There has been a tendency in some current scholarship to reclaim the view expressed by several nineteenth-century scholars concerning the influence of Islamic mysticism on Jewish mystics in general and on the Heikhalot mystics in particular. In addition to the possible impact of specific Sufi techniques, the combination of ancient gnostic and philosophic ideas characteristic of various forms of Islamic esotericism (especially Isma'ili sources) may prove important in future research on the evolution of Jewish mysticism from late antiquity to the Middle Ages. It must be pointed out, however, that another important milieu for understanding the cultivation and transmission of Heikhalot texts and traditions was southern Italy. The presence of this material in the Islamic and Byzantine-Christian context underscores the centrality of speculation on the throne in the religious history of the Jews, and it is likely that a common source for both currents lies in Palestine.

The details of the vision of the divine chariot were first recorded in the *Book of Ezekiel*. While many of the themes in the biblical prophecy served as the exegetical basis for the visionary experiences elaborated in Heikhalot literature, the essential difference between the prophetic theophany and mystical vision is evident. Closer to the spirit of the experience described in the Heikhalot texts are remnants of heavenly ascents recorded in Jewish and Christian apocalyptic literature from the second century BCE to roughly the third century CE. Some scholars have argued that the mystical praxis preserved in the Heikhalot literature is an outgrowth of Jewish apocalypticism. An important link in this chain is the angelic liturgy of the Qumran sectarians, the Songs of the Sabbath

Sacrifice (4Q400–407) as well as other liturgical fragments found in the Qumran collection. [See Songs of the Sabbath Sacrifice.] While there is some uncertainty regarding the appropriateness of the term *mystical* to refer to the poetic descriptions of the angelic realm and the throne contained in these documents, there can be little doubt that the motifs discussed in these sources bear a striking resemblance to the main concerns of the Heikhalot literature. Chariot speculation was an essential aspect of the religious worldview of the Qumran sect. This interest should be seen as part of a much larger phenomenon that involves the profound impact that the *Book of Ezekiel* had on the sectarians. The particular interest in the chariot vision of Ezekiel is attested as well in *Second Ezekiel*, which is rich in exegetical elaborations of the biblical text. The major methodological question is, however, was this interest in the chariot merely speculative in nature; or was it related to specific liturgical practices that the sectarians believed enabled them to bridge the gap between the human and angelic realms? The textual evidence allows us to conclude that this gap was closed in the minds of the sectarians by the angels descending to join their camp, but was it also closed by the humans ascending to join the angels in the heavenly heights? [See Heaven.]

Recent attempts to assign the Heikhalot to a later date in Jewish history may be valid from a textual point of view, but it is nevertheless evident that incorporated in these sources are older materials. In particular, the hymns in Qumran fragments provide an important perspective for the evaluation and the possible dating of the liturgical components embedded in the Heikhalot corpus to the Second Temple period. The philological similarities of the Qumran hymns and the liturgical poems contextualized in the larger redactional settings of the Heikhalot texts may also provide important clues for determining the identity and social standing of the composers of the latter. [See Poetry; Psalms, Hymns, and Prayers.] Furthermore, the connection between the priestly ritual and the angelic liturgy found in the relevant Dead Sea Scrolls may help the scholar determine the provenance of the Heikhalot writings. It seems likely that the visionary ascent to the heavenly throne and the participation in the angelic worship would have been a preoccupation of a priestly group who, in the absence of an earthly temple, turned their attention to its celestial counterpart. The similar turn from the earthly to the heavenly temple that one finds in the priests who decided to leave Jerusalem to establish a sectarian community in the desert provides the scholar with one of the best tools to appreciate the religious motivation underlying the intense experiences related in the Heikhalot corpus.

ELLIOT R. WOLFSON

HELLENISM. Modern scholars identify the process by which the eastern Mediterranean basin and western Asia adopted Greek culture after the conquests of Alexander the Great (d. 323 BCE) as *Hellenism*. The main channels of transmission were the Greek cities founded by Alexander and his successors in the newly conquered territories and the waves of Macedonian and Greek immigrants. The language spoken in this much-expanded Greek world was a common (Grk., *koine*) dialect that replaced the hitherto prevailing local Greek dialects, but many of the native languages, including Egyptian, Aramaic, Hebrew, and several languages of Asia Minor, remained in use throughout

the Greco-Roman period. Moreover, the spread of Hellenistic culture was far from homogeneous: in the Phoenician cities, for example, close commercial ties brought about substantial Greek influence long before Alexander's conquest; in Judea, a land further removed from the sea and lacking any economic appeal for Greek merchants or settlers, Hellenization was a much slower process. Here too, however, the process began even before Alexander's campaign, as can be seen, for example, from the Greek elements in the Wadi ed-Daliyeh seals. The Greeks' sophisticated culture, their conviction of its superiority over all "barbarian" cultures (*barbarians* are people who say *bar bar* and cannot speak intelligibly, i.e., in Greek), and their firm control of most political and economic activities throughout much of the then-known world, created an enormous incentive for the higher echelons of the native populations to become like Greeks. Moreover, for the Greek elite it was education, even more than ancestry, that made one truly Greek: all non-Greeks could learn the Greek language, immerse themselves in Greek culture, and share in the nurturing of a vibrant cosmopolitan civilization. Thus, one important aspect of Hellenistic culture was the extensive participation of non-Greeks—including, occasionally, such Jews as Caecilius of Caleacte (a rhetor of the late first century BCE)—and the subsequent enrichment of that culture.

A second significant aspect of Hellenistic culture was that the Greek language was used by non-Greeks who sought to preserve their ethnic and cultural uniqueness. Romans, Egyptians, Babylonians, Jews, and others could express their distinct cultures, and trace their national histories in the only language they could expect their non-compatriots to read (with growing Roman assertiveness, Latin, too, became a possible medium for literary creativity, at least in the western Mediterranean). In some instances, religious literature was also translated into Greek; for example, Egyptian texts, occasionally rendered in Greek, or the far more extensive translation of Jewish religious texts into Greek (like the Septuagint).

Hellenistic civilization exerted a great influence even on those individuals who never learned the Greek language: numerous Greek words entered the vocabularies of all other languages. Moreover, decidedly Greek literary motifs appeared in Egyptian and Jewish literature. Roman culture borrowed extensively from the Greek world, and numerous cross-cultural influences can be detected in the fields of art, architecture, law, medicine, religion, and magic. In effect, the global spread of Hellenistic culture enabled such extensive contacts and transformations even across the linguistic barriers separating Greek-speakers from "barbarians."

The Hellenization of Judea was a relatively slow pro-

cess. Although the spread of new cultural modes was welcomed by many Jews, some aspects of Hellenistic culture—its cosmopolitan tendencies, its inherently polytheistic outlook, its occasional insensitivity to ethnic and religious taboos, and its emphases on the human body and on physical images—were seen by many as irreconcilable with the Jewish way of life. Thus, much of the history of Jewish civilization in the Greco-Roman world can be seen as a struggle to define how exactly Jews should relate to this foreign culture. Within this context, the Dead Sea Scrolls clearly stand out as representing an extremely conservative Jewish milieu. The few Greek texts found at Qumran, including Septuagint manuscripts and fragments of unidentified works of Judeo-Greek literature, bear clear testimony to the Qumranites' contacts with Greek-speaking Jews and their culture. The references in the *pesharim* and related literature to the Seleucid and Roman military presence in Judea demonstrate the Qumranites' awareness of the non-Jewish world around them. And yet, their extensive writings in Hebrew and Aramaic display no interest in Greek culture, not even in the Judeo-Greek world. The Dead Sea Scrolls often evince their authors' deliberate attempt to avoid using Greek words in their writings, in spite of the use of numerous Greek words in contemporary Hebrew and Aramaic (as can be seen from the *Book of Daniel*, from the Copper Scroll [3Q15]). Such aversion to foreign words was in no way unique. In Egyptian (Demotic) documents, a similar phenomenon is apparent, and Latin speakers too sometimes objected to the incursion of Greek words into their language; however, the Qumran authors certainly stand out in their tenacity on this score.

The general lack of Greek loan-words in the Qumran scrolls, and of references to specifically Hellenistic ideas or practices, makes the assessment of the impact of Hellenism on the Qumran community an extremely complex issue. Numerous parallels can be drawn between the Qumranites' social organization, for example, and those of contemporary non-Jewish social and religious associations. Yet such parallels need not be interpreted as reflecting direct cross-cultural influences from one direction or the other, for similar phenomena can often develop independently in unrelated social contexts. Even the obvious parallels between such texts as Zodiology and Brontology (4Q318) and the Greek brontological literature, too specific to be attributed to mere chance, need not reflect a direct Greek influence on the Qumran texts, as both the Aramaic and the Greek astrological traditions owe much to the older Babylonian texts. Overall, it seems clear that at a time when the Hasmonean dynasty was adopting many of the characteristics of the other Hellenistic kingdoms, and when the subsequent Roman and

Herodian regimes opened Judea even further to the non-Jewish world, the Qumranites stood out in their refusal to accept the new realities. This refusal might help explain their marginal position within the Jewish society of the time, and their limited influence on future Jewish history.

If the Qumran scrolls testify to their owners' relative success in insulating themselves against Hellenic culture, that success must be interpreted in part as a sign of the relatively slow Hellenization of Judea and in part as resulting from the sect's close-knit character and the small number of its members. This also explains why the texts found elsewhere in the Judean Desert, and dating from the late first and the second centuries CE, amply testify to the pervasiveness of Greek culture in Roman Judea and to the exposure to that culture of many strata of Jewish society. This is seen not only in the Greek translation of the Minor Prophets found at Nahal Hever, but also from the many Greek documents included in the Babatha archive and from the Greek letters found in the Cave of the Letters and belonging to Bar Kokhba and his comrades. Both sets of documents attest to daily contacts between Jews and non-Jews and testify to the numerous transactions that were carried out, even among the Jews themselves, in the Greek language and within the legal conventions of the Hellenized Near East. In an age characterized by a growing foreign presence in Judea, by a much-weakened Jewish community, and by the end of isolationist sectarianism, Jews were more exposed to the influence of Hellenic culture than ever before. As the rabbis were soon to demonstrate, such exposure need not imply a compromise of one's Jewish identity.

GIDEON BOHAK

HEMEROBAPTISTS. The Greek *Hēmerobaptistai* (= *kath' hemeran baptizomenoi*) can be translated as the Hebrew term *tovelei yom*, "those who bathe (immerse) daily." The preserved information about the Jewish sect of hemerobaptists is extremely scant. It is mentioned by the Christian authors Justin Martyr (c. 100–165 CE) in *Dialogue with Trypho* 80.4 (here, it is called the sect of "Baptists"), Eusebius of Caesarea (ca. 263–339 CE) in *Ecclesiastical History* IV.22.7 (quotation from the unpreserved *Hypomnemata* [*Memoirs*] by the Christian historian of the second century CE Hegesippus), Epiphanius of Salamis (ca. 315–403 CE) in the *Panarion*, Heresy XVII, and in the *Apostolic Constitutions* (ca. 380 CE) VI.6.5 mentioned along with the sects of Pharisees, Sadducees, Essenes, and some others. Pseudo-Clementine *Homilies* (third–fourth centuries CE) 2.23.1 use the term with respect to John the Baptist. According to Epiphanius, the sect "has the same ideas as the scribes and Pharisees," but "unlike the Sadducees, however, in their [the Sadducees'] denial of resurrection." The members of the sect "were always baptized every day . . . and thus came to be called Hemerobaptists. For they made the claim that there is no life for a man unless he is baptized daily with water, and washed and purified from every fault" (*Panarion* 17.1.1–2). According to the *Apostolic Constitutions*, the Hemerobaptists "unless they wash every day, do not eat, and unless they cleanse their beds and tables, or platters and cups and seats, do not make use of any of them." It is possible that the Hemerobaptists are identical with the *tovelei (tovelanei) shaharit*, "morning bathers," mentioned in Rabbinic literature (e.g. T., *Yad.*, II, 20; B.T., *Ber.*, 22a; J.T., *Ber.*, 3.6c). Some scholars (e.g., H. Graetz, J. D. Amusin) identified the latter with the Essenes. The Hemerobaptists were probably close to (if not identical with) the Jewish sect of Masbotheans (the Greek *Masbōtheoi/Masbōthaiōi* is apparently derived from the Syro-Palestinian *msbw'ith*, "baptism") mentioned, in particular, in the *Ecclesiastical History* 4.22.7 and *Apostolic Constitutions*, 6.6.4. According to the latter composition, the Masbotheans "deny Providence, and say that the world is made by spontaneous motion, and take away the immortality of the soul."

According to Epiphanius's *Panarion* 30.15.3, the apostle Peter and the sect of Ebionites were "baptized daily for purification." [See Ebionites.]

The resemblance of the Hemerobaptists to the Essenes is evident. According to *The Jewish War*, 2.129, 138, 168 by the Jewish historian Flavius Josephus (37/38–after 100 CE), the Essenes practiced daily ritual purifying ablutions (baths) probably not long before noon (2.129).

Purification and sanctification by water are mentioned in the Qumran Rule of the Community (1QS) iii.4–9, iv.21, v.13–14 (see also the fragments of the Rule from Cave 4: 4Q255, frg. 2, 1–4; 4Q257, frg. 1, 2.6–13; 4Q262, 1–4). Judging from these passages, the Qumranites seem to have stipulated purifying ablutions (the frequency and order of which are unknown) by the obligatory repentance and spiritual cleansing preceding them (cf. *Ezek.* 36.25–26). If the term *Hemerobaptist* reflects *tevil yom* in some form, then texts found in Qumran that reflect a debate about this issue may indicate a trajectory found both in the late Second Temple period (cf. *Miqsat Ma'asei ha-Torah*^b [4Q395 13–16, 64–72]) and in an early Jewish Christian group. According to Josephus's *Jewish Antiquities*, 18.117, *Matthew* 3.11, *Mark* 1.4, and *Luke* 3.8 (cf. also *Panarion*, 30.13.6; 14.3 [a fragment of the so-called *Gospel of Ebionites*; for further reference, see Ebionites]), John the Baptist (who, according to some scholars, had close connections with the Qumran community) preached the "baptism of (preliminary) repentance." [See John the Baptist.]

In connection with the description of the Hemerobaptists attested in the *Apostolic Constitutions* it is appropriate to mention that the ritual meal of the Qumranites is designated in the Dead Sea Scrolls as *tohorah*, "purity" (e.g., the Rule of the Community 4Q255–4Q264 [1QS, 4QS^{a-1}], passim; the *Damascus Document* [CD] ix.21, 23). In Rabbinic literature the term *tohorah* is used to designate ritually pure articles—tableware, utensils, cloths, and especially food.

IGOR R. TANTLEVSKIJ

HEROD AGRIPPA. See Herodian Rulers.

HEROD ANTIPAS. See Herodian Rulers.

HERODIAN RULERS. The Herodian dynasty followed the Hasmonean one, which had ruled Judea under various forms from the middle of the second century BCE until 37 BCE.

The rise of the Herodians to power had already begun under the Hasmoneans (*Jewish Antiquities* 14.10) and was precipitated by the internal rivalry within the Hasmonean family. The roots of the Herodians were in Idumea, where they were counted among the leading noble families. They became Jewish when John Hyrcanus I conquered Idumea. Antipas, Herod the Great's grandfather, became governor of Idumea under Alexander Jannaeus. His son Antipater, Herod's father, inherited this post and was also a close friend and counsellor of Hyrcanus II (*Jewish Antiquities* 14.8).

This family belonged to the Judean nobility of the later Hasmonean period, even though its members were considered as *homines novi*, in the eyes of the more veteran or priestly Jewish nobility. The Dead Sea Scrolls are vehemently critical of this nobility. They are blamed for belligerency and social inequity, and doomed to destruction. In the early stages of Roman rule in the land of Israel, Antipater and his sons, Phasael and Herod, forged strong links with Roman governors and generals. These connections, the upheaval of the Parthian invasion of Syria in 40 BCE, and the instability of later Hasmonean rule, paved the way for Herod to the throne of Judea (for the history of this period and Herod's rule see *Jewish Antiquities*, books 14 to the middle of 17).

Herod's rule lasted for thirty-four years (37–4 BCE). It consolidated the political situation in Judea after a long period of instability, which had already begun under the later Hasmoneans. Yet it did not solve social problems, ideological unrest, and national aspirations, although it suppressed them all with an iron fist.

How did this affect the Jewish sects? The answer is not easy, as we should not suppose a common attitude on Herod's part toward all the sects, and because our sources are very limited. Be that as it may, it seems that both the Sadducees and the Pharisees were forced to abstain from political activity and were restricted to religious matters, the Sadducees mainly to the priestly activity around the Temple, although even there they were obliged to accept Pharisaic intervention, and the Pharisees mainly to juristic and communal activity. As both sects were active within Jewish society, they were forced, haphazardly, to keep aloof of any interference with Herod's state and family affairs.

The Essenes were the most tolerated among these three "classical" Jewish sects (*Jewish Antiquities* 15.373–378).

From a political point of view, Herod's tolerance toward the Essenes is explicable, since the Essenes, though ideologically extremists, were a closed sect, waiting for metaphysical deliverance from the corrupt existence in this world, and inactive as far as public and political life were concerned.

Assuming that the Essenes are to be identified with the Qumran community, and that all, or many, of the manuscripts found there were part of a sectarian collection of books, and that some of them express a sectarian ideology, we may conclude that under Herod the Dead Sea sect lived undisturbed on the outskirts of society. According to Flusser, they survived the famine in the land in 25–24 BCE, which is referred to in some of the Dead Sea Scrolls (Flusser, 1987).

It seems that the creative period of the sect preceded Herod's days. Yet, as many manuscripts from Qumran are dated paleographically to the Herodian period, it is clear that the sect's ideological activity did not stop. The fact that some of the sectarian writings, composed at an earlier period, were copied in Herod's time means that interest in their content still existed.

Yet, interestingly enough, no major composition seems to have been written down later than the early Roman period, and even meaningful editing in the Herodian period cannot be detected in the Dead Sea Scrolls. Archaeology also does not show any major events at the Qumran settlement between the earthquake of 31 BCE, which, according to Roland de Vaux brought severe destruction at Qumran, and the destruction of Qumran in 68 CE, in the course of the First Jewish Revolt of 66–70.

Additionally, Herod is only rarely mentioned in the Jewish literature of the Second Temple period, the Apocrypha and pseudepigrapha. The *Assumption of Moses* is the one work that refers to Herod, although not by name, as is the rule in apocalyptic literature.

Our main source for Herod's time and activity is Josephus (see *The Jewish War* 1.204–666; *Jewish Antiquities* as cited above), who was dependent on Herod's friend, Nicolaus of Damascus as a source. The main turning points in Herod's career were:

- His appointment by his father Antipater as governor of Galilee (in 47 BCE) and the friendly relations he forged with influential Romans.
- The Parthian invasion (40 BCE) of Syria, the death of his elder brother Phasaël, his flight to Rome, and his crowning as king of Judea in the same year.
- The conquest of the land of Israel from the last Hasmonean ruler—Mattathias Antigonus—and the beginning of his *de facto* rule in Judea (37 BCE).
- The struggles within his family involving Hyrcanus II,

Hyrcanus II's daughter Shelamzion Alexandra, and Miriamme, Shelamzion Alexandra's daughter and Herod's wife, who was executed by him (29 BCE).

- The confirmation of Herod in his position by Octavian (31 BCE), which was a major step in consolidating his rule over Judea.
- His building activity, crowned by such projects as the Temple Mount, Caesarea, Masada, and Herodion, of which traces are still to be seen in the land of Israel.

Herod was hated by many of his Jewish subjects and was regarded by them as a Roman puppet. Although the economic situation was improved under his rule, he represented foreign domination and was king of a binational state. His "Greek" subjects and his Jewish subjects hated each other, and both hated him.

Nevertheless in some areas, Herod continued trends that were already visible under the Hasmoneans. One of them was developing and strengthening relations with the Jewish Diaspora. It seems that there Herod achieved a certain degree of popularity, which he could not achieve in the Land of Israel.

Some of Herod's progeny continued to serve as rulers in the Land of Israel under Roman patronage, including three of his sons: Archelaus as ethnarch of Judea, Samaria, and Idumea (4 BCE–6 CE); Herod Antipas as tetrarch in the Galilee and the Perea (4 BCE–39 CE); and Philip as tetrarch in the Golan and its surroundings (4 BCE–33/34 CE). Archelaus's failure as a ruler brought his part of Herod's kingdom under the direct control of Roman governors. His two brothers ruled much longer, and their princedoms were gradually inherited by Herod's most distinguished successor, Agrippa I, his grandson through the Hasmonean Miriamme.

Agrippa I's reign constituted a kind of a short blooming period of Herodian rule, at least from a Jewish point of view. In 37 CE Agrippa was appointed king of the former princedom of his uncle Philip and two years later of Antipas's tetrarchy. Agrippa's meteoric career was due to his friendship with Caligula, the Roman emperor (37–41 CE). Caligula's murder opened the way for a new emperor, Claudius, also a friend of Agrippa, who made him king over all the land of Israel by adding Judea, Samaria, and Idumea, the three of which were a Roman province (6–41 CE), to his kingdom.

Agrippa's kingdom was as large as that of his grandfather Herod the Great, but, unlike him, he was popular among his Jewish subjects. Yet this flourishing of an autonomous Judea under him was shortlived. In 44 CE Agrippa suddenly died; some think he was poisoned. He was replaced by Roman governors, who ruled over most of the land of Israel.

There is little that links Herod's successors with the Dead Sea sect. One may find indirect relation in Herod Antipas's treatment of John the Baptist (*Antiquities* 18.117–119; New Testament: *Mt.* 14.3f; *Mk.* 6.17–18; *Lk.* 3.19–20), if we assume some connection of John with the Essenes/Qumranites.

It is thought that Agrippa I inclined toward the Pharisees, an inclination that cannot be proven, and in any case contributes nothing to our knowledge of the Dead Sea Scrolls. Both rulers are mentioned in the Gospels and *Acts*, and like Herod, they too are presented in a negative light.

The last Herodians who play a role in Jewish history are Agrippa I's children, Agrippa II and Berenice. After some interval, Agrippa II was appointed king of Philip's tetrarchy, to which the eastern Galilee, along with Tiberias, were later added. Berenice was active at the side of her unmarried brother to such a degree that they were suspected of incest. They both played a role in Jewish society until the end of the First Jewish Revolt of 66–70 CE, but with the destruction of the Temple they seem to disappear politically from the Judean scene.

Some other Herodians of lesser position also played a part in Jewish life and usually sided with the pro-Roman party in Judea, like most of the Judean nobility. Others served the Romans as rulers of regions outside Judea. Most distinguished among them were Herod of Chalcis, Agrippa I's brother, and his son Aristobulus, who ruled Chalcis in the Lebanon.

Although the Herodian dynasty and its offshoots played a major role in Jewish society for about 110 years (40 BCE–70 CE at least), its activity is not reflected in the Dead Sea Scrolls, and is only very slightly reflected in the Apocrypha and pseudepigrapha, which may be partially related to the Dead Sea Scrolls. In the Talmudic literature there are some references to Herodians, but their historical value is very doubtful.

If we consider the later existence of the Qumran settlement as contemporary with the Herodian dynasty, and draw conclusions from the silence of the literary sources, then we may propose that from Herod the Great until the destruction of Jerusalem, the Essenes/Qumranites lived undisturbed in their place. They, for their part, were more active in copying older works than in developing new attitudes toward the rulers of Judea, both Herodian and Roman.

URIEL RAPPAPORT

HERODIANS were referred to in the New Testament and in Josephus, but not in the scrolls, on which various theories have been held (H. Rowley identifies twelve; more could be added). The Gospels suggest that Herodians had a social-religious program, though Josephus implies that they were a political, not well-defined group. The relatively late evidence has encouraged proposals that behind the Herodians are Agrippa I or II.

Mark 3.6 and 12.13 (c.70 CE) claim that at the time of Jesus, Herodians (using the latinized Greek form *hêrôdianoî*) were associated with Pharisees, but only one parallel (*Mt.* 22.16; c.85 CE) follows *Mark*. *Mark* 8.15 has a variant, "Herodians," for "leaven of Herod," but neither Matthew nor Luke refers to either Herodians or Herod, suggesting that neither knows the group; Mark, or his source, knows them only slightly.

Josephus's earlier work, *The Jewish War* (c.75 CE), describes conditions in the period 40–37 BCE when Herod's supporters appear as a loose coalition (*The Jewish War* 1.319, 326, 356; using the Greek forms *hêrôdeioi*, *tous ta hêrôdou phronesantas*, *tous ta autou phronêsantas eunousterous*). In only one case does *Jewish Antiquities* (c.95 CE) use this vocabulary (*Antiquities* 14.450; contrast 14.436?, 15.1–2). Josephus, like the Synoptic Gospels and at about the same time, minimizes the group's significance as he moves farther from his source (Nicolaus of Damascus). The Gospels and Josephus do not support the view that the term *Herodians* refers primarily to supporters of Agrippa I or II.

Proposals that the scrolls allude to Herodians have been made. Yigael Yadin argued that the Temple Scroll's allusion to seven baskets of bread in an Essene ordination ritual (11QT^a xv.3–5) is reflected in the reference in *Mark* to seven baskets of crumbs (*Mk.* 8.14–21), and that Jesus' warning against the leaven of Herodians in 8.15 (v. 1) supports Constantin Daniel's argument that Herodians are simply Essenes, a view dismissed by Willi Braun. Eisenman and Wise suggest that marriage with nieces and relationship with gentiles in the Damascus Document should be linked with marriage questions in *Miqsat Ma'asei ha-Torah* (4QMMT B39–49, 81–82; CD v.7–9; iv.14–19; cf. 11QT^a lxvi.15–17) and understood as prohibitions against Herodians in the period 40–66 CE. The dating of the texts, however, makes it unlikely that either intends to refer to Herodians.

Some hold that the group originated under Antipas (4

BCE–38 CE; see Birkman). More logically, it derives from Herod the Great's reign, as a sociopolitical movement upon which Herod depended for legitimacy. While it probably began with members of the elite who agreed with Herod's entente with Rome and supported his hold on power, it may have developed later as a group with quasi-religious features, possibly including views of Essenes and others such as Boethos (Hoehner), who owed his position to Herod. There is no evidence that Herodians viewed Herod as the Messiah (contra Epiphanius). [See Herodian Rulers.]

PETER RICHARDSON

HERODIUM. Lying 5 kilometers (3.1 miles) southeast of Bethlehem and 12 kilometers (7.5 miles) south of Jerusalem, the truncated, conical mountain Herodium (Gk., *Herodion*) is described by Josephus as having the shape of a woman's breast (*Jewish Antiquities* 15.324). The Arabic name of the site, *Jebel Fureidis*, seems to preserve the name *Herodis* ("Herod's mountain"), the site's designation during the period of the Bar Kokhba Revolt against Rome (see below). Herodium was constructed by Herod some time between the years 24/22 and 15 BCE. According to Josephus, it was intended to serve as a fortress, as the capital of a toparchy (administrative district), and ultimately as a memorial to Herod (*The Jewish War* 1.419, 3.55; *Antiquities* 15.324). Josephus also describes the procession accompanying Herod's funeral and burial at Herodium (*The Jewish War* 1.670–673; *Antiquities* 17.196–199). During the First Jewish Revolt against the Romans (66–70 CE), Herodium was occupied by Jewish rebels and was one of the last three strongholds to fall to the Romans after the destruction of Jerusalem (*The Jewish War* 4.518–520, 4.555, 7.163). According to documents from Wadi Murabba'at dating to the time of the Bar Kokhba

Revolt (c.132–135 CE), Shim'on Bar Kokhba had a command post at Herodium.

Exploration of the Site. During the eighteenth and nineteenth centuries, Herodium was visited and described by a number of explorers, including Richard Pococke (1738), Edward Robinson (1838), Felicien du Saulcy (1863), Conrad Schick (1879), and Claude Reignier Condor and Horatio Herbert Kitchener (1881). Excavations on top of the mountain were conducted by Virgilio C. Corbo from 1962 to 1967 on behalf of the Studium Biblicum Franciscanum. In 1967 and 1970, conservation and restoration works were carried out by Gideon Foerster on behalf of the Israel National Parks Authority. Between 1970 and 1987, excavations were conducted in Lower Herodium by Ehud Netzer of the Hebrew University of Jerusalem. Although no documents have been found at any of the excavations at Herodium, there are graffiti scratched on the plaster of walls, ostraca, and inscriptions on jars in Hebrew, Aramaic, and Greek from all phases of occupation. [See Names and Naming.]

Upper Herodium. The site of Herodium consists of a palace/fortress on top of the mountain and a Lower City. The palace/fortress is located inside the top of an artificial mountain that was created by pouring an earth and stone fill around the outside of a double circular wall, the diameter of which is 62 meters (203 feet). A round tower, 18 meters (59 feet) in diameter, was set into the double circular wall on the east. A semicircular tower projected from the wall at each of the other three cardinal points. The double wall and towers were constructed on a series of vaults and rose several stories in height, with their tops originally protruding above the earth and stone fill. Herod's palace/fortress was built inside the double circular wall, as if set into the mouth of a volcano. A stepped, vaulted passage was cut through the fill from the base of the mountain to an entrance on the northeast side of the top.

The circular area on top of the mountain was divided into two symmetrical halves. The eastern half was occupied by a peristyle garden flanked by exedrae (semicircular recesses). The palatial rooms, including dwellings, service rooms, a triclinium (dining room), and a bathhouse, occupied the western half. During the period of the First Jewish Revolt the triclinium was converted into a synagogue. A small monastic community occupied the top of the mountain during the Byzantine period (fifth–early seventh centuries CE).

Lower Herodium. The buildings in the Lower City have the same axial orientation as those on top of the mountain and were apparently constructed as part of the same overall plan. A large (46 by 70 by 3 meters [151 by

227 by 9.8 feet] deep) pool with a circular pavilion in the center dominated the Lower City. The pool was surrounded by a garden with porticoes along the sides. To the southeast of the pool complex was a long, narrow racecourse or track (350 meters [1148 feet] long by 30 meters [98 feet] wide), with a large palace just above it to the north. The racecourse is too narrow to have served as a hippodrome. An elaborate structure described by Netzer as a "monumental building" faces directly onto the western edge of the racecourse. It consisted of a single rectangular hall of ashlar masonry, whose bottom part was cut into bedrock. The interior of the hall is surrounded by niches with half-columns set on pedestals between them. The thickness of the side walls indicates that there was a vaulted ceiling and perhaps a monumental roof above. Netzer has considered but rejected the possibility that the "monumental building" was Herod's tomb, but he believes that the tomb may have been located in the vicinity and that the "racecourse" may have been used for Herod's funeral procession. Noting the similarity between the interior of the "monumental building" and the triclinium of the Roman Soldier Tomb at Petra, he has suggested that the building served as a grave marker for Herod's tomb. This suggestion has been refuted by Foerster, who identifies the building as a triclinium.

Like Masada and Machaerus, Herodium remained in the hands of Jewish rebels or Zealots after the fall of Jerusalem in 70 CE but was the first of the three to be captured by the Romans. Post-Herodian remains at Lower Herodium include a network of tunnels that served mostly as hiding places during the Bar Kokhba Revolt (mostly at the northeastern edge of the mountain) and three churches of the Byzantine period. [See Bar Kokhba Revolt.]

Prototype for Herodium. Herodium's distinctive truncated, conical shape, combined with the fact that Herod's architecture in general was inspired by contemporary Hellenistic and Italic models, has led scholars to search for a prototype. The most plausible candidate until now has been the Mausoleum of Augustus in Rome, the similarities of which to Herodium in function and design were noted by Arthur Segal. This is not supported by the known chronology, however, since Herod made no recorded visits to Rome before the construction of Herodium was well under way or even completed. Instead, the similarities between the two monuments reflect the inspiration of a common prototype: the lost Mausoleum of Alexander the Great in Alexandria. This is supported by ancient descriptions of the mausoleum and by the fact that Herod accompanied Augustus to Alexandria in 30 BCE, at which time Augustus visited the mausoleum and paid homage to Alexander's remains. Herod probably followed

Augustus's example and modeled his own mausoleum after that of Alexander the Great.

HEROD THE GREAT. See Herodian Rulers.

HEVER, NAHAL. [This entry is divided into two articles: *Archaeology and Written Material*.]

Archaeology

In the autumn of 1953, Yoḥanan Aharoni conducted a survey of Nahal Hever, where he found ten caves (which he designated Caves 1 through 10). Aharoni likewise discovered two Roman siege camps, the first on a plateau north of Nahal Hever and a second camp on the southern bank. In both camps, as well as in the cave below the northern camp, he discovered evidence that the bedouin had preceded him and undertaken excavations for the purpose of plundering. In the course of his examination, it was ascertained that the cave under the northern bank was a large cave with two openings (designated as openings number 5 and 6; therefore, the northern cave is identified as 5/6Hev). During the spring of 1955 Aharoni returned to the caves of Nahal Hever, this time to examine Cave 8 on the southern bank of the river below the southern Roman camp. It was determined that excavations had

been conducted by the bedouin in this cave as well. Here, Aharoni discovered more than forty skeletons and named the southern cave the Cave of Horror. Within the framework of the Judean Desert Expeditions in 1960, Yigael Yadin excavated the northern cave. He found in it many artifacts from the era of the Bar Kokhba Revolt. [See Bar Kokhba Revolt.] The most significant find was a leather flask containing fifteen letters that Shim'on bar Kosiba' (Bar Kokhba's real name) had sent. [See Bar Kokhba, Shim'on.] Following this discovery, the northern cave was named the Cave of the Letters.

In 1961, within the framework of the second part of the Judean Desert Expeditions, Yadin returned to the northern bank of Nahal Hever. This time he excavated the Roman camp, Caves 3 and 4 (where he found pottery from the era of the Bar Kokhba Revolt), and he returned to the Cave of the Letters. During the course of this project, Yadin discovered the Babatha archive. [See Babatha.] In the course of part two of the Judean Desert Expeditions, Aharoni excavated the Cave of Horror, where he found a number of scroll fragments, among them fragments of the Greek Minor Prophets scroll, proving that the main section of this scroll was discovered by the bedouin in this cave.

In 1991 an additional cave was discovered in the western portion of Nahal Hever, where refugees had fled at the end of the Bar Kokhba Revolt. This cave was excavated by David Amit and Hanan Eshel. Signs of pillaging excavations conducted by the bedouin also were found in this cave. Despite this, a silver coin from the time of the Bar Kokhba Revolt was discovered. One can assume that the two documents included in the Nahal Se'elim collection originated in this cave.

Cave of the Letters. This cave is the largest on the northern bank of Nahal Hever. The cave's two openings are 7 meters (23 feet) apart. The length of the cave is approximately 150 meters (457 feet), and it contains three chambers. The two openings lead to chamber A, the northeastern side of which is rounded. Chamber A is full of huge masses of boulders. A tunnel approximately half a meter (1.6 feet) high leads from chamber A to chamber B. It is necessary to crawl through it in order to enter chamber B. From chamber B a tunnel extends to the east, while chamber C opens from the north into chamber B west of the tunnel.

In 1960 a burial chamber containing the skeletons of nineteen people and an abundance of fabric was found in the cave. At the foot of the cave a Bar Kokhba coin, a hoard of bronze articles used for ritual worship, and a fragment of a scroll of the *Book of Psalms* were found. The most significant findings in the cave, fifteen of Bar Kokhba's letters, also were discovered in 1960. In 1961, hoards of pottery, metal, and glass vessels were discov-

ered in the inner portion of the cave. [See Glassware; Metal Utensils; and Pottery.] Among them was an archive containing the documents of Babatha. Arrowheads, a whole arrow, fragments of a scroll from the *Book of Numbers*, as well as a fragment of papyrus including a Nabatean document published by Starcky (5/6Hev 36 = XHev/Se Nab. 1) were found at the entrance to the cave in 1961. Hence, we can deduce that some of the documents included in the Nahal Se'elim collection originated in the Cave of the Letters. A hoard of nineteen bronze vessels and a fragment of a scroll of the *Book of Psalms* were found in the first chamber. In the second chamber there were few finds: primarily, pottery, mats, and a Greek papyrus, which is the inner section of a marriage contract (5/6Hev 37). The majority of the finds were discovered in the third chamber: metal finds, a collection of rings, a cooking pot, a set of glassware, a Bar Kokhba coin, and baskets. The most significant find was a basket containing, among other items, the Babatha archive—thirty-five documents written between 93 and 132 CE in various languages—Greek, Nabatean, and Aramaic. Adjacent to the Babatha archive were six documents from the era of the Bar Kokhba Revolt belonging to Eleazar ben Samuel, a farmer from 'Ein-Gedi who had leased land from Bar Kokhba.

Cave of Horror. This cave is situated on the southern bank of Nahal Hever. It resembles a corridor 65 meters (213 feet) long, winding a little toward the north and culminating in a chamber that is reached by a short tunnel. The bedouin conducted pillaging excavations in the cave, and it was excavated entirely by Aharoni in 1961. During the course of this excavation, many clay vessels from the era of the Bar Kokhba Revolt were found in the cave, among them a significant group of ceramic oil lamps, glass vessels, and four bronze coins that were minted by Bar Kokhba. Also discovered were three *ostraca*, bearing names of the deceased placed on top of the skeletons, as well as fragments of two documents written on a papyrus, one in Aramaic and another in Greek, and fragments of a scroll written in Hebrew containing what most likely is a prayer (8Hev 2). Especially important are nine fragments of the Greek Minor Prophets (8Hev 1) discovered by Aharoni, the remainder of which were found by the bedouin, who designated their origin as Nahal Se'elim. Consequently, one can assume that a portion of the documents included in the Nahal Se'elim collection originated in the Cave of Horror.

Cave of the Tetradrachm. This is a large cave on the upper west side of Nahal Hever approximately 12 kilometers (7.5 miles) west of the Cave of the Letters and the Cave of Horror. This cave has three openings and three chambers; however, it is larger than the Cave of the Letters, and it is 200 meters (656 feet) long. This cave was

discovered and excavated in 1991 by David Amit and Hanan Eshel. In it were found many clay vessels from the era of the Bar Kokhba Revolt, two short inscriptions written in ink upon sherds itemizing the contents of jars, and a silver tetradrachm from which the cave gets its name. An assumption can be made that two of the documents (XHev/Se 9 [deed]; XHev/Se Gr. 2 [double contract; marriage contract]) included in the Nahal Şe'elim collection were discovered by the bedouin in this cave, since these documents originated in Yakim, which is only about 5 kilometers (3.1 miles) from the Cave of the Letters, whereas the rest of the documents of the Nahal Şe'elim collection originated in the eastern region of Transjordan. The documents under discussion mention the village Aristoboulias and the capital of the toparchy Zif—both in the southern region of Mount Hebron. The Aramaic document is dated by paleographic analysis to the Herodian period, and it documents the transaction of Yehudah ben Shim'on selling an orchard in Yakim to a man by the name of Yehudah. [See Deeds of Sale.] The Greek document is a canceled marriage document from the year 130 CE, of a bride from Aristoboulias and a man from Yakim.

HANAN ESHEL

Written Material

The written material from Nahal Hever falls into three groups: Group I contains documents found in Cave 5/6 (the Cave of the Letters) and Cave 8 (the Cave of Horror)

in the course of controlled excavations; Group II contains documents which, although they can be traced definitely to two caves in Nahal Hever, were not found there in the course of controlled excavations; Group III contains material about which there are reasons to believe that it comes from Nahal Hever, although this cannot be said with absolute certainty. Fragments from this group sometimes match those found in the first two groups, for example, the Greek Minor Prophets Scroll (8Hev 1).

Group I. This group was discovered in Nahal Hever by Israeli archaeological missions as part of a large-scale Judean Desert survey in 1960-1961. [See Archaeology.]

Documents from the Cave of the Letters. Cave 5/6, the Cave of the Letters, was excavated by Expedition B, led by Yigael Yadin, during two seasons of excavations, in 1960 and 1961. [See also biography on Yadin.] With the exception of two literary texts, Numbers ([5/6Hev 1a] and Psalms [5/6Hev 1b]), all of the material excavated by Yadin's mission is composed of documentary texts from the last decade of the first century CE to the end of the Bar Kokhba Revolt in 135 CE. [See Bar Kokhba Revolt.] This documentary corpus, designated P.Yadin (olim 5/6Hev), falls into three groups.

First are the letters of Bar Kokhba and his supporters (5/6Hev 49-63). The majority of these letters were written by Bar Kokhba himself. [See Bar Kokhba, Shim'on.] They are written in Hebrew, Aramaic, and Greek. None of the letters is dated. Most are addressed to Jonathan son of Baianos and Masabalah (5/6Hev 49-56, 58-60), Bar Kokhba's administrators in 'Ein-Gedi, and are, therefore, likely to come from their archives. [See 'Ein-Gedi.] These letters should be studied together with two letters of Bar Kokhba to Yeshu'a son of Galgula found in Wadi Murabba'at (Mur 43-44; Benoit, 1961), both of which, like the letter from Beit-Mashiko to Yeshu'a ben Galgula (Mur 42), must have come from the latter's archive. The fragmentary letters Mur 45-52 may belong to the Bar Kokhba circle as well. The only letter addressing Bar Kokhba himself is part of the Nahal Şe'elim collection (XHev/Se 30; Cotton and Yardeni, 1997). [See Şe'elim, Nahal.]

The second set consists of leases and subleases of the Bar Kokhba administration in 'Ein-Gedi in Hebrew and Aramaic (5/6Hev 42-46) and one private deed from the time of the revolt (5/6Hev 47a-b). The leases should be considered in conjunction with a deed of sale and farming contracts from Murabba'at (Mur 24), also recording leases of land. These leases and subleases suggest that Bar Kokhba took possession of public land, that is, parts of the imperial domain in Judea.

A deed of sale of half of a garden (5/6Hev 47a-b) in 'Ein-Gedi is dated by the era of the Bar Kokhba Revolt. It should be considered together with nine private legal deeds written during the revolt and using the same dating

system. Four are deeds of sale from Wadi Murabba'at (Mur 22, 23, and 25; Benoit, 1961); from Nabal Se'elim come three other deeds of sale (XHev/Se 7–8a), a confirmation of divorce (XHev/Se 13), and a deed of land sale (XHev/Se 49) (Cotton and Yardeni, 1997). [See Deeds of Sale; Murabba'at, Wadi.]

It should be noted that the private-law procedures visible in the documents from the Bar Kokhba period are continuous with those from the immediately preceding "provincial" period both in Judea and Arabia. What changes dramatically after the outbreak of the revolt is language use: Hebrew now appears alongside Aramaic (Nabatean) and Greek.

The third set of documents is the Babatha archive (5/6Hev 1–35), which contains legal documents in Nabatean (5/6Hev 1–4, 6, and 9), Aramaic (5/6Hev 7–8 and 10), and Greek (5/6Hev 5, 11–35) of a Jewish woman who lived in the village of Maḥoz 'Eglatain on the southern shore of the Dead Sea, in what used to be the Nabatean kingdom which in 106 CE became the Roman province of Arabia. [See Babatha.] The Babatha archive begins on 11 August 94 CE and concludes on 19 August 132 CE—not long after the outbreak of the Bar Kokhba Revolt in Judea. The close ties with 'Ein-Gedi, evident throughout the archive, may explain the presence of the Babatha archive in the same cave where documents belonging to Jonathan son of Bajanos and Masabalah were found. The Babatha archive should be studied closely together with the archive of Salome Komaïse daughter of Levi (XHev/Se 12, XHev/Se gr 60–65), which also revolves around the affairs of a Jewish family from the village of Maḥoz 'Eglatain, and whose documents are dated between 30 January 125 and 7 August 131 CE. The two archives contain deeds of sale, deeds of gift, petitions, land registrations, receipts, mortgages, promissory notes, and marriage contracts. The two women must have known each other since their families' properties were abutted by the same neighbors and the same witnesses signed their documents. Like Babatha and her family, Salome Komaïse left her home in Arabia with her precious documents and probably perished in the Bar Kokhba Revolt. Neither Babatha nor Salome Komaïse retrieved her documents.

Of all the material found in the Cave of the Letters at Nahal Hever by Yadin, only the Greek part of the Babatha archive has received its final publication (Lewis, 1989). The rest will be published by Y. Yadin, J. C. Greenfield, A. Yardeni, and B. Levine, *The Documents from the Bar Kokhba Period in the Cave of Letters, vol. 2: Hebrew, Aramaic and Nabatean Documents* (Judean Desert Studies, 3). [See Family Life; Marriage and Divorce; and Names and Naming.]

Documents from the Cave of Horror. Cave 8, the Cave of Horror, was excavated by expedition B, led by Y. Ahar-

oni, in 1960. Fragments of the Greek Minor Prophets scroll (8Hev 1), fragments of parchment containing a prayer (8Hev 2), and a fragment of a letter (?) written in Greek on papyrus (8Hev 4) were found there.

Group II. The second group contains most of the so-called Seiyal collection. The original Seiyal collection was composed of documents that were not discovered in the course of controlled excavations but rather were found by bedouin and brought in August 1952 and July 1953 to the Rockefeller Museum (then the Palestine Archaeological Museum), where they are kept to this day. [See Palestine Archaeological Museum.] The plates were labeled Se, that is, Seiyal (Nahal Se'elim). Although the labeling suggested that the papyri came from Nahal Se'elim, those directly in charge of the documents at the time of their discovery never made this claim anywhere in print. Most of the original Seiyal collection has been published (Tov, 1990; Cotton and Yardeni, 1997).

Seiyal Collection, Volume 1. The first volume (Tov, 1990) contains the Greek translation of the Minor Prophets (8Hev 1). The fragments of this translation, discovered by Aharoni in 1960 in the Cave of Horror in Nahal Hever, established that the larger fragments of the text designated on the plates in the Rockefeller Museum as coming from Seiyal also came from Cave 8 of Nahal Hever. Thus the entire first volume of the Seiyal collection originated in Nahal Hever. The fragments belong to a single manuscript written in two different hands that can be dated to the late first century BCE. The translation follows the sequence of books of the Masoretic Text and not that of the Septuagint. It contains portions from the books of *Joel, Micah, Nahum, Habakkuk, Zephaniah* and *Zechariah*. If the scroll had contained all the Minor Prophets, it would have reached approximately 10 meters longer than any published Qumran scroll.

Seiyal Collection, Volume 2. The second volume (Cotton and Yardeni, 1997) contains exclusively documentary texts, in Hebrew, Aramaic, and Greek. Depending on the language in which they are written, the documents are designated XHev/Se and XHev/Se ar, respectively, for the Hebrew and Aramaic documents and XHev/Se gr for the Greek documents. Many of these texts can be safely traced to the Cave of the Letters—above all, those documents that belong to the archive of Salome Komaïse, daughter of Levi. The striking similarities between the archive of Salome Komaïse and Babatha, and the identity of some of the people who figure in both archives, would constitute reasons strong enough to postulate that the Cave of the Letters is the source of Salome's archive as well, were it not for the more tangible proof that one document from the archive (XHev/Se gr 65) was found by Yadin in the Cave of the Letters. The unity of the archive seems to be the best proof that the other documents in

this archive, XHev/Se ar 12, XHev/Se gr 60, 61, 62, 63, and 64 (possibly also XHev/Se ar 32), originally part of the Seiyal collection, come from the Cave of the Letters as well. In addition, XHev/Se gr 67, 68, 70, and 71, located on a plate in the Rockefeller Museum (XHev/Se gr. 5), which contains several documents from the archive of Salome Komaise daughter of Levi, must come from the Cave of the Letters as well. And finally the Aramaic deed XHev/Se 7 and the Aramaic renunciation of claims following a divorce XHev/Se 13 safely can be traced to the Cave of the Letters for reasons of identity of hands and names.

Volume 2 of the Seiyal collection also includes an Appendix Containing Alleged Qumran Texts, two of which, 4Q347 (a fragment of XHev/Se ar 32) and 4Q359, can be traced to the Cave of the Letters; both were not part of the original Seiyal collection. On the other hand, there are items that are part of the original Seiyal collection, but that are not included in volume 2, that can be traced to the Cave of the Letters: Numbers? (XHev/Se 1) and Psalms (XHev/Se 4), which are from the same manuscripts as the smaller fragments from the same books found by Yadin in the Cave of the Letters (5/6Hev 1a and 1b); and contracts XHev/Se Nab. 1–5 (6). Fragments of contract XHev/Se Nab. 1 (Starcky, 1954) were discovered by Yadin in the Cave of the Letters in 1961. Since all the Nabatean documents according to Starcky were found in the same place, contracts XHev/Se Nab. 2–5 (6) were surely found in the Cave of the Letters too. Furthermore, it is possible that contract XHev/Se Nab. 1 belongs to the Babatha archive, whereas contract XHev/Se Nab. 2 belongs to the archive of Salome Komaise daughter of Levi.

Group III. The third group is composed of documents that are likely to have come from Nahal Hever. Thus there are good reasons for believing that the contracts XHev/Se 8 and XHev/Se 8a (two deeds written in Kefar Baru), the deeds XHev/Se 26 (written in the same hand as the former two documents), and the deed of land sale XHev/Se 49—all four of which are included in volume 2 of the Seiyal collection—come from Nahal Hever. A deed of sale XHev/Se 9 (written in Yakim) and a canceled marriage contract XHev/Se gr 69 (written in Aristoboulias)—both included in volume 2 of the Seiyal collection—are likely to have come from a cave in the upper part of Nahal Hever (some 12 kilometers west of the Cave of Horror and the Cave of the Letters), excavated in December 1991. Both locations, Yakim (present-day Khirbet Yuqin or Khirbet Bani Dar) and Aristoboulias (present-day Khirbet Istabûl), are close to the cave (Khirbet Istabûl lies only 3 kilometers west of the cave).

As regards Group III generally it can be assumed that whatever belongs to the original Seiyal collection may have come from Nahal Hever, as do the single documents

from the collection that belong to Group II. This consideration lies behind the decision to designate all of them XHev/Se. The X indicates that the cave number is unknown, the *Hev* expresses their likely provenance (Hever), whereas the *Se* (Seiyal) is there to remind us of the alleged provenance of the documents as well as to preserve the connection with the collection as a whole.

HANNAH M. COTTON

HIGH PRIESTS. With the end of the Davidic dynasty in the Persian period, the office of high priest increased in importance and absorbed many royal prerogatives, becoming effectively the political representative of the Jewish people. The terminology reflects this development. The most common biblical designation for the head priest was simply *ha-kohen*. Occasionally he was called (*ha-*)*kohen ha-ro'sh* (2 Kgs. 25.18; Jer. 52.24; Ezr. 7.5; 2 Chr. 19.11, 24.11, 26.20, 31.10) or *ha-kohen ha-gadol*

(*Lv.* 21.10; *Num.* 35.25, 35.28; *Jos.* 20.6; 2 *Kgs.* 22.4, 22.8, 23.4; *Hg.* 1.1, 1.12, 1.14, 2.2, 2.4; *Zec.* 3.1, 3.8, 6.11; *Neh.* 3.1, 3.20, 13.28; 2 *Chr.* 34.9; *Sir.* 50.1), but mostly in post-exilic texts. Apparently, the titular use of *ha-kohen ha-gadol* became established by the adoption of the pagan title *archiereus* (Gr.)—used for the head of the state religion—as the title for the Jewish high priest, beginning with the Hasmonean Jonathan (*I Mc.* 10.20). Thus *ha-kohen ha-gadol* (occasionally *kohen gadol* or *ha-kohen*) is the usual title for the high priest on Hasmonean coins and in the Mishnah, and *archiereus* is the common designation for the high priest in the books of the Maccabees, Josephus, and the New Testament.

Among the Dead Sea Scrolls, *ha-kohen ha-gadol* occurs only in the Copper Scroll (3Q15 vi.14–vii.1, high priest's burial chamber) and in Temple Scroll^a (cultic activities on festivals and Yom Kippur: 11Q19 xv.15, xxiii.9, xxv.16, xxvi.3; consultation before engaging in war; lviii.18). [See Copper Scroll; Temple Scroll.] The War Scroll (1QM; 4Q491–496) refers to the high priest who will take leadership in the final battle against the Sons of Darkness as *kohen ha-ro'sh*. [See War of the Sons of Light against the Sons of Darkness.] Assisted by his deputy (*mishneh*; cf. 11Q19 xxxi.4), he stands at the head of the chiefs of the priests (*ra'shei ha-kohanim*), Levites, and lay leaders (1QM ii.1; 4Q494 4), and fulfills various liturgical functions in the time of battle (1QM xv.4, xvi.13; 4Q491 11.ii.11, 18.5, 19.11; cf. 13.1).

Given that the Copper Scroll is unlikely to be of Qumran origin, and that Temple Scroll^a and the War Scroll express ideals rather than history (and may derive from pre-Qumran sources), the sectarian scrolls noticeably avoid applying the titles of high priest or chief priest to any contemporary figure. Rather, the high priest is otherwise simply *ha-kohen*, sometimes with a descriptor. On the one hand, the biblical commentaries (*peshtarim*) polemicize against one or more ruling high priests as “the priest who rebelled” (Peshar Habakkuk, 1QpHab vii.16), “the priest whose shame exceeded his glory” (1QpHab xi.12), and “the last priest” (Peshar Hosea^b, 4Q167 ii.3), but more commonly as “the Wicked Priest” (*ha-kohen ha-rasha'*: 1QpHab viii.8, ix.9, xi.4, xii.2, xii.8; Peshar Isaiah^c, 4Q163 30.3; Peshar Psalms^a, 4Q171 4.8), which may be a derogatory pun on *ha-kohen ha-ro'sh*. [See Peshar Habakkuk; Peshar Hosea and Wicked Priest.] On the other hand, several positive uses of *ha-kohen* may intend to designate a past, rightful ideal, or future high priest: the “anointed priest” *ha-kohen ha-mashiah*, Apocryphon of Moses B^a, 4Q375 1.i.9 and Apocryphon of Moses B^b, 4Q376 1.i.1), the Teacher of Righteousness (*ha-kohen moreh ha-[tsedeq]*, Peshar Psalms^a, 4Q171 1, 3–4.iii.15; cf. ii.19; 1QpHab ii.2, ii.8), “[the priest at the end” (Peshar Psalms^b 4Q173 1.5), and the priest who presides over the

messianic banquet (Rule of the Congregation, 1Q28a ii.12. [See Peshar Psalms; Rule of the Congregation; and Teacher of Righteousness.] Although the relevant heading is lost, it is probable that Rule of the Blessings includes a benediction blessing the high priest in the last days (1Q28b iv.22–28), and that the New Jerusalem text pictures an ideal high priest who outranks elders and other priests (New Jerusalem, 2Q24 iv.13). [See New Jerusalem.]

According to Joachim Jeremias (1969), the plural, *archiereis*, in the New Testament and Josephus probably designates the upper hierarchy of priests who held permanent offices at the Temple, including the high priest. In support of this, chief priests in the War Rule (*ra'shei ha-kohanim*, 1QM ii.1) are the leading priests who continually serve before God and oversee other priestly, Levitical, and lay leaders (cf. *kohanei ra'shei-deviro*, etc., in the Songs of the Sabbath Sacrifice (4Q400–4Q407, 11Q17; Mas1k). [See Songs of the Sabbath Sacrifice.]

Josephus (*Jewish Antiquities* 11–20; summary in 20.224–251) is the main source about high priests from Alexander the Great until the destruction of the Temple. [See Josephus Flavius.] From the time of Herod the Great on (Books 15–20), his information can be regarded as substantially accurate, probably derived ultimately from Temple archives. Other sources include the books of *Maccabees* (Onias III to John Hyrcanus), the Gospels and *Acts of the Apostles* (Ananus, Caiaphas, Ananias), and the Mishnah and Tosefta. *Ben Sira* 50 (Simon the son of Onias-Simon the Just), *Daniel* 9.25–6 and 11.22 (Onias III), and the Qumran *peshtarim* (Hasmoneans) also allude to high priests. [See Peshtarim.]

Under the Seleucids, Zadokite high priests functioned as princes of a self-governing ethnos and representatives of the king at the head of a priestly aristocracy. By virtue of the mythology of an unbroken dynasty extending back to Aaron, they wielded tremendous spiritual (e.g., *Sir.* 50) and political influence.

After the last two legitimate successions, Simon II (the Just, c.200 BCE) and Onias III (through 175 BCE), the Zadokite dynasty fell victim to personal ambition and party politics when Jason (175–172 BCE) bribed the Seleucid king, Antiochus IV Epiphanes, to depose his brother Onias III and appoint him. [See Antiochus IV Epiphanes.] Three years later he, in turn, was outbid by Menelaus (172–162 BCE), a non-Zadokite priest who arranged the murder of Onias III. The Zadokite Onias IV fled to Egypt and initiated a rival temple there. Menelaus's successor, Alcimus (162–159 BCE), being at least an Aaronide, won the support of the Hasideans until he betrayed their trust and executed a group. All three of these high priests actively promoted the Hellenization of Jews, bringing the high priesthood into disrepute in the eyes of pious Jews.

Josephus knew of no high priest during the seven years following Alcimus (*Antiquities* 20.237), but some (e.g., Hartmut Stegemann, Jerome Murphy-O'Connor) have speculated that the Teacher of Righteousness may have been serving as a Zadokite high priest during part of this time (on the question, see Wise, 1990, pp. 587–613). Following his military successes, Jonathan (Hasmonean, 152–143/42 BCE) accepted appointment as high priest from Alexander Balas, pretender to the Seleucid throne. [See Jonathan (Hasmonean).] It is most commonly held that the epithet Wicked Priest in the Qumran *pesharim* refers to Jonathan, and that it was for accepting the title of high priest without being of Zadokite lineage that he lost favor with the *yahud* (“called by the name of truth when he first appeared,” 1QpHab viii.8b–9a). [See Wicked Priest.] Numerous other interpretations have been offered for Wicked Priest, almost always regarded as an acting high priest (or succession of high priests). The pre-Christian dating of the *pesharim* discounts identifications in the Christian era, such as Robert Eissenman’s theory (1996) that the Teacher of Righteousness was James the Just, promoted as high priest by his supporters and executed by Ananus (high priest in 62 CE), the “Wicked Priest” (collected studies in *The Dead Sea Scrolls and the First Christians*. Essays and Translations, Shaftesbury, Dorset, 1996). Of more value is his questioning the importance of genealogical lineage in determining Zadokite succession. There is no hint that the lineage of the Wicked Priest was a point of contention with the *yahud*.

Following Jonathan’s death, his brother Simon (142/41–134 BCE) was confirmed as high priest by the Seleucid king Demetrius II, and the Jewish people additionally bestowed on him the title ethnarch. Under the Hasmonean dynasty the office of high priest attained its zenith of power. Simon’s son John Hyrcanus (134–104 BCE) added the title king and was followed by his son Aristobulus I (104–103 BCE). [See John Hyrcanus; Hasmoneans.] With Alexander Jannaeus (103–76 BCE), the prestige of the high priesthood declined, as he was blamed for military failures and clashed violently with his Jewish opponents. [See Alexander Jannaeus.] Peshar Nahum (4Q169) alludes to the horror of his crucifixion of many Pharisees. [See Crucifixion; Peshar Nahum.] Warfare between Alexander’s sons—Hyrcanus II (76–67, 63–40 BCE) and Aristobulus II (67–63 BCE)—further degraded the high priestly office, which once again involved the intervention of foreign rulers. Regularly, the Dead Sea Scrolls accuse the Hasmonean high priests (e.g., “the last priests of Jerusalem,” 1QpHab ix.4–5) of arrogance, defilement, and unjust accumulation of wealth.

Herod terminated the Hasmonean dynasty by executing Antigonus II (40–37 BCE) as well as Aristobulus III, whom he himself had appointed high priest (35 BCE) for

political reasons. [See Herodian Rulers.] Instead, Herod created a new oligarchy, loyal to himself, by appointing high priests from a few select nonlocal families (especially Boethus, Phjabi, Ananus, and Camithus), mostly drawn from the Diaspora. From this time on, the power of the high priestly office was seriously curtailed as the Herodian rulers and the Romans deposed and appointed at will. Herodian appointments included: Ananel (37–36, 34 BCE); Jesus (c.22 BCE), Simon (c.22–5 BCE), Matthias (5–4 BCE), Joseph (5 BCE), Joazar (4, 6 BCE), Eleazar (4–? BCE), and Jesus (6 CE). Roman appointments included Ananus (6–15 CE), Ishmael I (15–16 CE), Eleazar (16–17 CE), Simon (17–18 CE), Joseph Caiaphas (c.18–37 CE), Jonathan ben Ananus (37 CE), and Theophilus (37 CE–?). Later Herodian appointments included Simon Cantheras (41 CE–?), Matthias (?), Elionaeus (c.44 CE), Joseph (?), Ananias (47–55? CE), Ishmael II (?–61 CE), Joseph Cabi (61–62? CE), Ananus (62 CE), Jesus (c.62–65 CE), Joshua (c.63–65 CE), and Matthias (65–67 CE).

During the revolt, the Zealots appointed by lot an uneducated stonemason named Phineas (67–70 CE) to the high priesthood.

DANIEL K. FALK

HIPPOLYTUS (c.170–235 CE), Roman presbyter and rival bishop to Callistus (217–22 CE), Urban (222–30 CE), and Pontianus (230–35 CE). Under the persecution of the Roman emperor Maximinus, he was exiled to Sardinia in 235 CE along with Pontianus, with whom he became reconciled before their martyrdom.

Hippolytus was one of the most prolific writers of the early Western Church, and the last Christian author from Rome to write in Greek. Whether because of his deviant Christology (his view of the Logos as generated at the Incarnation), his tendency toward schism with other church leaders, or the decline of a knowledge of Greek, few works of Hippolytus have survived in Greek. Among his writings are biblical commentaries, homilies, chronological treatments, religious poetry, and antiheretical treatises. His most famous work is the *Refutation of All Heresies* (written c.225 CE), also called the *Philosophumena*. This ten-book treatise was originally considered Origen's, but is now almost universally regarded as the work of Hippolytus. Books 1–4 deal with the different pagan systems (books 2 and 3 are lost), while books 5–10 link each of thirty-three heresies to these pagan systems.

In book 9 of *Refutation of All Heresies*, Hippolytus discusses the Essenes as one of three heretical Jewish sects. He gives much more space to the Essenes than to the Pharisees or Sadducees. His account is so similar to Josephus's description of the Essenes in *The Jewish War* (2.119–161) that some scholars believe that Hippolytus used Josephus as a source. However, in light of the large number of differences between the two accounts, it is more likely that Hippolytus was using a paraphrase of Josephus's work written by a second-century Christian author or that Hippolytus and Josephus both used a common source. If the latter scenario is correct, then Hippolytus's account should not automatically be considered inferior to that of Josephus.

Some of the more significant differences from Josephus's account follow. In discussing the Essene piety toward God, Josephus states that the Essenes direct certain ancestral prayers toward the sun, "as if entreating it to rise" (*The Jewish War* 2.viii.5 sec. 128). Hippolytus, however, omits the intriguing reference to the sun, saying only that they "pray from early dawn" (*Refutation of All Heresies* 9.21). Further, while Josephus says that the Essene took an oath to "hate forever the unjust" (*The Jewish War* 2.viii.7 sec. 139), Hippolytus states that the Essene swore "that he will not hate a person who injures him, or is hostile to him, but pray for them" (*Refutation of All Heresies* 9.23). These sentiments may have been borrowed from Jesus' Sermon on the Mount rather than reflecting genuine Essene beliefs (see *Mt.* 5.44).

Hippolytus also has an extensive paragraph which discusses three divisions of Essenes. One group is characterized by excessive avoidance of idols; another by the practice of killing those who refuse to be circumcised (these are called Zealots or Sicarii); and a third by refusing to call anyone "lord" but God. None of this information is attributed by Josephus to the Essenes, though he does ascribe similar tendencies to other groups. In this paragraph, Hippolytus appears to have incorrectly attributed to the Essenes views held by the Zealots and others.

But the most important difference between Hippolytus and Josephus is in their discussion of the afterlife and the final judgment. For the Essenes, Josephus says, "bodies are corruptible and their matter is not lasting, but their souls are immortal and continue forever": in fact, the souls are imprisoned in the bodies and are "set free" upon death. Good souls go to a refreshing place "beyond the ocean," while evil souls are assigned to "a gloomy and tempestuous recess, filled with incessant punishments" (*The Jewish War* 2.viii.11 sec. 154–155). By contrast, Hippolytus states clearly that the Essenes believe in the resurrection of the body as well as the soul: "The doctrine of the resurrection is firmly established among them. They declare, in fact, that flesh will rise again and be immortal, just as the soul is already immortal." Furthermore, Hippolytus says that the Essenes "affirm that there will be both a judgment and a conflagration of the universe, and that the wicked will be eternally punished" (*Refutation of All Heresies* 9.27).

Once again, it is not clear whether Josephus is simply attempting to express (and even alter) Essene beliefs in terms of Greek thought in order to appeal to his gentile readership, or whether Hippolytus is giving a "Christianized" version of Essene teachings. While it is evident why Josephus would wish to adapt Essene thought to a Greek model, it is not so apparent why Hippolytus, in describing a heretical Jewish sect, would wish to make it more appealing to his Christian audience. It should be noted

that one text from Qumran, the Messianic Apocalypse, may speak of bodily resurrection (4Q521 2.11.12: "For he shall heal the slain, and he shall cause the dead to live"), while another appears to describe a universal conflagration at the end of the world in terms similar to those of Hippolytus (1QH^a xi.29–36 [in.3.29–36]). If these Qumran documents are of Essene origin, they would provide evidence, as Émile Puech has argued, that in these instances the account of Hippolytus more accurately reflects Essene thought.

TODD S. BEALL

HODAYOT. Among the literary genres recognized in the Essene literature from the Qumran library, the genre of hymns holds an important place.

The Scrolls. Among the seven large scrolls discovered by the bedouin in the spring of 1947 in the first cave with manuscripts, one manuscript was identified that contained a collection of hymns (Hodayot^a [1QH^a] hereafter called 1QHodayot^a), which expressed the ideas and feelings of a member or members of the Qumran Community. These poetic compositions of variable length imitate the biblical Psalms in giving thanks to God the Creator and the one who exercises Divine Providence for his deeds of kindness toward their author(s). Since most of the hymns begin with the formula *'odekha 'adonay*, "I give you thanks, Lord," and since no title has been preserved for the composition, the editor gave the manuscript the Hebrew title *hodayot*, rendered in English as *Thanksgiving Psalms/Hymns/Scroll*.

The *editio princeps* of the scroll, published in 1954–1955, presented 1QHodayot^a in eighteen columns and sixty-six fragments as belonging to several manuscripts. Eleazar Sukenik, the editor, judged that the fragments discovered by the archeologists during the excavation of the cave in 1949 belonged to one of them (1QHodayot^b [1Q35]). The editor of 1QHodayot^b concurred in this opinion (Milik, 1955). In 1958, Jean Carmignac proposed differentiating two scrolls in Cave 1: 1QHodayot^a and Hodayot^b. The first would include columns xiii to xvi of the edition plus fragments 15, 18, 22 and 1QHodayot^b, while the second would include all the rest (Carmignac, *Biblica* 1958, *Revue de Qumrân* 2 [1958] and 4 [1960]). However, a closer study led to the conclusion that two scrolls were divided as follows: 1QHodayot^a includes all the columns and all the fragments of the *editio princeps* plus some thirty other as yet untitled fragments; 1QHodayot^b constitutes a second scroll (1QH^b), which overlaps with 1QHodayot^a (column vii and viii of the *editio princeps*) (see Puech, 1987, 1988, and 1995). In an unpublished work/study, Stegemann arrived at a similar result, although he integrated somewhat fewer fragments (see Kuhn, 1964, 16f.).

The reconstruction of the scroll by positioning all of the columns and most of the preserved fragments (about one hundred in number) makes it possible to recover its original appearance. The scroll originally included at least seven leather sheets of four columns each, all of essentially equal size. The impeccable material crafting of the scroll, which to our knowledge is unique among the manuscripts that have been found, would in itself show the great esteem and importance the scribe-copyist accorded to this text, on a level with the great biblical manuscripts. There are forty-one lines for columns i and xviii, according to the new numbering, and forty-two lines starting from column xix (= xii of the edition), which is where there is a change in handwriting; the second copyist took over from that point to the end of the scroll. Reconstructing the scroll was greatly facilitated by the change in handwriting at column xix (= xii), by the direct joining points of numerous fragments and the sheets to be juxtaposed, and by the shapes of the breaks that were repeated at regular spaces in the rolled scroll, all proving that the fragments came from one and the same scroll. Thus column xviii of the edition should be considered an erroneous column, and its fragments—which certainly do not fit together—should be separated from it. The same holds true for "fragment 15" with its misleading points of juncture (Puech, *Revue de Qumrân* 13 [1988]). At the present state of research, some twenty small published fragments, as well as the unclassified manuscripts, still remain to be repositioned. As for 1QHodayot^b, it has a minimum of twenty-eight lines per column, but more

likely thirty-three or thirty-four, or even more, thus approaching the dimensions of 1QHodayot^a (Puech, 1995). Some fragments of other copies have been found in Cave 4, and these have been grouped into six different manuscripts, Hodayot^{a-1} (= 4Q427–432, hereafter 4QHodayot¹); five of them are on leather and one is on papyrus (Hodayot¹ = 4Q432).

Dating. While 1QHodayot^{a-b}, with its beautiful calligraphy, largely dates from the beginning of our era or shortly before, the manuscripts from Cave 4 are certainly older: 4QHodayot^{d-1}, the most recent, would date from the third quarter of the first century BCE (early Herodian), 4QHodayot^a and 4QHodayot^c from the middle of the first century BCE (late Hasmonean–early Herodian), and 4QHodayot^b, the most ancient, from the first quarter of the first century BCE, shortly after 100 BCE (middle Hasmonean).

Although in Aramaic script, all these scrolls are in the Hebrew language, as is the case for the majority of the Essene writings. However, the copyists of Hodayot^a and Hodayot^b sometimes write the divine name *el* and *eli* in Hebrew script, incorrectly called “paleo-Hebrew,” thus imitating a custom of copyists from the Herodian era, at least for the divine names. But the question as to the composition of the Hymns remains open. 1QHodayot^b follows the order of 1QHodayot^a, as does 4QHodayot^b with its seventy-five fragments (= Hodayot^a x.35–xxvi.42), 4QHodayot¹ with its twenty-nine fragments (= Hodayot^a ix.15–xvi.10), and 4QHodayot^c with its ten fragments (= 1QHodayot^a xiii–xiv). In contrast, 4QHodayot^d with its sixteen fragments deviates from that order on at least one point. This manuscript corresponds to some Hymns at the end of 1QHodayot^a xix–xxvi+, but fragment 3.i–ii attests to a different sequence affecting at least three Hymns. (It must be acknowledged, and it is the only case, that the placement of fragment 10 of 1QHodayot^a in column vii is uncertain.) Must we then conclude from this that 4QHodayot^a did not contain the “Hymns of the Teacher,” those attributed by scholars to the Teacher of Righteousness? The question will have to be studied more closely after the publication of these fragments. Manuscripts 4QHodayot^d and 4QHodayot^e, which are represented only by a single fragment containing a few lines, do not bring any information to bear on this question.

From these first indications, one important conclusion ought to be drawn. Indeed, the most ancient manuscript, 4QHodayot^b, the copy of which dates back to about the beginning of the first century BCE, may well attest to the same Hymns and in the same order as does 1QHodayot^a, and this on the basis of significant remainders of seventeen columns = 1QHodayot^a x.35–xxvi.42. A single manuscript, from the middle of the century, 4QHodayot^a, attests to a somewhat different sequence in a single passage on two columns (fragment 3.i–ii) and involving three

Hymns. But it is far from being proven that 4QHodayot^c contained only the “Hymns of the Teacher” on twelve line columns; the same also holds true for 4QHodayot¹. Since it is rather likely that 4QHodayot^b is merely a copy of a scroll of the Hymns, one must logically conclude that the sequence of the Hymns in 1QHodayot^a was known at least by about 100 BCE. The presence of this type of Hymn at the end of the Rule of the Community (1QS ix.26–xi.22), itself a nonautograph scroll and dated to about 100 BCE or the beginning of the first century BCE, confirms this conclusion and calls for dating the composition of this type of Hymn to the second half of the second century BCE. Thus, from a chronological standpoint, it appears plausible to attribute at least a part of the Hymns to the Teacher of Righteousness or to his disciples and contemporaries. This becomes even highly likely if not certain, if one wishes to account for the quality of inspiration and the exalted conceptions expressed by their author concerning the relationship of humans with their creator, features rarely encountered in other compositions.

Author. The authorial unity of the Hymns, at first held to be likely, is now questioned and the trend of current research is to distinguish two types of Hymns: the “Hymns of the Teacher,” or Thanksgiving Hymns on occasion of a revelation or of a personal release, and the “Hymns of the Community,” soteriological confession Hymns (*soteriologisches Bekenntnis*) by different authors where the “I” has no autobiographical coloring but refers to the members of the Community (Morawe, Jeremias, Kuhn, and so forth). However, a systematic attribution of authorship probably does not do justice to the reality, since the Teacher of Righteousness was no doubt capable of expressing himself according to various literary approaches and could vary his vocabulary wherever necessary. His strong personality was certainly not limited to a single type of hymn composition, and could vary between expressing himself in his own name and using his own spiritual experience as a pattern, or composing in a more impersonal manner for his group and for community praise of God. This would better explain an unmistakable unity of style and vocabulary that is rather striking in these Hymns, and better accounts for the repeated expressions such as *mizmor la-maskil* or *la-maskil hodot u-tefillah*, *la-maskil mizmor*, and *la-maskil mizmor*, showing that those hymns were intended for the prayer and meditation of the disciples and those committed to the Covenant. The presence of these expressions similar to “rubrics” found in columns v.12–15, vii.21, xx.7–14, and xxv.34 lead us to suppose there was another such expression at the beginning of the scroll (compare 1QRule of the Community ix.26 ff. to 1QHodayot^a v.12 ff. and xx.7 ff. in particular). These five “rubrics” suggest grouping the Hymns of 1QHodayot^a into five sets, which cannot

help but be reminiscent of the ordering of the scroll of the 150 biblical Psalms into five small books. It is thus possible, and even likely, that the Hodayot Scroll, or at least most of the Hymns, rather early on (about 100 BCE at the latest) had a liturgical purpose, just like the "hebdomadary" (i.e., seven fold structure) of the Words of the Luminaries^{4c} (4Q504–4Q506) with a prayer for each day of the week or the Songs of the Sabbath Sacrifice with its thirteen compositions. The liturgical life of the Community, having been cut off from the Temple, must have become organized already in the second half of the second century BCE, at the time when the original core group grew very quickly, thanks to the arrival of newcomers (see the transition from stratum Ia to stratum Ib in the archaeological levels according to Roland de Vaux, based on his excavations). Thus nothing proves that totally independent sources, which would have been gathered and combined in different ways in manuscript families like 1QHodayot^a and 4QHodayot^a, are involved. Since the composition of these Hymns must have taken a certain amount of time, it would be normal for some groups or sections to be enriched or revised. Thus 4QHodayot^a, with a somewhat different arrangement, might be a copy of an older manuscript.

In the present state of the documentation, it can be reasonably surmised that the Hymns of 1QHodayot^a were composed during the lifetime of the Teacher of Righteousness. This is all that can be said for certain, until the publication of the manuscripts from Cave 4, which will give us a clearer picture, since the preliminary publications of passages from 4QHodayot are not without contradictions in the scholarly distinctions between "Hymns of the Teacher" and "Hymns of the Community." Whatever the case may be, whether they be compositions by the Teacher or compositions by his contemporary disciples, these Hymns certainly date back to the second half of the second century BCE. In this connection, we may recall the observations by Philo about the Therapeutae of Egypt, that they had preserved some hymns composed by the first leaders of their sect, which they sang in their cultic assemblies, with everyone joining in together on the refrains (*On the Contemplative Life* secs. 29, 80, 83–84).

Related Texts. According to the preliminary indications of the editors, these manuscripts should be seen in comparison to manuscripts like the Hodayot-like texts 4Q433 and 4Q440, although at present it appears there is no overlap. Other fragments that should also be included within this literary genre are the fragments of the hymnic compositions such as 1Q36–40, 3Q6, 6Q18, 8Q5, 11Q15–16, the end of 1QRule of the Community ix.26–xi, the Hymns that are scattered throughout the War Scroll (1QM xii–xix) and the parallels in War Scroll^b (4Q492), War Scroll^c (4Q495) and particularly War Scroll^a (4Q491

11), which attests to some overlaps with 4QHodayot^d, the Prayer of Michael, and 1QHodayot^e xxvi. More broadly, they ought to be related to the Songs of the Sage^{a-b} (4Q510–4Q511), the Songs of the Sabbath Sacrifice^{a-h} (4Q400–407, as well as 11Q17), the Words of the Luminaries^{4c} (4Q504–506), the Blessings (*Berakhot*), and the Noncanonical Psalms (4Q380–381, 11Q5^a, 4Q88^f, 4Q448, 4QPsAp^a among the most notable Qumran compositions), as well as to the *Psalms of Solomon*, the *Psalms*, and Song of the Hebrew Scriptures, as well as the *Benedictus* and *Magnificat* (Lk. 1) or some passages from the *Gospel of John* (the Prologue of *Jn.* 1) in the New Testament.

Contents. The style of the author (authors?) of these Hymns, which are steeped in the Bible, abounds with biblical formulas. According to the first decipherment, some 673 (Carmignac, 1960) or 679 (Holm-Nielsen, 1960) quotations or allusions, often mixed with anthological tirades and more personal theological considerations, have been located and identified. The underlying unity of the Hymns is that they are a kind of meditation in which the theological subject is generally dealt with according to three major areas of focus: God, the salvation of the just, and the final doom of the godless—beginning with their leader Belial—in an eschatological war. God's greatness and perfection is described, along with his justice and kindness, and his forgiveness. God's creation of the universe is contrasted with the wretchedness and smallness of a human being, a creature of clay who is dependent on divine help. The Hymns speak of the persecution and suffering to which the faithful person falls victim and of his hope for the victory of God the Father, and for the punishment of the wicked. The author and, in turn, the one who prays, express their feelings of adoration, praise, gratitude, trust, and faithfulness, while at the same time acknowledging their weakness, fear, guilt, repentance, and sometimes their desire for vengeance for the wickedness of their adversaries and the sinners. This meditation sometimes takes the form of thanksgiving, or praise, or lament, or supplication, but always in a composed spirit of devotion and prayer, both day and night. It also serves as a kind of instruction, since God has revealed the secrets of the mysteries and the understanding of his marvelous works to the Teacher of Righteousness, who is charged with conveying this knowledge and enlightenment. In the "Hymns of the Teacher," it is God himself who has placed in his mouth these Hymns of praise for the instruction of the lowly and the poor and who has placed him at the wellspring of a lush planted field or of a luxuriant and blossoming tree; in short, it is God who has established him as the Teacher of the Community. By his life and his teaching, he shows the way of the "healing" that is to come. Unquestionably he remains a sinner, but God has purified him of the great sin and will purify

him by his holy spirit, and will not allow him to be carried away. Together with his faithful ones, he is sheltered in a fortified city over which God keeps watch.

To enter the Community is to enter into God's Covenant with the resolve to fortify oneself and to persevere (compare the Rule of the Community and the Damascus Document). Thus a member belongs to the group of the just or to the small remnant for whom God is already manifesting his power and mercy, while he will fully manifest his power and justice at the Visitation-Judgment, when all the wicked are destroyed, both Jews and pagans alike (compare the War Scroll). For the just, it will be a time of rejoicing, rewards, delights of Paradise, eternal glory, and peace in the world that has been renewed and purified in the universal conflagration, while Belial will be cast into the burning place of eternal Doom. The conception of eschatology is the same, whether it be in the "Hymns of the Teacher" or in the "Hymns of the Community." The allusions to the total eschatological war, the final and decisive judgment in the heights on earth and in the underworld Abyss, as well as reference to punishment in the infernal Sheol, and to reward with the sons of heaven are found in both categories. The elect knows what end awaits the wicked, those who refuse to observe the commandments of God and the instructions of the Teacher. For the just man, the return to dust is not the end; rather glorification is to follow because he will be restored to the glory of Adam with an abundance of days in a life of intimacy with God as a servant in the company of the angels. Indeed, although depicted in language full of imagery, the belief in the resurrection of the just is not totally absent from these texts (1QHodayot^a xiv, xiii, xix). In the present, a life of communion with the angels signifies for the Community a kind of return to the earlier purity of the people of God, a certain communing with the divine world while awaiting the complete restoration with God and freedom from sin at the end of days, a kind of return to the original paradise from which sin and death will have disappeared forever.

The same theological and anthropological conception underlies these Hymns as underlies the great Essene texts, such as the Rule of the Community and the War Scroll, in particular. In both places, there is a certain degree of dualism and determinism, without predestination however, since the faithful must respond actively by a life in conformity with the will of God. Angelology plays a similar role in these texts: Behai and his demons are the inspirers of evil and in the end they will be the victims of punishment. The angels, as servants of God, will take part in the eschatological war but, since they dwell before God, they are already watching over the faithful and preparing the successful outcome of the battle.

The theology of these texts takes no account of the ora-

cles of the biblical prophets that foretell the conversion of the pagans. Rather, they remain centered on the community that is closed in upon itself, thus lacking any universalism. In contrast, the liturgical worship at the Temple, which is very much present in the Hebrew Scriptures, has no place in this literature. This fact shows to what extent the Community had broken away from the Temple, which had been defiled by wicked hands. All collective prayer in these Hymns is outside the Temple and without reference to it.

The points that these Hymns have in common with the Rule of the Community and the War Scroll in particular, and perhaps also the Damascus Document, argue for their having been composed in the same community at about the same time, that is the second half of the second century BCE, the generation of the Teacher of Righteousness. It is not surprising that these foundation documents of the life of the community were carefully copied onto large-format scrolls, just as normative texts such as the Torah, the Prophets, and so forth were. The Scroll of Hymns must have had "authoritative" value for the followers of the Community before they had time to go through a long series of editions. At the present state of research there are hardly any variants except those owing to copying errors, for the most part. The Hymns most certainly occupied a primary place among the Essene compositions by the first generation of the founding of the Community.

Translated from French by Robert E. Shillenn

HOLY CONGREGATION OF JERUSALEM. The *qahala qaddisha* or *'edah qedoshah* in Jerusalem of Talmudic and later sources was an ascetic conventicle that cannot be confidently dated earlier than the second half

of the second century CE. J.T., *Ma'aser Sheni* 2.10, 53d links the group with Yose ben [ha-]Meshullam and Simeon ben Menasyah (c.180 CE). *Qoheleth Rabba* 9.9 explains its name by their practice of dividing the day into three parts, devoting a third to study of the Torah, a third to prayer, and a third to work. Other authorities suggested that they pursued agricultural work in the summer but study in the winter. The collective daily division of time, which restricts work to less than laborers' typical hours, and the description *'edah*, suggest a closely integrated social group with a substantially independent economy, geared to the maintenance of study. The adjective *qedoshah* refers principally to abstinence and ritual purity. The group's interpretation of a principal scriptural injunction regarding marriage suggests a membership of males who were unmarried or had separated themselves from family life for the purpose of study. Some nineteenth-century scholars saw the group as a survival of the Essene sect. The Rule of the Community from Qumran has since indicated a community structure that is to some extent analogous. In particular, 1QRule of the Community (1QS) vi.6–7 attests a similar, but not identical, division of time. Wherever an Essene community numbered at least ten celibate males, a rota ensured that at least one member was studying day and night; the community kept watch for a third of each night of the year, possibly according to a sequential rota. While 1QRule of the Community suggests full sharing of property, however, the practice of the Holy Congregation implies that members held their own land. The extreme sanctity of Jerusalem probably accounts for the group's rigorous purity, as mentioned in four texts of the Babylonian Talmud whereby bedding of forbidden mixed composition is prohibited even if ten coverlets are interposed. In B.T., *Betsah* 14b and *Yoma* 69a, the Holy Congregation is located prior to Rabbi Yehudah the Prince (died 217 CE) in chains of tradition; *Tanul* 27b omits his name. *Betsah* 27a has Simeon ben Menasyah attribute the *halakhah* to Rabbi Meir, but records the slightly opaque objection that "these [the Holy Congregation] are much older than he [apparently Rabbi Meir, but conceivably Simeon himself]." This may imply that the group began with disciples of Rabbi Meir (mid-second century CE), in the Yavneh period, or even earlier. The Holy Congregation itself suggests, along with other evidence, that the prohibition of Jews entering Jerusalem following the Bar Kokhba Revolt was relaxed under the Severan emperors. That a scholarly community observing rigorous standards of purity later clung tenaciously to the holy city suggests that it must have had precursors in an earlier time, including the probable opportunistic removal of the Qumran community to Jerusalem during its absence from the Dead Sea site in the reign of the Essene-friendly Herod the Great,

before and after which related, Qumran-influenced conventicles may have existed in the city.

BRIAN J. CAPPER

HOROSCOPES. Horoscopy (or genethliology) is understood as the prediction of an individual's future based on the positions of the planets, the sun, and the moon in the zodiac at the instant of his or her conception or birth. The Greek term, *horoskopos*, refers to a star or the point of the zodiacal circle rising just above the eastern horizon at the moment of birth or ruling over the current hour.

Among the Dead Sea Scrolls, only one text could belong to the astrological genre of horoscopic literature: 4Q186. Although even this text lacks some typical features of horoscopes (see below), for convenience's sake it is called here *horoscope*. The astrological character of two other texts, Elect of God (4Q534) and Physiognomy/Horoscope (4Q561), is still under discussion. [See *Elect of God*.] Another document, Zodiology and Brontology (4Q318), undoubtedly astrological, is by definition not a horoscope but describes the course of the moon through the twelve signs of the zodiac during the twelve months of the year and predicts future mundane events based on the phenomena of thunder in a particular zodiacal sign.

Unlike astrology, brontology-based oracles concern events of national interest (wars, weather, crops, etc.) rather than the fate of individuals. While Zodiology and Brontology need not be discussed here, the text clearly attests an interest in astrology as well as knowledge of the zodiac at Qumran. One common feature of horoscope (4Q186), Elect of God, and Physiognomy/Horoscope is the detailed description of physiognomic characteristics of particular persons. But only horoscope (4Q186) exhibits a clear astrological background because of the relation between physiognomic traits and the zodiacal sign at the moment of the birth (*ha-molad*) of various individuals.

Horoscope (4Q186). In 1964 Allegro first drew attention to the existence of a cryptographic astrological document from Qumran, which he published in 1968. In 1965 Carmignac presented a preliminary analysis of horoscope (4Q186). Since that time this text has been the object of

numerous studies. According to Milik and Starcky, the text was copied in the second half of the first century BCE. It consists of the remains of six columns with portions of four different horoscopes. The surviving text, however, is so fragmentary that many questions remain unanswered. In addition it is cryptographic in a double sense: the script is a mixture of Proto-Hebrew, Greek, and cryptic characters, and characters and word order proceed from left to right (the single exception being 1.ii.2). In terms of content, the following elements are discernible in horoscope (4Q186): the physiognomic description of an individual; the reference to a certain *'amud* ("position") combined with a number ("e.g., he is in the second position"); the reference to a ratio of portions in the "house of light" and the "house/pit of darkness" concerning the *ruah* ("spirit/room"?); the sign of the zodiac for the moment of birth; and a prediction of the individual's fate (e.g., "he will be poor").

Unlike other ancient horoscopes, this text gives no information about the position of the sun, moon, or planets in relation to the zodiac or to the horizon. A person is said to have been born "in the foot of the bull" (*be-regel ha-shor*), a key phrase commonly interpreted as a reference to the position of the sun within the zodiacal sign of Taurus. In this case horoscope (4Q186) would not be a horoscope needing sophisticated astronomical calculations but would belong to the astrological genre of zodiologies, which required knowledge only of the position of the sun, something easily gleaned from a solar calendar. Physiognomic characterization is a typical feature of this sort of astrological text. The phrase "in the second position" also may refer to the zodiacal sign of Taurus, because this sign is second behind Aries, which in antiquity was regarded as the first sign of the zodiac. The formulation "in the foot of Taurus," however, points to a more specific meaning of the phrase. Does it stand for a particular part of the constellation, in which the position of a certain celestial body is to be observed? Since the position of the sun within a zodiacal sign cannot be observed by day, it has been suggested that the phrase refers to the position of the moon in Taurus. The first part of Zodiology and Brontology (4Q318) would seem to support this assumption because it attests interest in the observation and schematic computation of lunar movements through the zodiac. The observation of the moon in the "feet of Taurus" also is attested in astrological texts from antiquity, for example in the work of Firmicus Maternus (*Mathesis* VI 31, 88). But what is the meaning of the ratio of portions (always a total of nine) in the "house of light" and the "house/pit of darkness"? Is there an astrological explanation for this enigmatic phrase? In the Hellenistic astrological compendium, *Book of Hermes Trismegistos*,

we find the ideas that each zodiacal sign is divided into light and dark parts and that the position of sun, moon, and planets in the dark and light parts at birth determines the fate of an individual born at that moment. Even if horoscope (4Q186) is interpreted against this background, however, some problems remain: The scroll does not mention celestial bodies, and there is no explanation for the light–darkness ratio of six to three in connection with the “foot of Taurus.”

Most of the problems are solved if we interpret horoscope (4Q186) in light of a Greek zodiacal text attributed to the Hellenistic astrologer Teukros (about 100 BCE) and delivered by the Byzantine collector of astrological literature Rhetorios (Catalogus Codicum Astrologorum Graecorum 7 p. 197 24ff.) nine parts (1.1°–3°, head; 2.4°–7°, horns; 3.8°–10°, neck; 4.11°–13°, breast; 5.14°–18°, hip; 6.19°–21°, loins; 7.22°–24° feet (!); 8.25°–27°, tail; 9.28°–30°, claws). The nine parts of the body of Taurus rise over the eastern horizon one after the other in the order of one to nine. Thus, the “foot of Taurus” in horoscope (4Q186) could designate the ascendant, the rising point of the ecliptic at the moment of birth, which was of importance in casting a horoscope. The ascendant interpretation does not need the additional hypothesis of solar, lunar, or planetary positions in horoscope (4Q186). The ninefold partition of the zodiacal sign of Taurus also explains the light–darkness ratio of 6:3 in 7–8 4Q186 1.ii.7–8 because the “feet” of Taurus appear in position seven: Six parts of Taurus have already risen (above the horizon = “in the house of light”) and three parts are still beneath the horizon (“in the house/pit of darkness”). The horizon is the boundary between light and darkness (cf. Job 26.10). The famous Greek astronomer Hipparchus (190–125 BCE), for example, discusses in his commentary on the *phainomena* of Aratus and Eudoxus the statements there about the risings and settings of the constellations. In one place (Lib. II Cap. II. secs. 15–17) he explains that the space above the earth is called the diurnal one whereas that below the horizon is called the nocturnal one and that a constellation sets at the western horizon after becoming saturated with light.

This interpretation can be combined with a proposal by Gordis to translate the word *ruah* in horoscope (4Q186) 1.ii.1 and 1.iii.5; 2.i.6 as “space” instead of the usual “spirit,” using the vocalization of *Genesis* 32.17 (*re-vaḥ*). Thus the translation: “He has space in the house of light of six (parts) three (parts) in the house/pit of darkness.” That way the ascendant divides the rising zodiacal sign at the moment of birth into parts of light and darkness that determine the physiognomic features and the fate of the person concerned. Presumably there was the assumption of an analogy between the nine parts of the

body of the rising zodiacal sign and the human body (nine parts?) born at this moment. However, to speculate further about the way the relationship was seen would be guesswork.

Elect of God and Physiognomy/Horoscope. The astrological character of these two texts is highly questionable. The Elect of God text (4Q534) which was first published by Jean Starcky in 1964 presents some fragmentary statements about the outward appearance and the future development of a newborn child which is designated as the Elect of God. Starcky called this text *astrologique*, and most researchers followed him in this respect. However, there is no reference to zodiacal signs, planetary positions, etc., which might suggest its horoscopic nature, as Fitzmyer correctly noticed. Of course an astrological background of the Elect of God is imaginable, but it cannot be demonstrated with any degree of certainty.

The Aramaic text Physiognomy/Horoscope (4Q561) contains physiognomic descriptions comparable to those in horoscope (4Q186), but we find in this highly fragmentary text no astrological or horoscopic elements, either. Some scholars regard it as a copy in Aramaic of horoscope (4Q186) (e.g., Florentino García Martínez, *The Dead Sea Scrolls Translated*, Leiden, 1994, p. 508), but this assumption is hypothetical.

Significance of Horoscopes in Qumran. Most scholars explain the significance of horoscope (4Q186) against the background of the teaching of the two spirits in the Rule of the Community from Cave 1 ([hereafter, 1QRule of the Community] 1QS iii.13–iv.26). The connecting link is the statement “His spirit has six [parts] in the house of light and three in the pit of darkness” (*ruah lo be-veit ha-'or shesh ve-shalosh be-veit / be-vor ha-hoshekh*) (4Q186 1.ii.7–8). It is common opinion that in horoscope (4Q186) and 1QS iv.15ff. people are seen as composed of different portions of the spirit of light and the spirit of darkness, nine altogether. On the other hand, the different ratio of the two spirits in an individual effects different physiognomic features. All this is then related to the zodiacal sign or, more exactly, to the part of the zodiacal sign in which a person was born. The physical appearance of individuals, the composition of their spirit of light and darkness, and their fate are finally determined by the zodiacal constellation at the moment of birth. Thus, astrological wisdom enables the diviner to identify the people who were made up more of darkness than of light and to know the secrets of divine predestination. Astrological knowledge, this interpretation suggests, was an integral part of the religious ideas of the Jewish group (Essenes, Proto-Essenes?) who composed writings like those which contain the teaching of the two spirits. The cryptographic script

in horoscope (4Q186) would have served as a means to emphasize the importance of astrology at Qumran by the esoteric form of writing.

However, if one assumes a relationship between the teaching of the two spirits and horoscope (4Q186), the question arises why topics like justice and sin, and living in truth and knowledge, emphasized in 1QRule of the Community (1QS iv.2ff.), do not play any role in horoscope (4Q186) where only external traits like physiognomic characteristics are mentioned. According to 1QRule of the Community (1QS iv.15ff.) the spiritual quality of human beings is recognized by their deeds (*ma-seihem*), not by their physiognomy. Moreover, the objection has been raised that influential works such as *Jubilees* and *I Enoch* condemn astrology as the sinful wisdom of the Chaldeans, which was taught to humankind by the fallen Heavenly Watchers (*I En.* 8.3; *Jub.* 8.3; cf. *Jub.* 11.8, 12.6–21; 1Q23, lines 9,14,15; *Is.* 47.13; *Jer.* 8.2). It is therefore advisable to look for an alternative interpretation.

The ascendant theory suggested above renders unnecessary the need to construct a connection to 1QRule of the Community (1QS iii–iv). If this theory is correct, horoscope (4Q186) might be regarded as a common astrological text, comparable to Hellenistic parallels and without deeper theological significance. The use of a cryptic script could be interpreted as a means of literary style for marking the esoteric character of the contents, but it could also be understood as a quasi-prohibition sign for unauthorized readers within the community. Indeed, it is quite easy to decode the text, but the cryptic and reversed manner of writing could have been an unmistakable signal for unauthorized readers that they had in their hands a forbidden text of pagan provenance (wisdom of the Chaldeans).

It should be emphasized that the ascendant theory does not automatically exclude a connection with the teaching about the two spirits (1QS iii–iv). For example, the partition of the rising zodiacal sign by the ascendant in dark and light parts may be interpreted as determining the ratio of light and darkness within the spirit of the individual who is born according to 1QRule of the Community (1QS iv.15–26). The sparse information conveyed by horoscope (4Q186) does not permit a final decision about the relative merits of the various interpretations. What is certain is that, in whatever way, horoscopy was an object of interest in the Qumran community.

INKWELLS. At Qumran at least four inkwells were discovered: three by Roland de Vaux and one by Solomon Steckoll. De Vaux unearthed two in locus 30, the room below the scriptorium, and the third in locus 31, which is adjacent to and east of locus 30. The fourth was found by Steckoll in an unspecified location. One of de Vaux's inkwells is made of bronze, whereas the other two as well as Steckoll's are ceramic.

After the Qumran pottery inkwells were found, other examples of the same type—now called Qumran pottery inkwells—were also discovered in other sites in early Roman Palestine. Produced on a wheel, the type has the form of a cylindrical “pillbox” with a flat base and top attached at a sharp angle—both top and base are uncharacteristic of ceramics but natural to bronze inkwells, which the Qumran-type vessels try to imitate. The ware is usually reddish or pinkish, but certain inkwells are gray, another feature derived from the metal utensils.

The concave top and a “sleeve” below the opening are designed to prevent spilling and are common features in inkwells from antiquity to our own times. A feature peculiar to the Qumran type is the ring handle, which is preserved only on rare occasions. The Steckoll inkwell is 5.5 centimeters (2.2 inches) tall and 3.9 centimeters (1.5 inches) in diameter, and the dimensions of those found by de Vaux are similar. This type has been found so far only in Palestinian Jewish sites of the first century CE.

The Qumran bronze vessel is made from a rectangular sheet turned into a cylinder with the two ends soldered together. The existence of a lid, now missing, is attested by a hinge still riveted near the filling hole. Similar to the pottery receptacles, it stands 5.2 centimeters (2 inches) high with a diameter of 3 centimeters (1.2 inches) and is of a type quite common to Roman inkwells from the first and second centuries CE.

Various collections (in Florida, Oslo, Munich, and elsewhere) include inkwells, both ceramic and metal, bought from a Jerusalem dealer and allegedly found at Qumran. There is good reason to doubt the claims for a Qumranic origin of these inkpots—an alleged Qumranic pedigree must have made them more attractive on the antiquities market. Even so, the four inkwells found at Qumran are of great significance and attest to at least serious, if not intensive, scribal activity.

MAGEN BROSHI

INSCRIPTIONS. Ancient Hebrew and Aramaic inscriptions of Palestine from the ninth–eighth century BCE onward are limited to nonliterary documents, mainly ostraca of the following types: alphabets, school exercises, letters, and economic documents, which tell of the political, juridical, economic, and social conditions of their time.

Regarding the discoveries in the Judean desert, nonliterary documents consist mainly of papyri, some leather fragments, and a few inscriptions on jars and potsherds. Of the latter, ostraca were discovered in Wadi Murabbaʿat (Mur 72–87), Wadi Khabra (Nahal Hever) (8Hev 5–8), Masada (Mas 1–701, 750–794), the area of southern Judea (fourteen ostraca with lists of goods, dating to the first century CE), and in the ruins of Khirbet Qumran and the caves nearby.

These inscriptions are written in black ink or charcoal or in incised letters on jars and potsherds. In instances where they show more than few letters (writing exercises, alphabets), they contain lists of personal names together with numeral signs and abbreviations, accounts, invoices, letters (Mas 554–552), reports (Mur 72), and a tomb inscription (8Hev 5). [See Deeds of Sale; Names and Naming.]

The script of the Hebrew and Aramaic ostraca is mainly cursive (derived from the Jewish square script) or a more or less fine bookhand. [See Paleography.] The languages of these inscriptions are Hebrew (Khirbet Qum-

ran; the Qumran caves; 8Hev; Mas [Beyer, 1994, pp. 209–212]), Aramaic Mas; (Beyer, 1994, pp. 209–213), Greek (Khirbet Qumran; Mas 772–794), and Latin (Mas 750–771).

In the ruins of Khirbet Qumran, inscriptions on jars with personal names (Hebrew, Latin, and Greek) were discovered as well as more than twenty ostraca with personal names and alphabets.

The caves near Khirbet Qumran preserved the following inscriptions: Cave 3, one jar inscription with the impression "T"; Cave 4, one jar inscription with the wish/greeting "Peace/Greeting. May he enlighten your face"; Cave 6, two inscriptions on jars about a quantity; Cave 7, one inscription on a jar with the personal name "RM"; Cave 10, one ostrakon with traces of a personal name.

These few inscriptions on jars and potsherds from Khirbet Qumran and from the caves nearby give very little information about the everyday life of the Qumran Hasidean-Essene community; however, this statement now may need revision. One of the volunteers of a small expedition to Khirbet Qumran led by J. F. Strange in the winter of 1996 found two inscribed sherds at the base of the eastern face of the outer wall. Both ostraca contain Hebrew inscriptions. The script is very similar to that of the Copper scroll (3Q15) and seems to belong to the middle or end of the first century CE. The reading of the second ostrakon yields only some personal names (. . . . P BN NTN . . . and perhaps [B]NYW M'YN [GDY ?]). Ostrakon number one is broken in two parts and contains fifteen more or less preserved lines. It represents a deed of gift from 67/68 CE ("in year two of [the freedom of . . .], written at Jericho, the place of execution of the contract). The donor's name is Honi b. . . ., the name of the recipient is Eleazar b. Nahamani. The donation consists of the slave Hisday from Holon and other property; through it the donor fulfills his obligation to the Qumran community (*vahd*). If this interpretation is correct, this ostrakon is one of the most convincing links between the community at Khirbet Qumran during the First Jewish Revolt and the Rule of the Community, providing for the first time the name of a *mevaqer* of the community (see CD xi.13). It should be noted, however, that some scholars question the reading of the word *yahad* and see this inscription as irrelevant to the Qumran community.

G. WILHELM NEBE

INTERPRETATION OF SCRIPTURES. The picture of biblical interpretation at Qumran is but a piece of the larger mosaic of Jewish biblical interpretation in antiquity. Although it may not have comprised a major component of that body of exegesis during the Second Temple period, Qumran biblical interpretation now constitutes a principal element in our delineation of the overall system of early biblical interpretation. The significance of the Dead Sea Scrolls in this area is based not merely upon the number of manuscripts discovered, but also on the diversity in its corpus and the way in which the collection seems to mirror Second Temple Jewish literature as a whole. It can thus serve as a virtual representative of a much broader body of material.

Nearly all of the writings of the Qumran community, whether formally linked with scripture or not, are pervaded with scriptural interpretation. Fragments of all books of the Hebrew scriptures, with the exception of *Esther*, have been found at Qumran. Clearly then, the raw material for scriptural interpretation was available. Regardless of whether there was a biblical "canon" at Qumran and what its contents might have been, it is generally conceded that, however it was defined by the Qumranites, and whatever books it contained, the books of what is now known as the Hebrew scriptures frequently functioned as both the source and the framework for what the Qumran writers wanted to say and the way in which they said it. The genres employed for interpretation are so diverse, and the various parts of scripture are employed in such diverse fashions, that they force us to focus on the important fact that any picture that is drawn of Qumran scriptural interpretation must be a highly variegated one. Diversity of texts commented upon, methods of interpretation, genres of commentary, functions of commentary, and modes of presentation make variety itself a characteristic feature.

It should also be stressed that the very notion "Qumran interpretation of scripture" is a virtual misnomer, for there is no reason to assume that the Qumran documents, deposited in the caves over a lengthy period of time, whether brought to the caves or written in the Qumran community, derive from a group or groups that had a unified sense of the way in which scripture was to be read or a single conception of the message that it was to convey. Our classification of the texts, their character-

istics, and their methods of interpretation should not be taken as intended to produce an integrated portrait of what is actually at best a mosaic. We can view the biblical interpretation of the Qumran scrolls as presenting a representative variety of the kinds of biblical interpretation that were presumably being carried out in Second Temple Judaism as a whole, with an admixture of uniquely Qumranic material such as, perhaps, the *pesharim*. [See Pesharim.]

The history of scholarship on Qumran biblical interpretation is instructive, since in many ways it serves as a microcosm of Qumran studies as a whole. The order in which the Qumran documents were discovered was responsible to a large degree for the guidelines and categories by which the genres of Qumran literature were described, and biblical interpretation was no exception. Thus the *pesharim*, especially the nearly complete Peshar Habakkuk (1QpHab), were the focal point of much early study, while the other biblical commentary from Cave 1, the Genesis Apocryphon (1QapGen), lagged behind in attracting academic interest because of its poor state of preservation. It has only been with the publication of a broader range of Qumran texts that focus on the Bible, such as the many *pesharim* (4Q161-173), Florilegium (4Q174), and the Temple Scroll (11Q19), that properly nuanced discussion of scriptural interpretation at Qumran could be carried on.

Unsurprisingly, the books of the Pentateuch dominate at Qumran as objects of interpretation. In addition to texts such as the Genesis Commentaries, the Genesis Apocryphon, the Reworked Pentateuch, and the Temple Scroll, we find substantial literature pertaining to Enoch, Noah, and Levi, "Moses-pseudepigrapha," other legal texts related to the Torah, as well as *Jubilees* and works related to *Jubilees* within the Qumran corpus. A very substantial proportion of Qumran pentateuchal interpretation pertains to *Genesis*, and even as far as that biblical book, there seems to be particularly heavy interest in the narrative of *Genesis* from Creation through the Aqedah (the binding of Isaac, Gn. 22.1-19). The other divisions of the Hebrew scriptures in their later form, the Prophets and Writings (cf. Miqtsat Ma'asei ha-Torah [4QMMT C 10]), attracted less written attention. Among the latter prophets, *Isaiah*, *Hosea*, *Micah*, *Habakkuk*, *Zephaniah*, and *Nahum* were the object of *pesharim*, while *Jeremiah* and *Ezekiel* engendered works that have been classified by scholars as "Apocryphon of Jeremiah" and "Pseudo-Ezekiel." It is somewhat striking that there is no generic overlap in the treatment of the two groups of prophetic texts.

The Aramaic Targum of Job (11Q10, hereafter 11QTargum of Job) represents the most extended interpretation on any book of the Writings. Beyond translation, focused and sustained interpretation of the Writings is to be

found primarily in *pesharim* on Psalms from Caves 1 and 4, with only one of the manuscripts, Peshar Psalms' (4Q171), being at all substantial. Three so-called "thematic" *pesharim*, Florilegium (4Q174), Catena' (4Q177), and Melchizedek (11Q13), also contain interpretive material on Psalms, with the latter commenting on *Daniel* as well. Based on the extant fragments, it is difficult to classify the pseudo-Danielic material (4Q243-245) as scriptural interpretation.

The study of biblical interpretation at Qumran (once again, like that of early Jewish interpretation generally) can be approached from a variety of valid perspectives. This survey is organized around the following categories: types of biblical interpretation; forms or genres of biblical interpretation; and methods of biblical interpretation. The first of these categories characterizes briefly the typological varieties of interpretation that are found in those works; the second, in somewhat greater detail and from a formal perspective, the kinds of works wherein we find biblical interpretation at Qumran; and the third, the techniques and methods through which those interpretations are derived from the biblical text.

Types of Interpretation. Classifying the types of biblical interpretation that are found at Qumran is more difficult than surveying its genres or describing its methodologies. One utilitarian perspective arranges types of interpretation along a range, which stretches from a straightforward literal exegesis demanded by a text (along the lines of that which is described as *peshat* in later Jewish literature) to the most extreme eisegesis, wherein the biblical text becomes the pretext for an ideologically or theologically colored "reading" that is superimposed upon it. In between these we find simple sense readings, which conform to, but are not demanded by, the text, and readings that might be the sense of the text, but that are selected by the interpreter largely for ideological reasons. At Qumran we can find types that range across this whole spectrum, and the boundaries between the "types" are usually not clearly delineated.

The Qumran (or other Second Temple) interpreter faced a variety of difficulties: some real; some imagined. Linguistic problems had to be solved; perceived gaps in a narrative had to be filled in; repetitive or contradictory stories and laws had to be integrated or harmonized; stories that contained matter at variance with the moral tastes of later generations needed to be adjusted. At the same time, the interpreter could also delve into the text in order to attain the fullest meaning of God's word for his generation, as he searched scripture for answers to questions, which, from the perspective of the modern reader, scripture does not seem even to ask. The interpreters in the Dead Sea Scrolls were offering only one (or more) of a range of interpretive options that existed in

Second Temple Judaism, and their readings must often be read as in dialogue with, or as polemic against, those of other Jewish groups. G. Vermes has distinguished between these two types as “pure” and “applied” exegesis, respectively, but it is not at all clear whether the ancient interpreter would have made such a distinction. Indeed, although the distinction is at times quite valuable, it is often difficult, even with our hindsight, to draw the line between “pure” and “applied.”

The question is further complicated if we allow for the possibility that not everything we consider as “interpretation” is textually generated, even by the standards of very close reading and gap-filling, which seem to have characterized ancient exegetes. The expansions of biblical narratives (and occasionally biblical legal material) with completely extrabiblical material, which need not be exegetically linked to the Hebrew text, certainly belong to the category of interpretation, but are hard to classify according to type.

If we try to classify some of the interpretive texts from Qumran against this background, we will find that most interpretive texts contain different sorts of exegesis side-by-side. The Genesis Apocryphon works out and smooths out details of the narratives in the Bible about Noah and Abraham in a manner that responds to the “bumps” in the biblical text, but also seems to find place for introduction into its narrative of legal practices that were of particular interest to the Qumran sect. Portions of Commentary on Genesis A (4Q252) seem to be directed at resolving “simple sense” exegetical difficulties (4Q252 ii.5–7, 8–10), but others seem to be focused on sectarian interests such as the chronology of the Pentateuch (i.1–ii.5) or on locating certain sectarian beliefs within the biblical text (v.1–5).

The *pesharim*, of course, stand at one extreme of the spectrum; almost all of the interpretation in them aims at locating sectarian history and theology within the interpretation of the biblical text of the Prophets or Psalms through the identification and association of names and events from the Bible with the personalities and history of the authors’ own day. Any attempt to *interpret* the biblical text in the modern sense appears to be very secondary to the prophet’s hidden message, which the authors are striving to reveal.

In the case of virtually all legal texts from Qumran that have scriptural interpretation, a spectrum of interpretive types may be observed. Generically diverse works such as the Temple Scroll^a (11Q19), Damascus Document^{a,b} (4Q266–273; CD), and 4QMMT (4Q394–399) all contain exegesis of the legal portions of the Torah. The reading of the biblical text is often of the sort that can comfortably be described as “simple sense,” but the textual support is often for laws that are the subject of debate be-

tween the Qumran group and its opponents. “Simple sense” interpretation thus serves tendentiously as the support of a legal system.

Genres of Biblical Interpretation at Qumran. When we turn to the forms of interpretive works, we observe the range of literary genres wherein biblical interpretation is to be found either as a primary or secondary function. It is especially necessary to distinguish between these two groups because, on the one hand, formal commentary differs generically from the other types, and, on the other, because to omit the nonformal commentaries would be to overlook the very pervasive nature of biblical interpretation in the Qumran scrolls as a whole. It also should be stressed that Qumran biblical interpretation, like other forms of biblical interpretation in antiquity, often did not resemble modern, “objective,” reading of the text. The Bible was not merely the object of study for the Qumranites, it pervaded their lives, prescribing both practice and belief. The study of, or meditation on, scripture was part of their daily (and nightly) religious and intellectual activity (see Rule of the Community [1QS vi.6–7]), and the unidentifiable Teacher of Righteousness was an inspired interpreter of prophetic texts (Peshar Habakkuk [1QpHab vii.3–5]).

Interpretation in interpretive genres. Biblical interpretation can be seen immediately as the goal of a variety of works from Qumran, particularly those labeled by modern scholars as *pesher* or “commentary.” These at times resemble the commentary form, which persists to the present day. The structure of such works, with the presentation of a lemma from the biblical text followed by interpretive remarks, makes it obvious that the Bible is the object of what we describe as interpretation. When the *pesharim* were discovered and read, beginning with Peshar Habakkuk in the early 1950s and followed by about fifteen other subsequently published exemplars, they provided scholars with a completely new type of ancient biblical commentary. Its form was indisputably commentary, although the kind of commentary it contained was not the straightforward explication of the text to which modern readers were accustomed, but one that located the message of the biblical text in the interpreter’s day, with the fulfillment of the biblical prophecy being seen in contemporary events. The commentary’s solution to the enigmatic prophecies often remains enigmatic to the modern student, and perhaps to some ancient readers as well, because the identities of groups and characters alluded to in the Bible are hidden behind “code” terms, which must have been clear to the author and the initiates of his group.

In the 1980s and 1990s, it became clear that the *pesharim* were not the only commentary form to be found at Qumran, and that the books of the prophets were not

the only objects of commentary. In particular, four texts (4Q252–254a) containing remarks on different parts of *Genesis* were labeled “Commentaries on Genesis A-D.” Although their remains, with the exception of Commentary on Genesis A (4Q252), are meager, that one manuscript exhibits a number of significant features for the classification of Qumran interpretation. Not all of Commentary on Genesis A is lemma + comment-type, and parts of it seem to derive from something resembling “Rewritten Bible,” but what is clear is that it is not a systematic retelling of the biblical text, and therefore must be distinguished generically from “Rewritten Bible.” It is also not even a commentary on all parts of *Genesis*, and that distinguishes it from many of the *pesher*-type commentaries, the discovery of which preceded it, because those commentaries usually present a verse by verse exegesis on the biblical text. What appears to characterize these commentaries, if we may use the best-preserved Commentary on Genesis A as a paradigm, is their selectivity and their willingness to comment, in whatever fashion, on specific texts and not on the biblical book as a whole.

The other major interpretive genre at Qumran is the so-called “Rewritten Bible.” Under this term we include texts that retell, summarize, or present in altered fashion the narratives or laws of the Hebrew scriptures. All rewriting is commentary, and the methodology of selection, rearrangement, supplementation, and omission in the process of rewriting is a form of commentary, even if the interpretive aspect is not always overt at first glance to the reader who is not closely attentive to the original text being rewritten. It is possible that “Rewritten Bible” represents the earliest generic attempt to comment on the Bible before the more economical “commentary” form was developed. Before the Qumran discoveries this ancient genre was extant only in such works as *Jubilees*, Josephus’s *Jewish Antiquities*, and pseudo-Philo’s *Biblical Antiquities*. [See Rewritten Bible.]

The Qumran caves enriched considerably the range of extant examples of this literary type, while simultaneously presenting some problems to the modern interpreter. At one end of the spectrum, on the border between biblical texts and biblical interpretation, stand the “Rewritten Bible” texts, which have been named by their editors “Reworked Pentateuch” (4Q158 and 4Q364–367). Inclusion of these works under the rubric of “interpretation” can be taken to imply that they are not biblical texts, but it is possible that, from the standpoint of their authors, as opposed to that of the modern scholar, they are biblical, with the process of interpretation taking place within rather than upon a text (cf. the relationship of the Samaritan Pentateuch and the Masoretic Text). [See Reworked Pentateuch.]

The lengthy rewriting of the Pentateuch in this modi-

fied form, which, it must be stressed, differs considerably among the several manuscripts given this title, rearranges segments for the sake of clarity, introduces interpretive comments, and occasionally adds new material. For long stretches some of these texts resemble some form of the biblical text itself. Thus the breadth of the rewriting, together with the fact that there are few major additions, makes the interpretive aspect of these manuscripts rather small in proportion to their lengths (4Q158 may be an exception to this description). In a like fashion, some of the “deviations” from the Masoretic Text in a biblical manuscript like 1QIsaiah^a may not all be due to variant textual traditions, but rather to interpretive rewriting. Distinguishing between variant text and exegetical rephrasing is a delicate matter regarding which scholars are virtually bound to disagree, and in the case of some of the Reworked Pentateuch material from Cave 4 a final decision has yet to be rendered as to their “biblical” or “nonbiblical” nature.

When we turn to works that are clearly distinguishable as nonscriptural, Cave 1, once again, provides an early example, the Genesis Apocryphon, which, in its extant portions, retells in Aramaic parts of the Noah and Abraham narratives of *Genesis*. Occasionally close enough to the Hebrew text to be a virtual *targum*, it also offers paraphrase and “midrashic” expansion of the biblical story. The Temple Scroll, discovered later, is rewritten Bible of a legal sort. The first part of the scroll describes the festivals and their sacrifices and the construction of the Temple in a fashion both structurally and stylistically modeled on the Pentateuch. The latter section of the scroll (li.11–lxvi.17, called by some the “Deuteronomic paraphrase”) gathers biblical laws under common rubrics, rearranging the pentateuchal legal material, and occasionally adding laws that have no overt scriptural basis. Because its language remains so closely modeled on the biblical, we can often follow the Temple Scroll’s manipulation of the pentateuchal text with great ease, and detect the places in which it has altered the original or handled it in such a fashion as to indicate a particular reading of the original. [See Genesis Apocryphon.]

A genre that is interpretive in a somewhat different fashion is the so-called thematic *pesher* mentioned earlier, which collects and interprets verses from diverse parts of the Bible around a particular issue. Both the anthologizing itself and the comments on the texts constitute scriptural interpretation. In particular, the employment of material from one book of the Bible as part of the exegesis of another demonstrates the sense of the interrelationship of various parts of the Bible held by the authors of the texts. Florilegium (4Q174) and Catena^d (4Q177) focus on *Psalms*, but cite texts from the Pentateuch and the Prophets in the course of their interpreta-

tion, while Melchizedek (11Q13) does not appear to be as firmly located in a single biblical book and follows its theme through the Pentateuch, *Isaiah*, *Psalms*, and *Daniel*. One of the *Isaiah pesharim* (Peshar Isaiah [4Q163]) also introduces references to other prophetic books (*Hosea*, *Jeremiah*, *Zechariah*) into its commentary on *Isaiah*.

Interpretation in noninterpretive genres. Not all Qumran biblical interpretation, however, is to be found in texts that focus on the Bible. In texts that are heavily legal in content, such as the Damascus Document (CD), the Rule of the Community (1QS), and 4QMMT (4Q394–399), we find exegesis in both legal and nonlegal sections. The orientation of the Qumran group to the Bible appears to have demanded biblical support for theology as well as law. Thus, the Damascus Document or Zadokite Fragments (CD) interprets and employs biblical passages in both of the sections into which it has been divided, the Admonition and the Laws (a distinction that has grown progressively difficult to assert after the full publication of the 4QDamascus Document texts). The Bible is in no way the framework for either so-called division of the work, but its influence is pervasive on both of them.

Miqtsat Ma'asei ha-Torah (4Q394–399), the so-called halakhic letter, is clearly not as scripturally based as the Temple Scroll, but it is difficult to deny its connection with scripture. It does not derive laws from scripture, but in listing the *halakhot* which it addresses, *Miqtsat Ma'asei ha-Torah* actually employs scripture as the model for its language. The legal section B of *Miqtsat Ma'asei ha-Torah* is heavily influenced by *Leviticus* and *Numbers*.

There are other literary forms at Qumran, such as prayers and others of less easily identifiable genres, that have been given such names as “paraphrase,” “exposition,” “admonition,” and the like by modern editors, which also include or reflect scriptural interpretation. If a biblical narrative is employed in a hortatory fashion or made part of a historical survey contained in a prayer, scriptural interpretation is inevitably present. Thus in the final section of *Miqtsat Ma'asei ha-Torah*, the so-called “Exhortation,” the phraseology is heavily influenced by the diction and theological themes of *Deuteronomy*. Finally, although perhaps furthest removed generically from “interpretation,” the *Hodayot* are composed in language that is saturated with that of the Bible, and the employment of biblical phraseology in the poetry often sheds light on the way in which the poet of the *Hodayot* would have interpreted Scripture.

Methods and Techniques of Interpretation: A Selection. The methods, or techniques, of interpretation at Qumran, with the exception of *pesharim*, are not unique to this corpus of literature, but are shared with other Second Temple documents and rabbinic texts as well, and some may even find their origins within the Hebrew Bi-

ble itself. They are not linked exclusively to the ideology of the Qumran group although they are sometimes employed in support of that ideology.

Thematic association. Thematic association is one of the most prominent methods of interpretation found in the Qumran texts, and it includes a variety of specific interpretive methods. Thus, the juxtaposition of biblical passages that share a common theme, whether legal or nonlegal; the harmonization of passages on the same or similar theme; and the linking of passages through common vocabulary are all forms of thematic association employed in Qumran biblical interpretation.

Harmonization and rearrangement are aspects of this procedure employed by the Qumran biblical interpreters in both legal and narrative material. At times their goal is the convenient assembly of material, found originally in diverse parts of the biblical text, into a single location. This systematization and collocation of related material is one fundamental form of interpretation. These methods are also employed in order to resolve difficulties in the text, whether of contradiction between two biblical passages or the apparent lack of sequentiality within a biblical narrative.

The Reworked Pentateuch texts omit the laws of *Numbers* 5–6 so that the narrative proceeds from the appointment of the Levites in *Numbers* 4.47 to the construction of the Tabernacle in *Numbers* 7.1 (4Q365 28). The laws of the festival of Sukkot, which appear in *Numbers* 29 and *Deuteronomy* 16, are juxtaposed in 4Q366 4 and may have been followed, according to the editors of the Reworked Pentateuch texts, by the laws of Sukkot in *Leviticus* 23. In their narrative portions, as well, we find the dialogue between the Israelites and the Edomite king harmonizing the accounts of *Numbers* 20 and *Deuteronomy* 2 (4Q364 23a–b i) in a manner similar to, but not identical with, that of the Samaritan Pentateuch. In Reworked Pentateuch^c (4Q365 36), the two incidents pertaining to the daughters of Zelophehad (*Nm.* 27 and 36) are placed together (cf. *Numbers*^b [4Q27 31–32]).

Temple Scroll^a shows an even greater tendency toward the gathering of legal material with similar subjects from different places in the Torah into common locations. The intent was apparently to produce a “better organized” Torah than the Mosaic one. An extended example can be found in 11Q19 lji–lv where the biblical text *Deuteronomy* 17.1, which prohibits the sacrificing of blemished animals, engenders a series of laws about slaughtering, some biblical and some extrabiblical, including the laws against sacrificing a mother and her child on the same day (*Lv.* 22.28). Other laws about animal slaughter deriving from *Deuteronomy* 12 and 15 and *Leviticus* 17 are introduced in a harmonizing fashion. Moving from the laws on slaughter in *Deuteronomy* 12 to a law on vows in *Deu-*

Deuteronomy 12.26, the Temple Scroll then moves to *Deuteronomy* 23.24 on vows, followed by the major pentateuchal passage on vows deriving from *Numbers* 30. This is then followed by *Deuteronomy* 13, several laws pertaining to idolatry, and then by the equivalent of *Deuteronomy* 17.2 introducing another passage on idolatry and continuing from the point at which the rearrangement within this section began.

The Genesis Apocryphon has minor rearrangements of material at several points in the extant fragments, the goal of which appears to be the creation of smoother narrative by furnishing information to the reader at an earlier point than its appearance in the biblical text. Thus Hagar is introduced into the Apocryphon's narrative at the point of Abram's leaving Egypt in order to account for her presence in *Genesis* 16.1. The words from *Genesis* 20.13, which Abram is said to have spoken to Sarai at the beginning of their wanderings, are actually inserted into the narrative's equivalent of *Genesis* 12.12–13, thus making the biblical narrative smoother and consistent.

Specification and atomization. Since the biblical text is often terse and nonspecific, the interpreter often must employ what might be termed *specification*, assigning specific identification or meaning to nonspecific references. This technique, employed by Qumran interpreters of both legal and nonlegal biblical texts, might be said to underlie much *peshet* exegesis in which the interpreter assigns specific meaning to the nonspecific words of the prophet, thereby revealing to his reader the hidden intention of the prophet. Thus the "wicked one" of *Habakkuk* 1.13 is "the man of the lie" in Peshet Habakkuk (1QpHab v.11); the "righteous one" who will live by his faith (2.4) is associated with the "keepers of the law in the house of Judah" (v.1); and the "arrogant man" of *Habakkuk* 2.5 is associated with the Wicked Priest (1QpHab viii.8). The "wicked" of Psalm 37 are taken in Peshet Psalms^a (4Q171) to refer to the opponents of the Qumran group, while the "righteous" are claimed by the author to be himself and his colleagues. In a non-*peshet* context, the unidentified escapee (*Gen.* 14.13) who tells Abraham about the capture of Lot at Sodom is identified as "one of the herdsmen of the flock which Abram gave to Lot" in the Genesis Apocryphon (1QapGen xxii.1–2).

Such *peshet*-type readings (whether or not they appear in formal *pesharim*) are often "atomized," ignoring the contextual meaning of the phrase or clause under consideration, or the punctuation between verses in order to decode its contemporary referent. Thus when the author of Damascus Document iv.12–19 interprets the "terror, pit and snare" of *Isaiah* 24.17 as referring to three sorts of sins of which his opponents are guilty, he has stripped the verse of its probable contextual sense according to which the three terms represent the catastrophic disas-

ters of an apocalyptic day of judgment. In a legal context, the key word in the phrase "Observe the sabbath day to keep it holy" (*Dt.* 5.12) is not taken as a general prescription, but as regulating one's behavior by avoiding forbidden activity late Friday afternoon (CD A.14–17).

Legal methods. In legal contexts, it is clear that the Qumran interpreters at times read the biblical text strictly rather than loosely. Thus in 4QMMT, the gifts of the first planting of fruit trees and the animal tithe (Miqsat Ma'asei ha-Torah B 62–64) are assigned to the priests (unlike their treatment in rabbinic *halakha*), based on the strict reading of *Leviticus* 19.23–24 and 27.32, "holy to the Lord." The priest who burns the ashes of the red heifer must be totally purified (once again in opposition to the rabbinic position) because Qumran law insisted on reading the biblical "pure" (*Nim.* 19.9) in the most limiting fashion.

At the same time, legal exegesis may expand the meaning of the pentateuchal text. The prohibition against defrauding (*Lv.* 25.14) is interpreted to mean in Damascus Document¹ (4Q271 3.4–6) that the seller must disclose defects in his wares to the buyer, and the failure to disclose the faults in a prospective bride to the potential groom (7–10) is characterized as "leading the blind astray from the road" (*Dt.* 27.18). Opposition to divorce (CD iv.21–v.2) is grounded in two narrative passages, "male and female he created them" (*Gen.* 1.27), and "they went into the ark two by two" (*Gen.* 7.9), coupled with the interpretation of *Deuteronomy* 17.17, "he shall not multiply wives for himself," as meaning that *even* the king may not take many wives.

Linguistic analogy (similar to the rabbinic *gezerah shawah*) is implicitly employed in Temple Scroll² (11Q19 1.17–18). The texts regarding the false prophet (*Dt.* 18.22) and a dishonest judge (*Dt.* 1.17) are the only pentateuchal occurrences of the phrase *lo' tagur(u)* ("you shall not be afraid"). Since a false prophet is to be put to death, reasons the scroll, so is a judge who takes bribes. A logical form of analogy seems to be employed in the argument that the laws of consanguinity operate for both males and females, so that uncle-niece marriage is to be prohibited on the same grounds as aunt-nephew marriage (*Lv.* 18.13; CD v.7–10).

Introduction of completely new material. Finally, scriptural interpretation at Qumran must also be taken to include the introduction of material that is virtually wholly new into readings of the biblical text without any stimulus for it within the text. On a legal level, the lengthy section of Temple Scroll³ that is generally referred to as the "Law of the King" departs at great length from the straightforward interpretation of the passage in *Deuteronomy* about the appointment and regulation of a king, and incorporates the treatment of topics that are completely unfounded on the scriptural material. Yet it is lo-

cated within the running paraphrase of deuteronomic legislation set out by the author. The same is true of nonscriptural details in Pseudo-Jubilees^a (4Q225) or in lengthy passages of the Genesis Apocryphon where, in the course of retelling the biblical narrative, the narrator includes details not exegetically derived from the Bible. The extrabiblical speech of Rebecca in Reworked Pentateuch^b (4Q364 3.ii.1-6) is typical of this type.

Comparison with Other Biblical Interpretation in Late Antiquity. Although it is clear that the Qumran scrolls are geographically isolated as a collection, it must be stressed that they nevertheless constitute a perhaps nonisolated selection of Jewish literature in late antiquity, and, as has been noted, this is as true in the area of biblical interpretation as in any other. The methods and terminology employed in citing biblical texts at Qumran are strikingly similar to those employed both in the New Testament and in rabbinic literature. The Aramaic *targum* (translation) of *Job* from Qumran can clearly be seen to stand on the same continuum as the later Aramaic versions, while the Genesis Apocryphon straddles the boundary that is drawn later between midrash and targum.

The kinds of legal interpretation that are found in the Qumran scrolls are similar to the types of readings that are found in later rabbinic and targumic literatures. Even when the rabbis derive a different law from the text than the Qumran exegete, the way in which Scripture is read to extrapolate the law is often the same. In that fashion, later rabbinic legal and nonlegal exegesis is part of the same continuum with the forms of interpretation that we find at Qumran, even if it is not literally a continuation of that interpretation. Like the Qumran interpreters, the rabbis specify what is nonspecific in the Bible, atomize texts by decontextualizing them, introduce new material (*aggadot*) into narratives, and associate and harmonize related texts with each other. Many of the problems that challenged Qumran interpreters confronted the rabbis as well, and after allowances have been made for the differing theological stances of the two groups, we can see how similar difficulties were often faced in similar ways.

Not all aspects of Qumran interpretation, however, found their continuation in rabbinic literature; *peshet*-type exegesis especially seems to be lacking. That type of prophecy-fulfillment interpretation, however, seems to survive in early Christianity, the other heir of Second Temple Judaism. In this model, texts from the Hebrew prophets are taken to be applicable to the days of the commentator. For the Qumran commentator, the eschatological prophecies were to be fulfilled in the era of the Teacher of Righteousness, while for the authors of the New Testament it was during the time of Jesus. Furthermore, such documents as Melchizedek may be seen as belonging to the exegetical milieu that generates the in-

terpretation of the Hebrew Bible in the *Epistle to the Hebrews*.

MOSHE J. BERNSTEIN

INTERPRETER OF THE LAW is a title (Heb. *doresh ha-torah*) that occurs four times in the Dead Sea Scrolls but it is used in different ways. The Damascus Document describes in CD v.20–vi.11 the origins of the group that lies behind the Qumran scrolls. [See Damascus Document.] The core of the passage consists of an interpretation of *Numbers* 21.18 ("the well that the princes dug, that the nobles of the people laid open with the scepter"; CD vi.3–4), in which the well is taken as a symbol for the law. This passage refers first to the raising up by God of a group responsible for the law (CD vi.2–3), and then to the designation by God of an individual called the Interpreter of the Law (CD vi.7), who is identified with the "scepter" of *Numbers* 21.18 and whose rulings are held to have binding authority until the appearance of "the one who shall teach righteousness at the End of Days" (CD vi.11). It is quite clear that in CD vi.7 the Interpreter of the Law is a figure of the past, and in view of the parallel between CD v.20–vi.11 and CD i.3–12—the key passage concerned with the origins of the group behind the scrolls—it further seems clear that the Interpreter of CD vi.7 is to be identified with the Teacher of Righteous-

ness of CD i.11. The use of the title Interpreter of the Law for the Teacher derives naturally from the context of CD v.20–vi.11, in which the emphasis is on the role of the Teacher as the one whose legal decisions alone are authoritative.

However, in the work from Cave 4 known as the Florilegium (4Q174), which is perhaps better described as the Midrash on Eschatology, the title Interpreter of the Law is unambiguously used to refer to a figure of the future, a messianic figure. [See Florilegium.] The Florilegium is a thematic *peshet*, which brings together a number of Old Testament texts that are interpreted by the author to refer to the "End of Days." [See Pesharim.] In the Florilegium (4Q174 iii.10–12) the quotation of 2 *Samuel* 7.11c–14a is followed by the explanation: "This is the Branch of David who will appear with the Interpreter of the Law, [whom he will raise up] in Zi[on at the] End of Days."

The passage is concerned primarily with the expectation of a royal messiah, who will be a descendant of David and is referred to here by the title *Branch of David* (cf. *Jer.* 23.5; Commentary on Genesis A [4Q252 v.3–4]). The Interpreter of the Law will accompany the Branch of David, and it is clear that in this context the Interpreter is a messianic figure. Although nothing is said here about the status and the duties of the Interpreter, it seems certain that he was regarded as a priestly figure and that his role, just like that of the historical Interpreter of CD vi.7, was to give authoritative legal decisions—in this case, decisions binding on the royal Messiah.

The Florilegium thus contains the expectation of two messianic figures acting side by side, the figures described elsewhere in the scrolls as the Messiahs of Aaron and Israel. The role of the priestly Messiah/Interpreter of the Law in giving legal instruction is indicated in the Testimonia (4Q175), which consists of a collection of messianic proof texts. *Deuteronomy* 33.8–11, the text quoted in reference to the priestly Messiah, includes specific mention of the role of Levi in giving instruction in the law, and it is perhaps not without significance that this text is also quoted in one of the fragments of the Florilegium, the Midrash on Eschatology. The role of the priestly Messiah in giving instruction is also indicated in Peshet Isaiah^a (4Q161 iii.24) where it is said of the Davidic Messiah: "According to what they (i.e., the priests) teach him, he will judge."

The Interpreter of the Law is further mentioned in Catena^a (4Q177 ii.5). It has recently been argued that Catena^a is another copy of the Midrash on Eschatology; in any case the work has a strong eschatological emphasis. Unfortunately, however, too little of the text has survived at the crucial point for it to be possible to determine whether the Interpreter in Catena^a belongs to the past or to the future.

The final reference to the Interpreter of the Law occurs in CD vii.18–19 in the context of a complex passage (CD vii.9–viii.2) referring to the origins of the group that lies behind the scrolls. The passage includes an abbreviated quotation from Amos (*Am.* 5.26–27), which is a prophecy of judgment on Israel but is interpreted in the Damascus Document as a prophecy of salvation relating to this group. The abbreviated quotation omits mention of the “star-god” in its version of Amos 5.26, but the author nonetheless added an explanation of “the star” in his comment on the passage; this in turn triggered a quotation of, and comment on, *Numbers* 24.17: “The star is the Interpreter of the Law who will come (or who came) to Damascus, as it is written: ‘A star shall come out of Jacob, and a scepter shall rise out of Israel.’ The scepter is the prince of the whole congregation, and when he appears he shall beat down all the sons of Seth” (CD vii.18–21). The Interpreter of the Law is here mentioned alongside the prince of the whole congregation who manifestly is a messianic figure. This fact, combined with the fact that *Numbers* 24.17 was frequently interpreted in Jewish and Christian texts in a messianic sense, suggests very strongly that the Interpreter of the Law of CD vii.18–19 is a messianic figure. Further, although it has sometimes been argued that the Interpreter in this passage is a prophetic figure, it seems much more likely—for the reasons indicated above in relation to the Florilegium—that he is a priestly figure. However, the Hebrew expression translated “who will come” is ambiguous, and it could also be translated as “who came.” This has suggested to some scholars that the Interpreter here is a figure of the past. Certainty is impossible, but the balance of probability favors the messianic interpretation.

MICHAEL A. KNIBB

ISAAH, BOOK OF. One of the most important, revered, and influential works for the community gathered at Qumran was the *Book of Isaiah*. It held a similarly special place for the early Christians, who used *Isaiah* heavily in order to understand and depict Jesus.

One complete copy of the book (1QIsaiah^a) was found at Qumran, the only biblical manuscript that survived intact over the intervening two millennia. It was found inside a pottery jar in Cave 1, presumably placed there, quite effectively, for safe preservation. Though there are a few small damaged places, its text is virtually completely preserved. Generous fragments from a second copy of the book (1QIsaiah^b) were also found in that cave, while the fragmentary remains of eighteen more manuscripts were recovered from Cave 4 and a couple of fragments from an additional copy in nearby Cave 5. Another was found at Murabba'at a few miles south. The total of twenty-one manuscripts at Qumran places Isaiah as one of the three most popular books there, along with Psalms (thirty-six manuscripts in the Qumran caves) and Deuteronomy (twenty-nine) manuscripts. This popularity was presumably shared among a wider group within general Judaism as well, since the biblical scrolls found at Qumran appear to be representative of the scriptures of general Judaism of the period, and since quotations from those three books rank statistically as the highest in the New Testament. Authors from the Qumran community, believing that Isaiah foretold God's plan for the period in which the community lived, explicitly quoted the book as authoritative scripture, wrote commentaries on it, and even quoted it to give expression to their self-identity.

Isaiah Manuscripts Found in the Judean Desert.

The following list gives the designations of the manuscripts of the *Book of Isaiah* found in the Judean Desert:

1QIsaiah ^a (1QIsa ^a)	4QIsaiah ^l (4Q63)
1QIsaiah ^b (1Q8)	4QIsaiah ^k (4Q64)
4QIsaiah ^c (4Q55)	4QIsaiah ^l (4Q65)
4QIsaiah ^b (4Q56)	4QIsaiah ^m (4Q66)
4QIsaiah ^c (4Q57)	4QIsaiah ⁿ (4Q67)
4QIsaiah ^d (4Q58)	4QIsaiah ^o (4Q68)
4QIsaiah ^e (4Q59)	4QIsaiah ^p (4Q69)
4QIsaiah ^l (4Q60)	4QIsaiah ^q (4Q69a)
4QIsaiah ^e (4Q61)	4QIsaiah ^r (4Q69b)
4QIsaiah ^b (4Q62)	5QIsaiah (5Q3)
4QIsaiah ^l (4Q62a)	Murabba'at Isaiah (Mur 3)

1QIsaiah^a is the oldest manuscript of the book preserved, dating from the early Hasmonean period, around 125 BCE, or perhaps even a bit earlier. It presents an im-

age much more realistic than that provided by the Masoretic Text of the kind of scroll from which the translator of the Septuagint must have worked, probably in the latter third century BCE, and of the difficulties involved in understanding the text to be translated. In contrast to some earlier views before the scrolls were known and their significance digested, it is quite likely that the translator of the Old Greek faithfully translated the Hebrew text he had before him, as best he could understand it. The orthographic practice is not systematic in any of the scrolls or in the Masoretic Text, but the spelling is generally fuller in 1QIsaiah^a than in the Masoretic Text or any of the other Isaiah scrolls except 4QIsaiah^c. Some of its more interesting textual features will be discussed below.

1QIsaiah^b was published by Eleazar Sukenik of the Hebrew University, but further fragments were found in the systematic excavation of the cave and published in *Discoveries in the Judaean Desert* (1955) by Dominique Barthélemy working at the Palestine Archaeological Museum in east Jerusalem. Its Herodian script places it near the turn of the era. Its text is closely allied with the tradition transmitted in the Masoretic Text, but not quite as closely as is commonly described. Many unclear or mostly lost letters were restored according to the reading in the Masoretic Text, but some of these restorations need correction.

With regard to date, the Cave 4 scrolls can be grouped into four categories. From the Hasmonean period generally (approximately the first half of the first century BCE) come 4QIsaiah^{h,i,l,m,n,o,p,r}. From the late Hasmonean period (the middle or third quarter of the first century BCE) come 4QIsaiah^{aj,k}, or (moving perhaps into the early Herodian period) 4QIsaiah^{b,g}. From the early Herodian period (the late first century BCE), come 4QIsaiah^{c,q}. And from the late Herodian period (toward the middle of the first century CE), come 4QIsaiah^{c,d}.

For the most part, both the orthography and the text of the Cave 4 scrolls display only minor differences from other witnesses, of interest primarily to the specialist. The scribe of 4QIsaiah^a used forms somewhat more full than those of the Masoretic Text but less full than those of 1QIsaiah^a; he seemed intent upon expanding Qal participial forms, sometimes adding a superlinear *vav* after the first radical. He also divides some verses differently than the Masoretic Text, in one instance illuminating that the Greek translator had made the same judgment:

Isaiah 23.1–2

1QIsaiah^a *nglh lmw dnmw* (ambiguous)

4QIsaiah^a *nglh ²lmwdnmw* (no division; *w* and *y* look alike)

Septuagint *nglh ²lmy dnmw* ("she is taken captive. ²To whom are they like?")

Masoretic Text *nglh lmw ²dnmw* ("it is revealed to them. ²Be silent!")

4QIsaiah^a contains about forty variants in its fifteen fragments. For this and all the Cave 4 Isaiah scrolls, the variants are mostly quite minor and show no particular pattern of textual affiliation for any of the texts, Hebrew or Greek.

4QIsaiah^b has numerous small fragments, fortunately containing both the first verse and the last verse (66.24) of the book. Its scribe also divides verses differently than 1QIsaiah^a, the Masoretic Text, and the Septuagint at 19.15–16. This extensive scroll displays numerous corrections, but all by the original scribe, and has more than 130 variants.

4QIsaiah^c, one of the latest of the scrolls, uses the ancient Paleo-Hebrew script for writing the divine name. As in 1QIsaiah^a, the orthography is full, and the longer morphological forms for suffixes are used. It has only eight corrections, all by the original scribe, and has about a hundred variants.

4QIsaiah^d preserves fragments from nine out of twelve successive columns, covering chapters 45–58. Its orthography is shorter than that of the Masoretic Text and considerably shorter than that of 1QIsaiah^a. It is carefully written with only three or four corrections, all by the original scribe. It has about seventy variants.

Whereas numerous fragments of 4QIsaiah^b and 4QIsaiah^c survive, 4QIsaiah^{a,d,e,f} have only a modest number, 4QIsaiah^g has eight from a single column, and 4QIsaiah^{l-r} have only one to five fragments each. 4QIsaiah^p was written on papyrus, whereas all the others were written on leather. For the scrolls with only a few fragments, it seems likely but is not always certain that they represent a manuscript of the full *Book of Isaiah*. The possibility remains that they could represent a *pesher* ("commentary"), an excerpted text, or another work that had simply quoted Isaiah, but, since only biblical text is preserved, they are classified as scrolls of Isaiah.

In addition to the twenty-two scrolls of the *Book of Isaiah*, six *pesharim* on the book were found, underscoring the community's recognition of *Isaiah* as authoritative scripture: 3QPesher Isaiah (3Q4) and 4QPesher Isaiah^{a,b,c,d,e} (4Q161–165). 4QPesher Isaiah^c (4Q163) was written on papyrus, the others on leather. Most of the *pesharim* are dated near the turn of the era, and though it is thought by some that they were composed then, there are indications that those manuscripts may have been copied from somewhat earlier originals. The *pesharim* generally are unconcerned with the original historical context of the words of Isaiah but eagerly apply the ancient words to events happening in their own time period, which they saw as the end time.

Characteristics and Significance of the Isaiah Manuscripts. Literary criticism has long since demonstrated that most of the books of the Hebrew scriptures are the product of a lengthy and complex compositional

process, and the earliest extant textual evidence at times preserves documentation of the latter stages of these processes. This general picture holds also for the *Book of Isaiah* in particular. It is a highly composite work, with a rich history of growth and development. Starting with a collection of oracles from the eighth-century BCE prophet Isaiah of Jerusalem, the work served as a magnet for a rich and variegated heritage of prophetic materials. These range from the large collections of high theology expressed in lyric poetry by an unknown exilic author called Deutero-Isaiah in Babylon and the late-sixth-century follow-up in Trito-Isaiah in Jerusalem, to hundreds of minor insertions expressing divergent theological points over the passing centuries. But in contrast to a number of other books, such as *Exodus*, *Numbers*, *Jeremiah*, and *Psalms*, for which textual evidence is preserved of variant literary editions of the book, only a single literary edition is preserved for *Isaiah*, though the individual variants number over a thousand. All the evidence that is extant is limited to minor developments, pointing to a single organic text that grew incrementally.

The variants highlighted by a comparison of the various Qumran manuscripts, the Masoretic Text, and the Greek translation display the complete range of categories of textual variants known from general textual criticism of the Hebrew scriptures. These include simple errors, large and small losses and insertions, transpositions, misdivisions, obscurities, awareness of mistakes already in the manuscript from which the copy is being made, and some successful and some unsuccessful attempts to correct or smooth the text. These are evident in the Masoretic Text, the Septuagint, and the Qumran texts.

The extant textual evidence, however, from the scrolls, the Masoretic Text, and the Old Greek, all points to a single main edition of the work circulating in Judaism in the late Second Temple period. Although there are numerous variants displayed by all witnesses, as well as numerous types of variants, they all appear to be what can be classified as individual textual variants; that is, each of the variants seems to be an isolated instance, in contrast to there being a general tendency or pattern displayed by a significant group of variants indicating that someone had intentionally set about making a systematic or large-scale revision of the book.

It will prove illuminating to consider some examples of the larger, apparently intentional, insertions characteristic of the latter stages of the development of the book. Already in chapter two there are two large insertions, both looking like isolated thoughts only loosely connected with the surrounding text, which display different patterns of textual witness. The first was not in 1QIsaiah^a but it occurs (with variants) in the Masoretic Text, 4QIsaiah^a, 4QIsaiah^b, and the Septuagint: "Do not forgive

them! Enter into a rock, and hide in the dust from before the terror of the Lord and from the splendor of his majesty!" (*Is.* 2.9b-10). The second was not in the Greek or presumably the Hebrew text from which the Greek was translated, but it is in 1QIsaiah^a and the Masoretic Text: "Have no more to do with mortals, who have but a breath in their nostrils, for what they are worth?" (*Is.* 2.22).

The possibility should be considered, of course, that these passages were just lost from a single witness, and sometimes this does happen. Whereas 4QIsaiah^a, the Masoretic Text, and the Septuagint all preserve Isaiah 4.5-6 intact, the scribe of 1QIsaiah^a or his predecessor clearly skipped from "by day" in verse 5 to "by day" in verse 6, losing a line of text. But occasionally two or more manuscripts attest the integrity of the short text that makes sense on its own. In the well-known call narrative of Deutero-Isaiah, the original scribe of 1QIsaiah^a and the Septuagint wrote:

All flesh is grass and all its beauty like the flowers of the field.
The grass withers, the flowers fade,
but the word of our God stands forever. (*Is.* 40.6-8)

A later scribe has inserted into 1QIsaiah^a, prior to the final affirmation, this addition also present in the Masoretic Text:

All flesh is grass and all its beauty like the flowers of the field.
The grass withers, the flowers fade,
when the breath of the Lord blows on it.
(Surely the people is the grass.)
The grass withers, the flowers fade,
but the word of our God stands forever. (*Is.* 40.6-8)

Similar long insertions can be highlighted in both 1QIsaiah^a and the Septuagint by noting the shorter text that stands on its own, in contrast to a sentence or two which gives the appearance of a secondary insertion. For 1QIsaiah^a, see, for example, 34.17-35.2; 37.5-7; and 40.14b-16, in contrast to the Masoretic Text, usually accompanied by the Septuagint. For the Septuagint, see, for example, 36.7b,c, where the secondary character of the insertion (between dashes) as a theological commonplace within the Assyrian Rabshakeh's threat to Judah seems clear:

But if you say to me, We trust in the Lord our God—
is he not the one whose high place and altars Hezekiah
removed,
after which he said to Judah and Jerusalem,
You will worship before this altar in Jerusalem?—
come now, make a wager with my lord the king of Assyria.
(*Is.* 36.7-8).

It is noteworthy that the Masoretic Text has the longer, later form in all the above examples. 1QIsaiah^a and the other scrolls give evidence that texts were occasionally corrected when errors were noticed, and were expanded when additional supplements were known and able to be added. In 1QIsaiah^a at least four scribes made revisions in the scroll, in addition to the original scribe's corrections. Since the insertions were sporadically entered secondarily into various texts, it is quite likely that the textual tradition transmitted in the Masoretic Text attempted to incorporate as much material associated with the developing Isaiah heritage as possible. Further, it is quite unlikely that all the passages now universally attested in the Septuagint were present in the original translation of the book into Greek but were picked up in the transmission process as the Greek text was copied generation after generation. After all the thousand-plus variants in the Isaiah manuscript corpus are reviewed, no evidence appears that would ground a pattern of intentional change according to consistent principles which would constitute evidence for variant literary editions of the book. That type of large-scale editorial work had ended for Isaiah before the period from which manuscript evidence is preserved. What we can see from the second century BCE onward is a much loved and heavily used book that was studied closely and occasionally supplemented with individual reflections.

The Prophet Isaiah and the Qumran Community. Unlike such figures as Enoch, Moses, and Daniel, the person of Isaiah does not emerge as a clear actor in the writings found at Qumran, whether in those composed there or in those brought in from Palestine generally. In fact, very little curiosity about the person of Isaiah is evident in either Judaism or Christianity. The *Martyrdom and Ascension of Isaiah* stands somewhat alone in this regard, even though it demonstrates both Jewish and Christian interest. The oldest section, the core of the *Martyrdom*, was a Jewish composition from approximately the second century BCE, and rabbinic interest in the death of Isaiah continued in the Talmuds. The *Martyrdom* itself was complemented by Christian additions in the "Testament of Hezekiah" and "Vision" sections.

Rather than the person of the prophet, it was God's message revealed through the prophet and recorded in the book that seems to have been the basis of its great influence at Qumran and in the early Church. Within the general belief that life should be guided by the scriptures, the Qumran community believed that God spoke through Isaiah specifically as one of the vehicles of revelation. The introduction to the Rule of the Community instructs that the *maskil* should teach the members of the Qumran community to live according to its rules, "that they may seek God [with a whole heart and soul and] do what is

good and right before him as he commanded through Moses and all his servants the prophets" (1QS i.1-3). The same Rule cites Isaiah with the traditional formula for introducing scriptural quotations ("as it is written"): "No member of the community shall follow them . . . , as it is written saying, Have no more to do with mortals, who have but a breath in their nostrils, for what are they worth?" (1QS v.17; *Is.* 2.22).

Some further quotations of Isaiah introduced by that formula occur in the following:

- 11QMelchizedek (11Q13) ii.23 quoting *Isaiah* 52.7
- Damascus Document vii.10-12 quoting *Isaiah* 7.17
- 4QFlorilegium (4Q174) quoting *Isaiah* 8.11
1-2.i.15-16
- 4QMiscellaneous Rules (4Q265) quoting *Isaiah* 54.1-2
2.3-5

The War Scroll (1QM, 1Q33) goes further and equates the text of Isaiah with God's word, but without mentioning Isaiah by name: "Long ago you [God] foretold . . . , saying, "Assyria will fall by a sword not mortal, a sword not human will devour him" (1QM xi.11-12; *Is.* 31.8). But the Damascus Document (CD, with a highly fragmentary parallel in 4Q266) makes it explicit: ". . . as God spoke through Isaiah the prophet son of Amoz, "Terror, the pit, and the trap will come upon you, O inhabitant of earth" (CD iv.13-14 = 4Q266 3.i.7; *Is.* 24.17).

Over and above recognizing and using the *Book of Isaiah* as authoritative scripture, the community at Qumran even looked to that book to express its self-identity:

When they have become a community in Israel according to these rules, they must separate . . . and go into the wilderness to prepare there the way of him as it is written, "In the wilderness prepare the way of . . . , in the desert make a smooth highway for our God." (1QS viii.12-14; *Is.* 40.3)

In both their heavy use of *Isaiah* as scripture and their application of *Isaiah* 40.3 specifically to their contemporary religious situation, the community at Qumran parallels the early Christian movement in that *Isaiah* is one of the three most quoted books in the New Testament and in that all four Gospels cite *Isaiah* 40.3 in reference to John the Baptist's ministry in the desert preparing the way for Christ (*Mt.* 3.3; *Mk.* 1.3; *Lk.* 3.4; *Jn.* 1.23). Moreover, there was a particular way of understanding *Isaiah* and revelation that was shared by Jewish groups including the Qumran community and early Christians. Revelation was seen as verbal, and the words of Isaiah, the rest of the prophets, and even the totality of the Hebrew scriptures were seen as the ancient word of God spoken long ago but with primary relevance to the contemporary or imminent situation of later Israel (whether in its Jewish or Christian continuation). This particular approach was

common in the apocalyptic period (200 BCE–200 CE), including the latest works of the Hebrew scriptures (see *Dn.* 9.2, 24–27), the Qumran writings (especially the *peshtarim*), and the New Testament (envisioning Jesus as the fulfillment of prophecy).

EUGENE ULRICH

ISRAEL. The term *Israel*, Hebrew *Yisra'el*, was used in the Hebrew scriptures in a number of ways. It served as the collective name for the twelve tribes who traced their ancestry to Jacob, whose name was changed to Israel after he wrestled with an angel (*Gen.* 32.28, 35.10). The Israelites were also known as *children of Israel*, often translated "people of Israel." While this term often designated the nation as a whole, during the period of the Divided Monarchy (924–721 BCE) it referred only to the northern kingdom, as distinct from Judah, the southern kingdom. After the destruction of the North, the term *Israel* was again used for the entire people. In accord with this usage, the land occupied by the people of Israel was termed the Land of Israel in the Prophets and the Writings. In Jewish sources of the Second Temple period, Israel was synonymous with the Jewish people (or with the non-priestly and non-Levitical members of the Jewish people), and the term *Land of Israel* was used to denote its ancestral homeland.

These terms are used in the same sense in the Qumran scrolls and either simply continue the biblical tradition, or provide examples of uniquely sectarian understandings of the people and land of Israel. There are no significant data available in the other Judean Desert documents.

The People of Israel. Israel had been a term for the entire nation in biblical times. From the Second Temple period on, in the absence of the old tribal system, Jews saw themselves as divided into four groupings: priests, Levites, Israelites, and proselytes. In several Qumran passages that describe the mustering ceremony and the lists of members of the sect that were kept by the examiner (*mevaqquer*), this division is maintained (CD xiv.3–6; Damascus Document^b, 4Q267 9.v.7–10; Damascus Document^c, 4Q268 2; cf. also Rule of the Community, 1QS ii.19–22 and War Scroll, 1QM ii.1–3 where the proselytes are not mentioned). This same division into four groups appears in Four Lots (4Q279 formerly, Purification Rules D), where each group is called a "lot" (*goral*). This division presumed that the tribe of Levi continued to be divided into the Aaronide priestly group and the rest of the Levites who served in the Temple as singers or assisted in various aspects of the maintenance of the sanctuary. All other born Jews, who were not immediately descended from converts to Judaism, constituted the main part of *Israel*—the Jewish people.

The final group, maintained as a separate group in the sectarian approach, was the converts. From their listing as a separate group, it is clear that the sectarian scrolls would have agreed with the Temple Scroll^a (11Q19), which did not accord proselytes the same status as full Israelites. Thus, they were not permitted to enter the

Temple until the fourth generation (11Q19 xl.5–7). This approach to the status of proselytes has some parallels in minority opinions in tannaitic literature (B.T., *Qid.* 5.1; *Sifrei Dt.* 247) but was rejected by the rabbinic tradition, which saw proselytes as full Jews with exactly the same status as born Jews.

The author of Florilegium excluded proselytes altogether from the messianic Temple (4Q174 1–2.i.4). This opinion accords well with the notion that the messianic deliverance, rather than a universal experience, was to be enjoyed by the most chosen of God's holy people, the sect alone. Despite the large wealth of Qumran literature, there is no discussion of the manner in which the sectarians determined the status of a born Jew. It is most likely that the sectarians shared the notion later codified in rabbinic literature that Jewish status was determined by birth to a Jewish mother. This approach seems to have been the norm among Jews in the Land of Israel in Second Temple times and it is in this context that we must understand the opposition to intermarriage in *Jubilees* (30.7–17) and the Temple Scroll.

For the sectarians, one final additional aspect must be emphasized. They understood the history of Israel in biblical times as essentially a period of religious and moral decline leading to the destruction of the First Temple. This process, described in theological terms in the Admonition at the beginning of the Damascus Document (CD i–viii), meant that God's covenant with Israel was transferred to the righteous remnant—the members of the Qumran sect and those who would join them in the End of Days. In effect, then, the sectarians saw themselves as the true Israel, the people of God. This special holiness was also manifested, according to their beliefs, in the presence of holy angels among them.

Jews and Non-Jews. The Qumran sectarians defined themselves as separate from non-Jews in two ways. On the one hand, they condemned the practices of the nations surrounding them, specifically idolatry, and distanced themselves from these pagans. On the other hand, they identified themselves as the chosen people whose merit it was to inherit the land in the End of Days.

The most objectionable feature of pagan religion to Jews was the worship of idols or a multiplicity of gods. The Damascus Document prohibits even indirect support of idolatrous practices by outlawing the selling of kosher animals and fowl to non-Jews for pagan sacrificial purposes (CD xii.8–10), and the Temple Scroll recapitulates the law of *Exodus* 34.10–17 stating that idolatrous cult places must be destroyed (11Q19 ii.6–12). Similarly, any object or material once used for idolatry may not be used in Jewish worship, such as meat of idolatrous offerings. In a passage based on *Deuteronomy* 16.21–22 (cf. *Lv.*

26.1) the author of the Temple Scroll warns against the erection of Asherot, pillars, and figured stones to which to bow down (11Q19 lx.19–lxi.3).

Indeed, idolaters may be put to death (*Dt.* 12.2–7; 11Q19 lv.15–lvi.4) if they can legally be convicted in court. The law of an idolatrous city (11Q19 lv.2–14) intends to interpret the biblical commandment (*Dt.* 13.13–19) that requires destruction by the sword of a Jewish city that has turned to idol worship.

The Temple Scroll (11Q19 ii.1–15) requires that pagan cultic objects be destroyed, and this passage also invokes the biblical prohibition (*Ex.* 34.10–16) on making covenants with the Canaanite nations lest there be intermarriage between them and the Jewish people. Other passages in the Temple Scroll indicate that all marriage between Jews and non-Jews was prohibited (11Q19 lvii.15–17).

Idolatry carries with it an impurity that can be contracted. Therefore, the Dead Sea Scrolls recommend that the sectarians distance themselves from non-Jews. On the Sabbath, the Damascus Document recommends that Jews not spend the Sabbath “in a place close to the gentiles” (xi.14–15). Non-Jews were forbidden from entering the Temple (11Q19 xxxix.5–7) and, according to Florilegium (1Q174 1–2.i.4), will also be excluded from the Temple in the End of Days.

Miqtsat Ma'asei ha-Torah (B3–5) prohibits the acceptance of grain offerings (*terumah*) from non-Jews for the Temple. Similarly, Miqtsat Ma'asei ha-Torah (B8) condemns the acceptance of sacrifices that non-Jews bring to the Temple, a practice current in the time of the Hasmoneans. Both these laws accord with the view of the sectarians that in the End of Days the non-Jewish nations will disappear. Pharisaic-rabbinic tradition taught the opposite: that in the End of Days the nations will come to worship God and will voluntarily appear to sacrifice at the Jerusalem Temple.

A poetic section of the War Scroll (1QM xii.12–14), which most probably predated its final authorship, calls upon the city of Jerusalem in the End of Days to accept the wealth of the nations who will now be subservient to Jerusalem. This poem would imply that the nations survive the final cataclysm and, based on *Isaiah* 60.10–14, become vassals of Israel. The same notion is found in Peshet *Isaiah* (4Q161 7.25). However, the overwhelming notion of the War Scroll is the destruction of the nations of the world by the sectarians at the End of Days.

Chosen People. The notion that Israel is God's chosen people is prominent in the sectarian documents. The War Scroll (1QM x.9–10; 4Q495 frag. 1) proclaims: “Who is like unto your people Israel which you have chosen for yourself from all the nations of the lands, a people of

those holy through the covenant!" The text continues by stating that Israel has expressed its chosenness by accepting the revelation and God's commandments (lines 10–11).

Liturgical passages repeat this motif often. In a Passover prayer, God "cho[se] us from among [thc] nations" (Daily Prayers [4Q503] 24–25.vii.4; cf. Noncanonical Psalms 76–77 15). Similarly, "you have loved Israel more than the [other] peoples. . . . All the nations saw your glory in that you were sanctified among your people Israel" (Words of the Luminaries^a [4Q504] 1–2.iv.4–9). The festival prayer states that God chose the Jewish people and set them apart as holy, renewing his covenant with them (1Q34bis ii.5–7 = 4Q509 97–98.i.7–10).

The Land of Israel in the Qumran Scrolls. The biblical usage of the expression *Land of Israel* (*Erets Yisra'el*) became increasingly prominent in the Second Temple period and is used in the scrolls. This expression occurs only rarely in the preserved Qumran scrolls (cf. Paraphrase of Kings [4Q382] 1.4 [restored]). Often, the area of Judea is termed *Land of Judah* in the scrolls, apparently a reference to the present political realities of the Greco-Roman period. Two passages are significant: In Miqtsat Ma'asei ha-Torah B 63, *Land of Israel* serves as a legal term for the area that is subject according to Jewish law to the laws of tithing of produce and the offering of fourth-year produce. While this legal usage certainly indicates a geographical entity, it need not assume a governmental or administrative significance. In the Temple Scroll (11Q19 lviii.6) it is used as a geographical and governmental term for the area under the sovereignty of the ideal king of Israel whose constitution is set forth in the Law of the King (11Q19 lvi–lix).

Despite the fact that the only mention of this term in the Temple Scroll is in a governmental context, this scroll presents an ideal vision of how the people of Israel should live in the Land of Israel. Throughout, the author is informed by a notion of concentric spheres of holiness, as well as by distinct concern for the sanctity of the entire Land of Israel as sacred space.

The preserved portion of the Temple Scroll begins with the assertion of God's covenant with Israel regarding the Land of Israel (col. ii). This section, adapted from *Exodus* 34.10–16 and *Deuteronomy* 7.5, 25, relates that God will expel the Canaanite nations from the Land of Israel. The Israelites, in turn, are commanded to destroy pagan cult objects and to avoid any covenants with the Canaanite nations since such alliances would lead to idolatry and intermarriage. The laws of war in the scroll (lx.9–16) concern the destruction of the pagan inhabitants of the land as well.

The notion that Israel is given the land conditionally also appears in the scroll. Bribery and corruption in judgment must be avoided, "in order that you live, and come

and take (or retain) possession of the land which I am giving you as a possession for ever" (li.15–16). In other words, judicial corruption will result in the destruction of the land and exile (lxx.2–9). Only after repentance (line 11) will Israel return to its land.

For the Temple Scroll, the central point of the Land of Israel was the Temple and the surrounding complex. Here the scroll provides for a Temple plan of very different proportions from that which existed in First or Second Temple times. This new Temple plan would be characterized by the enclosure of the Temple building itself by three concentric courtyards. This entire plan has behind it the assumption that the Temple is the center of sanctity for the entire land. The scroll makes clear repeatedly that it is the indwelling of the divine presence in the Temple that imparts to the land this level of sanctity.

Beyond the Temple city which, for the scroll, symbolized the desert camp, was located the hinterland of Israel. *Ezekiel* 48.1–10 had adopted an ideal view of the land, seeing the tribal allotments as a series of east-west strips of land. The Temple Scroll also took an ideal view, but for its author it is most likely that the tribes were to dwell outside the respective gates through which they were to enter the Temple precincts. Indeed, it was through these gates that the tribal territory was to be tied to the sanctity of the central shrine and the divine presence, which dwelled there.

Throughout the Temple Scroll there is a persistent notion that the people of Israel will dwell in cities. The scroll envisaged the people, including priests and Levites, as living in the cities of Israel, which were to be scattered about the central sanctuary, each tribe opposite its respective gate. Burial in the cities was forbidden (11Q19 xlvi.11). Burial places were to be set aside, one for each four cities (xlvi.11–13). The limitation of burial to specified places was designed to avoid rendering the land impure (xlvi.10).

All in all, the authors of the various sectarian texts found at Qumran saw both the people and the Land of Israel in ideal terms. They expected that as the true Israel, separated from both errant Jews and from the non-Jewish world, they could live a life of perfect holiness and sanctity in their ancestral land. Yet in the eyes of the author/redactor of the Temple Scroll, this land, even before the End of Days, had to be reconfigured and idealized in order to represent the level of holiness to which the sectarians aspired.

ISRAEL ANTIQUITIES AUTHORITY. Founded on April 1, 1990, the Israel Antiquities Authority (IAA) assumed the role and functions of the Israel Department of Antiquities and Museums (IDAM), which had operated since the founding of the State of Israel (1948) as an integral part of the Israel Ministry of Education and Culture. This legal and administrative change was made in order to facilitate the actions taken by this institution in its main capacity, which is to safeguard the antiquity sites and antiquities in Israel and to enforce the Israel Law of Antiquities. In this respect it continued the function of the Department of Antiquities of the British Mandate over Palestine (1920–1948). The IAA headquarters are located at the Rockefeller Museum in Jerusalem.

The protection of antiquity sites in Israel is carried out in different ways. Legal protection is given by the Israel Law of Antiquities (1978), which defines the nature of an antiquity site (any place where a construction or artifact produced by humans prior to the year 1700 CE has been found) and specifies certain limitations regarding the use of the land that encompasses an antiquity site. The IAA maintains a large number of inspectors of antiquities, organized into five divisions (North, Center, Jerusalem, South, and Judea and Samaria). Their function is mainly to participate in the planning and building commissions and to ensure that development projects do not endanger antiquities sites. In many cases ad hoc archaeological surveys are carried out as a preparatory action before major building projects are initiated, or when a rescue excavation is required.

A special unit for the prevention of clandestine excavations tries to minimize destruction of antiquities caused by unlicensed excavations. The Department of Excavation and Surveys performs all rescue excavations required to salvage archaeological data in cases of chance discoveries of ancient remains during the development of a site. It also carries out archaeological surveys of predes-

ignated areas. On the average, more than two hundred excavations and surveys are undertaken each year. In recent years the IAA has begun several major preplanned excavations on sites chosen for tourist development, such as Beth-Shean, Caesarea Maritima, Banyas, Beth Guvrin, Maresha, 'Ein Hazeva and Robinson's Arch at the Temple mount in Jerusalem. The Department of Conservation of Monuments carries out conservation and selected reconstructions of ancient monuments, adopting the guidelines of the ICOMOS Venice Charter (1964).

The IAA is the custodian of all antiquities objects and maintains the State Collections. This department lends all antiquities required for local museums as well as for exhibitions in foreign countries. The IAA organizes a selected number of exhibitions (see below). The IAA maintains and develops most of the laboratories and technical services for archaeological work, as well as laboratories for conservation of antiquities. The IAA also has its own department of publications. Major periodicals are *Hada-shot Arkheologiyot (Archaeological News)*, published twice a year (since 1961) with an English edition, *Excavations and Surveys in Israel* (since 1982); *'Atiqot*, the main journal for scientific studies and archaeological reports, with articles in English and Hebrew (with English summaries); the systematic publication of the *Archaeological Survey of Israel*, each issue covering an area 10 by 10 kilometers in size (with about twenty issues published per year). Special monographs include L. Y. Rahmani, *Corpus of Jewish Ossuaries at the State Collections*. The popular publications include a series of guides to antiquities sites (e.g., Tiberias, Khirbet Susiya, Hammat Gader, the Monastery at Ma'ale Adummim) and an album of aerial photographs of antiquities sites.

The IAA established the Education and Public Relations Department, which disseminates archaeological information. It sponsors several archaeological educational centers in Jerusalem, Nahariya, Karmiel, and Arad where groups of school classes are instructed. Since archaeology is taught in Israel in selected high schools, the IAA supports the education of high school teachers in this field. The IAA maintains an excellent library and archive (at the Rockefeller Museum) and for several years has been developing an elaborate computer database of archaeological information, which will soon be opened to the public. The IAA's Archaeological Advisory Board, of which representatives of all major Israel archaeological institutions are members, gives the Director of Antiquities professional advice on important archaeological issues and serves as the committee for licensing excavations.

IDAM, IAA, and the Dead Sea Scrolls. Following rumors of the discoveries made by a group of bedouin in the desert on both sides of the Israel-Jordan border, and

following discoveries made by Yohanan Aharoni in Naḥal Se'elim (in 1953, 1955, 1956, and 1960), the archaeological institutions of Israel at that time (including IDAM, the Hebrew University of Jerusalem, and the Israel Exploration Society) decided on an active approach to recovering scrolls. The Judean Desert Expedition was sent on a mission to survey and excavate the southern part of the desert that at the time was already included within the boundaries of the state of Israel. Four subexpeditions, headed by Aharoni (Naḥal Se'elim, northern bank), Nahman Avigad (Naḥal Se'elim, southern bank, followed by Nahal David), Pessah Bar-Adon (Naḥal Mishmar and vicinity), and Yigael Yadin (Nahal Hever, northern bank and Naḥal 'Arugot) were active during the spring of 1960 and 1961. Scrolls of the type discovered at Qumran were not found here. Other significant finds, however, were made, such as the discovery of the Bar Kokhba letters.

On 7 June 1967, while the fighting in Jerusalem was still raging (the Six Day War), Israeli archaeologists Professor A. Biran, director of IDAM, Professor Avigad of the Hebrew University, and J. Aviram, director of the Israel Exploration Society, entered the Rockefeller Museum, with the assistance of the Israeli Defense Forces, in order to survey and secure the building and its collections, among which were the Dead Sea Scrolls. The fighting in Jerusalem (including on the perimeter of the museum's premises) caused minor damage to some of the collections, but none to the Dead Sea Scrolls. When shortly afterward the headquarters of IDAM were transferred to the Rockefeller Museum, the direct custody of IDAM over the Dead Sea Scrolls was established. It should be noted that the Dead Sea Scrolls at the Rockefeller Museum came under a new legal status due to two actions: (1) the nationalization of the museum, its collections, and all its other assets by the Jordanian Government (November 1966), which relieved the international board of trustees that had run the museum since the end of the British Mandate over Palestine in May 1948 of its authority; and (2) the Israeli capture of east Jerusalem, including the Rockefeller Museum, by action of war (June 1967).

Shortly after the war, an inventory of the Dead Sea Scroll fragments at the Rockefeller Museum was prepared. Soon informal talks (of which no minutes were recorded) were held between Professor A. Biran, director of IDAM, Professor Yigael Yadin, chairman of the Shrine of the Book of the Israel Museum, and Roland de Vaux, editor in chief of the Dead Sea Scrolls. The Israeli authorities expressed their policy that they would retain the role of custodian of the Dead Sea Scrolls, while de Vaux retained the full rights and obligations as editor, including the responsibility for the policy of assigning manuscripts to scholars for study and publication—matters in which the IDAM did not interfere. This policy obtained as well

under subsequent editors, Pierre Benoit (1971–1982) and John Strugnell (1982–1990). In the first twenty years of the Dead Sea Scrolls under Israeli responsibility (with Biran followed by A. Eitan as Director of Antiquities), IDAM's interference in all editorial matters of the Dead Sea Scrolls was minimal. IDAM initiated two actions intended to improve the long-term preparation of the Dead Sea Scrolls. First, it initiated the movement of the fragments from the sunlit Room of Records at the Rockefeller Museum to a dark vault in the basement and provided the necessary climate-control equipment. Second, after E. Bechtel's suggestion and support, for reasons of security, duplicates of the Dead Sea Scroll negatives were created in Jerusalem to be kept in separate locations (the Center for Ancient Biblical Manuscripts, Claremont, California, and the Huntington Library, San Marino, California).

Major changes in the publication of the Dead Sea Scrolls, as well as the conservation of the fragments, began when A. Drori was appointed Director of IDAM (1988), and especially after IDAM was transformed into IAA. As a result of these changes, the legal status of the Dead Sea Scrolls and the direct responsibility of the IAA concerning all matters related to the scrolls was reassessed. An advisory and oversight committee to the director on Dead Sea Scroll matters was created, which included Professor S. Talmon, Professor J. Greenfield, and Magen Broshi. For the first time a timetable for the full publication of the still unpublished Dead Sea Scroll fragments (especially the Qumran Cave 4 fragments) was demanded of and received from the editor in chief. In 1990, Emanuel Tov was appointed deputy editor, and he later replaced Strugnell as editor in chief. A major step in the acceleration of publication was the reassigning of Dead Sea Scroll fragments to a larger group of scholars and the amendment of the publication timetable.

The IAA organized a major project for enhancing the state of conservation of the Dead Sea Scrolls. This meant removing the Scotch tape, which the scholars in the 1950s had used to glue scroll fragments together, and the careful cleaning of the fragments. The fragments were removed from the double glass plates in which they had originally been placed and were inserted into new containers made from inert paper and other tissues. (In addition, the negatives were restored. [See Conservation.]

The IAA initiated and organized an exhibition of the Dead Sea Scrolls (curated by Ayala Sussman and Ruth Peled), which included twelve fragments, most of which had never been exhibited (e.g., a fragment of the Cairo Damascus Document, Miqtsat Ma'asei ha-Torah [4QMMT], prayer for King Jonathan [4Q448], and Songs of the Sabbath Sacrifice). These fragments, augmented with a collection of artifacts from Qumran (pottery, coins, etc.)

were displayed in 1993–1994 at the Library of Congress, Washington D.C.; the New York Public Library; the de Young Memorial Museum in San Francisco; the Vatican Library in Rome; and the Shrine of the Book at the Israel Museum in Jerusalem. In collaboration with E. J. Brill located in Leiden (the Netherlands) the photographs of all scroll fragments were published by the IAA in microfiche form, edited by Tov in 1993. The IAA also collaborated with A. Witkin and Pixel Multimedia to publish a popular work on the story of the Dead Sea Scrolls aimed at the general public. It appeared in CD-ROM form (written and edited by R. Reich). Another CD-ROM project of the IAA aimed at the academic readership was designed to make available all the photographs of Dead Sea Scroll fragments.

In November 1993, the IAA conducted for several weeks an archaeological survey in the caves of the Judean Desert (in the regions of Jericho, Qumran, and further south) aimed at locating additional ancient manuscripts. At this time, the IAA also carried out excavations in selected caves and performed several probes at Khirbet Qumran itself (named Operation Scroll). As a result of these operations, several inscribed papyri were discovered in a cave above Jericho, and at Qumran an installation to produce date “honey” was excavated. The various Judean Desert caves also produced a wealth of organic items (e.g., textiles) and important Early Bronze finds.

ISRAEL DEPARTMENT OF ANTIQUITIES AND MUSEUMS. See Israel Antiquities Authority.

ISRAEL EXPLORATION SOCIETY. Founded in Jerusalem in 1914 with the name Jewish Palestine Exploration Society, the Israel Exploration Society (IES; as it was known in 1948 with the creation of the state of Israel) was modeled after the foreign societies engaged in the study and exploration of the history and antiquities of the Holy Land. The IES has played a major role over the years in four main areas: sponsorship, organization,

and financing of archaeological excavations in Israel; publication of the results of current archaeological, historical, and geographical research; sponsorship of forums for the exchange of scholarly information and reporting of current research; and the promotion of public interest in archaeology by providing nonspecialists with opportunities to increase their knowledge through membership in the society, publication of the popular Hebrew journal *Qadmoniot*, and participation in lectures and field trips to archaeological sites in Israel and neighboring lands. The IES is governed by an executive committee and council representing all the major institutions involved in archaeology in Israel, including universities, research institutes, museums, and the Israel Antiquities Authority.

The following archaeological excavations were carried out under IES sponsorship: Hammath Tiberias Synagogue, 1921; Absalom's Tomb (Jerusalem), 1924; Third Wall (Jerusalem), 1925–1927, 1940; Ramat Rahel, 1931; Beth-She'arim, 1936–1940, 1953–1956, 1958–1959; Tell Qasile, 1948–1950, 1982–1989; Hazor, 1955–1958, 1968, 1990–1998; Judean Desert Caves, 1960–1961; Masada, 1963–1965; 'Ein-Gedi, 1970–1972; Arad, 1962–1966, 1971–1978, 1980–1984; Temple Mount (Jerusalem), 1968–1977; Jewish Quarter (Jerusalem), 1969–1985; City of David (Jerusalem), 1976–1985; Herodium, 1970–1988; Jericho, 1973–1983, 1986–1987; Aphek, 1972–1985; Lachish, 1973–1987; Dor, 1982–1998; and Sepphoris, 1985–1997.

Current serial publications of the IES include *Eretz-Israel: Archaeological, Historical and Geographical Studies* (1951–); *Qadmoniot: A Journal for the Antiquities of Eretz-Israel and Bible Lands* (in Hebrew; 1968–); *Studies in the Geography of Israel* (1960–); and *Israel Exploration Journal* (1951–). In addition, the IES publishes books in English and Hebrew concerning the archaeology, history, and geography of Israel and Bible lands.

Over the years, the IES has played a significant role in Judean Desert text research. Of particular importance were its sponsorship and coordination of the archaeological excavations at Masada directed by Yigael Yadin. Exploration and excavation of caves in Nahal Hever and Nahal Se'elim, which yielded a significant portion of existing Judean Desert texts, were carried out as part of the 1960–1961 Judean Desert Expedition, a joint project sponsored by the IES, Hebrew University of Jerusalem, and the Israel Antiquities Authority to explore the area between 'Ein-Gedi and Masada. Documents found during the 1963–1965 Masada excavations include ostraca (fragments of incised pottery; tags, inscriptions, and letters); apocryphal, biblical, and sectarian scrolls; and papyri (letters, documents, and fragments). At Nahal Se'elim, Cave 34 (the Cave of the Scrolls) yielded phylacteries, a scroll fragment, and fragments of Aramaic and Greek pa-

pyri. The Cave of the Letters at Naḥal Hever yielded a group of fifteen letters, all from Shim'on Bar Kokhba to leaders of the revolt in the 'Ein-Gedi region, as well as biblical scroll fragments, the archive of Babatha, a group of Nabatean documents, and the archive of the people of 'Ein-Gedi. Several papyrus fragments were found at Naḥal Mishmar. It was at IES annual meetings that the discovery of these texts was first publicly announced. Likewise, the acquisition in 1967 of Temple Scroll⁴, probably from Cave 11 at Qumran, was first publicized at the IES annual meeting.

Following these discoveries, the IES has exercised a significant role in their publication. In addition to popular articles relating to Judean Desert texts that appeared in the Hebrew-language journal *Qadmoniot* and scholarly articles in the *Israel Exploration Journal*, IES publications dealing with Judean Desert texts include *The Judean Desert Caves I. Survey and Excavations, 1960* (Avigad, Aharoni, Bar-Adon, and Yadin, 1961); *The Judean Desert Caves II. Survey and Excavations, 1961* (Avigad, Aharoni, Bar-Adon, and Yadin, 1962); *The Finds from the Bar Kokhba Period in the Cave of Letters* (Yadin, 1963); *The Ben Sira Scroll from Masada* (Yadin, ed., 1965); *The Documents from the Bar Kokhba Period in the Cave of Letters*, which presents Greek papyri (Lewis, ed., 1989) and Aramaic and Nabatean signatures and subscriptions (Yadin and Greenfield, eds., 1989); *The Temple Scroll* (three volumes and a supplement; Yadin, ed., 1977 and 1983; Hebrew- and English-language editions); *The Damascus*

Document Reconsidered (Broshi, ed., 1992); *Naḥal Şe'elim Documents* (Yardeni, 1995); *The Temple Scroll: A Critical Edition with Extensive Reconstructions* (Qimron, 1996); *The Documents from the Bar Kokhba Period in the Cave of Letters II*, which presents Hebrew, Aramaic, and Nabatean documents (Greenfield, Levine, and Yardeni, eds., forthcoming); and *The Masada Final Reports* (vols. 1-6; the final volume includes "Hebrew Biblical and Non-Biblical Fragments from Masada" [Talmon, ed.]).

In addition to this active publications program, two international congresses devoted to biblical archaeology were held in Jerusalem, in 1984 and 1990, under IES sponsorship. Each included an entire session devoted to Dead Sea text research at which many of the world's foremost scholars in the field presented original papers. These were published in the volumes *Biblical Archaeology Today* (1985) and *Biblical Archaeology Today 1990* (1993). In cooperation with the Israel Museum, Shrine of the Book, and Israel Antiquities Authority, an international congress was held in Jerusalem in 1997 to celebrate the fiftieth anniversary of the discovery of the Dead Sea Scrolls and fifty years of Dead Sea text research. The proceedings of this congress will be published by the IES in conjunction with other organizations involved in research on the Dead Sea documents.

JOSEPH AVIRAM

J

JACOB, the younger twin son of Isaac and Rebecca. His life is presented as a struggle with both human beings and God (*Gn.* 32.28), beginning from the womb with Esau from whom he took the birthright and blessing. As a result, he was forced to flee to his uncle Laban. On the way he had a dream at Bethel and saw a ladder joining earth to heaven (*Gn.* 28.12, 17–19). After struggling under Laban's employment he left with two wives, becoming the father of one daughter and of twelve sons from whom descended the tribes of Israel. In his final testament (*Gn.* 49), Jacob blesses his sons and alludes to the future of the tribes.

The most significant Judean Desert writings that mention Jacob are fragments related to Second Temple works such as *Jubilees* and the *Testaments of the Twelve Patriarchs*, which retell and expand biblical stories. [See *Jubilees*, Book of; *Twelve Patriarchs*, Testaments of the.] In *Jubilees*, Jacob is a central figure, much more frequently praised and blessed than in the Hebrew scriptures. In the *Testaments of the Twelve Patriarchs*, which follow the pattern of Jacob's final testament (*Gn.* 41–50), his sons recount an episode in their life to illustrate a vice or virtue that becomes the subject of exhortation to their sons. In the *Testaments of the Twelve Patriarchs*, Jacob prays for his sons (*Testament of Reuben* 1.7; *Testament of Judah* 19.2), and in *Jubilees* he exhorts against evil (*Jub.* 39.6). In both *Jubilees* and the *Testaments of the Twelve Patriarchs*, Jacob's struggles culminate in victory over the Amorites and his killing of Esau (*Jub.* 34, 38; *Testament of Judah* 3, 9, cf. *Gn.* 48.22).

The Judean Desert texts contain a number of references to Jacob. Many are references to the sons of Jacob (e.g., 4Q372 1.13), or the nation as a whole is called Jacob (e.g., 4Q175 1.12, 17). At least eight passages relate to Jacob's life. There are a number of Aramaic fragments dating from about 100 BCE of a work that has been called the Apocryphon of Jacob (4Q537). This work may be a reworking from the third person to the first person of *Jubilees* 32.21 (Jacob's return to Bethel where he confers the priesthood on Levi, cf. *Gn.* 35.7). The first fragment mentions a dream in which an angel brings Jacob tablets on which were written what would happen to him during his life and perhaps (the text is broken) forbids the building of a temple at Bethel. The second fragment gives instructions concerning the temple, the priesthood, and sacri-

fices (lacking in *Jubilees*). The Temple Scroll (11Q19 xxix.10) also associates the temple with God's covenant with Jacob at Bethel, as does the Apocryphon of Joseph (4Q372 3.9). Two Hebrew fragments of *Jubilees* at Qumran contain the section that mentions Jacob's first journey to Bethel (1Q17, cf. *Jub.* 27.19–21) and Rebecca's request to Isaac to make Esau swear not to harm Jacob (1Q18, cf. 35.8–10). *Jubilees*¹ (4Q221) fragment 4 preserves parts of the story about Reuben's sin with his father's concubine (*Jub.* 33.12–15); fragments 5 and 6 have parts of the narrative about his war with Esau (37.11–15; 38.6–8), and *Jubilees*⁸ (4Q222) fragment 1 contains Jacob's discussion with Rebecca about a wife for him (25.9–12; cf. 27.6–7). In *Jubilees*^h (4Q223–224) several sections from the Jacob stories are extant 32.18–21; 34.4–5, 35.7–12, 12–22; 36.7–10, 10–23; 37.13, 17–38. Reworked Pentateuch⁹ (4Q158 7–9) expands *Genesis* 32.29 by giving the content of God's blessing at Penuei—that Jacob would be fertile, blessed with knowledge and intelligence, and freed from all violence. Commentary on Genesis A (4Q252 iv.5–7) contains a *peshet* ("commentary") on Jacob's blessing of Reuben in *Genesis* 49.3–4. The commentary mentions that Jacob reproved Reuben because he lay with Bilhah and comments on his status as the firstborn. Column v follows with a *peshet* of Jacob's blessing of Judah in *Genesis* 49.10. [See *Judah*.]

The New Testament refers to Jacob in connection with the other patriarchs or with his sons, for example, in the genealogies (*Mt.* 1.2; *Lk.* 3.34) or with blessing Joseph's sons (*Hb.* 11.21). Jacob is an example of God's selection (*Rom.* 9.13), and Christ as the Son of Man is seen as the focus of his dream at Bethel (*Jn.* 1.51). Rabbinic writings elevate Jacob as the greatest of the patriarchs (*Gn. Rab.* 76.1). They justify his gaining the birthright and blessing, and desiring Rachel; they disapprove of his marriage to two sisters (B.T., *Pes.* 119b), his treatment of Leah (*Ag. Ber.* 48(49).2), favoritism toward Joseph (B.T., *Shab.* 10b; B.T., *Meg.* 16b; *Gn. Rab.* 84.8), and prolonged absence from home (B.T., *Meg.* 16b ff.).

ROGER GOOD

JAMES, LETTER OF. One of the New Testament's seven so-called Catholic Epistles (Eusebius *H.E.* 2.23.25), the *Letter of James* is named after its author rather than its addressees. The letter is attributed to James, the brother of Jesus (*Gal.* 1.19; *Mt.* 13.55; *Mk.* 6.3) and leader of the early church in Jerusalem (*Acts* 12.17, 15.13; *Gal.* 2.9, 2.12), who by the third century CE was known in some writings as James the Just (Eusebius, *H.E.* 2.23.4). Though much in the letter may stem from this James, the work was probably compiled in its final form by an unknown Christian teacher in the last quarter of the first century CE. It is very difficult to determine more precisely the date of the epistle and its geographical setting.

The work is not really a letter at all but a collection of wisdom instructions that can be grouped loosely as follows: the benefits of trials (1.2-18); true religion (1.19-27); impartiality (2.1-13); faith and works (2.14-26); true wisdom (3.1-18); godliness and worldliness (4.1-5.6); and matters of encouragement (5.7-20).

The Jewishness of much of the letter's content is often pointed out. Apart from the two references to Jesus Christ (*Jas.* 1.1, 2.1), the letter lacks anything distinctively Christian. This has led some to argue that most of the content was strictly Jewish, not Christian-Jewish, in origin. Shortly after the discoveries of the Dead Sea Scrolls, several aspects of the letter were linked with the Qumran sectarians. For example, the "righteous one" of *James* 5.6 was seen as a designation applied to Jesus under the influence of the Qumran writings (Leaney, 1958, p. 93). In light of the *Letter of James*, it was even suggested that the community of Jewish Christians gathered around James in Jerusalem had at one time been "the urban brethren of the hardier souls that betook themselves to Qumran" (Gaster, 1976, p. 16). Such direct association was also dismissed as "fanciful" (Driver, 1965, pp. 543-44). Aspects of these proposals have been revived and exhaustively elaborated by Robert H. Eisenman (1996; 1997), who identifies the sectarian teacher of the scrolls as James the Just. The majority of scholars dismiss Eisenman's proposal on the basis of the dating of the evidence, its oversimplified view of the history of early Judaism, and the nonspecific character of the word-plays on which much of his theory relies.

Similarities between the letter and the clearly sectarian scrolls are relatively limited and seem almost incidental. Some of these similarities are matters of terminology. "Father of lights" (*Jas.* 1.17), a title which relates God to

the stars and which has no sure precedent in Judaism (cf. *T. Abr.* B 7.5), can be compared to the angelic "Prince of lights" in the Rule of the Community (1QS iii.20; CD v.18). The technical idiom "cycle of becoming" (*Jas.* 3.6) may be such a cycle as is described, though not labeled as such, in 1QH^a xx.5-8.

Some similarities are based in a common representation of exegetical traditions. For example, the letter is addressed to the twelve tribes (*Jas.* 1.1), a scriptural image also probably applied to sectarian community organization in Rule of the Community (1QS viii.1). In *James* 4.14 transitoriness is likened to smoke as in *Hosea* 13.3 (cf. the War Scroll [1QM xv.10]). In *James* 1.25 the law is described as a "law of freedom," a play on the consonants of *hrtw* in *Exodus* 32.16, which may also have been known to the author of Rule of the Community (1QS x.6-8), where most scholars take the play in the sense of "engraved." In *James* 2.23, Abraham is described as a friend of God (cf. *Is.* 41.8; *2 Chr.* 20.7; *Sg. of 3* 12; *Jub.* 19.9; CD iii.2; Commentary on Genesis A [4Q252 ii.8]; *Ap. Ab.* 9.6; 10.5; *T. Ab. A* 1.6 and often).

Some similarities are found in ethical instruction. The most explicit seem to lie with the Treatise on the Two Spirits of the Rule of the Community (1QS iii-iv), which may in any case be nonsectarian in origin. For example, *James* 1.6-8 speaks of the double-minded person and *James* 4.1 of the battle within a person (cf. 1QS iii.17-18, iv.23; also *Didache* 4.4; *Epistle of Barnabas* 19.5). However, in contrast with Qumran, there is no suggestion of a cosmic or angelic dualism lying behind the letter's anthropology. The term "way" (*Jas.* 5.19-20) is used of ethical and halakhic teaching from *Proverbs* 4.14 through to the *Didache* (cf. 1QS iii.13-iv.26, viii.15). The characteristics of wisdom (*Jas.* 3.14) are echoed in several Jewish texts (*Prv.* 8; *Wis.* 7; cf. 1QS iv.3-8).

The description of the teacher (*Jas.* 3.1) is an echo of the standard Jewish role of both priest and sage; at Qumran this role is variously taken up by both *mevaqqer* ("guardian"; CD xiii.7-8) and *muskil* ("wise teacher"; 1QS ix.12-20). *James* 2.10 insists on the keeping the whole of law (cf. 1QS viii.15-17; *4 Mc.* 5.19; *Mt.* 5.19; *Test. Asher* 2:5-10; *Gal.* 5.3; B.T., *Shab.* 70b). *James* 5.19-20 urges that the community members be dealt with suitably (cf. 1QS v.25-6.1). With regard to the instruction against oaths (*Jas.* 5.12), both Philo and Josephus describe the Essenes as forbidding oaths (*Every Good Man Is Free* 84; *The Jewish War* 2.135; *Antiquities* 15.371), though they made oaths on entry (*The Jewish War* 2.139, 142). This is echoed in the Damascus Document where there are oaths on entry (CD xv.5ff.) but restrictions thereafter (CD xv.1).

There are plenty of significant differences between the *Letter of James* and the form of Judaism represented in the sectarian scrolls. In general, the letter shares little or

none of the explicit form of scriptural exegesis found in the scrolls, which identifies prophecies as fulfilled in the experiences of the community. There is no narrow nationalism, no evidence of a hierarchical community, no restricted legal discipline, and no exclusion of outsiders from its meetings (2.2). In 5.14–15 there is a discussion of healing, but no mention of the laying on of hands that is common in other Christian and Jewish texts (cf. Genesis Apocryphon [1QapGen xx.25–30]).

The publication of the predominantly nonsectarian wisdom compositions found in the Qumran caves has provided a clearer perspective on the Jewishness of the *Letter of James*. It is now most likely that the sectarian scrolls and the *Letter of James* reflect varying receptions of a wide range of Jewish wisdom writings. Similarities between the letter and the nonsectarian wisdom traditions found in many of the scrolls are plentiful, but not precise. Standard idioms and common subjects for instruction can be found here: advice on how to carry on business dealings (Sapiential Work A^b [4Q416 2.ii.4–15]; *Jus.* 4.13–17), teaching on how to treat the wealthy and the poor (4Q416 2.iii.8–19; *Jas.* 2.1–13; 5.1–6), and advice on how to treat weaker members of society (untitled sapiential work [4Q424 3.9–19]; *Jas.* 1.27). Some of the ideas, such as business dealings (CD xii.7–11) and wealth (CD iv.17), are also discussed in the sectarian scrolls. As elsewhere, in both the scrolls (Prayer of Nabonidus [4Q242 1–3, 3–4]) and *James* (5.15), healing and forgiveness of sins are linked.

JEREMIAH, BOOK OF. [This entry comprises two articles: Biblical Text and Pseudo-Jeremiah.]

Biblical Text

Six fragmentary manuscripts from the *Book of Jeremiah* were discovered in the caves of Qumran. At other sites in the Judean Desert where biblical manuscripts were discovered, no remnants of this book were found.

In Cave 2 one manuscript—Jeremiah (2Q13)—was discovered. In Cave 4 two manuscripts of the *Book of Jeremiah*—Jeremiah^a and Jeremiah^b (4Q70 and 4Q71)—were identified in the 1950s; however, during the course of preparing these manuscripts for publication, Emanuel Tov and Esther Eshel realized that the fragments listed as Jeremiah^b belonged to several separate manuscripts, so the total from Cave 4 is five manuscripts:

1. Jeremiah^a (4Q70)
2. Jeremiah^b (4Q71)
3. Jeremiah^c (4Q72)
4. Jeremiah^d (4Q71a) and
5. Jeremiah^e (4Q71b).

These fragments represent a large part of the book, from the middle of chapter 4 until the beginning of chapter 40.

Comparing the texts of these manuscripts to the known versions of the *Book of Jeremiah* shows that it is possible to connect them to two major textual groups: One group includes texts similar to the Masoretic Text, more commonly referred to as the "Proto-Masoretic Text," in which Jeremiah (2Q13) and the two large manuscripts from Cave 4—Jeremiah^a and Jeremiah^c—as well as an additional manuscript from which only one fragment remains—Jeremiah^e—are included. In the second group there are two manuscripts, from each of which just one fragment remains: Jeremiah^b and Jeremiah^d. These manuscripts are similar to the text of the Septuagint, and despite their small size it should be assumed that they belong to the group of manuscripts called "Proto-Septua-

gint Text.” These texts probably reflect the *Vorlage*, used by the translators of the Septuagint.

The Manuscripts of *Jeremiah* from Qumran. As noted above, six manuscripts of the *Book of Jeremiah* have survived at Qumran.

***Jeremiah* (2Q13).** The scroll of *Jeremiah* that was discovered in Cave 2 includes twenty-seven fragments with text from *Jeremiah* 42–49 (only one complete column has been reconstructed from four fragments). The manuscript dates from the Herodian period, and it was written in the unique script familiar to us from the scrolls of Qumran (with forms such as: *ky*’, *zw*’t, etc.). Although a number of minor textual discrepancies exist between *Jeremiah* (2Q13) and the Masoretic Text, it is possible to characterize this manuscript as reflecting the Masoretic type of text, and to connect it to the group of manuscripts called “Proto-Masoretic Text.”

In this scroll there is a case of difference in content: in fragments 9–12.ii.13 (*Jer.* 48[31].35) the word “[in] them” is added above the words “is sacrificing and] burning incense.” This results in the reading “sacrifices in] them [and] burning incense,” which is similar to the Masoretic Text.

***Jeremiah*^a.** In this scroll fifteen columns were reconstructed. The manuscript was dated by paleography to the period between the end of the third century BCE and the beginning of the second century BCE. This is one of the most ancient manuscripts discovered in Qumran. The text of the scroll is also similar to the Masoretic Text, and the spelling in the scroll is similar to the spelling documented in the Masoretic Text (however, see the debate regarding the reconstruction of col. iii). The manuscript is characterized by a large number of corrections. Thus, for example, in lines 7–9 in column xi it is possible to count eight corrections, including erasures and/or additions above the line. These are corrections mainly of scribal errors (such as haplography). It appears that a second scribe proofread the spelling according to a manuscript identical in its text to the Masoretic Text; however, it is possible that from the start the manuscript was similar to the Masoretic Text, and the mistakes stem from the copyist of this manuscript. Particularly interesting is an addition in column iii. In the original copying of the manuscript one entire paragraph, which exists in the rest of the textual witnesses (*Jer.* 7.30–8.3), was not included. The addition of this paragraph was made in small script, in the following way: The copyist added three rows, which begin above the line, continue in the space between the columns, and end beneath the third line of the column, where they are written upside-down. This style of correction is unique among the more than eight hundred manuscripts from Qumran. The motive for

the correction is not clear, but it is possible to offer a number of possible explanations:

1. The original text before the correction may document an ancient and shorter version of chapter 7, which is a different edition of the book earlier than the Masoretic and Septuagint versions.
2. The omission of the paragraph from the original version may have been intentional.
3. The omission may have resulted from a scribal error.

It is difficult to explain an intentional omission. Regarding the possibility of an earlier version, it should be noted that it is perhaps possible to define the missing words as an independent unit, possessing Deuteronomistic characteristics. From a more precise examination of the section at hand, it seems that the verses appearing before and after the missing passage were written in a poetic fashion.

7.29
Cut off and discard your hair
and hear upon the hills a lament
for God has rejected
and abandoned the generation of his fury

[7.30–8.3 absent]

8.4
They shall fall and not arise
if they will repent or not repent. . . .

The missing paragraph 7.30–8.3, however, was written in prose: “For the people of Judea did wrong in my eyes said the Lord. They put their abominations in the house which is called by my name to contaminate it and they built altars to Topeth . . . which remain in all the places.” This paragraph belongs to the prose sections written in the Deuteronomistic style and which scholars have identified as an addition of a later editor.

As for the theory that one is dealing with an ancient source and not a scribal error, it should be noted that it is difficult to assume that the translator specifically omitted the prose passage. The difficulty in this explanation is that we do not have another textual witness to support this theory; that is, the stage of early editing preceding that which is documented in the Septuagint is not known to us from other sources, and we do not have additional examples of this early stage in other fragments of *Jeremiah*^a.

An additional explanation for the omission of the passage is *parablepsis*—that is, the skipping of the copyist’s eye from one section to another. Similar instances of the omission of a passage between open portions are not known to us, although other types of omissions due to

similarities are known to us and are widespread at Qumran.

The text of Jeremiah^a is most similar to the Masoretic Text. Of particular interest is the exceptional correspondence in col. xii, line 8 of the scroll: *tihyvenah* ("will be," with a single *yod*) is shared by the Masoretic Text of *Jeremiah* 18.21, although the common form in the Masoretic Text is the spelling *tihyvenah* (with a double *yod*).

Also, in the large addition in column iii between the lines and in the margins, there are eight minor corrections that make the text of the addition and the Masoretic Text more similar to each other. One example is in col. xi, line 5, where after "my glory" the word "you" was added, as in the Masoretic Text (*Jer.* 17.14). In line 6 the word "not" was added: "And I did not hasten" (*Jer.* 17.16). And in line 8 the word *tishberem* ("you will brea(k) them") was corrected to *shavrem* ("break them!") by the erasure of the letter *tav*, as in the Masoretic Text of *Jeremiah* 17.18. To this it is possible to add minor corrections involving guttural letters, which were added or switched in order to reconcile them with a text identical to the Masoretic Text. For example, *shesfa'im* ("hills," with an *alef*), was corrected to *shesfa'im* (without an *alef*) (*Jer.* 14.6). There are also changes in forms. For example, the word *temru* ("you will say") in the scroll was changed with the aid of a final letter *nun* to the form *temrun*, which agrees with the Masoretic Text of *Jeremiah* 10.11. There are also cases of textual changes in the direction of the Masoretic Text, as in the example from *Jeremiah* 17.19 of the changing from the singular *meleki* ("king"), to the plural *mela-khim* ("kings of Judah," with a final *kaf* in the middle of the word, which is closer to the medial *kaf* used in the Masoretic Text).

In contrast, there are corrections that distance the text from the Masoretic Text, as in the example of *ya'azvenu* ("will leave us"), found in the Masoretic Text (17.11), which was corrected in the scroll by the erasure of *nun* and the addition of *he* to the form *ya'azvelu* ("he will leave him").

From the many corrections in this scroll it is possible to conclude that the first scribe was careless, and that the scribe who proofread the text corrected it according to another text, which was very close to the Masoretic Text.

Jeremiah^b. After separating this manuscript from the rest of the manuscripts that had been grouped with it, only one fragment remained, which includes *Jeremiah* 9.22-10.21. It was dated by paleography to the first half of the second century BCE. The text of this fragment is very similar to the Hebrew text before the translator of the Septuagint, and therefore it is possible to define it as "Proto-Septuagintal Text." According to this version, verses 6-8 and 10 in chapter 10 were not included, and

the order of the verses reconstructed according to Jeremiah^b is identical to the text of the Septuagint—4, 5a, 9, 5b.

Jeremiah^c. From this manuscript parts of twenty-five columns have survived and between sixty-three and seventy other columns were reconstructed. The scroll includes remnants of *Jeremiah* 4.5-33.20 (altogether between eighty-eight and ninety-five columns were reconstructed).

The text of this scroll, like Jeremiah^a, is similar to the Masoretic Text and is different from the abridged text of the Septuagint in the parallel chapters, with the exception of a small number of insignificant differences, and therefore it is possible to define it as "Proto-Masoretic Text." The spelling is similar to the spelling in the Masoretic Text, although in a number of instances it is fuller than the Masoretic Text (e.g., *ya'aqov* ["Jacob"] appears with *plene* spelling).

Jeremiah^d. A small fragment represents this manuscript and it contains *Jeremiah* 43.2-10 (those verses were also preserved in Jeremiah [2Q13]). The spelling is similar to the spelling in the Masoretic Text. The manuscript is similar to the version of the Septuagint, and documented in it are instances of the use of shorter versions of names: "Yohanan" in the scroll and in the Septuagint, as opposed to "Yohanan son of Korah" in the Masoretic Text.

Jeremiah^e. From this manuscript a small fragment of *Jeremiah* 4.5-6 has been preserved. This is apparently the first column in a sheet of parchment. At the beginning there is a correction of the words "and at those time" to "and at that time." The source of the error is probably in the phrase, "in those days," which appears earlier in the verse.

The Contribution of the Scrolls to the Textual Criticism of the Book of Jeremiah. With the beginning of the study of the *Book of Jeremiah* it became clear that the version of it in the Septuagint is approximately one-eighth shorter than in the Masoretic Text. There are words, phrases, sentences, and even whole paragraphs found exclusively in the Masoretic Text. In addition, the order of the paragraphs and verses is not identical in the Septuagint and the Masoretic Text, while the most noticeable differences between these textual witnesses are the prophecies against the nations. According to the Masoretic Text, their place is at the end of the book (chapters 46-51), while in the Septuagint they are inserted after chapter 25.13. In addition, there are many differences in readings between the sources. The elaborations of the Masoretic Text are customarily classified into a number of categories: there are additions defined as "expansive language," meaning additions of names (e.g., "Baruch son of Neriah" [8.36]), repetitions of expressions such as "before . . . before" (37.49), or additions of formulas (e.g., "as the Lord said" or "utterance of the Lord") in many proph-

ecies in the book; there are also additions taken from other verses in the *Book of Jeremiah*, some of them resulting from immediate contexts, and others from similar contexts, as well as additions of editorial matters, among them the addition of introductory words and conclusions, which were written by the later editor. Additionally, repetitions of sections mentioned in other places in the *Book of Jeremiah* (e.g., the addition in *Jer.* 30.10–46.28) exist in the Masoretic Text. Likewise, textual material from Jeremiah was added to the Masoretic Text, as well as elaborations characterized as Deuteronomistic additions.

The question of whether the short version of the Septuagint is original stood at the center of the study of the *Book of Jeremiah* even before the discovery of the Qumran scrolls, and different explanations were given for the question of the relation between the different versions. There were those who claimed that the Masoretic Text constitutes an elaboration of the *Book of Jeremiah* that was close to the *Vorlage* of the Septuagint. Others suggested that it is a matter of two different editions of the *Book of Jeremiah*, which reflect a different tradition of editing (between which there is a historical connection).

With the discovery of the scrolls, ancient biblical texts written in Hebrew were found, and among them were found versions documented in the Septuagint as well. Two large manuscripts were discovered at Qumran, Jeremiah^a and Jeremiah^c, the texts of which are closest to the Masoretic Text, as well as two fragments that remained from scrolls that were also closest to the Masoretic Text. In contrast, a group of texts similar to the Septuagint were also discovered. Particularly close to this text is Jeremiah^b. In this manuscript, as in the Septuagint, there is a short version of the *Book of Jeremiah*, and in it the order of the verses is different from the one in the Masoretic Text. An important new item for the study of the text comes from Jeremiah^a in which a correction of the text of the scroll to the Masoretic Text, although not entirely consistent, is documented. And so we possess different witnesses of the text, side by side, which testify to the literary development of the *Book of Jeremiah*.

It should be noted that in these manuscripts there is no evidence of the scrolls' source, and hence there is no proof that they were copied at Qumran. Whether these texts were copied at Qumran or were brought to Qumran, it is possible to ascertain that in the Land of Israel during the Second Temple era, at least two different versions of the *Book of Jeremiah* were in use, one similar to the Septuagint, and one similar to the Masoretic Text. For Jeremiah^a it is possible to determine that this scroll was brought to Qumran, since it was dated paleographically to the years between 200 and 175 BCE, prior to the establishment of the communal center at Qumran.

ESTHER ESHEL

Translated from Hebrew by Daphna Krupp

Pseudo-Jeremiah

A group of works related to the career of the biblical prophet Jeremiah or based on the biblical *Book of Jeremiah* is indicated by the title *Pseudo-Jeremiah*. Although these works purport to be written by the prophet Jeremiah (or his scribe Baruch; see *Jer.* 36.4), they are all clearly pseudonymous. These pseudo-Jeremianic works include the *Epistle of Jeremiah*, the *Paraleipomena Ieremou* ("The Rest of the Words of Jeremiah" or *4 Baruch*), and the previously unknown *Apocryphon of Jeremiah*. Related texts, including those attributed to Baruch, are the first, second, and third books of *Baruch* and the *Lives of Prophets*. All these works date to the Hellenistic and Roman periods (late fourth century BCE–first century CE). With one exception (see below), they were all known prior to the discoveries at Qumran, and none displays any specific sectarian characteristics.

Two of this group of texts have been found among the Qumran scrolls. The first, the *Apocryphon of Jeremiah*, was not known prior to the discovery of the scrolls. It exists in five manuscripts from Cave 4: 4Q383, 4Q384, 4Q385b, 4Q387b, and 4Q389a. All of these manuscripts are extremely fragmentary, and the largest, 4Q385b, dates paleographically to c.50–25 BCE. The *Apocryphon of Jeremiah B* (4Q384) is a papyrus manuscript that dates to the Herodian period (c.50–1 BCE). All the manuscripts are in Hebrew; however, since there are no overlaps among the five manuscripts it is impossible to tell if they are all from the same composition. The manuscripts also do not contain any overlaps with the biblical *Book of Jeremiah*. In fact, three of the manuscripts—4Q385b, 4Q387b, and 4Q389a—were identified by their original editor, J. Strug-

nell, as part of a work entitled "Pseudo-Ezekiel." However, their present editor, D. Dimant, has identified these manuscripts, along with 4Q383 and 4Q384, as an *Apocryphon of Jeremiah* on the basis of content.

The largest of the manuscripts, 4Q385b, contains two columns of material. The first fragment, column 1, concerns Jeremiah and the destruction of Jerusalem. Its context draws on *Jeremiah* 40–44 and 52.12–13. Jeremiah is identified as a prophet; the content includes the exile to Babylon and the Temple vessels, as well as the mention of Nabuzaradan, the Babylonian "captain of the guard" (*Jer.* 39.11, 52.12). All of the material agrees with the biblical narrative, except the text seems to imply that Jeremiah went to Babylon with the exiles (line 6), as opposed to the biblical text, which states that he remained in Judah (*Jer.* 39.14, 40.6). The tradition that Jeremiah accompanied the exiles to Babylon agrees with other pseudo-Jeremianic works, for example, *Paraleipomena Ieremiou* 4.5 and the *Apocalypse of Baruch* 10 and 33, as well as certain rabbinic traditions, for example, *Seder Olam* 26 and J. T., *Sanhedrin* 1, 19a, both of which place Jeremiah in Babylon.

Fragment 1, column ii, of 4Q385b concerns Jeremiah in Egypt. Lines 1 and 6 mention Taphnes (or Tahpanes), a location of Jewish settlement in Egypt given in *Jeremiah* 2.16, 43.7–9, 44.1, 46.14 and *Ezekiel* 30.18. Lines 6–10 seem to contain an oracle of Jeremiah delivered in Egypt to the exiles, an oracle that line 2 may imply they do not understand ("do not interpret for them"). This notion of the people's obtuseness coincides with the biblical text, which declares that Jeremiah's prophecies in Egypt continued to meet with disbelief and rejection (*Jer.* 43.1–3, 44.15–19). In fact, the later work *Lives of the Prophets* and the *Midrash Aggadah* on *Numbers* 30.15 both declare that Jeremiah was stoned to death by the Jews in Egypt.

Apocryphon of Jeremiah D (4Q387b), fragment 1, also concerns Jeremiah in Egypt (line 4). Jeremiah is identified as the son of Hilkiah (*Jer.* 1.1). Line 5 mentions "x]–six" years of exile from Israel. This may agree with a tradition found in the *Paraleipomena Ieremiou*, which states that Jeremiah returned to Jerusalem from Babylon after sixty-six years of exile. In line 6 the name of the river Sor or Sud is given. This name, otherwise unidentified, is probably identical to the river Sud mentioned in *Baruch* 1.4 (in the Apocrypha) as the place of exile of King Jehoniah and his fellow captives in Babylon.

All of the correlations given above between the *Apocryphon of Jeremiah* and the other pseudo-Jeremianic works, as well as the biblical *Book of Jeremiah* and the rabbinic traditions, indicate that the *Apocryphon* was not a unique composition but part of a wider corpus of compositions based on the life and oracles of the prophet Jeremiah. Therefore, it is unlikely that the *Apocryphon of Jeremiah*

was a sectarian composition; rather, it was a work of the general literature of the Second Temple period that was read at Qumran. In this it is like other nonsectarian compositions based on biblical books found at Qumran, such as the Genesis Apocryphon.

The second pseudo-Jeremianic composition found at Qumran is the *Epistle of Jeremiah*. The *Epistle of Jeremiah* is supposed to be a copy of the letter which Jeremiah sent to the exiles in Babylon (*Jer.* 29). It is actually a satirical polemic against idolatry composed in the late fourth century BCE. Now extant only in Greek, the original language of the epistle may have been Hebrew. The epistle is part of the Greek Septuagint, where it is placed after *Lamentations* (also attributed to Jeremiah) and before *Ezekiel*. However, in the Latin Vulgate it is appended as a sixth chapter to the *Book of Baruch* (in the Apocrypha), since it was rejected by Jerome as pseudepigraphical.

The Qumran copy was discovered in Cave 7 (7Q2), a cave containing only Greek manuscripts. The manuscript is papyrus, written in uncials without separation between the words. Its editor, M. Baillet, dates it on the basis of paleography to c.100 BCE. The text of 7Q2 contains verses 43b–44 of the *Epistle of Jeremiah*, with only one significant variant.

Finally, a reference to a pseudo-Jeremianic work may occur in the Damascus Document viii.20, which reads, "This is the word which Jeremiah spoke to Baruch, son of Neriah, and Elisha to Gehazi his servant." This line is neither preceded nor followed by a biblical quotation, so it is uncertain as to what it refers. The context refers to the punishment of those who forsake the covenant, so the implication may be that Baruch has been unfaithful. There is no reference in either the *Book of Jeremiah* or any of the known pseudo-Jeremianic works, however, to an episode in which Baruch is unfaithful; in fact, Baruch is the epitome of faithfulness. It is possible that this line in the Damascus Document refers to some unknown pseudo-Jeremianic work. However, it is significant that this line comes from Cairo Damascus Document-A, at a point where it deviates sharply from manuscript B, and is not found in any of the Qumran Damascus Document manuscripts. Therefore, this line probably reflects a variant (and possibly post-Qumran) tradition within the composition history of the Damascus Document.

SIDNIE WHITE CRAWFORD

JERUSALEM. The form *Urushalim* is first attested in the Amarna letters of the fourteenth century BCE. It is a combination of two elements *yru* and *shlm*, which means "the foundation of *Shalem*." In the Ugaritic pantheon, *Shalem* was the god of Twilight. The name appears in *Genesis* 14.18; *Psalms* 76.2 as Salem. The city is sited on the crest of the central mountain range of Palestine at an altitude of 750 meters (2,500 feet). It is separated from the Mount of Olives on the east by the Kidron Valley, and limited on the west by the Hinnom Valley. The Tyropoeon Valley divides the higher western hill from the eastern hill, which is the oldest part of the city.

History. Sometime around 1,000 BCE David took the little Jebusite city on the Ophel ridge (*2 Sm* 5.6-10). In order to house the Ark of the Covenant, he bought a threshing floor to the north of the city from Araunah (*2 Sm* 24:18-25), which is a personal name in Ugaritic and a title in Hittite. It was here that Solomon built the first Temple (*1 Kgs.* 6-7). In 722 BCE, refugees from the defeated northern kingdom settled outside the crowded city. When Sennacherib menaced Jerusalem in 701 BCE, these had to be protected. King Hezekiah enclosed (*Is.* 22.10) the two new quarters on the western hill, the *mishneh* (*2 Kgs.* 22.14) and the *makhatesh* (*Zep.* 1.11), and guaranteed the water supply by cutting a tunnel from the Gihon spring to the Siloam pool (*2 Chr.* 32).

In 587/586 BCE the Babylonians devastated Jerusalem and deported its inhabitants to Babylonia. Only a fraction returned 60 years later, and the city contracted to the original eastern hill, where the Temple was restored by Zerubbabel (*Ezr.* 5-6). Jerusalem expanded to the west again only in the mid-second century BCE when the Maccabees built the First Wall to enclose the western hill (Josephus, *The Jewish War* 5.142-145). Subsequently the north and south walls moved backward and forward but always between the fixed east and west walls. Sometime in the early first century BCE the need for more space forced the construction of the Second (Northern) Wall (*The Jewish War* 5.146).

When Judas Maccabeus, after his first victories, returned to the city, he "found the sanctuary deserted, the altar desecrated, the gates burnt down, and vegetation growing in the courts as it might in a wood or on some mountain, while the store rooms were in ruins" (*1 Mc.* 4.38). This demanded extensive rebuilding (*1 Mc.* 4.48, 60; 12:37). The square platform was extended on the

south to bury the Syrian Akra (*1 Mc.* 1.29-35). Herod the Great's construction of the Antonia fortress (*The Jewish War* 5.238-245) north of the Temple, and of his new palace on the western hill (*The Jewish War* 5.161-182), highlighted the shabbiness of the much restored Temple. It took him nine and a half years to rebuild it completely (*The Jewish War* 5.184-247).

After the return from exile in Babylon (587-538 BCE), political and religious authority in Jerusalem was invested in the high priest. This office was hereditary in the Zadokite line (*1 Chr.* 6:3-15; *Neh.* 12:10-11; Josephus, *Jewish Antiquities* 11.347-12.239) until the legitimate succession was broken by Antiochus IV Epiphanes (175-164 BCE), who replaced Onias III by his brother Jason (*2 Mc.* 4.7-20). In 172 BCE Antiochus went a step further by appointing a non-Zadokite, Menelaus, as high priest (*2 Mc.* 4.23-24). His successor, Alcimus (162-159 BCE), again named by the Syrians, was of Zadokite stock (*1 Mc.* 7.14), though not of the high priestly line (*Jewish Antiquities* 12.387). The rupture with sacrosanct tradition became definitive when, in autumn 152 BCE, Jonathan Maccabeus invested himself as high priest by putting on the sacred vestments (*1 Mc.* 10.21). Thereafter, the high priesthood became hereditary in the Hasmonean dynasty until Herod the Great had Aristobulus III murdered in 35 BCE (*The Jewish War* 1.437).

Thereafter, Herod nominated "insignificant persons who were merely of priestly descent" (*Jewish Antiquities* 20.247). The consequence was the promotion of four families—Boethus, Hannas, Phiabi, and Kamith—from which twenty-two of the twenty-five illegitimate high priests of the period 37 BCE-70 CE were drawn. Inevitably, nepotism was rife throughout the sacerdotal system. Understandably, traditionalists foresaw a horrible fate for "the last priests of Jerusalem, who will accumulate riches and loot from plundering the peoples. However, in the last days their riches and their loot will fall into the hands of the *Kittim*" (Peshet Habakkuk, 1QpHab xii.7-9).

References in the Scrolls. The scrolls contain a number of simple factual references to Jerusalem. Geographically, it is "the high mountain of Israel" (Peshet Psalms^a, 4Q171 iii.11). This essential physical characteristic of the city is highlighted in the citation of *Isaiah* 10.32, which puts "the mount of the daughter of Zion" in parallelism with "the hill of Jerusalem" (Peshet Isaiah^a, 4Q161 2-6.21). The allusion of the War Scroll (1QM) to "the desert of Jerusalem" (ii.2-3) may have been inspired by the immediately preceding reference to "the desert of the peoples," i.e., the Syrian desert, which is drawn from *Ezekiel* 20.35, but for the Bible the desert began on the eastern slopes of the Mount of Olives (Funk, 1959).

On the historical level, Salem is identified as Jerusalem (Genesis Apocryphon, 1QapGen xxii.12). "The capture of

Jerusalem and of Zedekiah, king of Judah" (MMT^a, 4Q398 1.1-2) is used to specify the *terminus ad quem* of curses which came upon the southern kingdom from the time of Jeroboam son of Nebat (cf. *1 Kgs.* 11.26-25.7). Peshar Nahum (4Q169) 3-4.i.2-3 interprets *Nahum* 2.12 as a reference to the abortive effort of Demetrius III Eukerus to take Jerusalem at the invitation of the opponents of Alexander Jannaeus (*The Jewish War* 1.92-98). There is a similar neutral usage in the War Scroll, "No young boy or any women at all shall enter the camps when they leave Jerusalem to go to war" (vii.3-4).

A number of texts already quoted suggest that, as in the Bible, Zion, or the daughter of Zion, is a fully interchangeable synonym for Jerusalem. Confirmation is furnished by the juxtaposition "Mount Zion, Jerusalem" in Ages of Creation (4Q180) 5-6.4. "Jerusalem [the city which you chose from the whole earth] is "Zion, your holy city" (Words of Luminaries, 1-2.iv 3.12; cf. Non-canonical psalms A, 4Q380 1.i.2-7). "The ramparts of the daughter of Zion" is equivalent to "the precincts of Jerusalem" (Testimonia, 4Q175 29-30). The "Rock of Zion" is the site of the "house of the God of Israel" (Work with Place Names, "Rock of Zion," 4Q522 8.ii.3-4).

Such value-free references to Jerusalem are relatively rare in the scrolls. The majority of the texts reflect either an idealistic vision of the holiness of the city or a harshly condemnatory assessment of its real situation. The latter, of course, was conditioned by the former.

Both the Temple Scroll and Miqtsat Ma'asei ha-Torah devote particular attention to Jerusalem. The context is a debate concerning the contemporary interpretation of the Pentateuchal laws of purity. How were laws enacted to govern behavior in the tent of meeting and in the camp of the Israelites on their long journey from Egypt to the Promised Land to be applied in very different physical circumstances? Should they be given a limited or wide extension?

That there were different opinions is clear from the formulation of Miqtsat Ma'asei ha-Torah (B29-33):

We are of the opinion that the sanctuary [is the "tent of meeting"] and that Jerusalem is the "camp", and that "outside the camp" [is outside Jerusalem], that is, the encampment of their settlements. It is "outside the camp" where one should . . . the purification-offering and] take out the ashes of [the] altar and burn the purification-offering. For Jerusalem] is the place which [He has chosen] from among all the tribes [of Israel]. . . .]

Later in the same document we read, "One must not let dogs enter the holy camp, since they may eat some of the bones of the sanctuary while the flesh is (still) on them. For Jerusalem is the camp of holiness, and is the place which He has chosen from among all the tribes of Israel.

For Jerusalem is the capital of the camps of Israel" (B58-61).

The authors evidently reject an alternative view which identified "the tent of meeting" and "the camp" with different parts of the Temple. For its supporters, Jerusalem was "outside the camp" and thus subject to much less stringent standards of ritual purity. The authors of Miqtsat Ma'asei ha-Torah, on the contrary, insist not only that Jerusalem is "the camp" but that it is also "the place which He has chosen," a phrase that could easily be restricted to the Temple (Qimron and Strugnell, 1994, 144).

The same approach to the level of purity required of those who enter Jerusalem appears in the Temple Scroll (11Q19). "And if a man lies with his wife and has an emission of semen, for three days he shall not come into any part of the city of the Temple, where I will settle my name. No blind man shall enter it all their days, so that they will not defile the city in which I dwell" (xlvi.11-13). The enlargement of *Leviticus* 15.18 is paralleled by what is said of the blind; the original restriction applied only to priests (*Lv.* 21.17-21). The Damascus Document (CD) formally articulates the logical consequence of this legislation. Sexual intercourse should not take place in "the city of the temple" (xii.1-2). Yadin (vol. 1, 289) considers this the basis of Essene celibacy. Prior to the publication of Miqtsat Ma'asei ha-Torah there were those who believed that "the city of the Temple" did not mean Jerusalem but the Temple complex (Levine, 1978; Schiffman, 1989).

Those whose state of purity permitted them to enter "the holy city" (Damascus Document, CD xx.22) were not necessarily in a state to enter the Temple. Hence, "you shall make a ditch around the Temple, 100 cubits in width, which will separate the holy temple from the city, so that they may not come suddenly into my temple and desecrate it" (Temple Scroll, 11Q19 xlvi.9-11). The distinction is between the holy and the most holy and, while there is little difference in exclusions, positive qualifications assume great importance (Milgrom, 1980, 96). Those resident in Jerusalem could eat meat only from animals that had been sacrificed in the Temple, and all the skins they used for wine and oil must come from such animals (Temple Scroll, 11Q19 xlvi.8-18). The standard of other cities was not adequate for Jerusalem.

The sanctity of Jerusalem was due to the presence in it of the Temple. The Temple Scroll speaks of "the city which I will hallow by settling my name and [my] temple within (it)" (xlvi.3-4). The theme recurs in the form of a command, "You shall not defile the city in which I settle my name and my temple" (xlvi.10-11); "you shall not defile my temple and my city in which I dwell" (xlvi.17-18). The only biblical parallel to "my city" is *Isaiah* 45.13, where Jerusalem is certainly in view.

The other scrolls to focus particularly on Jerusalem are

the *peshtarim*. Their attitude, however, is significantly different, because they speak about the reality of the authors' relationships with the city. Note the criticism of the priests of Jerusalem (see Peshar Micah [1Q14] 11, 1).

One priest is singled out for particular notice. Commenting on "owing to the blood of the city" (*Hub.* 2.17) the Peshar Habakkuk (1QpHab) writes, "Its interpretation: the 'city' is Jerusalem since in it the Wicked Priest performed repulsive acts and defiled the Temple of God" (xii.7-9). The second charge was inevitable, given the standards of impurity demanded by the scrolls, and the illegitimacy of all high priests since Onias III. The first probably refers to the persecution of the Teacher of Righteousness and his followers (Peshar Habakkuk, 1QpHab ix.9-10; xi.4-7; xii.2-6).

Peshar Isaiah^b (4Q162) interprets *Isaiah* 5.14 and 25 as referring to "the congregation of arrogant men who are in Jerusalem" (1.ii.6-7, 10). If the underlying allusion is to *Isaiah* 28.14 the *pesher* has the authorities in view. These are certainly to be distinguished from "the congregation of Jerusalem" (War Scroll, 1QM iii.11), but their relationship to "the congregation of those [looking] for easy interpretations who are in Jerusalem" (Peshar Isaiah^c, 4Q163 23.10-11) is an open question. The latter group also appear in Peshar Nahum (4Q169) in association with Jerusalem (3-4.i.2) and with "the city of Ephraim" (3-4.ii.2). The name identifies them as lax by the strict standards of the authors of these *peshtarim*.

The tension between the ideal Jerusalem and what actually went on in the holy city provoked different reactions. There were those who dreamt of a new Jerusalem unmarked by any sins of the past. Even though the name appears nowhere in any copy of an extremely fragmentary text, in which the seer is shown around an immense immaculate city by an angel with a measuring rod, the title accepted by all is "Description of the New Jerusalem" (García Martínez, 1986).

Others believed in a transformation of the existing city, "And of the book of Isaiah: Words of consolation [Be consoled, consoled, my people! (*Is.* 40.1-5)] says your God; speak to the heart of Jerusalem and sho[ut to her that her service is done,] that her fault has been forgiven, that from the hand of [the Lord] she has received double for all her sins" (Tanhumim [4Q176] 1-2.j.4-6). The same hope inspired the great poetry of the Hymns to Zion (4QPs¹¹ vii-viii; 11Q5 xxii.8-15).

Finally some, on the grounds that their standard of observance alone befitted the holiness of Jerusalem, tended to identify their community with the holy city, as they did with the Temple (Rule of the Community, 1QS vii.5-6). Thus, the sapphire foundations of the New Jerusalem in *Isaiah* 54.11 mean "the council of the community, the priests and the people" (Isaiah Peshar^d, 4Q164 1.2). Simi-

larly 2 *Samuel* 7.12-14 was understood to refer to "the branch of David," who will arise with the "Interpreter of the Law who [will rise up] in Zi[on in] the last days" (Florilegium, 4Q174 1-3.10-12; cf. Rule of the Community 1Q28a ii.11-17).

JEROME MURPHY-O'CONNOR

JESUS. The following article deals with Jesus only inasmuch as he can be understood through historical research. A comparison with Jesus will be made using only the texts discovered in the eleven caves at or near Qumran. Within the Qumran texts, as far as possible, a distinction will be drawn between texts that go back directly to the Qumran community or the wider movement of which it was a part (the Essenes) and those which were merely part of their library. Throughout (in keeping with the Rule of the Community), the "Qumran community" is taken to mean wherever members lived (1QS vi.2). In general, the Rule of the Community is cited only according to 1QS, without any reference to the parallel manuscripts.

The State of Research on Jesus. Sources for the historical Jesus include the four canonical Gospels (the oldest, the *Gospel of Mark*, dates from about 70 CE) and also the *Gospel of Thomas* from among the documents found at Nag Hammadi. Jesus grew up as a Jew in Nazareth in Galilee. That he was baptized by John the Baptist is historically certain, but whether the Baptist originally belonged to the Qumran community cannot be ascertained. A critical reading of the Gospels indicates that the locations of Jesus' activity were in Galilee and Gaulanitis, around Capernaum, Bethsaida, and Chorazin—largely at

the northern end of the Sea of Galilee. Jesus came on the scene as a kind of itinerant preacher and wonder worker, neither of which has virtually any equivalent in the Qumran texts (However, with regard to the laying on of the hands for healing, which was performed by Jesus, according to *Mark* 8.23, 8.25 and *Luke* 13.13 see the parallels in 1QGenesis Apocryphon xx.22, xx.29). Jesus and Qumran share the basic presupposition that the end of time was imminent, in other words, that a new and definitive divinely ordained world was expected in the near future. The principal theme in the preaching of Jesus was the "Kingdom of God" (*basileia tou theou*) understood eschatologically, while the genre that was characteristic of Jesus' preaching was the parable. There is hardly any instance of either in the Qumran texts. That Jesus understood himself to be the Messiah has been almost unanimously ruled out by critical research. Around 30 CE the Roman prefect Pontius Pilate (26–36 CE) had Jesus crucified.

Jesus and the Qumran Texts. In this article only the main points of comparison can be covered. The theories that Jesus was an Essene, and even that he should be identified with a particular figure in the Qumran texts, have been judged too far-fetched by critical researchers and therefore are not dealt with here. Neither are theories that are overly speculative, such as the conjecture that Jesus may have celebrated his Last Supper according to the Essene calendar, since it is difficult to determine historically that Jesus even had a last supper on the basis of the New Testament accounts of it. (Accordingly, there will be no attempt at a comparison between the Last Supper accounts and the Qumran meal texts in 1QRule of the Congregation [1Q28a] ii.11–22 and 1QRule of the Community vi.2–6.) Unconnected parallels, such as those between the Beatitudes from the Sermon on the Mount (*Mt.* 5.3–12) and the Qumran texts (see particularly the 4Q Wisdom Text with Beatitudes [4Q525]), must likewise be left undiscussed. In the Qumran texts there is no reference of any kind to Jesus or to early Christians (nor have any New Testament texts been found in Cave 7), and this also holds true vice versa—New Testament texts do not make direct reference to the Qumran sectarians or their compositions.

Discipleship or community. The basic difference between the Qumran community and the Jesus movement lies in group sociology: The Qumran covenanters organized themselves into a closed community (*yahad*), while Jesus called only certain individual disciples to follow him (since the number of "the twelve" as representing the whole of Israel should probably not be read back into Jesus' lifetime, the representation of the twelve tribes by twelve men in 1QRule of the Community viii.1–4 is not discussed here). To all who encountered him, particularly

his fellow Jews, Jesus preached the Kingdom of God, but he did not gather his followers into communities. This was done by Christians only after the crucifixion, when they began to understand themselves as a "church" (*ekklesia*). Thus, from a sociological standpoint, these later Christian communities (*ekklesiai*) are more similar to the Qumran community or communities than the earliest Jesus movement.

Christians' identification of themselves as "children of light" (*huiioi tou photos/benei 'or*), a phrase reminiscent of the Qumran community and found in the parable of the unjust steward (*Lk.* 16.1ff.) should not be attributed to Jesus, because verse 8 is almost certainly a later addition to the parable.

The Torah. Jesus' attitude toward the Torah is difficult to characterize, and it is even less clear to what extent his activity in Galilee and Gaulanitis was influenced by the local attitude to the Torah, which certainly differed somewhat from that which prevailed in Jerusalem. Nevertheless, the contrast between the strict understanding of the Torah as it is found in the Qumran texts, and Jesus' behavior, particularly with regard to the Sabbath and questions of ritual purity, is unmistakable.

Perhaps the most controversial passage in the canonical Gospels regarding Jesus' stance on the Torah is *Mark* 7.15; it is a statement that probably goes back to Jesus. On the one hand, Jesus makes the Torah more stringent by contrasting the external eating of food with ethical behavior; on the other hand, he barely stops short of abrogating the Torah (see *Leviticus* 11 and *Deuteronomy* 14).

One constant characteristic of Jesus' preaching and practice was his table fellowship with tax collectors and sinners (see *Mk.* 2.15–17 and *Lk.* 5.29–30, *Lk.* 7.34 parallels *Mt.* 11.19, *Lk.* 15.2, 19.7). In the Qumran community, by way of contrast, not even the novices who had already spent a whole year in the community were allowed "to touch the purity of the Many (i.e. the full members)" (1QS vi.16–17) and even after an additional year, they were not yet allowed to partake of "the drink of the Many" (1QS vi.20). Furthermore, in 1QRule of the Congregation ii.3–11, following *Leviticus* 21.16–24, the Qumran community provides for the exclusion of all those with physical impairments (the lame, the crippled, and the blind, among others) from the actual community (perhaps only in the eschaton). It almost seems as if Jesus were presenting an opposing agenda when (in a saying in *Luke* 14.12–14) he clearly proclaims that "the crippled, the lame and the blind" are to be invited as partakers at the table, in addition to the "poor" (a positive self-designation that the Qumran community used of itself). This is repeated in *Luke* 14.21 in the parable of the banquet in the Kingdom of God.

Jesus' attitude toward the Sabbath is likewise inconsis-

tent with that of the Qumran community. In addition to the doubtlessly authentic saying of Jesus in *Mark* 2.27, which argues from the account of Creation, *Mark* 3.1–5 seems characteristic of Jesus, because he equates doing good on the Sabbath with saving a life, which was permissible in any case, and thus reduces his opponents to an absurd position. The Qumran texts, by contrast, advocate the strictest observance of the Sabbath, as the Damascus Document x.14–xi.18, for example, shows (partly preserved in 4Q266, 267, 270, 271). The prohibition in Damascus Document xi.13–14 (also in part in the parallel manuscript copies from Cave 4) and 4QSerekh Damascus (4Q265 7.i.6–7) against helping to save an animal that has fallen into a cistern or a pit would have struck Jesus as absurd, since the saying in *Luke* 14.5 (parallels *Matthew* 12.11–12) shows that he starts from the opposite assumption.

In *Mark* 10.2–9 (parallels *Matthew* 19.1ff.) Jesus argues from Creation (*apo archês ktiseôs*) against the possibility of divorce, which “Moses” allowed. Precisely this approach, arguing from Creation, is also found once in the Damascus Document iv.20–21 (partly preserved in the parallel manuscript copies 4Q269 and 6Q15), where the same passage, *Genesis* 1.27 is cited. While in *Mark* 10.9 (parallels *Matthew* 19.6) Jesus forbids divorce, the Qumran community seems to go even further by requiring men to be married to only one woman during their lifetime. Of course, the Qumran texts make no reference to any exception quoted by Moses.

In the so-called antitheses in the Sermon on the Mount (*Mt.* 5.21–48), of which particularly the first and the second are probably authentic, Jesus juxtaposes “but I say to you” to another tradition. This has a certain parallel in 4QMMT (4Q394–99), a document which comes from the earliest period of the Qumran community. There, the opposing opinion is frequently rejected with the words “(but) we say” (B 55, 65, 73 along with the common “but we think”; see also “but you know” in B 68, 80; C 8).

The command to love. In the Damascus Document vi.20–21 the commandment of *Leviticus* 19.18 “You shall love your neighbor as yourself” is reflected in the version “one should love his brother (see *Lv.* 19.17) as himself.” This also includes strangers: “one should look after the stranger” (Damascus Document vi.20–21 is also partly preserved in 4Q269 and 6Q15). In the smaller catalogs of virtues in 1Q Rule of the Community “love” is “faithful love” (*ahavat hesed*—see ii.24, v.4, v.25, viii.2, x.26), and in the large catalog of virtues (1QS iv.3aβ–6a) “unending goodness” (*tov ’olanum*) occurs (1QS iv.3). There can be little doubt that in all these cases it is the community members who are understood as the objects of these virtuous attitudes.

Repeatedly, Jesus’ command to love one’s enemies (*Mt.*

5.44 [parallels *Lk.* 6.27, 6.35]) stands in contrast with the Qumran texts. The Rule of the Community explicitly says that one should “love all the children of light,” and “hate all the children of darkness” (1QS i.9–10; see also ix.21–22, also partially preserved in 4Q256, 258, 259). Whether Jesus is here inveighing against the Qumran community cannot be determined. Jesus seems to have used “hate” in a general sense, but in the Qumran texts “hate” is used in particular dualistic religious contexts and presupposes a picture of God that is alien to Jesus. (It is a different matter in *midrash Sifra Leviticus* 19.18, where hate as “vengeance” and “rage” against gentiles is allowed.) Explicit love for enemies, in the stark wording that we find with Jesus, has no parallels in the Jewish literature of antiquity. Clearly, it must go back to Jesus himself, who again argues from Creation (the more original version is probably in *Matthew* 5.45 as opposed to *Luke* 6.35).

Eschatology. The Qumran texts turn out to be particularly helpful for reaching a better understanding of Jesus’ eschatology, which is characterized by its combination of future and present aspects. For Jesus, salvation is not only hoped for but also already experienced. Until the discovery of the Qumran texts, the common opinion was either that Jesus had a completely new understanding of eschatology over and against his own Jewish milieu (W. G. Kümmel), or that Jesus’ eschatology was falsely attributed to him, because it was not attested in the Judaism of the time (R. Bultmann). Recently, the so-called Jesus Seminar in North America has even supposed that Jesus’ teaching completely lacked any eschatology or apocalypticism, but his view is exegetically untenable (one has only to cite the petition in the Lord’s Prayer “Thy kingdom come” in *Luke* 11.2 [parallels *Matthew* 6.10] and some of the parables of Jesus). Among the most important authentic sayings of Jesus which speak of the presence of future salvation are *Luke* 11.20 (parallels *Matthew* 12.28) (as Jesus was casting out demons, the Kingdom of God has already begun to break through), and also *Luke* 10.23–24 (parallels *Matthew* 13.16–17); *Luke* 7.22–23 (parallels *Matthew* 11.5–6); and *Mark* 2.19a (parallels *Matthew* 9.15a and *Luke* 5.34).

There is no significant anticipation of future salvation as such in the Qumran texts. However, in the frequently encountered references to the community’s communion with the angels (e.g., 1QHodayot^a xi [formerly iii] 21–23, xix [formerly xi] 14–15; 4QAgnes of Creation [4Q181] 1.ii.4–5; the Songs of the Sabbath Sacrifice [4Q400–407; 11Q17; Mas1k], which perhaps did not originate in the Qumran community) and from the fact that the community understood itself to be the Temple of God (see particularly 1QS viii.5, viii.8–9), it is clear that the present for them is no longer devoid of salvation, as is the case in

the apocalyptic literature. This is the background for the transposition of future eschatological concepts into the present that was made by the Qumran community (H.-W. Kuhn) in, for example, the community songs in 1QHodayot^a (especially xi.19–23, xix.10–14), in the closing song of 1QRule of the Community (xi.7–9), and most likely also in other texts (4QWar Scroll^a [4Q491] 11.i, particularly line 1; 4QAgnes of Creation 1.ii.4 and in particular also 4QHodayot^a 7.ii [now part of 1QHodayot^a xxvi] and 4QHodayot^c [4Q431 1]). The Qumran community's members, upon their entrance into the community, saw themselves as having already been transported into heaven (1QHodayot^a xi.20, and perhaps also 4QWar Scroll^a 11.i.11). Indeed, the Qumran devotee had already experienced a new creation (1QHodayot^a xi.21, xix.13; compare vii [formerly xv] 16–17).

With respect to the much-debated 1QHodayot^a xi.21, on the basis of its context and the parallels with 1QHodayot^a xi.20–23 in 1QHodayot^a xix.10–14, it is clear that the words *yatsarta me-'afar* ("you have created from the dust") in xi.21 do not refer to the first creation of humanity from dust, but rather to its new creation out of what is transitory, out of an existence marked by sin. 4QHodayot^a 7.ii.8 is now additional confirmation that what is meant by creation "from the dust" (*me-'afar*) in 1QHodayot^a xi is the new creation of humanity as expressed by the phrase *wa-yarem me-'afar evyon le-[rum 'olam]* ("and thus he has raised the poor man out of the dust to the [everlasting heights]"). The corresponding sayings of Jesus, however, should not be understood against a cultic backdrop. They should rather be interpreted as Jesus expressing that the coming Kingdom of God is already present in his activity.

One of the sayings of Jesus about the immediacy of the end time, *Matthew* 11.5–6 (parallels *Luke* 7.22–23), now has a parallel in 4Q521; however, this Qumran text speaks in a traditional manner only about the future. In the text from the Sayings Source (Q) that can be extrapolated from *Matthew* and *Luke*, Jesus uses words from the *Book of Isaiah* (35.5–6, 29.18–19, 26.19, 61.1) to paint a picture of the future eschatological salvation, which he understands as being already present. The high point of the recounting of the eschatological salvific events is Jesus' tidings to the poor. The Qumran manuscript (4Q521) contains the remains of a document which has been misnamed the "Messianic Apocalypse" (where *mshyhy* [which should be read as *meshihay* and not as *meshiho*] in 2.ii.1 undoubtedly means the biblical prophets corresponding to 8.9). This text did not necessarily originate in the Qumran community. Fragment 2.ii contains two lists, which, like Q 7.22–23, use biblical sayings to describe eschatological salvation, but whose subject is God. In the first list (line 8), the correspondences with Q pri-

marily concern healing from blindness; in the second list (lines 12ff.) 4Q521 and Q have the same sequence of the raising of the dead (*Is.* 26.19) and the preaching to the poor (*Is.* 61.1). After citing the preaching to the poor, the Qumran text continues with further matters, so that the climax of the text is different. Behind Jesus' saying and behind 4Q521 there may well stand a common Jewish tradition that describes the time of salvation.

Jesus and the Teacher of Righteousness. The external circumstances of the lives of these two individuals were very different. The Teacher of Righteousness was a priest (Peshet Psalms^a [4Q171] iii.15; compare Peshet Habakkuk ii.8) and perhaps even the high priest (H. Stegemann), while Jesus came from a humble family. Despite this, there are some amazing correspondences between Jesus' consciousness of being sent and that of the Teacher of Righteousness. According to the so-called Songs of the Teacher in the Hodayot, God has not only made known all the mysteries of the prophets to the Teacher of Righteousness (Peshet Habakkuk vii.4–5), but God has even made him "a banner for the righteous elect" (1QHodayot^a x [formerly ii] 13) and "a father to the children of grace" (xv [formerly vii] 20). The Teacher of Righteousness becomes a "trap for the rebellious, but healing for all those who turn from sin" (x.8–9).

This corresponds with Jesus' basically authentic saying that salvation is decided in accordance with the position that one takes with respect to him, because this will be the criterion used by the future Son of Man at the Judgment (see the older version in Q [*Lk.* 12.8–9] and in *Mark* 8.38). The cities that Jesus condemns, through his words, come under the judgment of God (*Lk.* 10.13–15, parallels *Mt.* 11.21–22). His activity is already the irruption of the Kingdom of God. This clearly goes beyond the claims of the Teacher of Righteousness.

The Teacher of Righteousness became the founder of one of the most important pious associations of the time. Jesus gathered about himself a few people from the outermost edges of Israel/Palestine. Although the Teacher of Righteousness had the "Wicked Priest" after his blood (Peshet Psalms^a iv.8; see also Peshet Habakkuk xi.4–8), it seems that he died a natural death (at about the end of the second century BCE). Jesus, however, was evidently handed over by the authorities of his own people (according to all four canonical Gospels, through the connivance of the high priest Caiaphas), and was falsely put to death as a revolutionary by the Roman prefect of Judea, Pontius Pilate, through the ignominious punishment of crucifixion.

The Teacher of Righteousness had a major impact on his own extraordinarily well-organized Qumran community that endured for at least a century and a half (the Damascus Document vi.10–11 does not support any belief

that he would return). But, while the Jews on the whole managed to overcome the catastrophes of the two revolts in the first and second centuries CE, the Teacher of Righteousness and his followers no longer played any role after the destruction of the Qumran settlement by the Romans in 68 CE, after which the whole community eventually died out. The followers of Jesus, on the other hand, after his death, began to appeal to eyewitnesses, saying that God had raised him from the dead (see particularly *I Corinthians* 15.3–5). On the basis of Jewish categories, among other things, Christians understood Jesus as the Messiah. Using more Hellenistic categories, they saw him as the preexisting Son of God (e.g., *Philippians* 2.6–11), and the Jesus movement that had begun as a Jewish splinter group soon covered almost the whole world as it was known at that time.

HEINZ-WOLFGANG KUHN

Translated from German by ROBERT E. SHILLEN

JEWELRY is among the earliest artifacts and includes practically all items used for personal adornment. Gold jewelry was considered an expression of wealth, social standing, and economic security and at the same time valued most highly as an amulet (*apotropaion*) for the living and the dead, transmitting magical power and protecting the bearer against evil. Thus, many pieces were found among grave goods. Jewish women were permitted to wear jewelry and did so especially on special occasions (e.g., as a bride) and on festivals, jewels were not worn at times of mourning.

In Hellenistic and Roman times the art of jewelry making flourished, and Alexandria in Egypt was one of the major centers. Goldsmiths created elaborate and aesthetic jewelry, combining gold with precious and semi-precious stones and colored glass. In comparison, the standard of local Judean craftsmanship was moderate in forms, motifs, and techniques. Gold and silver were not readily available, so simpler versions in bronze, stone, glass, frit, and faience were used. It is nearly impossible to classify jewelry according to ethnic and religious contexts, not to mention the separate pagan, Jewish, and Christian contexts. Because of the economic situation in the late Second Temple period and afterward, the amount of jewelry unearthed is not large, particularly in Jewish areas, thus the paucity of finds in the Judean Desert.

The most common types of jewelry are necklaces, pendants, diadems, finger rings, earrings, and nose rings. The *qatla* (*Kel.* 11.8) is a necklace formed by pendants and strung beads of different materials. Representative is a necklace from the late second-century CE tomb in Jerusalem and one in the collection of the Ha'aretz Museum in Tel Aviv. Images for pendants include the amphora, basket, lamp, key, hand, phallus, Hercules' club, bull's head, Egyptian gods like Bes, cluster of grapes, and pomegranate. Particularly common is the crescent-shaped gold pendant (*lunula*), a motif that can be traced back to Neolithic times and has always been very popular in the Near East. In Roman imperial times it was worn by women and children and was meant to protect the bearer

against evil spirits and to guarantee life and prosperity. The hoard from Beth-Guvrin–Eleutheropolis, buried during the Bar Kokhba Revolt, contained two chain necklaces with crescent pendants. In addition, a spherical, bell-shaped silver pendant from the Cave of the Letters was found together with beads.

A miniature soft-stone pendant from a Jerusalem tomb proves to be unusual; the material from which it was made was not susceptible to ritual impurity. The diadem from a third-century CE burial at Kefar Giladi (northern Israel) is made of a band of thin-ribbed gold foil with nine applied gems of stone, glass, and mother-of-pearl. It is a good example of Roman polychrome style. Finger rings of gold, silver, bronze, and iron are very common, depending on the wealth of the owner. Several bronze and iron rings from Cave 4 at Murabba'at are either plain or engraved. Precious gold rings carry gems with figures and scenes in miniature carving known as *intaglio* (i.e., engraved into the surface and thus giving the impression of a stamp). The known rings from the first century BCE to the third century CE bear classical motifs with magical and religious significance; they were personal seals or amulets. In Jewish sources the finger ring (*'etsba' shel taba'at*) was separated into two classifications: rings with seals (*taba'ot hotam*) were worn by men and used for sealing documents; the rings without seals were considered women's jewels (B.T., *Shab.* 59.2).

Earrings display quite a variety of shapes. Hoop- and boat-shaped earrings were made by beating gold foil over a core made of paste and were sometimes decorated with stones and rows or clusters of granulation (the application of minute grains of gold directly to the sheet metal). This type is represented in the Beth-Guvrin–Eleutheropolis hoard. A ceramic mold for mass-producing earrings consisting of a hoop with two concentric rows of globules came to light in the City of David excavations in Jerusalem predating the city's destruction in 70 CE. In Jerusalem several pairs occur in male burials of the early third century. Since at that time only women wore earrings in the Near East, the deceased must have been Roman legionaries whose wives placed the jewels as grave offerings. A pair of earrings from another third-century CE tomb in Jerusalem belongs to the so-called shield-cross-bar-and-pendant type, which continues a widespread Hellenistic group. The shield is an openwork circular frame of lotus blossoms, holding a female head in chalcidony. Three movable pendants of pearls and glass beads hang from a horizontal bar. Simpler and popular Eastern Mediterranean versions are crescent-shaped earrings with movable pendants and those consisting of a convex shield with one or two pendants. These types occur in the Beth-Guvrin hoard and in Ketef Hinnom to the west of Jerusalem. A pair of basket-shaped earrings from

a tomb at Hamat-Tiberias of the second–third century CE is decorated with minute rosettes in filigree, a technique in which wires in the shape of the decorative elements are soldered to pieces of sheet gold.

The custom of wearing nose rings is known; on Shabbat Jewish women were not permitted to go out "with a necklace or nose ring or with a ring that bears no seal or with a needle that has no eye" (B.T., *Shab.* 6.1). Gold nose rings were identified at Mamphis and Oboda in the Negev and at Petra in Nabatean contexts. Needles were considered jewelry when used as hairpins (B.T., *Shab.* 60.a); some of these found in the Judean Desert caves could have been used in this way. In a wider sense, personal items such as mirrors, combs, and cosmetic articles related to eye makeup can be counted among female jewelry and are treated as such in Jewish writings. A rectangular box with a vaulted top and a sliding lid at the bottom, found in the Cave of the Letters, could have been used as a jewelry box.

Most of the items described here are of local workmanship, although individual workshops have not yet been identified; however, the number of ceramic and stone molds for casting jewelry found in nonstratified contexts is relatively large and needs further study.

RENATE ROSENTHAL-HEGINBOTTOM

JEWISH CHRISTIANS. Discussions of Jewish Christians (not a term used in the ancient sources, except once in Jerome [*Zach.* 3.14.9]) and Jewish Christianity have been plagued by problems of definition. An adequate definition must recognize that the distinctiveness of so-

called Jewish Christians lies in the fact they were both Jews and Christians and must take account of their evolving relationships both to other Jews and to other Christians over the four centuries (first through fourth centuries CE) in which something of their history can be traced. Definition by means of a particular set of beliefs is impossible, since, while all Jewish Christian groups differed from non-Christian Jews in the status they attributed to Jesus (though not all Jewish Christian groups had the same kind of Christology), doctrinal beliefs cannot distinguish Jewish Christians from other Christians. Some Jewish Christians (those whom Epiphanius calls "Nazoreans") did not differ in beliefs from the "catholic" Christians of their time. [See Epiphanius.] What distinguished them, as well as other Jewish Christian groups, from other Christians were their Jewish observances.

So Jewish Christians should be defined as Jews who held Jesus to be the Messiah (or some equivalent term) and also continued to live as Jews, observing Torah. By their observance of circumcision, Sabbath, dietary laws, and purity regulations, they maintained their Jewish identity, unlike Christians of Jewish ethnic origin who gave up observing Torah. Thus Christology distinguished them from other Jews; Torah observance distinguished them from other Christians. Their identity as both Christians and Jews, which increasingly led to their being disowned as Christians by other Christians and as Jews by other Jews, means that the term Christian Jews should be regarded as just as appropriate as the more usual Jewish Christians. Considering them more Christian than Jewish or more Jewish than Christian depends on perspectives that define Christianity in non-Jewish terms or define Judaism in non-Christian terms. This was what other Jews and other Christians did in the process of marginalizing and disowning Jewish Christians (cf. Jerome, *Epistle* 112.3: "since they want to be both Jews and Christians, they are neither Jews nor Christians"), but in their own self-understanding their identity as both Jews and Christians was unproblematic.

History and Character. In the earliest period, up to the fall of Jerusalem in 70 CE, most Christians of Jewish origin were, according to our definition, Jewish Christians. They retained their Jewish identity by observing Torah. There are few indications of debate about observance of Torah by Jews within the Christian movement in this period. (This was a quite different issue from, and should not be confused with, the question of whether gentile Christians should observe Torah, which was debated.) The Jerusalem church in particular, along with other Jewish Christians visiting Jerusalem, maintained its clearly Jewish identity by continuing to participate in the worship at the Temple, so that the destruction of the Temple was a factor in the growing marginalization of

Jewish Christians with respect to the rest of Judaism in the post-70 period. This marginalization and, subsequently, separation accompanied the growing dominance of rabbinic Judaism and the marginalization of all other forms of Judaism. In this process Jewish Christians were disowned not only because of their Christology and their association with gentile Christianity, but also because they did not follow rabbinic *halakhah* in their observance of Torah. Their alienation from other Jews can probably also be associated with their geographical location: From the second century onward there seem to have been rather few Jewish Christians in Palestine west of the Jordan, while their main concentrations were in areas to the east of the Jordan, the northeastern parts of Palestine and Syria.

That Jewish and Christian identity were incompatible became not only the general Jewish view but also, from the second century onward, the general Christian view. Justin Martyr (c.100–163/165) advocated full fellowship with Jewish Christians who continued to observe the Torah, unless they tried to persuade gentile Christians to do the same, but admitted that this tolerance was not shared by all gentile Christians in his time (*Dialogue with Trypho* 47.1–2). After his time it was rare. The view that came to prevail was that observing the Torah was incompatible with belief in Jesus Christ. Probably most Christians of Jewish ethnic origin lost their Jewish identity, and those who continued to observe the Torah were confined to sectarian groups regarded as schismatic or even heretical by the gentile church. Epiphanius, who knows of no heretical beliefs he can ascribe to the Nazoreans, as he can to other Jewish Christian groups, nevertheless calls them "nothing but Jews" (*Panarion* 29.9.1), cursed by God for their vain attempt to observe the Law (29.8.1–7).

The nature and origins of the various different Jewish Christian groups are debatable. The Nazoreans or Nazarenes should probably be seen as the most direct heirs of the earliest Jerusalem church. [See Nazoreans.] Their beliefs, including the virginal conception and divinity of Jesus, were orthodox by the standards of catholic Christianity, and they even took a positive view of the Pauline mission. Though the church fathers sometimes seem to have called all Jewish Christians Ebionites, the term should more properly be applied to a form of Jewish Christianity which, diverging from the Nazarenes, adopted positions that were less orthodox from both mainstream Christian and Jewish perspectives. [See Ebionites.] Their Christology had no place for the virginal conception and divinity of Jesus, while their acceptance of the Torah was strongly qualified by a rejection of the sacrificial cultus. Their bitter polemic against Paul no doubt reflects catholic Christianity's interpretation of Paul as disallowing Torah observance by Christians. The

divergence between Nazorean and Ebionite forms of Jewish Christianity may derive from the schism in Palestinian Jewish Christianity, which, according to Hegesippus, occurred at the time of the election of Simeon as second bishop of Jerusalem (quoted in Eusebius, *Ecclesiastical History* 4.22.4–5). The distinctively Ebionite critique of sacrifice is probably a response to the destruction of the Temple. Ebionism thus would have developed east of the Jordan in the period after 70 CE, but it may have taken several forms. The fragments of the *Gospel of the Ebionites* portray Jesus as condemning and abolishing sacrifices and reflect the Ebionite prohibition against eating meat. The Jewish Christian source in the Pseudo-Clementine *Recognitions* 1.27–71 seems Ebionite in regarding sacrifices as a Mosaic concession to Israel which Jesus came to abolish, but it does not engage in the more radical criticism of the Hebrew scriptures or in the speculative elaboration of the idea of the True Prophet that is characteristic of the more certainly Ebionite material in Pseudo-Clementine literature. The Elkesaites, [See Pseudo-Clementine Literature.] who also rejected sacrifice, can plausibly be seen as originating from the Ebionite movement at an early stage of its history. [See Elkesaites.]

The Dead Sea Scrolls and Jewish Christians. A number of scholars, beginning with J. L. Teicher, soon after the first publication of scrolls, have identified the Qumran sect with a Jewish Christian group. The mere fact that none of the scrolls refers to Jesus, whereas all Jewish Christian literature of which we know does, is sufficient to discredit such a view. More plausible are theories that explain the parallels and resemblances between the scrolls and what is known of Jewish Christianity by postulating the Essene origin of the scrolls and a greater or lesser degree of Essene influence on Jewish Christianity. Such theories can be divided into two types: those that postulate Essene influence on the early Jerusalem church (and therefore depend largely on the New Testament's evidence about early Jewish Christianity) and those that postulate Essene influence on Jewish Christian groups at a later stage in order to explain certain features of such groups according to the patristic evidence. Sometimes it has been argued that significant numbers of Essenes became Christians in the period after the destruction of the Qumran settlement, with the result that either Ebionism (Cullmann, 1954, pp. 35–51; Daniélou, 1964, pp. 55–64) or Elkesaitism (Reeves, 1996, pp. 47–48) can be seen as essentially a sort of Essene Christianity. [See Elkesaites.]

Qumran and the Early Jerusalem Church. There are a number of important parallels between the Qumran community and the early Jerusalem church.

Both groups saw themselves as the true Israel of the last days. But whereas the Essenes understood this in an exclusive, sectarian sense, the first Jewish Christians

more probably understood themselves as the beginning of the messianic renewal of Israel, which potentially included all Israel.

Both groups applied the image of the temple of God to their own community and are the only two Jewish groups known to have done so. This theme, which is widespread in early Christian literature, can be traced back to the early Jerusalem church by means of *Galatians* 2.9, which reports that James, Peter, and John were known as “pillars.” This identification of leaders of the community with specific architectural features of the new temple can be paralleled in Peshet Isaiah^d (4Q164) and by the reference in Peshet Psalms^a (4Q171) to the Teacher of Righteousness as the pillar of the building that is the community.

Two differences should be noted. The early church probably saw itself as the messianic temple of the eschatological age, whereas the Qumran sect saw itself functioning as a temple only until the building of the eschatological temple in Jerusalem. Secondly, whereas the Qumran community boycotted the Jerusalem Temple, the Jerusalem church continued to worship in it (*Acts* 2.46). This again shows the Jewish Christians to be less sectarian in relation to the rest of Judaism than the Qumran community was.

Each group referred to itself or its way of life as “the Way” (Rule of the Community from Cave 1 at Qumran 1QS viii.13–14; ix.17–18, x.20–21; *Acts* 9.2), probably both in dependence on *Isaiah* 40.3. However, the Qumran interpretation of this as the study and practice of Torah (1QS viii.15–16) differs from the Christian usage.

Both groups practiced a community of goods (*Acts* 2.44–45, 4.32–5.11; 1QS vi.19–20, vi.22, vi.24–25) and are the only two Palestinian Jewish groups known to have done so. How close the resemblance is is debatable, but similarities of organization have been argued (Capper, 1995, pp. 323–356). Both groups also practiced common meals (*Acts* 2.42, 2.46; 1QS vi.4–5). In addition, both groups engaged in the *peshet* exegesis characteristic of the Qumran commentaries (Ellis, 1978; R. Bauckham, 1990, chap. 4). The role of the Twelve in the Jerusalem church can be compared with that of the ruling group of twelve in the Qumran community (1QS viii.1).

Qumran and the Ebionites. Three resemblances have been observed between the Qumran community and the Ebionites. First, the name of the Ebionites (meaning “the poor”) is paralleled by the occasional use of “the poor” as a self-description by the community in the Dead Sea Scrolls (4Q171 2.9–10, 3.10; War Scroll 1QM xi.9, xi.13, xiii.12–14). Second, there are some resemblances between the dualism of the Qumran texts and that attributed to the Ebionites by Epiphanius (*Panarion* 30.16) and found in the Ebionite sources of the Pseudo-Clementines,

but there are also significant differences. Finally, both groups practiced frequent ritual ablutions, but the widespread popularity of ritual purification in late Second Temple Judaism makes this resemblance less remarkable. [See Epiphanius.]

Against these resemblances must be set major differences. Unparalleled at Qumran are the Ebionites' abstinence from wine and meat, their radical rejection of the sacrificial cultus as not commanded by God, their rejection of the "false pericopes" in the Pentateuch, and their rejection of the Prophets. These make any significant Essene influence on Ebionism implausible. If a particular Jewish sectarian influence accounts for the special character of Ebionism, the Nazarenes (a non-Christian Jewish group described by Epiphanius [*Panarion* 18]) should be considered a more likely candidate, since they rejected sacrifice, abstained from meat, were critical of the Pentateuch, and lived in Transjordan.

RICHARD BAUCKHAM

JOB, BOOK OF. Four fragmentary manuscripts from Qumran Caves 2 and 4 preserve portions of the book of *Job*. The Cave 2 *Job* (2Q15), a manuscript written in Herodian script, is represented by only a single fragment, containing portions of five words. Despite the small size, the fragment can be securely identified as containing material from *Job* 33:28-30, part of Elihu's speech. 4QJob^a (4Q99) and Job^b (4Q100), are written in Hasmonean scripts and consist of twenty-two and six fragments, respectively. 4QJob^a preserves parts of *Job* 31.14-19, 32.3-4, 33.10-11, 24-26, 28-30, 35.16, 36.7-11, 13-27, 32-33, 37.1-5, 14-15. The fragments of 4QJob^b preserve parts of *Job* 8.15-17, 9.27, 13.4, 14.4-6, 31.20-21. The text of 4QJob^a is written stichometrically, each line usually containing two cola. In several instances Job^a differs from the Masoretic Text, including divergences in orthography, grammatical forms, and readings. Although these manuscripts contain relatively little of the text of the book of *Job*, they provide evidence that the Elihu speeches (*Job* 32-37), which many scholars consider to be a secondary part of the composition, were part of the book by the turn of the era.

The most interesting manuscript is Paleo-*Job*^c (4Q101), written in Paleo-Hebrew script. Three fragments of this manuscript survive, containing portions of *Job* 13.18-20, 23-27, 14.13-18. Although Paleo-Hebrew texts are difficult to date, Paleo-*Job*^c has been estimated to come from some time in the period 225-150 BCE, probably toward the earlier part of the period (McLean, 1982, p. 52). The text was written stichometrically, each line beginning with a new stich. Typical of Paleo-Hebrew manuscripts, dots or strokes serve as word dividers within each line. Since the great majority of manuscripts written in Paleo-Hebrew are books of the Torah, it is somewhat surprising to find the book of *Job* written in Paleo-Hebrew. Perhaps, as the editor of Paleo-*Job*^c suggests, the use of Paleo-Hebrew script reflects the tradition that Moses wrote the book of *Job* (see B.T., *B.B.*, 14b, 15a). The orthography of Paleo-*Job*^c is more conservative than that of the Masoretic Text, using no internal *matres lectionis* (consonantal letters which indicate the presence of a vowel). In other respects it appears to preserve the same text as the Masoretic Text, with only one or two minor variations.

In addition to the four Hebrew manuscripts of *Job* the Qumran caves have also yielded two copies of an Aramaic *targum* ("translation") of *Job*, a text known as Targum of Job (4Q157), which preserves in Aramaic translation only *Job* 3.5–9, 4.16–5.4, and the much more extensive Targum of Job from Cave 11 (11Q10), which preserves portions of the text from *Job* 17–42. The script of the Cave 11 Targum of Job dates from the early first century CE, although the date of the translation may be earlier. This Targum of Job appears to have been translated from a text closely similar to the Masoretic Text, with most divergences appearing to be the result of the translator's attempt to produce a clear and understandable translation. The end of the *targum*, however, differs significantly from the Masoretic Text both in detail and in extent, the *targum* ending with lines which correspond to *Job* 42.9–11, whereas the Masoretic Text continues on to 42.17. [See *Job*, Targum of.]

CAROL A. NEWSOM

JOB, TARGUM OF. Among the Dead Sea Scrolls, remains of two manuscripts of a Targum of Job were discovered, one in Cave 4 at Qumran (4Q157), the other in Cave 11 (11Q10). Only two fragments from Cave 4 (hereafter, 4QTargum of Job), dating to the middle of the first century CE, have survived. Frg. 2 is so small that its contents cannot be identified, although it is known that it comes from the same manuscript. Frg. 1 shows the remains of two columns and contains text portions that virtually correspond to passages from *Job* 3.5–6 and 4.17–5.4.

About 15 percent of the original text of the Targum of Job from Cave 11 (hereafter, 11QTargum of Job), has survived. Discovered by the bedouin in 1956, the rights to study and publish the document were procured from the Palestine Archaeological Museum in 1961 by the Royal Dutch Academy of Sciences and Arts, which entrusted its editing to J. P. M. van der Ploeg and A. S. van der Woude. The Aramaic text of the document, written in an elegant Herodian script from the first decades of the first century CE, is a fairly faithful rendering of its biblical base text, allowing the conclusion that the complete scroll measured about 7 meters (23 feet) by 12–13 centimeters (5 inches) and contained about sixty-eight columns of sixteen or seventeen lines. In its present state, the end of the manuscript, containing portions of ten columns (11Q10

xxix–xxxviii) corresponding to passages from *Job* 37.10–42.11, is still in the form of a fragmentary scroll 109 by 4 to 6 centimeters (43 by 2 inches) in size (the lost bottom of column xxxviii and the top of column xxxix may have contained a paraphrase of *Job* 42.12–17).

Twenty-three tiny fragments (A 1–5, B–C, D 1–2, E–R), which contain only a few letters each, also derive from this "small scroll." From the preceding section of the document only twenty-eight fragments deriving from twenty-nine columns (including the fragment published by B. Zuckerman and S. A. Reed, 1993) remain, the text of which corresponds to passages from *Job* 17.14–26.33. Because the beginning of the manuscript is lost we do not know whether 11QTargum of Job belonged to the same work as 4QTargum of Job.

It is extremely difficult to state precisely when the original text of the Targum of Job was composed. The exegetical traditions used by the translator lack specific elements for dating their provenance, and, despite some assertions to the contrary, there are no clear indications of a sectarian origin for the work. Linguistic criteria may point to a date between the final redaction of the *Book of Daniel* (about 165 BCE) and the Genesis Apocryphon (1QapGen), which probably was composed in the first half of the first century BCE. The origin of the text of 11QTargum of Job must therefore in all likelihood be dated to the last decades of the second century BCE or a bit later. For linguistic reasons, T. Muraoka has, however, argued for an earlier origin (between 250 and 150 BCE) by asserting that the Targum is of Babylonian, not Palestinian, provenance (there is also use of some Persian loanwords).

The base text used by the interpreter for his Aramaic rendition was almost the same as the Hebrew tradition of the *Book of Job* known to us from the Masoretic Text. The conspicuous omissions and transpositions that are characteristic of the Septuagint version of the *Book of Job* are not found in the Targum, although in a number of cases its translation concurs with the Greek text. Over and against the singular of the Hebrew base text, 11QTargum of Job sometimes has a plural (especially in the case of collective nouns) or the other way around. Now and then a vocalization of the Hebrew consonantal text, which differs from later tradition, seems to be presupposed. In other cases the Aramaic rendition tries to clarify biblical passages by adding certain elements, for example, pronouns. The hermeneutical principles that guided the interpreter manifest themselves in a number of cases. He shows a certain inclination toward rationalization (cf. 11Q10 xxx.4 [= *Job* 38.7]), where the morning stars are said "to have shone" instead of "to have sung." In the translation the base text is often changed in order to accentuate God's sovereignty and omnipotence (e.g.,

11Q10 x.2 [= *Job* 26.11a], 11Q10 xxiv.7 [= *Job* 34.13], and in particular 11Q10 xxvi.8 [= *Job* 35.13a], where the interpreter, in contrast to the Hebrew text, states that the omnipresent God hears vanity). Special stress is laid on God's creative power (e.g., the elaboration of the Hebrew base text in 11Q10 xxix.2-3 [= *Job* 37.12]). Sometimes passages that might infringe on God's majesty are changed (cf. 11Q10 xxxiv.4, *Job* 40.8). In other cases words are omitted because the translator considered their contents shocking (cf. 11Q10 xviii.3, where the second part of *Job* 31.10 is left untranslated). Sometimes the rendition seems to forestall false interpretations and to prevent erroneous exegetical conclusions.

Most conspicuous from a hermeneutical point of view is the way in which Job is presented as a knowing and righteous man. Over and against the biblical text of *Job* 42.6, where Job is depicted as repenting because, in spite of the righteousness of his cause, he failed to recognize God's overpowering sovereignty, in the interpreter's rendition (11Q10 xxxvii.8-9), Job remains the innocent sufferer ("I am poured out and fall to pieces, and I become dust and ashes").

Except for the small fragments of the Targum of Leviticus (4Q156; about 100 BCE), 11QTargum of Job is the oldest *targum* we possess. It proves that Aramaic paraphrases of biblical texts were in existence well before the Common Era. In this respect, the reference in the Jerusalem (J.T., *Shab.* 15c) and Babylonian Talmuds (B.T., *Shab.* 115a) to an Aramaic *Book of Job*, which at the command of Rabban Gamli'el the Elder (who flourished between 25 and 50 CE) was hidden by a mason under a layer of stones in the Temple area, is noteworthy, although we cannot be sure that the contents of this text were identical with the text of 11QTargum of Job. It is certain however, that 11QTargum of Job has nothing to do with the later rabbinic Targum of Job.

The Targum of Job from Cave 11 is important because it sheds light on the history of the *targums*, presents us with linguistic data about written Aramaic at the beginning of the Common Era, and offers us some aid in the field of textual criticism of the book in question. But its main significance is to be sought in the hermeneutical principles that guided the interpretation of a biblical text in early Jewish circles.

ADAM S. VAN DER WOUDE

JOEL, BOOK OF. See *Minor Prophets*.

JOHN, GOSPEL AND LETTERS OF. The Dead Sea Scrolls cast general light on Judaism in the last two centuries BCE and the first century CE and thus on the writings of the Christian community that emerged from Judaism. However, to investigate the specific relationship of the scrolls to one group of those writings, we must lay aside as too imprecise, incidental, or implausible some of the similarities that are cited in the literature comparing the scrolls to *John*. For instance, the scrolls illustrate Jewish messianic expectations and the use of "son of god," but none of that applies exclusively to Johannine usage. For the community here, an honorific title rather than a personal name is used both by the scrolls (the Teacher of Righteousness) and John (the disciple whom Jesus loved), but that could be pure coincidence. The Copper Scroll (3Q15 xi.12-13) speaks of Bet 'Eshdatayin, seemingly the pool of Bethesda (*Jn.* 5.2); and Temple Scroll^a (11Q19 l.10-16) warns that a house is rendered ritually impure once an unclean person has entered, supplying background for the fear that entering Pilate's praetorium might bring contamination (*Jn.* 18.28). Yet, such incidental background does not establish a Johannine relationship to the scrolls.

Moving on to factors that could plausibly establish a specific relationship, the discussion is affected by presuppositions about both sets of writings. As for the Dead Sea Scrolls, the following positions are not seriously objectionable and will be assumed. Although the community at Qumran probably consisted of Essenes, a neutral designation is the neologism "Qumranians." The main Qumran compositions with which we shall be concerned date from the second and first centuries BCE, particularly the

Rule of the Community of Qumran Cave 1 (hereafter, 1QRule of the Community, IQS) and the Damascus Document (CD). (In the instance of 1QRule of the Community, it should be noted that in the many Cave 4 copies that may be earlier than the Cave 1 scroll, the key dualistic two-spirits passage of column iii is not found. If that absence is not by chance, it may tell us that strong dualism developed only later.) In these basic scrolls there is no evidence of a knowledge of Christianity or of quotations from the New Testament. Therefore, the possible influence would have been from Qumran to *John*, not vice versa.

As for the Johannine writings, it is not easy to list positions that might be unobjectionable and assumed, for there is a great deal of dispute. Despite attempts at early dating, most scholars would date the *Gospel of John* to the 90s CE (with a possible final editing between 100 and 110 CE) and the three Johannine Epistles to approximately 100 CE following the Gospel (but perhaps preceding the final editing). Traditionally, the author has been identified as John, son of Zebedee and one of the Twelve Apostles, who was thought to have been "the disciple whom Jesus loved," an unnamed figure who appears in the second half of the Gospel (*Jn.* 13–21). Now, however, the majority view would probably distinguish that disciple (who may have been the source of Johannine tradition about Jesus) and the evangelist (even if he was a follower of the disciple), and leave both unidentified. Often, different authorship is posited for the Epistles, so that a Johannine school of writers is envisioned. The traditional place of composition, Ephesus, continues to have many supporters, but frequently with the qualification that the tradition-bearers and parts of the Johannine community had moved there from Palestine or adjacent Syria where the early stages of the tradition behind the Gospel had taken shape.

Although *John* shares some outline and content similarities with the synoptic Gospels, it is unique among the four in content, style, and thought patterns. As for the similarities, did the evangelist know the other Gospels or, simply, was a general approach to Jesus also known to them, and Mark in particular? Do the differences have a root in genuine tradition about Jesus or are they the product of external Hellenistic influences on the evangelist and/or his tradition, for example, Gnosticism? A significant body of scholars contends that amid the diversity of pre-70 CE Judaism in Palestine, Jews of Jerusalem provenance, different from the Galileans who made up the Twelve, came into the following of Jesus during his lifetime and subsequently shaped a tradition about him. It was partially similar to the tradition found in the Synoptics but basically independent. How might Qumran Judaism have been an element in this picture?

The Johannine writings contain no clear quotation from a Qumran document and no reference to the Qumran community history. Therefore, the discussion has to concentrate on possible contacts in ideas and vocabulary. Many suggested parallels are attractive but quite speculative. For instance, the presence at Qumran of the Temple Scroll and various calendars of feasts has been related to the emphatic and early position of the cleansing of the Temple in *John* (2.13–22), the stress that Jesus' risen body is the replacement for the earthly Temple, and the framework of feasts that holds together chapters 5–12. 1QRule of the Community (IQS ix.11) speaks of "the coming of a prophet and the Messiahs of Aaron and Israel [i.e., priestly and Davidic messiahs]"; and the Messianic Apocalypse (4Q521 2.1, 2.5, 5.6), which speaks of the Messiah without further qualification, has the Lord calling the just by name and making the dead of his people rise. The Johannine Jesus is thought to be the prophet (6.14, 7.40), the Messiah (1.41, 4.25–26), and perhaps a high priest (17.19, 19.23–24); he calls his sheep by name (10.30), and when those in the tombs hear his voice they will come forth (5.28–29). Wisdom Text with Beatitudes, in a context of beatitudes, presents a personified Wisdom who is juxtaposed to the Law; John's Jesus, who is a greater gift than the Mosaic Law (4Q525 1.17), is God's word and wisdom made flesh. Nevertheless, one could explain most parallels of this type overall by invoking themes in the protocanonical and deuterocanonical Old Testament; the parallels show Jewish influence on *John* but are not precise enough to establish scroll influence on the book.

In fact, there is only one major area of relatively precise similarity, and so most of the comparison will center on dualism and its corollaries. The more speculative question of the channel of any direct or indirect influence will be raised at the end.

Modified Dualism. Theological dualism pictures the universe under the dominion of two opposing principles—one good, the other evil; modified dualism adds that such principles are dependent on a God who is over all. In the Old Testament there is no dominant, systematic dualism, even though there are evil agents (such as the tempter of *Genesis* 3) and evil people who are opposed to good people. In the Qumran literature (and related noncanonical works written in the last centuries BCE), we find a new outlook. All human beings are aligned in two opposing camps, one of light and truth and the other of darkness and falsehood, with each faction ruled by a spirit or prince. This is not a physical dualism wherein the nonmaterial is good and the material is evil; rather, it is ethical and cosmic. Although the synoptic Gospels portray Jesus in conflict with the devil or demons who possess people, *John* more clearly articulates a cos-

mic struggle between Jesus and the Prince of this world. The language in which Qumran documents and *John* express dualism is remarkably the same: light and darkness, truth and falsehood; Spirit of Truth and falsehood (see below); children of light and darkness (IQS i.9–10, iii.13, xiii.24, xiii.25; *Jn.* 12.36); those who walk in light and darkness (IQS iii.20, iv.11, xi.10; *Jn.* 8.12, 12.35; *1 Jn.* 1.6–7, 2.11); or walk in truth or falsehood (IQS iv.6, 15; *2 Jn.* 4; *3 Jn.* 3–4); do truth/falsehood (IQS i.5, v.3, viii.2; *Jn.* 3.21; *1 Jn.* 1.6; [3.18]); witness to truth (IQS viii.6; *Jn.* 5.33, 18.37; *3 Jn.* 3); purge or sanctify truth (IQS iv.20; *Jn.* 17.17). Some of these expressions occur elsewhere in the New Testament, but not with Johannine frequency.

Both Qumran and John take for granted the biblical doctrine of creation. IQRule of the Community reads, “From the God of knowledge exists all that is and will be” (IQS iii.15) and “By his knowledge everything has been brought into being” (IQS xi.11). (Compare this passage to *John* 1.3: “Through him [the Word] all things came into being, and apart from him not a thing came to be.”) In particular, IQRule of the Community (IQS iii.17–25) teaches that God created the spirits of light and darkness and that human beings will walk by these spirits of truth and deceit until the moment of God’s visitation. Visions of Amram^b (4Q544 1.12) makes it clear that people choose between the rulers of light and darkness; the sons of light go to everlasting happiness, and the sons of darkness to annihilation (4Q548 1.12–14). In the hand of the Prince of Light is dominion over all the children of righteousness, but because of the Angel of Darkness, all the children of righteousness go astray. The dominion mentioned here is not purely external, for IQRule of the Community (iv.23–24) reports that until now, the spirits of truth and perversion feud in the hearts of people so that they walk in wisdom and foolishness. Those whose inheritance is truth and righteousness hate evil; those whose inheritance is perversity and wickedness abominate truth. The ultimate outcome is not in doubt, for God and God’s Angel of Truth help all the children of light. God’s wisdom determines a period for the existence of wrongdoing; but God’s visitation will destroy it forever, and the truth will appear (IQS iv.18–19). The Qumran text on Mysteries (1Q27 1.1.5) promises that when those born of sin are locked up, evil will disappear before justice as darkness before light. The Qumranians lived in the period immediately before the divine visitation, to be introduced by the great battle described in the Qumran War Scroll (1QM).

In the Johannine writings, the exalted image of Jesus makes a difference; he is not on the same level as the Prince of this world. The Word that has become flesh existed before creation and brought it into being (*Jn.* 1.1–3),

while the devil was a murderer and liar from the beginning (*Jn.* 8.44; that is, from the post Creation period narrated in *Genesis* 2–3). The darkness did not overcome the light (*Jn.* 1.5), and Jesus is the light come into the world (*Jn.* 1.9, 9.5). This coming of light produces judgment: Those who practice wickedness hate the light, while those who do truth come to the light so that it may be shown that their deeds are done in God (*Jn.* 3.17–21). Jesus urges, “Walk while you have the light, or the darkness will come over you” (*Jn.* 12.35–36). Those who have faith in Jesus become children of the light; those who do not love Jesus belong to the devil (*Jn.* 8.41–44). Within the community of believers, people who hate their “brothers” or “sisters” are still in darkness, but those who love their “brothers” or “sisters” abide in the light (*1 Jn.* 2.9–10). Those claiming communion with God while continuing to walk in darkness do not do truth (*Jn.* 1.6). As for the struggle, Jesus gives the assurance: “The Prince of this world has been condemned” (*Jn.* 16.11) and “Take courage, I have overcome the world” (*Jn.* 16.33). The *First Letter of John* (2.8) confirms: “The darkness has passed away, and the true light is already shining.” Believers in Jesus are begotten by God (*Jn.* 1.12–13), and all begotten by God conquer the world through their faith (*1 Jn.* 5.1, 5.4–5).

Corollaries of the Dualism. Other parallels of thought between the scrolls and the Johannine writings have been proposed, for instance, a special emphasis on knowing, and a sense of predestination as if God had chosen beforehand those who would be sons of light. In addition, there are various parallels of vocabulary. For example, “the light of life” (IQS iii.7; *Jn.* 8.12); “living water” (IQH^a viii[16].7; CD xix.34; *Jn.* 4.10–11, 7.38); God as light/enlightener (IQH^a iv[12].23; *1 Jn.* 1.5). Yet, among all such suggestions, two parallels, both corollaries of dualism, are the most persuasive.

Spirit of Truth. Among the various Qumranian terms for the good principle are Prince of Light and Spirit of Truth. The Johannine writings have two good principles, one following the other, both necessary to accomplish God’s plan. Jesus is the light and the truth, but after his departure comes the Paraclete who is the Holy Spirit and the Spirit of Truth. Several unique characteristics mark the Johannine concept and bring it very close to Qumranian thought. First, only the Johannine writings (*Jn.* 14.17, 15.26, 16.13; *1 Jn.* 4.6) use the term *Spirit of Truth*, an expression absent from the Old Testament but found at Qumran (IQS iii.18–19; iv.21, 23) and in the *Testaments of the Twelve Patriarchs* (*Testament of Judah* 20.1–5), a dualistic work that has many parallels with Qumran literature. Second, the Qumranian Spirit of Truth functions at times as an angel (Michael) and thus as a personal be-

ing. John is uniquely clear about the personal characteristics of the Spirit of Truth. Besides the Greek neuter noun *pneuma* ("spirit"), *John* alone uses the masculine *paraklētos* ("Paraclete, advocate, counselor"). The Paraclete-Spirit is almost another Jesus (himself called a Paraclete implicitly in *John* 14.16 and explicitly in *1 John* 2.1), coming after Jesus leaves (*Jn.* 16.7), taking his place as teacher (*Jn.* 14.26), and proving that the Prince of this world has been condemned (*Jn.* 16.8, 11). Third, the Johannine Holy Spirit, even more than Jesus, has the internal aspect of the dominion of the Spirit of Truth at Qumran; for the spirit is invisible and dwells within the disciples (*Jn.* 14.17). Therefore, one must test a person's spirit to know whether it is the spirit of God or the spirit of the Antichrist (*1 Jn.* 4.1-6), a passage that resembles the rule for those entering the Qumran community: "They shall test their spirits" (IQS v.20-21, 24).

Love for community members. The Qumranians formed a tightly knit community, committed to the Teacher of Righteousness's interpretation of the law and shaped by a rigorous formation. The biblical encouragement to love what is good in God's sight and to hate what is evil (IQS i.3-4) is extended to the divided humanity ruled by the two spirits—love the children of light and hate the children of darkness (IQS i.9-10). Although IQRule of the Community curses the children of Belial (IQS ii.4-8), it also gives a warning not to speak to one's "brother" in anger (IQS v.25-26). God will obliterate those who backslide from the community (*Jn.* 2.11-17); and when the glory of God is revealed, such unfaithful covenanters will be condemned and delivered to Belial (CD xx.25-26; 4Q269 3.iv.11-12).

The Johannine writings make Jesus' teaching on love his commandment par excellence and include followers of John the Baptist, whom the Fourth Gospel describes as the first disciples of Jesus. Did such Baptist disciples who had been Qumranians filter what they heard from Jesus through the prism of their own dualistic outlook? In any case, Qumranian parallels fortify the thesis that the Johannine tradition arose in Palestine.

RAYMOND E. BROWN, S.S.

JOHN HYRCANUS, ethnarch (leader) of Judea and high priest from 135 to 104 BCE. He rose to power following the murder of his father and two brothers by his brother-in-law Ptolemy. John Hyrcanus attempted to punish his father's murderer; however, his mother was taken hostage by Ptolemy, and Ptolemy escaped without punishment. In 135 BCE a serious threat to the safety of Judea occurred when Antiochus VII Sidetes (138-129 BCE) sought to restore to the Seleucid kingdom provinces that had gained their independence. John Hyrcanus was compelled to surrender Jerusalem to the Seleucid king, agreeing to pay him a tariff in exchange for Jaffa and other cities conquered by Simon outside Judea. Although John Hyrcanus maintained his position as high priest and governor of Judea, it was still a subject state to the Seleucids for six years, until Antiochus VII Sidetes was killed in a military campaign against the Parthians. John Hyrcanus expressed the independence of Judea by minting coins that bore the slogan "John high priest and friend of the Jews."

Like his predecessors, he maintained good relations with Rome; during his reign the Roman senate passed resolutions in favor of Judea. Diplomatic ties with Pergamum and Ptolemaic Egypt were even established.

From 114 to 108 BCE, John Hyrcanus set out on a long series of conquests. He conquered Idumea, which was south of Judea, Samaria, portions of Transjordan, and apparently the Galilee as well. He destroyed the Samaritan city built on Mount Gerizim and the Samaritan Temple at its center. The conquering of Samaria and Scythopolis/Beth-Shean led to the unsuccessful Seleucid intervention in an effort to save the inhabitants of the Hellenistic cities. John Hyrcanus subsequently compelled the Idumeans to convert or be forced into exile. During the rule of John Hyrcanus, the territorial boundaries of the Hasmonean state were established. John Hyrcanus's followers claimed that he was merited to wear three crowns: the crown of priesthood, the crown of government, and the crown of prophecy.

Josephus's writings describe how John Hyrcanus observed the priestly laws as documented in the scrolls. In

the description of John Hyrcanus's attempt to punish his father Simon's murderer, it is noted that Ptolemy was saved due to the sabbatical year in which Jews do not fight (*The Jewish War* 1.60; *Jewish Antiquities* 13.234). The War Scroll testifies that it is forbidden to fight during the sabbatical year (1QM ii.6). Likewise, Josephus noted that in its campaign in Babylonia, the Seleucid army with its Jewish allies was compelled to camp for two days due to Shavu'ot (*Jewish Antiquities* 13.251–252).

One of the scrolls found in Qumran Cave 4, Testimonia (4Q175), is a single page containing four paragraphs. The first three paragraphs are quotations from the Pentateuch describing positive leaders, a true prophet, a ruler chosen by the Lord who would govern Moab, and a priest. The last paragraph explains *Joshua* 6.26 and describes a negative character nicknamed "the man Belial" who had built Jericho and appointed his sons as rulers. It is upon them that the curse of Joshua falls. It is accepted that Testimonia is a collection of quotations taken from *Exodus*, *Numbers*, and *Deuteronomy*, and that the last paragraph is quoted from the Apocryphon of Joshua (4Q378–379).

The last paragraph in Testimonia is similar in nature to a *peshet* in that it contains exegesis to a biblical verse and its author assumes that the curse of Joshua was in effect in his days. Beginning in 1973, an archaeological expedition headed by E. Netzer excavated a cluster of palaces built by John Hyrcanus, fortified and surrounded by a ditch dug by his heirs. Thus, archaeological evidence together with the description of Josephus support Jean Starcky's suggestion that the author of the last paragraph of Testimonia claimed that the curse of Joshua was applicable to John Hyrcanus I and his sons, on account of the deaths of Aristobulus and Antigonos, who both died from unnatural causes in 104/103 BCE. Josephus in *The Jewish War* 1.69 and in *Jewish Antiquities* 13.299–300, in his summary of the period of John Hyrcanus's activity, noted that he merited the high priesthood, prophecy, and power.

In Qumran Cave 4, an additional composition connected to John Hyrcanus was found. This is the Prayer of Joseph (4Q371–372) describing what is probably the conquest of Mount Gerizim and the destruction of the Samaritan Temple by John Hyrcanus in 111 BCE. In this prayer it is said that Joseph is thrown into unknown lands, and scoundrels built altars for themselves on Joseph's desolate mountains. *Scoundrels* is a nickname for the Samaritans in the *Book of Ben Sira* and in the *Testament of Levi*. It is proposed that this prayer was composed following the conquest of Mount Gerizim by John Hyrcanus and was customarily said on the day that was designated as a holiday in honor of the destruction of the Samaritan Temple. It is possible that on a small fragment

of papyrus found at Masada mentioning Mount Gerizim was also a hymn thanking the Lord for the destruction of the Temple on Mount Gerizim.

A third scroll, which is possibly connected to John Hyrcanus, is Calendrical Document C^a (4Q322). In one of its paragraphs, the high priest is most likely mentioned. One line below that, the name John is mentioned. Since this is a very fragmented scroll, and Shelamzion Alexandra and Aemilius (one of Pompey's generals) were mentioned in the other paragraphs, it seems that the events mentioned are not from the second century BCE but from the first century BCE, so that the reference is not to John Hyrcanus but to Hyrcanus II, son of Alexander Jannaeus and Shelamzion Alexandra. [See Hasmoneans.]

HANAN ESHEL

Translated from Hebrew by Daphna Krupp

JOHN THE BAPTIST, a first-century CE Jewish figure, engaged in a prophetic ministry in the region of the Judean Wilderness (sometime around 25–28 CE). Integral to this prophetic ministry was baptism, a religious rite involving an act of immersing in water, thus providing John with his nickname, "the baptizer" or "the Baptist." The primary sources of information about John include a variety of texts in the New Testament Gospels (e.g., *Mt.* 3.1–17 = *Mk.* 1.2–11 = *Lk.* 3.1–22) and Josephus's *Jewish Antiquities* (18.116–119).

The similarities between John's ministry and the ideas and practices expressed in the Dead Sea Scrolls, and the close proximity of the locale of John's ministry to Khirbet

Qumran have led scholars to consider the relationship between John the Baptist and the Qumran Community. To understand the issues we first describe John the Baptist briefly and then examine the evidence of a link between him and this community.

Description of John the Baptist. It is possible that John was of priestly descent (*Lk.* 1.5), but otherwise his origins are shrouded in obscurity. He appeared on the stage of Palestinian history as an adult and became known for his practice of baptism and his prophetic announcements (*Mt.* 3.1–17 = *Mk.* 1.2–11 = *Lk.* 3.1–22).

The use of water for ritual ablutions was a widespread and varied practice in Second Temple Judaism, and included handwashing, footwashing, sprinkling, and bathing. It is this latter practice of immersion that John adopted as a significant rite, but at the same time he adapted its practice and significance. John's baptism was associated with the Jordan River (e.g., *Mt.* 3.6 = *Mk.* 1.5; though not exclusively, *Jn.* 3.23), and the New Testament describes John as explaining that his baptism was "a baptism of repentance for the forgiveness of sins" (e.g., *Mk.* 1.4 = *Lk.* 3.3; cf. Josephus's interaction with this explanation in *Jewish Antiquities* 18.117). As an immersion in flowing water (e.g., *Mt.* 3.6 = *Mk.* 1.5), John's baptism would have been understood in Second Temple Judaism as an act that cleansed from more severe forms of uncleanness (e.g., *Lv.* 15.13; *Miq.* 1.6–8; cf. *Jewish Antiquities* 18.117). For John, this severe uncleanness was caused by sin, and in Second Temple Judaism flowing water or rivers were associated with repentance and forgiveness (e.g., *Sib. Or.* 4.165–167; *Apoc. Mos.* 29.11–13). Immersion rites in John's day were self-administered, but John appears to have played some role in the act of baptizing (*Mk.* 1.5, 8; *Mt.* 3.11 = *Lk.* 3.16), thus contributing to his nickname "the baptizer."

John's baptism functioned in several interrelated ways for those who participated in it (John's opponents would, of course, deny these functions; cf. *Mt.* 3.7–10). The first three of these are related to the issue of sin. First, John's baptism was an expression of conversionary repentance, in which those baptized were returning to a relationship with God (e.g., *Mk.* 1.4 = *Lk.* 3.3; *Mt.* 3.8 = *Lk.* 3.8; *Mt.* 3.2; cf. *Jewish Antiquities* 18.117). Second, it mediated divine forgiveness; that is, it was "for the forgiveness of sins" (*Mk.* 1.4 = *Lk.* 3.3). John's participation in the act of baptism may have implied some mediatorial role (cf. the possibility that John was of priestly descent). Third, John's baptism probably also cleansed from uncleanness caused by sin. The function of immersions in Second Temple Judaism was usually concerned with such cleansing and, as noted above, John's use of flowing water is probably related to this function. Fourth, John's baptism foreshad-

owed the future activity of an expected figure whom John proclaimed as one who would imminently bring judgment and restoration to Israel. John contrasted his own baptism with the activity of this figure, but continued to use the metaphorical language of baptism to describe this activity: "I baptize you with water . . . ; he will baptize you with holy spirit and fire" (*Mt.* 3.11 = *Lk.* 3.16; cf. *Mk.* 1.8; *Jn.* 1.26–27). Fifth, John's baptism was probably an initiatory rite into what we might call the "true Israel." His proclamation of repentance was addressed to Israel, and his baptism effectively distinguished between those who would experience the expected figure's restoration and those who would be judged. The net effect of his baptism, then, was to prepare a remnant for the eschaton. Finally, it is possible that John's baptism may have been an implicit protest against the Temple establishment, especially as it functioned as an alternate means of forgiveness (cf. a similar link in *Sib. Or.* 4.8, 27–30 with 4.162–170).

As a prophet, John not only called on the people to express repentance through his baptism, he also announced the imminent coming of a figure who would bring judgment and restoration (*Mk.* 1.7–8; *Mt.* 3.11–12 = *Lk.* 3.16–17). The nature of John's proclamation places his expectation within a Jewish eschatological framework, but the descriptions of this expected figure are sufficiently vague as to make it difficult to identify him with any particular expected figure within Second Temple Jewish thought (e.g., Messiah, Elijah-*redivivus*, Son of Man). The early Christian movement was later to interpret Jesus the Messiah as a fulfillment of John's announcement, but this does not necessitate attributing a particular messianic view to John himself.

A number of different types of prophetic figures arose in the late Second Temple period, including "clerical prophet," "sapiential prophet," and "popular prophet" ("popular" in the sense of relating to the common people). Some scholars understand John as a "solitary popular prophet." But John the Baptist is better understood to be a "leadership popular prophet" (like Theudas, *Jewish Antiquities* 20.97–98; or the Egyptian, *Jewish Antiquities* 20.169–72) because in his prophetic role he was a leader of a movement, preparing the true Israel for the eschaton (cf. *Jewish Antiquities* 18.118).

John the Baptist was arrested by Herod Antipas and later executed at Machaerus, one of Herod's palace fortresses (*Jewish Antiquities* 18.119; *Mk.* 6.17–29). The New Testament explains that Herod's actions were caused by John's condemnation of Herod's second marriage as immoral (*Mk.* 6.17–19), while Josephus explains that Herod feared that John was creating turmoil among the people (*Jewish Antiquities* 18.118). These two explanations are

probably complementary: the latter is the political fallout created by the moral condemnation.

Parallels between John the Baptist and the Qumran Community. Shortly after the discovery of the Dead Sea Scrolls, a number of scholars proposed that John the Baptist was related in some way to the Qumran community (e.g., Brownlee, 1958; Robinson, 1962; and most recently Sefa-Dapaah, 1995). The grounds for such a proposal are based on a number of parallels that may be observed between John and the Qumran community. Some of these parallels are quite intriguing but, as we shall see, they are also problematic, leading other scholars to reject an explicit link between them (e.g., Rowley, 1959; Sutcliffe, 1960; Webb, 1991; and most recently Taylor, 1997).

First (and probably most significant), both John and the Qumran Community practiced a ritual immersion. A number of Dead Sea Scrolls allude to or regulate such immersions (e.g., Damascus Document, CD x.10–13, x.23–xi.2, xi.21–22; Temple Scroll, 11Q19 xlv.7–10), but it is in Rule of the Community [1QS] where we may perceive something of the function and ideology of immersions. It has been argued (e.g., Webb) that the Rule of the Community, 1QS ii.25–iii.9 (esp. iii.6–9) and v.7–15 (especially v.13–14) points to a special initiatory immersion, which changed a person's status from a candidate to a member of the community. Whether or not one accepts this particular interpretation of one aspect of the Qumran immersion practices, the verbal parallels between John's baptism and the description contained in these texts are noteworthy: both John's and Qumran's immersions are linked to repentance (1QS v.1, 8, 14), atonement of sins (1QS iii.6–9), a spirit of holiness (1QS iii.7, iv.21), and the expectation of an eschatological cleansing (1QS iv.19–22). Yet, while there are similarities of ritual and language, it must be noted that there are also conceptual differences. For example, in the passages of the Rule of the Community it is repentance that makes efficacious both the atonement (resulting in forgiveness) and the immersion (resulting in cleansing), whereas with respect to John it is baptism linked with repentance that accomplishes both.

Second, the New Testament uses *Isaiah* 40.3 to interpret John as "the voice of one crying in the wilderness . . .", and the Qumran community used the same text in the Rule of the Community (1QS) viii.12–16 and ix.19–20 to express the community's reason for its existence in the Judean Wilderness. Yet, a number of factors weigh against this similarity being evidence for a link between John and the Qumran Community. First, the prophecy of *Isaiah* was part of the scriptures for all first-century Jews, not just John and the Qumran Community. Second, the text each quotes is different. In the Rule of the Commu-

nity (following *Isaiah*^d [1QIsa^d] and the later Masoretic Text) the text states: "A voice cries out, 'In the wilderness prepare the way of YHVH'"; whereas the New Testament, following the Septuagint, describes John as "the voice of one crying in the wilderness, [to] 'prepare the way of the Lord'" (*Mt.* 3.3 = *Mk.* 1.3 = *Lk.* 3.4; *Jn.* 1.23). Third, the New Testament use of *Isaiah* 40.3 is expressed as a Christian interpretation of John and is not attributed to John himself (except in *Jn.* 1.23 where it is placed on the lips of John—a typical device used by the fourth evangelist). It is unlikely that John would have used a reading from the Greek Septuagint to express his self-understanding. While it is quite possible that John did use *Isaiah* 40.3 to understand his prophetic call, the specific way it is used in the New Testament is more likely derived from early Christian reflection on John's significance than from John himself.

Third, John's teaching incorporates eschatological themes such as the expectation of eschatological judgment and of an eschatological figure who is God's agent of judgment and restoration (*Mt.* 3.11–12 = *Mk.* 1.7–8 = *Lk.* 3.15–17; *Mt.* 3.7–10 = *Lk.* 3.7–9). Such an eschatological orientation is also found in the Dead Sea Scrolls (e.g., 1QS iv.18–25; Rule of the Blessings [1Q28b] v.20–29; Florilegium [4Q174] i.11–13; Peshier *Isaiah*^d [4Q164]; Melchizedek, 11Q13 ii.4–20). However, such similarities may also be noted among other groups in first-century Judaism. The points at which similarities may be noted are not unique to the Qumran community and John. Since all groups drew upon the common tradition of the Hebrew Bible and did so in a context where such ideas were in the air, these similarities do not constitute evidence that John was specifically related to the Qumran community.

Fourth, John is described as being associated with the wilderness (*Mt.* 3.1 = *Mk.* 1.4 = *Lk.* 3.2–3) and baptizing in the Jordan River (*Mt.* 3.5 = *Mk.* 1.5; *Jn.* 1.28; according to Josephus, *The Jewish War* 3.515, the Jordan River flowed through a wilderness area, which would have included the Judean Wilderness). The Qumran community, located near the northwest bank of the Dead Sea in the Judean Wilderness, was only a few kilometers away from where the Jordan River flowed into the Dead Sea. Clearly John and Qumran were in close geographical proximity. In addition, some scholars observe that *Luke* 1.80 states: "And the child grew and became strong in spirit, and he was in the wilderness until the day of his public appearance to Israel." They suggest that John lived in the wilderness as a child and that he was raised by the Essenes—a practice described by Josephus (*The Jewish War* 2.120). However, *Luke* 1.80 is better read as a transitional verse, with verse 80a summarizing his spiritual growth as a child and verse 80b preparing the reader for his appear-

ing in the wilderness as an adult (*Lk.* 3.1–2). Finally, it must be noted that geographical proximity is just that, proximity; it does not provide evidence of a relationship.

Other possible links include John being an ascetic like the members of the Qumran community, and both John and the Qumran community being critical of the Temple establishment. But, while asceticism may be attributable to John (*Mt.* 11.18 = *Lk.* 7.33; *Mt.* 3.4b = *Mk.* 1.6b; cf. *Lk.* 1.15), the Qumran community only stressed purity according to the Torah, and this would not have been considered asceticism at all. And a critical stance with respect to the Jerusalem Temple establishment was hardly unique to John and the Qumran community.

While there are significant similarities between John and the Qumran community, there are also significant differences. Generally, those who propose that there was a link between John and the community admit that John must have broken with them in order to engage in his prophetic ministry as we know it. Such an admission is made in light of the evidential weight of these differences. Recognizing the differences and realizing that all the evidence is, at best, circumstantial and implicit suggest the more judicious conclusion that there was no direct link between John and the Qumran community. It is quite possible that they knew of each other (and that is all it is—a possibility), but the similarities are better explained as deriving from a common milieu. Some of this common milieu was widespread in first-century Judaism (e.g., concern for purity), while other elements of the common milieu may be traced to an eschatological orientation associated with motifs of a “wilderness mentality.” Only in this sense are John and the Qumran Community linked—an indirect link through their common heritage, milieu, and orientation derived from elements in first-century Judaism.

ROBERT L. WEBB

JOHN THE ESSENE. See Essenes.

JONAH, BOOK OF. *See* Minor Prophets.

JONATHAN (HASMONEAN), son of Mattathias was high priest from 152 to 143 BCE. Jonathan was the younger brother of Judah the Maccabee and together with him fought in battles from the beginning of the Hasmonean rebellion. After Judah fell in battle in 161 BCE, his friends elected Jonathan as their leader. Shortly thereafter, Jacimus was appointed high priest by Bacchides, military commander of Demetrius I of Syria, causing Jonathan and his followers to flee to the desert of Tekoa. When Jonathan's brother Yohanan was killed by a hostile Arab tribe, Jonathan took revenge against them. Bacchides attempted to punish Jonathan for the injury to the Arabs, but then formed an alliance with him. When a pretender to the crown, Alexander Balas, rose against Demetrius I in 152–145 BCE, both parties made offers to Jonathan to appoint him as high priest in 152 BCE in exchange for aid. Henceforth, Jonathan did not need to fight the Seleucids in order to strengthen his position; rather, he acted in the diplomatic realm in order to further his objectives. In 147 BCE, Demetrius II arose as a competitor to Alexander Balas. Jonathan defeated him in a battle that took place near Jaffa and Ashdod. As a reward, Jonathan received the Akra and its surroundings from Alexander Balas. After Demetrius II returned to Antioch, he faced a revolt of soldiers and residents. Demetrius II was compelled to ask for Jonathan's help, and as compensation he promised Jonathan to evacuate the Seleucid soldiers from the Akra. A force of three thousand Jewish soldiers departed for Antioch and protected Demetrius II, who then evaded his promises to Jonathan.

Toward the end of 145 BCE, the power of Tryphon (who was a pretender to the Seleucid throne) and Antiochus VI became stronger, and Jonathan formed an alliance with them. They authorized Jonathan's rule over the northern regions and added a fourth region to Judea (most likely Transjordan). Tryphon even appointed Simon, the brother of Jonathan, as governor of the coastal district. In 143 BCE, Jonathan formed political alliances with Rome and Sparta. Tryphon reached the conclusion that Jonathan was overly independent. Tryphon captured Jonathan at Acre and subsequently attempted to invade Judea, which was defended by Simon. Tryphon attempted to reach Jerusalem via the Judean Desert; however, as a result of a snowstorm, he was forced to return to the Jordan Valley. Following the failure of his campaign, Tryphon executed Jonathan in 143 BCE.

Among scholars of the Qumran scrolls, there has been a lengthy controversy regarding the identity of the Wicked Priest who is mentioned five times in Peshar Habakkuk (1QpHab) and an additional two times in two *pesharim* from Qumran Cave 4 (4Q171 and 4Q163). [See

Wicked Priest.] The majority of scholars have accepted the suggestions of Geza Vermes and Józef Milik in identifying the high priest as Jonathan son of Mattathias.

The following details about the Wicked Priest are elucidated in the *pesharim*: Peshar Habakkuk says that the evil priest was originally considered legitimate at the beginning of his service, and only when he ruled over Israel did he abandon the Lord and begin to betray the statutes for wealth (1QpHab viii.3–13). Likewise, it is noted that the Wicked Priest committed abominations in Jerusalem, defiled the Temple, and robbed the riches of orphans (1QpHab xii.7–10). The attempt of the Wicked Priest to kill the Teacher of Righteousness is mentioned twice. In Peshar Habakkuk it is said that the Wicked Priest attacked the Teacher of Righteousness on Yom Kippur, while the Teacher of Righteousness fasted in his place of exile (1QpHab xi.2–8). [See Teacher of Righteousness.] From this description it seems that one of the arguments between the Teacher of Righteousness and the Wicked Priest was the question of the calendar, since the Wicked Priest, who was probably the high priest, could not leave the Temple on the Day of Atonement. Therefore, it seems that the Wicked Priest attacked the Teacher of Righteousness on his Yom Kippur, which was not Yom Kippur for the Wicked Priest. [See Calendars and Mishmarot.]

In Peshar Psalms^a it was noted that the Wicked Priest tried to kill the Teacher of Righteousness on account of the statute and the law which the Teacher of Righteousness sent to the Wicked Priest (4Q171 4.7–9). In Peshar Habakkuk it is said that the Lord took vengeance upon the Wicked Priest because he attempted to hurt the people of the sect (1QpHab xii.2–6). Likewise, there are two descriptions in this *peshar* which note that the Wicked Priest's enemies caught him, tortured him, and took revenge upon his corpse (1QpHab vii.13–ix.2; ix.99–12). The mention of the Wicked Priest in Peshar Isaiah^c is fragmented and nothing can be learned from it (4Q163 30.3).

The widespread opinion that the treatise Miqtsat Ma'asei ha-Torah was sent by the Teacher of Righteousness to the Wicked Priest also explains why the author of Peshar Habakkuk took the trouble to differentiate between the beginning of the Wicked Priest's life in which he was a positive leader and the end of his life in which he betrayed the statutes for wealth. The last paragraph in Miqtsat Ma'asei ha-Torah is formulated in a very positive tone, and the writer notes that the addressee excels in the study of the law and understanding of the statutes. [See Miqtsat Ma'asei ha-Torah.]

Some scholars have suggested that Jonathan son of Mattathias was mentioned in one of the scrolls, Apocryphal Psalm and Prayer (4Q448). This scroll contains a prayer for the welfare of King Jonathan and his kingdom.

Yet Jonathan was not a king but a high priest, and there is no evidence that his followers called him *king*. Thus, the king mentioned in Apocryphal Psalm and Prayer must be Alexander Jannaeus, the only king whose Hebrew name was Jonathan.

[See also Alexander Jannaeus; Hasmoneans.]

JORDAN VALLEY. The Jordan Valley is part of the great Syrian-African Rift, in which significant volcanic and tectonic activity took place. Flowing through it and dividing it longitudinally into two parts, east and west, is the Jordan River, the longest flowing river in the Land of Israel. The Wadi ed-Daliyeh is located to the west of the Jordan Valley north of Jericho, while Qumran lies to the southwest of the point where the river enters the Dead Sea. The valley, whose waters originate in Mount Hermon in the north at an altitude of 2,840 meters above sea level, and drop into the Dead Sea at 395 meters below sea level, is differentiated into two parts (Har-El and Nir, 1995):

The Upper Jordan Valley, from the sources of the Jordan to the Sea of Galilee, is about 80 kilometers long, with the Hula marshes spreading in the upper part and rugged basalt rocks in the lower; this section has a pleasant Mediterranean climate.

The Lower Jordan Valley, from the Sea of Galilee to the Dead Sea, includes the saline, marly Lisan hills,

a distance of 105 kilometers; its northern section has a steppe-like climate, whereas the southern section has an arid, desert climate. The valley is between 4 kilometers and 20 kilometers wide.

The Jordan Valley is referred to by different names in the Bible, each relating to a different section: the Jordan Steppe ('Arava; Willow), the Jordan Plain, and Pride of the Jordan. Each name has geographic significance and a different economic function, and each is bounded by a different district in the valley:

The Jordan Steppe ('Arava; Willow) extends from the Sea of Galilee to the Dead Sea (*Jos.* 12.3) and is so called because of the large willow trees on the banks of the Jordan River. It has deep, fertile alluvial soils washed down from the mountains, and/or barren Lisan marl earth, which was deposited on the bottom of the ancient Lisan lake, the precursor of the Dead Sea.

The Jordan Plain (Har-El, 1984) is a low, richly watered plain, surrounded by mountains and extensive streams throughout the Jordan and Dead Sea valleys. Three fertile valleys are noted in the Bible:

1. "cities of the plain" and "land of the plain" to the south of the Dead Sea (*Gen.* 13.12; 19.28-29) fed by the Zered and Nimrin wadis in Moab,
2. "the plain," in the Jericho valley (*Dt.* 34.3; *Neh.* 3.22; 12.28) fed by the Qilt and Nuejma wadis west of Jericho, and
3. "the Jordan Plain" in the Sukkot valley fed by the Jabbok River in Gilead, which spills into the Jordan (*1 Kgs.* 7.46; *2 Chr.* 2.4, 17).

Pride of the Jordan (Har-El, 1978) is the lowest section in the Jordan Valley (*Jer.* 12.5; 49.19; 50.44; *Zec.* 11.3). Here occurred or were found earthquakes, high and low tides, thick forests, grassland and pasture for livestock, and a habitat for wild animals and predators.

Although the distance between the Sea of Galilee and the Dead Sea as the crow flies is 105 kilometers, it is 217 kilometers when following the meandering of the Jordan River. The average width of the river in summer is 30 meters, but in winter, with the swell of floodwaters, it reaches a width between 60 and 1,500 meters. During the ebb tide, with low energy flow, it is between 1 and 3 meters deep. Before the establishment of the National Water Carrier in Israel in 1956, 1 billion cubic meters of water flowed into the Dead Sea from the Jordan River annually. Crossing the river, connecting the two sides of the valley were fifty-five fords (*Jos.* 2.7; *Jgs.* 3.28; 12.5-6), fifty of which were north of the Jabbok River in Gilead and only five south of it.

Roadways. The Jordan Valley provided longitudinal and transverse arteries of transportation between the two sides of the river. The valley's lengthwise structure and water sources enabled comfortable passage from the north to the south and back. The convenient connection between the settlers in the Galilee, Samaria, and Judea in the west and those in the Golan, Gilead, and Ammon in the east was through fords across the Jordan River and the valleys of its tributaries. There were five roads branching from the Via Maris that ascended from the Galilee to the Golan. The transverse valleys of Shechem (Nablus), Farah in Samaria and the Yarmouk, and Jabesh Gilead and the Jabbok in the Golan and Gilead enabled convenient passage between the two sides of the Jordan.

Settlements, Security, and the Economy. There were three centers of settlement in the Jordan Valley. In the Hula Valley there was a concentration of frontier settlements connecting inhabitants of the valley in southern Lebanon to the settlements of northern Israel and the Golan. Among them were Dan (*Jgs.* 18.29), which was established at the headwaters of the Dan River, at 204 meters above sea level; Abel Beth-maacah (*2 Sm.* 20.14) on Nahal Ijon ('Ayoun) at an altitude of 414 meters above sea level; Ijon (*2 Chr.* 16.4) at 700 meters above sea level, at the headwaters of Nahal Ijon; and Pannias or Caesarea Philippi (*Mt.* 16.13; *Mk.* 8.27; Josephus, *Antiquities* 18.2.1) at 350 meters above sea level on the Pannias (Senir) River. The inhabitants of these cities engaged in dry and irrigated farming and serviced the international commercial caravans. In the southwest Hula Valley, Hazor was founded, at 200 meters above sea level; its king was head of the Canaanite kings (*Jos.* 11.10). The Canaanite inhabitants of Hazor had an army of iron chariots (*Jgs.* 4.2-3) by which they ruled the other kings in the area and controlled the Via Maris and the international trade in the north of the country. Built southwest of the Sea of Galilee were Hammath and Rakkath (*Jos.* 19.35), and Tiberias of Second Temple and Roman times, which controlled the Via Maris and its branches leading to the Golan and Damascus. Its inhabitants engaged in dry farming and fishing in the Sea of Galilee, and they made a living from the hot springs at Hammath, from trade with the international caravans, and from the sites holy to Christian tourists. The Sea of Galilee is considered holy by Christians, since Jesus performed the miracle of multiplying loaves and fish at Tabgha (*Mk.* 6.34-44), preached in the synagogue at Capernaum, performed wonders, and healed the sick (*Mk.* 1.21; *Mt.* 8).

In the Lower Jordan Valley the following important cities were built:

Beth-Shean (Scythopolis) and its towns (*Jos.* 17.11) were located 120 meters below sea level. The city had the largest amount of irrigated crops in the country

because it annually received 130 million cubic meters of water, which flowed at the foot of Mount Gilboa, at the eastern opening of the fertile Jezreel Valley. The city was established midway along the Via Maris, at the important junction of all four directions in the country, and was the capital of the Decapolis alliance of ten Roman cities on the eastern side of the Jordan (Josephus, *The Jewish War* 3.9.7) and the capital of the district of Second Palestine in Byzantine times. In the days of Byzantine Christian rule, in the fourth to sixth centuries CE, Christian monks from Jerusalem and the Judean Desert came to the Jordan Valley and the Beth-Shean and Galilee valleys (Chitty, 1966).

Succoth and its towns (*Jgs.* 8.14-15; *Ps.* 60.8) were founded on the fertile Jordan Plain, at the mouth of the Jabbok River, which yielded 80 million cubic meters of water a year. North of Nahal Reggev (*Men.* 8.3) (Rajib) the Philistines and Israelites produced their iron implements, and King Solomon cast his copper vessels for the temple there (*1 Kgs.* 7.46).

Jericho (*Jos.* 4.13) was founded in the fertile steppes as a desert oasis at the mouth of Wadi Nueima and Wadi Qilt, 215 meters below Mediterranean sea level. It was the city of palm trees and flax at the time of the First Temple (*Dt.* 34.3; *Jgs.* 3.3) and of balsam from the time of the Second Temple onward (Josephus, *The Jewish War* 1.6.6; 4.8.3; and Har-El, 1981).

The Jericho district and the mouth of the Jordan, where it spills into the Dead Sea, are sites in the country that have been sanctified in the Christian tradition. At Bet Hogla, on the Jordan's shore (*Jos.* 15.6), Jesus came to his teacher, John, who baptized him in the Jordan's water, and the "spirit of God rested upon him" (*Mt.* 3.13-17). The devil brought Jesus to Jebel Qarantal, the Mount of Temptation, which is above Jericho, to be tested; there he fasted for forty days and forty nights (*Mt.* 4.1). Thus the district of Wadi Qilt, Jericho, and the Jordan River became a center of Christian monasteries in Byzantine times and onward.

When Jesus and his twelve disciples went up to Judea and Jerusalem from the Galilee by way of the Jordan Valley and Jericho, rather than through Samaria, they increased the importance of these areas for their followers in later times. Hence, along this same route through the Jordan Valley, monks migrated and established monasteries in the Beth-Shean Valley and in the Hula Valley in Galilee.

BIBLIOGRAPHY

Chitty, D. J. *The Desert: A City*. Oxford, 1966. The author, who is also an archaeologist, describes in detail the history of the monks and asceticism in the Land of Israel and of their spread throughout the country.

Har-EI, Menashe. "The Valley of Craftsmen (Ge' ha Harashim)." *Palestine Exploration Quarterly* 109 (1977), 75–86. The only iron mines in the country were discovered in the Sukkot Valley. They were first exploited by the Philistines and the Israelites in the twelfth century BCE and formed the basis for the wood, stone, and metal industries in the Land of Israel.

Har-EI, Menashe. "The Pride of the Jordan—The Jungle of the Jordan." *Biblical Archaeologist* 41.2 (1978), 64–75. The Jungle of the Jordan is a lush tropical strip of land bordering the Jordan River, which contrasts sharply with the barren hills on either side of the valley.

Har-EI, Menashe. *The Judean Desert and the Dead Sea* (in Hebrew). Tel Aviv, 1981. A handbook for teachers and hikers, which gives a description of the important sites in the Judean Wilderness and details of its seven deserts and their inhabitants. The approach is geographic, historical, and archaeological, with information on the domiciles of the Judean Desert sects, the Christian monks and their monasteries, the fortresses of the desert, the agricultural inhabitants of the desert oases, and the history and fluctuations of the Dead Sea level.

Har-EI, Menashe. *Landscape, Nature and Man in the Bible* (in Hebrew). Tel Aviv, 1984. The author gives a geographic interpretation of the landscape, nature, and human events in biblical times. He describes life in the settlements of the different regions; their economy, crafts, and industry; road paving in the mountains and deserts; and the water installations and their sources. He discusses the wars against tribes and countries, and the relations between the Israelite nation and its close and distant neighbors.

Har-EI, Menashe and Dov Nir. *Geography of the Land of Israel* (in Hebrew). Tel Aviv, 1995 (new edition). A textbook for high-school and teachers'-college students. The authors deal with the country-wide and regional geography. They discuss physical properties, settlements, economic topics in the geographic regions, and also special problems of each and every region, emphasizing the anthropogenic activities that changed the landscape.

MENASHE HAR EI

JOSEPH, the eleventh and favorite son of Jacob, and the principal character in *Genesis* 37–50. The narrative tells of Joseph's dreams, his being sold by his brothers into Egypt, his success in enduring temptation from Potiphar's wife, his rise to become Pharaoh's chief officer in charge of the distribution of Egyptian food resources, and his reunion with his family in Egypt.

The most significant Judean Desert documents that refer to Joseph are fragments of a work called Apocryphon of Joseph^{ac} (4Q371–373) in Hebrew and an Aramaic Apocryphon of Joseph (4Q539). [See Joseph, Apocryphon of.] Only the Aramaic Apocryphon of Joseph has some resemblance to the Testament of Joseph, which focuses on and embellishes two aspects of the Joseph narrative—Joseph's resisting the seduction of the wife of Pentephris (Potiphar) and his selfless dealing with his brothers.

The Apocryphon of Joseph^a, a copy of the same text as the Apocryphon of Joseph^b (lines 5–13), is written in a middle Hasmonean script and dated earlier than the Apocryphon of Joseph^b. The Apocryphon of Joseph^b consists of three major fragments and twenty-four much smaller fragments and is dated paleographically to the

late Hasmonean or early Herodian period. One fragment of about thirty lines contains a psalm of Joseph uttered in a foreign land. It is either an exegetical reflection on *Genesis* or a composition that takes Joseph as a designation for the northern tribes suffering in exile. A second fragment of about fourteen lines also contains a psalm of praise. The Apocryphon of Joseph^c, which mentions a battle against Og, has been assigned to the Apocryphon of Joseph but may be better assigned to the Apocryphon of David? (2Q22).

The Apocryphon of Joseph contains Aramaic fragments dating from the late Hasmonean period. One fragment consists of a couple of words that may be related to the *Testament of Joseph* 14.4–5, which describes the schemes of the Egyptian (Memphian) woman to seduce Joseph. Two other fragments have a certain resemblance to *Testament of Joseph* 15.1–17.2, which mentions Joseph's being sold to the sons of his uncle Ishmael, his father Jacob's mourning, and his not wanting to bring scorn upon his brothers. Jubilees^b from Cave 2 at Qumran (2Q20) consists of three Hebrew fragments, only one of which is identified. This fragment corresponds to *Jubilees* 46.1–3, which describes the prosperity of Israel in Egypt until the time of Joseph's death. Joseph is also mentioned in two Aramaic fragments of the Apocryphon of Judah (4Q538), which recount the second journey to Egypt when the brothers finally recognize Joseph (cf. *Jub.* 42.25–43.18, *Gn.* 44.1–45.10). [See also Judah.] There is an additional Hebrew fragment, a Text Concerning Rachel and Joseph (4Q474), in which Joseph is referred to as a "beloved son." Joseph also is referred to a number of times in Temple Scroll^a (11Q19) in connection with the other tribes (e.g., 11Q19 xxiii.1).

In the New Testament, Joseph figures prominently in Stephen's speech. Stephen retells the *Genesis* narrative including Joseph's being sold into Egypt, God being with him to rescue him, and God granting him favor and wisdom before Pharaoh so that he was appointed governor over Egypt (*Acts* 7.9–18). Joseph's provisions for his burial are mentioned in *Hebrews* 11.22. While the images of Jacob and Judah are elevated above the corresponding biblical accounts in the Second Temple and rabbinic writings, Joseph's steadfastness in facing temptation, his loyalty to and love for his family, and his conduct in high office, they also point out his various faults and shortcomings. His troubles are due to his pride in his physical appearance (he "painted his eyes, curled his hair, and walked with a mincing step," [*Gn. Rab.* 84.7]) and his wrongly charging his brothers with serious offenses (*Gn. Rab.* 87.3).

ROGER GOOD

JOSEPH, APOCRYPHON OF. The work known as the Apocryphon of Joseph, which is contained in scrolls Apocryphon of Joseph^a (4Q371) and Apocryphon of Joseph^b (4Q372), was given this title because the largest fragment is concerned with Joseph, but parallels with two related manuscripts, the Apocryphon of Joseph^c (4Q373) and the Apocryphon of David? (2Q22), indicate that the work was concerned with other biblical figures as well. The interpretation of the work as a whole remains uncertain, but it is clear that the extant fragments consist largely of narrative and psalmic material, and it appears that the narrative sections provided a historical setting for autobiographical psalms in which heroes from the past acknowledged God's actions on their behalf or appealed for God's help. The work belongs to the category of parabiblical literature.

The greatest amount of text is preserved in the Apocryphon of Joseph^b, which consists of twenty-four small fragments and three somewhat larger pieces. Of the latter, the text concerned with Joseph (4Q372 1) is far longer than that of any of the fragments of the other manuscripts of this work. The Joseph text is also represented in seven of the twelve small fragments of the Apocryphon of Joseph^a, which overlap with fragment 1 of the Apocryphon of Joseph^b. The text consists of a narrative and a psalm of lament, and, although the psalmist is not named, it is clear that Joseph is the speaker. The narrative makes use of the "sin-exile-return" pattern and alludes to the fate of the northern and southern kingdoms, the return from exile, and the postexilic period, which is presented as a time of continuing oppression. But the real concern of the text is with the fate of Joseph, seen here primarily as representative of the northern tribes: Joseph, in exile, prays for deliverance and for the destruction of the hostile people—probably the Samaritans—who had erected a "high place" in the land. However, although the concern is with Joseph as representative of the northern tribes, it is possible that the fate of the patriarch Joseph, who was himself sent into exile, has been transferred to a

much later time and situation, that of an anti-Samaritan polemic in the Maccabean period, and used to shed light on the fate of the exiled northern tribes.

Such a transference of an incident from Israel's past to a contemporary situation may provide the key to understanding the references to David and Goliath and to figures from the *Book of Numbers* that are also contained in the fragments of the four interrelated manuscripts, but the fragments are too small for this to be clear. The Apocryphon of David?, with which the Apocryphon of Joseph^b (4Q372 19) and the fragments of the Apocryphon of Joseph^c overlap, appears to contain a narrative in which David described his battle with Goliath and a psalm of thanksgiving. The Apocryphon of Joseph^b (4Q372 3) is a psalm that refers to Zimri son of Salu (*Nm.* 25.14) and to the five kings of Midian (*Nm.* 31.8).

The fragments contain no hint that the work is sectarian in character. The manuscripts date from the first half of the first century BCE to the first half of the first century CE, but the work itself probably dates from the second century BCE.

To be distinguished from the above work composed in Hebrew is the Aramaic Apocryphon of Joseph (4Q539), of which five small fragments dating from the middle of the first century BCE survive. The two largest fragments (2a–b) appear to lie behind the Greek Testament of Joseph (15.1–17.2) from the *Testament of the Twelve Patriarchs*, but although the Aramaic work has been called a testament, it is not certain that it had this literary form.

Equally distinct from both the Hebrew and the Aramaic Apocryphons of Joseph is the Text Concerning Rachel and Joseph (4Q474), which mentions Rachel and appears to refer to Joseph as a "beloved son." This Hebrew text is represented by one small fragment and apparently contains a prayer to God for the birth of another son (cf. *Gn.* 30.24); it may also contain a prophecy on the future of Israel, but this part of the text is too fragmentary for the meaning to be completely clear. The manuscript dates from the end of the first century BCE, but the text itself could have originated in the second century BCE.

MICHAEL A. KNIBB

JOSEPHUS FLAVIUS. From the very time when the scrolls were first discovered, the most important ancient author for determining the historical context of the scrolls has been Josephus, especially since it is precisely for the period to which the scrolls are dated (c.225 BCE–68 CE) that Josephus, himself a contemporary, writes at greatest length. Any attempt at identifying allusions in the scrolls to Judean history would naturally have to be verified in Josephus. Moreover, inasmuch as most of the earliest scholars who dealt with the scrolls identified them as Essene documents, one would turn to Josephus, who has left us by far our most comprehensive description of them. Where the Dead Sea fragments disagree with the Masoretic or Septuagint texts of the Bible, one turns to Josephus to see whether there are parallels in his paraphrase of the Bible. Finally, where the Dead Sea fragments disagree in their versions of Jewish law as later codified in the Mishnah (c.200 CE), one turns to their contemporary, Josephus, for parallels.

Josephus Flavius was born in 37 CE and was given the Hebrew name of Yosef ben Mattityahu. His mother was a descendant of the Hasmonean family (*The Life* 2) that had ruled Judea a century earlier. By birth, he was a priest, and, indeed, he belonged to the first of the twenty-four courses of priests—a fact to be borne in mind in view of the sharp antagonism of the Qumran community to the established priesthood of the Temple in Jerusalem. According to his own statement, he tried out membership in different sects. So prominent was he that at the young age of twenty-seven (in 64 CE) he was selected to go to Rome to seek the freedom of some priests, a mission in which he was successful through the intervention of Poppaea Sabina, the Emperor Nero's consort (*The Life* 16) and a "sympathizer" with Judaism, that is, one who observed some of the practices of Judaism without actually converting (*Jewish Antiquities* 20.195). Two years later, despite a lack of previous military experience, he was chosen either to induce the Jewish revolutionaries in Galilee to lay down their arms (*The Life* 29) or, in what appears to be a contradictory passage, to serve as general of the Jewish forces in Galilee in the revolt against Rome (*The Jewish War* 2.568). After showing considerable ingenuity in the latter task, he surrendered to the Romans at

Jotapata (*The Jewish War* 3.391), predicted General Vespasian's succession as emperor (*The Jewish War* 3.401), and received various gifts from the Romans, including lodging in the house of Vespasian in Rome, citizenship, and a pension (*The Life* 423). In Rome, so far as we can tell, he devoted himself primarily to writing: first, *The Jewish War*, dealing with the revolution against the Romans, in seven books in Aramaic, which he later (c.79–81 CE) translated into Greek (*The Jewish War* 1.3), then (in 93 CE), the *Jewish Antiquities* in twenty books, starting with creation and ending with the outbreak of the Jewish War. Finally, some time before his death (c.100 CE) he wrote an autobiography (primarily intended to defend his conduct during the Jewish War) and the essay, in two books, *Against Apion*, an apologetic defense of Judaism against maligners.

One must recognize that Josephus should be approached with caution. In the first place, though he writes in Greek, this is not his first language, which was Aramaic, or even his second language, which was Hebrew. He himself (*Jewish Antiquities* 20.263) admits that though he labored strenuously to master Greek prose and poetry, his habitual use of his native tongue prevented him from attaining precision in the pronunciation. He also admits (*Against Apion* 1.50) that he needed the help of assistants in rendering into Greek his first work, *The Jewish War*, which is precisely the one that contains by far his longest account of the Essenes (*The Jewish War* 2.119–161) and the passage most important for students of the Dead Sea Scrolls. Hence, it is not surprising that the understanding of his Greek presents considerable difficulty. Moreover, Josephus is hardly impartial, being an apologist for his patrons the Romans, as well as for the Jewish religion, and, of course, for himself in his dubious role during the war against the Romans. We are seldom in a position to check up on him in his account of the Essenes, inasmuch as only Philo (*Every Good Man Is Free* 75–91 and *Hypothetica* 11.1–18) and a brief passage in Pliny the Elder (*Natural History* 5.15.73) have anything of importance to say about them, and the Talmud is completely silent about them. Moreover, we may well be skeptical of Josephus' attempt to equate Jewish movements and ideas with those of the Greeks, for example, the Essenes with the Pythagoreans (*Jewish Antiquities* 15.371) and the Essenes' view of the afterlife with that of the Greeks (*The Jewish War* 2.155–158). Finally, the manuscript tradition of Josephus is relatively late, the earliest manuscript (Codex Ambrosianus) dating from the tenth or eleventh century; and we have only one brief (third century) papyrus fragment of his works (*The Jewish War* 2.576–579, 2.582–594).

The Scrolls as a Source of Historical Information Confirmed by Josephus. In a very few instances the

scrolls seem to corroborate information found in Josephus. One such case is in connection with Alexander Jannaeus' conflict with his political opponents. Some have identified the Wicked Priest in the Peshar Habakkuk (1QP Hab i.12–15, xi.4–8) as a Hasmonean ruler, whether Jonathan (161–142 BCE), Simon (142–134 BCE), or Alexander Jannaeus (103–76 BCE), as described by Josephus. Peshar Nahum (4Q169) mentions “Demetrius King of Greece who sought, on the counsel of those who seek smooth things, to enter Jerusalem” (4Q169 3–4.i.2), the reference probably being to Demetrius III Eukerus (95–88 BCE), who, upon being summoned by the Jewish opponents of King Alexander Jannaeus of Judea (*Jewish Antiquities* 13.376–378), defeated him in battle. Peshar Nahum (4Q169 3–4.i.7) also refers to the “Lion of Wrath” “who would hang men up alive, [a thing never done] formerly in Israel”; this has been identified by most scholars as a reference to Alexander Jannaeus, who, after his defeat by Demetrius, according to Josephus (*The Jewish War* 1.97, *Jewish Antiquities* 13.380), ordered eight hundred of his Jewish opponents to be crucified and slaughtered their wives and children before their very eyes while he feasted with his concubines. Though these opponents are not specifically referred to here as the Pharisees, elsewhere (*Jewish Antiquities* 13.398–406) it is clear that Alexander Jannaeus' chief Jewish opponents were the Pharisees, and it is thus that we may identify them as the Seekers after Smooth Things who summoned Demetrius III.

The publication of *Miqtsat Ma'asei ha-Torah*, with its statement that “you [plural] know that we have separated ourselves from *rov ha'am* [multitude of the people]” (4QMMT C 7), would seem to support Josephus' claim that the Pharisees, who are apparently the opponents of the authors of this document and whose *halakhah* (i.e., law) is, to a considerable degree, the object of their attacks, were extremely influential among the masses (*Jewish Antiquities* 18.15). This would apply to the early Hasmonean period when MMT was apparently composed, but, admittedly, the question of whether this also applies to the period of Josephus himself, two centuries later, is open to debate.

There are a number of historical references in the scrolls, particularly in the *pesharim* and in the War Scroll, to a greatly feared and merciless military power, the *Kitim*, who, it is thought, are to be identified with the Romans. The *Kitim* are said (1QPeshar Habakkuk vi.3–5) to sacrifice to their standards, as indeed Josephus tells us (*The Jewish War* 6.316) was true of the Romans. Josephus declares (*The Jewish War* 2.152–153) that the war with the Romans tested the souls of the Essenes, who are usually identified with the Qumran community, and the fact that the latest Jewish coins found at Qumran date from 68 CE while the earliest Roman coins date from that year would

seem to indicate that the settlement was destroyed in that year by the Romans.

Josephus as an Aid in Identifying the Qumran Community. For a group such as the Qumran community with its huge library, it would seem surprising if Josephus had not even heard of them. In his autobiography—the earliest that has come down to us from antiquity—which consists of 430 paragraphs in Niese's standard Greek text, only twenty-one do not deal with the war against the Romans in which he served as a general in Galilee. Yet a major highlight of these twenty-one paragraphs is Josephus' account (*The Life* 10–12) of how, at the age of sixteen, after receiving a thorough education and achieving an excellent reputation for his learning, he had determined to gain personal “experience of the sects [*haireseis*, “systems of philosophical principles, sects, schools, factions, parties”] among us,” the clear implication being that he intended to try all the sects (though such a search is a commonplace, similar to the motif found in the lives of Nicolaus of Damascus, Apollonius of Tyana, Justin, and Galen). Josephus proceeds to state that “these are three [in number],” after which he names them as the Pharisees, the Sadducees, and the Essenes. In the three other places (*The Jewish War* 2.119, *Jewish Antiquities* 13.171, 18.11) where he mentions the sects, he likewise specifies that they are three in number. Josephus (*The Life* 10) says that he determined to choose the best of these sects after “becoming thoroughly acquainted [*kata-mathoimi*, “searching out, observing well, examining carefully”] with all” of them. He then spent three years (*The Life* 11) with a hermit named Bannus, but it is clear that he did not regard Bannus as being connected with a sect. To be sure, in the Jerusalem Talmud (J.T., *San.* 10.6) the third-century Rabbi Yohanan is quoted as saying that “Israel was not exiled until twenty-four sects [*kitot*, “parties, classes”] of heretics [*minim*, “sectarians”] had come into being,” but this may reflect rabbinic preoccupation, especially in the third century and thereafter, with speculating on the causes of the destruction of the Temple in Jerusalem in the year 70 CE.

Like Josephus, Peshar Nahum (4Q169 3–4.ii.2–iv.1–7) mentions three separate Jewish groups, referring to them as Ephraim (the “Seekers after Smooth Things,” probably to be identified with the Pharisees, though the term “Pharisees” does not appear thus far in any of the scrolls), Manasseh (probably to be identified with the Sadducees, though this term likewise does not appear thus far in any of the scrolls), and Judea (probably to be identified with the Qumran community itself), though it must now be admitted that 4QMMT (*Miqtsat Ma'asei ha-Torah*), with its indication that the sect followed Sadducean *halakhah*, would lead us to question these identifications.

As a result of these passages in Josephus referring to

the sects, most scholars, when the first Dead Sea Scrolls were discovered, assumed that they belonged to one of these sects, especially since the Qumran community was clearly not a small, ephemeral group restricted to Qumran and since it persisted for at least two centuries. Based largely on Josephus, most scholars identified the sect as the Essenes, even though the name Essenes is probably not found in any of the scrolls. In the first place, the Essenes are first mentioned by Josephus (*Jewish Antiquities* 13.171–173) in his account of Jonathan the Hasmonean, who ruled in the middle of the second century BCE, which is the approximate date of some of the earlier finds of the Qumran community. This identity seems to be confirmed by the statement of Pliny the Elder (*Natural History*, 5.15.73), who specifically locates the Essenes on the western shore of the Dead Sea.

A number of parallels have been noted between the Qumran community, especially as seen in the Rule of the Community (1QS), and Josephus' description of the Essenes:

1. Both separate themselves from other Jews, whereas members are extremely close to one another (Josephus, *The Jewish War* 2.119, 124; 1QS ii.23–25).
2. Both exercise extreme asceticism, shunning all pleasures (*The Jewish War* 2.120; 1QS ix.9–11).
3. Both educate young children according to their customs (*The Jewish War* 2.120; 1Q28a i.4–5).
4. Both look upon women as wanton (*The Jewish War* 2.121; 4Q184 i.13–14).
5. Both despise riches (*The Jewish War* 2.122; 1QS ix.21–24, CD iv.17, 1QpHab viii.10–13).
6. They pool their property (*The Jewish War* 2.122, *Jewish Antiquities* 18.20; 1QS i.11–12).
7. Both regard oil as a defilement (*The Jewish War* 2.123; CD xii.15–17).
8. They dress in white (*The Jewish War* 2.123; 1QM vii.9–10).
9. Both have treasurers in charge of their funds and various activities (*The Jewish War* 2.123; 1QS vi.20, CD xiii.16).
10. They replace their clothing only when totally worn out (*The Jewish War* 2.126; 1QS vii.13–14).
11. Both pray at dawn (*The Jewish War* 2.128; 1QS x.1–3).
12. Both practice purificatory washings (*The Jewish War* 2.129; 1QS iii.4–5).
13. Both have common meals (*The Jewish War* 2.129; 1QS vi.2–3).
14. The meal is restricted to initiated members (*The Jewish War* 2.129; 1QS v.13).
15. The priest blesses the food before the meal (*The Jewish War* 2.131; 1QS vi.4–5).
16. They speak in turn, each making way for the other (*The Jewish War* 2.132; 1QS vi.10–13).
17. Both strictly follow the orders of their overseers (*The Jewish War* 2.134, 2.146; 1QS v.2–3).
18. Both are masters of their temper (*The Jewish War* 2.135; 1QS iv.10).
19. Both are champions of fidelity (*The Jewish War* 2.135; 1QS viii.1–3).
20. Both are peace loving (*The Jewish War* 2.135; CD vi.21–vii.3).
21. Both are zealous students of the ancient writings (*The Jewish War* 2.136; 1QS vi.6–8, CD xviii.2).
22. Both are greatly interested in the healing of diseases (*The Jewish War* 2.136; *Jub.* 10.10–14).
23. Both describe an initiation period for entrance into the sect, there being a two-year period of initiation within the community itself (*The Jewish War* 2.137–142; 1QS vi.13–16).
24. Both declare that those entering the community must take an oath (*The Jewish War* 2.139; 1QS v.8–9, CD xv.7–11), though the Essenes do so at the end of the initiation period, whereas the sect does so at the beginning.
25. Both hide nothing from fellow members of the sect nor disclose anything about themselves to others (*The Jewish War* 2.141; 1QS ix.5–6, viii.11–12).
26. Both transmit their teachings precisely as they have received them (*The Jewish War* 2.142; 1QS ix.16–19).
27. Both refrain from brigandage (*The Jewish War* 2.142; 1QS x.19).
28. Both preserve the names of the angels (*The Jewish War* 2.142; 1QM ix.14–16).
29. Both obey the elders and the majority (*The Jewish War* 2.146; 1QS v.2–3, v.9).
30. Both avoid spitting (*The Jewish War* 2.147; 1QS vii.13).
31. They are particularly strict in observance of the Sabbath (*The Jewish War* 2.147; CD x.14–xi.18).
32. Both follow a strict rule of discipline, demanding absolute obedience by junior members toward senior members (*The Jewish War* 2.150; 1QS v.23, vi.2).
33. They are fearless in the face of danger (*The Jewish War* 2.151; 1QS i.16–17).
34. Some of the sect are able to foretell the future (*The Jewish War* 2.159; 1QpHab vii.4–5).
35. Both believe in determinism (*Jewish Antiquities* 18.18; 1QS iii.15–16).
36. Both disagree with the ritual practiced in the Temple in Jerusalem (*Jewish Antiquities* 18.19; CD vi.11–13).

However, there are a number of differences: (1) the members of the main Essene community (in contrast to

one offshoot, cf. *The Jewish War* 2.160–161) do not marry, seeking to protect themselves, as they stated, against women's wantonness (*The Jewish War* 2.120–121), whereas marriage was practiced in the Qumran community, as we see, for example, in the Damascus Document iv.19–v.2, xvi.10–12; (2) the Essenes (*The Jewish War* 2.122) shared their property, whereas the members of the community retained ownership of their possessions (1QS vii.6–8, CD xiv.12–13); (3) Josephus (*The Jewish War* 2.135) says that the Essenes avoid swearing except when finally being admitted to the sect (*The Jewish War* 2.139), whereas the Temple Scroll (11Q19 liii.9–liv.5) has a long passage on oaths and permits the husband to annul a wife's oath; (4) Josephus (*The Jewish War* 2.145) says that the Essenes never pass sentence in a court of less than a hundred members, whereas the Damascus Document x.4–7 speaks of a court of ten, and another fragment (4Q334 2–4.i.3–4) speaks of a court of ten men and two priests; (5) Josephus (*The Jewish War* 2.145) says that the penalty for blasphemy against the lawgiver, presumably Moses, is death, but there is no such mention in any of the scrolls; (6) the community does have slaves (CD xi.12, xii.10–11), whereas the Essenes do not (*Jewish Antiquities* 18.21); (7) there is no mention in Josephus of the community's use of a solar calendar (cf. 11Q5 xxvii.6); (8) there is no mention in Josephus of the Teacher of Righteousness; (9) there is no mention in Josephus of the community's eschatological views. The number of parallels is much greater than the number of discrepancies. Moreover, some of the discrepancies are between the Damascus Document and the Rule of the Community and may indicate the composition of the texts during different time periods.

Josephus and the Biblical Texts of the Scrolls. Since so many of the fragments of the Dead Sea Scrolls are either biblical texts or paraphrases or commentaries thereon, Josephus is of particular value, inasmuch as in the first eleven books of the *Jewish Antiquities* he presents a comprehensive and often close paraphrase of most of the Bible, the earliest systematic "rewritten" Bible that has come down to us. What is important for students of the scrolls is that he is contemporary with those writings. Hence, he is a most important source for our knowledge of the biblical text and the interpretation thereof. Indeed, such a document as 4Q252, a Commentary on Genesis, is not unlike Josephus' *Jewish Antiquities* or Pseudo-Philo's *Biblical Antiquities* in focusing on selected incidents, while abbreviating or expanding as the author deems appropriate. Josephus' value is particularly great because our earliest extant complete Hebrew texts of the Bible date from the tenth century CE; and our other sources, notably the Septuagint, the Samaritan text, and biblical quotations in the Talmud and Midrash are fraught with incredibly complex problems of their own.

Josephus himself (*The Life* 418) states that he received from Titus, the Roman commander at the capture of Jerusalem, a gift of sacred books, presumably the Bible in Hebrew. It is this text that we may speculate was a major basis of his version in the *Jewish Antiquities*; there is, moreover, reason to think that this version was the basis of the text known to the Qumran community. Thus, for the *Book of Joshua* we may note that in Josephus the account of the crossing of the Jordan River (*Jewish Antiquities* 5.16–19) by Joshua's army is followed by the account of Joshua's erection of an altar and his sacrificing upon it (*Antiquities* 5.20), precisely as in a Dead Sea fragment (4Q47), and, by implication, in the Mishnah (*Sot.* 7.5) and the Tosefta (T., *Sot.* 8.7), whereas in the Bible the altar is built later at Mount Ebal (*Jos.* 8.30–35), a passage omitted by Josephus. For the *Book of Samuel* there are at least four readings (*1 Sm.* 1.22, *Jewish Antiquities* 5.347; *1 Sm.* 11.1, *Jewish Antiquities* 6.68–69; *1 Sm.* 28.1, *Jewish Antiquities* 6.325; *2 Sm.* 11.3, *Jewish Antiquities* 7.131) in which the biblical scroll used by Josephus agrees with a Qumran scroll of Samuel (4Q51) against the Masoretic Text, whereas there are no readings where Josephus agrees with the Masoretic Text against the Qumran scroll.

Moreover, in his interpretation of the Bible Josephus is sometimes in accord with the scrolls against the simple understanding of the Bible itself. An example may be seen in the case of King Zedekiah of Judah. The Bible asserts that Zedekiah did what was evil in the sight of the Lord (*2 Kgs.* 24.19). Josephus (*Jewish Antiquities* 10.120) goes out of his way to mention Zedekiah's goodness and sense of justice in apparent contradiction to his own earlier statement (*Jewish Antiquities* 10.103) that Zedekiah was contemptuous of justice and duty. This same positive portrayal of Zedekiah appears to be reflected in several fragments (4Q470) discovered at Qumran.

Furthermore, in the realm of *halakhah*, Josephus' *Jewish Antiquities* and the scrolls share, to some degree, the interpretation of the Torah's laws. There are even parallels in points of detail: for example, both the Temple Scroll (lxiii.5—like the Septuagint) and Josephus (*Jewish Antiquities* 4.222) assert that the public officers of the nearest town are to wash their hands in holy water over the head of a heifer in expiation for an undetected murderer, whereas the Bible (*Dt.* 21.6) states that they are to wash their hands over the heifer, without specifying the head. Likewise, whereas according to both the Hebrew Scriptures (*1 Kgs.* 21.13) and the Septuagint (*1 Kgs.* 20.13) there were two false witnesses against Naboth while Josephus (*Jewish Antiquities* 8.358) speaks of three, Josephus may be following an earlier *halakhah*, which required three witnesses (that is, one accuser and two witnesses) in cases of capital punishment. In this connection, we may note that the Damascus Document (CD

ix.17, ix.22) similarly requires three witness in capital cases. Indeed, the very fact that the Temple Scroll records laws, including much oral law, in a systematic way should lead us to think that perhaps such a written compendium might have been available for Josephus.

LOUIS H. FELDMAN

JOSHUA, BOOK OF. If the number of the copies of manuscripts found at Qumran is an indication of their popularity with the Qumran community, Joshua was not a popular book, represented by merely two copies in Cave 4 (4Q47, 4Q48), published by Ulrich and Tov (1995). At the same time, Joshua is a central figure in five different copies of a Joshua apocryphon.

Before the discoveries at Qumran the main representatives of the text of Joshua were the Masoretic Text and Septuagint, which differ rather much from each other. Several scholars presented these two texts as reflecting two different text editions (recensions) of Joshua, representing different stages in the development of the biblical book. The Septuagint often presents a shorter text than the Masoretic Text, but it also contains substantial pluses, and it reflects other significant differences as well. The relation between the two texts should probably be portrayed in general lines as parallel editions of the book of Joshua, each of which are on occasion longer. The often earlier elements of the Septuagint of Joshua were analyzed especially by Auld (1978), Rofe (1994), Tov (1986), and Mazar (1994). A third textual witness of Joshua is the Samaritan version of the book of Joshua which, among other things, contains several readings agreeing with the Septuagint as against the Masoretic Text (see Gaster, 1906). Readings agreeing with the Septuagint are also reflected in Joshua^a, and less significantly also in 4QapocrJosh^{ab} and Joshua^b.

The medieval Masoretic Text is now joined by the few fragments of Joshua^b (late Hasmonean, six fragments of chapters 2, 3, 4, 17), although that text also contains

some readings which are found in the Septuagint (note a supralinear correction in *Joshua* 3.15 agreeing with the Septuagint), as well as some independent readings.

The suggestion that the Masoretic Text and Septuagint reflect two different recensions can be expanded by reference to *Joshua*^a, which reflects yet a third recension, although at times it is also significantly close to either the Masoretic Text or the Septuagint.

Joshua^a (dated to the Hasmonean period) contains twenty-two fragments covering chapters 5–10. As a rule, that text goes with the Masoretic Text against the Septuagint, but in two important pericopes it behaves differently.

Fragments 1–2, named “col. 1” by the editor, Eugene Ulrich, reflect the following sequence: 8.34–35 (the covenant at Ebal connected with the erecting of the altar described in the previous verses), two lines containing previously unknown verses (the preserved words refer to the crossing of the Jordan and the reading of the Torah), 5.2–7 (the circumcision ceremony), immediately followed by fragment 3 containing chapter 6 of *Joshua*. The sequence of events in *Joshua*^a presents Joshua as building an altar immediately upon crossing the Jordan (chapter 4), rather than as in the other textual witnesses, in which the altar is built after several military operations at the end of chapter 8. It is not likely that fragments 1–2 contain a doublet of 8.30–35, which would also have occurred in the section which contains chapter 8 in *Joshua*^a (not preserved in Qumran), because in that case Joshua would have built two altars and probably would have performed two similar ceremonies.

Based on the assumption that *Joshua*^a presents a different chronological sequence of events, it should be understood as reflecting a different edition of the book of *Joshua*, at least in this regard. This rival version was possibly known to Josephus, since, according to *Jewish Antiquities* (5.20), Joshua built an altar upon crossing the Jordan, even though, later in the story, he built another altar in connection with the reading of the Torah (5.59).

When comparing the different attestations of the pericope of the building of the altar and the reading of the Torah, one clearly recognizes their secondary nature. This section was meant to stress Joshua’s faithfulness to the commands of the Torah: As soon as the Israelites crossed the Jordan, they implemented the command of *Deuteronomy* 27, which ordered the Israelites to build an altar on Mount Ebal (or Mount Gerizim, according to the Old Latin and the Samaritan Pentateuch). This pericope was inserted secondarily in some manuscripts of *Joshua* in the course of the development of that book, and, as often happens, it was inserted in three different places in the different textual witnesses.

But, while in the traditions behind the Masoretic Text

and Septuagint, this pericope is secondary, its position in *Joshua*^a seems to be original. The version of *Joshua*^a is therefore hailed by Ulrich and Role as presenting an earlier and more logical version of *Joshua* than the Masoretic Text and Septuagint, since it presents the Israelites as building an altar as soon as they had safely traversed the Jordan. The secondary nature of 8.30–35 in its present context in the Masoretic Text is evident, as this section is very loosely connected with the context. This pertains also to the Septuagint in which it occurs at a slightly different place (after 9.2).

Kempinski (1993) stresses different aspects of *Joshua*^a by explaining the juxtaposition in that scroll of the covenant near Shechem and the circumcision ceremony. According to him, the conquest was sealed with a covenant and a circumcision (for which cf. *Gen.* 15 and 17). Kempinski finds parallels between this celebration far away from the temple in Jerusalem and the views of the Qumran covenanters whose cultic center was also outside Jerusalem. However, the Qumranic origin of *Joshua*^a is not a likely assumption.

In fragments 15–16 of the scroll (col. vi in Ulrich’s reconstruction, *Jos.* 8.10–18) the (reconstructed) text is significantly shorter than the Masoretic Text, thus more closely resembling the shorter text of the Septuagint. According to the reconstruction, verses 11b–13 are lacking in the scroll as in the Septuagint, and this pertains also to 14b–17, which are present in the Septuagint. On the whole, *Joshua*^a presents a more smoothly flowing text. The shortness of the Septuagint is one of its recensional traits, as opposed to the longer Masoretic Text. In this fragment the text of *Joshua*^a is even shorter than that of the Septuagint.

Five different groups of fragments of compositions from Qumran and two fragments of a similar composition from Masada rewrite the book of *Joshua* and most, if not all, of them may derive from the same composition (an apocryphon of *Joshua*). This composition, unknown before the Qumran finds, contains traditions about Joshua, several of which are not known from the Bible and may therefore be described as an example of the genre Rewritten Bible. [See Rewritten Bible.] These manuscripts cover different episodes and themes from the book of *Joshua*. Two copies of a composition rewriting the book of *Joshua*, Apocryphon of *Joshua*^{a,b} (4Q378–9), are poorly preserved in a great number of fragments published preliminarily and later in a final form (*Discoveries in the Judaean Desert*, 22, Oxford, 1996) by Newsom. Many of the fragments of these two manuscripts reflect speeches, blessings, and prayers by Joshua not contained in the biblical text, built on the model of the speeches of Joshua in chapters 1 and 23–24, and on those of Moses in *Deuteronomy* chapters 1–3 and 28–31. Apo-

cryphon of Joshua^a (4Q378), previously named 4QPsalms Joshua^a, dating to the Herodian period, covers the earlier part of Joshua's career. It probably started off with the Israelites' mourning for Moses (frg. 14), and it contained an account of the transfer of the leadership from Moses to Joshua (frg. 3). Several other fragments contain speeches of Joshua to the people (cf. the speeches of Joshua scattered in the biblical book, and especially in chapters 18–21). The incident of Achan (Joshua 7) is probably described in fragment 6.i, the ruse of the Gibeonites (Joshua 9) in fragment 22, Joshua's restraining the sun (chapter 10) in fragment 26 (cf. especially line 5), and a summary of the conquests in accordance with God's plan (*Joshua* 21.43–45) in fragment 11.

Apocryphon of Joshua^b (4Q379), dating to the Hasmonean period, contains more identifiable parts of the book of *Joshua*. It contains a description of the crossing of the Jordan (frg. 12 and probably additional fragments) and of the curse pronounced on the rebuilders of Jericho (*Jos.* 6:26), together with a prophetic vision on the identity of that builder (frg. 22.ii). The blessings mentioned in fragments 15–16 of that manuscript may reflect the ceremony on or opposite Mount Gerizim (*Jos.* 8.30–35). A summary of Joshua's victories over the inhabitants of Canaan is reflected in fragment 3 (parallel to *Joshua* 13). Fragment 17 probably reflects Joshua's final speech.

The fragments of Work with Place Names (4Q522) probably reflect 4QapocrJosh^c (Qimron and Tov speak about "Joshua Cycles"), and not a text dealing with "David and his son as well as the temple and tabernacle" (Puech). Only a minority of the identifiable elements in fragment 8.ii pertain exclusively to the period of Joshua. In the explanation by Puech, they feature as the central elements of this document, while for Qimron and Tov they are a mere digression in a document containing the memoirs of Joshua.

Fragment 8.i and additional fragments list names of places conquered by the Israelite tribes, in the north of the country and in the territories of Judah and Joseph, and they further contain fragments of narratives about the places which had not been conquered. The second column of that fragment contains a speech by Joshua (to Eleazar and the people?) explaining why he was unable to conquer Jerusalem, that the tent of the meeting would have to be transferred to an unnamed locality (Shiloh?), but that in the future the city would be conquered by David and that the tent of the meeting would be moved there, and eventually the temple would be established.

4QpaleoParaJosh, probably dating to the last half of the second century BCE, contains several phrases which were identified by Ulrich as deriving from *Joshua* 21. Since no coherent biblical text is identifiable in this very fragmen-

tary text, Ulrich regards it as a paraphrase, but he does not rule out the possibility that this is a variant edition of the biblical book of *Joshua*. However, the writing of this scroll in the Paleo-Hebrew script is unusual for a paraphrase, since almost all texts which have been preserved in this script are biblical.

A list of geographical names similar to the list in Work with Place Names (8.i) is contained in 5Q9 (5QapocrJosh? published in Discoveries in the Judaean Desert as 5QWork with Place Names). This list mentions the figure of Joshua and a list of geographical names from the same areas as those in Work with Place Names from Cave 4, namely from the north of the country and from the tribes of Judah and Joseph. If the link between 4Q522 8.i and 5Q9 is understood correctly, this manuscript contains an additional copy of the apocryphon of Joshua contained in Apocryphon of Joshua^a (4Q378), Apocryphon of Joshua^b (4Q379), and Work with Place Names (4Q522) (Tov).

Paraphrase of Joshua from Masada was described by Talmon as an apocryphon based on *Joshua* 23–24 (described as an apocryphon on Samuel by Yadin at an earlier stage of research). The text is very fragmentary, but there are a few similarities in motifs and literary texture between this text and Apocryphon of Joshua, which may suffice to assign them to the same literary composition.

Because of the uncertainties concerning the relation between the six different manuscripts, the issue of their possible Qumran authorship has to be dealt with separately, and may be answered positively for some manuscripts, although the evidence is not clear. The curse against the rebuilders of Jericho in Apocryphon of Joshua^b fragment 22.ii is the only datable element for the composition (in addition to the date of the individual manuscripts). Several scholars have suggested that the object of that curse is Simon or John Hyrcanus, and in that case the composition should be considered anti-Hasmonean. If this assumption is correct, the composition would have been written either in the late second or early first century BCE. The theological discussion in Work with Place Names (4Q522) as to why Jerusalem was not made a religious center in the days of Joshua is probably written from the point of view of the Jerusalem priesthood (Tov), but this element is not datable.

Beyond the aforementioned compositions devoted to Joshua, the figure of Joshua is mentioned only rarely in the Qumran texts: Words of Moses, 12 (1Q22); Damascus Document, CD v.4.

EMANUEL TOV

JUBILEES, BOOK OF, a retelling of the stories in *Genesis* and the first parts of *Exodus* set within the literary context of a divine revelation to Moses while he was on Mount Sinai. In the first chapter, God himself converses with Moses about Israel's future apostasy and restoration, but in the remaining chapters (2–50) an Angel of the Presence reveals the contents of heavenly tablets to Moses. The scriptural material that is revealed by the

angel begins with the creation story in *Genesis* 1 and continues until the Israelites have departed from Egypt, crossed the sea, and entered the wilderness, that is, from *Genesis* 1 to *Exodus* 19. The biblical stories are placed within a chronological framework provided by the author's system of dividing time into units of forty-nine years, called jubilees, each of which is subdivided into seven units of seven weeks of years. Numerous events from *Genesis* and *Exodus* are thus introduced with a formula such as the one found in *Jubilees* 4.29: "At the end of the nineteenth jubilee, during the seventh week—in its sixth year—Adam died" (the date in question is the year 930 from creation; see *Gn.* 5.5). References to the book by its Hebrew title *Jubilees*, derived from the frequently recurring chronological unit of forty-nine years, are found in Hebrew, Greek, and Syriac sources, while another title—*The Book of the Division of the Times* (taken from the prologue and *Jub.* 1.4)—which was probably its original name, is attested in Hebrew and Ethiopic sources.

It is highly likely that the book was written in the mid-second century BCE or even a little earlier. While scholars such as R. H. Charles defended a late-second-century date, new evidence now makes the midsecond-century date more likely. Externally, the earliest copy of any part of the book is *Jubilees*^a (4Q216), whose script indicates that it was copied during the Hasmonean period, probably between 125 and 100 BCE. *Jubilees* is mentioned by name and cited as an authority in the Damascus Document (CD xvi.2–4). The earliest copy of the Damascus Document from Cave 4 can be dated paleographically to between 100 and 50 BCE. Thus, the dates of the earliest copy of *Jubilees* itself and of the earliest reference to it indicate that it was written no later than approximately 100 BCE. Internally, the book contains some clues that it was written after most of the booklets included in *1 Enoch* had been composed. The section about Enoch (*Jub.* 4.15–26) betrays knowledge of the "Astronomical Book" (*1 Enoch* 72–82), the "Book of Watchers" (*1 Enoch* 1–36), the "Epistle of Enoch" (*1 Enoch* 91–107), and the "Book of Dreams" (*1 Enoch* 83–90). The "Book of Dreams" appears to be the latest among them, and, judging by historical allusions in the "Animal Apocalypse" (chaps. 85–90), it was written no earlier than c.164 BCE. Hence, *Jubilees*, which refers to this section, was written after 164 BCE. While many of the concerns in *Jubilees* resemble those found in the sectarian texts at Qumran (see below), there is no evidence in the book that the author advocated withdrawal from Jewish society. Consequently, it may have been written before the exodus to Qumran, which may have occurred c.150–140 BCE. A date of composition somewhere between 160 and 150 BCE seems highly likely for the complete book. Several scholars (Goldstein

[1983], Knibb [1989]) have argued that a slightly earlier date is more likely, perhaps about 170 BCE. Their reasoning is that the book demonstrates the author's knowledge of events that occurred early in the reign of Antiochus IV (175-164 BCE) but not of his infamous decrees banning the practice of Judaism in 167—an event the writer would certainly have noted had he been aware of it. It is not obvious, however, that, within the framework of the book, the author would have had occasion to comment on or allude to these decrees; moreover, a date of composition in approximately 170 BCE would not explain the writer's knowledge of the later "Book of Dreams." There is no textual or manuscript evidence for any subsequent redactions of *Jubilees* or parts of it.

Jubilees was composed in Hebrew and was subsequently translated into Greek and possibly into Syriac. The Greek translation served as the basis for renderings into Latin and Ethiopic. Some textual evidence from each of these versions has survived, but the complete book is extant only in the Ethiopic (Ge'ez) language. The Hebrew text of the book seems to have passed out of use in antiquity; nothing was thought to have survived of it, apart from a citation of its title in the Damascus Document (CD xvi.3-4), until the Qumran discoveries. In the Qumran caves, fragmentary copies of fourteen (possibly fifteen) manuscripts were found (see VanderKam [1992], p. 642). They are listed here with their paleographically determined dates (Hasmonean = 150-30 BCE; Herodian = 30 BCE-70 CE) and chapters and verses that are attested (usually only partially) in them:

1Q17	Herodian	27.19-20
1Q18	Hasmonean	35.8-10
2Q19	Herodian	23.7-8
2Q20	Herodian	46.1-3
3Q5 frgs. 3, 1	Herodian	23.6-7, 12-13
4Q17ba frgs. 19-21	Herodian	23.21-23, 30-31
4Q216	Hasmonean	Prologue + 1.1-2, 4-7, 7-15, 26-28; 2.1-4, 7-12, 13-24
2Q217 (?)	Hasmonean	1.29-2.1; 2.29-30 (?)
4Q218	Herodian	2.26-27
4Q219	Herodian	21.1-2, 7-10, 12-16, 18-22.1
4Q220	Herodian	21.5-10
4Q221	Herodian	21.22-24; 22.22, (30?); 23.10-13; 33.12-15; 37.11-15; 38.6-8; 39.4-9
4Q222	Hasmonean	25.9-12; 27.6-7; 48.5 (?)

4Q223-224	Hasmonean	32.18-21; 34.4-5; 35.7-22; 36.7-23; 37.17-38.13; 39.9-40.7; 41.7-10
11Q12	Herodian	4.7-11, 13-14, 16-17, 29-30; 5.1-2; 12.15-17, 28-29

As all fifteen (or fourteen if 4Q217 is omitted) of these copies are written in Hebrew, there can be no doubt that Hebrew was the original language of the book. It has been claimed that a copy of *Jubilees* was found at Masada (1276-1786), but the fragmentary text is related to parts of the book in theme only and is not from a copy of *Jubilees* itself. Unlike the Qumran copies of *1 Enoch*, the *Jubilees* manuscripts show that the Ethiopic version has preserved the text of the book in an accurate fashion. The Greek version has disappeared; all that survives is a series of allusions to and quotations from it in the writings of various Christian authors such as Epiphanius, Syncellus, and Cedrenus (see the list in VanderKam, [1989], 1, xii). The same situation obtains for the Syriac version, if there ever was a complete translation of *Jubilees* in this language: only a series of nineteen excerpts in the *Chronicon ad annum Christi 1234* has survived. A Latin version is attested by one fifth-sixth century palimpsest manuscript on which approximately one-third of the text from twenty-five different sections (beginning at *Jub.* 13.10) is preserved. The full text of *Jubilees* is extant in the Ethiopic language, and twenty-seven copies of it have been identified (cf. VanderKam, 1989).

Although the name of the author remains unknown, the concerns that led him to write the book are evident throughout. He chose to present his work as a divine revelation, with God himself speaking in the first chapter and the Angel of the Presence, reading from the heavenly tablets, in chapters 2-50. In large part he reproduced the scriptural base, but through additions and other modifications he was able to insert his own views into the older text and thus to clothe them with the same revealed authority. One of his principal emphases was to present the patriarchs as faithfully obedient to divine laws that, according to the Pentateuch, were revealed only in postpatriarchal times. Hence, Noah celebrated Shavu'ot (*Jub.* 6.17-18), and Abraham observed it (*Jub.* 15.1-10) and Sukkot (*Jub.* 16.15-31) as well. The writer may have been combating a current opinion that there had once been a time when the laws that came to separate Jewish people from others were not in existence. His point is that there was never such a time; the chosen race had always been distinguished from other nations by special laws that they observed from the earliest days.

Another overarching theme is chronological. The pe-

riod from the first day of creation to the future entry into Canaan extends exactly fifty jubilee periods of forty-nine years each, that is, 2,450 years. Such language reminds the reader of the biblical jubilee legislation requiring that at the end of a jubilee (in the fiftieth year according to *Lev.* 25.8–17) slaves were to be freed and land was to be returned to its original owners. In *Jubilees* the same happens in the fiftieth jubilee period but on a national scale: early in the jubilee period (the year 2410) the Hebrew slaves are freed from Egyptian bondage, and at the end of it (the year 2450) they enter the promised land, which had rightfully been theirs since the division of the earth following the Flood. The importance of chronology is also evident from the numerous dates that the author assigns to biblical events and from his teachings about the correct calendar. He attributes the beginning of calendrical knowledge to Enoch (*Jub.* 4.17–18, 21) but discloses the details about it in connection with the story of the Flood (*Jub.* 6.20–38). The revealed calendar is a solar one of 364 days (exactly fifty-two weeks), with each quarter having ninety-one days (thirteen weeks). Within this arrangement each festival has an exact time when it is to be celebrated, and the weekly rhythm of time is marked by the all-important Sabbath, which is to be observed scrupulously. The writer insists that lunar movements play no calendrical role; they mislead one into following the calendar of the nations. Several passages in the book imply that Shavu'ot was celebrated on the fifteenth day of the third month. The Qumran calendars specify the same date for the holiday and thus show that these exegetes understood the phrase “the day after the Sabbath” in *Leviticus* 23.15—the date that serves as the starting point of the fifty-day count leading to Shavu'ot—to mean the twenty-sixth day of the first month. This date is the occasion for making or remembering covenants in *Jubilees* (with Noah, *Jub.* 6.17–22; Abraham, *Jub.* 14.20; and Moses, *Jub.* 1.1) and is now known to be the time when the Qumran community annually renewed its covenantal vows (Damascus Document^a [4Q206 ii.16–18] = Damascus Document^c [4Q270 ii.11–12]).

Early in the history of scrolls scholarship, Annie Jaubert proposed that *Jubilees*' solar calendar provided the information needed to solve the problem of the conflicting days for the Last Supper in the Gospels. The synoptic Gospels identify the supper as a Passover meal, whereas John places it on the evening before Passover. Jaubert proposed that the synoptic writers followed the *Jubilees* calendar, but John used the lunar-solar arrangement practiced at the time in the larger Jewish community. Her proposal has not received much support because there is no evidence in the New Testament for the 364-day solar calendar; moreover, the differences in the gospel chronologies seem to be theologically motivated.

A third entity emphasized in *Jubilees* is the priesthood. In the book the priestly line extends back to Adam, who offered sacrifices as he left the garden of Eden (*Jub.* 3.27), and continues through to Levi who is the biblical ancestor of the priests. The sacred writings are entrusted to the members of this line. Levi, the third son of Leah and Jacob, is presented far more favorably in *Jubilees* 30–32 than in the corresponding parts of *Genesis*. The writer makes it abundantly clear that priestly authority, represented especially by Levi, who was divinely chosen for the position, is superior to temporal power, embodied particularly in Judah.

Fourth, unlike the biblical texts that undergird the book, *Jubilees* shows an interest in the last times. In the future, God, after punishing his recalcitrant people, will purify and restore them and will dwell with them in a new creation when human life will again be as long as it was for the antediluvian patriarchs (see chaps. 1 and 23).

A final intriguing point that the writer highlights is the importance of women in the chosen line. Unlike the biblical writers, he names the wives of all the patriarchs and supplies genealogical information about them. In this way he assures the purity of the line by documenting the proper family connections of both mother and father (Halpern-Amaru, 1994). Mention should also be made here of the significant role that Rebekah plays in the book (Endres, 1987).

Jubilees enjoys the closest ideological kinship with the Enochic literature, the Levi texts—especially Aramaic Levi—and the sectarian literature from Qumran. The writer's knowledge of the early Enoch booklets—the “Astronomical Book,” the “Book of Watchers,” the “Epistle,” and the “Book of Dreams”—is clear in *Jubilees* 4.16–25, the paragraph about Enoch. One specific theme common to *Jubilees* and the Enochic works is the angelic interpretation of *Genesis* 6.1–4: the sons of God (= angels) married the daughters of men who gave birth to giants. Their violent and evil exploits served as an explanation for the monstrous increase of evil in the world before the Flood, and their punishment prefigured the final judgment. A second theme that they share is the 364-day solar calendar. *Jubilees* disagrees with the “Astronomical Book,” however, in according no valid place to a lunar element in calendrical matters. *Jubilees* also borrows, whether directly or indirectly, from Aramaic Levi for its extremely positive portrait of the ancestral priest and his divine election to the priesthood (similar themes continue particularly in the *Testament of Levi* and *Testament of Judah* in the *Testaments of the Twelve Patriarchs*).

The Qumran caves have also revealed, besides the fourteen or fifteen copies of *Jubilees* found in them, a series of texts that have affinities with *Jubilees*. Several calendrical texts offer or presuppose the same 364-day solar calen-

dar; among them are Calendrical Document A (4Q320, which, however, correlates solar and lunar calendars), Calendrical Document E^b (4Q327, which correlates Sabbaths and festivals with dates in the 364-day system), Miqtsat Ma'asei ha-Torah (4QMMT), the Temple Scroll (11Q19 and 11Q20), Songs of the Sabbath Sacrifice (4Q400–407 and MasIk), and the Compositions of David in Psalms^a xxvii.5–7 from Qumran Cave 11 (11Q5). Other texts from Qumran that show similarities with *Jubilees* are the Pseudo-Jubilees texts (4Q225–227); 4Q228, which may cite *Jubilees* as an authority; Commentary on Genesis A (4Q252), whose chronology for the Flood account seems to offer a slight correction of the one in *Jubilees*; and the Genesis Apocryphon, whose story about the division of the earth among Noah's offspring, for example, closely resembles *Jubilees* 8–9.

There is strong reason for believing that *Jubilees* was considered authoritative at Qumran. The number of copies of the book is unusually high for any work, including the ones that became recognized as biblical. Only *Psalms* (thirty-six), *Deuteronomy* (twenty-nine), *Isaiah* (twenty-one), and *Exodus* (seventeen) among the scriptural writings are represented in more copies than *Jubilees*. Interestingly, there are as many copies of *Genesis* (fifteen) as of *Jubilees* (if 4Q217 is counted). No other text found in the caves is attested as frequently. In addition to the relatively large number of manuscripts, *Jubilees* is recognized as an authority in the Damascus Document. The Damascus Document (CD xvi.2–4) refers to it and employs its Hebrew title ("The Book of the Divisions"): "And the exact interpretation of their ages about the blindness of Israel in all these matters, behold, it is defined in the book of the divisions of the periods according to their jubilees and their weeks" (translation of García Martínez, p. 39; compare also CD x.7–10 with *Jubilees* 23.11 for a possible second reference). The text 4Q228 (work with citation of *Jubilees*?) may mention the book in 1.i.2 ("[in the divi-]s[ion]s of the times") and 1.i.9 ("For thus is it written in the divisions"; cf. lines 4 and 7). The citation formula that introduces the reference in line 9 is familiar from scriptural quotations at Qumran and elsewhere.

The status of *Jubilees* at Qumran is complicated by several other considerations. It may seem to have served as an authority in calendrical matters in that its 364-day solar calendar is attested in a series of Qumran texts, but the Qumran calendars are more closely related to the Enochic "Astronomical Book" because they also reckon with a lunar calendar, which is anathema to the author of *Jubilees*. Moreover, Commentary on Genesis A (hereafter, 4Q252) offers an interpretation of the dates in the Flood story that seems to correct the one presented in *Jubilees*: where *Jubilees* 5.27, following *Genesis* 7.24, states that "[t]he waters remained standing on the surface of the

earth for five months—150 days," the author of 4Q252 recognized that in the 364-day calendar the five months in question would total 152 days. Hence he added two days to the 150 to achieve five complete months. That is, the verdict of *Jubilees* was not taken as authoritative.

While there are no indications that *Jubilees* ever became more widely authoritative in Jewish circles, it was used by later writers. An example is the eleventh-century rabbi Moses the Preacher of Narbonne, who derived the *Jubilees* material that he incorporated in his writings from Byzantine excerpts from Jewish pseudepigrapha (Himmelfarb, 1994). The book was transmitted in Christian circles, although, apart from Ethiopia, little textual evidence remains. In the Abyssinian Church, *Jubilees* achieved canonical status and is often listed together with the works of the Pentateuch.

JAMES C. VANDERKAM

JUDAH, the fourth son of Jacob and Leah, who persuaded his brothers to sell Joseph to the Midianites rather than to kill him (*Gn.* 37.26-28). He took a Canaanite wife who bore him three sons and had twins through Tamar, the wife of his firstborn son (*Gn.* 38). He was blessed with the scepter (of kingship) that would not depart from him (*Gn.* 49.10), and from him kings and eventually the Messiah would descend.

The most significant Judean Desert documents that refer to Judah are fragments that resemble, but have no direct correspondence to, *Jubilees* and the *Testament of Judah*. The *Testament of Judah* (1.5) attributes the assignment of kingship to Judah's obedience and honoring his parents, and also mentions his military exploits (chaps. 3-7). The *Testament of Judah* puts much of the blame for Judah's actions in *Genesis* 38 on his Canaanite wife, who opposed her sons having children by the Amorite Tamar (10.1-6), and on drunkenness, the love of money, and

gazing at the beauty of women, which caused him to take a Canaanite woman as his wife and enter into relations with Tamar (14.1-6). Because of this, his tribe would be doomed to wickedness (17.1-2). The termination of his rule by an alien race is foretold (22.2) and the coming of his descendant, the star of Jacob, as a savior (24.1, 24.6). *Jubilees*, which retells *Genesis*, also elevates Judah, including his repentance for having had relations with Tamar, his forgiveness, as well as his command for strict punishment for those who do likewise in the future (*Jub.* 41.34-28; cf. *Gn.* 38).

Judean Desert documents contain numerous references to the tribe of Judah in connection with the other tribes (e.g., the War Scroll; 1QM i.2) or the land of Judah (e.g., Testimonia; 4Q175 27). The works that mention Judah's life are the Testament of Judah? from Cave 3 at Qumran (hereafter, 3QTestament of Judah?; 3Q7), Testament of Judah? from Cave 4 at Qumran (hereafter, 4QTestament of Judah?; 4Q484), Apocryphon of Judah (4Q538), and Commentary on Genesis A (4Q252). The first three are very fragmented, and it is difficult to say very much about the precise nature of these works. 3QTestament of Judah? consists of a number of Hebrew fragments that seem to be a list of tribes among whom Judah (the name Judah must be restored) is included, who are blessed by the Angel of the Presence. 3QTestament of Judah? is similar to *Testament of Judah* 25.1-2, which also mentions the Angel of the Presence. 4QTestament of Judah consists of twenty tiny fragments (the largest contains only five letters) dated to the first century CE, three of which may be related to the *Testament of Judah* 24 and 25. There are two Aramaic fragments of late Hasmonean date entitled the Apocryphon of Judah that recount the second journey of Jacob's sons to Egypt, in which Judah offers himself instead of Benjamin before the brothers recognize Joseph (cf. *Jub.* 42.25-43.18; *Gn.* 44.1-45.10). Commentary on Genesis A (4Q252 v.1-6) dates to around the second half of the first century BCE and contains a commentary or *pesher* on *Genesis* 49.10, predicting the coming of Judah's descendant, the Messiah of Righteousness, the Branch of David.

Judah's main significance in the New Testament is as the forefather of Jesus Christ, the priestly Messiah descended from Judah (*Heb.* 7.14) and lion of the tribe of Judah (*Rv.* 5.5). Matthew's genealogy of Christ also mentions Tamar, recalling Judah's relationship with her (*Mt.* 1.3). Rabbinic writings tend to elevate Judah, attributing his kingship to admirable character traits. He was distinguished by saving Joseph's life, openly confessing his relationship with Tamar, and his profound wisdom and physical strength. The death of his wife and sons is explained as divine retribution for the suffering he caused

Jacob by selling Joseph (Tanh B, *Gn.* 209). His sinning with Tamar was due to an "angel of desire" who enticed him because kings and redeemers were to issue from this union (*Gn. Rab.* 95.2).

ROGER GOOD

JUDAH, HOUSE OF. There are four certain occurrences of the term *house of Judah* in the Dead Sea Scrolls: the Damascus Document (CD iv.11); Peshar Habakkuk (1QpHab viii.1); Peshar Psalms (4Q171 1-10. ii.14); and the Florilegium (4Q174 4.4; 1-3. ii.1 is usually restored with this sobriquet also). Several questions arise in the understanding of this appellation. First, is it specific, not to be conflated with other uses of the term *Judah*, or could it overlap in meaning with *Judah*? Second, is the intended referent of the term the same in every document?

In the Cairo Damascus Document, the sobriquet appears in a brief passage following a *midrash* on *1 Samuel* 2.35-36 and *Ezekiel* 44. Both are accounts of the selection of a new priesthood, and both are interpreted as referring to the founding of the Qumran community. Thus the reference to "joining the house" appears to play on the "house" promised in *1 Samuel* 2.35-36 to which the old priesthood of Eli's line will beg in vain to be joined. The *midrash* on *Ezekiel* also plays on "joining," and probably alludes to *Isaiah* 14.1 as well. The passage in the Damascus Document concludes with the warning that the time for "joining with the house of Judah" is or will soon be over. If this is so, the *house of Judah* refers to the Qumran community; the passage suggests that the community saw itself as the beginning of the true eschatological Judah, which they hoped others would join before it was too late.

In Peshar Habakkuk the sobriquet is found in a passage that is an interpretation of *Habakkuk* 2.4b. The faithfulness that leads to life in Habakkuk is interpreted as faithfulness to the Teacher of Righteousness. The ones who are faithful are "those who observe the Law in the house of Judah." It is uncertain whether "in the house of Judah"

refers to the place in which the observance happens, in which case the house of Judah is to be identified with the Qumran community, or whether "in the house of Judah" suggests all Israel. Quite possibly, elements of both senses of the sobriquet were intended. The community (or the author) recognized the existence of an Israel apart from the gentile nations. Within this community of Israel the author recognized some who were faithful to the covenant although they had not yet joined the author's community. At the same time, the community considered itself the true Israel.

The discussion of how the sobriquet in Peshar Psalms is to be understood usually hinges on the understanding of the phrase "ruthless ones of the covenant." This could refer to those who are violent against the covenant; in this case, either the "covenant" is in the house of Judah or the violent ones are in the house of Judah. A more likely understanding of the passage begins with the subject "ruthless ones of the covenant," about whom two things are said: first, "they are in the house of Judah," and second, they "plotted to destroy those who do the Law." According to this understanding, being "in the covenant" is the same as being "in the house of Judah." The sobriquet would then refer to all Israel, some of whom are hostile to the community.

The example in the Florilegium ("[. . .] to the house of Judah, severe things, to cherish animosity against them [. . .]") occurs in a small fragment that provides little context for an understanding of the sobriquet.

JUDAH THE MACCABEE. See Hasmoneans; Jonathan (Hasmonean).

JUDAS THE ESSENE. See Essenes

JUDE, LETTER OF. This New Testament work has often been treated as a product of early Catholic Christianity and dated late, but recent study has shown that it probably derives from early Palestinian Jewish Christianity. There is no good reason to deny its attribution to Jude, that is, Judas the brother of Jesus, who was a leader of the early Christian movement in Jewish Palestine. [See Jewish Christians.] The work's striking affinities with the Dead Sea Scrolls are one element in the case for its origin in a Palestinian Jewish context. They are not such as to prove any particular historical connection with the Qumran community, but probably reflect the common milieu that the Qumran community and earliest Christianity shared. Of special interest are the shared exegetical methods and traditions, which are evidence of the degree to which exegesis at Qumran was in many ways typical of first-century Judaism.

Jude 4–19 is the most elaborate and carefully structured piece of formal exegesis in the style of the Qumran *peshtarim* to be found in the New Testament; this was first observed by Ellis (1978, pp. 220–226), and is studied particularly by Bauckham (1983; 1990, chap. 4). The structure resembles the thematic *peshtarim* of Qumran, which provide commentary on a collection of scriptural texts on a theme (e.g., Florilegium [4Q174], Tanhumim [4Q176], Melchizedek [11Q13]). The passage shares with the Qumran *peshtarim* in general exegetical formulas, exegetical techniques, and hermeneutical principles. Although it has no equivalent to the most common exegetical formulas in the Qumran *peshtarim* (those that use the word *pesher*), its use of formulas including “these” (*Jude* 8, 10, 12, 16, 19) to identify contemporaries to whom scripture prophetically refers is best paralleled in the Qumran *peshtarim* (e.g., Peshier Isaiah^b 4Q162 2.6–7, 4Q174 1.16). Exegetical techniques that can be paralleled in the Qumran *peshtarim* include the use of catchwords to link texts and to link texts and their interpretation. *Jude* shares with the Qumran *peshtarim* the hermeneutical presupposition that scripture speaks of the last days in which he and his contemporaries live and of the events in which his community takes part. Jude’s use of eschatological typology, which understands biblical persons and events as prefiguring those of the last days, is not typical of Qumran *peshtarim* but is found elsewhere in Qumran literature. [See Pesharim.]

Other points of contact between *Jude* and the Dead Sea

Scrolls are as follows. In addition to an explicit citation from *1 Enoch* (*Jude* 14–15 = *1 En.* 1.9 = Enoch^c 4Q204 1.i.15–17), *Jude* contains several clear allusions to the Enochic literature, indicating an evaluation of the work similar to that attested by the several copies of *Enoch* found at Qumran [See Enoch; Enoch, Books of.] *Jude* 5–7 makes use of a traditional schema of examples of divine judgment that is also attested in the Damascus Document (CD ii.17–iii.12) as well as elsewhere (*Sir.* 16.7–10, *3 Mc.* 2.4–7, *Testament of Naphtali* 3.4–5, *San.* 10.3). The story of the dispute over the body of Moses to which *Jude* 9 refers belongs to a tradition of stories of dispute between good and bad angels, to which Visions of Amram^a (4Q543–548) also belong and which accounts for some striking verbal parallels (cf. 4Q544 1.10–12). J. T. Milik (1972) thought Jude’s source, the *Assumption of Moses*, depended on the Visions of Amram (but against this and for studies of the whole tradition, see Berger [1973] and Bauckham [1983, pp. 65–76; and especially 1990, chap. 5]). C. Daniel [1968] identified the dreamers of *Jude* 8 as Essenes, but this ignores the clear evidence that Jude’s opponents are antinomians. The allusion to *Isaiah* 57.20 as a prophetic reference to Jude’s opponents in *Jude* 13 is paralleled by allusions to the same text in *Hodayot*^d from Cave 1 at Qumran (1QH^a x.14–15; xvi.15–16; cf. x.29–30; xiv.26 [ii.12–13; viii.14–15; cf. ii.27–28; vi.23])

RICHARD BAUCKHAM

JUDEA. [This entry is divided into five articles: Economy, Fauna, Flora, Geography, and History.]

Economy

Judea possessed a mixed economy in the Second Temple period, characterized by growth and change. [See Economic Life.] Until the Hasmonean uprising, Judea had been a small province divided into a number of districts.

A mixed but characteristically closed agricultural economy with a combination of crops and flocks was dominant in most of these districts. [See Agriculture.] The Greek cities were patently more open to commerce, and their economy was based on trade and the import of foodstuffs from within various parts of the country and from other provinces. The collapse of the Seleucid empire and the growth of the Hasmonean kingdom not only effected a change in the political situation, but also altered the economic conditions in the new kingdom.

The Hasmonean Revolt (106–104 BCE) caused much damage to the Hellenistic urban sector. According to Josephus, the Hasmoneans destroyed all the Hellenistic cities, but that description is exaggerated. At least some of these cities continued to be active, though to a lesser degree. On the other hand, there was a distinct economic and demographic increase throughout all regions of the land, especially in the Judean hill country, which was the heartland of the new kingdom. The Hasmonean kingdom was freed from the yoke of the taxes that had formerly been given to the Seleucid rulers, and these monies were now transferred to Jerusalem and the members of the Hasmonean elite. The tax burden imposed upon the farmer did not change, but the economy of the entire state benefited, since taxes ceased to constitute the export of capital.

The Roman conquest of 63 BCE liberated the majority of the Hellenistic cities; in other words, they were reestablished as autonomous cities that were detached from the vassal state of Judea and placed under direct Roman rule. There is no archaeological evidence for any surge of growth in these cities, but logic dictates that the lifting of the restrictions imposed by the hostile Hasmonean rule benefited the Hellenistic cities. No fundamental changes took place in the agrarian sector. The placement of Judea under the sheltering wings of the Pax Romana and the uniform system of Roman commerce and civilization contributed to the growth of the land. New technology, norms of consumption, and commercial arrangements all entered the land, and each exerted a positive influence upon the Judean economy.

Productive Economic Branch. The major productive economic branch was agriculture. Three agricultural products dominated the economy of Judea: grains (primarily wheat with some barley, mainly in the desert fringe); olives, which were used mainly as a source of oil; and wine, which was the primary source of sugars and which was drunk diluted with water in a ratio of 1:2 or 1:3. There were also a number of other crops that played an important role such as figs, dates grown in the Jordan Valley region, and pome fruits from Galilee. The raising of flocks and some cattle was another major sector of Judean agricultural production. The raising of flocks consti-

tuted a maximal utilization of the desert fringe areas in the southern Hebron hill country and in the Judean Desert. In the hill country regions, in contrast, such activity was wasteful. A sheep or goat requires an average of four to five dinams for grazing, and the area required for two or three of these animals would suffice to raise food for an entire nuclear family. Nonetheless, Josephus's enthusiastic description portrays Galilee, Judea, and Samaria as grazing lands (*The Jewish War* 3.35–50), thus indicating that the economy was mixed and that some potential agricultural lands were being used extensively as pasture. Such mixed agriculture is characteristic of less well-developed economies, for in more advanced phases this branch is shunted to areas with lower economic potential.

A Closed or Open Economy? The rural farm was basically a closed economic unit. The farmers supplied by themselves almost all their own needs. Nonetheless, the few manufactured goods that the common person required had to be imported. Thus, for example, there were no iron and copper deposits in the Land of Israel, and all metals would have to have been imported, as was the case regarding additional vessels. Few imported pottery vessels were found in rural areas, and Rhodian seals, for example, are extremely rare. Josephus explains the lack of attention by Roman authors to the people of Israel because "ours is not a maritime country; neither commerce nor the intercourse which it promotes with the outside world has any attraction for us . . . and we devote ourselves to the cultivation of the productive country with which we are blessed" (*Against Apion* 12.60). This description is somewhat tendentious and apologetic, and was meant to explain the disregard by Hellenistic culture of the ancient and venerable people of Israel. Another description by Josephus alludes to the existence of many ports and the possibilities of trade (*The Jewish War* 3.35–58). Nonetheless, the emphasis upon the agricultural nature of the land is essentially correct and recurs in the writings of many authors who stress the fertility and maximal utilization of the land.

Notwithstanding the above, there were pockets of open economies in certain regions of the land where specialized economies developed. In other words, special crops were raised in these areas that would then be exported, balanced by the need to import regular consumer goods. This required a market that would absorb the special crop and enable the marketing and purchase of standard consumer items. Galilee characteristically produced olive oil, while Judea specialized in the raising of grapes, but this did not suffice to change the structure of the economy. A different situation prevailed in Jericho, which produced dates and the ingredients of spices (myrrh and balsam). The plots devoted to spices were limited in area,

but such crops were extremely profitable, and when expropriated by the authorities, became a monopoly of the house of Herod and later of the Roman authorities. Clearly, the inhabitants of the region did not supply by themselves all their needs, but rather relied, in some measure, upon an open market.

Jerusalem and its Temple constituted another focal point of an open economy. The members of the elite streamed to the city from throughout the land, as did myriads of pilgrims a number of times during the year. Taxes, *terumot* ("heave offerings"), tithes, and many free-will offerings were brought to Jerusalem. The Mishnah attests that all the produce within a day's distance from Jerusalem was produced in a state of ritual purity and was regarded as potentially for Temple use. Jerusalem was a true metropolis, and the influence of its wealth and prosperity was felt throughout the entire province of Judea. Thousands of columbarium caves, used for the raising of doves most likely intended for sacrificial use in the Temple, were discovered in the Shephelah of Judea. Regardless of the intended economic function of the birds, it is clear that the commercial opportunities offered by Jerusalem's expanding urban market served as a major catalyst for this area's development as a dove-raising center.

The Hellenistic cities were also commercial centers. Some cities were agriculturally oriented to a great degree, while others were less so. Caesarea, for example, was a commercial city in all respects. It was here that Herod built the largest port between Alexandria and Antioch, and it also took part in the grain trade between Egypt and Rome. The agricultural potential of the area was low because of its sand dunes (which were used agriculturally only in the Early Arab period), and the city naturally relied heavily upon its commercial markets. The royal court and the homes of the rich located in Caesarea constituted another focal point of the city's open economy.

Evidence of magnificent buildings and international economic ties was uncovered in the excavations of cities in Judea. Rhodian seals and imported pottery vessels were found in almost every excavation. Thus, for example, the palace at Masada contained evidence of the import of foodstuffs for members of the Herodian dynasty from Italy and other Roman provinces. All the above-described factors, then, combined to produce a complex situation in which two economic systems—one open and the other closed—existed concurrently.

The Agrarian Situation and Socioeconomic Stratification. Before the Hasmonean rebellion Judean society consisted primarily of three socioeconomic entities: small, independent farmers; a few wealthy individuals; and officials involved with the government and operating out of governmental estates. A large governmental estate

was located in the eastern Jezreel Valley, and the Zenon papyri speak of additional estates. The scope of the governmental estates has not been determined, but there is no reason to assume that they occupied a large portion of the lands of Judea since the Jewish *halakhah* offered only a few ways in which the Temple might control extensive lands (in contrast with the land ownership policies of pagan temples in antiquity). Nonetheless, the Temple most likely possessed lands on a small scale.

The Hasmonean rebellion and the subsequent development of the Hasmonean kingdom provided the ideal background for agrarian changes that greatly affected the socioeconomic structure of Judean society. The new rulers inherited the lands of the Seleucid kings, and their conquests engendered a plethora of opportunities for land appropriations. The demographic increase in Judea led to the creation of landless masses. Jerusalem underwent a process of development and massive growth, and the small town became a tumultuous metropolis. A portion of the demographic increase was absorbed by Jerusalem, where landless masses earned their livelihood by providing services to the wealthy inhabitants of the city, in the construction work in the city, and, mainly, in the building of the Temple. The late Second Temple period was characterized by frequent changes of government. Each such change was followed by the exchange of elites, and probably by the expropriation of lands belonging to the members of the former ruling class. A number of estate buildings to the north of Jerusalem were abandoned at different times in the late Second Temple period and may attest to this ongoing process of the exchange of elites.

Some scholars are of the opinion that the agrarian tension and the constant upheavals caused by it to the socioeconomic stratification of Judean society were the primary reasons for both the First Jewish Revolt (66–73 CE) and various other social phenomena (e.g., messianic sects). Although there is no explicit proof of any direct link, many agrarian changes undoubtedly occurred in this period.

Many excavations have uncovered residential structures, the majority of which are simple houses without the characteristic components of Hellenistic architectural structures. The use of marble or ornamented capitals was not common among the masses. Economic prosperity, on the other hand, is evident, and the dwellings, though built simply, do not reflect poverty. There is insufficient evidence regarding the dwellings of the masses in Jerusalem itself. Only some of the patrician houses that were excavated throughout the land and in Jerusalem exhibit the influences of the Roman building style, and, with the exception of the palaces of Herod, no magnificent Roman villas on the highest imperial level were found in Judea.

Based on the archaeological finds to date, we are unable to identify any established stratum of the extremely wealthy.

In summary, despite the relative stability of every identifiable factor in the different production branches of the Judean economy, the overall economic situation of Judea was characterized by organizational and economic mobility and underwent recurring processes of structural change.

ZE'EV SAFRAI

Fauna

The Levantine region comprises a biogeographical crossroads between Africa and Eurasia where several biogeographical zones overlap and coexist and thus constitute one of the most complicated ecosystems in the world. Up until the Miocene (24 million years ago) the Levant was an integral part of Africa, but during the later part of the early Miocene (19 million years ago), due to a long-term gradual northward shift, the Afro-Arabian continental plate eventually coupled with the southwest corner of Asia. This created a land-bridge between the two continents through which an extensive biotic exchange between the Palearctic domain and the African continent took place.

Thus the southern Levant became a melting pot for Ethiopian, Oriental, Palearctic, and even Nearctic elements. During the latter part of the Miocene and the Pliocene (12–2 million years ago) the Saharo-Arabian desert belt was steadily developing, eventually creating a barrier between tropical Africa and the Levant and causing the original African organisms to become partially or totally isolated within the Levantine region.

The fluctuating environmental changes that took place in southwest Asia during the Pleistocene Age (1.7–0.1 million years ago) were significant enough to induce oscillating alterations of the faunal composition of the southern Levantine desert in accordance with the glacial-interglacial climatic changes. The abrupt increase in the postglacial world temperature (last 10,000 years), followed by an intense process of desiccation, compelled many Palearctic and Palearctic elements to become completely isolated from their main center of distribution, surviving in ecological enclaves, mainly in desert oases around the Dead Sea, and forced less tolerant species to the brink of extinction. At present, the region is paved with islands of coexisting Afro-tropical and Eurasian relicts.

The Judean region has been occupied for thousands of years. Population density began to grow rapidly in the late Epipaleolithic and Neolithic periods. The following Holocene period is characterized by an overall deteriorat-

ing climate and reduction in forest lands. Starting with the Canaanites and the ancient Israelite tribes, wildlife resources have been intensively exploited.

During the last few centuries, the pressure on the ecosystem by hunting and intensive herding has led to severe land attrition. The introduction of firearms has proved to be almost disastrous to the local biodiversity. Thus the extant fauna cannot faithfully represent the original animal community of Judea during the biblical period. Animals like the hartebeest (*Alcelaphus buselaphus*), the Arabian oryx (*Oryx leucoryx*), the Persian wild ass (*Equus hemionus*), the lion (*Panthera leo*), the ostrich (*Struthio camelus*), and most species of vultures have disappeared.

The extremely diversified composition of the Levantine biota comes to its full expressiveness in and around the Dead Sea area, which supports an impressive number of Palearctic elements; at present it is completely isolated within an extreme eremian region. A few examples among birds are the fan-tailed raven (*Corvus rhipidurus*), the sooty falcon (*Falco concolor*), the Tristram's grackle (*Onychognathus tristrami*), and the blackstart (*Cercomela melanura*), all of which delineate an essential "Syro-African Rift Valley" pattern of distribution, with a significant disjunction between the Levantine and the African realms. To them we may add the rock hyrax, or the coney (*Procapra capensis*), and the Nubian ibex (*Capra ibex nubiana*).

During the last decade, leopards (*Panthera pardus*) almost disappeared from the Judean Desert. Among other cats, the caracal lynx (*Lynx caracal*) is especially common along the Dead Sea Rift, the sand cat (*Felis margarita*) is rare, and the wild cat (*Felis silvestris*) is probably extinct. Among the three species of foxes found in Judea—the Rüppel's sand fox (*Vulpes rüppelli*), the tiny Blanford's fox (*Vulpes cana*), and the red fox (*Vulpes vulpes*)—the latter is by no means the most common predator. Other carnivores are the Egyptian mongoose (*Vormela peregusna*) and the badger (*Meles meles*). Hyenas (*Hyaena hyaena*) and wolves (*Canis lupus*) are extremely rare in this region. Among the artiodactyls the dorcas gazelle (*Gazella dorcas*), a graceful open plain antelope, is still found in the region. The mountain gazelle (*Gazella gazella*) is mainly restricted to semidesert habitats. A pygmy race of the wild boar (*Sus scrofa*) occupies the marshes of the southern Dead Sea region.

No less than four species of venomous snakes are found in the Judean Desert: the Palestinian horned viper (*Pseudocerastes persicus fieldi*), the carpet viper (*Echis coloratus*), the burrowing black mole viper (*Atractaspis endadensis*), and the desert cobra (*Walterinnesia aegyptia*).

The springs along the Dead Sea may be occupied by freshwater animals originating from extremely distant re-

gions, like the two tooth carps (*Cyprinodontidae*) species, *Aphanius dispar*, of a Paleo-Mediterranean origin, and *Aphanius mento*, which much like the endemic freshwater mollusk *Pseudamnicola solitaria* is an old species from the ancient Tethys region. Both species of fish live alongside the African copepod crustacean *Darwinula*.

EITAN TCHERNOV

Flora

The Dead Sea Scrolls add little to our knowledge of Judean plants and their use. The plants cited are the same as those in the Bible. The most commonly named are vine (*Vitis vinifera*), olive (*Olea europaea*), wheat (*Triticum durum*), cedar (*Cedrus libani*), cypress (*Cupressus sempervirens*), and hyssop (*Origanum syntacum*); we also find more generic terms such as vineyard and grain. An interesting list of types of wood that produce a pleasing sacrificial odor is given in the pre-Qumran Aramaic Levi Document (4Q213-214); it names the cedar (*Cedrus libani*), juniper (*Juniperus phoenicea*), mastic pine (*Pistacia lentiscus*), fir pine (*Abies cilicica*), tamarisk (*Tamarix manifera*), cypress (*Cupressus sempervirens*), fig (*Ficus carica*), oleaster (*Elaeagnus angustifolia*), laurel (*Laurus nobilis*), myrtle (*Myrtus communis*), and aspalathus (*Alhagi camelorum*). This list is similar to the twelve trees listed in *Jubilees* (21.12) and mentioned, but not listed, in the *Testament of Levi* (9.12). The sequence is different: twelve rather than ten trees are provided; also oleaster and ash are missing while savin (*Juniperus sabina*), almond (*Amygdalus communis*), myrrh (*Commiphora myrrha*), and olive (*Olea europaea*) have been added. The identification of most of the plants is tentative. Both lists differ from the requirements cited in the Mishnah (*Tam.* 2.3, 4), which named the olive (*Olea europaea*) and vine (*Vitis vinifera*) as not used on the sacrificial altar and the fig (*Ficus carica*) and walnut (*Juglans regia*) as generally utilized. Plants were used in poetic imagery in, for example, Psalms¹ (4Q88) or Hodayot^b (4Q428), but much less frequently than in the Bible. Many plants figure in biblical citations, for example, Words of Moses (1Q22) and Commentary on Genesis A (4Q252).

With regard to the plant material found in Judea, we

should assume that the agriculture was conservative and only the 128 species mentioned in the Hebrew Bible were known. Insofar as the borders of Judea were fluid throughout this period, all plants of the Land of Israel would be included except perhaps those found in the Jordan River Rift Valley, such as papyrus (*Cyperus papyrus*), cattail (*Typha sp.*), or reed (*Phragmites australis*). These subtropical species were unlikely to be found elsewhere in the land. Some mountain species such as the cedar of Lebanon (*Cedrus libanus*), as well as various kinds of evergreen (*Cyperus sempervirens*, *Abies cilicia*, or *Juniperus excelsa*), would not be found even though their wood may have been used.

Approximately a dozen species from the New Testament, the Apocrypha, and pseudepigrapha must be added. Josephus mentioned a few more plants. The Mishnah, edited at the end of the second century, added several hundred plants to those known from the Bible. Other plants are mentioned in the *baraitot* of the Talmud, a literary form usually considered as old as the Mishnah. No study of plants specifically mentioned in the Tosefta or the partially contemporary tannaitic literature (*Mekhulla*, *Sifrei*, *Sifra*) has been undertaken.

A plant assessment for this area and the entire Near East is difficult because of plant introductions presumably made through the newly established Greek cities in and around Judea. The Greek botanist and plant explorer, Theophrastus, who accompanied Alexander on his route of conquest into India, introduced a variety of new plants, many of which were later mentioned in the Mishnah. Some, like the citrus (*Citrus melica*), spread through Persia to the lands of the Middle East. We do not know what other plants spread or how quickly this occurred. We may assume that the spread of any new plants among the agricultural population was very slow. A more adequate knowledge of the plants of this period awaits the results of pollen and other studies, which have recently begun.

Geography

Judea comprises four north-south geographic strips: the coastal plain, the foothills (Shephelah), the Judean

Mountains, and the Judean Desert. The Judean Mountains are a high, wide consolidated block to the west of the Dead Sea and the Judean Desert, extending about 100 kilometers in length from Mount Baal Hazor in the north to the Beersheba Valley in the south; they are about 50 kilometers wide. Unlike the other mountains on the western side of the Jordan, the backbone of the Judean Mountains forms a continuous water divide. The Shephelah to the west and the Judean Desert to the east, made mostly of soft chalk, form two lanes alongside the mountains, through which entrance and exit was gained to pathways in the mountains themselves. Thus, fortresses were built in the mountains for the defense and security of their inhabitants.

The Judean Mountains are unique in both their landscape and climatic conditions, differing from all the other mountains west of the Jordan River. Their ridges are made of hard, rugged limestone. As a result of erosion, they have little soil and very few springs; both are swallowed up in the rocky terrain. The mountains were forested by sturdy oak trees, which were hard to uproot. Because of the rocks and the steep slopes, it was difficult to pave roads in the mountains, and extending east of them is the desolate Judean Desert. There was, therefore, never any intensive settlement in the area before that of the Israelites.

The Judean Mountains are divided into three transverse blocks:

1. In the south are the Hebron Mountains, reaching a maximum of 1,027 meters above sea level and extending lengthwise about 50 kilometers, most of which comprise the Judean Desert. On the west, toward the Shephelah, the Hebron Mountains have steep slopes, and on the east, toward the desert and the Dead Sea, the slopes are even steeper.
2. In the center are the Jerusalem Mountains, reaching altitudes just under 900 meters above sea level and extending 20 kilometers in length; they include three ranges that face west and serve as an agricultural hinterland for the capital, Jerusalem.
3. In the north are the Bethel Mountains, rising 1,010 meters above sea level and extending 20 kilometers in length; they are more of a plateau that constitutes a fertile agricultural base. Throughout the Judean Mountains there are observation points, which were utilized for signal fires and communication, as well as many caves for hiding.

Five streams flow out of the Judean Mountains into the Mediterranean Sea; these served as arteries of transport and communication between the mountain settlements and the port cities on the coast in the days before the Israelite settlement.

Routes and Trade. The uniformity and continuity of the high Judean Mountains enable passage along their length over the "mountain route," which follows the water divide, without any ups and downs. Founded on the "mountain route," on the narrow part of the water divide and east of it, Jerusalem's position was special. From the days of the Israelite settlement in the mountains and onward through the Second Temple, Roman, and Byzantine times, forty roads and ascents were paved in the Judean Mountains: twenty from the Dead Sea and the Judean Desert, thirteen from the coast, three from the north, and four from the Beersheba Valley. This unique phenomenon occurs only in the Judean Mountains because of Jerusalem, which was the capital, and because of the temple there. Jerusalem, on the "parting of the way" (*Ezek.* 21.26) and "where the paths meet" (*Prov.* 8.2), was positioned at the important crossroad of the longitudinal "mountain route," where it intersects the transverse Jaffa-Jericho-Rabbat Ammon connection of the Via Maris in the west with the King's Highway in Transjordan in the east.

Because of Jerusalem's low position, in a saddle straddling the Judean Mountains, the only stream penetrating the heart of the mountains and flowing to the west was Nahal Soreq-Rephaim, which served for convenient passage from Jaffa to Jerusalem. The only stream in the Judean Desert with water flowing its entire length is Nahal Perat (Wadi Qilt), which flows from north of Jerusalem eastward, spilling into the Jordan River east of Jericho. This intersection established Jerusalem as a principal commercial center not only for the Judean Mountains, but also for the coastal plain and the Shephelah foothills to the west, and for the kingdoms of Ammon and Moab in the east (*Letter of Aristeas*, 114).

Defense and Security. Jerusalem was built on two elongated hills surrounded by deep valleys, whereas most of the towns in the Judean Mountains were built at the top of the mountains with no valleys protecting them. The city was spread on the lower hill in the east; it was the first capital of the Land of Israel and within it was the only temple holy to the Israelites. Its maximum height was 743 meters above sea level, whereas the upper hill to the west was 777 meters high. Jerusalem was called Zion, from the Hebrew *tsiyvah*, which means "wilderness," a dry, desolate, parched, and weary land (*Ps.* 63.2; *Is.* 35.1; *Jer.* 2.6; and others), because it is the lowest, easternmost city on the water divide, close to the Judean Wilderness and the Dead Sea.

The Judean Mountains could be easily breached by enemies from the coast and the Shephelah in the west. On the other hand, the mountains had both natural and human fortifications, and thus in times of war the inhabitants of Judea sought protection in the mountain strong-

holds and desert fortifications, as urged by Jeremiah (*Jer.* 4.5; 8.14). Jerusalem was protected by four concentric rings of tens of fortifications distributed throughout all the mountain districts, as well as by tens of thousands of agricultural terraces that were obstacles to approaching enemies (*Ezek.* 13.5; *Ps.* 80.13, 89.41–42; Har-El, 1981).

The Judean Desert. The Judean Desert is long and narrow: about 100 kilometers long and about 22 kilometers wide in the north near Jerusalem and narrower, about 13 kilometers wide in the south, east of the Arad Valley. It includes the area to the east of the mountains with steep slopes, inhabited by shepherds, and the desert oases at the edge of the Dead Sea. The Judean Desert comprises both the biblical pastureland desert, which receives 100 to 200 millimeters of rain annually, sufficient for raising flocks of sheep and goats, and the wilderness, which receives less than 100 millimeters annually and is sufficient only for raising camels.

The Judean Desert differs from other deserts in Israel. It is the smallest of all the deserts, has no lack of water since it is part of the Judean Mountains and gets the mountain runoff, and contains many springs emerging in the Dead Sea Rift. The breadth of the desert, the Dead Sea, and the mountains of Moab can all be observed from the summits of the frontier settlements: Anatot, Tekoa, Ziph, Maon, and Arad. Therefore, in most of the periods in which the country was under Jewish rule, the desert was part of the Judean Mountain settlements, bustling with life and filling important functions:

Communication connected the tribes that were historically on both sides of the Jordan, through Jericho and the northern Dead Sea and also from the middle of the desert; at that time the Dead Sea terminated at the tongue (el-Lisan), east of Masada (Neev and Emery, 1995).

Those raising livestock drove their choice cattle and flocks from northern Edom and southern Moab to the market centers in Hebron and Jerusalem by way of the southern Dead Sea.

Shepherds tending their flocks in the Judean Desert in summer (*Is.* 32.14; *Ezek.* 34.14; and others) migrated with them in winter to the Dead Sea coast and returned to the mountains in summer for the birthing and shearing seasons.

The desert oases on both sides of the Dead Sea attracted those raising cattle and also merchants.

The curative spring waters on both sides of the Dead Sea attracted persons recuperating from illness and injury (Josephus, *The Jewish War* 1.33.5).

Export both of dates from Jericho, 'Ein-Gedi, and Zoar (*Dt.* 34.3; *Jgs.* 1.16; *2 Chr.* 20.2; and others) and of balsam from 'Ein-Gedi, Ramatha, and Jericho (*Shab.*

26, p. 1) enriched the country, according to the *Onomasticon* of Eusebius.

Vital salt from Mount Sedom and the Dead Sea (*Lv.* 2.13) and asphalt from the Dead Sea and its shore (*Gen.* 14.10; Josephus, *The Jewish War* 4.8.4) served to seal cracks in Phoenician ships and to mummify the dead in Egypt.

Refugees, zealots, and rebels found refuge in the hilltop strongholds, caves, and canyons in the desert.

Jewish and Christian monastic sects settled at the mouths of streams and in caves in the canyons of Nahal Hemar, Zohar, Se'elim, Mishmar, Hever, 'Arugot, Hazon, and Wadi Murabba'at, en-Nar, Mukallik, Qumran, and Oilt, and pilgrims were baptized in the Jordan (*Jn.* 3.22–23), all adding life to the desert.

Settlement and the Stronghold. Settlement in the Judean Desert dates back to biblical times, beginning with the settlement of the tribes of Israel in the Land of Israel. Six cities were established then: Beth-Arabah, Secacah, Middin, Nibshan, City of Salt ('Ir Ha-Melah), and 'Ein-Gedi (*Jos.* 15.61–62); these cities on the western shore of the Dead Sea were excavated by Bar-Adon (Bar-Adon, 1989).

King David and his men joined together at the "stronghold" (*1 Sm.* 24.23; *1 Chr.* 12.9), which apparently was Masada, and there the foundations were laid for the establishment of the Judean army, headed by David and his chief of the army, Joab, a native of the Judean Desert (*1 Kgs.* 2.34). The Rechabites, keepers of the Lord's covenant and his laws, established settlements in the Judean Desert (*2 Kgs.* 10.15, 23; *Jer.* 35.2–10), thereby renewing the days of their forefathers, who dwelt in the Sinai and Negev deserts. In the days of the Judean Kingdom, the Hasmoneans, and the Second Temple, huge fortresses were established at the frontiers of the Judean Mountains, the Judean Desert, and the Dead Sea as a protective ring around the cities of Judea and Jerusalem.

The Pastureland Desert of the Shepherds. Its seven deserts are evidence of the Judean Desert's value to sheep breeders.

1. Beth-Aven, or Bethel (*Jos.* 18.12),
2. Gibeon (*2 Sm.* 2.24),
3. Jeruel (Jerusalem) (*2 Chr.* 20.16),
4. Tekoa (*2 Chr.* 20.20; *1 Mc.* 9.33),
5. 'Ein-Gedi (*1 Sm.* 24.1),
6. Ziph (*1 Sm.* 23.14–15; 26.2), and
7. Maon (*1 Sm.* 23.24–25).

Though just 10 km apart from each other, each encompasses several streams and their sources. Thus, with water and pasturelands available at each place for their flocks and herds, and comfortable climatic conditions for every season, the shepherds wandered from one to the other, coming full circle in the course of the year. The

livestock served as raw material for a variety of industries: milk products, wool cloth, leather goods, saddles and reins, containers for liquid, and parchment for holy writings.

The Desert as a Refuge and Passage for War Convoys. In times of war in Jerusalem, the proximity of the Judean Desert made it an accessible refuge, either as a permanent or temporary haven, for zealots and rebels and persecuted religious sects, who could preserve their liberty and/or religious freedom there. Sometimes they returned to the capital to free it from their enemies. Nature endowed the desert with places and conditions for hiding, namely, thirty canyons full of caves and streams that spill into the Dead Sea. This configuration helped those dwelling in the caves and strongholds to defend themselves against their pursuers. In addition to the desert oases that served the persecuted as a source of livelihood, centers of learning (Torah) were established by the Rechabites and the sects of priests, based on principles of justice, righteousness, and truth. These bequeathed to the world the concepts of cooperation in work, brotherhood, peace, and frugality.

Thus the desert inspired prophets and kings, priests and monks, commanders of armies and rebels, husbandmen and shepherds. Here in the desert the settlements symbolized by the plow—Jericho, 'Ein-Gedi, Zoar, and Ramatha—merged with those symbolizing Torah learning—Qumran, 'Ein-Feshkha, Turaba, Ghuweir, and 'Ein-Gedi—and with the strongholds symbolizing independence and freedom—Masada, Herodium, Hyrcanum (Khirbet Mird), Machaerus, and others.

MENASHE HAR-EL

History

In the summer of 586 BCE, the Babylonians ruled by Nebuchadnezzar captured the rebellious city of Jerusalem for

the second time. As on the former occasion (16 March 597 BCE), the reigning king, now Zedekiah, and members of the royal family were carried away into exile along with military and religious leaders, wealthy landowners, artisans, and potential troublemakers. The number taken into exile remains uncertain: *2 Kings* 25.11 contains only general statements without figures while *Jeremiah* 52.29 says 832 persons (only males?) from Jerusalem, but places the deportation in the eighteenth year of Nebuchadnezzar, a year earlier than *2 Kings* 25. In spite of the lack of precision, a sizable number of Judeans must have been deported, although by no means the majority of the surviving population.

The city and the Solomonic Temple were looted and burned and the walls of the town were demolished (*2 Kgs.* 25.8–17). Vessels from the Temple were taken to Babylon as booty (*2 Kgs.* 25.14–15). Most of the Judean cities, especially to the south and west of Jerusalem, lay in ruins. The rule of the royal house of David, which had supplied monarchs for the country for more than four hundred years, was brought to an end.

The Babylonians took limited actions to stabilize and control the newly conquered region. Unlike the earlier Assyrians, the Babylonians neither restored destroyed capitals nor settled foreigners, deported from other conquests, in the area. Nebuchadnezzar appointed Gedaliah, who was from a prominent pro-Babylonian family with governmental experience (*2 Kgs.* 25.22; *Jer.* 40.5), over the people left in the land (*Jer.* 40.7, 11; 41.2, 18) but to what office (king? governor?) remains uncertain. The Babylonians redistributed land among the population left in the country, turning the poor into vinedressers and plowmen (*2 Kgs.* 25.12; *Jer.* 39.10). This newly enfranchised class probably worked the land of the deported wealthy Judean aristocracy, sharing the benefits with the Babylonian authorities.

The Benjaminite city of Mizpah, about seven miles north of Jerusalem, served as the capital for Gedaliah's short-lived rule. He was eventually assassinated by a certain Ishmael, a member of the Davidic family who, along with numerous associates, had sought refuge with the Ammonite king Baalis and thus escaped the Babylonians (*2 Kgs.* 25.22–25; *Jer.* 41.1–10). A contingent of Babylonian forces was slaughtered along with Gedaliah's troops and supporters, and a third deportation of Jews into exile may have resulted from this episode (see *Jer.* 52.30, which says that another 745 persons were exiled in Nebuchadnezzar's twenty-third year, which along with 3,023 exiles in 597 BCE and the 832 in 586 BCE, made a grand total of 4,600). Numerous Judeans took refuge in Egypt following Gedaliah's assassination (*2 Kgs.* 25.26; *Jer.* 41.17–18), including the recalcitrant prophet Jeremiah (*Jer.* 42.1–43.7).

The Persian Period (539–333 BCE). Nothing of consequence is directly reported about Judean history in biblical and nonbiblical texts from the assassination of Gedaliah until the collapse of the Babylonian empire and its replacement by the Persians. The city of Babylon fell into Persian hands without a battle in October 539 BCE. The Persian ruler Cyrus (539–530 BCE) thus added the Babylonian empire to the territory previously taken from the Medes to the east and north of Mesopotamia and from various kingdoms in Asia Minor. The Babylonian province of Judea thus acquired a new overlord although exactly when Persian authority was initially asserted in the region remains uncertain. Certainly by the time Cyrus's successor Cambyses (530–522 BCE) invaded and conquered Egypt in 525 BCE, the west was firmly under Persian authority.

Evidence, both textual and archaeological, is more plentiful for the Persian than for the preceding Babylonian period. In spite of this increase of evidence, however, numerous problems remain unsolved. Was Judea a separate province in the Persian satrapy of "Beyond the River" or was it a part of the province of Samaria until the time of Nehemiah? Although some scholars defend the latter position, the preponderance of evidence seems to indicate that Judea was inherited by the Persians from the Babylonians as a separate province and retained that status. Since Jerusalem, the main city in Judah, had not been refortified and repopulated, Samaria may have been the most important regional center and thus have wielded more significant influence in the area than Jerusalem.

Persia apparently administered the province through an appointed native governor and his staff. From the Hebrew Bible, the Elephantine papyri, and coins and seals, the names of eight governors of the Persian province of Yehud (Judea) are known, but there is uncertainty about the order of some of these: Sheshbazzar, Zerubbabel, El-nathan, Nehemiah, Bagohi, Yeh'ezer, Ahzai, and Hezekiah. (This list is based on the assumption that the terms *pehah* and *tirshata'*, translated "governor," are always used in this technical sense.)

The borders of the Persian province of Yehud are not completely certain, especially in the northwest. The southern boundary seems to have run between Beth-Zur and Hebron, the western between Azekah and Gath, the northern between Bethel and Samaria, and the eastern along the Jordan Valley and the Dead Sea. (The boundaries are reconstructed on the basis of *Ezra* and *Nehemiah* 3 and 7.) The region was about 25 miles by 30 miles or between 750 and 800 square miles. The province was divided into five or six districts with district capitals and sub-capitals (see *Nehemiah* 3, which lists the workers par-

ticipating in the reconstruction of the walls of Jerusalem by districts).

Cyrus, the founder of the Persian empire, carried through on elements widespread in Near Eastern royal ideology, namely, playing the role of "the gatherer of the dispersed" and "the restorer of the gods and their sanctuaries." Thus, he allowed the return of religious relics and encouraged local religious communities and the restoration of sanctuaries. His "decree" regarding the exiled Judeans and their Temple occurs three times in the Hebrew Bible: twice in the Hebrew language in *Ezra* 1.1–5 and 2 *Chronicles* 36.22–23, the latter probably merely restating the former, and once in Aramaic in *Ezra* 6.3–5 (see also *Is.* 44.28). The Aramaic form, described as the official record of Cyrus's edict, stipulates the size of the restored Temple, the method of construction, royal financing, and the return of the exiled Temple vessels, but makes no reference to the return of Judeans to their homeland. The Hebrew form is more general in content, noting the privilege of exiles to return to Jerusalem to rebuild the Temple and the right of nonreturning exiles to contribute financially to the undertaking, but lacks the other stipulations of the Aramaic text.

How many Judean exiles returned to Jerusalem and when remain uncertain. *Ezra* 1.5–6 speak of a return, but provide little detail. The exiled Temple vessels were said to be turned over to Sheshbazzar (*Ezr.* 1.7–11; 5.14–15; see *Is.* 52.11–12), "the prince of Judah," perhaps the Babylonian-appointed head of the province of Yehud who was confirmed or appointed as governor by Cyrus (*Ezr.* 5.15). The two, almost identical, lists of returnees in *Ezra* 2 and *Nehemiah* 7 appear to come from a later time because the leaders are Zerubbabel, Jeshua, and others, not Sheshbazzar.

The reconstruction of the Temple in Jerusalem did not occur during Cyrus's reign nor under his patronage. The rebuilt Temple was dedicated during the reign of Darius I (522–486 BCE); according to *Ezra* 6.15 it was dedicated in the Persian king's sixth year (516 BCE), which would have been seventy years after its destruction (see *Jer.* 25.11; 27.7; 29.10). The biblical evidence concerning the stages by which religious life was restored in Jerusalem, culminating in the rededication of the Temple, is complex and somewhat contradictory. In *Ezra* 1 and 5.6–17, Sheshbazzar is said to have begun reconstruction during the reign of Cyrus. In *Ezra* 3 and 6.19–22, Zerubbabel and Jeshua act as the restorers, whereas in *Ezra* 5.1–5 and 6.1–18, as in the prophetic books of *Haggai* and *Zechariah*, Zerubbabel and Jeshua carry out the work in conjunction with these two prophets. (In 2 *Mc.* 1.18–2.15, Nehemiah is said to have been the restorer of the Temple and the altar.)

Two figures dominate the biblical portrayal of restored Jewish life in Jerusalem during the fifth century—Ezra and Nehemiah. Although the final form of the biblical text has their activity overlapping (see *Neh.* 8.9; 12.26, 36), the two probably worked separately. In *Ezra* 7.7–8 and *Nehemiah* 2.1 both return to Judah under Persian sanction during the reign of an Artaxerxes. Three Persian kings bore this name: I Longimanus (405–424 BCE), II Memnon (405–359 BCE), and III Ochus (359–338 BCE). Artaxerxes III Ochus is easily excluded as a candidate. That Nehemiah returned in the twentieth year of Artaxerxes I (445 BCE) has been almost universally accepted. Throughout the twentieth century, however, scholars have been divided over whether Ezra returned to Jerusalem under the first (in 458 BCE) or second Artaxerxes (in 398 BCE). No conclusive verdict on this issue is possible.

The materials on Ezra are found in *Ezra* 7–10 and *Nehemiah* 7.73b–10.39. *Ezra* 7.11–9.15 are in autobiographical or memoir form. Apparently Ezra returned with special prerogatives and powers granted by the royal court (*Ezr.* 7.11–26). In addition, he possessed the “law of God” in his hand. The identity of this law, whether the Pentateuch, one of its sources, or some collection now unknown, remains uncertain. The Persians, as is known from nonbiblical sources, encouraged local communities to draw up collections of their laws and customs, and this factor may have influenced the codification of Jewish law. *Nehemiah* 8.1–38 report the reading, interpretation, and observance of Ezra’s law as well as the covenanting of the people to obey its stipulations. Ezra also opposed the intermarriage of Jewish males with non-Jewish females and forced a covenant agreement to implement putting away these wives and their children (*Ezr.* 10; see 10.3). The consequences of a societal survey by a commission, which determined those so intermarried, including priests and Levites, are not given, and the *Book of Ezra* breaks off abruptly.

The Nehemiah materials in *Nehemiah* 1.1–7.73a and chapters 11–13 are autobiographical and were probably written to be placed as a memoir in the sanctuary. As cupbearer to the Persian king, Nehemiah would have had immediate access to the monarch. The biblical narrative indicates that he initiated the course of action that led to his return to Jerusalem (*Neh.* 1.1–2.8) accompanied by a military escort, “officers of the army and horsemen” (*Neh.* 2.9). The following activities are attributed to Nehemiah: The city of Jerusalem was refortified in spite of the threat of local rulers (*Neh.* 2.11–4.23; 5.15; 12.17–43); economic measures were taken to alleviate the indebtedness of the local population because of interest charging (*Neh.* 5.1–13; see *Dt.* 23.19–20) and to grant remission from some taxes (*Neh.* 5.14–19); and people from the re-

gion were moved into Jerusalem to repopulate the city (*Neh.* 11.1–2). It may have been at this time that Jerusalem replaced Mizpah as the capital of the province of Yehud.

Nehemiah apparently served two stints as governor of the province (see *Neh.* 5.14 and 13.6), the first lasting twelve years and the second of unknown duration. His second period of service was recalled as a time when he expelled Tobiah the Ammonite from the Temple precincts (*Neh.* 13.4–9), took measures to ensure that the Levites received their designated income (*Neh.* 13.10–14), sought to enforce observance of the Sabbath (*Neh.* 13.15–27), and confronted the problem of mixed marriages, expelling a son of the high priest because of his intermarriage (*Neh.* 13.23–29).

The work of Ezra and Nehemiah was sanctioned by the Persians, who no doubt wanted to encourage loyal and stable communities in Syria-Palestine. Throughout the fifth and fourth centuries, Persia was not only warring with the Greeks but also had to confront rebellions by the Egyptians and revolts by Persian governors in the west.

The following internal developments during the period are noteworthy.

1. Various conflicts existed between the Jewish community and its neighbors. These conflicts tended to stimulate xenophobic reaction in the community.
2. The literature of the period suggests that a sharp distinction was drawn between those who had returned from exile (the *benei ha-golah*) and those Judeans who remained in Judea.
3. The swearing of agreements over the issues of marriage to foreigners and observance of the law (*Ezr.* 10.3; *Neh.* 9.38; 10.28–39) tended to create groups of “covenanters,” perhaps the forerunners of later sectarian movements.

The Hellenistic Period (333–63 BCE). In 334 BCE, Alexander the Great crossed the Bosphorus into Asia to carry out plans formulated by his father, Philip II. Although Alexander’s immediate goal was the Persian capital at Persepolis, he moved first down the eastern Mediterranean seaboard toward Egypt in order to secure his flank when he later moved eastward. The Jewish community in Judea was part of his acquisitions from the Persians. Legends about Alexander’s meeting and obeisance to the Jerusalem high priest have been preserved in Josephus (*Jewish Antiquities* 11.331–339) and the Babylonian Talmud (B.T., *Yoma* 69a), but what contact the community had with the Macedonian remains unknown. Presumably, transition from Persian to Greek rule went smoothly in Jerusalem, unlike the trouble that developed in Samaria.

With the death of Alexander in Babylon in June 323

BCE, his generals inaugurated a struggle over the division of his kingdom, which reached something of a state of equilibrium only in 301 BCE. At that time, Ptolemy I was ruling in Egypt and Seleucus I in Babylon. Syria-Palestine had been assigned to Seleucus but was occupied by Ptolemy. Throughout the next century, five major wars were fought between the two royal houses. Both wished to control southern Syria and Palestine as an economically and commercially valuable buffer zone in addition to its military importance.

Ptolemaic rule resulted in several significant consequences for the Jewish community.

1. The continued struggle with the Seleucids over control produced pro-Ptolemaic and pro-Seleucid factions within the community, thereby polarizing elements in the society.
2. Ptolemaic control brought with it administrative and economic control that involved heavy taxation, royal monopolies, royal ownership of large estates, and royal land-lease policies.
3. The old office of Judean governor disappeared. Some of its functions were taken over by the overlay of Ptolemaic administrators, and others were absorbed by the high priest of the Jerusalem Temple, who became the primary leader of the community.
4. The operation of the government was based on use of the Greek language. Local persons wishing to rise in Ptolemaic administration and to participate in commercial activity had to adjust to the demands of Hellenized culture.

In the Fifth Syrian War (202–200 BCE), Antiochus III the Great (223–187 BCE) wrested control of southern Syria-Palestine from the Ptolemies. The pro-Seleucid elements among the Jews not only welcomed the change but also fought against Ptolemaic forces. Antiochus rewarded the Jews and the city of Jerusalem with various privileges (*Jewish Antiquities* 12.138–144, 145–146): funds for sacrifices, support and goods for construction work on the city and Temple, reduction in taxes, and so forth, as well as the right of Jews to return from elsewhere to their homeland. These edicts are generally dated to about 198 to 196 BCE.

The year 196 BCE also witnessed the Isthmian Proclamation made by the Roman general Flamininus at the Isthmian games. Supported by the Roman Senate, the proclamation and subsequent Isthmian Doctrine declared Rome to be the protector of all Hellenes in both Europe and Asia (Polybius, 18.46; Livy, 33.32–33). The application of this perspective involved the Romans in eastern Mediterranean affairs from the first decade of the second century BCE.

Good relations between the Seleucids and the Jewish

community began to deteriorate during the reign of Seleucus IV (187–175 BCE), when factional strife broke out in Jerusalem. Eventually, four major families vied for control of the local Jewish community: the Oniads, from whose ranks high priests had traditionally been chosen; the Tobiads, one of whose earlier ancestors had purchased tax collection rights in the region from the Ptolemies (see *Jewish Antiquities* 12.154–241); the Simonites, whose head was captain of the Temple and who apparently sought control over the Jerusalem market (*2 Mc.* 3.1–4); and the Maccabeans (or Hasmoneans), who were members of the priestly course of Jehoiarib (*1 Chr.* 9.10–13; 24.1–7) and owned an estate in the hill country northwest of Jerusalem.

Jason, an Oniad, secured the office of high priest from the new Seleucid king, Antiochus IV Epiphanes (175–164 BCE), while his brother, Onias III, was at the Seleucid court attempting to remove a cloud of suspicion about his loyalty (*2 Mc.* 4.7–17). For a price, Jason also secured the right to establish a Hellenistic city in Jerusalem called Antioch-in-Jerusalem. This involved determining who would hold citizenship and attendant privileges in the new city, the construction of a gymnasium, and the creation of an *ephebeion* or youth corps to be educated in and to utilize the gymnasium. The establishment of Antioch-in-Jerusalem was no doubt intended to bring the city into fuller participation in the commercial and political activities of the time. Contact with Rome may have been made to “establish friendship and alliance” (*2 Mc.* 4.11).

Menelaus, a Simonite with Tobiad support, outbid Jason and secured the high priestly office (in ca. 172 BCE) and forced the latter to withdraw across the Jordan River (*2 Mc.* 2.23–26). Actions by Menelaus, including some looting of Temple objects, led to a popular uprising (*2 Mc.* 4.27–50).

Open civil war erupted in Jerusalem when an attempt to take Egypt by Antiochus was cut short by Rome and rumor spread that Antiochus had died. Jason then led an army against Menelaus (*Dn.* 11.25–29; *2 Mc.* 5.1–10). The Seleucid king, who was returning home from Egypt, attacked Jerusalem and took actions to repress the fighting and establish order. The Temple was looted. Either in conjunction with this activity or sometime thereafter, Seleucid troops were stationed in a new citadel (the Akra) in Jerusalem, land was taken over, and the Temple was used for non-Yahwistic worship (*Dn.* 11.30–31; *1 Mc.* 1.16–40; *2 Mc.* 5.11–26).

At this stage, the Maccabean family became an important player both in the civil struggles among the Jews and in opposition to Seleucid control (*2 Mc.* 5.27). The stories about Mattathias, the father of the Maccabean brothers, in *1 Mc.* 2, go unmentioned in *2 Mc.* and are probably legendary. Judah Maccabee raised an army, took action

against fellow Jews sympathetic to the Seleucids, and won several strategic battles against Antiochus's forces. Seleucid persecution of the Jews to suppress their religious practices probably occurred during this period (see *1 Mc.* 1.41–64; *2 Mc.* 6–7), although it is doubtful if there was an official edict circulated throughout the kingdom (see *1 Mc.* 1.41–42).

The Seleucids had been placed under heavy indemnity after their military loss to the Romans at Magnesia (190 BCE) and the Treaty of Apamea (188 BCE) and were battling the Parthians to the east. Thus they were unable to commit full military power against the Maccabean forces.

Maccabean success in the field and Seleucid preoccupation elsewhere led to negotiations to settle the conflict. Four documents in *2 Maccabees* 11.16–38 reflect these negotiations, although they are neither in their proper literary context nor in chronological order. One document addressed to the Jewish senate in 11.27–34 suggests that Antiochus IV offered amnesty and relaxation of oppression after the intercession of the high priest Menelaus. Another document, from the general Lysias in 11.16–21, probably addressed to the Maccabean faction, suggests that some matters between the parties were settled. Roman envoys gave their support to efforts and suggested further negotiations, according to the document in 11.34–38. The final document in 11.22–26, which dates to after the death of Antiochus IV (in late November or early December 164 BCE), has the new young king (Antiochus V) ordering the complete surrender to the Judeans of the Temple in Jerusalem and the cessation of religious repression.

No doubt, Antiochus V and the general Lysias intended that the Jerusalem Temple revert to the control of the high priest Menelaus, who was recognized by the Seleucids. Judah and his followers, however, captured the Temple precincts before the death of Antiochus IV, according to *1 Maccabees* 4.36–61, but after his death according to *2 Maccabees* 10.1–8. The Temple was cleansed, rededicated, and the sacrificial cult reinstated on the twenty-fifth of Kislev (in December 164 BCE).

Several actions were subsequently carried out under Judah.

1. The Temple Mount was fortified as well as the city of Beth-Zur (*1 Mc.* 4.60–61).
2. Raids were carried out against local powers, and Jews were brought to Judea from Galilee and Gilead (*1 Mc.* 5; *2 Mc.* 10.10–38).
3. Negotiations were conducted in Rome, and a treaty of friendship and alliance was concluded between the Jews and the Romans (*1 Mc.* 8) in which the Maccabeans became a client state to Rome.
4. According to Josephus (*Jewish Antiquities* 12.414, 410,

434), Judah assumed the office of high priest, probably after the Seleucids had put Menelaus to death (*2 Mc.* 13.3–8) and appointed Alcimus his successor (*1 Mc.* 7.9). If Judah was recognized as high priest (see *Antiquities* 12.414) by any external government, it would have to have been the Romans.

5. The Maccabean forces unsuccessfully besieged the Akra, which was garrisoned with Seleucid forces and sympathetic Judeans (*2 Mc.* 5.18–20).

Political rivalry in the Seleucid kingdom had aided Judah's exploits. But a new king, Demetrius I (162–150 BCE), sent a major force against the Maccabeans. In the consequent battle, in 160 BCE, Judah, who was supported by a force of only eight hundred warriors, was killed (*1 Mc.* 9.1–18).

The Maccabean movement was taken over by Judah's brother Jonathan and for several years exercised little or no authority in Judea, functioning primarily as a guerrilla force, harassing and avoiding the Seleucids and their supporters (*1 Mc.* 9.23–69). By 152 BCE, conditions changed for Jonathan when renewed rivalry racked the Seleucid kingdom. To gain his support, the rivals bestowed upon Jonathan various positions and privileges, recognizing him as client ruler of Judea. In a matter of months, Jonathan rose to become military, civil, and religious leader of Judea, not always to the delight of the local population (*1 Mc.* 10.7–8). Jonathan assumed the office of high priest in 152 BCE, having been appointed by Alexander Balas, the Seleucid pretender to the throne (*1 Mc.* 10.18–21); his appointment brought to an end the interregnum in the post that had existed since the death of Alcimus in 159 BCE (*1 Mc.* 9.54–57). The Maccabeans, however, were not members of the families from which the high priests had traditionally been chosen. King Demetrius I subsequently bestowed upon the Judeans various concessions as well as additional territory (*1 Mc.* 10.22–45).

With the Seleucid kingdom in turmoil, Jonathan became a major power in the region, headed up a large military force, campaigned as far afield as Damascus, and renewed the treaty with Rome. But he was unable to eradicate completely Seleucid power in Judea (*1 Mc.* 10.67–12.38) and eventually fell victim in the Seleucid power struggles (*1 Mc.* 12.39–53). He was seized, through deception, by Tryphon, a pretender to the Seleucid throne, and was executed in 143/42 BCE by Tryphon when the latter's march on Jerusalem was thwarted by Maccabean forces under Jonathan's brother Simon and by an unusually heavy snowfall (*1 Mc.* 13.1–24).

Simon, earlier appointed by the Seleucids as governor of the Mediterranean coastal plain (*1 Mc.* 11.59), was the last of the original family to lead the Maccabean movement. Simon was confirmed in the high priestly office by

Demetrius II (146–140 BCE), who also granted various privileges after receiving initiatives and gifts from Simon (*1 Mc.* 13.31–40). During Simon's rule (142–135 BCE), the following noteworthy developments occurred.

1. Simon assumed full civil, military, and religious authority, and the practice of dating documents by his rule affirmed an expression of independence granted by the Seleucids (*1 Mc.* 13.41–43).
2. Tribute was no longer paid to the Seleucids (*1 Mc.* 10.29–30).
3. Judean territorial control was extended toward the Mediterranean Sea in the west (see *1 Mc.* 13.29; 14.34) where Gazara (Gezer) was captured and resettled with loyal Judeans, analogous to Antiochus IV's earlier settlement of Syrians in Jerusalem (*1 Mc.* 13.43–48).
4. The anti-Maccabeans and Seleucids in the Akra were starved into submission, and the fortress fell into Maccabean hands amid joyous celebration (*1 Mc.* 13.49–52a).
5. The Temple Mount was fortified (*1 Mc.* 13.52b) as well as other places in Judea (*1 Mc.* 14.33–35).
6. The client-state relationship with Rome was reaffirmed (*1 Mc.* 14.16–19, 24; 15.15–24), and friendship greetings were received from Sparta (*1 Mc.* 14.20–23).
7. "The Jews and their priests" granted Simon and his family hereditary leadership with full civil, military, and religious prerogatives (*1 Mc.* 14.41–43). (*1 Mc.* 14.4–15 eulogizes Simon as if he were a messianic redeemer.)
8. The Seleucid king, Antiochus VII (138–129 BCE), recognized the "independence" of Judea under Simon, and granted him the right to mint coinage (*1 Mc.* 14.1–9). These grants seem to have been rescinded once the new king secured the throne (*1 Mc.* 15.10–36), and an expedition was sent to reconquer Judea (*1 Mc.* 15.37–16.10).
9. Simon and two of his sons were killed by his son-in-law, Ptolemy, and his supporters at a feast at Dok near Jericho (*1 Mc.* 15.11–17). The assassination was part of a major plan to seize power throughout the country, but was unsuccessful because Simon's son John Hyrcanus (135–105 BCE) was able to succeed his father (*1 Mc.* 16.18–22).

Evidence in the two books of *Maccabees* and in Josephus's works indicates that the Maccabean movement was never supported by an overwhelming majority of the Judeans and often faced considerable internal opposition. This conclusion is supported by the following factors.

1. *1 Maccabees* 2.29–38 mentions those who refused to participate in military actions against the Seleucids,

relying instead on the hope of divine intervention (see *Dn.* 11.34).

2. When Alcimus was appointed high priest, elements that had fought with Judah abandoned him (*1 Mc.* 7.12–17).
3. Letters from Rome noted the need to return to Judea for punishment "any pestilent men who had fled" to other countries (*1 Mc.* 15.15–24).
4. Privileges granted to Simon in *1 Maccabees* 14.31–44 are matched by restrictions imposed upon various elements in the society, limiting their freedom (*1 Mc.* 14.44–45).
5. Josephus first mentions the existence of the groups Pharisees, Sadducees, and Essenes during this period (*Jewish Antiquities* 13.171–173). To the existence of these groups, one could surely add the Qumran community.

After a period of Seleucid military success over John Hyrcanus (*Jewish Antiquities* 13.236–248), the latter eventually was able, because of Seleucid strife over rulership, to assert some independence (*Jewish Antiquities* 13.273). Hyrcanus then conquered regions in Transjordan to the east, in Idumea to the south and west, and in Samaria to the north, eventually destroying the city of Shechem, the Samaritan temple on Mount Gerizim, and the city of Samaria (*Jewish Antiquities* 13.254–281). The Idumeans and others were forced to submit to circumcision (to convert) or abandon their homes (*Jewish Antiquities* 13.257–258). Hyrcanus also employed foreign mercenaries and was faced with various internal factions and oppositions, to which he responded with repressive actions (*Jewish Antiquities* 13.249, 299; *The Jewish War* 1.67). According to Josephus, Hyrcanus broke with the Pharisees, who had widespread support (*Jewish Antiquities* 13.288–298).

Aristobulus I (104–103 BCE) seized power upon his father's death. He assumed the titles "king" and "Philhellene" (friend of the Greeks) and extended Judean holdings in the north (*Jewish Antiquities* 13.301–314). He died quickly, however, and through the intervention of the queen, Shelamzion Alexandra, Alexander Jannaeus (103–76 BCE) succeeded to the offices of high priest and king (*Jewish Antiquities* 13.320).

The rule of Jannaeus was characterized by territorial expansion of the Hasmonean (Maccabean) kingdom and by rising internal opposition, which was suppressed harshly. Jerusalemite control was extended to include major portions of the Mediterranean coast south of Mount Carmel. The districts of Judea, Samaria, Galilee, and Transjordan were under the rule of Jannaeus. Newly captured areas were required to convert or be destroyed (see *Jewish Antiquities* 13.397). Expressions of internal

opposition to Jannaeus ranged from crowds pelting him with festival fruit, to open civil war, to an appeal to the rival Seleucid king Demetrius III (in 88 BCE) to invade the land aided by some Jewish military support (*Jewish Antiquities* 13.372–383). Numerous Jewish opponents were put to death by Jannaeus, some by crucifixion.

Shelamzion Alexandra (76–67 BCE), succeeded her husband Jannaeus, and her son Hyrcanus II was made high priest. Josephus states that she ruled with the support of the Pharisees and their adherents, who used their power to take revenge on their enemies (*Jewish Antiquities* 13.405–409).

Before the queen's death, her son Aristobulus II began moves to seize power from his less assertive older brother. Upon the queen's death, civil war erupted between the two brothers, with Hyrcanus II being advised by Antipater, governor of the Jewish district of Idumea (*Jewish Antiquities* 13.417–432; 14.4–21).

The Roman Period (63 BCE–135 CE). With civil war raging in Judea and Aristobulus II, who had temporarily assumed the title of king, besieged in the Temple by Hyrcanus II and the Edomites, Rome moved to bring order to its client state. The Roman general Pompey, in the east to secure Rome's borders and to subdue piracy, eventually captured Jerusalem and the Temple (*Jewish Antiquities* 14.29–73). Pompey reorganized the political structure of Judea, greatly reducing its territory (*Jewish Antiquities* 14.74–76). Hyrcanus II was recognized as high priest (*Jewish Antiquities* 14.73), and Aristobulus II and his family were carried off to Rome (*Jewish Antiquities* 14.79). Judea was placed under the oversight of the Roman legate ruling Syria, which had been annexed by Rome from the Seleucids.

As far as possible, Rome exercised its rule through the use of local power groups. This was to Rome's financial advantage and involved fewer of its troops. Over the years, various forms of administration were utilized to govern Judea.

In the period from 63 to 37 BCE, two factors characterized local Judean politics. First, Aristobulus II and his family, building upon local support, sought to reassert Hasmonean dominance in the area. At various times, Aristobulus II and his sons, Alexander and Antigonus, led uprisings with some initial success (*Jewish Antiquities* 14.82–97, 101–102). However, Aristobulus II was eventually poisoned and Alexander beheaded. When the Parthians overran Palestine in 40 BCE, Antigonus was made king. He mutilated Hyrcanus II, rendering him unfit to serve as high priest. After his defeat, Antigonus was beheaded by Antony (*Jewish Antiquities* 14.330–336, 363–366; 15.5–10). Second, the family of Antipater rose to prominence. After the Roman takeover, Antipater was gradually granted more and more power (*Jewish Antiquities*

14.103, 127, 139) through being able to support the winning side in Roman politics (*Jewish Antiquities* 14.143–157). His eldest son, Phasael, was made governor of Jerusalem and his second son, Herod, was made governor of Galilee (*Jewish Antiquities* 14.158–162). Although Antipater was poisoned (*Jewish Antiquities* 14.280–284) and Phasael was killed or committed suicide while Antigonus held Jerusalem (*Jewish Antiquities* 14.367–369), Herod proved to be a skilled survivor.

Herod fled from the Parthians and made his way to Rome, where he was designated king over Judea in 40 BCE (*Jewish Antiquities* 14.381–389). However, only in 37 BCE was Herod able to overcome his opponents and capture the city of Jerusalem (*Jewish Antiquities* 14.465–491).

For convenience, Herod's reign may be divided into three phases. The first, 37 to 30 BCE, coincided with the final phase of struggle for the control of Rome, which saw the triumph of Octavian (Augustus Caesar). During this period, Herod faced continued opposition from elements in the local population, as well as threats against his territory by the ambitions of Cleopatra.

The second phase, 30–10 BCE, witnessed Herod in the good graces of Rome after his pledge of allegiance to Octavian. His territory was expanded to the Mediterranean Sea, into northern Transjordan, and eventually was almost as large as that controlled by the Hasmoneans at the height of their rule (*Jewish Antiquities* 15.217, 343–348; *The Jewish War* 1.400). He rebuilt cities throughout his kingdom and developed major fortresses, some with palaces, as retreats and defense posts. Jerusalem and its Temple were rebuilt to become what Pliny the Elder called "the most outstanding city in the East" (*Natural History* 5.70). Herod made contributions to many cities outside his kingdom as well. During this time, Herod put to death several members of his extended family, including his Hasmonean wife Mariamme.

In the final phase of his rule, 10–4 BCE, Herod became more and more paranoid and, with some justification, took out his frustration on his immediate family, executing his two sons by Mariamme (*Jewish Antiquities* 15.361–394) and Antipater, the son of his wife Doris (*Jewish Antiquities* 17.182–186). As an old man, he attempted to elicit a pledge of loyalty from some of the religious leaders. On their refusal, he reacted violently (*Jewish Antiquities* 17.41–67). Herod died, probably early in 4 BCE, just before Passover (*Jewish Antiquities* 17.188–192, 213).

Herod had executed a succession of wills. His last was generally followed by Octavian, but not completely and not immediately (*Jewish Antiquities* 17.317–324; *The Jewish War* 2.93–100). Before Rome made a final settlement, several civil disturbances erupted: pretenders to the throne vied for support, anti-Roman sentiment abounded, and

messianic hopefuls arose. In addition, Roman leadership in the area proved less than competent and more than greedy. Such features of the situation were an indication of things to come.

Herod's kingdom was somewhat reduced by the Romans and the remainder divided between three sons: Archelaus (4 BCE–6 CE), made ethnarch, a position lower than king, received Judea, Idumea, and Samaria; Herod Antipas (4 BCE–39 CE) was made tetrarch over Galilee and Perea in Transjordan; and Philip (4 BCE–33/34 CE) received territory in the northeast, which included Gaulanitis, Trachonitis, Batanea, Pania, and Auranitis (*Jewish Antiquities* 17.317–320).

Archelaus's incompetent rule was terminated by the Romans, who banished him to Gaul (*Jewish Antiquities* 17.339–355; *The Jewish War* 2.111–116). This time, Rome decided to govern the region directly and added it to the province of Syria. A census, carried out at the time (6/7 CE) by Quirinius, met with widespread opposition because the new political status involved increased taxation and direct Roman rule (*Jewish Antiquities* 18.4–10; *The Jewish War* 2.118). Judea was governed locally by Romans of the lower administrative echelon of the equestrian rank. Called "prefects," later "procurators," these officials resided in Caesarea.

The most famous Judean prefect was Pontius Pilate (ca. 26–36 CE), under whom several civil outbreaks occurred and Jesus was tried and condemned (*Jewish Antiquities* 18.55–64, 85–89; *The Jewish War* 2.169–177). Pilate was eventually removed from office and banished by the Romans for excessive cruelty.

Relations between Judeans and Romans were almost in a constant downward spiral. Roman ineptitude, greed and looting by the prefects, local gangs and thievery, group rivalry, freedom movements, political use of the office of high priest, and messianic enthusiasm all contributed their part. For example, when the emperor Gaius Caligula (37–41 CE) ordered that a statue of himself be set up in the Jerusalem Temple, widespread opposition erupted and general rebellion was averted only through administrative delays and Gaius's assassination (*Jewish Antiquities* 18.261–309; *The Jewish War* 2.184–203).

The grandson of Herod the Great, Agrippa I, was appointed king over the whole of Judea, Idumea, and Samaria by the emperor Claudius (41–54 CE) in 41 CE. This arrangement, restoring native Jewish rule, ended, however, with Agrippa's death in 44 CE (*Jewish Antiquities* 19.274–277, 350–352; *The Jewish War* 2.214–220).

Rome then decided to place Judea again under direct rule. Most of the procurators from 44 to 66 CE were confronted with periodic turmoil in the country and ruled with less than competency so that "matters were con-

stantly going from bad to worse" (*Jewish Antiquities* 20.160).

During the procuratorship of Gessius Florus (64–66 CE), matters became so tense and anarchy so widespread that open rebellion broke out. Jewish rebels seized several fortresses, including first of all Masada, which overlooked the Dead Sea, and sacrifices for the emperor were canceled in the Jerusalem Temple (*The Jewish War* 2.408–410). Battles between Jewish factions broke out in Jerusalem, and rebellious elements seized most of the city and the Temple, and in the process burned state records and archives (*The Jewish War* 2.411–456). The Roman governor of Syria, Cestius Gallus, took the field in early fall of 66 CE with the twelfth legion, but his army was devastated when it retreated from Jerusalem (*The Jewish War* 2.499–555). After the defeat of the Roman force, Jewish leadership set up a government, appointed generals to conduct the war, and began the minting of coins (*The Jewish War* 2.562–568). Vespasian was appointed to head the Roman forces, but Emperor Nero died and struggles in Rome erupted before Vespasian could subdue the region. Roman military activity was focused on isolating Jerusalem until Vespasian returned to Rome as emperor (69 CE), leaving his son Titus to take the Jewish capital.

In Jerusalem's final days, the anti-Roman forces in the city were divided into three factions, which fought one another until the Roman siege was well underway (Tacitus, *Histories* 5.12.3). The city was besieged in early spring of 70 CE and captured in stages. The Temple was burned in August and the upper city captured in September (*The Jewish War* 6.252–317, 358–408). Masada was not taken until 73/74 CE.

Radical changes in Judean life followed the revolt. Judea was made into an independent province ruled by legates of senatorial rank, and the Roman army was enlarged to legionary status. The Jewish sacrificial cult ended with the destruction of the Temple, and Jewish religious practices took on new features and orientations. Much of the agricultural land was taken over by Romans.

Little is known of Jewish life in Palestine from the end of the First Jewish Revolt until the Bar Kokhba Revolt (ca. 132–135 CE). Under the emperor Trajan (98–117 CE), widespread Jewish rebellion broke out in Egypt, Cyrene, Cyprus, and Mesopotamia, but the extent of Judea's involvement remains unknown. The causes of the second major war with Rome, the Bar Kokhba Revolt, are not clear. According to Dio Cassius (*Roman History* 69. 12. 1–14. 3), conflict occurred when Emperor Hadrian (117–138 CE) rebuilt the city of Jerusalem and constructed a pagan sanctuary on the Temple Mount. In the *Historia Augusta*, Roman prohibition of circumcision is noted as the reason (Hadrian 14.2). During the revolt, Judean

forces led by Shim'on Bar Kokhba were able to control Jerusalem for a time, set up a government, and mint coins. Recent discoveries in Judean caves reveal some of the realia of the war.

JUDGES, BOOK OF. At Qumran the *Book of Judges* is represented by three manuscripts: Judges, Judges^a, and Judges^b.

Judges (1Q6) from the first century CE is preserved in nine identified fragments containing portions of the text of *Judges* 6.20–22; 8.1 (?); 9.1–4, 4–6, 28–31 (frgs. 5 and 6), 40–42, 40–43, 48–49. Thirty-one small pieces are unidentified fragments. Judges presents two unique readings and agrees three times with the Septuagint against the Masoretic Text, in two of them with support of the Vulgate (Barthélemy and Milik, 1955).

Judges^a (4Q49) is extant in two contiguous pieces of a single fragment and contains portions of *Judges* 6.2–13. The script is a late Hasmonean or early Herodian bookhand from approximately 50 to 25 BCE. This manuscript offers new data for a better understanding of the textual history and the literary development of *Judges*. It represents a form of the text independent from any other known text type. In six instances of a total of ten variant readings, the manuscript goes its own way, disagreeing with the Masoretic Text and the Greek tradition. [See Septuagint.]

It is the only extant witness that does not include *Judges* 6.7–10, although two Hebrew medieval manuscripts and the Septuagint^b text also omit verse 7a. Verses 8 through 10 generally have been recognized by modern critics as a literary insertion, attributed in the past to an

Elohistic source (G. F. Moore, *ICC*, 1895) and now generally considered (for example, by Wellhausen, Gray, Boling, and Soggin) a piece of late Deuteronomic redaction.

A lacuna in line 4 (verse 5) allows room for no more than ten letters, those corresponding to a shorter reading, *ve-lahem* 'ein mispar va-ya]vo'u, attested only by the Old Latin *quorum non erat numerus* . . . , as against the Masoretic Text *ve-lahem ve-ligmalleihem* 'ein mispar . . . , "and neither they nor their camels could be numbered." In line 3 the counting of letters per line gives the reading *ve'-ohaleihem u-genalleihem yav[i]u*, which Judges^a shares with the proto-Lucianic text and the Old Latin, which here witness to the Old Greek.

The use in *Judges* 6.13 of $\dot{\zeta}$ instead of the Masoretic Text 'šr is characteristic of Qumran texts, which stand between late Biblical and Mishnaic Hebrew.

Judges^b (4Q50) is extant in only three fragments, containing portions of *Judges* 19.5–7 and 21.12–25. Fragments 2 and 3, although not contiguous, preserve parts of three lines in common. The reconstruction of the text shows an irregularity in the number of characters per line that may be explained by the fact that fragments 2 through 3 belong to the last column of the book. The preserved readings of Judges^b are very close to the Masoretic Text (Trebolle Barrera, 1995).

The identification of the proto-Theodotonic (also called *kaige*) recension with the help of the Greek Minor Prophets (8Hev 1) also has a bearing on the textual history of the Septuagint of *Judges*. [See Minor Prophets.]

The B group of manuscripts (B efj[m]qsz) with the subgroup irua² are related to that recension (Bodine, 1980). The A group (A G abd[k]x Syr) is very close to the Old Greek, except for its hexaplaric characteristics. The Lucianic group (K Z glw) is prehexaplaric and forms the best witness to the Old Greek in *Judges*.

JULIO TREBOLLE BARRERA

JUDICIAL PROCEDURES. For what is generally considered to have been a small, self-enclosed community, the multiple references in the Qumran texts to ju-

ridical bodies are noteworthy. The Damascus Document includes a *serekh* ("rule") "for the judges of the congregation," which describes the standard court consisting of ten men chosen from the congregation, "four from the tribe of Levi and Aaron and from Israel six" (CD x.4-6). The judges must be between twenty-five and sixty years old and well versed in the "Book of Hagu," probably a compendium of communal rulings. The passage does not define the nature of the cases that fall under the jurisdiction of the court of ten. It has been suggested that the quorum may be derived from the ten elders in *Ruth* 4.2, although the latter were apparently convened on an *ad hoc* basis. According to the Rule of the Community (1QS vi.3-4) ten was also the minimum quorum for a functioning unit of the sect, including deliberations "for their counsel on any matter." For capital offenses, this quorum was augmented by the presence of two priests (Ordinances^a [4Q159 2-4]). [See Hagu, Book of.]

A "council of the community" consisting of twelve lay and three priestly members is referred to in the Rule of the Community (1QS viii.1), but the broad description of its functions makes it likely that this was a leadership council rather than a judicial body. In fact, the term "council of the community" is also used for the community as a whole (1QS iii.2; v.7 etc.). Among matters brought before the whole "session of the many" were the acceptance of candidates (1QS vi.16 and parallels), the indictment of sinners (1QS vi.1), and questions about legal matters (Rule of the Community^d [4Q258 1.i.2]). These functions and the fact that participation in legal proceedings (*torah* and *mishpat*) was a privilege of all members in good standing within the community add to the difficulty of discerning the sect's specifically juridical bodies.

In addition to the courts that apparently functioned within the community, the Temple Scroll^a (11Q19) describes a royal council that was to guide the king in matters of judgment: "He will have twelve princes of his people with him and twelve priests and twelve Levites who shall sit next to him [to counsel him] concerning matters of law and Torah. Let him not act presumptuously toward them nor do anything requiring counsel without them" (11Q19 lvii.11-15).

The duodecimal pattern employed here to make up a quorum of thirty-six is the same as that employed in the War Scroll (1QM ii.1-3) for the representation of the people at the Temple cult. As the highest court of the community, this council appears to have functions similar to those that rabbinic tradition ascribed to the Great Sanhedrin. The quorum of the latter, which varies in different sources between seventy, seventy-one, and seventy-two members, was apparently viewed by some as also having a duodecimal basis. The principle that courts should always be odd-numbered to prevent a deadlock is reflected

in Talmudic theory and in the quorums of Greek courts. It was apparently ignored by Qumran legists.

The duodecimal system also is reflected in the Qumran interpretation of a prophetic vision. Peshet Isaiah^d (4Q164), a *peshet* on *Isaiah* 54.11-12, alludes to "the twelve [chief priests who] give light by the judgment of the Urim and Thummim" and "the heads of the tribes of Israel." Together these twenty-four constitute the council of the community, which is likened to the sapphire stone and the radiance of the sun (4Q1641).

Witnesses. According to Deuteronomic law "two or three witnesses" are required to establish guilt for any offense (*De.* 17.6, 19.15). Qumran legists had an elaborate way of resolving this ambiguity:

Any trespass committed by a man against the Torah, which is witnessed by his fellow—he being but one—if it is a capital offense, he shall report it in [the wrongdoer's] presence with reproof to the Overseer. And the Overseer shall write it down with his hand until [the man] does it again before one, who again reports it to the Overseer. If [the man] is again caught in the presence of one, his judgment is complete. And if they are two, testifying about different things, the man shall only be separated from the purity. . . . And concerning property they shall receive two reliable witnesses, while one suffices [only] to separate [him from] the pure (food and vessels).

(CD ix.16-23)

A distinction is drawn in this passage between capital cases, which require three witnesses or occurrences, and monetary cases, which require only two. The testimony may combine discrete violations, each one observed by only one witness, a procedure excluded in rabbinic *halakhah*. Scholars differ with regard to a single capital offense seen by two witnesses. *Deuteronomy* 17.6 and Temple Scroll^a (11Q19 lxiv.8) favor the view that two simultaneous witnesses would suffice to impose a death sentence; it is only for sequential testimony ("different things") that three are required.

The cumulative procedure requires that after each violation the offender is to be reprovved before the Overseer who records the offense. Failure to do so was seen as a violation of *Leviticus* 19.17: "You shall surely rebuke your fellow and not bear sin on his account" (Rule of the Community [1QS v.26-vi.1]). *Matthew* 18.15-17 has a similar procedure for disciplining sinners, except that the initial chastisement is private. It has also been noted that rabbinic *halakhah* requires a warning (*hatra'ah*) by witnesses before corporal punishment can be imposed, but this warning precedes rather than follows the offense. Its purpose was to verify that the offender was aware of the crime and its penalty.

An interesting communal record of chastisement is extant in *Rebukes by the Overseer* (4Q477), which refers to the rebuke of several named individuals for being short-

tempered, possessed of a haughty spirit, and gluttonous. Here the reproof apparently concerns moral shortcomings of character, rather than specific offenses, but it no doubt derives from the same source, *Leviticus* 19.1, which was the basis of the juridical rebukes recorded by the Overseer.

The qualifications for witnesses are indicated in the Damascus Document: "No witness shall be received by the judges to put someone to death on the basis of his testimony unless he has reached the age to pass among those who are mustered (and) is God-fearing. No man shall be believed against his neighbor as a witness who transgresses a commandment deliberately until he is cleansed by repentance" (CD ix.23-x.3).

The biblical age for mustering was twenty, which is also indicated in the Rule of the Congregation as the age when one "shall be received so as to witness the precepts of the Torah" (1Q28a 1.11). This passage, which has some syntactical ambiguities, is part of the description of the stages in the maturation of a youth within the congregation. Twenty is also the minimum age for a man's marriage, and this has led some translators to read the verb "receive" (*tequbat*) as a feminine passive referring to the wife being received to testify against her husband and to take part in judicial hearings. Others, including this writer, proposed emending the text in accordance with the above-cited law in the Damascus Document, to refer to the husband's eligibility to give testimony after he reaches the age of maturity. However, in view of now available rules barring nonreproductive and unnatural intercourse in the Damascus Document (4Q270) it seems more cogent to retain the form *teqabel* and to translate it in the sense of a promise by the wife to admonish her husband about the laws pertaining to licit and illicit conjugal relations. Marital responsibilities to differentiate "between good and evil" would thus devolve upon both partners.

Oaths. The pronouncement of oaths, other than those sworn upon entering the covenant (CD xv.5-9), was lawful only in a judicial setting. This is stated as the first rule under the rubric Concerning Oaths found in the Damascus Document: "As to that which he said, 'Let not your hand help you,' a man who causes an oath to be sworn in the open field that is not in the presence of the judges or by their bidding has let his hand help him" (CD ix.8-10). The injunction not to resort to violence ("letting one's hand help him") derives from *1 Samuel* 25.25-33; it is here extended to oaths, which not only involve the raising of one's hand (*Gen.* 14.22) but the use of the sacrosanct name of God.

Among oaths that may be sanctioned by the court, mention is made of one imposed upon someone suspected of misappropriating the property of others (CD

xv.3) and an oath curse to elicit information about a theft (CD ix.10-12).

Penalties. Despite occasional assertions by scholars to the contrary, it is clear that Qumran legal teachings did not eliminate the biblical death penalties. The Damascus Document (CD xii.2-5) explicates the distinction between erroneous and flagrant offenses (see table 1): "Any man who is ruled by the spirits of Belial and speaks apostasy, in accordance with the judgment of the [one who communicates with] a ghost, or a familiar spirit shall he be judged. But each man who errs and profanes the Sabbath or the holy days shall not be put to death."

The court of twelve referred to in the Ordinances texts from Cave 4 at Qumran had the authority to execute deliberate transgressors of capital laws. The same text refers to the death penalty for a bride who has proved not to have been a virgin. This accords with the literal reading of *Deuteronomy* 22.13-21 (cf. Temple Scroll^a [11Q19 lxv.7-15]). Rabbinic *halakhah* limited the death penalty to cases of proven promiscuity after betrothal (B.T., *Ket.* 44b).

In its paraphrastic version of Deuteronomic laws, Temple Scroll^a not only preserves their capital penalties, but also adds some new ones including a law dealing with treason: "If a man informs against his people, and delivers his people up to a foreign nation, and does harm to his people, you shall hang him on the tree, and he shall die" (11Q19 lxiv.7-8). This law, and the related one concerning one who leaves his people and goes over to the gentiles, derives its phraseology from *Deuteronomy* 21.22, "And if a man commits a sin worthy of death, and he is put to death, and you hang him on a tree, his body shall not remain all night upon the tree, but you shall surely bury him that day." However, as Yigael Yadin pointed out, the author of Temple Scroll^a has deliberately reversed the sequence of execution and hanging. This led Yadin to the inference, followed by a number of other scholars, that "hanging" meant death by crucifixion. Baumgarten maintains that hanging was more likely a form of strangulation (*heneq* in tannaitic literature) and has questioned Yadin's inference on several grounds (Yadin, 1971, pp. 1-12; Baumgarten, 1982, pp. 7-16). One objection is that the protracted death by crucifixion would make the insistence in Temple Scroll^a (11Q19 lxiv.11) on burial before sundown impossible to fulfill. Another is that Peshar Nahum (4Q169) emphatically denounced Alexander Jannaeus's crucifixion ("hanging alive") of his Pharisaic enemies, who were guilty of precisely the kind of high treason to which Temple Scroll^a refers, as an unprecedented atrocity, for which the "Lion of Wrath" was to face divine retribution (Peshar Nahum, 4Q169 3-4.1.6-8; see also Baumgarten, 1977, pp. 172-182). The premise that crucifixion was a legally sanc-

tioned form of execution in Qumran law thus remains open to question [See Crucifixion.]

Another nonbiblical death penalty is prescribed for "the man who takes a bribe and perverts righteous judgment" (Temple Scroll³ li.16-18). The phraseology derives from *Deuteronomy* 15.19 but not the capital penalty. Yadin (1983, p. 229) suggested that the injunction, "and you shall not fear him [the corrupt judge]" echoes a similar one concerning the false prophet in *Deuteronomy* 18.22, which led to the inference that both were to be executed. This seems rather circuitous. It is noteworthy that Josephus also states flatly that "a judge who accepts bribes suffers capital punishment" (*Against Apion* 2, 27). *Jubilees* 21.20, however, apparently alludes to a heavenly reward to he who does not accept bribes to avoid executing a murderer; this judge will be saved from all death.

Next to death the most severe penalty in the Qumran penal code was expulsion. In his description of the Essenes, Josephus observes that expulsion was often tantamount to death, since the ejected member was still bound by his oath not to partake of the food of outsiders (*The Jewish War* 2.143). In the version of the code preserved in the Rule of the Community, expulsion was specified for blasphemy (1QS vii.1), slander or grumbling against the community (vii.16-17), apostasy by a senior of ten or more years standing (vii.22), and flagrant transgression of a Pentateuchal law (1QS viii.22). A Cave 4 version of the penal code adds grumbling against the fathers and "one who approaches to fornicate with his wife contrary to the law" (Damascus Document⁴ 4Q270, 7.i.12-13). The latter apparently refers to a violation of some sexual ban, perhaps of unnatural intercourse.

For lesser offenses the Qumran penal codes list suspen-

sions of varying durations from access to purity rituals to reductions in one's food ration. The nature of most of these offenses is substantially similar in the Rule of the Community and the Cave 4 versions of the penal code (Serekh Damascus, 4Q265; Damascus Document⁴, 4Q266, 4Q270). They involve infractions of communal order and discipline, rather than transgressions of biblical laws. Lawrence Schiffman suggests that these selections from the penal code served a central role in the initiation rites for new members. This is a plausible suggestion, to which, however, should be added the observation that in the Cave 4 manuscripts of the Damascus Document the penal code is placed just before the expulsion rite for recalcitrant offenders.

The formulation of the penalties in the different versions of the code is not uniform (see table). While the Rule of the Community generally prescribes only one penalty for each infraction, the Cave 4 Damascus Document texts have compound penalties consisting of a specified period of suspension (*havdalah*) and a period of penance (*ne'enash*). In one case, deception involving property, the Rule of the Community (1QS vi.25) spells out a compound penalty: "he shall be excluded from the purity of the many for one year, and be fined one-fourth his bread." A fragmentary passage in the Damascus Document (CD xiv.20-21) refers to the same crime but has suspension and a penalty of only "six days," which may be a corrupt reading. In the case of lying to one's fellow, Serekh Damascus (4Q265) refers to a rather severe fine of one-half his bread and also indicates that the offender was excluded from participating in communal deliberations. For unjustified malice against a fellow the Rule of the Community (1QS, vii.8) has a suspension of six

months, but a correction above the line of the text reads "one year." Such corrections, erasures, and variations among parallel sources have led scholars to postulate different stages in the evolution of the community, but no firm evidence for the direction of the evolution of the penal system has yet been put forth.

A number of scholars have drawn attention to the similarity in its emphasis on rules of order between the Qumran code and the constitutions of various Hellenistic associations. The parallels concerning fixed seating, speaking in order, avoidance of disturbances, and other procedural rules are of great interest. However, they do not suffice to establish direct dependence. What they do suggest is that even the self-enclosed Qumran community, which some have characterized as the least Hellenized of ancient Jewish societies, was not impervious to the cross-currents of contemporary influence. [See Greco-Roman Guilds.]

K

KABBALAH. From the Middle Ages, *Kabbalah* is the generic term used to refer to a multiplicity of esoteric currents in Judaism that impart knowledge about God, the self, and the universe. Kabbalistic literature is not a monolithic phenomenon that can be delimited in a simplistic or straightforward manner. On the contrary, the works of Kabbalah comprise a multifaceted and complex set of phenomena that have evolved over an extensive period of time and in many geographical regions. It is commonplace to think of Kabbalah as interchangeable with Jewish mysticism, but in fact the mystical element (whether related to intense revelatory or unitive experiences of the divine) is only one component of the Kabbalistic lore. A more suitable term to characterize Kabbalah in its diversity is esotericism, which conveys the notion that there are inner, secretive traditions that cannot be conveyed except to select individuals. These traditions encompass both speculative and practical matters, theological beliefs and cultic rituals.

A recurring claim in Kabbalistic literature is that the mysteries have been transmitted orally through the generations from master to disciple in an uninterrupted chain. Nothing is more important for understanding the mentality of the Kabbalist than the correlation of esotericism and orality. According to one of the more popular chains of tradition found in a number of sources, the first link in the chain is Elijah, who revealed himself to a particular individual. The choice of Elijah as the one who revealed esoteric truths helped to guarantee the traditional and authoritative status of the content of the revelation, even while tacitly alluding to the fact that something novel had occurred in history. Whether the Kabbalistic traditions were legitimated by prophetic revelation or oral transmission, the presumption of Kabbalists is that these traditions are encoded in the Torah. The master of Kabbalah possesses the exegetical means to draw the mysteries out of the scriptural text. Indeed, a belief widely affirmed by Kabbalists (often expressed in the language used by Maimonides) is that the Torah has two complementary parts: the revealed or exoteric (*nigleh*) and the hidden or esoteric (*nistar*). What the Kabbalist discloses through his interpretive powers is the inner meaning of Torah that sheds light on the external meaning as well.

The possession of secret gnosis empowers the Kabbalist,

for he alone has the keys to unlock the hidden treasures of the tradition. One must suppose that Kabbalistic circles functioned as autonomous fraternities, laying claim to a secretive knowledge that explained the essence of Judaism but that was not readily available to all Jews in an equal manner. The implicit elitism of Kabbalistic literature is reinforced by the claim repeated by many Kabbalistic authors regarding the inability of human reason to ascertain the esoteric truths. Even after Kabbalistic literature became a greater force in shaping popular religious culture, especially in the sixteenth and seventeenth centuries, it is still fair to say that the more recondite doctrines and more intense spiritual practices remained the exclusive property of small circles of initiates. This is the case as well in the Hasidic communities that evolved in the Ukraine, Poland, and Russia in the eighteenth and nineteenth centuries.

There are no discernible historical links connecting the members of the sectarian Qumran community and the medieval Kabbalistic fraternities. Yet, there are interesting conceptual and sociological parallels that make a comparison of the two worthwhile. Both the sectarian community and the Kabbalistic fraternities were organized socially as an elitist, secret society. One major difference is, of course, that, unlike the Qumran community, the Kabbalistic fraternities were never geographically removed from the larger Jewish society. One must presume that in practical matters Kabbalists availed themselves of the religious institutions that served the rest of their extended communities. Nevertheless, the theological calling of both the Qumran community and the Kabbalistic circles is related to a shared sense of being the spiritual elite led by an enlightened leader (*maskil*, a term used in the Dead Sea Scrolls and in Kabbalistic literature due to the mutual influence of the *Book of Daniel*). It is also of interest to consider the role of the Kabbalist as the inspired interpreter of scripture and that of the Teacher of Righteousness. [See Teacher of Righteousness.] Just as the sectarian belief was that the Teacher of Righteousness revealed the secrets of scripture to the members of the community, the Kabbalistic literature imparts a similar task to the master of esoteric lore (although in a technical sense there is no genre of the *pesharim* in works of Kabbalah). More importantly, both the Teacher of Righteousness and the Kabbalist engage

in pneumatic exegesis, and thus their interpretations have the status of prophecy. For both the Qumran sectarians and the medieval Kabbalists, authority of interpretation derives from its being divinely inspired. Closely connected to this belief is the hermeneutical assumption regarding the dual nature of scripture as yielding both exoteric and esoteric meaning, which is shared in one form or another by the sectarian community and the Kabbalists.

Another fruitful area of comparison is the strong interest in magic and the occult in both the Qumran community and the Kabbalists. In particular, the Qumran fragments and the Kabbalistic compositions indicate that the magical arts of physiognomy and chiromancy, as well as astrology, were cultivated and considered to be part of the esoteric tradition. [See Horoscopes; Magic and Magical Texts.] Moreover, it is clear that the Qumran sect had an extensive angelology and demonology that is developed in later Jewish magical texts. [See Angels; Demons.] The technical use of hymns and spells to adjure angels or to ward off demons found in the Dead Sea Scrolls bears a striking similarity to techniques elaborated in the practical Kabbalah. [See Psalms, Hymns, and Prayers.]

A final point worthy of comparison is the attitude toward evil and suffering. The Kabbalists did not embrace the idea of predestination and the doctrine of ethical dualism so central in the Qumran texts, but there is a very strong emphasis in Kabbalistic literature on the cosmic struggle between the forces of light and darkness. [See Dualism.] The Kabbalistic notion of the holy *sefirot* (luminous emanations) competing with the impure *sefirot* is in some measure reminiscent of the sectarian view regarding the Sons of Light and the Sons of Darkness. [See War of the Sons of Light against the Sons of Darkness.] The discussions on evil in Kabbalistic texts are far more complex than the sectarian approach. Nevertheless, there is a similar psychological tendency found in both contexts, which serves as the basis for the assumption regarding the ontological tension between good and evil and the eschatological hope in the eventual overcoming of evil by good.

KANDO. See Shahin, Khalil Iskandar (Kando).

KARAITES were a Jewish sect whose teachings rejected the authority of rabbinic Jewish (Rabbanite) tradition and leadership, and did not acknowledge the concept of oral law and its literature, the Mishnah and Talmud. Karaites recognized only the Hebrew scriptures as a divinely revealed authoritative source of law. Karaism posed a serious challenge for rabbinic leadership from the late ninth through the eleventh centuries, and still exists today, mainly in Israel.

The name Karaite (*Qara'im* or *Benei Miqra'*) is derived from the Hebrew root *qara'*, meaning "to read," indicating the scripturalist aspect of Karaite ideology. Alternately, it can mean "to call" or "summon," denoting the missionizing aspect of medieval Karaism, which sought to summon Jews to their movement. The earliest attestation of the name comes from the Karaite Benjamin al-Nahāwendī in the mid-ninth century, although it may have been coined by Rabbanite Jews.

Parallels in ideology, exegetical method, and vocabulary can be identified in the Dead Sea Scrolls and Karaism. In its medieval phase, Karaism, like the ideology of the scrolls, was eschatological and messianic, resulting in constructions of the community and its laws that were predicated upon working toward the imminent end of time. These ideologies were sectarian in that they were formulated in opposition to dominant forms of Judaism by adopting a posture of resistance based upon a critique of the ruling elements of Jewish society. The Karaites believed that the rabbis were responsible for the exile because they perpetuated the evils that brought about the destruction of the Temple and that they benefited from their hegemonic position as leaders of the community.

History. The origins of Karaism are rooted in the great variety of nonrabbinic Jewish religious activity in the Near East of the early Muslim era. The consolidation of the political and social order of Islam was mirrored by similar developments within Rabbanite Jewry. A rejection of rabbinic hegemony among some Jews resulted from a complex set of social and religious conditions, including class distinctions, forms of Jewish localism that had always had a nonrabbinic character, and messianism. The primary witness to Near Eastern Jewish heterodoxy of the eighth and ninth centuries is the Karaite Ya'qūb al-Qirqisānī, who in 937 CE described groups that differed widely in regard to law, messianism, revolution, and syncretism. Several of these groups would later contribute to the more fully articulated Karaite movement of the tenth and eleventh centuries.

One of these movements began with Anan ben David in the middle of the eighth century, according to a narrative that may have originated among Rabbanites but was recorded by the twelfth-century Byzantine Karaite Elijah ben Abraham. Anan, of the Jewish princely family in Iraq, was passed over in the succession to the office of the exilarchate on account of his heterodox ideas. By presenting himself to the Muslim authorities as leader of a religion different from that of the rabbis, and not merely a sectarian group, he was able to secure governmental protection for himself and his followers. The narrative describes these so-called Ananites, who were acknowledged by later Karaites as the first of their movement, as "remnants of the Sadducees and Boethusians."

By the late ninth century, several heterodox trends came together to constitute Karaism, including antirabbinism, scripturalism, the Ananites, and perhaps remnants of defunct messianic followings. Under the leadership of Daniel al-Qūmisī, an ideology emerged that actively called for Jews to return to the land of Israel, in expectation of messianic times. Known as the "Mourners for Zion" (*Avelei Tsiyyon*), this group combined a millenarian perspective with ascetic tendencies. By choosing immigration to Palestine, they sought to negate the exile in preparation for the coming of the Messiah.

In the tenth and eleventh centuries, Jerusalem became a center for Karaite life and scholarly activity. This period is identified by some modern scholars as its "classical period" or "golden age" on account of the literary production in Hebrew and Arabic by a series of eminent scholars, including al-Qūmisī and al-Qirqisānī. These authors wrote works on biblical commentary, Karaite *halakhah*, philosophy, antirabbinic polemic, and Hebrew language and masoretic studies. This range of works has attracted attention on the part of modern scholars interested in correlations between the Karaites and the Dead Sea Scrolls.

Karaite *halakhah* for the most part is based upon scripturalism, a concentration on authority in scripture to the exclusion of received tradition. In order to develop a comprehensive legal system without making claims to tradition, Karaites used the entire Hebrew scriptures for legal purposes and had recourse to the hermeneutical methods of analogy (*heqqesh*) and consensus of the community (*qibbutz* or *'edah*). Nonetheless, scripturalism generated a great deal of individualism in jurisprudence, resulting in wide halakhic variation. It is noted by al-Qirqisānī that one could hardly find two Karaites who agreed. Many Karaites addressed diversity in their *halakhah* by turning to rationalism in the form of Kalām philosophy, which lent itself to efforts at systematization and provided an intellectually acknowledged methodology that could rival rabbinic traditionalism.

After dissolution of the Jerusalem center in the latter half of the eleventh century, Karaites continued to live in the Islamic Near East, with an important community in Cairo. However, a new intellectual center was established at Constantinople, where Karaism lost some of its millenarian emphasis as the immediacy of messianic belief was tempered by accommodation to the notion of exile. A great literary project translated the Arabic works of previous generations into Hebrew for use in the non-Islamic environment. Balkan and Constantinopolitan Karaites experienced a second period of florescence under the Ottomans (fourteenth through sixteenth centuries), producing important works of biblical commentary, law, and philosophy.

In the early modern period, Karaites were found in the Crimea and Poland-Lithuania, where a few Karaite scholars of distinction were influenced by contacts with Protestant academics in the sixteenth through eighteenth centuries. In the nineteenth century, eastern European Karaites distanced their group from Judaism, and, as a result of the Holocaust and Soviet policies, have virtually disappeared. In the twentieth century, the majority of Near Eastern Karaites immigrated with other Jews from Arab lands to Israel. Contemporary Israeli Karaites have focused some attention on the Dead Sea Scrolls in an effort to claim Second Temple origins for their community.

Karaism and the Scrolls. Scholars have suggested connections between the Dead Sea Scrolls and Karaism, but their many theories are weakened by an inherent twofold problem. If, on the one hand, the Karaites are intellectual and/or communal descendants of the Qumran community, then one needs to demonstrate some kind of historical continuity across a little-known period in Jewish history spanning the seven or eight centuries that intervened between the destruction of Qumran (68 CE) and the era to which we traditionally assign Karaite origins. If, on the other hand, the Karaite phenomenon is a medi-

eval movement independent of Second Temple period antecedents, then one must be able to explain striking similarities shared by these two groups.

What is perhaps the most plausible of theories is that medieval Karaites had access to Dead Sea Scroll literature or materials cognate to the scrolls and used them to formulate their own ideology. The Damascus Document was known to medieval Jews, having been found among the documents of the Cairo Genizah, and medieval Karaites claimed to be in possession of Zadokite texts. This theory is supported by a ninth-century letter from the Nestorian Catholicos of Seleucia-Baghdad, Timotheus, who reports that a desert chamber was discovered near Jericho filled with Hebrew manuscripts, which subsequently were declared heretical by local rabbinic authorities. It has been suggested that this was a medieval discovery of Cave 1 or some other known or unknown cave, and that these heretical documents became the bases for later medieval Jewish heterodoxy. Such a view finds further support in reports of other ancient and medieval manuscript finds (by Eusebius, by the Magharians, and in the Khazar correspondence).

A wide range of speculation has generated other theories. Naphtali Wieder suggests in *The Judean Scrolls and Karaism* that the Dead Sea Scroll community survived into the Islamic period as the Karaites, or as a group that joined and greatly influenced the larger nexus of groups forming the Karaites. In "The Damascus Document Revisited" (*Revue biblique* 92, 1985), Jerome Murphy-O'Connor states that Karaism is a medieval continuation of the teachings and community of the Essenes, originally an ancient Babylonian movement. It was subsequently imported to Qumran in Palestine in the Second Temple period, but its medieval Babylonian (Iraqi) continuators are understood to be Anan and the earliest Karaites. Another theory associates scripturalist ideologies found in Karaism with the scrolls and with forms of eastern Christianity, especially the writings of the Syrian Father Aphrahat, who died c.345 CE (Jean Ouellete, "Aphraate, Qumrân, et les Qarâites," an appendix in Jacob Neusner, *A History of the Mishnaic Law of Purities*, Leiden, 1976). An important link in this theory is Dāwūd ibn Marwān al-Muqammis, a ninth-century convert to Christianity who later returned to Judaism and became an important source for al-Qirqisānī. One must also mention the now-discredited theories reviewed by H. Rowley that claim the Dead Sea Scrolls are of medieval origin, either Karaite forgeries fabricated in order to establish an ancient origin for Karaism (Solomon Zeitlin), or documents of the 'Isawite sect, followers of Abū 'Īsa al-Isfahānī, the messianic leader of a rebellion against the Muslim Caliphate in eighth-century Iran (P. R. Weiss).

Comparisons of Karaism and the Dead Sea Scrolls often begin with *halakhah*. Karaite *halakhah* differs from rabbinic *halakhah* on many particular points, with the findings of the former often in agreement with the *halakhah* of the scrolls. The following three examples illustrate this: a marked tendency toward asceticism (compare asceticism in the scrolls to the ninth-century Daniel al-Qūmisī of Leon Nemoy, *Karaite Anthology*, p. 34ff., or the tenth-century Sahl ben Mas'iah, *Karaite Anthology*, p. 113f.); the presence of a calendar designed so that some or all holidays fall on a particular day of the week (compare the calendar behind the Temple Scroll [11QT] or Calendrical Document A (4Q320) to Samuel al-Maghribī in Nemoy, *Karaite Anthology*, p. 222, or the discussion in Zvi Ankori, *Karaites in Byzantium*, p. 275ff.); and strict notions of consanguinity, including rejection of niece-marriage (compare Damascus Document, CD v.7-11, and 11QT^a lxvi.15-17 to Daniel al-Qūmisī in Nemoy, *Karaite Anthology*, p. 40, or the discussion in Bernard Revel, "The Karaite Halakah," pp. 66-78).

On the other hand, there are many instances where Karaite and rabbinic rulings correspond but are opposed to those found in the Dead Sea Scrolls. Furthermore, Karaite *halakhah* can find both agreement and disagreement with Sadducean legal positions known from rabbinic literature. The wide difference in the results of these comparisons is compounded by the lack of consistency in Karaite *halakhah*. As a result, it is problematic to postulate a systematic halakhic correspondence between the scrolls and the Karaites.

Karaite literature and the Dead Sea Scrolls exhibit similarities in outlook and vocabulary, a correspondence most markedly noted in the writing of Daniel al-Qūmisī, but continued thereafter as part of Karaite literary tradition. Both Karaites and the Qumran community utilized the idea of the perfection of the Torah (*Torah temimah*) as an ideological foundation and as a critique of their opponents, who were characterized as false interpreters and liars. The Karaites also used this notion of the Torah as the basis for scripturalism, postulating the self-sufficiency of the Torah for human understanding, and thereby denying a need for rabbinic tradition. For both sects, the method by which the knowable or "revealed" Torah became comprehensible was *midrash*, understood to mean "inquiry," "study," or "seeking," perhaps to be contrasted to the narrower rabbinic definition of "homiletic exposition" (compare CD vi.7; Rule of the Community, 1QS vi.6; viii.11-12, 15-16; Florilegium, 4Q174 i.11 to the discussion in Wieder, *The Judean Scrolls*, pp. 77-79).

This type of inquiry into scripture was the domain of the *maskil*, translated as "man of understanding"; or "teacher, enlightener," whose scriptural exegesis often

utilized the *peshar* method known from the Dead Sea Scrolls (CD xii.21; xiii.22; 1QS iii.13; ix.12; ix.21; War Scroll, 1QM x.10; Hodayot^a, 1QH^a xx.11). Karaite exegetes often employed the term *pashar* (or its cognate, *patar*), and even utilized verses and their *peshurim* as found in the scrolls. For example, a *peshar* is used in the Damascus Document (CD iv.15–18; v.6), Peshar Psalms^a (4QpPs^a, ii.9–12), Peshar Habakkuk (1QpHab, xii.8–9, and several Karaite sources (including al-Qūmīṣī) to identify sins of the writers' opponents, known as the "nets of Belial."

Karaites used many other terms also found in the Dead Sea Scrolls to denounce their opponents, particularly in the Damascus Document. These include "changers of boundaries" (CD v.20–vi.2), "builders of the wall" (CD iv.19; viii.12; xix.24–25), "lying and deceiving interpreters" (1QH^a x.31; xii.7, 9–10), "shepherds" ("... of the exile," for Karaites) (CD xix.5–13), and "deflectors from the way" (CD i.13; ii.6; 1QS x.21).

Similarly, other Dead Sea Scroll terminology was used by Karaites to portray themselves, including "perfect in the way" (there are many instances of *temimei derekh* in the Damascus Document and the Rule of the Community, e.g., 1QS iv.22, as well as 1QM xiv.7, 1QH^a x.36, and the Rule of the Blessings 1Q28b v.22), as well as "those who turn from transgression" (CD ii.5; xx.17; 1QS x.20; 1QH^a vi.24; x.9; xiv.6), and the idea of "the remnant."

Both Karaism and the scrolls speak of "returning to the Torah of Moses" to indicate conversion to their brand of Judaism (CD xv.9, 12; xvi.1–2, 4–5; 1QS v.8). Eschatological expectation in both sects included a doctrine of two messiahs (CD xii.23; xiv.19; 1QS ix.11; Wieder, "Doctrine of Two Messiahs"), one of whom would be the Teacher of Righteousness (*Moreh Tsedeq*) (CD i.11; xx.32; 1QpHab i.13; ii.2; v.10; vii.4; viii.3; ix.9–10; xi.5; 4QpPs^a iii.15).

In spite of many shared elements, it must be noted that the Dead Sea Scroll community withdrew from Second Temple society at large to create a separate quasi-monastic society, whereas the Karaites created their subculture in Jerusalem and among the widely dispersed Jewish communities of the medieval Near East. Unlike the Qumran community, the Karaites never established a hierarchy of initiation, and Karaite theology included neither the dualism of light and darkness nor spirits of truth and evil.

KHABRA, WADI. See Hever, Nahal.

KILNS. In his excavations at Qumran, Roland de Vaux discovered the remains of potters' kilns belonging to periods Ia, Ib, and II (last third of the second century BCE to 68 CE). They were in potters' workshops located on the southeastern edge of the site, with those of periods Ib and II lying a little farther to the east due to the expansion of the later settlement. The remains of two poorly preserved kilns of period Ia were found side by side beneath Locus

oo. Both were circular and measured approximately two to three meters internally and four meters externally in diameter. The opening of the eastern kiln faced south, while the western kiln opened to the north. The western kiln also had a round central pillar supporting the floor, a feature that was either lacking or not preserved in the eastern kiln.

In Period Ib, a new potters' workshop was established in the triangular enclosure just to the east of the period Ia kilns. It continued in use to the end of period II. Again there were two kilns, adjacent to each other. The southern kiln, which was circular and opened toward the north, either had no central support for the floor or it was not preserved. The pots were put into the kiln through an opening in its upper part and placed on a bench that encircled the floor. Steps led down to another opening below, where the fire chamber was located. The kiln measured approximately two meters internally and four meters externally in diameter. The northern kiln opened toward the south. It appears to have been roughly circular in the interior and square or rectangular on the exterior. A round central pillar that supported the floor was found, and part of the floor was still pierced by five flues. It was smaller than the southern kiln, measuring a little over one meter in diameter internally and about two meters externally. De Vaux suggested that the openings of these two kilns were oriented to take advantage of the prevailing winds along the Dead Sea and that the southern kiln was used to fire larger vessels.

These two kilns lay in a sunken area on the eastern edge of the triangular enclosure, which was approached on the southwest by five steps. An iron hook, perhaps for stirring the fire, was found lying on the steps. Other parts of the potters' workshop were discovered outside the sunken area. About four meters to the southwest of the steps, de Vaux uncovered a circular cavity made of stones, measuring about one meter in diameter internally, which he identified as the site of a potter's wheel. Just to the south lay two plastered basins, which de Vaux associated with the workshop. The southern basin is shallow and roughly rectangular in shape, and was bordered by a line of standing stone slabs. According to de Vaux, it was filled with fairly clean clay. This basin received water from a small channel that branched off from the main supply channel of the adjacent cistern. The water flowed into a small decantation basin before entering the southern basin. De Vaux proposed that the potters washed their clay in the southern basin. Just to its north lay an L-shaped basin. The southern part of the basin is shallower and was filled with yellow clay. De Vaux suggested that this represents the stock of cleaned clay, which was mixed in the deeper northern part of the basin.

Samples of clay from Qumran were analyzed by Frederick E. Zeuner (1960). The results indicated that neither the marl deposits of the Qumran terrace nor the deposits that formed in the cisterns and decantation basins in the settlement could have provided suitable raw material for pottery manufacture. Thus, though the presence of the workshops at Qumran indicates that at least some of the pottery was locally produced, the source of the clay is still unknown. On the other hand, neutron activation analysis has demonstrated that the pottery vessels from Wadi Ghweir and Qumran were made from different clays.

In de Vaux's field notes, the western kiln (the one with the central pillar) of period Ia is described as being made of baked clay. The materials from which the other Qumran kilns are constructed are not described, though in the published photographs they appear to consist of fieldstone and mud. Their heights also are not recorded, and in no case was the upper part of the kiln preserved. Presumably, it would have been destroyed and rebuilt between firings to allow for the insertion and removal of the vessels. Despite their variation in size, materials, and the presence or absence of a central pillar, all of the Qumran kilns are of the usual Roman updraft type. The pots were stacked on a floor that was pierced by flues and that separated the oven compartment from the fire chamber below. The round plan of the Qumran kilns also conforms to the standard Roman type. At least two of the Qumran kilns had a central pillar to support the floor. Perhaps the other two kilns originally had a similar arrangement that was not preserved, since kilns without any internal support seldom measure more than one meter in diameter internally. On the other hand, in none of the Qumran kilns is the flue spanned by a complex of arches, which is usually found in kilns measuring more than three to four meters in diameter.

The Qumran kilns are unparalleled in the Judean Desert, and published examples from other parts of Hellenistic and Roman Palestine are rare. A contemporary round kiln was found in the Nabatean potters' workshop at Avdat (Oboda) in the Negev Desert. The workshop at Avdat, like that at Qumran, was located on the eastern outskirts of the settlement. According to the excavator, Avraham Negev (1974), this is because the prevailing winds blow from north-northwest to south-southeast. Other examples of kilns and potters' workshops in Roman Palestine are found at Kefar Hananya and Kfar Nahf in the Galilee, and at Givat Ram in Jerusalem. The discovery of potters' workshops at Qumran constitutes important evidence for local ceramic production. It also accounts for some of the peculiar characteristics of the ceramic repertoire at Qumran, including the unusual types and the rarity of decoration. Rachel Bar-Nathan (1988) has noted a similar phe-

nomenon at Jericho, where she believes much of the pottery found in the excavations was produced. In light of the similarities between the Jericho and Qumran assemblages, she has suggested that local potters' workshops supplied settlements along the Jordan Valley and Dead Sea.

JODI MAGNESS

KINGS, FIRST AND SECOND BOOKS OF. Three Qumran manuscripts of *Kings* are extant. Kings from Cave 4 at Qumran (hereafter, 4QKings, 4Q54) dates from the middle of the first century BCE. The seven identified fragments contain portions of *1 Kings* 7.20-21, 25-27, 29-42, 50(?), 51; 8.1-9; 16-18; fragment 8 is unidentified. 4QKings stands in the proto-masoretic textual tradition, agreeing with the Masoretic Text of *Kings* (and *Chronicles*) against the Septuagint in all the minuses and transpositions that give the Old Greek its peculiar textual char-

acter here. Fragment 7 preserves a reading in *1 Kings* 8.16, lost by homoioteleuton in the Masoretic Text but present in the parallel *2 Chronicles* 6.5b and 6.6a and also partly preserved in the Old Greek of *Kings* (Trebolle Barrera, 1995). [See Septuagint.]

Kings from Cave 5 at Qumran (5Q2) dates to the late second century BCE. Three fragments from the first column contain parts of *1 Kings* 1, verses 16-17 and 27-37, its text agreeing, except for spelling, with the Masoretic Text and the Greek (Milik, 1962).

Kings from Cave 6 at Qumran (hereafter, 6QKings, 6Q4), on papyrus, is from the late second century BCE. The orthography is full at times. Fragments 1-17 contain portions of *1 Kings* 3.12b-14, 12.28b-31, and 22.28-31 and *2 Kings* 5.26; 6.32; 7.8-10, 20; 8.1-5; 9.1-2; 10.19-21 fragments 18-94 are unidentified. The text of *2 Kings* 7.20-8.5 in 6QKings is sometimes shorter than the Masoretic Text (Baillet, 1962).

Furthermore, three fragments of the Book of the Kings (4Q235) in the Nabatean script have been preserved. [See Nabatean.]

The Isaiah scrolls also have a bearing on the text of *Kings* in the passages they have in common (*Is.* 36.1-39.8, *2 Kgs.* 18.13-20.19). Isaiah^a from Cave 1 at Qumran (1QIsa^a) preserves the entire parallel text, Isaiah^b from Cave 1 at Qumran (1Q8) has 37.8-12 and 38.12-39.8, and Isaiah^b from Cave 4 at Qumran (4Q56) contains 36.1-2, 37.29-32, 39.1-8.

In Paraphrase of Kings et al. (4Q382), fragments 1-5, 9, 11, 30 (40?) appear to be a paraphrase or part of a work rewriting the Elijah-Elisha stories (*2 Kgs.* 2.3-4; 17.1; 18.4; 19.16, 19). [See *Elijah and Elisha*.] The text is more closely related to the Hebrew underlying the Old Greek than to the Masoretic Text. Fragment 2 of the fragment mentioning Elisha (4Q481a) quotes and paraphrases *2 Kings* 2.14-14.16. The seventy-two fragments of Apocryphon on Samuel-Kings (6Q9) contain only scanty material related to these books and *Chronicles* (Baillet, 1962). [See *Chronicles, First and Second Books of*.]

Other Judean Desert biblical manuscripts shed light on the textual history of *Kings*. The Greek Minor Prophets (8Hev 1) contains the text of the proto-Theodotonic recension that is also found in two sections of the Septuagint *Kings*: *1 Kings* 1.1-2.11 and *1 Kings* 22.1-2 *Kings* 25.30 (Barthelemy, 1972). [See *Minor Prophets*.] In these sections the *Codex Vaticanus* (B), followed in Rahlfs' Septuagint edition, reproduces the text of the proto-Theodotonic recension, while the Lucianic manuscripts (boc₂e₂) preserve a text that is very close or substantially identical to that of the Old Greek. The identification of a proto-Lucianic recension was prompted by the observation that Lucianic readings of *Samuel* agree with the Hebrew of

Samuel^a (4Q52) against the Masoretic Text and the Old Greek, which in such cases does not show traces of recensional activity (Cross, 1975, p. 315; Ulrich, 1978, pp. 95–96). [See Samuel, First and Second Books of.]

Qumran confirms the antiquity of the Masoretic Text of *Kings* (for the defective orthography, for example), but also the text-critical value of the Old Greek. The considerable variations (pluses and minuses, transpositions, different chronological systems, etc.) that the Old Greek offers with respect to the Masoretic Text are not due so much to the work of the Greek translator but rather reflect a different text from that transmitted by the Masoretic tradition. In not a few cases the Hebrew original of the Greek version represents a literary edition of *Kings* that is older and shorter than that known in the Masoretic Text. However, the question of whether the Septuagint differs in recension from the Masoretic Text or reflects later Midrashic developments has not yet been answered.

JULIO TREBOLLE BARRERA

KINGSHIP. Although foreign kings ruled Judea during most of the Second Temple period, Hasmonean rulers claimed the royal title, beginning with Aristobulus I (r. 104–103 BCE), continuing through the reigns of Alexander Jannaeus (103–76 BCE), Shelamzion Alexander (76–67 BCE), Aristobulus II (67–63 BCE), and ending with Antigonus II (40–37 BCE). Herod the Great (37–4 BCE) also received the title, while it was denied to his son Herod Archelaus (4 BCE–6 CE; but see *Mt. 2.2, Jewish Antiquities 18.93*). Herod Agrippa I also ruled as king (41–44 CE). [See Hasmoneans; Herodian Rulers.]

According to Judean Desert documents, the ideal Jewish society also included the institution of kingship, yet the status and duties of the king were to be carefully circumscribed. The primary sources for determining the view of kingship expressed in the scrolls are the Law of the King section of Temple Scroll^a (11Q19 lv.12–lix.21)

and several fragmentary texts that refer to kings or kingship.

The Law of the King interprets and augments *Deuteronomy* 17.14–20. Following this biblical text, it refers to the monarch as *melekhi* ("king") and requires that the king be an Israelite, be chosen by God, and refrain from accumulating horses and wealth. Other items in the biblical text are modified, however. The prohibition against acquiring many wives is elaborated so that it explicitly requires the king to be monogamous, selecting a lifelong partner from his father's house, and whereas *Deuteronomy* 17.18–19 instructs the king to write out for himself a copy of the law that he might rule in accord with it—presumably referring to the deuteronomic law, Temple Scroll^a apparently directs the priests in charge of the law to write out for the king the Law of the King. If the king obeys the law, God promises to deliver him from his enemies, make him prosperous, and grant him and his descendants long rule. Disobedience, however, would result in exile for his people and the end of his dynasty. In short, dynastic continuance is strictly conditioned on obedience to the law of God.

The king's duties consist of military and judicial affairs. He must appoint from the tribes of Israel the army and its leaders, as well as a royal guard of twelve thousand soldiers of character and valor, whose primary task is to protect the king from capture by a foreign nation. Detailed rules for war restrict the number of soldiers a monarch may muster in a defensive war, limit his share of the plunder to one-tenth, and place the decision of whether to engage in a nondefensive war in the hands of the high priest. The king's judicial activities are to be distinguished by righteous judgments; he may not take bribes or covet the possessions of his subjects. Furthermore, he must exercise judgment in consultation with a judicial council composed of twelve leaders of the people, twelve priests, and twelve Levites: "his heart may not be lifted up above them" and "he may not do anything by any counsel apart from them" (11Q19 lvii.14–15).

The Law of the King sets forth a decidedly limited version of Jewish kingship, one that stands in contrast to the authority and prerogatives exercised by ancient Israelite kings. Conspicuously absent from the Law of the King are ideas associated with the Judean royal ideology, such as Davidic lineage, divine sonship of the king, and unconditional rule sealed by covenant; nor is there any role reserved for the king in cultic matters. Instead, the Law of the King reflects reservations about kingship and its abuses found in the Hebrew scriptures (cf. *1 Sm. 8*). The emphasis on priestly oversight of royal activities reflects similar misgivings about the power of kings. Accordingly, while monarchy is still viewed as a divinely approved institution for Israel, its character appears to be shaped by

biblical texts favoring restricted kingship and conditional rule (cf. *Ezek.* 40–48; Psalm 132).

Several provisions in the Law of the King probably represent a reaction to problems associated with the Hasmonean rulers. For example, the need for a loyal guard to protect the king from capture may constitute a response to the seizure and execution of Jonathan (the Hasmonean) in 143 or 142 BCE by the Seleucid Trypho. Furthermore, it is likely that prohibitions against the accumulation of wealth and restrictions against offensive wars reflect a critique of Hasmonean leaders such as John Hyrcanus (135–104 BCE), who amassed great riches and embarked on wars of conquest. Most importantly, in the Law of the King the office of king is distinct from the office of high priest, yielding a model of diarchic governance at odds with Hasmonean rulers who were both high priests and chief lay leaders or kings.

Despite claims to the contrary by some scholars, the Law of the King does not envision eschatological kingship; nor is the ideal king a messianic figure. [See Messiahs.] The need to fight defensive wars, the possibility of exile, and the potential for the king's dynasty coming to an end support this conclusion. Hence, while the ideal king of Temple Scroll^a shares with the Qumran royal Messiah a military and judicial role and subordination to priests, these figures are to be distinguished. [See Hasmoneans.]

Like the Law of the King, other Judean Desert documents speak of devotion to the law as fundamental to Jewish kingship. For instance, in *Miqsat Ma'asei ha-Torah*^{a-1} (4Q394–399) the recipient of this halakhic document is exhorted to remember the example of the kings of Israel, including David, who were delivered from their troubles and forgiven their sins because of their piety and faithfulness to the law. Also, in a fragmentary text mentioning Zedekiah (4Q470), this biblical king is portrayed as recommitting himself to the law of God.

Scholars have generally found in Judean Desert documents a negative attitude toward Hasmonean rule, in part because of the implicit critique of Hasmonean leadership in Temple Scroll^a and the absence of documents with a pro-Hasmonean slant among the scrolls. However, with the decipherment and publication of the Apocryphal Psalm and Prayer (4Q448), this conclusion has been challenged. Some scholars argue that this text contains a prayer for the welfare of King Jonathan, identified as the Hasmonean king Alexander Jannaeus. Yet the reading of the name *Jonathan*, the text's interpretation, and its provenance are all matters of dispute. On the other hand, Herodian kings are never specifically mentioned in Judean Desert documents, but their loyalty to the Romans and penchant for impiety suggest that the sectarians at Qumran viewed them as illegitimate.

The concept of kingship in Judean Desert documents can be compared to other ideas about this institution expressed during the Second Temple period. Thus, Josephus reports that during the struggle between Hyrcanus II and Aristobulus II for the Hasmonean throne (63 BCE), the nation declared its desire to be ruled by priests instead of a king (*Antiquities* 14.41). On the other hand, *Psalms of Solomon* 17 (c.60 BCE) envisions a Davidic king of power, wisdom, and holiness, whose reign leaves little role for priests. However, leadership through a king and a high priest is paralleled in some portions of the *Testaments of the Twelve Patriarchs* and on coins minted by the Jewish revolutionary Shim'on Bar Kokhba (c.132 BCE).

KENNETH E. POMYKALA

KITTIM. A group referred to as the *Kittim* figure prominently in the Qumran scrolls. The name occurs several times in the *peshtarim* (Peshar Habakkuk, 1QpHab; Peshar Nahum, 4Q169; Peshar Isaiah^a, 4Q161; Peshar Psalms, 1Q16), the War Scroll (1Q33, 4Q471, and 4Q491–497), and the War Rule (4Q285). There is consensus that the reference is to the Romans.

Biblical Use of Kittim. The spelling of the name *Kittim* in the Hebrew scriptures varies between *ktym* and *ktym*. Deriving from the Phoenician *kt* and *kty*, which originally referred to Citium, a town on the southeastern coast of Cyprus near modern Larnaca, and its residents (Harris, 1936, p. 113), the Hebrew term (always in the plural) came to have several meanings: the son of Javan, son of Japheth (*Gen.* 10.4; *1 Chr.* 1.7); Cyprus, or the coastlands generally (*Jer.* 2.10; *Ezek.* 27.6). In Jewish and Christian traditions, the word *kittim* likewise had a range of geographical and ethnic referents. The author of *1 Maccabees* understood it as Macedonia when he states that Alexander the Great defeated Darius after marching

from the "the land of the *Kittim*" (1 Mc. 1.1; Perseus is called "king of the *Kittim*" in 1 Maccabees 8.5). Both Targum Onkelos and the Vulgate rendered Numbers 24.24 ("but ships shall come from the coast of *Kittim*") as a reference to the Romans (cf. Dn. 11.30 [ῥωμαῖοι in the Septuagint, but *kittoi* in Theodotion]). Josephus explains that the name is given "to all islands and to most maritime countries" (*Jewish Antiquities* 1.128).

In the Qumran scrolls, *Kittim* is spelled, as in some of the biblical texts, as *ktyym* (4QpNah 1-2.ii.[3]; 3-4.i.3; 1QM i.2, 4, 6, 9; xi.11; xv.9; xvi.3; xvi.6, 9; xvii.12, 14; xviii.2, 4; xix.10, 13; 4QM^b 1.9; 4Q285 5.6) or with the digraph as *kty'ym* (1QpHab ii.12, 14; iii.4, 9; iv.5, 10; vi.1, 10; ix.7; 1QpPs 9.4; 4QpIsa^a 7-10.iii.7, 9, 11, 12; 4QM^a 10.ii.8, 10, 12; 11.ii.8, 19; 13.5).

Kittim as Romans. The identification of the *Kittim* as Romans in the Qumran scrolls is based primarily upon the historical allusions in the *peshtarim*. In the fragmentary interpretation of *Nahum* 2.12b, the author reveals that "[Deme]trius, king of Greece, sought to enter Jerusalem on the advice of the Seekers after Smooth Things" and that the biblical phrase also foretold the actions of "the kings of Greece, from Antiochus until the rise of the rulers of the *Kittim*, and afterwards she [Jerusalem] will be dwnthrodden" (4Q169 3-4.i.2-3).

These statements are understood to refer to the broad historical context as well as to specific events. From the time of Antiochus IV Epiphanes (c.170 BCE) no Greek king had entered Jerusalem. Demetrius (most probably Eukerus, c.88 BCE), the Seleucid king who ruled in Syria, on the advice of the Pharisees known by their sobriquet *Seekers after Smooth Things*, sought to enter Jerusalem but withdrew when out of pity for the defeated Alexander Jannaeus six thousand Jews gathered in support of him (Josephus, *Antiquities* 13.372-383; *The Jewish War* 1.90-98). The phrase "until the rise of the rulers of the *Kittim*" then appears to be a reference to Pompey's intervention in 63 BCE in the Jewish civil war in 63 BCE when Jerusalem was finally captured by the Romans. [See *Seekers after Smooth Things*.]

One particularly telling passage (1QpHab vi.4) states that the *Kittim* "sacrifice to their standards," a practice characteristic of the Roman veneration of their military standards (*signa*). Josephus, in recounting the dramatic climax of the First Jewish Revolt, reports that when the rebels had fled and while the sanctuary of Jerusalem was in flames, the Romans carried their standards into the Temple court, sacrificed to them at the eastern gate, and with a loud acclamation hailed Titus as *imperator* (*The Jewish War* 6.316).

There may also be a reference to the Roman senate, which continued to send governors and military commanders to Judea, when the author of Peshar Habakkuk

interprets *Habakkuk* 1.11 as referring to "the commanders of the *Kittim* who, by the council of their guilty house (Roman senate?), cause each man to pass before his neighbor; [their] rulers one after another will come to destroy the la[nd]" (1QpHab iv.10-13).

Qumran Attitudes toward the Kittim. It has been suggested (Vermes, 1994) that the Qumran community came to regard the *Kittim*/Romans as its chief enemy, even though earlier it depicted them simply as instruments of divine punishment of the "last priests of Jerusalem" (1QpHab ix.4). This developmental view involves seeing the *peshtarim* to Habakkuk and Nahum as representing the earlier, more neutral stage, and the War Scroll, the War Rule, and Peshar Isaiah^a the later, hostile repositioning.

The key to this approach is to be found in the different terms used to describe the leaders of the *Kittim*. In Peshar Habakkuk and Peshar Nahum, the *Kittim* are led by "commanders" (*moshelim*; 1QpHab iv.5, 10, 12; 4Q169 3-4.i.2-3). By contrast, in the War Scroll there is only one leader who stands with the army of Belial against the sons of light, and he is described as the "the king (*melekh*) of the *Kittim*" (1QM xv.2). The singular use of "king" is significant because it indicates that the *Kittim*/Romans are now ruled by an emperor (27 BCE onward). Notable, too, for comparison is the use of the royal terminology to describe Antiochus and Demetrius in Peshar Nahum (4Q169 3-4.i.2-3). Republican Rome is assumed in the former, while the latter presupposes that the *imperium* now lay in the hands of a single man.

In this view, then, the king of the *Kittim*, the emperor of the Romans, stands at the front of a satanic army that must be subjugated by the sons of light in the apocalyptic and eschatological battle envisioned in the War Scroll. The *Kittim*, who are the biblical Lebanon of *Isaiah* 10.34 in Peshar Isaiah^a (4Q161 7-10.iii.7), will fall, and their king will be put to death by the Prince of the Congregation (War Rule, 4Q285 5).

Other References to Kittim. Since Jewish tradition often used *Kittim* to refer in a general way to the last foreign enemy, it is possible that other groups represented the *Kittim*. In Peshar Habakkuk, the *Kittim* are equated with the Chaldeans of biblical prophecy. Like the Chaldeans, the *Kittim* are "swift and mighty in war" (1QpHab ii.12-13), "and merciless" (vi.10-12); "fear and dread of them are upon all the nations; (iii.4-5). They "scoff at the fortresses of the nations and lay siege to them" (iv.5-8), and they "amass their booty" (vi.1-2) and "annually apportion their yoke and tribute upon all the peoples" (vi.6-8). The War Scroll may have had another group in mind when it used the phrases "the *Kittim* of Ashur" and "the *Kittim* in Egypt" (1QM i.4; xv.2-3; xix.10). It has been suggested that these may be references to the Seleucids

and Ptolemies. Alternatively, the phrase "Kittim of Ashur" may be a straightforward terminological reflex due to the fact that *Kittim* and Ashur occur together at least three times in the Bible.

LANGUAGES. Among the languages used in the eastern Mediterranean world from roughly 150 BCE to 135 CE, four mainly have to be considered: Greek, Hebrew, Aramaic, and Latin. The language most commonly used at that time was Greek, the Indo-European language proper to Greece (Attica, Achaia, Macedonia, Peloponnesus). Its classical form flourished earlier and reached its apogee in the Attic dialect of the fifth and fourth centuries BCE. A developed form of Attic Greek spread throughout the eastern Mediterranean area, after Alexander the Great (356–323 BCE) conquered the Persian empire and Asia (334–324 BCE). It became the Hellenistic form of the language called *Koine*, which gradually replaced Aramaic as the *lingua franca*, or international language, of the area controlled by the successors of Alexander, the Lagides or Ptolemies in Egypt and the Seleucids in Syria, who actively worked for the spread of Hellenistic culture. Even later, under the Romans who dominated the Mediterranean world in the first century BCE, Greek continued to be the commonly used language, but its use never led to the demise of other languages.

After the fall of Jerusalem to the Babylonians in 587 BCE and the return of Jews from the Babylonian Captivity, their land, Judah, was dominated by the Persians. Jews of that land had earlier spoken their own Semitic language, Hebrew, sometimes called *yehudit*, "language of Judah" (2 Kgs. 18.26, 28; Is. 36.11, 13), and even *sefat Kena'an*, "language of Canaan" (Is. 19.18), because it was related to the Canaanite family of Northwest Semitic (along with Ugaritic, Phoenician, Ammonite, and Moabite). Hebrew is often thought to have been a more important Semitic language than Aramaic, because the bulk of the Hebrew scriptures is written in it. It was, however, spoken only by Jews in ancient Israel and Judah, whereas Aramaic was used by many peoples throughout Asia, Asia Minor, and Egypt. Jews deported to Babylonia adopted this commonly used cognate Semitic language. On their return to Judah under Cyrus in 538 BCE, they continued to use Aramaic, but Hebrew never completely died out

among them, remaining as a spoken language in certain areas and in certain strata of society. The Scriptures were still read in Jewish religious services in Hebrew; the composition of *Daniel* 1 and 8–12 and of *Ben Sira* provides evidence of its continued use (see *Sir.* 50.27). It is usually thought that an effort was made to revive the use of Hebrew in the second century BCE after the Maccabean revolt. This was true at least of the Qumran sectarians, whose sectarian literature (rulebooks, hymnbooks, liturgical prayers, War Scroll, and *pesharim*) was composed by them in a form of postbiblical Hebrew, which was transitional between the late postexilic form and Mishnaic Hebrew. The majority of the Qumran scrolls were in Hebrew.

The most commonly used language in the eastern Mediterranean world prior to the conquest of Alexander was Aramaic, a sister language of Hebrew in the Northwest Semitic family. It had already become the *lingua franca* during the time of the Neo-Assyrian empire, used by diverse peoples from the Indus Valley (modern Pakistan) across the Fertile Crescent to the southernmost parts of Egypt. Most of the evidence of this language and of its widespread literary, inscriptional, epistolary, legal, and commercial use has come to light only in the last eighty years. Many Aramaic literary texts, dating from the first centuries BCE and CE, were recovered from the Qumran caves between 1947 and 1956. Some of the Babatha archive material found in the Cave of the Letters of Nahal Hever (second century CE) is formulated in Greek with an Aramaic summary of its contents. The amount of Greek vocabulary, however, that infiltrated the Middle Aramaic of Judea in this period is rather small in contrast to the abundant influx of Greek into the targumic and rabbinic forms of Late Aramaic. About 120 Qumran texts were written in Aramaic.

Even prior to the golden age of fifth-century Greece, its pottery, coinage, and culture had begun to spread to the eastern Mediterranean, and Judah was affected. Only when Alexander the Great annexed Judah (332 BCE) was the Greek language gradually introduced, eventually becoming widely spoken along with Aramaic. Evidence for the use of Greek in Judah prior to the third century BCE is very sparse. The oldest extant Greek text from Judah is an Edomite-Greek bilingual ostrakon from Khirbet el-Kom dated to the sixth year of Ptolemy II Philadelphus

(277 BCE); and the next Greek inscription recalls the victory of Antiochus III (the Great) at Raphia in 217 BCE.

Aramaized Greek names for musical instruments are recorded in *Daniel* 3.5; *qaytros* = Greek *kitharis*, "lyre"; *pesanterin* = *psalterion*, "harp"; *symponvahi* = *symphonia*, "bagpipe." Even the full form of the *Book of Daniel* attests Hellenistic influence: to the protocanonical parts in Aramaic and Hebrew are added the Greek deuterocanonical chapters (as also in *Esther*). Many Judeans wrote in Greek, (e.g., Josephus). A letter written by *Soumaios*, usually taken to be Shim'on Bar Kokhba, even says, "(This) has been written in Greek because a [des]ire has not be[en] found to w[ri]te in Hebrew" (5/6 Hev 52.11–15). In *Acts of the Apostles* 6.1, *Hellenistai*, Jews who spoke only Greek, disputed with *Hebraioi*, Greek-speaking Jews who also spoke a Semitic language (probably Aramaic) in the early Christian community of Jerusalem. Many of the texts recovered from Murabba'at and Naḥal Hever were composed in Greek.

Under the Roman domination of the Mediterranean world, Latin, the language of central and northern Italy, was introduced into the eastern Mediterranean world. There it was mainly used by Roman officials and the Roman army, sometimes for official announcements or signs (e.g., dedicatory inscriptions on buildings and aqueducts, milestones for the direction of Roman legions, funerary inscriptions of legionnaires, warnings against entry). A fragmentary inscription of the Tiberieum, a building in Caesarea Maritima, tells of "[Po]ntivs Pilatvs / [Praef]lectvs Ivda[ea]e]." It shows that Pilate's title was not *procurator*, but *praefectus*, as Roman historians had often maintained. Evidence of the use of Latin in Judea is, however, sparse, because Roman administrators normally used Greek in dealing with the indigenous populace. Fragments of seven Latin texts were recovered from Murabba'at (Mur 158–163, 168).

JOSEPH A. FITZMYER, S.J.

LATIN. Only two sites from the Judean Desert have yielded Latin documents: Masada and Wadi Murabba'at.

The Masada material includes inscriptions on jars (*tituli picti*), papyri, and ostraca. The *tituli picti* are inscribed on imported storage jars (Mas793–852). Some of these advertise the luxury products contained in the jars: "apples from Cumae" (*mala Cumana*, Mas822), fish sauce (*garum*, Mas826), Philonian wine (*Philonianum*, Mas804–816), Masic wine (*Masicum*, Mas819), and so forth; they could have inspired Josephus' lavish praise of Herod's stores on Masada (*Jewish Antiquities*, 7.295ff.). Herodian dates are found on seventeen jars: The bilingual (Latin and Greek) Mas795–796 carry the consular dates 27 and 26 BCE, respectively, a series of wine jars, Mas804–817, carry the name of a (single) consul of 19 BCE, and Mas818 is datable to 14 BCE. Although most of the corpus of *tituli picti* is likely to date to the Herodian period at Masada, there are some exceptions (Rea 1999). They are written in capital letters resembling the so-called *capitalis rustica* used in literary texts and in headings for military documents (see below).

The papyri and ostraca come from a Roman military context. The papyri constitute a haphazard and mostly fragmentary collection of discarded texts, found in the rubbish pile assembled in locus 1039 on Masada, probably from the fall of the fortress in spring 73 (or 74) CE. The most important items are an elegantly written line from Virgil (*Aeneid* 4.9, Mas721a), a pay record of a le-

gionary cavalryman from 72 CE—the only dated papyrus from Masada (Mas722)—a list of hospital supplies (Mas723), a letter to Iulius Lupus, perhaps to be identified with the homonymous governor of Egypt after February 73 (Mas724), and two items mentioning the *xylobalsamum*, a by-product of the famous balsam growing in Jericho and Ein-Gedi (Mas725 and 749b). The nomenclature points unambiguously to soldiers of the Tenth Legion as the source of the Latin papyri and ostraca. It was this legion, the standing provincial garrison of the province of Judea, that laid siege to the fortress, leaving one of its units behind after its fall (Josephus *Antiquities* 7.407, probably in Camp F²).

All the Latin documents found on Masada thus have a precise historical context and date, the early seventies of the first century CE. This enhances their paleographical value. With the exception of the heading of Mas722 and the *tutuli picti*, written in *capitalis rustica* (see above), the writing used in the corpus can be given the general description of Old Roman Cursive, also known as Capital Cursive (in contrast to the minuscule cursive or New Roman Cursive in use from 300 CE onward). Despite the word “cursive,” ligature is almost absent throughout the Masada papyri. Mallon’s definition of the script as “l’écriture commune classique” emphasizes the fact that a common Latin script was in use throughout the Roman Empire at that period—a fact confirmed by the similarity between the Masada papyri and contemporary materials from military contexts in Egypt and Vindolanda in Britain.

The twenty-two ostraca each carry a single Roman name, some well known and well worn and some rare or even unattested names, a feature which proves that they belong to Roman citizen soldiers, that is to say, legionaries. The purpose of these ostraca is unknown.

The only Jewish items in Latin are Mas936, a bread stamp carrying the name “Josepu” and a bilingual (Latin and Greek) papyrus with Jewish names, Mas748.

The scanty Latin fragments from Wadi Murabba‘at (Mur 158–163) are paleographically and tentatively dated to the first and second century CE.

LATTER DAYS. See Eschatology.

LAW AND LAWGIVING. The Torah of Moses posed real problems for the interpreters of the Bible in the Second Temple period. Two problems proved quite challenging to these early Jewish readers. First, the Law code of Moses was not known by the patriarchs in *Genesis*. This baffled Jewish readers for a number of reasons, but most problematic was the question of God’s providential plan: if the Law code of Moses was so central to the religion of Israel, why did it take so long to be revealed? The second problem is to be found within the Law code itself. As any careful reader of the Torah knows, there are many legal statements that stand in outright contradiction to one another. If one is obligated to keep the whole Torah, then what does one do when the commands themselves stand in contradiction? Every Jewish exegete of the Second Temple period found himself forced to grapple with both these questions.

The book of *Jubilees* represents one solution to this problem. In this book, itself a grand expansion of *Genesis*, the Angel of the Presence makes clear to Moses at nearly every turn just how the actions of the patriarchs are to be understood in light of the legislation given at Sinai. Sometimes *Jubilees* rewrites the biblical story in such a way that the patriarchs actually know and observe Sinaitic legislation. For example, one frequently reads of certain patriarchs celebrating Israelite religious festivals (e.g., *Jub.* 7.3–6). At other times, the voice of the angelic interlocutor interrupts the *Genesis* narrative to make clear how a certain event is to be understood after the revelation of that law. Thus the recounting of the sin of Reuben’s violation of his father’s concubine is linked to the corresponding Mosaic injunctions against such behavior (*Jub.* 33.13–14): “And you Moses, command the children of Israel and let them keep this word because it is a judgment worthy of death. . . . Let them not say that Reuben had life and forgiveness . . . for the [Torah] had

not yet been revealed then." In this case, the narrator correlates Sinaitic law with a figure in *Genesis*, Reuben, but expressly to show that he was ignorant of that legislation and hence not fully accountable.

At Qumran, we have clear parallels to such exegetical examinations and expansions. But the members of the sect were faced with an additional problem. Because they did not believe that the era of the exile had come to an end with the founding of the Second Temple by Zerubbabel (cf. *Hg.* 2.1-8), they still awaited the era of restoration. For them, the most urgent problem was that of returning to a full obedience to the Torah of Moses. They often referred to themselves as the "penitents of Israel" (cf. CD iv.2), for they were the ones who had initiated the path to renewal.

When the sect took root, its leaders began to expound on what this renewed covenant would look like. In their view, the restored community of Israel was under a twofold legal obligation that looked both forward and backward. On the one hand, when they joined the group, they reobligated themselves to the "revealed" (*niglot*) laws of Moses given at Mount Sinai. On the other hand, they also obligated themselves, for the first time, to an ever-growing corpus of "hidden" (*nistarot*) laws, which were just now being discovered by the sect through inspired exegesis. The best textual illustration of this fundamental point is to be found in the Rule of the Community from Cave 1 at Qumran (IQS v.7-12):

Everyone who enters the council of the community shall enter the covenant of God in the presence of all those who have freely entered [in the past]. And they shall take upon themselves a binding oath [*Nm.* 30.3] to return to the Torah of Moses according to all which he commanded with all [their] heart and soul [*Dt.* 30.2] and to all which has been revealed from it by the sons of Zadok, the priests, the guarders of the covenant, and interpreters of his will . . . [They shall separate themselves] from all evil men who walk in a wicked path. For they are not reckoned among [those of] his covenant because they do not search out nor interpret his statutes so as to discern "the hidden laws" (*nistarot*). For [in these hidden matters] they have strayed so as to incur guilt. But toward "the revealed laws" (*niglot*) they have acted in a high-handed fashion so as to raise up wrath for judgment and the executing of revenge according to the curses of the covenant [*Dt.* 29.18, 19, 20].

This text indicates that the rite of entry into the sect depended on a return to fidelity to the Torah of Moses and an obligation to place oneself in a posture of obedience to the hidden commandments, which were only now being revealed. These commandments provided a new avenue of sanctification for the sectarians but also allowed them another means of condemning greater Israel. As to Israel as a whole, or, perhaps better, Israel outside the

sect, it was guilty of violating both the Mosaic and the sectarian Torah.

A well-known example of how the sect extended the force of biblical Law is found in the Damascus Document (CD iv.20-21). In considering the sins that comprise the "three nets of Belial" that have ensnared the people of Israel, the writer underscores the sin of unchastity (*zenut*). What is surprising is how it is defined. In contrast to the Hebrew scriptures, the author of the Damascus Document declares that any man possessing more than one wife is in violation of divine law. This point, which is absent from the Sinaitic legislation itself, is argued on the basis of the creation account. God created humanity as male and female (*Gn.* 1.27), implying that the marriage bond was to be between two people alone. In this example, we can see the boundaries of biblical law subject to dramatic extension with an end toward both shaping sectarian conduct and condemning the ways of wayward Israel: "[with these three nets Belial] entrapped Israel and made them appear as forms of righteousness." What may appear as righteous practice from a simple reading of biblical law is subject to dramatic reformulation in the hands of the sectarians.

In their own self-understanding, the Covenanters were in a legal position similar to that of the patriarchs in *Genesis*. For just as the patriarchs themselves faced a set of legal obligations that existed before them (e.g., the commandments given to Noah [cf. *Gn.* 9. 1-17]) while they awaited the fuller revelation to come at Mount Sinai, so the Covenanters stood under the prior obligations of the Mosaic Torah while they, in turn, awaited the full revelation of the Messianic Torah at the End of Days. This correlation of the patriarchal period with their own is not dissimilar, in formal terms, to the correlation drawn in the New Testament by Paul (cf. *Rom.* 4). For Paul, the issue of legal obedience in the patriarchal period also paralleled the position of the believer in the messianic age. Yet, one must emphasize that patriarchal nonobservance of the Torah was, for Paul, matched in the *eschaton* by a similar nonobservance on the part of Christians.

A different set of problems regarding the Torah and its status is to be found in a document like Temple Scroll⁴ (11Q19). This text purports to be a direct revelation to Moses, which he, in turn, narrates in the first person to the Israelites. The narrative has all the appearances of being an "inspired text" in its own right, perhaps of higher status than the other "interpretive" texts found at Qumran, which presume an authoritative biblical text as the point of departure for exposition. The language of the scroll (which is quite distinct from the rest of the scrolls) and its unique pseudepigraphic style have led some to question whether it was composed by the sectarians

themselves or whether it was simply brought to Qumran from the outside. The current tendency is to see the document as a nonsectarian composition. As to the text's "inspired" character and its relationship to the "canonical" Torah, one must be cautious. Careful examination of the document shows that the writer was quite conscious of those laws in the Torah that contradicted one another, and he took special care to harmonize them in Temple Scroll⁴. Perhaps the text was simply another example of a very common literary form of this period known as Rewritten Bible. [See Rewritten Bible.]

The fact that the Torah contained conflicting laws, especially in such crucial matters as ritual purity and sacrificial practice, meant that a great deal of exegetical energy was spent trying to solve these incongruities. The cult was slowly being transformed by their learned exegetical reflection. In fact, the exegetical solutions to the problems of sacrifice began to absorb as much creative spiritual energy as the actual habit of Temple worship itself. [See Sacrifice.] We can see the beginnings of this process in Temple Scroll⁴, a process that would gather steam and assume much more significance in the post-70 CE era, when the Temple was no longer standing. [See Temple Scroll.]

Regardless of whether Temple Scroll⁴ was sectarian, it and other legal works in the Qumran caves show that the people of Qumran possessed written law codes and thus did not adhere to the principle that extrabiblical legal traditions were to remain oral and not be put in writing.

It is also interesting that the caves contained not only earlier texts such as Aramaic Levi and Jubilees, which highlight legal points, but also booklets from the Enochic tradition in which the Law of Moses plays virtually no part. Even when relating the events at Mount Sinai, the "Animal Apocalypse" says nothing about the giving of the law (see *1 En.* 89.28–36). The Enoch literature, true to the pseudepigraphic identification of its hero as an antediluvian sage, emphasizes the pre-Flood revelations given to Enoch, not the later disclosures to him.

He argues that the Temple Scroll was composed outside of Qumran and consists of archaic laws, some dating from as early as the fourth century BCE.

GARY A. ANDERSON

LEATHER GOODS. Due to the extremely dry conditions in the Judean Desert, numerous leather objects of daily use have been preserved. The best published collection of leather artifacts, dating to the period of the Bar Kokhba Revolt (132–135 CE), is from the Cave of the Letters (Naḥal Hever). [See Hever, Naḥal.] Additional examples have been recovered from contemporary caves in Naḥal Hever, Wadi Murabba'at, Naḥal Mishmar, and Naḥal David, and at the Second Temple period sites of Masada and the Jewish cemeteries in Naḥal David ('Ein-Gedi) and Jericho. [See 'Ein-Gedi; Masada; Mishmar, Naḥal; Murabba'at, Wadi.]

In general, the leather objects from the Judean Desert indicate a high level of craftsmanship. Contemporary written sources describe in detail the manufacture of leather. It entails three main stages of production. First, the animal pelt must be cured in preparation for tanning. It is salted or dried in the sun or shade, followed by soaking, the removal of the hair and epidermis, and scudding the grain surface in order to remove the last traces of hair and debris. The next stage is tanning, which causes chemical changes in the pelt and renders it imputrescible and water-resistant. Lastly, the finishing of the leather can include rolling, lubrication, dyeing, and other treatments that improve the texture of the skin or hide. Parchment is also prepared from a pelt but is dried and worked, usually without tanning, while under tension on a stretching frame.

An installation, possibly used for preparation of leather or parchment, was uncovered at 'Ein-Feshkha, located south of Qumran. [See 'Ein-Feshkha.] It comprised a large rectangular building with a central courtyard surrounded by rooms with several plastered basins to the north and a system of canals and reservoirs. The excavator, Roland de Vaux, identified this complex as a tannery because of its numerous plastered vats, water channels and abundant supply of water. However, the plan of the 'Ein-Feshkha complex does not correspond to that of known Ro-

man tanneries, where depilation and tanning pits are small and numerous. In addition, no traces of tannin were discernible during chemical analyses of the sediments inside the basins. In light of the absence of tannin in the sediments, de Vaux subsequently suggested that this building complex was set up for the preparation of parchment. Alternative theories propose that the basins were used in the retting of flax for linen or as ponds for breeding fish.

Leather goods found in the Judean Desert include sandals, shoes, pouches or purses, waterskins, garments, leather phylactery cases (Wadi Murabba'at), fragments of colored leather covers for wooden boxes (Cave of Horror) and a sheath (Cave of the Letters). Most of them were of sheepskin, and occasionally, usually the accessory parts, were of goat- and calfskin. Analyses of the leather objects from the Judean Desert, and especially the Cave of the Letters, reveal that they were vegetable tanned, often with galls and pomegranates.

Sandals and shoes, especially their soles, are by far the most numerous type of leather object. Many examples have been found at Masada, 'Ein-Gedi, the Jericho cemetery, Nahal Hever, Nahal Mishmar, Wadi Murabba'at (Cave 1), and Wadi el-Habibi. The best preserved sandals were discovered at Masada, found with three skeletons on the lower terrace of the Northern Palace, and in the Cave of the Letters. All the sandal-soles, whether men's, women's, or children's, were formed of several layers of leather, stitched together by leather thongs. The sandals were fashioned only of leather, in contrast to the *caligae*—the nail-studded sandals of the Roman soldiers—and seem to be the type of sandal mentioned in later rabbinic texts (on the prohibition of wearing nail-studded sandals on the Sabbath, see, e.g., *Shab.* 6.2 and B.T., *Shab.* 60a). In the 'Ein-Gedi cemetery, a pair of leather shoes was found on the feet of the deceased interred in a wooden coffin. In the contemporary first century BCE Jericho cemetery, several similar sandal-soles were found inside wooden coffins, but placed under the skull of the deceased. In addition to adult sandals and shoes, a well-preserved child's shoe (Cave 5/6 [Cave of the Letters], Nahal Hever) and a child's sandal (Cave 1, Wadi Murabba'at) were recovered.

Three purses, or pouches, were discovered during Yigael Yadin's excavation in the Cave of the Letters. One purse, inside a waterskin, contained thirty-five documents dating from 93 to 132 CE, including the Archive of Babatha. A second purse, square in shape, was made of a long piece of red-dyed leather, folded over in the middle. A single black rosette applique and red and black fringes, also made out of leather, decorate both sides of the purse. It was closed by pulling on the draw string at the top. Fragments of leather strips from Wadi Murabba'at (Cave

1) may have originally belonged to a similar purse or to military equipment.

Several waterskins, most in a poorly preserved condition, were recovered from the Cave of the Letters. The waterskins were formed by closing off the animal skin at the neck with a round piece of leather. The ends of the forelegs were tied together, functioning as a handle. The hind-end of the skin was left open until filled, and then it was closed by winding and tying it with a rope. In the Cave of the Letters they also served as containers for the Bar-Kokhba letters, bronze vessels, and other personal belongings such as cosmetic items and balls of wool or linen threads.

Leather garment fragments from the Nahal Hever (Cave of the Letters and the Cave of Horror) and Nahal Mishmar (Scouts' Cave) have been identified as tunics or jackets. It is not clear if they were of a military nature. Similar leather remains were found in Wadi Murabba'at where they were described as tunics belonging to Roman soldiers.

The leather goods from the Judean Desert reflect accessories and clothing typical of the Second Temple period and later. Several leather objects found in close proximity to the Judean Desert documents, especially in the Cave of the Letters, served as containers for the documents themselves. From the nature of the artifacts, it is clear that women and children were also among the refugees hiding in the Judean Desert during the First and Second Jewish Revolts. It has also been suggested that some of these leather goods may have belonged to Roman soldiers involved in quelling these revolts.

LEGAL WORKS. Several minor Hebrew works dealing with issues of Jewish law are found at Qumran; they are termed *minor* only because of their present state of preservation. In antiquity, these texts may have been much more extensive. This article does not discuss the major legal works, such as the Rule of the Community, the Rule of the Congregation, Damascus Document, Temple Scroll, or Miqtsat Ma'asei ha-Torah. Also not discussed here, since they are the subject of specific articles, are the Serekh Damascus document (4Q265) and Ordinances (4Q159, 513-514). No legal tracts have been found among the Masada or Bar Kokhba period collections. The numerous legal documents from the Judean Desert are covered elsewhere.

Halakhah A from Cave 4. This document (4Q251) contains a series of laws on a variety of subjects and probably represents only a small part of what was originally a larger text. Some of its many prescriptions (of which only a few will be mentioned here) overlap with laws known from the Damascus Document, Temple Scroll, and Miqtsat Ma'asei ha-Torah from Cave 4 (4QMMT), and include some prescriptions that are typical of the Sadducean-type legal system we encounter in the sectarian materials. In general, the literary form of this text is much closer to that of Rewritten Bible than to abstractly formulated laws.

Some Sabbath laws (frgs. 1-2) overlap with prescriptions found in the Sabbath code of the Damascus Document, as well as in the Serekh Damascus. Important here is the reference in a broken context to what seems to be public scriptural reading on the Sabbath. Most of the preserved text is a rewriting of various laws in *Exodus* 21-22. Also described here are laws of first fruits and new grain, following a scheme similar to that in the Festival Calendar of the Temple Scroll (11QT xviii-xxiii). Other laws address the selling of ancestral lands (based on *Lev.* 25.14-17), the giving of fourth-year produce, or "first fruit," to priests (as opposed to eating it in Jerusalem as the Pharisees ruled), a practice also mandated in the Temple Scroll (11QT^a lx.3-4) and Miqtsat Ma'asei ha-Torah (4QMMT; B

62-63). The text also prohibits eating an animal that did not live for seven days (*Lev.* 22.27) and the slaughter of pregnant animals, again shared with the Temple Scroll (11QT lii.5) and Miqtsat Ma'asei ha-Torah (4QMMT; B 36), but permitted by Pharisaic rabbinic *halakhah*. The text also includes a list of forbidden consanguineous marriages similar to that in the Temple Scroll (11QT lxxvi.11-17). Among the laws here are a prohibition of intermarriage with non-Jews and of a priest marrying his daughter to a nonpriest.

Purification Rules (Tohorot) A. This fragmentary text (4Q274) deals with the laws of impurity resulting from the disease *tsara'at*, usually mistranslated as "leprosy." As in the Temple Scroll (11QT^a xlviij.14-15), this text provides for special places for the quarantine of those with this disease, and they must remain at least 12 cubits from the pure food to the northeast of each dwelling, probably from each town or village. Such people are forbidden to come in contact even with those already impure, as they would still require ritual cleansing from such contact. This indicates that impurity can be contracted in successively stronger layers, so that those with lesser impurity may not come in contact with those with this skin disease. The requirement of separation, even for the impure, indicates a consciousness also of the contagious nature of such diseases—in the same way a woman with a non-menstrual discharge of blood may not touch a gonorrheic or anything upon which he may have sat or with which he may have come in contact. If she does, she must undergo purification, even if she remains in her own original state of impurity. The text provides several examples to make this general point.

Another issue addressed in Tohorot A, also found in the Temple Scroll (e.g., 11QT^a xlv.7-10), is the requirement that one who is to undergo a seven-day purification period, with sprinkling on the third and seventh days, must undergo ablutions as well on the first day to peel off the initial level of impurity and to allow him or her to begin the normal purification required by the Torah. Until this first-day ablution, he or she may not eat anything. Further, all sprinkling for purification is forbidden on the Sabbath. Also discussed in this text is the impurity of semen and of reptiles.

Purification Rules (Tohorot) B^b (4Q276) and B^c (4Q277). These two texts deal with the ritual of the Red Cow as the means of purification from impurity of the dead as prescribed in *Numbers* 19. Purification Rules B^b (4Q276) seems to refer at the beginning to the high priest who ministers at this ritual. The text describes the slaughter of the animal and the sprinkling of its blood, as well as other aspects of the ritual as outlined in the Torah.

Purification Rules B^c (4Q277) also mentions the fact that the one who performs this ritual is rendered impure

as a result, a paradox mentioned already in the Bible. As in *Miqtsat Ma'asei ha-Torah* (4QMMT; B 13–17), all participants in the ritual are explicitly mentioned, indicating that they are all rendered impure by their participation. Also hinted at is the requirement, specified in *Miqtsat Ma'asei ha-Torah* as well, that the priest who officiates must be totally pure himself. In case he has just completed a purification ritual, the sun must have set on his last day of purification. The Pharisaic-rabbinic tradition would have allowed one still awaiting sunset on his last day of purification to perform the ritual. The Sadducees and those who followed their halakhic tradition disagreed. Further, the text lists a number of ways in which the impurity of the dead can be passed from one person to another, expanded to include categories that the Bible specifies for the gonorrhoeic (*Lev.* 15.4–15).

Tohorot B^a (4Q275), as presently preserved, has no specific legal content, but does refer to the inspector (*mevaqquer*) and to the cursing of someone, perhaps one who is being expelled from the community. Expulsion as a punishment is mentioned in the Rule of the Community (IQS vii.1–2, 18–19, 22–25, viii.21–ix.2) and Damascus Document (CD xx.1–8), and a ritual for expulsion is found in the Qumran fragments of the Damascus Document (4Q266 7.i–ii. 5–15). Tohorot C^a (4Q278) is extremely fragmentary and relates to impurity that can be transferred by contact, referring to the bed that can be rendered impure if one who contracted impurity has sat on it.

Harvesting (Leqet). This text (4Q284a) is extremely fragmentary and deals with the requirements for gleaning. According to *Leviticus* 19.9–10 and 23.22, grain left in the field may not be collected after the harvest is completed, but must be left for the poor. The Bible supplies no specific requirements for the gleaners, but this text requires that they be ritually pure. Little more can be derived from this text, but it no doubt included specifics of this requirement and may have included other agricultural laws.

Rebukes by the Overseer. This document (4Q477) clearly stems from the Qumran sectarian community and records actual dockets reflecting sectarian legal proceedings against those who violated the sect's prescriptions. According to sectarian law, it was required to perform reproof of one who violated the law in front of the overseer (*mevaqquer*) and in front of witnesses. Only if this procedure had taken place could a sectarian be punished for a later infraction of the same law. This fragmentary text lists by name specific individuals who had been rebuked, as well as their transgressions.

LETTERS. The Judean Desert Scrolls include an extremely diverse corpus of letters. Discovered at five or six different sites, the manuscripts were written over a time-span far broader than any other nonbiblical genre of material found in the Judean Desert—from the period of the Judean monarchy to the Umayyad period following the Muslim conquest—some fifteen centuries. (A few fragments are even later.) Linguistically, they are equally diverse, being composed in Hebrew and Aramaic (two distinct forms of each), Latin, Greek, and Arabic. The subject matter encompasses a wide variety of administrative, military, economic, and purely personal matters (see table 1).

Leaving *Miqtsat Ma'asei ha-Torah* (4Q394–4Q399) aside, all but a handful of these are written on papyrus. The only exceptions are two letters on leather (4Q342 and 343), the three Aramaic letters from Masada (ostraca), and one Bar Kokhba letter (5/6Hev 54) written on a wooden board.

Site-by-Site Summary. A letter fragment from post-exilic Judah (Mur 17), though it comes from Wadi Murabba'at, where a number of the Bar Kokhba letters were found, is in a class by itself. There is not much of it, but with a probable date of composition from the early seventh century BCE, it is perhaps the oldest Hebrew letter known. A palimpsest, it is extremely difficult to read, and only part of the opening has survived.

From the Qumran caves themselves, there are virtually no traces of true letters. The concluding section of the Ethiopic Book of Enoch (*I En.* 91–108) has been known since ancient times as the "Epistle of Enoch." Two Ara-

LETTERS. TABLE 1. *Sample Letters in Idiomatic Translation.*

LETTER	TEXT
A. Mur 17: (7th century BCE):	[. . .]yahu says to you: I send very warmest greetings to your household! . . . Now pay no attention to [anything . . .] may say to you . . .
B. 5/6 Hev 54 (132–135 CE):	Shim'on bar Kosiba, ruler over Israel, to Yehonatan and Masabbala. Greetings! You are to seek out and confiscate any wheat which Tahnun bar Ishma'el may have, and send [X] <i>seahs</i> of wheat to [PN] under guard. . . . you shall do so. If you have sentenced any of your men to punishment, send the man to me under guard. If there are any of the Tekoans whose houses were promised to you, but who are still living in them, summon them, and I will carry out their punishment, and the punishment of Yeshua' bar Tadmorayya. Arrest them and send them to me under guard. Do not shrink from taking up the sword against him! And send Shemu'el bar 'Ami.
C. 5/6 Hev 57 (132–135 CE):	Shim'on to Yehudah bar Menashe of Kiryat 'Arabayya. I have sent you two donkeys, with which you are to send two men to Yehonatan bar Ba'ayan and Masabbala. They should load them up with palm branches and citrons and send them to you at the camp. You are to send others from where you are to bring you myrtle branches and willow boughs. Prepare them and send them to the camp, because the number of the soldiers (?) is large. Greetings!
D. papMird A (7th–10th century CE):	From the one blessed by the Lord, Gabriel the sinner, to the Superior of the community of our "lords and fathers." I entreat you to pray for me because of the "clan" (?) on account of whom my heart trembles (?). Peace to you from the Father and the Son and the Holy Spirit.
E. APHM 49 (8th century CE):	In the name of the Father and the Son and the Holy Spirit in one substance. To Habban ibn Yusuf from Majnille the preacher. The elder inquires after you. . . .
F. APHM 18 (7th century CE):	In the name of God, the compassionate, the merciful. To Dir' ibn 'Abdallah from 'Umar ibn 'Ubaidallah. Greetings to you! I praise God to you, beside whom there is no other god. Further, may God grant you the fullness of his well-being in this world and the world to come. Now you have written me concerning Umm Iyas, daughter of Mu'arik, about the matter she raised with you concerning her [hus]band's taking away her property and her maintenance. I have confronted them, and asked him about the matter you mentioned. He acknowledged her property, so I gave it back to her. But he disowned her maintenance. So the wife requested that I bring him with her to you. I did this; I ordered them both to go to you. Now you have written me ordering me to do what. . . .

maic manuscripts of Enoch from Cave 4 contain fragments of this "Epistle" (Enoch^s [4Q212] and Enoch^e [4Q206]). [See Enoch, Books of.] Jozef T. Milik (1976) reconstructs Enoch^s as containing references to Enoch's writing a letter for Methuselah and his grandsons, but the extant text has no epistolary features and it is not included here.

The Hebrew halakhic text *Miqtsat Ma'asei ha-Torah* has been generally described as a "letter." Generically

mixed, it contains calendric, halakhic, and hortatory material, and many details of its interpretation are still controversial. It is quite unlike the personal letters described below, with no close parallels to their structure and formulation.

It has been observed by Elisha Qimron and John Strugnell (1994) that the legal section of the text introduces each new topic with the phrase, "Now concerning so-and so . . ." a pattern paralleled in some of Paul's ethical in-

structions in the New Testament (*1 Cor.* 7.1, 25; 8.1, 4; 12.1; cf. *1 Thes.* 5.1). In both cases the ensuing discussions frequently contain such phrases as “We (I) think. . .,” “We (I) say. . .,” etc.

Early attempts to identify the writer of *Miqtsat Ma'asei ha-Torah* as the Teacher of Righteousness have generally been abandoned. The official editors identify its genre provisionally as that of the corporate or public letter, or a treatise. Lawrence H. Schiffman (1995, p. 87) dates the work to the earliest period of the Qumran community's existence, and proposes that it was addressed by its unnamed leaders to the high priest in Jerusalem. Whatever the historical origin of *Miqtsat Ma'asei ha-Torah*, it is clear from the number of copies of it found (six, dating variously between ca. 75 BCE to 50 BCE) that it was treated as a literary text rather than an occasional communication. It is not included in the discussion of letter-forms below. [See *Miqtsat Ma'asei ha-Torah*.]

Other epistolary remains from Qumran are meager. Letter 4Q342 consists of a few fragments of a letter in Jewish Aramaic, and letter 4Q343 contains three small scraps of a Nabatean letter (Cotton and Yardeni, 1997). In fact, the editors of these texts believe that their provenance must be placed elsewhere in the Judean Desert area.

Epistolary material from Masada is both scanty and fragmentary. A partially legible Aramaic ostrakon of six lines (Mas554) pleads for payment of money owed for a purchase of bread (?). Another Aramaic ostrakon (Mas556) found in the southern storeroom complex gives instructions for deliveries of myrrh in clay jars. A broken portion of a papyrus letter in Greek (Mas741) from a certain Abakantos to one Judah mentions a shipment of lettuce.

There are two fragments of Latin letters, apparently from the time of the Roman siege of the site. One (Mas724) bears little more than the names of the sender (Titulenus Vindex) and the recipient (Julius Lupus), followed by a stylized greeting (*salutem*). The addressee is an officer known from the history of the period. Tiberius Julius Lupus served in the Roman army during the siege of Masada, and while on duty there was promoted to the position of prefect of Egypt. In the letter, the recipient's name is followed by the phrase, [*do]mesticum m[eum]*, “my familiar,” meaning “well-known to me,” identifying it as personal letter of reference. In the other Latin letter (Mas726), the words “. . . will be in danger . . . I will send a centurion to inspect whether . . .” can be made out. There are additional small fragments of letters from Masada.

Wadi Murabba'at and Nahal Hever have yielded a significant collection of letters from the time of the Bar

Kokhba Revolt against Rome (132–135 CE). These have become known as the Bar Kokhba letters (Aramaic “Son of the Star,” an allusion to *Nin.* 24.17). As is now known from the letters, most of which were written or dictated by him, his name was Shim'on ben Kosiba (S. bar Kosiba in Aramaic).

The Murabba'at letters are all in Hebrew to subordinates in the vicinity, particularly one Yeshua' ben Galgula'. Those from Nahal Hever are mainly to one or both of the co-commanders of the 'Ein-Gedi region, Yehonatan and Masabbala.

One of the most interesting features of the letters from Nahal Hever is that they are in three languages, Hebrew, Aramaic, and Greek. It is difficult to give the exact number of letters from each site, because some of the papyri are so fragmentary, and also because much of the material from Nahal Hever is not fully published. From Murabba'at, there are five Hebrew letters, plus a number of fragments. From Nahal Hever, there are definitely eight letters in Aramaic, three in Hebrew (including one letter to Bar Kokhba [XHev/Se 30], whose provenance is uncertain), two in Greek, and at least two more whose language is uncertain, but which are thought to be Hebrew.

The Bar Kokhba letters do not deal with matters of major military importance, but give vivid glimpses into the day-to-day problems faced by the Jewish commander: casualties (Mur 45), the difficulty of provisioning soldiers and maintaining supply lines (Mur 44, 5/6Hev 58, 59), the expropriation of food and living space (5/6Hev 54), and above all, the difficulty of maintaining morale (Mur 44). There is evidence of regional dissension (Mur 43), insubordination (Mur 43), apathy (Mur 49), food shortages (Mur 45), and various threats of punishment (Mur 43, 5/6Hev 54, 55). One fragmentary letter cites a subordinate for selfless actions—burying the dead and (caring for?) the poor—(Mur 46), another sarcastically accuses the recipients, “You sit, eat, and drink from the goods of the House of Israel, and care nothing for your brothers!” (5/6Hev 49). One letter (Mur 45) mentions a fortress Mešad-Hasidim, which some have suggested may be Qumran.

The seriousness with which Bar Kokhba maintained Jewish religious observance in the midst of difficult wartime conditions has often been noted. This is clearest in 5/6Hev 57, in which he orders the transport of “palm branches, citrons, myrtle branches and willow boughs” for the soldiers, the so-called four species required for the celebration of the festival of Sukkot (*Lev.* 23.39–43). [See Sukkot.] Letter 5/6Hev 52, which refers to “citrons” and a “festival,” probably has a similar intent, though the Greek text is less clear. Sabbath was carefully observed (Mur 44, 50), and one letter, in an unclear context, mentions a Rabbi (5/6Hev 56).

The manuscripts discovered at Khirbet Mird near the ruins of a Christian monastery of the Byzantine period include a number of letters from a much later era. The desert region between Jerusalem and the northeast shore of the Dead Sea became a favorite place of withdrawal for Christian hermits from at least as early as the fourth century CE. Sometimes there grew up around such an anchorite a loosely organized association of other solitaries, known as a *laura* (Greek). The monks acknowledged the authority of one of themselves as superior, but lived in isolation. [See Mird, Khirbet.]

One papyrus letter from Khirbet Mird (papMird A), dating from the seventh century or later, was composed in Christian Palestinian Aramaic by a member of such a community. In it, a monk named Gabriel asks the head of his community for prayers, concluding with a benediction in the name of the Trinity. Józef T. Milik (1953, pp. 536–537) interprets the short body of the letter as expressing fear of attack from desert bedouin. However, the word translated “the clan” (*ahila*, a loan-word from Arabic not otherwise found in Aramaic) normally expresses intimacy rather than hostility and may refer to the monastic community itself (“the brotherhood”) and Gabriel’s concern for them. In addition to providing a personal glimpse into the piety and concerns of the writer, the letter is also of interest in demonstrating the use of Christian Palestinian Aramaic for everyday purposes of communication. Virtually all known texts in this dialect are liturgical and biblical, most of them translated somewhat stiffly from Greek.

Of the Arabic letters from Khirbet Mird, only a few are explicitly Christian. Private letter APHM 45 is an eighth-century note from a Christian writer, Anba Majnille (= Greek Magnilios), who styles himself “the preacher,” and appears to have been abbot of a monastic community at or near Khirbet Mird. He opens the letter with an invocation of the Trinity, adding the phrase “in one substance.”

This brief phrase is worthy of comment in the light of the Christological controversies of the early church. The Nicene Creed (325 CE) affirmed that Christ was “of one substance (Greek *homoousion*) with the Father”; however, the interpretation of this phrase occasioned immense debate. The Council of Chalcedon (451 CE) attempted to resolve the question with a more precise definition.

In the aftermath of Chalcedon, the Palestinian monasteries were deeply divided. A few accepted the “orthodox” Chalcedonian position. But the majority of Aramaic- and Arabic-speaking Christians in Palestine followed the less philosophically nuanced Monophysite position, that one need affirm only that Christ is human and divine “in one

nature (*physis*),” and the phrase “one nature” became a code-word identifying an anti-Chalcedonian position. By the sixth century, the Palestinian church had become solidly Monophysite. The phrase in private letter APHM 45 “. . . in one *jawhar*,” uses an Arabic word commonly used to translate Nicene *homoousion*; hence it is translated here as “one substance.” But the meaning of the Arabic word is sufficiently broad that it also may be understood in the Monophysite sense as “one nature,” perhaps indicating the relative indifference of the Arabic-speaking church to the philosophical nuances so beloved by the Greek theologians (see table 1: sample letter E).

A shorter version of the Trinitarian formula appears at the head of the reply (private letter APHM 46), on the verso of the same papyrus. Private letter APHM 49 also refers, in a badly broken context, to a Christian abbot, Anba Yusuf.

Most of the Arabic letters appear to be communications between Muslim correspondents, though one cannot in every case be sure. In later times at least, some theological formulations common in Islam were also utilized by Christians, for example, the *Basmala* (“In the name of God, the compassionate, the merciful”). The letters date mainly from the Umayyad Period (661–750 CE) of Muslim administration in Palestine, a few being as late as the ninth century (Abbasid Period). The great majority of the letters in Khirbet Mird are damaged or fragmentary. Beyond common formulas, only a few can be understood in any detail.

Official letters APHM 10–32 deal with administrative matters of local and regional concern: a wife’s legal claim against her husband (18; see table 1: sample letter F), an allegation of theft (19), a suspected case of fraud (24), and fragments referring to a grain tax (26–28). The personal letters (APHM 42–70, also some fragments in 79–99) are even more difficult to interpret, since they often allude obliquely to matters known to both correspondents. One refers to “the food of Ramadan” (42), another to a land tax (50), and many contain personal greetings to family or friends. These letters add a few details to our knowledge of lower-level government administration and everyday life in a rather poorly documented period.

The Forms and Formulas. The seventh-century Hebrew letter from Wadi Murabba‘at is so poorly legible it is difficult to draw many conclusions (see table 1: sample letter A). If correctly understood, it has an *initial address* beginning with the form of the verb “to say,” though the syntax of the following clause is not clear. Dennis Pardee (1982, p. 121) suggests that a second form of the same verb (imperative?) may have been lost in the lacuna. In any case, the “say” formula is not otherwise known in ancient Hebrew letters, and has its closest parallels in letters

from Edom, Ammon, and Phoenicia. The precise form of the *greeting* that follows is also unknown, but the transition to the *body* with *w't* ("and now") is a common construction in both Hebrew and Aramaic letters of the early period.

Compared to older Hebrew and Aramaic letters, the Bar Kokhba letters are quite simple in their form. Most (in all three languages) begin with an *initial address* in the form "from A to B," or simply "A to B" (so also in Mas741). The more ancient usage known from preexilic Judah (Hebrew) and Achaemenid Egypt (Aramaic), according to which the preferred order is "to B from A," occurs only in XHev/Se 30. Either or both names may be accompanied by a patronymic ("son of so-and-so"). Rarely, the sender is also identified by a title or epithet, "the administrators of Beth-Mashiko" (Mur 42); and most interestingly, in two letters the name of Shim'on bar Kosiba is followed by the title "ruler over Israel" (5/6 Hev 54, Aramaic; similarly in XHev/Se 30, Hebrew), a title by which he is also known in the Talmud. In the much later letter from the monk Gabriel to an abbot (papMird A), the writer styles himself "the one blessed by the Lord" and "the sinner."

In some cases, the initial address is followed by an *initial greeting*, a single word meaning "peace, greetings" in Hebrew (Mur 42, 43, 44, 46; 5/6Hev 49), Greek (5/6Hev 52, 59; so also Mas741), and less commonly in Aramaic (5/6Hev 54 and 58). Letter 5/6Hev 53 is unique, opening with "A letter of Shim'on bar Kosiba, greetings!" with the name of the recipient following.

Sometimes the *body* of the letter begins immediately thereafter, with no transition (Mur 43, 46; 5/6Hev 49). Frequently, the body is introduced with a relative pronoun (Hebrew *she-*, Aramaic *di*), literally "that. . ." Since in virtually every case the next sentence is a direct command (one or more jussive-imperfect verbs), it appears that the relative pronoun is not a simple transitional particle, but part of a newly developed command-form (*she-* in Mur 42, 44; *di* in 5/6Hev 50, 54, 57, 58; so also Mas554.)

Following the body, there is often a brief *closing greeting*, any of several similar phrases meaning "best wishes" or "may it be well with you" (Mur 46; 5/6Hev 52, 53, 57, 59). A *signature* is not a regular feature, though the ends of many of the letters are lost or unreadable. Letter 5/6Hev 50 concludes with the words "dictated by Shim'on bar Yehuda" (literally, "S. bar Y. wrote it," but the usage of the phrase in other contemporary documents makes it clear this is not an indication of a personally written signature). The ending of the letter from Beth-Mashiko to Yeshu'a ben Galgula (Mur 42), a mixed-genre letter intended to be used as a legal document, uses the same phrase with the name of each of the two senders, fol-

lowed by the signatures of the principal party, two witnesses, and a notary.

The letters from Khirbet Mird, both Muslim and Christian, belong to much later and different traditions. The Christian Palestinian Aramaic letter (papMird A) concludes with a Trinitarian blessing (see Table 1: sample letter D), and the two Christian Arabic letters (APHM 49 [see table 1: sample letter E] and 50) begin with one. The Muslim letters regularly begin with the *Basmala*, then the initial address in the form "to B from A," followed by "greetings to you" and other, often lengthy, religious formulas. Private letter APMH 49 (see Table 1: sample letter F) is typical.

A more comprehensive formal analysis of the letters is beyond the scope of this article, but several recent studies have exhaustively analyzed the form of the letters from the Bar Kokhba period in the light of earlier Hebrew and Aramaic correspondence. [See also Haver, Nahal; Murabba'at, Wadi.]

BIBLIOGRAPHY

- Beyer, Klaus. *Die aramaischen Texte vom Toten Meer*. Göttingen, 1984. A German work roughly comparable in scope and content to the work of Fitzmyer and Harrington (below). Only six of the Bar Kokhba Aramaic letters, partially deciphered in some cases, are included. Beyer makes a number of advances in reading the texts. Glossary, bibliographies, and an extensive grammatical introduction are included. Line numbers do not always correspond to those of the originals.
- Cotton, Hannah M., Joseph Geiger, and J. David Thomas. *Masada II: The Latin and Greek Documents*. The Yigael Yadin Excavations 1963–1965, Final Reports. Jerusalem, 1989. Official publication (texts, translations, photographs) of the Greek and Latin letters. An especially thorough and helpful commentary on Mas724.

Jerusalem, 1989. Official publication of the Aramaic texts (including the three Aramaic letters) from Masada. Texts, translations, brief commentary, and photographs; includes a hand copy by Ada Yardeni of Mas554.
- Yadin, Yigael. "Expedition D." *Israel Exploration Journal* 11 (1962), 36–52. First major English publication on the Bar Kokhba letters from Nahal Hever. Excerpts from fifteen Hebrew, Aramaic, and Greek letters with preliminary translations and brief commentary. His readings have been the basis of most subsequent studies of the texts, and his serial numbering system is still widely used.

JAMES M. LINDENBERGER

LEVI, the third son of Jacob and Leah (*Gen.* 29.34) and the eponymous ancestor of the tribe of the Levites. With Simeon he took fearful vengeance on the men of Shechem for violating his sister Dinah (*Gen.* 34). Jacob's

blessing of Levi in *Genesis* 49.5–7 also refers to this incident (without mentioning a priesthood). The ideas about Levi in the blessing of Moses differ (*Deut.* 33.8–11). There, both cultic and teaching functions are attributed to him. These verses are cited in the Testimonia (4Q175 14–20) as characteristic of Levi. His three sons were Gerson, Qahat, and Merari; the high priests are descended from Qahat. The Levites served as one of the orders of servitors in the Temple, and there are numerous references to the Levites in the Hebrew scriptures.

The Levites, and consequently Levi, were important during the Second Temple period, playing a special role in the Dead Sea sect. In Jewish writings of the Second Temple period the relationship of Levi with Jacob, the incident in Shechem, and Levi's cultic and teaching functions are particularly central. Behind these themes is the idea of a covenant between God and Levi (*Deut.* 33.9, *Mal.* 2.4–9).

A saying of Levi, son of Jacob, is cited in the Damascus Document (CD iv.15). *Jubilees* 45.16 refers to the transmission of teaching through Levi, and this idea is reinforced by the Testament of Qahat (4Q542) and the Visions of Amram (4Q543–548). The transmission of teaching through the Levitical line was central to these documents. The Apocryphon of Joshua^b (4Q379 1.2) refers to "Levi, the beloved."

The most important single source relating to Levi is *Aramaic Levi Document*. This document focuses on a number of themes: the Shechem incident; Levi's installation as a priest and the recognition of his status by Jacob; Levi's prayer and vision; Levi's instruction by Abraham in cultic practices from the "Book of Noah"; and Levi's teaching of reading, writing, and wisdom to his children. Other characteristics of Levi may have been mentioned in this document, which survives only in fragments. These major biblical themes relating to Levi, as in *Genesis* 49 and *Deuteronomy* 33 were later developed in particular ways. Since Aramaic Levi is probably of the third century BCE, that a number of these ideas about Levi were taken up in *Jubilees* and in the later Qahat and Amram documents is not surprising.

Levi appears in other works as well. In the *Testaments of the Twelve Patriarchs* (the date of which is much debated), particularly in the *Testament of Levi*, Levi and Judah play central roles, with Levi holding pride of place. This relationship is already expressed in *Jubilees* 31.13–20, and earlier the exclusive eschatological dominance of Levi is mentioned in Aramaic Levi Document 66. In *Joseph and Asenath* 23.14, the Shechem incident figures in connection with Simeon and Levi's prowess. This incident is also described graphically by Theodotus (frag. 8; Eusebius, *Preparation for the Gospel* 9.22.10–12) and in *Jubilees* 30.3–4. *The Testament of Simeon* 5.4–6 refers to a

future war between the descendants of Simeon and Levi, in which the Levites prevail.

MICHAEL E. STONE

LEVI, ARAMAIC. An important document of early, postbiblical Judaism, Aramaic Levi reflects attitudes toward the priesthood that differ strongly from those of another more or less contemporary work, the *Book of Ben Sira*. Aramaic Levi stresses the transmission of the cultic commandments from Noah to Abraham to Levi in a striking fashion. The authority of the Levitical priesthood is anchored in the actions of Noah, who founded postdiluvian humanity, and relates to the very first sacrifice he offered upon exiting the ark. The actual cultic instructions are unparalleled in detail and are one of the very earliest examples of postbiblical Jewish law. They are legitimated by an appeal to ancient tradition, perhaps because the Mosaic revelation had not taken place at the time assumed by the pseudepigraphal framework of the book. Yet the stress laid upon literacy and teaching raises the question of whether more is at stake here than providing legitimacy for priestly teaching before the revelation at Mount Sinai.

Sometimes called Aramaic Testament of Levi, Aramaic Levi was discovered in the early part of the century in two fragments from the Cairo Geniza; one being Cambridge Geniza, published in 1900 by H. L. Pass and J. Arendzen and the other, Bodleian Geniza, published in 1907 by R.

H. Charles and A. Cowley. The relationship between Aramaic Levi and the Greek *Testament of Levi* included in the *Testaments of the Twelve Patriarchs* immediately was apparent. In addition, an insertion in one of the Greek manuscripts of the *Testaments of the Twelve Patriarchs* (Athos Koutloumous 39) was recognized as extracts from a Greek translation of Aramaic Levi. Among the Dead Sea Scrolls seven copies of Aramaic Levi have been identified, one from Cave 1 (Aramaic Levi, 1Q21) and six from Cave 4 (Aramaic Levi^{a-f}, 4Q213, 4Q213a, 4Q213b, 4Q214, 4Q214a, 4Q214b).

The fragments from Cave 4, among which J. T. Milik recognized three manuscripts, have been found to stem from six manuscripts (Greenfield and Stone, 1979). It is quite striking that all the Qumran copies date from the same period. The manuscripts are in scripts that resemble those typical of late Hasmonean, or in one or two instances early Herodian, writing. Significantly, two of the manuscripts (Aramaic Levi^d and Aramaic Levi^e) present variant shorter texts of the Cairo Geniza Aramaic Levi document.

Aramaic Levi seems to have been written originally in Aramaic, though some scholars, such as Grelot (1956), have maintained that the original was written in Hebrew and that it was translated into Aramaic in antiquity. This view has not met with general acceptance.

There is good reason to date Aramaic Levi to the third century or to the very early second century BCE. Aramaic Levi (or something very much like it) seems to have served as a source for *Jubilees*, which is usually dated to the first half of the second century BCE, as well as for the *Testaments of the Twelve Patriarchs*, and it is cited by the Damascus Document (CD), which is somewhat later than *Jubilees*. This date makes Aramaic Levi one of the most ancient of the pseudepigrapha.

Aramaic Levi relates nothing directly about its provenance, nor would such statements be expected in a pseudepigraphon. It employs a solar calendar resembling the one promoted by *1 Enoch*, *Jubilees*, and the Qumran sectarian writings. In contrast to *1 Enoch* and *Jubilees*, the surviving fragments contain no polemics regarding the use of the solar calendar. In addition to its adoption of the solar calendar, Aramaic Levi expresses distinctive ideas about two spirits, apotropaic prayer, and demonology, as well as oppositional views about the priesthood, including the unusual idea of an exclusively Levitical messianism. Aramaic Levi does not bear the distinctive marks of Qumran sectarian language, however, and should be attributed to a third-century wing of Judaism from which the Qumran sectarians are but one group of descendants.

It is possible to reconstruct the original order of the Oxford (Bodleian) and Cambridge fragments of Aramaic Levi from the Cairo Geniza. They are apparently parts

of the two middle leaves of a quire (a collection of four sheets, folded in half). The Cambridge sheet preserves part of the recto of a right-hand column of a right-hand folio and part of the verso of the same folio, which is from the following left-hand column. The single Bodleian leaf was the right-hand leaf of the innermost sheet of the quire. The left-hand leaf is lost, but its contents are preserved in the Greek fragment (Athos Koutloumous 39, see above). Then the recto and verso of another left-hand leaf (Cambridge) follow. Thus the structure of these fragments is: *1r-*1v (Cambridge); *2r-*2v (Oxford); [*3r-*3v Greek]; *4r-*4v (Cambridge).

The sequence of the fragments is important because it fixes the order of events in part of the original document. It is, however, incomplete in two respects. We do not know what material came between the fragmentary quarter columns of the first recto and verso in the Cambridge fragment and between them and the first column of the Bodleian fragment. Moreover, the Cairo Genizah fragments preserve neither the beginning nor the end of the work.

There is some further evidence that Aramaic Levi was longer, perhaps substantially longer, than the Cairo Genizah and Athos material. First, the Prayer of Levi that was preserved as an insertion in the Greek *Testament of Levi* (3.2) also occurs in a fragment of Aramaic Levi^b. This confirms the position of the Prayer of Levi as part of Aramaic Levi. Second, some of the other Qumran fragments overlap with the material known from the Cairo Genizah, but numerous fragments of the Qumran Aramaic text have no parallels at all in the Cairo Genizah-Athos material. These must have come from parts of Aramaic Levi that did not survive in the Cairo or Athos finds. Third, a citation attributed to Levi is given by Ammonas, a successor of Saint Anthony. If this is from Aramaic Levi, it is from some other part of the manuscript than those preserved in the surviving Greek and Aramaic fragments. Finally, Puech (1992) has claimed that the two copies of Aaronic Text A (4Q540-541), which show certain parallels to the Greek *Testament of Levi* 18, also derive from Aramaic Levi. This is not certain, but if it were true it would hint at the inclusion of this eschatological material in the book. We regard only those manuscripts with some textual overlap with the Cairo Genizah-Athos material as being a definite part of Aramaic Levi. Puech also refers to Milik's suggestion that the narrative 4Q458 contains the closing passage of Aramaic Levi.

R. Kugler (1996) has proposed an overall history and structure of Aramaic Levi that is of considerable interest, though debatable at some points. The surviving substantial fragments of Aramaic Levi deal with the following topics.

Levi's prayer and vision (Prayer of Levi) is a separate piece that may have originally preceded the Cairo Geni-

zah-Athos material, though not directly (Aramaic Levi^b 1-2). It has been suggested that 1QAramaic Levi fragment 1 might have occurred in the material preceding section 4 of the Genizah text. Levi's investiture and the recognition of his priesthood by Abraham, Isaac, and Jacob is found in Cairo Genizah, 1QAramaic Levi (3, 4), and Aramaic Levi^c:

- 4-10 = Genizah
- 4-6 = Aramaic Levi frg. 3
- 7-9 = Aramaic Levi^c
- 9 = Aramaic Levi frg. 4

Isaac's exhortation and cultic instructions to Levi (4Q214 1; 4Q214b 2-6; 4Q214a; 4Q214 2; 1Q21 45):

- 14-61 = Genizah
- 20-23 = Aramaic Levi^d frg. 1
- 22-27 = Aramaic Levi^d frgs. 2-6
- 24-25 = Aramaic Levi^e frg. 1
- 25-30 = Aramaic Levi^d frg. 2
- 26-27 = Aramaic Levi frg. 45

The birth of Levi's children and the major events of his life (4Q214a 2-3.i):

- 62-81 = Genizah
- 69-72 resembles Aramaic Levi^e frgs. 2-3 col. i

Levi's address to his children before his death, which is a wisdom poem (4Q213 1 and 2; 4Q214a 2-; 4Q214b 8):

- 82-95 = Genizah
- Aramaic Levi^a frgs. 1 and 2 overlap with this and have further text
- Aramaic Levi^e frgs. 2-3 = 95 and text from 4QLevi^a
- 4QLevi^f frg. 8 overlaps with the preceding.

This was not the end of the work, as is clear from parts of Aramaic Levi^a (1.ii and 2), which overlap with the end of the poem and which are followed by an eschatological exhortation.

Other substantial fragments that cannot be placed by reference to the continuous text of Aramaic Levi mentioned above include a piece of hortatory text (4Q213 4) and a reference to the Dinah incident, which also contains some eschatological words (4Q213a 3-4). Numerous other fragments of the Qumran Aramaic Levi manuscripts do not parallel any of the Qumran material noted above, and there seems to be no sure way of fixing their sequence in Aramaic Levi. It seems likely that Aramaic Levi formed the inspiration for two other works found at Qumran, the Testament of Qahat (4Q542) and Visions of Amram^{a-f} (4Q543-548). Thus a series of three compositions were attributed to the fathers of the priestly line.

MICHAEL E. STONE

LEVI, TESTAMENT OF. See Levi, Aramaic, Testaments.

LEVITICUS, BOOK OF. Thirteen manuscripts of the *Book of Leviticus* were discovered in the Judean Desert. Eleven of them were found at Qumran and two at Masada. Besides paleo-Leviticus 1Q3 (hereafter 1Qpaleo-Leviticus) and paleo-Leviticus 2Q5 (hereafter 2Qpaleo-Leviticus) (approximately one third of the manuscripts discovered in Qumran were written in paleo-Hebrew),

four manuscripts were discovered in Cave 4. During the course of the preparation of these four manuscripts for publication, E. Tov separated the fourth copy into three manuscripts, so that now we possess six manuscripts from Cave 4, while on the first copy the *Books of Leviticus* and *Numbers* are found

- 1 Leviticus-Numbers^a (4Q23)
- 2 Leviticus^b (4Q24, hereafter 4QLeviticus^b)
- 3 Leviticus^c (4Q25)
- 4 Leviticus^d (4Q26)
- 5 Leviticus^e (4Q26a)
- 6 Leviticus^f (4Q26b)

In addition, there is one manuscript from Cave 11, Leviticus^b (11Q2). Two manuscripts of *Leviticus* were discovered at Masada and given the sigla Masla and Maslb.

Two manuscripts of a Greek translation of the *Book of Leviticus* were discovered in Cave 4 (Septuagint Leviticus^a [4Q119] and Septuagint Leviticus^b [4Q120]), there is also one manuscript from Cave 4 in which there are fragments of an Aramaic translation of the book (Targum of Leviticus [4Q156]).

The Hebrew Manuscripts of Leviticus from Qumran. From 1Qpaleo-Leviticus we have twenty-four fragments containing parts of chapters 11-23 of *Leviticus*, as well as a number of fragments belonging to the *Book of Numbers*. The editor claims that the *Books of Leviticus* and *Numbers* were copied in order on the same scroll. The text of the scroll is identical to that of the Masoretic Text, except for a number of spelling variations. The spelling in the scroll is primarily "defective."

From 2Qpaleo-Leviticus there is only a single fragment, which contains parts of chapter 11, verses 22-29. The text in this small fragment is different from that of the Masoretic Text, and in two cases it is similar to the Samaritan Pentateuch and to the Septuagint. In verse 25 there is space for inserting the words "and bathe in water"

verse 25.

Masoretic Text: "whoever bears (*nose*, in defective spelling) from their carcasses shall wash his clothes and be impure until the evening"

scroll, Samaritan Pentateuch "[and whoever bears (*nose*, in "plene" spelling) from their carcasses] shall wash his clothes [and bathe in water and be impure until the evening]"

verse 26

Masoretic Text "to every beast that spreads its hooves and does not chew the cud"

scroll, Septuagint "[to every beast that spreads its hooves and chews its cud"

It appears that the texts of the scroll and the Septuagint preserve a harmonistic change that was made in the verse on the basis of the introduction to chapter 11, verse 3:

“Everyone that spreads its hooves and chews its cud.” The spelling in the scroll is usually “plene” (*we-ha-nogea*, he who touched, as opposed to *we-ha-nogea*) In the scroll and in the Samaritan Pentateuch the spelling *mafrisat* (“spread”) is attested as opposed to *mafreset* in the Masoretic Text This spelling is consistent in the Samaritan Pentateuch in all of the occurrences of this word

Leviticus-Numbers^a includes 104 fragments, among them 30 particularly small ones, which were not identified by the editor According to the reconstruction, the scroll included 21.5 columns from the *Book of Leviticus* (the first eight were lost) After several blank lines comes the *Book of Numbers*, which included according to reconstruction 29.5 additional columns

The script is an Early Hasmonean formal hand, dating from approximately the middle or later half of the second century BCE The spelling is similar to that in the Masoretic Text and the Samaritan Pentateuch, but there are a number of discrepancies between them It is not possible to see consistency in the method of the spelling in the different texts In two cases the copyist omitted an entire verse In *Leviticus* 14.24 and 14.45 the verse was added above the line, most likely by a second scribe In an additional instance (14.43) a fragment remained that was too small to determine whether the copyist used a shorter original version (which is not attested in other witnesses), or perhaps made an omission by parablepsis Also, missing vowel letters were added above the line and a number of letters were corrected between the lines

4QLeviticus^b includes thirty fragments and is dated paleographically to the Late Hasmonean period, from approximately the mid-first century BCE The spelling is similar to that in the Masoretic Text and in the Samaritan Pentateuch, but a number of discrepancies exist between them and it is not possible to discern a consistent pattern in the different texts The text of the scroll is similar to the Masoretic Text and the Samaritan Pentateuch, but it seems that it did not contain *Leviticus* 3.1–11 Since verses 1–5 and 6–11 are similar, the omission can be explained in two ways: either the scribe skipped from verse 2 to verse 8, “and the sons of Aaron (the priests) threw the blood/its blood,” because of the similarity of the expressions; or the copyist’s *Vorlage* was a shorter version and did not contain these verses and in it the two units were combined Similarly, in *Leviticus* 22.22 there is a small addition that is not attested in the remaining witnesses, the Masoretic Text, Samaritan Pentateuch, and Septuagint. “either a wart or eczema or moist skin eruption” *Leviticus*^b. “either a wart or eczema or moist skin eruption or bruised [testic]les.”

Of *Leviticus*^c only six fragments have survived along with three small fragments that were not identified (they may belong to *Leviticus*^c [4Q26a]) The manuscript contains sections from chapters 1, 3–5, and 8 The spelling is

generally similar to the spelling of the Masoretic Text and Samaritan Pentateuch, with slight differences Also, the differences in the text are few and lack textual significance In fragment 4, a correction of 4.23, which was partially erased, corrects the text and brings it closer to the other textual testimonies

Leviticus^d contains four identified fragments, in which there are sections from chapters 14, 15, and 17, with seven small fragments that have not been identified

Leviticus^d is written in an early Herodian script and is to be dated between 30 BCE and 20 CE The spelling in the scroll is fuller than in the parallel passages of the Masoretic Text and the Samaritan Pentateuch The condition of the scroll’s preservation is extremely bad, and in fragment 6 it is possible to read primarily the impression made by the letters, but the text preserved in it is important In fragment 4, which contains some of *Leviticus* 17, there are a number of textual differences.

Leviticus 17.3

Masoretic Text, Samaritan Pentateuch “Each man from the house of Israel”

Leviticus^d: “[Each man from the house of Israel and the sojourner who] sojourns in Israel”

Septuagint “Each man from the children of Israel and the sojourner who sojourns among you”

This difference concerns the inclusion of resident aliens in the prohibition in verse 3 (they are mentioned in other prohibitions in the chapter [vv. 8, 10, 12, 15])

Sifra 8.6 includes resident aliens in the prohibition of slaughtering inside the camp “(It is written) ‘The Israelites’. I know only that it includes the Israelites, how do I know it includes the strangers and the slaves? Because it is stated ‘say to them’” (Weiss, p. 83b) Some scholars offer explanations for the omission of the resident aliens in the Masoretic Text formulation of the Law It is possible that the scroll has the original version, and the words “and the sojourner who sojourns in Israel” have been omitted in the other versions due to parablepsis

Leviticus 17.

Samaritan Pentateuch, Masoretic Text “from outside (*mi-huts*) the camp”

Leviticus^d “from outside (*mi-hutsah*) the camp”

Here we find a use of the locative ending on a word preceded by a preposition

This difference relates to whether the text refers to *hullin* (the slaughter of “nonsacred” animals), or *qodashim* (the slaughter of sacred animals). Lines 3–5 of fragment 4 read as follows

Leviticus^d “and [t]o the entrance of the Tent of Meeting he did not bring it in order to make it a burnt-offering] or peace offering to the Lord as [a pleasing

aroma and he is to slaughter it outside and to the entrance of the Tent of Meeting] he is not to bring it to offer it as a sac[rifice to the Lord].”

Masoretic Text: “and to the entrance of the Tent of Meeting he did not bring it to offer as a sacrifice to the Lord.”

Samaritan Pentateuch: “And to the entrance of the Tent of Meeting he did not bring it in order to make it a burnt-offering or a peace offering to the Lord acceptable on your behalf as a pleasing aroma and he is to slaughter it outside and to the entrance of the Tent of Meeting he did not bring it to offer it as a sacrifice to the Lord.”

R. Ishmael and R. Akiba as well as contemporary commentators have disagreed about the contents of this passage. In *Leviticus Rabbah* one reads: R. Ishmael and R. Akiba (are in dispute). R. Ishmael says that this is a case of a

permissive law arising out of a prohibition, for owing to the fact that in the wilderness Israel were forbidden to eat the meat for enjoyment, the scriptures come and permit it to them, only stipulating that it is to be ritually slaughtered. R. Akiba says: It is a case of a prohibition arising out of that which was permitted, for since in the wilderness Israel used to kill the animals by stabbing and eat the meat, the scriptures come and forbid them to do so, laying down that they must perform ritual slaughter (Lev. Rab. 22:7, Slotki ed., p. 285)

The law of slaughtering *hullin* in the Temple City, according to the Temple Scroll, states:

You shall not eat the flesh of an ox [or a sheep] or a goat within my city—which I consecrate to put my name there within it—which is not to enter my temple; and they shall slaughter (it) there, and throw its blood on the base of the altar of burnt offering; and its fat they shall burn. (iii.19–21)

The author of the Temple Scroll held the view that *hullin* was forbidden when the Israelites were in the wilderness, and for the same reason it is not permitted to eat *hullin* in Jerusalem. The same view was shared by the author of *Miqsat Ma'asei ha-Torah* (4Q 394–399), who writes:

[for the sons] of the priest should [take care] concerning all [these] practices, [so as not to] cause the people to bear punishment. [And concerning] that it is written. [if a person slaughters inside the camp, or slaughters] outside the camp cattle or sheep or goat. (B.25–28)

Leviticus^d as well as the Samaritan Pentateuch and the Septuagint reflect the same view as that held later by R. Ishmael—that the law of *Leviticus* 17 deals with the slaughtering of *hullin* and meat eaten for enjoyment. This view is opposed to that of R. Akiba, who explained that *Leviticus* 17 deals with *godashim*. We may assume that a

version similar to Leviticus^d was used as a source by the authors of the Temple Scroll and *Miqsat Ma'asei ha-Torah*. Those authors thought that *Leviticus* 17 forbids slaughtering *hullin* near the altar. Thus during the time of the wilderness as well as in Jerusalem, *hullin* should be brought as offerings to the Temple. On the other hand, those authors thought that *Deuteronomy* 12 speaks about people who are living at a distance from the Temple, and therefore they are not obligated to bring their *hullin* to the Temple.

From reconstructing this fragment it seems that the phrase “This shall be to them a law for all time, throughout the ages” (v. 7) is probably missing from Leviticus^d. In this way there is no contradiction between *Leviticus* 17 and *Deuteronomy* 12.

Leviticus^e contains nine fragments from chapter 3, 19–22. The spelling is almost identical to that of the Masoretic Text and the Samaritan Pentateuch, and in the manuscript there is an omission that most likely is a result of homoeoteleuton.

Leviticus 19.36

Masoretic Text, Samaritan Pentateuch, and the Septuagint: “From the ears of the righteous stones of righteousness”

scroll: “Stones of righteousness”

The other differences are small and lack textual significance.

Leviticus^f contains only one fragment from *Leviticus* 7.19–26. The spelling in it is more plene than in the Masoretic and Samaritan texts, and the name of God is written in paleo-Hebrew script.

From 6Qpaleo-Leviticus only one fragment remains, and in it are remnants from *Leviticus* 13:12–13, written in paleo-Hebrew script. The spelling in the scroll is plene (for example, *ro'sh* [“head,” with the vowel spelled out] and *kutn(o)t* [“tunics,” with the second vowel spelled out]). Since ample spacing exists which enables reconstruction of two additional letters to the word *avnet* (“belt”) found in the Masoretic Text, the editor reconstructs the word *avnetim* (“belts”), as in the Samaritan Pentateuch.

11Qpaleo-Leviticus^g is written in paleo-Hebrew as well, and includes between six and nine lines from the last fourteen columns of the scroll of *Leviticus*. This is the longest scroll discovered in Qumran that is written in paleo-Hebrew. Of it there have survived fragments from chapters 4, 10–11, 13–22, as well as the entire text of chapters 22–27.

Following the publication of the edition by K. A. Matthews and D. N. Freedman, E. Puech identified a number of fragments that had not been identified by the editors and claimed that the original scroll contained twenty-

three columns. In the text there is evidence of the use of a symbol for a passage that is out of place:

Leviticus 18.27

Samaritan Pentateuch, Masoretic Text: "The people of the land committed"

11Qpaleo-Leviticus^a: "You, the people of the land, committed [and he was disgusted with them and said to you y]ou shall inherit their la[n]d."

This addition, taken from 20.23–24, does not fit the context, and has a harmonistic character, since the two passages deal with the abominations of the nations that were committed in the land. The copyist perceived the secondary character of the addition, and put a mark similar to a parenthesis, the antisigma, which is found in classical texts (similar to the upside-down *nuns* in the Masoretic Text before and after *Numbers* 10.35–36), at the end of the passage (after the word "their land").

In the scroll there are a large number of independent readings, some of them significant:

Leviticus 22.22

Masoretic Text, Samaritan Pentateuch: "Either a wart or eczema or a moist skin eruption"

11Qpaleo-Leviticus^a: "Either a moist skin eruption or eczema or a wart"

Leviticus 26.24

Masoretic Text: "and I also went with you"

Samaritan Pentateuch: "and I too went with you"

11Qpaleo-Leviticus^a: "and I went with you."

There are also a number of scribal errors in the scroll, which in part are a result of homoeoteleuton, such as the example of the omission of the words "and to his sons" in 17.2.

Masoretic Text, Samaritan Pentateuch: "To Aaron and to his sons and to . . ."

11Qpaleo-Leviticus^a: "To Aaron and to . . ."

Although there are readings shared by the scroll and the other textual witnesses, the text of the scroll is not especially close to any one of those witnesses. There are a number of independent readings in it that are not attested in other witnesses to the text, but it is difficult to define them as having a unique character or particular *Tendenz*. It appears that the uniqueness of the scroll is in its being different from the other textual witnesses. It is possible that in this there is evidence of the existence of more than the three groups of textual witnesses that were known to us. According to E. Tov, the variance of the scroll is not surprising, since every ancient source is likely to contain elements found in the Masoretic Text, and/or the Samaritan Pentateuch and/or the Septuagint without

having to come to typological conclusions regarding the nature of this source.

11QLeviticus^b includes fragments from chapters 7–10, 14–15, and 25, and is written in a late Herodian hand (ca. 50 CE). It is written with plene spellings and has readings that agree with the Septuagint against the Masoretic Text in three cases, with the Masoretic Text against the Septuagint in three instances, and it has five unique readings.

The Hebrew Manuscript of *Leviticus* from Masada.

During excavations conducted by Y. Yadin at Masada two copies of the *Book of Leviticus*, which were written on parchment, were found.

Leviticus^a (Mas1a) was written in a formal Herodian script from the second half of the first century BCE, by a skilled scribe. The text of this fragment is identical to the Masoretic Text of *Leviticus* 4:3–9, except for the word "will pour" (written plene) as opposed to "will pour" (defective spelling) in the Masoretic Text (4.7).

From Leviticus^b (Mas1b) forty-five fragments of different sizes have survived, some of them very small. The manuscript is dated to the later Herodian period—from the middle of the first century CE. The text of the scroll is identical to the Masoretic Text, including its spelling, and sections of *Leviticus* 8.31–11.40 are preserved in it. A number of corrections, which were most likely made by the scribe himself, are found in the scroll. The only difference is in the word "they" (*hemmah*, with the final form of *mem* in middle of the word). It appears that this evidences unobserved use of writing the letters *mem*, *nun*, *tsadi*, *pe(fe)*, and *kaf* in their initial and final forms. The similarity between the text of the scroll and the Masoretic Text extends to its division into sections.

In addition to the Hebrew copies of *Leviticus*, there are two manuscripts from Cave 4 of Qumran that contain a Greek translation of the book.

Greek Translations of *Leviticus*. From Septuagint *Leviticus*^a an entire column has survived, which contains the Old Greek translation of *Leviticus* 26.2–16, and an additional tiny fragment (on which one can identify only the word *kai*). The manuscript dates from about the late second or first century BCE.

The spelling is more or less similar to the spelling of the Septuagint. This manuscript is approximately four hundred years earlier than the earliest manuscripts of the Old Greek translation of the book. There are fifteen textual differences between the scroll and the Septuagint (Göttingen edition), among them seven are unique, and three are attested in other manuscripts. These differences stem primarily from a free translation of a text similar or identical to the Masoretic Text. On account of the antiquity of its script and the evidence of its text, one can conclude that this is an authentic textual witness to the Old Greek translation.

Septuagint Leviticus^b was copied on papyrus. Thirty-one identified fragments and sixty-six small unidentified fragments have survived from this manuscript. This is a text of the Septuagint of *Leviticus*, which should probably be dated to the first century BCE. The spelling is similar to the spelling of the Septuagint, and it contains a few scribal errors and scribal marks signaling the beginning of a paragraph. This manuscript too, like Septuagint Leviticus^a, is about four hundred years earlier than the oldest manuscripts of the Old Greek translation of the book.

Aramaic Translation of *Leviticus*. From Targum of Leviticus, two small Aramaic fragments were identified by J. T. Milik as an Aramaic translation of the *Book of Leviticus*. The manuscript is dated to the second century BCE. Vermes suggested the possibility that these small fragments were part of a larger composition, which contained in addition to a translation of sections of *Leviticus* liturgical sections or other texts. But there is no additional evidence that supports this suggestion. The fragments contain a translation of verses from *Leviticus* 16, in which there is a description of the Day of Atonement. A comparison of the fragments to the Masoretic Text and the other Aramaic translations of the *Book of Leviticus* shows that this is a literal translation, similar to Targum Onkelos and Targum Neofiti I. Of interest is the use of the word *kasi'*, from the root *ksy* (meaning to hide, cover) as a translation of the word *kaporet* as opposed to *kapora'* in the rest of the Aramaic translations.

The Contribution of the Scrolls to the Textual Criticism of the *Book of Leviticus*. In the manuscripts of the *Book of Leviticus* discovered at Qumran the diverse nature of the different texts is especially prominent. Among the fragments that remain are manuscripts that are close in their text to the Masoretic Text, and in others readings that are found in the Septuagint and the Samaritan Pentateuch are attested. However, the evidence of many manuscripts, principally 11Qpaleo-Leviticus^a (11Q1), in which are found a large number of independent readings that were unknown to us from other textual witnesses, is of special importance. Yet it is difficult to characterize these readings as having a common denominator or a certain tendency. Moreover, it is possible to explain a large portion of these readings as arising from different scribal errors, mainly as a result of parablepsis, etc. This variation raises the possibility that there may have been more than three groups of textual witnesses in the Second Temple period that were assumed prior to the discovery of the scrolls.

The picture from the other fragmented and limited discoveries is entirely different. The manuscripts from Masada are absolutely identical to the Masoretic Text. Combined with this are the textual discoveries from the caves of the Judean Desert, in which biblical scrolls from the

period of the Bar Kokhba Revolt were found (fragments from the *Book of Leviticus* have not survived). These biblical fragments are also identical in their text to the Masoretic Text. It appears that we will not be mistaken if we conclude from this that during the first century CE a decision was made to choose the Masoretic Text as the normative one. During this stage, it appears the other versions were rejected, and this is the reason that only texts identical to that of the Masoretic Text were discovered in Masada and later on in the caves of the Judean Desert.

Additional evidence of great significance is the discovery of the two Greek manuscripts of the *Book of Leviticus* from Cave 4 and one manuscript containing an Aramaic translation of the book. The Greek manuscripts form the most ancient evidence of the original text of the Old Greek, and they precede by approximately four hundred years the oldest manuscripts of the Old Greek that we had possessed. The Aramaic translation, although it is limited in its scope, is the only evidence that we presently have of a literal Aramaic translation, similar in its character to Targum Onkelos and Targum Neofiti I.

ESTHER ESHEL

Translated from Hebrew by Daphna Krupp

LIAR. The figure referred to variously by scholars as "the Liar" or "the man of the lie" (*ish ha-kazav*; 1QpHab ii.2; v.11; xi.[1]; CD xx.15); "the spouter (or preacher) of the lie" (*matfif ha-kazav*; 1QpHab, 10.9; 1Q14 10.[2]; CD viii.13; xix.26), or "the scoffer" (*ish ha-lashon*; CD i.14) is widely held to be a rival expositor of the law to the Teacher of Righteousness. The legal dispute between the two is thought to have led to schisms, but the nature of these divisions is disputed. Some believe that the Liar was a competitor from within the Essene movement, given that it is prohibited to argue with the "men of the pit" (Rule of the Community 1QS ix.16-18), while others argue that he must have been outside the community.

Liar and Wicked Priest. While many scholars are convinced that the Liar is a different person from the Wicked Priest, the view that they are one and the same is not without its supporters. Geza Vermes sees the significance of these sobriquets in Jonathan Maccabee, whom the Qumran community originally considered to have been "called by the name of truth" before his heart became

haughty (1QpHab viii.8-9). The implication is that he has become "wicked" because he has been teaching what the Qumran community considers to be lies. The author of Peshar Habakkuk, however, does not make this point.

The Liar may be distinguished from the Wicked Priest as scholars like Gert Jeremias and Hartmut Stegemann have done, but such a thesis is not without its problems. In Peshar Habakkuk (v 8-12) "the man of the lie" is identified as "the wicked one" of the biblical citation—a corollary to the equation of "the righteous one" with the Teacher of Righteousness. A similar identification of the wicked and righteous occurs in Peshar Psalms' (4Q171 1-10. iv.7-10), but here it is between the Teacher of Righteousness and the Wicked Priest. Both the Wicked Priest and Liar, if they are different figures, are "wicked" in the eyes of the Qumran community. Moreover, both are associated with some form of building program (1QpHab ix.16-x.13).

Proper caution must be exercised in distinguishing between different figures in the text on the basis of slight changes in terminology, since the scrolls themselves do not always maintain these perceived distinctions. The Liar is known as "the man of the lie" or "preacher of the lie," but the same figure seems to be referred to as "the scoffer" or "the man of scorn who dripped waters of lie over Israel" in the Damascus Document (CD i.14-17). Moreover, the term *scoffing* is also found in Peshar Isaiah^b, in connection with a certain group who are called "scoffers who are in Jerusalem" (4Q162 2.6).

The figurative description of a false prophet or teacher as one who "drips lies" is biblical (*Mi.* 2.6, 2.11; *Am.* 7.16, 9.13), and this term is also used to describe the curious figure of *tsav*, the enigmatic personification of judgment in *Hosea* 5.11, as "he who is the one who drips." In *Hodayot*^c there are furthermore "scoffers of lie" (2.31 and 4.10) and "prophets of lie" (4.16).

Role of the Liar. As the Liar is understood by several scholars, he is the rival of the Teacher of Righteousness on the matter of legal interpretation. Central to this understanding of the Liar is the passage in Peshar Habakkuk (1QpHab v.8-12) where the Teacher of Righteousness and his rival confront each other in the midst of their congregation. The precise translation and interpretation of the events recorded in this passage are disputed: Who are "the house of Absalom" and the men of their council, and what part, if any, did they play in the dispute between the two leaders?

One translation of the problematic lines 9 and 10 is "its interpretation concerns the house of Absalom and the men of their council who remained silent at the rebuke of the Teacher of Righteousness and did not help him against the man of the lie." This renders "the house of Absalom" (cf. *1 Mc.* 11.70, 13.11; *2 Mc.* 11.17) and its men

as remaining guiltily neutral for not taking the side of the Teacher of Righteousness. The biblical lemma that precedes it similarly asks why there is silence when the righteous is being swallowed up by the wicked. If this is correct, then it would appear that the Liar reprimanded the Teacher of Righteousness, and this reprimand is a rejection of the law.

There are, however, good linguistic reasons for translating the verb *ndmw* in the passive, as "they were silenced," and the "rebuke" in the active sense (see Williamson). This would mean that the men of the house of Absalom were silenced at the Teacher's reprimand and thus did not help him against the Liar who rejected the law in the midst of their congregation. If this translation is to be preferred, then the Teacher of Righteousness is seen both to be correcting the men of the house of Absalom as well as resisting the teachings of the Liar.

The Liar was a halakhic teacher, and his teachings are polemically described in Peshar Habakkuk as having "rejected the Torah" (1QpHab v.11–12). In the Damascus Document (CD i.14–17) the liar is described as a scoffer who preached lies to Israel. With his teachings, he led many astray and they sought smooth things and twisted righteousness and justice beyond recognition. In Peshar Habakkuk the Liar likewise is said to have led many astray in the building of a city of vanity and in instructing them with "[pre]cepts of falsehood" (x.9–13). His followers are called "traitors" in Peshar Habakkuk (1QpHab ii.2–10) because they did not believe that the eschatological interpretation of the Teacher of Righteousness was divinely ordained.

TIMOTHY H. LIM

LICHT, JACOB, (1922–1992), one of the earliest scholars of the Dead Sea Scrolls and one of the principal editors of the *Encyclopaedia Biblica*, was born in Vienna and raised in Brno, Czechoslovakia. He was educated in both the German and Czech cultures and in the nascent Hebrew-Zionist culture. In 1940, thanks to a student certificate, he immigrated to Erets Yisra'el and thus was saved from the horrors of the Holocaust. Licht served as professor of Bible at Tel Aviv University and was a member of the Israel Academy of Sciences and Humanities.

Upon the discovery of the Dead Sea Scrolls, Licht was invited to assist Professor Eleazar L. Sukenik in preparing the publication of the texts of the scrolls from Cave 1 at Qumran, which had been acquired by the Hebrew University of Jerusalem. [See *biography of Sukenik*.] Together with Sukenik and Nahman Avigad, Licht participated in all aspects of this task—reconstruction of the fragmented material, preparation of the Hebrew transcription, assistance in the English translation, et cetera (Licht, 1993). However, his major task involved the preparation of a philological and comparative commentary, and it was this that marked his role in the research and exegesis of the scrolls. In 1957 Licht published his critical edition of Hodayot^a (1QH), which was his doctoral dissertation at the Hebrew University of Jerusalem, and in 1965 he published a critical edition of the Rule of the Community (1QS; hereafter, 1QRule of the Community). For this latter work he received the Warburg Prize. [See Hodayot; Rule of the Community.]

Licht focused upon the work of philological exegesis, concentrating most of his efforts on understanding the written text as such, and deliberately refrained from engaging in philosophical approaches based upon speculative theories. Licht's close adherence to the written text assisted him not only in the interpretation of words and ideas in context but also in tracing the styles of the authors of the scrolls and their literary approaches (Licht, 1957, pp. 10–17; 1965, pp. 25–38). The distinctions among the different stylistic features were useful in isolating the groups of laws gathered in 1QRule of the Community at different stages of its editing, which Licht saw

as the result of an ongoing, developing process of legislation that required adjustment to changing conditions (Licht, 1965, p. 22). In his close reading of the text, Licht occasionally noted inner contradictions among the different testimonies of the sect of the *yahad*. However, he refrained from explaining the existence of these contradictions, preferring to recognize in them different approaches that were necessarily created during the course of everyday life, on the one hand, and the development of ideas, on the other.

Licht recognized the possible affinity between the sect of the *yahad* and that of the Essenes but refrained from making a definite identification between the two. On the other hand, he wrote extensively about the common ideological ground of the Qumran authors and a number of the noncanonical books in the postbiblical apocalyptic stream (Licht, 1965, pp. 83–85). Licht placed the apocalyptic vision of the future alongside the sect's doctrine of eras, thereby showing that both fit within one united system of postbiblical thought (1965).

Licht's adherence to the written word—of the Bible, of the extrabiblical writings, and of the Qumran scrolls—made it possible for him to distinguish among the different layers of the development of Jewish religious thought and the religious atmosphere that gradually changed over the course of generations (Licht, 1973). By doing so, he laid the groundwork for understanding the phenomenon of the *yahad* sect upon the stage of history and its religious and literary activities.

BILHA NITZAN

LIGHT AND DARKNESS play an important role in the Hebrew Bible. The creation begins with the separation between light and darkness, and the statement that light is "good." The sun, moon, and stars are set into the firmament to rule over day and night and to indicate the

season, the years, and the festivals (*Gen.* 1.4,14–19). Light and darkness are also associated, respectively, with wisdom and folly, righteousness and wickedness, salvation and destruction (*Eccel.* 2.13–14; *Prov.* 2.13; *Is.* 2.3–5 *Am.* 5.18–20; etc.). Light is elsewhere a visible expression of God's glory (*Ezek.* 1.26–28; 10.4; *Ps.* 104.2). The Qumran literature builds on these foundations and makes use of the image of light and darkness mainly to convey its understanding of the cosmic order and its dualistic teachings. [See Determinism; Dualism.]

The Songs of the Sabbath Sacrifice (4Q403; 4Q405; 11Q17) locate the most perfect light in the heavenly sanctuary, where God, the glorious king, is served by radiant angels and spirits, the most prominent among them being "gods of light." In a liturgical work the light of God's dwelling is not separated from darkness, contrary to what happens in the cosmos (4Q392 1.4–7). At Qumran great attention is paid to this cosmic division of light and darkness, and especially to the monthly phases of the moon and to the yearly course of the sun, which are detailed in works such as Jubilees^{a,c-g} (4Q216, 4Q218–222), Astronomical Enoch^{a-d} (4Q208–211), and Phases of the Moon (4Q317). An archeological witness to this is an astronomical instrument that measures the solstices and equinoxes, the horizontal position of the sun at each season, the fraction of the days according to seasonal hours, etc. The complex balance between light and darkness and their respective luminaries is understood as a manifestation of the knowledge, strength, and wisdom of the "God of lights" who had set their permanent laws (1QHodayot^a 1QH^a ix.10–12; xxiii 1–3; Liturgical Prayers, 1Q34 3.ii.1–4; War Scroll, 1QM x.11, Daily Prayers^a, 4Q503 13–16; 29–32; 11QPsalms^a, 11Q5 xxvi.9–15). Therefore, the turning points of days and nights are the most appropriate times for prayers and blessings (Rule of the Community, 1QS x.1–10; 1QHodayot^a 1QH^a xx.4–11; Daily Prayers 4Q503, 1–6; 10–11; 33–36; 39; 48–50; compare Josephus *The Jewish War* 2. 128; Philo *On the Contemplative Life* 27; 89); feasts and festivals, as well as priestly rosters, are also linked to the calendar (cf. Calendrical Document A–H, 4Q320–330).

Humanity, in God's mysterious design, is divided between "sons of light" and "sons of darkness" (Rule of the Community, 1QS 1.9–11; iii.13; and so forth). The two ethical spheres of light and darkness are the respective domains of a spirit or Prince of lights and of an Angel of darkness, heading heavenly hosts and having dominion over human beings, the first "over all sons of justice" who "walk in the paths of light," the second over "sons of deceit" who "walk in paths of darkness" (Rule of the Community, 1QS iii.17–25; cf. War Scroll, 1QM xiii.1–6, 9–12; Berakhot^a, 4Q286 7 ii.1–5; Apocryphal Psalms^a, 11Q11 i.5–6; iii.8–12; iv.4–13; and so forth). Depending on the

time of his conception or birth, each individual inherits various parts of light and darkness; hence everyone partly belongs to "evil humankind," to "the assembly those who walk in darkness" (Rule of the Community, 1QS xi.9-10; cf. 1Q Hodavot^a, 1QH^a xx.24-25). But God discloses his light to those whom he favors, and he makes them know "the great plans of his intellect"; he illuminates their hearts "with the discernment of life," through a spirit of truth, and through their gathering in a community of salvation around inspired teachers and priests who are also instrumental in their enlightenment. A model for them is the great figure of David, praised for having been "wise, a luminary like the light of the sun, learned, knowledgeable, and perfect in all his paths before God and men" (Rule of the Community, 1QS ii.3-4; iii.7; iv.2; xi.3; Damascus Document, CD xiii.11-12; 1QHodavot^a, 1QH^a xii.5-6.23-27; xxiii.2 11-12; Rule of the Blessings, 1Q28b iv.27-28; Barkhi Nafshi^a, 4Q434 1.1-8; Testament of Qahat, 4Q452 i.1-3; Daily Prayers, 4Q503 7-9; 51-55; Psalms,^a 11Q5, xxvii.2-4). On the contrary, the sons of darkness who follow Belial's leadership have their heart hardened and behave with evil cunning (Rule of the Community, 1QS iv.11; War Rule, 1QM xv.9-10; Wiles of the Wicked Woman, 4Q184 4-7; etc.).

The members of the community are watchful of false converts who, while joining, still continue to regard "darkness as paths to light" (1QS ii.16; iii.8). In addition, the sons of light are threatened by Belial, who dominates during periods of wickedness and, together with the spirits of his lot, attempts to trap them and cause them to fall (1QS iii.24; Damascus Document, CD v.18; Catena^a, 4Q177 ii.7; iii.8; Florilegium, 4Q174 1-3 7-9; Aramaic Levi^a, 4Q213 5 iii.8-10; Narrative, 4Q462 9-10). The torments experienced by the faithful are expressed with various metaphors, including that of light and darkness: "The light of my face has become gloomy with deep darkness, my radiance has changed into gloom" (1QH^a xiii.32). A way to resist the assaults of evil spirits is to proclaim against them the grandeur of the radiance of God (Songs of the Sage^a [4Q510] 1.4-7). When finally delivered from his enemies, the righteous states that God, his everlasting luminary, has caused his light to shine from darkness or that he made him "radiant with sevenfold light" (1QH^a xi.3; xv.24-25; xvii.24).

In spite of opposition, the sons of light will shine until the completion of the periods of darkness; then, on the day appointed by God, there will take place an eschatological battle between both camps, along with their respective angelic counterparts, the result of which will be the complete destruction of wickedness, with "no escape for the sons of darkness" (1QM; iii.6-9; xiii.14-16; xiv.16-18; xv-xix). On the contrary, God's lot is promised

peace and blessing, while the covenant of Israel will "shine with joy" (1QM xvii. 6-7). This double expectation is found in other documents as well, with minor variations: "Evil will disappear in front of justice as darkness disappears in front of light . . . and justice will be revealed like a sun which regulates the world" (Mysteries [1Q27] 1 5-6); "The angel of his truth will ransom all the sons of light from the power of Belial. . . . Belial and all the men of his lot will be finished for ever, and all the sons of light will be reunited" (4Q177 iv.12-16); "The sons of light will go to the light, to [everlasting] happiness, [to rejoicing;] and all the sons of dark[ness will go to the shades, to death] and to annihilation" (Visions of Amram¹? [4Q548] 12-14; cf. also Hodavot^b from Cave 4 at Qumran, hereafter 4QHodavot^b [4Q428] 7.ii.4-5). The fate of Belial's lot is also described as "being sentenced to the gloom of everlasting fire," "humiliation of destruction by the fire of the dark regions," etc. (1QS ii.7; iv.13-14; 1QH^a xiv.17-18; Sapiential Work A^a [4Q418] 69.7). The followers of the spirit of truth are promised "a crown of glory with majestic raiment in eternal light," joy "in eternal light," or a place "in the everlasting residence, in the light of dawn for ever" (1QS iv.6-8; 1QH^a xxi.13-15; Aramaic Levi^d, 4Q541 24.ii.5-6). The deliverance of God's people is depicted elsewhere as a mission of atonement and enlightenment by an eschatological priest: "His eternal sun will shine and his fire will burn in all the ends of the earth; above the darkness his sun will shine. Then, darkness will vanish from the earth, and gloom from the globe . . ." (Aramaic Levi^d, 4Q541 9.2-5).

Because it is experienced at various levels in the daily life of every human being, the separation of light and darkness provided the Qumranites with a powerful and multifaceted means to conceive and express some of their basic doctrines, as was also the case for other groups in Judaism, Gnosticism, and Christianity (e.g., the *Gospel of John*) during the same period and later on up to modern times.

JEAN DUHAIME

LITURGICAL TEXTS. See Psalms, Hymns, and Prayers.

LUKE, GOSPEL OF, the first volume of a two-volume work, Luke-Acts, which narrates the career of Jesus of Nazareth as the founder of Christianity.

The Gospel. The third gospel opens with a literary preface that identifies the programmatic concerns of the text (*Lk.* 1.1–4). The preface compares unnamed earlier works (verses 1–2) with the present work (verses 3–4). We can identify two of the predecessors: *Q*, the sayings gospel, and *Mark*. It is quite likely that the author knew others. In contrast to these, the author claims to present a fuller and more reliable version of the apostolic tradition about Jesus. The *testimonia* of the early church tell us that the author was Luke, a second-generation Christian and the sometime traveling companion of Paul (e.g., the Muratorian Canon 2–8, 34–39; Irenaeus, *Against Heresies* 3.1.1, 3.14.1; and the Old Independent Prologue or Anti-Marcionite Prologue). However, the preface suggests that the author was a third-generation Christian. Most place the author in the last twenty years of the first century CE. The geographical locale of the author and readers is impossible to pinpoint since the text was probably addressed to more than one community. The literary nature of the prologue is important for understanding the work and its relationship to the finds in the Judean Desert: it is the only text in the New Testament that self-consciously situates itself in the Greco-Roman world by means of a literary preface.

At the same time, the narrative is unashamedly Jewish. It begins with an infancy narrative (*Lk.* 1.5–2.52) that has an unmistakable Semitic ambience. A sketch of the career of John the Baptist and Jesus' appointment as the kingdom-proclaimer (*Lk.* 3.1–4.13) serves as an introduction to Jesus' Galilean ministry (*Lk.* 4.14–9.50). The most distinctive structural feature of the gospel is the long travelogue in which the author places Jesus' teaching in thematic groupings (*Lk.* 9.51–19.27). The Jerusalem ministry (*Lk.* 19.28–21.38) sets up the passion narrative that emphasizes the political charges against Jesus (*Lk.* 22.1–23.58). Unlike Mark, who championed the death of Jesus, this gospel accentuates Jesus' entrance into glory by narrating a series of resurrection appearances and an ascension (*Lk.* 23.50–24.52).

Luke and the Dead Sea Scrolls. The third gospel thus has a paradoxical relationship to the world of Qumran: it wants to claim continuity with Judaism and, at the same time, it opens up Christianity to the larger world by engaging it on its own terms. The paradox is complicated by the creation of the apostolic tradition. Christianity was

not simply a variation of Greek-speaking Judaism, but a movement in the process of acquiring its own identity.

The similarities with the Dead Sea Scrolls belong to the effort to anchor Christianity within Judaism. Yet the author clearly knew Judaism in several different forms, including the Septuagint, Greek-speaking Judaism, and Jewish Christianity. The echoes of the Dead Sea Scrolls must therefore be heard as one tradition among several. For the sake of convenience, I will cluster these reverberations into three groups.

The first is the general atmosphere of the earliest sections. As previously noted, the infancy narrative creates a Jewish milieu. While this world depends heavily on the Septuagint, the canticles of Mary and Zechariah (1.46h–55, 68–79) remind the reader of the hymns among the scrolls (1QH^a and the hymns in 1QM; e.g., *Lk.* 1.52 and 1QM xiv.10–11; *Lk.* 1.71 and 1QM xviii.11–12). The heavy Semitic cast of the hymns suggests that they were taken over from earlier Jewish Christians who composed them in much the same spirit as the Covenanters at Qumran did their hymns. The scrolls have even helped to clarify a line in another canticle. Scholars were divided over whether “goodwill” in “people of goodwill” (*Lk.* 2.14) referred to humans or to the deity. The discovery of the same phrase at Qumran where it means “people whom God favors” (1QH^a iv.32–33 [xvii.20–21], xi.9 [iii.8]) has settled the debate. Another section of the narrative that is redolent of Qumran is the presentation of John the Baptist (e.g., 3.1–20; cf. *Lk.* 3.4 and 1QS viii.12–16; *Lk.* 3.16 and 1QS iv.20–21). However, we must not overdraw this portrait since *Luke*, like the *Jewish Antiquities* of Josephus (18.116–19), presents John more as a Hellenistic moral reformer (cf. 3.10–14) than as an apocalyptic prophet.

A second area is the interpretation of scripture. Like the author of *Luke* (24.44), the Essenes know a threefold division of sacred texts (4QMMT 95). Both understand the scriptures eschatologically although the specific vantage point is different: The Christian author can look back to Jesus as the interpreter, whereas the Essenes understood the Teacher of Righteousness to be the interpreter and still anticipated the Messiah(s) (1QpHah vii.4–5). Their hermeneutics are quite similar as the introductory formulas for citations demonstrate (e.g., *Lk.* 3.4 and 4QFlor 1.15; *Lk.* 4.10 and CD xi.20; *Lk.* 7.27 and 4QFlor 1.16). At times they even cite the same texts (*Is.* 40.3 in *Lk.* 3.4 and 1QS viii.14; *Is.* 61.1–2 in *Lk.* 4.18; 7.22 and 1QH^a xviii.14 [x.12]; 11QMelch ii.18–19; cf. 4Q521 2).

The third area comprises the speculations about eschatological figures. The most impressive is *Luke* 1.32 and 35 and the Aramaic Apocalypse (4Q246) ii.1–8, which share four phrases, three virtually identical. Each claims

the figure "will be great," "will be called son of most high," "will be called son of God," and will have an everlasting reign. While *Luke* clearly refers to the Messiah, the Aramaic Apocalypse could refer to a number of different figures: a historical figure such as Alexander Balas, the Messiah, the anti-Christ, an angelic figure such as Melchizedek, or Israel, collectively. At a minimum, the two texts demonstrate that early Christians applied known eschatological formulas to Christ. Another example is the common use of *Isaiah* 61.1–2 in the eschatological speculations of both groups: *Luke* 4.18 and 7.22 use it to refer to Jesus; one of the Hodayot (1QH^a xviii.14 [x.12]) alludes to it as the revelation of God's truth to the speaker (the Teacher of Righteousness?); Melchizedek (11QMelch) applies it to the "messenger" of *Isaiah* 52.7, who appears to be Melchizedek; the Messianic Apocalypse (4Q521) ii.12 associates *Isaiah* 61.1 with God's activities in the messianic era. While there are variations, they all point to the association of *Isaiah* 61.1–2 with the announcement of eschatological salvation.

These similarities should not lead us to think that the Covenanters who produced the Judean Desert documents represent the primary source for Judaism in *Luke*. We have one text that may record a polemic against the Essenes. Luke insists that Christians include "the poor, the crippled, the lame, and the blind" (*Lk.* 14.13, 21) and warns against preferential seating arrangements (*Lk.*

14.7–11, 22.24–26). The Essenes, as described in the Qumran texts, explicitly exclude three of the former (1QSa ii.5–9; 1QM vii.4–6) and have rigid rules for seating arrangements (1QSa ii.11–22). Whether or not these statements were addressed against the Essenes at an earlier stage of the tradition, they represent the values of Jesus and his tradition, which stand at the heart of *Luke*.

Perhaps it is appropriate that a fragment of *Luke* has been found at Khirbet Mird (*Lk.* 13.1, 3–4) in the Judean wilderness. It represents a full circle for *Luke*, which used the traditions from Judea to create a portrait of a branch of Judaism that became Christianity in the larger world and then returned to the homeland.

GREGORY E. STERLING

M

MACHAERUS. The fortress of Machaerus is located on an isolated spur of the Jordanian plateau in the southern region of Madaba, between the Wadi Zarqa Ma'in and the Wadi Moujib-Arnon. It is geographically connected to the hot springs of Baaru to the north (today Hammamat Ma'in) and the hot springs of Callirhoe to the west on the shore of the Dead Sea (present-day Zara).

The name of the fortress, known by the Arabs as Qal'at al-Mishnaqa, was preserved in the ruins of the Roman-Byzantine village of Mechaberos-Mekawer, situated on the high plateau in front of the fortress (Georgii Cyprii *Descriptio*, n. 1082; Cyrilli *Vita Sabae*, 82). U. Seetzen registered the name of the village in 1807 and correctly identified the site, which was later visited by explorers. August Strobel drew a topographical map of the ruins in 1973, focusing on the Roman siege works with the *vallum* (siege wall), the camps, and the towers still clearly visible. Archaeological excavations were directed by V. Corbo on behalf of the Studium Biblicum Franciscanum between 1978 and 1981. Restoration work, followed by the resumption of archaeological research, was conducted in 1992 and 1993 by the Jordanian Ministry of Tourism and Antiquities.

According to Josephus, Alexander Jannaeus chose this naturally defended site, building the fortress on the southern boundary of the eastern province of Jewish Perea as a protection against the Nabateans of Petra (*The Jewish War* 7.6.2). It was demolished by Gabinius (57 BCE). Aristobulus and his son Alexander sought refuge among the ruins (*The Jewish War* 1.8.6). King Herod rebuilt the fortress (*The Jewish War* 7.6.2-3), which was inherited by his son Herod Antipas. In the fortress John the Baptist was thrown into prison and put to death (*Jewish Antiquities* 18.5.1-2). On the death of King Herod Agrippa I (44 CE), the fortress came under the direct control of the Roman army. It was held by the Zealots from the outbreak of the First Jewish Revolt (66 CE) until 72 CE (*The Jewish War* 2.18.6). In that year Lucilius Bassus besieged the fortress, took it, and destroyed it (*The Jewish War* 7.6).

Excavations have clarified the distinction made in Josephus's description between the upper city on the top of the mountain and the lower city built on the steep northern slope.

The structure constituting the first phase of the upper city has been identified as the Hasmonean fortress, but it has not yet been excavated. A later phase, possibly Herodian, was built above it and was differently aligned. The Herodian fortress is defended by four towers, three of which have been identified, and is divided into two main wings by a paved corridor stretching north to south. In the eastern wing, a central court possibly is related to the main entrance, and has *thermae* (baths) on the southern side and rectangular rooms on the northern side. The main feature of the central court of the western wing is a colonnaded *peristilium* with a possible double *triclinium* (reception or banquet hall) on the southern side. Both central courtyards covered a single water cistern. Columns and capitals of Doric and Ionic styles decorated with painted stuccoes found in the central cistern suggest a possible double order for the colonnade.

During the final phase of the occupation, possibly during the First Jewish Revolt, a polygonal defensive wall was built on the outer perimeter of the upper city. Two ovens on the mosaic floor of the *apoditerium* (disrobing room), a *miqveh* (Jewish ritual bath) and a poorly executed wall inside the north tower—the tower being the most exposed to the attack of the Roman legions—should be identified as traces of the Jewish revolt.

In the lower city, built on terraces inside a defensive retaining wall, only a few houses have been excavated. The city wall was defended on both sides by a tower. The northwest tower protected the opening of a large cistern hewn in the mountain.

The lower and upper city were connected to the high plateau on the east through an aqueduct 15 meters (49 feet) high, which diverted rainwater to the cisterns hewn in the northern slope of the mountain. A lower aqueduct served the same purpose for the cisterns at a lower height.

The fortress was razed to the foundation. The siege works built by the Roman legionaries are still well preserved: the *vallum*, with its camps and towers, which encircles the fortress; and the ramp, which was left unfinished because, Josephus relates (*The Jewish War* 7.6), the besieged surrendered. There is no evidence of a later occupation except for two coins of the Roman Provincia Arabia struck at the time of the Emperor Trajan.

MICHELLE PICCIRILLO

MAFJAR, WADI EL- In a series of waterfalls west of Jericho, Wadi el-Mafjar spills into the Jericho plain. During the Hasmonean era, the Fortress of Duk or the Fortress of Dagon was built north of the stream where Simon (Hasmonean) was murdered in 135 BCE [See Simon (Hasmonean).] Near the openings of several caves on the northern bank of Wadi el-Mafjar, a monastery named Duka was built during the fourth century CE. This was the second monastery built in the Judean Desert by Saint Chariton. Since the Middle Ages, the monastery has been associated with the tradition in the New Testament that Satan had tempted Jesus for the duration of forty days; therefore, the monastery is named Karantel, for the forty days Jesus stayed there (see *Lk.* 4.1-13, *Mt.* 4.1-11, and 1.12-13). In comparison to the caves on the northern bank that are part of the Karantel monastery, the caves south of the stream remained more or less in their natural state. In 1979 the Israel Cave Research Center explored the southern bank of Wadi el-Mafjar. The discovery in 1984 of a wooden comb characteristic of the Bar Kokhba era prompted my excavations in 1986 [See Bar Kokhba Revolt.] During this excavation, fragments of four different documents from the Bar Kokhba era and an almost complete document, dated to the fourth century BCE according to paleographic considerations, were discovered. Because the name Avi'or is mentioned in this document, the cave is called the Cave of Avi'or. At the end of 1993, excavation of Wadi el-Mafjar continued under

the leadership of Hanan Eshel and B. Zissu. Fragments of twenty fiscal documents from the Bar Kokhba era were found below the Cave of Avi'or. Excavations were conducted in the adjacent Cave of the Sandal, situated approximately 300 meters (984 feet) south of the Cave of Avi'or, where additional finds from the Bar Kokhba era, among them two small fragments of economic documents written in Greek, were discovered.

Cave of Avi'or. The small cave known as the Cave of Avi'or is 25 meters (85 feet) deep. It has three openings, a low one, approximately 5 meters (16.4 feet) high above the natural terrace south of Wadi el-Mafjar, as well as two higher ones. From the high northern entrance a tunnel connects to the main hollow of the cave, which is located at its center. From this point, the tunnel continues into an inner chamber. It is impossible to stand erect in the Cave of Avi'or, except for the areas of the lower entrance and the high southern entrance. Finds date from the Chalcolithic period, the Middle Bronze Age, the Roman era (second century CE), the Mamluk dynasty (fourteenth century CE), 1948, and 1967.

The majority of the finds in the cave are from the Roman era. Thirty-eight disarticulated skeletons were found in the inner chamber. The skeletons were of men, women, and children who most likely choked to death when the Roman army discovered the cave and ignited a bonfire under it. The oldest person to escape to the Cave of Avi'or was sixty-five years old, and the youngest was a girl of three. Special significance is given to remnants of a studded sandal, meaning a Roman boot, found in the cave, since it illustrates nicely a tradition appearing in rabbinic literature that the Jews who fled to the caves at the end of the Bar Kokhba Revolt used this type of sandal. The ceramic and organic findings discovered in the cave verify that the refugees fleeing to the cave did not prepare sufficient provisions and were therefore compelled to gather wild fruit, which ripens in the months of September and October, outside the cave. Consequently, it can be assumed that the people of Jericho escaped to the caves west of their city in October of the year 135 CE like the people of Herodian who fled to Wadi Murabha'at at the same time, since the latest document. Fragments of four economic documents from the Bar Kokhba era were found in the Cave of Avi'or: two in Aramaic and two in Greek. One of the Aramaic documents is a loan contract in which Nehunia ben ha-Levi borrowed an amount of money he was obligated to repay in four installments. An additional Aramaic document describes the sale of agriculture goods. A Greek certificate document mentions a man named Yehudah, while the fourth document is a receipt for the sale of seeds. [See Deeds of Sale.] The documents were discovered in a crevice in the cave's floor and in the terrace built above the lower entrance.

A document from the fourth century BCE was discovered above the Roman documents on this terrace. This document was written on both sides of the papyrus and contains two lists of Jewish names. Written beside each name is a sum of money in shekels, quarters, and *me'ahs* (ancient coins). Several of the names are rare while others are typical of the Second Temple era. [See Names and Naming.] At the end of each side is a summary. On side A, the sum is twenty-one shekels, while the sum on side B most likely reads: "all shekels twelve . . . the remaining shekels eight, coins of small change two." Because some of the names are mentioned on both sides of the papyrus and the sum on side B is always lower than the sum on side A, one can assume that sums of money given as loans were written on side A, while the repayments of these were written on side B. Since the documents and other finds were discovered on the terrace in inverted stratigraphy, meaning that the finds from the Roman era were discovered under finds from the fourth century BCE, one can assume that the terrace was built during the Mamluk era.

Because all the documents were discovered in the cave, in the terrace, or in a crevice in the floor, it was thought that it was possible that in the Mamluk era the cave was clean of soil (excluding the soil in the crevice and on the terrace), and therefore in 1993 excavations were carried out beneath the lower entrance. During this excavation a group of approximately twenty fragments of economic documents written on papyrus from the Bar Kokhba era were discovered. [See Economic Life.] Four are in Greek, and the remainder are in Aramaic. The most complete among them is an Aramaic text documenting the sale of a date crop by a lawyer for an orphan.

Cave of the Sandal. This is a small cave, similar to the Cave of Avi'or. Approximately 300 meters (98 feet) south of the Cave of Avi'or, the Cave of the Sandal has a single entrance, the height of which is approximately 8 meters (26 feet) above its terrace. Its length is roughly 15 meters (49 feet). The Chalcolithic period and Early Bronze Age are represented as is the Roman era: the cave served as a burial place in earlier periods and as a place of refuge during the Roman era. Twelve skeletons, seven of them dated to earlier periods, while the five others are most likely from the Roman era, were discovered in the cave. It can be assumed that those who hid in this cave met a similar death to those in the Cave of Avi'or, suffocating from the smoke of a fire set by the Roman army after they found the cave. The finds from the Bar Kokhba era include pottery, as well as two complete oil lamps and remnants of glass vessels. [See Glassware; Pottery.] Likewise, parts of leather sandals, processed leather, ropes strings, and parts of baskets and mats were discovered. [See Basketry; Leather Goods.] The metal finds include

coins and jewelry, consisting of a pair of gold rings, a gold earring, and a silver makeup spoon. [See Jewelry; Numismatics.] Twenty-six silver and bronze coins were discovered in the cave, the earliest among them is a silver dinar from the days of Vitellius from the year 69 CE, and the latest are dinars from the days of Hadrian. Especially interesting is a collection of six bronze coins with counter marks of the Tenth Legion. Two torn fragments of papyrus with Greek letters were found at the entrance to the cave. [See also Archaeology.]

Translated from Hebrew by Daphna Krupp

MAGHARIANS. Named after the Arabic term meaning "people of the caves" (*maghār* means "cave"), the Magharians are described as a pre-Christian Jewish sect by the tenth-century Karaite Jew Yaqub Qirqisani. Some modern scholars prefer to date the Magharians to the medieval period. Although Qirqisani understands the name to mean that "their books were found in a cave," it is not clear whether in the distant past the Magharians themselves found books in a cave or their books were recovered from a cave in later times. Qirqisani also mentions that among these were the book of the "Alexandrian," who has been identified by some scholars as Philo, and a *Sefer Yadu'a* (or *Yado'a*), the identification of which is problematic.

One of two primary distinguishing features of the Magharians is a calendar the months of which begin with the appearance of the full moon. The Muslim scholar al-Bīrūnī (973-1048) suggests that the Magharians observed both Ro'sh ha-Shanah and Passover only on a Wednesday, since that was the day of the week on which the sun and moon were created. The other distinguishing feature is the idea of the existence of a mediating angel used to explain anthropomorphisms in the Bible, thereby preserving the ultimate transcendence of God. This angel was described by the Muslim heresiographer al-Shahrastānī (d. 1153) as the creator of the world who acted as God's "viceroy" and "elect" on earth and may reflect pos-

sible Gnostic connections. Both Qirqisani and al-Shahrastānī connect this point of Magharian theology with that of the ninth-century Karaite Binyamin ben Mosheh Nahawendi, who held a similar view. Both authors also attribute ascetic tendencies to the Magharians.

Even before the discovery of the Dead Sea Scrolls the Magharians were identified by some scholars with the Essenes, but afterward they were explicitly identified as the Essene-Qumran community based upon the following: the association with caves; the approximate dating of the sect by Qirqisani and al-Shahrastānī to the first century BCE; the identification of the Alexandrian as Philo, whose description of the Therapeutae in *The Contemplative Life* has been thought to describe the Essene-Qumran community; the purported similarities of the Magharian calendar to the calendar of *Jubilees* and other calendars seemingly used by the Qumran community; and the association of the Magharian creator-angel with dualism in the angelology of the scrolls.

Scholars also have identified the Magharians as a link between the Dead Sea Scrolls and medieval sectarian phenomena, postulating that as a medieval sect their ideology was based upon manuscripts found in a cave in the vicinity of Qumran, as reported by Timotheus, the ninth-century Nestorian Catholicos of Seleucia-Baghdad. It is further suggested that the Magharians influenced the development of Karaism, especially by those who identify the Magharians and Karaites as medieval continuators of the Essenes. Magharian dualism and the doctrine of a mediating angel support a Gnostic identification, either as a pre-Christian sect or as a Jewish Gnostic sect in the medieval Islamic world.

came a Christian Gnostic sect, and ended up as a medieval Arabized Jewish Gnostic sect influencing the ninth-century Karaite Binyamin ben Mosheh Nahawendi.

FRED ASTREN

MAGIC AND MAGICAL TEXTS. Though the Qumran community knew of the biblical prohibition against magic (11Q19 lx.16–21; cf. *Dt.* 18.9–14), both sectarian and nonsectarian texts from the Judean Desert prove that, like most of their contemporaries, they believed in and practiced certain types of magic. These magic and magical texts concern two areas: exorcism, healing, and protection against demons (4Q510, 4Q511, 4Q560, 11Q11), and divination, augury, and prediction of the future, specifically through physiognomy (4Q186, 4Q561), zodiology and brontology (4Q318), and astrology (4Q186, 4Q318).

Proverbs(?). This very fragmentary text (4Q560) is an adjuration against demons, which attack pregnant women, cause various illnesses, and disturb sleep. Though the categories of demons listed are sometimes hard to identify, a complex demonology is clearly implied. Beelzebub, the prince of the demons, may be mentioned by name (4Q560 i.1). The text probably comes from a book of spells that contained a collection of such adjurations. A healer or exorcist would have copied an appropriate spell from the book onto leather, papyrus, or a thin sheet of metal and personalized it for a client by inserting his name. This text, encased in a small container, would then have been worn as an amulet or buried in a suitable spot in a house (e.g., at the threshold). *Proverbs(?)* is almost certainly not itself the amulet, since the leather shows no signs of rolling or folding; the spell is a general charm to prevent demonic attack. Such amulets may be compared with *tefillin* and *mezuzot*, examples of which have been found at Qumran. It is unclear, however, whether the Qumran community considered *tefillin* and *mezuzot* as protection against demons or simply as the literal fulfillment of the injunctions in *Deuteronomy* 6.8–9.

Songs of the Sage^{a-b}. These texts (4Q510–511) contain fragments from an extensive collection of Hebrew songs of a strongly incantatory character. The songs were recited by the *maskil* ("sage"), who declares the power and majesty of God in order

to frighten and ter[rify] all the spirits of the destroying angels and the spirits of the bastards, the demons, Lilith, the howlers and [the yelpers], those who strike suddenly to lead astray the spirit of understanding and to appall their [the members of the Qumran community's] heart and their so[uls] in the age of the dominion of wickedness. (4Q510 i.4–6)

The text is probably sectarian in origin and reflects the belief of the Qumran community that it is engaged through its liturgy in spiritual warfare against the forces of evil. The sage above all was charged with the spiritual defense of the community. These songs, which have a general apotropaic function, illustrate how fine is the line dividing prayer and hymn, on the one hand, from magical incantation, on the other. They recall such texts as the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community; 1QS ii.4–9), the War Scroll (1QM xiii.4–5), Berakhot^f (4Q280), Berakhot^d (4Q286), and, possibly, Curses (5Q14), in which Belial and his minions (both demonic and human) are ritually damned. In the latter texts the curses are uttered by the priests and Levites, or even by the community as a whole, whereas Songs of the Sage^{a-b} contain liturgies apparently falling specifically within the province of the sage and reflecting his particular role in the community. [See Songs of the Sage.]

Apocryphal Psalms^a. Of these four incantations attributed to David, the first three are apocryphal, and the fourth is a version of Psalm 91, the use of which for protection against demons is well attested in rabbinic sources (J.T., *Eriv.* 10.11 [26c]; B.T., *Shev.* 15b). These four texts have been plausibly linked to the four “songs for singing over the afflicted” mentioned in the list of David’s writings in Psalms^d from Qumran Cave 11 (11Q5 xxvii.9–10). Though they share many motifs with Songs of the Sage^{a-b}, the situation they envisage is specific and not general. The outer defensive ring represented by Songs of the Sage^{a-b} and Proverbs(?) has been breached. An evil spirit has successfully attacked a member of the community causing illness and has to be expelled. Apocryphal Psalms^d contains the texts recited over the victim, perhaps by the sage, to effect the exorcism. The victim responds after each incantation with the formula “Amen, amen. Selah” (cf. 11Q11 v.14). The first three texts are hortatory in tone. The victim is exhorted to exert himself, to confront the evil spirit, and to remind it of the creative power of God, of the mighty guardian angels whom the righteous man can summon to his aid, and of the incarceration in the abyss that they can inflict. Consequently, an element of self-healing seems to be involved. The text also may contain a remarkable allusion to the physiognomy of Belial if “face” and “horns” are to be taken literally (11Q11 iv.6–7). An early mention of Solomon appears in the context of spells against demons (11Q11 i.3).

Apocryphal Psalms^a may be compared with descriptions of healings in a number of literary narratives in the Dead Sea Scrolls. The most complex example is in the *Book of Tobit*, a novelistic work of nonsectarian origin but apparently popular at Qumran, in which Tobias ex-

pels the demon Asmodeus from his bridal chamber through a combination of prayer and magical praxis (the burning of parts of the heart and liver of a fish on ashes of incense). The warrior angel Raphael is also involved in the action, both in advising Tobias and in pursuing and binding Asmodeus (*Tb.* 6.16–17, 8.1–8; cf. 4Q196, 4Q197). [See Tobit, Book of.] A second example is the Genesis Apocryphon (1QapGen xx.16–29), in which Abraham prays and lays his hands on Pharaoh’s head to expel an evil spirit that has afflicted him because he took Sarah into his house (cf. *Gn.* 12.10–20, 20.1–18). The third example is in the Prayer of Nabonidus (4Q242): Nabonidus is cured of an “evil ulcer” through praying to God and through the attentions of a Jewish “exorcist” who “forgave” his sin. The account of the healing is very compressed and unclear, and it has been suggested that, in fact, the word is “resident alien” rather than “exorcist.”

Horoscope and Physiognomy/Horoscope. Both of these texts (4Q186 and 4Q561, respectively) are physiognomic texts that attempt to determine the character of a person’s “spirit” from the color of his eyes, the sound of his voice, the shape of various parts of his body, and other observable physical features. Though the two texts are very similar, it is unlikely that one is a straightforward copy of the other. Horoscope is in Hebrew; Physiognomy/Horoscope is in Aramaic. Horoscope is in code; Physiognomy/Horoscope is not. Above all, Horoscope links physiognomy with astrology (the sign under which one is born determines the nature of one’s spirit, and this in turn registers on one’s physiognomy), whereas Physiognomy/Horoscope, at least in the preserved portions, does not. The divinatory science of physiognomy is well attested in antiquity, with an extensive literature in Akkadian, Greek, and Latin, but before the discovery of Horoscope and Physiognomy/Horoscope, the earliest Jewish texts on these subjects dated to the Middle Ages. The expressions “house of light” and “pit of darkness” in Horoscope link it with the “Treatise on the Two Spirits” in 1QRule of the Community (1QS iii.13–iv.26) and suggest that the Qumran community, like the Pythagoreans, applied physiognomic criteria to determine who was fit to join their group. [See Pythagoreans.] The astrological element in Horoscope fits in well with the community’s broader knowledge of calendrical and astronomical lore. [See Horoscopes.]

Two narrative texts from Qumran also show an interest in physiognomy. The first, Elect of God (4Q534), describes the birth of a wonder child (probably Noah), whose special qualities and destiny are marked by certain physiognomic features. The reference to “lentils” (freckles) and “moles” is paralleled in medieval Jewish physiognomies. The second is the description of Sarah’s beauty

in the Genesis Apocryphon (1QapGen xx.2–8), where long, supple fingers are seen as a positive physical characteristic, in contrast to the negative characterization of short, fat fingers in Horoscope. [See Elect of God; Genesis Apocryphon]

Zodiology and Brontology. This scroll (4Q318), a type of divinatory text, found also in Akkadian, Greek, and medieval Hebrew, interprets thunder as an omen portending important events. Zodiology and Brontology is complex. It opens with a table that assigns the moon to one of the twelve signs of the zodiac for each day of each month of the year. This table was then used in the second half of the work to explain the significance of thunder. If it thundered on a day when the moon was in a given sign, certain things, it was believed, would follow. For example, "If thunder occurs [when the moon is] in Gemini, [it portends] fear and distress caused by foreigners." Brontology did not necessarily involve astrology. The astrological element in Zodiology and Brontology is, therefore, significant, as is its use of the moon to link thunder to the zodiac. Josephus (*The Jewish War* 6.291) states that portents were eagerly studied in first-century CE Palestine and that the interpretation of omens required great skill. It may have been seen specifically as a priestly prerogative. An interest in portents at Qumran would also fit well with the community's eschatological perspective. It is a commonplace of apocalyptic literature that signs and wonders in the heavens would foretell the end of history.

Though the basic ideas and praxis of Qumran magic were common in antiquity, the high level of theological reflection behind the magic at Qumran is unusual. Magic is fully integrated into the Qumran worldview. The Qumran group knew and accepted the remarkable account of the origin of the demons from the bodies of the antediluvian giants (*1 Enoch* 7.2–6, 10.4–15, 15.8–16.2, cf. 4Q201, 4Q202, and 4Q204). *1 Enoch* lies behind the expression "the spirits of the hastards" in Songs of the Sage⁴, and Apocryphal Psalms⁵ alludes to the judgment of the angelic watchers from whose illicit union with women the giants were born. The Qumran community also may have known the parallel passage in *Jubilees* 10.1–14 and noted its claim that the angels taught Noah all the "medicines" to counteract the harmful activities of the demons. Behind magic at Qumran lies the dualism of the Two Spirits (1QS iii.13–iv.26). Good and evil are at present locked in a cosmic conflict. Ranged on one side are Satan/Belial/Melchiresha and his servants—the demons and the wicked human opponents of the sect. Ranged on the other side are Michael/Melchizedek, the good angels and the members of the sect. The sect's spells, incantations, and prayers are weapons in its fight against the forces of darkness. The "Treatise on the Two Spirits," with its determinism, lies behind even the Qumran physiogno-

mics. The magic is restrained: the praxis on the whole is not theurgic or mechanistic but relies heavily on petitioning divine agencies to intervene on the community's behalf. The Qumran community's reluctance to pronounce the names of God (1QS vi.27–vii.2, CD xv.1–2; and the letter *yod* as the abbreviation for YHVH in 4Q511) may have inhibited the development of the *nomina barbara* ("strange names") so characteristic of later Jewish magic and mysticism. This is not the magic of the marketplace, but a high-level, learned magic, comparable in sophistication to that found later in the Great Magical Papyrus of Paris, written in Greek, or in the Hebrew *Sefer ha-Razim* (Book of Secrets). Qumran magic probably formed part of the doctrine and tradition that the *maskil*, as the guardian of the community's spiritual and physical well-being, was expected to master and transmit.

PHILIP S. ALEXANDER

MALACHI, APOCRYPHON OF. See Minor Prophets.

MALACHI, BOOK OF. See Minor Prophets.

MANASSEH. See Ephraim and Manasseh.

MANASSEH, KING. Noncanonical Psalms B includes a fragmentary composition entitled "A Prayer of Manasseh, King of Judah, when the King of Assyria Imprisoned Him" (4Q381 33.8). This superscription refers to the Judean king who ruled from approximately 687 to 642 BCE. The Qumran psalm recalls the unusual summary of Manasseh's reign in *2 Chronicles*: "Manasseh's deeds, his prayer to his God, and the words of the seers who spoke

to him in the name of the Lord God of Israel are in the annals of the kings of Israel. His prayer, and how God received his entreaty, all his sin and faithlessness, the places where he built high places and set up the sacred poles and images, before he humbled himself, these are written in the records of the seers" (2 Chr. 33.18–19). In spite of Manasseh's alleged prayer and repentance, his legacy is quite mixed. According to *Kings*, Manasseh was the most wicked of the Judean kings, and exilic writers point to his sins to explain the Judean exile (e.g., 2 Kgs. 21.10–15, 24.3–4; Jer. 15.4). Further elaborations of Manasseh's sins are described in 2 *Baruch* (64–65), *Martyrdom and the Ascension of Isaiah* (2.1–6), and rabbinic traditions. Yet according to *Chronicles*, Manasseh was exiled to Babylon for his sins but repented and prayed to God and was returned to Jerusalem (2 Chr. 33.10–17).

The Qumran Prayer of Manasseh follows the predominantly positive view of Manasseh in later Jewish sources where the wayward king becomes a paradigm of the repentant sinner (for example, in Josephus, *Jewish Antiquities*, 10.40–46). Manasseh's prayer speaks of his "sins" and "multiplied guilt" (4Q381 33.9). Manasseh acknowledges that he "did not serve" or even "remember" God (line 11), and yet he looks to God's "salvation" and "saving presence" (lines 8–9). The Prayer of Manasseh also highlights the competing explanations for the Babylonian exile. In the tradition represented by *Kings*, the exile is blamed on one individual—Manasseh. In the other tradition, this individual becomes the paradigm for a whole nation that was exiled in sin and restored in repentance.

The language and style of the Qumran Prayer of Manasseh indicate a close relationship with biblical psalmody. Although the biblical story obviously was known, the Qumran text surprisingly betrays no direct dependence on *Chronicles*. It speaks only in the most general terms of Manasseh's "great sins" and "shame" and his "seeking salvation" from God. This seems especially unusual when compared with the Greek Prayer of Manasseh, which depends directly on *Chronicles*. The Greek Prayer is typical of apocryphal and pseudepigraphal literature, which draw heavily on biblical language, themes, and motifs. It also raises the question of whether the *Chronicles* tradition may actually be derived from the Qumran Prayer of Manasseh. Alternatively, the Qumran prayer and *Chronicles* draw on an earlier tradition.

[See also Sadducees.]

WILLIAM M. SCHNIEDEWIND

MANICHAEANS were a religious community whose name stems from that of its founder, Mani, a third-century CE Mesopotamian gnostic sage. Due to its aggressive promulgation within both the Roman and Sassanian Empires, Manichaeism rapidly became a major rival of their indigenous religions, particularly Christianity. Vigorous state-supported suppression insured the demise of Manichaeism in the West by the sixth century. Similar persecutions by Zoroastrian and eventually Muslim zealots were less successful in the East, and Manichaeism survived as a viable religious identity within the Islamic realm well into the 'Abbasid period. There also exists evidence that attests to its persistent survival even as late as the seventeenth century in China.

Sources for Manichaeism. Our knowledge of Manichaeism derives largely from two broad categories of data. First in importance are the extant remnants of authentic Manichaean writings recovered by archaeological investigations of sites in Egypt and in central Asia. Manichaean literature from Egypt survives in Syriac, Greek, and Coptic, with the latest evidence indicating that the Greek and Coptic works are local translations of earlier Syriac versions. The central Asian finds are rendered in a variety of Middle Iranian languages, as well as Old Turkic, and lexical clues once again point to a prior eastern Aramaic stratum. Given Mani's Mesopotamian roots, as well as the explicit statement of later tradition, that Mani composed the bulk of his writings "in Syriac," this is, on its surface, an unremarkable state of affairs, yet scholars have been surprisingly unappreciative of the implications of the Semitic linguistic background for Mani's conceptual development. Unfortunately, most of these recovered works are in an extremely fragmentary condition, and a substantial quantity of the material remains unpublished.

Also of signal value in the reconstruction of Manichaean ideology are a small number of testimonia supplied by later Christian and Muslim heresiologists. Their general veracity, once suspect, has been confirmed by portions of the aforementioned primary sources. The most important of these testimonia are contributed by Ephrem Syrus (fourth century), Theodore bar Koni (eighth century), Ibn al-Nadim (tenth century), al-Biruni (eleventh century), and al-Shahrastani (twelfth century).

In addition to providing valuable historical information about the founder and the subsequent fortunes of his community, these sources also utilize (and sometimes quote) Manichaean literature when illustrating particular facets of that religion's doctrine. Since Ephrem and Theodore present their material in Syriac, their reports are of especial significance in the task of the recovery of original Manichaean terminology and locutions.

Ideology and Ethos. The cosmogonical teachings of Mani, derived in large part from a creative exegesis of the Bible and works like *I Enoch*, form the structural basis for the typical attitudes and behavior associated with Manichaeism. According to both authentic Manichaean writings and summaries supplied by hostile witnesses, the following myth is the fundamental expression of Manichaean religiosity. [See Enoch, Book of.]

In the beginning there existed two Realms in a primal, unsullied state: the Realm of Light or of Goodness, and the Realm of Darkness or Wickedness, each Realm populated with entities sharing those respective qualities, the "Sons of Light" and the "Sons of Darkness." The Sons of Darkness, depicted as filled with lust for violence and sensual gratification, gradually became aware of the paradisiacal qualities of the neighboring Realm of Light, and launched an assault against it with the aim of acquiring it for themselves. The ruler of the Realm of Light, termed the *Father of Greatness*, responded to this attack by invoking a champion, the so-called Primal Man, who went into battle armed with various component entities from the Realm of Light. Primal Man proceeded to the Realm of Darkness, but was promptly defeated, taken captive, and stripped of his lustrous armor, which was then consumed like food by the Sons of Darkness. This catastrophic defeat marks the initial "mixture" or "mingling" of the two previously separate Realms, a state of affairs which the eventual creation of the physical cosmos and the course of human history will be dedicated to alleviating.

Primal Man was soon delivered from his predicament by other forces from the Realm of Light, but the rescue of the now hopelessly dispersed and entrapped elements of Light consumed by the Sons of Darkness required a more imaginative stratagem. This plan involved the creation of the present universe as the arena wherein the captured elements of Light could be recovered. Sun, moon, and stars were created in order to attract the earthbound particles of Light upward toward their original home in the Realm of Light. Furthermore, a certain number of the Sons of Darkness, termed *archons* or *demons*, were taken into custody by the forces of Light. [See War of the Sons of Light against the Sons of Darkness.] Some of these archons were killed and dismembered so as to construct from their carcasses the physical surface of the earth. The remainder of the archons were

imprisoned upon the firmament (literally, "affixed" or "nailed") and kept under guard in preparation for the next step of recovery, a stage labeled by modern scholars the *seduction of the archons*.

The seduction of the archons was effected by an emissary of the Realm of Light who was androgynous in form. This emissary paraded nude before the captive archons, displaying a female form to the male archons and a male form to the female archons. Excited by their lust for this unattainable form, the male archons ejaculated semen wherein the previously engulfed particles of Light were now concentrated. This seed fell to earth and became the origin of plant life. Similarly, the female archons, who were depicted as being pregnant, miscarried, and their fetuses fell to earth where they became animal life, as well as other monstrous beings, termed *abortions*. The abortions fed upon the plants and each other, engaged in generally riotous, violent behavior, and further dispersed and mixed the entrapped elements of Light. They, however, wistfully recalled the beautiful forms of the emissary which their archon parents had seen in the heavens, and decided to create facsimiles of those male and female forms upon earth. By a gruesome process of cannibalism and sexual activity, the first human couple, Adam and Eve, was created.

Alarmed by these new developments upon earth, the Father of Greatness dispatched a heavenly messenger, the "Apostle of Light," to Adam in order to instruct him regarding the ways in which he and his offspring could assist in the process of recovering the trapped elements of Light from the material universe. These instructions form the core of the Manichaean ethos: complete abstinence from sexual activity, strict dietary regulations, and elaborate rules for prayer and purification. If followed, these prescriptions would eventually produce the liberation of the captured particles of Light and restore the primal uncontaminated status of the Realm of Light, as well as the destruction of the physical universe. During the course of human history, the Apostle of Light has periodically journeyed to earth and assumed human guise in order to repeat these instructions to subsequent generations of humanity. The advent of Mani was viewed as the final stage of the Apostle's didactic mission.

Relationship to the Scrolls. One of the more intriguing aspects of modern research into the history of Near Eastern religions during late antiquity involves the growing recognition that there is a conceptual and literary nexus between Second Temple Jewish scribal circles and certain subsequent Syro-Mesopotamian religious movements, including, most prominently, Manichaeism. The mechanisms underlying this gradual eastward transmission of traditions and texts remain, however, tantalizingly obscure.

Thanks to the recent discovery and publication of the Cologne Mani Codex, a fourth- or fifth-century Greek hagiographic life of the heresiarch, we know that Mani spent his formative years among a southern Mesopotamian branch of the Elkesaite sect, a Jewish-Christian group allegedly founded by a prophet named Elkesai. This sect originated in the Transjordan and Dead Sea region during the final decades of the first century CE. Interestingly, some suggestive similarities have been observed between the communal structure and ritual behavior of the Elkesaites and the earlier Second Temple Jewish sect of the Essenes, a group that has been prominently linked by many scholars to the composition and/or preservation of the Qumran library. A possible connection between these two sectarian communities receives important support from the testimony of Epiphanius, a prominent fourth-century Christian bishop and heresiologist who was intimately familiar with the late antique Palestinian religious landscape. [See Epiphanius.] According to this source, there was present in the region around the Dead Sea a Jewish sect of "Ossaeans," a designation which is strikingly reminiscent of "Essenes." However, "during the reign of the Emperor Trajan . . . these were then joined by one called Elksai, who was a false prophet" (*Panarion* 19.1.4). Epiphanius reports that this sect is "now called Sampsaeans," but adds at another place that "the Sampsaeans are now called Elkesaites" (*Panarion* 53.1.1). If Epiphanius's information can be trusted on this point, we have discovered one plausible way by which Second Temple Jewish extrabiblical literature came into the possession of the Elkesaite sect and ultimately to the attention of Mani.

The posited linkage between the Essenes and the Elkesaites need not be the sole means of this ideological and textual migration. Some scholars have speculated about the possible survival of subterranean sectarian currents within classical Judaism until the geonic period, at which time one or more reemerge in the Karaite schism. There are sporadic references in Christian, Muslim, and even medieval Jewish literature to the continued existence of the "Zadokite" (usually rendered "Sadducee") sect, a group which moreover displays some interesting affinities with its alleged forebears at Qumran. [See Sadducees.] Finally, the presence of "apocryphal" works like the Damascus Document, Aramaic Levi, and *Ben Sira* among the Cairo Genizah hoard demonstrates the persistent vitality of sectarian literary traditions among certain segments of Islamic Jewry. It is possible that Mani (and others) were exposed to traditions of this sort via occasional interactions with representatives of such groups.

Careful study of Manichaean literature and traditions has systematically uncovered Mani's reliance upon and esteem for older pseudepigraphic works, particularly

those allegedly authored by biblical primal forefathers, such as Adam, Seth, or Enoch. His indebtedness to Enochic literature is especially profound, inasmuch as certain structural features of his cosmogony, cosmology, and eschatology betray the influence of the revelatory wisdom transmitted in what are today termed *1 Enoch* and *2 Enoch*. Most importantly, conclusive evidence for Mani's acquaintance with specifically Qumranic literature comes from his expropriation and adaptation of the so-called *Book of Giants*, an aggadic expansion of *Genesis* 6.1–4 and *1 Enoch* 6–11 (that is presently attested only in two literary collections; namely, the Qumran library and Manichaean scriptures). This work, originally a Jewish composition, eventually achieved canonical status within Manichaeism.

MANUAL OF DISCIPLINE. See Rule of the Community.

MARK, GOSPEL OF. While much has been written concerning the dubious identification of certain of the papyrus fragments discovered in Cave 7 at Qumran (7Q1–18) as fragments of the *Gospel of Mark* (Fitzmyer, 1990), there has been relatively little discussion of the specific relation of Mark's gospel to the scrolls except within the general context of their relation to Christian origins (Black, 1961, 1969), the New Testament (Braun, 1966, Stendahl, 1958), the Gospels (Betz, 1987), John the Baptist, and Jesus (Berger, 1995; Charlesworth, 1993; Stegemann, 1994).

Introduced by a proof text (*Is.* 40.3) that the Qumran community also used to account for its presence in the wilderness (see Rule of the Community [1QS viii.12–16] where "preparing the way of the Lord" meant the study of the Law), John the Baptist is the first character to appear on the Markan stage (*Mk.* 1.4). A connection between John and the Qumran community has frequently been posited, reference being made to the proximity of Qumran to his sphere of activity (*Mk.* 1.4, 5), and to the

similarity of their respective teaching (eschatological judgment and messianic expectation) and practice (baptism and asceticism), as the Markan evangelist presents these (cf. *Mk.* 1.4–8; 2.18–19). Appeal has been made in particular to the remarkable (but disputed) conjunction, common to both, between baptism and entry into the eschatological community, between baptism, repentance, and the confession of sin (cf. *Mk.* 1.4, 5 and 1QS i.24–ii.1; v.13–14), and between such cleansing and the Holy Spirit (cf. *Mk.* 1.8 and 1QS iii.6–9; iv.20–22). On the other hand, the Markan Baptist is not concerned with founding a community, but calls on the nation as a whole for what is an unrepeatable act of moral obedience rather than for the regular ritual washings that otherwise characterize the Qumran community. Significant in *Mark* solely for his witness to Jesus, he proclaims furthermore only a single messiah (1.7), in contrast to the two or more messianic figures of Qumran expectation.

Although described as a “true” teacher (*Mk.* 12.14), the principal character of Mark’s gospel is hardly to be identified with the “Teacher of Righteousness” of the scrolls, as some have suggested, far less with the Wicked Priest (see Thiering, 1981). There is little indeed to establish a connection between the Markan Jesus and the Qumran community other than his links with John. His attitude to wealth or to marriage is comparable to theirs, but these have an Old Testament foundation and may not be significant. A healer and exorcist like the Essenes, he too invests eschatological significance in cures and exorcisms (cf. *Mk.* 3.22–30 and 1QS iv.19–22; War Scroll, 1QM xiv.9–10), which he accomplishes with the laying on of hands (cf. *Mk.* 7.32 ff. and Genesis Apocryphon, 1QapGen xx.21–22, 28–29, hereafter called 1QGenesis Apocryphon). As teacher and prophet, he proclaims “the good news” (cf. *Mk.* 1.14–15), a messianic act according to Melchizedek (11Q13) ii.15–20. In priestly fashion, he can expiate sins (cf. *Mk.* 2.5, 10), a role predicated of the expected Messiah of Aaron and Israel (cf. Cairo Damascus Document^a, CD-A xiv.18–19 = 4Q Damascus Document^b, 4Q267 18 iii.12–13), and as “shepherd” of his flock (cf. *Mk.* 6.34; 14.27) he fulfils the words of *Zechariah* 13.7, a passage quoted in Cairo Damascus Document^b (CD-B) xix.7–11 in connection with the same figure(s).

Principal Parallels. Although the linguistic medium of the respective texts is different—Mark is written in Hellenistic Greek (*Koine*); almost all of the Qumran documents, in Biblical Hebrew or Aramaic—the aforementioned parallels exist because the author of *Mark* has taken over a Palestinian Jesus (and John) tradition already forged in the common crucible of apocalyptic Judaism and the ideas associated with it. These ideas are a dualism, both cosmic (two powers, God and Satan, in continuous warfare; cf. *Mk.* 3.22–30 and 1QS iii.17–iv.1)

and temporal (two ages, the present wicked, the future blessed); the battle of God’s elect with temptation (*peirasmos*), sin, and the flesh (cf. *Mk.* 1.12–13; 4.17; 8.33; 13.21–22; 14.38; 1QS iii.13–iv.26); an emphasis on eschatology (the present age, in fulfillment of prophecy, as the final age of blessing for the righteous and judgment [by fire] for the wicked; cf. *Mk.* 1.14–15; 9.43ff.; 13.1ff. and Peshar Habakkuk, 1QpHab vii.1–14; 1QS ii.7–8; iv.11–14; 1QHodayot^c, 1QH^a xiv.17–19; CD-A ii.5–7); the coming of the reign or kingdom of God (cf. *Mk.* 1.14–15; 9.1; 14.25; 15.43; Assumption of Moses 7–10 and, among the scrolls, where it is not, however, a dominant theme, 1QM vi.6; xiv.16); the advent of messianic agents prosecuting God’s will.

While the scrolls appear to testify to a plurality of messianic figures (CD-A vii.18–21 = 4Q267 3.iv.7–10 = Damascus Document^d, 4Q271 5.2–4; xii.22–xiii.2; xiv.18–19 = 4Q267 18.iii.12–13 = 4Q271 13.2–3; CD-B xix.10–11, 35–xx.1; 1QS ix.9–11; Rule of the Congregation, 1Q28a ii.11–14, 17–22; Florilegium, 4Q174 i.10–13; 11Q13 ii.15–19), a Davidic messiah or messiah of Israel (cf. also Commentary on Genesis A, 4Q252 v.1–7; War Rule, 4Q285 5.1–6; Messianic Apocalypse, 4Q521 2.ii: a priestly messiah or messiah of Aaron [cf. also Aramaic Text A = Aramaic Levi^d?, 4Q541 9.i]), an anointed prophet and/or “Interpreter of the Law” (cf. *Mk.* 9.4) and, more controversially a heavenly figure or “Son of God,” cf. Aramaic Apocalypse, 4Q246 i.1–ii.8), such expectations are attached in *Mark* either, in a subordinate way, to John the Baptist (cf., e.g., *Mk.* 1.2; 9.12–13, “prophet”) or, in a major way, to the figure of Jesus (cf., e.g., “prophet” *Mk.* 6.14–16; 8.27–28; “Son of David” 10.47–48; 11.9–10; “Son of God” 1.1, 11; 3.11; 5.7; 9.7; 12.6; 13.32; 15.39), whose messianic role, unlike that of the scrolls, involves his redemptive death and resurrection as “Son of Man” (the titular use of which, incidentally, is unknown in the scrolls). [See Messiahs.]

Turning from parallels in ideas to those in institutions, we can observe certain similarities and differences between the Markan community and that (or those, if more than one community is represented by these diverse texts) of the scrolls. While both shared a conception of being an “elect” or “covenant” community (cf. *Mk.* 4.11–12; 13.22; 14.24; 1QS viii.5–10), with, in addition to “the many” (cf. 1QS vi.1, 7–25; CD-A xiii.7 = 4QDamascus Document^d, 4Q269 11.i.4; xiv.6–8 = 4Q269 11.ii.10–12), a special body or inner circle of members (the twelve laymen of Qumran, 1QS viii.1, who probably represented the twelve lay tribes of Israel, offering, some claim, a certain parallel with the twelve disciples in Mark), Qumran’s highly developed hierarchical structure (cf. 1Q28a i.28–ii.1) and stringent rules for membership (cf. Josephus, *The Jewish War*, 2.8.7 and 1QS vi.14–23) were in sharp

contrast to the inclusiveness and disregard of rank urged on Mark's community (cf. e.g. *Mk.* 9.33-41; 10.13-16, 35-45).

Jesus' rigid attitude to the marriage law, on the other hand, is paralleled only in the scrolls, both advocating lifelong monogamy (cf. *Mk.* 10.2-9 and Temple Scroll¹, 11Q19 lvii.17-18) and making a similar, though not identical, appeal to *Genesis* 1.27 (cf. CD-A iv.20-21 = Damascus Document¹, 4Q271 3 1-2). [See Marriage and Divorce.]

As reflected in *Mark* 1.9-11 (cf. also *Mk.* 10.38-39), baptism was clearly the significant non-repeatable initiation rite for the Markan community, whereas regular purificatory lustrations, which most Jewish sects practiced but to which, in another context, the Markan Jesus was averse (cf. *Mk.* 7.1-8), were the primary emphasis of Qumran practice (cf. CD-A x.10-13; IQS iii.4-6; v.13-14; IQM xiv.2-3). Adopted only after membership, however, and therefore signifying admission into the covenant community, Qumran baptismal practice offers then a partial parallel to the Christian rite. [See Baths and Baptism.]

Poverty and the sharing of goods also appear to have been a religious ideal for both communities (cf. *Mk.* 10.21ff.; 12.41-44; IQS vi.18-23), members admitted to the Qumran sect being required to surrender private property and possessions, thereby placing them at the disposal of the group. Itinerant sectarians, therefore, could expect to carry little with them, and to be given extraordinary hospitality when travelling (cf. *Mk.* 6.7-13; Josephus, *The Jewish War*, 2.8.4).

Common meals, in which the writer of Mark's gospel seems to have taken an inordinate interest (cf. e.g., *Mk.* 2.15ff.; 6.21ff.; 6.30-44; 7.1ff.; 8.1-21; 14.3, 12-25), were a daily feature of Qumran life, together with special ceremonial meals of a more sacramental or priestly character (IQS vi.3-6; IQ28a ii.2-10). These may have been connected with the weekly eating of the shewbread, or "bread of the presence" (cf. *Mk.* 2.26), and looked forward to the meal (of bread and wine) that would be eaten in the new age in the presence of the anointed priest and Messiah of Israel (cf. IQ28a ii.11-22 and *Mk.* 14.25). Features of the Markan account of the Last Supper (*Mk.* 14.12-25), which are inexplicable in relation to a Passover meal (e.g., the secrecy surrounding the event, the lack of mention of the lamb, the presence of men only, the absence of the *pater familias*), but which cohere with the Essene cult meal (e.g., the participation of an inner circle only, the presidency of the appointed leader of the community, the blessing of both the bread and the wine at the beginning of the meal), have been taken by some to argue for Qumran influence on the primitive eucharist. On the other hand, the absence in the Markan account of certain distinctive Qumran features (e.g., the strict observance of

precedence), the presence of certain distinctive Christian features (e.g., the central significance accorded the leader and his death), and similarities to other Jewish religious or ritual meals (e.g., the "brotherhood" meals of the Pharisees) have made the majority of scholars more cautious in positing a specific Essene connection. [See Meals.]

One problem to which Qumran practice has been deemed to offer a solution is the discrepancy between the dating of the Last Supper and Jesus' crucifixion as they are given in the separate Markan and Johannine accounts. In Mark, Jesus eats (on the evening of 14 Nisan) what is described as a Passover meal with his disciples (cf. *Mk.* 14.12ff.) and is crucified the following day (cf. *Mk.* 15.1ff.), while in John the meal takes place at least twenty-four hours before the Passover, and Jesus is crucified on the day of preparation (cf. *Jn.* 13.1; 18.28; 19.14, 31). Arguing for the operation of two calendrical systems, one the official luni-solar calendar used in the Temple (which calculated the day of the Passover, 14 Nisan, as commencing on Friday evening), the other the solar calendar used by the Qumran sectarians (which calculated the Passover, 14 Nisan, as commencing on Tuesday evening), A. Jaubert (1957) argued that Jesus, following Essene practice, had celebrated the Passover according to the latter. *Mark* was therefore correct in making Jesus' Last Supper with his disciples a Passover meal, but celebrated, according to the solar calendar, three days earlier, and *John* is correct in giving Jesus' crucifixion as the day of preparation for the official Passover. Such harmonization is not without its problems, however, since there is no evidence elsewhere that Jesus followed the solar calendar, nor any indication why he would wish to follow the Qumran community in this matter. [See Passover.]

One point of similarity between the Markan evangelist and the Qumran sectarians is their use of scripture, and in particular their common conviction that the biblical text held a contemporary relevance for their community's beliefs and experience (both present and future). Both had a particular preference for the prophetic writings (especially *Isaiah*) and for the Psalms (cf. the "*pesher*" use of *Is.* 40.3 previously referred to, or the use of *Ps.* 118.22-23 in *Mk.* 12.10-11). Where the *Gospel of Mark* makes Jesus the subject of Old Testament prophecies, as well as the revealer of divine secrets (cf. *Mk.* 4.11-12; 13.1ff.), the Teacher of Righteousness is the final interpreter of the words of God's servants, the prophets (cf. IQpHab vii.4-5). [See Teacher of Righteousness.]

The attitude of both communities to the Law, however, cannot have stood in sharper contrast, the Qumran sectarians evidencing a strictness that exceeded that of the Pharisees, the Markan community demonstrating a laxness for which there is no parallel in the scrolls. This can be seen, for example, in their respective attitude to Sab-

bath observance (cf. *Mk.* 2.23ff.; 3.1–6 and CD-A x.14–xi.18 = Damascus Document^c, 4Q270 10 v.1–21), or the purity laws (cf. *Mk.* 7.1ff., 14ff. and CD-A x.10–13; xii.11–15). Where the Markan Jesus is content to heal a non-life-threatening condition on the Sabbath (3.1–6), and the Pharisees only if danger to life were involved (cf. B.T., *Yoma* 86a), the Essenes were given instruction that if anyone fell into a “place of water . . . no one should take him out with a ladder, or a rope, or a utensil” (CD-A xi.16–17 = Damascus Document^c, 4Q268 3.10–11). Where ritual purity was of little concern to the Markan community, the laws of cleanness and uncleanness were a major occupation of the Qumran sectarians: the avoidance of sources of contamination (corpses, non-members, gentiles, etc.), the observance of dietary regulations, the practice of the daily ritual bath, etc. While penitence was essential, and spirituality atoned for transgression (cf. 1QS iii.6–12), sin tended to be equated with impurity, and forgiveness with ritual cleansing. The Markan approach to defilement, by contrast, is moral (“the things which come out of a man are what defile him,” *Mk.* 7.15) and the solution a Christocentric one (“the Son of Man has authority on earth to forgive sins,” *Mk.* 2.10). [See Purity.]

These conflicting attitudes to purity, on the other hand, converge when we consider their respective posture toward that ultimate monument to official ritual purity, the Jerusalem Temple. While retaining some kind of connection with it—by making offerings, for example (CD-A xi.17–21 = 4Q268 3 i.11–15; cf. also *Mk.* 1.44)—each regarded this institution as corrupt (cf. *Mk.* 11.15–18 and CD-A vi.11ff.; 1QpHab ix.3–8, 9–15; xii.1–10). Regarding righteousness as more important than sacrifices (1QS ix.3–6; *Mk.* 12.32–33), they each held a spiritualized view of sacrificial worship and the Temple. The Qumran sect indeed saw the community itself as a substitute for the Temple (1QS viii.1–ix.11 and esp. viii.5–10), hence their stringent efforts to maintain its purity. A similar idea is found in *Mark*, which implies that the community is the new Temple brought about by Jesus’ death (*Mk.* 14.58; 15.38). Some have argued for a common tradition here (cf. Gärtner, 1965), although Qumran’s hierarchical distinctions within the new Temple (between laity and priesthood, or “holy dwelling” and “holy of holies”) are not in evidence in the Markan community. The sectarians, moreover, intended to restore the Temple to its proper worship (cf. 1QM ii.1–6) whereas the Markan community appears to have been reconciled to its demise (cf. *Mk.* 11.15ff. read in conjunction with 11.12–14, 20ff.; 13.1–2; 14.58; 15.38).

Traditio-Historical Links. The principal parallels between the Qumran scrolls and the *Gospel of Mark*, and their respective communities, then, where traditio-historical links are concerned, lie primarily with the figure of

John the Baptist, and only secondarily with Jesus. As for ideas, the major resemblances reside in their eschatological worldview, and (to a qualified extent) in their messianic expectations. With regard to institutions, there are similarities to be observed in their common conception of the elect or covenant community; their stringent views on marriage, the place given to baptism, the attitude taken to wealth, poverty, the community of goods, and hospitality, the significance attached to communal and sacred meals; their use of scripture; and last but not least their common posture toward the Temple. These similarities are outweighed, however, by radical differences regarding admission to and membership of the community, as well as to rank and hierarchy within it, and by extreme contrasts in their attitudes to the law, the Sabbath, and matters of ritual purity. Where the ideological parallels are concerned, a common debt to the Hebrew scriptures and to apocalyptic Judaism may supply a satisfactory explanation. While Qumran may have exerted some influence on primitive Christianity in matters of practice, the sharp divergences here point to the very different nature of the communities represented by the scrolls and the *Gospel of Mark*. The first reflects a sectarian movement with an esoteric impulse, the second a universal thrust, the former emphasizing retreat from the world, the latter outreach to it, the one stressing exclusiveness, the other inclusiveness. The study of each therefore highlights the various polarities that existed in first century Judaism as Jews and Christians sought to give expression to their different understandings of being God’s people in and for the world.

Qumran Cave 7 and Khirbet Mird. No discussion of *Mark* and the Dead Sea Scrolls would be complete without some reference to the debate, mentioned at the start, over the question of the identification of certain of the papyrus fragments discovered in Cave 7 at Qumran (7Q1–18) as fragments of Mark’s gospel, particularly that known as biblical text? 7Q5. One of eighteen such fragments in Greek, discovered in 1955 and published in 1962, biblical text? 7Q5 has been identified (O’Callaghan, 1972, and Thiede, 1992) as part of *Mark* 6.52–53. Three more of the nine alleged New Testament fragments in this group have also been attributed to *Mark* (7Q6 1 = *Mk.* 4.28; 7Q7 = *Mk.* 12.17; and 7Q15 = *Mk.* 6.48), although the case for these has not been as compelling. Apart from the intrinsic unlikelihood of the Qumran sectarians preserving a copy (indeed four copies, since the fragments do not all come from the same manuscript!) of a Gospel with such divergent teachings and practice, the uncertainty of its date (the fragment could be dated earlier than the Christian era), and the possibility, were it genuine, that the cave had been re-used and someone other than a sectarian had placed it there, scholars have

pointed out a number of technical difficulties with the biblical text? 7Q5 identification: The minute size of the fragment (twenty letters), its illegibility and the consequent problems in transcription (only nine letters, on four lines, are certain), the presumption of textual variants (to make the fragment fit, two emendations to the traditional text of *Mark* have to be accepted), and the possibility of other identifications (*Ex.* 36.10–11, 2 *Sm.* 4.12–5.1; 5.13–14, 2 *Kgs.* 5.13–14, *Zec.* 7.4–5) have all been suggested. For these reasons, this controversial hypothesis has not received widespread acceptance.

Uncontroversial, on the other hand, have been the Greek manuscript fragments of the *Gospel of Mark* (*Mk.* 2.3–5, 8–9; 6.30–31, 33–34, 36–37, 39–41) found among the wider body of Judean Desert Scrolls. Part of an uncial biblical codex (p⁸⁴) dating to the sixth century, these texts were found near Qumran at Khirbet Mird, the site of the former monastery of Castellion, and are now in the Louvain University Library.

MARRIAGE AND DIVORCE. Among the documents from the Judean Desert are texts that shed light on the matrimonial practices of Judean Jews. Some of these texts give information about Essene ideas on marriage and divorce, and others preserve marriage contracts and writs of divorce used by Judean Jews of a later period. Some scholars maintain that the Qumran Jews were not Essenes; others that they were Christians. This article shares the conviction of the majority of scholars that the Jews of Qumran were Essenes.

Essene Marriage. Josephus tells us that many Essenes were celibate (*The Jewish War* 2.8.2, sec. 120; *Jewish Antiquities* 18.1.5, sec. 21; cf. Philo, *Hypothetica* 11.14: "No Essene takes a wife") but that there was a second "order" of Essenes that married (*The Jewish War* 2.8.13, sec. 160). Some Qumran texts support both statements. There is no mention of marriage or of women in the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community, 1QS); not even *perut zera'* ("fruitfulness of seed"; 1QS iv.7) is necessarily understood to mean human progeny. [See Celibacy.]

The appendix to 1QRule of the Community, the Rule of the Congregation, however, mentions "toddlers and women" (1Q28a 1.4) and "every head of a family" (1Q28a i.16); it also forbids a youthful member to enter into marriage before he is twenty years old (1Q28a i.9–10). These phrases, then, seem to refer to married members of the community. Moreover, the Damascus Document explicitly mentions "marrying and begetting children" and recognizes the "ordinances 'between a man and his wife'" (CD vii.6b–8, quoting *Nm.* 30.17).

1QRule of the Community was mostly likely the rule book for celibate Essenes living at Qumran, for whom life in the community symbolized life in "the camp of holi-

ness," that is, Jerusalem, which called for no marital intercourse, whereas the Rule of the Congregation and the Damascus Document regulated the life of Essenes living in towns and villages throughout Judea, the other "camps," where Essenes did marry and beget children. The difference between the Rule of the Community and the Rule of the Congregation may be explained rather as the difference between an earlier celibate form of the community and a community that only later admitted married members and women among its ranks. This too may be the reason why in the large main part of the Qumran cemetery, which was carefully planned, all the skeletons are male (de Vaux, 1973, p. 47), whereas skeletons of women and children were found in the extensions of the cemetery. [See Cemeteries.]

Essenes had an exalted view of married life. Full maturity was required of the youth who would enter into marriage: twenty years of age, "when he knows good and evil" (1Q28a i.10-11). This age differs from the later rabbinic requirement that viewed twenty as the *terminus ante quem*, the age by which a youth should have entered into marriage (B.T., *Qid.* 29b). Nothing in the Qumran texts supports what Josephus reports about the marrying Essenes who gave their wives a three-year probation and married them only after they gave proof of fecundity by three periods of purification, or who had no intercourse with their wives during pregnancy, engaging in it only for the procreation of children (*The Jewish War* 2.8.13, sec. 16f; contrast Philo, *On the Special Laws* 3.6, sec. 35).

Qumran Marriage. Among Qumran texts there is no example of a marriage contract, but a fragmentary document, the Rule of Marriage (4Q502), was called by the original editor a wedding ritual; others have considered it a ritual celebrating the golden age of elderly married couples (*zeqenim u-zeqenot*; 4Q502 19.2, 24.4) in the community. This text mentions the "procreation of offspring" (4Q502 1-3.4), but its broken context does not permit one to gather whether that was understood as the sole reason for intercourse. Intercourse with one's wife, however, was regarded as a source of ritual defilement and prohibited an Essene from entering any part of the city of Jerusalem for three days thereafter (11Q19 xlv.11-12), for there God had established his name: "the camp of holiness is Jerusalem" (4Q394 8.iv.10). "No one should sleep with his wife in the city of the Temple, defiling the city of the Temple with their impurity" (CD xii.1-2). This was apparently the Essene way of interpreting *Exodus* 19.15b and of extending the sense of *Leviticus* 15.18. [See Purity.]

The Qumran community forbade marriage within close degrees of kinship (between uncle and niece or aunt and nephew), interpreting *Leviticus* 18 strictly. They regarded such marriages as being caught in *zenut*, one of "the three

nets of Belial" (CD iv.15): "They take [as wives], each one [of them], the daughter of his brother and the daughter of his sister, whereas Moses said, You shall not approach [sexually] your mother's sister; she is your mother's kin" [*Lv.* 18.13]. The regulation for incest is written for males, but it applies equally to women: "so if a brother's daughter uncovers the nakedness of her father's brother, whereas she is his kin . . ." (CD v.7-11).

Polygamy was also denounced by the Qumran Jews, who considered it a second way of being caught in *zenut*, "by taking two wives in their lifetime, whereas the principle of creation [is] 'Male and female he created them' [*Gn.* 1.27]; and those who entered [Noah's] ark, 'two [by] two went into the ark' [*Gn.* 7.9]. And concerning the prince [it is] written, 'He shall not multiply wives for himself' [*Dt.* 17.17]" (CD iv.20-v.2a). This denunciation of polygamy stands in contrast to Mosaic regulations permitting it (*Dt.* 21.15-17; cf. *Gn.* 16.3, 29.18, 29.25-30; *1 Kgs.* 11.1-3).

Essene Divorce. The Essene attitude toward divorce and remarriage after divorce was complicated. Although Temple Scroll⁸ (11Q19 liv.4) asserts that the vow made by "a widow or a divorcee," by which "she binds herself formally, will hold good," it is not clear that Qumran Essenes considered divorce legal or tolerated marriage after it. Some interpreters have understood the Damascus Document (CD iv.20-v.2a), cited above, to forbid not only polygamy but also divorce, especially in light of Temple Scroll⁸ (11Q19 lvii.17-19, which elaborates the prohibition of polygamy for a king stated in *Dt.* 17.17): "He shall not take in addition to her another wife, for she alone shall be with him all the days of her life; and if she dies, he shall take for himself another [wife] from his father's house, from his clan." Although this prohibition is found among the statutes for the king in Temple Scroll⁸, it is usually judged that what was legislated for the king was to be observed by the commoner as well. So marriage was regarded as an alliance between one man and one woman "in their lifetime." Hence, it would be a prohibition not only of polygamy but also of divorce. If so, then this attitude differs from the Mosaic legislation tolerating divorce (*Dt.* 24.1-4; cf. *Jer.* 3.8). But so the Essenes honored God's words recorded in *Malachi* 2.14b-16a.

Qumran Divorce and the New Testament. The prohibition of divorce in Qumran texts provides an important Palestinian Jewish background for the New Testament prohibition of it. Its most primitive formulation is found in the isolated dominical saying in *Luke* 16.18: "Everyone who divorces his wife and marries another commits adultery." Jesus' absolute prohibition of divorce and remarriage is formulated from the viewpoint of Palestinian Judaism: the man must not divorce his wife. Moreover,

such divorce is equated with adultery, itself proscribed in *Exodus* 20.14 and *Deuteronomy* 5.18. An absolute prohibition of divorce is also found in *1 Corinthians* 7.10–11 and in *Mark* 10.11–12, where it is preceded by another pronouncement of Jesus: “What God has joined together let no human put asunder” (*Mk.* 10.9). Both Pauline and Marcan texts were formulated to address divorce practices in the Hellenistic world outside Judea, where a woman could divorce her husband. Such prohibition of divorce stands in contrast to the allowance of it according to “the laws of the Jews” (Josephus, *Jewish Antiquities* 15.7.10, sec. 259; cf. H. L. Strack and P. Billerbeck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, 6 vols. [Munich, 1922–1961], vol. 1, pp. 319–320). Because some Palestinian Jews (Qumran Essenes) apparently did forbid divorce, the *Sitz im Leben* for Jesus’ debate with the Pharisees, “Is it lawful for a man to divorce his wife?” (*Mk.* 10.2), must be considered. The question, as formulated in *Mark*, is not as inconceivable in a Palestinian milieu as some commentators have maintained. Pharisees, knowing the Essene prohibition of divorce, would have asked Jesus the question to find out where he stood: “Do you side with Essenes or Pharisees in the matter of divorce?”

In *Matthew* 5.31–32 (corresponding to the formulation in *Luke* 16.18) and 19.9 (corresponding to *Mark* 10.11), an exceptive phrase is added, “except for *porneia*.” [See Q Source.] The meaning of the Greek term *porneia* has been long debated. Etymologically, it corresponds to the Hebrew *zenut* (“fornication”). With the recent light shed on one of the two forms of *zenut* (CD iv.17) by Temple Scroll^a (11Q19 lvii.17–19), one realizes that the best meaning of *porneia* is now “illicit marital union” (that is, a marriage within degrees of kinship forbidden by *Leviticus* 18). This makes it intelligible why the evangelist, writing for a mixed, but predominantly Jewish-Christian, community, would have added the exceptive phrase, allowing divorce for gentile converts who would already have been married within degrees of kinship unacceptable to Jewish-Christians. Moreover, the question posed by Pharisees in *Matthew* 19.3, “Is it lawful to divorce one’s wife ‘for any cause?’” would represent the evangelist’s reformulation of it in terms of an inner-Pharisee dispute, between the schools of Hillel and Shamm’ai.

Non-Qumran Documents. Eleven documents found at Judean Desert sites other than Qumran—Naḥal Hever, Naḥal Se’elim, and Wadi Murabba’at, preserve examples of a dowry settlement, marriage contracts, and writs of divorce. One of these is written in Nabatean, five are written in Greek (one with an Aramaic subscription and signature), and the rest are written in Aramaic. The *ketubbah* (“marriage contract”) and the *get* (“writ of divorce”) reveal ancient formulas that have persisted in such documents for centuries.

reveal ancient formulas that have persisted in such documents for centuries.

5/6Hev 1 Nab.	Babatha Archive dowry settlement? (94 CE; as yet unpublished)
5/6Hev 10 Aram.	contract of Babatha’s second marriage (P.Yadin 10, 122–125 CE)
5/6Hev 18 Gr.	contract of marriage of Shelamzion and Kimber (with Aramaic subscription and signature; P.Yadin 18, 128 CE)
5/6Hev 37 Gr.	marriage contract (P.Yadin 37, 131 CE)
XHev/Se 13 Aram.	confirmation of divorce (135 CE)
XHev/Se Gr. 2 Gr.	marriage contract (canceled after 130 CE)
Mur 19 Aram.	writ of divorce (111 CE)
Mur 20 Aram.	marriage contract (117 CE)
Mur 21 Aram.	marriage contract (? CE)
Mur 115 Gr.	remarriage contract (124 CE)
Mur 116 Gr.	marriage contract (? CE)

Marriage Contract 5/6Hev 18 is a so-called double document, with the text of the *ketubbah* written twice: the upper part is the *scriptura interior* (folded over and sealed by thread), and the lower part is the *scriptura exterior* for normal consultation. (If someone contested the *scriptura exterior*’s text, the upper part could be opened in order to check the text of the lower part.) According to it, Judah son of Eleazar/Chtousion gives his virgin daughter Shelamzion to Judah, son of Hananiah, surnamed Kimber, to be his wedded wife according to the laws (*kata tous nomous* [Greek]). Shelamzion was apparently a minor (under twelve years of age) and could not legally be a party to the contract; so she is given away by her father. Her dowry (*prosphora* [Greek]) consists of feminine adornment in silver, gold, and clothing appraised by mutual agreement at two hundred silver denarii, given by her father; another three hundred silver denarii are promised by the groom for her support and that of the children to come “according to Greek custom.” Judah Kimber agrees that the total dowry is repayable on demand in exchange for the return of the contract (that is, if the marriage is dissolved). The contract was signed by the father, the groom, and five witnesses: one in Greek and the rest in Aramaic. The bride’s father, Judah son of Eleazar/Chtousion was the second husband of Babatha daughter of Simon whose *ketubbah* was written in Aramaic (5/6Hev 10), whereas that of Shelamzion (a younger generation) is in Greek. Judah son of Eleazar/Chtousion was also married to Miriam daughter of Beianos and on his death his two wives disputed over his possessions (5/6Hev 26 7–8, 13–14). [See *Babatha and Family Life*.]

Text 5/6Hev 37 is part of the *scriptura interior* of another Greek double document, a contract of the marriage of Jesus son of Menaham, domiciled in Soffathe, with Salome surnamed Komais, a resident of Maoza. Her dowry is stated to be worth ninety-six silver denarii (feminine adornment in silver, gold, clothing, and other articles).

Papyrus fragment Mur 20 preserves the beginning of seventeen lines of the Aramaic marriage contract of Judah son of Yeho[] son of Menashsheh of the Benê Elia-shib, with [] (the bride's name is lost). The fragment preserves the essential formula [*at*]y *thvi' li le-anttah kedin M[osheh]* ("[yo]u shall be my wife according to the law of M[oses]"). Part of the dowry is given as *kesef zuzin* ("silver denarii"). If the wife dies before the husband, the dowry will be inherited by the sons to be born; the daughters will continue to live and be cared for in the husband's house until their marriage.

Marriage contract Mur 21 is another fragmentary papyrus *ketubbah* preserving the beginning of five lines of the *scriptura interior* and most of the twenty lines of the *scriptura exterior*. The groom's name is Menahem son of [], and the bride's name is Le'uthon daughter of []. A bit of the essential formula is preserved (as above), but most of the extant text deals with provisions for the care of children to be born and for inheritance of the dowry by sons in case the wife dies before the husband. If he dies first, she will be provided for from his possessions.

Writ of divorce Mur 19, another double document, records the divorce of Joseph son of Naqsan, resident of Masada, and Miriam daughter of Jonathan, from Hanablaqa. It states that she has been his wife up to that time but that she is now free to go and become the wife of any Jewish man she chooses. It mentions the return of her dowry and reimbursement for ruined or damaged goods and promises the replacement of the writ, if necessary. It is signed in Aramaic on the reverse by Joseph and three witnesses.

Text XHev/Se 13 is a receipt of confirmation of divorce, which, written in the name of the divorced wife, has been interpreted as revealing that a woman could initiate divorce; but lines 6-7 are far from clear in this regard (See Benoit et al., 1961, p. 108).

Document Mur 115 is a contract of remarriage. Eleaios son of Simon and Salome daughter of John Galgoula had been married; subsequently, Eleaios separated and divorced (*apallagenai kai apolyein*) Salome. Later Eleaios was reconciled and took again (*kutallaxai kai pros-labesthai*) the same Salome for his wedded wife. Her dowry was two hundred denarii, of which fifty were Tyrian shekels. The rest of the document mentions the usual details found in contemporary Greek marriage contracts.

Only the *scriptura exterior* of a marriage contract remains of double document XHev/Se Gr. 2. Its text has

been canceled by diagonal pen strokes across the lines and signatures on the back, indicating that the marriage had been terminated (by divorce?).

JOSEPH A. FITZMYER, S J

MASADA. [This entry consists of three parts: Archaeology, History, and Written Material.]

Archaeology

The mountain of Masada, located on the southwestern shore of the Dead Sea, is one of the most famous archaeological sites in Israel. The mountain stands in isolation, surrounded on all sides by sheer cliffs, and rises to a height of over 1,300 feet above the shores of the Dead Sea. In the first century BCE, the Roman client king of Judea, Herod the Great, fortified the mountain and built a series of structures on the top, including two large palaces, storehouses, and water cisterns. Seventy years after his death, the Jews of Judea and Galilee revolted against Roman rule, and a band of about 960 Jewish rebels, known as Sicarii, took over the site. They continued to occupy Masada even after the fall of Jerusalem in 70 CE, until the arrival of the Tenth Roman Legion at the site two years later. The Romans set up a siege and managed to breach the walls around the top of the fortress by moving a battering ram up a ramp of earth and stones they had constructed on the western side of the mountain. When the Sicarii realized they had no more hopes of holding out against the Romans, they committed suicide in order to rob the Romans of their hard-won victory and to ensure their death as free people (in 73 or 74 CE). The story of Masada is told in detail by the Jewish historian Josephus Flavius, who lived at the time of the First Jewish Revolt.

Exploration of the Site. The American scholar Edward Robinson and his traveling companion Eli Smith, who visited the area in 1838, first proposed the identification of the site as Masada. The scholars who followed in their footsteps added their own observations and surveyed parts of the site. Among them were the French scholar Felicien de Saulcy (1851), the British explorer Captain Charles Warren (1867), and the German scholar Adolph Schulten (1932). In 1953 Shemaryahu Gutman started a systematic survey of the site. In 1955-1956 an excavation was carried out under the direction of Nahman Avigad, Michael Avi-Yonah, Yohanan Aharoni, and Immanuel Dunayevsky on behalf of the Hebrew University of Jerusalem and the Israel Exploration Society. Two extensive seasons of excavation were conducted between

1963 and 1965 under the direction of Yigael Yadin on behalf of the Hebrew University of Jerusalem, the Israel Exploration Society, and the Israel Department of Antiquities. Yadin also reconstructed the site. During the 1970s Gutman reconstructed one of the Roman siege camps. At the time of Yadin's death in 1984, only preliminary reports and a popular book had appeared in print. Since then, a number of scholars have undertaken the publication of the final excavation report, six volumes, in a series produced by the Israel Exploration Society and the Hebrew University of Jerusalem.

Small-scale excavations in selected areas were conducted on top of the mountain from 1994 to 1996 under the direction of Ehud Netzer of the Hebrew University. Another expedition in 1995, under the direction of Gideon Foerster, Benny Arubas (Hebrew University), Haim Goldfus (Ben-Gurion University) and me (Magness) (Tufts University), conducted excavations in the Roman siege camp F and cut a section through the Roman siege camp.

Phases of Occupation. On the basis of Josephus's testimony and the archaeological evidence, a number of occupational phases can be distinguished at Masada. The earliest phases, which are represented mainly by scattered potsherds rather than architectural remains, belong to the Chalcolithic period (fourth millennium BCE) and the Iron Age (tenth to seventh centuries BCE). According to Josephus, the site was first fortified by "Jonathan the High Priest." This probably refers to the Hasmonean king Alexander Jannaeus (103-76 BCE) or perhaps to Jonathan the brother of Judah the Maccabee (152-143 BCE). However, architectural remains from the Hasmonean period have proven difficult to identify. Instead, most of the buildings at Masada were erected by Herod the Great (40-4 BCE). Netzer, who published the final report on the architecture, has distinguished a number of building phases during the reign of Herod. Following Herod's death the site was occupied and maintained by a Roman garrison that seems to have made few if any architectural changes. During the period of the First Jewish Revolt (66-70 CE), the Sicarii occupied and modified the Herodian buildings and erected some structures of their own. Many of the Herodian buildings were destroyed during the siege and the subsequent fall of Masada to the Romans in 73 or 74 CE. The Romans left a small garrison to guard the site until 115 or 116 CE at the latest. An earthquake destroyed many of the remaining buildings on the mountain some time between the second and fourth centuries CE. The last phase of occupation at Masada consisted of a small Byzantine monastic settlement (fifth to early seventh centuries CE). A well-preserved church on the summit of the mountain is associated with this community.

Archaeological Remains. Herod fortified the top of Masada with a casemate wall (a double wall divided into rooms that could serve as barracks or as an arsenal for storing weapons; many of the casemate rooms were used as dwellings by the Sicarii). The wall, which runs along the edge of the mountain, has towers located at intervals and gates leading into the site. One gate is located at the top of the snake path, which ascends the steep eastern side of the mountain in a winding, serpentine manner. Another gate is located on the other side of the mountain, by Herod's western palace. It was approached by a path that was covered by the Roman siege ramp, and in the Byzantine period another gate (which is still visible) was erected on this spot. A third gate is located on the northwestern side of the mountain. It provided access to a path that led to two rows of cisterns hewn into the rocky slope below. These cisterns were filled by flash-flood waters channeled through an aqueduct from riverbeds (*wadis*) in the vicinity of Masada. The Herodian buildings are concentrated at the northern end of the mountain. They include a three-tiered palace-villa (with a small bathhouse), a large bathhouse, storehouses, and an administrative building. Another complex constituting the western palace is located about midway along the western side of the site. A number of small palace buildings that apparently date to the earliest Herodian phase are scattered around the top of the mountain. Except for these and a large open pool, the southern and eastern parts of the site are almost empty of structures. The following description proceeds from north to south.

At the heart of the northern palace complex is the palace itself, which is spectacularly constructed on a series of three buttressed terraces overhanging the northern edge of the mountain. The palace is separated from the rest of the site by a large, white plaster wall. Originally the only access was around the eastern end of the wall, where a guardhouse was located. From here one entered the upper terrace of the northern palace, which consisted of a rectangular wing in the south and a semicircular structure in the north. The rectangular wing contained two pairs of rooms paved with simple black and white mosaics. These rooms apparently served as the king's bedrooms; in the Byzantine period this area was reoccupied by monks. The bedrooms opened on to the semicircular structure, which formed a balcony with a view to the north. The middle terrace was a circular structure (*tholos*) that seems to have been a colonnaded, covered hall. Vertical niches in the cliff face on the southern side of the terrace originally may have contained rows of wooden shelves for a library. The lower terrace carried a rectangular colonnaded hall, which was probably roofed. Well-preserved wall paintings (frescoes) that imitate multicolored stone and marble panels can still be seen on

some of the walls of the lower terrace. The columns and some of the architectural details are covered with molded plaster (stucco), again in imitation of marble. The structure on this terrace apparently functioned as a dining room (*triclinium*). Thus, while the upper terrace contained a suite of private bedrooms, the buildings on the middle and lower terraces were intended primarily for recreation and the entertainment of guests. The three terraces originally were connected by a staircase whose remains still can be traced. A small bathhouse associated with the lower terrace contained a group of important finds from the time of the First Jewish Revolt.

Upon the steps leading to the cold-water pool of the bathhouse and on the ground nearby were the remains of three human skeletons: a man about twenty years of age, a young woman, and a child (these and twenty-five other skeletons found in a cave on the southeastern side of the mountain were the only human remains discovered in the excavations). The woman's hair was still preserved, and the associated finds included scale armor, arrows, leather sandals, fragments of a prayer shawl (*tallit*), and an ostraccon (inscribed potsherd) with Hebrew letters. Yadin suggested that these were the remains of some of the Sicarii defenders of Masada, perhaps the last to commit suicide. According to Josephus the last zealot, after verifying that all the others were dead, set fire to the palace and killed himself near the bodies of his family. The finds in the bathhouse were buried in the debris of the collapse of the palace rooms above. The human skeletal remains from Masada were the subject of a recent article by Joseph Zias, a physical anthropologist. According to Zias, there were only seven or eight human skeletons in the cave on the southeastern side of the mountain. In addition, the presence of pig bones in the cave indicates that these are probably the remains of Romans, not Jews. Zias has also suggested that the fragmentary nature of the three skeletons from the northern palace indicates that they did not belong to a single family, but were deposited at this point by hyenas (Zias, 1998).

The northern palace was serviced by a complex adjacent to the upper terrace, which includes a large bathhouse, storerooms, and an administrative building. The bathhouse was entered through a colonnaded courtyard with a mosaic-paved floor and painted (frescoed) walls. It is typical of Roman bathhouses of the first century BCE, having been equipped with a "dressing room" (*apodyterium*), "cold-water pool" (*frigidarium*), "tepid room" (*tepidarium*), and "steam room" (*caldarium*). The heat in the steam room was provided by a hypocaust system, in which dozens of small pillars supported the floor. Hot air from an adjacent furnace circulated among the pillars and through terra-cotta pipes along the walls. Water thrown onto the floor and walls from bathtubs in the

niches at either end of the room created steam. The walls of the bathhouse were painted with paneled frescoes, and the floors were paved with black and white tiles (*opus sectile*).

The storehouses consist of rows of long, narrow rooms oriented more or less north-south. Broken storage jars found in these rooms originally contained oil, wine, and grain. Latin inscriptions identify some as wine jars imported by Herod from Italy. Other jars and potsherds found at Masada bear inscriptions in Aramaic, Greek, and Hebrew, often consisting of Jewish names or titles. These include a group of eleven or twelve ostraca discovered near the entrance to the storehouses. Each is inscribed in the same handwriting with a single name or nickname in Hebrew or Aramaic. One that bears the name Ben Ya'ir probably refers to Eleazar ben Ya'ir, the leader of the Sicarii at Masada. Yadin identified these ostraca as the "lots" drawn by the Sicarii at the time of the suicide, since Josephus states that after the men had killed their wives and children, they chose ten men by lot to slay the other men. These ten men drew lots again, and the last one killed the remaining nine men and then himself. However, as Joseph Naveh has pointed out, there are more than ten "lots" in this group, and they do not differ in character from many of the other ostraca found at Masada. Thus, their identification as lots remains uncertain. Another potsherd found by Netzer in his recent excavations on the northwest side of the mountain bears the Latin inscription "Herod the Great, King of the Jews (or Judea)." It is the first inscription found at Masada containing Herod's full title.

On the northwestern side of the mountain is a large hall set into the line of the casemate wall. During the Herodian period, it contained a porch or anteroom that led into a colonnaded hall. During the time of the First Jewish Revolt, the Sicarii removed the wall separating the anteroom from the hall and added rows of benches along the walls and a room at the back. The addition of the benches and the discovery of scroll fragments under the floor of the back room (which suggest that the room served as a repository, or *genizah*) indicate that this structure was used as a synagogue by the Sicarii. Yadin believed that this structure functioned as a synagogue already in the time of Herod, but this has not been accepted by all scholars. In the final report, Netzer has raised the possibility that the hall originally may have functioned as a stable (a purpose it apparently served between the death of Herod and the outbreak of the revolt). Fragments of other scrolls were found at Masada, especially in another casemate room on the northwestern side of the mountain. They include biblical texts and a fragment of an apparently Essene document (Songs of the Sabbath Sacrifice); copies of the same work have been

found among the Dead Sea Scrolls from the caves of Qumran. The presence of the latter led Yadin to suggest that after the fall of Qumran to the Romans (probably in 68 CE), some of the inhabitants joined the Sicarii forces at Masada.

The western palace complex is located about midway along the western side of the mountain. It is made up of a wing containing the official rooms (the "core"), another wing with a group of storehouses, and a service wing that includes servants' quarters, workshops, and administrative rooms. At the heart of the official wing is a room that contained four rectangular postholes that are thought to have held the base of a canopied throne. One of the rooms that provided access to the throne room was paved with a polychrome mosaic floor decorated with intricate geometric and floral designs. The official wing also contained a bathhouse, which is paved with more polychrome mosaics. Netzer disagrees with Yadin's conclusion that the western palace served as Herod's ceremonial palace, believing instead that the northern palace fulfilled this function.

As mentioned above, the Sicarii occupied many of the casemate rooms and converted the hall set into the casemate wall on the northwestern side of the mountain into a synagogue. They also constructed two ritual baths (*miqva'ot*), one in the administrative wing of the northern palace complex, and the other in a casemate room at the southeastern edge of the site. Netzer has suggested that some of the other pools at Masada, such as the frigidarium in the large bathhouse in the northern palace complex, also may have functioned as *miqva'ot*. Two of the rooms in the northern palace (Locs 442 and 456), one of which was paved with the polychrome mosaic described above, were apparently used by the Sicarii as workshops or smithies for the forging of iron arrowheads.

Roman Siege. The signs of the Roman siege are still clearly visible at Masada. When they arrived at the foot of the mountain, the Roman forces (which included the Tenth Legion and numbered up to ten thousand soldiers) constructed a circumvallation wall with guard towers around the bottom of the site. The soldiers were housed in eight walled camps (designated by the letters A through H) surrounding the base of the mountain. Flavius Silva, the Roman commander, communicated with his forces by means of messages sent with runners along a path connecting the camps. [See Roman Camps.] The Romans managed to take Masada by constructing a ramp of earth and stones that can still be seen on the western side of the mountain. Silva's headquarters are believed to have been located in the two largest Camps, B on the eastern side of the mountain, and F on the western side near the foot of the ramp. Among the remains uncovered in the excavations in Camp F is a huge three-sided recti-

linear structure that opened toward the east, perhaps the officers' triclinium or dining room. A tent unit nearby probably served as officers' quarters, judging from its size, central location and unusually rich finds. Next to this unit stood a raised, square stone podium, apparently the tribunal from which the commander addressed his troops and reviewed parades. The headquarters itself might be represented by another unit just to the west that had beautifully plastered walls. Also uncovered in the excavations were rows of mess units (*contubernia*), individual tent units housing groups of eight enlisted men. Each consists of a small rectangular room encircled on three sides by earth and stone benches, on which the men ate and slept, with a small vestibule or anteroom in front. The remains of hearths, where the soldiers who shared the tent cooked their food, occupy the corners of the vestibules. All of the units in Camp F were constructed of dry-laid fieldstone walls, which originally stood three to four feet high. Leather tents pitched above these walls would have been held in place by iron pegs. The section cut through the Roman siege ramp revealed that it was constructed of fieldstones, each of which could be lifted by a single man. The stones were held in place by a framework made of horizontally and vertically laid pieces of tamarisk and date palm wood. Once the ramp was constructed, the Romans were able to drag their siege machinery to the top of the mountain and break through the Herodian casemate wall. At this point, according to Josephus, Eleazar ben Ya'ir gathered the Sicarii together and convinced them to commit suicide.

Suicide Controversy. Josephus describes the site of Masada and the events that transpired there in great detail. Just a few years earlier, he had participated in the First Jewish Revolt as the commander of the Jewish forces of the Galilee. Much of his testimony has been borne out by the archaeological finds at Masada. Yadin understood Josephus's account literally, and clearly it influenced his interpretation of the archaeological remains (such as the "lots"). However, the accuracy of Josephus's account, and especially the veracity of the suicide story, have been called into question by a number of scholars. One of them is Shaye J. D. Cohen, who has pointed out that, among other things, there are a number of mass suicide stories in Greco-Roman works of literature. He therefore has suggested that Josephus used the suicide as a literary device to enhance the drama of his story about Masada (Cohen, 1982).

The archaeological evidence has been interpreted as both supporting and contradicting Josephus's account. For example, Netzer has pointed out that only about 10 percent of the buildings at Masada showed signs of burning. He argues that the others were not burned because their wooden roof beams had been dismantled by the Si-

carii for use in the wood and earth wall they constructed at the top of the Roman siege ramp, as described by Josephus. On the other hand, Hillel Geva recently has proposed that the debris piled against the outside of the large white plaster wall separating the northern palace from the rest of the mountain represents a siege ramp constructed by the Romans (Geva, 1996). If this is the case, it suggests that there was a battle on top of the mountain during which at least some of the Sicarii took refuge in the northern palace, thereby contradicting Josephus's account.

JODI MAGNESS

History

According to Josephus (*The Jewish War* 7.285), Jonathan the High Priest built Masada. Opinions concerning the identity of this Jonathan are divided. Some say that the reference is to Alexander Jannaeus, king of Judea from 103 to 76 BCE. Others theorize that the source before Josephus utilized the Hebrew name of Alexander Jannaeus—Jonathan—which was unknown to Josephus. Josephus therefore may have assumed that Jonathan the Hasmonean built Masada. Another possibility is that because the coins of Alexander Jannaeus are inscribed in Greek with Aleksandros Basileus and in Hebrew with Jonathan the High Priest, whoever used the Hebrew name designated Alexander Jannaeus as High Priest. Josephus explicitly writes that Aleksandros, king of the Jews, is the one who built Machaerus (*The Jewish War* 7.171) at approximately the same time as the construction of Masada. The discovery of twelve Ptolemaic coins and five Seleucid coins near Masada makes it possible that Jonathan the Hasmonean built Masada during the years that he spent in the desert after the death of his brother Judah (between 161 and 152 BCE). Alternatively, it is entirely possible that Masada was only built later, at the beginning of the first century BCE by Alexander Jannaeus.

The similarity between the western palace on Masada and the twin palaces of Shelamzion Alexandra, which were discovered in Jericho by A. Netzer, enables us to date the western palace at Masada to the days of Jannaeus. Likewise, there is proof that some of the wells were built during the Hasmonean era. Masada is mentioned in ostraca (fragments of ancient pottery engraved with writing) discovered at Wadi Murabba'at and paleographically dated between the years 125–120 BCE.

In the year 42 BCE Jewish rebels who were opposed to the house of Antipater gained control of Masada. They held the fort until they were forced to surrender to Herod (*The Jewish War* 1.236–238, *Jewish Antiquities* 14.296). In 40 BCE, when Herod fled from the Parthians and Antigonus in Judea, he left eight hundred of his family and close friends at Masada (*The Jewish War* 1.246–267, *Jewish Antiquities* 14.361–362). Antigonus besieged the fortress during one of the winters between 40 and 37 BCE, in an attempt to capture Herod's family. It is possible that there is archaeological evidence of the siege works Antigonus

had erected beneath one of the Roman camps surrounding Masada. Josephus notes that the occupants of Masada debated whether to escape to the Nabateans because of the lack of water; however, sudden rainfall at Masada replenished the wells in the fortress, and Herod's family succeeded in surviving until Herod's return to Judea in 37 BCE (*The Jewish War* 1.286–287, 293–294; *Jewish Antiquities* 14.390–391, 400). An assumption can be made that Masada was not besieged during the entire rule of Antigonus, since three coins minted in Jerusalem during his reign were found in his fortress.

King Herod (37–4 BCE) is credited with building the majority of the existing structures at Masada, including the three-tiered palace, the bathhouse, and the storehouses. Herod also ordered the construction of dams and water conduits leading to the western pools. In 31 BCE, when Herod went to meet Augustus after the battle of Actium, he again left his family at Masada (*Antiquities* 15.184).

It is difficult to determine when the colossal building projects that Herod initiated at Masada were completed. Intriguingly, during Marcus Agrippa's visit to Judea in 15 BCE, Herod took him to Alexandrion, Herodium, and Hyrcania (Khirbet Mird), but not to Masada (*Jewish Antiquities* 16.14). Therefore, it is quite possible that the building projects at Masada had not yet been completed. While thirteen pitchers bearing Latin inscriptions mentioning Herod king of Judea were found in the northern storehouses and dated to the year 19 BCE, they cannot prove when building activity in the area ceased.

After the death of Herod, Masada passed into the hands of Archelaus (4 BCE–6 CE), 176 of whose coins were discovered in the fortress. After the exile of Archelaus, a force of Roman guards remained at Masada. Coins of all the Roman commanders were discovered at Masada (517 coins in all). It is not known whether the soldiers staying at Masada in the days of Agrippa I (41–43 CE) were Jewish or Roman (114 coins of Agrippa I were found in Masada). There is no doubt that Masada was manned with guards and equipped with large amounts of provisions and weapons before the First Jewish Revolt.

In 66 CE the Sicarii, headed by Menahem ben Yehudah the Galilean, gained control of Masada (*The Jewish War* 2.433–434). When Menahem was killed during a power struggle in Jerusalem, some of his followers, headed by his relative Eleazar ben Ya'ir, fled back to Masada (*The Jewish War* 2.446–447). Josephus mentions that "the robbers dwelling in Masada destroyed all the villages around the fortress and razed the entire land." Apparently, Josephus had a personal interest in representing the followers of Eleazar ben Ya'ir in a negative light.

Masada was not cut off from Jerusalem during the course of the First Jewish Revolt, as evidenced by thou-

sands of bronze and silver coins from Jerusalem, which reached the fortress. Refugees escaping to Masada during the revolt settled in the various buildings and implemented architectural changes. The Sicarii and refugees lived within the enclosing wall of the western palace and in the buildings adjacent to it. They strictly adhered to the laws governing ritual purity and impurity as the writings discovered upon the pitchers found in the fortress substantiate. Various people fled to the fortress, among them priests of respectable lineage, as the writing upon a pitcher bearing the name of "Aqaviah ben Hananiah the High Priest" proves. (Hananiah was most likely Hananyah ben Nadivi, who served as High Priest between 59 and 47 BCE.) The refugees were probably divided into different groups, and they distributed coupons, most likely as a method of rationing provisions. Two coins minted during the reign of Agrippa II in Baryas and discovered in Masada prove that refugees from the Galilee reached Masada as well.

Y. Yadin claims, based on a Qumran manuscript (Songs of the Sabbath Sacrifice) found near the synagogue at Masada, that members of the sect of Qumran fled to Masada to escape from the Roman army. Talmon, meanwhile, hypothesized that a small fragment of a papyrus mentioning Mount Gerizim, which was also found near the synagogue, confirms that Samaritans fled from the Roman army to Masada. Both these theories can be questioned. The discovery of the Songs of the Sabbath Sacrifice at Masada does not prove that anyone from Qumran fled to Masada; perhaps its presence at Masada merely indicates that it was extremely popular during the Second Temple era among people who adhered to the solar calendar. Likewise, the papyrus containing the name Mount Gerizim does not prove that Samaritans escaped to Masada. Indeed, it is possible that it is an anti-Samaritan prayer praising the Lord for the destruction of the temple on Mount Gerizim. Similar prayers were discovered at Qumran in Apocryphon of Joseph^a (4Q371).

After the destruction of Jerusalem, three fortresses remained in the hands of the rebels: Herodium, Machaerus, and Masada (*The Jewish War* 4.55). It is difficult to determine the number of people who escaped to Masada following the destruction of Jerusalem in 70 CE. Meshorer theorized that until 73 CE people were still arriving at Masada, since coins that were minted in Ashkelon during the year 72/73 CE were found in the fortress (Meshorer, 1989). Meshorer is of the opinion that these coins were brought to Masada by Jewish rebels and not by Roman soldiers.

It was most likely during the winter of the year 73 CE (some suggest that the event occurred during the winter of 74 CE) that Flavius Silva, the commander of the tenth legion and governor of Judea, besieged Masada. One may

suppose that the siege lasted about three months. Masada fell, therefore, during the spring of 73 CE. The Roman army surrounded Masada with a wall 3.5 kilometers long and patrolled by guards to prevent escape. In addition to the wall, the Roman army erected eight camps surrounding Masada and a rampart west of the fortress on which the army raised siege machines. At this stage the defenders of Masada disassembled the wooden ceilings of some structures in Masada in order to build an inner wall. This wall did not last and in the end it went up in flames ignited by the Roman army (*The Jewish War* 7.275–319).

Josephus attests that 960 people fell at Masada and seven were spared. During excavations conducted at Masada, 25 skeletons, some of women and children, were discovered in one of the caves on the southern cliff. Three additional skeletons of a man, woman, and child were likewise discovered on the lowest step of the northern palace. It can be assumed that during the fall of Masada the majority of the skeletons were thrown by Roman soldiers into the abyss surrounding the cliff.

Josephus states that a number of the defenders of Masada committed suicide on the night before the conquering of the fortress following the burning of the inner wall (*The Jewish War* 7.389–406). The words that Josephus put into the mouths of Agrippa II (*The Jewish War* 2.345–401) and Eleazar ben Ya'ir (*The Jewish War* 7.323–388) are a historical convention of the time, calculated to give the reader background material and express the historian's point of view. Therefore, we cannot accept Josephus's description as a historically accurate description. Although it must be assumed that a few of the people of Masada indeed committed suicide as Josephus says, suicides occurred in other places conquered by the Roman army. Of the rest of the Jews at Masada, some of them fought and met their deaths in combat; a portion of them were executed after the conclusion of the war; and some of them were sold into slavery. It should be noted that in the northern region of Masada, Roman soldiers were compelled to draw an additional rampart in order to conquer the northern palace, demonstrating that at least a few of the warriors of Masada continued to fight even after the Romans burst into the fortress.

Yadin claimed that the ostraca he found in the fortress served as the lots which the rebels cast when they decided to commit suicide. This description does not coincide with the description of Josephus, although it is interesting that "ben Yair," the name of Masada's commander, is written on one of the ostraca.

After the fall of Masada the Roman army returned to guard the fortress. On the summit of Masada were found documents of Roman soldiers who had participated in the siege, among them two soldiers' pay stubs, letters, and a list of medical equipment for the wounded. Also

discovered at Masada were five coins of conquered Judea (*Judea Capta*), which Titus had minted in Caesarea between the years 71 and 81 CE. The latest Roman coin found at the site is a silver coin from the days of Trajan; it was minted in Provincia Arabia in 112 CE (coin no. 3840). It should be noted that a treasure of thirteen tetradrachmas from the days of Nero, Vespasian, and Trajan, which a Roman soldier probably hid, was also discovered.

At the beginning of the sixth century a group of Christian monks settled at Masada. This monastery most likely functioned until the Persian conquest in 614 CE. It seems that these monks wrote Syriac, as an ostrakon found near Masada testifies. Approximately twenty monks resided on the western side of Masada, in an area that lay near the Roman bulwark. The presence of a very small number of monks is evidenced by only five coins.

HANAN ESHEL

Written Material

The excavations at Masada (1963-1965) led by Yigael Yadin yielded not only a considerable amount of materials inscribed in Greek and Latin, but also the remains of fourteen parchment documents written in Hebrew (one possibly in Aramaic) and in Hebrew square characters, and one Hebrew papyrus fragment penned in Paleo-Hebrew. These fragments were discovered in various locations at the desert fortress. They are identified by the first set of figures in the *siglum* of each piece, whereas the second set of figures indicates the number of the find in a given locus (excavated archaeological feature), e.g.

1039-270. While some items were found *in situ*, others were discovered in places where presumably they had been discarded by Roman soldiers. Casemate 1039 (a storage room in the rampart), in which seven items were found, together with Hebrew and Aramaic ostraca (inscribed pottery fragments) and Latin and Greek papyri, stands out in this respect, giving "the impression that articles from various rooms were thrown in disorder into this one and heaped up there." The Hebrew fragments stem from works of a variety of literary genres.

Scrolls of Biblical Books. Fragments of seven manuscripts of books of the Hebrew scriptures, two scrolls each of *Leviticus* and *Psalms*, and one each of *Genesis*, *Deuteronomy*, and *Ezekiel*, were discovered. Not one is preserved in one piece, even the smallest, *Psalms*^b (Mas1f), consists of two bits of parchment. The straight margins of some fragments seemingly evince willful tearing, presumably by Roman soldiers who, as Josephus alleges, vented their rage on the sacred writings of the Jewish defenders after the conquest of Masada. The condition of these fragments is probably not caused by deterioration or damage caused by insects, the effects of which can be observed most prominently in other Qumran scrolls.

Jubilees from Masada (Mas1i; 1039-317) contains one fairly sizable piece and five scraps of parchment, almost all of which can be fitted together on the basis of edge contours and extant letters. In the reconstituted fragment, measuring 5.6 by 4.5 centimeters, a part of the text of *Genesis* 46.7-11 is preserved, in which are listed the names of Jacob's sons who went down with him to Egypt.

Leviticus^d (Mas1a; 1039-270) consists of two pieces of parchment, which can be joined to form one fragment measuring 9.7 by 11.5 centimeters. It contains most of the text of *Leviticus* 4.3-9, which deals with expiation offerings.

Leviticus^b (Mas1b; 92-480) consists of over forty pieces, ranging in size from mere snippets of parchment to fragments as large as the palm of a hand. The preserved bits of text are practically identical with the Masoretic Text of *Leviticus* 8.31-11.40. Therefore, every piece can be integrated mosaic-fashion in five partly restorable columns. The mock-up sheet reconstituted in this way measures approximately 54.0 by 21.5 centimeters. The portion of text preserved in the five reconstructed columns comprises somewhat less than one-tenth of the text of *Leviticus*, both by a verse and a page count in modern editions. We may therefore conclude that forty-eight to fifty columns would have been required to accommodate the entire text of the book. The fully rolled-out scroll would have measured approximately 5.4 to 5.6 meters, without taking into account a handle sheet (see below), if such a sheet was attached to it.

The four fragments of *Deuteronomy* from Masada (Mas1c; 1034/1–4) evidently are remains of the final two columns of the last sheet of a *Deuteronomy* scroll and contain parts of *Deuteronomy* 33.17–34.6, including the Song of Moses. In fragment 1 the beginnings of seven lines, which constitute the main portion of the preserved text, are extant. Together with the 3.4-centimeter-wide top margin, fragment 1 measures 8.0 by 8.0 centimeters. The largest fragment, fragment 2, measures 13.8 by 10.0 centimeters. It holds seven line endings, of which five are the continuation of the parallel lines on fragment 1; next to them is a strip of the left-hand margin. A blank stretch of parchment measuring 9.7 by 11.0 centimeters is sewn to the margin. Needle holes are still discernible with a snip of thread running through them. This blank piece is evidently the remainder of the handle sheet, which enfolded the written columns of the rolled-up scroll, serving as their protective wrapper. Fragment 3 measures 4.0 by 3.3 centimeters and contains parts of four lines. On the strength of edge contours and textual sequence it can be joined with fragment 4, measuring 2.0 by 4.5 centimeters, in which fractions of text from the middle parts of six lines are extant.

Ezekiel from Masada (Mas1d; 1043–2220) consists of over fifty pieces of varying size forming the four columns that originally held the text of *Ezekiel* 35.11–38.8, including the “Vision of the Dry Bones.” All four columns can be reconstructed in large measure because of the virtual identity of the recoverable text portions with the Masoretic Text. The resulting mock-up sheet measures 41.0 by 29.5 centimeters and contains 85 of the 1,273 verses that the Masoretes counted in the book of *Ezekiel*, approximately one-fifteenth of the book. Therefore, the entire text of the book would have taken up approximately sixty columns of forty-two lines each. The fully unrolled scroll originally may have attained a length of approximately 5.75 to 6.15 meters, and approximately 6.0 to 6.4 meters with a handle sheet.

The two pieces of Psalms^d from Masada (Mas1e; 1039–160) can be comfortably joined on the strength of their edge contours and the extant or restorable text portions of three columns. The upper column (i) measures 18.0 by 14.7 centimeters, and the lower column (ii) 20.2 by 13.5 centimeters. A spur at the top of column ii projects almost perfectly into a concave indentation at the bottom of column i. The combination of both columns makes up a fragment that is 25.5 centimeters high. The apparent loss of some 2.7 centimeters results from the ingress of the spur of column ii into the concavity of column i. Four partial lines of text at the joint were lost in a fairly large lacuna that extends from the middle of the second column to its left edge. The ruggedness of the edges, which is especially noticeable on the right side of fragment 1,

seems to evince deterioration of the parchment rather than willful tearing, as Yadin assumed (1965, p. 103). The column is 20 centimeters high and holds twenty-seven written lines and divider blanks between psalms that equal the width of approximately two more lines. The fully extant bottom margin measures 3.4 centimeters; the top margin 2.1 centimeters. Thus, the scroll originally attained a height of about 25.5 centimeters.

Psalms^a from Masada encompasses the text of Psalms 81.2b–85.6a in one complete and two partial columns of hemistichs (half lines). The middle column (ii) is the best preserved. It contains the text of Psalms 81.16b–83.17a in twenty-seven lines. A 2.1-centimeter-wide blank in the column separates Psalm 81 from Psalm 82, except for the latter's superscription, *mizmor le-'Asaf* (“a song of Asaph”) which is kept apart from the last word of Psalm 81, *asbi'eka*, by a somewhat broader than regular space between the line. Variants on the Masoretic Text, which are more numerous in Psalms^a than in other biblical fragments, are concentrated in the lower half of this column (Ps. 83.8–15).

The right-hand part of column i is lost. The extant left-hand side holds parts of the line endings of Psalms 81.2–18. Equally, the left-hand length of column iii is missing. But in the right-hand length, which is fully extant, all the first hemistichs of Psalms 83.17b–85.6 are preserved. A blank of 1.2 centimeters separates Psalm 83 from Psalm 84, and a slightly larger one keeps Psalm 84 apart from Psalm 85.

In contrast to the color of the other fragments, which ranges from light brown to almost black, the two small pieces of Psalms^b (Mas1f; 1103–1742) are practically paper white. They can be combined easily in one fragment measuring 7.5 by 4.4 centimeters, which contains Psalm 150 written in especially small letters as poetry in sense units separated by blank spaces.

Comparison with Masoretic Text. Some textual variants between the biblical fragments from Masada and the Masoretic Text should be noted. Psalms^d (Mas1e ii.19) reads *'lhy 'dwm* (“the gods of Edom”); Masoretic Text for Psalm 83.7 reads *ohelai Edom* (“the tents of Edom”). MasGen 1.2 reads *mitsrayim et ya'aqov ha-ba'im mitsraymah ya'aqov uvanav* (“to Egypt with Jacob”); the Masoretic Text for *Genesis* 46.8 reads *ha-ba'im mitsraymah ya'aqov uvanav*. MasGen reflects here possibly the reading *et ya'aqov avihem* (“with Jacob their father”), which is preserved in the expanded Ethiopic version of the passage in *Jubilees* 44.11–13.

There are further variants with respect to *plene* and defective spellings. In several instances, Masada fragments exhibit a *plene* spelling vis-à-vis a defective spelling in the Masoretic Text, or vice versa. But, in general, the Masada texts appear to exhibit the same fluctuation in the use of

plene and defective spellings as the Masoretic Text. In this respect, the Masada scrolls differ decidedly from many Qumran biblical and nonbiblical scrolls, which are marked by a tendency to use *superplene* spellings.

For all intents and purposes, the text preserved in the Masada fragments is identical to the Masoretic Text. The textual congruence is highlighted by instances in which a Masada fragment agrees with the Masoretic Text against a variant preserved in a practically contemporaneous Qumran source. The same holds true for variants in other ancient versions of the scriptures, particularly in the Septuagint, especially where additions or deletions are involved. Special mention should be made of the two-word divine epithet (*Adonay Elohim*) of the Masoretic Text of the *Book of Ezekiel*. The Septuagint often renders the epithet by one word only, *Kurios*. In all recoverable instances, the Ezekiel scroll discovered at Masada exhibits the Masoretic reading.

Most important for gauging the relation between Ezekiel found at Masada and the Masoretic Text are variants in the Septuagint that show either the translator's misunderstanding of the Hebrew text or his deliberate deviation from it, or else a derivation from a divergent Hebrew text. For example, the Masoretic Text of *Ezekiel* 35.12 reads: "I have heard all [kol] your blasphemies. . . . The mountains of Israel have been given to us to devour [le-'okhlah]." The Septuagint reads: "I heard the voice [qol] of your blasphemies. . . . You have said the mountains of Israel are desolate and have been given to us as an inheritance [le-nahalalah]."

Parashot: the section system. In the Masada texts of *Leviticus*^b and *Ezekiel*, in which large enough portions of text are preserved, one notes an overall although not complete agreement of internal divisions with the Masoretic section system, as exhibited by other major medieval Masoretic Text manuscripts, the Aleppo Codex (A), Codex Leningradensis B19a (L), the Cairo Codex of the Prophets (C), and Codex Sassoon (S), which indeed differ among themselves in this respect. But a section indicated in a Masada text by a blank in the line or one that can be restored with confidence on the strength of space calculations always coincides with a section in one or more of the above codices.

In summary, similar to fragments of biblical scrolls discovered at Wadi Murabba'at, Nahal Hever, and Nahal Se'elim, the Masada scrolls exhibit a text tradition that is virtually identical to the Masoretic Text and thus give witness to the great antiquity of the Masoretic Text. Furthermore, unlike practically all Qumran scrolls of the Hebrew scriptures, which contain a plethora of diverse textual deviations from the Masoretic Text, only very few true variants vis-à-vis the Masoretic Text can be identified with certainty in the Masada biblical fragments. This cir-

cumstance prompts the conclusion that in the late Second Temple period, mainstream Judaism affirmed as authoritative a proto-masoretic text tradition, the forerunner of the text that ultimately gained exclusive acceptance.

Extrabiblical Compositions. This category includes fragments of previously known apocryphal writings discovered at Masada.

Twenty-six fragments of a Hebrew scroll of *Ben Sira* (Mas1h) were discovered in a casemate in the fortress wall, not far from the gate of the "Snake Path." These biblical fragments, written in a middle or late Hasmonean hand and therefore older than the fragments from the Herodian period discussed above, contain *Ben Sira* 37.27–43.30. They represent the earliest copy of this important apocryphal book, whether in Hebrew or in translation. Until the end of the last century, *Ben Sira* had been known only in Greek and Syriac renditions. The presence at Masada of a fragmentary copy of the Hebrew original, written within a century after the production of the Greek translation, strongly suggests that in the Second Temple period, *Ben Sira* also had currency in mainstream Judaism. [See *Ben Sira*, Book of.]

Fragments of previously unknown compositions of the apocryphal genre were also discovered at Masada. This category includes two items whose literary character suggests a Qumran origin. Phrases that echo expressions from the biblical story of Joseph indicate that the tiny fragments 1045–1350/1–4 and 1375 (Mas1m) survived from a work woven around the Joseph tale or from an apocryphal composition based on the entire *Book of Genesis*. A Joshua Apocryphon (Mas1c; 1039–211) consists of one main fragment measuring 9.5 by 5.8 centimeters and a scrap measuring 3.3 by 2.5 centimeters. The restored composite fragment holds parts of ten inscribed lines. The ink is very well preserved, and the script is legible with the exception of a few letters. The preserved text, in which God is praised for having come to the aid of his people, evidently echoes matters related in the last chapters (23–24) of the *Book of Joshua*. It should be noted that fragments of the Apocryphon of Joshua^{a-b} from Qumran (4Q378–4Q379) manifestly reflect events related in the first part of the biblical book. [See *Apocrypha and Pseudepigrapha*; *Joshua*, Book of.]

Songs of the Sabbath Sacrifice (Mas1k; 1039–200) consists of two pieces of parchment in which the partial text of two columns is preserved. This work, known from remains of several copies found at Qumran (4Q400–407, 11Q17), most probably contained individual compositions for each Sabbath of the year. Songs for the first thirteen Sabbaths, namely for the first quarter of the solar year of 52 weeks (364 days), are partially extant in the Qumran finds. Substantial overlaps between the Masada

and the Qumran fragments "allow for important mutual supplementation and the reconstruction of a significant amount of continuous text" (Newsom and Yadin, 1984, pp. 78–80). The Masada fragments appear to derive from a copy of the work brought to the fortress by members of the Qumran community who fled there when the Romans overran their communal center. [See *Songs of the Sabbath Sacrifice*.]

Additional finds at Masada include small pieces of parchment with only a few broken lines or letters that make it impossible to identify the works from which they originate. The legible bits of text suggest that all are remnants of nonbiblical compositions, which exhibit linguistic peculiarities known from discoveries in the Qumran caves.

A work similar to *Jubilees* (Mas1j; 1276–1786) contains seven partial lines of two columns. At the end of line 5 of the right-hand column, the collocation *sar ha-mastemah* ("prince of evil") can be read. The noun *mastemah* is used recurrently in the covenanters' ideoreligious vocabulary. But the specific term *sar ha-mastemah* turns up at Qumran only in fragments of *Jubilees*, in which it designates the head angel of the forces of evil and darkness. It may, therefore, be surmised that this Masada fragment, too, stems from a copy of *Jubilees* or Pseudo-*Jubilees* imported from Qumran. [See *Jubilees, Book of*.]

In line 3 of the small fragment (Mas1n; 1063–147), seemingly written by an untrained hand, the third-person, masculine pronoun is given in the typical Qumran *plene* spelling *hu'ah*. Equally, the *plene* spelling *qudsho* (line 2) and the indication of the third-person, masculine, possessive pronoun by *leh* in *le-nevu'ateh* (line 4) give reason for positing that this small piece remained of a document that a covenanter had brought to Masada.

Masada 1039–274 consists of a piece of dark brown parchment measuring 3.0 by 2.8 centimeters, on which the beginnings of four lines are preserved with the partly preserved right-hand margin. At the edge, traces of stitching can be discerned. The few extant legible words do not allow for an identification of the contents of this text.

A small papyrus fragment of Samaritan origin, about the size of the palm of a hand (Mas1o; 1039–320), inscribed on both sides in Paleo-Hebrew, holds five partial lines written by different hands. Dividers in the form of large dots separate one word from the next. On one side, *li-r nannah* ("to praise") can be read at the beginning of lines 2 and 3, possibly followed there by *tseho[ta']*, an Aramaic word for "prayer." In line 4, the word *hur-geri-[zz]i[m]* ("Mount Gerizim") can be restored, written as one word as is customary in the Samaritan tradition. We may therefore conclude that this papyrus originated from a Samaritan liturgical composition.

Scribal Conventions. The scribes of all the above documents, foremost of the biblical scrolls, follow rabbinic instructions for writing holy books. Most letters measure 0.3 by 0.3 centimeters and hang from horizontal dry rulings, as is the custom in ancient Hebrew manuscripts. In some cases, a perpendicular line of dots guides the scribe in the marking of the dry rulings, and where these are missing, the letter tops form a straight line. Larger letters like *lamed*, *qof*, and the final forms of *kaf*, *nun*, *pe*, and *tsadi* are 0.6 centimeters high, protruding above the heads or descending below the foot bars of the other letters. However, the occasional use of a final letter in mid-position and of a medial form at the end of a word, as in Qumran documents, suggests that the differentiation between medial and final forms had not yet stabilized at that time.

Letters are clearly separated by a fraction of a millimeter, and words by a space of approximately 0.1 centimeters. But now and then, two or more letters will flow together. Words will sometimes coalesce when a larger-than-usual length of text forced the scribe to crowd the writing, usually at the end of a hemistich or a line. In some instances, the last word or words of a line or a hemistich will spill over into the interhemistich space or the left margin. This also occurs when vertical dry rulings are provided for the guidance of the scribe.

The several columns of a manuscript usually hold the same number of lines, plus or minus one. But the numbers vary from one manuscript to another, from the twenty-five to twenty-six lines of *Leviticus* to the forty-two lines of *Ezekiel*.

Top and bottom margins come to "two finger-breadths," namely 3.0 to 3.5 centimeters, and intercolumn margins to "a thumb's breadth," approximately 2.0 centimeters, as prescribed by rabbinic tradition (B.T., *Men.* 30a).

Dating the Fragments. The site of Masada provides a definite and indisputable *terminus ante quem* for the written material, 73 or 74 CE, the year in which the fortress fell to the Romans. There are no tangible indications that any of the scrolls and documents were penned on the site. Rather, all the items were brought there by the defenders and fugitives. There are reasons for assuming that the documents were originally produced quite some time before the fall of Masada to the Romans.

The fragments of *Deuteronomy* and *Ezekiel* were found at Masada on the very last day of the excavation in two shallow pits, covered with sand and dirt, under the only partly uncovered floor of the "synagogue." Yadin believed that these pits served as a *genizah*. In later times, this technical term came to designate a special room set aside in a synagogue for the storage of tattered or faulty copies of holy books, which had become unfit for use in public

worship. They were taken out of circulation but were saved from desecration. The most famous example of a rich repository of this kind is the Cairo Genizah. [See Cairo Genizah.] If Yadin's conjecture is correct, this would imply that the holy scrolls of *Deuteronomy* and *Ezekiel* at Masada had become tattered through handling over an appreciably long period. Since they were unfit for cultic use, they were deposited in the pits to prevent their profanation. It is not unreasonable to assume that by this criterion alone these scrolls may be dated to the beginning of the first century CE or to the second half of the last century BCE.

Paleography permits further precision in dating the Masada texts. With the exception of one small piece of papyrus inscribed in Paleo-Hebrew characters, thirteen of the remaining fragments are penned in varying forms of the Hebrew square script of the Herodian period and the Ben Sira scroll is written in a late Hasmonean hand. They help us to trace diverse stages in the development of Hebrew script at the height of the Second Temple period (Cross, 1961). On the strength of linguistic criteria and/or content, several Masada documents are shown to be akin to certain Qumran works. They were probably carried to Masada by refugee covenanters. Therefore, the above findings reflect indirectly on the dating of at least some Qumran scrolls.

The discovery at Masada of remnants of compositions of Qumran vintage, on the one hand, and a piece of Samaritan origin, on the other, next to remains of the literary heritage of mainstream Judaism, points to the heterogeneity of the groups of people who had fled to the desert fortress before it fell to the Romans. In this context, attention should be drawn to the excavators' explanation of alterations made within the complex of the large Western Palace, which fact "clearly testifies to occupation either by a group of military commanders (perhaps without their families), an important family, or a coherent community such as the group of Essenes who might have joined the Zealots in their life on Masada" (Netzer, 1991, p. 634).

Yadin and Carol Newsom stress the significance of the presence at Masada of a fragment of the Songs of the Sabbath Sacrifice scroll extant at Qumran "because it implies the participation of members of the Qumran community, almost certainly to be identified with the Essenes, in the revolt against Rome" (Newsom and Yadin, 1984, p. 77). Vermes (1977, p. 124) weighs this possibility but also offers another interpretation of the circumstances:

the discovery of a Qumran writing at Masada . . . does not *ipso facto* equate the inhabitants of the Dead Sea establishment

with the garrison of Masada. It is more likely to mean either that some of the Qumran sectaries made common cause with the revolution during the last stage of the Community's history and brought their manuscripts to Masada with them, or that the Masada rebels considered the Qumran Community politically unreliable and seized its settlement as the Romans advanced towards the Dead Sea.

But the presence of a Samaritan piece among the Masada finds, in addition to documents of apparent Qumran vintage, suggests a more inclusive explanation: in times of distress and mortal danger, the desert fortress offered refuge not only to members of the mainstream community but also to various groups of dissenters—Zealots, Samaritans, and adherents of the "Community of the Renewed Covenant."

MASTEMAH. See Demons.

MATTHEW, GOSPEL OF. The connection between various portions of the *Gospel of Matthew* and the texts

found around the Dead Sea has been the subject of a good deal of speculation and discussion since the initial discovery of the Dead Sea Scrolls in 1947. The results of this research have been significant for our understanding of various portions of the text of *Matthew* as well as for the exploration of the social context in which it was written.

Sermon on the Mount. *Matthew* 5–7, the Sermon on the Mount, rightly has attracted the most attention from researchers. Important similarities with *Matthew* 5.3–11 are found in the Wisdom Text with Beatitudes (4Q525 2.ii.1–6). Both texts develop themes from Psalm 37 and share the use of the phrase *lev tahor* (“pure heart”), which appears in Greek in the Septuagint as *katharoi tes kardias* (“pure in heart”). Other references also are apparent. The similarity of *Matthew* 5.3–5 to *Hodayot*¹ from Cave 1 at Qumran (hereafter 1QHodayot¹ xxiii [xviii].14–15) has been argued, noting the presence of phrases such as “poor in spirit,” “the meek,” and “those who mourn” in both texts, each of which utilizes *Isaiah* 66.2 and 61.21–22 in a similar manner. The Messianic Apocalypse (4Q521) and Melchizedek (11Q13) also use this same language from *Isaiah*. The presence of these terms already was noted in the first scrolls from Cave 1. Other terms such as the “merciful” in *Matthew* 5.7 and “righteousness” in *Matthew* 5.6 and 10 also are attested in the Qumran texts.

Sectarian centers such as Qumran around the “Salt Sea” could be the image behind *Matthew* 5.13, just as the dualistic context of the sons of light and the sons of darkness would be evoked by the references to light in *Matthew* 5.14–16. It also is possible that salt refers to wisdom and light to the law. In either case these few verses could reflect a Matthean response to the kind of sectarianism represented in a large portion of the nonbiblical scrolls from the Qumran finds. If so they constitute a bridge between the eschatological outlook of the Beatitudes and the following pronouncements concerning the role of the law.

The antitheses (*Mt.* 5.21–48) are introduced by a statement on the role of the law (*Mt.* 5.17–20). This paragraph begins with a declaration concerning its continuing validity, “Do not think that I have come to abolish the law or the prophets,” and concludes with an appeal for a greater righteousness. The extent to which a sectarian identity associated with the Qumran texts was rooted in a very particular interpretation of the legal prescriptions of the Torah is well documented in *Miqtsat Ma’asei ha-Torah*² (4Q394–399), as well as a host of other works such as Temple Scroll³ (11Q19), the Rule of the Community from Cave 1 (1QS; hereafter 1QRule of the Community), the Damascus Document (CD), and the Cave 4 texts of these compositions, to name only a few. The antitheses conclude in *Matthew* 5.48 with the injunction “be perfect,” a

term also utilized in *Matthew* 19.21 and found nowhere else in the New Testament Gospels but familiar in the legal literature of the Dead Sea corpus. The antitheses are bracketed by statements using central concepts undergirding the communal legislation of the Qumran scrolls.

A number of studies of the antitheses (*Mt.* 5. 21–48) have pointed to the similarities between their structure in *Matthew* and the literary form of *Miqtsat Ma’asei ha-Torah*. The difference between the first person plural of *Miqtsat Ma’asei ha-Torah* and the first person singular of *Matthew* can be ascribed to the latter’s Christological interests. It appears that the rather direct polemical approach of *Miqtsat Ma’asei ha-Torah* may be closer to the Matthean formulation than previous hypotheses based on either Greek or other Hebrew literature.

The stringent rules concerning divorce shared by the New Testament and the Qumran scrolls in contrast to most of the remainder of Second Temple Judaism have resulted in the close examination of those features of the Matthean legislation (*Mt.* 5.31–32 and 19.1–12) that make it unique within the New Testament. The prohibition against both polygamy and divorce is spelled out and justified in the Qumran legislation (Temple Scroll³ [11Q19 lvi.18, lvii.17–18, lxvi.8–11]; CD iv.12–v.11, etc.). These texts are the earliest record of a tradition of the prohibition against divorce that is then picked up by the followers of Jesus. The Matthean texts are distinguished by the clause “except on the grounds of *porneia*,” frequently translated as “fornication.” This Greek term in the Septuagint is a translation of the Hebrew *zenut*, a term used in the Damascus Document to designate a variety of sexual activities regarded as illegal by the sect, including divorce, polygamy, and a broadened definition of incest (CD ii.16, iv.17, iv.10, vii.1, viii.5, ix.17). One of the Cave 4 manuscripts of the Damascus Document possibly refers to a violation of the laws of menstruation (Damascus Document⁴ [4Q270 11.i.12–13], Damascus Document⁵ [4Q267 12.4–5]). In *Miqtsat Ma’asei ha-Torah* the term is used to designate the intermarriage of priests and common Israelites (4Q396 1–2.iv.4–11, 4Q397 12–15). A broad sectarian definition for *porneia* may lie behind *Matthew* 5.32 and 19.9.

Interesting parallels to the injunction against swearing oaths in *Matthew* 5.33–37 (cf. *Mt.* 23.16–22) are found in the descriptions of the Essenes in Josephus (*The Jewish War* 2.135) and in Philo (*Every Good Man Is Free* 84), as well as in 1QRule of the Community (1QS vi.27–vii.1) and the Damascus Document (CD xv.1–15, xvi.1–2). In these same materials we also find descriptions of the oaths required upon admission into the group (*The Jewish War* 2.139–142; 1QRule of the Community v.7–11; CD xv.1–13). Other stipulations concerning oaths and vows can be found in the Damascus Document (CD vii.8) and Temple

Scroll" (liii.9–liv.7). Texts such as Damascus Document (CD xv) suggest that further oaths were unnecessary following the loyalty oaths required upon admission.

The second clause of *Matthew* 5.48, "You shall love your neighbor and hate your enemy," is not found in *Leviticus* 19.18, its presumed biblical antecedent. While 1QRule of the Community and other texts itemize legislation concerning the meaning of the mandate to love your neighbor, that is, other members of the sect (e.g., 1QRule of the Community v.24–vi.1, vi.25–27, vii.4–17; CD ix.2–8, etc.), they also contain sections closer to the Matthean appropriation of this legislation. Among the perspectives to be taught new initiates to the sect was "that they may love all that he has chosen and hate all that he has rejected" (1QRule of the Community i.4; cf. CD viii.15–19, xix.29–32). Upon admission to the "covenant of grace," they pledged that they would "hate all the sons of darkness, each according to his guilt in God's vengeance" (1QRule of the Community i.9–11; cf. 9.15–23).

Righteousness. Within the New Testament *Matthew* employs the term *righteousness* in a unique manner. Out of a total of seven references in the work the term appears only in *Matthew* 3.15 and 21.32 outside of the Sermon on the Mount. *Matthew* 5.20 and 6.33 (cf. *Mt.* 6.1) both use this term to point to the very particular understanding of Judaism and the attendant lifestyle the author of the first gospel expected of the followers of Jesus. Within the Beatitudes we learn that "those who are persecuted for the sake of righteousness" in *Matthew* 5.10 (cf. 5.6) are really suffering for the sake of Jesus in *Matthew* 5.11. This same term also is used to designate the sectarian lifestyle within the legal literature from the Dead Sea. The author of the Damascus Document is upset because the opposition has described "the three nets of Belial . . . in which Israel is ensnared" as "three kinds of righteousness" (CD iv.17). These "nets of Belial" are listed as fornication, wealth, and defilement of the Temple, issues at the heart of the sectarian identity spelled out in this composition. Within the viewpoint developed in the Damascus Document, however, it is the adherents of the new covenant in the land of Damascus who have the correct understanding of righteousness. The first line of the Damascus Document reads "And now listen all who know righteousness." Both this composition and the first gospel use the same term to designate their own particular viewpoint within Judaism.

Wisdom. While the beatitudes of the Wisdom Text with Beatitudes emphasize wisdom and law in a manner not immediately apparent in the Matthean version, certain parallels in structure are striking, and both works share an eschatological interest, certainly more highly developed in the latter. Elsewhere in *Matthew*, particularly *Matthew* 11.25–30, Jesus is regarded as the representative

of wisdom. In light of this identification, also mentioned in *Matthew* 11.19, 12.42, and 13.54, the equation of wisdom with law in the Sermon on the Mount becomes evident, emphasized in *Matthew* 5.17–20. This link is common throughout the Qumran corpus (e.g., Wiles of the Wicked Woman [4Q184 14–15]; 1QRule of the Community i.12, iii.1, viii.9, ix.17–18), where law is fundamental for a number of the basic compositions undergirding the life of the sect. Eschatological interests are another important feature of Qumran wisdom (Mysteries [1Q27 i.1–7]; Sapiential Work A^a [4Q418 69.5–15, 81.1–11]). The wisdom associated with Jesus is the occasion for persecution and suffering on the part of those who adopt it (*Mt.* 5.10–12, 7.6, 23.34–36); those who embrace the sectarian wisdom share the same lot in Wisdom Text with Beatitudes 1.ii.3–6. Thus we see that the connection of eschatological themes with wisdom statements in *Matthew*, evident in both the Sermon on the Mount and in chapter 11, also is evident in wisdom compositions from Qumran. The utilization of the wisdom theme as one argument for the authority of Jesus as lawgiver also is evident in *Matthew* 11.27.

Communal Discipline. The discussion of communal discipline in *Matthew* 18.15–18 reflects a particular interpretive tradition of the laws of reproof in *Leviticus* 19.17–18. These same verses are the source of the serious obligation in the Damascus Document (CD vii.2–3, ix.2–8), Damascus Document^a (4Q266 18.ii), and 1QRule of the Community (1QS v.25–vi.1, vii.8–9) to reprove a fellow member of the sect when necessary and the attendant steps to be taken. Berakhot^a and Berakhot^c (4Q286, 4Q288) also contain evidence of similar traditions. As in *Matthew* the emphasis is on internal discussion and rebuke, even though these Qumran texts outline specific punishments in many instances. The fragmentary remains of Rebukes by the Overseer (4Q477) suggest a written record of rebuke. When this process does not yield results, the unrepentant must be excommunicated. The Damascus Document (CD ix.16–22) deals with the procedure in capital cases.

Use of Scripture. One of the distinctive features of the Matthean usage of the Hebrew scriptures is the employment of the formula quotation "to fulfill the word . . ." followed by a citation from the Hebrew scriptures. Some studies have found an explanation for the origin of these texts within the evidence from the Qumran scrolls. While the formula employed in the two literatures is different, there is a good deal of similarity between their interpretive interests and techniques. These quotations do resemble the *peshar* literature in their shared interest in questions of the relationship between eschatology and the events narrated in the text. The *pesharim*, however, employ the biblical verse as the beginning point of the argu-

ment followed by an exegetical explanation, while the author of *Matthew* employs the verse as an explanation (or justification) for the preceding narrative or statement.

A related argument that precedes the Qumran discoveries is that the author of this gospel possessed a collection of "testimonies" that were integrated into the composition. Further evidence for this kind of collection was found among the Qumran scrolls in Testimonia (4Q175). Since the citations introduced by the formula quotations appear to reflect very closely the theology of the gospel's author, it is questionable whether these citations were based on an independent collection. Even if they were, the creative work of the author is apparent in their usage. The evidence from the Dead Sea Scrolls does make it clear that Jewish readers of the *Gospel of Matthew* could have been familiar with hermeneutical approaches to the Hebrew scriptures that were centered in concepts of eschatological fulfillment.

Matthew is the gospel with the greatest number of explicit quotations from the Hebrew scriptures, containing approximately sixty citations. Some studies prior to the discovery of the Dead Sea Scrolls found a significant variation between those texts cited in connection with formula quotations and the remainder that were seen to reflect Septuagint readings. Subsequent research has suggested a more complicated picture. The pluriform character of the textual traditions attested in the Qumran manuscripts provides new evidence for evaluating the Matthean citations of the Hebrew scriptures.

Prophet Like Moses. It is relatively clear that the figure of Moses is an important character for *Matthew's* depiction of Jesus. Whether the author deliberately intended to portray Jesus as the new Moses or as one greater than Moses or whether the author used a variety of less systematic allusions is the subject of continuing debate. The centrality of allusions to the figure of Moses in both *Matthew* and in significant compositions among the Dead Sea Scrolls cannot be contested. Mosaic allusions pervade the birth and infancy narratives. The story in *Matthew 2* of Joseph and Mary's flight to Egypt and subsequent return is built on imagery of Moses and the Exodus, including the use of *Hosea 11.1* in *Matthew 2.15*, Herod's murder of the children, and the reference to "those who were seeking the child's life" in verse 20 and elsewhere. There also is evidence for proposing that by the first century CE Jewish traditions about Moses included some of the more miraculous elements present in *Matthew* such as the birth narrative and Jesus' ability to perform miracles. Many of these traditions are rooted in the statement of *Deuteronomy 18.15-18* concerning the "prophet like Moses." The Transfiguration story in *Matthew 17.1-13* is another example. Evidence of Moses as the prophet-king is found within this tradition. Good evi-

dence for understanding this use of the Mosaic imagery in an eschatological and possibly messianic sense can be found in 1QRule of the Community ix.11, "until there shall come the prophet and the anointed ones of Aaron and Israel," and in the inclusion of *Deuteronomy 18.18-20* in Testimonia. Some scholars have suggested that Elijah redivivus was identified with the Mosaic eschatological prophet in Apocryphon of Moses B^a (4Q375) and some other Qumran texts.

All of these allusions to Moses pale in significance when compared to his overarching significance as lawgiver, recognized most obviously in *Matthew 23.2*. Moses' paramount role as lawgiver is presupposed in texts such as 1QRule of the Community v.8 and Damascus Document (CD) xv.2 and xv.12, where his name is used to designate the Pentateuch. The same obvious point is evident in the phrase "Moses says" in Damascus Document (CD) v.8, viii.14, and xix.26-27. The entire Temple Scroll^a, an authoritative statement of the will of God based upon the Pentateuch and written in the first person, is attributed to Moses. While not written in its entirety in the first person, *Jubilees*, amply attested in the Qumran fragments, makes a similar claim. There is adequate evidence to suggest that the sectarian legislation found among these compositions represented a unique attempt in Second Temple Judaism to interpret and live by the law of Moses. While the argument that the five major discourse sections of *Matthew* suggest a structure deliberately based upon the Pentateuch is less than convincing, it is clear that the interpretation of the Mosaic law is an issue throughout the work, most notably in *Matthew 5.17-18* and throughout the Sermon on the Mount. In the case of this gospel the assertions concerning the authority of Jesus have to do with his priority as the fundamental lawgiver-interpreter (e.g., *Mt. 5.17-20, 11.25-30, 23.9, 28.18*).

Jewish Sectarianism. The greatest contribution of the Dead Sea Scrolls to the study of *Matthew* is their contribution to our understanding of Jewish sectarianism in the late Second Temple period. A Jewish sectarianism informed by these perspectives provides a logical context for understanding the *Gospel of Matthew*. The Jewish religious and intellectual environment in which the *Gospel of Matthew* could be composed and understood becomes much clearer on the basis of the evidence from the scrolls. It is from this perspective that we evaluate the shared thematic and literary features identified above. Both literatures provide evidence of Jewish sects with a particular interest in issues of both law and eschatology. The interrelationship of these themes and other relevant materials in *Matthew* also aids in the interpretation of fragmentary remains of the scrolls where limited material on isolated topics makes comprehension and interpretation rather difficult. The complicated nature of Jewish

communities in the latter half of the Second Temple era becomes more evident as we attempt to understand these literatures within their social and historical context, and in relationship to one another.

Khirbet Mird. A few fragments of Greek papyri containing the text of *Matthew* were found at Khirbet Mird. Mird 16 and 29 have been labeled p83 in the Aland listing of New Testament manuscripts. Mird 16 contains portions of *Matthew* 20.23–25 and 16B may include *Matthew* 20.30–31.

JOHN I. KAMPEN

MAZIN, KHIRBET. Also known as Qasr el-Yahud or Khirbet el Yahoud (de Saulcy, 1853), Khirbet Mazin is a prominent Hasmonean ruin located in the delta of Wadi Mazin, approximately 500 meters to the north of the confluence of Nahal Kidron (Wadi en-Nar) to the Dead Sea. The structure had been erected at the foot of an ascent from the Dead Sea to the Buqei'a. The perennial springs of 'Ein-Feshkha are 3.5 kilometers to the north. The ruin was explored in 1953 by the Belgian expedition working at Khirbet Mird; it was excavated in December 1960 and January 1961 by Howard Stutchbury and G. R. Nicholl (1962), and again in 1971, 1974, and 1976 by P. Bar Adon (1989). The site was identified by Bar Adon as the biblical Middin (*Jos.* 15.61–62). He attributes its first construction to Uzziah, king of Judah, as related in *2 Chronicles* 26.10.

The ruin consists of a large courtyard or hall, 31 meters long and 11 meters wide inside, with a rectangular watchtower 9 by 18 meters in dimension, two to three stories high, attached to its northeastern corner. The tower was divided by lateral walls into five rooms and two interconnected, plastered water cisterns, 4 meters deep. The rooms served for dwelling and storage. The entrance to the courtyard was from a single opening, 5.2 meters wide, on the east, facing the Dead Sea. The jambs were built of carefully cut ashlar. Several worked sandstones were attributed to a frieze and cornice; others had marginal drafting and masons' marks, dry painted plaster (*secco*) in red and black, and molded stucco. A slanting ramp, approximately 6 meters wide, supported by walls on either side, descended from the opening eastward. A curvilinear wall approximately 4 meters wide to the east of the tower might have served as a breakwater to prevent the sea water from flooding in. The level of both courtyard and ramp was sunk below the external, surrounding ground level.

The courtyard walls, approximately 2 meters thick at

the bottom and tapering upward, were built of large local boulders on both sides, with a core of smaller stones packed between them. The large boulders were laid roughly in courses, with lacings of smaller stones embedded in mud mortar. The western and northern walls of the courtyard had an outer retaining wall with an external face built of undressed smaller stones. The 2.5-meter space between this and the inner wall was filled with rubble. The stone walls were covered by an external layer of plaster. The tower walls are preserved to an elevation of 6 meters. Sounding near the gate, especially on the southern side, yielded iron and bronze nails from the timber doors, fired pieces of which were also found. In the 1960–1961 excavations distinctive molded ware, coins, a ring, and a large lamp of lead were found. The pottery finds in the Bar Adon excavations are mainly from the second century BCE to the first century CE. The coins are from the time of Alexander Jannaeus to the time of the First Jewish Revolt. Iron Age II (eighth century BCE to seventh century BCE) pottery shards found by Bar Adon indicate that the Hasmonean fortress was preceded by an earlier one. Occupation by “squatters” during the Byzantine period is indicated by several fireplaces and small amounts of pottery shards, and by crude blocking of the entrance.

A cave, 6 meters wide and 12 meters deep, was excavated by Bar Adon in the cliffs to the west of Khirbet Mazin. The pottery finds are from the second and first centuries BCE. Another cave, referred to as the Coin Cave and yielding similar finds and a coin from the First Jewish Revolt, was excavated by Bar Adon 2 kilometers south of the site.

According to Bar Adon, Khirbet Mazin was a military and maritime trading post. Ehud Netzer (1989) had suggested that the site, which once stood very near the water's edge, was a fortified Hasmonean dry anchorage for royal boats, which could have been dragged from the sea along the ramp. The boats would have been protected inside the walled area. The courtyard could have been covered by a cloth curtain if not by a wooden roof. In this case the boats actually were protected inside a roofed hall. A small unit of soldiers occupied the tower. Four boats, 14 meters long and 4 to 4.5 meters wide, could have been housed in this dry anchorage. The boats were at the service of the Hasmonean kings and their retinues in sailing from Jerusalem or Jericho to 'Ein-Gedi, Masada, Mikhwar, or Zoara, since land traffic from Jericho and Qumran southward along the seashore was impossible.

JOSEPH PATRICH

MEALS. The Dead Sea Scrolls testify to the regular practice of communal meals in the Qumran community. Facilities for dining have also been identified among the Qumran remains. The importance of the communal meal at Qumran is indicated in this summary statement from the Rule of the Community from Cave I regarding community life. “They shall eat in common and bless in common and deliberate in common” (hereafter, IQRule of the Community, 1QS vi.2–3). Descriptions of Essene meal practices in Philo and Josephus coordinate with what we find in the Dead Sea Scrolls and lend weight to the theory that the inhabitants of Qumran were Essenes.

Although the scrolls do not indicate how often the communal meals were held, Josephus notes that the Essene meals took place twice a day, once in the late morning, when they took a break from their morning labors, and once in the late afternoon, when they finished their labors for the day (*The Jewish War* 2.129–132). Before each meal, Josephus writes, they would purify themselves with a bath and put on special garments. The scrolls also connect purificatory ablutions with entrance to the “pure meal” of the community (1QS v.13–14).

Documentation. The Rule of the Community from Cave I describes the common meal as follows:

Wherever there are ten men of the council of the community there shall not lack a priest among them. And they shall all sit before him according to their rank and shall be asked their counsel in all things in that order. And when the table has been prepared for eating, and the new wine for drinking, the priest shall be the first to stretch out his hand to bless the first fruits of the bread and new wine. (1QS vi.3–6)

Like other gatherings of the community, the common meal required at least ten men and the presence of a priest. No mention is made of women participating in the meal, a point also made by Josephus (*The Jewish War* 2.120–121). When they arrived in the dining room, the men were to sit “according to rank,” which corresponds to Josephus’s note that they were served “in order” (*The Jewish War* 2.130). The meal began with a benediction by the priest, also emphasized by Josephus, who adds: “none may partake until after the prayer” (*The Jewish War* 2.131). Josephus also mentions a prayer by the priest at the end of the meal, a practice not referred to in the scrolls.

The Rule of the Community specifies prayers over both the bread and the "new wine." This does not mean that only bread was eaten; rather, the prayer over the bread would be intended to cover all the food. According to Josephus the menu included bread and an unspecified common dish that was served to each participant (*The Jewish War* 2.130). The reference in the Rule of the Community to "new wine" is unusual since it is not the normal term for wine but rather refers either to lightly fermented new wine or simply to grape juice. Though later rabbinic usage connects the term with grape juice, the Temple Scroll⁴ (11Q19) connects it with the feast of new wine. In either case, the limited alcoholic content of their wine correlates with the sobriety of the community.

One component of their cuisine appears to have been meat. At various locations at the Qumran site, burials of animal bones encased in pottery vessels have been found. The bones appear clearly to be the remains of meals since they derive from edible animals (goats, sheep, oxen) and have been separated and cleaned of flesh. Why the remains of meals were buried so carefully continues to be a mystery. It has been suggested that they were remains of sacrificial meals, but no signs of sacrifice have been found at the site, and burial of sacrificial remains in this manner is unprecedented, so this interpretation is problematic.

Archaeological Remains. Two separate rooms among the archaeological remains at Qumran have been proposed as dining halls. Roland de Vaux identified a large rectangular room, 22 meters by 4.5 meters wide (72 feet by 15 feet), as the community dining hall because an adjacent room contained a cache of some one thousand serving vessels. He also noted that the room was designed so that it could be washed with water and drained, consistent with its proposed use for dining. There is no indication as to what the furnishings of the room might have been.

A reexamination of the excavation data by Pauline Donceel-Voûte has resulted in a new theory that the collapsed second floor of locus 30, previously identified as the scriptorium, was instead used as a dining room. The plastered furnishings found in the debris from the room, originally identified by de Vaux as a bench and writing table (1973, pp. 29-33, pl. XXIa), would in this reconstruction be identified as a low platform placed along the wall on which the couches (formerly identified as "writing tables") would rest. Donceel-Voûte argues that this reconstruction better fits the form of the remains and, furthermore, corresponds more accurately to a known architectural pattern in the ancient world, since there are many examples of dining rooms being designed in this way, whereas the proposed bench and writing table are unprecedented architecturally (as acknowledged by de Vaux). Donceel-Voûte's reconstruction of the arrange-

ment of the furnishings suggests that the room could have held at least nine and possibly more reclining diners. While it was common for diners to recline at ancient banquets, it must be noted that the scrolls describe diners at the community meal as sitting (1QS vi.3-5).

Symbolism. The community meal was known as a "pure meal," indicating its function as a centerpiece for the elaborate purity rules specific to this community. Just as the community saw itself as set apart from the rest of humanity, and even the rest of Judaism, by its purity, so the meal was one in which only the pure could participate.

In many ways participation at the common table symbolized membership in the community. There was a two-year trial period for each initiate before being accepted into full membership, during which time "he shall not touch the pure meal of the congregation until one full year is completed . . . he shall not touch the drink of the congregation until he has completed a second year among the men of the community" (1QS vi.16-17). Josephus states: "Before he may touch the common food, he is made to swear tremendous oaths" (*The Jewish War* 2.139). Similarly, exclusion from the meal for a specified time, usually a year, was the primary way in which members were disciplined (1QS vi.24-25, vii.15-16, vii.18-20).

This function of the meal as a boundary marker, setting the community apart from the outside world, is a feature it shared with meals in the culture at large. Meals functioned as a central activity for groups of various kinds in the Greco-Roman world, such as clubs, funerary societies, and philosophical societies, as well as sectarian groups within Judaism, such as the Therapeutae (described in Philo's *On the Contemplative Life*) and the early Christians. Other features of the Qumran meals were also consistent with Greco-Roman banquets, including prayer before the meal (which for the Greeks was usually in the form of a libation), the ranking of guests at the table, and reclining, if indeed reclining was practiced at Qumran (as Donceel-Voûte argues, but the evidence is inconclusive).

Another interpretation of the meal is found in the Rule of the Congregation (1Q28a). Here the community meal is said to include not only the community, but also "the priest," "the whole congregation of Israel," "the sons of Aaron the Priests," "the chiefs of the clans of Israel," and "the Messiah of Israel." The entire company proceeds in and sits "each in the order of his dignity." After the priest says the benediction over the bread, "the Messiah of Israel shall extend his hand over the bread, and all the congregation of the community shall utter a blessing, each man in the order of his dignity" (1Q28a ii.11-22). This text superimposes over the formula of the regular community meal a description of a banquet with the Messiah. The motif is that of the messianic or eschatological ban-

quet, the banquet of the end time, a theme that is widely reflected in biblical and extrabiblical tradition (e.g., *Is.* 25.6–8, *2 Bar.* 29.1–8). Based on this text, Frank Moore Cross, among others, has suggested that the Qumran community celebrated their common meals as a “[liturgical] anticipation of the messianic banquet.”

Comparison with Christianity and Other Sects. Comparisons are often drawn between the Qumran meal and the Christian Lord’s Supper. However, the centrality of the meal to the life of the community and the prominence of bread and wine are common features of all ancient meals. More distinctive is the eschatological focus and the idealization of the meal as a messianic banquet, which the Lord’s Supper emphasizes as well in such texts as *Mark* 14.25 and *Luke* 22.15–18. But these texts contrast the Lord’s Supper with the Passover meal and make no reference to the Qumran (or Essene) tradition, so it is unlikely that Christian practices were drawn directly from Qumran practices.

The Qumran meal has also been identified as a “sacred meal” in its resemblance to the Christian sacramental interpretation of the Lord’s Supper. These arguments often derive from an inadequate definition of “sacred meal” and an inadequate appreciation for the widespread practice of communal meals in the ancient world. The closest one gets to such a concept is Josephus’s reference to the Essenes entering the dining hall “as into some holy shrine” and practicing silence at the table so as to appear “to those outside . . . like some awful mystery” (*The Jewish War* 2.129, 2.133). Notice, however, that Josephus is not referring to the meaning of the meal per se, but rather to the effect it might have had on outside observers. It is a style of argument meant to persuade the reader that these meals were not run-of-the-mill pagan affairs but rather had a form consistent with the strict rules of purity with which they were circumscribed.

Qumran meal practices have also been compared to those of the *havurah* (“fellowship,” “brotherhood”), a term mentioned in *Dema’i* 2.2–3. The *haver* was one who maintained a table of ritual purity and refrained from eating with *‘am ha-‘arets*. Whether the *havurim* were actually a sectarian group, like the Qumran community, or whether this terminology simply referred to gatherings with one’s social intimates are matters of scholarly debate. But at the least the category of the *havurah* illustrates the phenomenon of separation on the basis of laws of purity elsewhere in Judaism.

MEDIA. Over the years, coverage of the Dead Sea Scrolls in mass-circulation newspapers and magazines, popular books, and broadcast media has played an important role in arousing worldwide public interest in and even fascination with the Judean Desert manuscripts. Yet on more than a few occasions, media coverage of the scrolls has transcended strictly scientific reporting to become deeply intertwined with wider modern political and religious controversies. In some cases, extensive media coverage of the scrolls’ supposed hidden religious significance or their interpretation and publication by scholars has sparked public protests and political controversies so serious that they have profoundly influenced governmental policies regarding the scrolls in both Jordan and Israel.

Discovery and Conflicting Scholarly Claims. The first announcement of the discovery of the scrolls from Cave 1 at Qumran, made by Professor Miljar Burrows on behalf of the American Schools of Oriental Research in a carefully worded statement datelined New Haven, 25 April 1948, ignited a storm of controversy over the legal status of the scrolls. Though initial details were sketchy (in one of the published versions, ten scrolls were reportedly found near 'Ein-Gedi), this press release, carried in the *New York Times* and on wire services all over the world, brought an immediate, angry response from Professor Eleazar L. Sukenik of the Hebrew University of Jerusalem who believed that his scholarly rights had been violated by the American scholars. [See *biography of Sukenik*.] Calling his own press conference on the following day (April 26) at the Jewish Agency building in Jerusalem, Sukenik reported on the Cave 1 scrolls that had come into his possession during the previous autumn and asserted that his negotiations to acquire the remaining Cave 1 manuscripts, though interrupted by the outbreak of the 1948 war, had established his prior scholarly claim. Public recriminations intensified in August 1949 with the publication in the London *Times* of a letter by Professor Godfrey Driver of Oxford, who criticized Burrows and his American colleagues for encouraging Archbishop Athanasius Yeshue Samuel to leave Palestine with his scrolls (in direct violation of British Mandatory antiquities laws) and for being "non-cooperative" in sharing details about the scrolls with other scholars. [See *biography of Samuel*.]

Questions of Authenticity. Through 1949, disputes over scholarly priority gradually gave way to enthusiastic reports about the antiquity and historical value of the scrolls. For the most part, these reports faithfully conveyed the general scholarly consensus, yet in the wake of the publicity and popular interest that accompanied public exhibitions of scrolls in London and at the Library of Congress in Washington, Professor Solomon Zeitlin of Dropsie College began to raise serious questions in the press about the scrolls' antiquity and even authenticity. Zeitlin's outspoken condemnations of what he believed to be scholarly credulity were soon countered in the press by prominent biblical scholars, including W. F. Albright, who rallied to the defense of the scrolls' value and early date. By 1950, criticism of the scrolls' authenticity and pre-Christian date had been effectively rebutted, but a pattern had been established in which future scholarly debates about the scrolls would be extensively covered by the news media and have a profound effect in shaping public opinion.

The Dead Sea Scrolls and Christianity. Although the discovery of the cache from Cave 4 at Qumran in September 1952 attracted immediate attention in the mass media, the issues that captured the imagination of the gen-

eral public in the mid-1950s were mainly theological. In 1950, wide coverage was given to Professor André Dupont-Sommer's theory, based on his interpretation of Peshet Habakkuk (1QpHab), that the community's veneration and expectation of the return of their martyred Teacher of Righteousness was a hitherto unknown precursor of the Christian tradition. [See *Peshet Habakkuk and biography of Dupont-Sommer*.] This theory was elaborated further by the American critic and novelist Edmund Wilson whose extensive 1955 feature article in *The New Yorker* later became a bestselling book entitled *The Scrolls from the Dead Sea*. The underlying theological implication—hinted at by Dupont-Sommer and deftly sidestepped by Wilson—was that the scrolls showed Christianity not to be the result of a sudden, unique revelation but a development of preexisting Jewish messianic ideas. That assertion was stated bluntly by John M. Allegro, a member of the international team of scroll scholars, who was featured in a series of British Broadcasting Corporation (BBC) radio interviews in the spring of 1956. [See *biography of Allegro*.] Allegro's description of his own work on the scrolls (notably Peshet Nahum 4Q169, with its references to crucifixion) was, by his own later admission, meant to undermine orthodox faith in the uniqueness of Christianity. [See *Crucifixion; Peshet Nahum*.] Moreover, his insinuation that other members of the international team were intentionally concealing the true theological implications of the scrolls' sectarian texts led to a public confrontation. A letter of protest, condemning Allegro and repudiating his conclusions, signed by other members of the international team, was published in the London *Times* on 16 March 1956. These accusations and countercharges between scroll scholars forever planted the suspicion in the public consciousness that the scrolls contained explosive religious secrets about the origins of Christianity that were being hidden or suppressed.

Warfare and Politics. Considering the time and place of their discovery around the outbreak of the Arab-Israeli conflict, the Dead Sea Scrolls were almost certainly destined to become contested objects of nationalistic pride. From the beginning, Sukenik had always stressed the emotional significance that the ancient Hebrew and Aramaic documents held for the people of the newly established State of Israel and for Jews all over the world. Indeed, the secret purchase by Sukenik's son Yigael Yadin of the remaining Cave 1 scrolls from Archbishop Samuel in the summer of 1954 was seen as a national triumph when it was officially announced in a press conference held by Prime Minister Moshe Sharett of Israel in February 1955. [See *biography of Yadin*.] In Jordan, the scrolls also became objects of national attention; in the rising tide of Arab nationalism in the months leading up to the Suez Crisis of 1956, articles and editorials began to ap-

pear in the Jordanian press opposing the export of any of the scrolls to foreign institutions that had subsidized their purchase from the Ta'amireh bedouin and demanding that the scrolls—as well as the Palestine Archaeological Museum—be nationalized. In 1960, John Allegro gained official Jordanian government support for his widely publicized (and ultimately unsuccessful) search for the treasures of the Copper Scroll. In Israel, the political significance of scroll discoveries was further underlined in the press and in the public consciousness by Yadin's decision in March 1960 to announce the discovery of the Bar Kokhba Letters from Nahal Hever in the residence of the president of Israel. [See Hever, Nahal, *article on Written Material*.] Likewise, the Masada expedition, funded and covered exclusively by the London *Observer*, was portrayed throughout the world as a national undertaking by the people of modern Israel in an attempt to uncover their ancient heritage. [See Masada.]

Publication Rights and the International Team. The Israeli conquest of East Jerusalem and the West Bank in the 1967 Arab-Israeli War brought both the scrolls and the Qumran site under Israeli administration, yet the previous arrangements regarding scholarly rights were retained. Yadin's 1967 announcement that he had obtained Temple Scroll" (11Q19) from the Bethlehem antiquities dealer Khalil Iskander (Kando) Shahin was widely publicized in the press and viewed with excitement by many scholars, but a full decade would pass before the scrolls once again became an international *cause célèbre*. [See Temple Scroll and *biography of Shahin*.] In the late 1970s, Professors Geza Vermes and Morton Smith began to criticize the slow pace of publication of texts by the members of the original publication team. By 1984 their protests were joined by a powerful new voice on the archaeological scene: Hershel Shanks, the founder and editor of the widely circulated *Biblical Archaeology Review*. In the pages of his journal and in lectures and interviews, Shanks energetically campaigned for strict timetables for scholarly publication and, eventually, for open access by all qualified scholars to the entire corpus of the Qumran scrolls. Before long, Shanks's crusade was taken up by the general media as an issue of academic freedom, and the pressure exerted in public forums on the members of the international team and on the Israel Antiquities Authority eventually forced the establishment of a new and more open regime for the study and publication of the scrolls. During the height of the public uproar, the editor in chief of the scrolls publication project, Professor John Strugnell, granted a personal interview to a correspondent for the Israeli daily *Ha-Aretz*. Strugnell's outspoken reflections on religion and politics in the modern Middle East greatly intensified the controversy. [See *biography of Strugnell*.] In addition, the broadcast in the United States

of a documentary on the scrolls controversy by the Public Broadcasting Service (PBS) series *Nova* proved instrumental in turning public opinion against the international team. Even though the public controversy died down with the reconstitution of the publication project in the autumn of 1991, journalistic interest in the newly released scrolls and their historical significance remained high.

New Theories, New Celebrities. Part of the intensity of the media campaign to gain access to the unpublished scrolls was fueled by the lobbying of scholars who opposed the general consensus on dating and identification of the authors of the scrolls. Reviving Allegro's claims that the international team members harbored private political or religious reasons for suppressing certain documents, a new wave of popular books and articles condemning scholarly abuses appeared side by side with new theories about the relation of Qumran to early Christianity. Most prominent in this respect were the works of Professors Barbara Thiering and Robert Eisenman, who identified members of the Qumran community with personalities mentioned in the New Testament. Another outspoken voice against the old order was Professor Norman Golb who had formulated a "Jerusalem Theory" of scroll origins, which linked the Qumran manuscripts not to a sectarian group in the wilderness, but to the efforts of individuals from Jerusalem to preserve the manuscripts of the city's libraries from destruction by the Romans during the First Jewish Revolt.

By the mid-1990s, however, emotions had cooled, and new leaders of mainstream Qumran research such as Professors Lawrence H. Schiffman, James C. VanderKam, Emanuel Tov, and Eugene Ulrich had emerged as effective spokespersons in press interviews and documentary films. At the same time, the new technologies of CD-ROM and the Internet served to diffuse unfounded, sensationalist press coverage by disseminating the latest developments of scroll research to an ever wider general audience.

MEDITATION ON CREATION. See Wisdom Texts.

MELCHIZEDEK. The name *Melchizedek* first appears in the Hebrew scriptures and became popular in some lines of Jewish and Christian traditions. It is to be understood as “king of righteousness” or “righteous king,” and not “my king is righteous[ness].” This understanding of the name is attested by Josephus (*Jewish Antiquities* I, 180). Nevertheless, a primitive meaning, “my king is Zedek” (Zedek was god of the city of Jerusalem), is possible. Its English pronunciation derives from the Septuagint.

The origin of the figure Melchizedek is not clear. Was he a purely mythical figure, even a Canaanite God (Bodinger, 1994), or was he a historical person from patriarchal times (e.g., Horton, 1976), to whom mythical features later were attributed?

Hebrew Scriptures. The name *Melchizedek* occurs twice in the Hebrew scriptures, in *Genesis* 14.18 and in *Psalms* 110.4. The age of these texts is disputed, though they surely are not extremely old; *Psalms* 110 recently has been dated to Hasmonean times (Donner, 1994), but, among other arguments, the use of the Tetragrammaton, which died out in the second century BCE, speaks against a late date. Neither *Genesis* 14.18 nor *Psalms* 110 is represented among the biblical manuscripts at Qumran, a fact that is best explained by the fragmentary state of preservation of the *Genesis* and *Psalms* manuscripts there. The *terminus ad quem* for the origin of *Genesis* 14.18–20 is the Greek translation about the middle of the third century BCE; the first reference to *Psalms* 110 might be found in 4Q183.

The short Melchizedek passage in *Genesis* 14.18–20 obviously is an insertion into the story of Abram meeting the king of Sodom after he came back from his victory over Chedorlaomer in *Genesis* 14.17–24. Melchizedek is

presented as king of Salem, which the later tradition explicitly identifies with Jerusalem (e.g., *Genesis Apocryphon* 1QapGen xx.13; cf. *Ps.* 76.2), and as priest of 'El 'Elyon (kings who act as priests are well attested in the ancient Near East). Melchizedek brings out bread and wine to Abram, blesses him, and praises 'El 'Elyon, the creator of heaven and earth, who is responsible for the victory of Abram. The positive description of Melchizedek contrasts with the characterization of the king of Sodom in this story. This led J. T. Milik to the assumption that the confrontation of Melchizedek and the king of Sodom here might be an image of the battle between the two chief spirits, Melchizedek and Melchiresha'. The meaning of verse 20 is uncertain. It simply is reported that “he” gave one tenth to “him”; later it generally was assumed that Abram was the subject of the action (e.g., *1QapGen* xx.17; Josephus, *Antiquities* I, 180; *Heb.* 7.2), but the problem is still discussed in rabbinic literature.

Psalms 110 is a psalm with many textual difficulties. It deals with a king, obviously the royal Messiah, to whom God has sworn the oath “You are a priest forever according to the order of Melchizedek” (v 4). Assuming that verses 5b through 6 refer to the Messiah and not to God (“When he grows angry he shatters kings, he gives the nations their deserts, smashing their skulls, he heaps the wide world with corpses.”), it is this king who will also execute the final judgment of the nations.

Apocrypha and Pseudepigrapha. There hardly are any traces of Melchizedek in apocryphal and pseudepigraphal texts. *Jubilees* (chap. 13) originally may have referred to Melchizedek, but the existing copies of the book do not mention him in its retelling of *Genesis* 14. Instead the title is given to an anonymous collective, to “the priests.” This might be an intentional avoidance by the author of *Jubilees*, who favors Levitical priestly interests.

Qumran. Melchizedek appears in the *Genesis Apocryphon* and in Melchizedek from Cave II at Qumran (11Q13). In *Songs of the Sabbath Sacrifice*^b (4Q401) Melchizedek could be the seventh and highest of the heavenly chief princes; the restoration of his name in this text is uncertain (4Q401 11.3, 22.3; cf. *Songs of the Sabbath Sacrifice*^d 4Q403 I.ii.24) but possible. In the fragmentary, pre-Qumran Aramaic text *Visions of Amram*^b (4Q544), the name Melchizedek probably occurred in a lacuna (2.1–b, 3.1–3) as one of the three names of the angel of light, the opponent of Melchiresha' (see Puech, 1993 p. 536).

In the *Genesis Apocryphon* (1QapGen) xxii.14–17 the Melchizedek story basically is the same as in *Genesis* 14, but some difficult points of interpretation regarding Salem and the tithe are clarified. The identification of 'El 'Elyon with YHVH (*Gn.* 14.22) is missing in verse 21, and

the general avoidance of the Tetragrammaton in the Genesis Apocryphon might suggest an origin only in the second century BCE; other aspects of the language point to the first century BCE (Kutscher, 1965).

The most interesting text is Melchizedek from Cave 11 at Qumran, a manuscript that consists of fourteen fragments from three successive columns (*Editio princeps* by van der Woude, 1965; new edition and reconstruction by Puech, 1987). Paleographically this copy dates from the middle of the first century BCE or slightly later. From column i only parts of a supralinear writing that continues in the margin are preserved; column ii probably had twenty-seven lines and can be restored extensively; column iii is represented by small remains. Unfortunately, the character and the length of the composition as a whole are unknown, as well as the original position of the three columns. The work probably dates from the end of the second half of the second century BCE; formal criteria, such as the use of certain quotation and interpretation formulas, suggest this date. Melchizedek is the oldest purely exegetical text from Qumran, older than the *pe-sharim*, 4Q174 and 4Q177. At the center of the manuscript from Cave 11 is the figure of Melchizedek, heavenly high priest, eschatological savior of the righteous ones; as the instrument of God, he will be judge on the "day of atonement" at the time of God's final judgment, when Belial and the spirits of his lot will be defeated. Melchizedek is not an earthly messianic figure. Rather he seems to be almost identical (only with nuances in function like cult, war, etc.) with the prince of light (cf. Rule of the Community, 1QS iii.20), the archangel Michael (cf. War Scroll IQM xvii.6–8), the angel of truth (1QS iii.24), and the great hand of God (cf. 4Q177 xi.14); he further exhibits parallels to the Son of Man. The eschatological scenario of history in Melchizedek from Cave 11, which is understood as being divided into jubilees, is described with the help of citations from different biblical books (*Leviticus* 25 and *Isaiah* 61 seem to play a kind of guiding role). Melchizedek ii.18 contains the oldest known explicit citation from the *Book of Daniel*. It is an unsolved problem whether the one who announces the release in the first week of the tenth jubilee (11Q13 ii.7) is identical with Melchizedek, who will bring about the release at the end of the tenth jubilee (11Q13 ii.7), or whether they are two distinct figures. Some scholars (e.g., Milik 1972, Puech 1987) have proposed identifying the one who announces the release with the Teacher of Righteousness, who, as "messenger of good news" (11Q13 ii.16), proclaims salvation for the just and consoles them by giving them insight into the sequence of the periods of history (11Q13 ii.18–20), including its end (according to Melchizedek and the Damascus Document CD ii, the end was expected probably around the year 70 BCE; see Steudel 1993).

Philo and Josephus. Both Philo and Josephus highly valued the virtuous figure of Melchizedek. Philo mentions him in *De Abr.* 235, *De Congr.* 99, and *Legum allegoriarum* III 79–82, always in the context of the Abram story. In *De Abr.* Melchizedek is designated as high priest, in *De Congr.* he is said to be self-taught, and in *Legum allegoriarum* the "king of Salem" is interpreted as "king of peace" (cf. *Heb.* 7.2). Josephus discusses Melchizedek in *Jewish Antiquities* I 180–181. There he explains that Melchizedek means "righteous king," and that for his righteousness, Melchizedek was made priest of God. In *The Jewish War* VI, 438 Josephus states that the original founder of Jerusalem was a Canaanite chief, who was the first to officiate as priest of God and the first to build the temple.

Christianity. In the New Testament Melchizedek figures only in the *Letter to the Hebrews* (chaps. 4–10). The influence of the ideas of the Qumran community on the particular Christology of the *Letter to the Hebrews*—via converted Essenes—often has been assumed, and indeed there are some characteristic parallels in the concept and the use of the figure of Melchizedek, but differences also exist. God makes Jesus, his son, high priest according to the order of Melchizedek. Jesus has entered the heavenly sanctuary once and for all, having won eternal redemption by his own blood for the pious. Melchizedek and his priesthood are depicted as eternal; the Melchizedekian priesthood is superior to the Levitical priesthood.

The Slavonic *Apocalypse of Enoch* refers to three Melchizedeks. Chapters 71 through 73 of 2 *Enoch* exhibit clear Christian interpolation; an early redactor seems to have been interested in a Melchizedek-Christ typology when he revised the Jewish Melchizedek legend of these chapters. These chapters tell about the supernatural birth of the priest of priests Melchizedek, son of Nir and nephew of Noah, who was brought to paradise for eternity by Michael in order to be protected from the Flood; another Melchizedek is priest and king in Salem; the third and final one is obviously Christ.

Melchizedek appears in the Gnostic texts *Pistis Sophia*, the *Books of Jeu*, and the fragmentary *Melchizedek* tractate of the Nag Hammadi Codices (Codex IX, 1). Epiphanius (Haer. 55) reports on the sect of the Melchizedekians. The Gnostic ideas about Melchizedek, which characterize him, for example, as heavenly, as carrier of the light, as high priest, identical with Michael, identical with Christ, are influenced by the traditions found in Melchizedek from Cave 11 at Qumran and the *Letter to the Hebrews*.

The church fathers stress especially the identity of Melchizedek's offering of bread and wine with the Eucharist (e.g. Cyprian, Epistle 63, 4).

Targumim and Rabbinic Literature. The Targumim as well as the rabbis identified Melchizedek with Shem, son of Noah (e.g., Targum Pseudo-Jonathan on *Gen.* 14.18;

B.T., *Ned.* 32b). Apart from Targum *Neophyti* 1, the Targumim avoid speaking of Melchizedek's priesthood. Instead of calling him "priest," as *Genesis* 14.18 does, they use a verbal form of the word meaning "to minister" (Targum Onkelos, Targum Pseudo-Jonathan). The same tendency is seen in rabbinic texts. It was Melchizedek's mistake to bless Abraham before blessing God (*Gn.* 14.19–20). For this reason God took the priesthood from Melchizedek and gave it to Abraham (the difficult expression in *Ps.* 110.4 is understood as "because of the words of Melchizedek," i.e., because of his erroneous blessing, B.T., *Ned.* 32b; *Lv. Rab.* 25). These texts might reflect a reaction to Christian ideas of the superiority of Jesus' priesthood compared with that of Melchizedek, though already in *Jubilees* there seems to be an antipathy on the part of Levitical priestly circles to the idea of a Melchizedekian priesthood. Nevertheless, in *Pesiq.* 51a Melchizedek is seen positively, as an eschatological figure, one of the four craftsmen of *Zechariah* 2.3 (cf. Rashi, B.T., *Suk.* 52b).

ANNETTE STEUDEL

MENAHÉM THE ESSENE. See *Essenes*.

MESSIAH OF AARON. See *Messiahs*.

MESSIAH OF ISRAEL. See *Messiahs*.

MESSIAHS. Some thirty texts in the Dead Sea Scrolls speak of anointed personages—the literal definition of messiah—and although only about half refer to what is probably the traditional, royal Messiah, most of the other texts refer to the prophets. A few refer to the priest, and one is in reference to Moses. The language is drawn from the Hebrew scriptures and is found in numerous writings and bodies of literature produced by Jews and Christians in late antiquity.

Derivation of the Term Messiah. The word *messiah* comes from the Greek *messias* (cf. *John* 1.41; 4.25), which itself is a transliteration of the Hebrew *mashiah* (*2 Sm.* 22.51; 23.1), meaning one who is "anointed" (with oil). *Mashiah* occurs some thirty-eight times in the Hebrew scriptures. The Greek equivalent is *christos* (cf. Septuagint, *2 Sm.* 22.51; 23.1), which occurs some 529 times in the New Testament (about half in Paul; more than half if one includes the Pastorals). The nominal form is derived from the verbs *mashah* (Hebrew) and *chriein* (Greek), which mean "to anoint" or "to smear (with oil)." When the nominal form is definite (Heb., *ham-mashiah*; Aram., *mashiha'*), it is usually translated "the Messiah." The Greek definite form, *ho christos*, is usually translated "the Christ."

Israel's tradition of anointing the priest is ancient (cf. *Ex.* 28.41; 30.30; 40.13–15; *Lv.* 16.32, *Nm.* 3.3). Of special interest is the anointing of the high priest (*Ex.* 40.13; *Lv.* 7.35), who in *Numbers* 35.25 is said to be "anointed with the holy oil." Ben Sira eulogizes Aaron, stating that "Moses ordained him, and anointed him with holy oil" (*Sir.* 45.15). Early rabbinic literature is keenly interested in the "anointed high priest" (cf. *Hor.* 2.1–3, 2.6–7; 3.1–2; 3.4; 3.6; *Zev.* 4.3; *Men.* 5.3; 5.5, 6.2; 6.4; *Me'il.* 2.9), much more than it is in the royal Messiah (cf. *Sot.* 9.15).

The kings of Judah and Israel were anointed, usually by prophets as well as by priests. Especially important is Samuel's anointing of Saul (*1 Sm.* 9.9; 9.16; 10.1; 15.1; 15.17) and David (*1 Sm.* 16.1–3; 16.12–13; *2 Sm.* 12.7; cf. *Sir.* 46.13). Nathan the prophet and Zadok the priest anointed Solomon (*1 Kgs.* 1.34; cf. *1 Kgs.* 1.39; 1.45). Elijah was commanded to anoint Hazael to be king over Aram and Jehu to be king over Israel (*1 Kgs.* 19.15–16), though Elisha actually carries out the task (*2 Kgs.* 9.1–3, 9.6; 9.12; cf. *Sir.* 48.8). Even in the period of the judges we find the tradition of someone being anointed king

(*Jgs.* 9.8, 9.15). Frequently the anointed king is called "the Lord's anointed" (*1 Sm.* 16.6; 24.6; 24.10; 26.9; 26.11; 26.16; 26.23; *2 Sm.* 1.14, 1.16; 19.21; cf. *Ps.* 2.2; 18.50; 20.6; 28.8). The psalmist, on behalf of the anointed, sometimes appeals to God for help (*Ps.* 84.9; 89.38; 89.51; 132.10; 132.17).

Elijah anointed Elisha, his prophetic successor (*1 Kgs.* 19.15–16; cf. *2 Kgs.* 9.1–3, 9.6; 9.12, where Elisha in turn anoints Jehu king). The anointing of Elisha is the only instance of an anointed prophet. However, one should recall that the prophetic speaker in *Isaiah* 61 claims to have the spirit of the Lord and to have been "anointed" to preach (cf. *Tg. Is.* 61.1: "The prophet said: 'A spirit of prophecy before the Lord God is upon me'"). The association in a sermon attributed to Jesus (*Lk.* 4.18–27) of this passage from *Isaiah* with the ministries of Elijah and Elisha is probably not accidental but reflects the tradition of the anointed prophet.

Perhaps reflecting on Psalm 105.15 and *1 Chronicles* 16.22 ("Touch not my anointed ones, and do my prophets no harm!"), the Dead Sea Scrolls often refer to the prophets as "anointed ones" (cf. CD ii.12; v.21–vi.1 = 4Q267 2.6 = 6Q15 3.4; IQM xi.7–8; IQ30 1.2[?]; 4Q270 9.ii.13–14; 4Q287 10.13; 4Q521 8.9 [or anointed priests]). They are "anointed by the Holy Spirit, the seers of truth" (CD ii.12). These anointed prophets have spoken the words that the Qumran community in its own time has been able to interpret (cf. Peshar Habakkuk, IQpHab vii.1–5). They spoke to an unbelieving and idolatrous Israel in times past (Damascus Document, CD v.21–vi.1), but they also spoke of the last days: "By the hand of your anointed ones, seers of things appointed, you have told us about the ti[m]es of the wars of your hands" (War Scroll, IQM xi.7–8).

Messianic Interpretation and the Rise of Messianism. The Hebrew scriptures speak of anointed priests, kings, and prophets. But none of these anointed persons is to be understood as an eschatological figure of deliverance. Sometime in the third or second century BCE, *messiah* takes on this eschatological nuance. In reaction to the oppression of Greek and Roman rule, and in response to what was perceived as usurpation of the high priesthood on the part of the Hasmoneans and their successors, hopes for the appearance of a righteous king and/or priest began to be expressed. The later usurpation of Israel's throne by Herod and his successors only fueled these hopes. The literature of this time speaks of the appearance of worthy anointed persons through whom the restoration of Israel might take place. These hopes and predictions drew upon passages of scripture that spoke of anointed persons and upon passages that spoke in more indirect ways of individuals or symbols that lent themselves to eschatological or salvific interpretations.

Three passages played an important, generative role in the rise of messianism: *Genesis* 49.10, *Numbers* 24.17, and *Isaiah* 11.1–6. All these passages are interpreted in a messianic sense in the Dead Sea Scrolls and other early Jewish and Christian writings.

In the Commentary on Genesis A (4Q252 1.v.1–7), *Genesis* 49.10–11 is cited and is understood to refer to the "Branch of David." The passage also may be alluded to in Peshar Isaiah^a (4Q161 7–10.iii.25), again in a messianic sense. The messianic potential appears to have been enhanced in the Septuagint. All four Targums to the Pentateuch (Targum Onkelos, Targum Pseudo-Jonathan, Targum Neophyti, and the Fragmentary Targum) render the *Genesis* passage in an explicitly messianic sense ("King Messiah" is mentioned in verses 10, 11, and 12). Jacob's blessing (*Gn.* 49.8–12) is referred to in the *Testament of Judah* 1.6 ("my father declared to me, 'You shall be king'") and in the *Testament of Judah* 22.3 seems to be understood in a messianic sense. The description of the warrior Messiah in *Revelation* 19.11–16 may have this passage, as well as *Isaiah* 11, as a source (compare *Rv.* 19.13 with *Gn.* 49.11); and it may be alluded to in *Hebrews* 7.14. Christian messianic interpretation of the passage becomes commonplace in the second century (cf. Justin Martyr, *1 Apologies* 32 and 54, *Dialogue with Trypho* 52 and 120; Clement of Alexandria, *Pedagogue* 1.5 and 1.6; Irenaeus, *Against Heresies* 4.10.2).

The interpretation of *Numbers* 24.17 is similar to that of *Genesis* 49.10. All four *targums* to the Pentateuch paraphrase the passage in explicitly messianic terms. The Hebrew text's "a star shall come forth out of Jacob, and a scepter shall rise out of Israel" becomes in the Aramaic "a king shall arise out of Jacob and be anointed the Messiah out of Israel." Messianic interpretation of *Numbers* 24.17 is widely attested in traditions dating to the first century CE and earlier (*Testament of Judah* 24.1–6; CD vii.20; IQ28b v.27–28; IQM xi.4–9; 4Q175 1.9–13; possibly Philo, *De Vita Mosis* 1.52 secs. 290; *De praeniis et poenis*, 16 sec. 95; Orphica 31 [Aristobulus fragment 4.5]). It is probably to this passage that Josephus refers when he says that his countrymen were misled by an "ambiguous oracle" that promised that "one from their country would become ruler of the world" (*The Jewish War*, 6.312–313; cf. 3.400–402). The "star" that "stood over the city" of Jerusalem would have only fueled such speculation (*The Jewish War*, 6.289). At issue was not the messianic orientation of the oracle; rather, the question was to whom the oracle applied. Of course, Josephus here is being disingenuous. It is very probable that he too understood the passage in the way his contemporaries did. Instead, Josephus deliberately distanced himself from popular Jewish interpretation and applied the oracle to Vespasian his patron, "who was proclaimed emperor on

Jewish soil." Early Christians were also aware of the passage's messianic potential, as seen in the "star" of *Matthew* 2.2 and the Magi's assumption that it pointed to the birthplace of the "king of the Jews." The nickname of Shim'on bar Kosiba', "Bar Kokhba" ("son of the star"), apparently was inspired by this passage. According to rabbinic tradition, this man claimed to be the Messiah, or at least was proclaimed as such by some of his followers (cf. J.T., *Ta'an.* 4.5/8; B.T., *San.* 93b; Justin Martyr, *I Apologies* 31 and *Dialogue with Trypho* 106; Irenaeus, *Against Heresies* 3.9.2).

In the Hebrew text, the oracle of *Isaiah* 11.1–6 anticipates the coming forth of "a shoot from the stock of Jesse, even a branch shall grow out of his roots" (v. 1). The *Isaiah* Targum, which represents later interpretive tradition, renders the verse, "And a king shall come forth from the sons of Jesse, and the Messiah shall be exalted from the sons of his sons." Much earlier the Septuagint had enhanced the messianic potential of *Isaiah* 11.10: "And there shall be in that day the root of Jesse, even he who arises to rule over nations. . . ." Paul quotes this passage and applies it to Jesus (*Rom.* 15.12; cf. *Rv.* 5.5, 22.16; Clement of Alexandria, *Stromateis* 5.6). *Isaiah* 11 is taken in a messianic sense in Peshar *Isaiah*^a (4Q161 7–10.iii.22–29 and is echoed in a passage in the Rule of the Blessings (1Q28b v.21–26), which describes the blessing that is to be pronounced upon the Prince of the Congregation. In 4 *Ezra* 13.2–10, *Isaiah* 11.4 is alluded to and applied to the man who "flew with the clouds of heaven" (cf. *Daniel* 7.13). Messianic interpretation of *Isaiah* 11 probably underlies the War Rule (4Q285 5.1–6) and *Testament of Levi* 18.7 as well. Early Christian writers were especially fond of *Isaiah* 11 (for v. 1, cf. *Mt.* 2.23; *Acts* 13.23; *Heb.* 7.14; *Rv.* 5.5, 22.16; Justin Martyr, *I Apologies* 32, and *Dialogue with Trypho* 87; Clement of Alexandria, *Pedagogue* 1.7; Irenaeus, *Against Heresies* 3.9.3; *Sib. Or.* 6.8, 6.16, 7.38, 8.254; for v. 2, cf. *Eph.* 1.17; *1 Pet.*, 4.14; Irenaeus, *Against Heresies* 3.17.1; for v. 3, cf. *Jn.* 7.24; Clement of Alexandria, *Pedagogue* 1.7; for v. 4, cf. *Jn.* 7.24; *Eph.* 6.17; *2 Thes.* 2.8; *Rv.* 19.11; Clement of Alexandria, *Pedagogue* 1.7; Irenaeus, *Against Heresies* 4.33.1; for v. 5, cf. *Eph.* 6.14).

The data therefore suggest that the messianism of the Dead Sea Scrolls coheres with what can be ascertained from other Jewish sources from this period. The scrolls contain some distinctive ideas in certain details (such as the nature of the final war at the End of Days and the Messiah's role in it, or the Messiah's submission to the priests), but it would appear that in most of the major points Qumran messianism is not much different from that of other pious, hopeful Jews.

The "Anointed of Aaron and of Israel." One of the interesting features of Qumran messianism is the epithet

"anointed (ones) of Aaron and of Israel" (CD xii.23; xiv.19; xix.10–11; xx.1; IQS ix.11). The coupling of the "anointed of Aaron and of Israel" reflects the frequent association of Aaron and Israel in the Pentateuch (cf. *Ex.* 16.9, 18.12, 34.30, *Lv.* 17.2, 21.24, 22.18; *Nm.* 13.26) as well as in liturgical expressions, such as "(God) will bless the house of Israel; he will bless the house of Aaron" (*Ps.* 115.12, cf. vv. 9–10; 135.19). The story of the simultaneous anointing of Solomon, the son of David, and of Zadok the high priest (*1 Chr.* 29.22), combined with Zechariah's vision of the two "sons of oil" (*Zec.* 4.14; cf. 4Q254 4.2), that is, the priest and the political ruler (cf. *Zec.* 3–4), probably informed the Damascus Document's expectation of the eventual appearance of the "anointed of Aaron and of Israel" (see also *1 Sm.* 2.35).

The epithet "anointed of Aaron" reflects passages that refer to the anointing of Aaron (*Ex.* 40.13; *Lv.* 7.35). To the passages from the better known scrolls one may now add the Apocryphon of Moses B^a (4Q375 1.i.9; "the anointed priest upon whose head the oil of anointing has been poured") and the Apocryphon of Moses B^b (4Q376 1.i.1; "the anointed priest"). Although these texts are fragmentary, they broaden the field of reference.

Many scholars of the Dead Sea Scrolls are convinced that at Qumran the "anointed of Aaron," along with his priestly colleagues, would be equal to, if not superior to, the royal Messiah (but see Abegg [1995] for important caveats). Again, the history of Solomon, the son of David, may have been viewed as exemplary: "Let Zadok the priest and Nathan the prophet there anoint him (Solomon) king over Israel" (*1 Kgs.* 1.34; cf. vv. 39, 45). In the commentary on *Isaiah* 11, it is anticipated that the "Branch of David" will submit to the instruction of the priests (4Q161 7–10.iii.22–29). One is reminded also of the prominence of the high priest and his priestly colleagues in the War Scroll (1QM) in the direction of the holy war against the sons of darkness. This royal priestly cooperation is probably at work in the related War Rule (cf. 4Q285 5.1–6), where the "Branch of David" battles the Romans (the Kittim), and the priests take charge of the disposal of the slain to avoid the defilement of the land. [See Kittim.]

Qumran's epithet "anointed of Israel" derives from passages in the Hebrew scriptures that speak of figures being "anointed king over Israel" (as in *1 Kgs.* 1.34; *2 Sm.* 12.7). The description of David prefaced to his final words may be relevant: "Now these are the last words of David: The oracle of David, the son of Jesse, the oracle of the man who was raised on high, the anointed of the God of Jacob, the sweet psalmist of Israel" (*2 Sm.* 23.1; cf. *Mk.* 15.32: "The anointed one, the king of Israel").

According to the Dead Sea Scrolls the "anointed of Israel" will engage in battle with the forces of darkness. Is-

rael's enemies "will be delivered up to the sword at the coming of the anointed of Aaron and of Israel" (CD xix.10–11). Indeed, the Davidic Branch "will kill him" (War Rule, 4Q285 5.4), by which we probably should understand that the Messiah was expected to kill the leader of the Romans (the *Kittim*), perhaps meaning the Roman emperor himself. The Messiah will also serve faithfully alongside the priests (1Q28a ii.20–21). The Messiah of the Messianic Apocalypse (4Q521), though perhaps a messianic figure of prophetic stripe, adds to our picture. According to this scroll (1.ii.1) "heaven and earth will obey his anointed" (cf. *Dt.* 32.1; *Is.* 1.2; *Ps.* 146.6). When this Messiah comes, God "will honor the pious upon the th[ro]ne of the eternal kingdom, setting prisoners free, opening the eyes of the blind, raising up those who are bo[w]ed down" (1.ii.7–8). At this time the Lord "will do glorious things that have not been done, just as he said. For he will heal the wounded, he will revive the dead, he will proclaim good news to the afflicted" (1.ii.11–12). The echoes of *Isaiah* 61.1–2 and 35.5–6 are interesting; especially noteworthy is the parallel between the scroll and a saying attributed to Jesus that echoes these passages in *Isaiah* and that also speaks of raising the dead (*Mt.* 11.4–5 = *Lk.* 7.22), an element not found in the passages from *Isaiah*. This is an important point of coherence between Jesus and the Messianic Apocalypse that must be explored.

The much debated "anointed of Aaron and of Israel" raises an important question: Do some of the Scrolls envision messianism as a diarchy? Many scholars think that they do. The idea of a priest and an anointed royal personage is found in *1 Samuel* 2.35: "And I will raise up for myself a faithful priest, who shall do according to what is in my heart and in my mind; and I will build him a sure house, and he shall go in and out before my anointed forever." The *targum* translates "sure house" as "lasting kingdom" and "anointed" as "Messiah." Part of the Hebrew expansion of *Sir.* 51.12 praises God who "makes the horn to sprout for the house of Israel" and who "elects the sons of Zadok to be priests" (cf. *Ps.* 132.16–17). As has already been mentioned, Qumran's "anointed of Aaron and of Israel" may reflect the diarchy of Zechariah. The alternating emphasis on descendants from the lines of Levi and Judah in the *Testaments of the Twelve Patriarchs* may be open to the same explanation (on the ruler from Levi, see *Testament of Reuben* 6.11–12 and *Testament of Levi* 18.1–14; for the ruler from Judah, see *Testament of Judah* 24.5–6 and *Testament of Naphtali* 4.5).

There is nothing novel about Qumran's messianic diarchy; it has its roots in the Hebrew scriptures (especially in the Masoretic Text and the Targum of *Zechariah* 3.6–10, 6.9–15; cf. juxtaposition of Aaron/Israel, for example in

Ps. 115.9–10, 115.12, 118.3, 135.19) and is probably the presupposition of the *Testaments of the Twelve Patriarchs* (cf. *Testament of Dan* 5.10: "And there shall arise for you the tribe of Judah and of Levi the Lord's salvation"; *Testament of Joseph* 19.11: "honor Levi and Judah, because from them shall arise the salvation of Israel"). It is not necessary to conclude, as did R. H. Charles long ago, that the *Testaments of the Twelve Patriarchs* exhibit two competing messiahships—one priestly (of Levi), the other Davidic (of Judah). Rather, the *Testaments of the Twelve Patriarchs* may reflect the understanding of the diarchy as it arose in the Second Temple period. Side by side a royal descendant of David and a Zadokite high priest would rule over restored Israel. It is possible that the emphasis on the two Messiahs, one of Aaron and one of Israel, may have originated as a corrective of the merger of the high priestly and royal offices during the Hasmonean period.

The reading and interpretation of the Rule of the Congregation (1Q28a ii.11–12) have been controversial. D. Barthélemy (1955, p. 110) originally read the text "[This is the sit]ting of the men of renown [called] to assembly for the council of the community when [God] will have be[got]ten [volid] the Messiah among them." But he thought the text should be emended to read "when God will have brought [volikh] the Messiah" (1955, p. 117). Other emendations have been proposed. Although it remains disputed, the original reading enjoys a measure of support from Psalms 2.2 and 2.7: "The kings of the earth set themselves, and the rulers take counsel together, against the Lord and his Messiah. . . . He said to me: 'You are My son, today I have begotten you [velidtikha].'" Given the language of Psalms 2.2 and 2.7, there is nothing unusual or unexpected in restoring the Rule of the Congregation (1Q28a ii.11–12) to read: "when God will have begotten the Messiah." This reading, however, does not necessarily imply that the author of the Rule of the Congregation expected the Messiah to experience an unusual or miraculous birth. (See, however, the objection to this reading by Puech [1994], who defends the reading "when God will reveal the Messiah.")

Related Messianic Epithets in the Dead Sea Scrolls. There are several other names and epithets given to the royal Messiah, the "anointed of Israel." He is explicitly identified as the "Branch of David" (*tsemaḥ David*). The epithet "Branch of David" occurs five times in the Dead Sea Scrolls (sometimes reconstructed) and derives from prophetic language (4Q161 7–10.iii.22; 4Q174 1–3.i.11; 4Q252 1.v.3–4; 4Q285 5.3, 4). Jeremiah's promise, "I will raise up for David a branch of righteousness [*le-David tsemaḥ tsaddiq*]" (*Jer.* 23.5; cf. 33.15), appears to be the principal text. But Zechariah's semititular usage ("Behold, the man whose name is 'Branch' [*tsemaḥ shemo*])"

has probably made a contribution as well (*Zec.* 6.12; cf. 3.8; *Is.* 11.1). In Commentary on Genesis A (4Q252 1.v.3–4) the Branch is called the “Messiah of righteousness.” In narrative (4Q458 2.ii.6) he is described as “one anointed with the oil of the kingdom” (cf. *1 Sm.* 10.1, 16.13; esp. *Ps.* 89.21 [English v.20]). According to Melchizedek from Qumran Cave 11 (11Q13) “the herald is the [one] anointed of the Spir[it], of whom Dan[iel spoke]” (ii.18). This passage alludes to *Daniel* 9, which originally may have spoken of an anointed priest. But in Melchizedek it refers to the herald of *Isaiah* 52.7, who may have been understood as an anointed prophet or as an anointed royal Messiah. The “herald” of Melchizedek may have something to do with the Messiah of the Messianic Apocalypse, who also proclaims good news (4Q521 1.ii.12).

The Messiah is also called the “prince.” The “prince” [*nasi*] of the (whole) congregation” occurs some ten times in the Dead Sea Scrolls (CD vii.19–20; 1Q28b v.20; 1QM v.1; 4Q161 2–6.ii.19; 4Q266 3.iv.9; 4Q285 4.2, 6; 5.4; 6.2; 4Q376 1.iii.1). All these occurrences are messianic. Four other references to *nasi* probably refer to this personage: the isolated reading “to the prince” in the Apocryphon of Moses B^b (4Q376 1.iii.3; which probably refers to the *nasi* mentioned in 1.iii.1); the “prince of the myriad” in the War Scroll (1QM iii.16), who is distinct from the tribal chieftains; and the fragmentary and partially superscripted twin references in the War Scroll¹ (4Q496 10.3–4; cf. 1QM v.1). The messianic epithet “prince” is apparently derived from *Ezekiel*, which speaks of a coming prince (*nasi*) who will shepherd Israel faithfully: “My servant David, a prince among them” (*Ezek.* 34.24); “My servant David shall be their prince forever” (*Ezek.* 37.25).

The “prince” is further identified as the “rod [that] is risen from Israel (*Nun.* 24.17). The rod is the prince of the whole congregation” (CD vii.19–20 [Damascus Document^a, 4Q266 3.iv.9; cf. Peshier Isaiah^a, 4Q161 2–6.ii.19). In War Rule (4Q285 5.4) the “prince of the congregation” is equated with the “Bran[ch of David].” Thus, we have at Qumran the messianic matrix Messiah = Prince = Branch of David.

The tradition of Israel’s monarch as a divine son (*Ps.* 2.7; *2 Sm.* 7.14) gave rise to a variety of “son” epithets. Within the Dead Sea Scrolls this language appears seven times, although it is unclear how many of them actually refer to a messianic figure. The epithets include “son” (*ben*; cf. 4Q174 1–3.i.11), “son of God” (*bereh di el*; cf. 4Q246 ii.1), “son of the Most High” (*bar ‘elyon*; cf. 4Q246 ii.1), “firstborn son” (*ben bekhor*; cf. 4Q369 1.ii.6), and “two sons of oil” (*shenei benei ha-yitshar*; cf. 4Q254 4.2). The common rabbinic epithet, “son of David,” has not been found at Qumran. Only the reference in the Florile-

gium (4Q174) is indisputably messianic. In this passage, not only is the “son” of *2 Samuel* 7.14 identified as the “Branch of David,” but this figure is also understood to be the fulfillment of the prophecy of *Amos* 9.11 (cf. 4Q174 1–3.i.12), while the quotation and interpretation of *Psalm* 2.1–2, with which column i of the Aramaic Apocalypse concludes (lines 18–19), probably apply to him as well.

The references in (4Q246 i.9; ii.1) are much disputed. It has been proposed that the son of God figure is an angel or an evil person, perhaps even an antichrist figure, who blasphemously applies these epithets to himself. Others argue that this figure is the son of a Jewish king, but that the son of God language is not messianic. And, of course, it has been contended that this figure is indeed a messianic figure, as the parallels with *Luke* 1.32–35, *2 Samuel* 7, and the Florilegium would seem to suggest.

The “firstborn son” in the Prayer of Enosh? (4Q369 1.ii.6) may be messianic, but the text is so fragmentary that it is difficult to gain a clear picture of the document’s perspective. It may be looking to the past, or it may be looking to the future (in which case the figure is probably messianic). The reference to the “two sons of oil” in the Commentary on Genesis (4Q254 4.2) is drawn from *Zechariah* 4.14 and may be messianic, especially if fragment 4 has been placed in its proper sequence and if it does indeed preserve a portion of the commentary on *Genesis* 49.8–12 (Jacob’s blessing of Judah).

There are other texts that from time to time have been regarded as having messianic significance, either by association with a messianic figure, such as “star,” or by identification with certain personages thought to be messianic, such as the Teacher of Righteousness. For “seeker of the law” (*doresh ha-torah*) passages see the Damascus Document (CD and 4Q266–267), Florilegium (4Q174) and Catena^a (4Q177). For “teacher” (*moreh [ha-]tsedeq*) passages, see the Damascus Document (CD); Peshier Habakkuk (1QpHab); Peshier Psalms^a (4Q171); unidentified *peshier* (4Q172); Peshier Psalms^b (4Q173); the Damascus Document^b (4Q267); the Damascus Document (CD, *yoreh ha-tsedeq*); Peshier Habakkuk (*moreh ha-tsedeqah*); Peshier Micah (1Q14); Peshier Isaiah (4Q163); Noncanonical Psalms (4Q381). For “star” (*kokhav*) passages (all involving *Nun.* 24.17) see the Damascus Document (CD, where “star” is read as the “seeker of the law”); War Scroll (1QM); Testimonia (4Q175). For “staff”/“leader”/“decree” (*mehoqeq*) passages, see the Damascus Document (CD, 4Q266–267, where “staff” is read as the “teacher of the Law”); Commentary on Genesis A (4Q252, where the “staff” is read as the “covenant of the kingdom”); Paraphrase of Kings et al. (4Q382); and Sapiential Work A^c (where reference is to the “degree” of God).

VanderKam, pp. 211–234. Notre Dame, 1994. Provides helpful discussion of the messianism at Qumran; concludes that there is a "dual messianism, with one messiah being priestly and the other davidic" (page 234).

MESSIANIC APOCALYPSE. A few of the fragments of the Hebrew Messianic Apocalypse (4Q521) manuscript have a great importance for the history of religions. The copy of the manuscript is dated paleographically to the first quarter of the first century BCE; the various corrections made to it entail that it be considered a copy and not the original. The discovery of this single copy bearing the scribal characteristics of the Qumran copyists makes it most likely that it is a product of the local scriptorium.

The use of the word *Adonay*, along with the absence of the Tetragrammaton and its systematic elimination in the direct quotations of Psalm 146.7–8, make it possible to conclude that the author of the composition followed the same procedure as the author of the Damascus Document (CD vii.11) or of Hodayot^a from Cave 1 at Qumran (1QH; hereafter 1QHodayot^a), in observing the warning against an abusive or misplaced use of the Tetragrammaton as expressed in the Rule of the Community from Cave 1 at Qumran (1QS vi.27f; hereafter 1QRule of the Community). [See Damascus Document, Hodayot, and Rule of the Community.] Other similarities in the vocabulary relate the Messianic Apocalypse to certain passages of 1QHodayot^a xxiii.13–16 (= xviii.12–15) referring to *Isaiah* 61.1–2. The mention of the *hasidim*, *tsadiqim*, *qedoshim*, and *'anunim* on the one hand, and the insistence on seeking the Lord in worship on the other (4Q521 2.ii.3), a worship set apart (4Q521 5.i.4) by faithful people who keep the covenant (4Q521 10.2), who adhere to its commandments (4Q521 2.ii.1–2), in the midst of whom unrighteousness should no longer be found (4Q521 10.3), for whom the priesthood holds an important place (4Q521 8–9, 11–12) and who await the coming of the Messiah-king (4Q521 2.iii.2ff), of the New Elijah (4Q521 2.iii.1f), and of the coming of the priest-prophet (4Q521 2.ii.1), seem to fit the Essenes-*hasidim* best. It is more than likely that this is an Essene composition dating from the second half of the second century BC, which might be attributed to the Teacher of Righteousness himself. [See Teacher of Righteousness.]

The set of fragments, including Messianic Apocalypse 2–7, arranged on four successive columns, although very incomplete, makes it possible to draw some important conclusions. Because of the gap preceding Messianic Apocalypse 2.ii.1, the interpretation of *mshyhaw* is not very clear: “its messiah” (*meshuho*) or “his messiahs” (*meshihav*)? Still it does seem that the plural is possible because the word may mean the king and the priest, which in turn may also be the prophet and the eschatological interpreter. [See Messiahs.] If it is read in the singular, then it has to be understood as the priest-prophet of messianic times and not the prophet who is never consecrated (in 1 Kgs. 19.16 due to the parallelism). The second paragraph (4Q521 2.ii.4ff. + 4) describes in poetic style

and in the form of an exhortation the eschatological blessings that God will accomplish in the messianic era (compare *Mt.* 11.5 and *Lk.* 7.22). After a change in structure, the remaining fragments of Messianic Apocalypse 2.ii.1, which most certainly refer to *Malachi* 3.24 and *Ben Sira* 48.10, allude to the new Elijah and the revelation of the king-Messiah in the time of the blessing of the Lord in his divine goodness, which is at the origin of the general exultation and the later mention of the scepter. This passage is followed by a few hints about the prosperity of the messianic kingdom (4Q521 5.i + 6). It seems that the new Elijah, referred to in the first person, is the teacher of the last times, the high priest who is the contemporary of the Messiah-king, the combined teacher-prophet (4Q521 2.ii.1), as understood by some Karaite authors (Daniel al-Qumisi, Yefet ben ‘Eli, and Avraham al-Fasi) who became aware of other Qumran scrolls discovered at the end of the eighth century. [See Karaites.]

Then comes the description of the End (4Q521 7, 5.ii). Just as God created the heavens and the earth and all that they contain, he also is able to raise up the just of his people, the blessed ones, while the damned shall be for death. He will deliver(?) from death mortal men, open the tombs of those who have died, and proceed to the judgment. The beginnings of lines 11 to 15, “and the valley of death . . . [the bridge of the Abyss . . .], the damned are petrified [. . .], the heavens welcome [. . . and all] the angels [. . . ” can only be referring to the Last Judgment, the eternal rewards of the just and the eternal punishments of the damned, of the just and the wicked (cf. *Mt.* 25.31–46). When they cross the “Bridge of the Abyss,” the damned fall stiff and lifeless into hell, while the just are welcomed by the angels into heaven. This new and unique presentation recalls the “Bridge of the Sorter” of Zoroastrianism and the life of the just transformed into glory in the company of the angels in Paradise, which was borrowed from Persian religion but adapted to a Semitic background and anthropology. This suggests that the resurrection is not conceived as a return to life, a simple reanimation, but as a transformation into glory of the just, whether living or dead (4Q521 7), on a new Earth.

These various partially preserved motifs belong more to the genre of exhortation based on the eschatological blessings and punishments that God will carry out in the messianic days. In language that is half prophetic and half apocalyptic, the author invites the “devout just” to persevere in the observance of the Law and the orthodox practice of worship. He recalls God’s judgment in favor of the just and the wages of the wicked. The *eschaton* will see the fulfillment of the prophecies (*Is.* 40–6, *Mal.* 3). The various allusions to the day of Yahveh of *Malachi* 3.18–24, to the glorious deeds that have not yet taken place, belong to a kind of *midrash* of Psalm 146, a hymn

to a God who stands ready to help, presenting its central themes: God as creator and savior, the distinction between the just and the wicked. The main parallels in the Old and New Testament, and the apocryphal texts justify this kind of interpretation. Thus the dominant messianic and eschatological theme suggests classifying this text in the apocalyptic genre of Jewish circles of the second century BC, as in the proposed designation Messianic Apocalypse.

Translated from French by Robert E. Shillenn

METAL UTENSILS. Though not found in great numbers, the metal utensils from the Judean Desert display typological diversity. Made of bronze, iron, and lead, they will be discussed in the following categories: vessels, tools, and weights.

Vessels. The bronze tableware found in the Cave of the Letters includes four shovels, two bowls, a *patera* (saucer), and fourteen jugs. Another jug and three ladles were found at the 'Ein-Gedi tombs and three ladles exist from the Cave of the Pool in Wadi Sdeir. The shovels comprise a rectangular pan, two small cups set on its rim in the corners, four feet on its bottom and a tubular handle. Traces of burning in the center of the pans suggest identifying it as an incense shovel. The coals were placed in the pan, while the incense was kept in the cups and sprinkled from time to time over the coals. This ritual was performed by pagans, Jews, and Christians. Common all over the Roman Empire, more than a dozen bronze and iron shovels are from Palestine, the earliest among the cult vessels from the Hellenistic temple at Beersheba, others from tombs in Jerusalem near Tell Ab-Shusha, and at Heshbon. In the Talmud, the *maḥyah* (incense burner) is mentioned when finishing a meal with the smelling of incense (J.T., *Shab.* 3.7). In the Byzantine period, the shovel is represented with ritual objects such as a *shofar*, *lulav*, and *etrog* flanking the menorah on synagogue mosaic pavements. Besides being used for burning incense, the shovels are also thought to have been used for bone collection in secondary burials, as a snuff box or a lamp-cleaning utensil in the synagogue, or as cult objects associated with the festivals.

Two hemispherical bowls or basins are provided with

feet and a pair of omega-shaped swing handles ending in bird and animal heads.

The *patera*, a bowl with a central decorated medallion, depicts Thetis riding a centaur to bring weapons to her son Achilles, and has a tubular handle formed like a fluted column, terminating in a ram's head. The faces of Thetis and the centaur were partially obliterated after the vessel had come into Jewish hands; such deliberate erasure of images was sufficient to allow the vessel's use (J.T., 'A.Z. 4.5) and shows that the leaders of the Bar Kokhba Revolt observed the rabbinic rulings. Another *patera* from Lajjun, ancient Caparcotna south of Megiddo, is a second type with a high boss [umbo] in the center of the bowl and a handle terminating in the bearded face of Pan (the shepherd god) turned up level with the vessel interior. Both *paterae* show no traces of soot and were never used over a fire, but were used for ceremonial purposes when wine was poured for libation. Occasionally found with jugs, thus forming a set, their cultic use is not undisputed, for it was a Roman custom to have water brought by slaves during and at the end of meals for cleaning hands and fingers. The slaves poured water from the jugs over the hands, which was collected in the *patera*. The same ritual, using the *kiton* (water canteen) and *leves* (basin), was obligatory for Jews with the blessing over wine before, during, and after the meal (M., *Ber.* 8.2-4; T., *Ber.* 4.8-9).

The jugs have a slender, squat, or biconical body. Some have a pinched spout or a trefoilmouth for convenient pouring of liquids. The elegantly shaped handles are decorated. Some decorations include: geometrical and floral patterns, human masks, the bust of a robed figure (a winged Victory?), a youth (possibly young Bacchus), a festooned bucranium [a bull's head], lion heads, griffons, and birds. A single jug is adorned with a frieze of a hound chasing an animal. The human faces have been partially rubbed out to permit the vessel's use by Jews. Similar jugs are known from all over the Roman Empire. In Jewish sources they are termed *lagin*, serving primarily as wine decanters filled from the *havit* (M., *Ṭev. Y.* 4.4).

The ladle (*simpulum*, *tarvad*) for scooping liquids served also as a liquid measure (T., *Cholot* 2.2) and ceremonial vessel in offerings. There are two shapes, both found in the 'Ein-Gedi tombs: a handleless form and another with a long handle rising vertically from a bowl (T., *B.B.* 7.8), the handle sometimes ending with an animal head finial. The most common kitchen vessel, the bucket (*situla*), is represented by a bronze bucket with an iron handle from the Qumran Caves and a handle from the Cave of the Letters. In the so-called scriptorium at Qumran (Locus 30) a cylindrical, handleless, bronze inkwell was found, its lid missing (the *qalmarin*, J. T., *Miq.* 10.1). Dated to the first century CE, it is one of five inkwells, the

others are made of ceramic. A rod flattened at both ends and twisted in the middle from the Cave of the Letters appears to be a stylus, a writing pen. The only iron vessel from the same findspot, a flat frying pan with two horse-shoe-shaped handles, shows heavy traces of soot (the *tergan*, T., 'A.Z. 8[9].2).

The iron pan is of local manufacture. The bronze tableware from the Cave of the Letters, considered booty taken by the revolutionaries from the Roman army, originated from the area of Capua in southern Italy and likely dates from the mid-first century to the early second century CE. The vessels from the Ein-Gedi tombs represent the personal effects of the deceased. Altogether, a date range from the second century BCE to the third century CE can be demonstrated.

Tools. Iron blades were fastened into wooden or bone handles with rivets and collars. A chopper with a long broad blade, the *hopis* of J.T., *Sotah* 9.5., served for slaughtering animals and cutting bones as well as chopping wood (Cave of the Letters). A hatchet from Cave 11 at Qumran has double blades flanking the circular hole for the insertion of the wooden shank: a wide flat one and a pointed one offset to the hole. A common type in the Roman period, the *dolabra* or pickaxe was used for land cultivation, excavating, and mining. The tool is identified by de Vaux as the Essene hatchet and the *axinidion* or *skalis* mentioned by Josephus (c.75–79 CE) as being used by the Essenes for covering up their excrement in a hole in the ground, dug with the pointed blade (*The Jewish War* 2.8.9). An ax blade with a wide cutting edge was found in the Cave of Horror. Sickle blades with an inner sharp slightly saw-toothed edge and knife blades were noted in several caves. Of special interest is a clasp knife from the Cave of the Letters, which folds into its handle on a pivot. Such a tool was helpful during weaving for cutting the weft or thread from a ball. Two blades—one of a knife, the other of an adz—were found at Masada. Metallurgical study showed that the knife was not specially hardened during fabrication and was thus made for activities not requiring great hardness, such as food preparation, while the adz was deliberately hardened. A hoe in the shape of a modern turieh is reported from Wadi Murabba'at. An S-shaped hook found in the Cave of the Letters was used for hanging meat or for moving a door bolt and must have been very convenient for hauling baskets and jars up to the cave. A hook from Masada was heavily cold worked, only then could it bear a heavy load.

Fine bronze and iron tools include needles, crochet hooks, and awls from several caves, as well as some surgical instruments, including a lancet, spatulae, and spoons from Murabba'at Cave 4.

An iron peg from Masada, forged from wrought iron with no attempt made to strengthen it, could have been a

construction element or simply a digging tool. Iron nails with a broad head and a shank square in cross section are common. The analysis of a nail from Masada showed that it could have served to reinforce two slabs of limestone connected with a layer of mortar. In the caves of the Judean Desert only sandals without nails were found, supporting the prohibition of wearing nail-studded sandals on Shabbat (M., *Shab.* 6.2) and in general. Yigael Yadin argues that this was done for security reasons, pointing out that the clatter of Roman soldiers wearing hob-nailed sandals could be heard. His suggestion is contradicted by the find from the Ketef Jericho Cave: a heel, piece of sole, and eighteen bronze nails.

Iron keys, twelve from the Cave of the Letters, and one from Murabba'at, are of two types: ring and elbow keys. The ring key has two parts, the ring for carrying and the bit for opening or closing the lock. Used to secure locks on chests and boxes, this key is probably referred to in Tosephta, *Shabbat* 4.11. In an elbow or knee key the shank is not straight but bent in a right angle, forming the upper arm and the forearm to which the bit is attached. Made for locks on heavy and light doors, elbow keys are discussed in M., *Kelim* 13.6 and 14.8.

Weights. Several lead weights of the Bar Kokhba administration are known, one from an underground hiding complex in the Beit Guvrin area, decorated on both sides with a rosette. The Hebrew inscription confirms the name and titles of the revolt's leader, already known from the papyri.

Taking into account the mobile mint at Horvat Eqed halfway between Jaffa and Jerusalem, operating under Bar Kokhba, the iron tools and lead objects illustrate the standards of metallurgical industrial manufacture in the first and second centuries CE.

MEZUZOT. See Phylacteries and Mezuzot.

MICAH, BOOK OF. See Minor Prophets

MICHAEL. The name *Michael* means "who is like God" and is used in the scrolls to refer to the prominent archangel known from a wide variety of Second Temple texts. The name *Michael* occurs ten times in the scrolls in their current state of preservation: four times in the War Scroll (1QM), once each in the Enochic manuscripts Enoch^a^b (4Q201-202) once in War Rule (4Q285), twice in fragment mentioning Zedekiah (4Q470), and once in Words of Michael (4Q529). However, there are also a number of texts that mention an angelic figure not explicitly called *Michael* but perhaps referring to him nevertheless. This article will briefly review both the certain and the possible references to Michael.

The War Scroll and War Rule. The War Scroll (1QM ix.15-16) refers to Michael twice in an injunction to inscribe his name on certain shields used in battle formations called *towers*. Other shields will have the names Gabriel, Sariel, or Raphael. Yigael Yadin noted that this same group of four archangels occurs in many other Jewish texts, particularly the *Book of Enoch*. The reason for inscribing their names on shields is probably connected to the belief that the angels will fight with the sons of light against the sons of darkness.

In the War Scroll (1QM xvii.6-7) Michael is mentioned twice in a speech given by the high priest who says that

God will exalt Michael's authority above that of all the gods and cause the covenant of Israel to shine with joy. As often elsewhere, a clear connection is made here between the authority of Michael and the fortunes of Israel. According to Jean Duhaime, War Scroll vii.11-xvii.9 is a later addition to the text, indicating a developing doctrine of dualism within the Qumran sect. On this theory, Michael's role in the struggle against Belial is emphasized to protect God's sovereignty. A possible reference to Michael occurs in War Scroll xiii:10-11 which mentions a "prince of light" who is contrasted with Belial.

The text known as War Rule (4Q285) is related to the War Scroll though clearly not a copy of it. Fragment 10.3 preserves the names of both Michael and Gabriel followed by a lacuna. Unfortunately, the small size of the fragment does not allow any certainty as to what function Michael may have had in this composition, though it is not unreasonable to hypothesize that it was similar to that in the War Scroll.

Enoch. The name *Michael* is preserved at *1 Enoch* 9.1 in Enoch^a^b. However, since both texts in their original condition probably contained all of the "Book of Watchers," one must also consider *1 Enoch* 10.11; 20.5; and 24.6 where Michael is mentioned in the extant Greek and Ethiopic manuscripts. In these four passages Michael appears in roles related to either judgment or revelation.

At *1 Enoch* 9.1 Michael is again mentioned along with Sariel, Raphael, and Gabriel, just as in the War Scroll. These angels behold the blood being shed on earth by the giants of the antediluvian age and intercede on behalf of perishing humanity. In *1 Enoch* 10.11, God sends Michael to pronounce judgment against both the angels and their progeny. Later, at *1 Enoch* 20.5, Michael appears as part of a group of seven angels who are said to keep watch and are assigned specific tasks. Michael is appointed to be "over the good things of the people [of Israel]." *1 Enoch* 24.6 portrays Michael as the interpreting angel (*angelus interpres*) who explains to Enoch the things that he sees on his heavenly tour.

In addition to these four explicit references, two other verses may refer to Michael indirectly. *1 Enoch* 87.2 mentions a group of seven archangels that would likely have included Michael and *1 Enoch* 90.14 refers to an angelic being who fights for the people of Israel. Both verses come from the "Book of Dream Visions" (*1 En.* 83-90) of which four copies were found at Qumran.

Fragment Mentioning Zedekiah. In this fragment, Michael acts as God's representative in establishing a covenant with a certain Zedekiah, apparently to be identified as the last ruler of the kingdom of Judah. The Hebrew scriptures make no mention of any covenant mediated by Michael, but somewhat proximate parallels may be found in the New Testament, which contains statements to the

effect that the Sinaitic covenant was mediated by angels (*Acts* 7.53; *Gal.* 3.19; *Heb.* 2.2). Note also that War Scroll xvii.6-17 links God's exaltation of Michael with his causing the covenant of Israel to shine. But the latter is still not the same as having Michael act as God's agent in establishing the covenant.

Words of Michael. This Aramaic work consists of an account, written in the first person singular, of the words that Michael spoke to certain of the angels. After some kind of geographical description ending with the statement, "I saw Gabriel there," Michael relates a vision, perhaps given to him by Gabriel, describing various future events, including the building of a city. Although Michael appears in the familiar role of revealer of divine mysteries in this text, what is unusual is that he delivers his message not to humans but to angels.

Daniel. The only canonical book to mention Michael is *Daniel*. This happens three times at *Daniel* 10.13, 21; 12.1. Although none of the *Daniel* manuscripts from Qumran actually preserves the name *Michael*, the close agreement of all of them with the Masoretic Text indicates that they originally contained all three references. In these verses, Michael acts as protector of the people of Israel and struggles against those angels who represent other peoples, namely Persia and Greece. Furthermore, *Daniel* 7.13 mentions "one like a son of man." Many recent commentators believe that this enigmatic figure is none other than Michael (so Collins, 1993).

Other Possible References. The text known as Melchizedek (11Q13) mentions an angelic being who is set in charge of the Sons of Light and contends with Satan and the spirits of his lot. Some scholars believe that the similarity in roles played by Melchizedek here and Michael elsewhere warrants considering them to be one and the same figure. The fact that the text itself does not explicitly make this equation, however, suggests that some caution be exercised. Similar to Melchizedek is Visions of Amram^b (4Q544) which describes two watchers struggling for control of Amram. The evil watcher is Melchiresha'. The good watcher is said to have three names but none of these is preserved due to a lacuna in the text. Again, on analogy with those texts that describe a struggle between Michael and Belial, many scholars believe that one of the names of the good watcher must have been Michael.

War Scroll^a (4Q491) and Prayer of Michael (4Q471b) contain textual overlap and both describe a glorious and exalted figure who will be "reckoned among the gods" (4Q491 11.i.14) and who asks rhetorically, "Who is like me among the gods?" (4Q471b 6.4). Maurice Baillet, the original editor of War Scroll^a, believed that the text spoke of Michael since War Scroll xvii.7 says that Michael is given authority above all the gods. However, Baillet's views have recently been challenged by Collins (1995) and Eshel

(1996) who argue convincingly that both works speak of the exaltation of a human, perhaps priestly, figure.

The Rule of the Community (1QS iii.20, 24) mentions respectively a "Prince of Lights" and an "Angel of his Truth." Both are said to aid the Sons of Light against the Sons of Darkness and their leader, the Angel of Darkness. Comparison with the War Scroll again suggests that Michael may be in mind. Damascus Document v.17-19 likewise mentions the Prince of Lights who helped Moses and Aaron when Belial raised up Jannes and Jambres. Aramaic Apocalypse (4Q246) refers to a figure called the *Son of God* who is involved in an eschatological struggle with evil and whom Florentino García Martínez (1992) has identified as Michael, though other scholars take the *Son of God* as a messianic title or a title for a Greek ruler. Finally, *Tobit* 12.15 mentions a group of seven angels that likely included Michael. Five copies of the book have been recovered at Qumran (4Q196-200), two of which contain chapter 12.

Implications. Michael plays a variety of roles in the texts surveyed: protector of God's people, bearer of divine judgment, revealer of heavenly mysteries, and mediator of a covenant. All these roles are consistent with what is known about the development and expansion in the Second Temple period of ideas concerning angelic activity in general and of Michael in particular. Furthermore, Michael often appears in connection with other archangels, such as Gabriel. Usually the number of such angels is given as four, though sometimes seven.

It is important to note that Michael is often associated with the idea of dualism that is so prominent at Qumran. [See Dualism.] In such a context he fights on the side of good against Belial and the forces of evil. Some scholars suggest that Michael is introduced to downplay the idea, expressed in some scrolls nevertheless (e.g., 1QM i.5), that God himself struggles against Belial.

Other scholars have gone even farther and suggested that in certain Qumran texts, such as Melchizedek, Michael functions as God's hypostasis or his visible form when he appears to men. This is surely an overstatement of the case. While Michael is often closely associated with God, the distinction between them is clear: God commands and Michael obeys, God will exalt the authority of Michael, etc. It is best, therefore, simply to see Michael as the servant of God, a role which he fills nevertheless with unique distinction.

The prominence of Michael in the Qumran texts may have one further implication. Larry Hurtado has recently suggested that the unique status of Michael as agent of the divine provided an analogy to the early Christians in their thinking about the person and role of Jesus and had a powerful impact upon Christological developments in the nascent church. Though a full evaluation of this hy-

pothesis is outside the scope of this article, it once again raises interesting questions regarding the Jewish background of the New Testament and early Christian belief.

ERIK W. LARSON

MICHMASH, NAHAL. The northern tributary of Wadi Qilt, Nahal Michmash (Wadi Suweinit) originates from Bethel Hills near Ramallah, and joins Wadi Qilt west of 'Ein-Fawar. Its canyon-like section starts east of the villages of Jaba' and Mukhmas, whose names preserve the biblical names of Gaba and Michmash (*1 Sm.* 13.16). This canyon is perhaps "the ravine of Beth Tamar" mentioned in the Copper Scroll (3Q15 xi.14–15, ed. Milik), unless the reference is to the cliffs of 'Ein-Fara. [See 'Ein-Fara.] Between 1983 and 1985, in the framework of the Archaeological Survey of the Judean Desert Caves, carried out on behalf of the Institute of Archaeology of the Hebrew University of Jerusalem, directed by J. Patrick, the caves along this canyon were explored, as well as those in Wadi al-Habibi, the northern tributary of Nahal Michmash. Along an approximately 5 kilometer section of Nahal Michmash fifteen artificial caves were found, some isolated, and some in groups of a few caves each; eight caves were found in Wadi al-Habibi. The caves were cut by Jews in the Second Temple period, probably as part of a deliberate emergency project aimed at providing shelter and hideout for families of the nearby villages of

Michmash and Gaba. Some of these caves were reused during the Bar Kokhba Revolt.

A large space in the rock was hollowed beyond the natural face of a crevice or a natural rock ledge, through which access was maintained. The caves were classified into six different types according to the size and shape of the cave or group of caves. Most had built-in cisterns for water. A particularly interesting type is the single chamber cave (10–30 square meters in area) with a vertical chimney or shaft (approximately 1 meter square in cross section and several meters deep) cut into its floor. Projections or depressions cut in the vertical walls of the shaft aided climbing; the entrance at the bottom was sealed by a door, probably of stone, which revolved on hinges. In one place a circular stone (approximately 1 meter in diameter) was found in situ. The stone could roll in a groove carved especially in the rock to keep the entrance open. In some caves a concealed upper cell was cut near the ceiling. A leather sandal similar to those found at Masada and in other caves in the Judean Desert was found in Wadi al-Habibi Cave 4.

Some of the caves had been reused during the Byzantine period by the monks of the Byzantine laura of Saint Firminus. [See Monasteries.] This laura was established in this ravine in the sixth century CE (Cyril of Scythopolis, *Vita Sabae* 16.89). Its ruined remains, explored by R. Rubin, are scattered along the wadi, mainly on its northern bank, but some hermitages were also built on the southern bank. They included two chapels. A Syriac inscription in a mosaic floor was found in a hermitage on this bank, near 'Ein-Suweinit (Haloun and Rubin, 1981). A secondary, eastern center of the laura, comprising some ruined buildings and cisterns, a burial chapel, and a large water reservoir, was found near the confluence of Wadi al-Habibi with Nahal Michmash.

The most complex groups of caves, known in Arabic as el-Aliliyat ("the upper chambers"), are located in the cliffs of the northern bank. There are two adjacent groups, one to the east and one to the west. The caves of the eastern group are located along a rock ledge 56 meters long, 30 meters above the foot of the cliff. The complex consists of two rock-cut dwelling rooms, a ritual bath (*miqveh*), and a cistern. On the plaster covering the walls of the cistern are charcoal sketches of seven branched menorahs, a pentagram, and inscriptions. The inscriptions include two lines of an abecedary, which, along with the drawings, probably should be interpreted as magic formulas to protect the writers. Another Aramaic inscription reads: "Yo'ezer has been uprooted, the guards have entered." This may have been the writer's last message, telling of the wounding or death of one Yo'ezer—a common name in priestly circles—and indicating that the besieging guards had penetrated this almost inaccessible place.

The script is typical of late Second Temple period. Below the pentagram another inscription reads: "Peace, peace, amen." During the Byzantine period monks lived in the caves and inscribed crosses and Syriac and Greek inscriptions in red paint on the rock walls and on the sides of the cistern and the *miqveh*. These were noticed already in 1928 by M. Marcoff and D. Chitty. This complex was reexamined in 1978 by a team of scholars on behalf of the École Biblique et Archéologique Française in Jerusalem, who had published a plan and the Syriac inscriptions on the plastered wall of the *miqveh*—a verse from *Psalms* 29.3 repeating three times: "The voice of the Lord is upon the waters." The three Greek inscriptions accompanied by crosses read: IC XC; IC XC NI KA; and IC XC *Basileue*.

The western group of caves consisted of four systems, one above the other toward the top of the cliff, interconnected by a tunnel and rock-hewn steps. The water collection system served all four systems of caves. Its plastered rock-cut channel collected runoff from the cliff, which was then directed to the cisterns as it descended from level to level. Typical shards from the time of the Bar Kokhba Revolt were found in this group of caves. Other finds from this period, including five bronze coins, were found in el-Ji Cave, the largest cave on the southern bank of the wadi (Eshel, 1997).

JOSEPH PATRICH

MIDRASHIM. The term *midrash* in the context of early rabbinic literature has three levels of meaning: the activity of interpretive study of Hebrew scriptures, the discrete exegetical results of such study, and the literary collections (*midrashim*) of such exegeses. Within the last

level, it is common first to distinguish chronologically between the collections. The earliest ones, containing Midrashic traditions attributed to the tannaitic sages (c.70–220 CE), are referred to as tannaitic *midrashim* or *midreshet halakhah* ("legal *midrashim*"). Both terms are somewhat imprecise, since these collections in their present form are most likely the products of amoraic redactors of the mid- to late-third century CE and their contents are both halakhic (legal) and aggadic (narrative/hortatory), depending on the mix of law and narrative in the biblical books upon which they comment. The biblical books covered, but not necessarily completely, by these collections are *Exodus* (by the *midrash Mekhilta*), *Leviticus* (*Sifra*), and *Numbers* and *Deuteronomy* (*Sifrei*), with evidence of there having been two recensions of each collection, only one of which in most cases is fully preserved, the other requiring reconstruction.

In the later Midrashic commentaries of the amoraic period (third through fifth centuries CE), a further distinction is drawn between those that take the form of running expository commentaries following the order of the biblical books (the Pentateuch and the Five Scrolls, but not the Prophets), and those that are more thematically and homiletically structured around the opening verses of weekly or festival scriptural lections. Among the latter, particular scholarly attention has been paid to the rhetorical artistry of the *mashal* ("parable") and the *petihta*' ("proem"). But this distinction between expository and homiletical collections should not be drawn too sharply, as nascent homiletical structures can be found in the earlier (tannaitic) collections as well.

As to language, both early and late Midrashic collections of the rabbinic period are written in rabbinic Hebrew, but the later (amoraic) collections contain a higher admixture of Palestinian Aramaic and aramaized Hebrew, in all cases with a liberal peppering of Greek and Latin loanwords. While these *midrashim* are all collective, edited anthologies rather than authored or pseudographic compositions, their constituent traditions are frequently (more so in the amoraic collections) attributed to named rabbinic sages, the veracity of such attributions being difficult to determine with certainty.

Although the extant collections of rabbinic *midrash* all date in their present form to the third century CE and later, it is generally assumed that they transmit earlier traditions, deriving not only from earlier rabbinic generations, but from prerabbinic antecedents of Second Temple times. Until the discovery of the Dead Sea Scrolls, the evidence for such prerabbinic Jewish scriptural interpretation was limited largely to writings preserved in Greek and other non-Semitic languages, and transmitted, with varying degrees of tampering, by later Christian denominations. The extent to which such writings could be iden-

tified with specific Jewish social groups was extremely limited. Even the Hebrew word *midrash*, in its rabbinic sense of biblical interpretation, was unknown in prerabbinic Jewish sources. Thus, it was difficult to judge whether or to what extent, rabbinic *midrash*'s own claims for great antiquity (extending ultimately to Moses at Mount Sinai) had any basis in fact. In the area of Jewish law, did the rabbinically preserved legal exegeses that derived rabbinic legal theory and practice from scriptural verses represent scriptural justifications of received legal traditions, originally transmitted nonexegetically, or the very methods by which Jewish law developed in the Second Temple period? In other words, was Jewish law of Second Temple times taught and transmitted through or independently of Midrashic interpretation? While the discovery and publication of the Dead Sea Scrolls and related literature have not fully answered these questions, they have revolutionized the way in which they are approached.

To begin with, the Hebrew word *midrash* appears some eight times in the Dead Sea Scrolls (Rule of the Community from Qumran Cave I, hereafter, IQRule of the Community, IQS vi.24, viii.15, viii.26; Florilegium, 4Q174 1.14; 4Q269 (verso); Damascus Document, CD xx.6; Damascus Document^d, 4Q266 5.i.17 (restored), 11.20; Damascus Document^e, 4Q270 7.ii.15), in five cases of which it is followed by the word *torah*. However, in such usages often it is not clear whether the word *midrash* has the specific connotation of scriptural exegesis or the more general sense of study. The same ambiguity pertains in the Dead Sea Scrolls to the use of the verb *hidros* in conjunction with a text or body of laws.

With the discovery of the Dead Sea Scrolls, many exegetical traditions, formerly known only from early rabbinic *midrash*, are now known to have circulated in late Second Temple times, minimally within the Qumran community and related groups, but probably more broadly. This sharing of exegetical traditions is as true for legal as for nonlegal understandings of scripture. Less certain is whether or to what extent these shared traditions are the products of direct or indirect contact between the Qumran sectaries and the Pharisees or the later rabbis, independent exegesis by the two groups, or a broader, more commonly shared body of tradition upon which both drew.

When we examine the variety of literary forms in which the two communities collected and transmitted their exegetical traditions, there are striking differences as well as similarities to be noted. For example, we find in the Dead Sea Scrolls some of our earliest known running scriptural commentaries, in the form of the *pesharim* to biblical books of the Prophets and *Psalms*. [See *Pesharim*.] These tend to decode in sequence the terms of the biblical

verses in specific reference to events, personalities, or groups in the life and history of the Qumran community, much like the interpretation of a dream, thereby affirming that the prophetic predictions have been or will shortly be actualized in the community. The term *peshet* and its form bear striking resemblance to the later rabbinic exegetical form and cognate term *petirah*. However, there are significant differences between the two. Rabbinic *midrash* often decodes an indeterminate scriptural verse or phrase, but not just from the Prophets, so as to refer intertextually to a specific biblical figure or event. Furthermore, it commonly provides a series of such decodings, each referring to a different referent or set of referents. Thus, rabbinic *midrash* commonly adduces a multiple of intrascriptural decoding possibilities, whereas the Qumran *peshet* commonly gives a single extrascriptural one. Finally, the rabbinic *petirah*, like rabbinic *midrash* in general, achieves its results through the exegetical juxtaposition of verses from different parts of the Hebrew scriptures, while the continuous *pesharim* refer only to the base verse being commented upon. However, intertextual interpretation is displayed in the several noncontinuous, or thematic, *peshet* or *peshet*-like interpretations in the Damascus Document (e.g., CD vi.2–11, vii.9–viii.2) and the Florilegium. Similarly, the thematic stringing together of scriptural verses from diverse locations (rabbinic *harizah*) is evidenced in *Catena*^{a-b} (4Q177, 182). All these Qumran forms, however, lack the dialogical rhetoric of rabbinic *midrash* (for example, question and answer, the rhetorical raising of alternative exegetical possibilities to be disproved) and the attribution of particular interpretations to named authorities.

Although Qumran texts evidence, besides the *peshet* terminology, stock terms for scriptural citation (e.g., *asher katuv/amar*; "as it is written/said") similar to those in rabbinic *midrash*, the frequency of actual scriptural citation is far less in Dead Sea Scroll interpretation than in rabbinic *midrash*. In some cases, especially in *Miqsat Ma'asei ha-Torah* (MMT^{d-e}, 4Q394–399), what follows such seeming citation terminology cannot be identified with any known biblical verse but rather represents a biblical paraphrase or common biblical idea. [See *Miqsat Ma'asei ha-Torah*.] Much more commonly, and especially in legal texts such as *Temple Scroll*³ (11Q19) and the Damascus Document, the Dead Sea Scrolls present the results of the community's (or its leadership's) exegetical activity in nonexegetical, paraphrastic form (referred to by some as "rewritten Bible"). [See *Rewritten Bible*.] Thus, as in early rabbinic literature where laws are taught both exegetically (*midrash*) and nonexegetically (*Mishnah*), both forms can be found in the Dead Sea Scrolls, but with a larger preponderance of the latter. So, while the Dead Sea Scrolls contain many antecedents to rab-

binic exegetical traditions, the fact that the exegetical underpinnings of those antecedents are expressed more implicitly than explicitly makes the search for antecedents to specific rabbinic hermeneutical methods rather difficult and the results minimal. Unlike early rabbinic literature, there is no evidence among the Dead Sea Scrolls for the explicit articulation of the hermeneutical rules that govern exegesis.

Being aware of these differences and limitations, it is important to acknowledge significant similarities between the two communities' employment of scriptural exegesis in relation to their respective social and ideological self-understandings. For both communities, the ritualized activity of interpretive study of scriptures was a central religious activity that defined the community and socialized its members to its ethos and place within the larger sacred history of Israel. In both cases, the scrutiny of scripture required close attention to the particulars of scriptural language in its smallest details, wherein lay deeper levels of meaning to be uncovered. For both communities, such highly engaged activity of *midrash* was not simply a utility for deriving or justifying their laws and teachings. Rather, it was a form of intensive religious expression and experience in itself, veritably a form of worship, a locus for experiencing the divine presence in their midst. Socially, such study strengthened the bonds of religious community (whether conceived at Qumran as *yahad* or among the rabbinic sages as *havurah*). As expressed by the Damascus Document (CD xx.10–13), the community inhabited a *beit Torah* ("house/place of Torah"), in which their continual *midrash ha-Torah* ("study/interpretation of Torah") provided the medium for ongoing revelation along a divinely ordained path to redemption (IQS viii.12–16). Similar understandings of *talmud Torah* ("study of Torah") inform early rabbinic self-understandings of how to know and experience God's presence and will in the present while awaiting final (albeit deferred) redemption.

Both communities had a twofold diet of study, however differently denoted and transmitted: for the rabbis, written and oral Torah (Miqra' and Mishnah); for the Qumran sectaries, that which was revealed (*nigleh*) to all Israel (the commonly held "Torah of Moses," by various names) and that which was hidden (*nistar*) from the rest of Israel but revealed to them alone (the community's "statutes," by various names). For both groups, scriptural interpretation was a way of interlinking the two bodies of revelation to one another, thereby engaging them as one.

Yet, once again, acknowledgment of these socially functional similarities between rabbinic *midrash* and Qumran exegetical activity should not distract us from their no less significant differences. The Qumran twofold study curriculum draws no performative distinction, as

does rabbinic *midrash*, between "written" and "oral" components. Rabbinic *midrash* stresses that both forms of Torah were revealed through Moses to the whole Israelite people at Mount Sinai, even as the unfolding of the oral Torah was to be continuous throughout subsequent generations. By contrast, Qumran writings suggest that what had previously been hidden (and continued to be hidden from the rest of Israel) was disclosed to the community of the renewed covenant alone, in the period after the destruction of the First Temple, beginning with the Teacher of Righteousness and continuing through the succeeding generations of the community under the guidance of its inspired teachers. While both communities sought to uncover fuller and deeper meanings of the Hebrew scriptures through scriptural study and interpretation, they related this activity to the larger body of Israel and its sacred history quite differently. In the case of rabbinic *midrash*, scripture's progressively uncovered meanings are thought to have been present, at least potentially, already at Mount Sinai and to have been revealed, at least ideally, to all Israel from Mount Sinai on. Among the Qumran sectaries, those meanings were a newly revealed dispensation to the community of the renewed covenant alone at the onset of the End of Days.

STEVEN D. FRAADE

MILIK, JÓZEF T. (1922–), Franco-Polish Orientalist and editor of the Dead Sea Scrolls. Born on 24 March 1922 in Seroczyn, Poland, Milik studied at the Boleslaw Prus Lyceum in Siedlce and then at the Major Seminary of Plock and Warsaw. In 1944 he began his studies of

ancient and modern languages at the Catholic Institute of Lublin. From 1946 to 1951 he studied at the Pontifical Oriental Institute and Pontifical Biblical Institute in Rome.

In 1950 Milik published a series of scholarly notes on the spelling, phonetic, and textual variants of the biblical manuscripts among the Dead Sea Scrolls, in particular Isaiah^a and ^b from Cave 1 at Qumran (1QIsa^{a-b}). In 1951, he was one of the first to publish a translation, in Latin, of the Rule of the Community from Cave 1 at Qumran (1QS), of which he later published the text in volume 1 of *Discoveries in the Judaean Desert* (Oxford, 1955). He identified one fragment as belonging either to the end of *1 Enoch* or to the beginning of *Noah*; in fact it was the largest fragment of a work that, in the *editio princeps*, by Milik himself, is called Noah (1Q19).

These scholarly studies attracted the notice of Roland de Vaux, director of the École Biblique et Archéologique Française, president of the Trustees of the Palestine Archaeological Museum and codirector of the excavations of Cave 1 and Khirbet Qumran. De Vaux invited Milik to Jerusalem to participate in the study of the hundreds of manuscript fragments from Cave 1. In 1952 Milik worked with Dominique Barthélemy in organizing, distributing, and classifying manuscript fragments found in Cave 1 during the excavations or purchased on the antiquities market.

In 1952 Cave 3 was discovered by the team of Roland de Vaux, to which Milik belonged. This increased Milik's on-site work and complemented his work as an epigraphist. He took part in excavating Cave 4 and unearthed hundreds of fragments. He also took part in the discovery of Cave 5 and excavating Caves 5 and 6, while workers from the University of Louvain excavated the nearby site at Khirbet Mird. [See Mird, Khirbet.]

Naturalized as a French citizen, Milik was admitted as a researcher to the Centre National de la Recherche Scientifique in Paris, an institution of which he was a member until his retirement in 1987. At first detached to work in Jerusalem, other researchers later joined him, working on an international and interdenominational team recruited by de Vaux. But all concurred that Milik was the most active, quick, and effective member in the work of grouping, classifying, and deciphering the fragments. He was the scholar who developed the universally accepted system of *sigla*, by which the manuscripts are cited (Barthélemy and Milik, 1955, pp. 46–48). De Vaux made him the pillar of the team and entrusted to him the publication of the fragmentary and extremely difficult manuscripts from the caves of Wadi Murabba'at. [See Murabba'at, Wadi, *article on* Written Material.] (Benoit, Milik, and de Vaux, 1961).

Milik deciphered the hitherto unknown Aramaic cur-

sive script. De Vaux entrusted to him the most important lot of manuscripts from Cave 4 (apocryphal works and compositions of the Community), the manuscripts from Cave 5, and the Copper Scroll from Cave 3 (3Q15; Baillet, Milik, and de Vaux, 1962).

During the nine years he spent at the Ecole Biblique et Archéologique Française de Jérusalem and in the "scrolery" of the Palestine Archaeological Museum, doing painstaking and austere work, Milik published in French (1957) a first synthesis of the main contributions of these discoveries to our knowledge of the Bible and Oriental studies (Milik, 1957). [See *École Biblique et Archéologique Française*; Palestine Archaeological Museum.] This work appeared in Italian that same year; it was updated and translated into English by John Strugnell in 1959. Although this work is intended for a wide audience in addition to scholars, it is still authoritative because the author is an expert who knows better than anybody else the places and texts. Having participated in the excavations, Milik could have a personal view and approach, having in mind the fragments which he was progressively identifying and deciphering. From the outset, Milik defended the identification of the Wicked Priest with Jonathan, and he stuck to this solution as the only one that could account for all the data gathered. [See *Wicked Priest*.] This solution was adopted by a majority of scholars and even by de Vaux himself (1973, pp. 5, 116f.), although de Vaux still could not make up his mind between Simon and Jonathan.

Endowed with a prodigious memory, Milik remembered everything he deciphered. He also had a gift for minute observation, and noted the quality of the leather, its preparation as a support for the writing, the scribe's handwriting, the ink, the language and vocabulary, the subjects treated, the shape of the breaks, that is, anything that individualizes a fragment in order to link up fragments, even at a distance, or to determine whether a fragment belonged to another sheet or manuscript. He excelled in this art of reconstruction. The members of the international team remember the story of his decipherment of the cryptic writing—the time of their lunch!

In addition to the excavations at Qumran, Milik and Frank Moore Cross led a surface exploration in the Buqeiya in an attempt to understand the toponymy (place-names) of the region. [See *Buqeiya*.] Milik's linguistic skills gave him the opportunity to publish and to study a number of inscriptions, whether in Greek or in a Semitic language, and to complete researches on Palestinian topography, largely of the Holy City, mainly because of the Copper Scroll from Cave 3. [See *Copper Scroll*.] Again and again, Milik showed his erudition. The first to join the team, he is also, by far, the one who has edited the greatest number of texts, drawing value from even the ti-

niest fragment to rediscover precisely a [literary, historical, and religious context for works for which the complete text has been forever lost. Finally, he played a crucial role in completing the "manual concordance" at the Palestine Archaeological Museum, which was intended to help editors find places where texts or expressions may overlap.

While based in Jerusalem, Milik had the chance to explore many subjects. He made friends with the Samaritan priests in Nablus, who permitted him to record their recitation of biblical books. This served his editions, for example, of the phylacteries from Cave 4 (de Vaux and Milik, 1977, pp. 39–46).

After another long stay in Rome during the 1960s, Milik came back to Paris where he continued to publish (Milik, 1976; Attridge et al., 1994), sharing the results of his research with the youngest members of the team, and, thereby, the benefit of his work that was already considerably advanced on a number of fragmentary manuscripts. As a master of decipherment he is frequently consulted, since his is the only living memory of the first work done on the site and on the original texts. The editors of *Discoveries in the Judaean Desert*, 22, acknowledge their indebtedness for finishing an edition for which Milik contributed his decipherment and notes (Brooke, et al., 1997).

In March 1991, the Complutensian University of Madrid honored this man of genius in epigraphy and decipherment by a medal.

The *Revue de Qumrân*, which includes Milik on its editorial committee, dedicated an entire volume to him on the occasion of his seventy-fifth birthday, in 1997. [See *Revue de Qumrân*.] Milik is and shall remain the greatest master of his generation in deciphering the Dead Sea Scrolls; a researcher of integrity, uninvolved in the plots and passionate debates of the last decade, and devoted to science, philology, and history.

MILKI-RESHA'. See Demons.

MILLSTONES, generally made of basalt quarried in the Golan and Hauran, were used for turning grain into flour. The process involved several steps. Husked grains were first pounded, and then the kernels were broken and finally ground. Naked grains were then grated between two stone surfaces to yield flour.

The simplest and oldest milling equipment was the mortar (*mortarium*) and pestle (*pilum*), yet, while they had been used to pound husked grains for a long time, they were unsuitable for large quantities and ineffective in grinding. Like the common clay *mortaria*, stone mortars were used for pounding and breaking up spices and herbs. The basalt mortar was an open flat dish with low sides set on three feet, while the shape of the pestles varied; a representative group of them came to light in the Herodian mansions of Jerusalem (Avigad, 1983, p. 127, illus. 123; p. 182, illus. 209.4).

In the course of time, however, the development led from the mortar and pestle to the hand-operated simple saddle quern, a primitive hand-turned grain mill, and then to the technically advanced animal- and water-powered rotary mill. The application of rotary motion was a great improvement. Not found in Israel before 100 BCE, it was the prevailing type used from then on.

In the settlement of Qumran, remains of a grain mill and a baking oven were discovered in the workshop area, indicating that flour was produced by its inhabitants. In de Vaux's opinion it was unlikely that grain was bought from outside the area for that purpose, but rather that corn or barley was grown in the plain of the Buqei'a to the west of Qumran, the sites being connected by an ancient pathway. The installation consists of a circular raised base for the millstones; in a pit nearby two intact

basalt stones and two broken ones were found (de Vaux, 1973, pp. 28-29, pl. XX). The type is the turning- or rotary grain mill (*mola versatilis*).

The earliest dated examples are known from El Sec (Mallorca) and Morgantina (Sicily) from the fourth century BCE. While scholars agree that the rotary grain mill was invented in the West, it is not clear when the type was introduced into the East; the theory that it was brought by the Roman legions to Greece in the first century BCE and from there further East might be due to insufficient research and the lack of stratified archaeological finds.

The mill consists of two stones, a lower one shaped like a bell (*meta*) and a hollow double-conic upper one shaped like an hourglass (*catillus*) with two central handles. The lower stone remained stationary on a platform, while the upper stone was rotated by turning it with a horizontal wooden handle. Depending on its size, the mill could be worked by a single person or by two people, one turning on each side.

A further development was the so-called Pompeian mill, a type employed in the commercial bakeries at Pompeii, Herculaneum, and Ostia. It was too heavy to be turned by human power, but was drawn by a mule, donkey, or horse fastened to its handlebar (*mola asmaria*). The simplest form of rotary hand mill (*mola manuaris*), easy to transport, consists of a pair of round flat stones, later a pair of lower convex stone and an upper concave stone, held in place by a vertical wooden handle.

MINOR PROPHETS. The manuscripts of the Minor Prophets from the Judean Desert vary in date and in textual affiliation. This article will survey the textual witnesses for the Twelve Minor Prophets from the Judean Desert and describe the contribution they make to our understanding of the text of the Twelve at this stage of scholarship.

As is well known by now, the biblical manuscripts from the Judean Desert have demonstrated that the text of the Hebrew scriptures was still evolving in the third through the first centuries BCE and into the first century CE. The consonantal text of the Hebrew scriptures was probably "standardized" by the end of the second century CE. In the case of the Minor Prophets in Hebrew, our evidence stretches from approximately 150 BCE to 50–100 CE, a period of 200–250 years covering a crucial phase in the history of the text and the collection of the Twelve. From the beginning of this period there exist manuscripts which show definite variation from the type of Hebrew text which is ancestral to the Masoretic Text. Likewise the ancestor of Masoretic Text is also attested. The picture which emerges is similar to that for other sections of the Hebrew scriptures. There is textual diversity and there is no unambiguous evidence that any one type of text was favored over another, although such theories have been proposed. For the Book of the Twelve we are extremely fortunate also to have a manuscript in Greek from the last half of the first century BCE which has been demonstrated to be a recension of the Septuagint (8Hev 1). This recension is closely aligned with later Greek versions which are known to be attempts to produce a Greek translation that was close to the Hebrew text. The existence of this early recension may be taken as evidence of the desire on the part of a community to revise the text of their Bible. Because the text of this recension, Greek Minor Prophets (8Hev 1), was based on the Septuagint translation, but stood closer to the proto-masoretic form of the text, scholars have assumed that the revision was done in order to bring the Septuagint closer to the current form of the Hebrew text. If this assumption were correct, then it would follow that there existed at that time a form of the Hebrew text which was viewed as more authentic or more authoritative than other forms of the Hebrew text which we know also existed at that time, some of which corresponded closely to the Septuagint. If this line of reasoning is accurate, then the theory which maintains that the proto-masoretic form of the text was more highly valued even in this period would be indirectly supported. There might have been additional reasons for a community to commission a revision of their scripture. We should not ignore the idea that revisions of translations might be desired to make the language current or up to date. This has not been explored as one of the possible motives for the production of the Greek recension of the Twelve.

Because the manuscript evidence from the Judean Desert is often fragmentary, it is not always possible to be certain of the textual affiliation of a witness. This uncertainty must always be kept in mind and should moderate generalizations based on this evidence.

In the following section are summarized the data regarding the agreements and disagreements among the versions, the ancient manuscripts, and the *pesharim*. The data are discussed book by book, following the order in the Hebrew canon. Disagreements which are due to orthographic differences, including the so-called longer suffixes, have not been included in the discussion.

Although in the Book of the Twelve the Septuagint may be somewhat expansionistic in general in comparison with the Masoretic Text, it is essential to keep in mind that the Masoretic Text also preserves later interpolations in addition to many incomprehensible readings. It is necessary for the textual critic and/or biblical exegete to review all evidence for each individual passage before deciding on the best reading.

Hebrew Biblical Manuscripts: Qumran Cave 4. Minor Prophets (4Q76) is one of the oldest biblical manuscripts from the Qumran caves, dating to approximately 150 BCE. It is written in an irregular semicursive script, which is rare in the biblical manuscripts recovered from the Judean Desert. This, along with its age, raises the possibility that it was not copied at Qumran, but rather imported into the community. Minor Prophets^a is a non-aligned manuscript in terms of its textual affiliation. It agrees sometimes with the Masoretic Text, sometimes with G, and frequently does not resemble either.

Minor Prophets^b (4Q77) is a neatly written manuscript in a semiformal hand from the middle of the second century BCE, roughly contemporary with Minor Prophets^a. It stands relatively close to the proto-masoretic textual tradition in the readings, which are preserved. Minor Prophets^b is also noteworthy because it preserves the transition between the "book" of *Zephaniah* and the "book" of *Haggai*, which allows insight into early scribal practices in copying biblical manuscripts.

Minor Prophets^c (4Q78) is a manuscript written in a semiformal hand, which dates from approximately 75 BCE. It stands relatively close to the textual tradition represented by the Septuagint. It exhibits a "full" orthography, which Tov has described as the "Qumran Practice."

Minor Prophets^d (4Q79) is a poorly copied manuscript written in a "rustic" semicursive script which is extremely difficult to date precisely; it may come from the second half of the first century BCE. In the few readings from the *Book of Hosea* which have been preserved, Minor Prophets^d seems to stand relatively close to the proto-masoretic textual tradition. The lower fragment of this manuscript preserves an unscribed section of leather which probably wrapped around the scroll when the scroll was rolled from the end.

Minor Prophets^e (4Q80) is written in a minuscule, semiformal hand dating from approximately 75 BCE. There are several erasures and corrections evident in this

manuscript. In the readings which are preserved, Minor Prophets^c stands very close to the textual tradition represented by the Septuagint.

Minor Prophets^d (4Q81) is preserved in only five fragments from the *Book of Jonah*. Like Minor Prophets^b, it varies little from the Masoretic Text, but since so little is preserved, it is not possible to reach a conclusion regarding its textual affiliation.

Minor Prophets^e (4Q82) is a poorly preserved and extremely fragmentary manuscript in most of the Book of the Twelve. It is written in a semiformal hand dating from the last half of the first century BCE. Although 4QXII^e disagrees frequently with both the Masoretic Text and the Septuagint, it stands close to the proto-masoretic textual tradition in most readings.

Murabba'at Minor Prophets Scroll. The Hebrew manuscript evidence also includes the Murabba'at Minor Prophets scroll, which dates to the second half of the first century CE. It has been described as virtually identical to the Masoretic Text. In the terminology of Emanuel Tov, which he uses in his book on the textual criticism of the Hebrew scriptures, Minor Prophets (Mur 88) is a proto-masoretic text. In comparison with the sometimes strong variation from the Masoretic Text among the seven Minor Prophets scrolls from cave four at Qumran, Minor Prophets (Mur 88) shows relatively little variation from the Masoretic Text (only one time in agreement with Septuagint against the Masoretic Text). The largest differences in comparison to the Masoretic Text are omissions where the omitted word or phrase was added interlinearly. These additions or "corrections" occur seven times and always correct the text of Minor Prophets (Mur 88) to agree with the reading of the consonantal text of the Masoretic Text. This correction of the text of Minor Prophets (Mur 88) may be indicative of the process of standardization. The consonantal text dates from the first century CE and has been described as a proto-masoretic text.

The textual situation in the Books of the Twelve. The Hebrew text of the *Book of Hosea* is attested in three biblical manuscripts and three *pesharim*. 4QXII^c and 4QpHos^a both seem to stand closer to the textual tradition represented by the Septuagint. 4QXII^d and 4QXII^e stand closer to the proto-masoretic tradition. In 4QpIsa^c the form of the citation of *Hosea* 6.9 in this commentary may be the result of the replacement of an archaic verbal form with a form which was more frequent at the time it was copied—a form of modernizing. 4QpHos^b agrees with the Septuagint against the proto-masoretic text in the single reading which seems to indicate an unambiguous variant, but there is too little text preserved to be certain of the textual affiliation of this manuscript. The other materials do not preserve enough text to know

where to place them textually. The situation was mixed, but by the second half of the first century BCE it seems that the proto-masoretic tradition is better attested.

The Hebrew text of the *Book of Joel* is attested in three biblical manuscripts and in one nonbiblical composition. Once again 4QXII^c emerges as an independent witness which stands closest to the textual tradition also preserved in the Septuagint. The ancient versions frequently had difficulty with *Joel* because of the higher frequency of rare terms. 4QXII^e stands in the tradition of the proto-masoretic text, while Minor Prophets (Mur 88) is surprisingly quite independent in *Joel*. Catena^a (4Q106) preserves only one citation of *Joel* (2.20) which disagrees with the Masoretic Text and is not reflected in other witnesses.

The Hebrew text of the *Book of Amos* is attested in three biblical manuscripts, one *pesher*, and two nonbiblical compositions. 4QXII^c, the earliest manuscript, is quite independent in *Amos*, although probably closer to the Septuagint. In contrast, 4QXII^e is quite close to the Masoretic Text. Minor Prophets (Mur 88), although in general quite close to the Masoretic Text, varies somewhat in *Amos*. 5QAmos disagrees with the Masoretic Text twice. Florilegium disagrees with the Masoretic Text once in agreement with the citation of *Amos* 9.11 in the Damascus Document (CD vii.16).

The Hebrew text of *Obadiah* is attested in only two biblical manuscripts. As usual, 4QXII^e stands quite close to the Masoretic Text. Minor Prophets Scroll (Mur 88) is somewhat independent.

The Hebrew text of the *Book of Jonah* is partially preserved in four biblical manuscripts. Greek Minor Prophets (8Hev 1) also preserves parts of the revised Greek text of the Septuagint. In the *Book of Jonah*, the texts of the Masoretic Text and the Septuagint are not far apart from each other. 4QXII^a is independent. 4QXII^d, while small, may be proto-masoretic, as is 4QXII^e. Minor Prophets (Mur 88) disagrees with the Masoretic Text twice.

The Hebrew text of the *Book of Micah* is attested in two biblical manuscripts and in two *pesharim*. Greek Minor Prophets preserves fragments of the revised text of the Septuagint. Witnesses both early and late preserve disagreements with the Masoretic Text in the *Book of Micah*. As usual, 4QXII^e agrees with the proto-masoretic textual tradition against the Septuagint. 4QMic is a single, small fragment written in a script very similar to that of 4QXII^d. It preserves a single unique reading which may be the result of exegetical activity. Minor Prophets (Mur 88) preserves two unique readings where the Septuagint and the proto-masoretic text agree with each other, and agrees with the Septuagint once against the proto-masoretic text in what is probably a secondary reading. *Pesher Micah* (1Q14) disagrees with both the proto-masoretic text and

the Septuagint, which are in agreement. Peshet Micah? (4Q168) preserves only orthographic differences from the Masoretic Text. Catena^d preserves only one reading where it disagrees with both the Masoretic Text and the Septuagint.

The Hebrew text of the *Book of Nahum* is attested in two biblical manuscripts and in one *peshet*. Parts of the revised text of the Septuagint are preserved in Greek Minor Prophets (8Hev 1). The two earliest witnesses to the Hebrew text of *Nahum*, 4QXII^e and Minor Prophets (Mur 88), agree more frequently with the proto-masoretic tradition than with the Septuagint but all three witnesses preserve some variation from the Masoretic Text. Minor Prophets (Mur 88) was frequently corrected to agree with the Masoretic Text. Peshet Nahum (4Q169) disagrees with the Masoretic Text some thirty-two times. Some disagreements may originally have had a basis in orthographic differences, but developed beyond that. At least six times, Peshet Nahum (4Q169) agrees with the Septuagint and the Masoretic Text. There is also a pattern of corrections toward the Masoretic Text by a second hand.

The Hebrew text of the *Book of Habakkuk* is preserved partially in Minor Prophets (Mur 88) and in the *peshet* on *Habakkuk* found in Cave 1 near Qumran. Greek Minor Prophets (8Hev 1) also preserves part of the revised Septuagint text. There are few significant variants preserved in Minor Prophets (Mur 88). The reading in 3.10 (= Ps. 77.18) is well known. In his study of the text of Peshet Habakkuk (1QpHab), Brownlee examined over 160 variants. Many were orthographic in nature, but several were important variants although unsupported by other witnesses. The text of the Masoretic Text can be difficult and in some places is corrupt. Both of the Hebrew witnesses preserve some useful readings. Peshet Habakkuk is of great importance for the study of the biblical interpretation of the Qumran community.

The Hebrew text of the *Book of Zephaniah* is partially preserved in four biblical manuscripts and two *pesharim*. Greek Minor Prophets (8Hev 1) also preserves part of the revised Septuagint text. Both 4QXII^b and 4QXII^e stand closest to the proto-masoretic textual tradition in *Zephaniah*. In 4QXII^c no significant variants are preserved. Minor Prophets (Mur 88) stands closer to the textual tradition found also in the Septuagint. The reading of Peshet Zephaniah (1Q15) is uncertain and the reading of the *peshet* in Cave 4 (4Q170) may reflect a variation in orthography.

The Hebrew text of the *Book of Haggai* is attested in three biblical manuscripts. 4QXII^b preserves no variants. 4QXII^e stands very close to the textual tradition found in the Septuagint. Minor Prophets (Mur 88) disagrees with both the Masoretic Text and the Septuagint once.

The Hebrew text of the *Book of Zechariah* is attested

in three biblical manuscripts and in three commentaries. Greek Minor Prophets also preserves part of the revision of the Septuagint for *Zechariah*. The Hebrew text of *Zechariah* preserved in the Masoretic Text is relatively free of problems; however, the ancient manuscripts of the book are of value. 4QXII^f, the most ancient witness to the text, does offer some useful readings. It also illustrates the sometimes complex web of agreements and disagreements between manuscripts. The remaining witnesses are important for the history of exegesis.

The Hebrew text of the *Book of Malachi* is attested in two biblical manuscripts and in one *peshet*. 4QXII^a is a somewhat idiosyncratic witness which is unaffiliated with either the Masoretic Text or the Septuagint. In *Malachi* it occasionally preserves readings of value in reconstructing an older form of the Hebrew text, as well as understanding the ancient exegesis of *Malachi*. Both 4QXII^c and 5QpMal are of little interest or text-critical value.

There is a gap of nearly eight hundred years between Minor Prophets (Mur 88) and the next manuscript of the Twelve, the Cairo Codex. The Cairo Codex is a masoretic manuscript of the Ben Asher family. It includes vowels, accents, and Masora. The Aleppo Codex is only slightly younger (925 CE).

RUSSELL FULLER

MIQTSAT MA'ASEI HA-TORAH (also known as the Halakhic Letter and by its abbreviation 4QMMT) purports to be a document sent by the leaders of the Qumran sect to the leaders of the priestly establishment in Jerusalem. The title of this text, which may be translated as "Some Precepts of the Torah," or "Some Rulings Pertaining to the Torah," was assigned by its editors as a description of its contents, based on phrases found at the beginning and the end of the text. As is the case with almost all the Qumran manuscripts, the text itself bears no title. This text, found in Cave 4 in six fragmentary manuscripts, outlines some twenty laws regarding sacrificial laws, priestly gifts, ritual purity, and other matters over which the writers disagree with the Jerusalem authorities. Stated in a polemical manner, these laws clearly represent the views of the founders of the sect as opposed to those of their opponents whom the sect calls upon to accept their views. The laws are set within a framework that may allow us to learn much about the ideology of those who authored the text and about the very origins of the Qumran sect itself.

Miqtsat Ma'asei ha-Torah (4QMMT) may be an actual document dating to the earliest days of the Qumran group, or it may have been written later to justify the sectarian schism with the Jerusalem establishment. The existence of six manuscripts of this composition testifies to the importance of this text to the sectarians. The earliest manuscripts date from the late Hasmonean to early Herodian period, that is, from the second half of the first century BCE.

The document played a particular role in the recent history of Dead Sea Scrolls research. The text had been known under the title 4QMishnaic only, from a short quotation of one law by J. T. Milik (*Discoveries in the Judaean Desert*, 3, 1962, p. 225), until it was announced at the International Congress on Biblical Archaeology held in Jerusalem in 1984. Its announcement and description there by Elisha Qimron (Qimron and Strugnell, *Biblical Archaeology Today*), who had worked on the text with J. Strugnell, sparked immense interest and drove home the point that enormously important material still awaited scholarly discussion in the unpublished corpus of Qumran manuscripts. Ultimately, this announcement was a major factor stimulating the demand for release of the scrolls.

The unauthorized publication of Qimron and Strugnell's transcription and restoration of this text (Shanks, 1991, p. xxxi) led Qimron to sue Herschel Shanks, editor of the *Biblical Archaeology Review*. The lawsuit also focused attention on the significance of this text and on the issues of intellectual property surrounding the scrolls and other ancient texts.

The structure of the document can be divided into three parts: an introductory sentence stating the nature of the letter, a section listing the halakhic disagreements between the sect and the Jerusalem authorities, and a conclusion. In at least one of the manuscripts, this text was attached to a copy of the 364-day solar calendar known from other Qumran scrolls, such as *I Enoch* and *Jubilees*. [See Calendars and Mishmarot].

The Calendar. It is questionable whether the calendar is really integral to the text of MMT, an issue that is connected with the physical reconstruction of the manuscript. A calendar was also attached to one of the manuscripts of the Rule of the Community from Cave 4. It is apparent that this calendrical list was not composed by the author of the MMT text but was imported as a unit into the text. The calendar mentions, in addition to the solar months, the specific extra day added after three months of thirty days at the equinoxes and solstices, and is organized in ninety-one-day quarters, which are the basic division of the year. It also mentions some extra festivals, such as the Festival of the New Wine on the third day of the fifth month, the Festival of the Fresh Oil on the twenty-second day of the sixth month, and the Festival of the Wood offering on the twenty-third day of the same month. All these are among the festivals associated with the solar calendar in the Temple Scroll.

The Introduction. The initial introductory sentence states that what follows are some of "our words" that are legal rulings "we hold to." These rulings concern only two topics, only one of which is legible—that is, the laws of ritual purity. The other topic, from the later list of laws, appears to introduce sacrificial offerings in the Temple.

List of Laws. In this section, the authors list about twenty matters of Jewish law that, they insist, are being violated by the Jerusalem establishment and have caused them to withdraw from Jerusalem and form their sect. This letter is proof that the major conflicts of Second Temple Judaism did not arise from theological disagreements such as messianism but from conflicts about the proper way to carry out Jewish law.

The following *halakhot* or halakhic topics are mentioned in the extant fragments of MMT:

1. Gentile wheat may not be brought into the Temple.
2. A fragmentary *halakhah* about the cooking of offerings.
3. Gentile sacrifices, also fragmentary.
4. Cereal offerings may not be left overnight.
5. The purity of those preparing the red cow.
6. The purity of hides.
7. The place of slaughtering and offering sacrifices.
8. Prohibition of the slaughter of pregnant animals.

9. Forbidden sexual unions.
10. The exclusion of the blind and deaf from the "purity of the Temple."
11. Impurity of liquid streams poured from one vessel into another.
12. Dogs may not enter Jerusalem.
13. The fruit of the fourth year is to be given to the priests.
14. The cattle tithe is to be given to the priests.
15. Purification rituals of the leper.
16. Impurity of human bones.
17. Marriages between priests and Israelites are forbidden.

The views of the author of MMT are representative of Sadducean *halakhah*. Some of the same laws are reported in the Mishnah (tractate *Yadayim*), and the views of our text are there attributed to the Sadducees. These *halakhot* are usually stricter than those of the Pharisees and later rabbis, and the author excoriates those who do not accept the sectarians' view.

Conclusion. Here the authors state that because of their strict observance of the previous laws according to their own opinion, they have separated themselves from the majority of the Jewish people and from their observances. The sectarians write the addressee in the singular form asking him to investigate the words of the Torah and see that they must be observed according to the sectarian interpretation. For he must know that the biblical kings were blessed when they followed the word of God and cursed when they transgressed. The addressee is urged to repent and spare his nation misfortune.

To whom is this letter addressed? The text alternates between the second person singular and the plural. When in the second person singular, the manuscript assumes that it is addressing a leader who can, by virtue of his position, identify with the kings of Israel. It appears that the head of the Jerusalem establishment with such status must be the high priest during Hasmonean times.

Miqtsat Ma'asei ha-Torah has wide ramifications for the history of Judaism in the Hasmonean period. In the disputes mentioned in the letter, the opinions of the opponents of the sect are those attributed in rabbinic literature to the Pharisees or the *tanna'im* (Mishnaic rabbis). When tannaitic texts preserve a Pharisee-Sadducee conflict mentioned in MMT, the view of the sectarians coincides with that of the Sadducees. For example, the specifics of the required state of purity of the one who prepared the ashes of the red cow according to our text are mentioned in rabbinic sources as being the custom of the Sadducean priests in the Temple. This phenomenon can be explained by seeing the earliest members of the sect

as Sadducees who were unwilling to accept the suppression of the Zadokite high priests in the aftermath of the Maccabean Revolt (168–164 BCE). Some of the disaffected Zadokites separated from the high priests in Jerusalem and formed the sect. The sect often refers to itself as the Sons of Zadok. The polemics of the Halakhic Letter are addressed to their Sadducean brethren who stayed in the Jerusalem Temple and accepted the new order, following the Pharisaic rulings, and no longer practiced the old Sadducean teachings. This document dates from the earliest stage of the development of the Qumran sect at which time the sectarians still hoped to reconcile with the Jerusalem priesthood. Later on, sectarian writings, having abandoned that hope, are filled with radical tendencies, animated polemics, and hatred for outsiders.

The Halakhic Letter demonstrates that the sect is not linked to the Hasidim, supposedly a second-century BCE group that was opposed to Hellenism and was devoted to the strict observance of ritual law. Any attempt to see the sect as emerging from some subgroup of the Pharisees must also be rejected. Similarly, they cannot be placed at the center of the Judaism of the Second Temple but are definitely a particular sect. The dominant Essene hypothesis must take into account the originally Sadducean sectarians who perhaps had gone through a process of radicalization and became a distinct sect.

There is no question that the origin of the community that collected these scrolls was in a sectarian conflict that sustained the community throughout its existence. Miqtsat Ma'asei ha-Torah preserves evidence that this conflict was with those in control of the Jerusalem Temple under Hasmonean rule. The library at Qumran was collected by a subgroup of society in opposition to the political and religious authorities of the time.

From MMT we learn the reasons for the schism. Up to now we had no explicit evidence on this subject. Josephus gives the impression that the sects were primarily divided over theological questions, but his explanation was designed to appeal to Greek and Roman readers. Only matters of practice are mentioned in MMT. This list of *halakhot* proves how important were matters of Jewish law, particularly purity regulations, as sources of schism within Judaism of the period.

The contribution of MMT to our knowledge of the history and character of the *halakhah* of the various groups in the period is of the highest importance. The text polemicalizes strongly against another group that is the predecessor of the rabbis, hence probably the Pharisees. It helps to prove that some Pharisaic laws are older than once thought. This text allows us to date a number of practices known only from later rabbinic literature in the Second Temple period.

Relationship to Other Dead Sea Scrolls. The text of Miqtsat Ma'asei ha-Torah has much in common with various documents of the Qumran corpus. Its appearance along with the 364-day sectarian calendar of solar months and solar years gives the impression that the authors of MMT accepted this calendar. MMT shares a variety of sacrificial laws and the same ritual calendar with the Temple Scroll. These parallels are no doubt to be traced to the common Sadducean legal substratum that they share, although these texts are not literarily interdependent. The Damascus Document also shares many common principles with the legal section of MMT. Here again, no literary relationship can be shown, only a relationship of content.

The Florilegium from Cave 4 also preserves some common legal rulings with Miqtsat Ma'asei ha-Torah, although they are not literarily dependent on one another. Miqtsat Ma'asei ha-Torah exhibits no parallels with the Rule of the Community or other such documents representing the teachings of the sect after it reached maturity.

These conclusions are consistent with the view that Miqtsat Ma'asei ha-Torah reflects the formative period of the Qumran sect. It therefore shares legal rulings with the sources of the Temple Scroll and the early laws of the Damascus Document. At the same time, it reflects the ideology of parts of the Temple Scroll. While the earlier Miqtsat Ma'asei ha-Torah and the Temple Scroll lack the language of sectarian antagonism, this tone is found in the Damascus Document, which was completed after the split was final and which reflects the sectarian animus that would characterize the later documents of the Qumran group.

Language. Another important area of research regarding discovery, which stems from the fact that 4QMMT represents the early history of the Qumran sect, is the analysis of its language. Milik, in discussing the Hebrew of the Copper Scroll, identified the language of this text as being Mishnaic Hebrew (Discoveries in the Judaean Desert, 3, p. 222), as a result of the large number of nouns found in it that are known from tannaitic usage. In actuality, this is an oversimplification, since the morphology and syntax resemble in many respects that of the Qumran sectarian texts. Accordingly, we can state that this document indicates that much of the halakhic vocabulary known from later tannaitic texts was already known in this period, even to those who used Qumran linguistic forms, and that certain of the characteristic elements of Mishnaic Hebrew already existed at an earlier period and influenced the usage even of the sectarians.

LAWRENCE H. SCHIFFMAN

MIQVA'OT. Man-made installations constructed according to several regulations, *miqva'ot* ("ritual baths"; singular, *miqveh* [literally, "a gathering of water"]) were made to enable the observant Jew to purify himself, when necessary, through full immersion (*tevilah*) of the nude body in water. This ritual act was different from the simple process of washing or cleansing the body (which was performed in a bathtub situated in the bathroom), although at a certain time, washing of the body before the *tevilah* became a prerequisite, as a measure taken in order to keep the immersion waters as clean as possible.

The earliest practical regulations concerning ritual purity are presented, in a somewhat condensed manner, in *Leviticus* (especially chapters 11-15), dating perhaps to early postexilic times. As the requirements for purifica-

tion were limited and the population small, natural water sources, like springs and sporadic water concentrations that formed after heavy rains, satisfied the needs of the Jewish population. About the mid-second century BCE, when these purification locations were not sufficient, the *miqveh* was introduced in Judea.

The main written sources for this subject in the rabbinic (Pharisaic) literature are the tractates *Miqva'ot* in the Mishnah and Tosefta. These *halakhot* ("laws") are not composed as a manual to instruct the builder of a *miqveh* but are discussions of solved problems relating to the use of these installations.

Physical Characteristics. Attention was drawn to this type of installation in the excavations carried out in the Jewish quarter of Jerusalem (1909 onward), where in the bathrooms located in the basements of every private house, plastered and stepped water installations were discovered, dated to the first centuries BCE and the first century CE, down to 70 CE. My recent study has demonstrated their identification with the *miqva'ot* known from the rabbinic literature.

So that the waters of the *miqveh* would possess the intrinsic power of purification, they had to meet a number of regulations. The waters had to be gathered in the *miqveh* without direct human intervention (waters from "divine hands"). This implies rainwater flowing by gravity from the roof and courtyard of a house into a *miqveh*. Rainwater drawn with a bucket from a nearby cistern and poured into a *miqveh* does not qualify for purification, as it is in the "hands of man." For this reason, *miqva'ot* were cut or built into the ground and were not pre-cast vessels. A minimum water volume of 40 *se'ah* (estimates fall between 0.5 and 1.0 cubic meters) was required with a minimum depth of 3 cubits (approximately 1.2 to 1.5 meters [4.0 to 4.9 feet]).

That the waters in the *miqveh* should be stationary, that is, not flowing, implied that no leakage through cracks in the walls should have occurred. This last requirement was clearly met with multiple coatings of plaster, so typical of the excavated *miqva'ot*. Tractate *Miqva'ot* neither refers to the provision for steps (which are, in fact, a common architectural element in the excavated installations, as such a requirement is self-evident) nor mentions any hint of a fixed number of steps.

Rainwater with a volume greater than 40 *se'ah* was regarded by the Pharisaic *halakhah* as possessing the power to purify people, vessels (with the exception of pottery vessels), and even impure (i.e., drawn) waters. This regulation is of a somewhat axiomatic nature, and it meant that these waters were not susceptible to any sort of impurity as long as they maintained the natural features of water and their volume did not diminish below 40 *se'ah*.

A man-made water installation is one in which the lower part is cut in bedrock while the upper part is built and roofed over with a barrel-shaped vault, or, alternatively, hewn completely out of bedrock. Its average measurements are 2 by 4 meters (6.6 by 13.1 feet). The steps, which usually occupy the entire width of the installation, have a comfortable height of approximately 25 to 30 centimeters (9.8 to 11.7 inches), with the exception of the lowest step, which descends to the bottom and has a height of 60 to 70 centimeters (23.4 to 27.3 inches). To overcome this elevation, one, two, or three small auxiliary steps were provided at the bottom. The tread of the steps varies in depth. In many cases, a deep step of 0.5 to 0.7 meters (1.6 feet to 2.3 feet) alternates with two or three steps of normal (0.3 meter [1 foot]) depth. Another type of installation (common at Jericho) has a narrow staircase attached to one or two sides of the basin. Rainwater was collected from the roof or stone-paved courtyard and diverted directly into these installations, either through the opening or by means of a gutter that pierced the built vault. Another means of providing a *miqveh* on a permanent basis was by spring waters, as in Hasmonean Jericho, or with winter runoff rain water as in Qumran, both using an aqueduct as means of conveyance. [See Qumran, *article on Archaeology*.]

A certain type of stepped and plastered water installation has been excavated in large numbers (over three hundred known, over one hundred fifty of them from Jerusalem) in sites dating to the Second Temple period. Domestic *miqva'ot* excavated in Jerusalem have been found in each private house. Others have been revealed in the palaces and mansions of the Hasmonean and Herodian dynasties in Jericho, Masada, and Herodium, as well as in other locations. [See Herodium; Masada, *article on Archaeology*.] Also in Jerusalem a large number of *miqva'ot* were found adjacent to the gates located on the southern and western walls of the Temple mount, made for the public who were entering the mount on the Jewish holidays and were obliged to do so in compliance with the purity regulations. [See Jerusalem.]

Another location in which *miqva'ot* were anticipated, in the light of rabbinic sources, was within rural areas with evidence of agricultural industry. Indeed, stepped installations are often discovered in very close proximity to ancient oil or wine presses dating to the Second Temple period. It is the strict observance of regulations related to the handling of fruits that calls for extreme purity: fruits that were picked and pressed to yield fluids (oil, wine) become susceptible to ritual impurity. Also, priestly families could consume tithes only in a state of purity.

In addition to the standard *miqveh*, several variant types evolved, one of which deserves special mention: a

miqveh that was equipped with two adjacent openings, instead of the normal single opening and/or a low partition (10 to 30 centimeters [3.9 to 11.7 inches] high), built or cut from bedrock, dividing the staircase into two lanes separating the descending impure person from undesired contact with the ascending pure person (cf. *M. Sheq.* 2.8).

The chief operational problem in maintaining a *miqveh* was to guarantee a constant supply of pure waters for immersion throughout the year. With a long rainless season prevailing at least from April to November, this poses a very grave difficulty in the Land of Israel. The *miqva'ot* are filled with rainwater during the first rainstorms of the year. However, as a minimal volume of 40 *se'ah* has the intrinsic power to purify persons, most utensils, and also drawn waters, an easy solution to maintain the pure waters was simply to add drawn waters to the *miqveh* on occasion, provided that the water level at the moment of addition was higher than 40 *se'ah*. In this case, any new amount of drawn, and therefore impure, waters would have been purified instantaneously. It is my opinion that this was the common way to tackle this problem, although it is not evident in the archaeological record.

When the waters of a *miqveh* became dirty or stagnant (which does not necessarily imply that they are impure) to such an extent that even the addition of drawn water would not improve their quality, they had to be changed. As there is no direct way to feed an empty *miqveh* with pure waters drawn from a nearby cistern (although the cistern water is in effect rainwater), this becomes an acute problem. In the large private houses and mansions in Jerusalem, which usually included several *miqva'ot*, a defiled *miqveh* did not raise any problem. The other installations would have sufficed through the dry season.

In several sites in the Judean Desert, which could afford only a small number of *miqva'ot*, an operational device was introduced based on the principle mentioned in the Mishnah that any body of water linked to the waters of a valid *miqveh* becomes equally pure. In several sites (Masada, Herodium, Jericho, and a few cases in Jerusalem) a pair of *miqva'ot* were excavated, linked at their rim by a pipe or channel initially filled with pure rainwater. One installation was not used for ritual immersion (in later times this installation was termed *otsar* ["treasury"]). When the waters of the other frequently used installation became filthy, they were simply drawn out of the *miqveh*. Clean waters were drawn from a nearby cistern and poured into the *miqveh*. The moment the stopper was pulled from the pipe connecting the installations and a momentary contact occurred between the two bodies of water, the *miqveh* became valid. It was the waters of the treasury, which possess the power to purify additional amounts of drawn waters, that purified the freshly drawn waters. This procedure could be repeated as often

as required. It made it possible for those who used *miqva'ot* regularly in an arid area to use waters that were as clean and pure as possible. This method, which was only rarely used in the Second Temple period, is obligatory today.

As common as *miqva'ot* were in private houses of the Second Temple period, they were completely absent in contemporary non-Jewish private houses of the same period. Apart from Jewish inscriptions and symbols, the *miqveh* was the only architectural element within the private house that might point to the Jewish identity of the owners.

After the destruction of Jerusalem and the Temple in 70 CE, the needs for ritual purity were minimized considerably, resulting in the sharp decline in the number of *miqva'ot* in use, as attested by the archaeological record. From an average frequency of two to three installations per private house, as found in Jerusalem, the number declined to one to two *miqva'ot* per village or neighborhood. This relatively small number also was present later, in the Jewish neighborhoods in the towns of medieval Europe.

Miqva'ot at Khirbet Qumran. The architectural element at Khirbet Qumran that catches the eye more than anything else is the seeming abundance of water installations, sealed with watertight plaster. These installations were fed with runoff waters collected in the winter from the nearby Wadi Qumran and diverted to the settlement by an aqueduct. [See Water Systems.]

De Vaux, in the French edition of his book on Qumran (1961), defined all water installations as functioning for storage. In the English edition (1973) he concluded that installations 138 and 68 (following de Vaux's numbers) were used as baths but not for a ritualistic immersion. All the rest were still considered installations for storage. Wood (1984) has demonstrated that the volume of the stepless installations (numbers 58, 91, and 110) was sufficient to support a population of approximately two hundred persons and their livestock, and he has concluded that the stepped installations were constructed for a "nonutilitarian purpose," that is, cultic immersion. [See Cisterns and Reservoirs.]

At least ten stepped water installations were excavated in Qumran, six of which (138, 118, 117, 56, 48, and 71) are very similar (in plan, architectural details, and workmanship) to installations found in Jerusalem, Judea, and Galilee that undoubtedly served as *miqva'ot*. This analogy proves clearly that the Qumran installations were a local type or adaptation of the standard *miqveh*. Moreover, the Qumran installations resemble more closely the Jerusalem type than the type frequently used in the neighboring town of Jericho, meaning that they follow a Jerusalem architectural tradition.

Despite the resemblance there are some technical dif-

ferences. The Qumran installations are considerably larger (at least twice the volume) than the Jerusalem installations, and some are provided with two to four vertical, parallel, small partitions on the upper part of their staircases (versus a single central partition, if at all, in Jerusalem). Four other installations (85, 83, 68, and 69) are also stepped installations but of a smaller size and somewhat irregular shape. They might have been used for ritual immersion of a different type (of household utensils?).

The abundance of installations is not unique to Qumran. It is of the same order of magnitude found in Jerusalem (in the private houses of the Upper City and near the gates of the Temple mount). It should also be taken into account that not all installations were used simultaneously but reflect a long period of time in which they were built and might have been used consecutively (e.g., number 48 went out of use due to the severe crack caused by an earthquake).

In the event that Qumran was indeed the site of the sect of the scrolls, it should be stressed that few *halakhot* mentioned in the scrolls refer directly to the practical and perhaps technical aspects of ritual immersion. The Rule of the Community (IQS v.13) mentions the use of water purification, and the verb used, *bo'* (to "enter" the water), alludes to a total immersion. The Damascus Document (CD x.10-11) regulates that a ritual immersion (using the root *rhts*) is prohibited in filthy water. It also requires that the immersion be total (the body should be covered), which differs from the Pharisaic requirement that included definite minimal measurements of water for purification. It further prohibits the use of "vessel waters" (i.e., water drawn with the help of a vessel) and suggests that immersion was carried out in waters gathered in a natural cavity (*geve'*; CD x.11-12). The different types of waters mentioned in the Rule of the Community (IQS iii.4-5) might indicate that in addition to the waters of seas and rivers, the purification waters were termed *mei rahats*. [See Damascus Document and Rule of the Community.]

RONNY REICH

MIRD, KHIRBET. The name of a ruin located on top of an isolated hill in the Judean Desert, 248 meters above sea level and some 200 meters above Begeia, Khirbet Mird (el Mird [Ar.]) is approached from the west along a saddle that was narrowed by rock cutting. The saddle carried a path and an aqueduct. The literary designation of el Mird is a corruption of the Syriac-Aramaic word *marda*, meaning "fortress," synonymous with the Greek *Kastellion*, the name of a famous Byzantine monastery erected in the late fifth century over the ruined Hasmonean-Herodian fortress of Hyrcania. This fortress gave the ruin its later names: *Kastellion*, *Marda*, and *el Mird*. The Greek *Kastellion* is derived from *castellum*, the Latin term for "fortress." The identification of Khirbet Mird with Hyrcania and *Kastellion* was first suggested by K. Furrer in 1880 and was accepted by most scholars.

History. Hyrcania is first mentioned by Josephus (*Jewish Antiquities* XIII, 417) as one of the three fortresses retained by Shelamzion Alexandra (r. 76-67 BCE). It may have been erected by Alexander Jannaeus or perhaps even in the time of his father, John Hyrcanus I, after whom the fortress was named. It was destroyed by Gabinius, the Roman governor of Syria, in 57 BCE (*Antiquities* XIV, 89; *The Jewish War* I, 160-170); Herod captured the fortress in 34 BCE, rebuilt it, and made it into a detention site for his political opponents, many of whom were executed and buried there, including his son Antipater (*The Jewish War* I, 364, 664; *Antiquities* XV, 365-367, XVI, 13). The name Hyrcania does not appear in the literary sources after the death of Herod.

In 492 CE a *coenobium* ("monastery"), called *Kastellion*, was erected on the site by Saint Sabas. [See Monasteries.] Our chief sources for the history of this monastery in the late fifth and sixth centuries are the hagiographies, mainly *The Life of Euthymius* and *The Life of Sabas*, written by Cyril of Scythopolis (died ca. 559). *Kastellion* was a dependency of the Great Laura of Saint Sabas (today Mar Saba) in the Kidron Valley (Wadi en-Nar), and it was headed by an administrator (*dioiketes*) and his assistant,

who had succeeded him in the administration. The administrators up to the year 559 were Paul, Theodore, Sergius, and another Paul, successively. John Moschus (*Letimouarion* 167, 3033) mentions Abba Agathonicus, an abbot of Kastellion. The site was a *cocnobiium* for older monks who excelled in their way of life and a place where monks who misbehaved were sent. The monastery had a stable and beasts of burden, and it owned two hostleries, purchased by Sabas, one in Jericho and a second in Jerusalem. Papyri dating from the seventh to tenth centuries discovered at the site attest that it survived the Persian invasion of 614 and the Arab conquest of 638. The monastery is mentioned in the eighth-century *Life of Stephen the Sabaites*, indicating that to the end of the eighth century it was still an active monastery. In approximately 749 it was headed for a short while by Zacharias, the uncle of Stephen and a monk of the Great Laura. In 1355 an icon was brought to Mar Saba from Kastellion as is attested by a Greek inscription on the back of that icon. However, it is doubtful whether a community of monks, rather than a single anchorite, was still occupying the site at such a late date. John Phocas, who had passed close to Khirbet Mird on his way to Mar Saba in 1185, did not mention this monastery.

In 1923, the site was reoccupied by monks from the Mar Saba monastery. They cleared the ruins of the church and set up a chapel in an ancient burial cave. They, in turn, abandoned the site in 1931 because of security problems, and their buildings were destroyed by bedouin.

Exploration. Khirbet Mird/Hyrkania has not yet been excavated. Data concerning its ruins are based on surveys and mapping. The site was first surveyed by the British Palestine Exploration Fund in 1873. In 1877, Conrad Schick prepared a map of the site and its surroundings. A. E. Mader studied the frescoes in the Christian burial cave during five visits to the site between 1913 and 1927 and also published various finds discovered there (1929 and 1937). Following the discovery by bedouin in July 1952 of inscribed papyri, a Belgian expedition from Louvain University, headed by R. de Langhe, arrived at the site in the spring of 1953. The expedition discovered texts written on papyrus and parchment in Palestinian Aramaic, Greek, and Arabic. In April 1960, an expedition headed by G. R. H. Wright investigated the site, measured the structures on the hilltop, and excavated some of the burials found at the foot of the hill east of Hyrcania, as well as a watchtower incorporated into the fortress's circumvallation (Wright, 1961). This circumvallation was reidentified and surveyed in 1973 by Zeev Meshel, on behalf of the Institute of Archaeology at Tel Aviv University. The water supply system was studied in 1971 by Yosef Feldman, on behalf of the Society for the Protection of

Nature in Israel. As part of the survey of the Mar Saba region, on behalf of the Archaeological Survey of Israel, I further investigated the site and the water supply system, and resurveyed the structures on the hilltop.

Remains. The structure on the hilltop was erected on a leveled area (25 meters by 40 meters) supported by subterranean vaults used as cisterns. The structure consists of rooms located on the north, east, and west around a central courtyard. The bottom courses of the walls, preserved in the east and north, were ashlar with drafted margins and a smoothed face laid as headers and stretchers. These are typical Herodian features at the site. Some stones also have a prominent central boss characteristic of Hasmonean masonry. The base of a heart-shaped column also was found. On the south, the boundary is a Herodian retaining wall, with several monastic cells abutting its eastern edge. The fence enclosing the hilltop today is from a later period, but under it a mass of stones set into mortar is visible, especially on the west. These stones probably belong to a glacis that was part of the fortress defenses. A cemetery from the Herodian period was found at the foot of the hill on the east, and an Aramaic inscription, published by Joseph Naveh, may have come from there. The circumvallation is well preserved, especially on the south, west, and east. Meshel is of the opinion that it was built during Herod's siege of Hyrcania, which had been taken by a sister of Antigonus (Josephus, *The Jewish War* I, 364).

The Byzantine monks settled in the structure on the hilltop and transformed its northeastern part into a chapel (5.5 meters by 16 meters) with a white mosaic floor and a roof supported by two arches. The room south of the chapel was paved with a colorful mosaic. The square central panel (2.4 meters by 2.4 meters) bears a floral design of leaflets forming diamonds. This is framed by a guilloche and running wave motifs 0.52 meters wide. A smaller panel has birds. The western wing of the summit structure, which had two openings to the courtyard, is still full of debris. Presumably this was the refectory. A Byzantine burial cave was excavated on the west side on a lower level. Eight pit graves were recorded under its white mosaic floor. Additional graves were built into the walls of the cave. The cave's plastered walls are covered with frescoes depicting thirty-six saints, most of them monks from the Judean Desert. Twenty-five can be identified by Greek inscriptions flanking their heads. On the west wall are Saints Euthymius, Athanasius, Thallelarius, and Martyrius; on the south wall Lazarus, Basilus, Arsenius, Timotheus, Symeon, Palladius, Johannes, Theoctistus, and Georgius Chozibites; on the east wall Abraamius, Marcianus, Theoctistus, Macarius, Moises, Theodosius, Paulus, Stephanus, Isidorus, and Arcadius; and on the north wall Johannes and Xenophon. Mader and other

scholars had suggested that these frescoes should be dated to the eleventh or twelfth century CE, but since there is no evidence that the monastery continued to exist so late, they might be attributed to a time as early as the sixth or early seventh century. Also found on the walls are graffiti in Greek, Arabic, and Syriac. There also is a burial inscription engraved on a tombstone for a monk named Andraos.

The finds in the monastery included a baptismal font that was discovered south of the chapel, along with three marble screen posts, decorated with vine tendrils, issuing from an amphora, and fragments of two screen plates, one ornamented with lilies between its branches, surrounded by an acanthus wreath, and the other with a relief of a deer. Also found were a fragment of an altar post, a Byzantine stone sundial, and the cover of a reliquary. An icon kept in the Mar Saba monastery depicts Jesus as Pantokrator with Mary and John the Baptist flanking him and the twelve Apostles around them. On its back it bears a Greek inscription that records that it was brought there in 1355 from Kastellion by a monk named Paulus. This is the latest evidence of a monk's residing in or visiting Kastellion. The papyri found in cistern K1 and graffiti on the walls of several cisterns indicate that the monks turned them into dwelling cells.

Written Documents. There are two sets of Arabic papyri, two sets of Greek papyri, and a smaller group of Greek and Syriac (or Christian Palestinian Aramaic) documents written on papyri or parchment. The Arabic papyri have been published by Adolf Grohmann (1963), who took them from thirty-one plates in the Palestine Archaeological Museum (Rockefeller Museum) and thirty-six plates found by the Belgian Archaeological Mission. They consist of one hundred texts from the first two centuries of the Hegira, most of them fragmentary, including a passage from the Koran. They are designated APHM 1 through 100. Yet many of the smaller fragments remain unpublished. Most of the texts were written by Muslims, and only four were written by or intended for Christians. Thematically the texts are divided into seven groups: APHM 1 through 7 are protocols, three of them bilingual; APHM 8 and 9 are legal texts; and APHM 10 through 32 are official letters, APHM 23 being a letter to the governor. APHM 35 through 41 are economic texts, and APHM 42 through 70 are private letters, 45 and 46 being correspondence between Anba Magnille, possibly the abbot of Kastellion, and a Muslim named Habban ibn Yusuf. These letters indicate the close relations between the monks and the Muslim population of the area. APHM 71 through 73 are literary texts, and the rest, APHM 74 through 99, are minor fragments of various kinds. APHM 100 is a fragment of a drawing. Of the Syriac or Christian Palestinian Aramaic papyri, only a letter (papMird A),

written in the seventh century by a monk named Gabriel to the head of the Mar Saba laura (*lwr* in the Syriac script), a magic amulet (MirdAmul cpa), and two fragments from the *Acts of the Apostles* (Mird Acts cpa; *Acts* 10.28–29, 10.32–41) have been published. Among the other Christian Palestinian Aramaic texts reported are fragments from the *Gospel of Luke* (3.1, 3.3–4), the *Gospel of Matthew* (21.30–34), the *Acts of the Apostles* (10.36–41), the *Letter to the Colossians* (1.16–18, 1.20–21), and the *Book of Joshua* (22.6–7, 22.9–10). The last three hitherto were unknown in Syriac. The publication of the Greek texts found by the Belgian mission was assigned by De Langhe to J. van Haelst, who has published five texts. The Greek documents include passages from *Matthew* (20.23–25, 20.30–31), *Mark* (2.3–5, 2.8–9, 6.30–31, 6.33–34, 6.36–37, 6.39–41), *John* (17.3, 17.7–8), *Acts of the Apostles* (11.29–12.5), and a monastic letter. Five plates of fragmentary documents in the archives of the Rockefeller Museum in Jerusalem, designated Nar 1 through 5 (Wadi En-Nar), perhaps originated at Khirbet Mird.

Water Supply System. Of the twenty-one rock-cut cisterns, six are on the hilltop, three are on the eastern slope, and twelve are on the southern slope, eight on the upper level and four on the lower level. One of the summit cisterns, with a wide staircase and a vault, presumably served as a *miqveh*. Another graded and more spacious *miqveh* was on the southern slope. Two open water reservoirs are situated at the foot of the fortress to the west, north of the aqueduct bridge. Another reservoir may have been dug south of the bridge. The cisterns and reservoirs are plastered with white lime and fine gravel plaster laid directly on bedrock. Their combined capacity was 20,000 square meters. Rows of rock-cut benches above the east side of the northernmost reservoir suggest that it may also have functioned as a swimming pool. Water was supplied from the west by two aqueducts, plastered along their entire length, that collected runoff water. The course of both aqueducts followed the contours of the hill; some parts were rock cut and some were masonry built or supported by retaining walls. The shorter aqueduct, coming from the northwest, was probably built in the Hasmonean period. It issued from a dam in Wadi Abu Shu'ala (Naḥal Sakekah) that drains the eastern slope of el-Muntar, the highest peak in the Judean Desert, and is approximately 1,950 meters long. A cross is carved in the rock near the dam, suggesting that this line was reused by the monks. The longer aqueduct, arriving from the southwest, begins in Naḥal Kidron and meanders 9 kilometers, crossing some deep ravines on high bridges on its way. Both aqueducts merge into a single channel on a saddle 750 meters west of Hyrcania; beyond that point, the aqueduct runs along another three bridges crossing the three saddles. The most impressive and high-

est of these is the eastern one, which is built with the isodomic technique of identical courses that are graded upward. The four lower courses, which are visible on the north side and date to the Hasmonean period, are built headers above stretchers and have drafted margins and a central boss. The upper courses, laid as alternating headers and stretchers, have drafted margins and a smoothed face, typical of Herodian masonry.

The Byzantine aqueduct is identifiable by its reddish plaster. Sections of this aqueduct were exposed next to the westernmost of the three bridges west of Khirbet Mird and at the head of the easternmost bridge (which in the Byzantine period was lower by 6.3 meters than in the Second Temple period). Between these two points, the aqueduct runs along a course parallel to the earlier one, but on a lower level and to the north of it. Thus, the Byzantine aqueduct could fill only the cisterns of the lower level. Indeed, in the excavation carried out next to the steps of cistern C, on the upper level, fragments of Herodian jars and lamps were recovered, together with a coin of the same period, but no later shards were found.

JOSEPH PATRICH

MIRIAM, the sister of Moses and Aaron, one of the leaders of the Israelites in the wilderness. In *Exodus* 15.20-21 she is described as a female prophet who leads the Israelite women in a victory song after the defeat of the Egyptians at the Sea of Reeds. Unfortunately, the text of Miriam's song is not given. In *Numbers* 12 she is stricken with leprosy after she and her brother Aaron challenge the supremacy of Moses, and *Numbers* 20.1 describes her death and burial. Miriam is also traditionally identified as the unnamed sister (*Ex.* 2.4-10), who watches over Moses after he has been cast adrift in the bulrushes by his mother. In later biblical tradition, Miriam retains her identification as one of the leaders of Israel during the wilderness period (*Mi.* 6.4).

In the literature of the Second Temple period and in rabbinic literature, Miriam's biblical functions are mentioned (e.g., *Jub.* 47.4), but her role as a prophet is emphasized (she does not appear in the New Testament). In Pseudo-Philo's *Biblical Antiquities*, she prophesies that the child Moses will redeem Israel (*P.-Ph.* 9.9-10). Targum Yerushalmi highlights Miriam's role in leading the singing of the Israelite women at the Sea of Reeds. It is in this role that Miriam appears in the Qumran text, Reworked Pentateuch^c (4Q365).

Reworked Pentateuch^c, which is dated paleographically between 75 and 50 BCE, is one of five manuscripts (all found in Cave 4 at Qumran) that reflect a text of the Pentateuch (or Torah) that has been thoroughly reworked. In particular, it contains material not found in any other known version of the Pentateuch. This is illustrated by the so-called Song of Miriam (4Q365 6a.ii.1-7), the fragmentary remains of a poetic text that appears to be missing in the received text of *Exodus*. This additional material appears to belong between *Exodus* 15.21, where Miriam sings the opening words of the Song of the Sea found in *Exodus* 15.1-18, and 15.22, where the narrative continues. The Song of Miriam tells of God's victory over

the enemy at the Sea of Reeds in language that is reminiscent of, but not identical to, the Song of the Sea. Whether Miriam's song found in Reworked Pentateuch^c is from a different and hitherto unknown tradition or is an addition to the received text by an unknown author is not clear, but the song fills a gap in the narrative and serves to bring the shadowy figure of Miriam, who is all but lost in later tradition, into sharper focus.

MISHMAR, NAHAL. [This entry consists of two articles: Chalcolithic Hoard and Roman Period.]

Chalcolithic Hoard

The "Judean Desert Treasure," also known as the Nahal Mishmar hoard, is unique in its size, in the quality of its contents, and in its excellent preservation (Bar-Adon, 1980). It was found in a natural niche in the Cave of the Treasure, blocked by a large stone (90 by 120 centimeters [35 by 47 inches]). The 429 objects were partially wrapped in a reed (*Cyperus*) mat (80 by 120 centimeters [31 by 47 inches]) and partially spread on the ground in no apparent order. All objects were made of copper, except for six ivory and six hematite artifacts and one made of limestone. Comparative stylistic studies of the artifacts and recent carbon-14 dating of the organic material recovered with the hoard place it in the local Chalcolithic culture, best attested in the northern Negev. The hoard is now dated to the first part of the fourth millennium, not later than 3500 BCE.

Ivory Objects. Five flat, perforated objects made of hippopotamus ivory are sickle shaped, curved like the animal's tusk itself. They are 45.5–57.5 centimeters long (17–22.6 inches) and 484–800 grams (17–28 ounces) in weight. The perforations are arranged in three rows over the entire surface of each object. The central perforation is larger and surrounded by a raised rim. Most objects also have small holes at their wide end; a piece of a linen thread was preserved in one of these holes. These objects may have been used as ceremonial standards, carried on

wooden poles inserted into the central perforations. A sixth object, made of elephant ivory, is a large elongated container, slightly curved and oval in shape, 38.3 centimeters long (15.1 inches) and 1150 grams (41 ounces) in weight.

Stone Objects. Six plain hematite mace heads were found in the hoard. They are globular or elongated, similar in shape to the most common copper mace heads of the hoard. There was only one limestone mace head in the hoard, typologically similar to the hematite ones.

Metal Objects. The 240 copper mace heads form the largest group of metal artifacts, comprising well over half of the hoard's components. Most are globular or elongated, devoid of any decoration; eleven are disk shaped, also plain; five are cone or barrel shaped, their surfaces covered with rows of small knobs. One mace head is surmounted by twin ibexes and two tool-like projections. All are hollow lengthwise and could be mounted on wooden poles.

Maces (in the excavator's nomenclature, "standards"), made in their entirety of copper, form the second largest category. They have disk-shaped rims; short necks; globular, elongated, or disk-shaped heads; long straight shafts; and splaying base rims. Almost all have decorated heads and shafts. All maces are hollow lengthwise and the majority could be mounted on wooden poles. Fragments of such poles were actually preserved in a few shafts, and a piece of cloth (used for securing such a pole?) was found in one.

The remaining groups of copper artifacts are smaller. There are ten large, open cylinders termed *crowns* because of their shape, but their actual use is unknown. All but three are decorated, and one is highly ornate. There are also six long, ornate scepters (43–77 centimeters [17–30 inches] long). Unlike the maces, these scepters have solid shafts. Three objects are horn shaped, hollow at the wide end and decorated, each with two suspension holes beneath the rim; one still had a piece of twisted string threaded through the holes. Only five objects could serve as receptacles for liquids or solids: these are three small vessels with basket handles (*situlae*), one bottle, and one in the shape of a deep, open bowl. All are decorated.

The artifacts listed above are commonly considered to have been ceremonial. Their shapes are unusual, they are made of costly raw materials that had to be imported, and they were produced by complex technology that required considerable expertise and equipment. Their decoration is mostly based on geometric elements: horizontal, vertical, or diagonal lines, either raised or grooved, often forming a continuous design. Only the most outstanding objects contain figurative ornaments: representations of ibexes, ibex heads with bent, grooved horns, or just horns

possibly symbolizing the complete animal. One standard is shaped in the form of a vulture, and figures of birds are superimposed on the rims of a few objects. Floral motifs are rare. Anthropomorphic heads with round eyes and prominent noses appear only twice: on a mace and on a crown.

The hoard contains a group of nineteen copper tools: twelve ax and adz blades and one hammer. In addition, there are three long, thin ax-blades and three socketed ax-blades, among them one decorated with an intricate rope design. These objects may have been designated for ceremonial rather than practical use.

Metallurgy. The Nahal Mishmar hoard produced decisive proof of the existence of highly developed Chalcolithic metallurgy in the Levant. All copper objects were produced by casting. Except for the six scepters and most of the tools, all artifacts were cast over a core, in the lost-wax casting technique. Gamma-ray inspection and thermal neutron radiography showed that each object was cast in its entirety, with all the details of ornamentation already existent in the mold. However, the quality of casting varies. As no two objects are identical, each must have been cast in an individual mold. After casting, all the objects were extensively smoothed and polished, obliterating exterior defects and obtaining shining surfaces.

The elemental composition of about 10 percent of the copper objects was determined. Twenty-eight samples were subjected to chemical, neutron activation and lead isotope analyses (Tadmor, 1995). The results show that the tools are made of pure copper of a type that could be obtained in the copper mines of Feinan (Biblical Punon) in the Wadi Arabah (Jordan). A few of the ceremonial objects also are made of pure copper, but most are made of antimony-arsenic-rich copper; while a few are made of nickel-rich arsenical copper. Both types of these complex metals are nonexistent in the Wadi Arabah mines and could be obtained only in the distant regions of central Asia, the Caucasus, or the Iranian plateau.

Several theories have been put forward to explain the enigmatic location of the Nahal Mishmar hoard. Ussishkin (1971) claimed that originally the hoard had belonged to the Chalcolithic temple at 'Ejn-Gedi and was hidden in the cave in time of danger. I believe that the hoard belonged to traders or trader-smiths who lived in the desert caves. They served as intermediaries between the Arabah mines and the Negev villages and, possibly, as importers of ores or ingots and distributors of finished products (Tadmor, 1989). Still another theory suggests that the hoard was buried in the cave in a "ritual burial" (Garfinkel, 1994).

The connection between the Nahal Mishmar hoard and the local Chalcolithic culture was ascertained by similar

copper, ivory, and stone artifacts that were unearthed in excavations in contemporary settlements and caves. Copper axes and adzes, maces and mace heads were found in private houses in Chalcolithic villages in the northern Negev, mostly in association with small-scale copper smelting and melting of Arabah copper. Similar objects were also deposited in burial caves in the Judean and Samaria Deserts and in other parts of the country: one mace was excavated in a cave at Palmahim on the Mediterranean coast; an assemblage of similar artifacts, together with eight gold and electrum rings (ingots?) was found in the Nahal Qanah Cave in the central hill country. Similar copper finds also were unearthed in a cave at Peq'in in Upper Galilee and in caves and pits at Givat Ha'oranim (Nahal Bameget) at the foothills of western Samaria. None has yet been found in a Chalcolithic temple. The local character of the Nahal Mishmar hoard has been confirmed by the occurrence of local stylistic elements, for example, round eyes and prominent noses in anthropomorphic images and the many representations of ibex horns.

The exceptionally high quality of the Nahal Mishmar hoard indicates the existence of specialized local trading systems in prestige goods in the Chalcolithic period. The use of ivory, hematite, and, especially, complex ores suggests interregional and long-distance connections. The hoard also proves that in the local Chalcolithic society there were ruling authorities capable of safeguarding the supply of raw materials and distribution of finished products as well as elites who used such artifacts in cult and ceremony (Moorey, 1988; Levy, 1995).

MIRIAM TADMOR

Roman Period

In 1955 Yohanan Aharoni discovered two structures at the crest of the cliff above Nahal Mishmar, but did not

excavate the caves under these structures. Under the aegis of the Judean Desert Expeditions in 1960 and 1961 Naḥal Mishmar was excavated by Pessah Bar-Adon. In the first season following the excavation of the caves in the valley, the archaeologists concentrated upon a large cave that, until then, had been nicknamed the Scouts Cave. This cave was found above two small springs. A natural cave with a wide opening, it comprises two chambers with a few niches and tunnels. Outside of the Scouts Cave the excavators found remnants of a narrow path that led to the cave in ancient times. Many segments of this path have eroded, and the descent to the cave became dangerous. For this reason the bedouin did not conduct excavations in it.

The first visit to the cave yielded pottery from the Chalcolithic period and the Roman period, glass vessels, and strips of fabric. Two fragments of documents written upon a papyrus were also found. In an additional cave (Cave 2), located approximately 15 meters northeast of the Scouts Cave, skeletons from the Chalcolithic period and pottery from the Roman period were found.

Bar-Adon returned to the Scouts Cave in 1961 and found a variety of items, including 429 vessels from the Chalcolithic period. On account of this discovery the name of the cave was changed from the Scouts Cave to the Cave of the Treasure. The third season of excavation was conducted in the Cave of the Treasure and in Naḥal Mishmar in 1962. During this time a number of additional caves in Naḥal Mishmar were excavated. In Cave 4, a small cave (4 meters in diameter) situated southwest of the Cave of the Treasure, were found sherds of pottery from the Iron Age II and from the Roman period. Also, a knife similar to the knives that Yigael Yadin had found in the Cave of the Letters in Naḥal Ḥever was found in Cave 4. [See Naḥal Ḥever, *article on Archaeology*.] This cave served only as a temporary place for shepherds to stay and not as an extended dwelling. In 1962 Bar-Adon also excavated the two structures at the crest of the cliff, and it was ascertained that one was a public structure from the Chalcolithic period, and the other was an army camp from the Roman period. The Roman camp is located directly above the Cave of the Treasure; from it there is an excellent view of the full length of Naḥal Mishmar.

In the Cave of the Treasure and in Cave 2 a large group of pottery characteristic of the era of the Bar Kokhba Revolt was found. [See Bar Kokhba Revolt.] In this collection the following were recovered: storage jars with flat rims that were popular during the second century CE, as well as bottles and jars, crockery, and two types of oil lamp (one with a splayed nozzle and a round Roman oil lamp). Also found in the Cave of the Treasure were many sherds of glass vessels, among these a greenish juglet shaped with a high folded handle. The bottles are charac-

teristic of the second century CE. Similar glass bottles were discovered in the Cave of Horror in Naḥal Ḥever. In the Cave of the Treasure, stoneware, such as a measuring cup and mortar and pestle, as well as remnants of clothing and sandals, various straw items, and a ball of fine linen thread wound around a small stone also were found. [See *Archaeology*; Qumran, *article on Archaeology*.]

In the Cave of the Treasure three small fragments of documents written upon papyri and four ostraca were found. Two of the ostraca were found erased and are not legible. The first papyrus (fragment of an official document, 1Mish 1) was discovered at the entrance to the cave. It is a very small fragment upon which the Hebrew word for "were given" remains. This is possibly a fragment of a deed of gift. The second papyrus (list of personal names, 1Mish 2) was located in the inner chamber; a list of names in Greek is written on both sides of the papyrus. [See *Names and Naming*.] Next to each name appears the Greek word for "brother," a practice also attested in one of the documents found by Aharoni in Naḥal Se'elim. [See *Se'elim, Naḥal*, *article on Written Material*.] The third papyrus (1Mish 3) was found in the inner chamber. It is a portion of a document on which a few of the signatures remain. Three people signed in Aramaic, and the last witness signed in Greek. In the first line the words "He wrote it for himself" remain and therefore on this line one of the parties mentioned in the document signed. This man also wrote the document. On the second and third lines witnesses signed in Aramaic, while on the fourth line a Greek signature appears. The first ostrakon was found in the outer chamber, and on it the word *zuzin* was written; on the second ostrakon, which was found in the inner chamber, there are three Greek letters.

HANAN ESHEL

Translated from Hebrew from Daphna Krupp

MISHNAH AND TOSEFTA. Literally, "oral teaching" from Hebrew *sh-n-h*, "to repeat," Mishnah refers to a collection of laws, which rapidly became standard for Talmudic Judaism. Tosefta (literally, "addition") refers to a collection of teachings which, while perhaps predating the Mishnah, now are in part arranged as a commentary on the Mishnah. Some elements of these collections seem

to date back to Second Temple and Pharisaic times. Overwhelmingly, however, the term *the Mishnah* refers to the collection compiled in the first quarter of the third century in Palestine, and attributed to Rabbi Judah the Prince (d. 220) by later rabbinic authorities (B.T., *Yev.*, 65:1). It is thus the earliest rabbinic legal code of any scope that has come down to us.

The Mishnah contains material that is conventionally dated by tannaitic "generation," the *tannaim* being the sages whose work makes up a large part of both the Mishnah, Tosefta, the halakhic *midrashim*, and various and sundry "external" *baraitot* cited in both Talmuds. They are conventionally dated to six or seven "generations," or clusters of sages who are seen to interact, or share a common program, or take opposite sides in disputes on rabbinic law. All these compilations are composed in Middle Hebrew I, a dialect related to, but not identical with, that of the Bar Kokhba letters, and quite distinct from Qumran Hebrew. Middle Hebrew I, as represented in the Mishnah, Tosefta, and most halakhic *midrashim*, may be dated linguistically to before the middle of the fourth century, while the latest of the halakhic *midrashim*, the so-called *Mekhilta de-Rav Shimon bar Yoḥai*, contains redactional material that seems to date to the beginning of the fifth century and perhaps later.

Closely related to the Mishnah, at least as currently structured, is a parallel compilation known as Tosefta. Like the Mishnah, various collections of *tosefata* (plural of *tosefta*) seem to have circulated in rabbinic circles, but again, like the Mishnah, only one version has been preserved in its entirety. In its current form, it serves to present tannaitic material parallel to, and occasionally divergent from, the Mishnah. It also contains sections that are independent of the Mishnah, covering topics not included in the Mishnah. Because of its relation to the Mishnah, we can occasionally discern the seams between its constituent collections, when two such collections overlap.

While some or even most of its constituent elements may predate the Mishnah's redaction, and while it belongs to the same stratum of Middle Hebrew as the Mishnah itself, recent research indicates that it may be dated (on linguistic grounds) as slightly later than the Mishnah, and earlier than its parallels in the Palestinian and Babylonian Talmuds.

The Qumran Halakah. In regard to the use of these collections in the study of Qumran *halakha* and related matters, it should be noted that since the Tosefta is both a larger and more heterogeneous collection than the Mishnah, it contains some references to sectarian *halakha* not to be found in the latter, as for example to discussion of "heterodox practices" (*derekh aḥeret*) in T., *Berakhot* 7.6 and T., *Terumot* 7.11, or to the "Morning Bathers" (hemerobaptists) in the Vienna manuscript of T., *Yadayim*

2.20 On the other hand, the compiler(s) did not always have traditions independent of, or supplementary to, the Mishnah. Thus, the parallel Tosefta to Mishnah *Yadayim* 4.6–8 contains hardly any such traditions to add to our knowledge of this important source of Sadducee-Pharisee history.

For purposes of research into the early history of *halakha*, and thus into rabbinic parallels to Qumran legal texts, the essential question is the reliability of rabbinic traditions for the period before the destruction of the Second Temple, and on this there is no consensus, at least from the point of view of method. The school founded by Jacob Neusner maintains that the Mishnah as a whole must be viewed as a product of the generation before c.220 CE, while nearly all Israeli scholars, and others as well, view the Mishnah as the product of generations of compilatory work. One striking difference between the two schools involves the dating of the anonymous redactional material. The Neusnerian school, while acknowledging that some of this material may be quite early, maintains that the methodologically "safe," and therefore, correct, approach, is to consider all of it as redactional. The Israeli school sees in this anonymous material some very old traditions, indeed, some of which date to the period in which the influence of Biblical Hebrew was still felt in the formulation of rabbinic traditions.

However, when we examine specific texts, the differences in approach become much narrower, especially when we limit our investigation to texts that may provide parallels to Qumran material. This is because much of the anonymous Mishnaic material involves issues that are not represented in our Qumran corpus, but also because the two modern scholarly schools, in the end, often agree on the dating of material for which the Mishnah provides attributions.

As currently organized, both the Mishnah and Tosefta are divided into six *sedarim*, "orders," named Zera'im, Mo'ed, Nashim, Neziqin, Qodashim, and Tohorot. Roughly speaking, each is primarily devoted to one or two topics. In order, these are liturgical and agricultural rules, the laws of Sabbath and festivals, laws affecting the status of women, civil law, laws relating to the Temple service, and laws of ritual purity. The last two are the largest orders, comprising some 40 percent of the total; they, along with Neziqin, contain the largest proportion of anonymous material. Except for relatively minor parts of Qodashim, however, little of these orders finds parallels in the Qumran legal or cultic material, though of late some significant texts relating to minor parts of Tohorot have been published.

Nevertheless, it is clear that some of this material is closely related to Qumran *halakha*. The most striking

case involves the Pharisaic-Sadducee debates of Mishnah *Yadayim* 4.6–8, which both in form and substance echo parts of *Miqtsat Ma'asei ha-Torah*. Both texts seem to reflect a halakhic dispute between the Pharisees and their antagonists. In the Mishnah these are identified with the Sadducees; in *Miqtsat Ma'asei ha-Torah*, the interlocutor(s) are unnamed, but in two cases, at least, their halakhic stance may be identical to that of the Sadducees of the Mishnah *Yadayim* passage. It is this parallel that has led some scholars, most prominently Lawrence H. Schiffman, to identify the Qumran sect not with the Essenes, but as an outgrowth of the Sadducees, though others consider such an identification as premature.

Another case relates to the question of whether the ceremony of the Red Heifer may be carried out by a *tevil yom*, that is, one who has undergone the requisite purificatory rites—sacrifice(s) and/or immersion in a ritual bath—but whose complete purification awaits sunset. According to Mishnah *Parah* 3.7, the Sadducees prohibit this, and the precursors of the *tannaim* went out of their way to ensure that their view would be followed, to the extent of causing impurity to the one assigned the task of burning the heifer, so that he would become a *tevil yom*. In the parallel toseftan text (T., *Par.* 3.5) it is Rabban Yohannan b. Zakkai who did this to an unnamed high priest.

Another tannaitic text that deals explicitly with legal disputes between the Pharisees and their opponents, in this case the Boethusians, is to be found in T., *Sukkah* 3.1 (with a parallel at T., *Suk.* 43b). According to the view of the sages, and apparently the priests as well, the willow branch ceremony at the Temple at the end of the *Sukkot* festival overrode Sabbath restrictions; according to the Boethusians, it did not. Most interestingly, the latter are reported as having attempted to prevent the willow branches from being brought in on the Sabbath, but were outwitted by the common people. Another case, in Mishnah *Menahot* 10.3 and T., *Menahot* 10.23, involves the date of the reaping of the 'omer, though the nature of the dispute between the sages and the Boethusians is not clear. It is, however, difficult to avoid associating this dispute with the major calendrical disagreement between the Pharisees and the sectarians, a disagreement of long-standing, and one that would have made a shared celebration of the festivals impossible. In this case, it may even be that the sectarians' literal understanding of "on the morrow of the Sabbath" of *Leviticus* 23.15, on which the date of the Festival of Weeks depends, also served to preclude the reaping of the 'omer on the Sabbath itself. But it must be noted that the rabbinic material is hardly clear on this point.

It is true that the relationships between the Boethusians, the Sadducees, the Essenes, the Qumran sect, and

other contemporaneous sects known only by name, are not well understood, and may never be, unless documents that can be clearly linked to each of these sects have survived and will be discovered. However, the existence of works of a non-Qumranic provenance, which were nonetheless preserved and presumably studied at Qumran, indicates that sectarian lines were fluid, at least to some extent. There is also the possibility, raised by Yaakov Sussman, that the very names that have been preserved in rabbinic literature (Boethusians, Sadducees, "Morning Bathers," and so forth) were not sharply defined in the first place.

Given the predilection of the sectarians for biblicalizing style, this is all the more important when the Qumran Hebrew term has greater affinities with the later rabbinic term than its Biblical Hebrew cognate. For example, the rabbinic term for the ash and water combination of the red heifer, which serves to purify those made impure by corpse-impurity, is *mei hata't*, as opposed to the Biblical Hebrew *mei muddah*. While the biblical term appears several times in non-halakhic contexts in Qumran literature, the appearance of the "rabbinic" term in 4QMMT serves to antedate the origin of this term by several centuries. It also serves to indicate the distance that Qumran halakhic terminology had traveled from its biblical roots by the middle of the second century BCE. As E. Qimron has pointed out, the coexistence of the two terms in Qumran Hebrew, along with its near total disappearance in rabbinic texts, even alongside a biblical proof text, situates the two terms on an almost linear linguistic continuum.

Second Temple-Period Sects. Though the Mishnah and Tosefta are the earliest rabbinic compilations that have come down to us, and contain earlier materials, they are far from providing us with anything resembling a complete, or even coherent, view of the positions of the various sects that existed in Second Temple times. Their compilers were interested in these sects only to the extent that they impinged on issues important to later rabbinic law, and to the extent that traditions regarding these questions had come down to them. Moreover, even matters of interest and importance to the rabbinic movement as a whole do not necessarily find their place in these two compilations. As an indication of the partial nature of evidence available from them, it is sufficient to point to the absence from the Mishnah or the Tosefta of any clear reference to that sectarian dispute that perhaps would have been considered of paramount importance in the Second Temple period: the nature of the calendar.

To the extent to which this question makes its appearance in rabbinic literature, we must seek it not in these early compilations, but rather in the Babylonian Talmud. According to the consensus opinion, which equates these calendars with the view attributed to the Boethusians in

B.T., *Menahot* 65a-b, the Boethusians and the Sadducees shared the sectarian calendar. Again, however, the relation of this to the question of the identification of the sect with those groups known from rabbinic literature is not altogether clear. Whatever the true contours of this dispute, it is important to note that it is absent from our earliest rabbinic sources, and the sectarian position is far from clear where it does appear, in the Babylonian Talmud. Though rabbinic sources can provide important data, which help clarify some of the sectarian issues in contention between the Pharisees and other Second Temple groups, great care must be taken in their use.

This is all the more relevant in matters on which there is little or no dispute between the sects. The rabbis, as successors to the Pharisees, hardly dwell on such matters. As is often the case, sectarian hostility tends to magnify sectarian differences, ignoring matters on which there was substantial agreement. Thus, while rabbinic literature contains many parallels to the rules contained in the so-called Qumran "Sabbath Code" of Damascus Document, CD x-xi, from these parallels alone it would be difficult to conclude that the sectarians observed the Sabbath in much the same way as the Pharisees did. And were we dependent on rabbinic literature alone, we would hardly guess that rabbinic and sectarian Sabbath laws are very similar in this area, even when there is no clear biblical source for the law in question. As we might well expect, where the two groups' practices were similar, and no polemic intent was meant, the sectarians' codificatory efforts would hardly relate to their opponents' views. But it does indeed appear to be the case that in this major area of concern to Second Temple Judaism, the two groups differed but little. Thus, both groups ushered in the Sabbath before sunset on Friday (*tosefet Shabbat* in rabbinic terminology), set strict limits on walking beyond the city limits (*tehum Shabbat*), forbade labor to be done by a non-Jew for the sake of a Jew, and forbade the handling of materials or objects of no conceivable use on the Sabbath, such as rocks and earth (*muqtseh*). Such quintessential rabbinic conceptions turn out to be not solely tannaitic/rabbinic at all, but apparently common to sects that in other respects were at daggers drawn.

However, the parallels are seldom direct; the individual cases may differ slightly, and we have few general statements to guide us. It is therefore difficult to extrapolate from the individual cases to the general system of Qumran *halakhah*. Because of that, it is difficult to state with certainty that a particular rule, even when similar, has the same resonance in the two systems.

Laws of Purities. Rabbinic literature on the laws of purities, even when restricted to the Mishnah and Tosefta, is both extensive and complex in its ramifications and interconnections. It is for this reason one of the areas

of rabbinic law that perhaps demonstrably existed as a system in tannaitic times, that is, as a consistent set of principles and applications.

Bearing this in mind, it is all the more telling that one of the most interesting, compelling, and apparently inevitable parallels adduced between the rabbinic system of purities and a section of *Miqtsat Ma'asei ha-Torah* (4QMMT), the matter of *mitsaq-mutsaqot*, raises a number of difficulties. This is because that single equation of *mitsaq-mutsaqot*, when viewed systemically, together with the generally accepted view that Qumran *halakhah* is always more stringent than the rabbinic parallel, yields contradictory consequences. According to 4QMMT B 55-58,

concerning (unbroken) streams of a liquid (poured from a clean vessel into an unclean vessel): we are of the opinion that they are not pure, and that these streams do not act as a separator between impure and pure liquids, for the liquid of the streams and that of the vessel which receives them are alike, being a single liquid.

If we equate *Miqtsat Ma'asei ha-Torah's mutsaqot* with the rabbinic *mitsaq* as it appears in *Mishnah Yadayim* 4.7, we have a clear partial parallel between the two documents, at least as concerns the ruling in *Miqtsat Ma'asei ha-Torah* on transmitting impurity ("impure liquids"), in which the Qumran rule is more strict. However, *Miqtsat Ma'asei ha-Torah* also rules that pure liquids follow the same rule. While it is difficult to determine the exact application of this rule, it is certainly more permissive than the rabbinic rule, which denies that *mitsaq* can be a connective for either purity or impurity. Similar difficulties have been raised on the rabbinic side of the parallel.

Again, there is no evidence that the Qumran sect accepted the tannaitic system of degrees of ritual impurity, which plays so large a part in the rabbinic system of purities, though it seems to have recognized the existence of different stages of purification. Again, their system of purities was extremely sensitive to the dangers of contact with non-sectarians, similar to the early rabbinic traditions. However, when we examine the respective systems in detail, the differences are more impressive than the similarities. Nevertheless, this argument from silence must be viewed with a great deal of caution, so long as we lack a large corpus of halakhic texts from Qumran.

In Context of the Rabbinic System. This brings us to a central issue in the interpretation of Qumran *halakhah* against the background of the rabbinic system. From the earliest days of research on the Genizah fragments of Damascus Document (CD) before World War I, it has generally been accepted that "all the halakhot in the Dead Sea scrolls which are at variance with Pharisaic halakha are stricter than the corresponding Pharisaic rulings," as

Yaakov Sussman put it in his remarks on 4QMMT (Qimron and Strugnell, 1994, p. 197). An examination of the available evidence does not bear out this judgment in the extreme manner in which it is typically expressed.

For example, Temple Scroll¹ (11Q119 1.4–7) rules that contact with the bone or blood of dead person defiles, but not, it would appear, the amputated bone of a living person.

As for any man who shall touch upon the surface of the field a bone of a dead human or one killed by the sword, or a dead person, or the blood of a dead human or a grave, he shall be purified according to this ordinance.

As Yigael Yadin (1983) rightly noted, the inclusion of the word *met* (“corpse”) modifying *‘etsem adam* (“human bone”) and *dam adam* (“human blood”) clearly points to a concern on the part of the drafter of the Temple Scroll to exclude amputated (“living”) limbs from this law. But rabbinic *halakhah* clearly rules to the contrary, as Yadin already noted, and as Hannah K. Harrington (1993) observes in her comparison of the two systems of purities. Thus the Temple Scroll in this instance is less stringent than the rabbis. The drafter has employed what Jacob Milgrom (1989) has called “homogenization,” in this case similar to the rabbinic forms of analogical reasoning which we may subsume under the heading of *heqqesh* (“argument by analogy”), to define the limbs and blood of Numbers 19.18 as issuing from a corpse rather than a living person, since the verse deals with “one killed by the sword or a dead person.” The latter terms modify the former in the direction of a more limited application of the resultant rule, that is, in the direction of leniency!

Perhaps the most important single contribution of rabbinic sources, then, is the setting of a context for the sectarian writings of Qumran and related literature, though they may disagree on many details large and small. Even when the two systems do not intersect, and no parallel can be found on one side or the other, a comparative study of the two will yield important results, which will enhance our understanding of both. For example, rabbinic law defines limits, quantities; in Qumran, the definition of the onset of the Sabbath and the *tehum Shabbat* stand out as anomalous. The Mishnah wishes to define not only the Sabbath-walk limit, but also the amount of various materials the carrying of which will require a sin-offering, the precise criteria for defining the various categories of Sabbath-territories. There is no indication that such jurisprudential activity was at all of interest to the sectarians. This is not to say that Qumran *halakhah* is totally bereft of quantification. Even if the original locus of *tehum Shabbat* lay outside Qumran, we still have the agricultural laws of Damascus Document⁶ (4Q270), recently studied by Joseph M. Baumgarten, in which the

amount of *leqet* (“gleanings”), *‘olelot* (“single grapes”), and the like are defined. But this attempt proceeds ineluctably from the need to translate the biblical text into reality. In rabbinic law quantification acquires its own momentum, whether it was a practical necessity or not.

To some extent, the difference in elaboration in halakhic detail may merely be a function of history. Qumran *halakhah* is simply earlier, just as the Palestinian Talmud, earlier than the Babylonian by more than a century, is less developed than the latter. But some amount—again, still undefined—of this lack of articulation is certainly due to the different vectors of Qumran and rabbinic law.

As Lawrence H. Schiffman pointed out long ago, the sects of the Second Temple period shared a halakhic universe of discourse; the important disputes were over minutiae of the law even more than theological issues. If we want entree into that shared universe, rabbinic literature, and the Mishnah and Tosefta in particular, properly understood and applied, can provide it.

MONASTERIES. The most important literary sources pertaining to monasticism in the Judean Desert are the seven hagiographies by Cyril of Scythopolis (died ca. 560), including those of the prominent desert Fathers Euthymius, Sabas, and Theodosius. Stories and anecdotes from the lives of the monks were assembled in the late sixth and early seventh centuries by John Moschus in his *Leimonarton*. Other contemporary sources are the anonymous lives of Chariton and Gerasimus, the life of George of Choziba by Anthony of Choziba, and *The Miracles of the Holy Virgin in Choziba* by the same author.

The major studies concerning the history and archaeology of the monasteries are those of Simon Vialhé (1990), Darews Chitty (1966), and more recently Yizhar Hirschfeld (1992, 1993) and Joseph Patrich (1993). Hirschfeld (in Bottjini, Di Segri, and Alliata, 1990) had recorded ruins of some sixty monasteries and monastic installations. Some—Khirbet el Murasas, Khirbet ed-Dejr, Khan el Ahmar, Khirbet el Kiliya, and five monasteries on the fringes of the desert, adjacent to Bethlehem—were entirely excavated, and all the others were surveyed comprehensively.

Institutionally and architecturally the monasteries were divided into two main types, the *laura* and the *coenobium*. The different ways of life in each of them dictated their different physical structures. The *laura* was a community of hermits. During the week, each monk lived in solitude in his cell, and only on the weekends would all assemble for a communal prayer and a communal meal. In a *coenobium*, on the other hand, the monks would live and work together and meet daily with each other in the church and in the dining room. Monastic life in the sixth century in *coenobia* and *laurae* alike was governed by fixed rules that controlled the daily and weekly routine; times of prayer and their contents; the monk's food, drink and clothing; his work in his cell; and the utensils he was allowed to keep there.

The founder of monasticism in the Judean Desert was Chariton, a native of Iconium in Asia Minor. Chariton es-

tablished his first monastery, Pharan, near 'Ein-Fara, the westernmost and most abundant perennial spring of Wadi Qilt, to the northeast of Jerusalem, in about 330 CE. At that time anchorites also lived among the reeds of the Jordan River. Later Chariton established two other monasteries: Douka, overlooking Jericho, on the site of the Hasmonean fortress of Duq-Dagon (c. 340); and Souka, not far from Thecoa (c. 345). From the beginning the *laura* had been the most prevalent type of monastic settlement in the Judean Desert and near the Jordan River. In 406 Euthymius, a native of the Roman province of Armenia, had settled in Pharan, and in 411 he and his colleague Theoctistus founded the first *coenobium* in the Judean Desert, the monastery of Theoctistus (Deir Muqallik) on the cliffs of Nahal Og. A second *coenobium* was established by Euthymius in 425 near Capharbaricha, and in 428 his *laura* (Khan el Ahmar) was inaugurated. The disciples of Euthymius founded other monasteries, all of them *coenobia*, and eventually occupied important posts in the Church of Palestine. Two of them, Martyrius and Elias, became patriarchs of Jerusalem. Romanus and Marcianus were two mid-fifth-century monastic leaders. The first established his monastery (Khirbet er-Rubeia) near Thecoa, and the second his monastery (Siyar el-Ghanam) near Bethlehem (454). In about 455 Gerasimus, a native of Lycia in Asia Minor, organized the individual anchorites living along the Jordan in an ordered community by setting up a *laura* with a *coenobium* at its center (Deir Hajla). At that time the nearby *laura* of Calamon ('Ein-Hajla) was established based on a similar pattern. The *coenobium* of Choziba was established near 'Ein-Qilt by John of Choziba in about 480; previously five Syrian anchorites had lived there in succession. Pilgrimage to the site of baptism on the Jordan was institutionalized when Emperor Anastasius I (491–518) established the Church of Saint John the Baptist (Qast el-Yahud) near the Jordan River and settled monks there who received a permanent yearly allowance of six gold coins (*solidi*).

The monastic movement reached its peak under the leadership of Theodosius and Sabas. Theodosius headed a large *coenobium* (Deir Dosi) founded in 479, while Sabas headed the Great Laura (Mar Saba), founded in 483. In the late fifth and early sixth centuries Sabas and his disciples established six other *laurae* and six *coenobia*, populating the entire desert with monks. In the sixth century the Great Laura and the Laura of Gerasimus were the leading *laurae* in the desert of Jerusalem and the desert near the Jordan, respectively. The leading *coenobia* were those of Theodosius and of Martyrius.

Architecturally, the *coenobium* was an enclosed monastery, with all its components confined within its walls. It had a gate and a two-or three-storied tower with a cross on its top. The Monastery of Martyrius (Khirbet el Mura-

sas) is the best representative of this type (Magen and Talgam, 1990). In *coenobia*, generally each monk lived separately, but a cell might have been shared by two or three monks or there might have been larger dormitories, in accordance with the regulations for the monks legislated by Emperor Justinian.

The *laura*, by contrast, was composed of dispersed cells, connected to each other and to the communal buildings by a network of paths that converted the scattered elements into an integral architectural entity. The Great Laura of Saint Sabas (Mar Saba) was the most elaborate example of this type (Patrich, 1995). Its remains are distributed along two kilometers of the ravine.

The *laura* hermitages were of various types. The simplest cells had a single room and a courtyard, while the complex ones consisted of several rooms, including a private chapel or a prayer niche. Cooking installations and utensils were sometimes found in the cells. All cells had one or several water cisterns.

Two main church types were common in the desert monasteries—the cave church and the built chapel; a true basilica was rare. The communal buildings in a *coenobium* consisted of one or more churches, a refectory, a kitchen and bakery, storerooms, stables, and sometimes a hostel for the lodging of pilgrims and guests. There also might be a hospital or cells furnished with stone beds for the care of the sick, and even a bathhouse, as in the Monastery of Martyrius. Rainwater was collected by means of a most efficient and well cared for system of plastered channels and gutters leading into large water cisterns constructed under the courtyard. Special reservoirs were constructed for the irrigation of the garden of the monastery. Open spaces and passages were paved by flagstones. In some instances, the large halls—the monastic chapel, refectory, and the rooms adjoining them—were paved by colorful mosaic floors with various patterns. There also were burial chapels and cemeteries, in which the monks were interred according to their inner hierarchy: abbots apart, priests and deacons in another group, and unordained monks in a third. The tomb of the founding father was sometimes marked by a special building, or he was buried in the cave in which he had spent his life. The tomb could become a focal point for the veneration of monks and pilgrims.

Almost all of the communal buildings found in a *coenobium* also were present in the core of a *laura*, except that the latter had no walls or gates. Typologically both kinds of monasteries could be constructed on a plain, on a moderately hilly area, or upon steep cliffs. Monasteries also were established among the ruins of the Hasmonean/Herodian desert fortresses like Masada (*laura*) and Hyrcania and Herodium (*coenobia*) (Hirschfeld, 1992; Patrich, 1995).

JOSEPH PATRICH

MOSAICS. The intensive archaeological fieldwork conducted at the Hasmonean and Herodian fortresses of the Judean Desert, which began in the 1960s, has yielded rich evidence of mosaic art from the late Hellenistic and Roman periods. As a whole, the mosaics of the Hasmonean and Herodian periods found in the Judean Desert exemplify the Jewish art tradition of avoiding the representation of living creatures, rather, making use of geometric and floral motifs. The earliest mosaic floor was found in the bathhouse of the Hasmonean palace near the mound Tulul Abu el-Alayiq at Jericho (second to the first century BCE). White tesserae (small evenly cut cubes of stone) form the background for a rectangular panel divided into three sections by two rows of black tesserae. In the center, a checkerboard pattern frames a square, surrounded by a saw-toothed pattern and filled with a smaller checkerboard pattern of angular white and black tesserae.

Other early mosaic floors dating to the first century BCE, were discovered by Yigael Yadin in the royal palaces of the Herodian fortress of Masada. Simple geometrical patterns decorate the floors of the living quarters of the upper terrace of the Northern Palace: for example, a rectangle formed by rows of black tesserae on a background

of white tesserae and a pattern of adjacent hexagons of black tesserae on a white background. Traces of a mosaic border are visible along the walls of the lower terrace in the same palace. Outside the southern wall, a mosaic floor had been laid in the court of the public bathroom. An isolated row of black tesserae decorates the perimeter of the court. On a background of white tesserae, a second row of the same width surrounds a frame of adjacent hexagons of black tesserae for a central circular geometric composition later destroyed.

Rooms of the residential wing of the Western Palace at Masada are decorated with polychrome mosaics. For instance, the entrance hall to the throne room has an elaborate composition in white, black, and red. A row of red tesserae followed by a saw-toothed pattern of black tesserae forms the perimeter of the decorated area. On a white background, a double row of black tesserae arranged in an inverted wave pattern surrounds a composition of segmented meander motif in red and black tesserae, which in turn frames the central composition on a background of red tesserae. Stems and opposed shoots with white berries encircle a simple ivy scroll in white and red tesserae, the white ivy leaves alternate with red vine leaves and single pomegranates. The central medallion is composed of intersecting circles with alternating sections in red and black tesserae. The corners of the central square are decorated with floral motifs.

A small private bathroom and the corridor leading to it in the same northeastern section of the palace are paved with a polychrome mosaic. The corridor is decorated with a square panel of red and black tesserae on a white background filled with the geometric pattern of the main composition, apart from the center of the composition where a radial pattern of leaves formed by white and red tesserae crossed by a double blue line appears.

The partial destruction of the mosaic floors in the Northern and Western Palaces provides an opportunity to see the process followed by their makers in laying the floors. They scratched the main lines of the composition in the wet plaster of the *rudus* (bottom floor) as guides for bedding the tesserae.

In Upper Herodium near Bethlehem traces of the mosaic floor can be seen along the wall of the *caldarium* ("hot room") in the bathhouse of the royal palace. A still intact composition was found in the *tepidarium* of the central bathhouse of Lower Herodium in the southwest corner of the pool complex. A row of black tesserae decorates the white background of the room. The central composition is a square panel enclosed in a frame of black tesserae. A three-strand guilloche forms the inner circular medallion, which surrounds a series of intersecting circles creating a pattern of rosettes. Single and multiple pomegranates decorate the corner of the square panel.

The *laconicum*, too, had been paved with mosaic; only an isolated section of the circular frame of ivy scrolls on a white background remains.

In the fortress of Cypros near Jericho, the mosaic floor of the *apodyterium* ("disrobing room") of the lower bathhouse has survived. The floor is decorated with a square panel composed of intersecting circles on a square grid, forming an orthogonal row of white quatrefoils alternating with concave squares.

The small mosaic sections found in the *apodyterium* of the Royal Palace atop the fortress of Machaerus in Perea, in the rich mansions of Jerusalem, in the villa on the shore at Caesarea, and on the floors of the royal fortresses of the Judean Desert constitute a homogenous group.

Stylistically, the mosaics can be divided into two groups. The polychrome mosaics of the Western Palace at Masada are better placed in the context of the Oriental Hellenistic tradition. The more simple mosaic compositions in black and white found in the Northern Palace and in the public bath, as in the fortress of Cypros, are typical of Italian mosaics and support the idea that artisans were sent from the center of the empire to decorate the royal palaces of King Herod.

MICHELE PICCIRILLO

MOSES. In the Bible, Moses is primarily a deliverer, leader, mediator, and judge, and secondarily a prophet and priest. In Jewish literature of the Second Temple period there are two main trends. First, Moses' biblical roles are amplified (especially in *Jubilees* and the *Testament of Moses*): he is predestined from creation to be mediator, continually intercedes for Israel, and is a prophetic law-giver who receives revelation from God about all things to the last days. Second, in the apologetic of Jewish Greek writers (especially Aristobulus, Artapanus, Philo, and Josephus), Moses conforms to Greek ideals: the great civi-

lizer, philosopher, and inventor; the ideal king embodying the offices of legislator, high priest, and prophet; and, perhaps, a "divine man."

In the Dead Sea Scrolls the character of Moses is developed in the manner of the former category. There is no reference to Moses as king, and his priestly role of atonement receives only brief mention in a prayer (Words of the Luminaries^a 4Q504 1-2, ii.9-10). Moses is above all a lawgiver, associated with the Torah through formulas such as "Moses said," "as God said/commanded by the hand of Moses," "as it is written in the book of Moses," and "the Torah of Moses." In the two sectarian rule books Damascus Document (CD; 4Q266-273; 5Q12; 6Q15) and Rule of the Community (1QS; 4Q255-264a; 5Q11), joining the community is tantamount to "taking upon oneself (an oath) to return to the Torah of Moses" (CD xv.9, 12; xvi.2, 5; 1QS v.8). [See Damascus Document, Rule of the Community.] Any deliberate or negligent breach of the Torah of Moses is punishable by permanent expulsion (see Apocryphon of Moses C, 4Q377 2.ii). [See Community Organization.] Oaths by the Torah of Moses, as with the divine name, are banned (CD xv.2; cf. Josephus's comment about the Essenes [*The Jewish War* 2.145]: "after God, they hold most in awe the name of their lawgiver, any blasphemer of whom is punished with death"). [See Essenes; Josephus Flavius.]

Moses' mediatory role is particularly enhanced in the Rewritten Bible/pseudepigraphal narratives. [See Apocrypha and Pseudepigrapha; Rewritten Bible.] Moses' authority as God's spokesperson and the promise of a future prophet like Moses are grounded in the biblical account (*Ex.* 20.18-21 and *Dt.* 5.23-31) that the people shrank in fear from God's presence at Mount Sinai and requested that Moses mediate between them and God (4Q377 2.ii; Reworked Pentateuch^a 4Q158 6). [See Reworked Pentateuch.] Moses is the "man of God," a "great and upright man," one who knows the knowledge of the most high, sees the vision of the Almighty, and whose voice is heard in the council of the most high (Apocryphon of Joshua^a 4Q378 3, 26). He is covered by the cloud because of his sanctity and is an incomparable herald of glad tidings through whom God would speak "as though he were an angel" (4Q377 2.ii). Moses' intercession serves as the model for a prayer of confession (4Q393 3; cf. *Jub.* 1).

But it is in Moses' role as prophet par excellence that the distinctiveness of this literature is especially apparent. Along with the writings of other prophets, the Torah of Moses is regarded as foretelling the sins and punishment of the Israelites until the last days, (4Q504 1-2.iii.11-14; cf. 1QS i.3; 4Q397 14-21; 4Q398 14-17.i-ii, 11-13 C; Words of Moses 1Q22 1.7-11; Commentary on Genesis A 4Q252 1.iv.2; Florilegium 4Q174 1-3.i.2-3 and 1-3.ii.2-3; Jubilees^a 4Q216 1-4). In the sectarian rules,

the "Torah of Moses" embraces the extrabiblical ordinances of the community (4Q266 11.6 parallels 4Q270 7.i.20), "for in it everything is specified" (CD xvi.2). This too is tied up with the idea of Moses as a prophet and recipient of all revelation: inherent in his Torah are the "hidden things" that are discernible only by inspired exegesis (see also the halakhic works *Miqtsat Ma'asei ha-Torah* and juridical text 2Q25, Temple Scroll^a 11Q19 and Reworked Pentateuch^a 4Q365 23.4). Although in the Bible he is neither anointed nor given the title, Moses is called God's "anointed one" in the Apocryphon of Moses C (4Q377 2.ii), presumably to highlight his role as one of the prophets who are designated "anointed ones" (War Scroll 1QM xi.7; CD ii.12, vi.1). Furthermore, the future prophet described in *Deuteronomy* 18.15-19 as "like" Moses is regarded as an eschatological figure accompanying the Messiahs of Aaron and Israel at Qumran (Testimonia 4Q175; 1QS ix.11; cf. Melchizedek, 11Q13 ii.17-18) and the royal Messiah in rabbinic literature. The historical Teacher of Righteousness mentioned in the sectarian scrolls is modeled as a prophet like Moses—authoritative lawgiver and leader of a new Israel in the wilderness in the last days—but seemingly not the prophet to accompany the messiahs. None of this is directly parallel to the portrayal of Moses as Israel's ideal king in Philo and rabbinic literature, nor to the combination of prophet and king in Johannine Christology.

DANIEL K. FALK

MOSES, TEXTS OF. As the greatest figure within Judaism, Moses inspired an extensive body of extrabiblical literature, but the vast majority consists of anecdotes or citations of his authority in larger works. Relatively few works composed in the Second Temple period survive that were devoted primarily to the purpose of developing traditions about Moses either as the central subject or as

purported author. In contrast with the rich cycles of literature associated with Enoch, Baruch, Ezra, and Daniel, one can cite *Jubilees*, *Testament of Moses*, and Philo's *De Vita Mosis*. Taking the Dead Sea Scrolls into account, this body of texts is richly enhanced, testifying to a very high regard for Moses among those who cherished these documents.

All the following works survive at Qumran only in Hebrew, the original language of composition. The connection of several of the works with Moses is disputable, and the first three works are mentioned here only briefly because they receive detailed discussion in specific articles.

Jubilees. Fourteen or fifteen copies and three or four related works attest to the importance of this work at Qumran, although it is clearly a pre-Qumran work and also was preserved elsewhere. [See *Jubilees*, Book of.] Chapter 1 supplements the biblical account of Moses receiving the law on Mount Sinai: an angel dictates the revelation to Moses; God foretells the sins of Israel analogously to his final revelation to Moses in *Deuteronomy* 31.16–21, but adding calendrical error and defilement of the sanctuary to the biblical mention of idolatry; and while still on the mountain, Moses intercedes for the people with a nonbiblical prayer based on *Deuteronomy* 9.26–29 and Psalm 51, which may in turn have been the inspiration for a communal confession from Cave 4 at Qumran (liturgical work 4Q393). Chapters 2 through 46 describe the story of the Book of Genesis being dictated to Moses on Mount Sinai, and chapters 47 through 50 concern Moses' life from birth to the Sinai revelation.

Temple Scroll. It is not entirely certain whether this very large work intends to be a new *torah*, given directly without Mosaic mediation or a rewritten *torah*, attempting to elucidate the true meaning of the laws received by Moses. [See *Temple Scroll*.] The reference to "sons of Aaron your brother" and the setting of divine revelation on a mountain (*Temple Scroll*^a 11Q19 xlv.5, li.6–7) suggest but do not necessarily imply that Moses is the assumed recipient. In either case, the author's effort to remove every mention of Moses and to portray God as speaking in the first person means that although the author conjures Moses' authority for extrabiblical laws, Moses himself remains invisible.

Reworked Pentateuch^{a-c}. Five copies (4Q158, 364–365, and 366–367) survive of this reordered, harmonized, and supplemented narrative, which seems to encompass Pentateuchal traditions broadly. [See *Reworked Pentateuch*.] Moses appears in fragments dealing with the Exodus, but there is no special emphasis on him as either author or central subject. The reworking of several passages emphasizes Moses' authority as God's spokesperson and that this role and the promise of a future prophet like

Moses derive from the people's request. (See similarly Apocryphon of Moses C 4Q377).

Words of Moses. Thirty-two small fragments preserve a large proportion of the first four columns of the scroll (1Q22). Both form and content indicate that it was intended as a rewritten *Deuteronomy*, harmonized with other Pentateuchal traditions. It consists of an introduction similar to *Deuteronomy*, giving the same setting for the following Mosaic discourse; an admonition by Moses to the congregation of Israel to keep God's commandments, warning against apostasy and the consequent judgment, and instruction to appoint wise men to teach God's laws; and laws for sabbatical years and Yom Kippur. The content and extent of the rest of the manuscript are unknown.

The author's use of biblical phrasing, above all that of *Deuteronomy*, has been termed *anthological* in style, but the retelling is more purposeful than is suggested by that term. First, the author emphasizes Moses' authority as God's spokesperson. Second, calendrical violation is added to the sin of idolatry from *Deuteronomy* 4.25–28 as grounds for the foretold destruction, as in *Jubilees* 1.10–14. Third, by having Eleazar and Joshua accompany Moses on the mountain and making them mediators of the instruction along with the Levitical leaders and priests, the author may endorse the successors to Mosaic authority as a normative model of leadership. Similar idealization of Moses' successors appears in Josephus (*Jewish Antiquities* 4.218) and probably underlies certain authority structures in the sectarian scrolls (e.g., priest, overseer, and judges/elders/council). Fourth, Yom Kippur rituals are on behalf of the land as well as the people, a concern that is emphasized in the sectarian scrolls (e.g., Rule of the Community IQS viii.6, viii.10, ix.4–5; Rule of the Congregation 1Q28a i.3). [See *Rule of the Community*; *Rule of the Congregation*; and *Yom Kippur*.]

Thus, a rewritten *Deuteronomy* is used to demonstrate concerns about calendar, submission to the community's teachers, and atonement. These are common concerns of the Qumran sectarian literature, but distinctive features pointing to a Qumran origin are lacking. On the basis of paleography, one may conclude that this manuscript was probably copied no later than the early first century BCE.

Apocryphon of Moses B^a and B^b and Liturgy of the Three Tongues of Fire. Liturgy of the Three Tongues of Fire (1Q29; seventeen very small fragments) was titled after the phrase "three tongues of fire" (2.3) in the context of what appears to be a ritual led by the priest involving a "right hand stone." The same ritual almost certainly appears in Apocryphon of Moses B^b (4Q376; one long narrow fragment and possibly another small fragment), originally given the same title. A ritual involving a priest and

a "left hand stone," which emits flashes of fire, is preceded by sacrifices similar to those on Yom Kippur and followed by matters concerning the Prince of the Congregation in battle.

Because of a shared mention of "the anointed priest," sacrifices reminiscent of Yom Kippur, and similar movements of the priest, it is probable that Apocryphon of Moses B^b and Liturgy of Three Tongues of Fire are the same work as Apocryphon of Moses B^a (4Q375). John Strugnell (1995) suggested that Words of Moses may be another copy of this work, but the similarity is not compelling.

Apocryphon of Moses B^a (one large and one small fragment) contains an address by an individual to a group based on *Deuteronomy* 13.1-6, urging the people to adhere to everything that God commands "by the mouth of the prophet" but to put to death the prophet who preaches apostasy. Next, the text details an unprecedented procedure of adjudication for dealing with a case not raised in the Bible: What to do if a prophet's tribe appeals an accusation against him, claiming that he is a truthful and faithful prophet? The tribe, elders, and judges assemble before the high priest, who carries out a ritual of discernment involving sacrifices reminiscent of Yom Kippur (*Lv.* 16), study of "hidden" laws in the secrecy of the Holy of Holies, and a presentation before the assembly.

The rest of the ritual is lost from Apocryphon of Moses B^a, but if Apocryphon of Moses B^b and Liturgy of Three Tongues of Fire are indeed copies of the same work, it involved an oracular use of two stones. Probably after some sort of test or ordeal and his private study, the high priest was to lead the prophet out before the people. While he delivered his verdict, one of the stones would shine forth, presumably either to indicate a judgment or to confirm the priest's verdict. The two stones were certainly the shoulder stones of the high priest's breastplate (*Ex.* 28.9-12), apparently confused with the Urim and Thummim, as is the case in a remarkably analogous passage in Josephus (*Jewish Antiquities* 3.214-15). In both cases, a description of the oracle's use in times of war seems to follow (cf. *Nm.* 27.21).

One can only speculate as to the genre and setting of such a fragmentary work. Gershon Brin's (1994) suggestion that it is a polemic by the Qumran community against the rejection of their Teacher of Righteousness is unconvincing. [See Teacher of Righteousness.] Strugnell also pauses to speculate on a possible Qumran setting: The Teacher of Righteousness, who may have served as high priest during the supposed interregnum of 159 to 152 BCE, took the oracular stones from the breastplate with him in his retreat to Qumran. Strugnell is correct, however, to hesitate to posit a Qumran origin. Apart from

the singular "Prince of all the Congregation," which is a familiar messianic title in several of the sectarian scrolls, the work lacks terminology and content distinctive to the sectarian literature of Qumran [See Prince of the Congregation.] Furthermore, its use of the Tetragrammaton would be unusual in a Qumran composition. It is only possible to conclude that the work originated no later than about the middle of the first century BCE, since Apocryphon of Moses B^b is written in a late Hasmonean hand and Liturgy of Three Tongues of Fire and Apocryphon of Moses B^a are early Herodian.

Strugnell concludes that the work is probably a general legal text on the discernment of prophecy and the use of oracle stones, which were operative in the writer's time. Expectation of renewed prophetic activity in the last days and concern over identifying true (e.g., *1 Mc.* 4.46 and 14.41) and false (e.g., *Mk.* 13.22, *Mt.* 24.11, *Rev.* 19.20) prophets were certainly alive in the later Second Temple period, but Strugnell's conviction that the work assumes current use of oracle stones is questionable. The seeming confusion of the shoulder stones with the Urim and Thummim suggests rather an idealized speculation on the use of objects no longer understood.

Assuming Strugnell's probable reconstruction and the heavy reliance on Pentateuchal language, the composition can perhaps best be understood as a rewritten Pentateuch text attempting to explain the use of the mysterious Urim and Thummim in the guise of Mosaic instruction. Its purpose could be to assert priestly primacy, whether or not the prophet and prince represent eschatological figures.

Pseudo-Moses^{a-c}. Strugnell originally classified Pseudo-Moses^{a-c} (4Q385a, 387a, 388-389, and 390) as six copies of one work titled Pseudo-Ezekiel, then Second-Ezekiel. Devorah Dimant, the current editor, has discerned in these fragments parts of three different works of different character: Apocryphon of Jeremiah, Pseudo-Ezekiel, and Pseudo-Moses. Here the concern is only with those fragments that Dimant attributes to Pseudo-Moses: Pseudo-Moses^a 13, 20, 40-42, and 44; Pseudo-Moses^b 1-3, and 5; Pseudo-Moses^c 4, 6, 9, 17, and 19; Pseudo-Moses^d 1-2, 8-9; and all seven fragments of Pseudo-Moses^e.

In a manner common in apocalyptic literature, Pseudo-Moses^e presents a schematized history of Israel's sin and divine punishment as a sequence of periods (jubilees, weeks of years, seventy years) in the guise of revelation by God spoken in the first person singular to an unnamed leader in the second person singular. [See Apocalyptic Texts.] Considering his role as lawgiver and mediator and the similar style and language to the divine addresses in *Deuteronomy* and *Jubilees* 1, the addressee is almost certainly Moses.

Neither the progression of periods nor the order of fragments is certain. Fragment 1 of Pseudo-Moses^f begins with the return from Babylonian captivity but assumes the concept of an extended exile lasting 490 years or ten jubilees (see 4Q387^a 3–4), characterized as a time of escalating sin and divine wrath. Only the first returnees are evaluated positively as receptive to God and penitent for their sins. The special laxity in the “seventh jubilee,” when the people will forget “ordinance and appointed time, and sabbath and covenant” might refer to the Hellenistic assimilation of the third century BCE under Ptolemaic control of Palestine. God delivers them up to enemy armies and the angels of Mastemah but preserves a remnant.

If fragment 2 of Pseudo-Moses^f follows (Dimant, 1992), it seems to concern the even greater apostasy under the Seleucids: violation of all of God’s laws and commandments, factional disputes, hoarding of unjust wealth, defilement of the Temple, corrupt priests, and intermarriage or incest. The last three sins correspond to the “three nets of Belial,” with which the Damascus Document (CD iv.17) also characterizes this time. These generations, too, are consigned to the rule of Belial and the angels of Mastemah. Alternatively, if fragment 2 precedes fragment 1 (Florentino García Martínez, 1991; Michael Knibb, 1992), it concerns sins of the divided kingdom.

Extensive overlaps among Pseudo-Moses^{a-d} indicate that these are copies of a single work. The style and general content correspond so remarkably to Pseudo-Moses^f that Dimant plausibly argues that they are the same Pseudo-Moses text. On the other hand, there is no exact overlap with Pseudo-Moses^f and no second person singular address, but rather a few cases of second person plural. In the absence of more concrete evidence, the possibility must be kept open that Pseudo-Moses^{a-d} represent copies of a variant version of a closely related work.

In one fragment (4Q389 2) God speaks in the past tense of his care for the Israelites in having led them out of Egypt and through the wilderness to the Promised Land, but he also addresses a group in the second person plural. If this is in fact a Pseudo-Moses text, it must then be regarded as a divine discourse to Moses with other leaders shortly before the crossing of the Jordan—exactly the situation depicted in Words of Moses, discussed above.

Most of the preserved content concerns the extended exile under God’s wrath until the end of “ten jubilees of years.” It is tempting to suggest that a large passage that can be reconstructed from overlapping fragments (4Q385a 41, 44; 4Q387a 2, 3.i–iii; 4Q388a 1.i–ii; 4Q389 1.i–ii; see Wacholder and Abegg, 1995, pp. xvii–xviii) describes the returnees who try to serve God, the downfall of the Persian empire, the conquests of Alexander the Great (a “blasphemer”), the subsequent division of his

kingdom, and, later, the Seleucid Antiochus IV Epiphanes as a second “blasphemer” who plunders Egypt and Israel (see *Dn.* 11.25–28, 42–43; *1 Mc.* 1.16–28) and in whose time Jerusalem priests apostatize. [See Antiochus IV Epiphanes.] This is far from certain, but if correct, then this work—represented by Pseudo-Moses^{a-d}—could not be the same as Pseudo-Moses^f, since it gives a different portrayal of the same chronology.

The schematized framework of history that Pseudo-Moses^f shares with Pseudo-Moses^{a-d}, in which sin and punishment escalate throughout an extended exile under the rule of evil angels, belongs to a rich tradition in apocalyptic literature. [See Angels.] *Daniel* 9.20–27, the Animal Apocalypse (*1 Enoch* 89), Melchizedek (11Q13), and, possibly, Ages of Creation (4Q180–181) all share a framework of ten jubilees or seventy weeks (equal to 490 years), and similar schemes appear in *Jubilees*, the Apocalypse of Weeks (*1 En.* 93), and the *Testament of Levi*. The catalog of sins with which Israel is charged finds very close verbal parallels in *Jubilees* and the Damascus Document, and, to a lesser extent, in the *Testament of Levi* and the *Testament of Moses*. *Jubilees* furthermore shares the illusion of a discourse to Moses as a venue for a forecast, as do the *Testament of Moses* and *Words of Moses*. [See Enoch, Books of; Testaments.]

There is no use of distinctive language that could concretely indicate a Qumran provenance, and the positive evaluation of the first generation of returnees may speak against it (cf. CD iii.10b–12a). The comparable literature and the enumerated sins point to a circle with priestly and apocalyptic concerns, probably pre-Qumran. If these manuscripts represent a single work, paleography suggests that it could not have been composed later than about the middle of the first century BCE, since Pseudo-Moses^f is written in a Herodian hand and the rest in late Hasmonean or early Herodian hands. [See Paleography.] On the basis of historical allusions, Dimant tentatively suggests a date of composition no later than the reign of the Hasmonean John Hyrcanus (134–104 BCE). [See John Hyrcanus.]

Apocryphon of Moses? Two small fragments (2Q21) written in a Herodian script preserve a scrap of discourse addressed to someone in the second person singular, in which the sons of Aaron apparently are appointed to administer justice, followed by a nonbiblical prayer of Moses. Whether this was a rewritten Pentateuch text, a narrative section in a Moses pseudepigraph, or merely part of a broader narrative, remains open. Nor is it clear whether the discourse is spoken by Moses to Israel, God to Moses, or God to Israel. In the Pentateuch, Aaron’s four sons are appointed to serve as priests. Their judicial role here may be deduced from the association of Nadab and Abihu with the seventy elders (*Ex.* 24.1, 24.9) and

Eleazar's function as judge after Moses' death (*Dt.* 17.9, 17.12). Possibly it relates to the judicial role that priests exercise in the Qumran rule books, but there are no clues to the provenance of these fragments. [See Priests.]

Discourse on the Exodus/Conquest Tradition. One medium-sized and fifteen small fragments remain of this text (4Q374), copied in an early Herodian hand. It contains a discourse on the Exodus and the conquest in the manner of numerous historical recitals dependent on Deuteronomic theology whose purpose is normally hortatory. It is unlikely that Moses is the speaker, as earlier believed (the text originally was entitled Apocryphon of Moses A), because the text alludes to the conquest in the past tense and seems to describe Joshua's mourning for Moses. The speaker is more likely Joshua or a later prophet. It lacks distinctive indicators of Qumran sectarian origin, and use of the Tetragrammaton may suggest a non-Qumran origin.

Apocryphon of Moses C. The work (4Q377) survives in one large and one small fragment, copied in a Herodian hand. The lack of distinctive Qumran language and a free use of the Tetragrammaton do not suggest a Qumran origin. Unlike the other Moses texts reviewed here, this is the only one that clearly speaks about Moses as its subject. In contrast to the "congregation of YHVH," which shrank from God's glory revealed on Mount Sinai, Moses is eulogized as "his anointed one," through whose mouth God would speak "as an angel."

All the texts surveyed here make implicit authoritative claims on the basis of the figure Moses. [See Moses.] Although there is no proof that any of these texts were composed at Qumran, the number of manuscripts found there and the interrelationships with sectarian compositions suggest the authority attributed to them at Qumran. This is wholly consonant with a community that envisaged and organized itself on the model of the wilderness congregation under Mosaic leadership, applying in a practical way the idea of a prophetic *torah* to be uncovered by inspired interpretation. [See Community Organization.] Rabbinic Judaism's concept of the oral Torah is a different means of drawing on the figure Moses to assert legal authority. When the early church portrayed Jesus in continuity with Moses (e.g., *Mk.* 9.4 and parallels), as a second Moses (e.g., *Mt.* 5-7, *Acts* 3.22), or one greater than Moses (e.g., *Heb.* 3.1-6, *Jn.* 1.17), it expressed an analogous impulse: these are assertions of the authority of Jesus' teaching.

DANIEL K. FALK

MURABBA'AT, WADI. [This entry is divided into two articles: Archaeology and Written Material.]

Archaeology

The caves of Wadi Murabba'at lie in a deep ravine descending from the Judean Desert to the Dead Sea and are situated approximately 18 kilometers (11 miles) south of Khirbet Qumran and 25 kilometers (15.5 miles) southeast of Jerusalem. First discovered by the bedouin, the area was then subjected to controlled excavations and survey, revealing the remains from the Chalcolithic period onward and, most importantly, from the time of the Bar Kokhba Revolt (132-135 CE). [See Bar Kokhba Revolt.]

Four caves were examined in 1952 by Gerald L. Harding, Roland de Vaux, and Dominique Barthélemy (de Vaux, Benoit, and Milik, 1961). During an extensive survey in 1968, another cave was excavated by P. Bar Adon, who traced the remains of a Roman road from one cave to another (Greenhut, 1984). A cemetery which resembles

the one at Qumran was discovered by Hanan Eshel and Z. Greenhut in 1993. [See Cemeteries.] In that year, another survey was carried out by the Israel Antiquities Authority, but no results have yet been published. [See Israel Antiquities Authority.]

The site, Mispah Shalem, extends across two hills and a terrace that faces the Judean Desert eastward, between the Wadi Murabba'at and the Metsoqui Derogot. Several ravines separate the different parts of the site; a wall built of large stones joins two areas of the site. All areas reveal burnt layers. Area A, on a flat hilltop, yielded a two-room structure, where a hearth, silos, ashes, and pottery sherds were found. Area B is the main part of the site, located on a terrace on the lower slope. Two platforms or halls were discovered here. In Area C, indications of the production of flint tools were discerned. The tools comprise a unique assemblage including over four hundred complete and broken tabular scrapers, over eighty of which bear incisions. Pottery includes numerous tiny votive vessels and large, coarse vessels were found. Petrographic analysis show three sources of clay, one being from Transjordan. The nature of the archaeological remains indicates that the site must have served as a cult center serving nomadic groups who wandered between Transjordan and southern Palestine.

Chalcolithic Period. The excavators distinguished two phases at Wadi Murabba'at: the Middle Chalcolithic (c. mid-fourth millennium BCE) and the Late Chalcolithic. It cannot be determined whether the occupation was seasonal or continuous.

The Chalcolithic period finds were discovered in Caves 1 and 2 and consist of handmade coarse ware with only a small amount of tempering added. Common types are reconstructed from the sherds as few vessels were found complete: cornets, chalices, goblets, deep bowls with straight sides, holemouth jars, several jugs with lug handles, and several thumb-indented ledge handles. Several of the bases bear mat impressions. Some complete vessels were burnished. Three types of decoration were used: red or brown wash; incised decoration, usually in a herringbone pattern; and relief decoration, formed by a rope or thumb-indented clay strip. [See Pottery.] The flint assemblage consisted mostly of scrapers. Blades, knives, axes, and several arrowheads were also found. The bone artifacts include awls, needles, and several spindle whorls. Stoneware includes two basalt whetstones and a small limestone bowl with four rectangular projections around the rim. [See Stoneware.]

The Bronze Age and the Iron Age. As the finds from the Middle Bronze Age II are relatively scarce, the excavators believe that Cave 2 served as a brief temporary settlement. The Hyksos scarab found in Cave 2 invites special attention; it is dated to the fifteenth dynasty. Two wooden

combs have exact parallels in the Middle Bronze Age II tombs at Jericho and from thirteenth-dynasty tombs in Egypt.

During the Iron Age, on the basis of the small amount of pottery dated to the eighth and seventh centuries BCE, the excavators have concluded that the site again served as a temporary refuge rather than as a permanent settlement.

Roman. Most of the finds are dated to the Roman period. A large amount of pottery of all types was dated through parallel pieces at Khirbet Qumran and Jerusalem to the second and early third centuries. Weapons are particularly abundant, including the blade of a *pilum*, the javelin used by the Roman legionnaires. Among wooden artifacts was a stamp with a Latin inscription *Centuria Annaii/Gargilit[s]* ("Gargilius of the Anaiian century"). The first name is Latin; the second, an African name that was especially common in the first and second centuries CE.

Many wooden and stone spindle whorls were found. The textile fragments were wool, linen, and cotton—some dyed and some decorated. An unusual find was a set of implements believed by the excavators to have been used by a doctor. [See Textiles; Wooden Artifacts.]

Coins were discovered by the bedouin, which the excavators purchased. They are believed to be authentic (Milik and Seyrig, 1958). This hoard of silver coins includes 149 Nabatean drachmas, 51 imperial dinars, and 33 tetradrachmas of Trajan. The others were minted locally, the majority in Antioch. One coin was from the First Jewish Revolt (69–70 CE), and nine coins were from the Bar Kokhba Revolt. Two coins had the emblem of the Tenth Legion Fretensis. [See Numismatics.]

The excavators took into account the evidence in the caves, especially the written documents, some of which were dated, and concluded that the caves were settled temporarily from the first century BCE onward. A larger and more developed settlement existed during the Bar Kokhba Revolt, when the area served as a refuge for the fleeing rebels and their families (suggested by a child's sandal). The site was eventually overrun by Roman army units, whose belongings—the legionnaire's *pilum* and the military wooden stamp—survived. A small unit continued to be stationed in the area until the end of the second century CE (one of the documents is attributed to the days of Commodus [180–192 CE]).

Caves 1 and 2 were also used in the Arab period. Two lamps dating from the eighth to ninth century CE; several inscriptions, one of which mentions the years 938–939 CE; and a coin from Cave 1, minted in Ramla in the eighth century CE, are from this period. Fragments of Arab pottery were dated to the fourteenth and fifteenth century CE.

EPHRAIM STERN

Written Material

Written documents dated to various periods, beginning with the First Temple era and ending with the Middle Ages, were discovered at Wadi Murabba'at. In the following survey I will treat the most significant documents discovered in Wadi Murabba'at in chronological order.

Document of the First Temple Period. Palimpsest: letter; list of personal names (Mur 17) was written on papyrus. The palimpsest (a document that was written twice, meaning that after there was no longer a need for the first document, the scribe erased the ink from the document and used the papyrus again) is from the seventh century BCE. [See Scribal Practices.] In the first stage a list of names typical of the end of the First Temple era was written on the papyrus, while in the second stage the papyrus was used for writing a letter. It is possible that this document indicates that there were people in Judea who fled to Wadi Murabba'at during the Babylonian campaigns in Judea at the beginning of the sixth century BCE.

Documents of the Second Temple Period. A number of important documents from the Second Temple period were found in the caves of Wadi Murabba'at. The most ancient among them is a document recording the decisions of a court on an ostrakon (Mur 72). This document was dated according to paleographic considerations to the years between 125 and 100 BCE. Regarding the two decisions that a certain court made, the document's mention of Masada is significant. This is one of the proofs that Masada was built during the Hasmonean period. [See Masada.]

An additional document from the Second Temple period is the debt acknowledgment (Mur 18) from the year 55/6 CE. This document was written in Tsoba, which is near Jerusalem, and in it Zekhariah ben Yehohanan from

Kislon says that he owes Avshalom ben Hanun twenty silver zuz (meaning twenty Roman dinars) for items he had purchased from Avshalom. [See Deeds of Sale.] A third document, which should probably be dated to the end of the Second Temple period, is a writ of divorce (*get*) written during the year 6 in Masada (Mur 19). [See Marriage and Divorce.] In this document Yehosef son of Naksan, who lives in Masada, divorces of his own free will Miryam daughter of Yehonatan, who also resides in Masada. Milik thinks that the document is dated by the era of the Roman province of Arabia, which was founded by Trajan in 106 CE, and therefore the document is from 111 CE. Yadin (1961), however, claimed that since the formula "according to the era of Provincia Arabia" does not appear in the document, one cannot suppose that the date is according to the era of Provincia of Arabia. He believed that the document was from the days of the First Jewish Revolt, from 71 CE, and that Miryam left Masada in 71 CE and took her writ of divorce with her to Wadi Murabba'at. [See First Jewish Revolt.] Yadin assumed that the Jewish rebels living in Masada after the destruction of Jerusalem continued to count the years according to the era of the First Jewish Revolt even after the destruction of Jerusalem, but they could not write: "in the sixth year of the freedom of Israel" or "freedom of Jerusalem," only "in the sixth year." Hence, the sixth year in the document under discussion is the sixth year of the First Jewish Revolt. The latest coin so far discovered in Masada is from the year 112 CE, hence, it is not impossible that the document is from 111 CE (Roman soldiers remained at Masada at least until 112). However, it is not likely that the Romans permitted the Jews to stay in Masada during those years. Therefore it seems that Yadin's suggestion that the document is from 71 CE is more convincing than Milik's later dating.

The debt acknowledgment (Mur 18) and perhaps the writ of divorce (Mur 19), as well as additional documents—deeds of sale of land (Mur 22, 25), deed of sale (Mur 29), and deed of sale of plot (Mur 30)—prove that there were Jewish refugees who escaped to Wadi Murabba'at at the end of the First Jewish Revolt, and in light of document Mur 18 it is apparent that some of them fled from the Jerusalem area. If Yadin is correct in his theory regarding the date of document Mur 19, it appears that a woman from Masada moved to Wadi Murabba'at after the fall of Jerusalem.

Documents of the Bar Kokhba Period. The majority of the documents found in the caves of Wadi Murabba'at were brought to the desert at the end of the Bar Kokhba Revolt (c.132–135 CE). A group of people seeking refuge in the caves of Wadi Murabba'at at the end of the rebellion escaped from the region of Herodium (east of Bethlehem). These refugees brought with them to the caves

fragments of leather scrolls upon which were written religious texts, as well as papyri upon which were written financial documents and letters. Among the scrolls, mention should be made of the book of Deuteronomy (Mur 2) discovered in Cave 1 at Murabba'at (portions of chapters 10 through 15 were preserved) and a scroll of the Minor Prophets (Mur 88) that was found in Cave 5 (portions of *Joel*, *Amos*, *Obadiah*, *Jonah*, *Micah*, *Nahum*, *Habakkuk*, *Zephaniah*, and *Haggai* were preserved). [See Deuteronomy, Book of Minor Prophets.] The remaining scrolls and documents were found in Cave 2. Fragments from a scroll (from which portions of Genesis [Mur 1: 1-3], Exodus [Mur 1:4-5], and Numbers [Mur 1:6-7] were preserved) that possibly contained the entire Torah were found in Cave 1 as well as a small excerpt of a scroll that contained portions of the book of Isaiah (Mur 3; the surviving part is from *Isaiah* 1). [See Genesis, Book of; Exodus, Book of; Isaiah, Book of; and Numbers, Book of.] Also, phylacteries containing paragraphs from *Exodus* and *Deuteronomy* and a *mezuzah*, the writing upon which cannot be identified, were found in Cave 2. Besides the biblical documents, a small segment of a prayer mentioning Zion (unclassified text Mur 6) was also discovered in Wadi Murabba'at.

Fiscal and administrative documents. The fiscal and administrative documents from Wadi Murabba'at all were found in Cave 2. The fiscal documents must be divided into those written prior to the Bar Kokhba Revolt and those written during the course of the rebellion. Among the documents written before the Bar Kokhba Revolt are four marriage contracts. Two marriage contracts are written in Aramaic and formulated in a very similar way to those documented in the Mishnah (Mur 20 and Mur 21; Milik suggests that Mur 20 should be dated to the year 117 CE). Both of the other documents are written in Greek (Mur 115, 116). The most significant among them (remarriage contract Mur 115) is dated to 124 CE, and in it a man by the name of Elias son of Simon, born in the village of Gludah in the district of Akrabah, remarried his divorced wife Salome daughter of Vanus Galgulah, whose family lived in the village Beit Betzi in the district of Herodium (this place is mentioned in *1 Maccabees* 9.62-65). [See Herodium.] Elias built his house in the district of Gofnah. This document confirms that the division of districts in effect during the Second Temple period and documented in Pliny (*Historia naturalis* 5.70) and Josephus (*The Jewish War* 3.54-56) continued to function until the Bar Kokhba Revolt.

Highly significant among the documents written during the rebellion are farming contracts (Mur 24) written in Hebrew. In them were copied a series of transactions signed in the winter of "year two of the redemption of Israel by Shim'on ben Kosiba' [Bar Kokhba] in a camp

situated in Herodion." [See Bar Kokhba, Shim'on.] In these transactions plots of land were leased by the administrator Hillel ben Garis to various people in the city of Nahash. The payment for the lease was not to be made in money but with grain, which the lessees had to weigh on the roof of the treasury of Herodium. In all, Hillel had leased on that day a dozen different plots in the city of Nahash.

Bar Kokhba Revolt. Four documents discovered at Wadi Murabba'at are of considerable importance for clarifying the problem of the rebels taking control of Jerusalem and the dating of the end of the Bar Kokhba Revolt. The text, entitled deed of sale of land (Mur 25), was written in the third year of the liberation of Jerusalem. A deed of sale (Mur 29) from the second year of the redemption of Israel was signed in Jerusalem. Both of the deeds were poorly preserved, and therefore the details of the transactions documented in them are not known; however, it is clear that in both of them immovable property was sold. The text called deed of sale of plot (Mur 30) was written on the twenty-second day of Tishrei in the fourth year of the liberation of Israel in Jerusalem, meaning that this document was written on the last day of Sukkot, and in it a man by the name of Dustus sold a field to a man whose name is not preserved. The fact that the document is from the fourth year and was written in Jerusalem is of great significance for clarifying the course of the rebellion. A deed of sale of land (Mur 22) was written on the fourteenth day of Marḥeshvan in the fourth year of the redemption of Israel, that is, a month after Sukkot. In these documents the formula "of the liberation of Israel by Bar Kokhba" does not appear, and, therefore, the possibility that these documents under discussion are from the period of the First Jewish Revolt must be considered. During archaeological excavations conducted in Jerusalem, coins from the period of the Bar Kokhba Revolt were not found, and, therefore, the excavators assumed that Jerusalem did not fall into the hands of the rebels. The question of dating the end of the Bar Kokhba Revolt also is complicated. The rabbis asserted that the duration of the rebellion was three and a half years while, according to the Mishnah, Betar fell on Tish'ah be-'Av, in the summer, two months prior to Sukkot. If these traditions reflect a historical kernel it cannot be assumed that in the fourth year fields were still being sold. Furthermore, it is difficult to assume that Jerusalem remained in the hands of the rebels after the fall of Betar. Hence, the possibility that the documents are from the days of the First Jewish Revolt, that is, from the years 67 through 69 CE, should not be discounted.

One interesting document has an intermediate status between a letter and a fiscal document. This is the letter from Beit-Mashiko to Yeshu'a son of Galgula (Mur 42), in which both administrators of the village Beit-Mashiko

wrote to Yeshu'a son of Galgula, who bore the title of head of the camp, and verified that Ariston's cow, which a man by the name of Yosef confiscated, belongs to Ya'aqov ben Yehudah. What is interesting about this document is that the administrators attempted to write Hebrew, but they integrated Aramaic words and Aramaic syntax into this Hebrew document. This document attests to how difficult it was for some of the people of Judea to express themselves in Hebrew during the course of the rebellion. The administrators also mention that if it were not for the Romans being in close proximity to their dwelling place, they themselves would have come before Yeshu'a son of Galgula and clarified the incident regarding the cow. Unfortunately, the document is not dated, and, therefore, the time of the arrival of the Romans in the region of Yeshu'a is unknown.

Two letters from Shim'on bar Kokhba to Yeshu'a son of Galgula (Mur 43, 44) were found at Wadi Murabba'at. In the first letter Bar Kokhba vows that he will imprison Yeshu'a son of Galgula in shackles if the Galileans in the region that is under the command of Yeshu'a are injured in any way. In order to explain to Yeshu'a that the threat is serious, Bar Kokhba explains that whoever harms the Galileans will be dealt with in the same manner as a man named Ben 'Aflul. Unfortunately, we do not know what transgression Ben 'Aflul committed or what his punishment was, but it can be assumed that the details were known to Yeshu'a son of Galgula. Some have claimed that these are people from the Galilee or that the people under discussion were Christians whom Bar Kokhba dubbed Galileans. The second letter deals with the supplying of grain, and from it one can learn that Bar Kokhba's warriors observed the Sabbath, since Bar Kokhba requests Yeshu'a to accommodate on the Sabbath the people who were coming to gather the wheat (Mur 44). The remainder of the letters found at Wadi Murabba'at are fragmentary. Particularly important is the letter sent from 'Ein-Gedi (Mur 46), which probably was written by Yonatan son of Ba'ayar, the commander of 'Ein-Gedi (whose letters were found in the Cave of the Letters in Nahal Hever), to a man by the name of Yosef. [See 'Ein-Gedi, Hever, Nahal.] In another fragmentary letter (Mur 45) Milik read Maşad Ḥasidin and claimed that it referred to Qumran; however, this reading is doubtful.

In summary, the scrolls, documents, and letters discovered at Wadi Murabba'at are of significance for clarifying the details concerning the Bar Kokhba Revolt. The scrolls attest that in the first and second centuries CE all the biblical scrolls were written according to the version now found in the Masoretic Text, and no Hebrew scrolls that reflect a different biblical version were found. The documents and letters prove that at the end of the Bar Kokhba Revolt a group of people from Herodium escaped to Wadi

Murabba'at. The military commander of Herodium during the period of the rebellion was Yeshu'a son of Galgula, whose family lived in the village of Beit Betzi near Herodium. An administrator by the name of Hillel son of Garis was appointed to the region of Herodium, as well. The administrator was responsible for civil matters, such as leasing Bar Kokhba's land and receiving agricultural products as compensation for it. Even small places, such as Beit-Mashiko, had administrators, and when the need arose they turned to the military commander of the region (and not to the administrator) to solve civil problems. The letters found at Wadi Murabba'at bear witness that Bar Kokhba was meticulous in the performance of precepts and also testify to the tension between the people of Judea and the Galileans.

Documents of the Roman Period. Apparently after the Bar Kokhba Revolt the Roman army kept a presence at Wadi Murabba'at. It should be assumed that military units of the tenth legion lingered in the area during the winter months, thereby preventing the Jewish rebels from seeking refuge in the caves during those years when there was still a lack of peace in Judea. A wooden imprint of Gargiliu(s) Centuria Annaji was found in the caves. Gargilius most likely was the commander of the Annaiian unit of the tenth legion. Recognition of debt (Mur 114) is a Greek document containing an acknowledgment of a debt (IOU) conducted between two Roman soldiers. This promissory note is dated either to the year 141 or 171 CE. Extracts from official ordinances (Mur 117) is a synopsis of an official regulation mentioning Caesar Commodus, who ruled between the years 180 and 192 CE, as well as serving as governor of Egypt during the years 183/4 to 185 CE. This is the latest document from the Roman era found in the caves, and it should be assumed that Roman presence there ceased at the end of the second century.

Documents from the Middle Ages. In the Middle Ages as well, during the eleventh century, people found refuge in the caves of Wadi Murabba'at and also brought with them to the caves documents in Greek and Arabic. From this period a Christian prayer in Greek (the Horologion, prayers for the hours of the day), which served monks during that period, was found there. Arabic documents were found, as well, among them two receipts—a complete one from the year 938 CE (Mur 169) and a fragment of sales contract (Mur 170)—and three magical texts. The complete magical text is an amulet (Mur 173) written in Arabic and Greek (its Greek side was given the number Mur 157 [fragment of magical text] that promises a safe journey to its bearer). The other two are a fragment of magical text (Mur 171) and a religious or magical text (Mur 172), which contains Arabic magical documents. [See Magic and Magical Texts.]

Translated from Hebrew by Daphna Krupp

MUSEUMS AND COLLECTIONS. Written materials and other artifacts from the Judean Desert that are connected with them are housed primarily in Jerusalem at the Palestine Archaeological Museum and the Shrine of the Book. [See Palestine Archaeological Museum; Shrine of the Book.] Two fragments are kept at the Franciscan Museum in Jerusalem. Outside Jerusalem, a small number are in Amman, Jordan, at the National Museum of the Department of Antiquities; in Paris, at the Bibliothèque Nationale de France; in private collections in France, Switzerland, and Norway; and in university collections at Heidelberg (Germany), Louvain (Belgium), and Chicago (USA). There are also fragments at the Museum Bible et Terre Sainte, Paris; the Syrian Orthodox Cathedral, Teaneck, New Jersey (USA); and possibly in Beirut.

Museums. Founded in 1936 through an endowment from John D. Rockefeller, Jr., the Palestinian Archaeological Museum in East Jerusalem was nationalized by the Hashemite Kingdom of Jordan early in 1967, and renamed the Rockefeller Museum after its capture by Israel during the 1967 Six Day War. [See Palestine Archaeological Museum.] It remains the primary repository for fragments of the Dead Sea Scrolls studied and published by the International Committee, and artifacts connected especially with Qumran, for example, some storage jars found in nearby caves. As the headquarters for the Department of Antiquities of Jordan during the 1950s and 1960s, this building was the center for scrolls acquisition and reconstruction. The scrolls listed below are stored in a basement room known as the "Scrollery," located near the scrolls conservation laboratory of the Israel Antiquities Authority. [See Department of Antiquities of Jordan; Israeli Antiquities Authority.] Scrolls located here include 1Q5, 8 (partial), 9-12; 21; 28, 28b, 29; 41-49; 69; 2Q1-33, 2QX1; 3Q1-14, 3QX1-6; 4Q1-21, 22 (except one plate), 23-108, 110-161, 163-174, 176-575; 5Q1-25, X-1; 6Q1-31, X1-2; 7Q1-19; 8Q1-5, X1-3; 9Q; 10Q; 11Q1-18, 20-23; Mur 1-173; 8Hev 1-6; XHev/Se 1-48; sem, Nab. 1-6, Gr. 1-6; Mas 1-951; Sdeir 1-4; 5/6Hev 1-64; XHev/Se gr. 7; 34Se 1-8; 1Mish 1-8; Ghweir? 1-2; Nar 1-5; WDSP1-28; Khirbet Mird APHM1-54, 56-93, 95-98, 100, Josh

22cpa, Mt. 21cpa, Lk. 3cpa, Acts cpa, Col. 1, papMird A, plaster with Syriac, pap. frag; all Ketef Jericho Aramaic and Greek documents.

A division of the Israel Museum, the Shrine of the Book, is located in West Jerusalem. [See Shrine of the Book.] The Shrine was built specially to house the Cave 1 scrolls bought by Sukenik and later Yadin. [See Discovery and Purchase.] Underwritten by the Samuel Gottesman family (who also paid for the Cave 1 scrolls), the Shrine consists of a large exhibition room where an Isaiah scroll replica and other large scrolls are on permanent display, as well as artifacts from the Bar Kokhba caves. Scrolls located at the Shrine include 1QIsa^a, 1QpHab, 1QS, 1QIsa^b, 1QapGen, 1QM, 1QH^a, and 11Q10 (one plate).

The Amman National Museum, Department of Antiquities of Jordan, houses the Copper Scroll. [See Amman Museum.] Other scrolls are stored under the original glass plates from the work of the International Team in Jerusalem during the 1950s. Most of the Jordanian collection is displayed in the main exhibition hall, but a few plates, containing more fragmentary remains, are usually kept in the museum vault.

Bibliothèque Nationale de Paris contains scrolls from Cave 1 at Qumran originally allotted to the École Biblique et Archéologique Française in Jerusalem. [See Bibliothèque Nationale de France; École Biblique et Archéologique Française.] The Franciscan Museum at the Church of the Flagellation, Jerusalem, has two fragments (4Q475) and the Museum Bible et Terre Sainte, Paris, one (4Q98).

Private Collections. Various scrolls have made their way into private collections: Georges Roux (France), the Schøyen Collection, Oslo, Norway, and the Syrian Orthodox Cathedral, Teaneck, NJ, USA.

University Collections. Various universities bought and retain certain scroll fragments, such as the University of Heidelberg, Germany, the University of Louvain, Belgium, and the Oriental Institute, University of Chicago.

Artifacts. Most artifacts from the Dead Sea caves and the Qumran excavations are housed in Jerusalem at the École Biblique et Archéologique Française (center of much of the early study of the scrolls), the Shrine of the Book, the Rockefeller Museum, and the Albright Institute of Archaeology, Jerusalem (formerly the American Schools of Oriental Research). [See American Schools of Oriental Research.] Small quantities of artifacts are in private collections elsewhere.

Photographic Negatives. Most of the photographic negatives of the scrolls are stored in a temperature-controlled environment at the IAA facility at Har Hašophim (Jerusalem). Additional collections of negatives are found in California at the Ancient Biblical Manuscript Center in Claremont, California, at the Huntington Library in San

Marino, California, in England, at Oxford University, and at Hebrew Union College-Jewish Institute of Religion, in Cincinnati, Ohio. The latter collection is for security only, and is not open for consultation.

MYSTERIES. This work is represented by at least three manuscripts at Qumran: *Mysteries* from Cave 1 at Qumran (1Q27) and *Mysteries*^a and *Mysteries*^b from Cave 4 (4Q299–300). Józef T. Milik identified *Mysteries*^c (4Q301) as a fourth copy, but the correctness of this identification has been questioned by Lawrence Schiffman. He notes that while *Mysteries* (1Q27) and *Mysteries*^a and *Mysteries*^b all overlap textually, *Mysteries*^c does not overlap with any of the other manuscripts and contains parallels with the *Heikhalot* literature not found in the other three. Nevertheless, given the fragmentary nature of the texts, one should probably not make too much of the lack of overlap or the presence or absence of parallels with *Heikhalot* texts. Moreover, clear terminological similarities between *Mysteries*^c and the other manuscripts appear to favor Milik's identification.

All the *Mysteries* texts are written in Hebrew, and some of the fragments reveal a poetic structure. In spelling, the manuscripts contain a somewhat strange mixture of both full and defective forms. Paleographically, the earliest of the texts is *Mysteries* from Cave 1, which is written in a hand dating to the end of the first century BCE or the beginning of the first century CE. This date thus provides a *terminus ante quem* for the composition of *Mysteries*. Of the Cave 4 copies, *Mysteries*^a is written in a developed Herodian hand, and *Mysteries*^b and *Mysteries*^c are late Herodian (c.50–68 CE).

Contents and Ideology. *Mysteries* is so named because the *raz* ("mystery") figures prominently in the preserved fragments. This word is used both alone and in phrases such as "mysteries of iniquity" (1Q27 1.i.2), "mystery of that which is coming into being" (1Q27 1.i.3–4), "marvelous mysteries" (1Q27 1.i.7), "mysteries of the deep" (1Q27 13.3), "mysteries of eternity" (4Q299 2b.5), and "mysteries of light" (4Q299 5.2). It appears from this that the term *mystery* is used in a variety of ways to describe both the natural and moral order of God's creation.

The most extensive run of continuous text is provided by fragment 1 of *Mysteries*. The first column of this fragment contains an almost prophetic indictment against

those who did not consider the "former things" and who did not know something called the "mystery of that which is coming into being," or *raz nihyeh* (1Q27 1.i.3–4). In *Mysteries*, the contrast in the text between the "former things" and the *raz nihyeh* indicates that the latter carries eschatological overtones, though the same phrase is used without eschatological significance in *Sapiential Work A*^c (4Q423 3.5 and 5.10) in a section dealing with agricultural matters.

The author of *Mysteries* proceeds to tell his readers, directly addressed as "you" in the second person plural, that the disappearance of wickedness before righteousness will be a sign that the *raz nihyeh* is about to come to pass. At that time will come the destruction of all the adherents of the "marvelous mysteries" (1Q27 1.i.7), the latter phrase clearly being used euphemistically for something like "mysteries of iniquity" (cf. 1Q27 1.i.2; elsewhere in the scrolls "marvelous mysteries" is used only in a positive sense). The truth of this "oracle" may be seen in that iniquity abounds in all peoples and nations.

Everywhere in *Mysteries* the sinfulness and shortcomings of human beings stand in sharp contrast to the character of God. Indeed, according to one restoration of *Mysteries*^a 3.ii.3, even the deeds of the seemingly righteous person are unclean. Line 8 of this same fragment highlights the authority of God over mankind by referring to him as the Creator (cf. 4Q299 5 and 6.i) and then foretells the destruction of those who violate his commands (cf. the theme of judgment in 4Q299 frgs. 53 and 59 and 4Q301 3a–b. 4–5). This leads into an exhortation in lines 9 through 16, probably addressed to those who hold fast to God's secrets, to recognize the omnipotence of the God who exists from before eternity and causes all things. The teaching of predestination here is somewhat reminiscent of Rule of the Community from Cave 1 at Qumran (hereafter, 1QRule of the Community, 1QS) and *Hodayot*^a from Cave 1 at Qumran (hereafter, 1QHodayot^a, 1QH^a).

Nowhere is the distinction between God and humanity clearer than in the matter of wisdom and knowledge. Twice God is referred to as "the God of knowledge" (4Q299 35.1 and 73.3.). One fairly well preserved section, *Mysteries*^b 1a.ii–b and its parallel in *Mysteries*^a 3c, contains an indictment against certain magicians, directly addressed in the second person plural, who under a pretense of wisdom actually teach transgression. The vision and the eternal secrets are closed to them.

Such is not the case, however, with the author of *Mysteries*. In *Mysteries*^c 1.1, he states that he will speak freely and apportion his words to his hearers according to their "kinds." Although the meaning of the next several lines is not totally clear, the reference to various kinds of hearers seems to indicate that only those who are diligent in their search for wisdom will truly understand the author's mes-

sage. According to *Mysteries*^a 8, however, even the quest for wisdom will fail unless God gives understanding. Thus, the writer of *Mysteries* says, "He opened our ear that we should hear"

Genre. Milik originally had suggested that *Mysteries* was a pseudepigraphic work containing revelations attributed to some biblical patriarch. However, although both Abraham and Aaron are mentioned in the fragments (cf. 4Q299 102 and 75, respectively), this suggestion seems unlikely since there is no real indication of any kind of historical narrative framework that might serve as the setting of the entire composition.

A better case can be made for associating *Mysteries* with the genre of writing commonly called wisdom literature. Throughout *Mysteries*, for instance, one finds typical wisdom terminology such as *da'at* ("knowledge"), *sekhel* ("understanding"), *binah* ("insight"), *hokhmah* ("wisdom"), *'ivvelet* ("foolishness"), and *kesel* ("folly"). There also is an abundant use of rhetorical questions designed to lead the addressees to affirm for themselves certain viewpoints that were important to the author's overall message. Both parallelism and antithesis are used to good effect. In general, the style is not so much the stringing together of disconnected maxims found in *Proverbs* 10.1–22.16 but more the discursive style of writing found in *Proverbs* 1–9 and *Ben Sira*. In common with the latter work, *Mysteries* also contains some halakhic material.

Nevertheless, despite the foregoing similarities, one difference that distinguishes *Mysteries* from both *Proverbs* and *Ben Sira* is the material in *Mysteries* that is eschatological in character. In this respect, as well as others, there are clear similarities between *Mysteries* and the so-called sapiential works found at Qumran. Daniel Harrington (1996, p. 41) has pointed out that fragment 1 of Sapiential Work A^b (4Q416) likely preserves the beginning of the work and sets the entire composition in a framework that is both cosmic and eschatological. Interestingly, fragment 1 of *Mysteries*, which Milik concluded must have come near the beginning of the *Mysteries* composition, also is eschatological in nature. The mixture of wisdom, *halakhah*, and eschatology in one work is a striking combination that shows again the richness and diversity of Second Temple literature.

Origin and Authorship. The ideology, language, and orthography of the *Mysteries* texts show some similarities to certain works believed to have been authored by the Qumran sect. This has led Schiffman to conclude that they share a common authorship. Armin Lange disputes this, maintaining that, despite certain general parallels, there are no specific theological ideas or vocabulary that indicate authorship by the Qumran sect.

Even before the full publication of *Mysteries*, Isaac Rabinowitz suggested that *Mysteries* was written by a Teacher of Righteousness of the Qumran sect (he thought

there were several such teachers). Rabinowitz believed that the origins of the sect lay in the group known as the Hasideans, and he even suggested that the author of *Mysteries* specifically could be identified as Mattathias, the patriarch of the Maccabean dynasty.

Although Rabinowitz's theory of Qumran origins has found little support, his suggestion that the text was authored by a sectarian leader is still possible. Many texts for which there is good evidence of Qumran authorship tell of mysteries to which the writer has been made privy. Thus, in 1QHodayot^a the author(s) makes frequent reference to the fact that God had revealed mysteries to him (1QH ix[i].21, xii[iv].27, xv[vii].27, xx[xii].13). Likewise, 1QRule of the Community often mentions that the members of the Qumran community possess insight into God's mysteries (1QS iv.6, ix.18, xi.3, xi.5, xi.19). Indeed, 1QRule of the Community xi.3 specifically refers to the "mystery of that which is coming into being," which also is found in *Mysteries*. Although this by itself does not prove sectarian authorship for *Mysteries* (Sapiential Work A also uses *raz nihyeh* but may not be sectarian), it is suggestive of it, as is the teaching about predestination.

ERIK W. LARSON

MYSTERY. The most prominent term for "mystery" in the Qumran writings is *raz*, which is generally regarded as a Persian loanword taken over into Aramaic and Hebrew. The biblical Greek translation of *raz* is *mysterion*,

though there is little need to assume a connection with the Greek mystery religions in the Greek Bible versions or at Qumran. Two Hebrew terms associated with *raz* are *sod* and *uistarot*. The word *sod* carries the ambiguity of "council" (an assembly gathered to give advice or make decisions) and "counsel" (the content of the advice or decision). The idea of the heavenly council has a rich background in ancient Near Eastern and biblical literature, and it was an easy step to use *sod* for the divine decrees. The word *uistarot* ("secrets") derives from the Hebrew root *str* ("hide," "conceal") and refers to what has been "hidden away." All three terms—*raz*, *sod*, and *uistarot*—convey the idea of the essential knowledge of heavenly or historical matters known to God and granted to humans only by divine revelation.

Biblical Usage. The biblical occurrences of *raz* are confined to the Aramaic sections of *Daniel* (2 and 4), a book that is well represented at Qumran both in the form it takes in the Hebrew scriptures and in writings related to it in language and content. The Qumran uses of *raz*, however, need not be regarded as directly dependent on *Daniel* as their source. They are probably better taken as parallels, though attention to the use of *raz* in *Daniel* illuminates greatly the pertinent Qumran texts.

According to *Daniel* 2, the Babylonian king Nebuchadnezzar demanded that his court sages tell him both his dream and its interpretation. The content of his challenge is called a *raz*, and it transcends the powers of human understanding (see *Daniel* 2.18, 2.27, 4.6). The Jewish courtier Daniel comes to understand and explain the *raz* only because the mystery was revealed to him in a "vision of the night" (*Du.* 2.19). The dream concerned a great statue and its destruction, and its interpretation (*peshet*) concerned the four empires (Babylonia, Persia, Media, and Greece) and their destruction as well as the indestructible and everlasting kingdom to be established by God for God's people, Israel. Daniel gives credit to God ("for there is a God in heaven who reveals mysteries," *Du.* 2.28), and even the gentile king comes to celebrate the God of Israel as "a revealer of mysteries" (*Du.* 2.47). The episode in *Daniel* 2 is important for understanding *raz* in the Qumran writings because in it *raz* pertains to the future course of history, transcends human understanding, and requires a revelation from God.

Usage in Qumran Texts. The Peshet Habakkuk (1QpHab) uses the term *raz* to refer to the words of the prophet in *Habakkuk* 2.2–3 and asserts that God has made known to the Teacher of Righteousness "all the mysteries of the words of his servants the prophets" (1QpHab vii.4–5). Just as God revealed to Daniel the king's dream and its interpretation (*peshet*), so God revealed to the Teacher the true meaning of the biblical prophecies. The text goes on to attribute the delay of the "last time" to the astounding character of the mysteries

of God (1QpHab vii.8) and to affirm that "all the times of God shall come to pass as he has decreed in the mysteries of his prudence" (1QpHab vii.13–14). As in *Daniel*, the word *raz* has a connection with the end of the present phase in human history and the establishment of God's reign in its fullness. But it transcends human understanding and needs divine revelation to be understood.

In the "Treatise on the Two Spirits" in the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community; 1QS iii.13–iv.25), the *maskil* explains the present success of the Angel of Darkness and those under his control as being "in accord with the mysteries of God" (1QS iii.23). But he also promises that God "in the mysteries of his understanding and in his glorious wisdom" has determined to destroy iniquity at the time of his visitation" (1QS iv.18). In the poem of the *maskil* near the end of the work, the speaker (1QS xi.3, 5) claims to have been illumined with the knowledge of the "mystery to be [come]" (*raz uilyelt*) and the "mysteries of his wonder" (or, "God's marvelous mysteries"). The content of these mysteries is clarified somewhat by parallel expressions in 1QRule of the Community: "your counsel . . . your holy design . . . the depth of your mysteries . . . the power of your might" (1QS xi.18–20). One of the *maskil's* duties is to instruct members of the community "in the mysteries of wonder and truth" so that they may "walk perfectly together, each with his neighbor, in everything revealed to them" (1QS ix.18–19). It appears that knowing the divine mysteries has an effect on how one behaves in the present, that is, one's ethical activity. That this knowledge has an esoteric character in the sense of not being intended for everyone, especially not the wicked, is suggested by the description of the children of light as displaying "prudence with respect to the truth of the mysteries of knowledge" (1QS iv.6).

In the War Scroll the trumpets of ambush are inscribed with the slogan "the mysteries of God are to destroy wickedness" (1QM iii.9)—an expression of the group's hope for the outcome of the cosmic and eschatological battle described in the work as a whole. The present success of Belial is attributed to "the mysteries of his enmity" (1QM xiv.9). Whether the permissive will of God or Satan's (limited) power is meant, the assumption is that all things, including the suffering and death of the righteous in the battle against Belial, take place in accord with the "mysteries of God" (1QM xvi.11). In "his marvelous mysteries" (1QM xiv.14) God can raise up (humans?) from the dust and expel heavenly beings from the divine council. Thus, in the exhortation to courage in the War Scroll (1QM xvii.4–9), the "sons of the covenant" are promised that "his mysteries will uphold you until he shakes his hand and fills up his crucibles" (1QM xvii.9).

The Hodayot scrolls connect the "mysteries" to God's activity in creating the heavenly lights (1QH' ix.11, 13

[i.9, 11]) and in allowing humans to proclaim God's glory and to praise his name (1QH^a ix.29 [i.27]). But the most distinctive contribution made by this work to our understanding of "mystery" at Qumran comes in those passages in which the speaker relates himself to the divine mysteries. Whether the "I" is the Teacher of Righteousness, the collective representation of the community, or some other figure is not clear. At any rate, the speaker claims to know the secrets of creation "from your knowledge because you have revealed to me marvelous mysteries" (1QH^a ix.21 [i.19]). He identifies himself as a "knowing interpreter in marvelous mysteries" (1QH^a x.13 [ii.11]). With regard to the speaker's role vis-à-vis the community, he affirms that "you gave me knowledge of your marvelous mysteries" (1QH^a xii.27 [iv.26]; see also 1QH^a xv.17 [vii.24]).

The concept of mystery is also used in Hodayot to deal with suffering and sin. The speaker claims that his opponents have rebelled and murmured against him "concerning the mystery you have hidden within me" (1QH^a xiii.25 [v.23]). He attributes their success against him to the "mysteries of transgression" (1QH^a xiii.36 [v.34]). The idea seems to be that God, in his wisdom, permits the children of darkness to do their sinful deeds. The speaker interprets his personal sufferings as a divine discipline: "For by the mystery of your wisdom you have chastised me" (1QH^a xvii.23 [ix.23]). Through the speaker, God has made known special knowledge to the "children of your good pleasure": "For you gave them knowledge in the council/counsel [*sod*] of your truth, and in your marvelous mysteries you taught them" (1QH^a xix.10 [xi.7]). As the recipient of the "mystery of your teaching" (1QH^a xx.13 [xii.10]), the speaker has the task of teaching others to understand "all your mysteries" (1QH^a xx.20 [xii.17]) and to make known God's glory "in the mysteries of your insight" (1QH^a xiii.13 [v.11]).

In these core documents from Qumran, the term *mystery* involves creation, the present, and the future. It is the divine plan or economy and has cosmic, ethical, and eschatological dimensions. It is a special knowledge revealed by God to his chosen ones through the instructor and/or the Teacher of Righteousness. It helps to explain the temporary success of the Angel of Darkness and his minions in the present, and it holds out hope of the ultimate vindication of the righteous. Knowledge of this mystery serves to guide and direct the behavior of the righteous in the present.

Raz Nihyeh. The expression *raz nihyeh* occurs about thirty times in Sapiential Work A—a wisdom instruction preserved in the wisdom apocryphon (1Q26) and Sapiential Work A from Qumran Cave 4 (4Q415–418, 423). The second element of the phrase (which is also found in 1QS xi.3–4) is the *niph'al* participle of the verb "be" (*hayah*).

The expression appears to have a future sense and should be translated "the mystery that is to be [come]."

In many cases *raz nihyeh* is prefaced by the preposition *b*, but it is difficult to determine whether this has an instrumental ("by") or local ("in" or "on") sense. The expression often appears with verbs in the singular imperative, usually in the context of the instructor's advice to his pupil: "test" (*bh'n*), "study" (*drsh*), "meditate" (*hgh*), "understand" (*lql*), and "look at" (*nbt*).

The content of *raz nihyeh* can be clarified to some extent by attending to its parallel expressions in Sapiential Work A: "all the ways of truth, and all the roots of iniquity" (Sapiential Work A^b, 4Q416 2.iii.14); "the birth time of salvation, and who is to inherit glory and iniquity" (Sapiential Work A^c, 4Q417 i.10–11); and "the inheritance of everything that lives" (Sapiential Work A^a, 4Q418 2.i.18). Meditating on *raz nihyeh* will help one to understand "the generations of mankind" (4Q418 77.2) and the "weight of the times and the measure" (4Q418 77.4). Such phrases indicate that the *raz nihyeh* involves creation, ethics, and eschatology. Applying oneself to it will give one knowledge about how to live in the present: "in righteousness you shall walk" (4Q416 iii.9); and "you shall know to discern between good and evil" (4Q417 2.i.7).

The parallel expressions suggest that the *raz nihyeh* is a body of teaching concerning the cosmos, proper behavior, and eschatology. Thus, it may have been a compendium such as the "Treatise on the Two Spirits" (1QS iii.13–iv.26), the "Book of Meditation" of the Rule of the Congregation (1Q28a i.6–8), or something like Book of Mysteries (1Q27, 4Q299–301), which uses the expression *raz nihyeh* in similar ways.

In Mysteries the future sense of the *raz nihyeh* is supported by the antithetically parallel phrase "the former things" and the synonymous expression "what will come upon them" (1Q27 1.i.3–4 and parallels). The use of the word *raz* with reference to the mystery of evil in the present occurs in the expressions "mysteries of transgression" (1Q27 1.i.2 and parallels) and "mysteries of Belial" (1Q27 1.i.6 and parallels). As in other Qumran texts, such phrases seem to refer to the permissive will of God in allowing evil to exist and even to flourish in the present. The "magicians skilled in transgression" who are challenged in Mysteries^b (4Q300 1.ii.1–5) are criticized for not applying themselves to the eternal mysteries: "For the seal of vision has been sealed up from you, and on the eternal mysteries you have not looked, and you have not come to understand knowledge" (4Q300 1.ii.2).

Mystery in 1 Enoch. That many manuscripts of *1 Enoch* were discovered at Qumran indicates its popularity there. This work also uses the terms *mystery* and *hidden things* to refer to the phenomena of the cosmos (*1 En.* 60.11, 71.4). It explains the existence of evil in the

world by attributing to the wicked and rebellious angels the revelation of the "everlasting secrets" to their earthly mistresses (*1 Enoch* 9.6; see *Gen.* 6.1–4). Enoch, having been granted access to the heavenly mysteries and having seen the holy writings (*1 Enoch* 103.2; see 4Q417 2.i.14–18), proclaims that he knows "this mystery"—the destinies of the righteous and the wicked at the last judgment. As in Sapiential Work A and the Mysteries, knowledge of the divine mystery serves as a guide for conduct in the present.

Mystery in the New Testament. The New Testament term *mysterion* shows many affinities with the uses of *raz* in the Qumran scrolls. In some cases *mysterion* refers to a puzzle or riddle to be solved (*Rv.* 1.20, 17.5; *Eph.* 5.32; *1 Cor.* 14.2), as in *Daniel* 2 and Peshet Habakkuk (1QpHab vii.4–5). The most common use of *mysterion* is with regard to the divine plan or economy (see *Col.* 1.26–27, 2.2; *Eph.* 1.9; *Rom.* 16.25; *Rv.* 17.7). Often it is synonymous with the "gospel" (*Col.* 4.3; *1 Tim.* 3.9, 3.16; *Eph.* 6.19), and sometimes it points toward a future (eschatological) action of God (*Rom.* 11.25; *1 Cor.* 15.51; *Eph.* 3.3). There is an esoteric aspect to the New Testament *mysterion*: "To you [Jesus' disciples] has been given the mystery of the kingdom of God" (*Mk.* 4.11). Paul describes himself and his co-workers as speaking "the wisdom of God hidden in mystery" (*1 Cor.* 2.7) and as "stewards of the mysteries of God" (*1 Cor.* 4.1). The use of the word *mystery* to describe God's allowing the presence of evil in the world is termed in *2 Thessalonians* 2.7 "the mystery of lawlessness."

Though there are many verbal and conceptual parallels with the Qumran "mystery" texts, the New Testament occurrences of *mysterion* also reflect the distinctively Christian theological conviction that in Jesus' person, and especially in his death and resurrection, there has been a decisive unfolding of the divine mystery in history. Nevertheless, the Qumran texts and related writings (*Daniel* and *1 Enoch*) provide a much more appropriate framework for understanding the New Testament "mystery" texts than do the Greek "mystery" religions.

DANIEL J. HARRINGTON

MYSTICISM. A term notoriously difficult to define, for purposes of this article *mysticism* is taken to refer to a type of religious praxis in which an individual engages in techniques specifically designed to give ecstatic access to the realm of the divine. In this narrow sense there is no evidence of mystical praxis in the communities represented by the literature of the Dead Sea Scrolls. Nevertheless, several texts from Qumran bear on related phenomena (the visionary ascents characteristic of many apocalypses, liturgical communion with angelic worshippers, and the disclosure of the mysteries of the chariot-throne of God). [See Apocalyptic Texts; Heaven; and Throne.]

Visionary Ascents. In ancient Jewish apocalypses the visionary often records an experience of ascent from earth into heaven, where he may be accompanied by an angelic guide, see the various structures and beings who occupy heaven (or multiple heavens), come into the presence of God, and receive a revelation, usually about the course of future events (e.g., *1 Enoch*, *2 Baruch*, *Apocalypse of Abraham*, *Testament of Levi*). [See Angels.] The oldest of these texts is *1 Enoch*, copies of which were found at Qumran, including portions of the text that describes Enoch's ascent to heaven (*1 Enoch* 13–16, Enoch^c 4Q204 vi). Enoch's ascent is presented as an intentionally cultivated experience. Having been asked by the fallen Watchers to take their petition to heaven, he sits next to "the waters of Dan" and reads the petitions until he falls asleep, whereupon he has a dream vision in which he ascends to heaven. The practice of incubating revelatory dreams at a holy place is attested already in second-mil-

lennium BCE literary texts (e.g., the Kirtu legend from Ugarit). Dan, the site of one of the ancient sanctuaries in northern Israel, would be such a holy place. [See Archaeology.] Rivers also are often mentioned in connection with mystical experiences (cf. the occurrence of Ezekiel's vision "by the river Chebar," *Ezek.* 1.1). Although the significance of rivers as a propitious site for incubating visions is debated, it may be that waters were thought to reflect the heavens above and so to provide a means of gazing into the mysteries of heaven. Enoch's ecstatic ascent is described as a "summoning" by clouds and mist, as he is carried by winds and hastened along by lightning flashes. The numinous quality of the heavenly palace is suggested by the description of it as composed of fire and hailstones, snow, and water, simultaneously hot and cold. Characteristically, Enoch is terrified to find himself in the divine presence (cf. *Ezek.* 1.28) and has to be lifted up by the divine command.

Three other texts from Qumran (like *I Enoch*, in Aramaic) contain accounts of revelatory dream visions, although only in one case does the vision apparently include an ascent. The Apocryphon of Jacob (4Q537) recounts a dream vision, presumably occurring at Bethel (cf. *Gen.* 28), in which an angel shows Jacob heavenly tablets concerning his future and the Temple that is to be built at Jerusalem, not Bethel. [See Jacob.] In the Visions of Amram^{a-l'} (4Q543–548), Amram sees two angelic beings, Melchiresha' and (presumably) Melchizedek, quarreling over him and receives instruction concerning the dualistic division of humankind into children of light and darkness. [See Amram, Visions of Amram.] In neither of these texts, however, is there an indication that the dream vision is intentionally brought about or incubated, or that it involves the transportation of the visionary to heaven. By contrast, the Aramaic Levi texts (1Q21, 4Q213–214b, 4Q540–541), although fragmentary, appear to refer to techniques of incubation (prayer, followed by sleep). [See Levi, Aramaic.] Although the mechanism of transportation to heaven is not described, there is reference to a mountain (Mount Zion?) upon which Levi stands, a mountain that reaches to heaven, where gates are opened and Levi presumably enters. [See Levi.]

All these texts are literary fictions describing the experiences of ancient and legendary characters and as such cannot be used as direct evidence for the existence of mystical praxis in late-Second Temple Judaism. However, Paul's reference to his own mystical ascent to Paradise where he heard "things that are not to be told, that no mortal is permitted to repeat" (2 *Cor.* 12.2–4) is clear evidence that such ascents were part of actual religious experience at least in some segments of Judaism. No evidence exists, however, for such practice at Qumran. The Aramaic texts discussed above are generally considered

to be literature read but not composed by the Qumran community. In the texts composed by the Qumran community there are references to a sense of communion with angels but no language that suggests the practice of ascent.

Liturgical Communion. Several passages in texts composed by members of the Qumran community speak of an experience of entering into communion "with the congregation of the sons of heaven" (Hodayot^a from Cave 1 at Qumran, 1QH^a xi.19–23 [iii.18–22], xix.11–13 [xi.8–11]; Rule of the Community from Cave 1 at Qumran, 1QS xi.7–8). [See Hodayot; Rule of the Community.] In one instance the language used to express this conviction echoes that of visionary ascent, as the speaker describes being lifted up from Sheol and Abaddon "to an everlasting height" (1QH^a, xi.19–20 [iii.18–19]); but the description appears to be figurative rather than literal, as in Paul's account. These passages probably refer less to specific experiences than to convictions about the status of the sect as an elect body integrated into the lot of the angelic hosts. The Damascus Document, for instance, excludes the physically and mentally impaired from the community "because the holy angels are in its midst" (Damascus Document CD xv.15–17, Rule of the Congregation 1Q28a ii.3–9; cf. War Scroll, 1QM vii.3–7). [See War Scroll.] This language is dependent upon *Leviticus* 21.16–21, which refers to qualifications for priestly service in the sacrificial cult.

A somewhat more vivid account of access to the heavens is found in a hymn of self-glorification (War Scroll^a 4Q491), part of a copy of the War Scroll from Cave 4 at Qumran. In this text the speaker asserts that he has been given "a mighty throne in the council of the gods," where he claims to have "taken my seat in the [council] in heaven." Although Morton Smith (1990, pp. 187–188) has argued that the text should be understood in relation to visionary ascent traditions, War Scroll^a says nothing about the techniques of ascent or about the revelations characteristically given to such visionaries. Instead, analogously to the 1QHodayot^a, the text uses heavenly enthronement imagery to assert a claim about the status of the speaker, who may plausibly be the priestly Messiah who officiates in the eschatological war (see Collins, 1995, pp. 148–149). [See Messiahs.]

The analogy between the community and the priests who serve in the Temple suggests that the distinctive sense of communion with the angelic hosts in the Qumran community is developed not so much from the apocalyptic ascent tradition as from priestly and temple traditions. [See Temple.] Johann Maier (1964) argues that there was a tradition of priestly mysticism based on the understanding of the Temple as the place of God's presence and so, uniquely, the place where heaven and earth

intersect. Already in the prophetic vision in *Isaiah* 6 there is an ambiguity or, perhaps better, a blurring of the heavenly or earthly locus of the temple in which the vision occurs. Little evidence exists, however, to substantiate the existence of a developed tradition of priestly mysticism, although numerous texts assert the correspondence between earthly and angelic priests (e.g., *Jub.* 31.13–14; *Testament of Levi* 2–5, 8) and common service with the Angels of the Presence in the heavenly temple is part of the eschatological expectation at Qumran (see Rule of the Blessings 1Q28b). [See Priests; Rule of the Blessings.]

Liturgical traditions, however, do provide a basis for the experience of common worship with angels and thus for a type of quasi-mystical praxis. Already in biblical psalmody, references occur to the joining of angelic and human praise (Psalm 148, Psalm 150; *The Song of the Three Children*). Later, the Qedushah de-Yotser in the synagogue liturgy explicitly incorporates a vivid description of the praise uttered by the ministering angels, the celestial 'ofannim (wheels), the holy hayyot (creatures), and the seraphim as part of the human act of praise, thus creating an experience of common worship with the heavenly beings. Such a cultivation of liturgical communion with the angels is extensively developed in the Songs of the Sabbath Sacrifice, a text found in multiple copies at Qumran (4Q400–407, 11Q17) and in one at Masada (MasIk). Probably a presectarian composition, the Songs of the Sabbath Sacrifice comprise a liturgical cycle for the first thirteen Sabbaths of the year, to be recited presumably at the time of the Sabbath Musaf offering. The tradition of coordinating song with sacrifice is attested in *Chronicles* (2 Chr. 29.27–28). Since the boundary between heaven and earth was considered to be especially “permeable” at the time when the smoke of offerings went up to God, it was considered a propitious time for prayer (see *Jdt.* 9.1, *Lk.* 1.10, *Josephus, Against Apion* 2.23; B.T., *Ber.* 26b). Similarly, it would be a suitable time for an act of worship that cultivated a sense of being present in the heavenly temple and witnessing angelic worship. Moreover, the Sabbath itself, as a holy day observed by the angels and by Israel (*Jub.* 2.18), was considered the distinctive occasion for common praise with the angels (Words of the Luminaries^{a-c} 4Q504–506). [See Sabbath; Words of the Luminaries.]

Since there is no indication that the Songs of the Sabbath Sacrifice functioned as a technique for ecstatic or dissociative experience, they are not, technically speaking, mystical texts. Nevertheless, they are crafted, both individually and as a cycle, to produce an intense religious-aesthetic experience of worship in the heavenly temple. Each song begins with a call to praise God addressed to the angels, so that human praise and angelic praise are intimately interrelated. Within the cycle three

distinct sections occur, songs 1 through 5, songs 6 through 8, and songs 9 through 13, each section distinguished both by content and by style. The first five songs describe and praise the angels who serve as priests in the heavenly temple. The style is characteristic of late-Second Temple poetry, parallelistic, but somewhat more free than biblical poetry. The central songs, 6 through 8, which form an initial climax for the cycle, contain highly repetitious and formulaic structures. The sixth and eighth songs are constructed of long formulaic accounts of the praises and blessings offered successively by each of the “seven chief princes” and the “seven deputy princes,” each account highlighting the number seven in its formulas. The central, seventh song begins with a call to praise addressed to each of seven angelic councils, followed by an account of the animate heavenly temple itself bursting into praise, and concluding with an account of the inner shrine of the heavenly temple, the throne of God, and the praises uttered by the chariot thrones and their attendant cherubim and 'ofannim (wheels). The final group of songs, 9 through 13, contains a progressive description of the heavenly temple and the praise uttered by its various structures, culminating in a description of the divine chariot-throne and the angelic high priests. This section of the Songs of the Sabbath Sacrifice is written in a style that features long construct chains in nominal or participial sentences, with few finite verbs, apparently an attempt to create a numinous style befitting the subject.

The fascination with angelic worship so evident in the Songs of the Sabbath Sacrifice is attested also in apocalypses that recount descriptions of angelic attendance upon God and the hymns sung by the angels (e.g., *1 En.* 39; *Apocalypse of Abraham* 17). Although little is known about liturgical and ritual practices by which human worshipers attempted to experience such angelic ceremonies, it may be such practices that Paul refers to when he cautions the Colossians not to be “disqualified by the decisions of people who go in for self-mortification and angel worship and access to some visionary world” (*Col.* 2.18).

Chariot-Throne. Late antique and early medieval Jewish communities did give rise to a genuine mystical literature, known as *merkavah* (“chariot”) or *heikhalot* (“palaces”) mysticism (see esp. *Ma'aseh Merkavah* and *Heikhalot Rabbati*). Although the extent to which this was a literary phenomenon or a genuine religious praxis is still debated, it seems certain that there was some systematic attempt to cultivate ecstatic experiences of the heavenly realm, particularly the immediate presence of God, which was imaged in terms elaborated from Ezekiel's vision of the chariot-throne. Although it is not possible to trace a direct line of influence from the description of the *merkavah* in the Songs of the Sabbath Sacrifice to later

merkavah texts, these compositions nevertheless belong to the same complex stream of religious tradition. Certain types of general continuity may be indicated. Much of the early Jewish literature concerning the *merkavah*, for instance, reflects exegetical interpretation of Ezekiel's vision of the chariot-throne, concerned in particular with the way in which the creatures of the *merkavah* generate the sounds of praise. So, too, the description of the *merkavah* in the twelfth of the Songs of the Sabbath Sacrifice is largely generated by a systematic attempt to explicate how the creatures of the *merkavah* praise God.

As striking as the similarities, however, are the differences. One of the distinctive features of the *merkavah* or *heikhalot* tradition as it is found in the Similitudes of Enoch (*I Enoch* 37–71), in the synagogue liturgy (the Qedushah de-Yotser and the Qedushah de-'Amidah), and in *Ma'aseh Merkavah* and *Heikhalot Rabbati*, is the interest in the hymns sung by the angels and by the attendants of the chariot throne. It is just this feature, however, that indicates the complexity of the relationship between the Songs of the Sabbath Sacrifice from Qumran and the later mystical literature. The Qedushah, the angelic hymn based on *Isaiah* 6.3 and usually complemented by the blessing from *Ezekiel* 3.12 ("Holy, holy, holy is the Lord of Hosts . . . ; blessed be the Glory of the Lord from His place"), is the centerpiece of the heavenly worship as described in *I Enoch* 39 and in the synagogue liturgy, and it is a regular feature of the angelic hymns cited in the *heikhalot* literature. Yet the Qedushah is conspicuous by its absence from the Songs of the Sabbath Sacrifice. Nor is there any other indication of elements from Isaiah's vision in the Songs of the Sabbath Sacrifice: no seraphim and no description of the throne as "high and lifted up," a formula that appears often in *heikhalot* hymns. Such differences are scarcely accidental. At the least it points to two divergent streams of tradition and possibly to a polemical rejection by the authors of Songs of the Sabbath Sacrifice of the tradition that set the recitation of the Qedushah at the center of the representation of angelic song.

The Songs of the Sabbath Sacrifice also have different emphases than do other *heikhalot* texts. The representation of heaven as a temple served by angelic priests, central to the Songs of the Sabbath Sacrifice, is not prominent in later *heikhalot* texts. Whereas the *heikhalot*

tradition contains the texts of long hymns praising God, Songs of the Sabbath Sacrifice are much more concerned with describing the angels in the act of praising God than they are with quoting the words of praise uttered by the angels. Stylistically, although some general comparisons can be drawn, the techniques of composition are not strikingly similar between the Qumran Songs of the Sabbath Sacrifice and the later *heikhalot* hymns.

N

NABATEAN. The form of Middle Aramaic spoken by Nabatean nomads (Greek *Nabataioi*). Their kingdom was called *Nbtw* (Aramaic), *Nabatene* (Greek), or *Nabataea* (Latin). They lived in the area to the east and south of Judea, roughly defined by Hejrah in the south and Damascus in the north, by Dumah and the Wadi Sirhan (which forms part of the border between modern day Jordan and Saudi Arabia) in the east and by Rhinocolura (modern-day El 'Arish) in the west. The Nabateans emerge in history toward the end of the fourth century (about 312 BCE), but inscriptions using their language begin to appear only about 150 years later. During their heyday, Petra was their main city, halfway between the Dead Sea and the Gulf of Aqaba (possibly = the older *has-sela'*, "The Rock," in Edom, *Jgs.* 1.36, *2 Kgs.* 14.7). From it have come the vast majority of Nabatean inscriptions, mostly of a funerary or votive nature. Many, however, come also from Mada'in Šalih in Saudi Arabia and the Hawran and from caravan routes leading to Arabia, Judea, the Sinai Peninsula, and the eastern Delta of Egypt. Some literary and documentary texts written in Nabatean have come from caves in the Judean Desert.

The Nabateans were governed by kings, five of whom can be dated almost with certainty: Maliku (Malchus) I, 59/58–30 BCE; 'Obodat (Obodas) III, 30–9 BCE; Hāriṭat (Aretas) IV 9 BCE–40 CE; Maliku (Malchus) II, 40–71 CE; and Rabb'il (Rabbel) II, 71–106 CE, when Nabatean land became part of the Roman *provincia Arabia*. At least six other earlier kings are known, but their dates and order of succession are disputed: Hāriṭat (Aretas) I, c.168 BCE (mentioned in *2 Mc.* 5.8); Rabb'il (Rabbel) I, circa ?; Hāriṭat (Aretas) II, 120/110–96 (who may be the same as *Rex Herotimus* in M. Junianus Justinus, *Epitoma Hist. Phil.* 39.5.5–6); 'Obodat (Obodas) I, 96–85; Hāriṭat (Aretas) III, 85–62; and 'Obodat (Obodas) II, c.62/61–59. The two best known of the Nabatean kings were Maliku I, notorious for his wars with Judea, and Hāriṭat IV, who is the King Aretas in *2 Cor.* 11.32 and whose daughter (name unknown) was married to Herod Antipas, who later repudiated her to marry "Herodias, his brother's wife" (*Lk.* 3.19; cf. *Mk.* 6.17). Inscriptions that mention him call him *rahem 'ameh*, "lover of his people."

Nabatean as a dialect is a local form that developed from Standard or Official Aramaic and was used in the

last three centuries BCE and the first three or four centuries CE. Some inscriptions written in it preserve archaisms derived from Standard Aramaic (e.g. *hw* and *hy* as third singular personal pronouns [instead of *hw'* and *hy'*]; *-lm* as the third plural masculine pronominal suffix [instead of *-lm* in contemporary dialects]; *zy* and *znh* as the relative and demonstrative pronoun [instead of *dy* and *dnh*]). The usual *matres lectionis* ('*h,w,y*.) are found, mostly in final positions, but they are sparsely used. There are no distinctive third plural feminine forms of the verb. The sign of the direct object is not *l*, as in other contemporary dialects, but *yt-*; the latter is used only with suffixes, never alone preceding a noun object. The causative form of the verb is only rarely *haphel*, being succeeded already by 'aphel forms. *Nun* at the end of a closed syllable is rarely assimilated to the following consonant.

Nabatean is, however, more marked by the incidence of Arabic words in its vocabulary, which other contemporary dialects do not share (e.g. *wld*, "child" [*walad*]; '*l*, "tribe" [*'āl*]; '*hr*, "descendants" [*'ahar*]; the preposition *py*, "in" [*ʔī*]; and occasionally the article '*l* [*'al*], especially in proper names). This incidence has suggested to some scholars that the Nabateans were Arabs who adopted the form of Aramaic used as the *lingua franca* during the time of Persian domination. Nabatean later borrowed a number of technical Greek words into its vocabulary ('*ptpy*' = Greek *epitropeia*, '*strig*' = *stratēgos*, '*hprk*' = *hyparchos*, '*klyrk*' = *chiliarchos*, '*qntvri*' = *kentyriōn* [actually Latin *centurio*]). Some inscriptions are bilingual, Greek/Nabatean or Nabatean/Arabic (sometimes written in Nabatean script).

Nabatean texts, on both stone and papyrus or skin, are written in a distinctive script, which developed from the earlier Phoenician and Aramaic mode of writing (see Birnbaum, 1956). It eventually influenced the writing of classical Arabic. The script varies slightly according to the locale in which the inscription is found.

NAMES AND NAMING. The personal names of individuals, mostly Jews, found in the documents from the Judean Desert belong to the social milieu of Jewish Greco-Roman Palestine. The basic naming tendencies and their documentation fit well with the general trends prevalent in contemporary documents such as the writings of the first-century CE Jewish historian Josephus, the New Testament, early rabbinic (tannaïtic) literature, and epigraphic documentation (primarily ossuary inscriptions from Jerusalem and the vicinity).

Sources. Personal names are almost nonexistent in the Qumran literature. More than 90 percent of the thousand or so personal names mentioned in Judean Desert documents and published thus far are found in the legal and personal documents of the rebels from the Bar Kokhba Revolt, written on papyri and discovered in caves in the wadis of Murabba'at, Hever, Mishmar, Şe'elim, and, re-

cently, in a cave overlooking Jericho. Some documents from these locations were acquired on the antiquities market.

Personal names are also abundant on ostraca (fragments of inscribed pottery) from the fortress of Masada and on ostraca and inscriptions from the fortress of Herodium, both located in the Judean Desert. The Herodium inscriptions are included in this survey because they were probably scribbled on the walls by the same people documented in the other Judean Desert writings. Herodium, a fortification built by King Herod, is mentioned in the Murabba'at documents as a stronghold of the Bar Kokhba rebels.

The individuals mentioned on the papyri are usually either the owners of the documents or witnesses affirming their legality, or the senders or recipients of correspondence. Most are Jews. Persons mentioned on ostraca may have had varied functions. For example, the eleven lot ostraca from Masada may record the names of the men who participated in the final suicide pact of the defenders. Other ostraca may have served as a form of payment coupons on Masada; still others are sherds (fragments) of vessels, the names implying ownership or manufacture label. Most of the Herodium inscriptions are common graffiti, indicating the urge of the people who produced them to sign their names as evidence of their having frequented the site.

Languages. Hebrew biblical names are by far the most popular personal names in the Judean Desert documents, but the pool of names in use was substantially smaller than the range available in the Hebrew Bible. The names used do not include Abraham; his son Isaac; Moses, the lawgiver (but see Mur 91); Aaron, the first priest; or David, the first king. On the other hand, the name of Ishmael, Abraham's rejected son, seems to have been singularly popular, occurring six times in the Judean Desert documents. The name of the third patriarch, Jacob, was in use (thirteen occurrences), as were the names of some of his sons (Simon, seventy-five occurrences; Levi, six; Judah, forty-three; Joseph, sixty-eight), which were extremely popular. The names of minor biblical figures were also popular: Jonathan (twenty-three), Saul (eleven), Yohanan/John (forty), Mattathias/Matthew (sixteen), Hanan/Hananiah (thirty-two), Joshua (forty-one), Eliezer/ Eleazar (fifty six), Samuel (four), Hillel (five), Zachariah (four), and Miriam (six). It seems, on the whole, that the popularity of six of the most common biblical names is associated with a different historical saga—not the Bible but the Hasmonean Revolt. The names of the five Hasmonean brothers Yohanan, Simon, Judah, Eleazar, and Jonathan—and to a lesser extent the name of their father, Mattathias—were singularly popular. Biblical names appear both in Greek and in Hebrew script.

Greek names were also in use, but they were much less popular. In the Judean Desert documents no preference for specific Greek names is evident. Alexander, the most popular Greek name documented for Palestinian Jews, appears only twice in these documents (P. Yadin 15; Mur 103). Names with the elements "theo" (God) and "dora" (gift), also popular with Palestinian Jews, seem to be somewhat more common (Mur 30, 39; 5/6Hev 11; see also Mas382, 573, 902; Herodjum 13, 17). No Greek name is documented more than twice.

It is worth noting, moreover, that, out of forty one clearly identifiable Greek names, nineteen (almost half) come from ostraca on Masada and inscriptions and ostraca from Herodium. The bearers of these names may be non-Jews. The same is true for 5/6Hev 11, in which most of the witnesses to the transaction between Judah, Babatha's second husband, and a centurion by the name of Magonius Valentius bear Greek and Latin names, and so, presumably, are non-Jews. [See Babatha.]

Greek names are documented both in Greek and Hebrew script. It cannot be deduced with any certainty whether Greek names were preferred by the higher, more hellenized echelons of Jewish society, although this is the usual interpretation. In one case such a claim may be substantiated. The name Jason, both in Hebrew and in Greek, is recorded on a number of jar sherds found on Masada (Masada 480-483, 878-880), obviously demonstrating that this Jew, who had a Greek name, was a wealthy manufacturer, whose products were purchased by King Herod and deposited in his fortress.

Although Palestinian Jews spoke Aramaic, Aramaic names were not part of the common name pool for Jews of the period. Nevertheless, many Hebrew names tended to become aramaized toward the late second century CE. Thus Hananiah (*ḥnnyh*) became Haninah (*ḥnyh'*), Joseph became Yosi (*ywsy*), and Judah became Yudan (*ywdn*). A trend in this direction is already manifest in the Judean Desert documents. Thus Babatha's second husband, who is usually designated Judah, is referred to once (5/6Hev 16) as Yudanes (see also Mur 18); the forms Hananiah and Haninah are both recorded, and other examples are also available.

Latin names are much more common in the Judean Desert documents than they are in contemporary sources. Thirteen male Latin names and one female Latin name (Julia Crispina in P. Yadin 20 and 25) are recorded. The names are usually written in the Greek alphabet, although the name Gabinus is recorded in Hebrew letters (*gbyns*). Latin names include Nero (Mur 92), Gaius (34Se 5; Avi-Yonah et al., 1957, p. 60), and Julius (Mas 748), common in the Roman imperial family; Agrippa (5/6Hev 52), used by the Herodians; and others such as Aurelius (Mur 116) and Saturninus (Mur 114). One name appears

on an ostrakon from Masada in Latin script, but it is the Hebrew Joseph (Mas 936).

Nicknames. Nicknames, a common phenomenon, seem to result from the abundance of persons bearing the same personal name and the lack of family names. A father's name as a definitive identifier was not always useful, because fathers also often bore very common names, and a combination of a father-and-son name could easily appear more than once in the same community. Nicknames often appear as fathers' names (x son of y, y being a nickname) and can be distinguished by various identifiers:

1. Unusual and often derogatory meanings. In the Judean Desert documents an example of this would be Simon son of *stn* (Satan; 5/6Hev 44).
2. The use of Aramaic, which was the spoken language of the Jews at the time but does not usually serve as a pool for personal names. A good example for this would be Simon son of *dqnh* (the beard; XHev/Se 9).
3. The use of an unusual (in fact singular) father's name for a very common personal name, such as Hillel son of *grys* (Garis; Mur 24) or even Simon son of *kwsb'* (Kosiba; Mur 24, 43, 44), which is the real name of the legendary Bar Kokhba.
4. Occasionally the use of the article *he'* in the father's name, making it unlikely that this is a personal name, for example, son of *hms'n* (the traveler; Mur 74).
5. The suggestion of a person's occupation by his nickname, for example, *qsb'* (butcher; Mas 512).
6. The identification of a person by his place of origin. Some examples are *idmyrh* (of Palmyra; Yadin, 1961, p. 42), Geschalan (of Gishala; Mur 92), or Cyrenai (of Cyrene; Mur 90).

Only in Greek documents are nicknames recorded as such. Thus, when signing in Hebrew, Babatha's husband signs *yhwdh br ktwsyn* (Judah son of Khethusion; P. Yadin 15), but in Greek he is identified as *Ioudas Eleazarou tou kai Khthousiontos* (Judah son of Eleazar, also called Khethusion; P. Yadin 18). Salome daughter of Levi (*Salome Leoue*) is identified in her marriage contract as *Salome kaloumenēn Komaise* (Salome, nicknamed Komaise; 5/6Hev 37).

Family Names. Family names were uncommon, except among priestly families, whose names sometimes were after an ancestor and sometimes simply a reference to the priestly order (*1 Chr.* 25.7-18) to which they belonged. Two individuals recorded in the Judean Desert documents are identified by their affiliation with one of the priestly families (Yakim, Mur 74; Eliyashiv, Mur 20). A woman of Masada, identified as *brt qir'* (daughter of Kathra) may have belonged to the infamous priestly family of Kathros (cf. B. T., *Pesahim* 57a).

Gender. Women's names are greatly underdocumented, and in the Judean Desert documents, despite the fact that they include two women's personal archives (Babatha and Salome Komaise), this situation is even more marked. In general, named women constitute about 10 percent of documented persons at the time (in burial inscriptions 23 percent). In the Judean Desert corpus of names, they constitute 5.53 percent (777 men to 43 women). This discrepancy results from various factors: many of the names documented are those of courtroom personnel; witnesses, guardians, etc., usually were not women in the Roman courts of the province of Arabia or in the Jewish courts of the Bar Kokhba era (but see Julia Crispina; P. Yadin 20, 25). Furthermore, women and men use a male relative for identification (usually the father, but, in the case of women, sometimes the husband). Thus for each man recorded, the name of another male appears, but for each documented woman, not only is no other woman recorded, but usually another man's name appears. Full names are normally used in legal documents, and so most women in the Judean Desert repository are documented with a male relative. Sometimes women are identified only by a male relative, with no personal name. Examples of this in the Judean Desert documents are several cases of pottery sherds from Masada that record the name of a woman's father, although the vessel had obviously belonged to the daughter (bat Damali, Mas403; bat Kathra, Mas405).

In the inscriptions from Herodium a large number of women with Greek names are mentioned. The excavators suggested that some of them were scribbled by soldiers stationed at the site as semipornographic expressions. Most of these women have Greek names: Tryphera (Herodium 9), Thekla (Herodium 34), Heraklea (Herodium 37), although one of them has the telling Hebrew name Shelamzion (Herodium 9) and another the biblical name Ruth (Herodium 25). Whether the women referred to in these inscriptions are real or imaginary, Jews or gentiles, harlots or sweethearts is unclear. What is obvious is that they add to the women's name repository, and without them women's names would be even more strongly in the minority.

In the Judean Desert documents, as in other contemporary sources, the three most common names for women are Salome (eleven occurrences), Shelamzion (five), and Mariame (seven), accounting for more than 50 percent of all female names. These documents, however, add some new names to the limited pool known to scholars to date. Thus the name Babatha is new, its meaning or origin unclear. The biblical name Tamar is recorded for the first time since biblical times (P. Yadin 16), and another new woman's name is *l'wwn* (Leuthon; Mur 21).

Orthography. The orthography of the names in the Judean Desert documents matches the contemporary material in other sources. Thus the Hebrew names Yohanan, Jonathan, and even Joseph, in contrast to the standard biblical spellings, always have an additional *he'* in them (*yhwynn*, *yhwunn*, *yhwsp*). In the Judean Desert documents only four (out of sixty-eight) Josephs, three (out of twenty-three) Jonathans, and three (out of forty) Yohansans are written without it. Similarly, and at variance with the biblical text, Joshua is written without the *he'* (*yshw'*). The biblical form *yhwsh'* is not documented even once.

The most common Hebrew names were transliterated into Greek in a standard way. Thus Judah is Ioudas, Yohanan is Ioanes, Joseph is Iosepos, Jesus is Iesous, and Miriam is Marjame. Some variations exist, but in general these equivalences were employed.

A note on two special cases is in place. It has often been pointed out that the name Simon was Greek and was not a transliteration of the Hebrew *shim'on*. This notion is derived from the use of other transliterations for the Hebrew name in literary compositions such as the Septuagint. However, the Judean Desert documents prove that Simon almost always was *shim'on*. This is obvious from several documents in which persons by that name are listed both in Greek and in Hebrew (P. Yadin 21, 22); the same is attested even for Simon bar Kokhba (Kosiba) himself (compare Mur 24 with P. Yadin 52).

The name Shelamzion, however, despite its popularity, did not have a standard transliteration into Greek. In the two instances in which this name is recorded in Judean Desert papyri, the literary tradition of transliterating the cluster "mem/sadi" with the Greek letter *psi* rather than the epigraphic tradition of using *mu/sigma* is followed (5/6Hev 18, 19, 20; XHev/Se Gr. 2).

Qumran. The documentation of names for the Qumran covenanters is extremely limited. Despite the enormous amount of literature produced by the group, and the fact that the regulations of the group provide for the preparation of a register of all the members (1QS v.23), no such registers have been found. Only one fragmentary document, designated Rebukes by the Overseer (4Q477), records the names of three individuals reprimanded by the overseer: two Hananiahs (one of them perhaps son of Simon, the other nicknamed Notos), and one Yohanan. Other names, presumably of Qumran members, were discovered incised on jars from Qumran: two Yehohanans (de Vaux, 1954, plate xija; Bar-Adon, 1977, p. 21) and one Josiphus in Greek on a clay stamp (de Vaux, 1954, p. 229). Scraps of legal documents from Cave 4 were also published, on one of which (4Q520) the name 'ly (Eli) was deciphered, but it is doubtful whether these docu-

ments belonged to the Qumran covenanters. They may have been deposited later in the cave by refugees of the Bar Kokhba Revolt, as were the other legal documents found in the Judean Desert (Yardeni 1997: 283).

Nabateans. The Babatha archive and other related documents include the names of fifty-four Nabateans who participated in the legal life of Nabatean and, after 106 CE, Roman Ma'oz. They appear in documents both in Nabatean and in Greek. The Nabateans served mainly as witnesses but are also recorded as guardians, landowners, sellers, and buyers. Even on Greek documents they usually signed in Nabatean script. Their names are an important contribution to the onomasticon of early Arabs. The names are usually regular Nabatean names such as *nirw* (Amaro; P. Yadin 16), *'bd'bdt* (Abdabdath; P. Yadin 12), or *'bdhrtt* (Abdharthath; 5/6Hev 3). Strikingly, one Nabatean, a certain son of Abdabdath, was actually called by a Hebrew name, Yohana (aramaization of Yohanan; P. Yadin 14, 16, 20, 22), indicating the close proximity of the two cultures and the influence of one culture in the region on another.

Lists of Names. One literary genre in which personal names appear in the Judean documents is lists. The functions of these lists are varied and can only be guessed. Some of them may be the names of soldiers in certain military units, as lists found in Nahal Se'elim suggest (34Se 4, 5, 6); they may be lists for food rationing, as some accounts of cereals and vegetables from Wadi Murabba'at (Mur 8, 10, 90–92, 94) and some miscellaneous ostraca from Masada (Mas420–421) imply, or payrolls, as some lists (Mur 89) appear to be; or they may have different meanings.

Two lists of names found in the Judean Desert documents undoubtedly predate the rest of the corpus. One was found in a cave above Jericho and is dated to the Persian period (fourth century BCE; Eshel and Misgav, 1988, p. 164). This list apparently is a payroll. The second is a palimpsest found in the Murabba'at Cave. This document is a list of names inscribed on top of an older letter, both written in ancient Hebrew script and dated by the editor to the eighth century BCE. It apparently lists supplies to be distributed to certain persons. Who they were and how the document came to be deposited together with the documents of the Bar Kokhba refugees remains a mystery.

Finally, two potsherds, both inscribed in Hebrew with the same name list according to the order of the Hebrew alphabet, were also discovered in the Judean Desert: a complete list turned up on the antiquities market, and its publisher (Puech, 1980, p. 125) believes that it was found in Herodium; and a fragmentary list was found on Masada (Mas008–009). The names on the lists are biblical

but do not coincide with popular names of men of the day. The lists seem to be a set writing exercise for apprentice scribes.

Dignitaries. The Qumran documents, as well as the other Judean Desert documents, also record the names of important historical figures of their day, both Jewish and non-Jewish. The names of several Hasmonean royalty are mentioned. King Jonathan (Yannai; Alexander Jannaeus) is mentioned in a hymn in his praise (4Q448); his wife Shelamzion (Alexandra) and his son Hyrcanus are mentioned in the fragmentary Calendrical Document C^a (4Q322), and Aemilius (Marcus Aemilius Scaurus) is mentioned in Calendrical Document C^d. On Masada the name of the leader of the rebels, ben Yair, may have been discovered inscribed on a potsherd (Mas437) and perhaps also the name of the high priest Hananiah (ben Nadbajos; Mas461). King Herod's name is recorded on several jars from Masada (Mas804–17). The most important name found in the Judean Desert documents of the Bar Kokhba period is that of Simon ben Kosiba, the leader of the revolt, because it confirmed both the personal name and the correct nickname of that person.

The names of non-Jewish rulers are also recorded, including those of Roman emperors and consuls used in the Babatha archive and elsewhere for dating purposes. Peshar Nahum (4Q169) documents the names of two Seleucid kings, Antiochus and Demetrius, and in one of the Babatha documents the Nabatean king Rabel is mentioned (5/6Hev 3).

TAL ILAN

NAMES OF GOD. The later books of the Hebrew scriptures, originating from postexilic times, show a tendency to avoid the Tetragrammaton YHVH, the four-letter name of the God of Israel. In its stead, the so-called Elohistic part of the Psalter (Psalms 42-83) uses *Elohim* to replace YHVH. In the *Book of Job* the Tetragrammaton was mostly avoided and *Shadday* or *El* was used instead. In the books of *Daniel* and *Ezra* the Israelites speak of the "God of Heaven" (*Ezr.* 5.11; *Dn.* 2.18), a designation which may have been influenced by Persian usage—the Persians designated their supreme God Ahuramazda with the title "heavenly God." In the Septuagint version of *Leviticus* 24.16 (dating to the middle of the third century BCE), one finds for the first time the explicit instruction not to mention the name of the Lord. The underlying Hebrew text merely threatens punishment in case of blaspheming the name.

From the time when the *Book of Genesis* was translated into Greek, Hellenistic Judaism rendered the name of God with *Kyrios* "Lord." Until now it has not been clear whether this was a specific development in the communities in Alexandria, possibly influenced by the use of Aramaic *Mare'* "Lord." There is also the possibility that the adoption of a Palestinian custom took place, which later led to the well-known reading *Adonay*, "Lord" for the Tetragrammaton. There is a rabbinic notice which fits this conjecture by claiming that since the sudden death of the high priest Simon the Just (c.180 BCE), the priests did not pronounce the holy name when saying the blessings

(B.T., *Yoma* 39b). But it must be stated that the Tetragrammaton was constantly used even in later times. We can find it in the Greek biblical manuscripts Papyrus Fouad 200 and 8Hev1 (Greek Minor Prophets) as a secondary replacement for *Kyrios* "Lord." The text in 4Q Septuagint Leviticus^b even reads *IAO* as a transcription of the name, which presumably represents an old tradition of pronouncing the Tetragrammaton. Other scholars think that either *IAO* or the (Paleo-)Hebrew Tetragrammata are the original custom of the Septuagint translators (Stegemann, 205). As an extrabiblical tradition, the ancient magical papyri should be mentioned, in which the names *Iao*, *Sabaoth*, and *Adonay* were used in incantations and for magical purposes.

The Name YHVH in Biblical Texts and Citations.

There are several instances of the special position of the holy name in the scrolls from Qumran. The Rule of the Community vi.27 calls it "the name honored above all," and according to the Rule of the Blessings iv.28 and the War Scroll xiv.8, 12 the name is the object of the adoration of believers. The Damascus Document xx.34 states that those will be saved who take refuge in the holy name. Therefore in the Cave 4 Sapiaential Work A^a fragment 81.12 the members of the community can be described as "all those called by his holy name."

The scrolls take the holiness of the name into account in several ways. In biblical manuscripts or when citing biblical texts, the Tetragrammaton was either written in regular Hebrew square script (for example 1QIsaiah^b) or it could be specially marked. The methods of special markings include replacement by four dots (for example, in 1QIsa^a, correction to Is. 40.7) or the use of Paleo-Hebrew characters exclusively for the Tetragrammaton in an otherwise square script scroll (for example, in the 11Q Psalms^a, even in noncanonical psalms; see also the Peshar Habakkuk when citing the biblical text). Other designations of God were written in Paleo-Hebrew characters as well, also rarely in nonbiblical contexts: see for example *El* "God" in fragment 3 of the 6QDamascus Document and fragment 6 of the 6QHymn. In 4QIsaiah^c all the names of God were written in this script; therefore a late date of origin has been considered for this manuscript (Skehan, 1980, p. 28).

Another interesting observation is that in biblical contexts, for instance in citations or translations, the Tetragrammaton could be entirely avoided or replaced by other designations. The first alternative can be deduced from the fact that the name has often been left out. Instead of it, the conjugation of the verb or an added suffix refer to God (see, for example, the Damascus Document vii.11f.). In other passages the pronoun *hu'ah* "he" was used for God. From this custom the strange *hw'h'* in the Rule of the Community viii.13 is often explained as a

scribal error. As replacements for the Tetragrammaton, one can find *Elohim* "God" (4QCommentary on Genesis^a, 4QGenesis-Exodus^a; this reading cannot be considered original, versus Davila), *El* (as, for example, in 11QMelchizedek 11.11) and Aramaic *Elaha'* (11QTargum of Job), both terms meaning "God." Several texts can be added, in which *Adonay* "Lord" may take the place of YHVH. Thus, in those passages where five dots may be interpreted as replacing the Tetragrammaton (see, for example, 1QIsaiah^d, correction to 42.6), the latter can be regarded as a reference to *plene*-written *Adonay*. In other texts *Adonay* is written instead of YHVH in biblical citations, for example, in 11QPSalms^d: Pss. 128.5, 129.5 and 4QLamentations. Since there are also instances where *Adonay* of the *Vorlage* has been replaced by a Tetragrammaton (4QLamentations: *Lam.* 1.14-15; 4QPeshar Psalms^a: Ps. 37.13; 4QFlorilegium frg. 21: *Ex.* 15.17), one may assume that at least some of the scribes pronounced the Tetragrammaton as *Adonay* "Lord" in accordance with the later rabbinic tradition (contra Stegemann, 1978, p. 204). That is why in fragment 1 of a sapiential work from Cave 4 (4Q408) the Tetragrammaton is supralineally corrected to *Adonay*. Pointing in the same direction is the well-known passage in the Damascus Document xv.1, according to which it is forbidden to swear by *alef lamed* and *alef dalet*, which certainly refers to *El/Elohim* and *Adonay*.

YHVH in Nonbiblical Texts. The Qumran covenanters—as far as such may be judged—did use the divine name in nonbiblical texts as well. We can therefore find the Tetragrammaton particularly often in the Temple Scroll and in noncanonical psalms (see 4Q380, 381; 11QPSalms^a, here in Paleo-Hebrew characters as well). The same usage can be found in other texts based on biblical materials, such as 4QReworked Pentateuch^{ac} and 2QApocryphon of Moses and David, or in the sapiential work 4Q411. 4QJubilees^a, dating from the second century BCE, proves that YHVH was in use even at that time. Therefore, one cannot claim that the Tetragrammaton was avoided in early Hellenistic times, nor can its use or nonuse be utilized as an isolated piece of evidence for dating or determining the origin of a scroll. It has to be stated that there obviously had not been general agreement on the representation and pronunciation of the divine name.

Substitutes for the Tetragrammaton. The overwhelming majority of the texts shows that God was no longer addressed or designated by his name. There may be one special text (4Q200 11.i.9) which replaced the Tetragrammaton by the unpronounceable substitute *ʾwn hw'* (J. Baumgarten), but this interpretation is not entirely clear. The Hodayot from Cave 1 mostly use, as do the Rule of the Blessings and other liturgical texts, the form *Adonay*, which is in most cases to be pronounced as *Ad-*

oni "my Lord." Often *Adoni* can be found in parallel with *Eh* "my God" (cf. Schuller, 1990, p. 136), a fact supporting this assumption. But the common designation for God is simply "God," for which *El* was mostly used, as in the later parts of the Hebrew scriptures. Less often one can also find *Elohim* (cf. 4Q375, the Apocryphon of Moses B', and 4Q378 + 379 + 380). This usage corresponds to the New Testament; here God is addressed as "God" (*Theos*) as well (cf. *Mk.* 15.34). Thus the title "Lord" (*Kyrios*) could be applied more easily to the Messiah Jesus (cf. *Rom.* 10.9, *Phil.* 2.11).

Attributes of God. Besides the employment of "God," one frequently finds the title "Most High" (*Elyon*) frequently combined with *El* to yield "Most High God" (cf. 4Q525, 2.2, 4Q285 1.2). This hymnic designation, often used in the *Psalms*, can later be detected in the books of *Jubilees* and *Ben Sira*. Its Greek counterpart *hypsistos* is found in the New Testament (e.g., *Lk.* 1.32, *Acts* 7.48). It seems that "Most High" eventually became a proper name, since the Aramaic Genesis Apocryphon employs the Hebrew form (Stegemann, 1978, p. 214ff.). The comparable *Shadday*, used frequently in *Job* and rendered as *pantokrator* "Almighty" by the Greek translation, is astonishingly rare, occurring in only three instances: as a citation in the Testimonia 1.1, in the Commentary on Genesis A 1.iii.12, and in the Songs of the Sage^b fragment 8.6.

A great variety of epithets have been used to designate God. These were mostly derived from the Bible. Examples are *El ha-De'ot* "God of Knowledge" (e.g., Rule of the Community iii.15; from *1 Sm.* 2.3), *El Emet* "God of Truth" (Hodayot xv.25; from Ps. 31.6), *El Qanna'* "jealous God" (Temple Scroll ii.12; cf. *Ex.* 34.14) and *El Yisra'el* "God of Israel" (Rule of the Community iii.24; cf. *Ex.* 5.1). From the *Book of Daniel* (11.36) came *El Elim* "God of the Gods" (War Scroll xviii.6), in which the plural "Gods" refers to the angels. In other contexts they are named "Sons of Gods" (4Q381 15.6) or "Sons of Heaven" (Rule of the Community xi.8). Other names of God are "God of Mercy" *El Rahumim* (Hodayot x.29), "God of Salvation" *El Yeshu'ot* (Rule of the Community i.19), "God of Eternity" *El 'olam* (Hodayot vii.31; from *Gn.* 21.33), "Holy One" *Qadosh* (War Scroll xii.8), "King of Glory" *Melekh ha-Kavod* (War Scroll xii.8; from Ps. 24.8), or very often "Maker/Creator" *'Oseh* (Damascus Document ii.21).

These and other designations too numerous to list here are not intended to take the place of the name of God. The holy name was considered ineffable and was therefore avoided or replaced by substitutes. Admittedly, however, it is difficult to distinguish between "name," "epithet," and "attribute" with certainty. The attributes serve to state the majesty and power of the transcendent God. By using biblical terms and forming new attributes in the style of biblical diction, the covenanters placed them-

selves in line with their forebears and believed themselves to be God's chosen community. At the same time, the use of these attributes and predictions provided the later rabbinical tradition with a determined number of names of God (101, seventy, or seventy-two) which emphasize his holiness.

MARTIN ROSEL

NAPHTALI, TESTAMENT OF. A composition giving the final words of Naphtali, son of Jacob, before his death, the *Testament of Naphtali* is part of the *Testaments*

of the *Twelve Patriarchs*; it differs from the other *Testaments of the Twelve Patriarchs* by its mention of a meal before the patriarch's death (9.2). After a standard introduction (1.1–12), Naphtali addresses his children concerning the ordered character of God's creation and their responsibility to observe that order in their actions (2.1–3.5); he describes their future as one of sin, exile, and return (4.1–5); he reports two visions he had earlier in life (5.1–7.4); and he exhorts his children to attach themselves to Levi's and Judah's children and again to observe the order of God's creation (8.1–10). Then follows narration of his death and confirmation of his words by his children's actions (9.1–3).

As with the *Testaments of the Twelve Patriarchs* as a whole, the date and origin of the *Testament of Naphtali* are disputed. The proposed dates range from approximately 200 BCE to 200 CE, and both Jewish and Christian authorship have been defended. Complicating matters in the case of the *Testament of Naphtali* is the existence of a loosely parallel Hebrew *Testament of Naphtali* (*HTNaph*), known in two critical revisions (Gaster; Wertheimer). The principal parallels are passages giving two visions (*GTNaph* 5–7; *HTNaph* 2–6) and somewhat differing descriptions of the human body's organization as evidence of God's ordered creation (*GTNaph* 2.8; *HTNaph* 10.5–7). In light of these connections, some claim *HTNaph* is later than *GTNaph* and, in certain places, a reworking of the Greek text (Becker; Schnapp); others think that *HTNaph* is an earlier source for *GTNaph* or that the two relied on a prior common source (Charles; Gaster; de Jonge; Korteweg).

Discovery of the *Testament of Naphtali* in Qumran (4Q215), a late-Hasmonean-period Hebrew manuscript, further complicated matters, although, thanks to a misreading, J. T. Milik (1978, p. 97) concluded it was translated from Aramaic. Milik dubbed it 4QT(estament) N(aphtali) because fragment 1, lines 2–5, parallel *GTNaph* 1.1–12 by dealing with the birth of Naphtali's mother, Bilhah, and her genealogy. However, the four surviving fragments lack any indications of the characteristic narrative framework of a testament and do not otherwise parallel *GTNaph*. Instead, they provide additional information concerning Bilhah and part of an eschatological speech (see now M. Stone, in *Qumran Cave 4: Parabiblical Texts, Part 3*, ed. G. Brooke, Discoveries in the Judean Desert, 22 [Oxford, 1997], where the eschatological material is separated from the rest of the manuscript). Under these circumstances, the principal interest attached to the three Naphtali texts from antiquity is the still unanswered question of why an otherwise obscure patriarch became the subject of such intense interest. With respect to the Qumran manuscript material, it is best to consider it apart from *GTNaph* and *HTNaph*, ac-

knowledging only that some of it may have served as a source for the two works, and assess it instead simply as one document among other Dead Sea Scrolls. From that perspective, one fragment (now treated as part of a separate manuscript) coheres with the community's apparent eschatological interests, and the rest of what remains of 4Q215 reflects the group's eagerness to preserve documents written in the name of ancient biblical figures. Hence, it is not surprising to find this material among the scrolls, though, by the meager evidence for it, one must say it probably did not hold a particularly esteemed role in the community's life.

ROBERT A. KUGLER

NAR, WADI EN- The Arabic name of the biblical Nahal Kidron, Wadi en-Nar starts on Mount Scopus (Har ha-Tsofim) in the Judean Hills to the north of the Old City of Jerusalem, at an elevation of 820 meters above sea

level. Its course runs south and east across the Judean Desert toward the Dead Sea, approximately 400 meters below sea level, about 20 kilometers distance from Jerusalem. This sharp difference in elevations results in long sections of rocky, canyonlike ravines, especially where the stream bed cuts its course through the north-northeast by south-southwest axis of the local geological formations of hard limestone.

At its upper zone Wadi en-Nar separates the Old City of Jerusalem (the Temple Mount and the City of David) from the Mount of Olives to its east. The necropolis of Second Temple period Jerusalem extended along approximately 5 kilometers of Wadi en-Nar's course (Kloner, 1980; Geva, 1995). Opposite the City of David, on the cliffs of the eastern bank, monumental tombs of the First and Second Temple periods are cut in the *meleke*, *Turo-mian* rocks (Avigad, 1954; Ussishkin, 1986).

Farther to the southeast, within the confines of the Judean Desert, the aqueduct leading to the Hasmonean/Herodian fortress of Hyrcanium (Khirbet Mird) started at a dam across the wadi and followed the course of the wadi for approximately 5 kilometers in rock-cut or masonry-built segments. Many water cisterns are cut along its course.

The Monastery of Theodosius (Deir Dosi) overlooks the course of Wadi en-Nar from the south, and farther to the east, in the midst of the desert, Mar Saba Monastery dominates the cliffs of the western bank. [See Monasteries.]

The wadi and its main northern tributaries, Wadi el 'Eidharawi and Wadi el Makari, drain the southern slopes of Gebel Muntar, the highest peak of the Judean Desert (524 meters above sea level). Upon descending to the Hyrcanium Valley (Buqea), the cliffs give place to a flat, mild landscape. The Iron Age II (ninth through seventh centuries BCE) site of Khirbet el Makari, identified with the biblical Nibshan of *Joshua* 15.61–62 (Cross and Milik, 1956), is the main ruin in this part of the valley. Otherwise there is plenty of evidence of nomadic and seminomadic installations from all periods in the valley: tent encampments, cairns, burial places, etc. (Patrich, 1995).

At the confluence of the Kidron and the Dead Sea, approximately 500 meters to the north, on the bank of Wadi Mazin, is located the Iron Age and Hasmonean site of Qasr el-Yahud (Khirbet Mazin). The remains of several Byzantine hermitages were discovered in 1994, during Operation Scroll nearby, on the southern cliffs of the Kidron. Three caves that yielded Iron Age, Roman, Byzantine, and Arab pottery sherds were located on this bank during the 1967–1968 survey (Bar Adon, 1972, site 113), and a small settlement (village?, site 114) was found on the opposite northern bank.

A cairn at the mouth of the Kidro(n) ravine is men-

tioned in the Copper Scroll (3Q15 viii.8; see Milik, 1962; cf. Wolters, 1996; see also Allegro, 1960).

Five items are listed as coming from Wadi en-Nar (Mird?) in the archives of the Rockefeller Museum (Palestine Archaeological Museum) in Jerusalem; none has been published. The items include a Greek fragment (Nar 1) on papyrus; Semitic fragments (Nar 2) on papyrus; Greek fragment (Nar 3) on parchment; unclassified fragments (Nar 4) on papyrus; and leather and linen fragments (Nar 5) (Reed et al., 1994, xlii and 281). Khirbet el Mird (Hyrcanium), where Greek, Aramaic (Palestinian Syriac), and Arabic manuscripts were found, is sometimes erroneously associated with Wadi en-Nar, although its stream bed is approximately 2 kilometers south of this ruin.

JOSEPH PATRICH

NAZARENES. See Nazoreans.

NAZOREANS (or Nazarenes) were Christian Jews in first-century Jewish Palestine (*Acts* 24.5) and Jewish Christians in Syria-Palestine in the late fourth century

(Epiphanius, Jerome). [See Epiphanius; Jewish Christians.]

Sources and History. In *Acts* 24.5, the only New Testament reference to Nazoreans, they are characterized as a *sect* (or *party*) of first-century Judaism (cf. *Acts* 24.14, 28.22). The Sadducees (*Acts* 5.17) and the Pharisees (*Acts* 15.5, 26.5) are also characterized as *sects* (*haireseis*) of Judaism, as are the Essenes by Josephus (*The Life* 2 sec. 10). [See Josephus Flavius.] The Nazoreans of *Acts* 24.5 were thus Jews who were also Christians. The Church Fathers Epiphanius (c.315–403 CE) and Jerome (c.342–420 CE) are the main sources for our knowledge of Nazoreans in the later period (Epiphanius, *Panarion* 29; Jerome, *Epistles* 112.13). The Nazoreans of Epiphanius and Jerome were not a sect within the rabbinic (Pharisaic) Judaism of their time; rather they existed apart from it and even were against it. For this reason, these Nazoreans are best characterized as Christians who were also Jews. Epiphanius and Jerome regarded them as heretical Christians precisely because they adhered to Jewish practices. Only fragments of their own writings (a Gospel and a commentary on *Isaiah*) have been preserved (mainly in the works of Jerome).

Apart from two brief and ambiguous references in Tertullian (c.160–225 CE) and Eusebius (c.260–340 CE), it is difficult to find traces of the Nazoreans in ancient sources between *Acts* and Epiphanius. [See Eusebius.] They may be present in an early version of the Blessing of the Heretics, part of the Amidah prayer attested in rabbinic sources, as in the writings of Epiphanius and Jerome on the Nazoreans. This benediction curses the *Notserim* and *minim* (“heretics”). It is disputed, however, whether the term *Notserim* refers to Christians in general or to the Nazoreans. It is also not certain whether Nazoreans may appear in other sources that attest the existence of Jewish Christian groups but do not use the term to describe them: for example, Justin Martyr (c.100–165 CE), Irenaeus (c.130–200 CE), and Origen (c.185–254 CE). [See Ebionites; Elkesaites; Encratites; and Origen.] Such uncertainties make it extremely difficult to trace a possible historical connection between the Nazoreans of *Acts* and those of Epiphanius (and Jerome), though such a connection seems likely and is evident in Epiphanius.

Name and Ideology. The name Nazoreans reflects the Greek term *Nazoraioi*, used in *Acts* 24.5 and Epiphanius. An alternate Greek spelling, *Nazarēnoi* (= Nazarenes), occurs only once in the post-New Testament Greek literature between *Acts* and Epiphanius, in Eusebius’s *Onomasticon*, though it remains doubtful whether the term here concerns Nazoreans (rather than Christians in general). Both spellings appear to be derived from the name by which Jesus himself was commonly known, “Jesus the Nazorean” (*Mt.* 2.23; 26.71; *Lk.* 18.37; *Jn.* 18.5, 7; 19.19;

Acts 2.22; 3.6; 4.10; 6.14; 22.8; 26.9; cf. 9.5) and “Jesus the Nazarene” (*Mk.* 1.24; 10.47; 14.67, 16.6; *Lk.* 4.34, 24.19). (English versions commonly translate both forms of the name as “Jesus of Nazareth.”) The former is twice as common as the latter. Adherents of Jesus the Nazorean (or Nazarene) thus came to be known as Nazoreans (or Nazarenes). The two forms of the name find a parallel in the name of the Essenes, which also has two forms in Greek, *Essēnoi* (= Essenes) and *Essaioi* (= Esseans). [See Essenes.]

Latin sources likewise use two forms, *Nazaraei* (= Nazoreans) and *Nazareni* (= Nazarenes), both found in Jerome. Some scholars maintain that when Jerome uses *Nazareni* he actually is referring to Christians in general rather than to Nazoreans. It would seem, then, that only the Greek *Nazoraioi* (and its Latin counterpart, *Nazaraei*, at least in Jerome) can with some confidence be taken to refer to Jewish Christians in the available sources.

The term *Nazarene* (Gr., *Nazarenos*), as applied to Jesus himself, was almost certainly a gentilic, describing a person who came “from Nazareth” as Jesus evidently did (*Mt.* 21.11, *Jn.* 1.45–46, *Acts* 10.38; cf. *Mk.* 1.9, *Lk.* 4.16). *Matthew* 2.23 seems to understand the other term, *Nazorean* (Gr., *Nazoraios*), in the same way. However, *Nazorean* is less clearly or obviously derivable from *Nazareth* (Gr., *Nazareth*, *Nazaret*, or *Nazara*) than is *Nazarene*. Furthermore, it is not certain what prophetic texts are in view in *Matthew* 2.23 or how these can be linked to Nazareth since the town is not mentioned in the Hebrew scriptures (nor in any Hebrew literature prior to the seventh or eighth century). For this reason, there have been attempts, both ancient and modern, to explain the term *Nazorean* in *Matthew* 2.23 (and thus elsewhere) in two major ways, which are further illuminated by the Dead Sea Scrolls.

Nazirite. According to *Judges* 13.4–7, Samson was to be a Nazirite (in Hebrew *nazir*, someone consecrated or set apart for God, whence the Septuagint’s *hagios*, “holy”). A copy of *1 Samuel* found at Qumran (*Samuel*⁴ 4Q51) refers to Samuel as “a Nazirite for all time” (*1 Sm.* 1.22; cf. *1 Sm.* 1.11 and see New Revised Standard Version marginal notes). The Nazirite vow, which could be permanent (as in the case of Samson or Samuel) or temporary (as, evidently, later), involved abstinence from wine and strong drink and not cutting one’s hair for the duration (cf. *Nm.* 6.1–21). While Jesus is sometimes called “the holy one of God” (*Mk.* 1.24, *Lk.* 4.34, *Jn.* 6.69; cf. *Jn.* 10.36, 17.19), there is no evidence that he was a Nazirite ascetic during his public ministry (cf. *Lk.* 7.34), unlike John the Baptist (*Lk.* 1.15), nor is there evidence that the Nazoreans of Epiphanius (or Jerome) were Nazirites (Epiphanius specifically denies it in *Panarion* 29.5.7). [See John the Baptist.] The Nazoreans of *Acts*

24.5, however, may have had some connection to Nazirite practice, since in *Acts* 21.18–26 Paul and others undertake what appears to be a Nazirite vow, doing so at the behest of James and the elders of the church in Jerusalem. According to Hegesippus (second century CE), James himself did not drink wine or shave his head (Eusebius, *Historia ecclesiastica* II.23.4–5). There is no evidence, however, that the Qumran covenanters were Nazirites, despite the emphasis on separation and holiness and despite 4Q51.

Netzer. This term refers to a “shoot” from the stump of Jesse (*Is.* 11.1). In the War Rule (4Q285), *Isaiah* 11.1 is brought into close association with the Branch of David (*tsemah David*), a common designation for the royal Messiah in the scrolls (Peshet 4Q161, *Isaiah*⁴, Florilegium 4Q174, Commentary on Genesis A 4Q252; cf. *Jer.* 23.5, 33.15; *Zec.* 3.8, 6.12). The image of the *netzer* occurs several times in the Hodayot from Cave 1 at Qumran (1QH vi.15, vii.19, viii.6, viii.8, viii.10), here seemingly applied to the Qumran community itself. In a similar vein, Epiphanius says that the Nazoreans were once known as Jesseans (*Jessaiot*), a name he derives from Jesse (*Panarion* 29.1.3–4, 29.4.9), though he also considers that it could be derived from Jesus (*Panarion* 29.4.9). In the Babylonian Talmud (B.T., *San.* 43a), a Jewish Christian disciple has the name Netzer, which is assumed to be related to the messianic prophecy of *Isaiah* 11.1. Thus the name *Nazorean*, even if it was originally a gentilic when used in connection with Jesus himself, may have had, or may have attracted, messianic connotations, perhaps especially when adopted by the followers of Jesus, through reflection upon the prophecy of *Isaiah* 11.1. [See Jesus.]

Nazoreans and the Qumran Community. According to *Acts*, Nazoreans were nearly indistinguishable from Pharisees (cf. *Acts* 15.5), differing from them only in their belief that Jesus was the Messiah (cf. *Acts* 21.20, 23.6, 26.5). [See Pharisees.] Similarly, according to Epiphanius, the Nazoreans differed from contemporary rabbinic (Pharisaic) Jews in only one significant respect: their faith in Jesus as the Messiah. Jews could find “no fault” with them in other respects since they were “trained in the Law, in circumcision, the Sabbath and other things” (*Panarion* 29.7.2). The Nazoreans of *Acts* and those of Epiphanius also affirmed the resurrection of the dead, as did the Pharisees and rabbis (cf. *Acts* 23.6–9, 24.14–15; *Panarion* 29.7.3). Jerome gives a similar impression even if he also reports that the Nazoreans had become so alienated from the synagogue that they had come to regard with contempt rabbinic traditions and teachings. Thus the sources would indicate that what distinguished the Nazoreans from the community of the Dead Sea Scrolls would largely have been what also distinguished

the Pharisees. Since the Nazoreans of *Acts* 24.5 can probably be identified with the Aramaic-speaking “Hebrews” of the earliest church (*Acts* 6.1, cf. *Acts* 21.40, 22.2, 26.14), much of what could be said about the possible influence of the Dead Sea Scrolls upon the earliest church in Jerusalem or upon “the churches of Judea” (*Gal.* 1.22) probably also would apply to the Nazoreans mentioned in *Acts* 24.5.

[See also *Acts of the Apostles*; Epiphanius.]

NEHEMIAH, BOOK OF. See Ezra and Nehemiah, Books of.

NEW JERUSALEM. A visionary work, the New Jerusalem describes the architectural plans for an eschatological Jerusalem of immense proportions. Known only in Aramaic (the existence of a Hebrew translation has not been proved), remains of seven fragmentary copies have been preserved.

Preserved Manuscripts. 1QNew Jerusalem (1Q32) comprises twenty-three small fragments (Barthélemy and Milik, 1955, pp. 134–135, plate xxxi) with only the first seven identified by their editor, J. T. Milik, with any certainty. Unfortunately, none of these fragments offers any useful data for understanding the scroll. 1QNew Jerusalem was copied in an early Herodian script from the second half of the first century BCE.

2QNew Jerusalem (2Q24), written in a late Herodian script dated to the first half of the first century CE, is composed of eleven fragments with three fairly large-sized ones (Baillet, Milik, and de Vaux, *Les ‘Petites Grottes’ de*

Qumran, 1962, pp. 84–89, plate xvi). Fragment 1, which preserves the lower left part of a column, contains part of the description of the city and overlaps with the copies from Caves 4 and 5, which proves that it is part of the same composition. The other preserved fragments either appear to describe parts of the temple and altar, or preserve elements not specific enough for their contents to be determined. The largest of these (frag. 4) contains a description of the distribution of the shewbread and overlaps with a fragment from Cave 11, thus indicating that the descriptions of the city as well as the temple and sacrifices were included in the original work.

New Jerusalem^a (4Q554) was copied in an early Herodian script in the second half of the first century BCE. Two large fragments, each containing the remains of three successive columns, and a dozen very small fragments are preserved. The measurements in this scroll are indicated generally with ciphers, not by words. The first fragment seems to come from the beginning of the composition, with column ii overlapping with the copies from Caves 2 and 5. This piece preserves part of the description of the walls and city gates, and of the entrance and stairs. The first and second columns of fragment 2 continue the description of the city's exterior and its walls, while the third column, beginning on a new sheet of leather, describes the eschatological war against traditional enemies. Because mention of the eschatological battle is found on a new sheet, the precise point in the narrative of this eschatological battle cannot be ascertained.

The manuscript 4Q554a is written in an early Herodian script similar to that of New Jerusalem^a but with smaller letters and different interlinear spacing; it contains the remains of the upper column and margin. This contrasts with the two large fragments of New Jerusalem^a, which preserve the lower part and the bottom margin of the columns. Although this scroll was originally considered part of New Jerusalem^a, its present editor (E. Puech, 1995) correctly regards them as two distinct manuscripts. Only one large fragment, containing the description of one of the block's houses (and which overlaps with 5QNew Jerusalem [5Q15]), has been preserved.

New Jerusalem^b (4Q555), also copied in an early Herodian hand from the second half of the first century BCE, consists of only three extremely small fragments, somehow related to 2QNew Jerusalem and to 11QNew Jerusalem (11Q18) but without a clear overlap. The identification of this scroll as a copy of the New Jerusalem is thus not assured, and the fragments do not contribute anything to our understanding of the composition.

5QNew Jerusalem (5Q15) was copied in a beautiful Herodian script at the end of the first century BCE. It preserves nineteen small isolated fragments, and another

twenty or so that were grouped by its editor, J. T. Milik, in two consecutive columns (and numbered frag. 1) due to similarities with the Cave 4 copies (Baillet, Milik, de Vaux, *Les 'Petites Grottes' de Qumran*, 1962, pp. 184–193, plates xl–xli). These two columns provide a description of the streets that separate the blocks of houses, the structure of these blocks of city houses, and the inside of each house. Fragment 2 continues the description of these same houses. In contrast to New Jerusalem^a and manuscript 4Q554a, the preserved measurements are not given in ciphers but in words. None of the fragments from 5Q15 contains any description of the temple or the rites celebrated there.

11QNew Jerusalem (11Q18) was copied in a later Herodian hand dated to the first half of the first century CE. Thirty-seven fragments have been recovered from one scroll, which was found complete, but in such a hardened and poor state of preservation that only a portion could be recovered (García Martínez and Tigchelaar, *Qumran Cave 11*, 1998, pp. 305–355, plates xxxv–xl, xliii). Unfortunately, the original sequence of the recovered fragments has not been established with any certainty. Some preserve the remains of architectural descriptions, but the majority contain descriptions not of the city but of the temple, cult, ceremonies, sacrifices, utensils, and even the vestments of the high priest. Despite the fact that the only overlapping element between this scroll and 2QNew Jerusalem fragment 4 is the description of the table of shewbread ritual, it is without doubt a copy of the same composition known from the copies in Caves 4 and 5. Similarities in style, vocabulary, and contents leave little room for doubt. While New Jerusalem^a and 5QNew Jerusalem mainly preserve data on the description of the city, 11QNew Jerusalem preserves details concerning the temple and cult, which prove that both aspects were equally developed in the original work.

The Contents of the New Jerusalem Scroll. The Aramaic composition New Jerusalem, which describes the city (although the name does not appear in any of the fragments) and the future temple, as well as the cult that will operate there, has been redacted in accordance with the literary scheme of *Ezekiel* 40–48, a text on which it depends and which it modifies extensively. The work is conceived as a sort of “tour,” in which the author is led by an angelic guide throughout the city and temple. He is first taken to the city's interior where he is shown and given the measurements, which he carefully notes, of an extremely large city. The author is then guided to the inside of the temple where he witnesses certain ceremonies and sacrifices. This visit proceeds from the exterior to the interior; it begins with the outside walls of the city, which form a rectangle of 32 by 23 kilometers (20 by 14 miles)

and with the description of its twelve gates, each flanked by two towers, which have the names of the twelve patriarchs. The author later describes the inside of the city, the large avenues and the blocks of houses, while lingering on a detailed description of the structure and the measurements of a block of typical houses. The angel then shows the visitor one of the blocks and describes the houses grouped together around the central courtyard. Equally detailed is the description of the inside of one of the houses, although this is only partially preserved.

The same course is followed with the description of the temple; the text indicates in what part of the city the temple is situated, although only meager details remain of its concrete description and the details of the visit. Apparently the temple visit proceeds from outside (the walls of the outside courtyard) toward the inside, culminating in the description of the divine throne, although we possess only isolated references to architectural elements, measurements, precious materials used for its construction, etc. Equally fragmentary is the description of various utensils, the table for shewbread, the sieves for sifting the flour of the *omer*, cups, cauldrons, etc., and of the seven crowns forming part of the high priest's vestments. Some fragments from the Cave 2 copy and the majority of those from the Cave 11 copy describe rituals celebrated in the temple. Mentioned there are the altar, the slaughtering of animals destined for sacrifices, the distribution of certain offerings, celebrations such as Passover, and other festivals. We also find certain ceremonies attended by the author, such as the distribution of the shewbread, and other rites or cultic acts, specifying who should be present and when they are to be celebrated.

The final preserved column of New Jerusalem" places this description in the context of the final battle against the nations, thereby accentuating the eschatological character of the composition.

The entire work is presented in the manner of *Ezekiel* 40–48 as a revelation in which the seer is shown the city with all its details and the temple with all its ceremonies. Expressions like "he introduced me," "he showed me," "he made me see," and "he told me; you are seeing," are frequently repeated. Such language transforms the description into a visual blueprint of the city and temple. At least one part of the contents is presented as originating from a book or an inscription, which is shown to the seer and read by the guide (cf. 11Q18 19). It is curious to note that, while the temple ceremonies are described as taking place and the seer and his guide are observing the comings and goings of the participants, priests, and levites, descriptions of the city and houses do not allude at all to any inhabitants. It is as if the seer and guide are touring an empty city in order to take its measurements without any obstacles

Sources Used. The author of the New Jerusalem is evidently familiar with various descriptions of the desert sanctuary and with the construction of Solomon's temple, but finds immediate inspiration in texts such as *Isaiah* 54 11–13, *Zechariah* 2.5–8, and *Tobit* 13.17–18, which briefly describe the glory and splendor of the future Jerusalem. Yet he relies above all on *Ezekiel* 40–48 for the basic literary structure, the system employed for measurement, the general plan of the city, and numerous specifics of description and vocabulary. The author, however, modifies these elements extensively: instead of measuring with a rod of six cubits, he uses one of seven cubits and, unlike Ezekiel, provides measurements in both rods and cubits; instead of envisaging a square structure for the city and temple as did Ezekiel, he describes a rectangular city plan with the temple inside; he of course modifies the locations of the gates to which he gives the names of the twelve patriarchs (sons of Jacob; cf. *Ezek.* 48.31–34), but in a different order.

It is more difficult to determine if, in addition to *Ezekiel*, the author of the New Jerusalem used other written sources for the two parts of his account: the description of the city and of the temple and its ceremonies. The fragmentary state of the second part precludes any firm conclusion on sources employed. For the first part the only element that may be traced back to a (known) written source is the description of the city and temple gates, which appear in a similar order in both the New Jerusalem and Temple Scroll (11Q19–20 xxxix–xli), although the order is not identical, with Reuben placed after Joseph and Benjamin in the New Jerusalem. Because this order, which differs from Ezekiel's account, is not found in any other biblical text, we may conclude either that one document depends on the other or, more likely, that both rely on a common source, a "parabiblical" text like the one attested in Temple Scroll? (4Q365a; a part of Reworked Pentateuch^c [4Q365]) in which the same order for the gates appears.

Literary Genre and Relationship to the Biblical Text. The fantastic and clearly utopian dimensions of the city and of the materials used in its construction emphasize the account's visionary character, and the figure who measures and shows the city to the seer is like the interpreting angel whom we find in other apocalypses. The elements of mediated revelation and other-worldly realities, so essential for the definition of an apocalyptic work (according to the paradigm in *Semeia* 14), are clearly present in the New Jerusalem. Equally present is the element of transcendent eschatology, at least in the description of the final battle in New Jerusalem^a. Although the fragmentary character precludes a firm determination of the literary genre, the presence of the specified elements and the absence of others, which might contradict such a

designation, allow its classification as an apocalypse. The reference to a document or book (11Q18 16.5–6), read by the guide to the seer, is another indication of its apocalyptic nature.

The description of the city and temple in the New Jerusalem is located midway between Ezekiel's description of the future Jerusalem and the Heavenly Jerusalem of the New Testament *Book of Revelation* 21–22. In the Bible we encounter the idea of a heavenly model for the temple "inscribed on palms of God" as it says in *Isaiah* 49.16; to this model the construction of the tabernacle and its utensils (*Ex.* 25.8–9) and Solomon's temple (*1 Chr.* 28.19) were to be adapted. Ezekiel is evidently inspired by this idea, which attains notable significance in later apocryphal literature, whether as an enhancement of the biblical idea (*1 En.* 90.28–39 and *Jub.* 1.17, 26–29; 25.21), or as an expression of reactions to the destruction of Jerusalem and the temple (*2 Bar.* 4.1–6; 6.7–9; 32.2–4; *4 Ecr.* 7.26; 10.25–28, 40–58). Other texts present the notion of a Jerusalem and celestial temple, not like a model of the earthly one, but like the locus of the angelic cult—an idea found, for instance, in the angelic liturgy of Qumran and expressed, for example, in B.T., *Hagigah* 12b.

Between these two ideas, the New Jerusalem is clearly situated within the orbit of *Ezekiel*, on which it depends, yet at the same time it profoundly transforms the prophet's vision. The city and temple described by the redactor are the revealed model, which will one day be a reality. Despite the city's gigantic and clearly utopian dimensions and the precious quality of the materials used in the temple's construction, the city and temple described in the New Jerusalem are not the heavenly ones, but comprise a blueprint of the celestial model in the hope that this will be constructed on the earth in the future.

Although the preserved text does not explicitly state when this future will be, it contains some signs that can help us determine it. If Ezekiel's description presents the model for the restoration after the exile, the description in the New Jerusalem constitutes the restoration model for the messianic era. The most important indicator in this regard is the reference to the eschatological battle against traditional enemies. An additional indicator is the references to the reduced sizes of the residential blocks and houses as well as their *caravanserai*-like structure, elements which indicate a preoccupation in organizing the city so as to house large groups of pilgrims. These considerations support our conclusion that the celestial model has been changed in order to realize the prophets' visions regarding the messianic Jerusalem to which all the nations of the earth will come after the victory of the just.

Origins and Relationship to Other Qumran Scrolls.

It is difficult to determine precisely the origins of the New

Jerusalem. The variety of copies and their distribution in several caves attest to the work's popularity at Qumran. However, the composition contains neither expressions nor characteristic ideas found in works originating in the Qumran community that would situate it within this context. (At the same time, however, the preserved materials contain nothing to rule out a Qumranic origin.) The most detailed study carried out so far on Qumranic or non-Qumranic origins of the entire corpus places the New Jerusalem among the non-Qumranic scrolls. This lends further support to placing it in the same indeterminate apocalyptic milieu of other apocryphal compositions containing similar ideas on the New Jerusalem and the New Temple. The sustained interest in the temple cult—which is evident above all in the Cave 11 copy—points to priestly circles of the temple environment as the most plausible group responsible for the New Jerusalem.

The composition most closely related to the New Jerusalem with respect to content is the Temple Scroll, although the latter is more interested in the temple than in the city (by outlining a detailed plan for the temple, not the city). In the New Jerusalem, however, both city and temple are objects of detailed description (although in the preserved fragments, only the plan of the city, not of the temple, is outlined). Yet despite thematic similarities, both the Jerusalem and the temple envisaged in these two compositions, including their architectural design, are apparently different. The similarities, which are inescapable in two verbal blueprints that deal with similar objects (e.g., the same type of spiral staircase inside the blocks with access to the roof, the wall height of seven rods, houses open to the inside courtyard with rooms on the floor) are offset by other architectural differences (e.g., the structure of the gates, measurements, exterior towers). The only elements essentially common to both compositions are the names of the city and temple gates, which, as indicated, may stem from a common tradition.

More significantly, the horizon of the temple and city described in both documents is not compatible. The descriptions of the temple, cult, and city of the Temple Scroll are presented as the uniquely acceptable interpretation of the biblical text, which pertains to the present and not to the eschatological period. Meanwhile, the city, temple, and cult described in the New Jerusalem are presented as a revelation of something new and different, and specifically foreseen for the moment of the final battle. In this sense, the content of the New Jerusalem is comparable to the temple referred to in the Temple Scroll⁹ (11Q19 xxix.9–10), a temple clearly different from the one described in the rest of the Temple Scroll, which God himself will construct at the end of time. It is equally comparable to the temple referred to in Florilegium (4Q174 1.i.2), "the house which he [will establish] for

[him] in the last days," and above all to the temple and cult referred to in the War Scroll (1QM).

The first column of this scroll provides a summary of the final battle against the same traditional enemies alluded to in New Jerusalem^a and describes participation in the temple cult (1QM ii.1-6 with parallels in War Scroll^d [4Q494]). Unfortunately, the important lacuna at the end of column 1 of the War Scroll prevents us from understanding the precise temporal relation between the final battle and participation in the new temple cult from the perspective of the War Scroll just as uncertainty regarding the precise location of column iii of New Jerusalem^b, fragment 2, renders uncertain the sequence of these events as foreseen in the New Jerusalem. The preserved text, however, assures us that the context in which the visions of the new city and temple of the New Jerusalem take place is none other than that of the War Scroll.

Date. The date of the original composition is uncertain. The fact that all preserved copies are from the Herodian period only indicates that the New Jerusalem circulated at Qumran during the second half of the first century BCE. The relationship to Florilegium and the War Scroll and the shared dependence on a common source with the Temple Scroll also do not provide a firm basis for fixing a date of composition. Linguistic analysis suggests the third/second centuries BCE, but permits no more precise dating, and analysis of the architectural elements also fails to provide any definitive conclusion as to the date. We may thus conclude that the date of the New Jerusalem cannot be determined with any precision. However, when all the preserved elements are taken into consideration, a date in the first half of the second century BCE seems reasonable.

FLORENTINO GARCÍA MARTÍNEZ

Translated from Spanish by Andrea E. Alvarez

NEW TESTAMENT. Among the Judean Desert documents, the Qumran scrolls, Masada fragments, and Bar Kokhba texts may be relevant to the study of the New Testament. Greek and Christian Palestinian Aramaic texts from Khirbet Mird, which preserve some New Testament writings from the sixth century, will be of value for textual criticism; but they are, for the most part, as yet unpublished. The sectarian documents from Qumran are especially relevant because they are the literary remains of Palestinian Jews who composed or used these writings in the last two centuries prior to the emergence of the Christian scriptures and because they reveal a certain affinity to the New Testament writings. Written in Hebrew or Aramaic from roughly the mid-second century BCE to 68 CE, they reveal that Judaism was not all of one stripe—what has been called traditional or Pharisaic Judaism, which eventually fed into the Mishnah and later rabbinic literature. Although the Qumran and Masada texts provide an important bridge between the Hebrew scriptures and that later Jewish tradition, they also shed no little light on the Palestinian matrix of Christianity.

Prior to the discovery of the Judean Desert texts, it was customary to explain Jewish-sounding phrases in the Greek New Testament by comparing them with rabbinic literature (e.g., the commentary of Paul Bijlerbeck, 1926-1930). That literature, however, reflected the Judaism of a later period (third to sixth centuries CE) and was not

always of Palestinian provenience (e.g., the Babylonian Talmud). Now in the Qumran and Masada materials one has genuine Palestinian Jewish literature of the centuries prior to the emergence of Christianity and contemporary with about two-thirds of its first century. This does not mean that the later rabbinic literature is useless or wholly replaced, but it makes one realize that the more contemporary Judean literature is of primary importance; material in the later rabbinic tradition can be considered only when one has evidence from first-century writers (e.g., Philo, Josephus, Qumran texts) that the parallel was already in vogue. Because such Judean material dates from the period before the destruction of Jerusalem (70 CE), it antedates the change that catastrophe wrought in Palestinian Judaism. Christianity emerged in the time before 70 CE, and some of its New Testament writings were already in existence by that date. For that reason such Judean material is important for the study of the New Testament.

All twenty-seven books of the New Testament were written in Greek by early Christians who lived roughly a generation or two after Jesus. Those writings date from approximately 50 to 100 CE, and the vast majority of them were composed in eastern Mediterranean locales outside ancient Judea. Yet they tell the story of Jesus of Nazareth, a first-century Judean Jew, and of the sequel to the movement that he started among Jews in Judea, either as they interpreted it or reflected upon the problems that it encountered. Christianity, then, had its roots in Palestine Judaism.

In the New Testament, one reads of Pharisees and Sadducees, two of the three "philosophies" among Judean Jews, about which Josephus wrote (*The Jewish War* 2.8.2 sec. 119; cf. *Jewish Antiquities* 18.1.2 sec. 11), calling them sometimes *haireseis* ("sects, schools of thought"; *Antiquities* 13.5.7 sec. 171). In the Gospels and *Acts* they are depicted as the contemporary opponents of Jesus and his followers, but one never reads about the third sect, the Essenes. The failure of New Testament writers to mention them is puzzling. Perhaps one reason they are not mentioned is the closer affinity of some Essene tenets to those of Christianity. Significantly, *Acts* 24.5 speaks of Christianity as *Nazōraion hairesis* ("sect of the Nazarenes") employing the very word used by Josephus. This may show how Christianity was at first perceived, as another "sect" among the Jews of Judea. Now that we have firsthand evidence of Essene tenets, we see how such Palestinian Jews may not have opposed the nascent Christian "sect" as strongly as did Sadducees, Pharisees, or other Jews who did not agree with them (for example, in *Miqsat Ma'asei ha-Torah*¹, 4Q394-399 or the Damascus Document [CD]).

There is no mention in the Qumran or Masada texts of

John the Baptist, Jesus of Nazareth, or any of his known followers, or even of specifically Christian ideas such as are recorded in the New Testament. Claims have been made that some fragments from Cave 7, which yielded only Greek documents, belong to copies of New Testament writings. [See Greek.] That claim, however, is hotly contested. Even if it were proven to be right, questions would still have to be asked. Who deposited such writings there? When were they put there? There is no guarantee that they would have been placed in Cave 7 by Essenes or prior to 68 CE, when the community center was destroyed by the Romans, just as there is no guarantee that the Copper Scroll (3Q15) was deposited in Cave 3 by Essenes or prior to 100 CE, the date to which its Hebrew script has been assigned by its principal editor. [See Copper Scroll.] In other words, for all the similarity of ideas and practices or parallelism of phrases between Qumran Essene tenets and those of the Christian New Testament, one has to reckon also with significant differences. The two sects were different, and the Essenes remained more within the stream of Palestinian Judaism than did early Christianity.

What has come to light in writings recovered from the Judean Desert are countless Hebrew and Aramaic parallels to words, phrases, and ideas found in Greek New Testament writings. Important evidence from Qumran writings bears on the christological titles used of Jesus in the New Testament: "Son of God" and "Son of the Most High" in the Aramaic Apocalypse (4Q246 ii.1; cf. *Lk.* 1.32, 35). Compare "(The) Lord" used absolutely (Targum of Job, 11Q10 xxiv.6-7 [= *Job* 34.12]; Enoch^b 4Q202 1.iv.5) to its application to Jesus in *Romans* 10.9 and *1 Corinthians* 12.3. Compare "Messiah" in Rule of the Community from Cave 1 at Qumran (hereafter, 1QRule of the Community), 1QS ix.11; Messianic Apocalypse, 4Q521; *Romans* 9.5; *Luke* 2.11; and *John* 1.41. [See Rule of the Community.] Other noteworthy parallels are the Wisdom Beatitudes (4Q525) and Jesus' beatitudes (*Mt.* 5.3-11, *Lk.* 6.20-22); the judgment of humanity by God's grace/mercy (1QS xi.9-15; 1QHodayot^a 1QH^a iv.30-38, vii.28-30), comparable to Pauline justification by grace (*Rom.* 3.24); *Miqsat Ma'asei ha-Torah*^c; related to righteousness (MMT^d 27, 31); and Paul's slogan, "works of the law" (*Rom.* 3.28, *Gal.* 2.16); "sons of light," designating Essenes (1QS i.9, War Scroll, 1QM i.1) and the same designation for Christians (*1 Thes.* 5.5, *Jn.* 12.36).

In addition to such words and phrases, there are also significant parallel practices. For instance, the early Christian community called itself *hē hodos*, "the way" (*Acts* 9.2, 19.9, 19.23), which may imitate the Essene practice of regarding their community as *ha-derekh* "(the) way" (1QS ix.17-18; CD i.13; cf. CD ii.6, 1QS v.21); the Essene negative attitude toward divorce (Temple Scroll^e

11Q19 lvii.17, CD iv.12b-v.14a), which may provide a background for Jesus' absolute prohibition of it (*Lk.* 16.18, *Mk.* 10.2-12, *1 Cor.* 7.10-11); the Greek *episkopos*, "overseer" ("bishop," *1 Tim.* 3.2), which may be borrowed from the practice of calling the superior in the Essene community *mevaqqet*, "overseer" (1QS vi.12, CD xiv.8); and, finally, the ascetic common life lived by the Essenes of Qumran (1QS v.1-vii.27), which may have had some influence on the communal practice of early Christians (*Acts* 2.44-46, 4.32-35); compare too the story of Ananias and Sapphira (*Acts* 5.1-10) with 1QRule of the Community (1QS vi.24-25). Later Christian monastic life may owe much to the Qumran community rules (1QS, CD). [See Community Organization.]

Important too is the way both Qumran and New Testament writers quote the Hebrew scriptures to illustrate their tenets. They also resemble each other in the way they introduce their quotations of passages of the Hebrew scriptures and the way they both differ from the Jews who codified the Mishnah. B. M. Metzger once compared the formulas introducing quotations of scripture in the New Testament and the Mishnah (1951, pp. 297-307). After the Qumran texts were published, a similar comparative study of New Testament introductory formulas with those of Qumran quotations revealed that the New Testament formulas were by and large closer to those of Qumran than to those of the Mishnah. For instance, *houtos gar gegrapta*, "for thus it is written" (*Mt.* 2.5, *1 Cor.* 15.45), is a literal translation of the Hebrew *ki ken katuv* (1QS v.15, CD xi.38, juridical text 2Q25 1.3). Or *kathōs gegrapta en biblo prophētōn*, "as it was written in the book of the prophets" (*Acts* 7.42), is similar to the Hebrew *ka'asher katuv be-sefer [Mōsheh]* (Florilegium, 4Q174 1-2.i.2; cf. Peshet Isaiah 1.4 4Q163). This is significant because both the Qumran and the Mishnaic texts use the same verbs, "say" or "write," but it is a rare Mishnaic formula that corresponds exactly with a New Testament introductory formula.

Along with such parallels, however, one should note differences. Qumran messianism is still largely an eschatological tenet: for the Essenes, the Messiah(s) is (are) awaited, whereas for Christians the Messiah has come. [See Messiahs.] Justification of sinful Essenes may be by God's grace/mercy, but Christians appropriate such justification through faith in Jesus Christ, which is a major difference.

NEW YEAR. See Ro'sh ha-Shanah.

NOAH, the biblical hero of the Flood and tenth forefather according to the genealogy in *Genesis* 5. The Bible portrays Noah as the single righteous individual among a generation distinguished for its depravity, corruption, and lawlessness (*Gen.* 6.9). Disgusted by this behavior, God decides to destroy the created order through a universal deluge (*Gen.* 6.5-7, 6.11-12, 7.4), but, owing to Noah's exemplary piety, he and his family are spared this fate (*Gen.* 6.8; 7.1). God warns Noah of the impending Flood and instructs him to build a boat and load it with certain items that are to survive the cataclysm (*Gen.* 6.13-21, 7.2-3). After the Flood, God concludes a covenant with Noah recommending certain basic observances (*Gen.* 9.1-17), and the children of Noah become the ancestors of the various contemporary nations (*Gen.* 9.18-19, 10). In *Jubilees* these points are elaborated upon in such a way that Noah's covenant in the third month becomes associated with the Festival of Weeks (Shavu'ot), and his sons divide the earth in his presence.

Within later biblically based literatures, Noah's primary significance revolves around his liminal position

between the antediluvian and postdiluvian worlds. Noah is a "new Adam" (*Gen.* 9.20), but his importance transcends the narrative level. He simultaneously embodies physical continuity with the righteous line of Seth and radical separation from the corrupt culture of the Flood generation. Hence, Noah becomes the prime candidate for the preservation of writings and teachings associated with worthies like Seth or Enoch and the guarantor of their accurate transmission to future generations. Similarly, Noah's remarkable piety amid his thoroughly apostate surroundings offered a typological model for those individuals or communities who identified themselves as occupying a similar cultural niche. The Flood was interpreted as foreshadowing a future eschatological judgment, with Noah's righteousness as both an object lesson and a promise of the survival and reward of the righteous at the End of Days.

The Dead Sea Scrolls illustrate almost every aspect of this postbiblical fascination with Noah and the Flood narrative. The prophetic flavor of *Genesis* 5.28–29 apparently stimulated the production of a legendary narrative stressing certain marvelous signs attending Noah's birth. Among the Dead Sea Scrolls at least three different versions of this legend are preserved. Two Aramaic renditions constitute the initial surviving columns of the *Genesis Apocryphon* (1QapGen ii–v) and the final chapters of *1 Enoch* (*1 Enoch* 106–107; *Enoch*¹, 4Q204). There are also extant some Hebrew fragments pertaining to the same event in the Noah Text (1Q19). Another enigmatic Aramaic text, the so-called Elect of God text (4Q534), may be an oracle predicting Noah's birth and mission; if so, its relationship to the previous legend remains unclear. The birth legends emphasize Noah's status as a divinely chosen agent, whose birth and subsequent career possess cosmic significance and may represent a response to a rival scribal tradition that attributed a supernatural origin to the child. [See *Enoch*, Books of.]

In addition to these fragments, there are other texts among the Dead Sea Scrolls that attest to the popularity of Noah and the story of the Flood. The *Genesis Apocryphon* once featured an extensive first-person narrative by Noah of the chaotic conditions preceding the Flood, his selection by God as Flood hero, the cataclysm itself, and subsequent events in his life (1QapGen vi–xvii), but much of this narrative has perished. According to 1QapGen v.29, the source of this information was "the book of the words of Noah." The commentary on *Genesis* A (4Q252) and the *Admonition Based on the Flood* (4Q370) each relate textual details of the Flood narrative, the former offering solutions for certain chronological difficulties resident in the biblical text; the latter consciously developing a homiletic exhortation that is based upon the biblical narrative.

JOHN C. REEVES

NOAH, TEXTS OF. Sources from the Second Temple period refer to writings attributed to or closely associated with Noah, but no *Book of Noah* survives from antiquity. One Hebrew scroll from Qumran (1Q19) is referred to as Noah, but this is a modern title. Some fragments of this scroll resemble parts of *1 Enoch* that deal with Noah or have been attributed by scholars to a *Book of Noah*. Fragments 2 and 3 deal with Noah's birth (paralleling *1 Enoch* 106–107), while fragment 1 seems to have connections with the Flood story and thus, perhaps, with *1 Enoch* 8.4–9.4. Moreover, fragment 2 mentions the names of the archangels, which also occur in the first part of *1 Enoch*. The combination of Flood motifs with the story of Noah's birth in these fragments is highly suggestive. The remaining fragments of 1Q19, however, do not seem to have any recognizable relationship to material connected with Noah and Enoch.

Scroll 1Q19 does combine a number of the elements from part 1 of *1 Enoch* that scholars believe are ultimately derived from a Noachic work. However, *1 Enoch* was composed in Aramaic, as the Qumran fragments of it attest, while 1Q19 was written in Hebrew. We cannot determine whether 1Q19 was a "Book of Noah" or another work embodying Noachic material.

Evidence for Book of Noah. The following Noachic texts from Qumran bear on the question of whether a *Book of Noah* existed. The *Genesis Apocryphon* from Cave 1 at Qumran (1QapGen), an Aramaic retelling of parts of *Genesis*, devotes a substantial fifteen columns to Noah. Columns ii through v deal with Noah's birth from

the viewpoint of his father, Lamech. Next, a recently deciphered fragment from column v, line 29, of this poorly preserved document contains the expression "Book of the Words of Noah." It apparently followed a blank line and marked the beginning of a new section of the work that continued to column xvii. This first-person narrative was apparently attributed to the "Book of the Words of Noah," and in it Noah recounts his story from the beginning, including his birth. It might be an extract from or a summary of a *Book of Noah*, though this may only be determined after the publication of the rest of the fragments of these column and perhaps not even then.

Aramaic Levi is a document apparently of the third century BCE. Seven copies of it have been found at Qumran, supplementing a fragmentary manuscript from the Cairo Genizah and some Greek extracts. One of its main points is the investiture of Levi as priest and the transmission to him of the priestly teaching about the sacrificial cult. Levi, having been anointed, is taught by Isaac (secs. 12-13). Isaac concludes his teaching: "for thus my father Abraham commanded me, for thus he found in the writing of the *Book of Noah* concerning the blood" (sec. 57). The phrase "concerning the blood" and the attribution to Noah may be explained by *Genesis* 9.1-7 and *Genesis* 8.20-21. A similar stress on the transmission of teaching from antiquity is to be found in the Testament of Qahat (4Q542) and the Visions of Amram^a? (4Q543-548), which are associated with Aramaic Levi. The question remains, of course, whether a "Book of Noah (concerning the blood)" actually existed, or whether the author of Aramaic Levi invented this title to enhance the authority of the priestly tradition it promoted.

Jubilees 10.1-14 relates an angelic revelation to Noah about illness and demons and concludes: "And Noah wrote down everything in a book, as we instructed him . . . [a]nd he gave everything he had written to Shem, his eldest son." The demonological material is connected with Noah because of the idea that the giants, offspring of the watchers and the daughters of men (*Gen.* 6.1 and *1 Enoch* 6), were drowned in the Flood, but their spirits became demons. On literary grounds, *Jubilees* 10.1-14 seems to be a discrete unit of text. Did it come from a *Book of Noah*? "The Words of Noah" are mentioned in *Jubilees* 21.10, but nothing can be inferred from that text.

A number of other parts of *1 Enoch* and *Jubilees* have, with greater or lesser plausibility, been attributed to a Noachic writing. The following passages are considered to be the strongest candidates: *1 Enoch* 60, 65.1-69.25, and 106-107. Noachic teachings transmitted in *Jubilees* 7.20-39 are dependent on *1 Enoch* 6-11.1. An extensive development of Noachic traditions is to be observed in *2 Enoch* 71-72, which recasts the Noachic birth traditions,

attributing them to Melchizedek. This is, however, no evidence for a literary work.

An Aramaic text entitled Elect of God (4Q534) contains some physiognomic details followed by information about the life of its hero. It is said that he will acquire wisdom with the knowledge of three books. Because of apparent references to the Flood in column ii, it has often been thought to be a horoscope for Noah. The matter cannot be regarded as settled.

We may conclude from this material that there might have existed a book or books of Noah that dealt with the topics of the birth of Noah (*Book of the Words of Noah*), sacrificial instructions ("The *Book of Noah* concerning the blood"), and medicine and demonology (*Book of Noah*). Whether these three topics were included in a single writing or in a number of different compositions cannot be determined. Indeed, it is possible that some or all these topics were not part of a discrete *Book of Noah* but were included in a broader retelling(s) of the *Genesis* stories.

Noah figures prominently in a number of other writings from the Second Temple period. Philo deals with aspects of Noah's life and actions in *Questions and Answers on Genesis and Exodus*, and in four closely related treatises that form part of his allegorical commentary on *Questions on Genesis: On Husbandry, On Noah's Work as a Planter, On Drunkenness, and On Sobriety*. Noah also figures in biblical retellings such as Pseudo-Philo's *Biblical Antiquities* and Josephus's *Jewish Antiquities*. None of these works, however, can be viewed as a *Book of Noah*.

Later Jewish Literature. The name *Book of Noah* is found in later Jewish literature. *Sefer ha-Razim*, a Jewish magical work of the fourth century CE, opens: "This is a book, from the Books of Mysteries, which was given to Noah, son of Lamech . . . son of Adam by Raziel the angel." A citation of the Noachic passage in *Jubilees* 10 is found as the opening passage of the medieval Jewish medical work *Sefer Asaf ha-Rofe*. It commences: "This is the book of remedies that ancient sages copied from the books of Shem ben Noah, which was transmitted to Noah on Mount Lubar, one of the mountains of Ararat, after the Flood." It has not yet been determined how this material reached the medieval author.

MICHAEL E. STONE

NUMBERS, BOOK OF. Substantial portions of the *Book of Numbers* have been preserved in ten to twelve manuscripts from three different sites near the Dead Sea (see table 1). Every chapter of the book except chapters six and fourteen is partially preserved in at least one of these manuscripts. Table 1 lists the manuscripts of *Numbers* with the approximate dates determined by paleographic analysis, along with the number of words that are preserved in whole or in part. The two documents with "Leviticus" in their titles include portions of *Numbers*, and the data concern those portions alone.

The one manuscript that stands out from the others because of its interesting readings is Numbers^b (4Q27; here-

after called 4QNumbers^b). Only three others preserve any textual variants from the Masoretic Text. The following account examines these four manuscripts according to an ascending order of significance.

Numbers¹ (2Q7; hereafter called 2QNumbers¹) omits one word (the first "all") in *Numbers* 33.52.

Septuagint Numbers (4Q121) has been analyzed in two opposing ways. E. Ulrich records P. Skehan's opinion that the text is "a considerable reworking of the original LXX [Septuagint] to make it conform both in quantity and in diction to a Hebrew consonantal text nearly indistinguishable from that of MT [Masoretic Text]," but Ulrich himself prefers a contrary conclusion: "4QLXXNum [4Q121] presents the superior witness to the Old Greek translation" (Ulrich, 1992). The dispute here is not about how close Septuagint Numbers is to the Masoretic Text; all agree that the text is very close. The dispute is rather about whether its closeness reflects the original Septuagint or a later revision toward the Masoretic Text.

The *Numbers* portion of Leviticus-Numbers² (4Q23) has forty distinguishable preserved textual variants. These variants show an interesting pattern of agreement between Leviticus-Numbers² and the major textual witnesses: thirty agreements with the Masoretic Text; twelve with the Samaritan Pentateuch; eight with the Septuagint; five with none of the others. (The total number of agreements exceeds the number of variants because many variants have more than one text in agreement.)

NUMBERS, BOOK OF. TABLE 1 *Analysis of Manuscripts that Comprise Numbers.*

MANUSCRIPT	DATES	WORD COUNTS
<i>Qumran</i>		
1Q3 paleo-Leviticus	150-100 BCE	8
2Q6 Numbers ^a	40-60 CE	24
2Q7 Numbers ^b	30-1 BCE	19
2Q8 Numbers ^c	20-50 CE	4
2Q9 Numbers ^d ? (from same manuscript as 2Q7?)	30-1 BCE	3
4Q23 Leviticus-Numbers ²	150-100 BCE	710
4Q27 Numbers ^b	40-20 BCE	1528
4Q121 Septuagint Numbers	25 BCE-25 CE	134
<i>Nahal Hever and Nahal Se'elim</i>		
XHev/Se 1 Numbers ^a	1-30 CE	10
XHev/Se 2 Numbers ^b (from same manuscript as 5/bHev 1a?)	1-30 CE	95
5/bHev 1a Numbers	1-30 CE	6
<i>Wadi Murabba'at</i>		
Mur 1:6-7 Numbers	75-125 CE	31

Of these variants there are four that are more helpful in establishing textual affiliation. In *Numbers* 3.12, Leviticus-Numbers^a has a short reading agreeing with the Masoretic Text ("I have taken the Levites . . . instead of every firstborn") against the longer reading of the Samaritan Pentateuch and the Septuagint ("I have taken the Levites . . . they will be the ones redeemed instead of every firstborn"). In *Numbers* 4.3, it agrees with the Masoretic Text and the Samaritan Pentateuch ("from thirty years old") against a different, harmonistic reading of the Septuagint ("from twenty-five years old," cf. 8.24). In *Numbers* 9.3, Leviticus-Numbers¹ has a unique reading ("in the day [. . .]" instead of "in the evening"). In *Numbers* 32.29, 31, and 33, it agrees with the Masoretic Text in the order of Gad-Reuben against the order in the Samaritan Pentateuch and the Septuagint of Reuben-Gad, while at the same time agreeing with the Masoretic Text and the Septuagint against the Samaritan Pentateuch in the shorter reading that does not include the half-tribe of Manasseh.

These four variants are of the type that could indicate affiliation, and they suggest that even though Leviticus-Numbers^a includes divergent readings, its primary link is with the Masoretic Text. The diagnostic value of these variants is weakened, however, because the readings Leviticus-Numbers^a has in common with the Masoretic Text are superior readings. Most scholars agree that inferior readings (shared errors) are better indicators of affiliation. Nevertheless, in the absence of more compelling data, these four variants emerge as the strongest evidence for the textual affiliation of Leviticus-Numbers^a.

The most significant manuscript of *Numbers* from Qumran is 4QNumbers^b. It preserves more than twice the amount of text preserved by the *Numbers* portion of Leviticus-Numbers^a, and nearly nine times the number of variants (preserved and reconstructed). The total amount of text preserved comes to approximately 9 percent of the *Book of Numbers*, and fragments exist from the eleventh chapter through the end of the book. The published list of variants in *Discoveries in the Judaean Desert* contains 210 entries for preserved variants and 112 for reconstructed variants. Because some of the published entries include multiple variants within the same lemma or subvariants that differ only with readings from other locations, a more accurate count of variants is 243 preserved and 115 reconstructed.

The range of secondary readings exhibited by 4QNumbers^b is impressive. The most significant ones are the major interpolations from *Deuteronomy* or from other parts of *Numbers*, which link together two accounts of the same events. Most of these interpolations had been known from the Samaritan Pentateuch, but in the last chapter of 4QNumbers^b there is evidence of previously unknown interpolations of the same kind. 4QNumbers^b

also commonly has readings made longer by the addition of subjects, appositives, prepositional phrases, clauses, copulas, or miscellaneous words. As in the Samaritan Pentateuch there is a tendency to convert singular words to plural when the plural reflects the sense of the reading.

On the other hand, 4QNumbers^b was a carefully produced text, copied by a master scribe who used impeccable calligraphy and consistent orthography, and made few slips of the pen. Only seven supralinear corrections have been clearly preserved, although another two are posited in the transcription. All except one of the corrections are of single letters that had been omitted; one correction restores an omitted tetragrammaton (24.6). In two instances the scribe began to write a wrong letter, but caught the mistake in mid-stroke and corrected it to the proper form. The only unambiguous error that remained uncorrected was the transposition of two letters in a word (24.9).

These errors of omission, false starts, and transposition are clearly the responsibility of the scribe who copied 4QNumbers^b. That such errors are few and almost always corrected suggests that great care was taken in the production of the manuscript. Therefore one must be cautious in attributing to the scribe of 4QNumbers^b the majority of the variants that cause such diversity between this manuscript and the Masoretic Text. It is improbable that the scribe started with a source very similar to the Masoretic Text and introduced hundreds of variants into his copy because he was sloppy, tired, or careless.

Many of the variants, moreover, are harmonistic additions, which must have been made by one or more scholars who knew the context well. The most significant of these additions, the major interpolations from *Deuteronomy*, are found in precisely the same locations also in the Samaritan Pentateuch. It is extremely unlikely that scholarly scribes from disparate parts of Israel independently edited pristine textual sources, guided only by a common attitude that biblical texts could be treated quite freely, and that these scribes independently produced texts with the same significant harmonizing additions in precisely the same locations. There must have been a source text or recension that included these harmonizing additions and provided the basis for all the texts that are in the category called Samaritan, proto-Samaritan, or Palestinian. These texts share more than a common attitude; they share a common recension.

The textual variants in 4QNumbers^b, then, can be accounted for by some mixture of unintentional scribal error (including at least the slips of pen noted above), intentional editing by the individual scribe (perhaps including some of the harmonizing readings that have been preserved only in 4QNumbers^b), and faithful copying of a source that already contained scribal errors and recen-

NUMBERS, BOOK OF. TABLE 2. *Total Number of Agreements between Numbers^b and Each Other Witness.*

WITNESSES	SHARED VARIANTS (PRESERVED/RECONSTRUCTED)	PERCENTAGE OF VARIANTS THAT ARE SHARED (PRESERVED/RECONSTRUCTED)
Numbers ^b Samaritan Pentateuch	161 (108/53)	45 (44/46)
Numbers ^b Masoretic Text	135 (94/41)	38 (39/36)
Numbers ^b Septuagint	123 (85/38)	34 (35/33)
Numbers ^b unique	98 (66/32)	27 (27/28)

sional readings (including at least the major interpolations known in the Samaritan Pentateuch). The evidence that has survived the millennia is too meager to indicate the precise mixture. The hundreds of variant readings found in 4QNumbers^b, however, provide invaluable light with which to explore the murky development of textual variants and recensional patterns.

The other three major witnesses to the text of *Numbers* (the Masoretic Text, the Samaritan Pentateuch, and the Septuagint), reveal their own characteristic patterns of errors in the hundreds of variants considered in connection with 4QNumbers^b. The Masoretic Text is characterized mainly by a low frequency of secondary readings. It has readings that may be inferior in some 16 percent of the list of variants. The few errors it exhibits are spread between many categories covering insignificant details. The most significant errors posited for the Masoretic Text are three possible omissions of clauses at *Numbers* 23.3, 25.16, and 32.30.

A higher frequency of secondary readings is found in the Samaritan Pentateuch. Probably some 27 percent of its readings in the listed variants are inferior. Its most significant secondary readings are the major interpolations from *Deuteronomy*. Other common errors include changing words from singular to plural, and changing pronouns to nouns. (For a fuller list of errors in the Samaritan Pentateuch from the entire Pentateuch, see Waltke's article on the "Samaritan Pentateuch" [Waltke, 1992]).

An even higher frequency of secondary readings is found in the Septuagint, with probably some 38 percent of its variant readings being inferior. The most common secondary readings here are additions of prepositional phrases, single words, and copulas. It also has several transpositions of words or verses.

The highest frequency of secondary readings is found in 4QNumbers^b. Some 42 percent of its variant readings are probably inferior. The percentage of inferior readings ranges from 38 percent of the preserved variants to 50 percent of the reconstructed variants. Its text is charac-

terized by frequent additions, the most common of which have been described above.

Although the major texts have their own distinctive characteristics, they are interrelated in a bewildering array of shared readings. Table 2 shows the total number of agreements between 4QNumbers^b and each other witness, in descending numerical order. (The total number of agreements exceeds the number of variants because many variants have more than one text in agreement. The data here supersede those in earlier works.)

When all the variants are considered together, it appears that 4QNumbers^b is related to each of the other three major witnesses to nearly the same degree, although the large number of unique readings proves that its text is not simply derived from the other witnesses alone. A clearer picture of its textual relationships emerges when the variants are individually analyzed for their inferiority or superiority, and when the shared errors of inferior readings are treated as the weightier evidence of textual affiliation.

When 4QNumbers^b has inferior readings, its readings agree with the other witnesses according to the following major patterns. The number of variants (preserved/reconstructed) found in each pattern is listed after the pattern.

- 4QNumbers^b/Masoretic Text, Samaritan Pentateuch, Septuagint 59 (37/22)
- 4QNumbers^b Septuagint/Masoretic Text, Samaritan Pentateuch 32 (19/13)
- 4QNumbers^b Samaritan Pentateuch/Masoretic Text, Septuagint 22 (10/12)
- 4QNumbers^b Samaritan Pentateuch and Septuagint/Masoretic Text 12 (10/2)

The following list shows that when all agreements in inferior readings are totaled and agreements with each witness are counted without regard to larger patterns of agreement, then the Samaritan Pentateuch and the Septuagint emerge as nearly equal partners in corruption with 4QNumbers^b, while the Masoretic Text shares distinctly fewer corruptions.

- 4QNumbers^b Septuagint 47 (30/17)
 4QNumbers^b Samaritan Pentateuch 46 (28/18)
 4QNumbers^b Masoretic Text 15 (8/7)

If shared errors are indeed the weightier evidence of textual dependence, then the conclusion must be that 4QNumbers^b is more closely related to the Samaritan Pentateuch and the Septuagint than it is to the Masoretic Text. That its relation to the Samaritan Pentateuch is even more significant than its relation to the Septuagint can be determined by the decisive force of the major Deuteronomic interpolations it shares.

4QNumbers^b thus preserves highly significant readings. It helps define the shape of the Palestinian recension and its further expansion beyond the stage represented by the Samaritan Pentateuch. It proves that at least some of the variant readings in the Septuagint are faithful translations of a variant Hebrew text rather than examples of carelessness. And it preserves many unique readings that open a window into the ancient exegesis of the text or, in a few cases, may preserve superior readings long lost from all other witnesses.

Quotations from and allusions to the *Book of Numbers* are found in parabiblical (4Q364–366) and various non-biblical scrolls from Qumran. The parabiblical scrolls show that the biblical text could be modified by adding exegetical material and by omitting or rearranging passages to form a “reworked” biblical text. The source used by these parabiblical texts was apparently a biblical text of the Palestinian recension, similar to 4QNumbers^b (cf. Tov, “4Q364–367,” in *Discoveries in the Judaean Desert*, 13, pp. 194–196).

Allusions to the *Book of Numbers* in the nonbiblical scrolls from Qumran include scattered references to the Romans as *Kittim* (cf. *Num.* 24.24) and a reference to the rebellion of Korah as an illustration of how God-ordained authority needs to be honored (*Num.* 16; 4Q423 5.2). But the primary use of *Numbers* is as a source for laws about ritual purity, contact with the dead, and the preparation of the red heifer (*Num.* 18–19; 11Q19 49.5–51.6; 4Q251 6.2–6; 4Q276–277; 4Q284 4; 4Q512 12; 4Q394–399 B 13–17, 72–74). *Numbers* also serves as the source for laws about various offerings and festivals (*Num.* 9.28–29; 11Q19 13–14, 17–19, 25–29) and the vows of men and women (*Num.* 30; 11Q19 53.14–54.5; CD xvi.10, 19.5).

Numbers is also a source for prophecy and for blessing formulas. Balaam’s prophecy in *Num.* 25.15–19 is used primarily as a prediction about the eschatological messiahs, the “Scepter” and the “Star” (1Q28a v.27; 4Q175 1.9–13; CD vii.19–21), but it also provides wording for a blessing (1Q33 xi.6–7). The “Song of the Wall” in *Num.* 21.18 is interpreted as a prophecy about how God would raise leaders who would dig wells of the law for the people (CD

vi.3–4). The Aaronic blessing of *Num.* 6.24–26, in either verbatim or expanded form, is spoken by the priests to the members of the community (1QS ii.2–4), by the instructor to the high priest (?) (1Q28a iii.1), and apparently as part of a healing ritual (4Q374 2 ii 8). The military blessing of *Num.* 10.9 is worked into a prayer of blessing to be recited before the eschatological battle (1Q33 x.6–8).

NATHAN JASTRAM

NUMISMATICS. At present it is rather difficult to analyze the numismatic material found at Qumran since, unfortunately, it has not yet been properly published. The numismatic material has been discussed by the site's excavators (R. de Vaux, 1973), as well as by other scholars (M. Laperrousaz, J. Magness, and others) who use it to prove their theories regarding the chronology of the various phases at Qumran. Based on purely numismatic evidence, as far as can be determined from the available material, which is derived mainly from the list of finds according to loci (Jean Baptiste Humbert and Alain Chambon, *Fouilles de Khirbet Qumran et de Ain Feshkha*, I, Göttingen, 1994), my conclusions are as follows.

The earliest coins are 8 Seleucid coins from Antiochus III to Antiochus VII as well as at least 10 coins of John Hyrcanus I. These coins are followed by 128 coins of Alexander Jannaeus. The Seleucid coins are all characteristic of the late-second-century coin circulation in Judea, and, together with the coins of Hyrcanus I (according to recent studies, all the Hasmonean coins depicting the name of Yehohanan are now dated to John Hyrcanus I) and attest that the site was inhabited during the last quarter of the second century BCE (this corresponds to de Vaux's phase 1a). The great number of coins of Alexander Jannaeus is characteristic of his rich minting. Many of the coins of Alexander Jannaeus were found in late phases. Similar phenomena are known at other sites, especially Masada. There is a possibility, although it has not yet been proven, that the coins of Alexander Jannaeus circulated over a long time, and were in use under Herod the Great, Herod's sons, and the Roman procurators. These coins are of a very small denomination, and may have been used as half-proutot, which were in demand over a long period of time. The single coin of Judah Aristobulus II and the 6 coins of Mattathias Antigonus point

to the site's continual occupation until the end of the Hasmonean period.

The main chronological problem, which still is in dispute, is whether or not there was a gap in the occupation of the site, between 31 BCE (the year of the earthquake) and the end of the first century BCE, as was suggested by de Vaux. This theory has already been challenged by several scholars. In our opinion, the numismatic evidence does not attest this gap on the basis of the following finds: Fifteen coins of King Herod were found, similar to the number of coins of Archelaus that were found there. Though the coins of King Herod were circulated during the lifetime of Herod Archelaus as well, it could well be that they were left there by people who inhabited the site during Herod's time.

The most important numismatic find of Qumran is the hoard of 561 Tyrian shekels found buried in three jugs (223+185+153) in locus 120. Two of the jugs were found together near the entrance to a room, at the door on the right. The third one was found in the same room, buried near its northern wall. All three lots comprise coins of the same types and dates and are therefore homogeneous. They were undoubtedly buried together and should be considered as one hoard. Except for a few late Seleucid tetradrachms, all are Tyrian full shekels with a few half-shekels. The latest date of these is "year 118" of the Tyrian era, which corresponds to 9/8 BCE. De Vaux has suggested that these lots were brought to the site at the beginning of phase II, during the reign of Herod Archelaus, explaining that, since Tyrian shekels from the years immediately following 9/8 BCE do not exist, it could well be that the hoard was placed in the site a number of years after the date of the latest coin, namely, during the first stage of Archelaus's reign. The information on the Tyrian shekels in our hands contradicts this supposition. In fact, there is no gap at all in the minting of Tyrian shekels during the years following 9/8 BCE. De Vaux and his numismatic advisers based their information on the published material available at that time, mainly that of the British Museum (1909) and the list of dates published by Rouvier (1903). In the meantime, many more Tyrian shekels have come to light, and, together with the huge Usfiyeh hoard, the "gaps" of dates on Tyrian shekels no longer exist. Tyrian shekels exhibiting dates corresponding to the years 8/7, 7/6, 6/5, 5/4, 4/3, 2/1 BCE and subsequent years are in the following collections: The Israeli Antiquities Authority, The Israel Government Coins and Medals Company, The Reuben Hecht Museum at Haifa University, as well as others. This information brings us to the inevitable conclusion that the three jugs of Tyrian shekels were buried in Qumran around 8 BCE, during King Herod's lifetime. This find, together with the fifteen coins of Herod, points to the following chronological re-

construction: After 31 BCE the site was not abandoned but reconstructed and resettled after the earthquake. Then, for some unknown reason, the site was abandoned, in 8 BCE. The single person who knew about the hiding place of the coins must have been killed or died, and no one remained to come and claim the cash. When, some ten years later, the site was reoccupied, the people living there, new ones as well as some of the original inhabitants, did not know that they were sleeping on a treasure.

The last stage of occupation is characterized primarily by the coins of Herod Archelaus, the Roman procurators, and Agrippa I, altogether some 180 coins. According to the excavators, the end of Qumran occurred in 68 CE, during the First Jewish Revolt against Rome. This date was again established on the basis of numismatic evidence. The theory, however, should be challenged. Sixty-eight proutot of "year two" and "year three" were found. Since no coins of "year four" (not mentioning the rare shekels of "year 5") were found, the excavators assumed that it was during this year that the site was destroyed. The numismatic evidence available, however, leads us to a different conclusion. Principal questions are raised by coin no. 243, from locus 13, which was struck at Ascalon in 72/3 CE, and a similar one from locus 43. It may well be that additional coins of this type were found in the dig. In addition to these two Ascalon coins, "three coins of Vespasian of 73 CE" were found (in locus 29). These finds should be compared with the finds from Masada, where the same coins were discovered in the destruction level of 73 CE. I am under the impression that Qumran reached its end at the same time that Masada did. The fact that no later coins of the First Jewish Revolt were found there, namely, coins of the fourth and the fifth year, is due to the fact that they are simply rare (those of the fifth year are extremely rare). Since the numismatic find at Qumran is poor, in general, the absence of the late coins of the First Jewish Revolt does not at all mean that the site was abandoned after the third year of the war. At Masada, 2,170 coins of "year two" and "year three" were found and only 105 of "year four" (coins of "year four" have a "tendency" to disappear from some excavations—stolen by some workers who sell them in the antiquities market for high profit). The two coins of Ascalon, the three coins of Vespasian, as well as the coins of Judaea Capta, struck in 70–72 CE (no. 595 from locus 32 and no. 801 from locus 43) may well have been used at the site until 73 CE, when Masada was destroyed. Generally speaking, the numismatic evidence of Qumran closely resembles that of Masada. The lack of coins of "year four" can be compared to the absence of the early coins of Herod the Great (the dated coins struck by him at Samaria in 40–37 BCE, one of which was found at Ein Feshkha, no. AF44). This absence did not bring the excavators

to the conclusion that the site was abandoned after the defeat of Mattathias Antigonus in 37 BCE.

Two coins of Caesarea and three of Dora were also found. These coins, struck during the years 67/8 CE, were used by all the inhabitants of the country, including the Jews, and composed the large denominations of bronze coins in the circulation of the period. Finds identical to this are known from Masada. The coins found at Qumran do not suggest that a Roman garrison occupied the site after the First Jewish Revolt (66–70 CE). The two coins of Trajan (nos. 490, 491) belong to the group of coins brought there during the Bar Kokhba Revolt (c.132–135 CE). All the coins found there are the typical types used by the local population until 73 CE, similar to the finds of Masada. Several Bar Kokhba coins prove that during the Bar Kokhba Revolt, some rebels reoccupied Qumran (and Ein-Feshkha) for a short time.

It should be noted that many of the loci included coins of long range, attesting the fact that the site was renovated from time to time and earlier strata were dug during later periods of occupation, bringing upward earlier coins, or, dropping late coins into earlier periods. An example is locus 7 in which the following coins were found: one tetradrachm of Antiochus VII, three coins of Alexander Jannaeus, two of Roman procurators under Tiberius, two coins of Agrippa I, and one of the procurator Antonius Felix, that is, coins from circa 130 BCE to 54 CE. Another such locus is no. 29, in which coins of Hyrcanus I were found together with coins of Alexander Jannaeus, Agrippa I, "year two" of the First Jewish Revolt, three coins of Vespasian of 73 CE, as well as four coins of Bar Kokhba and a coin of Trajan. Locus 30 included coins of Alexander Jannaeus, Mattathias Antigonus, the Roman procurators Antonius Felix and Festus, and "year two" of the First Jewish Revolt.

The coins found at Ein Feshkha show a similar pattern to that of Qumran, but, unlike Qumran, Ein Feshkha was, to a certain extent, reoccupied later, and people lived there during the reign of Domitian. This is demonstrated by a hoard of 17 coins of Agrippa II struck during the years 78–95 CE, as well as a coin of Domitian from the mint of Antioch.

It should be mentioned that no coins were found in the caves in which the scrolls were hidden. More interesting is the fact that not even a single coin was found in the Qumran cemetery, nor was any other material, apart from some trifling pieces of pottery. This is quite indicative and stands in contrast to some Jewish tombs from Jerusalem in which coins and other artifacts were discovered.

[See also Cemeteries.]

YAAKOV MESHORER

O

OATHS AND VOWS. In biblical Israel, as in the ancient Near East as a whole, oaths were often taken in order to attest to the inviolability of one's word. Such oaths usually involved a curse that would come upon the swearer if the oath turned out to be false. Generally, only the self-imposed condition is stated, with the curse left unstated yet understood. Hence, the words *shevu'ah* ("oath") and *'alah* ("curse") are practically synonymous. Often oaths involved the name of God as a guarantor or witness to the assertion. Legal procedures usually involved oaths, such as the exculpatory oath in which a defendant had to swear his innocence to satisfy a plaintiff (*Ex.* 22.7, 10). Oaths also functioned to force recalcitrant witnesses to testify (*Lev.* 5.1). Voluntary commitments were taken on in the form of oaths (*Lev.* 5.4, cf. 5.6-13) and these commitments had to be observed. *Numbers* 30.2-17 discusses the vows of unmarried and married women, which could be annulled by their fathers or husbands, respectively. Violation of oaths brought divine punishment. For this reason, *Ecclesiastes* discouraged oaths (*Eccl.* 5.1-6, 8.2-3).

Vows entail a promise to abstain from that which is normally permitted, as in the case of the Nazirite vow (*Nm.* 6). Vows often took the form of votive offerings, animals, or other things devoted to God. In this case, the object was rendered sacral and forbidden for common use. In lieu of animals, money could also be paid (*Lev.* 27). A specific form of oath very similar to a vow was that of oaths of self-denial discussed in *Numbers* 30. Such oaths taken by a woman were subject to approval of her husband or father.

Second Temple Sources. Several Second Temple period sources opposed oaths on the assumption that they would be violated and lead to transgression and punishment. Further, violations of oaths and vows were regarded as particularly serious since they involved the invocation of God's name as guarantor of the obligations. In this respect, they continued the trend already observable in *Ecclesiastes*. *Ben Sira* warns strongly against oaths in 23.9-11. Philo opposed the taking of oaths by God's name (*On the Special Laws* 2.1-2) and suggested avoidance or delay of oaths because of their seriousness (*Decalogue* 84). Josephus states that the Essenes would not swear oaths (*The Jewish War* 2.135, *Jewish Antiquities*

15.371) except for their initiation rites (*The Jewish War* 2.139) and would not swear using the divine name.

The Dead Sea Sect. Oaths played a major role in the life of the Dead Sea sect, both in terms of the procedures for entering the sect and of the judicial system. At the very start of the initiation process for joining the sectarian group, an oath had to be taken to return to the Torah of Moses and to its sectarian interpretation as taught by the Zadokite priests and the other members of the group. The oath also required separation from evildoers (1QS v.8-10). A similar oath was taken by a boy whose father was a member of the sect when he reached twenty, the age of majority (CD xv.5-6, 12-13; 1QSa i.9-10). This oath represented the transition from being the child of a sectarian to being an independent member of the group. At the age of twenty, the "new" member would take his stand in the mustering of the sect and accept the full obligations and privileges of his new status. The oath bound him to accept the sectarian interpretations of the Torah and the various sectarian regulations.

One of the functions of the judiciary in the Qumran legal system was to administer oaths. It was forbidden to make use of oaths as a legal instrument outside the precincts of the sect's formal courts (CD ix.8-10). We do not have a full set of laws detailing all the cases for which oaths were employed, but some information is available. For example, we can assume that oaths were used, as required by the Torah (*Ex.* 22.6-14), in cases of damage law where bailees asserted that the property in their care had been damaged by others with no negligence on their part. Oaths of adjuration were used to compel those who might know of the location of lost or stolen property to come forward (CD ix.10-12). Such oaths specified curses that would come upon the one who violated them, and the adjured party was required to respond "amen," thus accepting the provisions. A similar oath is known from medieval Jewish practice. This procedure was based on the sect's adaptation and interpretation of *Leviticus* 5.1, which legislated the use of such oaths to compel testimony by recalcitrant witnesses.

Qumran legal practice prohibited the use of the Tetragrammaton (the four-letter name of God—YHWH) in oaths. Use of this name was punished by expulsion from the sect (1QS vi.27-vii.2). It was also forbidden to use the

names Adonai (Lord) and Elohim (God), or even to say "by the Law of Moses." The only kind of oath permitted was one by the "curses of the covenant," as delineated in *Deuteronomy* 28.15–29 (cf. verse 69 and 29.20). Oaths by the divine name are said to profane God's name (CD xv.1–5). According to one view (Oimron, 1990), the oath of the "sons" upon reaching the age of majority was the only exception.

Damascus Document. A variety of other laws pertaining to oaths and vows are found in the Damascus Document (CD xvi.7–13), which reviews the rules found in the Torah for oaths not particularly connected with sectarian life or with the legal system of the sectarians discussed above. Based on *Deuteronomy* 23.24, the text specifies that all binding oaths must be carried out. Since this verse refers to vows, it seems that the Damascus Document considered the same laws to apply to both. Further, the text specifies that oaths to fulfill the commands of the Torah must be satisfied even at the sacrifice of one's life. Yet, similarly, if one swore to violate the Torah, he may not fulfill this oath even at the price of death. The *tanna'im* believed that an oath cannot refer to any of the commandments of the Torah for to these the entire people of Israel swore at Mount Sinai so that an oath has already been taken to observe them. Therefore, the oath need not be kept nor does it require annulment. According to the Damascus Document, however, oaths to observe or violate the commandments are valid, and since the latter should not be kept, they should be annulled by a husband whose wife made such an oath or by the father of a minor.

The text also discusses the annulment of oaths of married women, based on the Torah's discussion of the annulment of vows in *Numbers* 30.4–9. Here the sectarian law required that the oath (probably the vow as well) only be annulled by the husband or father if he was certain that it should not be carried out. It is most probable that the rights of the father or husband to annul oaths and vows were limited to cases in which they would be affected by them. The wisdom text, Instruction^b (4Q416) advises a husband to annul all the vows of his wife, making no distinctions at all as to the nature or appropriateness of the vow.

Temple Scroll. An alternative treatment of these same issues occurs in the Temple Scroll (11QT^a lii.11–liv.7, based on *Deuteronomy* 23.22–24 and *Numbers* 30.3–17). The text takes the view that vows should be avoided but that if taken must be observed. Further, the addition of the word *oath* to the biblical text makes clear that the vows in question are essentially taken as oaths and therefore have great stringency.

The Temple Scroll specifies that when a father hears

the vow of a minor daughter or a husband hears his wife's vow, he may let it stand or annul it. If he wishes to annul it, he must countermand the vow on the same day that he hears of it. Typically speaking in the name of God, the scroll states, then "I will forgive her" for not keeping the vow. Waiting beyond the same day causes the husband or father to be liable for the transgression when his wife or daughter does not fulfill the vow. If a woman is a widow or divorcee, however, she is bound by whatever she has stated.

The issues dealt with in the Temple Scroll are those of who may vow and under what circumstances the vow may be annulled. The Damascus Document uses these same verses to refer only to oaths, and deals with the content of the oaths themselves—oaths to violate the Torah or the covenant, or oaths to fulfill commandments of the Torah. Either these two documents stem from entirely different circles or they represent earlier and later development of the legal traditions of the sect. The latter is most probable, namely that from the early Sadducean origins of the Temple Scroll laws to the more sophisticated analysis of the Zadokite Fragments legislation, the teachings of the sect underwent a course of development after the arrival of the Teacher of Righteousness corresponding to the establishment of the Qumran sect.

Early Christianity and Rabbinic Judaism. Early Christianity and rabbinic Judaism both followed the trend observable in Second Temple and Qumran sources of avoiding oaths and vows. *Matthew* 5.34 and *James* 5.12 opposed all oaths. In the description of the interrogation of Jesus, *Matthew* 26.63 says that the high priest adjured him to admit if he was the Messiah, evidence of the continued use of judicial oaths. *Matthew* 5.36 and 23.16–22 make clear that people took oaths by all kinds of things, despite the advice of so many Second Temple period sources to avoid oaths. Even an angel takes an oath by heaven and earth in *Revelation* 10.5–6, indicating again the popularity of oaths. (The cutting of Paul's hair in *Acts* 18.18 seems to have resulted from a Nazirite vow that is not discouraged in our sources.)

The rabbis also cautioned against indiscriminate oaths and vows. *Deuteronomy* 23.23 gave rise to a dispute in the Babylonian Talmud *Nedarim* 22a and 77b over whether it is desirable to vow and fulfill the obligation (Rabbi Judah) or whether it is a transgression to vow at all (Rabbi Meir). The majority of sages seem to have followed the view that oaths and vows should be avoided at all costs, except for oaths in judicial context.

Early rabbinic law limited the right of the husband or father to countermand the vows of a woman to those which involved abstinence or self-affliction, or which restricted the married woman's ability to discharge her ob-

ligations to her husband. In this respect, the rabbinic views are similar to those in the scrolls. The house of Hillel permitted the annulment of vows and oaths, as did Qumran law, while the house of Shammai only permitted the annulment of vows, following the Torah more literally.

OBADIAH, BOOK OF. See Minor Prophets.

ORDINANCES is the name given to a Hebrew manuscript that has come down to us in five or seven preserved fragments written in a late Hasmonean–early Herodian formal script (50–30 BCE). Only one copy survived: Ordinances (4Q334). (Note: 4Q159, 513, and 514, or 4QOrdinances^{a-c}, respectively, belong to a different genre of halakhic ordinances.) The text of 4Q334 forms a formulary, for instance, fragment 2:

[On the eighth (cardinal number) on it (*bo*) at night (*be-laylah*)] eight psalms (*shiroi*) and forty [four] songs of praise (*divrei tishbahot*) [and by day (*u-be-yom*) eight (?) psalms] and sixteen songs [of praise.] [On the ninth] on it at night [eight psalms and] forty-two [songs of praise and by] day [eight (?) psalms [and eighteen songs of praise.] And on the tenth on [it] at night eight psalms [and forty songs of praise and by day] eight (?) [psalms] and twenty songs of praise.

Nearest to this type of text come the Calendrical Documents and Miqtsat Ma'asei ha-Torah (part A). Eight psalms at night are a constant as fragment 2.i.4 shows, as are perhaps also eight psalms by day (2.5: [*shemo*] *neh*). The formulary can be reconstructed as follows: for the first date there are fifty-eight songs of praise at night and two by day; on each of the following days in the chronological sequence there is a decrease of songs at night by two and a corresponding increase of two songs by day. On the twenty-ninth we arrive at the inversion of two

songs of praise at night and fifty-eight by day. The preference of the night over the day shows that the text is dealing with a cultic ordinance rather than with an everyday one. The cardinal numbers signify the days (*yom*) and "on it" (*bo*) refers to the month (*hodesh*) or to the service (*ma'amad*, *mishmar*). The number twenty-nine relates to the distance from one new moon to the next. It is unknown if the formulary might also take into account a thirtieth day. The new moon itself receives most of the nightly songs of praise and the least by day.

Unlike the priestly courses in the Calendrical Documents, which brings the twenty-four priestly courses into line with twenty-six weeks of a year of 364 days (Maier, 1996, pp. 52–100), the scheme of the Ordinances in 4Q334 is dependent on the lunar cycle and refers to the twenty-four levitical courses of the singers at the temple (*1 Chr.* 25; 15.16ff.; 16.4ff.). The sum of the songs of praise at night and by day is sixty and apparently related to a year of 364 days (6 × 60 + 4). The number of the levitical songs of praise indicates the position of the moon for every day of the year. From rabbinic times on we know of prayers regarding the moon (*berakhot hal-levanah* or *qadosh hal-levanah*), but they are related to the crescent moon (*Sanh.* 42a; *Soferim* 20.1ff.; Elbogen, pp. 122–126). The constants of eight psalms every day at night and by day seem to refer to seven psalms for each day of the week and to an additional one for the Sabbath (cf. the order of sacrifices in *Nm.* 28.9ff.; 11QPsalms xxvii.2–3; not mentioned in *Tam.* 8) or it means sixteen times of singing every day (cf. *1QS* vi.7: "One third of all nights of the year . . . to recite together benedictions," but this means rather three times at night; cf. *1 Sm.* 3.8; *1QS* x.1ff.; *1QH* xii.6ff.).

The terminology of 4Q334, especially the emphasized difference between psalms and songs of praise, approximates that of the Songs of the Sabbath Sacrifice texts (4Q510.1, 4Q403.1.i.2ff.; cf. 4QTobit^c 13.1; Psalm 72.18ff.; J.T., *Meg.* 3.74b; Grözinger, pp. 84ff., 323ff.). They also mention an increase of praise to seven powers (4Q403.1.ii.27ff.; Newsom, p. 227), but Songs of the Sabbath Sacrifice is related to the heavenly service. Ordinances (4Q334) does not seem to be an "order of divine service," but rather a formulary of levitical singing at the temple at night and by day (*1 Chr.* 9.33; *Ps.* 131.1; *Is.* 62.6; Josephus, *Against Apion* 1.199).

The cultic ordinance of 4Q334 stems from levitical circles of the second–first century BCE. It contains the sum total of the monthly plan for the singing of psalms and benedictions at the Temple in Jerusalem. The ordinance is dependent upon the lunar cycle. The text shows no specific Hasidean-Essene origin. There are no indications that this schedule was ever practiced by anyone. On the

contrary, in rabbinic times the new moon was always declared by court order (Soferim 19.9).

G. WILHELM NEBE

ORIGEN was a prolific early Christian writer and the founder of Christian textual criticism of the Old Testament. He was born in Alexandria c.185 CE, spent much of his life in Caesarea of Palestine and died c.253. Most of the biographical information on him comes from Eusebius's *Ecclesiastical History*, written c.340. Though Origen is known principally for his works on doctrine and hermeneutics, he also created the text-critical tool known as the Hexapla.

One of Origen's aims in compiling the Hexapla was to "heal," as he put it, the differences between existing Greek manuscripts of the Septuagint and recover its "original" Greek text. In this he was following the Alexandrian textual critics of classical authors, but he may also have been attempting to emulate the carefulness and near-uniformity of rabbinic biblical texts. His other reason was to help Christians in their debates with Jews, so that they would not be ridiculed for using texts not recognised by their opponents.

In form, the Hexapla usually consisted of a six-columned synopsis of scripture. The first column supplied the Hebrew text word by word, and constituted the matrix for the other columns. The second was a Greek transliteration of the Hebrew. The third contained the literal Greek version of Aquila, the fourth the more stylish translation of Symmachus, and the sixth the version known as "Theodotion." In the fifth column, Origen placed a Septuagint text marked with text-critical signs to indicate where material had been added or omitted in comparison with the Hebrew.

The Hexapla's sheer size and complexity militated against its survival as a complete work, and all that remains is a few folios of *Psalms* from the ninth or tenth century. Generally, copyists reproduced only the Septuagint column and its critical signs, and eventually the latter dropped out. For modern textual critics, this was disastrous, since what was left was a new Origenic or

hexaplaric recension of the Septuagint adjusted to the Hebrew text current in the mid-third century, and differed from the Old Greek of the original translators, which had often been based on quite different Hebrew texts. However, the Hexapla did help to preserve other Jewish Greek versions of the Scriptures, for its readings were sometimes incorporated into Christian commentaries. It is also an important witness to the revisional activity surrounding the Septuagint during the first century BCE and first and second centuries CE.

Sometimes Origen added further versions to the Hexapla: Intriguingly, Eusebius reports that one of these was found in a jar in Jericho during the reign of Antoninus son of Severus. Its identity remains a mystery. But in view of Eusebius's testimony, it is particularly interesting that a Greek Minor Prophets scroll (8HevXII gr) discovered at Nahal Hever in 1952 has connections with the Hexapla. The text it contains was identified by Barthélemy as an early revision of the Old Greek toward the Hebrew text, the same as that used by Justin Martyr in his *Dialogue with Trypho*. This revision was termed R by Barthélemy who noted that it shared revisional features with other sources, notably the stereotyped use of Greek *kaige* to render Hebrew *wegam* "and also." Such traits are found in certain sections of Samuel-Kings, in "Theodotion" of the sixth column of the Hexapla, in the fifth Greek version of the Hexapla known as Quinta, as well as elsewhere.

The existence of a "school" of revisers of the Septuagint at the turn of the era explains why citations resembling the version of Theodotion occur in the first century CE, whereas Theodotion is said to have worked at the end of the second century CE. Their work underlies much that goes under the name *Theodotion*, and influenced Aquila and possibly Symmachus. In recent years Barthélemy's position has been somewhat nuanced by other scholars, but his basic findings on the priority of "Theodotion" and that version's relation to 8HevXII gr continue to be accepted. [See *Minor Prophets*.]

ORTHOGRAPHY. This article will treat Hebrew and Aramaic orthography.

Hebrew Orthography. The epigraphic evidence for the development of Hebrew orthography was first collected and studied by Frank Moore Cross and David Noel Freedman (1952). They concluded that the spelling conventions of the Phoenician alphabet (adopted also for Hebrew and Aramaic) underwent a number of developments in the West Semitic dialects of Iron Age II. From the eleventh century BCE on (apart from late Punic), Phoenician consistently used a purely consonantal orthography—neither long nor short vowels were indicated by the spelling in any position. The diphthongs *aw* and *ay* were contracted, presumably to *ô* and *ê* respectively, and thus are not indicated in writing. The Gezer Calendar, a Hebrew scribal exercise generally dated to the tenth century BCE, shares this consonantal orthography, including the contraction of the diphthongs. The diphthongs were contracted in northern Hebrew (see, for example, the Samaria Ostraca of the early eighth century BCE) from this point on, although probably not in southern (Judean) Hebrew or Old Aramaic. In Aramaic, final long vowels began to be indicated early in the ninth century BCE by the letters *yod*, *he*, and *vav* and this practice was adopted in Hebrew later in the same century. The use of *vav* to indicate word-internal long *ā* and *yod* to indicate word-internal long *ī* began to appear in Aramaic in the late eighth century and gradually spread into Hebrew, but the only examples Cross and Freedman knew of were possible uses of *yod* for long *ī* in the sixth century. (More recently discovered evidence demonstrates that sporadic use of internal *matres lectionis* [that is, consonantal letters that indicate the presence of a vowel] in Hebrew goes back at least to the seventh century.)

However, this systematic and logical development of West Semitic orthography has been called into question by the discovery of an Aramaic–Akkadian bilingual monumental inscription at Tell Fakhariyah in Syria. Its contents appear to date it to the ninth century BCE, although elements of the script seem earlier. The spelling of the Aramaic text is inconsistent and includes numerous internal *matres lectionis*, especially in proper names and non-Aramaic loanwords. It is impossible to fit the orthography of the Aramaic text from Tell Fakhariyah into the process of development posited by Cross and Freedman,

and this anomaly warns us that the evolution of the West Semitic orthographic systems in the later Iron Age was probably much more complex than our current evidence indicates.

Nevertheless, the orthographic system used by the scribes of Jerusalem at the end of the monarchical period (the seventh and early sixth centuries BCE) can be reconstructed with reasonable confidence from the Siloam Tunnel Inscription, the Lachish Letters, the Arad Ostraca, and a few other inscriptions, and it is likely that this system is ancestral to the orthographies used in the Hebrew texts copied in the postexilic period and later, including the scrolls from the Judean Desert, the Samaritan Pentateuch, and the Masoretic Text. The system of the Jerusalem scribes makes consistent use of final *matres lectionis* (but with *he* rather than *vav* indicating final long *ō*) and occasional use of *vav* and *yod* to indicate internal long *ā* and long *ī*, respectively. The third masculine singular suffix on plural nouns is written *-w*. Diphthongs are still written out with *vav* or *yod*, probably indicating that they have not yet contracted in Judean Hebrew. Short vowels are never indicated by *matres lectionis*.

The orthography of the Masoretic Text, which seems to have been fixed by around the first century CE (see below), is probably based on this system, but shows a number of developments beyond it. A final long *ō* is usually written with a *vav*, although sometimes still with *he*. The third masculine singular suffix with plural nouns is written *-yw*. Long *ī* is nearly always represented by *yod* in both final and medial positions. The original diphthong *ay* is also nearly always spelled with *yod*, perhaps indicating that it still had not contracted in the Second Temple period. Final long *ā* is almost always written with *vav*, as are word-internal long *ā*, and the original diphthong *aw* is so written most of the time. Long *ō*, reflecting an original long *ā* (as a result of the "Canaanite shift"), is written with *vav* only about half the time. This may mean that the diphthong *aw* had contracted to long *ō* by this time and was becoming confused with the other long *ō*. The use of *matres lectionis* for accented original short *i* is exceedingly rare and for accented original short *u* is somewhat unusual. The orthography of the Samaritan Pentateuch is much like that of the Masoretic Text, but it makes freer use of internal *matres lectionis* and tends to confuse guttural letters with one another (apparently because they were no longer pronounced).

The three earliest manuscripts from Qumran contribute evidence that may help to close the gap in our knowledge of orthographic developments in the Persian and Hellenistic periods. On paleographical grounds, Cross dated 4QExodus¹ (now Exodus-Leviticus¹ [4Q17]) and Samuel^b (4Q52) to the third century BCE and Jeremiah^a (4Q70) to late in the third century or early in the second.

Freedman published a study of the orthography of these three manuscripts and came to the following conclusions: (1) Exodus-Leviticus¹ and Jeremiah² exhibit an orthography that is essentially the same as that of the Masoretic Text. (2) However, the orthography of Samuel^b is more archaic in that it consistently writes original *aw* with *aw* but does not indicate long *ō* from other sources with a vowel letter. Freedman had to stretch his interpretation of the evidence to arrive at a perfectly consistent result, but the tendency he observed is clearly there and may indicate that Samuel^b preserves a remnant of an orthographic system intermediate between the inscriptions and the Masoretic Text, in which the diphthong *aw* had not yet contracted.

The Hebrew scrolls from Qumran, when considered as a whole (both biblical and nonbiblical manuscripts), show at least two different orthographic systems that, at least in part, seem to reflect somewhat different pronunciations. One system, used in many biblical scrolls, the Copper Scroll (3Q15), and some others, is essentially the same as that of the Masoretic Text (although the degree of consistency for representation of *o* and *u* vowels varies from manuscript to manuscript). The other system is used by some biblical scrolls and all the sectarian texts. It tends to prefer longer forms: some independent pronouns, pronominal suffixes, perfect and imperfect verbal forms, and one or two other words tend to end with a long *-ah* (see, for example, *lw'hi*, *mlknh*, *'qllh*, *m'wdh*). This system also makes more frequent use of what are "pausal" verbal forms in the Masoretic Text (e.g., *tqtwlv*) and has idiosyncratic spellings of some words (*kwl*, *mwšh*, *ky'*, *z'wt/zw't/zwt*). Emanuel Tov has described this system in detail (1980; 1988; 1992) and has suggested that this "Qumran practice" was a Palestinian convention used by the scribes at Qumran (he ties the people who lived in the settlement to the texts in the caves) and perhaps elsewhere. Cross (1992) calls this system the "baroque orthography" and argues that both it and the system of the Masoretic Text are archaistic levelings of traits in early Hebrew orthography. The baroque system preferred longer forms typical of literary Hebrew while the system followed by the proto-rabbinical manuscripts and the Masoretic Text favored shorter, colloquial forms.

Whatever the origins of these two systems, by the late first century CE evidence for the use of the Qumran or baroque orthography disappears. The biblical manuscripts from Masada and the caves of the Bar Kokhba period are written in the proto-rabbinical (Masoretic) system and also exhibit very few textual variants from the Masoretic Text. Evidently, textual and orthographic uniformity was imposed on the biblical text sometime earlier in the first century, at least by groups destined to survive

the destruction of Jerusalem. More work needs to be done on the orthography of the nonbiblical Hebrew texts hidden in caves in the Judean Desert during the Bar Kokhba Revolt (132–135 CE), most of which are legal texts or personal letters and some of which have not yet been fully published. They are written in a very interesting colloquial Hebrew and in general have a fuller orthography than the Masoretic Text (that is, they use *matres lectionis* more frequently) as well as tending to confuse gutturals and sometimes reflecting elements of spoken pronunciation.

Aramaic Orthography. Many of the Aramaic texts from the Judean Desert have not yet been fully published, so the comments here are preliminary. The earliest Aramaic texts in this corpus are the Samaria Papyri, discovered in a cave in the Wadi ed-Daliyeh and still mostly unpublished. Their contents, including specific dates given in some of them, show that they were written in the fourth century BCE. Current indicators are that their orthography is little developed beyond that of Official Aramaic of the Persian Period (of which the fifth century Elephantine Papyri of Egypt are an outstanding example).

The following analysis of the orthography of Qumran Aramaic is based mainly on documents that have been published and studied at length (especially the Targum of Job, the Genesis Apocryphon, and the manuscripts of *I Enoch* [Enoch^a, 4Q201–4Q207]) and may require some revision as the more recently released material is published and analyzed. Overall, Qumran Aramaic shows much the same orthography as do the biblical Aramaic texts in *Daniel* and *Ezra* (which in themselves are somewhat inconsistent), but is sometimes developed beyond it. The orthographic changes that had already begun in late Official Aramaic are becoming the standard conventions, but elements of the older orthography persist. Etymological *ḏ* is always written with *dalet* rather than *zayin* (there are two exceptions in Enoch^a); etymological *t* is written with *tav* (except for a few historical spellings with *shin*); etymological *ṭ* is written with *ṭet* rather than *tsadi*; etymological *s* is still written with a *sin*, but sometimes also with *samekh* (as, for example, in the Targum of Job); etymological *d* is written with *'ayin* rather than *qof*. Historical final *'alef* as marker of definiteness is beginning to be confused with the *he* that marks a feminine singular ending or the ending of the derived infinitives, but not in all manuscripts (for example, Enoch^b maintains the old distinction and Enoch^a usually does so). The use of *vav* and *yod* to mark diphthongs and internal long vowels varies from manuscript to manuscript. The Qumran manuscripts of *Daniel* published thus far that contain Aramaic material also have inconsistent orthographies essentially resembling that of the Masoretic Text of *Daniel*, although

differing from it frequently in details. Overall the orthography of the Qumran Aramaic texts is typical of early literary Middle Aramaic. The orthography of the Aramaic texts from elsewhere in the Judean Desert, mostly hidden during the Bar Kokhba Revolt, varies a good deal, although these texts generally seem to be written in a form of late Middle Aramaic. Their orthography is in need of further comprehensive study.

Summary. The steady and logical development of Phoenician, Hebrew, and Aramaic orthography in the First Temple period proposed by Cross and Freedman has been thrown into some doubt by the discovery of the bilingual (Aramaic and Akkadian) Tell Fakhariyah inscription in Syria, which shows significant differences from the proposed system. Nevertheless, the orthography of scribal Hebrew in Jerusalem in the seventh and early sixth centuries BCE is well established by the epigraphic evidence. This Hebrew system also seems to be the ancestor of Hebrew texts preserved and copied in the postexilic period and later, including the Hebrew texts discovered in the Judean Desert. The orthography of the Masoretic Text is probably derived from this system, but shows a number of changes, some of which may be levelings of earlier colloquial traits in the language. One of the earliest biblical scrolls from Qumran, Samuel¹, may show an orthography that is intermediate between the old system of Jerusalem and that of the Masoretic Text. Otherwise, the Dead Sea Scrolls follow two basic orthographic systems. One is used in the Copper Scroll, numerous biblical manuscripts, and a few other texts and is essentially identical to that of the Masoretic Text. The other, termed "Qumran practice" by Tov and "baroque orthography" by Cross, is used in the sectarian documents and some biblical texts. This system shows a more extensive use of *matres lectionis* (Latin for "mothers of reading," because such consonants help to indicate the pronunciation of the written text), as well as other features that may be levelings of traits found in early literary Hebrew. After the mid-first century CE, the orthographic system of the proto-Masoretic Text (as well as the text itself) became standard in Palestine. The orthography of the Hebrew documents hidden during the Bar Kokhba Revolt (132–153 CE) is in need of more study, but clearly shows some colloquial traits of a spoken language.

Study of the Aramaic Samaria Papyrus (fourth century BCE) is still at an early stage, but the orthography of this corpus seems to be that of the Official Aramaic of the previous century with little or no change. The orthography of the Aramaic texts from Qumran is typical of early literary Middle Aramaic (particularly that of *Daniel* and *Ezra*), which developed from Official Aramaic, with individual manuscripts sometimes preserving earlier or,

more often, later traits. The orthography of many other (later) Aramaic texts from the Judean Desert also seems to develop out of that of Official Aramaic, although again, further study is in order.

P

PALEOGRAPHY is the study of ancient writing, and, especially, the science of dating alphabetic letters and scripts by the stage of their evolution, or, in other words, by typological sequencing. It is one of the typological sciences, sciences much used by historians and archaeologists, by which we date ancient manuscripts and inscriptions; pottery; styles of painting, sculpture, and glyptic; architectural periods; fashions in music, clothes, and weapons—to single out a few familiar instances. Indeed all artifacts devised by human hand are capable of being analyzed in sequences according to their characters and given relative and often absolute dates.

Paleographers are guided by two basic postulates in their endeavors: (1) that artifacts, including scripts, inevitably change in the course of time, and (2) that there is continuity in their change. All script styles evolve, sometimes swiftly, sometimes slowly, depending on the intensity of usage, but one typological feature or cluster of features (style) arises in continuity with its predecessor(s). If one thinks for a moment about scripts, it is obvious that they change, letter by letter, over the generations, and often at different paces. On the other hand they cannot change abruptly or completely, or the reader would be confused or lost. A letter written in an avant-garde fashion must still resemble its older form sufficiently to be recognized and not confused. The point can be illustrated—perversely—by giving an example where two different English letters were confused in their development. “þ,” the obsolete English letter *thorn*, came to be confused with the letter *y*. The word “*the*” (older “*pe*”) came to be written “*ye*,” and confused with the plural pronoun *ye*. So “*ye olde shoppe*,” properly translated into modern English as “the old shop,” was confusedly translated “your old shop” and thought to be elegant or “old timey,” especially in New England tourist shops. This kind of confusion cannot be permitted to happen often or communication fails. Letter signs must be easily recognized—intelligible. Change is inevitable, but there must be continuity in change. Language operates in similar typologies. To understand Chaucerian English, we must study it—almost as studying another related Germanic tongue. And yet we can trace the changes in English from Chaucer’s time, generation by generation, until we arrive at our present-day speech.

The dating of ancient scripts or manuscripts is of little

difficulty—given sufficient study and a good eye for form—if we have ample materials, and a series of documents with firm dates, that is, dated by archaeological context or by references in their contents, or, best, when documents bear date formulas in a known chronology. Ancient Latin and Greek paleography are highly developed disciplines, thanks to the plethora of dated documents and a scholarly tradition of detailed analysis of the several styles of script. The typological development of the several styles of Jewish scripts has been less well known in the past, owing to a relative paucity of well-dated scripts from Palestine.

In 1937, there were a sufficient number of documents and inscriptions in the Jewish scripts of the Hellenistic and Roman periods to enable W. F. Albright to publish a programmatic study which organized the basic typological outlines of the development of the late Aramaic script of the Persian chancellery (used throughout the Persian Empire) and the early Jewish formal hands which developed from it. Indeed, at the beginning of the Hellenistic period, when Greek replaced Aramaic as the lingua franca, local national scripts began to spring up and develop independently in many areas of the Near East, of which the best known in the Western part of the empire were Nabataean, Palmyrene, and Judean (or Jewish). The Jewish scripts which evolved into an independent tradition in Judea are traditionally called “Hebrew,” qualified as “square” or “Assyrian” (that is, Aramaic). The surviving, archaizing form of the Old Hebrew script that we term “Paleo-Hebrew” was largely displaced for ordinary purposes by the Jewish descendant of the official Aramaic script of the fourth century BCE, that is, at the close of the Persian sway over Syria-Palestine. The Jewish script is a distinct national script, not evolved directly from Old Hebrew, and clearly distinguishable from the Aramaic hand from which it did evolve in the course of the early third century BCE, with the end of Persian rule and the beginning of Hellenistic times. So we best call it “Jewish”—the script at home in Judea, and occasionally used by Jews in the Diaspora. The Paleo-Hebrew script died away in the first and second centuries CE, totally displaced in the Jewish community, and surviving as a sacred script only in the remnant Samaritan community.

In the past half century the field of early Jewish paleography has grown rich in materials for typological analy-

sis, and, as well, has furnished the paleographer with a series of absolutely dated documents which yield us pegs in the typological sequence, dividing up periods, and specifying the speed of changes in the scripts—the emergence of new forms and styles of script. The caves of the Wadi Qumran, emanating out from the community center on the Dead Sea, have yielded up more than eight hundred documents on skin and papyrus (and, in one instance, copper), ranging in date from the mid-third century BCE to the third quarter of the first century of the Common Era. These manuscripts and manuscript fragments exhibit a variety of scripts, predominantly early Jewish, including formal and cursive styles, more rarely Paleo-Hebrew, and, sporadically, Greek. There is even an esoteric manuscript written in a mixture of these three scripts (4Q186).

Hardly less important for Jewish paleography are the documents of the Wadi Murabba'at and other caves further south in the Judean Desert. These date in large part to the first and second centuries CE, many of the documents containing date formulas that pin them to a day, month, and year. There are materials in the Jewish formal scripts, and, more significant, perhaps, in the true Jewish cursive, as well as in Greek, Latin, and Nabataean.

The dating of documents and inscriptions of the Herodian Age (30 BCE–70 CE) is now capable of great refinement. The limits of the period are marked by materials bearing dating formulas, or otherwise absolutely dated within narrow limits by archaeological or historical context, for example, the Tomb of Jason (before 31 BCE), or the Queen Helena Inscription (c.50 CE). The ossuary inscriptions, which presently number several hundreds and whose number continues to expand, virtually all date to the last century before the fall of Jerusalem in 70 CE. They are written in formal, semicursive, and cursive Jewish hands, and sometimes in Greek. Thanks to stratigraphic excavations in Qumran and Jerusalem, especially, the sequence of pottery types of the Herodian Age have been given increased precision, and the finds of pottery, coins, lamps, and other artifacts in the ossuary tombs excavated with scientific rigor provide extra confirming controls and checks.

From the excavations of Khirbet Qumran have come a small group of useful inscriptions tied into the stratigraphy of the site. A recently discovered ostrakon, evidently written in the sectarian community to judge from its content, is dated "in the second year," presumably the second year of the first revolt against Rome (67 CE).

Again, excavations at Masada have produced ostraca, papyri, and leather manuscripts deposited in loci sealed by the fall of the bastion to the Romans in 73 CE. These include biblical fragments, a Ben Sira scroll, and fragments of sectarian documents.

Until recently, the dating of documents in the Archaic or Proto-Jewish period (c.265–150 BCE) has been based largely on typological sequence, making use of some fourth- and third-century papyri from Egypt for comparison. New discoveries in Palestine of dated documents stemming from the end of the fourth century and the beginning of the third century BCE are especially important for the dating of the beginning of the Archaic series. The Samaria Papyri from the Wadi ed-Daliyeh provide a series of legal contracts, dated by the Persian kings, mostly from the reigns of Artaxerxes III (359–338 BCE) and Darius III (338–331 BCE). Historical and archaeological evidence combine to show that the Samaritan owners of the documents perished in an attack by troops of Alexander the Great in 331 BCE, providing a precise *terminus ad quem* for the abandonment of the papyri in the Daliyeh cave. A series of ostraca in Aramaic script from the end of the fourth and the beginning of the third centuries BCE stem from Idumean circles living on the border of Judea in the south, notably from Mareshah, Khirbet el-Qom, and vicinity. André Lemaire has recently published nearly two hundred Aramaic ostraca, many bearing date formulas, the oldest from 362, the latest from 331 BCE (the latter the second year of Alexander the Great, according to the Egyptian reckoning of his reign). Another 201 Aramaic ostraca stemming from the period between 361 and 311 BCE have been published by Israel Eph'al and Joseph Naveh (1997). A cave in Ketef Yeriho (the "Mount of Temptation") has produced a well-preserved papyrus of the beginning of the third century, dated by associated materials in the findspot as well as typology. Lawrence Geraty has published an ostrakon from Khirbet el-Qom, a receipt for money paid, dated in the sixth year (of Ptolemy Philadelphus), 277 BCE.

A marriage contract from Mareshah bears the date 176 BCE, the 136th year of the Seleucid Era. Its semicursive script is virtually identical with that of the Nash Papyrus.

In the present state of paleographical study, therefore, we are able to draw a typological line of developments of several script styles, appearing in scores if not hundreds of documents inscribed on a variety of materials, their evolution pegged by a series of absolute dates at intervals in the early Hellenistic period, in the Hasmonean, and in the Herodian Ages—and indeed, through the subsequent era between the two Jewish revolts against Rome.

The Paleo-Hebrew scripts, found at Qumran for the most part in Pentateuchal manuscripts, are more difficult to date, the script evolving very slowly. When initially found at Qumran, there was some confusion about their date. However, the appearance of Paleo-Hebrew inscriptions on late-fourth-century bullae, and on inscriptions from the ruins of the city on the slopes of Mount Gerizim, destroyed by John Hyrcanus in 128 BCE, have aided in

clarifying the chronology. In the Hasmonean and Roman periods dated coins with Paleo-Hebrew legends, and an occasional inscription, from a tomb or from the Temple area, bring us up to 70 CE. We have mentioned above the occasional appearance of Paleo-Hebrew writing on manuscripts which are inscribed basically in the Jewish character. They permit us to date one script by the other. The best study is that of Mark McLean (see Bibliography). The dates of the Qumran Paleo-Hebrew scripts fall within the limits of the manuscripts in the Jewish hands—as might be expected. The earliest form of the script is probably found in a manuscript of Deuteronomy (Paleo-Deuteronomy^a [4Q46]) from the second half of the third century; the latest is the Paleo-Leviticus^a (11Q1) from circa 1–50 CE. The relatively well preserved *Exodus* scroll, 4QPaleo-Exodus^m (4Q22) may be dated to circa 100–50 BCE.

In 1991 and 1996, two groups of manuscripts, most from Qumran, were tested by radiocarbon dating methods, one group (1991) by the Institut für Mittelenergiephysik, Zürich, the second (1996) by NSF Arizona Accelerator Mass Spectrometry Facility. One Paleo-Hebrew manuscript was included (paleo-Exodus^m). Manuscripts in Jewish scripts from across the spectrum were also tested. The results were remarkably in agreement with dates arrived at earlier on paleographic grounds. The radiocarbon method gives a fairly broad range of dates. Paleographical analysis is more precise, and often can narrow the range of dates to a half century.

The evolution of the formal Jewish hand (or book hand) is now well established in three major phases: the Archaic (c.275–150 BCE), the Hasmonean (c.150–30 BCE), and the Herodian (c.30 BCE–70 CE). Each of these stages is marked by general typological shifts, including clusters of features we call style. At the same time there is a steady evolutionary change within each period, and many manuscripts can be dated to phases within the major periods, especially within the Hasmonean and Herodian eras. Indeed it is not too much to say that, thanks to the rapid evolution of the Jewish hands in these two periods, the paleographer can often fix a characteristic book hand within fifty years in terms of absolute dates.

We may illustrate these general shifts, to be discussed below in greater detail, with one or two of the more obvious traits of each period. The Archaic book hand is marked by two characteristics surviving from the end of the Persian era: the widely differing sizes of letters below and above the ceiling line, and the preservation of variety in the width of strokes (“shading”), according to a fixed fashion. The Hasmonean hand preserves in part the tradition of large and small letters, with letters hung from the ceiling line (usually marked in drypoint). But the tendency to uniformity of size—begun in Aramaic or Archaic

cursives of the third century—has set in, “infecting” the formal character. Shading is idiosyncratic. The Herodian hand sharply breaks with the tradition of variety in size, according to fixed canons, and tends to standardize letter height. Letters continue to be hung from the ceiling line, but a feeling for a base line sets in and occasionally a base guideline is marked in drypoint. “Titles,” or *keraiat* (not to be confused with Medieval *tagit*), archaic survivals or idiosyncratic in Hasmonean scripts, develop and multiply, becoming standard parts of letters. In elegant hands, new techniques of shading are often used.

We shall deal in turn with (I) the origin of the Archaic Jewish hand, (II) the development of the formal Jewish hands, and (III) the evolution of scripts in cursive traditions.

The Origin of the Archaic Jewish Hand. The starting point for the study of Jewish paleography is the Persian chancellery hand in use at the end of the Persian Empire. This official Aramaic hand finds its origin in an elegant cursive script which took form in the sixth century and evolved into its classical style in the fifth and fourth centuries BCE. This standard Aramaic character was in regular use throughout the Persian Empire, from Asia Minor to North Arabia and Upper Egypt, and from Palestine to the eastern reaches of Iran. While it evolved steadily in these centuries, it remained relatively undifferentiated by local peculiarities in the western reaches of the Empire until the Persian rule was swept away by the forces of Alexander in 331 BCE. So powerful was its sway that formal and lapidary Aramaic styles became moribund, and the chancellery hand, while cursive in its origin, was used not only for commercial and diplomatic correspondence and contracts, but as a fully formal script used on stone monuments.

The immediate ancestor of the earliest *formal* Qumran scripts has proved to be this standard Aramaic *cursive*. The earliest of the formal scripts from Qumran is the old Samuel manuscript, Samuel^b, which dates to the mid-third century BCE. I have designated it an Archaic Jewish formal—although one may prefer to describe it as Proto-Jewish. It is little influenced by the vulgar Aramaic cursive which developed in the third century BCE in Palestine and Egypt, when Greek replaced Aramaic for official purposes. On the other hand, the earliest Qumran exemplar of the cursive tradition, the archaic manuscript of Exodus and Leviticus (Exodus-Leviticus¹), makes it evident that a cursive stream flowed parallel to the formal, stemming from the vulgar Aramaic cursives of the third century. In the formal character of the mid-third century, the extreme difference in the length of various letters below the ceiling line continues, preserving the long slender letters of the classical tradition; in the cursive, letter forms become squat, more regular in size

One very important development which was destined to modify radically the size and form of letters characterizes the fourth-century and, especially, the third-century scripts. This is the trend to create what may be called semiligatures, a tendency of the scribe to bend the final stroke of a letter in the direction of writing, that is, to the position of forming the next letter. Especially affected were the long downstrokes of such letters as *kaf*, *nun*, *pe*, and frequently *tsadi*. However, other letters were affected by the tendency, notably *mem*, whose left oblique is bent upward to the left, and *lamed*, whose broad sweep down to the right tends to narrow, and, in the course of the third century, straightens and begins the development of a tick downward and to the left. Naturally this tendency was felt most strongly in the case of letters in nonfinal positions, so that we see here the commencement of the development of "medial" forms of the letters. The "final" letters, actually the older forms of the letters, were preserved where the tendency to create semiligatures was not so strong. By the third century, the distinction between final and medial letters was fullblown, though different script traditions froze different sets of medial and final forms. In the course of time, certain forms were lost (for example, final *lamed*), and secondary distinctions between final and medial forms elaborated (for example, the artificial distinction between medial and final *he*, and between medial and final *alef* in certain cursive scripts).

The Development of the Formal Jewish Scripts. Out of scores of exemplars of the formal hands of the Hasmonean period, three typical specimens exist, the first from the transitional period at the beginning of the Hasmonean development (Deuteronomy^a), the second from the middle of the Hasmonean period (Deuteronomy^c—contemporary with Isaiah^d), and the third a late transitional hand from the end of the Hasmonean or the beginning of the Herodian (Samuel^e). The absolute dates for this series can be fixed between c. 175 BCE and c. 30 BCE.

Out of the great riches of manuscripts from the Herodian Age, we have chosen seven typical formal scripts. The first two are Early Herodian, one fully formal (IQM), the second a popular Round or Rustic semiformal (Numbers^b). The script of the War Scroll (IQM) is an excellent example of the delicate, usually minuscule, formal script which evolved directly from the transitional hands of the type of Samuel^e. Its lapidary equivalent is found in the Tomb Inscription of the Bene Hezir from about the turn of the Common Era. An additional five scripts have been chosen to represent the complex evolution of the late Herodian hand. Daniel^b and Deuteronomy^f, especially the latter, exhibit the characteristic thick lines and squat configuration of the late formal scripts of Qumran. Perhaps the latest formal hand at Qumran is to be found in 4QPsalms^b. Its script is very nearly as evolved as the hand

of another manuscript of Psalms from the Nahal Hever dating to the end of the first century of the Common Era. The last script in the series is from a dated Hebrew contract inscribed in 133 CE.

Perhaps it will be useful to single out a few salient features in the evolution of each letter of the alphabet in the formal series. A more detailed and nuanced discussion can be found in my monograph "The Development of the Jewish Scripts" (1961).

Alef in the Archaic period is small, often with a crescent-shaped left leg. In the Hasmonean period, the letter begins to enlarge, becoming by the end of the period "standard" letter size. In the Herodian period, the left arm and, especially, the right leg develop more and more distinctive *keraiat* ("tittles"), and in the Late Herodian period the oblique axis and the left leg are penned as an inverted "V," and become increasingly heavy lined and squat.

Beit in the late Archaic and early Hasmonean times is narrow, and the downstroke curves softly into a short base. In the semiformal and semicursive scripts the *beit* becomes broad and enlarged, a development which invades the formal character of Hasmonean times. At the end of the Hasmonean period, the downstroke is drawn almost vertically and bends in a right angle to the horizontal base. In the Herodian period, the base line is no longer penned from right to left, but rather from left to right, often breaking through the right downstroke.

The changes in *gimel* are subtle. In the Archaic period the left leg of the letter moves down the right leg from near the top to the increasingly curved or doubly curved middle or lower part of the right leg. In the Herodian period, the top of the right leg develops a *keraiat*.

Dalet is a very narrow letter in the Archaic period, begun with a tick, and drawn without lifting the pen. In the Hasmonean period the letter broadens under the influence of the semiformal *dalet*. By the end of the Hasmonean period, it is penned in two strokes. The tick enlarges, and the horizontal part of the head completes the first stroke. The pen is then lifted and the right downstroke is drawn separately; in the Herodian period, the horizontal often breaks through the right leg owing to the change in the manner of penning the letter.

The typological shifts of *he* are complex, making it very useful in dating. The right leg is drawn first, then a shaded left horizontal is penned, attached slightly below the top of the right leg, slanting slightly down usually; the left leg is drawn down from the horizontal. In the Hasmonean period, the leg is drawn continuously following the horizontal stroke, often looped back in a triangular motion. In the Herodian period the fashion of making the *he* once again changes, the right leg penned upward, moving in a triangular motion into the horizontal, and then in

another triangular motion into the left downstroke, leaving triangular blobs of ink at the two top corners.

Vav and *yod* should be described together. The Archaic *vav* begins with a curl, later becoming a hook, and a straight vertical. *Yod* is made either with a three-movement set of strokes, down to the left, up and around and down again to the right, or typologically later, made in a two-movement inverted "V." In Hasmonean times, the tops of both *vav* and *yod* become an angular hook, often shaded, so that a triangular effect is given. In late Hasmonean times the right downstroke of *yod* lengthens and straightens, and in the early Herodian period, *vav* and *yod* become virtually, if not actually, indistinguishable. Finally, in the late Herodian period, *vav* and *yod* again are increasingly distinguished, *vav* becoming slightly longer, *yod* tending to shorten.

Early *zayin* is an uncomplicated single downstroke. Then, in the mid-Hasmonean period, it develops a bend or a bulge to the right at the top of the downstroke, a bulge which becomes a triangular tick or *keraiia* in the Herodian Age.

Het in the Archaic period is made with a right upstroke, a cross bar, and a left downstroke. The top corners are simple, with no evidence of looping from one stroke into another. In the Hasmonean period there begins some tendency to loop, particularly at the upper right corner. In the Herodian period this looping tends to create a triangular bulge on the right corner.

Tet in the third century is made with the left vertical, beginning high above the ceiling line and descending into a curved or even bluntly pointed base, then angling up in an oblique stroke before finally curling to meet the left vertical at the ceiling line. In Hasmonean scripts, the left downstroke shortens and the base straightens out toward the horizontal. At the end of the Hasmonean and the beginning of the Herodian age, a new style of penning the *tet* makes its appearance. The top, curled stroke to the left is drawn downward, and often in the Herodian period breaks through the lower horizontal base.

In the old Samuel scroll, *kaf* has a "figure-3" shape. The medial and final forms in this period are similarly hooked at the top, left, and the final form curves little if at all as it plunges below the (theoretical) base line. In the Hasmonean period the form broadens, and in the Early Herodian period a new final form is introduced in which the top bar is shaded and eventually loops into the downstroke.

After the disappearance of final (nonhooked) *lamed* found in the earliest Archaic forms, the small, hooked medial form comes to dominate in all positions. In the later periods, its evolution is slow. Scribes sometimes experiment in penning the *lamed* in varying styles, but the main line of evolution is not sidetracked. Intermittently

in the Hasmonean period, a hook develops at the top of *lamed*. In the Herodian period the hook becomes a *keraiia*.

Medial *mem* and especially final *mem* are large letters in the Archaic period, extending well below a theoretical base line. The right side of the medial form is drawn in the same pattern as the *kaf* is made, then the left arm is added last. Final *mem*, like medial *mem*, is often open. In the course of the Hasmonean age, medial *mem* increasingly loses its long, slender form, and by the end of the period is standard letter size. The final form develops similarly though not so dramatically. The left downstroke cuts through the head of the letter, and is drawn vertically downward, in the mid- and late-Hasmonean period, touching the base of the letter. The base of the letter meets the right downstroke. Like *kaf*, the lower right part of the letter becomes increasingly angular. At the end of the Hasmonean period, the left downstroke of final *mem* moves to the right at the top and finally disappears, giving the form a boxlike shape in Herodian times. In late Herodian times, the fashion of making the medial *mem* changes. The left diagonal is drawn upward, and the former tick beginning the letter is penned last, a short vertical stroke drawn down into the oblique, sometimes cutting it.

Nun in nonfinal positions steadily shortens in the Hasmonean period, in line with the trend toward uniform letter size. In the Herodian period a tick rightward at the top of the stroke—in both medial and final *nun*—becomes a *keraiia*.

In the third century, the *samekh* in semicursive scripts loses its complex doubly hooked head. The letter is drawn beginning with an upstroke on the left, into a looped head. The right side is curved around, but remains open at the base until the close of the Hasmonean period. In the Herodian period, the form is totally closed, and takes on a somewhat triangular shape.

'*Ayin* in the Archaic and early Hasmonean periods is a small letter drawn just under the ceiling line. It increases in size toward the end of the Hasmonean period, following the general trend toward uniformity of letter size. The right leg turns leftward obliquely, breaks through the left leg, and lengthens. The tendency for the 'ayin to rotate clockwise becomes fully developed in the Herodian period.

Medial *pe* in the Hasmonean script ceases to be made with a gentle curve into the base, but, following a general trend in the Hasmonean period (*beit, kaf, mem, tsadi*), the right downstroke turns in a right angle into a fully horizontal base. In the Herodian period the heads of both medial and final *pe* become curled under.

Medial *tsadi* follows the Hasmonean tendency to turn a straight or gently curved base into an angular base. The vertical downstroke of the final form lengthens—influenced by other final forms, notably *kaf* and *nun*. In

the Herodian scripts the right arm develops a *keraiā* at the top, and sometimes both arms have *keraiā*.

Qof in Archaic era scripts is small (enlarging in the semiformal). A short downstroke tends to lengthen in the Hasmonean scripts. In Herodian scripts the long "tail" persists with little change.

The changes in the development of *resh* are subtle. The narrow Archaic *resh*, often confused with *var*, broadens in Hasmonean scripts, and the ticked or sharp right shoulder becomes increasingly rounded.

The evolution of *shin* is very slow in the Archaic and Hasmonean periods. At the end of the Hasmonean period, and persisting through the Herodian, the rightmost downstroke develops a tick, and eventually a *keraiā*.

Tav in the Archaic period is a very large letter, extending well below the (theoretical) base line. The left leg is long and doubly curved. By mid-Hasmonean times, *tav* is shrunken, coming into line with the trend to uniformity of letter size. The left leg no longer ends in a curved flourish, but in an angular base. By Herodian times, the right leg has lengthened to roughly the length of the left.

Scripts in the Cursive Tradition. Vulgar cursive scripts, diverging from official Aramaic cursive style, appear first in the third century BCE. From these scripts develop in the Hasmonean period two distinct cursive traditions, one we term semicursive, the other cursive or extreme cursive. They are distinct styles, lasting over centuries of time. They often influence the formal and, especially, the semiformal styles, but, oddly enough, the influence is not always in the same direction. The cursive traditions are sometimes influenced by formal style, and in some periods exhibit fewer ligatures than the formal scripts.

PALESTINE ARCHAEOLOGICAL MUSEUM. Following the cessation of hostilities after World War I and the establishment of the British Mandate in Palestine, the pace of archaeological activity in the Middle East increased at a tremendous rate. British authorities, realizing the need to expand these archaeological explorations and exhibit the finds to the public, turned to John D. Rockefeller Jr., who previously had promised ten million dollars to build a museum in Egypt. Difficulties with King Fu'ād of Egypt over the preconditions of the generous grant led Rockefeller to withdraw his endowment. In October of 1927, following meetings with Professor James Henry Breasted, eminent historian and archaeologist of the Oriental Institute at The University of Chicago, Rockefeller agreed to donate the sum of two million dollars for the establishment of what was to become the Palestine Archaeological Museum. According to the agreement, one million dollars was allocated for building the museum, while the second million was budgeted for upkeep, acquisition, salaries, publications, etc. British authorities decided upon Austen St. Barbe Harrison (1890-1976), the chief architect in the country, as the architect for the project on ten acres of land northwest of the Old City Wall. The ceremonies for laying the cornerstone were held on 19 June 1930. Nearly eight years later, in January 1938, the Palestine Archaeological Museum was officially opened to the viewing public.

Administration of the museum, originally under the British Department of Antiquities, was eventually, toward the end of the Mandate period in 1948, placed under the

direction of an international board of trustees composed of academics and civil servants from France, Britain, the United States, Sweden, the Hebrew University, and surrounding Arab countries.

After the fall of Jerusalem in the War of Independence and its eventual partition into East (Jordanian) and West (Israeli) in 1948, mutual Jewish/Arab academic interest at the Palestine Archaeological Museum came to an end. Despite the international board of trustees appointed to oversee the museum, the Jordanian government chose to nationalize the museum on 1 November, 1966, and disband the board. Less than a year later, in June of 1967, hostilities erupted between Israel and her neighboring countries, which led to the reunification of Jerusalem under Israeli rule. Following the events of the 1967 Arab-Israeli War and the reunification of Jerusalem, the Israel Antiquities Authority moved its headquarters from west to east Jerusalem and centered all its activities in the Palestine Archaeological Museum, which was renamed the Rockefeller Museum in recognition of the contributions of John D. Rockefeller, Jr.

Qumran Explorations. Following the original discovery of the manuscripts in Cave 1 at Qumran in 1947 and the cave's eventual looting by bedouin and Syrians, archaeologists decided to carry out the first scientific exploration of the area, which began in the spring of 1949. Fragments of some fifty cylindrical jars and their covers, which presumably contained scrolls, along with scroll fragments, were brought to the Palestine Archaeological Museum for restoration and sorting. Preliminary work on the fragments showed that at least seventy biblical and nonbiblical scrolls were originally stored in Cave 1. Much of the credit for the negotiations between the bedouin and their Bethlehem agent (Khalil Eskander Shahin) lies with Yusuf Saad, the secretary of the Palestine Archaeological Museum, who later became chief curator.

Additional scientific joint explorations involving the Palestine Archaeological Museum, the École Biblique et Archéologique Française, and the American Schools of Oriental Research were carried out in 1952 along the cliffs west and northwest of the site. These explorations met with limited success until the discovery by bedouin of Cave 4. The vast number of fragments from this cave, totaling over fifteen thousand, led the Jordanian government to donate fifteen thousand pounds sterling to the Palestine Archaeological Museum to acquire some of the material. Outside funding from McGill University, the Vatican Library, the Universities of Manchester and Heidelberg, McCormick Theological Seminary of Chicago, All Souls Church of New York, and Oxford University enabled the remaining fragments to be transferred to the Palestine Archaeological Museum. Publication of these fragments, which were stored in a special room in the

museum, was entrusted to an international team of seven prominent scholars. In 1956, the bedouin searching for scrolls uncovered an additional cave with manuscripts, Cave 11, the contents of which were purchased by the Palestine Archaeological Museum through contributions from the Royal Academy of the Netherlands and the American Schools of Oriental Research.

Conservation and Publication of the Scrolls. In 1967, one of the first major changes implemented after the reunification of Jerusalem was to remove the approximately 1,300 glass plates that held the scroll fragments to a specially built room where environmental and security conditions could be controlled and carefully monitored. Many of the fragments had deteriorated in the 1950s when they were backed with cellophane tape and the plates sealed with adhesive tape. This did not allow the organic materials to breathe. Conservators were brought in from the Israel Museum, who initiated the painstaking process of removing the cellophane tape and rebacking the fragments with acid-free materials.

In 1991, the Israel Antiquities Authority, as custodians of the Dead Sea Scrolls, established a special laboratory in the Palestine Archaeological Museum for conservation and preservation of these documents. Consulting with an internationally recognized team of specialists in the field of parchment and leather conservation, the laboratory is adopting extensive measures to curtail the deterioration and improve upon earlier preservation techniques. At present four full-time conservators are working on these fragments in consultation with the guidelines set forth by the Getty Conservation Institute advisory committee. Eventually all the estimated fifteen thousand fragments will be rehoused using archival-quality mounting boards and hinges.

The number of scholars working toward publishing these documents has grown from the original seven to over fifty. An additional work area, with microscopes and other equipment, has been created in the museum to improve the ability of scholars to view these fragments.

The efforts being made in the area of conservation as well as in improving conditions for research and study will protect this outstanding collection of documents for the benefit of future generations of all faiths.

PARABLE OF THE TREE. See Wisdom Texts.

PARTHIAN EMPIRE. Around 250 BCE the Seleucid dynasty, which ruled Iran, Mesopotamia, and Syria, was disturbed by internal struggles. Then a nomadic tribe, the (A)Parni, overran the satrapy Parthia, nowadays Turkmenistan, under the leadership of a certain Arsaces. For the next four hundred years, he and his descendants, the Arsacides, ruled there temporarily as Seleucid satraps or as real sovereigns. After 170 BCE, Mithridates I (171–138 BCE) and, later on, Mithridates II (123–83 BCE) conquered the highland of Iran and the whole of Mesopotamia as well as parts of Asia Minor and North India. The Arsacid “king of Kings” claimed both descent from the Achaemenid kings of the former Persian empire and the heritage of Alexander the Great. They believed themselves to be elected by the great gods of the Zoroastrian religion for universal dominion. On their coins they used Greek titles, for example, *Philhellenos* (“friend of the Greeks”). For one hundred years there were repeated wars between the Seleucids and the Arsacids. In 164 BCE, during one of the wars, Antiochus IV Epiphanes, the adversary of the Maccabees, lost his life.

After 65 BCE, when the Roman republic defeated the Seleucids and annexed Syria and Palestine, clashes with the Parthian kings became unavoidable. The first attack of the Romans led by the famous Crassus ended with a total defeat of their army at Carrhae (Harran) in 53 BCE. A series of wars followed without decisive success for either side. The Parthian cavalry became especially famous and was always feared by its enemies. In Syria, the middle Euphrates remained the border of the two superpowers for centuries.

In 225 CE, Ardashir, a Sassanid prince of the central province of Fars, rebelled against his Arsacid overlord and abolished the Parthian empire after approximately four hundred years of dominion over Iran and Mesopotamia.

Babylonian Diaspora under Parthian Rule. During the Parthian period many thousands of Jews lived in Babylonia and Iran without any great difficulty from the pagan regime, although always keeping close contacts with Judah and Jerusalem (cf. the move of the famous Pharisaic leader Hillel from Babylonia to Jerusalem). In the middle of the first century CE, the king of Adiabene in northern Mesopotamia converted to Judaism but re-

mained acknowledged by his Parthian overlord. During 20–35 CE, a semiautonomous Jewish commonwealth existed around Nehardea in South Babylonia, but it collapsed because of internal struggles. Probably via Babylonia some Parthian loanwords were incorporated into Jewish Aramaic and Hebrew (cf. IQM i.9, de Menasce, 1956). In the same way, some features of Zoroastrian thought may have passed into Jewish forms, notably dualism (cf. IQS.iii.13–iv.26).

Judea and the Parthians. The attitude of the Palestinian population toward the Parthians was always ambivalent. On the one hand hopes of deliverance from Roman oppression arose time and again. On the other hand the eastern power was feared as an apocalyptic foe according to the Gog-prophecies of *Ezekiel* 38–39.

In 40 BCE a Parthian army invaded Syria and Palestine in support of the claims of the Hasmonean Antigonus against his uncle, the high priest Hyrcanus (Josephus, *Jewish Antiquities* 14.330–369). But in 39 BCE the Romans drove the Parthians back, and Antigonus lost his throne soon afterward. Some scholars understand a passage in the Similitudes of *1 Enoch* (56.5–7) as a *vaticinium ex eventu* to these events of 40 BCE. There an assault of the Parthians and the Medes against the land of the elect is predicted for the End of Days (cf. Black, 1985). Others, however, declare the passage to be a purely apocalyptic utterance (like *Rv.* 9.13–19). Some scholars have suggested that this invasion was responsible for the destruction and temporary abandonment of Qumran at the end of Period I. Because of the mysterious circumstances of the death of the cruel Roman emperor Nero in 68 CE, the suspicion arose among Jews and Christians that he had fled to the Parthians and would come back in the last days, crossing the Euphrates with many soldiers and devastating all the western countries including Jerusalem (4 *Sib. Or.* 119–124, 138–139; 5 *Sib. Or.* 93–98, 137–52, 361–370).

PASSOVER. An annual festival centered on a ritual meal recalling the Exodus from Egypt, the Hebrew name for Passover is Pesah. The events remembered are narrated in *Exodus* 11 and *Exodus* 12.21–39; legislation governing the holiday is found in *Exodus* 12.1–20 and 12.42–49. It was to be celebrated on the fourteenth day of the first month. On the tenth day of the first month each Israelite family was to have selected an unblemished lamb that was to be slaughtered on the fourteenth “at twilight” (*Ex.* 12.6; literally, “between the evenings”). The Israelites were ordered to spread the blood of the lambs on the doorposts and lintels of their houses and to roast the lambs and eat them with bitter herbs, leaving nothing remaining. No leaven was to be consumed, a practice that continued for the next seven days (the Festival of Unleavened Bread). During the first night in Egypt the Lord visited the tenth plague upon the Egyptians, killing every firstborn human and animal in unmarked houses, passing over the houses daubed with lamb’s blood.

Other celebrations of Passover are mentioned in the Hebrew scriptures (e.g., *Jos.* 5.10, *Ezr.* 6.19–22), and legislation regarding it can be found in most of the law codes. The lists of festivals in *Leviticus* 23 (see v. 5) and *Numbers* 28–29 (see 28.16; cf. *Ezek.* 45.21) do little more than give the date for Passover, but *Deuteronomy* 16.1–3a prescribes that it be observed at the sanctuary. Hence, the celebration no longer took place at home. *2 Kings* 23.21–23 indicates that this was a reform instituted by King Josiah and that the practice contrasted with what had been done in the earlier times of judges and kings (see *2 Chr.* 35 *1 Esd.* 1.1–22). *Numbers* 9.1–14 introduces the Second Passover, on the fourteenth day of the second month, for those impure or on a journey on the fourteenth day of the first month (see *2 Chr.* 30).

The Passover festival probably is mentioned in Elephantine Papyrus 21 (419 BCE), in which a certain Hananiah orders Yedoniyah and his colleagues, on the authority of King Darius II himself, to celebrate Passover (a likely restoration in line 4) and the Festival of Unleavened Bread. *Jubilees* offers an extended treatment of Passover in Chapter 49. When Mastemah (Satan) was bound on the fourteenth of the first month, the Israelites were protected by the blood of lambs on their doors; however, the Egyptian and animal firstborn fell victim to the forces of Mastemah. The sacrifice was to be made before evening, and the Israelites were to eat it on the evening of the fifteenth of the first month from the time of sunset. *Jubilees* 49.10 says the celebration should be “between the evenings, from the third part of the day until the third part of the night” (cf. *Jub.* 49.12, 49.19); it was to be eaten before the Lord’s sanctuary by males twenty years and older (*Jub.* 40.16–21). The proper celebration of Passover would ward off a plague for that year (*Jub.* 49.15). The contrasting fates of the Israelites and Egyptians during

the tenth plague are presented poetically in the *Wisdom of Solomon* 18.5–25. Ezekiel, a Hellenistic Jewish tragedian (*Evagoge* 147–192), largely reproduces the biblical givens, while Aristobulus (frg. 1) records calendrical details about Passover (that it is to be celebrated after the vernal equinox, in the middle of the first month, when the sun and moon pass through an equinoctial sector).

Passover is mentioned infrequently in the Qumran texts. Temple Scroll^a (11Q19 xvii.6–9) includes it in its calendar of festivals. It orders that the sacrifice be performed before the evening offering (as in *Jub.* 49.10; cf. *2 Chr.* 35.11–14) and that the meal be eaten at night in the sanctuary courts by all males who are twenty years or older. The men then are to rise early in the morning and return home (cf. *Dt.* 16.7). The only other mention of the festival by name in the Qumran corpus is in the calendrical texts. In Calendrical Document A (4Q320 4.ii–vi) it is included in lists of festivals for several years in a cycle in which the festivals are correlated with the priestly watch or course that would be on duty then. So, for example, the text says: “The first year. Its festivals. On the third (day) in the week of Me’ozayah, the passover” (4Q320 iii.1–2; see also iii.12, 4.iv.7; 4.v.1.10; 4.vi.5). Calendrical Document B^a (4Q321) also specifies the priestly courses that would be on duty during the holidays, including Passover (4Q321 2.ii.4, 9; 2.iii.3, 7; cf. 4Q259 8.3), and the very fragmentary Calendrical Document G may list the priestly courses during whose week Passover would fall in several years of a cycle (4Q329^a, lines 4 and 5). The same documents refer to the Second Passover (4Q320 4.iii.4, 14; iv.9, v.3, 12; vi.7; 4Q321 2.ii.5, 9; iii.8; cf. 4Q509 131.ii.1–3). Serekh Damašcus (4Q265) mentions Passover in a fragment about a child and woman who are said to have eaten during the festival of Passover (4Q265 4.3). It has been suggested that containers of animal bones found during the Qumran excavations held the remains of Passover sacrifices, but the varieties of animals represented show that this cannot be the entire explanation.

In the New Testament Passover features primarily in the accounts of the Last Supper. The synoptic Gospels present the Last Supper as a Passover meal (*Mt.* 26.2, 26.17–19; *Mk.* 14.1, 12, 14, 16; *Lk.* 22.1, 8, 11, 13, 15), although the bread and wine consumed are reidentified as the body and blood of Christ and the celebration of the meal anticipates the event of salvation (see also *1 Cor.* 11.23–29). In *John*, the Last Supper is eaten the night before Passover, while Jesus is crucified at the time when the Passover lambs were slaughtered in the Temple (*Jn.* 13.1, 18.28, 18.39, 19.14). Paul identifies Christ as the paschal lamb and urges the Corinthians to celebrate the festival, “not with the old yeast, the yeast of malice and evil, but with the unleavened bread of sincerity and truth” (*1 Cor.* 5.8; see also 5.6–7).

The Mishnah devotes a tractate of order *Mo’ed* to Pass-

over, outlining the sacrificial laws pertaining to it. A central concern is with the rituals that no longer were applicable after the destruction of the Temple in 70 CE. Sanctuary sacrifice was translated into domestic celebration of the festivals. Apart from discussions of leaven, cleanness and uncleanness, work, roasting procedures, disqualifications, the Second Passover, and the blessings, it also indicates that in Temple times the Passover lamb was slaughtered after the daily burnt offering, a point at odds with *Jubilees* and Temple Scroll^a (*Pes.* 5.1; cf. 5.3).

PATRISTIC LITERATURE. See Early Christian Writings.

PAUL, LETTERS OF. The Qumran scrolls have been studied in relation to the Pauline letters in three main ways: as background to the New Testament; comparatively, as documents belonging to Second Temple Judaism; and as Jewish texts on which the Pauline letters are seen to shed some light.

Many New Testament scholars have quarried the Qumran scrolls for parallels that will illustrate this or that phrase and passage of the Pauline corpus. The most comprehensive of this type of work still is Herbert Braun's two-volume *Qumran und das Neue Testament* (1966). Although the methodological difficulties of such an approach now are more generally recognized, there continues to be an interest in hunting for parallels, as seen in the ongoing Munich project (under the directorship of Heinz-Wolfgang Kuhn) to publish a self-styled "Qumran Billerbeck" along the lines of the much used compilation of rabbinic sources for the illustration of the New Testament ("Strack-Billerbeck"). This "Qumran Billerbeck" aims to avoid the methodological pitfalls of its predecessor.

Other studies discuss the Qumran scrolls and Pauline

letters as texts that belong to Second Temple Judaism. These may be explicitly comparative (e.g., Sanders, 1993; Lim, 1997) or text centered (e.g., Sanders, 1993; Brooke, 1985), or they may follow a particular theme (e.g., Bockmuehl, 1990). The third and least common approach is to study the Qumran scrolls for their own sake, all the while drawing on illustrative material from Jewish and Christian traditions, including the Pauline letters (e.g., Flusser, 1965).

Historical Context. All these studies assume contact, to a greater or lesser degree, between the sectarians and the early Church. The plausible, though inconclusive, historical link between the Qumran-Essene community and Paul is suggested by the figure of John the Baptist. Accordingly, this prophet, who lived in the wilderness and who received the divine call to preach the message of salvation to all of Judea, was either an Essene or closely associated with the community at Khirbet Qumran (cf. the identical proof text of *Isaiah* 40.3 in Mark 1.1-8 and Rule of the Community from Cave 1 at Qumran, IQS viii.1-16). [See John the Baptist.]

Paul met some disciples of a certain John when he came to Ephesus (*Acts* 19.1-7), and it is thought that these were John the Baptist's followers, since they did not know of the Holy Spirit but only of the baptism of repentance. It may be coincidental, but nevertheless it is notable that the deutero-Pauline *Letter to the Ephesians* shows the greatest proportion of Qumranic terminology and ideas (Kuhn, 1968).

The view that Qumran-Essene influence came to Paul via John the Baptist is not without its problems. Was John an Essene? It is often claimed that both the Qumran-Essene community and John practiced immersion and ritual washings; however, John's was a baptism for the repentance of sins while Essene ablution was a physical cleansing that followed a spiritual purification (Josephus, *Jewish Antiquities* 18.116-119; cf. Lichtenberger, 1992). [See Purity.] Moreover, cleansing with water as such, whatever its theological import, is not a practice exclusive to the Qumran-Essene community and John the Baptist (e.g., the ascetic Bannus' [c.50 CE] daily washings; Josephus, *Life* 2.129).

Even though direct contact between the Qumran community and Paul cannot be established, the chronological overlap between the period in which the Qumran community flourished (c.150 BCE-70 CE) and the missionary activity of the gentile champion (c.50-60 CE) makes this hypothesis plausible and attractive. The problem posed by the geographically different locations of Palestine and Asia Minor may be overcome by Paul's travels, especially to Jerusalem and Antioch, and the dispersion of Essenes ("priests" of *Acts* 6.7? Cf. Betz and Riesner, 1994, pp. 147ff.) and John's followers.

Less likely are views that posit direct identification of the Qumran-Essene community with the early Church (e.g., Eisenman, 1996), since carbon-14 tests would appear to preclude such a dating of key documents, especially Peshet Habakkuk (10pHab; Jull, 88). [See Carbon-14 Dating.] Moreover, the equation of Damascus and Arabia in the Pauline autobiography (*Gal.* 1:17, *2 Cor.* 11:32–33; cf. *Acts* 9:18–25) with the location of Khirbet Qumran and the Judean wilderness is tenuous and based upon a conflation of the figurative and the geographical. [See Geography in the Documents.]

Parallels and Their Significance. Numerous terminological, theological, and exegetical parallels have been drawn between the Qumran scrolls and the Pauline corpus that strengthen the contact between the Qumran community and the early Church. These have been collected from the earliest days of Qumran scholarship and include the phrase “sons of light” (*1 Thes.* 5:4–9; *Eph.* 5:8; 1QS i.9–11, ii.16–17; War Scroll 1QM i.1, i.3, i.9, i.11, i.13, xiii.5–6). The corresponding phrase “sons of darkness” (1QS i.9, War Scroll 4Q496 iii.7) does not appear, but compare it to “we are not of the night nor of the darkness” (*1 Thes.* 5:5; cf. *Jn.* 17:12). Other common phrases and concepts include “works of the law” (*Gal.* 2:16; *Rm.* 3:20, 3:27–8; Florilegium 4Q174 1–2.i.7[?], Miqtsat Ma’asei ha-Torah [MMT^c] 4Q396 29), “the new covenant” (*1 Cor.* 11:25, *2 Cor.* 3:6, CD vi.19), “church of God” (*1 Thes.* 2:14 1QM iv.10), “righteousness of God” (*Rm.* 3:21–24, 1QS xi.12), the community as the living temple (*1 Cor.* 3:9, 3:16–17; 1QS viii.1–16), the ethical division of humanity into camps of good and evil (*1 Thes.* 5:4–8, 1QS iii.13–iv.26); the interpretation of impalement of a corpse in *Deuteronomy* 21:22–23 as crucifixion (*Gal.* 3:13, Peshet Nahum 4Q169 3–4.i.7, Temple Scroll^a 11Q19 [xiv.6–13]), and the lists of vices (*Gal.* 5:19–23, 1QS iii.13–iv.26). [See Crucifixion.]

Standing out among Pauline passages is *2 Corinthians* 6:14–7:1, which numerous scholars believe to be thoroughly Qumranic, “a Christian reworking of an Essene paragraph” (Fitzmyer, 1971, p. 217). Features that betray editorial reshaping and a pre-Pauline source include: (1) the subject changes abruptly from verse 13 to verse 14 of *2 Corinthians* 6, and Paul’s exhortation to the Corinthians to open their hearts resumes in 7:2; (2) the six verses of this supposedly independent unit are characterized by Qumranic ideas of dualism (separation of “believers” from “unbelievers,” “righteousness” from “iniquity,” “light” from “darkness,” divine temple from the idolatrous one), the living temple of the community (6:16), concern against idolatry (6:16) and impurity (6:17), and the similar use of biblical anthologies and proof texts (*2 Sm.* 7:14 in *2 Corinthians* 6:18 and 4QFlor; see G. J. Brooke and T. H. Lim); and (3) the opposition of “Christ”

and “Belial” in 6:15 is evidently an adaptation to the new Pauline context. [See Dualism.]

Literary parallels should be assessed for what they can and cannot show. It may be illuminating to set terms from the Dead Sea Scrolls side by side with Pauline terms, to compare them literarily and theologically, but such similarities do not prove influence. Where parallels are shared only between the Qumran scrolls and Pauline letters, a stronger case may be made for direct contact. Parallels between the Qumran scrolls and Pauline letters that are found elsewhere may otherwise be explained by the use of a common source.

For instance, attention has been drawn to the terminological use of “the new covenant” in the Damascus Document and the Pauline letters, but in what sense is this a parallel? [See Damascus Document.] Given the diverging views concerning the efficacy of Jewish law in these texts, it is hardly illuminating, and even misleading, to compare the notion of the new covenant in Paul to that of the Qumran community. Whereas Paul sees the old covenant as having been surpassed by the new dispensation (*2 Cor.* 3), the Qumran community’s new covenant involves a return to a correct and punctilious observance of the Mosaic commandments that reflects a spiritual renewal of the individual. More appropriate would have been a comparison of Paul with the remarkable passage in *Jeremiah* 31:31–34 (Septuagint, *Jer.* 38:31–34) in which God declares that in the new covenant the law and its teaching will be internalized, placed in the hearts of the house of Israel. The Qumran community and Paul both drew on *Jeremiah* 31, but their respective formulations diverge dramatically and certainly do not show any mutual influence.

There indeed are genuine parallels between the Qumran scrolls and the Pauline letters, but these must be carefully assessed for the contribution that they make. Take, for example, the Pauline phrase *works of the law*, the Hebrew equivalent of which now appears unambiguously in the Miqtsat Ma’asei ha-Torah scrolls from Cave 4 at Qumran (4Q394–399; “some precepts of the Torah”), a text that has at its core the debate over some twenty or so legal points. A possible occurrence was previously found in the Florilegium (4Q174 1–2.i.7), but it could also be read as “works of thanksgiving” (Brooke, 1985, p. 108). It has been claimed that the phrase *works of the law* does not occur anywhere in the Hebrew scriptures and that the Qumran evidence now gives support for the use of this slogan in Paul’s days. While this may be true, it is important to realize that *Exodus* 18:20 already encapsulates this notion of divine commandments as work of the Torah: “and you shall teach them the statutes and the decisions, and make them know the way in which they must walk and what they must do.” In other words, it is not

especially surprising to encounter the phrase *works of the law* in a legal context, and finding it in the Pauline correspondence and *Miqtsat Ma'asei ha-Torah* may have no more significance than that both used a phrase common in the period.

Pauline Citations of Biblical Texts. Study of the Pauline explicit quotations has also been profoundly influenced by the contributions of the Qumran biblical scrolls (see Ellis, 1957; Koch, 1986; Stanley, 1992; and Lim). The biblical texts from Qumran attest to greater variety of text types than was previously thought. There is a multiplicity of texts attested in the period before the standardization of the biblical texts (Tov, 1992). What this means for Pauline quotations is that the scriptural citations in the letters should not be compared, as they regularly are, primarily to the Septuagint and other Greek traditions. Paul was a multicultural, multilingual Jewish citizen of the Greco-Roman world and was able to move easily from reading the original Hebrew to a Greek or Aramaic translation of it. The textual variants in his citations likewise must be assessed against both the Greek and Hebrew witnesses.

With the discovery of biblical texts at Qumran, such as Jeremiah^b (4Q71), which is closer to the presumed Hebrew *Vorlage* underlying the Septuagint, the common division of Greek and Hebrew sources in the study of Pauline biblical quotations now seems rather artificial (Lim 1997). For example, in the well-known passage of *Romans* 9.33, two passages from *Isaiah*, 28.16 and 8.14–15, are quoted to support Paul's contention that observance of the law has proven to be a stumbling block for his fellow Jews. A similarly combined citation of the same two texts is found in *1 Peter* 1.26, where the biblical proof texts now support a Christological reinterpretation of the living stone. The occurrence of this combination of biblical passages in different contexts is evidence for the use of scriptural anthologies or "testimony" books in the New Testament.

What is important is that in both *Romans* and *1 Peter*, the initial phrase of *Isaiah* 28.16 reads "behold, I am laying." The Septuagint has "behold, I will set," making explicit the independent pronoun and attesting to a synonymous verb. The Masoretic Text literally means "behold me, he laid," the abrupt change of subjects being smoothed out by some scholars to read a suppressed relative clause, "behold, I am he [who] laid." Two *Isaiah* scrolls from Cave 1 at Qumran now attest a Hebrew text that does not contain this difficulty: both *Isaiah*^a (1QIsa^a) and *Isaiah*^b (1Q8) read *piel* and *qal* participles, respectively, that remove the incongruity of the subjects. *Romans* and *1 Peter* appear to be one rendering whereas the Septuagint is another translation of a Hebrew text similar to the ones found at Qumran.

Exegesis of Scripture. As regards method, it is thought that the Pauline letters reflect the characteristic *peshet* type of scriptural interpretation. Several scholars would argue that the atomizing, contemporizing exegetical moves of the sectarian scrolls are also found in several Pauline passages. For example, the interpretation of *Deuteronomy* 30.11–14 in *Romans* 10.6–7 is suitably altered by C. K. Barrett (1970, p. 392) to the *peshet* pattern: "Do not say in your heart, Who shall ascend into heaven? The *pēšer* of this is, Who shall bring Christ down? Do not say in your heart, Who shall descend into the deep? The *pēšer* of this is, Who shall bring Christ up from the dead?" Similarly to the Qumran *pesharim*, key phrases from verses 12 and 13 of *Deuteronomy* 30 (influenced by Ps. 107.26) are segmented and applied to Paul's Christological reading of the biblical text. Apparently, the characteristic formula, *peshet*, that introduces an interpretation is implicit in the Pauline use of "this is" (*Rm.* 9.7–9; see Ellis, 1988, pp. 696–697). As a result, Paul's handling of the biblical sources is often described as *midrash peshet* exegesis, a hybrid phrase that is formulated based on the synonymous use of the two words in the Florilegium (4Q174 1–2.i.14).

Whether Paul's exegesis should be described as *midrash peshet* is largely a question of definition. Technically, "this is" is not a terminological equivalent of *peshet* "interpretation" but the independent pronoun *hu'* ("it [is]"). Semantically, the terms do overlap. Paul's exegesis may be called a *midrash peshet* if by this it is meant the general, primarily lemmatical, exegesis of scripture. However, the complicating factor is that these terms also have specific referents as genres of the Qumran *pesharim* and rabbinic *midrashim* and a comparison with these is not altogether appropriate.

The existence of a genre of exegesis called *midrash peshet* is questionable. To be sure, some of the exegetical techniques and principles found in the Pauline letters are comparable to those found in the *pesharim* and *midrashim*. However, the formal distinctions of genre should be maintained. Exceptionally, Paul's exegesis may be described as *peshet*esque, if that is what is desired, and such a description should not be seen to imply direct influence on Paul by the Qumran community.

TIMOTHY H. LIM

PELEG, HOUSE OF. A sobriquet found twice in the Dead Sea Scrolls, once in the Damascus Document (CD xx.22), and once in Peshet Nahum (4Q169 3–4.iv.1),

House of Peleg literally means "house of separation" or "house of division." In *Genesis* 10.25, Peleg, a son of Eber and a descendant of Shem, receives his name because "in his days the earth was divided." *Jubilees* 8.8 adds that the sons of Noah divided the earth "in an evil manner." Identification of the sobriquet in the Dead Sea Scrolls depends to some degree on a reconstruction of the history of the Qumran community; the referent of the sobriquet need not be the same in both the Damascus Document and Peshet Nahum. The difficulty of identification is compounded by the fact that both texts are damaged in the areas where the sobriquet appears.

In the Damascus Document there is a substantial blank space before the term *House of Peleg*. Immediately before the word *beit* ("house") there are traces of a letter that may be the preposition *from*. There also are other damaged areas in the rest of the passage (CD xx.22–25) describing the actions of the house of Peleg. This passage can be read in several different ways: the author may have viewed the house of Peleg, or a part of it, in a positive light as a group who, declaring the Temple in Jerusalem unclean because of Israel's sin, left Jerusalem and turned to God. That is, the house of Peleg is a group like the Qumran community, but one which remained distinct from the author's own community. Another interpretation is that the author viewed the house of Peleg as a group who, leaving Jerusalem when Israel sinned, leaned on God (by joining the Qumran community) but later defiled the Temple (now understood to be the Qumran community) and returned to the ways of the people. Most likely, the author regarded the house of Peleg as a group who left Jerusalem at a time when Israel sinned by defiling the Temple, but who later returned to the ways of the people (Judaism at large). In this case, the house of Peleg would refer to an otherwise unknown group who did lean on God for a time but eventually relapsed. They may even have joined the Qumran community for a time but later abandoned it.

In Peshet Nahum, the house of Peleg is mentioned in the context of an interpretation of *Nahum* 3.9. The sobriquet appears to be in apposition to the preceding phrase, "the wicke[d of . . .]," which is most plausibly reconstructed as "the wick[ed of Juda]h." If Judah refers to all Israel, the house of Peleg would refer to a group within Judaism who supported the ruling class (as Manasseh is often understood), perhaps contrary to the expectations of the author. Here the author's assessment of the house of Peleg is entirely negative and may reflect a date of composition for Peshet Nahum later than that of the Damascus Document.

There have been a number of attempts at a more precise identification of the term. Some scholars believe that it refers to a group led by the Liar. Others believe the

sobriquet is a reference to the group led by Onias IV, which built a competing temple in Egypt (c. 160 BCE). Still others think the *house of Peleg* is another name for Ephraim, which is often understood to refer to the Pharisees. The root meaning of Pharisee is "separation."

PENTATEUCH. See Scriptures, *article on* Texts.

PERSIAN EMPIRE. Around the turn of the first millennium BCE, two branches of the Indo-Iranian group of tribes, the Medians and the Persians, invaded the highlands of Iran, coming from the north either across the Caucasus or from the Middle Asian steppes. The Persians conquered the region of the former kingdom of Elam (Anshan and Susa, today the provinces Fars and Khuzistan). The Medians occupied the regions north of them, from around Teheran and Hamadan up to the modern Turkish border. Over time the Medians gained supremacy over the Persians and other Iranian tribes east of Iran. After the decline of the Assyrian empire in 612 BCE, the Median and Neo-Babylonian kingdoms became the leading powers of their time.

The Achaemenid Kingdom. The young Persian prince Cyrus II (560–529 BCE), who belonged to the house of the Achaemenids, rebelled against his Median overlord Astyages. He subjugated the Medians and conquered the whole of Asia Minor and the countries in the east up to Lake Aral in swift campaigns. In 539 BCE he attacked and

overthrew the Neo-Babylonian empire. With the fall of Babylon, its provinces in Syria and Palestine also became parts of the Persian kingdom. In Babylon, Cyrus appointed a certain Gubaru (Gobyras) as vice-regent, who may be the otherwise unknown prototype of Darius the Mede in *Daniel* (Koch, 1983).

Under his successor, Cambyses (529–522 BCE), Egypt was occupied; after that time the Judcan garrison of Elephantine (near Assuan) was transformed into a division of the Persian army (cf. Pritchard, *Ancient Near Eastern Texts*, 491–492). After a series of more than twenty rebellions, Darius I (the Great, 522–486 BCE), an Achaemenid but not a member of Cyrus's family, usurped the throne. In many countries of the empire, various uprisings raised expectations for a renewal of national sovereignty and for an indigenous kingdom; this was the case in Judah as the contemporary prophecies of *Haggai* and *Zechariah* demonstrate. But Darius proved the victor and extended the border of his rule from India to Egypt (cf. *Est.* 1.1). Dividing the empire into about twenty satrapies, he established an administrative and military structure that endured for nearly two hundred years. The famous buildings at Persepolis were erected as a kind of ideological capital.

The successors of Darius belonged to the same dynasty. Despite bloody palace revolutions and satrapic rebellions, they were able to retain the structure and the boundaries of the empire except the dominion over Egypt, which became autonomous for nearly one century. In the train of the army, Persian communities grew up all over the Near and Middle East.

However, starting in 334 BCE, the Macedonian king Alexander the Great, attacking from the west, overcame the last Achaemenid king, Darius III, and destroyed the empire within a few years. After Alexander's death, Iran, together with Mesopotamia and Syria, became part of the Greek-Macedonian kingdom of the Seleucids for some 150 years (c. 320–170 BCE). Later on, the Parthians invaded the country and ruled for nearly four hundred years. They were defeated by the Sasanian dynasty, which maintained its power until the Islamic conquest (225–642 CE).

Religion of the Achaemenids. Most extant royal inscriptions were written during the reign of Darius I. In them the king often mentions divine support, but that of only one deity, A(h)uramazda. This god appears as the creator of the universe and the upholder of truth and justice as the real world order (*arta*), always fighting against the evil powers of an "anti-world" (*draoga*). The conception seems similar to the dualistic tendencies in Zoroastrianism, although it is transferred into the political realm. A(h)uramazda has commissioned the Persian king with the task of realizing the divine law (*dava*) among the different peoples of the earth. So whoever shows enmity

against the king must be a creature of *draoga* (cf. the Bisitun inscription; Kent, 1953, pp. 116-134).

Today, most scholars are convinced that at least since Darius I, the Achaemenid kings represented a modified, somewhat toned-down Zoroastrianism. But opinions differ regarding monotheism or polytheism. Did the Achaemenids believe in only one god? Some of the Darius inscriptions mention "and all the *buga* (supranatural powers)" besides A(h)uramazda; does this expression refer to a heavenly entourage of the creator as kinds of angels or to independent deities? The Persepolis tablets, written in the reign of Darius, register deliveries of goods and money to Elamite, Babylonian, and other deities, although most of those issues seem to refer to a special cult of A(h)uramazda. Outside his homeland Cyrus did not hesitate to present himself in Babylonia as the elect of the indigenous god Marduk immediately after the occupation of the capital (ANET, 315-316); on Egyptian stelae Darius appears as the son of the sun god Amon-Re and as the representative of Egyptian deities. Were these references to other gods only accommodations to the mind and the manner of non-Persian people? Or did the kings believe in other divine powers acting on behalf of the dynastic patron A(h)uramazda?

The later Achaemenids (from c.440 BCE) invoked the god Mithra and the goddess Anahita besides A(h)uramazda; both of those, however, were conceived as created by A(h)uramazda according to the Zoroastrian Avesta.

Religious Tolerance? From the age of the Persian empire, between 540 and 330 BCE, a number of edicts have been discovered legitimating the local cultic institutions of subjugated peoples. These were promulgated by the king himself or one of his satraps. They often announce certain privileges like exemption from taxation for the clergy. The most famous examples concern Judah.

The famous Cyrus cylinder (ANET, 315-316) stresses the royal support of Babylonian sanctuaries. Darius I reorganized the structures of an Egyptian sacral city by sending back the Egyptian nobleman Udjahorresnet from his Persian exile to Sais (Lichtheim, 1980; Blenkinsopp, 1987). Darius also ordered the (first) collection and codification of the Egyptian (sacral) laws. In Asia Minor, privileges of several regional cults were confirmed by the satraps.

For the earlier empires like the Assyrian and the Babylonian, similar documents are totally missing. In the view of some historians, this lack is only a matter of chance. Most experts, however, suppose that there was a specific Persian attitude toward non-Persian people and a juridic principle of "imperial authorization" of indigenous religious institutions. Probably this tolerance by the great king is rooted in the conviction in the (nonwritten) law given by the creator, the *data* of A(h)uramazda, which le-

gitimized different ways of life among the nations. The same divine law appointed the Persian king to rule over all of them and to guarantee their specific *data*. This Iranian notion became an important loanword in Akkadian, Aramaic, and Hebrew in those centuries (Frei and Koch, 1996).

Relations to the Temple and the God of Jerusalem. According to a number of postexilic Old Testament books, the Persian kings nearly always acted generously to Judah and its temple. Soon after his conquest of Babylon, Cyrus sent Sheshbazzar back to Jerusalem as a governor (2 Chr. 36.23; Ezr. 1.2-4) together with the vessels that Nebuchadrezzar had transferred to Babylon. Later on, Cyrus's edict commanding the rebuilding of the temple was confirmed by Darius I (Ezr. 6) who delegated Zerubbabel as governor to that province and supported the restoration of the temple and its institutions. Probably in 458 BCE, Artaxerxes I permitted the priest Ezra to return from exile to the homeland with other fellow countrymen and to introduce the law (*data*) of the god of heaven (= the Pentateuch or its Priestly Source?) there as the constitution of their community. The same monarch allowed Nehemiah to restore the city of Jerusalem in 444 BCE. In 419 BCE, Darius II authorized a certain Hananiah to order his brothers at Elephantine (ANET, 491) to celebrate the feast of Passover and eat unleavened bread according to the divine law. Because of these surprising documents, the question arises as to whether or not there was a special acknowledgment of the monotheistic Israelite religion by the Persian authorities, as it seemed akin to their own Zoroastrian religion. Note that Cambyses during his campaign in Egypt destroyed the indigenous temples at Elephantine but not the Temple of Yahu (ANET, 492).

Appraisal of the Persian Kingdom by Judean Writers. Over against all other subjugations of ancient Israel by foreign peoples, there is not a single prophecy of doom about the Persians announced in the whole Hebrew scriptures (if it is not introduced by modern literary-critical operations). Deutero-Isaiah hailed Cyrus as the anointed of Yahveh (Is. 45.1). Later on, the *Book of Ezra* praised the spirit of God acting by the pagan ruler (Ezr. 1.1, 7.27). Darius I is remembered especially well. The Aramaic version of his Bisitun inscription was copied and stored by a diaspora community one hundred years later (Cowley, 1923). According to the *Book of Esther*, King Xerxes even took a Judean woman as his main wife and permitted her people to kill all its enemies on a certain day (Purim). In the apocalyptic literature, Persia is given third position according to the theory of the succession of four leading empires, which God's providence had determined for the (last) epochs of world history before the eschatological transformation (1 En. 89.72-75; 4Q215 5.8; Sib. Or. 4.49-

101 [cf. Charlesworth, *Old Testament Pseudepigrapha* 1, pp. 380–386]). Persia's rule is distinguished from the previous one by a universal dominion (*Dn.* 2.39, 7.6). Later, Persia was promoted to second position, because Rome had been placed fourth and Greece third; this is probably reflected in the (Pseudo-Danielic?) vision found in Four Kingdoms^{a-b} (4Q552 and 4Q553, respectively; cf. *4 Ezz.* 11 and later Jewish-Christian *Daniel* interpretation).

The pro-Persian attitude is also dominant in a pseud-epigraphon found at Qumran. Proto-Esther^{a-e1} (4Q550), perhaps somewhat misleadingly named, narrates how a Persian king, faithful to the legacy of his father Darius, appointed a Judean named Bagasro to the highest office of the empire. Anyone who uttered an evil word against him was to be killed. At the same time, the king confessed that only the Most High venerated by Bagasro governed the whole earth.

Between Iran and Judah good relations were maintained in the time of the Parthian kingdom as well. [See Parthian Empire.] The indirect influence of Persian culture is also visible in the use of Persian architectural terminology in the Temple Scroll (e.g., *parvar* in 11Q19 v.13).

KLAUS KOCH

PESAH. See *Passover*.

PESHARIM. A type of biblical interpretation found in the Qumran scrolls in which selected biblical texts are applied to the contemporary sectarian setting by means of various literary devices, the word *peshet* (pl. *pesharim*) may refer either to the employment of the technique itself or to a genre comprised of a series of such interpretations. In either case, the appearance of the word *peshet* is essential to the designation.

The Hebrew *peshet* is related to the root *ptr* and its cognates, the Aramaic *ptr* and the Akkadian *pasharu*. Already in Akkadian, the root meaning "to unbind" or "release" specifically came to denote the unbinding of dreams. The biblical *pitroni* refers to dream interpretation, and in the *Book of Daniel* *psir* denotes the deciphering of prophetic or predictive writing. The Qumran community perceived biblical prophecy, in itself revelation, as analogous to a dream the mystery of which might only be unraveled by a specially endowed individual. The coded prophetic messages were deciphered by the author of the *peshet*. However, his own expression of the newly revealed "true meaning" also was effected in veiled terms. *Peshet* interpretations were meaningful revelations for their intended sectarian audience. However, the modern reader is often challenged to identify the historical realities reflected in the allusions and sobriquets found in these interpretations.

Perhaps the most instructive description of *peshet* comes from one of the *pesharim* itself, *Peshet Habakkuk* (1QpHab), which comments upon the biblical *Book of Habakkuk*. The *peshet* cites *Habakkuk* 2.2: "The Lord answered me and said: 'Write the vision; inscribe it clearly on the tablets so that he who reads it may run.'" The *peshet* comments: "And God told Habakkuk to write that which was going to happen to the last generation but he did not let him know the final age . . . Its *peshet* is upon the Teacher of Righteousness, that God revealed to him all the mysteries of the words of his servants, the prophets."

This self-defining citation from *Peshet Habakkuk* also serves as an illustration of the basic structure of *pesharim*: citation of a biblical text (the *lemma*); an introductory formula typically using the word *peshet*, such as "its *peshet* is upon . . ."; and an application of the text to a contemporary reality outside of its original context. These formal elements are common to all *pesharim*, but they also may serve to highlight variability among particular *peshet* compositions.

Continuous Pesharim. Standard *peshet*, which Jean Carmignac termed "continuous" or "running," takes a biblical composition as a starting point and adapts it to a purported eschatological fulfillment. The documents published as a group in Maurice Horgan's *Pesharim: Qumran Interpretations of Biblical Books* (1979) represent

the existing corpus of continuous *peshtarim*, which cover five, or possibly six, of the twelve biblical Minor Prophets, as well as parts of *Isaiah* and *Psalms*. The best preserved specimen is Peshar Habakkuk, which contains consecutive *pesher* to the first two of the three chapters of the *Book of Habakkuk* and has long been regarded as paradigmatic of the genre. However, the continuity of continuous *peshtarim* is not entirely consistent. Peshar Psalms^a (4Q171) proceeds directly from Psalm 37 to Psalm 45. Peshar Isaiah^b (4Q162) omits *Isaiah* 5.15–24. Peshar Isaiah^c (4Q163) includes a citation from *Zechariah*, and apparently one from *Jeremiah*, and its current reconstruction presumes an irregular order of earlier and later chapters of *Isaiah*. Other *peshtarim* are too poorly preserved to determine their scope.

Citation. It is the citation of the biblical text that qualifies *pesher* as a type of explicit biblical interpretation, in contrast to other, implicit forms such as rewritten narrative. The selected text generally pertains to sectarian interests and is typically of an eschatologically prophetic or poetic nature. Cited texts in continuous *peshtarim* generally follow the sequence of a particular book but exhibit varying degrees of selectivity.

Formula. The biblical citation is followed by a formula that alerts the reader that the interpretation is at hand, serving a purpose similar to that of quotation marks. Some of the *peshtarim* tend to leave a space between the citation and the introductory formula. The introductory phrase usually contains a form of the word *pesher* itself and often includes a pronoun, a particular element (or substantive) of the *lemma*, and the word *asher* or *al*. At times, the word *pesher* is not used, and the formula is of the sort “for the [cited element] is the [identification].” These formulas preceding the interpretation are consistently employed in the continuous *peshtarim*. Less frequently, a formula such as “for this is as it is said” may precede the *lemma*.

Peshar Habakkuk and Peshar Isaiah^a (1Q161) use such citation formulas before secondary repetitions of biblical text. Peshar Isaiah^{a,c}, and ^d (4Q165) also introduce primary citations with formulas. The selective citation of biblical texts in these latter *peshtarim* may have created a greater need for the flagging of citations.

Application. The *peshtarim* contemporize biblical verses, identifying their referents in history through “inspired” application. The application relies upon linguistic or literary associations between the interpretation and the *lemma*. In the Peshar Habakkuk example, the prophet’s recording of events for a future individual is applied to a sectarian leader who, through *pesher*, will “run” with the text and reveal its true meaning. The author(s) of *pesher* believed the value of the biblical text to lie in its contemporary meaning(s), revealed to the *pesher* author

but unknown to the original biblical composer. The relationship of the base text to its *pesher* interpretation most plausibly is viewed as a combination of *ersegesis* and *exegetis*. The tendentious reading of the text removes this form from the category of simple explanation, *peshat*. The composer of *pesher* relied upon hermeneutic principles and employed exegetical devices closely related to those used in rabbinic *midrash*.

The exegetical techniques that correlate the base text with its interpretation include paraphrase, allegory, polyvalence, atomization, and allusion to other biblical passages (see Nitzan, 1986; pp. 29–79; cf. Horgan, 1979, pp. 244–249). The term *polyvalence* (“multiple meanings”) refers to the employment of wordplays to expand or change the original context. These often depend upon textual variants, real or hypothetical, such as homographs or homophones, as well as anagrams or abbreviations. The similarity of this technique to the rabbinic device of *al tiqra*’ (do not read) often has been noted. *Atomization* is K. Elliger’s term for the way in which he perceived *peshtarim* as approaching each detail of the base text, ignoring the original biblical structural content or context. This approach sometimes is in evidence, but Nitzan has demonstrated a greater adherence to biblical structure than previously had been assumed. Further, the very selection of appropriate biblical texts shows that the *peshtarim* are appreciative of the original context.

The least degree of atomization and a generally low incidence of literary devices characterize Peshar Isaiah^{b,c}, and ^d. In these *peshtarim*, long citations are followed by brief interpretations, which at times consist merely of an identification, such as “these are the scoffers who are in Jerusalem.” Many of the selected *Isaiah* texts themselves contain terminology that is typical of the Qumran sect. Peshar Habakkuk and Peshar Nahum (4Q169) exhibit the most highly developed exegesis and are characterized by well-balanced lengths of cited text and interpretation. These works recast primarily historical biblical passages to reflect their eschatologically significant fulfillment in the contemporary setting. In a similar fashion, Peshar Psalms^a applies the dualistic theology of Psalm 37 to an eschatological understanding of sectarian history. In general, the End of Days (*aharit ha-yamin*) is a recurring concept in the *peshtarim*. The concern with final judgment and salvation for the elect is intensified by the sectarian belief that the eschatological age already had begun.

It has been suggested that the *peshtarim* were revised over time to accommodate emerging historical realities, especially those that were at variance with *pesher* assumptions or predictions. The fact that each of the extant *peshtarim* is represented by a single copy may strengthen the hypothesis that only a single authoritative version of *pesher* was in effect at any one time.

Thematic Pesharim. So-called thematic *pesharim* take an eschatological concept as a structural theme and weave in citations from distinct biblical works. This sub-genre is represented by Melchizedek (11Q13), Florilegium (4Q174), and Catena⁷ (4Q177). Thematic *peshet* may be evaluated in relation to the same formal criteria as continuous *peshet*.

Citation. Diverse biblical texts are cited in thematic *peshet*, where the unifying element is the central concept, such as the restoration of the Temple and of the Davidic dynasty in Florilegium. Florilegium has been described by some as revolving around a central ("frame") text, 2 Samuel 7, but all agree that it relies heavily upon verses from other books, particularly *Psalms*, for support. Unlike the extant continuous *pesharim*, the thematic *pesharim* also cite verses from the Pentateuch as well as from prophetic books and *Psalms*, though the latter sources remain dominant. Nearly all the cited text is poetic. The Qumran community's perception of the prophetic nature of the Psalter is apparently indicative of a general attitude to biblical poetry as veiled communication.

Formula. Thematic *peshet* is characterized by the regular usage of citation formulas, which appear in far greater proportion than the interpretation formulas that typify continuous *peshet*. In Florilegium only the *Psalms* citations are introduced with the word *peshet*. Apparently, the flagged text is that which is seen as more external to the composition. In continuous *peshet*, the interpretations are seen as the explanatory notations, while in thematic *peshet*, the proof texts play this role. The occurrence of even one interpretation formula containing the word *peshet* may provide a basis for classifying a composition as *peshet*.

Application. In thematic *peshet*, the biblical text is not so much applied to a newly described reality as it is used to corroborate a previous statement. This style, which appears too in Isaiah^{16c}, may be associated with the preference for citation formulas.

Annette Steudel sees the Florilegium and Catena⁸ as two copies of a single composition and renames them Midrash Eschatologie^{ab}, classifying them as thematic *midrash* rather than thematic *peshet*. Steudel also places Catena^b (4Q182), unclassified fragments 4Q178, and historical work 4Q183 (Midrash Eschatologie^c) in this same category and suggests that they may also be from the same work. These latter manuscripts cite biblical texts as eschatological proof texts, using citation formulas, but the word *peshet* does not appear in the extant fragments. The joint grouping of Midrash Eschatologie^{2c} seems plausible, despite the disregard for the presence or absence of the word *peshet* in the extant portions of these texts. The singularity or multiplicity of compositions

should be viewed as indeterminate, and the nomenclature has not been definitively established. Steudel also classifies Melchizedek, Commentary on Genesis A (4Q252), and Tanhumim (4Q176) as thematic *midrash*. Melchizedek clearly belongs with the works Steudel terms Midrash Eschatologie^{1c}; 4QCommentary on Genesis A and Tanhumim are more problematic. I share Steudel's sense that the looseness of form exhibited in some of the continuous *pesharim* (e.g., 4Q163) indicates that those works, as well as thematic *midrash*, represent a stage of Qumran biblical interpretation prior to that in which the more developed texts were produced. These apparently earlier works also contain fewer examples of complex literary devices than later continuous *pesharim*.

Such midrashic techniques often are more evident in the isolated examples of *peshet* found in works of other genres. Damascus Document (CD) iv.13–19 is an example of such embedded *peshet* exegesis, complete with the word *peshet* in its introductory formula. Other instances of *peshet*-style interpretation, which lack the word itself, include Damascus Document (CD) iii.20–44, vi.3–11, vii.10–21, viii.8–15, and xix.7–13 and, from Cave I at Qumran, Rule of the Community viii.14–16 (IQS; alluded to again in IQS ix.20). The War Scroll (IQM xi.11–12) foretells the defeat of the Kittim on the basis of a quotation about Assyria.

The biblical orientation of the sectarian vocabulary and mind-set produces many allusive and derivative phrases throughout Qumran compositions. Devorah Dimant refers to implicit *pesharim*, such as the sobriquets, or biblically based code names, by which Qumran authors called contemporary individuals or groups. For example, the title Teacher of Righteousness for the group's leader was derived from exegesis of *Hosea* 10.12 and *Joel* 2.23. A related phenomenon is seen in the inscriptions on the banners of the eschatological army described in the War Scroll (IQM iii.2–iv.5). These phrases are associated with their bearers by the same techniques as *peshet* identifications. Thus, the banner of an ambushing group refers to the "hidden mysteries" of God; the banner of a group of ten anticipates a victory celebration upon a "ten-stringed harp."

Related Texts. Testimonia (4Q175), Tanhumim, Ages of Creation (4Q180, 4Q181; called Peshet on the Periods by Milik), (4Q464) and Exposition on the Patriarchs are related to the *peshet* genre. Words of Moses (IQ22), liturgical text? IQ30, and *peshet* on the true Israel (4Q239) contain the word *peshet* but are too fragmentary to characterize. Fragment 5 of Ordinances^d (4Q159) also contains two occurrences of the word *peshet*. Special mention must be made of Commentary on Genesis A–D (4Q252–254a). Commentary on Genesis A also has been known as Peshet Genesis¹ and as Patriarchal Blessings. It

is now agreed that Commentary on Genesis A, B, C, and D are not *peshtarim*, but the attempt to classify Commentary Genesis A has been pivotal in renewed debates over genres of biblical interpretation.

PESHER GENESIS. See Genesis, Commentary on.

PESHER HABAKKUK (1QpHab) is one of the "original" seven Dead Sea Scrolls discovered in Cave 1 in 1947 and published in 1951. Its importance among the *peshtarim*, and the Qumran literature as a whole, is due in part to its chronological primacy, in part to its relative completeness, and in part to the length of time it has been available for study. First among the prophetic *peshtarim* to be discovered, Peshet Habakkuk has long served as the paradigm by which other examples of this genre are evaluated.

The *pesher* was written on thirteen columns of seventeen lines each, ending in the middle of the thirteenth column at the conclusion of chapter 2 of *Habakkuk*. The first column survives only at its right edge, as the left side has been lost, and the second column is seriously damaged in the center, although the text can be reconstructed with some confidence. The bottom of each column appears to be lacking the last line or two of the seventeen in most cases. The scroll is written in a Herodian script and is generally assigned to the second half of the first century BCE. It is one of the scrolls distinguished by the Tetragrammaton being written in paleo-Hebrew characters, unlike the rest of the text.

The orthography of the *pesher* is fuller than the orthography of the Masoretic Text of *Habakkuk*, in particular in its use of *vav* as a vowel letter, a feature typical of many of the Qumran scrolls. *Vav* is used for long and short vowels of the o and u groups. The plene spelling of words like *ki* with *alef* at the end, of the second masculine singular suffix on verbs as *ih*, of the second masculine singular object suffix as *kh*, and of *y > '* in words like *ktiv'ym* (although *gwym* is usual rather than *gw'ym*) is also characteristic of many of the Qumran scrolls.

The scriptural text of *Habakkuk* on which the *pesher* is based appears to be at variance from time to time with the Masoretic Text, and thus may have independent value for text-critical purposes. Some of these variants are of a fairly insignificant nature, but others are more important and at times agree with other ancient textual traditions of *Habakkuk*. Among them are the following: The *pesher* at 1QpHab ii.1 implies the reading *bogedim*, "traitors" (= Septuagint), at *Habakkuk* 1.5, where the Masoretic Text has *bag-goyim*, "among the nations." At *Habakkuk* 1.17, the *pesher* (vi.8) reads *harbo*, "his sword," for the Masoretic Text's *hermo*, "his net." At *Habakkuk* 2.5, in place of the Masoretic Text's *ve'af ki hay-yayin boged*, "wine, too, is treacherous," the *pesher* (viii.3) has *ve'af ki' hon yivgod*, "wealth, too, is treacherous."

In several passages, however, the *pesher* cites the verse in the lemma in one form and appears to comment on it

as if it had another. The best example of this is 1QpHab xi.9–13 on *Habakkuk* 2.16, which is cited as *sheteh gam 'attah ve-hera'el*, “drink also thou and stagger,” while the *peshet* of the verse refers to *'orlat libbo*, one “who did not circumcise the foreskin of his heart,” as if deriving from the Masoretic Text’s *ve-he arel*, “and be circumcised.” This sort of interpretation might be described as being of a similar nature to the rabbinic *'al ture* (“do not read one form of a word but read another”) *midrash*, but, at the same time, might point to the availability and employment of more than one version of *Habakkuk* by the commentator.

The commentary on *Habakkuk* takes the form of citation from the biblical text followed by a comment, introduced by the words *pishro*, “its meaning,” or *peshet hadavar 'al*, “the meaning of the matter is in regard to.” A striking phenomenon of *Peshet Habakkuk* is its use of formulas for secondary quotation of words already quoted earlier but not commented on. It employs two such formulas: *ki' hu' asher amar*, “for this is what it says” (iii.2, 13–14; v.6), usually when the quotation is brought to support a preceding *peshet*; and *va'asher amar*, “and as for that which it says” (vi.2, vii.3, ix.2–3, x.1–2, xii.6), when the *peshet* is to follow the quotation.

Some of the interpretive methods of the *peshet* have been compared, particularly by Brownlee (1951, 1956, 1959, and 1979), to specific hermeneutic principles that are known in later antiquity from rabbinic literature, and it is likely that the exegetical world to which the author of the *peshet* as well as the later rabbis belonged shared certain common approaches to the exegesis of the biblical text. Nevertheless, it is probably more valuable for the study of the *peshet* to describe what it does rather than to identify its method by employing terms that, strictly speaking, belong to a later period. The following delineation of the exegetical “methods” or techniques of the author is thus descriptive rather than definitive.

Some of the *peshet*-comments explain the text on the most elemental level, paraphrasing and at times expanding the biblical text in the *peshet*. The interpretation may involve merely the change of the form of the interpreted word in the rewriting, or the employment of a synonym to replace it such as *qallim*, “swift” (ii.12), to replace the biblical *nimhar* (*Hb.* 1.6). In one notable example, the biblical verse “[And he] shall scoff [at kings] and mock at rulers” (*Hb.* 1.10a) is further expanded poetically in the *peshet*: “Its meaning is that they shall mock at great ones and despise honored ones; they shall make fun of kings and princes and scoff at a great army” (1QpHab iii.17–iv.2). In one passage (1QpHab vi.11–12), a verbatim citation of *Isaiah* 13.18, “they shall not have mercy on the fruit of the womb,” is employed as the interpretation of *Habakkuk* 1.17, “he shall not have mercy.”

One interpretive device consists of the specification of references to terms that are generic and unspecific in the biblical text; what the prophet left vague, the author of the *peshet* makes clear. This, of course, is unsurprising in the interpretation of a prophetic text, although the technique is to be found later in rabbinic *midrash* and *targum* in their readings of nonprophetic texts as well. Examples are the assertion that the *rasha'*, “wicked one,” of *Habakkuk* 1.13 is “the man of the lie” (v.11), the association of the “righteous one” who will live by his faith (2.4) with the “keepers of the law in the house of Judah” (viii.1), and the equation of *gever yahir*, “arrogant man,” of *Habakkuk* 2.5 with the Wicked Priest (viii.8). The kind of *'al ture midrash* alluded to earlier is also represented by the *peshet* of *Habakkuk* 1.3 (i.5–6) where *'amal*, “toil,” of the biblical text is interpreted as *ma'al*, “treachery.”

The reading of the *peshet* often changes the referent of a biblical clause as at *Habakkuk* 1.13, “too pure of eyes to look upon evil,” which refers in the original to the Lord, but is interpreted at 1QpHab v.7–8 as alluding to the faithful “who did not go astray after their eyes during the period of wickedness.” In other cases, an entity specified in the biblical verse is “pesheted” as a different one, such as the identification of the Chaldeans of *Habakkuk* with the *Kittim* of the *peshet*. This is a product of the author’s rereading of the prophetic text as pointing to his own day. Sometimes multiple interpretations are given to the biblical text as at 1QpHab ii.1–10 on *Habakkuk* 1.5. The term *bogedim*, “traitors,” is repeated three times, associated with “the traitors with the man of the lie” (ii.1–2), “the traitors against the new covenant” (ii.3), and “the traitors toward the end of days” (ii.5–6).

Many of the historically specific interpretations of the *peshet* begin with the identifications or associations seen above, which are then fleshed out with further details; there does not have to be any stronger connection to the biblical text. Thus, once certain verses are claimed to allude to the *Kittim* or to the Wicked Priest, their content is characterized in an appropriate fashion. It does not take much for the author of the *peshet* to turn *Habakkuk* 2.15 (in his version), “Woe to the one who gives his neighbor to drink, adding his poison and making him drunk, in order to gaze upon his festivals,” into a description of the attack on the Teacher of Righteousness by the Wicked Priest on Yom Kippur (1QpHab vi.2–8). Likewise, “Lebanon” and “the city” of *Habakkuk* 2.17 are “the council of the community” and “Jerusalem” with the attendant violence and corruption inflicted upon them by the Wicked Priest following naturally.

There are two major subject areas covered in the commentary itself, one relating to the internal religious politics of Jerusalem and the Temple priesthood, and the other discussing the international repercussions of the

appearance of the *Kittim* on the scene. These topics follow the pattern of the biblical book itself, as the prophet Habakkuk moves back and forth between domestic and foreign affairs in his prophecy, despite the way in which this forces him to interrupt and resume his treatments of the individual themes. Thus in chapter 1 of *Habakkuk*, the *peshet* interprets verses 2–4 as referring to a domestic adversary and 5–11 and 14–17 to an international enemy. The single verse 1.13, however, the author of the *peshet* associates with Habakkuk's domestic foes, the "house of Absalom" and the "man of lies," despite the fact that it interrupts the flow of references to the *Kittim* in his commentary. The author of the *peshet* has noticed that the language of 1.13 employs the terms *habbit*, *tsaddiq*, and *rasha'*, which were used in 1.3–4, a passage that describes Habakkuk's domestic adversary. Although the *peshet* is not a commentary in any traditional sense on the text of *Habakkuk*, its author clearly is more faithful to the text than has often been stated.

Peshet Habakkuk, like other similar writings from the caves of Qumran, probably has more to teach us about the history of the late Second Temple period than about the meaning of *Habakkuk*, but like other Qumran *peshetim*, it often conceals its message behind a series of code names, which presumably were meaningful to its writer and his expected audience. The attempt to identify the major actors in the *peshet*'s code has therefore been a priority of Qumran scholarship. Unlike Peshet Nahum (4Q169), no actual historical names are to be found in Peshet Habakkuk, thus eliminating one of the possible aids to locating a time frame for the *peshet*. Some of the names or epithets can be deciphered with greater confidence than others. Thus in the portion of the *peshet* that comments on the international scene at the time of the writer, the leading role is played by the *Kittim*, who have been virtually universally identified as the Romans (despite the attempt of certain Qumran scholars in the early years after the discoveries to identify them with the Greeks).

The Chaldeans of *Habakkuk* are the model for the description of the Romans by the author of the *peshet*, and he emphasizes the rapidity of their conquest, their power, and their plundering of captive nations (ii.10–iv.13). The practice of the Roman army in sacrificing to their standards is apparently the subject of the *peshet* (vi.2–5) on *Habakkuk* 1.16. There is nothing in this section that refers uniquely to the fate of the Jews in Palestine or to the particular details of the Roman conquest of Palestine, which leads some scholars to insist that the *peshet* was composed before that conquest. *Habakkuk* 1.12–13 gives the author of the *peshet* a hope for the future (v.1–7), asserting that the gentiles will not succeed in destroying God's people. Following the lead of the prophetic text

(1.14–17), however, the remaining references to the *Kittim* concern their worship of their weapons and their merciless ravaging of their weak opposition.

Even our ability to focus the international portion of the *peshet* on the Romans, however, is not sufficient to establish the chronological framework of the rest of the *peshet*. On the one hand, the *peshet* is one of our important documents for establishing Qumran chronology, and on the other, it needs a coherent chronological framework in which it can be embedded. One of the thorny problems continues to be the specific period being described in the *peshet*'s characterization of inner-Jewish tensions. Is it the second century BCE, the era of the early Hasmoneans, or is it the first half of the first century BCE, the time of Alexander Jannaeus and his sons? While the earlier period was the dominant choice among scholars for the first several decades of Qumran scholarship, the first century BCE has recently gained more adherents because the international dimension of the *peshet*, that of the Roman presence, belongs primarily to that era.

The identities of individuals such as the *moreh ha-tsedeq* (Teacher of Righteousness; i.13, ii.2, v.10, vii.4, viii.3, ix.9–10, xi.5), the *ish ha-kazav* ("man of the lie;" ii.1–2; he appears also in Peshet Psalms⁴ [4Q171] 1–10.i.26 and iv.14), the *matlif ha-kazav* ("the spouter of lies;" x.9), and the *kohen ha-rasha'* (the Wicked Priest; viii.8, ix.9, xi.4, xii.2, 7), and of groups such as *bet Avshalom* ("house of Absalom;" v.9) thus remain the subject of dispute after nearly fifty years of study. The identity of the *moreh ha-tsedeq* will probably never be ascertained because the Qumran texts do not offer us a list of leaders of the sect and because no convincing identification is possible based on non-Qumran writings. On the other hand, virtually every Hasmonean high priest has been suggested to be the Wicked Priest who persecuted the sect. Thus Milik identified him with Jonathan, Cross with Simon, and Nitzan with Alexander Jannaeus (Nitzan, 1986). Others have suggested Jannaeus's sons, Hyrcanus II or Aristobulus II. In fact, some scholars are of the opinion that more than one Hasmonean leader was assigned that sobriquet.

According to the *peshet*, the Teacher of Righteousness was an inspired interpreter, "whom God had informed of all of the secrets of the words of his servants the prophets" (vii.4–5); his followers were "the men of truth, practitioners of the law [*torah*]" (vii.10–11). The "law of God" was rejected by the opponents of the teacher (i.11). It is unlikely that these opponents were followers of the Wicked Priest because at v.11–12 it is the "man of the lie" who "rejected the law in the midst of their whole council." In the latter passage, the exegesis of "while the wicked destroys one more righteous than he" (*Hb.* 1.13) strikingly avoids the "Wicked Priest versus Teacher of

Righteousness" identification, with the "man of the lie" being specified as the "wicked" one of the biblical text. The commonly accepted restoration of the "wicked priest" in Peshet Habakkuk i.13, commenting on *Habakkuk* 1.4, which refers to "wicked and righteous" should thus probably be rejected. The Wicked Priest does not make his first appearance in Peshet Habakkuk until viii.8, and the failure of the exegete to seize upon obvious opportunities to introduce him earlier probably emphasizes the need to distinguish between the opponents of the teacher described in the early portion of the text and those in the later sections. Thus, the opponents of the teacher in the first part of the *peshet* are the "traitors with the man of the lie," "the traitors to the new covenant," and the "ruthless ones of Israel" (ii.1-6). The "house of Absalom" is accused of not aiding the teacher against the "man of the lie" (v.10).

In the later portion of the *peshet* (vi.12-end), after the conclusion of the section on the *Kittim*, the interpreter focuses on the eschaton ("the last days," vii.7, 12), predicts that those who fulfil the law will be rescued by God (viii.1-3), and exhorts them to maintain their faith in him (vii.10-14). The several references to "law" [*torah*] may indicate that, as frequently in Second Temple Judaism, differences in *halakhah*, in religious practice, were what divided groups from one another. It is only here that the Wicked Priest makes the first of his several appearances in the later segment of the *peshet*. He had been an individual of whom the author of the *peshet* approved at one time, but who had strayed from the path for the sake of greed (viii.8-11). His subsequent suffering (and perhaps death) is described almost gleefully by the *peshet* as the *Kittim* do to him as he has done to others in the past (viii.16-ix.7).

The sinful acts of the Wicked Priest consist primarily of amassing wealth and persecuting the Teacher of Righteousness (ix.9-11, xi.4-8, xii.2-10). Inserted amid references to the priest, however, is a passage about the "preacher of the lie" (x.9, xi.1), whose followers will be punished for their opposition to "God's chosen ones" (x.13). It is not clear whether the "preacher of the lie" is the same as the "man of the lie" or whether he represents another former adherent of the priest who betrayed him. It is generally agreed that the Wicked Priest's attack on the Teacher of Righteousness on Yom Kippur (xi.4-8) refers to one of those controversies regarding the calendar in which the Qumran group found itself involved. [See *Calendars and Mishmarot*.]

The conclusion of the *peshet* (xii.10-xiii.4) is remarkably tame, as the attack on idolatry by Habakkuk generates no contemporary allusions in the *peshet*, although there are two references to a perhaps apocalyptic "day of judgment" (xii.14, xiii.2-3).

MOSHE J. BERNSTEIN

PESHER HOSEA. The biblical commentaries from Cave 4 at Qumran include two very fragmentary manuscripts (4Q166 and 4Q167) containing commentary on the *Book of Hosea*. Like other representatives of the *peshet* genre, they relate the biblical text to both historical and eschatological events. The citations in Peshet Hosea^a (4Q166) are not particularly long relative to the interpretive comments, as they are, for example, in some of the *pesharim* on Isaiah, but the standards of Peshet Hosea^b (4Q167) are difficult to judge because of its fragmentary nature.

Peshet Hosea^a is composed basically of one two-column fragment, of which only column ii possesses substantial remains. The biblical text cited in the *peshet* runs from *Hosea* 2.8-14, a section of the prophetic work that pictures Israel as a wife faithless to her husband, God.

The text lends itself quite easily to symbolic explication, with the errant nation of the biblical text standing for those who have been led astray in contemporary times. Thus the fragmentary first column contains phrases like "the time of their faithlessness," "the generation of visitation," and "the times of wrath," which might refer either to the eschaton or to the present. The second column alludes to a group that rejected God's commandments, which had been conveyed to them by the prophets, and instead obeyed those who led them astray. *Hosea* 2.11–12 then becomes a reference to God's punishing them with "famine and nakedness" while "the nations," their former allies, are unable to succor them, a fairly obvious interpretation of the biblical text. The critique thus appears fairly general and unspecific with the following exception.

The last surviving *pesher* text (ii.15–17) is apparently an allusion to a calendric controversy of a type common in Second Temple times, according to both Qumran and rabbinic literatures. It refers to the conducting of "the festivals" (or "the day of testimony") "according to the festivals of the nations," a phrase that is a virtual quotation of *Jubilees* 6.35. The employment of language so strongly reminiscent of *Jubilees* by the *pesher* is probably further evidence of the importance that that text, or another like it, had within the Qumran sect.

The other *pesher* on *Hosea*, *Pesher Hosea*^b (4Q167), consists of almost forty fragments, most of which contain only individual or partial words. Identifiable passages derive from *Hosea* 5, 6, and 8. Almost all that can be restored with any certainty are biblical citations, but a few passages whose *pesher* text survives contain potentially valuable historical information if the allusive references to contemporary figures can be decoded.

Chapter 5 of *Hosea* is an attack upon biblical Ephraim, a term which is employed in the *pesharim* to refer, according to most scholars, to the Pharisees, and the author of this *pesher* uses the biblical text in the expected fashion. Thus, *Pesher Hosea*^b 2.2, commenting on *Hosea* 5.13, refers to "the lion of wrath," a term which also occurs in *Pesher Nahum* (4Q169), where it is believed to refer to Alexander Jannaeus. The following verse, 5.14, contains a reference to a lion and lion cub who oppose Ephraim and Judah, which the *pesher* interprets as referring to the "latter priest" who smites Ephraim (the manuscript breaks off after that word). It is unclear, however, whether this figure is an ally or adversary of the Qumran sect. The *pesher* on *Hosea* 5.15 is quite naturally understood as "[God will] conceal his face fr[om the la]n[d]."

The comment on *Hosea* 6.7a "[and they like Adam] have transgressed a covenant" recalls *Pesher Hosea*^a (4Q166), referred to above with the words "they abandoned God and [w]ent according to the statutes of. . ."

There are isolated references to the "[w]icked of the nations" (10–26 3) and "their teachers" (5–6 2).

MOSHE J. BERNSTEIN

PESHER ISAIAH. There are six Qumran commentaries on the *Book of Isaiah*, five from Cave 4 (*Pesher Isaiah*^a, 4Q161–165), which are designated *pesharim*, and one from Cave 3 (*Pesher Isaiah*, 3Q4). They apparently are all independent documents, and in at least one case (*Pesher Isaiah*^a and *Pesher Isaiah*^c) we find the same text being interpreted differently in each of two *pesharim*. *Pesher Isaiah* does not survive in sufficient detail for us to determine its genre. Since its only surviving fragment consists of a quotation of *Isaiah* 1.1 followed by nonbiblical material, it is likely that it is some sort of commentary, although not necessarily a *pesher*.

The other commentaries on *Isaiah*, the "true" *pesharim*, are quite diverse in type, scope, and extent of surviving fragments. Some of them have much lengthier biblical citations and shorter comments than those in the *pesharim* of *Habakkuk* and *Nahum*, and are characterized more by "identification" of features within the biblical text than by complex exegetical interpretation. *Pesher Isaiah*^a, of which three theoretical columns have been reconstructed, includes text with *pesher* from *Isaiah* 10.22–11.5, but, as is often the case with *pesher* documents, the biblical text can be restored with a great deal more certainty than its interpretation. As always, theoretical considerations about the length of columns and the exact nature of the *pesher* technique employed are significant factors in Horgan's (1979) reconstruction, which can be employed effectively with that reservation in mind. The term *pesher* actually occurs only once in the extant text of the fragments.

The sections of *Isaiah* commented upon describe God's

protection of Judah from the invading Assyrian forces and a "messianic" prophecy about the inspired "root of Jesse." Each of these sections lends itself to *peshet*-type interpretation, the former in terms of contemporary foreign military action in Palestine, and the latter in relation to the Qumran sect's eschatological beliefs. Fragment 1 contains no biblical text, but it is possible that the reference to "the men of his army" in 1.28 (Horgan, 1979) pertains to whatever foreign force the author of the *peshet* saw in the Assyrian army of *Isaiah* 10. We read in fragmentary references "when they return from the desert of the pe[oples]" and "the prince of the congregation" (2-6.ii.18-19). Both of these key terms appear elsewhere in Qumran literature: the first in the War Scroll (1QM i.2-3) (cf. also Peshet Psalms^a, 4Q171 1-10.iii.1) and the latter in a variety of passages.

The citation of *Isaiah* 10.28-32 describing the progress of the Assyrian army is projected "to the end of days" by the *peshet*, but we cannot tell what eschatological enemy of the Qumran group is being described as progressing to Jerusalem. The appearance of the *Kittim* in 7.iii.7, 9, 11, and 12 in the interpretation of the prophecy of *Isaiah* 10.33-34 makes it likely that the reference is to the Romans. The prophecy of *Isaiah* 11.1-5 refers to "[the branch] of David who will arise at the e[nd of days]," and will fulfil *Isaiah's* messianic predictions assisted by a priestly (?) council. [See Messiahs.]

The surviving fragments of Peshet *Isaiah*^b (4Q162) include material from chapters 5 and 6 of the biblical text. Much of the surviving material is biblical and not commentary. Column ii, however, begins with an intact *peshet* of a clearly eschatological nature: "The interpretation is regarding the end of days for the guilt of the land because of sword and famine; it will be at the time of the visitation of the earth." Unfortunately, we cannot tell to what verse the *peshet* refers. *Isaiah* 5.11-14 and 24-25 are taken to refer to the "men of mockery in Jerusalem" (2.6-7) and the "community of the men of mockery in Jerusalem" (2.10).

Peshet *Isaiah*^c (4Q163) is perhaps the most complicated of all the Qumran *pesharim*. Poorly preserved in about sixty fragments of papyrus, it introduces references to other biblical books (*Jeremiah*, *Hosea*, *Zechariah*) into the commentary on *Isaiah*. Its employment of formulas introducing citations of biblical verses appears to be different from that in the other *pesharim*. The surviving larger fragments consist mainly of biblical text, covering parts of *Isaiah* 8, 9, 10, 14, 19, 29, 30, and 31.

Since Peshet *Isaiah*^c presents virtually no running *peshet*, as opposed to biblical text, the sparse exegetical comments which it contains are disjointed, and we usually cannot link the *peshet* with a preceding biblical text. A comment apparently on *Isaiah* 10.12-19 refers to "the

region of Babylon," "the statutes of the peoples," and "to deal treacherously with many" (6-7.ii.4-6). Further references to the "king of Babylon" appear at 8-10.1 and 25.1, although without context. Several lines later, *Isaiah* 10.20-22 is interpreted "regarding the end of days" (6-7.ii.14) but it is not certain whether *vlkw bsh/by* (6-7.ii.15) is to be understood as "into captivity" (Allegro, 1956) or "among the returnees of Israel" (Horgan, 1979). The latter reading introduces a phrase that appears at Peshet Psalms^d (4Q171) 1-10.iv.24 and is restored at Peshet *Hosea*^e (4Q166 1.16-17).

Fragments 12-14 do not seem to contain any recognizable biblical text and thus seem to be all *peshet*, commentary of disproportionate length compared to any that appears elsewhere in this document. There survive tantalizing single-word references to "the rock," "[p]riests," "for a weight," and "which he commanded" (12.5-8), "[for the en]d of days regarding" and "[on] th[a]t day [they] will se[ek]" (13.4-5), and "a lion" (*kefir*, 14.5), a term significant elsewhere in the *pesharim*. Fragment 21 contains *peshet* references to Lebanon and Carmel, and to "teacher" (21.6), perhaps an allusion to the Teacher of Righteousness, although there is no surviving context. [See Teacher of Righteousness.]

Unequivocal contemporary allusions can be found in the references to "the Sons of Zadok" (22.3), a common term in Qumran literature, and "for the End of Days regarding the congregation of Se[ekers] of Smooth Things which is in Jerusalem" (23.ii.10-11; cf. Peshet *Nahum*, 4Q169 3-4.i.2). The latter group, usually identified with the Pharisees, may be further characterized by the citation of *Hosea* 6.9a, which is followed by the words "they have rejected the Law" (23.ii.14-14a). Fragment 32.3 may preserve an isolated reference to the "Wicked [Pr]iest." [See Seekers after Smooth Things.]

Peshet *Isaiah*^d (4Q164) has only one really readable fragment, which seems to deal with the structure or hierarchy of the Qumran sect. Commenting on *Isaiah* 54.11b-12b, "yahad community" (or the priests within it) is compared to the sapphire set in the midst of other precious stones. The "suns" of 54.12 are "the twelve . . . [who] enlighten through the judgment of the Urim and Tummim," while the "gates" are "the heads of the tribes of Israel for the E[nd of Days?]." The focus appears to be on the uniqueness and centrality of these institutions.

Peshet *Isaiah*^e (4Q165) contains material from *Isaiah* 11, 14-15, 21, 32, and 40, but the text is so sparse that we cannot get a sense of the scope of the document or its direction. We find a reference to "the righteous Torah" (1-2.3), which probably alludes to the "righteous teacher." There occur also isolated references to "the cho[sen] ones of Israel" (6.1), the king of Babylon (8.1), and "the men of the communi[ty]."

MOSHE J. BERNSTEIN

PESHER MICAH. See *Minor Prophets*.

PESHER NAHUM. Like Peshet Habakkuk (1QpHab) and Peshet Psalms^a (4Q171), Peshet Nahum (4Q169), is a well-developed specimen of the *peshet* genre, a type of contemporizing biblical exegesis peculiar to Qumran. Peshet Nahum features an even balance of quoted biblical text and *peshet* interpretation, numerous exegetical devices, and a substantial amount of historical allusion.

Peshet Nahum exists today in only a single copy. It is one of the few documents of certain Qumran origin that exhibits more negative than positive evidence of "Qumran scribal practice" as described by Emanuel Tov (1986). This manuscript is dated to the first century BCE by its very legible late-Hasmonean to early-Herodian formal script. It consists of a total of five fragments that comprise five fairly well preserved columns of text, as well as

a fragment from a sixth column. It is probable that each column originally consisted of twelve lines. Fragments 1 and 2 contain little historical information, but the four columns of fragments 3 and 4 have provided much material for historical inquiry.

Peshet Nahum atomizes its biblical base text, exegetically transforming individual elements into a picture of impending final judgment against all enemies of God and the community. This "true" eschatological import of the original prophetic text is expressed through typical *peshet* techniques, such as allegory, textual variants, and paraphrase. Thus, Nahum's depiction of God's powerful effects upon nature is taken as a symbol for God's intervention against political entities, with rivers, for example, representing governing powers. The mention of a lion in *Nahum* 2.12 presents an opportunity for the use of the sobriquet "Lion of Wrath" (3-4, col. 1, lines 5-8), applied no doubt to the Hasmonean King Alexander Jannaeus here as well as in Peshet Hosea (cf. Josephus, *Jewish Antiquities* 13.372-384). In general, Peshet Nahum uses such typical Qumran code names as "the elect" for the members of the sect and "Kittim" for their foreign enemies. Peshet Nahum is distinctive among Qumran texts in that, in addition to its use of sobriquets, it explicitly names two historical individuals, Demetrius and Antiochus. Modern scholars identify these figures as Demetrius III Eukerus (95-88 BCE), and Antiochus III (223-187 BCE) or Antiochus IV (175-164 BCE).

Especially important cryptic appellations in Peshet Nahum are Ephraim and Manasseh (3-4.iii, 3-4.iv.4). In the Bible, the tribes of Ephraim and Manasseh, the sons of Joseph, represent the renegade ten northern tribes of Israel who broke away from Judah, the Davidic monarchy, and the Temple. Since the Qumran community regarded itself as the true traditionalists, they termed their Jewish opponents *Ephraim and Manasseh*. Scholarly consensus associates the former, also named seekers after smooth things, with the Pharisees, who, according to Josephus, and the Talmud had great appeal for the masses. The group named Manasseh, described in Peshet Nahum as noblemen and rulers of the city, is taken to be the Sadducees. These identifications account for two of the three known major Jewish sects of the Second Temple period. Opposition to them in the Dead Sea Scrolls thus has been taken as support for the contention that the Qumran community is the third major sect described by Josephus, the Essenes. The apparent Sadducean *halakhah* of the Qumran sect as evidenced in *Miqsat Ma'asei ha-Torah* (4Q394-399) has precipitated a reassessment of the usual Essene identification. Though the threefold division is still useful, the nature of each group is no longer seen as static and monolithic. It must be stressed that Peshet Nahum describes a mobility among and within the divi-

sions, anticipating, of course, a final time when all who survive will be those who recognize the truth of the sect. Peshet Nahum supports the current tendency to recognize a dynamic fluidity and evolution in the sociopolitical and religious groupings of Jewish antiquity.

The most controversial passage in Peshet Nahum refers to the "hanging alive" of Jewish opponents by the "Lion of Wrath." Textually, this line tantalizes the reader with a small lacuna that has provided room for voluminous debate about whether the author approved or disapproved of the executions. The historical significance of this datum is that it corroborates Josephus's depiction of the cruel revenge exacted by Alexander Jannaeus upon his Pharisaic enemies. The Qumran community certainly welcomed the punishment of the Pharisees, but their view of Alexander Jannaeus is the subject of debate. From the perspective of religious concerns, the words "hang alive," which may imply crucifixion, have been scrutinized as a possible indication that the community accepted crucifixion as a legitimate mode of execution. This has been argued on the basis of Temple Scroll^a (11Q19) IXiv.6-13, which interprets *Deuteronomy* 21.22-23 as imposing the penalty of hanging upon traitors as a means of execution, rather than as a post-mortem hanging of the corpses of certain criminals, as interpreted in rabbinic texts. The acceptance of crucifixion within an ancient Jewish legal system, even a system upheld by those who rejected the Jerusalem center, could potentially impact upon the modern understanding of the crucifixion of Jesus. However, in fact, it has been the scholars' theological and social preconceptions that have impacted upon their textual reconstructions and interpretations. It is likely that Peshet Nahum, even in its original state, would not have contributed substantially to the debate. It is not a simple case of the *peshet's* approval or disapproval of Alexander Jannaeus's actions. Even a theoretical advocate of "hanging alive" as a legitimate form of execution, appropriate even for these particular victims, might have deplored the magnitude of the killings or the environment in which they were carried out. (Josephus describes Alexander Jannaeus as feasting with his concubines while viewing the crucifixion of these men and the strangulation of their wives and children [*Jewish Antiquities* 13.380].) More significantly, the focus of the *peshet* is Pharisaic downfall. Approval of Alexander Jannaeus's actions may have indicated gratification regarding Pharisaic persecution and even a sense of justice in the broad application of the Deuteronomic law to them, without offering a legal evaluation of the specific means of execution.

The relative abundance of historical material in Peshet Nahum provides data that generally are understood to correspond with the paleographic dating. Column I al-

most certainly relates to Alexander Jannaeus's repression of the Pharisees in the eighties BCE. Column 2 has been associated with Pharisaic dominance during the reign of Shelamzion Alexandra (76-67 BCE) (Josephus, *Antiquities*) 13.405-432. Columns 3 and 4 appear to allude to the subsequent civil strife in Judea as Hyrcanus II and Aristobulus II, the sons of Alexander Jannaeus and Shelamzion Alexandra, contended for the throne (Josephus, *Antiquities* 14.1-79). Their conflict was ultimately "resolved" by Pompey in 63 BCE, when the general annexed Judea to Rome, ending the Hasmonean dynasty and thereby curtailing both the Pharisees and the Sadducees. Columns i and ii clearly describe events that predate the composition of the text. It is possible that the author has already witnessed the Roman takeover as well. Alternatively, though, the *peshet* may have been composed during the time of Hyrcanus II and Aristobulus II and predicted their defeat. The *peshet* seems deliberately to refer to past, present, and future historical details, perhaps to emphasize the imminence of the final fulfillment of the prophecies. It has been proposed that Peshet Nahum may show signs of subtle modification aimed at maintaining the validity of the work as particular predictions failed to be fulfilled.

SHANI L. BERRIN

PESHER ON THE PERIODS. See Ages of Creation.

PESHER PSALMS. Three of the Qumran *peshet* manuscripts (1Q16, 4Q171, 4Q173) are designated *peshurim* on the biblical *Book of Psalms*. The most substantial surviving *peshet* on *Psalms* is Pesher Psalms² (4Q171), which originally contained commentary on at least four psalms. Fragments of four consecutive surviving columns contain major portions of a commentary on Psalm 37, which was clearly preceded by some other material and is followed by the beginning of a *peshet* on Psalm 45. Fragment 13 contains a citation from Psalm 60.

Because of the considerable remains of Pesher Psalms², we are in a better position to comment on it than on virtually any Qumran *peshet* other than Pesher Habakkuk (1QpHab) or Pesher Nahum (4Q169). The *peshet* of Pesher Psalms² is not as full of general historical references as Pesher Habakkuk or Pesher Nahum, which may be a consequence of the nature of its biblical text. Psalm 37, with its constant contrast of righteous and wicked and encouragement of the former to hold fast to their beliefs, despite the success of the latter, is exceptionally well suited to the ideological *peshet* exegesis of the Qumran community; its language triggers the interpretations in the *peshet*. There are no references to the *Kittim* or to any non-Jewish group in Pesher Psalms² (4Q171), with the exception of the "ruthless of the nations" (1-10.i.20; 1-10.iv.10), and the *peshet* does not give any sense of a broader historical context.

The "wicked" of Psalm 37 is taken to refer to the opponents of the Qumran group, while the author sees himself and his colleagues as the "righteous." The tension in the biblical text is between the prosperous wicked whose good fortune, according to the psalmist, is ultimately transient, and the impoverished, hopeful righteous who keep faith with the Lord. The *peshet*, employing coded

terminology to describe (presumably) the Qumran sect and its opponents, predicts the survival of the former and the ultimate destruction of the latter.

The sequence of the psalm determines the order of the *peshet*, and, as a result, the arrangement of the *peshet* is not chronological. Probable references to near and distant future (including the eschaton) are intermingled, and the same term in the biblical text does not always generate the same reference in the *peshet*. One of the ways in which the psalm is linked to the contemporary context of the author of the *peshet* is by the identification of the groups mentioned in the psalm with individuals or groups in his own day. "The man of lies," appears both early and late in the *peshet* (1-10.i.26 and 1-10.iv.14), as the concretization of "the doer of wiles" (Ps. 37.7) and "the arrogant wicked one" (Ps. 37.35), while the "wicked priest" appears between those allusions (1-10.iv.8) as the *peshet* of "the wicked one" (Ps. 37.32). The former term recalls the "preacher of lies," Pesher Habakkuk x.9 and CD i.14 and viii.13. These are presumably epithets for specific, unique individuals.

Other references to "the wicked" in Psalm 37 are not linked to specific figures, but to groups of opponents of the author: "the ruthless ones of the covenant who are in the house of Judah" (1-10.ii.14), "the wicked of Ephraim and Manasseh" (1-10.ii.18), and "the ruthless ones [of the covenant]" (1-10.iv.1-2). Ephraim and Manasseh in the *peshurim* have usually been taken to refer to Pharisees and Sadducees, respectively, although that identification may have to be reexamined in light of suggestions that the Qumran sect itself is "Sadducee" in some fashion. Those who "will pass away like smoke" (Ps. 37.20) are "the princes of wickedness" (1-10.iii.7), while those described by the psalm as "cursed by Him" (37.22) are identified with "the ruthless ones of the covenant, the wicked of Israel" (1-10.iii.11-12).

There is much greater variety in the terminology that is employed for the author's group and their allies. Of the individual leaders of the group, we find "the priest and the men of his council" (1-10.ii.19) who are attacked by the "wicked of Ephraim and Manasseh," and three fairly certain references to the "teacher of righteousness," one of which (1-10.iii.15) refers to him as "the priest." It is clear that we are dealing with the leader of the Qumran group who was vexed by a variety of antagonists. The "interpreter of knowledge" (1-10.i.27) is the victim of the "man of lies" who leads his followers astray. We cannot be certain of the historical reference of the former term, which occurs only once more in Qumran literature at *Hodayot*^a (1QH^a) ii.13, although its antithesis, "interpreters of lies" (cf. "man of lies") occurs at *Hodayot*^a (1QH^a) ii.31 and iv.8.

The Qumran sect thought of itself and its leaders as

"chosen" by God (1QH^a ii.12; xiv.15; 1QpHab v.4; 1QS viii.6). Thus the most common name by which the author of the *peshet* of Peshet Psalms^a (4Q171) describes his group is "the congregation of His chosen ones," a term that appears twice intact (1-10.ii.5; 1-10.iii.5) and possibly twice more in fragmentary contexts (1-10.iii.16; 1-10.iv.12). It is probably the equivalent of "the ch[os]en ones of God" (1-10.iv.14). The former phrase is also found in Peshet Isaiah^d (4Q164) 1.3, while the latter occurs also in Peshet Habakkuk (1QpHab) x.13.

The author of the *peshet* calls his sect "the congregation of the poor" (1-10.ii.10; 1-10.iii.10; restored in 1-10.i.21), not to refer to their financial status (cf. 1QpHab xii.3, 10 and often in 1QH), but, borrowing from the language of the biblical *Psalms*, to indicate their dependence upon God's mercy in the face of the larger, wicked world around them. The employment of the term "practitioners of the Torah" (1-10.ii.15; 1-10.ii.23; cf. 1QpHab vii.10-11, viii.1, xii.4-5) may emphasize the importance with which the author viewed proper halakhic behavior, while the "returners to the Torah" (1-10.ii.2; cf. 11.1; 1QS v.8; CD xv.9, 12; xvi.1, 4) are contrasted with "those refusing to repent from their sins" (1-10.ii.3-4), who are presumably backsliding members of the sect.

Peshet Psalms^a contains a number of interesting time references, which are untriggered by the biblical text. The destruction of the wicked at the end of a period of forty years (1-10.ii.7-8) is reminiscent of the dying off of the wilderness generation in the fortieth year after the Exodus (*Nm.* 14.33; *Dt.* 2.16), and of the length of the war of the Sons of Light against the Sons of Darkness in the War Scroll (1QM). The similarity of the language to CD xx.13-15, "And from the day of the gathering in of the unique teacher until the destruction of all the men of war who returned with the Man of Lies was about forty years," is remarkable. It appears that the *peshet* represents the same understanding of the design of history as the B manuscript of the Damascus Document.

In two passages the *peshet* alludes to "the time of the fast/affliction" (1-10.ii.10, iii.3). Those who accept it will be saved "from the nets of Belial" and God will keep alive "those who return from the desert" through its duration. The allusions to Belial and to "living a thousand generations" (1-10.iii.1) would point in the direction of an eschatological, rather than historical, context. Likewise, the "time of testing" when the "wicked of Ephraim and Judah will attack the priest" (1-10.ii.18-19) may refer to the near or distant future. In these passages we get the sense that the Qumran group believed that the eschaton was not far off.

The remaining fragments of Peshet Psalms^a on Psalm 45 contain language like "the penitents of Is[rae]l," "the teacher [of righteousness]," and "to return together to the

Torah," but insufficient context to determine the relationship of the biblical text to the *peshet*. Similarly frustrating is the language of Peshet Psalms^b (4Q173) on Psalm 127, "[hid]den things the teacher of righteousness [. . . the priest for the end of time]" (1.4-5) and "the interpretation of the world. . . the teacher of righteous[ness]" (2.1-2). Fragment 9 of Peshet Psalms from Cave 1 at Qumran (1Q16) on Psalm 68.30-31 preserves a significant historical allusion, referring to "the rulers of the Kittim. . .] before him in Jerusalem," and, in exegesis, of "the beast of the reed," a reference to "[K]ittim." These would appear to locate the *peshet* in the Roman period, since in the Qumran *pesharim* *Kittim* alludes to the Romans.

MOSHE J. BERNSTEIN

PESHER ZEPHANIAH. See *Minor Prophets*.

PETER, LETTERS OF. The two New Testament letters attributed to Peter are generally recognized as of different authorship and different character, though both probably derive from the Church of Rome in the last four decades of the first century.

The hermeneutical method which *1 Peter* employs in its exegesis of the Hebrew scriptures is remarkably parallel to that of the Qumran *pesharim*. In *1 Peter* 1.10-12 the author provides a statement of his hermeneutical presuppositions, which can be compared with Peshet Habakkuk (1QpHab) vii.1-5. [See Peshet Habakkuk.] In both passages it is said that the prophets were inspired by God to

predict the events of the end time in which the author and his readers live, while the Qumran text states and *1 Peter* implies that these prophetic words require interpretation by inspired interpreters to whom the way in which they are being fulfilled in the end time is revealed by God. This hermeneutical approach can be seen applied, as in the Qumran *pesharim*, throughout much of *1 Peter's* interpretation of texts from the Hebrew scriptures and especially in *1 Peter* 2.4–10, which is a carefully composed piece of formal exegesis, citing and interpreting six texts from the Hebrew scriptures with reference to Jesus and the church. As a small commentary on a selection of related texts, it can be compared with the thematic *pesharim* from Qumran (e.g., Florilegium [4Q174], Tanhumim [4Q176], Melchizedek [11Q13], 11QMelch). In this passage and elsewhere, exegetical techniques that are also prominent in the *pesharim* can be observed: the use of catchwords to link texts and to link texts and their interpretation, the exploitation of multiple meanings, and the selection and adaptation of the text form to suit the interpretation. The parallels have been demonstrated in Schutter's very full study (1989). They show that the writer of *1 Peter* was skilled in the exegetical methods that the Qumran *pesharim* exemplify but were no doubt also employed widely in Jewish exegesis of the period.

There are other significant resemblances. The image of the Christian community as the temple of God (*1 Pt.* 2.4–8; 4.17, which alludes to *Ezek.* 9.6) can be compared with the Qumran community's image of itself as temple, with one text from the Hebrew scriptures—*Isaiah* 28.16—occurring in the exegetical development of this theme in both cases (*1 Pt.* 2.6; Rule of the Community from Cave 1 at Qumran, 1QS viii.7). [See Temple.] The image in *1 Peter* is an instance of its widespread use in the early Christian movement, but the link *1 Peter* makes with the idea of the community as a priesthood offering spiritual sacrifices (*1 Pt.* 2.5) brings it especially close to the Qumran literature (cf. 1QS viii.5–10, ix.3–6; 4Q174 1.6–7). The “fiery ordeal” of *1 Peter* 4.12 is comparable with the “crucible” that represents the eschatological ordeal in Qumran literature (e.g., Damascus Document CD xx.27; 1QS i.17, viii.4; War Scroll xvii.1, xvii.9).

The *Second Letter of Peter* has fewer affinities with the Dead Sea Scrolls. Two are notable. The *Second Letter of Peter* 2.4–10 is dependent on *Jude* 5–7 but has also drawn independently on the traditional schema of examples of divine judgment (also attested in CD ii.17–iii.12, *Sir.* 16.7–10.3, *2 Mc.* 2.4–7, *Testament of Naphtali* 3.4–5, *San.* 10.3) that *Jude* 5–7 reflects. In three respects *2 Peter* is closer than *Jude* to the form of the schema found in the Damascus Document: *2 Peter* adds the generation of the Flood (*2 Pt.* 2.5, CD ii.20–21) to *Jude's* examples of sinners, it adds examples of righteous people spared judg-

ment (*2 Pt.* 2.5–8, CD iii.3–4), and it states the general lesson that the examples illustrate (*2 Pt.* 2.9–10, CD ii.16–17).

The *Second Letter of Peter* describes Christianity as “the way of truth” (2.2), “the straight way” (2.15), and “the way of righteousness” (2.21), phrases that are variations on the early Christian absolute use of “the way” (*Acts* 9.2, 19.9, 19.23, 24.14, 24.22; cf. 18.25–26). The latter resembles the Qumran usage (CD i.13, ii.6; 1QS viii.13–14, ix.17–18, x.20–21), and both reflect *Isaiah* 40.3, though *2 Peter's* usage has moved away from this textual basis.

RICHARD BAUCKHAM

PHARISEES. The “separatists,” or Pharisees (based on the root *psht*), appear by name in a wide variety of sources concerning the Second Temple period, including Josephus, the New Testament, and rabbinic literature. Their name, likely chosen by themselves, and thus to be understood in a favorable sense, is a reflection of their belief in the separate (i.e., holy) way of life they believed they were following as members of the group. According to Josephus, six thousand Pharisees refused to take an oath of loyalty to Caesar at the time of Herod (*Jewish Antiquities* 17.42). The meaning of this passage is not certain, but it most likely indicates that the Pharisees as a whole had six thousand members at that time.

Josephus first mentions the Pharisees in an aside concerning Jewish life at the time of the Hasmonean ruler Jonathan I (*Jewish Antiquities* 13.171–173; 152–142 BCE). This suggests that the Pharisees first emerged and flourished as a major distinctive movement in the Hasmonean era, beginning in the second half of the second century BCE. The group and/or its leaders played a key role throughout the Second Temple period, down to the time of the First Jewish Revolt (66–70 CE). In the view of most scholars, rabbinic Judaism, which became normative in the years following the destruction of the Temple, had a significant Pharisaic foundation.

Sources. Josephus regularly comments on the Pharisees in remarks concerning the division of the Jews as a whole into a number of “philosophies” and “heresies” = voluntary associations (the other groups worthy of notice

in his opinion being the Sadducees, Essenes, and Fourth Philosophy). In his view, a reader of his works would be unable to understand adequately events as they unfolded in his narratives without a sufficient background regarding these groups, hence he described the groups and the environment of the time (*The Jewish War* 2.117–166; *Jewish Antiquities* 18.9–25).

Josephus claimed to have been a Pharisee himself having elected to join that group after a year devoted to exploring the major options within Judaism, and three more as a disciple of Banus, who lived in the desert (*Life* 10–12). If Josephus's testimony were accepted at face value, his writings would constitute a source written by a member of the group, reflecting the way it was seen by an insider. Unfortunately, Josephus shows little indication of having been a Pharisee during his active years, and the claim in *Life* (written toward the end of his literary career) looks like a late-in-life conversion.

The Pharisees of the New Testament appear in the Gospels, as well as in the epistles of Paul. Their portrayal in the Gospels is generally unfavorable, as they are opposed to Jesus and in conflict with him. In Paul's account of his pre-conversion past he employs terms associated with the Pharisees to describe his prior life (*Gal.* 1.14) and explicitly claims to have been a Pharisee (*Phil.* 3.5). According to *Acts* 22.3, Paul even studied with Gamaliel I in Jerusalem. As the Pharisees best known to us were a movement in Palestine (with an important focus on Jerusalem) and Paul came from the Diaspora, his Pharisaism was atypical at best. In any case, Paul wrote his letters as a Christian and had little interest in explaining his past in detail, other than to serve his objectives at the time of writing these letters. He can therefore teach us little about the Pharisees, and that little is certainly not as a member of the group.

Last of the major sources are rabbinic texts. Pharisees appear by name rather infrequently there, and "Pharisee" is often not a term of praise (e.g., *Sot.* 3.4). If the group is assumed to be the one the rabbis preferred to call the sages (frequently presented as in opposition to the Sadducees), then accounts of their activities and legal positions—both as individuals and as a class—are more numerous. The rabbis saw themselves as the heirs of these sages, but modern scholars stress the divide that separates the sages meaning Pharisees from the later rabbis. Even if the latter chose to view the former as their predecessors, the gap between the two groups is apparent. Pharisaic material lies somewhere near the foundations of the world of the rabbis. Sometimes that Pharisaic stratum is easier to uncover (as in the case of the list of the "pairs" and their sayings, from Yose ben Yoezer of Zeredah and Yose ben Yohanan of Jerusalem, through Hillel and Shammai, at the beginning of *Avot*), but these in-

stances are rare. The world of the Pharisees and that of the rabbis were not identical, hence rabbinic sources cannot stand as direct evidence for the Pharisees.

The state of our sources on the Pharisees is such that we have much evidence concerning the way they were seen by others, but little indication of how they saw themselves or wanted to be viewed. As a group, they are therefore even more exposed than usual to being perverted by the tendentious motives of modern scholars who write about them—a tendentiousness that is near at hand given their connection with the rabbis, and thus with traditional Jewish identity—so that Jewish scholars of varying persuasions regularly present the Pharisees as the epitome of their personal version of Judaism, while many Christian scholars continue the polemic of the New Testament against the Pharisees, in modern guise.

As They Saw Themselves: *Paradosis* and *Akribeia*. How can we reconstruct the lost account of the Pharisees speaking in their own voices? The key lies in a number of terms scattered across our sources about the Pharisees, terms that go back to the Pharisees themselves. That is, each of the different authors who chose to describe the Pharisees through these terms did so because he was reflecting the way the Pharisees discussed themselves. If we can uncover the meaning of these terms we will make meaningful progress toward the goal of recovering the ways the Pharisees would have wanted themselves to be seen.

Two such key terms are tradition (Gk., *paradosis*; Heb., *masoret*), and the claim to accuracy, excellence, or exactitude in the observance of the law (*akribeia* in Greek). The Pharisees observed a number of practices not written in the law of Moses. These were their supplement to the law, which helped interpret and apply its teachings, closing the gaps between points explicitly taken up in the Bible. As such, this supplement was controversial, subject to attack as a human invention (as opposed to the written law of God, accepted as divine by all). The Pharisees were not, however, the only Jewish group of the era to have such a supplement: all did, as all groups attempted to close the gaps in the Bible, and proposed their own interpretations to accomplish this task. For each group its supplement was crucial, virtually defining its identity, but the supplements of all groups must have been vulnerable to attack as human invention, and the mutual polemic on that point, according to the testimony of Josephus (*Jewish Antiquities* 13.298), was harsh. What differed from one group to the other was not only the specific content of the supplement, but the way in which each group connected its supplement to the written text of the Bible.

For Pharisees, their traditions were essential. Thus when Hyrcanus I (134–104 BCE) deserted the Pharisees for the Sadducees, according to Josephus, he forbade the

observance of these traditions (further confirmation, if that were needed, of their practical nature, as it only makes sense to forbid something that might otherwise be done; *Jewish Antiquities* 13.296). When the Pharisees returned to power, under Shelaḡzion Alexandra (76–67 BCE), she restored the practice of these traditions (*Jewish Antiquities* 13.408).

The Pharisees, when challenged, defended the integrity of their tradition, investing it with national status by dubbing it the “tradition of the fathers” or “of the elders.” As such, it went back to Moses at Sinai, and had been passed down from generation to generation. According to this claim Moses himself was a Pharisee.

Whether accurate or invented, this account teaches us the way the Pharisees saw themselves connected to the past. Theirs was not a link to a distant past interrupted by long periods of error, forgetfulness, and infidelity to God’s law, which might be typical of an extreme, introverted sectarian group. Rather, they claimed that their way had always been known and always in power, as one might expect from a movement closer to the mainstream. The Pharisaic account of the past is thus a first indication, to be developed further below, that Pharisees were a “party” not a “sect” (in the terminology proposed by Sanders, 1990). They believed that most other Jews could be saved, that convincing these Jews to mend their ways was a worthwhile effort, and that the worst that could be said of those Jews who walked in the way of error was that they were capable of seeing the truth and living by it, but had not yet done so. They were a group that could manage, when necessary, to remain connected to the main center of power, even if they were not in charge of that center, sitting with Sadducees as members of the Sanhedrin (*Acts* 23.6–10).

For all the importance of the Pharisaic *paradosis* in the life of the group, and all the debate it engendered, we have only a few examples of its precise contents. According to the New Testament (*Mk.* 7.3–4 and *Mt.* 15.2), immersion before eating and on return from the marketplace, and the washing of hands before eating, as well as the purification of cups, pots, and perhaps beds, were key items in the Pharisaic tradition. That tradition also allowed release from vows under certain circumstances (too narrowly limited, in the opinion attributed to Jesus in these stories; cf. *Mk.* 7.9–13 and *Mt.* 15.4–6). Perhaps the rabbinic list of legal points for which there is little if any scriptural basis (*Hag.* 1.8; T., *’Erub.* 8.23), “like mountains hanging on a hair” at best, a list that includes the release from vows, is another indication of the contents of the tradition of the Pharisees. If that is the case, matters such as the laws of the Festival offering, the laws concerning improper use of sacred property (*me’ilah*), and basic Sabbath laws—including the list of thirty-nine

kinds of work forbidden on the Sabbath, and the laws of mingling of property to allow certain activities on the Sabbath (*’erubin*)—would have also been part of the Pharisaic tradition.

The Pharisees were also scrupulous in tithing, according to the charge against them attributed to Jesus in the Gospels (cf. *Mt.* 23.23 and *Lk.* 11.42). This would overlap with the saying of the Pharisaic master Gamaliel I (Paul’s supposed teacher, see above; father of Simon ben Gamaliel of Josephus’s day, see below), according to which someone who had gotten himself a master would tithe accurately, and not by guesswork (*Avoṯ* 1.16).

The tradition of the Pharisees may have been directly connected to the second Pharisaic claim—that of accurate, excellent, and exact observance of the laws of Moses (*akribeia*). That is, while the search for *akribeia* was widespread, and many Jewish groups of the Second Temple era claimed to have found it, the Pharisees asserted that they had achieved that goal. While never explicitly stated in any ancient text, Pharisees may have added that their *paradosis* was what enabled them to accomplish that objective. Perhaps the Pharisees also offered a play on the meaning of the name of their group, understanding it as “specifiers,” in order to underline their claim to *akribeia*.

Pharisees and *Haverim*. An issue that has preoccupied scholars on the Pharisees has been their connection with the *haverim* = associates, a group known from rabbinic sources (e.g., T., *Dem.* 2.2). Some have even suggested that *haverim* was the name the group took for itself, while Pharisees was a name given to them by outsiders. *Haverim* ate their ordinary food in conditions of ritual purity required of priests consuming holy offerings, and refused to eat food that did not meet (or could not be made to meet) those standards. They separated themselves from the *’ammei ha-oretz*, the ordinary “people of the Land,” who were not consistent in their level of stringent observance of purity rules or in paying sacred taxes. In one sense *haverim* were pretending to be priests, accepting voluntarily the obligation of those higher on the scale of holiness than themselves, as a means to raise the quotient of holiness in their lives. As priests had requirements separating themselves from ordinary Jews, *haverim* erected a purity barrier between themselves and other Jews.

Whether or not Pharisees were *haverim*, a purity barrier between themselves and other Jews affecting the practice of eating together is reflected in the story told in *Luke* 11.38, which describes what happened when a Pharisee invited Jesus home for dinner, and then discovered that Jesus had not immersed himself on returning to eat from the marketplace, where one might bump into people of unknown status (on Pharisaic purification on returning to eat from the market see above). As the story

in *Luke* 11.38 is told from the perspective of the followers of Jesus, it ends with Jesus rebuking his host. Had it been told from the point of view of the Pharisees it might have ended with Jesus being disinvited. Perhaps this sort of behavior was responsible for the Pharisees calling themselves "separatists." [See Haverim.]

Unlike some other Jewish groups of their era, such as the Essenes and the Dead Sea sect, the purity barriers of the Pharisees were relatively low and permeable. For example, an Essene had no home other than the sect (Philo, *Every Good Man Is Free* 86), where he ate his meals in a communal context, while a Pharisee could invite Jesus home. All non-Essenes were excluded from Essene meals (*The Jewish War* 2.129), while Jesus only needed to immerse to be able to eat dinner at the home of a Pharisee. Pharisees could participate in the life of the court, even joining the king at dinner, according to a famous story in Josephus (*Jewish Antiquities* 13.289) and the Talmud (B.T., *Qiddushin* 60a). They were active in the court of Herod. All this confirms the "party" nature of the Pharisees discussed above.

Varieties of Pharisees. According to rabbinic sources, the Pharisees were divided into Hillelites and Shammaites. These two subdivisions of the movement differed from each other on many points of law. Hillelite legal views were regularly more lenient; those of the Shammaites more stringent. The former were interested in making it easier for ordinary Jews to observe the requirements of the Torah, and took the economic and social needs of the masses into account in reaching legal decisions.

Hillelites and Shammaites also differed in their political orientation, with the Shammaites much more firmly in the anti-Roman camp. The "eighteen decrees" passed by the Shammaites, limiting the interaction of Jews with their gentile neighbors, testify to this commitment.

According to the rabbis, Hillelites and Shammaites were able to negotiate their differences so that, in spite of their disagreements, they lived in peace, ate each other's food, and married each other's children (*Yev.* 1.8). Other rabbinic sources provide an alternate picture, considerably less rosy, of the relationship between the two groups when they narrate the violent means used by the Shammaites to achieve the passage of the "eighteen decrees," a day that was supposedly as disastrous for Israel as the day on which the Golden Calf was made (*Shab.* 1.4; T., *Shab.* 1.16-22; J.T., *Shab.* 1.4.3c-d; B.T., *Shab.* 13b-17b). Given the limits of our sources it is hard to prove which rabbinic depiction better reflects reality in Second Temple times, but it is hard to avoid the conclusion that the account in *Yevamot* is too good to be true.

Josephus also knew of two varieties of Pharisees, the ordinary ones and those of the Fourth Philosophy, who

agreed on all matters with the Pharisees except politics (*Jewish Antiquities* 18.23). The Pharisaic nature of the Fourth Philosophy is confirmed by the fact that one of its two founders was Zadok the Pharisee (*Jewish Antiquities* 18.3). It is unlikely that the Hillelites and Shammaites of the rabbis are identical, respectively, with the regular Pharisees and the Fourth Philosophy of Josephus. Nevertheless, the notion that the Pharisees were not always a united movement, and that one of the issues over which Pharisees disagreed among themselves was politics, is reflected in both of our sets of sources, each in its own way.

The Place of the Pharisees in Second Temple Judaism. The extent of the power of the Pharisees in the era preceding the destruction of the Temple in 70 CE has been much discussed in scholarship in recent years. That is, granting the widely held conclusion that rabbinic Judaism, as it developed in the decades following 70 CE, had a substantial Pharisaic foundation, what was the position of the Pharisees prior to their transformation into the victorious rabbis? Did the Pharisees also dominate Jewish life before 70 CE?

Josephus is the principal focus of this debate, as his account of the Pharisees is quite complex. On the one hand he employed several key terms to describe the group, from his earliest work, *The Jewish War*, to one of his last, *Life*: in both books he praised their claim to *akribeia*, and described them as unrivaled experts in Jewish law (*The Jewish War* 2.162, *Life* 191). On the other hand, his attitude toward the Pharisees in *The Jewish War* is different from that in *Jewish Antiquities* (composed, like *Life*, toward the end of his career). At first glance, at the very least, *Jewish Antiquities* seems more emphatically pro-Pharisaic, more clearly asserting Pharisaic control of the Temple and other key aspects of Jewish life. Typical of this situation are Josephus's remarks on the Sadducees in *Jewish Antiquities* 18.17. They were a small group composed of men of the highest standing, yet they accomplished practically nothing, "for whenever they assume some office, though they submit unwillingly and perforce, yet submit they do to the formulas of the Pharisees, since otherwise the masses would not tolerate them." When there are parallel accounts of the same events in *The Jewish War* and *Jewish Antiquities*, a comparison of the versions suggests that the latter account has been rewritten to emphasize the preeminence of the Pharisees and to praise their role as the leaders of the Jews.

Central to the debate surrounding these passages is the interpretation offered by Morton Smith (Smith, 1956) and then elaborated by Jacob Neusner (Neusner, 1973). Smith proposed that Josephus was notably more pro-Pharisaic in his later works, as a result of their being written in the 90s CE, at a time when the Pharisees and their descendants were coming to power (with Roman ap-

proval) in the aftermath of the destruction of the Temple. Thus, Josephus told the story of his interactions with Simon ben Gamaliel in *Life* 191–192 in a most unusual way. Josephus wanted to tell of a plot against himself hatched by Simon in collusion with others of Josephus's enemies. Nevertheless, he began this account by singing Simon's praises and those of the Pharisees, then switched over to the sordid tale of the conspiracy by means of the comment that Simon, "at that time, was at variance with me." The reader was supposed to infer that "at that time," Simon and Josephus disagreed, but that now these unpleasant incidents from the past should be forgotten, and Simon should be praised in the highest possible terms. The [favorable assessment of Simon ben Gamaliel, Smith suggests, should be connected with the rise of his son, Gamaliel II, to supremacy. This was taking place in Yavneh, under the Roman auspices, in the 90s CE, at the same time as Josephus was writing his last books. Prior to that time, however, the Pharisees were one group among many, vying for power against others. Josephus, therefore, cannot be used as a witness to Pharisaic pre-eminence before 70 CE.

Much effort has been expended trying to understand the intricacies of Josephus's different accounts of the Pharisees. Schwartz (1983 and 1992) and Mason (1991), in particular, disagree with Smith, each in their own way, while Smith has been defended against his critics by Goodblatt (1989). Whether any of these proposals is adequate to explain the twists and turns of Josephus's description, whether any of the participants in this scholarly discussion can explain why the very same terms are used to describe the Pharisees in Josephus's earliest work as in one of his latest, while other aspects of the assessment differ from one composition to the other, remains unclear. Suffice it to say that the Pharisees definitely were closer to the levers of power at some points in their history, such as at the time of Queen Shelamzion Alexandra (76–67 BCE), while they were likely persecuted and may have even participated in a plot to overthrow the king during the reign of her husband, Alexander Jannaeus (103–76 BCE). Their status at other points in their history remains to be determined.

After the Destruction of the Temple. If the Pharisees did, in fact, live as if they were priests, this aspect of their life may have prepared them for the role they were to play in the years following the destruction of the Temple, when rabbinic Judaism flourished under the leadership of the family of the Pharisee Simon ben Gamaliel I. With no Temple in existence, groups whose power base was too intimately connected with the Temple would be at a substantial disadvantage. Nevertheless, to provide some sense of community, Jewish life would now need to preserve as much of Temple practice as possible. The Phari-

sees were ideally suited for a leadership role in those circumstances, as their way of life prior to the destruction had accustomed them to behaving as if they were priests in the Temple, when, in fact, they were not. Pharisaic patterns of thought and practice developed while the Temple was standing, intended to create equivalents or substitutes for the Temple, would have been excellent preparation for living in a world with no Temple.

Pharisees and Dead Sea Scrolls. The Pharisees never appear by that name in the Dead Sea Scrolls. Indeed, while the verb *prsh* is used often in that literature—both to describe those who separate themselves from the misguided ways of the Temple leadership and who adhere to the truth (as in *Miqsat Ma'asei ha-Torah* C.7), and as a quality of specific and accurate understanding of the laws of the Torah (as in *Damascus Document* iv.8 and vi.14 and 18)—its virtues are applied in these cases to the Qumran community itself. In fact, those at Qumran may have claimed that they were the "real" separatists, those who "really" knew how to fulfill the commandments of the Torah accurately, as opposed to others, mere pretenders to those titles, with the Pharisees the most prominent of those false claimants in the eyes of the Qumran community.

Nevertheless, scholars have seen many allusions to the Pharisees in the scrolls. These should be divided into two categories: (1) allusions through code names; (2) allusions to Pharisaic legal practice. Under the first heading comes the division of the nation into three camps in *Pesher Nahum*. The Qumran group dubs itself Judah or Israel, employing the derogatory code names of Manasseh and Ephraim for two sets of opponents. The city of Ephraim is being led astray. Its leaders, from king and priests to native-born citizens and strangers, are all being deceived. The result is that cities and families perish, honorable men and families are ruined (*Pesher Nahum* [4Q169] ii.4–9). This situation will continue until the end of days, when the glory of Judah will arise and the simple of Ephraim will recognize the error into which they have been conducted, and join Israel (*Pesher Nahum* [4Q169] iii.3–8). [See *Pesher Nahum*.]

The historical reality behind these biblical interpretations has been reconstructed by Flusser (1981) as follows. At the time of the composition of *Pesher Nahum*, Jewish life was controlled by the Pharisees = Ephraim, then at a high point of their influence (in the years following the death of Alexander Jannaeus). This circumstance is seen as a disaster by the author of *Pesher Nahum*, who understands the verses of the prophet as promising a reversal at the end of days, when the Pharisees will lose their standing in the eyes of the people, who will then turn to the "true" Judah/Israel = Qumran group in order to learn the proper way to observe the laws of the Torah. The

Qumran community will then achieve total vindication (compare Paul's description of the fate of Christianity among Jews at the end of time, *Rom.* 9–11). As such, the prominence of Ephraim in Peshet Nahum must be entered into any consideration of the place of the Pharisees as rulers of the Jewish state, as discussed above. [See Ephraim and Manasseh.]

Another code name, much more widely employed in Qumran writings, and long suggested as equivalent to the Pharisees, is Seekers after Smooth Things. Damascus Document i.18, for example, notes that a leader identified only by the code name Man of Scoffing wreaked terrible damage on the Jews, causing them to go astray in many different ways. Among these errors encouraged was "seeking" or "interpreting after smooth things," choosing delusions and looking out for gaps. This led, inevitably, to justifying the wicked and condemning the just, so that in the end those who walked uprightly were persecuted. While other possibilities for identifying these Seekers after Smooth Things have been proposed, the most attractive suggestion is to see them as the Pharisees, and to understand this derogatory code name as an explicit rejoinder to the Pharisaic claim to *akribeia*: you claim to be excellent and accurate interpreters of the law, but you are nothing more the Seekers after Smooth Things. [See Seekers after Smooth Things.]

Allusions to Pharisaic law are more difficult to identify with certainty in Qumran texts, as these sources often disagree with some practice that we know as one approved by the rabbis, but they do not explicitly identify that rejected practice as Pharisaic. Given the complicated relationship between Pharisees and rabbis (see above), it may be hazardous to identify legal positions rejected in Dead Sea Scroll texts but adopted by the rabbis as Pharisaic.

Nevertheless, legal opinions criticized in Qumran sources were definitely current in the years prior to the destruction of the Temple. If these views also appear in rabbinic sources they must be among the earliest layers of the rabbinic legal tradition, hence likely going back to the Pharisaic foundations of rabbinic Judaism. The publication of *Miqsat Ma'asei ha-Torah* has encouraged scholars to adopt the latter view, and to conclude that legal positions criticized there, such as the opinion that impurity does not flow upward when a liquid is poured from a pure vessel into an impure one (*Miqsat Ma'asei ha-Torah* B.55–58; cf. *Yad.* 4.7), were the views of the Pharisees. [See *Miqsat Ma'asei ha-Torah*.]

At the very least, Dead Sea Scroll sources create the opportunity to study the history of the rabbinic legal tradition with a new and assured means of dating specific positions. Scholars are no longer exclusively dependent on literary-historical analysis of rabbinic texts, or on the

sparse and possibly tendentious rabbinic accounts of their past. A new criterion for advancing this important inquiry has entered the discussion. Dead Sea Scroll legal texts and rabbinic sources should continue to shed important light on each other

ALBERT I. BAUMGARTEN

PHILO JUDAEUS (c.25/20 BCE–c.50 CE) was an Alexandrian Jewish philosopher and commentator on the Torah who provides the earliest extant descriptions of the Essenes.

The Life of Philo. We have three sources of information for Philo's life: scattered asides in his corpus, ancient *testimonia* (mainly from later Christian tradition), and indirect evidence provided by our knowledge of his family. Philo was a member of the most prominent family of the large and important Jewish community of Alexandria. Jerome says that he was of priestly descent (*On Illustrious Men* 11). Although there is some evidence to support this, Eusebius's more general observation that he "was inferior to none of the illustrious people in office in Alexandria" has more corroborating evidence (*HE* 2.4.2). His brother, whose full name was probably Julius Gaius Alexander, held a responsible governmental position in Alexandria (Josephus, *Jewish Antiquities* 20.100; *CPJ* 420). His name

suggests that Julius Gaius Caesar bestowed citizenship on the family, possibly on Philo and Alexander's grandfather for assistance during the Alexandrian War (48–47 BCE). Since the family could not have received Roman citizenship without first holding Alexandrian citizenship (Pliny, *Ep.* 10.5–7, 10), members of the family must have held triple citizenships in the Jewish community of Alexandria, the city of Alexandria, and Rome. The privileged position of the family is confirmed by the careers of Alexander's sons: Tiberius Julius Alexander abandoned his ancestral faith to work his way up the *cursus honorum* through governorships of Judea, Syria, and Egypt, until he became Titus's chief of staff during the First Jewish Revolt (66–70 CE) and the prefect of the praetorian guard in Rome; Marcus Julius Alexander died at an early age but not before he married Berenice, the daughter of Herod Agrippa I. It was undoubtedly the social standing of the family that led the Jewish community to select Philo, Alexander, and the young Tiberius Julius Alexander as members of the embassy to Gaius (39–41 CE).

The position of the family and the literary skills attested in Philo's treatises suggest that he went through the full complement of Greek education. This would have come in three stages: training in a gymnasium, a one-year *ephebeia*, which was essential to Alexandrian citizenship and normally occurred when a boy was thirteen or fourteen, and advanced training in rhetoric and philosophy. The latter was particularly important for Philo who wholeheartedly embraced the basic positions of Middle Platonism (c.80 BCE–220 CE). He did not understand these to be in tension with Judaism; rather, he held that Moses and Plato understood the same realities. This does not mean that they stood on equal footing, but that Philo's commitment to Moses was not to a Hebrew Moses but to a Platonic Moses.

Philo also received a Jewish education. Although this does not appear to have incorporated a working knowledge of Hebrew or Aramaic, it did include an impressive knowledge of the Torah and earlier Jewish works in Greek. There was a long-standing tradition of literary activity within the Jewish community of Alexandria beginning with the Septuagint in the third century BCE. Even though Philo does not mention his predecessors by name, his works betray knowledge of a number of them including Aristobulus, Pseudo-Aristeas, and Ezekiel the tragedian. Even more important are the anonymous exegetes to whom Philo alludes and whose exegetical traditions he incorporates. We should therefore view his work as the apex of a long and rich tradition.

Philo's specific role in the Jewish community is opaque. His selection to head the embassy to Gaius suggests that he was esteemed (Josephus, *Antiquities* 18.259). It may be that he held a position in the Jewish senate of

Alexandria, but this is only a logical possibility. We are far more certain that he used his wealth to devote himself to a life of study and writing. The specific social locale for Philo's work is debated. Was he a private scholar secluded in his study? A leading figure of a *prosenche* ("house of prayer")? A teacher in a school associated with a *prosenche*? A teacher of a private school of advanced Jewish exegesis? While the meagerness of the evidence permits only speculation, the best suggestion is that he operated an advanced school of exegesis in his home or privately owned building as philosophers and physicians did in the Hellenistic and Roman worlds. His students were probably potential synagogue leaders.

The Philonic Corpus. Philo wrote more than seventy treatises; thirty-seven of these survive in Greek and twelve in Armenian. We have excerpts of another work in Greek and fragments of two more in Armenian. His corpus can be subdivided into five major groups: three independent commentary series, several philosophical works, and a group of apologetic treatises.

The bulk of the treatises belong to the commentaries. One of these is the twelve-book series *The Questions and Answers on Genesis and Exodus*, a running commentary on *Genesis* 2.4–28.9 and *Exodus* 6.2–30.10. Ten of the twelve books are extant in a sixth-century Armenian translation in addition to some Greek fragments. The commentary uses the question-and-answer format in the literary tradition that begins with Aristotle's *Homeric Problems* and finds its closest analogue in Plutarch's numerous zetematic works. Jewish authors such as Demetrius and Aristobulus had used the question-and-answer structure within the context of a larger work, but Philo's commentary is the first known zetematic work in Judaism. His questions are of two basic types: citations of the biblical text prefaced with an interrogative and full rhetorical questions that contain the question's rationale. The answers are expansive and frequently contain both literal and allegorical interpretations. The work was probably intended as a beginning commentary for students in Philo's school or for members of the larger Jewish community.

The most famous commentary series is the Allegorical Commentary. This is a running commentary on the biblical text of *Genesis* 2.1–41.24. Of the thirty-one books that we may attribute to the series, we have twenty preserved in Greek and a fragment of another in Armenian. Like the *Questions and Answers*, these works use the question-and-answer format; however, they do so differently. The questions are now subsumed in the exegesis. The answers are greatly expanded through the incorporation of observations on secondary biblical texts. Further, allegorical readings now dominate the exposition. Philo again builds on the work of Jewish predecessors; we have evidence for

allegorical exegesis as early as Aristobulus and Pseudo-Aristeas. Although some have argued that Philo drew on a preexisting allegorical commentary, it appears more likely that the work is his own even though he borrowed from other Jewish allegorical exegetes. There are some literary and material similarities between Philo's commentaries and the *pesharim* of the Qumran community; however, the closest literary analogue is with the later Neoplatonic commentaries, such as those of Proclus, suggesting that Philo used a form in common use in philosophical circles. The series was probably intended for advanced students of Philo's school or for other Jewish exegetes.

The third commentary series is the Exposition of the Law. We have twelve of the fifteen books preserved in Greek. This series is significantly different from the other two: it is systematic in its organization and literal in interpretation. Philo himself divides this series into three parts (*On Rewards and Punishments* 1–3). The first is an account of creation since the cosmos is in harmony with the law (*On the Creation of the World*). The second is historical: the patriarchs (Abraham, Isaac, and Jacob) are embodiments of the unwritten law (*On Abraham*) and Joseph is a politician (*On Joseph*). The third is the legislative that opens with *On the Decalogue*. Each of the Ten Commandments subsequently serves as a heading for other laws in the four-volume *On the Special Laws*. The remaining legal material appears in several appendices under the headings of various virtues (*On the Virtues*). *On Rewards and Punishments* functions as the finale as it does in *Deuteronomy*. The two-volume *Life of Moses* may have served as a general introduction to the entire series, but was probably an independent work that introduced readers to the Pentateuch. The implied audience of these treatises is large and probably included members of the Jewish community and possible interested outsiders.

The fourth group comprises Philo's philosophical works. Of the eight books we know he wrote, we have two in Greek, two in Armenian, and an Armenian fragment of another. These have several notable features distinguishing them from the commentaries: the subject matter moves away from exegesis of the biblical text to philosophical themes, the material consists of Greek sources with passing references to Jewish traditions, and the literary form of a commentary is dropped in favor of literary forms appropriate to the philosophical tradition: arithmology (*On Numbers*), dialogue (*On Providence* and *Whether Animals Have Reason*), thesis—a work that presents a thesis along with the arguments pro and con—(*On the Eternity of the World*), and a discourse (*Every Good Man Is Free*).

The final category consists of works that are explicitly apologetic. We have three of the eight books extant in

Greek (*On the Contemplative Life, Against Flaccus, and The Embassy*) and excerpts from a fourth (*Hypothetica*). These were probably written in connection with the pogrom at Alexandria and the subsequent embassy.

Philo's Descriptions of the Essenes and Therapeutae. The final two sets of works contain descriptions of the Essenes and Therapeutae. Although the authenticity of these works was questioned in the nineteenth century, there is almost unanimous support for their authenticity today. I have outlined the basic elements of Philo's descriptions of the Essenes in a chart along with the parallels in Josephus and the Dead Sea Scrolls. The order follows and is restricted to Philo's own accounts. Where there are similar but not identical descriptions, I have used the siglum "cf." Where there is disagreement among the accounts, I have placed the dissenting perspective in parentheses. [See Essenes.]

Eusebius, who had access to Philo's works in the library Origen brought from Alexandria to Caesarea, tells us that Philo wrote multiple accounts of the Essenes (*PE* 8.10.19). We have two and know of a possible third. The first occurs in *Every Good Man Is Free*, the second of a two-volume work devoted to a famous Stoic paradox (e.g., Cicero, *Stoic Paradoxes* 5 [33-41]). Philo introduces the Essenes (secs. 75-91) within a series of examples of those who have demonstrated the freedom that virtue has brought to their lives (secs. 62-135). The next is the second of two fragments Eusebius preserves of a little-understood apologetic work, the *Hypothetica* (*PE* 8.6.1-7.20 and 8.11.1-18). Philo again holds the Essenes as paragons of virtue; they are proof that the Jewish people are in no way inferior to other nations who boast of philosophical groups such as the magi, gymnosophists, or sages. The third account is questionable. Philo begins his presentation of the Therapeutae with a reference to his previous treatment of the Essenes (*On the Contemplative Life* 1). Some think this is a reference to the description in the *Hypothetica*. This is, however, problematic. The reference suggests that there was an entire treatise devoted to the Essenes in the same way that there is one devoted to the Therapeutae. The problem is compounded by the fact that Eusebius introduces his two excerpts of the *Hypothetica* under two different titles, making it unclear as to whether he was referring to one work or two (*PE* 8.5.11, *Hypothetica* and 8.10.19, *Apology for the Jews*). The best explanation is that the former is the real title and the latter is Eusebius's clarifying paraphrase. If this is correct, Philo composed a lost treatise on the Essenes, a treatise that was considerably longer than the account in the *Hypothetica*. [See Therapeutae.]

The treatise describing the life of the Therapeutae on the shore of Lake Mareotis shares a similar apologetic and polemical nature, arguing that the Therapeutae are

living proof of the contemplative life among the Jewish people. The agreements between Philo's descriptions of the Essenes and the Therapeutae naturally raise the question of the relationship between the two. The evidence is split. On the one hand, Philo appears to differentiate between them by describing the Essenes as living the active life and the Therapeutae the contemplative (*On the Contemplative Life* 1). There are also a number of differences between his accounts of the two such as the geographical locales, the absence or presence of women, and the vegetarianism of the Therapeutae. On the other hand, there are some reasons to consider the Therapeutae as an Egyptian branch of the Essene sect. The most important of these has come to light with the Dead Sea Scrolls: both observed a Pentecontad calendar and made Pentecost their major feast. A maximalist interpretation of such evidence argues that the Therapeutae were an Egyptian branch of the Essene sect, whether they represent an extension branch or schismatic branch; a minimalist reading argues that they were a distinct yet similar movement.

The Qumran scrolls also raise the issue of whether the Essenes of Philo were the residents of Qumran. Although the identification is not without problems, most scholars make it. The differences are largely due to Philo's literary concerns and the limits of his knowledge. The philosophical coloring of his accounts (and those of Josephus and Pliny) led a number of nineteenth- and early-twentieth-century scholars to infer from Josephus that the Essenes were influenced by Pythagoreanism (*Antiquities* 15.371); however, the scrolls have not supported this. It is far more likely that authors such as Philo presented the Essenes and Therapeutae as ideal religious/philosophical groups in the same way that Chaeremon presented the Egyptian priests, Arrian and Philostratus the Indian sages, Philostratus the naked Egyptian sages, and Iamblichus the Pythagoreans.

This does not mean that the accounts are fabrications. The number of parallels between the Dead Sea Scrolls and Philo's descriptions suggests that Philo had fairly reliable information about the groups. There are several possible sources. The similarities with Josephus suggest both drew from a common tradition or that Josephus knew Philo's descriptions (as he knew other Philonic treatises). The most probable explanation is that both knew earlier accounts. Older scholarship pointed to the largely lost universal history of Nicolaus of Damascus, the adviser to Herod the Great. More recent analyses have suggested that Philo may have known several additional sources: a Hellenistic Jewish source and a Pythagoreanizing source. It is also possible that Philo had some personal contact. The Therapeutae were located nearby, although there is no evidence that Philo was ever a member

of the group—as some have speculated. On at least one occasion Philo made a pilgrimage to the Jerusalem temple (*On Providence* 2.64). He may have had some contact with the Essenes, although we do not have any basis for thinking that Philo had personal knowledge of the residents of Qumran. Finally, Philo may have known them through oral traditions circulating between Palestine and Egypt.

Philo and the residents of Qumran lived in radically different worlds. Even when they share similar outlooks, there is always a profound underlying difference: Philo was committed to an ontologically based Platonism and the Covenanters were committed to an apocalyptically based dualism. Yet there is a common identity, at least from the perspective of Philo. The most sophisticated and openly Hellenistic Jew of the Second Temple was unashamed to present them as his own people's moral exemplars.

PHOTOGRAPHY AND COMPUTER IMAGING.

Two basic means have been employed to preserve and optimize the primary data of the Dead Sea Scrolls—photography and, more recently, electronic imaging. Both approaches to documentation have proven highly effective; indeed, so effective that in many instances photographs and electronic images have superseded the scrolls themselves as the best points of reference for further research. Still, photographic and electronic imaging and computer-imaging enhancement all have distinct limitations. Therefore, one must understand these types of documentation if one is to take full advantage of their respective strengths and avoid the problems involved in their respective weaknesses.

Early Photographic Collections. Photographs of various assemblages of Dead Sea Scrolls materials were made by official photographers over approximately the last forty years. The most important such collection is the so-called "PAM" (Palestine Archaeological Museum) series (See Reed, Lundberg, Phelps, pp. xix–xxi; Tov and Pfann, pp. 13–14). Despite their limitations, these photographic plates have become extremely important since in many cases they now constitute the best evidence for the Dead Sea Scrolls before the onset of later deterioration of the scrolls themselves. In utilizing these collections, the following factors must especially be noted:

Lighting. Almost without exception, the scrolls documented in the photographic plates are lit inadequately. The ideal way of lighting a Dead Sea Scroll is to employ as flat and even a light as possible. That way, shadows that result from the natural wrinkling of the papyrus or animal skin are minimized or eliminated altogether. Moreover, backlighting of a manuscript serves to clarify and evenly illuminate all edges, tears, and holes in the skin. If only lighting from the top is employed, then the manuscript casts a shadow on the background, often making it extremely difficult to determine where the skin ends and a dark shadow begins or where an ink trace has been distorted by interference from the shadow of a small hole. This problem is further exacerbated if, as was fre-

quently done in the earlier plates, illumination comes from a single, oblique light source rather than from at least two lights placed at opposing angles (typically, forty-five degrees) on either side of the assemblage.

Black and white. With few exceptions, no early images of the Dead Sea Scrolls were made in color. Color adds a great deal of subtlety to an image and a level of information that can often prove invaluable for clearing up ambiguous readings. While infrared, black and white is extremely adept at distinguishing black ink from a dark or blackened background, it is very poor at distinguishing lighter areas of skin from the general gray tone of the skin in a black-and-white image. (In particular, areas where the original surface has flecked off but some skin remains or in areas where letters have been scratched out by a scribe, both typically resulting in much lighter skin, a black-and-white, infrared image will often be unable to distinguish the light grays from the general background gray of the skin.) Hence, where available, color images should be used to corroborate black-and-white images. Where this is not possible, then considerable caution must be exercised in checking images, especially in areas where the skin appears light in shade.

Exposure. Early images of the Dead Sea Scrolls typically feature one shot of a given plate image rather than a range of pictures at different exposure levels. Sufficient latitude in exposure would compensate for the wide range of shading one sees in the skins. While a single shot will usually be reasonably good for the mid-range grays of the skins in a particular plate, it will frequently be of limited value when one is trying to read a more seriously blackened piece or a piece where the letters nearly fade from view.

Resolution and infrared. Resolution of film is determined by the size of the crystals of silver compound which darken in proportion to the amount of light that bombards them during exposure. As a general rule, the larger the individual crystals, the more light-sensitive they are. In photographic terms, one characterizes this sensitivity to light in terms of a film being "slow" or "fast." Typically, a slow film has smaller crystals and is less light-sensitive, a fast film has larger crystals and is more light-sensitive.

This issue of crystal size is crucial to film resolution. The smaller the crystals, the higher the resolution of the film, the larger the crystals, the lower the resolution. Photographers characterize this relationship in terms of a film's "graininess." The more fine-grained a film, the better its ability to reproduce an image accurately and subtly; the more coarse-grained a film, the less adequate it is at making an image clear. One can think of the analogous case in computer imaging. In computer imaging, the more dots packed into a given space (for example, dpi

[dots-per-inch] or pixels [picture elements] per micron), the better the image will be. By the same token, the more crystals that can be packed into a given area of film, the higher its resolution.

This issue of film resolution becomes crucial when infrared imaging is considered. As is well known, from the outset it became clear that a great deal can be done to make apparently illegible texts more legible by photographing them in the infrared spectrum. Hence, the vast majority of Dead Sea Scrolls pictures—especially of the PAM plate type—are images made with films sensitive in the infrared spectrum. There has been only one film type used for this work (basically because it is the only one easily available); namely, Kodak High Speed Infra Red Film. The high speed aspect of this film also means that it is very grainy. Indeed, if you inspect a typical infrared negative from the PAM series, you can easily pick out the individual crystals with the unaided eye.

This is perhaps the most serious reason why, on a letter-by-letter basis, Dead Sea Scrolls photographic images are so difficult to read. Dead Sea Scrolls infrared negatives lack the sharpness of other films and do not magnify very well. As an infrared negative is magnified for study so that the letters begin to fill the image, the letters turn fuzzy or hazy. If a scribe has written letters very close together, in an infrared image they tend to run into each other, as though the pen employed had blotted the ink. If one tries to read small traces of individual letters which are broken, partially flecked off, or simply faded, it is frequently a daunting task because the resolution simply is not adequate. This is one reason for the constant demand by scholars to see the actual scrolls themselves. One simply feels that there is a lack of subtlety—a crucial level of information missed—when a scroll is only to be seen in a black-and-white, infrared plate image.

The official *Discoveries in the Judaean Desert* volumes printed "screened" images. A screened image is one that has been photographed through a mesh so that, for purposes of printing, the image is reduced to a series of minute dots. While such an image looks reasonably clear to the unaided eye, any effort to magnify a screened image has limited value because the image at higher magnification rapidly breaks down into merely the screened dots themselves.

The best way to optimize the data of the original plate images is to work with transparency reproductions. Transparencies inherently have a far greater dynamic range (that is, an ability to convey a broader range of gray tones, from the blackest black to the whitest white) than paper prints. If necessary, one can also stretch these data even further by having reproductions made in a range of exposures. In terms of subtlety of image, a transparency is usually superior to a digital image on a computer

screen—especially if a standard rather than a high-resolution monitor is employed. Digital images are unmatched in their ability to give the scholar tools for manipulation. Nonetheless, in side-by-side comparisons of a superior quality transparency and a digital image of equivalent resolution, the transparency usually is more subtle, more true in conveying information. It is therefore strongly advised that, for purposes of serious research, high-quality transparencies should always be employed, regardless of what other types of data are available.

Modern Photographic Approaches.

Films and exposure. A range of films are now typically employed in photographing Dead Sea Scrolls. At minimum, three ranges are essential for the best documentation: visible light color; high resolution, visible light, black and white; and black-and-white infrared. Additionally, a range of exposures provides sufficient latitude to encompass the wide range of shading in the skins and papyri of Dead Sea Scrolls media.

Lighting and polarization. As noted, illumination should come from a minimum of two evenly balanced light sources. Wherever possible, backlighting should also be employed. The best lighting source to employ for Dead Sea Scrolls is a strobe flash (which is safest, from a preservation standpoint; see Shelley, 1987, p. 72). Glare from scrolls mounted in glass or that have developed a shiny patina during the process of decomposition is minimized by cross-polarization between light source and camera (for the logistics of the technique, see Henderson, 1995).

Filtration. In visible-light photography, the use of colored filters can often be helpful in distinguishing faded inks from a light background. A color filter that most closely matches the background shade of the skin or papyrus (usually yellow, orange, red, or sepia) can enhance the contrast between the background and the ink in a black-and-white image, thereby making faded ink stand out more dramatically. In a color image, blue or green filtration sometimes proves effective—especially after computer manipulation. This is because the blue/green areas of the spectrum are those in which the eye has its more acute sensitivity. A yellow filter can also be used in combination with blue or green so that it cuts off the spectrum below green, leaving only the cooler hues available for the eye to view. None of these filtration techniques should be employed to the exclusion of the others. Rather, they should be used in a complementary fashion, since it is in combination that they are most likely to yield the full range of data.

Documenting the back. Photographing the back of the scrolls has yielded useful information, especially textual data. In instances of "print-through," ink from the recto of a scroll has imprinted a mirror-image trace on the verso layer to which it was contiguous when the scroll

was rolled up. On occasion, ink has become completely detached from the recto and now only adheres to the verso. There is even the occasional instance of double transfer, where ink became detached from recto to verso and then reattached to the recto (but in another locus) during successive rolling and unrolling of a scroll. The best known scroll with the print-through phenomenon is the Temple Scroll (11QT^a), but numerous other examples are attested.

The photographic documentation of the back of a scroll also reveals invaluable conservation information, for example, the number of fragments that have been joined together to make up a given assemblage and the precise means of positioning these fragments. Moreover, on those occasions where two or more layers of skin have been fused (something that is not always clear to the eye), the writing on a lower layer can often be reclaimed by photographing through the back, especially using infrared films.

Previewing. One of the most difficult aspects of documentary photography is the ability to be certain that one will be able to record precisely what one thinks is seen. Photographers therefore utilize a camera which takes a magazine containing Polaroid films especially designed for the previewing process. Once one has established the photographic setup, a Polaroid magazine is clipped onto the camera and an image is taken. Because the image is a Polaroid, one is able to preview the results in no more than sixty seconds. Then, once a satisfactory preview has been achieved, one can proceed with confidence to do a full documentation in permanent, high-resolution films.

Resolution. There are a number of means by which resolution may be optimized. The most obvious approach is to use large-format film rather than thirty-five millimeter or microfilms of even smaller dimension. Good results can be achieved by utilizing mid-format film that delivers an image frame of 1 5/8 inches by 2 1/4 inches or, in other configurations, a 2 1/4 inch square. However, where possible, standard 4-inch-by-5-inch large-format films should be employed if one is to gain optimal resolution. There are even occasions, for example, where large legal papyri are involved, where the 8-inch-by-10-inch format is preferable.

Another highly effective means of gaining resolution is by working at different levels of magnification in reference to a given scroll assemblage. Three levels of magnification are recommended: first, a reference shot, that is, an image of the largest reasonable size; for example, a plate of related fragments or a column of text. This is generally the equivalent of what one finds on a standard photographic plate of the PAM type. But even when the very best films are employed, this level of documentation is

not usually adequate for gaining everything that is needed by the philologist to do his or her best work.

A second level of magnification is also required—a section shot. That is, the given scroll piece is shot in sections at a mid-range magnification. This allows for a fairly close survey of the letters and the scribal hand. As a general rule, a section shot should be at sufficient resolution so that a negative or transparency is able to document the direction and order of the ink strokes that form the individual letters. Obviously, this is dependent on how small the letters are in a given scribal hand, but usually a section shot in a standard 4-inch-by-5-inch large-format frame can cover ten to fifteen lines of text.

Finally, a third level of magnification should be employed, at very high resolution, in order to visualize specific problems. In this case, the highest magnification possible should be employed that encompasses the area of interest without sacrificing focus due to the limitations of depth-of-field. Many, if not most, of the scrolls have serious problem areas where a high-resolution photograph at high magnification could do wonders to resolve the ambiguity.

Working at high resolution in the infrared spectrum is also essential. Since the coarseness of grain in infrared film undermines the resolution, the best means of overcoming this problem is to work at higher magnification than has normally been done. If one has an image recorded on the negative at high magnification, then this has the effect of allocating more film crystals to each letter, thereby overcoming the inherent limitation of the film. Experience suggests that if one doubles the resolution typically employed in PAM-type plate photographs, most of the resolution problems should be overcome. Of course, the more resolution one employs, the better the result. Working at three levels of magnification, the section shot can probably cover ninety percent of the problems in the infrared, while specific high-resolution shots at given points in the text can cover the rest.

Electronic Imaging of Dead Sea Scrolls.

X-ray. Imaging by X-ray has proven of value for one rather unusual Dead Sea Scroll, namely, the Copper Scroll (3Q15). Recently, a French team from the Electricité de France (EDF) did a thorough reanalysis of the Copper Scroll which features X-ray imaging. While this imaging must be used in conjunction with visible light pictures of the scroll's surface to be most effective, it does show the chiseled letters of the scroll particularly clearly and tends to minimize the other surface features (see "Rouleau de Cuivre," 1996).

Narrow-band infrared. For more typical Dead Sea Scrolls, narrow-band infrared imaging has delivered dramatic results on blackened and deteriorated skins—results that have significantly improved the acquisition of data over the more conventional infrared approach used

in the past. What had been done previously was to take a very broad band of the infrared spectrum when photographing Dead Sea Scrolls. It is now clear that this is not an optimal strategy. As tests done by G. Bearman of the Jet Propulsion Laboratory have shown, reflectivity of scroll materials varies from bandwidth to bandwidth—sometimes the difference between skin and ink is great, sometimes less so. Therefore, when one takes a broad-band sample, the good is averaged in with the bad. By using narrow band-pass filters which simply exclude areas of the spectrum—except for the bandwidths which, experience has taught, are the best for the Dead Sea Scrolls—one can achieve far better results than when one samples a broad band of the infrared spectrum.

Computer-Imaging Techniques and Manipulation.

Up to this point we have largely focused attention on the acquisition of data or input information. However, computer technologies now offer the researcher extraordinarily powerful tools for selecting, manipulating, and outputting information. Various manipulations (especially in terms of contrast and shading) have long been employed as part of standard darkroom techniques to enhance the legibility of photographic images of Dead Sea Scrolls. But, in broadest terms, there are three pronounced advantages offered by computer imaging that make this means of outputting data far superior to any other conventional means. The first such advantage is precision; that is, any manipulation of the data can be done with an exactness that is unmatched by other means. Photographic manipulations done in the course of printing images, on the other hand, always tend to be approximate and inexact. The second advantage is the ability to gain immediate feedback; that is, one can see the results of any manipulation in "real time" that is usually measured in seconds or, at worst, in minutes (feedback involving photographic images almost always takes a good deal longer). The third advantage is democratization; that is, computer imaging offers one the ability to do very sophisticated manipulations without a significant amount of specialized training, whereas image manipulation by photographic means requires specialized equipment, highly controlled environments, and special skills that often take years to acquire.

Because the field of computer imaging is evolving so quickly, it would be counterproductive to consider, for our purposes here, specifics of software programs and hardware requirements. Rather, we will consider the broader issues involved with the acquisition and manipulation of digital data.

Digital imagery. The first major concern is the quality of the digital image. This is largely dependent upon the type of hardware employed for scanning and the quality of the photographic image being scanned.

The higher in resolution the scanned image, typically

measured in "dots-per-inch," the better. The "dots" in question represent the minimum square dimension that constitutes a picture element or pixel, that is, the smallest area of image data in the scan. In order to do the kinds of manipulations most useful for Dead Sea Scrolls, a fairly high resolution is almost always necessary. As a general guide, a resolution of about one thousand dots-per-inch or more is required for plate images of the PAM type.

One must also consider whether the pixels in an image represent real as opposed to interpolated data. Some scanning hardware/software packages deliver an image that superficially appears to be of very high resolution. In such cases, however, the data are interpolated; that is, only a portion of the pixels comes from the image itself, whereas the rest are created by a program that fills in the image based on its best assumptions of what should be there. The use of such interpolated data should be avoided wherever possible.

Finally, one must consider the dynamic range of an image (the bit-depth); that is, the degree to which a scan divides an image into discrete levels of shade, from the darkest to the lightest. This too is dependent on the type of scanner employed. The best image is delivered by a drum scanner utilizing a photomultiplier tube (PMT), although highly credible images can also be delivered by high-end film scanners, employing charged-coupled device (CCD) arrays. The less expensive and more broadly available "flatbed" scanners are less effective in this regard and deliver a less detailed image both in terms of uninterpolated data and dynamic range (see B. and K. Zuckerman, 1997, p. 346). Still, dramatic improvements in flatbed scanning technology are rapidly improving the resolution that these scanners can deliver.

Computer requirements. Utilizing almost any standard computer-imaging package available today, one can now employ a broad range of software "tools" which can be highly effective in aiding a scholar in investigating and analyzing the visual data of a Dead Sea Scroll. Software is now easily accessible for use on either Macintosh or PC/Windows platforms. The key in either case is to employ a computer with as much hard-disk memory and random access memory (RAM) as possible. At minimum, a hard disk of four gigabytes and RAM of 128 megabytes are required to do serious computer-imaging manipulations with standard software programs.

Navigate and zoom. One of the most obvious and frequently used set of tools allows the investigator to navigate around any part of a scanned image and to magnify or reduce any part of the image in accordance with adjustable parameters. The effectiveness of the navigate-and-zoom tools necessarily depends on the degree of resolution (dots-per-inch) in the original scan. But if the scan is of high resolution, one can move to a given letter

and fill the screen with it. Thus, one has at one's disposal the electronic equivalent of an extremely powerful, highly versatile magnifying glass.

Layers. Data from any image may be placed on a specific discrete layer that can be made to appear or disappear at will. Moreover, once positioned on such a layer, these data can also be moved around within the image or, if appropriate, taken from one image and placed on another. Graphic data (for example, electronic drawings, line and column numbers, measure rules, special notations) can also be placed on separate layers and turned on or off as they are needed.

Measurements and scale. Software applications offer the investigator the ability to measure and place images at a given scale with a precision unmatched by other means. The ability to resize an image precisely is essential for doing comparative analysis of separate images. That is, if these separate images have a common scale reference (for example, each image contains a measuring rule employing a metric scale), then the images can be precisely measured in comparison to one another and then sized (that is, blown up or reduced) to a common scale. Of course, once images are at a common scale, they can be accurately compared. For example, fragments of a single manuscript (found in separate pictures; perhaps even taken many years apart) can be placed on separate layers and then moved around like electronic jigsaw pieces to check for potential matches. Likewise, individual letters or particular letter combinations can be copied and moved on separate layers and then superimposed over questioned readings in order to determine the best matches. The ability to measure lengths and angles with minute accuracy also allows one to do superior analysis of the typology of scribal hands.

Precision drawing and outlining. Working in close conjunction with both layering and sizing functions are the "path" commands. On a computer, a path may be thought of as an extremely precise tracing program. In simplest terms, a path is a line-vector, which is made by placing successive dots called "control points" over an image. Paths are highly effective for producing extremely accurate outlines and have two significant advantages over other approaches to drawing and outlining. First, paths are independent of resolution; that is, the dots and the lines they create are not altered in relation to the magnification of the image. Hence, the lines created in paths are always sharp at any resolution, regardless of the quality of the image. This means that one can work at extremely high magnification while drawing a dot-to-dot outline, thereby creating a graphic whose accuracy can be measured in microns. Second, the control points that create the path can be easily edited. That is, they can be deleted or moved or more dots can be added anywhere on the path as required. Moreover, control points can

also be adjusted so that the lines between them curve in any manner desired.

The real power of the path commands is in their ability to turn any such outline into a selection which can then be moved or copied. This can be especially useful for fragment alignment and matching. A researcher can create a path that accurately outlines a given scroll fragment which, in turn, can be selected and placed on its own discrete layer. If it is sized to the same scale as other scroll fragments (perhaps found in different pictures) which have been similarly outlined and similarly placed on discrete layers, then the different fragments can be placed in the same image and moved around, rotated, or otherwise adjusted as required to make the best alignments and matches. Paths can also be used to outline individual letters on a scroll fragment. These letters can also be moved around at will and used, for example, to build extremely accurate script charts, to compare unclear or partially preserved letters, or to check the validity of restorations in lacunae using the scribe's own hand.

Standards and Practices in Computer Imaging. Certain other powerful computer-imaging tools must be employed with a degree of caution and discretion. For example, all standard packages contain a "cloning" tool—sometimes known as a "rubber stamp." This tool allows one to take a sample from one part of an image and copy to another part of an image. Such a tool can sometimes be useful for "cleaning up" an image, that is, cloning away extraneous matter (dust or dirt) in the background or a flaw in a photographic image (scratch or fingerprint) by substituting a sample from a clear section of the background. Since this can be done at a microscopic level on a high-resolution scan, the alteration is indistinguishable to the eye. While this use of the clone tool may not be objectionable, more questionable are cases where cloning is used to clean up data themselves. For example, in realigning fragments, one might "clone in" extra bits of skin background so that the adjustment looks seamless. One might even rationalize such a use by arguing that one is only restoring the fragment to what it must have looked like in pristine condition before the onset of deterioration.

Another highly effective standard application is the "dodge-and-burn" tool. The terms "dodge" and "burn" come from photography. One can, in the process of printing a picture, selectively underexpose a section ("dodge") or overexpose a section ("burn") in order to make a given part of the image somewhat lighter or darker. One can do likewise with the "dodge-and-burn" tool in a computer-imaging program. That is, in areas that are darkened (by water staining, for example) one can electronically dodge the area to make it appreciably lighter, whereas in areas that seem too light (for example, where ink has faded but

is still visible) one can electronically burn it to make it appreciably darker. One can also use the tools in concert—for example, to "sharpen up" letters where ink is blotted—a highly effective strategy for cases like the Genesis Apocryphon.

It should be noted, however, that these uses of enhancement tools are highly aggressive and selective, depending as much on the judgment of the researcher as they do on the data. Moreover, because image adjustments using these (and other similarly aggressive) tools can be done with such precision, it is often virtually impossible for even an expert to distinguish an aggressively adjusted image from the "real thing." Even more seriously, it would be fair to say that the difference between what we might call noninvasive adjustments (sizing, layering, fragment movement) and invasive adjustments (cloning, dodging and burning) in terms of degree of subjectivity is not always clear. An adjustment that one expert might consider essentially a "fair" reflection of the data might be viewed by another as highly speculative.

In light of this possible difference of opinion, it is important that commonly agreed-upon standards and practices be used to guide the use of computer-imaging tools—especially for creating images for purposes of publication. Several principles should be operative:

- **Before and After.** One should always display the "raw" or unenhanced image alongside the full, enhanced version so that others can see both the beginning and endpoint of the work that has been done.
- **Verification and Replication.** The steps employed to alter and enhance a digital image should be documented to such an extent that another scholar, employing basically the same image and the same tools, could replicate the procedure. In that way, the investigator can better judge the degree of subjectivity involved in a given set of image manipulators.
- **Labeling.** Aggressively enhanced images should be clearly labeled as such—indeed, in cases where a good deal of subjective judgment informs the enhancement, such images should be labeled as the electronic reconstruction, the scholar's best judgment of what he or she thinks should be there, as opposed to what really is there.

Documentation and Preservation. The focus of photographic and computer imaging of **Dead Sea Scrolls** will always tend to remain on getting results, on gaining more information. However, it should also be noted that good documentation is a strong complement to long-term preservation of the scrolls and the data they possess. For if full documentation is done well, then this documentary evidence becomes superior to anything that could be seen through personal inspection of the physical remains

themselves. At that point, the texts may be stored away in an optimal environment, to be left undisturbed until a new technological breakthrough justifies imaging them again. Hence, both the needs of researchers and the concerns of conservators are addressed, and in the long term, the evidence of the scrolls may endure as both easily accessible images and as the special, fragile physical traces of ink on skin and papyrus themselves.

KENNETH ZUCKERMAN

PHYLACTERIES AND MEZUZOT. The Judean Desert caves have furnished the earliest exemplars of phylacteries (*tefillin*) and *mezuzot* (biblical portions affixed to door posts). While such Jewish phenomena were known from later literary sources, these phylacteries and *mezuzot* provide archaeological evidence from the Second Temple period and greatly refine our knowledge about the history of these ritual objects.

Phylacteries. Jewish tradition traces the biblical basis for the wearing of phylacteries to *Exodus* 13.9, 13.16; *Deuteronomy* 6.8, and 11.18. These passages command that "these words" be as "a sign on your hand and a frontlet between your eyes." Rabbinic law expected males over the age of thirteen to wear phylacteries. *Letter of Aristeas* 159, dated to the second century BCE, already mentions *tefillin* as physical objects worn on the body. Toward the end of the first century they are mentioned by *Matthew* 23.5 and *Josephus* (*Jewish Antiquities* 4.213). Nevertheless, the actual form of pre-rabbinic phylactery was not known until the discoveries at Qumran dated to the late Second Temple period and at Wadi Murabba'at, which

was occupied by refugees from the Bar Kokhba Revolt of 135 CE.

Phylacteries are small, black boxes, made of the leather of a kosher animal (usually a calf) that contain scriptural passages to be fastened to the head and arm. Derived from the Greek word meaning "amulet," phylacteries were secured to the head and forearm with leather thongs, which passed through the box. Each box or capsule contained four selections of biblical passages concerning the commandment written on leather slips. These slips are folded and tied with threads of tendon and hair and then placed in the individual compartments.

In the head phylactery, the leather capsule is stitched closed, and the strap passes below it. In the arm phylactery, there is but a single compartment with all the passages enclosed in it written on one slip, and the strap passes through the capsule. The phylacteries from the Judean Desert are made of vegetable-tanned, unbleached leather—which probably has discolored with age—with the hair side facing out.

Thirty fragments of phylacteries have been identified, most of which were found in the 1950s. The Cave 4 phylacteries are designated Phylactery A-U (4Q128-148). (T and U were regarded by the editors as undecipherable.) There are two fragments from Caves 1 and 8 respectively, 1Q13 and 8Q3. Phylacteries were also unearthed at Wadi Murabba'at (Mur 4). In 1960 an expedition to Nahal Se'elim discovered two phylactery texts, XHev/Se 5 A, B. These texts were a mixture of head and hand phylacteries.

In 1968 Yadin acquired one intact head phylactery (Phylacteries 1-4 [XQ]) from an undetermined cave in the Qumran region, which he described in detail. The capsule of this specimen, when closed, is rectangular in shape and measures 13 by 20 millimeters (0.5 by 0.8 inches). The slips are made of very fine parchment, probably unborn kid or woolly sheep, 0.04 millimeters (0.0016 inches) thick, and measure 27 by 40-44 millimeters (1.06 by 1.6-1.7 inches) before folding. The scriptural portions are written only on one side with black on unruled lines. Although the lines are tightly spaced, the scribe was careful not to let the letters touch but to save space surrounding each letter. The script can be paleographically dated to the Herodian period, the first half of the first century CE. The folded parchment slips were tied with threads of animal sinews.

This head *tefillin* from Qumran contained four compartments, but only three of the original parchments were intact. A fourth parchment was inserted to match the other three, but it was certainly a later addition, added by the seller to complete the piece.

Overall, Qumran phylacteries are remarkably like those described in rabbinic texts as to their form, the writing

material, and the manner of tying the parchments. However, they differ in some details, which may be explained either by their sectarian nature or their early date.

The passages found in the phylacteries from Qumran and those specified in rabbinic sources are basically the same: *Exodus* 13.1–10, *Exodus* 13.11–16, *Deuteronomy* 6.4–9, and *Deuteronomy* 11.13–21. In the Qumran phylacteries, however, the passages appear in a different order and contain some orthographic variants and some variant biblical readings. It has been pointed out that phylacteries and *mezuzot* tend to present harmonistic type textual variants (Eshel, 1991, pp. 122–123). Apparently, there was some fluidity in the sequence of the passages. The rabbinic tradition also testifies to disputes over their order (B.T., *Men.* 34b). This debate even continued into the Middle Ages, and the two primary types of phylacteries—Rashi and Rabbenu Tam—are each named after the medieval rabbi who fixed the order of the passages according to his understanding of the Talmudic requirements. Rashi held that the last two sections are to be ordered *Deuteronomy* 6.4–9 and then *Deuteronomy* 11.13–21. Rabbenu Tam reversed this order. Evidence from the Judean Desert shows that some Qumran phylacteries have Rashi's order, some (e.g., XQ) another order, but the *tefillin* from Wadi Murabba'at are of the Rabbenu Tam type. Thus, these two traditions go back to Second Temple times and were in use concurrently.

Some Qumran phylacteries contain additional scriptural selections as well. There is a rabbinic proscription against adding any passages to the four standard ones. Therefore, some scholars have posited that those that have additional passages are sectarian *tefillin* while those that contain only the standard selections are of Pharisaic-rabbinic type. S. Goren examined the phylacteries from the Dead Sea from the point of view of rabbinic *halakhal*. He concluded that the phylacteries from Cave 4 are sectarian in nature, but those from Murabba'at conform closely to Pharisaic-rabbinic *halakhal* (Goren, 1963/1964).

The Qumran phylacteries from Cave 4 can be subdivided into two groups. Thirteen of them, A, B, G–Q (Group 1), do not accord with the prescriptions of rabbinic law regarding the contents of the phylacteries (Tov, 1997). Some of them contain rabbinically prescribed passages; others contain additional texts; and four contain only texts that were not prescribed by the rabbis. Furthermore, these Qumran phylacteries also feature the orthography and morphology characteristic of Qumran texts.

Scribal practice also differs from that of the prescriptions of the Talmud. For example, the Talmud does not allow corrections by means of writing between the lines. Words may not be broken at the ends of lines, nor may letters be crowded in at the end of the line if the word will not fit in the space left. All rabbinic phylacteries are

written on one side of the parchment only. At Qumran, the phylacteries of Group 1 violate these rabbinic laws. Yet the formation of the letters does not adhere to rabbinic law either in the biblical scrolls at Qumran or in the *mezuzot*. So it is possible that the later scribal regulations were not all in force as yet nor widely observed. Then perhaps the Qumran phylacteries represent ordinary Second Temple phylacteries, even those used by Pharisees. Alternately, and more likely, the scribal regulations of the Pharisees were already in place, but the sectarians did not write their manuscripts in accordance with them.

Among the additional passages in some Qumran phylacteries is the Ten Commandments which, according to *Tamid* 5.1, was recited daily in the Temple along with the Shema (*Dt.* 6.4–9 and 11.13–21). The custom of reciting the Ten Commandments along with the Shema in daily morning liturgy is seen by some as reflected in the Nash Papyrus. This manuscript from Fayyum, Egypt, dated to the second century BCE, is a single sheet on which the Ten Commandments are written. It was the oldest biblical text known until the discovery of the Dead Sea Scrolls. The papyrus includes a text of the Ten Commandments, which is in accord with the Septuagint translation and might actually be a part of a phylactery or a *mezuzah* (Eshel, 1991, p. 123 n. 36). Both the Babylonian and Jerusalem Talmuds state that the custom of reciting the Ten Commandments daily was eliminated when sectarians asserted that the Ten Commandments were the only part of the Bible directly revealed to Moses at Mount Sinai (B.T., *Ber.* 12a; P.T., *Ber.* 3c). *Sanhedrin* 11.3 forbids any additional passages in the *tefillin* except for the four prescribed ones. By the time of the manufacture of the Wadi Murabba'at phylacteries, in the early second century CE, Mishnaic prescriptions had become normative, and the Ten Commandments were no longer to be found in phylacteries. Therefore, while the physical aspects of the phylacteries were established by the first century, the contents of the scriptural passages were definitively established only by the second century, and their order remained controversial into the Middle Ages.

On the other hand, the rest of the Qumran phylacteries do reflect the rabbinic instructions with respect to their contents. Another six phylacteries from Qumran, C–F, R, and S (4Q130–133, 4Q145, and 4Q146; Group 2), conform to rabbinic practice in their contents, do not feature Qumran orthography and morphology, and agree with more of the rabbinic scribal practices. In fact, the phylacteries, especially phylactery C, have much in common with phylactery Mur 4 and Se'elim A and B, the texts of which completely accord with Masoretic Text and reflect the order of Rabbenu Tam.

Two more phylacteries, IQ13 and 8Q3, feature a mixture of characteristics. They do not reflect Qumran prac-

rice but neither do they have rabbinic contents. The phylacteries from Cave 8 attempt to reconcile Rashi's and Rabbanu Tam's order. The contents of the phylacteries are written according to Rashi with the addition of *Deuteronomy* 4.6–9 written in a space to the lower left. The phylacteries from Cave 1 have similar scribal habits and textual background to the rabbinic prescriptions. The phylacteries from undetermined caves in the Qumran area (XQ) are not written in the Qumran practice but do not contain only the rabbinically mandated passages.

Therefore, of the phylacteries of Cave 4, Group 1 (Qumran practice, not in accord with rabbinic teachings) are sectarian in nature. Group 2, those which do not reflect Qumran practice and conform to rabbinic contents, probably derived from Pharisaic circles (Tov, 1997).

The small number of phylacteries found at Qumran might be explained by taking into consideration the minimal chances of their survival and the frequency of their use. Compared to later rabbinic *tefillin*, the Qumran specimens are quite small. Due to their fragility, a number of them might have been lost. Their scarcity might also have to do with the extent of the practice of wearing phylacteries. According to rabbinic sources, phylacteries were not originally worn by all Jews, although this practice grew in popularity. The Qumran phylacteries might come from a time before this practice was universally observed. The Babylonian Talmud states in several places that phylacteries were reserved for the *haverim* rather than the *'am ha-'arets*, yet most did not wear them all day. Possibly the requirement of ritual purity while wearing phylacteries was the reason for many not to wear them. The practice was further discouraged by the Hadrianic persecutions.

Mezuzot. The commandment to place *mezuzot* at the door posts is based on *Deuteronomy* 6.9 and 11.20. As in the case of the phylacteries, we cannot determine how widespread was the practice of affixing a *mezuzah* (pl. *mezuzot*) to the door posts of a house or public building. *Letter of Aristeas* 158 mentions the placing of *mezuzot* on door posts, as does Josephus (*Jewish Antiquities* 4.213). It is definite that *mezuzot* were in use in this period because they have been found at Qumran. These early exemplars contain the biblical passages of later *mezuzot*. Fragments of *mezuzot* have been identified at Qumran Cave 4 and designated Mezuzah A–G (4Q149–155). Cave 8 yielded one example: 8Q4.

Deuteronomy 6.4–9 and 11.13–21—the first two paragraphs of the Shema—are always present, as they are in the later rabbinic tradition, but again, as with phylacteries, Qumran *mezuzot* contain additional passages such as *Exodus* 20.1–14 and *Deuteronomy* 6.6–18, the Ten Commandments. The presence of *mezuzot* with additional passages and in plene, sectarian orthography alongside *mezuzot* in accord with Pharisaic regulations demon-

strates that both types of *mezuzot* were in use in Second Temple times.

The finding of phylacteries and *mezuzot* at Qumran prove that more than a century before the destruction of the Second Temple in 70 CE, some Jews already observed these practices. Furthermore, these rituals were becoming increasingly standardized until their customs were fixed in the Pharisaic-Rabbinic system after the destruction.

LAWRENCE H. SCHIFFMAN

PLEA FOR DELIVERANCE. See Psalms Scroll.

PLINY THE ELDER. Gaius Plinius Secundus, or Pliny the Elder (23–79 CE), was a Roman scholar and the author of the prodigious work *Natural History*. Pliny was

born to a wealthy family, which enabled him to study at Rome. When he was twenty-three, he entered into military service, rising to a high rank in the cavalry. Seven years later he returned to Rome and studied law. Later in his life he became procurator in Spain, and then served in various posts under Vespasian. It was as commander of the fleet in the Bay of Naples in 79 CE that Pliny died. He was attempting to get a closer view of the eruption of Mount Vesuvius, but instead succumbed to its poisonous fumes.

Pliny was devoted to study throughout his life. He wrote on various topics, including the use of the javelin, histories of Roman military campaigns in Germany, a history of Rome, and a work on Latin diction. But by far the most important of his works, and the only one to survive, is his *Natural History*, a work consisting of thirty-seven books. The purpose of this work, largely completed in 77 CE, was to study "the nature of things" ("Preface," p. 13). Pliny used a variety of sources for his work, and mentioned more than one hundred of them in Book 1. The remaining books treat cosmology and astronomy (Book 2), physical and historical geography of the world (3–6), zoology (7–11), botany (12–19), medicine and drugs (20–32), and minerals and metals (33–37).

While Pliny's work was used extensively through the Middle Ages as an authoritative text, by the end of the seventeenth century it was rejected by scientists. Pliny often linked together fact and fiction, making unsupported claims and exaggerations. Still, in the wealth of details it preserves about the ancient world and the state of scientific knowledge in Pliny's day, *Natural History* is invaluable.

Pliny mentions the Essenes in the geographical portion of the *Natural History*, where he describes the Syro-Palestine area. He first discusses the region of Judea in general (mentioning its division into ten districts); next he talks extensively about the Jordan River and the Dead Sea; and then speaks of the Essenes "on the west side of the Dead Sea, but out of range of the noxious exhalations of the coast." After a brief paragraph describing the Essenes, Pliny concludes his geographic survey of Judea by speaking of 'Ein-Gedi below them, and then of Masada further south (*Natural History* 5.15 sec. 73).

Pliny's actual discussion of the Essenes adds relatively little to the fuller accounts of Josephus and Philo. He speaks of them in glowing and exaggerated terms: they are "unique" and "remarkable beyond all the other tribes in the whole world." Daily a "throng of newcomers" joins the group; thus, "unbelievable though this may seem, for thousands of centuries a race has existed which is eternal yet into which no one is born." When the account is stripped of its hyperbole, however, it aligns well with those of Josephus and Philo. Pliny says that the Essene

tribe "has no women, and has renounced all sexual desire, has no money, and has only palm-trees for company." Both Philo and Josephus mention that the Essenes did not marry (*Jewish Antiquities* 18.21; *The Jewish War* 2.120; *Hypothetica* 11.14–17), although Josephus also speaks of another group of Essenes that did marry (*The Jewish War* 2.160–161). So the only growth of the group would occur through new members, whose entrance Josephus describes in detail (*The Jewish War* 2.137–142). Furthermore, both Josephus and Philo stress the community of property and frugality of the Essenes (*The Jewish War* 2.122, 2.126; *Jewish Antiquities* 18.20; *Hypothetica* 10.4, 11.11–12; *Every Good Man Is Free* 12.77). Thus, Pliny's account appears to be in basic harmony with those of Josephus and Philo.

It is, instead, the geographical reference by Pliny that is his most important contribution to the study of the Essenes and the possible identification of the Qumran community. As mentioned above, Pliny locates the Essenes on the west side of the Dead Sea, then mentions 'Ein-Gedi below them (*infra hos Engada*), and finally, Masada. He previously mentioned Jericho (in his division of Judea into ten districts), noting its "numerous palm-groves and springs of water" (*Natural History* 5.15.70). It is possible that Pliny meant Jericho instead of Jerusalem, when he says that 'Ein-Gedi is "second only to Jerusalem in the fertility of its land and in its groves of palm-trees" (*Natural History* 5.15.73). In any event, the region Pliny describes seems to line up precisely with the location of Qumran. Pliny notes that the Essenes lived among palm trees, which would fit the region between Qumran and 'Ein-Feshkha, the spring just south of their farm area. There are no other oases in the region capable of sustaining a community other than 'Ein-Feshkha and 'Ein-Gedi. Thus, Pliny is in all probability describing Qumran (eight miles south of Jericho), then 'Ein-Gedi (twenty miles south of Qumran), and finally, Masada (eleven miles south of 'Ein-Gedi). If correct, this would be a strong argument for the identification of the Qumran community as Essene.

Two arguments have been proposed in challenging this identification of Pliny's Essenes with the Qumran area. First, it is argued that *infra hos* does not mean "south" or "downstream," but "below" in altitude. Thus, the reference is not to Qumran, but to a settlement in the mountains overlooking 'Ein-Gedi. There are two problems with this view. First, *infra hos* does mean "downstream" in nine of its seventeen occurrences in Pliny (see Laperrousaz, 1962). Second, despite extensive excavations in the early 1960s, archaeologists have not uncovered a trace of any ruins in the Roman period near 'Ein-Gedi. Recent claims to the contrary have been widely disputed.

A second argument against identifying Pliny's Essenes

with Qumran is that of chronology. Since Pliny's account (completed ca. 77 CE) speaks of the Essene settlement in the present tense, it is believed that Pliny could not have been talking about Qumran, because the site had already been destroyed in 68 CE. But this argument has a number of weaknesses. First, Pliny might not have known at the time he completed his work that Qumran had been destroyed. Second, he might have written the passage in question before 68 CE, and simply not have modified it by the time of his death in 79 CE. And finally, as has already been mentioned, Pliny primarily relied upon sources in writing the *Natural History*. The section in question may have been from one of his (older) sources, rather than original to Pliny himself. Despite these objections, Pliny's geographical discussion remains an important part of the Qumran-Essene identification.

TODD S. BEALL

POETRY. Determining what is and is not poetry among the inscriptional finds of the Judean Desert is not a straightforward task. There are no graphic arrangements of versification, and no colophonic indicators marking a certain text as poetry. The primary method of determination is identifying key words and/or motifs that suggest a genre affiliation similar to the poetic genres in the biblical corpus, and an assessment of the diction as resembling that of biblical Hebrew poetry. Neither of these criteria is unambiguous, leaving the boundaries of this category uncertain.

Poetic Texts at Qumran. Two manuscripts of biblical psalms (11QPsalms^a [11Q5] and 4QPsalms¹ [4Q88]) contain a number of psalms which are not part of the Masoretic Text Psalter. Four of these were previously known in Syriac translation and one is preserved in *Ben Sira*

51.13–19. The remaining psalms (designated *Apostrophe to Zion*, *Hymn to the Creator*, *Plea for Deliverance*, *Apostrophe to Judah*, and an eschatological hymn) appear in these texts for the first time. Two manuscripts, noncanonical Psalms A (4Q380) and noncanonical Psalms B (4Q381), contain poetic compositions similar to the canonical psalms in their prosodic style, though no complete psalm and almost no single poetic line has been preserved in full. Another text of apocryphal psalms (Apocryphal Psalms^a) is too fragmentary for proper poetic assessment.

From Cave I a manuscript of thanksgiving psalms (*hodayot*) was found (1QH^d) consisting of one large piece (eighteen columns) and numerous fragments. A recent reconstruction (É. Puech, "Quelques aspects de la restauration du rouleau des hymnes," *Journal of Jewish Studies* 39 [1988], 38–55) suggests an original of at least twenty-six columns containing an estimated twenty-five psalms. An additional eight copies of these *hodayot* have been recovered, one from Cave 1 (1Q35) and six from Cave 4 (4Q427–432). The poetic character of these *Hodayot* has been the topic of a handful of studies.

A number of wisdom texts have survived, some of which present a diction similar to the biblical Proverbs (4Q184–5, 525). Other texts contain sapiential discourse but are quite fragmentary and therefore difficult to analyze poetically (4Q413, 416–419, 424). A composition from Cave I entitled "Mysteries" (1Q27) is arguably poetry, though the clearest fragment displays only seven full lines of text. On the periphery of the category of poetic compositions are the finds containing prayers or songs possibly associated with a liturgical celebration of some kind: (Liturgical Prayers [1Q34]; Festival Prayers^{a-c} [4Q507–9]; Words of the Luminaries^{a-c} [4Q504–6]; Songs of the Sabbath Sacrifice^a [4Q400]; 11Q17; blessings: curse [4Q280], Berakhot^a [4Q286], Berakhot^b [4Q287]; Barkhi Nafshi^a [4Q434], Barkhi Nafshi^b [4Q436]).

Poetic Features. The study of biblical Hebrew poetry constitutes the basis for examining the poetry of the Judean Desert Scrolls. In the case of the former, poetic discourse is characterized by the sustained presence of parallelism, terseness of expression, and various rhetorical features. Although these elements are not altogether absent from biblical Hebrew prose, their regular and consistent presence across a stretch of text marks it out as "heightened" discourse, which fairly bears the designation *poetry*.

The most conspicuous feature of ancient Hebrew poetry is parallelism, or seconding, in which poetic lines are combined into two- (couplet) or three- (triplet) line units exhibiting various kinds of correspondence between the lines, ranging from repetition or virtual sameness to expansion or continuation. The nature of the correspon-

dence between the lines of a couplet or triplet (also called "bicolon" and "tricolon," respectively) can be described in terms of both the grammatical and semantic dimensions of the language, and may be active at the word and line levels. These cohesive two- or three-line units constitute the basic building blocks of the poetic composition. Once delineated, these blocks can then be combined into larger poetic paragraphs or strophes. Strophes are distinguished on the basis of perceived thematic cohesion and may be accompanied by marked rhetorical features. Poetic analysis, then, consists of exploring the contours of coherence in the poem, from the parallelism displayed in the basic units (couplets and triplets), to the patterning of these units into larger segments (strophes), making sense of the whole on the basis of a close examination of the parts.

Lineation. An initial challenge to analyzing the poetry of the Judean Desert Scrolls is determining the extent of each poetic line. For biblical Hebrew poetry, lineation is based on syntactic considerations (a line of poetry is coterminous with a syntactic juncture) and parallel correspondences, aided by the reading tradition encoded in the Masoretic accentuation. In addition, lines of biblical poetry are roughly the same length, whether "length" is established by counting main grammatical constituents or syllables. In determining the lineation of noncanonical poetry (here, principally, 1QH^a), syntactic features are the main guide, and while line junctures can be fairly established in the majority of cases, uncertainty does exist. Should the expressions "I know" (*'ani yadu'ti* [xx.10 = xi.]) or "I said" (*'ani amarti* [x.27 = ii.25]) be placed on the same poetic line as their following object clauses, or do they constitute a separate line? Should the temporal expressions "all day, continuously" (*kol hay-yom tamid* [xix.8–9; xi.5–6]) be placed with the preceding clause, the following clause, or be split up? Furthermore, lineation based on substantial syntactic breaks may result in lines of considerable length. One poem ends with a series of five elaborate infinitive phrases (xix.13–17 [xi.10–14]). Syntactic criteria would leave them as long lines, but it is also possible to divide them up into couplets by placing the break among the constituents of the phrase. Since lineation has a significant effect on the evaluation of poetic diction and parallelistic correspondence, this becomes an important issue.

Granting these difficulties, two noteworthy features of the *Hodayot* poems are the diversity of line length and the juxtaposing of lines of various lengths. While most lines consist of three or four constituents (roughly 8–12 syllables), there are many comprised of two (5–7 syllables) and some of five or six constituents (13–19 syllables). The presence of these long lines tends to weaken the terseness of the diction and affects the rhythmic nature of the poetry. This is especially so when short and long lines are

placed next to one another (e.g., *va-ani nuh/ki' [hodu']tani besod amittekluth*, "and what am I / that you have instructed me in the secret of your truth," xi.4–6, see also v.34–36). While there may be a perceived rhetorical effect to this variation of line length, it contributes to a more prosaic style of poetry.

Couplets. The combination of two poetic lines to form a basic parallel unit is common in the *Hodayot*. Correspondence between the lines can be close in both the grammatical and semantic domains (*yesodei harim hsrifah / ve-shoreshei hallamish le-nuhalet zefet*, "the foundations of the mountains will become a burning (mass) / and the roots of the flint a stream of pitch," [xi.32 = iii.31; see also viii.11–12, 14–15 = xvi.9–10, 12–13; xix.12–13 = xi.9–10; etc.]), though (nonparticle) word repetition across contiguous lines is surprisingly uncommon. Tight parallelism is particularly conspicuous in the opening strophes in which the writer expresses the reasons for his praise (see x.23–24 [ii.20–21]; xiii.7–8 [v.5–6]; xv.29–30; [vii.26–27]; xix.7 [xi.3]). The feature of ellipsis or gapping, where a term from the first line is to be understood in the second line, is also present in these psalms (*ki' hi'yatsavni vigebul rish'ah / ve-'im helka'im ba-goral*, "for I was placed in the territory of wickedness / and with the evildoers by lot," xi.25–26 [iii.24–25]; see also x.28 [ii.26]; xiii.18 [v.16]; xix.7–8 [xi.4–5]). More commonly, however, the relationship between the lines of a couplet is one of partial correspondence, with terms in one line without a lexically associated term in the other, or paired lines with different syntactic configurations. Especially striking is the number of couplets whose relationship of coherence is purely syntactic in nature; that is, a single clause is spread across two lines with one line being syntactically dependent on the other. In many cases, the second line of the couplet is dependent on the first (for the opposite, see x.30 = [ii.28]; xiii.17–18 [v.15–16]), either as an object clause (ii.25; xi.7), a relative clause (after *asher*, xiii.15 [v.13]), a purpose clause (v.14), an appositional phrase (x.8–9 [v.6–7]), or, most often, an infinitive phrase (xi.22–23, 28–29 [ii.21–22, 27–28]; xiii.13–15 [v.11–12]; xv.35–37 [vii.32–33]). Syntactic dependency effectively loosens the grammatical dimension of parallelism and often reduces the degree of semantic association between the lines as well.

Triplets. A prominent feature of the *Hodayot* is the relatively high percentage of three-line units employed. In both biblical poetry and the non-Masoretic Text psalms of 11QPsalms^a, the couplet is the primary poetic unit with the occasional presence of a triplet. By contrast, some of these noncanonical thanksgiving psalms are dominated by triplets (see xi.20–37 [iii.19–36]; xiii.7–21 [v.5–19]). In certain cases, the three lines manifest a perceptible degree of syntactic and/or semantic equivalence (xiii.14–15

[v.12-13]; xv.31 [vii.28]; xix.7-18 [xi.4-5]). In many other instances, two of the three lines display a closer correspondence to each other than to the third line, and often it is the second and third lines that exhibit a higher degree of parallelism (x.27-29 [ii.25-26]; xiii.11-12 [v.9-10]; xix.6-7, 11-12 [xi.3-4, 8-9; exceptions: xiii.9-10, 13-15 [v.7-8, 11-12]; xix.9-10 [xi.7-8]). In particular, the second and third lines may be comprised of parallel infinitive phrases (xi.22-23, 23-24 [iii.21-22, 22-23]; xv.32-34 [vii.29-31]) or other types of phrases or clauses dependent on an initial main clause line (xiii.9-10, 11-12 [v.7-8, 9-10]). In fact, grammatical subordination is a common feature of the tricolonic units of these poems.

Larger units. While there seem to be relatively few examples of isolated single lines in the Hodayot, there are a number of units consisting of four or five lines which resist division into smaller, more standard units (couplet or triplet). In one *hodayah* (xix.6-17 [xi.3-14]), grammatical and semantic parallelism binds together a series of five verbal clause lines (8-10 [5-7]), a series of five short nominal clause lines (10-11 [7-8]), and a series of five long infinitive phrase lines (13-17 [10-14]). In another (x.22-32 [ii.20-30]), two units of four lines each are juxtaposed, each beginning with the personal pronoun *hemmah* "they" and concluding with a line introduced by *ki* (22-23; 23-25). In column xiii, lines 8-9 (v.6-7), appositional modification generates a four-line unit, and in column xi, lines 30-31 (ii.27-28) the ellipsis of an infinitive construct holds together four consecutive lines. Such large clusters of closely related lines are noticeably absent from the non-Masoretic Text psalms.

The Strophe. One observed feature of the *Hodayot* is the tendency for independent personal pronouns to introduce strophes (see especially x.24, 25, 30, 31 [ii.22, 23, 25, 28, 29]; xi.24 [iii.23]; xix.6, 10 [xi.3, 7]). However, apart from this, and the regular introductory formula for each *hodayah* (*odekhah adonay eli*, "I give you thanks, O Lord / O my God," or *baruch attah adonay*, "Blessed are you, O Lord"), there are no constant strophic features in these psalms, and delineation must be based on thematic considerations and rhetorical elements. In some cases, repetition is a helpful guide; in column xiii, lines 7-21 [v.5-19], for example, the second half of the psalm is punctuated by the repetition of *attah eli* "you, my God," which seems to serve as a strophic marker. Word repetition occurs within larger blocks of text and may function as a coherence-producing *leitmotif* (see the use of *yd'* in xix.10-13 [xi.7-10]). In addition, repeated syntactic features can give unity to a stretch of text: in xi.27-29 [iii.26-28] nine poetic lines constitute an expanded temporal setting signified by three infinitive phrases (*b* + infinitive construct).

Within the manuscript finds of the Judean Desert, the

poetic texts exhibit a range of prosodic styles. The non-Masoretic Text psalms of 11QPsalms^a and some of the other apocryphal psalms (4Q380-381) manifest a prosody similar to that of the canonical psalter, with the predominance of couplets, a relatively high degree of grammatical and semantic correspondence (parallelism), terseness of expression, and rhetorical features. Other poetic texts, principally 1QHodayot^a, display a prosodic style which, while bearing a definite resemblance to the canonical poetic tradition, has drifted toward the prosaic end of the prose-poetry spectrum. The presence of longer poetic lines, the diminished consistency of the couplet and the relatively higher frequency of three- (four- and five-) line units, the conspicuous presence of syntactic dependency, especially the infinitive phrase, are all signals of this drift. While still rooted in the biblical poetic tradition, the prosody of these texts bears its own distinctive character.

DAVID A. DIEWERT

POMPEY. See Rome.

POTTERY has been found in caves and settlements throughout the Judean Desert. Most of the material from Qumran dates to the late Iron Age (late seventh to early sixth centuries BCE) and to the Hasmonean and Herodian periods (late second century BCE to first century CE). It provided much of the basis for Paul Lapp's ceramic typology (Lapp, 1961). Assemblages similar to that from Qum-

ran, mainly from the first century CE, come from 'Ein-Feshkha and 'Ein el-Ghuweir. The only pottery published from Qumran and 'Ein Feshkha is illustrated in Roland de Vaux's preliminary reports, although the pottery from the caves around Qumran was published in final form. No ceramic material is illustrated in de Vaux's field notes, which were recently published by Jean-Baptiste Humbert and Alain Chambon (Humbert and Chambon, 1994), but the numbers of the vessels listed in the locus descriptions can be correlated with those illustrated in de Vaux's preliminary reports. The pottery from 'Ein el-Ghuweir was published by Pesach Bar-Adon. Important comparative evidence for the ceramic material from Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir comes from the nearby site of Herodian Jericho. The Hasmonean and Herodian pottery from Ehud Netzer's excavations at Herodian Jericho, together with a small amount from Masada, provided the basis for an unpublished typology constructed by Rachel Bar-Nathan. The oil lamps constitute the only other ceramic material published from Masada. This article focuses on the pottery types characteristic of Periods Ib and II at Qumran, since little material from Period Ia has been published.

Chronological Outline. De Vaux divided the settlement of the sectarian community at Qumran into three phases, which he called Period Ia (third quarter of the second century BCE), Period Ib (last quarter of the second century BCE to 31 BCE), and Period II (4–1 BCE to 68 CE). According to de Vaux, Qumran was destroyed by an earthquake and a fire in 31 BCE, and was subsequently abandoned for the duration of King Herod the Great's reign, until its reoccupation between 4 and 1 BCE. Based on a reexamination of the stratigraphic and numismatic evidence, it is more likely that the earthquake and fire were not simultaneous, and that Qumran was not abandoned after the earthquake of 31 BCE. Instead, the inhabitants continued to occupy the site until it was destroyed by fire, apparently by human agents, c.9 or 8 BCE or some time thereafter. The site was then abandoned for a period of at least one winter season and perhaps up to several years, until it was reoccupied early in the reign of Herod Archelaus (that is, in 4 BCE or shortly thereafter).

This revised sequence for Qumran means that de Vaux's Period Ib includes at least some pottery types that postdate 31 BCE. It provides a basis for distinguishing between late Hellenistic types, which come from loci abandoned after the earthquake of 31 BCE, and types dating to the time of Herod the Great, which come from loci covered by the ash of the fire of c.9 or 8 BCE. This revision does not affect Period II, which should still be dated from early in the reign of Herod Archelaus up to the Roman destruction in 68 CE. At 'Ein-Feshkha, the main phase of

occupation distinguished by de Vaux is contemporary with Period II at Qumran. De Vaux also found traces of an earlier phase of occupation (Period I), which he equated with Period Ib at Qumran. However, a comparison of the ceramic assemblages reveals that Period I at 'Ein-Feshkha does not antedate 31 BCE. This is supported by the fact that de Vaux found no evidence of damage by the earthquake of 31 BCE at 'Ein-Feshkha. Thus, the settlement at 'Ein-Feshkha was not established before the reign of Herod the Great. A similar picture is obtained from 'Ein el-Ghuweir, where Bar-Adon distinguished two occupation levels, both of which suffered destruction by fire. Again, the vast majority of the pottery is contemporary with Period II at Qumran. Since none of the ceramic and numismatic material antedates the time of Herod the Great, there is no basis for Bar-Adon's correlation of the earlier occupation phase at 'Ein el-Ghuweir with de Vaux's Period Ib at Qumran. Thus, neither of the settlements at 'Ein-Feshkha and 'Ein el-Ghuweir was established before the reign of Herod the Great, while the majority of the ceramic material is contemporary with Period II at Qumran.

The Late Hellenistic Pottery of Qumran. One example of a pre-31 BCE ceramic assemblage at Qumran comes from L89 (the pottery store in the annex to the large room), which contained more than one thousand vessels buried beneath the earthquake collapse. Most are plates, cups, and beakers, many with delicate, eggshell-thin walls and ring bases. The plates and beakers have flaring rims, sometimes with a carinated ridge below. No oil lamps from any definite pre-31 BCE contexts at Qumran are published.

The Pottery at Qumran in the Time of Herod the Great. The most completely published ceramic assemblage from Qumran dating to the time of Herod the Great comes from L130–135 (the open area on the northwestern side of the site with the animal bone deposits). There are round cups and beakers with flaring rims similar to those of pre-31 BCE date. However, none of the plates and beakers has a prominent carinated ridge, and the walls are slightly thicker than the earlier examples. There is also a tendency for the bases to change from ring to disc in form, although this is by no means universal. The cooking pots continue the Hasmonean tradition, with a globular body and a vertical neck with plain rim.

One ceramic type apparently not represented at Qumran is fusiform *unguentaria*. These "spindle bottles" are characteristic of the Hellenistic period to the late first century BCE in Judea. During the late first century BCE and first century CE they were replaced by piriform, or pear-shaped, *unguentaria*. Piriform *unguentaria* are attested in first-century CE contexts at Qumran, 'Ein-Fesh-

kha, and 'Ein el-Ghuweir. According to Bar-Nathan, they first appear at Jericho in contexts dating to the time of Herod the Great, after 30 BCE. The fact that a piriform *unguentarium* is published from a Period I context at 'Ein-Feshkha supports the assignment of the establishment of the settlement to after 31 BCE.

Perhaps the most distinctive type from L130–135 is that of the peculiar oil lamps of Hellenistic inspiration. In fact, L130–135 is the only locus at Qumran from which lamps of this type are published (other examples, described by de Vaux as “Hellenistic lamps” but not published, were found in L40 [lower level], L44, and L74). The other published lamps of this type all come from the caves around Qumran. Thus, this type seems to date specifically to the time of Herod the Great. Jericho and Masada are the only other sites aside from the caves and settlement at Qumran where these lamps have been found. At Jericho, too, they are found in contexts dating to the time of Herod the Great. A parallel of the same date comes from the “Herodian Residence” in Jerusalem, although it differs in being mold-made and slipped. No examples of the mold-made radial or “sunburst” lamps characteristic of Judea in the time of Herod the Great appear in de Vaux’s publications on Qumran, although one is illustrated by Pauline Donceel-Voûte. There are no published examples of the folded, wheel-made (“cornucopia”) lamps common in Judea during the Hasmonean period.

One problematic ceramic assemblage from Qumran comes from L114 (an area next to the large round cistern in the western part of the site). It consists mostly of cups, bowls, and beakers similar to those from L130–135. Because of the presence of three wheel-made, knife-pared (“Herodian”) lamps, de Vaux originally assigned this assemblage to Period II. He later reattributed it to Period Ib, pointing out that the Herodian lamps appear to be rougher in design and earlier than the usual examples of this type. He also noted that this store was covered by a layer of Period II. With the exception of L114, there are no examples of Herodian oil lamps from any of the Period Ib contexts at Qumran. This lends support to a growing body of evidence that this type appeared either late in the reign of Herod the Great or after his death. No examples were found in the Herodian Residence in Jerusalem, while at Jericho these lamps are first attested in contexts dating to the end of Herod’s reign. Their presence indicates that L114 at Qumran might be slightly later in date than the other Period Ib contexts. This possibility is supported by the form of the beakers from this locus, none of which has the ring base still seen on some examples from L130–135. Thus, the pottery store from L114 should perhaps be assigned to the beginning of Period II (end of

first century BCE or early first century CE) instead of to Period Ib.

The Pottery of Qumran in Period II. Most of the pottery from Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir dates to the first century CE. Contemporary assemblages come from sites across Judea that were destroyed by the Romans at the time of the First Jewish Revolt (66–73 CE). The tendency continues for the walls of cups, bowls, and beakers to become slightly thicker, and for them to develop disc or flat bases instead of ring bases. However, the delicate bowls with flaring rims and flat, string-cut bases with painted decoration common in Jerusalem and at Herodion do not appear to be attested at Qumran. Although cooking pots with globular bodies continue, a new type with sharply carinated shoulders and short neck now appears. Other types characteristic of this period include storage jars with an elongated, outward folded rim, piriform *unguentaria*, and Herodian oil lamps.

Scroll jars, which de Vaux more accurately described as “cylindrical jars,” are probably the most distinctive ceramic type found at Qumran. Although he stated that scroll jars were discovered in Period Ib and Period II contexts at Qumran, no definite examples are published from any Period Ib context. On the other hand, de Vaux’s published locus notes and excavation photographs indicate that scroll jars might be represented in contexts dating to the time of Herod the Great in L80 and L120. In addition, Bar-Nathan states that scroll jars first appeared at Jericho during the reign of Herod. However, carinated cooking pots, piriform *unguentaria*, and Herodian oil lamps, which are not definitely attested in any Period Ib context at Qumran, are also reported at Jericho from contexts dating to Herod’s reign. This suggests the possibility that the contexts in which these types first appear at Jericho are slightly later in date (c.9 or 8 BCE) than the end of Period Ib at Qumran. Only the final publication of the pottery from Qumran will make it possible to resolve this issue. In any case, scroll jars are not attested at Qumran or Jericho before 31 BCE.

One of the problems in discussing the distribution and function of scroll jars is defining exactly what is meant by the term. Bar-Nathan uses it broadly to describe a variety of jars with wide mouths. According to this definition, scroll jars have been found at Qumran, Herodian Jericho, Masada, and Quailba. Still, the largest number and variety of scroll jars have been found at Qumran, where they are more common in the caves than in the settlement. At Herodian Jericho, which seems to have the second largest number of these jars, the selection is mostly limited to a large variant with bag-shaped body. According to Bar-Nathan, all the scroll jars from Masada occur in Zealot contexts, dating to the time of the First

Jewish Revolt. I believe that the pattern of distribution and the morphology of the "classic" scroll jars (Bar-Nathan's Type 2B), which are characterized by their long cylindrical bodies, indicate that they were designed to hold scrolls. However, the much larger and smaller variants with bag-shaped or oval bodies found at the sites of Qumran, Herodian Jericho, and Masada were probably put to other uses, as de Vaux suggested. According to Bar-Nathan, at Jericho most of the scroll jars were found in the Herodian industrial area.

The parallels between the ceramic assemblages from Herodian Jericho and Qumran are striking. Bar-Nathan is certainly correct in attributing these parallels to regional distribution patterns. Could they also reflect the presence of the same community? Further, does the appearance of scroll jars in Zealot contexts at Masada support Yigael Yadin's suggestion that members of the Qumran community joined the rebels there after their own settlement fell to the Romans?

Characteristics and Peculiarities of the Pottery from Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir.

Most of the ceramic types found at the site of Qumran consist of cups, bowls, flasks, plates, kraters (deep bowls or basins), cooking pots, jars, jugs, juglets, lids, and oil lamps. The pottery from the caves is identical to that from the settlement, but is more limited in repertoire. The vessels tend to be made of smooth, well-levigated clay and have thin, hard-fired walls. The clay is usually pink, red, or gray in color, and there is often a whitish slip covering the exterior. The potter's workshops discovered by de Vaux indicate that at least some of the vessels were manufactured at the site, although analyses of the fabric have yet to be published. Neutron activation analysis has demonstrated that the vessels from Qumran and 'Ein el-Ghuweir are made from different clays.

How does this corpus compare with contemporary assemblages from other Judean sites? First, there are several ceramic types that are common at Qumran but rare or unattested elsewhere. These include the delicate beakers with flaring rim and ring base of pre-31 BCE Period Ib; the peculiar oil lamps of Period Ib in the time of Herod the Great; and the scroll jars, which date mainly if not exclusively to Period II. Conversely, there are a number of ceramic types found at contemporary sites in Judea that are rare or unattested at Qumran. These include the wheel-made, folded (cornucopia) lamps and fusiform *unguentaria* of the Hasmonean period. However, most conspicuous by their apparent absence at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir are imports of any kind. There are no published examples of Western Terra Sigillata (a fine, red-slipped ware from Italy and Gaul), amphorae (transport containers), or Roman mold-made oil lamps. Although not found in abundance, examples of

these types and other imports such as Pompeian Red Ware are attested from Jerusalem, Herodian Jericho, Herodion, and Masada. Amphorae are also found at the site of Qasr el-Yalud (Khirbet Mazin), located at the point where the Kidron Valley empties into the Dead Sea. The absence of these types from the corpus at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir, combined with their presence at other sites in the area, suggests that the inhabitants could have obtained these items. However, their absence may be due to financial considerations, as they represent luxury imports.

Much more suggestive is the apparent absence or rarity of Eastern Sigillata A from the assemblages at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir. Eastern Sigillata A is a fine, red-slipped tableware that was produced in the eastern Mediterranean during the first century BCE and first century CE. It is much more common at sites in Palestine than is Western Terra Sigillata. Complete sets of Eastern Sigillata A dishes have been discovered in the Herodian houses in the Jewish Quarter. No examples have been published from Qumran, although a few fragments were recovered, according to Jean-Baptiste Humbert. Eastern Sigillata would have been cheaper and easier to obtain than other imports. However, certain bowls from Qumran and 'Ein-Feshkha are clearly imitations of Eastern Sigillata A bowls, but without the red slip. This means that the inhabitants (or potters) at Qumran were not isolated from contemporary ceramic trends in Palestine and the eastern Mediterranean. They apparently preferred to manufacture and use their own imitations of these types.

"Pseudo-Nabatean" ware or "painted Jerusalem bowls" also appear to be unattested at Qumran and 'Ein el-Ghuweir, although one example is published from 'Ein-Feshkha. These are delicate, thin-walled bowls decorated on the interior with red, brown, or black painted floral designs. Scientific analyses have demonstrated that Jerusalem was the center for the production of this ware. Examples of these bowls have been found at sites throughout Judea, including Jerusalem, Herodion, Jericho, and Masada, in contexts dating mainly to the first century CE.

Painted decoration is common on other types of open and closed vessels from Jerusalem in the first century CE. The red or brown paint is usually applied unevenly, with drips, over the rim or base. Sometimes it is found over a whitish slip that, as at Qumran, covers the entire vessel. Painted vessels are found at Herodion and Jericho, but are rare at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir.

The ceramic assemblage from Qumran thus differs from contemporary assemblages in Judea in terms of the types that are represented and those that are not. However, most of the types found at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir are also common at other sites in

Judea. While the fabric of the vessels appears to be local, the forms are paralleled elsewhere. One of the non-Judean types represented at Qumran is that of jars and jugs of buff or cream-colored ware, usually adorned with combed and incised decoration. They have often been misdated to the early Islamic period, but should be associated with the Nabateans. The presence of this ware at Qumran is thus suggestive of contacts with Nabatea, although the better-known painted Nabatean bowls are apparently not represented.

As de Vaux observed, the repertoire of ceramic types represented at Qumran is limited and repetitive. The fact that the types found in the caves are identical in form, fabric, and date to those from the site furthers the argument that the same population occupied and used both locations. The character of the fabric supports de Vaux's assumption that the majority of the vessels were manufactured locally. Local production would also account for the presence of unusual types such as the scroll jars and the peculiar oil lamps. In contrast, the various fine ware types and imports found throughout Judea in the first century BCE and first century CE are either rare or unattested at Qumran, 'Ein-Feshkha, and 'Ein el-Ghuweir. The inhabitants of these settlements apparently preferred to manufacture and use their own ceramic products, many of which are undecorated variants of contemporary Judean types.

Definitive conclusions regarding the chronology of the Qumran pottery and its relationship to neighboring sites must await the final publication of the Period Ib material, which will make it possible to establish a ceramic typology for the reign of Herod the Great. It will also help to resolve the issue of when such types as the scroll jars first appeared, and may provide a basis for determining more precisely when the Qumranian settlement of Herod the Great's time was destroyed, and when the settlements at 'Ein-Feshkha and 'Ein el-Ghuweir were established. The final publication of the pottery may also make it possible to answer some of the questions that have recently been raised regarding the nature of the settlement at Qumran before 31 BCE. For example, Bar-Nathan has noted that imports, including Eastern Sigillata A, are either rare or unattested in the Hasmonean palaces at Jericho, appearing instead during the reign of Herod the Great. Thus, while the rarity or absence of imports and fine wares at Qumran is unusual for a Judean site of the late first century BCE and first century CE, this may not hold true for the pre-31 BCE settlement.

PREFECTS AND PROCURATORS. Officials drawn almost entirely from the second stratum of the Roman governing class, the equestrian order, the prefects and procurators, governed the province of Judea from 6 CE down to the outbreak of the First Jewish Revolt in 66 CE, with one brief interruption between 41 and 44 CE. Until 41 CE, their official designation was *praefectus* ("prefect"). After 44 CE, they went by the name *procurator* ("manager," "agent"). No change of function underlies this shift (not unique to Judea) from a military-sounding title to one with mainly administrative connotations: throughout the period the main duties of the Judean governor were to maintain law and order and to ensure that the taxes imposed by Rome were raised.

For the relationship between these men and the Judean desert sectaries, specific evidence is lacking. It seems inconceivable, however, that one could have been unaware of or indifferent to the other. To the Qumran sectaries, with their strongly held messianic views, the Judean governor would have personified the hated rule of their gentile oppressors, the *Kittim*. [See *Kittim*.] And although they viewed as corrupt the contemporary non-Zadokite Temple establishment, they hardly would have approved of the way in which successive prefects and procurators insisted on maintaining custody over the high priestly vestments and treated the high priesthood itself as an instrument of political control. The governors, for their part, would have been equally aware of sectarian activity in the far-from-remote Judean desert. If Pliny the Elder, writing in Rome, possessed detailed knowledge about the

Essene community near 'Ein-Gedi (*Historia naturalis* 5.73), it is most unlikely that governors on the spot would have been ignorant about such sects. [See 'Ein-Gedi; Essenes; Pliny the Elder.] They also would have known about the itinerant popular preachers who held messianic and nationalist beliefs comparable to those of the Qumran sectaries and the Essenes. The activities of such people became an increasingly frequent source of unrest as the procuratorial period progressed and required constant Roman vigilance [See Rome].

To control their province the governors had several weapons. Fundamental were their powers of life and death over the vast majority of their subjects, that is, all except Roman citizens. Vitally important also were the military forces they could command. Certainly after 44 CE, and probably between 6 and 41 CE too, they had at their immediate disposal six units of locally recruited "auxiliary" soldiers, conservatively estimated at around three thousand men. Drawn mostly from Herod the Great's non-Jewish foundations, the towns of Sebaste and Caesarea, these (mainly infantry) units were stationed principally in the province's two most important cities—Jerusalem and Caesarea. And, for backup forces, there were always the Roman legions of the province of Syria. For whenever the situation in Judea threatened to become unmanageable, the prefect/procurator could appeal to the Roman legate (i.e., the governor) of Syria for military support. [See Syria.]

With regard to individual prefects and procurators, our knowledge is patchy. About the prefects, we are particularly ill informed, their names mostly being incomplete and even their number uncertain. About the three who held office under the emperor Augustus, namely Coponius, Marcus Ambibulus (perhaps Ambivius) and Lucius (?) Annius Rufus, there is no certain information. The first of the emperor Tiberius's two appointees, Valerius Gratus, is almost as shadowy a figure, despite his eleven years as prefect (probably 15–26 CE). Clearly he had problems with the high priests, three of whom he deposed in quick succession early in his governorship, but the nature of those problems is unknown.

With regard to his successor, Pontius Pilate, we are better informed. Jewish writers are critical of him. Philo's allegations against Pilate include venality, lawlessness, and endless savage ferocity. Josephus depicts a provocative and heavy-handed operator: certainly in ordering his troops into Jerusalem bearing standards topped with graven images—a procedure avoided by all previous prefects, in appropriating surplus Temple funds for the construction of an aqueduct, and in roughing up protesters against both those initiatives, Pilate clearly displayed all those characteristics. But from a Roman point of view

probably he seemed an adequate governor. He was conspicuously loyal, as his attempt to dedicate shields in Tiberius's honor in the governor's palace at Jerusalem and his erection in Caesarea of a *Tiberietum* ("building in the emperor's honor") both show. His relations with the Jewish authorities were, for the most part, good. Unlike his predecessor, he experienced no difficulties over the high priesthood: throughout his entire ten-year governorship (probably 26–36 CE), Joseph Caiaphas, Gratus's last appointee as high priest, remained in office. And, crucially, Pilate kept his province quiet. Examples of his enforcement of law and order may be seen in his vigorous policing of Jerusalem and the Temple precinct, incarceration of the rebel Barabbas, and crucifixion of the popular itinerant preacher Jesus of Nazareth, believed by many Jews to be the Messiah.

Ironically it was Pilate's tough law-and-order policy that proved his downfall: his massacre on Gerizim, the Samaritan holy mount, of the massed followers of another popular Moses-like figure led to formal complaints to the legate of Syria, the arrival of the latter in Judea, and Pilate's dismissal. A certain Marcellus was now made interim governor of the province. Whether he was the same man as Marullus, whom Tiberius's successor, the emperor Gaius (nicknamed Caligula), appointed governor of Judea in 37 CE, cannot be determined and does not matter—nothing is recorded about either, the Judean prefects at this point disappearing from the scene. The crisis produced by Gaius's attempt to have a statue of himself installed in the Temple at Jerusalem was too serious to be left to such junior officials and was handled entirely by the Syrian legate.

In 44 CE, following a three-year experiment with renewed Herodian royal rule in Judea, equestrian governors returned. The province was larger than hitherto and the populace less amenable to Roman rule. Gaius's behavior had made the Jews morbidly suspicious of Rome's intentions, and the termination of Herodian rule caused immense disappointment—Herod Agrippa I had been a popular monarch. People seeking to exploit popular discontent, itself exacerbated by famine and economic decline from the mid-40s onward, easily won a wide following. The task facing the governors sent out by the emperors Claudius and Nero over the next twenty years was, therefore, not easy. To judge by the contemporary historian Josephus, few, apart from the earliest, coped well. During the middle procuratorial period (48–62 CE), Judea became increasingly ungovernable and under the last two governors altogether so.

The first two procurators, Cuspius Fadus (44–c.46 CE) and the able Jewish apostate Tiberius Julius Alexander (c.46–48 CE), later to become prefect of Egypt and a key

figure in Flavian Rome, did enforce the law. Those who disturbed the peace of the province were hunted down and exterminated. This early phase of the procuratorial period is notable for the appearance of the first of those men whom Josephus regularly calls "impostors" or "false prophets." They were people who whipped up large popular followings by promising to work miracles and deliver the Jews from the Romans. During Fadus's governorship, a certain Theudas turned up in the Jordan Valley, promising to part the waters of the Jordan and lead his followers over to the desert on the other side. Before he could perform that miracle, however, Fadus's cavalry routed Theudas's followers and cut off his head.

Under Ventidius Cumanus (48–c.52 CE), the effectiveness of Roman rule in Judea declined. A serious indiscipline prevailed among his troops. Ventidius's own behavior, alternately negligent and overreactive, only served to increase intercommunal tensions. Serious fighting broke out between Jews and Samaritans in Samaria, the upshot of which was the intervention of the Syrian legate, the dismissal of Ventidius, and his trial and condemnation in Rome. When the powerful freedman and imperial favorite Marcus (?) Antonius Felix took over the province from Cumanus around 52 CE, the security situation was already serious. By the end of his long governorship (c.60 CE), it was dire, despite his best efforts to restore law and order. Symptomatic of the alienation of the Jews from Roman rule by this time was the plethora of "bandits," political activists, and "impostors" with whom Felix had to deal. The most serious of these was the so-called Egyptian—a prophet in the Theudas tradition, who, promising miracles and national redemption, amassed in the desert a following several thousand strong. Felix's massacre of the Egyptian's followers proved to be no deterrent. Yet another desert "impostor" was to trouble Felix's successor, Porcius Festus (c.60–62 CE).

With Festus's sudden death in office, Judea lapsed into anarchy, which the last two procurators, Luceius (?) Albinus (62–64 CE) and Gessius Florus (64–66 CE), never succeeded wholly in reversing. Nor, this time, could the Syrian legate Cestius Gallus retrieve the situation. A special commander (the future emperor Vespasian) had to be appointed by Rome and a full-scale war fought before peace could be imposed upon the province.

PRIESTS. There is a broad consensus that the Qumran community was founded by a group of priests that broke away from the Temple cult in Jerusalem, that it was governed by priests, and that it anticipated an eschatological age that would be inaugurated, in part, by a priestly messiah and in which priests would play the central role (Cross, 1995; Hauer, 1959; Milik, 1959; Schiffman, 1994; VanderKam, 1994). A survey of the testimony of the scrolls regarding the priesthood that critically reviews this consensus follows.

Terms for Priests in the Dead Sea Scrolls. Numerous references in the scrolls to priests under various titles illustrate the community's intense interest in the priesthood; they also underscore the ambiguity of the evidence.

The title *kohen* ("priest") appears approximately three hundred times in the scrolls, in sectarian rule books, biblical interpretations, apocalyptic works, legal documents, and even in mystery and wisdom compositions (e.g., Mysteries^a, 4Q299 63.3, 75.6; Sapiential Work B, 4Q419 1.3). Besides evincing the community's interest in priestly matters, appearances of the term *kohen* in nonsectarian works underscore the community's negative attitude toward the Jerusalem priesthood's practice (Pseudo-Moses^b, 4Q387a 3.iii.6; Pseudo-Moses^c, 4Q390 1–2) and its interest in linking an ideal priesthood to Levi and his immediate descendants (Aramaic Levi^d, 4Q213–214a; Testament of Qahat, 4Q542; Visions of Amram^e, 4Q543–548; Pseudo-Jubilees^f, 4Q225 2.ii.11–12; Pseudo-Jubilees^g, 4Q226 7.4). *Kohen* is also used in sectarian texts that refer to the Jerusalem priesthood as religiously and morally corrupt (Peshar Habakkuk, 1QP Hab ix.4; Peshar Micah, 1Q14 11.1; Peshar Nahum, 4Q169 3–4.i.11, 3–4.ii.9). Unexpectedly, though, the occurrences of the term in sectarian texts support the consensus view regarding the role of priests at Qumran in only two respects: it is clear that priests assumed a leading role in community life and were responsible for much of its governance (Rule of the Community from Qumran Cave 1, hereafter, 1QRule of the Community, 1QS vi.4–5, 8; Damascus Document, CD ix.13, 15; xiii.2–3; xiv.3, 5), and they were to have a similarly elevated place in the anticipated new age (Rule of the Congregation, 1Q28a i.16, 24, ii.3, 12–13). However, the scrolls do not unequivocally describe priests as community founders. For instance, although the discussion of what appears to be a founding group of three priests and twelve laymen in 1QRule of the Community (1QS viii.1) indicates a priestly role in the community's beginnings, the priests are in the minority; and even though the Aaronides of this founding group control aspects of the group's life (1QS ix.7), the highest authority, the *maskil* ("Master"), was probably a layman (1QS ix.12).

The title *ha-kohen ha-gadol* ("high priest") and its con-

geners appear nearly twenty times in the scrolls, generally referring to the chief priest of the eschatological age or of a restored temple. In the War Scroll (1QM) a chief priest directs the priests committed to battle. Temple Scroll^a mentions the high priest in connection with his ordination (11Q19 xv.15, xvi.1), the Festival of the Wood (11Q19 xxiii.9), and Yom Kippur (11Q19 xxv.16, xxiii.6). An anointed priest appears in the Apocryphon of Moses B^a (4Q375 1.1.9) and the Apocryphon of Moses B^b (4Q376 1.1.1) as the judge of true prophecy. Some scholars treat occurrences of the simple title *ha-kohen* ("the priest") in the Rule of the Congregation (1Q28a ii.12–13, 19) as references to an eschatological high priest; Hartmut Stegemann (1990) asserts that the designation of the Teacher of Righteousness by the same title indicates that he was the high priest of the Intersacerdotium. Michael Wise (1990) has demonstrated that biblical, numismatic, and inscriptional evidence regarding the term *the priest* undermines Stegemann's suggestion. The War Scroll (1QM ii.1–5) lists as the deputy of the high priest a *mushneh*; this figure probably parallels the rabbinic *sagan* (B.T., *Yoma* 39a).

Descriptions of the priests of Qumran as *benei Tsadoq* ("Zadokites") are commonplace; for this reason many scholars assume that they were responsible for founding and governing the community (Cross, 1995; Gärtner, 1965; Hauer, 1959; Milik, 1959; Schiffman, 1994; Schürer, 1979). There are a few references to Zadokites that neither support nor undermine that view (see the *midrash* on Ezek. 44.15 in CD iii.20–iv.4; see also Peshar Isaiah^c, 4Q163 22.3; Florilegium, 4Q174 1–iii.i.17; Rule of the Blessings, 1Q28b iii.22), and it is true that 1QRule of the Community (1QS v.2, 9) and the Rule of the Congregation (1Q28a i.2, 24; ii.3) do name Zadokites as the ruling figures of the community, both in this age and in the one to come. Nevertheless, Damascus Document^a (4Q266 6.i.14) and 1QRule of the Community (1QS ix.14) limit the Zadokites' power, requiring them to submit to the judgment of the Master. More significantly, the occurrences of the term *benei Tsadoq* in the manuscripts of the Rule of the Community undercut the claim that the Zadokites were the community's founders and its governors from the beginning. Although 1QRule of the Community (1QS v.2, 9) indicates that Zadokites did govern community life (but in cooperation with the "multitude of the men of the community"), the corresponding passages in Rule of the Community^b (4Q256) and Rule of the Community^d (4Q258)—an earlier recension of the Rule of the Community than the one available in Qumran Cave 1 (1QS)—omit Zadokites, giving authority instead to *ha-rabbim* ("the many"). Further, casting doubt on the notion that the title *Zadokite* has to do with priestly lineage at all is the fact that it is used interchangeably with the

title *Aaronide* (cf. IQS v.2, 4, 8–9; ix.7; see also 1Q28a i.23–24; 4Q266 o.i.14, o.ii.5, 8, 10, 12).

Meanwhile, nearly thirty times the Dead Sea Scrolls designate priests with the typical postexilic title *benei Aharon* (“Aaronides” or “descendants of Aaron”). The name Aaron alone is used on occasion to designate part of the community as priestly (IQS v.6, vii.9, xi.6), and several times his name appears in conjunction with Levi’s to refer to the tribe from which priests arise (CD x.5; 1QM v.1). As already noted, the title *Aaronides* is used interchangeably with *Zadokites*, but generally in sectarian texts it distinguishes priests from other community members: in the Rule of the Congregation (1Q28a i.16, 23), the War Scroll (1QM vii.10), and throughout Temple Scroll^a (11Q19), the title sets priests apart from Levites; it distinguishes priests from the laity in 1QRule of the Community (IQS ix.7), where Aaronides wield absolute power over the life of the community; and in Miqtsat Ma’asei ha-Torah^d (4Q394 1–2.iv.8), the Aaronides are called the most holy while Israel (the laity) is only holy (IQS viii.5–6). Yet, in 1QRule of the Community (IQS v.21), Aaronides share power with the laity; in the Rule of the Congregation (1Q28a ii.13), they stand under the authority of a single priest who may be messianic in character; and like *Zadokites* they are subject to the Master’s judgment (IQS ix.14; 4Q266 o.i.15, o.ii.5, 8, 10, 12). In nonsectarian texts the title appears infrequently, the most notable occurrence being in Pseudo-Moses^e (4Q390 1.1–2), where Aaronides—presumably the Jerusalem Temple priests—are denigrated for their apostasy.

There are nearly one hundred references to *benei Levi* (“Levites”) in the scrolls. Levites are often elevated above their traditionally lower status vis-à-vis the priests, and at times their privileges even transcend those granted the priests. For example, Temple Scroll^a (11Q19 xxi.1, xxii.10–12, lx.6–7) gives Levites more generous portions from the offerings than those provided for the priests, and (in 11QT xliv.5, 14) they are granted more quarters in the Temple than are the priests. More often, they are elevated over their second-class status becoming equivalent to the priests (11Q19 lvii.12, lx.12, 14, lxi.8; 1QM xiii.1, xviii.5–6; War Scroll^b, 4Q491 1–3, 9; War Scroll^c, 4Q493 9–10; CD xiii.3; IQS i.18–19, ii.11; New Jerusalem from Qumran Cave 11, 11Q18 30.2). In still other passages Levites are maintained in their biblically mandated role as second to priests in rank and privilege (11Q19 xxi.4, xxii.4, lviii.13, lx.7–11; 1QM ii.2, vii.14–16, viii.9, xv.4, xvi.7; CD xiv.4–5; IQS ii.20). But when they are mentioned in relationship to the other eleven tribes, Levites consistently are privileged (11Q19 xxiii.9–10, xxiv.11, xxxix.12, xl.14–15; Reworked Pentateuch^c 4Q365 23.10). Meanwhile, in a number of nonsectarian works, Levi is the progenitor of all priests and is often exalted as a fig-

ure of priestly wisdom, good judgment, and purity: Pseudo-Jubilees^a (4Q225 2.ii.11–12) and Pseudo-Jubilees^b (4Q226 7.4) list Levi along with Abraham, Isaac, and Jacob in what is certainly a priestly genealogy; in Psalms of Joshua^b (4Q379 1.5), Levi is the first of Jacob’s sons listed in a passage based on *Deuteronomy* 33; the Rule (5Q13 2.7) describes Levi as set apart for special service; Testimonia (4Q175 14–20) expresses Levitical messianic sentiment; and Aramaic Levi (1Q21, 4Q213–214a) exalts Levi as the archetypal priestly figure, while Testament of Qahat (4Q542) and Visions of Amram^{a-17} (4Q543–548) extend that tradition. Indeed, it seems possible that the priestly messianism of Qumran had substantial roots in this tradition (VanderKam, 1988).

Priests and Named Figures in the Dead Sea Scrolls. Because of the importance of priests for the Qumran community, it is probable that some named figures in the scrolls were priests. Peshar Psalms^d (4Q171 3.15) states the priestly identity of the Teacher of Righteousness; Peshar Habakkuk (1QpHab ii.8–9, vii.4–5) describes a priest and the Teacher of Righteousness in the same way. Some scholars, like Stegemann, believe that the Teacher was a deposed high priest while others, like Wise, maintain there is insufficient evidence for that claim.

The Wicked Priest appears in Peshar Habakkuk (1QpHab i.13; viii.8, 16; ix.9, 16; xi.4, 12; xii.2, 8), Peshar Isaiah^e (4Q163 30.3), and Peshar Psalms^a (4Q171 3–10.iv.8). The issue here is which priestly historical figure he was. Nominees include figures from Alcimus to Alexander Jannaeus, while some (van der Woude, 1982; Garcia Martínez, 1988) think specific occurrences of the term correspond to the succession of Hasmonean priest-kings. Timothy Lim (1993) challenges the precision of that hypothesis without denying that uses of the title may refer to more than one person.

Although the *mevaqer* (“Overseer”) is never explicitly identified as a priest, many scholars think he must have been one. The duties assigned him are like those of a priest at Qumran: he judges disputes (CD ix.17–22, xiv.11–12), instructs the community in God’s deeds (CD xiii.8), passes judgment on new initiates (CD xiii.11–12), and instructs the priest in cases of confusion over the law (CD xi.5–6). Moreover, the appearance of the *mevaqer* in the Rule (5Q13 4.1) after the mention of Levi and Levites in fragment 2 might indicate that he was a Levitical priest.

The *paqid* (“Appointed One”) is a priest according to the broken text of Berakhot^d (4Q289 1.4). He is also the examiner of the neophyte in 1QRule of the Community (IQS vi.14), while the Damascus Document (CD xiv.6–8) assigns the same responsibility to a priest who is appointed (*paqid*) at the head of the Manv. Consequently, although it seems likely that the *paqid* was a priest, so little

else is written about him that nothing further can be concluded from this observation.

It is difficult to be certain that the Master (*maskil*) was a priest, and if he was, what significance should be attached to his identification. His role as teacher and guardian of the law of the community (1QS iii.13–15, ix.12–14) and his function as the judge of people's suitability for community life (1QS ix.14; see also 4Q266 6.i.15) remind one of the Qumran priests. Yet his function is mostly to educate and maintain the division between the Sons of Light and the Sons of Darkness. So even though he assumes the priestly role of blessing in the Rule of the Blessings (1Q28b i.1), it is best to reserve judgment regarding his priestly status.

The title *Messiah of Aaron* refers to an eschatological priest. It does not occur, however, in isolation, but as *meshiah Aharon ve-yisra'el* ("Messiah of Aaron and Israel", 1QS ix.9–11; CD xii.22–13.1; xiv.18–19; xix.10–11; xix.33–xx.1; 1Q28a ii.11–15, 17–22; see also 4Q375 1.i.9; 4Q376 1.i.1, 1.iii.1) Because the title appears with the construct plural *meshihei* ("messiahs") only in 1QRule of the Community (1QS ix.11), there is some question whether it refers not to two messiahs but to a single messianic figure (Abegg, 1995). However, syntax permits the singular *messtah* before the following two names to refer to two figures, and where a Davidic messiah is mentioned with a priestly partner, the priest is always superior to the kingly messiah and is thus in practice a messiah too (see, for example, 1Q28a ii.11–14; 1Q28b; Peshier Isaiah^a 4Q161 8–10.17–24; War Rule 4Q285 5.4–5; and 11QT19 lviii.19 [Collins, 1995]). So, on the whole, although the ambiguity of the evidence (especially that preserved in the differing manuscripts of the Damascus Document from the Cairo Genizah) has led some, such as George Brooke and J. Starcky, to posit theories of messianic development at Qumran in which the community expected only one or the other of the two messiahs, it seems likely that the community almost always anticipated two messiahs together, with the ascendant one being a priest.

The title *doresh hu-Torah* ("Interpreter of the Law") occurs in the Florilegium (4Q174 1–2.i.11–12), the Damascus Document (CD vi.7, vii.18), and perhaps in the Commentary on Genesis A (4Q252 5.5). Apart from the Damascus Document (CD vi.7), the references are to an eschatological priest paired with a future Davidide, just as the Messiah of Aaron and the Messiah of Israel appear together. Aaronic Text A (Aramaic Levi^d? 4Q541 9.i) may provide additional evidence that the Interpreter of the Law was the eschatological priest since it appears to some that the text deals with a future priest to whom is assigned the task of interpreting the law (Collins, 1995).

Function of Priests in Community Life. During the Second Temple period, priests filled a variety of roles:

they led the community in prayer, interpreted the law, judged disputes, controlled communal wealth and affairs, and made sacrifice for the laity (Schürer, 1979). The evidence indicates that the priests of Qumran filled all these roles except that of performing sacrifices, and they looked forward to fulfilling that function, too, in the eschatological age, an age that one of their own would inaugurate.

Priests were prominent in community ceremonies; they pronounced blessings, announced God's deeds, and cursed the wicked (1QS i.18, 21; ii.1, 11); they blessed food (1QS vi.5; 1Q28a ii.19); and they ceremonially dismissed errant community members (4Q266 18.v.8). In the eschatological battle they were to serve as sacerdotal combatants (see especially 1QM xiii.1–xiv.16). According to *Miqsat Ma'asei ha-Torah^a* (4Q394 3–7.ii.1; parallel to *Miqsat Ma'asei ha-Torah^b* 4Q395 1.11); Purification Rules B^b (4Q276 1.9), and Purification Rules B^c (4Q277 1.3, 6, 9), priests had some role in the preparation and sprinkling of the water of cleansing from the red heifer rite.

Priests also taught and interpreted the law as it was defined by the community. The Damascus Document (CD xiii.2; xiv.6–8) states that a priest learned in the "Book of Hagu" is required for understanding of the law. The Rule of the Community (1QS v.9–10) requires that priests teach the law to all under their authority; where ten are gathered, a priest should guide them (1QS vi.6); before the eschatological battle the priests should instruct the people in God's assistance in making war (1QM x.2–5, xv.6–11); and according to Peshier Habakkuk (1QpHab ii.8–9), the Teacher of Righteousness as priest interprets the words of the prophets.

The priests of Qumran had a variety of adjudicatory roles. For instance, they judged the acceptability of neophytes (1QS v.21, vi.19, ix.7), and they determined the status of the leper (CD xiii.5; 4Q266 9.i.13 and parallels). The Damascus Document (CD x.4–6) requires that the community's judicial body be composed of ten men, four of whom must be priests (cf. Ordinances^a, 4Q159 2–4.4, where ten men and two priests are required).

The Rule of the Community (1QS v.2, 9, 21; viii.1; ix.7) and the Damascus Document (CD x.5, xiii.3, xiv.6) indicate that priests governed the community, although in cooperation with laity. Their ascendancy is implied by their privileged place in community gatherings (1QS vi.8; 1Q28a i.2; ii.3, 12–13; CD xiv 3, 6; 4Q270 11.i.16) Priests also had oversight of community wealth (e.g. 1QS ix.7–8; CD ix.13, 15). In this regard one wonders how priests maintained such authority in the absence of the Temple and its prerogatives. Carol Newsom (1990) suggests that participation in the liturgy of Songs of the Sabbath Sacrifice (4Q400–407) reminded the community of the priest-

hood's ascendancy in God's plan and so provided liturgical legitimation to priestly claims of superiority at Qumran.

It seems unlikely that priests offered sacrifices at Qumran, notwithstanding the conflicting testimony of Josephus (*Jewish Antiquities* 18.1.5) and Philo (*That Every Good Man Is Free* 75), the scant positive archaeological evidence, and Frank Moore Cross's strong defense of the notion. Although it is true that the Damascus Document (CD ix.14, xi.17–xii.2, xvi.13–16) may indicate that community adherents sent sacrifices to the Temple or even dedicated offerings to Temple priests, that Damascus Document¹ (4Q266 b.ii; parallel to Damascus Document², 4Q268 4.iii) lists priestly disqualifications that imply priests had sacrificial obligations, and that calendrical documents from Cave 4 at Qumran imagine a world in which priestly courses are observed, one cannot deny that 1QRule of the Community (1QS ix.4–5) unequivocally states that prayer and praise replaced sacrifice at Qumran. As for the evidence that the rite of the red heifer was observed at Qumran (1QS iii.1–12; 4Q395 3–7.ii.1; 4Q276 1; 4Q277 1), John Bowman (1958) notes that the rite itself is not sacrificial, and so its possible practice at Qumran does not mean that priests offered sacrifices there. It is clear that in the new age the community anticipated a restoration of priestly sacrifice (4Q174 1–3; 1QM ii.5–6; New Jerusalem from Qumran Cave 2, 2Q24 4.11–18). [See Sacrifice.]

Priests also figured prominently in the community's eschatological imagination. Not only would the priests inaugurate the new age, they would also serve in all the roles just described above, have highest authority, and have sacrificial responsibilities restored to them (1Q28a i.2, 16, 23; ii.12–13; 1QpHab ii.8; 4Q491 5.5).

Significance of Priests for the Qumran Community.

Some suggest that the Qumran community understood itself as an entirely priestly community, a replacement for the Temple cult: one can cite the community's atoning function (1QS v.1–7), its self-designation as holy (1QS viii.5–6, 8; ix.6; x.4), priestly (1QS v.6, viii.9, ix.6; CD iii.18–iv.4; 4Q174 1.3–4), and destined to be like the heavenly angels (1QS xi.8; 1Q28b iii.25–26, iv.24–26; 4Q174 1.4), as well as its adoption of priestly rules for purity (1QS v.13, vi.16–17; 1Q28a ii 3–10; CD xv.15–17) and age of service (1Q28a i.8–17; CD x.6–8). Yet the evidence surveyed above shows that the community distinguished between priests and laity; the use of titles, the assignment of tasks and authority, and the division of the community into Israel (holy) and Aaron (holy of holies) demonstrate the separation of the two classes.

Regarding priestly descent at Qumran, Daniel Schwartz (1990) insists that the title *Zadokite* asserts the proper lineage of the Qumran priests over the improper lineage of

the Hasmonean high priests who claimed Aaronide descent through Jehoiarib (*1 Chr.* 24.7, *1 Mc.* 2.1). Jacob Liver (1967) says that although the priests of Qumran may have been Zadokites, their lineage was not the reason for the community's separation from the Hasmoneans; there is no polemic against Hasmonean descent in the scrolls, and the use of the term *Aaronide* as a priestly title indicates the coexistence at Qumran of priests from various lines. Joseph Baumgarten (1979) notes the infrequency of the title *Zadokite* in Second Temple literature (*Ezek.* 40.46, 43.19, 44.15, 48.11; *Sir.* 51.12) and contends that the term does not pertain to priestly lineage but reflects the community's concept of its priesthood as more righteous than others. Inasmuch as the titles *Zadokite* and *Aaronide* were used interchangeably, Baumgarten's view may be the most plausible. At any rate, the conflicting evidence regarding the lineage of the Qumran priests permits little to be said on the topic with any confidence.

That the biblical division between priests and Levites was maintained at Qumran appears to be accurate, although the community occasionally elevated Levites above their biblically mandated status as second to the priests (Milgrom, 1978) and took interest in works that exalted Levi as the progenitor of a proper priesthood. The community's fondness for traditions that elevated an oppressed priestly class (see above) is rooted in the community's identity as a protest group vis-à-vis the Temple and its clergy (Kugler, 1997). The elevation of Levi is evident in other works of the Second Temple era, such as the *Testaments of the Twelve Patriarchs* and *Jubilees*.

The consensus that the community was critical of the Jerusalem priesthood is supported by the textual evidence and is also not unusual in the period (see, for instance, the *Testament of Levi* 17–18; *Psalms of Solomon* 1.7–8, 2.3–4, 8.12–14, 16.18–19). The question is whether the community rejected the validity of the Jerusalem priests and their leader or whether they objected only to their practices. Since the Dead Sea Scrolls never question the legitimacy of the priests—even of the Wicked Priest—it seems that practice was the point of contention, in particular, the priests' ethical behavior, ritual laxity, and personal apostasy (Hauer, 1959); see, for example, the condemnation of behavior of the Jerusalem priesthood in Pseudo-Moses^b (4Q387a 3.iii.6; Peshar Habakkuk (1QpHab ix.4), and Peshar Micah₁ (1Q14 11.1). [See Calendars and Mishmarot.]

The oft-stated view that the Qumran community was founded by Zadokite priests who had withdrawn from the Temple because of Hasmonean seizure of the high priest's office is undermined by the evidence adduced above. The equivocal nature of the texts describing the community's origins (CD 1; 1QS viii–ix), the absence of any references to Zadokites in the earliest recension of

the Rule of the Community (Kugler, 1996), and the inconsistent use of the title *Zadokite* require that this view be reassessed. It now seems possible that the community developed from the withdrawal from the Temple of a pious group dominated by laity because of the impure priesthood; only later did the community give full authority to similarly disaffected priests whom they called either Aaronides, Zadokites, or simply priests. But one must also admit to the possibility that the late introduction of the title was not matched by a corresponding influx of priests, but merely reflects the community's late, idealized view of how a proper priesthood should be defined as a matter of character and lineage.

Whatever the nature of the community's origins, the consensus that priests came to play important roles in community life survives in light of the evidence. Yet the texts also indicate that the community as a whole assimilated priestly tasks and characteristics. This also raises the possibility that the community was at one time a largely lay group that was disenchaned with the Jerusalem Temple and its priesthood, and that saw itself as a replacement for the apostate Temple leadership until proper priests could take charge.

Although there may be some evidence for theories of a developmental history of the two-messiahs doctrine at Qumran (Brooke, 1991; Starcky, 1963), the idea that the community probably all along expected two messiahs is well supported by the evidence of the scrolls (Collins, 1995). At any rate, there is little reason to doubt that the community was ever without priestly messianic expectations. The seeds for priestly messianism had been sown at least as early as the Persian period; an "anointed priest" appears in *Leviticus* (Lv. 4.3, 5, 16; 6.15); *Zechariah* (Zec. 6.9-14) elevated the priest above the royal figure; and Persian imperial policy gave priests ruling authority. As for the preeminent role imagined by the community for priests in the new age, that has never been disputed and remains certain in light of the evidence [See Messiahs].

ROBERT A. KUGLER

PRINCE OF THE CONGREGATION. The phrase "Prince of the (whole) Congregation" (*nasi [kol] ha-'edah*) occurs some ten times in the Dead Sea Scrolls (CD vii.19–20; 1QSb v.20; 1QM v.1; 4Q161 2–6.ii.19; 4Q266 3.iv.9; 4Q285 4.2, 6; 5.4; 6.2; 4Q376 1.iii.1), nine times if allowance is made for overlapping texts. Four other references to *nasi* probably refer to this personage: the isolated reading "to the Prince" in the Apocryphon of Moses B¹ (4Q376

1.iii.3, which probably refers to the *nasi* mentioned in 1.iii.1); the "prince of the myriad" in the War Scroll (1QM iii.16), who is distinct from the lower-ranking tribal chieftains; and the fragmentary and partially superscripted twin references in War Scroll¹ (4Q496 10.3–4: "the [great standard of the Prince who heads [. . .] and they shall write] 'People [of God] and the name of Isra[e]l and] Aaro[n] and [the name of] the Prince" [cf. 1QM v.1]). Two other *nasi* texts could be mentioned, but they probably do not refer to the Prince of the Congregation. The first is the "Prince of holiness" in Songs of the Sabbath Sacrifice^b (4Q401 23.1; probably a reference to Melchizedek as fragments 11 and 22 seem to suggest), while the second is found in a fragmentary line in Sapiential Work A^c that reads, "first of the fathers [. . .] and prince of your people" (4Q423 5.3). Here we may have a reference to Moses.

Derivation of the Epithet. The word *nasi* occurs some 134 times in the Hebrew scriptures (thirty-seven times in *Ezekiel* alone). The messianic epithet *Prince* is probably derived from *Ezekiel*, a prophetic book that is manifestly pro-Zadokite (*Ezek.* 40.46, 44.15; cf. 1Q28b iii.22–23). *Ezekiel* speaks of a coming prince (*nasi*) who will shepherd Israel faithfully: "My servant David, a prince among them" (34.24); "My servant David shall be their prince forever" (37.25). In the Targum both of these passages read "king" instead of "prince," probably as part of a messianizing tendency. In contrast, the designation "the whole congregation" reflects language frequently found in the Pentateuch, for example, "Speak to the whole congregation [*kol 'edah*] of Israel" (*Ex.* 12.3; cf. *Ex.* 12.47, 16.1–2, 16.9, *passim*). The plural "princes of the congregation" also occurs several times in the Hexateuch (e.g., *Ex.* 16.22, 34.31, *Num.* 4.34, 16.2, 31.13, 32.2, *Jos.* 9.15, 9.18, 22.30). However, the singular "prince of the congregation" does not occur in Hebrew scripture—Qumran's singular "Prince" appears to be an innovation.

Thus, a text such as *Numbers* 27.16–17 ("Let the Lord appoint a man over the congregation [*'edah*] . . . that they may not be as sheep without a shepherd") provides a bridge between the congregation frequently mentioned in the Pentateuch and Ezekiel's hope for a prince who will prove to be a caring shepherd of God's flock (cf. 4Q504 1–2 iv.5–8). The prophet criticizes Israel's shepherds who plunder and oppress the sheep (for example, *Ezek.* 34.1–19) and promises that God will set up "one shepherd," his "servant David," who will feed the sheep (*Ezek.* 34.23). The two kingdoms will be reunited under the one shepherd David, who will be king over them (*Ezek.* 37.24).

Ezekiel's portrait of the prince who will faithfully observe the cultus (Temple worship, sacrifice, etc.) and not infringe in any way upon the prerogatives of the high priest (*Ezek.* 44.3, 45.17, 45.22–25, 46.2–8, 46.10, 46.12–15) probably also contributed to Qumran's expectation of

the appearance of the "Messiah of Israel" who would serve alongside the priest (cf. 1Q28a ii.11-21). Thus, Qumran's concept of the expected Prince of the Congregation appears to draw on the prophetic anticipation of a coming prince from the line of David and on an idealized portrait of the wilderness congregation.

In this connection it is noteworthy that some of the coins and papyri associated with Bar Kokhba and the revolt he led (c.132-135 CE) designate him as the "Prince of Israel" (*nesi yisra'el*). He, too, was regarded by some as a messiah (cf. *Nm.* 24.17). [See Bar Kokhba Shimon.]

Identification of the Prince. The Prince of the Congregation is identified as the "rod that is risen from Israel" (CD vii.19-20 = 4Q266 3.iv.9; cf. *Nm.* 24.17; 1QM xi.6; 4Q175 12). In the War Rule he is identified as the "branch of David" (4Q285 5.4). This identification is probably presupposed in Peshier Isaiah' (cf. 4Q161 2-6.ii.19; 7-10.iii.22). Several "branch" passages in the Old Testament are interpreted messianically in the Targum (cf. Targum on *Jer.* 23.5, 33.15; Targum on *Zec.* 3 8; 6.12). This interpretive tendency is fundamental, as seen in the Commentary on Genesis A (4Q252 1.v.3-4), where "Branch of David" is identified as the "Messiah of righteousness" (cf. *Jer.* 23.5, 33.15; *Ps. Sol.* 17.32, which speaks of a "righteous king . . . who shall be the Lord Messiah"), and in the Florilegium (4Q174 1-3.i.11), where the "Branch of David" is identified as the "son" mentioned in 2 *Samuel* 7.14. The blessing for the Prince of the Congregation in the Rule of the Blessings (1Q28b v.20-29) concludes with the words: "For God has established you as a rod over the rulers" (cf. *Is.* 14.5; *Ezek.* 19.11, 19.14). This blessing contains language derived from *Isaiah* 11, thus implying that the Prince is the fulfillment of the hope for the appearance of the "shoot from the stump of Jesse" (*Is.* 11:1). The *peshier* on *Isaiah* 10.24-11.5 agrees with these ideas (cf. 4Q161 2-6.ii.10-7-10.iii.29). From this it seems clear that Qumran's Prince of the Congregation is none other than the Davidic Messiah.

Functions of the Prince. The primary function of the Prince of the Congregation is military; he is to lead Israel against the forces of evil. He is to fulfill the prophecy of *Numbers* 24.17 and so "break down all the sons of Sheth" (CD vii.19-21) and his name will appear on battle implements (1QM iii.16; v.1; 4Q496 10). The commentary on *Isaiah* 10.24-11.5, though poorly preserved, clearly implies that the Prince will do battle against Israel's enemies "at the end of days" (4Q161 7-10.iii.22). Indeed, the Prince of the Congregation "will put him (the Roman Emperor?) to death" (4Q285 5.4). It is through the Prince that God "will restore the kingdom of his people" (1Q28b v.21).

The Messiah (who in 4Q252 1.v.3-4 is identified as the Branch of David) also plays a cultic role, though possibly

subordinate to the priest. He is to enter the assembly, but behind the priest (1Q28a ii.11-16). When they sit at the table, he follows the example of the priest and "stretches out his hands over the bread" (1Q28a ii.17-22). Even in battle the Prince cooperates with—perhaps even defers to—his priestly colleagues. This is implied in the War Scroll (1QM) and is probably reflected in the War Rule (4Q285 5.4-6), where the Prince is engaged in battle and the priest directs the disposal of the corpses of the slain. Peshier Isaiah' (4Q161 7-10.iii.28-29), commenting on *Isaiah* 11.3, suggests that the Prince is guided by priestly counsel.

PROPHECY. A wide range of differing topics can be considered under the label *prophecy*. This article will attempt to suggest that the phenomenon should be understood broadly and as ongoing and developing in the late Second Temple period.

Terminological and Other Issues. Scholars of prophecy in the Hebrew scriptures have been greatly concerned with identifying precisely what may have been meant in any period by the various terms associated with the prac-

tice of prophecy. This precision has ramifications for how prophecy in the late Second Temple period might also be construed, though the clarifications of the understanding of prophecy in preexilic Israel should not dominate the discussion. Nevertheless, on the basis of biblical texts, four principal kinds of prophetic activity are commonly identified and linked with four terms.

- (1) The seer (*no'eh*) seems to have had a role that was principally divinatory (e.g., *1 Sm.* 9.9–11), though not all those who use divination or who manipulate oracular artifacts are labeled seers.
- (2) The visionary (*hozeh*) (*Am.* 7.12; *Is.* 29.10; *Mt.* 3.5–8) made reports of his visions that were no doubt based in some form of visionary or dream experience.
- (3) The prophet (*navi'*) was someone called by God to receive and deliver the divine message to a particular audience; sometimes the message is delivered directly as the word of God, sometimes it is uttered in the third person.
- (4) The man of God (*ish ha-elohim*), such as Elijah and Elisha, was a personification of the realm of the sacred whose activity was described through a range of legendary material. All these figures variously interacted with either the court or the cult or both; not surprisingly, the cultic associations of prophecy became increasingly dominant in the Second Temple period when there was no royal court.

It is clear that in some form or other much of these four kinds of prophetic activity continued from early postexilic times into the Hasmonean and Roman periods. Although *1 Maccabees* 9.27 and other passages (*t. Sot.* 13.2; *Seder Olam Rabbah* 30) might be read as implying that prophecy ceased after the work of the last of the twelve minor prophets, there is plenty of recognition that prophetic activity was thought to be ongoing (e.g., Philo, *Cher.* 27; *Migr. Abr.* 34–35; Josephus, *The Jewish War* 1.68–69; *Jewish Antiquities* 20.97), even if the terminology is not an exact continuation or representation of certain earlier Hebrew terms. Since the Qumran community and the wider movement of which it was a part viewed itself as being in many respects in direct continuity with earlier Israel, it is likely that at least some of the community's activities would fall within the broad definition of prophecy outlined above and that other features would also need to be included as showing a continuing concern with prophecy. It is very probable that the label *prophet* was never applied to a member of the movement, and it is clear that the strictly sectarian compositions do not contain much visionary or oracular material. However, the way in which the interpretation of the Law and the Prophets is a matter of revelation aligns such interpretative activity with that of the prophets themselves, many

of whom also interpreted earlier tradition as well as received oracles. In addition, the "Book of Hagu" and the mystery of being (*uaz uihvch*) are accessible only through suitable interpretative mediation.

Once the term *prophecy* is not narrowly restricted to those in the Bible who are labeled as prophets (especially *navi'*), then the study of prophecy in the Dead Sea Scrolls should consider all the means of divine communication that are hinted at in the scrolls: the transmission and interpretation of visions and dreams (as in the Enoch literature and *Daniel*), the use of lots and priestly means of divination, such as the Urim and Thummim, the writing down of angelic discourse (as in *Jubilees*), inspired interpretation of authoritative oracles (as in the *pesharim*), and the symbolic activity of the community as a whole and of its individual members.

Biblical Scrolls of the Literary Prophets. Among the first seven scrolls to come from Cave 1 at Qumran, there were two copies of the *Book of Isaiah*, one of which (1QIsa^a) was nearly complete. The explicit use of *Isaiah* 40.3 in 1QRule of the Community (1QS viii.14) confirmed for the first generation of scholars that the community responsible for collecting and preserving these manuscripts held the *Book of Isaiah* in particular esteem. Together with the number of citations and allusions to it in sectarian compositions, the 1997 publication of the eighteen copies of *Isaiah* from Cave 4 (4QIsa^a) has made it clear that *Isaiah* ranked alongside *Genesis*, *Deuteronomy*, and the *Psalms* as a kind of canon within the canon for the community.

In addition to the many scrolls of *Isaiah*, there are several copies of the *Book of Jeremiah* (2QJer; 4QJer^{a-c}) and the *Book of Ezekiel* (1QEzek; 3QEzek; 4QEzek^{a-c}; 11QEzek; also MasEzek). 4QJer^b and 4QJer^d are important for indicating that the form of *Jeremiah* preserved in the Old Greek version is probably an accurate translation from a Hebrew precursor and not the free rendering of a translator intent on sweeping paraphrase. The *Ezekiel* manuscripts are poorly preserved, though that from Cave 11 might have contained the whole book; only a few fragments from the outside of the scroll are legible.

The Twelve Minor Prophets are featured in several scrolls (4QXII^{a-e}; 5QAmos; also MurXII and 8HevXII gr). Of special note is the way in which in 4QMinor Prophets^a the *Book of Jonah* probably followed the *Book of Malachi*. As for the *Book of Daniel*, the situation is complex and not yet fully understood. If the final form of the *Book of Daniel* belongs shortly after the end of the Maccabean Revolt (164 BCE), then the Aramaic Pseudo-Daniel texts that survive in the Qumran library almost certainly predate it and some of them may have formed its sources. That the community at Qumran understood *Daniel* to be a prophet (4Q174 4.3) remains certain.

Rewritten Prophets. Though it is seldom noted, in what has survived in the Qumran literary corpus there is a marked difference in the treatment of *Isaiah* and the Twelve, on the one hand, and of *Jeremiah* and *Ezekiel*, on the other. Among the clearly sectarian texts there are running commentaries (*peshtarim*) on *Isaiah* (3QpIsa: 4QpIsa^{a-c}) and the Twelve (1QpHab; 1Q14; 1Q15; 4Q166-167, 4Q169, 4Q170, 4QpMal), but there is none extant on any continuous section of *Jeremiah* or *Ezekiel*. By contrast, when the apparently nonsectarian rewritten forms of scriptural books are taken into account, there seem to be several versions of rewritten forms of *Jeremiah* and *Ezekiel* (Apocryphon of Jeremiah A-E; Pseudo-Ezekiel^{a-c}) from Cave 4 but there are no manuscripts containing rewritten forms of *Isaiah* and the Twelve Minor Prophets. The rewritten forms of *Jeremiah* and *Ezekiel* include both narrative and visionary material, the former perhaps suggesting that they were viewed as legend-worthy men of God like Elijah and Elisha, the latter indicating that subsequent scribal transmission and adjustment of the earlier prophetic text was considered part of prophetic activity.

The lack of rewritten forms of *Isaiah* and the Twelve Minor Prophets may be entirely accidental, since it does not mirror what was previously known. In the so-called Apocrypha and pseudepigrapha, there are rewritten forms or narrative and other kinds of expansions of all the prophetic books (e.g., the *Martyrdom and Ascension of Isaiah*; the *Letter of Jeremiah*; *1 Baruch*, *2 Baruch*, *3 Baruch*; the *Apocryphon of Ezekiel*; the *Lives of the Prophets*). Or it may be that the remains of the prophetic literature at Qumran signal something particular about the place of *Isaiah* and the Twelve in the community's self-understanding.

There are also rewritten forms of other scriptural passages in which prophets feature. For example, Vision of Samuel (4Q160) is a reworked form of a tradition associated with Samuel, and Paraphrase of Kings et al. (4Q382) is some kind of paraphrase of the Elijah and Elisha cycles from *Kings*. If one includes Abraham, Moses, Joshua, and David as prophets, then the narratives (e.g., 1QapGen; 4QPseudo-Moses; 6QApocryphon on Samuel-Kings) and narrative poems (4Q522 [Prophecy of Joshua?]; 11QPs^a xxviii.1-14 = Psalm 151A and B) found in the Qumran caves, variously associated with them, may also need to be included under the heading *rewritten prophetic materials*.

Among other texts, mention should be made of 4QJudges^a (4Q49), which preserves parts of *Judges* 6:2-6 and 11-13 in sequence. 4QJudges^a does not have *Judges* 6:8-10, a short paragraph describing a prophet being sent to the Israelites and delivering a message of condemna-

tion; it is hard to discern whether a text-critical or an editorial reason best explains the form of the text.

Biblical Prophets. In addition to the literary prophets whose prophetic status was not doubted, other figures have prophetic characteristics or roles. Chief among these is Moses, who is defined as a prophet in *Deuteronomy* 18:18-19. Moses' prophetic status is mentioned by Philo when he describes how the Therapeutae do everything in accordance with the advice of the prophet Moses (*On the Contemplative Life* 64). *Deuteronomy* 18:18-19 is used to undergird the Qumran community's expectation of an eschatological prophet (4Q175 1-4), an expectation which is variously stated (1QS ix:11; 4Q521 2.ii.1). Despite the Qumran community's eschatological expectations, 4QProphecy of Joshua(?) (4Q522) may imply that Moses' prophetic mantle fell first on Joshua, whose own utterances were also being fulfilled in the experiences of the community (4Q175 21-30; cf. 4Q379 22.ii.7-15).

In addition to Moses and Joshua, David was considered as spiritually enlightened. 11Q Psalms^a (11Q5 xxvii.11) describes him as having spoken all his poetic compositions through prophecy, which was given to him before the Most High. Not surprisingly, the Qumran sectarian compositions include inspired interpretations of the Psalms (4Q171; 4Q173).

Though it is not made plain in any sectarian composition, perhaps Abraham was also understood as a prophet, as his intercessory role (*Gn.* 20.7) was developed in a popular fashion with other aspects of prophecy. In the nonsectarian Genesis Apocryphon (1QapGen xix.14-17), he has a dream that predictively explains what is to happen; he also has visions (1QapGen xxi.8; xxii.27; cf. *Gen.* 15.1).

Prophecy and the Prophets in the Nonbiblical Scrolls. The extensive debate concerning what happens to prophecy in the late Second Temple period takes several forms. Some scholars identify late prophetic traditions with the emerging and varying forms of apocalyptic thought; others suggest that in light of the dominance of the Law, prophecy became subsumed within the scribal activities of the wisdom schools; yet others propose that the Temple cult provided the setting for ongoing prophetic activity. The compositions found at Qumran suggest that all three ways of looking at the continuation of prophecy in early Judaism have some validity.

The opening of 1QRule of the Community (1QS i.2-3) stresses that the identity of the community rests in both the Law and the Prophets as correctly interpreted and applied to daily life: "to do what is good and right before him as he commanded by the hand of Moses and by the hand of all his servants the prophets." In the exhortatory section of Miqsat Ma'asei ha-Torah from Cave 4 (4Q397 14-21.10), there is also appeal to an authoritative set of

writings, the first two parts of which are the law and the prophets.

From the Damascus Document (CD), a composition that may have defined the life of the wider movement of which the Qumran community was just a part, it is clear that the prophetic literature played as significant a role as the law in providing identity and social cohesion for the movement. In the opening exhortation of Damascus Document A (CD 1.1–11.1), there are allusions to *Isaiah*, *Jeremiah*, *Ezekiel*, *Hosea*, and *Micah*, as well as to various sections of the law and the psalms. These prophetic texts are understood principally in two ways: as predicting the future, which can now be discerned in the events the community is experiencing, and as providing exemplary instruction on the right and wrong ways to respond to the law. Not only are several of the biblical prophets actually labeled *prophet* (e.g., *Isaiah*: 4Q174 i.15; CD iv.13; *Jeremiah*: 4Q385 1b.1, 2, 6; *Ezekiel*: 4Q174 i.16; CD iii.21; *Zechariah*: CD xix.7), but they are also referred to as the anointed ones (e.g., CD ii.12; vi.1; IQM xi.7). They are recognized as agents of divine communication with the people.

The way in which the prophetic message was understood as describing predictively the life and times of the community also has a future aspect to it. In addition to perceiving that the prophets described the events of the end time, they were also understood as describing God's agents in those times. In particular, *Isaiah* 11.1–5 was used in several compositions (1Q28b v.20–29; 4Q161 8–10.iii.11–25; 4Q285 5.2–6) to define the expectation of a messianic king; *Zechariah* 4.14 was probably used (as in 4Q254 iv.2) to justify the widespread hope in the sectarian compositions that there would be both a royal and a priestly messiah (e.g., IQS ix.11); and *Isaiah* 61.1–3 was used to define the role of the priestly judge Melchizedek (11QMelch ii.6) or some other anointed figure (4Q521 2.ii.1–12), possibly the eschatological prophet, the prophet like Moses, or Elijah redivivus (4Q521 2.ii.2; 4Q558). It has been suggested that after his death some of the community considered that the Teacher of Righteousness had fulfilled this eschatological prophetic role; perhaps this is also supported by Commentary on Malachi (4Q253a) in which *Malachi* 3.16–18 may be interpreted of the Teacher of Righteousness (4Q253a 1.1.5).

Prophetic Activity in the Community. Beyond the biblical materials referred to above, there is no clearly self-defined institution of prophecy in the nonbiblical texts from Qumran. The terms *prophet* and *prophecy* in the scrolls are restricted to various scriptural figures. However, rather than attempting to define prophecy at Qumran sociologically, there is plenty in the compositions found there that can be suitably described as prophetic activity. Some of this is largely predictive, such as

the eschatological exegetical teaching and vision reports. Some is more concerned with the correct analysis of present circumstances and may be termed *divinatory*.

From a formal point of view, there are no new prophetic oracles (“Thus says the Lord”) in what survives of the Qumran library. However, from another perspective, several texts can be construed to have an oracular function of encouragement or condemnation, as can be found in the scriptural prophetic literature: among such texts can be included the exhortatory sections of the Damascus Document and Admonition Based on the Flood (4Q370). Moreover, the Temple Scroll (11QT^{ab}) with its divine speech in the first person is more explicitly oracular than much of the presentation of the Law by the prophet Moses in the Pentateuch itself.

The reception and description of visions can also be described as prophetic activity. Apart from the Enoch literature that is preserved in the Qumran scrolls, there are few vision reports. The Songs of the Sabbath Sacrifice contain cultic visionary descriptions and these are echoed in other liturgical texts (e.g., 4Q286 1.ii.1–8). The poorly preserved 4QSapiential Work (4Q410 1.7–10) contains a first-person report of a vision, apparently received “in the spirit.” 4QSapiential Work A^c (4Q417 2.ii.16) speaks of “the vision of meditation (*hazon hagi*),” which might imply that the “Book of Hagu” (IQSa i.7; CD x.6; xiii.2) was a vision report of some kind. 4QMysteries^b (4Q300 1.ii.3) appears to describe what is required before a vision can be opened.

Visions are commonly associated with the kind of prophetic activity that finds its continuation in various forms of apocalyptic writing. However, apart from the Enoch literature, there are no extensive literary apocalypses in the Qumran library. If the War Scroll is to be described as apocalyptic, then it is because it is replete with motifs commonly associated with earlier prophetic visions, especially strongly eschatological ones, not because it contains the narration of revealed visions.

Whereas the eschatological teaching and visionary materials are concerned with the future, the practice of divination is not so much predictive as confirming the dualistic worldview of the community. Sometimes this kind of prophetic activity is linked with various forms of wisdom traditions. It is clear that the Qumran community practiced casting lots. Not only are there texts that imply as much, such as “to love all the Sons of Light, each according to his lot in God's plan” (IQS 1.9–10), but also small round lots marked with small holes (which are not yet fully explained) have survived from Qumran. Lots were cast to endorse the enrollment of new members and to assist in the allotment of rank and role in the community. It is very likely too that physiognomies (4Q186; 4Q561)

were used to help determine an individual's standing in the community, though whether these belong more to the realm of magic than to prophetic activity is debatable.

There are also references in sectarian compositions to the Urim and Thummim which functioned as a means of prophetic testing. Thus, *Pesher Isaiah*^d (4Q164 1.5) contains an interpretation of *Isaiah* 54.11–12 with respect to the Urim and Thummim. *Mysteries*^d (4Q299 69 2) refers to these objects, perhaps in the context of a description of the rites of Yom Kippur. *Apocryphon of Moses B*^b (4Q376 1.i.3) also offers some kind of comment on them, perhaps with regard to the ongoing prophetic function of “the anointed priest” (4Q376 1.i.1).

In addition to these forms of divination, the seemingly nonsectarian text *4QPrayer of Nabonidus* (4Q242 1–3 4) mentions a Jew who was a diviner (*gezer*; cf. *Dn.* 2.27; 4.4; 5.7, 11). Though it has been argued that this Jew was an exorcist, it is preferable to understand his role as declaring to Nabonidus that his healing was the result of God remitting his sins.

In all this range of prophetic activity it is difficult to describe with any precision what kind of religious experience it reflects. Just as there is a lack of descriptions of visions and of divine oracles in the sectarian compositions found at Qumran, so there is virtually nothing that might be construed as expressions or descriptions of ecstatic experiences as was a feature of the activity of many of the institutional prophets. The mention of being “in the spirit” in *4QSapiential Work* (4Q410 1.7–10) is the exception rather than the rule. One must suppose that the nearest that members of the community might have come to such ecstatic activity was through participation in worship, such as the Songs of the Sabbath Sacrifice might imply.

In addition to the more obviously predictive and divinatory forms of prophetic activity, there are symbolic prophetic actions. These take one of two forms, either reinforcing the message already delivered or serving to bring about the circumstance symbolized. Though there do not seem to be any individual symbolic acts in the sectarian compositions that have survived from Qumran, the whole movement of the community to the wilderness of Judea might be understood as a symbolic act intended to hasten the completion of the prophetic prediction that at the end time there would be a new entry to the land through the wilderness (cf. *Is.* 35.1; 40.3). The organization of the community itself as Israel in the wilderness (e.g., the use of *Ex.* 18.21 in CD xii.22–xiii.2; IQSa i.27–ii.3; IQM iv.2–5) can be construed as a symbolic action which underlines the identity of the community as the true eschatological Israel and effectively denies the claims of other Jewish groups to such a role.

Rejection is another constant motif associated with the

prophets: for the scriptural prophets sometimes this led to ostracism and possibly even martyrdom. In keeping with the community's determination to live out its prophetic role against existing institutions, it seems as if certain individuals in the community (IQH^a xi.8–10) and even the community as a whole (CD vi.19) experienced exile and rejection, and risked persecution and death. So there is a common exhortation to keep to the covenant whatever happens and to practice the law appropriately, even in times of trial (cf. the use of *Dn.* 11.32 and 12.10 in 4Q174 4.3–4). The pursuit of wisdom and holding fast to the law in times of hardship, terror, and distress are the marks of eschatological blessing (4Q525 2.ii.3–7).

True and False Prophecy. Absence of any discussion of what might distinguish true from false prophecy might imply the absence of prophecy itself. However, a small group of texts, none of which need be identified as sectarian compositions but all of which echo sectarian issues, seems very much concerned with precisely this topic and so suggests that identifying true and false prophecy was a live issue. In its law for the land, the Temple Scroll (11QT^a liv.8–18; lxi.1–5) contains a slightly revised form of *Deuteronomy* 13.1–5 and 18.20–21. In *Deuteronomy* 13.1–5 the concern is with the false prophet and the dreamer of dreams; in *Deuteronomy* 18.20–21 the concern is with discerning true prophecy by observing whether the prophet's predictions come about. In *4QApocryphon of Moses B*^b (4Q375 1.4–9) there is a short passage that is full of the phraseology of both *Deuteronomy* 13 and 18. However, the truth of the prophet's declaration is determined by the anointed priest before whom he is brought for some kind of hearing: thus, prophetic activity is subsumed under priestly authority. The Aramaic composition 4Q339 is a list of false prophets. The contents of the first eight lines are readily identifiable with seven biblical figures from Balaam (*Nm.* 22–24) to Hananiah son of Azur (*Jer.* 28.1–17); the last line of the fragment may contain some further description of Hananiah or may refer to an eighth false prophet, perhaps John Hyrcanus (cf. Josephus, *The Jewish War* 1.68–69; *Jewish Antiquities* 13.300). Perhaps the list of false prophets (4Q339) was used didactically to provide examples of those who could serve as a measure of false prophecy for the Qumran community.

The Teacher of Righteousness. The Teacher, the apparent founder of the Qumran group, was a priest (4Q171 iii.15). However, in the *Hodayot*, some of which are widely considered to be autobiographical of the Teacher, it is clear that he viewed himself in the prophetic mold, since the self-descriptive *Hodayot* are replete with allusions to the prophets, especially *Isaiah* (e.g., *Is.* 61.1–3 in IQH^a xxiii.14–15; *Is.* 53.3 in IQH^a xii.8, 22–23). With charismatic authority he took a stand against some of his

fellow Jews and the institutions that were contemporary to his time. Like the prophets of several generations, he was persecuted, exiled, and risked death as the autobiographical *Hodayot* suggest. These poetic allusions may well lie behind the narrative descriptions of the persecution of the Teacher as are found in the other compositions (e.g., 1QpHab ix.9–12; xi.4–8).

The prophetic role of the Teacher should be understood to include his charismatic interpretation of the prophets, just as some of the scriptural prophets commonly interpreted the significance of earlier traditions for their own generations. In 1QPesher Habakkuk (1QpHab vii.4–5) the Teacher is described as the one “to whom God made known all the mysteries of his servants the prophets.” In this vein, the interpretation is as much a matter of divine revelation as the oracle originally received by the prophet. It is as if the original prophets did not fully understand the oracles they uttered, the Teacher’s interpretation completes the oracle by unlocking its mysteries. In a similar way, the Teacher and his colleagues offer interpretation of the law that was hidden until their own times.

Prophetic Interpretation. The most distinctive feature of the Qumranian interpretation of scripture is to be found in the biblical commentaries, the *pesherim*. The technical term *pesher* occurs in these commentaries to introduce the interpretation of a scriptural citation. Though Temple Scroll¹ (11QT^a) liv.8–18 warns against those who have dreams, the term *pesher* reflects the Danielic tradition of dream interpretation. In the *pesherim* the interpretation usually contains some kind of identification of an aspect of the scriptural text with a person, group, or historical event that may be considered contemporary with the interpreter and his audience. This kind of interpretation thus makes it clear that the dominant view of prophecy at Qumran stressed its predictive character: unbeknownst to themselves, the prophets of old predicted the end-time circumstances of the community. It is not prophetic oracles alone that are interpreted in this way, but any text that may be deemed as predictive and yet unfulfilled, such as various blessings (e.g., *Gen.* 49.2–27, the interpretation of which partially survives in 4Q252 x frag. 6) and curses, and the psalms (e.g., Psalm 37 in 4Q171).

The Essenes and prophecy. The Qumran community and the wider movement of which it was a part are commonly identified in some way with the Essenes as described especially by Philo, Pliny the Elder, and Josephus. With regard to prophecy, it is Josephus’s testimony that is particularly important. Josephus himself claimed to be expert at predicting the future (*The Jewish War* 3.352), which was clearly his dominant view of the nature of prophecy, and his own prowess in this area may have provoked his interest in some similar Essene activity. He

describes three different Essenes in this regard but nowhere refers to them as prophets (*profētēs*). This fact should not deter the making of comparisons with the scrolls; rather, it concurs with the observation that the technical terms for *prophet* are nowhere used to describe members of the scrolls’ community.

Josephus mentions that Judah the Essene’s predictions had always come true; this is illustrated by reference to his words concerning the death of Antigonus during the reign of Arisobulus I (104–103 BCE), which had come true despite Judah thinking otherwise (*The Jewish War* 1.78–80; *Jewish Antiquities* 13.311). Josephus also describes Menahem the Essene as having knowledge of the future (*prognōsin tōn mellontōn echiōn*) from God. In particular, he had predicted that Herod would be king and had sealed his prediction with a symbolic act, tapping the boy Herod on the rump (*Jewish Antiquities* 15.373–379). The third named Essene with prophetic powers is Simon; Josephus describes how during the rule of Herod Archelaus (4 BCE–6 CE), Simon gave a correct interpretation of the ruler’s dream (*The Jewish War* 2.113; *Jewish Antiquities* 17.346–348). It is unlikely that any of these figures are mentioned in the scrolls, though some have tried to see the same Judah in 1Q Pesher Habakkuk (1QpHab vii.1). Overall, in Josephus’s lengthy general description of the Essenes, he describes them as expert in foreseeing the future (*ta mellonta prognōskein lupischmōntai*), rarely erring in their predictions (*proagoreusis*) (*The Jewish War* 2.159). This last comment is reflected in slightly different terms in a similar account by Hippolytus (*Refutation of All Heresies* 9.27): he notes that some of the Essenes practiced prophecy (*prophetenem*) and the prediction of the future (*prolēgein ta esomēna*).

The scrolls and early Christian prophecy. In the New Testament and other early Christian writings there are similarities and differences as to the kinds of prophecy to be found in the scrolls. John the Baptist (e.g., *Mt.* 11.14) and Jesus (e.g., *Mt.* 6.14) are both variously described as fulfilling the role of the eschatological prophet, and Jesus is identified as the prophet like Moses of *Deuteronomy* 18.15 (*Acts* 3.22). There were prophets in the Pauline churches (e.g., *1 Cor.* 12.10), the contents of whose prophecy is only vaguely discernible. The Apocalypse of John exemplifies many of the forms of prophetic speech found in the Hebrew scriptures. While prophecy in early Christianity must be understood as a varied phenomenon with no formal institutional structure, it is perhaps distinguished from the earlier Qumran counterparts by its closer connection phenomenologically with ecstatic utterances and its greater literary imitation of biblical patterns. Prophecy in the Qumran scrolls is chiefly characterized by the inspired interpretation of scripture that was predominantly priestly.

PROPHETS. See Prophecy; Scriptures, article on Texts. See also separate entries on prophetic books.

PROSELYTES. Religious conversion to Judaism, as distinct from the attraction and assimilation of strangers dwelling within the Israelite community, is a phenomenon that emerges most distinctly in the Greco-Roman period. It has its roots in the prophetic universalism that welcomed foreigners "who join themselves to the Lord" (*Is.* 56.3), but it apparently played no role in solving the problems of intermarriage in the days of Ezra. Only the Greek version of *Esther* 8.17 depicts those who professed to be Jews as converts who underwent circumcision. Achior (*Jdt.* 14.10) is one of the early examples of the classical convert, one who believed, was circumcised, and joined the house of Israel. In the Roman period, Jewish proselytism proliferated. Members of the royal family of the kingdom of Adiabene in the days of Claudius are among the most prominent proselytes described in the writings of Josephus (*Jewish Antiquities* 20.34–96).

Given the self-enclosed and strict character of the Qumran community, it is noteworthy that proselytes are referred to as participants in the "session of all the camps": "They shall all be mustered by their names, the priests first, the Levites second, the sons of Israel third, and the proselytes (*ha-ger*) fourth" (CD xiv.4, 6). It is a fair presumption that the term *ger* in this passage no longer had the biblical connotation of "stranger," but the meaning found in rabbinic literature, where it is the standard designation for a proselyte. This designation probably holds for the Damascus Document (CD vi.21), where the *ger* is listed (as in the Hebrew scriptures) together with the poor as deserving of support. The status of the proselyte ostensibly was inferior to that of born Israelites: Peshar Nahum (4Q169 3–4.11.9) lists "the proselyte who is joined to them" (*ger nilyam*), an expression based on *Isaiah* 14.1, after "kings, princes, priest, and people."

The inferior status of the *ger* is further indicated in Qumran law by his exclusion from the Temple precincts. The Florilegium alludes to this incidentally when it describes the Temple built by God as "the house into which shall never enter either the Ammonite, the Moabite, the bastard, the alien [*ben nekhar*], or the proselyte" (4Q174 1–3.1.4). The placement of the proselyte after the alien is odd, and I have suggested that the latter was perhaps a designation for a descendant of the Netinim, the temple servants of foreign origin (*Ezek.* 44.9).

The exclusion of proselytes is further elaborated in Temple Scroll (11Q19 xl.6): "And you shall make a third countryard . . . and for their daughters, and for proselytes bor[n . . .]." Yadin proposed restoring the end of this sentence, as "and for proselytes bor[n as the third genera-

tion]" on the basis of the fragmentary text (11Q19 xx-xix.5) concerning the middle courtyard, which refers to the fourth generation. However, *Deuteronomy* 23, which bans various aliens from entering the congregation, makes no reference to the fourth generation. Edomites and Egyptians, each for specific reasons, were eligible after the third generation (*Dt.* 23.9). Did the author of the Temple Scroll add another generation for proselytes from other peoples? In any case, it is clear that Qumran exegetis did place impediments on the entrance of proselytes into the Temple precincts.

The famous Temple inscription discovered by Charles Clermont-Ganneau, warning gentiles against trespassing beyond the enclosure, uses the term *allogenes*. It has been suggested by D. R. Schwartz that the term also might apply to converts, but Josephus rendered it *allophylon* ("alien") (*The Jewish War* 5.194). The Mishnah did not place any restrictions on the access of proselytes to the Temple, as evidenced by *Bikkurim* 1.4: "The proselyte brings (first-fruits to the Temple) but does not recite (the prayer), for he is unable to say '(the land) which the Lord swore to our forefathers to give unto us' (*Deut.* 26.3). If, however, his mother was Israelite, he brings and recites." There is a later midrash that cites *Job* 31.22, "The stranger shall not lodge outside," and expounds: "For the Holy One Blessed be He does not disqualify any creature, but receives all. The gates are open all the time and whoever wishes to enter may enter" (*Ex. Rab.* 19.4). The amora Rabbi Berekhiah even alludes to an eschatological future in which proselytes may become priests ministering in the Temple. This is distinct from Paul's claim that the dividing barrier between Jews and gentiles already had been torn down through the abolition of the law (*Eph.* 2.14).

Qumran writings do not tell us anything specific about the procedure for the conversion of gentiles. On the other hand, the Rule of the Community (hereafter, 1Q Rule of the Community) details the requirements for the various stages in the admission of Jewish outsiders into the communal covenant. These include an oath to return to the Torah as interpreted by the Sons of Zadok (1QS v.8-9) and, after one year of novitiate, an immersion in the ritual bath before being allowed to touch the communal purities (v.13). Access to liquids required a second year of training (vi.20-21). We may presume, although this is only by inference, that for proselytes the instruction in the commandments of the Torah would have been more protracted and demanding.

Given the premise that impurity was inherent in all transgressors of the law (1QS v.14) and *a fortiori* in gentiles born outside of the law, no proselyte could possibly have entered the Qumran community without undergoing purification. Christian baptism is thought by many

scholars to have had its origin in the Jewish immersion of proselytes.

Already in biblical times circumcision was considered essential for males who belonged to an Israelite household. The Damascus Document (CD xii.11) forbids the sale of slaves to gentiles, because the slaves had entered the covenant of Abraham, although this term apparently includes maidservants. Circumcision was specified in the conversion of Achior and the Edomites, and its postponement became a critical issue in the conversion of Izates of Adiabene.

The preceding data circumstantially favor, but do not prove, the hypothesis that three of the elements of conversion that became normative in rabbinic Judaism, acceptance of the commandments, immersion, and circumcision, were already part of customary Jewish practice during the period in which the Qumran community flourished. Rabbinic sources also speak of the obligation of a proselyte to set aside funds for bringing an offering at the Temple, but this custom was said to have been abolished by Yoḥanan ben Zakkai (B.T., *R. ha-Sh.* 316).

JOSEPH M. BAUMGARTEN

PROVERBS, BOOK OF. The book of *Proverbs* has had a relatively tumultuous textual history. Different versions preserve variations in the order of individual verses and entire chapters, and additions or omissions ranging from single words to entire verses. Some changed readings come from differing interpretations of the same Hebrew consonants, and others come from different readings in the sources. The variations between the versions are more radical than one would expect from normal scribal error; it is likely that they represent different recensions of the book.

The evidence from the Dead Sea Scrolls and related documents shows that significant variants could develop even within one recension. *Proverbs* 15.8 is quoted in the

Damascus Document without the Tetragrammaton, with a different word for the "righteous," and with the sacrificial nature of prayer emphasized (CD xi.20–21). The two manuscripts of *Proverbs* from Qumran preserve relatively little of the text, but nevertheless help to illustrate the kinds of variants that could develop as the text was transmitted.

The darkened fragments of *Proverbs*^a (4Q102) contain thirty-nine words or portions of words from *Proverbs* 1.27–2.1. The fragments of *Proverbs*^b (4Q103) are better preserved, and contain a total of 125 words or portions of words from *Proverbs* 9.16 (or possibly 9.4), 13.6–9, 14.6–13, 14.27–28(?), 14.31–15.8, and 15.19–31. Patrick Skehan did not make a distinction between the two manuscripts in his preliminary publication and dated them as "relatively late" (1956). *Proverbs*^a is written in an early Herodian script (ca. 30–1 BCE), while *Proverbs*^b is written in a late Herodian script (ca. 50 CE).

One of the characteristic differences between the recensions of *Proverbs* is the addition or omission of complete cola. Such variations would have been promoted both by the genre of the work, as Richard Clifford has noted (1997), and by the tendency of the scribes to arrange the text by cola. The columns in the scrolls are generally of a width allowing for two complete cola in each line. A relatively large number of cola in *Proverbs*^b, however, are split between two lines, so some variation of form was tolerated.

Wilhelm Nebe (1994) reconstructs two variants consisting of omitted cola in 14.7–9. A more convincing reconstruction of the two fragments preserving portions of 14.6–13, however, which takes into account the indications of right and left margins on the fragments, suggests that they came from a wider column averaging approximately three cola per line, and thus originally included all the cola in the Masoretic Text. Nevertheless, Nebe's reconstruction draws attention to the possibility that entire cola could be involved in scribal additions or omissions in texts arranged by cola.

Both manuscripts together yield six variants from the Masoretic Text. Two are merely orthographic (15.27), one concerns the absence of a copula (1.31), and one appears to have come from transposing two letters of an orthographic variant (15.19). A more significant variant is the omission of a word (*vehgeh*, "meditate," in 15.28). The most significant variant (*mwshkt-moshekhet*, "cord," for *meshuvai*, "apostasy," in 1.32) may have come from a combination of transposing two letters and then mistakenly copying a *kaf* for the similar-looking *heit*, or it may have come from the influence of the second colon of *Job* 38.31 (so Nebe). Despite the significance of the last two variants, both manuscripts are more closely related to the Masoretic recension than to that of the Septuagint, which

exhibits numerous additions, changes, and even sequential differences in these verses.

NATHAN JASTRAM

PSALMS, BOOK OF. [This article comprises two parts: Biblical Text and Apocryphal Psalms.]

Biblical Text

Among the Dead Sea Scrolls the *Book of Psalms* is represented more frequently than any other work, which is indicative of the importance of the Psalter for the Qumran community. This article is divided into three sections: the Psalms scrolls and the observations that arise from them; the main issues that emerge from analysis of these manuscripts; and conclusions.

The Psalms Scrolls and Observations That Arise. The Dead Sea Scrolls include thirty-nine scrolls or manuscripts that incorporate psalms (see Appendix). Thirty-six were found at Qumran: three in Cave 1; one in each of the Minor Caves—Caves 2, 3, 5, 6, and 8; twenty-three in Cave 4; and five in Cave 11. Three more scrolls were discovered further south: two at Masada and one at Nahal Hever (part of the latter was previously thought to be from Wadi Seival). Analysis uncovers several features that are relevant to our understanding of the *Book of Psalms* in the scrolls.

In decreasing order, the manuscripts with the greatest number of verses preserved (whether wholly or in part) are the Great Psalms scroll from Cave 11 (11Q5), followed by Hev/Se 4, 4Q83, 4Q84, 4Q85, and 4Q87. While almost all the Psalms scrolls are very fragmentary, some originally contained only a few compositions or part of a Psalter (e.g., 4Q89, 4Q90, 5Q5 probably contained only

Ps. 119). Only five manuscripts (1Q10, 4Q87, 4Q88, 11Q6, 11Q8) now preserve material from both Psalms 1–89 and 90–150, which suggests that some may have originally contained material from the earlier part of the *Book of Psalms*, while others comprised material from the later part. Of the 150 Psalms found in the Masoretic Text (i.e., the Received Text), 126 are represented in the 39 Psalms scrolls or other relevant manuscripts such as the *pe-sharim*. The remaining twenty-four psalms were most likely included, but are now lost due to deterioration and damage. Of Psalms 1–89, nineteen no longer survive (3–4, 20–21, 32, 41, 46, 55, 58, 61, 64–65, 70, 72–75, 80, 87), but of Psalms 90–150 only five are not represented (90, 108?, 110, 111, 117), since the beginnings of scrolls are usually on the outside and are thus more prone to deterioration. At least fifteen apocryphal psalms or compositions are also distributed among five manuscripts (11Q5, 4Q88, 4Q522 [Work with Place Names], 11Q6, 11Q11). Six were previously familiar to scholars: 151A, 151B, 154, 155, David's Last Words (= 2 Sm. 23.1–7), and *Ben Sira* 51.13–30. Nine were unknown prior to the discovery of the Dead Sea Scrolls: the Apostrophe to Judah, Apostrophe to Zion, David's Compositions, Eschatological Hymn, Hymn to the Creator, Plea for Deliverance, and three Songs Against Demons.

Format of the Psalms scrolls. At least ten of the *Psalms* manuscripts are arranged stichometrically (1Q10, 3Q2, 4Q84, 4Q85, 4Q89, 4Q90, 4Q93, 5Q5, 8Q2, Mas1e), and twenty-one in prose format (1Q11, 1Q12, 2Q14, 4Q83, 4Q87, 4Q88, 4Q91, 4Q92, 4Q94, 4Q95–98a, 4QPs^a, 4Q522, 6Q5, 11Q6, 11Q7, 11Q8). At least one scroll, Psalms^d (11Q5) is arranged in a prose format with one psalm, the acrostic Psalm 119, arranged stichometrically. In comparison with the Masoretic Text, the preserved superscriptions reveal little variation. Two exceptions are Psalm 123 (“A Song of Ascents. Of David”; cf. Masoretic Text “A Song of Ascents”) and Psalm 145 (“A Prayer. Of David” cf. Masoretic Text “A Song of Praise. Of David”) in Psalms^d (11Q5). At least thirteen manuscripts were copied before the Common Era. The oldest two, 4Q83 and 4QPs^a, date from the second century BCE, while the remaining eleven were copied in first century BCE (1Q10, 4Q84, 4Q86, 4Q88, 4Q92, 4Q93, 4Q95, 4Q96, 4Q98d, 4Q522, Mas1f). Six scrolls are generally classified as Herodian (1Q12, 2Q14, 4Q90, 4Q94, 4Q97, 4Q98^a), and four are assigned to the first century CE (1Q11, 3Q2, 5Q5, 8Q2). More specifically, ten others date from the early to mid-first century CE (4Q87, 4Q89, 4Q91, 4Q98, 4Q98c, 11Q5, 11Q6, 11Q7, 11Q8, Mas1e), and four from the mid-first century CE onward (4Q85, 4Q98b, 11Q11, XHev/Se 4).

In comparison with the Masoretic Text, twelve scrolls contain major disagreements or “macro-variants.” Differ-

ences in the order of psalms appear in seven scrolls from Cave 4 (4Q83, 4Q84, 4Q86, 4Q87, 4Q92, 4Q95, 4Q98). For example, Psalm 31 is followed immediately by Psalm 33 in 4Q83 and 4Q98. Variations in content (the inclusion of compositions not found in the Masoretic Text) occur in two scrolls from Cave 4 and another from Cave 11 (4Q88, 4Q522, 11Q8), for example, the “Apostrophe to Judah” in 4Q88. Differences in both order and content are present in two manuscripts from Cave 11 (11Q5 and 11Q6). The Psalms scrolls contain hundreds of variant readings (not counting orthography) that often involve single words but sometimes extend to entire verses. Many are relatively minor, but several are significant to our understanding of the text of the Psalter, for example, the *mn*-verse of the acrostic Psalm 145.13 (11Q5 xvi.2–3), which is not found in the Received Text. This, the largest of all the extant Psalms manuscripts, features prominently in discussions concerning the *Book of Psalms* at Qumran. Copied in approximately 50 CE, the manuscript preserves forty-nine compositions (with Psalm 120 now lost but originally included) in the following arrangement:

Psalm 101 → 102 → 103; 109, 118 → 104 → 147 → 105 → 146 → 148 [+ 120] → 121 → 122 → 123 → 124 → 125 → 126 → 127 → 128 → 129 → 130 → 131 → 132 → 119 → 135 → 136 (with Catena) → 145 (with postscript) → 154 → Plea for Deliverance → 139 → 137 → 138 → Sirach 51 → Apostrophe to Zion → Psalm 93 → 141 → 133 → 144 → 155 → 142 → 143 → 149 → 150 → Hymn to the Creator → David's Last Words → David's Compositions → Psalm 140 → 134 → 151A → 151B → blank column [*end*]

Addressing the Main Issues. Differing arrangements and contents of the Psalms scrolls require a reassessment of terminology that is used with respect to the Psalter. Although the Masoretic Text is used as the basis for comparison with the various Psalms scrolls, the Masoretic Psalter cannot be viewed as normative and all others as aberrant. Thus the terms *Masoretic*, *biblical*, *canonical*, and *noncanonical* should not be employed with reference to the Qumran era, since they presuppose the closure of the Hebrew canon, which took place later. Terms such as *Scripture*, *MT-150 Psalter* (the received Masoretic Text), and *11QPs^a-Psalter* (the Psalter represented by 11Q5) are more neutral and better suited for describing the material under discussion.

James Sanders's “Qumran Psalms Hypothesis.” The first *Psalms* manuscripts to be discovered did not generate great excitement among scholars since they were very fragmentary and seemed to be close to the Masoretic Psalter in both content and arrangement. But James Sanders's edition of Psalms^a (11Q5; hereafter called 11QPsalms^a) in 1965 showed how this manuscript diverges radically from the Masoretic Psalter in the order-

PSALMS, BOOK OF: Biblical Text. TABLE 1. *Agreements and Conflicts with the Masoretic Text in Arrangement.*

BOOKS (PSALMS)	CONSECUTIVE JOINS	AGREEMENTS WITH MT	CONFLICTS WITH MT
I (1-41)	20	18 or 90%	2 or 10%
II (42-72)	13	12 or 92%	1 or 8%
III (73-89)	6	6 or 100%	0
IV (90-106)	18	7 or 39%	11 or 61%
V (107-150)	62	24 or 39%	38 or 61%

ing of contents and in the presence of additional compositions. In a series of articles commencing in 1966, Sanders reached conclusions that challenged traditional views of the text and canonization of the *Book of Psalms*: for instance, that 11QPsalms¹ is part of the "Qumran Psalter," an earlier form of the Hebrew Psalter prior to its finalization and viewed by the community at Qumran as a true Davidic Psalter. According to Sanders, the Qumran Psalter was regarded by those who used it as "canonical" (since it incorporated psalms 1-89, which had been finalized), yet also as "open" (able to admit additional contents or arrangements, since Psalm 90 and onward were still fluid). He maintained that the process of stabilization was arrested when the founders of the Qumran community left Jerusalem, at a time when Psalms 1-89 had reached finalization. The gathering of Psalm 90 and beyond then developed independently in two directions. This resulted in two collections or editions, having Psalms 1-89 in common but differing from Psalm 90 onward. These are what Sanders termed the "Qumran Psalter," of which almost all the second half is represented by 11QPsalms¹, and the Psalter found in the Received Text whose second half comprises Psalms 90-150. Subsequent discussion surrounding the Psalms scrolls concerns four central theses that were articulated by Sanders, and which constitute what Peter Flint terms the "Qumran Psalms Hypothesis."

Stabilization of the Psalter. The first thesis states that 11QPsalms¹ witnesses to a Psalter that was being gradually stabilized from beginning to end. It is evident that diverse groupings of Psalms are present in 11QPsalms¹, other Psalms scrolls, and the Masoretic Psalter. Agreements between the Masoretic Text and the scrolls may be regarded as indicative of stability (e.g., Ps. 5-6 in 4Q83), while disagreements in order or content provide evidence of fluidity (e.g., Ps. 147 → 104 in 4Q86 and Psalm 150 → Hymn to the Creator in 11Q5) (see tables 1 and 2). Using the criteria of order and content, two bases for comparison between Psalms 1-89 and Psalms 90-150 emerge: the proportion of agreements and conflicts with the order of the Masoretic Text (Table 1) and the overall number of

times that specific Psalms are joined to non-Masoretic compositions (Table 2). These results provide a firm basis for comparing the stability and fluidity of Psalms 1-89 and 90-150 in relation to each other.

With respect to arrangement, the small number of disagreements with the Masoretic Psalter for Books I-III contrasts markedly with the high incidence of variation for Books IV-V: thirty-six (92 percent of the total) in the same arrangement as in the Masoretic Text, as opposed to only three (8 percent) in a conflicting order. For Books IV-V, only thirty-one psalms support the masoretic arrangement (39 percent), while forty-nine are in a conflicting order (61 percent).

The second correlation involves content, namely, the presence or absence of compositions that are not found in the Masoretic Psalter. These additional pieces are never joined with any of Psalms 1-89, but are linked eleven times with compositions that appear in Psalms 90-150 of the Masoretic Text. Thus the order and content of Psalms 1-89 vary little from those of the Masoretic Text, but from Psalm 90 and beyond many divergences are evident. This supports Sanders's proposal that during the Qumran period Books I-III were stabilized but Books IV-V remained fluid, although the precise cutoff point is not certain. Comparison of the older and later Psalms scrolls shows that this stabilization did not take place gradually, but in two distinct stages: Psalms 1-89 (or so) prior to the first century BCE, and Psalm 90 onward toward the end of the first century CE.

PSALMS, BOOK OF: Biblical Text. TABLE 2. *Conflicts with the Masoretic Text in Content.*

BOOKS (PSALMS)	"APOCRYPHAL" PSALMS
I (1-41)	0
II (42-72)	0
III (73-89)	0
IV (90-106)	2
V (107-150)	11

Two or more editions of the Psalter. Sanders's second thesis holds that the Psalms scrolls attest not to a single, finalized Psalter, but to more than one edition of the *Book of Psalms*: the "11Q5 Psalter," the "Masoretic Text-150 collection," and possibly others (e.g., in 4Q88). With a literary edition defined as "an intentional reworking of an older form of the book for specific purposes or according to identifiable editorial purposes" (Ulrich, 1992, p. 32), the identification of different literary editions largely depends upon an assessment of individual variant readings. In the Psalms scrolls and the Masoretic Psalter two types of variation are prominent: differences in the order of adjoining psalms, and the presence or absence of entire compositions. A comparative analysis suggests the existence of three major collections: an early Psalter comprising Psalms 1–89 (or thereabouts); the Masoretic Text-150 psalter; and the 11Q5-Psalter.

An early Psalter. The Psalms scrolls bear witness to an early collection of Psalms whose arrangement was largely stabilized well before the second century BCE, which represents one milestone in the formation of the *Book of Psalms*. It is not exactly clear where the cutoff point between the largely stabilized collection and the fluid part of the Psalter is (probably Ps. 89, but Ps. 72 is also possible). While several of the thirty-six Qumran Psalms scrolls support the general arrangement of Psalms 1–89, it is remarkable that none unambiguously confirms the longer order of the received Masoretic Text (Psalms 1–150) against 11QPsalms^a. Firm evidence for this second collection among the Psalms scrolls is found only at Masada, where Mas1f^b clearly supports the masoretic structure (since it represents a Psalter ending with Ps. 150). Some smaller scrolls (1Q11, 4Q93) may have supported the Masoretic Psalter when they were fully extant, but several of these equally support the structure of 11QPsalms^a (e.g., Ps. 126 → 127 → 128 in 1Q11). While none of the Qumran manuscripts supports the masoretic arrangement against 11QPsalms^a on the macro-level, it may be possible to demonstrate the affinity of some Psalms scrolls with the Masoretic Text on the basis of key individual variants (e.g., 4Q85 and XHev/Se 4, although neither preserves material beyond Book II of the Psalter). Containing both Psalms 1–89 and the arrangement found in 11QPsalms^a, this 11Q5-Psalter is found in at least three manuscripts: 11QPsalms^a, 11Q6 (contains the Catena, Plea, Apostrophe to Zion, the sequence Psalms 141 → 133 → 144, other variants), and 4Q87 (the sequence 118 → 104 → [147] → 105 → 146, other variants). While the earlier part of this Psalter is not found in 11QPsalms^a, both 4Q87 and 11Q6 preserve material from Psalms 1–89 as well as the later part. Additional arrangements of Psalms at Qumran are evident in several manuscripts, such as 4Q84 (includes Ps. 103 → 112, with 104–111 lacking),

4Q88 (107 [+108?] + 109 and several "apocryphal" compositions), and 11Q11 (three "apocryphal" compositions followed directly by Ps. 91).

Secondary collections and three editions. Some of the Psalms scrolls contain secondary collections (compositions selected from a fixed scriptural collection and then rearranged, e.g., 11Q11, which includes Ps. 91). But the phenomenon of multiple literary editions of other biblical books at Qumran or in the Septuagint (e.g., *Exodus*, *Samuel*, *Jeremiah*, *Daniel*) supports the existence of variant editions of the Psalter. The three main Psalms groupings may be classified as Edition I (containing Ps. 1 or 2 to 89), Edition IIa (the 11Q5-Psalter or Edition I plus the arrangement found in 11QPsalms^a), and Edition IIb (the Masoretic Text-150 Psalter or Edition I plus Ps. 90–150 as found in the Masoretic Text). Both IIa and IIb seem to have been completed prior to the Qumran period; it seems impossible to decide which was earlier. The existence of yet further editions of the Psalter among the Psalms scrolls cannot be ruled out (e.g., as represented by 4Q88), but this seems impossible to prove owing to the fragmentary state of the manuscript evidence.

Provenance of the 11Q5-Psalter. The third thesis of the Qumran Psalms Hypothesis is that 11QPsalms^a was compiled at Qumran and thus may be termed the *Qumran Psalter*. Possible evidence for this theory includes its occurrence in at least three manuscripts (4Q87, 11Q5, and 11Q6); the 364-day solar calendar evident in David's Compositions (col. xxvii of 11Q5) is clearly indicated in other writings that are undoubtedly of Qumranic origin (e.g., 4QMMT); and 11QPsalms^a displays what Emanuel Tov (1992, pp. 108–109) terms expanded "Qumran orthography" or the "Qumran practice," which for some scholars is indicative of Qumran provenance. While these arguments admit the possibility that the 11Q5-Psalter was assembled by the Qumran covenanters, they do not prove this to be so. Other factors make it more likely that the collection was compiled and used by wider Jewish circles—including those at Qumran—who advocated the solar calendar: the individual compositions in 11QPsalms^a all predate the Qumran period; the absence of explicit Qumranic references (e.g., to the Teacher of Righteousness) suggests that none of the pieces was actually composed there; expanded orthography is not a sure indicator of Qumran provenance (cf. Ulrich, 1992, pp. 31–32); and the 364-day solar calendar evident in this collection is attested in other Jewish writings that arose before the founding of the community (*I Enoch*, *Jubilees*, the Temple Scroll [11Q19–20]).

The clear implication is that the 11Q5-Psalter as a collection originated before the Qumran period. More recently, Sanders has stated that 11QPsalms^a did not originate at Qumran but was brought there from outside,

possibly as the *hon* offered as surety by a novice on entering the community (1993, pp. 301–302, esp. n. 22). The notion of an 11Q5-Psalter that was used not only at Qumran, but also among other Jewish circles advocating the solar calendar, attests to a widespread type of Judaism, which possibly included the Sadducees. This is in marked contrast to the Pharisees and Rabbis with their 354-day lunar calendar, and cannot be viewed as sectarian (cf. Flint, 1997, pp. 198–201). But as regards the production of individual scrolls, it is possible one or more of the representatives of the 11Q5-Psalter (4Q87, 11QPsalms^a, 11Q6) was copied at Qumran in view of the popularity of this Psalter among the covenanters and because scrolls were produced at the site.

11QPsalms^a as Part of a Scriptural Psalter. The final thesis of the Qumran Psalms Hypothesis concerns the status of 11QPsalms^a: that it contains the latter part of a true scriptural Psalter, and is not a secondary collection dependent upon Psalms 1–150 as found in the Received Text. Not surprisingly, reactions to such a proposal have been sharp and numerous. In 1966, Shemaryahu Talmon (1966, pp. 11–21) and M. H. Goshen-Gottstein (1966, pp. 22–33) asserted that 11QPsalms^a is not part of a true scriptural Psalter at all, but is instead a secondary, liturgical or nonbiblical collection. For instance, Goshen-Gottstein argued that “David’s Compositions” (col. xxvii) is incompatible with a scriptural Psalter, while Talmon proposed that 11QPsalms^a contains material that is supplementary to scripture. In a series of articles from 1973 to 1980, Patrick Skehan adopted a similar position concerning the secondary status of 11QPsalms^a. He sought to demonstrate that the Masoretic Text-150 Psalter is chronologically prior to 11QPsalms^a, which he classified as a “library edition,” an “instruction book” containing the supposed works of David, or “an instruction book for budding Levite choristers” at the Temple in about 200 BCE. In more recent times, Ben Zion Wacholder has also supported the view that 11QPsalms^a contains a rearrangement or supplementation of the Masoretic Text-150 Psalter (1988).

Discussion advanced with a series of articles and a Yale dissertation (1985) by Gerald H. Wilson, who took into consideration 11Q5–8 and most of the Cave 4 scrolls, thus expanding the entire Psalms debate. Wilson’s conclusions support several elements of the Qumran Psalms Hypothesis. By investigating the consecutive arrangement of Psalms in the scrolls, he reinforced the thesis that these manuscripts attest to overall stability for Psalms 1–89 and to general fluidity for Psalm 90 onward; and with respect to the scriptural status of 11QPsalms^a, he demonstrated that this collection was organized in accordance with principles similar to those found in Books IV and V in the Masoretic Text-150 Psalter.
