The most thorough analysis is that of Peter Flint (1997), who has examined the issues with recourse to all thirty-nine Psalms scrolls from Qumran and other Judean Desert sites. Flint begins by emphasizing the existence of both different editions of scriptural books and secondary liturgical compilations in antiquity: for example, two Jewish editions of *Exodus* (found in 4Q22 and the Masoretic Text), and two forms of *Jeremiah* (the shorter form in 4Q71 and the Septuagint, the longer in the Masoretic Text, 2Q13, 4Q70, and 4Q72). Conversely, secondary liturgical compilations are represented by the phylacteries found at Qumran and manuscripts such as 4Q37, which contains a liturgical reordering of previously finalized poetic texts from *Exodus* and *Deuteronomy*. With respect to the *Psalms* as “scripture” at Qumran, Flint draws attention to formal indications of scriptural status for the Psalter. For instance, the halakhic text 4QMMT^d (4Q397) suggests that the *Psalms* (under David’s name) form the most prominent component in the third part of the Jewish “canon,” which was still in the process of formation (“[And] we have [also written] to you that you should examine the book of Moses [and] the book [of the Pr]ophets and Davi[d]’ figs. 14–21 C, lines 9–10 [cf. *Lk.* 24.44]). Another pertinent text is the War Scroll^e (4Q491), which specifically refers to the “Book of Psalms” (17.4). But while it seems clear that the “Psalter” or “Book of Psalms” was viewed as scripture at Qumran, it is difficult to determine which specific form(s) of the Psalter was regarded as such. For Flint, attempts by earlier scholars to show that 11QPsalms^a is not a true scriptural Psalter but a secondary liturgical compilation prove to be unconvincing because all presume that the arrangement of the Masoretic Text-150 Psalter, or even its textual form, had been finalized and was accepted by virtually all Jews as the “Book of Psalms” well before the second century BCE. He concludes that the 11Q5-collection (Edition IIa) qualifies as a true scriptural Psalter on three main grounds: the attribution to David, structural principles, and usage (i.e., quotations and allusions). “David’s Compositions” implies that all the pieces in 11QPsalms^a originated with David by asserting that 4,050 pieces—which surely included those in Psalms^a—were spoken by David “through prophecy” (xxvii.11). The Davidic character of 11QPsalms^a is reinforced by its arrangement of compositions, which forms clusters dominated by Psalms with Davidic titles. Flint also endorses Wilson’s view that similar organizing principles lie behind these clusters in this Psalms scroll and behind the compilation of the latter part of the Masoretic Text-150 Psalter, but regards this as only one of several pillars that support the thesis of scriptural status for the collection.

When the full panoply of thirty-nine Psalms scrolls is taken into consideration, the following items seem clear:

the Psalter is very well attested among the scrolls; this material is significant for our understanding of early prose and stichometry; the superscriptions are uniformly present from the earliest scroll (4Q83, c.150 BCE) onward; several manuscripts contain material and/or arrangements that conflict with the Masoretic Text; the arrangement of Psalms 90-150 as found in the Received Text is not clearly confirmed by any Qumran scroll but by one from Masada; and the 11Q5 Psalter is attested by at least three scrolls (4Q87, 11Q5, 11Q6). These data emphasize the need for appropriate nomenclature in relation to "biblical" texts, the "Psalms," and other terms in the Second Temple period.

Apocryphal Psalms

When fully extant, the Dead Sea Scrolls contained all or almost all the 150 psalms found in the received Masoretic ("MT-150") Psalter. But several scrolls also preserve other psalms, some known previously, some completely new to modern readers. These compositions can be grouped in various ways (e.g., by theme or content), but in this article are presented in two sections: previously known compositions, and previously unknown compositions not grouped with psalms that became canonical (see table 1).

It would be helpful first to define what is meant by apocryphal psalms. The term *apocrypha* is used for "quasi-scriptural" or "noncanonical" books of doubtful authorship and authority. It originally denoted hidden or secret writings to be read only by initiates into a given Christian sect, but was eventually used for works that were similar to biblical books in content, form, or title, but not accepted into the canon. In the present context and by extension, the term can also denote individual compositions (in this case psalms) that were not accepted into books included in the canon of scripture (i.e., the Book of 150 Psalms used by Jews and almost all Christians). As the above title indicates, an alternative designation for these apocryphal pieces is "noncanonical psalms." It should be emphasized that both "apocryphal" and "noncanonical" are terms that describe the status of these psalms in later Judaism or Christianity, not necessarily among their ancient readers at Qumran and elsewhere.

Previously Known Compositions. The Psalms scrolls include six pieces that were previously familiar to scholars, all of which are grouped with psalms now found in the MT-150 Psalter (see table 1).

David's Last Words (= 2 *Sm.* 23.1-7) were originally in columns xxvi-xxvii in the Psalms⁴ scroll from Cave 11 at Qumran (hereafter, 11QPsalms⁴, 11Q5) although only the last six Hebrew words of verse 7 are extant in the scroll. Together with David's Compositions, which follows it, this piece serves to affirm the Davidic authority and authorship of the 11QPsalms³-Psalter. Like those of patri-

archs such as Jacob, David's final words carried special authority: the opening words ("These are the last words of David") are not a superscription but seem to have a similar function. The passage also refers to "the oracle of David," (v. 1) through whom speaks the spirit of the Lord, the God of Israel (vv. 2-3).

Psalms 151 is the final composition in the Septuagint Psalter and is accepted as canonical by the Orthodox churches. Before the discovery of 11QPsalms⁴, this psalm was considered a single composition as in its Greek, Syriac, and Latin translations. The existence of two Hebrew compositions in the Qumran scroll (each with its own Davidic superscription) shows that the Greek and other versions represent a transformation of two separate psalms into a single piece. Psalm 151A deals with God's selection of David the shepherd boy (v. 1) and musician (v. 2), and his anointing by Samuel (v. 5) to be the leader of his people and ruler over the sons of the covenant (v. 7). Little more than two verses of Psalm 151B survive, but this is sufficient to denote the overall theme: "At the beginning of David's power after the prophet of God had anointed him. Then I [saw] a Philistine uttering defiance from the flanks of the enemy." This is the final composition in the 11QPsalms³-Psalter (col. xxviii).

Scholars of Syriac are familiar with the "Five Syriac Apocryphal Psalms" (151-155) included in some manuscripts of the Syriac Psalter. Psalms 152 and 153 (dealing with David's prowess as a shepherd, protecting his flock and fighting animals of prey) are not found in the Dead Sea Scrolls, but Psalms 154 and 155 feature in 11QPsalms³, which preserves the underlying Hebrew text of the Syriac translations. Psalm 154, most of which is preserved (cols. xvii-xviii), is a wisdom composition that calls the faithful to glorify God by gathering to proclaim his greatness (vv. 1-3) and to instruct the ignorant (vv. 4-8). It goes on to describe the nature and characteristics of Wisdom (vv. 12-15), and to affirm God's protection over the godly, humble, and pure (vv. 16-20). Psalm 155 (mostly preserved in cols. xxiv-xxv) is a Psalm of Thanksgiving that incorporates a Plea for Deliverance and is reminiscent of Psalms 22 and 51. The Psalmist pleads

PSALMS, BOOK OF: Apocryphal Psalms TABLE 1. *Previously Known Compositions.*

NAME OF COMPOSITION	SCROLL(S)	WHERE KNOWN	SUPERSCRPTION
David's Last Words	11Q5	2 <i>Samuel</i> 23.1-7	equivalent (Davidic)
Psalms 151A	11Q5	Greek, Syriac, Latin	yes (Davidic)
Psalms 151B	11Q5	Greek, Syriac, Latin	yes (Davidic)
Psalms 154	11Q5	Syriac	yes
Psalms 155	11Q5	Syriac	yes
Sira 51.13-30	11Q5	Greek, Syriac, Latin	no

with God to hear his request and not to abandon him to the wicked (vv. 1–6). “O Lord, judge me not according to my sins; for no one living is righteous before you,” he admits (v. 8), acknowledging the sins of his youth (v. 12), but then appealing to God to edify his soul and renew his life (v. 5), and to grant him understanding in God’s Law and to teach him his ordinances (v. 9). The last preserved verses affirm the Psalmist’s trust and confidence in God’s deliverance (vv. 15–19).

Sira 51.13–30 is the second canticle of the Wisdom of *Ben Sira* (also known as *Ecclesiasticus* or *Sirach*), which is part of the Old Testament in Roman Catholic and Orthodox Bibles and one of the Apocrypha for Protestants. Like *Psalms 151*, *Ben Sira* was previously known in Greek, Syriac, and Latin translations, but early Hebrew fragments were found in Cave 2 and a partially preserved scroll was found at Masada. Fragments of a medieval Hebrew text had been discovered in the Cairo Genizah in 1897. Our Qumran text is distinct from the other Hebrew, Greek, Syriac, and Latin versions, all of which represent the same recension of this canticle. The poem is an alphabetic acrostic, each verse beginning with a successive letter of the Hebrew alphabet. It describes how a celibate young man is able, through discipline, to devote his bodily passions and appetites to the pursuit of Wisdom instead of sexual pleasure (a theme found earlier in *Genesis*, *Proverbs*, and the *Song of Songs*). The version in 11QPsalm² is more erotic than the others, which suggests that provocative portions of the original Hebrew version were modified by a later editor (compare the Septuagint: “I stretched my hands on high and perceived her secrets” with 11QPsalm²: “I spread my hand [or, penis] and discerned [or, pierced] her unseen parts [or, nakedness]”). It appears that this piece was originally an independent poem, which was both incorporated into the 11QPsalm²-Psalter and appended to *Ben Sira*. [See *Psalms, Hymns, and Prayers*.]

Previously Unknown Compositions. The Dead Sea Scrolls include many psalms or songs that are not grouped with psalms now found in the canonical *Book of Psalms*. Two important manuscripts are Noncanonical Psalms A (4Q380) and Noncanonical Psalms B (4Q381), which are probably from different parts of a single collection, although two different collections cannot be ruled out since there are no overlapping texts. Seven fragments of Noncanonical Psalms A remain, containing portions of at least three distinct psalms, while the approximately one hundred fragments of Noncanonical Psalms B preserve parts of at least twelve psalms. The original collection or collections were certainly larger.

The psalms in these two scrolls are very similar to biblical psalms in vocabulary, style, theme, and content. One such theme is Zion, as in Noncanonical Psalms A, fragment 1: “[For the name of Yahweh is invoked upon it (=

Zion), [and his glory] is seen upon Jerusalem” (lines 5–6). Other psalms deal with creation, for example, Noncanonical Psalms B, fragment 1: “He, by an oath, made (the) heavens and the earth, and by the word of his mouth [. . .] and watercourses. He shut up its rivers, pools and every eddy, and he . . . night, and st[ar]s and constellations” (lines 3–5; see also 4Q380 7.11). Penitential psalms or lamentations are also evident, as in Noncanonical Psalms B fragments 33+35: “For (my) transgressions are too many for me, and [. . .]. But you, my God, will send your spir[it] and [you will give your compassions] to the son of your handmaiden, and your mercies to the servant near to you” (lines 4–5. See also frags. 15, 24, 31, 45).

Several of these psalms contain superscriptions, none of them connected with David, which serve to attribute the psalms involved to biblical figures. One such heading reads: “Praise of the Man of G[ol]d” (381 24.4), another has “[Prayer of . . . king of Judah (4Q381 31.4), another “Prayer of Manasseh, king of Judah” (4Q381 33.8), and another “Praise of Obadiah” (4Q380 1.11.8). The term *selah*, found at the end of many biblical psalms, is preserved at the end of two psalms (in Noncanonical Psalms B 4Q381 24.3; 33.6), and most likely appeared at the end of five more.

Precisely when these psalms, all written in Hebrew, were composed is difficult to determine, since they contain virtually no historical references or special themes (4Q380 and 4Q381 were both copied in mid- to late-Hasmonean times, c.100–30 BCE). Like several biblical psalms, the general linguistic features are characteristic of Late Biblical and Qumranic Hebrew, suggesting a date in the Persian or early Hellenistic periods. The complete absence of references to the afterlife—which is so prominent in several later texts—suggests a relatively early date of composition. There is no real evidence that these psalms were composed within the Qumran community, since virtually no special terminology or themes specifically associated with Qumran are evident. They are rather to be viewed as compositions characteristic of Second Temple Judaism in general.

PETER W. FLINT

PSALMS, HYMNS, AND PRAYERS. Hundreds of psalms, hymns, and prayers are found in the Dead Sea Scrolls. More than one hundred biblical psalms have been preserved in nearly forty manuscripts from Qumran, two from Masada and one from Nahal Hever/Wadi Seiyal. [See Hebrews, Letters to the; Psalms, Book of; and Scriptures.] In addition, well over two hundred extrabiblical prayers, most of them previously unknown, may be counted among the scrolls discovered at Qumran (Caves 1-11). Besides the single manuscript of the Songs of the Sabbath Sacrifice from Masada (attested at Qumran in nine copies), only three more nonbiblical prayers have been found at the other Judean Desert sites: a fragmentary papyrus manuscript from Masada which mentions Mount Gerizim and two prayers from the Bar Kokhba cache at Nahal Hever, one of which is a communal thanksgiving which speaks of seeking refuge in God.

The corpus of prayers, hymns, and psalms from Qumran may be classified according to seven major categories:

- Liturgies for fixed prayer times
- Ceremonial liturgies
- Eschatological prayers
- Magical incantations
- Psalmic collections
- Hodayot* (thanksgiving) hymns
- Prayers embedded in narratives.

Prayers in the last category are in Hebrew or Aramaic, depending on the language of the work in which they are embedded. The other prayer texts are in Hebrew. Major works from each category are surveyed below (the survey is not a complete listing).

Liturgies for Fixed Prayer Times. The Qumran corpus preserves several collections of communal prayers for recitation at fixed times of the day, week, and year. Each collection contains prayers of similar form, content, and liturgical function. The corpus includes other communal prayers whose time of recitation is not explicitly stated (for example, the communal confession in liturgical work 4Q393 and the lamentation in Apocryphal Lamentations B, 4Q501).

Daily prayers (4Q503). These are evening and morning blessings for each day of the month. They praise God for the renewal of the heavenly lights at sunset and sunrise, and with each daily change in the moon's phases. Praise in unison with heavenly beings is also mentioned. This liturgy is similar to the rabbinic Blessing on the Lights and *Qedushat Yotser*. References to a festival in the middle of the month indicate the liturgy is for *Nisan* or *Tishrei*. On Sabbaths, special themes (rest, delight, holiness, election) are added. Daily Prayers is written in a Hasmonean hand (c.100-75) and plausibly is non-Qumranic in origin. See sapiential work 4Q408, another liturgy of morning and evening blessings, which praises God's creation and daily renewal of light and darkness.

Words of the Luminaries (4Q504-506). These are communal prayers for the days of the week, ending with the Sabbath. All six weekday prayers open with a historical review and then petition for physical deliverance (Tuesday, Wednesday, Friday) or spiritual fortitude: knowledge of the Law, turning from sin and forgiveness (Sunday, Thursday; the Monday petition is lost). Each petition is followed by a concluding blessing and Amen, Amen response. The Sabbath prayer is different: it consists of doxological hymns. The title *Divrei Ha-me'orot* (Words of the Luminaries) is written on the back of the oldest copy, 4Q504 (c.150 BCE) and seems to refer to its liturgical function in daily prayer. The early date of Words of the Luminaries⁴ (4Q504) indicates this liturgy was probably composed before the Qumran settlement was founded (for the historical issues and parallels with the later synagogue liturgy see the separate entry on this document). [See Words of the Luminaries.]

Songs of the Sabbath Sacrifice (4Q400-407, 11Q17, *Maskil*). These are songs by a sage (*maskil*) for the first thirteen Sabbaths of the year. The dated titles presume a solar calendar of 364 days. This is an earthly liturgy in which human worshipers invite the angels to praise God and describe angelic worship in the heavenly Temple. Song 12 portrays the divine chariot-throne (*merkavah*)

with its attendant angels while the angelic high priests are depicted offering sacrifices in the final song. Possible functions are: substitute for the earthly sacrifice, liturgical accompaniment to the angelic offering, communion with the angels and experiencing the heavenly Temple. Nine copies from Qumran, dating from the late Hasmonean to late Herodian periods indicate this liturgy's importance for that community, however, the Masada manuscript suggests a nonsectarian origin or use. [See Songs of the Sabbath Sacrifice.]

Festival prayers (1Q34-34^{bis}, 4Q507-509). These are prayers for the annual festivals beginning with the New Year in *Tishrei* (this calendric arrangement may indicate non-Qumranic origin). Each prayer opens with the words "Remember, Lord" and then formulates reminiscences and petitions connected with the special aspects of the festival before concluding with a blessing and Amen, Amen response. The Prayer for the Day of Atonement (the title is preserved) thus opens with a petition asking God to remember the time of his compassion, refers to the divine law establishing this day as "an appointed time of fasting," and has a confession of sin. See liturgy 4Q409, a hymn calling for praise on the festivals.

Ceremonial Liturgies. The Qumran sect held numerous communal ceremonies on fixed occasions as well as on an *ad hoc* basis, as circumstances required (for example, ritual purification). Liturgies comprised mainly of blessings and/or curses accompanied such ceremonies.

Covenant renewal ceremony, Rule of the Community (1QS i.16-ii.25). The Rule of the Community enjoins all members to participate in an annual ceremony in which they reaffirm their commitment to the divine commandments. This ceremony apparently was held on the Festival of Shavu'ot (Weeks and Oaths/Covenants; see *Jubilees* 6 and below, Expulsion Ceremony). The heart of the ceremony is the blessing of God's lot by the priests and the curse of Belial's lot by the Levites (for the content of both, compare the priestly blessing in *Numbers* 6.22-27). The ceremony is modeled upon the covenant in Moab and the recitation of blessings and curses on Mount Gerizim and Mount Ebal (*Deut.* 27-29, *Jos.* 8.30-35). Unlike the biblical model, the sectarian blessings are extended only to the Qumran Covenanters (God's Lot) while the curses automatically attach to their opponents (Belial's lot). See the different form of the covenant renewal ceremony in 4QBerakhot which prefaces the blessing and curse with praise of the *merkavah*-throne, heavenly abode, and divine mysteries, rather than with the review of divine salvation and confession of Israel's sins found in 1QS Rule of the Community, i.16-ii.1.

Expulsion Ceremony, Damascus Document (4Q266). A ritual for the expulsion of those who reject the community's laws follows the penal code in the last section of the

Damascus Document. The priest recites a blessing that praises God for choosing "our forefathers" while causing the other nations to "stray in chaos." The blessing states that God curses those who transgress. No curse occurs in the expulsion ritual *per se*. The text does mention the curse pronounced by the Levites in the third month in what appears to be a reference to the annual covenant ceremony held on the Shavu'ot festival (see above). The expulsion ritual may have been conducted on the same occasion.

Ritual of Marriage (4Q502). This is a ritual for a public ceremony held on a joyous occasion. The entire assembly as well as certain individuals recite blessings offering praise and thanks, particularly for human fertility. The text mentions men and women of different ages (young, mature, old). References to human seed, fruit of the womb, men and women in their prime, and a married couple (perhaps Adam and Eve) prompted the designation *Ritual of Marriage*. The alternate theory of a Golden Age Ritual is based on the blessings for longevity and the prominence of elders in the text. Although the precise function is not certain, this ritual clearly challenges conventional views of the Qumran community as an all-male, celibate order (its sectarian origin is confirmed by a quote from the Rule of the Community).

Ritual of Purification (4Q512). This sectarian text is written on the back of the Daily Prayers (4Q503). It gives instructions and blessings for ritual purification from different types of impurities (sexual impurity, leprosy, corpse contamination) and on holy days. The blessings connect the cleansing of the body during ritual immersion with spiritual cleansing through repentance and atonement (impurity is associated with sin). Confession of sin and thanksgiving for purification are prominent themes. Compare the Baptismal Liturgy (4Q414) that overlaps but is not identical with Ritual of Purification (4Q512).

Eschatological Prayers. The Qumran sectarians prepared for the *eschaton* ("end of days"), which they believed was imminent. Their preparations included setting forth prayers to be recited during the final war and ensuing messianic era. The Qumran corpus also contains prayers which are not eschatological in function but which request or depict messianic redemption (e.g., the Apostrophe to Zion in 11QPsalms^a and the hymns in prayer 4Q457 and Messianic Apocalypse, 4Q521 2).

War Scroll (1QM, 4QM^{al.g?}). This operative plan for the eschatological War between the Sons of Light and the Sons of Darkness prescribes prayers for several stages of the campaign. The prayer before battle (1QM x.8-xii.18, xviii.5-xix.8) appeals to prophecies of salvation and divine deliverance of Israel in the past while petitioning God to crush the nations and redeem His elect, holy peo-

ple in the upcoming battle. Immediately after the battle, the priests, Levites, and elders are to bless God and his angels, curse Belial and all evil spirits, and offer praise for the victory of the Sons of Light over the forces of darkness (1QM xiii.1–xiv.1; compare xiv.9–12). Upon their return to the camp, the troops are to recite a hymn and, after cleansing themselves the next morning, they are supposed to return to the place of arrayal for a thanksgiving ceremony (1QM xiv.2–xv.2; the parallel passage in the second part of the War Scroll has not survived but it probably included a thanksgiving ceremony for the final victory over the *Kittim*; see War Rule). The War Scroll appears to have utilized older, originally independent prayers.

War Rule (4Q285) and Berakhot (11Q14). The overlapping portion of these scrolls is a blessing for Israel and the angels which reflects the sect's belief in its communion with angels. This blessing for rain, produce, and physical well-being is based on deuteronomic covenant blessings and curses (*Dt.* 11.14; 28.12, 21–22; 31.20). The biblical priestly blessing (*Nm.* 6.24) supplies the opening framework. Parallels between the War Rule and the War Scroll suggest this blessing was to be said by the high priest during the final stages of the eschatological war and may come from the War Scroll's lost, concluding section.

Rule of the Blessings (1QSb). This rule contains blessings recited by a sage (*maskil*) for all "up-holders of the covenant" as well as for dignitaries: Zadokite priests, the Prince of the Congregation, and, probably, an eschatological high priest are mentioned. The priestly blessing in *Numbers* 6.24–26 serves as a paradigm for all the blessings except the last which is based on *Isaiah* 11.1–5 and so identifies the one blessed (the Prince of the Congregation) with the Davidic Messiah. This eschatological blessing ceremony, which lacks curses, since evil would already have been expunged, was apparently designed to supplant the covenant renewal ceremony prescribed in the Rule of the Community (1QSb and 1QSa, the Rule of the Congregation for "the end of days," are appended to 1QS, the Rule of the Community).

Magical Incantations. The Qumran corpus contains hymns to God which were used to dispel demons and thus functioned as incantations. These may be contrasted with magical formulae which address the demons exclusively and, therefore, are not prayers.

Songs of the Sage (4Q510–511). These are doxological hymns pronounced by a sage (*maskil*) "to frighten and terrify" evil spirits. This prophylactic function as well as the hymns' form and content, including the citation of *Psalms* 91 and naming of demons (related to the Fallen Angels of *Gen.* 6.1–4) qualify them as incantations. They are distinctive, however, (1) in their address to God rather than to the demons, (2) in their use of hymnic

praise as words of power, (3) in their communal dimension as protection for all sons of light and, possibly, as a liturgy for a public ceremony (note the calls to praise and the concluding blessing with its Amen, Amen, response). The terminology and ideas (*dualism, determinism, eschatology, "dominion of Wickedness," "Sons of Light,"* and *yahad*) point to Qumranic authorship. See the similar hymn of prayer 4Q444.

Apocryphal Psalms^a (11Q11). This prophylactic ritual consists of three apocryphal psalms followed by Psalm 91. The second psalm praises God but also speaks about demons, their judgment, and banishment to the underworld. The third psalm purports to be an incantation addressed to Belial, which also announces his imprisonment in Sheol. The formula *Amen Amen Sela* closes each psalm. All four psalms are attributed to David and may be the "four songs for making music over the stricken" in the Psalms Scroll's list of Davidic Compositions (see 11Q11 and compare the equivalent rabbinic term for Ps. 91 in B.T. *Shebu.* 15b, J.T. *'Erub.* 10, 26c).

Magic formula (4Q560). This text names male and female demons, lists illnesses caused by demon possession, and adjures the demon(s) addressed. The fragment may be from a book of magic recipes (there are no signs it was an amulet). This Aramaic magic formula bridges the gap between ancient Near Eastern traditions and later Palestinian Jewish magic while underscoring the distinctiveness of the other incantations from Qumran, all of which are hymns written in Hebrew.

Psalmic Collections. More than thirty scrolls of biblical psalms have been preserved at Qumran. Seven of these (*Psalms*^{a,b,d,e,k,o,q}) differ from the Masoretic Text in the order of the psalms and may represent different recensions of the biblical psalter or secondary arrangements for various purposes. Of the four scrolls which juxtapose biblical and apocryphal psalms, Apocryphal Psalm^a is a prophylactic ritual while the large Psalms' Scroll (11Q5) appears to be a liturgical arrangement (11Q6 and 4Q88 are similar to 11Q5). There are also several psalmic collections without any biblical psalms, for example, the apocryphal Barkhi Nafshi hymns (4Q435–438), the noncanonical psalms (4Q380–381) and 4Q448, a scroll containing part of Psalm 154 and a prayer for King Jonathan, who is to be identified with Alexander Jannaeus (103–76 BCE). The extrabiblical psalms do not bear the marks of Qumranic authorship.

The Psalms Scroll (11Q5). This is the best preserved psalmic collection from Qumran. Despite the Davidic attribution given in the prose insert known as David's Compositions, this scroll does not appear to be a scriptural book of psalms but rather an arrangement for liturgical purposes (note especially the refrain added to Psalm 145). About forty biblical psalms are interspersed with seven

psalms not found in the Hebrew scriptures, four of which are attested in other sources: *Ben Sira* 51.13–30, Septuagint *Psalms 151*, Syriac Psalms 154 and 155. The three previously unknown psalms are: Plea for Deliverance, Apostrophe to Zion, and Hymn to the Creator. The Plea for Deliverance is an individual thanksgiving for salvation from near death which incorporates a tripartite petition for forgiveness, knowledge, and protection from Satan and the evil inclination (also in 11Q6). The Apostrophe to Zion is an alphabetic acrostic poem addressed to Zion (compare *Is.* 54, 60, 62) which assures Zion that she is remembered and that the prayers for her redemption and prophecies of her future glory (especially *Is.* 66.10–11) will be fulfilled (also in 4Q88). The “Hymn to the Creator” praises God for His creation of light and darkness and heaven and earth. It stresses God’s creation with knowledge and granting of knowledge to the angels who then ring praise. This hymn has been likened to the *Qedushat Yotzer* in the rabbinic Blessing on the Lights (see 4Q503).

Hodayot Hymns. These are thanksgiving hymns which often open with the characteristic formula “I thank you, Lord” (*odekhalah, Adonai*). The speaker offers thanks for his election by God’s grace and for his endowment with the divine gifts of speech and knowledge. Qumranic terminology and ideas are employed throughout. Two types of hymns have been recognized in the *Hodayot* collections: Hymns of the Teacher and Hymns of the Community (see below). Comparison between the eight *Hodayot* manuscripts indicates that different types of collections circulated at Qumran: some were longer, others shorter; some apparently had only Hymns of the Teacher (4QH^c), others only Hymns of the Community (4QH^a), while still others included both types (1QH^a, 4QH^b). The divergent collections shed new light on the ongoing debate over the function of these hymns in private devotion or public liturgy.

Hymns of the Teacher. These occur in *Hodayot*^b, 4QH^{bcd1} and *en bloc* in the middle of the large *Hodayot* manuscript from Cave 1 (1QH^a x–xix = [ii–ix]). The Hymns of the Teacher give expression to the personal encounters, thoughts, and feelings experienced by a leading member of the Qumran community, sometimes identified with the Teacher of Righteousness. His main themes are his own suffering, persecution, and mockery by his enemies, as well as testing in the crucible, reliance on divine salvation, justice, and annihilation of evil. The speaker thanks God repeatedly for protecting him from the “men of Behai,” for saving his soul from the “snares of the pit,” and for granting him the gift of knowledge and the task of “enlightening the many” (that is, the Qumran community).

Hymns of the Community. These are found at the beginning and end of 1QHodayot^c as well as in 4QH^{abc}. The Hymns of the Community introduce “we” language and

stress less personal themes: the human condition, communal affiliation, congregational praise, and communion with angels. They use the opening blessing formula “Blessed are you, Lord” more often than the highly personal “I thank you, Lord,” which typifies the Hymns of the Teacher. They also express thanks for personal salvation, election, and spiritual gifts (especially knowledge) which constitute an essential component of the *Hodayot* hymns.

Prayers Embedded in Narratives. Prayers pseudographically attributed to hoary figures are often incorporated in the narrative framework of a “parabiblical” work (i.e., a nonbiblical work based in some way upon a biblical text). These literary prayers bear a resemblance to prayers in actual use and reflect current religious practice. Besides the prayers in previously known works such as *1 Enoch*, *Jubilees*, and *Tobit*, the Qumran corpus brings to light much new material of this type, including Noah’s and Abraham’s prayers in the Genesis Apocryphon, the Prayer of Enosh in a work by that name (4Q369), Levi’s prayer in the Aramaic Levi Document, Joseph’s prayer in the apocryphon named after him, the Song of Miriam in *Reworked Pentateuch*, and songs of praise in the Psalms of Joshua (4Q378, 379).

Aramaic Levi^b. The Aramaic Levi Document (approximately late third century BCE) preserves a prayer attributed to Levi also found in one manuscript of the Greek *Testaments of the Twelve Patriarchs*. This Greek manuscript juxtaposes the prayer with Levi’s report that he grieved over human unrighteousness and prayed to be saved (*Testament of Levi* 2.3–4, see also 4.2). The context may be different in Aramaic Levi where the prayer is preceded by Levi’s purification. Levi petitions God for spiritual support: for the wisdom, knowledge, and strength (see *Is.* 11.2) to do God’s bidding, for protection from every Satan and evil, for purification of his heart from every impurity. Levi also asks that he be drawn near to God to serve Him, particularly as teacher and judge (see *Dt.* 33.10). This prayer displays features of two related prayer types: the tripartite petitions for knowledge, repentance, forgiveness (see *Ps.* 51, *Ps.* 155, 4Q504 4.6–15, 1–2. ii.7–18, B.T. Ber. 29a, b. *Meg.* 17b) and apotropaic prayers which counterpose pleas for protection from evil and sin with requests for knowledge and purification (see 11QPs^a, 11Q5 13–16, *Mt.* 6.13, B.T. Ber. 16b, 60b). Also noteworthy are Levi’s posture in prayer (he lifts his eyes to heaven and stretches forth his hands) and his silent prayer following the verbal prayer.

Apocryphon of Joseph (4Q372 1, 4Q371). This Hebrew text contains polemics against the Samaritans’ claim to descend from Joseph and their Temple on Mount Gerizim (second century BCE). The first part (4Q372 1.1–15) is a historical review in the Sin-Exile-Return pattern which

culminates with a critique of those who make "a high place upon a high mountain" and "revile against the tent of Zion." It stresses that Joseph, identified here with the Northern Tribes, is still in exile among foreigners. Joseph's prayer is then introduced (11.15-16). Joseph pleads for deliverance from the nations' hands, laments the hostile people dwelling on the land, and expresses confidence that they will be destroyed (11.16-22). As is typical of individual laments, Joseph's prayer ends with a promise to worship God as well as to teach God's laws to sinners (11.23-31). Two features important for Jewish and Christian liturgical history are: the invocation to God as "my father" (see *Sir.* 23.1, 4; *3 Mc.* 6.3, 8; *Mt.* 6.9; *Lk.* 11.2; *Mk.* 14.36) and the expanded list of divine epithets (see Psalm 99.3, the "Hymn to the Creator," the non-canonical psalm in 4Q381 76-77.14, B.T. Ber. 33b, and the *'Amidah* prayer).

The Role of Prayer at Qumran. Prayer played a major role in the life of the Qumran community. In the wake of the sect's succession from the Jerusalem Temple, prayer served as a substitute for sacrifice. [See Sacrifice.] It was considered the preferred means of worship and instrument for atonement as long as the Temple service continued to be conducted in impurity. Sectarian works thus regularly refer to prayer in sacrificial terms, as in, "An offering of the lips for judgment is like the sweet fragrance (offered by) the righteous" (1QS ix.5).

Prayer's function at Qumran as a substitute for sacrifice fostered its development there as a communal, religious institution. The Rule of the Community refers to congregational prayer (1QS vi.8, x.14), as well as to praise at regular intervals of the day and of the year ("times ordained by God", 1QS x.1-8). The Qumran sect, like the rabbis in the aftermath of the destruction of the Second Temple (70 CE), apparently instituted communal prayer at fixed times corresponding to the hours of Temple sacrifice (twice daily, early morning, and late afternoon, toward sunset, and on Sabbaths and festivals). The daily, weekly, Sabbath, and festival liturgies discovered at Qumran were evidently adopted and used by the Qumran community in its own worship although they may have originated elsewhere.

As the primary mode of service to and contact with God, prayer flourished at Qumran as a multifaceted religious phenomenon. Besides providing steady worship, offering constant praise, and furnishing petitions for physical and spiritual needs, prayer became a medium for a quasi-mystical experience of the heavenly realm (Songs of the Sabbath Sacrifice), a part of preparations for the "end of days" (War Scroll), and a means of affirming commitment to the divine Law as revealed to the Qumran covenanters (covenant renewal ceremony). Some of the prayers in the Qumran corpus were probably not com-

posed for liturgical use but for other purposes, such as private devotion or religious expression (the *Hodayot* and certain psalms).

Origins of Prayers Found at Qumran and Jewish Liturgy. The presence of many biblical texts, including biblical psalms, among the Qumran finds proves that much of the corpus was not authored by the Qumran covenanters but merely adopted by them. Non-Qumranic provenance has been demonstrated quite conclusively for most non-canonical psalms and prayers embedded in narratives; a strong case has also been made for the liturgies for fixed prayer times.

The prayers of non-Qumranic origin open a window onto religious practice among different Jewish groups during the Second Temple period. Significantly, they provide the first direct evidence of fixed public prayer outside of Qumran in this early period. This finding is extremely important for the issue of the origins of Jewish liturgy. Rabbinic sources speak of the establishment of fixed, obligatory liturgy by the Sages of Yavneh soon after, and in response to, the destruction of the Second Temple in 70 CE. The virtual absence of sources for regular public prayer during the Second Temple period has generally supported the view that Jewish liturgy was created *de novo* at Yavneh. The prayers from Qumran, particularly the liturgies for fixed prayer times, may lend credence to the opposing view that Yavneh marked the institutionalization of a liturgy which emerged gradually during the Second Temple period. In any case, despite the difficulties posed by the late date of the comparable Jewish sources (rabbinic prayer texts and medieval prayerbooks) and the question of how representative the prayers of non-Qumranic origin are, it would seem that the numerous, striking parallels with the later Jewish liturgy bear witness to a shared liturgical tradition and probably also to some fixed public worship during the two centuries prior to the destruction of the Second Temple.

ESTHER CHAZON

PSALMS SCROLL. The large Psalms Scroll, found in Qumran Cave 11 in February 1956, was unrolled in Jerusalem in November 1961. The scroll covers five sheets of leather, still sewn together at unrolling, and five independent fragments (frgs. A–E). Four separable leaves at the beginning of the scroll formed a part of the first sheet; the five independent fragments probably formed part of a sheet of leather that preceded the first extant sheet. There is a total length of 4.253 meters (approximately 14.5 feet) of extant leather, probably goat or ibex skin. The last column of the scroll was left blank, which is not uncommon at Qumran (see also Psalms^b from Masada). The bottom third of the scroll had decomposed over time in the cave so that the height of each column measures only 15 to 18 centimeters of an original 25 to 26 centime-

ters (about 10 inches); hence, approximately the bottom third of each column is lacking. The fragments contain six partial columns of text and the rest of the scroll twenty-eight columns.

There are forty proto-masoretic psalms in the extant scroll, including the "Last Words of David" from 2 *Samuel* 23. Except for the latter and Psalm 93, they are all from the last third of the Masoretic Psalter, but in a different order, plus eight nonmasoretic psalms and a prose composition (col. xxvii). The protomasoretic psalms basically agree textually with the received Masoretic Text but with many interesting variants and additions in the text. The nine nonmasoretic compositions include four psalms known heretofore from ancient translations, four previously unknown psalms (including the Psalm 118 catena in col. xvi), and the prose insert. Two previously known psalms (154 and 155 on cols. xviii and xxiv) are very close textually to their later ancient Syriac translations, while the two others, *Psalms 151* (col. xxviii) and the second canticle previously known from *Ben Sira* 51 (cols. xxi–xxii), are significantly different from their later ancient Greek translations (and from the Syriac Psalm 151, paralleled by the Septuagint's *Psalms 151*).

All of the scroll is in biblical style Hebrew, in contrast, for example, to the Hebrew of the Hodayot. The square Hebrew script is Herodian and the scroll itself dates to about the middle of the first century CE. Like other biblical and nonbiblical scrolls from Qumran, however, the Tetragrammaton (YHVH) is in Paleo-Hebrew script. The scroll probably contained approximately the final third of the Psalter at Qumran, beginning with Psalms 101–103, followed by Psalms 109 (alone on frg. D), 118, 104, 147, 105 (in sequence on frg. E), 146–148, etc. Thirteen of the so-called *Psalms of Ascent* (120–132) are grouped together in accordance with their order in the Masoretic Text in columns ii–vi, while the other two, Psalms 133 and 134, are scattered among other psalms later in the scroll. Psalm 119, occupying eight columns of the scroll, follows directly after the *Ascent Psalms* 120–132. The nonmasoretic psalms are found scattered among the masoretic ones on columns xvi, xviii, xix, xxj–xxi, xxiv, and xxvi–xxviii. The "Apostrophe to Zion" (col. xxii) is also found in the 4Q Psalms (4Q88), and the "Plea for Deliverance" (col. xix) is also found in the 11Q Psalms^b (11Q6).

Some, especially Patrick W. Skehan, have argued that the Psalms Scroll is a secondary liturgical collection. The editor's position, that the scroll represents a relatively late stage in the canonical process of stabilization of the pre-Masoretic Psalter, and was functionally canonical at Qumran, is supported by two recent dissertations: Gerald H. Wilson (Yale) and Peter W. Flint (Notre Dame). At latest count, there are thirty-six manuscripts of Psalms found in Qumran Caves, 1, 2, 3, 4, 5, 8, and 11, of which

twenty-one are from Cave 4, and five (six, if 11Q11 is included) from Cave 11. Of these, the 11QPsalms^b appears to be a copy of 11Psalms^a, with the 4QPsalms¹ similar to them in having a mix of proto-masoretic and nonmasoretic psalms. Many containing only proto-masoretic psalms nonetheless have an order different from the collection of 150 psalms found in the Masoretic Text. At least one scroll with three nonmasoretic psalms and a variant form of Psalm 91 (11Q11) may possibly have been part of an original scroll having a mix of proto-masoretic and nonmasoretic psalms. It would appear that the first two-thirds of the proto-Masoretic Psalter was more or less stable, with the last third still open-ended, at least at Qumran (Flint).

The Psalms Scroll (11Q5) presents itself as a Davidic Psalter. Exactly when in early Judaism the whole of a Psalter was attributed to David is not known. It would probably have been within the Hellenistic time frame, under growing Greek influence, that the need arose to attach an individual author's name to a community's collection of literature, as in the cases of attribution of everything in the Books of *Ecclesiastes*, *Proverbs*, and *Song of Songs* to Solomon, or the entire Pentateuch to Moses. Columns xxvi-xxviii of the Psalms Scroll make a fairly clear statement of the view that David was responsible for all the psalms in the scroll, and even perhaps for all psalms, despite their earlier attribution to others. The last lines of column xxvi originally contained the first six and a half verses of 2 *Samuel* 23.1-7, which conclude with the last six words of 23.7 in the first line of column xxvii. While there is not enough space in the missing portions of the scroll to have contained 2 *Samuel* 22.1-51, David's Song of Thanksgiving, that psalm, with variants, appears as Psalm 18, a doublet in the Masoretic Text, and was probably in the first third of Psalters found at Qumran (present in 4Q85, 8Q2, and 11Q7) anyway. 2 *Samuel* 23.1-7 has a masoretic superscription describing it as "The Last Words of David." In the Qumran Psalter, it would have formed a doublet with 2 *Samuel* 23, just as Psalm 18 in the Masoretic Psalter does with 2 *Samuel* 22.

This composition is followed on column xxvii by the ten-line prose insert which claims that David composed 4,050 psalms and songs, 3,600 psalms and 460 songs. The songs are categorized as follows: 364 to be sung before the altar over the whole burnt perpetual offering every day; fifty-two for the Sabbath *qorbanot* ("sacrifices"), thirty for New Moons, all the Solemn Assemblies, and the Day of Atonement, plus four for making music over the stricken. All of the psalms in the Scroll have superscriptions with attributions to David everywhere the Masoretic Text does, except Psalm 144, but that may well have been an oversight, since it follows closely on Psalm 133 which has the Davidic attribution. None of the nine nonmaso-

retic compositions in the Scroll is attributed to David, or to any author, just as there are forty psalms in the Masoretic Psalter unattributed to anyone, that is, without superscription (all in Books Four and Five, Pss. 90-150).

The traditional claim that the entire Masoretic Psalter is to be attributed to David is contradicted in the Masoretic Psalter itself by attributions to others. Of these, the greatest number refers to "Asaph" (twelve) and to the "Korahites" (eight); all of these are found in Books Two and Three (Pss. 42-89), but are absent from the extant Scroll. Two psalms are attributed to Solomon (Pss. 72 and 127). One of these is in the Psalms Scroll (Ps. 127), and is so attributed. Yet another is attributed to Ethan the Ezrahite (Ps. 89), but is not found in the extant Scroll. It is clear, however, that columns xxvi-xxviii of the Psalms Scroll, and, especially, the prose composition in column xxvii, lend support to a belief which had developed by the mid-first century of the common era—namely, that the Psalter was a Davidic Psalter, no matter the individual attributions. Not only so, but with the claim that David had composed 4,050 psalms and songs, the conservative attitude at Qumran would have been that a Davidic Psalter, whatever exactly that meant, ought to include as many of the psalms David supposedly composed as could be found!

Clearly, it would be difficult to assume that the Psalter was already limited to 150 psalms; or, at least, such a tradition apparently provided no constraint at Qumran, nor presumably from wherever the Psalms Scroll came to be a part of the Qumran library. Not only so, but some later Syriac Psalters contained up to 200 psalms. The theory, appealing to some scholars, about the Psalms Scroll's having been a secondary liturgical collection (Skehan), in itself lacks a firm basis in the available evidence (Flint). Presumably, the Masoretic Psalter is itself also a liturgical collection (Wilson).

Two of the nonmasoretic psalms appear in other Qumran Psalter manuscripts. The Apostrophe to Zion (col. xxii) is found in 4QPsalms¹, and the Plea for Deliverance (col. xix) is in 11QPsalms^b, where Psalm 133 follows Psalm 141, just as in the Psalms Scroll (11QPsalms^a). 4QPsalms¹ has six psalms on the extant leather; three of these are proto-masoretic, and three are nonmasoretic psalms—the Apostrophe to Zion, the Eschatological Hymn, and the Apostrophe to Judah. In addition, Psalm 154:17-20 is paralleled in the 4Q Apocryphal Psalm and Prayer (4Q448).

Two of the more interesting nonmasoretic psalms in the large Psalms Scroll, *Psalm 151* and the second canticle in *Ben Sira 51*, are significantly different textually from their later translation, which had been known all along in Septuagint manuscripts; *Psalm 151* is also found in some Syriac Psalters. In both instances, the Greek ap-

pears to be based on edited *Vorlagen* or models, that is, on Hebrew texts quite different from those in the Psalms Scroll. Though it is possible that the editing was done in the course of translation, this seems less probable. In the case of *Psalm 151*, the editing was apparently done because of resigned echoes of certain aspects of Greek culture in the original Hebrew (of the scroll). In the case of *Ben Sira 51* (col. xxi, 11ff.) the editing was apparently done as a result of rather patent ambiguities in the poetry, suggesting erotic overtones—not unlike such overtones as are found in biblical literature itself. Scholars who have attempted to deny these as the reasons for the editing which resulted in the later Greek translations have so far failed to offer plausible theses to account for the differences between the Hebrew texts in the Scroll and their later translations. These cases suggest that some Hellenized, Greek-speaking Jews may have been more “conservative” in certain ways than their Hebrew-speaking (or reading) counterparts. On the other hand, that which was viewed as conservative then, as opposed to now, or in the two cultures then, may have been quite different.

All early Jewish literature was composed more or less scripturally, that is, in the phrases and paraphrases of earlier biblical literature. The psalm in *1 Chronicles 16*, for instance, is made up of pastiches of earlier biblical poetry, and so are the nonmasoretic psalms in the scroll, some more than others. The Hymn to the Creator (col. xxvi) is largely composed of phrases from biblical wisdom literature. Even where there is more originality, as in the *Apostrophe to Zion* (col. xxii), the author nevertheless clearly drew on biblical phrases, tones, and cadences. It is because of this dominant characteristic of early Jewish literature that small fragments of works heretofore unknown can be pieced together at all, a tedious, painstaking process.

The Psalms Scroll is a major reason for the recent concern with the canonical process in Judaism and Christianity, and the launch of the subdiscipline of canonical criticism. Those who disagree have attempted to bracket Psalter manuscripts at Qumran as secondary liturgical collections; those who agree have seen the necessity of reviewing the older theories of canonization, due to their being inadequate in accounting for the massive amount of data now available because of the Dead Sea Scrolls. The two studies that have probed most deeply into the question of the structure of Psalters and Psalms collections, including the Psalms Scroll, support the need for the review (Wilson and Flint).

PSEUDEPIGRAPHA. See Apocrypha and Pseudepigrapha.

PSEUDO-CLEMENTINE LITERATURE. A pseudonymous account of Clement of Rome’s associations with Peter, an apostle of Jesus, the Pseudo-Clementine literature is in the form of an ancient novel with extensive dialogues. Clement relates how he became a Christian under Peter’s tutelage, what he heard and saw when Peter debated with Simon Magus, and how he recovered his long-lost family. The historical significance of the Pseudo-Clementine literature is, above all, that it contains rare traditions of ancient Syrian Jewish Christianity, illuminating also for the Dead Sea Scrolls.

Constituent Writings. The chief components of the Pseudo-Clementine literature are the *Homilies* and the *Recognitions*. These two compositions run verbatim in parallel in large sections. There is a consensus that each derives independently from an original novel called the *Basic Writing* (original title: *Periodoi Petrou, Circuits of Peter*).

While the *Homilies* (with their prefaced writings: *Letter of Peter, Adoration*, and *Letter of Clement*) survive in the original Greek, the Greek *Recognitions* have not yet been found. They are preserved primarily through a Latin translation (c.400 CE) by Tyrannius Rufinus and through a Syriac translation (pre-373 CE) of *Recognitions* 1-4.1.

Attention to Christological remarks allows the *Homilies*

to be dated to about 325 CE and fixes the *Recognitions* within the following twenty years. The *Basic Writing* was composed around 220 CE. All these writings probably derive from the general region of Antioch in Syria and are influenced to varying degrees by this educational center. The *Basic Writing* likely came from an area with access to Jewish-Christian traditions and broadly tributary to the great metropolis (Jewish Christians are witnessed for cities such as Apamaea and Beroea as well as in Palestine and Transjordan). The later redactions (*Homilies* and *Recognitions*) were undertaken possibly in or near Antioch. The author of the *Homilies*, in particular, displays extraordinary literary sophistication, including humor.

Pseudo-Clementine literature's lively and influential history of transmission is documented by numerous later epitomes, redactions, excerpts, and translations in Greek, Latin, Syriac, Armenian, Arabic, Ethiopic, Georgian, and Slavonic.

Sources of the Pseudo-Clementine Literature. Scholars agree that the *Basic Writing* sometimes copied passages from sources with only slight modifications. The clearest example is the extensive use of a dialogue of Bardaisan on astrological fate known as *The Book of the Laws of the Countries*. Other material was adapted from philosophical and mythological handbooks and from the Bible and intertestamental writings. A Jewish-Christian writing, the *Book of Elchasai* (116–117 CE), was employed particularly in the opening fictitious *Letter of Peter* and in the account of James's reaction in Jerusalem (the *Adoration*). An intriguing review of biblical history in *Recognitions* 1.27–71 apparently derives from another special Jewish-Christian source that should be assigned to Judea about 200 CE.

Much of the older research focused on the isolation of a source called the *Kerygmata Petrou* (*Preachings of Peter*), an earlier account of Peter's discourses that supposedly already had been sent to James (so the *Basic Writing* in, for example, *Recognitions* 1.17.2–3, parallel to *Homilies* 1.20.2–3). This view that the *Basic Writing* is not engaging in a novelistic fiction but truly employed a source called the *Kerygmata Petrou* has, however, crumbled over the years and should probably now be discarded.

Pseudo-Clementine Literature and the Dead Sea Scrolls. The source for many similarities between the Dead Sea Scrolls and the Pseudo-Clementine literature is common dependency on Hebrew scriptures and intertestamental writings, such as *Jubilees* and *1 Enoch*. The source of *Recognitions* 1.27–71 used *Jubilees* in an account of Creation and the early history of humanity (cf., e.g., Pseudo-Jubilees⁴ 4Q227). The author of the *Homilies* complemented this account with *1 Enoch* (see *Homilies* 8.12–18). Knowledge of these writings in both the Pseudo-Clementine literature and the Dead Sea Scrolls is in-

dicative of how current these works were in ancient Jewish and Christian circles.

Jubilees was employed by the source of *Recognitions* 1.27–71 particularly to help develop a territorialism of "the land" that is virtually unique among ancient Christian writings. Here it is said that the coming war will drive off the land all but those who worship as God wills (*Recognitions* 1.37.2, 1.39.3). There also is evidence of chiliasm (earthly rewards; *Recognitions* 1.61.2). The similarities to the hopes in the Dead Sea Scrolls are apparent (e.g., War Scroll IQM i.3, vii.12–16; Peshier Psalms⁴ 4Q171 i–10, iii.10–13; War Rule 4Q285), but the parallels also extend through broad expanses of ancient Judaism. [See Peshier Psalms; War of the Sons of Light Against the Sons of Darkness.] The virtual uniqueness of this Pseudo-Clementine tradition in ancient Christianity points toward the Jewish-Christian origins of these writings. [See Jewish Christians.]

While the source of *Recognitions* 1.27–71 adapted such material from *Jubilees*, it differed from *Jubilees* in promoting a more positive attitude toward astrology. The *Basic Writing* furthermore employed the frankly astrological *Book of Elchasai*, as well as Bardaisan's dialogue, which admitted the influence of the "stars." Though the *Basic Writing* itself played down the importance of such knowledge, interest in astrology provides a link with the Dead Sea Scrolls. The recovery of Jewish astrological works here (horoscope 4Q186, Zodiology and Brontology 4Q318) has confirmed widespread Jewish use of (Hellenistic) astrology and encourages further exploration of a Jewish matrix for astrological beliefs among Syrian Christians. [See Horoscopes.]

The horoscopes in 4Q186 reflect a dualism of light and darkness also found in the Rule of the Community from Cave 1 at Qumran (e.g., IQS iii.13–iv.26). [See Rule of the Community.] The *Basic Writing* (*Recognitions* 3.51–53, parallel to *Homilies* 20.1–3) similarly promotes a dualistic doctrine of two kingdoms: Humans must choose either the present evil age and its king or the age to come (kingdom of heaven) and its good king. The *Recognitions* combine this doctrine with the *Basic Writing's* notion that ten pairs control world history (the first member evil, the second good, *Recognitions* 3.59–61, parallel to *Homilies* 2.15–17). The author of the *Homilies* additionally has the concepts of the left and right hands of God (*Homilies* 20.3.4–6) and of the two ways (*Homilies* 7.7.1–3; cf. The Two Ways 4Q473). The commonalities in the dualism of the Pseudo-Clementine literature and the Dead Sea Scrolls point toward the broader background of Zoroastrian influence on ancient Judaism and Syrian Christianity.

Some correspondences have been seen between specific figures both on the good and evil sides in the Pseudo-Clementine literature and in the Dead Sea Scrolls. The *Basic Writing* often speaks of a good Prophet of Truth (Je-

sus; compare the term in Apocryphon of Moses B¹ 4Q375 1.1.7), while a Teacher of Righteousness is witnessed among the Dead Sea Scrolls (e.g., Peshet Habakkuk 1QpHab ii.2). [See Jesus: Teacher of Righteousness.] Evil in the *Basic Writing* is embodied by Simon Magus, who sometimes carries the attributes of Paul and is associated with deceit. A Liar is also well known in the Dead Sea Scrolls (e.g., 1QpHab ii.1-2, v.11, x.9; 4Q171 1.18). [See Liar.] Qualifications such as "righteous" and "lying," however, simply are too widespread to justify equation of figures in widely disparate writings. The systematic similarities of the figures on the good sides and the evil sides derive from a larger shared background.

The two bodies of writing differ in their attitudes toward sacrifices. In the Dead Sea Scrolls there may well be a problem with the ruling priesthood in Jerusalem and with their sacrifices (e.g., 1QpHab viii.8-17), yet there is no fundamental problem with either institution. [See Sacrifices.] In the Pseudo-Clementine literature the source of *Recognitions* 1.27-71 thinks that sacrifice had been endured by God for a while but is now outdated, even sinful, after the proclamation of Jesus (*Recognitions* 1.64.1), while the author of the *Homilies* (3.45) denies the genuineness of any scriptural passages promoting sacrifice. Critical Jewish attitudes, such as those in the Dead Sea Scrolls (e.g., IQS ix.3-6) might, nevertheless, have converged at some point with the Hellenistic, rationalistic critique of animal sacrifice and ultimately fed into the positions found in the Pseudo-Clementine literature. The idea in the *Homilies*, that there are spurious scriptures, derives in part from rationalizing Hellenistic exegesis that was also of influence in Judaism. It has clearest affinities, however, with a follower of Marcion named Apelles and no noticeable ones with the Dead Sea Scrolls.

Bathing in the Dead Sea Scrolls has similarities with Christian baptism (found throughout the Pseudo-Clementine literature) and has perhaps some additional parallels with the *Basic Writing*, which reports that Peter bathed before meals (*Recognitions* 4.3.1, parallel to *Homilies* 8.2.5; *Recognitions* 5.36.3, parallel to *Homilies* 10.26.2 [here participants are arranged according to their rank; cf. IQS vi.2-5]) and before prayer (*Recognitions* 8.1.1 and 8.2.1, parallel to *Homilies* 14.1.2 and 14.3.1). The notion of prohibiting the nonbaptized from participation in communal meals (*Recognitions* 1.19.3-5, parallel to *Homilies* 1.22.3-5; *Recognitions* 7.36.4, parallel to *Homilies* 13.11.4) is similar to the probationary period in the Rule of the Community (IQS vi.16-17, vi.20-21, vii.19-20). [See Meals; Purity.]

Even stronger parallels with the Dead Sea Scrolls seem to surface in the material that the Pseudo-Clementine literature adapted from the *Book of Elkesai*. An oath taken by teachers near the water (*Adjuration* 1.2-4.3) recalls the

oath required of members by the Rule of the Community (IQS v.8-9). Similarly, the six-year probationary period for teachers in *Adjuration* 1.2 resembles the two-year probationary period in the Rule of the Community (IQS vi.14-23). The *Book of Elkesai* thus seems to have promoted an order of the church with similarities to the order of the congregation described in the Dead Sea Scrolls (e.g., IQS vi.8-13).

F. STANLEY JONES

PTOLEMIES. Alexander's conquest of Egypt in 332 BCE, and the foundation of a large coastal city, Alexandria, marked the beginning of a new stage of Egyptian history. The huge empire Alexander conquered collapsed with his death (323 BCE), and Egypt fell (in 323 BCE) to one of his generals, Ptolemy, the son of Lagos, who was crowned as its king in 305 BCE. Ptolemy's descendants ruled Egypt, and territories outside it, for the next three centuries, a period often referred to as the Ptolemaic period. Although the Ptolemies were a foreign, Greek-speaking dynasty, who introduced foreign customs and institutions into Egypt and encouraged the immigration of numerous foreigners, they also presented themselves as heirs to the pharaohs, committed to maintaining and supporting Egypt's ancient social and religious institutions. From a Jewish perspective, the Ptolemies' importance lies mainly in their control of Palestine throughout the third century BCE, and in the great influx of Jews into Ptolemaic Egypt, the largest and most illustrious center of the Jewish Diaspora in the ancient world. In the following survey of Ptolemaic history, special attention will be devoted to these two issues.

Ptolemy I Soter's reign (305–282 BCE) was characterized by an attempt to consolidate his power in Egypt and abroad. This included the reorganization of the Egyptian bureaucratic system and the enticement of Greeks and other foreigners, including, presumably, Jews, to settle in his new domains. Ptolemy's foreign wars included several major campaigns in Palestine and Syria, which led to the arrival in Egypt of numerous Jewish prisoners of war, some of whom served as slaves, while others were posted in garrisons throughout Egypt.

The reign of Ptolemy II Philadelphus (282–246 BCE) was marked by several wars—including the first of the "Syrian Wars," the Seleucid-Ptolemaic conflicts that often were fought in Palestine—and by further advances in Egypt's administrative development. Philadelphus also initiated the reclaiming and settlement of extensive tracts of land in the Fayum and nurtured Alexandria as the cultural center of the Mediterranean world. According to the *Letter of Aristeas*, it was Philadelphus's desire to include the Jewish Torah among the books in the Alexandrian Library that led to its translation into Greek by seventy-two Jewish envoys from Jerusalem. [See Septuagint.] The account probably is fictitious, but the dating of the Septuagint to his reign may reflect a historical reality, given the growth and rapid Hellenization of the Jewish communities of Egypt at the time.

From the reign of Philadelphus's successor, Ptolemy III Euergetes I (246–222 BCE), comes our first evidence of the existence of Jewish prayer-houses (Greek: *proseuchê*) in Egypt. It is also at this period—the second half of the third century BCE—that the typical contours of the fully

Hellenized Jewish community first come to the fore. On the one hand stands the brilliant career of Dositheus son of Drinyllos, a Hellenized Jew who abandoned the Jewish way of life and became secretary to the king and the eponymous priest of the cult of the deified Alexander; on the other, the writings of Demetritus, a Jewish historian and exegete (active in the reign of Ptolemy IV Philopator) who was the first to systematically incorporate the biblical accounts of the Jews' past into the chronological framework of Greek mythology and history. These two opposing poles—apostasy on the one hand and the development of new modes of Jewish culture on the other—remained characteristic of the Jewish Diaspora experience for many centuries to come.

In the reign of Euergetes's successor, Ptolemy IV Philopator (222–205 BCE), the Seleucid king Antiochus the Great conducted a successful invasion of Palestine, but was repelled after an Egyptian victory at the battle of Raphia (217 BCE). An uprising in Upper (Southern) Egypt resulted in the establishment of a native pharaonic dynasty in Thebes (217–186 BCE). It is to Philopator that 3 *Maccabees* attributes an attempt to enter the Jerusalem Temple, and a subsequent persecution of the Jews of Egypt, but the first of these accounts apparently is fictitious, while the second probably reflects the events of 145 BCE (see below).

In the reign of Ptolemy V Epiphanes (205–180 BCE), Palestine was irrevocably lost to Antiochus the Great following the Battle of Panias (200 BCE). After a century of Ptolemaic rule, characterized by a general benevolence toward the Jerusalem Temple and, as far as we know, by Jewish acquiescence, the Jewish mainland now passed to the Seleucids. Early in the reign of Epiphanes' successor, Ptolemy VI Philometor (180–145 BCE), the Seleucid king Antiochus IV Epiphanes twice invaded Egypt itself, but on the second occasion he was ignominiously compelled by a Roman envoy to withdraw (168 BCE). Philometor's early years were also characterized by internal insurrections and by constant strife with his brother, Euergetes, with whom he shared the throne from 170 to 164 BCE. Following a compromise brokered in part by the Romans, Euergetes left Egypt to become the king of Cyrene (163 BCE).

For the Jews of Egypt, Philometor's reign was a period of great visibility and prosperity. Their numbers were greatly swelled by refugees escaping the tumultuous events in Judea, including even the legitimate heir to the Jerusalem high priesthood, Onias IV, who settled in Heliopolis and built a temple there modeled after the one in Jerusalem. Culturally, too, this was a time of intense Jewish activity: Aristobulus, the Jewish philosopher and exegete, apparently was personally acquainted with Philometor, and large sections of the *Third Sibylline Oracle* may

be attributed to this period as well. Philometor's death, however, prompted the return to Alexandria of his brother and enemy, Ptolemy VIII Euergetes II Physcon (145–116 BCE), who wreaked his vengeance on Philometor's supporters, including Philometor's young son, who was swiftly executed. Onias IV supported Cleopatra II, Philometor's widow, and Physcon threatened to retaliate against the Jews of Alexandria. But the confrontation ended with a compromise, and the following years of Physcon's reign apparently saw continued prosperity for the Jews of Egypt.

The reigns of Physcon's two sons, Ptolemy IX Soter II Lathyrus (116–107 and 88–80 BCE) and Ptolemy X Alexander I (107–88 BCE), were rocked by constant internecine strife, as well as a major native revolt, crushed only with the destruction of Thebes in 88 BCE. It was during Lathyrus's exile from Egypt that he defeated Alexander Jannaeus in battle, but was subsequently checked by his mother, Cleopatra III. Her own plans to march on Jerusalem were foiled when one of her senior commanders, Ananias, the son of the above-mentioned Onias IV, dissuaded her from attacking his compatriots (103 BCE).

The following reigns, those of Ptolemy XI Alexander II (murdered shortly after his accession in 80 BCE), Ptolemy XII Auletes (80–51 BCE), Ptolemy XIII (51–47 BCE), Ptolemy XIV (47–44 BCE), and Ptolemy XV Caesarion (44–30 BCE), saw the gradual deterioration of Ptolemaic power, with the kingdom retaining its nominal independence, but in fact becoming a Roman protectorate. They also witnessed the rise to power of Cleopatra VII, who dominated the Alexandrian court from 52 BCE until her death in 30 BCE. Her successive affairs with Julius Caesar and Mark Antony brought various short-term gains, such as the acquisition of new territories (including the balsam groves of Jericho), but they also served to hasten Rome's involvement in Egypt's affairs. When Octavian (Augustus) defeated Antony at Actium (31 BCE), Egypt's fate was sealed. Octavian landed in Alexandria, Antony and Cleopatra committed suicide, and Egypt was annexed to the Roman Empire (30 BCE). Thus came to its end the last dynasty of pharaohs who, while not Egyptians themselves, made Egypt their home and saw its prosperity as a key to their own.

PUBLICATION. The first of the Dead Sea Scrolls were published in the 1950s, following their discovery between 1946 and 1947 by shepherds from the Ta'amireh tribe, who penetrated a cave in the Judean Desert and accidentally found jars containing several ancient Hebrew and Aramaic manuscripts. This cave, designated Qumran Cave 1, yielded seven manuscripts: Isaiah^a (1QIsa^a), Isaiah^b (1Q8), Peshet Habakkuk (1QPHab), Genesis Apocryphon (1QapGen, the sole Aramaic work of the seven manuscripts), Rule of the Community (1QS), the War Scroll (1QM), and Hodayot^a (1QH^a). In 1947 Eleazar L. Sukenik purchased Isaiah^b, the War Scroll, and 1QHodayot^a on behalf of the Hebrew University of Jerusalem. These manuscripts were published after Sukenik's death in 1955. The other four manuscripts were purchased by Athanasius Yeshue Samuel, who gave three of them (1QIsa^a, 1QS, and 1QPHab) to the American Schools of Oriental Research in Jerusalem. They were published in 1950 and 1951 by Millar Burrows, John C. Trever, and William H. Brownlee. These three manuscripts and the Genesis Apocryphon (1QapGen) were brought by Samuel to the United States where they were bought for Yigael Yadin in 1954. In 1956, Yadin published the most legible parts of the Genesis Apocryphon (1QapGen ii and xix–xxii). Because of the poor condition of the manuscript, column xii was not published until 1992 by Jonas C. Greenfield and Elisha Qimron. [See *biography of Yadin*.]

The seven manuscripts were not, however, the only texts from Cave 1 at Qumran. In 1949, after locating the precise position of the cave from which the manuscripts originated, the Department of Antiquities of Jordan began an excavation of the area under the supervision of its director, G. Lankester Harding, and Roland de Vaux, director of the École Biblique et Archéologique Française. This first scientific expedition led to the publication in 1955 of the first volume of *Discoveries in the Judean Desert*, a series that still is in progress, in which most of the later *éditiones principes* of the texts appeared. Dominique Barthélemy and Józef T. Milik edited volume one, which contains biblical and nonbiblical texts (1Q1–72). [See *Discoveries in the Judean Desert*.]

Between 1952 and 1962 other caves in the area were excavated, and those caves that yielded written material were numbered from 2 to 11. The texts originating from Caves 2, 3, and 5 through 10, the so-called *petites grottes* ("small caves"), were published by Maurice Baillet, Milik, and de Vaux in 1962 (*Discoveries in the Judean Desert*, 3; 2Q1–33, 3Q1–15, 5Q1–25, 6Q1–31, 7Q1–19, 8Q1–5, 9Q, 10Q). [See *biographies of Baillet; de Vaux; and Milik*.]

The cave, however, that yielded the greatest amount of material was Qumran Cave 4. Part of this material had been excavated by the bedouin of the region, who demanded an excessive price for it. With the financial help

of the Vatican Library, the University of Manchester, McGill University of Montreal, the University of Heidelberg, the McCormick Theological Seminary of Chicago, the All Souls Church of New York, and Oxford University, it was possible for the Department of Antiquities of Jordan to purchase the material found by the bedouin. The fragments that the bedouin brought to the museum and those found in the authorized expeditions number approximately fifteen thousand and belong to more than five hundred fifty manuscripts. The number of fragments as well as the difficulty of reconstructing the original manuscripts made it imperative to entrust them to an international team of scholars working in Jerusalem under the direction of de Vaux. The biblical manuscripts were assigned to Frank Moore Cross (whose lot consisted of 4Q1-10, 4Q13-21, 4Q23-43, 4Q47-54, 4Q70-81, 4Q99-100, and 4Q104-118) and Patrick W. Skehan (whose lot included 4Q11-12, 4Q22, 4Q44-46, 4Q55-69, 4Q82-98, 4Q101-103, and 4Q119-127). [See the biography of Cross.] The nonbiblical manuscripts were divided among John M. Allegro (4Q158-186), C. H. Hunzinger (who was replaced by Baillet in 1971; Baillet's lot was 4Q482-520), Milik (4Q128-157 and 4Q195-363), Jean Starcky (4Q521-575), and John Strugnell (4Q364-481). [See biographies of Allegro, Starcky, and Strugnell.] The task of the international team was difficult because of the large quantity of material. Nonetheless, they provided preparatory descriptions of the fragments, a transcription of and a concordance to them (which would be privately published by Hartmut Stegemann), as well as several provisional publications that appeared in scholarly journals.

During the years following the discoveries in Qumran Cave 4, the bedouin explored the area again and in 1956 they found another cave, Qumran Cave 11, which yielded some important texts. In this case, too, the high price requested by the bedouin necessitated the intervention of foreign institutions, who acquired the right to publish them, namely, the American Schools of Oriental Research and the Koninklijke Nederlandse Akademie van Wetenschappen. As a result the American Schools of Oriental Research published paleo-Leviticus^d (11Q1), Ezekiel (11Q4), and Psalms^a (11Q5); the Koninklijke Nederlandse Akademie van Wetenschappen published Leviticus^b (11Q2), Deuteronomy (11Q3), Psalms^{b-c} (11Q6-9), Targum of Job (11Q10), Apocryphal Psalms^a (11Q11), Jubilees (11Q12), Melchizedek (11Q13), Berakhot (11Q14), Hymns^{a-b} (11Q15-16), Songs of the Sabbath Sacrifice (11Q17), and New Jerusalem (11Q18). The price demanded was too high for Temple Scroll^{a-b} (11Q19-20), and they proved impossible to buy. During the 1967 Arab-Israeli War, these manuscripts were confiscated from an antiquities dealer, who was indemnified by the State of Israel. Yadin published Temple Scroll^a in 1977; an

English version of this seminal study was published in 1983.

In the meantime, the team working on the material found in Qumran Cave 4 was continuing its task. Allegro published the manuscripts assigned to him in volume 5 of *Discoveries in the Judaean Desert* (1968; this edition must be used cautiously and in connection with the long review article by Strugnell that appeared in *Revue de Qumrân* in 1970). Baillet published his texts in volume 7 of *Discoveries in the Judaean Desert* in 1982. Cross, together with other scholars, published part of his lot in 1994 in volume 12 of *Discoveries in the Judaean Desert: the Qumran Cave 4 biblical texts from Genesis to Numbers* (4Q1-10, 4Q13-21, 4Q23-27). Many of his texts had already appeared since Cross entrusted them to other scholars such as J. R. Davila (who published 4Q1 and 4Q2-10), N. R. Jastram (who published 4Q27), S. A. White (who published 4Q28, 30-31, 33-34, 36, 41) and J. A. Duncan (who published 4Q29, 32, 35, 37-39). Cross himself provided preliminary publications of some texts of his own lot (4Q13-14, 16, 41, 51-52, 71, 117).

After Skehan's death, a number of the manuscripts assigned to him were published by Eugene Ulrich and Judith A. Sanderson in 1992 in *Discoveries in the Judaean Desert*, 9 (paleo-Hebrew and Greek biblical manuscripts), and Skehan's successor, Ulrich, has published the other manuscripts of Skehan's lot in volumes 12, 14, 15, and 16 of *Discoveries in the Judaean Desert*. Skehan, too, however, gave preliminary information about many of the texts of his own lot (such as 4Q44, 55, 56-69a, 83-98b, 102; see also Muilenberg, 1954).

As for the nonbiblical texts entrusted to Starcky, he published Psalms¹ (4Q88; see also Wilson, 1985) and the Elect of God (4Q534). After Starcky's death, his texts were passed to Émile Puech, who published many of them in several articles as well as in his 1993 book.

Strugnell published part of Songs of the Sabbath Sacrifice^{d-1} (4Q403-405) in 1960 (Songs of the Sabbath Sacrifice was published in its entirety by Carol Newsom in 1985, and it has now been reedited by her in *Discoveries in the Judaean Desert*, 11), parts of Pseudo-Ezekiel^e (4Q385) in 1988 together with Devorah Dimant, Apocryphon of Moses B^{a-b} (4Q375-376) in 1990, and Miqtsat Ma'asei ha-Torah^{a-1} (4Q394-399) together with Qimron in 1993 (in *Discoveries in the Judaean Desert*, 10); finally, in 1994, some of Strugnell's parabiblical texts were published by other scholars (4Q364-367, 4Q369, 4Q382, 4Q422, in *Discoveries in the Judaean Desert*, 13).

Milik, the team member who had the largest lot, edited *Discoveries in the Judaean Desert*, 6 in 1977 (along with de Vaux), containing Phylactery A-U (4Q128-148; see also Kuhn, 1957), Mezuzah A-G (4Q149-155), Targum of Leviticus (4Q156), and Targum of Job (4Q157). Milik also

published all or parts of Enoch^a (4Q201–202, 204–207), Enoch Giants^a (4Q203), Astronomical Enoch^{a-d} (4Q208–211), and Enoch^c (also Letter of Enoch; 4Q212) in his seminal *The Books of Enoch* (1976), as well as several other texts in articles that appeared in scholarly journals. Furthermore, Milik, together with James C. VanderKam, in 1994 published the Qumran Cave 4 texts related to *Jubilees* (4Q216–228) in *Discoveries in the Judaean Desert*, 13.

The large amount of material entrusted to a comparatively small number of scholars, however, caused a considerable delay with regard to publication of all the fragments. As a matter of fact, only two members of the team published their lots in their entirety (Allegro and Baillet), whereas a large part of the texts remained unpublished for many years. This situation gave rise to harsh polemics as well as to unauthorized publications of texts based either on the photos of the texts that had been entrusted to the Huntington Library in San Marino, California (cf. Eisenman and Wise, 1992), or on the handwritten concordance to the texts from Qumran Cave 4 (cf. Wacholder and Abegg, 1991–1996).

The Israel Antiquities Authority, therefore, radically reorganized the international team in order to achieve the publication of the still unpublished texts. After de Vaux's death, Pierre Benoit became editor in chief, and Strugnell succeeded him. After Strugnell's retirement in 1990, Emanuel Tov was named as editor in chief and Puech and Ulrich were named as general editors. Some sixty new members joined the international team, so that the still unpublished texts were assigned to a much larger number of scholars who either replaced the earlier members of the team or joined them.

Owing to this reorganization, in the last six years the rate of publication has accelerated considerably, and many texts have appeared in preliminary editions. According to the director of the Israel Antiquities Authority, Amir Drori, all the unpublished manuscripts (less than 20 percent of the whole) will be published by the end of this century. It is now possible, furthermore, to consult the whole collection of manuscripts from the Judean Desert in the comprehensive edition on microfiche recently edited by Tov.

Qumran is not, however, the only site in the Judean Desert where written material was found. One of the twenty papyri from Wadi ed-Dahyeh was published by Cross in 1985; the Masada manuscripts have so far been only partially published, whereas the entire collection of manuscripts from Wadi Murabba'at was published by Benoit, Milik, and de Vaux in *Discoveries in the Judaean Desert*, 2 (1961). A group of manuscripts believed to have come from Nahal Se'elim (Seiyal) on the basis of the reports of clandestine excavators was later identified as

having come from Nahal Hever. These documents have been published in volumes 8 and 27 of *Discoveries in the Judaean Desert*. Other documents of this group will be published in *Discoveries in the Judaean Desert*, 36. Conversely, the documents certainly stemming from Nahal Hever have been published outside the *Discoveries in the Judaean Desert* series (see Lewis et al., 1989). A part of the written material from Nahal Mishmar has been published by P. Bar-Adon and B. Lifshitz, whereas other fragments will appear in *Discoveries in the Judaean Desert*, 36. Finally, Milik, C. Perrot, A. Grohman, and J. van Haelst have published the documents from Khirbet Mird.

PURITY. Matters of purity and impurity are a major concern of the sectarian Dead Sea Scrolls. The writer of *Miqsat Ma'asei ha-Torah* (MMT) (4Q394–399), for example, states that because cultic and purity practices in Jerusalem did not follow precisely the teachings of the Torah, he and others have separated from the people.

The scrolls found at Qumran reveal a surprising amount of congruence on the subject of purity. Although these documents represent differences of authorship, date, and genre, they consistently champion a more stringent standard of ritual purity than was currently observed in Jerusalem. This sectarian emphasis on purity is supported by Josephus's descriptions of the Essenes and by the site at Qumran, where an ancient aqueduct connected many cisterns and immersion baths. Ritual baths have also been found at Masada. [See *Miqva'ot*.]

Comparison of the scrolls with the Mishnah reveals their uniqueness since the Mishnah represents another ancient Jewish interpretation of the same purity laws of the Torah. The rabbis of the Mishnah, successors to the Pharisees, often hold the views that the scrolls condemn.

Rabbinic literature reveals that purity concerns were central not only for the sectarians but also for the early sages. This is especially true in the time of the Second Temple and shortly thereafter (B.T. *Bekh.* 30b; J.T., *Shub.* 1.3). After the destruction of the Temple, the study of ritual purity replaced practice of those laws, which depended on the cult. The laws of the Mishnah, nearly 25 percent of which relate to purity matters, reflect the rabbinic expectation that the Temple eventually would be restored. Nevertheless, whereas the sectarians preferred a stringent interpretation of the Torah's purity laws, the rabbis tried to limit purity restrictions whenever possible.

The scrolls most relevant to this discussion are: Rule of the Community from Cave 1 (hereafter, 1QRule of the Community, 1QS), Rule of the Congregation (1Q28a), Damascus Document (4Q266–273, CD), Florilegium (4Q174), MMT (4Q394–399), Ordinances^b (4Q514), Purification Rules A (4Q274), and Temple Scroll^a (11Q19).

Terms. *Qodesh qodashim* ("holiest of the holy") refers to places, persons (e.g., the high priest), and items (usually food) that have been set aside exclusively for the service of God at the highest level of sanctity. *Qodesh* ("holy") refers to items of lesser sanctity. *Tahor* ("pure") is the absence of impurity; *tohorah* ("purity") can refer to all pure belongings of the community but usually refers only to the community's food and drink. *Tame* ("impure") and *tum'ah* ("impurity") refer to those items that threaten the pure status of Israel. [See *Tithing*.]

Biblical Foundations. The purity system of the Torah provides the foundation for all subsequent Jewish discussions of the subject. Purity is a state of being commanded

of all Israelites in order to enable a holy God to live among and protect them (cf. *Dt.* 23.14). God has made his house the sanctuary and from its inner room, the Holy of Holies, he has promised to speak to Israel (*Ex.* 25.22).

In order to guard the holiness of the sanctuary, purity had to be maintained in Israel. Purity restrictions were more severe the closer one was to the sanctuary that was in the center of the Israelite camp. Only pure priests could enter the sanctuary. Levites lived around it and worked in its courtyard. The rest of Israel live around the Levitical camp.

According to anthropologists, food laws maintain the lines of distinction between those within a culture and those outside it. The holier the person, the greater the food privileges as well as the restrictions. This is certainly true of the Torah. Israel, the chosen people, eats only certain pure foods. The Levites, the chosen tribe, are supported by a pure food tithe from the Israelites. The priests, the chosen family of Aaron, receive holy food, including tithes and sacrificial portions, from all Israel.

Impurities are those items and conditions that threaten the pure status of Israel. Sin, of course, is the greatest of impurities and must be expiated by repentance and sacrifice; otherwise the sinner must be expelled from the community. Some severe impurities, including scale disease and abnormal genital discharges, are considered curses for sin (*Lv.* 14.34, *Dt.* 28.27, *2 Chr.* 26.19). Repentance, healing, and sacrifices are necessary to restore the person to the community.

Most impurities (for example, menstrual blood, corpse contamination), however, are incurred in the normal course of life and are not the result of sin. They are easily purified, primarily by immersion in water and the passage of time.

Scholars have debated the rationale underlying the Torah's purity system. The most persuasive view is that items are impure because they are in some way connected to or representative of death (Milgrom, 1991). Corpse contamination is the most severe of all impurities. People diseased by the flaking of their skin or open sores visually illustrate the process of decay. Even the discharge of genital fluids represents a loss of life-giving forces. Most impure animals (carnivorous ones) have a clear association with death. Scripture teaches that obedience will lead to blessing and life, while sin leads to curses and death (*Dt.* 30.15–20). Hence, what is associated with death must be restricted and avoided because it is incompatible with the holy God who gives life.

Purity in the Dead Sea Scrolls. There is a tendency in the Dead Sea Scrolls to expand the Torah's categories of purity and to interpret the laws of impurity stringently. Impurity is regarded as a powerful enemy that can be neutralized only by greater holiness in Israel.

Purity classifications. The classifications of purity in the scrolls reveal a common desire to extend holiness in Israel. The Torah's categories are interpreted maximally. However, since the sectarians had no control over the Temple, much of the data represents only an ideal.

According to Temple Scroll¹, the *qodesh qodashim* is not just a single room in the sanctuary but the entire sanctuary, the altar area, the laver, and the stoa (11Q19 xxxv.8–9). With regard to persons, the authors of Miqtsat Ma'asei ha-Torah (MMT) and 1QRule of the Community understand *qodesh qodashim* to include all priests, not just the high priest (4Q397 5.6–8; 1QS viii.5–6; ix.2–8; cf. 4Q400 1.19).

Just as the priestly area is interpreted maximally so is priestly food, *tohorat ha-Miqdash*. According to the Temple Scroll, Israelites must contribute all fourth-year fruit, animal tithes, and an annual tribute of birds, wild animals, and fish to the priests (11Q19 lx.3–4; xlvi.17; cf. 4Q396 3.2–4; Nm. 31.28–29). By contrast, the rabbis do not require any priestly tribute from birds, game, or fish, and they allow farmers to eat their own animal tithes (after priestly portions are given) and fourth-year fruit (*Zev.* 5.8, *Sifrei on Numbers* 6[9]). In addition, Temple Scroll¹ states that all slaughter conducted by anybody living within three days' travel of Jerusalem was to be carried out at the sanctuary with substantial portions of each sacrifice given to the priests (11Q19 lii.13–21; cf. *Lv.* 17.3–4). Levites too received a sacrificial portion, a gift not established by scripture.

The category of *qodesh* is expanded as well. The authors of MMT and the Temple Scroll emphasize the holiness of the entire city of Jerusalem (4Q394 3.10–12; cf. 2.16–18). The Temple Scroll bars all bearers of impurity from the city and requires of them three days of purification, probably based on the holiness regulations of Israel at Mount Sinai (cf. 1Q28a i.26). Sexual intercourse is forbidden in the city according to both the Temple Scroll (11Q19 xlv.11–12) and the Damascus Document (CD xii.1–2).

Other Israelite cities are pure to a lesser degree than Jerusalem. The Temple Scroll states: “[And let] their cities [be] clean forever, and the city, which I will hallow by settling my name and [my] temp[le within (it)], shall be holy and clean” (11Q19 xlvi.3–4; cf. 4Q394 2.17–18).

In some sense every Israelite is *qodesh* (“holy”) according to the scrolls (4Q396 4.4–8; 1QS viii.5; ix.2–8). Jews are forbidden to marry gentiles or accept their food (4Q394 1.6–11; 4Q174 1.4, cf. *Dt.* 23.2–4, Josephus's *The Jewish War* 2.409–410, *Zev.* 4.5). The Temple Scroll further distinguishes between the *ish tahor* (“pure individual”) who will observe greater purity, and the *adam mi-Yisra'el* (“[ordinary] Israelite”).

Without control over the Jerusalem Temple, the com-

munities of the Dead Sea Scrolls could only approximate the holiness they desired. The Rule of the Community describes the standard of purity that was in practice at Qumran. Ordinary food was eaten in a state of purity. All members of the community had to bathe before eating the *tohorah*, the pure communal meal (1QS v.13; cf. *The Jewish War* 2.129). According to other sources, Community members changed into white clothing before eating it, and no physically impaired person could participate (*The Jewish War* 2.129–131, *Jewish Antiquities* 18.21; 1Q28a ii.3–10; cf. 1QM vii.4–6). Exclusion from the *tohorah* was a penalty for members who violated the community rules (1QS vii.2–21; vii.22–24; *The Jewish War* 2.143).

Candidates for membership in the community were put on probation and examined for an entire year before they were allowed to eat the communal food; at least two years of probation were necessary in order to drink communal liquids (1QS vi.17–21; *The Jewish War* 2.138; cf. CD xv.14–15). By contrast, according to the rabbis, ordinary food was merely invalidated if it became impure; no penalties applied.

Food terms reinforce the distinction between priest and Israelite. The food of the laity is called *tohorat ha-rabbim* (“pure [food] of the many”; 1QS vi.16–17, 25; vii.3) or *tohorat anshet ha-qodesh* (“the pure (food) of the holy persons”; 1QS v.13; viii.17). However, *tohorat ha-qodesh*, the “pure sacred food,” required greater sanctity (Milgrom, 1992).

Levels of purity with regard to food are already present in the Bible. They are distinguished by the nature and purpose of the food (e.g., sacrificial, pure, ordinary) and the restrictions that are imposed. These determine which foods can be eaten, who can eat them, how much time is allowed for eating it, and the place of consumption (*Lv.* 7.16–18; 22.10–16). Holier foods will be under greater restrictions. According to *Leviticus*, the holiest of priestly foods could only be eaten in the sanctuary court by male priests (*Lv.* 6.11). At the very least, all Israel had to eat at a minimum level of purity which required draining animal blood properly so as not to ingest it, avoiding certain animals for food, and eating no suet (*Lv.* 7.23–27; 11.1–47; 17.10–16; cf. *Dt.* 12.23–25).

The Damascus Document may refer to the same community as the Rule of the Community. Candidates for membership in the group were inspected for one year (CD xv.14–15). Physically impaired persons were excluded because of the presence of the holy angels within the community (CD xv.15–16). Disobedient members were barred from the communal meal (CD ix.21).

The Damascus Document distinguishes between those Israelites who live in a camp of “perfect holiness” and those Israelites who live in the “camps” (i.e., cities of Is-

rael). The text has been interpreted to mean that the former were celibate (probably residents of Jerusalem and/or Qumran) and the latter were married (CD vii.4-7) (Qimron, 1992). Josephus may be referring to the same movement when he says some Essenes are celibate (*The Jewish War* 2.120; *Jewish Antiquities* 18.21) and others are not (*The Jewish War* 2.160). [See Celibacy; Marriage and Divorce.]

Impurities. The particular laws of impurity are largely compatible among the scrolls. Ambiguity in the Torah is settled by adopting an interpretation that meets all possible requirements, however strict (cf. Milgrom, 1989). The following impurities are discussed in the scrolls: corpses, scale disease, genital discharges, animal carcasses, and excrement.

The Qumran sect buried the dead outside the community in accordance with *Numbers* 5.2. The Temple Scroll bans all corpse-contaminated persons from Jerusalem and orders them quarantined in other cities (11Q19 xlv.17, xlvi.13-15).

The tent in which a person died and everything in it was impure for seven days according to the Torah (*Nm.* 19.14). The Temple Scroll includes all types of dwellings in its interpretation of "tent" (11Q19 xlix.5-6). In addition to the biblical rites of sprinkling a contaminated tent with special ashes and water, dwellings had to be cleansed even to the washing of locks and doorposts. Walls, doors, and floors had to be scraped (11Q19 xlix.12-16). Sealed or unsealed vessels of all types, including stone, were considered contaminated along with their contents (11Q19 xlix.8-15; as opposed to *Kelvin* 1.1). Even nails and pegs in the dwelling wall became impure (CD xii.17-18; cf. *Kel.* 11.3).

Moreover, a woman carrying a dead fetus was considered as impure as a tomb because she contained a dead body. Anyone touching her, or in the same room with her, was contaminated for seven days (11Q19 l.11-16; as opposed to *Hullin* 4.3).

By contrast, rabbinic law allows the corpse-contaminated person after immersion to enter all but sacred areas. The definition of a tent in the scriptures is limited to structures not attached to the ground (*Sifrei* on *Numbers* line 129 [page 160 H. S. Horowitz edition]). Other susceptible items are limited to a few types of unsealed, usable vessels (*Kel.* 2.1).

Like the rabbis, the scrolls consider the *metzora'*, a person afflicted with scale disease, to be a sinner (cf. T., *Neg.* 6.7; B.T., *Arakh.* 16a). Fragments from Purification Rules A (4Q274) and the Damascus Document (4Q270) state that *tsara'at* ("scale disease") is induced by an evil spirit and that the *metzora'* must plead for mercy as a sinner. The scrolls follow the inspection and purification procedures of *Leviticus* (4Q267 9.1-14; *Lv.* 13-14). According

to the Temple Scroll, special places are to be established for scale-diseased persons outside of all cities (11Q19 xlvi.16-18; cf. 4Q396 3.4-8; 4Q274). The Mishnah excludes the *metzora'* only from walled cities (*Kel.* 1.7; cf. *Jewish Antiquities* 3.264, *Against Apion* 1.28).

According to the Temple Scroll, all persons discharging sexual fluids (menstrual blood or semen), are to be removed from Jerusalem and quarantined within ordinary cities (11Q19 xlvi.13-17). Serekh Damascus fragments (4Q265) reveal that women discharging blood after childbirth were impure for forty to eighty days, depending on the gender of the child (cf. *Lv.* 12.4-5). In Galilee a desperate woman with an abnormal discharge approached Jesus publicly (*Mk.* 5.25-27). This was a matter of some concern: abnormal discharges (e.g., gonorrhea) were considered curses for sin (Rule of the Community 4Q274).

The author of the Temple Scroll requires men who have had seminal emissions to leave Jerusalem until they are purified. Those who are approaching the city but have had sexual intercourse must bathe and launder their clothing, remaining outside the city in a special area for three days before entering (11Q19 xlv.11-12; cf. CD xii.1-2). By contrast, the rabbis consider such persons pure for all ordinary purposes after immersion and for all sacred purposes after sunset (*Tev. Y.* 2.2-3; *Sifra Shemini Sheratsim* 8.9).

Since the Temple Scroll does not mention installations in Jerusalem for women during their times of impurity, and since no sexual intercourse is allowed there, apparently no women were to live in the city (Yadin). It is possible that there were such installations in Jerusalem in the Second Temple period for women with fluxes (*Nid.* 7.4; *A.R.N.* 2.3; Targum Pseudo-Jonathan on *Lv.* 12.2; *Jewish Antiquities* 3.261).

The scrolls emphasize that the whole carcass of an animal not ritually slaughtered is defiling, even its skin and claws (11Q19 li.4-5; 4Q394; cf. *Lv.* 11.39-40). The rabbis claim that hides, horns, and hooves are not included in this injunction and do not convey uncleanness (*Hul.* 9.1; cf. *Sifra Shemini Sheratsim* 10.2; *Yad.* 4.6). According to the Temple Scroll and MMT, the hides of such animals cannot be brought into Jerusalem even as flasks (11Q19 xlvii.7-18; 4Q394). This view was actually put into law by Antiochus III (r. 223-187 BCE) one of the Seleucid rulers of Palestine.

According to the Temple Scroll, no "place for a hand," a latrine, was allowed in Jerusalem, but rather at a location 3,000 cubits northwest of the city (11Q19 xlvi.13-16; cf. 1Q33 7.6-7). This is based on the Deuteronomic law requiring soldiers to leave their camp to relieve themselves (*Dt.* 23.12-13). Yadin suggests that the Gate of the Essenes in Jerusalem was used by the sect to walk to their latrine area (Yadin, 1983). Josephus states that the Es-

senes even refrained from defecation on the Sabbath so as not to desecrate it (*The Jewish War* 2.147-149). By contrast, the rabbis do not regard excrement as impure in any context (*Ter. Y.* 2.1) and demand that latrines be set up in every city (B.T., *San.* 17b).

Transfer of impurity. Impurity is a more penetrating force in the scrolls than in the Mishnah. This is clear from the expanded categories of susceptible items discussed above. Additionally, anyone who touched either an impure person or an individual in the process of purification became impure and was not allowed to eat until after bathing and laundering his or her clothing. Josephus states that among the Essenes senior members would not touch junior members for fear of defilement (*The Jewish War* 2.150). Even objects on which the impure person had lain or sat or which he or she had merely touched could transmit impurity to other persons (4Q274; cf. CD xii.17).

As noted above, the scrolls are especially concerned with food and drink. Liquid not only receives but can transmit impurity (CD xii.16-17). If a liquid is poured out of a vessel onto an impure item, the impurity will be transmitted by the flow upward back into the vessel (4Q394 3.5-8). Even the food and drink of impure persons was a concern; impure persons had to bathe before eating (4Q514; 4Q274).

Purification. Purifications prescribed by the scrolls generally intensify the biblical instructions. As a minimum purification from any impurity, laundering, bathing, and waiting for sunset are required (4Q396 4.1; 11Q19 1.8-9). Only clean water could be used for purification, and it had to cover the whole person (4Q267 17.8-9; CD v.10-13). The rabbis require only bathing as a minimum purification; a person who has immersed is granted access to everything in the profane sphere and waits for sundown only to gain access to the holy.

The sectarians required immersion for ritual impurity as well as moral impurity. Sinners were instructed to immerse themselves in water in order to be purified. In fact, all their belongings were considered in some way (?) impure (1QS v.20; cf. 1QpHab viii.3-13). However, without repentance immersion was meaningless (1QS iii.3-9; v.13-15). The same view is endorsed by both John the Baptist, who baptized repentant sinners (*Mt.* 3.6-11), and Philo of Alexandria (*The Unchangeableness of God* 7-8).

Rationale for purity. The key to understanding the maximal interpretations of purity in the scrolls lies in the recognition that the writers were primarily priests (Schiffman, 1989; Schwartz, 1990). The responsibility of the priests was to ensure the sanctity of the sanctuary. The greatest threat to the sanctuary was not physical assault from outside but impurity resulting from within Israel. The priests had to be certain that God was pleased with

his house or else he would either depart, leaving Israel defenseless, or go to war against her (4Q267 2.8-9). Hence, ambiguity in the Torah was settled by stricter interpretation. Most rabbis, by contrast, were laymen. They too regarded the Torah's laws as sacred and inviolable. However, their interpretation reveals a bias in favor of the laity, restricting priestly gifts and limiting the purity regulations to the minimal requirements.

The authors of the scrolls looked forward to the messianic era when they would control the Temple and its cult. Focus on the future sharpened because of current failure to bring about desired holiness. The sectarians considered themselves a temporary substitute for the Jerusalem Temple, even referring to themselves as a "Temple of Men" (4Q174 1.6; cf. 1QS viii.5-9; ix.3-6). The laws discussed above forbidding physically impaired persons from the group, abstaining from sexual intercourse, and bathing before meals were incumbent on the priests on duty in the Temple. Since the community was a substitute for the Temple, the sectarians tried to enforce these laws among themselves.

Unlike the early Christians, the sectarians did not think of themselves as a permanent replacement for the Temple. Rather, the scrolls emphasize the necessity of observing all the ritual purity laws of the Torah. Jesus, by contrast, appears to marginalize the whole issue of ritual purity by teaching that only what comes from a person's heart will defile him (*Mk.* 7.14-23; *Mt.* 23.25; *Lk.* 11.38-40). In fact, Mark states that Jesus declared all foods clean (*Mk.* 7.19). According to *John*, purity comes by association with Jesus (*Jn.* 13.10, 15.3). The author of *Hebrews*, too, believes that Christianity has replaced the physical cult and its purity laws (*Heb.* 10.1-25).

HANNAH K. HARRINGTON

PYTHAGOREANS. The religious and philosophical movement to which the Pythagoreans belonged was founded in the sixth century BCE by Pythagoras, a shadowy historical figure who was the subject of many ancient legends (see Diogenes Laertius, *Lives and Opinions of Eminent Philosophers*, 8.1–50; Porphyry, *The Life of Pythagoras*; Iamblichus, *On the Pythagorean Way of Life*). Pythagoras probably was born c.570 BCE on the island of Samos but emigrated in approximately 529 BCE to Croton in southern Italy, where he inaugurated the so-called Italian school of ancient philosophy by founding the fraternity that bore his name. He is usually credited with teaching the theory of metempsychosis and the importance of numbers as the key to understanding the structure of the universe. His school, which had Apollo as its patron deity and "fellow God" as its slogan, was characterized by a strict ascetic discipline and a communal way of life. The closeness of his community (said to have numbered nearly three hundred) is indicated by the fact that Pythagoras is credited with having coined three of the most famous ancient maxims on friendship: "friendship is equality," "friends have all things in common," and "a friend is another I." Although Pythagoras and his followers ini-

tially achieved a high degree of success and wielded considerable political power, they soon faced fierce political opposition, and it is debated whether the early Pythagoreans survived the classical period.

During the Hellenistic period, however, a large number of Pseudo-Pythagorean writings were produced. Some of these may be as early as the fourth century BCE, but most scholars date the bulk of these writings to the first century BCE or later. These documents, which contain various Platonic and Peripatetic ideas, contributed to the rise of Neo-Pythagoreanism, which won the allegiance of men such as Apollonius of Tyana and Numenius of Gerasa. This revival of interest in Pythagoras and his teachings began during the period when many of the nonbiblical Dead Sea Scrolls were produced.

Even before the scrolls were discovered, scholars such as Zeller and Levy had emphasized the importance of Pythagoreanism for the development of the Essenes, grounding their arguments in Josephus' assertion that they "practiced the way of life taught among the Greeks by Pythagoras" (*Jewish Antiquities* 15.10.4 sec. 371). Subsequent to the discovery of the scrolls and the standard identification of Qumran as an Essene community, a number of scholars have provided fresh assessments of the affinities between the Pythagoreans and Essenes/Dead Sea Scrolls. The degree of similarity in such comparisons inevitably depends not only upon the particular evidence employed but also upon the interpretation of that evidence.

It is commonly affirmed that both the people of Qumran and the Pythagoreans were ascetic groups who wore white linen, lived communally with no private property, devoted themselves to prayer and purifications, held sessions where the teachings of the group were expounded, and celebrated common meals. In addition, both groups seem to have required a solemn oath of initiation but otherwise prohibited or restricted the use of oaths. The observance of the sun's movements was also important to both groups, and some have argued that the solar calendar used by the sectarians was originally devised by the Pythagoreans.

Many of the affinities between the two groups are likely the result of their involvement in a similar enterprise, the general influence of Hellenistic culture (with its Pythagorean elements) in Palestine, and the sect's adoption of the legal form used by Hellenistic private and religious associations. Attempts to demonstrate a more pervasive or direct Pythagorean influence—such as Dupont-Sommer's (1955) interpretation of the Rule of the Community from Cave 1 at Qumran (1QS x.4) as a reference to the Pythagorean sacred number fifty—have proved to be either erroneous or unpersuasive. [See Rule of the Commu-

nity.] Yet there were sufficient similarities between the two groups to justify Josephus' analogy.

Q

QABBALAH. See Kabbalah.

QAHAT (or Kohat; Heb. *qht*), second son of Levi and the father of Amram, Izhar, Hebron, and Uzziel (*Ex.* 6:18; *Nm.* 3:19). He forms a link in the priestly line as it descends from Levi, through Amram to Aaron. Qahat died at the age of 133 (*Ex.* 6:18). The Kohathites were a major priestly family and are mentioned as late as the fifth century BCE (cf. *1 Chr.* 9:32).

In the literature of the Second Temple period, Qahat does not figure largely. He is mentioned as the son of Levi in *Jubilees* 44:14 and *Testament of Levi* 11:3; 12:2. In Aramaic *Levi* secs. 67–68, Qahat is exalted: he was born on the first day of the first month, at the rising of the sun, which is a particularly significant date according to the solar calendar (sec. 68). Aramaic *Levi* states that Qahat “would have an assembly of all the people and . . . the beginning of kings, priesthood for Israel” (sec. 67; cf. *Gen.* 49:10). In the same vein, *Testament of Levi* 12:6 interprets the name Qahat as “the first place of majesty and instruction.” As in Aramaic *Levi*, both the royal and priestly dimensions of Qahat are stressed. This combination is underlined by the exegesis of *Genesis* 49:10 underlying Aramaic *Levi* sec. 67. That verse of *Genesis* was originally directed to Judah (a royal reference) but is applied by Aramaic *Levi* to Qahat (a priestly reference). The same combination of royal and priestly attributes is to be found in a fragment of Aramaic *Levi* from Cave 1 (1Q21) not parallel to sec. 67. It is surely not by chance that Qahat figures in these documents, which are closely related. There are numerous copies of both *Jubilees* and Aramaic *Levi* at Qumran. The only other work in which Qahat plays a prominent role is the *Testament of Qahat* (4Q542).

Although most scholars consider the *Testament of Qahat* a farewell address, the surviving text, strictly speaking, indicates only that it is an exhortation, and no details are given about the narrative framework. A comparison with the *Testaments of the Twelve Patriarchs*, however, shows that a testamentary context is plausible. Since the speaker mentions both “Amram my son” and “Levi my father,” clearly he is Qahat.

One large and three smaller fragments of the *Testament of Qahat* survive, apparently parts of four different columns. The large fragment preserves one column al-

most completely and the right half of the second one. The writing is careless, and corrections have been made by both the copyist and by a later hand. Paleographically, the *Testament of Qahat* is dated to the late second century BCE, a date not contradicted by a carbon-14 sample (Puech, 1988). The text is in Late Aramaic and some Hebraisms have been detected. It contains some expressions that are not dissimilar to Aramaic *Levi*.

The first fragment opens with direct speech to “my sons.” They are exhorted to observe purity and holiness—priestly qualities. Similarly, intermarriage and duplicity are excoriated. In the course of the second column, the speech to the sons becomes directed specifically to Amram. The transmission of teaching to Amram from Abraham, via Isaac, Jacob, and Levi, is stressed, as well as an “inheritance,” which the addressees received from their fathers and which they are to pass on to future generations. In column ii, this inheritance is specifically said to be “books,” apparently books of priestly teaching. The emphasis on transmission takes up a theme that is prominent in Aramaic *Levi* and was particularly important for the justification of the priestly teaching of the group responsible for the *Testament of Qahat* (cf. Aramaic *Levi* secs. 13, 22, 50, 57). *Jubilees* similarly emphasizes the line of transmission from antiquity, although its stress is chiefly on the antediluvian generations (*Jub.* 7:38–39, 10:14, 21:10; but see also *Jub.* 45:16). Reference is made to eschatological reward and punishment and, in the second column, to light and darkness. The document seems to refer to resurrection on the day of [judgment?], and the eschatological punishment is described as fire, abysses, and caverns. This is reminiscent of material in the early part of *1 Enoch* (see, for example, *1 En.* 10:13).

The *Testament of Qahat* from Cave 4 was most likely composed in priestly circles, either preceding the Qumran community or early in its life. These circles viewed their authoritative tradition as derived not just from Levi, but from instructions transmitted to Levi from Abraham. In Aramaic *Levi* these instructions are even attributed to Noah (sec. 57). At least one of the purposes of the *Testament of Qahat* is the authentication of this tradition. Like Aramaic *Levi*, which is definitely pre-Qumran in date of composition, the *Testament of Qahat* contains dualistic elements—light and darkness—which later become extremely important at Qumran. Its concern with eschatol-

ogy would not be discordant with composition in the second century BCE. [See Light and Darkness.]

Puech, following and moderating the earlier views of Milik, argues that the Testament of Qahat is later than Aramaic Levi, which itself precedes *Iubilees*. This is the case, he maintains, since the Testament of Qahat and *Iubilees* both seem to have used Aramaic Levi. The implications of this series of relationships for the dating of the composition of the Testament of Qahat are clearly that it was written after Aramaic Levi (third or early second century BCE) and before the time of the copying of the Qumran manuscript, in the late second century BCE. It is representative of the development of priestly ideas that became central for the Qumran group. The three sacerdotal writings, Aramaic Levi, the *Testament of Qahat*, and the *Visions of Amram* (4Q543–548) form a series of priestly instructions; Aramaic Levi is the oldest, and the other two works depend on it although their relationship cannot be determined.

No traces of the Testament of Qahat, other than the single manuscript, have been found either at Qumran or elsewhere. Milik suggests that the works of “the three patriarchs” mentioned in *Apostolic Constitutions* 6.10.3 actually are the writings associated with Levi, Qahat, and Amram. This view, however, has not been widely accepted, and in that case there is no reference whatsoever to the *Testament of Qahat* beyond the single manuscript from Qumran.

QANEH, NAHAL. See Ghweir, Wadi.

QIDRON, NAHAL. See Nar, Wadi en-

QOHELETH. See Five Scrolls.

Q SOURCE. The term Q refers to the source, no longer extant, believed by many to have been used by the New Testament Gospel writers Matthew and Luke. [See Luke, Gospel of; Matthew, Gospel of.] Much work has been done in recent years, seeking to identify characteristic or distinctive features of Q and to see if one can discern something about the group of people who preserved this material and handed it on. Q is very Jewish in its outlook, with a strong insistence on the validity of the Law (*Lk.* 10.17 par.), with little if any awareness of the Christian movement extending beyond the boundaries of Judaism to include gentiles, yet full of tirades against the Jewish audience.

Apart from Jerusalem, the only place names mentioned in Q are in Galilee (Chorazin, Bethsaida, Capernaum in *Lk.* 10.13–15 par.). Hence, many have presumed that Q emanates from a northern Palestinian milieu. This makes any direct relationship between Q and the Dead Sea Scrolls unlikely. There are, however, some significant parallels. For example, Q’s account of John the Baptist’s prediction of a coming baptism with “holy spirit and fire” (*Lk.* 3.16 par.) is strikingly similar to the reference in the Rule of the Community from Cave 1 at Qumran to the “spirit of holiness,” “refining” (i.e., by fire), and cleansing “like purifying waters” (1QS iv.20–21). [See John the Baptist; Rule of the Community.] This is, however, one of a number of parallels between the New Testament’s accounts of John the Baptist and the Qumran texts (leading some to speculate whether John himself might once have belonged to the Qumran community). Similarly, the absolute ban on divorce in Q (*Lk.* 10.18 par.) can be compared with an apparently similar ruling in the Damascus Document (CD iv.20–v.5) and in Temple Scroll^a (11Q19 lvii.17–19). However, such a ban is not peculiar to Q in the Gospels (cf. *Mk.* 10.1–12). Thus, any link with Qumran is not specific to Q.

Both Q and Qumran show a positive attitude to poverty and a disregard for family and possessions (*Lk.* 6.20–21, 9.59–10.16, 12.33–34 pars.; cf. the self-reference of the Qumran community to themselves as the “poor” (for example, Peshar Habakkuk [1QP Hab xii.3, 6, 10] or in Peshar Psalms^a on Psalm 37 [4Q171 2.8–9, 3.9–10] as well as the existence of the community itself). On the other hand, the similarities should not be overplayed; Q Christians did not apparently form themselves into a separate community, as at Qumran, and Qumran literature tends to use the vocabulary of “poor” in a more “religious” sense than a socioeconomic one (as in *Lk.* 6.20). Any similarities between the lifestyle reflected in Q and in Qumran texts probably simply illustrate a broader social phe-

nomenon of uprooting (for a wide variety of reasons) in first-century Palestine (see Theissen, 1992).

More significant may be the use of *Isaiah* 61 in Q and some Qumran texts. *Isaiah* 61.1–2 probably lies behind Q's version of Jesus' Beatitudes (*Lk.* 6.20–21 par.) and the saving of Jesus to John the Baptist's messengers (*Lk.* 7.22 par.). Q's Jesus thus presents himself as the eschatological prophetic messenger of *Isaiah* 61. Similar language can be found in some Qumran texts, for example, in some of the Hodayot (1QHodayot' 1QH xxiii.15 [xviii.14], perhaps of or by the Teacher of the Righteousness) and above all in the Melchizedek text (11Q13), where *Isaiah* 61 underlies the whole text and is linked with *Isaiah* 52.7. [See Hodayot; Teacher of Righteousness.] A striking parallel to the Q saying in *Luke* 7.22 has now also been found in the Messianic Apocalypse (4Q521), where, exactly as in *Luke* 7.22, there is a reference to "raising the dead" alongside "bringing good news to the poor" (4Q521 2.ii; 4.12). [See Apocalyptic Texts.] It is likely that both texts presuppose a prophetic background, specifically the traditions about Elijah as one who raised the dead (*1 Kgs.* 19). So too the dominant place of Psalm 146 in the Messianic Apocalypse may illuminate some of the sayings in Q (cf. the beatitude about the hungry in *Lk.* 6.21a with Ps. 146.7, otherwise difficult to parallel in *Is.* 61). Q and the Messianic Apocalypse may therefore witness to common exegetical traditions, interpreting *Isaiah* 61 in conjunction with other biblical texts.

Direct contact between Q and Qumran is unlikely. But the common links may witness to shared traditions that can illuminate study both of Q and of the Dead Sea Scrolls as writings from different parts of the wide spectrum of Judaism we now know to have existed in Palestine in the first century CE.

CHRISTOPHER M. TUCKETT

Archaeology

About a year after the scrolls came to the notice of the scholarly world, the cave in which the scrolls were found (Cave 1Q) was rediscovered by an officer of the Arab Legion. In winter of 1949, the cave was excavated by an expedition headed by Roland de Vaux and G. Lankester Harding and sponsored by the Jordanian Department of Antiquities, the Palestine (Rockefeller) Archaeological Museum, and the École Biblique et Archéologique Française of Jerusalem. At the end of the three-week dig the number of scrolls found in this cave was raised from the original seven found in 1947 and a few unearthed by illicit diggers, to seventy-two. Unlike the first scrolls, which were quite well preserved, the latter were assembled from fragments. The discovery in 1952 by bedouin of another scroll-bearing cave (2Q) alerted the above-mentioned institutions to the possibility of the existence of further caves housing manuscripts. In the spring of that year an intensive survey, which the American Schools of Oriental Research in Jerusalem also joined, was carried out. The cliffs north and south of Qumran were searched methodically, but of the hundreds of loci searched only one cave with manuscripts was found (3Q, the Copper Scroll Cave). The bedouin were able to discover two more caves—Cave 6Q in 1952 and Cave 11Q in 1956.

The year 1952 saw also the discovery of Cave 4 at Qumran, the richest of all caves, again by bedouin. This cave, unlike the natural caves located in the hard limestone, is an artificial cave dug in the soft marl southwest of the Community Center. Following this find, a survey, also headed by de Vaux, investigated the marl plateau south and southwest of the Center. Seven caves were excavated by this expedition—4Q (as a matter of fact two caves 4Qa and 4Qb) 5Q, and 7Q–10Q.

The race between the desert dwellers and the archaeologists has had four stages: discovery of Cave 1 (not followed by an archaeological initiative); discovery of Cave 2 (followed by an extensive survey of the rocky slopes and the finding of Cave 3); discovery of Cave 4 (followed by a survey of the slopes of the marl plateau and the digging of 5Q, 7Q–10Q); the bedouin discovery of 6Q and 11Q. Cave 11 was the last cave to produce manuscripts and like the first cave it contained well preserved ones.

The areas surveyed by de Vaux were resurveyed in 1984–1985 by an expedition headed by J. Patrich, working under the aegis of the Hebrew University. As of 1986, this expedition also conducted four seasons of excavations in five caves in the limestone cliffs. No new scrolls were unearthed, but data on the nature and history of the caves were obtained, mostly confirming the conclusions reached by de Vaux. In the winter of 1995/1996 an expedition led by Magen Broshi and Hanan Eshel (on behalf

QUMRAN. [This article comprises two parts: Archaeology and Written Material.]

of Bar Ilan University, the Israel Exploration Society, and the Israel Museum) surveyed the area north of the Community Center and dug two caves there. No written material was disclosed, but the data obtained show that this area was honeycombed by at least twenty residential caves. The site itself, the "Community Center," was excavated in the years 1951 and 1953–1956 by an expedition directed by de Vaux on behalf of the École Biblique (in 1951 the expedition was co-directed also by G. Lankester Harding, who represented the Jordan Department of Antiquities).

In 1967–1968 S. H. Steckoll excavated ten graves in the necropolis, and one of the skeletons unearthed is the only one (out of some fifty) that has been studied properly by physical anthropologists, although new results are soon expected in this area of research. In 1958, the site of 'Ein-Feshkha, most probably the farm that belonged to the residents of Qumran, was excavated by the same expedition. In 1994 the site was excavated by A. Drori and Y. Magen on behalf of the Archaeology Officer of the Civil Administration of Judea and Samaria. Y. Magen carried out a second season in the winter of 1998. No reports of those two seasons have yet been published.

The Caves. De Vaux and his colleagues carried out a systematic survey of the limestone cliffs north and south of Qumran. In a strip 8 kilometers long, 230 loci were explored—natural caves, crevices, etc.—but only 40 showed signs of habitation and only 26 contained pottery similar to that found in cave 1Q and the Community Center. Scrolls were found in five of these natural caves: 1Q, 2Q, 3Q, 6Q, and 11Q. In the survey conducted by the team led by Patrich the same area was reexplored. This team found archaeological remains in 15 caves in the strip north of Wadi Qumran (as against 27 in de Vaux's survey) and only 2 south of the Wadi (as against 13 found by de Vaux). Apparently, the search of the earlier surveyors exhausted most of the remains. This expedition did not find any written material, with one exception (4Q37). None of these caves was used for regular habitation by the members of the Qumran community. They are too narrow, ill-ventilated, ill-lit, and lack leveled floors. Moreover, they are situated beyond the Sabbath limit, which is the area within a radius of some 500 meters around the Community Center. The caves were used only for storage, hiding of the scrolls in times of emergency, and perhaps temporary residence.

After the discovery of Cave 4Q by the bedouins in 1952, a cave in which some three quarters of the scrolls were unearthed (more than 600 manuscripts), de Vaux conducted a survey of the marl cliffs south and southwest of the Community Center. In the southern marl spur three artificial caves were found (4Q7–9) and in the southwestern spur five more were discovered (4Qa and 4Qb, 5Q,

10Q, and an unnumbered oval one, mostly eroded, west of 5Q). Most of the caves suffered from violent erosion, and there is good reason to believe that more caves must have existed on this cliff. Cave 4Qa has a squarish plan approximately 7 by 7 meters; Cave 4Qb is approximately 7 by 3 meters; 5Q is approximately 4.25 by 3 meters; all have two or three entrances and leveled floors. These are the best preserved caves and they are representative of the artificial ones: they are roomy, well-lit, well-ventilated, and they provide the best possible shelters in the harsh climate of the Dead Sea prior to the invention of air-conditioning. The pottery found in some of these caves—cooking utensils, storage jars, and table ware—as well as floor mats and food remains testifies that they were used for residence. Some one hundred leather thongs and leather tabs with eyelets used for the fastening of scrolls were found in 8Q, indicating that this cave might have served as a workshop for producing the writing material for the Qumran scriptorium.

The expedition of Broshi-Eshel excavated two artificial caves dug in the marl plateau approximately 200 meters north of the Community Center. Great amounts of pottery shards similar to the ware found in the Community Center testify to the fact that these caves were also used for habitation. The ceilings of these caves collapsed and the same is the case for at least another twenty artificial caves in this neighborhood.

It seems quite certain that most of the members of the Qumran community resided in the artificial caves dug in the marl north and south of the Center. On the probability that some members might have used living quarters in the Center itself, see below.

The Community Center. The site was first settled in the eighth century BCE and this settlement was destroyed violently at the end of the First Commonwealth, circa 587 BCE. It was an enclosure (approximately 44 by 38 meters) consisting of an open courtyard with a row of rooms along its east wall and perhaps also along its northern wall. An annex to the west contained a circular cistern. Probably a military lookout post, it is one of several contemporary settlements founded along the Dead Sea and adjacent Bugei'a Valley. The date of its foundation can be established by three eighth-century BCE *lu-melekh* stamped jar handles found here (two of which have not yet been published).

During the second commonwealth the complex covered an area of approximately 4,500 square meters (a little over an acre) and served the residents of Qumran as a center for their communal activities. Like so many other sites in Israel's arid zone, this complex was well preserved, rising at some points to a height of several meters. Its relatively good preservation permits identification of many of its components, such as the assembly hall (the

dining hall), the scriptorium, the kitchen, and the potter's workshop, etc. In the following paragraphs the remains of the last phase stratum (II) will be described; earlier remains will be discussed later.

The main entrance to the compound was through an unguarded opening, not an elaborate gate, in the northern wall. There were also two other entrances, one on the northwest and the other on the southeast. Next to the main entrance stood a massive two-story tower. The doorless ground floor might have been approached only through the second story and it was probably used as storage area. This well-built solid construction—meant to provide defense in emergency—stands out in a compound many of the components of which can be described as jerry built. The walls of Qumran, outer as well as inner, are dry built (i.e., made without the use of mortar) of rough field stones with an average width of 60–70 centimeters. It is as austere as possible: hardly any plaster covers its walls and most of its walls are unpaved.

The most conspicuous feature of this site is the sixteen water installations, ten of which are immersion pools (*miqva'ot*). The water system was fed by an aqueduct, which carried the flashflood waters diverted into it by a dam in the nearby upper Wadi Qumran. These ritual baths are perhaps the most important elements identifying the compound as a religious institution. Nowhere else has anyone found such a density of pools, which make up 17 percent of the site's area; as well, Qumran boasts the largest pools of the three hundred throughout the country. The immersion pools can be distinguished easily from the regular cisterns by two characteristics: all of them have staircases for the bathers to use, and most of the staircases have low partition walls, symbolic rather than utilitarian, demarcating the borders between the unclean who descend and the pure who ascend.

The largest room in the compound, Locus 77, covers an area of 99 square meters (22 by 4.5 meters), and it must have served in the double capacity of a dining and assembly hall. The identification of this space is based on the nearby pantry (in the adjacent Stratum I pantry more than one thousand tableware pottery vessels were found). At the western end of the assembly hall a paved circular area might have been used by the presiding priest. The hall could accommodate 120 (in four rows of 30) or 150 (in five rows) people. If we are right in assuming that Qumran is an Essene establishment, the written sources that describe the common meals as religious services would suggest that this was not just a dining hall but also a house of worship. The kitchen, Loci 38 and 41, lying for some reason at a certain distance north of the dining hall, has several fireplaces as befits a communal establishment. In Locus 30 were found remains that fell from an upper story of what quite probably was a scriptorium.

The proposed identification is based on three inkwells (two made of pottery and one made of metal) and plastered mud brick pieces of stationary furniture, which might have served the scribes as shelves. [See Inkwells; Scriptorium.]

Qumran had several workshops, but only one's function could be identified—the potter's atelier. All the components of a potter's workshop are well preserved—a basin for levigating the clay, a pit to store it, the wheel, and two kilns. There was no economic justification for keeping for about a century and a half a busy ceramic industry at Qumran just to serve a small and austere community—the site lacks cheap energy and good clay. The only plausible reason for maintaining a two-kiln industry throughout its existence would be the insistence of its community on the absolute ritual purity of its vessels. It is also quite possible that Qumran supplied its wares to other Essene communities. The nature of other workshops concentrated in the northwestern corner (the potters' workshop was in the opposite, southeastern corner) cannot be established. The northwest area also contained storerooms and a stable.

No residential quarters were found in the compound. It is possible though that a dormitory might have existed above Loci 1, 2, and 4—as may be suggested by a staircase leading to the second story. The net area of the story was approximately 80 square meters and it could have accommodated an estimated twelve to twenty inhabitants. Thus, it is quite certain that most of the members of the community lived outside the compound in artificial caves. In Locus 51, a roofed room, a clay pipe connected to a bottomless jar embedded in the marl was found under the paved floor. It is quite likely that the jar served as cesspool and that the room was a lavatory.

The Small Finds. Qumran yielded primarily three kinds of small finds: pottery, coins, and deliberately buried animal bones. The pottery, most of it probably produced on the site, has quite a limited repertory. It is utilitarian, monotonous, and plain, even drab. Some of the types are typically and exclusively Qumranian. Almost no imported ware was found here. Like the architecture, the ceramic ensemble (despite the presence of some fine glassware) testifies to the ascetic nature of the community that occupied the site in the first century BCE as well as in the first century CE. Unlike many excavated sites, great amounts of intact vessels were unearthed at Qumran—the pantry (Locus 86) alone contained more than a thousand vessels, mostly complete. [See Pottery.] The numismatic finds are also plentiful (this small site produced no less than 1,240 coins, and 'Ein-Feshkha contributed another 145).

The numismatic ensemble represents fairly the currencies that were in circulation in Palestine in the century

and a half prior to the abandonment of Qumran. As will be noted (see below, Stratigraphy and Chronology), de Vaux apparently overrated the power of numismatics to solve chronological problems. However, the cache of silver coins, which must have been hidden in the last days of Stratum I, is the most important find concerning the stratigraphy and chronology of the site.

A peculiar find, unattested anywhere else, is the animal bone deposits. They were found between the buildings or in the areas around them, covered by large pottery shards or put in jars, flush with the level of the ground. They stem from both strata, the majority from Stratum I, and they constitute one of the main arguments that both strata were occupied by the same community. There is hardly a doubt that there is a religious significance to the burial of the bones—they are either remains of sacred meals or of sacrifices. The latter explanation (defended recently by J. B. Humbert) is hard to accept. A community in whose library the *Book of Deuteronomy* was the second most popular book (twenty-nine copies were preserved) could not have offered sacrifices outside the Jerusalem Temple. The final publication of the excavation's small finds will give us a clearer and richer picture.

The Necropolis. Comprising 1,200 graves of a hitherto unknown type the necropolis includes shaft graves, up to 2.5 meters deep, in which the deceased lie supine facing north. Each grave is made for one person, who is buried without any funerary goods. The necropolis, beginning 50 meters east of the compound, consists of a main cemetery with some 1,100 graves and subsidiary extensions with some 100 graves. Of these, so far only 53 have been excavated—43 by de Vaux and 10 by Steckoll. In the central graveyard, where the tombs are arranged in straight lines, only male skeletons were unearthed; in the extensions, where the tombs are arranged haphazardly, nine skeletons of women and six of children were found. In five of the tombs remains of wooden coffins were found and this, most probably, shows that the bodies were brought from a considerable distance. In three graves the skeletons were found disjointed, with some parts missing—typical of secondary burials of skeletons brought from some other place. Thus, it seems that the central cemetery, where only male inhumations were found, was reserved for the members of the Qumran celibate community. On the fringes, most probably brothers and sisters, real or spiritual, were buried. There is no doubt that the burials represent not only members of the community but also the deceased brought from afar. The presence of women and children cannot be used to argue against the celibacy of the Qumran community as has been suggested recently by some scholars. Recent studies as yet unpublished show that some of the female skeletons are

of bedouin women. Also, the number of burials cannot be used for computing the size of the community.

The mode of burial at Qumran is very much what one would expect—a total break with the traditional Jewish funerary customs. The Qumran burials are individual, unlike the family burials practiced in Judaism from time immemorial. The Essene insistence that their members break their ties with their families is reported in Josephus (*The Jewish War* 2.134) as well as in the scrolls (Rebukes of the Overseer [4Q477]). [See Cemeteries.]

Ein-Feshkha. A contemporary site, 'Ein-Feshkha ('Enot Tzukim) is an oasis lying some 2 kilometers to the south of Khirbet Qumran. Several springs supply the oasis with plenty of water. Two of the springs, Tzukim 1 and Tzukim 2, have a combined mean annual flow of 6,000,000 cubic meters. However, the quality of the water is quite poor as it contains between 1,232–5,229 ml/l Cl. (in comparison, the water of the Sea of Galilee contains only 220 mg/l Cl). A complex of buildings unearthed here by de Vaux seems to have belonged to a farm based on agriculture and a certain industry. The ceramic and numismatic evidence leaves no doubt that this site is contemporaneous with Qumran and that it was settled by the same community. The central block is a rectangle, 24 by 18 meters large, with structures arranged around an inner courtyard. Over part of it, a second story was built. Nothing certain can be said about the function of the various components, part of which might have served as living quarters and part as workshops and warehouses. To the southwest of this block lies an enclosure, approximately 40 by 40 meters, with a shed. The enclosure might have been used as a pen for livestock. Another enclosure, to the northeast, is made of channels, basins, pits, and tanks. De Vaux was of the opinion that these were installations for curing hides, a sort of tannery. Other scholars have suggested that this was a fish farm and that the basins were used to rear fish, or that the basins were retting pits—that is, tanks used to soak flax.

There is little doubt that the main crop of this farm was the date palm. There are three reasons for this conclusion: Pliny the Elder tells us that the "tribe" of the Essenes "has only palm trees for company" (*Natural History* 5.73); carbonized dates were unearthed at Qumran in the 1993 excavations (as yet unpublished)—formerly these were taken to be from a wine press. The date palm is the most salt tolerant of all domesticated plants and it can be irrigated even with ocean water. It is also very likely that of the vegetables, spinach beet (*Beta vulgaris* var. *cicla*, not to be confused with spinach), was grown. Like other members of its family (Chenopodiaceae), it is also highly salt tolerant.

It is almost certain that herds of cattle, sheep, and

goats were reared here, as well as some pack animals and oxen needed for plowing. The animals spent the night at the livestock pen. Some of the pack animals were kept at the Qumran stable.

Stratigraphy and Chronology. De VAUX distinguished two archaeological strata at Qumran, and Stratum I, the earlier, he divided into two—Ia and Ib. He was of the opinion that Stratum Ia was founded sometime in the last third of the second century BCE and that Stratum Ib, the phase in which this site received its distinct form, started circa 100 BCE (in the reign of John Hyrcanus or Alexander Jannaeus). This stratum, he believed, came to an end after the site was destroyed by a violent earthquake in 31 BCE. The earthquake (known to us from a detailed description by Josephus [*The Jewish War* 1.370–380; *Jewish Antiquities* 15.121–147]) and its effects are clearly discernible at Qumran. De Vaux suggested that the site was abandoned until about 4 BCE, the time Stratum II begins. The later phase, the high point of the sectarian establishment, came to an end during the First Jewish Revolt, most likely in June 68 CE, when the Romans occupied nearby Jericho.

It should be noted that the site does not lend itself easily to stratigraphical observations. The continuous use of walls during different strata, the meager accumulation of debris due to clearance by later occupants, and the total lack of epigraphical material (save for coins, and see below) pose serious difficulties. De Vaux's over-reliance on numismatic evidence often led him to incorrect conclusions. For example, a coin of John Hyrcanus cannot be used as a proof that the site was settled during his reign—coins can be used only as a *terminus a quo* but not as a *terminus ad quem*. Likewise, the scarcity of coins minted by Herod the Great does not point to an abandonment of the site; Herod's coins are notoriously scarce everywhere.

There are five dates suggested by de Vaux—the beginning and end of strata Ia and Ib, the beginning and end of the gap between Strata I and II, and the beginning and end of Stratum II (three of the eight dates coincide, thus there are only five). Of these, only one is almost certain—that assigned to the end of Stratum II, viz. summer of 68 CE. All the others have been challenged, it seems justifiably, by later studies, including primarily that of Jodi Magness. The main corrections that should be applied to de Vaux's system are these:

1. Stratum I does not have to be divided; it is basically a homogeneous and continuous entity.
2. Stratum I was not founded in the second century BCE, but sometime in the first half of the first century BCE.
3. Stratum I did not come to an end in the earthquake of 31 BCE. The violent tremor indeed caused considerable

damage, but most of the destroyed elements were soon repaired and the settlement carried on without a gap.

4. The destruction and abandonment of Stratum I occurred at the very end of the first century BCE. The evidence for this date was deduced from a sizable hoard of 561 silver coins, mostly Tyrian tetradrachma. The latest of these coins, found in three ceramic pots in the destruction level, dates to 9/8 BCE. This should be taken as the *terminus post quem* for the hiding of the hoard. The fact that such a miniature treasure was not retrieved shows that the site was destroyed violently with a probable loss of life. It is quite plausible that the destruction, followed by a short desertion, was due to the riots and their bloody suppression (by the Roman governor Varus), which occurred after the death of Herod the Great in 4 BCE.

The chronology suggested by Magness is:

Stratum I	100/50 BCE–c.4 BCE
Stratum II	c.1 CE–68 CE

There is also evidence of a third stratum, identified as Stratum III. After the Roman occupation of Qumran, probably in June of 68 CE, a military post was established in the compound. The site was abandoned after several years, probably after the conquest of Masada in 73 CE. The small army unit used only the northeastern corner of the compound, let the water installations fall into disrepair except for one cistern, and strengthened the defenses.

It seems quite certain that the archaeological evidence alone—even without the aid of the scrolls—points to one conclusion: that Qumran was inhabited in the last century and a half of the Second Commonwealth by a male religious group, which led a communal life. In other words, this is the Essene monastery we are told about by Pliny the Elder (*Natural History* 5.73). This conclusion is supported by the shared dining hall, kitchen, pantry, corn mill, potter's shop and kilns, and the ten immersion pools, all of which give the site a distinct religious nature.

Nonconsensual Archaeological Theories. There are at least five nonconsensual countertheories concerning the nature of Khirbet Qumran. None of these theories gives adequate answers to some basic questions. How do we explain the existence of the huge "library," the backbone of which are Essene and related compositions? After all, the access to some of the caves passes by the Community Center and the scrolls are found in Qumranite ceramic contexts. How can one account for the ten immersion pools in such a small site unless it is a religious establishment, fanatically devoted to ritual cleanliness? Why is there a necropolis of 1,200 graves here?

These are only three questions drawn from a long list, made even longer with the new theories. The theories will be dealt with in the alphabetical order of their proponents. It will be necessary to deal only with their basic arguments.

1. A. D. Crown and L. Cansdale suggest that the site was a commercial entrepôt lying on a major trade route. As a matter of fact, no major route, commercial or otherwise, passed by Qumran. The north-south axis was blocked by the cliffs reaching the sea. Roads on an east-west axis existed at a considerable distance from Qumran. To the south of Qumran, across the cliffs, a road along the Kidron Valley led to Jerusalem and a Hasmonean fortress guarded its eastern extremity. North of Qumran, the road to the capital joined the Jericho road. If Qumran had served commercial traffic coming from across the Dead Sea, it should have had a quay on the shore, like other sites, but it had none. In addition, the Qumran compound lacks any components one should expect from a commercial entrepôt—no living quarters, no large stables, no large warehouses, etc.

2. R. Donceel and P. Donceel-Voute propose that the site served as a *villa rustica*, but why should anyone bother to establish a rustic villa here? There is no agricultural potential in this barren site, the marly, salty soil of which hardly grows even scant weeds in the winter. The 'Ein-Feshkha palm grove does not need year-round care. The buildings of the 'Ein-Feshkha farm are more than sufficient for seasonal workers. Unlike the palaces and villas of Jericho, which enjoyed an almost unlimited supply of excellent water, Qumran relied on flashflood water in open pools, which must have evaporated after a couple of months of exposure in the intense heat of the Rift Valley. The brackish water of 'Ein-Feshkha was a poor substitute for the stagnant pools of water.

Additionally, Qumran lacks the basic features of contemporary rustic villas. It is jerry built, made of undressed field stones, except for the doors, and is marked by a total absence of interior decoration. Had it been a villa we would have expected mosaic floors, wall paintings, and stucco, as well as a bathhouse, a swimming pool, and other amenities that were obligatory in Roman-period villas.

One of P. Donceel-Voute's main arguments is that the room above Locus 30, identified by de Vaux as a scriptorium, is indeed a cenacle—that is, a dining room. [See Scriptorium.] She is of the opinion that the "tables" found there are *klinai*—that is, diners' couches. However, the 'couches' are too flimsy to carry the weight of a man. Moreover, they are too narrow for

klinai, and Donceel-Voute herself admits that she cannot cite any parallels for such couches, either in artistic representations or archaeological finds.

3. N. Golb is of the opinion that the relation of the scrolls and the nearby ruin is accidental and that Khirbet Qumran was not an Essene establishment. He therefore explains the compound as a fortress, a most unlikely definition. The compound lacks any of the prerequisites of a fortress—its walls, which are made of undressed ill-fitting stones, are too narrow (60–70 centimeters) and its entrances are unguarded. The necropolis, Golb believes, is the burial place of the defenders of Qumran who were killed in 68 CE. Actually there is no standing room in this compound for even a small fraction of the 1,200 people buried here. Moreover, it is most unlikely that the Roman army bothered to bury 1,200 corpses in graves up to 2.5 meters deep in an orderly, chessboard plan. If a victorious army chooses to bury the enemy dead—it only for hygienic reasons—it will do so in shallow mass graves because of the urgent time factor; the corpses have to be buried before they rot.

4. Y. Hirschfeld believes that we have the remains of a fortified country estate, and he bases his theory on the similarity of the eastern part of the compound to contemporary country estates. This is a hybrid theory combining Golb's fortress theory (dissociating the scrolls from the combination) and the Donceels' theory of a *villa rustica*. There is no plausible way to deny the relation between the scrolls and the residents of the site—the only access to some of the scroll caves is through the Community Center, and most of the scrolls were found in, or with, typical Qumranic pottery. That the site was a farm also is highly unlikely for the same reasons mentioned above concerning the Donceel theory—there is no agricultural logic in having a farm here. The austere, ascetic nature of the compound stands in sharp contrast to the elegance and comforts of comparable country houses.

5. J.-B. Humbert is of the opinion that the site was first founded as a country house and only later (57 BCE or 31 BCE) became the seat of the Essene community. He bases his theory mainly on the similarity of the compound to contemporary country estates and on some architectural elements such as a few column-drums. The similarity between the plan of Khirbet Qumran and other compounds, something elaborated later also by Hirschfeld, does not necessarily require defining it as an agricultural country villa. It is quite a common practice in all periods for builders to borrow a popular plan and use it for a particular purpose. The scant architectural elements, not found in situ and thus of obscure functions, do not justify far-reaching conclu-

sions. What really speaks against this theory is the apparent continuity between Stratum I and Stratum II—such as the use in both phases of the dining hall (and the deserted pantry at Locus 86, with its one thousand vessels, is an eloquent witness) and the idiosyncratic animal bone deposits practiced in the earlier as well as the later phase.

MAGEN BROSHI

Written Material

The collection of documents known as the Qumran manuscripts was unearthed in eleven caves near the site of Qumran between 1947 and 1956. It comprises fragments of various sizes coming from some 850 manuscripts. The fragments range from scrolls of more than 8

meters in length (11Q19) to minute pieces. Many of the fragments, however, do not exceed more than several lines. Nevertheless, there are numerous fragments of substantial size, and a few manuscripts, from Caves I and 11 in particular, are almost intact. Most of the surviving manuscripts are written on leather, but more than 9 percent are copied on papyrus. The majority of the manuscripts were written in Hebrew, but more than 10 percent of the collection use Aramaic. A few Greek manuscripts were discovered, mostly copies of the Septuagint version of the Pentateuch (4Q119–122; see Skehan et al., 1992). In Cave 7 a small Greek fragment has been found that may belong to the apocryphal Epistle of Jeremiah (7Q2; see Baillet et al., 1962). Other Greek Apocrypha may have been stored in the library, as is the case, for instance, with the Greek Paraphrase of Exodus (4Q127; see Skehan et al., 1992; cf. Dimant, "4Q127," 1995) or the tiny remains of unclassified text 4Q126 (see Skehan et al., 1992). Most of the manuscripts use the Hebrew square script for both Hebrew and Aramaic. Occasionally, an archaizing form of the ancient Hebrew script—the Paleo-Hebrew script—was used to copy texts from the Pentateuch (4Q11–12, 4Q22, 4Q45–45), Job (4Q101), and several other nonbiblical works (4Q123; see Skehan et al., 1992). Sporadically, this script also was used for writing the divine name in texts written in square script (e.g., 1QpHab, 4Q180, 4Q183).

Typological paleography and carbon-14 tests have established the dates of the Qumran scrolls to be between 200 BCE and 50 through 70 CE (Cross, 1995, figs. 16–19; Bonani et al., 1991; Lull et al., 1996). Several manuscripts were penned even earlier, during the third century BCE, for example, Exodus-Leviticus^f (4Q17) and Samuel^b (4Q52). Such manuscripts must have been brought to Qumran from the outside. But most of the manuscripts were copied during the first century BCE and the first century CE, many perhaps at Qumran. However, these dates concern the copies and not the original compositions. Given the fact that practically all the Qumran manuscripts, biblical and nonbiblical, are copies of lost originals and that many of these copies show traces of reworking and editing, the composition of the originals must have taken place in earlier times and not necessarily at Qumran.

Unlike other documents found in the Judean Desert, the Qumran collection is marked by its literary and religious character. Even the few nonliterary documents assigned to the library probably originated elsewhere. The fact that numerous Qumran writings existed in the library in more than one copy, and the paucity of legal and administrative documents, all of uncertain provenance (4Q342–360, 6Q26–29), point to the character of the Qumran collection as a "library" rather than as an "ar-

chive," at least in the state it has reached us. The nature of this library, its origins, and its background, are still a matter of debate among scholars and may never be known with certainty. Yet, some facts about the library can be established beyond doubt.

All the manuscripts found in the eleven Qumran caves belong to one and the same collection. This conclusion is based on the following facts: all the caves yielded the same types of writings; copies of the same works were found in different caves (for example, copies of the Rule of the Community were found in Caves 1 and 4; copies of the Damascus Document were found in Caves 4, 5, and 6; and copies of *Jubilees* were unearthed in Caves 1, 2, 3, 4, and 11); all the manuscripts fall within the same span of dates and display the same scribal practices, in a few cases, the same scribes penned manuscripts from different caves (for example, 4Q53 was copied by the scribe of 1QS; cf. Ulrich, 1979); and copies of almost all the works found in the various caves were present in Cave 4 (Dimant, "The Qumran Manuscripts," 1995, p. 31). This last fact, together with the presence in Cave 4 of nearly 70 percent of the total number of works, makes Cave 4 the core of the collection.

Linked to the site of Qumran by virtue of its topography, archaeology, and dates, Cave 4 undoubtedly was connected to the people living in the Qumran settlement. Together with the other caves, Cave 4 housed manuscripts that must have belonged to the inhabitants of Qumran, whoever they may have been.

Despite the fragmentary state of many of the documents, their sizable number, their overlaps, and their interconnections combine to offer a fairly detailed picture of the library and its contents. The collection falls into three distinct categories. The first is biblical texts, into which a quarter of the manuscripts fall. The second is texts related to the life and teachings of an ascetic, probably Essene, community. Texts in this group, which also comprise a quarter of the manuscripts, are recognizable by their references to the practices and religious ideas of the community (dualism, determinism, developed angelology, eschatology), and by the distinctive style and terminology they employ. A small group of these manuscripts is written in cryptic scripts. There are at least two types, Cryptic A Script and Cryptic B Script. Ten manuscripts were copied in Cryptic A Script, seven of them found in Cave 4 (e.g., 4Q250; 4Q298, see Fitzmyer, 1997; 4Q313), all in Hebrew and dealing with specific teachings of the community. A third category, comprising a third of the manuscripts, consists of various writings with no ideas or terminology distinctive of the Qumran community. This group includes Hebrew narratives and poetic texts that rework all the Hebrew scriptures in various

ways, wisdom texts, prayers, and other miscellaneous pieces. Aramaic fragments, which come from biblical pseudepigrapha and legendary narratives, form a distinct group. Since no Aramaic text exhibits the traits distinctive of Qumran community literature, such texts must have originated outside Qumran. The community does not seem to have authored texts in Aramaic.

The remaining one-sixth of the texts consists of fragments too small for classification.

Biblical Texts. The fragments of more than two hundred biblical manuscripts that were discovered among the remains of the Qumran library open new vistas on the process by which biblical books acquired their final text and form. Except for *Nehemiah* and *Esther*, all the books of the Hebrew scriptures are represented in the library. *Deuteronomy*, *Isaiah*, and *Psalms* seem to have been the most popular with the Qumran community, since each survived in more than twenty copies. The plurality of textual variants and literary editions, which marks the Qumran biblical manuscripts, reflects a precanonical stage when the shape of the biblical books and their texts were not yet stabilized. In some cases, such as those of the books of *Judges*, *Samuel*, and *Jeremiah*, the Qumran biblical fragments offer evidence of several successive editions, the later ones reworking and amplifying the earlier ones (Ulrich, 1996).

The library also produced excerpted or abbreviated biblical texts. Manuscripts of this type may have served for private use, as is indicated by their small size. Pentateuch and *Psalms* copies of this type were, perhaps, intended for liturgical use (e.g., 4Q41, 4Q95), whereas copies of other books, for instance, the *Song of Songs* (4Q106–107), were literary creations (Tov, 1995). These excerpted and abbreviated texts do not constitute compositions different from the Bible itself, since they do not go beyond the familiar biblical text, whatever textual form they may take. There exists, however, another type of text that manipulates the biblical texts in a more radical fashion. This is the case, for instance, of the Reworked Pentateuch (4Q158, 4Q364–367; Allegro, 1968; Attridge et al., 1994) and the Temple Scroll. Such texts should, therefore, be considered nonbiblical texts.

Writings Related to the Qumran Community. This group includes works distinctive in content, genre, and style. They all are written in a special Bible-like Hebrew and are usually copied in a peculiar, full orthographic system (Qimron, 1980; Tov, 1980). With few exceptions, the sectarian texts fall into distinct types of writings: rules and community discipline; religious law, as interpreted by the sectarians; *pesharim*, the sectarian interpretation of prophecy; prayers and religious poetry; sapiential texts; and calendrical and chronological lists.

Rules. Three groups of documents fall into the category of rules. The first is the Rule of the Community, extant in twelve copies, ten from Cave 4 alone (1QS, 5Q11, 4Q255–264; see Baillet et al., 1962; Alexander and Vermes, 1998). The Rule of the Community^a (4Q255) is dated to the second half of the second century BCE, while the most recent copy, Rule of the Community^b (4Q262), was copied in the first half of the first century CE (Cross, 1994). Thus, the Rule of the Community was copied from the early days of the community nearly until its end. The work contains rules for the life and organization of the *yahad* (“community” in Qumran parlance) and expounds its major ideological tenets. It portrays a community that shared property, prayer, meals, and study, and practiced a rigorous observance of Jewish religious law, in particular of purity regulations (1QS iii.4–6, v.2). A prominent section of the Rule of the Community contains a penal code (1QS vi.24–vii), which prescribes the penalties for various infringements of the community’s discipline. A striking characteristic of this code is the extensive use made of withdrawing food rations as a means of punishment, a severe sanction considering the complete dependence of the members on communal food, since they were bound by oath to eat only pure food prepared according to the communal rules. The Rule of the Community makes no reference to women, children, or family, and it has been surmised that it applied only to celibate males who were full members of the community.

A section of the Rule of the Community known as the “Treatise on the Two Spirits” (1QS iij.13–iv.26) presents the most far-reaching formulation of a dualistic outlook found in the scrolls. According to the section, two spirits govern the human sphere and history: the Spirit of Light and the Spirit of Darkness. Preordained by the divine plan of creation, the two are interlocked in a constant struggle that will reach its climax and resolution at the End of Days, with the triumph of light over darkness. Notably, the Treatise on the Two Spirits is absent from two of the Cave 4 copies (4Q258–259). Both copies begin in column v and thus attest to a recension of the Rule of the Community that did not include the “Treatise on the Two Spirits” (Metso, 1997). To the Rule of the Community from Cave 1 are appended two other works: the Rule of the Congregation (1Q28a), which lays down procedures for the assembly of the community in the eschatological era, and the Rule of the Blessings (1Q28b), which lists blessings to be recited by the leaders of the community, perhaps also at an eschatological gathering.

The Damascus Document, known since the early twentieth century from two incomplete manuscripts in the Cairo Geniza, was later identified in ten copies from various Qumran caves (5Q12, 6Q15, 4Q266–273; see Bail-

let et al., 1962; Baumgarten, 1996), indicating the importance attributed to this work by the Qumran community. The oldest manuscript, Damascus Document^c (4Q266), dates to the first half of the first century BCE, showing that it belongs with the basic literary corpus of the community. The Damascus Document produces a communal rule similar to the one found in the Rule of the Community, though less detailed. But the two differ in some details. The Damascus Document, for example, contains injunctions concerning women, children, and family, while the Rule of the Community from Cave 1 is silent about these matters. However, the existence of a text that combines regulations from both the Rule of the Community and the Damascus Document, Serekh Damascus (4Q265), cautions against assigning the Rule of the Community and the Damascus Document to two separate communities or to different phases of the same movement. Unlike the Rule of the Community, the Damascus Document also covers matters pertaining to Jewish religious law and the history of the community. Among the legal issues treated are the Sabbath, the jurisdiction of courts, Temple sacrifices, and agriculture. The community’s beginnings and later history are treated in the hortatory framework of the Damascus Document. These sections include sharp polemics against the sect’s political and ideological opponents. Among the accusations leveled at them are polluting the Temple, faulty practice of religious law, false exposition of scriptures, and adherence to an erroneous calendar (CD iii.13–14, iv.12–v.15).

The War Rule describes war tactics and the arrangement of the armies in the final battles between the Sons of Light and the Sons of Darkness. First discovered in the well-preserved copy of the War Scroll from Cave 1 (1QM), it also is extant in seven other, more fragmentary, copies from Cave 4 (4Q471, 4Q491–494; Baillet, 1982). Some of the fragments from Cave 4 attest to an edition of the War Rule appreciably different from that of the War Scroll from Cave 1. Thus, although the earliest copy of the rule, War Scroll^d (4Q493), dates to the first half of the first century BCE (Baillet, 1982, p. 50), a period of prior literary activity must be assumed. It seems, then, that together with other community writings the War Rule belongs to the early phase of the community’s history. The presence in the library of other works related to the War Rule (4Q285, 11Q14) suggests that the literary tradition lying behind it is wider than is usually assumed.

Religious law. *Miqsat Ma’asei ha-Torah* (MMT^{a-d}, 4Q394–399) most explicitly expresses the separatist stance of the Qumran community toward other groups in contemporary Judaism. Extant in six copies, *Miqsat Ma’asei ha-Torah* (“Some of the Torah Precepts”; see Qimron and Strugnell, 1994) is written in the form of a

letter addressed to a rival leader and his followers. The document lists the legal issues that were a matter of contention between the two groups and that led the writers to dissociate themselves from the majority of the people. The writers list twenty-two such legal issues pertaining to purity, priesthood, and the Temple. Although *Miqtsat Ma'asei ha-Torah* does not contain any of the terminological characteristics of the community, the separatist position and the legalistic polemics similar to those of works authored by the community (for example, in the Damascus Document) suggest a sectarian origin. Whether this document originated in a real letter, or whether the epistolary form was adopted as a literary device, is difficult to say. The fact that it is preserved in six copies suggests that it was already treated as a literary work. The major importance of the document lies, however, in its legal orientation. As it turns out, several of the legal controversies defined by *Miqtsat Ma'asei ha-Torah* are identical with the halakhic controversies between the Sadducees and the Pharisees, as recorded in the Mishnah (e.g., *Par.* 3.7, 4Q394 3-7 i.13-16; *Yad.* 4.6, 4Q394 8.iv.56-58). *Miqtsat Ma'asei ha-Torah* adopts the Sadducean view and contests the Pharisaic one, whereas the Mishnah takes the reverse position. Some scholars have concluded, therefore, that the Qumran community was not Essene but Sadducean (Sussman, 1994, pp. 195-196; Schiffman, 1993, p. 29). These scholars and others argue, however, that the evidence of *Miqtsat Ma'asei ha-Torah* is consistent with the close similarity of the Qumran community to the Essenes, and therefore the identification with the Essenes should be maintained (Baumgarten, 1994, p. 34; Dimant, 1996, pp. 995-997). The publication of *Miqtsat Ma'asei ha-Torah* brought into focus the fact that in matters of Temple, purity, and priesthood, Qumran jurisprudence is akin to that of the Sadducean halakhic school (Baumgarten, 1994, Sussman, 1994). This new realization also throws light on the Temple Scroll, as a repository of legal traditions related both to the community and to the Sadducean school. The longest scroll yet to be discovered, Temple Scroll^a rewrites and interprets important legal sections of the Pentateuch in the form of a divine address to Moses (11Q19 li.6-7).

Pesharim. This history of the Qumran community and the community's polemics against its opponents figure prominently in the *pesharim* ("commentaries"), a genre of biblical interpretation distinctive to the Qumran community. These commentaries were so designated because they introduce each comment by the term *peshet* ("meaning" or "interpretation"). Attributed to divine revelation accorded to the community's charismatic leader, the Teacher of Righteousness, the *pesharim* interpret prophetic utterances as referring to events in the community's history on the threshold of the eschatological era

(Peshet Habakkuk: 1QpHab vii 1-5). Running *pesharim* are extant only for *Isaiah* and the Minor Prophets (*Hosea*, *Micah*, *Nahum*, and *Zephaniah*), but not for *Ezekiel* and *Jeremiah*. This may be accidental, or it may reflect a particular attitude to these prophets, since isolated *pesharim* of verses from both *Jeremiah* and *Ezekiel* occur in the Damascus Document. *Pesharim* of Davidic psalms also survive, since they were considered prophetic (cf. 11Q5 xxvii.11). The special technique of *peshet* interpretation can be seen best in Peshet Habakkuk, preserved almost intact. This *peshet* comments on the first two chapters of *Habakkuk* and was penned at the end of the first century BCE. Referring to various events in the life of the Teacher of Righteousness, the *peshet* mentions the Teacher's adversary, dubbed the Wicked Priest, now identified by many scholars as Jonathan (Hasmonean, 160-142 BCE). Peshet Habakkuk xi.4-8 relates an episode in which the Wicked Priest came to the Teacher's abode and disturbed his Yom Kippur fast (1QpHab xi 4-8). Such an infringement of the holiday by a priest is puzzling. It was explained as reflecting the practice of different calendars: the Teacher of Righteousness and the Qumran community adopted a solar calendar, whereas the calendar used by the majority in Israel, including the Wicked Priest, was a lunar one (Talmon, 1993). This hypothesis is confirmed and amply evidenced by other Qumran documents, which detail the solar calendar.

Another group that figures prominently in several *pesharim* is nicknamed the *Kittim*. Their cruel conquests, the cult of their insignia (1QpHab iii-v, vi.3-4), and the references to their rulers rather than kings (1QpHab iv 9, 4Q169 3-4.i.3) confirm their identification with the Romans. In fact, the rulers of the *Kittim* seem to represent the Roman rulers installed in Jerusalem after Pompey the Great's conquest of the city (63 BCE). Explicit historical names appear in Peshet Nahum (4Q169), where two Seleucid kings are mentioned, Antiochus and Demetrius (4Q169 3-4.i.2-3). Antiochus probably is Antiochus IV Epiphanes (175-164 BCE), while Demetrius should be identified as Demetrius III Eukerus (95-88 BCE). Demetrius III Eukerus is linked to a third figure. Explaining the prophetic metaphor of a lion who kills his cubs (*Na.* 2 13), the *peshet* equates the lion with a person dubbed the "Lion of Wrath," who strikes his great men and counselors and hangs people alive (4Q169 3-4.i.4-5). This is probably an allusion to the Hasmonean king Alexander Jannaeus (103-76 BCE), who, according to Josephus (*Jewish Antiquities* 13, 372-383; *The Jewish War* 1, 90-98), crucified many of the Jewish rebels who fought against him on the side of his foe Demetrius Eukerus.

Besides running *pesharim* on prophetic texts, there were selected passages, arranged around specific themes, for example, the Florilegium (4Q174) on messianism and

Melchizedek (11Q13) on Melchizedek, the eschatological judge. Isolated units of *pesharim* are inserted in other categories of texts, such as the Rule of the Community and the Damascus Document (e.g., 1QS viii.1 14–17), thus indicating that the *peshar* form of exegesis was practiced within the Qumran community from its earliest days.

While the *pesharim* usually are recognizable by their typical formulaic terminology and symbolic exegesis, Commentary on Genesis A (4Q252; see Trebolle et al., 1997) represents a different kind of commentary. It offers a selection of *Genesis* texts, interspersed with brief comments, usually of a straightforward, literal nature. Its sectarian affiliation is apparent only through a typically sectarian messianic interpretation of *Genesis* 49.10 (Brooke, 1994, 1996; Bernstein, 1994). It shows that the Qumran community was familiar with, and drew upon, various types of biblical exegesis.

Prayers and religious poetry. Poetic texts displaying characteristics of Qumran community authorship broadly fall into two groups: religious poetry, that is, *Hodayot*, usually composed in a literary-reflective genre; and prayers used in public service and in individual recitation.

Hodayot is a collection of reflective poems, modeled, to a large extent, on the biblical Psalms. First known from the longer copy of Cave 1 (1QH), it also is extant in six Cave 4 copies (4Q427–432). The oldest copy (4Q428) dates to the last quarter of the second century BCE (Schuller, 1994), making *Hodayot* one of the earliest preserved works of the community. Consisting of psalmic units, these poetic compositions reflect the polemics and ideology specific to the Qumran community. At times the mood is personal and the style autobiographical, with sporadic allusions to various events. It was, therefore, surmised that such units were composed by the Teacher of Righteousness himself, a hypothesis difficult to substantiate. The reflective and personal style of the *Hodayot* scrolls marks them as literary compositions rather than as prayers.

There are other poetic texts of a different character. Marked by repetitive refrains and formulaic style, they express the traditional content of prayer: petitions to God or praise of him. Some of these texts represent prayers recited by members of the community during their public services; others preserve individual prayers. Most of these were probably recited in communal gatherings. Typical of the Qumran prayers is the arrangement in collections of prayers for specific occasions: daily prayers, prayers for specific days of the week, festival prayers, and prayers for special communal ceremonies. The Qumran prayers may be divided into two groups, prayers intended for daily service and prayers for the yearly cycle of festivals prescribed by the Torah. These prayers are heavily indebted to biblical models, have few, if any, distinctive

sectarian features, and have much in common with the analogous prayers prescribed by rabbinic *halakha*. To this group belong Daily Prayers (4Q503), weekly prayers (sectarian provenance for Words of the Luminaries^{a-c}, 4Q504–506), and the prayers for the festivals (1Q34, 1Q34bis, 4Q507–509). They were probably obligatory and recited by each member of the community. The formulaic character of these prayers shows that at least at Qumran, and probably in other circles as well, prayer was regularly recited as a form of communal service already during Second Temple times.

Of different character are liturgies intended for special occasions or ceremonies of the community and prayers for the individual within the community. Their connection to biblical models is looser, and the expression of the peculiar sectarian ideas, especially the dualistic ideology and eschatological expectations, is more pronounced. To this group belong the curses and blessings in the ceremony of the covenant recorded in the Rule of the Community (1QS i–ii) and the prayers of *Berakhot* (4Q286–290). The angelic liturgy contained in the Songs of the Sabbath Sacrifice (4Q400–407, 11Q17; Nitzan, 1994, pp. 282–318) also belongs to this category. This liturgy lists types of prayers recited by the angels in the heavenly temple on the Sabbaths of the first quarter of the solar year. The close affinity between this angelic liturgy and the communal prayers contained in *Berakhot* from Cave 4 attests to and illustrates the belief of the members of the Qumran community that they were counterparts of the heavenly angelic service. Individual prayers such as ones to be recited in ceremonies of purification (4Q512) or marriage (4Q502), or psalms to exorcise demons (4Q510–511, 11Q11), also evince the specific concerns of the community. Thus, while the daily and festival prayers seem to have been drawn from mainstream Judaism, the peculiar community liturgies appear to have been composed within the community itself.

Sapiential texts. This designation encompasses at least eight different works and miscellaneous fragments. What unites them all is a mixture of sectarian ideas and wisdom sayings of general import. The most extensive sapiential works that have survived are Sapiential Work A and the Mysteries. Represented by six copies (1Q26, 4Q415–418, 4Q423), Sapiential Work A is by far the largest sapiential work that has surfaced at Qumran, both in terms of the number of copies and in material remains. Mostly written as wisdom sayings addressed to the wise in the second person singular, the work offers practical advice on matters of family and society, such as one's attitude toward one's parents, wife, and children, and conduct in financial matters, work, and agriculture. Besides such mundane concerns, the work also treats general topics such as reward and punishment of the righteous and

wicked at the End of Days and the revelation of God's mysteries to the elect. Closely related to this work in terminology and content is another sapiential work, *Mysteries*. It has survived in three copies (1Q27, 4Q299–300; see Barthélemy and Milik, 1955; Fitzmyer, 1997), and it deals with mysteries of nature and history.

The relationship of the sapiential texts to the community's literary corpus is peculiar: the terminology they use, which is shared by the sectarian literature, pertains to theological issues (wisdom's role in the world, predestination, and divine mysteries in the course of history) and not to the specific organizational pattern of the community. Precisely these kinds of theological issues are known from other non-Qumran writings, such as *Ben Sira* and various Jewish apocalypses. This type of theological speculation is not, therefore, distinctive of the community but may reflect a wider spectrum of sources.

Calendrical and chronological texts. The chronological and calendrical texts (4Q320–333) differ from other texts found in the Qumran library in that they do not constitute literary compositions. They consist of various lists computing dates according to the solar calendar of 364 days. A number of these texts plot cycles of services of the priestly courses in the Temple, synchronized with festivals and Sabbaths (e.g., 4Q320–321a, 4Q325). Another type of list chronicles events according to the relation of priestly courses, sabbatical cycles, and jubilees (4Q322 and perhaps the so-called Historical Work, 4Q331–333). Those texts do not contain specific sectarian terminology, and the presence of the solar calendar is insufficient for assigning them to the community, since this calendar was espoused in other works without explicit sectarian affiliation, such as *Jubilees*, *1 Enoch*, and the Temple Scroll. Thus, the calendrical computations may have originated in a wider and probably older circle and were taken over by the community. A horoscope text found in Cave 4 (4Q186; see Allegro, 1968) shows that the members of the Qumran community not only plotted the general sequence of time but also the precise portions of brightness and darkness for each day (Schmidt, 1997).

Writings Not Explicitly Connected with the Qumran Community. Compared with the diversity of genres and styles evidenced by the sectarian literature, the nonsectarian texts display a much more limited range of forms. Most of the nonsectarian works emulate biblical models to various degrees. This tendency is particularly pronounced in the Hebrew texts. Extant are Hebrew texts that rework the four major parts of the Hebrew scriptures: the Pentateuch, Former Prophets, Latter Prophets, and Psalms. As for the Aramaic works, most of them also are inspired by biblical genres or situations, but in a more general way.

Reworked Pentateuch. This group includes texts that range from fragments reworking the biblical text more or less closely, such as the Reworked Pentateuch (4Q158, 4Q364–367; Attridge et al., 1994), to legendary pieces freely elaborating *Genesis* themes, such as the so-called Noah fragments (1Q19, 1Q19bis; Barthélemy and Milik, 1955). The Reworked Pentateuch provides a good illustration of the method used in rewriting biblical texts, a method employed by a good many Qumran texts. It makes omissions and additions, sometimes of nonbiblical material, and rearrangements and transpositions, all of which are geared to serve the exegetical purpose of the author. In this context, Temple Scroll² and *Jubilees* also should be mentioned. Both resemble the Reworked Pentateuch in rewriting long sections from the Pentateuch. But unlike other reworked Bible compositions, *Jubilees* and the Temple Scroll are explicitly presented as Mosaic pseudepigrapha. A freer reworking with substantial additions is found in the Hebrew fragments of Noah. One of the most extensive reworkings of the *Genesis* stories is preserved in the Aramaic Genesis Apocryphon from Cave 1 (1QapGen). It rewrites long sections of the patriarchal history of *Genesis*, adding large blocks of external material.

Rewritten Former Prophets. There is a sizable group of texts attached to the Former Prophets; for example, the Apocryphon of Joshua (4Q378–379; Trebolle et al., 1997; and probably also 4Q521), texts related to Samuel (4Q160) and David (2Q22, 4Q479), and a fragment mentioning Elisha (4Q481a; Trebolle et al., 1997). A fragment mentioning Zedekiah also exists (4Q470; see 6Q9). Most of these texts are quite fragmentary, and perhaps their chief interest lies in their presence at Qumran. They also attest to the existence of a considerable body of literature reworking not only the Pentateuch but also the Former Prophets, and the keen interest the Qumran community showed in such literature.

Rewritten Latter Prophets. It is noteworthy that in a library of a community so versed in the *pesher* exegesis of the biblical prophets, very few rewritten prophecies have surfaced. In fact, only texts related to two prophets, namely Ezekiel and Jeremiah, have come to light. For Ezekiel there is extant a work now called Pseudo-Ezekiel, represented by five copies (4Q385–386, 385b, 388, 4Q391). The composition rewrites, with additions and omissions, the great visions of the prophet such as the vision of the celestial chariot and the vision of the dry bones (*Ezek.* 1 and 37, respectively), but it also offers new, nonbiblical visions. There are six copies of a Jeremiah work, now entitled the Apocryphon of Jeremiah (4Q385a, 387, 387a, 388a, 389, 390). Most of the copies comprise divine historical review, which goes from early biblical

history through Second Temple times to the eschatological era. This revelation was apparently given to Jeremiah. One fragment relates the final episodes in the life of the prophet after the fall of Jerusalem, following the narrative sections that conclude *Kings* and *Jeremiah*, with many additions.

Poetic and psalmlike works. A complete inventory of poetic, nonsectarian texts from Qumran is still to be made. However, some apocryphal psalms first became known in the early 1960s with the publication of Psalms^d from Cave 11 (hereafter, 11QPsalms^a; 11Q5). With the addition of material from Cave 4, there are now extant seven previously unknown psalmic compositions: Apostrophe to Zion (11Q5 xxii.1–15), Apostrophe to Judah (4Q88 x.4–15), Eschatological Hymn (4Q88 ix.1–15), Hymn to the Creator (11Q5 xxvi.9–15), and Plea for Deliverance (11Q5 xix.1–18). Five other compositions contained in 11QPsalms^d were previously known in Greek and Syriac versions. It is now clear that besides 11QPsalms^d, three other Qumran psalms collections contain apocryphal compositions (4Q88, 4Q522, 11Q6). An apocryphal psalm also is quoted in the text known as Apocryphal Psalm and Prayer (4Q448). It has been suggested that 11QPsalms^a is a scriptural collection of psalms, compiled along the principles of the solar calendar and authored by a circle other than the community itself (Flint, 1997). Another manuscript contains a collection of Psalms against Demons (11Q11). In any case, the status of the apocryphal psalms at Qumran is yet to be determined.

Aramaic Texts. The Aramaic texts from Qumran present a puzzle of their own. Composed in an early Jewish Aramaic, they include two types of compositions: apocalypses and testaments, and legendary narratives. As for apocalypses and testaments, most of them are attributed to antediluvian patriarchs. The fragments of Enoch (4Q201–202, 204–207, 212, 208–211) and the Book of Giants (1Q23, 1Q24, 6Q8, 4Q203, 4Q530–532) belong to the Enoch-Noah cycle of legends. Aramaic Levi (1Q21, 4Q213, 213a, 213b, 214, 214a, 214b) is an apocalypse that formed one of the sources of the Greek Testament of Levi. All three works were known before the Qumran discoveries. But a number of other, previously unknown apocalyptic compositions have come to light at Qumran, most of them in Aramaic. Related to the biblical *Daniel* are a Pseudo-Daniel apocalypse (4Q243–245; see Trebolle et al., 1997) and the Prayer of Nabonidus (4Q242; see Trebolle et al., 1997). New Jerusalem is an apocalypse describing the eschatological Jerusalem and the Temple (1Q32, 2Q24, 5Q15, 4Q554–555, 11Q18). Around patriarchal figures of the Levitical genealogy are constructed the Visions of Amram (4Q543–548) and the Testament of Qa-

hat (4Q542). Another peculiar group of Aramaic fragments portrays typical court-tale scenarios, where seers interpret enigmatic dreams or visions to a royal figure, or wise courtiers grapple with plots against them. Such are Proto-Esther (4Q550), the Aramaic Apocalypse (4Q246; see Trebolle et al., 1997), and the Four Kingdoms (4Q552–553). They join other Jewish Aramaic court tales, such as *Daniel* 1–6 and *Tobit*, of which four Aramaic copies were found at Qumran (4Q196–199; see Broshi et al., 1995) to form a corpus of narrative tales, which suggests a line of transmission from the Babylonian-Persian Diaspora to Judea and Qumran.

Nonliterary Documents. A group of seventeen documents (catalogued as 4Q342–348, 351–354, 356–361) is unparalleled in the literary collection of the Qumran manuscripts. Of uncertain provenance, these texts contain letters, deeds, and accounts. Most of them are in Aramaic, and they are penned in a cursive script different from that of the Qumran manuscripts. Carbon-14 examination of letter 4Q342 and debt acknowledgment 4Q344 yielded dates in late first and early second century CE, at least a century after the latest Qumran texts were copied. One of the documents, act 4Q347, is actually a part of a document number 32 from the Wadi Seiyal collection (cf. Cotton and Yardeni, 1997, p. 283). Cotton and Yardeni, the editors of the documents, therefore, concluded that they probably were not originally from Qumran and do not belong to the library but rather stem from other sites in the Judean Desert.

DEVORAH DIMANT

QUMRAN COMMUNITY. The term *Qumran community* refers to the community whose archaeological and

literary remains were preserved at Khirbet Qumran, 'Ein-Feshka, and nearby caves. [See 'Ein-Feshka: Qumran, *article on Archaeology*.] As the archaeological evidence is reconsidered, as new texts are published and new questions are being asked of long-known texts, the identification of the Qumran community, or communities, remains one of the most debated issues in Qumran scholarship.

The archaeological remains point to the use of the settlement at Qumran by a community between 100 BCE and 68 CE. Eleven caves in the vicinity of the settlement have revealed a wealth of ancient texts. A connection between the settlement and these texts is indicated by the discovery of a particular type of pottery in both the settlement and the caves. The texts that reflect the life of the community are referred to as sectarian documents. These form a distinct type of literature among the nonbiblical scrolls. The term "sectarian" is used to indicate that a document was composed by the Qumran community rather than merely copied by them.

Serious questions have been raised recently, and a reevaluation of the evidence is taking place. It is no longer clear that the sectarian scrolls go back to a single community. That we might be dealing with more than one Qumran community is indicated by the numerous differences between various documents as well as significant differences between various copies of the same Rule of the Community (compare especially Rule of the Community from Cave 1 at Qumran [hereafter 1QRule of the Community], 1QS v.1, and Rule of the Community^d 4Q258 1.i). [See Community Organization, *article on Community Organization in the Rule of the Community; Rule of the Community*.] The traditional view of accounting for differences between the Damascus Document and the Rule of the Community, for example, has been to rely on the references to two orders of Essenes in the writings of the Jewish historian Josephus (37–100 CE). [See Josephus Flavius.] Whether we should rely on external sources for the basic framework of interpreting the primary evidence is questionable. Some would be content to explain discrepancies as due to developments in the organization of a single community. Others attempt to explain these differences as reflecting various communities, sometimes choosing to describe them as a parent movement and its offshoot community. There is today an increasing awareness that many of the documents are composite texts, which further complicates the picture.

Tied up in this debate is an ongoing search for appropriate criteria to distinguish works or parts of works that go back to a particular community from traditional material that might have been cherished and copied rather than composed by that community. The following criteria have been suggested to identify sectarian material: shared terminology (Stegemann, 1983, p. 511) or style (Dimant,

1984); shared literary forms (Stegemann, 1983); distinct ideology (Dimant, 1984); the expression of self-understanding of a distinct religious community (Stegemann, 1983; Dimant, 1984); scribal practice (Tov, 1986); the use of Hebrew rather than Aramaic (Dimant, 1984); the avoidance of the Tetragrammaton except in scriptural quotations (Newsom, 1990); the conclusion that texts advocating a nonsolar calendar are nonsectarian (Newsom, 1990); and the reference to the Teacher of Righteousness as an authoritative figure (Stegemann, 1983). Also, since various versions of the Rules outlining the organization of a community were preserved side by side, it is difficult to envisage how all the versions could have been practiced by a real community.

The following documents are widely regarded as sectarian: 1QRule of the Community, 4Q255-264, 5Q11, 4Q265, 5Q13; Rule of the Congregation [1Q28a]; the Damascus Document; the *pesherim*; Hodayot; the War Scroll; *Miqsat Ma'asei ha-Torah*^{a-1} [4Q394-399], and Rebukes by the Overseer [4Q477]. The status of many other compositions, including Temple Scroll^b (11Q19) is debated.

The archaeological evidence (especially the coins found at the Qumran site), the study of the scripts, recent carbon-14 tests using Accelerator Mass Spectrometry (AMS), as well as the identification of the few named individuals mentioned in the scrolls (*Pesher Nahum* 4Q169 1.2) all point to the period between 100 BCE and 70 CE for the communal occupation of the site and the copying of most of the manuscripts. [See Carbon-14 Dating; Numismatics; *Pesher Nahum*; and *Scrolls Research*.] Some manuscripts predate this period and must have been brought to Qumran from outside.

Character of the Community.

Literary evidence. A variety of self-designations are employed to refer to the communities described in the various texts. In the Rule of the Community, *yahad* ("community") and "the many" are the most frequent; in the Damascus Document (CD) "congregation" and "camp" are widely used; in the Rule of the Congregation "congregation" occurs frequently. The interpretation of scripture and its legal requirements, especially in relation to purity, emerge as key concerns in many of the texts (*Pesher Habakkuk* 1QpHab ii.7-10a, vii.4-5a; *Pesher Psalms*^a 4Q171 2.2b-3a, 15a; CD iv.8, vi.7b-8a; 1QS vi.6-7, viii.15-16a), and legal matters were a source of disagreement with opponents (1QpHab v.11-12a, 4Q171 4.8-9a, 4Q394-395 B). [See *Miqsat Ma'asei ha-Torah*; *Pesher Habakkuk*; *Pesher Psalms*.] The prominence of priestly concerns points to a community with a dominant priestly element (4Q394-399 B, 11-13, 25-27, 75-82); and the material dealing with the disqualification of certain categories of priests as well as with the procedures for dealing with skin disease in

which the priest plays a crucial role in Damascus Document (4Q266 6.i parallels 4Q269 7, 4Q272, 4Q273 4). [See Damascus Document.] Several passages describe the formation of a community in terms of a withdrawal (1QS viii.12b-16a [but cf. 4Q258 2], ix.19b-21a, 4Q394-399 C 7-8) and might refer to the withdrawal to Qumran. *Pesher Habakkuk* and the Damascus Document mention a Teacher of Righteousness. The Damascus Document (CD i.9-11) portrays him as an important figure in the history of the community (in CD vi.11 a similar expression refers to a future figure). In *Pesher Habakkuk* and *Pesher Psalms*^a he appears in opposition to a wicked priest. Hierarchical community structures are reflected in 1QRule of the Community (1QS ii.19-23, v.23-24a, vi.2, 4, 8-11, 22, vii.21, viii.19) and Rule of the Congregation (1Q28a i.19, ii.15-17, ii.21). Meals were eaten communally according to 1QRule of the Community (1QS vi.2, 4-5, 25) and Rule of the Congregation (1Q28a ii.21-22). [See Rule of the Congregation.] Numerous statements bear witness to independent judicial systems (1QS v.6b-7a, v.24b-vi.1a, vi.24-vii.25; CD ix.2-8a, ix.16b-x.10a, xix.20; 4Q266 18.iii-iv; 4Q267 12; 4Q270 11.i; 4Q477; 1Q28a i.11, 20).

On a number of matters the literary evidence is not so clear-cut. 1QRule of the Community never mentions women or family life and is sometimes thought to reflect a celibate community. The Damascus Document (CD vii.6b-9a [xix.2b-5a], xv.5-6, xvi.10-12, xi.11, xii.1-2, xiv.12-16) and the Rule of the Congregation (see 1Q28a i.4, 8-11) presuppose the presence of women and children. The idea that the community has rejected the sacrificial cult as practiced in the Temple is expressed in 1QRule of the Community (1QS iii.11, vii.5b-6a, 8b-10a, ix.3-5), whereas the Damascus Document (CD ix.13-14, xi.17-21, xvi.13) and Damascus Document^a (4Q266 6.ii) take participation in the cult for granted. Great variety exists even within individual documents regarding the authority structure in the community. Authority is granted to "the sons of Zadok the priests and the men of their covenant" (1QS v.2b-3a; see also 1Q28a i.2), "the many" (in the parallel passage in 4Q258 1.i.2), and "the sons of Aaron" (1QS ix.7; see also 1Q28a i.23). Different procedures for the admission of new members are outlined. The Damascus Document (CD xv.5b-xvi.1a) and 1QRule of the Community (1QS v.7c-9a) refer to swearing an oath of the covenant. 1QRule of the Community (1QS vi.13b-23) refers to a more complex process involving various stages. Common use of property is envisaged in 1QRule of the Community (1QS i.11b, iii.2, v.2, vi.17, 19-20, 22), whereas the Damascus Document (CD ix.10b-16a, xiii.15-16, xiv.12-13) more obviously implies private ownership.

The texts portray a community that perceives itself as

the righteous remnant after the exile (CD i.3–5a); in possession of special revelation (CD iii.13–16a); and modeled on Israel in the wilderness (CD xi.23–xii.7, IQS ii.19–22a, IQM iii.13–iv.17, IQ28a i.29–iii.1, 4Q394–399 B 29–31). A number of passages express severe hostility to an opposing group (CD i.13–ii.1, IQpHab ii.1b–4, 4Q171 1.26b–2.1a).

There is evidence for the following beliefs and teachings. Strict standards of purity are stipulated (4Q394–399 B, CD vi.17, vii.3) with a particular concern for the purity of Jerusalem (4Q394–399 B 29–33, 58–62; CD xii.1–2). Sometimes the reason given for these is the presence of angels in the community (CD xv.15b–17 [par. 4Q266 8.i.9], IQ28a ii.8–9, IQM vii.6). [See Angels.] Strict Sabbath observance is stipulated (CD iii.13–15, vi.18, x.14–18a). A solar calendar is promoted (4Q394–399 A; CD iii.14; cf. IQpHab xi.6–8a). [See Calendars and Mishmarot.] Various texts express a dualistic outlook (IQM i.2; IQS ii.2, 5; iii.13–iv.26) which, nonetheless, retains a belief in the ultimate sovereignty of God (IQM xviii.1–3, IQS iv.18b–19a). There is also a conviction that the course of history and the fate of humans is predetermined by God (IQM i.10, IQS iv.25b–26, CD ii.7b–10, IQpHab vii.13). A variety of eschatological beliefs are expressed in the texts: an expectation of the Messiah(s) of Aaron and Israel (but cf. CD xii.23b–xiii.1a, xiv.19, xix.10, xv.1; IQS ix.11), the one who will teach righteousness at the end of days (CD vi.11), an eschatological prophet (IQS ix.11; cf. 4Q259 1.ii.6). A delay of the expected end time was experienced (IQpHab vii.7–10a), and a messianic banquet appears to be described in the Rule of the Congregation (IQ28a ii.11b–21b).

Archaeological evidence. The archaeological evidence suggests communal use of the Qumran site from around 100 BCE. The settlement may have been destroyed in 31 BCE by an earthquake recorded in the writings of Josephus. Recent research on the numismatic evidence suggests a second violent destruction by fire in 9/8 BCE, or soon thereafter followed by a brief abandonment of the site. (Magness, 1995). In 68 CE the settlement fell to the Romans. [See Qumran, *article on Archaeology*.]

The excavations have brought to light evidence for the use of the site for ritual immersions (an elaborate water system, pools used for ritual immersion [*miqva'ot*]), for meetings (an assembly room), for communal meals (a refectory, a large amount of crockery, animal bones, a room [kitchen] with five fireplaces), for the production of pottery (kilns); and perhaps for the copying of scrolls (two inkwells and remnants of what has been reconstructed as a writing table). [See Cisterns and Reservoirs; Inkwells; and Water Systems.] The same type of pottery, at least some locally manufactured, discovered in the settlement has also been found in the nearby caves. Numer-

ous cisterns were excavated that would have supplied the needs of up to two hundred people. A cemetery with approximately eleven hundred graves is located adjacent to the settlement. The skeletons excavated in the central part of the cemetery are predominantly male, the bodies having been buried with their heads facing south. Near the edges of the cemetery some children's and female skeletons were found.

Jean-Baptiste Humbert (1994) interprets the archaeological evidence as indicating two phases during which the settlement had different functions: a Hasmonean villa (100–31 BCE) that became the cultic center of the Essenes (31 BCE–68 CE). He argues that the animal bones and the vessels are remnants of sacrificial worship practiced by the Essenes at Qumran after they had turned their back on the Jerusalem Temple. The following arguments mitigate against his hypothesis: The majority of the vessels that he claims were used for offerings predate his Essene phase of occupation (Magness, p. 60, n. 10); the establishment of sacrificial worship at Qumran is difficult to reconcile with passages in the scrolls that are expressly hostile to the sacrificial cult (see IQS ix.4–5).

Identity of the Community or Communities. There are a number of hypotheses concerning the identity, origin, and history of the Qumran community, including the view that none of the sources provides sufficient evidence to permit any identification (Goodman, 1995).

Essene hypothesis. An identification of the movement behind the nonbiblical scrolls with the ancient Jewish group of the Essenes constitutes the majority view among Qumran scholars. [See Essenes.] Prior to the discovery of the scrolls, the only information available about the Essenes came from classical authors, chiefly Philo Judaeus, Josephus, and Pliny the Elder. [See Philo Judaeus; Pliny the Elder.] The Essene identification of the movement behind the Qumran library is based on a catalog of correspondences between the descriptions of the Essenes in the classical sources and the practices and beliefs of the movement as they emerge from the sectarian scrolls. The evidence of the classical authors is conveniently accessible in Vermes and Goodman (1989). The Essene hypothesis is presented in a number of versions. [See Essenes.]

The consensus view first largely outlined by Geza Vermes (1953), Józef T. Milik (1957), and Frank M. Cross (1958), which was endorsed by the majority of scholars for many years, considered the Essenes and the Qumran community as identical. This reconstruction is found, for example, in Hartmut Stegemann's earlier work on the origins of the Qumran community (1971). A key element in Stegemann's reconstruction of the community's history is the identification of the Wicked Priest, the arch-opponent of the Teacher of Righteousness. [See Teacher of Righteousness; Wicked Priest.] From what is said about the

Wicked Priest in Peshar Habakkuk, Stegemann concluded that this nickname refers to the Hasmonean Jonathan who was high priest between 152 and 143 BCE. [See Jonathan (Hasmonean).] Stegemann argued that the Teacher of Righteousness was high priest during the so-called Intersacerdotium (159–152 BCE), that is, the period in which the high priestly office is believed to have been vacant, a view challenged by Stegemann. According to him, the Teacher of Righteousness was driven out of office and replaced by Jonathan, who did not belong to the traditional high priestly family of the Zadokites and was, therefore, considered an illegitimate high priest by the Teacher of Righteousness and his adherents. According to this view the Teacher of Righteousness perceived himself as the only true representative of the covenant and as the legitimate high priest. Once driven out of Jerusalem he found protection with a community of pious Jews known as the Hasidim. The arrival of the Teacher of Righteousness provoked a split within this movement over the issue of boycotting the Temple. Stegemann further argued that those who refused to follow the Teacher of Righteousness became the Pharisees and the Teacher of Righteousness's community should be identified with the Essene Qumran community. [See Pharisees.]

Stegemann's original outline of the origins of the Qumran community has been challenged. The widely held assertion that the Teacher of the Righteousness was a former high priest has been questioned (Collins, 1989); perhaps he was no more than the ultimate priestly authority for his followers. The scarcity of evidence about the existence of the Hasidim as an organized group in the Maccabean period has also been stressed (Davies, 1977). [See Hasidians.] Very little about this group is known; *1 Maccabees* 2.42 and 7.13; and *2 Maccabees* 14.6 are the only references to the Hasidim in our sources. This paucity of evidence contrasts sharply with the pivotal role attributed to it by some.

"Groningen Hypothesis." This hypothesis takes its name from the University of Groningen (in the Netherlands). Florentino García Martínez, its principal proponent, has emphasized that the origins of the Essene movement and the origins of the Qumran community are distinct from each other: The Essene movement emerged in the Palestinian apocalyptic tradition, whereas the Qumran community emerged after a split within the Essene movement and resulted in the withdrawal to Qumran of a group loyal to the Teacher of Righteousness. García Martínez argues that the Teacher's self-consciousness of having received the only true interpretation of the law was what caused him to differentiate himself from the rest of the Essenes.

A. S. van der Woude has added to the hypothesis that the title Wicked Priest as used in Peshar Habakkuk refers

not to an individual but to a succession of high priests who can all be identified.

Stegemann's revision of Essene hypothesis. Stegemann has recently revised his reconstruction of the history of the Essenes. He now regards the Teacher of Righteousness as the founder of "the main Jewish Union of Second Temple times" (1998), which, Stegemann holds, comprised all conservative Jews of the time and lacked the support only of the Maccabean high priest and the Temple establishment. According to Stegemann, the classical authors' term Essenes refers to this union. For Stegemann, the Qumran site, the nearby caves, and 'Ein-Feshkha were used by this union from the end of the second century BCE as a center for the production, deposition, and study of manuscripts. Stegemann's revised reconstruction has not found as much support as his earlier reconstruction commanded when it was first formulated.

Sadducean hypothesis. An earlier theory of a Sadducean background to the scrolls has recently been revived. Especially since the contents of *Miqsat Ma'asei ha-Torah* have become known, some scholars have pointed out that a number of legal positions endorsed in the scrolls favor the same position attributed to the opponents of the Pharisees in rabbinic sources. [See *Miqsat Ma'asei ha-Torah*; Sadducees.] When it comes to interpreting this evidence, even those scholars who have drawn our attention to this situation disagree among themselves.

Lawrence H. Schiffman has emphasized that since *Miqsat Ma'asei ha-Torah* expresses views at times identical to those attributed to the Sadducees in rabbinic sources, we should move toward identifying the background of the sectarians as Sadducean rather than Essene. He does, however, consider the possibility that the Essenes developed out of a Sadducean background. If *Miqsat Ma'asei ha-Torah* is associated with a community that has withdrawn to Qumran (cf. 4Q394–399 C 7–8), as some would argue, Schiffman's interpretation would have a bearing on the identity of the inhabitants of the Qumran site. Joseph Baumgarten (1980) also has shown that in a number of Pharisaic-Sadducean controversies on ritual purity recorded in tannaitic literature the position attributed to the Sadducees is close to the position taken in the scrolls, but Baumgarten has remained a supporter of the Essene hypothesis, since more than one group can share the same position on specific items of legal interpretation.

This debate is ongoing. Correspondences in matters of legal interpretation between the scrolls and the views attributed to the opponents of the Pharisees in rabbinic writings clearly exist. The question is whether these constitute sufficient evidence to identify the Qumran community as a Sadducean group. An acute difficulty for those advocating a Sadducean background for the Qum-

ran community is the strong belief in fate and predeterminism expressed frequently in the scrolls, which contrasts sharply with Josephus' famous statement that the Sadducees deny fate altogether. It readily can be argued that the legal correspondences between the scrolls and the Sadducean position as described in later Jewish sources can be explained satisfactorily as deriving from their common traditions.

Jewish Christian hypotheses. A Jewish Christian identification of the movement behind the scrolls has been proposed in different forms, and these positions tend to receive much more popular and media attention than is warranted. The main argument against any Jewish Christian identification of the movement behind the scrolls is the date of the material. The group(s) responsible for the scrolls, some members of whom came to reside at Qumran, originated at least a century and a half before the first Christians.

Jerusalem hypothesis. In a series of publications Norman Golb has denied not only an Essene identification of the movement behind the scrolls but also any link between the Qumran settlement and the contents of the nearby caves. Golb argues that the Qumran site does not provide evidence for a civilian settlement inhabited by a religious community but constitutes the remains of a military fortress. He goes on to suggest that the manuscripts and fragments found in the nearby caves are unrelated to the settlement and originated in Jerusalem. In Golb's view the texts belonged to the library of the Jerusalem Temple (as suggested by Rengstorff in the 1950s) as well as to individual wealthy citizens and were hidden near the Dead Sea just before the fall of Jerusalem to the Romans in 70 CE.

There are five principal arguments against Golb's proposal: Distinctive pottery has been found in the scroll caves and at the site; provided the graves found near the site originated over a sustained period, the burial practice at Qumran is fairly distinctive, being attested only at Qumran, at Wadi Ghweir, situated some 15 km south of Qumran, and possibly in Jerusalem; the aqueduct leading to Qumran would be vulnerable and would not be a suitable way to supply a fort; the presence of multiple copies of documents describing the life of a particular community (Newsom, 1990); and an ostrakon discovered in 1990 in the wall extending south from the main buildings, which is thought by some to contain the term *yahad*, the technical self-designation of the community as found in the sectarian scrolls.

The literary evidence is complex and points to a number of communities. The texts and the archaeological evidence together point to a predominantly male community with particular concern for strictest standards of

ritual purity. One or several of the communities attested in the texts probably occupied the Qumran site. The evidence of the classical sources fits best with some kind of Essenism.

RABBINIC LITERATURE. See Midrashim; Mishnah and Tosefta; and Talmudim.

RELIGIOUS BELIEFS, QUMRAN SECT. The prevalent descriptions of Qumran beliefs are the achievements of research which relied primarily on the well-preserved scrolls from Cave 1. A number of assumptions and presuppositions resulting from this state of affairs and concerning contents as well as chronology should be revisited in light of the fragments from Caves 4 and 11.

It was and still is a widely shared assumption that the Teacher of Righteousness installed himself and his adherents at Khirbet Qumran in approximately 130 BCE. The more correct date for the founding of the Qumran community is 100 BCE, probably a long time after the death of the Teacher of Righteousness. Fragments of additional exemplars of the Rule of the Community from Cave 1 (hereafter, 1Q Rule of the Community, 1QS) and the Damascus Document (CD) indicate a rather complicated redactional history and for some parts an earlier origin than previously imagined. In consequence, some of the assumed characteristics of the *yahad* community were not the result of a sectarian development at Qumran but part of an older Zadokite tradition of priestly self-administration and self-consciousness. This involves particularly a cultic conception of God and humanity, of purity/impurity (Newton, 1985), including a deterministic view of creation and history with dualistic traits, and finally a sophisticated division of time and history based on practices and experiences in connection with the organization of cultic service (Johann Maier, *Die Qumran-Essener*, vol. 3, Munich, 1996). It is, however, difficult to understand whether and how such basic concepts were transferred during the Qumran period from the specific priestly realm to the whole of the later *yahad* community, which certainly also included lay Israelites. However, it seems certain that the *pesher* literature had its roots in a specific personal claim of the Teacher of Righteousness and originated primarily during the Qumran period, reflecting that view of history which the followers of the Teacher of Righteousness envisaged as a kind of authoritative explanation of preceding and present events and as a prelude to the imminent eschatological period(s).

It is difficult to decide to what extent the description of the Essenes by Josephus may explain the beliefs of the Qumran community, for Josephus obviously combined sources about different groups (Bergmeier, 1993), and his account of Essene beliefs contradicts fundamental aspects of the Qumran evidence.

Zadokite Tradition in the Framework of Postexilic History. The Dead Sea Scrolls represent the literary heritage and the original documents of a priestly group that claimed for itself the preservation of the Zadokite tradition, which to a certain extent also survived in the group the New Testament and Josephus call the Sadducees. [See Sadducees.] According to the Damascus Document (CD i-ii), Pseudo-Moses^c (4Q390), and related texts (e.g. *1. En.* 93.9-11; cf. *1. En.* 89.72-90.17), these Zadokites headed a conservative reform connected with the change of dominion about 200 BCE, when Antiochus III granted the pro-Seleucid party in Jerusalem a number of privileges, some of which resemble regulations in the Temple Scroll (11Q19) and in *Miqsat Ma'asei ha-Torah*^d (4Q394-399). The texts mentioned above presuppose that a number of "elected ones" received "revelations" (cf. *1. En.* 93.9).

According to the Damascus Document (CD i.5-7), a decisive revelation was received twenty years after a return to the correct order, which happened three hundred ninety years after the fall of Jerusalem under Nebuchadnezzar (586 BCE). The Damascus Document (CD i and ii) connects this "revelation" with the activity of a Teacher of Righteousness, probably the priest who officiated at that time as a "Prophet like Moses" (*Dt.* 18.18). Pseudo-Moses^c (4Q390 1) stigmatizes the failure of the reform as a renewed backsliding by Israel (cf. CD i.12-21) into erroneous practices that are listed in MMT and corrected by the proper rules and rites. In consequence, the followers of the Teacher of Righteousness regarded the official Temple cult as ritually ineffective and organized themselves as a separate *yahad* group initially, perhaps as a center for their adherents in the country, who may have been more or less identical with the Essenes (Bergmeier, 1993). In expectation of the eschatological turning point of history they withdrew toward the end of the actual 490-year period to Khirbet Qumran, where their traditions and beliefs underwent a more or less sectarian development.

Calendar, Chronography, and Eschatological Expectations. During the Persian and early Hellenistic periods the Zadokites developed a universal chronographic system based on the solar-oriented calendar in connection with the traditional cycles of priestly courses. Within the frame of the solar calendar, the twenty-four courses (cf. *1 Chr.* 24) automatically formed cycles of six years plus one year for a total of seven years. Dividing the time into periods of six years plus a seventh year (sabbatical year), into jubilees (49 years), hexajubilees (294 years, the span of time in which the continually increasing seasonal difference between the lunar- and solar-calendar systems is reduced again to zero), heptajubilees (343 years) and particularly dekajubilees (490 years), these Zadokites calculated the past, beginning from the actual priestly cycles of their own time (probably as early as the fourth or third century BCE). Thus they arrived at a point where the beginnings of all these periods coincided. Regarding this point as the year of creation, they divided the traditional view of history (as attested also in the Pentateuch) into jubilees, with the result that Moses and Israel arrived, according to the *Book of Jubilees*, at the borders of the land of Israel at the end of five periods of 490 (= 2450) years. Continuing this calculation, the First Temple was accordingly completed at the end of the next dekajubilee, at 2940 ($10 \times 294 = 6 \times 490$), and destroyed in 3430 (10×343) after creation. The next dekajubilee would end in 3920 (= 98/7 BCE) at the beginning of the first eschatological period of 490 years. According to *1 Enoch* 93 this would be a period of the "sword," in which the destruction of the Second Temple and the building of a new Third Temple was expected.

And, of course, they reckoned with the restoration of their concept of constitution under a high priest, a (Davidic) ruler, and a new "Prophet" (like Moses). As theoretically authorized functionaries, the high priest and (Davidic) ruler are called "anointed ones," a term that usually has been translated as "messiahs." [See *Messiahs; Priests.*]

Until this eschatological restoration, during the "period of evil," all former rules and precepts of the Torah were to be observed as defined and prescribed by the late Teacher of Righteousness. The End of Days was calculated to be imminent; this motivated the struggle for an uncompromising application of the Zadokite Torah tradition and calendar without considering the practical consequence.

Cultic Worldview and Priestly Self-consciousness. Some of the Dead Sea Scrolls express explicitly the self-assessment of the Jerusalem priesthood and clarify a number of biblical and other statements.

The basic concept involves two opposite realms, God's realm and its counterpart: the realm of good spirits/

angels (Davidson, 1992) and the realm of evil powers; the realm of holiness and purity and that of the profane and impure. Or, in cosmological terms, the realms can be thought of as realms of light and darkness, headed by a prince of light (Michael) and a prince of darkness (Belial). The natural division between heaven and earth is, relative to this, of secondary importance. This concerns particularly the sanctuary as the cultic abode of God's glory or name; its cultic order corresponds to that of the cosmos, and its service is identical with that in the heavenly sanctuary. In other words, the priests in service regard themselves functionally as ministering angels as described in the Songs of the Sabbath Sacrifice (4Q400-407). [See *Songs of the Sabbath Sacrifice.*]

The task of cultic service is first the adoration of God and second the eliminations of the power and consequences of impurity and guilt by sacrificial rites which guarantee the preservation of an adequate status for the service of God in the respective and hierarchically divided ritually pure realms (these begin at the Holy of Holies and end at the borders of the land of Israel).

This priestly concept produced a specific view of the nature of humanity. The exalted position among angels is due to the election for priesthood. According to his human existence, a priest has a humble, and, compared with God, even a detestable nature, a mixture of loam (dust) and water laden with shame and guilt, depending totally on God's grace. This ambiguous position was shared also by the lay members of the *ma'amad* as they formed (on an inferior level, of course) part of the cultic personnel, representing Israel at the sanctuary. The rituals, however, display clearly the differences of status. Priestly liturgies consist of mere adoration and glorification of an exalted creator God enthroned in the midst of ministering angels. There is almost never even a hint of the election of Israel and its salvific history, a motif so common in liturgies and prayers for lay Israelites. And even the name *YHVH*, which designates primarily the God of Israel rather than the creator, does not appear in such contexts. The same distinction between priests and lay Israelites characterizes the terminology concerning the covenant. The priests are called those who are elected to maintain the covenant. The laymen share this covenant by obeying the priestly directions and Torah (cf. *1QS* v.7-13).

The general purpose of the sacrificial cult is the ritual expiation of guilt which otherwise would unleash an ominous power with disastrous consequences for humanity and nature alike. In this context the expiation for the "land" (of Israel) as the holy realm for the existence of Israel plays a predominant part. Consequently, this task was also regarded as one of the main functions of the *yahad* order. Certain already stereotypical statements in

IQRule of the Community equate the priests with the Holy of Holies and their lay followers with the temple hall. In this way they represent the sanctuary at least functionally, and they obtain expiation for the land until the reintroduction of the correct cult at Jerusalem.

Revelation: Torah and Prophecy. Of particularly far-reaching consequences for Qumran research has been the impact of the Christian concept of the Bible as a canon of scriptures. It has been commonly presupposed already for the period of the Second Temple and for classifying the the Qumran texts. The classification of the texts is based on the division into biblical texts and nonbiblical texts; the latter have been classified according to their relationship to the biblical ones as rewritten Bible, parabolic, biblical paraphrase, and apocryphal/pseudepigraphic, etc. This does not correspond to the Jewish concept of holy scriptures, which differentiates carefully between Torah, Prophets, and other scriptures as three distinct levels of revelation and authority. Only the Torah constitutes a revelation of an absolutely binding character. The Torah as revelation of God's will was, however, never restricted to the legal contents of the Pentateuch, as some scholars assume. For them the Pentateuchal laws serve as the decisive basis and criteria for the evaluation of all extant legal materials; they regard the latter primarily as interpretation, harmonization, or amplification of biblical laws. The traditional Jewish concept of holy scriptures should have caused a more cautious attitude. It differentiates between a Written Torah in the Pentateuch and a (far more extensive) Oral Torah. This Pharisaic-rabbinic concept restricts the Written Torah to the Pentateuchal laws and binds the Oral Torah to the authoritative advising function of rabbinical experts.

In the Qumran texts no differentiation of this kind appears: There is no hint of a special significance for the Pentateuch as far as a source of Torah, for all Torah is exclusively bound to priestly authority, represented principally by Moses and by an office that generally has been misunderstood as an eschatological one—a “prophet like Moses.” This title refers, according to *Deuteronomy* 17–18, to a position within the constitution of Israel still explicitly attested by Josephus in *Jewish Antiquities* 14.216–218. Its function is not prophetic in the usual sense but a legislative and judicial one based on the claim of direct revelation, as was Moses', who, after Sinai, received direct Torah revelations in the “tent of meeting.” The authority of this office was, therefore, an absolute one, as *Exodus* 18 demonstrates before Sinai.

New Torah legislation takes the form of *derash* (“proclamation”) based on already extant Torah (written or oral) and of acts of *horot* (“instruction”) as enacting new *torot*. These procedures are not bound to interpretation of extant law but may include exegetical procedures. The

usual translation of *h-drosh* as “to interpret” or “to expound” is evidently erroneous and should be replaced by “to declare [as valid, applicable],” a meaning still valid for the tannaitic sources. The term *le-horot* has remained throughout the history of Jewish law the designation for the authoritative decisions concerning binding *halukhalah*. In the rabbinic tradition this was not a priestly privilege. Both claims to authority were, however, based on the model of Moses and that of the “prophet like Moses.”

This dynamic, still open, and creative Qumran concept of Torah constitutes one of the central beliefs in the Qumran texts, and through the office of a “Prophet like Moses” it played a decisive role in the controversies of post-exilic Judaism. The so-called Teacher of Righteousness (more correctly, Enactor of Justice) seems to have been the last to hold this office. The Hasmoneans were not interested in nominating a new occupant for the office (cf. *I Me.* 4.46, 14.41) because of the still differing opinions regarding Torah, and certainly also because of the remarkable political power connected with this authoritative function. [See Hasmoneans.] In consequence, Torah in the Qumran texts should be treated primarily as a product of this Mosaic institution and not as a result of exegesis of Pentateuchal laws only.

Normal prophecy differs essentially from Mosaic Torah prophecy (see *Nim.* 12.1–8). Qumran texts ascribe (as does Jewish tradition in general) to primarily the regular prophet the task of foretelling events but never the ability to enact Torah. The specific attitude of the Qumranic texts consists of the claim by the Teacher of Righteousness (and his followers) of the exclusive and true key for understanding the original meaning of the prophetic text as intended by God and not even realized by the prophet himself. The *peshet* interpretation relates the text, even its smallest components, to present events as a time of evil before the definitive turn to the eschatological periods. A specific controversial point was that this claim to a kind of revelatory exegesis was combined with the Torah authority of the Teacher of Righteousness: he alone is said to know on this basis what, for the time in question, has to be regarded as presently binding Torah. Consequently, no legal text is subjected to *peshet* interpretation, and no nonlegal text is subjected to *derash* or *horot*. The result of this double claim on authority regarding Torah enactment and *peshet* interpretation was a sectarian development; it confronted people with a choice: to obey and to believe or not.

Although fragments of almost all the biblical books have been found at Qumran, we do not know much about their exact authoritative status. According to statistical evidence, a dominant position is accorded the *Book of Deuteronomy* and books of law of more or less identical legal content. Other books of the Pentateuch are well at-

tested but obviously not primarily as books of law: The actual binding Torah regulations were written down in specific records called *midrash* or *sevek*. Consequently, the Pentateuch, a product of compromise from the early Persian period, gained the reputation of a common Jewish foundation which could be referred to in cases of diverging opinions. This is the case in MMT^{a1} (4Q394–399), where the differences between the followers of the Teacher of Righteousness and their opponents are listed. The text refers explicitly to a correct understanding of the book of Moses, the books of the Prophets, and the psalms of David, as well as of the practices of every generation. But it is truly remarkable that the correct practices are not presented as results of correct scriptural interpretation; on the contrary, the correct practices are said to lead to the proper understanding of the authoritative scriptures.

Testimonies to the Qumran community's legal heritage are extant in a great number of manuscripts, the best preserved being Temple Scroll^b (11Q19). Legal texts and laws are also embedded in historical contexts for example in *Jubilees*. In spite of representing Torah, such regulations were not necessarily always actually valid law, for a double concept of Torah existed in this tradition: the "hidden" as part of the conceptual totality of God's will, and the "revealed" (extant) Torah, enacted by acts of *derush* or *horot* and subject to instruction (CD xv.10–12). The actually valid Torah of the group was, however, restricted to the "law of the time" and to the regulations enacted by the Teacher of Righteousness for the time of wickedness. Such actual Torah may have been the content of the "Book of HGW/Y," mentioned several times as indispensable for the administration of justice and order within the *yahad* community.

Predestination and Eschatology. The concept of the election of Israel has its place in contexts concerning the relation between Israel and the gentiles. It coincides to a large extent with the belief in God's command to separate Israel ritually and sociologically as a holy realm from all other nations. In the Dead Sea Scrolls, however, the election of "Levi," the priestly group, is of more central concern (Kugler, 1996). The priestly worldview dominates the religious thought, particularly the relationship of the earthly and heavenly realms and beings, described as essentially opposed in nature but coinciding during the cultic performance and also in the person of the priest. The peculiar view of humanity (essentially, priest) resulted from such presuppositions (Lichtenberger, 1980). His predestination (Merrill, 1975) culminates in a cultic "position" within a *yahad* together with the heavenly "colleagues." The nature of this realm is described in the Songs of the Sabbath Sacrifice (4Q400–407) which contain an account of the seven heavens and their angelic personnel, who perform a complicated and solemn heav-

enly liturgy. This transcendental goal of existence and the concern for purification and expiation (Garnet, 1977) and, not least, for "knowledge," seem to have been of greater importance than the concept of resurrection or afterlife in general (Puech, 1993). The latter is mentioned or hinted at only a few times in the Dead Sea Scrolls and never elaborated as a general concept of soteriology as New Testament scholars usually expect (Aalen, 1990). The application of the priestly functional predestination to the final destiny of man implicates a kind of "realized eschatology" (Kuhn, 1966) but not in a plain sense, for 1QRule of the Community, 1QS iii.13–iv.26 presupposes a final stage of purification and expiation which transcends the realm of salvific history and seems to correspond to the text Melchizedek (11Q13) where Melchizedek (the model for the Jerusalem high priest) plays a decisive eschatological role as a heavenly figure (Horton, 1976; Kobelski, 1981).

The specific priestly concept did not exclude an appropriate adaptation of traditional eschatological expectations (Collins, 1995). Their fulfillment seems, however, to have been restricted to a certain stage of history, the imminent period "of the sword" (the eighth week of *1 En.* 93.12) of 490 years, with a third temple. It is the period of the restored Israel with its peculiar constitution headed by an "anointed" high priest, and "anointed" Davidic ruler or "Prince of the Congregation," and a Torah prophet (Steudel, 1994). The eschatological texts of the Rule of the Congregation (1Q28a), the Rule of the Blessings (1Q28b), the War Scroll (1QM), the Florilegium (4Q174), and Catena^c (4Q177) display no specific interest in "messianic" speculations or in the person of a messiah in a Christian sense. The authors of the Dead Sea Scrolls were far more eager to define the ritually conditioned precedence of the priestly authority in the presence of the lay leadership (including the ruler) on certain ritual occasions (Schiffman, 1989).

Two differing points of view, that of the election of Israel and its future and that of the priestly status and final destination of humanity, led to eschatological statements that are *mutually contradictory*, at first glance. They are, of course, connected in the concept of the whole of Israel in its historical dimension. The priestly point of view, however, is primarily concerned with the dimension of holy space and finally with realms beyond normal human existence. Their combination reflects a development toward a double eschatological concept akin to that of the later Jewish distinction of a "messianic time" as the final phase of history in "this world" and a transcendent "world to come" (clearly attested in *4 Ezra*).

Sectarian Developments. It is a symptom of sectarian tendency that the "revealed" or presently valid law had to be treated by the members of the group as a secret in the presence of nonmembers (1QS viii.16–18; 4Q258 1.i.8–9).

This is an attitude that contradicts MMT^{a-1} (4Q394-399) in which a kind of literary legal controversy appears. Demands of secrecy also applied to doctrinal contents as indicated by (IQS x.25) and by the frequent use of the word *sof* ("secret") or *raʿ* ("mystery") in theological ("sapiential") and poetic-liturgical texts. They refer to creation and the cosmos, as well as to salvific history, and thus combine the secrets of calculating the cultic calendar and chronography. It seems that an ancient and arcane priestly tradition was transformed into the specific secret heritage of the group behind the Qumran texts.

The priestly concept of election underwent a decisive change that corresponded with the evolution of exclusive, sectarian trends within the Qumran community. Now the *yahad* community regarded itself as the true remnant of Israel and as the nucleus of the whole of Israel to be restored in the new eras. Consequently, the rift within Israel became a radical antagonism between the adherents of the *yahad* and all other Israelites, with the latter being regarded as traitors and allies of the enemies of God, who were to be eliminated during the final wars of the "sons of light" against the "sons of darkness." [See Light and Darkness; War of the Sons of Light against the Sons of Darkness.] Until the very end of history the powers of light and darkness are continuously striving for predominance in the world as a whole as well as in every single person. Only at that time will the antagonism between good and evil be terminated by God's final decision (cf. IQS iii.26-iv.25). The good will be purified and the evil eliminated; some texts even mention a new creation. It is evident that this transcends the realm of salvific history with the restoration of Israel as its final goal. It seems, however, impossible to determine the relationship between these disparate conceptions. In spite of a certain systematization, there existed no detailed plan for the final goals of redemption. The same is true concerning humanity's final destination. Some texts express more or less clearly the hope for the resurrection of the body, but this hope seems not to have been a central point of view. Other statements express belief in a kind of spiritual survival after death, more or less akin to the concept of an immortal soul. Still more frequent are statements concerning a kind of eternal existence in terms of the priestly communion with angelic beings. It seems likely that it was just this priestly self-consciousness which prevented a more elaborate development of such concepts.

REPENTANCE. In keeping with the Hebrew scriptures, the idea of repentance in Qumran literature involves both personal and national aspects. Repentance plays a central role in the renewal of the covenantal relationship between the Lord and Israel at the End of Days (*Dt.* 4.25-31, 30.1-10; *1 Kgs.* 8.33-34; *2 Chr.* 7.13-14; *Jer.* 31.17-19; *Zec.* 1.3). Qumran literature, however, is unique in dealing with the performance of repentance in daily life in ways that include judicial and liturgical aspects.

Repentance as a Way of Life. It was the Qumran community's aim to realize in its life the eschatological repentance demanded in the prophetic biblical books (e.g., *Jer.* 29.13-14, 31.17-19, 31.30-33). The way of life recommended for the members of the community was considered as a way of repentance. This is apparent in the attri-

butes and appellations of the members of the community. They were defined as the "men of the community who devote themselves to turn away from every evil" (Rule of the Community from Cave 1 at Qumran, hereafter 1QRule of the Community; 1QS v.1) or "who dedicate themselves to return to his covenant" (1QRule of the Community v.22). One of the widespread appellations in the Dead Sea Scrolls is *shavei peshu'* ("those who return from transgression"). This designation expresses the longing for atonement, for forgiveness, and for salvation (Damascus Document [CD ii.4-5, xx.17]; 1QRule of the Community x.20; *Hodayot*^a, hereafter 1QHodayot^a [1QH^a ii.8-9, vi.6, xiv.24]; Songs of the Sabbath Sacrifice^a [4Q400 1.i.16]; cf. *Prayer of Manasseh* 7, B.T., *Yoma* 86b). However, Qumran writings relate not just the idea of repentance but also the activities by which the men of the community are to realize their repentance in daily life.

In examining the positive direction of the root of the word *teshuvah* ("repentance"), *shuv* ("to return to"), in the community regulations, we find that its objective is "the Law of Moses," according to the Zadokite-sectarian interpretation (CD iv.8, vi.14, vii.7-8, xiii.6, xiv.8, xv.9-15, xvi.1-5, xix.4, xx.6, xviii; 1QRule of the Community viii.1-2, viii.15, 22; *Miqsat Ma'asei ha-Torah* [4Q394-4Q399] C27; etc.). The repentance "to that which is found to be done in the whole epoch [of wickedness]" (CD xv.7-10) is parallel to the formula "to return to the Law of Moses according to everything that has been revealed from it to the sons of Zadok, the priests" (1QRule of the Community v.7-10) in that both phrases concern the revelation of "the hidden matters in which all Israel had gone astray" (CD iii.13-16; cf. 1QRule of the Community i.13-15; v.11-12).

Repentance in this manner was the first and basic obligation a member of the community was required to undertake, and it became effective by a ceremonial oath he had to swear upon entering the community covenant (1QRule of the Community v.1, v.7-9, vi.13b-15; CD xv.6-13), defined as *berit teshuvah* ("a covenant of repentance," CD xix.16). This way of life was considered the realization of the repentance that, according to biblical prophecy, had been designated for establishing an eternal covenant between the Lord and Israel (*Jer.* 31.30-32, *Ezek.* 37.26-28, 1QRule of the Community iii.11-12, CD iii.13). This concept is clarified in the epilogue of *Miqsat Ma'asei ha-Torah* (C 13-22).

As the obligation "to return to the Law of Moses" was undertaken by each person who entered the covenant under oath, anyone who violated the oath was considered to be punishable (CD xv.12-13 = Damascus Document^a [4Q266 8.i.4]; Damascus Document^c [4Q270 6.ii.6]). In such a case a person could be blamed for taking a false oath and prolation of the name of the Deity (see *Lev.*

5.4, 19.12), which might entail capital punishment (see *Ex.* 20.7 [= *Dt.* 5.11], *Lev.* 19.12, 24.16). This situation was to be handled judicially.

Judicial Ritual of Repentance. As may be inferred from the regulations in the Damascus Document (CD xv.1-10), a distinction was made between an oath taken in the name of the Deity, which could carry capital punishment, and an oath taken by the covenantal curses (*shevu'at ha-berit*, "the covenantal oath"; or *shevu'at he'alah*, "the public adjuration oath," *Neh.* 10.30), where there is, according to *Leviticus* 5.4-6 and *Numbers* 5.5-7, a possibility of repentance and forgiveness. A person who unintentionally violated such an oath could gain atonement by confessing consciousness of the crime and by making a guilt offering. The possibility of this ritual mitigated the danger of the oath demanded from new members upon entering the community (see Josephus, *The Jewish War* 2.135, 139-142 on the problematic issue of taking an oath among the Essenes). As the swearing involves dangerous curses, the fear of taking such an oath might have been mitigated by the regulation in Damascus Document (CD) xvi.4-5 (= Damascus Document^d [4Q271 4.ii.6-7]). According to this, as long as a person fulfills his oath his repentance is granted the power to overcome the magical power of the curse.

Ceremonial Repentance. A confession recited either privately or in public is the main ceremonial act of repentance. The procedure of the personal confession, to be recited in the presence of a priest while making the guilt offering, is found in Damascus Document (CD) ix.13. A public confession, as recited in the annual covenantal ceremony, is found in 1QRule of the Community i.24-ii.1 (its introduction is preserved in Rule of the Community^b [4Q256 2.2]) and possibly in *Berakhot*^a (4Q286 1.i.7-8?, 4-5?). A distinction between the personal ritual of repentance and the public ritual is alluded to in Damascus Document^e (4Q266 11.1-3a, 11.3b-5 = Damascus Document^f 4Q270 7.i.15-19). The public confession as recited at the annual covenantal ceremony is considered a formal expression of repentance, by virtue of which the penitents are released from the covenantal curses imposed upon Israel when violating the Sinai covenant, and they become worthy to renew the covenant with the Lord and to enjoy the blessings reserved for those faithful to the covenant (cf. *Lev.* 26.40-42, *1 Sm.* 12.19, *2 Kgs.* 22.19, *Neh.* 9.2, 9.33-34). The same concept is apparent in the Qumran literature related to the history of the community, where the act of the confession symbolizes the turn from a situation of sinfulness to the establishment of the reality of a congregation of *shavei peshu'* (see CD i.8-11, iii.17-20). In the Damascus Document (CD) xx.27-30, the confession is accorded a central place as a distinctive sign of those faithful to the community covenant.

There is no guilt offering in the public covenantal ceremony; it is replaced by commandments for perfect observance of the Law. Thus purity, morality, and integrity become mediums of expiation for sins (1QRule of the Community iii.6-8; cf. 1QRule of the Community ix.5). The priestly ritual of a guilt offering in the Temple was replaced by personal purity, which also sanctified the whole community (see 1QRule of the Community iii.7-12, ix.3-6). This holiness was established by strict observance of the Law, according to its priestly Zadokite interpretation.

Repentance in Prayers and Psalms. The custom of expressing repentance by recitation of confession had become a main factor in the Jewish liturgy with the destruction of the First Temple and possibly even earlier. This may be inferred from the prayers and psalms of the late biblical and Second Temple periods, which generally include a confession (*Dn.* 9.4-14; *Ezr.* 9.5-7; *Neh.* 6-7, 9.32-37; *Pr. M.*; *1 Bar.* 1.13-2.12; *Ad. Est.* 4.7-8; *Sg. of 3* 5-9; *Tb.* 3.2-5; *Ps. Sol.* 8.29-34, 9.1-7). Among the prayers from Qumran see Words of the Luminaries^a (4Q504 1-2.ii.15, iii.15-20, v.17-21), Festival Prayers^a (4Q507 1), liturgical work 4Q393 (1-2.ii.1-5), 1QHodayot^a (1QH iv.34-35, xvi.6), Noncanonical Psalms B (4Q381 33.9, 45.1-2), Paraphrase of Kings et al. (4Q382 13.1-2), and Ritual of Purification (4Q512 34.15-16, frag. 28 line 4). *1 Baruch* 1.13-14 recommends that one recite aloud a prayer of confession in the house of the Lord "on the days of the festivals and at appointed seasons."

The confessional motifs of prayers and psalms from Qumran follow those known from the aforementioned biblical and apocryphal supplications, as for example in the communal prayers of liturgical work 4Q393 and Words of the Luminaries^a (4Q504-506). The confessional motifs in the weekly prayers of Words of the Luminaries, especially in the prayer for Friday (4Q504 1-2.v-vi), are interesting. They follow a survey of the historical sins and punishments of the last generations of the First Temple (4Q504 v.1-6a) and the forgiveness of the Lord to Israel that is considered the fulfillment of the promises of *Leviticus* 26.44-45, *Deuteronomy* 30.1-6 and 4.29-30, and *Isaiah* 26.16 (4Q504 v.6b-17a).

Two kinds of confessions are recorded there: a confession of guilt (4Q504 v.17b-21) and a confession of having become cleansed from guilt (4Q504 vi.2-10a). In the confession of guilt the worshippers declare that, despite the Lord's forgiveness for the guilt of past generations, they too have wearied God by their own sins; thus the troubles they suffer are considered as punishment for their guilt. In the confession of cleansing, the worshippers of Words of the Luminaries proclaim that they have already performed the commandment of repentance, and thus they are clean from transgressions. Moreover, they proclaim

their willing acceptance of the anguish and suffering laid upon them, which they consider as intended to test and strengthen their faith (4Q504 vi.6-10a; cf. *Jb.* 5.17). Neither the idea of suffering anguish to strengthen the faith (1QHodayot^a [1QH v.16, xvii.22, 9.23]) nor the proclamation of cleansing (1QH xvii.9-15) is usual in biblical and apocryphal prayers and psalms. Both ideas are connected in 1QHodayot^a (1QH i.31c-32, iv.33-40, xvii.17-25) and Songs of the Sage^b (4Q511 18.ii.5-10). The proclamation of cleansing appears in 1QHodayot^a xvi.10-18 and xvii.17-21. Indeed, the context of these phrases in the psalms of 1QHodayot^a differs from that of the communal prayers of Words of the Luminaries. The poet of 1QHodayot^a refers all the events of his life to the predestination of the Lord, who chose him to perform repentance and righteousness; the poet even is proud of the strength the Lord grants him for suffering anguish caused by the process of repentance.

In the Qumran writings repentance "with faith and wholeness of heart" is regarded as the highest virtue, for a person who is clean from any sin and impurity may be equal to the angels and thus gain the highest honor (glory) a human being can reach (1QH^a xvi.17-18, xvii.14-15, xii.20c-24).

RESEARCH TOOLS. In order to study the vast amount of written material found in the Judean Desert since 1947, scholars have developed a variety of research tools. Bibliographies, concordances, grammars, translations, facsimile editions, and various forms of electronic publication have all proved useful in the analysis of the texts of the Dead Sea Scrolls. Notable examples of each of these types of scholarly tool are briefly described in the sections that follow.

Bibliographies. It would be impossible to keep track of all the scholarly literature about the Judean Desert findings without the assistance of bibliographies. The first one on the entire corpus of the Dead Sea Scrolls was Christoph Burchard, *Bibliographie zu den Handschriften vom Toten Meer*, Beihefte zur Zeitschrift für die alttestamentliche Wissenschaft, 76 (Berlin, 1957). This work covers publications during the years between the first finds in 1947 and 1956. The second volume of Burchard's work, *Bibliographie zu den Handschriften vom Toten Meer, II: Nr. 1557–4459*, Beihefte zur Zeitschrift für die alttestamentliche Wissenschaft, 89 (Berlin, 1965), covers the years between 1956 and 1962. Citations in both volumes are arranged in alphabetical order by author's surname.

A different conceptual approach was used by William Sanford LaSor in his *Bibliography of the Dead Sea Scrolls, 1948–1957* (Pasadena, 1958), which classifies citations according to topic. This approach was continued by Basma A. Jongeling in his *Classified Bibliography of the Finds in the Desert of Judah, 1958–1969*, Studies on the Texts of the Desert of Judah, vol. 7 (Leiden, 1971), and by Florentino García Martínez and Donald W. Parry in *A Bibliography of the Finds in the Desert of Judah, 1970–95, Arranged by Author with Subject and Citation Indexes*, Studies on the Texts of the Desert of Judah, 19 (Leiden, 1996).

There are numerous bibliographies of works concerning single texts or groups of texts. For example, on the texts published in volume 5 of the Discoveries in the Judean Desert series, interested scholars can refer to Joseph A. Fitzmyer, "A Bibliographical Aid to the Study of the Qumran Cave IV Texts 158–186," *Catholic Biblical Quarterly* 31 (1969), 59–71.

For works concerning the Temple Scroll (11Q19–20), Florentino García Martínez has compiled and published three bibliographies. "El Rollo del Templo (11Q Temple): Bibliografía sistemática," *Revue de Qumrân* 12 (1985–1987), 149–174, covers the years between 1977, when Yi-

gael Yadin's edition of 11Q Temple Scroll was published, and 1985. Covering the next six years is "The Temple Scroll: A Systematic Bibliography, 1985–1991," in *The Madrid Qumran Congress: Proceedings of the International Congress on the Dead Sea Scrolls, Madrid, 18–21 March 1991*, edited by Julio Trebolle Barrera and Luis Vegas Montaner (Madrid and Leiden, 1992), pp. 393–403. Both these works follow the same topical divisions, apart from the fact that in the first one descriptions of the text prior to the *editio princeps* and editions of the text are also cited. The third installment of García Martínez's work, covering the years 1991–1995, is "A Classified Bibliography," in *The Temple Scroll: A Critical Edition with Extensive Reconstructions*, edited by Elisha Qimron (Beer Sheva and Jerusalem, 1996), pp. 95–121.

Helpful bibliographies have also been published on Miqtsat Ma'asei ha-Torah (MMT) and on the Hodayot. For the former, see Florentino García Martínez, "A Bibliography of MMT," in *Reading 4QMMT: New Perspectives on Qumran Law and History*, edited by John Kampen and Moshe J. Bernstein (Atlanta, 1996), pp. 145–156. For the latter, see Eileen M. Schuller and Lorenzo DiTommaso, "A Bibliography of the Hodayot, 1948–1996," *Dead Sea Discoveries* 4 (1997), 55–101.

As for the Damascus Document, see Florentino García Martínez, "Damascus Document: A Bibliography of Studies, 1970–1989," in *The Damascus Document Reconsidered*, edited by Magen Broshi (Jerusalem, 1992), pp. 63–83. This work continues Joseph A. Fitzmyer's *Prolegomenon* to the reprint of Solomon Schechter's *Documents of Jewish Sectaries* (New York, 1970), pp. 25–34, which covered the years up to 1969, and follows the same principles and general divisions. The items taken into account are whole or partial reproductions of the text, both of the Cairo Damascus Document (CD) and the Damascus Document from Cave 4 at Qumran (4QD), translations of CD, studies on particular passages of CD, and more general studies of CD.

A useful work covering Hebrew publications in the early decades after the first discoveries is Michael Yizhar, *Bibliography of Hebrew Publications on the Dead Sea Scrolls, 1948–1964*, Harvard Theological Studies, 23 (Cambridge, Mass., 1967). Other helpful bibliographies can be found in such scholarly reviews as *Biblica*, *Ephemerides Theologicae Lovanienses*, *Revue de Qumrân*, and *The Qumran Chronicle*.

Concordances. An alphabetical index of the words used in a body of literature is a research tool of exceptional value in the exegesis of texts. A concordance is just such a tool. Although we have, up to the present, no concordance of the whole Qumran corpus of writings, various concordances to single texts or groups of texts are available. One of the earliest was compiled and published

by Avraham M. Haberman in his *Megillot Midbar Yehuda: The Scrolls from the Judean Desert* (Jerusalem, 1959), pp. 3–175. This was soon followed by two concordances compiled by Karl G. Kuhn: *Konkordanz zu den Qumrantexten* (Göttingen, 1960) and “Nachträge zur Konkordanz zu den Qumrantexten,” *Revue de Qumrân* 14 (1963), 163–234, which together cover the texts published up to 1962.

Concordances to single texts or groups of texts can be found in the appendixes to volumes 1–13 of the Discoveries in the Judean Desert series. Other notable concordances to specific texts include the following:

- For Genesis Apocryphon (1QapGen), see Hubert Lignée, “Concordance de 1Q Genesis Apocryphon,” *Revue de Qumrân* 1 (1958–1959), 163–186
- For the War Scroll (1Q33), see Jean Carmignac, “Concordance hébraïque de la Règle de la guerre,” *Revue de Qumrân* 1 (1958–1959), 7–49
- For the Temple Scroll (11Q19–20), see Yigael Yadin, *The Temple Scroll*, vol. 2 (Jerusalem, 1983), pp. 431–463
- For noncanonical psalms (4Q380–381), see Eileen M. Schuller, *Non-Canonical Psalms from Qumran: A Pseudepigraphic Collection* (Atlanta, 1986), pp. 285–293
- For Songs of the Sabbath Sacrifice (4Q400–407, 11Q-ShirShabb, and MasShirShabb), see Carol A. Newsom, *Songs of the Sabbath Sacrifice: A Critical Edition* (Atlanta, 1985), pp. 389–466
- For Melchizedek (11Q13), see Hans-Peter Richter, “Konkordanz zu XIQMelkîsédeq,” *Revue de Qumrân* 48 (1987), 515–518

A group of texts published since 1966 has been analyzed by Ulrich Dahmen in “Nachträge zur Qumran-Konkordanz,” *Zeitschrift für Althebraistik* 4 (1991), 213–235, and 8 (1995), 340–354. Supplementing this work is Corrado Martone, “A Concordance to the Newly Published Qumran Texts,” *Henoch* 15 (1993), 155–206, which starts from the most recent text analyzed by Dahmen and covers the Hebrew nonbiblical Qumran texts that were published officially between 1990 and 1992. An unusual concordance by James H. Charlesworth is his *Graphic Concordance to the Dead Sea Scrolls* (Tübingen and Louisville, 1991). This work lists words according to a rigorous alphabetical order, so that, for example, related verbal forms are not registered under a common root, as their places in the concordance depend entirely upon the alphabetical sequence.

Finally, mention must be made of a work compiled by Raymond E. Brown, Joseph A. Fitzmyer, Willard G. Oxtoby, and Javier Teixidor: *A Preliminary Concordance to the Hebrew and Aramaic Fragments from Qumran Caves II to X*. Privately published in four volumes in Göttingen in 1988, this handwritten concordance was compiled by the first Qumran scholars and is very important, since it

is based on all the Cave 4 texts, even those as yet unpublished. Unfortunately, it is not readily accessible.

Inventory Lists. The entire and accurate catalog of all the written material from the Judean Desert is a work in progress that will be achieved only when all the material is published. Nevertheless, many inventory lists have already appeared that offer the scholar a sufficiently wide view of the Judean Desert corpus.

For a list of the Qumran texts that have not yet been published in the Discoveries in the Judean Desert series, see Emanuel Tov, “The Unpublished Qumran Texts from Caves 4 and 11,” *Journal of Jewish Studies* 43 (1992), 101–136. Although this list (dated 9 February 1992) is no longer current, it nevertheless provides much interesting data about 4Q1–127, 4Q195–575, and 11Q1–23, such as the previous and the prospective editors, notes concerning material, language, and script, as well as bibliographic references to preliminary publications. Tov has updated his list in *Biblical Archaeologist* 55 (1992), 94–104, which presents about fifty amendments.

The catalog of texts from the Judean Desert published in the second, revised, edition of the *Companion Volume to the Dead Sea Scrolls Microfiche Edition*, edited by Emanuel Tov with the collaboration of Stephen J. Pfann (Leiden, 1995), pp. 17–72, is based on the same criteria as the previous ones, but it covers all the findings of the Judean Desert, both published and unpublished. The reader can therefore find in this list not only data about manuscripts discovered at Qumran but also data about the whole collection of written material found at other sites in the Judean Desert, such as Wadi ed-Dalijeh, Masada, Wadi Murabba‘at, Nahal Hever, Nahal Şe‘elim (Seiyal), Nahal Mishmar, and Khirbet Mird. Furthermore, the list presents for each fragment the negative number in the collection of the Rockefeller Museum, the Israel Antiquities Authority, or the Shrine of the Book at the Israel Museum, as well as the inventory number in the Rockefeller Museum or the Shrine of the Book.

Of great importance also is the other accompanying volume to the microfiche edition: *Inventory List of Photographs*, compiled by Stephen A. Reed and edited by Marilyn J. Lundberg (Leiden, 1993). Thanks to this volume, the reader can single out the texts in the photographs contained in the microfiche edition and thus ascertain the exact contents of each photograph.

A comprehensive catalog of all the written material from the Judean Desert is *The Dead Sea Scrolls Catalogue: Documents, Photographs, and Museum Inventory Numbers*, compiled by Stephen A. Reed and revised and edited by Marilyn J. Lundberg with the collaboration of Michael P. Phelps, Society of Biblical Literature Resources for Biblical Study, 32 (Atlanta, 1994). As is evident from its title, this volume is divided into three sections, contain-

ing, respectively, a catalog of the documents, a catalog of the photographs, and a catalog of the Rockefeller Museum inventory numbers. For the published documents, the volume lists the official number, the sigla, the bibliographic reference, and the number of the photographs; for texts that have not yet appeared in the official series, more detailed information is given.

For a comprehensive list of all the Qumran manuscripts, see Florentino García Martínez, *The Dead Sea Scrolls Translated: The Qumran Texts in English* (Leiden, 1994), pp. 467–513. This list provides the bibliographic reference to the *editio princeps* or preliminary publication of each Qumran text and focuses mainly on nonbiblical texts. For an inventory list of the Qumran manuscripts focusing mainly on biblical texts, see Florentino García Martínez, “Lista de MSS procedentes de Qumran,” *Henoch* 11 (1989), 149–232, which also offers a comprehensive register of passages to be found in each biblical manuscript. An index to García Martínez’s list is that of Liliana Rosso Ubigli, “Italian-English Index of Qumran Texts,” *Henoch* 11 (1989), 233–270. On the basis of García Martínez’s lists, Rosso Ubigli organizes her index to group manuscripts regarding the same text, both biblical and nonbiblical, in order to offer the reader an exhaustive view of the works that were found at Qumran, as well as the materials related to them.

For a complete list of nonbiblical manuscripts from Qumran, see Devorah Dimant, “The Qumran Manuscripts: Contents and Significance,” in *Time to Prepare the Way in the Wilderness: Papers on the Qumran Scrolls by Fellows of the Institute for Advanced Studies of the Hebrew University of Jerusalem, 1989–1990*, edited by Devorah Dimant and Lawrence H. Schiffman, *Studies on the Texts of the Desert of Judah*, 16 (Leiden, 1995), pp. 23–58. Dimant organizes her list into two large categories: “Documents Employing Terminology Connected to the Qumran Community” and “Documents Which Do Not Contain Clusters of Terms and Ideas Related to the Community.”

Another useful list of biblical manuscripts from Qumran is Uwe Glessmer, “Liste der biblischen Texte aus Qumran,” *Revue de Qumrân* 16 (1993), 153–192. Glessmer lists the Dead Sea Scrolls in which biblical texts are to be found, grouping them according to the order of the biblical books. Furthermore, he indicates for each Qumran manuscript the biblical passage cited, the Qumran sigla, the PAM photograph number (indicating origination at the Palestine Archaeological Museum, later renamed the Rockefeller Museum), and the relevant plate number in the *Facsimile Edition* edited by Robert Eisenman and James M. Robinson. Eugene Ulrich has also created helpful lists in his two-part work published in 1994 and 1995, “An Index of the Passages in the Biblical Manu-

scripts from the Judean Desert” *Dead Sea Discoveries* 1 (1994), 113–129, and 2 (1995), 87–107. Part 1 covers the biblical books from Genesis through Kings; part 2 deals with Isaiah through Chronicles.

A separate list of the texts from Cave 11 is given by Florentino García Martínez in “Texts from Qumran Cave 11,” in *The Dead Sea Scrolls: Forty Years of Research*, edited by Devorah Dimant and Uriel Rappaport, *Studies on the Texts of the Desert of Judah*, 10 (Leiden and Jerusalem, 1992), pp. 18–26. García Martínez lists the biblical, apocryphal, sectarian, and unidentified texts from Cave 11 and indicates for each of them the PAM photograph number as well as the earlier publication. His observations about the listed texts concern mainly the possible placing of unidentified fragments within other manuscripts.

Grammars. Since the late 1950s, when many important Qumran texts had already been published, the attention of scholars was drawn to their language. One of the earliest studies of the linguistic features of the Qumran texts was Moshe H. Gottstein, “Linguistic Structure and Tradition in the Qumran Documents,” in *Aspects of the Dead Sea Scrolls*, edited by Chaim Rabin and Yigael Yadin (Jerusalem, 1958), pp. 101–137. Some years later, Eduard Y. Kutscher published a seminal book, *The Language and Linguistic Background of the Isaiah Scroll (IQIsa^a)*, *Studies on the Texts of the Desert of Judah*, 6 (Leiden, 1974; reprint, 1997), that offers a thorough analysis of the orthography, phonology, and morphology of the language of the Qumran texts, mainly on the basis of IQ Isaiah^a. Indices and corrections to this work were published in Elisha Qimron, *The Language and Linguistic Background of the Isaiah Scroll (IQIsa^a) by E. Y. Kutscher: Indices and Corrections*, *Studies on the Texts of the Desert of Judah*, 6a (Leiden, 1979).

The most complete grammar of the language of the Dead Sea Scrolls is Elisha Qimron, *The Hebrew of the Dead Sea Scrolls*, *Harvard Semitic Studies*, 9 (Atlanta, 1986). This book offers a description of the orthography, phonology, and morphology of the language of the Dead Sea Scrolls by investigating a large amount of material. Qimron analyzes all the nonbiblical texts published up to 1976, taking into account as well the texts published in volume 7 of *Discoveries in the Judaean Desert* (4Q482–520), the Songs of the Sabbath Sacrifice (4Q400–407), and the then-unpublished MMT (4Q394–399).

Aramaic texts found at Qumran have been studied by Klaus Beyer in *Die aramäischen Texte vom Toten Meer* (Göttingen, 1984), in *The Aramaic Language: Its Distribution and Subdivisions*, translated from the German by J. F. Healey (Göttingen, 1986); and in the *Ergänzungsband* (Göttingen, 1994).

Translations. A complete, authoritative, and thorough translation into English of all the nonbiblical texts from Qumran, even those as yet unpublished, is provided by Florentino García Martínez, *The Dead Sea Scrolls Translated. The Qumran Texts in English* (Leiden, 1994), which, as previously noted, also presents an updated inventory list of the Qumran texts. In this volume, the texts are grouped according to their contents, as follows: rules, halakhic texts, literature with eschatological content, exegetical literature, parabiblical literature, poetic texts, liturgical texts, astronomical texts, and calendars and horoscopes, with a separate section devoted to the Copper Scroll (3Q15). It is supplemented by *The Dead Sea Scrolls Study Edition*, 2 vols., edited by García Martínez and Eibert J. C. Tigchelaar (Leiden, 1997, 1998), which offers the original Hebrew, Aramaic, and Greek texts with facing English translations, supported by other data, such as bibliographic references and photograph numbers.

The Princeton Theological Seminary Dead Sea Scrolls Project, launched in 1985, is publishing English translations of all the nonbiblical texts from Qumran. Under the general editorship of James H. Charlesworth, who works with a large team of subeditors, *The Dead Sea Scrolls: Hebrew, Aramaic, and Greek Texts with English Translations* will have ten volumes. Each volume will contain a general introduction, critical editions of the texts included, English translations of the texts, and literary notes. The plan of this edition is as follows: vol. 1, Rule of the Community and Related Documents; vol. 2, Damascus Document, War Scroll, and Related Documents; vol. 3, Damascus Document Fragments, More Precepts of the Torah, and Related Documents; vol. 4A, Pseudepigraphic and Non-Masoretic Psalms and Prayers; vol. 4B, Angelic Liturgy, Prayer, and Psalms; vol. 5, Thanksgiving Hymns and Related Documents; vol. 6, Targum on Job, Pesharim, and Related Documents; vol. 7, Temple Scroll and Related Documents; vol. 8, Genesis Apocryphon, New Jerusalem, and Related Documents; vol. 9, Copper Scroll, Greek Fragments, and Miscellanea; vol. 10, Biblical Apocrypha and Pseudepigrapha.

Two other comprehensive English translations are also notable: *The Dead Sea Scrolls: A New Translation* by Michael O. Wise, Martin G. Abegg, and Edward M. Cook (San Francisco, 1996), and *The Complete Dead Sea Scrolls in English*, translated from the Hebrew and Aramaic and edited by Geza Vermes (New York, 1997).

Facsimile Editions. In October 1991, the Israel Antiquities Authority decided to make available to scholars, as well as to the interested public, all the photographs of written materials discovered in the Judean Desert. As a result of this decision, *The Dead Sea Scrolls on Microfiche. A Comprehensive Facsimile Edition of the Texts from the*

Judean Desert, edited by Emanuel Tov, was published in 1992 by E. J. Brill and IDC Microform Publishers, both of Leiden. This is the facsimile edition *par excellence* of the whole Dead Sea corpus. With a microfiche reader, it is now possible to see the original negatives that were produced by various photographers over a number of years. The microfiche collection contains images of four groups of photographs of texts: (1) the first, and main, group is that of the photographs taken on behalf of the Palestine Archaeological Museum, now the Rockefeller Museum; (2) the second group is that of the photographs taken on behalf of the Israel Antiquities Authority; (3) the third group is that of the photographs to be found in the archives of the Shrine of the Book at the Israel Museum; (4) finally, a further group of photographs, the Jerusalem West Semitic Research Collection, taken by Bruce and Kenneth Zuckerman for the Ancient Biblical Manuscript Center in Claremont, California.

Use of the Brill-IDC microfiche edition is facilitated by two ancillary volumes: *Inventory List of Photographs*, compiled by Stephen A. Reed and edited by Marilyn J. Lundberg (Leiden, 1993), and *Companion Volume to the Dead Sea Scrolls Microfiche Edition*, 2d rev. ed., edited by Emanuel Tov with the collaboration of Stephen J. Pfann (Leiden, 1995). The *Companion Volume* not only provides guidance on how to use the microfiche edition but also includes a chronology of the history of the discoveries in the Judean Desert, gives some useful information about the sites where written materials were found, and offers two firsthand accounts of the photography of the materials by Frank Moore Cross and John Strugnell. In 1996, the microfiche edition was supplemented by *The Allegro Qumran Collection* (Leiden, 1996), offering the many photographs from the collection of John M. Allegro.

Far less comprehensive than the Brill-IDC microfiche edition is *A Facsimile Edition of the Dead Sea Scrolls*, prepared with an introduction and index by Robert Eisenman and James M. Robinson (Washington, D.C., 1991). This two-volume edition is based on the group of photographs taken for the Israel Antiquities Authority, but many of them are not of good quality, and it is not so simple to single out texts in the photographs.

A Preliminary Edition of the Unpublished Dead Sea Scrolls: The Hebrew and Aramaic Texts from Cave Four, edited by Ben Zion Wacholder and Martin G. Abegg (Washington, D.C., 1991–1996), may also be regarded as a facsimile edition, as it contains computer-generated texts based on the concordance compiled by R. E. Brown and others. The fascicles contain halakhic, calendrical, and sapiential texts. The importance of this edition cannot be underestimated, even though, as Emanuel Tov has pointed out, it is in places based on outdated readings.

Also worth noting in the context of facsimile editions is the exhibition catalog entitled *Scrolls from the Dead Sea: An Exhibition of Scrolls and Archaeological Artifacts from the Collections of the Israel Antiquities Authority*, edited by Ayala Sussmann and Ruth Peled (Washington, D.C., 1993). This exhibition, sponsored by the Project Judaica Foundation, included twelve fragments of as many manuscripts and archaeological artifacts. The catalog offers photographs of the texts presented in the exhibition with transcriptions and English translations, as well as a general introduction to the discoveries in the Judean Desert. After opening at the Library of Congress in Washington, D.C., the exhibition traveled to New York, San Francisco, Vatican City, and Jerusalem. An online view of digitized images with commentary is now available on the Internet (<http://sunsite.unc.edu/expo/deadsea.scrolls.exhibit/intro.html>).

Electronic Publications. In the age of computers and the Internet, Qumran scholarship has kept abreast of the times. The most useful Internet site devoted to the Dead Sea Scrolls is undoubtedly that of the Orion Center for the Study of the Dead Sea Scrolls and Associated Literature. Established in 1995 at the Institute of Jewish Studies at the Hebrew University of Jerusalem, the Orion Center stimulates and fosters research on the Dead Sea Scrolls, coordinating research under way in Israel with research abroad. At its Web site (<http://orion.mscc.huji.ac.il>), it is possible to find a weekly updated Qumran bibliography, an index to the volumes in the Discoveries in the Judean Desert series, and much other information regarding Qumran literature.

A second useful Web site is that of the West Semitic Research Project (<http://www.usc.edu/dept/LAS/wsrp/index.html>). Established in the early 1980s by Bruce and Kenneth Zuckerman, this project is affiliated with the School of Religion at the University of Southern California in Los Angeles. Its Web site offers many digital images of the Dead Sea Scrolls in low-resolution format, as well as a catalog of images that can be obtained in high-resolution format.

Also a product of current computer technology is *The Dead Sea Scrolls Electronic Reference Library*, vol. 1, edited by Timothy H. Lim in consultation with Philip S. Alexander (Oxford and Leiden, 1997). This CD-ROM edition of the Dead Sea Scrolls, jointly published by Oxford University Press and E. J. Brill, allows the user to analyze the photographs of the scrolls as digital-image files. Each image is referred to by its PAM number, cave number, and a descriptive title. The software has many searching tools and a database that provides the user with a short bibliography of each text. Volume 2 of this work, published in 1998, contains transcriptions of the texts published in the Discoveries in the Judean Desert series.

Another useful electronic work is *The Dead Sea Scrolls on CD*, produced by the Foundation for Ancient Research and Mormon Studies (Salt Lake City, 1998). It gives transcriptions of the nonbiblical texts from Qumran, with English translations and images of the texts, and it includes a catalog of the texts, the Hebrew Bible, the Old Testament (King James Version), and the Septuagint.

A Final Word. No survey of the research tools that have been developed over the years for use in studying the written materials from the Judean Desert would be complete without mention of Joseph A. Fitzmyer, *The Dead Sea Scrolls: Major Publications and Tools for Study*, rev. ed., Society of Biblical Literature Resources for Biblical Study, vol. 20 (Atlanta, 1990). Notwithstanding the spate of new publications and studies on the texts from the Judean Desert that have appeared in recent years, this book is still an invaluable resource for scholars and general readers alike. No other work provides such easy access to the world of the Dead Sea Scrolls.

CORRADO MARTONE

RESURRECTION. A function of God's judgment by which the dead are raised from the underworld to receive the reward or punishment of their deeds is referred to as resurrection.

Hebrew Scriptures. The earliest biblical use of resurrection language is in one text from the decades just prior to the Assyrian destruction of Samaria, two texts from the Babylonian exile, and one text of postexilic date. In at least three of these sources, resurrection is a metaphor for Israel's revivification and restoration from exile. *Hosea* 6:1–3 anticipates the collapse of the northern kingdom and exhorts the people to repent so that God will revive (*hayah*) them and raise them up (*qum*). The metaphorical usage is clearest in the vision of the valley of the dry bones in *Ezekiel* 37. Later, in the exilic period, "Second Isaiah" foretells the restoration of Israel in a poem that describes the suffering, death, and unexpected exaltation of the prophetlike servant of Yabveh (*Is.* 52:13–53:12). *Isaiah* 26:13–21, which dates from some time in the Persian period, has been interpreted both metaphorically as Israel's restoration and literally as an actual resurrection of the righteous dead. The language and imagery of these three texts and *Isaiah* 65–66, with its predictions of a great judgment, a new creation, and a new Jerusalem, color later Jewish and Christian texts about resurrection.

Early Jewish Apocalyptic Texts. The apocalyptic writings of the third and second centuries BCE contain the first clear references to a resurrection of dead persons in Jewish literature. The earliest of these is *1 Enoch* 1–36,

an account of Enoch's journeys around the world, composed in the third century BCE. Chapter 22 describes Enoch's visit to the realm of the dead—a mountain in the west with huge caverns that separate the “souls” or “spirits” (the text is uncertain) of the dead according to the character of their lives on earth. The righteous are refreshed by a bright fountain of water; the sinners are tormented. One group of these sinners awaits terrible punishment on the day of judgment, while another group, who had been sufficiently punished in their lifetime, will not be raised. This latter statement implies that the other sinners will be raised for judgment and suggests that the righteous will also be raised. When Enoch travels to Jerusalem (chaps. 26–27), he sees Mount Zion, where the righteous and pious will live long lives like the patriarchs and eat the fruit of the tree of life, the fragrance of which will be in their bones (*1 En.* 25.4–6; cf. *Is.* 66.14). The imagery suggests resurrection to a bodily life. Nearby in the accursed Valley of Hinnom (Gehinnom), sinners will suffer divine punishment in the presence of the righteous (*1 En.* 26.4–27.4). This scenario has been colored by the prediction of a new Jerusalem in *Isaiah* 65–66, which has been enhanced to include a resurrection.

Daniel 12.1–3, part of the latest book in the Hebrew Bible (c. 165–164 BCE), is also the only text in the Hebrew scriptures to present unambiguously the belief in a resurrection of the dead. As in *1 Enoch*, resurrection facilitates God's judgment, notably for the righteous who were put to death by Antiochus IV Epiphanes and the apostates, now dead, who had submitted to his strictures against the Jewish religion. The text reflects the language of *Isaiah* 26.14 and, evidently, *Isaiah* 65–66 (Nickelsburg, 1972, pp. 17–23). The term *hayyei 'olam*, which is usually translated as “everlasting life,” seems to allude to the long life described in *Isaiah* 65.20, and the “everlasting contempt” to which the sinners will be subjected employs a term the only other biblical occurrence of which is in *Isaiah* 66.24. The passage does not indicate whether its author envisions a bodily or a spiritual resurrection. Read in light of *1 Enoch* 25–27, with its double reference to *Isaiah* 65–66, it may anticipate a bodily resurrection and a long life in the new Jerusalem (see, however, Collins, 1993, p. 392). However, *Daniel* 12.3 employs the language of *Isaiah* 52.13 and 53.11 to depict the vindication, exaltation, and heavenly glory of the teachers who preserved faithfulness in persecuted Israel, and the imagery of this passage closely parallels *1 Enoch* 102–104, which makes no reference to a bodily resurrection (see below).

The “Animal Apocalypse” of *1 Enoch* (chaps. 85–90) is contemporary with the *Book of Daniel*. Its description of the end time includes a great judgment, with Jerusalem as the place of the fiery destruction of apostates and the

home of the righteous, including those whose resurrection from the dead is described as a return from dispersion (*1 En.* 90.26–33). The earthly setting of these events implies a bodily resurrection.

Chapters 92–105 of *1 Enoch* (early or late second century BCE) also anticipates a resurrection of the righteous dead, whose spirits or souls grieve in Sheol because of their oppression during their earthly life (*1 En.* 102.4–104.8). The text does not promise a resurrection of the body, but a revivification of the souls of the righteous, which will enjoy the glorious company of the angels in heaven (cf. *Dn.* 12.3, which refers only to the exaltation of the teachers of Israel; see Nickelsburg, 1972, pp. 123–124). The souls of the sinners will suffer in the darkness and fires of Sheol-become-hell.

The latest stratum of *1 Enoch*, the “Book of Parables” (chaps. 37–71), which dates from the turn of the era, anticipates a bodily resurrection of the righteous and chosen, who will inherit the Land of Israel (*1 En.* 51.1–5, 61.5). Their persecutors, “the kings and the mighty,” will descend to the flames of Sheol (*1 En.* 63.10–11).

Other Jewish Texts. Two other Jewish texts from the first century BCE also anticipate a resurrection. The *Second Book of the Maccabees* features two stories in which martyrdom under Antiochus IV Epiphanes is offset by a belief in resurrection of the body (*2 Mc.* 14.37–46; cf. 12.39–45). In the story of the seven brothers and their mother, Antiochus puts the protagonists to death because of their faithfulness to the Torah. However, they express their expectation that God, the “king of the world,” will restore the bodies that the earthly king has destroyed unjustly. The logic of this formulation requires a materialistic notion of bodily resurrection (cf. *2 Mc.* 14.46). The story's view of resurrection has been fed by three themes that “Second Isaiah” used to describe the restoration of dispersed and exiled Israel. The youths are the suffering and vindicated servants of God, as well as the sons of Mother Zion, dispersed by death but to be returned to their mother through resurrection. This resurrection is an act of redemption that involves the re-creation of the bodies that had been formed in their mother's womb (Nickelsburg, 1972, pp. 102–108).

The *Psalms of Solomon* (c. second half of the first century BCE) anticipates a resurrection of the righteous to “eternal life” in the light of the Lord and the eternal destruction of the wicked in the darkness of Sheol (*Ps. Sol.* 3.11–12; cf. *Ps. Sol.* 13.11, 14.9–10, 15.10–13). There is no indication whether these texts anticipate a bodily resurrection.

Three texts from the end of the first century CE foretell a universal bodily resurrection and judgment (*4 Ezr.* 7.26–44, *2 Bar.* 49–51, and Pseudo-Philo's *Biblical Antiq-*

uties). The Syriac *Apocalypse of Baruch* describes a bodily restoration of the righteous and the wicked, the latter's transformation for the worse, and the heavenly glorification of the righteous to an angelic, starlike state (cf. *1 En.* 104, *Dn.* 12.3).

These texts indicate a spectrum of beliefs about resurrection (Nickelsburg, 1972; Cavallin, 1974). Always a function of God's judgment, resurrection may recompense one for injustice in this life, or it may simply reward or punish people for their good or evil deeds. The scope of resurrection varies. Early texts, unlike the later ones, do not seem to anticipate a resurrection of all humanity, although *1 Enoch* 22 posits universal post-mortem judgment. Resurrection may involve the emergence of souls in Sheol without being clothed in new bodies (*1 En.* 102–104). Bodily resurrection, on the other hand, may lead to a long life on earth or to a glorious, eternal existence in heaven (*2 Bar.* 49–51).

Belief in Resurrection at Qumran. The numerous manuscripts of *1 Enoch* and *Daniel* found in the Qumran caves might suggest that the community possessing the scrolls believed in the resurrection that plays a central role in these apocalyptic texts. Émile Puech (1993) argues this in great detail and finds bodily resurrection attested or at least alluded to in many of the scrolls authored by the Qumran community. The viewpoint is not universally shared, however (Nickelsburg, 1972, pp. 144–169; Cavallin, 1974, pp. 60–68), and many details of Puech's exegesis have been contested by Collins (1997, pp. 111–128). [See *Daniel*, *Book of*; *Pseudo-Daniel*; *Enoch*, *Books of*.]

In addition to *1 Enoch* and *Daniel*, two other texts found at Qumran seem to express a belief of resurrection. The Messianic Apocalypse (4Q521) promises that the Lord will heal the wounded, make the dead live, and proclaim good news to the poor (4Q521 2.ii.12; cf. 5.ii.5–6). Pseudo-Ezekiel^a (4Q385 2) and Pseudo-Ezekiel^b (386 i–ii) interpret the vision of the valley of the dry bones (*Ezekiel* 37) as a resurrection of “many in Israel who have loved your name and have walked in the paths of [righteousness]”—an evident reference to the resurrection of individuals and, given Ezekiel's imagery, perhaps to a bodily resurrection. However, it is not at all certain that these texts were composed by members of the Qumran community. The fragmentary condition of 1QHodavot^a xiv.37 (vi.34) and Pseudo-Daniel^c (4Q245 2.4–5; a text of uncertain provenance) makes it impossible to ascertain whether these texts refer to a resurrection of individuals.

Two texts in Hodavot from Qumran Cave 1 (hereafter, 1QHodavot^d; 1QH^a) present a special interpretive problem. In 1QHodavot^d (1QH^a xi.19–23 [iii.18–22] and xi.10–14 [xi.7–11]) the speaker praises God for having raised him from Sheol, death, and dust to the heaven and the company of the angels. The point of dispute is

whether this use of resurrection language anticipates future glory (Puech, 1993, pp. 366–381) or expresses the belief that entrance into the community brings one from death to eternal life (Kuhn, 1966, pp. 44–88; Nickelsburg, 1972, pp. 152–156). It is a question of whether the Hebrew perfect tenses indicate accomplished fact or “prophetic” fact, where the future is so certain that it can be spoken of as an accomplished fact. The context of the first passage indicates that the author does not claim perfection and awaits a future fiery conflagration and judgment that will purify a world still under the domination of Belial (1QH xi.24–36 [iii.23–35]). The genre of the texts (hymns of thanksgiving) suggests that the latter is the case, and one can find clear examples of a partly realized eschatology in the New Testament (*Rom.* 6–8, *Ju.* 3.18, 3.36, 5.24, 6.47; Nickelsburg, 1992, pp. 688–690). [See Hodavot.]

According to Puech (1993, pp. 693–703), a belief in the bodily resurrection of the dead is also attested in the uniform orientation of the Qumran graves toward the north—allegedly the direction of Paradise. This archaeological evidence, however, is an uncertain index for interpreting the scrolls (Collins, 1997, pp. 123–124).

Testimonies to Essene Belief in Josephus and Hippolytus. Essene beliefs about future life are described twice by Josephus (*The Jewish War* 2.8.11 [2.154], *Jewish Antiquities* 18.1.2–6 [18.18]), in the context of descriptions of the Jewish religious groups in the Second Temple period, and once by the second-century CE Christian heresiologist Hippolytus (*Refutation of All Heresies* 9.27), in a passage that draws on a source common to Josephus's description in *The Jewish War*. According to Josephus, the Essenes believed in the immortality of the soul, while the Pharisees believed that the soul passes into a new body or a new life. Hippolytus states that the Essenes believed that the flesh would rise and be immortal, just as the soul is immortal. Scholars dispute whether Josephus or Hippolytus is correct. Puech (1993, pp. 703–709) accepts Hippolytus's view, which he sees as consonant with his interpretation of the Qumran texts. Nickelsburg (1972, pp. 167–169) reads Josephus as a Hellenizing explanation of the difference between Pharisaic belief in resurrection of the body and Essene belief in an eternal life that has already commenced. [See *Essenes*; *Eternal Life*; *Hippolytus*; *and Josephus Flavius*.]

New Testament and Rabbinic Texts. A belief in resurrection is central to the New Testament (Nickelsburg, 1992, pp. 688–691). Jesus' resurrection is construed as the act by which God reversed Jesus' wrongful condemnation and death (cf. *2 Mc.* 7) and exalted him as lord and judge of the living and the dead. It also implies the future resurrection of all the dead. Although the gospels uniformly maintain that Jesus was raised in the body that

had been crucified, there are suggestions in the texts that the resurrected body was not immediately recognizable. Other texts like *Acts* 9 and *Revelation* describe a glorious heavenly body. In *1 Corinthians* 15 and *Philippians* 3.21, Paul likens the resurrected bodies of Christians to that of the glorified Lord (cf. *2 Bar* 51).

Early rabbinic texts tend to speak of a bodily resurrection without being precise about the character of the body (Cavallin, 1974, pp. 171–186). Rabbinic tradition expects universal resurrection of the dead to be associated with the End of Days, and it is usually understood to occur after the messianic era.

BIBLIOGRAPHY

- Cavallin, Hans C. C. *Life after Death*. Coniectanea Biblica NT Series, 71. Lund, 1974. Discusses a wide range of Jewish texts, including the rabbinic corpus, and concludes that they express a variety of beliefs in resurrection, immortality, and eternal life.
- Collins, John J. *Apocalypticism in the Dead Sea Scrolls*. London, 1997.
- Collins, John J. *Daniel: A Commentary on the Book of Daniel*. Hermeneia. Minneapolis, 1993. See especially the excursus on pages 394–398 for an excellent summary of material relevant to *Daniel* 12.1–3.
- Kuhn, Heinz-Wolfgang. *Enderwartung und gegenwärtiges Heil*. Studien zur Umwelt des Neuen Testaments, 4. Göttingen, 1966.

- Nikolainen, Armo T. *Der Auferstehungsglauben in der Bibel und ihrer Umwelt*. 2 vols. Annales Academiae Scientiarum Fennicae, 46. Helsinki, 1944–1946. Comprehensive treatment of biblical and post-biblical texts about resurrection, set in their ancient Near Eastern context.
- Puech, Émile. *La croyance des Esséniens en la vie future: Immortalité, résurrection, vie éternelle?* 2 vols. Études bibliques 21–22. Paris, 1993. Comprehensive discussion of early Jewish texts, with special attention to the Qumran corpus. Finds a widespread belief in resurrection of the body, not least in the Dead Sea Scrolls.

GEORGE W. E. NICKELSBURG

RETRIBUTION. The English term *retribution* is at its heart a neutral word meaning "to pay back"; however, it generally connotes a negative sense: "to exact punishment" especially in the hereafter. Other meanings with this sense are "recompense," "vengeance," "reprisal," and "reward." Two contrasting categories are thus suggested: the wicked are punished in reprisal for their evil deeds, whereas the righteous are rewarded for their good ac-

tions. In the Dead Sea Scrolls, the former category is developed more fully than the latter.

Although the scrolls appear to attest to a unified concept of retribution, the component elements of the concept exhibit a bewildering diversity. In the large picture, the scrolls submit that God established two spirits in which one might walk until the time of judgment, thus dividing mankind into two "lots," the righteous and the wicked. The righteous were set apart so that at a final time of judgment, God might render good to them, whereas the wicked were created so that in their destruction all might know God's glory and great power. The time of judgment will be characterized by a divine war in which God will punish the wicked through his mediator(s) and doom them to a place of fire and darkness. The righteous are rewarded with eternal joy and life without end.

It is important to note that the theology of retribution is most prevalent in those works from Qumran that are considered to be sectarian texts, that is, texts characterized by a distinctive style and ideology that define the community that used them. These texts are the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community, 1QS), the War Scroll (1QM), *Hodayot*^a from Qumran Cave 1 (hereafter, 1QHodayot^a, 1QH^a), the Damascus Document (CD), the Rule of the Blessings (1Q28b), Testimonia (4Q175), and the *peshtarim*: Peshar Habakkuk (1QpHab), Peshar Psalms (1Q16, 4Q171, 4Q173), and Peshar Isaiah (4Q161–165).

Vocabulary. The vocabulary of recompense in the Dead Sea Scrolls is derived from the Hebrew scriptures. The root *nqm* ("to avenge") in its verbal and nominal forms (*naqam* and *neqamah* ["vengeance," "recompense"]) as well as *pqd* ("to visit," "to punish") and the nominal *pequddah* ("visitation," "punishment") are foundational. The verb *gm̄l* ("to recompense") and the nominal form *gemûl* ("recompense," "retribution") also are frequently used. Other terms are *shlm* ("to requite," "to reward"), the nominal *shillum* ("repayment," "retribution"), and *mishpat* ("judgment," "ordinance"), which is frequently used in the sense of a "divine act of retribution."

Given the variety of terms in the Hebrew scriptures for "recompense," it is no surprise that the scrolls make use of a single expression for the concept. One tendency is to focus on God as author: "the recompense of God" (1QM iv.12, 1QS i.11), "the reprisal of God" (1QM iv.12), "the retribution of God" (1QM iv.12), "the judgment of God" (1QM iv.6; vi.3, 5), "the annihilation of God" (1QM iv.12; 1QpHab xii.3), "the avenging of [God's] anger" (1QM iii.6), or "[God's] true judgment" (1QM xi.14, 1QH^a xiii.13 [v.x]). Another group of expressions focuses on the time of the action: "the day of vengeance" (1QM vii.5; 1QS

ix.23, x.19), "the time of distress" (IQM i.11–12, xv.1), "the time of vengeance" (IQM xv.6), "the time appointed for punishment" (IQS iii.18; iv.18–19, 25; Damascus Document, 4Q266 i.2), "the time of punishment" (CD xix.10, 11), "the time decreed" (IQS iv.25), or "the time of judgment" (IQH^a xiv.29 [vi.26]). There are other expressions that fall outside these two categories: "the curses of the (Mosaic) covenant" (IQS v.12; CD i.17–18, 20), "the eternal punishment" (IQH^a v.34 [xiii.16]), "the retributive punishment" (IQH^a ix.17 [i.15]), "the crucible" (CD xx.3; Wisdom Text with Beatitudes, 4Q525 22.4), or simply "the punishment" (IQS iii.14, 18, iv.6, 11, 19; CD vii.21; Peshar Isaiah^b 4Q162 1.ii.2).

The reason offered for the need of retribution is most generally expressed by the phrase "your wicked, guilty deeds" (IQS ii.5). More particularly, these deeds are termed a "rejection of the commandments" (CD xix.5). Occasionally, particular transgressions are listed: attacking God (IQH^a xv.12 [vii.9]), mistreating the poor (IQpHab xii.3), or bearing a grudge against one's brother (CD viii.5–6 [parallel passage, xix.8]).

Although "all mankind" (IQM xi.14; IQS iii.13, iv.15) or "all flesh" (IQM xv.13) are guilty of these wicked actions, these phrases generally characterize two groups of people. On one side are the godless gentile nations, "the Sons of Darkness" (IQM i.10, 16, iii.6, 9, xiii.16; IQS i.10). They are also referred to as "all nations of wickedness" (IQM xv.2), "all the nations" (IQM xv.1, 13; IQpHab xiii.1–3), "all the vainglorious nations" (IQM vi.6), "the seven vainglorious nations" (IQM xi.8–9), and "Kitim" (IQM xi.11).

Closer to home were the rebellious Jews, most commonly qualified as those who walked "with a willful heart" (CD ii.17–18, iii.5, viii.8, 19, xix.20, 33, xx.3, 9–10; IQS i.6, ii.14, 26, v.4, vii.24; liturgical work 4Q393 3.3). They also were referred to as "a company of traitors" (CD i.12), "all who reject the commandments of God" (CD vii.9, viii.19, xix.5–6, xx.8; IQpHab i.11), and "the backsliders" (CD vii.13). There are particular expressions for various components of this group: "the wall builders" (CD iv.19, viii.12, [parallel passage, xix.24–25], xviii [parallel passage, xix.31]), the "whitewashers" (CD viii.12), "the men of mockery" (CD xx.11; 4Q525 22.8), and "the Wicked Priest" (IQpHab ix.9).

God as the Agent. The retributive judgment of God was expected at the End of Days; there were accompanying events and persons that would herald the end. Interpreting the star imagery of *Numbers* 24.17, the Damascus Document (CD vii.19–21) predicts the final judgment of the "sons of Seth" (see also IQ28b v.27; IQM xi.6; 4Q175 1.12–13), when the leader or prince (*nasi*) of the whole nation will appear. The Damascus Document (CD xix.10–

11) also speaks of the final judgment and refers to this coming personage as "the Messiah of Aaron and Israel." Indeed, the Qumran sect saw its existence and especially the presence of "twelve laymen and three priests who are blameless" (IQS viii.1) as a sign of impending judgment (IQS vii.3–7), for one of the purposes of the group was "to recompense the wicked their due."

God would not, however, deal with sin only at the End of Days. IQRule of the Community (IQS iii.14–15) asserts that the "visitation for punishments" could occur even during the "eras of peace" (see also Sapiential Work A', 4Q417 2.i.7, 14). These historical judgments, for example, Nadab and Abihu (IQM xvii.2) and the Babylonian Exile (CD i.17, vii.9–12, xix.11), are warnings of what is to come.

The Dead Sea Scrolls normally place the execution of retributive judgment in the hands of various mediators rather than in the hands of God himself. However, the frequent use of the phrase "by the agency of" makes it clear that God is the ultimate author of all retributive acts. The lines in IQRule of the Community, "with God resides the judgment of all the living, and he shall pay each man his recompense" (IQS x.18) and "at the time appointed for visitation he [God] shall destroy such (perverse) forever" (IQS iv.18–19), are exceptions to the general pattern. References to God's hand (IQM x.16) and God's sword (IQM xi.12–13, xv.3, xix.11; IQH^a xiv.29; CD i.17, vii.13, viii.1, xix.10) somewhat remove action from God himself. In the scriptural tradition (*Hb.* 1), retribution is carried out against unrighteous Jews by those who are opposed to God: "the enemies" (IQpHab ix.10), "the cruel gentiles" (4Q171 3–10.iv.10), "implacable avengers" (IQS ii.6; Curse, 4Q280 1.3), "those who recompense evil with evil" (IQS ii.6–7), "the kings of the gentiles . . . Greece" (CD xix.23–24), "chief of the kings of Greece" (CD viii.11), "the angels of perdition" (IQS iv.12), and the Satan figure in the scrolls, "Belial" himself (CD viii.2).

But God's righteous agents also carry out his retributive justice, upon the unrighteous Jew and gentile alike: "the oppressed whom you [God] have redeemed" (IQM xi.9, 13), "those who are prostrate in the dust" (IQM xi.13), "his [God's] chosen people" (IQpHab v.4), "the children of his [God's] truth" (IQH^a xiv.29 [vi.26]), "the holy ones of the Almighty" (CD xx.8), Melchizedek (Melchizedek, 11Q13 2.13), and "the instructor" [*maskil*] who "shall work God's will when he attacks the wicked" (IQS ix.23), but not until the day of vengeance (IQS x.19).

The last sentence reveals the principle by which retribution is to be understood in the Dead Sea Scrolls. The rule of *lex talionis* (an "eye for an eye," *Ex.* 21.23–25) is set aside in favor of God as the author of vengeance (*Dt.*

32.35). In 1QRule of the Community, the writer affirms "To no man shall I return evil for evil, I shall pursue a man only for good; for with God resides the judgment of all the living, and he shall pay each man his recompense" (1QS x.17-18). "Take no vengeance and bear no grudge against your people" (*Lx* 19.18; see also CD ix.2-4) is the order of the day. Fellow sect members could be chastised (CD vii.2, ix.8; 1QS v.24-25, vii.8, ix.17-18; and also Rebukes by the Overseer, 4Q477) but reproof could not be directed against the "men of the pit" (1QS ix.16). Nowhere in the scrolls do we read of blood vengeance (*Nim.* 35.19-31) or cities of refuge (*Nim.* 36.22-28), which are motifs in the Hebrew scriptures. The scrolls suggest a theological development that becomes a major theme in the teachings of Jesus and Paul (cf. *Mt.* 5.38-48; *Rom.* 12.17-21).

Images of God's final vengeance upon the wicked are recorded in vivid detail in the scrolls: "multiple afflictions at the hand of all the angels of perdition," "everlasting damnation in the wrath of God's furious vengeance," and a description of the psychological and physical experience of the wicked as well as the place of execution, "never-ending terror and reproach for all eternity with a shameful destruction in the fire of the dark places (1QS iv.12-13; see also 1QH^a xi.26-36 [xii.25-35]). Elsewhere retribution is characterized by "burning" (1QM xiv.18 with War Scroll, 4Q491 8-10.i.15), a punishment with "fire" (1QH^a xiv.18 [vi.15]), with "fire and brimstone" (1QpHab x.5), in the "flames of fire" (CD ii.5), in the "darkness of eternal fire" (1QS ii.8), and "fiery punishments" (1QpHab x.13).

The "dark places," the site of punishment named in 1QRule of the Community (1QS iv.13), is also referred to in the War Scroll (1QM xiv.17, reconstructed with 4Q491 8-10.i.15), Sapiential Work A^a (4Q418 69.ii.7), and the Wisdom Text with Beatitudes (4Q525 21.1). All these passages describe the final punishment of the wicked, borrowing the term from the Hebrew scriptures, where it is occasionally used in parallel with "grave" (Ps. 88.6 [7], 143.3; *Lam.* 3.6). Capitalizing on the imagery of *Deuteronomy* 32.22 (see also Ps. 49.14 [15]), Sheol is a place in which the wicked are burned (1QM xiv.18; 1QH^a iv.13 [xvii.1]). The "pit" is used to describe the abode of Lady Folly in the Wiles of the Wicked Woman (4Q184 1.6) and the fate of the wicked in Wisdom Text with Beatitudes: "the depths of the pit and to [. . .] in the fiery furnace" (4Q525 22.3-4). "Destruction" or "pit" (Ps. 16.10, 30.9 [10]) is the destination of Belial (1QM xiii.11) and those of his lot (1QH^a xi.18 [xiii.17]; Berakhot^a 4Q286 7.ii.4-5). The pit was described with fiery terms: "And in it (most likely the pit, see 4Q525 22.i.3) the flame[s] of death shall fly about, at its entrance[. . . da]rkness, flaming brim-

stone is its footing, and its foundation is[. . .] it [doors] are shameful reproaches and its locks are the restraints of destruction [. . .]" (4Q525 15.5-7).

The extent of the retribution is described less certainly. On one hand, the Hebrew root meaning "annihilation" or "complete destruction" (*klh*) is frequently employed in the context of the final judgment: "In the day of judgment God will annihilate all those who worship false gods" (1QpHab xiii.2-3, see also 1QS iv.13, CD viii.2, 1QM xiv.5). It is likely, however, that this is hyperbolic; elsewhere the judgment is extended: ". . . everlasting damnation in the wrath of God's furious vengeance, never-ending terror and reproach for all eternity" (1QS iv.12-13; see also 1QS ii.15, iv.19, v.13; 4Q286 7.ii.4-5).

Reward for the Righteous. For the righteous, reward is "healing, bountiful peace, long life, and multiple progeny, followed by eternal blessings and perpetual joy through life everlasting; they will receive a crown of glory with a robe of honor" (1QS iv.6-8; see also CD iii.20; Ages of Creation, 4Q181 1.3-4; 4Q525 14.ii.14).

Josephus, in discussing the Essene belief in the immortal nature of the soul, records that good men were to be encouraged "by the hope they have of reward after their death"; "the fear and expectation" that "they should suffer immortal punishment after their death" would restrain the evil inclination of bad men (*The Jewish War*, 2.156-157). In conformity with Qumran literature, Josephus describes the Essenes as undergoing great tortures with no thought of vengeance (*The Jewish War* 2.152-153) and reproving fellow members for their sins (*The Jewish War* 2.141).

REVELATION. In Jewish apocalyptic writings and the Qumran scrolls, revelation is the divine disclosure of hitherto hidden information, which constitutes the eschatological community of the chosen.

Biblical Precedents. The belief that God communicates in special ways to the chosen people is widespread and basic in the Hebrew scriptures. This revelation occurs directly through epiphanies, visions, and auditory experiences, and it is mediated by human agents, designated as seers or prophets. The content of revelation includes the commissioning of a human agent for a particular task or role; the expression of God's will for Israel, embodied, for example, in law codes; exhortations to act rightly in a specific situation or denunciations of wrong actions; and announcements of divine blessing or punishment.

Jewish Apocalyptic Literature. The late fourth century BCE saw the rise of a new notion of revelation, which was embodied in texts that claimed to have been composed by figures of the past such as Enoch, Levi, Daniel, and Moses. [See Daniel, Book of; Enoch, Books of; Moses, Texts of; and Testaments.] This revelation is usually said to have been received through waking or dream visions in which the recipient interacts with an angel and/or is taken to heaven or around the cosmos. The revelation is often transmitted in literary forms that imitate prophetic counterparts, modifying them with elements drawn from Israelite and Near Eastern sapiential and mantic traditions. [See Apocalyptic Texts.] Although these texts often reflect the influence of biblical language, they present their authors as persons who stand in the prophetic tradition and receive direct revelation.

While the content of apocalyptic revelations corresponds, in many ways, to its biblical counterparts, there are significant modifications—special emphases, and unique additions. The texts are governed by a dualistic view of reality (Nickelsburg, 1991). This world is set over against the unknown reaches of the cosmos, especially heaven. The present time is contrasted with the hidden future. The divine and demonic realms are pitted against

one another. The revelation mediates knowledge about the cosmic realm and heaven and unveils the course of history and the coming of a new age that will be ushered in by the final judgment (Collins, 1979). It may also provide special information about the right interpretation of divine law. In all these respects, it differs from prophetic texts in that it purports to unveil secrets that have hitherto been hidden. Allegedly received by a figure of the (remote) past, this revelation is disclosed in the end time as the special possession of the chosen, who stand in contrast to the rest of Israel and the human race and are uniquely equipped to pass muster in the judgment (Collins, 1998; Nickelsburg, 1998).

Qumran Library. The Dead Sea Scrolls contain a mixed corpus of revelatory works. The texts found at Qumran include multiple copies of several apocalyptic writings—notably, parts of the Enochic corpus, the *Book of Daniel*, and *Jubilees*. Especially noteworthy are *1 Enoch* 85–90 (the "Animal Apocalypse"), *1 Enoch* 93.1–10 and 91.1–17 (the "Apocalypse of Weeks"), and *Jubilees* 23.11–32, which review the course of (part of) human history and focus on an evil generation in which the eschatological community of the chosen arises and receives the revelation that prepares them for the final judgment. In *1 Enoch*, eschatological revelation is epitomized in the Enochic corpus itself (Nickelsburg, 1982, pp. 340–345). *Jubilees* 23 depicts the latter generation engaged in a process of "searching out" (Ethiopic *hashasha* = Hebrew *hqs*, *drsh*) God's commandments, which are equated with the book's angelically revealed *halakhah*.

A number of the sectarian texts authored in the Qumran community or within its orbit are governed by a notion of revelation similar to that in the apocalyptic writings (Nickelsburg, 1998). Revealed wisdom about God's will and the imminent *eschaton* are the special possession and the constitutive feature of the eschatological community of the chosen, which distinguishes it from the rest of Israel.

Nonetheless, indigenous revelation at Qumran can be distinguished from its apocalyptic counterparts (Collins, 1998). There is no clear evidence that the Qumranites wrote pseudepigraphic apocalypses claiming direct revelation. Instead, Qumran revelation is derivative. It is divinely inspired interpretation of an extant body of authoritative sacred literature, notably, the Hebrew scriptures, the Enochic writings, and *Jubilees*, which is, itself, a text of ambiguous genre, being a rewritten form of *Genesis* and *Exodus* that is presented as an angelic revelation to Moses. [See *Jubilees*, Book of.] Four texts illustrate the notion of revelation operative in the Qumran community.

Damascus Document. In recounting the origins of the community in which this text was generated, the Damascus Document (CD 1) depicts postexilic Israel dominated

by the nation's guilt and experiencing the covenantal curses. In the latter generations, the remnant of Israel appears, and God raises up a Teacher of Righteousness to enable them to walk in the path of his heart and makes known (*yd'*) the divine judgment executed on the wicked, who have strayed from that path (CD i.10–13). The opponents of the eschatological, enlightened community are designated as those who seek slippery things (*darshu bahalqot*), the facile interpreters of the law (*halakhot*) who perpetrate lies (CD i.14–18).

The Damascus Document (CD v.20–vi.11) focuses in more detail on the interpretation of the Torah. In the postexilic period, certain individuals prophesy deceit and cause Israel to stray from God's commandments. In response to this, God raises up knowledgeable and wise men, who go to Damascus to probe the well of the Torah, under the leadership of the Interpreter ("searcher") of the Law (*doresh ha-torah*). [See Interpreter of the Law.] All this happens with a view toward the end of time and the appearance of "the one who teaches righteousness."

Rule of the Community. Providing a similar account of origins, but with important nuances of its own, is column viii of the Rule of the Community from Cave 1 at Qumran (hereafter, 1QRule of the Community, 1QS). [See Rule of the Community.] In a time of uncleanness, the council of the community is formed in order to atone for the land and exercise judgment on the wicked so that iniquity will be removed. The dominant metaphor of (the council of) the community as a building depicts its function as a kind of temple, implying the dysfunction of the Jerusalem Temple (cf. *1 Enoch* 89.73, CD iv.15–v.15). Although it is rooted in an exegesis of *Isaiah* 28, with its counterposition of two structures, the metaphor finds a parallel in *1 Enoch* 93.10 and its portrayal of a structure of deceit built on a foundation of violence. An important function of the community is the ongoing searching of the Torah (*mdrsh htwrh*; 1QS viii.15–16). This interpretation is not explicitly construed as revelation, although it is connected with previous revelations. The eschatological character of the community is indicated by its judicial function, which is connected with the extirpation of iniquity.

Although this passage makes no reference to a cadre of opposing, false interpreters of the Torah, the notion appears in 1QRule of the Community (1QS ix.3–11). A literary association between these two passages is indicated by the identical introductory words in 1QRule of the Community viii.4 and ix.3 and by the common depiction of the community as a temple with atoning functions. Those outside the community are "men of a lie," who stray from the right path (1QS ix.8–10). The eschatological orientation of the community is evident in 1QRule of the Community (1QS ix.11).

1QRule of the Community column v has a number of verbal parallels with column viii (cf. v.3–6, viii.1–7) and describes some of the regulations pertaining to those who enter the covenant of the community. A critical factor—perhaps the critical factor—in one's communal existence is the obligation "to return to the Torah of Moses in accordance with all that it commands with all his heart and all his soul, to everything that has been revealed (*glh*) concerning it to the Sons of Zadok, the priests who observe the covenant and interpret (*drsh*) his will . . ." (1QS v.8–9). What distinguishes the members of the community and sustains their covenantal status is their proper observance of the Torah, which has been rightly interpreted through divine revelation. The outsiders, by contrast, have neither sought (*hqsh*) nor studied (*drsh*) the decrees of the covenant in order to learn (*yd'*) the hidden things (*str*) in which they stray. Here, revealed interpretation of the Torah is opposed not to false interpretation, but to a lack of enlightenment with respect to its interpretation and observance.

Hodayot. One group of hymns describes the life, activities, and fate of an unidentified teacher, thought by many to be the Teacher of Righteousness. The hymns are an important source for studying the Qumran community's notions of revelation. A notable example is Hodayot^a from Cave 1 at Qumran (hereafter, 1QHodayot^a; 1QH^a xii.5–xiii.4 [iv.4–v.3]). [See Hodayot.]

This text does not speak about revelation and revealed interpreters of the Torah; it is the first-person account of one who claims to be such a recipient and dispenser of revelation. The reason for this hymn of thanksgiving is the fact that the Lord has brightened his face with his covenant, has enlightened him like the perfect dawn (1QH^a xii.1–6 [iv.1–5]) and has made known to him (*yd'*) the wondrous divine mysteries (1QH^a xii.27 [iv.26]). The author, in turn, has enlightened the face of the many (1QH^a xii.27 [iv.26]) and poured the drink of knowledge (1QH^a xii.11 [iv.10]). The content of revelation is, first of all, the interpretation of the Torah. God has engraved the Torah in the teacher's heart (1QH^a xii.10 [iv.9]). Those "who walk in the path of your heart" have listened to him (1QH^a xii.24 [iv.23]), and they will stand forever in God's presence and will be established forever (1QH^a xii.21–22 [iv.20–21]). The author may also allude to other kinds of revelation. The "vision of knowledge" (*hazon da'at*) may refer to eschatological revelation, and God's "wondrous mysteries" (*razei pef'ekhah*) may denote the same or imply cosmological secrets (cf. 1QH^a ix.21 [i.19]).

Much of the hymn is taken up with criticism of the author's opponents, who ridicule and belittle him (1QH^a xii.8, 22 [iv.7, 21]). They change (*hvr*) the Torah, giving vinegar rather than the drink of knowledge (1QH^a xii.10–11 [vi.9–10]). In addition, they claim to have their

own visions (1QH^a xii.20 [iv.19]). Overall, the text is marked by a number of references to their lives and deception (1QH^a xii.7, 9, 10, 16, 20 [iv.6, 8, 9, 15, 19]; see also Nickelsburg, 1982).

Also noteworthy is this author's use of language from *Isaiah* 52–53 to describe his rejection by his opponents (1QH^a xii.8, 22–23 [iv. 7, 21–22]). These passages recall *Wisdom of Solomon* 2 and 5, which depict the persecution and eschatological exaltation of the righteous sage in language drawn from *Isaiah* 52–53. Another application of the servant material in "Second *Isaiah*" to the inspired teacher appears in 1QHodayot^a (1QH^a xv.10, xvi.36 [vi.7, viii.35]).

Pesher Habakkuk. The early columns of Pesher Habakkuk (1QpHab) feature the opposition between the Liar and his followers and the Teacher of Righteousness. [See Liar; Pesher Habakkuk; and Teacher of Righteousness.] The points of contention are the interpretation of the Torah (1QpHab v.9–12) and the Teacher of Righteousness's inspired interpretation of prophetic eschatology (1QpHab ii.5–10). The issue of revealed eschatology returns in Pesher Habakkuk (1QpHab vii.4–9). Of note here, in Pesher Habakkuk (1QpHab ii.5–10) and in the genre of the text itself is the distinction between the revealed prophetic word (God spoke [*dbr*] to Habakkuk [1QpHab vii.1]) and the revealed eschatological interpretation that God made known (*vd'*) to the Teacher of Righteousness (1QpHab vii.4–5). Different from the author of *I Enoch*, who knows scripture but pretends that his allusions to it came through direct revelation, this author assumes the existence of the ancient inspired texts and claims secondary revelation as the basis for its correct interpretation. The association of Torah and eschatology is explicit in Pesher Habakkuk (1QpHab vii.10–12 and viii.1–3). The "men of truth" who observe the Torah, in accordance with the interpretation of the Teacher, will endure in the last age and pass muster in the coming judgment.

The Qumran texts attest a transition in the history of Israelite notions of revelation. The apocalyptic writings reflect important moves along the prophetic trajectory. Although these writings were valued at Qumran, at least in the case of the Enochic corpus, they seem to have fallen into disuse around the turn of the era. There may have been some visionary activity at Qumran (1QH^a xii.18 [iv.17]; IQS xi.5–7), but there is no evidence that the sectarians wrote pseudepigraphic apocalypses. Instead, they claimed inspired interpretation of the Torah and the Prophets. But this was not an altogether new phenomenon; its antecedents appear in pseudepigraphic texts that patently interpret scripture (*Testament of Moses*, *Jubilees*, *Daniel* 9) and in the scribal activity of Joshua ben Sira (*Sir.* 39.1–8).

GEORGE W. E. NICKELSBURG

REVELATION, BOOK OF. The *Book of Revelation* has points of contact with the documents from the Judean Desert in two major areas: the expectation of an eschatological battle and the description of New Jerusalem.

In *Revelation*, the main actors in the final battle are the risen Christ and other suprahuman figures. In *Revelation* 19.11–16, the glorified Christ appears with the heavenly

armies, presumably angelic hosts, to defeat the Beast and his allies. In *Revelation* 20.1–3, Satan is bound by an angel, and in 20.7–10, the last resurgence of chaos—the attack of the legendary Gog and Magog—he is crushed by fire from heaven. Certain texts, however, hint that the human followers of the Lamb will fight in the eschatological battle. In a context referring to the battle between the Beast and the Lamb, it is said “and those with him [the Lamb] are called and chosen and faithful” (*Rv.* 17.14). This is the only time that the words *called* and *chosen* are used in the book. *Faithful* is used three times of Christ (*Rv.* 1.5, 3.14, 19.11), twice of the words of the book itself (*Rv.* 21.5, 22.6), and twice of the followers of Jesus in the context of loyalty unto death and bearing witness under pressure (*Rv.* 2.10, 13). It is unlikely then that “those with him” in *Revelation* 17.14 are angels. The reference seems to be to the human followers of Jesus. The text leaves open whether these followers participate only in the victory of the Lamb or in the battle as well. “Those with the Lamb” in *Revelation* 17.14 calls to mind the 144,000 in 14.1–5 who are said to follow the Lamb wherever he goes. The armies of heaven in *Revelation* 19.14 are also said to follow the Word of God. If the 144,000 are thought of as fighting alongside the angels in the final battle, the purity regulations relating to holy war would explain the otherwise rather isolated comment in *Revelation* 14.4 to the effect that they have not defiled themselves with women. These two passages, *Revelation* 17.14 and 14.4, show that the author was aware of a tradition that the elect would fight in the last battle.

Such a tradition is elaborated in great detail in the War Scroll from Qumran. According to the War Scroll (1QM i.1–3), the sons of Levi, Judah, and Benjamin, the exiles of the desert, will do battle with the *Kittim* and other traditional groups that represent the Romans as well as other external enemies, and with “the ungodly of the covenant”—i.e., Jews considered to be apostate who are seen as internal enemies. The camp must be pure (1QM vii). The human battle on earth is related to a heavenly battle in which God fights as Divine Warrior with his angels against the Prince of the kingdom of wickedness and his host (1QM x–xii, xvii.5). God will raise up the dominion of his angelic agent Michael in heaven and the dominion of Israel on earth (1QM xvii.7–8).

The tradition regarding the participation of the elect in the final battle is muted in *Revelation*, perhaps because of the disastrous outcome of the First Jewish Revolt against Rome, or because of the teaching of Jesus against responding to violence with violence. Richard Bauckham (1993) has argued that the followers of Jesus participate in the eschatological battle only metaphorically through their martyrdom.

In the last series of visions, John sees the holy city, New

Jerusalem, coming down from heaven (*Rv.* 21.1). Later, an angel carries him off, in the spirit, to a high mountain so that he might see the city (*Rv.* 21.9–10; cf. *Ezek.* 40.1–4). It has a large, high wall with twelve gates. Upon these gates are twelve angels and the names of the twelve tribes of Israel (*Rv.* 21.12). Three gates face in each of the four directions (*Rv.* 21.13), and on the twelve foundations of the wall are the names of the twelve apostles of the Lamb (*Rv.* 21.14). The angel has a golden measuring rod with which to measure the city, its gates, and its wall (*Rv.* 21.15; cf. *Ezek.* 40.3). The angel makes the measurements and John reports them (*Rv.* 21.16–17). There is no temple in the city because God and the Lamb themselves are its temple (*Rv.* 21.22).

Fragments of a work, given the title “New Jerusalem” by modern scholars, have been found in Caves 1, 2, 4, 5, and 11 at Qumran. The work seems to have begun with a scene in which an unnamed seer is led to a great wall by an angel carrying a measuring rod. Various features of the work suggest that it is closely related to *Ezekiel* 40–48. The wall to which the seer is led, however, seems to be the wall of the city rather than the wall of the area of the sanctuary as in *Ezekiel* 40.1–5. According to New Jerusalem” (4Q554), the wall has twelve gates that are named after the twelve patriarchs or tribes of Israel; three gates face in each of the four directions. (A similar motif appears in the Temple Scroll, according to which the second or middle courtyard and the third or outer courtyard of the ideal Temple have twelve gates each, three facing in each direction, whose names correspond to the names of the children of Israel, that is, the sons of Jacob [11Q19 xxxix–xli].) After the angel measures the twelve gates, he leads the seer into the interior of the city and begins to measure blocks of houses. After descriptions of various architectural structures of the city, the document apparently included a description and measurement of the sanctuary area and the Temple. The fragments describing certain ritual activities of priests in the Temple may represent the next surviving part of the document.

The *Book of Revelation* and the New Jerusalem texts are both heirs to the tradition that Jerusalem would be rebuilt with precious stones and metals. The tradition appears for the first time in literary form in *Isaiah* 54.11–12, where it is the foundations of the city that are to be sapphires or adorned with sapphires. The motif is reflected in the New Jerusalem texts in the mention of white stone (5Q15), alabaster or white marble and jasper (5Q15), a gate of sapphire (2Q24), as well as a wall made of precious stones, among which were sapphires and rubies (4Q554). Other walls are to be overlaid with gold (11Q18). According to *Revelation* 21.18–20, the wall of the city was made of jasper and the foundation stones were adorned with every jewel, including jasper and sapphire. Accord-

ing to *Revelation* 21.21, the street of the city was to be of pure gold.

The promise that the one who conquers will become a pillar in the Temple of God (Rv. 3.12) and the appearance of the names of the twelve apostles on the foundations of the wall of the New Jerusalem (Rv. 21.14) suggest that the Christian community is a symbolic foreshadowing or anticipation of the New Jerusalem and that the redeemed community in the presence of God in the new city will constitute a living temple. The Qumran community analogously understood itself as a spiritual or symbolic temple.

In *Revelation*, the manifestation of the New Jerusalem is identical with the arrival of the new age in its fullness. Since the New Jerusalem text is fragmentary, it is more difficult to assess its relationship to socially constructed reality. An important clue is evidence that the Temple of the New Jerusalem text is identical with the new Temple to be created by God that would endure forever. This Temple is mentioned in the Temple Scroll (11Q19 xxix.6-10) and in the Florilegium (4Q174 i.1-13). Since the city and Temple of the New Jerusalem text are presented as fulfillments of *Isaiah* 54, and since the text of *Isaiah* portrays God as saying, "I will make," it is likely that the city envisaged is the eschatological Jerusalem that, like the eschatological Temple, will be created by God himself. Therefore, like the *Book of Revelation*, the New Jerusalem text probably depicts the eschatological city and the definitive, everlasting Temple.

- Chyutin, Michajel. "The New Jerusalem [Ideal City]." *Dead Sea Discoveries* 1 (1994), 71-97. Provides a detailed discussion of the plan of the city. Concludes that, in the dimensions of the New Jerusalem, there is a proposal for a solution to the problem of squaring the circle similar to the attempts of the mathematician Meiron as described by Aristophanes (p. 96).
- Collins, Adela Yarbro. *The Combat Myth in the Book of Revelation*. Harvard Dissertations in Religion, 9. Missoula, Mont., 1976. The relationship between *Revelation* 12 and Hodayot' from Qumran Cave 1 (1QH' iii 1-18) is discussed on pages 67-69.
- Draper, J. A. "The Twelve Apostles as Foundation Stones of the Heavenly Jerusalem and the Foundation of the Qumran Community." *New Testamentica* 22 (1988), 41-63. On the basis of a comparison of *Revelation* (21.14, 19ff.) with Rule of the Community from Cave 1 (1QS viii 1-16, ix 3-7, xi 7-9) and Peshet *Isaiah*' (4Q164), concludes that the author of *Revelation* and the Qumran community were heirs to a definite method of Old Testament interpretation.
- García Martínez, Florentino. "The 'New Jerusalem' and the Future Temple of the Manuscripts from Qumran." In *Qumran and Apocalyptic: Studies on the Aramaic Texts from Qumran*, by García Martínez, pp. 180-213. *Studies on the Texts of the Desert of Judah*, 9. Leiden, 1992. Concludes that New Jerusalem does not describe the Heavenly Jerusalem or the Celestial Temple in the sense of an ideal Jerusalem beyond the concept of time, but the eschatological city, temple, and cult (p. 201), that the complex was presented as a divine creation (p. 202), and that the work is a product of the Qumran community (pp. 202-213).
- Gonanson, Stephen. "The Exclusion of Ephraim in Rev. 7.4-8 and Essene Polemic against Pharisees." *Dead Sea Discoveries* 2 (1995), 80-85. Concludes that the exclusion of Ephraim is polemical because in Peshet *Nahum* (4Q169 3-4 ii 2, etc.) "Ephraim" is identified with "those who seek smooth things," that is, the Pharisees.
- Hillers, D. R. "Revelation 13.18 and a Scroll from Murabba'at." *Bulletin of the American Schools of Oriental Research* 170 (1963), 65. Points out that an Aramaic document supports the spelling of "Nero Caesar" in which the letters would have the sum 666.
- VanderKam, James C. "I Enoch, Enochic Motifs, and Enoch in Early Christian Literature." In VanderKam and William Adler, eds., *The Jewish Apocalyptic Heritage in Early Christianity*, pp. 33-101. *Compendia Rerum Iudaicarum ad Novum Testamentum* 3.4. Assen, 1996. Notes that, although the two witnesses in *Revelation* 11 are unnamed, they are portrayed as Elijah and Moses. Concludes that there is documentary evidence for a pre-Christian Jewish expectation that both Enoch and Elijah would return at the time of the final judgment (pp. 88-100).

ADELA YARBRO COLLINS

REVUE DE QUMRÂN. A periodical that grew out of the immense interest aroused by the Dead Sea Scrolls and the problem of the proliferation of scientific articles scattered in many different journals, the *Revue de Qumrân*, founded in 1958 by Abbé Jean Carmignac, sought to consolidate new research. Throughout his tenure, Jean Carmignac performed the role of director and secretary with exemplary devotion and self-sacrifice.

According to the statement of its founder, the *Revue* is international in scope, and accepts articles written in German, English, Spanish, French, Italian, and Latin. Its focus is scholarly and scientific. The editors seek to ensure rapid publication so that scholars can profit from

research as quickly as possible, while maintaining the freedom to publish by adapting to the pace of the work. Finally, it seeks to be as practical as possible with reviews, indexes, tables, and bibliographies. Les Éditions Letouzey et Ané (Paris) agreed to guarantee the speed of publication.

Publication proceeded on schedule at first; however, later on the journal experienced some difficulties. Therefore, the director of the *Revue* had to make some modifications. The *Revue de Qumrân* changed publishers in 1976 when Emile Puech, as the new associate director, took office.

With the exception of the occasional publication of a few new fragments, the *Revue de Qumrân* generally limited itself to presenting studies on a great variety of subjects related to Qumran, and texts from Judaism in that period. With fascicle 46 in 1986, the founder handed over the work to a new team consisting of a new director, Émile Puech; an editorial secretary, Florentino García Martínez; and a European editorial committee. The new team attempted to give the *Revue* a new thrust, focusing on the publication of as many editions of unpublished manuscripts from the Judean Desert as possible, while adhering to a semiannual schedule. The *Revue de Qumrân* concentrates on the manuscripts from the Judean Desert while leaving to its sister journals studies about various texts from Judaism in that period, such as the Pseudepigrapha, and so forth.

A memorial volume was published in honor of its founder (vol. 13, 1988) and another in honor of one of the members of the editorial committee, who was also the editor of one group of scrolls from Cave 4 at Qumran, Jean Starcky (vol. 15, 1991). With volume 17 (1996), it honored the most eminent of the first-generation editors of the Dead Sea Scrolls, Józef T. Milik, on the occasion of his seventy-fifth birthday.

The *Revue de Qumrân* has made it a point to fulfill the commitments of its charter and to provide a service to science and scholars as a focal point for exchange and discussion. In its beginnings it supplied the first components of a concordance of Hebrew (War Scroll 1QM) and Aramaic (Genesis Apocryphon 1QpGen) texts, the supplements to the *Konkordanz zu den Qumrân Texten* by K. G. Kuhn and the corrections by John Strugnell that were critical of John M. Allegro's work in *Discoveries in the Judaean Desert*, 5 (Oxford, 1968). The journal publishes fragments and inscriptions from the region, linguistic and thematic studies, relationships with the history of the period, the New Testament, and the archaeology of the region. On a regular basis it provides a bibliography of articles on Qumran studies.

A few years ago a new journal, *Dead Sea Discoveries*, was founded. The intentions of its editors were not to in-

terfere with the scholarly *Revue de Qumrân* or to compete with its elder sister. But, while addressing a wider English-speaking audience, the editors intend to focus on more popular studies on manuscripts in their context.

[See *biographies of Allegro, Milik, Starcky, and Strugnell*.]

EMILE PUECH

Translated from French by Robert E. Shillenn

REWORKED PENTATEUCH. Consisting of five Hebrew manuscripts from Cave 4 at Qumran, the Reworked Pentateuch includes Reworked Pentateuch^a (4Q158)^b(4Q364), ^c(4Q365), ^d(4Q366), and ^e(4Q367); a sixth manuscript, Apocryphal Pentateuch 4Q368, also contains material from the Pentateuch with rewriting, and may be related to the Reworked Pentateuch. All five manuscripts are different exemplars of the same composition, a text of the Pentateuch that contained a running biblical text reworked by scribal intervention. This reworking consisted of exegetical additions and a differing sequence of passages from that of the received texts. The additions usually were short, of one or two lines, although in two instances in the Reworked Pentateuch^c they are more substantial. The altering of sequence usually is sensible, dictated by the content of the text, although occasionally the reason for the alteration is unclear (cf. 4Q158). There are no scribal indications in any of the manuscripts of the Reworked Pentateuch to signal differences from the received text of the Pentateuch; to the casual reader, the scroll would have looked like any other manuscript of the Torah. In fact, the greater part of the Reworked Pentateuch follows the received text closely.

Provenance. Of the major witnesses to the Pentateuch (the Masoretic Text, the Samaritan Pentateuch, and the Septuagint), the Reworked Pentateuch is most closely aligned with the Samaritan Pentateuch in its Proto-Samaritan or presectarian form. It is of interest to note that our evidence indicates that, unlike the other Torah manuscripts from Qumran, in which copies of *Genesis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy* are preserved on single scrolls, or, at most, two books to a scroll (Genesis-Exodus^a 4Q1), the Reworked Pentateuch copied all five books on one scroll, which would have made a complete scroll longer (twenty-two to twenty-seven meters [seventy-two to eighty-nine feet]) than any other found at Qumran. The composition of the work must have been postexilic, since fragment 23 of Reworked Pentateuch^c mentions two festivals, the Festival of the Wood and the Festival of the Fresh Oil, that seem to have been celebrated only in the postexilic period; further, Reworked Pentateuch^b 3.ii contains additional material that resembles in content *Jubilees* 27. [See *Festivals*.] If the Re-

worked Pentateuch is at this point alluding to *Jubilees*, then it must have been composed after it (therefore, in the middle to late second century BCE), but it may equally well be argued that *Jubilees* is familiar at this point with the Reworked Pentateuch, which would put the composition of the Reworked Pentateuch before that of *Jubilees*. The question of date is at the moment unresolved. There also is no evidence, either positive or negative, to indicate whether the work was composed at Qumran (if it was composed prior to *Jubilees*, then it was not). It contains none of the language usually identified as sectarian, nor does it espouse any particular calendar. However, it does have close ties with Temple Scroll^a (11Q19^a), which many scholars believe to have been a sectarian document. [See Temple Scroll.] Again, the question of the Reworked Pentateuch's provenance is unresolved. What follows are individual descriptions of each manuscript.

Description of the Texts. Reworked Pentateuch^a is an early Herodian manuscript consisting of fourteen fragments and one small unidentified fragment. It contains parts of *Genesis* 32 and *Exodus* 19–24 and 30. Its *Exodus* material is interspersed with parallel material from the masoretic *Deuteronomy*, which makes Reworked Pentateuch^a closely related to the presectarian form of the Samaritan Pentateuch. The biblical texts are presented in a sequence different from other witnesses: *Genesis* 32.25–32 is followed by *Exodus* 4.27–28; *Exodus* 3.12 is followed by *Exodus* 24.4–6. The reasons for these sequences are not transparent. Fragment 14 of Reworked Pentateuch^a also contains nine lines of additional material that may be related to *Exodus* 15.

Reworked Pentateuch^b is a late Hasmonean manuscript consisting of thirty-two fragments and thirty-five small unidentified fragments. It contains parts of *Genesis* 25–48, *Exodus* 24–26, *Numbers* 14 and 33, and *Deuteronomy* 1–14. No fragments of *Leviticus* have been preserved. Reworked Pentateuch^b agrees with the presectarian form of the Samaritan Pentateuch both in minor details and in major harmonizing additions at *Genesis* 30.36 and *Deuteronomy* 2.8, where Reworked Pentateuch 23a–b.i juxtaposes *Numbers* 20.17–18 and *Deuteronomy* 2.3–14. The manuscript preserves an interesting scribal feature: Before every occurrence of the Tetragrammaton, the scribe inserted two dots like a colon (:) in the preceding space. This may have been a device to remind the reader not to pronounce the divine name. Reworked Pentateuch^b 3.ii also contains a rather lengthy (six lines) nonbiblical addition before *Genesis* 28.6, in which Rebecca is speaking parting words to Jacob, and Isaac is consoling her for the loss of their son; the addition resembles in content *Jubilees* 27.

Reworked Pentateuch^c, the longest manuscript of the Reworked Pentateuch, dates to the late Hasmonean pe-

riod and consists of thirty-eight fragments and twenty-four small unidentified fragments. It contains parts of *Genesis* 21, *Exodus* 8–39, *Leviticus* 11–27, *Numbers* 1–27, and *Deuteronomy* 2 and 19. In minutiae, it is more closely related to the presectarian form of the Samaritan Pentateuch than any other witness, although it does not contain any major harmonizations. In addition, its *Numbers* material is closely related to Numbers^b (4Q27), a manuscript that clearly is part of the Proto-Samaritan family. Reworked Pentateuch^c contains two of the largest exegetical additions preserved in the Reworked Pentateuch. The first, (4Q365 6a.ii and 6c), occurs between *Exodus* 15.21 and 15.22 and contains what has been titled the “Song of Miriam.” It is a poetical composition describing God's victory over the Egyptians at the Sea of Reeds, and contains words and phrases reminiscent of the Song of the Sea in *Exodus* 15.1–18. It does not appear to serve any theological purpose in the text. The second exegetical addition, on fragment 23, follows *Leviticus* 24.2 and describes two festivals not found in the received text of the Pentateuch but known at Qumran from Temple Scroll^a: the Festival of the Fresh Oil and the Festival of the Wood. Their appearance here in the Reworked Pentateuch seems to be an attempt to give these festivals, which were first celebrated in the Second Temple period, the (retrojected) sanction of Moses.

The remaining two manuscripts of the Reworked Pentateuch are small and fragmentary. Reworked Pentateuch^d, a Hasmonean manuscript, consists of five fragments and contains parts of *Exodus* 21–22, *Numbers* 29, and *Deuteronomy* 14 and 16, while Reworked Pentateuch^e, a middle to late Hasmonean manuscript, consists of three fragments and one unidentified fragment, and contains parts of *Leviticus* 11–27. Neither manuscript contains enough material to make a definitive statement regarding textual affiliation, although they follow the same pattern of exegetical addition displayed by the other three manuscripts.

The Reworked Pentateuch is part of a larger category of Second Temple works loosely grouped under the rubric *Rewritten Bible*. These works, which include *Jubilees*, Temple Scroll^a, and the Genesis Apocryphon (1QapGen) are all based on biblical narratives later recognized as canonical, which the author(s) reuses in some way. Sometimes the purpose is clearly theological and polemical, as in the book of *Jubilees*, where the author rewrites the *Genesis* narrative in order to make several points, for example, that the seven-day, solar calendar that divides history into “jubilees” is the one ordained by God. At other times the purpose seems to be for entertainment, as in the Genesis Apocryphon, where the author takes the *Genesis* narrative and retells it in Aramaic, adding aggadic and legendary material, which expands the narrative but

does not alter its message or purpose. The Reworked Pentateuch's approach appears to be rather conservative: Material is added to the existing biblical material or its sequence is altered, but the essential character of the biblical narrative remains unaltered. The changes are sometimes simply for embellishment, as in the Song of Miriam, but sometimes the changes serve a larger purpose, such as giving the Mosaic imprimatur to the Festival of the Wood and the Festival of the Fresh Oil. As stated above, there is no scribal indication in the manuscripts that changes have been introduced. This may indicate that the scribe did not wish his audience to be consciously aware of the changes. This raises the question of the authority of the Reworked Pentateuch: did it have the same authority as the "canonical" text of the Torah?

Authoritative Status. The words *canon* and *scripture* are anachronisms in regard to the Qumran texts. However, it is clear that some texts at Qumran were authoritative. One good test of this is an instance of a certain text being cited by another, such as the Damascus Document citing the book of *Jubilees*. Other criteria may be brought into play as well, such as the number of copies of a particular work. Many of the books that seem to be authoritative at Qumran later became part of the Jewish canon: the Torah, the Prophets, and *Psalms*. Others that seem to have authority were not included in the later canon, for example, *1 Enoch* and *Jubilees*. However, there are many texts whose authoritative status is unclear, including the Reworked Pentateuch.

The Reworked Pentateuch's claim to authority rests on its relationships to other Torah manuscripts, the book of *Jubilees*, and Temple Scroll^a. *Jubilees* was certainly authoritative at Qumran; Temple Scroll^a may have been. As shown above, fragment 3 of the Reworked Pentateuch^b and *Jubilees* 27 have similar texts concerning Jacob's departure from his parents. If *Jubilees* is drawing its material from the Reworked Pentateuch, that may imply that the Reworked Pentateuch's version of the Pentateuch was in some way authoritative. If, however, the Reworked Pentateuch is here relying on *Jubilees*, we have no information concerning the Reworked Pentateuch's authority.

The Reworked Pentateuch's relationship to Temple Scroll^a is somewhat more complicated. Fragment 23 of Reworked Pentateuch^c contains material related to the tribal order of the offerings for the Festival of the Wood (4Q365 23.10-11), which is parallel to material found in Temple Scroll^a (11Q19 xxiv). This tribal order is not found elsewhere in ancient Jewish literature. [See Sacrifice.] Once again, if Temple Scroll^a is dependent on the Reworked Pentateuch and if Temple Scroll^a was authoritative at Qumran, then this may imply that the Reworked Pentateuch was authoritative as well. In addition, there exists a group of five fragments, in the handwriting of

the scribe of Reworked Pentateuch^d, that contain material parallel to the Temple Scroll. These were originally placed with Reworked Pentateuch^e; however, the editors decided that they were not part of the manuscript and published them separately, under the rubric Temple Scroll? (4Q365a). If, however, these fragments were, after all, part of Reworked Pentateuch^d, the relationship between the Reworked Pentateuch and Temple Scroll^a is even more complex. The question of the direction of dependency remains unresolved. Finally, the text to which the Reworked Pentateuch is most closely related is the "Proto-Samaritan" version of the Pentateuch, found in other Torah manuscripts at Qumran (e.g., Paleo-Exodus^m 4Q22). The Reworked Pentateuch contains many of the same pluses and harmonizing passages as the Proto-Samaritan text in introducing additional material and harmonizing changes. The unresolved question is when a text ceases to be simply a full or harmonizing text of the Torah and instead becomes rewritten. The Reworked Pentateuch may have been accepted by the inhabitants at Qumran as another version of the authoritative Torah or it may have been considered a rewritten version that did not carry the same authority. The question remains unanswered.

SIDNIE WHITE CRAWFORD

REWRITTEN BIBLE. The term *Rewritten Bible* refers to any representation of an authoritative scriptural text that implicitly incorporates interpretative elements, large or small, in the retelling itself. Some scholars suggest that the term constitutes a distinct literary genre. Geza Vermes (1986, p. 326) defines it as "a narrative that

follows Scripture but includes a substantial amount of supplements and interpretative developments." Other scholars are inclined to define the term as a loose overarching category for a number of compositions of different genres. George Nickelsburg (1984, p. 89) includes paraphrases, narrative blocks in a nonnarrative genre, and poetic presentations of biblical stories.

On the basis of the observation that there are rewritten forms of a multitude of books of the Bible, this article will adopt a loose definition of the term and offer some overall characteristics of the category. The category is to be found in the Bible itself and seems to have been common in the late Second Temple period. Among the Dead Sea Scrolls the majority of compositions to which the label is commonly attached were written in Hebrew, but some were composed in Aramaic.

The rewriting seems to have a variety of purposes, among which are the following: to improve an unintelligible authoritative text, making it more comprehensible (11Q10); to improve a text by removing inconsistencies—often through internal harmonization (4QpaleoExod^m); to justify some particular content by providing explanations for certain features in the base text (1QapGen); to make an authoritative text serve a particular function, perhaps in a liturgical setting (4Q41); to encourage the practice of particular legal rulings (*Jubilees*); and to make an old text have contemporary appeal (Temple Scroll). Rewritten Bible texts thus have features of both pure and applied exegesis, but the interpretation is never formally explicit.

In one sense, whenever a scribal copy of a biblical book is not exact in every detail, then a Rewritten Bible text is produced. However, it can generally be said that Rewritten Bible texts are those compositions which closely follow their scriptural base text and which clearly display an editorial intention that is other than or supplementary to that of the text being altered.

Biblical Rewritten Bible. The two most significant examples of Rewritten Bible within the Bible are *Deuteronomy* and *Chronicles*. *Deuteronomy*, as its latinized Greek name suggests, is a second, even secondary, version of a collection of laws; the primary texts are to be found in *Exodus*, *Leviticus*, and *Numbers*. From at least the fifth century BCE, *Deuteronomy* seems to have been widely accepted as being of equal authority with the other four books usually designated as the Torah. This authoritative status of *Deuteronomy* is significant since it may have encouraged further rewritten versions of parts of the Law in subsequent centuries. The authoritative place of *Chronicles* as rewritten forms of the earlier history books is unclear; it is worth noting that virtually nothing of *Chronicles* has survived among the biblical manuscripts found in the Qumran caves.

Rewritten Torah in the Dead Sea Scrolls. There are three types of rewritten texts that are applicable to the Torah: Reworked Pentateuchs, rewritten narratives, and rewritten laws.

Reworked Pentateuchs. Some manuscripts found at Qumran are apparently extensive rewritten versions of the whole Torah. These copies of the so-called Reworked Pentateuch (4Q158; 4Q364–367) generally follow the text of the Torah very closely. They acutely raise the issue of whether textual variants should be understood as constituting Rewritten Bible or whether they should be understood as merely belonging to the everyday and largely unintentional scribal practices of copyists. The Reworked Pentateuch manuscripts share many minor readings with the *Vulgate* of the Septuagint and with the Samaritan Pentateuch, but in places they contain more significant variations, notably additions, such as the so-called Song of Miriam in Reworked Pentateuch' (4Q365 6a.ii and 6c). Some fragments written by the same hand as that of Reworked Pentateuch have been classified as a separate manuscript (4Q365a) because they contain material that is predominantly nonbiblical; whether this is the correct editorial judgment remains to be seen, since it seems to be based on certain assumptions concerning how close the Reworked Pentateuch should be to the biblical base text.

Rewritten Pentateuchal narratives. Several compositions found among the scrolls from Qumran are rewritten forms of the narrative portions of the Torah. The Aramaic Genesis Apocryphon, one of the first seven scrolls to come to light, has stimulated the investigation of Rewritten Bible texts like no other. In its extant portions it is a rewritten form of the stories from Noah to Abraham, offering various kinds of explanatory expansions. The extant fragments of Exposition on the Patriarchs (4Q464) contain reworked biblical material relating to Abraham and Jacob.

Much of the Moses tradition is also presented in a reworked form: Apocryphon of Moses (2Q20), Discourse on the Exodus/Conquest Tradition (4Q374), Apocryphon of Moses B^a (4Q375), Apocryphon of Moses B^b (4Q376), Apocryphon of Moses C (4Q377), and possibly five copies of a Pseudo-Moses text (4Q385a; 4Q387a; 4Q388a; 4Q389; 4Q390).

In addition, there are multiple copies of *Jubilees*, which is a rewritten form of Genesis 1–Exodus 12 (*Jubilees*^{a,b} = 1Q17–18; *Jubilees*^{a,b} = 2Q19–20; 4Q176a; *Jubilees*^{a,b} = 4Q216–224; *Jubilees* = 11Q12). *Jubilees* is echoed in a series of related so-called Pseudo-Jubilees compositions (4Q225–227). The broad purpose of these narrative retellings is twofold: to make the antediluvians and the patriarchs keep the law in various respects and to represent

the whole of history according to a divinely ordained scheme of Jubilee periods. The very great significance of *Jubilees* as an example of Rewritten Bible is its apparent authoritative status at Qumran (CD xvi.3; 4Q228).

In Aramaic the *Books of Enoch*, the *Book of Giants*, and the various collections concerning Noah all attest the wide variety of forms in which pre-Abrahamic traditions could be passed on. Not all of these were deliberate attempts to rewrite the biblical narrative, sometimes a short biblical passage is used as a springboard for an extensive work of another kind.

Rewritten Pentateuchal laws. The most extensive collection of rewritten laws is the so-called Temple Scroll (4Q365a?; 4Q524 11QT^{sc}). This may be divided into four parts, which are joined together with editorial paragraphs. After the opening, which imitates parts of *Exodus* 34 but also harmonizes the *Exodus* narrative with corresponding passages of *Deuteronomy*, there is a lengthy section of reworked passages from the Torah containing regulations for the ordering of the Tabernacle and for the sacrifices that are to be performed there; these all refer to the temple that has yet to be built. Then, after a collection of rewritten purity laws, there is a lengthy section that rewrites much of *Deuteronomy* 12–22. This last section seems to be presented as a revised law for living in the land. It is interesting to note what is omitted as well as what is included or expanded. Most prominent among the omissions are all references in the corresponding chapters of *Deuteronomy* to the gentiles; perhaps this was done to suggest a hope of the authors that only Israelites would belong in the land as properly inhabited by virtue of God's gift. The most obvious expansion is the so-called King's Law (11QT^{sc} lvi.12–lx.21), which extends *Deuteronomy* 17.14–20 in a variety of ways to limit the powers of the king; perhaps this was written against a contemporary ruler, possibly one of the Hasmoneans. The literary device of having God speak in the first person suggests that the editor was trying to provide this secondary text with a self-authenticating authority.

There are several other manuscripts that contain rewritten forms of Pentateuchal laws. A brief mention of some of them will show how extensive and varied the phenomenon was: Words of Moses (1Q22), the Liturgy of the Three Tongues of Fire (1Q29; 4Q376), the Greek Paraphrase of Exodus (4Q127), the Targum of Leviticus (4Q156), Meditation on Creation A^a, B (4Q302a–304), the Apocryphon of Joseph^{sc} (4Q371–373; 4Q539), the Apocryphon of Jacob (4Q537), and various Aramaic traditions associated with Levi, Qahat, and Amram (4Q540–548).

Rewritten Former Prophets. There are a few compositions found at Qumran that seem to allow us to see rewritten forms of the various books assigned to the former

Prophets. For Joshua, it may well be that the Qumran evidence permits the conclusion that the version of the book in Masoretic Text is in fact the rewritten one: 4QJosh^{sc} (4Q47) contains an ordering of events that could well be more original than that displayed in the Masoretic Text. Also, for Joshua there exists something of a rewritten form in the so-called Psalms of Joshua, a version of the narrative containing poetic additions, which, like *Jubilees*, may have been considered authoritative (cf. 4Q175 14–21). There is also a Paraphrase of Joshua in paleo-Hebrew (4Q123).

For *Kings*, which is dominated by the Elijah and Elisha cycles of stories, the scrolls have provided very fragmentary copies of what appear to be rewritten forms: 4QParaphrase of Kings et al. (4Q382), 4QApocryphon of Elisha (4Q481a). The fragment mentioning Elisha (frg. 2) seems to contain some poetic or liturgical material. A common feature of expanded versions of biblical books is the addition of such material that may enhance the appeal of the narrative and even encourage audience participation.

Rewritten Latter Prophets. Rewritten forms of the literary prophets were known before the discovery of the Dead Sea Scrolls; among these were the *Ascension of Isaiah*, the expansions to the Jeremiah traditions in the series of works associated with Baruch, the so-called Ezekiel Apocryphon, and the Lives of the Prophets. For the scrolls from Qumran, no rewritten forms of *Isaiah* or the Twelve Minor Prophets have come to light; conversely, no *pesher* or running commentary on Jeremiah or Ezekiel has yet been identified.

For the prophet Jeremiah, the rewritten forms feature in what may be five apocryphal compositions, Apocryphon of Jeremiah A–E (4Q383, 4Q384, 4Q385b, 4Q387b, 4Q389a). For Ezekiel, the rewritten forms are preserved in five manuscripts of Pseudo-Ezekiel (4Q385; 4Q386; 4Q387; 4Q388; 4Q391). Sometimes the biblical text is followed very closely, sometimes not.

Rewritten Writings. The books now collected together in the Writings pose some particular problems for the student of Rewritten Bible texts. Because the majority of the works among the writings attained authoritative status later than other sections of the Hebrew scriptures, it is not always clear how alternative forms of these works should be understood. For example, from the various collections of Psalms discernible in the Qumran Psalms manuscripts, it is not clear whether the collection of 150 Psalms as in the Masoretic Text was one of several collections available in the Second Temple period or the dominant collection against which all other collections should be deemed secondary.

More obviously there are several collections of biblically based Psalms among the scrolls from Qumran.

These apocryphal psalms imitate their biblical counterparts in phrasing or in form, or both. It is difficult to determine when a nonbiblical Psalm should be labeled as Rewritten Bible and when it should be labeled as a new nonbiblical composition. For example, in 4QNoncanonical Psalms B (4Q381-24) there is a re-presentation of Psalm 18 (parallel to 2 Sm. 22).

For *Job* there are two Targums (4Q1gJob, 11Q1gJob). In these Aramaic versions of the wisdom book, minor interpretative improvements are introduced into the text. Some of these may have been provoked by the difficulty of the Hebrew of *Job*, with which even the ancients struggled.

Many of the biblical wisdom sayings are reworked into new groupings and new contexts in the wisdom texts from Qumran. The order of the original source is usually lost, so texts like Sapiential Work A (4Q415-418) are not fairly classified as Rewritten Bible.

For *Canticles*, it is clear that *Canticles*^a (4Q106) and *Canticles*^b (4Q107) represent alternative secondary excerpted versions of the text. The *Book of Esther* has a complicated textual history, as the Greek versions of it attest. Though the *Book of Esther* itself is not extant in any of the fragments from the Qumran caves, the Aramaic 4QProto-Esther (4Q550) may enable us to see how the canonical *Book of Esther* is a rewritten form of earlier court tales. The Pseudo-Daniel manuscripts (4Q242-245) do the same thing for the *Book of Daniel*, revealing something of the sources that were available to the author of the biblical book and showing us how he reworked or re-wrote earlier traditions.

Overall Characteristics of Rewritten Bible in the Dead Sea Scrolls. Several features characterize these Dead Sea Scroll Rewritten Bible compositions, though not all are necessarily present in every work mentioned in this article.

Rewritten Bible works generally follow the biblical text closely; the appropriateness of the label depends on discerning that the biblical text acts persistently as the primary control on what is re-presented. Rewritten Bible texts thus reflect a consistent attitude of respect to the authoritative base text. They do not replace the biblical text, but offer alternative or supplementary versions of it.

Rewritten Bible texts generally reflect a coherent overall editorial purpose of some kind. Sometimes this is fairly easy to determine, as in *Jubilees*; sometimes the fragmentary nature of many of the scrolls prevents us from being sure what the purpose might have been. Since all Rewritten Bible compositions are interactions with a scriptural base text, all of them are exegetical in some form. Yet the exegesis is always implicit, never explicit, as in formal commentaries (such as the *peshtarim*).

Rewritten Bible texts display a wide variety of exegetical

practices, some of which can be considered as simply scribal improvements to the text, but others of which are more elaborate. A common strategy is harmonization. Whereas later rabbinic interpreters enjoyed discovering different significances for two similar biblical passages, those responsible for the Rewritten Bible compositions commonly tried to make two similar passages correspond as closely as possible, or might remove one altogether.

Rewritten Bible texts come in almost as many genres as can be found in the biblical books themselves. Rewritten Bible is a label that is suitable for more than just narrative retellings of the biblical stories. It is a general umbrella term describing the particular kind of intertextual activity that always gives priority to one text over another.

None of the Rewritten Bible compositions found at Qumran is narrowly sectarian. It is not even clear that the Temple Scroll was compiled by the Qumran community or the movement of which it was a part. In light of the Dead Sea Scrolls it would seem that for the whole of the Second Temple period and beyond, rewriting authoritative texts was a widespread practice in early Judaism. Once both the form and content of the biblical books were fixed in Hebrew, Rewritten Bible continued only in the Targums.

RIGHTEOUSNESS. The concept of righteousness is a hallmark of Qumran theology. The Hebrew term for "righteousness" (*t'sedeq, t'sedaqah*) appears fifteen times in *Hodayot*^a from Qumran Cave 1 (hereafter, 1QHodayot^a 1QH^a), the hymnbook of the Qumranites, and twelve times in the Rule of the Community (hereafter 1QRule of the Community, 1QS, and Serekh Damascus, 4QS), which contains the community's laws and regulations. The latter scroll introduces the collection with the claim that those who enter the community have dedicated themselves "in order to perform truth and righteousness (*t'sedaqah*) and justice upon the earth (or land)" (1QS i.5–6).

God as Righteous. The founder of the Qumran community remains anonymous; however, he is known as the Teacher of Righteousness (Peshar Habakkuk, 1QpHab i.12–13). He was "righteous" in contrast to the high priest in Jerusalem, who is the Wicked Priest and most likely drove the Teacher of Righteousness and his small group of followers from that city. The famous passage in *Habakkuk* 2.4, "the righteous one shall live through his steadfastness," is interpreted at Qumran to denote only those who patiently suffer and remain steadfast to the Teacher of Righteousness (1QpHab viii.3), and it is to him and him alone that God has revealed all the mysteries of the words of his prophets (1QpHab vii.5).

It is God, and God alone, who constitutes righteousness in the Qumran documents. A human cannot obtain righteousness by obeying the Torah or following special rules for purification unless God grants it; a major tenet of Qumran theology is the repeated emphasis that God, and

only God, can make one righteous: That theme is clearly stated in 1QHodayot^a:

And I, I know that righteousness is not of man,
Nor perfection of way of the son of man
To God Most High (are ascribed) all works of righteousness
(1HQ^a xii.31–32 [iv.30–31])

Particularly striking and, in a way, unique in contrast to the theology in the Hebrew scriptures, is the way in which the people of Qumran think of righteousness along with forgiveness and judgment. According to 1QHodayot^a, God is the only judge, and forgiveness derives only from God's goodness (1QH^a xix.8–10 [xi.5–7]). Perhaps indicative of the Qumranite rejection of the Temple cult and the atonement obtained there, especially on Yom Kippur, and surely evidence of the Qumranite conceptual linking of righteousness and ritual cleansing, is the following section from 1QHodayot^a:

[I] lean upon your kindness
And (upon) your abundant compassion
For you atone for iniquity
And you clea[nse the hum]an from guilt through your righteousness.
(1QH^a xii.36–37 [iv.34–35])

While the Holiness Code (*Lev.* 17–26) stipulates holiness at the heart of God's goodness (*Lev.* 19.1–20.27), the Qumran texts place righteousness at the heart of God's nature (Ringgren, 1995). Thus, while the Holiness Code requires holiness, the Qumran scrolls demand righteousness. Both writings stress that a life pleasing to God is an imitation of God. This contrast is not to be overdrawn; yet, it is significant how much the members of the Qumran community stressed the demand for righteousness when they revered and exhorted holiness and developed the concept of the Holy Spirit as an entity separate from God and when they referred to their community as the "House of Holiness."

How the Community Will Become Righteous. What the members of the community perceived is the contrast between God and human beings. God is totally righteous, but humans are completely unworthy of God's attention (1QS xi.20–22). Many Qumran passages are in line with some verses in the Prophets (*Is.* 45.9) and the Wisdom literature (*Jb.* 7.32, *Eccl.* 7.20) that stress human's lack of goodness. The Qumran community chanted the conviction that "no one is righteous in your ju[dgme]nt" (1QH^a xvii.14–15 [ix.14–15]). God's creature, the human, can praise God, but God alone is righteous because he is the Creator: To you, you (alone belongs) righteousness, For you have made a[ll things] (1QH^a viii.28 [xvi.9]).

In contrast to 1QHodayot^a, which only once (in 1QH^a xii.37 [iv.36]) mentions how one will be cleansed through God's righteousness, the 1QRule of the Community em-

phasizes that the human is saved by God's righteousness, which is virtually a synonym for God's grace:

And I, when I totter, the mercy of God (is) my salvation forever
 When I stumble over fleshly iniquity,
 my judgment (is) by God's righteousness which endures forever.
 In the righteousness of his truth he judges me
 In his great goodness he atones for all my iniquities
 In his righteousness he cleanses me of the impurity of the human
 and (of) the sin of the sons of Adam,
 in order (that I might) praise God (for) his righteousness,
 and the Most High (for) his glory
 Blessed are you, my God, who opens for knowledge the heart
 of your servant.
 Establish in righteousness all his works

(1QS vi.12-16)

Humans are not righteous in the present, but those at Qumran, the predestined Sons of Light, will become righteous, like God, at the end of time, through God's own deeds of righteousness (cf. 1QH^a v.34-36, xiv 4-35, xix.4-14 [xiii 17-19, vi 1-32, vi.1-10]). This insight helps explain why in the Rule of the Community, Rule of the Blessings, Hodayot, and the War Scroll, members of the Qumran community almost never call themselves "the righteous ones" (contrast 1QH^a ix 36 [i 34]), although they are certainly "the sons of righteousness" (*benet tsedeq*, [1QS iii.22]). This insight also helps explain why, except for the mention of the Teacher of Righteousness, the authors of the *pesharim* never use the term *righteousness* (that is, no form of the root *tsdq*). Many Qumranites apparently believed their age was not fit for righteousness. It was only at the end of time that "righteousness will be revealed as the sun" (Mysteries, 1Q27 1.6, cf. 1QH^a xiv 16 [vi.13]). Only "in the last days" will Melchizedek, who is the archangel in charge of the forces of light (and whose name can mean "King of Righteousness"), come to deliver the people of Qumran (here called "the holy ones of God") from the bondage of the "evil one," Belial, who controls the forces of darkness (Melchizedek, 11Q13). [See Demons]

Significance of Qumranite Exile. The claim that only God can make one righteous and that righteousness will be a possession of the members of the Qumran community only at the end of time might lead one to imagine that they could not earn righteousness and therefore attempted to do nothing to obtain it. That would be a misunderstanding. While the Sons of Light, the members of the Qumran community, are preordained to be righteous (1QS iii-iv, 4Q186), they were not content to be "the elect ones" but followed the Teacher of Righteousness into the wilderness "to prepare the Way of the Lord" (1QS viii.13,

ix.19-20) by studying the Torah in the wilderness (1QS viii.15). They are thus "the doers of the Torah in the house of Judah" (1QpHab viii 1-2). The people of Qumran left the world and the practice of contemporary Judaism behind, and allocated all possessions to the common storehouse at Qumran to devote themselves fully to the pursuit of righteousness in anticipation of and in preparation for God's final act.

The biblical understanding of "the wilderness" was not only as the place for the Sinai theophany but also, and more emphatically, as the symbolic place of disobedience and punishment (Talmon, 1993); thus, the people of Qumran went into the wilderness literally and not only metaphorically (Brooke, 1994). They went into the wilderness as an act of preparation, to separate themselves from unholy history. They prepared themselves for the time when they would again be the ruling priests in a purified Temple cult; certainly, they prepared for the future day of judgment. There in the wilderness, the transitional locale, they devoted all to performing ritual lustrations, keeping themselves pure, praying, studying, and reading throughout the day and night, copying God's word, and—most importantly—living lives of righteousness, while feeling and expressing their own unrighteousness, in devotion to the Creator, especially through the revelation given to the Teacher of Righteousness.

Thus, it is evident why the members of the Qumran community, during the yearly renewal for entering the covenant, considered God's actions on behalf of his chosen ones. During the ceremony the priests reported "the righteousness of God," which is evident in "all [his] merciful acts of love toward Israel" (1QS i.21).

RITUAL OF EXORCISMS. See Demons; Magic and Magical Texts.

RITUAL OF MARRIAGE. From about 344 fragments that have been ascribed to this scroll, Ritual of Marriage (4Q502), only seven display more than a few lines of running text. The language is Hebrew, the paleographical characteristics pointing to a date of the copy at the beginning of the first century BCE. To establish the character and contents of the original scroll on the basis of such fragmentary remains is practicably impossible, particularly considering the possibility that the scroll contained more than one text of composite character. It may well be that the definition "rituel de mariage" ("marriage ritual") really fits only a part of the scroll (cf. frgs. 1-2, 5), but there is no convincing proof for this assumption in the extant fragments.

Several fragments, however, formed part of some liturgical benedictions concerning welfare in family life and public activities. The following persons are mentioned: a woman, perhaps a wife of one of the "Sons of Zadok" (?; 4Q502 1), and offspring; in fragment 2, "a daughter of truth"; men and youths in connection with benedictions concerning economic prosperity and cult personnel (9); sons and daughters (14); a "council of holy ones"; and children, old men and women, virgins, boys and girls, and also men reciting a benediction, which is not preserved (19). Fragment 24 seems to concern a woman; according to fragment 34, men and women recite a benediction, and fragment 96 mentions "sisters." A number of fragments indicate the situation of a festival; for example, Sukkot is clear on fragment 99. Only the beginning of a benediction is preserved in fragment 24: "Praised is the God of Israel, who has helped[. . .]"; "God of Israel" appears also in fragment 105 + 106 and is characteristic of liturgical texts for nonpriests.

The fact that members of families are mentioned as reciting benedictions or as participants or subjects of such rituals indicates a "nonsectarian" character. The fragments are probably remains of a pre-Qumranic liturgical tradition, attested also in other texts containing prayers and benedictions for defined events or certain days or festivals. [See Festivals.] It represents not necessarily a proof for the practice of marriage within the Qumran community, but may be taken anyway as proof for "normal" life

beyond the boundaries of the performance of the *yahad*, which may be regarded as an inner circle of a broader group, all sharing the liturgical heritage of the Jewish establishment before the split that occurred during and after the events under Antiochus IV.

ROCKEFELLER MUSEUM. See Palestine Archaeological Museum.

ROCK OF ZION. The Hebrew manuscript Prophecy of Joshua (4QapocrJoshua?; 4Q522) includes twenty-four leather fragments, all small in size, except for fragment 9 i-ii, which has been called "Rock of Zion." The copy dates from the second third of the first century BCE (late Hasmonean script and corrections). It contains some characteristics of Qumran spelling (long suffixes) that are absent, however, in the citation of Psalm 122 (with a few variants), while the Masoretic Text attests to long final vowels. The manuscript abounds in biblical reminiscences, in particular from *Joshua*, *Judges*, and *1* and *2 Samuel*, but also from *Kings* and from *Chronicles*. It is centered on the conquest of the country, but not of Zion "until the end of time." It is "the son of Jesse, son of Phares, son of Judah, who will take the Rock of Zion and will expel the Amorites from it, . . . it is he who will have the idea of building a temple of Yahveh, the God of Israel." He himself is to make all the preparations for its construction, but it is his youngest son, Solomon, who will build the Temple and the priest Zadok, son of Phinehas, son of Aaron, who will be the first to officiate there. The beloved of Yahveh will be blessed and shall dwell in safety in Jerusalem for a long time, and his people will dwell there forever. For the present, Joshua has placed the Amorite "at the service of the people of the sons of Israel." He and Eleazar are to carry the Tent of the Tabernacle away from Bethel to Shiloh.

The fragmentary list of place names that precedes this half-historicizing and half-prophetic statement of Joshua in Bethel is unclear in its geographic sequences. It lists only the names of a few tribes: Judah, Simeon, Dan, Issachar, and Asher, and then Judah again, with a few cities

from their territories, some of which are cities of refuge. All the sites mentioned are located in Palestine, from Tyre, Sidon, and the region of Hermon in the north, to Galilee, to the Negev in the south.

The manuscript uses the Tetragrammaton several times, even outside explicit citations, just like the Apocryphon of Joshua^{a-b} (4Q378–379) and *Ben Sira* and *Daniel*. On the one hand, the emphasis on the Temple and the altar seems to presuppose the profanation of the holy place by Antiochus. On the other hand, the mention of Zadok, son of Phinehas, seems to be an allusion to the eviction of the Zadokites from the Jerusalem high priesthood. Some similarities with *Jubilees* also argue for dating the composition of the scroll toward the middle of the second century BCE.

It is likely that Prophecy of Joshua (4Q522) and Work with Place Names (5Q9) represent remnants of one single composition. Apocryphon of Joshua^d seems to belong at the beginning of an Apocryphon of Joshua (death of Moses, succession, entrance speech), and Apocryphon of Joshua^b seems to belong shortly thereafter (crossing of the Jordan, destruction of Jericho), while Prophecy of Joshua and Work with Place Names might belong to the following sequence: resettlement of the tribes and of the Tent of the Tabernacle. But there is no overlap between the two sets, and Apocryphon of Joshua^{a-b} do not have the long forms of suffixes as in Prophecy of Joshua.

Are we dealing with a single composition? It may seem surprising to find Psalm 122, which is centered on Jerusalem, David's capital, in an Apocryphon of Joshua. Perhaps this accounts for the allusion to Psalms of Joshua in the citation of Apocryphon of Joshua^b 22.ii in Testimonia (4Q175 21–30). However, one is reluctant to give these fragments the title Apocryphon of Joshua^c. But Joshua's prophetic function, already emphasized in *Ben Sira* 46.1, might well characterize this *midrash* on the settlement of the tribes and the prophecy of the capture of the Rock of Zion by David, the construction of the Temple by Solomon, and the exercise of the Zadokite priesthood; Prophecy of Joshua might be a more neutral title. The paleo-Hebrew Paraphrase of Joshua (4Q123) and the Paraphrase of Joshua from Masada (Mas11) should certainly be excluded from this Apocryphon of Joshua.

Were it to be proven that Prophecy of Joshua belonged to the Apocryphon of Joshua, then the question must be raised as to the origin of the scroll cited in the fourth position after *Exodus*, *Numbers*, and *Deuteronomy* in Testimonia as a book also enjoying prophetic authority—that of Joshua, the successor of Moses.

The abridged genealogy for the birth of the son of Jesse found in this text finds an echo in *Matthew* 1.3–5 and *Luke* 3.31–33.

ÉMILE PUECH

Translated from French by Robert E. Shillens

ROMAN CAMPS. Military camps (*castrum*, usually plural, *castra*) comprise all installations other than permanent fortifications that afford accommodation and shelter in the field to troops, their equipment, and supplies.

It is often impossible, prior to excavation, to allocate camps to specific periods and armies, since camp patterns did not basically change from the second millennium BCE onward. A further complication for definite identification is the frequent reuse of earlier camps. In Israel, pottery finds prove that camps established in Israelite times may have been reactivated in the Roman period, and that those in turn were used again in the Byzantine period and after. However, surface finds do not necessarily include distinguishable shards from all periods, especially if occupation was short, and, if, as was the case from the first century BCE to the second century CE, most types of pottery changed very little. Part of the following, thus, cannot be taken as final and many "camps" cannot be discussed.

During the period covered by the scrolls, the following campaigns have been recorded in the area, all of which could have left camps behind: the wars of Jonathan the Hasmonean, 152–142 BCE; the war waged by Aristobulus II against his brother, Hyrcanus II, 67–63 BCE; Pompey's conquest, 63 BCE; the wars of Aristobulus against Gabinius, 57–56 BCE; of Herod against Antigonus, last of the Hasmoneans, 40–38 BCE; of Varus, 4 BCE; the First Jewish Revolt, 66–74 CE; and the war of Bar Kokhba, 132–135 CE; and possibly Byzantine confrontations with the Ghassanid and other Arabs, up to the Muslim conquest.

Hellenistic Period. Following local and Greek traditions, Hellenistic-period camps, including those of the Hasmoneans, could assume a variety of quadrangular, polygonal, and rounded shapes. The small, square, dry-walled enclosures, averaging 35 by 35 meters, surveyed around the fortress of Hyrcania, are, on historical

grounds, allocated to Herod's siege (*The Jewish War* 1.1.364—ca. 33 BCE) Nothing of their internal arrangement has survived.

Around Alexandria, historical considerations alone designate as siege-camps seven similarly shaped and built structures, constructed by the soldiers of Pompey (63 BCE) or Gabinius (57 BCE).

Masada. The outstanding importance of this site for the research of military camps is in the excellent state of preservation of the eight siege-camps around Masada (A to H), erected in 72 or 73 CE by Flavius Silva, the Roman governor, to reduce the last Jewish stronghold in recently conquered Judea.

The camps vary in size: B and F1 comprise about 2 hectares. They housed half a legion each. C and E, with approximately 0.43 hectares, probably accommodated a regiment of mixed infantry and cavalry, *cohors equitata*, of 500 men, although larger garrisons have been claimed for them—up to a *cohors miliaria*. A and D, each 0.22–0.24 hectares, accommodated one infantry *cohors* of 500 men each, G and H, rather less. All had dry, high walls of local stone and a filling of rubble. All, save C, were quadrangular, although each one was different in shape. All had the rounded corners, typical of Roman camps, and the gates of X, E, and F were protected by interior *claviculae*, half-moon shaped walls jutting out from one of their corners to prevent rushing the gates by surprise. They were in use from the first century BCE to the second century CE. [See Masada, *article on Archaeology*.]

Pseudo Hyginus. The Masada camps B and F prove that in Flavian times the oblong pattern prescribed for larger-size *castra* by "Pseudo Hyginus" (*De Munif. Cast.*), the Hadrianic (or later) surveyor, had already evolved—contrary to the square outline prescribed by Polybius, in the mid-second century BCE (6.27–40). The latter also described the mode of camp building incumbent as a standing order on all Roman commanders for every stay at one place, from overnight onward. Accordingly, an advance party would survey the camp and mark the outline and internal installations with flags and spears, so that each unit could immediately, upon arrival, occupy its allocated space and commence its task of camp building (6.41).

The Hyginic pattern for the camp interiors, as adopted at Masada B and F1, is based on a grid of roads intersecting at right angles. The *praetorium*, which comprises the commanders' tent and the headquarter premises, is connected with the *porta praetoria*, the frontgate, by the *via praetoria*, one of the two main thoroughfares of the camp, running on its main-length axis. The other thoroughfare, the *via principalis*, passes in front of the *praetorium* between the two sidegates (*porta principalis sinistra* and *porta principalis dextra*) at right angles to the *via prae-*

toria. It divides the camp into two sections, the *praetentura* and the *retentura*, as is the case with Masada B and F1. According to this layout, the *praetorium* is situated in the forward part of the rear sector (*retentura*) with the logistic installations behind it, around the quartermaster's office (*quaestorium*). The assembly area (*forum*), the camp sanctuary (*aedes*), and the commanders' tribunal, can, according to the Hyginus, be pointed out in front of the *praetorium* also at camp A. The senior officers' tents/dwellings ranged along the *via principalis*. The troops occupied tent rows or barracks along the roads parallel to the main thoroughfares. Each row (*hemistriga*) housed one century or an equivalent tactical unit. The two adjacent rows formed a *striga*, which housed the next higher legionary subunit, the *manipulus*. Owing to these arrangements, the troops could fall-in immediately under the eyes of the centurions who occupied one end of their century's tent row, and assemble in the *intervallum*, the broad road running along the inside of the walls, either to man the defenses or to move outside for any action.

Pseudo Hyginus and Masada. The main differences between the Hyginic pattern and Masada are the latter's deviation from the rectangular pattern, the inexact inner alignments, and the absence of the regulation ditch or ditches, which were hallmarks of the Roman camps of all sizes in the west and in Africa. The absence of the regulation ditch or ditches may be explained by the rocky soil, while the other two deviations may be explained by their status as siege camps, which do not belong to either of the two categories explicitly mentioned in the sources: (a) the overnight, short-stay *castru aestiva*, or (b) the long-stay camp, the *castru liberna, stativa*, which, on the borders, developed into permanent fortifications (Polybius and Pseudo Hyginus, *ibid.*, Livy 5.2.1; 29.30.5). Archaeological survey proves that campaign bases and siege camps of the late Republic and the first century CE did not usually adhere to the written recommendations and were either polygonal or nonrectangular in shape. At Masada, all attempts to explain the camp patterns by tactical needs or topographical conditions are so far unconvincing.

Regarding the inside, commanders may have, under battle conditions, deviated from the canon for a variety of reasons. Thus the extremely adverse weather conditions explain the following not yet mentioned peculiarities of the Masada camps: the building of stone-hut *strigae*, with the section tents (*papiliones*) as roofings; the ranging of the hearths for preparing the common meals outside, in front of each *contubernium*; and the furnishing with stone-built "U"-shaped *triclina*, an amenity usually reserved for officers, praetorians, and other privileged personnel.

Small-size siege camps often fulfill special tasks, such as physically preventing hostile movement. Additional tactical requirements may have been the reason for rhombic or similar shapes in sites such as Masada or the siege belt around Machaerus from 7 CE. Hypothetical wooden corner towers, as existed in Caesarian camps (for instance, *Bellum Gallicum* 8.9), would have been able to provide their walls with much needed enfiladic bow shot.

Tactical Siting of the Masada Camps. The exact siting of the Masada camps is explained by tactical considerations. Camps A, B, and C block the main axis for surprise sallies, the Nahal Mesada. Camp D prevents hostile use of the path ascending the plateau and stands guard over the Ge ha-Armon (Wadi Nimr); camps E and F protect the building of the assault ramp; camp G guards the southwest corner of the circumvallation, and camp H occupies the only point permitting observations of the inside of the Masada fortifications.

After the siege, Silva garrisoned Masada with a legionary detachment. Until these troops moved up, they, or another force occupied rhomb-shaped camp F2, built into the southwestern corner of camp F1. The eleven artillery platforms guarded against zealot groups possibly still at large, and the arrangement of most of the tent rows along the walls foreshadows later Roman works of the second/third century and after, which continue long-existing local traditions.

The Bar Kokhba Revolt. Only two small camps of approximately 1,250 square meters each can be assigned with certainty to the Bar Kokhba Revolt. Not simply camping sites, they are also field redoubts, built on opposing sides of the edge of the Nahal Hever gorge, to observe and block the Jewish refugees in the Cave of the Letters and the Cave of Horror, respectively. By building the camps on the sheer cliff edges, the garrisons were able to do without enclosure walls on the fourth side, while blocking the only ascents from each cave and permitting the cover of their entrances with bow shot. The method of wall construction is the same as in the Masada camps. The uncommon practice of protecting the rear by a bent wall trace and protruding towers in the northern camp and by a rounded corner bastion in the southern camp, in addition to the *claviculae* at the single entrance, attest to the aggressive Jewish tactics (*Dio. Epit.* 69.12–14, and according to many scholars, Apollodorus, 1908, 138.2) typical of this war. [See Bar Kokhba Revolt.]

The inside structures, better preserved in the south, include square tent bases or huts, sufficient to house one century, large commanders' quarters, stores (?), ovens, and a horse-shoe shaped flag-sanctuary (?).

Apart from these two camps, a string of twelve or more camps have been discovered, tracing a line of most probable Roman advance along the Jordan Valley, the Buq'at,

its southeast branch, and up the 'Ein-Gedi ascent. The surface pottery may completely or partly be assigned to the Bar Kokhba period, although an earlier date cannot be excluded.

Only Camp 4 has rounded corners and only Camp 3 has an (external) *clavicula*. All others are quite distinct from the Pseudo Hyginian canon, as represented, for instance, by the large Bar Kokhba-period camps at Betar. Camps 2, 4, 7, 8, 9, 10, and 11 are approximately square; the last three with protruding towers. Camps 3 and 5 are sharp-angled polygonal, while 1 and 6 are rounded in pattern. Camps 2, 3, and 5 might have been Roman bases that were pushed forward successively to face the enemy in front and flank. Camps 3 and 5 would accommodate a military *cohors* or comparable force, while 2 and 4 would house reduced small units or detachments. Others could have served the Jews, such as the small strongholds 8, 9, and 10, recalling earlier, local patterns that guarded the ascent to Tekoa. Their mutual support goes a long way to explain the flexible Jewish defense alluded to by Hadrian, cited by Apollodorus.

In the Roman structures, battle conditions explain once more the nonconformity with the official canon.

Importance of Camps in War. The Roman camps were recognized already by their contemporaries as a mainstay of the Roman mode of warfare. Livy 44.39 quotes Aemilius Paulus, who designated the camp "as a continuously available haven . . . to move out to battle . . . and in which to find a secure refuge." Josephus (*The Jewish War* 3.76) states, "The Romans never lay themselves open to surprise . . . they engage in no battle until they fortify their camp." His battle accounts contain numerous instances where the secure base saved the day (for instance, *The Jewish War* 5.480–489). In retrospect, Vegetius (1.1) pointed out one more aspect: the *disciplina castrorum*, which we must understand to include, in addition to the present sense of discipline, the continuously trained building and striking of the camp, the fixed regulations of its guarding and defense, and, when not in battle, the daily routine of exercise and rest.

Camps in Peace. Finally, *castra stativa* frequently fulfilled an important role in creating relations with the civil population and even in acquainting them with Roman values. In 124 CE, a plantation owner from 'Ein-Gedi was able to borrow money from a *centurio*, who was stationed in the camp of the *cohors I miliaria Thracum*, situated there (see loan on hypothecary papyrus from Nahal Hever [5/6 Hev 11]). The *thermae*, excavated in 'Ein-Gedi, will have belonged to that unit, even if situated *extra muros*. Though its use by the civil population is doubtful, the example of the military bathhouses must have been among the reasons for the quick proliferation of *thermae* all over Judea.

MORDECHAI GICHON

ROME. The start of the Romans' eight-hundred-year relationship with the Jews of Judea antedates their conquest of that country in 63 BCE by about a century. The form that the relationship initially took was a pact of "Friendship and Alliance." It came about because of the shared hostility of both the ruling oligarchy in Rome and the Judean Jews to the Seleucids of Syria. What the Jews, at that time led by Judah Maccabaeus, hoped to get out of the agreement was military aid in their struggle against their Seleucid overlords. The Romans saw in the Jews a potential instrument for destabilizing the Seleucids, whom they viewed as a threat to their own interests in Asia Minor and the eastern Mediterranean.

Judah's pact, signed around 161 BCE, was renewed by each of his three immediate successors, his brothers Jonathan (Hasmonean) and Simon (Hasmonean) and his nephew John Hyrcanus. [See John Hyrcanus; Jonathan (Hasmonean); and Simon (Hasmonean).] About the relationship between Rome and their three successors, Aristobulus I, Alexander Jannaeus, and Shelamzion Alexandra, there is no evidence. [See Alexander Jannaeus; Shelamzion Alexandra.] Usually it is thought that the alliance was allowed to lapse: Jewish independence had now been won, the Hasmonean dynasty was firmly established, and Rome no longer feared the Seleucids. [See Hasmoneans.]

In 63 BCE the relationship between the Jews and the Romans underwent a change. Civil war had broken out in Judea between Shelamzion Alexandra's two sons, John Hyrcanus II and Aristobulus II, and each had taken advantage of the presence of the Romans in Syria to appeal for help, first from Pompey's legate, Marcus Aemilius Scaurus, and then from Pompey himself. [See Aemilius Scaurus, Marcus.] The Romans did indeed intervene but in a way that neither Hyrcanus nor Aristobulus could have expected. For Pompey proceeded to conquer Jerusalem, desecrate the Temple, and impose his will upon the country. He sent Aristobulus II in chains to Rome; Hyrcanus II was allowed to stay in power nominally as an independent ruler (his official designation was "Friend and Ally of Rome"). In practice, however, his freedom of action was severely limited. Pompey determined what powers Hyrcanus II should exercise and what titles he should bear (they were to be high priest and ethnarch). His terri-

toxy, now stripped of the later Hasmonean conquests, was made tributary to Rome. This direct intervention by the Romans in Judean affairs created intense and widespread bitterness among the Jews, as a number of texts, generally regarded as broadly contemporary, illustrate. The *Psalms of Solomon* (not found at Qumran) are highly critical of both the Romans in general and Pompey in particular. Calendrical Document C^d (4Q324a) shows deep hostility to Aemilius Scaurus, presumably because he had ended up backing the less nationalistically minded Hyrcanus II. Peshar Habakkuk (1QpHab) repeatedly condemns the impious *Kittim* (usually thought to be the Romans) and all their works. That the contents of this text refer to the preimperial age is to be deduced from the use of *mashal* ("rule") rather than *malakh* ("reign") in reference to the *Kittim*.

Pompey's actions in Judea in 63 BCE brought the Jews there under Rome's sway for good. In the whole period preceding the Arab conquest (c.640 CE), although they attempted on numerous occasions to revolt, only four times did they succeed in escaping altogether from Roman control and even then but briefly. The means by which the Romans exercised control varied. Sometimes it was indirectly through puppet rulers; at other times directly through provincial governors supported mostly by Roman legionaries and/or non-Jewish, local troops (auxiliaries). Occasionally, during the period from 6 to 37 CE, for example, when provincial government in Judea, Samaria, and Idumea coincided with royal (Herodian) rule over Galilee and Perea, both direct and indirect methods of control were employed simultaneously. But, whatever the mode, the basic situation did not change: after Pompey, the Jews of Judea possessed only such freedom of action as Rome allowed them.

Down to 40 BCE the Romans were content to leave the Hasmoneans, in the person of the feeble Hyrcanus II, as the nominal rulers of Judea. But in that year they were forced to rethink their policy: the Arsacids of Parthia, Rome's archenemy in the East, had overrun Judea, deposed Hyrcanus, and installed in his place his anti-Roman nephew, Antigonus II. The result of that rethinking was the bestowal of the Judean crown upon Herod (later called Herod the Great), the ablest of the four sons of Hyrcanus's pro-Roman vizier, Antipater the Idumean. It took Herod three years and considerable help from Rome to oust Antigonus II, stamp out local resistance, and gain control of the territory over which he had been appointed king. That done, he ruled with a rod of iron until his death in approximately 4 BCE. From a Roman point of view he was the perfect puppet ruler. Besides being totally loyal, he kept his subjects in order and brought prosperity to his kingdom. Unparalleled opportunities for work were created by his vast building program, which

included fortresses, palaces, and even a whole new harbor city at Caesarea. And the economy of Jerusalem was transformed by his lavish rebuilding of the Temple and worldwide promotion of pilgrimage. The Jews, though, viewed him very differently. Rule by this "half-Jew" was an affront to them and the manner in which, for personal and political reasons, he hired and fired high priests and perpetually transgressed against their ancestral laws was deeply offensive. The ruthlessness with which Herod exercised power meant that he himself was not seriously troubled. It was those who governed Judea after his demise, his son Herod Archelaus (ethnarch until 6 CE) and the Roman prefects and procurators who succeeded him, who were forced to face the consequences of Herod's impious and pro-Roman ways. The sporadic messianism and rampant nationalism with which Herod's successors had to contend between 4 BCE and 66 CE owed their growth, if not their origin, largely to Herod. The chief manifestation of those phenomena was the string of "pseudoprophets," self-appointed kings, and so-called brigand chiefs who regularly disrupted Judea after 4 BCE and ultimately made it ungovernable. The literary manifestations are more subtle: in texts then in use among the Qumran sectaries, Rome, the archenemy, is never attacked by name but only in code. There seems little doubt that in the War Scroll (1QM), for instance, the king of the *Kittim* is the Roman emperor, the Kingdom of Darkness the Roman empire, and the host of Belial, which will get its comeuppance in the final battle against the sons of light, the legions of Rome.

In 66 CE the Jews succeeded for the second time in casting off the Roman yoke. Daily sacrifices in the Temple on the emperor's behalf were suspended and the machinery of an independent state established in Jerusalem. The slogans on its coinage proclaim its priorities: freedom of Zion (from Rome), the redemption of Zion, the sanctity of Jerusalem. For over four years this tiny state resisted the might of Rome. Jerusalem and the Temple did not fall until 70 CE, despite being invested by a large force of crack troops under a first-rate commander (the future emperor, Vespasian's son, Titus). And it was more than three years after that before the last rebel stronghold, Masada, was taken and the revolt finally crushed. Documents from Qumran, which was destroyed by the Romans in 68 CE, shed no certain light on the contemporary situation in Judea. (An ostrakon found at Qumran in 1996 may refer to "year two" of the Jewish revolt; see Cross and Eshel, 1997, pp. 17-28.) More informative is a writ of divorce found at Wadi Murabba'at (Mur 19). Dated to the year 6, it seems to show that even after the fall of Jerusalem in the fifth year of the First Jewish Revolt the formal machinery of the Jewish state still continued to operate. But the best evidence of all comes from

Masada. Many of the ostraca from that fortress testify to the continuing pietism of the rebels despite the exigencies of war (e.g., Mas441–461, inscriptions designating priestly shares). Further, the discovery there of certain Qumran-type texts, such as Songs of the Sabbath Sacrifice (Mas1k), points to the participation of members of the Qumran sect in the Jews' last stand against Rome.

The length of the revolt and the strength of Jewish resistance prompted another reappraisal of Roman policy toward Judea. Government by the procurators, supported by locally recruited troops, had not worked, and a return to Herodian rule in the person of Herod's great-grandson, the effete Herod Agrippa II, was unthinkable. Only the brute force of the legionaries and a governor with considerable military clout seemed up to the task of control. Hence the first peacetime posting of a Roman legion in Judea (after the war Legio X Fretensis was stationed permanently at Jerusalem) and the appointment to the governorship of the province of tried and tested men of senior senatorial rank. The Latin papyri found at Masada (e.g., Mas721r, a line of Virgil's *Aeneid* [recto]; and two military documents, Mas722, legionary pay record, and Mas723, Medical Care in the Roman Army) probably belonged to Roman troops garrisoned there after the revolt.

Little is known about the next fifty years or so in Judea, but the desperate nature of the Jews' next all-out bid for freedom, the Bar Kokhba Revolt of approximately 132 to 135 CE, and its messianic character suggest that for the Jews these years must have been a time of intense hardship and repression. [See Bar Kokhba Revolt.] Actual events are hard to identify. Unrest in 85 CE is sometimes inferred from a Roman coin of that year celebrating the "capture of Judea," and allusion in rabbinic sources to the "War of Quietus" often is taken as evidence of serious trouble under Lucius Quietus, governor of the province from approximately 116 to 117 CE. Precisely what triggered the changes in Roman policy toward Judea in the 120s CE is not known (in that decade we find the governorship further upgraded and a second legion stationed permanently in the province). And equally obscure are the emperor Hadrian's motives for deciding (probably around 130 CE) to rebuild Jerusalem as a pagan city.

Compared with the revolt of 66 CE, literary evidence for Bar Kokhba's insurrection is exceedingly thin. All the more valuable, then, are the rich yield of clothing and papyri from the caves in the Judean Desert that functioned as rebel hideouts. While the former, most notably the distinctively marked tunics and mantles, demonstrate the strength of Greco-Roman cultural influence on the Jews, the latter shed considerable light on the character of the rebel leader, the correct form of whose name (i.e., Bar Kosiba) we learn for the first time. It is a peremptory and minatory figure who emerges in these documents

from Wadi Murabba'at and Nahal Hever, several of them communications from Bar Kokhba himself to junior officers in the field (e.g., letter from Shim'on Bar Kokhba to Yeshu'a ben Galgula [Mur 43]). Particularly striking is the leader's pietism: even when faced with a desperate military situation, he still finds time to make detailed provision for the proper celebration of Sukkot (letter from Shim'on Bar Kokhba to Yeshu'a ben Galgula [Mur 44]).

The Bar Kokhba Revolt, though relatively brief, was a bloody affair, and losses on both sides were very high. The Romans, anxious to prevent any repetition, embarked on yet another reappraisal of policy in Judea. The result was not only the maintenance in the province of the high, prewar level of security but a determined attempt to obliterate the Jews' very sense of identity. Crucial religious rites were proscribed, access to their sacred city (now renamed Aelia Capitolina) forbidden to them, and even the name of their country changed—Judea, a word with strong Jewish connotations, was replaced by Syria Palaestina.

Although the Jews' sense of identity did survive these measures (after all, they still had their Law and it was on this that they focused primarily after 135 CE), their will to revolt was weakened. Nearly half a millennium was to elapse before they successfully escaped from Roman control again. They did not remain long, however, in the state to which Hadrian had reduced them. Under his successor, Antoninus Pius (138–161 CE), they secured some relaxation of the restrictions that had been imposed upon their religion. But the end of the century they had recovered a considerable degree of control over their own affairs, at least in Galilee, the area where the majority of them now lived. And throughout the third century they enjoyed, thanks to the wise and moderate rule of the House of Hillel, a long period of peace and prosperity. Precisely when the Romans first decided to recognize the head of that aristocratic rabbinic family as the official leader of the Jews is not known, but that decision established a precedent. Down to the early fifth century each succeeding head of the House of Hillel was recognized as the leader or, in official parlance, patriarch of the Jews. The relationships thus inaugurated were not dissimilar to those that had existed between the early Roman emperors and the Herods. In return for loyalty and the maintenance of order among the Palestinian Jews, Rome was prepared to concede the patriarchs a large measure of autonomy. Indeed, such confidence did the Romans come to have in these regal rabbis that by the end of the third century the Romans had withdrawn their legions, reducing their military presence in Palestine to a handful of "auxiliary" units.

Given the Jews' success in adapting in this manner to Roman rule, it was a cruel irony that, with Constantine's

conversion to Christianity, the nature of that rule should change and the new Roman authorities, namely the Byzantine emperors, become antipathetic to them. Under Constantine himself their position did not materially worsen, despite the anti-Jewish tone and content of many of his pronouncements. And with the counterrevolution of the pagan emperor Julian in 361 CE, it even looked, briefly, as though it might significantly improve, since he promised to restore the Temple in Jerusalem. But with his early death in battle (363 CE), that long-cherished dream died too, and under his successors, all militant Christians, there was a slow but inexorable reduction of Jewish rights. Legal restrictions and civil disabilities, such as exclusion from the army and civil service of Rome, were imposed upon them, and around 425 CE, in a severe blow to their prestige, even the patriarchate itself was abolished. In the next century a further erosion of their position occurred. Intervention took place, especially under the emperor Justinian I (527–565 CE), in areas of Jewish life that hitherto had escaped imperial notice (e.g., the synagogal liturgy), and for the first time there was official pressure on Jews to convert to Christianity.

Given all this, it is hardly surprising that there was a resurgence of zealotry and rebelliousness among the Palestinian Jews. In 556 CE they rioted against the Christians at Caesarea and in 578 CE joined with the Samaritans in a short-lived revolt against Rome. Then, in 614 CE, by throwing in their lot once again with Rome's long-standing archenemy in the East, they succeeded for the fourth and last time in escaping altogether from Roman control. With the help of the Sassanids of Persia, successors to the Arsacids of Parthia who some six centuries before had installed the anti-Roman Antigonos II on the Judean throne, they set up an independent administration in Jerusalem. It did not last long. Within a few years (possibly as early as 617 CE), the Persians had a change of heart and handed the city back to the Christians. Reprisals inevitably followed, the culmination of which was an order by the emperor Heraclius for the Jews to quit the city. Though Jewish humiliation at the hands of Christian emperors continued until the end of Roman rule, the latter had not much longer to run. In 636 CE, the Arab conquest of Palestine began. By the end of 640 CE Roman control there had ended for ever. Documents of the seventh and eighth centuries from Khirbet Mird illustrate neatly some of the major developments of the previous seven to eight hundred years, though written in Arabic, they were found in a Christian monastery, which itself had been built on the site of a Herodian fortress.

RO'SH HA-SHANAH. The Hebrew scriptures, which contain evidence for more than one annual calendar, do not attribute the name Ro'sh ha-Shanah, the New Year, to any date but do suggest there were two candidates for the beginning of the year. *Exodus* 12.2 refers to the month in which the Exodus from Egypt and the first Passover occurred as "the beginning of months" but says nothing about a new year's day. [See Passover.] The festival calendars in the Pentateuch also fail to name such a holiday. *Leviticus* 23 begins with Passover on the fourteenth day of the first month, however, it does highlight the first day of the seventh month with its complete rest and "holy convocation commemorated with trumpet blasts" (*Lv.* 23.24) accompanied by a fire offering (*Lv.* 23.25). The first of the seventh month is worth mentioning in the present context only because it later became the date for Ro'sh ha-Shanah. *Numbers* 29 develops the sacrificial regulations for the first day of the seventh month and calls it "a day for you to blow the trumpets" (*Nm.* 29.1). Another event that is dated to the first of the seventh month is Ezra's reading of the law to the people (*Neh.* 7.72–8.8). Psalm 81.4 has also been associated with the autumnal new year and even with a hypothetical festival for the enthronement of Yahveh on that occasion. [See Psalms, Book of, *article on Biblical Text*.] While there are, then, a few certain and some possible indications that the first day of the seventh month possessed a special character, in Ezekiel's vision of the restored Temple and community, God commands: "In the first month, on the first day of the month, you shall take a young bull without blemish, and purify the sanctuary" (*Ezek.* 45.18). In fact,

Ezekiel 40.1 contains the phrase *ro'sh ha-shanah* (lit., the "beginning of the year") as a general designation for when the prophet experienced the vision, although the tenth day of the first month is mentioned as the specific date. [See *Ezekiel*, *Book of* article of Biblical Text.]

In the calendar of *Jubilees*, the first days of the first, fourth, seventh, and tenth months are called "memorial days and days of the seasons" (*Jub.* 6.23). [See *Jubilees*, *Book of*.] These dates were commemorative festivals that served as reminders of events that happened during the year of the Flood (*Jub.* 6.24–29), and they marked the four divisions of the year. None of these dates is singled out in this context, but in *Jubilees* 12.16, "Abram sat at night—at the beginning of the seventh month—to observe the stars from evening to dawn in order to see what would be the character of the year with respect to the rains." Here the first day of the seventh month appears to mark the beginning at least of the agricultural year. The system of numbered months used throughout *Jubilees*, however, clearly begins the year in the spring.

Only one Qumran text provides detailed information about a new year festival. The Temple Scroll, in its festal calendar, apparently does devote some space to the particular sacrifice that was to be offered on the first day of the first month (11Q19 xiv.9–?) [See *Temple Scroll*.] The section in question is located directly after the paragraph about the sacrifices made on the first day of every month (11Q19 xiv.2–8; note especially lines 7–8). Column xiv, line 9 begins "And on the first of the [fir]st month" and continues by setting forth material that is closely related to what is said in *Numbers* 29. It stipulates that no work was to be done and that certain sacrifices were to be offered in addition to what was required for all firsts of the month (cf. Josephus, *Jewish Antiquities* 3.239). The regulations for the first day of the first month seem to have filled the remainder of column xiv. Temple Scroll* also formulates rules for the first day of the seventh month, which it calls, after *Numbers* 29.1, "[a day of re]membrance for the trumpet blast" (11Q19 xxv.3; see lines 2–10). A liturgy from Cave 4 at Qumran may refer to the same date when it says, "[Praise and bless] on the day of remembrance with cheering" (4Q409 1.1.5). The calendars from Cave 4 at Qumran do not mention *Ro'sh ha-Shanah*, either for the first day of the first month or the first day of the seventh month (cf. Calendrical Document A 4Q320 2.i.5, "beginning of all the years," apparently intending the first month of the first year of the world).

The ambiguous indications regarding a new year's festival in the earlier sources find an interesting clarification in the Mishnah, which devotes an entire tractate to the subject. The tractate *Ro'sh ha-Shanah* (1.1) begins by explaining that there are four different new year days (see also Josephus *Antiquities* 1.81), each of which is a new

year for a different chronological calculation. The first day of Nisan (the first day of the first month) is the new year for the reigns of kings and the dates of festivals, the first day of Elul (the first day of the sixth month) is the new year for the cattle tithe, the first day of Tishrei (the first day of the seventh month) is the new year for reckoning the reigns of foreign kings, the sabbatical years and the jubilee, and for planting; and the first day of Shevat (the first day of the eleventh month) is the new year for trees. Four times of judgment are also distinguished, with the first day of Tishrei clearly being the most comprehensive one: "on New Year's Day all that come into the world pass before him like legions of soldiers" (*R. ha-Sh.* 1.2). In addition, the tractate preserves discussions about sundry issues that arose in connection with *Ro'sh ha-Shanah* (the first day of the seventh month) such as the witnesses who reported that they had sighted the new moon, the shofar (trumpet) that was blown on the holiday, what would happen if the first day of the seventh month fell on the Sabbath, and the scriptural words that were to be recited during the new year service. The recitations were to consist of ten biblical texts with the theme of God as king, ten with the theme of God's remembering, and ten with references to the shofar. By this time it is clear that the first day of the seventh month was regarded as *Ro'sh ha-Shanah*.

[See also *Festivals*.]

JAMES C. VANDERKAM

RULE OF THE BLESSINGS (1Q28b) is a compilation of liturgical texts in Hebrew, consisting of elaborate benedictions, written as a second appendix to the texts on the scroll of Rule of the Community (1QS), a copy from 100–75 BCE. The benedictions in Rule of the Blessings are probably meant for the restored eschatological Israel. In the extant pieces the benedictions concern lay members and functionaries (i–iii.21); Levites and priests; priests of higher status, the "Sons of Zadok" (iii.22–28); the high priest (iv.22–28); an obviously important functionary (in a lacuna and v.18–19); and the ruler (v.20–29). The formula "May the Lord (*Adonay*) . . ." seems to be of a higher liturgical quality than, for instance, one with the attribute "the God of Israel."

The introduction at the beginning, apparently repeated in every section, appears in texts of different genres: the

piece in question is defined as one at the disposal of the *maskil*, a (priestly) functionary in charge of traditions and responsible for instruction.

The first benediction is obviously addressed to lay members, praised as voluntarily observing in perfect holiness the commandments of God and preserving the eternal covenant, for which they have been chosen by God. The blessing for them is illumination from God, symbolized by the metaphor "living water." This instruction seems to be, however, bound to the institution of the sanctuary (i.8). The formulations of the following lines and at the beginning of column ii are of a rather general character, but may have been meant for the chief of a certain social unit.

Column iii seems to address Levites or a priestly group of secondary rank.

The benediction concerning the sons of Zadok, the priests, is of quite different character. [See Zadok, Sons of.] An introductory passage expresses the priestly functions and prerogatives: the priests are chosen by God to "establish" the covenant, to scrutinize the existing laws, and to proclaim Torah, thus maintaining the covenant and representing supreme authority. The benediction itself begins with "May the Lord (*Adonay*) bless you . . ." and reminds one of the self-understanding of the priests as attested in the "Songs [for the Sabbath sacrifice]: fulfilling their service they act like angels of the presence, sharing their company in a *yahad*, the specific form of community life among priests during service. Particularly underlined is their judicial authority; their claim to cultic dues and to authority in general seems to be a universal one, concerning the gentiles as well.

Of the benediction for the high priest the first part is unfortunately lost. The extant lines repeat in solemn words the principal characteristics of the priestly status in general, stressing, however, the high priest's representative role, his connection with the name of God, and his task to bless and to enlighten the Israelites, which corresponds to the respective passage in the blessing for the lay members, who owe their illumination to the sanctuary. The basic ideas are the same as in the Aramaic Levi^a and in the *Book of Jubilees* chapter 31 (cf. 4Q213).

The following benediction, of which only the last sentences are preserved, concerns an important functionary of high authoritative status. In the traditional constitution of the Second Temple period there is only one position of such high rank to be placed between high priest and ruler: the "prophet" of Josephus (*Jewish Antiquities* 4.218), the supreme Torah authority "like Moses" according to *Deuteronomy* 17–18 (cf. Testimonia [4Q175] 6–7; Rule of the Community [1QS] ix.11; *I Mc.* 4.46; 14.41). In some Qumran texts he is also defined as supreme "Torah

advisor," *doresh ha-Torah*, usually translated as "Torah interpreter" (cf. CD vii.18; 4Q174 iii.11–13), or as "enactor of justice," *moreh tsedeq*, usually translated as "Teacher of Righteousness." [See Teacher of Righteousness.]

The benediction for the *maskil* to bless the Prince of the community (*nesi ha-'edah*, v.20) also begins with a descriptive introduction, which contains a well-known list of the ruler's virtues and duties. The aim of the blessing is to strengthen the ruler, to renew the "covenant of [gr]ace" (for David; restore [*hese*]d, not [*yaha*]d) for him, to enable him to establish the reign of his people forever, to judge in justice the poor, to direct the meek of the land, and to walk perfectly before God. The benediction itself begins with "May the Lord raise you to eternal highness . . ." and expresses the wish that he will exercise power against enemies and evildoers. All the nations shall acknowledge his sovereignty and serve him. All of this is expressed in phrases reminding one of passages such as *Isaiah* 11.1, *Genesis* 49.9–10, *Numbers* 24, and *Micah* 4.13, representing a conventional repertoire of qualities of a theocratically authorized ruler. The formulations correspond to other Qumran descriptions of the functions, duties, and privileges of the ruler: as king (Noah [1Q19] lvi.12–lix), as "anointed one of (lay) Israel" (cf. IQS ix.11; CD xii.23; xiv.19; xx.1; Rule of the Congregation, 1Q28a ii.14), as "sprout" of (the house of) David (Peshar Isaiah^a, 4Q161 8–9, 11–12; 4Q174 iii.11; Commentary on Genesis A [4Q252] 1.v; 4Q285 5), or as "Prince of the community," *nesi ha-'edah* (CD vii.20 IQM v.1; 4Q161 5–6, 3; War Rule, 4Q285 4; 5; 6.2, 6; Apocryphon of Moses^b [4Q376] 1.iii). The concept of this figure with its preeminently belligerent and judicial functions is essentially the same as in Peshar Isaiah^a (4Q161 iii.12–17), Commentary on Genesis A (4Q252 v.1–7), and War Rule (4Q285 5). The most important parallels may be found in Peshar Isaiah^a (4Q161, 8–10), Florilegium (4Q174), *Testament of Judah* 24, and *Psalms of Solomon* 17–18. There is, in contrast to Rule of the Blessings, no trace of a "sectarian character" in the sense of *yahad*-theology. The benedictions display, therefore, more or less the basic constitutional views of the pre-Qumranic official Zadokite tradition, views which had their place, of course, also in the concept of a restored Israel at the End of Days.

JOHANN MAIER

RULE OF THE COMMUNITY. Occupying the major part of one of the seven manuscripts that were found in 1947 in what was to become known as Cave I at Qumran, the Rule of the Community (IQS; hereafter, IQRule of the Community) was one of the first of the Dead Sea Scrolls to be discovered. At the time of its discovery and initial publication, IQRule of the Community was given the title "Manual of Discipline." But the text actually bears the title "Rule of the Community" (in Hebrew *Serekh ha-Yahad*), and it is by this title that it now is known. The Rule of the Community is one of the most important of the sectarian texts, and its importance is underlined by the fact that fragments of no less than ten copies of the Rule of the Community subsequently were found in Cave 4 at Qumran (Rule of the Community⁴ 4Q255–264). In addition, two tiny fragments of a copy of the Rule of the Community were found in Cave 5 (5Q11), and a quotation from the Rule of the Community is included in a fragment of another sectarian text from Cave 5, Rule of the Community (5Q13). While little is to be made of the evidence from Cave 5, there are important differences between the Cave 1 version of the Rule of the Community and the versions preserved in some of the Cave 4 manuscripts. It has been argued that these differences cast an important light on the composition of the Rule of the Community, but their significance is disputed. All copies of the Rule of the Community are in Hebrew, and there is no reason to doubt that this was the language in which it was composed. It is assumed here that the community for which the Rule was composed was Essene. [See Essenes.]

The Cave 1 copy of the Rule of the Community not only is the best preserved copy but also contains the longest version of this text known to us. For this reason, IQRule of the Community is likely to remain the basis on which study of this document is conducted, but this does not mean that this version necessarily is to be regarded as the most original. The manuscript contains not only the Rule of the Community but also two other works: the Rule of the Congregation (IQ28a) and the Rule of the Blessings (IQ28b). [See Rule of the Blessings; Rule of the Congregation.] That these are three separate works, and not one single work, is shown by the fact that a space has been left in the manuscript between the end of IQRule of the Community and the beginning of the Rule of the Congregation and again between the end of the Rule of the Congregation and the beginning of the Rule of the Blessings; by the fact that on the outside of the manuscript the remains of a title are preserved, "[The Rule of the Community and from . . .]", which clearly seems to have referred to more than one work; and by the fact that there are differences of approach between IQRule of the Community on the one hand and the Rule of the Congregation

and the Rule of the Blessings on the other. Perhaps the motive for combining all three works on one scroll lay in the fact that they are all concerned with the ordering of the life of the community—IQRule of the Community with the community in the present age and the Rule of the Congregation and the Rule of the Blessings with the community in the future age. Recognition of the fact that IQRule of the Community, Rule of the Congregation, and Rule of the Blessings form three separate works inevitably has led to the question of whether IQRule of the Community itself forms a single work. However, although IQRule of the Community is a composite, as we shall see, the arrangement of the text in the manuscript clearly seems to indicate that IQRule of the Community was meant to be read as an entity.

The physical arrangement of the text of IQRule of the Community—the leaving of the ends of lines blank, the use of indentation, the placing of paragraph signs in the margin—serves to divide the text into paragraphs. But the text also contains a series of headings, normally followed by passages that are introductory in character, on the basis of which it may be divided into six main sections.

IQRule of the Community i.1–15 is an introduction that sets out the aims and ideals of the community.

IQRule of the Community i.16–iii.12 is a ritual for the ceremony of entry into the covenant (IQS i.16–ii.18), to which are attached instructions for the annual renewal of the covenant (IQS ii.19–25a) and a passage on the need for sincere inner conversion on the part of those entering the covenant (IQS ii.25b–iii.12). The ritual for the covenant ceremony draws its inspiration from the account of the covenant ceremony in *Deuteronomy* 27 and the related material in *Deuteronomy* 28–30.

The third section, IQRule of the Community iii.13–iv.26, is an exposition of the dualistic beliefs of the community, specifically the belief that the actions and the fate of all humans are under the control of one or the other of the two opposing forces in the world, the spirit of truth and the spirit of injustice. [See Dualism.] Dualistic beliefs underlie a number of other Qumran sectarian texts and are particularly prominent in the War Scroll (IQM), but they are not expressed elsewhere as explicitly as in this section of IQRule of the Community. [See War of the Sons of Light against the Sons of Darkness.]

Columns v.1–vii.25 are a collection of rules for the organization of the life of the community. The collection is somewhat random in character and contains the following material: an introduction (IQS v.1–7a); a passage on the oath sworn by the new member on admission (v.7b–20a); a miscellaneous collection of rules governing such matters as the administration of reproof or the requirement that in every place where there are ten men from

the council of the community there shall not be lacking a priest (v.20b–vi.8a); rules for meetings of the community (vi.8b–13a); rules governing the admission of new members (vi.13b–23); and a list of punishments for infringements of the community's rules (vi.24–vii.25).

The fifth section, 1QRule of the Community viii.1–x.8, a program for a new community, frequently has been regarded as forming the core of the Rule of the Community. It provides rules for a community that apparently was on the verge of being set up in the wilderness and to which the prophecies in the *Book of Isaiah* concerning God's "plant" (*Is.* 60.21, 61.3), concerning the "cornerstone" (*Is.* 28.16), and concerning the preparation of the way of God in the wilderness (*Is.* 40.3), are all applied. When the community came into existence, its members would form the true (spiritual) temple and would, by the practice of righteousness and the endurance of suffering, make expiation for the land. In the wilderness they were to prepare the way of God by living a life devoted to the study and observance of the law (1QS viii.1–ix.11). This section also includes a description of the duties of the "wise leader" or "master" (*maskil*) (ix.12–26a), to which is attached a liturgical calendar (ix.26b–x.8) that prescribes the times at which praise was to be offered to God. [See Calendars and Mishmarot.] Because 1QRule of the Community viii.12b–14 refers to withdrawing into the wilderness, it has seemed natural to relate this section specifically to the establishment of the community at Qumran.

The final section, columns x.9–xi.22, is a concluding hymn of praise, which may be compared with the hymns in Hodayot (known best from a manuscript from Cave 1, 1QH) and to which the liturgical calendar (1QS ix.26b–x.8) serves as a natural transition. [See Hodayot.]

It is generally accepted that 1QRule of the Community was copied in the period between 100 and 75 BCE, and since there is evidence to indicate that the text was copied from another manuscript, it seems clear that the Cave 1 version of the Rule of the Community must have been in existence by at least about the beginning of the first century BCE. However, it has been argued on the evidence of the Cave 4 manuscripts of the Rule of the Community that the Cave 1 version represents a late stage in the evolution of this text.

As was noted above, fragments of no less than ten manuscripts of the Rule of the Community were found in Cave 4, but in practice it is only in the case of three of these—Rule of the Community^b and ^d (4Q256, 258) on the one hand, and Rule of the Community^e (4Q259) on the other—that sufficient text has survived for the manuscripts to be of real significance for our understanding of the evolution of the text. Of the remaining seven manuscripts, it must suffice to note that they range in date from the second half of the second century BCE (Rule of

the Community^e 4Q255) to the first half of the first century CE (Rule of the Community^b 4Q262); and that two of them (4Q255, 262) preserve tiny fragments—one in each manuscript—that appear to form part of the section on the two spirits but do not correspond exactly to anything in 1QS iii.13–iv.26 and thus suggest the existence of an alternative version of this material.

Rule of the Community^b and ^d belong together in that both attest a text that is considerably shorter than that of column v of 1QRule of the Community and in that both can be shown, on the basis of the reconstruction of the extent of the manuscripts, to have had a shorter text than that of columns vi–vii of 1QRule of the Community. In addition, both were copied in the Herodian script and date from the last third of the first century BCE, and both apparently contained a text or texts in addition to the Rule of the Community. Rule of the Community^b contains at the end what looks like the beginning of a further text, although it is impossible to say what this was, while the reconstruction of the extent of Rule of the Community^d suggests that the manuscript did include a further text(s), whether a shorter version of the Rule of the Congregation and the Rule of the Blessings—there would not have been space for the exact equivalent of these texts—or some other text. However, in one important respect Rule of the Community^b and Rule of the Community^d differ. All sections of 1QRule of the Community are reflected in the fragments of Rule of the Community^b except for the section on the two spirits (cf. 1QS iii.13–iv.26), and it is very unlikely that this section was not included in the text. In contrast, the fragments of Rule of the Community^d begin with the equivalent of 1QRule of the Community v, and it seems very likely that this was the beginning of the manuscript and that the equivalent of 1QS i–iv never formed part of this text.

The manuscript that contains the fragments of Rule of the Community^e also contains the fragments of a calendrical work, Otot (4Q319). The fragments of Rule of the Community^e correspond to parts of 1QRule of the Community vii–ix, but its text differs in some respects from that of 1QRule of the Community, above all in the fact that Rule of the Community^e does not contain the equivalent of 1QRule of the Community viii.15b–ix.11. Further, it is significant that no fragments corresponding to 1QRule of the Community x–xi (the liturgical calendar and the concluding hymn) have been preserved, and the reconstruction of the manuscript makes it almost certain that Rule of the Community^e never contained the equivalent of 1QRule of the Community x–xi but that the equivalent of the instructions to the "wise leader" (1QS ix.12–26) was followed immediately by the beginning of Otot. It is also possible, but by no means certain, that this manuscript, like Rule of the Community^d, did not include

the equivalent of 1QRule of the Community i–iv. As to the age of Rule of the Community^f, whereas Józef T. Milik (1962) dated its script to the second half of the second century BCE, Frank Moore Cross has recently assigned it to the period between 50 and 25 BCE.

The Cave 4 fragments of the Rule of the Community became generally accessible only in the 1990s, but even before their publication, although occasionally scholars such as P. Guilbert (1958–1959) defended the unity of 1QRule of the Community, it generally was accepted that 1QRule of the Community was composite. Jerome Murphy-O'Connor (1969), whose account of the formation of 1QRule of the Community was the most influential and was further developed by Pouilly (1976), attempted to relate the evolution of the text to the history of the Qumran community and argued that the text was formed in four stages by successive additions to an original core. Stage one, 1QRule of the Community viii.1–x.8a (minus some additions), was intended as a manifesto for a new community and belongs in the period prior to the establishment of the community at Qumran. Stage two, 1QRule of the Community viii.10b–ix.2 (with which Pouilly included viii.10b–12a), represents the addition of a small number of rules to take account of the realities of communal life and belongs to phase Ia in the occupation of the site at Qumran. Stage three, 1QRule of the Community v–vii (minus the interpolation of v.13b–15a [according to Pouilly, v.13b–vi.8a]), consists of the addition of a collection of rules governing communal life and reflects the institutionalization of the life of the Qumran community at the time of the expansion of its membership at the beginning of phase Ib. Stage four, 1QRule of the Community i–iv and x.9–xi.22 (plus the interpolation of v.13b–15a [or v.13b–vi.8a], x.4b, and x.6a), represents the addition some years later of material that was intended to revive the fervor of the members of the Qumran community.

Murphy-O'Connor's four-stage theory represented a significant attempt to explain the evolution of the text of 1QRule of the Community, but in the light of the evidence of the Cave 4 manuscripts it can be seen that, even if his approach was broadly along the right lines, the process was more complex than his explanation suggested. Thus, while Rule of the Community^d and Rule of the Community^e can be interpreted to support the view that 1QRule of the Community i–iv and x–xi (or x.9–xi.22) were added at a late stage to the Rule of the Community, there is no unequivocal manuscript evidence to suggest that these sections were added at the same time and represent a single stage. Again, despite the fact that 1QRule of the Community v–vii and viii–ix are very different in character and presumably had a separate origin, there is no manuscript evidence to support the view that the equivalent of 1QRule of the Community viii–ix (or

viii.1–x.8) ever existed as a version of the Rule of the Community apart from the equivalent of 1QRule of the Community v–vii. Finally, the evidence of Rule of the Community^f suggests that if there was an addition within 1QRule of the Community viii–ix, it consisted not just of viii.10b–ix.2 but the whole of viii.15b–ix.11 and the evidence of the short text of Rule of the Community^{h,d} suggests that the formation of the text of 1QRule of the Community v–vii is not simply to be explained by the assumption of the interpolation of a single passage, whether of v.13b–15a or of v.13b–vi.8a.

In a recent study of the formation of the Rule of the Community, Sarianna Metso (1997) has argued that although Rule of the Community^{b,e} (if Cross's dating is correct) are all younger than 1QRule of the Community, they represent alternative versions of the Rule of the Community that are older than that represented by 1QRule of the Community, and that behind both of them lies the original version of the Rule of the Community, which is no longer attested in any manuscript. This original version is likely to have consisted of a text parallel to 1QRule of the Community v–ix, but with the shorter text of columns v–vii represented by Rule of the Community^{b,d} and without the passage parallel to 1QRule of the Community viii.15b–ix.11 (cf. Rule of the Community^e) in columns viii–ix. The absence of the equivalent of 1QRule of the Community i–iv in this version is confirmed by the evidence of Rule of the Community^d, and the absence of the equivalent of 1QRule of the Community x–xi is confirmed by the evidence of Rule of the Community^e—and of Rule of the Communityⁱ, which dates from the period 100 to 75 BCE and, in the light of the reconstruction of the extent of the manuscript, appears not to have had this material. Otot may have been included at the end of the text.

This original version was then revised in two different ways. In the version represented by Rule of the Community^f, substantial additions were made to the text parallel to 1QRule of the Community v–ix, which were intended to provide scriptural legitimation for the community's regulations and to strengthen the community's understanding of itself as the true keeper of God's covenant with Israel. However, the equivalent of 1QRule of the Community viii.15b–ix.11 was not included, and Otot followed immediately after the end of the equivalent of 1QRule of the Community ix, not the final hymn of 1QRule of the Community x–xi. Metso also believes that the equivalent of 1QRule of the Community i–iv was not included in the version represented by Rule of the Communityⁱ but it should be noted that it is far from certain that the equivalent of this section was lacking in Rule of the Community^e. In the version represented by Rule of the Community^{h,d}, the shorter text parallel to 1QRule

of the Community v–vii was retained, but a text parallel to 1QRule of the Community viii.15b–ix.11 was included. The final hymn was added at the end in place of Otot, and—at the stage represented by Rule of the Community^b—the equivalent of 1QRule of the Community i–iv was added at the beginning of the text. At a final stage, a redactor drew on both of these versions to produce the text of the Rule of the Community represented by 1QRule of the Community.

Despite the uncertainties caused by the fact that Rule of the Community^b and Rule of the Community^c apparently are all of later date than 1QRule of the Community, Sarianna Metso's account of the textual development of the Rule of the Community has a good deal to commend it. Her explanation takes account not only of the evidence presented by the various manuscripts but also makes sense of the evidence provided by traditional forms of literary criticism of 1QRule of the Community. However, other scholars have argued for the priority of the text represented by 1QRule of the Community. Thus Philip S. Alexander (1996), in the most significant representation of this view, has argued that the dating of the manuscripts ought to be taken seriously in the reconstruction of the redaction history of the Rule of the Community. He believes that on text-critical grounds three main forms of the Rule of the Community are to be identified, and on the basis of the paleographical evidence he would date these recensions as follows: 1QRule of the Community (plus Rule of the Community^c 4Q257) to approximately 100 BCE; Rule of the Community^c to approximately 50 BCE; and Rule of the Community^b and ^d to approximately 25 BCE. In support of this view he argues that it is just as likely that Rule of the Community^c and Rule of the Community^b and ^d are abbreviated texts as it is that 1QRule of the Community is an expanded text. Thus, for example, in relation to the fact that Rule of the Community^c does not have the equivalent of 1QRule of the Community viii.15b–ix.11, Alexander argues that the omission of the material contained in 1QRule of the Community by the redactor of Rule of the Community^c is just as plausible on internal grounds as its insertion by the redactor of 1QRule of the Community.

Alexander's stress on the importance of the paleographical considerations has to be taken seriously. On the other hand, the view put forward by Metso better takes account of the indications within 1QRule of the Community itself that its text is composite, and that it acquired its present form by a process of evolution. The debate on this issue is far from over, but in the end it may have to be recognized that there can be no certainty on the question of the redaction history of the Rule of the Community.

The Rule of the Community and the Damascus Document have enough in common for attention inevitably to

have been focused on the relationship between them. [See Damascus Document.] In fact, the two works are somewhat different in character, but there is a real similarity between the communal regulations contained in 1QRule of the Community v–ix and those contained in the corpus of laws in the Damascus Document. The relationship between these two sets of regulations often has been explained on the basis that the Rule of the Community was intended for those Essenes living at Qumran, while the Damascus Document was intended for those Essenes who lived among their fellow Jews in towns and villages. The emphasis on the wilderness ideology in 1QRule of the Community viii–ix gave this explanation plausibility, and it is not totally to be abandoned. But some, at least, of the regulations included in 1QRule of the Community v–vii suggest that they, like those of the Damascus Document, were intended for Essenes who were living among their fellow Jews; and the existence of other rules, particularly Serekh Damascus (4Q265), has shown that the situation was more complex than a simple division between a rule intended for Essenes at Qumran and a rule intended for Essenes living elsewhere. [See Serekh Damascus.] It is perhaps more accurate to say that the Rule of the Community and the Damascus Document belong to different, but related, communities, and that the two works reflect the life and the history of these communities. It is significant that whereas the Damascus Document refers to the group with which it is concerned as a "congregation" (*'edah*), the key word for the Rule of the Community is "community" (*yahad*).

As we have seen, the Rule of the Community in the form represented by 1QRule of the Community was already in existence by approximately the beginning of the first century BCE, and the origins of the Rule of the Community must therefore go back into the second century; in fact Rule of the Community^d dates from the second half of the second century BCE. It often has been assumed that the Teacher of Righteousness was the author of the Rule of the Community, and this view has been linked to the view that the Rule of the Community, and particularly 1QRule of the Community viii–ix, was to be associated with Qumran, and that the Teacher was responsible for the withdrawal of the community to Qumran. [See Teacher of Righteousness.] While all this is possible, it cannot be anything more than speculation because the Rule of the Community contains no evidence about the identity of its author.

MICHAEL A. KNIBB

RULE OF THE CONGREGATION (1QSa = 1Q28a), also known as the Messianic Rule or by its Hebrew name *Serekh ha-'Edah*, is preserved only as an appendix copied on the same scroll after the Rule of the Community (Manual of Discipline, *Serekh ha-Yahad*), and followed by the Rule of Benedictions. The script is from the Hasmonean

period, dating to about 100-75 BCE. Despite appearing on the same scroll, and being related in many ways, the Rule of the Community and the Rule of the Congregation are clearly two separate documents that need to be studied individually. Yet the many relationships of these two texts indicate why the copyist decided to place them on the same scroll. There are also many parallels between the Rule of the Congregation and the War Scroll (1QM), involving some of the purity laws, ages of military service, and the concept that angels are among the sectarians, requiring the highest standards of ritual purity.

The Rule of the Congregation was clearly considered to be a central text by the sectarians or it would not have been copied immediately after the Rule of the Community. Yet only one manuscript of this document survives. Its content is a description of the nature of the eschatological community as understood by the sectarians. This community would presumably come into being in the aftermath of the great eschatological war described in the War Scroll. Accordingly, this text was an essential part of the messianic worldview of the Qumran sectarians.

When read in comparison with the Rule of the Community (1QS), it becomes clear that the Rule of the Congregation presents a messianic mirror image of the life of the sectarians in the present, pre-messianic age. One can conclude that life in the present sectarian community is seen as an enactment of what will be the order of the day at the End of Days. At the same time, the life of the eschatological community reflects a transformation of the present order into the life of the End of Days.

The text is made up of several sections, each of which might have originally stood alone before redaction into the complete document as it is now preserved.

The Sectarian Assembly (1QSa i.1-6). The title of the text is derived from the opening sentence, which specifically alludes to the eschatological character of what follows. The leadership of the sect, even in the End of Days, is retained by the Sons of Zadok, the Zadokite priests, who are associated with their followers who have kept God's covenant when all others went astray. At the onset of the End of Days, the priestly Sons of Zadok assemble with their wives and children and celebrate a covenant renewal ceremony, reading the law aloud. This text most certainly expects normal family life in the eschatological community.

The Stages of Life (1QSa i.6-19). The text then outlines the stages of life of the sectarian, beginning with the earliest education and extending to old age. Twenty is the age of majority when marriage and sexual relations are to ensue. The text details various ages for different military roles. At twenty-five the male sectarian enters into full service, and at thirty he may take a leadership role.

Those Disqualified from Service (1QSa i.19-22). At old

age, the sectarian would be reassigned according to his abilities. Apparently age was seen as a disqualifying blemish. Mental incompetence disqualifies a man from any but the most subsidiary military duties.

The Levitical Officials (IQSa i.22-25). The scroll next specifies that the sect is to be led by members of the tribe of Levi, specifically by the Zadokite priesthood, together with the heads of the clans. In this respect, the text attempts to mirror the ideal period of desert wandering, which is also reflected in the organization of tens, hundreds, and thousands mentioned below.

The Council of the Community (IQSa i.25-ii.10). The duties of the eschatological council of the community are specified as judgment, that is, serving as the highest court of the community and deciding matters of law, such as formulating legislation and declaring war. The text assumes that all these activities will continue in the End of Days. There follows a list of those excluded from the council because of ritual impurity or physical deformity, seen by the sectarians as a sign of some kind of moral deformity. They are forbidden to enter the assembly because of the presence of angels, a motif also employed to explain the need for purity in the military camp in the War Scroll.

The Messianic Convocation (IQSa ii.11-17). The high point of the text is the description of the expected messianic convocation. The eschatological high priest is to enter, followed by the rest of the members of the priesthood, all sitting before him in order of status. The Messiah of Israel will enter followed by the chiefs of clans, according to their position in the march, patterned on the desert camp of biblical Israel. All the wise men of Israel are to sit before the two messiahs. Some scholars have seen this passage as referring to the "begetting" of the Messiah (IQSa ii.11-12), alluding to a Christian parallel. This reading must now be rejected, however, in light of new photographs and computer enhancement. While the birth of the Messiah may be foretold in the Hebrew Bible (cf. *Is.* 7.14, 9.5), Jewish sources were unanimous in seeing the Messiah (or messiahs) as normal mortals, even if in some views they were seen as having miraculous births.

The Eschatological Banquet (IQSa ii.17-22). Finally, the text describes the messianic banquet in which, as in the communal meals of the sect (IQS vi.3-5) in the present, pre-messianic era, the priest is to recite the blessing over the bread and then the wine, and receive the first portion of bread. Then the Messiah of Israel is to receive his portion, and then all those in attendance in the order of their status in the community. The text of the Rule of the Congregation (IQSa ii.22-23) concludes by stating that this pattern shall be maintained whenever there are

at least ten males participating together in a communal meal.

Significance for the History of Judaism and the Background of Christianity. This text has been discussed extensively in an effort to find an early parallel to the Last Supper and the Christian Eucharist that commemorates it. The discussion has centered on the fact that here, as in the early Christian community, the focus of the meal is on bread and wine, and that it is clearly an eschatological experience. Such a parallel is natural since bread and wine were the normal staples of life in ancient Palestine. Further, the ritual blessing of the food in the Qumran communal meal—in the present and in the End of Days—was the required blessing that Jews already practiced in Second Temple times, praising God both before and after eating.

Some scholars have pointed out that the practice of blessing the food indicates the sacred character of the meal described here and suggests a similarity to the Eucharist. Yet, a sacred meal is one eaten in imitation of a sacrifice or as a replacement for it, in which the eater is somehow transformed by the experience. None of this is present here. The benedictions result only from the normal ritual obligations of the Jew, and the role of the priests here is only an honorary one, paralleled also in rabbinic requirements that priests be served their food first and be given the honor of reciting the grace. This meal should therefore be seen as eschatological rather than as sacred.

The text also has significance for the history of Jewish ideology and practice. Like many other scrolls texts, the Rule of the Community describes a messianic banquet, a notion quite widespread in Second Temple Judaism and continued into rabbinic aggadic tradition. Moreover, the text attests to the practice of grace and the honor given to the priest in a non-Pharisaic context earlier than the rabbinic evidence previously known. The minimum of ten males, also found elsewhere in the scrolls (IQS vi.3, 6), indicates that the concept of the minyan, a quorum of ten for Jewish religious activity, was already common at this early date.

RULES. *Serekh*, the word for "rule" in the Dead Sea Scrolls, like *yahad* ("community") is probably part of the distinctive religious vocabulary of the Dead Sea sect. It occurs some thirty-eight times in the scrolls (and three times in its related verbal form) but is very rare elsewhere in early Hebrew. Neither the noun *serekh* nor its putative verbal base *srk* is attested in the Hebrew scriptures, though some have postulated a link with the Biblical Hebrew *srk* ("twist"), hence, *serokh* ("sandal thong").

Serekh or *srka'* is found in Talmudic literature in the sense of *habu* or *custom*, but this rabbinic usage is not close to that of the scrolls. It is uncertain whether the Qumran *serekh* is the same as the noun *sarakh* that occurs several times in the Persepolis Aramaic texts (usually in the combination *besarak birta'*). *Serekh* may be related to the Aramaic noun **sarakh* (plural, *sarekhun*, *sarek-hayya'*) used in *Daniel* 6.3-5 and 6.7-8 to denote a class of high officials at the court of King Darius. **Sarakh*, which is probably Persian in origin, may have had the meaning of "administrator" or "organizer." Theodotion translates its plural form by *hoi taktikoi* ("the organizers"). From this noun may have been derived a verb *srk* (to "organize" or "administer"). Note in the War Scroll: "those who organize the camps [*sorekhei ha-mahanot*] shall be from fifty to sixty years old" (1QM vii.1) and "the chiefs of the priests shall they organize (*yisrokhui*) behind the chief priest and his deputy, twelve chiefs to serve constantly before God" (1QM ii.1). This verb *srk* in its turn may have generated a noun *serekh* ("organization" or "order").

Serekh in Qumran Hebrew has a very similar semantic range to *taxis* in Greek. It denotes, abstractly, the order or rules according to which a group of people is to be organized and to conduct its affairs. It is applied at Qumran to the community as a whole (Rule of the Community [hereafter, IQRule of the Community]: IQS i.1, v.1; Damascus Document: CD vii.6; xii.19, 22-23; xiv.3), to elements within the community (IQS vi.8; CD xiv.12, x.4, xiii.7), and to "all the congregation of Israel" in the last days (Rule of the Congregation, 1Q28a i.1). [See Damascus Document; Rule of the Community; and Rule of the Congregation.] In a military context it denotes in the War Scroll the order of battle to be followed by the army of the Sons of Light during the eschatological war (1QM

v 3-4, vii.17, viii.14, ix.10, xvi.3, xviii.6). [See War of the Sons of Light against the Sons of Darkness.]

Serekh can also be used concretely for the group itself, organized in accordance with the rules. It can, therefore, function as a synonym for the community (IQS i.16 ii.20). And in the War Scroll it denotes the actual battle array, the army deployed in battle order (1QM vii.1; iii.3; vi.10-11, 14; xiii.1, 5).

Serekh may denote abstractly a member's proper position or rank within the group (1Q28a i.21). Or concretely it may indicate the list or register that records each member's position within the group (IQS v.23, vi.22; 1Q28a i.21; 1QM iv.6, 11).

Serekh appears to be found once in the sense of a specific ruling, statute, or commandment of the Torah (CD vii.7).

Finally, *Serekh* may be used for a document that sets out the order or rules by which a group is to be organized. There are eighteen texts from Qumran that carry *Serekh* in their title and the inference that any one of these texts may be called "a *Serekh*" seems reasonable. (Cf. the use of *Serekh* concretely for a list of the members of a group arranged in their rank order in the above paragraph.)

Serekh is used restrictively at Qumran. It is applied only to the community in this age or to idealized Israel in the age to come, the two groups being linked in the minds of the writers of the scrolls, since they saw themselves as foreshadowing in their organization and worship redeemed Israel at the End of Days. *Serekh* is, consequently, always positive and prescriptive: it is the sect's technical term for that proper, divine order and discipline that faithful Israel should follow.

Dead Sea Texts That Qualify as *Serakhim*. In the scholarly literature the title *Serekh* or *Rule* has been attached, somewhat loosely, to a variety of literary works—the Rule of the Community, the Damascus Document, the War Scroll, the Temple Scroll, and Miqtsat Ma'asei ha-Torah, as well as several minor texts and fragments containing laws and regulations and the ordinances found in Qumran Caves I and 4. However, the word actually is found only in three scrolls—the Rule of the Community, the Damascus Document, and the War Scroll. These are the only texts that designate themselves in whole or in part as *Serakhim*, and it is doubtful whether the term should be extended beyond them. A *Serekh* is not a literary form, save in the vague sense that it is, by definition, an orderly statement. It is a genre defined by its content, and that content primarily has to do with community organization and practice. There is a *Serekh* for all Israel, but the Israel to which it applies is idealized Israel at the end of history, whose order the

community in some measure anticipates in this age. *Miqtsat Ma'asei ha-Torah* (4Q394–399) lists some twenty sectarian laws concerned mainly with the Temple, its purity, sacrifices, and festivals, but since these are national laws and not distinctive sectarian regulations controlling the life of the community, *Miqtsat Ma'asei ha-Torah* probably does not qualify as a *Serekh*.

1QRule of the Community. The Rule par excellence among the Dead Sea Scrolls is the Rule of the Community (1QS [and 1Q28a and 1Q28b], 4Q255–264a). The opening line of the Qumran Cave 1 exemplar, 1QRule of the Community, is damaged, but from Rule of the Community^a (4Q255) we can deduce that it contained the words “the Book of the Rule of the Community” (*Sefer Serekh ha-Yahad*). “The Book of the Rule of the Community” is, then, the title of the whole work and covers the scroll up to at least the end of column xi. The total content of these columns is intended to regulate the thoughts, beliefs, behavior, and organization of the community.

Appended to 1QRule of the Community are two further texts, which though now separated from 1QRule of the Community, originally belonged to the same scroll and were written by the same scribe: Rule of the Congregation (1Q28a; entitled “The Rule for all the Congregation of Israel in the last days”) and Rule of the Blessings (1Q28b; entitled “Words of Blessing for the *maskil*” [the word *serekh* does not actually occur in the preserved text]).

The link between the Rule of the Congregation and the Rule of the Blessings, on the one hand, and 1QRule of the Community, on the other, is functional as well as physical. The whole scroll was probably composed as a manual for the use of the spiritual mentor of the sect, the *maskil*, to remind him of his duties. Columns i through xi (1QS) relate to his duties in this age (note the reference at 1QS ix.21 “in these times”); column xii and following (1Q28a and 1Q28b) relate to his duties in the messianic age. This text was not intended as a rule book for new members. It is highly allusive throughout, and any novice would have found it difficult to implement the rules solely on the basis of what it reports. It is an *aide-mémoire* for someone already well versed in the community's ways.

The Rule of the Community involves both doctrine and practice. 1QRule of the Community opens—columns i through iv—with a prolegomenon that demarcates the boundaries of the community in terms of its general aims and objectives (1QS i.1–15), the mode of entry for new members at the annual ceremony of the renewal of the covenant (1QS i.16–iii.12), and the sect's uncompromising dualistic worldview (1QS iii.13–iv.26, the “Treatise on the Two Spirits,” a text that may have had a catechetical

function). [See Dualism.] Columns v through vi deal with more practical matters of community discipline and organization. Columns vi.1 through ix.11 are concerned with the community in general and include two sections that are explicitly subtitled *Serakhim*.

1QRule of the Community reads, “This is the Rule for the men of the Community who have pledged themselves to turn from all evil and to cling to all his commandments according to his will” (1QS v.1–vi.8). This gives broad spiritual guidance to the members on their duties: separation from “the men of injustice” and from the outside world; the practice of truth, humility, justice, uprightness, charity, and modesty toward their fellows within the community; total adherence to the Torah of Moses “in accordance with all that has been revealed of it to the Sons of Zadok . . . and to the multitude of the men of the covenant”; and obedience and deference to superiors within the community's hierarchy.

1QRule of the Community (1QS vi.8–23) is introduced by “This is the Rule for the session of the Many,” which deals not only with the conduct of plenary sessions of the community but also describes the stages by which a new member is admitted to the community. This process begins with a preliminary examination by the “Overseer at the Head of the Many” and by catechesis in “all the rules of the Community.” It is followed by a two-year probation and leads, if successful, to the absorption of the candidate's property into communal funds and his participation in the sect's central sacrament, the communal pure meal.

Also included in this section are a version of the community's penal code, which would have been applied in the community court (1QS vi.24–vii.25), rules regarding the penalty of expulsion (1QS viii.16b–ix.2), and a document often regarded as the primitive manifesto of the community, which speaks of the emergence within godless Israel of twelve men and three priests “perfectly versed in all that is revealed in the Torah,” whose role is to “separate themselves from the habitation of unjust men,” to go into the wilderness to prepare there the way of the Lord in fulfillment of *Isaiah* 40.3, and through spiritual worship to “atone for guilty rebellion and for sins of unfaithfulness, that they may obtain lovingkindness for the land without the flesh of holocausts and the fat of sacrifices” (1QS viii.1–16a, ix.3–11).

Columns ix.12 through xi.22 of 1QRule of the Community are concerned with the duties of the *maskil* in particular. It includes “the statutes (*huqqim*) by which the *maskil* shall walk with every living being” (1QS ix.12–21) and “the rules of conduct (*tikkunei derekh*) for the *maskil* in these times with respect to his loving and his hating” (1QS iv.21–x.5) and concludes with the *maskil*'s hymn, a poetical composition that the *maskil* would have recited

at some major community festival (possibly the annual ceremony for renewing the covenant) and which opens with a poetical listing of the times of prayer and the holy days observed by the community (1QS x.5–xi.22)

The Rule of the Congregation, as its opening line indicates, relates to “the last days.” It contains two sections that are designated *Serakhim*: Rule of the Congregation i.1–5 (“This is the Rule for all the Congregation of Israel in the last days, when they shall join [the Community to wa]llk according to the law of the Sons of Zadok and priests and of the men of their covenant”) and Rule of the Congregation i.6–ii.22 (“This is the Rule for all the hosts of the Congregation”). The brevity of the first *Serekh* here suggests that it is truncated: it says little more than that the Sons of Zadok shall read out and explain to the whole congregation, including women and children, the statutes of the covenant. The second *Serekh* opens with a review of the stages of a man’s life, from childhood to old age, and the communal duties appropriate to each stage, proceeds to the rules regarding a plenary assembly of the congregation (those allowed to participate, the role of the Sons of Levi, the conduct of business), and concludes with the arrangements for the messianic banquet. The *maskil* is not mentioned by name in the Rule of the Congregation (though he is probably the referent of third-person pronouns in columns i.21 and ii.10), but the text, within the setting of the scroll, should be seen as primarily addressed to him: he is the one charged with ensuring that the messianic age is inaugurated in the proper manner. The Rule of the Blessings, which is designated as “words of blessing for the *maskil*,” appears to be a collection of benedictions that the *maskil* will be called upon to recite in the messianic age. [See Rule of the Blessings.]

The Rule of the Community survives in more exemplars than any other sectarian text. There are eleven exemplars in all, one almost complete copy from Cave 1 at Qumran and ten incomplete copies (some represented only by a few tiny fragments) from Cave 4. The paleographical dates of these manuscripts are well distributed and range from around 125 BCE to 50 CE. They clearly contain different recensions of the Rule of the Community. Thus, none of the Cave 4 fragments appears to preserve the Rule of the Congregation and the Rule of the Blessings. Rule of the Community^c (4Q259) did not have the *maskil*’s hymn but instead had the calendrical composition known as Otot (4Q319). And Rule of the Community^e [lacked 1QRule of the Community viii.15–ix.11, with its concluding significant reference to “the coming of a prophet and the messiahs of Aaron and Israel.” Rule of the Community^d (4Q258) did not have the prolegomenon to the Rule found in 1QRule of the Community i–iv. 1QRule of the Community v.1–2 and 7–9, Rule of the Community^b (4Q256), and Rule of the Community^d

(4Q258) pointedly omit any reference to the Sons of Zadok and appear to envisage a more democratic constitution for the community. It seems obvious that this Rule remained in active use within the community and was constantly being reworked

Damascus Document. Broadly similar to the Rule of the Community in that it too opens with a theological prolegomenon (the “Admonition”) and then proceeds to practical matters of law and communal organization (the “Laws”) is the Damascus Document (CD; 4Q266–273, 5Q12, 6Q15). However, unlike the Rule of the Community, it probably did not designate itself in its entirety as a Rule. Its original title is uncertain but may have been “[For the Maskil], an exposition of the laws for the Sons of Light, so that they might separate themselves from the wa[ys of evil]” ([*La-maskil perush ha-mishpatim li-be]nei or le-hunnazer middar[khei resha’]*; cf. 4Q266 11.18).

The Damascus Document contains a number of texts that are specifically called *Serakhim*:

1. CD x.4–10, “This is the Rule for the judges of the Congregation” stipulates who is qualified to act as a judge.

2. A law code, the precise extent of which is unclear because of the fragmentary and confused state of the manuscripts, but which included CD xv.1–xvi.20 and ix.1–xii.22, as well as material preserved only in the Cave 4 manuscripts, is referred to at CD xii.19 as “the Rule of the settlement of the towns of Israel.” This Rule included both laws found in the Torah, according to the sect’s distinctive interpretations, which applied to all Israel, as well as regulations relating specifically to the sect’s internal discipline and organization.

3. CD xii.22–xiii.7, “This is the Rule for the settlement of the camps,” deals with the composition and governance of a “camp,” stipulating that it should comprise at a minimum ten men under the control of a priest.

4. CD xiii.7–21, “This is the Rule for the Examiner [*mevaqyer*] of the camp,” enumerates the duties and the powers of the Examiner—to instruct the congregation in the works of God, to determine who may enter the congregation and to assign him his rank within it, to monitor the commercial activities and relationships of the members, to approve the marriage and divorce of members, and to teach their sons and daughters. Appended to this Rule is a fragment of a text giving the “precepts” for the *maskil* (CD xiii.22–xiv.2).

5. CD xiv.3–12, “The Rule for the settlement of all the camps,” describes the order of enrollment of the members and the duties of the presiding priest and of the examiner.

6. CD xiv.12–18, “This is the Rule for the Many to prepare for all their needs,” deals with the communal purse and the giving of charity to the poor, the fatherless, the sick, the captive, and other such needy persons.

Though there are numerous overlaps between the Rule of the Community and the Damascus Document, and copies of both texts have been found in the same Qumran cave, they also differ from each other in ways that make it unlikely that both apply to precisely the same group. Thus, while the Rule of the Community reflects a celibate male community holding its property in common, the Damascus Document legislates for women and children and assumes that the members have a private income from which they contribute only two days' wages per month to communal funds. There have been numerous attempts to reconcile these contradictions. One plausible explanation is that the sect had two branches: one, known as the *yahad*, lived at Qumran according to a strict code called the *serekh* of the *yahad*; the other, known as "the settlement of the towns of Israel" or "the settlement of (all) the camps," lived in groups scattered throughout the land and followed a less rigorous regimen known as the *serekh* of the land (cf. CD vii.6 and xix.2–3, "But if they live in camps according to the *Serekh* of the Land"). The *yahad* at Qumran is likely to have had spiritual oversight of the whole movement and so the Damascus Document may have been composed there.

Besides the two medieval copies, ten fragmentary manuscripts of the Damascus Document have been recovered from Qumran. Unlike the manuscripts of the Rule of the Community, these copies are not well distributed in time. Apart from one copy in a Hasmonean semi-cursive script (4Q206), which it has been suggested may be an early draft of the work, the manuscripts are all in a similar formal Herodian hand, and the order in which they were written cannot be established with any certainty. Moreover, in contrast to the Rule of the Community, there appear to be few substantial differences between the various copies of the Damascus Document. The strongest disagreements are between the Qumran copies and the medieval manuscripts, where interference by the medieval scribes might be suspected. All this would be consonant with the hypothesis that the "settlement of the camps" emerged as an offshoot of the Qumran *yahad* only in the late Hasmonean period, and that either it did not persist for long or did not undergo much internal change and development.

War Scroll. The beginning of the War Scroll is damaged but has plausibly been restored as "For the *m[askil]*, the Rule of] War" or perhaps "For the *m[askil]*, the Book of the Rule of] War" (*La-m[askil serekh] ha-milhamah*, or *La-m[askil sefer serekh] ha-milhamah*; cf. IQM xv.5, "[the Bo]ok of the Rule of His Time" or "[the Bo]ok of the Appointed Rule," reading *serekh 'uti* rather than *serekh 'uto*). If this restoration is correct, then the War Scroll in its entirety, like the Rule of the Community, was designated a *serekh*. Here, the Rule covers the strategy and tactics,

and the organization, disposition, maneuvers, and weaponry of the forces of the Sons of Light in their eschatological war with the Sons of Darkness. Once again, this is a doctrine entrusted to the keeping of the *maskil*, who, as in the Rule of the Congregation, is assigned an important role at the End of Days. He is entrusted with the safe-keeping of the war book, with studying and teaching its contents, and with ensuring that it is implemented when the time comes.

Within the War Scroll the following sections are designated as *Seraklum*:

1. IQM ii.16–iii.11 is the Rule of the Trumpets. The opening is damaged but should probably be restored as "[The Rule of the trumpets of summons and the trumpet]s of alarm according to all their functions" (*[Serekh hutsotserot ha-miqra' va-hutsotser]ot ha-teru'ah le-khol 'avodatam*). In a list of the inscriptions to be placed on the various trumpets used by the army, the inscription normally matches the trumpet's particular function: for example, "On the trumpets of pursuit they shall write, 'God has smitten all the Sons of Darkness; His fury shall not end until they are utterly consumed.'"

2. IQM iii.13–iv.8, "The Rule for the standards of the whole congregation." Like the preceding Rule, this is a list of inscriptions, in this case to be written on the standards carried by the army. The inscriptions are changed in accordance with the maneuver being executed—advance, engagement, or retreat.

3. IQM iii.9–14, "The Rule for the standards of the congregation," though under a separate rubric, completes the listing of inscriptions for the banners. It leads into two short sections giving the dimensions of the banners and the inscription to be written on the shield of the prince of the whole congregation.

4. IQM v.3–ix.9, "The Rule for deploying the battalions," deals with the order of battle, the tactics and the weaponry of the army, as well as the ages of the various elements of the army and the regulations governing the purity of the camp. The War Scroll (IQM vii.9–ix.9) is concerned with the role of the priests in controlling the battle. It describes their battle dress, their position on the battlefield, the different signals that they are to blow on their trumpets, and what these signals mean. Though this unit of text falls within the general heading of "the rule for the deployment of the battalions," it is set out as a separate section and internally is referred to as a Rule (IQM viii.14, "it is according to this Rule that the priests shall blow for the three battalions").

5. IQM ix.10–17 is the "Rule for changing the deployment of the battalions." This short section is badly preserved and seems to have been concerned mainly with a tactical formation referred to as "towers" and with setting an ambush. In the columns immediately following (IQM

ix.18–xvi.2), the subject matter changes, and we are given the texts of various prayers and hymns to be recited in the time of the war—prayers at the camp, prayers on the battlefield, prayers after the victory—ending with the Prayer in the Time of War, recited to encourage the army in their last engagement with the *Kittim*. This leads naturally into the final section of the War Scroll.

6. IQM xvi.3 to the end is the Rule for the final engagement with the *Kittim*: "All this Rule shall they carry out [on] tha[1 day], when they stand in front of the camps of the *Kittim*." This deals with tactics and maneuvers and gives prominence to the role of the priests in directing the battle.

As with the Rule of the Community and the Damascus Document, an unusually large number of copies of the War Scroll have been identified. In all, there are some ten texts that overlap with the copy from Cave I of Qumran (IQM) or which by their content appear like it to be an account of the eschatological war (War Rule, 4Q285; War Scroll^b, 4Q471; War Scroll^{a-c}, 4Q491–497; Berakhot, 11Q14). The manuscripts range paleographically from the first half of the first century BCE to the early first century CE. Most, however, are early Herodian (c.30–1 BCE). The existence of different recensions and versions of the War Scroll indicates a text that was the focus of strong interest. The members of the sect presumably took it literally and studied it as a manual to train themselves for their role in the imminent eschatological war.

Analogies to the Qumran Rules. The Dead Sea Rules are unique in early Judaism. However, there are significant similarities between early Church orders, such as the *Didache*, the *Didascalia Apostolorum*, and the *Apostolic Constitutions*, and the Rule of the Community [*Sec Apostolic Constitutions: Didache*.] The parallels with the *Didache*, a work dated by some as early as approximately 70 CE, are particularly interesting. The *Didache*, like the Rule of the Community, contains a mixture of doctrine and practice. It opens with a substantial sermon on "the two ways, one of life and one of death," reminiscent of the "Treatise on the Two Spirits" in the Rule of the Community. It goes on to deal with practical matters of church order—baptism, prayer (including key liturgical

texts given in full), the Eucharist (which is seen as a pure and spiritual sacrifice offered by the community), the role of apostles and prophets (the latter are described as "your high priests" to whom first fruits are due), the assembly on the Lord's Day, and the appointment of bishops and deacons. It concludes with an eschatological section involving a brief scenario of the end of history and an exhortation to await the coming of the Lord. There is no specific readership designated within the *Didache*, but it is reasonable to suppose that it was intended primarily as a manual for bishops or other leaders within the local churches, just as the *Serekh ha-Yahad* was a manual to instruct the *maskil*, the spiritual leader of the Dead Sea sect, in his communal duties. The links between the Rule of the Community and the *Didache* are in terms of function rather than of specific content. Both arose naturally in a sectarian milieu where a group that no longer participated in the worship of the community at large had to define its own distinctive beliefs and organization. It is possible that other religious or quasi-religious associations or schools in antiquity would have had similar rules (note, for example, Iamblichus's account of the Pythagorean community in *On the Pythagorean Life* 17–18), but that these have not survived.

RUTH, BOOK OF. See Five Scrolls.

S

SABBATH. The institution of the Sabbath as a day of abstention from creative work and of joyous celebration is based on the biblical account of creation. After six days of creation, God rested from his work and blessed the Sabbath day (*Gn.* 2.1-3). The Bible often mentions that the Sabbath is a special sign between God and Israel to be observed forever (*Ex.* 31.17). Several biblical references mention the types of labor prohibited on the Sabbath, such as chopping wood, gathering manna, starting a fire, plowing a field, and reaping (*Ex.* 16.29-30, 34.21, 35.3; *Nm.* 15.32-36). Servants, both Jewish and non-Jewish, and all work animals were to share in the Sabbath rest (*Ex.* 20.10, 23.12; *Dt.* 5.14). The prophets, especially Jeremiah, admonished the people for lax observance of the Sabbath (*Jer.* 17.19-27). In the Temple, the Sabbath rituals included additional sacrifices and the placing of fresh showbread (*Lv.* 24.8; *Nm.* 29.9-10). The challenges to Sabbath observance in the Persian period are highlighted by *Nehemiah* 9.6-37, 10.31-34, 13.15-22, and some of the Aramaic texts from Elephantine refer to the Sabbath and assume its observance.

Sabbath in the Apocrypha. A small amount of information about the observance of the Sabbath in the Second Temple period can be gleaned from the Apocrypha. *Judith* 8.6 indicates that fasting on the Sabbath was not allowed, although some Greco-Roman sources mistakenly thought that the Sabbath was a fast day. The *Books of Maccabees* testify that originally even defensive war was regarded as forbidden on the Sabbath (*1 Mc.* 2.32-38; *2 Mc.* 6.11; see also *Jub.* 50.12) until it was decided by the Maccabees to permit it (*1 Mc.* 2.41). The *Second Book of the Maccabees* also emphasizes the sanctity of the Sabbath and its observance (*2 Mc.* 8.25-29; *2 Mc.* 15.1-6). Ritual purity was apparently required for the Sabbath (*2 Mc.* 12.38). Some additional material on Sabbath observance in this period is available in Philo (Marcus, pp. 81-83) and Josephus. All this material indicates that the Sabbath was taken very seriously in Second Temple times and that while all groups saw the prohibitions of labor as central to their observance, there was considerable disagreement on the exact nature of the forbidden labors.

Sectarian Sabbath Legislation. Due to the cryptic and generalized nature of the biblical description of the observance of the Sabbath, later interpreters were inspired to elaborate on the laws pertaining to this day, especially

regarding the specific types of labor forbidden. Laws of the Dead Sea sect were derived from their own sectarian-inspired biblical exegesis as opposed to the Pharisaic "traditions of the fathers" or oral law, which the rabbis claimed as the basis of their *halakhah*. Therefore, while often based on the same biblical texts that the rabbis used, sectarian law often resulted in different rulings. The Damascus Document (CD iii.12-16) states that God fulfilled his eternal covenant with Israel by revealing to those who had held fast to the commandments the secrets (*nistarot*) in which all Israel had erred. Included in these secrets are "his holy Sabbaths." It should be noted at the outset that the Essenes, identified by most scholars with the Qumran sect, are said by Josephus to have been extremely strict in their Sabbath observance (*The Jewish War* 2.147).

The Damascus Document includes a number of previously existing legal treatises known as *serakhim*. Among these was the sectarian Sabbath code (CD x.14-xi.18, with parallels in 4Q266, 267, 270, and 271), which was redacted into the legal section of this text. The sectarian code had much in common with rabbinic legal rulings, but often it tended to be stricter. Both prohibited talking about business, walking in fields to discuss what might be done after the Sabbath, allowing non-Jews to do work prohibited to Jews on behalf of Jews, and preparing on the Sabbath for the following weekdays. Both systems required that Sabbath observance begin somewhat earlier than sunset on Friday afternoon, and it is possible that the Qumran sect was stricter than the later rabbis. Walking beyond the Sabbath limit was prohibited, based on *Exodus* 16.29. The limit was fixed by the rabbis as 2,000 cubits while the sectarians limited it to 1,000 allowing one to walk 2,000 cubits beyond the settled area only if pasturing an animal. The sect did not allow the breaking of an airtight seal on a jar, or any preparation of food, even the peeling of vegetables that were to be eaten raw on the same day, but the rabbis only prohibited actual cooking.

If an animal fell into a pit on the Sabbath, both the sectarians and the rabbis agreed that the animal could not be rescued until after the Sabbath. Later Talmudic sages allowed the feeding of the animal to keep it alive and the throwing in of pillows into the pit to allow the animal to climb out by itself. Jesus is pictured in *Matthew*

12.11 and *Luke* 14.5 as saying that the animal may be lifted out of the pit.

If a human fell into a pit or reservoir, both the sectarians and the Pharisees agreed that he may be rescued, but the Damascus Document (CD xi.16–17) prohibits the use of a ladder, rope, or other instrument that would constitute a violation of the Sabbath. This interpretation is confirmed by Serekh Damascus (4Q265 6.6–8).

The Damascus Document also prohibits the wearing of perfume bottles around the neck, spending the Sabbath among gentiles, carrying children, lending anything to a neighbor, disputing about money, eating or drinking outside the camp, drawing water, drawing water into a vessel while on a journey, wearing dirty garments on the Sabbath, entering a partnership, pasturing animals more than 2,000 cubits distant from the city, handling rocks or earth, encouraging Jewish servants to perform even permitted work on the Sabbath, helping animals in labor, violating the Sabbath for the sake of wealth or profit, offering sacrifices except for the burnt offering of the Sabbath, and carrying infants or any object from the private into the public domain, and vice versa.

It is debatable whether the sect may have had legal fictions, such as the construction of an *eruv*, the rabbinic enclosure surrounding a public domain to permit carrying within it. However, there is no evidence of the use of any such device in the Dead Sea Scrolls.

While the Sabbath law of the Dead Sea sect reveals a picture of the prohibitions practiced on that day, the positive aspects of its celebration are not outlined. The Damascus Document (CD xii.3–6) specifies punishment for a person who violates the Sabbath as being deprived of his position in the congregation for seven years. However, *Jubilees* demands the death penalty for this offense (*Jub.* 2.17–32, 50.6–13).

Fragmentary Sabbath codes that are partially parallel to those of the Damascus Document are preserved in Serekh Damascus (4Q265) fragments 6 and 7.1–5 and in Halakhah (4Q251) fragments 1 and 2.3–7). Had these codes been preserved in their entirety, we would no doubt have a fuller picture of Sabbath law in the Qumran community and of the literary history of the Sabbath laws as they were redacted in the various documents. For example, a fragmentary passage in the Damascus Document (4Q267 5.iii.2–5) refers to public reading of the Torah. Halakhah (4Q251 1 and 5) refers to reading a book on the Sabbath. This may indicate that the Torah was read on the Sabbath. The Temple Scroll^a (11QT^a xiii.17–xiv.02) mentions the Sabbath offering, which is to be given in addition to the daily sacrifice. While texts from the Bar Kokhba caves testify to the observance of the Sabbath, they provide no specific information on Sabbath laws or modes of celebration.

Concept of the Sabbath in Jubilees. *Jubilees* (chap. 2) portrays a sense of how a group closely related but not identical to the Qumran sect viewed the Sabbath and its place in the religious system of Judaism. The Sabbath is first established with the angels and subsequently with Israel, of God's covenant with his chosen people, to be celebrated with festive eating and drinking. According to *Jubilees*, there were twenty-two generations from Adam through Jacob, and twenty-two kinds of work performed by God until the Sabbath day. Therefore, only with Jacob—that is, the people of Israel—could the Sabbath now be observed. The text emphasizes that this special privilege was extended to Israel alone. On the other hand, whoever profanes the Sabbath is liable to the death penalty. Observance of the Sabbath brings blessedness and holiness like that of the angels.

Sabbath Law in Jubilees. Closely related to the legal system of the Dead Sea sect was that of the circles that produced *Jubilees*, copies of which were part of the Qumran library. In general terms, the Sabbath law of *Jubilees* was even stricter than that of the Qumran sectarian documents. *Jubilees* permits the bringing of the daily sacrifices in the Temple as well as the *'olah* ("burnt offering") for the Sabbath, but the Damascus Document apparently requires that all sacrifices be suspended except for the *'olah* of the Sabbath (CD xi.17–18). In the sectarian case, the issue was entirely theoretical since the sect had removed itself from the Temple and its cult, believing the Temple to be impure and run contrary to sectarian principles.

Jubilees mandated the death penalty for nonobservance of the Sabbath (2.17–32; 50.6–13). The prohibition on cohabitation (50.8) reveals a somewhat ascetic approach to marriage, which was not accepted by the Mishnah. Other prohibitions include setting out on a journey to buy or sell; drawing water; carrying something out of the house or tent or between houses; preparing food to eat or drink rather than preparing it the day before; tilling the soil; lighting a fire; riding an animal; traveling by ship; striking a beast; slaughtering an animal or bird; catching an animal, bird, or fish; making war; and fasting.

Liturgy. The Dead Sea Scrolls feature special hymns, the Songs of the Sabbath Sacrifice, which, it seems, were to be recited on the Sabbath. Physical evidence of the manuscripts reveals that only thirteen, or about one-quarter of the possible Sabbaths, are assigned distinct compositions. It is possible that the thirteen songs were repeated quarterly or that the cycle extended only through the first quarter of the year (Newsom, 1985, p. 5). The Songs of the Sabbath Sacrifice is preserved in nine manuscripts at Qumran and one at Masada.

This text, also called the Angelic Liturgy (4QSerekh Shiroi 'Olat ha-Shabbat), is a series of poems exhorting

the angels to praise God. Each hymn opens with a formula and then continues with the angelic praise of God in the heavenly Temple. Based on the visions of Isaiah, Ezekiel, and Daniel, the compositions describe angelic priests and princes, the heavenly Temple, and the chariot-throne of God, thus closely paralleling the Merkabah texts of later Heikhalot literature. The visions of the heavenly Temple reflect the earthly one, and the service below is patterned on the ideal service performed in the Temple above.

The Sabbath was considered a particularly propitious time for reciting the praise of God because humans rest in imitation of God's cessation of creation (*Gn.* 2.1-3; *Ex.* 20.8-11). The hymns would have been recited at the time of the Sabbath offering (*'olah*) and were intended to allow the worshiper to envision himself as being present in the heavenly sanctuary among the angels. These compositions have affinities to the rabbinic Qedushah recited on the Sabbath, which is also a description of the praise of God conducted by the angels and mimicked on earth.

New Testament. Both the *Gospel of Luke* (4.16) and the *Gospel of Mark* state that Jesus went to the synagogue on the Sabbath day. The early Christians also observed the Sabbath (cf. *Mt.* 24.20). Yet in the Gospel narratives, Jesus is portrayed as rejecting specific aspects of Pharisaic-rabbinic law.

In the description of miracles, such as the healing of Peter's mother-in-law (*Mk.* 1.29-31) or the casting out of demons, Jesus overrides the Pharisaic-rabbinic law against healing on the Sabbath unless it be a life-threatening illness. Jesus taught that not only rescuing a person in danger was permitted on the Sabbath, but also simply feeding the hungry justified its violation (*Mt.* 12.1-8; cf. *Mk.* 2.23-28). The law of the Qumran sectarians, in these matters, was known to have been even stricter than that of the Pharisees, so that Jesus occupied the most lenient position, with the Pharisees in the middle and the Qumran sectarians and other such groups being the most extreme.

Matthew 12.11 and *Luke* 14.5 state that early Christian tradition considered it acceptable to draw animals directly out of a pit on the Sabbath. Again, this is the most lenient position, with the Pharisaic-rabbinic tradition permitting helping the animal to leave the pit indirectly and the sectarians forbidding all help for the endangered animal.

Rabbinic Judaism. In the tannaitic sources the main issue discussed regarding Sabbath law is the conditions under which one who accidentally violated the Sabbath must bring a sacrifice of expiation. According to the Mishnah (tractate *Shabbat*), the labors that were prohibited on the Sabbath day are for the most part those which were performed in the building of the Tabernacle, the

portable sanctuary used by the Israelites during their period of wandering in the desert. These creative labors include construction, sewing, weaving, tanning leather, painting or dyeing, reaping, threshing, grinding grain, and kneading dough. Despite the fact that these prohibitions are derived in a very different manner from the biblical exegesis of the Dead Sea texts, the list of prohibitions that emerges from these sources is remarkably similar to that of the Damascus Document, although the latter is in some cases stricter and follows the biblical sources more closely in formulation.

Rabbinic sources also mention the positive and joyous aspects of Sabbath observance. A festive meal, special prayers, the reading of the Torah, and the pursuit of spiritual goals all add to the rejoicing on the Sabbath that the rabbis intended to emphasize even while observing its restrictions. Such concepts are absent from our Qumran texts although, judging from the biblical background and the discussion in *Jubilees*, they must have been part of the thinking of the Qumran sectarians as well.

LAWRENCE H. SCHIFFMAN

SACRIFICE. On the basis of the Rule of the Community (IQS) and the Damascus Document, Joseph Baumgarten (1953, pp. 141-159) inferred the abandonment by the sectaries of Qumran of the Jerusalem Temple and the development of rituals and prayers ("offerings of the lips") in place of the Temple sacrifices. At the same time, the Damascus Document indicates that the sect was intent on preserving the laws pertaining to the sacrificial service. This view was confirmed by the translation of the War Scroll (IQM), which specified that the sect looked forward to its restitution to a purified Jerusalem, specifically, during the seventh year of a forty-year war between the forces of light and darkness, when they would build a new temple. This step was essential. It held that the Jerusalem of their time was polluted: It contained a wrongly constructed temple and an impure and disqualified priesthood, and both the Temple and priesthood op-

erated by a wrong calendar. The New Jerusalem text also predicts that a temple with its sacrificial rites will be reinstated in the future (2Q24, frg. 4; 11Q18). The program for rebuilding the correct temple and reinstating a correct sacrificial service according to a correct calendar was fully laid out in Temple Scroll^a (11Q19).

The Sacrificial Calendar of the Temple Scroll. Temple Scroll^a describes the burnt offering (*olah*) for every day, Sabbath, and the new moon, which is sacrificed (11Q19 xii–xiv) on a rebuilt outer altar (11Q19 xii). *Numbers* 28.2–15 details the sacrificial adjunct of cereal, oil, and wine, which is supplemented by instructions found in *Exodus* 29.38–42 and *Numbers* 15.4–10, and a notice concerning the priestly prebend from the burnt offering is derived from *Leviticus* 7.8.

On the basis of *Numbers* 29.1–6, which ordains special sacrifices for the first day of the seventh month, Temple Scroll^a prescribes the same sacrifices for the first day of the first month, except that the goat for the purification offering (*hatta't*) is offered first (11Q19 xiv). In Yigael Yadin's *editio princeps* of Temple Scroll^a (Yadin, 1983, vol. 1, p. 90), he suggests that the change in order is influenced by *Jubilees* 7.2–3, which also bears a tradition that in a sacrificial series the purification goat takes priority. The greater likelihood, however, is that the scroll was influenced by *Ezekiel* 45.18, which prescribes for this day a purification of an animal (though a bull, not a goat) for the purpose of purging the Temple. Furthermore, that *Ezekiel* ordains similar sacrifices for the first days of the first and seventh months (according to Septuagint's *Ezekiel* 45.20) is probably what prompted the scroll's author to equate the number and type of sacrifices for both days.

Consecration of Aaron and his sons. The first major innovation in the sacrificial calendar of Temple Scroll^a is the seven-day consecration of Aaron and his sons (based on *Exodus* 29, *Leviticus* 8), which it mandates as an annual observance (11Q19 xv–xvii versus the rabbinic text B.T., *Suk.* 43a; B.T., *Men.* 45a). This rite is aptly placed following the discussion of the new moon sacrifices, since it begins, according to the scroll, on the first day of the first month (so, too, Rabbi Aqiva, Sipre Num. 68; the rest of the rabbis hold that the weeklong consecration ends on this day Sipra Millu'im, Tsaw 36). Since the sect allows no sacrifices on the Sabbath other than those biblically prescribed (*Nm.* 28.29–10), the consecration rite ends on the eighth day of the first month. These are the additional innovations introduced by Temple Scroll^a: the sacrificial items, the same for each of the seven days, are prepared in advance and distributed among the seven priestly divisions (11Q19 xv.4–5). The elevation rite (*tenu-fah*) is performed solely by the priestly consecrators (11Q19 xv.4; see below), two purification bulls—not one—are sacrificed at the high priest's consecration

(xv.6–8, see below); and the high priest replaces the priestly elders as the officiant after he is daubed and sprinkled with the blood of the ordination (*millu'im*) ram (xvi.2, 14–18; see below).

First, it should be noted that in Temple Scroll^a the account of the consecration of ordinary priests, in contrast to that of the high priest, is severely truncated. It seems that the author wrote down only the parts of the ceremony that differed with the mainstream interpretation. In other words, his text is a polemic. This is strikingly evident in the prescription for the high priest's consecration, which deals exclusively with the sacrifice of two purification bulls. The reason for the unattested second bull can be surmised: it allows the altar to be sanctified by the second purification bull after its decontamination by the first bull. The author builds his case on the basis of *Leviticus* 4.13–21. The priestly purification offering is always followed by one on behalf of the people (e.g., *Lv.* 9.2–3, 16.3, 16.5), but the only text that prescribes a bull for the people is *Leviticus* 4. Refinements need also be added. First, in all attested cases of the elevation rite, it is performed by the officiating priest. In this case, however, the offerers, the consecrators perform the rite. This ostensible exception can be explained by assuming that the consecrators officiate as priests as soon as they are consecrated by the sacrificial blood. Thus, according to the scroll, Moses orders the elevation rite, but the consecrators execute it. Second, the ashes of the purification offering of the bulls are to be kept apart from the ashes of other sacrifices (11Q19 xvi.12, versus *Zev.* 12.5; T., *Yoma* 3.17; but cf. B.T., *Zev.* 104b). The sect's position can be explained by the belief attested elsewhere in the ancient Near East, that these ashes contained residual (black) magical powers. Finally, the priestly elders perform the hand-laying ceremonial because they are empowered to represent the people (Milgrom, 1991, pp. 561–566).

The paschal sacrifice (*pesah*) and the sacrifice for the Festival of Unleavened Bread (*matstsot*; 11Q19 xvii) follow the biblical prescriptions (*Lv.* 23.5–8; *Nm.* 28.16–25), except that the scroll specifies that the *pesah* must be sacrificed before the daily evening offering (*tamid*) by every male over twenty years of age and eaten in the Temple court (cf. *Jub.* 49.20). It is in the Festivals of the First Fruits, however, that Temple Scroll^a enjoins its major, often startling, sacrificial innovations.

Festivals of the First Fruits. The Festival of the New Barley (11Q19 xviii.1–10) follows the instructions of its biblical source (*Lv.* 23.12–14). To the prescribed lamb, however, the scroll adds a burnt-offering ram and a purification goat with its cereal, oil, and wine adjuncts (on the basis of *Nm.* 28.27–30 and *Lv.* 14.10). The Festival of the New Wheat (11Q19 xviii.10, xix.9) also follows its biblical source (*Lv.* 23.15–22; *Nm.* 28.27–31), but in addi-

tion it prescribes twelve burnt rams (restored) and twelve loaves instead of two (offered by the twelve tribal chieftains), each composed of two-tenths of an ephah of semolina, the requisite cereal offering (*minḥah*) for a ram (*Nm.* 15.6, 28.28) for the obvious purpose of involving all the tribes in the Festivals of the First Fruits.

The nonbiblical Festival of New Wine and Festival of the New Oil follow, the former fifty days after the Festival of the New Wheat, the latter fifty days after the Festival of New Wine (11Q19 xix.11–xxi.10, xxi.12–xxiii.2). Again the scroll prescribes twelve burnt rams and their requisite adjuncts (11Q19 xix.14–16; cf. xxii.4), to be offered during the first quarter of the day (that is, early in the morning), and also enjoins healthy (“well-being”; *shelamim*) rams, and fourteen healthy lambs, one each for the priests, Levites, and the twelve tribes, to be eaten in the outer court on the same day before sundown as a thanksgiving (*todah*) offering (but in opposition to *Lv.* 7.15, 22.30). From the tribal portions, the priests also receive the right thigh, breast, cheeks, maw, and foreleg “until the shoulder,” but the shoulder is assigned to the Levites as their prebend from the well-being offering (*Lv.* 7.32–34; *Dt.* 18.3). Since this is a Festival of the First Fruits, the scroll also adopts the sacrificial requirements of the Festival of the New Wheat from *Numbers* 28.26–31.

The unattested Festival of New Wine follows fifty days later, starting the count with the Festival of the New Wheat (11Q19 xix.11–xxi.10). The scroll prescribes twelve burnt-offering rams, two and four-tenths of an ephah of semolina, two-tenths per tribe, and four hins of the new wine, one-third of a hin per tribe in accordance with *Numbers* 15.6–7, to which fourteen rams and fourteen lambs as a well-being offering are added, one of each for the priests, Levites, and the twelve tribes, with their respective cereal offerings and libations (as enjoined by *Nm.* 15.4–7). The lambs, rams, their cereal offerings (*Lv.* 7.32–34; *Dt.* 18.13), and the shoulder are awarded to the Levites (derived from *Dt.* 18.1–2; Milgrom, 1983, pp. 169–176). A memorial offering (*azkarah*) of the cereal is burned on the altar (*Lv.* 6.9), and the rest is eaten unleavened by the priests (*Lv.* 2.3, 2.10, 6.10) in the inner court (*Lv.* 6.9). All altar sacrifices are salted (*Lv.* 2.13; *Nm.* 18.19). The climax of the ceremony is reached with the drinking of the new wine and eating of the new grapes by the entire assembly. The purpose of the festival is to release (*kipper*; “ransom”) the year’s wine crop for its sacred use as altar libations and its secular use by the populace. [See Atonement.]

The unattested Festival of the New Oil occurs fifty days later, the count starting with the Festival of New Wine (11Q19 xxi.12–xxiii.2). An offering of one-half hin of newly pressed oil is brought by each tribe as one of the ingredients of its cereal offerings and serves to light the

Temple menorah during the festival. Thereafter, the oil is released for use by the sanctuary and the populace. The sacrifices are identical to those of the Festival of New Wine, with the exception of an expiatory burnt-offering bull (which thus far defies explanation). The ceremony is climaxed by the entire assembly anointing itself with new oil and partaking of the olives.

The key principle in the ritual for all first-fruit offerings is that the crop is not released for sacred or secular use until God, via the altar, receives his portion. Thus, a sheaf (*omer*) of new barley releases the rest of the crop (11Q19 xviii.7, E. Qimron, *Israel Exploration Journal* 37 [1987], 31) for secular use. A loaf of new wheat is brought to the Temple by each tribal leader (eaten by the priests since leaven is forbidden on the altar; *Lv.* 2.11) before the new wheat is available to the community; a libation of new wine releases the new crop for use by the Temple and people, and an offering of new oil (as part of a cereal offering) precedes its sacred and secular use.

An otherwise unattested Festival of the Wood follows the Festival of the New Oil, probably beginning the following day and celebrated for six days (11Q19 xxiii.1–xxv.2). Wood is offered by two tribes each day, beginning with Levi and Judah. The doubling of the tribes is most likely due to the necessity to avoid overlapping Ro’sh ha-Shanah (see below). Ephraim and Manasseh are subsumed under Joseph in order that the tribes add up to a total of twelve. Each tribe offers one bull, one ram, and one lamb as burnt offerings and one male goat as a purification offering (on the model of *Numbers* 7.15–88). Presumably, the amount of wood contributed depends on the Temple’s fuel needs for an entire year.

The common denominator of these festivals, which may also be considered their major innovation, is that the twelve tribes, that is all Israel, participate in bringing and offering the first fruits and wood. In every case, the priest and Levites take priority. Other examples of the primacy of the tribe of Levi (priests and Levites) in the sacrificial service are that the new wine is drunk by priests, Levites, tribal leaders, and the rest of Israel in that order; one each of the well-being offering of fourteen rams and fourteen lambs is a perquisite of the priests and Levites, thereby giving the tribe Levi a double portion over the other tribes; Levi is the first of the tribes to bring the wood offering; and the Levites perform the sacrificial slaughter in the Temple (cf. *Ezek.* 44.10–11, *2 Chr.* 30.17, 35.6, 35.10–11). Probably the most radical innovation of the priestly perquisites is the Levitic share of the well-being offering, the shoulder. The shoulder is never considered a sacred portion in the Hebrew scriptures, nor are the Levites ever entitled to sacrificial flesh.

Other Sacrificial Innovations. Regarding animal slaughter, the Temple Scroll interprets *Leviticus* 17.1–9

and *Deuteronomy* 12.5-7 as implying that nonsacral slaughter is forbidden within a three-day journey from the Temple. *Leviticus* 17.13-14 required that the blood of nonsacral slaughter, both domesticated as well as wild animals (beyond a three-day journey from the Temple) be covered. *Deuteronomy* 12.27 is interpreted as prohibiting the eating of the meat of nonsacral slaughter in Jerusalem. Thus, Temple Scroll^a demarcates three areas in regard to slaughter. In the Temple city it is forbidden to eat any meat slaughtered outside it (11Q19 lii.19-21); within a three-day journey from the Temple it is forbidden to slaughter animals except as burnt and well-being offerings (11Q19 lii.13-16); beyond this, nonsacral slaughter is permitted on the proviso that the blood is drained (11Q19 liii.7-8). [See Purity.]

Among other sacrificial innovations of the scroll is its insistence that the purification goat be accompanied by a cereal offering and wine libation equivalent to that accompanying a lamb in other sacrifices (e.g., 11Q19 xviii.4-6); its insistence that the purification and reparation (*asham*) offerings for the priests and the people be kept apart (11Q19 xxxv.10-15). The first day of the first month is given special prominence as the beginnings of the annual consecration of the new priest (see below), and since it follows the sacrificial rites of the first day of the seventh month (*Nm.* 29.1-6), in effect it gives the calendar two New Year days (cf. the Septuagint's *Ezekiel*).

Ro'sh ha-Shanah, Yom Kippur, and Sukkot follow in their biblical order (*Lv.* 23.23-36; *Nm.* 29.1-38), on the first, tenth, and fifteenth through the twenty-first days, respectively (11Q19 xxv.2-xxix.3). They follow the biblical prescriptions for the sacrifices, and where there is a conflict in the sources such as that for the Festival of the New Wheat (*Lv.* 23.18-19, *Nm.* 28.27-30), Temple Scroll^a adopts the simple expedient of combining them, making all the prescribed sacrifices mandatory. Similarly, the scroll ordains that on Yom Kippur three rams are sacrificed, the two listed in *Leviticus* 16.3 and 5, and one in *Numbers* 29.8 (a view also adopted by Rabbi Eli'ezer, *Yoma* 70b).

Sanctuary Gifts. Other than altar sacrifices, Temple Scroll^a conveniently provides a list of sanctuary gifts, presented to its sacral cadre. Priestly gifts include elevation offerings, first-born males, sanctifications (*qodashim*), cattle tithes, the fruit of fourth-year trees (*qodesh hilulim*: "jubilation sancta"), one-thousandth of the spoil and hunt, and one-hundredth of the wild doves (cf. *Dt.* 18.3-5; *Nm.* 18.9-19; *Lv.* 19.24, 27.32-33; 4Q395 (MMT^b) 62-64). These gifts are cooked and eaten by the priests in the inner court according to Temple Scroll^a (11Q19 xxxviii.17). Levitic gifts include tithes of grain, must and oil, the shoulder of the well-being offering, one-hun-

dredth of the spoil and hunt, one-tenth of wild honey and one-fiftieth of wild doves (*Nm.* 18.21-22; *Dt.* 18.1-2).

Miqtsat Ma'asei ha-Torah (MMT). The sacrificial polemics of the sect are accentuated in *Miqtsat Ma'asei ha-Torah*. In the broken text of *Miqtsat Ma'asei ha-Torah*^b, it is forbidden to cook other sacrifices in or add remnants of other sacrifices to a pot in which the purification offering was cooked (in consonance with) Temple Scroll^a (11Q19 xxxv.10-15, xxxvii.8-10). It is quite likely that *Miqtsat Ma'asei ha-Torah*^b (8-9) forbids offerings from gentiles. *Miqtsat Ma'asei ha-Torah*^b (9-11) holds, in agreement with the rabbinic view (*Sifra* on *Tsav* 12.1) and Temple Scroll^a (11Q19 xx.12-13) that the cereal offering must be eaten by the priests, for whom it is a perquisite, on the same day it is offered. However, this provision also maintains that the day terminates at sundown, in disagreement with many rabbis who hold that in sacrificial matters, as plainly indicated in the Bible (e.g., *Lv.* 7.15), the day includes the following night (*Zev.* 6.1). *Miqtsat Ma'asei ha-Torah*^b (36-38) ordains that a mother and her fetus may not be sacrificed on the same day (based on *Lv.* 22.28) in consonance with Temple Scroll^a (11Q19 lii.5-7), but in opposition to the rabbis who hold that the fetus is part of the mother (*Hul.* 4.1-4).

Damascus Document. Two sacrificial provisions are of importance. First, the Damascus Document (CD xi.17-18) prohibits all offerings on the Sabbath except those explicitly prescribed, namely, the Tamid and Sabbath offerings (*Nm.* 28.9-10). It is on the basis of this unambiguous statement that it can be assumed that all the festivals that coincide with the Sabbath are extended an extra day for their sacrificial requirements to be fully met. Second, the Damascus Document (CD xi.8-9) prohibits the sale of sacrificial animals to gentiles, presumably lest they sacrifice them to their (pagan) deities.

Purification Rules B^{b-c} and the Red Cow. The red cow whose ashes are used to purify the corpse-contaminated person is labeled a *hatta't* ("purification offering"; *Nm.* 19.9). Since the offering also is referred to as a "burnt *hatta't*" (*Nm.* 19.17), it falls into the category of a stringent purification offering, the flesh of which may be eaten but is burned outside the camp (*Lv.* 4.6-7, 4.11-12; cf. 6.23, 10.18). Yet the difference in the ritual procedures is glaring: the blood of the red cow is not offered up on the altar as is the blood of every other purification offering and, indeed, of every other animal sacrifice. Rather, the whole cow, together with its blood, is incinerated outside the camp (*Nm.* 19.5). Thus, it does not appear to be a sacrifice at all (for a resolution of this discrepancy, see Milgrom, 1981, pp. 62-72).

The Qumran sectaries leave no doubt that the red cow is a sacrifice. Although the rabbis maintain that those involved in the preparation of the ashes of the red cow need

but bathe (*Par.* 3.7–8, 6.4), members of the Qumran community believe that a corpse-contaminated person must bath and then wait until after sunset in order for purification to be complete (4Q395 16–20). The stringency of the sect is even more apparent in Purification Rules B^h (Baumgarten, 1995, pp. 112–119), which yield the following information: The preparatory rites with the red cow are priestly functions (in contrast to *Nm.* 19.3, 19.5, 19.8–9). The slaughter and blood sprinkling are performed without sacred garments, presumably lest they become defiled in the performance of the rites (in contrast to *Par.* 4.1 on *Nm.* 19.4). The blood must be collected in a sacred vessel (cf. B.T., *Zer.* 20b). The blood bears a purging function *kapparah*, as is the case with every purification offering (contrast B.T., *Yoma* 2a). The sprinkling of the purification waters is also a priestly function (cf. 4Q265 7.ii.3 and despite *Nm.* 19.21). The sprinkling is performed by a mature priest and not by a boy (in agreement with the Damascus Document [4Q271], but in contrast to the explicit specifications of *Parah* 3.1–2).

Rabbinic Texts. Of historic (that is, legal) importance in the development of the sacrificial system are the pronouncements of Temple Scroll¹, usually in polemic style, which are at variance with subsequent rabbinic tradition (and often the plain meaning of the biblical text). These are the following: The purification offering requires a cereal offering and libation, which the rabbis reject (*Men.* 90b–91b). The entire sacrificial ritual with the purification offering, including the incineration of its suet, must be completed before the burnt offering is sacrificed, a requirement the rabbis do not endorse (*Zer.* 10.12). On the altar, different sacrifices must be kept apart, a pronouncement that the rabbis deny (*Men.* 9.4). All libations are poured on the altar hearth (*Jub.* 7.5), which, according to the rabbis, holds for discrete libations, but those accompanying other sacrifices must be poured on the altar base (B.T., *Suk.* 48b–49b). The blood of sacrifices maintains its sanctity even after it is drained from the altar (versus T., *Zev.* 6.9, the majority view). The carcass of the severe purification offering mentioned above (whose meat is not eaten by the priests) is burned outside Jerusalem “in a place set apart for purification offerings” (11Q19 xvi.12), contrary to *Leviticus* 4.12 and Tosefta *Yoma* 3.16–17, which enjoins that it is burned in the “ash heap/house” of other sacrifices. Other rulings found in Temple Scroll¹ include the following: The foreleg, cheeks, and maw of the well-being offering are considered priestly portions (*Dt.* 18.3), a practice also endorsed by some of the rabbis (T., *Men.* 7.17–18). That these offerings require an elevation rite is in disagreement with the majority of the rabbis who maintain that these portions are, indeed, priestly perquisites that are exempted from the elevation rite since they stem from secular slaughter

and not from sacrifices (*Hul.* 10.1). The foreleg assigned to the priests does not include the shoulder, which belongs instead to the Levites (versus *Hul.* 10.4). Skins of impure animals are prohibited in the Temple city (Josephus, *Jewish Antiquities* 12.14b; *Hul.* 9.2 and *Sifra*, *Shemini*, para. 10.6). The scroll is even more extreme by banning even skins of pure animals that were not slaughtered as sacrifices (11Q19 xlvii.7–18). The prohibition of *Leviticus* 22.28 banning the slaughter of a dam and its young on the same day applies to both father and mother, whereas the rabbis (the majority) hold that it applies solely to the mother B.T., *Hul.* 78b).

Aramaic Levi¹. The fragment Aramaic Levi¹ (4Q214b) contains nine broken lines discussing the woods recommended by Abraham to Isaac as acceptable for the altar fire. It lists twelve kinds of wood capable of producing a pleasant aroma (correcting Trebolle Barrera et al., *Qumran Cave 4: Parabiblical Texts*, Part 3, Discoveries in the Judean Desert, 22, pp. 68–97, Oxford, 1997; see Low, 1924, pp. 3 and 15–16): cedar, bay (?), almond, stone pine, pine (?), ash (?), sabina (= *junipers excelsia*), white fig (?), Aleppo pine, laurel, myrtle, and stone juniper (*junipers drupacea*). This list corresponds with the twelve trees enumerated in *Jubilees*, also attributed to Abraham's bequest to Isaac. The Mishnah declares all wood qualified except the wood of the olive tree and the grape vine (*Tam.* 2.3). No reason is given for their disqualification, but two are surmised: they make poor fuel (B.T., *Tam.* 29b), and their fruit is needed for the altar libation (*Leqah Ton' to Lv.* 18; *Lv. Rab.* 7.1). The same *mishnah* also claims that the following woods were preferred: fig, nut, and pine. Rabbi Eli'ezer (*Sifra* on *Nedava* 6.4) adds the carob, palm, and sycamore.

Concerning defects in these woods, Aramaic Levi¹ only mentions the presence of worms, but from the text's missing beginning, one can reconstruct “split wood.” This leads one to suspect that it read “split or dark wood” (*Jb.* 21.13). The Mishnah (*Mid.* 2.5) resorts to a generalization: “blemished and old wood.”

Aramaic Levi¹ also specifies that the officiating priest must wash his hands and feet after he sprinkles the blood, corresponding to “And when you have completed making the offering, wash your hands and feet again. And let there not be seen any blood upon you or your garments” (*Jub.* 21.16–17).

JACOB MILGROM

SADDUCEES were one of the main Jewish currents and parties during the period of the Second Temple. Because no text has come down to us that can be defined with certainty as coming from the Sadducees themselves, our knowledge derives from a variety of sources, each of which is problematic. The authors of the New Testament and the sages of rabbinic literature, for example, consider them as opponents. As well, the sources provide only spotty references to the Sadducees, while each body of literature mentions them only in terms of its own main

interests. Thus, Josephus presents the Sadducees as one of the three "Jewish philosophical schools" of the period and in comparison with the other two, the Pharisees and the Essenes, while emphasizing the rivalry between the Pharisees and the Sadducees (*The Jewish War* 2.119, 162-166; *Jewish Antiquities* 13.171-173, 297-298; 17.16-17). Likewise, the authors of the New Testament bring up the question of the Sadducees in the context of faith in the resurrection (*Lk.* 20.27-40 and parallels) and their exchanges with the disciples (*Acts* 4.1-22; 5.17-40; 22.30-23.10). In the rabbinic sources, the Sadducees almost always appear within a setting of discussion on the *halakhot*, most often out of context, while there seems to be an underlying intention to show the superiority of the Pharisees over the Sadducees. As for the scrolls from the Judean Desert, they never mention the Sadducees explicitly by that name (see below). We will not discuss the church fathers here, because their writings are later and transmit only secondhand information (but see Black, 1961).

Origin of the Name and Its Meaning. The name appears as *Saddoukaioi* in the Greek sources and in the form *Tsedduqim* in the Hebrew sources. The equivalence of the terms seems to be assured by the Hebrew witness of the *Avot de-Rabbi Natan*, which describes a group similar to that of the *Saddoukaioi* of Josephus (*Avot de-Rabbi Natan* ms. A ch. 5; ms. B ch. 10). This passage traces the foundation of the group to a certain Zadok (Tsadoq), a disciple of Antigonus of Sokho (first half of the second century BCE) or belonging to the third generation of his disciples. This poses a twofold problem, with a philological and historical dimension. Why there is a doubling of the *dalet* in Hebrew and of the *delta* in Greek in the forms *Tsedduqim* and *Saddoukaioi*, respectively, while the name Zadok does not show this doubling, remains an unsolved mystery. Moreover, it is difficult to accept that the founder of such a well-known group would not be mentioned in any other source. This is why some researchers prefer to maintain the explanation of the church fathers who saw the name Sadducee as being derived from the adjective *tsaddiq* (righteous). The deformation of *tsaddiq* into *Tsedduqim* might involve a pejorative nuance: the Sadducees might be the kind of people who believe themselves to be righteous, but are not. Other researchers, in view of the fact that the name *Zadok* sometimes appears in Greek in the form *Saddouq*, accept that it might be the origin of the term Sadducee. However, for them, the name of the group was derived from a different Zadok, the high priest from the time of David and Solomon, whose descendants inherited the office of high priest until the Maccabean crisis. This is the most widely accepted explanation. But this does not allow us to determine whether the name is positive—the Sadducees might rep-

resent, at least in part, the descendants of Zadok—or negative—they wrongly claimed this ancestry.

The term Sadducee appears in the sources only in the context of the period in the history of Judea that runs from the Hasmoneans to the destruction of the Temple. In our view, it is not a substitute for the traditional biblical expression *benei Tsadoq* (sons of Zadok), which was still used in the scrolls from the Judean Desert. Rather, each of these expressions designates a different reality. The name *benei Tsadoq* refers to the socially defined group of priestly families, while the term “Sadducees” designates a political and religious party, which took part as such in public affairs. The party may have drawn its name from the fact that *some of the bene Tsadoq* were its founders and/or its most influential members. However, this would not warrant the conclusion that *all the bene Tsadoq* became Sadducees, or that all the Sadducees were descendants of Zadok.

History of the Sadducees. The sources point to the existence of the Sadducees only in occasional references, which makes it impossible to construct a continuous history of the group. The most ancient mention (with respect to the sources) of the Sadducees comes to us from Josephus who, in *Jewish Antiquities* (13.171–173), places a summary of his observations regarding the three “Jewish philosophical schools” toward the end of his account of the rule of Jonathan (153–143 BCE). This summary is artificially inserted into the account of the events copied from *I Maccabees* and has no connection with the context. Josephus does not give any explanation about the origin of the groups. Indeed, he refers us back to his observation in book two of *The Jewish War*, which is placed in a completely different chronological context (in 6 CE). Consequently, the piece of information that suggests that the “Jewish philosophical schools” already existed during the rule of Jonathan seems itself to be the result of a notion that Josephus himself conceived, without any source whatsoever to corroborate his assertions.

The second mention of the Sadducees by Josephus places them under John Hyrcanus, the Hasmonean high priest (134–104 BCE). Josephus describes the break between Hyrcanus and the Pharisees on the occasion of a banquet (*Jewish Antiquities* 13.288–298). The high priest, influenced by someone close to him, may have then gone over to the side of the Sadducees. However a *baraita* (B.T., *Qid.* 66a) places the same events under the reign of Alexander Jannaeus (103–76 BCE), who was the son of John Hyrcanus, and served as high priest and king. That reference suggests that, toward the end of the second century or the beginning of the first century BCE, the two groups, the Pharisees and the Sadducees, had formed as competing parties, one which supported the Hasmoneans in power and the other which opposed them.

The reign of Jannaeus was marked by a six-year civil war, which broke out after an initial incident at the Temple, during the feast of Tabernacles (*Jewish Antiquities* 13.372–373 and 376). Jannaeus's opponents took advantage of his difficulties with the Nabateans to appeal to the Seleucid king, Demetrius III Euketus (95–88 BCE). Demetrius III then invaded Judea and defeated Jannaeus (*Jewish Antiquities* 13.377–378), but immediately left for Syria. Jannaeus exploited this fact to exact revenge on his enemies: after taking them prisoner, he had eight hundred of them crucified in Jerusalem (*Jewish Antiquities* 13.379–383). Josephus did not characterize either the supporters of Jannaeus or his opponents. However, according to the Peshar Nahum (4Q169), it was the *doresh halaqot*, also called “Ephraim,” who appealed to Demetrius III. Most scholars understand this as a reference to the Pharisees, while “Manasseh,” the opposing camp, referred to the Sadducees. During her reign, the widow of Jannaeus, Shelamzion Alexandra (76–67 BCE), relied on the party of the Pharisees. They, in turn, exploited this to take revenge against the supporters of Jannaeus. In the end, Aristobulus II asked the queen, his mother, to grant guarantees and safeguards for them, while his brother, Hyrcanus II, who had been appointed high priest, seems to have accommodated himself with the Pharisee government. Upon the death of Shelamzion Alexandra, the situation reverted to civil war. The intervention of Rome was to impose a solution on the Near East. However, it was not two parties, but three parties, who appeared before the Roman commander Pompey in Damascus in 63 BCE to ask him to arbitrate their conflict. Aristobulus II seems to have been supported all along by the Sadducees. The Idumean, Antipater (father of Herod), with the support of his Arab allies, seems to have convinced Hyrcanus II to continue the struggle against his brother. The third group is not identified; they are “Jews” who denied both brothers the right to exercise the twofold function of high priest and king (Diodorus, *Bibliotheca Historica* 40.2; Stern, 1974). This group may have represented some of those Pharisees who had formerly leveled the same criticism against Jannaeus, and who had adopted the same strategy of getting a foreigner to intervene against the Hasmonean dynasty. In this, they may have differed from the supporters of Hyrcanus II. In any case, Aristobulus II, who was probably supported by the Sadducees, was defeated and taken prisoner by the Romans (and was assassinated in 49 BCE), while Hyrcanus II was confirmed in his office as high priest.

The Parthians put an end to the pontificate of Hyrcanus II after invading Judea in 40 BCE. In his place, they set up the nephew of Hyrcanus, the son of Aristobulus II, a high priest and king from 40 to 37 BCE. At the same time, in response to the intervention of their Parthian en-

emies, the Romans appointed Herod the Idumean as king (in 40 BCE). He was forced to conquer his kingdom by the sword. In 37 BCE, the Pharisees Pollion and Samaias convinced the people of Jerusalem to open the gates of the city to Herod. However, Herod seems to have also sought to appease the supporters of the Hasmonean dynasty. Thus he appointed Aristobulus III, the grandson of Hyrcanus II, as high priest. Very shortly thereafter, Herod, who was feeling threatened by the popularity of the young high priest, had him assassinated, thus bringing the Hasmonean dynasty to a final end in 35 BCE. Herod's coming to power—he was to reign until 4 BCE—introduced some radical changes. From this time on, Rome was to govern Judea, either indirectly through Herod and his descendants, or directly. The Idumean origin of the king furthermore imposed a *de facto* separation of political and priestly powers. The high priests were appointed and removed at the pleasure of the rulers. However, the result was the rise in power of four new families who were to provide twenty-two of the twenty-six high priests of that period (from 35 BCE to 70 CE). These were the families of Phiabi, Boethus, Anan the elder, and Kamith.

Given these conditions, had the Sadducees been nothing more than a pro-Hasmonean party, they should have disappeared, having lost all hope, after the death of the last representative of the family. However, the sources that tell us the most about the Sadducees, relatively speaking, date from the first century CE. Furthermore, Josephus asserts that Anan, the high priest, son of Anan the Elder, was a Sadducee (*Jewish Antiquities* 20.199), which leads us to believe that the rest of the family may have been Sadducees as well. This same family produced eight of the high priests from that period. One of the members of this family, Caiaphas, held the office of high priest for the longest time. According to the *Gospel of John* (Jn. 18.13), Caiaphas (18–37 CE) was the son-in-law of Anan the Elder. Moreover, for most scholars, the group of the Boethusians, whom *Avot de-Rabbi Nathan* (see above) describes as being close to the Sadducees, may have been none other than the family group of Boethus and his followers. In other words, the Boethusians may have been little more than a family clan, a subgroup of the Sadducee party. [See Boethusians.]

The connection between the Sadducees and the Temple is confirmed by the New Testament and rabbinic sources. The *Book of Acts* also asserts that the Sadducees comprised the inner circle of the high priest (*Acts* 5.17, cf. *Acts* 4.6) and that they sat on the Sanhedrin (*Acts* 23.6, cf. *Megillat Ta'anit*, scholium on 28 Tevet). The fact that the Temple was both the source and locus of their power would account for why the Sadducees as a group disappeared during the turmoil of the First Jewish Revolt (66–70 CE), as a result of the destruction of the Temple.

The members of the high priestly families did in fact take an active part in the First Jewish Revolt. The initiative to end the daily sacrifices in honor of the emperor is said to have come from Eleazar, son of Anan the Elder (*The Jewish War* 2.409 ff.). His brother, Anan the Younger, received the command of Jerusalem, which had risen up in revolt, alongside Joseph ben Gorion (*The Jewish War* 2.563), but he was assassinated by the Idumeans (*The Jewish War* 4.314–318). Matthias, the son of Boethus, was in turn assassinated by Simon bar Giora, although Matthias had opened up the gates of Jerusalem to him (*The Jewish War* 5.527–531). It seems that other members of the priestly families and the lay aristocracy were considered as insurgents by the Romans because the Romans placed them under house arrest at Gophna when they surrendered (*The Jewish War* 6.114–115). The sources no longer mention the Sadducees as a group after the end of the First Jewish Revolt.

Some scholars have thought that the Sadducees did not appear as a group until the Herodian and Roman period, but it no longer seems possible to cast doubt on the witness of the sources pointing to their existence during the Hasmonean period, even if their party must have undergone a certain evolution. On the other hand, the permanence of the group throughout that period could be explained by the fact that its inner circle may have been made up of the Temple staff, who may have supported the existing (Jewish) government for generations. They would then be characterized by their commitment to the independence, or at least the political autonomy of Judea, as the best means to defend the Torah against the pagan world.

In contrast, the ability of the Pharisees to survive the catastrophe perhaps comes from the political principle they espoused for centuries: it is better to have a tolerant foreign ruler who respected the particular way of life of the Pharisees than an independent Jewish state that held both political and religious powers.

Ideology and Practice. While Josephus points out the resemblance between the position of the Pharisees and that of the Stoics (*Life* 12) on the one hand, and between the way of life of the Essenes and the Pythagoreans on the other (*Jewish Antiquities* 15.371), he absolutely avoids comparing the “philosophical school” of the Sadducees with any Greek group whatsoever. His manner of describing the Sadducees would have forced him to find hints of Epicureanism in their “philosophy.” This is probably the reason why Josephus avoids the comparison; the Epicureans had a very bad reputation in antiquity and were considered to be “atheists,” dangerous people who denied divinity. This criticism can probably not be leveled against the Sadducees. Nonetheless, for twenty centuries they were the object of criticism, sometimes harsh, from

both Jewish and Christian authors, to such an extent that even today the term "Sadducee" has been used among Jews as an insult to designate an unbeliever, an atheist. Both Jewish and Christian authors often describe them as libertarians, as people interested only in preserving their privileges and well-being, having little zeal for the Law, if not ignoring it altogether.

In fact, their ideas could be ascribed to strictly biblical teaching. It would be incorrect to assert that they denied the doctrine of retribution, but, just as in a great many passages of the Bible, it seems that the Sadducees considered that the wages for one's acts are given in this life: "If you obey the commandments of YHWH your God . . . then you shall live and become numerous. . . . But if your heart turns away . . . you shall perish; you shall not live long in the land" (*Dt.* 30.16–18). This teaching, if it is taken in its strict sense, implies the idea of retribution in this world. Also, they seem to have inferred from the commandment of levirate marriage (*Dt.* 25.5–10) that the only life after death promised to humanity by the Torah was survival through one's posterity. The objection to the belief in the resurrection of the dead is based on this commandment (*Lk.* 20.27–38).

Josephus, it seems, was unable to present the doctrines of the Pharisees and Sadducees, except in relation to one another and in a context of rivalry and opposition. Thus, in contrast to the Pharisees, the Sadducees denied "destiny" (*heimarmene* in Greek, *fatum* in Latin). A denial of this kind is certainly in keeping with the idea that a person alone is responsible for the good and the evil that happens to him or her. In this respect, the Sadducees were also consistent with biblical thought. This denial of "destiny" was perhaps also a categorical rejection of Greek philosophical ideas, particularly Stoicism, which if taken to their logical conclusion, threatened to end up denying human responsibility. On the other hand, it is more difficult to understand this assertion if it is to be interpreted as a denial of divine providence. As for the affirmation that God is so far from all evil that he cannot even see it (*The Jewish War* 2.164), this might be similar to the insistence on human responsibility by the refusal to attribute to God the evil that happens to people.

Another subject of contention between the Sadducees and the Pharisees concerns the "traditions of the Fathers," which the Pharisees considered as having authority almost on par with that of the written Torah, but which the Sadducees rejected (*Jewish Antiquities* 13.297). But the main subject of the debates regarding Jewish law between the two groups dealt with ritual purity. There again, the Sadducean position appears to be grounded on scrupulous respect for the rules of the levitical purity as defined by the Bible, and with regard to the Temple and the priests, while the Pharisaic position tended to want

to extend those rules to "all of Israel," even if it meant adapting them to make them accessible to all.

Even though he refers to a Sadducee high priest (see Anan the Younger, above), Josephus never explicitly says that the Sadducees were priests. For him it was enough to assert: "They are but few men to whom this doctrine has been made known, but these are men of the highest standing" (*Jewish Antiquities* 18.16, trans. by Feldman). Their attitude and the instances of their interactions with society in the first century CE are what earned them their bad reputation. Josephus alludes to the levies the high priests exacted by sending out their slaves to steal the tithe that was due to the priests (*Jewish Antiquities* 20.181), and rabbinic sources also record abuses of power (*B.T., Pes.* 57a; *B.T., Men.* 13.21). Similarly, the Gospels and *Acts* bear witness to the fact that the high priestly families, along with their supporters, formed a group that had a stranglehold on the Temple. There the Sadducees appear as exerting particular control over what went on within the Temple and as a kind of police power (*Acts* 4.1–3; 5.17–18).

The Sadducees and Qumran. The question of the link between the Sadducees and the members of the "the Jewish sect of the New Covenant in the countryside of Damascus" (Lagrange, 1912) has been posed ever since the appearance in 1910 of manuscripts A and B of the Damascus Document, discovered in the Cairo Genizah and published under the title *Fragments of a Zadokite Work* by Solomon Schechter. On the one hand, the Zadokite origin of the group, attested by the reference to the *benei Tsadoq* (sons of Zadok), appeared beyond question, suggesting a connection with the Sadducees described by Josephus. On the other hand, the clearly sectarian character of the text called for marking the difference between its writers and the representatives of the Jerusalem aristocracy. A number of hypotheses were raised to characterize the sect: most often it was accepted that the group professed a form of Sadduceeism, although most likely of a different kind, or else of a period other than that of the Sadducees described by Josephus. In any case, the publication of this document stimulated renewed interest in the study of the Sadducees in general until the discovery of the scrolls from the Judean Desert and the excavations at Khirbet Qumran.

The identification of the Qumran site as the Essene establishment described by Phny the Elder (*Natural History* 5.73; Stern, 1974, p. 470) undermined the Sadducean hypothesis as to the origin of the group for several decades. In addition, the publishing of the *peshurim* and the interpretation of the name "Manasseh" as designating the Sadducees reinforced the idea that the people of Qumran, far from being Sadducees, were instead enemies of the Sadducees.

However, beginning in 1980, Joseph Baumgarten made the connection between certain legal rulings in the Temple Scroll (11Q19 and 11Q20) and the *halakhah* attributed as Sadducean in the rabbinic sources. A similar connection seems to be warranted between these rulings and those described in *Miqtsat Ma'asei ha-Torah* (4Q394–4Q399), fragments of a letter addressed to a high-ranking person in Jerusalem to whom the author points out several cases where the recipient's *halakhah* differs from his own. Even before the official publication of *Miqtsat Ma'asei ha-Torah* (1994), several scholars were proposing an identification of the *Tsadduqim* of the rabbinic sources with the *benei Tsadoq* of Qumran; some even spoke of the "Sadducees of Jerusalem" (those described by Josephus and the New Testament) and the "Sadducees of Qumran." This hypothesis did not convince the majority of scholars: some objected that the resemblance between Sadducean *halakhah* and Qumran *halakhah* may have stemmed from a priestly origin common to both groups, rather than a shared identity. Others again pointed to the doctrinal and sociological differences between the Sadducees of the Greek sources and the members of the sect of the Judean Desert. Finally, the hypothesis that certain *benei Tsadoq* may have been the originators of the sect was itself cast in doubt: the fragments of the Rule of the Community discovered in Cave 4 (4Q256 and 4Q258) may represent an earlier stage of the text without any mention of the *benei Tsadoq*.

All in all, the identification of the sect of the scrolls from the Judean Desert with the Essenes of the Greek sources does not seem to be decisively called into question. Nonetheless, after moving the study of the Sadducees into the background, the discovery and publication of the Qumran scrolls revived the debate over the origin and character of the Sadducees. They were demarcated from the other groups of the time not by any one criterion, but by a whole set of inseparable criteria: social (the lay and priestly aristocracy), doctrinal (founded on the written Torah and rejecting the oral Torah developed by the Pharisees), halakhic (rejecting the Pharisaic innovations), economic (by the management of the Temple and the tithes), and political (by the support for the Jewish government in place).

EMANUELLE MAIN

Translated from French by Daphna Krupp

SALOME ALEXANDRA. See Shelamzion Alexandra.

SAMARIA was the name of both a region and a city and in preexilic times an alternative name for the northern kingdom, Israel. As a region it covered some 2,250 square kilometers with its geographical center at Shechem (Neapolis). As a city, biblical Samaria was founded by the Israelite King Omri (876–864 BCE) on a hill 100 meters high; it became the capital of Israel. It was the principal city of the Samaritan hills and a rival to Shechem. Alexander settled the city with Macedonians, but it was destroyed after a rebellion of the Samaritans (c.331 BCE) only to be rebuilt shortly afterward as a major Hellenistic city. The Wadi ed-Daliyeh papyri appear to relate to the period immediately before this rebellion. The city was destroyed again by the Hasmonean John Hyrcanus (c.108 BCE), but was restored and renamed Sebaste by Herod, who built a temple to Augustus on the highest part of the city. The Greek "Samaritans" of the city of Samaria were probably syncretists and provided a fruitful breeding ground for Gnosticism, unlike the Yahwist Samaritans of Shechem. The city of Samaria was renamed Colonia Lucia Septimia Sebaste by Septimius Severus. The site has been extensively excavated and its walls, gate, colonnaded street, forum, temple, and stadium, among other buildings, exposed and recorded. Widely mentioned in classical sources (see Tsafir et al., 1994). It is rarely mentioned in the Qumran scrolls except in the *peshtarim*, and then without an apparent consistency.

The few references to Samaria in the scrolls include Tobit^c (4Q198) line 8 (= *Tobit* 14.4), where Judah assumes the mantle of all Israel as successor to biblical Israel. Samaria may be said to be a partner of Jerusalem, and any distinction between Israel and Judah, as implied in the Apocryphal Greek version, appears to be lost. There is no sense of foreignness of Israel and Samaria in the Qumran version.

It is possible that the oblique reference to Jericho in the Apocryphon of Joshua^b (4Q379) is transferred to Samaria because of the reference to Jacob and Ephraim (frg. 22, col. ii, line 13).

Nahum's description of the bloody city in Peshar Nahum (4Q169) fragment 3–4 column ii, line 8 is applied to "the city of Ephraim" rather than to Nineveh, although whether Samaria rather than Shechem is intended is not clear. One must assume that because Samaria was the abode of the king, mentioned in line 9 of the same passage, it was among the cities of Ephraim targeted as hostile and to be destroyed.

In Peshar Micah (1Q14), it is possible that the fate of Samaria is taken as a symbol of the fate of the priests of Jerusalem, who are to be laid low because they mislead.

Unfortunately, a line may have been lost in the critical position linking the Peshet of Micah to the lemma.

In an apocryphal prophecy (1Q25 15), the text is too broken to make a definitive judgment on the role of Samaria, but the city appears to be contrasted with Zion as a place where the prophets are despised.

In Peshet Hosea^b (4Q167), the prophetic reference to the shattered calf of Samaria is taken as a symbol of the dispersion of Israel. Hosea may not have been referring to the animistic symbols at Dan and Bethel but to a similar object at Samaria itself; a reference at Kuntillet 'Ajrud to "Yahweh of Samaria and his Asherah" implies that there was a shrine there. The *peshet* shows no knowledge of this.

SAMARITANS. There is uncertainty about the beginnings of the Samaritan nation. The Samaritan view is that they are descended from biblical Israel/Ephraim, and are *shomerim*, "guardians" (of the Torah/Law), rather than *shomronim*, "Samaritans." In this case, their history begins with the divided monarchy. Comments of Church Fathers show knowledge of the Samaritans' self-assessment. The writers of the Delian inscriptions (second century BCE) were of the view that the Samaritans were Israelites, differing from the Jews only because of their affinity for Mount Gerizim. In Peshet Nahum (4Q169 3–4.iii) the people of Ephraim, i.e. the Samaritans, were still regarded as acceptable within the body of Israel.

Josephus's view of the Samaritans is based on 2 Kings 17. He used, interchangeably, the terms *Samareis* ("Samaritans") and *Samareitai* ("Samaritans"), the latter ostensibly for the settlers who replaced deported Samaritans after 720 BCE. *Choutaioi* ("Cutheans") was also used for these alleged syncretists. The current view is that Cutheans applies to pagans for whom the Herodian temple at Samaria was the central place of worship rather than to Yahwist Samaritans whose sanctuary was on Mount Gerizim. In rabbinic literature Cutheans is not specific to Samaritans. The use of the term in the scrolls (4Q550: proto-Esther^d) does not allow us to see who was intended. Josephus's reference to the Sidonians at Shechem (*Jewish Antiquities* 11.342–11.346, 12.258–12.264) applied to Phoenicians. In these circumstances Samaritan history begins in the eighth century BCE and takes us through the exilic and postexilic periods. It is marked especially by

the processes in the time of Ezra and Nehemiah, which see the Samaritan state beginning to flourish as a rival to Judah.

In establishing the Torah as state law, Nehemiah and Ezra ensured a distinct Judean national identity. The separatism forced on the heirs of Israel and Judah by the postexilic Judean leaders may well have been the major factor in the rift which led to the Samaritans becoming the Samaritan nation.

In c.400 BCE the Samaritans were still considered to be undifferentiated religiously from the Jews by the settlers in Yeb/Elephantine. By the time of the invasion of Alexander the Great (333 BCE) the political stage of the Judean-Samaritan rift was in place and religious separation was the beginning, though the Dalijeh papyri show a high proportion of Yahwist names among fourth-century Samaritans. The crucial question of whether the Samaritans had a temple seems to have been solved by excavations on Mount Gerizim and soundings through the floor of the church of Mary Theotokos. By early Hellenistic times a temple city was in existence there only to be destroyed by John Hyrcanus in the period between 128–110 BCE. It is possible that sacrificial rites continued in the ruins of this temple, for the site was not built over until the days of Hadrian.

Between the second century BCE and the second century CE we can trace a changing relationship between Jews and Samaritans and an ambivalence which is reflected in what the Qumran documents say of them. The people who worshiped at Gerizim are mentioned in 2 Maccabees (5.22–23) as part of the Jewish nation and it is evident that Judas Maccabeus, with his followers, was readily able to take refuge in Samaria. In 2 Maccabees, the Samaritans suffer with their Judean brethren as Jews.

In the first century, prejudice between Jews and Samaritans flared into open hostility under extreme provocation but the public authorities preached restraint. Another cause of contention was alleged Samaritan aloofness from the Bar Kokhba Revolt, though there is every likelihood that they took up arms against the Romans independently, for Hadrian built a pagan temple on Gerizim, and forbade Samaritans to circumcise.

The Samaritans of the first century spoke the same languages as the Judaeans, had similar lifestyles and rituals based on the commandments and moral values of the Pentateuch. While this does not, *ex post facto*, make them an offshoot of the biblical Israelites, we should appreciate their rituals, beliefs, practices, and relationships with the Jews from this standpoint. However, we should note that the *Tannaim* were divided on the issue of the Samaritans' status.

The aftermath of the Hadrianic persecutions led to the final breach between Judeans and Samaritans. The trig-

gers might well have been two factors—the expansion of Samaria at the expense of Judea and the Samaritan religious reforms and revivalist movement under the aegis of their third-century CE hero, Baba Rabba, which led to the development of heretical, rather than schismatic, Samaritanism.

At this time the Samaritans began to formulate traditions for the copying of the Pentateuch on the basis of a typology that we can see in embryo in the Qumran scrolls. Rather than creating a new text under the influence of later currents of Samaritan thought, an old tradition of the type seen in Qumran was preserved and embellished with characteristics which we come to recognize as peculiarly Samaritan. At the same time synagogues were built, a liturgy developed and Midrash schools established for the transmission of the Samaritan *halakhah*.

Qumran textual studies regularly involve comparison with texts of the genre which grew into the Samaritan Pentateuch. These pre- or proto-Samaritan texts demonstrate that their users and the Samaritans were interested in older Palestinian traditions which depended on textual variations. Neither the Samaritans nor the authors of the scrolls accepted a plurality of *Torot* (oral and written): The same view of the sanctity of the Torah, and its role as the sole Torah, seems to have pertained. Both used the Law, primarily in its plain sense, as *peshat*, and both drew for their *halakhah* on the text of the Bible and not on the oral Torah, the *Torah she be-'al peh*.

There is a risk of anachronism when making comparisons between Qumran and the Samaritans for little was recorded of early Samaritan beliefs and practices. What we have was set down at comparatively late dates except in regard to Samaritan sub-sectaries. Most of these were short-lived and were extant at the time of Qumran. Records are drawn from Abu'l Fath, the thirteenth-century Samaritan historian, but there are supporting cross-references in the writings of the Church Fathers and of Karaite and Arabic historians and theologians. From these there derives a picture of the Samaritan sectaries which is reasonably consistent with what we learn from the "minor" Talmudic tractate, *Kittim*. Comparisons result in the redating of some of the "expansionist" Samaritan readings and interpretations. It may well prove to be the case that expansions in the pre-Samaritan and Samaritan texts will be found to have nothing to do with matters of late, textual harmonization but rather reflect and preserve the halakhic traditions of those Jews who did not accept the Oral Law. In other words, they are the textual deposit of shared laws agreed by "One Torah" Jews in their common past.

Despite the friendly view of Ephraim, noted above, and the fact that the Copper Scroll (3Q15) refers to a treasure

deposited on Mount Gerizim, apparently beneath a Samaritan structure, attention should be drawn to the existence at Qumran and perhaps at Masada of literature partially, but not entirely, hostile to the Samaritans. These are the fragments identified as the Prayer of Joseph (4Q372) and what is probably a papyrus from Masada (Mas11). The occasion for these pieces appearing at Qumran is not clear but they bespeak a knowledge of the Samaritans.

ALAN D. CROWN

SAMUEL, ATHANASIOS YESHUE (1907–1995), Syrian archbishop and one of the first to acquire manuscripts from Cave 1 at Qumran. Born at Hulva near Nisibin in Turkey on 25 December 1907, Athanasios Yeshue Samuel arrived with his mother in Jerusalem in 1923. His family belonged to the Syrian Orthodox Church. He completed his studies at Saint Mark's Monastery, where he became a monk in 1927, before being ordained a priest in 1932. He became the superior of Saint Mark's Monastery in 1933. He spent six months in 1939 at the Greek Orthodox monastery on Mount Sinai where he learned to read ancient manuscripts. He became a patriarchal vicar in 1944. He was consecrated a bishop in 1946 and became metropolitan (archbishop) of the Syrian Orthodox Church for Palestine and Jordan. In 1957, he became metropolitan of the Syrian Orthodox Church of Antioch for the United States and Canada. He died on 16 April 1995, palm Sunday in the Orthodox calendar; he is buried in Saint Ephraem's Monastery in Holland.

In his memoirs, Archbishop Samuel describes how he acquired four manuscripts from Cave 1 at Qumran. It was during Holy Week of 1947 that he heard for the first time about the manuscripts from George Shaya, a member of his church. Shaya took Khalil Iskandar Shahin (Kando) to Saint Mark's Monastery, and Kando, who had brought a manuscript with him, then described the dis-

covery of the manuscripts by bedouin. On 5 August 1947 the archbishop bought four manuscripts from Kando for sixty Jordanian dinars, which was about two hundred fifty dollars. These manuscripts were, Isaiah^a (1QIsa^a), Peshet Habakkuk (1QpHab), Rule of the Community (1QS), and the Genesis Apocryphon (1QapGen).

To determine the authenticity of Kando's account, the archbishop sent George Shaya and a priest from the monastery to visit Cave 1, where the two men gathered some fragments from Daniel^{a-b} (1Q71-72) (cf. Barthélemy and Milik, 1955, pp. 4 and 150-152). Then, keen to find out about the content of the manuscripts, the archbishop approached J. Trever of the American Schools of Oriental Research, who, with the help of W. H. Brownlee, was able to photograph the manuscripts (except for the Genesis Apocryphon, which could not be unrolled) within a few days (21-24 February 1948). Shortly afterward, the manuscripts were placed in a bank in Beirut.

When he left for the United States in 1949, Archbishop Samuel caught the boat at Beirut and took the scrolls with him; but in spite of his efforts, he did not find a university willing to buy them. It was only in 1954 that he placed an advertisement in the *Wall Street Journal* and the manuscripts were purchased for two hundred fifty thousand dollars by a bank acting for Yigael Yadin. The manuscripts are now in Jerusalem and are the property of the State of Israel.

SAMUEL, FIRST AND SECOND BOOKS OF. In the Masoretic Text, *1* and *2 Samuel* form a single book, whereas the Septuagint presents them as *1* and *2 Kingdoms*. In the Lucianic tradition of the Septuagint *2 Samuel* also includes *1 Kings* 1.1-2.11. The *Book of Samuel* recounts the history of Israel under its first kings, Saul and David, as well as the rise of the monarchy and the preceding period, beginning with the birth of the prophet after whom the book is named.

Content and General Character. The history of the period is presented as an alternation of successes and almost fatal crises. After the account of Samuel's birth, his service at Shiloh, and the inception of his prophecy, the narrator tells how the Israelite defeat in battle against the Philistines leads to the extinction of the priesthood at Shiloh as the Ark of the Covenant falls into the hands of the Philistines (*1 Sm.* 4.1-22). After a middle section re-

lates the story of the divine plague, which forced the victors to transfer the Ark to the region of Beth Shemesh (Kiriyath-Jearim), and the blessings of Samuel's religious-political leadership (*1 Sm.* 5.1-7.1, 7.2-17); the narrative then turns to the rise of kingship (*1 Sm.* 8.1-12.24). The Philistine oppression is brought to an end by Saul, whose ascent to kingship is connected with his lifting of the Ammonite siege of Jabesh (*1 Sm.* 11.1-14) and his victory over the Philistines (*1 Sm.* 13.3-14.44). However, Saul's initial success is followed by his failure to execute fully the divinely imposed ban on Amalek and the prophetic announcement of his downfall (*1 Sm.* 15). In contrast to Saul's impending demise the narrator celebrates David's preliminary anointing (*1 Sm.* 16.1-13) and his gradual rise to greatness; Saul's position keeps deteriorating until his death in the battle of Jezreel (*1 Sm.* 31.1-2 *Sm.* 1.27). These are the dire consequences of Saul's disregard for the ban on Amalek. For a short period David ruled in Hebron over Judea when at the same time Saul's son Eshbaal (Ishbosheth) was king in Mahanaim. With the murder of Eshbaal, David was recognized as king over all Israel. But David's decisive successes—his victory over the Philistines, the conquest of Jerusalem, and the return of the Ark (*2 Sm.* 5-6)—are followed by his adultery with Bath-sheba, the future mother of Solomon, the willful killing of Bath-sheba's husband, Uriah, in order for David to cover his tracks (*2 Sm.* 11-12), and a series of tragedies within the royal family: the rape of his daughter by his eldest son, Absalom's mutiny and death, the consequent discord between Judah and the other tribes, and the rebellion of Sheba ben Bichri (*2 Sm.* 13-20). The narrative (*1 Kgs.* 1-2) continues recounting the appointment of Solomon as successor to the throne. This event, representing David's final success (*1 Kgs.* 1.47-48), is flawed too, for it leads to the death of the other contender to the throne, Adonijah (*1 Kgs.* 2.13-25). The disturbances troubling David's reign are explained as the outcome of his sins. The divine punishment is announced by Nathan, whose role in proclaiming divine retribution is paralleled by the promise of royal designation and dynastic stability (*2 Sm.* 7). By the same token, Saul's kingship (*1 Sm.* 9.15-10.8), as well as his rejection by God (*1 Sm.* 13.11-14; 15.10-29), was proclaimed by Samuel, who also anointed David (*1 Sm.* 16.1-13).

Critical Analysis. The scholarly discussion of the *Book of Samuel* centers on the many tensions with respect to the main heroes. The attitude to Saul ranges from admiration (*1 Sm.* 9.1-11.15) to rejection (*1 Sm.* 13.11-14, 15.10-29) and repugnance (*1 Sm.* 22); David is considered with adulation (*1 Sm.* 16-26) but also distrusted, accused of grave crimes (*2 Sm.* 11-12), and shown in his weakness (*2 Sm.* 13-15). Moreover, even though the monarchy is acclaimed as a gift from heaven (*1 Sm.* 9.15-

11.15) or halfheartedly accepted (*1 Sm.* 12.6–15), kingship is also attacked as a source of injustice and oppression, which is opposed to the freedom and the sacred institutions of the preroyal era (*1 Sm.* 8.1–17).

Critical scholarship views these tensions as the result of the differences in outlook of various traditions or underlying narrative cycles and redactional intrusions. The continuity of the narrative is explained by the assumption of redactional integration, on the part of a Deuteronomistic editor of independent cycles, a pre-Deuteronomistic prophetic editor followed by the Deuteronomist, or a series of Deuteronomistic editors (see survey by McCarter, 1980–1984). Analysis in the light of modern theories of literature highlights such issues as the representation of character, point of view, anticipation, and structural integration (Bar-Efrat, 1989; Fokkelman, 1981–1983; Polak, 1994). The language of the *Book of Samuel* sets it apart from the greater part of *1–2 Kings* and postexilic Hebrew. Among the known sources, its linguistic and stylistic character is probably closest to the Mesha inscription (850–825 BCE).

The Book of Samuel at Qumran. Among the Qumran texts the *Book of Samuel* is represented in four scrolls, in “Rewritten Bible”, as well as in an actualizing *pesher* commentary. The poem “David’s Last Words” (*2 Sm.* 23.1–7) is contained in Psalms^a (11Q5 xxvii.1), where it is followed by the list of “David’s Compositions.”

Samuel. In Cave 1 at Qumran remnants of a manuscript designated Samuel (1Q7) were discovered, which include fragments from *1 Samuel* 18 and *2 Samuel* 20.6–10, 21.16–18, and 23.9–12. This scroll is written in “mixed” orthography. Among the few variants one notes the omission of a long stretch (20.8) and some peculiar readings of proper nouns (21.18; 23.9). The Cave 1 text follows the Masoretic Text of *2 Samuel* in some important details over *1 Chronicles* (“lent[ils]” in *2 Samuel* 23.11 as opposed to “barley” in *1 Chronicles* 1.13).

Samuel^b. In Cave 4 at Qumran, three extremely important Samuel scrolls have been found, the oldest of which is Samuel^b (4Q52), attributed to the end of the third or the beginning of the second century BCE; followed by Samuel^c (4Q53), which dates from 100 to 75 BCE; and Samuel^a (4Q51), written between 50 and 25 BCE. These scrolls contain many readings that also are known from the Septuagint.

The most extensive scroll is Samuel^a, which preserves fragments of *1 Samuel* through *2 Samuel* 24. Fragments of the scroll have been published preliminarily with a photograph; other fragments have been published in part, without a photograph. This scroll’s orthography is to a large extent traditional, but also contains many Qumranic elements. One encounters both *ky* and *ky* (“for”), *lw* and *l* (“not”), *’nwky* and *’nky* (“I”) but only *’lwhym*

(“God”), *kwl* (“all”) and *dwyd* (“David”). Active and passive participles of the Qal stem regularly appear in full spelling. More baroque forms, such as *m’wdh* and Qumranic verbal forms are not extant. Samuel^a contains many readings that are different from the Masoretic Text, while equaling those of the Septuagint. Hence these readings represent the ancient Hebrew text reflected by the Greek version. For example, *1 Samuel* 1.23 in Samuel^a reads, “only the Lord establish what proceeded out of your mouth,” against the Masoretic Text’s “only the Lord establish his word.” In Samuel^a *1 Samuel* 1.24 reads “with a three-year-old [bullock]”; the Masoretic Text reads “with three bullocks.” Samuel^a reads (*1 Sm.* 2.17) “for they (namely Eli’s sons) dealt contemptuously with the offering of the Lord,” while the Masoretic Text says “for the men (namely the worshippers) dealt contemptuously with the offering of the Lord.” *Second Samuel* 13.21 in Samuel^a reads “[But when king David heard of all these things he was very wroth but he did not grieve the spirit of Annon his son for he loved him for [he was] his first-born],” against the Masoretic Text’s “But when king David heard of all these things he was very wroth (the remaining clauses were omitted by error). Some readings in Samuel^a are similar to the text of *Chronicles*. For example, in it *2 Samuel* 6.2 reads “to Baalah, that is Kir[iath-Jearim, which belongs to] Judah” against the Masoretic Text’s “Baale-Judah,” but similar to *1 Chronicles* 13.6: “to Ba’alatah to Kirjath-Jearim, which belongs to Judah.” The scroll presumably preserves the text on which the author of *Chronicles* based his narrative.

Scholars have tried to define the character of Samuel^a in terms of its affinity with the Septuagint and with the Masoretic Text of *Chronicles*, but the issues are rather complicated. The *Book of Samuel* in the Septuagint is not uniform: part of the text of the Septuagint reflects the Old Greek version and part, the *katge* revision (*2 Sm.* 10–*1 Kgs.* 2.11). In the latter sections the manuscripts of the Lucianic recension preserve many readings of the Old Greek (proto-Lucianic variants). Some ancient variants are preserved in the other sections as well, at times supported by Samuel^a against the main text of the Septuagint. Samuel^a contains some readings that can only be described as variant developments of the reading reflected by the Septuagint; some important variants in the Qumran scroll are not represented in the Masoretic Text or the Septuagint but are reflected in the Greek paraphrase of Josephus’s *Jewish Antiquities* (as well as many other variants that also are reflected by the Septuagint [See Josephus]). The text of the Old Greek used by Josephus was probably even closer to the Qumran scroll than to the Septuagint in its present state. Attempts to minimize the text-critical relevance of the scroll as exegetical and thus secondary vis-à-vis the Masoretic Text seem less plausible.

The scholarly discussion of these problems has passed through a series of stages. At first Cross proposed a solution based on the hypothesis of "local texts," which presumes that during the postexilic period the biblical text developed in three geographically distinct branches, namely Babylonian (resulting in the Masoretic Text), Egyptian (reflected by the Septuagint), and Palestinian (represented by the Samaritan Pentateuch and the text underlying *Chronicles* and Samuel⁴). The Egyptian text is viewed as the more pristine one, out of which the Palestinian text evolved, containing many secondary developments, such as duplicate and explanatory readings. E. Tov has criticized this view in general because at Qumran all text forms are found together, and the Septuagint appears to have been translated from Palestinian manuscripts (Tov, 1992, pp. 186–187). Moreover, unlike the Qumran texts of *Samuel*, the Samaritan Pentateuch does not exhibit any specific affinity to the Septuagint, whereas its connection with the Masoretic Text is obvious (Polak, 1992).

Concerning Samuel⁴, the local texts hypothesis has been criticized for being based on insufficient data and for disregarding pericopes (that is, sections) in which divergence exists between the Septuagint and the scroll (e.g., 2 *Sm.* 3–5; Tov, 1980). In view of these difficulties it has been argued that the witnesses to the text of *Samuel* are independent, and that the apparent closeness between the Septuagint and the scroll results from the preservation of primary readings not extant in the Masoretic Text; from the general nature of all early biblical texts "which relate to each other in an intricate network of agreements and differences" (Tov, 1980, 1992, p. 160); and from tendencies that are characteristic of the transmission process such as harmonizations (Tov, 1992, p. 261). But statistical analysis of the available data (Polak, 1992; Tov, 1992, pp. 30–33), however, indicates an undeniable affinity between the Septuagint and Samuel⁴: out of more than 180 simple variants (disregarding complex redactional phenomena, long stretches, and so forth), more than 120 are common to the Septuagint and the scroll. Accordingly, both witnesses seem to belong to one branch of the tradition, but the Septuagint reflects an older state of this text, whereas Samuel⁴ represents a further development of it.

Since the variants characteristic of this branch include many explanatory readings, it appears to embody a recension of an ancient Hebrew text, which makes itself felt in *Chronicles* and not in the Masoretic Text of *Samuel* (Polak, 1992, pp. 244–255). The most obvious example of a secondary variant that is common to the Septuagint and the scroll is the reading of the name Mephibosheth for the surviving son of Saul, Ishbosheth (Eshbaal according to 1 *Chr.* 9.39). Adjustment to Pentateuchal ritual is evi-

dent in the reading of 1 *Samuel* 1.24, where both the Septuagint and the scroll add "bread" to the list of provisions Hannah takes with her (*Lv.* 7.11–12). But the Samuel⁴ and Septuagint variants also include many primary readings that have not been preserved in the Masoretic Text. Among these is the reading of 1 *Samuel* 2.20: "and Eli would bless Elkanah and his wife and say 'The Lord shall repay the seed of this woman for the gift which was given to the Lord,'" against the Masoretic Text's "for Eli would bless Elkanah and his wife and say 'The Lord shall give thee seed of this woman for the gift which was given to the Lord.'"

Many of the independent readings of Samuel⁴ are to be considered secondary, but some are better viewed as primary. Two instances even affect the overall structure of the narrative. The first example relates to the Ammonite war. According to the Masoretic Text and the Septuagint this war started with the siege of Jabesh (1 *Sm.* 11.1) by Nahash, called "the Ammonite." Samuel⁴ opens with an additional pericope concerning the conquest of the territory of Gad and Reuben by "Nahash the king of the sons of Ammon," narrating how he put out the right eye of all the men, apart from seven thousand men who fled to Jabesh. "A month" later Nahash laid siege to this town. A similar account is offered by Josephus, with slight variation (*Antiquities* 6.68–71 [5.1]). This additional pericope seems ancient, for it does not contain signs of late Hebrew (Cross, 1983). In view of the unprecedented national disgrace of two tribes being subjugated and maimed (probably the reason for its omission in the Septuagint and the Masoretic Text), it is better considered original. Saul's is the greater victory: he did not merely save one town but defeated a most dangerous enemy.

A second example of a primary reading in Samuel⁴ is the introduction of Bath-sheba's unfortunate husband, Uriah, as the "armour-[be]arer of Joab" (2 *Sm.* 11.3), the same way in which he is introduced by Josephus in *Jewish Antiquities* (VII 7.131 [7.1]). This description results in a parallel between Uriah, close to Joab, who brings about Uriah's death by David's orders, and Absalom, David's son, who is killed by Joab in contravention of the king's orders and at the hand of "ten of his servants" (2 *Sm.* 18.14–15). Thus the longer reading of the scroll, which fits the best expository style of classical Hebrew, considerably strengthens the idea of divine retribution in the David narrative (Polak, 1994, pp. 133–136).

These two examples affect our understanding of the structure and redaction-history of the *Book of Samuel*. Of great interest for understanding the development of Israelite historiography is the long addition at 2 *Sm.* 8.7. After the phrase "[and brought them to Jerusa][em]" the scroll reads "and they also were ([aken by Shishak, the king of Egypt as he w]ent up to Je[rusalem] in the days

of Rehoboam son of Solo[mon. . .],” which is similar to the Septuagint (cf. *1 Chr.* 18.8). This addition indicates that the tendency toward integration of the histories of David and his successors, which is obvious in the Septuagint and *Chronicles*, was already present in the Hebrew textual tradition and may be preexilic.

Samuel^b. The Cave 4 scroll Samuel^b, preserved in one part of a column and seven fragments, contains parts of *1 Samuel* 16.1–11, 19.10–17, 20.26–21.10, and 23.9–17. It is of utmost interest because of its early date (end of the third century or beginning of the second century BCE). There are signs of correction by a second scribe (*1 Sm.* 23.9). The orthography often is defective: for example, *qmtw* (“his length”), and *hhlm* (“the window”). The spelling often fits the norms of the Masoretic Text: *sh’wl* (Saul), *lhkw[tw]* (“to hit him,” in the Masoretic Text *lhktw*), *mlhrysh* (“was planning”), and *yymt* (“he will be put to death”). Qumranic orthography is not attested: “David” is written as *dwd*. Thus the orthography seems similar to that of the Masoretic Text in the Pentateuch or even slightly more conservative, for example, in the word *lmh*, “his lad” (*1 Sm.* 20.38; the Masoretic Text has *lm’r*), where the letter *he* as in ancient (epigraphic) orthography, indicates the masculine suffix. The use of this word suggests an ancient state of the text. Another example of the archaic lexicon is the verb *wyphz* (“he jumped up”; *1 Sm.* 20.34; a similar verb is reflected by the Septuagint) for the simple *wyqm* (“he stood up”) of the Masoretic Text. The reading *’hr ’pd* (“behind the ephod,” *1 Sm.* 21.10, for *’hry h’pd* of the Masoretic Text) without an article, suggests the archaic style.

Samuel^b shares many readings with the Septuagint, for example, the designation of Samuel as “the seer” (*1 Sm.* 16.4). But it shares almost as many significant readings with the Masoretic Text rather than the Septuagint, such as “on the second day of new moon” (*1 Sm.* 20.34) against “on the second of the month” in the Septuagint. Samuel^b and the Masoretic Text appear to imply a two-day feast for the New Moon, whereas the Septuagint records a one-day New Moon followed by an ordinary day. In some cases it is impossible to decide whether the reading of the scroll fits the Septuagint or the Masoretic Text; for example, 20.26, “for he has not been purified/has not purified himself.” Some apparent correspondences are dubious. For example, after the priest’s warning to abstain from women (“[if the soldiers] [on]ly [abstained] from women” [Masoretic Text 21.5]), the scroll has an additional clause, which completes the sentence “then you may eat of it,” while the Septuagint reads “if the soldiers abstained from women, they/one may eat.” The number of passages that are at variance (*1 Sm.* 20.29, 20.31, 20.32, 20.36, 21.5, 21.9) seems significant. Hence Samuel^b is best considered independent of both the Masoretic

Text and the Septuagint (Tov, 1980, p. 64); the readings it shares with the Septuagint most probably represent the ancient text against the Masoretic Text.

Samuel^c. This scroll, preserved in one fragment (*1 Sm.* 25.30–32) and the remains of three columns (*2 Sm.* 14.7–15.15), was written by the scribe of Rule of the Community (1QS). [See Rule of the Community.] The orthography is typically Qumranic, including such spellings as *z’wt* (“this”), *’bdkh* (“your servant”), *[m]wdh* (“very”), and *wy’wmr* (“and he said”). The variants are for the most part insignificant and do not indicate any special relationship to either the Masoretic Text or the Septuagint (Tov, 1980, pp. 58–62). Those passages of Samuel^c that overlap Samuel^a share one variant against the Masoretic Text (Ulrich, 1979, p. 20). Because of this independence, it is important to note two variants that are common to the Septuagint and the scroll. At *2 Sm.* 14.30 the Masoretic Text ends with the note of the burning of Joab’s field. The Septuagint continues, recounting how the latter’s servants informed him of the mishap, with their clothes rent. This addition is also present in the scroll: “[and the s]ervants of Joab [came] to him, with [their clothes] rent [and said ‘the ser]vants of Absalom [have set] the field on fire.” The authenticity of this sentence is warranted by two independent witnesses. But Joab’s servants are styled *[y]ldy* (“lads”), as in late Hebrew. This probably is a late adaptation of an ancient reading. At *2 Samuel* 15.12 the scroll and the Septuagint read “and he se[nt] [and c]alled for Ah[i]thophel,” whereas the Masoretic Text has one verb only “and he sent for Ahithophel”.

Rewritten Bible. The Vision of Samuel (4Q160), written in “Qumranic” orthography and attributed to approximately 100 BCE, consists of three text sentences: a text on Samuel, comparable to *1 Samuel* 3.14–17 (frag. 1); a prayer for the deliverance of Israel, including allusions to *Psalms* 40.3 (frag. 3–6); and part of a monologue, probably by Samuel (frag. 7). It is uncertain whether all these fragments really form a single text. If they do, it constitutes a “Samuel Apocryphon.” The prayer could be attributed to Samuel, in view of the similarity to the end of Hannah’s prayer (*1 Sm.* 2:10–11). Fragment 7 may speak of Samuel’s service to Eli (4Q160 1.2) and his preferring to keep to his proper place (4Q160 1.4) and not to aspire to riches (cf. *1 Sm.* 2.26), perhaps indicating the proud isolation of Qumran/Essene leadership from the Hasmonean high priesthood. Fragment 1 contains many variants vis-à-vis the Masoretic Text and the Septuagint. For example, the Masoretic Text (*1 Sm.* 3.5) says “and he lay, Samuel, until morning” (*wyshkb shmwl ’dbqr*), a text also reflected by the Septuagint, but Visions of Samuel says “and Samuel was lying before Eli” (*[w]shmwl shwkb l’pny ’ly*).

In the fragment the prophecy is followed by the asser-

tion that "Samue[] [h]eard the wor[ds]," a sentence not present in either the Masoretic Text or the Septuagint. Hence this fragment represents "rewritten Bible" or a heavily revised biblical text. [See Rewritten Bible.]

Florilegium. This scroll (4Q174) contains a series of biblical passages with Messianic actualizing interpretation. The first preserved column (actually the third column) contains quotations from the dynastic promise to David (2 Sm. 7) with commentary (4Q174 i.1-13) in which this prophecy is applied to the Davidic Messiah and the Temple. Second Samuel 7.10 is quoted as promising that Israel will not be oppressed any more by the enemy (4Q174 i.1-2). Verse 11a α is taken to prove that the eschatological Temple, built by God himself, will not be polluted by strangers (4Q174 i.4-7) while verse 11a β is interpreted as promising the end of the "villains" who suppress the "sons of light" (4Q174 i.7-9). The promise of the "Glorious Scion of David," who is to stand at the side of the "Interpreter of the Torah" at the End of Days to save Israel (4Q174 i.10-13; cf. IQS ix.9-11), is presented by means of a condensed quotation of verses 11b-14a, in which verses 13a and 14b are not represented: this text deals not with the human temple (verses 13a) but with the divine one; not with a fallible king (verse 14b) but with a divinely inspired messiah. [See Florilegium.]

FRANK POLAK

SANBALLAT. Referring to a leader of Samaria, the name *Sanballat* (which means in the original Akkadian "Sin [the moon-god] restored to health/sustained alive") appears in four different sources, two of which have been known from ancient times in traditionally transmitted texts, and two from modern discoveries of papyri. There has been much scholarly debate over how many Sanballats are attested, and which if any of the Sanballats attested in our sources can be correlated.

In the Book of Nehemiah. The Sanballat of the *Book of Nehemiah* is first introduced as "Sanballat the Horonite" (Neh. 2.10). He is the chief opponent of Nehemiah, associating himself with Tobiah the Ammonite official and

Geshem/Gashmu the Arabian (*Neh.* 2.19, 4.1, 6.1–2, 6.5–6, 6.12, 6.14) to try to block the rebuilding of Jerusalem's city walls. He is apparently the leader of Samaria (cf. *Neh.* 4.2), although he is never given an administrative title. "Horonite" is usually taken to be a gentilic from Beth Horon (five miles north of Jerusalem), although a connection with Horonaim in Moab has also been suggested (see *Neh.* 13.1–3; Josephus, *Jewish Antiquities* 11.174). Several incidents in the book indicate that Sanballat (like Tobiah the Ammonite) had close ties to the leadership of the Jewish community in Jerusalem (*Neh.* 6.10–14, 6.17–19). In particular, "one of the sons of Jehoiada, son of the high priest Eliashib, was the son-in-law of Sanballat the Horonite" (*Neh.* 13.28).

Sanballat the Horonite was a contemporary of Nehemiah. There is some scholarly dispute as to whether to place Nehemiah's first term within the reign of Artaxerxes I (445–433 BCE) or Artaxerxes II (384–372 BCE), although a majority favors the former.

In the Elephantine Papyri. A Sanballat (*sn'blt*), in this case explicitly identified as "governor of Samaria," is mentioned at the end of a draft of an Aramaic letter on papyrus dated to the equivalent of 25 November 407 BCE, and discovered at Elephantine. It is a letter from the communal leader Jedaniah addressed to Bagohi governor of Judah asking his assistance in rebuilding the temple of YHW in Elephantine. At the end of the letter, Jedaniah mentions that he sent a similar letter to "Delaiah and Shelemiah sons of Sanballat governor of Samaria." Although nominally still governor of Samaria, this Sanballat must be at least middle-aged since his sons are evidently grown up and acting to some extent in his stead. There is also extant from the same period a joint memorandum from Bagohi and Delaiah granting permission to the Jewish community in Elephantine to petition Arsames the satrap of Egypt to rebuild the temple in Elephantine. Thus Delaiah must have held real power either as acting or full governor of Judah. It is thus quite plausible to correlate this Sanballat with the contemporary of Nehemiah in the reign of Artaxerxes I.

This evidence also provides grounds for assuming that the Sanballatid family enjoyed some positive relations with the Jewish community in Jerusalem. Both of Sanballat's sons bear Yahvistic names. Jedaniah would not have given the governor of Judah notice that he had made the same request to Sanballat's sons unless he felt that it helped his case. The joint memorandum speaks for itself.

In the Samaria Papyri. A Sanballat (*sn'blt*) appears as a patronymic of a witness listed at the end of one of the Samaria papyri from Wadi ed-Daliyeh (WDSP 11 front 13). [See Daliyeh, Wadi ed-: Written Material.] The name of the witness is broken, but ends with the letters *vav-ayin*, hence probably Yaddua' or Yeshua'. According to

the conventions for these documents, the position where Yaddua'/Yeshua' bar Sanballat is listed probably indicated that he was the current governor of Samaria. The text on the back is dated in the reign of Artaxerxes. The document is certainly to be dated to the fourth century BCE, probably sometime between 375–338. Sanballat also appears as the patronymic of the governor of Samaria on a Hebrew sealing (Wadi Daliyeh Seal 22). This time, too, the name of the governor is broken. Only the last three letters, *yod-he-vav*, are preserved. Clearly, this has to do with a Sanballatid dynasty. So it is likely that a Hananiah who appears as governor in several of the Samaria papyri belongs to the same family. It is quite possible that the Sanballat of the Samaria papyri is the grandson of the Sanballat who appears in the Elephantine papyrus. This supports the presumption that the family practiced papponymy (naming a grandson after the grandfather). Further, the Yahvistic name of Sanballat's son on the sealing and the use of Hebrew itself provides some further support to the connection the Sanballatid family felt with the Jewish community in Jerusalem.

In Josephus. Josephus in his *Jewish Antiquities* mentions a Sanballat (*Sanaballetes*), an old man in the time of Darius III (*Antiquities* 11.311), of Cuthaeen race (cf. 2 *Kgs.* 17.24; *Antiquities* 9.290), who was made governor by Darius III, and whose daughter Nikaso was married to a priest Manasseh, brother of the high priest Jaddua son of Johanan (*Antiquities* 11.302–303). This Sanballat promised his son-in-law with the consent of Darius that he would make him high priest of a temple to be built on Mount Gerizim, similar to the temple in Jerusalem (*Antiquities* 11.310–311, 11.315). When fortune appeared to be going against Darius, Sanballat switched sides to support Alexander, securing at the same time Alexander's support for a temple on Mount Gerizim with Manasseh appointed as high priest over it (*Antiquities* 11.321–324, 11.342). On the one hand, our knowledge of a mid-fifth century and an early fourth century Sanballat increases the plausibility of a third Sanballat in the period of transition from Darius III to Alexander the Great. On the other hand, before Josephus's narrative can be construed as positive evidence for a Sanballat III, its sources and claims to historicity must be critically sifted. Such criticism raises a host of doubts about a historical connection between a Sanballat, Alexander the Great, and a Samaritan temple on Mount Gerizim (cf. Grabbe; Schwartz; Williamson). Josephus's knowledge of the latter part of the Persian period is very vague. He seems to have known only two of the three kings named Artaxerxes and two of the three Dariuses. He mentions only one Sanballat, and not in connection with opposition to Nehemiah. The Samaritan temple on Mount Gerizim may not have been founded until after 200 BCE (Eshel, 1996, p. 360). Schol-

ars have long been suspicious of the coincidental accounts of intermarriage between a daughter of Sanballat and a son/brother of a Jerusalem high priest named Jehoiada/Jaddua who was subsequently banished from the Jerusalem cultus. Josephus does not demonstrate a direct knowledge of the relevant passage in *Nehemiah* 13.4–29.

The Sanballatid Dynasty. Our four sources provide evidence for a Sanballatid family dynasty holding the governorship of Samaria during the Persian period. Many scholars argue that since Nehemiah's opponent is identified not by a patronymic, but with the gentilic "the Horonite" he is likely to have been the founder of the dynasty. Appealing as this supposition is, it could be pointed out that Sanballat's allies, Tobiah the Ammonite and Geshem the Arabian are cited in the same way. The narrator's purposes (and the possibility that Horonite refers to Horonaim) must also be taken into account. With these caveats the dynasty can be reconstructed plausibly as:

- Sanballat I (the Horonite) (of the *Book of Nehemiah*; third quarter of the fifth century)
- Delaiah son of Sanballat I (of the Elephantine papyrus; end of the fifth century)
- Sanballat II (of the Samaria papyrus; early fourth century)
- Yaddua/Yeshua (of the Samaria papyrus; second quarter of the fourth century)
- Hananjah (on a Samaria papyrus dated 4 March 354 BCE)
- Sanballat III (?) (of Josephus; last half of fourth century)

DOUGLAS M. GRÖPP

SAPIENTIAL WORK. A large wisdom text sometimes referred to as Sapiential Work A appears in fragmentary form in six Qumran manuscripts: wisdom apocryphon (Sapiential Work A¹) (1Q26), Sapiential Work A^d (= verso

of 4Q414) (4Q415), Sapiential Work A^b (4Q416), Sapiential Work A^c (4Q417), Sapiential Work A^e (4Q418), and Sapiential Work A^f (4Q423). That these six manuscripts represent copies of the same work is indicated by many textual overlaps among them (for example, 4Q418 1–2 equals 4Q416 1). The text designated Sapiential Work B (4Q419) may not be a wisdom text at all. It was related to Sapiential Work A on the basis of a possible textual overlap (4Q416 2.ii.2–3 and 4Q419 8.7). But the style and content of the two works are very different, and the "overlap" may only reflect independent uses of *Deuteronomy* 15.7.

The ancient title of Sapiential Work A is unknown. Most of the extant fragments convey the instructions of a wise and experienced sage to someone who needs and wants to learn the ways of wisdom. The person addressed is often referred to as the "understanding one," or at least one who is coming to understand through instruction. A putative Hebrew title that would fit the work's content would be "The Instruction for One Who Understands" (*Musar le-Mevin*). The manuscripts are all Herodian in their script; that is, they are from the late first century BCE and early first century CE. The fact that six copies of the work were found at Qumran and that one (1Q26) was part of what was perhaps a "special collection" in Cave 1 suggest that it was regarded as important there.

Sapiential Work A is a wisdom instruction expressed in small units and put together without much apparent concern for overall logic or thematic progression. In form and content it is similar to *Ben Sira* and parts of *Proverbs* (especially, *Prv.* 22.17–24.22). All the manuscripts are in Hebrew, which undoubtedly was the original language. Some of its language is paralleled by more explicitly sectarian works from Qumran, such as the Rule of the Community (1QS) and *Hodayot* (1QH) from Cave 1. [See *Hodayot*; Rule of the Community.] But its instructions about business dealings, social relations, and wife and family presuppose a "secular" life setting (perhaps as in the Damascus Document). [See Family Life; Deeds of Sale.] There is an extensive vocabulary for poverty, which appears more to symbolize human limitations and mortality than to express a religious ideal. The expression *raz nihyeh* ("the mystery that is to be/come") occurs at key points and refers to a body of knowledge or a book that conveys wisdom about creation, ethics, and eschatology. [See Mysteries; Mystery.] The most puzzling linguistic feature is the otherwise unknown word *ot*, which appears sometimes with reference to God and other times with reference to humans.

The most extensive parts of Sapiential Work A (4Q416 2, 4Q417 1 and 2, and their overlapping texts) are wisdom instructions with second-person masculine singular imperatives and negative admonitions ("you shall not . . ."),

punctuated by calls to the hearer ("O understanding one") and reminders of his "poverty" ("you are poor"). The main topics in these well-preserved sections are possessions, social relations, and family matters. There are frequent exhortations to study and meditate on the "mystery that is to be/come," which is the key to knowledge about creation, ethics, and eschatology. There are also mentions of heavenly tablets and books associated with the eschatological judgment (4Q417 2.i.15–17). [See Eschatology.]

Because 11 has a large right-hand margin, Sapiential Work A^b 1 may mark the beginning of the work. If so, it places the instructions that follow in a cosmic and eschatological framework. Several of the larger fragments in Sapiential Work A^d (4Q415 55, 69, 81, 126, 127) also concern matters of creation and judgment as the proper contexts for righteous action in the present. At least two fragments (4Q418 103 and 4Q423 2) use agricultural images; whether they are intended literally or metaphorically is not clear. One text (4Q415 2.ii) appears to address a woman—very likely the wife of the person being addressed in most of the work—in second-person feminine singular forms, though the content of the advice to her reflects the patriarchal assumptions of the text as a whole.

As a wisdom instruction, Sapiential Work A belongs with other such texts found at Qumran (Sapiential Work 4Q185, Words of the Sage to the Sons of Dawn [in Cryptic A Script] 4Q298, Mysteries^a 4Q299–301, Sapiential Work 4Q424, and Wisdom Text with Beatitudes 4Q525). There also may be some connections with the other (extremely fragmentary) manuscripts classified as sapiential on the basis of their vocabulary (Sapiential Work F 4Q307; sapiential fragments [?] 4Q308; Sapiential Works 4Q408 and 410–412; Sapiential Work C 4Q425; Sapiential Work 4Q426; Sapiential Works 4Q472, 475, and 476; The Two Ways 4Q473; Text Concerning Rachel and Joseph 4Q474; Sapiential Work^{a,b} 4Q486–487; and Sapiential Hymn 4Q498). Although Sapiential Work A shares some vocabulary and concepts with such sectarian works as the Rule of the Community and *Hodayot*, it contains none of the distinctively sectarian elements and organizational features: the community as the *yahad*, the Teacher of Righteousness, the solar calendar, and so forth. It does, however, share a whole phrase with one of the poems in the *Hodayot*: "according to their knowledge they shall be glorified, each one more than his neighbor" (4Q418 55.10 = 1QH xviii [x].27–28). Moreover, the frequent mentions of the "mystery that is to be/come" (see 1QS xi.3–4 and Mysteries 1Q27) and the allusion to the "Book of Meditation" (see 1Q28a i.7 and 4Q417 2.i.7) serve to link this work with other sectarian works found in Cave 1 at Qumran. Since the work presumes a "secular" lifestyle, it may

reflect a pre-Qumranic phase in the movement's history. Or it may have been intended for Essenes more fully integrated into Jewish society than the Qumran people were. [See Community Organization; Essenes.]

There are parallels to parts of *Ben Sira* (also known as Qumran) in the treatments of loans and surety, parents and wives, and creation as a theological horizon for wisdom instruction. [See Ben Sira, Book of.] Some parts of *1 Enoch* (well attested at Qumran) are similar in their insistence on the heavenly esoteric nature of God's wisdom and on eschatology as the framework for righteous human activity, and in their hope for the coming age of wisdom (*Sir.* 5.8) and righteousness (*1 En.* 92.4). There are some analogies between the "mystery that is to be/come" and the similarly elusive "kingdom of God" in the Synoptic Gospels (see *Mk.* 4.11).

DANIEL J. HARRINGTON

SARAH or Sarai, wife of Abraham and mother of Isaac, according to the patriarchal narratives in *Genesis*. She functions as an important person in the Abraham cycle, since it is through her children with Abraham that God's promise to Abraham is reckoned. Thus, in *Genesis* 18, the forthcoming miraculous birth of Isaac is announced not only to Abraham, but also to Sarah, and it is her reaction—laughter—that gives Isaac his name. Sarah also plays the leading role in the story of Hagar (*Gen.* 16, 21), choosing to give Hagar to Abraham in order that Abraham might have a son and later driving Hagar and her son Ishmael away from the family group. Sarah's beauty plays an important role in Abraham's story as well: Twice she is taken as a wife by another man (the Pharaoh of Egypt, Abimelech, King of Gerar) on account of her beauty and is rescued from this threat to her sexual purity by God. In both stories (*Gen.* 12.10–20, 20), Abraham passes Sarah off as his sister in order to save himself;

Genesis 20.12 explains that she is indeed his half-sister, sharing a father but not a mother.

Sarah reappears several times in the Apocrypha and pseudepigrapha in her role as Abraham's wife and Isaac's mother. In *Jubilees* (second century BCE) she merely reprises her role in *Genesis* (although Abraham's deception is omitted). In the *Testament of Abraham* (first to second century CE), she and Isaac appear at the beginning of the story in a charming portrait of family life, and it is she who recognizes Abraham's mysterious guests as angels (this agrees with the rabbinic statement in the *Tanhuma* to *Exodus* that Sarah has prophetic powers). In the epistles of Paul (*Rom.* 9.6–9, *Gal.* 4.21–31; cf. *Heb.* 11.11), Sarah's role as the chosen mother of Isaac (which Paul interprets allegorically) again comes to the fore. Elsewhere in the New Testament, Sarah is the ideal model of the obedient wife (*1 Pt.* 3.6).

In the Qumran literature, Sarah appears in the Genesis Apocryphon (1QapGen 1Q20), a late-second-century BCE Aramaic text from Cave 1, a retelling of the biblical book of *Genesis*. Although the text is fragmentary, the story of Abraham and Sarah's descent into Egypt is preserved, and it contains an extended poem praising the beauty of Sarah (col. 20). This emphasis on Sarah's beauty continues in rabbinic literature, where, in *Genesis Rabbah* 40.4, Sarah is described as so beautiful that Abraham hides her in a chest when they cross into Egypt. The Genesis Apocryphon also mentions Sarah's great wisdom—this is in keeping with the tendency in the Second Temple period to elevate the matriarchs and patriarchs to an almost superhuman stature. However, her role as the wife of Abraham (and, we assume, if the text were preserved, as Isaac's mother) is still primary.

A second Sarah appears in the apocryphal literature found at Qumran. This is the Sarah mentioned in the book of *Tobit* 6–14 (late third century BCE) as the daughter of Raguel and the eventual bride of Tobias. She is beset by an evil demon who has killed off her seven bridegrooms on her wedding nights; Tobias rescues her from the demon with the help of the archangel Raphael. In the four Aramaic copies and the one Hebrew copy of *Tobit* that were found in Cave 4 (4Q196–200), the role of Sarah is unchanged.

[See also *Genesis Apocryphon*; *Tobit*, Book of.]

SCRIBAL PRACTICES. The documents from the Judean Desert constitute the largest corpus of texts in non-lapidary scripts providing information about scribal habits in early Israel relating to biblical and nonbiblical texts. These practices should be compared with other contemporary and earlier (prior to the third century BCE) material in Hebrew and Aramaic in nonlapidary texts, that is the Elephantine papyri and other Aramaic documents from the fifth and fourth centuries BCE. The later texts are very significant for this analysis, but at the same time they provide limited relevant information, and they pertain mainly to Egypt; therefore the documents from the Judean Desert remain the major source for our knowledge of scribal habits for Hebrew and Aramaic texts from ancient Israel prior to the early Middle Ages (the first documents from the Cairo Genizah). Comparison of these practices with scribal habits of earlier cultures in the Middle East and with contemporary Greek practices is mandatory, but because they were written in different languages and often refer to different materials, such a comparison yields only partial results.

An analysis of the scribal practices pertains to technical aspects of the copying of the texts, many of which have implications for wider areas, such as the provenience of the scrolls, the relation between individual manuscripts, the composition and contents of the texts, and their textual transmission.

A description of the scribal practices reflected in the documents found in the Judean Desert is more encompassing than the name of the geographic area implies. For many of the documents found in the Judean Desert had been copied elsewhere in Israel, so that the documents and scribal practices reflected in them represent scribal practices not only of the persons who lived and wrote in the Judean Desert, but to an even greater extent those of the scribes of Palestine as a whole.

The Judean Desert documents, in the Hebrew, Aramaic, Greek, and Latin languages, as well as in the Nabatean script and three different cryptic scripts, reflect a variety of scribal systems.

Little is known from external descriptions about the copyists who wrote the texts, nor can we distinguish easily between the scribal traditions handed down to them and their personal input. [See Scribes.]

With the aid of paleographical analysis different scribal hands can be identified in individual documents, especially large documents. Thus, a second scribe started his work at the beginning of column xxviii of Isaiah^d from Cave 1 at Qumran (1QIsa^d); hereafter 1QIsaiah^d. See the different hands in Peshet Habakkuk (1QpHab) and Ho-

dayot^a from Cave 1 (1QH). Even as small a scroll as Apocryphal Psalm and Prayer (4Q448) was written by two different scribes.

The scribal practices embedded in the documents found in the Judean Desert reflect the writing in the period under review, but at the same time they reflect continuing writing styles of earlier periods when scribal practices developed for literary and documentary texts on papyrus and parchment as well as for inscriptions on various types of material. Several details that the scribal traditions of the documents from the Judean Desert have in common with Aramaic documents of the fifth century BCE lead us to believe that many documents from the Judean Desert continue earlier traditions of writing in the square script (division of the text into sense units, the *paragraphos* and other scribal signs, etc.). To a lesser degree scribes were influenced by scribal traditions of the Alexandrian Hellenistic tradition (note especially some correction procedures).

Some of the scribal practices are closely related to the material used. That is, the different use of material is reflected by some of the different scribal practices. Thus, though papyrus texts were not ruled, ruling of lines was the normal practice in literary texts written on parchment, as it was in earlier times in lapidary inscriptions, both horizontally (indicating lines) and vertically (indicating the beginnings and sometimes also the ends of columns). The ruling may have been executed by the scribes themselves, but more likely it was inserted, often with the aid of guide dots at the beginnings and ends of lines, by the persons who prepared the parchment.

In the great majority of the texts from the Judean Desert, the letters were suspended from below the horizontal lines. In the Qumran texts the letters sometimes are consistently written slightly below those lines; for example, in the Hodayot-like text from Cave 4 at Qumran (4Q440). In other instances, however, scribes did not pay attention to the guide lines. In work with a citation of Jubilees? (4Q228) and Prophecy of Joshua (4Q522), for example, the letters are written irregularly between the lines, on and under the lines, and also through them. In Mysteries (1Q27) the words more frequently are written on the lines than under them.

Sense Divisions. Breaks in the text, whether between words, verses, paragraphs or larger content units, and books are indicated in a variety of ways.

Words. In most texts written in the paleo-Hebrew script (but not paleo-Deuteronomy¹ [4Q45]) most words were separated by dots. Some dots were simply forgotten, while at the ends of lines they often were purposely left out (see paleo-Exodus^m [4Q22] and paleo-Leviticus^a [11Q1]). Words were separated by single spaces in texts written in the square script, but in some texts exceptions

were made for small words that were joined to the next word.

Verses. As a rule no extra spaces were used to indicate the end of smaller units, namely sentences or units that subsequently became verses in the biblical text. However, clear evidence for a division into verses (indicated by *di-cola*) is preserved for Targum of Leviticus (4Q156), ascribed to the second or first century BCE.

Larger Content Units. In the great majority of the biblical and nonbiblical Qumran texts the separation between larger content units was indicated by a system of spacing: a space in the middle of the line denoted a minor subdivision ("closed section" in the Masoretic tradition of the Bible), and a space extending from the last word in the line to the end of the line indicated a major subdivision ("open section"). This system (cf. B.T., *Shab.* 103b; B.T., *Ber.* 12b; *Sof.* 1.15), which prior to the discovery of the Qumran texts often wrongly was considered to be characteristic of the transmission of only the Hebrew scriptures, actually was used for the transmission of many texts in antiquity, sacred and nonsacred, Hebrew, Aramaic, and Greek. In addition to the indication of spacing, several texts also (inconsistently) used a paragraph sign to indicate new paragraphs (see, for example, the War Scroll from Cave 1 [1QM]). Apart from these methods, the beginning lines of some sections were indented, and some major content breaks were indicated by completely blank lines, such as between individual psalms in Noncanonical Psalms A-B (4Q380-381), and between psalms in Psalms^a from Cave 11 at Qumran (11Q5) as well as between stanzas in Psalm 119 in Psalms^a (4Q89).

Books. In scrolls containing more than one biblical book, spaces were left between the books (the Minor Prophets scroll from Wadi Murabba'at [Mur 88]; paleo-Genesis-Exodus¹ [4Q11]).

Layout of the Text in Poetical Sections. A special arrangement for the writing of the poetical sections is known mainly for several biblical texts (including *Ben Sira*) and only for one nonbiblical composition (Messianic Apocalypse [4Q521 2.ii]). This special layout is evidenced for only two of the poems in the Pentateuch (*Ex.* 15; *Dt.* 32) and for the books of Psalms (especially Ps. 119), *Proverbs*, and *Lamentations* and probably also *Job*. Twenty-four texts are written completely or partially in three types of stichographic arrangement.

Scribal Marks. The texts from the Judean Desert, especially from Qumran, contain various scribal markings, that is, elements that are not part of the content of the running text. They occur especially in 1QIsaiah^a; the manuscript containing the Rule of the Community from Cave 1, the Rule of the Congregation (1Q28a), and the Rule of the Blessings (1Q28b; these three compositions were written by the same scribe who also inserted some

corrections in 1QIsaiah^a); Ritual of Marriage (4Q502), Daily Prayers (4Q503), Words of the Luminaries^{a-c} (4Q504–506), Festival Prayers^{a-c} (4Q507–509), and Songs of the Sage^{a-b} (4Q510–511); Peshet Isaiah^c (4Q163); and Canticles^b (4Q107). The signs are used for, among other things, the division of the text into different sections; scribal intervention, mainly for the correction of errors; letters in the Cryptic A Script and paleo-Hebrew letters denoting matters of special interest; sundry remarkable matters in the text; and line fillers. The different shapes of the signs indicating paragraph breaks and corrections show the differences between the individual scribes. These signs occur almost exclusively in Hebrew (and not in Aramaic) texts written in the orthography and morphology of the Qumran scribal school. [See *Scriptures, article on Texts*.]

Writing of the Divine Names. In several Qumran texts, mainly those of a nonbiblical, sectarian nature, a special approach toward the writing of the divine names, especially the Tetragrammaton, is evident. As in rabbinic literature, most sectarian texts avoided the mentioning of the Tetragrammaton and Elohim as much as possible, finding alternative ways of expression. In addition, three special scribal systems were employed for the writing of the divine names, especially the Tetragrammaton: the writing of the divine names in paleo-Hebrew characters in texts written in square characters (twenty-nine biblical and nonbiblical texts; for example, Peshet Habakkuk from Cave 1); four dots (*tetrapuncta*) to represent the Tetragrammaton, mainly in several sectarian nonbiblical texts; and a dicolon, followed by one space, systematically placed before the Tetragrammaton (written in the square script) in Reworked Pentateuch^b (4Q364). The first system probably insured the nonerasure of the divine names, while the latter two systems indicate a special approach to the Tetragrammaton, possibly to alert against pronouncing it.

Correction Systems and the Degree of Scribal Intervention. When a mistake was made in either a biblical or nonbiblical text the first scribe or a later hand could correct the text with a variety of systems, some of which are used alongside each other in the same text: the marking of the letter(s) or word(s) to be canceled with cancellation dots under or above the letters (or both under and above the letters); the crossing out of a word with a horizontal line; parenthesis signs around the elements to be omitted; an addition sign denoting supralinear elements to be added in the running text; erasure of letters or words with a sharp instrument; the supralinear or infralinear addition of a single letter or letters, or a word or words above or under an element in the text as a correcting addition; reshaping of letters; expunction of letters or words with liquids. Many of the texts contain a relatively large num-

ber of scribal interventions, some averaging as many as one scribal intervention in every four lines of text (thus 1QIsaiah^a). According to Talmudic sources the sacred character of the text allows for only a minimal number of corrections (for example, B.T., *Men* 29b mentions either two or three corrections per column as the maximal number of permitted corrections). Most of the Qumran scrolls thus would not have passed the scrutiny of the rabbis. On the other hand, the texts written in the paleo-Hebrew script reflect only a minimal amount of scribal intervention.

Final and Nonfinal Letters. In many of the Qumran texts nonfinal letters are written in final position. A lack of consistency in the use of these letters is reflected in many biblical and nonbiblical texts in which both final and nonfinal forms are written at the ends of words.

Notation of Variant Readings and Glossing. It has been suggested by some scholars that some of the marginal notations in the Qumran scrolls reflect variant readings copied from parallel scrolls of the same composition. Other scholars suggest that these marginal notations functioned as glosses. I have suggested (Tov, 1992) that, with one exception, the words written between the lines or in the margins should be viewed as corrections, probably on the basis of the scribe's *Vorlage*.

In many details one recognizes the continuation of the scribal tradition from the writing of nonsacred Aramaic documents to the writing of sacred and nonsacred documents from the fifth century onward. These scribal practices were applied to both sacred and nonsacred texts, so that there is hardly any difference between the two types of texts at the scribal level. In both areas copies are recognized that have been written and transmitted either carefully or carelessly. The only distinctions pertain to the writing of biblical texts on only one side of the parchment unlike several nonbiblical epistolographs, the writing of biblical texts almost exclusively on parchment (as opposed to papyrus), and a special arrangement for the writing of several poetical sections in the biblical books. These conclusions are not necessarily characteristic of all of Israel, since in rabbinic circles scribes specializing in the writing of sacred documents probably developed different approaches from scribes writing nonsacred documents. Several differences are recognizable between Qumran texts written in the paleo-Hebrew script and those written in the square script—several of these are inherent in the writing traditions of the two scripts, while other features show that the texts written in the paleo-Hebrew script were written by a distinct scribal school. In addition, there probably is sufficient evidence for supporting the view that the Qumran scribes developed their own scribal practices. No scribal differences are recognizable between texts written in Hebrew and texts written in

Aramaic. Special practices were developed for the writing of *Tefillin*.

SCRIBES. Because of its complicated technical nature, the activity of a scribe must be considered a profession rather than a part-time activity. The majority of the documents found in the Judean Desert were therefore probably written by professional scribes. [See Scribal Practices.] The difference between the handwriting of the copyists of the documentary texts of Murabba'at and Nahal Hever and the unskilled signatures in these documents underlines the skilled scribal hands of the copyists. The scribes who wrote the texts found in the Judean Desert were in a few cases local, but most of them wrote elsewhere in ancient Israel. They should not be confused with the *soferim* even though the meaning of that word is "scribes" as well.

In the period covered by the documents from the Judean Desert, scribes occupied themselves with all aspects of scribal activity, that is, the copying of existing docu-

ments and literary compositions, as well as the (creative) writing of documentary texts (such as those found in Murabba'at and Nahal Hever) and the composing of new literary works. In addition, scribes were involved in various aspects of administrative activity. From rabbinic sources we obtain a one-sided picture of scribal activity, since they record the activity of scribes only in the religious realm, that is, the copying of religious documents—for example, scripture, especially Torah scrolls, *tefillin*, and marriage and divorce documents. In that literature, instructions for writing occur with regard to specific issues, but more frequently they are grouped into compilations dealing with various matters: B.T., *Menahot* 29b-32b; B.T., *Megillah*; B.T., *Shabbat* 103a-105a; J.T., *Megillah* 171d-172a and, in a more organized fashion, in *Massekhet Soferim* and *Massekhet Sefer Torah*. The terms used in that literature for scribes are *sofer*; *kotev* (copyist), with the connotation of calligrapher; *lavlar*, a loanword from the Greek *libbellarios*, itself a loanword from the Latin *libellarius*.

Very few details are known about the scribes who wrote the documents found in the Judean Desert. They did not record their names in the texts themselves, since the custom of writing a colophon had not yet been formed in Hebrew and Aramaic manuscripts. The only information available about the many aspects of scribal activity is therefore culled from the texts themselves: the scripts, materials used, writing practices, handwriting, mistakes and their correction procedures, the approach of scribes to the texts they had in front of them, collaboration between individual scribes, the characteristic scribal features of certain types of documents, and so forth.

The documents found in the Judean Desert reflect different levels of scribal skills, visible not only in precise handwriting and careful transmission, but also in the adherence to certain scribal conventions. Most nondocumentary texts are written by skilled hands, while letters are often written in more irregular scripts.

Scribes learned their trade over the course of a training period, during which they became accustomed to the writing itself and the various scribal procedures connected to it. Furthermore, scribes had to master various technical skills relating to the features of the material on which they wrote, the use of writing utensils, and the preparation of ink. The abecedaries found in Qumran (an ostrakon; see de Vaux, 1954) and Murabba'at (parchment [Mur 10B, 11] and sherds [Mur 73, 78-80]) are probable witnesses to such a learning process, and they may point to the existence of a scribal school. Possibly the Qumran fragments which contain lists of names and other words evince a learning process (elsewhere such lists also served as scribal exercises: 4Q234, 4Q360, 4Q341).

In the Qumran texts, the *sofer* is mentioned a few times. In Psalms^a from Qumran Cave 11 (11Q5) column xxvii, David is called a *sofer*, in the sense of "author" rather than "scribe," since the text focuses on his compositions and not on his copying any text. Second, in the Aramaic fragments of Enoch, Enoch is named *saḥar parasha'*, "a distinguished scribe" (4Q203 h ii.14). Finally, the fragmentary narrative 4Q461, fragment 2, includes the word *soferim* without any context.

Furthermore, writing is mentioned in some of the Qumran texts, especially in the sectarian documents. These texts mention the administrative registering of the members of the Qumran community, sometimes by the *mevaqqer* (e.g., 1QS v.23, vi.22, and from Cave 4, copy d, 3.ii.3; CD xiii.12), who also wrote down in his private notebook the sins committed (CD ix.18). Rebukes by the Overseer (4Q477) probably contains such personal remarks about certain individuals of the Qumran community. Writing was also an essential part of the warfare in the War Scroll, which records in detail the inscriptions inscribed on the standards and engraved on the trumpets and shields to be used in the future war. Writing is mentioned also in Jubilees^a (4Q216) and MMT^a (4Q398 14-17.ii.2).

SCRIPTORIUM. In the compound of Qumran, above Locus 30, which was possibly an assembly hall (as suggested by the remains of a burned, thick mat found on its floor), there was a room that Roland de Vaux, the excavator identified as a scriptorium. [See *the biography of de Vaux*.] This term defines a room in medieval monasteries devoted to the activity of scribes. At Qumran a stairway led to the upper room, which must have been well lit and well ventilated. Locus 30 and its counterpart above it are the largest rooms in the compound (approximately 10 meters by 4.2 meters [33 feet by 13.8 feet]), with a small bay), second only to the refectory.

The identification of the scriptorium rests on finds of two kinds: three inkwells (one made of pottery and the other of bronze unearthed in Locus 30, and an earthenware one found in the adjacent Locus 31) and the remains of a structure that fell from the upper floor. This structure is made of mud, rubble, and mortar and is covered with smoothed plaster. After reconstruction it

looked like a table a little over 5 meters (16.4 feet) long, approximately 0.5 meters (1.6 feet) wide, and approximately 0.7 meters (2.3 feet) high (Reich, 1995). Its "legs" taper toward the floor where they reach a width of only 0.18 meters (0.59 feet). Unquestionably, this structure was not meant to carry a lot of weight. Low benches fixed to the wall might have been associated with this structure. The remains of two other "tables" were found.

There is no agreement as to how these pieces of furniture were used. According to de Vaux (1973) they clearly served as benches and tables. This idea is unacceptable—there is no evidence for the use of tables until several centuries after the destruction of Qumran. Metzger (1959) suggested that the scribes sat on the "tables" and used the "benches" as footstools. This also is an unsatisfactory suggestion; the "tables" are not strong enough to hold the weight of men sitting on them. Clark's explanation seems the most plausible—the "benches" were used for sitting, and the "tables" served as shelves to hold the manuscripts in use, the writing materials, and so on (see Clark, 1963). Katharine Greenleaf Pedley's idea that the "tables" were used for treatment of the parchment is quite close to Clark's view (see Pedley, 1959).

No plausible explanation has yet been offered for another object found with the above items: a plastered platform with two hollowed out compartments.

It has been suggested by Pauline Donceel-Voute (1992) that the room above Locus 30 was a cenacle, that is, a dining room, and that the "tables" are in fact *klinai* ("couches"). Besides the improbability of the existence of such furniture at this site, the suggestion ought to be rejected on technical considerations: not only are these "tables" not sturdy enough to carry the burden of diners, but they are too narrow to serve as "couches." The author of this theory herself admits that such *klinai* have no parallels, either in artistic representations or in the archaeological finds.

It seems therefore that de Vaux's suggestion that this room is a scriptorium is highly probable. The sizable dimensions of the room would have permitted several scribes to work there simultaneously, on separate texts or taking dictation.

SCRIPTURES. [This entry comprises three articles: Texts, Translations, and Quotation and Use.]

Texts

In many ways the texts from the Judean Desert have revolutionized the study of the text not only of the Hebrew scriptures, but also that of the Greek scriptures. [See Septuagint.] Many aspects of the textual transmission of the biblical text can be illustrated by these texts from the Judean Desert, including some aspects of the last stages of the literary growth of the biblical books.

The main sources for our knowledge of the Hebrew scriptures in the manuscripts from Qumran are the continuous biblical texts, but our information is supplemented by other sources.

Biblical Manuscripts. The number of biblical texts recognized among the Qumran fragments, which has constantly increased with new insights into the nature of the fragments and the separation of groups of fragments, now stands at 220. The great majority of Hebrew biblical texts comes from Cave 4, while smaller quantities were found in Caves 1, 2, 3, 5, 6, 8, and 11. There are no firm objective criteria for classifying the biblical texts. For one thing, the contents of each of the caves are not homogeneous, with the sole exception of Cave 7, which contains only Greek papyri. The main depository of texts is Cave 4, which contains copies of all the books of the Hebrew scriptures with the exception of *Esther*. It is a significant fact that virtually all the so-called canonical books were found in this cave, which probably implies that an effort was made to store in that cave all the books that were considered authoritative at that stage, at least in certain Jewish circles, and which became authoritative at a later stage for all Judaism. [See Canon.] On the other hand, only a few books of the Apocrypha and pseudepigrapha are represented in Cave 4 (*Tobit*, *Jubilees*, *Aramaic Levi*, *Testament of Judah*, *Testament of Naphtali*). Cave 4 thus may have served as a central depository for the books of the Qumran community.

At Qumran, fragments of eleven, twelve, thirteen, or fourteen biblical texts written in the Paleo-Hebrew script

have been found as well as a few Paleo-Hebrew texts of uncertain nature (Ulrich, 1995). These fragments contain only texts of the Torah and *Job*, both of which are traditionally ascribed to Moses (cf. B.T., *B. B.* 14b-15a). The longest preserved texts written in the Paleo-Hebrew script are Paleo-Exodus^m (4Q22) and Paleo-Leviticus^l (11Q1). All texts written in the Paleo-Hebrew script reflect a similar scribal approach, but the scribes often displayed their individuality in specific scribal features. The Paleo-Hebrew texts from Qumran may have derived from the circles of the Sadducees (Tov, 1996). [See Sadducees.]

The great majority of the Qumran texts as well as all the biblical texts from the other sites in the Judean Desert are written in square Hebrew script, reflecting a textual variety. As scribal variety is also seen in the texts written in the Paleo-Hebrew script, the textual character of these texts cannot serve as a key for unscrambling the riddle of the writing in later square Hebrew script. In other words, the biblical texts written in Paleo-Hebrew script differ from the texts written in the square Hebrew script with regard to their scribal characteristics, and they probably reflect a different scribal school. Among other things, they display almost no scribal intervention.

The first generation of Qumran scholars ascribed all the texts found in Qumran to the Qumran community; some of them even tried to derive from the texts the characteristic ideas of that community. At this point, the textual variety of the biblical scrolls from Qumran is an established assumption among scholars (Talmon, Cross, Tov), as is the conclusion that these texts derived from different places in ancient Israel, not only from Qumran.

Classification according to textual character. The Qumran scrolls cannot be classified by cave, since the contents of each individual cave are not homogeneous. Nor can they be classified by origin (copied by the Qumran community or brought from outside the community), since this distinction is not firmly secured, or by date, or by paleographical or codicological criteria. Probably the best criterion for classification is the textual character, even though this criterion is subjective. The first generation of Qumran scholars ascribed the scrolls to what they considered to be the three recensions of the Bible—the Masoretic Text, the Septuagint, or the Samaritan Pentateuch (or three local recensions or families in the descriptions of Cross). Several attempts at classification have illustrated the dilemma that any classification, including the one below, remains hypothetical.

The principle behind the following classification is the recognition that some texts can be grouped according to common scribal features and others according to the degree of their proximity to the Masoretic Text, Septuagint, or Samaritan Pentateuch without accepting the claim that these three texts are the central pillars (recensions,

texts, text types, etc.) of the biblical text. This classification is valid as long as we are open to the possibility that there are also texts that are not close to any of these three entities (group five below). It is rather unusual to classify ancient texts according to the degree of their proximity to later texts, and particularly if these are medieval (the Masoretic Text and Samaritan Pentateuch), but this comparison is made merely for the sake of convenience. Once classified, the different groups of texts recognized are not all of the same kind, since groups two through five are identified on the basis of subject matter, while group one is identified according to its scribal features. This unequal basis for the classification is dictated by the evidence itself and should be kept in mind.

1. It was suggested by Tov (1986; 1988) that a large group of Qumran texts stands apart from others because of its common use of a distinctive orthography, morphology, and a set of scribal practices. That virtually all the sectarian texts from Qumran reflect this combined set of features has led to the suggestion that these texts had been copied by the group of people who left the texts behind in the Qumran caves—possibly the texts were written at Qumran itself, although this is not a necessary part of the hypothesis. These features are not characteristic solely of the Qumran scribal school. On the contrary, our working assumption is that within the corpus of the texts found at Qumran these features display a peculiar distribution: Some of these texts have been copied from proto-Masoretic texts, while others are close to the Samaritan Pentateuch; others reflect a more complicated textual profile. The documents written in the Qumran practice (for a list see Tov 1986; 1988), often described as typical Qumran texts, comprise some 25 percent of the Qumran biblical texts. As for the nonbiblical texts, possibly the base texts of several *pesharim* belong to this group as well.

2. Proto-Masoretic (or proto-rabbinic) texts contain the consonantal framework of the Masoretic Text, one thousand years or more before the time of the Masorah codices—they do not seem to reflect any other special textual characteristics beyond this basic agreement. The proximity of some of these fragments to the medieval texts, discernible especially in Genesis^b (4Q2) and in the long text of Isaiah^b (1Q8), is quite remarkable. These texts usually are referred to as “proto-Masoretic,” but the term “proto-rabbinic” (used by Cross) probably better describes their nature. These texts comprise some 40 percent of the Qumran biblical texts and therefore represent the largest group among the Qumran documents.

3. The pre-Samaritan Qumran texts—Paleo-Exodus^m (4Q22), Exodus-Leviticus^l (4Q17), Numbers^b (4Q27), and secondarily Deuteronomyⁿ (4Q41) and possibly Leviticus^d (4Q26)—reflect the characteristic features of the Samari-

tan Pentateuch with the exception of the latter’s ideological readings, although they occasionally deviate from it. One of the texts of this group apparently formed the basis of the Samaritan Pentateuch and the Samaritan ideological changes and phonological features were inserted into that text. A characteristic feature of these texts is the addition of elements of certain stories found elsewhere in the corpus into a different or parallel story. Thus all the speeches in the historical survey of Deuteronomy 1–3 have been repeated in the appropriate places in Exodus and Numbers; these are usually called “harmonistic” additions, and as a result the group as a whole is often named harmonistic. Cross prefers to call this group “Palestinian,” and there is much justification for this characterization since these texts are not found outside Palestine. The use of the term “Palestinian” is, however, problematic, since it may imply that no other texts or groups of texts were extant in Palestine. Of the Reworked Pentateuch compositions, Reworked Pentateuch^{3c} (4Q158, 364, and 365) reflect a pre-Samaritan biblical text. Testimonia (4Q175) also reflects a similar text. All the pre-Samaritan texts together comprise some 5 percent of the Qumran biblical texts of the Pentateuch. Although this is a small group, (for the entire biblical text this group would have comprised some 15 percent), it is still very significant for our understanding of the transmission of the Hebrew scriptures.

4. Although no text was found in Qumran that is identical or almost identical to the presumed Hebrew source of the Septuagint, a few texts are very close to that translation. Jeremiah^{b,d} (4Q71 and 71a) bear a strong resemblance to the Septuagint in characteristic details, with regard to both the arrangement of the verses and their shorter text. Also similar to the Septuagint, though not to the same extent, are Leviticus^d (4Q26; also close to the Samaritan Pentateuch), Deuteronomy^q (4Q44), Samuel^r (4Q51; close to the main tradition and the Lucianic manuscripts of the Septuagint), Numbers^b (4Q27), and according to Cross, Exodus^b (4Q13). Individual agreements in words with the Septuagint are also found in additional texts, in a somewhat large proportion in Deuteronomy^{s,h,i} (4Q30, 35, and 37), but the latter texts actually belong to group five. The Masoretic Text of *Isaiah* and that of the Septuagint closely resemble one another, so that most of the extant Qumran *Isaiah* texts (4Q55–4Q69b) are equally close to these works. There is insufficient evidence for speculating on the internal relation between the texts that are close to the Septuagint, but they should not be considered a textual group. They do not form a close-knit textual family like the masoretic family or pre-Samaritan group, nor have these texts been produced by a scribal school, like the texts written in the Qumran practice (group one). They represent individual

copies that in the putative stemma of the biblical texts happened to be close to the Hebrew text from which the Septuagint was translated. Since the Septuagint was translated from a single biblical text, and not a family, recension, or revision, the recognition of Hebrew scrolls that were close to that text is thus of limited importance to our understanding of the relation between these texts, but it does have bearing on our understanding of the nature of the Septuagint and its source. The texts that are close to the Septuagint comprise some 5 percent of the Qumran biblical texts.

5. Many Qumran texts are not exclusively close to either the Masoretic Text, the Septuagint, or the Samaritan Pentateuch and contain readings not known from other texts; therefore they are considered unaligned. Usually the employment of the term nonaligned merely implies that the texts under consideration follow an inconsistent pattern of agreement and disagreement with the Masoretic Text, the Septuagint, and the Samaritan Pentateuch, as in the case of *Leviticus*^c (4Q25), *Deuteronomy*^{ba, b, k, l, m, n, o, p, q, r, s, t, u, v, w, x, y, z} (4Q29, 30, 35, 38, 38a, 40), *Kings* (6Q4), *Isaiah*^c (4Q57), *Minor Prophets*^{a, c, e} (4Q76, 78, 80), *Daniel*^d (4Q112), and *Paleo-Leviticus*^a (11Q1). But the texts that are most manifestly nonaligned—those actually independent—are texts that contain (groups of) readings that diverge significantly from the other texts, such as *Joshua*^a (4Q47), *Judges*^a (4Q49), and *Deuteronomy from Cave 5* (5Q1). *Samuel*^a (4Q51) holds a special position in this regard, since it is closely related to the source of the Septuagint, while reflecting independent features as well. A special subgroup of nonaligned texts are scrolls written for specific purposes, especially liturgical or excerpted texts, such as *Exodus*^d (4Q15), *Deuteronomy*^m (4Q37 and 41) and many of the *Psalms* texts. By extension this also pertains to *Canticles*^{a, b} (4Q106 and 107). The nonaligned texts comprise some 25 percent of the Qumran texts, and add an important aspect to our understanding of the nature of the transmission of the biblical text.

Whether we assume that all the aforementioned texts were written at Qumran, or that only some were written there while others were brought from elsewhere, the coexistence of the different categories of texts in the Qumran caves is noteworthy. That all these different texts were found in the same caves probably reflects a certain textual reality in the period between the third century BCE and the first century CE. Our reconstruction of the history of the biblical text in that period describes this situation as textual plurality. At the same time, within that textual plurality the large number of proto-Masoretic texts probably reflects their authoritative status. Since there is no evidence concerning the circumstances in which the scrolls were deposited in the caves or their possibly different status within the Qumran sect, no solid conclu-

sions can be drawn about the approach of the Qumran community toward the biblical text. In any event, they apparently paid no special attention to textual differences such as described here.

That all these different groups of texts coexisted not only at Qumran but also in ancient Israel as a whole, shows that no fixed text or textual family was used as the central text for the entire country. However, that conclusion may be slightly misleading, since in certain milieus in Israel one of the texts or textual families could still have been the only accepted text. This is probably the case for the Masoretic family, which probably was the only acceptable text in Temple circles. In a way this text should be considered an official text, and this assumption would explain the great number of copies of it found at Qumran, and that it was the only text found at Masada, Nahal Hever, and Wadi Murabba'at. The facts known about Masada reveal that the community which lived there would have adhered to the rabbinic text, as would have those communities at Nahal Hever and Murabba'at from the time of the Second Jewish Revolt (135 CE).

The five-part classification proposed here replaces some of the textual theories that have been suggested in this century. The existence of the fifth group, texts without exclusively close connections with the Masoretic Text, the Septuagint, or the Samaritan Pentateuch, allows for an endless number of individual texts, thus eliminating the possibility that all the Qumran texts—in fact all ancient Hebrew texts—ultimately are derived from a tripartite division of the textual sources. It is thus suggested that the textual sources of the Bible cannot be reduced to three traditions and that what was previously referred to as such are not recensions or text types but are simply texts.

Textual evidence for different biblical books. Having analyzed the different textual entities recognized among the Qumran scrolls, evidence for individual books of the Bible now can be examined. In this way different textual patterns—perhaps misleading—may emerge for the biblical books through the accident of textual transmission, which may result in the survival of certain texts and not others. The existence of two different editions of *Jeremiah*, for example (the Masoretic Text and *Jeremiah*^o [4Q70, 4Q72] on the one hand and the Septuagint and *Jeremiah*^{b, d} [4Q71, 71a] on the other), demonstrates the textual transmission of that book, while in other books there may likewise have existed different editions, though less clearly defined (*Joshua*, *Samuel*, *Kings*, *Proverbs*, *Daniel*, *Esther*; see Ulrich, 1992). It is difficult to know whether similar editorial processes took place in other books as well, without leaving any trace in the text. For example, different recensions once may have existed for *Leviticus* or *Isaiah*, even though the present rather homo-

geneous textual traditions of these books give us no indication of such earlier stages. There is no evidence that on a textual level the Torah was treated differently from the other books of the Hebrew scriptures.

Textual transmission and literary criticism. The relevance of the textual traces or witnesses for certain aspects of literary analysis has been discussed by several scholars. The following Qumran scrolls have been analyzed with regard to their possible contribution to literary criticism: Phylactery A, B, J (4Q128, 129, 137; *Deuteronomy* 5 contains a shorter text); Joshua^a (4Q47; the biblical *Joshua* contains different editorial strands); Judges^a (4Q49; shorter text of *Judges* 6), Samuel^a (4Q51; there is a longer text in *1 Samuel* 11 and different editorial strands in the Song of Hannah); Isaiah^a (1QIsa^a; *Isaiah* 38.21–22); and Jeremiah^{b,d} from Cave 4 (shorter text and different arrangement). According to some scholars, different arrangements of the various Psalms scrolls also are relevant to literary criticism of the Bible (Flint) since they display texts differing in recension from the Masoretic Text and other witnesses. By definition, all the excerpted and abbreviated texts are secondary, so that their greatly deviating text does not contribute to the literary analysis of the Bible.

Excerpted and abbreviated texts. Most excerpted texts were probably made for liturgical purposes: the Phylactery texts, several manuscripts of *Exodus* and *Deuteronomy*, and a long list of Psalms texts from Caves 4 and 11 containing major transpositions, omissions, and additions (e.g., Psalms^b [4Q95], in which Ps. 135.12 is followed by Ps. 136.22ff.). The same pertains to a few manuscripts containing abbreviated texts, but the evidence for such texts is far from clear. Thus Exodus^d (4Q15; containing *Ex.* 13.15–16 and 15.1) omits *Exodus* 13.17–22 and chapter 14, Canticles^a (4Q106) omits *Song of Songs* 4.7–6.11, and Canticles^b (4Q107) omits *Song of Songs* 3.6–8 and 4.4–7. If the characterization of these texts as excerpted and abbreviated texts is correct, their major omissions and transpositions should be disregarded in the critical analysis, but their other details should be included. Thus the Phylactery texts containing combinations of four different biblical texts often agree with one of the other textual witnesses. Likewise, the first biblical text quoted in Testimonia (4Q175), which combines *Deuteronomy* 5.28–29 and 18.18–19, is close to the Samaritan Pentateuch and Reworked Pentateuch^a (4Q158; of a Proto-Samaritan character), and the third quotation, from *Deuteronomy* 33.8–11, is very close to one of the Qumran scrolls, namely *Deuteronomy*^h (4Q35), and may have been based on that scroll or a similar one. Another feature of the excerpted and abbreviated texts is that, with the exception of some Phylactery and Mezuzah texts, none of these texts is close to the Masoretic Text.

Biblical Texts Reflected in Nonbiblical Compositions. A full analysis of the biblical texts in Qumran ought to include quotations from the Bible in nonbiblical documents. In the past, these nonbiblical texts have rarely been included in critical analyses, since it is difficult to extract from them reliable information about the biblical text quoted because such texts are found in a great variety of compositions, each of which requires a different type of analysis.

Free quotations and allusions. Nonbiblical compositions, both sectarian and nonsectarian, quote freely from and allude to passages in the Bible. Most of these quotations are free, involving changes in the biblical text and combinations of different biblical texts. As a result, the deviations from the textual witnesses of the Bible cannot be evaluated easily within the context of a discussion of the text. The textual background of some compositions has been studied, but few solid conclusions have been reached.

Pesharim. The lemmas (quotations of biblical texts) in the eighteen *pesharim* on biblical books or parts of them from Caves 1 and 4 contain long stretches of biblical text, which, when combined, would amount to biblical manuscripts, were it not that they have been preserved only fragmentarily. In addition, the exposition in the *pesharim* itself sometimes reflects a few additional readings differing from the biblical text on which the *pesharim* comments. For Peshar Habakkuk from Cave 1 (1QpHab), Peshar Nahum (4Q169), and Peshar Psalms^{a–p} (4Q171, 173) from Cave 4, and some sections of the *pesharim* on Isaiah (3Q4, 4Q161–165), extensive stretches of biblical text have been preserved, while the preserved text of the other *pesharim* is more fragmentary. The editors of several textual editions of the Hebrew scriptures incorporated readings from these *pesharim* into their textual apparatuses. On the other hand, other scholars ascribed most nonmasoretic readings in the *pesharim* to the contextual exegesis of the authors of these *pesharim*. However, although the biblical text of the *pesharim* undoubtedly reflects commentary by the authors of the *pesharim*, including a few cases of sectarian exegesis, undoubtedly many of the deviating readings found in the lemmas or embedded in the exposition of the *pesharim* reflect ancient variants copied from the manuscript on which the *pesharim* is based. At the same time, it is hard to determine how many of the readings which look like contextual changes were initiated by the authors of the *pesharim* and how many were found in their *Vorlagen* (the texts which they had in front of them). A maximalistic approach explains manuscript variation in the lists of presumed variant readings for Peshar Habakkuk (Brownlee) and all the *pesharim* (Lim) as coming from a presumed different underlying text. Other scholars ascribe most of the differences between the biblical

text and the *pesharim* to the latter's interpretive changes. There are hardly any criteria for deciding between the two views, although the sectarian changes in the exposition lead us to believe that the authors of the *pesharim* themselves inserted many alterations. But if they did not, quoted biblical texts already included the morphological variations and contextual changes, so that those manuscripts must have resembled Isaiah^a from Cave I (1QIsa^a) and similar texts. Believing that this was the case, several scholars characterized the underlying text of the *pesharim* as "vulgar" texts.

Rewritten biblical compositions. Some compositions reformulated the content of the Bible, especially of the Pentateuch, adding and omitting minor and major details, as well as changing many words. Each composition was unique, inserting a different number of changes in the biblical text. Some compositions were very close to the biblical text, such as Reworked Pentateuch^{a-c}, (4Q158, 364-367) and Temple Scroll^a (11Q19), all of which contain very long stretches that run parallel to the biblical text. In fact, the Reworked Pentateuch scrolls are almost in the nature of a regular biblical manuscript to which a thin layer of exegetical changes was added. Because of the difficult distinction between the underlying biblical text and a layer of exegesis and rewriting, it is hard to incorporate the underlying biblical text in an analysis of the text. In the case of the Reworked Pentateuch and Temple Scroll^a, however, the underlying biblical text is recognizable, so that some conclusions suggest themselves. For example, there is strong evidence that at least three of the manuscripts of the Reworked Pentateuch (4Q158, 364, 365) are close to the Samaritan Pentateuch and hence to the so-called Proto-Samaritan manuscripts. A great deal of textual evidence is available for Temple Scroll^a, especially for columns li-lxvi, of which the underlying biblical text should probably be characterized as reflecting an independent textual tradition. [See Interpretation of Scriptures: Pesharim.]

Masada, Nahal Hever, and Murabba'at. Excavations on Masada yielded two manuscripts of *Leviticus* (Leviticus^{a-b} [Mas1a, Mas1b]), one of *Deuteronomy* (Mas1c), one of *Ezekiel* (Mas1d), and two or three of *Psalms* (Psalms^{a-b} and Psalm^c [Mas1e, Mas1f, Mas1g(?)]). All these texts are very close to the Masoretic Text. Also the texts from Nahal Hever (Numbers [XHev/Se 1, 2], Deuteronomy [XHev/Se 3], and Psalms [XHev/Se 4]) and Murabba'at are almost identical to the Masoretic Text. This is especially evident in the well-preserved Minor Prophets scroll (Mur 88) from Murabba'at. [See Masada, article on Written Material.]

EMANUEL TOV

Translations

Ancient translations are significant for understanding the textual history of the Hebrew scriptures and are important sources for biblical exegesis in early Judaism and Christianity. The modern study of the ancient translations has been transformed by the discovery of the Dead Sea Scrolls, as it has become clear that the early translations often preserve readings from the Hebrew biblical

texts that differ from the Masoretic Text or the proto-Masoretic Text. Recent study has concentrated on the relationships among the ancient translations and extant Hebrew biblical texts (the Masoretic Text, the Samaritan Pentateuch, and the Dead Sea Scrolls), and on the translation techniques and exegetical interests characteristic of each translation.

Greek: the Septuagint. A Greek translation of the Pentateuch was undertaken in Hellenistic Egypt in the third century BCE, probably during the reign of Ptolemy II (285–246 BCE). This translation, called the Septuagint (*septuaginta* in Latin means seventy), after the legend that seventy-two (or seventy) translators completed the translation in seventy-two days, was followed in subsequent centuries by the Greek translation of the entire Hebrew scriptures, including some writings not included in the Masoretic Text (the so-called apocryphal books: *Tobit*, *Judith*, *Ben Sira*, *Maccabees*, etc.). Several fragments of the Greek translation of the Pentateuch have been found at Qumran: Septuagint Exodus (7Q1); Septuagint Leviticus^{4b} (4Q119–120); Septuagint Numbers (4Q121); and Septuagint Deuteronomy (4Q122). These manuscripts are reliable witnesses to an early stage of the transmission of the Septuagint. Early papyri of the Septuagint also have been found in Egypt (Rylands Greek Papyrus 458 and Fouad Papyrus 266).

In most of the books of the Pentateuch the Septuagint renders accurately its Hebrew parent text, though translation techniques vary from book to book. Many readings that clearly differ from the Hebrew of the Masoretic Text are now evidenced in Hebrew biblical manuscripts from Qumran. Some notable examples from the Pentateuch are as follows. In *Genesis* 1.9 the long plus in Septuagint (the report of the gathering of the waters and the appearance of dry land) is witnessed in *Genesis*^k (4Q10); the Masoretic Text lacks this half verse. In *Exodus* 1.5, the Septuagint and *Exodus*^b (4Q13) count seventy-five descendants of Jacob; the Masoretic Text counts only seventy. In *Deuteronomy* 32.8 the Septuagint and *Deuteronomy*^l (4Q37) read “sons of God” (*benei elohim*); the Masoretic Text reads “sons of Israel” (*benei-yisra’el*). Numerous examples of this kind show that in many biblical books the Septuagint is a reliable translation of a Hebrew text that differed from the Masoretic Text.

Moreover, in some instances where the Septuagint differs on a large scale from the Masoretic Text, those same differences can be found in Qumran texts. The most notable case is the short version of *Jeremiah* (one-sixth shorter than the Masoretic Text, with different verse and chapter sequences), in which the fragments of *Jeremiah*^{b,d} (4Q71 and 4Q71a) belong to the same text type as the Septuagint. In *Exodus* 35–40, the short version of the construction of the Tabernacle in the Septuagint may be reflected

in the corresponding sections of Temple Scroll^o (11Q19). The fuller text of *Samuel* in the Septuagint often agrees with the Cave 4 fragments of *Samuel*^o (4Q51). In those instances, in which the Septuagint preserves a different edition of biblical books or parts of biblical books from that of the Masoretic Text, the Qumran texts indicate that these too derive from Hebrew biblical texts. It is the task of the textual critic to determine the relative priority or originality of the variant readings and editions. In the cases of *Jeremiah* and *Exodus* it has been argued persuasively that the short editions preserved in the Septuagint and the allied Qumran texts are historically prior to the expanded editions preserved in the Masoretic Text. In the case of *Samuel*, the Septuagint and *Samuel*^o often preserve a text superior to the Masoretic Text.

Because of the numerous divergences between the early Septuagint and the contemporary Hebrew versions, a variety of ancient scholars endeavored to “correct” the Septuagint to agree with the Hebrew text of their time. The earliest revisions were probably made by the mid-second century BCE, as indicated in the polemics against such revisions in the *Letter of Aristeus*. The earliest extant revision is the Greek Minor Prophets scroll from Nahal Hever (8Hev1), dated to the mid-first century BCE. This revision, referred to as Proto-Theodotion or *karge*-Theodotion, brought the Septuagint text closer to the proto-Masoretic Text. The later revisions attributed to Aquila (early second century CE), Theodotion (late second century CE), and Symmachus (second or third century CE) were probably based on this early revision. Somewhat less clear is the evidence for a Proto-Lucianic revision of the Septuagint in the first century BCE, in line with Palestinian biblical texts. This revision would have formed the basis for the later revision of Lucian (late third century CE). Subsequent revisions and editions were strongly influenced by Origen’s edition of the Septuagint in his Hexapla (mid-third century CE), in which he marked the divergences between the Masoretic Text and the Septuagint and produced a composite Greek text that mirrored the Masoretic Text.

After the adoption of the Septuagint as the canonical Old Testament of the Christian Church, it was translated into languages of local Christian communities. Early translations include the Old Latin (second century CE), Coptic (third century CE), Ethiopic (fourth through sixth centuries CE), and Armenian (fifth century CE). Of these translations the Old Latin (*Vetus Latina*) is particularly valuable in determining an early pre-Hexaplaric form of the Septuagint. [See Septuagint.]

Aramaic: the Targums and Peshitta. The Aramaic translations of the Hebrew scriptures are of lesser but still notable importance as witnesses to an early stage of the Hebrew biblical text. The Targums are translations

and explications of the Hebrew scriptures into various Jewish dialects of Aramaic. The oldest extant *targum* texts are the Qumran fragments of the *targum* of Leviticus (4Q156) and the *targum* of Job (4Q157 and 11Q10). [See Job, *Targum* of.] The Qumran Targums are extremely literal, in contrast to the exegetical expansions characteristic of later Targums: Onkelos, Jonathan, Neofiti, Pseudo-Jonathan, and the Fragment Targums. These Targums probably stem from translations made in the first and second centuries CE and were embellished in subsequent centuries. The Peshitta, a translation into the Syriac dialect of Aramaic, probably also stems from the first or second centuries CE and was revised in subsequent centuries. A fairly literal translation, the Peshitta was adopted as the Old Testament of the Syrian Christian Church.

From the number of variants from the Masoretic Text found in the Targum and the Peshitta, it appears that the Aramaic translations of the Hebrew scriptures were made from Hebrew biblical texts not entirely identical to the Masoretic Text. Many of these variants agree with readings in the Septuagint, the Samaritan Pentateuch, or the Qumran texts. The Aramaic translations preserve far fewer variants than the Septuagint, as one would expect from their later dates of origins and (for the most part) rabbinic background. Variant readings from the Aramaic translations are particularly useful in providing independent support for variants from other sources. Some notable examples from Genesis are as follows. In *Genesis* 6.3, Targum Onkelos and the Peshitta (also the Vulgate) agree with the Septuagint and the Commentary on Genesis A (4Q252) in reading the word "dwell" (*ydwr*); the Masoretic Text and the Palestinian *targum* read "judge" or "be strong" (*yadur*). In *Genesis* 3.16 and 4.7 the Peshitta and the Targums (different Targum texts in each verse) agree with the Septuagint in reading "turning" or "repentance" (*teshuvah*); the Masoretic Text reads "desire" (*teshuqah*). These and other examples (see further below under Vulgate) show that variant readings survived in Hebrew biblical manuscripts even after the canonization of the proto-Masoretic text in rabbinic Judaism. In general, the Peshitta preserves more textual variants than the Targum, and Neofiti is the richest source of textual variants among the Targums.

The Psalms of the Peshitta provides another curious connection with the Dead Sea Scrolls. Some Syriac manuscripts include *Psalms* 151 (which also is included in the Septuagint) and *Psalms* 152-155. The Hebrew text of *Psalms* 151, 154, and 155 are found in *Psalms*¹ (11Q5). These psalms may have been translated into Syriac after a find of Hebrew scrolls from the Dead Sea caves. Such finds are referred to by Origen (third century CE) and the Syrian Patriarch Timothy I (ninth century CE). [See Origen.]

The Targum, and to a lesser extent the Peshitta, are also significant as sources of early Jewish exegetical traditions. Their interpretations and expansions of biblical passages at times parallel traditions attested in Qumran exegetical texts such as the Genesis Apocryphon (1Qap-Gen) and other parabiblical texts. [See Targumim; Genesis Apocryphon.]

Latin: from the Old Latin to the Vulgate. The Old Latin translation(s) of the Septuagint show much textual variation by the fourth century CE, probably including some minor revisions based on Hebrew texts. Around the year 382 CE the bishop of Rome commissioned Jerome to produce a revised Latin Bible based on the Septuagint. Jerome ultimately chose to work from Origen's edition of the Septuagint, the Hexapla, as the most authoritative Greek text on the basis of its fidelity to the Hebrew. After completing revisions of the Old Latin translation on the basis of the Hexapla (including the Gospels and *Psalms*), however, Jerome began to translate directly from Hebrew. Between 390 and 406 CE he translated the entire Hebrew scriptures into Latin. Jerome's translation eventually came to be used alongside the Old Latin and gradually superseded it in the Christian West. Since the sixteenth century Jerome's Latin text (including his earlier translation of the Hexaplaric Psalter and supplemented with other sources for much of the Apocrypha and the New Testament) has been referred to as the Vulgate, or common edition, of the Catholic Church.

The Hebrew biblical texts used by Jerome, who lived in Bethlehem at the time of his translations from the Hebrew, occasionally differed from the Masoretic Text. Kedar-Kopfstein (1964) has collected some notable examples from Isaiah. In *Isaiah* 8.18 the Vulgate, the Peshitta, and *Isaiah* (1QIsa^a) read "sign and wonder" (*le-ot u-le-mofet*); the Masoretic Text, the Septuagint, and the Targum read the phrase in the plural, "signs and wonders" (*le-otot u-le-mofetin*). In *Isaiah* 15.9 the Vulgate and *Isaiah*^a twice read the toponym "Dibbon"; the Masoretic Text and the Targum read "Dimon" (this phonetic difference is also reflected in the Peshitta, which reads "Ribon," and in the Septuagint, which reads "Remmon"). In *Isaiah* 49.24 the Vulgate, the Peshitta, and *Isaiah*^a read "tyrant" (Hebrew *'arits*) the Masoretic Text and the Targum read "righteous one" (*tsaddiq*). In his commentary on *Isaiah*, composed roughly seventeen years later, Jerome refers to Masoretic Text readings in each of these passages, probably showing that he was now using different Hebrew manuscripts from those he had translated. Jerome's Hebrew manuscripts show that variant readings survived in old Hebrew texts as late as the fifth century CE. Jerome's translations and commentaries also display his familiarity with the Jewish exegetical traditions of his era.

Text-critical Value of the Translations. The discovery of the Qumran biblical texts has made it clear that ancient translations often preserve authentic Hebrew readings even when they differ from the Masoretic Text. The Septuagint is the most important translation in this regard, as its Hebrew parent text in many biblical books is of a different text-type from the Masoretic Text. The Targum, the Peshitta, and the Vulgate generally reflect Hebrew texts that diverge only intermittently from the Masoretic Text. The ancient translations provide considerable evidence for variant readings and variant textual editions, which in each case need to be subjected to careful scrutiny in order to ascertain their relative text-critical worth. The rehabilitation of the value of the ancient translations for biblical textual criticism is one of the significant legacies of the discovery of the Dead Sea Scrolls.

RONALD S. HENDEL

Quotation and Use

The pervasive presence of the Bible in the Qumran scrolls is most clearly apparent from the physical presence of the large number of biblical manuscripts found in the caves. But on another level, the primacy of the Bible for the authors of Qumran is demonstrable through the many ways in which it is introduced into a variety of texts, both those that focus primarily on scripture and those that do not. The fact that a biblical (or other) text is cited in the scrolls implies that to the author of the citing document the cited material is important, canonical, or authoritative in some fashion. Since the authors of the Qumran scrolls were so manifestly fluent in the Hebrew scriptures, it is at times unclear whether biblical language found in Qumran compositions, when not accompanied by a "citation formula," is a conscious or unconscious employment of the biblical text. This problem is particularly apparent in compositions, such as poetic works, not explicitly linked to the Bible. This essay surveys the biblical (and nonbiblical) texts that are quoted, the formulas that introduce the quotations, and the faithfulness of the cited texts to their hypothetical originals.

What Is Cited and Where. Since there is no list of what would today be described as "canonical" books from Qumran, we must extrapolate, as best we can from the data available, which books were "biblical" for the Qumran group. The well-known fact that every book of the Hebrew scriptures other than *Esther* left some remains, however brief, in the Qumran caves does not guarantee that all of these books were "canonical" or "biblical." The more copies of a book that have been found, the more likely it is that the book was regarded as "scriptural," although it is unlikely that anyone would claim such a status for the Rule of the Community or the Damascus Document, copies of which are more numerous in the caves than those of some books of the Hebrew scriptures. Frequency of citation in other works, however, may serve as an indicator of a book's "canonicity," or at least of its importance to the authors of the Qumran scrolls.

Excluding from our survey biblical texts and texts that might be described as biblical commentaries, summaries, paraphrases, or "apocrypha," we find among Qumran works texts that are constructed around the Bible, such as the various forms of the "thematic" or "non-continuous" *pesharim*. In this group, Florilegium (4Q174) cites *Exodus*, *Isaiah*, *Ezekiel*, *Amos*, *Psalms*, and *Daniel*; Cate-na^a (4Q177) quotes *Isaiah*, *Jeremiah*, *Ezekiel*, *Hosea*, *Micah*, and *Psalms*; Melchizedek (11Q13) cites *Leviticus*, *Isaiah*, *Daniel*, and *Psalms*. Among the "continuous" *pesharim*, Peshar Isaiah^c (4Q163) refers to *Jeremiah* and *Zechariah* in addition to *Isaiah*. Testimonia (4Q175), which is fundamentally only an anthology of texts, cites

Numbers, *Deuteronomy*, and Apocryphon of Joshua^b (= 4Q379 22.ii). Tanhumim (4Q176) consists primarily of a series of consolatory passages from *Isaiah* 40–54, with one possible citation from *Zechariah*.

When we examine Qumran works that are not built around the Bible, but cite biblical books to a significant degree, we find in the Damascus Document (CD), for example, a very broad range of quotations (more than twenty-five) from *Numbers*, *Deuteronomy*, *Isaiah*, *Jeremiah*, *Ezekiel*, *Hosea*, *Amos*, *Micah*, *Zechariah*, *Malachi*, and *Proverbs*. The Rule of the Community (1QS) and the War Scroll (1QM) are less pervaded with scriptural citations; the former cites *Exodus*, *Deuteronomy*, and *Isaiah*, while the latter quotes *Numbers*, *Deuteronomy*, and *Isaiah*. Serekh Damascus (4Q265) in contexts unrelated to the extant texts of the Damascus Document (CD) and the Rule of the Community (1QS), quotes *Isaiah* and *Malachi*.

The ambiguous nature of the “citations” in poetic material can be demonstrated by the following examples. Among the “non-canonical psalms,” 4Q381 fragment 15 contains language either citing or very closely modeled on Psalms 86 and 89; 4Q381 fragment 17, on Psalm 21 (with appropriate shifts in person), and 4Q381 fragment 24, on Psalm 18. In the Barkhi Nafshi material, Barkhi Nafshi^c (4Q434) and Barkhi Nafshi^d (4Q437) include quotation, paraphrase, or very strong echoes of verses from *Isaiah*, *Jeremiah*, *Hosea*, and *Psalms*. The clear dependence of Second Temple poetic literature on the Hebrew scriptures makes it difficult to assert that what we are dealing with in these cases is what is normally considered citation. A similar problem is raised by the presence of biblical language in wisdom texts. When Sapiential Work A^b (4Q416) 2.iv.1 seems to quote *Genesis* 2.24 without a citation formula, is *Genesis* its source or its model?

Although it is unsurprising that not every book in Hebrew scriptures is cited in the scrolls, it is noteworthy that there are a few citations from books that did not find their way into the Jewish or Christian canons. *Jubilees*, or the “Book of the Divisions of Times,” is alluded to in Damascus Document (CD) xvi.3 and Apocryphon of Jeremiah B^c (4Q384) 9.2, and is actually cited in “work with citation of Jubilees?” (4Q228). Damascus Document (CD) iv.6–7 also seems to quote from a form of the *Testament of Levi*. Such citations might raise once again the question of the extent of the Qumran “canon.”

Citation Formulas. Just as in the New Testament (*hos gegraptai*; “as it is written”) and rabbinic literature (*she-ne’emar*, “as it is said”; *kakativ* and *dikativ*, “as it is written”), explicit citations of biblical passages at Qumran are often introduced by a citation formula, employing some form of the verbs *’amar* or *ktb* (“say”; “write”) followed by the interpretation of the cited verse. Although it is not

always clear why certain texts or passages prefer the *’amar* formula to the *ktb* formula, or vice versa, adherence to specific formulas in specific contexts seems to be consistent across works that survive in several copies, including the medieval versions of the Damascus Document.

The specific formulas are of several types, sometimes specifying the biblical book or author and at other times merely employing the *’amar* or *katuv* formula without identifying the book, as if the reader is expected to be familiar with the source text. The most common formula is probably *va’asher ’amar*, which is found in a variety of passages and has been translated variously as “and that which he (i.e., God) says,” “and that which Scripture says,” and “and that which it says.” Similarly unspecific as to source is *ka’asher katuv* (“as it is written”). But we also find usages such as *ka’asher katuv b-* (“as it is written in”) or *asher katuv besefer* (“as it is written in the book of”) where the source text is specified. The forms with and without source reference may at times stand side-by-side (4Q174 ii.12 vs. 15). Likewise, it appears that within the same text, we may find biblical quotations with and without citation formulas (e.g., 4Q174 has many citation formulas but cites passages from *Deuteronomy* without formulas).

Sometimes the author of the book replaces the name of the book in a citation formula; for example, “as David said” (Catena^a [4Q177] 12–13+15+19 7), “and Moses said” (CD v.8), or “[whic]h Moses spoke” (Ordinances^a [4Q159] 5.3). Citations ascribed to God can come from varying books of scripture. “Which God said” at Damascus Document (CD) vi.13 introduces a citation from *Malachi* and at Damascus Document (CD) viii.9 (= xix.22) a quote from *Deuteronomy*. In a prayer context where God is the addressee, the citation formula may take the form of “as You spoke by the hand of Moses, saying” (1QM x.6).

Quotation and Requotation in the Pesharim. Citation formulas in the “continuous” *pesharim* present a perspective different from citation formulas in other documents. In the *pesharim*, which are based completely on a single biblical book, the employment of citation formulas is surprising since the framework for the *peshar* is the biblical book and there should be no need to introduce citations. It is only in Peshar Habakkuk (1QpHab) and Peshar Isaiah^{b,c} (4Q161–163, 165) of the continuous *pesharim* that formulas are to be found at all. In Peshar Habakkuk, it appears that these formulas are employed only to introduce requotations of portions of verses that have been cited already (and almost always not commented upon previously), *va’asher ’amar* when the second citation precedes its *peshar*, and *ki lu’ asher ’amar* when the citation is reintroduced to confirm the connection between the *peshar* and the biblical text. It is not clear that the usage is the same in the Isaiah *pesharim*, other than

Pesher Isaiah¹. In fact, there is only one possible example outside Pesher Habakkuk where we find the formula *ki lu' asher amar* ("for that is what it says") employed for any kind of quotation or requotation.

In Pesher Isaiah¹ (4Q163) and in "rhetoric" *peshtarim* such as Florilegium (4Q174) and Melchizedek (11Q13), the function of citation formulas is clearly not merely to introduce quotations, but is a technical device by which an author introduces further texts into his scripture-based argument. At times, several verses are quoted in sequence with a kind of hierarchy of quotation formulas applied to them. In works such as Pesher Isaiah¹ (4Q163), where the text of *Isaiah* is not commented upon continuously, the *va'asher amar* citation formula may also serve to move the reader's attention ahead to the next piece of noncontinuous text being cited and interpreted. On the other hand, *ka'asher kattiv* in Pesher Isaiah¹ appears to link two citations together in the sequence quotation-*pesher*-proof text. [See *Pesharim*.]

The uses of *va'asher amar* and *ka'asher kattiv* are similar in Florilegium, to indicate resumptive quotation and subordinated proof text, respectively, while citations from other books are sometimes introduced by *asher kattiv* together with the name of the book. The latter formula is also to be found in *Catena*¹ (4Q177), perhaps as many as seven times with the same function of introducing subordinated proof texts from books other than *Psalms*. In this manuscript, however, the use of *va'asher amar* does not lend itself neatly to explanation. Melchizedek has a more complicated citation formula pattern than Florilegium or *Catena*², because it does not maintain a strong stance within a single biblical text as they do, but is rather built around several passages together with, of course, the employment of secondary proof texts. We find a double formula "*as it is written about it in the songs of David who said*" followed by a quotation from *Psalms*, followed by *ve-'alav amar* ("and regarding it, he says") and another *Psalms* quote, with David presumably the subject. The latter formula behaves like "as it is written in the book of."

Function of Citations in Non-Pesher Works. In works that are not fundamentally scripturally based or focused, citations from scripture play a very different role from the ones that we examined in the various sorts of *peshtarim*. From a formal standpoint, even though the interpretive technique and terminology may resemble that of the various types of *peshtarim*, citations in the Damascus Document, the Rule of the Community, and the War Scroll are generally introduced in order to facilitate the flow of the narrative, to buttress its arguments, or to verify its truth. In certain legal texts, such as the Damascus Document (and *Miqsat Ma'asei ha-Torah* with the modifications noted below) some quotations merely employ

the biblical legal material as a framework or as proof texts for the Qumran legal interpretation, and the Damascus Document texts from Cave 4 at Qumran have added to the corpus of citations in legal contexts. But the Damascus Document (CD) also employs scriptural citations in what might be termed a *pesher*-like fashion (even using the term *ptshro* once) by associating events in Jewish history, generally, and the history of the community, in particular, with the specific interpretation of scriptural texts, mostly prophetic. The density of scriptural citations, in both legal and non-legal contexts of the Damascus Document (CD), demonstrates how pivotal scripture was in the composition of this document so fundamental to the Qumran group.

In the Rule of the Community, on the other hand, there are only three examples of citation formulas; two of them are of the legal proof text variety (1QS v.15 and v.17), while the third cites *Isaiah* 40.3 in support of the community's "move to the wilderness" (viii.14). According to a recent analysis, earlier manuscripts of the *Serekh ha-Yahud* did not have any of these citations, and they belong to a later, redactional, level of the Rule of the Community. If this evaluation is correct, then the complete absence of scriptural citations from the original form of Rule of the Community underlines very sharply one of the fundamental ways in which two central Qumran texts, the Damascus Document and the Rule, differ from one another.

In the War Scroll, most of the work is free of scriptural citations, and the citation formulas that we find are concentrated in columns x-xi, the exhortation and prayer of the chief priest. Column x.2-5 cites *Deuteronomy* 20.2-5 and x.6-8 cites *Numbers* 10.9, both pentateuchal verses dealing with the correct conduct of war. Column xi.6-7 cites *Numbers* 24.17-19 (a favorite Qumran quote) and column xi.11-12 quotes *Isaiah* 31.8, both in support of the argument that the wars of Israel will be won by supernatural, and not natural, forces. In all these citations the text is indicated to derive from God and thus serves as a powerful stimulus to the eschatological warriors.

The Accuracy of Scriptural Citations. Given the fact that the Qumran biblical scrolls manifest a variety of so-called text types, there is no reason to assume that scriptural citations in the nonbiblical material need to conform to the Masoretic Text, the Septuagint, or any other known recension of the Hebrew scriptures. On the other hand, it is probably incorrect to assume that whenever a citation formula introduces a text that varies from the Masoretic Text it represents a variant reading of some sort. In fact, there is no doubt that in the case of at least one Qumran work, *Miqsat Ma'asei ha-Torah*, the term *kattiv* is rarely (according to its editors, never) employed with verbatim citations of the Hebrew text; it is followed

by what are not recognizable as "exact" quotations in most of its occurrences. It has been suggested that, rather than employing the convenient, but perhaps misleading, term "paraphrase" for these "citations," we should recognize them as quotations since that term should be applied to any text that employs the language of the scriptural text with modified or re-ordered phraseology. The term "paraphrase" should then be reserved for references to scripture that do not employ primarily scriptural language.

There are also examples in Florilegium where "citations" from *Daniel* and *Ezekiel* are introduced by citation formulas but do not match any known ancient form of the biblical text, although they are clearly modeled on it. How these quotations are to be described or defined does not seem as clear as it does in the case of Miqtsat Ma'asei ha-Torah. More striking is the passage in the Damascus Document from Cave 4 (4Q266 and 4Q270), which seems to meld together material that does not appear in the Hebrew Bible ("Let me go to the ends of the heavens") and a biblical quote (*Lv.* 26:31), introducing it with a citation formula, *ve-'ul Yisra'el katuv* ("regarding Israel it is written"). Unless some sort of flexibility regarding the words following a citation formula is to be allowed for, there is no reasonable way to explain this feature.

The possibility of exegetical variation must also be kept in mind when evaluating the biblical citations in texts like the *pesharim*. Since these texts manipulate and maneuver the biblical original in order to obtain maximum meaning, it is possible that, not only might a Qumran exegete take advantage, by citing it, of a variant text that conforms to the reading that he wishes to impose on the biblical verse, but he might actually create what appears to be a variant on his own toward the same goal. Thus the omissions of a Qumran citation of a biblical text may be exegetically, rather than textually, based, and even the word-play or punning on the biblical text (analogous to the rabbinic *al tirqvi*) might be looked for and found in the citation of the text and not only in the comment on it.

MOSHE J. BERNSTEIN

SCROLL RECONSTRUCTION. Among the more than eight hundred manuscripts found at Qumran there are only nine that are more or less well preserved: Isaiah^a (1QIsa^a), Isaiah^b (1Q8); Genesis Apocryphon (1QapGen),

Rule of the Community (1QS) with Rule of the Congregation (1Q28a), and Rule of the Blessing (1Q28b); War Scroll (1QM); Hodayot' (1QH); Peshet Habakkuk (1QP^{Hab}), Psalms' (11Q5); and Temple Scroll' (11Q19); plus a single sheet of leather, Testimonia (4Q175), the completely preserved Copper Scroll (3Q15) (see Stegemann, 1996, p. 17) and very probably the small square "card" 4QL^{ist of False Prophets} (4Q339). All the other so-called scrolls exist only in fragmentary form, often in tiny pieces. The aim of the material reconstruction of scrolls is to learn more information about a once-complete work that was handed down in a fragmentary state, that is, to gain more insight into its text, its content, and its genre. The advantage of such a material reconstruction is that it is not guided by textual speculations but is oriented to the physical evidence of the fragments; it enables one to know exactly the width of gaps between fragments and their order in the former scroll.

Method of Reconstruction. Already in 1955, J. T. Milik had undertaken a material reconstruction of the Words of Moses (1Q22) and of Rule of the Blessings (Barthelemy and Milik, 1955). [See *biography of Milik*.] The actual method of material reconstruction of scrolls from scattered fragments, also known as the Stegemann method, was developed by Hartmut Stegemann in 1963 in his reconstruction of Hodayot' from Cave 1 at Qumran (Émile Puech independently reconstructed the same manuscript and came to almost the same conclusions as Stegemann, which have since been confirmed by the Hodayot manuscripts from Cave 4 at Qumran), and was described in detail by Stegemann in 1990; cf. also A. Steudel (1998). [See Hodayot'.] An application of the method is found in my work (1994); further ideas were developed by Dirk Stoll (1996) and Stephen Pfann (1997). The method of reconstructing Dead Sea Scroll manuscripts from scattered fragments is grounded in the fact that they were scrolls, that is, that they were rolled up when the natural process of decay started. The basic principle of the Stegemann method is to find corresponding shapes of fragments and corresponding points of damage: Those fragments or points of damage within a fragment that look very similar to each other come from successive layers of the former scroll. The distance between corresponding shapes equals the circumference of the original scroll at the point from which they originate, that is, the smaller the distance between corresponding traces of damage, the closer to the end of the scroll we are (see, for example, the development of distances in which the damage caused by a worm occurs in Psalms' from Cave 11 at Qumran between column xiv and the end of the scroll). Usually, scrolls were stored rolled up correctly—with the beginning of the text on the outside. In those cases the distances decrease from the beginning of the

text, the right part of the scroll, to the end of the text, the left (see, for example, the imprints of the sewing seams in Temple Scroll'; cf. column xxv with column xviii and column lxvi). Some scrolls have been rolled up with the beginning of the text inside, that is, in the wrong direction (obviously they have not been rolled back after usage). Here we find small distances between corresponding points of damage at the beginning of the text that grow larger the further one moves toward the end of the text (e.g., 1QM; 1QS, 1Q28a, and 1Q28b; and Midrash on Eschatology [=Florilegium] 4Q174). The increase or decrease from one layer to the next depends on the thickness of the leather and how tightly a scroll was wrapped, and usually measures about 0.1–0.3 centimeters (0.04–0.12 inches; for papyrus scrolls usually about 0.5 centimeters (0.19 inches). In general, scrolls that are rolled in the wrong direction are more loosely wrapped than those scrolls that are rolled in the right direction.

Technical Process of Reconstruction. In order to find corresponding shapes of fragments it is necessary to compare all the fragments of a manuscript with one another and also to check whether there are corresponding points of damage within a fragment (which is the case when a fragment is larger than the circumference of the former scroll at that point). For this purpose one has to prepare two sets of Xeroxes of all the fragments of a manuscript, to edge the shapes of the fragments and to mark evidence like top and bottom margins, column dividers, sewing seams, empty spaces in lines, etc. In front of a strong light (artificial or sunlight through a window) one shifts the photocopies against each other until corresponding traces of decay are found. Also, the distances of lines drawn with ink or a sharp instrument have to correspond to each other if fragments belong to the same sheet of skin. Alternatively, one might use one set of Xeroxes and one set of transparencies; no extra light is needed in this case (in the future, computer technology will certainly help, but at present, the enormous amount of data is still a problem; not only the shapes, but also cracks, imprints, folds, etc., in the skin have to be compared). Fragments that correspond to each other necessarily have to be arranged on the same horizontal level. It is imperative to check such a reconstruction, begun with the help of Xeroxes, against the originals in the museum. Many details that are of importance for the reconstruction often are not mentioned in the editions and cannot be seen in the photographs; for example, imprints of a fragment or a sewing seam on the back of another fragment. Thickness and color of the leather might indicate that fragments come from the same area of the former scroll, but this is not necessarily so, because the thickness within one sheet can vary, and the color of a fragment, especially its darkening, often depends also on its history

after the scroll has fallen apart (for example, some fragments have been used by rats to build their nests (Benoit, Milik, and de Vaux, 1961); or the colors of some fragments changed after treatment with oil, etc., used in the museum in order to preserve them (see 4Q174, fragment 1). The final and decisive check for a material reconstruction is to see whether the text that results from it makes sense.

It is not possible to reconstruct each and every scroll. Even if there seems to be enough material for a successful reconstruction (Noncanonical Psalms B 4Q381 might be such a case), nature has its own rules, and every fragment has its own history after the scroll has fallen apart. One cannot predict whether a reconstruction of a certain manuscript will be possible. If, at the end of intensive attempts to reconstruct, only one bigger fragment remains unplaced (i.e., there is no space for it in the suggested sequence), the whole reconstruction is questionable, and one might refrain from suggesting any order of the fragments, or, even better, communicate one's failed attempt. Nevertheless, in numerous cases it is worth trying a material reconstruction; the method should be applied only carefully and responsibly.

ANNETTE STEUDEL

SCROLLS RESEARCH. The analysis of the Dead Sea Scrolls cannot be separated from the saga of their discovery, the successful and abortive attempts to publish them, and the political developments of the Middle East. Several accounts of discovery of scrolls in the region of Jericho exist from antiquity and the medieval period, but in modern times the earliest scroll materials to be discovered were the two partial medieval manuscripts of the Zadokite Fragments, also called the Damascus Document. [See Damascus Document.] These manuscripts came to the attention of Solomon Schechter in 1896 in the Cairo Genizah, a storehouse for old books and documents in the Ben Ezra Synagogue in Fustat, Old Cairo. Manuscripts of the very same text were later to be found in the Qumran collection.

The Discoveries. Often told, the discovery of the first hoard of Dead Sea Scrolls by a bedouin shepherd in what is now termed Cave 1 at Qumran actually pertains to only the first few scrolls. Many more fragments were found by archaeologists or by bedouin of some 850 scrolls from other Qumran caves, not to mention the other Judean Desert sites. [See Archaeological Surveys; Qumran.] The entire controversy over unreleased documents related to the finds of Cave 4 which took place sometime later.

In the winter of 1947 (or perhaps fall, 1946), a bedouin shepherd Mohammed edh-Dhib, from the Ta'amireh tribe, entered what is now known as Cave 1 and found several almost complete scrolls encased in protective pottery jars. In the spring of 1947 they were brought to an antiquities dealer in Bethlehem named Khalil Iskander Shahin (Kando) who soon became the agent for the bedouin as they continued to recover scrolls from the Judean Desert. [See biography of Shahin.] In July of 1947, Kando sold four of the scrolls to the Syrian Metropolitan Athanasius Yeshue Samuel of St. Mark's Syrian Orthodox Church in Jerusalem. [See biography of Samuel.] In November, the Jerusalem archaeologist Eleazar L. Sukenik inspected two scrolls in Bethlehem and immediately recognized the probable antiquity of the texts from the script. [See biography of Sukenik.] He succeeded in buying these two scrolls as well as several fragments on behalf of the Hebrew University of Jerusalem and the Jewish Agency. [See Hebrew University of Jerusalem.] On 22 December, Sukenik acquired another scroll from the same source. In so doing, he had succeeded in purchasing three of the seven scrolls found by the bedouin in Cave 1: a manuscript of the biblical book of *Isaiah*; the Thanksgiving Scroll, a collection of sectarian hymns (Hodayot), and the Scroll of the War of the Sons of Light against the Sons of Darkness. The initial identification of the scrolls by Sukenik took place between the November 1947 vote of the United Nations in favor of the Partition Plan for Palestine and the Declaration of Independence of the State of Israel on 14 May 1948.

In late January 1948, Sukenik was shown another four scrolls by Mr. A. Kiraz, an associate of the Metropolitan. On 6 February, Sukenik returned the scrolls to Kiraz, indicating his desire to purchase them for the soon-to-be-declared State of Israel. However, he had trouble in organizing the purchase, and the intervening political changes made it impossible for him to continue the negotiations. In late February 1948, the Metropolitan's assistant took three of these four scrolls to the American Schools of Oriental Research (ASOR) in East Jerusalem (now known as the Albright Institute) to get the opinion of William F. Albright [See American Schools of Oriental Research.] In the absence of the director, Millar Burrows, the material found its way to a young post-doctoral fellow, John C. Trever, also an expert at photography, who concluded that they appeared ancient. With the Metropolitan's permission and aided by another young post-doctoral fellow, William H. Brownlee, he skillfully photographed the three scrolls in black and white and color and began study of them.

By the time archaeologists started to investigate the location from which the scrolls had come, the Jordanian Arab legion had occupied the area of Qumran. As a result, future Qumran manuscript purchases and archaeological excavation would be in the hands of officials of the Jordanian Department of Antiquities. Locating Cave 1 for archaeological study was a difficult task, especially in light of the reticence of the bedouin who expected to find additional scrolls nearby. The cave was spotted by a detachment of British and Jordanian troops after a seventy-two hour, meter-by-meter search of the cliffs. From 15 February to 5 March 1949, G. Lankester Harding, Director of the Jordanian Department of Antiquities, and Roland de Vaux of the Ecole Biblique, the French biblical and archaeological school in Jerusalem, undertook the excavation of Cave 1.

In the spring of 1950, Burrows, Trever, and Brownlee, through the American Schools of Oriental Research (in New Haven) published *The Dead Sea Scrolls of St. Mark's Monastery*, vol. 1: *The Isaiah Manuscript and the Habakkuk Commentary* which contained photographs and transcriptions of the two scrolls. A year later they published vol. 2: *Plates and Transcription of the Manual of Discipline* (that is, the Community Rule). The fourth scroll from the Metropolitan was in such poor condition that it had not yet been unrolled. The rapid publication of the other scrolls naturally encouraged the work of scholars so that, for example, E. Elliger was able to publish a major monograph on Peshet Habakkuk already in 1953 (*Studien zum Habakkuk-Kommentar vom Toten Meer* [Tübingen]).

It was sometime after their examination of Cave 1 (which at first was thought to have no connections with the Qumran ruins) that de Vaux and Harding turned to

the excavation of Khirbet Qumran. From 24 November through 12 December 1951, they conducted the first season of excavations at the site where they found coins and pottery which confirmed the connection between the caves from which the scrolls had come and the adjoining site, and established the dating of the scrolls. By this time the bedouin realized the value of these fragments and put tremendous efforts into locating additional caves. They succeeded in finding the caves in the Wadi Murabba'at in 1951 and those in the Nahal Hever and the site of Khirbet Mird in 1952, but the biggest treasure came to light in August 1952 when they discovered Cave 4 (and Cave 6) at Qumran (Caves 2 and 3 had been found earlier in the year). Cave 4, when the materials from it were pieced together, would yield fragments of some 580 manuscripts. Cave 5 was also located in 1952. [See Hever, Nahal; Mird, Khirbet; and Murabba'at, Wadi.]

Analysis and Publication. The large number of manuscript finds and excavated artifacts convinced the Jordanian authorities in 1952 to organize the work of analysis and publication. Harding appointed de Vaux to the post of editor in chief, and the work was thereafter subsidized by the Palestine Archaeological Museum (PAM), now the Rockefeller Museum. [See Palestine Archaeological Museum.] It was decided to appoint a team of scholars to work with and publish the texts. In 1954, John D. Rockefeller agreed to fund the project for six years, providing the expenses of scholars in Jerusalem, secretarial staff, photography, and preservation. Large sums were also provided for the purchase of materials by the Palestine Archaeological Museum. The materials were to be stored and restored in the museum and published by the Oxford University Press in a new series Discoveries in the Judean Desert. Virtually all the photography was done by Najib Anton Albina, mainly during the years 1954 to 1960. Originally the photographer for the Palestine Archaeological Museum, he devoted himself almost exclusively to the production of photographic plates, including infrared images, of the Judean Desert texts. In many cases, these photographs are the best documentation now available for the texts, some of which have since deteriorated or lost letters around the edges during various stages of storage, research and preservation.

The First Generation. The conditions in the Palestine Archaeological Museum could be described at best as primitive. Scholars never had enough room to work, there were no assistants provided, and too little attention was paid to issues of conservation and preservation. Scorch tape or the gummed edges of postage stamp sheets were used to attach fragments as they were being assembled. Sunlight was allowed to stream into the room and to bathe the ancient manuscripts, leading to further decay. Coffee cups and cigarettes were not an uncommon sight.

De Vaux limited the initial assignments for publication to his colleagues at the Ecole Biblique, P. Benoit, Józef T. Milik, and Maurice Baillet. They were responsible for archaeological reports, the sorting of the myriad Cave 4 fragments, transcription and publication of the texts. In 1953–1954 a group of scholars called the International Team was formed from representatives of various archaeological schools and missions then active in Jordanian East Jerusalem. The members of that team were Frank Moore Cross Jr., Józef T. Milik, John Allegro, J. Starcky, Patrick Skehan, John Strugnell, and C.-H. Hunzinger.

The first to become involved in this new team was Frank Moore Cross, Jr. Eventually a professor at Harvard, Cross was assigned responsibility for the publication of most of the biblical scrolls. One of his most important contributions to Qumran studies was his paleographic analysis of the history of the scripts, "The Development of the Jewish Scripts," published in 1961 (*The Bible and the Ancient Near East*, edited by G. E. Wright, pp. 133–202, Garden City, NY). [See Paleography.] This analysis made possible the dating of fragments so that, when Accelerator Mass Spectrometry, an advanced form of carbon-14 dating, was applied to some scrolls in the 1990s, Cross's dates were generally confirmed. [See Carbon-14 Dating.]

By fall of that year, Milik and Cross were working together in the *scrollery* (as the room in which the scroll fragments were being sorted was called) on the Cave 4 material. Milik had a large lot of fragments assigned to him, including tefillin (phylacteries), mezuzot, targums (translations of biblical books into Aramaic), pseudo-historical texts, rule books, benedictions, calendrical materials, apocrypha and pseudepigrapha. Although Milik went on to publish more than any of the other scholars on the team, it is clear that he was assigned more material than it was feasible for one scholar to handle.

By November 1953, it was apparent that the Jordanian government lacked the necessary funds to keep this important historical source from falling into the hands of private collectors. Accordingly, it was decided to invite foreign academic institutions to purchase fragments. Between 1954 and 1959, manuscripts were purchased by McGill University of Montreal, the Vatican, the Universities of Manchester in England and Heidelberg in Germany, McCormick Theological Seminary in Chicago, All Souls Church in New York, and Oxford University in England. By the time 1953 drew to a close, the scholars working in the Palestine Archaeological Museum had identified some seventy manuscripts from among the Cave 4 collection. Nevertheless, additional manuscripts continued to amass as archaeological excavations proceeded.

For some years after bringing the four large manu-

scripts in his possession to the United States, the Syrian Metropolitan Athanasius Yeshua Samuel had been trying to sell them but without success. He had exhibited them at the Library of Congress in an attempt to attract buyers and later placed an advertisement in the *Wall Street Journal* of 1 June 1954 suggesting that the scrolls "would be an ideal gift to an educational or religious institution." The advertisement was brought to the attention of Yigael Yadin, then on a lecture tour of the United States. Arrangements were made for purchase of the scrolls, and Harry Orlinsky of Hebrew Union College–Jewish Institute of Religion in New York inspected the manuscripts under an assumed name and verified their authenticity. On 1 July 1954, they came into the possession of the State of Israel. Soon after, a large part of the cost of these scrolls (the selling price was \$250,000) was donated by Samuel Gottesman of New York.

At about the same time, John Strugnell of Jesus College, Oxford, joined the team. Besides Milik, he was most consistent in his scrollery work in the 1950s. His assignment was a large lot of pentateuchal paraphrases, pseudo-prophetic texts, hymns, and liturgical and sapiential (wisdom) texts. He eventually turned many of these over for publication to his students at Harvard, where he taught for many years, as he managed to publish very few of them himself. Strugnell was eventually (in the 1980s) to rise to the position of editor in chief, and it was during his tenure that the pressure for full release of all the scrolls came to a head.

In 1955, Sukenik's editions of a scroll of *Isaiah* (Isaiah^b [IQ8]), the *Hodayot* scroll (IQH^a), and the *War Scroll* (IQM) were published posthumously. This meant that by 1955, all scrolls in the possession of the Israelis had been published except the *Genesis Apocryphon* (IQapGen) which, owing to its state of preservation, was not successfully unrolled until later (and then only partially), so that cols. ii and xix–xxii could be published in 1956 by N. Avigad and Yigael Yadin in *A Genesis Apocryphon: A Scroll from the Wilderness of Judaea* (in Hebrew; Jerusalem). In 1955, the first volume of the *Discoveries in the Judaean Desert* series appeared: D. Barthélemy and Józef T. Milik were editors of *Qumran Cave I*. The volume contained all the Cave 1 texts apart from the large ones which had already been published (or, in the case of the *Genesis Apocryphon*, would appear soon). 1955 was also the year in which the Hebrew edition of Yadin's text of and commentary on the *War Scroll* appeared (Jerusalem); an English translation of the book was issued in 1962 under the title *The Scroll of the War of the Sons of Light against the Sons of Darkness* (Oxford).

In the winter and spring of 1955, excavations revealed four additional caves which had collapsed, Caves 7–10; they yielded small numbers of texts, with Caves 9 and 10

each having just one written item. January 1956 brought the discovery of Cave 11 by bedouin. The Jordanians sold the rights to publication to various institutions as a means of financing the purchase of these new materials. The main purchasers were the American Schools of Oriental Research (through the generosity of the Bechtel family) and the Royal Academy of the Netherlands. Publication of the growing number of scrolls continued at an acceptable pace, as the texts from Caves 2, 3, and 5–10 were published in the third volume of *Discoveries in the Judaean Desert* in 1962 (Maurice Baillet, Josef T. Milik, and Roland de Vaux, eds., *Les 'petites grottes' de Qumran* [the second volume in the series, published in 1961, had been devoted to the texts from the Wadi Murabba'at]). Included in the lot of manuscripts of the American Schools of Oriental Research were some from Cave 11, namely, the *Psalms Scroll* (11Q5) which was published as volume 4 in the *Discoveries in the Judaean Desert* by J. A. Sanders in 1965 (*The Psalms Scroll of Qumran Cave 11 [11QPs^a]*). The Dutch purchased the *Job Targum* (edited by J. P. M. van der Ploeg and A. S. van der Woude with B. Jongeling, *Le Targum de Job de la Grotte XI de Qumran* [Leiden, 1971]) and a number of other extremely important manuscripts. The largest of the Cave 11 scrolls, the *Temple Scroll* (11Q19), was acquired by Yadin for Israel in 1967.

De Vaux and his colleagues undertook a preliminary investigation at 'Ein-Feshkha near the Dead Sea in 1956. [See 'Ein-Feshkha.] This site was interpreted as an offshoot and industrial zone for the inhabitants of Qumran, and it was officially excavated in 1958. On 1 June 1956 something of the contents of the Copper Scroll, a list of buried treasures supposedly hidden in the Judean Wilderness, were made known to the public after the scroll had been sawed apart and deciphered in Manchester. [See *Copper Scroll*.]

At this point once again the politics of the Middle East and the Arab-Israeli war interfered in Dead Sea Scrolls research. As a direct result of Egypt's nationalization of the Suez canal and of Arab raids into Israel, Israel, Britain, and France attacked Egypt in the 1956 Sinai Campaign. The military confrontation led to the dispersal of the International Team, and the scrolls were temporarily removed to Amman for safekeeping for the duration of the hostilities.

Research on the scrolls was sufficiently advanced by 1957 that in July Joseph Fitzmyer could begin to compile a concordance of the texts on index cards. In this work he was succeeded by Raymond Brown and Willard G. Oxtoby. This concordance was to be used much later by Ben Zion Wacholder and Martin G. Abegg to produce a multi-volume computer-reconstructed text (*A Preliminary Edition of the Unpublished Dead Sea Scrolls: The Hebrew and*

Aramaic Texts from Cave 4, 4 volumes [Washington, D.C., 1991–1996]), the first volume of which effectively broke any exclusive hold the international team would still have on the Cave 4 texts in 1991. As work on the texts was proceeding, scholarly research on the scrolls was finding new outlets: in 1957 the first volume in the series *Studies on the Texts of the Desert of Judah* was issued (P. Wernberg-Møller, *The Manual of Discipline Translated and Annotated with an Introduction* [Leiden]); and the year 1958 saw the appearance of the first issue of the journal *Revue de Qumran*.

In July 1958 the last of the Cave 4 texts were purchased from Kando, thus bringing to a close an important stage in the history of Qumran research. Some of these fragments, however, are only now finally being published.

Throughout this period, Israeli archaeologists had watched with great interest as bedouin continuously unearthed scrolls in the Jordanian-controlled part of the Judean Desert. In March 1955 the first season of an archaeological survey was carried out at Masada, the desert fortress farther south on the shore of the Dead Sea. Masada had been the last stand of the Sicarii in the Jewish revolt against Rome in 66–73 CE. [See *Masada*.] Some of the same texts found at Qumran were also to be found at Masada (e.g., *Songs of the Sabbath Sacrifice*).

In the spring of 1960, the appearance of John M. Allegro's edition of the Copper Scroll (*The Treasure of the Copper Scroll* [Garden City, N.Y.]) caused great friction in the international team. Allegro had gained access to the scroll as a member of the team and had suggested to Harding that it be sent to Manchester to be opened. The Copper Scroll had been assigned to Milik for publication, and he, indeed, published a preliminary edition in *Revue biblique* in 1959 (his definitive edition appeared in 1962 in *Discoveries in the Judaean Desert* 3, pp. 211–302). Allegro's book was the first major rival edition of a text to be published by a team member, and he was never forgiven for this, perhaps in part because of his view that the treasure was real. In the early 1960s Allegro conducted two expeditions to try to find the treasures mentioned in the scroll. None was ever found, but the search continues by some.

In 1960, when funding by the Rockefeller family came to an end, the members of the international team scattered to their various universities. By this time, the work of sorting the entire collection had largely been completed, and almost all the texts had been transcribed at least in preliminary fashion. Unfortunately, various delays that took place after the international team left Jerusalem, and instances where team members denied other scholars access to texts, impeded publication and eventually led to the controversies of the late 1980s and early 1990s. When the international team disbanded, 511

manuscripts of Cave 4 had been identified, arranged on 620 museum plates, with 25 plates of material still unidentified. The final series of photographs was also completed then. By this time some members of the international team had published widely read introductions to the scrolls: Józef T. Milik, *Ten Years of Discovery in the Wilderness of Judaea* (French original, Paris, 1957; English translation by Strugnell, London 1959); John Allegro, *The Dead Sea Scrolls* (London/Melbourne/Baltimore, 1956; 2nd rev. ed. in 1964; American edition: *The Dead Sea Scrolls and the Origins of Christianity* [New York, 1957]); and Cross, *The Ancient Library of Qumran and Modern Biblical Studies* (London, 1958; 2nd ed. New York, 1961; 3rd ed. with a shortened title *The Ancient Library of Qumran*, Minneapolis, 1995). In 1959, de Vaux gave the Schweich Lectures which were published in French in 1961 (*L'archéologie et les manuscrits de la Mer Morte* [London]) and a revised version in English in 1973 (*Archaeology and the Dead Sea Scrolls* [London]).

Other scholars, too, had contributed introductions or translations of the scrolls then available. For example, A. Dupont-Sommer had issued his first introduction to the scrolls in 1950 (*Aperçus Préliminaires sur les Manuscrits de la Mer Morte* [Paris]); it was soon translated into English as *The Dead Sea Scrolls: A Preliminary Survey* (Oxford, 1952). A new edition of the French work appeared in 1953 (*Nouveaux Aperçus sur les Manuscrits de la Mer Morte* [Paris]), with an English translation in 1954 (*The Jewish Sect of Qumran and the Essenes: New Studies on the Dead Sea Scrolls* [London; American edition, New York, 1955]). His translation of the scrolls appeared under the title *Les écrits esséniens découverts près de la Mer Morte* (Paris, 1959); it was rendered into English as *The Essene Writings from Qumran* (Oxford, 1961; New York, 1962). M. Burrows's volume *The Dead Sea Scrolls* (New York, 1955) contained an introduction to and translation of the scrolls. It was soon followed by his *More Light on the Dead Sea Scrolls* (New York, 1958). T. H. Gaster's *The Dead Sea Scriptures in English* was published in New York in 1956 (British edition, *The Scriptures of the Dead Sea Sect*, London, 1957).

Publications had become so numerous that bibliographies began to appear at a very early time: Christoph Burchard, *Bibliographie zu den Handschriften vom Toten Meer* (Berlin, 1957); William S. LaSor, *Bibliography of the Dead Sea Scrolls* (Pasadena, CA, 1958); and B. Jongeling, *A Classified Bibliography of the Finds in the Desert of Judah 1958-1969* (Leiden, 1971). K. G. Kuhn also issued *Konkordanz zu den Qumrantexten* (Göttingen, 1960), with a supplement a few years later ("Nachträge zur 'Konkordanz zu den Qumrantexten,'" *Revue de Qumrân* 4 [1963-64] 163-234). The first edition of G. Vermes's translation of the scrolls appeared in 1962, *The Dead Sea Scrolls in*

English (Harmondsworth; this much-used work, which includes a substantial introduction to the scrolls, appeared in a fifth edition in 1997 under the title *The Complete Dead Sea Scrolls in English* [New York and London]).

The Shrine of the Book. As early as 1955, the Israeli government planned to build a permanent repository for the scrolls and to put them on display. With additional help from the Gotesman family, who had purchased the four scrolls in 1954, the Shrine of the Book of the Israel Museum was completed and dedicated in 1965 to house those four scrolls and other earlier and more recent purchases. The Shrine of the Book in western Jerusalem remains one of the most distinctive landmarks of the city today, and its position opposite the Knesset illustrates the power of the symbolism provided by the first scrolls coming to light just as the State of Israel was created.

The 1960s saw discovery by the bedouin of the caves at the Wadi ed-Daliyeh and the large-scale excavations at Masada directed by Yadin. [See Wadi ed-Daliyeh.] Only a small amount of the Daliyeh texts, which are contracts written in Aramaic, have appeared, but the Masada texts and artifacts have been made available in the series *Masada: Final Reports* (vols. 1-6, Jerusalem, 1989-1999).

In November of 1966, the Jordanian government nationalized the Palestine Archaeological Museum. This step became significant when Israel conquered East Jerusalem in the 1967 Arab-Israeli War, for the Israel Department of Antiquities would come to control this important collection of Dead Sea Scrolls in the institution now renamed the Rockefeller Museum. A few scrolls that had been on exhibit at Amman during the war, as well as several of the fragmentary Cave 1 manuscripts, still remain in Jordan along with the Copper Scroll, on which conservation work was done by Elicricité de France in 1996. [See Amman Museum.]

During the Arab-Israeli War, Yadin acquired the Temple Scroll from Kando. This was the end of a story that had begun in 1960. A clergyman from Virginia, Reverend Joseph Uhrig, had shown Yadin a small sample of the scroll in return for a deposit of \$10,000, but the deal for purchase of the scroll through him never materialized. By 1967, Yadin was apparently aware that the scroll was in Kando's hands. In the early days of the war, he sent intelligence officers to Kando's house in Bethlehem where they seized the scroll, thereby saving it from rotting under the floorboards. Later, Kando was compensated with a payment of \$108,000.

The physical location of the scrolls and the politics of the Middle East affected the publication process as well. One result of these factors was the exclusion of Jews, and certainly of Israelis, from de Vaux's editorial team in the 1950s through the mid-1980s. The Israeli conquest of

East Jerusalem would set off a chain of events which ultimately led to the release of the entire corpus and to a wider understanding of the nature of the ancient library. But his was a delayed reaction [lasting well into the 1990s. Immediately after the war, Israeli officials agreed to let the existing team continue their work, expecting that it would soon be completed. In retrospect, the allotments of texts to each editor were simply too large for publication within a reasonable time. It should be noted, however, that the first volume of Cave 4 texts—those of John Allegro's lot—was published in volume 5 of Discoveries in the Judaean Desert (called Discoveries in the Judaean Desert of Jordan for vols. 4 and 5) series in 1968: *Qumran Cave 4, I (4Q158–4Q186)*. The appearance of the volume was followed by a devastating review by Strugnell, "Notes en marge du volume V des 'Discoveries in the Judaean Desert of Jordan'" (*Revue de Qumrân* 7 [1969], 163–270); the review was longer than the volume reviewed.

Yadin's work with the Temple Scroll, made available first through a series of public lectures and then in his Hebrew edition of 1977 (*The Temple Scroll*, 3 vols., Jerusalem, English version Jerusalem, 1983), capped a process already observable earlier of seeing Qumran materials in a broader Jewish context. For the first time a scroll entirely of Jewish law—the same size as the *Book of Isaiah*—was placed before the scholar. Furthermore, Yadin had identified the authors of the Temple Scroll with the Qumran sectarians. Therefore, the new scroll led to a fuller recognition of the thorough grounding of that group in Jewish law.

In September 1971, Pierre Benoit succeeded de Vaux (who died that year) as editor in chief of the international team and the Discoveries in the Judaean Desert series. Although he attempted to move the publication process along and some major publications did appear, much of the work on the Cave 4 texts was not really proceeding at all. During his thirteen-year tenure as editor, two volumes in Discoveries in the Judaean Desert (volumes 6 [1977] and 7 [1982]) appeared—de Vaux and Milik, *Qumrân Grotte 4, II: I. Archéologie, II. Tefillin, Mezuzot et Targums (4Q128–4Q157)*; and M. Baillet, *Qumrân Grotte 4, III (4Q482–4Q520)*. Another major publication of the period was Milik's *The Books of Enoch: Aramaic Fragments of Qumrân Cave 4* (Oxford, 1976) in which many of the Cave 4 copies of Enoch material were made available and supplied with learned commentary.

Problems with the publication process were clear in September 1984 when Benoit retired and the Israeli Department of Antiquities confirmed Strugnell as editor in chief of scrolls publication. Strugnell expanded the team to include some twenty members, among whom were several Israelis—Devorah Dimant, Elisha Qimron and Emanuel Tov. He also furnished a timetable to the Israeli

Department of Antiquities (which in the meantime had become the Israel Antiquities Authority), but the deadlines he specified were not kept and there was no effective mechanism for enforcing them. [See Israel Antiquities Authority.] The only volume to appear in print during Strugnell's tenure as editor was by Tov in 1990: *The Greek Minor Prophets Scroll from Nahal Hever (8HevXIIgr) (The Seiyâl Collection I)*.

A New Generation. When Qimron communicated a few lines of the Halakhic Letter at the 1984 International Conference on Biblical Archaeology in Jerusalem, it stimulated great curiosity as to what other such texts still lay hidden in the unpublished corpus of Qumran texts. Scarcely a year later, at the New York University Conference on the Dead Sea Scrolls, Morton Smith delivered an impassioned plea for the immediate publication of photographs of the entire corpus. Hershel Shanks, editor of the *Biblical Archaeology Review*, took up the struggle in his popular magazine. He editorialized extensively on the problem and began his campaign in earnest to liberate the scrolls. The members of the team alone, however, retained the right to work with the published Cave 4 fragments, and they were not as willing to make them available to other scholars as many people would have liked. At the close of the 1980s and beginning of the 1990s the call for release and publication of all the remaining Cave 4 texts grew louder, surfacing regularly at scholarly conferences and in the press. Amir Drori, Director of the Israel Antiquities Authority also began to feel pressure for change. However, the roadblock was soon to be broken by the efforts of scholars themselves. The clamor for open access was greatly increased when Robert Eisenman and Philip Davies formally requested to read the unpublished fragments of the Damascus Document in the Rockefeller Museum and were denied the right to do so by Strugnell. The exchange of letters involved in this matter was published in *Biblical Archaeology Review*.

In 1990, Stephen A. Reed of the Ancient Biblical Manuscript Center in Claremont, California, came to Jerusalem to prepare the first complete catalog of scrolls materials and photographs, making use of an earlier private catalog compiled by Qimron. Reed's indispensable catalog clarified the extent of the still unpublished material and focused attention on its proper conservation and restoration. Reed's inventory was first published as a series of ten fascicles (*The Dead Sea Scrolls Inventory Project: Lists of Documents, Photographs and Museum Plates* [Claremont, 1992]) and later appeared as *The Dead Sea Scrolls Catalogue: Documents, Photographs and Museum Inventory Numbers* (compiled by S. A. Reed, revised and edited by M. J. Lundberg with the collaboration of M. B. Phelps; Society of Biblical Literature Resources for Biblical Study 32; Atlanta, 1994).

The official editorial team—while significantly widened by 1990 to include some thirty scholars, Jewish and non-Jewish of many nationalities—still held exclusive access to texts, producing editions much too slowly for use by other researchers. Many disenfranchised scholars proposed that access be granted to any and all on the basis of research or university affiliation. Shanks stressed this point in his magazine and proposed that photographs of the texts be distributed.

Then in November 1990, Strugnell's health deteriorated, and after unfortunate remarks in an interview in the Israeli newspaper, *Hareetz*, the Israel Antiquities Authority replaced him with Emanuel Tov of the Hebrew University as editor in chief of the international team and head of the Discoveries in the Judaean Desert series. Émile Puech of the École Biblique, Eugene Ulrich of the University of Notre Dame, and Tov were designated general editors by the members of the team. The international team was expanded by them to some fifty-five editors.

This new team had barely gotten to work when events overtook them. Tov had been on leave in the Netherlands, and, only a few days after his return in September 1991, the newspapers carried the reports of the computer-aided reconstruction of the still-unpublished texts by Ben Zion Wacholder and Martin Abegg of Hebrew Union College in Cincinnati. This edition was produced from the privately distributed concordance prepared by the original editorial team in a limited edition of about thirty copies. The Wacholder-Abegg reconstruction was published by the Biblical Archaeology Society with a preface by *Biblical Archaeology Review* editor Shanks. The date of release of the reconstructed edition was chosen to precede a Nova television documentary which had been in the works for over a year. Only a few weeks later, on 22 September, the Huntington Library in San Marino, California, one of four places where photographs of the scrolls had been deposited for purposes of safety, announced that it would release its full set of photographic negatives of the scrolls. On 15 October 1991, the Nova documentary, "Secrets of the Dead Sea Scrolls," appeared on nationwide television in the U.S. It detailed the controversies surrounding delayed publication for an audience of over 13 million viewers. The Nova special demonstrated the role of the media in the release of the scrolls by making the general public aware of the controversy and stimulating further press reports.

Beginning in 1990 new technological advances not only opened up the scrolls to all scholars but allowed better readings of the manuscripts than had been possible before. In that year Accelerator Mass Spectrometry, a new form of carbon-14 testing, was applied to a set of manuscripts, and these generally supported the paleographic

and archaeological dating which had been previously proposed. Several editions of photographs of varying degrees of usefulness were released. The microfilms of the Huntington Library were not of sufficient quality for exact research. At about the same time, copies of photographs of the unpublished fragments were reaching Robert Eisenman of California State University at Long Beach, from an undisclosed source. Eisenman was a natural conduit for such photographs because of the outspoken position he had taken demanding the release of the scrolls. Together with James Robinson of the Institute for Antiquity and Christianity at Claremont, he organized 1785 photographs for publication in a two-volume set (*A Facsimile Edition of the Dead Sea Scrolls* [Washington, D.C., 1991]); it included a foreword by Shanks discussing the publication controversy and relating his role in it.

A Change of Policy. The publications by Wacholder-Abegg and Eisenman-Robinson led the Israel Antiquities Authority to reformulate its own policies on access to photographs of the scrolls. In October 1991 it allowed open access to all photographs but asked scholars to refrain from publishing editions of texts assigned to others for editing. Open access to all photographs available in Jerusalem, Claremont, and Oxford has been the norm since then.

With the release of the Huntington microfilms and the Eisenman-Robinson-Shanks facsimiles, it was clear that high-quality, properly indexed photographs of the entire Judean Desert corpus would have to be issued. The Dutch publishing house E. J. Brill, with the cooperation of the Israel Antiquities Authority and under the editorship of Tov, issued a set of positive microfiches in 1993: *The Dead Sea Scrolls on Microfiche: A Comprehensive Facsimile Edition of the Texts from the Judean Desert*. The microfiche edition was supplemented with two other volumes: *An Inventory List of Photographs* (compiled by S. Reed, edited by M. Lundberg) and *Companion Volume* (edited by Tov with the collaboration of S. J. Pfann; a second edition appeared in 1995). This project, of high quality, is the most complete set of photographs (more than 5000 in number) from all the Judean Desert sites ever issued and has recently been supplemented with the Allegro collection of 1600 images (*The Allegro Qumran Collection* [edited by G. J. Brooke with the collaboration of H. K. Bond; Leiden, 1996]) and a CD-ROM edition. Today, anyone who can read Second Temple Hebrew and Aramaic texts in their original scripts can study the entire corpus. This important part of humanity's heritage has now become available to all.

Publication of more and more texts from Cave 4 has accelerated the pace of publication on the scrolls. A new journal, *Dead Sea Discoveries*, began in 1994, and other large-scale projects in scrolls research, such as the

Princeton Theological Seminary Dead Sea Scrolls Project, edited by J. Charlesworth, are under way. So large is the number of publications on the texts that F. Garcia Martínez and D. Parry prepared a 561-page volume *A Bibliography of the Finds in the Desert of Judah 1970–95* (Leiden, 1996), and it is being updated in issues of *Revue de Qumrân*. Also, the series *Studies on the Texts of the Desert of Judah* has become a major vehicle for publication of technical scrolls research, with some twenty volumes appearing between 1992 and 1999.

With the enlargement of the team of editors and the opening of the entire corpus to scholars, the speed at which the texts are being published has greatly improved, and it is predicted that all of them will be in print in official editions by the turn of the century or very shortly thereafter. More texts have been published in the last ten years than in the preceding forty. During the 1990s sixteen volumes in the *Discoveries in the Judaean Desert* series have appeared (9, 10, 11, 12, 13, 14, 15, 18, 19, 20, 22, 25, and 26 contain texts from Qumran Cave 4; 23 completes publication of the Cave 11 material; 24 contains the Wadi ed-Daliyeh seal impressions; and 27 includes texts from Nahal Hever); other volumes are in advanced stages of preparation.

GEORGE J. BROOKE
LAWRENCE H. SCHIFFMAN
JAMES C. VANDERKAM

SDEIR, WADI. In 1905 some bedouin brought the German engineer G. D. Sandel to the Cave of the Pool. He later described the pool that was built at the entrance to the cave and mentioned that he had found a group of complete jugs in the cave. In 1952 the bedouin found a number of written fragments in the caves of Nahal David, most likely in the Cave of the Pool. In 1958 Yohanan Aharoni surveyed Nahal David and conducted a short excavation in the Cave of the Pool. N. Avigad excavated in the Cave of the Pool in 1960 and 1961 within the framework of the Judean Desert Expeditions. A group of graves from the Hasmonean era north of Nahal David, near the shore of the Dead Sea, were excavated in 1960 by Yigael Yadin. During the second stage of the Judean Desert Expeditions, Avigad excavated six graves from the Second Temple period on the lower eastern side of Nahal David. An additional grave was excavated in Nahal David by G. Hadas in 1987.

Burial Caves. The burial caves excavated in Nahal David by Yadin, Avigad, and Hadas were of the Second Temple period. Yadin excavated the easternmost caves adjacent to the shore of the Dead Sea, a little north of Nahal David. The results were never published but it is known that a wooden coffin and many bones were discovered in

one of the caves. On the basis of the pottery Yadin found there, he theorized that the graves were from the time of Herod; however, Avigad claimed that they were instead of the Hasmonean period. Grave 4, excavated by Hadas, is situated between the graves excavated by Yadin and Avigad. A sarcophagus as well as a bronze bell were found in this grave. The six graves excavated by Avigad contained a number of wooden coffins.

The finds in the caves of Nahal David are characteristic of family graves from the Second Temple period, such as those that were found in Jerusalem and Jericho, and include pottery, glass, and metal containers of the Hasmonean period. [See *Cemeteries; Glassware; Metal Utensils; and Pottery*.] The graves discovered at Nahal David are different from those found in the ruins of Qumran, which lack family burials and burial offerings. Eight graves similar to those in Nahal David were excavated by Hadas in Nahal Arugot to the south. [See *Arugot, Nahal*.]

Cave of the Pool. On the northern bank of Nahal David, north of the dry waterfall, lies the cave's entrance, which is 150 meters (492 feet) above the stream. Access to it is difficult but not dangerous. The entrance to the cave is visible only from a distance of a few meters away. At the present time the width of the cave's opening is 2.5 meters (8.2 feet). Aharoni claimed that the remnants of plaster and building stones that he found attest that the people hiding in the cave sealed its entrance, and entered the cave through a nearly obscured opening in the side, the width of which is 60 centimeters (24 inches). Avigad claimed, in contrast, that the material in question was not plaster but natural matter and that it was unreasonable to think that the inhabitants of the cave sealed the only entrance that provided them with light and air.

The cave is a medium-sized one, the depth of which is 33 meters (108 feet). In the entrance of the cave is a pool similar to those built in Cave 1 at Wadi Murabba'at and the Cave of the Reservoir in Nahal Hardut. [See *Murabba'at, Wadi; and Se'elim, Nahal, article on Archaeology*.] The pool was partially hewn and partially built and is covered with thick plaster. The length of the pool is approximately 5 meters (16.4 feet), and it is divided so that one part is a sunken pit, the depth of which is roughly 1 meter, from which water flows to the pool. The average width of the pool is 1.2 meters (3.9 feet), its depth about 2 meters (6.6 feet), and its volume 12 cubic meters (424 cubic feet).

Finds from the Chalcolithic period and from the Iron Age were discovered in the cave, but the principal finds were from the Bar Kokhba period. In 1905, Sandel mentioned that he saw a collection of large pitchers containing liquid standing in the rear of the cave, and near the pitchers a mat made of palm leaves was spread out. In 1958 Aharoni noticed that the bedouin had taken the

pitchers from the cave. Aharoni found pottery, remnants of rope and mats, as well as many organic remnants of various fruits brought as provisions to the cave. Avigad found an arrowhead (bearing an etching resembling a pyramid) stuck in the cave's ceiling. He assumed that the arrow was shot from outside when the Roman soldiers chased those escaping to the cave right up to the cave's entrance. [See Bar Kokhba Revolt.] A different type of arrowhead (three-sided) was found by Avigad in the cave, and he assumed that this type served those escaping to the cave. Likewise, Avigad found wooden combs in the cave; a collection of fourteen glass vessels; two wooden spindles; a cap of a pitcher made of clay; a small collection of fabrics, mats, and ropes; many remnants of organic food brought to the cave; and two bronze coins, one a coin of the city of Tyre from the year 127 CE and the second from the third year of the Bar Kokhba Revolt. [See Numismatics; Wooden Artifacts.]

In 1952, the bedouin found at Nahal David written documents from the period of the Bar Kokhba Revolt. These documents probably were discovered in the Cave of the Pool, since this is the only cave in Nahal David in which remnants from the period of the Bar Kokhba Revolt were found. Among the fragments acquired from the bedouin were three fragments of a leather scroll containing the *Book of Genesis* (Sdeir 1). One of the fragments contained remnants of two columns. In the first column parts of *Genesis* 35.6–8 remained. The three other pieces from this scroll were from one column, which contained *Genesis* 35.23–36.17. The scroll was a tall one containing at least thirty-two lines. A second document acquired from the bedouin was written upon a papyrus (Sdeir 2); it is a fiscal document on which was written: "On the second of Adar, year three of the liberation of Israel," that is to say in the winter of 134 CE. The third is a fiscal document written in Greek.

HANAN ESHEL

Translated from Hebrew by Daphna Krupp

SECRECY. At Qumran two terms are used to denote secret knowledge or revelation. The first is *sod*, which in Biblical Hebrew means "counsel" or "council" but can

also mean "secret counsel"; in the Qumran scrolls *sod* frequently means "secret" (e.g. "because of their guilt you hid the fountain of understanding and the secret of truth" [*ve-sod emet*; *Hodayot*^a from Qumran Cave 1, hereafter, 1QH^a *Hodayot*^a, 1QH^a viii.26–27 [v.25–26]). The second term is a Persian loanword, *raz*, which usually means "mystery" but can also denote "secret" (e.g., "wondrous secrets"; 1QH^a ix.22 [i.20]).

Practice of Secrecy. God's secrets, that is, "all the mysteries (or secrets) of the words of his servants the prophets," were apparently hidden from the prophets; they were revealed only to the Teacher of Righteousness (Peshar Habakkuk, 1QP^aHab vii.4–5). He and his group of followers kept secret what had been revealed. Other Jews knew about the "revealed things" (Rule of the Community from Qumran Cave 1, hereafter, 1QR^aRule of the Community; 1QS v.9), but they transgressed them; only the Qumranites possessed access, through the Teacher of Righteousness, to "the hidden things" (1QS v.11; Festival Prayers^b, 4Q508 2; Festival Prayers^c, 4Q509 212). It was forbidden to discuss these "hidden things" or other insights with Jews who were not members of the community (1QS v.10–16, ix.16–17). Discussions are to be only with "the chosen of the Way" (1QS ix.17–18). One of the attributes of "the Sons of Truth" is that they conceal "the truth of the mysteries of knowledge" (1QS iv.6). At Qumran sometimes scribes wrote in code to hide secrets from the uninitiated, for example, in Words of the Sage to the Sons of Dawn (in Cryptic A Script; 4Q298).

The master is to instruct only the Sons of Light "in the mysteries of wonder and truth" (1QS ix.18–19). The final hymn of 1QR^aRule of the Community, which was institutionalized by its inclusion in this collection, has the Qumranite state: "With the counsel of salvation I will conceal knowledge, and with prudent knowledge I will hedge [it] with a firm boundary, keeping faithfulness and strong judgment of God's righteousness" (1QS x.24–25). The hymn continues to celebrate God for the light that shines in the heart of the Qumranite "from his wondrous mysteries" and for the secret knowledge that has been hidden from mankind (1QS xi.5–6).

The author of the hymn in column viii of *Hodayot*^a, who is most likely the Teacher of Righteousness, talks about the secret he has received from God and why it is not known by others: "And he who causes to sprout the hol[y] shoot for the planting of truth is concealed with the result that he is not esteemed, and the sealing of his mystery is not perceived" (1QH^a xvi.11–12 [viii.10–11]). The one "who causes to sprout the hol[y] shoot" is the Teacher of the Righteousness, who obviously is able to perform this salvific task because God is working through him. It is clear that he has not received the requisite "esteem" he deserves, and the explanation of this suffering is that God has "concealed" his work from other Jews so

that those who are not his followers do not perceive the secret mystery he has received from God. [See *Eternal Planting*.]

Frequently, the poems in *Hodayot* refer to secret knowledge. Most of these probably were composed by an anonymous poet in the community. The following excerpts indicate the secrets vouchsafed only to the Sons of Light and celebrated by them: "You have revealed to me wondrous secrets (*razer pele*?; 1QH^a ix.23–25 [i.21–23]), and "For you have made known to me your wondrous mysteries, and by your wondrous secrets you have wrought mightily with me" (1QH^a xii.28–29 [iv.27–28]).

If a member of the community discovered, through the study of the Torah or other sacred books, "what had been concealed from Israel," he was obligated to share the new insight with the men of the community (1QS viii.11–12). Thus, it is clear that the Qumran community claimed to possess special knowledge and mysteries. They were a closed group, probably a sect, and secrets were reserved only for the Sons of Light, that is, only for those who belonged to the community. Only the members of the community had access to and knew the mysteries of God. In this sense, Josephus seems accurately to portray this Jewish group, and there are abundant reasons to conclude that the members of the Qumran community were a strict type of Essenes: Josephus reported that the Essenes, on the one hand, conceal nothing from other members of the community but, on the other hand, share none of their secrets with others, even if severely tortured (*The Jewish War* 2.141). In the Damascus Document (CD xiv.8–10), the inspector over all the camps is required to know every secret of mankind.

For the members of the Qumran community, the secrets were always God's, and they fall into seven categories: the secrets of the cosmos (Mysteries, 1Q27 13), the secret society of the eternal planting (1QH^a xvi [viii]), the secrets of music (1QH^a ix.28 [i.26]), the secret of language (1QH^a ix.29 [i.27]), and the three most important, the secrets of scripture (1QpHab vii), the secrets of the universe that helped establish their solar calendar (1QH^a ix.9–13 [i.7–11]), and especially the secrets of past and recent salvific history and the future (1QS xi.3–4, 1QpHab). The author of *Hodayot* was interested in them all, and he praised God for hiding "the secret of truth" from the sons of misfortune and revealing it to him (1QH^a xiii.25–27 [v.23–25]).

Context outside the Sect. The Qumran concept of "secreter" is unlike that found in *Ben Sira*, which lauds the wise person who searches out "the secrets of proverbs" (*Sir.* 39.3). Members of the Qumran community would, however, have agreed with the author that God's secrets are hidden from humans (*Sir.* 11.4), but because of their special sources of revelation, they regarded themselves as exceptions. They would also have agreed with the author

of the *Wisdom of Solomon*, who explained that the wicked "did not know the secret purposes of God" (*Wis.* 2.22). They would concur with the author of *Daniel* that no wise person knows secrets unless God reveals them (*Dn.* 2.27–29), but they would boast that is precisely what has occurred: God disclosed his secrets to the Teacher of Righteousness. Most importantly, as Jews heavily influenced by Jewish apocalypticism, they held the same concept of wisdom articulated in, for example, *1 Enoch*, numerous copies of which they kept in their library. Surely they would have related to the idea of Michael revealing to Enoch all the secrets of mercy, all the secrets of righteousness, and all astronomical secrets (*1 En.* 71.4).

The emphasis upon salvific and esoteric knowledge revealed only to a select group of humans aligns the members of the Qumran community with some of the early forms of gnosis, which was controlled by wild and aberrant metaphysical speculations (Driver, 1965), but Qumran esoteric salvific knowledge is paradigmatically distinct from second-century Gnosticism (Davies, 1953). [See *Gnosticism*.] The Qumran concept of a secret plan of salvation is important for understanding Paul and the Pauline School (Coppens, 1990), since Paul and his school linked the concepts of revelation, mystery, knowledge, and perfection, and for Paul "mystery" denoted God's secret plan of salvation.

JAMES H. CHARLESWORTH

SECTARIANISM. Second Temple Jewish society included a number of groups with distinctive outlooks, practices, social relationships, and political stances. A group is an aggregate of people who have or are perceived to have common characteristics and who interact with

one another in some way. Groups may be specified as social movements, interest groups, kinship groups, deviance associations, etc. Some Jewish groups, including the Qumran community and the Essenes with whom they are often identified, have been called sects. Since sects must be understood in relationship with the whole of society, and the term *sect* has a number of meanings, a review of the sociology of sectarianism will precede a survey of some Jewish groups and sects from the Second Temple through early rabbinic periods.

Sociology of Sectarianism. The term *sect* has been borrowed from Christian theology and history where the dominant "orthodox" community used it as a pejorative designation for groups that rejected normative teaching, authority, worship, and practices. In the early twentieth century, Ernst Troeltsch popularized the church/sect distinction to differentiate organizational forms within Christianity. In the latter half of the twentieth century, the waning influence of "main-line" churches has led to the contrast of modern secular society with religious sects espousing traditional or non-Western ways of life and thought.

Though sects are often thought of as religious groups that have withdrawn from society in order to engage in odd practices and beliefs, they are more often religious groups within society that actively resist or reject in word and deed the prevailing patterns of belief and conduct. Sects claim exclusive possession of a single comprehensive religious truth and they demand a primary all-embracing allegiance from their members. Since they oppose the prevailing authorities and sociopolitical arrangements, they often lack elaborate formal organization and stress egalitarian relationships.

Sects may be coherently classified in several ways. Most simply, they may be related to society at large, according to the degree of tension in their relationship with their socio-cultural environment, ranging from the conformative to the alienative. Like other deviant groups, they may also be classified according to their goals, which may range from the instrumental (seeking to have an impact on society) to the expressive (seeking to meet the sect's inner needs) (Stark and Bainbridge, 1985, p. 23; Pfahl, 1985, pp. 315-317; Pfahl, 1980, pp. 269-273). Since sects deviate from "prevailing cultural values, goals and norms, and whatever facilities are culturally provided for man's salvation" and for the overcoming of evil, they may be classified according to the alternative modes of transformation for individuals and society that they offer in response to society's ills (Wilson, 1973). Bryan Wilson suggests seven sects according to types of response:

1. The revolutionist sect awaits the destruction of the social order by divine power. Many apocalyptic and messianic groups, including the Qumran sect, fit this type.
2. The introversionist sect withdraws from the world into a purified community. The Qumran community also fits this type.
3. The reformist sect seeks gradual, divinely mandated alterations in society. The Pharisees, Jesus with his disciples, and perhaps the Sadducees among the ruling classes, fit this type.
4. Utopian sects try to reconstruct the world according to divine principles without revolution.
5. The conversionist sect seeks emotional transformation now and final salvation in the future. Many early Christian groups match this type.
6. The thaumaturgical sect seeks relief from specific ills through healings, magic, and miracles. Some Greco-Roman cults and early Christian groups fit this type to a limited extent.
7. The manipulationist sect seeks happiness by a transformed subjective orientation that will control evil. Gnostic and mystical movements fit this type.

These schemes for sorting out different sects have limited utility. They are broad abstractions (ideal types) that suggest common social patterns and relationships. No group can be adequately described using these categories, and most groups may be related to more than one category. In addition, a sect or deviant group may become the dominant group in society over time or may change significantly in several respects. Ancient social categories are subject to the same limitations. For example, Josephus designates the Essenes, Pharisees, Sadducees, and Fourth Philosophy as *haireses* ("choices") specifically, choices of a way of life or of a set of philosophical principles. Thus *hairesis* comes to mean a philosophical school or sect. But just how accurate Josephus is in his description of Jewish organizations and the analogies he makes with Greek institutions is debatable. Nevertheless, Greek voluntary associations, schools, and other sociopolitical institutions must be taken into account along with modern categories (such as sect) in analyzing Jewish groups during the Greco-Roman period.

The Social Context in Erets Yisra'el. In the land of Israel, a number of identifiable movements, groups, and sects with religious, social and political agendas and goals arose during the Second Temple and early rabbinic periods. Judean society, like the rest of the Near East, was governed by traditionally wealthy and powerful landowning and priestly families who controlled the political and religious institutions in Jerusalem. About 90 percent of Judeans did not belong to the ruling classes but were farmers and artisans led by local elders from landowning families and by local priests who did not belong to the

Jerusalem elite. This power structure, which embraced religion, economics, and politics, regularly renewed its membership, since leaders and groups competed with one another in factions and coalitions. Individuals and families not only gained but lost wealth, power, and influence.

Third Isaiah, *Deutero-Zechariah*, *Ezra*, *Nehemiah*, early sections of the *Book of Enoch*, and the Dead Sea Scrolls suggest that various priestly and learned groups in Judea competed and disputed over the governance of the Temple and land and over the dominant vision that should guide their society. *Ezra* and *Nehemiah*, who represented elite but powerful minorities, promoted the reform of Judean society by an appeal to Torah. *Third Isaiah* (chaps. 56–66) reflects conflicts over Temple policies and practices, and *Deutero-Zechariah* (chaps. 9–14) responds to social dislocation in the fifth-century Persian Empire. The collections of documents in *I Enoch* and many Dead Sea Scrolls testify to disputes over the calendar, rigorous observance of the covenant, the authentic sources of divine authority, and God's purposes in the world.

In the early second century BCE, political disorder in Jerusalem led to the overthrow of the traditional high priestly family, the Oniads, and to Seleucid oppression and persecution of Judeans and their way of life (for causes that remain disputed). In response, the Hasmoneans (Maccabees), who were a minor priestly family living in the Judean village of Modin, formed a coalition of disaffected local leaders and farmers to oppose the Seleucids and the Jewish usurpers in Jerusalem. Popular unrest, guerrilla warfare, and a few large-scale military engagements, combined with instability in the Seleucid dynasty, enabled the Hasmoneans to gain relative independence for Judea and the high priesthood for themselves. Thus, disaffected members of the elite (priestly class) formed a popular revolutionary movement and displaced the governing class, itself riven by rivalries.

Second Temple Jewish Groups and Sects. The Hasmonean hegemony in Jerusalem from the mid-second to mid-first centuries led to a power shift and social dislocation that resulted in the formation of a number of political-religious movements and sects. The process continued in the next century with the Roman conquest and the rise of the Herodian family to power. Thanks to Josephus, Philo, the Dead Sea Scrolls, the New Testament, and Pliny we know the names of some Jewish groups of the Second Temple period, especially the Essenes, Pharisees, Sadducees, Fourth (revolutionary) Philosophy of Judas and Zadok, and the inhabitants of Qumran (most probably a type of Essene). We also know a number of leaders who attracted followings, including teachers and reformers, such as John the Baptist, Jesus, and Bannus, revolutionaries, such as Athronges and Simon baidir leaders

such as the Galileans Ezekias and his son Judas, and revolutionary factional leaders during the first war against Rome such as Jesus the Galilean, John of Gischala, Simon bar Giora, and Eleazar ben Simon.

The most well known groups are the Pharisees, Sadducees, and Essenes. The three groups, Josephus approvingly identified as "philosophies" for his Greco-Roman readers. Josephus presents the Pharisees and Sadducees as rival political interest groups at the Jerusalem royal court in the reigns of John Hyrcanus, Alexander Jannaeus, and Queen Alexandra during the late second and early first centuries BCE, each with its own reform agenda, way of life, and interpretations of Jewish law. In sociological terms they are reformist sects, conformist and instrumental in their orientation, clearly marked off from society at large, but deeply involved in its workings at the highest level. We have no direct documentary evidence for the Pharisees' and Sadducees' teachings, and very little about them can be reliably inferred from Second Temple and rabbinic literature. Since they evolved over time, they should not be treated as unchanging sects with invariant doctrines or *halakhah* but as synchronically and diachronically diverse. They probably included competing leaders and subgroups and changed their emphases, goals, and social relationships over time. Since they coexisted in the same milieu, they probably overlapped in their teachings and policies and formed shifting coalitions with each other and other groups.

The Qumran group, which has enough in common with Josephus's description of the Essenes to be identified as a branch of that sect, is placed at Qumran in the mid-second century BCE (or in the late second century, according to some) by archaeological evidence. This group promoted a renewed commitment to the biblical covenant and a strict observance of biblical law. Its response to society is marked by withdrawal and apocalyptic expectation of divine intervention and thus may be typed as an introversionist, revolutionary (to a limited extent) sect with an alienative, expressive response to society. The Essene groups that lived in towns may have been more reformist and instrumental in their orientation.

Because Josephus has made the Pharisees, Sadducees, and Essenes well known, some have tried to force other groups and figures into these named groups. This tendency should be resisted. Jewish life, thought, society, and politics manifested a rich diversity that was shared among many groups and documents. Qumran documents contain a variety of views, images, and concerns found in earlier contemporary, and later documents. Thus the Qumran group should not be labeled as Zealot, Essene, or Sadducean without a preponderance of evidence. Nor should Jesus or John the Baptist be identified with the Essenes or Pharisees on the basis of a few similar inter-

ests or teachings. Similarly, the groups who opposed the Romans, from Ezekias and Judas the Galilean through the Fourth Philosophy mentioned by Josephus, should not be identified with the Zealots of the mid-first century CE and treated as an ongoing, organized movement.

Some Second Temple groups were led by popular teachers and preachers who were reformers or revolutionaries, who exhorted and warned the people to repent, renew the covenant, obey God's commands, and turn Israel into what it should be in God's eyes. These groups were more amorphous than sects and should be likened to popular movements. John the Baptist, whose austere life and fatal confrontation with Herod Antipas is briefly recounted in Josephus and the gospels, was one of the prophetlike reformers in the twenties of the first century CE. Though John did not advise revolution, he criticized society, Herod Antipas, and the governing class. In the fifties of the first century, an ascetic named Bannus attracted people to withdraw from society for a faithful living of Jewish life in the wilderness (Josephus, *The Life* 11–12). Jesus, an artisan from the Galilean village of Nazareth, attracted a large following with his message of reform and recommitment to God's rule (the kingdom of God) and his promise of relief from suffering and oppression through thaumaturgy (miracles) and divine intervention (apocalyptic expectation). He gathered around him a group of followers who, either before or after his execution, understood him to be the Messiah. In the decades after his death, Jesus' reform movement became an apocalyptically motivated reformist sect among Jews in Syria-Palestine. In the rest of the Greco-Roman world, Jesus' followers became a conversionist sect by incorporating gentiles into their assemblies (churches) and eventually distancing themselves from the Jewish community.

Josephus records the emergence of a number of popular leaders who founded revolutionary movements and sects that opposed the Roman Empire. When Herod died in 4 BCE, a tall, extraordinarily strong shepherd named Athronges claimed to be king and, with his four brothers, took over part of Judea until defeated by Roman troops (*The Jewish War* 2 secs. 60–65). A slave of Herod named Simon also proclaimed himself king, burned Herodian palaces at Jericho and elsewhere, and looted the countryside until he was finally defeated in battle (*The Jewish War* 2 secs. 57–59). These messianic revolutionaries drew upon Israel's Davidic traditions and apocalyptic expectations to motivate their revolutionary groups. When Herod's son Archelaus was removed from his position as ruler of Judea and Samaria in 6 CE and replaced by a Roman prefect, a Galilean named Judas led an uprising and, with the aid of a priest named Zadok, promoted a "philosophy" that led to the formation of revolutionary

sects accepting God alone as ruler (*Jewish Antiquities* 18 secs. 4–10, 23–25).

After the reign of Agrippa I (41–44 CE), the increasingly venal and unjust reigns of Roman procurators enraged the people and led to the rise of many revolutionary groups before and during the war against Rome (66–70 CE). The Sicarii assassinated their enemies to destabilize society. Groups of peasants from Galilee, Idumea, and Judea followed local, popular leaders who warred with one another and against the Romans. A man named Jesus was a brigand chief of a band of eight hundred men outside Ptolemais (Acco) on the Mediterranean coast. Simon son of Giora from Gerasa in Transjordan gathered a brigand band and fought both the Romans and his fellow Jews in northern Judea, then in Idumea, and finally in Jerusalem. Among the provincial elite, John of Gischala was Josephus's rival as leader in Galilee early in the revolt and subsequently escaped to Jerusalem where he formed a Zealot coalition to overthrow the traditional leadership. Even after the destruction of Jerusalem in 70 CE, these trends continued and resulted in a second war against Rome in 132–135 CE led by Bar Kosiba, who claimed messianic authority to lead Israel.

In summary, during the first century, groups in Israel had a number of strategies for preserving their identity and adapting their traditions in changing and often hostile circumstances. The Temple priests and leading families, some of whom were Sadducees, negotiated with foreign governments, survived invasions and conquest, and responded to the attractions of Hellenistic culture with dogged determination to survive and continue the sacrificial rituals and national laws of Israel. The Qumran community established a pure priestly and lay community along the hot and barren shore of the Dead Sea in order to await divine intervention against both the Romans and Jerusalem leaders. Other groups of Essenes adapted this way of life to life in the towns of Judea. Groups of priests developed competing interpretations of the Temple ritual, calendar, purity, tithing, among other areas, as specifications of the way of life mandated by the Bible. The Pharisees sought to call Israel to greater fidelity to its covenant with God and to greater zeal in keeping the divine laws. The extension of priestly purity to the homes of ordinary Israelites sanctified people against the lure of Greek and Roman society and culture. Popular leaders called the people to revolt, to a lively expectation of divine intervention, to prophetic reform, or to passive resistance.

These sects, deviant groups, and social movements should not be seen as peripheral nor hostile in principle to an orderly society. They should not be treated in isolation as autonomous entities, nor should religious teaching and motivation be separated from political and social

interests. All social groups are part of society and society is constituted by activities and attitudes associated with politics, religion, economics, and kinship. Sects themselves change over time and, in turn, change society by their presence and activity. Any society contains a wide variety of viewpoints, behaviors, and groups that are constantly in contact and conflict. Those things that a society labels deviant or strives to preserve define the values, norms, boundaries, and symbolic center of a society. Social protest and conflict stimulate change and adaptation, which allow society to survive.

SEEKERS AFTER SMOOTH THINGS. The sobriquet *Seekers after Smooth Things* (*dwrshy hlywt*) appears in several Dead Sea texts, with a particular concentration in fragments 3 and 4 of Peshar Nahum from Qumran Cave 4 (4Q169). It is a derogatory name for a group opposed to the authors of the scrolls.

This code name is based on *Isaiah* 30.10, in which Ju-

dah, a rebellious and faithless people, has told its seers not to prophesy what is right but rather to "speak to us smooth things (*halaqot*); prophesy illusions." The noun *halaq*, the basic meaning of which is "smooth" in a physical sense (cf. *Gen.* 27.11), is here employed in an extended sense. Smooth things are contrasted with the truth. The former are easy and appealing, while the latter are demanding and uncompromising, but nevertheless authentic. The meaning is also behind Psalm 12.3–4.

In *Daniel* 11 an alternate form of the word, based on the same root, *halaqlaqqot*, plays a major role. The despised king, Antiochus IV Epiphanes, maintains control over his subjects by such deceptions (*Dn.* 11.21), seducing disloyal Jews into collaborating with him (*Dn.* 11.32). Yet, even the camp of those faithful to the truth, who "know their God," is not free of this blight. They stand firm and take action, die as martyrs, and receive little help when they fall. Nevertheless, many join the loyalist movement for insincere reasons (*venihvu 'aleihem rabbim ba-halaqlaqqot*; *Dn.* 11.34).

The noun *halaq* is utilized six times in the derogatory sense outlined above in Peshar Nahum. We learn there of the "Seekers after Smooth Things (*doreshei halaqot*)," who "search," which should be understood in the technical sense of their examining scripture to discover its practical application (based on the meaning of the root *drsh*); hence, their name indicates that the Seekers are false interpreters of scripture. They claim to be looking for the true meaning, but they are frauds, intent on finding the easy way out rather than the rough but genuine path.

To summarize the description in Peshar Nahum, the Seekers after Smooth Things are an organized group (*'edah*, 4Q169 3–4.ii.5; *'etsah*, 3–4.iii.7; *keneset*, 3–4.iii.7). They are the heart of a violent government, in league with the gentiles, responsible for numerous deaths (4Q169 3–4.ii.5–6). Utilizing another term from the pejorative jargon of the Qumran community, the seekers are identified with Ephraim (4Q169 3–4.ii.2) and are accused of misleading kings, princes, priests, ordinary members of the nation, as well as proselytes. Families and cities perish as a result of their counsel, while nobles and rulers are brought down by their angry speech (4Q169 3–4.iii.8–10). This baleful situation will not, however, last forever. At the End of Days the Seekers will be unmasked and despised (4Q169 3–4.iii.3). Then they will no longer be able to mislead Israel and will be appropriately punished (4Q169 3–4.iii.7).

The clearest clue to the identity of the Seekers after Smooth Things in Peshar Nahum is in the first appearance of the word (4Q169 3–4.i.2). The Seekers invited the Greek king Demetrius to Jerusalem. The Seekers also appear in the very fragmentary continuation of column i in

connection with the hanging of people alive (4Q169 3-4 i.7). Not only are the Seekers false interpreters, but they also are traitors, acting contrary to divine plans: God did not put Jerusalem into the hands of foreign kings from the time of Antiochus IV Epiphanes until the Roman conquest (4Q169 3-4.i.3).

This links the Seekers to an incident known from Josephus and described in *The Jewish War* (1.92-98) and *Jewish Antiquities* (13.377-383). Alexander Jannaeus's (r. 103-76 BCE) subjects despised him. In 88 BCE they invited Demetrius III, one of the last of the Seleucid line, to attack their own king. Demetrius was the victor in the initial engagement near Shechem, but, at least according to Josephus, the Jews were horrified at what they had done and switched their loyalty back to Alexander Jannaeus. Demetrius withdrew, and Alexander Jannaeus was ultimately able to quell the rebellion. Eight hundred of the rebels were crucified. Before that their wives and children were butchered before their eyes, while Alexander Jannaeus looked on, feasting with his concubines. Eight thousand of Alexander Jannaeus's opponents were so terrified by his cruelty that they fled into exile, not to return until after his death. [See Alexander Jannaeus.]

Josephus never explicitly names these opponents of Alexander Jannaeus; hence, the link with Josephus might not seem to fix the identity of the Seekers after Smooth Things of Peshar Nahum. Nevertheless, Josephus does indicate that after the death of Alexander Jannaeus in 76 BCE and the rise of the Pharisees under Shelamzion Alexandra (r. 76-67 BCE), the Pharisees took a leading role in the prosecution and execution of Alexander Jannaeus's advisors, who had urged him to crucify the eight hundred men (*The Jewish War* 1.113; *Antiquities* 13.340-411). This suggests that the seekers of Peshar Nahum, also identified as Ephraim, were the Pharisees. [See Shelamzion Alexandra.]

According to this interpretation, aspects of Peshar Nahum noted above make good sense. The reign of Shelamzion Alexandra, as described by Josephus, was an era of exceptional Pharisaic dominance. They were the real rulers of the state, enjoying all the benefits of royal authority, at liberty to banish and recall, to release or imprison as they saw fit. This would accord well with the description of the power of the Seekers in Peshar Nahum. Moreover, the Pharisees and the Qumran community were rivals, fighting over much the same ideological turf. Both groups claimed to have exact knowledge of how to observe the laws of the Torah, and both asserted that they had separated from the evil ways of other Jews, less stringent in fulfilling the law. Yet, on the whole, the Pharisees were not nearly so far removed from the main institutions of the nation and its people as the Qumran mem-

bers. Their regulations were consistently more lenient than those of the Covenanters. From a Qumran perspective, the charges of hypocrisy and of yearning for the easy but untrue way explicit in the code name *Seekers after Smooth Things* fit the Pharisees well.

The rabbis employed the term *halakhat* for their special teachings that did not have a firm scriptural foundation (*Hag.* 1.8, *Orl.* 3.9). If this term was also used by their Pharisaic predecessors and was particular to them (unlike many other technical legal terms employed by a number of groups, as analyzed by Qimron [1992]), perhaps *durshy hlywt* was an anti-Pharisaic play on words in yet another sense: the Pharisees presented themselves as *doreshet halakhot*, but in fact they were only *doreshet halyot*. This interpretation would be confirmed by Peshar Nahum 3-4.ii.2, where Ephraim was denounced as living a life of falsehood and lies (*be-khahash' ushteqar[im yi] thallekhu*); in this line the verb from which *halakhat* is derived was applied to Ephraim (= Seekers = Pharisees).

The deceivers of Ephraim of Peshar Nahum (4Q169, 3-4.ii.8-10) have a false teaching (*talmud sheqarim*). Another term with important rabbinic associations—*talmud*—is here applied as part of the denunciation of Ephraim = Seekers = Pharisees.

The full significance of the denunciation of the Seekers for inviting Demetrius III to attack their own king and possible Qumran support for the violent punishment merited out by Alexander Jannaeus may be clarified by a passage in Temple Scroll⁴ (11Q19, LXIV.6-9). According to this text, those who betray the Jewish nation to a foreign people are to be punished by being hanged on a tree until they die. Perhaps this indicates that the crucifixion of the rebels by Alexander Jannaeus was approved by the Qumran sectarians. [See Crucifixion.]

One aspect of the Seekers discussed above receives confirmation by their appearance in other Dead Sea Scrolls. As in Peshar Nahum (4Q169 3-4.ii.5), they are characterized as an *'edah* in Peshar Isaiah⁵ (4Q163 23.ii.10), as well as in Carana⁶ (4Q177 9.4) and Hodayot⁷ (1QH^a x.35 [ii.32]). Furthermore, while the text in Peshar Isaiah⁵ is, unfortunately, fragmentary, some comment about the fate of the Seekers in the end of time is made, likely anticipating their punishment and destruction at the *eschaton*, as was the case in Peshar Nahum. Peshar Isaiah⁵ (4Q163 23.ii.10) adds to our knowledge of the Seekers by locating them in Jerusalem. This coheres well with the extensive political role assigned the group in Peshar Nahum.

Hodayot (1QH^a x.35 [ii.32]) adds information of another sort. The author there thanks God for having saved him from the hatred and persecution of living interpreters and from the Seekers after Smooth Things. This suggests that the hostility against the Seekers explicit in the scrolls

was reciprocal. The Seekers hated the sect members and persecuted them.

The final reference, in the Damascus Document (CD i.18), is slightly different, but only grammatically: rather than the nominal form *Seekers after Smooth Things*, those "who sought smoothly" (*daeshim be-holuqot*) are denounced as part of a grand review of error, as a result of which the wrath of God was kindled. In all these other references to Seekers, their identification with the Pharisees is plausible, even if less certain than in Peshet Nahum.

ŞE'ELIM, NAHAL. [This entry is divided into two articles: Archaeology and Written Material.]

Archaeology

At the end of the 1950s, documents that the bedouins said originated in Nahal Şe'elim, meaning from the southern portion of the Judean Desert that was occupied by Israel, reached the antiquities market in East Jerusalem. When the Israelis heard this report, Yohanan Aharoni conducted a survey in Nahal Şe'elim for the duration of a week at the end of January 1960. The results of the survey were surprising, since Aharoni found during that week arrowheads, papyri, fragments of scrolls, and more.

These findings encouraged the Israel Exploration Society to organize the first stage of the Judean Desert Expeditions, which was carried out at the end of March and the beginning of April 1960. Within the framework of this project, Yohanan Aharoni explored the caves on the northern bank of Nahal Se'elim as well as Nahal Harduf, which is north of Nahal Se'elim, while Nahman Avigad explored the southern bank of Nahal Şe'elim. Avigad did not come across any finds on the southern bank of Nahal Şe'elim, and he therefore determined that Jewish refugees did not flee to its southern bank.

In contrast, Aharoni discovered four caves where refugees escaped at the end of the Bar Kokhba Revolt (three at Nahal Şe'elim and one at Nahal Harduf). [See Bar Kokhba Revolt.] Aharoni also found four forts built in the Roman period around Nahal Şe'elim. All the documents that Aharoni found were discovered in one cave, Cave 34, which the bedouins did not find. In the remainder of the caves explored by Aharoni, clear evidence of pillaging carried out by the bedouins was found, and, therefore it should be assumed that even though a portion of the documents in the Wadi Seiyâl collection originated in Nahal Hever, there are documents in this collection that indeed were discovered in Nahal Şe'elim. [See Hever, Nahal, article on Written Material.]

Forts of Nahal Se'elim. Nahal Şe'elim is one of the large canyons in the Judean Desert, emptying into the Dead Sea four kilometers (2.5 miles) north of Masada. It is blessed with a relative bounty of water thanks to four small springs within it. Likewise, there are two pools in the valley containing water all year round. Aharoni discovered in the valley four Roman forts enclosing Nahal Se'elim from the west and from the east. The first is a square fort, each side roughly 20 meters (65.6 feet) long. Many clay vessels from the Roman era were collected at this fort. [See Pottery.] The second fort is a square fort as well; each of its sides is 15 meters (49.2 feet) long. It is surrounded by a wall 3 meters (9.8 feet) thick, and in it,

too, many clay vessels from the Roman period were found. The remaining two forts are situated on the eastern side of Nahal Ṣe'elim, and they guard the two springs that are on the east side of the wadi. The third and fourth forts are square forts as well. Aharoni assumed that the eastern forts were built during the siege at Masada, since a wide Roman road extends from Masada to the eastern entrance of Nahal Ṣe'elim. According to Aharoni, it should be assumed that the western forts also were built at the end of the First Jewish Revolt; however, discoveries were made in them establishing that they were used by the Roman army at the end of the Bar Kokhba Revolt as well.

Cave of the Arrows. This (Cave 31) is a small cave on the northern bank of Nahal Ṣe'elim, to which access is difficult. The cave has two entrances, its measurements are 7 meters by 4 meters (23 feet by 13.1 feet), and in it are two burial niches. A collection of pottery from the Bar Kokhba period, including pitchers, cooking pots, and a Herodian lamp, was discovered in the cave. Aharoni also found in the cave a silver dinar (Roman coin) from the days of Trajan. In one of the corners of the cave a collection of three-sided iron arrowheads was discovered. [See Weapons.] Eleven arrowheads as well as a large number of arrow shafts, whose front ends are made of wood and are between 14 centimeters and 20 centimeters (5.5 inches and 7.9 inches) long, were discovered at the site. The junctures of the wooden parts and the shaft, as well as the front end where the arrowhead was situated, were tied with sinew. The posterior of the shaft was painted red and black, and at its end there is a groove where the bow's string was inserted.

Cave of the Skulls. This (Cave 32) is a medium-sized cave on the northern bank of Nahal Ṣe'elim. Access to the cave is relatively easy, and it has a wide entrance with a rock pillar in its center. The cave is divided into two chambers approximately 30 meters (98.4 feet) deep: the left chamber is larger than the right; deep furrows and alcoves emanate from the chambers. The entire cave was excavated by the bedouin. Aharoni found there a drachma (silver coin) of the Roman province of Arabia from the days of Trajan. In the inner alcove of the cave, seven skeletons were found, with the skulls in one pile and the remainder of the bones nearby. [See Skeletal Remains, *article on Human Remains.*] There is no doubt that the bones were specifically collected in one place. Nothing else was found near the skeletons.

Cave of the Scrolls. Located between Caves 31 and 32, this cave (Cave 34) is a very small one, on the northern bank of Nahal Ṣe'elim. Since its entrance is hidden and difficult, the bedouin did not reach it. The cave measures 4 meters by 3 meters (13.1 feet by 9.8 feet), and there is a narrow niche seven meters (23 feet) long on its right side. Finds in the cave included a wooden comb, a

wooden game die, two coins from the Severan dynasty (that is, about one hundred years after the Bar Kokhba Revolt), as well as eight written documents (34Se 1–8) including phylactery parchments, one with a segment from *Exodus* 13.1–10 and other with a segment from *Exodus* 13.11–16. On the first parchment a single difference between the text of the phylacteries and the Masoretic Text was found: "You [plural] shall eat the leaven of" as opposed to "You [singular] shall eat the leaven of" in the Masoretic Text. The other six fragments were written upon papyrus. One fragment is written in Aramaic and the other five in Greek. In four of the Greek fragments there is a list of personal names, and each of the people mentioned is designated with the title of "brother." [See Names and Naming.]

Cave of the Reservoir. This (Cave 40) is a medium-sized cave located on the southern cliff of Nahal Harduf. The descent to it is extremely difficult, and it is located 115 meters (377 feet) below the level of the desert above the wadi. The length of the cave is 25 meters (82 feet). Not far from the entrance to the cave a pool for collecting water was built. This pool is similar to the pools built in Cave 1 of Wadi Murabba'at and in the Cave of the Pool at Nahal David (Wadi Sdeir). [See Murabba'at, Wadi; Sdeir, Wadi.] The length of the pool is 1.90 meters (6.2 feet), its width 1.25 meters (4.1 feet), and its depth 1.40 meters (4.6 feet). Roman pottery characteristic of the second century CE was found in the cave. In a small niche situated approximately 200 meters (656 feet) east of the Cave of the Reservoir, a bronze coin from the second year of the Bar Kokhba Revolt was found. [See Bar Kokhba Revolt.]

Translated from Hebrew by Daphna Krupp

Written Material

The written material that safely can be said to have originated at Nahal Ṣe'elim (Wadi Seival) is, as we now know, quite meager. In the early 1950s a group of literary and documentary texts were put in plates labeled Se, that is, Wadi Seival, in the Rockefeller Museum (then the Palestine Archaeological Museum). [See Palestine Archaeological Museum.] Although the labeling suggested that the papyri came from Nahal Ṣe'elim, those directly in charge of the documents at the time of their discovery never

made this claim anywhere in print but referred to this group of papyri as coming from "unknown caves." The majority of the documents labeled Se can now be shown to come from Nahal Hever; Nahal Se'elim is, however, one of the possible sources of those papyri said to come from unknown caves (Cotton and Yardeni, 1997, p. 6). The two Seiyal collections, volumes 8 and 27 of Discoveries in the Judaean Desert, do not contain a single document that certainly can be traced to Nahal Se'elim (see Cotton and Yardeni, 1997).

The written material that does come from Nahal Se'elim was discovered in 1960 during Expedition B, led by Yohanan Aharoni, in Cave 34, the Cave of the Scrolls. This cave "had not been tampered with by Bedouin"; most of the material hidden in it "had been removed from there already in ancient times" (Aharoni, 1961, p. 24). The material includes fragments of a phylactery (34Se 1; frag. a, Ex. 13.2-10; frag. b, Ex. 13.11-16; these were published preliminarily by Aharoni, pp. 22-123), corner of a leather scroll with Hebrew letters (34Se 2, described by Aharoni, 1961, p. 23), and fragments of Greek papyri (34Se 4-8) (Tov and Pfann, 1995).

The Greek papyri were preliminarily published by B. Lifshitz (1961). The readings were corrected by P. Benoit, and fragments were reassigned, combined, and reinterpreted by J. Schwartz. Lifshitz's fragment numbers 1 through 6 are likely to be part of a single papyrus. (Lifshitz had already recognized that numbers 3 through 6 were "parts of the same document"). The final publication of the two (Greek) papyri by Cotton will be in volume 38 of Discoveries in the Judaean Desert. 34Se 4 is a roster of households listing the name of the head of the household followed by those of the other members (i.e., sons). The list is restricted to the male members of the household. Similar lists are known from Egypt, but this is the only document of its kind to come from the Judean Desert. They were derived, or rather abstracted, from the declarations submitted at the census, and often must have been closely connected with the collection of the poll tax by the Romans. The papyrus is likely therefore to predate the Bar Kokhba revolt; there is no support for Lifshitz's speculation (1961) that 34Se 4 is a list of soldiers, a fraternity of warriors, who constituted the army of Bar Kokhba. 34Se 5 is a ledger containing a system of notation first observed by P. Benoit in Mur 89-107.

SELEUCIDS. The house of Seleucus (Gk., *Seleukos*) was one of the dynasties that inherited the world empire of Alexander the Great. After the period of the Diadochoi (323-301 BCE), Seleucus, one of Alexander's generals, established an empire of his own, which encompassed the greatest area among the four empires that came into existence toward the end of the fourth century BCE. (Their founders were Ptolemy I, Lysimachus, Cassander, and Seleucus.)

At its peak the Seleucid empire covered approximately the area of the Persian (Achaemenid) Empire, with the exception of Egypt. Its nucleus was northern Syria (called Seleucis) with its four cities: Antioch-on-the-Orontes, the capital of the empire; Seleuceia-in-Pieria; Laodicea-on-the-Sea; and Apamea. There was the bastion of the empire, its military base, and the recruiting area, in which military settlers of Greek origin were settled.

A major element in the history of the land of Israel in the Hellenistic period was the struggle between the Seleucids and the Ptolemies, who ruled Egypt, for control of the country. For a century (c.300-200 BCE) Israel was a bone of contention between the two powers, both of whom had strong claims to rule it (Diodorus of Sicily,

21.1.5). As a result, five "Syrian Wars" broke out in the third century BCE. These, as well as other events, are alluded to in *Daniel* 11, which refers to them in enigmatic style.

The breaking apart of Alexander's empire along with the foundation of the Seleucid empire ("the king of the north") and of the Ptolemaic one ("the king of the south"), are referred to in *Daniel* 11.4–5, as is the political marriage between the Ptolemies and the Seleucids (*Dn.* 11.6, i.e., between Berenice, daughter of Ptolemy II Philadelphus, and Antiochus II, which lead to "the war of Laodice" [= the third Syrian war, 246–241 BCE]), which shook both empires, but did not deeply change their positions (*Dn.* 11.7–8). The author also refers to the fourth Syrian war, 219–217 BCE (*Dn.* 11.9–11), in which Antiochus III initially conquered Israel, but was finally defeated in the battle of Raphia (217 BCE) and was forced to retreat.

Nevertheless, Antiochus III did not give up his plan to annex Israel to his empire and in 202 BCE he invaded it again, this time successfully. After a century of Ptolemaic rule Israel became part of the Seleucid empire (*Dn.* 11.12–16). The first encounter between the Jews and Antiochus III was friendly, and after he expelled the Ptolemaic garrison from Jerusalem with Jewish help, he confirmed the right of the Jews to live according to their ancestral laws and gave them various exemptions (*Antiquities* 12.138–144).

A decisive defeat and turning point in Seleucid history, which turned the Seleucid state into a second rate power, was its defeat by the Romans in the battle of Magnesia (December 190 BCE). The Romans brought Antiochus III to his knees, his empire was limited, and he was obliged to pay huge indemnities to Rome (*Dn.* 11.17–19). From then on the yoke of Rome hung heavily on the Seleucid kingdom. Gradually it also lost its eastern provinces and was torn apart by internal strife, and came to an end after 130 years, in approximately 65 BCE.

Seleucus IV (187–175 BCE) began to interfere in Judean affairs, although his interference was triggered by internal quarrels. He sent Heliodorus, his prime minister, to confiscate monies kept in the Temple of Jerusalem (2 *Mc.* 3 and *Dn.* 11.20). His successor, his brother Antiochus IV, supported the Hellenizers in Judea, visited Jerusalem, and persecuted the Jews. Many were killed and the Temple was desecrated (*Dn.* 11.21–39).

At this point the author of *Daniel* 11 terminates his "prediction" of the past and with it his review of Seleucid history. But this description of Seleucid history shows knowledge and awareness of it in apocalyptic circles (cf. the *maskilim* in *Dn.* 11.33, 35), which were either similar to the Qumran sect, or may have been historically their forerunners.

An awareness of Seleucid history can also be seen in

the fragments of Peshar Nahum (4Q169), at least as far as it was connected to Israel. This text mentions both Antiochus IV (175–164 BCE; 4Q169 3–4.i.1–3) and Demetrius III (95–88 BCE; 4Q169 3–4.i.1–2).

Indeed Judea was deeply involved in Seleucid history for some generations after Antiochus's persecution (167–164 BCE). Antiochus IV died in 164 BCE, and under his successor Antiochus V (a boy under the tutelage of Lysias) the war of independence in Judea continued. Antiochus V was soon replaced by Demetrius I (162 BCE), who made a considerable effort to consolidate his kingdom, despite Roman enmity. He put down rebellions, among them the one led by Judah Maccabee, who died in 160 BCE.

But the stability of Demetrius's rule did not last long. His enemies, with Rome's blessing, put up against him Alexander Balas, who claimed to be Antiochus IV's son. Demetrius was defeated (152 BCE) and a weak ruler, subject to Ptolemaic interference, took over.

Under Balas, Jonathan, Judas's brother and successor, became ruler of Judea and a Seleucid representative in Israel. Alexander Balas appointed him high priest and thus made him part of the Seleucid administration. Jonathan's rise to power reflects both the disintegration of Seleucid rule and the influence of the Ptolemaic king, Ptolemy VII, on Syrian affairs.

Balas's rule did not last long (150–145 BCE). Ptolemy XII transferred his patronage from Balas to Demetrius II, whose rule was quite troublesome because of a prolonged war against Tryphon. Tryphon first acted as regent for Antiochus VI (145–142 BCE), Balas's son, and then as a pretender to the Seleucid throne (142–138 BCE), although he was not a member of the royal family.

During this period Jonathan's power was growing. He fought for the cause of his Seleucid patron, and at the same time became more and more influential in all the region of Coele Syria (i.e., approximately from Damascus to the Egyptian border). He became governor of the inner part of the country, and his brother Simon a governor of its coast. The influence of the Hasmonean brothers spread over all Israel.

Jonathan's career ended when Tryphon trapped and killed him. He was replaced by his brother Simon, who continued to stabilize his rule and to become an independent ruler. Tryphon's career was terminated when Antiochus VII Sidetes (138–129 BCE), a brother of Demetrius II (who had fallen into Parthian captivity), appeared on the scene.

A reverse in Hasmonean politics occurred under Antiochus VII, whose rule was the swan song of the Seleucid dynasty. He planned a forceful expedition against Parthia to regain the former eastern provinces and the Hellenistic cities there. But before that he reasserted Seleucid au-

thority within the realm. Judea was one of his targets, and it is even possible that he had a hand in Simon's assassination (134 BCE). A short while afterward he invaded Judea with a huge army, besieged Jerusalem, and forced John Hyrcanus I to surrender (132 BCE).

Two years later Antiochus VII invaded Mesopotamia (130 BCE) and drove away the Parthians. But in the winter of the following year (129 BCE), a Parthian counterattack brought disaster on the Seleucid armies, and Antiochus himself fell in battle.

From then on the Seleucid state was no longer a world power. Its disintegration proceeded swiftly and the normal situation in Syria became one of constant civil war.

Nevertheless, and although Josephus says that John Hyrcanus "showed contempt" to both Antiochus VIII and Antiochus IX, step-brothers and sons of Antiochus VII, who fought against one another (*Jewish Antiquities* 13.274), some Seleucid rulers inflicted setbacks on the Hasmoneans. It seems that Antiochus IX Cyzicenus succeeded in 113/112 BCE in controlling Ashkelon, and recovering Joppa and the adjacent region from the Hasmoneans. But in a short time his position in Syria deteriorated, and John Hyrcanus regained control over Joppa. Maresha and Samaria were also conquered by Hyrcanus in this period, despite Cyzicenus's efforts to save Samaria, and Beth-Shean/Scythopolis followed suit.

Another Seleucid king who interfered in Judean affairs was Demetrius III, who in 89 BCE took part in the civil war in Judea, and supported Alexander Jannaeus's enemies. He is the Demetrius mentioned in Peshet Nahum.

The last Seleucid who was active in Israel was Antiochus XII, who invaded the country in about 85 BCE, forced his way through a line of fortifications constructed by Jannaeus along the Yarkon River, and continued toward Nabatea, where he lost his life. Shortly afterward Tigranes, the king of Armenia, conquered Syria (83 BCE) and liquidated what remained of the Seleucid empire. In 64 BCE Pompey, the Roman general, turned Syria into a Roman province.

URIEL RAPPAPORT

SEPTUAGINT. The scrolls from the Judean Desert have greatly enhanced our knowledge of the Septuagint, and the Septuagint has significantly contributed to our understanding of the scrolls.

The Septuagint is the collection of ancient Greek translations of the books of the Hebrew Scriptures or Old Testament, by a number of different Jewish translators over the course of the third, second, and perhaps early first centuries BCE. Some later, systematically revised versions for certain books or sections have been substituted for the originals, making the collection even more diverse.

The origin of the term can be traced to the legendary *Letter of Aristeas*, which narrates that seventy-two (or according to some traditions seventy) scholars translated into Greek the five scrolls of the Pentateuch brought from Jerusalem at the request of Ptolemy Philadelphus (285-247 BCE). Eventually the tradition grew to embrace the translations of all the books of the Hebrew Bible, as well as translations of some Hebrew books excluded from the rabbinic Bible, and even certain sacred Jewish books originally composed in Greek. Thus, an excessively strict use of the term (since it has not been so used in the last 1,800 years) denotes only the Pentateuch, whereas the broadest use denotes the entire Greek version, without regard to textual character, of the Jewish Scriptures, including the deuterocanonical or apocryphal books. Usually the term is used to designate one of three forms of the collection that are mostly congruent but partly distinct: the ancient Greek translation of the books of the Jewish Scriptures, the Jewish Greek Scriptures used by the early Christian communities, and the Greek form of the Old Testament of the Christian church.

In an effort toward precision, the term "Old Greek" is used to denote the original Greek translation, as opposed to later developments, revisions, or recensions. This usually means a translation from one Hebrew (or, for portions of *Ezra* and *Daniel*, Aramaic) textual form of the book, but it also means the original text for books originally composed in Greek. This can be either ideal or practical, either the original Greek form, which is usually not preserved purely, or the earliest Greek form recoverable through the surviving evidence.

The illumination between the scrolls and the Septuagint is reciprocal and multifaceted. On the one hand, a number of Septuagint scrolls were discovered in the Judean caves, providing some of the earliest extant Septuagint manuscripts (alongside the second-century BCE John Rylands papyrus of *Deuteronomy*), approximately four centuries earlier than our oldest surviving Septuagint codices, such as Vaticanus, Alexandrinus, and Sinaiticus. Among other things, these scrolls thus confirm that the Septuagint is pre-Christian, dating from at least the second century BCE. On the other hand, certain Hebrew

scrolls, at variance with the Masoretic Text, proved to exhibit the Hebrew *Vorlage* or parent text from which the Septuagint was in the main translated. Frequently, though a particular scroll may not have been the form of Hebrew text from which the Septuagint was in the main translated, it may display individual readings that have influenced secondary readings in the Septuagint text. In turn, the Septuagint, now generally exonerated and shown to be basically a faithful translation of one ancient Hebrew text form of each book, sometimes earlier than or superior to the Masoretic Text, may be used to reconstruct the text of scrolls when they are fragmentary.

Septuagint Manuscripts Found in the Judean Desert. The following eight highly fragmentary manuscripts of the Septuagint, plus two Septuagint-like manuscripts, were among the documents found in Qumran Caves 4 and 7 and Nahal Hever:

- Septuagint Leviticus^a (4Q119; Rahlfs 801)—Scraps from a *Leviticus* manuscript (*Discoveries in the Judaean Desert* [DJD] 9.161–165) on leather dating from “the late second or the first century BCE” were found in Cave 4. The handful of fragments can be pieced together to form a mostly vertical strip preserving the full height of a column containing *Leviticus* 26.2–16; about a third of the width of the column is preserved. The text is generally close to the manuscript tradition of Septuagint *Leviticus*, but it presents fifteen variants from the text presented in the Göttingen Greek critical edition. Some of the variants have good support in the manuscript tradition, but seven are unique readings, while three are attested by only one or two other manuscripts. None of these readings was selected for the critical text in the Göttingen edition of *Leviticus*, even though the scroll is four centuries older than other Septuagint witnesses and some of the readings appear clearly superior. Subsequent to further analysis (Ulrich, 1992), the Göttingen editor has now accepted some as superior (Wevers, 1997, see also Greenspoon, 1998). In general, this scroll appears to be a reasonably literal and quite faithful translation of a Hebrew *Vorlage* from which the text preserved in the Masoretic Text varied only slightly, whereas the later Septuagint manuscript tradition shows occasional revision toward the latter.
- Septuagint Leviticus^b (4Q120; Rahlfs 802)—Nearly a hundred small fragments from a papyrus manuscript of *Leviticus* (DJD 9.167–186) were also found in Cave 4. The thirty-one fragments with identifiable text come from the first thirteen columns of the scroll and contain parts of *Leviticus* 1.11–6.5 [5.24 Septuagint]. The scroll, which “could reasonably be assigned to the first century BCE,” exhibits only one important variant: *IAO* at *Leviticus* 4.27 (and probably again at 3.12) where the Masoretic Text and the Samaritan Pentateuch have the Tetragrammaton and the later Septuagint tradition has *kurios*. Otherwise, it has only minor, routine variants.
- Septuagint Numbers (4Q121; Rahlfs 803)—Fragments from a *Numbers* manuscript (DJD 9.187–194) dating from “the late first century BCE or the early first century CE,” contain text from *Numbers* 3.40–4.16 from three contiguous columns of a leather scroll. Unlike Septuagint *Leviticus*^b but like Septuagint *Leviticus*^a, it does not preserve the divine name. Whereas John Wevers and the later Patrick Skehan viewed Septuagint Numbers (4Q121) as representing a revision of the “Old Greek,” Eugene Ulrich and the earlier Skehan view it as an earlier form, which the subsequent Septuagint tradition has revised in some readings.
- Septuagint Deuteronomy (4Q122; Rahlfs 819)—Five small fragments remain of this manuscript of Septuagint *Deuteronomy* (DJD 9.195–197), with the word for “Red” [Sea] alone able to secure the identification as *Deuteronomy* 11.4. The main value of the manuscript is its ancient date in the early or mid-second century BCE and its witness to the existence of the Greek *Deuteronomy* at Qumran.
- Septuagint Exodus (7Q1; Rahlfs 805)—This pair of papyrus fragments (DJD 3.142–143) containing text from *Exodus* 28.4–7 dates from “around 100 BCE.” Only nineteen words survive, of which fourteen are only partly preserved, while the five complete words are: “and” twice, “the” twice, and “gold” once. The editor (M. Baillet) characterizes it as “in general closer to the MT [Masoretic Text] than to the LXX [Septuagint],” agreeing several times with the Greek manuscripts c and m (142). The conclusion, however, that Septuagint Exodus is closer to the Masoretic Text than to the Septuagint is questionable. In fact, only one variant is clearly preserved, while a second is quite likely. For the clear variant, Septuagint Exodus and Vaticanus present two slightly different forms of the infinitive, both of which well translate the text as in the Masoretic Text. For the probable variant, the Masoretic Text and Septuagint Exodus both have “your brother” after “*Aa-ron*” in Vaticanus; this common reading could well be causally due to the influence of the Masoretic Text, but it could also be an independent commonplace.
- Epistle of Jeremiah (7Q2; Rahlfs 804)—Only two complete and seven partially preserved words remain of this papyrus from around 100 BCE (DJD 3.143), with text from verses 43–44 of the *Letter of Jeremiah*. This apocryphal or deuterocanonical letter of seventy-three verses was later placed in different sequences in different codices of the Septuagint. Since no Hebrew or Aramaic original (if there ever was one) survives, that type of comparison is not possible. The Greek text of the

small fragment appears to have affiliation with Lucianic manuscripts and the Syriac.

- The biblical text? (7Q4)—Emile Puech recently wrote to confirm G.-W. Nebe's identification of a pair of Greek papyrus fragments (Nebe, 1988), which had formerly been alleged to be from the New Testament (*I Tim.* 3.16–4.3), as from a Greek translation of *I En.* 103.3–4; 105.5.1 (Puech, 1996). The text would then be considered part of the Septuagint since this book was considered scripture, as indicated by the large number of *Enoch* manuscripts at Qumran, by quotations or allusions in the Qumran writings and in the New Testament *Jude*, and by its continuing inclusion in the Ethiopian canon.
- The unclassified text (4Q126)—Cave 4 also yielded two other unidentified Greek texts, one on leather and one on papyrus. The former (DJD 9.219–221), with eight small fragments dating from the same period as Septuagint Leviticus^b and Septuagint Numbers, contains *kurio*, (*s?*)*korpid*, and *spod* as the most distinctive words. It would not be surprising if this were a Septuagint related text or a Greek version of an otherwise known or unknown religious text.
- Greek Paraphrase of Exodus (4Q127)—This papyrus text (DJD 9.223–242) dates from about the same period as Septuagint Leviticus^b. Its largest fragment mentions Egypt, Pharaoh, Moses, and probably Aaron and the Red [Sea]. But other fragments mention angels, sins, and possibly lawlessness and the hid[en things]. Thus Devorah Dimant may well be correct in suggesting that it is a lost apocalyptic work recalling God's salvific deeds at the Exodus and urging the faithful toward righteous action in the future.
- Greek Minor Prophets (8Hev 1, Rahlfs 943)—Dominique Barthélemy recognized in this scroll a "missing link" between the "Old Greek" and the later, slavishly literal recension of Aquila. Its generous fragments contain parts of the Twelve Minor Prophets, interestingly in the order of the Murabba'at Hebrew manuscript and the Masoretic Text, not in the order of the Septuagint. Barthélemy dated the manuscript to the middle of the first century CE, whereas C. H. Roberts dated it to 50 BCE–50 CE, and Peter Parsons cautiously dated it to the later first century BCE ("such a dating is possible, though not of course necessary"; DJD 8.26). Barthélemy published preliminary parts of the manuscript and a highly insightful analysis of it, and Emanuel Tov completed a thorough edition and study of it in DJD 8. This Greek text of the Minor Prophets from Nahal Hever, they convincingly demonstrate, is a revised form of the "Old Greek" translation whose intention was to bring the "Old Greek" into more precise quantitative, lexical, and syntactical conformity with a Hebrew text

that was close to, although not identical with, the text eventually appearing in the Masoretic Text (the "proto-Masoretic Text"). One may safely presume that it adjusted also the order of the twelve books to conform to the order in that Hebrew manuscript. The recension, labeled the *kaige* recension, due to its routine rendering of (*we-*)*gam* by the Greek *kai ge*, was close to the one associated with the name Theodotion, and was in turn used by Aquila as the basis of his even more literal recension. Thus, this manuscript is perhaps the most richly instructive of the Greek scrolls with respect to the history of the Greek textual development. It is quite possible that the rabbinic text (or "proto-Masoretic Text") of the Minor Prophets was intentionally selected to serve as the basis of the revision, although it is also quite plausible that the situation was simply coincidental. The fact that a major effort was expended to revise the Greek form of the book (and the same was done yet again by Aquila) underscores the use and importance of the Septuagint at this time. The reviser may simply have had available the form of Hebrew edition of the book that was found at Murabba'at and judged that it was important that the Greek agree with the inspired "original."

Readings in the Hebrew Scrolls That Support the Septuagint. While the Greek manuscripts above provide ancient samples of the pre-Christian Septuagint, numerous Hebrew scrolls shed light on the textual character of the Septuagint.

- Jeremiah^b (4Q71)—Shortly after the discoveries in Cave 4, Frank Moore Cross reported that a Hebrew fragment of *Jeremiah* displayed the same shorter and rearranged text known from the Septuagint translation of *Jeremiah*. The fragment preserves text from *Jeremiah* 9.22–10.21, but it is not the Hebrew text as found in the Masoretic Text, but the type of Hebrew text from which the Septuagint had been translated. This fragment demonstrates clearly that part of the Septuagint, and presumably the full Septuagint, text of *Jeremiah* is faithfully translated from an ancient Hebrew text from which the Masoretic Text differs. Further analysis leads to the conclusion that the Jeremiah^b-Septuagint text is a more original, short edition of the book with an intelligible order, and that the Masoretic Text contains a later, longer edition of the book based on that earlier edition, but amplified and rearranged such that the major sections occur in the same order as they do in the *Books of Isaiah and Ezekiel*.

Once the Jeremiah^b-Septuagint text and the Masoretic Text are seen as two successive editions of the book, the phenomenon can be recognized as parallel to the *Book of Daniel*, though the situation is reversed.

The Masoretic Text of *Daniel* presents one early edition in the growth of the *Daniel* collection, and the Septuagint and Theodotianic texts present a later, longer edition. The Septuagint of both *Jeremiah* and *Daniel* should be seen as faithful translations of a current Semitic text that was simply a variant edition from that preserved in the traditional *textus receptus*.

- Samuel^a and Samuel^b (4Q51 and 4Q52)—Cross also published early articles announcing manuscripts of *Samuel*, which showed close relationships with the Septuagint. Neither Hebrew manuscript presents the exact text from which the Septuagint had been translated, but both repeatedly display readings that show that the Septuagint translation of *Samuel* was based on, and faithfully translated from, a Hebrew text that not only was frequently different from, but was often superior to, the Masoretic Text. Moreover, the Chronicler had used a form of *Samuel-Kings* closer to the Qumran texts than to the Masoretic Text, as had Josephus for his *Jewish Antiquities*.

Whereas some manuscripts, such as *Jeremiah*^b, provided copies of the Hebrew parent text from which the Septuagint had been translated, and others, such as *Samuel*^a and *Samuel*^b, displayed a preponderance of readings in agreement with the Septuagint as opposed to the Masoretic Text, such qualitatively dramatic evidence was supplemented by the great quantity of sporadic readings exhibiting a Q = Septuagint ≠ Masoretic Text pattern in a wide variety of manuscripts.

Many of the editors of the Hebrew biblical scrolls have pointed out the interrelationships between the Hebrew and Greek texts of the books they edited. For example, James Davila urged that scholars should "take the LXX [Septuagint] of Genesis very seriously as a source for a Hebrew tradition alternate to the MT [Masoretic Text]" (Davila, 1990).

For *Exodus*, Anneli Aejmelaeus had already demonstrated that "All in all, the scholar who wishes to attribute deliberate changes, harmonizations, completion of details and new accents to the translator is under the obligation to prove [that] thesis with weighty arguments and also to show why the divergences cannot have originated with the *Vorlage*" (Aejmelaeus, 1987). The DJD editors, Frank Cross, Judith Sanderson, and Eugene Ulrich, confirmed this, showing that many of the Greek variants quite likely were accurate translations of alternate Hebrew texts.

For *Deuteronomy*, Skehan and Ulrich concluded that, although "not identical to the Septuagint, *Deuteronomy*^a (4Q44) shares several unique readings with the Septuagint version of *Deuteronomy* and bears witness to the existence of the variant Hebrew *Vorlage* used by the Septua-

gint translator" (DJD 14.138). The DJD co-editors, Sidnie White Crawford and Julie Duncan, also showed numerous agreements between the scrolls and the Septuagint in *Deuteronomy* manuscripts. For *Joshua*, Ulrich and Tov showed similar agreements, with Tov especially pointing out that a correction made in *Joshua*^a (4Q48) took that manuscript further away from the Masoretic Text and brought it into closer agreement with the Hebrew behind the Septuagint (DJD 14.155–157).

Due to the fragmentary, nonsustained nature of most of the evidence, it may rather prove helpful to give a few classified examples of the types of Septuagint readings provided by the scrolls:

(a) Correct readings in Hebrew scrolls retained by the Septuagint where the Masoretic Text has erred:

<i>Genesis</i> 1.9	
Genesis ^{b1} (4Q8)	pool (<i>miqveh</i> ; cf. 1.10)
Septuagint, OL	pool
Masoretic Text,	
Genesis ^b (4Q2)	place (<i>maqom</i>)
<i>1 Samuel</i> 10.27–11.1	
Samuel ^a (4Q51)	11.1 In about a month . . . (<i>kemo hodesh</i>)
Septuagint, OL	11.1 About a month later . . .
Masoretic Text	. . . he was like one silent. 11.1 (<i>ke-maharish</i>)

(b) Variant readings in Hebrew scrolls, which are intentionally different from the ones in the Masoretic Text, where the Septuagint reflects the Qumran reading:

<i>Exodus</i> 1.5	
Exodus ^b (4Q13)	five and seventy persons (cf. <i>Acts</i> 7.14)
Genesis-Exodus ^a (4Q1)	[seventy] and five persons
Septuagint	seventy-five persons
Masoretic Text	seventy persons
<i>1 Samuel</i> 1.24	
Samuel ^a (4Q51)	[with a] three-year-old [bull of] the herd and bread
Septuagint, OL	with a three-year-old bull and bread
Masoretic Text	with three bulls and an ephah

(c) Errors in Hebrew scrolls where the Masoretic Text retains the correct text, and the Septuagint has faithfully translated the Hebrew error.

<i>2 Samuel</i> 4.12	
Samuel ^a (4Q51)	Mephibosheth (cf. also <i>2 Sm.</i> 4.1, 2)

Septuagint	Mephibosheth
Masoretic Text	Ishbosheth
<i>2 Samuel 7.23</i>	
Samuel ^a (4Q51)	tents (<i>ve-ohalim</i>)
Septuagint, OI	tents
Masoretic Text	its gods (<i>ve-elohai</i>)

(d) Corrections in Hebrew scrolls, made by either the original or a subsequent scribe, which go against the Masoretic Text and toward an alternate Hebrew text form from which the Septuagint was translated:

<i>Joshua 3.15</i>	
Joshua ^b (4Q48)	the ^{wheat} harvest
Septuagint	the wheat harvest
Masoretic Text	the harvest
<i>Isaiah 5.25</i>	
Isaiah ^b (4Q56)	the LORD ^{of hosts}
Septuagint	the LORD of hosts
Masoretic Text	the LORD

The first category is important and helpful for attaining a superior form of the biblical text. The second and third categories are significant for determining textual affiliation and the reliability of the Septuagint as a translation, and serve as witnesses to the accepted pluriformity of the text and at times superior readings. The significance of the fourth category is complex and must be decided case by case. At a minimum, it neutralizes contentions that corrections in the scrolls were made "on the basis of the Masoretic Text." The texts of the books of scripture were pluriform; scribes were, of course, concerned that texts be accurate, and so they or readers checked their texts and corrected them when seen as mistaken. The corrections were based sometimes on readings embedded in the texts preserved by the rabbis and Masoretes, sometimes on readings embedded in the texts translated as the Septuagint, and sometimes on genuine current readings no longer preserved in any extant witnesses. The Greek Minor Prophets scroll from Nahal Hever is highly significant for helping sort out the history of the Septuagint tradition and the chronological order of the Hexapla's columns.

A few final observations can be made concerning the Septuagint manuscripts found in the Judean Desert. The finds are random, fragmentary, and mutely ambiguous, and so, while some conclusions are certain, it must be recognized that many are more or less educated attempts at reconstructing what may have been the situation.

First, if fragments of *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy* were found, it is a very safe bet to wager that *Genesis* had also been at Qumran. As Martin Hengel and many before him have shown, the Greek language as well as Hellenistic culture had deeply penetrated Palestinian Judaism in the late Second Temple period. And as

Nicholas de Lange has observed, there was always more Greek in Jewish life and literature than Jewish tradition (or, I might add, Christian tradition) cares to admit. At a minimum we can say that more than one person—it is unlikely that both Septuagint *Leviticus*^c (4Q119) and Septuagint *Leviticus*^b (4Q120) were brought by the same individual—thought that the Greek Scriptures were important and brought copies to Qumran. How much use they received is open to speculation. On the one hand, the conservative nature of the Qumran community may have caused its members to be suspicious and to see Greek forms of the scriptures as part of unacceptable Hellenistic tendencies. On the other, the educated priests in Jerusalem probably knew Greek and so the Zadokite leaders now removed to Qumran may have studied the scriptures also in Greek or at least may have been open to those who would have profited from reading them in Greek; moreover, the books of the Torah in Greek may have been seen as part of the hedge against Hellenizing antinomian tendencies.

In addition to the Torah, the Prophets were also represented, as well as other religious literature in Greek which may, or may not, or may not yet, have been considered as scripture. The *Book of the Minor Prophets* was certainly considered among the Prophets, as the *pesharim* demonstrate. It is uncertain but likely that *1 Enoch* also was so considered (just as *Daniel* was); note that (parallel to Mt. 24.15 calling Daniel a prophet) *Jude* explicitly says Enoch "prophesied" (14) and quotes (14–15) the prophecy from *1 Enoch* 1.9. It is less likely that the *Letter of Jeremiah* was considered among the Prophets. Moreover, it does not seem unduly speculative to assume that there may have been a Greek translation of one or more of the major prophetic books such as *Isaiah* that simply has not survived. As yet it cannot be determined whether the unclassified text 4Q126 was part of the Septuagint, though the Greek Paraphrase of Exodus most likely was not considered such.

Cave 7 piques curiosity. Only Greek papyri were found there, and the cave was closer than Cave 4 to the community's building complex and more accessible. It is difficult to think that these manuscripts were not used by community members, and the difficulty is compounded by the bilingual nature of the important legal and marriage documents and the letters in Caves 5/6 at Nahal Hever.

Thus, copies of some of the Scriptures—the Law and the Prophets—and other religious literature in Greek form were at Qumran and were presumably used at least by some, while they were probably able to be understood by a sizable percentage of Jews.

EUGENE ULRICH

SERKHX-DAMASCUS (4Q265) takes its name from the assumption of the initial editors that it represents a combination of the Serekh ha-Yahad (Rule of the Community) and the Damascus Document. This text contains material that parallels information in these two well-known Qumran texts, but it remains to be seen if Serekh-Damascus is a composite based on these texts as known to us in their final redacted forms or if it represents an independent redaction consisting of the building blocks (*serakhim*) of which these larger texts were later made up by their redactors. In any case, this text can be considered in light of other Qumran texts that appear to be anthologies. Especially to be compared is 4QOrdinances, which seems to be a legal anthology of some kind. All this points to the complex literary history of the larger Dead Sea Scrolls texts, an area of research begun only recently and already bearing important results. The full text, had it been preserved, would have contained much more material on different topics of Jewish law. A sense of the full contents would have allowed us to judge the literary his-

tory of the document with much more certainty. The manuscript is in a Late Herodian script and can be dated to the first half of the first century CE.

The text, as it now survives, may be divided into the following sections: (1) fragments 1-3, line 2, quotation of *Isaiah* 54.1-2, probably followed by *peshier* interpretation and other quotations and interpretations; (2) fragment 3, line 3, prohibition of youths and women from eating the paschal sacrifice; (3) fragment 4 i-ii, line 2, penal code; (4) fragment 4 ii, lines 3-9, joining the sect; (5) fragment 5, regarding agriculture; (6) fragment 6-7, line 5, Sabbath code; (7) fragment 7, lines 6-10, on the sect; (8) fragment 7, lines 11-17, purification rules.

1. If the order proposed by the editor is correct, then the text may have had some hortatory beginning, such as in the Damascus Document. It may have included, as does that section, the quotation of various biblical verses with *peshier* exegesis provided, all of which would serve to introduce the laws that follow.

2. The text prohibits young men or women from eating of the paschal sacrifice. Such a law is also found in *Jubilees* 49.17 and in the Temple Scroll (11QT^a xvii.8-9) but is contrary to the actual practice of Second Temple Judaism (Josephus, *The Jewish War*, 6.426; M. *Pesahim* 8.1). *Exodus* 12.3-4 seems to require everyone to eat of it. But for certain Jewish circles, perhaps the wider Sadducean trend in *halakha*, purity considerations led to the exclusion of women and young males from this rite.

3. This section contains parts of a penal code which parallels that found in the medieval *genizah* manuscript of the Damascus Document (CD xiv.18-22), in the Qumran manuscripts of this same document (4Q266 10.i.11-ii.15; 4Q270 7.i.1-14), and in the Rule of the Community (1QS vi.24-vii.27). These three recensions of the penal code share a variety of aspects, especially the means of punishment by banishment from pure liquid or solid food of the community, which is tantamount to exclusion from the communal meals, reduction of the food ration for specified periods, and even expulsion from the sect. Yet the various recensions have different punishments, and variant readings indicate such diversity even within the same text. Apparently, this was an ongoing issue in sectarian life, and the codes were developed and constantly modified in light of decisions and practices of the sect's assembly and its officials.

4. The text describes the entry process for joining the sect. It closely parallels the version in the Rule of the Community (1QS vi.14-23). First, the novice is to be examined by a sectarian official; if he passes this aptitude test, he studies for one year before being examined by the council. If he passes, he is taught the sectarian legal provisions. He then may touch the solid food of the sectarians, but may not touch the liquid food, for an addi-

tional year for liquids are more easily susceptible to impurity and may help communicate it. After two years the candidate surrenders his property for communal use and becomes a full member of the sect.

5. The mention of "all that is sown in the earth" and "makes bloom" is all that can be read here. It may be that this section dealt with laws of agriculture, such as are dealt with in the Damascus Document. It is also possible that this is a metaphoric reference to the Dead Sea sect.

6. Several Sabbath prohibitions are mentioned that for the most part parallel those in the Sabbath code as preserved in both the medieval *genizah* version of the Damascus Document and the Qumran manuscripts. Included here are prohibitions on wearing dirty clothing, carrying out of the private domain (the tent) on the Sabbath, removing animals from a pit (contra *Mt.* 12.11), allowing animals to walk beyond the Sabbath limit of 2,000 cubits (3,000 feet), and a prohibition against Aaronide priests sprinkling waters of purification on the Sabbath.

Extremely important is the law of saving a life on the Sabbath. Based on the Sabbath code of the Damascus Document (CD xi.16-17), there was room to argue whether the sectarians agreed with the Pharisaic-rabbinic tradition of setting aside all Sabbath prohibitions in cases of danger to life. Some scholars argued that the sectarians rejected this notion, but the view that they agreed to save life while seeking to minimize Sabbath violation in the process was proven correct by this text's explicit instruction to use a garment to lift a person out of the water on the Sabbath.

Appended to this section is a prohibition on eating meat of nonsacral slaughter in the vicinity of the Temple. This regulation is paralleled also in the Temple Scroll (11QT^a lii.18-19).

7. The sixth section parallels the Rule of the Community in requiring that there be a learned priest wherever there are ten sectarians (IQS vi.3-4; CD xiii.2-3) and in setting a minimum of fifteen for setting up a Council of the Community (IQS viii.1-2). Also similar is the understanding of the sect itself as a pleasant aroma (IQS viii.9), that is, a substitute for the sacrificial ritual from which the sect abstained. Serekh-Damascus sees the sect itself serving as a sacrifice on behalf of the people of Israel in the period of wickedness, in which the sacrifices are not being conducted, in the view of the sect, according to the correct regulations.

8. The final section is a statement of the laws of the parturient, the woman who has just given birth, following *Leviticus* 12.1-6 and *Jubilees* 3.9-14. The text of Serekh-Damascus tells us that Adam was brought into the garden of Eden after seven days, presumably so that he could be purified, and then Eve entered seven days later, making a total of fourteen days of purification. This notion is based

on the concept of the garden of Eden as a sanctuary, requiring entry only by the ritually pure.

While little of this document has been preserved, it certainly shows, along with the minor legal texts from Qumran, that legal literature among the sectarians was much richer than what is preserved. [See *Legal Works*.] Further, the ongoing process of editing and compiling that resulted in the larger works as we have them is illustrated by this important text.

SHAHIN, KHALIL ISKANDAR (KANDO), Arab antiquities dealer (c.1910-1993). Born in Bethlehem in approximately 1910, Shahin spent the greater part of his life there. His family was Christian and belonged to the Syrian Orthodox Church, which is also called the Jacobite Church. His father was a cloth merchant; Kando himself opened a cobbler's shop in 1935 in Bethlehem, where as many as five workers were employed. Later, he opened an antiquities shop. In 1963, he bought a shop in Jerusalem, not far from the École Biblique et Archéologique Française, in order to develop his antiquities business. He

died in Bethlehem on 28 April 1993 and his sons took over his antiquities business.

Soon after the summer of 1947, shortly after their discovery of Cave 1 at Qumran, Ta'amireh bedouin came to see Kando in Bethlehem in order to offer him manuscripts and jars. Unaware of the contents of the manuscripts and their value, Kando sent a messenger to the Syrian bishop Athanasius Yeshue Samuel, at Saint Mark's Monastery in Jerusalem. The archbishop bought four scrolls on 5 August 1947: Isaiah^a (1QIsa^a), a complete text of the book of Isaiah; Peshet Habakkuk (1QPHab); the Rule of the Community (1QS); and the Genesis Apocryphon (1QapGen). For his part, Professor Eleazar L. Sukenik at the Hebrew University of Jerusalem bought on 19 November 1947, just before the United Nations' vote on the partition of Palestine, three other manuscripts from another antiquities dealer in Bethlehem by the name of Faidi el-Alani: Isaiah^b (1Q8), the War Scroll (1QM), and 1QHodayot^a (1QH^a).

[See Genesis Apocryphon; Peshet Habakkuk; Rule of the Community; and War of the Sons of Light against the Sons of Darkness.]

In 1952, Kando acted as intermediary between the bedouin and the Department of Antiquities of Jordan for important fragments that came from Caves 2 and 4 at Qumran, but also from the caves at Wadi Murabba'at; in 1955, he acted as intermediary for the Greek Minor Prophets (8Hev 1) and in 1956, he again was involved, this time for the scrolls and fragments from Cave 11 at Qumran. Knowing the value of the manuscripts, he kept some for himself, in particular Temple Scroll^a (11Q19), the existence of which Yigael Yadin knew about from 1960 onward. In 1967 Yadin, taking advantage of a change in the political climate, took the manuscript from Kando, who was offered, after some discussion, \$108,000. While Kando can, of course, be reproached for having held onto the scroll illegally, above all he is censured for not having looked after it properly. Nevertheless, it is important to remember that this scroll as well as those from Cave 1 were not cut apart and sold as pieces.

[See also Department of Antiquities of Jordan; Murabba'at, Wadi; Temple Scroll; and the biographies of Samuel, Sukenik, and Yadin.]

JACQUES BRIEND

SHAPIRA FRAGMENTS. Moses William Shapira (c.1830–1884), a Polish-born Jewish convert to Christianity, was a prominent antiquities dealer in nineteenth-cen-

tury Jerusalem. He supplied European collections with numerous authentic materials, some quite important, but he is primarily remembered for attempting in 1883 to sell a group of unusual Hebrew manuscripts written on fifteen strips of leather. The wording of these texts was similar but not identical to portions of the Torah, especially the *Book of Deuteronomy*, and the script had an extremely archaic appearance, close to that of the stela of King Mesha of Moab, which had recently been brought to the Louvre. The Mesha stela had been discovered in 1868 near the village of Dhiban, overlooking the Wadi Mojib, the biblical Arnon, approximately 12 miles east of the Dead Sea, and Shapira indicated that his *Deuteronomy* fragments had been found in a cave in the Wadi Mojib.

Shapira first attempted to sell the strips in Germany, where, several years earlier, in the wake of the discovery of the Mesha stela, he had sold a group of "Moabite potteries," which proved to be forgeries. His offering of further Moabite antiquities was met with skepticism, and the German scholars who examined the strips declared them to be unauthentic. Shapira then moved on to England, where he offered the documents to the British Museum for 1 million pounds. The museum sought an evaluation from Christian David Ginsburg, an expert in Hebrew manuscripts, who, after a month's examination, announced that Shapira's *Deuteronomy* fragments were forgeries. Ginsburg noted several details of the Hebrew text that he considered evidence of recent and counterfeit authorship. He also endorsed the opinion of the French Orientalist Charles Clermont-Ganneau, who had been instrumental earlier in exposing Shapira's "Moabite potteries," that the leather strips had been cut from the lower margins of Torah scrolls, perhaps two or three centuries old, but treated with chemical agents to simulate greater age. This allegation suggested not only that the manuscripts were fraudulent, but also that Shapira, who was well known as a purveyor of antique Torah scrolls, was himself the forger.

Evidently driven to despair by the humiliation he had experienced, Shapira took his own life in a Rotterdam Hotel on 9 March 1884. The fate of the *Deuteronomy* fragments is unknown. Shapira may have destroyed them, or they may have been among a group of his manuscripts that, according to contemporary reports, was purchased from his estate by a bookseller. In any case, efforts to trace them further have failed.

The affair of the Shapira *Deuteronomy* fragments was all but forgotten until 1956, when Menahem Mansoor of the University of Wisconsin and other scholars began to call for their reexamination in light of the Qumran discoveries. There are a number of suggestive parallels between the Shapira strips and the Qumran manuscripts, such as the discovery of both in caves near the Dead Sea.

Nevertheless, most scholars continue to regard the Shapira documents as modern forgeries. Many of the objections raised by Shapira's contemporaries remain valid, and there is nothing in the script or text that a forger acquainted with the Mesha inscription and nineteenth-century biblical scholarship could not have concocted.

P. KYLE MCCARTER, JR.

SHAVU'OT, the Feast of Weeks, is one of the three biblical festivals requiring males to make pilgrimage to the Temple; it is not assigned a specific date in the Bible. Although *Exodus* 23.16 mentions a harvest festival, *Exodus* 34.22 provides its name, "the festival of weeks, the first fruits of wheat harvest." *Leviticus* 23.15-16 and *Deuteronomy* 16.9-12 offer instructions for determining its date. According to *Deuteronomy*, one is to count seven weeks from the time the sickle is set to the standing grain and then celebrate a Festival of Weeks with a freewill offering and rejoicing. *Leviticus* legislates that "from the day after the Sabbath, from the day on which you bring the sheaf of the elevation offering, you shall count off seven weeks; they shall be complete. You shall count until the day after the seventh Sabbath, fifty days; then you shall present an offering of new grain to the Lord." Bringing the sheaf of the elevation offering occurred at some point shortly after Passover (*Lv.* 23.9-11, 15); therefore, the Festival of Weeks would take place at some point early in the third month. Additional details about offerings, such as the two loaves of bread made with leaven, are found in *Leviticus* 23.17-20 and *Numbers* 28.26-31, where the holiday is called the Day of the First Fruits. *Leviticus* 23.21 and *Numbers* 28.26 mandate an assembly on this day on which work was prohibited. Elsewhere the festival is mentioned only in *2 Chronicles* 8.13, although *2 Chronicles* 15.10-15 refers to a gathering in the third month when the people and King Asa entered into a covenant with an oath. Later, the Festival of Weeks became associated with covenant and oath ("*shevu'ah*," a play on the name of the holiday *shavu'ot*). It is missing from Ezekiel's calendar of holidays (*Ezek.* 45.18-25).

While the festival is not prominent in the Hebrew scriptures, it became more significant for some groups later in Jewish history. It appears either under the name *Weeks*

or the Greek *Pentecost* ("fiftieth") in a number of sources. Josephus is the earliest witness to the Pharisaic view that the fifty-day count began on the sixteenth of the first month (*Jewish Antiquities* 3.10, 5-6 [secs. 250-252]). In *Jewish Antiquities* 13.8, 4 (secs. 251-252), he observes that warfare is not permitted on Pentecost, while in *Jewish Antiquities* 14.13, 4 (sec. 337; cf. *The Jewish War* 1.13, 3 [sec. 253]), he notes that a multitude of people from the countryside went to Jerusalem for the holiday (see also *Jewish Antiquities* 17.10, 2 [sec. 254; cf. *The Jewish War* 2.3, 1 (sec. 42)]; *2 Mc.* 12.31-32). In *The Jewish War* 6.5, 3 (secs. 299-300), Josephus reports that the priests entered the inner court of the Temple during the night, apparently because of the large number of sacrifices that would have to be offered the next day (see also *Tb.* 2.1; Philo, *On the Decalogue* 160 and *On the Special Laws* 2.176-187). In the New Testament, the outpouring of the Holy Spirit on the first followers of Jesus is dated to Pentecost, when a large crowd of Jewish people from many countries gathered at the Temple (*Acts* 2).

Jubilees connects the Festival of Weeks with the covenant that God made and renewed with his people. *Jubilees* 6.17-19 associates Noah's covenant (*Gen.* 9) with the festival and asserts that

it has been ordained and written on the heavenly tablets that they should celebrate the Festival of Weeks during this month—once a year—to renew the covenant each and every year. This entire festival had been celebrated in heaven from the time of creation until the lifetime of Noah. Noah and his sons kept it until Noah's death. Abraham alone kept [it], and his sons Isaac and Jacob kept it until your [Moses'] lifetime. During your lifetime the Israelites had forgotten [it] until I renewed [it] for them at this mountain [Sinai].

The writer places the covenant of *Genesis* 17 on the same date: "in the third month, in the middle of the month [the fifteenth]—Abram celebrated the Festival of the First Fruits of the wheat harvest" (*Jub.* 15.1). He also draws a connection between the time of the festival and the date of the covenant at Mount Sinai (cf. *Ex.* 19.1, in which the Israelites entered the wilderness of Sinai on the first day of the third month). Moses was ordered to ascend the mountain to obtain the two stone tablets on the sixteenth day of the third month, the date after the Festival of Weeks (*Jub.* 1.1). This entails that the covenant of *Exodus* 19-24 was made on the fifteenth day of the third month, the festal date. *Jubilees* also calls the Festival of Weeks a double holiday—of weeks and of first fruits (*Jub.* 6.21).

The Festival of Weeks serves several functions in the Qumran texts. First, it figures in some calendrical texts in such a way that one can calculate when it was celebrated. Calendrical Document A from Cave 4 at Qumran (4Q320)

correlates the priestly watches (1 *Chr.* 24.7–19) with the holidays in a 364-day calendar. Since the priestly courses served one week at a time, one can infer the number of days between holidays that are mentioned. For example, in one year (4Q320 4.iii) Passover falls on the third day of Maozjah's week and the waving of the elevation offering on the first day in Jedaiah's shift. One priestly watch occurs between these two; hence, the wave offering took place twelve days after Passover, or on the twenty-sixth day of the first month. The Festival of Weeks then falls on the fiftieth day (day one of Jeshua's duty), counting the twenty-sixth day of the first month as the first day, that is, on the fifteenth day of the third month as in *Jubilees* (see also 4Q320 4.iv.1, 10; 4.v.4, 13; 4.vi.8; 4Q Cal. Doc. B^a, 4Q321 2.ii.1, 5; 2.iii.1, 4, 8; 4Q259 7.1).

A second function is attested in the Temple Scroll. Temple Scroll^a (11Q19 xviii.10–15) largely reproduces the legislation from *Leviticus* 23, although there is some re-arranging of the text. The calendar in the Temple Scroll shows that for the author the festival was observed on the fifteenth day of the third month. However, Temple Scroll^a (11Q19 xliii.5–7) prescribes, in connection with tithes, that one may eat grain from the time of the first-fruits Feast of the New Wheat (Festival of Weeks) until that date the next year (the same stipulations apply for the other first-fruits holidays). *Jubilees* makes a related point in connection with the second tithe (*Jub.* 32.10–15). The Hakhmah text (4Q251 1.1–6) stipulates that grain, wine, and oil are not to be consumed before their respective first-fruits holidays.

A third context in which the Festival of Weeks seems to function is as the occasion for a covenantal ceremony every year, just as in *Jubilees*. The Rule of the Community refers to an annual covenantal ceremony at which candidates entered the group and members apparently renewed their commitment (1QS i.16–iii.12). The text does not indicate when this occurred, but according to two of the Qumran Cave 4 copies of the Damascus Document—Damascus Document^b, 4Q266 11.16–18 and Damascus Document^c, 4Q270 7.ii.11–12: "The sons of Levi and the men of the camps will meet in the third month and will curse whoever tends to the right [or to the left of the] law." Since the Levites utter the curses in 1QRule of the Community, this may well be the same occasion. In other words, the Qumran community seems to have renewed the covenant on the same holiday as the one to which *Jubilees* assigns the great biblical covenants. It may be that the Berakhot texts from Cave 4 at Qumran (4Q286–4Q290) contain the blessings recited on this occasion.

The Mishnah supplies some evidence that the date for Shavu'ot continued to be debated in later times. It refers to those who say "Pentecost falls on the day after the Sabbath" (*Hag.* 2.4), as in the Qumran/*Jubilees* calendar. Nat-

urally, the festival, along with others tied to the harvest cycle, served as the point before which the appropriate first fruits could not be brought to the temple (*Hal.* 4.10) *Megillah* reports that *Deuteronomy* 16.8–12 was the Torah passage for the festival.

JAMES C. VANDERKAM

SHELAMZION ALEXANDRA, (r. 76–67 BCE), Hasmonean queen, wife and successor of King Alexander Jannaeus of Judea; the only Jewish queen to hold power during the Second Temple period. Many scholars have assumed that Shelamzion Alexandra was the widow of Alexander Jannaeus's brother and predecessor Aristobulus I (104–103 BCE), but there is no ancient evidence for this assertion. After ascending the throne, Shelamzion reversed her husband's internal policies, deposed the ruling party (evidently the Sadducees), and put the Pharisees in power. For this she is criticized by the historian Josephus, who, in his *Jewish Antiquities*, accuses the Hasmoneans of blundering for allowing a woman to rule, but she is greatly praised in rabbinic literature, apparently composed by the heirs of the Pharisees. According to rabbinic literature, Shelamzion Alexandra was the sister of Shim'on ben Shetaḥ, the leading Pharisee at that time, and the days of her reign were blessed with rain in its season and a plentiful harvest. The queen's foreign policy was unimpressive. She supported a failed Jewish attempt to take Damascus and corresponded with the Armenian king, Tigranes I, when his armies approached the borders of her kingdom. She appointed her eldest son, Hyrcanus II, as high priest and successor, but his appointment was contested, even during her lifetime, by her other son, Aristobulus II. After her death, rivalry broke out between the two brothers, followed by the arrival of Roman rule in Palestine and the end of Jewish independence.

Queen Shelamzion Alexandra is mentioned by name twice in the Dead Sea Scrolls, in a rather long fragment

from Cave 4 Calendrical Document C^a (4Q322) and Calendrical Document C^c (4Q324b). Reference to her reign probably is also to be found in Peshar Nahum (4Q169). The information from these fragmentary texts allows a glimpse into the attitude of the Dead Sea sect toward the queen, her rule, and even her change of policy. In Peshar Nahum, after describing the reign of the "furious young lion" (*kefir le-haron*) in which the "expounders of smooth things" (*doreshai ha-halayot*) were hung on trees (crucified?), apparently referring to a well-known event in the days of King Alexander Jannaeus (88 BCE) described in the writings of Josephus, the text goes on to describe the "rule [*memshelet*] of the expounders of smooth things." Obviously the position of the latter had been reversed—from a persecuted group they had become the rulers. This is exactly what happened in the days of Shelamzion Alexandra, who chose to elevate the Pharisees, who had been persecuted by her husband, to a position of leadership. The very language in which the Pharisees are addressed in Peshar Nahum is of a derogatory nature. In addition, the city of new rulers, obviously Jerusalem, under the rule of the new queen, is characterized using the words of the prophet Nahum: "the bloody city all full of lies and booty, no end to plunder! The crack of whip, the rumble of wheels, galloping horse and bounding chariot! Horsemen charging, flashing sword and glittering spear, hosts of slain, heaps of corpses, dead bodies without end" (*Na.* 3.1–3). Perhaps even Nahum's next words, "all for the countless harlotries of the harlot, graceful and of deadly charms, who betrays nations with her harlotries and peoples with her charms" (*Na.* 3.4), were interpreted by the sect as referring directly to the queen. It seems clear that for the sectarians of Qumran, the queen's change of policy in Jerusalem did not make much difference: They hated the Sadducean rule of Alexander Jannaeus, and they detested the Pharisaic rule of his successor no less. [See Peshar Nahum.]

Light on the queen's rule from Calendrical Documents C^{a,c} is more difficult to extract because of the fragmentary nature of the documents. Recently, Michael Wise has shown, quite convincingly, that these texts are a chronicle of events from the days of Shelamzion down through the Roman conquest of Palestine (63 BCE), based on a cycle of six years and dated monthly, according to the period in which a priestly course was serving in the Temple. The names mentioned in it are those of Shelamzion (twice), Hyrcanus (most likely her son), Aemilius (probably Aemilius Scaurus, an officer on the staff of the Roman general Pompey, who conquered Palestine) and a Yohanan (perhaps John Hyrcanus I, Shelamzion's father-in-law). Although the text is dry and formal, the special days it lists seem to be calamities, and the mention of the queen may suggest hostility to her. However, Wise's proposal

that the text is supportive of Shelamzion's second son, Aristobulus II, is unconvincing, since the latter is not even mentioned in the fragment that is now available. This text is probably another piece of anti-Hasmonean propaganda produced in Qumran.

Finally, Calendrical Documents C^a and C^c constitute supporting evidence for a reconstruction of the correct Hebrew (or Aramaic) name of this Jewish queen. Josephus calls her only by her Greek name—Alexandra. In rabbinic literature, only the Hebrew name is used, but unfortunately in various odd forms, none of them reflecting the original version (*shelamtsi*, *shelamtsah*, *shelamtsa*, *shelaminon*, *shel tsiyon*, and so forth). Byzantine chroniclers call her Salome, but this version seems to be influenced by the names of several other royal women mentioned by Josephus. The French archaeologist Charles Clermont-Ganneau was the first to suggest that the queen's name was Shelamzion (*shelamtsiyon*), based on a name mentioned in a Jerusalem burial inscription. The repetition of the name Shelamzion in many inscriptions further supports this conjecture. The mention of Shelamzion in close proximity to Hyrcanus in the Calendrical Documents supplies the final confirmation of this thesis because it is the only ancient document mentioning the queen by her Hebrew name.

SHRINE OF THE BOOK. A museum located at the Israel Museum compound in Jerusalem, the Shrine of the Book was designed to house, preserve, and display the first seven Dead Sea Scrolls—Isaiah^a (IQIsa^a), Isaiah^b (IQ8), the War Scroll (IQM), Hodayot^a (IQH), Peshar Habakkuk (IQpHab), the Genesis Apocryphon (IQap-Gen) and the Rule of the Community (IQS)—discovered in 1947. After the 1967 Arab-Israeli War, Temple Scroll^a (11Q19) was added to the original collection. In addition, other impressive finds are exhibited, including archaeological artifacts from Khirbet Qumran, the biblical Aleppo Codex, and finds from the Cave of the Letters from the time of Bar Kokhba.

The idea to put the scrolls on public display was first explicitly expressed in the Israeli government decision of 13 February 1955 to create the Shrine of the Book Foundation. The original plan was to build "a special gallery at the National and University Library in Jerusalem . . . to serve as a depository and museum for the preservation and display of these documents and any other material related to the Bible." In 1956, the philanthropist D. S. Gottesman, who had already aided Yigael Yadin in acquiring four of the scrolls in 1954, agreed to fund the project. During 1957, two well-known American architects—Armand Bartos and Frederick Kiesler—were chosen to design the building. After endless sketches and negotiations, the plan was canceled by the Hebrew University and transferred to the Israel Museum. It took four years to complete the building (1961-1964). Finally, the Shrine of the Book was inaugurated on 20 April 1965.

Since its opening, the Shrine of the Book has been considered one of the most innovative examples of modern architecture. This is because it was not conceived as a functionalist building, one which fulfills the "prosaic" need to display and preserve the scrolls, but rather as an

ideological building. It attempts to convey spiritual ideas and universal messages through the use of sophisticated architectural methods, lighting the extended flow of internal and external spaces, sculptural form, and the use of different geometrical shapes. All combine to make a visit to the Shrine a "religious" experience. Indeed, the secret of the success of this unique building is its combination of architectural design and symbolism. For example, the world-famous round white dome of the Shrine of the Book, which "floats" within a pool of water with fountains, symbolizes the theme of the *Sons of Light*—a technical term of self-designation used by the sectarians in the Dead Sea Scrolls—as well as the idea of the "re-birth" of the Jewish people in their own land.

The Shrine of the Book was entrusted with the physical preservation of the Dead Sea Scrolls. For this purpose, the institution makes use of modern technology, such as computer-controlled air conditioning and air and ultraviolet filters in order to keep the ancient manuscripts on display and those fragments kept in the vault under constant temperature and humidity control (48 ± 2 relative humidity), according to the recommendations advanced by the Getty Conservation Institute in its official report on the condition of the scrolls (Gineff, 1993). In the 1970s the Shrine of the Book was engaged in the conservation of the scrolls that had passed into Israeli hands after the 1967 Arab-Israeli War. Carried out by conservators from the Israel Museum, this work consisted of replacing the glass plates between which the fragments had been placed, with paper "plates," removing tape and some of the stains from the manuscripts, and reinforcing the fragments with different chemical products.

In its first two decades the Shrine of the Book played a significant role as a center for Dead Sea Scrolls research. It promoted international meetings, awarded research grants, collected all publications concerning the scrolls, and was directly involved in the publication of several important documents, including the Genesis Apocryphon (1956) and Temple Scroll^d (1983).

Since the middle of the 1990s, the Shrine of the Book has begun to change its function. First, the conservation work is carried on today by the laboratory established in 1991 by the Israel Antiquities Authority, located in the Rockefeller Museum in Jerusalem, and many other institutions have undertaken to promote research on the scrolls, like the Qumrân Institut, RUG, in Groningen, The Netherlands, the Dead Sea Scrolls Institute at Trinity Western University in Canada, and the Orion Center for the Study of the Dead Scrolls at the Hebrew University of Jerusalem.

However, the Shrine of the Book is still almost the only place in the world where the original Dead Sea Scrolls are on display. The only exception is the renowned Isa-

iah" Scroll. The entire Isaiah Scroll had been on display until the late 1970s when preservation problems obliged curators to replace the original scroll with a facsimile. Today the facsimile of Isaiah^a is exhibited in the central case of the Shrine, while a fragment of the original manuscript is on display in one of the lateral cases. When necessary, the need for preservation takes precedence over the importance of exhibition.

This unique role of the Shrine of the Book is continuously stressed and developed. New exhibitions on the archaeology of Qumran and on biblical manuscripts are planned for the future. New showcases are being designed in accordance with the specifications of conservation experts at the Israel Antiquities Authority. The Shrine of the Book is becoming an international educational center for Dead Sea Scrolls, intended to spread increased knowledge on this subject through informal educational programs, public lectures, and popular publications.

ADOLFO D. ROITMAN

SICARII were a group of Jewish rebels against Roman rule at the end of the Second Temple period (first century CE). The name *Sicarii* derives from the Latin word for a curved dagger (*sica*), because the rebels wore daggers under their clothes and used them to stab and kill their enemies (*Jewish Antiquities* 20.186). The derogatory nickname was first given to them by the Romans (cf. Cicero, *Pro Roscio Amerino* 8.39.103). The Sicarii developed an ideology of freedom based on uncompromising activism, which called for immediate action in the belief that daring for freedom would be rewarded by divine aid. Recognition of imperial rule was seen by them as a blasphemous

insult to divine authority. There were, indeed, other Jews who were ready to die rather than engage in idol-worship, but the Sicarii were exceptional in that, for them, mere recognition of the Roman government and the rule of the emperor was tantamount to idolatry. They called people to their revolutionary banner without considering whether the time was ripe, and even justified themselves for imposing their views by force on other Jews who had not been persuaded by their arguments. Concern for the people, joining with the poor in their struggle against the rich, was also central to their outlook. The social and political situation at the end of the Second Temple period meant that their ideas found many willing listeners, for the air was charged with eschatological expectations. Nevertheless, the Sicarii and their sympathizers remained a minority group in Jewish society.

The main source for the history of the emergence of religious ideologies at this time is the work of the Jewish historian, Josephus Flavius, who provides the initial evidence for the existence of a "Fourth Philosophy" in addition to the Pharisees, Sadducees, and Essenes (*Jewish Antiquities* 18.23-25). Josephus mentions the Sicarii together with the Zealots in connection with the First Jewish Revolt in the years 66-70 CE. In addition, there is fragmentary information in Talmudic sources, the New Testament (the label Iscariot [*Mk.* 3.19, etc.] may be derived from Sicarius), and some Greek and Latin authors. Despite the fact that Josephus was ideologically opposed to these extremist activists, we can obtain from his works some idea of what the Sicarii were like, and what they represented.

The movement crystallized at the time of the census conducted by Quirinius, when Judea was made into a province after the deposition of Archelaus. It was connected with Judah of Gamla in the Golan (also known as the Galilean), whom Josephus tells us was the head of the school of the Fourth Philosophy.

Most of the activities of the Sicarii took place before the major battles of the First Jewish Revolt (*The Jewish War* 2.252-257). They played a large part in inciting Jews to revolt, in causing the failure of Agrippa's attempt to stop the revolt, and in murdering leaders of the priestly party, the peace party, and the upper classes. Their concern for the poor, which was part of their world outlook, can be seen in acts like setting fire to the house of Hananiah [Ananias], the high priest whom they had murdered, as well as to the royal palace and archives. Josephus stresses that the burning of the archives was aimed at destroying money-lenders' bonds and thus preventing the recovery of debts (*The Jewish War* 2.427). In an internal quarrel between different factions of the Sicarii, Menahem, their most important leader, was murdered, and as a result the Sicarii ceased to be an important influence

either on the conduct of the revolt in Jerusalem or on its central leadership.

A group of Sicarii banded together and took refuge in the fortress of Masada (which they had controlled since early in the revolt) after the failure of the revolt and the destruction of Jerusalem and the Temple in 70 CE (*The Jewish War* 7.252–258). They held out there for about four years. After the Roman besiegers surrounded Masada and the Jews lost all hope of holding out, their leaders, headed by Eleazar ben Ya'ir, resolved to kill themselves and their wives and children so as not to be taken alive by the Romans (*The Jewish War* 7.389–401). This decision reflected the basic tenets of the Fourth Philosophy, and suited the desperate state in which the Sicarii found themselves on the heights of Masada. For those who believed in the Fourth Philosophy could not bring themselves to recognize the imperial rule, and thus found themselves in a situation where they had no alternative but to kill themselves.

Finds at Masada have included fragments of some compositions also found at Qumran (Songs of the Sabbath Sacrifice), so that it is possible that some of the members of the sect at Qumran might have joined the fighters at Masada at one time, whenever this may have been. However, this possibility is still an insufficient reason to identify all the members of the Qumran sect with the Sicarii (or the Zealots), as some scholars have proposed. Indeed, the sword described in the War Scroll (1QM v.12–14) has a long straight blade and is not a *sica*. [See Masada.]

The Sicarii were the only revolutionary group that survived after the end of the war, partly because the social motivation for their activities did not disappear. A few of the Sicarii managed to flee from Judea to Egypt, and incited the local Jews there. These refugees continued to make converts to their basic ideology of the sole dominion of God, and the necessity of fighting against Roman authority in their attempt to achieve freedom. However, they came into conflict with the institutions of the local Jewish community to such an extent that the latter decided to hand them over to the Roman authorities. Hundreds of Sicarii were captured in Alexandria, and many others were arrested in different locations in Egypt. Some of these Sicarii reached Upper Egypt (the Thebaid), where they were arrested by the Romans. Josephus, who can hardly be accused of excessive love for the Sicarii, describes with amazement the way in which they endured the subsequent Roman torture, for no form of torture was able to make any of them acknowledge the emperor as lord. Above all, the spectators were impressed by the endurance of the young children, for not even they could be made to recognize the emperor's authority, so that their strength of spirit prevailed over their weakness

of body (*The Jewish War* 7.409–419). There were also refugees from the Sicarii who reached Cyrenaica, and it is possible that in the longer term it was their activities that led to the revolt of the Jews of Cyrenaica and Egypt during the Diaspora Revolt under the emperor Trajan in 115–117 CE. [See Zealots.]

AHARON OPPENHEIMER

SIMON (HASMONEAN). The second son of Mattathias (who with his sons played a leading role in the revolt against Antiochus IV Epiphanes), Simon is lauded as a man of "wise counsel" in *1 Maccabees* 2.3. [See Antiochus IV Epiphanes.] Under his brother, Judah the Maccabee, Simon led the successful military expedition into Galilee (*1 Mc.* 5.17, 5.20–23, 5.55) and after the death of Judah supported his brother Jonathan (*1 Mc.* 9.33–42, 10.74, 10.82). [See Jonathan (Hasmonean).] Simon took over the leadership of the Jews after Jonathan was murdered by the Seleucid pretender Trypho in 143/142 BCE (*1 Mc.* 13.1–30). [See Seleucids.] Simon finally succeeded in driving the Syrian garrison out of Jerusalem (*1 Mc.* 13.49–53), thus making Judea independent of the Seleucids. In 140 BCE Simon was made high priest and ruler by a national referendum "until a trustworthy prophet should arise" (*1 Mc.* 14.41–49). Simon was thus the true founder of the Hasmonean dynasty because it was his descendants who succeeded him. Since Simon supplanted both the high priestly family of the Zadokites and the old Davidic dynasty, there was likely some opposition to his rule (cf. *1 Mc.* 14.44–45), but Simon ruled peaceably until 135 BCE. [See Zadok, Sons of.] His end, however, was violent; he was murdered, along with two of his sons, by his son-in-law Ptolemy in the fortress of Dok on the way to Jericho (*1 Mc.* 16.11–17). Simon was succeeded by his surviving son John Hyrcanus I.

Simon's importance for the study of the Dead Sea Scrolls lies in his possible identification as the Wicked

Priest, one of the enemies of the Qumran sect (cf. Peshet Habakkuk, 1QP^{Hab}; Peshet Psalms^a, 4Q171.) [See Peshet Habakkuk; Peshet Psalms.] The champion of this identification is F. M. Cross (1995), who suggests that the Teacher of Righteousness, as the leader of the dissident Zadokite priests, would have been opposed to the usurpation of the Zadokite high priesthood by both Jonathan and Simon. [See Teacher of Righteousness.] Therefore, either Simon or Jonathan is a good candidate for the identity of the Wicked Priest, and the material in Peshet Habakkuk can refer to either one equally well. However, Cross argues that it is the de jure elevation of Simon to the high priesthood by national referendum, rather than the de facto appointment of Jonathan by the Seleucids, that is the death knell of the Zadokite hopes.

Further, Cross turns to a passage in Testimonia (4Q175) that appears to refer to an enemy of the sect. [See Testimonia.] The entire passage is a quotation from another Qumran manuscript, Apocryphon of Joshua^b (4Q379 22.7–14). The passage consists of a quotation of Joshua 6.26, followed by an interpretation:

'Cursed before the Lord be the man that rises up and rebuilds this city. At the cost of his first born shall he lay its foundation, and at the cost of his youngest son shall he set up its gates.' And behold cursed is the man of Belial who comes to power to be a trapper's snare to his people and ruin to all his neighbors. . . . and he rose to power and [his sons] . . . [with him], the two of them becoming violent instruments, and they rebuilt again the [city?] . . . and set up a wall and towers for it to make a stronghold of wickedness . . . horrors in Ephraim and Judah . . . [and they] committed sacrilege in the land . . . [blood like water [shall flow?]] on the battlements of the daughter of Zion and in the district of Jerusalem.

(Translation by Cross, 1995)

The city referred to by Joshua is Jericho. The crucial line is the one concerning the sons, which Cross interprets to mean that the cursed man has associated his two sons with him in his rule. All three meet a violent end. Cross argues that the only historical circumstances that this scenario fits is the violent demise of Simon and his two sons at Jericho. While he makes a persuasive case that Simon is the figure referred to in the Testimonia passage, that figure is not identified by the author of the text as the Wicked Priest. Therefore, the identification of Simon as the Wicked Priest, while a possibility, is still uncertain.

SIMON THE ESSENE. See Essenes.

SIN. The preferred term for "sin" in the Dead Sea Scrolls is *hata'*. Judging from its Akkadian and Semitic cognates, the root means "to be mistaken," "to be found deficient [lacking]," "to be at fault," or "to miss a specified goal or mark." Another root, *psih'*, signifies the violation of a norm, standard, or covenant and has been translated as "to rebel," "to revolt," or "to transgress." Other terms used in the scrolls include *'avon* ("error," "iniquity," from the root *'avah*, "to be bent [twisted]") and *'avar* ("to cross [break]" the law).

Definitions. According to the Bible, to sin is to fail to meet requirements of God (cf. *Ex.* 20.20), either by outright violations of his commandments or by failing to fulfill personal (?) obligations to him. Sin includes a range of offenses from inappropriate cultic procedures to violations of the dignity and rights of others. Any of these offenses can impede the relationship between God and his people, leading to God's rejection of his people, his wrath, and retribution (*Is.* 64.7; *Jer.* 14.20–21; *Ps.* 51.11). God, who is the source of holiness, will not tolerate sin, the antonym of holiness, in his presence.

While this notion of sin dominates Jewish thinking in the postbiblical period, sin emerges in a more abstract way, as a power or sphere that is antagonistic to both God and humanity. Good and evil, usually configured in the Hebrew scriptures as two categories of people, are conceived of as two powers that control the world (*Testament of Judah* 20.1). Sin is present from the time of one's birth: "All that are born are corrupted with wickedness, full of sins, burdened with guilt" (*2 Esd.* 7.68–69; cf. 8.35). Sin sometimes is described as a defiant attitude toward God (*Sir.* 10.12–13). Nevertheless, the Law continued to be the measuring rod of one's righteousness (*Sir.* 35.1, 41.8; *Ps. Sol.* 14.2).

In the Dead Sea Scrolls, sin is often personified as an angel or spirit that controls human destiny. In the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community; 1QS), the Angel of Darkness controls the children of darkness and is at war with the Prince of Light, who helps the children of light to overcome evil (1QS iii.20–24). The War Scroll describes the opposing angels as Belial and Michael (1QM xvii.6–7; cf. Damascus Document, CD v.18; Visions of Amram^b, 4Q544 1–3). The resolution of this spiritual conflict will come in the eschatological age (Hodayot^c from Qumran

Cave 1, hereafter, 1QHodayot^a, 1QH^a vii.20 [iv.19]; 1QM i.8–10).

In some texts there is a strong emphasis on predestination. According to 1QHodayot^a:

Nor can a human being establish his steps. I know that every spirit is fashioned by your hand . . . For him [the righteous], from the womb, you determined the period of approval, so that he will keep your covenant. . . . But the wicked you have created for the time of wrath, from the womb you have predestined them for the day of annihilation.

(1QH^a vii.17–21 [xv.4–8])

The Cave 4 horoscope text analyzes exactly how much of a person's spirit is in light or darkness (4Q186 1–2).

Determinism and free will are in contention. According to the Rule of the Community, God predestines some people for evil and others for good (1QS iii.17–21, iv.15–17), but at the same time human beings choose between good and evil (1QS iii.18–19, iv.23). The Damascus Document states that God “raised up men of renown for himself . . . but those he hates, he causes to stray”; however, sin also is attributed to human choice: “And now, my sons, listen to me . . . so that you can choose what he is pleased with and repudiate what he hates, so that you can walk perfectly on all his paths and not follow after the thoughts of a guilty inclination and lascivious eyes” (CD ii.14–16).

Many Judean Desert documents describe sin as an inherent human condition, with which each person must struggle from birth. Hodayot^a from Qumran Cave 1 describes man as “a structure of dust shaped with water, his base is the guilt of sin, vile unseemliness, source of impurity, over which a spirit of degeneracy rules” (1QH^a v.32–33 [xiii.16–17]; cf. 1QS xi.9). The hapless human is “in sin from his maternal womb and in guilty iniquity right to old age” (1QH^a xii.29–30 [iv.28–29]; cf. 4Q507 1.2–3).

Origin of Sin. How did sin originate? In the Apocrypha and pseudepigrapha, two common explanations are given. The first is that the sin of Adam and Eve brought evil into the world (*Sir.* 25.24; *2 Bar.* 23.4; cf. *2 Esd.* 7.118–119: “O Adam, what have you done? For though it was you who sinned, the fall was not yours alone, but ours also who are your descendants. . . .”). The second explanation is that the sexual intercourse of angels and women in the time of Noah was so heinous that it changed the moral nature of humanity (*1 En.* 10.7–9, 64.1–2).

Several explanations for the origin of sin are offered in the scrolls. In keeping with the Enochic view, a fragment of Apocryphal Psalms^a (11Q11) reads: “[The sons of] heaven and [all the] earth [on their account,] because they sent sin upon [all the earth,] and [evil] upon every

ma[n . . .]” (11Q11 ii.7–8; cf. CD ii.17–18; Ages of Creation, 4Q180). The Testament of Anram tells of two angels, one good, the other evil, who control humanity and order Anram to choose by whom he will be ruled. On the other hand, 1QRule of the Community states that God created the Spirits of Light and Darkness (1QS iii.25). Other texts emphasize the *yetser ha-ra'* (“evil inclination”) that tempts human beings to sin (Sapiential Work A^a, 4Q417 2.12; CD ii.16).

Consequences of Sin. Sin brings dire consequences to the offender. Sinners are barred from God's presence and excluded from the covenant (1QH^a vii.29; vii.35 [xv.16, iv.34]), delivered up to their enemies (CD i.3–4), and ultimately will suffer “the gloom of everlasting fire” (1QS ii.8). A distinction is made in the scrolls, as in scripture, between the sin committed *be-yad ramah* (“defiantly”) and the sin committed *bi shgagah* (“unintentionally”; cf. *Nm.* 15.27–31). At Qumran, the unintentional sinner was forbidden to enter the community's ritual baths, eat of the community's pure food for a time and given a separate food ration, and forbidden to join in other communal activities (1QS v.13–14), while the defiant sinner was permanently expelled from the community with all his belongings. The person who breaks “one word of the Law of Moses,” according to the practices of the sectarian community, will be banished from the community, but if he acts “through oversight,” he is excluded from eating the pure food and cannot judge anyone for two years. At that time, if he has not sinned again, he may return (1QS vii.21–26; cf. 1QS iii.4–7, CD ix.16–20). Certain sectarian violations are unpardonable, for example, betraying the community's secrets, fraternizing with a betrayer, despising the judgment of the community, approaching one's wife in a lustful manner, and eating a meal without following community regulations (1QS vii.24–27; Damascus Document^a, 4Q270 11.11–14).

Atonement and Forgiveness. The removal of sin is the subject of a fair amount of discussion in the scrolls. It is an overwhelming force that cannot be eradicated without God's power: “[Blessed] are you, Lord, because the spirit of flesh is forgiven through your merc[ies] with the strength of your power” (1QH^a v.4; cf. Noncanonical Psalms B, 4Q381 33.4). Human beings receive no credit for atonement: “You [God] saved us many times thanks to your mercy and not by our own deeds by which we did wrong, nor by our sinful actions . . .” (1QM xi.4; cf. 1QS xi.3). By the “spirit of holiness” God strengthens the resolve of the penitent (1QH^a viii.20 [xvi.2]).

The establishment of the Qumran community itself was an atoning act of God. The Damascus Document refers to the covenant as that “which God established for the first ones to atone for their sins” (CD iv.9–10; cf. 1QS ix.4). According to the Liturgical Prayers (1Q34 3.ii.5–7),

God could no longer tolerate the sins of the covenanted people, so he isolated them in order to sanctify them. Hodayot" concurs: "For your glory, you have purified man from sin, so that he can make himself holy for you . . . so that he can take his place in your presence" (1QH^a xix.10-13 [xv.7-10], cf. Words of the Luminaries^a, 4Q504 6.2-4).

Although God's goodness and mercy form the basis of atonement, the disposition of the penitent sinner is of utmost importance. Sinners must humble themselves before God, confess their sins, plead for mercy, swear never to sin again, and pray for divine aid in the future (1QH^a iv.18-24 [xvii.6-12], vi.17 [xiv.6], xiv.6 [vi.3], cf. CD xv.3). Since the sectarians opposed the Temple's current priesthood, the sacrificial cult was temporarily suspended. However, the study of the Law was a powerful weapon against sin: "Engrave your com[mandments in him,] so that he can hold himself up against [fiendish] spirits" (1QH^a iv.23 [xvii.11]).

Several documents emphasize that forgiveness is possible only through the community: ". . . And they [the holy community] shall appease his will, in favor of all those converted from sin" (Songs of the Sabbath Sacrifice^a, 4Q400 1.i.16). Obedience to the community leader, the communal law, and the community's judgments enables a person to receive atonement (1QH^a xii.24-25 [iv.23-24]).

The connection between sin and ritual impurity is interesting. The Rule of the Community from Qumran Cave 1 requires sinners to undergo immersion at the time of their confession and entrance into the community (1QS iii.4-9). Sin causes ritual as well as moral defilement, requiring the penitent to immerse himself in water. Not all impurity, however, is the result of sin (11Q19 li.1-5; cf. *Lv.* 11.40, *Nm.* 19.19).

Parallels to the New Testament. Many associations have been drawn between the beliefs of the Qumran sect regarding sin and early Christian beliefs. According to both the New Testament and the Dead Sea Scrolls, sin is a power that entraps all creation (*Acts* 26.18, *Rom.* 5.12-21, 8.22). Only God in his merciful goodness can release human beings from the power of sin. According to Paul this is accomplished by faith in Christ's salvific act on the cross; according to the Qumran sect this is accomplished by obedience to the Law as mediated by the community and its teacher. The conflict between the flesh and the spirit, so common in Pauline writings, also appears in the scrolls (1QS xi.9, xi.12; 1QH^a vii.21 [xv.8]; cf. *Rom.* 8.13). John the Baptist required ritual immersion for all sinners (*Mt.* 3.6; cf. 1QS iii.4-9), as did the Qumran sect.

Unlike the sectarians, the New Testament focuses on Christ as the once-for-all sacrifice for sin (cf. *Heb.* 10.10). The Qumran sect viewed the suspension of sacrifices as

only temporary; the pure cult would be restored in messianic times.

Parallels with Rabbinic Texts. Like the Dead Sea Scrolls, rabbinic teachings distinguish between deliberate and inadvertent sin, an idea not pursued in the New Testament. The rabbinic definition of deliberate sin, however, is limited to outright idolatry. The rabbis use the verb *avarar* ("to cross," "to violate") for *sin*. They rarely speak of sin in the abstract, generally referring to specific breaches of the Law. They would agree with the sectarians that repentance is not merely an act of faith, but one that requires sacrificial atonement and obedience to the Law.

The *yetser ha-ra'* is usually defined in rabbinic literature as the human inclination to disobey God (B.T., *Stk.* 52b; cf. CD ii.16; 1QH^a xv.13-16 [vii.10-13]). Although the sages do not hold to the doctrine of original sin, they do believe that human beings have a propensity to sin. Beit Hillel and Beit Shammai debated for over two years whether it would have been better for humanity not to have been created because of this evil tendency (B.T., *Eriv.* 13b).

The rabbis advise strategies for conquering sin similar to those found among the sectarians. First, sinners should realize that a final accounting will take place (*Avot* 2.1, 3.1). Second, Torah study and the practice of its commandments will keep a person from sinning (B.T., *Sot.* 21a). Although God created the evil inclination, he also created the Torah as its antidote (B.T., *Qid.* 30b). Rabbi Yishma'el advises leading the evil inclination to the house of learning: "If he is stone, he will dissolve; if iron, he will shiver into fragments" (B.T., *Qid.* 30b).

Unlike the rabbis, however, the sectarians did not believe that good deeds would accrue merit for the penitent. For the members of the Qumran community, the power of sin and feelings of unworthiness were almost insurmountable. As time went by, the sectarian desire for outsiders to repent seemed to weaken.

HANNAH K. HARRINGTON

SIRACH. See Ben Sira, Book of.

SKEHAN, PATRICK W., was born in New York City on 30 September 1909 and died on 9 September 1980. He was ordained as a priest in the Catholic Church on 23 September 1933 and graduated with a doctor of sacred theology degree in Scripture and Semitic Languages from the Catholic University of America in 1938. In that year he began teaching at the Catholic University in the Department of Semitic and Egyptian Languages and Literatures, a post he held until his retirement, one year before his death. During those years he also served a number of times as a visiting professor at Johns Hopkins University, replacing William F. Albright—"pinch-hitting for Babe Ruth," as he called it. Skehan was very active in the Catholic Biblical Association: he served as its president in 1946–1947; he was the editor of its journal, the *Catholic Biblical Quarterly*, from 1946 to 1949; and he edited the monograph series associated with the journal for volumes 3 through 6. Volume 36:4 (October 1974) of the *Catholic Biblical Quarterly* is a festschrift in his honor. He was heavily involved for more than twenty-five years in the work of translating the *New American Bible*, serving as vice-chair of the editorial board, text editor for the books of the Old Testament (except *1 Mc.* and *2 Mc.*), and translator of *Baruch* and *Wisdom of Solomon*. He also was a consultant for the Pontifical Biblical Commission from 1965 through 1971.

In 1954, Skehan was appointed to the team of scholars charged with editing and publishing the Qumran Cave 4 fragments. He was, at the same time, the Annual Professor at the American Schools of Oriental Research in 1954–1955. [See American Schools of Oriental Research.] He was given the specific mandate of preparing the editions for the Paleo-Hebrew manuscripts of the Pentateuch and *Job*, the Septuagint, and the Hebrew texts of *Isaiah*, *Psalms*, and *Proverbs* (the official inventory of the Qumran texts includes more than sixty-five texts under *Sn*, the *siglum* for the texts in his lot). Work on these biblical manuscripts resulted in a series of articles regarding

textual criticism of the Hebrew and Greek Bibles and the new perspectives opened on them by the Qumran texts. Although he issued preliminary publications of the more significant of the texts assigned to him and had completed most of his editions, he did not live to see their publication in the Discoveries in the Judaean Desert series. He had, however, arranged to have his material transferred to Eugene Ulrich, who has updated, completed, and otherwise supervised the publication of the texts in his lot in Discoveries in the Judaean Desert, 9, 14, 15, and 16. [See Discoveries in the Judaean Desert.]

BIBLIOGRAPHY

Skehan's literary output has been catalogued in two publications: Skehan, P. W. *Studies in Israelite Poetry and Wisdom*. Catholic Biblical Quarterly Monograph Series, 1. pp. 254–260. Washington, D.C., 1971. The list includes his publications until 1971. Skehan, P. W. "Bibliography of the Published Works of Patrick William Skehan." *Catholic Biblical Quarterly* 43 (1981), 96–98. The list gives his publications from 1971 to his death.

EUGENE ULRICH

SKELETAL REMAINS. [This entry comprises two articles: Human Remains and Nonhuman Remains.]

Human Remains

Archaeological sites in the Judean Desert that have yielded human skeletal remains span some 12,500 years. The sites include Jericho, with human remains from different periods such as the Natufian (c. 12,500 BP); Erq el Ahmar (Natufian); Nahal Mishmar and Wadi Makak (Chalcolithic, c. 5,500 BP); Vered Jericho (Iron Age); 'Ein-Gedj (Iron Age–Byzantine); Qumran (late Hellenistic–Roman), Wadi ed-Dalijeh (Hellenistic); and Masada and Nahal Hever (Roman). The human remains specifically associated with the Judean Desert documents fall into three periods: skeletons from the Hellenistic period found in caves at Wadi ed-Dalijeh and possibly also at Ketef Jericho, skeletons from Qumran and other cemeteries, and human remains from the Bar Kokhba period found in caves in Nahal Hever and Nahal Se'elim. It is likely that all or many of the skeletal remains from the Hellenistic and Roman periods are those of fugitives who died or were killed while sheltering in the caves and that they brought the scrolls and other objects found with them.

Specimens Associated with the Samaritan Parchments. Human skeletal remains have been found together with Samaritan scrolls dated to the fourth century BCE in the Bat Cave at Wadi ed-Dalijeh and at Ketef Jericho. At Wadi ed-Dalijeh a large number of skeletons were found in the Bat Cave, some covered with mats. This cave, like most of the others where scrolls were found,

also contained material finds from other periods. Identification of the skeletons as owners of the scrolls rests on their position when found. This seems fairly secure for the Bai Cave. It seems that they were Samaritans who took refuge in the cave from the army of Artaxerxes III. Some of the bones had been disturbed by intruders in the recent past. Others, mainly of adults, were removed for analysis. In the absence of a complete inventory of all those present in the cave, age and sex distribution could not be assessed. In head form the skeletal remains of these individuals resemble the Arab rather than the contemporaneous Jewish population. This indicates that the Samaritans already constituted a distinct ethnic group and accords with written documents from the period, that describe enforced migrations following the conquest of the kingdoms of Israel and Judea in the Hellenistic period. Signs of trauma were noted on one adult male—a healed partial fracture of the forehead, which was attributed to a blow from a slingshot (Bloom and Smith, 1992).

At Ketef Jericho the human bones, many of them broken and some blackened from smoke, were found piled in an inner chamber of the cave. Examination showed that parts of at least thirty-eight individuals were present—men, women, and children. The cave was in use from the Chalcolithic period to recent periods, and the bones have not been dated, so that their association with the Samaritan scroll fragment found in the cave has not been proven. However, there were many children and few older adults among the individuals identified, so that it is possible that the remains are those of fugitives. This is assumed since most of the known burials from earlier periods were predominately those of adults.

Qumran and Other Essene Cemeteries. Human remains have been recovered from three Essene cemeteries in the Judean Desert: a large one at Qumran and smaller ones at Hiam el-Sagha and 'Ein-el-Ghweir near Wadi Murabba'at. They were characterized by primary interments in cist tombs aligned in a north-south direction, and all contained individuals of both sexes, children as well as adults. In the several cemeteries at Qumran twenty-five males, eight females, and three children were identified from the forty-three tombs excavated by Roland de Vaux in the late 1940s and 1950s and in the additional nine tombs excavated by Steckoll in 1966 and 1967. [See *biography of de Vaux*.] At Hiam el-Sagha two individuals, a male aged twenty-five years and a child aged three to four years, were found in Essene graves, and at 'Ein-el-Ghweir thirteen males, six women, and one child aged seven years were identified. [See *Ghweir, Wadi*.] It should be emphasized that all these identifications were carried out by qualified anthropologists. In fact at least four different anthropologists examined the remains from Qumran: nineteen males, six females, and one child were

identified by H. Vallois and G. Kurth; from Steckoll's excavations six males, two females, and two children, one of them female, were identified by Haas and Nathan (Steckoll, 1967–1969). It seems then that the Qumran cemetery, like the other Essene cemeteries known from the Judean Desert, contained graves of families rather than members of a monastic community.

Only limited descriptions of the biological characteristics of the Essenes have been published. It was initially thought that they were a distinct population, but measurements for head shape and size and stature fall within the range of variation now established for the late Hellenistic–early Roman Jewish population of 'Ein-Gedi, Jericho, and Jerusalem (Reshef and Smith, 1993; Haas and Nathan, 1968). With regard to pathology, the most striking lesions found at Qumran were a healed depressed fracture of the frontal bone and healed fracture of the clavicle of an old male. The cranial lesion was attributed to a blow with a heavy rounded instrument (Haas and Nathan, 1968). A similar lesion, attributed to a slingshot wound, was found in the frontal bone of a male found in Wadi ed-Dalivah and identified as a Samaritan from the third century BCE. Other pathologies recorded for the Essenes are osteoarthritis (inferred from the description of lesions in Steckoll, 1968, p. 335), dental caries, and tooth loss. Similar lesions have been reported for Jews from 'Ein-Gedi, Jericho, and Jerusalem. Sampling problems preclude any analysis of the prevalence of these conditions, or indeed life expectancy, at any of the Essene sites. Finally, the use of madder by the Essenes is indicated by pink staining in seven of eleven individuals from Qumran (Haas and Nathan, 1968). Chemical analysis showed this was due to alizarin, a chemical present in the madder plant (Steckoll et al., 1971). Similar staining has been found in bones from other sites in the Judean Desert, but these have not been analyzed, and may have been caused by bacteria. The madder plant still grows in the Judean Desert and is used as an herbal medicine by bedouin and others. Steckoll (1973–1974) suggested that at Qumran madder was made into a decoction for protection against evil spirits.

Specimens Associated with the Bar Kokhba Letters. At Nahal Hever skeletal remains of a minimum of twenty-one individuals were found in the Cave of Horror and dated to the Bar Kokhba Revolt. [See *Hever, Nahal*.] They included ten adults, at least three of them female, and eleven children. An additional twenty-eight individuals of all ages were found in the Cave of the Letters and at Nahal Şe'elim. [See *Şe'elim, Nahal*.] Possibly refugees who died in the caves, the documents found with them indicate that they may have originated from the settlement of 'Ein-Gedi. No specific pathology or cause of death was noted, other than a high incidence of cribra orbitalia.

This condition, caused by resorption of bone, has been associated with iron-deficiency anemia, which may be caused by a poor diet, infection, or genetic disorders of the blood.

Ein-Gedi. Human remains were excavated from rock-hewn tombs at Ein-Gedi and Jericho during 1970–1990. They date from the Iron Age to the Byzantine period, and constitute good base line data for evaluating the affinities of the Samaritans and Essenes described here. The individuals found in the Nahal Hever and Nahal Şe'elim probably were fugitives from the settlement at Ein-Gedi. Several hundred individuals have been studied. Stature averaged 169 centimeters in males and 156 centimeters in females. Head form was rounded and faces wide and short. The Essenes appear to have been part of the same population, whatever the extent of their religious differences from mainstream Judaism. The Samaritans on the other hand formed a distinct group in terms of physical characteristics.

Masada. Although not specifically associated with documents, twenty-five individuals, dated between 40 and 115 CE, were found in a cave at Masada (Zias, Segal, and Carmi, 1974, pp. 366–367). [See Masada.] Possibly some of the last defenders of Masada, they were contemporary with the Essenes.

PATRICIA SMITH

Nonhuman Remains

Faunal remains have been recovered from archaeological sites in the Judean Desert going back some 120,000 years

(e.g., Oumni Qatafa Cave). Many of the settlements and caves associated with the Dead Sea Scrolls and related communities (c. fourth century BCE–seventh century CE), have yielded animal bones. They provide information on subsistence strategies, diet, ritual practices, and beliefs of past populations. Additional information on animal usage during this period has been obtained through the study of the materials from which the parchments were made, as well as from the interpretation of the use made of certain installations or structures.

Khirbet Qumran. During excavations at Khirbet Qumran by Roland de Vaux (1973, pp. 12–14), deposits containing animal bones were found throughout the settlement in the open spaces between or around the buildings or at the foot of walls. These bones were buried just below the surface, lying between or beneath potsherds and vessels or inside covered cooking pots.

A sample of 492 animal bones, found in association with 39 such pots, was analyzed (Zeuner, 1960, pp. 27–36). The vessels originated from three different locations at the site. The sample contained 408 bones identified as those of either sheep or goats, representing twenty-six adult sheep or goats, five adult sheep, and five adult goats, including at least one male, as well as ten kids or lambs. Cattle were present as evidenced by sixty-nine bones representing a minimum number of four cows or oxen and six calves. In addition, fifteen bones were found representing an animal the size of a small cow, the species of which could not be identified.

None of the bones were articulated, and none could be reconstructed to form a whole animal. Many of the bones were broken, possibly even prior to being placed in the vessels. Sometimes the vessels examined contained odd bones and fragments of more than one individual animal (up to four animals in a pot), but the majority contained the remains of only one. Due to the incompleteness of the animals and the presence of both calcined and nonburnt bones in the same pot, it was suggested that one animal provided most of a meal while the other bones represent subsidiary scraps. Each pot represents all the remains of a meal.

Some of the bones had been modified by charring, while several others were calcined. Both modifications indicate that at least some of the food was roasted; however, most of the bones were not burnt, suggesting that they may have been boiled. Written sources indicate that at this time meat was roasted and boiled as well as fried and smoked (Broshi, 1986, pp. 41–56).

Due to the special attention these bones have received—their collection in ceramic vessels and interment—it has been suggested that they represent either remains of sacred meals that had been ritually buried or remains of ritual offerings and sacrifices. A disputed suggestion, however, states that they represent pots aban-

done when a feast was interrupted by an enemy attack. As similar deposits were found in both Period Ib and Period II represented at the site, de Vaux considered them important evidence for the reoccupation of the site (in Period II) by the same population.

In addition to the bones recovered during the excavations, it was suggested that a structure situated in the western part of the settlement (Locus 97) may represent a shed with stalls for pack animals such as donkeys or cattle. Calculation of the area of the shed has led researchers to conclude that it could have housed eight to twelve donkeys.

Philo (*Hypothetica* 11.8) mentions that the Essenes kept bees, but as this practice is not expected to leave any recognizable remains in the archaeological record, it cannot be corroborated.

Cemeteries. No animal bones were recovered in association with human burials excavated at the cemeteries of Qumran, Hiam el-Sagha, or 'Ein el-Ghuweir.

'Ein-Feshkha. A structure was excavated just north of the spring of 'Ein-Feshkha and dated as being roughly contemporaneous with Khirbet Qumran. It has been suggested that this structure and its outlying features served as an agricultural, stock rearing, and industrial center for Khirbet Qumran. This claim is based upon the presence of a walled enclosure lying to the south of the main structure, which de Vaux (1973, p. 74) suggested could have served as a paddock or pen for livestock.

Another enclosure, situated to the north of the main structure, contained installations (basins and channels), the purpose of which may have been industrial. Two suggested uses are a tannery for preparation of leather or parchments (de Vaux, 1973, p. 79), and a water system for fish breeding (Zeuner, 1960, p. 34). Both explanations have been considered unsatisfactory, but no alternatives have been put forward (Zeuner, 1960, pp. 34–35; Poole and Reed, 1961, pp. 114–123).

Thus, although it has been suggested that 'Ein-Feshkha served as an agricultural and industrial center for the site of Khirbet Qumran, there is no direct faunal evidence to support this contention.

Caves in the Judean Desert. Numerous caves in the Judean Desert have yielded archaeological remains spanning from prehistoric to historic times, and many show multiperiod use (e.g., Oumm Qatafa, et-Taban Cave, El Khiam, Cave of the Treasure, Cave of Horror, Cave of the Pool, and the caves of Wadi Murabba'at). In some of these caves, animal bones have been found mixed in with artifacts and other remnants of material culture, sometimes including parchments and human skeletal remains (e.g., Cave of the Treasure, the Scout's Cave, Cave of the Pool, Cave of the Letters, the caves of Wadi ed-Daliyeh and Wadi Murabba'at, Ketef Jericho, and Sela Cave)

There is growing evidence to suggest that in some in-

stances (e.g., the caves of Wadi ed-Daliyeh, Ketef Jericho, and Sela Cave), the complete or partial faunal assemblage is not directly associated with the archaeological deposits (Lvall-Watson, 1974). Instead, the bones were introduced into the caves, subsequent to or between human occupations, by wild animals such as hyenas and porcupines.

Finds from these caves represent a wide range of animal species including those found in the Judean Desert today, such as sheep, goat, cattle, boar, ibex, gazelle, donkey, horse, camel, dogs, and domestic birds. Moreover, many of the animals present in the cave assemblages naturally occur in caves, such as carnivores, hyrax, rodents, reptiles, bats, and birds. Indeed, they may represent animals who died there accidentally. The problem of identifying the origin of the bones is exacerbated by the extremely good preservation of ancient organic remains in the Judean Desert. This makes it extremely difficult to distinguish "ancient" from "modern" bones. Moreover, as most caves were used in more than one period, it is difficult to relate the faunal assemblage to any one cultural assemblage.

The use of the caves by wild and domestic animals continued after many of the scrolls and parchments were placed in them, as evidenced by the dung and guano layers sealing many of the deposits, and the animal damage to some of the parchments (e.g., Wadi Murabba'at caves 1 and 2, Cave of the Letters, and Qumran Caves 1 and 4).

Consequently, the association between animal bones recovered from the caves and their related archaeological finds, including parchments, remains unclear. Thus, the bones do not necessarily represent the remains of food brought to the caves by the people who used them.

Other Sites around the Dead Sea. Animal remains have also been recovered from Late Hellenistic to Roman contexts in archaeological sites situated in close proximity to Qumran and the Dead Sea—'Ein-Buqeq, Masada, 'Ein-Gedi, and several locations in and around Jericho. A complete list of species found at these sites includes a predominance of domestic animals, among them sheep, goats, cattle, pigs, donkeys, horses, dogs, and domestic birds such as fowl, geese, and pigeons. A columbarium at Masada may have served for pigeon breeding.

In addition, a wide range of wild animals is present, including gazelle, ibex, boar, carnivores (e.g., foxes, wild cats), wild birds (e.g., chukar partridges, doves, raptors, ducks), rodents, and reptiles. Most of these species are still found in the area today. Remains of more than nine fish families are represented in these sites. They originate from the Mediterranean Sea (e.g., white grouper, gilt-head sea bream, meagre), the Red Sea (e.g., parrot fish, pigface bream), and freshwater sources (e.g., mouth-breeders, Nile catfish), which illustrates the extensive trade links between the Dead Sea sites and the coastal areas to the south and the west.

Animals Used for Parchments. Fiber analysis of parchments from Qumran Cave 4 and from Wadi Murabba'at indicate that one of the parchments from Cave 4 was made of calf hide. Ryder concluded that the other parchments were all made of sheepskin while one was unidentifiable as to species (Ryder, 1983, p. 126). Similarly, analysis of the leather water skin from the Cave of the Letters indicated that it was made of sheepskin.

Recent DNA analysis of eleven samples of parchment from the same time period and region as the Dead Sea Scrolls shows two of them to be made of either gazelle or ibex hides (Woodward et al., 1996, p. 231). Of fourteen samples of parchment from the Dead Sea Scrolls that were analyzed for DNA, ten proved to be of domestic goat, three of ibex, and the last, either ibex or goat (Kahila Bar-Gal, in press).

Summary. The inhabitants of the Judean Desert during the Late Hellenistic to Roman periods appear to have practiced the same subsistence economy as populations in the rest of the country—agriculture, animal husbandry, hunting, and some industry in addition to trade. During this time, agricultural produce played a major role in the diet, and people appear to have consumed little meat. Animals such as sheep, goats, and cattle were exploited primarily for their milk, wool, and hair as well as for labor. With regard to the Qumran finds, it can be concluded only that sheep, goats, and cattle were consumed at the site. There is no evidence to support or to rule out the possibility that these animals were raised there as well.

SLAVERY. Documentary evidence for slavery in the Dead Sea Scrolls is concentrated in the Samaria papyri from the Wadi ed-Daliyeh from the fourth century BCE, on the one hand, and in finds related to Qumran, on the other.

Samaria Papyri. The Samaria papyri are, without exception, legal documents. Although many of the Samaria papyri have to do with the disposition of slaves in one way or another, the information about slavery that can be extracted from them is severely limited by the nature of the documentary evidence. They do not give us any information, for instance, about how slave labor was used or the proportion of the slave population to the total population of Samaria.

The legal genre best represented among the Samaria papyri is the deed of slave sale. All the slave sales follow a sale formula that is quite stable in the phrasing of the individual formulae, and even more in the order of the formulae. About half of the slave sales represent the sale of single slaves (WDSP 1, 3, 4, 11 front, 18, 19, 26?), and half, the sale of multiple slaves (WDSP 2, 5, 6, 7, 8, 9, 20). The formula for selling multiple slaves differs only in inserting a penalty clause requiring the seller to pay the buyer an additional 1 mina for each slave (*le-nefesh*) in case the sale is contravened in any way.

Aside from the usual Aramaic terminology for male (*evad*) and female slaves (*amah*), two designations for groups of slaves are attested. In one text several slaves are listed as "youths consisting of males and female slaves" (lit., "boys of males and female slaves," *rabbei zikhrein*) (WDSP 7.7). In three texts, a group of slaves is designated as *nish'a*. Syntactically, the word is treated as feminine plural. It is evidently an Akkadian loan word that we may compare with the Aramaic phrase *neshei bayit* (domestic servants) attested in the Arsames correspondence. With these we may compare the phrase *nish biti*, especially common at Nuzi and in late Neo-Babylonian texts. We might also compare the similar Neo-Assyrian usage of *nishe* (Gropp, 1990, pp. 185). This new term may designate a group of related slaves that are sold together as opposed to a group of unrelated slaves designated simply *'avdin*. The fragmentary nature of our evidence allows this speculation, but cannot be said to confirm it. But if this is correct, the slaves designated by this term could be related as a set of household slaves, as slaves tied to a particular plot of land, or as a slave family.

Contrary to the ordinary practice in Mesopotamia where the slave's genealogy is almost never mentioned (Mendelsohn, 1949, p. 34), the slave being sold in the Samaria papyri is given a patronymic when first introduced. It is possible that this practice, along with the fact that most of the slaves, like their new owners, bear Yahwistic names, indicates that they were originally free-born but were reduced to servitude through poverty.

A concern for the condition of the slave is sometimes registered. The slave may be introduced as "without defect" (*tamin*) or lacking a slave mark (*roslum*). The concern may be to guard against the fear that a former owner, whose name is tattooed on the slave, might try to reclaim the slave. Or, perhaps, the absence of the slave mark hints that the slave is not given to flight (Mendelsohn, 1949, pp. 49–50; Greenfield, 1982, pp. 474–475). The same concerns are expressed in the Talmudic slave sale deed quoted in B.T., *Gittin* 86a (Gulak, 1932, pp. 4–6; 1935, pp. 106–109).

With some caveats, the ethnicity of the slaves can be inferred from the pedigree of their personal names. Apart from an Edomite name here and a Persian name there, the names of the slaves are almost invariably Yahwistic.

In the deeds of slave sale, slaves are sold outright "in perpetuity" (*le-'alma'*) and are inherited by the buyer's children. Since sellers, slaves, and buyers all tend to bear Yahwistic names, this outright sale directly violates *Lv.* 25.39–47 (compare *Jer.* 34.8–17). The Samaritans did not make the required distinction between their brothers and foreigners.

The price of slaves is quite variable. One male slave may go for thirty-five shekels (WDSP 1), thirty shekels (WDSP 4), or only ten shekels (WDSP 3). Three males fetch a price of one mina (WDSP 5) or two (?) minas and four shekels (WDSP 7). One male and one female are sold together for twenty-eight shekels (WDSP 2). The degree of variability should caution the scholar seeking an average sale price for comparative purposes.

In addition to the outright sale of slaves, other attested genres have to do with slaves, though their fragmentary states hinder complete or confident assessment. One two-sided papyrus (WDSP 11) seems to record a legal dispute over a slave on the back side, whose original sale was recorded on the front side. Several documents represent the lease or antichretic pledge of a slave in exchange for money (WDSP 10, 12, and possibly WDSP 27). Another papyrus written on both sides (WDSP 13) represents the release of a slave on the back side, probably from such a pledge, which seems to be recorded on the front side. A double document (WDSP 17) records a payment in relation to a pledge, perhaps of a slave, although the document does not state the nature of the pledge. It is unclear why such a high proportion of the legal deeds carried off by the patricians of Samaria in their flight to the desert should have to do with slaves.

Slavery in Materials Related to Qumran. The Damascus Document contains two regulations regarding slaves. The first (CD xi.12) prohibits a master from "provoking" (or "urging" [the meaning of the key verb is in dispute]) his male or female slave, or employee, on the Sabbath. Some interpret this as going beyond the biblical command of *Exodus* 20.10 in prohibiting the master from di-

recting the slave to perform even work permitted to the master on the Sabbath (Schiffman, 1975, p. 121). The second regulation (CD xii.10–11) proscribes the sale of either a male or female slave "who have entered with him into the covenant of Abraham" to a gentile. The crux here is whether the regulation applies to all servants held by Jews, because it regards them all as having entered into the covenant of Abraham (referring, at least, to circumcision: *Gn.* 17.13, 23, 27; *Ex.* 12.44) or applies only to that subset of servants who have been circumcised (cf. Schiffman, 1983, pp. 379–380, 388).

It is a natural, if not strictly necessary, inference that the community of the Damascus Document did not proscribe slave-holding absolutely. On the other hand, Philo (*Every Good Man Is Free* 12 [79]) and Josephus (*Jewish Antiquities* 18.21) agree in denying that the Essenes were slave holders. Further, private slave-holding also seems at variance with the testimony of Pliny, Josephus, and Philo that the Essenes owned their property collectively rather than privately. This accords with the community envisioned in the Rule of the Community (1QS i.11–12; v.2; vi.18–23; but cf. 1QS vii.6–10). The community of the Damascus Document may therefore refer to a different, albeit related, community, even if only an earlier phase of the same community (cf. the discussion of VanderKam, 1994, pp. 82–84).

The picture is complicated further by the possible relevance of a recently discovered and published ostracoon from the actual ruins of Qumran. Unfortunately, much of the text is barely legible, if at all. It looks like a conveyance of a house with its surrounding property, but apparently mentions a person named *Hisdai* in the initial statement of the transaction. The original editors, Frank M. Cross and Esther Eshel (1997) interpret *Hisdai* as a slave being deeded to the community as a gift, although some have disputed elements of their reading and interpretation.

DOUGLAS M. GROPP

SOLOMON. In the nonbiblical manuscripts from Qumran, Solomon is named only a few times. The Copper Scroll reports that, in a town named *skk'*, treasure was hidden east of Solomon's cistern and above Solomon's trench (3Q15 v.6, v.8ff.). Pseudo-Daniel¹ (4Q245 1.i.11) names Solomon in a list of persons prominent in Israel's history. In the Apocalypse of Weeks? (4Q247 1.3), which "seems to belong to a kind of commentary to the Apocalypse of Weeks in the Epistle of Enoch" (Milik, 1976, p. 256), the date of the construction of the temple of Solomon is given according to *1 Kings* 6.1. Pseudo-Ezekiel² (4Q385 13.ii.2) describes David's death and Solomon's ascension to the throne ("and his days were fulfilled and Solomon seated himself [upon the throne]"). In Apocryphal Psalms³ (11Q11 i.2) Solomon is named in an exorcistic psalm attributed to David; this may be an early attestation of the tradition of Solomon as the Jewish archmagician, a tradition well known from later texts (e.g., Josephus, *Jewish Antiquities* 8, 45-49; *Mt.* 12.23; and the *Testament of Solomon*; cf. Puech, 1989-1990, pp. 389f.). With the exception of the Copper Scroll, all these references occur in texts that are seriously damaged [See Apocalyptic Texts; Apocrypha and Pseudepigrapha; Copper Scroll; Daniel, Book of, *article on* Pseudo-Daniel; Ezekiel, Book of, *article on* Pseudo-Ezekiel.]

For reasons of their content, and/or Aramaic language, and/or free use of the Tetragrammaton, the Copper Scroll, Pseudo-Ezekiel⁴, Pseudo-Daniel⁵, and Apocryphal Psalms⁶ should be considered nonsectarian in origin; the Apocalypse of Weeks? is too damaged to speculate about its origin. Solomon is mentioned in the sectarian texts of Qumran only once. Miqtsat Ma'asei ha-Torah (MMT) section C from Cave 4, 18 (MMT⁷, 4Q398 11-13.1) argues that the blessings promised in the books of Moses and the Prophets started to come true for Israel in the days of Solomon, while the fulfillment of the corresponding curses started in the time of Jeroboam I (MMT section C 17-20). This recalls the explanation of Solomon's name in *1 Chronicles* 22.9: "his name shall be Solomon and I will give peace and quiet to Israel in his days." Because the context of MMT section C 17-20 (C 12-16 and 20-22) stresses that these fulfillments would happen at the End

of Days, this characterizes Solomon's reign at least as proleptic to the *eschaton*. Since Solomon is attested in sectarian literature only in this one text, Dupont-Sommer's (1973) proposal to identify the Psalms of Solomon as of Essene origin seems to be highly unlikely.

No substantial variants concerning Solomon to the known witnesses can be found in the Biblical manuscripts from the Judean Desert.

In view of the extensive literature attributed to Solomon in Second Temple Judaism (*Proverbs*, *Ecclesiastes*, *Song of Songs*, and the *Wisdom of Solomon*) and his prominence in the Hebrew scriptures, it is astonishing that Solomon is seldom mentioned in the Dead Sea Scrolls. In the case of the sapiential manuscripts from Qumran, this may be due to their deterioration—in wisdom literature Solomon is often named only at the beginning of a book or a collection of proverbs, and in nearly every wisdom manuscript from Qumran the beginning is lost. Even so, it is remarkable that, with the single exception of Miqtsat Ma'asei ha-Torah, Solomon is not named in the sectarian texts from Qumran, either in a positive or a negative way. Especially in the Damascus Document's catalog of paradigmatic sinners and sins (CD ii.14-vi.11) one would expect to find him mentioned as an ambiguous person full of wisdom and sin—as he is described in *Ben Sira* 47.12-22. The reason for this avoidance can probably be found in the extreme ambiguity of Solomon's image in Second Temple times. On the one hand, the Essenes viewed his reign as the beginning of the promised blessings; on the other hand, he married foreign women and practiced idolatry. In addition, in the time of the Essenes, Solomon was beginning to be viewed as the Jewish archmagician while the Essene movement rejected almost every form of magic and divination (for the Essene position on magic and divination, see Lange, 1997).

ARMIN LANGE

SONG OF SOLOMON. See Five Scrolls.

SONG OF SONGS. See Five Scrolls.

SONGS OF THE SABBATH SACRIFICE. Each song in the Songs of the Sabbath Sacrifice, a liturgical cycle consisting of thirteen related compositions, is dated to one of the first thirteen Sabbaths of the year. The title is adapted from the headings that introduce each part of the cycle (e.g., *lu-maskil shir 'olat ha-shabbat ha-shev'it be-shesh 'asar la-hodesh*, "For the sage. Song of the sacrifice of the seventh Sabbath on the sixteenth of the month"). Since the Songs of the Sabbath Sacrifice is largely concerned with invoking and describing the praise of angelic priests in the heavenly temple, the composition also is known as the Angelic Liturgy. [See Angels.] Ten fragmentary copies of the Songs of the Sabbath Sacrifice are extant, eight from Cave 4 at Qumran (Songs of the Sabbath Sacrifice^{a-h} 4Q400–407), one from Cave 11 at Qumran (11Q17), and one from Masada (Mas1k).

Date and Provenance. The date and origin of the Songs of the Sabbath Sacrifice are difficult to establish. The manuscripts from Qumran are written in late Hasmonean and early Herodian scripts and the Masada fragment in a fully developed Herodian hand. [See Paleography.] Thus on paleographical grounds, it is likely that the Songs of the Sabbath Sacrifice was composed not much later than approximately 100 BCE. How much earlier the text might have been composed depends on whether it is a composition of the Qumran community itself or a pre-Qumran text adopted and copied by the community. Unfortunately, the evidence concerning the provenance of the composition is ambiguous. Although no definitive conclusion is possible, on balance a pre-Qumran origin seems most likely. Three types of evidence are available: the distribution of copies of the Songs of the Sabbath Sacrifice, internal evidence, and the relationship between the songs and other clearly sectarian literature from Qumran.

The finding of a copy of the Songs of the Sabbath Sacrifice at Masada, in addition to those at Qumran, might indicate that the text circulated among a variety of Jewish communities, although it also is possible that a refugee from the destruction of Qumran by the Roman army in 68 CE took a copy of the Songs of the Sabbath Sacrifice to Masada. Internal evidence is similarly ambiguous. Although the headings in the Songs of the Sabbath Sacrifice assume the solar calendar used at Qumran, that calendar also is presupposed in other works preserved but not composed by the Qumran community, such as *Jubilees* and *I Enoch*. Moreover, there is no distinctively sectarian rhetoric in the Songs of the Sabbath Sacrifice, nor any reference to peculiarly sectarian forms of organization. Even the use of the term *maskil* in the heading of the songs is not decisive. Although the Qumran community used the word as a technical term for a functionary ("the Instructor") who had both pedagogical and liturgi-

cal roles (see Rule of the Community from Cave 1 at Qumran, 1QS iii.13, ix.12; Rule of the Blessings 1Q28b i 1, iii.22, v.20), the term also appears, in both sectarian and nonsectarian literature, in a nontechnical sense (the "wise," CD xii.21; Hodavot^a from Cave 1 at Qumran 1QH^a xii.11; *Du* 11.33, 12.3; *I En.* 100.6, 104.12). One linguistic feature, at least, appears to be inconsistent with Qumran sectarian practice: the frequent use of the term *Elohim* for God. Among documents of clear Qumran authorship the term *Elohim* is extremely rare, except in quotations from scripture. Finally, two texts that display unmistakably Qumran sectarian language, *Berakhot*^{a-b} (4Q286–287) and the Songs of the Sage^{a-b} (4Q510–511), also contain passages that are very similar to and almost certainly dependent upon the Songs of the Sabbath Sacrifice. One plausible explanation for this pattern of relationships is that the Songs of the Sabbath Sacrifice originated outside of and probably prior to the emergence of the Qumran community but was appropriated by the Qumran community and influenced the composition of the sectarian texts *Berakhot* and Songs of the Sage from Cave 4 at Qumran. [See *Berakhot*; Songs of the Sage.] As a parallel, one might cite not only the influence of the book of *Jubilees* on Qumran literature but also that of Sapiential Work A (4Q415–418), an apparently pre-Qumran text that influenced the development of the Qumran theological vocabulary in the Rule of the Community and the Hodavot. [See Hodavot; Rule of the Community.]

If the Songs of the Sabbath Sacrifice originated as a non- or pre-Qumran text, then one should probably seek its origin in the priestly scribal circles that produced works such as *Jubilees* or Aramaic Levi. [See Levi, Aramaic.] In those texts, too, the comparison of priests with angels is a characteristic motif. A date for the composition of the Songs of the Sabbath Sacrifice some time in the second century BCE is plausible, although there is no evidence to preclude an earlier date.

Form and Content. Despite the fragmentary condition of the manuscripts, the content of many of the individual songs and the overall structure of the cycle are relatively clear. Each of the thirteen songs begins with the standardized heading, identifying it as a composition for the sage/instructor and giving the number and date of the Sabbath. After the heading comes the call to praise, introduced by the imperative *hallelu* ("praise"), followed by a direct object (an epithet for God) and a vocative (an angelic title). The body of each song differs in both style and content, depending on its place within the work as a whole.

Distinctive features of content and style differentiate three large sections within the composition: songs 1–5, songs 6–8, and songs 9–13. Although much of the mate-

rial in songs 1–5 is lost, enough is preserved to indicate that these songs describe the establishment of the angelic priesthood and its duties, as well as recounting the praise these heavenly priests offer to God. Eschatological and predestinarian themes appear at the end of the fifth song. As far as can be determined, the only references to a human priesthood and worshipers, as well as the only first- and second-person grammatical forms, occur in this section. Poetic parallelism characterizes the style of this section.

The central section, songs 6–8, is strikingly different, characterized by formulaic and repetitious literary structures in which the number seven is highlighted. The sixth and eighth songs are dominated by long formulaic accounts of the praises and blessings offered by angels identified as the “seven chief princes” and the “seven deputy princes,” respectively. The seventh song consists of two sections. In the first, the call to praise with which every song opens is expanded into a series of increasingly elaborate calls to praise addressed to each of seven angelic councils. The second part of the song describes how the heavenly temple itself bursts into praise, concluding with a description of the inner shrine of the heavenly temple, the throne of God, and the praises that are uttered by multiple chariot thrones (*merkavot*), together with their attendant cherubim and wheels (*ofannim*). [See Throne.] The seventh Sabbath song, the midpoint in the sequence of thirteen, provides both a climax of praise and an anticipation of the final section of the cycle (songs 9–13), in which a progressive description of the heavenly temple and the praise uttered by its various parts culminates in a description of the divine chariot throne and of the angelic high priests (songs 12–13). [See Heaven.]

The first part of the final section is badly broken, but it appears that the description of the heavenly temple and its praise begins in the ninth song with the outer temple, its vestibules, and nave, then moves in the tenth song to a description of the veil that separates the outer area from the inner shrine. The end of the eleventh song describes the inner shrine, concluding with references to the multiple chariot thrones that praise God. The twelfth song contains an elaborate description of the chariot throne, which bears the glory, the presence of God, followed by an account of the praise of angels as they enter and leave the heavenly temple. Finally, in the thirteenth song there is an account of the priestly angels and the sacrifices they offer. In contrast to the poetic but discursive style of songs 1–5 and the use of formulaic repetition in songs 6–8, the songs in the last section are largely nominal and participial sentences containing sequences of elaborate construct chains, apparently an attempt to create a numinous style.

Purpose and Function. The heading of the individual compositions, “Song of the Sabbath Sacrifice,” might suggest that the texts were designed as liturgical accompaniments for the Musaf (“additional”) sacrifice of the Sabbath (cf. 2 *Chu.* 29:27–28; *Siv.* 50:22–28; *Tan.* 3:8, 7:3–4) or an offering of praise as a substitute for the sacrificial act. The problem, however, is that the cycle of Songs of the Sabbath Sacrifice consists of only thirteen songs, not fifty-two (cf. Psalms^a xxvii from Cave 11 at Qumran, 11Q5). Although it has been suggested that the songs might have been repeated quarterly, the date formula in the headings (e.g., “the first [Sabbath] on the fourth of the first month,” 4Q400 1.i.1) appears to refer to a yearly system of counting. Some thematic correspondence also exists between the Sabbath songs and the festival cycle of the first quarter of the year. The first Sabbath song, which occurs during the Week of Consecration for the priesthood, is concerned with the establishment of the angelic priesthood. The description of the chariot throne in the twelfth Sabbath song, which is exegetically dependent on *Ezekiel* 1, occurs on the Sabbath immediately following Shavu’ot. At least in the rabbinic period, the synagogue reading for Shavu’ot included all or part of *Ezekiel* 1 plus *Ezekiel* 3:12.

If the cycle of Sabbath songs was specific to the first quarter of the year, then its function is best understood not as cultic but as the means for a communion with angels in the act of praise, in short, as a form of communal mysticism. [See Mysticism.] Communion with angels in worship is a motif already present in biblical literature (e.g., Psalm 148, *Prayer of Azariah and the Song of the Three Young Men*). It particularly is associated with the Sabbath in the book of *Jubilees* (*Jub.* 2:17–24) and in the nonsectarian collection of daily prayers from Qumran known as the Words of the Luminaries^a and ^b (4Q504–506). [See Words of the Luminaries.] In the synagogue liturgy, too, communion with the angels by means of the recitation of the Qedushah was originally practiced on Sabbaths and certain holidays, not in the weekday liturgy. Communion with the angels is a motif that occurs in several of the Qumran sectarian documents (e.g., in the *Hodayot*, the *Rule of the Community*, and the *Rule of the Blessings*). Presumably, as it was used within the Qumran Community, the Songs of the Sabbath Sacrifice provided a liturgical mechanism for experiencing such communion.

The Songs of the Sabbath Sacrifice differs from many other expressions of common praise with the angels, however, in its preoccupation with the specifically priestly function of the angels. The songs are more similar to literature of the Second Temple period in which the priesthood of Levi is compared with the angels of the

presence (*Jub.* 31.14) and in which Levi himself is granted access in a vision to the uppermost heaven where the angels offer priestly service before God (Testament of Levi 3). The Songs of the Sabbath Sacrifice provides the means by which those who read and heard it could receive not merely communion with angels but a virtual experience of presence in the heavenly temple among the angelic priests. Although there is no evidence that the document was restricted to members of the priesthood, the text readily may be understood as a means of enhancing the sense of priestly identity through its vivid description of the Israelite priesthood's angelic counterparts. Within the Qumran community this function would have been particularly significant. Since the Qumran community considered the Jerusalem Temple to be polluted, the priestly members of the Qumran community could not participate in the sacrificial service. [See Sacrifice.] Reciting the Songs of the Sabbath Sacrifice and experiencing the sense of presence in the heavenly temple would have provided a means of validating their identity as priests despite their separation from the Temple in Jerusalem. [See Priests.]

Significance and Relation to Other Literature. Although the only texts that show literary dependence on the Songs of the Sabbath Sacrifice are sectarian documents from Qumran (*Berakhot*^{a-b} and *Songs of the Sage*^{a-b}), the Songs of the Sabbath Sacrifice contains motifs, literary features, and concepts that are related to other liturgical traditions, apocalypses, and mystical writings. As noted above, the liturgical practice of communion with the angels is a feature of the synagogue service and of Christian worship, although the characteristic feature of those traditions, the Qedushah or Trisagion based on *Isaiah* 6.3, does not occur in the Songs of the Sabbath Sacrifice. References in the New Testament to angelic worship (*Col.* 2.18), either as the mystical practice of joining in angelic worship or as the veneration of angels, might also be illumined by the Songs of the Sabbath Sacrifice. The descriptions of the heavenly temple and its angelic attendants in the Songs of the Sabbath Sacrifice bear comparison with accounts in apocalypses, especially *I Enoch* 14 and *Revelation* 4–5. The motifs of "silence in heaven" (*Rev.* 8.1) and of an animate heavenly altar (*Rev.* 9.13–14) have striking parallels in the Songs of the Sabbath Sacrifice (see 4Q403 1.i.40–4b and 4Q405 20.ii.21–22 12–13). Finally, the exegetical development of *Ezekiel* 1 and 10 as the basis for an ecstatic description of the divine chariot throne has many parallels with traditions of Merkavah speculation in later Jewish literature. Although it is unlikely that there is a direct line of development from the Songs of the Sabbath Sacrifice to later Heikhalot mysticism, the similarities between Heikhalot hym-

nody and the vocabulary, style, and literary features of the Songs of the Sabbath Sacrifice warrant closer investigation

SONGS OF THE SAGE. Songs of the Sage^a (4Q510) and Songs of the Sage^b (4Q511) are remnants of copies from the late first century BCE (Herodian script), representing two exemplars of an extensive collection of liturgical texts in Hebrew. Extant are fragments from eleven of the approximately twenty-one original columns. Only a few of them, however, exhibit any overlapping text (see 4Q510 1 and 4Q511 10). There are only 7 fragments re-

maintaining of Songs of the Sage^a; of Songs of the Sage^b. 215 fragments have survived, most of them, however, consist of rather tiny pieces. In his reconstruction, Hartmut Stegemann revised the sequence of the fragments of Songs of the Sage^b in Discoveries in the Judaean Desert, 7, according to their presumed position within the scroll.

The components of the collections are assigned to the *maskil* (see 4Q511 2.ii.1), who (according to 4Q510 1/4Q511 10) in this liturgical context is supposed to perform an active role: to proclaim the majesty of God's loftiness in order to deter and frighten harmful demons and to protect the righteous against them. A *maskil* was, consequently, an important priestly functionary. Such passages of apotropaic character (4Q510 1/5Q511 10; 4Q511 2.ii; 7; 8; 16.4; 35.6ff.; 44-51.ii) have parallels in Apocryphal Psalms^c (11Q11, which contains psalms against demons along with Ps. 91), but this text does not correspond to the liturgical character of Songs of the Sage^b. More adequate is a comparison with Berakhot^a (4Q286), where fragment 7 contains formulas of two liturgical curses (counterparts of benedictions) directed against Belial. It seems to have been a standard topos among the priestly tasks to safeguard nature and man against evil powers, one of the basic functions of any cult.

Certain phrases in Songs of the Sage^b are characteristic of the liturgical genre of such specific priestly (angelic) liturgies as the Songs of the Sabbath Sacrifice^{a,b}, or 4Q400-407 (4Q511 10.i.4; 4Q511 2.i.2-3; 8ff.; 52-59.iii). Similar solemn wordings may be found in Berakhot^a (4Q286 1) and Berakhot^b (4Q287). The major part of the contents may, therefore, be regarded as liturgical units constructed for use among priests (cf. 4Q511 35).

Other passages (4Q511 18.ii; 26) are in style and content nearer to Hodayot (1QH) and related poetical texts. They stress God's grace as the cause of an exalted status, which humans never exhibit in their quality as mere creatures and never achieve by themselves (4Q511 28-29; 52-59). Such texts also underline, therefore, a person's dependence on God's forgiving grace. In consequence, the pious person promises to express God's praise according to the faculty given to a him from God (4Q511 63.ii), the Creator (cf. 4Q511 30), praising him regularly in accordance with the cosmic powers (4Q511 1) and by way of eternal rules for appropriate times (4Q511 2.1; 63.ii; 64). The latter passages obviously contain an allusion to the calendar (cf. 1QH^a xx.8.15 [xii.4-11]; 1QS x.1ff. with parallels in 4Q258 and 4Q260).

This concept of humans exposed in a realm of tension between the unworthy constitution of a weak creature, on the one hand, and the high status analagous to the position of the angelic servants of God, on the other hand, was originally a specifically priestly one. Since

we know very little about the internal social structure of the Qumran community, it remains difficult to decide whether such liturgical and poetic pieces remained more or less exclusive characteristics of priestly self-consciousness. They could have been generalized and applied to lay members of the community, a possible development which, however, remains hypothetical. Only the priestly and, within this framework, the Zadokite character of such traditions is well established.

It may be suggested that liturgical texts of this kind (without any specific sectarian character) are, despite the relatively late date of the copies, a source for the liturgy at the Temple in Jerusalem. If this be the case, we should then see the above-described dualistic anthropological concept as also stemming essentially from the priestly tradition (emphasizing as it does the functional position between human and angel) and not primarily the effect of a sectarian tendency and radicalization during a later stage of development within the Qumran community. Liturgical traditions usually correspond to rather conservative attitudes and preserve concepts from earlier times. Therefore, if we are not able to identify in liturgical texts from Qumran traces of specific group interests beyond the priestly realm, we may assume that they contain such older concepts. Furthermore, it should also be understood that the dualistic traits of said liturgical texts do not necessarily constitute characteristics developed exclusively in the later Qumran community. Considering the possibility that the organizational pattern of the *yahad* also had its roots in the structures and norms of priestly service in the sanctuary, our criteria for the sectarian character of texts seem to fade away except, of course, for the practical halakhic differences as stated in Miqsaṭ Ma'asei ha-Torah (4QMMT).

SON OF GOD. See Aramaic Apocalypse.

SONS OF DAWN. The term *benei shahar* ("Sons of Dawn") occurs in the title of 4Q298 (Words of the Sage to the Sons of Dawn) and perhaps in one other passage in the Damascus Document (CD xiii.14). The use of the term in Words of the Sage to the Sons of Dawn should be understood in light of the content of the message that follows. Since this composition appears to be an introductory address, it is probable that the Sage is speaking to novices and that the term "Sons of Dawn" implies that these individuals are "dawning" out of the darkness into the light, and are thus on the verge of becoming "Sons of Light." The use of the word *all* may indicate that the group was diverse or made up of subgroups as in the case of Rule of the Congregation (1Q28a i.1) and Rule for All of the Hosts of the Congregation (1Q28a i.6).

The main component of the Sons of Dawn was most likely those who are described in Rule of the Community (1QS vi) as serving a two-year preparatory and probationary period before full induction into the community. This group naturally would be divided into those who were undergoing their first year (addressed in Words of the Sage to the Sons of Dawn [4Q298 1-2.i.1-2]) and those who were in their second year of the novitiate, having been examined and ranked each year (perhaps the group referred to in the second address as "those who know" in 4Q298 3-4.ii.4). The term may also include lapsed members whose process of reincorporation was strikingly similar to the requirements demanded of novices before their incorporation (Rule of the Community [1QS vii.18-21]).

The reading *livnei ha-shahar* ("to the sons of dawn") in CD xiii.14 is difficult. (The Cave 4 Damascus Document manuscripts are not of help here since the passage in question was not preserved at Qumran.) The alternative reading *livnei ha-shahat* is also possible upon examination of the original manuscript. Given the possibility that the reading should remain *livnei ha-shahar*, then the term "novice" would fit the context well. It would imply that certain limitations were placed upon full members of the community concerning business procedures with those still holding a probationary status. Noteworthy for this interpretation is Rule of the Community (1QS vi.17-20) where the mixing of a novice's goods and finances with those of full members is forbidden.

STARCKY, JEAN (Abbe; 1909-1988), French Orientalist and editor of the Dead Sea Scrolls. Born on 3 February 1909 in Mulhouse, France, Jean Starcky did his studies in classics and philosophy at Mulhouse, Mainz, and Reims. He went on for advanced studies at the Oratory and the Institut Catholique in Paris. Drawn by Oriental studies, he took courses at the Institute of Ancient Oriental Languages at the Institut Catholique and the École Pratique des Hautes Études in Paris. He deepened his knowledge of Biblical and Oriental studies at the Pontifical Biblical Institute in Rome and the École Biblique et Archéologique Française in Jerusalem as a fellow of the Academie des Inscriptions et Belles-Lettres. [See École Biblique et Archeologique Française.] This was his first contact with the Near East (Palestine, Lebanon, Syria, and Egypt). From 1938 to 1941 he taught Hebrew and the Old Testament at the Université Saint Joseph in Beirut. During this time he explored the ruins of Palmyra and read the many inscriptions there. This defined his calling as an expert on Palmyra and led to his writing the *Guide archéologique de Palmyre*.

In the Second World War he served as a chaplain, but, once the war was over, Starcky went back to teaching scripture, this time the New Testament, at the Institut Catholique in Paris. He also inaugurated a course in Aramaic at the Ecole des Langues Orientales Anciennes. However, he continued to devote part of his time to the Near East, mainly at the Institut Français d'Archeologie in Beirut, where he undertook the study of Palmyrene inscriptions and prepared volume 3.1 of *Pars Secunda* of the *Corpus Inscriptionum Semiticarum*. In October 1952 he asked to be relieved of his courses in Paris to leave for Beirut and Jerusalem. This was just after the sensational discovery of Cave 4 of Qumran in September of that same year.

This marked the beginning of a new adventure, as he took an active part in the work on the Dead Sea Scrolls as a member of the international team that was forming around the archaeologist Roland de Vaux and Józef T.

Milik, who was the central pillar of the research. Starcky participated in classifying thousands of fragments and in reconstructing manuscripts. One group of Hebrew and Aramaic manuscripts was entrusted to him for publication, as well as some documents in Nabatean cursive (a language akin to Palmyrene), which had been found by some bedouin south of 'Ein-Gedi. [See 'Ein-Gedi.] He immediately published the best-preserved Nabatean papyrus contract, thus producing groundbreaking work on material that was particularly difficult. [See Nabatean.]

He divided his activities between translations of the Bible (Liénart, Jerusalem, Ecumenical), the foundation of the Association Catholique Française pour l'Étude de la Bible, the Association Bible et Terre Sainte, the journal *Bible et Terre Sainte—Le Monde de la Bible* (The Bible and the Holy Land—the World of the Bible), the Bible and Holy Land Museum (now at the Institut Catholique in Paris), and giving lectures that were very popular. At the same time, because he personally had explored the region and read the inscriptions, he masterfully wrote the first syntheses and papers, still considered authoritative, about the desert caravan centers, *Palmyra* and *Petra*, which appeared in 1960 and 1964, respectively, in the *Supplément au Dictionnaire de la Bible*. It was then that he published a few fragments of manuscripts from Cave 4: "Un texte messianique araméen de la grotte 4 de Qumrân" [An Aramaic Messianic text from cave 4 of Qumrân], *Mémorial du Cinquantenaire de l'École des Langues Orientales Anciennes de l'Institut Catholique de Paris*, Paris 1964: 51–66 and "Psaumes apocryphes de la grotte 4 de Qumrân" [Apocryphal psalms from cave 4 of Qumrân], *RB* (1966), 353–371, and that he wrote his synthesis on the messianism of Qumrân in his famous study "Les quatre étapes du messianisme à Qumrân."

After entering the Centre National de la Recherche Scientifique, he rose to the highest positions. He became director of research in 1967; then, Daniel Schlumberger, the new director of the Institut Français d'Archéologie in Beirut, made him an associate director of the institute. Starcky very soon became a member of numerous scientific committees and councils. Realizing the scope of the project and his multiple commitments, Starcky brought in Abbé Maurice Baillet as an associate to edit half of his group of manuscripts from Cave 4 (Baillet, 1982). In 1974 he asked me to help in the project and, if necessary, to take over finishing the edition of the Hebrew manuscripts in his group. In 1982 he asked for my help on the Aramaic fragments and the Nabatean papyri. [See Aramaic.] Since Starcky and Milik often worked in close collaboration on both Palmyrene and Nabatean manuscripts, Milik also published a number of the Aramaic manuscripts from the Starcky group. Starcky and I worked closely while preparing the *editio princeps*. As a result, the second

half of the manuscripts from his group are widely known in preliminary publications.

As a researcher, professor, administrator, lecturer, archaeologist, philologist, epigraphist, numismatist, art historian, and religious historian, Starcky stood out as a true scholar in Oriental studies. Thus, for this reason, he received many awards. He was decorated by the French Ministry of Education and in 1977 he was awarded the silver medal of the Centre National de Recherche Scientifique.

ÉMILE PUECH

Translated from French by Robert E. Shillenn

STONEWARE. Being easily available raw materials, hard limestone and basalt were used for a wide range of domestic ware and utensils: vessels for storing, grinding, pounding, and mixing; tools; weights; and anchors. During the late Second Temple period, a soft-stone industry flourished, in which vessels, tables, ossuaries, and sundials were manufactured. Found predominantly in areas of Jewish settlement, the industry is linked to the religious tradition of purity since stone vessels are not susceptible to becoming ritually unclean (*kel.* 10.1; *Par.* 3.2).

Material and Production. Two types of stone were employed: white chalk (*ka'akule* limestone) and the slightly harder gray bituminous limestone; the former is found in the Jerusalem hills, but also in other areas with limestone deposits, the latter near Nebi Musa in the Judean Desert. Near Jerusalem, quarries and workshops have been identified at Hizma and at Jebel Mukkabir. A production center at Kefar Reina in Lower Galilee was defined on the basis of vessel cores alone (Cahill, 1992, p. 219). Tables were made of stone from the Nebi Musa quarries, while ossuary slabs came to light in a cave at Jebel Mukkabir and at Hizma. Quarry workshops usually contain cores, chips, and vessels in various stages of

completion; however, there is also evidence for the transportation of the raw material to workshop sites (Gibson, 1983; Magen, 1988, pp. 9–18; Cahill, 1992, pp. 218–219; Magen, 1994, pp. 7*–8*; Rahmani, 1994, p. 3).

Techniques. Two methods of manufacture can be discerned: lathe-turning and hand-carving. The lathe-turned vessels were turned on a small and a large lathe; handles and decorations are rare except for ledge handles and rim treatments on large jars. In hand-carving, the stone was soaked in water to soften it. Stoneware made by this method consists of tables and ossuaries, as well as vessels with chisel marks and knife-paring or with polished surfaces, achieved with the help of pumice. Pierced handles, spouts, and chip-carved and incised ornaments occur (on the chip-carving technique, see Rahmani, 1988). Undecorated ware is thought to have fulfilled the demand for inexpensive mass production, while decorations demanded more labor and thus increased production costs. Manufacturing techniques can be studied and reconstructed by comparing details on finished and unfinished vessels with traditional craftsmen working to this day in Iran, Switzerland, and Israel (Wulff, 1966, pp. 130–133; Mutz, 1978; Gibson, 1983; Magen, 1988, pp. 18–41; Cahill, 1992, pp. 219–225; Magen, 1994, pp. 10*–13*).

Types. Vessels show a great diversity of sizes and shapes, some imitating clay, metal, glass, and wood. Both in quantity and variety the finds from Jerusalem constitute the largest group, indicating that the city served as the center of production, marketing, and usage. The following categorization follows Cahill's classification of the material from the City of David excavations. We begin with lathe-turned and hand-carved ware, followed by tables, ossuaries, and sundials. Several vessel types were manufactured on a small lathe: bowls (Magen, 1988, pp. 122–123, pl. 7.1–15; Cahill, 1992, pp. 201–203); goblets (Magen, 1988, pp. 124–125, pl. 8.3–5; Cahill, 1992, p. 204); inkwells (Magen, 1988, pp. 124–125, pl. 8.1–2); stoppers (Magen, 1988, pp. 124–125, pl. 8.10–12; Cahill, 1992, pp. 204–205); lids (Magen, 1988, pp. 124–125, pl. 8.13–17; Cahill, 1992, p. 205); and round trays (Magen, 1988, pp. 124–125, pl. 8.6–8). Bowls vary in shape and size, but fall within three subtypes: a vessel in the tradition of the clay bowl with incurved rim (Benoit, 1961, pp. 32–33, fig. 8.5.7), cup bowls with nearly straight sides (Benoit, 1961, pp. 25), and shallow open dishes with straight or sloping walls. Stoppers were meant to be used with narrow-necked clay bottles and *unguentaria*, since this shape was not found in stone. Large jars, worked on a large lathe externally and hand-carved internally, are represented by three types: the most common jar has straight walls, profiled and sculpted rims, internal ridging for holding a lid and a trumpet-shaped base; the second has a higher base resembling a column; the third is a hole-mouth rim jar

with two handles. The first two types are approximately 65–80 centimeters high, the third 50 centimeters (Magen, 1988, pp. 126–133, pls. 9–12; Cahill, 1992, pp. 207–209; de Vaux, 1959, p. 244, pl. XIA; de Vaux, 1973, pp. 64–65, pl. XXXIVa). These vessels were identified by N. Avigad (1983, p. 174) and Y. Magen (1988, p. 53) with the *qalal*, a large container mentioned in the Mishnah (*Par.* 3.3). Magen suggests that the name *qalal* derives from the word *calyx* and considers the shape a copy of Greek *calyx* craters, which continued in the late Hellenistic and early Roman periods in marble and bronze (Grassinger, 1994, p. 259). Such a derivation is based on a misconception: the definition according to shape is modern; the Greek and Latin term *krater* refers to a wide-mouthed vessel used for mixing wine and water for banquets (*symposia*). In Italy, huge marble and bronze *calyx* craters were placed in the gardens of wealthy citizens; their relief decoration with Dionysiac and bucolic subjects is an expression of the leisure concepts of the upper class (Grassinger, 1994, pp. 275–276).

The hand-carved vessels can be divided into those with and without chisel marks, the latter having been polished. To the first group belong barrel-shaped single- and double-handled mugs and spouted pitchers, flat-based bowls with loop, lug, and bar handles, bowls with incurved rim and ring bases, lids, and tubs; to the second group belong bowls with exterior fluting, cups with a square-cut ring handle, and rectangular trays with decorative handles (Avigad, 1983, pp. 176–182; Magen, 1988, pp. 142–143, pl. 17.2–11; Cahill, 1992, pp. 209–215). The mugs have been termed *measuring cups*, following the suggestion that their capacity was equal to one Mishnaic *log*; however, there is no standard measure, and they could have been used for the ritual washing of the hands (Avigad, 1983, p. 176; Magen, 1988, p. 76; Magen, 1994, p. 15*; Cahill, 1992, pp. 210–211; Harding, 1952, pl. XXIX:1 upper right; Benoit, 1961, pp. 32–33, fig. 8.6). Three fragmentary vessels from the Judean Desert caves, published as measuring cups, are different. Two are flat-based bowls with bar handles (Bar-Adon, 1961, pp. 28–29, fig. 1.6; Yadin, 1963, pp. 115, 117, fig. 43.A.7); the third could be an inkwell according to its shape (compare Yadin, 1963, pp. 115, 117, fig. 43.59.10 to Magen, 1988, pl. 8.1–2). Two spouted pitchers were found at Qumran (de Vaux, 1953, p. 99, fig. 3.12) and 'Ein el-Ghuweir (Bar-Adon, 1977, p. 15, fig. 15.18). Vessels with exterior fluting and cups with square-cut ring handles are copies of luxury tableware; the former copies ribbed bronze bowls and glass bowls and pitchers (Avigad, 1983, p. 108, illus. 95–96 and p. 117, illus. 113–114), while the latter copies lead-glazed *skyphoi* produced in southern Asia Minor (Hayes, 1976, p. 28, no. 135). They are so far found in relatively small numbers only; their manufacture took more time and

thus they were more expensive. Some vessels bear signs of both lathe-turning and hand-carving (Gibson, 1983, pp. 178–179, 182, fig. 1.5; Cahill 1992, p. 205); others have traces of paint (Gibson, 1983, pp. 179–181).

Stone tables occur in two shapes: rectangular and circular (Avigad, 1983, pp. 167–173; Magen, 1988, pp. 134–141, pls. 13–16; Cahill, 1992, pp. 215–217). The rectangular table, approximately 70 to 80 centimeters high, consists of a top, around 45 by 85 centimeters, upon a single central base, either circular or square, or a combination of both; the edges of the top are ornamented in chip-carving on three sides, the fourth is facing the wall. Such tables are mentioned in the Talmud (Zevulun, 1978, p. 10*–11*; T., *Kel.*, *B.B.* 3.4). The motifs include geometrical patterns like ovolo and meander and floral decorations like wreaths, flowers, and rosettes; two subjects are unique: a fish on one fragment and two crossed cornucopias with a pomegranate between them on another. Of special interest is a tabletop published by Rahmani (1974, p. 65, fig. 1) and later identified as originating from the Jewish Quarter excavations. On the long side a ship is engraved, on the shorter side there is a single-legged table with four vessels standing on its top and two large kraters with lids below; this led to the suggestion that the large stone jars were used in the same manner (Avigad, 1983, pp. 172–173, illus. 194–195). Another singular table carries as its top a mosaic inlay in white, gray, and black tesserae (for the reconstruction of the fragment, see Magen, 1988, pp. 136–137, pl. 14). Its central motif of two six-petaled rosettes has its parallels on the mosaic floor of a patrician house in Jerusalem (Avigad, 1983, p. 155, photo 162) and on ossuaries (Rahmani, 1994). The round table has a plain top, approximately 40–60 centimeters in diameter, resting on three wooden legs—of which nothing survived—with bronze feet; it is probably the *delphica* mentioned in the Mishnah (*Kel.* 22.2; *A.Z.* 5.4–5). Rectangular tables in marble and bronze were found in Pompeii (for illustrations, see Magen, 1988, pp. 67–68, photos 81–82; Pernice, 1932); both the rectangular and circular version are shown on a Roman relief from Italy: two groups of banqueters are shown around a three-legged table; between them a single-legged table is used as serving table (Zevulun, 1978, p. 9, illus. 5; Avigad, 1983, p. 171, illus. 191). In addition, a three-legged table is illustrated on a wall-painting in a Hellenistic tomb in Marissa (Avigad, 1983, p. 170, illus. 189; Magen, 1994, p. 18).

Ossuaries (*glosqema'ot*) are rectangular receptacles for the collection of bones of deceased individuals in a secondary burial, a practice called *ossilegium* or *liqqut 'atsamot*. They are mostly made of soft chalk, seldom of hard limestone, and rarely of clay. Their size varies: for adult burial a box of 70–60 by 35 by 30 centimeters was sufficient, while ossuaries for children were smaller. Hewn

from a single block of stone, they have four short supports at the corners and tightly fitted lids, which are flat, curved, or gabled. The majority are plain and quite a number carry ornamentation in chip-carving or in high relief, yet, the decoration is not necessarily an indication of higher social status. Some are inscribed in Hebrew, Aramaic, Greek, Latin, and Palmyrene. Decoration is restricted to a showside and is also found on lids. Motifs include a large variety of architectural elements: tomb facades, a burial monument (*nefesh*), friezes, metopes and triglyphs, arches, colonnades, doors, columns, and ashlar walls; there are also six- and multi-petaled rosettes, whorl rosettes, palm trees, palm branches, wreaths, lilies, vine tendrils, and clusters of grapes as well as the depiction of amphoras and menorahs. These motifs constitute a common repertoire of Jewish art in the Second Temple period and later (Hachlili, 1988). The main period of ossuary manufacture and secondary burial took place between circa 20/15 BCE and 70 CE, with its latest occurrence in mid-third century contexts (Meyers, 1971; Zevulun, 1978, pp. 48*–50*; Jacoby, 1987; Hachlili, 1988, pp. 110–115; Magen, 1988, pp. 88–93; Cahill, 1992, pp. 217–218; Geva, 1994, pp. 191–243; Rahmani, 1994).

Several sundials made of soft chalk came to light in Jerusalem. Their principle follows that of the Roman period: a concave dial is divided into twelve radial segments; at its top a horizontal metal rod, a gnomon, was attached, casting its shadow on the dial. Sundials are decorated with rosettes carved in low relief and an incised menorah on one side (Magen, 1988, pp. 80–84, fig. 107; pp. 146–147, pl. 19.1; Avigad, 1983, pp. 119–120; Hachlili, 1988, pp. 238–239; Avigad, 1989, pp. 43, 72).

Distribution and Date. Remains from the stone industry are recorded from fifty-nine sites in the region from the Mediterranean Sea to the Sea of Galilee and the Dead Sea, with four to the east of that line; the southernmost site being Aroer in the Northern Negev and the northernmost Meron in Upper Galilee (Cahill, 1992, p. 230, plan 63). In addition, there are thirteen unnamed findspots in the Shephelah (Cahill, 1992, p. 236, note 43). While Magen (1994, pp. 25*–26*) dated the beginning of the industry to the second half of the first century BCE, Cahill (1992, pp. 231–232) has convincingly shown that its appearance does not predate the first century CE and that the latest finds are those from the Bar Kokhba Revolt. This group is preceded by a smaller number of hand-carved and polished vessels from the late Persian/early Hellenistic periods (fourth and third centuries BCE; Cahill, 1992, pp. 191–198).

Purpose. It is widely accepted that the stone industry is linked to the biblical tradition of purity since stone vessels are not susceptible to becoming ritually unclean (*Kel.* 10.1; *Ohal.* 5.5, *Par.* 3.2, *Yad.* 1.2). This applies also to

cattle dung and earthen vessels, while pottery vessels (i.e., of fired clay) had to be broken after having become ritually unclean. Water stored in stone jars was considered ritually clean (*Beits*. 2.3, *T.*, *Shab.* 17.1, *Beits.* 2.9), such jars being mentioned in the New Testament account of the wedding at Cana (*Jn* 2.6). Mishnaic sources stress the preference for stone vessels in the Temple ritual (*Pat* 3.2-3, 5, 11) as well as the use of a stone oven (*Kel.* 5.11) and a stone bathhouse bench (*Nid.* 9.3). Magen (1988, pp. 94-102, 1994, pp. 19*-23*) concludes that anyone wishing to maintain religious purity could easily do so by acquiring inexpensive local products made of natural material such as stone and earth. Cahill (1992, pp. 232-233) discusses briefly some questions that remain to be answered on archaeological and historical grounds. She points to the anomaly that ossuaries were used together with offerings in clay and glass, which were considered impure like everything else in burial. In the settlements and hideouts in the Jordan Valley and along the Dead Sea the number of finds is relatively small (see Cahill, 1992, p. 231 for a detailed list), although it was an area of intense Jewish settlement, and the members of the Dead Sea Scrolls community maintained strict purity; still, only small vessels were suitable for transportation into the caves. The publication of the substantial amount of stoneware from Qumran, prepared by R. Donceel and Pauline Donceel-Voûte, will provide new insight. The vessels and tables that came to light in the Herodian residence in Jerusalem, owned by a wealthy upper-class family, show that stoneware was used in addition to, not instead of, imported luxury tableware of clay and glass (Avigad, 1989).

RENATE ROSENTHAL-HEGINBOTTOM

STRUGNELL, JOHN (1930-), a member of the original team of Dead Sea Scrolls editors and later editor in chief. In 1954, when Strugnell was only twenty-four years old, he was nominated by G. R. Driver to join the international team of scholars working on the Dead Sea Scrolls in Jerusalem. At that time, Strugnell held a Bachelor of Arts degree in classics and the history of philosophy from Oxford (1952) and was completing a second degree in Oriental languages. He was the last member appointed to

the original team of editors and was the only one whose salary was fully paid by Rockefeller Foundation funds. He had no previous training in paleography. He was given a share of the previously unknown Hebrew texts that were mostly assigned to J. T. Milik and, by most accounts, soon developed a proficiency in reading them that was second only to that of Milik. Strugnell's share eventually grew to more than a hundred plates.

In 1956–1957 Strugnell interrupted his work in Jerusalem to take a position at the Oriental Institute in Chicago, but he returned to Jerusalem for three more years (1957–1960). From 1960 to 1967, he taught at Duke University, visiting Jerusalem occasionally in the summers. He was appointed to Harvard University in 1967. In September 1984 he succeeded Pierre Benoit as editor in chief of the scrolls and the Discoveries in the Judaean Desert. (His appointment was not confirmed by the Israel Antiquities Authority until two years later.) He held this position until October 1990, when he was succeeded by Emanuel Tov.

Strugnell's publications on the Dead Sea Scrolls have been few in number but exceptionally important. He was the first to signal the importance of the Songs of the Sabbath Sacrifice from Cave 4 at Qumran for the history of Jewish mysticism in his article "The Angelic Liturgy at Qumrân: 4Q385 Serekh Šîrôt 'olat Haššabbat" (*Congress Volume, Oxford*, pp. 318–345, Leiden, 1959). He subsequently supervised Carol Newsom's edition of this text in her 1982 Harvard dissertation (published in revised form as *Songs of the Sabbath Sacrifice: A Critical Edition* [Atlanta, 1985]). His "Notes en marge du volume V des 'Discoveries in the Judaean Desert of Jordan,'" (*Revue de Qumrân* 7 [1969–1970], 163–276) is not only a devastating review of John M. Allegro's work but an indispensable guide to the correct readings of the texts in question. In collaboration with Elisha Qimron, he introduced the pivotal halakhic work *Miqtsat Ma'asei ha-Torah*, from Cave 4 at Qumran, to the scholarly public in 1984 ("An Unpublished Halakhic Letter from Qumran," in *Biblical Archaeology Today: Proceedings of the International Congress on Biblical Archaeology, Jerusalem April 1984* [Jerusalem, edited by J. Amittai, pp. 9–12, 1985]). The critical edition of *Miqtsat Ma'asei ha-Torah* by Qimron and Strugnell appeared in *Discoveries in the Judaean Desert* 10 in 1994. He presented a preliminary edition of important Moses pseudepigrapha at a conference in New York in 1985 (published as "Moses-Pseudepigrapha at Qumran: 4Q375, 4Q376, and Similar Works," in *Archaeology and History in the Dead Sea Scrolls: The New York University Conference in Memory of Yiguel Yadin*, edited by Lawrence H. Schiffman, pp. 221–256 [Sheffield, 1990]). In collaboration with Devorah Dimant, he presented the first prelimi-

nary edition of Pseudo-Ezekiel ("4Q Second Ezekiel," *Revue de Qumrân* 13 [1988], 45–58; "The Merkabah Vision in Second Ezekiel [4Q385 4]," *Revue de Qumrân* 14 [1990], 331–348). His edition of Sapiential Work A, prepared for *Discoveries in the Judaean Desert*, with D. J. Harrington, was completed in 1996. Strugnell also supervised the edition of Noncanonical Psalms A and B of (4Q380, 4Q381), by Eileen Schuller in her 1984 Harvard dissertation (published as *Non-Canonical Psalms from Qumran: A Pseudepigraphic Collection* [Atlanta, 1986]).

At the end of Strugnell's tenure as editor in chief of the Dead Sea Scrolls and Discoveries in the Judaean Desert, he was in very poor health. On November 9, 1990, the newspaper *Ha'aretz* published an interview given by Strugnell to Avi Katzmann, which was reprinted in the *Biblical Archaeology Review* in the 1991 January/February edition. In this interview, Strugnell declared himself an "anti-Judaist" and made negative remarks about the Jewish religion, while insisting that his attitude toward individual Jews was no different from his attitude toward individual Christians. In a later interview with Hershel Shanks, published in the *Biblical Archaeology Review* (July/August 1994), he disavowed responsibility for the formulation of his remarks in the Katzmann interview and expressed his position as a belief in the superiority of Christianity rather than a judgment on Judaism. Whatever his theological position, however, Strugnell collaborated freely with Jewish, especially Israeli, scholars. It was he who first expanded the team of official editors to include Jewish scholars, and he worked closely with Qimron and Dimant, among others.

In addition to his work on the scrolls, Strugnell played an important part in stimulating scholarly interest in the pseudepigrapha and Hellenistic Judaism, and directed several dissertations in these areas. Many of his former students contributed to a Festschrift in his honor (*Of Scribes and Scrolls. Studies on the Hebrew Bible, Intertestamental Judaism, and Christian Origins* [edited by H. W. Attridge et al., Lanham, Md., 1990]).

JOHN J. COLLINS

STUDY AND EDUCATION. From the evidence of the library discovered scattered and hidden in the Qumran caves, it is clear that the desert communities took seriously the Deuteronomic and sapiential emphasis on the

study, meditation, and memorization of Torah, as well as commenting on the biblical prophets (in a way which updated their application to contemporary events), the accurate scribal copying of biblical and extrabiblical texts, and, going far beyond these, the abundant creation of new texts, sectarian, apocalyptic, and devotional. [See Pesharim.] Thus, there is found in the Qumran sect a combination of intense application to the received tradition, along with considerable literary creativity. In this respect the Qumran authors are doubtless heirs of the schools of prophetic and apocalyptic tradition (note the emphasis on reading and writing in *1 Enoch* and *Jubilees*), as well as anticipating to some extent the activities of early Christian exegetical and catechetical schools (e.g., Caesarea, Alexandria, Lyons) and the rabbinic academies (Yavneh, Usha', Tiberias).

But in addition to these forms of literary activity, some works have been found at Qumran that boldly carry on the Mosaic tradition of divine legal revelation itself. (It is important to remember that the canon was not yet closed.) Among these are *Miqsat Ma'asei ha-Torah* (MMT^{a-1} 4Q394-399), apparently a letter on calendrical and legal interpretation, and *Temple Scroll*^a (11Q19), which presents itself as God's instructions to Moses. [See *Miqsat Ma'asei ha-Torah*; *Temple Scroll*.] Also included are the fragmentary *Words of Moses* (1Q22) and the *Liturgy of Three Tongues of Fire* (1Q29), both in the style of *Deuteronomy*. Then there are Aramaic retellings of Pentateuchal stories like the *Genesis Apocryphon* (1QapGen) and the book of *Jubilees*, which oscillate between *midrash* and free composition (of new stories). [See *Genesis Apocryphon*; *Jubilees, Book of*.] In varying degrees these works suggest that study at Qumran was not always purely academic commentary but perhaps at times involved a conviction of divine inspiration and divine legal authority. Yet the authors are clearly steeped in Israel's earlier legal traditions. The Qumran community has been described as a school of exegesis (Denis, 1967), but the ambitions of its members transcended ordinary commentary.

Elementary school texts that help children learn how to read and write, such as those found at Kuntillet 'Ajrud, have not been found at Qumran. This is so because only adults were admitted to the primarily celibate community at Qumran itself. On the other hand, in the Damascus Document, legislating for a wider community that includes families, provision is made for children: "Whoever enters the covenant, for all Israel for an eternal law, he must impose upon his sons, who belong to those who are enrolled, the oath of the covenant" (CD xv.5-6). So too, in the *Rule of the Congregation* (1Q28a i:6-9), which probably envisages a future, ideal community of the end of time, we read:

From his youth they shall educate him in the book of Hagu, and, according to his age, instruct him (*yaškituhu*) in the precepts of the covenant, and he will receive instruction (*mušaro*) in its regulations, for ten years, he will be counted among the boys. At the age of twenty years, he will transfer to those enrolled to enter the lot amongst his family and join the holy community.

Even if this is only utopian legislation, the book of Hagu is mentioned in the Damascus Document (CD x.6, xiii.2, xiv.8) as the basis of education. [See Hagu, *Book of*.] It may have consisted of the *Rule of the Community* from Cave 1 (1QRule of the Community, 1QS) the Pentateuch, and those works considered by the community as forming part of the Holy Scriptures. To judge from the literature produced by the movement, memorization of scripture would have played a major role in this program of basic studies. [See *Family Life*.]

On the level of daily practice, the most important text on study and education at Qumran is found in the section of the 1QRule of the Community that makes specific provision for keeping up this study at all times (1QS vi.1b-8a, especially 6-8):

And there shall not lack in the place where there will be the ten a man who studies in the Torah day and night, continually. They shall take turns, every man with his fellow. But the regular members shall keep vigil in community a third of all the nights of the year, to read in the book, and to study legislation and to pray in community.

This is the heart of the Qumran rule, the goal and ideal that all the other regulations support and protect. This constant study is central to the Qumran way of life, and the literary remains are there to prove it. Though the interpretation of the lines runs into some difficulties, the probable sense is this: At Qumran, all shared in the common task of study. Each was to be "a man who studies in the Torah."

The phrase "day and night" comes from *Joshua* 1.8 and *Psalms* 1.2. To live out this ideal, members of the Qumran community studied in shifts throughout the day and night. The phrase "a third of all the nights of the year" means that the community held a common study session more or less every night of the year for about three hours (one third of the night), that is, a regular evening study period after the day's physical labor was done. This common evening study session is probably distinct from the perpetual round of study in shifts mentioned in the preceding lines. There may have been specialists for whom study and writing were full-time tasks that exempted them from manual labor, although this is not explicitly stated.

The idea of Torah study as a religious value was pres-

ent to an eminent degree in the Qumran community; it included all-night study vigils, regular evening study periods, examinations, and the combination of study with prayer. Qumran was a house of study. Both noisy collective memorization and silence to think and write must have been a part of the way of life, judging from the results.

That the practice of study commanded by the IQRule of the Community took root in the emotions is illustrated by the wisdom psalm preserved in Psalms^a from Cave 11 (hereafter, 11QPsalms^a; 11Q5 xviii). This prayer speaks of forming an assembly to make known the salvation of God to those who did not study. Wisdom is personified as a woman. Praise of God is counted as rich sacrifices. At table they are to discuss Wisdom and to meditate on Torah. Even if this psalm was not composed at Qumran, the Essenes shared its values. [See Wisdom Texts.]

The high esteem for study and education as religious values in Qumran literature is a development from both Deuteronomic and sapiential traditions in the Hebrew scriptures (cf. *Dt.* 4.5-8; 5.1b; 6.6-9; *Jos.* 1.8; *Hos.* 4.6; *Mal.* 2.7; *Ps.* 1.2; 19.7-14, 111, 112; 119; *Prov.* 1.20-33; 2.1-6; 3.13-18; 8; *Sir.* 24; 38.24-39.11; *Bar.* 3.9-4.4; and *Wisdom of Solomon* 7). These values also find an echo in the New Testament and in rabbinic literature. The program of the early Christians summarized in the *Acts of the Apostles* 2.42 includes devoting themselves to the teaching of the apostles; the apostles themselves are devoted to prayer and the ministry of the word (*Acts* 6.4). The use of the Hebrew scriptures in Matthew's formula citations and in Paul's letters bears some resemblance to the *pesharim*, in which the scriptures are applied to contemporary events and issues (Stendahl, 1968). The abiding validity of Torah is asserted in *Matthew* 5.17-20 (cf. *Lk.* 16.16-17). Jesus' command "seek and you will find" (*Mt.* 7.7) can be understood in Hebrew (*darash*; Gk, *zetoo*) as an encouragement to interpret the biblical text in a mid-rashic manner. *Matthew* 18.18-20 implies that when people gather to study and pray, the divine presence hovers. This echoes not only Psalm 18 in 11QPsalms^a (11Q5) but also *Avot* 3.2 and 3.6. Rabbinic literature places an extremely high value on Torah study. This evaluation is thematized especially in *Avot* and *Avot de-Rabbi Natan*.

SUFFERING. For the members of the Qumran community, suffering was not contemplative, it was experiential. Before they left the magnificent Temple in Jerusalem, they endured the removal of the high priesthood from the line of Zadok, who was David's high priest. Beginning with the treacherous action of Joshua/Jason, who bought the high priest's office from Antiochus IV Euphrones shortly after 175 BCE and subsequently dethroned his brother, Onias III (2 *Mc.* 4.7-8), the high priest's office was open to the highest bidder. The Qumranites, who considered themselves the legitimate heirs of the priesthood, experienced the desecration of the Temple and became increasingly unwanted and persecuted by the one responsible for Hellenizing "the holy city." Eventually they were expelled from the Temple, and led by the Teacher of Righteousness ("the Righteous Teacher"), they left to live in the inhospitable wilderness. There they remembered the riches and grandeur of the Temple and found meaning in reading *Isaiah*. From studying *Isaiah* 40.3 they eventually became convinced that they lived in the wilderness to prepare the way of the Lord (1QS viii.13-14). The wilderness became their place of trial and suffering where they prepared for the final act of God at the end time. As the author of the Florilegium contended, "the Sons of Light," that is, the members of the Qumran community, who are "the chosen ones of Israel in the latter days," are "those who take [refuge in him]" and are living out "the time of refining." The righteous ones are in the wilderness to "refine themselves" (4Q174, frgs. 1-3).

The Teacher of Righteousness. A religious figure of the second century BCE, the Teacher of Righteousness was a brilliant mind and interpreter of the Torah who helped his followers understand the meaning of scripture. He, or another leader in the Qumran community, in approximately 150 BCE—that is, soon after the group of priests settled at Qumran—wrote to the officiating high priest in Jerusalem explaining some of the reasons why

they differed theologically from the other so-called priests in the Jerusalem cult (Miqsat Ma'asei ha-Torah, 4Q394-399). The founder of the community emphasized that the time about which prophets had spoken was that in which the community was now living. A later follower of the Teacher of Righteousness wrote a commentary (*pesher*) on the *Book of Habakkuk*, in which it is said that God had "told Habakkuk to write down the things that will occur in the last generation, but the consummation of the time he did not allow him to know" (1QpHab vii.1-2). The author of the *pesher* and other followers of the Teacher of Righteousness looked back at Jerusalem and knew that the interpreters of the Torah there misunderstood the meaning of scripture; only the Teacher of Righteousness understood the meaning of God's word. This follower wrote that God had revealed "all the mysteries of the words of his servants the prophets" to one person only, the Teacher of Righteousness (1QpHab vii.5). When he came to the famous passage "and the righteous one shall live through his steadfast faith" (*Hb.* 2.4b), he claimed that the verse prophesied their steadfast faith in the Teacher of Righteousness, which resulted in "their suffering" (*amalam*; 1QpHab viii.1-3).

According to this follower of the Teacher of Righteousness, the illegitimate and officiating high priest in the Jerusalem cult—the Wicked Priest—had come to Qumran and persecuted the Teacher of Righteousness. He did so on Yom Kippur, which supports the idea that the members of the Qumran community followed a calendar appreciably different from the one observed by the Jerusalem sacerdotal aristocracy (1QpHab xi.4-8). The Wicked Priest "persecuted the Righteous Teacher swallowing him up in the anger of his fury in his place of exile" (1QpHab xi.4-5). While these words do not indicate that the Wicked Priest killed the Teacher of Righteousness, and there is no evidence in the Qumran scrolls that he was martyred or revered as a martyr, they do reveal that he suffered greatly from the persecution by the Wicked Priest.

Earlier than the composition of this commentary on *Habakkuk*, which dates from the end of the second century BCE and most likely represents oral tradition that derives from the earliest phase of the community (Horgan, 1979), a community member spoke about his own suffering in *Hodayot* from Qumran Cave 1 (hereafter, 1QHodayot^a; 1QH^a). He is most likely the Teacher of Righteousness. After picturing himself as a fountain and the community as a "shoot for the eternal planting," the poet says:

But upon the shoot every beast of the forest shall feed
And its trunk [shall become] a place of trampling
for all those who pass over the way
And its branches [shall be] for every bird.

And all the tree[s] of the water
shall exalt themselves over it
because they shall become magnified in their planting
But they shall not send forth a root to the river
And he who causes to sprout the hol[y] shoot
for the planting of truth is concealed
with the result that he is not esteemed
and the sealing of his mystery is not perceived.

(1QH^a vii.9-12 [viii.8-11])

The author and his followers, "the trees of life," have suffered; they have become "a place of trampling." They have been ostracized and persecuted by the wicked priests in Jerusalem, "the trees of the water," who have exalted themselves over the Teacher of Righteousness and his followers. The Teacher of Righteousness and his followers have not received the esteem they deserve. [See *Eternal Planting*.]

It is also possible that the lines following the above excerpt from 1QHodayot^a (1QH^a xvi [viii]) may refer to the punishment administered to the Teacher of Righteousness by the Wicked Priest since the lines continue the autobiographical nature of this hymn and the descriptions of physical suffering are more precise in detail and extreme than in the biblical psalms of lament. Thus, references to the strength going out of the author's body, his arm being torn from its socket, and his foot being caught in chains may be more than mere metaphors (1QH^a xvi.27-41 [viii.26-40]).

The Community and Its Concept of Suffering. Other passages in 1QHodayot^a reflect the expressions of suffering felt by others in the community. Since this scroll contained a definitive form of the hymnbook of the community, it was a liturgical document that, when read out loud during services, was a unified expression of shared suffering. Note the following lines from 1QHodayot^a that were recited by the members of the Qumran community: "I was in distress as a woman in travail with her first-born" (1QH^a xi.8 [iii.7]) and "And (concerning) me, a fountain of bitter mourning was opened for me" (1QH^a xix.22 [xi.19]). Thus, the community's painful experience of suffering led its members to compose and recite such vivid images.

Their suffering was meaningful and purposeful—it was one of the expected roles of the Sons of Light in helping to prepare the way for God's final day of judgment. To obey the call of Isaiah, they separated themselves from "the men of deceit in order to depart into the wilderness to prepare there the way of the Lord; as it is written: 'In the wilderness prepare the way of the Lord, make level in the desert a highway for our God'" (IQS viii.13-14). The quotation is, of course, from *Isaiah* 40.3. In the wilderness they lived out their conviction that they were suffering in order to prepare for the final day of God's judg-

ment when the wicked would be punished and the members of the community would be duly rewarded.

Employing such words as *'ebyon* ("poor") and *'ani* ("oppressed"), the inhabitants of Qumran eventually began to think of themselves as "the poor" "the poor in spirit" (cf. *Mt.* 5.3), "the poor ones" (cf. *Lk.* 6.20), and the "oppressed." Note the self-understanding of the community in the following excerpt:

Yea, Thou, O my God, hast shut their teeth,
so that they may not tear to pieces the soul of the wretched and
poor;
and their tongue is drawn back as a sword into its
sheath. . . .

Thou hast dealt wonderfully toward the poor . . .
But Thou, O my God, turnest storm to stillness,
and the life of the poor Thou hast saved. . . .

(tQH^a xiii t8-20 [v.16-18]; see also tQH^a x 34 [ii 32],
1QH^a xi.26 [iii 25]; translated by Holm Nielsen, 1960)

The references to the "poor" could also be rendered "the poor one." It becomes readily apparent how this concept of being "the poor" is related to their suffering.

The Qumranites transformed the concept of "the poor" from an economic concept to a religious attribution of themselves. The term is found not only in 1QHodayot^a; it appears, for example, in the War Scroll (1QM) and elsewhere (1QP Hab xii.3, 6, 10; 4QP Ps^a 1.9, 2.10; CD vi.21, xiv.14). There "the poor" appears with a meaning synonymous to "we in the lot of your truth" (1QM xiii.12-14; cf. xi.9, 13). Although they are "the poor"—indeed, precisely because they are so designated—they will be victorious in the great and final war, thanks to the assistance of the archangels and all the hosts of heaven, and finally the intervention of God himself.

This perception most likely originated when the first generation of Qumranites experienced the severe contrast between living opulently in Jerusalem and eking out an existence in the wilderness beside the foul-smelling Dead Sea, near which virtually no vegetation or animals could survive. There, in exile from the holy city, they, "the eternal plant," claimed to have been chosen "to atone for the earth [land]" and to punish the wicked (1QS viii.5-10), which in light of the echoes from *Numbers* 35.33, presumably means that the Sons of Light will purify the land polluted by the wicked ones, especially the Jerusalem priests.

Atonement. The Rule of the Community contains several new ideas regarding atonement. For example, the cultic expiation of sins, prescribed in the Hebrew scriptures, is now attributed to God as the one who atones for the iniquity of the Sons of Light (1QS xi.14). Members of the Qumran community claimed that they were atoning for the earth or land (1QS viii.5-10), but one should not form the impression that their suffering was vicarious.

Their attempts to atone for the land through withdrawal into the wilderness, purification rites, full dedication to the study of the Torah and God's word, and special liturgies, which were at odds with the calendar and rules observed by the Jerusalem sacerdotal aristocracy, led to the Qumran community's suffering and persecution by the Jerusalem establishment. At Qumran the attempts to obtain atonement led to the suffering of all members of the community, especially its founder; by contrast, in early Christian theology the suffering of Jesus was understood to lead to the atonement of all. [See Atonement; Retribution.]

The Qumranites thought of themselves as continuing the line of inspiration and revelation of the great prophets. In contrast to the rabbinic sages, but in ways similar to later Jews who wrote some of the documents in the New Testament, members of the Qumran community developed the concept of a "New [Renewed] Covenant," *berit hadashah*, a term that occurs just once in the Hebrew scriptures (*Jer.* 31.31, Talmon, 1994). They conceived of themselves as constituting the "New Covenant" (*ha-berit ha-hadashah* [CD vi.19]; *ba-berit ha-hadashah* [CD viii.21]). Also, in contrast to rabbinic Judaism, but exceedingly close to the origins of Christianity, members of the Qumran community perceived themselves as participating in living prophecy; their founder was God's chosen prophet, to whom absolute allegiance was demanded.

Prophetic Fulfillment. The Qumran *peshtarim* reflect the prophetic vision of suffering. In Peshier Hosea^a (4Q166) the reference to "those whom he [God] sent" clearly refers to the prophets, whom the Qumranites understood to include themselves; hence, the reference to the rejection of Qumranites as prophets by others (perhaps the rejection of the "commandments they taught"; Horgan, 1979) or possibly their "murder" (Carlson, 1983) mirrored the suffering felt and experienced by the members of the Qumran community.

JAMES H. CHARLESWORTH

SUFFERING SERVANT. A figure described by Deutero-Isaiah, the suffering servant is the one who will come, suffer, and die for the sins of others. He is mentioned in *Isaiah* 42.1–7, 49.1–6, 50.4–9, and most importantly 52.13–53.12; these chapters were added during the Babylonian exile in the sixth century BCE. Most Jewish scholars interpret these sections to refer to the nation of Israel, but for nearly two thousand years many Christians have taken such phrases as he "was despised and rejected by others," he was "a man of suffering," and "he has borne our infirmities" to be a prophetic prediction of Jesus' crucifixion and its salvific nature. Specialists on the theology of Second Temple Judaism tend to concur that the concept of a messianic figure who will fulfill the prophecy of Deutero-Isaiah is not found in Jewish apocryphal texts and is thus a Christian creation based on Jesus' self-understanding or, more likely, on reflections upon Jesus' sufferings by his followers (Benoit, 1990).

The Qumran scrolls have been at the center of the discussion, and indeed controversy, about whether any Qumran text or any other pre-Christian Jewish text refers to a suffering messiah, that is, one who vicariously suffers and dies for the sins of others, as Jesus is portrayed by most of the authors of the documents found in the New Testament. Thus far, although the texts allude to sufferings of an individual or the community, there is no convincing evidence to identify these figures as the one mentioned by Deutero-Isaiah.

It is true that both *Isaiah*^a (1QIsa^a at *Is.* 53.12) and the Septuagint, in contrast to the Masoretic Text, read: "From the travail of his soul he shall shed forth light and be satisfied"; this variant reading is significant for dis-

cerning possible allusions to the servant concept in the Hodayot: "and my light shall shine forth in your glory. For [as] a light from out of the darkness, so have you enlightened me" (1QH^a xvii.27 [ix.26]). One passage in this hymnbook seems to be an allusion to *Isaiah* 50.4 (Ringgren, 1995), since the author is "to give life to the spirit of the stumbling and to comfort the weary with a word" (1QH^a xvi.37 [viii.36]). While it seems obvious that passages of *Isaiah* have influenced the composition of some poems in Hodayot, at the same time no passage suggests that an author is thinking of himself as the suffering servant of Deutero-Isaiah. A few passages, however, bear a relation to some of the words from the suffering servant passages of *Isaiah* (1QH^a x.11–16 [ii.8–13]).

John M. Allegro claimed that the Teacher of Righteousness was martyred and even offered the opinion that he had been crucified by Alexander Jannaeus. Scholars have wisely pointed out that there is no evidence for such an interpretation. Although the word *suffering* in the Hodayot probably sometimes refers to the experiences of the Teacher of Righteousness and may contain his self-understanding (1QH^a xvi [viii]), his suffering was not considered to be vicarious. Moreover, many of the hymns in the Hodayot clearly refer to the community's own perception and experience of suffering in the wilderness, away from Jerusalem and the Temple. Thus, the Qumran community did not develop the concept of a servant-messiah who would vicariously suffer for the many and save them; rather, it is the community that is to suffer and atone for the land (1QS vii.6–10).

Aaronic Text A (= Aramaic Levi^d, 4Q541), consisting of twenty-four fragments and dating from approximately 100 BCE, was written in Aramaic on leather. Several scholars (Starky, Puech, and Brooke) conclude that it contains a significant development in the concept of the suffering servant envisioned by Deutero-Isaiah, focusing on the suffering of an individual. The text is mutilated and portions have been lost—thus, the extant fragments are difficult or impossible to read. The two fragments that can be deciphered (4Q541 9, 24) are ambiguous. The text does not mention the Hebrew word for *messiah*, but it does refer obliquely to some wise man who will suffer. He is most likely a priest because he will make atonement for others; but this function was performed frequently, especially on Yom Kippur, by the high priest in the Temple, through sacrifices and confessions (*Mishnah Yoma*). Thus, there is insufficient evidence that Aramaic Text A refers to the well-known suffering by the Teacher of Righteousness, the founder of the Qumran community. It clearly does not reflect his self-understanding (cf. 1QH^a x[ii]).

Fragment 24 of Aramaic Text A may obliquely refer to crucifixion in the view of some scholars, but if so it refers

to the many crucifixions suffered by Jews long before the time of Jesus and may reflect the crucifixion of eight hundred Jews who opposed Alexander Jannaeus. Aaronic Text A does not suggest any vicarious suffering or death by the wise man (Puech and Collins agree), and it is not clearly eschatological or obviously dependent on the suffering servant passages in Deutero-Isaiah. Another fragmentary Qumran text, the War Rule (4Q285), does not appear to refer to the murder of a messiah. It most likely means that the Messiah will kill Israel's enemies.

JAMES H. CHARLESWORTH

SUKENIK, ELEAZAR L. (1889-1953), Israeli archaeologist and epigrapher, remembered as the first scholar to recognize the great antiquity of the Judean Desert manuscripts. Born in Białystok, Lithuania, Sukenik immigrated to Palestine in 1913 and studied archaeology at

the University of Berlin (1922-1923). After receiving a doctorate from Dropsie College in Philadelphia in 1926, he was appointed staff archaeologist for the Hebrew University of Jerusalem, where he devoted himself to research on Hebrew epigraphy and the archaeology of ancient synagogues. With the able assistance of his research associate, Nahman (Reiss) Avigad, Sukenik compiled a corpus of Hebrew and Aramaic inscriptions found on ossuaries of the Second Temple period in Jerusalem, many of which he and Avigad had excavated. Indeed, Sukenik's familiarity with the Hebrew scripts of the Second Temple period was of crucial importance in his subsequent study of the Judean Desert manuscripts.

Sukenik's initial involvement with the Dead Sea Scrolls came as a result of his collecting activities as chief curator of the National Museum of Jewish Antiquities at the Hebrew University. In November 1947, he was contacted by a prominent Jerusalem antiquities dealer, Nasri Ohan (from whom he acquired many important objects for the National Museum in the 1930s and 1940s), and invited to inspect a recent manuscript discovery. Ohan was then serving as agent for the Bethlehem dealer Feidi al-Alami, who had purchased three nearly complete texts—the War Scroll (IQM), Hodayot^a (IOH^a), and Isaiah^b (hereafter IQIsaiah^b; IO8)—discovered during the previous spring in Cave 1 at Qumran by members of the Ta'amireh bedouin tribe. [See Hodayot; Isaiah, Book of; War of the Sons of Light against the Sons of Darkness.]

Upon his first examination of a fragment of one of the texts, Sukenik recognized the similarity of its Hebrew letter-forms to those of the inscribed ossuaries of Jerusalem, which had been securely dated from the first century BCE to the first century CE. [See Alphabets.] The obvious importance of Jewish texts of such unprecedented antiquity (older by nearly a millennium than the oldest known Hebrew manuscripts) convinced Sukenik that he immediately should acquire these texts for the National Museum of Jewish Antiquities at the Hebrew University. Although intercommunal violence between Arabs and Jews was increasing in the days before the United Nations vote on the partition of Palestine, Sukenik accompanied Ohan to a meeting with al-Alami in Bethlehem on November 29, 1947. During that meeting Sukenik made a commitment to purchase al-Alami's texts on behalf of the Hebrew University and took possession of two scrolls (IQM and IOH^a) as well as two tall ceramic jars in which some of the Cave 1 scrolls had apparently been found. In the following weeks, with the encouragement and financial backing of Hebrew University president Judah Magnes, Sukenik was able to raise the necessary funds for the purchase of the first two texts. He acquired IQIsaiah^b in a subsequent meeting with Ohan in December 1947. [See Hebrew University of Jerusalem.]

From his preliminary study of the content, terminology, style, and reported provenance of the manuscripts, Sukenik was the first scholar to connect the texts to the ancient Jewish sect of the Essenes, whose main community was located between 'Ein-Gedi and Jericho, according to Pliny the Elder. [See 'Ein-Gedi; Pliny the Elder.] This Essene identification seemingly was confirmed when, in March 1948, Sukenik had the opportunity to examine four additional scrolls (Rule of the Community 1QS, hereafter, 1QRule of the Community; Peshar Habakkuk 1QpHab; Isaiah^a 1QIsa^a; and Genesis Apocryphon 1QapGen) that had been purchased from another group of Ta'amireh bedouin by the Syrian Orthodox archbishop of Jerusalem, Athanasius Yeshue Samuel. [See Genesis Apocryphon; Peshar Habakkuk; Rule of the Community; and biography of Samuel.] In Sukenik's opinion, the regulations listed in the text now known as 1QRule of the Community offered particularly close parallels to the communal organization of the Essenes as described by Josephus. [See Essenes; Josephus Flavius.]

Despite Sukenik's efforts to acquire the second group of scrolls for the Hebrew University, he was unable to raise the necessary funds, and in the summer of 1948 the four scrolls were taken to America by Archbishop Samuel. In subsequent months, Sukenik attempted to enlist the aid of the government of the State of Israel to acquire Archbishop Samuel's scrolls (soon to be published in America by the American Schools of Oriental Research). [See American Schools of Oriental Institute.] In the meantime, he pressed ahead with the study of the texts already in his possession. In November 1948, he published a preliminary transcription and commentary on several of the texts he had examined, and in 1950, a second volume of his preliminary report on the scrolls appeared. After Sukenik's death in February 1953, his unfinished translation and commentaries on *Hodayot*^d, 1QIsaiah^b, and the War Scroll were completed by Nahman Avigad and Sukenik's son Yigael Yadin. In July 1954, Yadin completed his father's quest to acquire the second group of Cave 1 texts with his purchase in New York of the four scrolls from Archbishop Samuel.

NEIL ASHER SILBERMAN

SUKKOT, the Feast of Tabernacles, is one of the three biblical harvest festivals that were to be celebrated at the sanctuary. *Exodus* 23.16 calls Sukkot "the festival of ingathering at the end of the year," and *Exodus* 34.22 terms it "the festival of ingathering at the turn of the year." All the biblical festival calendars mention it. *Leviticus* 23.33–36, which calls it a festival of booths or tabernacles (*sukkot*), stipulates that the seven-day holiday was to begin on the fifteenth day of the seventh month, that the first day was to include a holy convocation when work was forbidden, that sacrifices were to be offered each day, and that an eighth day was to be marked in the same way as the first. The same holiday receives additional treatment in *Leviticus* 23.39–43, where it is tied to the end of the harvest. The Israelites were ordered to spend seven days in the booths and to "[t]ake the fruit of majestic trees, branches of palm trees, boughs of leafy trees, and willows of the brook, and you shall rejoice before the Lord your God for seven days" (*Lv.* 23.40). The booths were to recall the time when the Israelites lived in such temporary dwellings during their trek through the wilderness (*Lv.* 23.42–43). *Numbers* 29.12–38 provides extensive detail about the sacrifices that were to be presented on each of the eight days, beginning with the fifteenth day of the seventh month. *Deuteronomy* 16.13–15 places the festival at the time when the Israelites had gathered the produce from their threshing floors and wine presses. All were to rejoice and observe the celebration at "the place that the Lord will choose" (*Dt.* 16.15). The Deuteronomic law was to be read at the festival every seventh year according to *Deuteronomy* 31.10–13.

There are several other biblical references to Sukkot. It is likely that Solomon dedicated the Temple during the festival (*1 Kgs.* 8.2, 8.65; cf. 8.66 for the eighth day; *2 Chr.* 5.3, 7.8–10; cf. Josephus, *Jewish Antiquities* 8.100). King Jeroboam redated the holiday to the fifteenth day of the eighth month so that his new subjects would not celebrate it at the Jerusalem Temple (*1 Kgs.* 12.32). Sukkot may also be the annual festival mentioned in *Judges* 21.19 and *1 Samuel* 1.3 and 1.21. In Ezekiel's vision of the restored Temple and community, the prince is required to provide sacrifices for himself and the people on the holidays, including the seven-day festival that began on the

fifteenth day of the seventh month. (*Ezek.* 45.25). According to *Ezra* 3.1–4, the returned exiles, led by Joshua and Zerubbabel, built the altar and celebrated Sukkot, and the prophet Haggai received one of his revelations about the new Temple on the twenty-first day of the seventh month, the seventh day of Sukkot (*Hg.* 2.1). *Nehemiah* 8.13–18 reports that the postexilic community, in response to the law read to them by Ezra, went to the hills to “bring branches of olive, wild olive, myrtles, palm, and other leafy branches to make booths” (*Neh.* 8.15). They lived in them for seven days and held a solemn assembly on the eighth. *Zechariah* 14.16 predicts that survivors of the nations who come against Jerusalem will worship the divine king annually at Sukkot, while a plague will strike those who fail to keep the festival (*Zec.* 14.18–19).

Jubilees traces Sukkot back to the time when Abraham learned that he and Sarah would have a son who would become the ancestor of God’s holy people (*Jub.* 16.15–31). The book stresses the biblical theme of festal joy (*Jub.* 16.19, 20, 25, 27, 29, 31). For the occasion, Abraham built an altar and offered the appropriate sacrifices for seven days; no foreigner or other uncircumcised person participated. The eternal festival and its laws were engraved on the heavenly tablets (*Jub.* 16.28). Israel was to “celebrate it, live in tents, place wreaths on their heads, and take leafy branches and willow branches from the stream” (*Jub.* 16.30). Abraham himself, taking palm branches and the fruit of good trees, made a procession around the altar with them seven times per day. Both *1 Maccabees* and *2 Maccabees* draw a connection between Sukkot and Hanukkah in that the latter, which also was associated with the dedication of the altar and the Temple, is called Tabernacles in the ninth month and was celebrated for eight days (see *1 Mc.* 4.56, 4.59; *2 Mc.* 1.9, 1.18, 2.12). Josephus mentions some of the legislation for Sukkot but adds the unusual explanation that every family was to “fix up tents, apprehensive of the cold and as a protection against the year’s inclemency” (*Antiquities* 3.244). Josephus also mentions the four kinds of species that composed the bouquet to be carried during the festival and reports the time when the people pelted the high priest Alexander Jannaeus with citrons (one of the four species; *Antiquities* 13.372–373). According to Mishnah tractate *Sukkah* 4.9, the reason was that he had poured the water libation of the festival over his feet. Philo expands on the fact that the holiday fell on the autumnal equinox and the end of the harvest (*On the Special Laws* 2.204, 2.207).

Sukkot is mentioned a few times in the Dead Sea Scrolls. Column xi, line 13 of Temple Scroll^a (11Q19) preserves part of the holiday’s name and notes a solemn assembly connected with it, while column xxvii, line 10 through column xxix, line 1 lists the sacrifices for the var-

ious days of the holiday. Column xlii, lines 13 through 17 describes the permanent Temple installations that were to provide a place for tabernacles to be built on the roof over the third story. From the tabernacles the elders, leaders, heads of ancestral houses, and commanders of thousands and hundreds were to watch the sacrifices for the festival. Sukkot is mentioned several times in the calendrical texts (Calendrical Document A, 4Q320 4.iii.9, 4.iv.4, 4.v.7, 4.vi.2; Calendrical Document B^a, 4Q321 2.ii.2, 2.ii.7, 2.iii.2, 2.iii.6, 2.iii.9; and Rule of the Community^c, 4Q259 4.3). Two of the Bar Kokhba letters from Nahal Hever mention the holiday. A letter in Aramaic (Hev 15) written by Shim’on bar Kokhba to Yehudah bar Menashe, conveys the commander’s order about gathering supplies of the four species (palm branches, citrons, myrtles, and willows), presumably for the celebration of Sukkot (which is not named) by a sizable army. A Greek letter (Hev 3) that may also be from Shim’on bar Kokhba, orders that palm branches and citrons be sent to the Jewish camp and that no time be lost because of the holiday that was approaching. [See Hever, Nahal, *article on Written Material*, and Rule of the Community.]

In the New Testament, *John* 7–8 preserves an account of a celebration of Sukkot at which Jesus was in attendance. Near the middle of the celebration he taught in the Temple (*Jn.* 7.14–36), but on the last day (“the great day,” *Jn.* 7.37) he addressed the crowd with his words about the thirsty coming to him to drink and about living water (*Jn.* 7.37–52). The next day, in the treasury of the Temple, he declared that he was the light of the world (*Jn.* 8.12–59; cf. 9.5). These allusions to the festival are elucidated by the fuller explanations of Sukkot customs found in tractate *Sukkah*. There one learns, in addition to more detail about the four species to be brought to the altar (*Suk.* 3.1–4; there was one procession around the altar each day except the last, when there were seven, see *Suk.* 4.5), about the water libation that took place on each of the seven days. The water was taken from the pool of Siloam in a golden container and brought to the Temple where it was placed near the altar in a silver bowl and used as a libation. The Mishnah comments on the great joy associated with drawing the water (*Suk.* 5.1). On the first day of the festival, golden candlesticks, each with four golden bowls on them, were lit in the Temple court of women, “and there was not a courtyard in Jerusalem that did not reflect the light” (*Suk.* 5.3).

JAMES C. VANDERKAM

SYNAGOGUES. The ancient synagogue was the central Jewish communal institution in the Greco-Roman and Byzantine worlds. From its inception, it fulfilled a myriad of functions as required by each Jewish community, from the social and political to the religious and educational.

We know of six synagogues in the Judean Desert region—Qumran, Masada, Herodium, 'Ein-Gedi, Jericho, and Na'aran—spanning a wide geographical area, from Masada in the south to Jericho and Na'aran in the north, and to Herodium on the western fringes of the desert. These synagogues cover the entire range of late antiquity, from the last century BCE (Qumran, Herodium, Masada) to the eighth century CE (Jericho), and were located in a variety of settings—towns, villages, and fortresses—several of which relate in interesting ways to one another. The synagogues at Masada and Herodium were established by the same group (Sicarii or members of the Fourth Philosophy) and at the same time (the beginning of the First Jewish Revolt in 66 CE), while the synagogues at Jericho and Na'aran are almost contemporaneous yet strikingly different in their features.

Generally speaking, synagogue remains in this region reflect the more conservative end of the spectrum. Beside the absence of Greek, this conservatism is also evident at 'Ein-Gedi in the community's use of names only for the zodiac signs, over pictorial representations used at each of the other five sites (including Na'aran).

Qumran. The Qumran scrolls and various literary descriptions of the Essenes (assuming that these two groups are closely associated, if not identical) indicate that the concept for worship was well developed by this sect. On numerous occasions, community rules and practices are prescribed that relate to the form and content of worship in contexts encompassing much of the sect's life; moreover, remains of over two hundred prayers, psalms, and hymns have been recovered among the Qumran manuscripts. [See *Psalms, Hymns, and Prayers*.]

We know of two distinct references to such settings, one by Philo and the other from the Damascus Document. Philo describes Essene worship as he does Jewish

worship, generally consisting of the reading and elucidation of scriptures in synagogues. Regarding Essene Sabbath worship, he notes: For that day has been set apart to be kept holy and on it they abstain from all other work and proceed to sacred spots which they call synagogues (*synagōgai*). There, arranged in rows according to their ages, the younger below the elder, they sit decorously as befits the occasion with attentive ears. Then one takes the books and reads aloud and another of especial proficiency comes forward and expounds what is not understood (Philo, *Quod omnis probus liber sit*, 81–82; translation, F. H. Colson, Loeb Classical Library). Whether this description is reflective of Essene settings everywhere, only in Qumran, or, alternatively, everywhere except Qumran is difficult to determine.

The Damascus Document (CD xi.21–xii.1) refers to a "house of prostration." "And no one entering a house of prostration (*beit hishtahavut*) shall come, insofar as he is in a state of uncleanness, which demands a washing; and at the sounding of the trumpets of the assembly, he shall have done it [the washing] before or he shall do it [later, but they [the impure] shall not interrupt the whole service; for it is a holy house [*beit qodesh*]" (translation and interpretation follows Steudel). The nature and structure of this setting for worship are never made explicit, but the worship undoubtedly consisted of prayers, blessings, and hymns described in other Qumran writings.

Where at Qumran would worship have taken place? The most reasonable guess is room 77, the largest at the site; it was here that the communal meal was served. This room seems to have functioned not only as a dining area but also as a place of worship, and it is in this regard that the platform at the western end of the room, facing Jerusalem, might have some significance. The Qumran arrangement, combining dining and worship activities, thus would have resembled the multifunctional purposes of other Second Temple synagogues, which served a variety of communal needs, including religious ones.

Masada. Undoubtedly, the most famous synagogue building remains from the Second Temple period are those of Masada, excavated between 1963 and 1965. Originally a Herodian reception hall, this room was transformed into a synagogue during the occupation of the fortress by the Sicarii (one of the more extreme revolutionary groups) between 66 and 74 CE. Surrounded on all four sides by benches (usually in four tiers), with columns in the central area, the rectangular hall measured 15 meters by 12 meters (49 feet by 39 feet) and had a single 1.35 meter (4.4 foot)-wide door in the middle of its southeastern wall. Unique to Masada is a small room (5.7 meters by 3.5 meters [18.7 feet by 11.4 feet]) protruding into the northern corner of the main hall. Fragments from the books of *Deuteronomy* and *Ezekiel*, containing

passages undoubtedly used in the synagogue liturgy at the time, were discovered there. It would appear that this hall served the revolutionaries on Masada for meeting purposes generally, as well as for religious services.

Herodium. The structure at Herodium has an architectural history similar to that at Masada. Its 15 meter by 10.5 meter (49 feet by 34.4 feet) trapezoidal hall was transformed into a meeting hall by revolutionaries during the First Jewish Revolt against Rome. As at Masada, this rectangular hall had simple, unornamented plaster walls, into which four columns were introduced along with several rows of benches. Entrance to the Herodium synagogue was gained through three eastern portals; a stepped cistern, which may have served as a *miqveh* ("ritual bath"), was located outside the hall.

Ein-Gedi. An oasis on the western shore of the Dead Sea, Ein-Gedi was a flourishing community throughout antiquity, playing a significant political and economic role in Second Temple Judea. It was an administrative center for one of Judea's toparchies (Josephus, *The Jewish War* 3.55) and later served as a military and administrative center during the Bar Kokhba Revolt (c.132–135 CE). Its economic importance was directly connected to the lucrative balsam industry noted by a number of ancient writers. In the late third century, Eusebius notes that Ein-Gedi was a large Jewish village (*Onomasticon* 86.18).

The synagogue at Ein-Gedi was excavated between 1970 and 1972. Two distinct strata were uncovered. The earliest stage of the first building (Stratum II)B) dates to the turn of the third century CE, during the Severan dynasty. The synagogue plan was trapezoidal and of modest proportions, measuring 15.5 meters (50.8 feet) on the west, 13.5 meters (44.3 feet) on the east, and from 9 to 10.5 meters (30–34.4 feet) on the north and south; the hall was not internally divided by columns. The mosaic floor is decorated in a relatively simple fashion, with geometric designs and different types of tesserae—large coarse white stones together with smaller white, black, and colored ones. A swastika of black tesserae appears in one of the rectangular frames in the middle of the floor. There were two entrances along the northern, Jerusalem-oriented wall, one in the center and the other near the northeastern corner.

About a century after it was first built, some time around the turn of the fourth century CE, the synagogue underwent extensive renovations (Stratum IIIA), which included the blocking of the central northern entrance and the creation of a niche that probably held a wooden Torah shrine. Just east of the niche was a stepped seat (possibly the "Seat of Moses"), and three benches were built along the southern wall. Aisles were created in the

east and south by the addition of pillars, three entrances were opened on the western side of the hall, and a porch with three columns was built in front of these entrances to the west. The original mosaic floor continued to be used in this stratum.

Stratum II came into being about a century and a half later, in the mid to late fifth century, measuring 16 meters (52 feet) long on the west, 13.5 meters (44.2 feet) long on the east, and about 12.5 meters (41 feet) between them. A wooden rectangular structure with its apse facing north stood in front of the niche and undoubtedly contained the Torah ark; the area between this structure and the northern wall was used for storage. A large hoard of bronze coins was also found there. The porch on the west had now become the western aisle of the synagogue hall and contained a series of Hebrew and Aramaic inscriptions (see below). West of this aisle a corridor or narthex was added, with entrances on the south and north. A basin was placed at the southern end of the narthex for washing hands and feet. A new mosaic floor, featuring menorahs, birds, and peacocks, now replaced the earlier one.

The destruction of the synagogue at the beginning of the reign of Justinian (527–565 CE) is dated by a hoard of coins (found in a nearby house), the latest of which dates to the early years of Justinian. The synagogue of Gerasa in Jordan was converted into a church in 531 CE, and similar forces may have been at play at this time in Ein-Gedi. A bronze menorah was found in the destruction debris near the Torah shrine.

The *pièces de résistance* of this synagogue are the inscriptions located in its western aisle. The main inscription may be divided into several sections. The first part of this inscription contains a series of names, the ancestors of the world according to *1 Chronicles* 1.1–4; the zodiac signs; the Hebrew months; and two sets of three names, each identified, in one *midrash* at least (*Midrash on Psalms* 1.15), as the pillars of the world. The names in these lists probably appear here as witnesses to the public oath that follows in the second part of the inscription, which is radically different from the first. It is written in Aramaic and highlights the community's oath, beginning and ending with a list of names of important local donors. These lists are quite similar, and the differences between them may reflect certain changes that took place over time. Of particular interest, however, are the four cardinal offenses mentioned in the oath:

Anyone causing a controversy between a man and his friend, or whoever slanders his friend to the gentiles, or whoever steals the property of his friend, or whoever reveals the secret of the community to the gentiles—he whose eyes range through the whole earth and who sees hidden things, he will

set his face on that man and on his seed and will uproot him from under the heavens. And all the people said: Amen and Amen. Selah.

The nature of the secret that the community has been sworn to keep has understandably intrigued scholars. Ephraim E. Urbach has suggested that this secret be seen in the context of oaths taken by religious societies, guilds, and citizens of *poleis* ("city-states") throughout antiquity; he calls attention to the oaths recorded in the Qumran scrolls. Benjamin Mazar suggests that the secret had to do with political issues related to community life, perhaps shifting alliances regarding the major powers (Byzantium and Persia) of the day. Aaron Dothan ties the secret to certain religious practices that the community wished to keep from the authorities. Finally, Saul Lieberman has opined that the community's secret is related to the local balsam industry, suggesting that each of the four components of the oath is related to a trade secret, that was to be kept from outsiders. (See Levine, 1981, pp. 140–145.)

One final inscription, never published, contains a blessing in Aramaic for the people of the town and specifically mentions one Yonatan the *huzzan*, who contributed to the renovation of the synagogue.

Jericho. Discovered in 1936, this synagogue is located about 2 kilometers (1.2 miles) north of Byzantine Jericho and just north of Tell es-Sultan (biblical Jericho). It measures 10 meters by 13 meters (33 feet by 43 feet) and is oriented on a southwest-northeast axis, facing Jerusalem. An apse is located on the Jerusalem-oriented wall, and the nave is separated from two side aisles by two rows of square pillars. Entrance into the building was from the north via a door flanked by two columns.

The mosaic floor is decorated with stylized floral and geometric designs and divided into two sections. The northern part contains alternating squares and circles, while the southern part features lozenges with alternating rows of heart-shaped leaves (*ivy*) and plain rhomboid lozenges. This southern section contains two unique features: a circle with a seven-branched menorah, a shofar, and a lulav in the center, and a Hebrew inscription reading "Peace upon Israel." South of this design is a stylized Torah ark standing on four legs with a shell decoration above it. The closed doors of the ark are decorated with geometric designs.

Near the entrance to the synagogue is a six-line Aramaic inscription that reads as follows:

May they be remembered for good, and may their memory be for good—the entire holy congregation, the old and the young, whom the Lord of the world has helped, and they have contributed to and made this mosaic. He who knows their names,

and (the names of) their children and people of their households will inscribe them in the book of life (together with) all the righteous. All Israel are bound together (lit., friends). Shalom (Amen).

This prayer on behalf of the congregation is most unusual and is strikingly similar to prayers appearing in a number of Jewish communities over one thousand years later. On the basis of bronze lamps, glass vessels, and coins, all dating from the fifth to the seventh centuries CE, this synagogue was probably built at the close of the sixth or beginning of the seventh century and continued to exist into the eighth century.

Na'aran. Discovered as a result of a Turkish shell exploding near British lines in September 1918, the sixth-century synagogue at Na'aran was one of the first to be excavated in the twentieth century. Na'aran is located just north of Jericho and is identified with Noorath, a Jewish settlement mentioned by Eusebius as being located some 5 Roman miles from Jericho (*Onomasticon* 136.24). Oriented on a north-south axis, its full extent is unknown, as the southern part is missing. The synagogue hall itself is almost 15 meters wide and at least 19 meters long (the excavator Louis-H. Vincent estimates its length to be 21.94 meters) and is surrounded by a series of courtyards on the north and west.

The Na'aran synagogue is distinguished, in part, by its many inscriptions and by the artistic representations on its fairly well preserved mosaic floor. Nine of the ten Aramaic inscriptions recovered are of a dedicatory nature, most of which mention individual contributions, such as:

Remember for good, Pinhas (the priest, son of Justa, who donated the cost of the mosaic at his own expense[?]).

Remember for good, Rebecca, wife of Pinhas.

Remember for good Halifa, daughter of Rabbi Safta who contributed to this holy place. Amen.

Remember for good, Benjamin the *pomas* ("community official"), son of Yose.

One inscription mentions donors generally.

The section part of the synagogue mosaic floor closest to the entrance is largely geometric, with alternating circles and hexagons among bands of *guilloches*, with the former containing depictions of animals, many of which are obliterated. The next section containing fragmentary remains of depictions of the four seasons, zodiac signs, and Helios with his quadriga and horses is largely obliterated. What is strange in this representation is the absence of coordination between the months and seasons—they are off by 90 degrees. Effacement of figurative art is evident in synagogues in other parts of the country and clearly reflects an aniconic upsurge toward the end of late antiquity. Whether this was an internal Jewish development or

the result of Arab or Byzantine pressure, and—in either case—who was responsible for such actions are, for the present, moot issues. The third section of the floor, that nearest the Jerusalem-oriented wall, depicts a paneled Torah ark flanked by two menorahs, each having two lamps hanging from its branches. Below these is a partially obliterated depiction of Daniel with raised hands and surrounded by two lions.

Development and Diversity. Though the number of synagogues in the Judean Desert is limited, enough has been recovered to afford a glimpse at the variety of these buildings from antiquity. From relatively simple halls, like those at Qumran and Masada, the synagogue evolved into a more complex setting, like those at 'Ein-Gedi and Na'aran. While later synagogue decorations vary considerably from place to place, the languages of the inscriptions throughout the region remain constant: Aramaic predominates, although Hebrew was also in use. Entirely absent in this region, however, are inscriptions in Greek, which were predominant in synagogues in other parts of the country.

Despite the paucity of evidence, each of the above Judean Desert synagogues adds a unique dimension to what is known about this central Jewish institution. Qumran's "house of prostration" is the earliest known synagogue-like setting in Greco-Roman Palestine, antedating other evidence by at least a century; Masada and Herodium (together with Gamla on the Golan) are the earliest attestations of separate synagogue structures in the country; the inscription at 'Ein-Gedi is among the most fascinating of synagogue inscriptions known to date; Na'aran is exceptional in the wealth and variety of its epigraphical and art remains; and Jericho is a classic example of synagogue art and epigraphy at the very end of late antiquity and into the early Middle Ages.

LEE I. LEVINE

SYRIA (*Aram* in Aramaic) had been ruled by successive waves of Persian, Macedonian, and Seleucid invaders before the Roman general and statesman Pompey established a military beachhead in the region in 64 BCE. This early Roman presence was restricted to extreme northwest Syria and the Orontes River Valley. By the time the region achieved the status of a Roman imperial province under the emperor Augustus in 31 BCE, it was bounded by the Taurus Mountains, the Syrian desert, the Nabatean kingdom, and the Mediterranean coastline. Roman Syria is, therefore, best thought of as occupying a territory of shifting boundaries and local allegiances more equivalent to "Greater Phoenicia" and "Greater Syria" than to the modern state of Syria.

Immediately following the establishment of this initial Roman presence, Pompey turned his attention to the occupation of the Hellenized cities along the Phoenician coast. Tripolis and Berytus, the earliest cities to see Roman occupation, were the most important and influential centers of Greco-Roman culture in the region. Tripolis rivaled Alexandria as the economic giant in the eastern Mediterranean. Berytus, universally acknowledged for its schools of Roman jurisprudence and for the production of learned legal commentaries, is unique in the fact that it alone, of the major cities of the empire, preserved the use of Latin in public life well into the fourth century CE. Between Tripolis and Berytus lay the ancient city of Byblos, whose magnificent temple enclosure to its ancestral deity, Adonis, is referred to in cuneiform tablets from Ebla as far back as the third millennium BCE. But Berytus and Byblos were militarily and economically weak compared to Tyre and Sidon to the south. A centuries-old rivalry made these the richest and most powerful cities in the region, and together they controlled a maritime empire that extended to the British Isles and down the northwest coast of Africa.

Inland from the Mediterranean coast, Roman Syria rose to the Anti-Lebanon Mountains, east of which is located the city of Antioch on the Orontes River. As the former capital of the Seleucid empire, and the third largest city of the Roman Empire, Antioch boasted a large patrician population whose sophisticated and cosmopolitan lifestyle is attested to by the remains of luxurious villas in the southern suburb of Daphne. As the seat of the Roman governor of Syria, Antioch maintained a sizable military presence. It was from Antioch that troops were dis-

patched to Jerusalem in 66 CE, and Antioch provided large-scale military interventions during the First Jewish Revolt, which ended with the suicide of the defenders of Masada in 74 CE. Antioch had a significant Jewish population as well, which maintained close ties to Jerusalem. At the beginning of the second century CE, Ignatius of Antioch, while en route to martyrdom in Rome, wrote several letters in Greek in which he spoke of himself as "bishop of Syria" (*Ep. ad Rom.* ii.2). And "It was in Antioch that the disciples of Jesus were first called Christians" (*Acts* 11.26).

Mount Hermon, Syria's highest point, rises as a southwestern extension of the Anti-Lebanon Mountains, which form a chain down the Phoenician coast. Damascus is situated just east of Mount Hermon. The earliest references to this ancient city indicate that it was joined by north-east trade routes to Palmyra. It was also linked (as it still is today) to Berytus in the west by a road between the Anti-Lebanon Mountains and Mount Hermon to the Bek'a Valley, and then over Mount Lebanon. The city has always owed its existence to the Baradas River, which runs off the mountain range behind the city, and which made it a prosperous oasis for as long as records have been kept. However, the social history of Damascus remains rather obscure. Although it is the oldest continuously inhabited city known, self-identification of the population and characterization of the city before the Greco-Roman period are exceptionally rare. There is no indication of the persistence of indigenous local ethnic structures, and although several populations speaking a variety of Semitic languages are known to have thrived in Damascus, the evidence from the period of the Dead Sea Scrolls reveals a Greek-speaking population of a city that is thoroughly Hellenistic. Strangely enough, in the entire region known in Abbasid times as *Bilād al-Shām*, "the country of Damascus," there exist no inscriptions in any Semitic languages dating from the period of Roman domination.

The Euphrates River flows southeastward across eastern Syria and is the only navigable river in the entire region. Traditionally it constituted the boundary (at Zeugma, northwest of Antioch) between the Roman and Parthian, and later, the Byzantine and Persian, empires. The so-called Syrian steppe, made up, not of sand, but essentially of rock and gravel, occupies much of the rest of Syria. Lesser mountain ranges and salt flats dot the interior of the land.

In 200 CE, the Roman emperor Septimius Severus divided Syria into two regions, which he identified by their traditional Greek names. The northern province, called *Syria Koile* ("Hollow Syria") was used as a term of self-identification of the Greek cities of the Decapolis. The

southern province was known as *Syria Phoenice*. The border between these two ran from the Euphrates to the Mediterranean. It is important to recall the fluid nature of these and other boundaries, if the term is applicable at all during this period. From this historical remove, it is often difficult to determine whether a given settlement fell within the jurisdiction of one of the provinces of the empire, owed allegiance to local dynastic rulers, or was under the control of kingdoms such as that of the Nabateans or Hasmoneans.

In 135 CE, following the Jewish uprising under the leadership of Shim'on Bar Kokhba, the emperor Hadrian designated Judea as *Syria Palaestina* and Jerusalem became the Roman colony of *Aelia Capitolina*. On its eastern and southern borders Syria Palaestina met the kingdom of Nabatea, which Rome acquired in 106 CE. Thereafter, it became known as *Provincia Arabia*.

Although Syria was ruled by successive empires of Parthians, Greeks, and Romans, its population remained largely Semitic, spoke various dialects of Aramaic, and continued to identify themselves as "Aramaicans." The Jewish historian Josephus, writing in Rome in the late first century CE, identifies the Aramaicans of the Bible precisely as "those whom the Greeks call Syrians" (*Jewish Antiquities* 1.6.4 [143–145]).

The Syrian steppe, or desert, was inhabited by seminomadic peoples whom the settled population referred to as *Hagarāyê*, roughly "Hagarites," after Hagar, the maid of Abraham's wife, Sarah, and the mother of Ishmael (cf. *Gen.* 16); or more generically as *Tayyāyê*, after the Arab tribe "the *Tayy*." Greco-Romans referred to the nomadic population by a variety of names, the most common being *Arabes*, *Skenitai*, and *Saraceni* or "Saracens," a term that came to be used as the equivalent of "Muslims" during the crusades.

Several languages are known to have been in use throughout the region of Syria. Greek came into widespread use for the first time throughout the Near East with the conquests of Alexander the Great (336–323 BCE), but Aramaic, once the *lingua franca* of Persian administration, survived in local dialects. In Palestine and Roman Arabia these dialects are identified as Nabatean, Qumran, and Muṣabba'at. This is the period of the Aramaic that we find preserved in early Palestinian rabbinic literature, and in select words and phrases in the New Testament. In Syria and Mesopotamia, evidence of this period comes from documents uncovered at Palmyra, Edessa, and Hatra. A recently discovered fragment that dates from about 100 CE consists of two lines of verse in Arabic, which appear in the middle of a Nabatean inscription from the Negev.

Of the several offshoots of classical Aramaic, the dialect

known as Syriac is most closely related to the Aramaic of this period. [See Aramaic.] The earliest evidence for the use of Syriac dates from the third quarter of the first century CE and belongs to the same period as early Semitic inscriptions found at Palmyra, Petra, and Nabatea. Despite its name, Syriac was never “the language” of Syria; the prevalence of bilingualism throughout the region and the multicultural landscape of ancient Syria make such a suggestion absurd. Likewise, the once common claim that Greek was spoken in urban areas while the use of Syriac was restricted to the countryside needs to be reconsidered in light of more recent evidence. The linguistic history of the region is highly complex, and the use of one language or another was most likely a matter of choice, or perhaps, even convenience.

What distinguishes Syriac from the several other dialects of Aramaic, some of which are represented only by fragments, is the fact that Syriac enjoyed a long and rich literary history, due largely to the fact that it was the form of Aramaic spoken by early Syrian converts to Christianity. As such, Syriac became the literary medium for an expression of Christianity whose thought-forms and modes of expression were in direct continuity with the Semitic world from which Christianity emerged. It is largely for this reason that Syriac-based Christian literature is so notoriously difficult to characterize. With rare exception, Greek-based Christian literature is essentially analytical and philosophical in character. The literature of Syriac-speaking Christianity, however, remained essentially symbolic and synthetic.

Discoveries at Qumran and Nag Hammadi, and notably the Cologne Mani Codex, have significantly altered our knowledge of the religious landscape of Roman Syria and of the origins of Syriac-speaking Christianity. It is now clear that Christianity in Syria was not the result of Hellenistic missionary activity from Antioch, as was previously assumed. Rather, Syriac-speaking Christianity was part of a much more intricate development of Judeo-Christian movements, which produced various baptismal sects such as the Elkesaites and Mandaeans. While very much remains to be discovered about these groups, it is becoming increasingly clear that the Essenes, Elkesaites, and other similar groups were separate developments of a Jewish sectarian ideology that placed special emphasis on asceticism as well as on a variety of apocalyptic ideologies that exerted enormous influence throughout much of the Near East, particularly in Syria. For example, the Christianity that arose in this region is known for an ascetic orientation that encouraged both temporary and permanent vows of celibacy among the elite of the community, who were known as Sons and Daughters of the Covenant. Syriac-speaking Christianity likewise devel-

oped an extensive literature of apocalyptic legends and biblical figures, most notably, Enoch.

The use of Syriac as a late form of Aramaic is most closely associated with the kingdom of Edessa, called by the natives *Urhay* (modern Urfa in Turkey), which fell under Roman control in the 160s CE. According to local legend reported by the church historian Eusebius, Christianity came to Edessa in the apostolic age when the apostle Thaddeus (Syriac: *Addai*) converted the royal house (*Hist. eccl.* i.xiii.1–20).

The other prominent center of early Syriac-speaking Christianity was Arbela, located east of the Tigris in the province of Adiabene (Syriac: *Hadyab*). As in Edessa, the Jewish population in Arbela was large and influential; Josephus records that during the reign of Claudius (41–54 CE), King Izates of Adiabene was converted to Judaism (*Antiquities* 20.2.1–5). In the case of both Edessa and Arbela, all indications are that the Jewish community provided the starting point for Christian missionaries, and Jewish names figure prominently in lists of early bishops of both Edessa and Arbela.

Syriac-speaking Jewish scholars in the region of Edessa and Arbela produced the *targum* of the Hebrew scriptures known as the Peshitta. As the work of many hands, the text of the Peshitta is quite uneven, and although the Peshitta is essentially a translation of the Hebrew, it shows secondary influences from the Septuagint. *Judith* and *Buruch* originated independently, while *Ben Sira* is based on a Hebrew text. In time, the Peshitta Hebrew scriptures became the common Bible for Syriac-speaking Christians and Jews alike. Syriac-speaking Christians used methods of interpreting the Bible that are known to have been developed in the Talmudic schools of Babylon; they referred to their commentaries as *turḡāmê*, cognate to the Hebrew term *targumim*, and *pešārê*, cognate to *peshtarim*. To date, however, no substantive historical link has been adduced between Syriac-speaking Jewish and Christian exegetes.

There is only fragmentary documentary evidence for the Aramaic-speaking and -writing world of the Jewish villages of Judea proper as long as the Temple stood, that is to say, up to approximately 70 CE; thereafter, Galilee became the center of Jewish life in Palestine. This, in part, accounts for the fact that scholars hesitate to identify a particular Aramaic dialect with the language spoken by Jesus. In spite of this, however, the claim is often made that Jesus spoke Syriac.

The use of the name *Aram* (Syria) in the Judean Desert scrolls is not restricted to the identification of the ancient region of Syria. It occurs in compound names of regions in which Arameans predominate. Consider, for example, “Aram-Damascus” and, as indicated below, “Aram-Na-

haram" (Mesopotamia), and "Aram-Maacah." We find the place (and person) *Aram* mentioned twice in the War Scroll (1QM ii.10-11): Aram-Naharaim is the first enemy of the Sons of Light in their Forty Years' War against the gentile world, and in the third year of that war "the remnant of the sons of Aram" are the opponent. All the enemies in the first ten years are descendants of Shem, and insofar as Abraham shares that lineage, this first group of foes may be seen as Israel's closest neighbors or kin. Enemies in subsequent decades of the war are not differentiated into specific ancestral clans but are rather subsumed under categories "sons of Ham" or "sons of Japhet," the brothers of Shem. The word *Aram* also occurs in Qumran biblical and parabiblical texts four times, Genesis-Exodus^a ([4Q1]; *Gn.* 35.26), Samuel^b ([4Q51], *2 Sm.* 10.18), Samuel^c ([4Q53], *2 Sm.* 15.8), and Jubilees^d ([4Q223] 2.iv.19, but in none of these cases does the cita-

tion differ from the Masoretic Text. In only one case does a biblical reference to Syria differ from the Masoretic Text, and this reading must be reconstructed: in Samuel^a (*2 Sm.* 10.6), the extant text requires a verse much longer than the Masoretic Text provides, although the Masoretic Text *1 Chronicles* 19.6 (with its references to Aram-Naharaim and Aram-Maacah) would constitute an identical match.

T

TALMUDIM. Literally, *talmudim* means “teachings,” and these compilations are arranged as extended commentaries to the Mishnah. The two Talmuds, Palestinian and Babylonian, contain a vast array of traditional material, early and late, together with analyses and discussions of these traditions. The Palestinian Talmud received its final redaction in the last quarter of the fourth century CE, and the redaction of the Babylonian Talmud continued into the sixth or, perhaps, even into the seventh century CE. As a consequence, both reflect a world very different from that of the Mishnah—one in which rabbinic Judaism had few competitors for dominance, quite unlike the situation before the destruction of the Temple in 70 CE. The Mishnah thus preserves traditions from the world in which the Pharisees and the Qumran sect coexisted; the Talmuds had hardly any such traditions that they did not inherit from the period of the Mishnah and earlier.

The core of both Talmuds, aside from the Mishnah, consists of thousands of ostensibly tannaitic traditions, some of which have parallels in the Tosefta and the halakhic *midrashim*, and even in *Megillat Ta’anit* (The Scroll of Fasts), a written compilation of days on which fasting is forbidden, and thus, in part, a historical record of Jewish victories, military and moral. Some of these in all probability date from the third century CE in their present form, but in some cases date from much earlier, that is, from before the destruction of the Temple.

A second layer dates from the third to the early fifth century CE for the Palestinian Talmud, and to late in that century for the Babylonian Talmud. This layer consists of statements attributed to the *amora'im*, sages of the third through fifth centuries CE, conventionally divided into five generations for the Palestinian authorities and seven for the Babylonian.

The Palestinian Talmud, much the smaller of the two, is conventionally regarded as having been closed circa 425 CE, but much of its attributed material dates from the second half of the third century CE, that is, to Rabbi Yohanan and his disciples. It also contains a rather thin but noticeable and influential layer of anonymous redactional material, which serves to frame and orient some of the attributed sayings.

In contrast, the Babylonian Talmud, while conventionally dated to 500 CE, certainly contains much later mate-

rial, but most of all differs from its Palestinian counterpart in both its size, and the size and role of its anonymous redactional layer, which according to one estimate constitutes 55 percent of the whole. Current scholarly consensus dates this huge “layer,” or a large part of it, to the post-amoraic era, that is, after the mid-fifth century CE, with additions being reported as late as the eighth century, though recent research indicates that a significant portion (size as yet unknown) may date from late-third-century CE Palestine.

As noted, many of the early traditions incorporated into both Talmuds are to be found in some form in collections of tannaitic literature—the Mishnah, Tosefta, Midrashic compilations, and even *Megillat Ta’anit*, but both Talmuds also contain material that does not appear elsewhere. Unfortunately, Talmudic interest in Second Temple sects is generally limited to sources already available in these earlier collections, which are relevant to one or another Mishnaic passage. Little if any independent material exists that is not known from these sources.

What the Talmuds do provide is a fuller and more cohesive system of rabbinic law, but not necessarily one that reflects Second Temple theory and practice in every detail; significant advances had been made in the meantime. Thus, even more care must be taken in retrojecting Talmudic statements into Second Temple times than is the case with tannaitic materials.

Nevertheless, the Talmuds do contain some important material bearing on the earlier period, not available in earlier sources. Noteworthy among them is the extended discussion of the sectarian view regarding the dating of the Feast of Weeks. It should be noted that according to the consensus opinion, which equates these calendars with the view attributed to the Boethusians in the Babylonian Talmud (B.T., *Men.* 65a–b), the Boethusians and the Sadducees shared the sectarian calendar. Whatever the true contours of this dispute, it is important to note that it is absent from our earliest rabbinic sources, though, unfortunately, the sectarian position is far from clear in the Babylonian Talmud. Thus, in the Babylonian Talmud (B.T., *Men.* 10.3) and the Tosefta (T., *Men.* 10.23), it involves the date of the reaping of the ‘omer, though the nature of the dispute between the sages and the Boethusians is not clear. However, it is difficult to avoid asso-

ciating this dispute with the major calendrical disagreement between the Pharisees and the sectarians, a disagreement of long standing, and one that would have made a shared celebration of the festivals impossible. In this case, it may even be that the sectarians' literal understanding of "on the morrow of the Sabbath" of *Leviticus* 23.15, on which the date of the Feast of Weeks depends, also served to preclude the reaping of the 'omer on the Sabbath itself. But, as noted, the rabbinic material is hardly clear on this point.

Nevertheless, interesting parallels do appear. One such example is the amoraic classification of dust, pebbles, and rocks as *muqtseh* (B.T., *Beits.* 8a, *Shab.* 46a, *Beits.* 12a), rulings that are not found in earlier rabbinic literature, but that parallel the Damascus Document (CD xi.9–10). Indeed, this is a case in which the Qumran material may provide evidence for an earlier provenance of an amoraic ruling. Again, viewing the statement of Rabbi Eleazar of Modiin in *Arak.* 3.11, where those who "denigrate" the festivals, alongside those who defile sanctified things (*qodashim*) and those who misinterpret the Torah, are deprived of their "portion in the world to come" despite their "having Torah and mitzvot to their credit," we gain a rich historical context against the background that Qumran literature provides. This statement is elaborated, where Rabbi Eleazar ben Azariah furnishes it with a biblical proof text that specifically ties the condemnation to the festival of Passover, but without specifying the grounds or further identifying the object of this condemnation. With our knowledge of the importance for both the sectarians and their opponents of the interpretation of "on the morrow of the Sabbath" of *Leviticus* 23.15, on which the date of the Feast of Weeks depends, and the calendrical divergence to which this difference of biblical interpretation gave rise, we can now recover, with a fair amount of certainty, the original provenance of the tannaitic statement. The coupling of those who denigrate the festivals with those who misinterpret the Torah and those who defile the sacrifices becomes not only understandable, but almost inescapable. Thus, in this case, the Babylonian Talmud transmits a tannaitic statement whose significance was (in all likelihood) not recognized by the Talmudic tradents, but that furnishes a missing piece of the Talmudic puzzle.

Rabbinic sources, then, set a certain legal and ritual context for the sectarian writings of Qumran and related literature—and this is true even when the two systems do not intersect. For example, rabbinic law defines limits, quantifies; in Qumran, the definition of the onset of the Sabbath and the *tehum Shabbat* are unusual in this regard. There is no indication that such jurisprudential activity was at all of interest to the sectarians. In this respect, and in others, the process of systematization that

rabbinic law underwent is phenomenologically later than that of Qumran.

On the whole, however, the Talmuds provide linguistic and other material for the comparative study of Qumran literature, but not necessarily direct parallels. When they do provide parallels, they raise exegetical possibilities for the explication of earlier sources and help elucidate the tannaitic system of *halakhah*, though they must be used with care.

Even when traditions transmitted by the Talmuds are ahistorical, they may shed light on earlier attitudes. Thus, while the complex of stories regarding Alexander Jannaeus and Shim'on ben Shetah may be historically dubious, some certainly contain "historical kernels," and even when they do not, they date from a time in which Alexander Jannaeus's opinion on sectarian disputes was a matter of interest to whoever originated and whoever transmitted such stories. They bear witness to a time in which it was in the Pharisaic interest to attribute such a view to him. The origins of such stories can hardly post-date the destruction of the Temple in 70 CE. Again, at times, the presumption of historicity may be particularly strong. Thus, the story in the Babylonian Talmud (B.T., *Sot.* 22b) regarding Alexander Jannaeus's rather detached attitude to the Pharisees and Sadducees is striking. His recommendation of the Pharisees and "those who are not Pharisees" as trustworthy, and his warning against the "hypocrites" bears witness to a political acuteness with which his experience may well have provided him. On the other hand, given the aptness of his warning in light of later developments, this story may actually have arisen in Herodian times. In the latter case, many late rabbinic traditions may mirror public opinion of some two to three centuries earlier.

TANHUMIN AND APOCRYPHAL LAMENTATIONS. Tanhumim (4Q176) is a scroll represented by about fifty-seven fragments written in late Hasmonean/early Herodian script. At least three columns can be more or less completely restored, and they can be described as liturgical texts of various genres. Most of the larger extant fragments belong to a lament-like poetic genre; the sanctuary and the fate of the people and of the land of Israel are its main subjects. This first extant piece begins with formulations similar to Psalms 70.1–3, and continues with a series of citations from *Isaiah*, defined as “consolations” (*tanhumim*): *Isaiah* 40.1–5; 41.8–9; 43.1–2; (3x) 4–6; 49.7, 13–17; 51.22–23; 52.1–2; 54.4–10 (for these passages, see particularly Stanley, 1992). In addition, it should be borne in mind that passages from Second and Third *Isaiah* were also called *consolation pericopes* later in synagogal lectionary traditions. Fragments 9–11 preserve the introduction to another unit, which also includes the term *consolations*. Fragments 42 + 12–13, 14, and 15 seem to belong to the same genre, citing *Isaiah* passages and *Zechariah* 13.9.

The text restored from fragments 33 + 51, 22, 17, 16, and 23 is different in character. The sanctuary is mentioned here too, but style and terminology indicate a different genre that is a mixture of sapiential and hymnic elements. It stresses God’s determining role as creator and his “mysteries,” but also mentions covenant, obedience, disobedience, and retribution. There is reason to suppose that the complete scroll contained a variety of genres, perhaps with the sanctuary as their common thematic basis.

Apocryphal Lamentations A (4Q179) seems to have been a collection of laments (beginning with “Woe to us . . .”) comparable to those in the biblical *Book of Lamentations* in content, form, and probably function (and date?). The text of the few extant fragments displays no “Qumranic” traits. The text on fragment 1, column i, is a lament on the situation in the city of Jerusalem, its unhappy inhabitants, and destroyed sanctuary. A new piece, which describes Zion/Israel in its devastated land as a woman who lost her children, begins at column ii. Similar standard motifs also appear on fragment 2.

Apocryphal Lamentations B (4Q501) is a nonbiblical lament on a fragment of nine lines from which the beginning has been lost. It is written in a late Hasmonean/early Herodian script and may have formed part of a collection of similar pieces. The beginning (“Do not give our inheritance to foreigners, or our produce to strangers”) appar-

ently recalls *Lamentations* 5.2, but the text, rather than a reworking of biblical passages is an independent poetic piece using some thematically conditioned standard phrases. The basic theme is, as in the biblical *Book of Lamentations*, the destruction of the temple and the situation of exile, combined with polemics against the enemies of Israel. It seems, however, that in lines 4, 6, and 7–9 the polemic concerns inner Israelite, Jewish enemies. This may be the result of an actualization of an already conventional genre, applying the exilic situation to the conditions of the author’s own lifetime. Such procedure presupposed, of course, the claim to represent the true Israel. As we know practically nothing about the internal quarrels among the Zadokites before Antiochus IV, it is difficult to identify an appropriate situation. It is, in any case, not necessarily one after Antiochus IV, for older pieces were certainly fit to be used and actualized for similar purposes during the later stages of development in an oppositional group.

JOHANN MAIER

TARGUMIM. Targumim (the root *trgm* means “to translate”) is the term used in Jewish tradition mostly in a technical sense to designate the Aramaic translations of biblical texts. In a broader usage, however, translations into other languages can also be designated by this term. Targumim are not simply mechanical reproductions of the Hebrew scriptures into another language but aim to explain its meaning. Some of them show a considerable amount of interpretation or contain large interpolations of a Midrashic character. They are, therefore, of interest as sources for the early history of biblical exegesis. The following survey focuses on three major issues: the background, textual witnesses, and points of relationship with the Dead Sea Scrolls.

Background. It is assumed that a translation into Aramaic became necessary when Hebrew as a spoken language was replaced by Aramaic in the Second Temple pe-

riod. The later custom of translation during synagogue services (attested by the Mishnah c.200 CE) probably has roots which go back to this time. Whether instruction of the people connected with Ezra's reading of the Torah in *Nehemiah* 8.8 reflects this institution, as the rabbis and subsequently also some scholars maintained, is an open question. The oldest witnesses to the targumic genre are fragments of targumim from Qumran. They show that written targumim go back at least to the second century BCE. However, for those targumim which were transmitted within the rabbinic tradition, serious problems in fixing their dates remain, due to the processes of accretion and modernization during the course of their use in the synagogue. The degree of alteration of the targumim depended on their different settings. Whether a *targum* was used for private study/lection, for school, or in the synagogue must be kept in mind when evaluating the textual traditions. Because changes occurred in the course of their transmission, the dialects of the various targumim do not necessarily indicate the dates of their origins. Only from the period of Middle Aramaic onward are targumim preserved; these may be compared with the Aramaic of the Dead Sea Scrolls.

Witnesses. The few textual witnesses to targumim from Qumran do not show a direct literary relationship to the later versions of the targumim. Therefore the survey of the areas is divided into two separate sections. Comparisons with topics from the Dead Sea Scrolls, however, will expose some points of indirect relationship.

Targumim among the Dead Sea Scrolls. Among the Dead Sea Scrolls are three manuscripts which were officially designated as targumim: Targum of Leviticus (4Q156) and Targum of Job (4Q157 and 11Q10). Additionally, Beyer lists fragments of 4Q550 as "Das Targum Jesaja," whereas their original editor, Milik, had presented them as part of Proto-Esther¹. In the case of the two copies of the Targum of Job, the designation is undisputed. These texts are evidently continuous translations of the biblical book of *Job*. With respect to 4Q156 (c.150 BCE) opinions are divided. The two fragments, which contain *Leviticus* 16.12–15, 16.18–21, may belong to an originally complete translation of *Leviticus* or to a work containing a ritual text for the day of atonement (cf. Discoveries in the Judaean Desert, 6, p. 86 with references to an Aramaic ritual text in the work called the New Jerusalem, 2Q24). A definitive answer is not possible, and the conclusion that 4Q156 attests to the existence of written targumim to the Torah around 150 BCE may be doubted (see Veltri, p. 174). Klaus Beyer's designation of 4Q550 as "Targum Jesaja" is dubious, though a relationship to the Hebrew text of *Isaiah* 14.31b–32 in two lines is evident.

Later targumim. These exist for nearly all biblical books (except those which contain longer sections in Ara-

maic: *Daniel* and *Ezra/Nehemiah*). Detailed information about their different features is given in the introductions to the volumes in the series *The Aramaic Bible*—a series that offers English translations of the targumim with explanatory notes.

For the Torah there are three main textual traditions (for editions, see Gleßner). Targum Onqelos normally follows the word sequence of the Hebrew. The rabbis of the Babylonian Talmud regarded this *targum* as authoritative and referred to it as "our targum." The esteem it enjoyed, as well as the obligation to read it, were similar to those of Hebrew scriptures. The Palestinian Targum tradition, with its translations and expansions, is linked to the more variable liturgical tradition. Many of the varying versions are contained in manuscripts in which only short sections of text are copied for public recitation. The oldest witness is an acrostic poem preserved on papyrus (fourth or fifth century CE); fragments from the seventh to the thirteenth century CE, discovered in the Cairo Geniza, represent all sorts of liturgical genres. Only a single complete manuscript, dating to 1504 CE, is extant (Targum Neofiti), but extracts from older liturgical traditions are included in the printed editions of the Bible in two special forms: as fragment-targumim known as "Yerushalmi II") and as toseftot (known as "Yerushalmi III"). Targum Pseudo-Jonathan ("Yerushalmi I," also called Jonathan ben Uzziel" in Rabbinic Bibles) combines elements preserved in Onqelos and the Palestinian Targum with additional narrative and exegetical material that has parallels in the Apocrypha and the *midrashim*. The relationship between these three groups of targumim is a matter of controversy. It is possible that they are descendants from a common but lost targumic version ("proto-Onqelos" or "proto-Palestinian"), current in the Second Temple period, which was reworked in different areas and communities.

For the Former and Latter Prophets, Targum Jonathan is extant. Segments go back to the first century BCE (see Smolar, Aberbach, and Churgin). Though this version is attributed to one individual, it is not homogeneous and shows distinctive characteristics in some books (cf. the difference in messianic exegesis compared with Targum Ezekiel, Levey). Additions (indicated by "Yerushalmi" and probably for liturgical purposes) are transmitted in some manuscripts.

For the third part of the Hebrew scriptures, the Writings, no targumim are extant for *Ezra/Nehemiah* and *Daniel*, while some of the translations in this group were probably composed only in the later Galilean Aramaic (*Psalms* and *Job*, for example).

The Relationship between the Targumim and the Dead Sea Scrolls. The relationship between the Targumim and the Dead Sea Scrolls is of an indirect nature.

It does not support the conclusion that the Dead Sea Scrolls depend on the targumim discussed above.

Institutions for reading and studying biblical texts provided a forum for the origin and development of public translations, but no exact information about such matters is available for the Second Temple period. The institutional use of scripture and the addition of reading signs to its consonantal text may be elucidated by the Dead Sea Scrolls. Perhaps in the future some still unresolved questions will be answered: (1) Is there a common background for the Palestinian three-year lectionary cycle and the three-year periods found in the Cave 4 Calendrical Documents? (2) Does the interest in *Isaiah*, evident from the twenty-one copies of this book found at Qumran, correspond to the selective use of prophetic lections from *Isaiah*, which is predominant in the three-year cycle? (3) Is the old graphic segmentation of biblical texts (in 1QIsaiah^a often corresponding to the masoretic *setumah* and *petuhah* paragraph markers) linked to a practice of reading? (4) The indication of verse-units by ":" (like *sof pashuq* in the Masoretic text) in the 4QTargum of Leviticus is not paralleled among the Dead Sea Scrolls. Does this system presuppose a Torah-like translation verse by verse? (5) In the later targumim, a technique is used to insert additional information in the middle of verses following the Masoretic *amah* sign. Is the masoretic verse division perhaps foreshadowed by the Dead Sea Scrolls (see Talmon [1966] *Textus*)?

Regarding the public usage of targumim, no information is preserved concerning the temple service; rabbinic writings deal only with targumim for synagogues, schools, and private study. While in Egypt the *proseuche* is attested from the third century BCE on, the prehistory of synagogues in Palestine is much debated due to a lack of archaeological evidence before the time of Herod. However, the Damascus Document (c.100 BCE) mentions ten persons as the smallest institutional unit of [local] communities (CD xiii.2), houses of prostration (CD xi.22), and a functionary who should know the languages of all their families (CD xiv.10). Though the ability to translate is implied, the conclusion that there was a need for targumim within the Damascus Document group remains hypothetical. Whether the targumim listed above originated with the Qumran group at all may be doubted. For one thing, all texts with a special group terminology are in Hebrew rather than Aramaic. Nevertheless, some Dead Sea Scrolls show an indirect relationship to targumic literature on different levels of comparison.

Phases of the Aramaic language. Before the discovery of the Dead Sea Scrolls, there was an almost complete lack of Aramaic documents between the period of Biblical Aramaic and rabbinic texts. But the Aramaic of the Genesis Apocryphon and the Targum of Job enabled Fitz-

myer to establish a new classification of the Aramaic dialects and to explain the transitional phase as Middle Aramaic (200 BCE–200 CE). This phase is also attested by the language of Targums Onqelos and Jonathan. Therefore it is likely that these targumim go back to this period.

Peculiarities in the Biblical Texts from Qumran (often written with *plene* spelling) show that the consonantal text was not always understood and vocalized as implied by the masoretic punctuation; for example, 1QIsaiah^a sometimes corresponds to the Aramaic translation in Targum Isaiah (see Talmon, 1989, pp. 131–141). 4QJoshua^a (100–50) BCE shows that even textual recensions differing from those of the Masoretic Text are preserved among the Dead Sea Scrolls. The narration about circumcision after crossing the Jordan and entering the Promised Land (Jos. 5) is combined in this text with the covenant renewal (Jos. 8.32–35). This sequence best explains the interpretation of "circumcision of the heart," which some liturgical targumic manuscripts offer for *Joshua* 5 (see Fahr and Gleßner, 1991) and which is also paralleled by the covenant liturgy of the Rule of the Community (1QS).

Ideologies and motifs within some targumim resemble aspects of the Dead Sea Scrolls. Pseudo-Jonathan in particular has been used to clarify texts from the scrolls: to restore some gaps in the Genesis Apocryphon (1QapGen, see Ruge, 1964) and to elucidate Aza(z)el materials in *I Enoch* (see Hanson, 1977) and exegetical peculiarities in *Jubilees* (see Marmorstein, 1905–1906) and the Temple Scroll (see Brooke, 1992). Although Pseudo-Jonathan shares an ideological background with some of the Dead Sea Scrolls (and pseudepigrapha), an opposite view also may be implied: in Apocryphal Psalm and Prayer (4Q448), *Deuteronomy* 33.11 is interpreted in a manner favorable to the Hasmonean king Johanan (John Hyrcanus I). 4QTestimonia, however, seems to cite this passage with an anti-Hasmonean emphasis that insists on the separation of eschatological functions of king, prophet, and priest. Parallels in the interpretation found in "Targum Jonathan to the Prophets" and Peshar Habakkuk are evident. A similar situation is evident in the messianic interpretation of Peshar Isaiah. But it remains difficult to determine an exact literary relationship.

Halakhah. The fact that nonmishnaic *halakhah* is included in some targumim was emphasized by Geiger in the nineteenth century. In the meantime, the diversity of such *halakhah* in the Second Temple period has become much more evident, though the relation of the Dead Sea Scrolls to the groups of Essenes, Sadducees, and Pharisees is still a matter of controversy. How contradictions to rabbinic *halakhah* and the attribution of certain *halakhah* to one of the groups (Sadducees?) can be evaluated is unclear (see Levine, 1988, pp. 163ff.) The ritual of the red heifer, which served to produce water for cleansing,

and the amount of time that the persons involved were regarded as unclean (see Baumgarten, 1995) can be used to demonstrate the complexity of the agreements and disagreements between Targum Pseudo-Jonathan and rabbinic texts and the Dead Sea Scrolls (see Hayward, 1992).

Haggadic elements. In some cases, haggadic elements contained in targumim have parallels in the Dead Sea Scrolls. Aramaic texts (the Genesis Apocryphon, for example) as well as Hebrew texts (such as *Jubilees*) include such details in their rewritten biblical narratives. Many parallels between the Dead Sea Scrolls and the targumim may be explained by the suggestion of a common oral tradition. Authors of several of the Qumran texts seem to be familiar with such a tradition of transmission. Perhaps some scribes and functionaries of the communities were even engaged in the active transmission of such targumim. The existing witnesses demonstrate that at least the scribes who copied them had access to written targumim.

TEACHER OF RIGHTEOUSNESS. The sobriquet *Teacher of Righteousness* is given in the Dead Sea Scrolls to the individual who is commonly believed to have played the decisive role in the formation and early history of the group, assumed here to be Essene, that lies behind the scrolls. His role was no doubt of some importance, but the information provided about him in the scrolls is in fact quite limited. References to the Teacher of Righteousness are confined to the Damascus Document, Peshar Habakkuk (10pHab), Peshar Psalms^a (4Q171), Peshar Psalms^b (4Q173), and Peshar Micah (10i4). These references are frequently cast in figurative language and are opaque in their meaning. In consequence, the Teacher of Righteousness remains a somewhat shadowy figure.

"The Teacher of Righteousness" has become the accepted translation of the Hebrew expression *moreh ha-tsedeq* (e.g., 10pHab v.10), which forms the sobriquet; the variants *moreh tsedeq* (CD i.11; xx.32) and *moreh ha-tsedaqah* (10pHab ii.2) also occur. The Hebrew expression can also be translated as "the right teacher," that is, the "true" or "legitimate" teacher, but in either case, the use of this name is a reflection of the authority that this individual was thought to possess. The sobriquet itself probably derives from *Joel* 2.23 ("for he has given you the early rain for your vindication [*ha-moreh ha-tsedaqah*]), which—in line with the view that the words of the prophets were mysteries, the true meaning of which referred to the end time—was applied by the Qumran group to their own age and interpreted to mean "for he has given you the teacher for righteousness." Other names given to this individual are "the unique teacher" (CD xx.1, 14; where in both cases the Hebrew perhaps should be emended to read the "teacher of the community"), "the interpreter of the law" (CD vi.7), and "the interpreter of knowledge" (4Q171 i.27).

Appearance of the Teacher. One of the most important passages concerning the Teacher of Righteousness occurs in column i of Cairo manuscript A of the Damascus Document. According to this passage (CD i.3-ii.1), 390 years after he had given Israel into the hand of Nebuchadnezzar, king of Babylon—that is, after the beginning

of the Babylonian exile in 587 BCE—God caused “a plant root” to spring from Israel and Aaron. The passage continues:

And they (the “plant root”) considered their iniquity and knew that they were guilty men, but they were like blind men and like men who grope for the way for twenty years. And God considered their deeds, for they sought him with a whole heart; and he raised up for them a Teacher of Righteousness to lead them in the way of his heart (CD i.8–11)

The passage goes on to describe the opposition that the appearance of the Teacher aroused from a group led by a figure called “the scoffer.”

The emergence of the Teacher of Righteousness is presented in this passage as the second stage following the emergence of a reform group or movement that initially was overwhelmed by feelings of guilt and uncertainty concerning “the way” of God’s heart, that is, uncertainty as to how the law should properly be observed. For the author of the Damascus Document this period of uncertainty was brought to an end by the intervention of the Teacher of Righteousness, but it is apparent from the continuation of the passage (CD i.13–ii.1) that his intervention was a source of controversy, which focused on the question of the proper observance of the law, and that not all those who belonged to the plant root accepted the instruction of the Teacher and became his followers. So much seems clear, but beyond this the passage raises a number of problems of interpretation.

Firstly, it is not clear what reliance should be placed on the designations *390 years* and *20 years*. The 390 years is in the first instance a symbolic figure, which has been taken from *Ezekiel* 4.5 where it represents the years of punishment of the house of Israel. But the use of the figure in the Damascus Document cannot have been totally divorced from reality. Three hundred and ninety years from the start of the exile would bring us to 197 BCE, but there are reasons to think that the author may have underestimated the length of time from the start of the exile by some decades. It has in any case been plausibly argued that the emergence of the plant root is to be linked to the reaction of conservative Jews to the Hellenization of Judaism and particularly to the series of events that began in 175 BCE with the removal from office of the legitimate high priest, Onias III, and the conversion of Jerusalem into a Greek city, events made possible only by the ever-increasing involvement of Antiochus IV Epiphanes in Jewish affairs. The twenty years during which the plant root was overcome by feelings of guilt and uncertainty, where “twenty” looks like a round figure, would adjust the chronology of the appearance of the Teacher of Righteousness to around the middle of the second century BCE.

Secondly, the identity of the plant root remains uncertain. The group has often been identified with the “company of Hasideans” (*Hasidim*), who are mentioned in *1 Maccabees* 2.42 and 7:13 and *2 Maccabees* 14.6, but we know too little about the Hasideans to make this identification very helpful. According to the so-called Grottingen Hypothesis, the origins of the Essene movement are to be traced to the apocalyptic tradition within Judaism in the late third century BCE, and the plant root represents the Essene movement itself.

Finally, it is a matter of dispute whether the opposition provoked by the appearance of the Teacher of Righteousness caused a split within a broad movement that led ultimately to the emergence of the groups we now know as the Essenes and the Pharisees or whether it caused a split within the Essene movement itself. Thus it is a matter of dispute whether the Teacher of Righteousness should be regarded as the founder of the Essenes or of a splinter group within the Essenes. What is clear is that the clashes between the Teacher of Righteousness and those who opposed him centered on the law.

The broad lines of the events from the time of the exile to the appearance of the Teacher of Righteousness are confirmed by a parallel passage in CD v.20–vi.11. The appearance of the Teacher, here called the Interpreter of the Law, is mentioned separately after the description of the raising up by God of a group concerned for the proper interpretation and observance of the law. It is true that it is not made clear that the appearance of the Teacher of Righteousness occurred at a second stage, but there is also nothing in this passage to exclude this possibility. The centrality of the issue of how the law should be observed is emphasized by the name given to the Teacher of Righteousness, but here there are only hints of the opposition aroused by his teaching.

In one place the Damascus Document refers in a promise of blessing to those “who obey the Teacher of Righteousness” (CD xx.32); but of greater significance are the references to the “gathering in,” that is, the death, of the Teacher of Righteousness (CD xx.1, 14). The death is presented as having occurred relatively recently, and since the composition of the Damascus Document can be dated to approximately 100 BCE, this enables us to place the career of the Teacher of Righteousness in the second half of the second century BCE.

Opposition to the Teacher. The information given in the Damascus Document can, to some extent, be supplemented by the references to the Teacher of Righteousness in the *pesharim*, although a number of these are too fragmentary to be of much help. *Pesher Psalms*³ (4Q171 iii.15–17) refers to the role of the Teacher of Righteousness as the founder of a community, and *Pesher Habakkuk* (10pHab viii.1–3) states that his followers will be

saved from judgment "because of their suffering and their faithfulness to the Teacher of Righteousness." Two other important passages in Peshier Habakkuk (1QpHab vii 1–5; ii.7–10) describe the Teacher as the one to whom God made known the true meaning of the words of the prophets. Disputes between the Teacher of Righteousness and a group led by "the Liar" are mentioned in Peshier Habakkuk (1QpHab ii.1–3; v.9–12); Peshier Psalms^d (4Q171 i.26–ii.1); "the Liar" is no doubt to be identified with "the scoffer" of the Damascus Document (CD i.14), and the disputes are no doubt to be related to the controversy caused by the arrival of the Teacher of Righteousness among the group represented by the plant root. Finally, three passages mention the Teacher of Righteousness in relation to a figure called "the Wicked Priest," who is presented as the opponent and persecutor of the Teacher and his followers. Peshier Habakkuk (1QpHab xi.4–8) states that the Wicked Priest pursued the Teacher to his place of exile in order to "confuse" him and his followers on Yom Kippur (that is, the Day of Atonement according to the calendar reflected in the scrolls); often it has been assumed that the place of exile was Qumran, but this can be no more than an assumption. Peshier Psalms^d (4Q171 iv.8–10) refers to an unsuccessful attempt by the Wicked Priest on the life of the Teacher and perhaps to a law that the Teacher had sent to him, and Peshier Habakkuk (1QpHab ix.9–12) states that God gave the Wicked Priest into the hand of his enemies "because of the iniquity committed against the Teacher of Righteousness and the men of his council."

There are good grounds for thinking that the Wicked Priest is to be identified with Jonathan, who held the office of high priest for the period 152–143 BCE, and this fits in with the view that the career of the Teacher of Righteousness should be dated to the second half of the second century BCE. According to the Groningen Hypothesis, Peshier Habakkuk refers not just to one wicked priest, but to a series of wicked priests (from the Maccabean leader Judah to Alexander Jannaeus, ruler from 103 to 76 BCE). If this theory were correct, it would enable us to relate the passages in Peshier Habakkuk referring to the Teacher of Righteousness to particular high priests, and thus to place the life of the Teacher on a more precise chronological basis; but the suggestion of a series of wicked priests may not be convincing.

The teacher described in Peshier Habakkuk and Peshier Psalms^d is called "the priest." It has been argued that in postexilic literature *the priest*, used as a title, means "the high priest," and in light of this and of other considerations, it has been further argued that the Teacher held the office of high priest and functioned in that office in Jerusalem between the death of Alcimus in 159 BCE (1 Mc. 9.56) and the appointment of Jonathan in 152 BCE (1

Mc. 10.18–21). The suggestion that the Teacher of Righteousness was deposed from the office of high priest in 152 BCE by Jonathan is attractive and would explain the hostility between the Teacher and the Wicked Priest.

The Teacher as Author of the Scrolls. Apart from some passages that have survived in too fragmentary a form for much to be made of them, the references mentioned above constitute the only references to the Teacher of Righteousness; the picture of the career of the Teacher that they enable us to reconstruct is fairly limited. The situation would be different if we could be certain that the Teacher of Righteousness was the author of any of the Qumran writings that have over the years been attributed to him: the Rule of the Community (1QS), the Rule of the Congregation (1Q28a), the War Scroll (1QM, 4Q471, 4Q491–496), the Hodayot (1QH^d, 4Q427–432), the Temple Scroll (11Q19), and Miqtsat Ma'asei ha-Torah (MMT^d 4Q394–399). However, it is highly improbable that the Teacher of Righteousness was the author of the Temple Scroll, which was almost certainly pre-Qumranic in origin, and while for most of the other writings just mentioned, nothing prevents the view that the Teacher of Righteousness was their author, nothing in these writings enables us to associate any one of them specifically with him. The case of MMT is of particular interest: on the one hand, this document provides valuable information on the specific issues concerning the interpretation of the law that led to the formation of the group behind the Qumran manuscripts; on the other hand, it makes no reference whatsoever to the Teacher of Righteousness. However, there is perhaps a rather stronger case for the view that the author of the Hodayot, or at least of the so-called Teacher Hymns, was the Teacher of Righteousness.

The Teacher Hymns are a group of hymns within the Hodayot that are marked by a strongly personal character. The author presents himself as the persecuted and exiled leader of a community that he regards as utterly dependent on his leadership. He recognizes that his leadership is a source of controversy, but at the same time he makes very strong claims to authority for his teaching, which he had received under divine inspiration. The nature of these claims is such as to suggest that the author could well have been the Teacher of Righteousness who is mentioned in the Damascus Document and the *pesharim*. However, even if this is so, it is quite a different matter to try to use the details contained in these poetic compositions, which are cast in biblical language and make constant use of biblical imagery, to reconstruct a biography of the Teacher of Righteousness.

Identification of the Teacher. Over the years there have been numerous attempts to identify the Teacher of Righteousness with a known historical figure, ranging from Onias III, the high priest deposed from office in 175

BCE, to John the Baptist, Jesus, or James, the brother of Jesus. The Christian identifications are ruled out by the fact, among others, that the oldest manuscript of the Damascus Document (4Q266) and the manuscript of Peshar Habakkuk (1QPHab), which together form the two most important sources of information about the Teacher of Righteousness, date from before the Christian era, while none of the Jewish identifications has proved convincing. The view that the Teacher of Righteousness held the office of high priest between the death of Alcimus and the appointment of Jonathan has a good deal to be said for it; but it is unlikely that we shall ever be able to identify the Teacher with a known figure.

CD v.20–vi.11 refers to the decrees issued by the Interpreter of the Law as remaining valid “until there appears the one who shall teach righteousness at the end of days.” The Hebrew expression is similar to, but not identical with, the one regularly translated as “the Teacher of Righteousness.” It has been argued that the figure whose appearance is still expected in CD v.20–vi.11 was identified with the historical Teacher of Righteousness, who in later parts of the Damascus Document and in the *pesharim* is always referred to as a figure of the past. This is, however, quite unlikely because the individual in CD v.20–vi.11 who corresponds to the Teacher of Righteousness in an introductory section of the Damascus Document (CD i) is the Interpreter of the Law. It is equally unlikely that (CD v.20–vi.11) provides evidence that the Teacher of Righteousness was expected to reappear after his death, because there is no hint of such an idea elsewhere in the scrolls. Rather, the passage refers to the expectation of a messianic figure, whose role as a teacher would be the counterpart to that of the historical Teacher of Righteousness. As such, this messianic figure is to be regarded as a priestly figure and should almost certainly be identified with the one elsewhere described as the Messiah of Aaron.

TEFILLIN. See Phylacteries and Mezuzot.

TEMPLE. Only in rare cases do Qumran texts mention the “house of the Lord” or “house of God” (Work with Place Names, 4Q522 8.ii.4; Temple Scroll 11Q19 iii.4, xxix.3, xxx 4, xxxii.11). Far more common is the designation *miqdash* (“sanctuary”).

Heavenly Sanctuaries. The concept of the heavenly sanctuary, mentioned in Enoch^a (4Q201 iv.7), lies behind the Songs of the Sabbath Sacrifice (particularly 4Q400–

4Q407) and seems to be of a rather complicated character. The heavenly realms consist of seven heavens, each, apparently, with its own sanctuary and angelic personnel.

Sanctuaries on Earth. The beginning of cultic history is related to Enoch, who in *Jubilees* 4.25 is said to have burnt incense in the sanctuary on the mount of incense in the garden of Eden; *Jubilees* 4.26 reads:

For there are four places on earth that belong to the Lord: (a) the Garden of Eden; (b) the mountain of the east; (c) this mountain on which you are today, Mount Sinai; and (d) Mount Zion (which) will be sanctified in the new creation for the sanctification of the earth. For this reason the earth will be sanctified from all its sins and from its uncleanness unto the history of eternity.

Sanctuaries before Jerusalem. The first sanctuary of Israel according to tradition is the Tabernacle built at Mount Sinai (*Ex.* 25–27 and 30–31), a retrojection of the Temple and Temple symbolism (Josephus, *Jewish Antiquities* 3.115–133). In Qumran texts the Tabernacle is mentioned only a few times (3Q14 unclassified fragments, 3; Enoch^c, 4Q204 4.10 [*I En.* 89.36–37], Purification Rules B^b 1.5), without special significance attached, except in *Miqsat Ma'asei ha-Torah* (MMT)^a (4Q394 5–7), where the Temple mount as a holy precinct is paralleled to that of the Tabernacle, and Jerusalem (the “city of the sanctuary”) to the “camp.”

All groups in Judaism saw Eretz Yisra'el as a holy realm. In *Jubilees* 13.1–4 Abraham is said to have erected the first altar after his arrival in the land near Shechem, where he received the first promise that he would inherit the land. Other altars are connected with certain festivals. It is, however, the altar of Bethel that appears in *Jubilees* 13.5–7 and 13.15 in connection with an unquestionably initial cultic event. Again, to Bethel, Abraham returned after his sojourn in Egypt (Genesis Apocryphon, 1Q20 xx1) in order to offer a sacrifice. Jacob had his dream (*Gn.* 28, *Jub.* 27.19–27) at Bethel, and there he received his first promise. He rebuilt the altar of Abraham after his return from Haran, and he initiated the regular cult in the land (*Jub.* 31–32) by installing as priest Levi, who saw his installation in heaven in a dream the night before (*Jub.* 32.1–15). But Bethel is not regarded as the proper permanent cult place. This is Mount Zion, as explicitly stated in *Jubilees* 32.22 (see also *Jub.* 18, *Gn.* 22): God forbade the erection of a permanent sanctuary, with enclosing court structures, at Bethel. Bethel retained its significance, however, as a symbol for the covenantal cultic event concerning the introduction of cultic organizational institutions (Rule, 5Q13 2.6, 11Q19 xxix.10; see J. Schwartz, 1985).

About the sanctuary at Shiloh almost nothing is reported except in the work of Eupolemus (cf. Vision of

Samuel, 4Q160 1), who regarded it as a direct forerunner of that at Jerusalem, linking the two by the presence of Eli at the dedication of Solomon's Temple (see Wacholder, 1974, pp. 151–154).

The Sanctuary of Jerusalem. According to *Genesis* 14 and related traditions, the sanctuary of Jerusalem is of ancient origin. Melchizedek (*Gn.* 14.18–20), in later Jewish tradition identical with Shem, is regarded as the sanctuary's priest-king (cf. *Gn.* 14, *Ps.* 110, Josephus, *The Jewish War* vi.438–439, *Jewish Antiquities* i.180–181), representing the temporally unlimited cultic order of Jerusalem and the claims (particularly on tithes) of its priesthood (*Jub.* 13.25–27), thus indicating the precedence of the institutions of Jerusalem over even the election and founding of the Levitical priesthood and cult order at Bethel (Levi) and Sinai (Aaron). Consequently, Melchizedek could be regarded as a figure beyond history and without descendants (cf. *Heb.* 7), and in the Melchizedek Scroll (11Q13) he is, indeed, conceived as a timeless, even heavenly figure with eschatological connotations. In addition, the mountain (“in the land of Mo'rah”) (*Gn.* 22.2) was identified with the Temple mount in Jerusalem, in *2 Chronicles* 2.1 and *Jubilees* 18.13.

Throughout the course of Jewish history the Sanctuary in Jerusalem, despite the changes to and the destruction of its buildings, has constituted the focus of religious orientation. Almost all religious practice was directed toward Zion (cf. 11Q5 xx.1–15) and its Temple (cf. 11Q5 xxiv.4), first of all as the elected place for the abode of God's presence, glory, or name, and as the central cultic institution for the whole of Israel. Like every sanctuary, it also had the reputation of being the “navel of the earth” and the center of the cosmos. In consequence, a complicated cosmological symbolism was connected with the institution as a whole and with each of its parts, installations, vessels, and ritual performances. As the abode of God's presence, functionally identical with the heavenly temple, its priests regarded themselves in service like angels (cf. *Mal.* 2.7, *Eccl.* 5.5, *Jub.* 31.14; *Jewish Antiquities* ix.226; Philo, *The Special Laws* i.114–116), especially ministering angels like those described in Songs of the Sabbath Sacrifice (cf. Songs of the Sage^b 4Q511 35). The presence of angels and spirits (Berakhot^d 4Q286 2.2) in the Sanctuary was for them a matter of course—all of them devoted to serve in the presence of the Lord. The destruction of the Temple building could not essentially affect the character of the holy place itself; cultic thinking supposed the withdrawal of God's presence the more decisive change.

Independent of the concept of God's abode is the sacrificial altar, a center of cultic religiosity [See Sacrifices.] The whole of the Sanctuary had, therefore, two focuses: its cosmological and mysterious focus was the Holy of

Holies as the place of God's presence with the "inner" cultic service, primarily related to concepts of exclusive priestly theology; its public focus was the altar as the center of the sacrificial service, primarily related to the cult of Israel. The liturgical texts reflect this fundamental difference clearly in their terminology and style and in their use of the names and attributes of God. The Temple was probably also the center of the official religious literary tradition, perhaps with archives, as indicated by Testament of Moses 1.17–18, where the techniques of preservation (scrolls in linen and in jars) recall the situation in Cave 1 at Qumran.

Officially privileged during all its history, and entitled to cultic dues on a large scale, with continuous incomes due to sacrifices and dedications, the Sanctuary also constituted practically an economic center, serving as a kind of depository and banking institution.

First Temple. Temple Scroll^d (11Q19) and other texts (cf. Reworked Pentateuch^c 25) presuppose explicitly that God commanded the construction of a Temple in Erets Yisra'el (cf. *Wis.* 9.8). Josephus explained the comparatively late erection of the First Temple (*Against Apion* i.127; cf. *Jewish Antiquities* vi.61–62) with a ritual argument: The complete domination over Erets Yisra'el was the precondition for the Temple's construction (cf. Ritual of Purification, 4Q512 8.ii). The author of *Chronicles* states that Solomon built the Temple after extensive preparations by David (*1 Chr.* 28.10–11; cf. 4Q522 8.ii.4; Apocryphon of Jacob 4Q537 5) according to plans, on the basis of a revealed model, a tradition shared by the Qumran community (cf. *The Life of Adam and Eve* 29.4). Solomon found the tables of Seth, which contained detailed information about the Torah and the Temple building, and Michael instructed David about its contents.

According to *1 Kings* 6.37–38, it took Solomon more than six years to complete the Temple. He dedicated it at the beginning of the first or seventh month. (Masoretic Text variants and *1 Chronicles* indicate an old calendaric controversy about the dating). In the scheme of Zadokite chronography presupposed in *Jubilees* and *1 Enoch* (Apocalypse of Weeks), it would have been dedicated at the beginning of Nisan in the year 2940 after Creation, a sabbatical year concluding six dekajubilees (of 490 years each) and 10 hexajubilees (of 294 years each). The following seventh dekajubilees concludes after 490 years in 3343 (586 BCE) with the destruction of Solomon's Temple.

In the Florilegium (4Q174 iii.6–7) the phrase *miqdash 'adam* (man's Sanctuary) may refer to this Temple which God ordered to be built, while lines 2 through 3 apparently speak about an eschatological temple; the interpretation of the passage is, however, controversial (see D. Schwartz, 1979; Steudel, 1994). Its destruction (4Q174

iii.5–6) was conceived as a consequence of aberrant religious practice (cf. *Jubilees*^a 4Q216 ii.9–10; *Jub.* 1.7–15) and was liturgically lamented. Texts of this genre are *Lamentations* and Apocryphal Lamentations A (4Q179). Narrative variations of the Jeremiah tradition (see C. Wolff, 1976) related to the destruction were also of particular interest to the Qumran community (Apocryphon of Jeremiah C, 4Q385b 16.5).

The First Temple was generally held in great esteem, and this gave rise to idealized descriptions of its buildings and institutions, which are particularly impressive in Eupolemus (see Wacholder, 1974, pp. 173–201) and Josephus (*Antiquities* viii.63–98; xv.398–400). The fundamental traits of such idealizations are an enlargement of the areas and their division by closed porticos—evidently one of the main concerns during all the architectural history of the Temple, and also reflected in utopian-eschatological plans as in *Ezekiel* 40–48 (presented as a prophetic vision), or in an ideal plan for the twelve tribes of Israel in Temple Scroll^d (11Q19; presented as part of the Torah). In older texts two precincts were commonly supposed: an inner court for priests, and a second court for ritually pure Israelites, men and/or women. There was, however, already at an early time, a tendency to separate a court of men from a third one, accessible also for ritually pure Israelite women, and, finally, a fourth one as in Herod's time, an outer court accessible to gentiles (Josephus, *Against Apion* ii.102–102). The number of these precincts and the means of their separation was, apparently, already subject to dispute in the late period of the kings. Of great concern was the protection of the holy areas, for instance, from birds (11Q19 xlvi.1–4; Wacholder, 1974, pp. 196–201).

Second Temple. Controversial interpretations concerning the Second Temple exist. The significance of the Second Temple, which was dedicated on the first of Nisan 515 BCE, remained for many Jews a secondary one in relation to Solomon's Temple, which was to be replaced in the following period of four hundred ninety years by a new and larger sanctuary (*1 En.* 90.28–29). *1 Enoch* 89.78 states explicitly that on the "table" of the Second Temple only contaminated bread was offered. The sole impetus of such criticism was not only the events under Antiochus IV Epiphanes and older controversies, which, reaching their climax in the second century, caused far-reaching discord (cf. Cohen, 1984). The Damascus Document (CD i.3) speaks of God's anger about "the house" where the Sons of Zadok should have observed the correct service (CD iv.1; CD iii.19). Changes in the cultic order (CD iii.6), incorrect practices (CD iii.18; 4Q394 8.ii.5; 4Q396 1.i.1, 1.ii.1 and 6, 8, and 10), and forbidden marriages (CD v.6; cf. *Jub.* 30.15–17) caused contamination of the Temple which could have been avoided by the observation of rit-

ual restrictions concerning the holy realms (4Q266 9.ii.3-4; 4Q394 3.i.4, 8; 8.iv.4; 4Q397 1-2.3; 4Q398 1-2, Ways of Righteousness^b, 4Q421 11.3; 11Q20 13.9, 14.4-6) and observation of the correct calendar. Participation in the sacrificial service seemed, therefore, ineffective (CD vi.12-13), the holy property of the sanctuary having been desecrated (CD vi.16) and the whole of it polluted (CD xx.23; cf. Pseudo-Moses^c 4Q390 2.i, 1 En. 89.73). The Damascus Document and the Enoch apocalypses (Animal Apocalypse; Apocalypse of Weeks) presuppose an old conflict among priests about the correct cultic order (cf. 1Q22 i.8-10, 4Q390 1), which arose soon after the erection of the Second Temple. They presuppose, however, a period of "revelation," between about 200 and 176 BCE (cf. 4Q390), and a subsequent time of renewed apostasy. In a more concrete manner Peshar Habakkuk (1QpHab xii.9) states that the Wicked Priest contaminated the sanctuary (cf. *Asm. Mos.* 5.3, 6.1).

In contrast, a vivid idealization of the Second Temple appears in the *Letter of Aristeas*. The *Third Book of Esdras* and *Judith* also contain positive evaluations of the Second Temple, and they are, of course, particularly characteristic of pro-Maccabean literature (*1 and 2 Maccabees*). The *Second Book of Maccabees* is especially tendentious in favor of the Hasmonians and full of Temple propaganda to their advantage (see Doran, 1981), an attitude also evidenced by the festival of Hanukkah. The crisis under Antiochus IV Epiphanes was, therefore, of great significance for the history of the Temple. After it was desecrated and polluted during 169-165 BCE, and dedicated anew at the end of 165 BCE, sanctuary practices remained subject to dispute, particularly because of the calendrical and concrete ritual disagreements listed in *Miqsat Ma'asei ha-Torah* (MMT^a 4Q394-4Q399). The high priest Alcimus (162-159 BCE), according to *1 Maccabees* 9.54, took architectural measures contrary to tradition, pulling down a separating wall within the inner precinct. Alexander Jannaeus, however, reintroduced a dividing wall in this area (*Antiquities* xiii.373). Qumran literature retained a rather negative attitude toward the existing Temple (CD v.6-7; cf. 1QpHab), while the Essenes, according to Josephus, took a more neutral position; indeed, they did not participate in the sacrificial cult but sent votive oblations to the sanctuary (*Antiquities* xviii.19).

King Herod's (37-4 BCE) monumental undertaking of an almost complete renovation of the sanctuary as a whole, with considerable enlargements of the outer precinct, was certainly of primary interest for all priests, even those in opposition. It is not by chance that at least one copy of the Temple Scroll (11Q19/11Q20) was produced at that time. Each current in Judaism, and within the priestly circles, appreciated or criticized Herod's undertaking according to its own traditions. There is suffi-

cient evidence to conclude that Herod's plan included a remarkable number of items that appear in the various plans of ideal or utopian temples (see below). He apparently tried to please the great majority of the priests as much as he could, even the more conservative Zadokites. This does not necessarily presuppose that the Temple Scroll exercised a decisive influence on his plans (but cf. Delcor, 1989).

The topographic position of the sanctuary on the northwestern hill above the city had a decisive strategic and military significance; the Temple mount was the most important stronghold in Jerusalem. Herod the Great (37-4 BCE) strengthened this strategic role considerably by his monumental enclosing walls and porticoes, with the fortress Antonia, at the northwestern corner of the outer precinct, at the same time controlling the Temple area itself. The political significance of the Temple as God's invulnerable abode and as the national military stronghold reached its culmination during the first century CE, leading to drastic consequences during the war against Rome (66-70 CE), when the Temple and its stronghold were destroyed on 9th/10th of Ab 70 CE.

The *yahud* community considered its inner circle as a temporary functional compensation for the invalid atonement at the desecrated temple of Jerusalem. Its lay members are said to form symbolically the *heikhul* ("house") and its priests the Holy of Holies (1QS iv, v.6; viii.11; cf. 4Q258 1.i.4, 4Q258 2.ii.6-7; 4Q509 frg. 97; 98 i.7-8; 4Q511 35.3).

Temples Outside Erets Yisra'el. Jewish temples existed outside Erets Yisra'el, both of them connected with Jewish military colonies. The first is mentioned in the papyri from Elephantine in Upper Egypt, where a Jewish military colony existed under Persian rule (Porten, 1961). [See Elephantine Texts.] This sanctuary was destroyed by the Egyptian priests of the God Khnub in 411 BCE. From the papyri we learn that its cult was not exclusively dedicated to YHVH but to a group of deities, representing a kind of popular religion as attested also by the excavations at Kuntillat Ajrud in the Negev, a military stronghold during the late period of the kingdom of Judah.

The second example is the Temple of Onias in Leontopolis in Lower Egypt. Onias IV, son of the assassinated high priest Onias III, founded a temple similar to that in Jerusalem after the establishment of Hasmonian rule in Palestine under Jonathan (*The Jewish War* vii.246-346; *Antiquities* xiii.62-77). In 73 CE the Romans abolished the cult at this temple. About its structure and service we know practically nothing (see Hayward, 1982).

Some scholars have suggested that there was a temple at the Tobiad stronghold in 'Araq el-Amir, but it is doubtful whether the structure called Qasr el-'Abd was actually a sanctuary.

Ideal and Eschatological Temples. Eupolemus described Solomon's Temple in an idealized manner, and Josephus did the same (*Antiquities* viii.63-98) two centuries later. Such descriptions correspond in part to the reality of the Second Temple and in part to utopian concepts about a sanctuary during the same period. This attitude is attested by the *Letter of Aristeas* (see Hadas, 1973), which idealized (secs. 83-90) the Temple of the third and second century BCE in a similar manner. All these sources witness an elaborate cosmological symbolism and a complicated cultic theology, with the topographical and architectural details serving primarily to underline and illustrate the theological viewpoint.

Ezekiel's temple. Ezekiel preached to the Jews of the Babylonian exile, predicting the destruction of Jerusalem and the future restoration of Israel and the Temple. A number of copies of *Ezekiel* were found at Qumran. The ideal, utopian character of *Ezekiel* 40-48 is obvious, but it is impossible to determine the place of its temple within the chronological scheme of the group behind the Qumran texts and related literature. Did they regard this plan as a guideline for the Second Temple, or for a third or even a fourth Temple? The plan contained, at any rate, a difficult point: it describes, according to the preexilic situation, only two precincts; consequently, this plan does not account for later ritual standards which presuppose three courts. Some details of the concept of Ezekiel nevertheless exercised a remarkable influence on later temple plans. Characteristic is the holy square measuring 500 by 500 cubits and the tendency to separate the realms of holiness by different levels and to enclose structures with monumental gateway buildings. The latter, however, only were planned on the east, south, and north sides, not on the west.

The Temple of the Temple Scroll. Columns ii-xiii and xxx-xlvi of Temple Scroll^a (11Q19) contain a detailed description of a sanctuary for all the twelve tribes of Israel (cf. *Testament of Benjamin* 9), in the form of direct commandments from God to Moses, as written Torah. The beginning is unfortunately lost but column ii seems to indicate that the whole is to be regarded as revelation at Sinai. This description, a literary blueprint for an ideal temple, apparently is for the temple the Israelites should have built after their entrance into the land of Canaan. It also may have been meant as a plan for an eschatological temple (see below). Within the composition of the Temple Scroll the relevant passages constitute one of its main sources, divided by the insertion of another source concerning the sacrifices of the festivals (11Q19 xiii.8-xxix.2); consequently, this "Temple source" is older than the entire composition, and may be based on plans developed during the fourth through third centuries. There are no Hellenistic architectural traits or Greek technical

terms, the only foreign words being of Persian origin. It should be noted that Josephus mentions considerable building activity in the Temple area at the time of the high priest Simon (c.200 BC, *Antiquities* xii.141), which also is in *Ben Sira* 49-50.

The concept of the sanctuary in the Temple Scroll combines the traditional holy square of 500 by 500 cubits (as in Ezekiel, 40-48) with the requirements of a sanctuary for all twelve tribes. Certain ritual aspects seem to have been in dispute for a considerable span of time before, particularly the separation of the various realms of holiness. The basic concept is one of graduated concentric realms of holiness proceeding from the abode of God's presence in the Holy of Holies at the center to the outside: (1) Temple house; (2) the area of sacrificial service around the altar within the inner court; (3) the inner, or priest's, court, representing a square complex around a court 280 by 280 cubits (11Q19 xix.6, xx.4; xxxvi[?]-xxxviii.11, xlvi.2) with a gateway building on each side of the square, its outside dimensions probably extending to 300 by 300 cubits; (4) the middle court, for ritually clean Israelite men, an outside area 500 by 500 cubits around an area of 480 by 480 cubits (11Q19 xxxviii.12-xl.5, xl.7); and (5) the court for ritually clean Israelite men and women around a square 1600 by 1600 cubits (11Q19 xxi.3-4, xxii.13-15, xxxvii.19, xl.5-xlv.2, xlvi.3; 4Q365 28.ii) and surrounded by porticoes three stories high with inner galleries. Both the middle and the outer court would have three gateway buildings on each side, twelve in all, each bearing the name of one of the twelve tribes. On each of the three stories double rooms were planned behind the gallery (a front room and a back room), to be constructed as units between the gateway buildings and corner buildings for the eleven lay tribes and the three Levitical clans. The Aaronide priests would receive two units on the sides of the eastern gate. On the roof of these porticoes, installations for the Sukkot festival would be provided, their location corresponding to that of the room units. The entire construction, measuring 1700 by 1700 cubits, would be surrounded by an embankment of 100 cubits, separating the areas of the sanctuary from the "city of the sanctuary" (11Q19 xlv.7ff., xlvi.9-12; Serekh Damascus, 4Q265 10.2,6; 4Q267 6.4; cf. Apocryphal Psalm and Prayer, 4Q448 1.ii.1; Words of the Luminaries^a 4Q504, 2.iv.12), also called "the camp" (4Q394 5.3, 8.16-17; 4Q397 6-13; 2-5). According to another view (Schiffman) the term "city of the sanctuary" refers only to the area enclosed by the embankment. The utopian character of the third court is obvious because of its dimensions, but it should be remembered that the Temple of Herod the Great also included as enlarged an area as possible within the outer walls of the sanctuary, the outer court being the "court of gentiles."

Third Temple. Was the ideal temple described in Temple Scroll^a also meant as a plan for the Third Temple? A Temple for all of Israel is, at any rate, presupposed in the War Scroll (1QM ii.3, vii.11–12; cf. 4Q491 1–3.18) during the period of the eschatological wars. In this Temple the “sword” that had been given to the righteous at the beginning of the period (cf. 1 *En.* 91.12) would be laid down after the completion of the wars against the enemies of God and Israel (1 *En.* 90.34–36). According to 1 *Enoch* 90.28–29 God himself will pull down the Second Temple building and produce a completely new Temple during the period of the “sword” (which, according to Zadokite chronology, would begin after the year 98/97 BCE); 1 *Enoch* 91.13 (cf. *Enoch*^b, 4Q212 iv.18), however, says only that the new Temple will be built. An enigmatic formulation in *Tobit* 14.5 seems to indicate a similar concept: The Second Temple will be built, but not like the First Temple, and it will exist until the completion “of the periods” (490 years?); then the exiles will return and rebuild Jerusalem in a magnificent manner, and the “house” will be built splendidly for all generations according to the words of the prophets.

A Fourth Temple? The Florilegium (4Q174 iii.2–69; cf. Steudel, 1994) promises a Temple that will not be destroyed. This may refer to the Third Temple, or it may allude to a Fourth Temple (cf. 11Q19 xxxix.8–10). The Temple Scroll passage unfortunately is fragmentary, but the eschatological character of the situation is beyond doubt: “. . . [and I] shall be for them eternally . . . (8) with them for ever and eternally. And I shall sanctify my [san]ctuary with my glory for I shall cause my glory to dwell upon it until (?) the day of creation on which I shall create (anew) my san[ctuary] (10) to prepare it for myself for all [ti]me according to the covenant which I made with Jacob at Bethel.” This covenant of Bethel as mentioned in *Jubilees* 32, (44th jubilee) seems to presuppose a sanctuary for each of the following dekajubilees. It is significant that Josephus in *Jewish Antiquities* divided the course of Jewish history, not unlike the *Enoch* apocalypses, into six periods: from Adam to the flood; from the flood to Abraham’s arrival in Canaan; to the Exodus; to the completion of the First Temple; the First Temple period; and the Second Temple period, presupposing a Third Temple. The Temple of Temple Scroll^a (11Q19 xxix) seems, however, to be the last Temple (cf. *Jubilees*^a, 4Q216 iv.7–8, *Jub.* 1.26–28), a sanctuary beyond the realm of history. Among the extant fragments about the “New Jerusalem” only a few passages mention the sanctuary (New Jerusalem, 4Q554 1.i.4; cf. 4Q554 1.ii.18). It is not clear, however, whether this “New Jerusalem” and its sanctuary are related to the Third or Fourth Temple, or whether the New Jerusalem scroll and the Temple Scroll

form part of one and the same eschatological concept (as supposed by Wise, 1990, pp. 61–99).

JOHANN MAIER

TEMPLE SCROLL. A rewriting of the canonical Torah from the end of *Exodus* through the end of *Deuteronomy*. Temple Scroll has been one of the compositions most intensively studied among those recovered at Qumran (for a bibliography see García Martínez, 1996.)

Preserved Manuscripts and Editions. Five manuscripts, three from Cave 11 and two from Cave 4, have been published as containing remains of this previously unknown composition. Of these, only two (Temple Scroll^a [11Q19] and Temple Scroll^b [11Q20]) are certainly copies of the Temple Scroll while a third one (4QTemple Scroll^b 4Q524) could possibly be a very fragmentary copy of the last part of it. The relationship of the two other manuscripts (Temple Scroll? [4Q365a] and Temple Scroll^c? [11Q21]) to the Temple Scroll is most uncertain.

Temple Scroll^a (11Q19). The best preserved manuscript is Temple Scroll^a (11Q19), which is also the largest of all the Qumran scrolls with more than 8 meters (26 feet) extant. The inner portion, which contained the end of the composition, is fairly well preserved with the lower part still intact, although the upper section has been lost. The exterior part, however, which included the beginning, has suffered considerable damage and is only fragmentarily preserved. With the beginning of the manuscript lost, the narrative framework is no longer extant, and since the end of the composition was located in the

upper section it, too, is lost. The final preserved column (col. lxvi) is followed by a new sheet of leather with no writing on its lower portion, which shows that only a few final lines are missing.

Temple Scroll^a was apparently discovered in 1956 with the other Cave 11 scrolls, but remained in the possession of an antiquities dealer in Bethlehem until its confiscation by the Israeli army in 1967 (Yadin, 1985, pp. 8-44). In the same year, Yigael Yadin presented an early description of its contents, and then published the *editio princeps* in 1977 in Hebrew, which was translated into English in 1983. This fine three-volume edition includes an extensive introduction and detailed commentary in modern Hebrew and a photographic supplement. Since the English translation adds a section of Addenda et Corrigenda (vol. 1, 405-19) and many corrections and revised readings (vol. 2), it is to be preferred above the *editio princeps*. E. Qimron, who contributed the majority of these new readings, published his own edition with alternative readings and substantial reconstructions in 1996, thereby improving considerably on Yadin's edition (Qimron, 1996).

Nineteen thin sheets of leather have been recovered from Temple Scroll^a, ranging between 39 centimeters (15 inches) and 61 centimeters (24 inches) in width, with each containing three or four columns of writing, except for the last column, which is blank in its preserved section. Because of damage to its upper section, the manuscript's preserved height varies between 10 centimeters (4 inches) and 20 centimeters (8 inches), but according to Yadin's calculations the original height was probably between 24 centimeters (9 inches) and 26 centimeters (10 inches). The remains of sixty-six columns have been preserved, with a width ranging from 9 centimeters (4 inches) to 12 centimeters (5 inches) (including margins). The number of lines per column, as far as reconstruction allows, varies between twenty-two (cols. vi-xlviii and lxi-lxvi) and twenty-eight (cols. xlix-lx; sheets 14-16). The scribe left the final marked line blank for columns xlv-xlviii, but wrote it from column xlix on. He then added two more lines of text in the lower part of the column and reduced the spacing between each line from 1.1 centimeters (0.4 inches) to 0.8 centimeters (0.3 inches). The change from twenty-eight to twenty-two lines at the beginning of column lxi (the first of sheet 17) is clearly seen in the increase of distance between lines to 1.1 centimeters (0.4 inches).

Temple Scroll^a was copied by two different scribes, with the largest portion of the manuscript (cols. vi-lxvi) in a middle Herodian formal hand dating to the end of the first century BCE or the beginning of the first century CE. However, columns ii-v (the first preserved sheet)

were written in a late Herodian formal hand, clearly distinct and more evolved, and dating to the first half of the first century CE. This difference in writing and the fact that part of column v coincides with the beginning of column vi allows us to conclude with Yadin that the first sheet was added later, probably to repair the beginning of the scroll, which had been damaged.

Temple Scroll^b (11Q20). Another fragmentary copy of the Temple Scroll allows us to replace several lost sections of the first scroll. Temple Scroll^b (11Q20), which was also discovered in 1956, was acquired in 1962 as part of the Dutch allotment of manuscripts from Cave 11. The preliminary publication appeared in 1992, and the *editio princeps* in 1998 (García Martínez and Tigchelaar, 1998, pp. 357–409, plates xli–xlvi). From this manuscript, forty-two fragments have been recovered, thirty of which have been identified due to overlap with Temple Scroll^a. Portions from columns xv to lv of Temple Scroll^a are preserved in fragments of Temple Scroll^b, which contains remnants of every section of the Temple Scroll. Despite its fragmentary character, there is no doubt that Temple Scroll^b comprises the same text as Temple Scroll^a and that both are copies of the same composition. Temple Scroll^b was written in a developed Herodian formal hand, which dates to the second quarter of the first century CE (c.20–50) and is very similar to the first hand of Peshar Habakkuk (1QpHab), with several shared characteristics suggesting that both were copied by the same scribe.

4QTemple Scroll^b (4Q524). A possible third copy of the Temple Scroll is a very fragmentary manuscript with very few portions extant. 4QTemple Scroll^b (4Q524) was first published in 1997 by Émile Puech, and has since appeared in the Discoveries in the Judaean Desert series (Puech, 1998, pp. 85–114, plates vii–viii). From the thirty-nine fragments, only two groups (frgs. 6–13 and frgs. 15–22) and fragment 14 clearly correspond with the preserved material in Temple Scroll^a and Temple Scroll^b. Fragments 6–13 preserve part of Temple Scroll^a lix.17–lx.6; fragment 14, part of Temple Scroll^a lxiv.6–11; and fragments 15–22, part of Temple Scroll^a lxvi.8–17, but with significant variants. The biggest of the recovered fragments (frg. 25) has no correspondence in the known text of the Temple Scroll, and all the other remains are so minute that they are of no real help in identifying the text. The paucity of material and the fact that all the identified fragments come from the final part of the composition would allow us to conclude that 4Q524 is not a copy of the composition known from Temple Scroll^a and Temple Scroll^b, but represents another unknown composition or one of the sources used by the author of the Temple Scroll for the last part of the work. Since the end of a scroll is usually preserved when it is rolled up (i.e., with

the end in the inner portion), and the variants preserved are of the sort that usually appear during the copying process, the editor reasonably concludes that 4Q524 represents another copy of the same work.

Significant features of this manuscript include its writing (a semi-cursive hand of the early Hasmonean period, dated c.150–125 BCE), the divine name being represented by four dots (frg. 6.4), and the orthography which, though not completely consistent, corresponds to what Emanuel Tov has termed the *Qumran system*.

4QTemple Scroll^a (4Q365a). Two other manuscripts have been presented as possible copies of the Temple Scroll, but these are most probably not copies of the same work, and their “official” designations should be viewed only as rough indications that their contents are somehow related to the Temple Scroll.

4QTemple Scroll^a (4Q365a) was first considered to be a Hebrew translation of the Aramaic composition known as New Jerusalem. Subsequently, Yadin published three of its fragments as a copy of the Temple Scroll (Yadin, 1983, vol. 3, suppl. 38, 40), one of them as corresponding to columns xxxviii and xli–xlii of Temple Scroll^a, and the other two without a precise location within the known text. Sidnje White Crawford has attributed to it five fragments and has published them in Discoveries in the Judaean Desert, 13 as *Temple Scroll?* (White, 1994). She is perfectly aware of the problems posed by this identification, because only one of the five fragments overlaps (and not completely) with the known text of the Temple Scroll, and concludes that “if these fragments do constitute another copy of the Temple Scroll, it must have been a copy different from Temple Scroll^a and Temple Scroll^b.” But as I have demonstrated elsewhere (García Martínez, 1998, pp. 230–48), this text is part and parcel of Reworked Pentateuch^c (4Q365) and there is no reason to separate these five fragments from it. Temple Scroll? (4Q365a) thus belongs to a copy of the Reworked Pentateuch, which incorporates materials related to biblical manuscripts, to other compositions such as the Temple Scroll and the New Jerusalem, and also to previously unknown works. The composition from which these fragments come is especially interesting since it may represent one of the sources used by the author-redactor of the Temple Scroll, or may be a witness to a common ancestor: however, it cannot be considered a copy of the work represented by Temple Scroll^a and Temple Scroll^b. [See Reworked Pentateuch.]

4QTemple Scroll^c? (11Q21). This text, first published by Qimron as a copy of the Temple Scroll (Qimron, 1995, pp. 473–476), 11Q21 was identified as Temple Scroll(?) (García Martínez and Tigchelaar, 1998, pp. 411–414, plate xlvi). The problems presented by this text are simi-

lar to those presented by Temple Scroll? (4Q365a). Of this manuscript only three very small fragments have been preserved. Their physical appearance, the ruling, and the writing are very similar or even identical with those of Jubilees (11Q12) from Cave 11 at Qumran to which they were formerly attributed, although their contents do not correspond to the known text of *Jubilees*. Of these three fragments, only seven letters of fragment 1 overlap with the known text of Temple Scroll^a iii.14–17 (but the words of the overlap are extremely common, and the key words of this fragment are not preserved on Temple Scroll^a). The other two fragments contain material compatible with the Temple Scroll (cols. ix and xlvii–xlviii), but with no overlapping text. There is thus no reason to consider these small fragments as another copy of the Temple Scroll. If Qimron's designation of these three fragments as 11QTemple^c(?) has been retained it is for two reasons: the impossibility of locating their contents in the known text of *Jubilees*; and to underscore that shared vocabulary with the Temple Scroll indicates that they may preserve missing parts of this composition or another work dealing with similar themes.

The Contents of the Temple Scroll. The systematic manner in which the redactor has organized the components of Temple Scroll^a facilitates a description of its contents. Although the beginning is lost, column ii suggests that the narrative framework, which integrates the body of concrete laws forming the work, was similar to that in *Jubilees* and in the Sinaitic covenant (as in *Ex.* 34 and *Dt.* 7). The author goes so far as to change the biblical idiom from the third to the first person, thus transforming *Deuteronomy's* message from Moses to the people to a direct discourse from God to the people. He thereby presents his work as a divine word, like a new Torah for the entire nation of Israel coming directly from the mouth of God. At times, however, the author or redactor forgets this pseudepigraphical fiction and retains the third person of the biblical text. This new "*Deuteronomy*" systematically integrates the various laws concerning the temple and its sacrifices as found in *Exodus*, *Leviticus*, and *Numbers*. At times these are reproduced in a literal manner, but at other times in modified form with numerous additions not found in the biblical text, thereby being fashioned as a new version of *Deuteronomy* 12–23.

Surveying the preserved columns of Temple Scroll^a one by one (Yadin, 1983, pp. 46–70; Maier, 1985, pp. 8–20), we ascertain that the author has grouped the laws around four main themes. The first is the construction of the temple, with the relevant rules concentrated in two blocks: columns ii–xiii (construction of the sanctuary and the altar), and columns xxx–xlv (construction of the temple's courtyards and various buildings in them). Between

these two blocks, the second theme (cols. xiii–xxix) has been inserted: the cycle of festivals throughout the year with the sacrifices that correspond to each festival, including the festivals of new wheat, wine, and oil, and the festival of the wood offering.

The third theme consists of the purity rules for both the temple and the holy city, as well as general rules. The author is concerned with safeguarding the purity of the temple area and the city where the temple should be constructed in columns xlv–xlvii, and with the more general purity rules in columns xlviii–li. The fourth theme occupies the remainder of the manuscript (cols. lii–lxvi) and comprises a rewriting of *Deuteronomy* 12–23, with the same diversity of contents found in the biblical text: rules regarding judges, idolatry, the slaughter of animals, curses, false prophets, rights of priests and Levites, witnesses, the slave taken in war, the rebellious son, crimes of betrayal, the defamed virgin, incest, etc. Among these themes the following are highlighted: an extensive treatment dedicated to *Deuteronomy* 17.14–20, known as the "King's Law" (cols. lvi–lix); further details on the Levites (li–lii); and crucifixion as a form of capital punishment (lxiv.6–13).

Sources Used. The same themes suggest the general outline of the sources used by the author-redactor to write the Temple Scroll (Wise, 1990; García Martínez, 1991). First, the redactor relied on the Torah, particularly *Deuteronomy*, which he edited extensively for his purposes by combining several biblical formulations, which he harmonized, clarified, completed, or modified as he saw fit. The redactor also relied on and incorporated four other sources in his work: a written source with instructions for construction of the temple; another written source containing a "festival calendar" that differs from the usual one by including new festivals and presupposing a 364-day calendar as found in other Qumran documents (this material was inserted in the preceding source dealing with the temple); a source dealing with purity rules in force within the author's group and for which he provides only a summary; and a Midrash to *Deuteronomy*, from which he took the "King's Law" and amplifications pertaining to the Levites and to crucifixion as a form of capital punishment. Throughout his work, this redactor has taken great care to insert various legal prescriptions in use within the group to which he belongs. These prescriptions serve to unify the whole and to present them as part of the Torah obligatory for all Israel.

The identity of the author-redactor who gathered these materials, and with them the Temple Scroll, is obviously unknown to us; thus this work is as anonymous as other prominent Qumran documents. The scroll's authoritative character, the redactor's profound knowledge of the bibli-

cal text, and his audacity in rewriting the biblical text, might suggest as the author the strong prophetic personality of the priest known in Qumran texts as the *Teacher of Righteousness*, but none of the preserved data confirms this supposition.

Even if there is uncertainty regarding some details—such as the precise limits of some sources, the relative chronologies of these sources, or the extent of the author's redactional activity—the foregoing attempts to be a fair summary on which there is general consensus among scholars. The same cannot be said of the following points, since the composition's literary genre and its relationship to the biblical text, its origins, and date have been hotly disputed during the last twenty years with no consensus reached to date.

Literary Genre and Relationship to the Biblical Text. It is difficult to determine the literary genre of the Temple Scroll. For Yadin (1983, vol. I, pp. 392 and 418) the author (and the members of the sect) considered it as a "proper Torah, albeit hidden and known only to the sectarians." For Hartmut Stegemann this is indeed a sixth book of the Torah, a new biblical text intended to complete the existing Pentateuch. For B. Z. Wacholder, the author viewed the Temple Scroll as the only valid Torah, designed to replace the Mosaic one which inspired it; for him Moses received from God on Mount Sinai a second Torah that was to be revealed once the Mosaic Torah was shown to be temporary as a result of the nation's transgressions (Wacholder, 1983). For many other scholars, such as Swanson, the Temple Scroll is above all a rewritten Torah designed to unify, homogenize, and resolve the difficulties of the biblical text (Swanson, 1994).

Until the publication of 4QTemple Scroll^b 4Q524 the use of the Tetragrammaton in Temple Scroll^a and in Temple Scroll^b was one of the strongest arguments for understanding the Temple Scroll as a "biblical" work. We now know, however, that the oldest exemplar avoided the use of the sacred name, and is in this aspect similar to other nonbiblical scrolls.

The fundamental relationship between the Temple Scroll and the biblical text lies at the level of interpretation, which was considered revealed and thus normative, thereby enabling the redactor to transform even his biblical starting point. The work is certainly presented as normative, and so may be defined as a legal text; thus a classification as *Torah* is not totally inadequate. Yet the essential features of its relationship to the Mosaic Torah are that it does not seek to be an alternative nor a complement, but as being the only valid interpretation, and that it is this element that determines its literary genre. This "normative" character of interpretation within the group is heightened in that the copies from the Herodian period (Temple Scroll^a and Temple Scroll^b) no longer write the

divine name in Paleo-Hebrew characters but transcribe the Tetragrammaton as in the biblical texts.

The addition in Temple Scroll^a of the quotation from *Deuteronomy* 21.23 as a proof text, specifying the use of crucifixion as a form of capital punishment (absent in halakhic text 4Q524), is one of the most revealing indicators that this composition was not understood as a new Torah intended to complete or to supersede the Mosaic one. Moreover, it clearly shows that the basic relationship of the Temple Scroll to the Bible is in the realm of interpretation, as a composition intended to bring out the true meaning of the sacred text.

As a normative interpretation of *Deuteronomy*, the Temple Scroll could be classed, following Michael O. Wise's suggestion, as a new *Deuteronomy*. But unlike Wise I would not define it as a new *Deuteronomy* that was intended to substitute for *Deuteronomy* 12–26 "at the end of time"; even the temple described in the Temple Scroll will be replaced at the end of time by a new one created directly by God (xxix.8–10). In reality, for its author this composition contains the only legitimate way for understanding the true sense of the biblical text that pertains in the present, and should be applied as soon as circumstances may permit.

Origins and Relationship to Other Qumranic Writings. The origins of the Temple Scroll have been debated as much as its literary genre or date. While some scholars, such as Stegemann postulate an origin completely independent of the Qumran community, many others, starting with Yadin, situate its origin within the Qumran community itself. The work is earlier than the community's installation in the desert, but certainly had its origin in the priestly circle from which the community would later emerge. It belongs, therefore, to the community's formative period.

The Temple Scroll's interest in the architectural elements of the temple, the temple rituals, and the polemics regarding the details of the sacrificial system and of the purity levels points to priestly circles as the most likely originators of the composition. For these priestly circles these were the most important issues at hand.

The same elements account for the purpose of the Temple Scroll. Differences from the existing temple are easily apparent, but the author does not present his detailed plan as a prophetic vision of the temple that God himself will construct at the end of time, as does *Ezekiel*; instead, he presents it as a real program of construction that was revealed at Sinai and is therefore normative. His presentation enhances the discrepancy between the existing temple and the normative one, and shows up the inadequacy of the existing temple as against the future one that will be built according to revealed precepts.

The few concrete details from the *midrash* to *Deuteron-*

omy that help determine the Temple Scroll's setting direct us to these same priestly circles. The prescription of compulsory monogamy for the king is likewise reflected, of course, in the Damascus Document. Furthermore, the division of powers between the king and high priest is also found in Rule of the Blessings (1Q28b), together with the subordination of king to high priest. These elements may indicate a certain opposition to the existing situation during the Hasmonean period in that they favor a king subject to the priesthood and free from all cultic activities. The need for reformulating the biblical data with respect to royalty seemed more pressing once the Maccabees attained national independence than had been the case during the Persian period or under Ptolemaic or Seleucid dominion.

Yet this does not mean, as has been erroneously claimed, that the work's origins are to be placed during the reign of Alexander Jannaeus (Hengel, Charlesworth, Mendels). Mercenaries were continuously present from the time of John Hyrcanus; all the Hasmoneans were involved in offensive and defensive wars, taking advantage of the spoils of those conquered, and throughout this period there was the constant threat of danger from the Egyptians. The moderate character of the polemic present in the text accords better with the early period of national independence secured by the Maccabees than with a period that saw the transformation from Hellenistic rule to Hasmonean power. In any case, this polemic is a far cry from the anti-Hasmonean polemic found in other Qumran writings such as the *pesherim*. Yet it directs us to the same priestly circles as a possible locus for the origin of the Temple Scroll.

On the other hand, various elements confirm its relationship to writings that are generally acknowledged as specific to the Qumran community. The most interesting of these are: affinity to the Damascus Document regarding prohibitions against polygamy, marriage between uncle and niece, and sexual relationships in the temple city; similarity to the War Scroll (1QM) with respect to the exclusion of women from the holy city, encampment during the eschatological war, military organization, and the location of the lavatories; the shared reference with *Pesher Nahum* (4Q169) to crucifixion as a form of capital punishment; and references to the 364-day calendar, including mention of the oil festival on the twenty-second day of the sixth month (also found in Calendrical Document E¹ [4Q327]). Several other common factors may be added: those who are excluded from participation in the community at the end time in Rule of the Congregation (1Q28a) are the same ones who, in the Temple Scroll, are prohibited entrance into Jerusalem; the names used for the door to the temple's courtyard are the same as those used for the gates of Jerusalem in the New Jerusalem, as in other

Qumranic texts the Levites may impart the blessing in the Temple Scroll; and the composition of the king's council and the community council reflect the same pattern.

Although these similarities are impressive, a further list of elements prevents us from concluding that the Temple Scroll was composed when the community was already founded and installed at Qumran after breaking away from the Jerusalem Temple: the interests evident in the sectarian scrolls are very distinct from those of the Temple Scroll; its method of scriptural interpretation is equally distinct; its *halakhah* includes several elements that cannot be reconciled (Schiffman, 1989); a principal Qumranic festival (renewal of the covenant) is missing from our text; there are notable differences in vocabulary (e.g., designation of the High Priest); and the basic positions *vis-à-vis* the temple and the authorities are hardly compatible (Schiffman, 1989).

Both lists of observations can nevertheless be reconciled if one assumes that the Temple Scroll arose among the emergent community, yet before the community's installation at Qumran. This solution explains the similarities and differences by allowing us to take into account the inevitable evolution, modifications imposed due to the break from the Jerusalem Temple, and ideological and halakhic developments that arose in the new situation. With these considerations in mind, the data at our disposal are best explained by an origin for the Temple Scroll among priestly circles connected with the Temple, and from which the Qumran community would later emerge. Such an origin enables us to understand the surprising parallels in vocabulary, content, and *halakhot* between the Temple Scroll and *Miqtsat Ma'asei ha-Torah*, hereafter 4QMMT (Schiffman, 1990).

Date. It is as difficult to determine the date of the composition of the Temple Scroll as to establish its origin. Dates have been proposed as early as the fifth to fourth century BCE (Stegemann) or as late as the first century CE (Thiering in Brooke, 1989, pp. 99–120) although most scholars are inclined, with Yigael Yadin (1983, vol. 1, p. 390) to date the work "in the days of John Hyrcanus or shortly earlier." Since the redactor used diverse sources his work was necessarily later than the composition of these sources, and the work itself must be earlier than the most ancient preserved copy.

The paleographical dating of the oldest copy is of crucial importance with respect to the date of the composition itself, since this provides a fixed point and physical evidence of the work's existence in the second half of the second century BCE. It thus automatically excludes all proposals dating the Temple Scroll to the time of John Hyrcanus or later periods. Theories positing a composition in the fifth/fourth century BCE are not excluded, of course; but these are disqualified by indicators of a rela-

tionship with the group from which the Qumran group would emerge, and of sources which are apparently later in date.

The festival calendar depends on the Enochic calendar, remains of which have been preserved in the Aramaic fragments from Qumran, and which may date back to the fourth century. The festival calendar in the Temple Scroll, therefore, is later than these dates. Yet this calendar includes elements earlier than the most concrete form of the same calendar used in *Jubilees* and in other Qumranic texts, including the still imprecise manner of designating the dates of the festivals. The composition of this source of the Temple Scroll, then, should be dated to somewhere in the third or early second century BCE.

In similar fashion, the "Temple Source" contains few concrete details that may help to date it precisely. However, one apparently innocuous point may offer an indication. Column xlvi of Temple Scroll^a includes the prohibition of introducing animal skins into Jerusalem, even the hides of ritually clean ones, if they have not been sacrificed in the Temple. This text thus goes beyond Antiochus III's decree that prohibits the introduction of impure animal skins. A relationship to the Temple Scroll seems clear, although one open to interpretation; the Temple Scroll's strictest legislation can be viewed as a hardening of a previously existent norm, which would make it later, as Yadin claims. But it is equally possible that Antiochus III would have accepted only in part the requirement presented before him, imposing a measure less severe than what was demanded, which would imply the priority of the formulation as found in our text. In any case, the relationship between the two documents points to the period of the Seleucid dominion as the most plausible background for the "Temple Source."

Another source of the Temple Scroll is the block of purity laws, which contains no concrete elements pointing to a date or a specific origin. We can only cite an increased sensitivity toward purity problems as a consequence of the Antiochan crisis; the desecration of the Temple, as the center of the purity system, must have acted as a powerful catalyst. In fact, the rededication of the Temple by Judah Maccabee is presented as its purification, just as the conquest of other cities by the Maccabees is seen as a purification of the country. Moreover, the origins of the various sects and their reinterpretation of the purity rules are placed by Josephus precisely in this period, as are the disputes between Sadducees and Pharisees on the purity laws according to rabbinic tradition. The period of the Antiochan crisis provides an appropriate setting for the formulation of the ideas on purity reflected in this source.

The *midrash* on *Deuteronomy* contains in the "King's Law" some elements that point to a later dating. The discussions preceding the investiture of Simon, which ap-

pear indirectly in *I Maccabees* 14.48, for example, may have provided the occasion for formulating the ideas found within this source.

If this be the case the relative chronology of the various sources used by the redactor of the Temple Scroll may be as follows: the festival calendar would be the oldest element, followed by the source pertaining to the purity laws, and then the *midrash* of *Deuteronomy* that includes the "King's Law."

Since this final source apparently dates back to the Maccabean period, it is obvious that the Temple Scroll's date of redaction cannot in itself precede these dates. And since, as we have indicated, the composition must be earlier than its oldest copy (4Q524, second half of the second century BCE), a date toward the mid-second century BCE seems assured.

This implies that the composition of the Temple Scroll is more or less contemporaneous with 4QMMT, and can be situated within the same priestly circles from which the Qumran community was later to emerge. According to 4QMMT, a well-defined group existed within these priestly circles. This group was already considered distinct and separate from both a hostile group (which may be defined as "proto-Pharisaic") and another, less differentiated, group (termed "proto-Sadducean"). This group would eventually end up withdrawing to the desert and forming the community of Qumran. It is here that the origins of Temple Scroll are to be found, within a group of priests who disagreed with the status quo of the existing Temple and dreamed of a future temple that would be in accordance with the divine norms. They also envisaged a cult in harmony with the revealed festival calendar, living in a Jerusalem and country where the strictest purity rules would be followed exactly and where the king's authority would be subordinate to the divine rules interpreted by the priests. And since the Temple Scroll, unlike 4QMMT, is neither presented as the work of one specific group nor directed to any other specific group, but rather to all Israel, we may presume that it was redacted sometime before 4QMMT.

Whatever the case, the anonymous person who redacted the Temple Scroll about the middle of the second century BCE, using earlier written sources, succeeded in creating one of the most interesting documents for understanding the Judaism of his period. Despite disagreements among scholars concerning specific points of interpretation and differing views on details and more general points, the importance of the Temple Scroll is unanimously acknowledged.

TESTAMENT OF _____. See under latter part of name.

TESTAMENTS. A number of texts from Qumran that either mention their speakers as figures from Israel's ancestral period or can be logically assigned to such persons have been designated at one time or another by those who have commented on them as *testaments*. They include works attributed to Jacob (Apocryphon of Jacob, 4Q537), Levi (Aramaic Levi, 1Q21, Aramaic Levi^{d-e}, 4Q213–214), Judah (Testament of Judah[?], 3Q7, Apocryphon of Judah, 4Q538), Naphtali (Testament of Naphtali, 4Q215), Joseph (Apocryphon of Joseph, 4Q539), Kohath (Testament of Qahat, 4Q542), and Amram (Visions of Amram^{a-1}[?], 4Q543–548). This article assesses the reasons for and the legitimacy of designating each text as a testament, and considers the possible role in the life of the community played by some of these texts that are closely associated with one another principally by reason of subject matter.

A testament is defined not by specific content but by its narrative framework. The subject matter of testaments varies considerably and cannot be used to establish the presence of the genre; although a testament often includes the speaker's narration of events and visions from his life, exhortations to his children, and eschatological predictions regarding his descendants (e.g., *Testament of Levi*), in some cases only one or two of these elements appear (e.g., *Testament of Asher*; *Testament of Job*; *Testament of Moses*). By contrast, the narrative framework of testamentary literature is relatively consistent. A testament is almost always a first-person deathbed address, which is introduced by a description of the context for the address and concluded by a narration of the speaker's death (Collins, 1984).

Two of the Qumran works labeled *testaments* seem to possess at least some aspects of this narrative framework. They are the works attributed to Kohath (4Q542) and Amram (4Q543–548). Although the remains of the Testament of Qahat (an Aramaic text in Hasmonean script) provide neither an introduction certifying the context as a deathbed speech by Kohath nor a concluding narration of Kohath's death, the text that survives makes it clear

the work is an address given to Kohath's children in imminent expectation of his demise (Puech, 1991; see especially the urgent exhortations to *banav* ["my children"] in 4Q542 1.i.4, 7–8; and to *amram* ["Amram"] in 4Q542 1.i.9). The principal interest of the speech is in the purity of the priesthood and its proper stewardship, and fragment 1.ii.9–12 makes apparent that its contents had already been passed by Levi to Kohath and to Levi by another before him. The speech may also evince some eschatological interests (4Q542 1.ii.4–8).

Meanwhile, the only certain exemplar of a testament found at Qumran, represented in six manuscripts, was dubbed Visions of Amram by J. T. Milik (Milik, 1972; 4Q543–548). [See Amram for additional details regarding the manuscripts' date and discussion of the disputed assignment of 4Q548.] Reconstruction of the first line of the work leaves little doubt that it is a testament: "This is a copy of the words of the visions of Amram, son of Kohath, son of Levi, all that he recounted to his sons and that he commanded to them on the day of his death, in his 136th year, the year of his death, in the 152nd year of the exile of Israel in Egypt." As in the case of Kohath's testament, Amram's visions concern the proper stewardship of the priestly office but also include much more evidence of an eschatological interest on the part of the author.

A second group of texts are considered testamentary, not because they exhibit the narrative framework described above, but because some or all of their content parallels passages from fully extant testaments. The most extensive of these is Aramaic *Testament of Levi* (Aramaic Levi, 1Q21; Aramaic Levi^{a-c}, 4Q213–214, 4Q214^a; the identification of Aaronic Text A (bis)-Aramaic Levi[?], 4Q540–541, as additional Levi material may be rejected since it lacks any significant connection with the otherwise certain witnesses to the Levi document [Puech, 1993], but see more on these texts below). Because of a fragmentary Aramaic medieval manuscript from the Cairo Genizah whose text resembles parts of *Testament of Levi* 6–7, 8–9, and 11–13, it has long been known that the Greek testament had a close Semitic parallel. Part of the Cairo Genizah manuscript giving Isaac's priestly instructions to Levi and Levi's life history was also matched by a long addition to the Greek *Testament of Levi* in the Mount Athos manuscript of the *Testaments of the Twelve Patriarchs* at *Testament of Levi* 18.2 (Charles, 1908). In 1955 Milik published an Aramaic work and named it *Testament de Lévi* (Aramaic Levi 1Q21) because a handful of its sixty fragments matched the Cairo Genizah text and/or the Mount Athos additions and also paralleled elements of *Testament of Levi*. Milik also published a two-column "Prayer of Levi" from Aramaic Levi^d (4Q213), a Hasmonean Aramaic manuscript, as a Semitic parallel to another addition in the Mount Athos manuscript at *Testament of Levi* 2.3

(Milik, 1955) and concluded that the manuscript was another Qumran copy of *Testament de Lévi*. Several more fragments of Aramaic Levi^d were offered as a parallel to *Testament of Levi* 13–14 (Milik, 1971, p. 345; 1976, pp. 23–25). Since then the remaining fragments of Aramaic Levi^d and all Aramaic Levi^d (4Q214) have been published, some of which are identified as further parallel material with the Cairo Genizah fragments and/or *Testament of Levi*; the rest of Aramaic Levi^d is material unknown before the discovery of the scrolls (Beyer, 1994; Greenfield and Stone, 1994; Kugler, 1996; see now *Discoveries in the Judaean Desert*, 22 for the further division of these two manuscripts). The basis for calling the work a testament has been its close connection with *Testament of Levi*. While most scholars follow Milik's lead and reconstruct the document according to the pattern of *Testament of Levi* (e.g., de Jonge, 1988), Greenfield and Stone first questioned this procedure (1979). Kugler (1996) has proposed a reconstruction that, at least on the basis of the surviving text, precludes classification of the work as a testament and offers instead the title *Aramaic Levi*. Although manuscript witnesses of Aramaic Levi do provide a number of parallels with *Testament of Levi*, no evidence of the narrative framework that makes a speech or recollection into a testament survives; there is no third-person introduction indicating this is a deathbed speech and no conclusion in which Levi's death is narrated; there is only a great deal of material that shows the author's fascination with the priestly office and its purity. More importantly, Levi's reference to his own death in the Cairo Genizah text (Aramaic Levi 81), suggesting the entire speech is given from beyond the grave, and the introduction to the wisdom speech he gives his children (Aramaic Levi 82) which indicates he is recalling the speech as a past event, decisively contradict the notion that this might be treated in any way as a deathbed speech to Levi's offspring.

Milik (1978, p. 97) presented three more texts from Qumran that he thought could be classified as testaments because of their similarity to known works of the genre. He entitled a late Hasmonean Hebrew text the Testament of Naphtali (4Q215; Milik thinks, however, that it was originally an Aramaic work). He discerns a parallel between fragment 1.ii.v and the Testament of Naphtali 1.11–12, from the *Testaments of the Twelve Patriarchs*, both of which recount Bilhah's genealogy. However, this is all the two documents have in common; the remainder of the Testament of Naphtali from Qumran provides more detail about Bilhah and in a separate fragment gives part of an eschatological speech, none of which occurs in *Testament of Naphtali* (see now the separation of this fragment from 4Q215 in Stone's discussion in *DJD*, 22).

Milik also dubbed 4Q538, two fragments of a late Hasmonean Aramaic work, *Testament of Judah* (Apocryphon of Judah) (1978, pp. 97–98). According to Milik the scant remains are the narration of the second trip by Jacob's sons to Egypt and Joseph (cf. *Gen.* 44.1–45.10, *Jub.* 42.25–43.18; see especially the parallel between *lsh* in 4Q538 1.1 and the equivalent word in *Jub.* 42.25). Although this trip is only summarized in the *Testament of Judah* 12.11–12, the existence at Qumran of a precursor to the testament in Apocryphon of Judah (4Q538) is confirmed for Milik by the parallel he suspects between Testament of Judah², 3Q7 6, 5, and 3, a Herodian text that he suspects to be another copy of the work attested in Apocryphon of Judah, and *Testament of Judah* 25.1–2 (1978, pp. 98–99; 3Q7 was identified earlier by Baillet only as "Un apocryphe mentionnant l'ange de Presence" [1962, p. 99]). Finally Milik identified 4Q539 (Apocryphon of Joseph), a late Hasmonean Aramaic manuscript, as a *Testament of Joseph* (1978, pp. 101–102). While he intimates that isolated references to "children" and "loved ones" in fragment 2.ii provide the formal characteristics of a testament, the two phrases are only that—isolated references that apparently come in the middle of the work and so provide no convincing evidence that it possessed the complete narrative framework described above. However, Milik points out that the remaining content matches elements of the *Testament of Joseph* 14.5–4 (frg. 1) and 15.1–17.2 (frg. 2). On that basis he is confident in naming the work a *Testament of Joseph*. But like the Testament of Naphtali (4Q215) and the Apocryphon of Judah (4Q538), the parallel in content does not succeed in overcoming the absence of the narrative framework distinctive of testaments. Given the evidence as it remains to us, it is difficult to think the three are much more than source material for the corresponding testaments that appear in the *Testaments of the Twelve Patriarchs*. In spite of his nomenclature, Milik (1978) shares this view.

In scrolls research, a final work has been termed a testament that hardly deserves the designation. The Apocryphon of Jacob (4Q537), an Aramaic manuscript described by Milik as apocalyptic and testamentary (1978, p. 103) but named "Visions de Jacob" (and subsequently called a testament by Puech, 1993, p. 488), gives only the slightest remains of a vision of Jacob dealing in apocalyptic and priestly matters. In the absence of any indication that the vision was related by Jacob to his children from his deathbed, there is no reason to consider the Apocryphon of Jacob a testament.

To summarize, it is clear that the testaments attributed to Kohath and Amram are legitimate examples of the genre. In addition, other scrolls provide works that, though lacking the narrative framework characteristic of a testament, show parallels with material known other-

wise from the *Testaments of the Twelve Patriarchs* (Judah, Joseph, Levi, and Naphtali), and may be understood as sources for the testaments. Of these, Aramaic Levi from Qumran is most closely related to certain Qumran testaments by virtue of its similarity to those works: it also deals with the priesthood and contains a vision account. Finally, there is a work attributed to Jacob that should not be classified as a testament, at least on the basis of its scant remains; nevertheless, it too may be associated with the genuine testaments at least by reason of content since it also relates to the priestly office.

The recurring interest in the priesthood in Aramaic Levi, Testament of Qahat, and Visions of Amram (and perhaps the Apocryphon of Jacob) and their relationship through the genealogical connections among their main figures suggest that classifying these texts from Qumran by genre may be less fruitful than grouping them according to the topic addressed. As Milik (1972; 1978) and Puech (1991) have already indicated, these texts, along with Aramaic Text A (bis) and Aramaic Text A (4Q540–541), also deal with the purity and future of the priesthood (see Puech 1993); they should perhaps be considered together as a priestly literature attributed to key figures from Israel's sacerdotal history. This body of literature probably originated in a pre-Qumran setting—perhaps when the priestly office was contested in the early second century BCE—and was further developed by the Qumran residents who seem to have had reason to perpetuate a priestly literature, especially one that reflects a concern for the purity of the priestly office and that presents the view that it was unjustly usurped by impure occupants and will someday be returned to its proper stewards. In fact, one suspects this priestly literature may constitute the books given by Israel to Levi in *Jubilees* 45.16. Unfortunately, the present understanding of these texts and their content permit little more than such speculation; and the fragmentary condition of the manuscripts may never allow more than that.

ROBERT A. KUGLER

TESTIMONIA. In 1956, John M. Allegro published a manuscript called Testimonia (4Q175; Allegro, 1968; see on the text the decisive review of J. Strugnell, 1969–1971). Discovered in 1952, it is one of the few almost completely preserved works found at Qumran. Testimonia consists of only a single sheet of skin (23 by 14 centimeters). The hand is that of Rule of Community from Qumran Cave 1 (1QS; hereafter, 1QRule of the Community), but the script of Testimonia is much more careless. Paleographically it belongs to the semiformal tradition of the mid-Hasmonean period, dating from about 100 BCE. As in 1QRule of the Community (1QS viii.14), the Tetragrammaton is replaced in Testimonia by four dots (cf. also, e.g., Tanhumim [4Q176], and Isaiah^a from Qumran Cave 1 [1QIsa^a xxxiii, line 7]); technically, both manuscripts also share the hooks in the margin, here obviously used as paragraph markers. The carelessness of the scribal hand, the numerous mistakes and corrections, its "orthographe chaotique" (Strugnell, 1969–1971, p. 225), as well as the peculiar format of the sheet might point to the fact that Testimonia is an autograph—that is, the work itself might originate from about 100 BCE (on date and purpose see below).

Quotations. Testimonia is a collection of quotations, which are directly linked to each other, that is, without any explicit quotation formulas or interpretations. Quoted are a text, which follows *Exodus* 20.21 in the Samaritan Pentateuch (which equals Masoretic Text *Dt.* 5.28–29 and *Dt.* 18.18–19) in lines 1–8, *Numbers* 24.15–17 in lines 9–13, *Deuteronomy* 33.8–11 in lines 14–20, and at the end there is a passage also found in the Apocryphon of Joshua^b, previously called Psalms of Joshua (*Jos.* 6.26, 4Q379 22.ii.7–14) in lines 21–30. The sequence of the quotations seems to be given by the order of the biblical books (*Ex.*, *Nm.*, *Dt.*, and *Jos.*), but perhaps also by catchwords (see Brooke, 1985).

Textual Traditions. Concerning the textual traditions, it is not exceptional among the Qumran manuscripts for a quotation to follow the Samaritan tradition, as Testimonia 1–8 does (see, e.g., Florilegium [4Q174 1.9, 3.3]). Testimonia 9–13 quotes *Numbers* 24.15–17 in a version that is close to the Masoretic Text, but differs slightly, and Testimonia 14–20 (*Dt.* 33.8–11) shares two variants from the Masoretic Text with the Septuagint, but does not have all Septuagint readings; one cannot exclude the possibility that the biblical texts are quoted by heart. The quotations from *Numbers* and *Deuteronomy* are also used in other genuine Qumran texts, and in all cases different texts are presented. *Numbers* 24.17 is explicitly cited also in the Damascus Document (CD vii.19–20), and in the War Scroll (1QM xi.6; cf. also Rule of the Blessings [1Q28b v.27–28]). Only the Damascus Document follows

the Masoretic Text exactly; and where Testimonia and the War Scroll both differ from the Masoretic Text of *Numbers* 24.15–17, both differ also from each other. It is similar to the case of quotation of *Deuteronomy* 33.8–11 in Testimonia 14–20, which is also found in Florilegium (4Q174 1.9–12).

Interpretation and Historical Background. All three biblical quotations in Testimonia seem to be messianic (but see Lübbe, 1986), and the majority of scholars interpret them as referring to three different eschatological figures: *Exodus* 20.21b is speaking about a prophet like Moses, a new legislator for the time of salvation, which is to come (cf. *1 Mc.* 4.46, 14.41, and probably the role of Elijah in 4Q558, see Starky, 1963, p. 498). *Numbers* 24, 15.17 deals with the priestly messiah; star and scepter are obviously interpreted as one and the same individual figure (CD vii.18–21 interprets *Nm.* 24.17 as two distinguished persons, the Interpreter of the Law and the Prince of the entire congregation, that is, the priestly messiah and the royal messiah); War Scroll (1QM xi.6–7) quoting *Numbers* 24.17b–19 seems to interpret both star and scepter collectively as Israel (see Maier, 1960, p. 127). *Deuteronomy* 33.8–11 refers to the future high priest, the priestly messiah. Interestingly, all three eschatological figures, prophet, king, and high priest, are also and exclusively in the Qumran literature found in 1QRule of the Community (1QS ix.11), in a manuscript that was copied by the same scribe who also wrote Testimonia (the passage represented by 1QS ix.11 is missing in earlier stages of the Rule of the Community redaction; see Rule of the Community^c [4Q259]).

The most debated passage from Testimonia is lines 21–30, a section that interprets Joshua's curse about the re-builder of Jericho (*Jos.* 6.26). Its quotation of *Joshua* 6.26 seems to follow a text similar to that reflected by the Septuagint, that is, Jericho was not mentioned by name as in the Masoretic Text (see Skehan, 1957). While the majority of scholars argues that Testimonia 21–30 is a quotation from the Apocryphon of Joshua, Hanan Eshel has argued for the reverse—that is, the quote from Testimonia was added to the Apocryphon of Joshua (Eshel, 1991–1992, p. 412, accepting for the main part of the Apocryphon of Joshua Carol Newsom's suggestion of a date prior to the second century BCE. Eshel also does not exclude the possibility that Testimonia quotes from a different text—not the PsJos—not preserved among the Qumran findings, n. 11). This section especially, Testimonia 21–30, has served as the basis for speculations on the historical background of the composition of Testimonia. It has been interpreted to refer to almost all Hasmonean rulers: Alexander Jannaeus and his two sons Hyrcanus II and Aristobulus II (Allegro, 1956), Mattathias and his two

sons Jonathan and Simon (Milik, 1959), Jonathan/Simon and Simon's two sons (Skehan, 1959), Simon and his sons Judas and Mattathias (Cross, 1961), John Hyrcanus I and his two sons Aristobulus I and Alexander Jannaeus (Betz, 1961–1962), and similarly John Hyrcanus I and his sons Aristobulus I and Antigonus (Eshel, 1991–1992). It is important to distinguish with Newsom (1988) between the original historical background of the passage in the Apocryphon of Joshua (perhaps alluding to the outbreak of a revolt in Jericho against Artaxerxes III, that is, to fourth-century BCE events; see cautiously Newsom, 1988; cf. Eshel, 1992, p. 414, n. 23; in the *editio major* Newsom [1996, pp. 238–239, 281], is more uncertain, assuming only a presectarian origin of 4QApJos) and the citation of it in Testimonia. While the most serious argument, that is, the paleographical date of Testimonia contradicts the late dating of the composition suggested by Allegro, the best arguments seem to exist for the identification with John Hyrcanus I, not only with the accursed man in the last passage Testimonia 21–30 (i.e., a kind of secondary identification, ignoring the original meaning in 4QApJos), but with the figures of all the other quotations too: Josephus (*The Jewish War* 1.69, *Jewish Antiquities* 13.330) describes John Hyrcanus I as a prophet (cf. Testimonia 1–8), ruler (cf. Testimonia 9–13), and high priest (cf. Testimonia 14–20; see Treves, 1959–1960, and especially Eshel, 1992). Testimonia would very probably be of polemical character (but see Treves, 1959–1960, who assumes that the author of Testimonia was pro-Hasmonean, believing that the biblical passages were fulfilled in the person of John Hyrcanus I) and might have been composed sometime after the death of Antigonus and Aristobulus I in 103 BC. Whatever the historical background of Testimonia was, the peculiarities of this manuscript, with its particular format and the carelessness of the script, could indicate that it was written for private use, for example, as a kind of preparation notes for a discussion or for an eschatological commentary.

Testimony-Hypothesis. Testimonia is of particular importance for the debate on whether early Christianity used collections of proof texts. Before the Qumran finds the most ancient acknowledged collection of proof texts was Cyprian's "Testimoniorum libri III" (249/250 CE), but the Testimony-Hypothesis—first raised by Burkitt and Harris—has received strong support from the discovery of the pre-Christian compositions Testimonia and the Midrash on Eschatology (Florilegium [4Q174] and Cate-na' [4Q177]). Evidence for the hypothesis within early Christian literature is, for example, the quotation of *Malachi* 3.1, which occurs in combination with *Isaiah* 40.3 and *Mark* 1.2–3 and which is erroneously presented as a quotation from the prophet Isaiah (a collection of proof

texts on the topic "preparing the way," with insufficient mention of the sources, might have been used), and the sequence of *Isaiah* 28.16, Psalms 118 (Septuagint 117) and 22, and *Isaiah* 8.14 used in *Matthew* 21.42, *Romans* 9.33, *1 Peter* 2.6-8, and *Barn* 6.2-4 (see, e.g., Fitzmyer, 1957). J. de Waard (1965) was the first to note that *Amos* 9.11 is quoted in Florilegium (4Q174 3.12) and in *Acts of the Apostles* (15.16) in the same way, against the Masoretic Text and the Septuagint. It is uncertain how this should be interpreted: both might have quoted the same unknown textual tradition (cf. also CD vii.16), but the fact that both share the same quotation formula (a formula that is unusual in 4Q174) might alternatively speak for the use of a collection of proof texts, in this case perhaps a collection containing formulas, too (on this and on the possibility that 4QMidr-Eschat might at least partially be based on collections of biblical quotations, see Steudel, 1994, pp. 138-139).

Excerpted Texts. Testimonia is related to other texts that also collect biblical quotations; the overall genre might be called excerpted texts (see Stegemann, 1967-1969). Excerpted texts are compositions that present—differently than biblical manuscripts—only certain passages of biblical texts. To those excerpted texts belong phylacteries, probably Exodus^b (2Q3), Deuteronomy^c (4Q37), Deuteronomy^d (4Q41), Deuteronomy^e (4Q44), and Testimonia. Apart from Qumran, the Nash Papyrus (second half of the second century BCE) is another contemporary example of an excerpted text; it includes the Ten Commandments and the Shema on one sheet. The purpose and use of such excerpted texts were probably different: some might have been used for studying, others for teaching, or for pious reasons. A certain number of Qumran texts that are counted at present as biblical manuscripts might in fact have been excerpted texts (on criteria for distinguishing between biblical and excerpted manuscripts, e.g., the script, see Stegemann, 1967-1969, pp. 217-218; a material reconstruction of the manuscripts might help to clarify doubtful cases).

TETRAGRAMMATON. See Names of God.

TEXTILES. Thanks to the arid conditions prevailing in the Judean Desert, organic materials, including textiles, dating from the Chalcolithic period on, have been recovered in archaeological excavations conducted at the sites. This article, which focuses on those textiles dated to the Roman period, is divided into three principal parts: the textiles found during archaeological excavations, Dead Sea Scroll descriptions of articles made from textiles, and the processes and equipment used to create the textiles.

Textile Finds from the Judean Desert. The quality, quantity, origins, and types of textiles found in the Judean Desert vary considerably. Wool and linen, scarves and scroll wrappers, are just some of the articles identified.

Qumran. The Qumran textiles differ in two ways from all the other textile finds in the Judean Desert: they are all woven of linen threads, and they were not intended for use as clothing or coverings, but were for wrapping and preserving the scrolls. Initially, one of the wrappers was studied by Louisa Bellinger (1950), and subsequently

all the other fragments were examined by G. M. Crowfoot (1955). The main results of her examination follow:

The textiles found in the first cave comprise mainly scroll wrappers, covers for tying over jar tops, and packing pads for the scrolls in the jars. These were the first textiles found in the Judean Desert. The seventy-five fragments cataloged belong to more than fifty separate items (wrappers, covers, packing pads). Full measurements were obtained in only ten cases: the largest measures 1.57 by 60 centimeters and the smallest 27.2 by 23.2 centimeters. All the threads are S-spun and the weaving is tabby (plain weave).

No textiles were found by de Vaux (1973) on the site; however, an imprint of a bag in which eighteen coins, dated 78–95 CE (Agrippa II), had been placed was found. On the basis of the photo, it appears that the bag was tabby-woven of linen threads (de Vaux, 1973 pl. XXXVc).

The only decorations found in the wrappers are blue threads dyed with indigo. On sixteen linen wrappers, a pattern consisting of three quadrangles was found carefully woven or partly embroidered, with blue threads crossing in warp and weft (technically a very complicated weave). The center figure is rectangular; the other two external figures are more square. The complicated pattern seems to represent the ground plan of the temple as conceived by the Qumran sect and may also have a mystical value (talismanic power) to protect the sacred books.

It is not certain how the dead were buried at Qumran. In the twenty-six graves excavated by de Vaux (1973, p. 45ff.), no remains of textiles were found. Steckoll (1968) excavated nine graves; in Grave G.2 a fine brown dust fell from the skull and other bones, which may indicate the remains of shrouds. Bar-Adon (1977, p. 22) found in the burial of a woman (Tomb 12) bulrush impressions, suggesting that the dead were buried in reed mats.

The woven linens are most probably local. The varied spinning, the woolly threads, the low thread count, and the true linen weave, all of which are typical of local linen, and the fact that linen fabrics were manufactured here, especially fine fabrics in Beth-Shean, support the argument. The looms could have been any one of the three types known in that period: ground looms, vertical looms, and warp-weighted looms. The last is more likely because of the corded starting border found in the textiles, which is typical of textiles woven on warp-weighted looms, as well as the many loom weights from the Hellenistic-Roman period found in the vicinity at Masada and Tell Goren (Tell el Jurn) near 'Ejn-Gedi (Mazar et al., 1966), which indicate that this loom was still in use in the Roman period.

Judean Desert caves. Since the first discovery of textiles in Qumran, many more textiles have been found, most of them in caves mainly occupied during two peri-

ods: Chalcolithic and Roman. The poor condition of the loci in which these fragments were found sometimes makes contextual dating impossible.

Murabba'at. In the excavations of the Murabba'at caves (1952), 146 fragments were found, consisting of wool, cotton, and silk fabrics. The largest group, 69 wool fragments, dates from the time of the Bar Kokhba Revolt (135 CE), while 39 linens may be earlier or later. Thirty-one linen, cotton, and silk fragments are medieval. Spinning and weaving instruments were also found (Crowfoot and Crowfoot, 1961).

Cave of the Treasure. A total of 31 wool fragments and 134 linen pieces were examined. The textiles were divided into three chronological groups: Chalcolithic, Roman, and Intermediate (the date of the textiles from the last group could not be determined). Further examination proved that the woolens, initially thought to be Chalcolithic, are actually Roman. Fourteen undyed linen samples and one brown and one pink fragment, clearly dating to the Roman period, were examined by the Institute of Fibers and Forest Research. The threads are S-spun, the weave is tabby or basket weave. Sewing was used for strengthening the selvages (Bar-Adon, 1980).

Cave of the Letters. The textiles from this cave are particularly important because of their secure date (135 CE) and their large number (fifty-six linen and sixty-three woolens), size (some garments could be reconstructed), and variety.

The textile finds shed new light on Jewish dress in the Roman period and clarify doubtful references to garments as mentioned in halakhic literature. Textile artifacts include wool and linen tunics with colored *clavi*, decorated men's and women's mantels, spreads, scarves, hairnets, scroll wrappers, and so forth. No garment made of *sha'atnez* (mixed linen and wool) material was found. Among Babatha's belongings were spindle whorls, balls of linen, and colored wool-spun threads. A bundle of unspun wool-dyed kermes was evidently intended for making the "blue cord" of the *tsitsiyvot* or ritual fringes (Yadin, 1963).

Judean Desert campaigns. Most of the caves excavated during the Judean Desert campaign (1960–1961) and the campaigns that followed present a similar picture. The occupation of these caves is dated mainly to two periods: Chalcolithic and Roman. Most of the textiles found in these caves have not yet been studied or published.

Wadi ed-Daliyeh. The textile fragments from the Abu Shumqa caves in Wadi ed-Daliyeh (excavated 1963–1964) date from two periods: Late Persian (fourth century BCE) and Roman. The fragments from the late Persian period are remnants of garments that belonged to rich Samaritan refugees who hid and died there following their revolt against Alexander the Great. Those from the Roman pe-

riod belong to the Jews who hid there during the Bar Kokhba Revolt.

As the fragments were found in a very disturbed state, it was difficult to distinguish between those of the late Persian period and those of the Roman period. However, the fortunate preservation of a linen fragment, which still adhered to one of the Samaritan skeletons, allows one to infer that similar fragments also belonged to this period. Of the total of fifty-nine pieces found, thirty-six are Samaritan linens, twelve are Roman woolens, five are tent fabrics, three are braids, and three are recent fabrics. A child's linen tunic was the only garment that could be reconstructed (Crowfoot, 1974).

Masada. In the excavations of Masada (by Yadin in 1963–1964) thousands of textile items were found, most of them in the casemate wall constituting the Zealot's living quarters (74 CE). Only about 130 textiles were cleaned, studied, and published. The diversity of fibers, range of colors, and hitherto unknown weaving techniques are truly astonishing. Almost every item of clothing (tunics, mantles, a sock, hairnets, baskets, and coverings) is incomplete and patched. The one exception is an almost-complete embroidered wrapper. The spindle whorls found in almost every room and the many warp-weighted looms unearthed suggest that spinning and weaving were done at the site (Sheffer and Granger-Taylor, 1994).

'Ein-Gedi. Nine tombs dating from the Second Temple period (Late Hellenistic) were excavated by G. Hadas in 1984–1989 in the vicinity of 'Ein-Gedi. Remains of linen textiles were found around the limbs and skulls of the deceased in the tombs and in the coffins. Textile fragments assumed to be shroud remnants found in Tomb 2 were examined by A. Sheffer. Two varieties of weave were observed, both using S-spun linen threads. Type A was woven of single threads in a plain (tabby) weave (12 by 10 threads per square centimeter). Type B is somewhat coarser, using double threads in an extended tabby weave (16 by 12 threads per square centimeter). Since the sample size is small and no edges remain, warp and weft could not be distinguished. One item was a corded starting border, similar to items found at Qumran and Murabba'at (Crowfoot, 1955, pp. 21 and 33, fig. 5; Crowfoot and Crowfoot, 1961, p. 56, fig. 15). The discovery of two kinds of fabric, coarse and fine, in the tombs recalls the description of the revived Lazarus in *John* (11.44): "bound hand and foot with grave clothes, and his face . . . bound about with a napkin."

In Coffin 4 of Tomb 1 and Coffin 2 of Tomb 6, a knotted piece lay above the right shoulder of the deceased. Hadas identified this knot with the *afqarsin* mentioned in rabbinic literature (Hadas, 1994).

The fine quality of the 'Ein-Gedi textiles suggests that they were made on a warp-weighted loom; clay weights

belonging to such a loom were found in the roughly contemporary Stratum III at nearby Tel Goren.

Scroll Descriptions of Articles Made from Textiles. The Dead Sea Scrolls contain numerous descriptions of garments and other articles made from textiles. The descriptions can be categorized into two groups, those for the priests and those for the nonpriestly members of the Qumran sect.

Garments of the members of the Qumran sect. In the various purification ceremonies mentioned in the scrolls, it is said that in purifying themselves, members of the sect were required to wash not only their bodies and possessions, but their clothing as well (Ritual of Purification, 4Q512 11.3). Any member of the sect who walked naked in front of his friends, not being forced to do so, would be punished for six months (1QRule of the Community, 1QS vii.2). It can be assumed that members of the sect wore garments used by the Jews at that time, such as those found in the Cave of the Letters and seen on the paintings on the walls of the Synagogue at Dura Europos (265 CE). The standard garments of the period were the *kutonet* (*tunica*)—*hahuq* in halakhic literature—and the *me'il* (*pallium*)—*talit* in halakhic literature.

The *kutonet* consisted of two identical rectangular pieces of fabric sewn together above the shoulders and at the sides, with an opening for the head and arms. Another kind of *kutonet* was found in Dura Europos (Pfister and Bellinger, 1945). It was woven from a single piece with a slit between warps for the neck. Both types of *kutonet* are characterized by two colored bands (*clavi*) along the body, starting near the neck opening and running vertically down the front and the back.

The *me'il* consisted of an elongated rectangular sheet with geometrically colored decorations on the four corners. The men's *talit* was white and decorated with notched bands; the women's *talit* was colored and decorated with gamma designs. The only reconstructed *talit* (Yadin, 1963, p. 223, no. 43–8, ii) was 2.7 meters long (warp) and 1.4 meters wide (weft) with gamma decorations.

The *talit* was worn with the longer side draped around the body in different ways, depending on its size. The *talit* found by Yadin could be draped from under the left armpit, held by the left hand, draped to the right front, brought around the back and passed on to the front again; the excess material could be thrown over the right shoulder, leaving the right hand free. The short ones could be fastened to the right shoulder with a knot or a brooch. In a painting in the Dura Europos synagogue, Abraham wears his *talit* over his shoulders, and the edges are held by his hands. Other possibilities are also depicted in the Dura Europos synagogue paintings. It seems that the *talit* was made in different sizes, some very long, while others were quite short.

From 1QRule of the Community (1QS vii.15), it is obvious that some kind of covering, probably a *talit*, was worn by everyone. Perhaps some people wore only the *talit*, for example, workers or fishermen (*Jn.* 21.7) or the Greek philosophers. If the *talit* was not wide enough and nothing was worn underneath, the one who talked (or bent) while gesturing with his left hand would expose his private parts. Although the word "*puat*" (1QS vii.14) is not clear, it seems that the person wearing a torn *tunica* or no *tunica* at all under the *talit*, thereby revealing his private parts, would be punished.

Loincloths are not mentioned in the scrolls. Essene men worked and bathed wearing loincloths (Josephus, *The Jewish War* 2.165), while women wore tunics. During meals they probably wore *talliot*. Perhaps they wore nothing under their *talliot*, which had to be wide enough to be draped around when they squatted to relieve themselves.

Priestly garments. The "seven priests of the sons of Aaron" headed by the chief priest (War Scroll, 1QM vii.8–9) wore identical garments, called "garments for battle" and "destined for the appointed time of vengeance," not to be brought into the Temple (1QM vii.10–11). The garments are made of white byssus including (a) a linen tunic (*kuonet-bad*); (b) linen trousers (*mikhnesei-bad*); (c) a linen girdle (*avnet-bad*) decorated with "twined byssus, blue, purple, and scarlet, as well as a brocaded pattern cunningly wrought"; and (d) turbaned headdresses (*pa'arei migba'ot*). In the Bible, these garments are called "sacred garments" and are worn by the high priest and his sons when they enter the Tabernacle (*Lv.* 16.4; *Ex.* 28.39–43, 39.27–32; *Ezek.* 44.18).

The Temple Scroll adds the word "linen" to the first three articles, noting the fact that they are made of white (*shesh*) linen. We do not know how the priestly vestments of the biblical period appeared. However, we are acquainted with the garments of the inhabitants of the region as depicted in Assyrian reliefs (*The Ancient Near East in Pictures*, fig. 355: The Black Obelisk of Shalmaneser III).

Trousers are not found in this relief or in any graphic depictions from Old Testament times, although they are described in detail in *Exodus* 28.42, which states that the priests wore them "from the loins to the thighs" in order "to cover their naked flesh." Josephus's description of the high priest's garments notes that the high priest wore trousers, which covered his thighs (*The Jewish War* 5.237ff.).

In the synagogue paintings of Dura Europos (265 CE) trousers are worn by Parthians. In Roman depictions only the barbarians wear trousers. The priests were probably obliged to wear trousers so that the people observing from below would not see their nakedness when they went up to the altar. According to the Mishnah (*Tam.*

5.3), when the priests removed their clothing they had to keep on their trousers. The priests wore linen clothing decorated with threads dyed in special and costly color. Josephus (*The Jewish War* 5.237ff.) presents extensive descriptions of their splendor, emphasizing that gold was the most prominent color of the ephod. The priestly garments were considered part of the treasures of the Temple and in time of danger, they were hidden with other Temple treasures (3Q15 1.9).

In the temple described in the Temple Scroll, a special structure was built for the costly priestly vestments—"The House of the Laver" (*beit kiyyor*). The *beit kiyyor* is also mentioned in the Mishnah (*Tam.* 5.3; *Toh.* 7.7; see *Tosefta Sukkot* 2.24). In the walls of the structure were gold-plated cells (11Q19 xxxii.8) appropriate for the storage of the holy garments. Here the priests stored the holy vestments (11Q19 xxxii.1–7), which were Pelusian linen for the morning service and Indian linen for the afternoon service (*B.Q.* 10.9). This custom is referred to in *Ezekiel* 42.14, which states that the priests were required to wear linen garments in the inner court and change from the holy vestments into ordinary clothes when they left for the outer court. Aaron and his sons likewise did this upon entering the Tent of the Congregation (*Lv.* 16.23). A humble structure for storage of clothing was found at Masada in Room 1192 (Netzer, 1991, pp. 505, 512, 513). This structure apparently served for common people.

Manufacturing Procedures and Implements. Flax (*Linum usitatissimum*) has to undergo several stages of preparation to be ready for spinning. It has to be separated from the woody core and bark in several operations, which have remained unchanged over the last four millennia:

1. Combing the dried flax with a rippling comb to remove the seeds.
2. Retting the flax in flowing water, where the flax is weighted down with stones for two to three days. (The bark is loosened from the bundle of bast fibers as a result of bacteriological decay.)
3. Hammering the bundles of fibers with a wooden mallet to remove the bark and woody core.
4. Bending the stalks over a narrow object and beating them with a scutching knife (wooden blade) to dispose of the remains of the bark. This process is called scutching.
5. Drawing the stalks across a hackle, a board set out with several rows of iron spikes of graded size (*Soi.* 9.5). This process is called hackling.
6. The installation at 'Ejn-Feshkha (de Vaux, 1973, pp. 75–83) could have been used in the industrial processing of flax to produce linen and dyeing threads with indigo.

The prepared fibers are then wound into a coil, ready to be attached to the distaff.

All the equipment needed for the preparation of linen is made of wood except the hackle, which has iron teeth. Examples of these implements have not been found in the Judean Desert.

Spinning, the forming of threads by drawing out and twisting fibers, is usually done by women with a spindle and a distaff (*Prov.* 31:19). The twist can be in either direction, to the right (Z) or to the left (S).

The spindle is a slender stick of wood, tapering at one end or both, up to 30 centimeters in length, and weighted by a whorl at either of its ends (*Par.* 12:8). Above the whorl is a hook (Crowfoot and Crowfoot, 1961, XIII:9; Aharoni, 1961, pl. XXII) or a groove (Crowfoot and Crowfoot, 1961, pl. XIII:7, 8; Yadin, 1966, p. 145) on which the yarn is caught while twisting.

The spindle whorl is usually a disk-shaped weight, pierced by a central hole into which the stick is inserted, sometimes to its midpoint (Crowfoot and Crowfoot, 1961, XIII:7). The whorls, about 5 centimeters in diameter, add momentum to the rotation of the spindle. The whorl is made of various kinds of material: bone, stone, glass, et cetera. The dimensions and weight are determined by the yarn desired and fiber used. The coarser yarns require a heavier spindle and the thin yarns a lighter one. The whorls found in the Judean Desert caves were made of various materials and different shapes. In the Zealots' dwellings on Masada, different kinds of whorls were encountered, obviously for different purposes.

The distaff is a short stick about 20–30 centimeters in length, plain or ornamented and grasped in the left hand. It serves to hold the prepared raw fibers, which are transferred to the spindle during the spinning operation. Any stick could be used. It is therefore difficult to identify distaffs in the Judean Desert sites. The stick found at Murabba'at (Crowfoot and Crowfoot, 1961, pl. XIII:6) could have been used as a distaff.

No spinning or weaving tools were found in Qumran or in its graves. However, the spinning tools found in the Judean Desert caves and in Masada indicate that spinning was a household activity practiced by women of all classes.

Dyeing. Every fiber has to be washed and bleached before dyeing, otherwise the dye will not adhere to it. The linen is first soaked in cold water, then boiled in a vat with potash or other alkaline plants, rinsed in flowing water, dried, and bleached in the sun. Only blue dye was used in the linen textiles of Qumran. The threads were dyed with indigo extracted from the leaves of the plant *Isatis tinctoria* L. (woad), which grows in the Jordan Valley. The ground leaves are allowed to ferment in water

with the addition of an alkaline substance, such as vegetable ashes, urine, and limewater.

Looms. The looms used in this period are the horizontal ground loom, whose warp stretched between two beams fastened to four pegs driven into the ground, and the vertical two-beamed loom, whose warp stretched between two beams fastened in a rectangular wooden frame. Both are still in use in the Near East. The ground loom is used by the bedouin while the vertical loom is used by the weavers at Gaza. The Mishnah refers to two kinds of loom (*Zav.* 3.2): the vertical loom (*Kel.* 11.1; *Neg.* 11.9), in which the weaving is done toward the lower part of the loom, while sitting; and the warp-weighted loom (the warp stretched between an upper beam and a series of weights), on which the weaving is done toward the upper part, while standing (*Zav.* 3.2; *Neg.* 2.4). A few tools are needed to help the weaver in his work:

Heddle—to which the alternate warp threads are looped in order to open the shed to permit the passage of the weft;

Laze-rod or Rods—a stick or sticks to maintain the thread order;

Sword-beater—a flat blade of wood used to beat in the weft, sometimes used also to keep the countershed open;

Comb-beater and/or iron hook—to beat in the weft.

There is no proof that any of the combs found in the Judean Desert caves or at Masada were used for weaving. Lice found on many combs indicate that they were used to comb women's hair. As most parts of the loom and the weaving implements are made of perishable materials, there is little hope of finding any remains. The only evidence we have about the use of the warp-weighted looms is the clay weights found in many excavations. In addition, the excavation at Masada revealed marks of warp threads upon a wall, indicating the use of such a loom.

THANKSGIVING SCROLL. See Hodayot.

THERAPEUTAE. The Therapeutae, a group of Jews wholly devoted to worship and meditation, were highly praised by Philo in *On the Contemplative Life*. No other Jewish source speaks of them. Church fathers who refer to them seem dependent on Philo's information (Eusebius, *History of the Church* II.17; Jerome, *Against Jovinian* II.14).

Either contemplative Essenes, or an independent band of contemplatives according to Philo, whose language is ambiguous, the Therapeutae's name derives from the Greek *therapeuo*, meaning "to heal" or "to worship" (Philo, *Life*, 1). He provides a detailed description of their beliefs and way of life. He says about them that, unlike physicians who simply treat bodily ills, they are expert in healing diseases of the soul. They worship the Existent One who is better than the highest good, more simple (*heilikrimesteron*) than the One (*Life* 2). According to Philo, Therapeutae aspire to the vision of the Existent One, never leaving the order (*taxis*), which leads to happiness: motivated not by custom or the promptings of others, they have been seized by heavenly love, enthused like Bacchantes or Corybantes until they see the object of their desire (*Life* 11–12).

A Spiritual Life. According to Philo, the Therapeutae lived mainly above Lake Mareotis near Alexandria in Egypt, where surrounding villages provided security against brigands and the climate was temperate (*Life* 21–24). It was sufficiently isolated to provide their preferred solitary settlements, simple houses so distanced from one another as to permit solitude without forfeiting community (*Life* 20, 24). Each house had a sacred room or shrine and monastery (*monasterion*), where the Therapeutae practiced day and night the mysteries of the holy life in solitude, taking there nothing but the Laws, oracles of the Prophets, hymns (and other things that increase devotion), and perfect piety (*Life* 25–26).

Philo describes them as a group who philanthropically abandoned property to families or friends, who fled from all responsibilities, avoiding cities as places of uproar and confusion (*Life* 13–20). In solitude they prayed twice daily, around dawn and at evening (*Life* 27). During the day, they read scripture and followed their ancestral philosophy by allegorizing, perceiving literal expressions as symbols of hidden meanings. They engaged not only in contemplation, but also in action by composing hymns to God (*Life* 28–29). So they imitate the purpose of their philosophy, writes Philo (*Life* 29), doubtless referring back to his explanation of the name *Therapeutae* as expressing both meditation and sacred action (*Life* 2). Alone for six days in the monasteries, they gathered on the Sabbath to sit in order of seniority, their hands turned inward, the right held between breast and chin, the left along the thigh. The eldest spoke while the rest sat silently, signalling approval by slight gestures of eye or head (*Life* 30–31). They met in a sanctuary having a wall dividing men from women, its upper part open so that all might hear what was said (*Life* 32–33).

They held self-control as the basis of all virtues: they neither ate nor drank before sundown, using light for acquiring wisdom, darkness for bodily necessities. Some ate every third day; others consumed little during the week, waiting until the Sabbath, the all-holy festival when they refreshed both soul and body (*Life* 34–36). Their food was cheap bread and salt, to which the fastidious might add hyssop. They drank water. They consumed these things for bodily needs only (*Life* 37). Likewise their differing winter and summer clothes were poor, worn only to cover and protect them. All vanity was excluded as a source of falsehood, while they considered simplicity to belong with truth (*Life* 37–40).

Philo's arithmological interests were aroused by their meeting after a seven-week period on the eve of "the greatest festival," which was on the fiftieth day, apparently, a likely reference to Pentecost. Then, the Therapeutae joyfully donned white robes and at a given signal

stood in rows one behind the other, lifting eyes and hands to heaven in prayer that God be pleased with the festival (*Life* 65–66). The elders lined up in order of election that determined seniority, men on the right, women (mostly aged virgins) on the left. Couches of the simplest sort were provided. No slaves served them, only young novices, like sons waited on their fathers (*Life* 67–72). Only cold or warm water was served. Philo writes that meat would pollute the table; so bread, salt, and occasionally hyssop were used. Just as scripture orders priests to abstain from wine while sacrificing, so the Therapeutae were commanded to live in like manner (*Life* 73–74).

With banqueters reclining and servants attending, the president called for a silence deeper than usual. He expounded a scriptural passage, the audience making slight gestures to show approval or puzzlement (*Life* 75–77; cf. 31). Philo's account states that he expounded allegorically that like a living creature of body and soul, the Law has outer literal sense and inner reason concealed in its words. Applause followed this sermon; then a member sang a hymn, either new or old. The hymns were of different kinds, and the rest of the gathering sang in order of rank (*taxis*), the others listening in silence but joining the chorus (*Life* 79–80).

As Philo describes it, the novices brought the table bearing the all-holiest food, leavened bread and salt mixed with hyssop. This was out of reverence for the holy table in the Temple, which bore unleavened loaves and unmixed salt. The simplest and best things were apportioned to the most excellent of priests: abstaining from what is exactly the same, the Therapeutae emulated what was similar, so that the priests retained their privilege (*Life* 81–82). An all-night festival followed. A choir of men and another of women sang hymns, waved, leapt, and cried out for joy. Then they formed a single choir like that at the Red Sea to celebrate the miracles of the Exodus when Moses led the men, Miriam the women—all seized by the divine spirit. This ecstatic rejoicing they piously imitated in godly drunkenness until dawn, when they faced east and, at sunrise, lifted hands to heaven and prayed for a fine day, truth, and clear judgment. Thus they left the sanctuary. Their life was that of the soul alone: as citizens of heaven and of the universe, their virtue was rewarded by anticipatory elevation to heavenly bliss (*Life* 83–90).

An Idealized Account. Philo's account seems to idealize the Therapeutae. Some of them, so rapt in contemplation, seem to live on air (*Life* 35). In places the description of the Therapeutae corresponds with his picture of the Levites as ideals of the spiritual life. Thus, Therapeutae disown their families for God himself, like the Levites (*De Fuga* 102; *Leg. Alleg.* 11.51; *De Sac.* 119, 129). Like the Levites (*De Plant.* 62–64), their minds are purified to

know only the one God; they are voluntary exiles, like Levites (*De Fuga* 88); and fifty, a number specially honored in their worship, is significant also for Levites (*Quod Det.* 63–68). Their closest affinities, however, are with the Essenes described by Philo and Josephus. Since they share characteristics of the Essenes, which Josephus records but Philo does not, it is likely that, for all his idealization of them, Philo provides a reasonable core of reliable evidence about the group.

Comparison with Essenes. Peculiar to Philo's accounts of Essenes are the notes that they avoid cities, interpret scripture symbolically following ancient teaching (*Every Good Man Is Free* 76, 82), and wear different clothes in summer and winter. Similar things are reported of Therapeutae (*Life* 19–24, 28, 38). Both Philo and Josephus speak of Essenes as holding meals in common (*Every Good Man Is Free* 86; *The Jewish War* 2.128–132): Therapeutae have a similar institution for Sabbath and Pentecost (*Life* 36, 40, 81). Both groups love frugality (*Every Good Man Is Free* 77; *Apol.* 11; *The Jewish War* 2.130, 133; *Life* 37) and live celibate lives (*Apol.* 14–17; *The Jewish War* 2.121; *Antiquities* 18.21; *Life* 68). Finally, Torah study is the first love of both groups (*Every Good Man Is Free* 88; *The Jewish War* 145; *Life* 25, 28, 75).

Josephus, not Philo, tells how Essenes don a white garment to eat (*The Jewish War* 2.131), as do the Therapeutae at Pentecost (*Life* 66). He notes that they recruit the young (*The Jewish War* 2.120); are armed against brigands (*The Jewish War* 2.125); turn each morning in prayer toward the sun when it rises (*The Jewish War* 2.128); study the art of healing (*The Jewish War* 2.136); and possess peculiar writings of their own (*The Jewish War* 2.142). Similar statements are made by Philo about the Therapeutae (see *Life* 67–68, 24, 27 and 89, 2, 29 for each item, respectively, and in order).

To these similarities may be added stress on order among the Therapeutae (*Life* 11, 30–31, 66–67, 80), attested also of Essenes by Philo (*Every Good Man Is Free* 80–81); their refusal, like the Essenes, to own slaves (*Life* 70–72; *Every Good Man Is Free* 79; *Jewish Antiquities* 18.21); and their understandings of falsehood and truth (*Life* 39; *Every Good Man Is Free* 83; *The Jewish War* 2.139). Their meeting places are described as a sanctuary (*Life* 25, 32 for Therapeutae; *The Jewish War* 2.129–131 for Essenes) where silence reigns (*Life* 31, 75; *The Jewish War* 2.130, 132), and where a priestly ambience prevails (*Life* 81–82; *The Jewish War* 2.131). Finally, the term *Essenes* may possibly mean “healers” (if taken as deriving from Aramaic *asayya'*), which might be rendered into Greek as Therapeutae. This last is, however, disputed; and it prompts notice of recorded differences between Therapeutae and Essenes.

Essenes lived in the Land of Israel (*Every Good Man Is*

Free 75). In *On the Contemplative Life* 21 Philo suggests that Therapeutae were found in many places, though chiefly by Lake Marcotis. Thus some possibly lived in the Holy Land, but their Egyptian location seems to be significant. The famed "communism" of Essene life (*Every Good Man Is Free* 85–86; *The Jewish War* 2.122) finds no mention in Philo's record of the Therapeutae, which also states that the group was made up of men and women (*Life* 67–69): Essenes, except the married "third order" noted by Josephus (*The Jewish War* 2.160–161), seem to have been men. Neither Philo nor Josephus states that Essenes refrained from meat or wine, as did Therapeutae (*Life* 37, 73, 81). Indeed, Essenes assembled daily for two meals (*The Jewish War* 2.130–132), Therapeutae once a week (*Life* 30, 36); the latter were otherwise solitary, many eating hardly at all. Pentecost expresses the highest aspirations of the contemplative year for the Therapeutae (*Life* 65–90); it does not feature in descriptions of Essenes. Finally, there is a strong ecstatic element in Therapeutic life (*Life* 11–12, 83–90), which is not attested of Essenes.

Relation to Qumran Jews. The Qumran Jews, who are generally thought to be related in some way to the Essenes, reveal ideas shared with the Therapeutae. The former used a Pentecontad calendar, while Therapeutae stressed the number fifty in a calendrical setting (*Life* 65), which seems to refer to Pentecost, most probably the chief feast at Qumran (Rule of the Community [1QS] i–iii). Pentecontad calendrical arrangements feature also in the Temple Scroll, fifty days separating the waving of the 'omer, Pentecost, wine festival, and oil festival from each other. Pentecontad calendrical arrangements feature also in the Temple Scroll (11QT19^a xviii.10–15). Words related to "oneness" and unity abound in Philo's discourse and have been noted above: they recall in some measure the *yahad* of Qumran, and the implications of that term in respect of divine unity and Israel's proper undivided response to it. The composition of hymns as a Therapeutic activity (*Life* 29, 80) finds its counterpart in the Hodayat, Blessings, and other poetry from Qumran. [See Hymns, Prayers, and Psalms.] Mention of a women's choir imitating Miriam (*Life* 87) may reflect Therapeutic interest in her song (*Ex.* 15.21) expressed also in Reworked Penta-teuch^c (4Q365), which preserves fragments of a lost "Song of Miriam." Notions of *serekh* ("order") in its various senses, which find expression in Qumran writings, may be paralleled among the Therapeutae (*Life* 11, 30–31, 66–67, 80). Both the Qumranites and the Therapeutae make signs with the right hand (1QS vii.15; *Life* 77). On the other hand, discoveries of cooked animal bones at Qumran may indicate that the inhabitants ate meat, which the Therapeutae avoided (*Life* 73); and the Qumranites drank *tirosh* (e.g., 1QS 6.4), which may refer to wine, a drink

acceptable to Therapeutae (*Life* 74), or to unfermented grape juice.

Validity of the Source. The fact that there are both similarities and differences between Therapeutae, Essenes, and Qumran Jews suggests that Philo describes people known to him directly or indirectly. His idealizations, which portray Therapeutae as superior to Greek philosophers (*Life* 14), and his perhaps schematized presentation of them, do not require a conclusion that the Therapeutae were any less a real group than the Pythagoreans to whom Josephus compares the Essenes (*Jewish Antiquities* 15.371), or the Scythians idealized by Strabo (*Geography* 7.3.9). Evidence surveyed here suggests that Therapeutae and Essenes were not identical. Their common features, however, suggest that they may have originated from a single parent body and struck out along slightly different paths. Likewise Essenes, the Qumran group, and Therapeutae may all depend on and represent different aspects of a common approach to religious life, which evolved to meet specific needs of the specially devout in late Second Temple times. The Therapeutae may therefore legitimately be considered in discussions of Essene and Qumran beliefs and practices, and serve to show how widespread the general principles underlying these understandings of Judaism had become by the first century CE.

C. T. R. HAYWARD

THRONE. References to heavenly thrones occur in three Dead Sea Scroll texts. In the Songs of the Sabbath Sacrifice (4Q400-407, 11Q17, Mas1k), the chariot throne of God is the subject of an extensive description, whereas in War Scroll^a (4Q491), a hymn of self-glorification describes the human speaker as receiving "a mighty throne in the council of the gods." [See Songs of the Sabbath Sacrifice and War Scroll.] A reference to thrones as an eschatological reward for the righteous occurs in the Messianic Apocalypse (4Q521). [See Messianic Apocalypse.]

References to the heavenly throne (*kisse'*) of God occur in numerous biblical texts. The common ancient Near Eastern convention, which depicted the chief god as an enthroned king surrounded by courtiers, is assumed in the vision reports of Micaiah ben Imlah (*1 Kgs.* 22.19) and Isaiah (*Is.* 6.1-2), and elaborated with descriptive details in the apocalyptic vision of Daniel (*Dn.* 7.9-10). The most extensive account of the divine throne in the Hebrew scriptures, however, is found in *Ezekiel* 1, a text that had a profound influence on later literature. In *Ezekiel* and *Daniel* the throne is said to have wheels, thus identifying it as a chariot throne, even though the term "chariot" (*merkavah*) is not used (cf. *Sir.* 49.8). Details of the chariot throne, including the cherubim and perhaps the *ofannim* ("wheels"), associate it with the ark, which represented the presence of God in the sanctuary (*1 Chr.* 28.18). Accounts of the divine throne occur frequently in apocalyptic literature, often at the climax of the visionary's heavenly journey and sometimes in association with the heavenly temple (e.g., *1 En.* 14, *Rv.* 4-5, *Apocalypse of Abraham* 18, *Testament of Levi* 5). Speculation on the

throne of God and its associated creatures becomes an important aspect of Merkavah mysticism (see *Mu'aseh Merkavah, Heikhalot Rabbati*).

In contrast to the narrative context of prophetic and apocalyptic accounts, the Songs of the Sabbath Sacrifice refers to the heavenly chariot throne in the context of a liturgy of praise. The Songs of the Sabbath Sacrifice comprises a cycle of thirteen songs in which the speaker summons the angels to praise God, following the calls to praise with descriptions of the nature of the priestly angels, the heavenly temple, and the praise conducted within it. Allusions to the throne occur in the seventh, eleventh, and twelfth Sabbath songs. In the seventh song, the divine throne of God in the Holy of Holies of the heavenly temple is described in terms evocative of *Ezekiel* 1; but at the conclusion of the song there is a description of multiple chariot thrones (*merkavot*), with their attendant cherubim and *ofannim*, praising God together (Songs of the Sabbath Sacrifice^d, 4Q403 1.ii.1-16; cf. Berakhot^d 4Q286 1). A similar description of multiple chariot thrones occurs at the end of the eleventh Sabbath song. The closest parallel to this motif is found in the later Jewish mystical text *Mu'aseh Merkavah*, which describes thousands upon thousands of chariot thrones singing doxologies to God in each of seven *heikhalot* ("palaces," "temples"; *Mu'aseh Merkavah* 6).

The twelfth Sabbath song contains an extended account of the chariot throne that bears the glory of God (*kavod*). In systematic fashion the passage describes the way in which the various creatures associated with the chariot throne (the cherubim, the *ofannim*, and attendant angels) praise God. The passage is closely based on Ezekiel's vision and actually derives its interpretation of the means by which the creatures praise God through an exegesis of *Ezekiel* 1, 3.12-13, and 10, interpreted in light of *1 Kings* 19.11-12 and *Psalms* 68.17-20. Such exegetical development of Ezekiel's vision report is found in the Septuagint and in the Targum and continues in later *merkavah* traditions.

War Scroll^a (4Q491), a hymnic text, part of the War Scroll fragments from Cave 4 at Qumran, initially was described as a canticle of Michael the archangel but is now recognized as a hymn of self-glorification by a human speaker, perhaps the high priest who officiates in the eschatological battle. The speaker refers to "a mighty throne in the council of the gods" and to having "taken my seat in the [council] in heaven." Hodayot^a from Cave 1 at Qumran often refers to the members of the community as "stationed with the host of the holy ones" and "entering into community with the congregation of the heavenly beings" (e.g., 1QH^a ix.21-23 [iii.20-22]), although the imagery of the throne is otherwise not attested in the Hodayot. In biblical depictions of the divine council, the

heavenly beings may be described as standing (*1 Kgs.* 22.19) or as seated on thrones for judgment (*Dn.* 7.9–10, *Rv.* 4.4). Somewhat different from this image of a human being taking a place in the heavenly council are those accounts of the seating of a human being upon a uniquely exalted heavenly throne that is similar to the throne of God (Moses in the *Exagoge* of Ezekiel the Tragedian, lines 68–82; Abel in the *Testament of Abraham*, Recension A, chap. 10; Enoch in *1 Enoch* 61.8, 69.29, 71.14).

Heavenly thrones as an eschatological reward for the pious are a characteristic of the messianic era, according to the Messianic Apocalypse. Similar statements occur in other apocalypses (e.g., *1 En.* 108.12, *Rv.* 3.20; *Martyrdom and Ascension of Isaiah* 9.24–26) and predictions of the messianic age (*Mt.* 19.28, *Lk.* 22.30).

TIMOTHEUS. See Discovery and Purchase.

TITHING. In the biblical period, detailed laws regarding the tenth part of one's annual income set aside for special purposes were dictated. During the Second Temple period three major allocations from the harvest were customary based on the combination of tithes mandated in *Numbers* and *Deuteronomy*.

Tithes in the Second Temple Period. The wave offering (*terumah*) from oil, wine, and grain harvests was given to the priests in accordance with *Numbers* 18. Its percentage was not prescribed, but 2 percent was considered average (*Ter.* 4.3). The *terumah* was sacred, and its consumption was restricted to priests and their households. Because of this and the relative modesty of the portion, the separation of *terumah* was widely observed. The Levites, too, were required to set aside for the priests a "tithe from the tithe" that they received (*Nm.* 18.26).

The Levitical or first tithe (*mu'aser rishon*) was, according to *Numbers* 18, supposed to be given to the Levites. Yet, a number of sources have been cited as indicating that in Second Temple times this tithe was arrogated by the priests. *Judith* 11.13 describes the besieged Jews as consuming the first fruits "and the tithes of the wine and oil, which they had consecrated and set aside for the priests, who minister in the presence of our God." However, a study of the usage of *mu'aser dekate* indicates that this term was frequently used in the generalized sense of any priestly tax, including the *terumah* (Baumgarten, 1984). This would explain the statement in *Judith* 11.13 that "it is not lawful for any of the people so much as to touch these things with their hands." Such a restriction would not apply to the Levitical tithe according to rabbinic *halakhuḥ*, although the Temple Scroll, as we shall see, deemed it to be consecrated. The use of *dekate* for the priestly perquisites is also reflected in *Tobit* 1.6–7 (BA recensions), where "the first fruits, the tithes of the produce, and the first shearings of the sheep" are given to the priests, the sons of Aaron.

The assertion of priestly claims to the Levitical tithe appears to be connected, according to some rabbinic sources, with Hasmonean innovations. In the days of John Hyrcanus the prevailing practice was to enforce the collection of the tithe, which was now treated as a tax used for multiple purposes, and send it to Jerusalem. This served to counter the widespread evasion of the tithe. However, since it was no longer given exclusively to the Levites, John Hyrcanus abolished the recitation found in *Deuteronomy* 26.12–13: "I have removed the hallowed things from my house, and have also given them to the Levite" (*Dt.* 26.13). (See the sources cited by H. Albeck, *Mishnah Zera'im*, [Tel Aviv, 1958] 217–219; Oppenheimer, 1977, pp. 29–42.)

The second tithe (*mu'aser sheni*), a term found already in *Jubilees* and *Tobit*, is based on *Deuteronomy* 14.22–27. It was to be set aside by the owner of the land for consumption at the Temple. If it was inconvenient to bring the actual produce, its monetary value could be substituted to purchase food to be eaten by the owner and his household at the time of pilgrimage.

Deuteronomy 26, which also described the ceremony of bringing first fruits to the Temple, refers to a three-year cycle for completing one's tithing (*Dt.* 26.12). In the third year a tithe was to be given to the needy, including strangers, orphans, and widows. Levites, too, are listed among the poor eligible for what in rabbinic tradition was called *mu'aser 'ani*. According to the rabbis and the Septuagint, this tithe for the poor was to be substituted for the second tithe in the third and sixth year of the septennial cycle, but *Jubilees* 32.11 refers to the second tithe as obligatory "year after year." Josephus (*Jewish Antiqui-*

tes 4.240) speaks of three tithes every third year (cf. *Tb.* 1.8), although the practicality of such imposts justly may be called into question.

Tithes in Qumran Writings. The allocation in the Damascus Document (CD xiv.12–13) of the wages “of at least two days per month” for the needy, though not literally a tithe, illustrates the extension of the duty of tithing beyond the proceeds from the harvest and the flocks (cf. *Gu.* 14.20, 28:22; *Lk.* 18.12; *Didache* 13.3).

The major extant source concerning the agricultural perquisites of the priests and Levites is Column ix of Temple Scroll^a (11Q19). The beginning of this column lists the gifts for the priests, but only the last four lines of the priestly list are preserved. There the wave offerings of *Numbers* 18.11 are mentioned, and, following a likely restoration, “all [tithes] of their cattle.”

The cattle tithe is described in *Leviticus* 27.32 and 2 *Chronicles* 31.6 as sacred, but its disposition was the subject of controversy. According to the Mishnah, it was brought as an offering that could be consumed by the owner or other laypersons. *Jubilees* 13.26–27 insists that it belonged to the priests. This view is supported by Miqtsat Ma’asei ha-Torah MMT^c (4Q396 1–2.iii.63–64) and Damascus Document^d (4Q270 2.ii.7), where those who oppose the assignment of the cattle tithe to the priests are listed in a catalogue of sinners.

The Temple Scroll^a (11Q19 ix.6–7) is clear in assigning “to the Levites the tithe of grain, wine, and oil that they formerly consecrated unto me.” The phraseology alludes to *Leviticus* 27.30 where the “tithe of the land” was designated as consecrated to God. It now belongs to the Levites in return for their sacred service. The passage would seem to imply that, contrary to the rule ultimately adopted in rabbinic *halakhah*, the Levitical tithe was forbidden to be consumed by non-Levites, just as the consumption of *terumah* was the exclusive prerogative of the priesthood. The latter view is attributed to Rabbi Meir (B.T., *Yev.* 86a). Temple Scroll^a (ix.9) lists a “tithe from honey” at the rate of “one from fifty,” thus illustrating the nonliteral use of the term *ma’aser*.

Although the expression *second tithe* is not extant there, it is clear that this is the subject of the rules elaborated in Temple Scroll^a (xl.iii 2–17). Like *Jubilees* 32, and contrary to mishnaic *halakhah*, Temple Scroll^a imposes a one-year limit for the consumption of the tithe from each of the fruits of the harvest: grain, wine, and oil. Moreover, the tithe may only be eaten on Sabbaths and holidays, not on weekdays. This restriction apparently derives from the notion that workdays are associated with impurity, thus violating the provisions of *Deuteronomy* 26.14.

Such restrictions, as well as the specification that the second tithe can be converted to money only by means of a sale (*nikr*) rather than redemption, would probably

have aggravated the economic difficulties associated with compound tithing. However, these difficulties were of little concern to the authors of Temple Scroll^a and *Jubilees*. What mattered was that the rules were deemed to be in accord with what was inscribed on the tablets of heaven.

JOSEPH M. BAUMGARTEN

TOBIT, BOOK OF. Bearing the name of its main character, the *Book of Tobit* is about a law-abiding Israelite deported from the northern kingdom to Nineveh with his wife Hannah and son Tobiah. In exile Tobit suffers as he tries to live as a pious Jew; he is finally blinded in his old age. As he prays to die, he recalls the sum of money once deposited with a friend in Rages, in distant Media; so he decides to send Tobiah to get the money. Simultaneously, at Ecbatana in Media, a young relative, Sarah, also prays to die, having suffered from the insults of maidservants because all seven men to whom she has been married were killed by the demon Asmodeus on their wedding night. [See Sarah.]

In answer to the prayers of Tobit and Sarah, God sends the angel Raphael, in disguise, to Nineveh so that he may accompany Tobiah to Media to get his father's money. En route, Tobiah bathes in the Tigris. When a large fish tries to swallow his leg, Raphael tells Tobiah to catch the fish for food and to extract its gallbladder, heart, and liver for medicinal purposes. Raphael also tells Tobiah about his kinswoman Sarah at Ecbatana. When they arrive there, Tobiah marries Sarah and uses the fish's heart and liver to smoke away the demon on his wedding night. Then Tobiah sends Raphael on to Rages to get the money. When Raphael returns with it, Tobiah takes the money and his wife and sets out to return to Nineveh, to his father's house.

On his arrival, Tobiah uses the fish's gallbladder to cure his father's eyes. Tobit rejoices at the return of newlywed Tobiah with Sarah and at the recovery of the money. When Tobit and Tobiah try to pay Raphael for his help, the angel reveals his identity and disappears, having instructed Tobit to offer thanks to God. Tobit composes a hymn of praise, instructs his son, and counsels him to leave wicked Nineveh once his mother dies; then Tobit

passes away. Having buried his mother beside his father, Tobiah takes Sarah and leaves Nineveh for Media, where he dwells with his parents-in-law. There he learns about the destruction of Nineveh.

Though some scholars have argued for a historical kernel in the story, the *Book of Tobit* is a Semitic novel composed for an edifying, didactic religious purpose; its fictive character is seen in various historical and geographical improbabilities and its use of folkloric motifs. It inculcates fidelity to God, loyalty to Mosaic tradition and ancestral customs, and deuteronomic retribution for good deeds; family life, monogamous marriage, and almsgiving are all extolled. It also incorporates numerous maxims and aphorisms characteristic of Jewish wisdom literature. [See *Wisdom Texts*.] Such aspects of the book reveal why it has been preserved in multiple copies and two versions in the Qumran community, known for its conservative style of life. [See *Community Organization*.]

The *Book of Tobit* is preserved in four fragmentary Aramaic texts (Tobit^{a-d}, 4Q196–199) and in one fragmentary Hebrew text (Tobit^e, 4Q200). Together they preserve about a fifth of the book. They are copies written from the mid-first century BCE to the mid-first century CE. The full text is preserved in Greek and Latin translations and in other versions that are mostly derived from these; these include versions in Arabic, Armenian, Coptic (Sahidic), Ethiopic, Syriac. Derivative forms are also found in medieval Aramaic and Hebrew, which are unrelated to the Qumran forms. [See *Aramaic*; *Greek*; *Hebrew*; *Latin*.]

The Greek version of Tobit exists in three forms: the Long Recension (G^l), preserved in Codex Sinaiticus (S) and partly in manuscripts 319 (Vatopedj 513) and 910 (Oxyrhynchus 1076); the Short Recension (G^s), preserved in Codices Vaticanus (B), Alexandrinus (A), Venetus (V), and many minuscule manuscripts (this recension was normally used before S was discovered in 1844); and the Intermediate Recension (Gⁱⁱ), preserved in manuscripts 44, 106, and 107; the last is useful for Tobit 6.9–13.8; for the rest, it is the same as B.

The Latin versions are two: the Long Recension, extant in the Vetus Latina (VL), for which no critical text exists; and the Short Recension, preserved in the Vulgate (Vg), which differs considerably from the Vetus Latina and the Greek recensions. Jerome admitted that he dashed off his translation in "one day" (*Epistle ad Chromatium et Heliodorum*; *Patrologia Latina* 29.23–26), having found a Jew who understood Aramaic and translated it for him into Hebrew, which he then rendered in Latin. The Vulgate of Tobit is by and large unrelated to the Qumran Aramaic.

The Long Recension of Tobit in G^l and Vetus Latina is seen today to be the more original because of its correspondence to the Qumran forms of the text. Indeed, the

importance of the Vetus Latina of Tobit is now quite evident.

Though the book recounts events of the eighth-century deportation of Israelites, its allusion to postexilic customs of tithing, its recognition of prophetic writings as sacred, and the absence of any awareness of the Maccabean revolt reveal that it was composed in the early second century BCE. The Qumran Aramaic and Hebrew texts contain parts of chapters 13 through 14, showing that these chapters were already part of the book; they thus put an end to the controversy about whether these chapters were a later addition to the story, as Frank Zimmermann once maintained, following others in dating them even after 70 CE.

Tobit seems to have been composed originally in Aramaic, because Tobit^e is written in late postexilic Hebrew with words and syntagms that argue for an Aramaic substratum. This issue, however, is currently debated and awaits further discussion.

The book alludes to the ancient story of Ahiqar (4Q196 2.5–9) and reveals that Tobit's brother's name was 'Ana'el, with an initial 'ayin not *heth*, often used heretofore because of the Greek rough breathing. Sennacherib's name turns up as 'Srhryb instead of *Saneheriv*; it is a scribal confusion with Esarhaddon. Ahiqar is also said to have been set up by Esarhaddon as *tinyan leh*, "second to himself," which finally yields the sense in which the Greek *ek deuterus* (1.22) has to be understood.

TRUTH. In the Dead Sea Scrolls, truth (*emet*) is "the underlying sense of faithfulness to God's law and sincerity in one's actions" (Knibb, 1987, p. 80). It is used in a number of distinguishable yet related ways. By far, the most frequent occurrences of *emet* are in the sectarian documents, although the term occurs frequently in the liturgical texts of the Hymns and Blessings, and a few, but significant, occurrences are also found in the parabolic texts.

In the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community, 1QS), in columns iii–iv, in the section on the two spirits, the functional opposite of *emet* ("faithfulness," "truth") is *'avel* ("injustice," "unrighteousness"), for "an abomination to *emet* are the doings of *'avel*; an abomination to *'avel* are all the ways of *emet*," and when *'avel* is destroyed, *emet* will appear forever (1QS iv.17, 19). As opposites, *emet* and *'avel* are best translated as "truth" and "deceit," with the understanding that they are used as umbrella terms, each of which includes several qualities of human behavior. The way of *emet* is unity, humility, righteousness, justice, merciful love, and walking circumspectly (1QS v.3–4; cf. viii.2), while *'avel* includes lewdness, iniquity, and lies (*kezabim*; 1QS x.22). Thus, righteousness, justice, merciful love, and circumspect living are subcategories of doing the truth (*la-'asot emet*), and *kazav* ("lie," "falsehood"), while expected to be the opposite of *emet*, is but one of several qualities that comprise *'avel*.

In the sectarian documents, 1QRule of the Community and the War Scroll (1QM), truth is an important quality of God's character and of God's dealing with humanity. Derivatively, truth is an important characteristic of the identity and behavior of the community, both in their adherence to God's truth and in their dealings with one another. Since members of the Qumran community view themselves as the only faithful adherents to God's truth,

they are the Sons of Truth (*benei ha-emet*) as opposed to the Sons of Deceit (*benei ha-'avel*).

The divine quality of truth is assumed in 1QRule of the Community and the War Scroll, although in the hymn at the end of 1QRule of the Community, God's truth is not just assumed but directly praised as the foundation of life (1QS xi.4). God's deeds of truth (*ma'asei emet*) are worthy of praise (1QS i.19; 1QM xiii.1, xiii.9, xiv.12); indeed, all God's deeds are truth (1QS x.17). God's statutes contain the truth and are faithful and consistent with God's character (1QS i.12). An adherent is cleansed by the Spirit of Truth (1QS iii.7), and when evil is destroyed, God will purify humanity through truth (1QS iv.19), judging them in the righteousness of truth (1QS xi.14; 1QM xi.14).

Truth also functions as a human quality in these sectarian documents. 1QRule of the Community acknowledges that individuals are influenced by two spirits that lead them to do good or to do evil, the Spirit of Truth and the Spirit of Deceit (*ruhot ha-emet ve-ha-'avel*; 1QS iii.13–iv.26). The Spirit of Truth, also called the Prince of Light and God's Angel of Truth (1QS iii.20, 24; cf. 1QM xiii.10), influences some by enlightening them, fostering justice, establishing in them respect for God's precepts and trust in God's deeds, for the Spirit of Truth is a spirit of meekness, patience, compassion, goodness, insight, and wisdom (1QS iv.2–8). Those who are influenced by the Spirit of Truth are called Sons of Truth (1QS iv.5; 1QM xvii.8) or Sons of Light (*benei or*; 1QS iii.24–25). The Sons of Truth detest idolatry and pretentious behavior and will be blessed with healing, peace, a long life, offspring, eternal enjoyment, "and a crown of glory with majestic raiment in eternal light" (1QS iv.5–8). The Spirit of Deceit, on the other hand, also called the Angel of Darkness (*mal'ak hoshekh*; 1QS iii.20–21), is found in greed, injustice, irreverence, deception, pride, haughtiness, dishonesty, trickery, cruelty, insincerity, impatience, insanity, impudence, lust, indecency, blasphemy, stiffness of neck, and hardness of heart, which lead to eternal damnation (1QS iv.9–14). Although all humanity is divided into two opposing factions until God's final visitation (1QS iv.15–19), 1QRule of the Community acknowledges that the Sons of Truth do commit sins and are unrighteous because of the influence of the Spirit of Deceit (1QS iii.22). This unrighteousness will be purified, but until then the two spirits feud within one's heart (1QS iv.20–26). [See Rule of the Community.]

Because the War Scroll describes the final battle between the forces of light and the forces of darkness, it recognizes only the influence of the Prince of Light over the Sons of Light. They have been created according to God's truth and are blessed by God's deeds of truth (1QM xiii.1–2, 9–10). The Sons of Light will rejoice in salvation, God's aid, peace and strength, and everlasting knowledge

(1QM xiii.13, xvii.8) When the Sons of Light go out to war, they will march forth under the banners of "God's Truth," "God's Justice," "God's Glory," and "God's Judgments" (1QM iv.6). These banners evidently were a literary device for expressing the foundations of and motivation for their presumed victory (Yadin, 1962) [See War of the Sons of Light against the Sons of Darkness.]

The almost equal influence of the Spirit of Truth and the Spirit of Deceit on individuals is reminiscent of the powers of good and evil in Persian dualism. In Persian religion, Ahura Mazda, the supreme deity of light, influences people to do good, while Ahriman, associated with darkness, influences people to do evil. In Persian dualism and in the sectarian documents from Qumran, the power of darkness is acknowledged to have great independence, without, however, compromising the eventual triumph of light.

In the Dead Sea Scrolls, truth is occasionally a body of knowledge. The community conceived of truth as a body of knowledge and a quality of their insight, which was to be taught to members of the community but concealed from the wicked (1QS iv.6, ix.16-18). Truth, based on the Torah, was to be the standard of judgment for internal community matters, as well as the standard of behavior by which the community council was to encourage truth, justice, judgment, compassionate love, and unassuming behavior, in order that the community might be a house of perfection and truth (1QS viii.1-9). Truth, along with humility and merciful love, was to be the hallmark of interpersonal relationships at Qumran (1QS v.25). In Peshier Habakkuk, the People of Truth (*anshei ha-emet*) were considered to be doers of the Law (*osei ha-Torah*). They were encouraged to be indefatigable in their service, even if the last days were delayed (1QpHab vii.10-12; Brownlee, 1979). [See Peshier Habakkuk.]

Truth then, as revealed by the Prince of Light, was an essential component of life in the community and of the community's self-perception. They believed that truth has been revealed by God to Moses but that it was revealed in greater detail through the study of Torah by the members of the community. To know truth was to practice a life of extreme faithfulness to the Law, as influenced by the Spirit of Truth (Leaney, 1966).

In addition to its appearance in the sectarian documents, references to truth also occur in the Hymns and Blessings. Truth is frequently said to be a characteristic of God (Hodayot^a from Qumran Cave 1, hereafter, 1QHodayot¹; 1QH^a viii.34, ix.29, xii.41, xv.31 [xvi.16, i.27, iv.40, vii.28]), of God's ways (1QH^a xix.32 [xi.29], xxii.10; Songs of the Sabbath Sacrifice^d, 4Q403 i.46; Berakhot^a, 4Q286 1.7, 8; 7.i.4, 8), of God's deeds (1QH^a ix.32, xiv.9 [i.30, vi.6]; 11Q17 v.5), and of God's holy residence, which echoes with God's glorious truth (1QH^a xi.35 [iii.34]) God's

truth is revealed to the faithful ones (1QH^a xix.30, xxxiii.14-15 [xi.26, xviii.13-14]), whose deeds consequently are also characterized by truth (Rule of the Blessings, 1Q28b, i.2; 1QH^a xii.11, 27 [v.9, 26]) and who are called "Sons of Truth" (1QH^a x.16 [ii.14]; 4Q427 7.ii.14) or "Sons of Your Truth" (1QH^a xv.33, xviii.29, xix.14 [vii.30, x.27, xi.11]) with God as their father (1QH^a xvii.35 [ix.35]). Worshipers praise God for his truthful deeds (Barkhi Nafshi^a, 4Q434 1.i.9; 1QH^a xiv.12 [vi.9]), adhere to his truth, and serve him in truth (1QH^a viii.25, xv.23 [xvi.6, vii.20]). They also lean on God's truth, which is a secure foundation (1QH^a xiii.11, xiv.28-29, xv.17, xvii.32, xviii.19, xix.19, xxiii.16 [v.9, vi.25-26, vii.14, ix.32, x.17, xi.16, xviii.16]). God's truth can be taught (1QH^a v.20-21, xiv.12-13, 15, xv.29, xviii.6, xix.7, 11 [xiii.3-4, vi.9-10, 12, vii.26, x.4, xi.4, 9]; sapiential work 4Q413 1.2), and is a delight to the soul (1QH^a xviii.33, xix.33 [x.31, xi.30]). God's truth is trustworthy, even for the penitent (1QH^a xvii.10 [ix.10]), and thus is seen as a measure for justice (1QH^a xxv.10 [vi.7]), although at times it is hidden (1QH^a xvii.24 [ix.24]). God's truth is considered to be more valuable than wealth (1QH^a vi.31, vii.37 [xiv.20, xv.14]), and truth destroys sin (1QH^a vii.39 [xv.29]). The words of Hippocrates, on the other hand, are not firmly based on the truth (1QH^a xii.15 [iv.14]), and truth has been concealed from them (1QH^a xiii.28 [v.26]). [See Barkhi Nafshi; Berakot; Hodayot; Rule of the Blessings; and Songs of the Sabbath Sacrifice.]

References to truth (*emet*) also occur in parabiblical Qumran texts, characterizing the community's righteous lifestyle (Aramaic Levi^a, 4Q213 1.i.12, 5.ii.8; Testament of Naphtali, 4Q215 2.ii.5; Testament of Qahat, 4Q542 i.9, ii.1-2). In the Genesis Apocryphon (1QapGen ii.5, 18), however, truth is used in the sense of something that is verifiable rather than false. But in the commentaries, a life of faithfulness to God is called a truthful one (Melchizedek, 11Q13 ii.21; Peshier Psalms^a, 4Q171 iii.17, iv.12). Similarly, in Temple Scroll^a (11Q19 lvii.8), the king's guard is to be made up of Men of Truth, who are loyal, upright, and skillful warriors. Here, "Truth" has the meaning of faithfulness or loyalty. [See Aramaic Levi; Genesis Apocryphon; Melchizedek; Naphtali; Peshier Psalms; and Temple Scroll.]

Truth in the scrolls refers to the quality of God's faithfulness and trustworthiness. Those who are faithful to God and keep his Law as a result also possess this quality of truth and are urged to continue to be faithful, even though a Spirit of Deceit is at war with the Spirit of Truth in their hearts. Truth as a righteous way of life can be discerned in and drawn from the Torah; those who seek to live by the truth call themselves the Sons of Truth. Rarely is truth (*emet*) meant as a verifiable body of knowledge; much more frequently it refers to faithfulness

to God and his Law, and to the members of the community who see themselves as intensely faithful adherents of his Law.

LESLIE W. WALCK

TWELVE PATRIARCHS, TESTAMENTS OF THE.

This Greek work's full title describes its contents appropriately as the testaments of Jacob's sons. Each testament contains a narrative introduction setting the scene as the patriarch's imminent death, a first-person address to his children, and a concluding narration of his demise. The speeches usually contain the speaker's narration of events from his life, exhortation for his children, and eschatological predictions regarding the future of his descendants.

The date, origin, and composition history of the *Testaments of the Twelve Patriarchs* are related and disputed topics. Although no one doubts that in its present form it is a Christian work, some claim the *Testaments of the Twelve Patriarchs* was a Jewish composition that came into existence well before the turn of the era, as early as 200 BCE, and was only later transformed by Christian interpolations (Becker, 1970; Charles, 1908; Ulrichsen, 1991). Others claim specifically Essene authorship on the basis of items like the common expectation of two messiahs and date the work to the period before the turn of the era (Dupont-Sommer, 1951–1952; Philonenko, 1960). Still others hold that the *Testaments of the Twelve Patriarchs* was composed (albeit from some Jewish sources) around 200 CE as a Christian work (de Jonge, 1953).

Manuscripts from Qumran confirm the fact that regardless of one's view of the origin of the *Testaments of the Twelve Patriarchs*, parts of it are related to older Jewish works; they do not, however, support the notion that the *Testaments of the Twelve Patriarchs* was composed at Qumran. The document represented by Aramaic Levi, Ar-

amaic Levi^a, and Aramaic Levi^d (1Q21, 4Q213, and 4Q214, respectively) was dubbed by Milik an Aramaic Testament of Levi because, along with a Cairo Geniza manuscript of the same work and additions to the Mount Athos manuscript of the *Testaments of the Twelve Patriarchs* at *Testament of Levi* 2.3 and 18.2, it provides material similar to *Testament of Levi* 6–13 and appears to have been a source for the author of the Greek testament. Nevertheless, Aramaic Levi is not the same as *Testament of Levi*: it includes a complete "Prayer of Levi" (only mentioned, not included, in *Testament of Levi* 2.4; 4.2), lacks the testamentary narrative framework, and probably contains only one of Levi's two visions from *Testament of Levi* 2–5; 8 (Kugler). In 1978, Milik also identified the Testament of Naphtali (4Q215) as a precursor to *Testament of Naphtali*. One of its four fragments parallels Bilhah's genealogy in *Testament of Naphtali* 1.11–12, while it differs otherwise from the corresponding testament. Also in his 1978 article, Milik identified the work represented by the Testament of Judah? (3Q7) and the Apocryphon of Judah (4Q538) as a source for the *Testament of Judah* (3Q7 = *T. Judah* 25.1–2; part of the Apocryphon of Joseph [4Q539] expands on *T. Judah* 12.11–12), and the Apocryphon of Joseph (4Q539); he entitled a *Testament of Joseph* because fragments 1 and 2 are similar to *T. Joseph* 14.5–4; 15.1–17.2. While these Levi, Naphtali, Judah, and Joseph texts do not reveal the presence of complete testaments in those figures' names at Qumran, they do reveal the antiquity of traditions taken up in the *Testaments of the Twelve Patriarchs*.

The *Testaments of the Twelve Patriarchs* has limited interest for the study of early Judaism. Without greater certainty regarding the work's pre-Christian form, little may be said with confidence about its witness to Jewish thought, though much is said all the same (Becker, 1970; Ulrichsen, 1991). For now the *Testaments of the Twelve Patriarchs* holds greatest promise for illuminating early Christian convictions articulated on the basis of Hebrew scripture traditions. [See Testaments.]

UNIDENTIFIED FRAGMENTS. A piece of leather, papyrus, or, in a few cases, pottery that preserves textual remains and was once part of a larger document but that has not yet been matched by scholars to any known document is an unidentified fragment. Excluded, then, are the many fragments of material that do not preserve any text (usually a portion of a margin or a piece of leather or papyrus on which ink is no longer visible). While certain features of a fragment, such as the scribal hand and the color, texture, and state of preservation of the leather, papyrus, or pottery aid scholars in matching it with a known document, the main reason any fragment is designated *unidentified* is that there is insufficient writing remaining on it to determine with confidence the document to which it actually belongs. [See Scribal Practices.]

Not surprisingly, unidentified fragments of texts exist for most of the Judean Desert sites where textual material has been discovered (such as Qumran, Masada, Wadi Murabba'at, Nahal Hever, Nahal Mishmar), and usually in rough proportion to the amount of written material recovered from these sites. [See Hever, Nahal; Masada; Mishmar, Nahal; Murabba'at; and Qumran.] The largest cache of documents in the Judean Desert comes from the caves around Qumran, and so does the largest number of unidentified fragments: approximately thirty-nine hundred from the eleven caves combined. About thirty-three hundred of these unidentified fragments come from Cave 4 at Qumran, which contained more textual material than any other cave in the Qumran area, although much of it was poorly preserved.

Unidentified fragments exist in various shapes and sizes and preserve various portions of the scroll (or papyrus sheet or ostrakon) of which they were originally a part. Some fragments preserve several words, often on multiple lines, while other fragments are so small that only one or a portion of one letter remains. When small fragments are found together with larger, identifiable ones, it is often possible to determine that the smaller

fragments were originally part of the same document, although it may not now be possible to join them to each other. Without such physical evidence, even fragments that contain several words are often too small to provide adequate textual context to make an identification. For example, fragment 37 on PAM 43.677 from Cave 4 at Qumran contains two complete words, *asher* ("which") and *le-'olam* ("forever"), as well as parts of three other words, all preserved on portions of three lines of text. Given the common occurrence of these complete words and the limited amount of text, it presently is not possible to determine to which if any known document this fragment might belong. However, if a fragment preserves enough text to determine that it does not belong to any known document, then it is considered *identified*, even though little if anything may be known about the original document. Such is the case with 4Q466.

As scholars began to work with the textual remains from Qumran and elsewhere in the Judean Desert, they generally worked with the (nearly) complete documents and larger fragments first, turning more attention to the smaller fragments later. While there is little hope of identifying most of the smallest fragments (that preserve only a letter or two) and joining them to known documents, it is possible that as scholars continue to study the presently unidentified fragments, their number will further diminish.

VESPASIAN. See Rome.

VISIONS. Like so much of the terminology in the scrolls, the use of the word *vision* in the Qumran literature clearly draws its inspiration from biblical precedent. Several different nouns in the Bible are translated into the English word "vision," such as Hebrew *hazon*, *hizayon*, *hazot*, *mahazeh*, and Aramaic *hezû*. All of these usages derive from the verb *hzh*, meaning "to see." Although this verb is normally used to refer to physical sight in Aramaic, in biblical Hebrew the verb most commonly used for physical sight is *r'h*, while the root *hzh* is more often used in the special sense of "seeing" some revelation from God. It is with this specialized meaning that the word occurs in the Dead Sea Scrolls.

The root *hzh* in its various derivatives is used a little more than fifty times in the scrolls in works of various types. In addition, certain documents from Qumran have been titled as "Visions" works by the team of editors. These works are the Visions of Amram⁴⁷ (4Q543–4Q548), the Vision of Samuel (4Q160), and Visions A, B, and C (4Q556–4Q558). Although the titles might lead one to assume that all these works share certain common characteristics, there is little usefulness in thinking of a kind of genre of visions literature either at Qumran or elsewhere.

This is not to say that the use of the term *vision* to designate a literary composition has no justification. Indeed, there is some precedent for it in the ancient texts themselves, both biblical and otherwise. The prophetic books of *Isaiah* and *Obadiah* begin with the words "The vision of Isaiah" and "The vision of Obadiah," respectively. *Nahum* opens with the slightly longer phrase "The book of the vision of Nahum." That such phrases were understood as actual titles is indicated by *2 Chronicles* 32.32, which refers to certain events from the reign of Hezekiah as being "written in the vision of the prophet Isaiah." Similarly, *2 Chronicles* 9.29 states that the deeds of Jeroboam's reign are found in the otherwise unknown "visions of Iddo the seer."

Outside of the biblical literature, from around the turn of the era, the term *vision* is used as a title at the beginning of the "Book of Parables," the second of the five Enochic works that now comprises chapters 37–71 of what is commonly termed *1 Enoch*. *1 Enoch* 37.1 begins, "The

second vision which he saw, a vision of wisdom, which Enoch saw." The word "second" probably implies that chapters 1–36, the "Book of Watchers," was also considered to be a visions work, even though it bears no such title in the extant manuscripts (although cf. the reference to a vision in *1 Enoch* 1.2 [Greek]). The "Book of Watchers" dates to the early second century BCE. Both the "Book of Parables" and the "Book of Watchers" belong to the genre of apocalypse.

From Jewish-Christian circles in the second century CE, both the *Shepherd of Hermas* and the *Ascension of Isaiah* use "vision" as a title for parts of the two works. Thus, chapters 1–24 of the *Shepherd of Hermas* contain four visions, the last three of which are explicitly so titled. Many scholars believe that these chapters originally circulated independently of the rest. Chapters 6–11 of the *Ascension of Isaiah* bear the title "The vision which Isaiah the son of Amoz saw." Scholars debate whether this section ever circulated independently of chapters 1–5. Both the Hermas material and the Isaiah material belong to the literary category of apocalypse.

Of the works from Qumran that have been titled *Visions* by the team of editors, only the Visions of Amram explicitly bears the title *Vision*. This Aramaic work opens with the phrase, "Copy of the book of the words of the vision of Amram." Immediately after this introduction, however, comes not a description of the vision but rather a scene that is clearly testamentary in nature, with Amram, the father of Moses, addressing his sons on "the day of [his] death." A later fragment, though, returns to the subject of the vision, which consisted of a quarrel taking place between Melchiresha' and, apparently, Melchizedek concerning the fate of Amram. During this quarrel, Amram himself is asked to choose between the two angelic leaders. A further fragment contrasts the fate of the Children of Light and the Children of Darkness. The presence of such apocalyptic material in a formal testament reminds one of the *Testaments of the Twelve Patriarchs*.

Of the two remaining "visions" works, the Vision of Samuel is written in Hebrew but is not well preserved. Fragment 1 expands upon the account of *1 Samuel* 3.1–18 in which Samuel receives a vision from God and the aged priest Eli petitions Samuel to "[let] me know the vision of God" (1.5). It is this very line that has led to the entire

document being called the Vision of Samuel. However, it should be noted that the word "vision" is not preserved as a title for the work, nor is the full extent of the work known so that it very well may have contained much more of the Samuel story than just an account of his vision. In light of this consideration, one might better call this work *Apocryphon of Samuel*, as some scholars have done, to avoid confusion with those works that are certainly titled "visions," such as the Visions of Amram.

Of Visions A, B, and C very little can be said with confidence. All are written in Aramaic. Visions A is represented by 6 very small fragments, Visions B by 2 fragments, and Visions C by about 144 small fragments. None of the manuscripts preserves any meaningful amount of text. Visions A mentions Gabriel. Visions C contains the phrase "he saw [a vision?] and said." It also mentions Elijah, Uzziah, Horeb, and Egypt. As an alternative title, Beyer (1994) calls Visions C a "Prophetic History." Once again, there is no reason to see any connection between these manuscripts and either the so-called Vision of Samuel or the Visions of Amram.

The word *vision* was used as a title for various types of Jewish writings, such as prophecy, apocalypse, and testament. The title was undoubtedly used to indicate the divine source of the writing, but it was never used in a standardized way to indicate either the content or form of the writing. Of the compositions among the Dead Sea Scrolls titled "visions," only Vision of Amram certainly deserves the designation. Vision of Samuel and Visions A, B, and C are somewhat arbitrarily titled and could as easily be given other names. Thus, one should not think of a genre of "visions" literature at Qumran.

ERIK W. LARSON

VISITATION, DAY OF. This dualistic event described in the Hebrew scriptures and New Testament foretells judgment for the wicked and reward for the righteous. The term "Day of Visitation" (*yom pequddah*) is found only once in the Hebrew scriptures (*Is.* 10.3), in a

challenge posed to unjust Judah: "And what will you do in light of the Day of Visitation?" The sole citation in the New Testament (*1 Pt.* 2.12) maintains that the good deeds of the believers are noticed by the gentiles "to glorify God in the Day of Visitation."

The expectation of a coming final judgment is central to the theology of retribution expressed in the nonbiblical Dead Sea Scrolls. Although the texts are in basic agreement as to the elements of this expectation, the expressions used to describe it show considerable diversity. The Qumran scrolls never refer to the expression "Day of Visitation"—although the Damascus Document (CD viii.2-3) is certainly a reflection—nor surprisingly do the scrolls refer to the more common designation "Day of the Lord" (*yom Yahveh*; *Is.* 13.6, 9; *Ezek.* 13.5; *Jl.* 1.15, 2.1; *Theo.* 5.2; and *2 Pt.* 3.10). Instead, the less euphemistic expression "Day of Vengeance" (*yom naqam*) is used (Rule of the Community from Qumran Cave 1, hereafter, 1QRule of the Community; 1QS ix.23; x.19; War Scroll, 1QM vii.5) and reflected in Melchizedek (11Q13 2.13; see *Is.* 34.8, 61.2, 63.4; *Prov.* 6.34 [but not the New Testament]). The appellation "Day of Judgment" (*yom mishpat*) found in Peshar Habakkuk (1QpHab xii.14, xiii.2-3), although not present in the Hebrew scriptures, is found in the New Testament (*Mt.* 10.15, 11.22, 11.24, 12.36, *2 Pt.* 2.9, 3.7; *1 Jn.* 4.7). Other expressions include "the time of distress" (1QM i.11-12, xv.1), "the time of vengeance" (1QM xv.6), "the time appointed for punishment" (1QS iii.18; iv.18-19, 25; Damascus Document^a, 4Q266 1.2), "the time of punishment" (CD xix.10-11), "the time decreed" (1QS iv.25), and "the time of judgment" (Hodayot^a from Qumran Cave 1, 1QH^a xiv.29 [vi.26]).

Although exhortations are often given on the basis of historical occurrences that could be called a day of visitation—Nadab and Abihu (1QM xvii.2) and the Babylonian Exile (CD i.17, vii.9-12, xix.11)—normally the various appellations denote a period of final judgment upon mankind. This time of judgment will be preceded by a divine war and the arrival of a messianic leader. For the unjust, retribution is portrayed with images of darkness (1QS iv.13; 1QM xiv.17; Sapiential Work A^a, 4Q418, 69.ii.7; and Wisdom Text with Beatitudes, 4Q525 21.1) and fire (1QS ii.8; 1QH^a xiv.18 [vi.15]; 1QpHab x.5, 13; CD ii.5). The place of judgment is called the *bor* ("pit"; Wiles of the Wicked Woman, 4Q184 1.6; 4Q525 22.3-4)—and *Shahat* (1QM xiii.11; 1QH^a xi.18 [iii.17]; Berakhot^a, 4Q286 7.ii.4-5). The extent of the judgment is said to be eternal (1QS iv.12-13; see also ii.15; iv.19; v.13; 4Q286 7.ii.4-5). For the just, the reward is "life everlasting," with the accoutrements of the messianic age (1QS iv.6-8; CD iii.20; Ages of Creation from Qumran Cave 4, 4Q181 1.3-4; 4Q525 14.ii.14).

WARFARE. [*This entry surveys two aspects of warfare: Historical Warfare and Eschatological Warfare.*]

Historical Warfare

After the destruction of Jerusalem and the First Temple in 587/586 BCE the Jews spent the next several centuries under the domination of great empires. To the best of our knowledge, the Jews during the first part of the Second Temple period were pacifistic and not involved in military activity. They had little choice to be anything else, much as with many other peoples in the Persian and Greek empires. Yet the Jews as a whole had never adopted a pacifistic stance and remained ready to fight when necessary. As a result of necessity, the Jews revolted against religious suppression in the Maccabean Revolt (166–164 BCE), and, over the next 300 years, to the time of Bar Kokhba, a series of revolts resulted from perceived necessity and the hope of victory. Sadly, many of these revolts had almost no chance of succeeding and only left the people ravaged, devastated, and disillusioned.

In most examples we have of fighting, the Jews were defending their nation, traditions, or community. However, there are indications that Jews sometimes participated as mercenaries or in fighting units in the armies of the day. After Onias IV fled to Egypt and built a temple at Leontopolis (c.170 BCE), some members of the community established there became commanders of the forces of Cleopatra III (Josephus, *Jewish Antiquities* 13.284–287). Josephus gives anecdotes of Jews who were a part of the armies of Alexander and the Diadochi (*Against Apion* 1.22 secs. 192, 201–240). Jews were part of military settlements (*klerouchoi, katoiktai*), which would have included the duty of call-up in time of war. The Tobias known from the Zenon papyri was in charge of a military settlement which seemed to have included Jews as well as others (*CPJ* 1.118–121). The papyri also show a number of Jewish military settlers in Ptolemaic Egypt (*CPJ* 1.11–15, 147–178).

The core of the Hellenistic Greek army was the *phalanx*, a body of heavily armed infantry in rows of up to sixteen with twenty-foot spears (*sarissa*). The phalanx

was normally made up of troops from military settlements and largely Macedonian descendents, as they were likely to be more reliable and loyal. The phalanx was the key to the effectiveness of Greek fighting units, with their discipline in making the phalanx act as a single unit in battle. (The fossilization of the phalanx was also the downfall of the Greek military when they confronted the more flexible Roman formations.) When functioning as it should, in close formation with the soldiers protected by a hedge of pike heads and shields, they could withstand the assault of cavalry, archers, skirmishers, and even elephants. But there were two weaknesses: one was the difficulty in maintaining the close formation as the phalanx advanced, especially if it had to cross rough terrain; once it was broken up, cavalry and light infantry could come in for close combat. The other weakness was its vulnerability to attack on the flanks.

Connected with the phalanx were cavalry units whose main job was to break up the phalanx of the enemy by outflanking it, or to defend the flanks of their own phalanx from the enemy cavalry. Preceding the phalanx were lightly armed skirmishers—archers and javelin throwers—whose job was to harrass the opposing phalanx and attempt to break it up. They would be opposed by the skirmishers on the opposite side. Elephants were an effective addition to the heavy infantry when available, though they tended to be more effective against non-Greek armies than other Hellenistic forces. Artillery was used by Hellenistic armies only during sieges; the Romans, however, eventually evolved a system which made regular use of arrow- and stone-throwers on the battlefield.

The Roman army was conceptualized differently from the Greek. The Romans had early abandoned the phalanx in favor of maniples (Latin *manipulus* [“handful”]), small units of soldiers (60 to 120 men) in the battle line who had some freedom of action. There were conventionally three main lines in the battlefield: in the front rank the *hastati*, armed with sword and javelin; next, the *principes*, the most fit of the young men in their prime, similarly armed; finally, the *triarii*, the older and most experienced of the soldiers. Preceding them were the *velites*, lightly armed soldiers whose job it was to harrass the enemy line with light javelins before retiring behind the main battle lines. These groups could be deployed in different ways

and formations, depending on the circumstances. From about 100 BCE the manipular system gave way to that of cohorts, somewhat larger units and without the distinction in armament or experience. One of the achievements of the Romans, from the time of Julius Caesar on, was the integration of cavalry, light, and heavy troops into a fully coordinated and versatile fighting force.

The Greek city-states had raised their army from among the citizens, each of whom had a duty to defend the state. However, the Greek homeland was incapable of providing enough food for its population. This is why the Greeks branched out into trade and seafaring activities. Also, many Greeks made their living by selling their services as mercenaries. Both the Persians and their opponents (e.g., the Egyptians) made use of Greek mercenary soldiers. During the Hellenistic period, it was common for kings and would-be rulers to depend heavily on mercenaries.

The Roman army had also begun as a citizen army. Then, as they spread their control, they made use of allies and native troops in auxiliary fighting units. (Thus, another strength of the Romans was their ability to absorb enormous casualties and still continue to carry on their campaigns.) The Maccabees began with a citizen army but their pool of manpower was finite, and the later Hasmoneans also made use of mercenaries. Nevertheless, large numbers of the Jews continued to have military careers during Hasmonean and Herodian rule.

The military settlement was an important part of Hellenistic organization and strategy. Alexander rewarded his veterans by founding Greek cities at various places in the ancient Near East and settling them there. A piece of land would be taken and a city built on the model of the Greek city-state. The farmland surrounding the city would be divided up into plots known as *kleruchies* (from Greek *klērouchia* ["inheritance"]) and a portion assigned to each soldier. The soldiers were citizens of the city and also reservists in the army, to be called up when needed by the king. The land was farmed by slaves or (as frequently was the case in the East) by serfs bound to the land. In the late days of the Roman Republic, as it extended its control over new lands, a similar scheme was followed in which Roman veterans received land.

As noted above, Jews served in fighting units in the Seleucid and Ptolemaic armies. They also had opportunity to observe fighting units of the various armies which would have been regularly in the Palestinian area. Unfortunately, when it comes to precise information on military knowledge among the Palestinian Jews or the makeup and training of their armies, we have very few data. Only certain hints are given in the books of *Maccabees*. As a military man himself, Josephus is sometimes a bit better, while the Qumran War Scroll (1QM) may show

some more detailed knowledge of the conduct of actual battles.

When the Maccabean revolt began, the Jews seem to have had little in the way of weapons or training. Yet recent study has shown that while some of their initial successes were remarkable, they were not miraculous: most of their military successes are explicable by the normal canons of warfare (Bar-Kochva 1989). The David-versus-Goliath picture so common in text books is a gross exaggeration, though this picture has prevailed because the books of *Maccabees* themselves exaggerate the strength and numbers of the enemy and minimize the numbers, equipment, and training of the Jews. Victories were usually due to factors which also accorded victory in other military contexts: equal or superior numbers to the enemy, surprise, poor training or generalship on the part of the enemy forces, underestimation of their strength by the Seleucids, making use of local knowledge, the fact that the Seleucids' attention was directed elsewhere and not focused on the situation in Judea. The initial successes of the Maccabees were mainly against local garrison troops with only small contingents of soldiers. In four confrontations between Judas and proper Seleucid forces (Emmaus, Beth Zur, Beth Zacharia, Elasa), two were lost by the Jews and in a third the Syrians withdrew because of the situation in Antioch. The only extraordinary victory was at Emmaus in which Judas made a surprise attack after a forced march with a small group of picked, disciplined, and very fit troops.

The real success of Judas Maccabeus was not in guerrilla warfare, as has sometimes been suggested, but in developing a properly trained regular Judean army. It is debated as to whether the phalanx and an army modeled fully on Hellenistic lines had already been created under Judas (Bar-Kochva 1989) or came about only under Jonathan (Shatzman), but both agree that it happened. The initial improvised warfare was necessary when nothing else was available, but territory could be gained and held only by a conventionally trained and deployed Hellenistic military force. The indication is that part of the knowledge about training and fighting technique came from the Tobiad military colony, which contained Jewish as well as other soldiers (cf. *1 Mc.* 5.13; *2 Mc.* 12.12–24, 35; and the discussion in Bar-Kochva 1989, p. 82 and n. 42).

Jews continued to be used in fighting units after the end of Hasmonean rule. Jewish troops were involved in the Roman civil war. During Caesar's invasion of Egypt, Hyrcanus II and Antipater placed their own troops at his disposal. When Herod was appointed king by the Romans, he had a number of forces at his disposal in retaking Jerusalem in 37 BCE—several Roman legions, mercenaries, Gentile soldiers—and he continued to make use of mercenaries and soldiers from the non-Jewish portions

of his kingdom. As a result, it has often been assumed that his standing army (which was an important support of his rule as a client-king to Rome) was made up mostly of mercenaries or conscripts from the gentile areas of his kingdom. However, this seems to be incorrect; rather, the bulk of Herod's army throughout his reign appears to have been composed of Jews (Shatzman).

For the 66-70 war, we have a detailed description of some parts of it. The Jews won the first round against the Roman general Cestius Gallus, apparently because of miscalculations on his part and effective Jewish harassing tactics as a consequence of their knowledge of the local terrain. But once Vespasian landed with adequate forces, the Jews simply retreated before them. Josephus claims that he trained his troops in Roman methods (*The Jewish War* 2.577-582). When besieged in Jotapata, his techniques of defense were mostly those known as standard from the military manuals (Cohen: 94-96). The only real fighting was at the final siege of Jerusalem and a few other cities. The Jews fought bravely and, again, used standard counter-siege techniques, but their final defeat was never in doubt.

The last major Jewish military activity in antiquity was the Bar Kokhba Revolt, but we have few details and some accounts are legendary (e.g., the references in rabbinic literature). It is not clear that Bar Kokhba ever held any territory apart from that in the Judean desert. The supposition that he took and held Jerusalem for a period of time has not been demonstrated. According to Cassius Dio (69.12.1-14.13), the Roman army suffered a great deal, but this may have been from harassing tactics rather than full battlefield confrontations. Archaeology indicates that the Jews used underground hiding places as a means of ambush and lightning attacks (Gichon; Kloner). Once again, though, the superior military resources and skill of the Romans prevailed.

LESTER L. GRABBE

Eschatological Warfare

The idea that God would fight—and fight on behalf of his people—was widespread in the ancient Near East. Kings often believed that their god would march alongside them, and if they were defeated, it was because their god was angry with them. Israel believed the same thing. The Song of Moses states, "Yhwh is a warrior" (*Ex.* 15.3), and describes how God threw Pharaoh's troops into the sea and protected the defenseless Israelites. According to the Song of Deborah, even the stars fought from heaven against the forces of King Jabin (*Jgs.* 5.20). Psalm 18 describes Yahweh as coming from heaven in wrath to intervene against the psalmist's enemies. One of the epithets of the God of Israel, mentioned in many passages, is *Yhwh Tseva'ot* ("the Lord of armies"). The "day of Yhwh" seems originally to have been a time when God was expected to fight on behalf of his people (*Am.* 5.18-20; *Joel* 4.14-17 [Eng. 3:14-17]). *Ezekiel* 38-39 pictures a restored peaceful land of Israel with unwallled villages which is threatened by a set of eschatological enemies from the ends of the earth. The invasion by "Gog of the land of Magog" is supernaturally stopped, and the bodies of the troops are given to the beasts of the field and the birds of the air.

Developing from these earlier Israelite and ancient Near Eastern phenomena, eschatological warfare became a widespread motif in Jewish apocalyptic and related literature. Perhaps one of the most explicit early statements is from the main Old Testament apocalyptic writing *Daniel* 7-12. It paints a picture in which the earthly powers and their struggles against each other are mirrored by angelic powers who also oppose one another (cf. 10.13, 20-21). The "prince of Persia" is not a human ruler but an angelic being who opposes the archangels Gabriel and Michael. Although the scene is set in the time of the neo-Babylonian or early Persian empire, the writer is clearly expecting the eschaton in his own time during the Maccabean revolt (about 165 BCE).

The war between supernatural beings hinted at in *Daniel* is described in greater detail in the New Testament book of *Revelation* (12.1-9). Here Satan the Devil and his forces are defeated by the forces of God, led by Michael. The story has been Christianized and made to refer to the birth of Christ, but the basic story depends very much on Jewish antecedents. Not least are the motifs taken from the ancient Near Eastern beliefs in the monsters of chaos, also found in the Old Testament (*Ps.* 29.10; 89.9-10; *Is.* 27.1; 51.9-11), who were conquered at creation but continually threaten the ordered cosmos and must be defeated periodically by God (Yarbro Collins).

Many apocalypses envisage a cosmic climax to history in which God or his instrument(s) will intervene in one

way or other to punish the wicked and defend his people. The Gospel apocalypse (*Mark* 13 and parallels), *4 Ezra*, *2 Baruch* describe this time, as does *Revelation*. According to the last-named writing, the climax is the battle at "Armageddon" (*Rv.* 16.16), the battle in the valley of Jezreel in which God slaughters the armies menacing Jerusalem until the blood flows to the horse's bridle (14.20). This is followed by a "millennium" of God's rule on earth (12.4-6); however, at the end of this period Israel is once again threatened by eschatological enemies, stirred up by Satan, and said to be "Gog and Magog" (12.7-9, obviously drawing on the names of *Ezekiel* 38-39).

Timing is very important to eschatological warfare. It is often assumed that God has a particular prearranged schedule of events to which he works, and a variety of schemes can be found in the surviving apocalyptic literature (Grabbe, 1979). One which seems to occur in the Cairo Damascus Document is the use of the seventy-weeks prophecy from *Daniel* 9.24-27 (Grabbe, 1997), in which there is a period of 390 years of wrath, follow by 20 years of groping (CD i.5-6). A period of 40 years is also supposed to follow the death of the Teacher before the eschaton (CD xx.13-14). If we count in a "generation" of 40 years for the life of the Teacher, we come to 490 years, exactly as in *Daniel* 9. Other significant periods of time found in some of the scrolls are forty and seven (see below).

The main Qumran text embodying eschatological warfare is the War Scroll (1QM; 1Q33; 4Q491-496 = 4QM^{a-1}). There is also a writing related to it preserved in fragments (4Q497). The War Scroll is not paralleled in other known literature and thus provides a unique view on the subject. The final war between the "Sons of Light" and the "Sons of Darkness" takes place according to a stereotyped timetable. According to ii.6-10, the war will apparently last forty years (forty is often used as a time of trial or difficulty in biblical passages); however, i.13-14 makes it according to a heptadic scheme, with one side winning for three "lots" (*goralot*), the other side winning for three, and "the hand of God" apparently prevailing in the seventh. Whether these "lots" represent years is not clear; if so, the war is fought over a sabbatical year cycle.

A great deal of attention is paid to the formalities of how the battle is carried on, with significant space given to the trumpet calls (iii.1-11), the various ensigns carried by the particular battalions (iii.13-v.2), the decoration of the weapons (v.4-14; vi.2-3), and the activities of the priests (vii.9-ix.9). The order of battle is also very stylized: however much it may be based on actual warfare of the time, it has the quality of a ballet about it. Just as a ballet may contain scenes from actual life but interpreted in a special way by dance, so the waging of war in the War Scrolls appears choreographed. Contributing to this impression is the considerable influence of the biblical

text which has stereotyped the account (e.g., *Nm.* 10.1-10 on the trumpets).

Yet one can say with some confidence that the picture in the War Scroll is at least in part based on the actual maneuvers of the army in battle. It has been suggested that the writer shows a knowledge similar to that found in Hellenistic military manuals (Davies; Duhaime 1988). Others have seen a detailed knowledge of Roman military tactics (Yadin). In either case, the writer has at least a general understanding of basic movements of an army engaging another army in the field, especially in columns ii-xix. Yet many of the writings which discuss eschatological warfare do so in terms of normal warfare and only shade into a supernatural aspect of it. Nevertheless, the picture in some passages of the War Scroll seems different from that in others. It has been explained that the differences between the different parts arise in part because of its redaction history (Davies). This means that more than one system is represented in the text. If so, it is impossible to reconcile all the passages with one another. The picture given by the different sections can be summarized as follows:

Column i: The nations attacked are the army of Belial, including Edom, Moab, Ammon, Philistia, and the *Kittim* of Asshur and Egypt (i.1-2, 4). The war is between "the sons of light" and the "sons of darkness" with angelic hosts fighting as well as humans (i.10-11). The fighting takes place in seven parts: for three, the sons of darkness prevail, and for three, the sons of light prevail. In the seventh, God is victorious. The "sons of righteousness" shine to the ends of the earth (much as the "wise" shine like the stars in *Dn.* 12.3), suggesting a form of "astral immortality" (Dupont-Sommer).

Columns ii-ix: The war takes place over a period of forty years of war, fighting every year except the sabbatical years. The first six years have been lost at the beginning of the column; however, they may have been devoted to preparation for war for six years, followed by the sabbatical rest (ii.9). The remaining thirty-three are divided up into a pattern of six years of fighting followed by a seventh year of rest (ii.6-10). The list of enemies fought is broken (ii.10-13) but apparently included Aram Naharaim, Lud, Uz, Hul, Togar, Mesha, sons of Arphaxad, Ashur, Persia, Kadmonites, Elam, Ishmael, Keturah, the sons of Japhet. Fighting units contain horsemen, javelin throwers, and (apparently) slingers, along with the usual regular troops. It is interesting, in the light of columns xv-xix, that no indication is given that Israelites will fall in battle. However, on the whole, this section tends to describe the battles realistically and contains no angelic assistance (though vii.6 mentions "the holy angels" as being among them), despite a certain "ritualizing" of the battle (Davies, 1977, 42, 45)

Columns x–xiv: This is a collection of hymns and prayers, thus differing in content from much of the rest of the writing. God's past help to his people is recited, and he is called on to deliver them from their enemies, aided by the angelic hosts (vii.4). God is referred to as a "mighty man of war" (xii.9: *gibbor hu-milhamah*). At least one blessing is given by the priests (xiii.1); another is sung by the victorious Israelite army (xiv.2–18).

Columns xv–xix: This section is partially parallel to vii.9–ix.9, but there are differences. For example, it is envisaged that there will be Israelite casualties (xvi.11; xvii.8–9; War Scroll^a x, ii.11). This is apparently a way of testing "according to the mysteries of God." There is also no cavalry among the troops. There is only an anonymous "enemy" rather than named opponents, except for "the king of the Kittim" in xv.2 (redactional according to Davies, 1977, pp. 88–90).

Extensive discussion about the growth of the book is beyond our purpose here, but some points are important. Columns ii–ix are based on the realities of the battlefield, but they were not written by a soldier. Just as some of the military manuals of the Greco-Roman world were written by armchair military historians and were debated in the philosophical schools, so this section may well have been written by a priest with some knowledge of warfare (Duhaine 1988). The military data have been put in a framework which gives them a different slant, however. The conduct of the campaign is led by the priests; the battle has been ritualized; and, most importantly, the central description of columns ii–ix is now preceded by column i and followed by columns x–xix, which give an eschatological context to the battle.

The details of the battle now fit in with this eschatological context. For instance, a number of different trumpet sounds are described in the War Scroll (iii.1–11). The trumpet was very important in warfare because in the noise and confusion of battle it was one of the best ways to communicate to the troops, and the ones described in the War Scroll have the feel of being based on the actual signals known to be used in battle, but it is the priests and Levites who sound the signals (vii.12–ix.9). Ensigns and standards (1QM iii.13–iv.18) were also widely used by ancient armies, much as flags are used today, however, the amount of space devoted to them gives them a significance far beyond their place in actual warfare. Similarly, the slogans (1QM iii, iv, vi) remind one of those mentioned in 2 Maccabees 8.23 and 13.15, but they seem to have an end in themselves in the War Scroll. The data may at times be those of a military manual, but the message is a theological one.

The enemies named at various places are traditional enemies and could be reapplied to represent a particular historical enemy (as the "Kittim" seem to represent the

Romans in *Dn.* 11:30). But just as Gog and Magog are taken up in *Revelation* as names for the eschatological enemies destroyed by Christ, so the Kittim and others in the context created by column i have become the "Sons of Darkness" to be defeated by the stereotyped righteous who now become the "Sons of Light" and fight not according to human plans but only to the strict schedule of a divine timetable. As always, God is the supreme divine warrior, commanding angelic hosts.

LESTER L. GRABBE

WAR OF THE SONS OF LIGHT AGAINST THE SONS OF DARKNESS. Known also as the War Scroll (1QM), this Hebrew manuscript was among those scrolls from Qumran Cave I acquired by the Hebrew University, Jerusalem, and first published (posthumously) by Eleazar Sukenik in 1955; two fragments (1QM) appeared in Discoveries in the Judaean Desert, 1 (pp. 135–136). It contains 19 columns (originally, at least 20) of which the first 14–19 lines (originally, at least 21–22) are preserved. It describes a war which is sometimes presented as between the "Sons/Children of Light" and the "Sons/Children of Darkness" (aided by a nation called the "Kittim"), but sometimes as between "Israel" and "the nations." This feature, and other variations in language and ideology, suggest a composite document, whose originally independent sources have nevertheless been organized in a way that offers a generally coherent if sometimes puzzling picture. Seven fragments (4Q491–97) of similar materials have also been published by Baillet in Discoveries in the

Judaeen Desert, 7. According to the editor, these comprise a shorter recension of 1QM, but the relationship between them and the War Scroll (1QM) is in fact variable. The War Scroll^a (first published by Hunzinger), is clearly an earlier and shorter version of 1QM xix. However, not all of the Qumran Cave 4 texts fragments have parallel texts in the War Scroll (1QM), and while some Cave 4 fragments may represent some of the source material from which War Scroll (1QM) was drawn, or perhaps even an earlier version of that composition, they do not all belong to a single manuscript (War Scroll^a 4QM^a and War Scroll^b 4QM^b are papyri). Paleographically, some are older, some contemporary, and some younger than War Scroll (1QM) (Baillet, summarized by Duhaime, 1995, pp. 80–81). The existence of other texts related to a final war, but not forming part of a War Rule (such as 4Q285, 4Q497), suggest that behind War Scroll (1QM) may lie a set of beliefs and writings on the theme of the eschatological battle, only some of which crystallized into a Rule. The designation *M*, therefore, cannot safely be taken to designate a single document, even in differing recensions: the term *War Rule* should be confined to 1QM.

Contents. Column i opens with the title: “And th[is . . .] the war,” then summarizes that war, opening with a battle between the “Sons/Children of Light” and the “Sons/Children of Darkness,” the latter being nations living in Palestine or on its borders, (traditional biblical enemies of Israel—Edom, Moab, Ammon, Philistia), in league with “*Kittim*” who are present in Syria and Egypt and whose “domination” is hereby ended, and “those who violate the covenant” (cf. *Dn.* 11.32: presumably certain Judeans). Columns ii–ix deal in more detail with subsequent battles between the now reunited twelve tribes of Israel and the nations of the world (drawn from *Gen.* 10), involving six-year campaigns interspersed with sabbatical years, making a total of forty years of combat, including the initial battle. Column ii opens with the restoration of the Temple cult, presumably in the seventh year of the war, and the twenty-six priestly courses show that the typical Qumranic 364-day calendar is being adopted. Columns iii–ix list inscriptions on trumpets and banners, lengths of banners, battle arrays and weaponry, ages of participants, and, finally, military maneuvers. Columns x–xiv contain a varied collection of liturgical pieces: some dualistic and some not; some with explicit settings in a battle context, and some without. Columns xv–xix describe in detail a seven-stage battle between the Children/Sons of Light and the Children/Sons of Darkness, directed by priests, assisted by heavenly hosts and finally won, after alternate successes by either side, by direct divine intervention. If a coherent sequence is to be reconstructed from this document, the battle must correspond to that of the first seven years outlined in column i. It

is therefore possible, though not necessary, that several columns have been lost after column xix. The fragment 1Q33 shows that there was at least a column xx.

The scroll thus combines, by means of the arrangement of its parts and a prefatory outline (i) a nationalistic scheme of world conquest by Israel with a seven-stage dualistic confrontation between the forces of light and darkness. The balance between fantasy and reality is precarious: the dualistic battle proceeds as if minutely choreographed, where the enemy falls after a single throw. The “nationalistic” sections (ii–ix) contain some apparently more realistic data, though the idea of world conquest, with even enemy combatants observing sabbatical years, is hardly credible.

Genre, Composition, Date. Though it is sometimes described as *apocalyptic*, the War Scroll (1QM) is clearly not an apocalypse: no heavenly revelation is claimed. The most plausible comparison is with Hellenistic and Roman military manuals, specifically the “tactical treatise” (Duhaime, 1988), which, though transmitted in a fairly standard form, could be adapted. Even so, the concept advanced in this composition is thoroughly idealistic and its execution involves heavenly forces. Duhaime thinks that three documents ii–ix, x–xiv, and xv–xix have been independently redacted in both the War Scroll (1QM) and what he sees (with Baillet) as a different recension represented by the Cave 4 texts. Most scholars accept a division into these three sections, ii–ix, x–xiv, and xv–xix. The fragment War Scroll^a provides some evidence for a pre-dualistic war rule, of which the War Scroll (1QM) xv–xix is a dualistic redrafting. But the date and circumstances of such a rule are unclear, and whether it originated inside the circles responsible for distinctive Qumran features (e.g. dualism, 364-day calendar) is also an open question. The analysis by Davies, which demonstrates that xv–xix represents an elaboration into seven stages of a single battle plan already present in 1QM vii–ix, tells against the view of van der Ploeg and von der Osten-Sacken that the dualistic sections (i, xv–xix) are the earliest parts of the War Scroll (1QM) that were subsequently elaborated by nondualistic material. Some features, such as the use of lightly armed forces rather than heavy infantry, the use of the ambush, and the tradition of banners with a slogan “. . . of God” and the singing of hymns after battle feature in the books of Maccabees, and point to a basis in Hasmonean warfare (as Davies has also argued).

As for the date of composition of War Scroll (1QM) itself, both Carmignac and Yadin took the view that 1QM is the product of a single author, and the overall unity of plan makes this probable, though “compiler” is evidently a preferable term. The scroll’s description of the weaponry and tactics led Yadin to posit an imperial Roman

date for it (the mention of "king of the *Kittim*" in x.2 might support this). Certainly, most scholars now see the *Kittim* in the War Scroll (1QM) as Romans, whose status as a major power in the Levant dates from the early-middle 1st century BCE. The composition of the War Scroll (1QM) itself should probably be assigned, then, to the late first century BCE or early first century CE, a date supported by the Herodian script (bearing in mind a paleographical margin of error of fifty years or so). Such a period makes plausible the view of a final war that would have to involve a confrontation with the Romans, against whom a hostile attitude is now expressed (unlike e.g., the attitude in the Habakkuk commentary, where they are not treated as enemies, but agents of divine punishment on a corrupt Jewish leadership). Despite its idealistic character, therefore, the War Scroll (1QM) may reflect a real political tension in Judea, and an anticipation of the struggle with Rome that eventually occurred in 66 CE. Its sentiments might also explain how certain Jews may have come to see a war with Rome as one in which their god would intervene decisively.

Links with Biblical Literature. A list of Hebrew scripture quotations in the War Scroll (1QM) has been compiled by Carmignac (*Revue biblique* 63.234-260, 375-390). The significant cases are as follows: *Daniel* 11.40-12.3 is the basis for the war scenario in the War Scroll (1QM); *Numbers* 1-10.10 inspires the presentation of a twelve-tribe nation-army; and *Genesis* 10 prompts the list of nations to be conquered. *Deuteronomy* 20.2-4 and *Numbers* 10.9 are also quoted in x.1-6 to justify speeches of encouragement before battle. Finally, although there are no clear textual allusions, *Ezekiel* 38-39 (the Gog prophecy) may have contributed to the notion of a final war in which God defeats a mighty army of nations.

Although there is no evidence of any direct borrowing of the War Scroll in the New Testament, the book of *Revelation* also describes a final war in which earthly and heavenly forces combine. As already mentioned, the scrolls give evidence of a wider set of Jewish traditions about the final war, from which the author of *Revelation* may well have drawn.

Links with Other Qumran Texts. There are very few demonstrable direct links between the War Scroll (1QM) and other Dead Sea Scrolls, although there are several general features in common, such as angelology. The closest parallel is with the dualistic section of the Rule of the Community (1QS ii.13-iv.26). There is an especially close connection between the War Scroll (1QM xiii.1-6) and Rule of the Community (1QS ii.1-18), both of which are dualistic blessing and cursing liturgies. The organization and composition of the "congregation of Israel," into thousands, hundreds, fifties, and tens, including age lim-

its for various kinds of service, is shared by the War Scroll (1QM) and Rule of the Congregation (1QSa). The organization of the Temple service and the citation of biblical rules of warfare are both shared by the Temple Scroll, but there is no evidence of direct influence. The views of some scholars (e.g., van der Osten-Sacken, B. Z. Wacholder, *The Dawn of Qumran*, Cincinnati, 1983), that the War Scroll has influenced other Qumran writings is not borne out by any detailed comparison. Indeed, while the word *vahad* is used in the War Scroll several times, it never designates a particular community, as in Rule of the Community.

Significant Features of the War Scroll. The most interesting ideological features of the War Scroll are its dualism and the leadership of the war. The dualism is very similar to the formulation in the Rules of the Community (1QS iii.13-iv.26). The precise identity of "Children/Sons of Light" is an intriguing problem. Column i.3 speaks of the "exiles of the Children/Sons of Light return from the wilderness of the nations to encamp in the wilderness of Jerusalem"; as with many Qumran texts, the presence of biblical phrases and the possibility of metaphoric senses makes it hard to conclude for certain whether some "Sons of Light" are held to be in the Diaspora and will join forces with the Judean children/Sons of Light. The supernatural leader of the "Children/Sons of Darkness" is Belial, and human leadership comes from the *Kittim* (the Romans, as already in *Daniel* 11.30). It is the Jewish god (and his angelic armies) who fights for the children/Sons of Light and who for the most part is called upon in the liturgy. But in the liturgical fragments in columns xii and xvii we find the "Prince of Light" and "Michael." It may be legitimate to identify these figures, though it should also be recognized that the material in the War Scroll (1QM) is not necessarily homogeneous. More puzzling is the human leadership of the children/Sons of Light; although the "Prince of the whole Congregation" is mentioned in column v.1 as the owner of a shield, he is otherwise entirely absent, and the fighting is directed by priests, although they themselves are not permitted to fight; it is a priest who also gives the addresses before and during battle. The lack of a "messianic" figure in the one context where he might be expected (he figures in 4Q285) cannot be due to accident or carelessness, and illustrates the variety of eschatological roles presented in the Qumran collection.

From the historical point of view, the significance of the War Scroll is its evidence of military sources and even concepts of a "final war" that may be linked with the early Hasmonean period, and the light it sheds in turn on the ideological background to the war of 66 CE. As to its possible Essene authorship: While Philo claims that the Essenes were pacifist (*Every Good Man Is Free*, 87), Jo-

sephus speaks of Essenes being tortured by the Romans during the 66–70 CE war (*The Jewish War* 2.149) and of individual Essene warriors.

WATER SYSTEMS. Throughout the periods of human history in Palestine, settlements were founded in the Judean wilderness for reasons of climate, industry, isolation, military advantage, and security; the foremost consideration in establishing such a settlement was to provide an adequate and reliable water supply to meet the needs of the residents. Since there is little to no rainfall in this desert region throughout most of the year, recourse was made to ingenious methods to provide the needed water.

Two sources of water were available to the residents of the Judean wilderness: natural springs and rainfall. If there were no springs in the vicinity of the settlement, then the residents were forced to depend upon rainfall. Rainfall occurs only in the winter months and that largely

in the mountains to the west. It was therefore necessary to store water collected in the winter for use throughout the remainder of the year. Thus there were three aspects of ancient water systems: collection, transport, and storage. [See Cisterns and Reservoirs.]

The systems employed to collect and convey spring water and rainwater were sophisticated and utilized the latest technology. Transport mechanisms included stone conduits, mortared rubble conduits covered with waterproof plaster (Qumran, Jericho), sealed clay pipelines (Hyrkania, Jericho), aqueducts employing bridges and tunnels (Cypros, 'Ein-Gedi, Hyrkanja), and dams (Hyrkania, Khirbet ed-Deir, Masada). [See 'Ein-Gedi; Masada, article on Archaeology; and Qumran, article on Archaeology.] Water in an open conduit can flow only downhill, thus limiting its end-use location. A tightly sealed pipeline, however, can take advantage of the siphon effect and rise almost to the height of its source after descending into valleys. This innovation of the Hasmonean period allowed pipelines to follow straight-line courses into low areas rather than having to construct long detours around them. In addition, in some instances running water could be supplied to fortresses and palaces situated on hilltops. Clay pipes have the advantage of being low in cost, easy to lay, secure when buried, and sanitary.

An important element in the construction of water systems in antiquity was the use of impermeable plaster. By sealing conduits, clay pipes, cisterns, and reservoirs with lime plaster, the loss of water was prevented. The plaster was made by first reducing limestone to lime powder (calcium oxide) in a limekiln. Then water was added (slaking) to produce a waterproof substance (calcium hydroxide). In the Hellenistic and Roman periods, crushed potsherds were added to the mixture.

Water resource technology in antiquity proved to be a boon to modern scholarship. This technology allowed communities to settle in the Judean wilderness. As they settled, they brought with them, produced, and stored written documents. Because of the arid climate of the region, many of these documents survived the centuries to be discovered and studied in modern times. Were it not for the water resource technology that allowed communities to survive in the Judean wilderness, modern scholarship would have been robbed of a large percentage of the written documents recovered from ancient Palestine.

Hasmonean Period. During the Hasmonean period (152–37 BCE), the Judean wilderness was highly developed, and the construction of elaborate water systems reached its peak. From the palaces and villas of Jericho, to the fortresses throughout the region, to the religious community at Qumran, settlements utilized water from every conceivable source.

At Jericho (Tulul Abu el-'Alayiq), where the upper

classes of Judea maintained winter residences, a network of aqueducts was constructed to bring water from local springs to supply the palaces, villas, estates, farms, and gardens of the community. During the first phase of occupation, probably during the reign of John Hyrcanus (135-104 BCE), a long water channel was built to carry water from three springs in Wadi Qelt, over 8 kilometers (5 miles) to the west, to provide water for the palace area and irrigate an area of more than 110 acres north of the palace. An underground clay pipe 400 meters (1,313 feet) long brought water from the aqueduct to the palace. In the reign of Alexander Jannaeus (103-76 BCE) a second long-range water channel was built to bring the waters of 'Ein-Auja some 13 kilometers (8 miles) to the northwest, 'Ein-Na'aran, and 'Ein-Duk 5 kilometers (3.1 miles) to the royal estate.

Cypros, located 1 kilometer (0.6 miles) southwest of the winter palaces at Jericho, was one of a series of Hasmonean fortresses protecting the valley of Jericho. Runoff from the nearby hills was collected and directed to the fortress by means of an aqueduct system.

At Khirbet Qumran, in Period Ib (late second century–first century BCE), an elaborate water system was constructed. Surface runoff from the esplanade north of the settlement was no longer adequate as in the previous period of occupation, so a more abundant supply was tapped. Some 800 meters (2,627 feet) distant in the northern branch of Wadi Qumran is a natural amphitheater-like catchment area in the face of the cliff on the north side of the wadi. During periods of rain in the winter months, a torrential waterfall cascades down the cliff at this point. A catchment area of approximately 12 hectares (29.7 acres) provided approximately 1,300 cubic meters (45,911 cubic feet) of water annually, much more than was required for the subsistence needs of the community. The water was directed from the base of the catchment area to the compound by means of an aqueduct cut into the rock and marl along the base of the cliff (Schulz, 1960). When it reached the compound, it was stored in reservoirs and cisterns (Wood, 1984, pp. 55-58).

Located 9 kilometers (6 miles) southwest of Khirbet Qumran, the fortress of Hyrkania was supplied by runoff water from the west that was directed to two aqueducts. The longest, coming from the southwest, brought water 9 kilometers (6 miles) from the Kidron Valley. It crossed deep ravines by means of high bridges. The second brought water approximately 2 kilometers (1 mile) from the Wadi Abu Shu'ala to the west, where a dam was built to contain the runoff. Some parts of the two aqueducts were rock-cut and some parts constructed of masonry. Both were plastered along their entire length. The aqueducts merged into a single channel on a saddle 750 meters (2,463 feet) west of Hyrkania. It then ran along three

bridges across three saddles. The easternmost, and highest, of the bridges is graded upward to bring the water into the fortress.

Water from the perennial spring at 'Ein-Gedj supplied a fortress at Tell Goren and its surrounding oasis. The area was known for its production of dates and balsam. An aqueduct from the spring, situated some 200 meters (657 feet) above the Dead Sea and 750 meters (2,463 feet) from Tell Goren, brought water to the site. It fed a reservoir at the northwest corner of the tell made of rubble walls and plastered on the inside. On the slope north of Tell Goren, east of 'Ein-Gedj, are four plastered reservoirs. Laid out on a north-south line, they are spaced at intervals of 90, 50 and 110 meters (361 feet) from one another and fed by aqueducts from the spring. Water from the north-slope reservoirs was used to irrigate the plain below.

Thirteen kilometers south of Masada, the industrial community of 'Ein-Boqeq (1854.0676) derived its water from natural springs of the same name by means of two aqueducts, one 1.2 kilometers (0.74 miles) long and the other 300 meters (985 feet) long. Along most of the way, the longer aqueduct ran on a wall at least 3 meters (10 feet) high on the north side of Nahal Boqeq. Two reservoirs at the site remain; they measure 12 by 11.65 by 3.45 meters and 16.6 by 10.3 by 3.2 meters (39.4 by 38.3 by 11.3 feet and 54.4 by 33.8 by 10.5 feet). The reservoirs were built of large stone blocks, covered with three layers of plaster laid on potsherds.

Herodian Period. During this period (37 BCE–70 CE), the ruling class continued to use Jericho as a royal winter estate. The Hasmonean aqueducts were therefore maintained and used to supply water to the various palaces, pools, gardens, and farms that comprised the complex.

Herod erected the fortress of Cypros, named after his mother, on the ruins of the Hasmonean fortress at that site. A sophisticated water system was also constructed at this time. A 14-kilometer (8.7-mile)-long aqueduct brought water from the springs of Wadi Qelt to the lower reaches of the summit. Several bridges and tunnels formed part of the system.

In 31 BCE Herod captured the Hasmonean fortress Hyrkania and made it into a detention center for political opponents. Many were executed there, including his son Antipater (Josephus, *The Jewish War* 1.364, 664; *Jewish Antiquities* 15.365–367; 16.13). The fortress was rebuilt, including the water system. Upper courses of the eastern aqueduct have typical Herodian masonry of alternating headers and stretchers, with drafted margins and a smooth face.

When Herod built his fortress atop Masada, his engineers ensured that adequate water would be available. Dams were built across the Ben-Jair Valley 2 kilometers

(1.2 miles) to the northwest and the Masada Valley on the south side of the fortress. Open channels directed the water from the dams to storage reservoirs on the southwest slope of the mountain. From there, the water was transported by humans or pack animals to the summit.

Byzantine Period. Monasteries were prevalent in the Judean wilderness in the Byzantine period (324–638 CE). Elaborate water systems were a basic element of these desert communities.

Saint John the Baptist Monastery was settled around 500 CE and is located approximately 800 meters (2,625 feet) west of the Jordan River. In the west part of the site is a large reservoir. It was fed by an aqueduct originating at the spring 'Ein es-Sultan in Jericho, about 10 kilometers (6.2 miles) to the west. Remnants of the aqueduct are still visible in the area.

Monks settled among the ruins of the Herodian fortress Hyrkania in the fifth century. A section of a Byzantine aqueduct has been found adjacent to the earlier Hasmoanean-Herodian system. The later aqueduct is identifiable by its reddish plaster. It was 6.3 meters (20.7 feet) lower than the earlier one and thus could only supply water to the lowest of the cisterns at the site.

Mar Saba Monastery is situated 13 kilometers (8.1 miles) southwest of Khirbet Qumran on the cliffs of the Kidron Valley. Built in the fifth century, it still is in use today. Runoff water is collected by dams and channeled into reservoirs. From there, it is directed throughout the complex to individual pools and cisterns in the various buildings and residences.

Khirbet ed-Deir Monastery, located 15 kilometers (9.3 miles) northwest of 'Ein-Gedi, was occupied in the sixth and seventh centuries. Two aqueducts directed rainwater to two cisterns and a large reservoir. In addition, rainfall from the monastery's roofs and courtyards was channeled into the garden area by means of gutters and channels.

WAYS OF RIGHTEOUSNESS. See Wisdom Texts.

WEAPONS have been found in settlements and caves throughout the Judean Desert. This article focuses on military equipment dating from the time of the First Jewish Revolt (66–73 CE) and the Bar Kokhba Revolt (132–135 CE), which constitutes the majority of the excavated and published material. By far, the greatest quantity and variety of military equipment comes from Yigael Yadin's excavations at Masada, the final publication of which, by Jodi Magness and Guy Stiebel, is forthcoming. Weapons have also been published from caves in the Judean Desert that were occupied at the time of the Bar Kokhba Revolt, and from the site of Qumran and caves in its vicinity. In addition, military equipment dating to the time of the First Jewish Revolt has been discovered in Shmarya Gutman's excavations at Gamla in the Golan (Gutman, 1994). Most of the parallels for the weapons from the Judean Desert come from Roman forts and military camps in Europe. Most of the military equipment published from sites in the Judean Desert, except for Masada, consists of arrowheads and shafts.

Arrowheads, Arrow Shafts, and Bows. Hundreds of arrowheads were found in the excavations at Masada. With one exception, all of them are of iron and are of the same general type. The arrowheads are trilobate in section, have barbed wingtips, and a tang that was inserted into a wooden shaft. Arrowheads of this type are also published from caves in the Judean Desert that were occupied at the time of the Bar Kokhba Revolt, and there is one from a cave near Qumran that was excavated by Joseph Patrich. In Roland de Vaux's field notes, which were

recently published by Jean-Baptiste Humbert and Alain Chambon, one arrowhead from locus 4 is described as trilobate. Only seven other "arrows" (apparently, arrowheads) appear in the locus lists (two more from L4, and one each from L19, L33, L41, L45, and L109), some of which are described as iron. It is impossible to determine on the basis of the presently available information whether they are all barbed iron trilobate arrowheads. It is also impossible to determine whether other objects listed in de Vaux's field notes, such as iron shafts, iron knife blades, belt buckles, bone handles, and bronze fibulae, represent military equipment. No arrowheads are listed from de Vaux's excavations at 'Ein-Feshkha, and none is published from Pesach Bar-Adon's excavations at 'Ein el-Ghuweir.

Barbed iron trilobate arrowheads with tangs are recorded from Roman sites (especially forts and military camps) throughout Europe. Although this type of arrowhead first appeared prior to the Roman Imperial period, it was most common during the time of the Roman Empire. Evidence for the manufacture of barbed iron trilobate arrowheads was discovered in two rooms (L442 and L456) in the Western Palace at Masada. Over two hundred arrowheads were found together in the center of hearths, with a large quantity of iron fragments, pieces of slag, charcoal, and the remains of arrow shafts. Since these workshops (*fabricae*) date to the time of the First Jewish Revolt, they demonstrate that the Jewish rebels at Masada were using and manufacturing arrowheads of characteristic Roman type.

Arrow shafts have also been discovered at Masada and in caves around the Judean Desert that were occupied at the time of the Bar Kokhba Revolt. All have a two-part construction that is uncommon elsewhere in the Roman Empire, consisting of a wooden head or foreshaft and a lower half of reed. Finally, three pieces of worked bone belonging to bows were recovered in the excavations at Masada.

Arrowheads and arrows are characteristic weapons of Roman auxiliary archers, most of whom were of eastern origin, although at least some *non-sagittarii* auxiliaries and legionaries were trained in archery. The Jews were skilled in archery as were the other peoples of the Roman East, and Jewish cavalry archers served in Herod's army. Archery was often used defensively during the Roman period in times of siege, and undoubtedly played a major role in both the mural defense and the offensive drive at Masada. Archers must also have been involved in the battle that resulted in Qumran's destruction.

Body Armor. Hundreds of bronze scales of armor (*lorica squamata*) were found at Masada, in a variety of shapes, sizes, and colors. Each scale was originally wired

to another and sewn onto a fabric backing. In Israel, bronze scales from the time of the First Jewish Revolt virtually identical to those from Masada have been found at Gamla in the Golan. Bronze and iron scales have been found at Roman sites throughout Europe, though the most complete examples of this type of armor are attested from Dura Europos in the third century CE.

Copper alloy fittings from segmented armor (*lorica segmentata*) have also been found at Masada. This type of armor consists of a cuirass made of strips of iron sheet articulated on leather straps, with copper alloy fittings. Again, most of the parallels come from Roman forts and military camps in Europe. However, the remains of a suit of segmented armor were found at Gamla in the Golan. It includes the iron shoulder and chest plates to which the copper alloy hinges, buckles, and decorative elements are still attached.

Scale armor was used by both legionary and auxiliary soldiers, though in Roman reliefs from the second quarter of the first century CE on it is usually associated with auxiliaries. Segmented armor, however, is characteristic of Roman legionary soldiers, who could wear other types of armor as well.

Shields. Remains of an undetermined number of shields (*scuta*) were found in the excavations at Masada. They include fragments of layers of pressed wood or plant fibers, covered by stretched leather. There are also pieces of bronze binding from the edges of shields. Fragments of bronze binding are not uncommon at Roman military sites in Europe, but shields have rarely been found owing to the perishable nature of the materials from which they were made. The best-preserved examples come from Dura Europos in the third century CE. The shape of the bronze bindings suggests that at least some of the Masada shields were the large, semicylindrical, rectangular ones carried by legionaries.

Swords and Sheaths. The remains of three iron swords were found at Masada. Due to the poor state of preservation, it is difficult to determine their original forms. The best-preserved example is a gladius with a long, tapering tip. It is still sheathed in a u-section guttering. Other finds from swords at Masada include bone handgrips and the bronze chape of a sword sheath. The bronze, which was originally tinned or silvered, is decorated with delicate cutout designs, which formed a decorative pattern. The details are incised and would have been gilded. The dark leather backing would have originally been visible through the cutout areas and would have created a striking contrast with the silvered and gilded bronze overlay. The chape belongs to a type of gladius sheath found in the Villa of the Mysteries at Pompeii and at Roman sites elsewhere in Europe, from the reign of

Claudius through the time of Domitian. It must have originally belonged to a legionary officer. A clipe of the same type is published from the excavations at Gamla in the Golan.

Spears, Lances, and Javelins. Traditionally, scholars have defined spears and lances as weapons for thrusting, as opposed to javelins, which were hurled. According to traditional definitions, the Roman spear had a broad head and was called a *hasta*. The *hasta* and *spatha* were generally the offensive weapons used by the auxiliaries, while legionaries were equipped with *pila* ("javelins") and *gladii*. However, some scholars have recently called into question the traditional classification of Roman spears, pointing out that it is impossible to equate ancient terms such as *hasta* and *lancea* with the objects, or to determine which ones were hurled and which were thrust. No *pila* were discovered at Masada, and none is published from any other site in the Judean Desert. However, four socketed iron objects that can be identified as spearheads were found at Masada. The two larger examples are about 20 centimeters long and have low-shouldered blades, which means that the broadest point is closer to the socket than to the tip. The two others are similar in form but much smaller in size and could have been used for either thrusting or hurling.

Artillery and Other Objects. In his account of the Roman siege of Masada, Josephus (*The Jewish War* 8.309) describes the use of both catapults (iron bolt- or dart-shooting engines) and ballistas (stone-throwing engines). However, no objects that can definitely be identified as iron bolts have been found at Masada, though a number have been discovered at Gamla in the Golan. On the other hand, both ballista stones and rolling stones from Masada have been discovered and published. The evidence suggests that artillery was used only by the Romans, not by the Jews, in the siege at Masada.

Other types of military equipment from Masada include fragments of helmets, military belts, aprons, and equine equipment. There are also leather military boots (*caligae*) and iron hobnails. The corpus of military equipment from Masada thus includes types characteristic of both legionary and auxiliary soldiers.

Warfare and Weapons in the War Scroll. As Yigael Yadin demonstrated, *The Scroll of the War of the Sons of Light against the Sons of Darkness* contains valuable information on contemporary weapons, while the types of weapons and warfare described point to its date of composition. The sequence of fighting progresses from skirmishing units (including cavalry) equipped with long-range weapons, such as slings, javelins, and arrows, to battalions armed with weapons for close combat. The skirmishing units opened the battle from a relatively long range, engaging the enemy's skirmishing units and at-

tempting to breach the enemy lines. They were followed by the "front formation" of heavy infantry, which could open at intervals to allow the skirmishing units to emerge. As the enemy's lines began to collapse, the army took the offensive by pressing forward with a formation of four "towers." According to Yadin, these towers correspond to the Roman *testudo*, which was a closed formation of men whose three sides were protected by the shields of soldiers standing in the outer ranks. The rest of the soldiers moved behind this tower.

Yadin identified the shields carried by the heavy infantry with the large, rectangular, semicircular *scuta* of Roman legionaries. They are described as being made of burnished copper decorated with elaborate inlaid or applied designs. The shields carried by the heavy cavalry, who fought with and were attached to the heavy infantry, are described as round. The heavy cavalry were also protected by body armor, helmets, and greaves. According to Yadin, in addition to the large rectangular shields, the heavy infantry carried swords corresponding to the *gladius* and spears. The skirmishing units and light cavalry appear to have been equipped with javelins, slings, and bows and arrows (the last is mentioned only in connection with the light cavalry).

Yadin suggested that a combination of elements points to a date of composition between the time of Julius Caesar and the early Augustan period. The numbers and composition of the front formation, which corresponds to the Roman legion, is most closely paralleled in the time of Caesar. It was Caesar who greatly reduced the size of the legionary cavalry, which resulted in the cavalry being made up almost completely of auxiliary units, while the legions were converted into almost purely infantry units. This too corresponds with the structure of the army described in the scroll. In addition, the heavy cavalry, which is attached to the heavy infantry, is described in the scroll as armed with long spears, round shields, and greaves. Round shields were still used by the cavalry at the time of Caesar, but were replaced immediately thereafter by oval or hexagonal shields. The greaves protected the shins of the heavy cavalry, which were left exposed by the round shields. However, by the first century BCE, greaves were no longer worn by the heavy infantry, who were protected instead by large rectangular shields. According to Yadin, the spears carried by the heavy infantry correspond to a long version of the *hasta* instead of the *pilum*. He noted that the *hasta* continued to be used by legionaries when fighting in phalanx order, though by this time the *pilum* was the characteristic legionary weapon. Finally, the use of light units armed with bows, slings, and javelins, fighting between the lines or at the flanks with the support of cavalry, also corresponds to the structure of the Roman army in the time of Caesar

and the early Augustan period. Most of the scroll describes the tactics of the skirmishing units, reflecting the fact that much of the eastern Roman army consisted of auxiliary units, and the fact that the vassal armies of the Roman Empire, including that of Herod the Great, were organized mainly on the auxiliary pattern.

JODI MAGNESS

WEEKS, FEAST OF. See Shavu'ot.

WICKED PRIEST. The identification of the antagonist, whether as a single individual or multiple personalities, behind the disparaging epithet the *Wicked Priest* has preoccupied Qumran scholars from the beginning. It remains one of the central issues in the dating of the origin and history of the sectarian community. The historical figure most frequently identified as the Wicked Priest is the high priest Jonathan or his brother Simon Maccabee.

The appellation the *wicked priest* (*ha-kohen ha-rasha'*) occurs five times, four in Peshar Habakkuk (1QpHab viii.8, ix.9, xi.4) and once in Peshar Psalms^a (4Q171 1-10.iv.7-10). It is always understood in the titular sense and is a pun on the Hebrew *ha-kohen ha-rosh* ("the high priest"). Two other partially mutilated phrases, "the priest who rebelled . . ." (1QpHab viii.16) and "the [priest] who . . ." (1QpHab ix.16) have likewise been interpreted as references to the Wicked Priest, even though a rebellious priest is not necessarily wicked, and there is a scribal error in the writing of the latter text.

The Wicked Priest and the Liar. It is now commonly held that "the Wicked Priest" and "the Liar" (or "one who drops lies"; 1QpHab x.9) are two separate enemies. The former is an illegitimate sacerdotal rival for the high priesthood and the other a teacher of the law who rejected the instructions of the Teacher of Righteousness as authoritative (Jeremias, 1963; Stegemann, 1971). Others, however, view the two as one and the same person (Vermees, 1994; Cross 1995).

The radically diverging interpretations primarily are due to the ambiguities within the relevant texts and the reconstruction of column j of Peshar Habakkuk. Despite the priestly and didactic meaning of their nicknames, what is said about the Wicked Priest and the Liar does overlap terminologically and exegetically. Vermees argues that the Wicked Priest was originally favored by the Qumran community when he was called by "the name of truth at the beginning of his elevation" (1QpHab viii.9) but was later known as "the Liar" when he fell from grace. The difficulty with this explanation is that, according to the passage in Peshar Habakkuk, the Wicked Priest's downfall was caused by his arrogance and greed, not his lies. Moreover, the word *truth* is not always juxtaposed to *lie*, as is seen in the Rule of the Community (cf. 1QS iii.13-

iv.26 and the opposition of the spirits of truth and iniquity).

However, in two other passages that refer to the Wicked Priest (1QpHab ix.16–x.5) and the Liar (1QpHab x.5–xi.2), respectively, the Pesherist conflates the apparently distinct personalities in an exegetical exposition on the building of Jerusalem as a city of vanity. Here, the biblical woes of *Habakkuk* 2.9–11 and 2.12–14 provide a common context and an identity of punishment. If the Wicked Priest and Liar are separate individuals, then they do not always remain so in the mind of the Habakkuk Pesherist.

Another point of dispute that impinges on the relationship between the Wicked Priest and the Liar centers on the restoration of the badly mutilated first column of Pesher Habakkuk. There is a tantalizing reference to “the Teacher of Righteousness” (i.13). The lacuna preceding this phrase has sometimes been reconstructed to include a reference to the Wicked Priest (e.g., Horgan, 1979, translates: “[the interpretation of it: the wicked one is the Wicked Priest and the righteous one] is the Teacher of Righteousness”). This reconstruction is possible since the partially preserved *lemma* (“biblical citation”) of *Habakkuk* 1.4 describes the hedging in of “the righteous” by “the wicked,” and the Pesher writer is likely to have exploited this reading in the same way that the commentator on *Psalms* 37.32–34 saw “[the] Wicked [Priest]” and the “[Teache]r of Righteousness” in the verse on the wicked watching the righteous in order to slay him (4Q171 1–10.iv.7–10).

This restoration, however, is no more than a possibility, since the author of the *pesher* does not always trade lexical opportunities in his biblical *lemma*. For example, in Pesher Habakkuk (1QpHab xii.10–14), the phrase *my shqr* from *Habakkuk* 2.18 is open to an exegetical comparison with the Teacher of Righteousness. The consonants could be pointed as *môrê sheqer* and understood as “a teacher of falsehood,” but this was evidently not how the author of the *pesher* read it. The interpretation was an uninspired critique of idolatry, and the biblical phrase was probably read as “image (or fating) of falsehood.”

If the proposed restoration of column i of Pesher Habakkuk is accepted, then it may be argued that the Wicked Priest already figures from the beginning of the *pesher*. Column i would be a kind of preface that introduces the two opponents: the Teacher of Righteousness and his rival the Wicked Priest. Moreover, column ii of Pesher Habakkuk could be seen as a continuation of the preceding and the Liar (lit., “man of the lie”) as another sobriquet for the same antagonist. If this reconstruction is rejected, then the Wicked Priest appears for the first time only in column viii.

Identification of the Wicked Priest. There has been no shortage of suggested candidates for the historical personage behind the sobriquet the *Wicked Priest*. These identifications range from the high priest Onias III to Jesus and Paul, and one estimate places the total number of figures at over twenty.

The two most commonly discussed individuals are Jonathan (Milik, 1959; Vermes, 1994) and Simon Maccabee (Cross, 1995). Both identifications are based upon the equation of the Qumran community with the Essenes, a hypothesis that some scholars do not accept. Those who support the Maccabean theory argue that the formative period of occupation at Qumran (c.150 BCE) converges with the historical allusions to be found in the *pesherim* and in the *Psalms of Joshua*^{a-b} (4Q378–379; quoted in an anthology, that is otherwise biblical, called *Testimonia* [4Q175]). Apparently, the Qumran-Essene community viewed the illegitimate accession of non-Zadokites to the pontifical office as cause for separation from the Jerusalem cultus. Vermes, who favors one of the two Maccabean brothers, argues that the death of Jonathan is alluded to in Pesher Habakkuk (1QpHab ix.9–12), when it is said that God handed the Wicked Priest over to the hand of his enemies (*1 Mc.* 12–13). Cross prefers Jonathan's brother Simon, since he sees in the allusions to “an accursed man” and his two sons in *Testimonia* from Cave 4 a reference to Simon and the deaths of his two sons, Judas and Mattathias, in Jericho.

Neither the Rule of the Community (1QS) nor the Damascus Document (CD) treats the supposedly illegitimate accession of the Wicked Priest as an issue, and one may ask whether the narrative of *1 Maccabees* has not had undue influence on the interpretation of the Dead Sea Scrolls. Some of the *pesher* interpretations do indeed have the semblance of coded historical allusions; however, the correlation of the characters and events can be challenged. For example, does the death of the Wicked Priest by a bitter affliction fit well with the sudden execution of Jonathan at the hands of Trypho? Is the building program mentioned in the *Psalms of Joshua*^{a-b} not more convincingly located in Jerusalem than in Jericho?

Other historical allusions have no correspondence to or are too general or more descriptive of another figure. It is often pointed out that the Wicked Priest pursued the Teacher of Righteousness to his house of exile on Yom Kippur and that this is indicative of a calendrical difference (1QpHab xi.4–8), but there is no external evidence of any Maccabean or Hasmonean high priest venturing to Qumran. The state of drunkenness described in Pesher Habakkuk (xi.12–15) is a more appropriate description of Alexander Jannaeus's inebriation (Josephus, *Jewish Antiquities* 13.15.5, sec. 398) than of Jonathan or even Si-

mon's behavior. The latter and his two sons were killed by Ptolemy, Simon's son-in-law, when they were in a drunken stupor during a banquet in Jericho (1 Mc. 16.1–17), but it is unclear whether they were customarily given to drink. Yet other passages (e.g., 9.16–10.5) are so unspecific that they may apply to different high priests.

A Multiplicity of Wicked Priests. The problems in attributing all that is said about the Wicked Priest to one individual have led several scholars to posit a multiplicity of figures behind the insulting title. Apparently, Peshar Habakkuk calls more than one Maccabean and Hasmonean high priest wicked. Although anticipated by others (e.g., Brownlee, 1982), the most developed theory issues from the study of Adam Simon van der Woude (1982), who enumerates six high priests in strict sequential order in columns viii–xii of Peshar Habakkuk: Judas Maccabaeus (de facto; viii.8–13); Alcimus (viii.16–ix.2); Jonathan (ix.9–12); Simon (ix.16–x.5); John Hyrcanus I (xi.4–8); and Alexander Jannaeus (xi.12–xii.10). This theory is now incorporated into the Groningen Hypothesis, which views the Qumran Community and the Egyptian Therapeutae as daughter sects of the Essene movement (cf. García Martínez, 1988, on the origin and early history of the Qumran community and Lim, 1993, regarding some of its difficulties). [See Therapeutae.]

Peshar Habakkuk itself refers to more than one high priest in speaking of "the last priests of Jerusalem," whose gathered wealth and booty in the last days will be handed over to the army of the *Kittim*, namely, the Romans (1QpHab ix.4–7). This phrase is commonly interpreted to refer to the last Hasmonean high priests, including Alexander Jannaeus, "the furious young lion" of Peshar Nahum (4Q169) and possibly the Apocryphal Psalm and Prayer (4Q448). Moreover, the plurality of wicked priests is suggested by the irreconcilably different ways in which each figure comes to an end (by the hand of his enemies [1QpHab ix.8–12]; by the judgment of guilt [x.3–5]; and by bodily afflictions [xi.12–15]). [See Alexander Jannaeus; Hasmoneans; Jonathan (Hasmonean); John Hyrcanus; and Simon (Hasmonean).]

The Wicked Priest and the Teacher of Righteousness. In Peshar Psalms^a (1–10.iv.7–10) it is said that the Wicked Priest spied on the Teacher of Righteousness and tried to murder him on account of the precepts and laws that the latter had sent to him. Most likely, "the precepts and laws" here refer to the document known as *Miqsat Ma'asei ha-Torah* (MMT, 4Q394–399), a letter that discusses twenty or so differences of law, as initially proposed by Qimron and Strugnell, 1994. Accordingly, the Wicked Priest was originally considered legitimate by the Qumran community before he changed his religious allegiances, and the Teacher of Righteousness, writing as

head of the community, sent this letter to him. Mention is also made of a third group, which has been interpreted as a proto-Pharisaic group.

Whether MMT can support such a reading depends in large part upon the correct identification of its genre. If it is a real letter, then it is odd that it should begin with the enumeration of a calendar when no chronological issue is subsequently discussed. Perhaps it is better to describe it as a formal epistle of the kind that typifies the exhortative treatise or sermon. Whatever the relationship of Peshar Psalms^a to MMT, it is believed that at some point the Wicked Priest did seek to kill the Teacher of Righteousness, though it is unclear whether the attempted murder was successful.

TIMOTHY H. LIM

WILES OF THE WICKED WOMAN. Six fragments in early Herodian script have been ascribed to a sapiential-poetic work termed *Wiles of the Wicked Woman* on the basis of the theme of the first fragment and of similar motifs in fragments 3, 5, and probably also 6. The first fragment is of considerable length (eighteen lines) and bears a strong resemblance to *Proverbs* 7 in that it describes a female who is a dangerous seductress of pious men. There is, however, one fundamental difference. In *Proverbs* 7 it is (as in *Prv.* 5 and 6.20–35) indeed the foreign woman who represents a danger for the upright and wise man with, however, an additional connotation: the attitude in favor of the foreign woman is seen as the antithesis of a life lived in accordance with wisdom. Wiles of the Wicked Woman (4Q184), on the other hand, represents the female figure as much more than a temptation to lead a life contrary to the tenets of wisdom; she has become, rather, the personification of an antagonistic group, and the central controversy has evolved into the author’s concern for the correct fulfillment of the entire Torah. The implacable nature of the controversy reflected in this work is characterized by dualistic traits. It is no longer simply a question of morality but that of the right or wrong observance of God’s will in general and in its details reflects a symbolism much nearer to the old biblical concept of idolatry as adultery and fornication than to the moralistic attitude of normal wisdom literature. [See *Wisdom Texts*.] The sapiential motifs of this moralistic variety, as they are attested in *Proverbs* 5–7, underwent, then, in *Wiles of the Wicked Woman* a theological transformation whereby they were applied to group controversies of a fundamental character. Those portions of *Wiles of the Wicked Woman* that offer a reproach concerning effective rhetoric (4Q184 1.1–2) and misleading advice

(cf. 4Q184 1.14–15) point perhaps to the same people who in other texts appear as followers of the “Man (or Preacher) of Lies.” Regardless of whether this group should be seen as a forerunner of the later Pharisees (Amusin, 1986), what is obvious is that *Wiles of the Wicked Woman* reflects fundamental group dissensions and a perceived deception on the part of a group of antagonists.

It is difficult to establish a date for the controversy behind these polemics, as they are generally applicable throughout a long stretch of time after the initial rift. It is, however, not impossible that their first application dates back to the controversies in Judea in connection with the events immediately before and during the reign of Antiochus IV, when, according to the Damascus Document (CD i), the people went astray because of the propaganda of a certain person who, along with his followers, abandoned a position that the “Teacher of Righteousness” still tried to defend.

JOHANN MAIER

WISDOM TEXTS. The presence of the biblical wisdom books at Qumran is indicated by the fragments of *Job* (4Q99–101), *Proverbs* (4Q102–103), *Ecclesiastes* (4Q109–110), and *Ben Sira* (2Q18 and 11QPsalms², 11Q5 xxi.11–17; xxii.1), along with Targums of *Job* from Caves 4 and 11 (4Q157; 11Q10). Although it has long been acknowledged that there are wisdom elements in the Rule of the Community, Hodayot, and other core Qumran texts, the Qumran library includes other Jewish wisdom texts from the Second Temple period.

The most prominent literary form among the sapiential texts from Qumran is the wisdom instruction. In it a sage

instructs an individual ("O understanding one") or a group ("sons") using the customary devices of calls to pay attention, imperatives and negative prohibitions ("you shall not . . ."), and reasons ("for . . ."). The most extensive wisdom instruction is Sapiential Work A (1Q26; 4Q415-418, 423). Other examples of the genre include sapiential works 4Q185 and 424, Ways of Righteousness^a and ^b (4Q420-421), Wisdom Text with Beatitudes (4Q525), Mysteries (1Q27) and Mysteries^{a-c} (4Q299-301). All are in Hebrew.

The Qumran library also contains Hebrew hymns and poems that speak about wisdom in the context of creation (11Q5 xxvi.9-15), celebrate the place of wisdom in the community of the righteous (11Q5 xviii.1-16), and describe in graphic detail the search for Wisdom as a female figure (11Q5 xxi.11-17; xxii.1) and the seductions of her evil counterpart Lady Folly (Wiles of the Wicked Woman 4Q184). Still other very fragmentary Cave 4 manuscripts have been labeled as sapiential on the basis of their vocabulary (Sapiential Work F 4Q307; Sapiential Work C 4Q425; The Two Ways 4Q473; Sapiential Work^a 4Q486; Sapiential Work^b 4Q487; Sapiential Hymn 4Q498; sapiential fragments? 4Q308; and 4Q408, 410-413, 426, 472, 474-476).

The wisdom instructions imply a secular setting in which those being exhorted engage in business and legal affairs, relate socially to various kinds of persons, and deal with family matters. The wisdom hymns and poems would have been very appropriate for the Qumran setting and for the community envisioned in the Rule of the Community. But they contain nothing that would tie them exclusively to such a community. No single explanation fits all the Qumran wisdom texts. The hymns and poems may have been Second Temple Jewish compositions that were judged as appropriate for inclusion in the Qumran library. The instructions may reflect an earlier secular stage in the Jewish religious movement that developed into the Qumran community or of which the Qumran community was a branch. Or they may have been composed in and for the wider movement in which groups (as in the Damascus Document) lived in a manner that was more fully integrated into Jewish society in the Second Temple period.

Instructions. The most extensive wisdom instruction found at Qumran is Sapiential Work A. It appears in six fragmentary copies (1Q26, 4Q415-418, 423). If the extensive margin at the right-hand side of Sapiential Work A^b (4Q416) marks the beginning of the work, the language of that fragment indicates that the instructions appear in a cosmological framework ("season by season . . . the hosts of the heavens He has established . . . luminaries . . . signs of their festivals") and in an eschatological framework ("He shall pronounce judgment upon the

work of wickedness . . . all iniquity shall come to an end"). The best-preserved section presents instructions from the senior sage to the "understanding one" (4Q416 2.i-v; see also 4Q417 1.i.15-ii.17; 4Q418 7-10). Most units begin with a second-person singular imperative or a negative admonition ("you shall not"). The three main topics are money and possessions, social relations, and family matters.

The advice about money and possessions in Sapiential Work A^b (4Q416 2.ii and iii) is typical of Jewish wisdom literature. The person being addressed is to acknowledge God as the sustainer of all creation ("He has let loose his mercies . . . to give food to all that lives"; ii.1-2). He is to pay back loans quickly and extricate himself as soon as possible from guaranteeing the loans of others or holding their deposits (ii.4-6; iii.4-5). He is to avoid business dealings with strangers (iii.6). While remembering and acknowledging his own poverty (iii.2, 8, 12, 19), he cannot appeal to it as an excuse for failing to seek wisdom (iii.12-14). He is to cultivate a moderate lifestyle (ii.18-20) but may accept good fortune when it comes his way (iii.8-9).

The material on social relations is more obscure. The one being instructed is urged repeatedly to preserve his independence. He is to work diligently at pleasing his superiors (human or divine?) and not to assert his superiority over his social inferiors (ii.9-10, 15-16). He is reminded that God is the ultimate source of social status for all humans, especially his own status (iii.11-12).

The advice on family matters in Sapiential Work A^b (4Q416 2.iii.15-iv.13) and parallel manuscripts uses biblical texts as starting points and expands and adapts their teachings. Thus it reflects on reasons why the one receiving instruction should honor his parents (see *Ex.* 20.12; *Dt.* 5.16), why he should exercise dominion over his wife (see *Gn.* 2.24, 3.16), and why and how he can annul the vows and votive offerings of his wife (see *Nm.* 30.6-15).

The advice on these three topics is punctuated by exhortations to study or contemplate the *raz nihyeh* ("the mystery that is to be/come"). Such study will lead to understanding "what is allotted" (perhaps a reference to eschatological rewards and punishments) and to knowing "all the ways of truth . . . and all the roots of iniquity" (iii.9-10, 14-15).

Extensive sections of Sapiential Work A also appear in the first two fragments of 4Q417, referred to as Sapiential Work A^c. The first column of fragment 1 deals mainly with social relations and financial matters: sensitivity in correcting others (i.2-6), the dangers of associating with evil persons (i.7-9), greed and inappropriate responses to the misfortunes of others (i.9-10), the "mystery that is to be/come" (i.9-10), personal integrity as the best preparation for the coming judgment (i.12-17), and various fi-

nancial matters—borrowing from others, paying back loans promptly, honesty, and possible punishments (i.17–28). Here the “mystery that is to be/come” has as parallel phrases “the birth time of salvation” and “who is to inherit glory and trouble”—thus confirming the eschatological dimension of this concept.

The nature of the “mystery that is to be/come” receives further clarification in fragment 2 of Sapiential Work A (and its parallel text in 4Q418 43). Here the “understanding one” is urged to concern himself with the *raz nihyeh* (i.1, 13–14, 18). One who meditates on it is promised ethical knowledge (“truth and iniquity, wisdom and foolishness”; i.6–7), an understanding of creation (“by the mystery that is to be/come he has laid out its foundation”; i.8–9), and a glimpse of the future (“what is to be”; i.5). This instruction also refers to heavenly books or tablets (see *Ex.* 32.16): “Engraved is the ordinance and ordained is all the punishment. For engraved is that which is ordained by God against all the iniquities of the children of Seth. And written in his presence is a book of memorial of those who keep his word” (i.15–16). Access to these sources of divine revelation is granted to those who constitute a “spiritual people” and not those of “fleshly spirit” (ii.16–17).

Other substantial fragments of Sapiential Work A appeal to the threat of eschatological judgment and sanctions as a motive for wise and righteous behavior in the present. The “foolish ones” of Sapiential Work A^a (4Q418 69) are told to expect the “everlasting pit” and annihilation (6–8), while the righteous ones (4Q418 126.ii) are promised an angelic existence of meditating on God’s power, glory, and faithfulness, and praising his name continually. In the present there exists a correlation between the righteous on earth and the angels in heaven: “Angels of holiness serve him in heaven; but the earth he has given over to the sons of truth” (4Q418 55.8–9). Thus the angels can serve as an example and a goal for the righteous on earth (see also 4Q418 69.12–13; 81.4–5).

Sapiential Work A is unusual in providing wisdom instructions directly to a woman. In Sapiential Work A^d (1 = 1 verso of 4Q414; 4Q415 2.ii.1–9) the singular imperatives and prohibitions are feminine in form. The woman is told to honor her father-in-law, to cling to her husband’s bosom, not to neglect her “holy covenant” (marriage), and to be a subject of praise “on the mouth of all men.”

In the fragmentary instruction contained in sapiential work 4Q185, the sage addresses more than one person (“sons of men . . . my people . . . you simple ones . . . my sons”) and uses the literary conventions of the instruction genre (calls to pay attention, commands and prohibitions, reasons for obeying them) and beatitudes. The

three instructions concern the coming judgment and the fragility of humankind (i.4–13), the might of God displayed in the Exodus (i.13–ii.3), and the ways of iniquity and of righteousness (ii.3–8). The first beatitude (ii.8–13) declares happy those to whom God has given “her,” while the second beatitude (ii.13–iii.1) insists on the need and rewards of remaining faithful to “her.” The feminine referent seems to be Wisdom personified, though a case can be made for identifying “her” as the Torah. More likely, the instruction equates Wisdom and the Torah (as in *Sir.* 24.23). It presents “her” as both a divine gift and an object that the righteous should seek, act upon, and hand on to the coming generations.

The wisdom instruction in sapiential work 4Q424 concerns the kinds of persons to be avoided or shunned for carrying out certain tasks. The sage is instructing someone who is or will be engaged in commerce and lawsuits. The latter is first warned against liars and “shaky” persons, fools and dullards, constant complainers, those who are devious in speech, greedy stewards, and short-tempered judges (1.4–13). The list of persons to be avoided admits of a more moral or spiritual interpretation: those who judge before they investigate, those with blurred vision, the hard of hearing, and the “heavy of heart” (3.1–7). It is complemented by a list of persons to be sought out and relied upon in one’s business and legal affairs: the intelligent, knowing, righteous, truthful, and so forth (3.7–10). The text’s division of humankind into the foolish/wicked and wise/righteous is typical of Jewish wisdom literature. There is no appeal to eschatology or divine judgment, or to anything distinctively “Qumranian” in what has survived of this text.

The text called Ways of Righteousness^{a,b} (4Q420 1.ii.1–5; 4Q421 1.ii.13–15) is similar in content to the list of wise and righteous persons in sapiential work 4Q424 3.7–10; there is nothing particularly sectarian about this list. The righteous person walks in God’s ways, is prudent in dealing with others, seeks truth and justice, and remains faithful to the ways of righteousness. Social relations, and especially persons to be avoided and befriended, are a major concern of wisdom literature (see *Proverbs* and *Ben Sira*).

The Wisdom Text with Beatitudes (4Q525) is a long wisdom instruction in which the speaker addresses an audience in the plural (“sons”). Its series of beatitudes (2.ii) declares “happy” one who speaks the truth, as well as those “who cling to her statutes,” “who rejoice in her,” and “who seek her with pure hands.” The link between wisdom and the Torah is again so close (as in 4Q185) that it is difficult to determine which (or both?) is the referent. The fifth beatitude is an extensive description of “the man who has attained wisdom and walks by the law of the

most high," thus indicating the equation between wisdom and the Torah. Other fragments of this work deal with the precious character of wisdom (2 iii), the link between wisdom and the Torah (4.8–13), the rewards of pursuing wisdom (14.ii 8–13) prudence in speaking (14.ii 18–27), and the rewards and punishments associated with pursuing wisdom/righteousness and folly/iniquity (15).

The wisdom instructions known as Mysteries and Mysteries^{a-h} (4Q27, 4Q299–300 [Mysteries^a, 4Q301?]) are important because of their focus on the "mystery that is to be/come" (*raz nihyehi*) and the association of that mystery with human knowledge and activity in the present. Because the foolish/wicked do not know how to discern between good and evil and between falsehood and truth, and because they fail to understand the "mystery" and the "former things," they will be condemned in the coming visitation and eventually "be no more." The result of this judgment will be the triumph of God's wisdom and its acknowledgment by all creation: "Knowledge will fill the world and folly will be there no more." The eschatological scenario will take place when the hypocrisy of the nations becomes manifest. The text also criticizes "magicians skilled in transgression" who have not looked upon the eternal mysteries or come to understand knowledge (4Q300 1.i.1–5).

The Words of the Sage to Sons of Dawn (in Cryptic A Script; 4Q298) is best preserved in its formulaic introduction ("Listen to me . . . hear my words . . . pay attention"). The body of the work links cosmological matters and moral instructions.

On the basis of their vocabulary several other Cave 4 texts (4Q307–308, 408, 410–412, 425–426, 472–476, 486–487, and 498) have been classified as sapiential. But there is not enough complete text to grasp what contributions they might make to understanding wisdom at Qumran beyond expanding the vocabulary and repertory of motifs.

Hymns and Poems. Interspersed among the biblical psalms in Psalms^d from Cave 11 at Qumran are several compositions that either are clearly sapiential texts or at least contain wisdom elements. Even the prose summary of David's compositions describes David as a sage (among other things): "wise and brilliant like the light of the sun, a scribe, intelligent and perfect in all his ways before God and men" (11Q5 xxvii.2–3).

The Hymn to the Creator (11Q5 xxvi.9–15) refers in passing to the role of wisdom in God's creative activity: "Blessed be he who makes the earth by his power, who establishes the world by his wisdom. By his understanding he stretched out the heavens . . ." (xxvi.13–14). Such language is reminiscent of *Proverbs* 8.22–31 and related texts that develop the idea of wisdom as God's agent in

creation and prepare for the personification of Wisdom and her identification with the Torah (see *Sir.* 24).

The work previously known as Psalm 154 or Syriac Psalm 11 appears in its Hebrew form in 11QPsalms^e (11Q5 xviii 1–16). Two of its stanzas may be important for understanding wisdom at Qumran. The first of these two stanzas (xviii.3–6 [verses 5–8]) describes wisdom as a gift from God, whose purpose is to make known God's glory: "to recount the greatness of his deeds she has been made known to humans." The second wisdom stanza (xviii.10–13 [verses 12–15]) gives a picture of a wisdom community that would fit well at Qumran: "From the gates of the righteous her voice is heard, and from the assembly of the pious her song." The community's banquet is a wisdom feast, and wisdom is identified with the Torah: "When they eat in fullness, she is mentioned; and when they drink in community together, their meditation is on the law of the most high." Although there is no definite link between Psalm 154 and the Qumran community beyond its being part of a manuscript found in Cave 11, the content of this psalm would have been very appropriate for a community in which the Rule of the Community and the *Hodayot* were core texts.

A more thoroughgoing sapiential composition is the autobiographical poem on the search for Wisdom known previously from *Ben Sira* 51.13–30 and found in fragmentary form in 11QPsalms^e (xxi.11–17, xxii.1). It presents a vivid personification of Wisdom as a female figure. Whether Ben Sira wrote it or it was attached to his book later is a matter of long-standing debate. The Qumran version is somewhat erotic, though probably not as erotic as was supposed by its first editor, James A. Sanders. It describes the speaker's quest for Wisdom and Wisdom's revelation of herself to him (xxi.11–15 [*Sir.* 51.13–17]) and the speaker's resolve to live by Wisdom's teachings (xxi.15–17 [*Sir.* 51.18–19]). The poem is an acrostic, with a new letter of the Hebrew alphabet beginning each line. Its lively portrayal of Lady Wisdom offers a sharp contrast to the lurid representation of Lady Folly in *Wiles of the Wicked Woman* (4Q184).

The highly negative poem about Lady Folly in *Wiles of the Wicked Woman* stands in the tradition of *Proverbs* 1–9, where folly is often presented as a seductress preying upon the simple and foolish. In its erotic but ultimately conventional portrayal of Lady Folly, *Wiles of the Wicked Woman* describes how she leads astray the unwitting by means of her body, garments, and lodgings: "her heart is set up as a snare . . . her clothes are shadows of twilight . . . her lodgings are beds of darkness" (4Q184 1.2–7). Her inheritance or "lot" is amid everlasting fire. In a play on the biblical descriptions of Wisdom (see *Jb.* 40.19, *Prov.* 8.22), Lady Folly is called "the beginning of all the ways

of iniquity." She lies in ambush against the righteous man and seeks to turn him "from the ways of righteousness." This poem is more concerned with the subversion of the "righteous" than with the corruption of the "wise," though in the last analysis in Jewish wisdom literature they are the same.

The sapiential text sometimes called the Hymn of Knowledge (4Q413) may be the beginning of or an introduction to a hymn about acquiring wisdom. The speaker (first person singular) addresses a group (second person plural) and promises them knowledge about God's plan for humankind, God's will regarding human actions, and the appropriate rewards and punishments.

Significance of the Qumran Wisdom Texts. By providing new examples of wisdom instructions as well as wisdom hymns and poems, the Qumran wisdom texts expand the corpus of Second Temple Jewish wisdom literature. In some cases (Psalm 154, *Str.* 51.13–19) we now have access to the (original) Hebrew version of texts previously known primarily in Syriac or Greek translations. The instructions are most closely linked to *Proverbs* (especially 1–9 and 22–24), *Ben Sira*, and *1 Enoch* (94.1), and so can be used in the explication of those texts (and vice versa).

With respect to the New Testament, the Qumran wisdom instructions provide parallels at least to the genre of the sayings source Q, the Sermon on the Mount (*Mt.* 5.1–7.29), the Sermon on the Plain (*Lk.* 6.20–49), the *Letter of James*, and the parenetic sections of the Pauline Epistles. In particular, the series of at least five beatitudes in the Wisdom Text with Beatitudes (4Q525) is an important formal parallel to *Matthew* 5.3–12 and *Luke* 6.20–23, though their theological orientations (sapiential versus eschatological) differ. Their appeal to eschatology as a horizon for ethical activity (as in Sapiential Work A and sapiential work 4Q185) is also very prominent in the ethical teachings of Jesus and the early Christians. This combination of ethics and eschatology renders questionable recent scholarly attempts to portray Jesus as a non-eschatological wisdom teacher and to separate sapiential and eschatological strata in the sayings source Q. [See Q Source.]

There are analogies between the appeals in the Qumran wisdom texts to the "mystery to be/come" and the Synoptic Gospels' emphasis on the "kingdom of God." Both concepts are assumed rather than defined and are proposed as the key to understanding God's plan for the future and for human existence in the present.

The portrayals of Wisdom as a personal figure in *Ben Sira* (and perhaps in the Hymn to the Creator) and of Lady Folly in the *Wiles of the Wicked Woman* add to the dossier of Jewish texts that are useful for interpreting the

early Christian hymns that celebrate Jesus as the Wisdom of God (see *Jn.* 1.1–18, *Col.* 1.15–20, and *Heb.* 1.3).

DANIEL J. HARRINGTON

WOMEN. [This article provides a general survey of women as mentioned in the Dead Sea Scrolls. It is divided into two parts: Daily Life and The Texts.]

Daily Life

Most of the documents found in the Qumran caves that are about how daily life is to be lived according to the true interpretation of the Law of Moses contain some passages that discuss women. Of particular importance are Temple Scroll^a (11Q19), the Rule of the Congregation (1Q28a), the Damascus Document, and various collections of Ordinances and Purification Rules; even the War Scroll (1QM vii.3), with its regulations for the conduct of the eschatological battle, makes mention of women in specifically excluding them from entering into the camp of the warriors. [See Damascus Document; Purity; Rule of the Congregation; Temple Scroll; War of the Sons of Light against the Sons of Darkness.] It is clear that women were part of the life of the community or various communities that produced these texts.

The exception is the Rule of the Community (1QS). [See Rule of the Community.] This work makes no mention of women (except for the formulaic "one born of a woman" in 1QS xi.21) or matters of family, marriage, and sexuality. Some scholars think that this was the rule for a specific community, or perhaps an elite subgroup of men (the *yahad*) that did not include women. Other scholars see this rule as a supplementary document, to be read in conjunction with other rules; just as the Rule of the Community makes no explicit mention of the Sabbath but certainly assumed Sabbath observance, so it did not necessarily need to talk explicitly about women even if it applied to a community that included women.

Though the documents belonged to a community that was composed of both men and women, the perspective from which they are written is clearly androcentric. In accordance with the biblical pattern, laws are formulated in the masculine (unless they are clearly speaking about matters of childbirth or menstruation); for example, "they take wives and beget children" (CD vii.6-7); "let not a man lie with a woman" (CD xii.1). [See Family Life; Marriage and Divorce.] Following Hebrew grammatical usage, the masculine forms are used for adjectives and imperative verbs (e.g., "the holy ones," "the perfect," "hear!") when they apply to both men and women; thus an accurate translation needs to be inclusive lest it give a false impression that only men are included.

Most of the information about women comes indirectly, from passages that are primarily concerned with marriage, sexual relations, and purity. There is virtually no theoretical discussion about women per se nor men-

tion of individual women. The only woman's name that occurs is that of queen Shelamzion [Salome] Alexandra, in a calendric type document that lists dates in her reign (Calendric Document C^{4f} 4Q322-324c). [See Shelamzion Alexandra.] Whatever the relationship between the authors of the scrolls and the Essenes, the type of abstract misogynous statements found in Josephus and Philo about the "nature" of woman (e.g., "none of them preserves her fidelity to one man," *The Jewish War* 2 121; "a woman is a selfish creature, excessively jealous and an adept at beguiling the morals of her husband . . .," *Hypothetica* xi.14-15) finds little parallel in the scrolls.

Marriage. Although the Rule of the Congregation (1Q28a i.10) specifies that the marital age for men was twenty years, nothing is said about the age when women married. [See Rule of the Congregation.]

There is a lengthy and detailed exposition of regulations concerning the choice of a woman to marry. The passage (Damascus Document D^f 4Q271 3.7-15) begins with a statement that the woman "is given" in marriage by a male, presumably her father (although the relationship is not stated explicitly). He is commanded to disclose any physical blemishes that the woman might have under penalty of suffering the curse of *Deuteronomy* 28.17 for the one who misleads the blind. He is not to give the woman to one "who is not established for her." The exact sense of the expression is difficult to determine (contrast the different formulation in 11Q19 xvi.9 and *Ketubot* 3.5, "who is fit for him"). Perhaps there is a concern that she not be given to one who is incompatible, or perhaps the concern is with creating a match that is illicit within the regulations of the community. The text continues by specifying that a man is to marry a virgin or a widow who has not been sexually active after widowhood. If there is doubt about her virginity, the prospective bride is to be examined by "trustworthy and knowledgeable women" chosen by the Overseer. The examination may have been a physical examination, perhaps by midwives, to determine if the hymen was intact. (Compare Ordinances^a 4Q159 2-4, which provide for a similar examination if a husband accuses his wife of not having been a virgin on their wedding night; the biblical law in *Deuteronomy* 22.13-21 and its paraphrase in Temple Scroll^a do not provide for such an examination.)

There are many regulations specifying which women are acceptable for marriage, and the strong element of polemic in some of these suggests a sectarian interpretation, different from the rest of Judaism. For example, marriage between a man and his niece was forbidden, and Damascus Document (CD) v.9-11 states explicitly that "The law of incest, written for males, applies equally to females, and therefore to the daughter of a brother

who uncovers the nakedness of her father's brother"; later rabbinic sources allowed and even encouraged such marriages. *Miqtsat Ma'asei ha-Torah* 80–82 is concerned with the union of priests "with women they are forbidden to marry." 4Q Ordinances^b (4Q513) 2.ii with illicit relationships entered into by priests and the daughters of priests, and *Halakhah* (4Q251) 7 with acceptable degrees of kinship for marriage.

Polygamy and Divorce. There are also specific sectarian regulations that limit a man to one wife. In the Damascus Document (CD iv.20b–21) "the builders of the wall" are accused of committing "fornication" by "marrying two women in their [masculine] lifetime." According to the majority of scholars, this is a prohibition against both polygamy and divorce, or, more specifically, remarriage after divorce. This would correspond to the regulation specifically for the king in *Temple Scroll* (11Q19 lvii.17–19): "He shall not take another wife in addition to her, for she alone shall be with him all the time of her life. But if she dies he may marry another." But the Damascus Document could also be read as prohibiting remarriage absolutely, even after the death of the wife.

Yet, there are texts that suggest that divorce was possible in this community, as it was elsewhere in Judaism. The word *mequresh* had appeared in a fragmentary section of the Cairo Genizah copy of the Damascus Document (CD xiii.17), but the text was badly broken at this point, and, with virtually no context, many scholars hesitated to read this isolated word as "the one who divorces." But the fuller passage preserved in Damascus Document^d from Cave 4 at Qumran, (4Q266 9.iii.4–7) establishes that this phrase does occur in the context of marriage and family ("everyone who takes a wife" and "he will instruct their sons"), and so the text, though fragmentary, is speaking of "the one who divorces. . . ." Other texts that may imply at least the recognition of the reality of divorce include *Mutachi* 2.16 as it is found in *Minor Prophets*^d (4Q76 ii.4 "if you hate her, send her away") and biblical verses involving divorce that are simply repeated (and not changed) in the reworkings of biblical law (e.g., 11Q19 lxi.11, "he may not divorce her all his day," citing *Dt.* 22.29; and 11Q19 liv.4–5, "but any vow of a widow or a divorced woman shall stand against her," citing *Nm.* 30.9).

Regulation of Sexual Relations. Although in numerous texts it is assumed that members of the community will be married, there are strict regulations about sexual relations even within marriage. In a list of prohibited activities in Damascus Document^e (4Q270) 2.ii there is a reference in line 16 to "a pregnant woman." Although the next phrase, *meqits dam* ("stirs up (?) blood") is difficult to understand, the context suggests that what is prohibited is sexual relations during pregnancy. Josephus says

specifically of the Essenes that "they do not have sexual relations with them [their wives] during pregnancy, thus showing that their purpose in marriage is not pleasure but the assurance of posterity" (*The Jewish War* II 161). Possibly related to this is the regulation in Damascus Document^f (4Q270) 7.1.12b–13, "and he who approaches to fornicate with his wife, contrary to the regulation, shall depart and not return again." The offense here also may be sexual relations when conception is impossible (during pregnancy and after menopause), though the passage has also been interpreted as sexual relations during menstruation or when the marriage itself is illicit. There are other places that may reflect further restriction on sexual activity, but the interpretation of these passages is less certain (for example, a prohibition against sexual relations in the three days of purification before the meeting of the council of the congregation [1Q28a i.26] or on the Sabbath [CD vi.4–5, "a man may not mix(?) voluntarily on the Sabbath"]).

Ritual Purity. Many passages that concern women are related to issues of ritual purity, which were at the heart of sectarian ideology and a key factor in the separation of the Qumran community from the rest of Israel. Damascus Document^g 6.ii deals with the major impurities of women: menstruation, genital discharge, and impurity after childbirth. Rules for menstrual impurity (including blessings to be said) appear in the Rule of the Menstruating Women (4Q284), although unfortunately the text is very fragmentary. The biblical rules for a postpartum period of impurity, forty days after the birth of a son and eighty days after the birth of a daughter (*Lv.* 12.1–6), are found in *Serekh Damascus* (4Q265), which gives an etiology in a narrative section for the variation in the period of purification based on the story of Adam and Eve in the garden of Eden (cf. *Jub.* 3.8–14).

The segregation of ritually impure people, not only from the pure, but also from each other, is a distinctive feature of these regulations. Some texts speak of an actual separation of those who are ritually impure. For example, in *Temple Scroll*^h (11Q19 xlvi.14–17) places outside of every city are set apart for menstruating women and women who have given birth; in *Temple Scroll*ⁱ xlvi.16–18, those who are impure are divided into separate camps. Purification Rules A (4Q274) sets up rigid barriers between the pure and impure as well as between impure persons of different categories (so that if one with a lesser degree of impurity touches someone of a higher degree, the one with the lesser degree must undergo ablution before eating). There are specific regulations for the man and the woman with genital discharges (*zav* and *zavah*) and for the menstruating woman. A menstruating woman is not to mingle with others in any way during her menses in order not to defile the camp (4Q274 l.i.6).

Often the sectarian regulation in purity matters was stricter than the general *halakha*. For example, according to Temple Scroll' (11Q19 xlv.11–12), "anyone who lies with his wife and has an emission of semen he shall not enter into any part of the city of the sanctuary where I will cause my name to dwell for three days," that is, there is a three-day impurity rather than the single day prescribed in *Leviticus* 15.18, and the presumption is that the woman was also impure for three days. Several texts prohibit all sexual intercourse in "the city of the sanctuary" (CD xii.1–2); the restriction sometimes has been interpreted specifically as banning women from permanent residence in Jerusalem, but the prohibition would apply to both men and women.

Oaths, Vows, and Testimony. The capability and trustworthiness of women in regard to oaths, vows, and various types of testimony are treated in different contexts. A number of texts deal with the biblical law in *Numbers* 30.3–15 that gives a man in authority over a woman (husband or father) the right to invalidate any oath or vow she might take. Temple Scroll' (11Q19 liii.16–liv.3) and the pre-Qumran wisdom text Sapiential Work A^b (4Q416 iv.8–10) confirm this right. However, in the Damascus Document (CD xvi.10–12) the oath could be annulled only if it violated the covenant of the community; otherwise women had full control over oaths they made.

Two passages in the Dead Sea Scrolls describe women as being "trustworthy" (*ne'emano*) in legal matters. Both of these involve giving testimony about the examination of a woman for evidence of virginity, either before marriage (4Q271 3.13–15) or after the marriage night (4Q159 2–4, 8–10). A passage in the Rule of the Congregation (1Q28a i.11), in a discussion of the stages of entry into the congregation, states that when the man reaches twenty and is of age to marry, "she will be received to bear witness of him concerning the judgments of the law and to take her place in the proclamation of the ordinances." Although the precise meaning of the passage is difficult, it seems clear that the technical language of testimony ("she will be received to bear witness of him") is here applied to women.

Membership, Leadership, and Status. One of the most difficult questions is whether women were "members" of the community and how fully they participated in the liturgical life and communal meals. Some scholars (Schiffman, 1994; Stegemann, 1992, 1998) have maintained that women did not take the "oath of the covenant" (CD xv.6) independently but were part of the sect by virtue of marriage to a member. Other scholars (Schuller, 1994) have emphasized texts that speak of the instruction of women in the regulations of the community (1Q28a i.4) and the fact that women are not listed among those

excluded from the communal assembly (1Q28a ii.3–8, CD xv.15–17, and 4Q266 8.i.6–9).

In describing the Essenes (*The Jewish War* 2.161), Josephus has a very enigmatic passage that states "they put their wives to the test for a three-year period"; the three years and the use of the same verb here as used elsewhere for the initiatory testing for men (*The Jewish War* ii.138) is at least suggestive of some type of formal initiation for women. There is very little information about whether women could attain to the higher levels of purity and share in the "pure food"; only in Temple Scroll' is there an addition to the biblical law about the captive woman (*Dt.* 21.10–14) that specifies that after seven years she may touch pure food (11Q19 lxiii.10–15); the implication is that other women do so. According to a rubric in the Ritual of Purification (4Q512 4i.2), "a man or a woman" can recite the blessings of purification that are connected with ritual washing.

In the penal code of the Damascus Document (4Q270 7.i.13–14) mention is made of the "fathers" and the "mothers." These seem to be honorific titles, although the precise function of those who bear these titles is unclear. Their unequal relative status may be reflected in the penalty; the offense against the fathers carried the penalty of expulsion, while offending the "mothers" warranted a penance for ten days "because the mothers do not have *roqmah* (?) in the midst of [the congregation] . . ." (In the so-called Ritual of Marriage (4Q502; though it is very uncertain whether the document is really referring to marriage), there are references to "male elders" and "female elders" (or elderly men and elderly women), "brothers" and "sisters," and "daughter of truth"; both the parallel terminology and the familial terms suggest a respected and acknowledged status for women. [See Ritual of Marriage.]

Poetic and Sapiential Texts. In keeping with themes that were standard in the Wisdom tradition going back to *Proverbs* and *Ben Sira*, the long Sapiential Text A^{3-d} (4Q415–418) gives instruction to a young man about marriage, family life, including elderly parents, and the relationship between husband and wife (4Q416 iii.20–iv.6). [See Sapiential Work.] What is most distinctive is that in one place (4Q415 1.ii.1–9) a woman is addressed directly, though the advice given to her appears to be rather conventional (unfortunately the text is broken, but phrases speak of "honoring as her father" and the holy covenant, "a subject of praise on the mouth of all").

Other wisdom-type texts personify both Wisdom and Folly as women. This is a continuation and development of the biblical motif found in *Proverbs* 1–9, and it is difficult, if not impossible, to abstract from the negative portrayal of Lady Folly (in *Wiles of the Wicked Woman* 4Q184) or the positive portrayal of Lady Wisdom

(Psalms' 11Q5 xx.11–xxii.1, xviii.1–16) information about women per se or even attitudes toward women in the community that wrote or copied these texts. [See Wiles of a Wicked Woman.]

Other poems include the long poetic description of Sarah's beauty that is added in the retelling of the story of Abraham and Sarah in Egypt (*Genesis* 12) in the Genesis Apocryphon (1QapGen xx), and the expanded version in Reworked Pentateuch' (4Q365) of the song that is attributed to Miriam (*Ex.* 15.21). [See Abraham; Sarah.] In Hodayot' from Cave I at Qumran, a vivid image is developed of a woman in labor as a description of the advent of the messianic age (1QH iii.7–12, v.30), and God is compared to "a woman who tenderly loves her baby" (1QH' ix.30). [See Hodayot.]

The Cemetery at Qumran. In addition to written texts, another potential source of information about women is from the large cemetery of about twelve hundred graves at Qumran. [See Cemeteries.] Theoretically, it should be possible to learn much about the relative proportion of women to men buried here and about ages and physical health. In fact, the statistically small proportion of the cemetery that has been excavated and the absence of scientific study of the remains make any extensive conclusions based on the cemetery only speculative.

Out of the approximately fifty graves that have been excavated (whether as part of the formal excavation of the site or by unofficial digging more recently), ten were graves of women, a smaller relative proportion than normally would be expected. The youngest woman was about fourteen to sixteen years old; one grave contained a child buried with its mother. In terms of the distinction that Roland de Vaux, the chief archaeologist, made between a main cemetery, extensions to the main cemetery, and two secondary cemeteries, more of the graves of females and children were located in the extensions than in the main cemetery. But until archaeologists excavate the whole cemetery in a careful and scientific manner, even such observations are at best tentative and can tell us little about women at the Qumran site.

The Texts

The documentary material on women from the Judean Desert consists of two women's archives and of single documents that belonged to women or mention them.

With the exception of the few documents from Masada (Mas 891–894), written before 73 or 74 CE, the documents date to the end of the first century and the first half of the second century CE. [See Masada, *article on Written Material.*] The archives that come from the Cave of the Letters in Nahal Hever (the Babatha archive: P.Yadin 1–35, 94–132 CE, the archive of Salome Komaise daughter of Levi: gr XHev/Se 12, XHev/Se 60–65, 125–131 CE) revolve around the legal affairs of Jewish families in Maoza (Maḥoza/Maohoz) 'Eglatain, a village on the southern shore of the Dead Sea, in what was the Nabatean kingdom and in 106 became the Roman province of Arabia. [See Babatha.] Some of the single documents were found in Wadi Murabba'at: writ of divorce Mur 19; marriage contracts Mur 20 and 21; deeds of sale XHev/Se 50, and Mur 26 and Mur 29; deed of sale of plot Mur 30; proceedings of lawsuit Mur 113; remarriage contract Mur 115; and marriage contract Mur 116. Others belong to the so-called Nahal Se'elim collection, and, therefore, are likely to come from Nahal Hever: contract XHev/Se 7, contract (Kefar Bario?) XHev/Se 8a, marriage contract XHev/Se 11, renunciation of claims after a divorce XHev/Se 13, and XHev/Se 69.

I believe these documents convey a faithful picture of the realities of life, and of women's lives in particular. The two archives amply demonstrate that the Jews living in the province of Arabia and the Jews living in the province of Judea belonged to a single Jewish society whose internal ties overrode provincial boundaries, in their marriages, property holdings, and residences. The Jews represented in the other documents come from densely populated Jewish areas, from the heartland of the Bar Kokhba Revolt, a religious and national movement. [See Bar Kokhba Revolt.] The writers of these documents cannot and should not be regarded as assimilated, Hellenized, or semi-Hellenized Jews, even if many of their documents are written in Greek and lack anything that would mark them as Jewish apart from the identity of the parties as disclosed by their names.

Marriage Contracts and Dowry (*Ketubbah*). We possess nine documentary marriage contracts, five in Greek (Mur 115, 116; P.Yadin 18; and XHev/Se gr 65 and 69) and four in Aramaic (Mur 20, 21; XHev/Se 11; and P.Yadin 10), all from the first half of the second century CE. Marriage contract XHev/Se 11 is very fragmentary and will be ignored in the following discussion. The three remaining Aramaic marriage contracts reveal to us that the rabbinic marriage contract indeed had by then developed its own special form but had not yet become normative, because not one of the five marriage contracts written in Greek can be said to be a translation of an Aramaic *ketubbah*.

On two occasions we find one of the parents giving

away the bride: the father in P.Yadin 18 and the mother in XHev/Se 69. On four others it is the groom who is taking the bride to be his wife (Mur 20, 21, 115; P.Yadin 10). In two of these four documents we find in the opening lines the formula that places the marriage firmly within a Jewish framework and imposes on it the sanction of Jewish law, namely the declaration of the groom that the bride will be his wife according to the Law of Moses and the Jews (Mur 20 and P.Yadin 10). In all but one of the marriage contracts (Mur 116 has not preserved the text at this point), the groom acknowledges the receipt of a dowry from the bride (Mur 115; P.Yadin 18; XHev/Se gr 65 and 69) or the debt of *ketubbah* money to her (Mur 20, 21; P.Yadin 10)—which may amount to the same thing—for the return of which his entire property, both present and future, is liable. That this was indeed so is proven by two deeds of sale from 134 and 135 CE, where the wife waives all claims on the property just sold, presumably because it guaranteed the return of her *ketubbah* or dowry (Mur 30 and XHev/Se 8a). Babatha's seizure of her husband's date orchards to cover the debt of her dowry (*ketubbah*), attested in P.Yadin 21, 22, 23 and 24, supplies yet another proof for the entailment of the husband's property. On four occasions the acknowledgment of a dowry is also the occasion to undertake the nourishment of the wife (P.Yadin 10, 18; XHev/Se 65, 69) and twice also that of the children to come (P.Yadin 18 and XHev/Se gr 65). On one occasion, since the couple has been living until then in an unwritten marriage (*agraphos gamos*)—an institution whose legal validity was no different from that of a written marriage (*engraphos gamos*)—the marriage contract is merely an acknowledgment of the receipt of a dowry (XHev/Se gr 65). All these practices and obligations frequently are documented in dozens of Greek marriage contracts from Egypt and other parts of the Roman Near East and certainly are not unique to Jewish marriage contracts. The only clauses so far attested in the Jewish tradition are those distinguishing between male and female children as heirs to their mother's property.

The dowry or *ketubbah* in these texts consists of valuables (jewelry and clothes) or sums of money. On one occasion the groom adds a sum of money to the dowry (P.Yadin 18). The dowry never includes real property, which is given to the daughter in deeds of gift (P.Yadin 19 and XHev/Se gr 64) on the occasion of her marriage.

In addition to the marriages attested in the marriage contracts, the documents mention dozens of married couples. In all these cases it seems evident that Jews married among themselves. [See Marriage and Divorce.]

Remarriage. One of the marriage contracts is in fact a contract of remarriage of a man to his former wife (Mur 115); nevertheless the groom acknowledges here a fresh

dowry. Jewish law allowed a man to remarry his divorced wife as long as she had not been married to another man in the meantime.

For three women in the two archives two husbands are attested (Babatha, Salome Komaise, and her mother, Salome Grapte).

Polygamy. On the evidence of P.Yadin 26 and 34 from 131 CE its editor suggested that polygamy was practiced by Jews in Arabia at the time. This interpretation of the document is not beyond dispute: a good case could be made for a divorce having preceded the second marriage.

Divorce. The Aramaic writ of divorce Mur 19 from 72 CE is a deed of divorce given by a man to his wife that reflects to a great extent the wording of the rabbinic deed of divorce. The Aramaic XHew/Se 13 from 135 CE is a renunciation of all claims on the part of the wife who had in blatant contradiction to rabbinic law given her husband a deed of divorce. P.Yadin 18 from 128 CE attests that the woman could demand at any time the return of her dowry, and presumably thus initiate a divorce. The marriage concluded in XHew/Se gr 69 from 130 CE was terminated by death or divorce, as shown by its cancellation by a number of crossing diagonal strokes of the pen over the document, as well as through the signatures on the back. Probably also there was a deed of divorce, a receipt for the return of the dowry, or a deed of renunciation of claims like XHew/Se 13.

Widowhood. Marriage contracts Mur 20 and 21, deed of sale of plot Mur 30, marriage contracts Mur 116 and P.Yadin 10 show that the widow had a right to remain in her husband's house and be supported from his estate (while her dowry/*ketubbah* remained intact), either as long as she wished (Mur 30 and 116), or until the heirs paid back the money of her dowry/*ketubbah* (Mur 20 and 21, and P.Yadin 10). The rabbinic sources attribute the former practice to the people of Jerusalem, followed by the Galileans, whereas the latter is said to be the practice in Judea (*Ket.* 4.12). P.Yadin 7, a deed of gift by a husband to his wife in contemplation of death, provides the married daughter with a hut on her parents' estate, in case she becomes a widow and as long as she does not remarry (cf. T., *Ket.* 11.6-7).

Guardian for a Woman. The presence of a guardian for a woman is attested only in legal documents written in the Greek language (P.Yadin 14-17, 20-22, 25, 27; XHew/Se gr 63-65, 69). The use of a single term (*epitropos*) for the guardian of a woman as well as for that of a minor is due to the influence of Roman law, and the requirement for a woman to be represented by a guardian seems to have been imposed by the Roman authorities. In none of the Hebrew Aramaic, or Nabatean papyri from the Judean Desert do we find a woman represented by a guardian. The low profile kept by the guardian of a

woman even in the Greek documents is conspicuous. The four Semitic deeds that would have required the presence of a guardian of a woman under Roman law were not written under Roman rule: P.Yadin 2-3 (unpublished) and contract XHew/Se Nab. 2 (unpublished) were written before the annexation of the Nabatean kingdom and the creation of the province of Arabia, and XHew/Se 13 was written in 'Ein-Gedi at the time of the Bar Kokhba Revolt. Is it a mere coincidence that we do not have a document written under Roman rule in Aramaic, Nabatean, or Hebrew with a guardian representing a woman, or does this fact prove incontrovertibly that the Greek deeds, unlike the Semitic ones, were meant for Roman courts or at least had to conform to Roman legal formalities?

Guardianship Exercised by a Woman. Babatha is totally excluded from the guardianship of her orphaned son from her first husband (P.Yadin 12-15, 27-30). This fits Roman legal practice: women were excluded by Roman law from the exercise of guardianship (e.g., Dig. 26.1.18). Furthermore, Babatha's conduct in her litigation with her son's appointed guardians is entirely in harmony with what is attested much later in the Roman legal sources as that befitting the mother of a ward vis-à-vis his appointed guardians. In Jewish law, on the other hand, a woman could serve as a guardian, if appointed by her husband in his lifetime, whether as guardian of his property or of that of his orphans. There also existed a de facto sort of guardianship: guardianship acquired by virtue of orphans boarding with a householder (*semikhah*). This could offer a way for a woman to become the de facto guardian of her children. It seems that boarding with his mother did not have the legal consequence of turning Babatha into the guardian of her orphaned son. Babatha's exclusion from guardianship contrasted sharply with Julia Crispina's status as an *episkopos* of Babatha's orphaned nephews (P.Yadin 20 and 25). She is acting together with, and once instead of, a proper male *epitropos* of the orphans. Her position resembles that of the Egyptian *epakoloutheria* attested in papyri only from the second half of the second century, who also appears accompanied by a male guardian. It seems quite likely that the later institution was created to satisfy the strictures imposed by Roman law on the exercise of guardianship by women.

Law of Succession. In five marriage contracts daughters were to be fed and dressed from their father's estate until they got married (Mur 20, 21, 116; P.Yadin 10; XHew/Se 69), whereas the sons inherited their mother's dowry (Mur 20, 21, 115, and 116, and possibly XHew/Se 69). The specific clauses distinguishing between male and female children as heirs to their mother's property are so far attested only in the Jewish tradition and, apparently, already in the early Mishnaic period (*Ket.* 4.10-11). The evidence of P.Yadin 23 and 24 combined with the pres-

ence of three deeds of gift in the two archives from the Judean Desert—all designed to advance the financial interests of daughters and wives (P.Yadin 7 and 19; XHev/Se gr 64)—suggests that the law of succession in force at that time (at least among the Jews) in the province of Arabia did not automatically grant a wife the right to inherit from her husband or a daughter the right to inherit from her parents when in competition with sons of her father's brother. In denying the claims of the wife to her husband's property this law seems to have been not unlike the normative Jewish law of succession. It differs from such Jewish law in preferring the claims of the man's brother or his brother's children to those of the daughter; normative Jewish law prefers the claims of children, whatever their sex, to those of the man's brother or his brother's children (*Nm.* 27.8, *M.B.B.* 8.2). Like Jewish law, however, the legal system reflected in these documents recognized a legal instrument that mitigated the rigor of rules of succession that were so prejudicial to women: the deed of gift.

Economic Activity. The name Salome written in Greek letters on four jars discovered on Masada (Mas 891–894) must refer to the owner of the jars and/or the products therein, thus attesting to the involvement of a Jewish woman of independent means in economic activity in the period before 73 or 74 CE. The women encountered in the documents, whether married or not, own real estate—houses and orchards. Documents written in the Nabatean kingdom reveal women selling property on their own (P.Yadin 2–3 from 99 CE, unpublished; and XHev/Se nab. 2, c.100 CE, unpublished). We find women selling property together with their husbands (XHev/Se 50, Mur 26, and XHev/Se 7), giving it in deeds of gift (XHev/Se gr 64), and declaring it in the census (P.Yadin 16). Some of this property was received in deeds of gift from parents (XHev/Se gr 64 and P.Yadin 19) and husbands (P.Yadin 7). Women lend money (P.Yadin 17) and initiate litigation concerning money and property before the Roman governor (P.Yadin 13–15, 23, 25, 26).

Literacy and Illiteracy. In Babatha's case (P.Yadin 15, and possibly that of the mother in XHev/Se gr 69) we are told explicitly that "she did not know her letters," and therefore someone wrote a subscription for her. Illiteracy may be assumed even in those cases where it is not set out as the reason for the employment of a subscriber: contract (Kefar Bario?) XHev/Se 8a, renunciation of claims after a divorce XHev/Se 13, deed of sale XHev/Se 50 + Mur 26, marriage contract Mur 21, deed of sale Mur 29, and deed of gift XHev/Se gr 64.

HANNAH M. COTTON

WOODEN ARTIFACTS. Due to the dry climatic conditions of the Judean Desert region, large numbers of wooden objects, dating to the Hellenistic-Roman periods, were preserved and recovered during the course of excavations. The largest collections of artifacts were found in

the Cave of the Letters, Wadi Murabba'at, Masada (mostly unpublished), and in the Hasmonean (second-first centuries BCE) 'Ein-Gedi and Jericho cemeteries.

The wooden artifacts include furniture, portable domestic objects comprising tableware and other items connected with household activities, cosmetic containers and utensils, handles or shafts of weapons and other implements, and coffins. Most of the wooden domestic artifacts were fashioned out of local wood using a lathe. Several of the cosmetic items were made of imported wood, either from Asia Minor or Greece.

Numerous pieces of furniture have been uncovered in the Cave of the Letters, Wadi Murabba'at caves, and at Masada. Three main carpentry techniques were used to assemble the furniture. These include (1) pegging the edges of two boards together, (2) dovetailing, or the joining of two boards at right angles by means of interlocking, wedge-shaped tenons and spaces, and (3) joining members placed at right angles by means of tongues and sockets.

Several parts and fragments of furniture and chests, many of them burnt, were found scattered throughout the Cave of the Letters. A whole leg and several other fragments possibly belonged to a table, and two boards were perhaps part of a chair. Another fragmentary panel probably originated from a chest. Due to the charred condition of many of the fragments, Yigael Yadin, the excavator of the cave, suggested that pieces of furniture had been used for firewood or as torches during the last days of the Bar Kokhba Revolt. Similar furniture pieces were found in Wadi Murabba'at and among the unpublished wood remains from Masada.

Portable domestic objects comprise tableware (such as bowls, plates, platters, and spoons) and wooden objects used in daily activities. The majority were found in the Cave of the Letters, Wadi Murabba'at caves, and cemeteries at 'Ein-Gedi and Jericho. In the Cave of the Letters, a large platter, two small shallow bowls, and a deep bowl were recovered in baskets that contained the belongings of Babatha. The bowls were lathe-turned and formed out of a single piece of local acacia wood; several bore traces of brown coloring on the surface. In the 'Ein-Gedi cemetery, sixteen small bowls and two flat plates were among the burial goods alongside the coffin burials. Most bowls have concave sides with either inverted or simple rims, with a thick disc or ring base. Similar bowls appeared with coffin burials in the Jericho cemetery and in Wadi Murabba'at. Flat wooden spoons, probably also used as tableware, were found in the Cave of the Letters and in Wadi Murabba'at. A wooden stick with incised decoration from Wadi Murabba'at was identified by Roland de Vaux as a possible writing implement.

Other wooden objects of daily domestic use include numerous examples of wooden spindle whorls (Nahal Hever

[Cave of Horror and Cave of the Letters], Nahal David [Cave of the Pool], and Wadi Murabba'at). In the Cave of the Letters, three wooden whorls were discovered together with skeins of woolen and linen thread, indicating the existence of a household textile industry. Additionally, a hooked needle with a wooden handle, probably used for weaving and knitting, was found in the Cave of the Letters and is identical to one from Wadi Murabba'at. In Cave 34, Nahal Se'elim, wooden gaming counters were recovered.

From the Cave of the Letters, several wooden objects connected with cosmetic use included boxes, mirror cases, and combs. One rectangular box, out of imported wood (*Tilia* species), was probably used as a jewelry box. It consisted of several parts joined with glue and dovetails and a sliding lid on the bottom. The exterior of the box was covered with very thin sheets of a yellow resinous material decorated with yellow and red spots arranged in regular rows. The box is further ornamented with two crossing bands formed by red and black pieces of resinous material, probably imitating metal bands found on larger chests. A second smaller box was found in the Cave of the Letters, and fragments were discovered in Wadi Murabba'at. Parts of wooden boxes, covered with colored leather, were also recovered in the Cave of Horror. A *pyxis* (cylindrical box) with a lid was also among the personal possessions found in the Cave of the Letters. Traces of a reddish powder within the box have been identified as rouge. In the 'Ein-Gedi cemetery, a small cylindrical container and wooden kohl tubes had been placed among the grave goods.

Two wooden mirror cases, found in the Cave of the Treasure, were formed partly on a lathe and partly by sawing, chiseling, and carving. The two halves of the case were closed with a leather hinge secured by two nails or metal loops. The exterior of the case is overlaid with a parchment, which has been painted red.

Numerous wooden combs were found in Cave 34 (Nahal Se'elim), Cave of Horror (Nahal Hever), the Wadi Murabba'at caves, Qumran Cave 1, Cave of the Pool (Nahal David), Masada, and in the 'Ein-Gedi cemetery. Also related to haircare is a decorated hairpin recovered from a tomb in the 'Ein-Gedi cemetery.

Wood was also used for shafts or handles on weapons, tools, and other implements. In the Cave of the Arrows (Nahal Se'elim), the upper shafts attached to arrowheads were formed out of wood. In the Cave of the Treasure, several metal knives, blades, and a sickle were found with their wooden handles preserved. A metal key with a wooden handle and an unusual wooden stamp belonging to the Roman army with a Latin inscription—*C[enturia] Annai Gargiliu[s]* (Gargilius of the Anaitan century)—were found in Wadi Murabba'at.

Several dozen wooden coffins in various states of preservation were excavated in the caves and rock-cut tombs at 'Ein-Gedi and Jericho. They were usually constructed of sycamore wood, with its planks joined by pegs either of sycamore or of a harder wood, such as tamarisk. Other types of wood used to build coffins included cypress, jujube, cedar, and pine—the latter two not native to the 'Ein-Gedi or Jericho regions. Some of the coffins were painted with red and black paint, and one was decorated with a rosette motif.

Wooden objects constitute a type of artifact not generally preserved in the archaeological evidence. This unusually rich collection recovered from the Judean Desert sites broadens our understanding of domestic, funerary, and military activities of the Jewish inhabitants, refugees, or rebels, and, to a lesser degree, of the Roman soldiers who resided in the Judean Desert during the late Hellenistic and Roman periods.

ANN E KILLEBREW

WORDS OF THE LUMINARIES. The title *Words of the Luminaries* (*Divrei Ha-me'orot*) is the name of a collection of prayers for the consecutive days of the week, ending with the Sabbath. The work has survived in three Hebrew manuscripts from Qumran (4Q504, 4Q505,

4Q506). All three copies were published by Maurice Baillet (1982) and reedited by E. Chazon (1991) with a new arrangement of the fragments.

The oldest copy (4Q504) can be dated paleographically to around 150 BCE. This weekly liturgy is thus likely to have been composed before the settlement at Qumran was founded in the second half of the second century BCE. The absence of distinctive sectarian terminology and ideas in this work, particularly in the description of the most recent historical period (4Q504 1-2.v-vi), also indicates its non-Qumranic origin. This text was, however, preserved by the Qumran community in manuscripts copied over the course of its two-hundred-year history and could easily have been incorporated into that sect's own prayer ritual, which served as a substitute for its participation in the Temple cult.

The Hebrew title, *Divrei Ha-me'orot*, is inscribed on the back of the oldest and most complete copy (4Q504). It apparently relates to the scroll's liturgical function in daily communal prayer, with *divrei* referring to the "words" of the prayers and *ha-me'orot*, "the luminaries," used as a term for the day, the unit of time assigned these prayers by their headings (e.g., "on the Sabbath day" cf. *Gn.* 1.14 and the Rule of the Community, IQS x.1-3). The title might further allude to recitation at the time of the interchange of the luminaries in the morning and evening, a standard time for prayer in both sectarian and nonsectarian circles (cf. IQS x; the daily prayers of 4Q503; B.T., *Ber.* 9b, 11a-12a; y. *Ber.* 1.8 3a). This collection of prayers for the different days of the week is designed to be repeated regularly on a weekly basis.

All six weekday prayers are communal supplications motivated by historical recollections. Although they vary from day to day in details of content, they all follow the same basic form and structure. Each opens with the words "Remember, Lord" and then reviews specific events. This lengthy historical prologue lays the groundwork for the petition, which is the focal point of the prayer. A formal, concluding benediction praises God for the particular course of action requested in the petition and is answered by the response *Amen, Amen*.

The petitions said on the third, fourth, and sixth days of the week request deliverance from physical distress (e.g., "look upon our affliction] and our suffering and our oppression, deliver your people Isra[el from all] the lands, near and far to which you have banished them," 4Q504 1-2.vi.11-14). The petitions said on the first and fifth days of the week request knowledge of the Law, strengthening in its observance, and deliverance from sinning in the future as well as forgiveness from past sin. This liturgical arrangement perhaps reflects the view that such spiritual fortitude is a prerequisite for the granting of the physical deliverance requested on the other week-

days. Note that the petition for the second day has not survived.

A chronological progression of the historical references ties the six weekday prayers into a weekly scheme. This progression begins with the creation of Adam and the sins of Eden and the Flood, which are related at the beginning of the prayer for the first day. The revelation at Sinai is recounted at midweek, at the beginning of the prayer for the fourth day. The Wilderness and First Temple periods are recalled in the prayer for the fifth day. The prayer for the sixth day describes the Exile and Return, post-exilic sin and repentance, and the current "troubles, blows and trials" from which the worshipers seek deliverance. This final historical period probably reflects the author's times and sociopolitical matrix.

The Sabbath liturgy is not part of the chronological scheme and also differs from the weekday prayers in content, form, and genre. It consists of hymnic units, each of which opens with an invitation to praise God. Creation is a dominant motif of this praise.

The distinction between petitionary weekday prayer and doxological Sabbath prayer is one of several features which this liturgy shares with the later synagogue liturgy (see the Sabbath *'Amidah* prayer, *t. Shabb.* 17:22, *b. Shabb.* 12a-b, 113a-b, *y. Shabb.* 15, 15b). Such a distinction is first attested in this scroll, although other contemporary sources also document Sabbath praise (*Jubilees* 2, Songs of the Sabbath Sacrifice, 4Q503).

This text's most significant feature may well be its composition of a fixed liturgy for each day of the week. A similar liturgical phenomenon is reflected in 4Q503's daily prayers for each evening and morning of the month. If, as has been suggested, both liturgies are non-Qumranic in origin, they would provide invaluable evidence for fixed, daily prayer among various groups during the Second Temple period and not only among the Qumran sectarians who withdrew from the Jerusalem Temple. This evidence has far-reaching implications for understanding the nature of the institutionalization of Jewish prayer following the destruction of the Temple in 70 CE and its Second Temple period background.

Other signs of liturgical regularization in the Words of the Luminaries include the use of concluding benedictions (the identical formula occurs in the Festival Prayers from Qumran, cf. the opening benedictions in 4Q503) and the daily recital of supplications like those normally said *ad hoc* at times of acute distress (e.g., *Jer.* 14; *Jl.* 2; *Dn.* 9; 3 *Mc.* 2.2, 6.2-16; *m. Ta'anit* 1.1-6, 2.1-3; cf. the liturgy in 4Q393 and the lamentation in 4Q501). The tripartite petition for knowledge, forgiveness, and repentance is also an important feature of the Words of the Luminaries and one which has many parallels in biblical and apocryphal prayers (e.g., *Ps.* 51, *Ps.* 155, 2 *Mc.* 1.3-5,

Leviticus^b [4Q24] = *Testament of Levi* 2.3, manuscript *e*), as well as in later Jewish and Christian liturgy (especially the weekday *'Amidah* prayer and the Lord's Prayer, *Matthew* 6.7-13, *Luke* 11.2-4, cf. *Apostolic Constitutions* 8.6 5-8).

WORDS OF THE SAGE TO THE SONS OF DAWN. Fragments of one manuscript of Words of the Sage to the Sons of Dawn (in Cryptic A Script; 4Q298) have been preserved in Cave 4 at Qumran. [See Cryptic Scripts.] The title of the work is preserved, written in ordinary square Hebrew letters, which can be dated as late Hasmonean or early Herodian (Pfann, 1994). The Sons of Dawn (*benei shahar*) also are mentioned in the Damascus Document (CD xiii.14), but the meaning of this term is not clear: a synonym to the term *Sons of Light* (Baumgarten, 1983), or candidates for admission to the sect, thus reflecting a relatively advanced stage of the sect's terminology (Pfann, 1994; Kister, 1994). Only the introductory

address of the sage to his audience is preserved. It is clear, however, both from the title and from the terminology of this scroll, that it was a sectarian work. The contents of this text seem to be similar to the instructions of the camp overseer concerning "the works of God and his wonderful mighty deeds," recounting "the events of eternity with their [religious] interpretation" (CD xiii.7-8), that is, the secrets of nature and of history (including eschatology). Since only the introductory formula has been preserved, we do not know whether these instructions and interpretations had an esoteric aspect and whether the so-called cryptic script is used due to the esoteric contents or for some other reason. The text from which our scroll was copied was written in the usual square Hebrew letters.

The tiny fragments have much in common with several sectarian writings. There are clear stylistic parallels between this work and the Damascus Document (CD i.1 and ij.2), Damascus Document^c (4Q270 2.ii.18-20), sapiential work (4Q413), Sapiential Work A^a (4Q418), and Wisdom Text with Beatitudes (4Q525). [See Damascus Document; Sapiential Work; and Wisdom Texts.] These sapiential formulas may be typical of the instructions of the "sage" (*maskil*). Words of the Sage to the Sons of Dawn (4Q298 3-4.ii.3-8) contains formulas known from the Rule of the Community from Cave 1 at Qumran (e.g., IQS v.4-5).

The contents of the Words of the Sage to the Sons of Dawn are too poorly preserved to be discussed. Its major significance lies in the use of the cryptic script and in its being a specimen of the instruction of the sage to novices; the affinity to other works from Qumran may indicate that these works as well might be products of the teachings of the sage.

WORSHIP, QUMRAN SECT. Worship at Qumran cannot be understood without setting it in the entire development of Jewish practice in the Second Temple period. One of the striking features of this period is the movement from sacrifice to prayer (both statutory and free). It has frequently and correctly been claimed that the destruction of the Temple in 70 CE led to a dramatic reformulation of the preexistent liturgical practice centered around the Temple. Yet this claim, when made too

confidently and without nuance, can mislead: One may dramatically understate the growing importance of routinized prayer within the Second Temple period itself. For there can be no doubt, as the discoveries at Qumran show, that the physical structure of the Temple could be radically devalued even during the Second Temple period, and along with this devaluation came the meteoric rise in the significance of prayer. [See Sacrifice; Temple.]

The first question to be asked, however, is just when did prayer become a liturgical modality capable of standing over and against sacrifice? Nahum Sarna has traced the growth of institutional prayer back to the First Temple period. Specifically, he has claimed that the closing of regional sanctuaries under Josiah left not only those responsible for sacrifice without work but also the guilds of temple singers responsible for attending to those sacrificial rites. Prayer, then, was first isolated from sacrifice late in the First Temple period. This isolation was most pronounced in those provinces of Judea and Israel that stood at some distance from Jerusalem.

The early centuries of the Second Temple period are shrouded in mystery, and it is difficult to speak with assurance on many matters of importance. Nevertheless, one has good reason to suspect that the inauguration of the Second Temple would have recentered Israel's religious sensibilities on the Temple and its altar. Yet one thing can be said with some assurance: The founding of the Second Temple was not uniformly welcomed nor was it always appreciated as a full replacement for the First Temple. Indeed, a rather sizable pseudepigraphal literature is attached to the more conventional restorative message of the later prophets (see most particularly *Zechariah* 9-14 and *Malachi*, but also "Third Isaiah"). These editorial additions serve to relativize the significance of Zerubbabel's Temple structure. Indeed, quite unexpectedly, the building of the Second Temple hardly brought assurance of divine favor; rather it immediately spawned a literature that pushed the restorative moment into the future. The Qumran corpus participates in this trajectory of eschatological expectation. Fundamental to the sect's self-definition was the notion of a defiled cultic center in Jerusalem and the concomitant act of withdrawing from any participation in it.

For the community at Qumran the rejection of Temple and sacrifice was probably an idea that evolved over time and may not have commanded the complete allegiance of every wing of the movement. One must qualify the standard picture that the sect was altogether hostile toward the Temple. The laws in the Damascus Document (CD) give us hints that not all participation in the Temple was forbidden. Consider the following: "anyone who enters the house of prostration should not come in a state of impurity that requires washing" (CD xi.21-22). In our

view, the “house of prostration” is the Temple; other scholars understand it to be a place of sectarian worship. This text, in our understanding, presumes that one might find occasion to enter the Temple. This picture contrasts with the harsh condemnations of the existing religious institutions found in the admonition section of the Damascus Document (CD vi.11–14) and with the Rule of the Community. How should we understand this contradiction? One solution would be to posit some form of historical development. [See Community Organization.] In this view, the laws of the Damascus Document would represent a much earlier form of the community’s thought. Another solution would understand the sect as divisible into a number of sodalities, some of which took a more favorable position in respect to the Temple. Or perhaps the solution is somewhere in the middle: A more lenient position on sacrifice may have remained more common in the localized “camps” for some time after the rejection of this position in the principal settlement and was only gradually rejected.

However one settles this question, it is clear from most of the documents at Qumran that the Temple was understood as defiled. Because of the belief that the Temple was defiled, the sect was forced to understand many of the priestly stipulations for atonement and purity in a non-Temple manner. As a result, the sect, itself a group with strong priestly antecedents, transferred much of the Levitical terminology of purity and purification from its natural home within the cult to the mode of existence the sect was in the process of creating at Qumran.

Liturgy as a Dramatic (Re)presentation of Israel’s Relation to God. Fundamental to the idea of the Temple as the physical structure that houses the deity is the performative drama of sacrificial activity. This activity is of such great significance because it bears witness in a public and observable manner to the claims the deity has made over this particular place as his residence. Specifically, the routine of daily sacrifice focuses the community’s attention on the ongoing responsibility of “housing” the deity and maintaining the requisite demands of cleanliness and moral virtue that were required of those who would approach his presence. With the demise of sacrifice after 70 CE—or even before that time, when the everyday role of sacrifice lessened due to a feeling of spiritual decline or as a result of the Temple standing at some remove from a particular individual or community—a need arose to provide an alternative means of dramatizing the bond between God and his people. Corporate prayer became an important means of achieving this. And because of this, it can hardly surprise that the moments of corporate prayer were designed to mirror the rhythms of sacrificial rites, as is illustrated in *Berakhot* 1.1. One should compare this *mishnah* with the parallel material found

in the Rule of the Community (hereafter, 1QRule of the Community; 1QS x.1–3) and in the Daily Prayers (4Q503), both of which seem to imagine a cycle of prayer that coincides with the sacrificial moments of evening and morning. [See Rule of the Community.]

Prayer at Qumran. The liturgical materials found at Qumran open a up a whole new perspective on the history of Jewish prayer. We have noted that both the rabbis and the sectarians at Qumran chose to coordinate the times of prayer with those of sacrifice. Two other areas of parallel development suggest themselves. One has to do with the religious vocabulary of the prayers, the other with the themes of repentance and restoration. [See Psalms, Hymns and Prayers; Repentance.]

Regarding language, the liturgical texts from Qumran employ a range of Hebrew vocabulary that shows little relation to the standard terminology of the sect (Chazon, 1992). This has led to considerable problems for categorization. Are these prayers sectarian compositions or not? The fact that many of these documents exist in multiple copies suggests that they were actively used by the sect. Yet it is difficult to say much more with any confidence. As Eileen Schuller states:

I suspect that this body of texts will remain the most resistant to [a distinction between sectarian and non-sectarian writings]. The very essence of prayer/hymnic discourse, whether sectarian or non-sectarian, is its dependence on a common stock of stereotypical and formulaic, biblically based phraseology. Those precise features that scholars have singled out as hallmarks in recognizing [a] sectarian [composition] . . . are least likely to come to expression in a prayer text.

(1993, p. 170)

The nonsectarian quality of the language, plus some rather striking parallels to the rabbinic prayer corpus, has suggested to some that the Qumran prayer corpus will assist us in writing the history of rabbinic prayer (Schiffman, 1987; Weinfeld, 1992). Others are more cautious about the usage of this evidence and the nature of the parallels that have been adduced between Qumran and rabbinic sources (Fleischer, 1990). In any event, it must be underscored that the prayer texts themselves are sufficiently generic in format that one can imagine their use extending beyond the immediate circle of the sect. Indeed, one wonders, as one reads the prayer materials in relation to the explicit sectarian literature, whether the language of the liturgy is already sufficiently independent and well rooted in the late Second Temple period to resist rather strongly any attempt to “reform” it along sectarian lines.

Equally striking is the shared interest of rabbinic and Qumran prayer in a common confessional formula “we have sinned, we have transgressed. . . .” This prayer has

its roots in the Hebrew scriptures (cf. *Dn.* 9.5) and in rabbinic sources was tied to the annual festival of contrition, Yom Kippur: "And thus used [the High Priest] to say: 'O God, I have committed iniquity, transgressed, and sinned before thee, I and my house. O God forgive the iniquities and transgressions and sins which I have committed and transgressed and sinned before thee, I and my house'" (*Yoma* 3.8).

What is striking about the Qumran liturgy is that this "occasional" item in the rabbinic calendar, a prayer limited to the annual ceremony of atonement and purgation, was given far wider circulation and became a significant defining moment for the sect. The significance is clear from a very important liturgical text known as the Words of the Luminaries. [See Words of the Luminaries.] It reads: "And now, on this very day, on which our heart has been humbled, we atone for our sin and the sins of our ancestors, because we have sinned and rebelled [against you]" (4Q504 vi.4-6).

It is difficult to dissociate this prayer from the rite of entrance into the sect. In this rite, as new members prepared to join the sect, they were enjoined to heed the laws of the sect (1QS i.1-15) and then to "cross over," in the form of some procession, into the sect. As they proceeded forward, the Levites were to enumerate the sins of Israel and the new converts were to reply: "We have gone astray, we have rebelled, we have sinned, we and our fathers before us have done wrong. . . ." (1QS i.24-25; cf. CD xx.27-30). The parallels of this text to *Yoma* 3.8 are striking, but it must again be underscored that what was a seasonal rite in rabbinic religion was a central rite within the sect.

The Sect as a Reconstruction of the Sanctuary. One of the most surprising features of the scrolls is the way in which the ritual, as well as the routine matters of daily life within the sect, become commensurate with the activities of the Sanctuary. Compare the following:

[The sect] shall be a holy of holies for Aaron . . . so as to offer up sweet-smelling savor [*le-huqriv nihoah*]. (1QS vii.8-9)

When these matters occur in Israel [and the sect is formed, it shall] atone for the guilty rebellion and the iniquitous sin so that acceptance (*ratson*) shall come to the land apart from the flesh of burnt offerings or the fat of peace offerings.

(1QS ix.3-4)

Just as surprising, but perhaps slightly more allusive, is the rhetorical flourish that serves to summarize the lengthy description of the sect's entrance procedure: "Then he will be acceptable (*ve-ratseh*) before God through these acts of pleasant atonement and he shall become part of the covenant of the eternal community" (1QS iii.11).

A couple of matters are surprising here. First, the act

of entrance is imagined as a moment of "acceptance." The term for acceptance is most appropriate to a sacrificial context (cf. *Lv.* 1.4, etc.). But the term is also very popular in the exilic prophets, and it frequently connotes the expectation of God's restoration of Jerusalem and forgiveness of Israel's sins (*Is.* 49.8, 58.5, 61.2). The idiom of 1QRule of the Community trades on this more general restorative sense of the term but combines it, in a quite surprising idiom, with the rather specific terminology related to the cultic act of reconciliation, "pleasant atonement" (*kipurei nihoah*). In the Bible itself, *nihoah* is never used for offerings that effect atonement (*kaparah*). Only those offerings that fall outside of the realm of sin offerings are able to provide a "pleasing [savor]."

The unlikely combination of these two terms points to the broadly metaphoric character of the sacrificial and atonement idiom in the entire section. The sect itself has taken over norms that were by origin limited to the Sanctuary. Indeed, many of the idioms of purity found in 1QRule of the Community iii.4-11 reflect Temple rites that the sect did not practice. Yet the sect understood the process of its initiation rites as fulfilling all the virtues of these Temple rites. Conversely those outside the sect were doomed to remain impure (1QS iii.4-6) even though they had access to the Temple rites designed to render them pure. It is striking indeed that the sect, which is so dependent on Aaronic nomenclature for its self-definition, would alter so drastically the contours of biblical purity and atonement rites such that they could become moral categories. This stands in vivid contrast with rabbinic literature, which maintains a strict Levitical separation of the categories of purity and moral rectitude, even though the rabbis lacked the requisite Temple complex in order to carry out many of the demands of the laws of purity.

Earthly and Heavenly Liturgy. One of the more striking questions raised by Qumran materials is the role of mystical ascent in the worship life. The question is raised by the very enigmatic document titled Songs of the Sabbath Sacrifice (4Q400-407, 11Q17). [See Songs of the Sabbath Sacrifice.] The songs that make up this sequence are thirteen in number and were designed to be sung during the first quarter of the year. Whatever their actual liturgical purpose might have been, there can be no question of their consummate literary artistry. The compositions are organized around the sixth, seventh, and eighth songs, with the seventh being the literary center. The fact that these texts have been found in multiple copies, including a copy at Masada (Maslk), is evidence of their importance if not their role in liturgical practice (if we presume that one feature of liturgical composition would be their existence in numerous copies).

Carol Newsom has argued that the literary structure of the songs creates within the reader a sense of being in the

heavenly sanctuary, witnessing the praise of the angels. Lawrence Schiffman has issued some words of caution on this score, arguing that these texts, unlike parallel Jewish mystical sources, provide no explicit directions for conjuring the deity through dreams or acquiring a visionary experience. Instead, Schiffman has suggested that the songs constitute a highly learned if not somewhat esoteric reflection and expansion on visions of the heavenly temple found in *Ezekiel* 1 and 10.

Newsom's treatment of the liturgical/mystical usage is highly colored by Gershom Scholem's groundbreaking work on the history of Jewish mysticism. For Scholem, the key feature of this early mystic material is its interest in the ascent of the soul to the celestial throne in order to obtain an ecstatic vision. To this end, Newsom argues for a "numinous style" in these compositions that would suggest just such liturgical use. Elliot Wolfson has voiced some misgivings about Scholem's typological schema and has suggested that more fundamental to mystic experience is the act of "seating" the mystic within the celestial temple. This seating of the mystic is both an act of enthronement and quasi-deification. Because the Songs of the Sabbath Sacrifice imply nothing of the sort, Wolfson inclines toward the more skeptical position of Schiffman that the Songs of the Sabbath Sacrifice are primarily exegetical in force, not experiential.

Recently, however, Morton Smith has suggested that one Qumran text (War Scroll^a 4Q491) does speak of the transformation of a human being into a semidivine being. [See the War of the Sons of Light against the Sons of Darkness.] In particular, the seated position of this individual indicates a position of angelification that anticipates future developments in the *Heikhalot* literature. [See *Heikhalot Literature*.] Did the sect at Qumran experience mystic ascent as part of their worship experience? No final answer can be given, but the extant sources do show strong lines of continuity with later *Heikhalot* materials. At the very least, the materials from Qumran provide a point of transition from the meager supply of biblical texts about the heavenly realm, and the corresponding notion that humans were not given any regular access to this realm, to the far richer set of materials that come from the rabbinic period and later that not only detail the heavenly temple but provide instruction for how one might ascend to it.

Even if we posit no direct ascent experience in the worship of the sect, one can in confidence point to the close continuity of their worship with the presence of the angels. Numerous texts from Qumran suggest that the sectarians believed angels joined their earthly worship. So close was this association that their very community could be imagined as a temple. This notion is perhaps best illustrated from a halakhic perspective. At the escha-

tological meal of the sect—which was to occur at the End of Days but was proleptically anticipated in the life of the sect—individuals were excluded on the grounds of impurity and physical impairment (Rule of the Congregation 1Q28a ii.3–9) [See Purity.] The proximate rationale was that holy angels resided within the assembly. But closer inspection reveals that the grounds for this type of exclusion are borrowed from the set of Levitical prescriptions that served to bar certain priests from altar service. [See Priests.] In other words, the sacred meal of the sect had greatly extended legal norms that were originally limited to the Aaronic priesthood and the altar. As Newsom notes: "the extended sense in which the life of the entire community could be considered as priestly is also related to the idea of communion with the angels . . . in short, life in the community becomes in some sense priestly service before God with the angels" (1985, p. 63). In light of the strong correlation of angelic presence in the daily affairs of the sect, it is tempting to see the Songs of the Sabbath Sacrifice as a view from the other side: the ever present opportunity for certain sectarian adepts to attain the privilege of beholding the angelic liturgy. A community bereft of an earthly Temple has laid claim to its heavenly correlate.

Festival Laws. As any anthropologist would say, the act of common worship can be both a source of unity for a community and disunity. This is clear from the earliest layer of biblical evidence about the cult. In the texts that prescribe the three pilgrimage festivals there is the strong injunction that every male appear, and not empty-handed (*Ex* 23.14–15). [See Festivals.] This is no doubt related to the function of these festivals in the prestate period: they served as a public testimony and witness as to which tribes were a part of the Israelite federation. Since there was no central state authority to enforce the participation of all the tribes, the unity of the federation was dependent on each and every clan sending its representatives in time of need. During the era of kingship, the question of participation was not so much the issue; rather the matter of more urgent concern was the relationship of the peripheral sanctuaries to the center. In times of crisis, there was always the danger that a peripheral sanctuary would serve as the locus of revolt for a smaller federation of tribes.

The Second Temple period offered a different horizon for measuring such tensions concerning political or religious control. Because worship was centered in Jerusalem, and most Jews in Palestine were compliant with that city's centrality in the religious life of the Jewish people, religious ferment centered on the issue of the legitimacy of the Temple. Concerns over legitimacy frequently focused on the family line of the high priest who served in that Temple. But another issue of considerable concern

was the religious calendar of rites that were practiced there. At Qumran we see a community that stands at odds with the central authority in Jerusalem, not only on the grounds of how the festival days were counted (they preferred a solar calendar in place of a lunar), but by the very makeup of the festivals themselves. [See Calendars and Mishmarot.]

In order to understand the various disputes about calendrical practice in proper perspective, one must take cognizance of the biblical data on this question. The final canonical text of the Hebrew scriptures presents a very unclear set of guidelines for festival practice and, as a result, caused numerous problems for all interpreters in the Second Temple period. Not only are there two somewhat different sets of prescriptions for the various holidays (*Lev.* 23 and *Num.* 28–29), but numerous holidays are treated in a rather piecemeal form in the remainder of the Pentateuch and frequently in contradictory ways. For all Jews of this period it was a major undertaking simply to discern what the Hebrew scriptures required.

Our chief source for the thinking of the sect regarding the festivals is Temple Scroll^a (11Q19). [See Temple Scroll.] This is slightly problematic, in that there are good grounds for positing that Temple Scroll^a had its origins outside of the sect. Yet, on the basis of numerous points of correlation with other Qumran documents, Yadin has successfully argued that the calendar found in Temple Scroll^a is very close if not the same as that of the sect itself. It is also significant to note that very close correspondences exist between the calendrical sequence of festivals in Temple Scroll^a and the book of *Jubilees* (VanderKam, 1989).

A sizable literary unit of Temple Scroll^a is devoted to an outline of the festival cycle (11Q19 xiv–xxix). In the main, the festivals that are adduced are in keeping with what one would expect from the Hebrew scriptures (e.g., Yom Kippur, Sukkot, Passover, and Shavu'ot). Yet there are some striking innovations.

The calendar itself begins with New Year's Day, which is placed on the first of Nisan (11Q19 xiv.9). The rites observed on this day parallel those of the first day of the seventh month (the "Day of Remembrance" or Ro'sh ha-Shanah) and clearly show that the sect has divided the year into two equal parts corresponding to their division of the priesthood into twenty-six courses, one course for each week of the half year.

The days of ordination for the high priest (cf. *Lev.* 8–9) become a yearly festival in the mind of the sect (11Q19 xv.3–17). In striking deviation from biblical practice, the sect requires that both the priests and the congregation offer a bull for a purification offering. This is, no doubt, arrived at by presuming that *Leviticus* 4.1–21 is not a general law for how one should offer the sin offering but de-

tails the specific requirements for how the sin offering is to be handled on the "Day of Ordination" (Anderson, 1992).

The most striking deviations have to do with Shavu'ot (11Q19 xviii–xxii). This festival becomes three separate events, each separated by fifty days. [See Shavu'ot.] The first feast is that of the first fruits of wheat. This feast occurs on the fifteenth day of the third month, exactly fifty days after the first Sunday that followed Passover and the Festival of Unleavened Bread. Fifty days later the sect celebrated the Festival of the First Fruits of Wine and fifty days after that the final Festival of First Fruits, that of oil. The liturgical year ended with another non-Pentateuchal festival, that of the wood offering (cf. *Neh.* 10.35). These festivals not only differ from biblical precedent but they also have no parallel in rabbinic sources.

From Sacrificial Altar to House of Prayer. The late Second Temple period was an era of broad and dramatic change for Jewish worship. The growth of prayer as a complement to, or even replacement for, sacrifice was taking hold even as the Temple was still functional. And the texts of those prayers and the times of the day when they were offered show broad parallel lines of development. Frequently in the Qumran scrolls it is difficult to discern whether these liturgical texts have an explicit sectarian provenance. Yet the lines of sectarian self-definition are very evident in other aspects of the sect's worship life. Particularly striking is the concern of the sect to describe its own self-constitution as a (new) temple. Moreover, the difficult task of sorting out just what the Hebrew scriptures required in the way of festival observance was also a point in which sectarian tendencies could be very much in evidence. The festival laws known from the scrolls show striking divergences from what we know from other contemporary and near-contemporary Jewish sources.

GARY A. ANDERSON

WRITING MATERIALS. The Judean Desert has yielded more documents than any other part of the Land of Israel, thanks to the dry air and its proximity to the cultural center of Jerusalem. Manuscripts abound in the Judean Desert in Khirbet Mird (Horkania), Wadi ed-Daliyeh, Wadi Murabba'at, Nahal Hever, Wadi Mishmar, Nahal Se'elim, and Masada, in addition to Qumran itself. Tens of thousands of fragments from over 800 scrolls have been found at Qumran alone (of these, about 200 are biblical scrolls), in addition to the dozens of letters, documents, and scrolls discovered elsewhere. This wealth of written material attests to intensive writing activity at Qumran, and to vigorous cultural productivity throughout the Judean Desert in Hebrew, Aramaic, Nabatean, Greek, Syriac and, later, in Arabic as well. The great quantity of documents and their variety both in content and physical materials preclude any attempt to generalize regarding the nature of the whole corpus.

The *terminus a quo* (the earliest possible date) of the earliest written fragment from the Judean Desert, a papyrus found in Wadi Murabba'at, is the seventh century BCE; the *terminus ad quem* (the latest possible date) of the latest relevant texts, papyri, and ostraca from Khirbet Mird is the seventh century CE. The bulk of the written material derives from Qumran and spans the period from the late third century BCE to the destruction of the Temple in 70 CE. The Bar Kokhba letters, however, written on papyrus and discovered at Nahal Hever and elsewhere, date from the second century CE.

A wide variety of materials were used for writing in antiquity, with certain types of text usually written on a spe-

cific type of surface. For instance, biblical scrolls were usually written on parchment, while letters and bills were written on papyrus. Of the c.200 biblical scrolls discovered at Qumran, only a few were written on papyrus: Isaiah^p (4Q69), Septuagint Leviticus^l (4Q120), Deuteronomy? (6Q3), Kings from Qumran Cave 6 (6Q4), Psalms? (6Q5), Daniel (6Q7), and Septuagint Exodus (7Q1), as well as biblical text? (7Q3). Some one hundred papyri have been found at Qumran, but the number of parchment texts is far greater. The scarcity of papyrus documents can be attributed to its expense, compared to the cheaper leather, since it had to be imported from Egypt. Parchment was prepared from ritually pure animals, making it more available and cheaper than papyrus. In addition, the Qumran community was scrupulous in observing the laws of ritual purity, hence it considered papyrus impure (assumed to be manufactured by non-Jews in Egypt). To these reasons may be added such conjectures as aesthetics, the greater ease of writing long texts on leather parchment, or a lack of papyrus supply that resulted in a clear preference of leather parchment over papyrus at both Qumran and in the descriptions of the writing process contained within rabbinic literature.

Various ostraca (from the seventh and sixth centuries BCE)—pottery sherds or utensils—bear names of individuals; they served some immediate, temporary purpose, and were considered inferior to both leather papyrus and parchment. One two-part scroll from Qumran, called the Copper Scroll (3Q15), is written on copper. The copper was beaten to a thinness of less than one millimeter, using a technique that is unknown elsewhere. The fine quality of the copper and the superb technique indicate the work of foreign craftsmen. The scribe used a metal stylus instead of one fashioned from a reed or other organic material.

Preparation of the Writing Materials. Parchment scrolls were made from the hides of deer, sheep, goats, or cattle. The hide was removed from the carcass and then soaked in a solution of salt and other agents in order to remove any remaining particles of hair and fat, then stretched, dried, smoothed with a rock, and treated with a tanning solution. This improved its appearance, and perhaps made it easier for the leather to absorb the ink. Next, the hide was cut into the longest possible rectangular sheet to serve as a scroll. The remaining scraps of leather served for less important documents.

The sheets of processed leather varied in height (between 12 and 32 centimeters), length (26 to 89 centimeters), and thickness (0.16 millimeters for scrolls and 0.04 millimeters for phylacteries). Each sheet comprised a varying number of columns (1–7) of different width (6–20 centimeters), with a different number of lines appearing in each column (8–60). There was nevertheless an at-

tempt on the part of the scribe to impart some uniformity to each scroll. The pieces of the scroll were sewn together (except for one case in which they were glued) to attain the desired length, the longest known example being the Temple Scroll, which was sewn together from nineteen sheets and was originally 8.75 meters long.

Stylus, Ink, and Inkwells. The scribe's implements were a reed of the type that commonly grows by streams in the Land of Israel and as found near Qumran, and a knife, used most often to cut the leather and prepare it, and more rarely to scrape away errors written in ink.

Four inkwells, three ceramic and one bronze, were found at Qumran. The presence of this rare type of utensil attests to the prolific amount of writing done at Qumran. [See Inkwells.] The scribe usually used black ink having a carbon base (soot), mixed with oil and vegetable excrescence or oak galls in different combinations; at least three types of ink were produced. The production of ink was not unique to the Qumran community, but was practiced generally by Jewish scribes in antiquity. On rare occasions, red ink was used. One copy of the *Book of Numbers* (Numbers^b; 4Q27) has the opening of certain paragraphs in red ink. In Damascus Document^c (4Q270) the heading appears in red ink, and in Psalms from Qumran Cave 2 (2Q14) the first two lines of Psalm 103 are written in red ink. The red ink was prepared from mercury sulfide (HgS), usually known as cinnabar.

Where Were the Texts Copied. Texts found hidden away at various sites in the Judean Desert were usually copied elsewhere. It is possible that certain texts were written at Masada. It is widely accepted that some of the texts found at Qumran were copied there. Scholarly consensus also holds, however, that other texts do indeed derive from other places. Whether or not the majority of scrolls were copied at Qumran is still a disputed issue among scholars. The manuscripts that were obviously not written at Qumran can be identified by the fact that they either date from before the community was established or have no bearing on Qumran, such as, according to the opinion of some, the Copper Scroll. There are also advocates of the claim that all the texts found at Qumran, especially the early ones, were written elsewhere, perhaps in Jerusalem. At any rate, it is certain that the Qumran manuscripts reflect different scribal schools, and it is highly doubtful that more than one school of scribes was active at Qumran itself.

Implications for the Qumran Finds. Some scholars think that many inhabitants of Qumran engaged in writing because of the many types of different handwriting

found in the Qumran manuscripts and the size of the scriptorium compared to that of the dining room. The identification of one of the rooms as a scriptorium is based on the discovery of two inkwells and the unique slabs, made of mud brick and covered with plaster, which were later identified by the excavators as writing tablets. Though the existence of a scriptorium has been opposed, most scholars still believe that the room indeed served in that capacity, and that the texts were written there. In short, the variety of documentation found at Qumran underscores the fact that the site served as a religious center, where reading and writing were an integral part of the daily routine, and the production of sacred scrolls was perhaps even a means of livelihood.

Y

YADIN, YIGAEEL (1917–1984), Israeli general, political leader, and archaeologist. His personal involvement with the manuscripts from the Judean Desert began in the autumn of 1947, when his father and teacher, Professor Eleazar L. Sukenik, purchased three of the scrolls discovered by members of the Ta'amireh bedouin earlier that same year in Cave 1 at Qumran. [See *biography of Sukenik*.] Although Yadin's direct connection with the scrolls was interrupted by his service as chief of operations in the Haganah and chief of staff in the Israel Defense Forces, he subsequently became deeply involved in the decipherment, study, and acquisition of additional Judean Desert manuscripts.

After concluding his military career in February 1952, Yadin chose as the subject of his doctoral dissertation at the Hebrew University of Jerusalem a translation and extensive commentary on the War Scroll (1QM), which had been only partially published by his father. [See *War of the Sons of Light against the Sons of Darkness*.] In this study (published in Hebrew in 1955 and in English in 1962), Yadin was the first to document fully the striking similarity of the battlefield movements described in the scroll with the tactics of the Roman legions of the early imperial period—not those of the Hellenistic phalanx, as a number of scholars earlier had proposed. Moreover, as an experienced military tactician and student of military history, Yadin suggested that the War Scroll's use of Hebrew terms such as *gillul kappayim* ("enveloping arms"), *kenafim* ("wings"), *mgdalim* ("towers"), and *darrukh me'at* ("flat arc") was identical to the use of parallel Latin terms in widely distributed Roman military manuals.

After completing his study of the War Scroll, Yadin traveled to America in the summer of 1954 and became involved in secret negotiations for the purchase of the four Cave 1 scrolls (Isaiah^a [1QIsa^a], Peshar Habakkuk [1QpHab], Rule of the Community [1QS], and Genesis Apocryphon [1QapGen]) long sought by his father that were still in the possession of the Syrian Orthodox Archbishop, Athanasius Yeshue Samuel. [See *Genesis Apocryphon*; *Isaiah, Book of*; *Peshar Habakkuk*; *Rule of the Community*; and *biography of Samuel*.] With the assistance of Avraham Harman, then serving as Israeli consul general in New York, and with funds provided by New York industrialist D. Samuel Gottesman, Yadin acquired

the manuscripts for the State of Israel. Together with the three scrolls purchased by Yadin's father (War Scroll, Hodayot^a [1QH^a], and Isaiah^b [1Q8]; hereafter 1QHodayot^a and 1QIsaiah^b), these manuscripts became the nucleus of the collection of Jerusalem's Shrine of the Book. [See *Hodayot*; *Shrine of the Book*.] Yadin returned to Israel in the autumn of 1954 and collaborated with his father's longtime associate, Nahman Avigad, to publish the newly acquired and painstakingly opened Genesis Apocryphon and to complete the formal publication of 1QHodayot^a and 1QIsaiah^b that had been left unfinished by Sukenik at the time of his death in 1953.

Although Yadin spent the years between 1955 and 1958 engaged in the excavation of Hazor, he maintained his interest in the Judean Desert manuscripts, publishing occasional review articles and comments on the recently discovered material from Cave 4. In 1960, however, he once again became deeply involved with the discovery and study of ancient texts. In response to reports of illegal digging in the caves of the Judean wilderness that lay within the borders of Israel, Yadin joined a large-scale expedition sponsored by the Israel Department of Antiquities, the Hebrew University, and the Israel Exploration Society, organized to search the region systematically for any remaining manuscripts or other archaeological finds. [See *Hebrew University of Jerusalem*; *Israel Antiquities Authority*; and *Israel Exploration Society*.] Yadin's sector included Nahal Hever, where, in a large cave on the northern cliff face, he and his team uncovered a large collection of personal artifacts, human remains, and inscribed material (including military dispatches and legal documents left by refugees during the Bar Kokhba Revolt, c.132–135 CE). [See *Hever, Nahal*.] Yadin's excavation of the Cave of the Letters and of the associated Roman camp provided a carefully documented archaeological context for the manuscript finds of the Bar Kokhba period that was largely lacking for the finds in the plundered caves of Wadi Murabba'at. [See *Bar Kokhba Revolt*; *Murabba'at, Wadi*.]

Yadin directed his most famous excavation at the mountain fortress of Masada between 1963 and 1965. [See *Masada*.] In addition to uncovering a complex of impressive Herodian palaces and administrative buildings from the late first century BCE, Yadin's team also distin-

guished clear evidence of the occupation of the fortress by Jewish rebels during the First Jewish Revolt against the Romans (66–70 CE). Written material uncovered on the summit included hundreds of Hebrew ostraca (pieces of inscribed pottery; apparently used for the distribution of provisions by the Herodian and Roman garrisons and, later, by the rebel occupants), scattered Greek and Latin graffiti, and almost fifty fragmentary texts and documents in Hebrew, Aramaic, Greek, and Latin. The Hebrew manuscripts included fragments of biblical books (*Leviticus*, *Deuteronomy*, and *Psalms*), noncanonical works (a work similar to *Jubilees* and *Ben Sira*), and sectarian literature including Songs of the Sabbath Sacrifice (Mas1k) that paralleled texts from Cave 4 at Qumran (4Q400–407). The manuscript finds from Masada also included rare Latin military and administrative texts connected with the garrison of the Tenth Legion Fretensis at the site.

Yadin's acquisition of one of the most important manuscripts from Qumran—Temple Scroll^a (11Q19)—took place during the 1967 Arab-Israeli War. [See Temple Scroll.] Since the early 1960s Yadin had been conducting inconclusive negotiations through an American middleman for the purchase of this long and important text, reportedly discovered at Qumran by the Ta'amireh bedouin in the mid-1950s. With the Israeli occupation of Bethlehem, Yadin, then serving as security advisor to Prime Minister Levi Eshkol, obtained the assistance of the Israel Defense Forces in locating and confiscating the Temple Scroll from a Bethlehem antiquities dealer, Khalil Iskander (Kando) Shahin. [See *biography of Shahin*.] Yadin's careful transcription of and exhaustive commentary on this document, published in Hebrew in 1977 and in English in 1983, marked the beginning of a new era in Qumran studies. Since the Temple Scroll contained complex codes of calendric, ritual, and purity law, Yadin masterfully demonstrated the importance of analyzing the Qumran sect's religious law or *halakhah* in light of later rabbinic literature.

Although Yadin died in 1984, leaving important manuscript material from the Judean Desert caves and Masada unpublished in final form, his work on the Judean Desert texts was carried on by students and colleagues under the auspices of the Israel Exploration Society, which began publishing final excavation reports and textual transcriptions of and commentaries on the Masada and Bar Kokhba-period texts in 1989.

NEIL ASHER SILBERMAN

YOHANAH AND HIS BROTHER. Yohanah and his brother are the henchmen of Belial in the Damascus Document (CD v.17b–19; 4Q266 3.11.6–8 [13–15]; 4Q267 2.1–3; 6Q15 3.1–2). Referring to the biblical Exodus, it states, "in ancient times, Moses and Aaron arose by the hand of the Prince of Lights and Belial in his cunning raised up Yohanah and his brother when Israel was first delivered." They are not encountered elsewhere in the documents from the Judean Desert, though with a new identity they appear frequently in later Jewish, Christian, and pagan literature as Jannes and Jambres, the Egyptian magicians. Starting in 1910 with Solomon Schechter's publication of the Cairo Genizah manuscripts of the Damascus Document, the two pairs of brothers have been consistently but erroneously equated without proper qualification.

Linguistically, the Greek *Jannes* is clearly derived from the Hebrew *Yohanah* and is sometimes given in its longer and more familiar form, *Yohannes*. The second brother, nameless in the Damascus Document, with time acquired a name (Jambres), apparently based on the Hebrew root *mrh* ("agitate, rebel"). In biblical literature their appear-

ance is limited to 2 *Timothy* 3.8, where they are mentioned only in passing ("as Jannes and Jambres opposed Moses").

That Yohanah and his brother are portrayed in the Damascus Document as opponents of Moses and Aaron at the time of Israel's Exodus from Egypt is explicitly stated; less clear, however, is their ethnic affiliation. In part due, one suspects, to Schechter's identification of the brothers with the Egyptian magicians of later tradition, many scholars have judged the passage in question to be intrusive in its present context. P. R. Davies (*The Damascus Covenant*, Sheffield, 1983, p. 121), however, has rightly seen it as integral to the argument at hand and illustrative of the preceding charge that Israel had shown a lack of understanding. More broadly, just as Israel committed the other acts of waywardness enumerated in the Damascus Document (4Q266 3, 4Q267 2, 4Q269 3-4, 6Q15 1.3), so she had followed false leaders rather than the divinely appointed Moses and Aaron. This tradition of Israel's apostasy in Egypt, though at variance with the account of *Exodus* (cf. *Ex.* 5.21), is not only found in other biblical passages (*Ezek.* 20.7-8, 23.3; *Jos.* 24.14) and rabbinic literature (L. Ginzberg, *Legends of the Jews*, vol. 2, p. 345 [Philadelphia, 1920, 1969]), but is also attested elsewhere in the Damascus Document, namely, CD iii.5-6 (cf. 4Q269 2), which states that the descendants of Jacob's sons acted stubbornly and willfully transgressed God's commandments.

Only if the Damascus Document (CD v.17b-19) is read anachronistically in light of the later Jannes and Jambres tradition can it be maintained that Yohanah and his brother are identical with the Egyptian magicians of *Exodus* fame. Read in context, however, it is clear that the pair had an Israelite following and that they themselves were apostate Israelites, as is underscored by the Hebrew name of the named brother.

Viewed in light of the inner?-Jewish conflict of the last two centuries BCE, the typological role of the ancient apostate leaders becomes distinctly possible. Georg Molin (1951) and A. Dupont-Sommer (1962) suggest that "Yohanah and his brother" was a veiled reference to Hyrcanus II (63-40 BCE) and his brother Aristobulus II (67-63 BCE). L. Moraldi (1971) favored Aristobulus I (104-103 BCE) and Alexander Jannaeus (103-76 BCE). But a more likely pair are the Maccabean brothers Jonathan and Simon who, according to *I Maccabees* (9.33, 9.37, 9.65, 10.74), regularly acted in concert. Since the linguistic distinction between the Hebrew *Yonatan* and *Yohanah* (Yohanah = 4Q266, 4Q267) is more apparent than real, as well-known confusion of the names demonstrates, it presents no obstacle to this identification.

Yohanah and his brother, the apostate Israelites, con-

tinued their literary life as Jannes and Jambres, the Egyptian magicians and stereotypical opponents of Moses and Aaron. A book was written about them, probably sometime in the first century CE, in Greek on Egyptian soil (Pietersma, 1994).

ALBERT PIETERSMA

YOM KIPPUR. The day of atonement, Yom Kippur, is the annual holiday on which the high priest and Israel confessed their sins and, with the sanctuary and altar, were cleansed. *Leviticus* 23.26-32 dates it to the tenth day of the seventh month, although it was to be observed from the evening of the ninth day to the evening of the tenth (*Lv.* 23.32). The holiday requires self-denial or fasting and fire offerings as part of the process of making atonement. *Numbers* 29.7-11 sets forth the same laws but lists in detail the sacrifices (whole burnt offerings) that were to be presented on the day. *Ezekiel* dates some cleansing aspects of the day of atonement to the first month of the year (*Ezek.* 45.18-20; but see 40.1). *Exodus* 30.10 contains a command that Aaron perform the rite of atonement on the altar one day each year, but *Leviticus* 16 offers the fullest explanation of what was to be done on the day of atonement. Aaron, presented as the first high priest, enters the most sacred part of the sanctuary in his holy attire on this day alone. There he sacrifices a bull as a sin offering for himself and his house (*Lv.* 16.2-5, 11-14) and takes two goats, and casts lots over them, with one being assigned to the Lord, the other to Azazel (*Lv.* 16.6-10). Aaron sacrifices the Lord's goat as a sin offering for the people and also makes atonement with its blood for the altar and the sanctuary, which requires cleansing because of the people's uncleanness (*Lv.* 16.15-19). Aaron then presents the live goat (the scapegoat), and after confessing the people's sins over it and symbolically placing them on it, he sends it away. "The goat shall bear on itself all their iniquities to a barren region; and the goat shall be set free in the wilderness" (*Lv.* 16.22). After changing his sacred vestments, Aaron again offers an atoning sacrifice for himself and for the

people (*Lv.* 16.23–25). The chapter also stipulates that the people are to afflict themselves (fast) and refrain from work completely (*Lv.* 16.29–31). *Leviticus* 25.9 says that a trumpet was to be sounded on the tenth day of the seventh month after a forty-nine-year period to announce the beginning of the jubilee or fiftieth year, thus suggesting that the tenth day of the seventh month may once have been considered the new year (cf. *Ezek.* 40.1).

It may be that *Ben Sira* describes the high priest Simon as he engaged in the rites of the day of atonement (*Sir.* 50.5–21), although the text does not explicitly identify the occasion. The magnificence of the high priest's garments and the splendid stateliness of the observances are stressed. *Jubilees* traces the origin of Yom Kippur to the time when Jacob mourned for Joseph, after he had received the false report that Joseph had been killed (*Jub.* 34.18–19). But the topic surfaces already in the section about the Flood in which, apparently building on the verb *dyn* ("to judge") in *Genesis* 6.3, the writer declares that if the Israelites turn from their sins in a proper way once each year, they will be forgiven (*Jub.* 5.17–18; see *Jub.* 6.2 where Noah offers an atoning sacrifice). Pseudo-Philo's *Biblical Antiquities* 13.6 mentions the fast associated with the day. Philo deals with the day of atonement in *Allegorical Interpretation* II.52 (the sufferings placed on the scapegoat are the lot of the person who is fond of suffering), and *The Special Laws* I.72 (the high priest enters the most sacred area only once each year); I.186–188 (he calls it the fast observed by all and deals with the sacrifices, the goats, and purification); and II.193–203 (he deals with the more sober character of the day, the temperance and prayers involved, the fast after the harvest had been gathered in honor of the God who gave it, and the numerical significance of the fact that it fell on the tenth day of the seventh month). Josephus paraphrases the biblical material from *Leviticus* 16 as he surveys the festivals found in *Numbers* 28–29, but he does add a few other details such as the practice that the high priest paid for his own young bull (*Jewish Antiquities* 3.240–243).

Although there is no evidence for animal sacrifices at Qumran, and, consequently, atonement would have taken a different form (see 1QRule of the Community, 1QS iii.6–9), Yom Kippur does appear in several kinds of texts. [See Rule of the Community.] Temple Scroll^a (11Q19 xxv.10–xxvii.10) presents the legislation from *Leviticus* (16.23, 27–32) and *Numbers* (29.7–11) but clarifies a few scriptural ambiguities. [See Temple Scroll.] For example, it specifies that three rams were to be offered, one as a burnt offering and two as sin offerings (one for the high priest and one for the people). It also gives the exact sequence of the offerings. Several of the calendrical texts among the Dead Sea Scrolls mention the day and name

the priestly course that would be on duty during the festival in particular years (Calendrical Document A, 4Q320 4.iii.7, 4.iv.3, 4.v.6, 4.vi.1; Calendrical Document B^a, 4Q321 2.ii.2, 2.ii.6; Rule of the Community^a, 4Q259, 7.2). The holiday also figures in a passage that provided one of the first clues that the Qumran group followed a different calendar from the one used for the Temple cult. [See Calendars and Mishmarot.] Peshar Habakkuk (1QpHab), where it comments on *Habakkuk* 2.15 (including the words "to gaze on their festivals" [reading *mw'dyhm* rather than *m'wryhm* ("their nakedness") in the Masoretic Text]), relates the verse to a time when the Wicked Priest "pursued the Teacher of Righteousness to consume him with the ferocity of his anger in the place of his banishment, in festival time, during the rest of the day of atonement. [See Peshar Habakkuk.] He paraded in front of them, to consume them and make them fall on the day of fasting, the sabbath of their rest" (1QpHab xi.4–8). If the Wicked Priest was the high priest, the requirement of complete rest combined with his duties in the Temple would have prevented such an attack on the Teacher of Righteousness and his community if the two had observed Yom Kippur on the same date. [See Teacher of Righteousness; Wicked Priest.] Hence they probably used different calendars. The scroll Melchizedek (11Q13) refers to an eschatological day of atonement as the end of the tenth and apparently final jubilee when the sons of God and people of Melchizedek's lot will receive atonement during this year of grace for Melchizedek (11Q13 ii.7–9). [See Melchizedek.] Here the biblical association between the jubilee and the day of atonement is expressed in a new way (*Leviticus* 25.9 is quoted in 11Q13 ii.25). Words of Moses (1Q22 iii) contains Moses' instructions about the seventh year and also about the day of atonement (see 1Q22 iii.10–12 and iv.1–3). It should be added that the two surviving fragments of the Targum of *Leviticus* (4Q156) preserve verses from *Leviticus* 16 (frg. 1 = *Lv.* 16.12–15; frg. 2 = *Lv.* 16.18–21).

The festival, which is called "the Fast" in *Acts* 27.9, is a major theme in *Hebrews* 6–9 where the annual ceremonies through which the high priest makes atonement for his sins and those of the people are compared unfavorably with the once-for-all sacrifice of himself by Jesus, the high priest of the order of Melchizedek, the mediator of a new and better covenant. The writer asserts that by his self-sacrifice this sinless high priest of the heavenly sanctuary effected complete atonement for his people.

The Mishnah devotes tractate *Yoma* to the day of atonement. From it the reader learns much about the demanding preparations made by and for the high priest during the seven days prior to the holiday and the biblically based procedures he followed as he carried out the

rites of atonement (especially in mishnahs 1, 3–7). The final section elaborates on the implications of the rules that one fast and refrain from work on Yom Kippur and on the sorts of sins that are purged or not purged by the rites.

Z

ZADOK was one of two priests who served David at the Jerusalem shrine (2 *Sm.* 15.24-29). Solomon banished Abiathar, David's other priest, to Anathoth (1 *Kgs.* 2.26-27), leaving Zadok and his descendants with a monopoly on the priesthood until the exile. They apparently resumed control in the postexilic period (*Ezek.* 44.9-31).

In the Dead Sea Scrolls the name appears most often in the expression the *sons of Zadok*. While it would be natural to assume that Zadok is the priest of David and Solomon, other theories have been advanced. Ben Zion Wacholder suggests that the Zadok of the scrolls, the Zadok who was a friend of Boethus and pupil of Antigonus of Socho (mentioned in *Avot de Rabbi Nathan* 5 and al-Qirqisani's *Book of Lights and Watchtower*), and the Teacher of Righteousness were one figure, the founder of the Qumran community. Wacholder further posits that this Zadok was the author of the Temple Scroll and the "discoverer" of that work as the "sealed book of the law" (CD v.2), which became the basis for other works found at Qumran (e.g., the Damascus Document, the Rule of the Community, the War Scroll).

Another theory, held by G. R. Driver and Cecil Roth, suggests that the Zadok of the scrolls was an assimilation of the ancient priest of David with Zadok the Pharisee who, with Judah the Galilean, is said by Josephus to have founded the first-century CE Fourth Philosophy (*Jewish Antiquities* 18.4-10, 23). The obvious difficulty with this view is the requirement that one ignore scrolls containing references to the Sons of Zadok that date much before the rise of Josephus's first-century CE Fourth Philosophy.

The scant evidence in the scrolls for the community's view on Zadok's identity supports the traditional view. Zadok appears as a proper name in the Damascus Document v.2-5, and he is the priest who opened the second law, which revealed the illegality of polygamy too late for David (but apparently not too late to condemn Solomon; thus the biblical judgment on his polygamy). From this it is reasonable to assume that Zadok refers to the priest of David and Solomon; he must be the figure whom the Qumran residents took as their namesake. Moreover, the Copper Scroll (3Q15 xi) suggests the author's veneration of Zadok's tomb. Assuming Qumran authorship of the scroll, it is most probable that Qumran residents would have honored the ancient priest's tomb, and much less

likely that they revered the burial site of one of the later Zadoks who have been suggested for the role.

The thornier issue here is determining what it means that the residents considered themselves descendants of the priest Zadok. Did they consider themselves to be Sadducees (if this term is derived from *Zadokites*)? Or was their self-designation only a semantic expression of their conviction that they were the proper heirs to the high priestly office? In spite of recent work in this area (Schiffman and Baumgarten), the late date and ambiguity of our sources regarding the Sadducees limit us to mere speculation about the correspondence between them and the keepers of the scrolls.

ROBERT A. KUGLER

ZADOK, SONS OF. The expression *Sons of Zadok* is found in the Hebrew scriptures only in *Ezekiel*, and here only three times (*Ezek.* 40.46, 44.15, 48.11). In these passages a monopoly of priestly Temple service is claimed for the descendants of Zadok. However, other biblical material dealing with the priesthood (for instance, *Numbers*, *Chronicles*, *Exodus* 28-29) includes all "Sons of Aaron" as priests. It is inferred from the biblical evidence that a priestly dynasty, claiming descent from David's priest Zadok, occupied the high priesthood in the Persian period. The phrase *Sons of Zadok* also occurs several times in the Dead Sea Scrolls, some texts appearing to endorse Ezekiel's position, thus suggesting a possible Zadokite origin, or connection, for the Qumran compositions. Other considerations have also been adduced in favor of this conclusion, going back to the publication by

Solomon Schechter of "Fragments of a Zadokite Work," known also as the Damascus Document, in 1910. Several early commentators on the Zadokite fragments (CD) identified them as Sadducean because the manuscripts contain both the personal name Zadok and the phrase *Sons of Zadok* (in Hebrew and Aramaic, Zadokite and Sadducee are identical).

In the first generation of the Dead Sea Scrolls research, it was widely held on the basis of paleography, the dating of the occupation of Qumran, and allusions in Peshet Habakkuk to persecution of the "righteous" and priestly "Teacher" by a wicked priest, that the *yahad* ("community") of the Rule of the Community text from Cave 1 (hereafter, 1QRule of the Community 1QS) was founded by a Zadokite priest (the Teacher of Righteousness) and represented a protest against the usurpation of the high priesthood by the Hasmoneans (Cross, 1995, 3d ed.) Stegemann has even suggested that the Teacher was, before his expulsion to the Judean wilderness, the last of the Zadokite high priests. Although on this theory the sect is identified as Essene, the view has persisted in some quarters that they called themselves Sons of Zadok.

Zadok in the Dead Sea Scrolls. The Damascus Document (v.5) mentions a "book of the law," sealed "until Zadok arose," and a hitherto unknown historical figure has sometimes been suggested; more recently, Wacholder has argued that this Zadok is the founder of the Community (for example, the Teacher of Righteousness). However, given the mention of David in the Damascus Document, this Zadok is very probably David's high priest, the founder of the Zadokite line. The unusual selection of Zadok in the context of revealing a hidden law might suggest an important role for Zadokites in the Damascus Document (CD), perhaps even portraying David and Zadok as the archetypal "Messiahs of Aaron and Israel." [See Messiahs.] But this isolated reference is a flimsy basis for such speculation, and the passage may simply refer to the return of the ark, which contained the tablets of the Law, to the sanctuary in the time of David and Zadok (2 Sm. 6).

A "tomb of Zadok" and a "garden of Zadok" are mentioned in the Copper Scroll (3Q15 xi.3 and xi.6); the Zadok in question is uncertain, but if the names were more than coincidence, their occurrence might provide an otherwise elusive link between this and other Qumran scrolls and perhaps support suggestions that the treasure in question comprised priestly or Temple funds. [See Copper Scroll.]

The Sons of Zadok, the Priests. The term *Sons of Zadok* is found in the Damascus Document (4Q266-273; 5Q12. 6Q15; see Davies, 1987), Serekh Damascus (4Q265), the Rule of the Congregation (1Q28a), the Florilegium (4Q174), and Peshet Isaiah^c (4Q163). In the Da-

mascus Document (CD) iii.21-iv.3), the term *Sons of Zadok* occurs in a *midrash* on Ezekiel 44.15, where it is applied to the "elect of Israel, those called by name, who shall arise at the end of days." This is the only place in the entire corpus where the term *Sons of Zadok* is applicable to an entire community, but the reference here is typological rather than literal. In the laws section of the Damascus Document (CD), although priests are occasionally mentioned, they are nowhere referred to as *Sons of Zadok*. By contrast, in Rule of the Congregation (1Q28a), Rule of the Blessings (1Q28b), and frequently in 1QRule of Community (1Q5), the fuller expression *Sons of Zadok, the priests*, designates the priests within the community (or communities). In 1QRule of the Community, these have authority over community members, and in Rule of the Blessings (1Q28b iii.22) the Sons of Zadok receive a particular blessing, wherein their eternal priesthood and their centrality in the covenant are confirmed. Their authority in matters of law follows the instruction of Ezekiel, though in Ezekiel they are linked not to the covenant but to the Temple cult. The difference perhaps suggests an important redefinition of the role of priesthood and covenant according to the *yahad*. Elsewhere in the Dead Sea Scrolls, the Florilegium 1.17 (4Q174) cites Ezekiel 44.10, applying the verse to "the Sons of Zadok and the men of his council who will come after them to the council of the community." Peshet Isaiah^c (4Q163) also includes the phrase *Sons of Zadok*, but the context is too fragmentary.

It appears from the instances cited that the authors of the Dead Sea Scrolls recognized only Zadokite priests as legitimate and usually accord them authority, though there is no warrant for taking the term to apply to any community as a whole. However, these passages do not give the entire picture. *Sons of Aaron* is the phrase used regularly in the War Scroll (1QM) and in the Temple Scroll (1Q19; 11Q20) to denote the priesthood. It is also used in 1QRule of the Community (ix.7, especially). Moreover, in 1QRule of the Community, Zadokite authority is sometimes transferred to or shared by members of the *yahad* (1QS v.2), although a parallel passage in Rule of the Community^d from Cave 4 at Qumran (4Q258) omits the phrase *Sons of Zadok* entirely, leaving authority solely with the community. Cave 4 Damascus Document^b (4Q267) offers *Sons of Zadok, the priests*, a unique reading among the Qumran Damascus Document material and perhaps evidence of a pro-Zadokite version. Recognizing the Dead Sea Scrolls are not ideologically homogeneous and have in some cases been edited, we have to conclude that the Zadokite perspective of some passages cannot be applied universally across the scrolls. The root *tsdq* is among the most common in the scrolls and some scholars have seen in its frequency a reflection of Zado-

kite ideology or authority. The most striking example is the expression *benei tsedeq* ("sons of righteousness") (1QS iii.20, 22; Ritual of Marriage, 4Q502; Daily Prayers, 4Q503). There are no other cases where such a wordplay is explicit; nor can it be argued that the concept of righteousness in the scrolls is in any way especially informed by Zadokite themes, as argued by Eisenman, for whom the term *tsedeq* functions as a quasi-technical term among several associated groups, forming a wider Jewish movement, and whose Zadokites include Maccabees, Zealots, and early Judean Christians. Yet the title "Teacher of Righteousness" (*moreh tsedeq*) is derived not from the name Zadok but from a text in *Joel* (this usage does involve a wordplay: in *Joel* 2.23, *moreh* means "rain"). Furthermore, no ambiguous cases are documented in which the personal name Zadok (*tsedeq*) is spelled defectively (*tsdq*), so as to draw attention to any link between the two. Thus, the predominance of *tsedeq* language in the scrolls is not, *per se*, evidence of a Zadokite ideology.

Sadducees and the Dead Sea Scrolls. The Sadducean sect is described in Josephus (*The Jewish War* 2.119, 164–5; *Jewish Antiquities* 13.171) and alluded to in the New Testament (e.g., *Acts* 23.6–8). It emerges as an aristocratic priestly Jewish party that remained loyal to (and even comprised) the Temple authorities in the late Second Temple period and denied both the existence of angels and resurrection. Rabbinic literature also refers to *tsedoqim*, which may sometimes denote these Sadducees but sometimes, especially in censured printed texts, appears to refer to other unorthodox groups, particularly to Christians. The contents of the Miqtsat Ma'asei ha-Torah Documents from Cave 4 at Qumran (MMT¹, 4Q394–4Q399), in the opinion of some scholars (Schiffman, 1994), comprise a set of halakhic (legal) positions conforming with what the rabbinic literature ascribes to these *tsedoqim*. Hence, the theory has recently emerged that the Dead Sea Scrolls (or some of them) come from a Sadducean group, though not the mainstream party. Such a deviant Sadducean sect is conjectural, and the halakhic parallels are few. But the MMT documents may at least imply that legal traditions, rather than priestly dynastic rivalry, form the basis for the opposition to the Temple administration widely found in the scrolls.

In conclusion, it is reasonable to suggest that some of the Dead Sea Scrolls may have originated with, or have been influenced by, groups ideologically or socially attached to a Zadokite priesthood. One explanation might be that the Zadokite priests were either expelled from their place in the Jerusalem Temple by the Hasmoneans when these rulers assumed the high priesthood or, because of halakhic differences that could no longer be tolerated, voluntarily separated from the Temple and its

administration. Given the variety of ideologies and communities reflected in the Dead Sea Scrolls, it is unwise to employ the label *Zadokite* globally for the authors of the scrolls; nevertheless, if one is searching for basic themes uniting the entire corpus, such as the 364-day calendar or a distinct set of holiness laws, then connection with a usurped Jerusalem priesthood remains plausible. It is unfortunate, then, that we know so little of this line, though the report that one of the last Zadokite priests fled to Egypt and built a temple there discloses some Zadokite traditions outside Hasmonean Jerusalem, perhaps even linked in some way with the scrolls.

PHILIP R. DAVIES

ZADOKITE FRAGMENTS. See Damascus Document.

ZADOKITES. See Zadok, Sons of.

ZEALOTS. The goal of the Zealots, a party of uncompromising revolutionaries, was to free Judea from Roman rule. They took an active role in the uprising known as the First Jewish Revolt during the years 66–70 CE, which ended in the destruction of the Second Temple. The name *Zealots* probably served to link this group, which was connected to the priestly class, to the most famous zealot in Jewish biblical and post-biblical traditions, Phinehas the son of Eleazar, grandson of Aaron the High Priest (*Nm.* 25). The Jewish historian Josephus is the main source for information about the Zealots and their ideol-

ogy. He mentions them in the context of the war, mainly from the fourth book of his *The Jewish War* onward, where he describes the stage in the war when the Romans had already overcome Galilee, Yavneh (Iamnia), and Ashdod, and their threat to Jerusalem had become more real. However, this does not mean that the Zealots had not been involved in events prior to the First Jewish Revolt. One of the disciples of Jesus, Simon, is called *Zelotes* in the New Testament (*Lk.* 6.15; *Acts* 1.13), and this is said of a man who lived, operated, and got his nickname decades before the outbreak of the First Jewish Revolt. A theory popular among historians is that there is a connection between the Zealots and the school of Shammai, the first-century sage. This theory is based, among other things, on a Talmudic tradition, which relates that the followers of Shammai forced the followers of his colleague Hillel to accept eighteen rulings that were laid down in the upper room of Hananiah ben Hezekiah ben Gorion (*M. Shab.* 1.4). These rulings display a tendency to distance Jews from non-Jews, and to impede contacts between them.

Josephus makes an explicit distinction between the Zealots and the Sicarii. He notes the Sicarii for the first time in *The Jewish War*, and connects their beginnings with Judah of Gamla at the time of Quirinius's census, when Judea was made into a province after the deposition of Archelaus. Following this, he lists the four elements on which the defense of besieged Jerusalem was based during the revolt: Yohanan of Gush Halav [John of Gischala], Simon bar Giora, the Idumeans, and the Zealots. There is no explicit evidence of a connection between the Sicarii and the Zealots. The two parties were united in their basic concepts of freedom for the Jews, and war against the emperors of Rome, but the social principles of the Sicarii were more extreme than those of the Zealots. The Sicarii were consistently loyal to the family of Galilean leaders while the Zealots, whose leaders came from Jerusalem priestly circles, did not develop particular dependence on one or another ruling dynasty, and did not attach messianic hopes to any of their leaders.

There can be no doubt that the Zealots had some part in stopping the sacrifices and prayers for the welfare of the emperor. This demonstrative act expressed, more than any other, rebellion against the emperor and the desire to be freed from the Roman yoke. Talmudic tradition attributes this revolutionary step to Zechariah ben Euzolos, who can be identified with the Zacharias, son of Amphicalleus, whom Josephus notes as one of the outstanding leaders of the Zealots. This episode is recorded by Rabbi Yohanan bar Nafha, one of the leaders of the amoraic sages in the mid-third century in Palestine, who reports a number of historical traditions: "The forbearance of Rabbi Zakhariah ben Euzolos destroyed our

Temple, burned our Sanctuary, and exiled us from our land." (*B.T., Git.* 56a).

Josephus mentions the Zealots for the first time after the victory of the Jews over Cestius Gallus, the Roman governor of Syria, on the Beth-Horon ascent. The context of this citation is the appointment of Joseph ben Gorion and Hanan ben Hanan [Ananus] as leaders of the people, entrusted with making preparations for the revolt. During this account, Josephus explains why Eleazar ben Simon, one of the leading Zealots, did not receive any office even though he had control of the Roman spoil. According to Josephus, this was because of Ananus's despotic nature, and the behavior of the Zealots under Eleazar's command. Despite the fact that Eleazar was denied any official function in the Jewish leadership, he retained and even increased his influence as time went on. He became the leader of the Zealots during the siege of Jerusalem, with Zakhariah ben Euzolos the other outstanding figure at his side.

The party of the Zealots had two main components: the junior priests and the refugees who had fled to Jerusalem from the countryside of Judea. These two elements joined together after the defeats the Jews had suffered in different parts of the country and the general disappointment that followed, as a move against the moderate upper-class leadership of the Jews in Jerusalem.

The priestly orientation of the Zealots meant that they were careful to maintain control of the running of the Temple after they took it over in 67–68 CE. This situation continued until the Temple was finally destroyed in 70 CE. The most important achievement of the Zealots was deposing the dynasties of the priestly oligarchy, and instituting the election of a high priest by lot. This was a revolutionary step, both politically and socially, and was intended to democratize the institution of the high priesthood. Josephus, who was himself a priest, was sensitive to what he saw as an attack on the honor of the high priesthood. Thus he finds fault with all the actions of the Zealots and despises the high priest Phineas (Phanni), who was a simple priest from the village of Habta (Aphthia) and was chosen in this new way. Josephus describes Phineas as a man who not only did not come from the dynasty of the high priests, but knew nothing at all of the significance of the office of high priest (*The Jewish War* 4.151–157). In this way the Zealots expressed their aversion to the priestly establishment, and stressed their tendency toward a kind of democratic process of the sort that typified the structure of their party.

The rural element among the Zealots poured into Jerusalem from the areas of the country that had been taken over by the Romans. Upset by the Roman success, and angry at what was, in their eyes, the total ineffectiveness of the Jewish institutions, they determined to take over

Jerusalem and reorganize the city to meet the expected Roman attack. One of the first steps taken by Eleazar ben Simon, who relied on the support of this rural element, was the arrest of a number of people connected to the Herodian royal family and their execution without trial. The first of these was Antipas, who was in charge of the city treasury. To justify these killings, the Zealots claimed that these people were to be considered traitors, because they had been involved in negotiations with the Romans about surrendering the city. The heads of the high priesthood of the time, Joshua (Jesus) ben Gamla and Ananus, convened meetings where they accused the people of apathy and incited them against the Zealots. It is in describing this episode that Josephus deals with the name of the Zealots: "[They] incited them [*sic.* the people] against the Zealots; for so these miscreants called themselves, as though they were zealous in the cause of virtue and not for vice in its basest and most extravagant form" (*The Jewish War* 4.160–161, trans. Thackeray).

The position of the Zealots in the power struggle for Jerusalem was poor at first, but a decisive turn in their favor came when the Idumeans arrived in the city and when John of Gischala joined their side. As a result, the Zealots became the virtual rulers of Jerusalem, at least for a time, and wiped out their opponents. Among those they killed were the two former high priests, Joshua ben Gamla and Ananus. Another of their victims was one of the important commanders from the beginning of the war, Niger of Perea.

When Simon bar Giora reached Jerusalem and took over the upper city, the situation changed. The power of the Zealots was reduced, and the city was divided into different areas of influence. Even though the Zealots were numerically fewer than the other parties, they managed to hold on to the topographical advantage they had obtained by their occupation of the Temple. Eleazar ben Simon continued to be their general. Under his leadership, they succeeded in barricading themselves within the walls of the Temple mount. However, soon after the Roman army under Titus began its operations against Jerusalem, John of Gischala changed the situation drastically. He took advantage of the Passover festival to introduce armed men into the Temple precincts on the pretext of coming to offer their Passover sacrifices. Thus he was able to overcome the Zealots (*The Jewish War* 5.98–105). In spite of this reversal, it is clear that the Zealots continued to preserve their separate identity even after this and stayed under the command of their own generals. They are mentioned by Josephus as a separate unit during later events (*The Jewish War* 5.250), and some of their fighters were outstanding in the battles against the Romans (*The Jewish War* 6.92, 148).

By the end of the revolt, Jerusalem was torn to pieces

between the warring factions of revolutionaries, for even though they all wanted to fight the Romans, they were deeply divided among themselves for social, religious, and personal reasons. Here it must be noted, however, that a large number of people still belonged to the peace parties, including the school of Hillel among the Pharisees, who consistently supported a moderate position. At the very end, some degree of unity was achieved among the revolutionary factions, although by then it was too late. But even if Jerusalem had been united throughout the war, it would probably still have fallen in the end before the forces of Rome. The internal dissent merely hastened the final fall.

It is important to note the differences between the various groups involved in the war with Rome (66–74 CE) and to distinguish them carefully from one another. Josephus does not mention the existence of a Zealot group before the war, so it is virtually impossible to identify them with the community at Qumran. The most exhaustive attempts to link the Qumranites and the Zealots have been provided by G. R. Driver and R. H. Eisenman, but their ideas have received little support because they depend largely on the problematic interpretation of Pesher Habakkuk (1QpHab) as referring to events in the early stages of the war. Furthermore, although the Qumran community's members clearly recognized the rightful place of zeal (cf. Rule of the Community [1QS] ii.15, iv.4, 10, 17, ix.23, x.18), like other Jews before them (cf. 1 Mc. 2.49–64), the term does not seem to have been part of a self-designation as it was for the Zealot movement. While it is just possible that during the war some of the Qumran community or the wider movement of which it was a part found themselves fighting alongside fellow Jews against the Romans, either in Jerusalem or even on Masada, they were not Zealots as described by Josephus. Further, Masada was occupied by the Sicarii, not by the Zealots. [See also Sicarii.]

ZOROASTRIANISM remains to this day a living religion with some ten thousand adherents in India (the Parsees) and Iran. Its members believe in the revelations of an ancient Iranian priest, Zarathushtra, named Zoroaster by the Greeks and modern English-speaking scholars. His teachings are said to have been collected primarily in the Avesta, a series of holy scriptures including liturgical songs, prayers, laws and divine-human dialogues.

Zoroaster and His Reform. Within the Avesta there are sixteen poems, the Gathas (Yasna 28-34, 43-51, + 53?), composed in an archaic dialect. These are understood by modern critics as having been composed by Zoroaster himself. Regarding the period of his activity, opinions differ widely. There only is a certain consensus that this prophetic priest was active before 520 BCE, that is, before Darius I. Some experts estimate a date around 600 BCE, while others prefer a time nearly one thousand years earlier. Even the location of his homeland is disputed, with proposals ranging from Lake Aral in Central Asia to Azerbaijan in north-western Iran.

The Gathas contain the words of revelation of a single god, the omniscient creator Ahura Mazda, "Lord Wisdom" or "The wise Lord." They refer to a permanent struggle between two substantial principles, both cosmic and ethical: the Holy or Bounteous Spirit, a manifestation of Ahura Mazda himself, and the Evil or Hostile Spirit. The first upholds the hypostasized, positive world order *asha*, the source of truth and justice and the functioning human society. Since *asha* is manifest in every fire, fire-altars, and, later, fire-towers, are the preferred places of worship. The other spirit supports the *druj*, a hypostasized anti-world which is the sphere of falsehood, lies, and rapacious nomads. The antithetical worldview was probably already current among Iranian people before Zoroaster's time, but he radicalized it and transferred it to the practice of religion. Whereas his fellow

countrymen venerated the polytheistic pantheon of old Indo-Iranian or even Indo-European times and sacrificed hecatombs of bulls together with an intoxicating herbal drink called *haoma*, Zoroaster emphatically condemned these rites as works of *druj* and declared the deities involved to be *daevas* ("demons").

According to Zoroaster's teaching, Ahura Mazda is the only god worthy of offerings. Around the creator is arrayed a group of archangel-like supranatural instrumental forces—the Immortal Holies/Bounteous. Among them are Vohu Manah ("Good Intention"), Best Asha Khathra Vairya ("Desirable [divine] Kingdom"), and others. At a later stage, their number was limited to seven, including Ahura Mazda himself.

The reformer promised happiness in this life and glorification after death to every person believing his message and fighting for *asha*. According to Zoroastrian belief, a deceased human being has to cross a mysterious bridge leading from this world into the other one. When an adherent of *druj* attempts to pass, the bridge becomes extremely narrow, resulting in his fall into a stream of fiery metal. The soul of an *asha*-adherent, on the other hand, goes over a broad bridge into the house of the heavenly songs, *garodman*. Burial of the corpse, however, would contaminate the earth; it must therefore be exposed in order to be picked clean by scavenging birds. (Structures devoted to this purpose came to be called Towers of Silence.)

Because of his revolutionary message, Zoroaster was persecuted by rulers and priests, but was able to find refuge with and support from a prince, Vistaspa. After his death, Zoroastrian communities began to emerge in other parts of Iran.

The Religion of the Achaemenids. Presumably since the time of Darius I (c.520 BCE), the Persian kings adopted Zoroastrian dualism and transformed it into a political doctrine. Whoever resisted their government was declared to be an adversary of *arta* (i.e., the Avestan *asha*). During the time of their empire, Zoroastrianism spread over the entire Near East and especially Asia Minor. Gradually, the Median priest class, known as the Magi, acquired a cultic and doctrinal monopoly. In later parts of the Avesta, the fundamental dualistic opposition was interpreted as the contrast between the world of light and the world of darkness. Babylonian astronomy and astrology were integrated into the religious system, becoming the basis for a reformed calendar (c.440 BCE?) with 360 plus 5 days per year. Reversing former monotheistic tendencies, a series of pre-Zoroastrian deities were venerated again, and bull sacrifices as well as *haoma* libations were revived. Among the new figures were Mithra, a protector of warfare and treaty, Verethragna, the genius of victory, Apam Napat, the numinous power of waters, and

a goddess without a proper name, described as "The Moist(?), Mighty, Immaculate," later on called Anah by the Greeks.

The Persian kings were convinced that a universal kingdom over the entire earth had been granted to them by Ahura Mazda. According to the Greek writers, Herodotus and Ctesias, the Achaemenids considered themselves as the third empire after an Assyrian and a Median one. With the victory of Alexander the Great, the disappearance of the Achaemenids in 332 BCE, and the subsequent rulership of the Seleucid dynasty over Iran and its environs, some groups in Iran seem to have come to believe that this Greek-Macedonian empire would be the fourth and last one in history. Subsequently, the idea of the succession of four universal monarchies predetermined by divine providence became influential among Greeks and Romans as well as among Israelites (cf. *Dn.* 2 and 7).

The Parthian Epoch. During the Arsacid empire (240 or 170 BCE–225 CE), an open-minded if not syncretistic Zoroastrianism represented the official religion, though it is very poorly documented. As a rule, the King of Kings bore a Zoroastrian name (e.g., Mithridates) but minted coins with Greek inscriptions and depictions of Iranian deities after a Hellenistic fashion (e.g., like a Heracles or an Aphrodite).

Contrary to the official policy in certain circles in Iran an anti-Hellenistic apocalypticism seems to have been developed which condemned the contemporary political system and prophesied both the coming catastrophe and the subsequent "making wonderful" of the world by Ohrmazd (i.e., the Avestan Ahura Mazda). The eschatological epoch would include the appearance of a superhuman savior (later, of three saviors), the end of the evil spirit Ahirman and his helpers, the resurrection of the dead, and a life in eternal bliss for the believers. Unfortunately, only fragmentary remains of these apocalypses have been preserved in medieval Persian books like the *Bahman Yasht* (or *Zand-i Vohuman Yasna*; Boyce, 1991, pp. 383–386), in Latin quotations of the Oracles of Hystaspes (Boyce, 1991, pp. 376–383) and perhaps a passage of the Persian Sibyl in Greek (III Sib 388–95; Boyce, 1991, pp. 371–373).

During Sassanian rule (225–636 CE) a Zoroastrian orthodoxy arose, with severe persecutions of heretics, Manichaeans, and Christians. In these centuries, the Avesta, heretofore transmitted orally, was written down. It was, moreover, translated and explained in *Pahlavi* (middle Persian) and augmented by other writings of Pseudo-Zoroaster.

Zurvanism. Around 300 BCE, the Greek philosopher Eudenus of Rhodes knew of Magi who referred to a primeval unity, "either as place or as time," as the ultimate source of both the good and the evil spirit. He is thus the

first witness to a movement referred to by modern scholars as Zurvanism or Zervanism. Essentially, Zurvanism was an attempt to overcome the inherited Zoroastrian dualism. According to its teaching, a supreme deity of unlimited time (*zrvan akarana*; cf. Greek *aion*) stood beyond the opposition of good and evil in the world (in spite of a certain favor for Ohrmazd). From it emanated the minor god of a time "of long dominion," (*zrvan darengo khvadata*; cf. Greek *chronos*) the tutelary deity of the regular this-worldly time, who after four great epochs or ten millennia of universal history will merge again with the infinite time. This theory was susceptible to the influence of Babylonian astrology and became very fatalistic in outlook. Later on, Zurvan became one of the important gods of the Manichaean religion.

In Sassanian times, a Zoroastrian orthodoxy suppressed the vestiges of the zurvanistic heresy. As a result, our knowledge of it is primarily dependent on Christian apologetic writings. Some scholars presume that Zurvanism was the dominant manner of religious thinking among the Aramaic- and Greek-speaking Magi in Asia Minor, the Maguseans. Perhaps due to their influence, many Greek Pseudo-Zoroastrian books appeared, making Zoroaster famous as the chief astrologer and magician of the Hellenistic and Roman worlds. Even Greek philosophers, especially the Pythagoreans, traced their ideas back to the Magi (cf. also *Matthew* 2).

In Roman times, the cult of the mysteries of Mithras probably originated in Asia Minor. How far it was influenced by Iranian dualism or by Zurvanism is a matter of great dispute today.

Zoroastrian Influence on Hebrew and Aramaic Literature. Since the first publication of the Avesta in Europe 200 years ago, many similarities between Iranian and biblical texts have been detected and have fascinated scholars. Doctrines such as creation by the will of one single god, a heavenly realm of archangels, a satanic antipode, a fourfold succession of world empires, and especially an eschatology based on the arrival of a savior(s), resurrection of the dead, last judgment, a new creation in an eternal eon with the definite realization of the divine kingship—these clear-cut ideas seem to have emerged side by side in Iran and Israel but nowhere else in the religions of antiquity. The question arose: Were the later layers of the Hebrew scriptures, especially the apocalyptic writings, dependent on Iranian models or was the influence the other way around? In scholarly literature, this question is highly disputed.

During Achaemenid, Seleucid, and Arsacid times, there had always been some contact between the Jewish diaspora both in the East and in Asia Minor and Iranian settlements. This contact presumably extended also into religious matters, since Iranian loanwords describing im-

portant theological notions were taken over into Biblical Aramaic and Hebrew: *dat* "(divine) law," *pitgam* "word (of God)," *raz* "mystery," and the famous noun "paradise." Moreover, an iconographic dependency is documented by the synagogue of Dura Europos, where biblical heroes are depicted in Parthian dress.

The most striking example of an Iranian influence is the "Treatise of the Two Spirits," found in the Rule of the Community iii.13–iv.26. According to that passage, the spirit of Light and the spirit of Darkness have been created by God for the predetermination of the lot of every human being. A similar conception emerges in the Visions of Amram (4Q544–548), where two angels are said to struggle with one another—the dark Melchiresha' and the bright Michael-Melchizedek; here also the Sons of Light are confronted with the Sons of Darkness. These ideas may have come from a Zurvanite source.

Synoptic Outline of Contents

The entries in the *Encyclopedia of the Dead Sea Scrolls* pertain to the general conceptual categories listed on this page. The following pages in this section provide a detailed synoptic outline of the contents, organized by con-

ceptual category. Some entries are listed more than once in the synoptic outline because the conceptual categories are not mutually exclusive. Entries in the encyclopedia proper are organized alphabetically.
