Preface

The fifty years since the discovery of the Dead Sea Scrolls have seen an immense development in our understanding of biblical studies, the history of Judaism, and the rise of Christianity—the result of what has been called by many the most important archaeological discovery of the century. Recent years have seen an intensification of research and publication relating to the scrolls. The purpose of the *Encyclopedia of the Dead Sea Scrolls* is to present to scholars and interested lay people the results of this half century of research and to reveal to them this trove of information that highlights a period in the history of our civilization the importance of which cannot be overstated. The documents discussed in this encyclopedia, as well as the historical sites and circumstances, were formative in shaping the Western religious tradition as we know it. It is therefore no accident that these scrolls have engendered such great enthusiasm on the one hand and much controversy on the other. The encyclopedia aims to provide an up-to-date account of all aspects of these important finds.

As understood in this encyclopedia, the Dead Sea Scrolls are a set of collections of texts found in the Judean Wilderness, an area east and south of Jerusalem and west of the Dead Sea. Although the term *Dead Sea Scrolls* is usually used to designate only the texts found in the eleven caves of Qumran, this encyclopedia also includes the texts found in Wadi ed-Daliyeh, Wadi Murabba'at, Nahal Hever and related sites, Masada, and Khirbet Mird. Taken together, scholars usually designate these collections as the Judean Desert texts. These materials range in date from the fourth century BCE to the seventh century CE. While these collections are often described using the terms *scrolls*, *texts*, or *documents*, most of the parchment and papyrus scraps are but fragmentary representations of what once constituted complete scrolls. Those few scrolls that survive in full-length copies are often missing sections or break off at certain points. The reconstruction of the original texts is one of the most difficult tasks for scholars and has been compared to assembling a jigsaw puzzle with most of the pieces missing. Nevertheless, through reconstruction and interpretation, the Dead Sea Scrolls provide textual evidence for a variety of topics, including the history of the text of the Hebrew Bible, background for the New Testament and early Christianity, and evidence for the development of Second Temple and Rabbinic Judaism.

Although research began on the scrolls shortly after their discovery in the late 1940s and 1950s with the intent of publishing all the texts, scholarship slowed in the 1960s and was revived only in the 1980s. At that time, there were protests about the paucity of texts that were available for study. Those that had not been published remained in the possession of the editors, who at times denied other researchers access to them. The decade of the 1990s opened with the “liberation” of the scrolls and continued by making all the texts available to the public in

several formats. This encyclopedia could not have been conceived until this development in the history of scrolls scholarship had taken place. At the end of the 1990s, it is particularly appropriate to encapsulate this new knowledge in an encyclopedia written by experts, each of whose field of study now has been greatly enhanced by access to these materials. Even as this encyclopedia goes to press, editions and translations of the remaining unpublished texts are in progress in the Oxford University Press series *Discoveries in the Judaean Desert*.

To be sure, the centerpiece of this encyclopedia is the Qumran scrolls. These scrolls, along with the other documents, illuminate the several centuries preceding Jesus' life and extending until shortly after his death, a very significant period for understanding the history of both Judaism and Christianity. During this era, Judaism consisted of a varied group of sects and movements that rivaled one another for supremacy. Echoes of these can be found in the Qumran texts, which shed light on the Essenes, Pharisees, Sadducees, Boethusians, and other Second Temple groups. This was the period of the rise of Talmudic Judaism. Further, these texts reverberate in the literature of the Karaites, Talmudic rabbis, and early Christians through their exposition and interpretations of Jewish law, their polemic against other groups, and their own theological and ritual construction of Judaism. The Dead Sea Scrolls are a unique record of this period, for they constitute the only contemporary manuscripts of these centuries outside the Bible itself and some passing references in the works of the first-century Jewish historian Josephus. In past research, Josephus was the key to understanding the events of the period. Now, with the eight hundred fifty or so documents found in the caves of Qumran as primary material, the previously available sources must be reinterpreted in light of the scrolls.

The Collections

Since the discovery of the first scrolls in 1947 at Qumran, a variety of collections from different sites in the Judean Desert have been found, sold, and published. For the most part, these collections have been studied separately in secondary scholarly literature. They are included together in this encyclopedia for a number of reasons. First, they all share a similar history of discovery, publication, and research. Second, they often throw light on one another when studied together. Third, the history and archaeology of the region in which they have been discovered are shared ones. Thus, these several collections together are the basis of this encyclopedia. At the same time, the quantitative size of the Qumran collection, the important research that has been done on it, and its overarching significance in historical terms have led us to give greater emphasis to it. Nevertheless, we do not wish to diminish the significance of the other material.

The collections included in this encyclopedia are as follows.

Qumran Scrolls

The most extensive collection is that of Qumran on the western shore of the Dead Sea. Here, in caves associated with the ruins of a nearby settlement, from 1947 on, remnants of more than eight hundred texts have been unearthed, for the most part by bedouin. These texts had been brought to the settlement or copied at Qumran between the third century BCE and the first century CE.

The texts may be divided almost equally into three divisions by their contents: biblical books, other books read at the time throughout the Land of Israel, and sectarian writings describing the beliefs and religious practices of the people who

authored them. While this sect has been identified with many previously known groups, it is certain that it was a Jewish sect with a rather strict construction of Jewish law, a strong messianic belief, and a cohesive communal organization. Most scholars have identified this sect with the Essenes, and some recent scholarship has pointed to relations of the group with the Sadducean priestly sect.

The excavation of the site of Qumran has yielded a building complex that virtually all archaeologists agree served the community that collected the scrolls and hid them in the caves. This site was occupied from sometime after 134 BCE through 68 CE and includes a complex water system that fed a variety of installations, including ritual baths, as well as rooms for public assembly and dining. Most scholars therefore judged these facilities to have served a group such as that described in the sectarian scrolls found in the nearby caves.

Samaria Papyri

In 1962, bedouin located two caves at Wadi ed-Daliyeh, northeast of Jericho, that yielded Samaritan legal papyri from the fourth century BCE, clay bullae, coins, and signet rings. Roman coins of the early second century CE and later remains from the Arabic and Mameluke periods were also located. The Samaria Papyri, as the documents from this site have been termed, testify to the legal usages and state of the Aramaic language in the fourth century BCE. Further, these texts have helped reconstruct the history of Samaria in the Persian period.

Bar Kokhba Texts

Beginning in 1951 bedouin unearthed texts and ostraca from caves located along the shore of the Dead Sea at Murabba'at, south of Qumran and north of Masada, ranging from the Iron Age to the Byzantine period and including texts written in Hebrew, Aramaic, Nabatean, Greek, Latin, and Arabic. The most important finds were the so-called Bar Kokhba texts, which were brought to the caves by Jewish refugees during the Bar Kokhba Revolt of 132–135 CE. Among them were Jewish, Greek, and Nabatean legal documents. In addition, some ostraca and coins were found. The scroll of the Twelve Minor Prophets found there is extremely significant.

The Israel Department of Antiquities undertook a survey of the caves of Naḥal Ḥever, between Wadi Murabba'at and Masada, in 1953. In addition to Chalcolithic potsherds, many remnants of everyday life in the Roman period were uncovered—clothing, shoes, vessels, textiles, knives and other utensils, baskets, keys, bullae, coins, and skulls. Additional documents from the Bar Kokhba period were also found. Legal documents in the possession of a woman named Babatha were written in Nabatean, Aramaic, and Greek. Hebrew land contracts from 'Ein Gedi were another important find, and personal letters from none other than the leader of the revolt of 132–135 CE, Bar Kokhba himself, were found addressed to members of his administration. Another cave, excavated in 1955, and known as the Cave of Horror, contained numerous skeletons of women and children, everyday utensils, and remains of foodstuffs. A further excavation of this cave in 1961 located fragments of a scroll of the Greek text of the Twelve Prophets. Those texts listed as coming from Naḥal Ṣe'elim actually derive from Naḥal Ḥever. Taken together, this collection of texts gives us a valuable window on life in Judea and the Roman province of Arabia in the second century CE, as well as illuminating the history of Jewish law and the state of the Greek, Hebrew, and Aramaic languages in use at the time.

Masada

In 1955 and 1956, excavations were carried out at Masada by the Hebrew University, the Israel Exploration Society, and the Israel Department of Antiquities. Here were found extensive architectural remains from the Chalcolithic period, the Iron Age, and the time of Herod the Great. The most dramatic evidence concerns the destruction of the site in 73 CE and includes the Roman siege works surrounding the plateau. The site also yielded finds indicative of its occupation by a Roman garrison after 73 and a later Byzantine church. In addition to the remains of the Jewish occupiers of the palace during the revolt against Rome (66–73 CE), including several biblical and a variety of apocryphal-type texts on parchment, there were many coins, more than seven hundred ostraca, and more than twenty documents on papyrus. The Hebrew and Aramaic texts, though few in number, include some of the same texts found at Qumran. This collection contributes to an understanding of the history of the biblical text and to the nature of the groups that revolted against Rome in 66–73 CE.

Khirbet Mird

Khirbet Mird, also called Horqaniah, yielded forty Greek and ten Christian Palestinian Aramaic documents, as well as more than one hundred fifty Arabic papyri from the Byzantine period. These texts were found by bedouin in the ruins of a Byzantine monastery in 1952. This last collection has been given the least attention but is of great importance. It testifies to the religious situation in the last years of Byzantine Palestine. Further, biblical fragments in this collection are valuable witnesses to the Aramaic biblical texts of the time and the state of the Greek Bible. The Arabic papyri also contain much interesting information for social historians.

The Purpose and Design of the *Encyclopedia of the Dead Sea Scrolls*

This work aims to encompass all scholarship on the scrolls to date, making use of the research of many scholars of international reputation. It includes the details of the discovery of the scrolls, a review of the archaeological context in which the scrolls were found, descriptions of the various fragments and scrolls, and a discussion of their contents. The written material and artifacts from each site, the history of the site, and the more general historical context of the texts and other finds are the subjects of the articles. Each article stresses the relevance of the corpus to biblical scholarship, its wider historical significance, and, in the case of the Qumran texts, how it contributes to the reconstruction of the Qumran community through an understanding of sectarian rulings, prayer, and rituals. Discussions emphasize the later impact of the material on Judaism, Christianity, and other related groups. The various articles constitute a reference work that unites the fields of historical geography, archaeology, paleography, biblical studies, history, law, theology, and religious studies.

While there is a vast and ever-growing literature on the sites in the Judean Desert and the material discovered there, the *Encyclopedia of the Dead Sea Scrolls* is the first and only reference work that brings all the information together in one place. It goes far beyond the various extant introductions to the scrolls in two significant ways. First, it provides much more detailed information and greater background material; second, it encompasses all the collections of Judean Desert texts, not just the Qumran scrolls.

Studies of these sites, or at least some of them, are often included in other reference works, the principal concern of which is the Bible or ancient Near Eastern archeology. While our sites are only a minor set of topics in such works and serve as background material in them, they are the primary focus of the *Encyclopedia of the Dead Sea Scrolls*. Consequently, the content and design of the encyclopedia are not driven by the concerns that govern, say, an encyclopedia of the Bible. The material from each of our sites is the heart and soul of what is presented here and what gives structure to the work as a whole. Many biblical and Bible-related topics fall within the purview of the encyclopedia and are treated here, but they are included only when they are relevant to the discoveries in the Judean Desert.

In planning the work, the editors attempted to organize the large amount of information available about the sites and to do so with the aim of making the contents of the encyclopedia accessible to a wide audience. The authors of the articles were carefully selected to write within their areas of specialization, but they wrote their entries with the goal of setting forth the material in such a way that educated readers, clergy, and scholars in related fields will be able to profit from the contributions.

In planning a reference work such as this, there is always a danger that selection of the contributors will reflect the biases of those who organize it. In order to counter this problem, a sincere effort has been made to avoid endorsing any specific views and to include a wide spectrum of opinion. The many contributors represent the diversity and international character of modern scholarship on the material. They also come from varied religious backgrounds and have been given the freedom to write their articles in ways that reflect their own scholarly points of view. The *Encyclopedia of the Dead Sea Scrolls* advances no unified ideology about the ancient sites and finds. Authors were given scope descriptions of the articles that they were invited to contribute, but they were also encouraged, as experts in their particular fields, to develop their articles according to their best judgment. The initial descriptions provided were meant only as guides, not as restrictions on the contributors' thinking. The authors were assigned word limits for their articles; these ranged from about five hundred to five thousand words.

The origins of the encyclopedia can be traced to a suggestion by Eric Meyers, editor in chief of *The Oxford Encyclopedia of Archaeology in the Near East*, that Oxford University Press be approached about publishing an encyclopedia of the Dead Sea Scrolls. Lawrence H. Schiffman of New York University was the first to be involved in the project, and Marlene Schiffman drafted a proposal that was submitted to and accepted by Oxford University Press in 1992. James C. VanderKam of the University of Notre Dame was invited to become the other editor in chief along with Schiffman. The next step in the planning was to appoint an editorial board of experts in a range of subdisciplines connected with scrolls research. Those who served in this capacity are George J. Brooke of the University of Manchester, John J. Collins of the University of Chicago, Florentino García Martínez of the University of Groningen, Eileen M. Schuller of McMaster University, Emanuel Tov of the Hebrew University, and Eugene Ulrich of the University of Notre Dame.

The editors in chief and the editorial board also were assisted by Ephraim Stern of the Hebrew University, who served as a consultant primarily in archaeological matters, and by four advisers, Joseph A. Fitzmyer, the late Jonas C. Greenfield, Émile Puech, and Hartmut Stegemann, who contributed their expertise both in the initial definition of articles and their scope and, once the articles began to be submitted, on specific topics and problem areas.

In the complicated process of planning the hundreds of articles to be included

in the encyclopedia, the editors and advisers began with eight conceptual categories that were broken down into smaller areas and eventually into individual topics under each. Those conceptual categories are:

1. places and archaeological sites (both places of general importance in the period covered and archaeological sites with written remains)
2. material remains (the architectural and artifactual material from the sites included in the work)
3. written materials discovered in the Judean Desert
4. related ancient texts (Jewish, Christian, and other)
5. history (political, military, religious, and economic)
6. beliefs, institutions, and practices
7. figures (individuals in ancient history)
8. scrolls research (research, publication, preservation, tools, methods, important individuals, and institutions).

Naturally, the articles are arranged in alphabetical order, but these were the categories that allowed the editors to plan the work and to make the coverage as systematic, detailed, and efficient as possible. Each member of the editorial board was assigned to supervise articles within certain conceptual categories and fields of interest.

How to Use the *Encyclopedia of the Dead Sea Scrolls*

Articles are titled in such a way that the reader will have access to information from several different angles, whether from the textual or artifactual side or through more general articles. In addition, articles have been included that provide necessary background material for understanding the Judean Desert texts and the research that has centered on them. There are three kinds of headwords, or article titles: independent entries, composite entries, and blind entries.

1. *Independent entries* were selected as the most likely term or phrase under which a person would look for an article on the particular subject.
2. *Composite entries* are headings under which groups of related topics are gathered in order to provide appropriate contexts for comparison and to make comparison more convenient. For example, the composite article on Qumran consists of two headings, Archaeology and Written Materials. Each is an independent article written by a different author, and each has its own bibliography.
3. *Blind entries* appear in their appropriate, alphabetical place and simply refer the reader to the independent or composite entry under which the subject is treated. This reference allows the reader who searches for an article under a particular title to find the information needed, even if the article is actually presented under a different title.

The articles are also supplied with a series of cross-references to related material. In this way the diverse contents of the encyclopedia are made more readily available. Readers will find that they can begin reading articles of a more general character and be guided by the cross-references and the index to progressively more detailed and more technical articles, which when read in such a fashion will make sense to people with different levels of previous knowledge.

The editors and authors of the encyclopedia are aware of the changing nomenclature and numeration of texts that plagues the still-developing field of Dead Sea Scrolls studies. Some texts are known by more than one name, as is the case

with the text originally called the Zadokite Fragments, now more generally known as the Damascus Document. In some cases, there are both English and Hebrew names, so that the Hodayot Scroll is the Hebrew designation for the Thanksgiving Scroll. A few texts also have French or Arabic titles. We have developed a standardized set of titles for the encyclopedia and carefully followed the numeration assigned by the International Team for the Publication of the Dead Sea Scrolls. Occasionally, however, we had no choice but to deviate somewhat and use differing titles. Further, as research has been progressing, and since the texts were being published while this encyclopedia was being prepared, changes were taking place in some aspects of numeration of texts, fragments, columns, and lines. We have made every attempt to update the encyclopedia to the greatest extent possible in this regard, but users may occasionally find that recent publications have adopted titles or numerations that are different from those here. For example, we have attempted to follow the new numbering system for columns and lines in the Hodayot Scroll, but most readers will find that the editions and translations available still follow the old system. The simple fact is that because this field is making so much progress, we could not avoid such problems short of delaying the appearance of the encyclopedia for years. We trust that readers will concur in our decision to proceed as we have and to live with these minor inconsistencies and inconveniences for the sake of disseminating the progress that has made in the study of this field.

The articles are meant to appraise the reader of the latest scholarship on the topics treated. To that end they include bibliographies, the lengths of which are normally proportional to the importance of the topic. These bibliographies are not meant to be exhaustive but to inform the reader of the basic studies, such as where a text was published or where the standard archaeological report(s) about a site are to be found. The bibliographies, which are less complete for publications in languages other than English, are in many cases annotated by the authors of the articles in order to increase their usefulness.

At the end of the encyclopedia is a comprehensive topical index and a synoptic outline of the contents, as well as a list of the Judean Desert texts according to the official numeration, specifying their titles as used in the encyclopedia which occasionally differ from those in the official publications.

At the turn of the millennium, it is especially appropriate that the *Encyclopedia of the Dead Sea Scrolls* make its appearance, renewing our acquaintance with texts that were composed over two millennia ago. With access to all of the Dead Sea Scrolls, there has been a flowering of interest and research, and more people than ever are involved in scrolls scholarship and study, in academic, religious and informal circles. The volumes of this encyclopedia are meant to establish a reciprocal relationship between the synthesis of scholarship assembled herein and future study, summarizing past research and stimulating further investigation. Scholars in other fields will be able to find here material relating to their interests and to share in the significant progress that has been made since the early years of Qumran Studies in which scholars were occupied so heavily with piecing together the fragments. Here at last, there is an attempt to bring together into one place all the critical texts, introductions, articles, and studies into one widely accessible work for scholars in the field, students of related fields, clergy, and interested lay persons. This encyclopedia sums up all the wonderful accomplishments of recent years and points to the tasks still awaiting future efforts in this exciting field. In the process, it fully delineates the Dead Sea Scrolls as a field of study in its own right with great contributions to make to the history of Western civilization and to the modern quest for an understanding of our collective human past.

ACKNOWLEDGMENTS We have been blessed with the support and encouragement of numerous people throughout this project, which could never have been completed without the cooperation of a large group of dedicated editors, consultants, and authors, and the members of the staff of Oxford University Press. Our area editors—George J. Brooke, John J. Collins, Florentino García Martínez, Eileen M. Schuller, Emanuel Tov, and Eugene Ulrich—have contributed unstintingly to the planning and execution of the encyclopedia. We benefited greatly from the advice of Ephraim Stern, Joseph A. Fitzmyer, Émile Puech, Hartmut Stegemann, and Jonas C. Greenfield (of blessed memory). The friendship and collegial cooperation of these leaders in the Dead Sea Scrolls field have made our task much easier and certainly more pleasant. It is an honor to work with them.

The members of the staff of Oxford University Press have worked with us at every stage to bring this project from dream to reality, even when the overcommitment of scrolls scholars to the publication of the scrolls and to the celebration of the fiftieth anniversary of their discovery always seemed to slow us down. They also lived with the changing details which resulted from the steady publication of the texts and from the progress the field has been experiencing while we were putting this encyclopedia together. Claude Conyers, then editorial director of the scholarly reference division of Oxford University Press, initially expressed confidence in this project and oversaw its development and progress until his retirement in 1998. It was from him that we learned how to plan the intellectual structure of an encyclopedia, and his patient prodding and sage advice were major factors in the success of the project. He was succeeded by Karen Casey, whose administrative talents were a major factor in bringing the encyclopedia to publication. Marion Osmon led us through the planning of the entries and the organization of the project. Scott Lenz and Jeffrey Edelstein handled much of the administrative editorial work, and their help is greatly appreciated. The project came together under the editorial guidance of project editor Kathy Moreau, who managed the editorial and organizational tasks.

One of the great pleasures of being in the field of Dead Sea Scrolls studies has been working closely with students who constitute the next generation of scholars. We have been privileged to involve in this project a number of our students in various bibliographic and editorial tasks. We express our appreciation to Eric Mason, Kelley Coblenz Bautch, Tobin Rachford, and Monica Brady of the University of Notre Dame, and to Michael Rand and Kevin Osterloh of New York University.

On a personal note, the editors have had an international and ecumenical experience and have learned a great deal from both writing articles and editing the work of colleagues. The encyclopedia has helped us to keep abreast of all the new research in areas other than our specific interests. We hope that it serves as a stimulus to further discoveries in the wealth of materials left to us from the Judean Desert in Late Antiquity.

A

AARON. The figure of Aaron, his ancestry, and his rise to priestly prominence is treated rather tersely in the Bible. Though he stems from the lineage of Levi (Levi, Kohath, Amram, Aaron; *Ex.* 6.16–20), he must be distinguished from the secondary class of temple servants who also come from that tribe and more properly bear the name *Levites*. [See Levi.] The account of Aaron's elevation over his Levitical brothers is not recorded in the Bible, but we do have the Korah story, in which his prominent role amid the other Levites is contested (*Nm.* 16–17); his investiture as chief priest also is described (*Ex.* 29).

When we turn to the Second Temple sources found at Qumran we find a surprising dearth of interest in the figure of Aaron as a narrative character. Though the name *Aaron* occurs numerous times, it almost always refers to the category of Aaronic priests, rarely to the biblical person himself. Many of the more important references of this kind are to be found in the Rule of the Community from cave 1 (1QS). [See Rule of the Community.] Here we find the community itself broken down into two composite parts: the "Sons of Aaron" and the "majority of the members of the Community." There is some variation here as to how the priestly element is named. Alongside the title "Sons of Aaron" (1QS v.21) one also can find "Sons of Zadok" (1QS v.2, v.9), and simply "the priests" (1QS vi.19). These different titles for the priestly element of the sect must be understood as synonymous. [See Zadok, Sons of.]

Interest in the role of the Aaronic priests also is prominent in the War Scroll (1QM vii.10, xvii.2); here the biblical role of Aaron in raising up the militia of Israel (*Nm.* 1ff.) is drawn upon. In Temple Scroll^a (11Q19) there is frequent reference to Aaron as the person to whom Israel's sacrificial legislation was first entrusted (11Q19 xxii.5, xxxiv.13). [See Temple Scroll.] Finally, one must note the interest the scrolls show in a messianic figure from the line of Aaron, nearly always paired with a messianic figure from the line of David (e.g., Damascus Document, CD xix.11). [See Damascus Document; Messiahs.]

This lack of interest in Aaron's narrative character is counterbalanced by the very significant attention the figure of Levi receives in Second Temple sources (cf. *Jub.* 30–32; *Testament of Levi*; Aramaic Levi [1Q21], Aaronic Text A (bis) [4Q540], and Aaronic Text A [4Q541]; *Heb.* 7.9). [See Levi, Aramaic; Testaments.] Nearly all of Aar-

on's priestly attributes (and their anticipated return) are funneled into stories about Aaron's ancestor Levi. Indeed, in much of this literature the relationship envisioned for the restoration of a royal and priestly office is expressed through the figures of Judah and Levi.

Alongside the question of the restoration of an Aaronic messiah is the very complicated question of what constituted authentic Aaronic lineage. This question cannot be addressed without some consideration of the figure of Zadok. [See Zadok.] The biblical picture portrays Zadok as one of David's two leading priests (2 *Sm.* 8.17). Eventually Zadok emerged as the leading priest in Jerusalem, once the Temple was built. The foundation story of Zadok's elevation is to be found in *1 Samuel* 2.27–36. Here the house of Eli, the other major priestly family in David's kingdom, is condemned to lose its priestly status. The historical origins of Zadok and his genealogical relationship to Aaron are contested issues in biblical scholarship. But however that historical problem is to be solved, the Bible's own solution is clear: Zadok is given an Aaronic ancestry (*1 Chr.* 5.27–34). The position of Zadok reaches extreme heights in the *Book of Ezekiel* (44.15–26). For this prophet claimed that, as a result of the priestly errors that led to the exile, only priests of Zadokite descent would be qualified for service at the altar.

The question of how these biblical categories of priestly superiority functioned in the Second Temple period is very complicated. On one level, the name of one particular priestly party was transformed into the title of a much broader political constituency in the affairs of this Second Commonwealth, that of the Sadducees (the Hebrew term for Sadducees is derived from the name *Zadok*). [See Sadducees.] Yet on another level, the figure of Zadok continued to serve as the person from whom all legitimate high priests would trace their ancestry. This is made quite clear by Josephus (*Jewish Antiquities* 11.347) when he notes that the ancestry of the Oniad family could be traced back to the last high priest mentioned in the Hebrew scriptures, Jaddua (*Neh.* 12.22). Much of the political intrigue related to currying favor with the Seleucid rulers in Syria involved rival claims to priestly power. [See Seleucids.]

The Dead Sea Scrolls themselves make ample use of the polemical biblical texts about Aaron and Zadok. But frequently these allusions do not presume the specific po-

2 ABRAHAM

lemical import of their biblical origins. Aaron and Zadok function as ciphers for the sect as a whole. For example, 2 *Samuel* 2.35, which points toward the rise of the house of Zadok and the "sure house" he would build for Israel, is alluded to in the Damascus Document (CD iii.19) when the writer describes the sect itself as the "sure house" God has built within Israel. In a more obvious fashion, the text of *Ezekiel* 44.15 is quoted verbatim just a few lines later in the Damascus Document (CD iii.21-iv.4). Here again the priestly titles "Levite," "Sons of Aaron," and "Sons of Zadok" are given metaphoric value. The Aaronic priests are the "penitents of Israel"; the Levites are those who "accompanied" (a wordplay on "Levi" in Hebrew) those "penitents" into exile; and the Zadokites are the "chosen ones of Israel."

The ability to trace a clear and pure Aaronic pedigree back to the specific figure of Zadok was an especially important matter in the second century BCE. With the rise of Antiochus IV Epiphanes and the large-scale persecution of those who desired to remain true to the demands of the Torah, there arose yearnings for a return to more ancient and customary forms of religious observance. [See Antiochus IV Epiphanes.] Among those desires was the restoration of the true Aaronic priests and their proper Zadokite leader. Hopes must have been raised quite high when the Maccabees appeared on the scene, restored a modicum of independence, and, most importantly, rededicated the Temple. Yet those hopes were quickly dashed when the first two Hasmonean rulers, Jonathan (152 BCE) and Simon (143 BCE), both laid claim to the office of the high priest (*I Mc.* 14.41), a claim that could only be viewed as illegitimate by religious traditionalists. [See Jonathan; Simon.] Most likely it was the traditionalists of this stripe who formed the backbone of the group at Qumran; the history traced above accounts for the strong asseveration of the priestly role of Aaron and Zadok in the Qumran sect's documents of self-definition.

GARY A. ANDERSON

ABRAHAM (Heb., *Avraham*) or Abram (Heb., *Avram*) is the name of the progenitor of the Hebrew people. At first he is called Abram (*Gn.* 11.26-27, 12.1), perhaps meaning "exalted father." (This form of the name occurs some sixty-one times in the Hebrew scriptures, all but two of them in *Genesis*.) Later his name becomes Abraham (*Gn.* 17.5), meaning "father of a multitude." (This form of the name occurs some 175 times in the Hebrew scriptures). Abraham's story is told in *Genesis* 12-25. Among the many noteworthy episodes in his life were his calling (*Gn.* 12.1-9), his battle with the tribal kings (*Gn.* 14), his covenant with God (*Gn.* 15), and his willingness to sacrifice his son Isaac (*Gn.* 22). His most surprising failing was his fear and deceit with regard to his wife Sarah (with Pharaoh, *Gn.* 12.10-20; with Abimelech, *Gn.* 20). In subsequent books of the Hebrew scriptures Abraham, the "friend of God" (*Is.* 41.8; *2 Chr.* 20.7; cf. *Jas.* 2.23), emerges as the most venerable of all Jewish figures (*Jos.* 24.2-3; *Is.* 29.22, 51.2; *Ezek.* 33.24; *Mi.* 7.20; *Sir.* 44.19-23). It was this great respect for Abraham that led to much of the interpretation and embellishment found in later Jewish and Christian sources.

Abraham is often mentioned as the ideal example of Jewish piety and orthodoxy; his election is a subject of great interest in many of these sources. Whereas Abraham's virtues and accomplishments are often greatly magnified, his failings are explained or even justified. Although by no means a major character in the Dead Sea Scrolls, Abraham does figure significantly in a few passages.

The name *Abraham* (or *Abram*) is found some eighty times (including restorations) in the Dead Sea Scrolls published thus far. About one third of these occurrences are found in the Genesis Apocryphon (where he is called Abram). These appearances in the Scrolls cohere with other early Jewish traditions.

Abraham in the Dead Sea Scrolls. There are three extended treatments of the figure of Abraham among the Dead Sea Scrolls. One is found in the Commentary on Genesis A (4Q252), a fragmentary Hebrew scroll; another is in the Genesis Apocryphon (1QapGen, 1Q20), a poorly preserved Aramaic scroll; and the third is found in Pseudo-Jubilees^a (4Q225), a paraphrase of portions of *Genesis* and *Exodus*. All three scrolls are similar to *Jubilees* in that they are dependent on *Genesis*, yet they take certain liberties with the text. This is especially so in the Genesis Apocryphon.

Commentary on Genesis A. According to the Commentary on Genesis A (4Q252), God "gave the land to Abraham, his beloved. Terah was one hundred and [for]ty years old when he left Ur of the Chaldees and came to Haran; and Ab[ram was se]venty years old. Abram lived five years in Haran, and afterwards [Abram] went [to] the

land of Canaan" (4Q252 1.ii.8–10). At this point the text breaks off, making it impossible to discern what interpretive slant, if any, might have been given to the story. Column iii (6–7) treats briefly the events of Genesis 22: "Abraham stretched out his hand . . . your only . . ." but again too little of the scroll has been preserved.

Genesis Apocryphon. Columns ii, xii, and xix–xxii of the Genesis Apocryphon (1QapGen) are substantially preserved. Column xviii, which is lost, probably introduced Abram, who becomes the principal figure in the remainder of the scroll. Columns i–xvii had dealt with the ancient patriarchs, leading up to Noah. The surviving portion of column xix begins with Abram's building an altar and confessing that God is eternal. Sometime later, famine forces Abram to travel to Egypt. But shortly after entering the country, he has a dream: "And I, Abram, had a dream in the night of my entering into the land of Egypt and I saw in my dream [that there was] a cedar, and a date palm (which was) [very beautiful]; and some men came intending to cut down and uproot the cedar but leave the date palm by itself. Now the date palm remonstrated and said, 'Do not cut down the cedar, for we are both from one family.' So the cedar was spared with the help of the date palm, and [it was] not [cut down]" (xix.14–16). Perhaps attempting to mitigate the patriarch's deception, the dream, in which Abram is the cedar and Sarah the date palm, implies that Abram's life was in danger and that Abram and Sarah (or Sarai) were blood relatives. The story goes on to tell of Pharaoh Zoan's infatuation with the beautiful Sarah and the adventure to which this leads. There is nothing about the Genesis Apocryphon that suggests that it was composed at Qumran or by an Essene.

Pseudo-Jubilees^a. Perhaps the most interesting paraphrase of the story of Abraham is found in Pseudo-Jubilees^a (4Q225). Most of the extant material is concerned with "[the covenant that] was made with Abraham" (1.4). According to this scroll, God tested Abraham in Genesis 22 because of "Prince Mastemah" (2.i.9–11). The introduction of Mastemah, who is Satan (he is called Belial in 2.ii.14), coheres with Jewish interpretive lore found elsewhere (cf. *Jub.* 17.15–16; B.T., *San.* 89b) and probably owes its origin to *Job* 1.6–12.

Abraham in Jewish Piety and Theology. There are several important aspects of Abraham's life that became foundational for later Jewish ideas regarding piety. Abraham's faith, moreover, is viewed as exemplary and informs later Jewish and Christian doctrine concerning righteousness and justification (being declared righteous or guiltless by God).

Conversion of Abraham. The Damascus Document presents Abraham as the ideal convert and supreme example of a proselyte. This is because "Abraham did not

walk in (the stubbornness of his heart), but was counted as a friend for keeping the precepts of God and not following the desire of his spirit. And he passed (the precepts) on to Isaac and to Jacob" (CD iii.2–3). Appropriately, the true faith may be called the "covenant of Abraham" (CD xii.11; cf. 4Q225 1.4). This idea is followed up later in the Damascus Document. "And on the day which a man undertakes to be converted to the Law of Moses, the angel of hostility will depart from him if he fulfills his promises. For this reason Abraham circumcised himself on the day of his knowledge" (CD xvi.4–6). The scrolls offer other references to the life and example of Abraham, but the fragmentary condition of the materials makes it impossible to tell what points are being made.

God's election of Abraham. Several explanations in Jewish lore and legend are given for God's election of Abraham (*Jub.* 12.12–22; Josephus, *Jewish Antiquities* 1.7.1, 154–157; Pseudo-Philo, *Biblical Antiquities*, 6.1–8.3; *Ap. Ab.* 8.1–6). All these traditions, which introduce fire in various ways, are ultimately based on a wordplay involving "Ur of the Chaldees." Vocalized differently, it can mean "fire of the Chaldees" (cf. *Tg. Neofiti Gn.* 11.31).

The Dead Sea Scrolls may shed light on Paul's emphasis on faith and how it is supported by what is said of Abraham in *Genesis* 15.1–6. According to Paul, "one is not justified by works of the Law [*erga nomou*] but through faith . . . thus, Abraham 'believed [*episteusen*] God, and it was reckoned to him as righteousness [*elogisthē autō eis dikaïosunēn*]" (*Gal.* 2.16, 3.6). According to Pseudo-Jubilees^b (4Q226), "Abraham^b was recognized as faithful to [G]o[d . . .] that he might be accepted. And the Lord blessed [him . . .]" (7.1–2). The word translated as "faithful" is from the same root as the word "believe" in *Genesis* 15.6. Pseudo-Jubilees^b is saying that Abraham's faith led to his acceptance. Here we seem to have agreement with Paul's position. But in *Miqtsat Ma'asei ha-Torah* (MMT; 4Q394–399) a different understanding of *Genesis* 15.6 is expressed, possibly very similar to the one opposed by Paul. Near the end of the letter the author writes: "Now, we have written to you some of the works of the Law, those which we determined would be beneficial for you and your people And it will be reckoned to you as righteousness, in that you have done what is right and good before him, to your own benefit and to that of Israel" (4Q398 2.ii.2–3, 7–8 = 4Q399 1.i.10–11; 1.ii.4–5). The words "will be reckoned to you as righteousness" echo *Genesis* 15.6. Yet it is performing the "works of the Law" (*ma'asei ha-torah* = *erga [tou] nomou* in Greek) that will lead to one's being reckoned as righteous before God. This concept may parallel *1 Maccabees* 2.51–52: "and remember the works [*ta erga*] of the fathers, which they did in their time, and received great

4 ABSALOM, HOUSE OF

honor and an eternal name. Was not Abraham found faithful [*pistos*] when tempted, and it was reckoned to him as righteousness?" These materials, especially as seen in MMT, probably reflect the theology against which Paul so vigorously argues in *Galatians*.

CRAIG A. EVANS

ABSALOM, HOUSE OF. The only reference to the phrase *house of Absalom* in the Dead Sea Scrolls appears in Peshar Habakkuk (1QpHab v.9), where its position in a dispute between two religious leaders is described as follows:

Why are you staring, traitors, but are silent when a wicked man swallows up one more righteous than he? [*Hb.* 1.13b]. Its interpretation concerns the House of Absalom and the men of its council, who kept silent at the reproach of the Teacher of Righteousness and did not help him against the Man of the Lie, who rejected the Law in the midst of their whole con[gregation]. (1QpHab v.8-12)

The author of the *peshar* is disappointed by the attitude of the house of Absalom toward the Teacher of Righteousness, this group or family's behavior appearing to result in its alignment with the policies of the man of the Lie, or the Liar.

The historical identification of the house of Absalom and the meaning of the title are open to dispute. William H. Brownlee (1948) and those who agree with his position see here a cryptic reference to a religious party given the name of Absalom who rebelled against his own father, thereby symbolizing its unfaithfulness to the Teacher of Righteousness. By contrast, David N. Freedman (1949) and those who follow him see this as a reference to an actual historic figure named Absalom and his family or partisans. They suggest a historical family such as that mentioned in *1 Maccabees* 11.70 and 13.11; a historical figure such as the one mentioned in *2 Maccabees* 11.17 (Freedman); or even a later figure to whom Josephus refers in *Jewish Antiquities* (14.4. 4 [71]; Dupont-Sommer, 1964). The latter set of hypothetical identifications is not likely, and nominal identifications of specific persons are not customary in the scrolls. Conversely, in light of the terminology used in the scrolls, Brownlee's suggestion may be supported in the following way: Terms such as *house (bayit)* and the like are used in the scrolls to symbolize a definite group or party (Flusser, 1965). For example, we find the title, the *house of Judah*, and similar titles, referring to the Yahad (Qumran) community (Peshar Habakkuk, 1QpHab viii.1; CD iv.11; xx.10.13; cf. 1QS v.6; viii.5, 9; ix.6) and the *house of Peleg*, another cryptic name given to an opposing group (Damascus Document, CD xx.22-24; Peshar Nahum, 4Q169 3-4.iv.1), in which the name *Peleg* is used to symbolize a schism (cf. *Gn.* 10.25, *Jub.* 8.8).

This suggestion is supported by another term, the *men of their council ('etsah)*, used here to define the members of the house of Absalom rather than their followers. The term *'etsah* is used in the Hebrew scriptures for "counsel," but in the Qumran scrolls it acquires the additional meaning of "council": either "the council of the Yahad" (1QpHab xii.4; Rule of the Community, 1QS vi.14) and its members (1QpHab ix.10; Peshar Psalms^a, 4Q171 1-2.ii.18; Rule of the Congregation, 1Q28a i.3; Hodayot^a, 1QH vi.11, 13), or the council of their opponents, the "seekers after smooth things" (4Q169 3-4.iii.7-8).

Various identifications have been suggested for the historical event mentioned here, most of them related to the historical identification of the Man of the Lie and his partisans. One must nevertheless recognize that all identifications are only theoretical. Groups such as the house of Absalom or the house of Peleg, which separated from their parent body and attached themselves to others, may have been one of the socioreligious consequences of the

dispute among religious leaders concerning which halakhic precepts should prevail in Israel. The existence of such groups reflects the dangerous situation of schism among the followers of the Teacher of Righteousness (cf. 1QpHab ii.1–4; CD xix.32–35; xx.10–12, 22–26) and within Second Temple Judaism as a whole.

BILHA NITZAN

Translated from Hebrew by Jonathan Chipman

ACTS OF A GREEK KING. The scroll fragment Acts of a Greek King (4Q248), previously also Pseudohistory, is now called Historical Text. It is approximately 8 by 8 centimeters in size and ought to be dated paleographically to between 30 and 1 BCE. Stitching holes on the right margin testify to the existence of at least one sheet to the right of our column. It is written in late Second Commonwealth Hebrew. Our fragment preserves nine of ten lines, all dealing with events connected with King Antiochus IV Epiphanes: his first invasion of Egypt, the first siege of Alexandria, selling Egyptian land, and the capture of Jerusalem and the conquest of Cyprus. An interesting fact mentioned here but not recorded in other sources is that the Seleucid king sold Egyptian land for lucre. This agrees closely with the data about Antiochus's rapacity. It also explains a difficult verse in *Daniel* concerning this monarch: "and he shall distribute land for a price" (*Dn.* 11.39). A passage in Acts of a Greek King, "And when the shattering of the power of the ho[ly] people [comes to an end] then all these things [be fulfilled]," is identical to *Daniel* 12.7. Acts of a Greek King refers to events that took place between 170 and 168 BCE, and its author does not know yet of the persecutions of 167 BCE. The *Book of*

Daniel, which has ample references to the persecutions (*Dn.* 7.25, 11.30–33, and 12.1) and refers also to the victory over Xerxes, king of Armenia, which took place in 166 BCE, could not have been edited before this year. Therefore our text should be regarded as one of the sources of *Daniel*.

MAGEN BROSHI

ACTS OF THE APOSTLES is the second volume of a two-volume work, *Luke-Acts*, which relates the story of the early church in ways that are strikingly similar to the structure and practices of the Qumran community.

Acts of the Apostles. The two treatises, *Luke* and *Acts*, relate the story of Jesus and the early church. Although there is no manuscript evidence that the two ever circulated together in antiquity and there are differences between them, factors such as the use of the double preface (*Lk.* 1.1–4, primary preface; *Acts* 1.1–2, secondary preface), the unified narrative, and intertextual connections (e.g., *Acts* 6.14 appears to have been in mind when the author wrote the trial scene in *Lk.* 22.54–71; cf. *Mk.* 14.53–65, especially 58 and *Mt.* 26.57–68, especially 61) suggest that the two were planned as one work. A third generation Christian who is distinct from Luke, the sometime traveling companion of Paul, probably composed the work in the last twenty years of the first century CE. The empire-wide perspective of the work makes the identification of the locale for the author and first readers uncertain.

Acts begins where *Luke* began and ended: Jerusalem. The author provides a rough table of contents indicating the geographical expansion of Christianity out from Jerusalem. Jesus says to the apostles (1.8), "You will be my witness in Jerusalem" (2.1–8.3), "in all Judea and Samaria" (8.4–12.25), "and to the ends of the earth" (13.1–28.31). The work thus chronicles Christianity's expansion from Jerusalem to Rome or from an exclusively Jewish base to a predominately gentile base. The work attempts to provide Christians with a new sense of identity as members of an ethnically and geographically diverse movement. One important consequence of this orientation is the conscious effort to Hellenize earlier traditions in an attempt to make the story reflect the historical reality of Christianity's presence in the wider world. Another is the replacement of the apocalypticism of earliest Christianity, which contained the expectation of an imminent parousia, with a new form of salvation history, which offers the Spirit in the present and situates the parousia in

the distant future. At the same time, the text goes to great lengths to anchor this movement in Judaism.

Acts and the Dead Sea Scrolls. If we consider *Acts* from the perspective of its terminus, we find that the text stands at a considerable remove from the world of the Judean Desert, especially from the Covenanters at Qumran. On the other hand, if we consider *Acts* from the viewpoint of the effort to anchor the movement in Judaism and to depict Jewish Christianity as the earliest form of Christianity, there are three broad areas of agreement.

The first has to do with the concept and structure of the movements. *Acts* used the word "Way" (Greek, *hodos*) both absolutely (9.2; 19.9, 23; 22.4; 24.22) and with modifiers (16.17; 18.25, 26) to describe Christianity as a "sect" within Judaism (24.14). The closest analogy is the use of "way" (Hebrew, *derekh*) in the Dead Sea Scrolls where it appears both absolutely (e.g., in the Rule of the Community, IQS ix.17–18; x.21; CD i.13; ii.6; and the War Scroll, IQM xiv.7) and with modifiers (e.g., CD xx.18) to mean the strict observance of the law in contrast to deviation from the law to another "way" (IQS viii.13–15; cf. also iii.17–21). Both probably took their inspiration from *Isaiah* 40.3 in order to establish self-identity, but developed it with different nuances. Similar analogies exist for specific units within the movements. Both *Acts* and the Dead Sea Scrolls use the word "many" as a technical term to denote the full assembly (*Acts* 6.2, 5; 15.12, 30 and IQS vi.7, 7–9, 11–18 etc.). Each community has a group of twelve: in *Acts* they are the apostles (6.2; cf. 1.15–26) and at Qumran twelve laymen, along with three priests, constitute the community council (IQS viii.1–4). Apparently each group found the number of the twelve tribes of Israel to be important for their identification as a reconstituted Israel, although again with different applications. Finally, each has a similar leader: *Acts* knows of "bishops" (*episkopoi*) who shepherd the flock (*Acts* 20.28–35) just as the Damascus Document compares the inspector (*mevaqquer*) of the camp to a shepherd (CD xiii.7–13) who functions in very similar ways.

The second area of agreement comprises the common practices of the two groups. Both practiced communal meals, which had some eschatological significance, although the seating arrangements at Qumran would have been foreign to early Christians (*Acts* 2.26; IQS vi.4–6; Rule of the Congregation [IQ28a] ii.11–22). Both practiced baptism and associated it with repentance, cleansing from sins, and entry into the community (e.g., *Acts* 2.38, 41 and IQSa iii.6–9), although Christians understood it as an unrepeatable act while the residents of Qumran practiced it not only in initiation (IQS iii.4–12, v.13–14) but also as an ablution (CD x.10–13). The most striking practice that they shared is the community of goods (*Acts* 2.44–45; 4.32–35 along with 4.36–37; 5.1–11

and IQS i.11–13, v.2, vi.16–25). The Dead Sea Scrolls may help to explain a famous conundrum in *Acts* where there is a tension between the sharing of goods in the narratives (4.36–27; 5.1–11) and the common treasury in the summaries (2.44–45; 4.32–35). Although the residents of Qumran surrendered their property to the congregation, they did maintain some control (IQS vii.6–7, 27–28). It is thus possible to have a common treasury without surrendering all personal control of the property.

The third area is the exegesis of scripture (a Greek text for *Acts* and generally a Hebrew text for Qumran). *Acts* sometimes uses a text that is closer to the text circulating at Qumran than to the underlying Masoretic Text or the Septuagint (e.g., *Am.* 9.11 in *Acts* 15.16 and Florilegium [4Q174] i.12). Like the Qumran Essenes, the Christian author understands the text eschatologically, though the Christian writer looks to the past and present while the Essenes look to the present and future (e.g., *Acts* 2.17; 3.24; 10.43; and Peshet Habakkuk [IQpHab]). They share a similar hermeneutic including the use of the same introductory formulae (e.g., *Acts* 1.20, 23.5, and CD xi.20; *Acts* 7.42, 13.33, and 4Q174 i.2). In some cases they use the same texts, although their interpretations vary (see table 1). Furthermore, for years New Testament scholars have thought that New Testament authors used *testimonia* in their expositions of the sacred scriptures such as we find in the speeches of *Acts*. They based this position on phenomena such as incorrect attributions of quotations and composite citations. What they lacked was a pre-Christian example. We now have examples in *Testimonia* (4Q175) and Florilegium (4Q174).

The Essenes and Jewish Christianity in Acts. These similarities have led some to look for a direct connection between the Essenes (following the view that the Qumran sect is to be identified with the Essenes of Greco-Roman sources) and Jewish Christians as they are presented in *Acts*. Perhaps the most interesting of these hypotheses has been the argument that one group of Jewish Christians sprang directly from the Essenes. This argument requires the postulation of an Essene community in southwest Jerusalem during the first century (cf. *The Jewish*

ACTS OF THE APOSTLES. TABLE 1. *Major Texts and Parallels with Dead Sea Scrolls and Acts.*

War 5.145) at the site where a small second-century Christian community is known to have resided (cf. Epiphanius, *On Measures and Weights*, 14). The primary link between the two is the common practice of the sharing of goods. As interesting as this hypothesis is, it rests on a very tenuous tie between a postulated group of Essenes and later Christians who, if they were similar to the Jewish Christians of *Acts* or later Ebionites, were very different in many important ways. It also requires that the summary statements in *Acts* reflect actual practices. It is more likely that they are authorial generalizations based on the traditions in the surrounding narratives. They make the same claim for the early Jerusalem community that Philo and Josephus did for the Essenes, and this claim may have been made with the Essenes in mind.

Others have argued that the Hellenists in *Acts* 6.1–8.3 who opposed the Temple were related to the Essenes. This argument is also problematic on several grounds. The speech of Stephen in *Acts* 7.2–53 is an authorial composition, which certainly presents the author's perspective, but may or may not provide information about the earlier Hellenists. Even if it does, the grounds for opposition are quite different: the Essenes opposed the Jerusalem Temple as ritually polluted; the Hellenists of *Acts* opposed the Temple as the sole locus of God's presence. Similarly, some have suggested that the priests who are reported to have converted to Christianity were Essenes (*Acts* 6.7). However, the text calls them priests in a context devoted to the Jerusalem Temple. It is difficult to imagine how they could have been Essenes. [See Essenes.]

Along a different line, some have argued that there are New Testament manuscripts among the unclassified fragments found in Cave 7, including a small fragment of *Acts* 27.38 (7Q6 frag. 2). The problem with this identification is that there are only three unambiguous letters in the published photograph and three more reconstructed letters in the published edition, hardly enough to warrant a firm identification. Even if the case is eventually made for the identification of some of the other fragments with New Testament texts, the identification of 7Q6 fragment 2 will remain questionable at best since the fragment is so small and Cave 7 contains copies of texts other than the New Testament. The manuscript evidence at Khirbet Mird is a different story. Here we have a fragment from *Luke* (3.1, 3–4) and two manuscripts of *Acts*: a fifth-century Greek uncial (0244 [*Acts* 11.29–12.1 and 12.2–5]) and a sixth-century Christian-Palestinian Aramaic manuscript (*Acts* cpa [*Acts* 10.20b–29, 32c–41a]). These, however, come from a Christian monastery founded in 492 CE. [See Mark, Gospel of; Mird, Khirbet.]

Our present evidence then does not warrant us to believe that there was a direct connection between the Es-

senes and Jewish Christianity or *Acts*. It is far more likely that both movements sprang from a common milieu of which they are the best attested representatives.

GREGORY E. STERLING

ADAM. In the literature and religion of the Hebrew scriptures, Adam plays almost no role. The story of his transgression and eviction from the garden of Eden is recounted in a mere two chapters and never addressed again. One can understand the figure of Adam only in light of the wider narrative of the primeval history of *Genesis* 1–11, which documents the slow but inexorable decline of humanity that provides the background for the call of Abraham (*Gn.* 12.1).

Second Temple sources are divided as to where they wish to locate the moment of man's fall within this primeval history. One set of sources locates that moment in

the sin of Adam; another, in the myth of the "Fall of the Watchers" (*Gn.* 6.1-4). In the former category we would include the writings of Paul, *4 Ezra*, and, perhaps, Philo. If one is willing to include sources beyond the Second Temple period, one could also mention Gnostic materials and the *Life of Adam and Eve*.

The other manner of depicting origins of evil within the world is through the myth of the "Fall of the Watchers." This myth can be found in *1 Enoch*, *Jubilees*, and the Dead Sea Scrolls. The Enoch literature is the best place to turn for the full elaboration of the tale. But the Dead Sea Scrolls allude to it in an indirect manner. In the Damascus Document (CD ii.14-21), the writer summarizes all the most important moments in human history up to the rise of the sect. Significantly, the section begins with the "Fall of the Watchers"; Adam's sin is passed over in silence.

One very prominent problem in assessing the role of Adam in the Dead Sea Scrolls is the ambiguity of the term *adam* in Hebrew. The term can mean "man," or "mankind" in general, or it can specify the figure of Adam. In the Hebrew scriptures the former meaning is far more common than the latter. We would expect and, in fact, do find a similar situation in the Dead Sea Scrolls. For example, in the Damascus Document (CD x.8) the diminution of human longevity—a clear result of the sins of Noah's generation (*Gn.* 6.1-4)—is ascribed to the sin of "man." The Hebrew term used in this text is *adam*, but the historical figure of *Genesis* 2-3 is certainly not intended. All translations of the text rightly opt for the more standard meaning in Hebrew, "man," that is, "humanity." In other, more ambiguous cases, it is probably wiser to opt for the banal translation of "man" than to presume the rarer meaning "Adam." Thus, in the Damascus Document (CD iii.20), just after the failures and achievements of all human creation have been narrated and Adam has been conspicuously passed over in silence, the writer concludes by asserting: "those who remain steadfast will gain eternal life, and all the glory of man will be theirs." In light of the overall context of the passage, the translation of "man" is preferred. Yet, many scholars prefer to translate the line "the glory of Adam."

It is a well-known fact among scholars that the scrolls found at Qumran can be divided into two groups: those authored by the members of the sect (most likely at the site of Qumran) and those authored by other groups. The latter texts were ones that the sectarians clearly respected or showed some interest in, but they do not necessarily represent, in every detail, the thought of the sect itself. In light of this, it is certainly worth noting that several of these nonsectarian texts show substantial interest in the biblical figure of Adam. As Esther Chazon (1997) has shown, three of these texts, Paraphrase of Genesis-Exo-

odus (4Q422), *Words of the Luminaries* (4Q504), and *Sapiential Work A'* (4Q423), exhibit numerous parallels, though the closest ones are between the first two texts. In particular, these first two texts evidence an interest in Adam's rule over all creation, a theme that shows an interpretive decision to regard *Genesis* 1-3 as one complete narrative; a tendency to base this rule on the diction of *Psalms* 8.7 ("you set him as ruler over the works of your hands") instead of *Genesis* 1.27; and an interest in correlating the sin of Adam with that of the generation of Noah, especially in regard to the presence of an "evil inclination."

The most interesting text among these three is the *Words of the Luminaries*³, because this text was a set of prayers for each day of the week. Thus, the fall of Adam would have been read in a weekly fashion as a part of this liturgy, and it certainly would have become a central topos in the imagination of those who recited it in prayer.

Finally, I should mention the important text published by Joseph Baumgarten (1994), *Serekh Damascus* (4Q265). This text shows a very close relationship to *Jubilees* in the matter of Adam and Eve's process of purification after childbirth. In *Jubilees*, Adam and Eve must wait forty and eighty days, respectively, in order to purify themselves, prior to entering the garden of Eden. This period of time is drawn from *Leviticus* 12, a legal text about purification after childbirth. A parallel of this level of specificity can come about only as a result of some form of very close contact and/or borrowing. This is hardly surprising, however, in light of the close filiation between the Qumran material and the *Book of Jubilees*. Perhaps it is significant and worth noting that although *Jubilees* ascribes halakhic import to the life and times of Adam and Eve, it shows little interest in highlighting their glorious state prior to the sin or the sin itself; there is little more than the bare biblical narrative. The sectarian writings from Qumran seem to share this more pedestrian evaluation of Adam and his sin.

In the New Testament, in *Romans* 5.12-21, Paul uses the Adam-Christ typology to proclaim that, as sin and condemnation came through Adam, life came through Christ. In *1 Cor.* 15.45-47 Adam is the ancestor through whom all have a physical body; Christ's resurrection guarantees that believers will rise with a spiritual body (*1 Cor.* 15.22, 15.45). In *1 Timothy* 2.13-14, Adam's creation, prior to that of Eve, who sinned first, grounds the authority of men and denies it to women (cf. *1 Cor.* 11.9).

Among the Nag Hammadi texts, an *Apocalypse of Adam* appears. Adam, in the year of his death, tells Seth about his life (creation and fall), about a special race who have knowledge of God, about attempts to destroy them in the Flood, and about the coming of the Illuminator.

Extrabiblical traditions about Adam also figure in rab-

binic texts. Some concern his nature or appearance when first created (he was androgynous [*Gn. Rab.* 8.1]; he was a fully developed man of twenty years [*Gn. Rab.* 14.7]). Although angels questioned whether he should be created, once he was made, they had to be commanded not to worship him (*Gn. Rab.* 8.10). There were discussions about which laws were revealed to Adam; it was recognized that he was not born circumcised and that he had not been commanded to keep the Sabbath (*Gn. Rab.* 11.6, 24.5). He is also said to have learned the power of repentance from Cain and to have recited *Psalms* 92 (*Gn. Rab.* 22.13).

GARY A. ANDERSON

AEMILIUS SCAURUS, MARCUS, first-century BCE Roman aristocrat; Pompey's quaestor during the annexation of Syria and conquest of Judea, also Pompey's brother-in-law and husband of Pompey's (divorced) third wife; first Roman governor of Syria. According to Josephus (*Jewish Antiquities* 14.29-33; *The Jewish War*

1.127-130), while Pompey was still in Armenia campaigning against Tigranes he sent Scaurus ahead to Syria. That would place Scaurus's mission no later than 66 BCE, but the rest of Josephus's account seems to indicate that it is instead to be placed in 65 BCE. Perhaps Josephus meant to refer to Mithradates VI of Eupator Pontus, whose death he indeed reports somewhat later (*Antiquities* 14.53). When Scaurus discovered that Damascus had already been taken by Roman forces, he proceeded down to Judea. He arrived during one of the critical junctures in the struggle between Hyrcanus II and Aristobulus II, the two sons of King Alexander Jannaeus (died 76 BCE) and Queen Shelamzion Alexandra (died 67 BCE): Hyrcanus, with the assistance of Nabatean forces, was besieging Aristobulus in Jerusalem. Both brothers appealed to Scaurus for assistance, employing various arguments and bribes, and Scaurus decided in favor of Aristobulus. An ultimatum from Scaurus forced the Nabateans to lift their siege, and then, after Scaurus withdrew to Damascus, Aristobulus inflicted a major defeat on his enemies.

At this point there is some disruption in Josephus's narrative in *Jewish Antiquities*, apparently due to the juxtaposition of material from Strabo (cited explicitly) and another source. Perhaps as a result, the next stage of the story (*Antiquities*, 14.34-38; *The Jewish War* 1.131-132) is less than clear. Josephus reports that when Pompey himself arrived in Syria (64 BCE), both Hyrcanus and Aristobulus sent envoys to him, and Nicodemus, Aristobulus's envoy, for some reason saw fit to accuse Scaurus of having accepted a bribe from Aristobulus. Naturally, this strange move is said to have made Scaurus turn against Aristobulus, and, indeed, we may surmise that it played some role in Pompey's decision to favor Hyrcanus. Certainly Scaurus's continued influential position, in Pompey's eyes, is shown by the fact that when Pompey left the region after the conquest of Jerusalem (in the summer of 63), Scaurus remained, as the governor of Syria (*Antiquities* 14.79; Appian, *Syrian Wars* 51). In this capacity, Scaurus undertook a campaign against the Nabateans, but upon failing to take Petra he came to a financial arrangement with them and withdrew (*Antiquities* 14.80-81; *The Jewish War* 1.159). After he was replaced in Syria by Marcus Philippus (c.61 BCE; Appian, *Syrian Wars* 51), Scaurus returned to Rome. His subsequent career began with a succession of high positions (aedile, praetor, governor of Sardinia) but ended in exile after he was convicted of corruption.

A fragmentary text from Qumran apparently refers to Scaurus and tantalizingly suggests a supplement to the story summarized above. Calendrical Document C^d from Cave 4 at Qumran (4Q324a) seems to read *hrg 'mlyws* at the ends of lines 4 and 8 of fragment 2. In both cases, the name appears fairly clearly, the word *hrg* less so. *'Mlyws*

is most probably a transcription of Aemilius. Since other fragments of this text refer to Hyrcanus, Aristobulus, and Shelamzion, it is reasonable to infer that "Aemilius," too, is a historical character of the seventies and sixties of the first century BCE. Scaurus is our only candidate, although it is remarkable that this Qumran text refers to him by his nomen, in contrast to the Greek and Latin texts, which prefer his cognomen scaurus. As for *hrg*, it apparently means that on both of the dates mentioned, which were in the late summer (end of the sixth month and fifteenth of the seventh, that is, the first day of the festival of Sukkot), Scaurus was responsible for the killing of some important Jew or Jews. It seems most likely that both references are to the killing of more than one individual, for if only one individual had been killed, the fact that the event was listed in the calendar would indicate that he was quite important—but in that case his name would have been expected. There seems to be no space for such a name in the text.

Our sources do not supply a reference to any killing, much less massacre, perpetrated by Scaurus. We may assume that he participated in Pompey's campaign against Aristobulus II and in the conquest of Jerusalem, but we do not know why any massacres in that context would have been associated with his name and not with Pompey's. Of course, we know very little about these events, and any suggestion here is necessarily speculative. As Michael Wise has already proposed, nevertheless, it is attractive to imagine some connection between our text and the conundrum mentioned above: Why would Aristobulus's agent accuse Scaurus of having accepted the bribe from Aristobulus? It is likely that this reflects a falling-out between the two, and it is just possible that our text alludes to events in that process. Wise suggests, furthermore, that memorializing such a (perhaps perfidious) massacre by Scaurus might indicate Qumran support for Aristobulus. However, it may be no more than just another item in a general Qumran picture of Roman cruelty, such as that painted more fully in Peshar Habakkuk (1QpHab ii-vi).

DANIEL R. SCHWARTZ

AENEID. A fragment with a line from the *Aeneid*, the sonorous Roman epic and "principal secular book of the Western World" (Knight, 1958, p. 23), was found on top of Masada near fragments of the Bible, the principal religious book of the Western world.

Publius Vergilius Maro (70-19 BCE), after composing his *Eclogues* (or *Bucolics*) in 37 BCE and *Georgics* in 30 BCE, worked for the remaining decade or so of his life on composing the *Aeneid*. Based on the *Iliad* and the *Odyssey*, it tells the story of the heroic Trojan warrior and paragon of moral virtues, Aeneas, son of Anchises and Venus, who, despite all obstacles and with the help of the gods, reaches Italy and prepares the way for the might and grandeur of Rome.

The small papyrus fragment, Virgil's *Aeneid* (recto; Mas721r), was found in Locus 1039 and bears the inventory number 1039-210. On the recto is part of a line that contained *Aeneid* 4.9, while on the verso is a similar fragmentary line with three words presumably from another poet (Mas721v). It is inscribed in large and elegant letters characteristic of the Old Roman Cursive script (also called Capital Cursive), with parallels to scripts in the Latin papyri from Egypt and the Roman fort at Vindolanda in North Britain (Cotton and Geiger, 1989, pp. 28-29). It was found alongside various scraps of other Latin and Greek papyri as well as biblical and religious fragments (Cotton and Geiger, 1989, pp. 18-19), and the archaeological, numismatic, and historical indicators point to a date "shortly before Spring of 73 or 74 CE" (Cotton and Geiger, 1989, p. 27). Thus this papyrus "may be the earliest [extant] MS witness to Virgil, and is certainly the earliest that can be dated with any certainty" (Cotton and Geiger, 1989, p. 33). It probably belonged to a soldier in the *Legio X Fretensis* (cf. Josephus, *The Jewish War* 7.5) or its auxiliaries.

The scanty text preserved on the recto, with reconstruction, is:

]NA[]OR[]RQUAEMESUSP[

[An]na [s]or[o]r[] quae me susp[ensam] insomnia terrent] (*Aen.* 4.9)
= "Anna, my sister, what dreams terrify me and leave me helpless!"

After her great banquet welcoming the storm-tossed Trojans, Queen Dido of Carthage has listened through the night to the lengthy story of Aeneas's escape from Troy and his adventurous travels. As dawn nears, Dido, overcome by Cupid's machinations, begins her passionate speech confiding to her sister the strength of her love.

The editors of the fragment suggest that the papyrus was not part of a roll (Cotton and Geiger, 1989, p. 31), but neither does it appear to be simply a writing exercise (Cotton and Geiger, 1989, pp. 33–34). They see it as an isolated line and thus wonder whether it could be “addressed to someone called Anna,” or whether it might “reflect the writer’s feelings of horror at what he had witnessed on Masada” (Cotton and Geiger, 1989, p. 34).

It is uncertain whether one should focus on the fragment or the opus. Did the Roman soldier have only a few lines, or Book 4, or the entire *Aeneid*? Was he simply dreaming dactylic hexameter daydreams of his contemporary counterpart for *forma pulcherima* Dido (*Aen.* 1.49b)? Or was he a worthy counterpart for his Jewish opponent atop Masada? The fragment invites contemplation of the two scenes at the top and at the foot of that majestic mountain, of soldiers and their books. As the Roman soldier eyed that towering fortress, was he remembering the *altae moenia Romae* (*Aen.* 1.7), confident that his gods would effect the destined victory, despite the resistance from other divine forces, just as they had done for *pious Aeneas* (*Aen.* 6.17b)?

EUGENE ULRICH

AGES OF CREATION. The title *Ages of Creation* was given by the first editor, John M. Allegro, to several Hebrew fragments. [See *biography of Allegro*.] They stem from at least four columns of the original scroll and are copied in a late Herodian formal hand (thus John Strugnell). However, as observed by Strugnell, the title fits only the content of fragment 1 but not that of the remaining fragments. A more suitable title would be the one provided by the work itself (4Q180 1.1): Peshar on the Periods. All together, eight decipherable fragments are assigned to this scroll (Strugnell's corrected number). Four other tiny fragments are hardly readable. The largest and best preserved is fragment 1. It comes from the right sec-

tion of a column, preserving both the upper and bottom margins, and the upper corner of the right margin. It thus produces the entire height of a column. This column seems to contain the beginning of the work, or at least of a major section, since it opens with a formula introducing the subject: Peshar on the Periods. The *peshar* seems to have been divided into units, marked by blank spaces at the end of each paragraph, as is the practice in many Qumran manuscripts. Such a blank space of a word or two is visible in *Ages of Creation* (4Q180) 2–3.ii.3. In *Ages of Creation* (4Q180) 1.6 an entire line was left blank, apparently to mark the end of the introductory section and to indicate a new paragraph.

The first paragraph of *Ages of Creation* opens with the title, followed by a general description of the subject matter, namely the Periods, as divinely preordained and engraved on the Heavenly Tablets. It is formulated in typical sectarian terminology, especially when introducing the subject in general terms. For instance, *Ages of Creation* (4Q180) 1.2–3 says: “. . . before he created them he set up their activities.” Compare *Ages of Creation* (4Q180) with 1QHodayot^a (1QH^a) i.7 and Damascus Document (CD) ii.7 [See *Damascus Document*; Hodayot.] This description refers to a concept of history as a sequence of precisely defined periods, a concept occurring in other community writings (Rule of the Community, 1QS iii.15 and 23, iv.13; 1QH^a i.24; Peshar Habakkuk, 1QpHab vii.13) and in ancient Jewish apocalypses (e.g., *Dn.* 9.24–27; the “Animal Apocalypse” [*1 En.* 85–90]; the “Apocalypse of Weeks” [*1 En.* 91.11–17, 93.1–10]) [See *Peshar Habakkuk*; Rule of the Community.] The general description of the Periods concludes with a reference to a sequence or order (the term *serekh* is employed), after which the text breaks off. The following line speaks of “twenty.” Given the context of the Periods and the mention of Isaac's birth in the following line (4Q180 1.5), the order may refer to the twenty generations from Adam to Abraham, which represent the first two Periods. Such an explanation accounts for the fact that all the events alluded to in the surviving fragments concern episodes that fall within these two Periods: the sin of the angels (4Q180 1.7–8; see *Gn.* 6.1–4), the change of Abraham's name (4Q180 2–3.i.3–5; see *Gn.* 17.3–5), the visit of the three angels to Abraham (4Q180 2–3.ii.3–4; see *Gn.* 18.2), and the destruction of Sodom and Gomorrah (4Q180 2–3.ii.5–7; see *Gn.* 18.20–21). All these events took place before the birth of Isaac, which marks the beginning of the next series of ten generations.

Following the general first section, the second paragraph (4Q180 1.7–10) introduces a *peshar* “on Azazel and the angels.” Mention of the giants in the next line connects the allusion to the episode of the sinful angels who

fathered giants by mortal women (*Gn.* 6.1-4). Several agadic expansions of this biblical episode are known from early Jewish sources, roughly contemporary with the Qumran scrolls, chiefly *1 Enoch* (6-16, 89-90) and *Jubilees* (5, 7.20-25, 10.1-11). One of the main divergencies among these versions concerns the name and character of the sinners' leader. The Ages of Creation identifies the leader of the sinful angels with the demon Azazel. In this it agrees with one of the traditions recorded in *1 Enoch* (8.1-2; 10.4-6; 54.5), but differs from another tradition found in other sections of *1 Enoch*, where the angel Shemihazah is mentioned as the leader (6.3-7; 7.1-4; 69.2).

The remaining decipherable fragments 2-3 and 5-6 concern episodes from the life of Abraham. Clearly identifiable are the change of his name (4Q180 2-3.i.3-5; see *Gn.* 17.3-5), the three men who visited Abraham (4Q180 2-3.ii.3-4; see *Gn.* 18.2), and the destruction of Sodom and Gomorrah (4Q180 2-3.ii.5-7; see *Gn.* 18.20-21). This passage also contains an explicit quotation of *Genesis* 18.20-21. Since fragments 2-3 are materially connected and preserve remains of two successive columns, they establish the sequence of the description: first the change of Abraham's name, then the visit of the angels, and finally the destruction of Sodom and Gomorrah. Such an order clearly follows the biblical sequence of episodes as it is told in *Genesis* 17-18. The biblical order of events seems, therefore, to be the underlying structural principle of the *peshet*, as indeed is the case in other contemporary Jewish apocalypses that present early history (the "Apocalypse of Weeks," the "Animal Apocalypse"). [See Apocalyptic Texts.] If the biblical sequence is to be maintained, the mention of Mount Zion in Ages of Creation (4Q180) 2-3.ii.1-2 therefore should be linked to an event preceding the angels' visit to Abraham. It may have to do with *Genesis* 13.14-17, where Abraham is promised the land that was not chosen by Lot. That would also account for the mention of Lot in this context (4Q180 2-3.ii.2) and for the fact that the story about the destruction of Sodom and Gomorrah follows directly.

The badly preserved fragments of Ages of Creation 4Q180 5-6 have been placed by most of the editors after fragments 2-3. But these fragments mention Pharaoh (4Q180 5-6.5), which may refer to the earlier sojourn of Abram in Egypt (*Gn.* 12.10-20; see 4Q180 5-6.2-4). If, however, the principle of biblical sequence is to be maintained throughout the *peshet*, fragments 5-6 should precede fragments 2-3 and perhaps be placed at the upper right section of Ages of Creation (4Q180) 2-3.i. It should further be noted that fragment 4, which contains general predestination phraseology, was placed by the first editor at the bottom of fragment 3. However, it does not fit there materially or contextually, and therefore this joining cannot be retained.

Although the extant fragments deal only with episodes related to antediluvian and postdiluvian events, the original work may have included details about other, later periods, perhaps even of the entire historical sequence. Lists of historical events or precedents also occur in other contemporary writings (*Sir.* 16.7-10, *1 Mc.* 2.51-61). A particularly close parallel to the Peshet on the Periods is provided by the "Apocalypse of Weeks" (*1 En.* 93.1-10, 91.11-17), an Aramaic copy of which was found in Cave 4 at Qumran (Enoch^a [also = Letter of Enoch] 4Q212), and where the entire history is described in terms of periods of *shemiyot* (units of seven years). [See Enoch, Books of.]

The Peshet on the Periods should be considered as belonging to the peculiar literature produced by the Qumran community, since it contains ideas and terminology typical of the community's writings. In fact, the *peshet* presents the Periods within the framework of predestination characteristic of the community's thought (4Q180 1.1-3, 1.3,4,9-10; cf. 1QS iii.15, CD ii.10). Moreover, it may be alluding to the dualism embedded, according to the Qumranites' belief, in the present world structure (see Caquot, 1973, p. 391), since it describes both sinners and righteous. In itself the use of the term *peshet* indicates a sectarian provenance, since the *peshet* is a typical product of the Qumran community. Nevertheless, the Peshet on the Periods is unique in that it introduces comments on a conceptual theme, the Periods, rather than on biblical prophecy, as is the practice in all other extant *pesharim*. This, however, does not prevent the author from citing biblical texts concerning various details in a manner typical of the *pesharim* (4Q180 3-4.i.3-5 quoting *Gn.* 17.3-4; 4Q180 3-4.ii quoting *Gn.* 13.8 and *Gn.* 18.20-21; and 4Q180 5-6.6 quoting *Gn.* 12.17). The *peshet* even seems to employ actual *peshet* formulas, such as *peshet ha-davar* ("the meaning of the matter," 4Q180 2-4.ii.7) or *va-asher katuv* ("and as for what is written," 4Q180 5-6.5).

Preserved in only one copy, it is difficult to determine whether the *peshet* is an autograph or a copy, yet the Peshet on the Periods falls well within the typical sectarian style and ideology. It may therefore be assumed that it reflects a major ideological teaching of the Qumran community. At the same time the *peshet* betrays a considerable affinity to the worldview espoused by ancient Jewish apocalypses. Such an affinity suggests close links between the two corpora, perhaps even similar origins. This conclusion is corroborated by the fact that a number of works containing apocalypses, such as *Jubilees*, *1 Enoch* and the Aramaic Levi, were also found at Qumran.

What is the relationship between Ages of Creation 4Q180 and 4Q181? In his first edition, Allegro published the two as separate texts, without commenting on the close similarity between lines 4Q180 1.8 and 4Q181 2.2,

referring to the birth of giants. [See Giants, Book of.] This phenomenon has not yet been satisfactorily explained. For Jozef Milik (1972, pp. 112–124) 4Q180 and 4Q181 are two copies of the same work, a work that, in his opinion, dealt with the activities of angels through the Periods. He combined the two texts to create one document, a combination adopted by Émile Puech and J. J. M. Roberts. In Milik's opinion Melchizedek (11Q13) constitutes a third copy of the same work. A connection between 4Q180–181 and Melchizedek should be discarded on material as well as contextual grounds (see Puech, 1987, p. 509). Considerations of a similar nature disprove the proposed identity between 4Q180 and 4Q181 (see Dimant, 1979, pp. 89–91). 4Q180 and 4Q181 each have a distinct subject matter and literary structure and forms. Their material combination, attempted by Milik, is problematic. As for the close parallel line concerning the giants, it is well integrated into the context of 4Q180, whereas it stands out in 4Q181. If one of these works was commenting on the other, it was 4Q181 commenting on 4Q180 and not, as suggested by Strugnell, the other way around. Perhaps both refer to a third source, or to a biblical episode well known in the circles of Qumran. 4Q180 and 4Q181 should then be treated as copies of two distinct works.

DEVORAH DIMANT

AGRICULTURE. The landscape of the Judean Desert consists of four mountainous escarpments descending to the east. The uppermost and lowest escarpments are

composed of hard limestone, the middle two of soft chalky hills. The peaks of the Judean Hills stand at altitudes of 800–1,000 meters above sea level; the Dead Sea lies approximately 400 meters below the level of the Mediterranean Sea. The climate of the Judean Desert is unlike that of the other deserts in the Land of Israel, which lie at subtropical latitudes, since the Judean Desert lies on the leeward side of the Judean Hills and constitutes a local desert. The Judean Hills have a Mediterranean climate—rainy in winter and dry in summer. The Judean Desert is therefore suitable for select sheep breeding. This eastern arid region of the Judean Hills consists of three long climatic strips: a Mediterranean climate in the highest part of the Judean Hills, which, in its easternmost border region, receives some 400 millimeters of rain per annum, favoring the cultivation of wheat; a very narrow strip of steppe climate in the middle part of the desert, which receives some 200–300 millimeters of rain per annum, where barley is grown; and an arid climate in most of the lower region, which receives some 100–200 millimeters of rain per annum and is suitable for sheep- and goat-raising.

The Judean Desert never lacks water entirely and—to a lesser extent—food, as the peaks of the Judean Hills receive some 600–700 millimeters of precipitation each winter, which flows rapidly down to the Judean Desert and the Dead Sea, filling cisterns in the chalk hills and potholes in valleys and canyons, and replenishing the groundwater in the desert. A few rather meager springs may be found in the upper slopes of the desert, while some large springs, the most plentiful in the Judean Hills, flow at the foot of the Dead Sea cliffs in the east.

Sheep-Raising. The Judean Desert is the most suitable part of the country for raising sheep and goats, in view of the favorable lithological and climatic conditions, its proximity to Jerusalem and the Temple, and the efficient settlement geography of the Judean Hills. Grazing in the Judean Desert depends on an annual cycle of migration, with the animals moving down from the wooded peaks of the Judean Hills to the Judean Desert and the Dead Sea and back. This cycle assures the animals of a favorable climate and readily available grass, fodder, and water in each season of the year. In winter the shepherds bring their flocks down from the villages in the hills to the Dead Sea coast, where grass grows early in the floodplains of the wadis and springs, nourished by heavy floods and the high temperatures at the Dead Sea, which never freezes. In spring the flocks climb westward to the chalky hills, which support the low, thin grass known in Hebrew as *revi'ah* (B.T., *Ta'an.* 6a), the first vegetation after the rainy season; here the animals can drink water from the many cisterns and potholes in the valleys. In summer the animals feed on stubble in the barley fields, fertilize the

fields with their excreta, and drink water from cisterns and potholes in the valleys. Finally, in autumn the livestock graze on wheat stubble and fertilize the wheat fields, also eating acorns from oak trees and sycamore figs (*Am.* 7.14), as well as forest weeds; in addition, the livestock receive straw from the local village farmers and drink spring water.

Flocks were mixed, about three-quarters of the animals being sheep, which produce a variety of dairy products and have tasty meat and soft and pleasant fleece; the remaining quarter consisted of goats, which produce abundant milk but little meat and coarse fleece (*1 Sm.* 25.2). The Israelite flock was improved by importing fat and purebred rams from the rainy, wooded hills of southern Moab (*2 Kgs.* 3.4), as well as purebred rams and goats from the high hills of Edom (*2 Chr.* 17.11).

It is noteworthy that pilgrims to the Jerusalem Temple in the Second Temple period made more than a quarter of a million animal sacrifices on each of the three pilgrimage festivals (Josephus, *The Jewish War* 6.9.2); a small proportion of these animals were reared in the Judean Desert.

Sheep and goats provided a major livelihood for the Israelite peasants living in the hilly areas, thanks to their highly varied range of produce, as one reads in the Babylonian Talmud: "Whoever wishes to become wealthy should keep sheep and goats" (B.T., *Hul.* 84b). There was a close economic relationship between the people of the towns at the edge of the Judean Desert and the shepherds. The latter received supplies and fodder from the townspeople while providing them, particularly residents of Jerusalem, with dairy produce. Thanks to the proximity of the animals, these Judean towns developed a wide range of dairy-based industries: from cooked sheep's butter they prepared fat for cooking and frying food; sheep's and goat's flesh was eaten and used as sacrifices at festivities and festivals; the fleece provided the only fabric for winter clothing (the "hairy mantle" of *Zechariah* 13.4 was a warm fur made from sheep's hide); the animals' wool was used to weave rugs, tents (*Ex.* 26.7), and sacks for the transportation of grain; the hides were used to make harnesses and shoes, while the skins of lambs and kids provided vessels for water (*Jgs.* 4.19), oil, and wine (*Jos.* 9.13), as well as the parchment on which the Holy Scriptures were written (J.T., *Meg.* 71d; see Har-El, 1977).

Irrigated Farming. The types of agriculture practiced by the people and sects of the Judean Desert depended primarily on flood crops and irrigated crops in three centers: Jericho, Khirbet Qumran, and 'Ein-Gedi. Irrigated farming in the Judean Desert began in Canaanite Jericho; it continued apace during the years of the monarchy of Judea and Israel and reached its peak in the Hasmonean and Herodian periods.

The main irrigated crops grown in the Jericho region were dates and flax since the Late Bronze Age, and balsam since the Second Temple period.

The date palm and its special uses. The date palm, the Judean Desert's only local fruit tree, provided the local people with an important source of nourishment (B.T., *Ket.* 10b). The palm's fruit, the date, is rich in carbohydrates and easily preserved in arid conditions. Dates may be eaten either fresh and moist or dried; and wine, honey, and an intoxicating liquor can be made from them. The palm grows in nature in oases, where high groundwater is available, and thrives in soil with a salt content of as much as 20 percent. Palm branches can be used to make baskets, mats, and fibers for string, rope, and hats (*Ber. Rab.* 41).

Jericho's dates were already famous in Second Temple times, as stated in the Tosefta (T., *Bik.* 1.5): "No dates may be brought as first fruits, save the dates of Jericho"; and Pliny writes that Judea was famous for its date palms, especially those of Jericho (*Natural History* 13.6.26; 9.44). Josephus states that the groves of Jericho extended for some 21 square kilometers, yielding an abundance of dates, balsam, balm, myrrh, and camphor (*The Jewish War* 1.6.6; 4.8.3). According to data published by the Israel Hydrological Service, the amount of water supplied to Jericho's orchards by the springs of Nahal Perat (Wadi Qilt), Na'aran, and 'Ein-Duk reaches some 1,500 cubic meters per hour.

Flax. Flax was grown in the land of Israel in two climatic regions: as a dry farm crop in the Mediterranean region, which produced rather poor-quality flax; and as an irrigated crop in arid regions—Beth-Shean and Jericho—where the yield is of good quality. Flax is associated with Jericho in the biblical story of Rahab, who concealed Joshua's spies under some "stalks of flax" (*Jos.* 2.6).

Examination of linen objects discovered in the Qumran caves has dated them to between 167 BCE and 237 CE, in good agreement with archaeological findings (Yadin, 1957, pp. 53–56, 161–162). Excavating the Cave of the Letters in Nahal Hever in the Judean Desert, Yadin discovered many dyed fabrics from the time of the Bar Kokhba Revolt (132–135 CE; see Yadin, 1993, p. 830). In addition, Stern mentions a dye plant from the First Temple period discovered in excavations at 'Ein-Gedi (Stern, 1979, p. 247).

The blue dye indigotin was extracted from the plant *Isatis*, mentioned in the Mishnah, which grew in the vicinity of Jericho, Zoar, and Beth-Shean; the dye itself is mentioned in the Mishnah and in the Tosefta (*Shevi.* 7.1; *Shab.* 5.9; *Meg.* 4.7; T., *Shab.* 9.7). E. L. Sukenik (Sukenik 1956, p. 7, lines 10–11) cites the description in one of the Dead Sea Scrolls of clothing made of blue, purple, and scarlet yarns.

Balm and balsam. Balm from Gilead is mentioned in the Bible as early as the period of the Patriarchs (*Gn.* 37.25; *Jer.* 8.22, 46.11); it was probably grown in the Sukkot Valley in the Jordan Plain. During the reign of King Solomon it was probably cultivated for use in the Temple, in "the King's Garden" (*Neh.* 3.15) in the Kidron Valley (Har-El, 1987).

Benjamin Mazar, excavating at 'Ein-Gedi, discovered equipment used in the manufacture of perfumes: barrels, bowls, dishes, juglets, balance pans, and *sheqel* weights from the First Temple period (Mazar, 1993, pp. 401–402).

The balsam trees of Jericho are mentioned by Josephus: "The soil [in Jericho] is the most fertile in Judaea and provides abundance of palms and balsam-trees; the stems of the latter are cut with sharp stones and the balsam is collected at the incisions, where it exudes drop by drop" (*The Jewish War* 1.6.5 [Loeb ed.]; see also 4.8.3). Strabo, too, describes the palm groves in a fertile, abundantly watered area near Jericho, near which are also "the palace and the balsam park" (*Geography* 16.2.41 [Loeb ed.]). This palace was excavated by Ehud Netzer, who discovered, north of the palace, a farm, 450,000 square meters in area, fed by aqueducts from Nahal Perat and the Duk Spring. Netzer believes that the Hasmoneans grew date palms, persimmon, and balsam trees there (Netzer, 1992, pp. 690–691). To the west of the farm, Netzer exposed two large winepresses, which he presumes were used to make date wine and date honey. At the edge of the farm were various workshops with pools, ovens, treading pavements, drainage channels, and a square (12 by 12 meters) building used to store liquids. These industrial installations were used, Netzer believes, to produce balsam from the Hasmonean period to the first half of the first century CE.

An indication of Judean Desert priests' cultivation of perfumes at Jericho and 'Ein-Gedi may be found in the Rule of the Community: "To offer up a pleasing odor . . . and may be received willingly to atone for the land" (Habermann, 1952, p. 8, lines 9–10).

Grain. Jericho was a center of Levites, who served the pilgrims to the Jerusalem Temple. They were organized in accordance with the twenty-four priestly courses (or divisions) from the entire Holy Land, twelve of which stayed at Jericho while the other twelve came to Jerusalem from all over the country (*baraita* in B.T., *Ta'an.* 27a). Cultivation of grain at Jericho, to be brought to the Temple for the offering of the first sheaf, is referred to in the Mishnah: "The men of Jericho did six things: for three they reprov'd them and for three they did not reprove them. And these are the things for which they did not reprove them: they grafted palms [on the fourteenth of Nisan] the whole day, they did not make the prescribed

divisions in the *Shema'*, they reaped and stacked before the *Omer* . . ." (*Pes.* 4.8 [trans. Danby]).

Agriculture at Khirbet Qumran. The members of the Judean Desert sects strictly observed the laws of ritual purity, immersing themselves in water before any prayer or meal. They would not touch bread baked by outsiders and ate only vegetables from their own fields (Josephus, *The Jewish War* 2.8.5, 8). Philo of Alexandria writes of the Essenes: "Some of them labour on the land and others pursue such crafts as co-operate with peace and as benefit themselves and their neighbours" (*Every Good Man Is Free*, chap. XII [Loeb ed.]). The Rule of Community hints at the sect's wheat-growing and sheep-raising: "The time of harvest is in summer, the time of sowing is the time of grass" (Habermann, 1952, p. 10, line 7).

The people of Khirbet Qumran, therefore, cultivated flood crops and irrigated crops.

Flood crops. Evidence of the cultivation of flood crops comes from the Hyrcanium Valley, about 5 kilometers west of Qumran. The valley is 12 kilometers long and 2–3 kilometers wide, providing about 7 million square meters of fertile alluvial soil and loess. The precipitation amounts to approximately 150 millimeters per annum, which floods the valley's fields in winter. Three Iron Age settlements were discovered in the valley itself, and a fortress was built on the hills to the west (Hyrcanium, today Khirbet Mird). It was here, most probably, that the sectarians grew grain and perhaps also legumes and vines.

Irrigated farming. The sect's irrigated fields lay to the east of Qumran, on the Dead Sea shore, where there are several abundant springs: 'Ein-Ghazal (Qumran), some 1.5 kilometers away, with a yield of 420 cubic meters per hour; and 'Ein-Tannur, 2.5 kilometers away, yielding 260 cubic meters per hour. Both springs have a salinity of 2,000–4,000 milligrams chlorine per liter, and their temperatures in the months of December and January are 25–28 degrees Celsius. Channels and pools that were clearly used for agriculture have been discovered at both springs. The sectarians probably grew date palms here, since they can grow in salty water. They may also have grown vegetables, and presumably also bathed in the warm spring water.

Some 3 kilometers southeast of Qumran lie the largest springs of the western Dead Sea shore, 'Ein-Feshkha or 'Enot Tsuqim. Their total yield reaches some 50 million cubic meters per annum, and their salinity varies from 1,500 to 4,000 milligrams chlorine per liter. Remains similar to those of Khirbet Qumran have been unearthed in the region, dating from the reign of Alexander Jannaeus to the Bar Kokhba Revolt (de Vaux, 1993, pp. 1240–1241). According to de Vaux, this was the site of an agricultural and industrial settlement that served the Qumran congregation, one of its industries being tanning, which needs

abundant water. The sectarians spent their time writing scrolls of the law and other scrolls (Yadin, 1957), which must be written, according to Jewish law, on parchment (J.T., *Meg.* 71d).

Agriculture at 'Ein-Gedi. The settlement at 'Ein Gedi had 1.3 to 1.4 million square meters of land, on hill terraces and the estuaries of the David and 'Arugot ('Areijah) streams, which are fed from springs with a yield of 350 cubic meters per hour, and a salinity of 63–78 milligrams per liter. The inhabitants of this oasis raised sheep and goats (as indicated by the name 'Ein-Gedi = Spring of the Kid) and grew dates (another biblical name of the site is "Hazazon-tamar" wherein *tamar* = date; 2 *Chr.* 20.2), camphor (*Song* 1.14), balm (Eusebius, *Onomastikon*, s.v. "Ein-Gedi"), and vines (*Song Rab.* 1.14). Pliny writes: "On the west side of the Dead Sea, but out of range of the noxious exhalations of the coast, is the solitary tribe of the Essenes, which is remarkable beyond all the other tribes in the whole world . . . and has only palm-trees for company. . . . Lying below the Essenes was formerly the town of Engedi, second only to Jerusalem in the fertility of its land and in its groves of palm-trees . . ." (*Natural History* 5.15.73–74 [Loeb ed.]). Among Yadin's discoveries in the Cave of the Letters were letters that Bar Kokhba had sent to the commander of the 'Ein-Gedi region, urging him to send him wheat, salt, palm branches, citrons, myrtles, and willow branches—all the produce of 'Ein-Gedi and its environs (Yadin, 1993, p. 832).

ALBRIGHT INSTITUTE OF ARCHAEOLOGICAL RESEARCH. See American Schools of Oriental Research.

ALEXANDER JANNAEUS, king and high priest of Judea from 103 to 76 BCE. There are those who suppose that he was the first Hasmonean to bestow upon himself the title *king*.

Alexander Jannaeus was the third son of John Hyrcanus I. His Hebrew name was Jonathan as can be learned from his coins, which were inscribed with *King Alexander* written in Greek on one side and *Jonathan High Priest* on the other. During the days of his brother Aristobulus's rule, he was incarcerated. Upon the death of his brother, he was released from prison by his brother's wife Shelamzion Alexandra, who most likely became Alexander Jannaeus's wife following levirate marriage.

The twenty-seven years of Alexander Jannaeus's rule were characterized by never-ending wars. In his conquests Alexander Jannaeus had expanded the borders of Judea and forced his sole rule as a Hellenistic king in every way upon his subjects. Josephus subdivided the rule of Alexander Jannaeus into three periods. During the first period, 103–95 BCE, Alexander Jannaeus completed the conquest of the coast of Palestine from the Carmel to the border of Egypt (excluding Ashkelon) amid fierce struggle in the Hellenistic cities and against their ally Ptolemy Lathyrus, king of Cyprus. Alexander Jannaeus was aided in his battle by Ptolemy's mother, Cleopatra III, queen of Egypt. During this period he began his attempt to conquer Transjordan as well.

The second period, 95–83 BCE, was marked by overt conflict between Alexander Jannaeus and the Pharisees,

while he fought the Nabateans in the east and Demetrius III in the north. During these years, Alexander Jannaeus suffered severe defeats from these kings and was compelled to relinquish territories to the Nabateans. In the third period, 83–76 BCE, Alexander Jannaeus resumed his wars in Transjordan upon the cities of the Decapolis, however, when he besieged the city of Ragaba, he fell ill and died.

Events from the era of Alexander Jannaeus's reign are mentioned in three *peshers* from Qumran Cave 4: Peshet Isaiah^a (4Q161) on the verses from *Isaiah* 10.28–34 describes an enemy advancing from the northeast toward Jerusalem, almost conquering the city, but compelled to retreat due to divine intervention. In light of Josephus's description in *The Jewish War* 1.86 and *Jewish Antiquities* 13.324–355, it appears that this enemy could be identified with Ptolemy Lathyrus. In 103 BCE, Ptolemy waged war against Alexander Jannaeus, conquered the city of Shihin in the Upper Galilee, and advanced southward in the direction of Jerusalem. Alexander Jannaeus was defeated, but Ptolemy was forced to retreat from Judea when his mother Cleopatra III embarked with her army for Palestine in order to stop him. In Peshet Isaiah^a, Ptolemy's retreat from Judea was explained as the fulfillment of this prophecy of Isaiah.

Events of 88 BCE are alluded to in Peshet Nahum (4Q169). Here, the Seekers after Smooth Things, identified as the Pharisees, invited Demetrius to Jerusalem. However, the Lord protected Jerusalem, which did not fall into the hands of gentiles from the days of Antiochus until the Roman conquest. Later on, the "Lion of Wrath" hanged the Seekers after Smooth Things (the Pharisees) alive on the tree.

In *The Jewish War* 1.92–98 and *Jewish Antiquities* 13.376–383, Josephus relates that the enemies of Alexander Jannaeus summoned Demetrius to invade Judea and promised him aid. Demetrius invaded Judea, camped near Shechem, and defeated Alexander Jannaeus in battle. After this defeat, the majority of the Jews abandoned the camp of Demetrius, and he returned to Syria. Then, Alexander Jannaeus caught eight hundred of the Jewish leaders who rebelled against him and crucified them in Jerusalem. In light of the similarity between the descriptions of Josephus and Peshet Nahum, it is accepted that the nickname of Alexander Jannaeus in the *pesharim* is the "Lion of Wrath," and that the *peshet* relates to the events of 88 BCE. The proof from Peshet Nahum that Alexander Jannaeus hanged the rebels alive is significant since some scholars had doubted it and were of the opinion that it was invented by Nicolaus of Damascus, historian of Herod the Great and a source for Josephus.

The Temple Scroll (11Q19 lxiv.b–9) states that whoever turns his nation over to a foreigner must be hung on a

tree. Thus, Yigael Yadin suggested that Alexander Jannaeus executed his enemies according to the laws appearing in the Temple Scroll, and concluded that Peshet Nahum, therefore, does not criticize Jannaeus. This suggestion cannot be accepted since the author of the *peshet* alluded to *Deuteronomy* 21.23: ("You shall not leave his corpse overnight on the tree but you shall bury it on that day") when he wrote "for the hung on the tree shall be called living. . . ." Hence, he assumed that Alexander Jannaeus violated the law of the Pentateuch in the manner in which he executed the rebels or by not interring those who were hanged immediately. It is possible to see in Peshet Hosea^b (4Q167) an allusion to the events of 88 BCE as well. In this composition, fragments of a *peshet* on *Hosea* 5.13–14 were preserved:

Ephraim saw its illness and Judah its wound and Ephraim went to Assyria and sent for an enemy king, and he will not be capable of curing you or remove your wound. For I will be as a lion to Ephraim and a cub to the house of Judah, I will prey upon and will go and will take, and there will be no savior.

The cub that will harm Ephraim and the house of Judah without a savior is understood by the author of the *peshet* to be speaking of the execution of the rebels by the "Lion of Wrath," designating Alexander Jannaeus.

An additional scroll from Qumran that probably mentioned Alexander Jannaeus is Apocryphal Psalm and Prayer (4Q448). This scroll contains a prayer for the safety of "King Jonathan" and his kingdom. It is probable that the king mentioned in Apocryphal Psalm and Prayer is Alexander Jannaeus, the only king whose Hebrew name was Jonathan. The prayer also thanks the Lord for his having saved King Jonathan on a day of war. On the basis of the description of Josephus, it is possible to suggest three events in which it is feasible to attribute Jonathan's rescue to divine intervention. The first is Alexander Jannaeus's war against Obodas I in 95 BCE, in which the Jewish forces were driven by the Nabatean army into a deep valley and Alexander Jannaeus barely succeeded in escaping. Another possibility is the rescue in 103 BCE when Ptolemy Lathyrus retreated from Jerusalem. The third possibility is the retreat of Demetrius from Jerusalem in 88 BCE. It is also quite possible that the author referred to a different event in the course of Alexander Jannaeus's life for which we have no details.

HANAN ESHEL

ALLEGORY OF THE VINE. See Wisdom Texts.

ALLEGRO, JOHN MARCO (1923–1988), scholar, author, and scrolls editor, attended the University of Manchester after wartime service and received a bachelor of arts degree in Oriental Studies (1951) and a master of arts degree (1952). In 1954 he became Lecturer in Comparative Semitic Philology in Manchester, but in 1953 had already been sent to join the editorial team in Jerusalem responsible for the Cave 4 texts. Here he worked, chiefly with Józef Milik, on the texts containing biblical interpretation. [See *biography of Milik*.] Having once been a candidate for the Methodist ministry, his linguistic studies and work on the scrolls nevertheless convinced him that established views on the origins of Christianity were wrong. He concluded that the Qumran community anticipated much of the history and doctrines of early Christianity and his popularizing of these views created friction with his editorial colleagues, culminating in a letter by his colleagues to the *London Times* after a radio broadcast in English in which Allegro claimed to have proof for his conclusions in the texts he was editing. Allegro came to believe that the delay in publication of the Cave 4 materials was due to a policy of suppression, and that he was being victimized.

Allegro succeeded in bringing the Copper Scroll (3Q15) to Manchester for opening, which took place in 1956. [See Copper Scroll.] Convinced that this was a genuine treasure list, he suspected his colleagues' claim that it was folkloric arose from dislike of him and from fear of instigating a bedouin treasure hunt. Although its official translation was entrusted to Milik, Allegro finally lost patience with Milik's procrastination and published his own edition (although Milik's preliminary edition did appear before Allegro's publication). Allegro's opinion of the genre of this text is now generally accepted.

Allegro was enthusiastic and enterprising: during the digs at Qumran he made his own small excavation and took numerous photographs of the site and the texts,

which are invaluable and have now been published in microfiche form. He later organized other excavations at and near Qumran in the hope of discovering more caves and more texts, possibly some of the Copper Scroll treasures. An indefatigable broadcaster and writer, he made a documentary in 1957 for the British Broadcasting Corporation (broadcast in 1959).

He published most of the Cave 4 texts entrusted to him quickly in journals, and finished his assignment, aided by his Manchester colleague Arnold Anderson, in 1966. The edition has been criticized as careless, and it is clear that Allegro was more interested in the wide dissemination of the contents of the scrolls. By contrast, his more careful colleagues did not publish their texts at all. His resignation from Manchester in 1970 coincided with publication of his notorious book, *The Sacred Mushroom and the Cross*, which identified Christianity as a cult based on a hallucinogenic mushroom, and he later developed this in *The Dead Sea Scrolls and the Christian Myth* (1981) in which he traced what he saw as key ideas and practices in the scrolls into Christianity and gnosticism, arguing for a common mystical tradition (connected with the hallucinogenic mushroom) from which the myth of Jesus arose. In an appendix to this book he published a text (4QTherapeia) that he took to be an account of a healing, but which has since been claimed to be a meaningless writing exercise. Allegro's subsequent writings on the history of Judaism and on religion and medicine evidence a widening of interests. Despite general academic scorn, Allegro has maintained a large popular following (there is a John Allegro Society), and his views on the scrolls and Christianity have been voiced by a small number of scholars and journalists. His personal charm, enthusiasm, range of interests, dislike of academic cliques, and open-mindedness contrast with the widespread image of him as a cynical sensationalist.

PHILIP R. DAVIES

ALPHABETS. Alphabetical inscriptions have been in existence since the Canaanites of Palestine first invented the consonantal script under the influence of the Egyp-

tian script in about 2000 BCE. The earliest pieces of evidence for consonantal alphabetical inscriptions are the cuneiform consonantal alphabet of Ugarit from the fourteenth century BCE (27+3 letters: *'[aleph]bghdlhwzhtyksl-nidnz's[ayin]psqršgt + inš*; the traditional alphabetical order can already be recognized, *p* after *'[ayin]*), and the Old Canannite cuneiform alphabet of Beth-Shemesh (thirteenth century BCE), which gives evidence of the south-Semitic alphabetical order in Palestine (*hllhmqwšrğt-šknhsp'[aleph]'[ayin]'gdbtzdy's/t*) (A. Lüdine, *Le Muséon* 100, 1987, pp. 243–250). Evidence for the twenty-two-letter consonantal script in the traditional order in Syria-Palestine comes from the twelfth century BCE in old Canannite script at 'Izbet Tsartah in Judea (*'[ayin]* after *p*); the eighth century BCE in paleo-Hebrew script at Kuntillet 'Ağrud in Sinai (*'[ayin]* after *p*) and at Lachish and Qadesh Barnea; in Aramaic script at Deir 'Alla, outside Palestine at Tell Halaf (*'[ayin]* after *p*); seventh century BCE in Phoenician script outside Palestine at Salamis; and also in Etruscan and Greek script.

The alphabets were written on stone, limestone, jars, potsherds (ostraca), and seals. The inscriptions were the result of school exercises (Lemaire, 1981; Haran, 1988) or the work of apprentices in seal cutting, or perhaps even the result of apotropaic magic rites (the latter being even more likely when the inscriptions were part of grave donations or ossuary inscriptions such as were found at Beth-Shemesh and Jericho), or on magic bowls, in use from the fourth century CE. Some inscriptions were likely also created for the purpose of votive and memorial inscriptions, such as those that have been found at Hatra and Dura Europos.

Alphabetical inscriptions in the Jewish square script were found in the following places: the ruins of Khirbet Qumran, one ostrakon, about 30 BCE (de Vaux, *Revue biblique* 61 [1954], 229; *p* after *'[ayin]*, this ostrakon, in addition to the inkwells and the writing tables, is one of the indications for a writing school at Qumran); Murabba'at, four ostraca (Mur 73, 78–80) and two fragments of leather (Mur 10 11), all in a formal bookhand, and all from about 100 CE except for Mur 73 (which is from about 50 BCE). Mur 73 (Discoveries in the Judaean Desert, 2, p. 175, pl. LII) consists of personal names arranged in nonalphabetical order, Mur 78 (Discoveries in the Judaean Desert, 2, p. 178, pl. LIV) is a palimpsest with each letter being written two times, Mur 79 (Discoveries in the Judaean Desert, 2, p. 178, pl. LV) exhibits *p* after *'[ayin]* and medial as well as final letterforms with the exception of final *mem*, Mur 80 (Discoveries in the Judaean Desert, 2, p. 179, pl. LV), Mur 10 (Discoveries in the Judaean Desert, 2, pp. 90–92, pl. XXVI) is a palimpsest (originally an account) that also exhibits *p* after *'[ayin]* and medial as

well as final letterforms, Mur 11 (Discoveries in the Judaean Desert, 2, p. 92, pl. XXVII) is perhaps a palimpsest; Masada, two ostraca, about 74 CE, in a formal bookhand, Mas606 with *p* after *'[ayin]* and Mas607, Greek (Mas782 and Mas783) and Latin (Mas983) and bilingual Greek-Latin (Mas941); alphabetical inscriptions were also found at Masada, from about 74 CE; Herodion, one ostrakon was found from the end of the first century CE, the front and back of it being in a formal bookhand, a personal name follows beginning with *'[alef]*; at Nahal Michmash (Wadi Tsuwnit, about 10 kilometers northeast of Jerusalem), were found, in addition to other inscriptions, two-wall inscriptions with alphabets written by Jewish refugees in a formal bookhand from perhaps 70 CE with *p* after *'[ayin]*.

Alphabetical order is evident in lists of personal names on several ostraca from Masada, Mas608 and Mas609 (74 CE), and on one ostrakon of unknown provenance after an alphabetical inscription as well as on a list of proper names from Qumran Cave 4 (4Q341) composed as part of a writing exercise in Herodian script (cf. also Greek of Mur 122). Use of the alphabet as an aspect of poetic style is found in the acrostic psalms and hymns in the manuscripts of the Dead Sea Scrolls. In addition to the traditional order with *'[ayin]* after *p* in Lamentations from Qumran Cave 4 (4Q111) 1 and Lamentations^b (5Q7) 4, the following are written as acrostics: Psalms^b from Qumran Cave 4 (4Q84) 112; 1Q10; Psalms^e (4Q89) 119; Psalms^b (4Q90) 119; Psalms from Qumran Cave 5 (5Q5) 119; Psalms^d from Qumran Cave 11 (11Q5; hereafter 11QPsalms^d) 119, only partly 11QPs^d col. xxiv (equals *Psalm 155*); Lamentations from Qumran Cave 3 (3Q3) 1 and 3; Lamentations^b (5Q7) 4; not written as acrostics are Psalms^d from Qumran Cave 4 (4Q83) 25 and 34; Psalms^c from Qumran Cave 4 (4Q85) 37; Psalm 37 in Peshet Psalms^d (4Q171); 11QPsalms^d 145; Lamentations^c (5Q6) 4; in Peshet Nahum (4Q169) 1; Mur 88, XII Nah 1; *Sir.* 51 in 11QPsalms^d col. xxi; Apostrophe to Zion in 11QPsalms^d col. xxii and in Psalms^f (4Q88).

Letters of the alphabet in the paleo-Hebrew and in the Jewish square script are attested as ciphers and numeral signs from the end of the second century BCE: within the dates on coins of Alexander Jannaeus, 103–76 BCE (cf. the Greek legend); for counting pages and columns, in the ostrakon Mur 72 (120 BCE), in Rule of the Community^b, 4Q256 (=4QS^b). Paleo-Hebrew *W* is used as a division marker in paleo-Leviticus^d (11Q1); paleo-Exodus^m (4Q22); Psalms^b from Qumran Cave 4 (4Q84; below col. v before the beginning of col. vi, the beginning of Psalm 94; and perhaps above col. xxi, cf. Aramaic *'[alef]* used to separate one saying from the other in Abiqar, sixth/fifth century BCE; J. M. Lindenberger, *The Aramaic Proverbs of Abiqar*, Baltimore, 1983, p. 305ff.).

G. WILHELM NEBE

AMERICAN SCHOOLS OF ORIENTAL RESEARCH. A scholarly organization founded in 1890 by a consortium of twenty-one institutions of higher learning, the original purpose of the American Schools of Oriental Research (ASOR) was, according to the founding committee's circular of 1895, to establish an overseas school in Jerusalem:

... The object of the school would be to afford graduates of American theological seminaries, and other similarly qualified persons, opportunities to prosecute Biblical and linguistic investigations under more favorable conditions than can be secured at a distance from the Holy Land . . . to gather material for the illustration of the Biblical narratives; to settle doubtful points in Biblical topography; to identify historic localities; to explore and, if possible, excavate sacred sites.

(King, 1983, p. 26)

The bibliocentric attitude reflected in this circular was a direct result of the legacy of nineteenth-century explorers, travelers, and missionaries, whose rediscovery of the Holy Land led ultimately to the establishment of the most important national schools of archaeology, the British, French, German, and American schools in Jerusalem. The high point of America's nineteenth-century accomplishments was the signal achievement of Edward Robinson, who first visited Palestine in 1838 and whose exploration and identification of sites with biblical connections made him America's first biblical archaeologist.

Instrumental in the establishment of ASOR were three parent societies: the Society of Biblical Literature (SBL), founded in 1880 as the Society for Biblical Literature and

Exegesis, whose president in 1895, Joseph Henry Thayer, promoted the effort that resulted in the circular quoted above; the American Oriental Society (AOS), which formally endorsed the idea in 1896; and the Archaeological Institute of America (AIA), which endorsed the proposal in 1898 and had previously established overseas centers in Athens (1882) and Rome (1895). The broad backing of such diverse bodies led in time to a restatement of goals and objectives that extended the ASOR's purview beyond the Levant into the greater Near East and its historical reach and focus beyond the biblical world.

ASOR opened its Jerusalem School in 1900 with Charles C. Torrey, Professor of Old Testament at Yale, as its first director. Its quarters were in a large room of a hotel near the Jaffa Gate inside the Old City, where lectures were given and field projects planned. The first long-term director of the Jerusalem School was William F. Albright, who served from 1920 to 1929 and from 1933 to 1936. The first major field project was the expedition to Samaria between 1908 and 1910 led by George A. Reisner, Clarence S. Fisher, and David G. Lyon. During these early years the Jerusalem School was run by a managing committee in the United States; reports of the school's activities were normally presented at meetings held in conjunction with the annual meeting of the AIA and the SBL. ASOR and the Jerusalem School were one and the same until the opening of the Baghdad School in 1923. Anticipating that event, ASOR was incorporated in the District of Columbia in 1921 with the plural "Schools" in the title, a title that was reaffirmed in the annual meeting of the Corporation in Philadelphia on 18 November 1995. In 1923 the Egyptian ankh, symbol of life, inside of which was the sign of the deity, the eight-pointed Babylonian star, became the symbol of ASOR.

ASOR and the Dead Sea Scrolls. ASOR played a major role in the recovery, publication, and dissemination of information about the Dead Sea Scrolls from their earliest discovery. Four of the scrolls were brought first to the Jerusalem School in 1948 to John Trever, who was acting director on behalf of Millar M. Burrows. Burrows was also president of ASOR and happened to be away on official business at the Baghdad School. Trever recognized the scrolls' importance, photographed them, and sought the advice of Albright at Johns Hopkins University. Albright responded in the following letter:

My heartiest congratulations on the greatest manuscript discovery of modern times! There is no doubt in my mind that the script is more archaic than that of the Nash Papyrus. I should prefer a date around 100 B.C. . . . What an absolutely incredible find! And there can happily not be the slightest doubt in the world about the genuineness of the manuscript.

(King, p. 116)

ASOR was granted full rights to publish those first manuscripts; and Millar Burrows made the first public announcement of the discovery. Among the first scrolls published by ASOR were the Isaiah^a manuscript (10Isa^a), the Rule of the Community (10S), and Pesher Habakkuk (10pHab). In 1972 ASOR published *Scrolls from Qumran Cave I*, edited by Frank Moore Cross, Jr., et al., which contained Trever's first color photographs.

As a result of the 1948 War of Independence, the Jerusalem School wound up in the Hashemite Kingdom of Jordan, where it remained until 1967. Excavations at Qumran and the adjacent caves were conducted between 1949 and 1956, led by Roland de Vaux of the Ecole Biblique et Archéologique Française and Gerald Lankester Harding of the Department of Antiquities of Jordan. American scholars Frank Moore Cross, Jr., and Patrick W. Skehan were assigned key roles in the publication of all new materials discovered in these years by virtue of their official role in the administration of the Palestine Archaeological Museum in Jerusalem, home of the Department of Antiquities of Jordan. Publication of *Psalms*^a (1105) in 1965 by James A. Sanders was also an effort in which ASOR was active.

The debate over public access to the scrolls and their publication reached its zenith in the early 1990s. In this connection, ASOR called upon its vice president for archaeological policy, Walter E. Rast, to prepare a policy statement in consultation with the Standing Committee on Ancient Manuscripts chaired by James C. VanderKam, which was adopted with some revisions at the November 1992 meeting of the board of trustees in San Francisco. Unlike statements of policy such as the one by the SBL, ASOR's policy takes into account both written and non-written archaeological remains and reaffirms the right of the host country to regulate access and guarantee proper site preservation (Meyers, 1994, pp. 458-459).

We the members of ASOR affirm the priority of national antiquities authorities to manage and regulate cultural remains. As an organization of scholars devoted to recovery of the cultures of Middle and Near Eastern lands, we reaffirm the principles of scholarly integrity and ethics with respect to retrieval, preparation, preservation, and timely publication of material remains, including texts.

1. Publication

Before assignment of finds to an excavator(s) or editor(s) by the responsible authorities (be they the licensed excavator(s) or the antiquities authority) and their scholarly advisors, these groups should determine what constitutes a reasonable time for publication. In the case of major finds, it is desirable that preliminary editions be promptly published. In the interval between assignment and publication, the excavator(s) or edi-

tor(s) should be encouraged to cooperate with interested scholarly parties.

2. Access

a. Recognizing that the responsible antiquities authorities and their scholarly advisors will be concerned with securing and preserving the finds, it is likely that scholarly access to the originals, after publication, will still be necessary. Such access will be regulated by the responsible antiquities authorities and their scholarly advisors.

b. After the reasonable time limit (see no. 1 above) has passed, the materials, photographs, and documentation should be made generally accessible within the limits of the requirements for preservation and laws of the host country.

New Centers. Because of the political division of Jerusalem, Nelson Glueck, past director of the Jerusalem School and the president of Hebrew Union College (HUC) in Cincinnati, established an HUC campus in west Jerusalem in 1964, which he envisioned as a successor to the Jerusalem School. The 1967 Arab-Israeli War resulted in the unification of the city and an Arab boycott of all scholars who worked in Israel. ASOR's response to this development led to the reorganization of the Jerusalem School into the W. F. Albright Institute of Archaeological Research (AIAR) in 1969 and to the establishment of the American Center of Oriental Research (ACOR) in Amman in 1970. George Ernest Wright, president of ASOR at the time, took these steps to preserve ASOR's historic position of political neutrality, thereby enabling ASOR scholars to work on both sides of the Jordan River. Another research center, the Cyprus American Archaeological Research Institute (CAARI), was established in 1978, four years after Wright's death. Today, all three centers are independently incorporated and administered by individual boards of trustees, though this was not the original intent. The Albright Institute has had as fellows numerous important scroll scholars and has sponsored many lectures and seminars on the Dead Sea Scrolls as well.

The decentralization of ASOR has had a profound and lasting impact on the society. ASOR's historic role in fostering overseas fieldwork today is reflected in the oversight work of the Committee on Archaeological Policy, which acts as an accrediting agency. In recent years this committee has also turned its attention to broader policy questions such as ethical issues concerning the preservation of sites, trade in antiquities, and responsibility to the public. ASOR's Committee on Publications monitors all the society's journals and monographic publications. Important articles dealing with the scrolls have appeared in ASOR's publications *Biblical Archaeologist* and *Bulletin of the American Schools of Oriental Research*. The home office provides assistance to the overseas centers as needed,

including library exchanges. Various lectures on the scrolls and the archaeology of Qumran have been presented at ASOR's annual meetings. ASOR also offers scholarships to students and faculty among the approximately 140 colleges, universities, seminaries, and museums that make up the ASOR consortium.

ASOR is the major international scholarly organization dedicated to promoting research in the Middle East. Its record of political neutrality has earned it widespread respect from nearly all the countries in the area. Effective 1 July 1996, ASOR administrative offices were relocated to the campus of Boston University adjacent to the offices of the Archaeological Institute of America.

ERIC M. MEYERS

AMMAN MUSEUM. The National Archaeological Museum on the Citadel in Amman is the principal archaeological museum in Jordan. The museum has long been associated closely with the Jordanian Department of Antiquities, which played a central role in the discovery, purchase, preservation, and publication of the Qumran scrolls until 1967. Along with other national treasures, fragments of at least twenty scrolls are housed in the museum, including the whole of the Copper Scroll (3Q15). These materials were transferred from the Palestine Archaeological Museum (now Rockefeller Museum) in Jerusalem before 1967 for an exhibition.

The complete list of fragments housed at the National Archaeological Museum is as follows:

Scroll	Fragment	Amman Museum No.	
1Q13	Phylactery	1-58	J 5926 A, J 5926 C
1Q17	Jubilees ^a	1	No number assigned
1Q18	Jubilees ^b	1-5	No number assigned

Scroll	Fragment	Amman Museum No.	
1Q19	Noah	1, 3	No number assigned
1Q20	Genesis Apocryphon	1-8	No number assigned
1Q22	Words of Moses	1-28, 31, 33-37, 41-45, 47-49	J 5928
1Q23	Enoch Giants ^a	1-22, 24-31	J 5928
1Q27	Mysteries	1-17	J 5928
1Q28a	Rule of the Congregation	Cols 1-11	No number assigned
1QM	War Scroll	1-2	J 5928
1Q34	Liturgical Prayer	1	J 5928
1Q35	Hodayot ^b	1-2	J 5928 (Numbered 1Q33 on the museum plate)
1Q36	Hymns	1-18, 20-25	J 5928
1Q37	Hymnic Compositions?	1-6	J 5928
1Q70	Unclassified fragment	1-32	J 5928
3Q15	Copper Scroll	23 segments	
4Q22	paleo-Exodus ^{ca}	11	No number assigned
4Q109	Ooheleth ^a	1-6	No number assigned
4Q162	Peshar Isaiah ^b	1	No number assigned
4Q175	Testimonia	Single col	No number assigned

The fragment numbers are given here according to the principal published edition of each manuscript in the Discoveries in the Judaean Desert (of Jordan) series (Oxford, 1955-). In some of the museum plates the fragments are numbered differently; this is especially the case for Words of Moses, Mysteries, and Hymnic Compositions.

In addition to these fragments, a group of uninscribed and unidentified fragments not listed in any catalogue is given the Amman Museum number J 5927. A glass plate in the museum containing some linen with very neat edging is labeled AF 33.

The collection in the museum in Amman is representative of the Qumran finds as a whole. There are examples of texts written on leather, papyrus (e.g. 1Q70), and copper. There are examples of Hebrew, Paleo-Hebrew (1Q35), and Greek script (in the Copper Scroll). Most of the texts are in Hebrew; two are in Aramaic (1Q20, 1Q23). There are examples of all kinds of scribal practices, including marginal marks (4Q175), paragraphing, and cancellation dots (4Q162).

The principal exhibit in the museum is the Copper Scroll. [See Copper Scroll.] This was originally sawed into strips in Manchester in 1955 and 1956 and was exhibited in the museum in cases built shortly afterward. In the early 1990s it was agreed between the Jordanian and

French authorities that the scroll should be conserved in the laboratories of Electricité de France. In 1997 the conserved scroll, together with a facsimile, was formally received back for the Jordanians by Her Majesty Queen Noor at a ceremony in the Louvre, Paris. After being exhibited in Paris and in Manchester, the scroll returned to the National Archaeological Museum in Amman where it is now on permanent display in specially constructed mounts, together with one of the facsimiles.

In addition, two scrolls from Cave 4 form part of the permanent display in the museum: Peshier Isaiah^b and Testimonia, which is a single column containing four quotations: *Exodus* 20.21, *Numbers* 24.15–17, *Deuteronomy* 33.8–11, and a passage that is either quoted from or quoted in the Apocryphon of Joshua^b (cf. 4Q379 22 ji.7–15). Some artefacts from Qumran are also on display. A large collection of silver coins from Qumran is also held in the Amman Museum.

Apart from the official publications, the best photographs of many of the fragments in the National Archaeological Museum have been taken by Bruce and Kenneth Zuckerman of West Semitic Research during a project completed in association with Princeton Theological Seminary.

AMOS, BOOK OF. See Minor Prophets.

AMRAM. Appearing frequently in genealogical lists of the Hebrew scriptures, Amram is a son of Qahat (Kohath) and father of Aaron, Moses, and Miriam (*Ex.* 6.18, 6.20; *Nm.* 26.58–59); his wife was Jochebed, his father's sister. Amram is also prominent in a number of Second Temple writings. In Pseudo-Philo's *Biblical Antiquities* (9.1–10) he

is the hero of a significant incident before the birth of Moses. In *Jewish Antiquities* (1.210–216), Josephus writes of visions vouchsafed to Amram before the birth of Moses. In a later work, *Sefer Hu-Razim*, a Hebrew magical text originating from the first millennium CE, Amram, together with Qahat and Levi, figures in the book's chain of transmission from Noah to Moses. Interestingly, Amram plays no major part in *Jubilees*, which is generally linked to Aramaic Levi (1Q21, 4Q213–4Q214a) and the Testament of Qahat (4Q542).

Significantly, in view of Josephus's writings, five copies of the Visions of Amram were found in Cave 4 at Qumran. Although this number of copies suffices to show that the work must have had some importance for the Qumran covenanters, no references to it occur in sectarian literature. In 1972, Józef T. Milik published a substantial fragment of the Visions of Amram^b (4Q544) and claimed that Origen had alluded to it. Milik recognized six copies (4Q543–548?). Émile Puech thinks that the same scribe copied the Testament of Qahat and the Visions of Amram^a. Moreover, he notes that the Testament of Qahat starts on a piece of leather with a join on the right, and he even speculates that this work and the Visions of Amram^a might have formed part of the same manuscript. Details about the other manuscripts of the Visions of Amram are not yet known.

Milik dates Visions of Amram^b to the second century BCE. His view that it may come from the earlier part of that century has been challenged, however, and the manuscript most probably comes from the latter part of the century. The published text is written in Late Literary Aramaic of the type familiar from the other Aramaic documents found at Qumran.

The beginning of the work has survived, and its superscription reads: "Copy of the Book of the Words of the Visions of Amram." The word *copy* may be compared with the term *copy* used in *Ezra* 4.11, while "Book of the Words of . . . Amram" resembles the recently deciphered phrase "Book of the Words of Noah" in the Genesis Apocryphon (1QapGen, col. v). The book is clearly a testament, recounting Amram's words to his children "on the day of his death, in the 136th year, the year of his death." Although the title "Testament of Amram" would fit its contents, in fact, the work is known as "The Visions of Amram."

The full contents of the work remain unknown because part of it is lost; some substantial fragments have been published. Column i, lines 10–15, as reconstructed by Milik (1972) from fragments of three manuscripts, tells of a dream vision in which Amram sees two angels. One is like a serpent, and his garment is multicolored and dark, while the other has a happy visage. They rule over all humans, and the two beings are struggling over Am-

ram. In a second, fragmentary column, Amram is called upon to make a decision between these two beings. Milik thinks that this fragmentary second column is column 2 of the manuscript. It identifies one figure as Melchiresha' and associates him with darkness, while the speaker is the angel who rules over light. The name of the ruler of light has been lost, but it is often reconstructed as Melchizedek. Other names found in the text are "ruler of light" and "ruler of darkness" (cf. 1QS iii.16 20, CD v.16 18, etc.). In the next column, apparently, Amram asks the ruler of light a question. Milik calculates that these three columns comprise approximately one-third of the book.

In the Bible, Melchizedek was the mysterious king of Salem encountered by Abraham (Gn. 14.18), as well as the type of a priest (Ps. 110.4), and a type of Christ (*Heb.* 5.6). In the Melchizedek scroll found in Cave 11 at Qumran (11Q13), Melchizedek appears as a heavenly figure, as he does in Gnostic texts, such as the Nag Hammadi Codex (9.1). He was the object of much (chiefly heretical) speculation in early Christian circles, where his priestly function is combined with his eschatological role.

The dualism of light and darkness in the Visions of Amram is notable. It is, of course, very typical of the sectarian documents. However, the dualism of the two spirits is already present in Aramaic Levi, which clearly antedates the Visions of Amram (and the Qumran sect). This does not necessarily demonstrate that the Visions of Amram was written by the Qumran sect; a pre- or extra-Qumran origin is quite possible. On the other hand, in reference to Aramaic Levi, it is generally accepted that the sectarian community did not compose Aramaic documents, but this factor is not necessarily determinative.

The three sacerdotal writings, Aramaic Levi, the Testament of Qahat, and the Visions of Amram, form a series of priestly instructions. Aramaic Levi is the oldest of the works and the one on which the other two depend, although the exact relationship between them cannot be determined. The Testament of Qahat and the Visions of Amram were composed in addition to the existing Aramaic Levi in order to legitimate the continuity of the priestly line and its teaching. This theme is stressed in Aramaic Levi and particularly in the Testament of Qahat.

Milik (1978) has suggested that the conflict among the angels over Abraham's soul described in Origen (Homily 25 on Luke) derives from the Visions of Amram. That view is based on his emendation (editorial alteration) of Origen's *Abraham* into *Amram*. A very similar conflict between Michael and the devil over Moses' body is mentioned in *Jude* 9, while the theme of two conflicting angels is found elsewhere, for example, in Hermas (*The Shepherd*, Mandates 6.2.1) and the Armenian pseudepigraphical work, *Questions of Ezra*. Thus, Origen's ac-

quaintance with the Visions of Amram is not definitely demonstrated.

Milik suggested, moreover, that the works of "the three patriarchs" (Gk. *Ton g' patriarchon*) mentioned in *Apostolic Constitutions* 6.16.3, connected with "the apocryphal books," are Aramaic Levi, the Testament of Qahat, and the Visions of Amram. This view has not been widely accepted, and, unless it is, there is no assured reference to the Testament of Qahat beyond the single manuscript from Qumran. Nonetheless, it seems quite correct to emphasize the relationship between Aramaic Levi, the Testament of Qahat, and the Visions of Amram, works associated with the descendants of Levi, down to Aaron, the direct father of the priestly line of Israel.

MICHAEL E. STONE

ANGELIC LITURGY. See Songs of the Sabbath Sacrifice.

ANGELS. Originally, Hebrew *mal'ak* and Greek *angelos* were terms that indicated messengers, be it between humans or between God/the gods and humans. During the Second Temple period the divine messenger was identified with other heavenly beings, like the seraphim, the holy creatures, and so forth, and thereby became by itself a designation for heavenly beings, which may have some contact with humans. Jerome took the Greek *angelos* for the translation of heavenly messengers only, hence the modern European term *angel*.

Angels play an important role throughout the Dead Sea Scrolls as well as in other Jewish writings of the time. Josephus notes the Essene practice of keeping angelic names secret (*The Jewish War* 2.142). Yet, even without identifying the members of the Qumran community with the Essenes as described by Josephus, the development of Jewish angelology during the last centuries before the destruction of the Second Temple is most remarkable.

Luke's short notice concerning the Sadducees' denial of the existence of angels (*Acts* 23.8; cf. Daube, 1990) needs further consideration, especially in light of recent attempts to stress a more Sadducean character of some Qumran writings. [See Sadducees.]

However, a specific, coherent doctrine of angelology within the Qumran community cannot be easily defined because of the nature of the sources and our lack of knowledge concerning the provenance of Qumran writings and their literary development. Fragments from *I Enoch* and *Jubilees*, for example, have been found at Qumran, and these works are, among others, major sources of angelology. Though it seems that the works did not originate within the community, the fact that they were copied so often shows that their angelology was acceptable in the Qumran community.

The different works attributed to the Qumran community show sometimes quite disparate beliefs and motifs concerning angels, though at times allusions in one work find a closer explanation in another. A work like the Songs of the Sabbath Sacrifice (4Q400–407, 11Q17, Mas1k) is a classical source for a fully developed angelology; Temple Scroll^a (11Q19) in contrast, does not mention heavenly beings at all. Some *pesharim* use angelic terms (4Q174, 4Q177, 4Q182, 11Q13) whereas others do without (4Q169; cf. Davidson, 1992, pp. 136–141).

Combining different sources is highly problematic and might produce an artificially coherent picture. There are many differences between the sources, and yet some connections can be made. The Dead Sea Scrolls mostly reflect aspects and problems of beliefs in angels commonly shared in the Judaism of the period: Angels rule over nature, serve God, watch over the tree of knowledge, and so forth. The scrolls mention several angels by name. These (and many more) are known from the Jewish literature of the time.

Terminology and Interpretation. The first aspect to be stressed is an exegetical one. Jewish literature of the Second Temple period identified more and more Biblical Hebrew terms as angels regardless of earlier probable meanings. Designations for God or terms that survived from polytheistic myth were now understood as angelic designations. The "sons of God" (*Gen.* 6.1–4) become "divine beings"—angels—as already in the Septuagint. Dead Sea Scroll literature is especially rich in angelic terms derived from combinations with the words *El* ("God") or *Elim*; for example, the War Scroll (1QM x.8).

The same holds true for certain biblical references to "holy ones," which are quite often understood as angels (again as in the Greek translation). According to the War Scroll (1QM i.16), "holy ones" appear at God's side to destroy the sons of darkness (following Yadin's reconstruction; cf. *Zec.* 12.5). The War Scroll also offers a play on

the words "holy ones," referring to angels and human beings side by side (1QM x.10–12 and xii.1–7, as in Hodayot^a, 1QH^a xix.9–11 [xi.6–8]). This kind of double usage has its clearest parallels in *I Enoch's* "Book of Parables" (*I En.* 37–71), where both meanings change constantly. Yet, some commentators stress the interpretation of the "holy ones" as mere human beings. The question has given rise to much discussion among scholars (mostly related to the explanation of *Daniel* 7; see Di Lella, 1977).

One of the more interesting features of angelology in the Dead Sea Scrolls is the development of the meaning "angel" for the Hebrew term *ruah* (though still maintaining a series of other connotations, including "spirit"; see Davidson, 1992, pp. 155–156; Sekki, 1989, pp. 145–171). Here, too, a double meaning is very common, for example: "And a perverted spirit you purified from great violation, so that it might stand in rank with the host of holy ones, and so that it might come together with the congregation of the sons of heaven. And you cast for man an eternal lot with the spirits of knowledge" (1QH^a xi.22–23 [iii.21–22]). *Holy ones* and *sons of heaven* are typical terms for angels in the Dead Sea Scrolls; they are paralleled here by the term *spirits of knowledge*. A few other texts attribute limited knowledge to the angels (1QH^a ix [i]). Yet, the person joining their congregation has been a perverted spirit: *spirit*, like *holy one*, can designate in the same context angels and human beings. Some scrolls refer to angels as "spirits of knowledge" (*Elei da'at*; Newsom, 1985, pp. 23–24; cf. Mach, 1992, pp. 133–144).

The Dead Sea Scrolls use the term "prince" or "commander" (*sar*) quite frequently (cf. *Daniel* 12.1). It seems that this term replaces another biblical expression for "messenger" (*tsir*) found in *Isaiah* 63.9. The passage from *Isaiah* seems to be used in the War Scroll (1QM xiii.14), yet its importance is much greater: A certain reading of the prophet's Hebrew words allowed for the term *Angels of the Presence*, which is attested quite often in the Qumran writings.

Following such exegetical practices, the Dead Sea Scrolls offer a full range of comparable terms for angels that often derive from former divine designations (Newsom, 1985, pp. 23–29; Noll, 1979, pp. 216–240; Yadin, 1962). Scholars often have tried to identify angelic beings mentioned in the scrolls with specific angels such as Michael. However, such identifications serve mostly modern needs for systematizing an otherwise quite unsystematic literature. The "Prince of Light" in the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community, 1QS iii–iv) need not be the archangel Michael (Davidson, 1992, p. 148; Segal, 1992) or Uriel.

The Visions of Amram^{a1} (4Q543–548) are of special interest in this regard: the angel who appears seems to have three names. Jozef Milik (1972) discusses the possible

names for the angel and his evil counterpart (4Q544 2.3, 3.2), as does Paul Kobelski (1981). It seems clear that angels might have had more than one name at a time.

The Melchizedek scroll (11Q13) places Melchizedek in opposition to Belial (the "evil one") and his angels, making Melchizedek a savior figure for the end time. The identification of Melchizedek with Elohim (perhaps 11Q13 ii.24-25) is not completely certain; however, Melchizedek clearly is depicted as a heavenly figure, a priestly savior (Milik, 1972; Kobelski, 1981).

Another aspect of the interpretative activity of the Qumran community is the introduction of angels into the biblical text, whether by identifying biblical terms as angels or by adding angels to the biblical story. The Genesis Apocryphon (1QapGen), for example, speculates about whether the wonderful appearance of the newborn Noah is a sign that his parents are indeed the watchers (angels who descended according to *1 Enoch*). The three men who visit Abraham after his circumcision in *Genesis* 18 are understood, it seems, explicitly as angels in the Ages of Creation (4Q180).

Duality and Communion with Human Beings. A major characteristic of the belief in angels in Qumran, however, is the so-called communion with the angels, which has to be seen in connection with certain dualistic tendencies that are more prominent in the Dead Sea Scrolls than in most of the contemporary literature. In a variety of works, this communion of members of the Qumran community with the angels is either presumed or expected (especially in Hodayot^a). In the dualistic partitioning of humanity into the Sons of Light and the Sons of Darkness, who are allotted to the principal angelic Princes of Light and Princes of Darkness, respectively, communities are matched with the corresponding angelic host; the motif is formulated primarily in terms of the communion of the Qumranites and the Angels of Light only. The dualistic division of humanity is broadly formulated in the Treatise on the Two Spirits, now part of 1QRule of the Community (1QS iii.13-iv.26). The text is still under discussion because of its theological difficulties. The precise form of the dualism is at issue as well as the question whether and when some terms indicate a more personal angelic being or, to the contrary, might still be understood as nouns designating human situations and/or behavior. Yet, the idea of a common future battle of the Prince of Light and the Sons of Light (i.e., the Qumranites) against the forces of darkness (angels as well as humans) is clearly linked to the dualistic division.

Following biblical and later traditions, the communion of humans with angels in the eschatological battle against Belial and his angels is especially developed in the War Scroll. From the beginning of that scroll, angels from

both sides seem to form part of the armies together with the humans (1QM i.10-11, ix.14-16, xii.1-9). For this battle the names of the archangels will be written on the shields of the towers (1QM ix.14-16). Accordingly, the War Scroll prohibits certain people from staying in the camp, "for the angels of holiness are in the camp, together with their hosts" (1QM vii.6). Elsewhere, the idea of the presence of the angels in the camp produces similar prohibitions that need not be understood as total expulsion from the group. They might exclude a member from certain meetings or tasks (Schiffman, 1989, pp. 51-52).

The author of Hodayot gives thanks for his elevation to the rank of the angels or expects that elevation in the near future (1QH^a xiv.12-13 [vi.9-10], xix.13 [xi.10], and more often in the fragments of this scroll). The close relation to the angels has a revelatory aspect (as in 1QH^a xix.4-13 [xi.2-10]), since the communion here is clearly linked to the salvation hidden from others, that is, outsiders. The purpose of such a communion is the common praise of God as in "You cast eternal destiny for man with the spirits of knowledge, to praise your name together in celebration and to tell of your wonders before all your work" (1QH^a xi.20-23 [iii.19-22]; cf. 1QM xii.1-2). The liturgical communion of the members of the Qumran community with the angels is still the most plausible explanation for the function of the Songs of the Sabbath Sacrifice (4Q400-407).

In light of this liturgical communion, one might surmise that other texts have a specific liturgical character, too, as suggested recently by Bilhah Nitzan (1995) for Berakhot^{a-c} (4Q286-290). If her interpretation is right, the angels did attend the yearly liturgy of the renewal of the covenant. According to the Rule of the Blessings, that communion may be expected as a future blessing: the "words . . . to bless the Sons of Zadok the priest" (1Q28b iii.25-26). At the same time, the priests are supposed to bless in that way, and they themselves are described as sharing the angelic communion (1Q28b iv.23-26).

On various other occasions, angels are involved not only with the fulfillment of eschatological and liturgical tasks; it seems that they also struggle for the future of individuals as in the Visions of Amram^{a-b} (4Q543 3, 6; 4Q544 3.12-14, 6.2-3). In a text that was published just recently, a fragment mentioning Zedekiah (4Q470), Erik Larson (1994) suggests an active role for the angel Michael in the rehabilitation of Judean king Zedekiah.

Recently, these expectations of sharing a common future with the angels or even living with them have raised the question of whether the Qumranites believed in a transformation of the just into angelic beings. The theory has been advocated by Morton Smith with respect to the

War Scroll' (4Q491), which appears to speak of a figure enthroned in heaven. It has some parallels in other writings of the period (e.g., *Dn.* 12, *1 En.* 104; Segal, 1992; Mach, 1992, pp. 163–173). It has been opposed, however, by other scholars (e.g., Davidson, 1992, p. 156). The continuation of the same song that suggests the idea of a common lot with the angels in Hodayot' (1QH' xi.20–23 [iii.19–22]) shows the author's awareness of the dissimilarity between himself and the angels. The communion with them might, at least according to this text, be expected, but it is not always conceived of as having already been accomplished.

Judgment against Angels. At one point it seems that the author of Hodayot' is following a different biblical or postbiblical tradition that allows for a certain critique against at least some of the angels (1QH' xviii.34–35 [x.32–33]). God is in dispute with the angels and seeks justice among them. According to the same text, the angels' knowledge of God seems to be limited and they are unable to stand before his wrath. Punishing angels are mentioned several times in the scrolls, but their precise role is disputed. [See Demons.]

MICHAEL MACH

ANOINTING. The Dead Sea Scrolls provide a valuable link between the biblical tradition of anointed kings and other special individuals and later Christian and rabbinic definitions of "the anointed one" or messiah. Terms for anointing in the scrolls include *mashakh* and *sukh*. Both terms indicate pouring, rubbing or smearing oil upon someone or something. *Mashakh* usually is used in ritual contexts, while *sukh* is confined to ordinary situations, for example, smearing oil on the body for medicinal or cosmetic purposes.

The sectarians understood anointing in the manner described in the Bible, where it was performed for the inauguration of a king, priest, certain prophets, and others who were chosen as God's agents. Anointing could be literal, as in the cases of Saul and David, or symbolic, as in the case of the prophet who exclaims, "The Spirit of the Lord has anointed me to . . ." (*Is.* 61.1; cf. *Is.* 45.1). Anointing sanctifies, or separates, such persons from the normal sphere of human activity, elevates them above their fellow human beings, and empowers them for sacred service. By anointing, God endows his agent with his spirit (*1 Sm.* 10.13–14), providing the person with protection (*Ps.* 105.15), strength (*Ps.* 89.20–21), honor (*Ps.* 45.7), and wisdom (*Is.* 11.2). Thus, a special relationship between God and his anointed is forged. Objects that are anointed are separated for sacred use and become dangerous to those who encroach upon them unworthily (*Ex.* 30.29–33, 40.9; *Nm.* 4.15).

Oil for sacred purposes differed from ordinary oil. It was composed of a special recipe that included various aromatic spices mixed with fine olive oil (*Ex.* 30.23–25). It was not to be used for any noncultic purposes. By re-

servicing this aromatic oil for his use, God claims its fragrance as his own; those anointed with it become associated with him as his special representatives.

Among Israel's neighbors anointing was also significant. When Egyptian officials were anointed by the king, they were given authority and protection to act as his agents. Rubbing oil on the body solidified legal contracts in Mesopotamia, signifying the commitment of each party. At weddings, the groom poured oil on the head of his bride, probably emphasizing his selection of her.

In the pseudepigrapha, we find a heavenly anointing that transforms individuals by endowing them with divine glory. According to the *Testament of Levi* (8.4–5) the patriarch Levi was anointed by an angel to serve as high priest. After the angel Michael anoints Enoch, he becomes virtually indistinguishable from the angels (2 *En.* 22.8–10). In addition, oil is considered a source for strength and healing (cf. *Apocalypse of Moses* 9.3).

In the Dead Sea Scrolls, as in the Bible, the term “anointed” refers to kings, priests, and prophets. Like other Jews of the Second Temple period, the sectarians clearly awaited a messiah, an anointed Davidic king who would restore the political and moral condition of Israel (cf. *Ps. Sol.* 17.3, 18.5–8; *Mt.* 11.3; *Jn.* 1.41). He is referred to as the “Messiah of Justice” in the Commentary on Genesis A (4Q252 5.3), the “Branch of David” in the Florilegium (4Q174 1.11), “Messiah of Israel” in the Rule of the Congregation (1Q28a ii.14), the “Holy Messiah” in a liturgical text? (1Q30 i.2) [partially restored] and “the Anointed of the Spirit” in Melchizedek (11Q13 ii.18). The Davidic Messiah described in the Scrolls is clearly a human being. There appears to be no influence from the heavenly “son of man” tradition found in Enochic literature and elsewhere (1 *En.* 46.1–3, 48.2–10; cf. 4 *Ezr.* 13.1–53).

“Anointed” in the scrolls also refers to consecrated priests. In the description of the eschatological battle, the priests are told not to come near those who are severely wounded so as not to “desecrate the oil of their priesthood” with the slain (War Scroll^c 4Q493 1.5; cf. 1QM ix.7–9). The community expected an anointed high priest as well as the anointed Davidic ruler. The Rule of the Community from Cave 1 (hereafter, 1QRule of the Community) refers to the coming “Messiahs of Aaron and Israel” (1QS ix.11). The priestly Messiah will be preeminent in the community; he is “at the head of the whole congregation” and the key figure in the eschatological battle (War Scroll, 1QM ii.1, xvi.13, xvii.5; cf. CD vii 7.18–21).

Finally, the prophets are considered by the sectarians to be the anointed of God. The Damascus Document refers to those “anointed ones” (for example, prophets) who had taught Israel throughout her history by God's Holy Spirit (Damascus Document, CD ii.12; cf. CD v.21–vi.1).

The War Scroll honors God for providing military wisdom through the agency of his anointed prophets: “By the hand of your anointed ones, seers of decrees, you taught us the times of the wars of your hands, to fight to cover you with glory, with our enemies to tell the hordes of Belial . . .” (1QM xi.7–8).

Although they emphasize two future messiahs, the Dead Sea Scrolls represent an outlook on the biblical tradition that is fairly similar to that of rabbinic literature. Like the sectarians, the rabbis expected a messianic era in which the temple and the Davidic kingdom would be restored. The Shemoneh 'Esreh, a first-century rabbinic text containing eighteen benedictions, includes a prayer to God to be merciful to David, his anointed, and to restore the fortunes of Israel to Jerusalem. Within the priesthood of the period, however, sacred anointing apparently had been abandoned. The Mishnah implies that the high priest was consecrated by investiture only (*Meg.* 1.9, *Hor.* 3.4). According to the Talmud, the sacred anointing oil was hidden by Josiah, King of Judah (seventh century BCE) and never used again (B.T., *Hor.* 11b–12a).

In contrast to the Dead Sea Scrolls and rabbinic teachings, the New Testament regards Jesus as the embodiment of Jewish messianic expectations. He is referred to as the Christ (in Greek, “Anointed One”), who has been elevated and enthroned in heaven due to his obedience to God as a sinless sacrifice for humanity (*Heb.* 1.9). By extension, Christians—those who identify with Christ—partake of his anointing and become his fragrance (1 *Jn.* 2.27; 2 *Cor.* 1.21, 2.14–16). The New Testament, like the scrolls, connects anointing with empowerment by the Holy Spirit (*Acts* 1.8, 10.38; *Lk.* 4.18). Anointing with oil was also used by the early church in acts of exorcism and healing (*Mk.* 6.13, *Jus.* 5.14–15).

HANNAH K. HARRINGTON

ANTIOCHUS IV EPIPHANES, son of Antiochus III “the Great,” succeeded his brother Seleucus IV as king of the Seleucid empire in 175 BCE, and ruled over that kingdom until his own death in late 164 BCE. Antiochus’s image is etched in the collective memories of Jews and Christians as the Syrian despot who imposed a systematic religious persecution on the Jews of Judea, setting in motion the Hasmonean uprising that ultimately led to Jewish political independence, thereby effecting a major turning point in the history of the Jewish people.

Antiochus’s personality is projected by classical historians as eccentric and contradictory, at once generous and gregarious while also tyrannical. On his coins he employed the epithet [*Theos*] *Epiphanes* (“God manifest”), but Polybius (2b.10) is often cited for his mocking rendering of the king’s surname as *Epimanes* (“mad”). Antiochus inherited an empire in decline, following his father’s defeat at the hands of the Romans, and his espousal of a fierce Hellenizing policy, evinced through the founding of more Greek *poleis* than all his Seleucid predecessors, is frequently interpreted as a step toward restoring the kingdom to its earlier prominence as the leading force in the Hellenistic East. Antiochus encouraged this process in Jerusalem as well, by deposing the high priest Onias and appointing his brother Jason (2 *Mc.* 4.7–10), who proceeded to introduce a variety of Hellenistic institutions into the city, and ultimately transformed the city into a Greek *polis* called “Antioch” (2 *Mc.* 4.9; the precise meaning of the text in 2 *Maccabees* has been fiercely debated by scholars—see Tcherikover, 1959, pp. 161–169). Subsequently, Jason was also deposed by the king in favor a more docile pro-Hellenist, Menelaus (2 *Mc.* 4.23–27). In retrospect, this interference by Antiochus in the most sensitive areas of Jewish religious life was a harbinger of future events.

Antiochus embarked on two campaigns against Ptolemaic Egypt: in 170–169 BCE and again in 168 BCE. Neither expedition led to the king’s ultimate goal of outright conquest, with the initial successes of the second campaign only to be thwarted by Roman intervention leading to Antiochus’s retreat. It is unclear precisely when and in what sequence (compare 1 *Mc.* 1.20–24, 2 *Mc.* 5.11, and Josephus, *Jewish Antiquities* 12.242–250; see Mørkholm, 1966, p. 142; Tcherikover, 1959, pp. 473–474), but in close proximity to these campaigns disturbances broke out in Jerusalem, possibly encouraged by the perception of a Seleucid defeat and even the king’s death (2 *Mc.* 5.5), and these were cruelly put down in the course of a visit (or visits) to the city by the Seleucid king himself. Within months, the king’s steps toward neutralizing any Jewish opposition culminated in the imposition of religious persecution; under penalty of death, the Jews were required “to depart from the laws of their fathers and to cease liv-

ing by the laws of God. Further, the sanctuary in Jerusalem was to be polluted and called after Zeus Olympius” (2 *Mc.* 6.1–2). Antiochus’s expeditions to Egypt, as well as his “raging against the holy covenant,” the desecration of the Temple, and the establishment therein of “the appalling abomination” are all described in great detail in the *Book of Daniel* (11.21–45). To this we might possibly now add Acts of a Greek King (4Q248), which has been interpreted (see Broshi and Eshel, 1997) as alluding to the actions undertaken by Antiochus both in Egypt and in Jerusalem, and which has even been dated earlier than *Daniel* and described as the possible source for the reference there (*Dn.* 11.39) to the king who “will distribute land for a price.”

Antiochus did not personally devote his remaining years to the implementation of Seleucid policy against the Jews. The dwindling financial resources of his empire forced Antiochus to turn eastwards, and in 164 BCE he began an expedition with the intention of sacking one of the wealthy temples in Elymais. He died at Tabae, a city situated between Persis and Media, shortly before 20 November 164 BCE.

ISAIAH M. GAFNI

APOCALYPTIC TEXTS. Writings that are governed by a worldview in which the revelation of divine secrets is constitutive of salvation from an alien or threatening world are referred to as apocalyptic.

Definitions: Traditional Terminology. The establishment of *apocalyptic* as a common term in the Western world is the result of nineteenth-century Christian historical and theological discourse, which took its cue from the initial Greek word of the New Testament *Book of Revelation*, *apokalypsis* (“revelation”). The noun *apocalypse* designated writings like *Revelation*, which claimed to reveal secrets about the future or the hidden parts of the

cosmos. The adjective *apocalyptic* denoted the kind of dualistic eschatology presented in *Revelation*—the clash of divine and demonic powers that would be resolved in an imminent final judgment ending the present evil age and ushering in a new age and the return of primordial bliss. The adjective *apocalyptic* was also used as a noun that designated the worldview and theology that permeated the *Book of Revelation* and its Jewish precursors and that comprised such elements as the divine control of history, a developed angelology and demonology, eschatology, messianism, and resurrection (Russell, 1964). In popular parlance (the) *apocalypse* came to refer to the eschatological clash depicted in the *Book of Revelation*. In much of this scholarly and popular usage, the element of revelation inherent in the term *apocalyptic* faded or disappeared in favor of an emphasis on violent and dualistic eschatological cataclysm.

New Terminology. By the middle of the present century the variety of connotations and nuances applied to the term *apocalyptic* had created such semantic confusion that some scholars suggested the word should be discarded. The discovery of the Qumran scrolls further complicated the issue but also catalyzed a new discussion that has helped to clarify the apocalyptic phenomenon and its place on the religious and social horizon of Second Temple Judaism.

The new discussion was initiated by Klaus Koch (1972), who proposed that a good starting point would be an investigation of texts that most scholars would agree are apocalypses. Taking his cue from Koch, Paul D. Hanson (1976) distinguished the literary genre *apocalypse*, the *apocalyptic eschatology* found in such writings, and *apocalypticism*, the worldview expressed in apocalypses and embodied in social movements.

In a discussion of *1 Enoch*, Michael Stone (1978) drew attention to this work's great interest in cosmology, indicated its parallels in Israelite sapiential texts, and thus argued that Judaism of the Persian and early Hellenistic periods was more diverse than had been assumed in studies of apocalyptic literature that focused on the prophetic roots of its eschatology.

Further refining this discussion, a subgroup of a Society of Biblical Literature task force on genres examined the corpus of Jewish, Christian, and pagan texts that arguably could be called *apocalypses* and developed a definition and a detailed typology of the morphology of the texts. According to John Collins, an apocalypse is "a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial insofar as it involves

another supernatural world" (Collins, 1979, p. 9). By emphasizing the activity of an otherworldly mediator and revealer, the presence of a "transcendent eschatology," and the frequent occurrence of cosmological revelations, the definition helped to distinguish the apocalypses from some of their biblical prophetic counterparts. Later, Collins added a statement about function: an apocalypse is "intended to interpret present, earthly circumstances in the light of the supernatural world and of the future, and to influence both the understanding and the behavior of the audience by means of divine authority" (1991, p. 19).

The distinction between the genre apocalypse, on the one hand, and apocalyptic eschatology and apocalypticism, on the other hand, significantly clarified discussion of biblical texts; nonetheless, the retention of the root *apocalyp-* in the latter cases allows some terminological confusion to remain. Paul D. Hanson finds "apocalyptic eschatology" (the eschatology found in apocalypses) already in promises of a new creation in "Third Isaiah." Collins (1992) distinguishes between the genre apocalypse and apocalypticism, which is a worldview with two components: a heightened interest in otherworldly regions and supernatural beings and an eschatology in which belief in the judgment of the dead transcends the eschatology of the later prophets. At the same time, he supposes that this worldview preceded and gave rise to the literary phenomenon of apocalypse. The terminological confusion in both instances involves the use of the term *apocalyptic* or *apocalypticism* in the absence of the revealer and the mechanisms of revelation that are central to the apocalypses.

Apocalyptic Collections from the Greco-Roman Period. The present discussion focuses on two early collections of apocalypses, *1 Enoch* and *Daniel*, which then provide a basis of brief comparison with other texts, mainly from the Qumran corpus, that may be said to be apocalypses or to reflect an apocalyptic worldview.

1 Enoch. This lengthy collection of revelatory texts is an appropriate starting point for several reasons. It contains all the elements comprised by an apocalyptic worldview and presents them within the framework of an explicit claim to revelation. The traditions contained in the work are among the oldest in apocalyptic literature and are, thus, potentially helpful in tracing the origins of the phenomenon. The complexity of the corpus discourages oversimplifying definition.

Composed in Aramaic between the fourth century BCE and the turn of the era, the components of this gradually evolving corpus claim to record revelations that were received by the ancient patriarch mentioned in *Genesis* 5.18–24. Although no part of *1 Enoch* seems to have been composed at Qumran, its popularity there is attested by

eleven fragmentary manuscripts from Cave 4, which preserve bits and pieces of four of its five major sections.

The book *1 Enoch* is appropriately called an apocalyptic writing because mediated revelation is not only present in the text but is essential to its dualistic worldview (Nickelsburg, 1991). A temporal dualism opposes the present time of experience to a hidden future or a remote past; a spatial dualism counterpoises the inhabited world and the rest of the cosmos. A complex of ontological dualisms is folded into both temporal and spatial dualisms. Humanity, distinct from the superhuman realm of God, angels, and demons, is inextricably bound up with their activity, and God and God's angels are pitted against the demonic powers. These respective dualisms are mitigated by the apocalypticists' revelations, which unveil the hidden future and penetrate the inaccessible parts of the cosmos. The revelations effect salvation by enabling people to endure the present time and world of evil experience in the knowledge that God's will is being done in the heavenly throne room and out in the cosmos, and that divine justice will be effected among humans when the final judgment obliterates evil and the new age becomes present reality.

The imminent arrival of this judgment is the dominant theme of *1 Enoch*. Judgment is necessitated by the present pervasive state of injustice, which is manifested variously in the gentiles' victimization of Israel, the persecution and oppression of the righteous poor by rich and powerful "sinners," and the success of false teachers in leading many astray from the correct interpretation of God's commandments (Nickelsburg, 1985, pp. 336-339). In the judgment, the respective groups will receive the just recompense that hitherto has been lacking. As a function of this judgment, the righteous who have died unjustly will be rewarded in spite of death, and the prosperous sinners will be punished after they have died.

The message of judgment of *1 Enoch* places the present world of evil, suffering, and injustice in relation to their future resolution in the judgment and the new creation that will follow it. This viewpoint is "eschatological" because it envisions an end (Gr., *eschaton*) to the present order and the beginning of a qualitatively new state of affairs. The temporal axis of *1 Enoch* also projects backward into primordial times, when angelic revolt originated the violence, sexual promiscuity, and some of the false teachings that are focal in the authors' portrayal of evil.

The spatial dimension reinforces *1 Enoch's* temporal axis. In contrast to the evil and injustice that pervade the world, in heaven God's angels record human deeds in preparation for the judgment and plead the cause of the righteous. Beyond the inhabited world, on the mountain

of the dead, the souls of the righteous and wicked are separated for reward and punishment, and at the ends of the earth the pits of hell are stoked. Running through the accounts of Enoch's cosmic journeys and related sections of *1 Enoch* is the belief that the Creator has built order and justice into the structure and operation of the cosmos, which are securely under the control of God's angelic deputies and aides.

All this information is explicitly presented as revelation, that is, the divine unveiling of hidden things: the events of the future and their timing and the periodized structure of human history; the places beyond the inhabited world and the activities that occur in them. Even in the "Book of the Luminaries" (chaps. 72-82), which contains information that could be gathered from empirical observation, the author claims to have seen these things in the company of an interpreting angel. Revelation in *1 Enoch* is always visual and usually auditory as well. Enoch sees the enthroned Deity and hears the divine oracle of judgment. Traveling around the world, he sees cosmological phenomena and hears the accompanying angel interpret them. The angel commands him to look at the book of human deeds and read and learn what is written in it (81.1-4) so that he can recount the structure of human history (93.1-2). Dream visions are especially important in this text: Enoch's ascent to heaven occurs in a dream vision (chaps. 13-16). Chapters 17-32 imply that Enoch's cosmic journeys took place within that dream vision, as angels led him away from the heavenly throne room (17.1), although the narrative at the conclusion of these journeys depicts a physical return to his house rather than an awakening from sleep (81.5). The dream visions in chapters 83-84 and 85-90 differ from the others in not having an otherworldly figure interpret what Enoch has seen (although chapters 85-90, reflecting chapters 12-30, depict Enoch traveling in the company of angels).

The components of *1 Enoch* are cast in a wide variety of literary forms that are paralleled in biblical and post-biblical Israelite literature and in non-Israelite literature. These include a prophetic oracle (chaps. 1-5); an account of a heavenly prophetic commissioning that is especially reminiscent of *Ezekiel* 1-2 and 40-48 (chaps. 12-16); journeys to the underworld that recall both the Greek *nekylia* ("journey to the underworld") and *Ezekiel* 40-48 and *Zechariah* 1-6 (chaps. 17-30); symbolic dream visions (chaps. 83-90); and an epistle (chaps. 92-105) that comprises, in turn, oracles of woe, beatitudes, predictions of what will happen "in those days," and proverbial two ways ethical instruction (cf. chap. 91). In addition, the narrative thread that organized the penultimate form of *1 Enoch* (chaps. 1-32, 81.1-81.3, chaps. 91-105) is shaped

in the well-known genre of a testament, which presents the text as Enoch's last words delivered to his son Methuselah in order to be transmitted to his children—the righteous who will live in the last days (Nickelsburg, 1981, pp. 150–151).

The prophetic forms support the authors' claims to be presenting revelation. Other forms typical of Israelite sapiential literature are qualified so as to indicate the revealed character of their content. Enoch presents his two-way instruction as a corollary of the revelations he has received about the future (91.1). He cites and alludes to his visions in support of his admonitions (103.1–4; cf. 98.7–8, 104.1–2, 104.7–8). He defines his testament—a traditional form found in many contexts—as the written, earthly deposit of heavenly “wisdom” that will function as a testimony for future generations (81.6–82.3, 104.12–105.2). Twice he alludes to its contents with the formula “wisdom shall be given” (5.8, 93.10), and the revelatory “Book of Parables” is explicitly presented as “wisdom” (37.1–4).

The Enochic claims to revelation provide or refer to several kinds of salvific knowledge: instruction about the right calendar; a range of other mandates, necessary for salvation, implied in admonitions to walk in the path of uprightness (cf. 99.10, 100.6); belief in God's justice, which enables one not to apostatize in the face of oppression and persecution.

The revelation of this Enochic wisdom constitutes an exclusive eschatological community of the chosen, who will survive the coming judgment. Who these people were is impossible to know. The evidence does not allow us to identify them with any known group in Judaism, though they appear to have been historical predecessors of the Qumran community, who preserved their literature. The identity of the authors of the texts is hinted at in two ways: the leaders of the righteous are called “the wise” (98.9, 99.10), and Enoch is described as a “scribe” (12.4, 15.1, 92.1).

Daniel. This second major work of the pre-Christian era (composed c. 165/64 BCE), which was also found in multiple manuscripts in the Qumran caves, manifests important similarities to *1 Enoch* and significant differences from it. The biblical books *1 Enoch* and *Daniel* (especially *Daniel* 7–12) are substantially similar in their worldview and the form, function, and some of the content of their revelations. The latter half of *Daniel* posits a sharp opposition between the divine and demonic realms and sees human history as a mirror of events on this level. Visionary eschatological revelations mediated by angels to a figure of the past—who is both sage and seer—penetrate the hidden realms of time and space. The three visions in chapters 7, 8, and 10–12 (as well as the one in chapter 2) recount the determined course of history from the fic-

tional author's time to the great judgment and the new age, which are expected in the real author's time (cf. *1 En.* 85–90, 93.1–10, 91.11–17). Chapters 2 and 7 are dream visions, and the contents of chapters 2, 7, and 8 are symbolic, like *1 Enoch* 85–90, although chapters 7 and 8 are interpreted by angels. The promise of an imminent judgment and resurrection encourages the faithful to stand fast despite persecution. Chapter 7 schematizes latter-day history into four periods that have a counterpart in the four periods of demonic activity in *1 Enoch* 89.59–90.19 (cf. also *Daniel* 2). In addition, *Daniel* 7 draws on the tradition of the throne vision in *1 Enoch* 14–15 and, in turn, informs the vision about the “Son of Man” in *1 Enoch* 46–48. The vision in *Daniel* 10–12, which recounts the course of history inscribed in the heavenly “book of truth,” is presented as a kind of prophetic commissioning that is to be recorded in a written document to be revealed in the end time (12.9; cf. *1 En.* 14–15). Like *1 Enoch*, *Daniel* has sapiential features. Its heroes are sages, skilled in dream interpretation, and their latter-day counterparts are “the wise” (Heb., *maskilim*).

Daniel also differs from *1 Enoch*. Its account of the archdemon's revolt against heaven (chap. 8) draws on *Isaiah* 14 rather than *Genesis* 6 (cf. *1 En.* 6–11) and identifies the revolt with the demon's present rather than primordial activity. Although *Daniel's* eschatology posits a great judgment that separates the present evil time from a new creation, the Danielic authors indicate no interest in the cosmological information that dominates *1 Enoch* and reinforces its eschatological message. Apart from the dream visions and a commissioning account, *Daniel* lacks the literary forms that constitute much of the Enochic text. Similarly, the biographical narratives that introduce the recipient of revelation and his friends (chaps. 1–6) do not constitute a testamentary framework but recount a set of traditional court tales that exemplify the wisdom and faithfulness of Daniel and his friends. The book's audience appears to have been faithful Israelites in general and not an exclusive group who saw their adherence to a particular interpretation of the Torah as constitutive of their status as the chosen. [See Court Tales.]

Early Apocalyptic Writings. Our findings allow some conclusions about the form, content, and function of early apocalyptic writings and offer some hints about their origin.

Shared peculiarities. Although *1 Enoch* and *Daniel* contain much material that is paralleled in the Hebrew scriptures, and especially their prophetic and sapiential books, the peculiar contour of the two works lies in a unique cluster of substantial and formal elements. Their worldview is governed by a dualism that emphasizes the origin and activities of an immense demonic realm that victimizes human beings and clashes with God and God's

angels. Both works speculate about the ordered structure of human history and feature an enhanced eschatology, with a final judgment that will end the demonic hold on humanity and a new creation that is epitomized in a resurrection or its equivalent. They embody all this in accounts of visionary eschatological revelations received in dreams or in cosmic journeys, and they attribute these revelations to sages and seers from the past who were not biblical prophets of record. They also employ sapiential self-designations, terminology, and literary forms.

Rationale and function of the apocalyptic synthesis. This cluster of elements has an integrity. The demonic mythology is consonant with the experience of persecution and acute sense of victimization that pervades these books; evil is perceived as too massive to be attributed merely to humans. Speculation about the structure of the cosmos in *1 Enoch* and the periodization of history in both works is related to their demonology. Historically, speculation has supported the hope for an imminent end to evil times, and cosmologists have found order in a chaotic universe, attributing ultimate power to the Creator of a cosmos that the Hellenistic world found to be much larger than had been supposed. Their perception of the immensity of the cosmos and the consequent remoteness of God helps explain their multiplication of angels with cosmic functions and the stipulation of other angels as intercessors who provided access to that God. Their appeal to revelation attested the veracity and authority of their own worldview. Thus, the apocalyptic synthesis functioned to alleviate the threat of a world that was experienced as chaotic, unjust, hostile, and threatening. It maintained that, in the final analysis, the divine King and his entourage were in control, and order and justice would prevail over evident chaos and experienced injustice. In some respects, this synthesis paralleled contemporary philosophical systems, astrological speculation, and magical practice.

Roots and provenance of apocalypticism. Like much of the religious and cultural syncretism of the Hellenistic age, the roots of apocalypticism are diverse, multicultural, and often difficult to disentangle. Elements in the demonic mythology and its dualism were drawn from Greek and Near Eastern religions. Speculation about the ordered structure of history derived from Mesopotamian sources, although many elements in the eschatology of *1 Enoch* and *Daniel* hark back to the prophets. The sense of cosmic order in *1 Enoch* has many parallels in contemporary Israelite sapiential literature, although the data that underlie these texts surely reflect the activity and observations of both non-Israelite and Israelite sages. While the claims to revelation in *1 Enoch* and *Daniel* are carried in forms that derive from the prophetic corpus, their embodiment in accounts and interpretations of dream vi-

sions is beholden to the sapiential tradition attested in the Joseph cycle of *Genesis* and also reflects broader currents in Mediterranean and Near Eastern antiquity. Thus, it is not by accident that *Daniel* and his friends are counterpoised to Babylonian sages and that the figures of *Enoch* and *Daniel* have Mesopotamian counterparts.

The provenance of apocalypticism is more difficult to identify because it is masked by the pseudepigraphic attribution of these works. Nonetheless, the cluster of elements in these texts suggests some inferences, which will need much more detailed consideration and explication. The creators and masters of the apocalyptic synthesis were members of a learned class of scribes and sages, who were the keepers and interpreters of the sacred Israelite tradition that was in the process of becoming the Hebrew scriptures and were knowledgeable also in the religious and intellectual traditions of their non-Israelite neighbors. In this respect, Ben Sira's description of the scribe is suggestive (*Sir.* 39.1–5). Moreover, his concern about right conduct and its consequences, his interest in the cosmic order (42.15–43.33), and his respect for the prophets (39.1; chaps. 45–49) indicate that we may look among such sages for the sapiential-prophetic synthesis found in the apocalyptic writings (Argall, 1995).

These similarities notwithstanding, the apocalyptic authors differed substantially from scribes such as Ben Sira in their epistemology, their understanding of revelation, and their appropriation of the prophetic tradition. For Ben Sira the regularity of the cosmos could be perceived by empirical observation, even if it revealed the power of the Creator (41.15–43.33). Moreover, though he claimed to "pour out teaching like prophecy" (24.32–33), he viewed the prophetic corpus as an extant body of ancient tradition that was to be interpreted, and he severely criticized divination from dream visions (34.1–8). Finally, the prophetic vision of the future was interpreted without reference to the activity of opposed divine and demonic realms.

The authors of *1 Enoch*, to the contrary, intensified prophetic eschatology and incorporated it into a dualistic worldview that counterpoised the present and the future and the divine and demonic realms. They presented this worldview in accounts of revelation, and they anchored their assertions about the order of the cosmos in accounts of revelatory journeys (cf. 2.1–5.3 for an exception). Their pseudepigraphic ascription notwithstanding, the Enochic authors' use of prophetic revelatory forms and accounts of dream visions suggests that they saw themselves as latter-day representatives of the prophetic tradition.

Apocalypticism Outside of the Apocalypses. If a particular claim to revelation is integral to the worldview of the apocalypses, one should exercise caution in the use

of the term *apocalyptic* with respect to texts that do not explicitly make that claim. Of course, a text that presents a dualistic worldview with a radical eschatology may, in fact, have derived this from an apocalypse and, thus, may presume an apocalyptic notion of revelation. Here a close exegesis of specific relevant texts may provide answers to some difficult questions. Which is prior: the account of the activity of the two spirits in Rule of the Community from Cave 1 (hereafter, 1QRule of Community; iii.13–iv.26) or the pseudepigraphal account of a vision of the confrontation of these spirits in the Visions of Amram? Does the language in 1QRule of the Community (1QS xi.3–9) presume apocalyptic accounts like *1 Enoch* or even claim that the author had such visions? Does 1QH^a dāvo^t ix.24 (1QH^a i.24) presume something like Enoch's vision of the heavenly tablets (*1 Enoch* 81.1–3)? What is the relationship of the Ages of Creation (4Q180–181) to the Enochic "Apocalypse of Weeks" and its claim to be based on a reading of the heavenly tablets?

One can postulate the existence of heavenly tablets or armies of angels and hordes of demons without claiming to have seen them or before any one claimed to have seen them. One can believe in a resurrection without claiming that this was revealed by an angel. If this is the case, what are the roots, precipitating causes, and specific functions of texts that ascribe these beliefs to a particular kind of revelation? Historical and conceptual clarity will be helped by a distinction that reserves the term *apocalyptic* for the revelatory embodiment of the beliefs.

Revelation in the Qumran Community. Clarity on these issues may provide a context for a broader discussion of revelation in the Qumran community. Peshar Habakkuk (1QP^aHab vii.1–8) asserts that God revealed the time of the end to the Teacher of Righteousness. What were the mechanisms of revelation, and how does this eschatological speculation compare and relate to revelation in the apocalypses? 1QRule of the Community (1QS v.9) posits a revealed interpretation of the Torah, the observance of which is necessary for salvation. A similar notion appears in the Damascus Document (CD vi–vii). What, again, were the actual and claimed mechanisms of such revelation, and how did the claim relate to *Jubilees* 23.26 and to *Jubilees'* assertion that its Torah derives from an angelic revelation of laws inscribed on heavenly tablets?

The Genre Apocalypse at Qumran. Many questions remain about the role that the genre apocalypse played in Qumran piety. How, precisely, were *Daniel*, *1 Enoch*, *Jubilees*, and the Vision of Amram used at Qumran? What other Qumranic texts might be identified as apocalypses or apocalyptic? In addition to *1 Enoch*, García Martínez identifies the following as "apocalyptic" texts composed

at Qumran: Elect of God (4Q534); Prayer of Nabonidus (4Q242); Pseudo-Daniel (4Q243–245); Aramaic Apocalypse (4Q246); and New Jerusalem (1Q32, 2Q24, 4Q232, 4Q554–555, 5Q15, 11Q18). Because of the fragmentary character of these works, it is difficult to decide whether the designation is appropriate. It is not sufficient to point to the oracular form and eschatological content of some of them, and one must remember that the heavenly Jerusalem has a parallel in *Ezekiel* 40–48. How one deals with these issues and how one decides whether any of these works was likely composed at Qumran will affect our understanding of the character of revelation at Qumran and the propriety of referring to the community as "apocalyptic."

APOCRYPHA AND PSEUDEPIGRAPHA. The word *Apocrypha* means "hidden things," but the term is used traditionally to refer to those books included in the Old Testament of the Latin Vulgate translation but not in the Hebrew scriptures. The category embraces fifteen books or portions of books: *1 Esdras*, *2 Esdras*, *Tobit*, *Judith*, *Additions to Esther*, *Wisdom of Solomon*, *Ben Sira*, *1 Baruch*, *Letter of Jeremiah*, *Prayer of Manasseh*, *1 Maccabees*, *2 Maccabees*, *Prayer of Azariah and the Song of the Three Young Men*, *Susanna*, and *Bel and the Dragon* (the last three items are known collectively as the *Additions to Daniel*). The books *3 Maccabees* and *4 Maccabees* sometimes are included, as is *Psalms 151* (these books are found in the Greek Bible). The *Psalms of Solomon* also is found in manuscripts of the Greek Bible but is not traditionally classified with the Apocrypha.

All these writings originally were composed between 200 BCE and 150 CE. All at some point were regarded as canonical scriptures, although some were more widely accepted than others. Older scholarship explained this more inclusive collection of scriptures by positing an "Alexandrian canon," that is, by supposing that the Jews of Alexandria had a more inclusive collection of scriptures than their Palestinian counterparts. The idea of an Alexandrian canon was discredited by the work of Albert Sundberg, who showed that Judaism before 70 CE had a

fixed canon of Torah and Prophets, but an open-ended collection of Writings. The Christian Old Testament canon continued to fluctuate for some centuries. Jerome (c.400) distinguished sharply between the books found in the Hebrew scriptures and those that were not, but he translated the Apocrypha into Latin nonetheless. The Protestant Reformers excluded the Apocrypha from the canon, but the Roman Catholic church at the Council of Trent accepted them (excluding *1* and *2 Esdras* and the *Prayer of Manasseh*). Those books that are accepted by the Roman Catholic church but rejected by Protestants are called "deutero canonical."

The word *pseudepigrapha* means "falsely attributed writings." In this case there is no quasi-canonical collection, and the period of composition cannot be delimited firmly. The "Old Testament pseudepigrapha" primarily are books attributed to figures that appear in the Old Testament (Adam, Enoch, Abraham, Moses, etc.), but the category also is extended to Jewish works ascribed to pagan authors, such as the *Sibylline Oracles*. None of these works is older than the Hellenistic period. Many of them, however, are of uncertain date and provenance, and some of them were composed by Christians. The most important Jewish pseudepigrapha are *1 Enoch*, *2 Enoch*, *Jubilees*, the *Psalms of Solomon*, the *Testament of Moses* or *Assumption of Moses*, *4 Ezra*, *2 Baruch*, *3 Baruch*, the *Sibylline Oracles*, and the *Letter of Aristeas*. The *Prayer of Manasseh*, usually classified with the Apocrypha, is also a pseudepigraphon. The *Testaments of the Twelve Patriarchs* are Christian in their final form but contain much Jewish material and may have originated as a Jewish composition. Unlike the Apocrypha, most of the pseudopigrapha were never accepted as scripture, but *1 Enoch* and *Jubilees* were regarded as authoritative in some circles and subsequently became canonical in the Ethiopian church.

Apocrypha. All the books of the Apocrypha were transmitted in both Greek and Latin. Only in the case of *Ben Sira* was a significant portion of a Hebrew text preserved.

Ben Sira. Several Hebrew citations from that book are known from rabbinic literature. At the end of the nineteenth century several leaves of the book, representing four distinct manuscripts, were found at Cambridge University in the materials recovered from the Cairo Geniza. Fragments of two more manuscripts were later discovered, one at the Jewish Theological Seminary of America in New York and one in Cambridge. These fragments are all of medieval origin and include most of chapters 3-16 and fragments of chapters 18-36. The Dead Sea Scrolls yielded much older fragments, from around the turn of the era. Two fragments of *Ben Sira* from Cave 2 (2Q18) contain only four complete words and some let-

ters from chapter 6, but the Psalms Scroll from Cave 11 contains *Ben Sira* 51.13–20 and the last two words of verse 30b. Finally, twenty-six leather fragments from one scroll were found at Masada. These date to the first century BCE and contain portions of chapters 39 through 44. In general, these fragments confirm the antiquity of manuscript B from the Cairo Genizah and indirectly enhance the credibility of the other fragments. The fragment of *Ben Sira* 51 found in the Psalms Scroll is not part of a manuscript of *Ben Sira*. This is an autobiographical poem in praise of wisdom. It is in the form of an acrostic and makes some use of erotic imagery. Opinion is divided as to whether this poem is the work of Ben Sira and reflects his autobiography or is simply a wisdom poem that became attached secondarily to the book.

Book of Tobit. The *Book of Tobit* is represented at Qumran by four Aramaic manuscripts and one Hebrew manuscript. These copies show that Tobit was composed in a Semitic language, although they leave open the question as to whether it was Hebrew or Aramaic. Current opinion favors the priority of the Aramaic. The Semitic fragments support the long form of the text of *Tobit* that is found in Codex Sinaiticus over the short form found in Codices Vaticanus, Alexandrinus, and Venetus. [See Tobit, Book of.]

Only two other compositions traditionally associated with the Apocrypha have been found at Qumran: *Psalms 151* and the *Letter of Jeremiah*.

Psalms 151. Present in the Septuagint and also preserved in Syriac as one of five apocryphal psalms, *Psalms 151* is found in Hebrew in the Psalms Scroll from Cave 11 as two separate psalms (*Psalms 151 A* and *151 B*). *Psalms 151 B* is poorly preserved. Only the heading, half of verse 1, and a few letters of verse 2 survive. The heading seems to correspond to verses 6 and 7 in the Greek and Syriac versions. The Greek *Psalms 151*, on which the Syriac depends, is a conflation and condensation of the two Hebrew psalms. Where the Hebrew is preserved it shows a fuller and longer text. Verses 5 and 6 of *Psalms A* are not represented in the Greek and Syriac versions. These verses say that the mountains and hills do not bear witness to God, and some scholars think that they were omitted intentionally. Other scholars, however, interpret these verses as questions (“do not the mountains bear witness to me?”) and so render them theologically unobjectionable.

Letter of Jeremiah. A polemic against idols, the *Letter of Jeremiah* is sometimes found after *Lamentations* in the Greek manuscripts and sometimes after *Baruch*. From the time of Jerome, the *Letter of Jeremiah* has been consistently appended to *Baruch* as chapter 6. Most scholars think that the *Letter of Jeremiah* was composed in He-

brew, but the fragment found at Qumran (7Q2) is in Greek. The manuscript dates from about 100 BCE. It contains only verses 43 and 44.

Omissions. The majority of the writings that came to constitute the Apocrypha have not been found at Qumran. In some cases, their absence is not surprising. The Qumran settlement was destroyed before *2 Esdras* and *4 Maccabees* were written. The *Wisdom of Solomon* and *3 Maccabees* were most probably composed in Alexandria close to the middle of the first century CE, too late to have found their way to Qumran. In some cases, the absence of specific books may be due to ideological considerations. The *First Book of Maccabees* was almost certainly composed in Hebrew, before the end of the second century BCE. And although it certainly was current in Israel at the time when many of the Dead Sea Scrolls were being written, no trace of it is found among them. The absence of *2 Maccabees* is less remarkable since it was abridged from the history of Jason of Cyrene in the Diaspora. The lack of any literature about the Maccabees is surely significant as regards the ideology of the people who hid the scrolls and shows that they were not supporters of the Hasmoneans in general. The *Book of Judith*, which celebrates the defeat of a foreign invader, also may be regarded as pro-Maccabean and is missing from the scrolls, although it too was probably written no later than the first century BCE.

In other cases, however, the absence of apocryphal writings can be explained by neither unavailability nor ideological reasons. The additions to *Daniel* (the *Prayer of Azariah* and the *Song of the Three Young Men*, *Susana*, and *Bel and the Dragon*) are similar in genre to stories and prayers that are found in the Dead Sea Scrolls. The *Prayer of Azariah* is thought to date from Maccabean times. *Bel and the Dragon* contradicts the canonical *Book of Daniel* by making Daniel a priest, and so is likely to have been composed before the biblical book had become established as authoritative. Yet none of these writings has been found in the caves. (Józef Milik tentatively identified 4Q551 as a fragment of *Susana*, but the identification is not persuasive.) Similarly, the Old Greek of *Daniel* 4–6 is very different from the text of the Hebrew scriptures and is widely believed to be based on a different Semitic text. Yet no trace of such a textual tradition has been found at Qumran. In these cases, we can only conclude that the writings in question were not known or transmitted universally. Furthermore, there is no evidence that *Ben Sira* and *Tobit* had the status of sacred scripture at Qumran. The apocryphal psalms in the Psalms Scroll are not differentiated from the psalms that have been traditionally recognized as canonical. Some scholars have argued that this was a liturgical collection, but the lack of differentia-

tion is still significant. There is no example of a *peshet* or formal interpretation of an apocryphal psalm, but then we have such interpretations for only a few of the canonical psalms. The status of the apocryphal psalms at Qumran remains uncertain.

Pseudepigrapha. Among the pseudepigrapha, the books of *Enoch* and *Jubilees* are most prominent at Qumran. The *Apocalypse of Enoch*, *1 Enoch*, is fully preserved only in Ethiopic, with some fragments in Greek. It is a composite book containing five major works: the "Book of Watchers" (chapters 1–36); the "Similitudes" (37–71); the "Astronomical Book" (72–82); the "Book of Dreams," including the "Animal Apocalypse" (83–90); and the "Epistle," including the "Apocalypse of Weeks" (91–105). Appended at the end are a brief "Book of Noah" (106–107; see below) and a discourse on the last judgment, addressed to Methuselah (108). Aramaic fragments of all sections except the "Similitudes" and the concluding discourse have been found at Qumran. The "Astronomical Book" was copied separately, and is found in four copies (4Q208–211). Seven manuscripts contain fragments of the other sections.

Enoch. *Enoch*^a and *Enoch*^b (4Q201 and 202) contain only fragments of the "Book of Watchers." *Enoch*^d and *Enoch*^e (4Q205 and 206) combine fragments of the "Book of Watchers" and the "Book of Dreams." *Enoch*^c (4Q204) contains fragments of the "Book of Watchers," the "Book of Dreams," the end of the "Epistle," and the "Book of Noah" (104–107). *Enoch*ⁱ (4Q207) contains a fragment of the "Book of Dreams"; and *Enoch*^k (4Q212) contains fragments of the "Epistle." Moreover, there are allusions to the *Enoch* literature in sectarian compositions (for example, the Damascus Document [CD ii.18] refers to the story of the "Watchers." The motif of planting in *1 Enoch* 93.10 is echoed in the Damascus Document i.7 and other passages).

Jubilees. This work is even more prominent in the scrolls than the *Enoch* literature. The book is fully preserved in Ethiopic, but fragments of the Hebrew original have now been found in fourteen (possibly fifteen) manuscripts from Qumran: two from Cave 1, 1Q17 and 18; two from Cave 2, 2Q19 and 20; one from Cave 3, 3Q5; eight or possibly nine from Cave 4, 4Q176a and 4Q216–224; and one from Cave 11, 11Q12. There are also three fragments that have been dubbed Pseudo-Jubilees (4Q225, 226, and 227). All three mention Moses and have parallels to material dealt with in *Jubilees* but do not correspond to the Ethiopic text of *Jubilees*. There appears to be an explicit reference to *Jubilees* in the Damascus Document, CD xvi.3–4, where it is called "the book of the divisions of the periods according to their jubilees and their weeks." Another fragment, 4Q228, may also refer to *Jubilees* as an

authority or source of information. The sheer number of manuscripts is significant. Only *Genesis*, *Exodus*, *Deuteronomy*, *Isaiah*, and *Psalms* are represented by more manuscripts than the pseudepigrapha of *Enoch* and *Jubilees*. It is very likely that they were regarded as authoritative scripture at Qumran. Both these books became canonical in the church of Ethiopia; *1 Enoch* may have been more widely regarded as canonical (cf. *Jude* 14–15, Epistle of Barnabas 16.5).

Testaments of the Twelve Patriarchs. Materials have also been found at Qumran that relate to the *Testaments of the Twelve Patriarchs*. In this case, the relationship of the Qumran fragments to the Greek pseudepigraphon is much more complex, in part because there is no consensus on the provenance of the Greek Testaments. The presence of Christian elements is undeniable, but there has been a long-standing debate as to whether the *Testaments of the Twelve Patriarchs* is a Christian composition (M. de Jonge) or a Jewish work that was later interpolated by Christians (Charles). The fragments found at Qumran do not preserve the distinctive elements of the literary form of testaments and should probably be regarded as source documents for the Greek Testaments rather than as fragments of Testaments themselves.

The most important fragments relate to the *Testament of Levi*. The Aramaic fragments, 1Q21, 4Q213, and 4Q214, are part of a *Levi* apocryphon that coincides partially with material in the Greek Testaments and partially with Aramaic fragments found in the Cairo Genizah, which themselves partially overlap with the Greek Testaments. The Aramaic fragments from Qumran and the Cairo Genizah also overlap with additional material found in a Greek manuscript of the Testaments from Mount Athos but not in most manuscripts of the Testaments. From these fragments it is possible to reconstruct an Aramaic *Levi* apocryphon that corresponds in large part to chapters 2–15 of the *Testament of Levi*, with some additional material, notably the "Prayer of Levi," which is also found in Greek in the Mount Athos manuscript. Milik and Puech have argued that other fragments (4Q540, 541, 548) correspond to passages in the *Testament of Levi* 17–19. While these fragments bear some similarity to the Testament, however, the similarity is not enough to warrant identification.

Milik has also tentatively identified fragments of the *Testaments of Judah* (3Q7, 4Q484, 4Q538) and *Joseph* (4Q539), but in these cases the identifications are very doubtful. A Hebrew fragment (4Q215) parallels a passage in the *Testament of Naphtali* but again may be a source on which the author of the Greek Testaments drew rather than part of a Hebrew testament. A much later, medieval Hebrew *Testament of Naphtali* is known, but it is not clear

whether there is any relationship between that work and the Qumran fragment (Milik, 1978, p. 97).

Book of Giants and Book of Noah. Two other pseud-epigrapha, previously known but not usually listed among the Jewish pseudepigrapha of the intertestamental period, are also attested at Qumran. These are the *Book of Giants* and the "Book of Noah." Milik claimed to have identified "ten, if not some twelve," copies of the *Book of Giants*, which was previously known as a Manichaean work of the third century CE (Milik, 1976, p. 4; cf. 2Q26, 4Q203, 4Q530-533, 6Q8). One of these manuscripts was copied by the same scribe as Enoch^a (4Q201), and Milik has argued that it was originally part of an Enochic pentateuch and that it followed the "Book of Watchers." We do not, however, have any fragments that actually show that the *Book of Giants* was copied in the same manuscript as any of the Enochic writings.

The "Book of Noah" was known only indirectly before the discovery of the scrolls. There is mention of such a book in *Jubilees* (10.13, 21.10), in the Mount Athos manuscript that contains the apocryphal Levi material and in the *Chronography of Syncellus*. Fragments have been identified in *1 Enoch*, notably in chapters 106 and 107, but there is no agreement as to how much material in *1 Enoch* can be ascribed to this book. In the scrolls, too, fragments of the "Book of Noah" can only be identified tentatively because of their content; no composition clearly identified as a book of Noah has been found. The most likely candidate is the text known as the Elect of God (4Q534). Initially thought to chart the horoscope of the Messiah, it more plausibly has been explained as referring to the birth of Noah. It is also possible that the section of the Genesis Apocryphon dealing with Noah is a summary of the lost "Book of Noah" (García Martínez, 1992, p. 40). Fragments of the book may also be found in 1Q19 and 6Q8, although Milik regards the latter as a copy of the *Book of Giants*.

Other Compositions. The scrolls include several other apocryphal and pseudepigraphic compositions, previously unknown, but not obviously or necessarily of sectarian origin. These include patriarchal testaments with apocalyptic elements, written in Aramaic, ascribed to Jacob (4Q537), Amram (4Q543-548), and Qahat (4Q542). 4Q541, which we have mentioned already in connection with the Levi Apocryphon, also belongs to a priestly apocryphal text, but the beginning and end are missing and the exact identification is uncertain. Also in Aramaic are several compositions related to the *Book of Daniel*: the Prayer of Nahonidus (4Q242), the pseudo-Daniel texts (4Q243-245), the so-called Aramaic Apocalypse or Son of God text (4Q246), and the Four Kingdoms text (4Q552-553). The so-called Proto-Esther text (4Q550) resembles several of these Danielic writings insofar as it has a court

setting. The Aramaic Genesis Apocryphon (1Q20) is a re-writing of narrative material from *Genesis* that is partly related to the "Book of Noah." Another Aramaic text purports to give the words that Michael spoke before the angels of God (4Q529).

Apocryphal and pseudepigraphal writings in Hebrew include prophetic-apocalyptic texts that are apparently in the names of Moses (1Q22; 4Q385^a, 387^a, 388^a, 389, 390) and Ezekiel (4Q385, 386, 387, 388, 391) and a narrative work related to Jeremiah (4Q383, 384, 385^b, 387^b, 389^a). Another Hebrew apocryphon (2Q22) appears to describe the battle between David and Goliath. The Apocryphon of Joshua (4Q378-379) is cited in the Testimonia (4Q175). The so-called messianic apocalypse in 4Q521 resembles the apocalyptic pseudepigrapha in its content, but it is not possible to say on the basis of the surviving fragments whether it was attributed to an ancient author. Noncanonical Psalms A and B (1Q380 and 381) contain psalms attributed to specific biblical characters, including Obediah and Manasseh (Schuller, 1986, pp. 27-32, argues that the pseudepigraphic attributions were secondary). The psalm attributed to Manasseh at Qumran does not appear to bear any relationship to the Greek *Prayer of Manasseh*, which is sometimes included in the Apocrypha.

Omissions. It is not possible here to survey all the fragmentary literature that may be derived from apocryphal or pseudepigraphal compositions. The examples cited show a considerable literature of this sort that was unknown before the discovery of the Dead Sea Scrolls. At the same time, only a fraction of the pseudepigrapha that were transmitted in Greek and other languages has been found at Qumran. The standard edition of the pseudepigrapha of the Hebrew scriptures (Charlesworth, 1985) includes more than fifty works. Of these, only *Jubilees*, the various sections of *1 Enoch*, and the apocryphal parallels to the *Testaments of the Twelve Patriarchs* are found at Qumran. (Charlesworth also includes the apocryphal psalms from the Cave 11 Psalms Scroll). The great majority of the works included by Charlesworth were composed too late to be found at Qumran. The absence of Greek compositions such as the *Sibylline Oracles* is also unsurprising. There are, however, a few works that generally are believed to have circulated in Palestine, in Hebrew or Aramaic, before 70 CE, that have not been found at Qumran. These are the *Psalms of Solomon*, the *Testament of Moses*, and the "Similitudes" of *1 Enoch*. The *Psalms of Solomon* are often thought to be Pharisaic, and no Pharisaic literature has been found in the scrolls. The absence of the "Similitudes" could be due to a late composition date. It has also been suggested that the near equality of sun and moon in *1 Enoch* 41 might have been unacceptable at Qumran. No plausible reason has been

found for the absence of the *Testament of Moses*, which dates from the turn of the era. None of the previously known Apocrypha and pseudepigrapha found at Qumran can be dated later than the second century BCE.

JOHN J. COLLINS

APOCRYPHAL NEW TESTAMENT. The title *Apocryphal New Testament* is commonly applied to collections of early Christian writings that were not included in the canon of authorized scripture. In general, the term covers literature composed in imitation of the genres of writing found in the New Testament proper, such as the Gospels and *Acts of the Apostles* or stories concerned with characters who appear in the New Testament. [See John, Gospel and Letters of; and Luke, Gospel of.] Modern scholars normally exclude other early Christian writings, like the so-called Apostolic Fathers and the bulk of Gnostic texts from such collections. [See Apostolic Fathers.]

This umbrella title, *Apocryphal New Testament*, though convenient and widely understood, is less than ideal. First, many of the so-called apocryphal texts do not in fact match New Testament genres. [See Apocrypha and Pseudepigrapha.] Second, few of the writings are apocryphal in the literal meaning of "hidden." Third, and most important, the title gives the erroneous impression that we are dealing with a recognizable fixed body of literature, comparable to the New Testament or parallel to the Apocrypha. Modern editors, who gather collections of writings under a general title, such as the *Apocryphal New Testament*, are all too aware that they are making a selection from an amorphous and vast range of texts. Even the most comprehensive collections that have been published (such as Erbetta's or Moraldi's) do not claim to be exhaustive.

The Apocryphal New Testament comprises writings that range in age from the second (and some would argue first) century CE to the Middle Ages. Some texts are richly represented in numerous extant manuscripts. Others have survived in a single fragment or in lone patristic citations. The provenance and original language of the writings range from the Latin West through the Greek of the Mediterranean areas to the Syriac East and to the Coptic and Ethiopic writings of Africa. In addition, Arme-

nian and Arabic texts are included. Given the fact that several texts are known today from manuscripts written in different centuries, it is clear that we are dealing with a popular form of religious literature that endured for many hundreds of years.

Although the common denominator of these apocryphal writings may be loosely described as the events and personalities of the New Testament world, the contents cover a variety of genres and topics, such as birth and infancy stories (of Mary and of Jesus), passion gospels, narratives about various New Testament characters (especially Pontius Pilate), collections of sayings (such as the *Gospel of Thomas*), narratives about the founding fathers of early Christian communities (the Acts of Peter, the Acts of Andrew, for example), scenes of the other world, and dialogues between the risen Jesus and his disciples. There are treatises, novels, hymns, poems, letters, and apocalypses. Some of the contents seem to be tinged with what were claimed to be heresies by the wider church, including Gnosticism or Encratism [See Gnosticism.]; others fit comfortably with "orthodox" Christian teaching. Many texts, especially the apocryphal Acts, are characteristic of popular folk religion, full of entertaining, albeit highly magical or superstitious, miracles and improbable legends.

Various ecclesiastical authorities, particularly in the fourth century, set out in their lists of approved texts those books that by then were recognized throughout Christendom as the foundation documents of the Christian faith, that is, the canonical New Testament. Those books not on a list of authorized reading were branded as apocryphal. It is surprising that these rejected books ever survived official opprobrium. In some cases, especially the apocryphal Acts, expurgated Catholicized versions of the stories were produced; these usually enhanced the deaths, typically martyrdoms, of the apostles, and eventually these rewritings became the accepted hagiographies of the Church's heroes. Nevertheless, a sufficient number of the original texts have survived in clandestine copies (now locked in libraries) for modern scholars to be able to reconstruct, albeit often only partially, many of the second- and third-century Acts, Gospels, and other texts.

It is obvious that we are dealing here with a range of literature a world away from the Dead Sea Scrolls. The contrast between the Apocryphal New Testament and the scrolls could not on the face of it be wider. The latter represent the literary remains of an exclusive Jewish sect, probably largely removed from the mainstream of society; most of its extant literature was composed in pre-Christian times. [See Essenes.] The origins and inspiration of the Apocryphal New Testament texts are Christian (however deviant on occasion); much of the literature

seems to have been written for an educated readership whose background was pagan and secular; and the outlook in most of the texts is universal—inclusive and all-embracing. Unlike the Dead Sea Scrolls, where little historical interest in the founders of the sect is expressed, the apocryphal New Testament writings owe their *raison d'être* to the inquisitiveness, and imagination, of Christian communities about the founders of their faith and church. Another obvious difference is that many of the concerns of the Qumran sectarians, such as community rules, hardly surface in the New Testament—and even less so in the Apocryphal New Testament.

Certain structural features found in the Dead Sea Scrolls, such as the insertion of hymns, prayers, and poetic passages, are also to be found in some of the apocryphal texts, but these are common features of religious writing in general and the Hebrew scriptures in particular. [See Psalms, Hymns, and Prayers.] There is no obvious reason to look to the scrolls for such influences on Christian writers.

Nevertheless, some links and parallels may be observed. Certain Apocryphal New Testament texts betray the exclusivity and insight characteristic of the Qumran sectarians (e.g., *Gospel of Thomas* 23: "Jesus said, 'I shall choose you, one from a thousand, and two from ten thousand, and they shall stand as a single one'"; or *Gospel of Thomas* 67: "Jesus said, 'He who knows the All but fails to know himself lacks everything.'" Such ideas may be compared with Hodayot^a [1QH^a]). [See Hodayot.] In these hymns a constant theme is that salvation is assured for those with knowledge; the sectary gives thanks for the insight into the divine mysteries. But it is improbable that one should detect any direct literary or social influence of the Dead Sea Scrolls on the Apocryphal New Testament. A more rewarding search would seek these common links in Gnosticism.

If the Qumran sectarians believed that they, as privileged initiates, were living in the end time, awaiting the fulfillment of the Kingdom, they shared aspirations comparable to those of Christians as expressed both in the New Testament and in the apocryphal texts, such as the *Apocalypse of Paul*, of *Peter*, or of *Thomas*. Although the apocalyptic literary genre is rare in the Qumran writings, the fact that *Enoch*, parts of the *Testaments of the Twelve Patriarchs*, and *Jubilees* were discovered there shows that the sectarians found such literature congenial. Eschatological texts also are found at Qumran. Again, we may conclude that this interest in apocalyptic matters at Qumran and among early Christians is due to their shared background.

Teaching about the sovereign power of God and the need for humanity to rely and depend exclusively on that power is fundamental to the Dead Sea Scrolls. This is a

unifying and dominant theme throughout the otherwise amorphous Apocryphal New Testament, too, and is a theme arguably more consistently stressed than in the New Testament itself. But such faith and fervor inevitably characterize much religious literature, and it is a more rewarding exercise to study how those beliefs are expressed in differing literary vehicles within various traditions than to seek parallels for the Christian apocrypha exclusively within the Qumran literature. In our examples the links may be traced to a shared, Jewish, or, more specifically, Hebrew biblical heritage. Jewish, and particularly sectarian Jewish, influence on the writings in the Apocryphal New Testament would have reached Christians predominantly through the books that eventually were accepted into the New Testament proper.

There are, nevertheless, some areas where it might be legitimate to look for a specific influence of the scrolls on extracanonical Christian literature, however secondhand and filtered that influence may have been.

Jewish-Christian Gospels. Although manuscripts of Gospels, such as the *Gospel of the Ebionites*, the *Gospel of the Nazareans*, and the *Gospel according to the Hebrews*, have not survived from the Jewish Christian groups allegedly responsible for them, certain citations in the works of the church fathers are attributed to these sources. Even though only a few samples survive, one detects that a feature of this Jewish Christianity was an asceticism comparable to that found in the Qumran community. [See Jewish Christians.] Vegetarianism is described in the *Gospel of the Ebionites*, as known from Epiphanius (*Refutation of All Heresies* 30.13), where it speaks of John the Baptist's food as being not locusts and wild honey but only "wild honey, which tasted like manna, formed like cakes of oil" (cf. *Refutation of All Heresies* 30.22). [See Epiphanius.]

The asceticism apparent in the *Gospel of the Ebionites* surfaces elsewhere in the Apocryphal New Testament, especially in the *Acts*. A common theme in the *Acts* is that of the apostle who endures great deprivation, hardship, and poverty, and whose life is contrasted with the wealth and position enjoyed by his main, usually pagan, protagonists. The message of the apostle is that money, beauty, possessions, and power are transient. Marriage is railed against (e.g., in the *Acts of John* 113), and sexual relations even within marriage are to be avoided, according to the apostles' teaching. *Acts of Thomas* 12 presents negative and uncompromising teaching about procreation. It is no wonder that Encratite groups found such texts congenial. A common chord between such material and the monasticism in the Qumran community may be detected, but, once more, there is no evidence that the Qumran material directly influenced authors of the Apocryphal New Testament. [See Ebionites; Encratites.]

Insofar as attempts have been made from time to time to identify the Qumran sectaries with the Ebionites, it is worth noting that, despite some superficial similarities of practice between the two movements (e.g., purificatory baths, Sabbath observance, circumcision, and a shared communal meal), from what we know about the Ebionites in the writings of Irenaeus, Tertullian, Epiphanius, and other church fathers, as well as in the Pseudo-Clementine literature, it seems that the Ebionites, unlike the Qumran community, did not accept the whole of the Pentateuch and rejected prophets of the Hebrew scriptures, the practices of sacrifice, and the institution of priesthood. [See Ebionites.] In these matters and in their teachings about dualism, the Ebionites differed so fundamentally from the Qumran sectarians that it is illusory to look in the *Gospel of the Ebionites* for direct evidence of influence from the Dead Sea Scrolls. In any discussion of the identification of the Qumran sect with the Ebionites, it must be remembered that the Ebionite movement was Christian and post-Qumran.

Messianism. The Apocryphal New Testament obviously does not share the teaching of the Dead Sea Scrolls about the expected Messiahs. [See Messiahs.] However, the quasi-magical powers attributed to Jesus and to those who confess their faith in him through these Christian texts are similar to those described in the Messianic Apocalypse (4Q521), in which healing and resurrection are linked with the coming of the kingdom of God ("He will heal the wounded and revive the dead. . ."). The effectiveness of healing miracles became an incessant theme in many apocryphal tales; in the apocryphal *Acts*, in particular, miracles characterize and in effect justify apostolic activity. But, again, we might more profitably seek the shared background for ideas found in the Messianic Apocalypse, the New Testament, and the Apocryphal New Testament in the Hebrew scriptures, especially in *Isaiah* 61 or *Psalm* 146.

Apocalypse of Peter 4.7-9 (Ethiopic) and Apocryphon of Ezekiel. A plausible attempt has been made by Richard Bauckham to link the citation in the *Apocalypse of Peter* 4.7-9 (Ethiopic), the only formal scripture citation in the apocryphon, with Pseudo-Ezekiel^a (4Q385). [See Ezekiel, Book of, *article on* Pseudo-Ezekiel.] The quotation in the *Apocalypse of Peter*, based on *Ezekiel* 37.7-8, parallels the wording in Pseudo-Ezekiel^a in several ways, most convincingly in "bone to its bone" and the reference to "joints," which mark significant variants from the canonical *Ezekiel*. If the Qumran fragments of Pseudo-Ezekiel (4Q385, 386, 387, 388, and, perhaps, 391) belong to the so-called *Apocryphon of Ezekiel*, of which there exist five fragments (none paralleling the Qumran passages) in patristic citations and in Chester Beatty Papyrus 185, then the source of the quotation in the Apoca-

lypse of Peter may well be from an apocryphon that circulated more widely than Qumran. Such a conclusion would therefore make a direct link from a Qumran text to a Christian apocalypse less likely. (An alternative, but less probable, explanation would be that the *Apocalypse of Peter* was quoting from a form of canonical *Ezekiel* differing from the Masoretic Text, on which Pseudo-Ezekiel also depends.) That the *Apocryphon of Ezekiel* was known in Christian circles from an early date may be confirmed by the apparent citation from it (frg. 2) in *Epistle of Barnabas* 12.1, which is attributed to "another prophet." The *Apocryphon of Ezekiel* was Jewish, but its themes of repentance, resurrection, and judgment made it a popular text for Christians. Tertullian (*De carne Christi* 23.2) also seems to have known the *Apocryphon of Ezekiel*, as does Justin (*Dialogue with Trypho* (1 *Apologies* 52.5–6) and Tertullian (*De resurrectione mortuorum* 32.1), whose quotations of *Ezekiel* 37.7–8 seem to know a form of wording that agrees with Pseudo-Ezekiel^a.

Hymn of the Bride. Yiphtah Zur (1993–1994, pp. 103–107) has raised the possibility of links between the "Hymn of the Bride," inserted into *Acts of Thomas* 6–7, and Wiles of the Wicked Woman (4Q184). [See Wiles of the Wicked Woman.] These include the length, structure, and meter of the poems, and textual parallels. The Qumran text in effect lampoons the panegyric in the *Acts of Thomas*, a not unfamiliar form of satire. If the suggestion is correct, the Hymn of the Bride must have had an earlier Jewish (Hebrew) prototype. This is not impossible, given the practice of Apocryphal New Testament texts (especially the *Acts*) to import hymnic material into a narrative. Such a link does not, of course, betray any direct influence of a Qumran text on the author of the apocryphal *Acts*, merely that a hypothetical prototype of the Hymn of the Bride permeated sectarian Judaism and, later, Christian congregations.

Apostolic Fathers. If we stray outside the Apocryphal New Testament, as commonly understood nowadays, and turn to the Apostolic Fathers, in particular the *Epistle of Barnabas* and the *Didache*, we find that the Doctrine of the Two Ways (the Way of Darkness/Death; the Way of Life/Light) in these two books reflects a common Jewish source, which has interesting links with the Rule of the Community (1QS). Such material, however, has a long ancestry in Jewish writings, going back to *Deuteronomy* 30.15–16, *Psalms* 1, and *Jeremiah* 21.8. [See Apostolic Fathers.] More rewarding comparisons lie outside the Doctrine of the Two Ways: *The Epistle of Barnabas* and the Qumran community share a common interest in covenant; both hold to the centrality of scripture and see scriptural truths as their own possession and referring to their own community. Both identify the understanding of scripture as knowledge and attribute to it a strong ethical

meaning (compare *Barnabas* 2.2–3, "The auxiliaries of our faith are fear and endurance, while patience and self-control fight alongside us. While these allies remain in a pure state in relation to the Lord, there rejoice with them wisdom, understanding, knowledge, and Gnosis," with the Damascus Document [CD ii.2], "God loves knowledge. Wisdom and understanding he has set before him, and prudence and knowledge serve him. Patience and much forgiveness are with him toward those who turn from transgression").

Other links between teachings found in the Dead Sea Scrolls and in the Apostolic Fathers may be noted, but, as with the Apocryphal New Testament, there are no unambiguous or definitive parallels that demand the direct literary or other influence of the Dead Sea Scrolls on early Christian noncanonical writings. A shared cultural and religious heritage and a common background of ideas are responsible for those links that have been identified.

J. K. ELLIOTT

APOCRYPHON OF _____. See under latter part of name.

APOSTOLIC CONSTITUTIONS. Near the end of the fourth century CE an anonymous author, perhaps living in Syria (not ancient Palestine), collected into one work diverse laws and hymns. Despite John Chrysostom's support of its apostolic authenticity, it was rejected as spurious by the Council of Trullo in 692. It is certainly pseudepigraphical (see, for example, the claim that James the son of Zebedee is the composer of a constitution [8.2.12]). The collection is thus erroneously labeled the *Apostolic Constitutions*, because of its pseudonymous title, "Constitutions of the Holy Apostles." Divided into

eight books, and preserved in its full form only in Greek, Latin, and Coptic, it is a late-fourth-century church manual of ecclesiastical rules and liturgical compositions.

As a collection of rules that to a certain extent concludes with liturgical texts, it is reminiscent of the Rule of the Community from Qumran. Like the compiler of the Qumran book, the author of the *Apostolic Constitutions* compiled a manual of instruction including rules and liturgical compositions. And like the texts composed at Qumran, especially the Rule of the Community and the *pesharim*, the *Apostolic Constitutions* depends upon the Hebrew scriptures, interprets them legalistically, and considers them holy and perfect (6.4.19); but—of course—the *Apostolic Constitutions* is a Christian composition and so depends upon and interprets with equal rigor the books of the New Testament (except *Revelation*). Like the Wiles of the Wicked Woman from Qumran (4Q184), sections of the compilation exhort devotion to Lady Wisdom and warn about the wicked woman who will seduce and mislead (1.2.7), and like the author of the Temple Scroll^a (11Q19), the compiler of the *Apostolic Constitutions* values the priesthood over kingship (2.5.34). [See Temple Scroll; Wiles of the Wicked Woman.] But unlike the Qumran theology, the compiler (or author of a section) warns against writings that others deem sacred (1.2.5–6) and exhorts his readers not to observe ritual lustrations (6.4, preface). In Book 2 (2.3.22) the compiler excerpts from the *Prayer of Manasseh*, one of the books in the Old Testament Pseudepigrapha, but it is not related to the “Prayer of Manasseh” found in Non-canonical Psalms B (4Q381 33 + 35.8–11). The compiler of the *Apostolic Constitutions* knows the Essenes (who are most likely to be identified with the members of the Qumran community) as those who are separated from others and observe different laws (6.2.6). As these observations, which pertain to Books 1 through 6, show, there is no reason to imagine, let alone posit, any direct influence of the Qumran scrolls upon the *Apostolic Constitutions*. While influence is possible even with authors of vastly different perspectives, it is essential, in assessing possible links between this Christian compilation and the Qumran scrolls and related Jewish compositions, to recognize that the compiler of the *Apostolic Constitutions* thought the Jews had crucified Christ (5.3.17) and were now rejected by God (6.2.5).

Most important for a perception of its relation to the Dead Sea Scrolls are the final two books, numbers seven and eight. Book 7 presupposes the concept of “Two Ways,” which was first definitively developed into a light–darkness paradigm in Jewish theology only in the Rule of the Community (1QS iii.13–iv.26). The source of the compiler’s thought is *Deuteronomy*, which he explicitly quotes; and it is based on *Deuteronomy* 30.15 that he em-

phasizes the two ways: the way of life and the way of death. This dualism is appreciably different from and in no way clearly influenced by the ideas peculiar to and developed in the Qumran scrolls. Conspicuously absent in the *Apostolic Constitutions* are the terms found in the Qumran scrolls, such as *Sons of Light* and *Sons of Darkness*, and the light–darkness dualism. Any link between the way of life and good works (7.1.12) or the way of death and wicked deeds (7.1.18) of the *Apostolic Constitutions* and similar lists found in the Rule of the Community (1QS iii.13–iv.26) is not because of direct Qumran influence; the similarity is caused because of the subject matter and the dependence of both works on the books of the Hebrew scriptures.

Books 7 and 8 clearly are an epitome or selection of some early Jewish compositions. For example, they contain the Qedushah. Book 8, in section 3, 18–41, may also preserve Jewish hymns which may derive from an otherwise unknown Jewish collection or hymn book (Kohler, 1924; Charlesworth, 1986; Fiensy, 1985). These hymns are Jewish but they are not clearly influenced by Qumran compositions or Qumran theology; none of the Qumran technical terms and no ideas peculiar to Qumran appear in them. If the Qumran scrolls are any indication of Essene thought, as most Qumran experts have concluded, then there are abundant reasons to disagree with K. Kohler, who asserted that the Jewish hymns excerpted in Book 7.33–38 derive from a pre-Christian Essene group.

[See also Rule of the Community.]

BIBLIOGRAPHY

- Charlesworth, James Hamilton. “Jewish Hymns, Odes, and Prayers (ca. 167 BCE–135 BCE).” In *Early Judaism and its Modern Interpreters*, edited by Robert A. Kraft and George W. E. Nickelsburg, pp. 411–436. Philadelphia, 1986.
- Donaldson, James, ed. “Constitutions of the Holy Apostles.” In *The Ante-Nicene Fathers*, vol. 7, pp. 387–508. New York, 1926. Grand Rapids, Mich., 1951, 1970. Contains W. Whiston’s translation from the Greek with significant alterations, of the *Apostolic Constitutions*.
- Fiensy, David. *Prayers Alleged to be Jewish: An Examination of the Constitutions Apostolorum*. Brown Judaic Studies, 65. Chico, Calif., 1985. In the definitive treatment of the Jewish prayers excerpted in the *Apostolic Constitutions* Fiensy concludes that the Jewish prayers in this collection were redacted by a Christian, that their form postdates the first century, and that generally they are an example of Syrian synagogal Sabbath morning services that are theologically similar to rabbinic thought.
- Kohler, Kaufmann. “The Origin and Composition of the Eighteen Benedictions with a Translation of the Corresponding Essene Prayers in the *Apostolic Constitutions*.” *Hebrew Union College Annual* 1 (1924), 387–425. Kohler argues, unpersuasively (pp. 410–425), that the *Apostolic Constitutions* preserves a collection of prayers from an Essene synagogue; yet, he demonstrates that this Christian collection preserved the first six of the seven benedictions of the Amidah that were recited on the Sabbath in some synagogues.

JAMES H. CHARLESWORTH

APOSTOLIC FATHERS. The collection known as the *Apostolic Fathers* consists of several Christian works written from the late first through the late second century. A letter written by the leaders of the Roman community to Corinth, *1 Clement* probably dates from the last decade of the first century or first decade of the second. It attempts to mediate a dispute within the Corinthian community in which some elders had been deposed from office. The *Letters of Ignatius* were written by the bishop of Antioch while he was being transported to Rome for execution under the emperor Trajan (98–117). They address churches along the way to Rome, as well as the Roman community itself, encouraging unity under episcopal leadership, and resistance to “Judaizing” and to docetism, or the denial of the full humanity of Jesus. The *Didache* is a book of church order probably composed in Syria in the late first or early second century. [See *Didache*.] It contains admonitions to follow the “way of life,” instructions for celebrating baptism and eucharist, and guidance on fasting and support of itinerant and residential leaders. *Barnabas* is a polemical treatise probably composed around the time of the Bar Kokhba Revolt (132–135 CE), interpreting scripture in order to support Christian claims and inculcating a life of ethical perfection. The *Shepherd of Hermas* is a lengthy apocalypse written in Rome, probably in the second quarter of the second century. In the form of symbolic visions, it offers guidance for the Roman community on various ethical and doctrinal issues. The fragments of Papias preserve tidbits of tradition collected by an important elder of the church in Asia Minor in the early second century. The *Letter of Polycarp* contains admonitions to fidelity to the church at Philippi from the bishop of Smyrna, martyred in 155, an event recorded in the *Martyrdom of Polycarp*. The letter also accompanied copies of letters of Ignatius that Polycarp sent to the Philippians. The work *2 Clement* is a homiletic letter of uncertain date inculcating a high Christology, a virtuous life, and belief in resurrection. The *Epistle to Diognetus* is an apologetic work probably dating from the late second century. Most of the disparate collection thus consists of Christian works concerned with ecclesiastical issues of the second century.

The *Didache* offers the most interesting parallels to material from the scrolls in its teaching of the Two Ways theology (*Didache* 1.1–6.2), although a direct connection to the scrolls is unlikely. Instead, both Rule of the Community (1QS) and the *Didache* draw on a widespread form of ethical instruction. Instructions on baptism (*Didache* 7.1–4) and eucharist (9–10) show acquaintance with some Jewish forms, but also divergence from the fragmentary prayer text Baptismal Liturgy (4Q414) and from Grace after Meals (4Q434a), a blessing over food. No specific connection to the scrolls is likely.

Barnabas 18.1–20.2 contains another version of the

Two Ways schema, close to but not derived from the *Didache*. The extensive scriptural citations in *Barnabas* use texts that may derive, at least in part, from collections of “testimonies” or proofs for messianic claims. Two such collections are found in the scrolls, Florilegium (4Q174) and Testimonia (4Q175). Related is Catena^a (4Q177), a commentary on Psalms 6–17, which draws upon other scriptural texts as well. The parallels are largely formal, although often with eschatological thrust, and for *Barnabas* the materials are oriented to his “Christian” interests. Parallels in detail, for example, Pseudo-Ezekiel^a (4Q385) to *Barnabas*, are infrequent, although both Pseudo-Ezekiel^a 2.9–10 and *Barnabas* 12.1 contain the same image of a tree bending over and straightening up in answer to the question of when certain events will occur. While there may be borrowing here on the part of *Barnabas*, it may be the case that the two works share a common exegetical tradition (cf. also *Barn.* 4.3 and 4Q385 3). The scrolls have probably not provided the sources of *Barnabas* but offer analogies from a community that took seriously the need to interpret scripture.

The concern in *Hermas* for the welfare of the poor recalls the desire of the Teacher of Righteousness to proclaim to the poor in Hodavot^a (1QH^a xviii.14), who are the object of God’s special care (1QH^a ii.32–35). The allegory of the tree (*Herm.* 67–77 [*Similitudes* 8]) resembles the imagery of 1QH^a vi.8–28 and viii.1–12.

The *Epistle of Polycarp to the Philippians* 2.2 contains the principle “to love all that he has chosen and to hate all that he has despised,” reminiscent of the stark dichotomy of Rule of the Community (1QS i.9–10). Direct dependence, however seems unlikely.

In general, there were numerous paths for transmission of Jewish and Semitic sources to eastern and western Christian writers. These included both contact between living communities that transmitted texts and traditions about *Enoch*, the *Testaments of the Twelve Patriarchs*, *Jubilees*, the *Ascension of Isaiah*, and other materials. They also included “archeological” discoveries such as Origen’s use of Greek Bible translations found mysteriously “in jars” at Nicopolis near Actium (Eusebius, *HE* 6.16.2–3; the *Dialogue of Timothy and Aquila* 3.10 locate the discovery in Palestine). [See Origen.] Hence, it remains possible that material from the Dead Sea Scrolls could have been used by Christian authors. Yet hypotheses that some of the works among the Apostolic Fathers were written by converts from Qumran are unconvincing. Nothing sufficiently concrete is known about these authors or their sources to provide external evidence for any connections with the Dead Sea Scrolls, and the internal evidence is too ambiguous to make a strong case for direct or even for significant indirect dependence. Themes common to *Barnabas*, the *Didache*, and *Hermas*, especially associated with the Two Ways instruction, have

echoes in the Dead Sea Scrolls, but they are more likely commonplace Jewish views rather than uniquely Dead Sea Scrolls influences.

The possible use of collected "testimonies" in *Barnabas* (also to some extent in *1 Clement*, but absent from the *Didache* and *Hermas*) may have some remote connection with a practice attested in the Dead Sea Scrolls but probably not unique to them. Whether the "logia of the Lord" mentioned by Papias have any connection to this kind of collection is a matter of conjecture. The larger context is the variety of approaches to scriptural interpretation, from restatement to anthologizing to explicit commentary, in early Jewish and Christian circles. Finally, the very idea of the *Didache* as a "rule book" (and along with it, the Two Ways genre of instruction) resembles the similarly directive Dead Sea Scrolls materials such as the Rule of Community and the Damascus Document, but such regulatory literature is unlikely to be unique to the scrolls. Connections between the Dead Sea Scrolls and early Christian literature are possible, but, in the case of the Apostolic Fathers, they are generally improbable.

ARABIA (PROVINCIA ARABIA). The term *Arabia* has been variously applied in both modern and ancient times to refer to a vast territory stretching from the borders of the Fertile Crescent in northern Syria to the tip of the Arabian Peninsula, and from the borders of the Euphrates to the fertile regions near the Jordan River. Under this general rubric, all the Judean Desert sites in which manuscript discoveries have been made fall within the territory of Arabia, although at the time the texts were written the area was not known by this name. During the time of Roman domination of the area, when Roman Arabia was known as *Provincia Arabia*, the discovery sites were in territories under Roman domination.

For the ancients, this vague term, *Arabia*, referred to the dwelling places of the varieties of South Semitic speakers lumped together under the term *Arab*. For speakers of Hebrew and Aramaic, the term *Arab* ('*arabi*) carried the semantic notion of the desert or the wilderness ('*arabah*), since the Arabs they encountered were primarily the nomadic and seminomadic desert dwellers engaged in long-distance commerce, animal husbandry, or the supply of cavalry troops to imperial armies. The meager textual evidence available to us shows that in pre-Islamic times many of the northern Arabs used Aramaic and Hebrew as well as varieties of Arabic. After the rise of Islam, however, the Arabic of northwest Arabia, the region of the Hijaz, became the dominant language of the Arabs, and it, along with its cognate dialects, became the Arabic known today.

Among the important pre-Islamic pastoral nomads of the region were the Nabateans, who, by the time of the arrival of Roman imperial presence in the region, dominated the region's trade from around Damascus to the Hijaz. Settled in their heartland around Petra, the Nabateans plied their trade through the areas of Transjordan, across the Wadi 'Arabah to Gaza and al-'Arish (Rhinocoryza). There is also evidence that they used the interior route of the Wadi Sirhan to carry goods to Bostra for distribution to Damascus and beyond. Nabatean wealth and influence attracted the Romans into an unsuccessful invasion of Arabia in 26 BCE, and the Nabateans were able to resist Roman domination until 106 CE, when *Arabia Nabataea* became a Roman province. In later history, the name *Nabatean* became identified with irrigation and agriculture, because the Nabateans are credited with the development of hydraulic technology in the region. In modern Arabic, "Nabatean" (*nabati*) refers to vernacular poetry in the ancient style.

By 106 CE, the Romans dominated most of the former territories of the Nabateans and the adjacent Syrian cities of Gerasa and Philadelphia (modern Jarash and Amman in Jordan), creating a province through the formal annexation of the Nabatean kingdom under the Roman emperor Trajan. *Provincia Arabia* was bounded by the western coast of the Sinai Peninsula, the present Syrian-Lebanese border to a line south of Damascus, and the eastern coast of the Red Sea as far as Egra (Mada'in Salih in the Hijaz). Gaza prospered as a major seaport and outlet for the province's commerce. This trade continued under Roman domination, and the borders were fortified by semipermeable lines of fortifications and client states. Under the Romans, Bostra (Bozrah; now Busrâ ash-Shâm) in the north became the capital around a legionary camp. Petra remained a religious center until the penetration of Christianity into the area. The construction of a highway, the Via Traiana Nova, linking Damascus, via Bostra, Gerasa, Philadelphia, and Petra, to Aelana on the Gulf of Aqaba, set the border of Arabia (*Limes Arabicus*) along the lines of an ancient biblical route. Paved by Claudius Severus, the first governor of *Provincia Arabia*, in approximately 114 CE, the highway improved communication and established a modicum of control over the influx of pastoral nomads into settled territory. More importantly, the road insured the increase in prosperity of the cities along the route.

At the end of the third century, the Roman emperor Diocletian divided Arabia into a northern province, enlarged by the Palestinian regions of Auranitis and Trachonitis, with Bostra as the capital, and a southern province, with Petra as the capital. The southern province, united to Palestine by the emperor Constantine I the Great, became known as *Palaestina Salutaris* (or *Tertia*) when detached again in 357-358 CE. The cities of both provinces enjoyed a marked revival of prosperity in the fifth and sixth centuries but fell into decay following the Arab conquest after 632 CE.

During the period in which the Judean Desert finds were deposited in the caves, the area containing the discovery sites remained off the main conduits of trade and communication, and it is this remoteness that, for the most part, provided value to the caves as retreats from the demands of the central settled world. The practice of using the Judean Desert caves as *genizot* continued from the time of the Roman Wars through as late as the eleventh century CE. The presence of Byzantine Greek and Arabic texts (Arabic texts were found in the caves of the Wadi Murabba'at and Khirbet Mird) indicates that the local populations both knew of the presence of the caves and made use of them as depositories for important documents. This fact has had important implications in discussions about the presence of copies of the Damascus

Covenant found in the Cairo Genizah. [See Arabic; Cairo Genizah.] The texts, particularly the texts from the Byzantine and Islamic periods, indicate that the inhabitants of the region who deposited the finds were well connected not only to Palestine but also to Egypt and the larger world of the Mediterranean.

The Roman province of Arabia is mentioned in a number of Greek texts from the Bar Kokhba period: 5/6Hev 12, 14, 15-18, 20, 22, 27, and 37; XHev/Se 62, 64, and 65. The city of Maoza, from which both Babatha and Salome Komajse came, was located within this province. The texts also attest the change of the province's name to "the new province of Arabia" in 127 CE and to the census that occurred in the same year (see XHev/Se 62, 64, and 65 for the name, and XHev 62 for the census).

GORDON D. NEWBY

ARABIC. Arabic texts, mostly on papyrus but five on paper, have been discovered at two sites in the Judean desert. Over a hundred texts and fragments were discovered at Khirbet Mird (*khirbat al-mird*) and five at Wadi Murabba'at. [See Mird, Khirbet; Murabba'at, Wadi.] The majority of the texts date from the first two Islamic centuries (seventh and eighth centuries CE), but some can be dated as late as the eleventh century CE, in a context of artifacts that have been dated as late as the fourteenth century. Most of the texts are damaged, some being only scraps, but the texts yield important paleographic data even when many add little to our literary and historical knowledge. The collection from Khirbet Mird represents the largest cache of Arabic papyri found outside Egypt and demonstrates both the close connection between Egypt and Palestine in the early Islamic period and that the Judean desert area was on a literary par with Egypt.

It also demonstrates the continued use of the Judean caves as *genizot* well into Islamic times.

The five texts from Wadi Murabba'at are on paper and date from the fourth century AH/tenth century CE. One text is a receipt, one a fragment of a contract, and three are magical texts. A magical text fragment (Mur 171) has numerous magical signs, a drawing of a figure, and three lines of Greek characters. While this should not be construed as a bilingual text, the use of Greek letters indicates the conservative nature of magic and the perseverance of older cultural forms in the Islamic context. An amulet of fifty lines (Mur 173) adds to the limited corpus of early Arabic magical texts. [See *Magic and Magical Texts*.] This text, a palimpsest in which the underlying text is illegible, also exhibits transconfessional features, mentioning God, both in Arabic and in an Arabic rendering of the Tetragrammaton, Muḥammad, Satan, Solomon, and some apparently pagan names.

The corpus of texts from Khirbet Mird represents the range of written materials one would expect from an archive found within the borders of the important district of Aelia Capitolina, the borders of which were taken over by the Umayyad administration and maintained for the first four Islamic centuries. In the Bilingual Protocols (APHM 1–4), we see linguistic and conceptual interplay between Arabic and Greek in which the usual Islamic Arabic introductory formulas are transformed into a Greek calque (APHM 2: *theos monos Mamet apostolos theou*), and possibly in APHM 3 Greek letters are used to transliterate Arabic, as is the case in texts from other sites. The rendering of the name Muhammad as Mamet suggests a phonetic transformation dependent on a spoken dialect.

There are a number of letter fragments in the *jalil* ("majestic") script that was used by the Umayyad caliphs for foreign imperial correspondence and for official signatures (APHM 10–17). The Umayyad caliph Umar II allowed this very old script style to be used by provincial governors at the close of the first Islamic century. [See *Letters*.] The fragments are too incomplete to give an indication of the content of the originals. The official letters, administrative texts, and economic documents not in the monumental script (APHM 18–41) show, where the texts are complete enough, an expected range of topics: domestic violence, divorce, robbery, taxes on grain, lists of personnel, and lists of commodities. In the economic texts, Greek characters are used for calculation as is usual in this early period.

The private letters (APHM 42–70) are fragmentary and offer only slight glimpses into the lives of the individuals mentioned within them. Most of the letters seem to be written to and by Muslims, but APHM 45 and 46 are a letter from a Father Anbâ Magnille, who was probably an abbot of a monastery near Khirbet Mird, and the reply

from Habban ben Yûsuf. The letter starts with an apparently Monophysite statement, "In the name of the Father, and the Son, and the Holy Spirit in one nature." The correspondence, dating from the eighth century CE, exhibits some unusual diacritical marks on some of the letters. What little remains of the letters hints at unfulfilled promises and urgent requests, but careful matching of the fragments has failed to produce extensive texts.

There is one fairly extensive literary text in the corpus, APHM 71, which consists of a fragmentary notice of a historian's account of the names of the participants with Muḥammad at the Battle of Badr in 2 AH/624 CE. Such lists were important for social and financial reasons in the early Islamic world because proof of the participation by one's ancestors at the Battle of Badr afforded both prestige and a share in the distribution from the public dole. Such notices were often family- and clan-specific. Unscrupulous historians would sometimes extort money from families by threatening to claim that their ancestors were not at Badr, thus requiring written proof. Another literary text, APHM 72, like APHM 11, appears to be a pen trial by a scribe who wrote a portion of the first chapter of the Koran and possibly the first verse of chapter 20.

The discovery of Arabic texts in the Judean Desert caves gives us a clear indication that the caves were used regularly through the Byzantine and early Islamic periods, with some use attested until at least the eleventh century CE. Therefore, it is plausible to assume that access in early Islamic times to some of the pre-Islamic materials in the caves did indeed occur. In a letter of the Nestorian catholicos of Baghdad, Timotheus, to a priest in charge of the area of Elam named Sergius, he tells of the discovery around 805 CE of a chamber in the Judean Desert filled with ancient books. When Jews from Jerusalem investigated, they declared that the books were heretical. Some scholars have linked this ninth-century discovery in the Judean Desert caves to the copies of the Cairo Damascus Document found in the Cairo Genizah and their putative association with the origins of Karaism and the Karaite use of vocabulary and concepts parallel to what has been found among Judean Desert scrolls. While all this remains speculative, and while the discovery of ancient texts in caves stands as a distinctive literary topos, it is clear that the premodern inhabitants had as much possibility of access to the materials as have modern bedouin and scholars. [See *Cairo Genizah; Damascus Document*.]

GORDON D. NEWBY

ARAMAIC. Qumran texts and other Judean Desert texts have been recovered that are written in Aramaic, the most commonly used language in Judea in the last three centuries BCE and the first two centuries CE. This is not surprising since Aramaic had been the lingua franca of the ancient Near East for centuries prior to the conquest of Alexander the Great (334-324 BCE).

Aramaic Language. Aramaic is one of the two chief branches of the Northwest Semitic family of languages used in the ancient Near East. The other branch, Canaanite, embraced Amorite, Ugaritic, Phoenician/Punic, Moabite, and Hebrew.

Aramaic was the language spoken by Aramaeans, the people living in Aram, the area around Damascus and in northern Syria between the Tigris River and the Taurus Mountains. Nomads from the Syrian-Arabian Desert, the Aramaeans gradually settled in city-states in northern Syria in the late twelfth century BCE. In the Assyrian annals of the fourth regnal year of Tiglath-pileser I (c.1115-1076 BCE) the Aramaeans are mentioned for the first time. Ancestral traditions recorded in the Hebrew scriptures refer to Aramaeans who lived in Paddan-Aram (*Gen.* 25.20), Aram-Naharaim, and the city of Nahor (*Gen.* 24.10; Nahor, brother of Abraham, *Gen.* 11.27). Although Aramaeans are traced to the end of the twelfth century BCE, only in the ninth century BCE do Aramaic texts begin to appear.

From the ninth century BCE until the Middle Ages, Aramaic remained basically one language, although it underwent development and various phases of it must be distinguished. Unfortunately, names for the phases have not been uniformly agreed upon. One reason for the lack of agreement in terminology is that prior to the twentieth century almost the only known Aramaic texts were either biblical, targumic, or rabbinical, whereas the bulk of extrabiblical Aramaic texts known today, and even some *targumim*, have come to light only in the last seventy-five or eighty years. Sometimes the designation of phases of Aramaic begins as chronological and then shifts to geographical, with little rhyme or reason. The following attempt to designate five main phases of Aramaic is intended solely in a chronological sense. When geographical designations appear, they are subdivisions of the main phases.

Old Aramaic. Dating roughly from 900 to 700 BCE (or perhaps to 613, the fall of Nineveh), this phase is represented by inscriptions from northern Syria, Mesopota-

mia, and Israel, written in the borrowed Phoenician alphabet. These texts, which are not entirely uniform, represent an archaic form of the language that is sufficiently homogeneous to mark it off from contemporary Canaanite and Phoenician. In some instances there are features in this phase of the language that are Canaanitisms (e.g., infinitives used as infinitives absolute in Hebrew, Phoenician, and Ugaritic, or *vav*-conversive forms, both of which disappear in subsequent phases); there are also remnants of ancient case endings (masculine plural forms ending in *vav* [= nominative?] or *yod* [= genitive?]). The chief feature of the language, however, which distinguishes it from Canaanite, is the postpositive article. Whereas Hebrew prefixes *ha'*, "behold," to the stem *malk*, "king," and *ha'malk* becomes *ham-malekh* (with assimilation of the *alef* to the *mem* and an anaptyctic vowel breaking up the consonantal cluster), then *ham-melekh* (with vocalic assimilation), "the king," Aramaic affixes it: *malkay + ha'* becomes *malkayya'* then *malkayya'* ("the kings." The feature that distinguishes texts of this phase from subsequent phases is the way Aramaic interdental and sibilant consonants are represented in the borrowed Phoenician alphabet. When Aramaeans borrowed the alphabet, they were still pronouncing these consonants in the proto-Semitic way: the interdental fricative was still pronounced like *th* (in *the*), a sound for which the Phoenician alphabet had no character. Consequently, the Phoenician *z* was used to represent it as well as the Aramaic *z*. The result was that *z* stood for two sounds. As Aramaic developed, the fricative shifted to a stop and fell together with the *d*, both being represented by *d*. Thus, the relative pronoun was written in Old Aramaic as *zy* and it persisted in the writing in the early part of the following phase, even when it was already being pronounced *di*; eventually it was written as *dy*.

Another characteristic of Old Aramaic is its orthography. Phoenician was written in consonants only and had not developed a system of writing vowels; its diphthongs usually were contracted and represented as zero in writing. At an early stage Aramaeans began to use certain consonants to represent vocalic sounds, which at first was confined to final long vowels and uncontracted diphthongs: *yod* = long *i* or the diphthong *ay*; *vav* = long *u* or the diphthong *au*. Gradually, it spread to medial positions. The occasional contraction of *ay* to *e* was represented in final positions by *h*. In this phase *aleph* was treated as a consonant: the emphatic state ended in *-a'* (e.g., *malka'*, "the king"). Later the *aleph* quiesced, and the vowel was lengthened in a compensatory manner, becoming *-a*.

Standard or Official Aramaic. Dating roughly from 700 (or 613) to 200 BCE, Standard Aramaic sometimes is called *Reichsaramäisch*, or Imperial Aramaic, and origi-

nally denoted the Aramaic used during the dominance of the Persian empire; but its use is now traced back to the late Neo-Assyrian period. It was employed not only for communication between officials in the Assyrian and Persian empires, but even for communication between ordinary Jews and Aramaeans. It is called Standard Aramaic because it became the classic form of the language that would persist, despite later local dialectal differences, as long as the language remained alive. During this period this form of Aramaic became the lingua franca, used from the Indus Valley (modern Afghanistan and Pakistan), across the ancient Fertile Crescent (Babylonia and Armenia) into Asia Minor and to southern Egypt; examples even have been found in Greece. To this phase belong the twenty-eight Samaria papyri and fragments from Wadi ed-Daliyeh and the Biblical Aramaic of *Ezra* and probably even that of *Daniel*. Sometime during this period the short vowel in a pretonic open syllable was reduced to a shewa, which became another characteristic of Aramaic: the earlier *shalani*, "peace," became *shelani*. The vast corpus of Standard Aramaic comprises letters written on skin and papyrus, contracts, deeds, legal documents, literary texts (e.g., *Ahiqar*), inscriptions, inscribed ostraca, wooden labels, and clay tablets. In this phase some scholars have sought to distinguish a western and an eastern form of the language; that is a debatable issue, since evidence for the distinction is so meager.

Middle Aramaic. During this phase, which dates roughly from 200 BCE to 200 CE, Standard Aramaic develops, and one detects the emergence of five local dialects.

The Palestinian or Judean Aramaic dialect remained closest to Standard Aramaic and is found in inscriptions on Jerusalem ossuaries and tombstones, in literary texts from Qumran, in letters and documents from the Judean Desert, and in Aramaic words preserved in the Greek of Josephus and the New Testament.

Nabatean Aramaic was used by Arabs in Transjordan between the Hejaz and Damascus. Its center was Petra (from which the majority of Nabatean inscriptions come). It was a local dialect of Aramaic with Arabic interference, especially Arabic vocabulary. Outside Petra, Nabatean inscriptions have been found along caravan routes leading to South Arabia, Hauran, and even Judea.

Palmyrene Aramaic was the dialect of the caravan city of Palmyra (Tadmor) in the Syrian Desert and its environs. The earliest text in this dialect is from about 32 BCE (*PAT* 1067). The vast majority of these texts are sepulchral or dedicatory inscriptions from the heyday of Palmyra under Odaenathus and Queen Zenobia (130–270 CE).

Hatran Aramaic was the dialect used by the people of Hatra (modern Al-Hadhr), a town in Parthian-controlled Mesopotamia, fifty miles south of Mosul, where an Ara-

maean dynasty constructed a caravan town serving northern Syria and the Persian Gulf. Its heyday was about 100 CE. Its dialect is related to Palmyrene with Iranian loanwords.

Old Syriac was used by people in Edessa, Serrin, Dura, and other Syrian towns. The extant Old Syriac texts are pagan Aramaic inscriptions written in a script related to Palmyrene that began developing toward that of the early Christian Syriac scripts. The texts represent the kind of Aramaic spoken during the Achaemenid domination of the area, a development of Standard Aramaic, which had not yet adopted the characteristics of later literary Syriac, used by Christians. The third singular masculine imperfect form still begins with *yod*, not *uun*, as in classical Syriac, although the *u* form starts to appear sporadically. The proto-Semitic *ś* is represented by *shin*, whereas it falls together with *s* in classical Syriac. The inscriptions are for the most part memorial, sepulchral, and dedicatory.

Late Aramaic. Dated between approximately 200 and 700 CE, these Aramaic texts of various geographical areas and dialects have further peculiarities that distance them from Standard Aramaic even more than those in the Middle Aramaic phase. They fall into two large geographic subdivisions, Western and Eastern. The Western subdivision consists of dialects of Jewish Palestinian Aramaic (sometimes called Galilean Aramaic), to which belong the so-called Palestinian Targums, literary texts of the tannaitic and amoraic periods, and synagogal and funerary inscriptions (*MPAT*, appendix, A1–A56); Samaritan Aramaic; and Christian Syro-Palestinian Aramaic. The Eastern subdivision consists of dialects of Syriac (further divided into a western form [Jacobite] and an eastern form [Nestorian]), Babylonian Talmudic Aramaic, and Mandaic.

The cutoff date of this phase is not easily set. Seven hundred CE is taken as a round number close to the Muslim conquest and the consequent spread of Arabic, which brought an end to the active use of Aramaic in areas of the Near East. Neither Aramaic nor Syriac, however, completely died out at this time. Aramaic continued to be spoken among Jews until the end of the geonic period in Palestine and Babylonia (end of the eleventh century), and Syriac continued among Christians even to the end of the thirteenth century (Bar Hebraeus and his contemporaries).

Noteworthy in this phase not only is the *liqtul* and *neqtol* form of the third singular masculine imperfect *peal* in Babylonian Talmudic Aramaic and Syriac (respectively), but also the waning use of the absolute and construct states of the noun: *nalka'* can mean either "a king" or "the king"; instead of the construct state of nouns, one uses the determinative pronoun *de-*. Also characteristic of

this phase is the piling up of pronominal forms; the widespread use of the possessive pronoun, *dit-*; and the introduction of many Greek words into all the dialects.

Modern Aramaic. Sometimes called Neo-Aramaic, Modern Aramaic still is spoken in northern Syria, Iran, Iraq, and related areas: in the west in villages of the Anti-Lebanon region, north of Damascus (Ma'lūla, Jubb'addīn, Baḥ'ā), and in several areas of the east (Ṭūr 'Abdīn, the region between Lakes Urmia and Van, and in northern Iraq, around Mosul). The dialects spoken in these areas are a remnant of Late Aramaic or Syriac, heavily influenced by other local languages (e.g., Arabic, Turkish, or Kurdish).

Aramaic of Judean Desert Texts. The Aramaic of the Qumran and Murabba'at texts belongs to the dialect called Palestinian or Judean. A few documents, however, from Naḥal Hever are written in Nabatean. In either case, they are part of the corpus of Middle Aramaic texts, representing a transitional form between the Aramaic of *Daniel* (c.165 BCE) and that of the classical Targums of Onkelos and Jonathan, which are not earlier than 200 CE. These Middle Aramaic texts give us an idea of the language commonly spoken in Judea in the time of Jesus and the early Christians and provide the background for the study of Aramaic words preserved in the Greek texts of Josephus and the New Testament.

About 120 fragmentary texts (some still unpublished) from eleven Qumran caves were composed in Aramaic. Among them are eight biblical manuscripts, six Targumic and deuterocanonical texts, and many parabiblical texts from Qumran.

That some Aramaic texts are found in multiple copies at Qumran and that some have been copied in scribal hands already known from the site indicate that these texts were copied at Qumran itself. In most instances, however, little in the Aramaic texts classes them as sectarian; the bulk of the Aramaic documents represents texts that Essenes read or studied but that were not composed by them. Moreover, because most of the sectarian literature at Qumran was composed in Hebrew, the scarcity of sectarian tenets in Aramaic texts supports the view that the use of Hebrew was something that Qumran Essenes had restored because of their high regard for *leshon ha-qodesh*, "the language of the sanctuary."

Grammatical analysis of the Judean Desert Aramaic texts depends to a certain extent on their vocalization. The texts are written in consonants with *matres lectionis*. In many cases the vocalization is certain, because their vocabulary uses standard words well known in earlier or later Aramaic or in cognate Semitic languages. Many of the words occur in Biblical Aramaic. Although its vocalization is later than its consonantal text, the Masoretic vocalization can be adopted, provided that the consonan-

tal text of these documents tolerates it. The same must be said about vocalizations derived from later pointed texts of Jewish Palestinian Aramaic or from Syriac and Babylonian Talmudic Aramaic. In using Biblical Aramaic, however, one must realize that the Masoretic tradition has at times Hebraized some Aramaic forms (e.g., *melekh*, "king," instead of *mēlēkh*, as in the Targums and Syriac; see Blake, 1951, pp. 81-96).

Orthography. Scribes who copied Judean Desert Aramaic texts made abundant use of consonants as *matres lectionis*. Such *scriptio plena* is known from Qumran Hebrew texts (see Tov, 1986, 1988). Occasionally, some texts preserve historical orthography: *zi* for *di*, *zenah* for *denah*.

Phonology. Sibilants and interdentalals are the same as in Biblical Aramaic; the proto-Semitic *ḏ* always is represented by 'ayin. *Nun* at the end of a closed syllable often is assimilated to the following consonant, but not always; *lamied* similarly is assimilated at times. Doubled consonants are at times resolved by the use of liquids, especially *nun* (*yūdda'* becomes *yūuda'*; *Dammeseq* becomes *Darmešeq*).

Morphology. In this Palestinian Aramaic the three states of the noun (absolute, construct, and emphatic) are still alive. There is the shift of *haphel* to 'aphel in the causative conjugation; a shift of the pronouns from *di* to *de* and from *denah* to *den*, "this." The third plural masculine pronoun passes from *hinunō(n)* to *imun*. The conjunction "if" shifts from *hēn* to 'in. The sign of the accusative often still is *le-*, though *yat(-)* begins to appear. Hebraisms occur ('in for 'in; ending *-im* for *-in*).

JOSEPH A. FITZMYER, S. J.

ARAMAIC APOCALYPSE. Known as the Aramaic Apocalypse (4Q246) or the Son of God Text, this skin fragment (14.1 by 8.8 centimeters) preserves the end of nine lines on column i and the complete nine lines of column ii, with upper and lower margins (photo PAM 43.236). It is from the middle of a document, of which neither the beginning nor the end is preserved. Written in Herodian script, this copy is dated from approximately 25 BCE and is derived from a pre-Christian source of ancient Judea. It is written in the Palestinian form of Middle Aramaic known from other Qumran texts. [See Aramaic.]

The text is called an apocalypse because it tells of a

coming era of peace, when God's people will arise after a period of distress, war, and carnage. [See Apocalyptic Texts.] A seer(?) falls before the throne of a king, whom he addresses with a message of reassurance. The seer explains that distress will come from enemies called (historically? symbolically?) Assyria and (perhaps) Egypt, whose domination, however, will be short-lived. An individual will arise, who "will be called great" and "will be hailed as the Son of God"; they will call him "Son of the Most High." "His (or Its [God's people's]) reign will be an everlasting kingdom . . . ; he (or it) will judge the land with truth, and everyone will make peace. The sword will cease from the land, and all provinces will pay him (or it) homage, (because) the great God is his (or its) might."

Column ii is easily read; the restoration of column i is problematic, and there is no certainty about its width. Line 9 reads: []ba' yitqere' u-vi-shemeh yitkaneh. The possible restoration is: [ve-hu' bar El rab]ba' . . . , "[and he] will be called [son of] the [gr]eat [God]; by his name will he be named." 'El rabba' occurs in Aramaic Apocalypse 2.7. Milik read the verbs as middle passive/passive voice, restoring [bar malka' rab]ba', "will call himself [son of] the [gr]eat [king]," which he took to refer to Alexander Balas, who pretended to be son of Antiochos IV Epiphanes. But would a Jewish writer give a pagan Seleucid king the titles "Son of God," "Son of the Most High"? Puech preferred [bar maria' rab]ba', "[son of] the [gr]eat [Sovereign]." Who is this person? The answer is debated. For David Flusser, he is an antichrist, a human exponent of satanic forces of evil, claiming such titles. For Florentino García Martínez, he is an eschatological savior of heavenly character, someone like Melchizedek. For Martin Hengel, the titles are collective (equivalent to the Jewish people), like Son of Man (Dn. 7.13). For Émile Puech and John J. Collins, the titles are those of a messiah, but that interpretation imports gratuitously yet another title into the text. It may simply refer to an awaited Jewish ruler, a successor to the Davidic throne, not envisaged as a messiah, since the text does not use that title. [See Messiahs.]

This text supplies an important Palestinian Jewish background for the titles *Son of God* and *Son of the Most High* used for Jesus in *Luke* 1.32 and 1.35.

ARAMAIC LEVI. See Levi, Aramaic; Testaments.

'ARAQ EN-NA'SANEH CAVE. See Daliyeh, Wadi ed-

ARCHAEOLOGICAL SURVEYS of the Judean Desert can be divided into two groups: bedouin explorations and controlled surveys (see table 1).

Bedouin Explorations. Although by no means official or scientific, the explorations and clandestine excavations by Ta'amireh bedouin have yielded by far the largest part of the ancient, written material from the Judean Desert. Sites from which the bedouin recovered epigraphic materials include Wadi en-Nar (Naḥal Qidron), Wadi Sdeir (Naḥal David), Wadi Ghweir (Naḥal Qaneh), Wadi ed-Daliyeh, Wadi Murabba'at, and the Qumran Caves.

Controlled Surveys. A variety of archaeological organizations have sponsored numerous surveys and excavations in the Judean Wilderness.

Survey of the cliffs. In March 1952, in conjunction with the excavation of Qumran Cave 2, a survey of the cliffs 4 kilometers north and south of Wadi Qumran was carried out by R. de Vaux and W. Reed, director of the American School of Oriental Research in Jerusalem (now known as the Albright Institute), and assisted by D. Barthélémy, J. T. Milik, and M. Henri de Contenson. Through 230 soundings, forty caves containing archaeological remains were found, including Cave 3. Twenty-six caves yielded pottery identical to that of Cave 1 and Khirbet Qumran. The dig was stopped due to heat.

Judean Desert Survey. Following news that many manuscripts sold by bedouin in Jerusalem had come from Judean Desert sites on the Israeli side of the green

line, a series of surveys and minor excavations were conducted by Y. Aharoni between 1953 and 1960 at sites ranging from 'Ein-Gedi to Masada. In the wake of Aharoni's findings, the Judean Desert Survey of 1960 and 1961 was organized. Four archaeologists were assigned to direct the units. N. Avigad was in charge of Group A (the southern bank of Naḥal Şe'elim and Naḥal David); Y. Aharoni, Group B (the northern bank of Naḥal Şe'elim, Naḥal Harduf, and Naḥal Hever); P. Bar-Adon, Group C (Naḥal Mishmar, Naḥal 'Asahel, southern bank of Naḥal Hever); and Y. Yadin, Group D (northern bank of Naḥal Hever and Naḥal Arugot). This survey was aided by personnel and equipment of the Israel Defence Forces.

Copper Scroll Expedition. In the spring of 1960, J. M. Allegro directed the "Copper Scroll Expedition," which excavated various sites in the Judean Wilderness believed to contain items mentioned in the Copper Scroll (3Q15) from Qumran Cave 3, including Khirbet Mird and Khirbet Mazin.

Operation Scroll. From November 1993 to January 1994 a joint survey was undertaken by the Israel Antiquities Authority (IAA) and the Military Authority of Judea and Samaria, directed by A. Drori, director of the IAA, and Y. Magen, staff officer for archaeology of the Military Authority of Judea and Samaria. The survey covered an extensive area from Jericho to 'Ein-Gedi and involved many archaeologists. Caves and archaeological sites (including Qumran) were surveyed and excavated, yielding finds ranging from the Chalcolithic to Islamic periods. Although no new sites produced epigraphic remains, the Wadi el-Mafjar Cave of Avior (also known as Ketef Jericho) produced additional papyrus fragments related to those found earlier by H. Eshel.

Recent surveys of Qumran environs. Surveys conducted in the 1980s and 1990s by J. Patrich, J. Eisenman, V. Jones, and M. Broshi and H. Eshel have added in varying degrees to the knowledge of the region, but have not yielded any written material.

Epigraphic Remains from Surveys and Excavations. The epigraphic remains found at the Judean Desert sites vary in materials, eras, language, and content. The following section organizes these findings according to era and location.

First Temple period

Wadi Murabba'at (Naḥal Dargah): one papyrus.

Khirbet Qumran: *la-melekh* jar handles.

'Ein-Gedi: *la-melekh* jar handles and seal impressions.

Persian-Hellenistic period (fourth century BCE)

Wadi ed-Daliyeh Caves: Discovered by bedouin in February 1962 in the Abu Shinjeh Cave were at least twenty-eight papyrus legal documents, nearly one hundred clay bullae, several coins, and two gold sig-

Wadi el-Mafjar (Cave of Avior)		H. Eshel	1986	

net rings. Found in 1963-1964 during two seasons of excavations directed by P. Lapp on behalf of the American Schools of Oriental Research (ASOR) were five papyrus manuscripts, four clay bullae, coins, and shards in Greek (as well as Middle Bronze, Iron Age II, Late Persian, Early Roman, Arabic, and Mameluke remains). Found in December 1980 in 'Araq en-Na'saneh by Y. Magen (Israel Defence Forces, archaeological staff officer, Judea and Samaria) were similar remains and a hoard of seventeen Roman coins (second century CE).

Wadi el-Mafjar, the Cave of Avior: A wooden comb found by A. Frumkin in 1984 and similar to others from the Judean Desert led to the 1986 excavation by H. Eshel on behalf of the Israel Cave Research Centre and Ofra Field School of the Society for the Preservation of Nature in Israel (SPNI). Epigraphic remains include a list of names in Aramaic (fourth century BCE), and legal documents in Aramaic and nonliterary documents in Greek (second century CE). During "Operation Scroll," Eshel once more found fragmentary papyri associated with this cave.

'Ein-Gedi: Jar handles with seal impressions.

Hasmonean-Hellenistic period (Second Temple period; third-first centuries BCE). While bedouin were responsible for the original discovery of several of the Qum-

ran scroll caves (1, 2, 4a and 4b, 6, and 11; all later officially excavated), others were discovered by methodical surveys and explorations (Caves 3, 5, 7-10).

Qumran Cave 1: Early in 1947 bedouin discovered Cave 1, taking seven scrolls from the cave and selling them on the antiquities market. The official excavation was conducted in February/March 1949 by G. L. Harding and R. de Vaux on behalf of the Jordan Department of Antiquities (JDA), the Palestine Archaeological Museum (PAM), and the École Biblique et Archéologique Française (EBAF), jointly. The finding of "scroll" jars and fragments from at least one of the seven scrolls confirmed the cave as the source of the scrolls. All remains were from the Hasmonean and Early Roman periods.

Qumran Cave 2: In February 1952 bedouin discovered Cave 2 and offered numerous fragments for sale. None of the thirty-three manuscripts found was complete. The discovery of this new cave prompted the authorities to undertake the survey of the cliffs (see above).

Qumran Cave 3: The only scroll cave discovered during the 1952 survey contained the fragmentary remains of nine manuscripts and the Copper Scroll (3Q15).

Qumran Cave 4: In September 1952, close to the site of Khirbet Qumran, bedouin discovered three new

caves containing manuscript fragments. These became known as Caves 4 (4a and 4b) and 6. Unfortunately, the bedouin mixed the manuscripts from Caves 4a and 4b (which were only seven meters apart) and, accordingly, de Vaux decided to record all fragments coming from both caves as 4Q. Within two days of the bedouin offering fragments for sale, the authorities found the caves, stopped the illicit digging, and began a controlled excavation under de Vaux and Harding. Fragments of about one-fourth of the approximately six hundred fragmentary manuscripts identified as having come from Cave 4 were identified among those found in the excavation. An ink-inscribed jar and an object were also recovered.

Qumran Cave 5: During the excavations of Cave 4 a partially collapsed cave (5) was discovered about 25 meters to the north. At least fifteen manuscripts were recovered in the excavation carried out by J. T. Milik.

Qumran Cave 6: No manuscripts were found in the de Vaux excavation but bedouin produced fragments of at least twenty-one manuscripts from this cave, mainly on papyrus.

Qumran Caves 7, 8, 9, and 10: During the fourth season of excavation at Khirbet Qumran (February 1955), it was decided to investigate possible collapsed caves spotted along the cliffs on the southern end of the terrace. Three caves containing fragmentary manuscripts were discovered and designated caves 7, 8, and 9. Cave 7 contained fragments of at least five manuscripts, numerous Greek papyrus fragments, a jar inscribed *ronia* and objects; Cave 8 contained fragments of five texts as well as thongs and reinforcing tabs; and Cave 9 contained only one badly worn papyrus fragment. Cave 10, discovered during the excavations when worn steps leading to a possible collapsed cave were noted near Cave 4, revealed a woven mat, date pits, and an ostrakon.

Qumran Cave 11: This cave was discovered by bedouin in January 1950, who cleared it of manuscripts. Shortly after their sale to the PAM, de Vaux and his team excavated the cave, prior to their fifth season of excavation at Qumran. From the excavation, an unidentified, blackened, cigar-shaped document and several small fragments of paleo-Leviticus^a (11Q1) were recovered; from the bedouin, nine biblical manuscripts (including paleo-Leviticus), one *targum*, two apocryphal or pseudepigraphic texts, and eight sectarian documents were recovered.

Khirbet Qumran: Surveys in December 1940 by Bar-amki and in April 1946 by S. Husseini made note of the ruined buildings, reservoir, boundary walls, and cemeteries with a consensus that the site dated to the Byzantine and Arab periods.

R. de Vaux, returning to the site in late 1951, made a test sounding in the middle of the tell. Pottery matching that from Cave 1 (1 kilometer to the north)—including the cylindrical “scroll” jars—was found, confirming the relationship of the site to the cave. As a result, several seasons of thorough excavation were launched, directed by R. de Vaux on behalf of the JDA, PAM, and EBAF, jointly. During the first season (24 November–12 December 1951), loci 1–4 in the main building and a few graves in the main cemetery were opened. During the second season (9 February–24 April 1953), the remainder of the main building and its tower (loci 5–53) were uncovered. The third season (13 February–14 April 1954) saw the clearing of loci 54–99, which included the dining room/assembly hall, “pantry,” and potters workshop. During the fourth season (2 February–6 April 1955) the entire western sector and remainder of the water system were excavated (loci 100–142). The fifth season (18 February–28 March 1956) was used for re-checking the stratigraphy of the site and determining the extent and makeup of the nearby cemeteries. Remains from the Iron II period, second century BCE to first century CE (four phases), and second century CE (Bar Kokhba Revolt) were found. No writing on skins or papyrus was recovered from the strata contemporary with the scroll caves (third century BCE to first century CE), although inscribed jars, ostraca, ink wells, and (possibly) writing tables were found.

Epigraphic remains included a jar with an inscription, a jar neck fragment with an etched name in Greek, *IOSIPOS*, more than twenty Hebrew ostraca (mainly names), an abecedary, one Greek ostrakon, and more than seven hundred coins.

During the winter of 1996 J. Strange excavated a deep trench just south of the ruins of Khirbet Qumran on the esplanade. During the clean-up work at the end of the excavation, fragments from two ostraca were discovered in the recesses of the north-south enclosure wall (excavated earlier by de Vaux).

‘Ein-Feshkha (‘Enot Suqim): A test sounding was made during the fifth season of excavation at Khirbet Qumran. Ceramic and numismatic finds confirmed that the site was contemporary with Khirbet Qumran and one season of excavation (25 January–21 March 1958), directed by R. de Vaux, was conducted as a result. Inscriptional remains were limited to an inscribed stone weight, an inkwell, and sixty-two coins.

Masada: During 1955 and 1956 two seasons of archaeological survey were carried out at Masada by M. Aviyonah, N. Avigad, Y. Aharoni, I. Dunayevsky, and S. Gutman on behalf of the Hebrew University (HU), Israel Exploration Society (IES), and Israel Depart-

ment of Antiquities (IDA), jointly. At this time, the entire mound, its visible structures, and its water system were mapped and drawn. Special attention was paid to the northern palace, which was partially excavated. One ostrakon, one papyrus fragment, one graffito on plaster, and three coins were recovered. Y. Yadin directed two seasons of excavation at Masada in 1963–1964 on behalf of the HU, IES, and IDA. The extensive architectural and material remains, exposed in their entirety, dated primarily from the time of Herod the Great until the site's destruction in 73 CE (including Roman army camps and siege works built around the site). A limited occupation by a Roman garrison during the post-destruction years followed. Evidence of Chalcolithic, Iron, and especially the Byzantine period occupation (including the remains of a church) was also found. From the Roman period several biblical and other texts on parchment were recovered as well as many coins, more than seven hundred ostraca, and more than two hundred Roman secular documents on papyrus.

Second Revolt (Bar Kokhba Period; second century CE)

Wadi Murabba'at (Nahal Dargah): This site was originally discovered in 1951 by bedouin who eventually offered large quantities of fragmentary manuscripts of texts and ostraca (mostly dating to the Bar Kokhba Revolt) in Hebrew, Aramaic, Nabatean, Greek, Latin, and Arabic to the PAM (with a few items from other periods ranging from the Iron Age to the Byzantine period). Controlled excavations in 1952 directed by R. de Vaux on behalf of the JDA, PAM, and EBAF, yielded four caves with archaeological remains; of these, only adjacent Caves 1 and 2 produced epigraphic remains. Shepherds found a fifth cave in March 1955, which yielded a single document: the scroll of the Twelve Prophets.

Nahal David (Wadi Sdeir), The Cave of the Pool: This area was surveyed by G. D. Sandel in 1905 and Y. Aharoni in 1956 and excavated by N. Avigad (1960–1961) with archaeological remains coming from the Chalcolithic period, Iron Age, and Bar Kokhba Revolt (including a plastered pool). Epigraphic remains consist of two coins from the Bar Kokhba Revolt.

Nahal David (Wadi Sdeir), Unidentified Cave: Bedouin offered Aramaic and Greek documents purported to be from this cave, along with fragments of a copy of *Genesis*.

Nahal Hever (Wadi Khabra) Cave 5/6, The Cave of the Letters: This area was first investigated by Y. Aharoni in 1953 on behalf of the IDA, at which time traces of illicit digging were found. Aharoni dated the remains

of the cave and the Roman camp on the plateau above to the Bar Kokhba Revolt. During two seasons of excavation (1960–1961), Y. Yadin recovered from the cave Roman period remains including linen clothing, shoes, bronze vessels, glassware, knives, wooden utensils, matting, baskets (one with skulls), door keys, two bullae with impressed images of Hercules, and a number of coins.

Three archives derived from this cave: (1) Legal documents from the personal archive of a certain Babatha, many of which were "double documents" written in Nabatean, Aramaic, and Greek; (2) Land contracts written at 'Ein-Gedi mainly in Hebrew; (3) Personal letters written by Shim'on Bar Kokhba, mainly to two administrators at 'Ein-Gedi.

Nahal Hever (Wadi Khabra) Cave 8, The Cave of Horror: Cave 8 was first noticed by Y. Aharoni in 1953 while investigating Cave 5/6 directly across the ravine. In 1955 Aharoni entered the cave and found pottery from the Early Bronze and Roman periods. Among the remains (all dated to the Bar Kokhba Revolt) were clothing, shoes, dehydrated fruit, wooden utensils, matting and ropes, together with numerous skeletons of primarily young people and children (thus the name of the cave). The only epigraphic find was a Hebrew ostrakon.

In 1961, Aharoni fully excavated the cave, finding more remains from the Roman period, including fragments of the Dodekapropheton (Greek Minor Prophets) scroll (8Hev 1), papyrus fragments with Greek or Jewish script, ostraca in Jewish script (two legible, others illegible), and four coins.

Nahal Mishmar (Wadi Mahras) Cave 1, Cave of the Treasure (Scouts Cave): Two seasons of excavation by P. Bar-Adon (1960, 1961) yielded finds from the Chalcolithic and Roman periods, including a large cache of bronze and bone objects from the Chalcolithic period.

Nahal Se'elim (Wadi Seiyal): In the spring of 1960, two excavation teams centered their attention on the cliffs and area around Nahal Se'elim. N. Avigad and his crew worked on the southern cliffs of the wadi and its tributaries and found only a few potsherds from the Chalcolithic period and no inscriptional material.

Y. Aharoni excavated several sites and caves along the northern cliffs, and found remains from the Chalcolithic, Iron II, and Bar Kokhba periods. Only three adjacent caves produced epigraphic remains.

Nahal Se'elim (Wadi Seiyal) Cave 31, Cave of the Arrows: Roman period remains included a lamp, storage jars, cooking pots, iron tipped arrows, and a coin of the emperor Trajan.

Nahal Se'elim (Wadi Seiyal) Cave 32, Cave of the

Skulls: The bedouin thoroughly explored this cave before the excavators arrived. Left behind were seven skeletons in secondary burial, potsherds from the Chalcolithic and Roman periods, some cloth, and a coin of the emperor Trajan.

Nahal Se'elim (Wadi Seiyal) Cave 34, Cave of the Scrolls: Remains mainly from the Bar Kokhba Revolt include a wooden comb, game pieces, and fragments of various documents, as well as two coins from the early third century CE.

Nahal Harduf (Wadi Maradif) Cave 40, Cave of the Reservoir: In a tributary of the Nahal Se'elim Aharoni found, in the Cave of the Reservoir, Chalcolithic and Roman period potsherds, a Bar Kokhba coin, and a plastered cistern.

'Ein-Gedi: In 1949 trial excavations and survey were conducted by B. Mazar at Tell Goren and in the oasis on behalf of the IES. In 1956-1957 an extensive archaeological survey was conducted by Y. Aharoni and J. Naveh, which yielded remains from the Chalcolithic, Iron, Hellenistic, Roman, and Byzantine periods. Epigraphic remains from the Hellenistic, Roman, and Byzantine periods included coins and mosaic inscriptions. The land contracts found in Nahal Hever's Cave of the Letters deal with plots of land at 'Ein-Gedi: these and other documents found in the cave must have derived from this town. Between 1961 and 1965 five seasons of excavations at 'Ein-Gedi-Tell Gorden were conducted by B. Mazar, I. Dunayevsky, and T. Dothan.

Byzantine-Islamic Periods

Wadi Murabba'at (Nahal Dargah): In addition to the fragments from earlier periods (see above), fragments of several manuscripts from the Byzantine-Islamic period were found in the caves of the Wadi Murabba'at.

Khirbet Mird (Horqaniyah): In July 1952 bedouin found manuscripts in Christian Palestinian Aramaic, Greek, and Arabic in a room in the ruins of a Byzantine monastery at this site. The Belgian archaeological expedition under R. de Langhe recovered additional manuscript fragments in a cistern in 1953. Finds include more than forty Greek documents, at least ten Christian Palestinian Aramaic texts, as well as more than 150 Arabic papyri.

Khirbet Mazin (Copper Scroll Expedition): Excavated by R. de Langhe on behalf of J. Allegro, the site yielded Second Temple and Byzantine period remains.

ARCHAEOLOGY. In the nineteenth century and the first half of the twentieth century, scholars were mainly attracted to explore the unique geographical features of the Dead Sea. The first surveys were undertaken by F. de Saulcy (1853), V. Guerin (1869), and Conder and Kitchener (1881-1883), while the monastic remains in the Judean Desert and in the Valley of Jericho were recorded by Tobler (1853-1854), Schick (1877), and J. L. Federlin (1902-1904).

Exploration of Caves. A new interest in archaeological exploration of the Judean Desert caves and ruins was instigated by the discovery of the first scrolls in Cave 1 at Qumran by a bedouin shepherd from the Ta'amireh tribe in the spring of 1947. Because of the political circum-

stances prevailing in that region at that time, scholarly exploration was delayed. Systematic excavations were carried out in Cave 1 at Qumran only in February–March 1949, on behalf of the Department of Antiquities of Jordan, The École Biblique et Archéologique Française in Jerusalem, and the Palestine Archaeological Museum in Jerusalem (now the Rockefeller Museum). In 1951 excavations began at Khirbet Qumran, which was interpreted then as a Roman military post. In January–March 1952, following rumors of new scrolls having been discovered by bedouin of the same tribe in the area farther to the south, the directors of the Qumran excavations—G. L. Harding and R. de Vaux, together with D. Barthélemy—excavated four caves at Wadi Murabba'at. The first group of Bar Kokhba letters was discovered in these caves. In 1960 another group of Bar Kokhba letters was retrieved by Y. Yadin in the Cave of the Letters in Naḥal Hever.

Meanwhile, in February 1952 the bedouin discovered Cave 2Q. This prompted the archaeologists to extend their investigations by conducting a systematic survey along the 8-kilometer long limestone cliffs extending from 'Ein-Feshkha to their northern end, beyond Khirbet Qumran. The survey, in March 1952, was directed by Harding, de Vaux, and W. L. Reed. The most outstanding find in this survey was the Copper Scroll (3Q15), found in Cave 3Q. It was again first the bedouin who in September 1952 discovered Cave 4Q—the richest of the Qumran caves. They managed to extract most of its content before de Vaux and J. T. Milik, with the assistance of the Department of Antiquities of Jordan, could begin their systematic excavation, which lasted seven days. Cave 5Q was subsequently found nearby, and Cave 6Q farther to the west, near the fall of Wadi Qumran at its outlet to the valley. Finds from Cave 6Q were already purchased earlier from the bedouin. Caves 7Q–10Q were discerned only in the spring of 1955, during the fourth season of the Qumran excavations, at the edge of the marl plateau to the south of the site. Cave 11Q, the last to yield scrolls, was discovered early in 1956. It is assumed that the Temple Scroll (11Q19 and 11Q20), brought to scholarly attention only after the 1967 war, was originally found by the bedouin there. Caves 1Q, 4Q, and 11Q are considered to be the most important of the Qumran caves in terms of inscribed finds.

Khirbet Mird (Hyrkania) papyri were also first found in 1952 by the bedouin. In 1953 the site was explored by an expedition from Louvain University, directed by R. de Langhe and Lippens.

On the Israeli side of the border it was Y. Aharoni who devoted special efforts, already in the end of 1953 and again in the springs of 1955 and 1956, to explore the caves of Naḥal Hever and Naḥal David on behalf of the Israel Department of Antiquities and Museums. As a re-

sult of Aharoni's finds, and due to rumors during the late 1950s that papyri originating from caves in the Israeli part of the Judean Desert had reached the antiquities market in Jordanian Jerusalem, an Israeli campaign began. In January 1960 Aharoni went on a ten-day survey to Naḥal Se'elim. This was followed in March–April 1960 and March 1961 by four expeditions headed by Y. Aharoni, P. Bar Adon, N. Avigad, and Y. Yadin, on behalf of the Hebrew University of Jerusalem, the Israel Exploration Society, and the Israel Department of Antiquities and Museums. The territory explored extended between 'Ein-Gedi and Masada, encompassing the cliffs of Naḥal Se'elim, Naḥal Mishmar, Naḥal Hever, and Naḥal David. The papyrus documents from the Cave of the Letters in Naḥal Hever also included, besides the Bar Kokhba letters, the archive of Bahatha, a wealthy Jewish matron of 'Ein-Gedi.

In 1963 and 1964, an expedition headed by P. W. Lapp and N. L. Lapp, on behalf of the American School of Oriental Research in Jerusalem, explored two caves in Wadi ed-Daliyeh, northeast of Jericho. This time, as well, bedouin preceded the archaeologists. The major finds included papyri and bullae from the end of the Persian period.

In 1983, a systematic archaeological survey of the Judean Desert caves was initiated by J. Patrich in collaboration with Y. Yadin, on behalf of the Hebrew University of Jerusalem. The survey, conducted in the fall and winter of each year until 1987, was followed by trial soundings, especially in some of the Qumran caves. The area surveyed extended from Naḥal Og (Wadi Mukellik) in the south to Wadi Auja in the north. The limestone cliffs of Qumran and 'Ein-Feshkha were subjected to a careful re-examination (Patrich, 1995).

In 1983 a cave yielding unique Pre-Pottery Neolithic B finds was excavated by O. Bar Yosef and D. Alon in Naḥal Hemar. Other caves in the Judean Desert were explored in the 1980s by the Israel Cave Research Center of the Society for the Preservation of Nature, directed by A. Frumkin. In the course of this survey, the caves at Wadi ed-Daliyeh were reexamined; Wadi Makukh and Wadi Khareitun were explored; and in 1986, excavations by H. Eshel at Avior Cave at Ketef Jericho revealed several papyri fragments from the Persian and Bar Kokhba periods. The terrace below this cave was excavated by Eshel in 1993 in the framework of "Operation Scroll," yielding more papyri. In 1991 a cave in the upper section of Naḥal Hever was excavated by D. Amit and H. Eshel (1993), yielding finds typical of other Bar Kokhba Revolt caves (including one silver coin of "year three," but without inscribed documents, except two fragmentary ostraca). At the site of Hiam el-Saqha, north of Murabba'at, Bar Adon found a cemetery consisting of twenty graves, which he

claimed to be of the Qumran type. Two of them were excavated by H. Eshel and Z. Greenhut (1993).

"Operation Scroll," on behalf of the Israel Antiquities Authority and the staff officer for archaeology in Judea and Samaria, started in mid-November 1993 and lasted until January 1994 (Drori, et al., 1994). The area explored extended along approximately 100 kilometers of canyons in the Jordan Valley, from Wadi ed-Daliyeh in the north to Nahal Dragot in the south. Most cliffs had been explored already on a more modest scale by other expeditions. The area was divided into six zones. The cliffs of Qarantal and Qumran were divided into secondary zones. Approximately 650 caves were surveyed, and approximately 70 were excavated. A separate numeration system, different from those used by earlier expeditions, was employed. New excavations also took place at Khirhet Qumran at that time. The work was undertaken by a team of approximately one hundred archaeologists, assistants, and volunteers, and approximately 170 workers from Shechem and Jericho were employed in the excavations. A systematic, expert use of a metal detector proved to be most fruitful. The finds included fifteen papyri from the Ketef Jericho caves (Eshel and Zissu, 1995); an ostrakon from Cave 38 near Qarantal, overlooking Jericho; thousands of fragmentary clay vessels, flint tools, metal objects, glass, coins, cloths, leather, basketry; and foodstuff such as dates, almonds, olive stones, etc. No new scrolls were found. The periods of occupations attested were similar to those already known in this region: Neolithic, Chalcolithic, Early Bronze I, Iron Age (few finds), and a wealth of finds from the Persian, Hellenistic (mainly Hasmonean), and Roman (end of Second Temple and Bar Kokhba) periods. In Khirhet Qumran the flat area on the south was excavated, uncovering Iron Age pits and the surface of a date press adjacent to a *miqveh*. Soundings were opened in various rooms and in later years the area along the water channel extending northward was entirely excavated as well.

Other Surveys and Excavations. In conjunction with the Qumran scroll finds, and de Vaux's excavations at Qumran and 'Ein-Feshkha in the years 1951–1956, the Iron Age sites in the Buqeiya (Hyrcania Valley) were excavated by Cross and Milik in 1954 and 1955. The agricultural installations associated with them were further explored by Stager in 1972. On the Israeli side of the Judean Desert, hihlical 'Ein-Gedi (Tell Goren) was first surveyed in 1949 by B. Mazar, A. Reifenharg, and T. Dothan. Later surveys were carried out by Y. Aharoni and J. Naveh. Five seasons of excavations were conducted during the years 1961–1965 by an expedition of the Hebrew University and the Israel Exploration Society, headed by B. Mazar. The 'Ein-Gedi Synagogue and adjacent area was excavated in 1970–1972 by D. Barag and Y. Porath, and in 1993 by G.

Hadas. The excavations at the site were resumed in 1996 by Y. Hirschfeld. The agricultural installations were studied by J. Navah, Y. Porath, and more recently by G. Hadas.

In 1955 and 1956 two comprehensive archaeological surveys were undertaken at Masada, but large-scale excavations at the site took place only in the years 1963–1965 on behalf of the Hebrew University of Jerusalem and the Israel Exploration Society, headed by Y. Yadin. Excavations at the site were resumed in 1989 by E. Netzer and in 1995–1996 by E. Netzer and G. Stiehel. On the Jordanian side of the Judean Desert, the Herodian palace-fortress of Herodium was excavated in the years 1962–1967 by V. Corho on behalf of the Studium Biblicum Franciscanum in Jerusalem. [See Herodium.] The excavations at the site were continued in the years 1967–1970 by G. Foerster, and since 1970 Lower Herodium has been exposed by an expedition of the Hebrew University headed by E. Netzer. Netzer had also excavated Cyprus and Nu-seih Uweishirah, on either side of Wadi Qilt, overlooking Jericho, in conjunction with his large scale excavation at the site of the Hasmonean-Herodian palaces and agricultural estate of Jericho. Other Hasmonean-Herodian fortresses were mainly surveyed or excavated on a small scale by Israeli scholars (Tsafrir, 1982). [See Hasmoneans; Herodians.] The siege systems around these fortresses were studied mainly by Meshel, while the siege system of Masada was studied by Schulten long before. [See Roman Camps.]

W. R. Farmer, who had assisted Cross and Milik in the Buqeiya survey, excavated in 1957 at Khirhet Zaraniq on behalf of the American School of Oriental Research at Jerusalem. The site turned out to be the monastery of Jeremias, known from Byzantine sources. In the winter of 1961 J. M. Allegro and R. de Langhe excavated for three weeks at Khirhet Mazin. In 1964–1966 I. Blake conducted surveys and excavations at several Iron Age and Byzantine sites ('Ein el-Turaheh, 'Ein el-Ghweir, and El Kuseir-Sousakim), on behalf of the British School in Jerusalem.

Following the 1967 war, an "Emergency Archaeological Survey" was launched in 1968 on behalf of the Israel Department of Antiquities. In this framework and in the following years Bar-Adon (1972, 1989) explored many Judean Desert sites and caves, mainly on the fault escarpment and along the Dead Sea shores.

Comprehensive archaeological surveys all over the Judean Desert were conducted during the 1980s on behalf of the Archaeological Survey of Israel by Y. Hirschfeld (1985), J. Patrich (1995), U. Dinur, N. Feig, H. Goldfus, A. Golani, and O. Sion (Finkelstein, 1993). In this period two Iron Age II sites were also excavated (Eitan, 1992).

A Broad Survey of the Finds and Settlement Patterns. In all periods the Judean Desert served as a land

of pasture for nomadic tribes. Typical installations of nomadic and semi-nomadic societies are tent encampments, burial grounds, water cisterns, stone cairns (Chalcolithic and/or Early Bronze I), and cave shelters. The desert was also a place of seclusion and wandering for hermits and pious people of high spirituality. The desert caves, adjacent to the settled land, always served also as places of refuge in times of war and oppression. To such hideouts the refugees would bring with them their most precious belongings, including judicial documents and sacred writings.

Prebiblical and biblical periods. The beginnings of a walled settlement at Jericho go back to Pre-Pottery Neolithic A period. The most interesting finds of the Pre-Pottery Neolithic B period, including textiles and basketry, were found in Naḥal Hemar Cave. Finds from this period were also found in Cave 24 to the north of Qumran (Patrick, 1995). Chalcolithic shards are common in any survey in the Judean Desert. The main Chalcolithic settlement exposed so far in the Judean Desert is at 'Ein-Gedi, where a large temple was found. The Naḥal Mishmar treasure was presumably taken from this temple. Early Bronze I finds are common as well. The finds from Cave 13 in the lower Wadi Makukh ("The Warrior Cave"), excavated in the framework of "Operation Scroll," are of particular interest: an Early Bronze I burial of a warrior, laid on a mat, wrapped by a cloth. A flint blade, approximately 30 centimeters long, an arch cut into two pieces with the string attached to it, a wooden bowl painted red, a worked stick, and four arrows were laid next to him, and his sandals were placed near his legs.

Jericho and 'Ein-Gedi, abounding with spring water, were the chief settlements of the Judean Desert throughout history. In biblical and postbiblical times they were royal estates. Other prominent Iron Age II sites include the settlements and agricultural estates of the Judean Kings Jehoshaphat and Uzziah (2 Chr. 17.21; 26.10), or Josiah in the Bugeia, and along the Dead Sea (Qumran, Khirbet Mazin, 'Ein el-Turabeh, 'Ein el-Ghweir). [See Agriculture; Bugeia.] These sites were identified with the cities mentioned in *Joshua* 15.61–62 in the wilderness of Judea: Middin, Secacah, Nibshan, and Ir-Melah (City of Salt), between Beth-Arabah in the north and 'Ein-Gedi in the south. Eshel has suggested the identification of the City of Salt with the Iron Age II site of Meẓad Gozal, adjacent to the salt rock of Mount Sodom, farther south than 'Ein-Gedi (1995). To these Iron Age II sites we can add the royal fortresses of Horvat Shilha, excavated by Amit and Ilan, adjacent to the road leading from Michmash to Jericho, and that of Vered Jericho, excavated by Eitan (1983) to the south of Jericho. The road system leading from the settled land of Judea to Jericho, Qumran, the Dead Sea, 'Ein-Gedi, and Zoara on the southern shore of

the Dead Sea, across the Judean Desert, is quite well known due to the intensive surveys and excavations.

Second Temple period. The Hasmonean and Herodian initiative for agricultural exploitation of the Jordan Valley and 'Ein-Gedi oasis is attested at the sites of Pithulais, Archelais, Na'aran, Jericho, Qumran, and 'Ein-Gedi. [See Agriculture.] Rujum el Bahr and Qasr el-Yahud (Khirbet Mazin) are two Hasmonean maritime docks on the shores of the Dead Sea. The Hasmonean/Herodian fortresses of Masada, Herodium, Hyrcania, Cyprus, Dok and Aleksandryon, and Machaerus (on the other side of the Dead Sea), with their water supply systems (Amit et al., in press), are the most comprehensive settlement initiative of the Late Hellenistic and Early Roman periods in the confines of the Judean Desert (Tsafrir, 1982). [See Water Systems.] Late Roman and Byzantine fortresses and military posts of Provincia Palaestina at 'Ein-Boqeq (Gihon, 1993) and Meẓad Zohar are located south of Masada.

The sectarian site at Qumran. Qumran was the chief settlement of the Dead Sea sect. [See Qumran; Qumran Community.] Another settlement associated with it is in 'Ein el-Ghweir, where a similar cemetery was exposed. Recently (early 1998), Hirschfeld claimed that approximately twenty-five huts and simple shelters he had excavated above 'Ein-Gedi, on the northern bank of Naḥal Arugot, rather than Qumran, should be identified with the location of the Essenes mentioned by Pliny the Elder (*Natural History* 5.15.73). A similar agglomeration of thirteen poor huts, already traced by Bar Adon (1972, p. 126, site 114) at the outlet of Wadi en-Nar, above Khirbet Mazin, was excavated by U. Dahari in the framework of "Operation Scroll," without arguing for any association between them and the Essenes.

Following the original interpretation of Qumran by de Vaux as a monastic site of the Dead Sea Sect, various other suggestions were put forward. Most agree that, at least in its last phase, Qumran was a sectarian settlement. According to H. Stegemann, Qumran was an educational and study center, where the manuscripts of the Essenes were also copied and stored. According to J. B. Humbert (1994), it was a religious cultic center of the Essenes, where sacrifices took place, and according to E. M. Cook (1996), it was their main ritual purification center. Others, ignoring or misinterpreting the archaeological evidence as a whole, deny its sectarian character. According to N. Golb it was a military post, but there is no real fortification wall. According to R. Donceel and P. Donceel-Voûte it was a Hasmonean or Sadducean winter *villa rustica*, but their reconstruction of its triclinium is far-fetched. According to A. Crown and L. Cansdale, it was a commercial entrepôt, and for Y. Hirschfeld (1998), it was an agricultural manor (Cook, 1996; Humbert, 1997).

In terms of architecture, as was pointed out by Hirschfeld, Qumran shares some basic features with a group of Hasmonean and Herodian farms equipped with a fortified tower that served as a stronghold. At the beginning it might also have had a military function. The various workshops, warehouses, and installations indicate that it was indeed a busy place, presumably engaged in the manufacture of date and balsam products cultivated in the terraced fields extending along the shore between 'Ein-Feshkha and Qumran, and irrigated by a network of built channels. On the other end, the sectarian character of Qumran, suggested by the scrolls found in caves in its immediate vicinity, is even more evident due to its unique archaeological features, which set this site apart from any other site uncovered so far in the Judean Desert or elsewhere in Israel: the multiplicity of ritual baths (*miqva'ot*) equalling ten in number, hall 77 (the "refectory" and assembly hall), the elongated hall on the second story above locus 30 (the "scriptorium"), the inkwells, and the vast and well-organized cemetery that demonstrates shaft burials completely different from the *kokhim*, rock-cut, family burials, so common in the necropoleis of Jerusalem or that of Jericho and 'Ein-Gedj.

The limited space for dwellings within the walls indicates that the permanent population at the site did not exceed a few dozen inhabitants. In spite of claims by Eshel and Broshi (1997), extramural dwelling quarters in tents or caves, large enough to accommodate a population of 150 inhabitants or more, have not been traced (Patrìch, 1997 and 1998). Yet, some features point to a larger population: the refectory could have served approximately 150 inhabitants or more, the ten *miqva'ot* could as well serve a much larger group than the small permanent population at the site. Similarly, the cemetery is much larger in size relative to the small settlement.

These seemingly contradictory data might be resolved if we assume that sect members from Jerusalem and elsewhere used to come here on feast days, to celebrate together, according to the calendar and liturgy of the sect, which were different from the official Jewish practice in the Jerusalem temple. Qumran should be conceived as an integral part of the Essene community of Jerusalem.

Hideouts in the desert caves. Biblical and postbiblical literary references, as well as the archaeological finds, attest that the desert caves—mainly those not too remote from the settled land on the west, or from 'Ein-Gedj and Jericho on the east—had served as hideouts. For the late Persian and early Hellenistic periods this is attested by the finds of Wadi ed-Dalijeh, Ketef Jericho, and other caves to the west of Jericho. A hoard of tetradrachmas of Alexander the Great found near Jericho should also be associated perhaps with the early Greek conquest of the country. The Hasmonean period is attested by caves to

the west of Jericho, which were explored in the framework of "Operation Scroll." The desert of Samaria also served as a land of refuge for the rebellious Hasmoneans (Schwartz and Spanier, 1991). For the end of the Second Temple period this phenomenon is attested by the hideouts in Ein-Fara and Naḥal Michmasli, and by the Qumran caves (Patrìch, 1995). In the cliffs near 'Ein-Fara the cave encampment set up by Simeon Bar Giora, one of the leaders of the First Jewish Revolt against the Romans, was found; this same camp was mentioned by Josephus. [See 'Ein-Fara.] Aramaic inscriptions and painting of menorahs and a pentagram were found in one of the caves in Naḥal Michmas. Hideouts from the Bar Kokhba Revolt were found in Naḥal David, Naḥal Şe'elim, Naḥal Harduf, Naḥal Hever (including the Seja Cave), Murabba'at, Herodium, Ketef Jericho, Naḥal Michmas, Wadi Makukh, and Wadi ed-Dalijeh. El-Massaiyah Cave, from the same period, was excavated in upper Naḥal Dargot. A defense network, which included three towers and a defensive wall, was found on the banks of the wadi surrounding this cave.

Manuscript finds. Discoveries of ancient manuscripts in caves in the Jericho region are recorded in ancient sources. According to a colophon for the *Hexapla* of Origen, a Greek version of *Psalms* was found in a jar in the Jericho region, together with other Greek and Hebrew manuscripts, during the reign of the emperor Caracalla. A note on another cave discovery in this region, in about 785 CE, of biblical and other works in Hebrew script, is preserved in a letter by the Nestorian patriarch Timotheus I to Sergius, the metropolitan of Elam. The *Pentateuch*, called the *Jericho Pentateuch* by the Masoretes, probably was discovered in such a cave. A papyrus of the end of the Judean monarchy (Bordreuil and Pardee, 1990), was presumably found at an unknown site near Jericho. In one cave south of Naḥal Yishai an inscription from the biblical Judean monarchy was found.

Manuscripts, on parchment or papyrus, other than the Dead Sea Scrolls from the Qumran caves, were found at Wadi ed-Dalijeh, Ketef Jericho, Khirbet Mird, Murabba'at, Masada, Naḥal David, Naḥal Hever, Naḥal Mishmar, Naḥal Şe'elim, and 'Ein-Boqeq (Gibon, 1993). [See entries for place names in this paragraph.]

The Byzantine Period. The Byzantine period in the Judean Desert and in the Valley of Jericho is characterized by monasteries and hermitages. At that time, monks settled many ravines all over the Judean Desert, establishing there lauras and cenobia. Churches were erected near the site of baptism at the Jordan, and in other centers of pilgrimage. [See Monasteries.]

Archaeological Techniques and Methods Used in the Dead Sea Sites. Unlike a regular survey and excavations, archaeological explorations of caves require some

special equipment: mountaineering equipment to get access to those caves that are located on steep cliffs, lighting, dust masks, and ventilation equipment.

Aerial photographs are of a limited help for the designation of caves located on steep cliffs. Horizontal shootings are preferable in these cases.

In some areas and caves adjacent to Qumran, special electronic equipment measuring electrical conductivity and resistivity or electromagnetic resonance, or similar remote sensing equipment, was used in order to trace still hidden underground spaces, but to no avail.

A new method of carbon-14 analysis invented in the mid-1980s—Accelerator Mass Spectrography (AMS), requiring just 5–10 milligrams of organic material in order to be applied—was utilized to analyze manuscripts in two separate laboratories: the Institut für Mittelenergiephysik in Zurich and the NSF Arizona Accelerator Mass Spectrometry Facility, University of Arizona, at Tucson. Twenty samples from fourteen dated and undated manuscripts written on leather and papyrus were examined in the first laboratory (Bonani et al., 1991), and fifty-three samples from eighteen inscribed leather scrolls and two linen textiles were examined in the second (Jull et al., 1996). The resulting dates nicely corroborated dates attributed to these scrolls and documents earlier by paleography, and established once and for all that the sectarian writings preceded Christ by many decades. Linen textiles used as wrapping for the scrolls were subjected to carbon-14 probes already in 1951 (Libby, 1951). Weaving and dyeing aspects of these fabrics have been subjected to particular study as well (Bélis, 1997).

Another field of scientific application, still under operation, is to determine the DNA of the scroll parchments to recover genetic information about the animals from which the skins were taken. A comparison with animal bones retrieved from excavations in Qumran and the adjacent caves may establish relations between the scrolls and local herds of sheep, goats, or other animals. This method may thus determine whether the scrolls were written or copied at Qumran or elsewhere. It may also enable researchers to trace fragments that originally had belonged to the same text. This field, still under development, has been undertaken by a team of scholars, headed by P. Smith and G. Kahila from the School of Medicine of the Hebrew University of Jerusalem at Hadassah Hospital, in collaboration with S. R. Woodward (1996) of Brigham Young University, Utah.

New methods of analysis were also applied to the study of the pottery, in addition to the regular typological-chronological comparative study. Petrographical and Neutron Activation analyses conducted on clay vessels from Qumran and 'Ejn el-Ghweir proved the clay to be of

two different sources (Broshi, 1992), raising some difficulty concerning the usual interpretation of 'Ejn el-Ghweir as a sectarian site.

JOSEPH PATRICH

ARCHITECTURE. While climatic conditions did not generally make the Judean Desert into an obvious choice for settlers, major architectural activities did nevertheless materialize throughout this area. Being a marginal area, regular settlements came into being in this arid zone only in places where water was available, either in the form of perennial springs, as in the oases of Jericho, 'Ein-Gedi, 'Ein-Buqeq, and Zoar, or as a result of human efforts to collect such water by means of aqueducts, dams, or cisterns.

Building activities were primarily a result of the presence of groups that had withdrawn into the Judean Desert for a variety of reasons, and under differing historical circumstances. One such group that had severed its ties with contemporary society and made the desert its home was the community at Qumran. Early Christian monks

who took up residence in the area starting in the fourth century CE were another group that purposely created a boundary between itself and its contemporaries.

During both the First and Second Revolts against Rome (66-74 and 132-135 CE), the Judean Desert served as a base of operations (Herodium, 'Ein-Gedi, Masada) and as a last refuge (Judean Desert caves), and these events also resulted in a strong, although mostly temporary, Roman military presence in the region, which has left considerable architectural traces. At Masada, where a series of opulent palaces had been constructed by Herod, the choice of the site had likewise been dictated by the wish to facilitate withdrawal to a safe and faraway desert fortress in times of crisis.

In the Judean Desert, the most conspicuous architectural remains cannot, therefore, be described in terms of a slow, evolutionary process. They rather should be seen as reflecting the history of different groups of people, whose presence in the area was limited in both time and space as it was being dictated by very specific concerns. Despite the relative isolation in which such people chose to live, the architecture they produced and the artifacts they used were nevertheless very similar to the architecture and artifacts common in other parts of Hellenistic, Roman, and Byzantine Palestine. Architectural remains from the Judean Desert thus help to document the complex, yet interactive relationship between people residing in this desert and those living elsewhere in ancient Palestine.

The Road System. In antiquity, only a few roads were constructed in the inhospitable and mountainous Judean Desert. The main road, on the northern fringe of the Judean Desert, was the one leading from Jerusalem to Jericho, from where it went on to Heshbon and Philadelphia (Amman). This road, along which watchtowers were erected beginning in Hellenistic times, continued to be in use throughout antiquity and beyond, as indicated by archaeological evidence dating mainly to the Mamluk period discovered in Nehi Musa.

Further roads in the Judean Desert should be considered as desert tracks rather than actual roads. One such track, which was partially surveyed by P. Bar Adon in 1968, led from Jerusalem to Bethlehem and Tekoa, from where it continued into the Judean Desert to 'Ein-Gedi, and from there along the coast of the Dead Sea through Wadi 'Arahah down to Aila (Eilat). A second important track, which began in Hebron, joined the Jerusalem-Aila track in the Judean Desert. Defense and watchtowers, as well as remains of caravanserais, were discovered along this track during a recent survey. They permit us to date the main activities along this track to the time of the Iron Age and the Byzantine era. Still another major track con-

nected Gaza-Maiumas on the Mediterranean coast with 'Ein-Buqeq on the Dead Sea.

Settlements located on the shores of the Dead Sea were accessible via harbors as well. Such harbors probably existed in 'Ein-Gedi as well as at Rujm el Bahr.

Monumental Architecture. In the Judean Desert, a chain of fortress and palaces was constructed starting in the later second century BCE. Except for Herod's winter palace built along Wadi Qilt near Jericho, architectural remains at sites such as Cypros, Hyrcania, Herodium, and Masada show how, in the early Roman period, the wish to participate in supra-regional artistic trends was combined with a strongly felt need for security. Being located on inaccessible hilltops and having been equipped with a set of walls and defense towers, these sites were first developed under the Hasmoneans. It was not until the reign of King Herod, however, that they were turned into the splendid palace-fortresses visible at these sites today. Because they could easily be defended, palace-fortresses such as Masada and Herodium also played a prominent role in the First Jewish Revolt, and in case of the latter, the Bar Kokhba Revolt as well.

Recent study of architectural remains at Masada by E. Netzer (1991) and G. Foerster (1995), and of such remains at Jericho, has helped to document the extent to which Herod's architectural projects were indebted to local architectural and artistic traditions. Such study has also shown, however, how Herod's architects managed to integrate elements deriving from the larger world of the Hellenistic Near East in the terms of layout, construction techniques, and decorative schemes applied. Typically Roman architectural elements can best be seen in the form of characteristically Roman building techniques such as the use of *opus reticulatum* and *opus quadratum* at Jericho, or the construction of Roman-type baths at all the Herodian sites in question.

Evidence of specifically Jewish architectural practice survives in the form of *miqva'ot* (ritual baths), which appear at all these sites, while Hebrew letters carved into a series of seventy column drums discovered at Masada likewise seem to indicate that at least part of the workforce there may have been Jewish. In the particular case of Masada, Nabatean artistic influence can be detected in a series of Corinthian-Nabatean blocked-out capitals.

During the First Jewish Revolt, Herodium and Masada became important centers of resistance. The insurgents appropriated existing structures in such a way as to accommodate large groups of people. They also transformed existing buildings into synagogues. Herodium also played a role during the Bar Kokhba Revolt, when an extensive network of underground galleries was excavated in the partially artificial hill. Except for some isolated evidence of activity by monks in the Byzantine pe-

riod, Herod's large palace-fortresses were not rebuilt in the post-135 CE era, nor did the Roman army occupy them for any significant length of time.

Industrial Complexes. In the ancient world, the area surrounding the Dead Sea was famous for its production of asphaltum, balsam, and perfumes. A workshop of 20 by 20 meters for processing products of this type has been excavated in 'Ein-Buqeq. It was probably already operative in the Hasmonean period and continued to function well into the second century CE. Similar workshops must also have existed at 'Ein-Gedi and at Jericho, where the production of dates constituted the single most important crop. In the latter town, evidence for the existence of a workshop for the production of balsam has survived to the north of Herod's palace. A complex for the large-scale processing of agricultural products was excavated by R. de Vaux (1973) at 'Ein-Feshkha—a site that may have been a dependency of Qumran. Workshops that satisfied local needs were probably also common. One such workshop (for the production of pottery) has been excavated in Qumran.

Domestic Architecture. Little is known about the history of domestic architecture in the Judean Desert on the basis of archaeological remains. Literary sources suggest that a large Jewish village existed in 'Ein-Gedi during the Roman and Byzantine periods, but except for individual finds, little is known about the formal appearance of the domestic architecture of the site. In Jericho, south of Herod's palace, evidence of houses dating to the Second Temple period and probably belonging to wealthy owners has also survived, but these houses too await further study. [See 'Ein Feshkha; 'Ein-Gedi.]

Qumran. The chronology and interpretation of individual buildings as proposed by R. de Vaux in the preliminary account of his archaeological discoveries in Qumran has recently been called into question. Where de Vaux had stressed the communal nature of most of the architectural spaces at Qumran, other scholars have lately suggested that the site functioned primarily as a fortress or as a villa. The final publication of the stratigraphy and architecture, which is in preparation, will probably help to settle these questions. [See Qumran, *article on Archaeology.*]

Caves. From prehistoric times onward, the hundreds of caves that can be found in the Judean Desert, in cliffs overlooking dry streambeds, have been a preferred site for human habitation. In the Roman period, it was not unusual for such caves to have been used for domestic purposes. Such caves were used especially intensively at two points in history, during the period of the revolts against Rome, when such caves were used for hiding, and in the early Christian era, when caves served as a retreat for anchorites. Much of what is known about the history

of the Judean Desert derives from these caves and dates to these periods.

The caves found north of Masada in Naḥal Še'elim, Naḥal Mishmar, Naḥal Hever, and Naḥal David, as well as the caves in Wadi Murabha'at have provided us with a wealth of written and artifactual evidence bearing on the Bar Kokhba Revolt. The general absence of architectural remains inside the caves mentioned attests that human activity there resulted from an emergency situation that accompanied the collapse of Bar Kokhba's reign. Something similar holds true for the caves that were used during the First Jewish Revolt, such as the caves at 'Ein-Fara, in the western part of Wadi Qilt, and Naḥal Michmash, which were studied by J. Patrich (1995) and, possibly, also the caves in Wadi Murahha'at. Architectural activity in these caves was limited to the construction of the cisterns (Cave of the Pool in Naḥal David, Miqveh Cave in Naḥal Harduf).

The caves in and around Qumran served various purposes. Some of these were used for storage and as a library, while others may have provided living quarters for members of the community. The caves finally also served to hide documents.

In the early fourth century, early Christian ascetics "turned the Judean Desert into a city." Taking up residence in desert caves, such ascetics made their caves into abodes in which they could dwell on a permanent basis (see below).

Water Systems. In the Judean Desert, survival was possible only in places where enough water could be acquired. Archaeological evidence suggests that much energy was spent on obtaining and preserving water. At sites where water was not locally available, it was brought in by means of aqueducts. Remains of aqueducts have been traced in and near Herodium, Wadi Qilt, and Wadi Nu'eima (a total of five aqueducts), and Hyrcania. Aqueducts and plastered conduits that were fed by local sources can be found in 'Ein-Gedi and 'Ein-Buqeq. In 'Ein-Gedi, such aqueducts fed into cisterns that were used to water a series of terraced fields, which were located in the vicinity.

In Masada, Hyrcania, and Qumran, water from the surrounding wadis was collected and led to a series of reservoirs and cisterns in and around the settlements themselves. Huge cisterns that also served for the collection of run-off water were discovered at all of Herod's palace-fortresses. The later monks likewise relied on run-off water, as is evident, for example, from archaeological evidence uncovered at the monastery of St. Theodosius.

Miqva'ot and Baths. Jewish ritual baths occur at Herodian sites such as Masada, Herodium (Upper and Lower), and Herod's winter palace along Wadi Qilt. We can only speculate as to why such *miqva'ot* were included

in Herod's palaces. One possible explanation is that these ritual baths should be dated to the period of the First and Second Revolts against Rome. In Qumran, a series of *miqva'ot* has been excavated. They provide telling evidence for the importance attached to ritual purity by the members of the Qumran sect. [See *Miqva'ot*.]

Roman architectural influence is most tangible in the form of a series of Roman-type bath complexes. All of the palace-fortresses—Masada and Lower Herodium in particular—contained one or more such baths. The same holds true for Herod's winter palace in Jericho. Remains of a Roman-style bath dating to the period between 70 and 135 CE also came to light near 'Ein-Gedi, in the plain between Naḥal David and Naḥal Arugot.

Funerary Architecture. Remains of several burial grounds have been excavated in the Judean Desert. According to Josephus, Herod was buried in Herodium, but his mausoleum has not been identified, despite efforts to do so. At the foot of Hyrcania, another of Herod's palace-fortresses, graves, which may contain the earthly remains of his political opponents, were found.

In Jericho, R. Hachlili (Hachlili and Killebrew, 1983) has excavated some 120 chamber tombs dating to the time of the Second Temple. These tombs, which contain vital evidence on the history of primary and secondary burial among Jews, are particularly interesting because of the remaining Hebrew, Aramaic, and Greek inscriptions as well as the wall paintings they contain. At 'Ein-Gedi, a series of similar chamber tombs dating to the second and first centuries BCE has been discovered, especially in the years 1984–1988. There too, remains of ossuaries, wooden coffins, and traces of wall paintings could be recovered. Wooden coffins dating to the Hasmonean period also came to light in the so-called burial caves in Naḥal David.

Physical remains of the supporters of Bar Kokhba who had been starved to death were encountered in the Cave of Horror and also in the Cave of the Letters, in Naḥal Hever.

A large cemetery with some 1,100 shaft graves, as well as two subsidiary cemeteries, were discovered in Qumran. During the excavations of fifty graves in these cemeteries, remains of males, females, and children were uncovered. Fifteen kilometers south of Qumran a similar, but much smaller cemetery was excavated at 'Ein el-Ghweir. [See *Cemeteries*.]

Roman Military Architecture. Regular Roman military forces were stationed in Jerusalem following the destruction of the city in 70 CE, and in Ramat Rahel, where Roman barracks belonging to the same period have been discovered. In the fourth century CE, troops that were part of a defense line known as *Limes Palaestinae* could be found in 'Ein-Buqeq, where a small fort of 16.5 by 16.5 meters has come to light.

The Roman military presence in the Judean Desert was mostly temporary in character. The largest and architecturally most interesting complex of Roman military architecture in this area is constituted by a series of two large and six smaller Roman camps built during the siege of Masada—camps that were interconnected by a long, continuous circumvallation wall. Architecturally, these camps, which have been only partially excavated, conform to the standard type of Roman military camp in terms of layout (four gates, two principal roads, *praetorium*, etc.).

Of special interest are the *contubernia* or mess-units, which served to accommodate the soldiers and which have survived in large numbers. Recent and still unpublished work on the siege ramp and on one of the Roman camps at the foot of this ramp should help to further clarify both the chronology and the nature of Roman military activity in and around Masada.

Evidence of a Roman military presence postdating the First Jewish Revolt also survives on top of Masada, and at other sites such as Qumran, but the evidence suggests that such a presence was but short-lived (until 111 CE and 73 CE respectively). A Roman garrison (*cohors I miliaria Thracum*) was probably also stationed in 'Ein-Gedi in the period between the two revolts.

Other Roman camps, dating mainly to the period of the Bar Kokhba Revolt, survive in the Judean Desert on plateaus that overlook the cliffs and caves where the supporters of Bar Kokhba had taken refuge. Such camps survive near Naḥal Şe'elim near 'Ein-Anava, near Caves 1 and 2 in the Naḥal Mishmar (only shards), near Naḥal Hever over the Cave of the Letters and the Cave of Horror, respectively (extensive architectural remains), and, possibly, also in Wadi Murabba'at. Again, archaeological evidence suggests that such camps were but temporary structures that were deserted soon after the purpose of bringing the Bar Kokhba Revolt to an end had been accomplished. [See Roman Camps.]

Synagogues. The Judean Desert has preserved some of the earliest evidence bearing on the history of synagogue architecture. During the First Jewish Revolt, preexisting buildings in Masada and Herodium were turned into synagogues through the construction, along the walls, of benches, which consisted of reused materials. Although scholarly opinion on the identification of the buildings as synagogues is divided, the presence of fragments of a *Deuteronomy* and an *Ezekiel* scroll in the Masada synagogue seems to favor those who regard these buildings as early examples of Jewish religious architecture. It has been suggested that during the same general period there also existed a *beit midrash* ("house of study") at Masada.

In the late antique period, when the architecture of the synagogue had fully evolved, further synagogues were

constructed at 'Ein-Gedi, Jericho (Tell es-Sultān), and Na'aran. These synagogues are especially interesting because of their mosaic floors, which document how in the course of the sixth century naturalistic scenes were replaced by geometric ones, as at Jericho, or verbal transcriptions of the signs of the Zodiac and the months of the year, as at 'Ein-Gedi. [See Synagogues.]

Churches and Monasteries. Upon the rise of early Christian monasticism in the fourth century CE, the Judean Desert became a preferred spot for anchorites and cenobites who wanted to withdraw into the desert. As a result of the surveys and excavations carried out by Y. Hirschfeld (1992) and J. Patrich (1995), it has recently become possible to reconstruct the history of the monastic movement using archaeological evidence. Concentrations of early Christian monastic remains can be found in and around Wadi Qilt, where early in the fourth century Chariton founded the oldest *laura* in Palestine, at 'Ein-Fara. Along this wadi no less than sixty-five monastic sites dating to the Byzantine period have been identified. Another concentration can be found in the triangle Jerusalem-Bethlehem-Mar Saba (five Byzantine monasteries and forty-five hermitages associated with the activities of St. Sabas [439–532 CE]), as well as near Herodium-Tekoa (Wadi Chariton, after a monastery founded by Chariton). In the southern part of the Judean Desert there were considerably fewer monasteries and hermitages. Isolated spots such as Herod's old palace-fortresses, including Herodium, Dok, Cypros, Hyrcania, and Masada, were especially popular among early Christian monastics. [See Churches; Monasteries.]

LEONARD V. RUTGERS

ARISTOBULUS II. See Alexander Jannaeus; Hasmoneans; and Shejamzion Alexandra.

ARUGOT, NAHAL. Cutting through the Judean Desert, Nahal Arugot flows southeast from the Judean Mountains to the Dead Sea, from about 1000 meters above sea level to 400 meters below sea level. Its length is 31 kilometers and its drainage area is about 220 square kilometers. Its western border is the Teqo'a-Kefar Baruch (Bani-Na'im) road.

It has three sections: Nahal Arugot Elyon (upper) or Wadi el-Jihar, Nahal Arugot Tikhon (middle) or Wadi el-Ghar, and Nahal Arugot Tahton (lower) or Wadi Areijeh.

Throughout history, Nahal Arugot was the site of only

roads and forts. Its location in the Judean Desert precluded permanent settlements, but nomads camped there for limited seasons. The middle and lower wadi belong to 'Ein-Gedi, which was a large Jewish village from before the fourth century CE (*Onomasticon* 428) through the sixth century CE, as shown by the synagogue located there. [See 'Ein-Gedi.]

The main road to Jerusalem from 'Ein-Gedi was via Teqo'a. Along the road were forts built during the Iron Age and used during the Early Roman period (Bar-Adon 1972, pp. 93–4). At Rujum en-Naga architectural remains were found with pottery from the Iron Age, Hellenistic, and Early Roman periods (Bar-Adon, 1972, p. 93–94), and the remains at Mitspe 'Ein-Gedi can be dated to the Late Iron Age and are paralleled by those of Stratum V in Tel Goren (Ofar, 1986, 27).

The Teqo'a-Hebron road runs north-south along Nahal Arugot's western edge, along a chain of forts from the Byzantine period (Hirschfeld, 1985, p. 10*) such as Khirbet Sahba (Hirschfeld, 1985, pp. 57–58).

In upper Arugot, south of Teqo'a, lies a connecting road between the two roads mentioned above, with towers and water cisterns established at the end of the Iron Age and reused in the Byzantine period (Amit, 1989, pp. 161–162).

Two ascents were built to cope with the 600-meter height, the Ascent of 'Ein-Gedi near the Israelite fort and the Ascent of the Essenes, built by Hadrian to serve the Roman siege camps above the caves in Nahal Hever (Harel, 1967, pp. 21–23). [See Hever, Nahal, article on Archaeology.]

Monasteries were built during the Byzantine period, only in Wadi el-Jihar: Nea Laura, which included a church with monks' cells around it, a garden with a dam, and a reservoir and cisterns (Hirschfeld, 1992, pp. 26–27; the Severianus monastery (Hirschfeld, 1992, pp. 46 and 49); and Khirbet ed-Deir, which included church and dining-hall complexes, residential quarters, and a garden. On the church floor is a Greek inscription taken from the Septuagint (Ps. 106.4–5). Another Greek inscription is taken from *1 Corinthians* 15.52–53 (Hirschfeld, 1991, pp. 39–42).

A number of settlement sites are located in the lower part of Wadi Areijeh, close to the Tell of 'Ein-Gedi. In the ravine are remains of aqueducts hewn out of the rock and a reservoir. Tombs were found at the mouth of the river with many wooden coffins and vessels dating from the second or first century BCE. There were primary burials in wooden coffins, secondary burials in large wooden coffins (Hadas, 1994, p. 30), and wooden ossuaries (Hadas 1994, p. 7).

On top of the desert plateau at Mitspe Arugot are twelve buildings and the remains of an ascent to the wadi

dating from the sixth century CE (Bar-Adon, 1972, p. 145).

Even in the Arugot Cave, pottery from the Iron Age and Early Roman period was found. A jar handle imprinted in old Hebrew, *le-Nahum 'avdi* ("to Nahum my servant"), also was found (Hadas, 1983, p. 62).

GIDEON HADAS

ASSYRIA. Located on the west bank of the Tigris (Qal'at Sherqat), forty miles south of the Upper Zab tributary, Assyria (Ashur) is the designation of a land and then an empire named after the old capital city of Ashur. The Assyrian heartland consists of a roughly triangular stretch of land around the upper Tigris embracing Ashur and the subsequent capital cities Kar-Tukulti-Ninurta, Kalhu (Nimrud), Dur Sharrukin (Khorsabad), and Nineveh (Kuyunjik). At the height of its power the Assyrian empire embraced the entire Fertile Crescent, extending from southern Armenia in the north, the Arabian Desert in the south, Egypt in the southwest, and the Persian Gulf in the east. Assyrian political power ended with the fall of Nineveh in 612 BCE, although certain elements of Assyrian culture and administrative practices lived on in various parts of the Neo-Babylonian and Persian empires that succeeded it.

Assyria became a factor in Israelite and Judean history in the ninth century BCE, perhaps under Shalmaneser III and certainly under Tiglath-pileser III, and remained a decisive force, bringing about the fall of Ephraim and its capital Samaria in 722 BCE and threatening Jerusalem and Judah until its own fall. Assyria, city and empire, and the kings Tiglath-pileser III, Shalmaneser V, Sargon II, Sennacherib, Esarhaddon, and Ashurbanipal are mentioned in the historical books of the Hebrew scriptures as well as in the prophecies of *Hosea*, *Amos*, *Micah*, *Isaiah*,

Nahum, *Zephaniah*, *Obadiah*, *Jeremiah*, *Ezekiel*, and *Zechariah*, and the *Book of Psalms*.

As early as the seventh century BCE the Egyptians and Greeks used Assyria, and a shortened form, Syria, to designate all lands speaking Aramaic, which had become the official language of the Assyrian empire and its successors. This usage is reflected in the rabbinic designation of the Aramaic and late Hebrew script as Assyrian (*Ashurit*). Later on, Syria became the Greek designation of the Levant, while Assyria was used for Mesopotamia. *Ketubbot* 10b in the Babylonian Talmud identifies Assyria with Seleucia. The Dead Sea Scrolls refer to Assyria in its Hebrew form, Ashur, and even the attestations in Aramaic texts prefer this form to the Aramaic Attur. Assyria occurs in the Dead Sea Scrolls with two distinct meanings, reflecting the biblical meaning on the one hand and the later connotation on the other.

Assyria appears in the Qumran biblical scrolls as it does in the other versions. Noncanonical Psalms B (4Q381 33.8; Prayer of Manasseh, reflecting 2 *Chr.* 33.10-19), Peshar Isaiah^c (4Q163 7.2, a citation of *Is.* 10.12-13; 4Q163 40.1), and the Genesis Apocryphon (1QapGn xvii.8; cf. *Jub.* 9.1) also refer to the historical Assyria as known from the Hebrew scriptures. In these instances Ashur is a descendant of Shem. Describing the division of the earth among Noah's sons Shem, Ham, and Japheth, Genesis Apocryphon (1QapGn xvii.8) places the portion of Shem "to the west, to Assyria, until it reached the Tigris" (cf. *Gen.* 10.22 and *Jub.* 8.11-9.15). Certain nonbiblical passages also refer to Assyria as a descendant of Shem and in its historical borders. Thus, the War Scroll (1QM ii.12) reads "During the sixth and seventh years they shall wage war against all the sons of Ashur, and Persia, and the Eastern peoples up to the Great Desert."

A special meaning of Ashur, attested exclusively in the War Scroll, occurs in the expression *Kittiyyei Ashur*, "the Kittim of Ashur" (1QM i.2, i.6, xviii.2, xix.10). This term is an expanded and specialized form of the frequently attested *Kittim*, who were an enemy descended from Japheth destined to come from the Mediterranean. The *Kittim* in the Dead Sea Scrolls, once thought to be the Greeks, are now often identified with Rome, and the *Kittim* of Assyria are a subdivision of this group. Several biblical texts that speak of the historical Assyria are used as a basis for an apocalyptic predication concerning the *Kittim* (1QM xi.11, "From of old you foretold the moment of the power of your hand against the *Kittim*: Assyria will fall by the hand of no one, and the sword of nobody will devour it," based on *Is.* 31.8). A precedent for such identifications can be found in biblical texts such as *Ezekiel* 38.17, where the prophecy about Gog and Magog is based on *Isaiah* 14.24-27, a passage relating to Assyria. The War Scroll (1QM xix.10) reads: "And in the morning at

the battlefield will arrive the heroes of the *Kittim* and the hordes of Assyria and the army of all the nations who gather with them, [and, lo, they are all] dead corpses [because] they fell there by the sword of God"; the expressions "in the morning" and "dead corpses" seem to reflect 2 Kings 19.35 and Isaiah 37.36, while the "heroes of the *Kittim*" is related to 2 Chronicles 32.21, which expands and refers to "every hero of valor, officer, and prince in the Assyrian camp." These passages are meant to apply the biblical texts concerning the fall of Sennacherib in the past to the expected demise of the *Kittim* in the future.

It has been suggested that the use of Ashur as a modifier of *Kittim* implies that the nature of the Kittian rule will resemble Assyrian domination (cf. *Gen. Rab.* 16.4: "Rav Huna in the name of Rav Aḥa said: all the empires are named after Nineveh because they adorn themselves at Israel's expense"). It is more likely, however, that the combination of Ashur and *Kittim* indicates that the *Kittim*, who occupy the islands of the sea and the Mediterranean coast, have a center to the north of Israel or would invade the land of Israel from the north. In fact, the War Scroll (1QM i.1-2) groups the *Kittim* of Ashur along with Israel's traditional biblical neighbors, Edom, Moab, Ammon, Philistia, and the "offenders against the covenant." In this passage, which may have been influenced by Psalm 83.7-9, the Assyrian *Kittim* are a northern enemy closing a ring around Israel. They are comparable, therefore, to the "nation from the north" mentioned in the prophecies of Jeremiah. Moreover, the use of Assyria to designate the land north of Israel is certainly related to the later use of Assyria, or the shortened form, Syria, to designate the lands speaking Aramaic to the west of the Euphrates.

The locution *Kittiyei Ashur* and the use of the two words in parallelism may be related to the proximity between the two words found in Balaam's last blessing, a text of apocalyptic nature (*Nim.* 24.23-24). The lines "Ships come from the quarter of *Kittim*; they subject Ashur, subject Eber" may have been understood by the Qumran community as "Ships will come from *Kittim*; Assyria will afflict—they [Assyria] will afflict the descendants of Eber." Note also Isaiah 23.12-13: "Up, cross over to *Kittim*—even there you shall have no rest. Behold the land of Chaldea—this is the people that has ceased to be. Assyria which founded it for ships . . . has turned it into a ruin." Ezekiel 27.6 reads: "From oak trees of Bashan they made your oars; of *bat Ashurim* from the isles of *Kittim* . . . they made your decks"; here the enigmatic *bat Ashurim* should be read *bitashurim*, "with boxwood," but the reading preserved in the Masoretic Text already may have been known to the scribes who wrote the Dead Sea Scrolls.

ASTROLOGY. See Horoscopes.

ATONEMENT. The term *kipper* ("atone") is associated with the Arabic term *kafara* ("cover") as well as with the Akkadian *kuppuru* ("purge" or "wipe"). In the Bible the term is often paralleled by words meaning "decontaminate" or "purify." The Septuagint translation of *kipper* is *hilaskomai* ("propitiate" or "appease"). The root also carries the meaning of "ransom." Sin and severe impurities must be purged lest the wrath of God fall on Israel. In order to be reconciled to God, the guilty party must bear the penalty of the violation or provide a ransom, that is, a prescribed substitute. Priests act as mediators between God and the sinner to atone for, or expiate, guilt through specific sacrificial rituals.

The community at Qumran attempted to fill the void caused by their withdrawal from the Jerusalem cult. They did not reject the cult on principle but rather decried its present corruption. They fully expected the pure cult to be reestablished and priests to expiate sin through sacrifices once again (cf. Temple Scroll, 11Q19 xxv.10-xxvii.10; War Scroll, 1QM ii.5). Even one of the expected Messiahs would be a priest (e.g., Damascus Document, CD xiv.19; Rule of the Community from Cave 1, hereafter, 1QRule of the Community, 1QS ix.11). However, lacking a temple, members of the Qumran community accomplished atonement "without the flesh of burnt offerings and without the fats of sacrifice"; prayer "in compliance with the decree" was "a pleasant aroma," that is, incense before God, and "correctness of behavior" was "acceptable like a free-will offering" (1QS ix.4-5).

The emphasis in the scrolls is on God as the provider of atonement. His holy spirit, compassion, and grace make atonement possible (1QH^a xii.37 [iv.36]; CD ii.4-5). Though Israel had rebelled against him, God, "in his wonderful mysteries, atoned for their failings and pardoned

their sins" (CD ii.18). In future days, God will again expiate the guilt of Israel (CD xx.34).

Atonement also depends on the penitent's humble obedience: "By the spirit of uprightness and of humility his sin is atoned. And by the compliance of his soul with all the laws of God his flesh is cleansed by being sprinkled with cleansing water. . ." (1QS iii.8-9; cf. CD ii.5). The "laws of God" include subjection to the community, and stiff discipline is enforced to keep the sect holy (1QS v.6-13; ix.3-4). Apparently, the repentant sinner makes a declaration of praise to God for his mercy (cf. "May you be blessed, [God of Israel, who forgave me all] my faults and purified me . . . and atoned . . ."; Ritual of Purification, 4Q512 29-32.vii.9, 21).

The atonement process was accompanied by water purifications by the members of the Qumran community as described above (cf. 1QS iii.9). It is no surprise that the efficacy of water is denied to the rebel: "He will not become clean by the acts of atonement, nor shall he be purified by the cleansing waters, nor shall he be made holy by the seas or rivers nor shall he be purified by all the water of the ablutions" (1QS iii.4-5; cf. v.13). The requirement of ritual purification for the sinner is not new in Israel. According to the Bible, the leper and individuals suffering from leprosy and gonorrhea are sinners, the diseases resulting from a curse (*Lv.* 14.34, *Nm.* 12.9-11, *Dt.* 28.27, *2 Chr.* 26.23; cf. 4Q272 1.2; 4Q274 1.1; T., *Neg.* 6.7; B.T., *Arakh.* 16a). Purification by water must accompany the atoning sacrifices (*Lv.* 14.8, 15.13; cf. also *Gn.* 35.2).

There is a sense in which the righteousness of the sect atones for the entire world as an appeasement to God, which brings about his fair distribution of justice and prevents indiscriminate destruction. The sectarians are "chosen by the will (of God) to atone for the earth and to render the wicked their retribution . . . and these will be accepted in order to atone for the earth and to decide the judgment of the wicked" (1QS viii.6-7; cf. 1Q28a 1.3). These holy ones will "appease (*va-yekhapru*) his [God's] will in favor of all those converted from sin" (Songs of the Sabbath Sacrifice, 4Q400 1.16). Israel's enemies will be punished instead of her: "Of the wicked you shall make our ransom while for the upright [you will bring about] the destruction of all our enemies." (Liturgical Prayers, 1Q34 3.i.5).

Another aspect of atonement is the presentation to God of the first fruits of the new wine and oil as "atonement" for the rest of these crops. In other words, these first fruits serve as a sort of "ransom" or propitiatory gift to God that releases the rest of these crops for human consumption. The notion of first fruits is biblical, but it is not linked to atonement. The term used in the Bible is *hillel* ("desanctify"; *Dt.* 20.6), in contrast to the sectarian term *kipper* (11Q19 xxi.7-9; xxii.15-16). [See Tithing.]

Yom Kippur, the annual day of repentance in Israel (*Lv.* 16), is outlined extensively in Temple Scroll^a (11Q19 xxv.10-xxvii.19). The Levitical prescriptions are reorganized, and details are added from other parts of the Pentateuch. The day is to be observed by fasting and prayer (CD vi.19; Peshet Habakkuk, 1QpHab xi.8) not only for atonement but for the restoration of Israel (Festival Prayers^b, 4Q508 2.2).

The rabbis, like the sectarians, bewail the loss of the Temple cult and fully expect it to be reinstated in the messianic era. They focus on personal piety and good deeds as a substitute, much as the sectarians: "Now that we have no prophet or priest or sacrifice, who shall atone for us? In our hands is left only prayer" (*Tanhuma* on *va-Yishlah* 10), and "Prayer, repentance, and charity avert the evil decree" (J.T., *Ta'an.* 2.1, 65b).

In contrast to the sectarians, the New Testament writers do not consider the Temple cult necessary for atonement but rather affirm their faith in atoning for the death of Jesus (*Mt.* 26.26-29; *Mk.* 14.22-25). Nevertheless, the biblical language of atonement is used to interpret this event. Jesus "substitutes" his life as a "ransom" for penitent sinners (*Mk.* 10.45), "expiates" their guilt by his own sacrificial blood (*Heb.* 10.12), serves as their "propitiation" (*Rom.* 3.25; *1 Jn.* 2.2), and "reconciles" them to God (*Rom.* 5.10).

HANNAH K. HARRINGTON

ATONEMENT, DAY OF. See Yom Kippur.

AZAZEL. The name *Azazel* occurs in *Leviticus* 16.8, 10, 26 and in the Qumran texts Ages of Creation (4Q180), Enoch^{a-c} (4Q201, 202, 204), Enoch Giants^d (4Q203), and Temple Scroll^e (11Q19). In the biblical text *Azazel* appears to be a desert demon, while in works found at Qumran he is a leader of the angels who sinned. [See Demons.]

The etymology of the name and the meaning, and the origin of the ritual in *Leviticus* 16, have been the subject of much discussion (Janowski and Wilhelm, 1993). Perhaps Azazel means "God is powerful." This form of the name (*Azaz'el*, without consonantal metathesis) appears to be the more original and is still preserved in Temple Scroll^a (11Q19 xxvi.13) and Ages of Creation (4Q180 1.7–8). The masoretic form (*Aza'zeel*) is to be found in Enoch Giants^a (4Q203 7.i.6). There are still other spellings, but they depict the same name: Enoch^a (4Q201 iii.9) uses 'Asa'el, while the parallel texts in Enoch^c (4Q204 ii.26) and Enoch^b (4Q202 ii.26–29) have 'Aśa'e[l].

On the one hand, Azazel is the name of a desert demon. Within the ritual of Yom Kippur as described in *Leviticus* 16 (cf. 11Q19 xxvi.13; *Yoma* 4.1a, 6.2–6), one of the two goats prescribed by the biblical text is sacrificed for God, and the other carries the sins of Israel into the desert to Azazel. Instead of understanding Azazel as a proper name, the Septuagint and the Vulgate translate *Aza'zel* as *ez* ("goat") plus *zal* ("to go away")—*ho apopomaïos* or *capere emissarius*, "scapegoat."

On the other hand, Azazel is one of the fallen angels who, according to *Genesis* 6.1–4, once descended to earth (*1 En.* 6.7; cf. 4Q201 iii.9, 4Q204 ii.26, which refer to Azazel as the tenth of twenty such angels). [See Angels; Enoch, Books of.] When he fell in love with human women, he taught them his knowledge of metals, diamonds, and colors (*1 En.* 7.1, 8.1; cf. 4Q202 ii.26–29). The archangel Michael is to announce God's sentence to these angels (*1 En.* 10.11); they will experience the deaths of their wives and of their "sons of prostitution" (cf. *1 En.* 10.9); then they will be chained for seventy generations in a valley of the earth (*1 En.* 10.12). Azazel is treated in a special way (*1 En.* 10.4–8): Raphael is to bind Azazel's hands and feet, and to heal the earth from the corruption of the angels. Azazel will find neither peace nor pity nor intercession (*1 En.* 13.1–2); his final destination and that of his adherents is eternal punishment (*1 En.* 55.4, 69.2).

In Ages of Creation, "a *peshet* on the periods that God made" (4Q180 1.1), Azazel stands at the head of the fallen angels (4Q180 1.7: "and the interpretation concerns Azazel and the angels"). They lead Israel astray to love iniquity, to possess wickedness, and to forget the commandment of purity. Since Ages of Creation seems to refer to God's providence for the period of the angels' fall as well as for the periods of the temptation of Israel, Azazel plays a role that is usually occupied in Essene-Qumran texts by Belial.

In the *Apocalypse of Abraham*, Azazel is portrayed as the opponent of the angel Jaoel. Azazel takes the form of an unclean bird who tries to keep Abraham away from sacrificing and to make him leave Jaoel (*Ap. Ab.* 13.2–4).

Evil comes from Azazel over all generations of godless mankind (*Ap. Ab.* 13.8; cf. *Ap. Ab.* 14.4). As a serpent he had already tempted Adam and Eve (*Ap. Ab.* 23.6–8). Justice is his enemy (*Ap. Ab.* 14.4); he is personified wickedness (*Ap. Ab.* 13.6). His former position in heaven is now Abraham's (*Ap. Ab.* 13.12), but God allows Azazel to rule over the inhabitants of the earth (*Ap. Ab.* 13.7). As the chief of the fire-oven of hell (*Ap. Ab.* 14.3) he functions as an instrument of God's punishments.

In a medieval *midrash* about Shemihazah (another leader of the fallen angels) (Milik, 1976, pp. 321–331), Shemihazah repents of his deeds when the flood is near, but Azazel continues to tempt humankind. For this reason an animal is sent to Azazel to make him bear the burden of Israel's injustice.

The two aspects of Azazel, his role in an expiatory context (*Lv.* 16) and his position as one of the leading fallen angels (cf. *1 En.*), are combined from the first century BCE on. For example, in Enoch Giants^a (4Q201 7.i.6) Azazel is punished for the sins of the giants.

Despite the traditions of Azazel as an evil figure, he also appears as one of God's good archangels. In some of the manuscripts of the *Sibylline Oracles* 2.215 he belongs to the four imperishable court angels (cf. Mandaean *Ginza* 144.25, where Azazel is the head of the 444 Shekinas to the right, and 173.21, where Azazel is one of the watchers of the bound Ur). In magical literature Azazel plays an important role as a helpful angel; for example, by the name of Azazel the wind demon Lix Tetrax is thwarted (*T. Sol.* 7.7), and the name of Azazel is mentioned among the helpful forces on an Aramaic incantation bowl (Montgomery, 1913, no. 19.18). [See Magic and Magical Texts.]

ALEXANDER MAURER

B

BABATHA, a Jewish woman who is the central figure in a group of papyrus documents of the early second century CE found in the Judean Desert at Nahal Hever. The documents, designated 5/6Hev 1–35, are generally known as P.Yadin (less commonly P.Babatha) or as the Babatha archive. No particular connection between this archive and Qumran literature is apparent.

The Archive. The papyri were found in March 1961 in the course of the second season of the archaeological expedition led by Yigael Yadin, in the Cave of the Letters, located on the northern bank of Nahal Hever about 5 kilometers southwest of 'Ein-Gedi. The cave was named for a cache of letters of Shim'on Bar Kokhba that had been found during the previous year's excavations. The cave apparently served as the hideaway from the Romans for people of 'Ein-Gedi, including a commander in Bar Kokhba's forces, Yehonatan ben Be'ayan. In a corner of the innermost chamber, hidden in a crevice and covered by stone slabs, a basketful of various household objects and a carefully wrapped pouch containing the documents of the Babatha archive were found. Underneath the pouch were more household objects and a second purse with six additional documents dating from the first and third years of the Bar Kokhba Revolt, 132 and 134 CE. Babatha's pouch, then, could not have been placed there before November 134 CE. [See Bar Kokhba Revolt; 'Ein-Gedi.]

The Babatha archive is composed of legal documents, ranging in date from 93/94 to 132 CE and written in various languages: six documents are written in Nabatean, three in Aramaic, twenty-six in Greek. Of the Greek documents, nine have Aramaic or Nabatean subscriptions. Detailed descriptions of the documents in the Babatha archive were published by Yadin in 1962 and 1971. Three Greek documents, those later entitled 5/6Hev 15, 27, and 28, were published promptly by H. J. Polotsky. The Greek documents in their entirety were published after Yadin's death by Naphtali Lewis (1989); the Aramaic and Nabatean signatures and subscriptions were edited by Jonas C. Greenfield (Yadin and Greenfield, 1989). Of the remaining documents, only two in Aramaic have been published to date, 5/6Hev 7 and 10. Documents from the Babatha archive serve scholars concerned with various matters, including Roman legal procedure and provincial administration.

Personal History. Babatha's name, in one document spelled consistently as "Babtha," may be derived from the Aramaic word for "pupil of the eye," indicating someone especially precious. Her father was Shim'on son of Menahem, her mother Miriam daughter of Yosef son of Menashe (5/6Hev 7.3, 24). Babatha is regularly identified as a Maozene, that is, of Maoza, also known as Maḥoz 'Eglatain, a port or town in the district of Zoara at the southern end of the Dead Sea in the Roman province of Arabia. Her family had lived in Maoza at least since 99 CE, when her father bought a palm grove there (5/6Hev 3). We do not know if she had siblings. By 120 CE she was married (5/6Hev 7.24–25) to Yeshua son of Yeshua son of Yosef Zaboudos, also of Maoza. If the skeletons of the eight women, between the ages of fifteen and thirty, found in the Cave of the Letters include that of Babatha, then she would have been sixteen or probably younger at the time of her marriage.

By the first half of 124 CE she had a son, Yeshua, who was quite young since he was still a minor eight years later, and her husband was dead. The city council at Petra, the metropolis of the region, assigned the orphan two guardians, one Jewish, one Nabatean. The guardians invested the boy's capital and gave Babatha an allowance for his support at the rate of one-half percent, two denarii per month, half the usual interest rate. In 124 and 125 CE, Babatha petitioned the provincial governor about this low rate and offered to triple the return if the boy's property would be entrusted to her and secured by her own property (5/6Hev 13–15). Her initiative appears to have failed, for in 132 CE the guardians were still giving Babatha an allowance for her son at the original rate (5/6Hev 27).

In 127 CE, for a provincial census, Babatha declared her ownership of four palm groves in Maoza, listing yields and taxes for each (5/6Hev 16). We are not told how these groves came into her possession. One grove appears to have belonged to her father and presumably was given to Babatha as a gift before he gave his remaining property to his wife (5/6Hev 4, 7). The same may be true of the other groves, or she may have received them as part of the settlement of her first marriage.

By February 128 CE, and possibly as early as October 125 CE, Babatha was remarried, to Judah son of Eleazar Khthousion son of Judah. His official residence was 'Ein-

Gedj, where his family lived and he owned a home, but he lived in Maoza, where he also owned property. Judah previously was married to Miriam daughter of Beianos of 'Ein-Gedj, perhaps the sister of the Bar Kokhba commander mentioned above. Contrary to the view of several modern scholars that Judah's marriages were polygamous, nothing in the documents indicates that he was still married to Miriam when he married Babatha. The Aramaic document recording Judah and Babatha's marriage (5/6Hev 10) matches the traditional Jewish marriage contract as it would have been at that period. In February 128 CE, Babatha deposited with her husband three hundred denarii, probably a loan without a fixed term (5/6Hev 17).

In April of that year, Judah gave his daughter from his previous marriage, Shelamzion, in marriage to Yehudah Cimber son of Ananias son of Somalos, of 'Ein-Gedj. Eleven days later he gave her his house in 'Ein-Gedj as a gift, half of it to take effect after his death. Two years later Judah was already dead when representatives of the orphans of his deceased brother Jesus conceded to Shelamzion rights to that house (5/6Hev 18–20). That Shelamzion's documents were found among the papers of her stepmother Babatha is consistent with her being a minor and indicates a notable measure of trust between the two women.

Babatha, now twice widowed, probably by the age of twenty-five years or less, took possession of at least three palm groves owned by Judah in satisfaction of obligations under their marriage contract or loan. In September 130 CE, Babatha disposed of the produce of these groves by selling the crop before the harvest (5/6Hev 21–22). Two months later she was summoned to the court of the Roman provincial governor in Petra by the guardians of Judah's nephews to answer their claim, presumably to these same groves. A plausible reconstruction of these events would be that the estate of Eleazar Khtousion, the father of Judah, Babatha's second husband, was never completely divided between Judah and his brother Jesus in their lifetimes, but held more or less in common, and that after their deaths representatives of the orphans of each came to a settlement in June 130 CE. The orphans of Jesus relinquished rights to the house in 'Ein-Gedj (5/6Hev 20); Shelamzion daughter of Judah relinquished rights to groves in Maoza (in a document that naturally would not be present in this archive). At the same time Babatha was embroiled in a suit with Miriam, Judah's first wife, over household goods of their late husband (5/6Hev 26). The outcome of neither litigation is known.

Representing the orphans of Jesus as *episkopos* ("overseer") was a woman named Julia Crispina daughter of Berenicianus. There has been considerable scholarly speculation about her identity. It has been suggested that

she was the granddaughter of Queen Berenice and thus the last Herodian princess, or, alternatively, that she was no less than the daughter of C. Julius Alexander Berenicianus, scion of the house of Herod and Roman consul in 116 CE, and granddaughter of the notorious Crispinus, an Egyptian who rose to power and dubious fame in the late first century CE (cf. Juvenal, *Satires* 1.26–30, 4.1–33). If so, she would have made a formidable opponent for Babatha. However, she or her father could have been freedpersons of that family, and her function may have been little more than that of a nanny. Indeed, when challenged by Babatha, she denies having the capacity to do anything but deliver documents (5/6Hev 25, lines 59–63).

The documentation of these legal conflicts has led reviewers such as Martin Goodman (1991), to complain of Babatha's "enthusiasm for litigious confrontation." However, in two of the three suits recorded in the archive, it was not Babatha but her opponents who initiated the litigation. The facts as she presents them certainly raise the suspicion of corruption on the part of her son's council-appointed guardians. A picture of a very young widow of whom various parties try to take unfair advantage is equally plausible. Though evidently a woman of means, she was illiterate, apparently both in Greek and in Hebrew and Aramaic (5/6Hev 15.35, 22.34).

Significance. Babatha's place in Jewish society in her time has been the subject of controversy. Her archive contains neither pious phrases nor any explicit reference to the Jewish religion or to religious authority, except for an oblique reference to the Sabbath in a bequest of property (5/6Hev 7). Most of the documents were written in Greek, even when the principals were illiterate in that language but literate in Hebrew or Aramaic. Clearly, these documents were intended for presentation, if need be, to Roman rather than to rabbinic courts, in violation of the halakhic injunction against recourse to gentile courts. In the subscription written in Babatha's name to her property registration (5/6Hev 16), she is said to have taken an oath by the *tyche* ("genius") of the emperor. On the other hand, there are features of the documents, most notably in Babatha's marriage contract (5/6Hev 10), that appear to be read best in light of rabbinic literature. Since Babatha herself was illiterate, these features reflect less her own commitments and more those of her society and are better treated in a general discussion of contracts from the Judean Desert.

RANON KATZOFF

BABYLON. A Mesopotamian city situated slightly southwest of the convergence of the Tigris and Euphrates Rivers, Babylon (Babel in Hebrew) is well known from textual and archaeological evidence. Babylon first rose to political prominence under King Hammurabi (1792–1750 BCE). It remained the dominant city in southern Mesopotamia (Babylonia) for about two hundred years until the invasion of the Hittite King Mursilis I in the early sixteenth century BCE. Its next rise to greatness came under Nebuchadnezzar I (ca. 1124–1103 BCE) when, after his defeat of Hultaludish-Inshushinak of Elam, it became the major power in southern Mesopotamia. Babylon's dominance faded again with the rise of Assyria. Babylon and Assyria remained rival forces until 609 BCE when Assyria and its capital Nineveh fell to Babylon, which had long since come under Chaldean (Aramean) domination. Babylon itself fell to the Persians under Cyrus the Great in 538 BCE, an event recorded in the prophecies of "Second Isaiah." The city of Babylon continued to exist for

hundreds of years thereafter, finally disappearing with the advent of Islam.

Babylon first appears in the Bible as a city of Nimrod (*Gn.* 10.10). The legend about building the Tower of Babel explains the divine dispersal of humankind over the face of the earth and the proliferation of languages (*Gn.* 11). Babylon became a political factor in Judah under the reign of Merodach-baladan II (see *2 Kgs.* 20.12–21), but its real influence came under the reign of Nebuchadnezzar II (*2 Kgs.* 24), who destroyed Jerusalem and its Temple and sent the king, the nobility, and most of the populace of Judea into exile in Mesopotamia and Egypt. The prophecies of Jeremiah were spoken under the ascendancy and victory of Babylonia in the Levant, while Ezekiel was exiled and flourished in Babylonia itself. Babylonia and its kings form the backdrop of the *Book of Daniel*. The prophet Habakkuk complains that wicked Chaldean (Babylonian) dominance in the world is an affront to divine rule and a grave injustice. Babylon is mentioned occasionally in the books of *Isaiah*, *Micah*, *Zechariah*, *Psalms*, *Esther*, *Ezra-Nehemiah*, and *Chronicles*, most of these books being postexilic.

Apart from the biblical attestations of Babel, the city is mentioned in the Dead Sea Scrolls some seven times. In the Genesis Apocryphon (1QapGen 21.23) Babel is used rather than Shinar to describe the kingdom of Amraphel (cf. Targum Onkelos to *Gn.* 14.1). The Damascus Document (CD i.6) records the defeat of Israel by King Nebuchadnezzar.

In the Prayer of Nabonidus (4Q242 1–3.1) the healed and penitent last king of Babylon describes himself in ways reminiscent of Nebuchadnezzar as described in *Daniel* 3.31–4.34, thus confirming the suggestion that the author of *Daniel*, never having heard of Nabonidus, substituted the name of the well-known king for the unknown one.

Babel occurs in two *pesharim* to *Isaiah* in broken contexts. Whereas Peshar Isajah^c (4Q163 8.1) and Peshar Isajah^e (4Q165 8.1) speak of historical Babylon on the basis of *Isaiah* 14 and 39, Peshar Isajah^d (4Q163 6.ii 4) and Peshar Isajah^f (4Q165 8.1) seem to substitute the king of Babylon for the king of Assyria mentioned in *Isaiah* 10.13–19 and 30.31.

The Chaldeans mentioned in the *Book of Habakkuk* are identified in Peshar Habakkuk (1QpHab ii.11) as the *Kitinti*, a code word for Rome. In this way a prophecy about an enemy world power from the time of the prophet is made applicable to the major foe contemporary with the writer of the *peshar*.

It has been suggested that the Land of Damascus where the exiles from Judah lived according to Damascus Document (CD vi.5) was actually Babylonia (see also CD viii.21, xix.33–34, xx.10–12). Since the covenanters claim

that they organized in Damascus, they place their origin in the context of the exile. [See Damascus.]

VICTOR AVIGDOR HUROWITZ

BAILLET, MAURICE (1923–1998), French epigrapher. Born in Bordeaux, France, on 25 March 1923, Maurice Baillet studied there, where he obtained a Licence-ès-Lettres. He continued his studies in Toulouse and Tübingen; then in Paris, where he learned Biblical Hebrew, Aramaic, Syriac, Akkadian, Arabic, and modern Hebrew at the École Pratique des Hautes Études; in Jerusalem, where he arrived in 1952; and finally in Rome, where he obtained a Licentia in Sacra Scriptura. After several years of teaching in Toulouse (1955–1958), he arrived at the Centre National de la Recherche Scientifique in 1959, where he remained until 1993 as a research director.

In Jerusalem, between 1952 and 1953, Baillet worked on the texts that had been discovered in the caves at Qumran, at first the texts from the small caves, then, later, those from Cave 4. By this time, he had begun to show a strong interest in the Samaritans and their texts.

In 1953, at the Académie des Inscriptions et Belles-Lettres in Paris, Baillet presented his first thesis, in which he dealt with fragments from the Jeremiah scroll (2Q13). The following year he presented his second thesis, at the same institution in Paris, which dealt with the Aramaic New Jerusalem fragments from Cave 2 at Qumran (2Q24). [See New Jerusalem.] These fragments were published in 1955 in the *Revue Biblique*. This preliminary work led to the publication of the fragments that had been discovered in the small caves at Qumran, Caves 2, 3, 6, 7, and 10. The publication appeared in 1962, but the preface by Roland de Vaux dates back to 1959. The documents had been poorly preserved (the scrolls were torn and had been damaged by water, insects, and rodents), and Maurice Baillet's editing was a thankless task.

In this timely publication, a special place was given to the Greek fragments 7Q4–5, which led to some lively dis-

cussions, since some scholars have seen some traces of the New Testament in them. The editor intervened in the debate, but he was able to justify objectively his reading of the fragments. [See New Testament.]

In June 1958, Jean Starcky arranged to have Baillet join the Dead Sea Scrolls' editorial team. [See *biography of Starcky, Jean*.] At the same time, Baillet received five texts from Cave 4. In 1959, Roland de Vaux entrusted him with a collection of fragments on papyrus, among which was War Scroll¹ (4Q496). After many difficulties, about which Baillet made no secret in his preface, he received C. H. Hunzinger's collection in 1971. After much strenuous work, the manuscript intended to ensure the publication of all these texts was finished in 1976, but it was published only in 1982 because of the 1967 Arab–Israeli War. The appearance of this set of texts in volume 7 of Discoveries in the Judaean Desert bears witness to the role of Maurice Baillet in the publication of manuscripts from Qumran.

JACQUES BRIEND

BARKHI NAFSHI. The texts entitled Barkhi Nafshi consist of five collections of fragments numbered 4Q434–438. These fragments contain a collection of hymns of praise to the Lord for delivering the righteous and of thanksgiving for his continued grace. Earlier discussions of these texts often included 4Q439, which is a lament and does not have any material or compelling thematic connection with Barkhi Nafshi; therefore it is probably not part of this collection. The editors have entitled it 4QLament by a Leader.

The texts of Barkhi Nafshi are all in Hebrew and are from five different scribal hands. Several examples of textual parallels and overlapping in the five collections of fragments demonstrate that all five manuscripts were originally copies of the same text. Barkhi Nafshi^{a–d} (4Q434, 436, 437) contain significant portions of extant text whereas Barkhi Nafshi^{b–r} (4Q435, 438) are very fragmentary. Paleographically Barkhi Nafshi^e is the earliest

manuscript, and the other four are more recent copies. John Strugnell identified the script of Barkhi Nafshi^c as belonging to the late Hasmonean (150–30 BCE) or early Herodian period (30 BCE–70 CE). The rest of the fragments date to the Herodian period. There is no internal evidence for dating the original composition.

The title Barkhi Nafshi derives from the opening line of Barkhi Nafshi^d 1.i.1 *barkhi nafshu et Adonai*: “Bless, O my soul, the Lord,” a phrase known from Psalms 103 and 104, both of which begin and end with this expression (*Ps.* 103.1, 103.2, 103.22, 104.1, 104.35). The opening line is likely a deliberate imitation of the biblical psalms, suggesting thereby the existence of a genre of Barkhi Nafshi texts, but there do not appear to be any other texts from Qumran that contain this phrase. There exists a *Barkhi Nafshi* tradition in Judaism. Psalm 104, a hymn of praise to the Lord as creator, continues to be recited in the Ashkenazic tradition after *Minhah* on Sabbath afternoon and in all the rites on *Rosh Hodesh* (the beginning of the Hebrew month). In the Sephardic tradition a supplicatory prayer called “Barkhi Nafshi,” ascribed to Bahya ben Joseph ibn Pakudah from eleventh-century Spain, is read after *Musaf* (the additional service) on Yom Kippur.

In Barkhi Nafshi^c and in the beginning of Barkhi Nafshi^d, the Lord is praised for his deliverance of a group of righteous people from Israel identified as the poor (*ebyon*), the humble (*ani*), and the helpless (*dal*). “In the abundance of his mercy” (4Q434 1.i.3) and “on account of his lovingkindness (*hesed*)” (4Q434 1.i.4) the Lord has preserved his people from their enemies, and “his angel encamped around them” (4Q434 1.i.12). In Barkhi Nafshi^c the Lord is described as strengthening the heart of the contrite, comforting the poor, and giving knowledge to the wise. The poet addresses God in the second person and praises him for writing his law on his heart, for making his mouth like a sharp sword, and for giving him a pure heart. In Barkhi Nafshi^d the poet continues blessing the Lord for delivering him from the gentiles and for rescuing his soul from the underworld.

Like much of the poetry from Qumran, the Barkhi Nafshi hymns imitate biblical psalms. The poetry is crafted from biblical language by verbatim citations of biblical passages, by paraphrase, and by allusion to biblical metaphors and imagery. Often the poet quotes two or more complete lines from a biblical passage, altering the wording and the order of the lines. Most of the biblical citations and allusions are from *Psalms*, *Isaiah*, and *Jeremiah*. Likewise, there is much language and imagery in these hymns that are also found in other Qumran texts—most notably the *Hodayot*.

A central and unifying theme of the Barkhi Nafshi texts is that of God implanting in his people and in the author a series of pious qualities. For example, in Barkhi Nafshi^a

the Lord opens his eyes to the helpless and hears the cries of the orphans, and in turn God opens their eyes to see his ways, and their ears to hear his teachings, and he circumcises the foreskins of their hearts (4Q434 1.i.3–4), “he set their feet to the way” (4Q434 1.i.4) and gave them “another heart” (4Q434 1.i.10). In Barkhi Nafshi^c the author praises God because “my heart you have commanded and my inmost parts you have taught well, lest your statutes be forgotten” (4Q436 1.i.5); “and you have made my mouth like a sharp sword, and my tongue you have set loose to (utter) holy words” (4Q436 1.i.7); and “my foot you have strengthened” (4Q436 1.i.8). In Barkhi Nafshi^d the poet blesses the name of the Lord, “for you have delivered me from the snare of the gentiles” (4Q437 2.i.4), “in your quiver you hid me . . . you made me into a sharp arrow, and in the shelter of your palm you hid me” (4Q437 2.i.8–9).

The sectarian origin of the poetic material at Qumran is notoriously difficult to prove because hymns and prayers do not always contain the terms distinctive to the sectarian literature. Nevertheless, the Barkhi Nafshi hymns contain a constellation of phrases and imagery found in other sectarian texts from Qumran: the designation of the community as the poor, the imagery of the circumcision and the giving of a new heart and of “walking in the way,” and references to Psalm 37.15 (4Q434 1.i.5; 4Q437 2.i.3) closely resembling the interpretation given in the sectarian *Pesher Psalms* (4Q171^a ii.19). An argument could be made for the sectarian origin of these hymns.

The Barkhi Nafshi hymns are important examples of early Jewish prayer. Moshe Weinfeld (1992) has identified in Barkhi Nafshi^c 2 a series of phrases also found in the rabbinic prayer *Birkat ha-mazon la'avelim* (“Grace after Meals for Mourners”) and has argued that this fragment preserves an early form of Grace after Meals. The identification of the righteous as the poor, the theology of God’s grace, and the imagery of internal conversion are significant themes for the study of Jewish and Christian theology.

DAVID ROLPH SEELY

BAR KOKHBA, SHIM'ON, leader of the second major Jewish revolt against Rome in the province of Judea, during the years 132–135 CE. This was the only revolt out of a long list of Jewish uprisings against foreign domination to be called by the name of its leader, and for good reason, as this revolt was characterized, among other things, by the confederation of all the revolutionaries under the banner of a single leader, Shim'on Bar Kokhba. Bar Kokhba not only was the military commander of the revolutionaries but also headed an independent Jewish polity that came into being during the course of the revolt.

The documentary evidence from the time of the revolt includes the Bar Kokhba letters, which were found in the caves of the Judean Desert near the Dead Sea, and which contribute materially to expanding the extant evidence for the Bar Kokhba Revolt in general, and for Bar Kokhba himself in particular. In 1952 various artifacts and documents from the time of the revolt were found in Wadi Murabba'at, including documents about leasing land in the name of Bar Kokhba. In 1961–1962 further finds were made in the Judean Desert, the most outstanding of which are letters from Bar Kokhba himself, found in a cave in the cliffs of Naḥal Hever.

Until the discovery of these documents even the very name of Bar Kokhba (more accurately, Bar Kokhva) had been uncertain, and it was not clear whether his name was Bar Kokhba with a letter *kaf* as it appears in the writings of the church fathers, or Bar Kozeba with a letter *zayin* as in Talmudic literature. Nor was it known whether the name Shim'on, which appears on some of the coins issued during the revolt, was the first name of Bar Kokhba, or of another leader. When Bar Kokhba's letters were found, together with the land-lease documents signed in his name, it became clear that his name was Shim'on bar Koseba, spelled with a letter *samekh* or *sin*. In the letters written in Greek his name appears as Chosiba. It is clear, then, that the name Bar Kokhba stems from a nickname given to him after Rabbi Aqiva proclaimed him the King Messiah, the realization of the biblical verse: "There shall come a 'star' (*kokhav*) out of Jacob" (*Nm.* 24.17). It was usual at the time to explain this verse as a prophecy about a king or leader as seen, for example, in the Damascus Document (CD vii.18–20). The form Bar Kozeba, with a letter *zayin*, may have been a derogatory nickname given to Bar Kokhba after the failure of the revolt, as related by Rabbi Yohanan: "Rabbi used to comment on 'There shall come a star out of Jacob': 'Do not read *kokhav* ('star') but *kozav* ('liar')'" (*Lam. Rab.* 2.4). However, it is more likely that this by-form was produced by a copyist's unintentional interchange of the letters *samekh* and *zayin*. It is also possible that Bar Kokhba's name connects his origins with a village called

Kozeba, mentioned in the Bible (*1 Chr.* 4.22). This village has been identified with Khirbet Kuweizibe, in the area of Betlehem, the birth place of King David (from whose descendants the Messiah was to come), situated about two kilometers south of 'Ein-'Arub, where finds from the time of the revolt have surfaced.

Bar Kokhba's title as it appears in the documents and letters from the caves of the Judean Desert, and on the coins of the revolt, is *Nasi* of Israel. In the Bible and in the language of the sages this title is used of a king. Rabbi Aqiva, when he saw Bar Kokhba, proclaimed "This is the *melekh mashiach*" ("King Messiah") (*J.T., Ta'an.* 4.68d; *Lam. Rab.* 2.4), thereby relating him to the royal house of David. Aqiva is most likely using the term to describe an earthly military and political leader rather than an eschatological messiah who is seen as a savior and redeemer with supernatural qualities. Rabbi Aqiva's concept of redemption had no apocalyptic foundations, and was restricted to the hope for the realization of an earthly historical process, which would culminate in the rebuilding of the Temple that had been destroyed in 70 CE. This is spelled out in the parallel source in *Lamentations Rabbah*, which attributes immense physical strength to Bar Kokhba, as symbolized in his ability to catch Roman missiles on his knee and hurl them back at the Romans. On this the Midrash comments: "And it was about this that Rabbi Aqiva made his statement." In other words, Rabbi Aqiva's statement about Bar Kokhba's messianic nature was made because of his physical strength and military abilities. Other Talmudic sources also stress Bar Kokhba's great strength. To them must be added the description of Bar Kokhba's death by snake-bite in the Palestinian sources. The intention of this narrative is not only to show that Bar Kokhba's death was the result of divine intervention, but also to show that a charismatic and powerful hero like Bar Kokhba could not have been simply defeated on the battlefield. This is most clear from the version that relates that the snake was found curled around his knee (*Lam. Rab.*, ed. Buber, pp. 102–103). Like the biblical hero Samson, who could not be defeated until his hair, which contained his legendary power, was cut off, so Bar Kokhba could not be defeated until he was bitten on the knee, the same limb upon which he caught the Roman missiles, and which more than any other was a metaphor for his strength.

A tradition in the Babylonian Talmud tells that after Bar Kokhba proclaimed himself messiah he was put to the test by the sages, and when it was shown that his claim was unfounded they put him to death. (*B.T., San.* 93b). This tradition comes from a passage that is based on a debate between *amoraim* of the fourth generation, sages who lived in Babylonia in the mid-fourth century. It is therefore reasonable to assume that it is a product

of the intellectual world of these sages, who were at the peak of their established strength in the fourth century, and found it hard to explain to themselves how the sages of Bar Kokhba's day did not see him for what he really was, a false messiah. From the Palestinian Talmudic literature it is clear that the sages as a group supported Bar Kokhba. It is possible that the sources which note the exaggerated numbers of Rabbi Aqiva's pupils and their untimely deaths are in fact dealing with Rabbi Aqiva's political followers, who were to be found among Bar Kokhba's soldiers. The Talmudic *aggadah* does indeed blame Bar Kokhba for opposing the divine will, obviously in order to explain his final defeat, but Bar Kokhba is still depicted by them as having taken account of the instructions of the sages. There is some reticence about Bar Kokhba's messianic nature among certain sages, as well as despair in the final stages of the revolt when it must have been clear that defeat was just around the corner. It is interesting to note that, although the Talmudic literature describes the Bar Kokhba Revolt after the event (for even the earliest material was edited after the revolt was over), its attitude to Bar Kokhba is still ambivalent, while Rabbi Aqiva, who proclaimed Bar Kokhba King Messiah, is accorded a central and wholly positive status among the *tannaim* without any word or hint of disapproval.

Only Christian traditions, in fact, give any evidence that Bar Kokhba surrounded himself with a halo of supernatural miracles and was not just renowned for his military prowess. For example, Eusebius writes:

The Jews at the time were led by a man called Bar Chochebas, which means a star, a bloodthirsty bandit who on the strength of his name, as if he had slaves to deal with, claimed to be a luminary who had come down from heaven and was magically enlightening those who were in misery.

(*Historia Ecclesiastica* 4.6.2)

Here we see a tendency to tarnish the image of Bar Kokhba and present him as a sort of Antichrist. In fourth century CE Christian eyes, Bar Kokhba appeared as the representative of Jewish extremist, nationalist messianism, at the opposite end of the spectrum from the pacifist, spiritual, universalistic Christian gospel.

Bar Kokhba's letters complement the picture obtained from Talmudic sources. Bar Kokhba appears as a pragmatic leader who tyrannizes his men, and is personally involved in running the daily life of the revolt. There is nothing in the letters that conveys even the slightest impression of messianic fervor. Bar Kokhba appears in them rather as a harsh and exacting leader of revolutionary bands, and not as a king. In one of the letters Bar Kokhba castigates Masabalah and Yehonatan bar Ba'ayan, the commanders of the base at 'Ein-Gedi: "Here you are, sitting in comfort, and eating and drinking away

everything the Jews own, and not caring a damn for your fellows . . . from the ship which is with you and in the harbour" (Yadin, 1961, papyrus 12, p. 47). Just like units on the home front throughout history, the soldiers at 'Ein-Gedi preferred to take food for themselves from the supplies that reached them (which included supplies coming by ship from south or east of the Dead Sea) rather than pass them on to furnish the needs of the soldiers on the battle front, which would have involved effort and risk to themselves. Bar Kokhba's instructions are brief and to the point, and include threats of punishment for those who disobey. In one of the letters he threatens the soldiers in the unit commanded by Yeshu'a ben Galgula that if they harm the Galileans among them: "I'll clap your legs in irons like I did to Ben 'Aflul" (Milik, no. 43, 1961, 159-161). In another letter, Bar Kokhba demands from Yehonatan and Masabalah, the commanders of the base on the home-front at 'Ein-Gedi, to send him the men of Teqo'a (near Herodium) and Tel 'Arazin (which has not yet been identified with certainty), who are staying with them in order to avoid serving on the battlefield, for if not: "You had better know that I'll get my own back on you" (Yadin, 1961, papyrus 14, p. 47-48).

Bar Kokhba's letters reveal his concern for religious observance among his soldiers. He makes a particular point of arranging for them to carry out the commandment of taking *Arba'at ha-Minim* ("the Four Species"):

"Shim'on to Yehudah bar Menasheh, to Qiriat 'Arbayah: 'I have sent you two donkeys so that you can send two men with them to Yehonatan bar Ba'ayan and Masabalah so they can pack and send palm branches and citrons to the camp, to you. And you are from your place to send others who will bring you myrtles and willows. See that they are tithed and send them to the camp . . . Be well.'"

(Yadin, 1961, papyrus 15, pp. 48-50)

The letter is addressed to Yehudah bar Menashe, who was presumably the commander of the unit stationed at Qiriat 'Arbayah, which was probably in the region of 'Ein-'Arrub. Yehudah was to send messengers to the commanders at 'Ein-Gedi in order to bring *lulavim* ("palm branches") and *etrogim* ("citrons") from the Dead Sea area, and was further ordered to send people to gather *hadassim* ("myrtles") and *'arabot* ("willows"). Finally, he was told to take tithes from these *Arba'at ha-Minim* and to send them to Bar Kokhba's base. Bar Kokhba's concern for the proper observance of the commandments relating to *Arba'at ha-Minim* is more than merely a simple wish to observe the festival of *Sukkot* ("Tabernacles") according to religious law. For *Arba'at ha-Minim* do not merely represent the rejoicing of the community on the festival of *Sukkot*, but all community rejoicing, and especially rejoicing in victory. The taking of tithes appears in

the Bar Kokhba deeds of lease, among the duties of the lessee. It is likewise understood in lease contracts that the parties will observe the laws of the sabbatical year.

Several other documents also demonstrate Bar Kokhba's concern for strict Sabbath observance in his army units. In one letter he orders the commanders at 'Ein-Gedi to send El'azar ben Hitta to him immediately, so that he will arrive at the base before the beginning of the Sabbath (Yadin, 1961, papyrus 8, pp. 44-45). In another letter he demands that Yeshu'a ben Galgula should send him a certain quantity of corn, but that he should keep it with him over the Sabbath, and only after the Sabbath ends should he send it on (Milik, no. 44, 1961, pp. 161-163). The national importance of these religious observances to the revolutionaries was known to the Romans and they therefore included bans on taking the *lulav* and on observing the laws of Sabbath, tithes, and the sabbatical year in the *gezerot ha-shemad* ("repressive legislation") after the failure of the revolt.

Bar Kokhba emerges from the letters as someone close to the world and spirit of the sages. He accepted the way of the sages of Yavneh who, after the destruction of the Temple, had reconstructed religious observances so as to preserve the national framework of the Jewish people in their land. It is true that Talmudic sources present Bar Kokhba as someone who trusted in his own powers and was insolent before heaven, claiming that he did not need divine aid but only requested divine non-interference, but it is clear that these traditions were written after the event, in order to explain Bar Kokhba's downfall and death as being the result of his sinful behavior.

Among the documents from the Judean Desert caves are legal contracts that reveal a complex system of land leasing to various individuals by Bar Kokhba's staff, and with his permission. These land-leases seem to be dealing with some sort of state land, which may have previously been in Roman hands but which had been captured by the revolutionaries. Some of these contracts were drawn up at Herodium, which was also the place where the lessees had to bring their rent and their tithes. Archaeological finds from the time of the Bar Kokhba Revolt have been made at Herodium, and it is clear that the fortress was one of its administrative centers. Bar Kokhba may actually have had his headquarters there for some time. So not only did the activities of daily life continue during the revolt, but they were carried on under the aegis of the revolt leadership.

Thus Bar Kokhba was both a military and political leader during the revolt, heading a kind of independent polity, albeit short-lived, which even had its own coins. He has remained the subject of controversy up to the present day. There are those who see him as a false messiah who misled the people and caused them to suffer a

terrible defeat. Others identify with his heroism, and see him as both the symbol of non-compromise with foreign governments and of the Jewish people's yearning for independence in their land.

AHARON OPPENHEIMER

BAR KOKHBA REVOLT. Both the high point of the Jewish revolutionary movement against Roman rule in Erets Yisra'el and its breaking point, the Bar Kokhba Revolt (c.132-135 CE) was characterized by its large number of participants, apparently more than in the First Jewish Revolt (66-70 CE). The Jews of Erets Yisra'el joined forces under one leader, Shim'on Bar Kokhba, who gave his name to the revolt and, in its course, set up a kind of independent polity. Unlike other Jewish revolts, the Bar Kokhba Revolt did not provoke internal dissent, nor was it accompanied by internecine struggles like those of the Hellenizers and the Hasideans in the Maccabean Revolt (166-164 BCE), or the Peace Party and the Zealots in the First Jewish Revolt. Paradoxically, this was a result of the activities of Rabban Yohanan ben Zakkai, who had left Jerusalem at the height of the First Jewish Revolt in order

to negotiate with the Romans. As head of the leadership institutions at Yavneh, he (and later Rabban Gamliel) had worked to unite the people in the severe crisis that followed the destruction of the Second Temple.

There is no ancient literary or historical record that describes the Bar Kokhba Revolt firsthand. The absence of a source of this kind means that the course of the revolt must be reconstructed from a mosaic of tiny pieces of evidence, often contradictory, sometimes biased, and frequently incomplete. This evidence is to be found in the Talmudic literature, in the works of Roman authors, in the works of the church fathers, and in the Samaritan chronicles. Archaeological finds must be added to this list, especially the unique source for the revolt contained in the discoveries from the Dead Sea area. In 1952, documents and artifacts from the time of the Bar Kokhba Revolt were found in Wadi Murabba'at. In 1961–1962, further finds were made in caves in the Judean Desert, of which the most outstanding were the letters from Bar Kokhba himself that were found in a cave in the cliffs of Nahal Hever. These exciting finds evoked waves of scholarly and popular interest since they had an immediacy that is rare in research into the distant past.

The Roman historian Dio Cassius wrote his *Roman History* in the first half of the third century CE. There he ascribes the direct cause for the outbreak of the Bar Kokhba Revolt to the decision by the emperor Hadrian to rebuild Jerusalem as a pagan city, placing a pagan temple inside it and turning it into a colony called Aelia Capitolina (*Aelia* from Aelius, the name of the emperor's family or gens; *Capitolina* for the god Jupiter, whose temple stood on the Capitoline hill in Rome; *Roman History* lxi.12). In contrast, the fourth-century CE church father Eusebius writes that Jerusalem was refounded as Aelia Capitolina after the revolt. If this is so, then this was a consequence rather than a cause of the revolt (*Ecclesiastical History* iv.6). It would seem more likely that Aelia was founded before the revolt and that the revolutionaries confounded the Roman plans and probably took over the city, so that after the revolt the Romans had to rebuild it from its ruins. The author of the fourth-century CE *Historia Augusta* writes that the revolt took place because the Romans placed a ban on the religious practice of circumcision (*Vita Hadriani* xiv.2). It may well be that this was an additional reason for the outbreak of the revolt, although other sources place the ban on circumcision among the repressive legislation that was instituted after the revolt was put down.

The Bar Kokhba Revolt was no spontaneous uprising. It was preceded by careful preparations. Dio Cassius writes that the local population deliberately forged weapons that were not up to Roman military requirements, so that they would be rejected as substandard by the Ro-

mans who had ordered them and therefore would be left for the rebels to use. He also records the construction of fortifications and the excavation of complex underground hide-outs. His evidence has been confirmed by the discoveries of underground hide-outs in Judea and elsewhere. (There is still no agreement, however, on whether these hide-outs are exclusively connected with the Bar Kokhba Revolt.) The revolt was timed to break out only after Hadrian had left the country on his journey to Athens in 132 CE.

The documents from the Judean Desert may not provide all the information necessary to describe the central events of the revolt, but they do contain tiny vignettes full of fascinating details about what Bar Kokhba was like and even what his name was, as well as about the course of the revolt. It is possible to infer from them that there were people from Galilee in the unit that was active around the Hebron hill country. The documents also clarify the identity of the commanders of various units, and they tell of some of the revolutionaries who chose to leave the area where the battle was raging and found refuge in units on the home front. Information about ownership of land is contained in lease contracts found with the letters and also in the archive of Babatha, who brought a set of documents relating to her legal negotiations with family members with her when she took refuge in the caves.

Finds from the time of the revolt also have come to light in a cave in Wadi ed-Daliyeh, southwest of Phasaelis in the Jordan Valley; in the caves at 'Ein-'Arrub between Bethlehem and Hebron; and in Horvat 'Eqed, east of Emmaus. Finds from Herodium are particularly important in that they provide evidence for the activities of the Bar Kokhba revolutionaries in this fortress, for the base at Herodium also is mentioned in papyri that were found in Wadi Murabba'at. It is possible that for part of the period of the revolt, Bar Kokhba actually had his headquarters at Herodium, but at least the documents are evidence that Herodium served as an administrative center for the popular leadership during the revolt. Present research into the Roman roads of the province of Judea shows that there was widespread paving of official highways during the reign of Hadrian, although insofar as these roads can be dated, they were paved before the outbreak of the revolt. It should be noted that the archaeological and epigraphic evidence shows that the Roman army in the province was strengthened even before 120 CE, almost certainly in 117 CE. The main evidence for this is the promotion in rank of the governor and procurator of Judea, which points to the reinforcement of the standing army of the province, as well as the paving of military roads from Legio (the base for the legion that was now added to the Tenth Legion Fretensis) to Sephoris and from Akko/Ptolemais to Sephoris in 120 CE. This is a clear indication

that unrest and terrorist activities against the Romans were endemic in Erets Yisra'el throughout the reign of Hadrian. However, there is also some evidence that Hadrian was popular with the Jews at the beginning of his reign, as can be seen from the praise of Hadrian in the fifth book of the *Sibylline Oracles* (1.46-50).

The sources do not provide a full picture of what happened during the revolt. It would seem that in the first stages the revolutionaries had the advantage. It is almost certain that Bar Kokhba and his men were able to take Jerusalem: at least this is the picture from the contemporary evidence of Appian (*Syriaca* 50, 252). The name of Jerusalem appears on a large number of Bar Kokhba coins, although in Jerusalem itself very few coins from the revolt have been found to date. There can be no doubt that the revolutionaries intended to rebuild the Temple, but there is no certain evidence that they managed to carry this out. One of the well-known coins of the revolt bears the image of the front of a sanctuary that can reasonably be identified with the Temple, but this coin may well express an idealistic hope rather than a historical fact. The main events of the revolt took place in Judea, and it is doubtful whether the Samaritans took any part in them, even though there is some basis for the contention that the Romans did not treat them too kindly at this time. It is clear that the scope and intensity of the revolt in Galilee did not approach that in Judea, but it is possible that there were sporadic outbreaks of rebellion there. The names of the settlements that appear in the documents from the time of Bar Kokhba, found in Wadi Murabba'at and Nahal Hever, are all from Judea. However, this is not conclusive evidence for deciding the territorial extent of the revolt; it is reasonable to suppose that it was the people who lived close to the caves who used them as refuge, so that it is only natural that the names of settlements from the area where they lived and operated should appear in the documents that were in their possession.

The Romans were unable to get the better of the revolutionaries with two legions that were based in Erets Yisra'el, the Tenth Legion Fretensis in Jerusalem and the Sixth Legion Ferrata, which gave the name Legio to its base near Tel Megiddo. Attempts to regain control using legions from the neighboring provinces of Syria, Arabia (Transjordan), and Egypt were unsuccessful. The Twenty-second Legion Deiotariana, which came from Egypt, no longer appears in the roll call of the Roman legions after the revolt, and it may be that it was decimated by the revolutionaries or dispersed following its failure to put down the revolt. In the end, the Romans were forced to bring in soldiers from the Danube and to put at their head the governor of Britain, Julius Severus, their best general at the time. He was careful to avoid frontal con-

flict with the revolutionaries and preferred to use siege tactics, cutting off their lines of supply and slowly entrapping them.

Eventually, the revolutionaries were forced back to Betar and besieged there, in what became the final stage of the revolt. Betar, about 11 kilometers southwest of Jerusalem, was not merely a stronghold of the revolutionaries but a settlement that had grown up largely after the fall of Jerusalem in the First Jewish Revolt. During the Bar Kokhba Revolt, the leadership of the sages and the family of the patriarch himself were in Betar and may have moved there even before the revolt. It also is possible that preparations for the revolt were made in Betar, which could have served as a base for launching attacks on the Tenth Legion aimed at the control of Jerusalem. The Talmudic sources describe the fall of Betar in chilling terms, as symbolizing the failure of the revolt. Various traditions give an all-too-vivid tableau of the huge number of slain, including women and children, whose blood flowed as far as the Mediterranean and stained its waters. Bar Kokhba himself met his end at the fall of Betar, while the last of the revolutionaries found temporary shelter in the caves of the Judean desert. The Romans besieged these caves as well, and those hiding there were killed or starved. Cassius Dio stresses the large number of the slain, too, but notes that such a large number of Romans also died on the battlefield that Hadrian was unable to open his report to the senate with the usual formula: "If you and yours are well, it is well; I and the army are well" (*Roman History* lxix.14).

The Romans laid down various repressive bans on the Jews in order to undermine the religious base of their national identity. For example, they banned the reading of the Shema' prayer, which stresses the uniqueness of the Deity, and thus was a kind of threat to the cult of the emperor. Similarly, festival observances that had a national significance were outlawed, such as lighting Hanukkah lamps, eating unleavened bread on Passover, and taking palm branches on Sukkot. Naturally, the Romans banned the leadership institutions and public assemblies. These repressive bans are known in the Talmudic literature as *gezerot ha-shemad*. Jewish reactions to them varied. There were those who accepted the laws and others who even converted; the best known of these is the sage Elisha' ben Avuyah, who subsequently was called Aher ("another"). Some defied the bans openly and were prepared to die for the sake of the exact observance of religious law. The best known of these was Rabbi 'Aqiva', whose flesh was torn to shreds with iron claws but who still continued to declaim the Shema' until the end. The readiness to die "for God's name" became, with the passage of time, a model for Jewish martyrs throughout the generations. A historical and literary expression of this is

the tradition of the Ten Martyrs in the *Heikhalot* literature and the *piyyutim*, although not all the sages in these lists (which are not all identical) were among the martyrs who died following the revolt. However, many of the people, influenced by the sages, made considerable efforts to observe the banned practices secretly or with changes, in order to preserve their Jewishness without being punished by the Roman authorities.

By the end of the revolt, large areas of Judea had been destroyed, many people had been killed or wounded, and many more had been taken into captivity. So many captives were sold as slaves that the price of slaves fell all over the empire, and one of the traditions tells that in the Hebron hill country one could buy a slave for the price of a bale of fodder for a horse. Many refugees fled from Judea to Galilee, which had been less involved in the revolt and thus was less subject to punishment. Others left for Babylonia, the only sizable Jewish community outside the Roman empire. At this time, partly as a result of this influx of refugees, the foundations were laid for the institutions of the exilarchate and the large rabbinic academies, the *yeshivot*, which characterized Babylonian Jewry of the Talmudic period (200–500 CE).

Most of the repressive legislation ceased with the death of Hadrian in 138 CE and the succession of the Antonine dynasty. There were some laws that remained in force longer; for example, a law banning Jews from living in Jerusalem. The self-governing leadership institutions, such as the patriarch and the council of sages, the Sanhedrin, were reconstituted in Galilee, which became the chief center of Jewish life in Erets Yisra'el from then on.

The Bar Kokhba Revolt was the last attempt at achieving Jewish independence in Erets Yisra'el until 1948. Later uprisings were of a more local nature and were put down by police, rather than military, action. Later reactions to the revolt were, and remain, ambivalent: on the one hand, the Bar Kokhba Revolt was a failure with catastrophic results; on the other hand, there is a tendency to respect the valor of the revolutionaries, especially Bar Kokhba, and their desire for Jews and Judaism to survive unchallenged.

AHARON OPPENHEIMER

BARTHÉLEMY, DOMINIQUE (1921–), French epigrapher, was born in Nantes, France, on 16 May 1921. He entered the Dominican order in 1939, studying first in Paris and then in Jerusalem (1949–1951). It was at the École Biblique in Jerusalem that he began to work as a university teacher and researcher.

From 1957 to 1991, Barthélemy was professor of the Old Testament at the University of Fribourg in Switzerland, where he carried out research in the history of the Old Testament text. From 1969 to 1980, he was actively involved in the Hebrew Old Testament Project. As a result of this collaborative work, he became editor of a series of publications on the textual criticism of the Old Testament. Three of them were published in 1982, 1986, and 1992, respectively, and two more are being prepared.

Barthélemy was dean of the Theology Faculty from 1964 to 1965 and pro-vice chancellor of the University of Fribourg from 1970 to 1978. He retired from teaching in 1991, but he still continues his research in textual criticism of the Old Testament.

During his stay in Jerusalem, Barthélemy quickly became interested in the manuscripts and fragments that had been discovered in Cave 1 at Qumran. In 1950, his first article dealt with Isaiah^a, the main Isaiah scroll; he used photographic reproductions published by J. C. Trever to emphasize the special characteristics of this manuscript and its place in a tradition brought to light by what had been learned from more recent manuscripts.

In 1952, the work carried out on the manuscripts at Qumran enabled Barthélemy to take stock for the first time of the history of the Masoretic Text, of the origin of the Hebrew vocalization, and also of the origin of the Greek version. The biblical fragments from Qumran Cave 1 were published in *Discoveries in the Judaean Desert*, along with a Rule of the Congregation fragment (1Q28a), a well-known text with mention of a messiah (1955, pp. 108–118). From 1953 onward, there was a shift in Barthélemy's focus toward the Greek texts, following the discovery of important fragments from a Dodekapropheton (twelve prophets scroll) in a cave in the Judean Desert. The work on this new manuscript gave rise to an authoritative work, *Les devanciers d'Aquila*, which reopened the question of the history of the Greek versions and which became a point of departure for investigations into the Greek text of the Bible by other researchers. This Greek text received the initials 8HevXII gr (the Greek Minor Prophets) and was published by Emanuel Tov in 1990 (*Discoveries in the Judaean Desert*, 8). Thus, within a short number of years, the contribution of Barthélemy to the publication of texts discovered in the caves of the Judean Desert was not only swift but effective and authoritative.

JACQUES BRIEND

BASKETRY has survived the ravages of time in the Dead Sea region due to the arid climate. Fragments of baskets and mats, as well as some nearly complete articles, have been recovered from archaeological sites spanning the past nine thousand years. With the exception of that found at Masada and Jericho, the basketry in the Judean Desert was recovered from caves, in some cases the same caves that yielded ancient documents, though none in direct association.

The antiquity of basket-making in the region is also demonstrated by impressions on the bottoms of clay pots, and at Jericho, impressions of rush mats on Neolithic floors. Such evidence, however, lacks the heuristic poten-

tial inherent in original specimens that are replete with details of material, shape, size, technique, and style. Moreover, the organic composition of basketry renders it datable by radiocarbon testing, thus enhancing the scientific relevance of finds from cultural contexts that are ambiguous.

Despite often-cursory reporting, infrequent direct dating of basketry specimens, and the absence of information for some eras, existing data attest to techno-stylistic variation through time. The following chronologically ordered synthesis draws on personal observations as well as published accounts and is offered with the proviso that new discoveries may require revisions to the scheme.

Pre-Pottery Neolithic (Seventh Millennium BCE). The oldest basketry found to date in the Judean Desert is best known from the Nahal Hemar collection, which features specimens of three types—twined, wrapped, and coiled—as well as remnants of basketlike containers made by coating cords with bitumen. The twined fragments, all woven in fine-gauge close simple twining, include some with color-contrast decoration. Other fragments represent matting made from rushes or grass with suna-like wrapped rows. Only one example of coiling is reported for Nahal Hemar. All three basketry types are also reported from other nine-thousand-year-old Judean Desert Neolithic contexts, including Jericho (soumak-style wrapping, coiling) and Netiv Hagdud (fine close twining). Wrapped fragments from mixed contexts at Wadi Murabba'at are likely of the same age.

Chalcolithic (Second Half of Fourth Millennium BCE). Basketry is known from Chalcolithic-age contexts in at least ten caves in the Judean Desert. In most cases, the specimens are associated with burials and comprise remnants of mats used to lay out or shroud the dead. Such mats are made from reeds or rushes laid side by side, close with no visible spaces, and attached at intervals by simple twining, or by passing a thin cord through pierced holes. The latter method is represented by a relatively intact specimen found in the Cave of the Treasure in Nahal Mishmar, where it had been used to wrap a hoard of treasured objects. Mat fragments are also reported from Nahal Mishmar Caves 2 and 3, Nahal Şe'elim Cave 1, Cave of the Pool in Nahal David, and Cave of Horror in Nahal Hever. Caves at Masada and Wadi Murabba'at produced similar fragments that may be Chalcolithic. Two specimens have been radiocarbon dated, and both confirm assignment to the Chalcolithic era: samples from a mat associated with a burial in the Cave of Horror yielded a date of 5460 ± 125 BP; and three assays on samples from the mat wrapping the Nahal Mishmar treasure gave an average age of about five thousand years.

Other types of basketry from apparent Chalcolithic-age contexts in the Judean Desert include remnants of con-

tainers or trays made by coiling from Nahal Badjar Cave 49 and from the Cave of the Treasure. The latter site also produced a sieve with coiled sides and a base woven in open checker plaiting.

Middle Bronze Age (Early Second Millennium BCE). Rush matting made in a plaiting technique was recovered from burial tombs at Jericho, as were coiled baskets. Kathleen Kenyon (*Digging Up Jericho*, 1960, p. 247) observes that the ancient mats were exactly like modern manufactures. Impressions of coiled baskets are reported for the Late Bronze Age at Jericho.

Roman (First Century BCE–Second Century CE). Basketry from the time of the Roman presence in the Judean Desert includes two comparatively large assemblages that have been analyzed and reported in detail (Cave of the Letters in Nahal Hever and Masada). There are also small assemblages from the Cave of the Treasure, the Cave of the Pool, and others in Nahal Mishmar; the Cave of Horror in Nahal Hever; Nahal David Cave 4; Qumran Caves 10, 11, 12; and Wadi Murabba'at. None has been radiocarbon dated.

The predominant type is made from flat braids of date-palm leaf in a combined coiling-plaiting technique. Several (usually nine) long, narrow leaflets are plaited on a bias in 2/2 interval twill, forming a strip that spirals from the center out and from the bottom upward. Successive courses are connected, apparently during construction, by passing a thin twisted cord through the folded edges of the weaving elements. The cord, though invisible, produces horizontal ridges on the basket wall. Both baskets and mats were made in this twill-braid technique. The baskets were strong, general-use containers. At the Cave of the Letters in Nahal Hever, many twill-braid baskets contained secondary burials (human bones removed from their original place of deposit); one contained a cache of bronze vessels. One nearly complete twill-braid mat, measuring 62 by 80 centimeters, was recovered from Qumran Cave 12. Archaeologists speculated that it had been used to cover pottery jars.

Other types of basketry from Roman-era sites in the Judean Desert include variants of plaiting, coiling, and twining. The Masada collection features a sieve with an open-twined base. The Cave of the Letters produced a small cylindrical basket made in decorative wickerlike plaiting.

The incidence of basketry finds parallels that of other archaeological discoveries in the Judean Desert. Notably, there are two periods for which numerous findsites are known: the Chalcolithic and Roman eras. Although methods of construction vary over time, craft quality remains high. Moreover, even the earliest Pre-Pottery Neolithic specimens document a sophisticated technological expertise that obviously had much older roots. Basketry

comprised an important and ubiquitous item of everyday life, serving in both mundane and ceremonial capacities for thousands of years. Where environmental conditions favor the preservation of basketry, its diagnostic potential and ready datability should encourage increased attention from archaeologists intent on reconstructing the past.

KATHRYN BERNICK

BATHS AND BAPTISM can only be understood and discussed in relationship to the system of purity and impurity, but it is not the aim of this article to discuss this system in detail. The basis of all Jewish understanding of purity is the biblical ordinances concerning purity, impurity, and the possibility of attaining cultic purity. The water rite as a means of regaining ritual purity following pollution (e.g., impurity through contact with corpses or carcasses, impurity of the parturient and the zav) is a common property of ancient Judaism. It is no surprise that we find in Josephus's account of the Essenes and the texts of the Qumran community the rituals of purity as a predominant trait of the religious and halakhic life. The excavations of Khirbet Qumran have revealed a water-system that not only provided a supply of drinking water but also filled the pools that served for purification rites.

Purification Rites and Communal Life. As Josephus says in *The Jewish War* 2.129, purification is a prerequisite for the common meal. Ordinances^c (4Q514) 1.1.5–7

states: "All those (who are) 'impure of days' shall on the day of their healing, bathe and launder in water, and become pure. And afterwards they may eat their food according to the purity precept. And he shall not eat anymore while in his initial impurity who has not begun to become pure from his source" (trans. Milgrom; see also lines 8–10). Temple Scroll^a (11Q19) xlix.20–21 excludes the impure who are already in the process of purifying themselves from the communal meal (Harrington, 1993, p. 63). Excluding someone who is impure from the common meal is also prescribed in Rule of the Community (1QS v.13–14; i.25; vii.16ff.).

Repentance is the precondition for entry into the community and the effectiveness of the water rites (see 1QS ii.25–iii.12). In this paragraph we see that purity and atonement are bound together in a very distinctive way: "He cannot be purified by atonement, nor be cleansed by water of purification, nor sanctify himself in streams and rivers, nor cleanse himself in any waters of ablution. Unclean, unclean is he, as long as he rejects the judgments of God, so that he cannot be instructed within the Community of his (God's) counsel" (1QS ii.4–6; trans. Charlesworth). This correspondence of bath and atonement has often been related to the baptism of John the Baptist in order to show that he was or had been a Qumran-Essene. It is true that John preached and practiced a "baptism of repentance for the forgiveness of sins" (Mk. 1.4), but that is a unique, unrepeatable, symbolic, and prophetic ritual act as a salvific baptism before the last judgment. A characteristic feature of John is the title *the Baptist* (as Josephus also relates), which identifies this baptism as something inextricably his own. Even though Josephus, in his report about baptism (*Jewish Antiquities* 18.116–119), disputes the sacramental character of baptism in effecting the forgiveness of sins and allows it to be of use only for the purification of the body, such a negation of the atoning effectiveness of baptism nevertheless shows that Josephus knew the special significance of the baptism of John but desired to rank it within the common Jewish understanding of purity. It cannot be proved that John derived his baptism from the Qumran rituals.

Various Impurities and Their Respective Rites. Purification Rules A (4Q274) 1.i.1–9 offers legislation for individuals who are impure because of fluid discharges:

An unclean person must remain at distance of twelve cubits from a pure person or dwelling. Anyone who is in the process of purification but comes in contact with an impure person must bathe in water and wash his clothes, only afterwards may he eat. For example, a woman who is purifying herself for seven days after the flow of blood may not touch a man who has a flux nor anything which he has touched. She should also not touch a menstruating woman or a man who has had an emission of semen. For whoever touches one of these im-

pure persons during his period of purification must bathe and wash his clothes as though he had been in contact with a corpse.

Serekh Damascus (4Q265) 2.15–17 says about a woman who has given birth to a child:

that if she has a boy, she remains impure for seven days as though she were menstruating and has a purification period of thirty-three days, for a girl, the first period is 14 days, and the second sixty-six days.

A *metsora'* ("person with a skin disease") defiles those who touch him: "[Whoever] of the impure persons to[uches] him shall bathe in water, launder his clothes, and afterwards he may eat of it (any food). This is what is meant by 'impure (to the) impure he shall call out' (Lv. 13.45)—all the days the [aff]liction is [in him]" (Purification Rules A, 4Q274 1.3). The *metsora'* is recognized as a sinner in the Damascus Document (4Q266; 272; 268). "Thus, I conclude about the *metsora'* that only after being forgiven by God, as evidenced by healing, can the purification process begin. The *metsora'* can enter the ordinary city after bathing and laundering on the first day of the purification rituals . . . but must keep away from the members of the community so as not to defile them" (Harrington, 1993, pp. 82–93). (For the uncleanness of the leper see 11Q19^a xlvi.14; xlix.19–21; CD xiii.5–6.)

Everyone who had contact with a corpse was barred from the common meal. The house of the dead is unclean for seven days (11Q19^d xlix.5–6), but 11Q19^d xlix.11–21:

Temple Scroll^a xlix.11–21 explains that a house in which a dead body was present must be cleansed from any liquids; the floor, walls, and doors must be scraped, and the locks, doorposts, and lintels must be washed with water. In addition, all the vessels of wood, iron, or bronze must be purified, and all clothing and skins must be washed. Any person who was in the house must bathe and wash his clothes on the first, third, and seventh days. On these last two occasions he must be sprinkled with the water of impurity. By the evening he will become pure and then be allowed to touch pure things.

Temple Scroll^a and Miqtsat Ma'asei ha-Torah B state that the impure person is unclean to the end of the purification period; this means until after sunset of the last day of the purification. People in the process of purification are not considered clean. Purification Rules A (4Q274 1.i.4–5) says: "As for the woman who is discharging blood, for seven days she shall not touch a male with a genital flux, or any object [th]at he has either touched, [l]ain upon, or sat on. [And if] she has touched, she shall launder her clothes, bathe, and afterwards she may eat."

Ritual Baths of the Essenes according to Josephus. Daily after work until the fifth hour, the Essenes "assemble in one place and, after girding their loins with linen

cloths, bathe their bodies in cold water. After this purification, they assemble in a private apartment which none of the uninitiated is permitted to enter, pure now themselves, they repair to the refectory, as to some sacred shrine" (*The Jewish War* 2.129). Also in the regulations for admission to the community, the laws of purity play a crucial role: After a year of probation the candidate "is brought into closer touch with the rule and is allowed to share the purer kind of water for purification" (*The Jewish War* 2.138). It has often been observed that there is some relationship between the Essene purification laws and the practice of Bannus (*Life* 11) of "using frequent ablutions of cold water, by day and night, for purity's sake." There is also some similarity between Josephus's accounts of the Essene immersion baths and his view of John the Baptist's baptism, in the use of *hagneia*, purification. This terminology is firmly rooted in the Essene accounts (this is hardly to be traced to its very rare usage in the Septuagint; *The Jewish War* 2.129.138.159; *Jewish Antiquities* 18.19; for Bannus, *Life* 11). [See John the Baptist.] More important still is the fact that in both the account of John's preaching and baptizing and the Essene section (*The Jewish War* 2.129) the life-change and ensuing righteous lifestyle precede the water rite. Only after a one-year probationary period is the candidate permitted to "share the purer waters for purification" (*The Jewish War* 2.138). Concerning John's baptism, it is expressly stated that virtue and righteousness are the "necessary preliminary if baptism was to be acceptable to God" (*Jewish Antiquities* 18.117).

There is another important note in *The Jewish War* 2.129. It is expressly stated that "they bathe their bodies." This also agrees with the explicit emphasis in the account of John the Baptist that the baptism did not serve "to gain pardon for whatever sins they committed, but as a purification (consecration) of the body implying that the soul was already thoroughly cleansed by right behaviour" (*Jewish Antiquities* 18.117). Josephus's view of the meaning of John's baptism is not in accordance with the New Testament accounts of John the Baptist (see above on 1QS ii.25-iii.12).

Later Developments in Jewish and Jewish-Christian Baptismal Movements. Many groups within early Judaism and Christianity practiced baptismal rites besides the Qumran-Essenes and the followers of John the Baptist. Two aspects are important for the understanding of their water rites: (1) the concept of a repeatable rite for the achievement of cultic purity and (2) the concept of a one-time baptism for the forgiveness of sins. They form the basic presuppositions for the later history of baptismal movements. Between these two aspects stands the proselyte baptism in rabbinic literature; it presents a first-time immersion for the achievement of cultic purity after

which, according to cultic needs, other immersions may follow.

The reports about some of the baptists, hemerobaptists, and masbotheans are so scanty that only the name itself betrays a baptismal group. The hemerobaptists, according to Epiphanius, practiced a total immersion in water daily, both summer and winter. [See Epiphanius.] The *Apostolic Constitutions* portray them as corresponding to a Pharisaic ideal of purity (cf. *Mk.* 7). Usually brought into connection with them are the *tovei Shahrut*, the "dawn baptizers" of *Tosefta Yadayim* 2.20. Their Pharisaic opponents disputed the effectiveness of purifying oneself by bathing every day even when a nocturnal defilement had not taken place.

Scattered reports about baptizing activities appear in connection with Bannus (Josephus, *Life* 11); *Sibylline Oracles* IV,161-169; *Life of Adam and Eve* 6-11; Epictetus (*Diss.* II,9,21); and various adherents of John the Baptist (*Ephesus*, *Acts* 19.1-7; Rome?). In general, we find Jewish-influenced baptismal movements at the turn from the first to the second centuries; they are varied and are geographically widely distributed.

Irenaeus mentions Ebionite water rites only in connection with the eucharist (water instead of wine); however, the general information that they retained the Jewish law certainly includes rules concerning frequent purifying immersions. The Gospel of the Ebionites (reported by Epiphanius, *Heresies* 30.13) began with the appearance of John the Baptist and the baptism of Jesus. John is a vegetarian, like the Ebionites. Another Ebionite work portrays Peter as washing himself for purification every day, like an Ebionite. The Pseudo-Clementine literature confirms the general character of this information. It reports about baptism for salvation and purification rituals following sexual intercourse. [See Pseudo-Clementine Literature.] One must distinguish between the book of revelation of Elkesai and the preaching of Alcibiades. Hippolytus relates the Elkesaites teaching "that there was preached unto men new remission of sins in the third year of Trajan's reign," which was likened to a baptismal rite. A second baptism is especially required in cases of more serious sins, such as adultery, fornication, or false prophecy. The immersion is conducted while fully clothed and can be repeated up to forty times. These extensive water rites emerge later in the *Cologne Mami Codex*, where they are criticized. [See Elkesaites.]

The Mandaeans are a further model of a syncretistic baptismal sect. Their traditions are recent, but their origins are at home in the same baptismal-sectarian milieu as that of the Ebionites, the Elkesaites, and the other baptismal groups of Palestine. Every Sunday, the Mandaeans practiced a thrice-repeated signing of the forehead with water accompanied by a baptismal formula and a thrice-

repeated drinking of water. In addition, there is a daily self-immersion performed as a morning washing by every member. The water rituals of the Mandaeans until the present have undergone a powerful ritualization and organization, but their origin is clearly from among the heretical Jewish and Jewish-Christian baptismal sects of the first two centuries.

The Jewish-Christian baptismal movements preserved the two basic possibilities of the use and understanding of water rites: self-immersion for the attainment of cultic purity; one-time baptism by a "baptist" as a "baptism of repentance for the forgiveness of sins," mediated through John the Baptist to primitive Christianity. Ebionites as well as Elkesaites practiced the water ritual in a double form: the one-time baptism as an initiation (for the Elkesaites, an additional second baptism for the forgiveness of sins) and repeatable baptism as a cultic-ritual washing following pollution.

HERMANN LICHTENBERGER

BEATITUDES. A set of related Hebrew fragments, one of which contains five beatitudes, was found in Cave 4 at Qumran; it is known as Wisdom Text with Beatitudes (4Q525). The fragments originally were assigned for editing to Jean Starcky but were first published by Émile Puech. Puech continues to group other small fragments with the original core identified by Starcky, so that at this time final conclusions cannot be drawn about the extent of the text preserved. But it is the larger fragment (4Q525 2.ii.1–6) that deserves to retain the interest of students. This large fragment can be structured as a series of five beatitudes. Since the beginning is lost, what is extant could have been preceded by one or more other beatitudes. The first of the extant beatitudes is concerned with speaking the truth with a pure heart and avoiding slander. The second congratulates those who uphold (Wisdom's) statutes and avoid the paths of perversity. The third praises those who rejoice in Lady Wisdom and avoid the paths of folly. The fourth felicitates the one who seeks Wisdom with purity of hand and does not strive after her with a deceitful heart (mind). The fifth is much longer. It puts in parallel Wisdom and "the Law of the Most High." It praises Wisdom's devotee for his studiousness, his delight in accepting her corrections, and his fidelity to her even in affliction and in a time of distress. The last line reads "For on her [Wisdom] he mediates always, and in his misfortune he ponders on . . ." before breaking off. The whole last long beatitude bears a striking resemblance to Psalm 1, as the first four beatitudes remind one of Psalm 15.2–3.

The extant fragments are dated by Puech and George Brooke to between 50 BCE and 50 CE because they are written in Herodian script. The date of composition could be earlier. The sapiential values of the text do not mark much of a change from *Proverbs* and *Ecclesiastes* (i.e., the Persian period, so Puech). On the other hand, the signs of careful composition and conformity to a rigidly struc-

tured genre of beatitude series (which includes the exact counting of words) such as Puech finds in this Qumran text, as well as in Psalm 15, *Ben Sira* 14.20–27 and 15.1–10, and *Matthew* 5.3–10, argue for the Hellenistic or Herodian-Roman period, perhaps between 150 and 30 BCE. The language is a Hebrew similar to that of *Psalms*, with some suggestions of the influence of Aramaic vocabulary.

It is difficult to determine the exact origins of this text since the language is quite general. It is certain that the text comes from a wisdom circle, perhaps of scribes. There is nothing particularly sectarian about it. The crucial issue that has been debated is the absence (Viviano) or presence (Puech, 1993) of eschatology in the series of beatitudes. It is clear that the War Scroll (1QM) and the more recently published Danielic text Aramaic Apocalypse (4Q246) share an apocalyptic eschatology centered on the kingdom of God, and occasionally (in the War Scroll) mentioning the archangel Michael, with the *Book of Daniel* (and much of the New Testament). There is none of their special terminology in these beatitudes. Whatever implication there is of punishment or judgment in our text is the result of one's personal folly; it is immanent, not transcendent, with the possible exception of line 5, which mentions a "time of oppression" and days of "terror." The phrase "in a time of oppression," *be-'et tsuqah*, could be an echo of the phrase *uve-tsuq ha'itim*, literally "in an oppression/distress of times," that is, "in a troubled time" from the prophecy of seventy weeks in *Daniel* 9.25. This is quite apocalyptic, yet the same word *tsuqah* appears in a purely sapiential text, *Proverbs* 1.27. The word for terror, *paḥad*, is common throughout most of the Hebrew scriptures. This question remains unsettled. From another angle, one sees that the long final beatitude presupposes the identity of Wisdom with the Torah, a bold theological step first attested outside Qumran in *Ben Sira* 24.22(23), though anticipated in *Deuteronomy* 4.5–8 (cf. *1 Cor.* 1.24, 30). This datum suggests that our text represents late rather than early Israelite wisdom ideas, that is, from after 200 BCE.

Since the text is a unicum, any detection of redactional layers would be speculative. The author is so immersed in the phraseology of *Psalms* and wisdom books that they could be viewed as the earliest layers of the text. As it stands, however, it seems a unity, indeed, if Puech's word counts have validity, a tightly structured unity. There is no evidence that the work was used or viewed as an authoritative scriptural book.

As for relations with other works, besides those already mentioned, a parallel with Hodayot² from Cave 1 at Qumran (1QH 6.13–16) has been noted; also the idiom in line 3 (*be-vor kapayim*, with purity of hands, i.e., with clean hands) is found in Rule of the Community from Cave 1 (1QS 9.15) as well. [See Hodayot; Rule of the Commu-

nity.] With the Hebrew scriptures note the following: line 1 is parallel to *Psalms* 15.3, "slander with the tongue"; in *Proverbs* 3.18, those who cling to wisdom are called happy; and *Proverbs* 4.4 says "keep my commandments, and live." Line 2 is parallel with *Proverbs* 5.5, neglect of wisdom leads to death and Sheol. Line 3 has a parallel in *Proverbs* 12.20's phrase "the heart of deceit" and in the use of the verbal root *nšg* to refer to attaining wisdom/the paths of life. For the rest, we can say that there is a biblical vocabulary, yet the phraseology is original, with an almost masochistic intensification in line 4, "delighting in wisdom's strokes." For the whole, see *Ben Sira* 14.20–27, which contains eight verses introduced by "happy is." This passage can be read (Puech, 1991) as one long eight-part beatitude that expresses an intellectual eros. *Ben Sira* 15.1–8 continues this sapiential eros in a series of maternal and bridal images. New Testament comparisons begin with *Matthew* 5.3–12, parallel to *Luke* 6.20–26, Jesus' list of beatitudes (the number varies from four to nine). The rest of the beatitudes in the New Testament are single, not in series. Qumran's first beatitude refers to sins of the tongue or speech; this is also the subject of *Matthew* 5.23–37 and 23.16–22, and *James* 3.1–12; for the purity of heart mentioned in this first Qumran beatitude, see *Matthew* 5.8, "blessed are the pure of heart." For Qumran's second beatitude, compare *Matthew* 5.17–20 and *Luke* 16.17, both passages concerned with observance of the Law. Qumran's third beatitude connects with *Matthew* 5.10–12, 7.13–14, 7.24–27, 25.1–13, and 25.14–30 in the sense that all these passages speak either of a contrast between wisdom and folly (the wise and the foolish) or between the way that leads to life and the way that leads to death; they move the reader to a choice or a decision. *Matthew* 11.25 and *I Corinthians* 1.19 and 1.26–29 differ from these texts to the extent that they contrast the apparently wise (but really foolish) with the apparently foolish (but really wise). Compare the fourth beatitude from Qumran with *Matthew* 6.33, which lists the values one should most seek; compare Qumran's deceitful heart with *Matthew* 9.4, 5.28, 12.34, 13.15 (citing *Is.* 6.10), 15.8 (citing *Is.* 29.13), and 15.18–19, all heart texts. On the ready assumption of sinfulness, compare the Qumran text with *Matthew* 7.11. The Qumran beatitude text is important for the history of this literary genre, for the study of Hebrew wisdom literature, and for the analysis of the Sermon on the Mount/Plain (*Mt.* 5–7; *Lk.* 6).

BEN GALGULA, YESHU'A. According to three letters found at Wadi Murabba'at, a letter from Beit-Mashiko to Yeshu'a ben Galgula (Mur 42) and two letters from Shim'on Bar Kokhba to Yeshu'a ben Galgula (Mur 34–44), Yeshu'a ben Galgula is the name of one of the commanders in Bar Kokhba's army. Bar Kokhba's letters contain the names of several of his subordinate commanders, but Yeshu'a ben Galgula is the only one whose army rank is specified. He is called "chief of the camp," although it is impossible to know from this his exact position in the hierarchy of command. The term *camp* also is used in another document to refer to Herodium, but in neither case is there any way of knowing the size of this unit, if indeed there was a standard size.

One of the letters (Mur 43) sent to Yeshu'a ben Galgula by Bar Kokhba begins as follows: "From Shim'on ben Kosiba' to Yeshu'a ben Galgula and the men of *ha-Barukh*, peace." According to Józef T. Milik (Benoit, 1961, pp. 159–161), who edited the document, the unclear word *ha-Barukh* refers to Kefar ha-Barukh, a village near Hebron, where Yeshu'a ben Galgula's camp must have been located. There is some support for identifying this word as a geographical place-name since other letters of Bar

Kokhba that were sent to local commanders begin by addressing the commander's men, specifying the place in which they are situated; for example: "from Shim'on ben Kosiba' to the men of 'Ein-Gedi, to Masabbala [and] Yeho[u]atan b[ar] Ba'ayan, peace" (Yadin, 1961, p. 47). However, others think the correct reading should be *li-kerakhi*, "the fort," or perhaps even *hevrekha*, "your company." A further text that associates Yeshu'a ben Galgula with this geographical area is the remarriage contract of his sister Salome, which also was found at Murabba'at (Mur 115). This document dates from the year 124 CE and was drawn up in the toparchy of Herodium. It was written in Greek, so that from it we know the correct pronunciation of Yeshu'a ben Galgula's name, which appears without vowels in the Hebrew and Aramaic documents.

In the letter to Yeshu'a ben Galgula (Mur 43), Bar Kokhba appears to demand from him and his men that they not harm the Galileans in their unit; if they do, he will clap them in irons, as he once punished someone called ben Aflul. If this reading is correct, it provides evidence for the presence of soldiers from Galilee in Bar Kokhba's forces stationed in the area of the Hebron hill country, as well as evidence for local differences and tensions between the Galileans and the men from Judea. A further letter (Mur 44) from Bar Kokhba to Yeshu'a ben Galgula deals with the supply of food (Benoit, 1961, p. 161).

The letter (Mur 42) in which the name of Yeshu'a ben Galgula appears as chief of the camp was sent to him by the officials of the village of Beit-Mashiko, which was within his area of command. This name does not appear anywhere else in Jewish sources, but it is found in Nabatean and Palmyrene. Thus, Milik presumes that the village must have been in Southern Judea, an area that belonged to the Roman province of Arabia, according to Josephus. The officials demand that Yehosef ben Ariston return the cow that he took from Ya'aqov ben Yehudah, a resident of Beit-Mashiko, who had bought it legally. They are unable to come to Yeshu'a ben Galgula in person because of the Roman presence nearby. From this it is clear that, at the time, Bar Kokhba's units and the Roman units were very near each other (Benoit, 1961, pp. 155-159).

AHARON OPPENHEIMER

BEN SIRA, BOOK OF. The *Wisdom of Yeshua* (Jesus), *Ben Sira* in Hebrew (*Sirach* in Greek and *Ecclesiasticus* in Latin), is part of the Apocrypha and traditionally is included among those Jewish works called wisdom literature. It was composed in Hebrew in Jerusalem somewhere between 195 and 180 BCE by a scribe whose name is given as Jesus son of Eleazar, son of Sira (*Sir.* 50.27). This date can be confirmed by the inclusion in the book (chap. 50) of a paean to the high priest Simon II (219-196 BCE), during whose high priestly tenure the author lived and after whose death he most likely wrote, and the lack of awareness of the events under Antiochus IV Epiphanes that led to the Maccabean Revolt. The translator presents himself in the prologue as the author's grandson, who came to Egypt in the "thirty-eighth year of King Euergetes" (Ptolemy VIII, nicknamed Physcon Euergetes), in about 132 BCE (Prologue). There he translated the work into Greek, which became the book's primary language of transmission into modernity.

Transmission of the Text. Both the Hebrew manuscripts and the Greek translation have been transmitted in at least two different forms. The original Hebrew text of *Ben Sira* has been designated *HTI*, and a text or texts augmented with additional proverbs is known as *HTII*. The grandson's translation, *GI*, was made from *HTI*, and a second Greek recension, *GII*, was translated from *HTII*. The manuscripts from the Cairo Genizah witness both forms of the Hebrew text, and the quotations of *Ben Sira* contained in rabbinic literature also show awareness of this expanded text form. Additionally, all extant Greek manuscripts show a textual displacement in which the order of particular verses—30.25-33.13a and 33.13b-36.16a—has been switched.

Two other translations constitute important additional textual witnesses to the book. The Old Latin, which was eventually accepted into the Vulgate because Jerome did not make a new translation of the book, probably dates from the second century CE and rests on the expanded *GII*. The Syriac translation was made on the basis of *HTI* and *HTII*, but it also shows the influence of the Greek. It was most likely the product of Ebionites in the fourth century.

Even though a number of Ben Sira's proverbs are cited in rabbinic literature, the original Hebrew gradually fell into obscurity, presumably because the book was not included in the Jewish canon. It survived in Karaite communities well into the Middle Ages, perhaps after having been rediscovered as part of a find of Hebrew manuscripts in the area of the Dead Sea around 800 CE.

Hebrew Manuscripts. In 1896 Solomon Schechter of Cambridge University identified the first fragments of the Hebrew *Ben Sira* among the thousands of manuscript pieces found in the Cairo Genizah. To date, scholars have

identified fragments of six manuscripts of the book, denoted A through F. None, unfortunately, encompasses the entire fifty-one chapters of the book. The following list provides those passages extant in the Cairo Genizah manuscripts.

MS A, 3.6b–16.26

MS B (written in suchometric form and including a subscription), 30.11–33.3; 35.11–38.27b; 39.15c–51.30

MS C (a compilation of citations), 3.14–18; 3.21–22; 4.21–23; 4.30; 4.31; 5.4–7; 5.9–13; 6.18b; 6.19; 6.28; 6.35; 7.1; 7.2; 7.4; 7.6; 7.17; 7.20; 7.21; 7.23–25; 18.31b–19.3b; 20.5–7; 20.13; 20.22–23; 25.8; 25.13; 25.17–24; 26.1–3; 26.13; 26.15–17; 25.8; 25.20–21; 36.27–31; 37.19; 37.22; 37.24; 37.26; 41.16

MS D, 36.29–38.1a

MS E, 32.16–34.1

MS F, 31.24–32.7; 32.12–33.8

More recently portions of the Hebrew text were found among the discoveries at Qumran and Masada. Small fragments from Cave 2 at Qumran (2Q18) preserve a few words from *Ben Sira* 6.14–15 (or 1.19–20) and 6.20–31. Maurice Baillet, the editor (1962, pp. 75–77) dates the fragments to the first century BCE. Although small, these fragments reveal that *Ben Sira* was copied at an early period in poetic stichometry (lines). The Psalms Scroll from Cave 11 (hereafter 11Q Psalms^a, 11Q5), which contains several compositions not in the Hebrew scriptures (Psalms 151, 154, 155, the Plea for Deliverance, Apostrophe to Zion, Hymn to the Creator, and David's Compositions), also includes *Ben Sira* 51.13–19 and 51.30. James A. Sanders (1965) argues that the Hebrew text of *Ben Sira* 51 in 11Q Psalms^a is superior to that extant in the Cairo Genizah manuscripts.

The Ben Sira scroll found at Masada (Mas1h), discovered in casemate 1109, comprises the most extensive Judean Desert remains of the work. This scroll, the earliest Hebrew-manuscript evidence for the book, is written, according to Yigael Yadin (1965), in a "middle or late Herodian" hand and dates from the first century BCE. It encompasses *Ben Sira* 39.27–43.30. The text of the scroll is virtually identical with that of the Cairo Genizah manuscripts, and it is the closest among extant Hebrew copies to Ben Sira's original text (Yadin, 1965).

Contents of Ben Sira. The book contains sapiential material of a diverse nature. Ben Sira includes in his work both "recipe" or practical wisdom—advice for living a good life (e.g., *Sir.* 4.1–10)—and "existential" wisdom—those traditions that provide meaning for the difficulties of life (for example, *Sir.* 18.8–14). Several themes dominate the book, but Alexander Di Lella (1992) argues that the most dominant theme concerns acquiring wisdom by fearing the Lord and keeping his commandments. Wis-

dom is personified as a woman, who calls out to those seeking her and desires to be sought (for example, *Sir.* 14.20–15.8; 24; 51). The book concludes with a long section, usually called the Praise of the Ancestors, glorifying the heroes of Israel's past up through the high priest Simon II.

The book also provides a wealth of potential clues about the social world of Jewish Palestine and inner-Jewish religious tensions in the pre-Maccabean period. In what seems to be a polemic against Jewish groups that he does not countenance, Ben Sira warns his charges against the danger of speculating about the secrets of the universe (*Sir.* 3.21–24), and, in an apparent swipe at those who use a solar calendar, he goes beyond *Genesis* 1.14 and says that it is solely according to the moon that important days and times should be set (43.1–8).

BENJAMIN G. WRIGHT III

BERAKHOT. The Hebrew work Berakhot has been preserved in Cave 4 at Qumran in five manuscripts, known as Berakhot^{a-c} (4Q286–290), dated paleographically between approximately 1 through 50 CE. The opening of the work is missing, and the overlap of text among the five manuscripts is slight. However, on the basis of the extant fragments, its length may be estimated at approximately sixteen columns of thirteen lines each.

The text of Berakhot consists of a series of liturgical blessings and curses and a series of laws. A ceremonial function is suggested by such opening rubrics as “[F]urther they shall bless the God” (4Q286 7.i.8) and by closing rubrics such as “the council of the Community, all of them will say together: Amen. Amen” (4Q286 7.ii.1 = 4Q287 6.1). These characteristics, together with such phrases as “year after year in orde[r]” (4Q287 4.1) and a law referring to the muster of the members of the community (4Q286 17ab), indicate an annual covenantal ceremony of the *yahad* (cf. Rule of the Community [hereafter 1QRule of the Community] 1QS i.16–iii.12). [See Rule of the Community.]

The sequence of the covenantal ceremony may have been as follows: a communal confession (4Q286 1.i.7–8 [and frg. 9?]); a series of blessings addressed to God (4Q286 1.ii–7.i and 4Q287 1–5); a series of curses against Belial and his lot (4Q286 7.ii [= 4Q287 6] and 4Q287 7–10); a series of laws (4Q286 20ab [= 4Q288 1] and 4Q286 13, 14, 15, 17ab); liturgy of expelling the willful sinner from the community (4Q289 [and 4Q286 9?]); and the conclusion of the ceremony (4Q290).

Generally speaking, this sequence from Berakhot is similar to that of the covenantal ceremony recorded in the Rule of the Community, both of them, according to the *yahad* sectarian outlook [see Covenant], being intended to renew the biblical covenant with Israel. Nevertheless, the two covenantal ceremonies differ in their liturgical course and in the content of the blessings and curses, thus representing different aspects of the same covenantal idea.

Although blessings, curses, and *amen* responses are recited in alternating sequence in Berakhot, these do not follow the pattern of *Deuteronomy* 27 and 1QRule of the Community (1QS) ii, which contain recitations by priests, Levites, and those who enter the covenant. Rather, the blessings and curses of Berakhot are set in a liturgical sequence of recitations by heavenly and earthly participants, to which the men of the *yahad* community then respond. Thus, the ceremonial system of blessings

and curses evident in the literary form of Berakhot is based upon a broader concept of the covenantal ideology than that of 1QRule of the Community. Whereas the covenantal ceremony of 1QRule of the Community follows that of *Deuteronomy* (esp. chaps 27–29) and of the priestly blessing of *Numbers* 6.24–26, which are of a national nature, the covenantal ceremony of Berakhot seems to reflect a cosmological approach, similar to that in the biblical psalmody concerning the kingdom of God (cf. Ps. 96–100, 103.19–22, 145). Following this tradition, the covenantal concept of Berakhot expresses the idea of the overall nature of the law of God as creator and king, who creates and unifies the entire universe (cf. Ps. 103.17–22). Thus Belial and his lot, pretending to rule by their antithetical laws, are cursed (cf. the Melchiresha' and Melchizedek concept in Visions of Amram^{a-7?} [4Q543–548]; Melchizedek [11Q13]; War Scroll [1QM xiii.2–12]; and Curse [4Q280]). [See Amram; Melchizedek; and War of the Sons of Light against the Sons of Darkness.]

The antithesis between God and Belial appears in Berakhot as the antithesis between holiness and abomination. This concept of holiness is apparent in Berakhot through the invocation of God in the blessings recited by his angelic ministers in the heavenly sanctuaries (4Q286 1.ii–7.i, 4Q287 2). These angelic blessings are shaped by biblical and postbiblical motifs of the Merkavah tradition. Thus, the connection between the Sinai covenant and the angelic chariot, as shown in Psalm 68.18 and 68.34–36, may have influenced the idea of holiness in Berakhot (see 4Q286 2). However, the main concept expressed in Berakhot is that of the celestial holiness of the heavenly sanctuary, similar to that known in *Ezekiel* 1.26–28 and 8.2, *Daniel* 7.9b–10, *1 Enoch* 14, and the Songs of the Sabbath Sacrifice, possibly as an antithesis to the abomination of the pit, Abaddon, and Sheol, which are the dwellings of Belial (4Q286 7.ii.7–10 = 4Q287^b 6.6–9). [See Songs of the Sabbath Sacrifice.] The blessings of the earthly realms, following the blessings of the angelic realms, express the hegemony of the laws of God the Creator over the whole universe (4Q286 5–7.i; 4Q287 3–5). Among them, the men of the *yahad*, “the . . . elect . . . who have knowledge” of the laws of God like “[the c]ouncil of elim [angels] of purification who have eternal knowledge” (4Q286 7.i.2–3 and 6), reflect the idea of commitment to the laws of God by all the faithful of the covenant (cf. Ps. 103.20–22).

Stylistically, the blessings of God and the curses of Belial (4Q286 1–7, 4Q287^b) are structured as catalogs, in various forms of poetic parallelism and repetition of linguistic forms. The liturgical nature of this work is characterized both by its catalog structure and by poetic repetition (cf. Ps. 29, 103.20–22; *Prayer of Azariah and the Song of the Three Young Men*, 22; and esp. Ps. 148.7–13 and the

Sabbath hymn of the Words of the Luminaries" [4Q504 1-2.vij.4-9]). The antithetical curses are likewise rhymed in poetic parallelism, but of a different nature, similar to that of the War Scroll xiii.4-5, albeit versified in Berakhot in a more elaborate manner.

The series of laws preserved in Berakhot may be integrated with the same idea of the dualistic separation between the allies of God and the allies of Belial by the procedure of rebuking a sinning member of the *yahad* who may turn to the path of Belial (4Q286 20ab [= 4Q288 1] and 4Q286 13 and 14). These laws interpret *Leviticus* 19.17-18 as intended to prevent the unwitting sinner from deviation and elaborating the forensic procedure of punishment (cf. Damascus Document, CD ix). Thus, the sequence as a whole seems to lead toward the conclusion of expelling the willful sinner from the community (4Q289). There are parallels to this part of the annual covenantal ceremony in IQRule of the Community ii.25b-iii.6a and Damascus Document^a 4Q266 11.5b-18a (= Damascus Document^c 4Q270 7.i.19c-ii.12a). [See Damascus Document.]

The ceremony concludes with a hope for the eschatological days, when wickedness vanishes and anger disappears (4Q290). Thus, the dualistic sectarian ideology is conclusively molded in ceremonial expression.

BIBLE. See Scriptures, article on Texts.

BIBLICAL CHRONOLOGY is the name given to a papyrus manuscript of twelve or thirteen preserved fragments written in a late Hasmonean-early Herodian formal script with but a few cursive traces (50-30 BC). Only one copy (J. Starcky, 1956) from Qumran Cave 4 has survived, Biblical Chronology (4Q559). The text is written in Hasmonean Aramaic but does contain one Hebraism (*nmits[rayin]*). Ciphers are used throughout the text to designate numbers.

The chronology of the manuscript begins with Adam and Noah (or Abraham?). The end of the chronology is lost. Fragments 1 to 3 (and perhaps 6) contain a brief outline of biblical history from Isaac to Aaron, using primarily the phrasing formulas of the biblical genealogies (*Gn.* 5.1-32, 11.10-32): "X person begot, at Y years of age, so and so." The outline starts with Isaac's marriage (at the age of 40; *Gn.* 25.20), his fatherhood (at the age of 60; *Gn.* 25.26), Abraham's admonition to his sons (Isaac's age being 65; cf. *Jub.* 20), Isaac's sending his son Jacob to Mesopotamia, Jacob's years in Canaan (69; *Jub.* 19.13, 27.19), and the years of service that he traded for the hands of both Leah and Rachel (14 years; *Gn.* 31.41). Fragment 3 includes information about Levi's fatherhood (at the age of 35; *Greek Testament of Levi* 11), Qahat's age (29), Amram's age, Aaron's departure from Egypt together with 11,536 members of his family (this number's significance deriving from the fact that it is equal to half of 23,000 + 36 ?; cf. *Nm.* 3.26; *1 Chr.* 23.13-14). Fragments 4, 5, and 7 contain a brief historical outline from the departure from Egypt until the time of the Judges in Israel, interconnected via the repeated use of the formula "X person + the years of said person's reign." This outline details the Israelites' journey of forty years in the desert, their arrival at the Jordan River, their staying at another spot for thirty-five years (it is impossible to tell where), their coming to Gilgal, Joshua's time at Timnat Serah (20 years; cf. *Jos.* 24.30; *Jgs.* 2.9), the lives of the rulers of Israel after Joshua's death: Cush-rishathaim (8 years; *Jgs.* 3.8), Othniel (40 years; *Jgs.* 3.9-11), Eglon (18 years; *Jgs.* 3.12-14), Ehud (80 years, *Jgs.* 3.16-30), Shamgar (*Jgs.* 3.31). Fragment 5 also details the period of the dominance of the Midianites (7 years; *Jgs.* 6.1-10), Gideon (40 years; *Jgs.* 8.28), Thola (23 years, *Jgs.* 10.1-2); Abimelech is omitted. Fragment 7 deals with Jabin's twenty years (*Jgs.* 4.2), followed by Deborah's forty years (*Jgs.* 4-16;

5.31) or Abdon's eight years (*Jgs.* 12.14), followed by forty years of Philistine domination (*Jgs.* 13.1).

As mentioned, **Biblical Chronology** quotes its chronology from the biblical tradition. An Aramaic Targum (cf. frg. 1 I with *Gen.* 25.20, frg. 2.3 with *Gen.* 29.18–20) should probably not be presupposed as the literary base of the manuscripts even though there is an obvious dependence on a Hebrew Bible tradition (the Hebraism *mi-nits* [*rayin*], and the geographical terminology for Land of Israel *Yardena'* and *Gilgela'*), perhaps stemming from a branch of the proto-Septuagint (cf. *Cush-rishathaini* frgs. 4, 6 and Septuagint *Jgs.* 3.8–10). In addition to the biblical tradition, **Biblical Chronology** quotes from other works such as *Jubilees*, *Testaments of Levi*, *Anrami*, *Qahat*, and so on. Fragments 4, 5, and 7 quote from *Judges* in a way that ignores the Deuteronomistic framework. Enemies and saviors of Israel stand side by side without any precise characterization. The missing Deuteronomistic element argues against any Hasidean-Essene origin for the work, but the fact that fragments 1, 2, and 3 concentrate on the genealogy of priestly families is possibly the result of their being written by sacerdotal groups. The text is likely the work of a scribe or a school of scribes from the second or first century BCE, at the earliest from the third century BCE, that pursued a specific interest in abstract summaries of Jewish history.

G. WILHELM NEBE

BIBLIOTHÈQUE NATIONALE DE FRANCE. Founded in 1368 by King Charles V, the Bibliothèque Royale became the Bibliothèque Nationale during the French Revolution in 1789; in 1994, upon its amalgamation with the Bibliothèque de France, it took the name of Bibliothèque Nationale de France.

In 1953, at the request of Roland de Vaux, director of the École Biblique et Archéologique Française in Jerusa-

lem, the Bibliothèque Nationale de France acquired 377 fragments from Cave 1 at Qumran, where excavations were carried out in 1949. The entire collection was given the number 18674 and was placed in the Oriental Section of the Manuscripts Department. As a result of this purchase, the publication of the texts from Cave 1 was made possible; the edition of the biblical texts (1Q1–13) was prepared by Barthélemy and that of the nonbiblical texts (1Q14–70) was undertaken by J. T. Milik. Their work was published in 1955 as the first volume of the series *Discoveries in the Judaean Desert* (Oxford).

The Bibliothèque Nationale de France houses the following fragments: Genesis (1Q1), Exodus (1Q2), paleo-Leviticus (1Q3), Deuteronomy^a (1Q4), Judges (1Q6), Samuel (1Q7), Peshet Micah (1Q14), Peshet Zephaniah (1Q15), Peshet Psalms (1Q16), Enoch Giants^b (1Q24), apocryphal prophecy (1Q25), wisdom apocryphon (4Q Sapiential Work A¹) (1Q26), liturgical texts? (1Q30–31), New Jerusalem (1Q32), hymnic compositions? (1Q38–40), and unclassified fragments (1Q50–56 and 63–68).

JACQUES BRIEND

BLESSINGS AND CURSES. Numerous blessings and curses appear in the Qumran corpus. The source of their power is the deity; hence, these benedictions and maledictions may be considered prayers. [See *Psalms*, *Hymns*, and *Prayers*.] Their stylistic forms and usage follow those of the biblical blessings and curses. However, they are used in the life of the Qumran community on a limited number of occasions and adapted in terms of content and liturgical form to express sectarian dualistic ideas.

The counterpoising of blessings and curses plays a central role in the life of the Qumran community in ceremonies and literary compositions. These demonstrate the contrast between the *yahad*, as the chosen seed of Israel loyal to the Law, and those who violate the Law. At the same time they express the dualistic ideology of the *yahad* concerning the struggle between light and darkness. Counterpoised blessings and curses occur in covenantal ceremonies and in various expressions of the ideas of covenant and reward found in other texts. In some cases, there are only blessings or only curses.

Covenantal Ceremonies and Literature. Since the discovery of the covenant treaties and law codes of the peoples of the ancient Near East, it has become clear that

counterpoising blessings against curses serves regularly as a legal formula of covenantal obligation. Their role is to assure loyalty to a political or religious authority by serving as judicial or religious sanctions (Mendenhall, 1954). The biblical covenant formula between the Lord of Israel and his people follows these treaties in either ceremonial or literary contexts (*Dt.* 27, *Lv.* 26, *Jos.* 24, *1 Sm.* 12.6–19, *2 Kgs.* 22.22–23.5, *Neh.* 9–10).

An annual ceremony held by the *yahad* essentially follows the biblical covenantal formula of renewing the covenant with God. Thus, juxtaposed blessings and curses appear in this ceremony (Rule of the Community from Cave 1 [hereafter IQRule of the Community] IQS ii.1–18 [Rule of the Community^b 4Q256 1–4, 4Q257 1.i, 5Q11 1.i–ii]; Curse 4Q280 [fragmentary], *Berakhot*^{a-c} 4Q286–290). [See Rule of the Community.] Nevertheless, although the biblical covenant formula was followed, the role of the blessings and curses was changed in these Qumran writings in accordance with the particular character of the *yahad* covenant. The renewal of the covenant obliged the *yahad* to keep the Law of Moses according to its sectarian interpretation. In adapting for itself the designation of *Jeremiah* 31.31, a “new covenant” (Damascus Document, CD vi.19; viii.21; xx.12), the *yahad* community regarded its covenant as the eschatological renewal of the covenant between God and Israel. [See Damascus Document.] However, it did not apply to all Israel but only to those who had atoned for their sins and committed themselves to the laws of this “new covenant” (IQS i.24–ii.1; CD xx.28–34). They were blessed, whereas those who rejected these laws remained cursed (CD xx.8–13; cf. IQS ii.5–18 and parallels).

Moreover, the covenantal blessings and curses of Qumran were intended not only to assure the observance of the covenant on the part of those who had committed themselves to it (IQS ii.11–18, CD viii.1–2 [= xix.13–14] and parallels) but also to draw a distinction between those who had undertaken the *yahad* covenant—“all the men of God’s lot who walk perfectly in all His ways”—and those who had not done so—“all the men of Belial’s lot who walk in the boundaries of darkness” (IQS ii.1–9 [= 4Q256 3–4, 4Q257 1.i], CD vii.4–10, War Scroll IQM xiii.12). Thus, one may assume that these counterpoised blessings and curses primarily symbolize the ceremonial distinction between the two antithetical lots, that of those faithful to the laws of God and that of those faithful to the laws of Belial (cf. IQM xiii.9–12 [= War Scroll^f 4Q495 2]). Even if the covenantal custom of reciting blessings and curses per se was derived from the Bible, its aim was altered in the Qumran texts in accordance with the deterministic-dualistic worldview of the *yahad*. [See Determinism; Dualism.]

The Juxtaposition of Blessings and Curses in a Covenant Formula appears in the Qumran writings in several versions of the annual covenantal ceremony of the *yahad*, thereby reflecting its textual development. One may discern three basic patterns upon which the covenantal blessings and curses of Qumran are based: the priestly blessing of *Numbers* 6.24–26 (in IQS ii.2–9 and 4Q280 2.2–4b); the covenantal curse of *Deuteronomy* 29.17–20 (in IQS ii.11–17 and 4Q280 2.1); and the counterpoised blessings and curses of the dualistic authorities, God and Belial, and their lots, found in the War Scroll (IQM xiii.2–6), *Berakhot*^d (4Q286 7.ii [= 4Q287 6]), curse (4Q280 2 [2b?] 4c–7a). [See War of the Sons of Light against the Sons of Darkness.]

The Rule of the Community. An entire formula of the annual covenantal ceremony of the *yahad* appears in IQRule of the Community (IQS i.16–ii.18). Based on the covenantal formula of *Deuteronomy* 27, it has counterpoised blessings and curses (cf. *Sotah* 7.5). However, as *Deuteronomy* 27 lacks blessings, the blessings in IQRule of the Community (IQS ii.2–4) are based on the biblical priestly blessing of *Numbers* 6.24–26, which also became the model for the counterpoised curse in the scroll (IQS ii.5–9 and parallels). The curse of *Deuteronomy* 29.17–20 became the model for additional curses in IQRule of the Community (IQS ii.11–17).

The circumstances for the recitation of the priestly blessing are not specified in the Hebrew scriptures; there is no allusion there to its recitation in a covenantal ceremony. Hence, its recitation in such a ceremony, where it is used to express the idea of dualistic separation between the lots of good and evil, may be considered an innovation. Besides the possibility that the blessing of *Numbers* 6.24–26 was chosen in order to assign the priests who recite it (IQS ii.1) a priestly blessing based on the Torah (cf. *Berakhot* 11Q14 1–2 [= War Rule 4Q285 1]), there may be an additional reason for this ordinance. [See *Berakhot*.] According to *Ben Sira* 50.19b–20 and the Mishnah (*Tam.* 5.1, 7.2; *Ta’an.* 4.1), it was customary to recite the priestly blessing following the sacrificial service, a custom based on *Leviticus* 9.22. As the *yahad* did not participate in the sacrificial service, which atoned for the sins of Israel but made atonement “for iniquitous guilt” by means of prayer (IQS ix.4–9; CD xi.18–21), one may assume that the confession that preceded the priestly blessing in the covenantal ceremony (IQS i.22–ii.1) of IQRule of the Community was considered an act of repentance, by means of which those who entered the covenant were made deserving of the priestly blessing. To quote the words of IQRule of the Community (IQS ii.11–12) addressed to those entering the covenant of the *yahad*: “Then he will be accepted by an agreeable atone-

ment before God, and it shall be unto him a covenant of everlasting community."

As the biblical priestly blessing of *Numbers* 6.24–26 is not a covenantal blessing and there is no corresponding curse in the Bible, its adaptation into the covenantal formula of the *yahad* required literary creativity. The blessing of *Numbers* 6.24–26 is retained in IQRule of the Community (IQS ii.2–4) in its entirety and in its original order, with the exception of God's name, which is not used because of its sacredness. However, certain homiletical additions are attached to the verbs to indicate their desired benefit. These additions place the homiletical contents into the pattern of the biblical priestly blessing, suitable to the worldview of the *yahad*, as follows:

May He bless you with every good
And keep you from every evil;

May He enlighten your heart with immortal wisdom
and favor you with eternal knowledge;

May He lift up His merciful countenance upon you
for eternal peace.

The curse in IQRule of the Community (IQS ii.5–9) is formulated with greater detail and greater freedom than the corresponding blessing, with several of its expressions being recited in parallel sentences. At the beginning of each sentence there is a verb of malediction, opposed to the verb of felicitation at the beginning of the corresponding sentence in the blessing; at the end there are words contrasting with the exegetical additions found in the corresponding blessings.

Cursed be you because of all your guilty deeds.
May God give you up to terror through all those who breathe
vengeance;
May He visit upon you destruction through all those who
take revenge.

Cursed be you without mercy for your deeds of darkness.
Damned be you in everlasting murky fire.
May God not be merciful unto you when you call.
May He not forgive by wiping out your iniquity.

May He lift up His angry countenance to wreak His
vengeance upon you.
May there be no peace for you at the mouth of any
intercessors.

The opposition between the blessings and the curses is characteristic of the dualistic contrasts applied by God's edict to both the deeds of the opposed lots and to their recompense. In the first pair the opposition is of good against evil; in the second, light against darkness; in the third pair the opposition is expressed in terms of an eter-

nity of grace and peace over and against the denial of peace.

The additional curse of IQRule of the Community (IQS ii.11–18) is directed against one who enters the covenant of the community insincerely. It imposes upon him the curse of *Deuteronomy* 29.18–20, directed against a man or woman of Israel who intentionally breaks the covenant. Such a member is cursed with the words "may God set him apart for calamity, that he may be cut off from all the Sons of Light" (IQS ii.16), and "may he put his lot among those who are cursed forever" (IQS ii.17), namely, he is considered to be cursed as one of those of Belial's lot.

Curse. The content suggests that the text Curse 4Q280 belongs to the annual covenantal ceremony as well. However, the extant fragments consist only of covenantal curses. Fragments 1 and 2, lines 1 and 7h, reflect the basic order of the last part of the curses of IQRule of the Community (IQS ii.15–17, 25–26), dealing with a member of the *yahad* who has intentionally broken its covenantal laws. But this order is interrupted in lines 2–7a with an additional series of curses directed to Melchiresha', the leader of wickedness, and his lot.

The curse of Melchiresha' and his lot is arranged in two parts, based on two different patterns. In the first part (4Q280 2.2–4h), Melchiresha' himself is cursed with some of the imprecations directed in IQRule of the Community (IQS ii.5–9) to the men of the lot of Belial, but in a shorter version, without the parallelicolon found in IQRule of the Community (IQS ii.5–9). In the second part (4Q280 2.4c–7a), Melchiresha' and his followers ("his lot") are cursed according to the pattern of the War Scroll (IQM xiii.2–6) and Berakhot^{44c} (see below). Nevertheless, this series as a whole is written consistently in one style, applying directly to the leader Melchiresha' and his lot, as follows:

(2) [Cur]sed be you Melchiresha' in all the schemes of your
guilty inclination].

[May] God [give you up] (3) to terror at the hand of avengers
of vengeance

May God not be merciful unto you when you call (on Him)
[May He lift up His angry face] (4) upon you for a curse.

May there be no peace for you at the mouth of any
intercesso[rs].

[Cursed be you] (5) with no remnant and damned be you
with no escape.

And cursed be those who execu[te their wicked schemes] (6)
and those who confirm your purposes in their hearts, by
plotting evil against the covenant of God [and. . .] (7)
against the words of all seers of [His] truth.

In light of the close relationship between the Curse scroll and IQRule of the Community (IQS ii) on the one hand, and the partial similarity of Curse, 4Q280 2 4c-7a, to a curse in the Berakhot texts on the other (see below), the question of the origin of these curses must be raised. Considering the undeveloped liturgical form of the covenantal ceremony in the Curse scroll, in contrast to that of IQRule of the Community (IQS ii) where rubrics for those who recite the blessings and the curses and the Amen responses are written systematically throughout the ceremony, one may assume that the Curse scroll represents an earlier stage of the covenantal ceremony. This conclusion may also be deduced from the fact that the Curse scroll, like the Rule scroll (5Q13) and the Rule of the Community from Cave 5 at Qumran (hereafter, 5QRule of the Community 5Q11), were all written by the same scribe in a "rustic semiformal hand" of the middle of the first century BC (Milik, 1972, p. 129) and may be related to "the evolution of compositions into what was eventually called the *Rule of the Community*" (Charlesworth, 1994, p. 105). If this assumption is correct, one may suggest that the editor of the Rule of the Community found the curse of Melchiresha⁵ inappropriate to a covenantal ceremony concerned with human beings alone, unless it was ascribed to "the men of the lot of Belial."

Purification Rules B^a. This fragmentary text (4Q275) contains a covenantal ceremony. It includes the procedure of cursing a member of the *yahad* in the presence of the elders with a priest [?] and the overseer (frg. 1). The curse probably referred to a member of the *yahad* who did not purify himself according to the purification laws of the group, whereas the blessed ones are those who keep the Law (frg. 2). The contrast between the curse and the blessing is apparent in their reference to the inheritance (*nahalah*) granted by God to each person. The sinner is cursed by being expelled "from his inheritance forever" (4Q275 1.5), parallel to the curse "may he be cut off from the midst of all the sons of light" (IQS ii.16, 4Q280 2.1), whereas those faithful to the Law are blessed that "They will inherit in their inheritance" (4Q275 2.1-2; cf. CD i.7-8; Peshier Psalms^d 4Q171 ij.4-5, 8-11). *Nahalah* ("inheritance"), like its parallel *goral* ("lot"; cf. *Nm.* 26.56, *Jos.* 17.14), is used here metaphorically for the predestination of each person (see IQS 4.16, 4.24). [See Peshier Psalms.]

Berakhot^{a-c}. A specific example of the dualistic distinction between the lot of God and that of Belial appears in the covenantal ceremony of Berakhot^{a-c} (4Q286-290). The blessings and curses of this text do not play the role of direct religious sanctions and do not even apply to those who do or do not enter the covenant. The blessings, to be recited by all the heavenly and earthly creatures faithful

to the laws of Creation and by the covenanters faithful to the Law, praise God directly (4Q286 1-7.i and 4Q287 1-5), whereas the curses, to be recited by the "Council of the Community," apply to Belial and his lot, as maledictions for their "hostile schemes" and "evil purpose" (4Q286 7.ii = 4Q287 6). Thus, the dualistic distinction between the two antithetical authorities, that of God and of Belial, became the main focus of these counterpoised blessings and curses. [See Demons.] In this respect, the ceremonial blessings and curses of Berakhot^{a-c} may be considered as a medium in the dualistic struggle between God and Belial, light and darkness, justice and evil, as in the War Scroll (IQM xiii.1-6) and Songs of the Sage^b (4Q511 52-59).

Noteworthy is the absence in Berakhot^{a-c} of blessings directly rewarding those who are faithful to the covenant of God. However, in the last section of the blessings of God (4Q286 7.i and 4Q287 5), those faithful to the covenant of God are described as "those who become close" to God, and probably "the offspring" of "the families of the earth to become [blessed]" (cf. *Is.* 61.9). In Berakhot^d (4Q286 7.i.2-3) they are defined as "the elect" and "men who have knowledge of psalms." In these characteristics they are similar to the angels, "[the council of *elim* of purification . . . those who have eternal knowledge to bless and praise" the name of God (4Q286 7.i.6-7). Thus, considering their superior virtues, their reward is certain. The opposite description of those faithful to the lot of Belial in the following section of the curses (4Q286 7.ii [= 4Q287 6]) reflects the antithetical recompense that will come to those unfaithful to the covenant of God. Thus, the dualistic distinction between the two opposite lots, as defined according to their deeds and reward, plays the same role as direct blessings and curses.

In light of another text representing the covenant formula of Qumran, the absence of direct blessings and curses is not unique. In Damascus Document (4Q266 11.11-14), the priest recites a blessing to God while expelling the willful sinner from the community, saying:

You chose the descendants of our fathers
and gave them your truthful regulations
and your holy precepts,
so that man could carry them out and live,
and you established frontiers for us,
and you curse those who cross them
and we are the people of your ransom
and the flock of your pasture.
You curse those who cross them
but we have raised ourselves up.

Blessings and Curses in Dualistic Struggles. The transformation of the covenantal formula into a theology of dualistic struggle between the forces of light and dark-

ness (i.e., good and evil) permits the use of counterpoised blessings and curses in other contexts as well. Thus, blessings and curses are used in the eschatological war (IQM xiii.1–6) and in magical poetry (4Q511 52–59).

Songs of the Sage^b. Songs of the Sage^a and ^b (4Q510–511) offer magical defense for the Children of Light against the injuries caused by the spirits and demons sent by Belial. Songs of the Sage^b (4Q511 52–59) begins with the praise of God who brings blessing to those who fear him and curses to the wicked spirits. [See Songs of the Sage.] The words of curse and blessing (4Q511 11.4–6) are as follows:

for from You comes judgment . . . [the cursed ones,
and from you is the foundation of all those who fear you . . .
[the blessed one

These lines express God's dualistic edict to the two "lots." It follows that these curses and the corresponding blessings serve as a kind of magical weapon in the daily struggle of the children of light against the spirits of Belial in the era of the rule of wickedness. It is as if there were a certain magical power in the words said by a righteous sage.

War Scroll. This text (IQM xiii.2–6), which became a pattern for the dualistic distinction in Berakhot^{a-c} and Curse, is to be recited in the eschatological war between the Children of Light and the Children of Darkness. It seems that the blessing of God in his holy plan, and with him all who serve him in justice, and the curse of Belial with his malicious plan, and together with him all his spirits whose deeds are full of filthy uncleanness, are used here either as a magical weapon against the hosts of darkness or as a symbol of the distinctive eschatological rewards decreed for the two opposite lots.

Blessings on Solemn Ceremonial Occasions. Blessings alone, without curses, are recited on solemn ceremonial occasions (e.g., Rule of the Blessings 1Q28h; War Rule 4Q285 1 [= Berakhot 11Q14 1–2]). Curses alone appear in magical poetry directed against evil spirits (4Q511 3.5, 11.3; Apocryphal Psalms^a 11Q11 4.6ff., 3.4ff.). The occasions for reciting these magical texts are not clear. [See Magic and Magical Texts.]

War Rule. The blessing of the War Rule (4Q285 1 [= 11Q14]) occurs in this text about the eschatological victory of the Children of Light over the *Kittim*. [See Kittim.] The blessing, possibly recited by a priest, opens with praise of the God of Israel, by whose power the people of Israel are blessed. The blessings directed to Israel are based upon two of the priestly blessings (*Nm.* 6.24–25) and the elimination of the covenantal curses written in the Bible. The idea of the blessings, as deduced from the literary structure of its content, is "May God Most High

bless you" with good wishes of heaven and earth (see 11Q14 1–2.6–10a [= 4Q285 3–7a]) "and make His face shine upon you" in removing all the curses and imprecations which come at the time of hiding of the face (see 11Q14 1–2.6, 10b–14 [= 4Q285 1.3, 7b–11]). While focusing on the content of the blessing itself, the restorative aspect of possessing the land of Israel, as based on the Deuteronomic covenant, is noticeable. Yet this aspect of the blessings is illuminated in light of the prophetic blessings of *Ezekiel* 34.25–29 and 36.29–30, which intended to eliminate the covenantal curses. In this way the blessings of the War Rule are integrated into the wider context of the War Rule, which deals with the fulfillment of the prophetic eschatological plan of Ezekiel and Isaiah.

Rule of the Blessing. This text (1Q28h) consists of blessings to all the members of the community, according to their status; these were to be recited at a solemn ceremony. There is no explicit reference to the particular occasion of the blessings. Nevertheless, as all the blessed ones are thought to remain constant to their holy covenant with God (1Q28h i.2, ii.25, iii.23–24, v.23), one may suggest that the solemn occasion is connected with a covenantal ceremony or perhaps an eschatological ceremony. Furthermore, the blessing of the Prince of the Congregation deals with an eschatological figure (1Q28b v.20–29), and the fact that no curses are mentioned also points to an eschatological time. The blessings are based mainly on the biblical priestly blessing (*Nm.* 6.24–26) and other biblical writings.

Blessings or Curses upon Individuals. Blessings or curses upon individuals hardly appear at all in the Qumran writings. This category is found only in the Testimonia (4Q175 21ff. [= *Psalms of Joshua*^b 4Q379 22.ii.7ff.]). Here the curse of *Joshua* 6.26 is interpreted as applying to figures from the Second Temple period, one who is symbolically named "a man accursed, the one of Belial" and two others who "may be instruments of violence." Statements about the predestination of individuals, recorded in the *peshtarim* and other sectarian writings (e.g., *Pesher Psalms*^a 4Q171; *Pesher Hahakkuk* 1QpHab viii.1–3, 13–15; x.3–5; CD i.16–18, viii.1–2), are not intended as curses or blessings but as presaging the recompense of particular figures. [See *Pesher Hahakkuk*.]

Undefined Curses and Blessings. The Curses scroll (5Q141) includes curses directed alternatively to an individual person and to the group. There is no sectarian terminology in the preserved text, only biblical language. The content and style of the curses seem to be influenced by the covenantal curses of *Leviticus* 26, written in the second person plural, and *Deuteronomy* 28, written in the second person singular.

Only five small fragments of Benediction from Cave 6

at Qumran (6Q16) are preserved. In the text, copied in the first century CE, one may discern blessings (see frg. 3) and curses (see frg. 2), possibly referring to a sectarian covenant.

Stylistic Traits. Declarative forms using the passive participle, *barukh* ("blessed be") and *arur* ("cursed be") or *za'um* ("he execrated"), appear in Qumran writings in both the singular and plural. "Blessed be" is directed to God, denoting his praise, while the plural, *berukhim*, is directed to those who fear Him, denoting their reward. By contrast, *arur* and *arurim*, or *arur ve-za'um* and *arurim u-ze'u-min*, are directed to the leader of wickedness (Belial in his various names) and/or his lot, denoting their punishment (IQM xiii.1-6, IQS ii.5-11 [= 4Q256 3-4, 4Q257 l.i.1-6], 4Q511 52-59.4-6, 4Q286-290, 4Q280, 4Q285 1 [= 11Q14 1-2], Purification Rules B^a 4Q275).

The one to be blessed or cursed is addressed primarily in the second person, in more or less fixed forms. Extensive use is made of the imperfect (jussive) form, as in: "may He bless you . . . and may He protect you . . ." (IQS ii.2-3); "may God give you up . . . may He visit upon you . . ." (IQS ii.5-6 [= 4Q257 l.i.2f., 5Q11 l.3]; "may there be no peace for you" (IQS ii.9). In some cases the third person is used, such as "may God set him apart for calamity" (IQS ii.16, 4Q280 1 [cf. *Dt.* 29.20], 4Q275 l.5). Negation may be expressed by *ein* as in "there is no bereavement in your land nor any illness" (11Q14 1-2.10-11 [= 4Q285 1.7]; cf. *Lv.* 26.6, 26.17, etc.). The use of the imperative is quite rare. Such phrases as *ashre* ("blessed is/are" or "happy is/are") and *oy* ("woe") appear in wisdom writings (Wisdom Text with Beatitudes 4Q525 3.ii.1, sapiential work 4Q185 1-2.ii.8, 1-2.ii.13) and poetical works (Apocryphal Lamentations A 4Q179 l.i.4, l.ii.1) in indirect blessings or curses.

BILHA NITZAN

BOETHUSIANS. The Boethusians were a sect of Jews who thrived in the late Second Temple period and who differed greatly from the Pharisees (*Perushim*) or Sages of that era in their religious outlook and practices. They are known to us only from rabbinic literature and are referred to there as the *Baytusim*. These sources often cite the Boethusians in close proximity to the Sadducees (*Tseduqim*), and parallel rabbinic passages often interchange the names of the two sects. [See Sadducees.] As a result, the Boethusians have frequently been viewed as closely aligned with the Sadducees, and it is sometimes difficult to isolate the views of the Boethusians from those of the Sadducees.

Scholars of the last two centuries have generally assigned the origins of the Boethusians to the Herodian era (37-4 BCE). Josephus reports that after Herod decided to marry Mariamme (25-24 BCE), he promptly elevated his father-in-law, Simon ben Boethus, to fill the post of high priest. This appointment effectively inaugurated the Boethusians as a sect. This theory, however, is questionable because rabbinic sources never even intimate that there was a connection between the origins of the sect and the Herodian Simon. In fact, *Avot de-Rabbi Natan*, a late rabbinic source, traces the origins of both the Boethusians and Sadducees to students several generations after the tenure of Antigonus of Sokho. Since Antigonus was an early sage who presided during the first quarter of the second century BCE, the origins of the Boethusians would probably be traced—by *Avot de-Rabbi Natan*—to the reign of either John Hyrcanus (135/4-104 BCE) or Alexander Jannaeus (103-76 BCE). It is usually assumed that the Boethusians ceased to exist as a viable group after the destruction of the Second Temple (70 CE). One rabbinic source, however, records a discussion between a Boethusian and a rabbi of the mid-second century CE.

The Boethusians are usually depicted by historians as rich aristocratic priests who wielded considerable power in opposing the Pharisees. While the suggestion that they were wealthy finds little corroboration in rabbinic literature, the claim that they were dominated by priests appears rather certain. Indeed, several rabbinic sources portray a Boethusian in the position of high priest while

others indicate serious involvement on the part of the sect with Temple-related matters.

The opponents of the Boethusians are most commonly identified simply as the *Sages*. Only one passage labels their opponents *Pharisees*. Although the Boethusians were always subdued by the Sages, they are viewed as having presented a serious threat to their authority. Indeed, the defeat of the Boethusians is sometimes connected to the commemoration of Second Temple semi-festival days.

The views of the Boethusians are recorded with respect to a wide array of issues. In the only theological dispute attributed to the Boethusians, they are portrayed as having denied the rabbinic doctrine of the resurrection of the dead. This accounted for their departure from the Sages. In one passage, the Boethusians apply a literalist approach to three biblical verses. These interpretations were rejected by the Sages because of their lack of adherence to the teachings of the Oral Law.

In three Temple-related matters, the disagreements and activities of the Boethusians are related. One of a set of parallel rabbinic passages relates that on Yom Kippur, a Boethusian high priest offered the incense outside of the Holy of Holies. This ran counter to the directives of the Pharisaic Sages. His action even drew rebuke from his Boethusian father. The Boethusians attempted to thwart the willow branch ceremony on the Festival of Tabernacles because they did not share the view of the Sages that the ceremony may be performed even on the Sabbath. Their plot was uncovered by the common people. A Boethusian priest is also accused of having poured water on his feet on that same festival in what seems to have been an attempt to mock the Sages' insistence on pouring the water libation on the altar. He was pelted with citrons by the people assembled in the Temple.

Two court procedures separated the Boethusians and their opponents. One of a set of parallel passages presents the Boethusians as having argued that therrefuted (*zomemim*) witnesses may be killed by the court even after the adjudged had been executed. Another passage indicates that the Boethusians—in opposition to the Pharisees—argued on logical grounds that a daughter may inherit from her father. In both cases, their arguments were rejected.

The Boethusians are also presented as having disagreed with the Sages with regard to the determination of certain calendar dates: The reaping of the 'omer was performed amidst great pomp and ceremony on the second day of Passover. This was done in accordance with the Sages' understanding that the biblical requirement to reap the 'omer "on the morrow of the Sabbath" refers to the day after the festival day of Passover. The public ceremony was thereby aimed at refuting the claims of the

Boethusians that the ceremony should not be done "at the conclusion of the festival." In two separate contexts, the Boethusians are presented as having insisted that the Festival of Pentecost must always fall on a Sunday. This was in opposition to the view of the Sages that Pentecost occurs fifty days from the second day of Passover, regardless of the day of the week.

The standard scholarly view is that the sectarians at Qumran employed the same calendar as that which was used by the authors of *Jubilees* and *1 Enoch*. This calendar consisted of 364 days, divided over twelve months, with eight months possessing 30 days and four months possessing 31 days. Each quarter of the year would always begin on a Wednesday. Likewise, Passover, falling on the fifteenth day of the first month, would also occur on a Wednesday. Consequently, if "on the morrow of the Sabbath" is taken as a reference to the first Sunday following Passover (that is, the day of the Paschal sacrifice and the seven-day festival of unleavened bread, which immediately follows it), Pentecost would consistently fall on the fifteenth day of the third month. Some scholars have argued that the calendar employed by the Boethusians was identical to that which was employed by *Jubilees*, *1 Enoch*, and the Dead Sea Scrolls. Others have rejected this equation, instead arguing that the Boethusians placed the reaping of the 'omer on the Sunday of Passover itself.

Commentators and historians have frequently attempted to reveal some unifying theme among the views of the Boethusians. Consequently, they have often portrayed the Boethusians as having taken a literalist approach to the Bible and as having rejected the entire corpus of the Oral Law. The contention that the Boethusians took a consistently literalist approach, however, is difficult to sustain. The Boethusians offer scriptural proof in only three rabbinic passages. Moreover, in several cases, the view of the Boethusians is not more literal than that of their opponents. In point of fact, even some of the clearly literalist understandings of the Boethusians match tannaitic opinions elsewhere in rabbinic literature. Although the Boethusians clearly rejected the binding nature of the Oral Law in some circumstances, it remains unclear to what extent they went in their rejection. In all probability, they rejected laws passed down as oral traditions with absolutely no support in the biblical text. Some historians have offered sociological motives to explain the differences between the Boethusians and their opponents, but these remain, on the whole, unproven.

Rabbinic sources never equate the Boethusians with any other group. Nevertheless, the prevalent opinion—and that which has the clearest support in the sources—finds that the Boethusians had a close affinity with the Sadducees. Several scholars have also adopted the equa-

tion between the rabbinic Boethusians and the Herodians of the New Testament.

Some historians, however, have argued that the Boethusians are to be equated with the Essenes. These arguments have been bolstered primarily by the similarity between the term used for the Boethusians in rabbinic literature ("Bet Sin" or "Betsin") and "Esse'im" (the presumed Hebrew that would lie behind *Essenoi* and *Essaioi* of Josephus and other Greek texts). [See Essenes.] In order to resolve the differences in practices and beliefs between the Essenes of Josephus and the Boethusians of rabbinic literature, it has been posited that there existed two groups of Boethusians: one group (described by Josephus) that lived in the outlying villages and another (cited in rabbinic literature) that moved to Jerusalem, came into conflict with the Pharisees, and altered its way of thinking and way of life.

The discovery and interpretation of the Dead Sea Scrolls has introduced a new dimension to the task of identifying the Boethusians. The dominant position has been that the Qumran sect is identical to the Essenes. Hence, shortly after the publication of the first scrolls, scholars began to assert that the Boethusians were one and the same with the Qumran sect.

More recently, some scholars have again advanced this argument on the basis of the contents of *Miqsat Ma'asei ha-Torah*. On the one hand, the Pharisaic-type of laws that the author rejects and the Sadducean-type of laws that he advocates point to the decidedly Sadducean character of the scroll. On the other hand, the Essenes are presumed to be the composers of the Qumran scrolls. For these scholars, therefore, the Boethusians of rabbinic literature, followers of Sadducean traditions, were actually the Essenes of nonrabbinic literature, the composers of the Qumran scrolls.

Some scholars have resisted identifying the Boethusians with any of the contemporary sects, instead arguing that they formed a distinct group insistent on a literalist interpretation of the Bible and rejection of the Oral Law.

BONE ARTIFACTS. In the Judean Desert sites dating to the Roman period, artifacts fashioned out of bone are rare. Most of these objects were for personal or domestic use. The richest and largest collection of bone and ivory artifacts was found at Masada, inside the rooms of the casemate wall surrounding the hilltop palace-fortress site originally constructed by King Herod. These objects were dated by Yigael Yadin to the period of the First Jewish Revolt (66-70 CE) when these casemate rooms served as dwellings for Jewish rebels who reinhabited Masada following the fall of Jerusalem. The artifacts included domestic or cosmetic objects such as spindle-whorl and stick, a flat spatula, dice, a small shallow circular spoon, and a larger spoon richly decorated with an incised rosette pattern. These personal belongings were most likely the property of women and represent the last days of Jewish resistance at Masada against the Roman army.

In the Murabba'at caves, several bone objects were recovered by archaeologists following the illicit excavations of the cave by local bedouin. Although the archaeological context was largely disturbed, Roland de Vaux assigned them to the Roman period. Owing to the personal nature of the artifacts, it is likely that they belonged to refugees who occupied the caves during the Bar Kokhba Revolt (c.132-135 CE), and who were the owners of the docu-

ments from these caves. The finds included spoons (one incomplete example was a shallow bowl of a spoon decorated with an incised rosette pattern and concentric circles) and two circular objects termed "buttons" by de Vaux, one measuring approximately 4 centimeters in diameter and the other measuring 2 centimeters in diameter with a hole drilled through the center. The smaller button was decorated with several circles and triangles, while the larger one was richly ornamented with geometric designs consisting of incised circles, triangles, and diagonal lines. A bone blade with rounded edges served an unknown function. Bone dice, similar to those from Masada and Jason's Tomb in Jerusalem, complete the bone artifact assemblage.

Contemporary with the finds from the Murabba'at caves, a few bone objects were found in the Cave of the Letters. A shallow bowl of polished horn, part of a spoon, was found in the "Letters-skin" and was probably used for cosmetics. A second bone object from this cave was a handle formed out of polished bone, which was decorated with incised crisscross bands filled with an unidentified black substance. A similar decoration is found on a wood stylus from the Murabba'at caves.

Bone artifacts were especially rare in tombs from this period. In the Jericho Jewish cemetery dating to the Second Temple period, a bone spatula, resembling one from Masada, was found in a coffin tomb dating to the first century BCE. This object may have been used as a weaving tool.

At 'Ein-Gedi, in a burial cave situated in Nahal David, one of the coffins was decorated with bone and wood inlays. These coffins are contemporary with those found in the Jericho cemetery and date to the first century BCE. The patterns formed by the inlays included circle, rosette, and pomegranate motifs, all typical designs of the Second Temple period.

ANN E. KILLEBREW

BRANCH OF DAVID. See Messiahs.

BUQEIA. The Hyrcania Valley, Buqeiya, is a geological syncline at the northeastern edge of the Judean Desert above the fault escarpment dominating Qumran and 'Ein-Feshkha. It is approximately 9 kilometers long, extending from north-northeast to south-southwest, between Nahal Og (Wadi Mukellik) and Nahal Kidron. [See Wadi en-Nar.] It is 2 to 4 kilometers wide, its central zone being drained by two tributaries of Nahal Qumran. Overlooking the valley on the west is the Hasmonean/Herodian fortress of Hyrcania (Khirbet Mird). The elevation of the valley is between 0 and 100 meters above sea level. It is an arid zone, with annual precipitation of 100 to 150 millimeters. Much of the valley is covered by local shallow and saline soil, unsuitable for agriculture, but over the wadi beds alluvial deposits have aggraded, forming chalky-marly soils that were deep enough and full of enough clay to store up winter rain and flood water to permit desert agriculture. The main north-south road was the shortest path of communication between Jericho and Hebron. The transversal roads lead from Jerusalem and Bethlehem to Khirbet Qumran and Khirbet Mazin via two steep ascents.

First visited by E. W. G. Masterman at the beginning of the century, the Buqeiya ruins were explored by Frank Moore Cross and Jozef T. Milik in 1954 and 1955, by Pessah Bar Adon in 1968, by Lawrence Stager in 1972, and by Joseph Patrich in 1981-1982.

There is a consensus about the identification of Buqeiya with the biblical Valley of Achor (*Jos.* 7.24, 7.26, 15.7; *Hos.* 2.17; *Is.* 65.10). But according to a fourth-century Christian tradition the valley was located to the north of Jericho (Wadi Nuwei'imeh). The ruins in the Valley of Achor are mentioned in the Copper Scroll (3Q15 i.1) (see also 3Q15 iv.6, where two tamarisk trees in the Valley of Achor are mentioned); opinions vary as to whether the reference is to the biblical valley or whether the later Christian tradition already had its roots in the Second Temple period (see Milik's commentary to the scroll; compare with Allegro's commentary).

The settlement in the valley flourished in the seventh century BCE (Iron Age II), when three village-fortresses and five associated farms with terraced fields and watchtowers were established along the valley, forming thirteen

installations and paramilitary farming enterprise sites. This settlement was first attributed by Cross and Milik (1956) to the Judean kings Jehoshaphat and Uzziah (2 *Chr.* 17.12, 26.10), but a reexamination of the finds by Lawrence Stager and several soundings he has conducted have indicated that the sites were not occupied for more than several decades; Stager (1976) has suggested attributing the settlement to the time of King Josiah. The entire system was abandoned in the last days of the monarchy of Judah (Stern, 1994).

Pottery finds indicate that the ruins (mainly the northern one), were partially reoccupied in the Hellenistic and Roman periods (Second Temple period). Otherwise there is plenty of evidence of nomadic and seminomadic installations of various periods in the valley: tent encampments, cairns, burial places, etc. (Patrich, 1995).

The three Iron Age II village-fortresses were Khirbet Abu Tahaq in the north, Khirhet (or Karm) es-Samrah in the center of the valley, and Khirhet el-Maqari (or Makari) in the south. Each settlement was rectilinear in plan and surrounded by a wall 1.0 to 1.2 meters thick, with casemates on two or three sides and rock-cut tunnel-like cisterns. The largest settlement was Khirhet es-Samrah, 68 by 40 meters in dimension. Khirbet Abu Tahaq measured 59 by 30 meters, and Khirbet el-Maqari was a square of about 32 meters to a side.

Two *imlk*, stamped jar handles from the second half of the seventh century BCE, were found in Khirhet es-Samrah, and an incised scarab with a seventh-century inscription reading "Of Badyahu son of M [. . .]" was found at Khirhet Abu Tahaq. An inscribed shard was found in Khirbet el-Maqari with parts of only two letters, *lamed* and *alef*, preserved.

Karm Atrad, the field adjacent to Khirhet Abu Tahaq, is the largest and best explored dam complex. Approximately 740 meters long and comprising approximately 100 dunams, it had seven transversal dams or terraces. It was encircled on the south, east, and north by a U-shaped enclosure wall and on the west by a 250-meter-long wall with sluice gates, installed in order to regulate the gushing floods. Three dam complexes were found in the neighborhood of Khirhet es-Samrah. The one to the north was 54 by 82.5 meters in dimension, the second

was located to the west, and the third, called Kurum el-'Ajuz, located about 1 kilometer to the west-southwest, was approximately 155 meters long and 57.5 meters wide. About 1.5 kilometers to the west of Khirbet el-Maqari were the remains of another dam complex, with a total of more than 1,000 meters of wall. Wheat, barley, and legumes were cultivated in the fields, and the surrounding area served as a grazing land for sheep and goats.

These three village-fortresses have been identified with the biblical Middin (Khirbet Abu Tahaq), Secacah (Khirhet es-Samrah), and Nihshan (Khirhet el-Maqari), three of the desert cities of Judea mentioned in *Joshua* 15.61-62 (Cross and Milik, 1956), unless these sites should be sought along the western shore of the Dead Sea, as was suggested by Bar Adon (1989).

C

CAIRO GENIZAH. The title *Cairo Genizah* is used to describe both the source and the contents of a collection of about 220,000 fragments of medieval Hebrew and Jewish writings. These were amassed in the *genizah* ("depository") of the Ben Ezra Synagogue in Old Cairo (Fustat) over a period of about nine hundred years and have in the past century found their way into various academic libraries in the Western world. In view of their large number and extensive range, as well as their dating from the tenth through thirteenth centuries, they constitute a unique source for the history, religion, and everyday life of the Mediterranean Jewish communities of the early Middle Ages. The manuscripts from the Cairo Genizah provide the only Hebrew paleographical links between texts from the time of Jesus and Hillel and the manuscript codices and early editions of the thirteenth through sixteenth centuries. The only other early manuscript source for some of the works found among the scrolls from the Judean Desert is the Cairo Genizah.

Discovery and Dispersal. During the last two decades of the nineteenth century, Cairo Genizah fragments first began to appear in the collections of booksellers, bibliophiles, and scholars. The minor officials of the Ben Ezra Synagogue had become aware that there was a market for such literary antiquities and were willing to supply it in return for some financial inducements. The material often passed through more than one pair of hands, and by the time it reached its final destination, its source was often obscure. Four personalities played major roles in the Cairo Genizah transfer from the East to West during the 1880s and early 1890s. A Jewish bookseller and editor from Jerusalem, Rabbi Solomon Aaron Wertheimer, was enthusiastic enough about some of his acquisitions to prepare them for publication but insufficiently prosperous to allow himself the luxury of retaining them. Reverend Greville Chester, an Anglican cleric and Egyptologist, on the other hand, presented a number of items to the Bodleian Library of the University of Oxford and to the University Library, Cambridge. The Imperial Public Library in Saint Petersburg, for its part, was enriched by the receipt of a substantial collection of Cairo Genizah documents from an archimandrite of the Russian Orthodox church in Jerusalem, Antonin, who lived in Jerusalem from 1865 until his death in 1894. Unlike others, the lawyer and bibliophile Elkan Nathan Adler, son of the

British chief rabbi, Nathan Marcus Adler, did not operate through intermediaries but visited the Cairo Genizah himself in 1896 (for a second time) and came away with a sackful of archival spoils.

Adler's friend and scholarly rival, Solomon Schechter, then Reader in Talmudic Literature at the University of Cambridge, though probably already aware of the Chester and Adler finds, was more fully alerted to the possibilities of a major discovery by the exciting purchases of his Scottish Presbyterian associates in Cambridge, the widowed twin sisters Agnes Lewis and Margaret Gihson. Encouraged, financed, and recommended by Charles Taylor, master of Saint John's College, Schechter spent a few weeks in Cairo in the winter of 1896-1897 and ensured that Cambridge University Library obtained a large number of fragments, now comprising almost 70 percent of all Cairo Genizah material. Even after Schechter's efforts, there were still some spoils to be taken from the Ben Ezra Synagogue and the Bassatin Cemetery. The Jewish Mosseri family of Cairo, together with some scholarly acquaintances, also assembled a significant collection. Among other private collectors was the Haham of the Sephardi community in England, Moses Gaster, who purchased many Cairo Genizah fragments.

The activities of such individuals and the subsequent relocation of the precious texts that they had obtained resulted in the enrichment of a number of libraries around the world. More than 140,000 Cairo Genizah fragments are now housed at the Cambridge University Library and consist of items obtained from Chester and Wertheimer, Lewis and Gihson, and Taylor and Schechter, as well as from the bookseller Samuel Raffalovich, and from a few others between 1897 and 1982. The second most extensive collection is probably the one in the institution that has recently been renamed the Russian National Library in Saint Petersburg, which holds the Antonin Collection of some twelve hundred pieces and many thousands of manuscript remnants (yet to be precisely sorted and numbered) purchased from the nineteenth-century Karaite scholar Abraham Firkowitsch. The uncertainty arises out of doubts as to whether his material came from the Ben Ezra Synagogue or from another synagogue, possibly Karaite. A hoard of twenty-four thousand fragments, definitely from the Cairo Genizah, is in the possession of the Jewish Theological Seminary

of America in New York City, having been purchased from Adler when financial pressures forced him to dispose of his library in 1923 and from his estate after his death in 1946. The Seminary also inherited fragments from what Schechter regarded as his private collection. Gaster's fragments were divided between the British Museum (now the British Library) in London and the John Rylands University Library of Manchester, the former buying some five thousand of the better-preserved pieces in 1924 and the latter about ten thousand of lesser quality in 1954. The Bodleian Library boasts a substantial Cairo Genizah collection (five thousand pieces), established at about the same time as that of Cambridge, as a result of purchases from Wertheimer and presentations by Chester and the Oxford Assyriologist and traveler, A. H. Sayce. Westminster College, the United Reformed Seminary in Cambridge, was presented with two thousand fragments by Lewis and Gibson. The Mosseri collection (four thousand pieces) remains in family hands in Paris. The city also is host to thirty-five hundred items at the Alliance Israelite Universelle, acquired early in the century by the Consistoire Israelite. Smaller collections are to be found in Strashourg, Budapest, Philadelphia, Jerusalem, Cincinnati, Washington, D.C., Vienna, Birmingham (United Kingdom) and Kiev.

Origin and Literary-Historical Importance. Remarkable though it is as a historical archive, the Cairo Genizah was built neither with an eye to preservation nor the expectation of historical research. From as early as the eleventh century, when the Ben Ezra Synagogue was built on its current site, the communal authorities followed the practice of Jews worldwide in not destroying any text that might contain the name of God or a quotation from sacred literature. For almost nine centuries the religious functionaries in Cairo, however, appear to have interpreted the tradition more strictly, consigning to their *genizah* not only worn and damaged religious tracts but also a host of written items of purely mundane content. As the combined result of reverence for Jewish texts, the climate, and an undisturbed site, the Cairo Genizah has bequeathed to posterity a unique testimony to the medieval Jewish Mediterranean.

The earliest such testimony goes back four centuries before the founding of the Ben Ezra Synagogue, some texts having apparently been retained by previous generations and inherited by the founders; the latest dates from the end of the nineteenth century. The period best represented is that of the tenth through thirteenth centuries, when the community was still of central significance to the Jewries of both Egypt and the wider Jewish Orient. As the Jewish settlement in Fustat gave way to its successor in Cairo to the northeast, the importance of the Ben Ezra Synagogue declined. Nevertheless, the arrival of

Jews expelled from Spain in the fifteenth and sixteenth centuries is variously documented, as is Judeo-Spanish literature. Such Jewish languages are another central feature of the Cairo Genizah materials, including as they do Judeo-Arabic, Judeo-Greek, Judeo-Persian, and Judeo-German (Yiddish), as well as (less surprisingly) Hebrew, Aramaic, and Arabic.

Intriguingly, Cairo Genizah texts represent the first evidence of Jewish compositions committed to writing after a gap of a number of centuries. This may be no more than an accident of archaeological history but can also be interpreted more innovatively. The rabbinic tradition was perhaps so overwhelmingly oral that only Torah scrolls and a few other items such as incantations, notes on matters of religious law, and synagogal poetry existed in written form. This is not to say that the rabbinic traditions were not being systematically compiled and edited; indeed there is the real and important possibility that such a process was essentially oral. If this suggestion is correct, the Cairo Genizah testifies to an explosion of written material among rabbinic Jews during the ninth and tenth centuries (given that there are some 220,000 items [some consisting of a number of folios] still in existence from the Cairo Genizah, many times this number of texts must simply have not survived). This trend may have been inspired by the need to respond to Islamic, Christian, and Karaite developments and was probably aided by the widespread adoption of the codex, in preference to the scroll and the individual folio. Once this new medium became widely employed, it influenced the format and transmission of texts, the nature of literacy, and the history of the book in many Jewish communities.

Content and Study. It is immediately apparent to the historian assessing almost a century of Cairo Genizah scholarship that the results represent a virtual rewriting of Jewish history for the early medieval period. Through letters and documents, detailed accounts have now been compiled of the social, economic, and religious activities of the vibrant Oriental Jewish communities during the tenth through thirteenth centuries. Studies of halakhic rulings, commentaries, and correspondence have demonstrated the development of Jewish law in the gaonic period (seventh through eleventh centuries) and the manner in which the Babylonian academies succeeded in establishing a centralized system of education, authority, and administration throughout the Islamic empire. The description of the biblical texts, Aramaic and Judeo-Arabic translations, and exegetical works have clarified how rabbinic interpretations met Karaite challenges and responded to Muslim and Christian theological notions. Previous knowledge about such leading personalities as Sa'adya ben Yosef Ga'on, Shemu'el ben Hofni, Moses Maimonides, Yehudah ha-Levi, and Yosef Karo has been

significantly deepened. Texts have been found of both the Babylonian and Jerusalem Talmuds, and of many Midrashic works that predate by centuries the few manuscripts on which standard editions are based, permitting the restoration of more accurate versions. Historians of the Masoretic Text and Hebrew philology have been able to provide new insights into how the biblical text was carefully transmitted and how a number of systems of grammar were developed. The variety of Jewish liturgical rites, especially those of Babylonia and Palestine, contrast significantly with later standards, and thousands of unknown poems, sacred and secular, many by newly discovered poets, have been restored to Jewish lyrical history. A new era of Semitic linguistic study has been ushered in through the close examination of the Judeo-Arabic dialect. Also uncovered have been rare examples of Jewish artistic, musical, scientific, and medical self-expression.

These scholarly achievements have by no means been evenly spread over each of the last ten decades. The intensive preservation, sorting, and description of the collections in the early decades was followed by an era of relative neglect in the period of the two world wars. Since the 1950s, institutions have again given attention to the fragments and made them more widely available. As a result, there has been another flowering of Cairo Genizah scholarship, particularly in the past thirty years, in which Cambridge University Library, the Jewish Theological Seminary, the Institute of Microfilmed Hebrew Manuscripts at the Jewish National and University Library in Jerusalem, the Israel Academy of Sciences and Humanities, and the efforts of Shelomo Dov Goitein and his students have played major roles.

It was Goitein who brilliantly deciphered many of the mundane Cairo Genizah documents and was thus able to reconstruct the daily life of the Jew in the medieval Mediterranean area. Inspired by their teacher, his students have added many chapters to Oriental Jewish history in the Middle Ages.

Links with the Dead Sea Scrolls. There are a number of aspects of the Cairo Genizah story that are of particular relevance to the interpretation of the discoveries in the Judean Desert. It is clear that the consonantal texts of the earliest biblical material from the Cairo Genizah betray little variation from the famous medieval exemplars and confirm the accurate transmission of texts between the periods of Rabbi 'Aqiva and Maimonides. While that transmission no doubt included traditions of vocalization and cantillation, such traditions were systematized only in the early period of the Cairo Genizah, and a variety of methods were championed in different Jewish centers. Some Hebrew and Aramaic linguistic phenomena and apocalyptic and mystical texts may be

traced back to the Second Temple period, but it is also clear that there are early medieval linguistic features.

As far as liturgy is concerned, the precise links between the Dead Sea Scrolls, the Talmudic traditions and the developments of the late geonic period are not yet clear. At Qumran, prayers, hymns, and benedictions on the one hand, and supplicatory formulas and incantations on the other, were already structured, communal, and an integral part of religious duties. The linguistic and contextual parallels with rabbinic prayer are striking, but the precise formulation is unique to each group, and it is an open question whether the rabbis were inspired by the Qumran practice to commit their prayers to writing and to standardization. It is clear that there was no Talmudic prayerbook as such, and that the way that rabbinic prayers were formulated, recited and transmitted in the first few centuries still left room for development. In that case, some communities may have followed more closely than others the texts and customs recorded at Qumran. What the Cairo Genizah fragments have demonstrated is that there was still considerable variety in the geonic period, either freshly encouraged by the liturgical poets in the post-Talmudic period, or a continuation of the earlier situation.

Special mention must be made of the fact that apocryphal and pseudepigraphal texts are represented among the Cairo Genizah material and have parallels in the texts from Qumran and Masada. The most important of these is the Damascus Document, the first and most extensive text of which was discovered by Schechter and published by him in his *Documents of Jewish Sectaries* (1910). It was puzzled over until a link could be made in 1947 with the literature from Qumran, including copies of this composition from Cave 4. Fragments of *Ben Sira* were also located and published by Taylor and Schechter, and later by others; one of the manuscripts is particularly close to the version discovered by Yadin at Masada. There are also texts of *Tobit* in Hebrew and the *Testament of Levi* in Aramaic, as well as sixth-century palimpsests of Greek Bible translations.

How is one to account for the survival of all this material from the second to the tenth century? It is possible that the rabbinic tradition was central during this period and was only lukewarm about such items, which found greater acceptance among Karaites, fringe groups, and non-Jewish communities and made only occasional, haphazard appearances in the more normative synagogues such as the Ben Ezra. In that case, either such items were consigned to the *genizah* of that synagogue precisely because they were regarded as heretical, or their origins are more accurately to be sought in a Karaite synagogue nearby. Alternatively, it may be that the rabbinic tradition was less central than it later imagined itself to have been, and historians should be working to uncover major Jew-

ish religious trends during the first Christian millennium that manifest themselves in a variety of ideologies that were, for their part, unenthusiastic about rabbinic developments. It would have been natural for Talmudic Judaism to have played down the importance of alternative traditions and condemned alternative literature, perhaps not always with success. During periods of literary expansion, such as the one represented by the classic Cairo Genizah texts, the drive toward the adoption of written, and therefore authoritative and perhaps syncretistic, versions may have been one of the factors leading to the temporary acceptance within the Talmudic communities of a greater variety of compositions than that sanctioned in some earlier or later contexts.

STEFAN C. REIF

CALENDARS AND MISHMAROT. The momentous importance that attaches to "proper chronology" and Temple watches (*mishmarot*) in the conceptual world of the "Community of the Renewed Covenant" is evinced by fragments of some twenty calendrical documents (4Q320–330, 4Q335–337, 6Q17), the tailpiece of a calendar preserved in one manuscript of Miqtsat Ma'asei ha-Torah^a (4Q394; hereafter MMT^a), and Otot (4Q319); a detailed exposition in Temple Scrolls^{a and b} (11Q19–20); and calendar-related references in major works of the Qumran community—the Rule of the Community (1QS), the Damascus Document (CD), Peshar Habakkuk (1QP^aHab), Psalms^a (11Q5; hereafter 11QPsalms^a), Songs of the Sabbath Sacrifice (4Q400–407; 11Q17; and Mas1k) and other works, which presuppose this calendrical system. The covenanters' messianic-millenarian expectations depended upon a divinely ordained sequence of periods in history (*qitsei*; Peshar Habakkuk [1QP^aHab vii.12–13]), or eternal periods (*qitstsei 'olanim* or *qitsei netsah*; Hodayot^a [1QH^a ix.26–27] [i.24–25]; iv.16; War Scroll [1QM i.8–9]), which were expected to culminate in the "cutoff period" and establishment of the fervently awaited "new [age]" (*qets neh' eratsah va-'asot hadashah*; Rule of the Community [1QS iv.25]).

The covenanters' calendrical works can be divided into four major categories.

Chronographical Schedules. These would include enumerations of days, weeks, months, and annual quarters in the Qumran community's 364-day solar calendar year and rotas of the annual cycle of "holy seasons"—Sabbaths and festivals. No document comprises all facets of the covenanters' calendar. The itemized roster of David's daily, Sabbath, and festival psalms in 11QPsalms^a (11Q5 xxvii) comes indirectly closest to a comprehensive circumscription of it. However, by collating and combin-

ing various features extracted from diverse sources, a full picture of the Qumran community's calendar can be reconstituted (see Table 1).

Unlike the Jewish lunisolar calendar of 354 days, the covenanters' solar year holds 364 days (fifty-two weeks) and can be subdivided into four quarters of three months (thirteen weeks or ninety-one days each). The first two months of a quarter (*tequfah*, a term also used in rabbinic parlance) number thirty days each. The last month of the quarter, that is, the third, sixth, ninth, and twelfth months of the year, has one *yom nosaf* ("additional day") to which is attached a special cultic significance, and thus numbers thirty-one days. This basic structure is captured in the fragmentary but still restorable opening lines of what appears to be a mnemonic calendrical composition (6Q17 i.1-2): 1 "[The first month, in it 30 days; the] second, in it 30 [days]; 2 [the third month, in it 31 days]; and complete are the days [of the quarter]."

In this document and others, for example the Biblical Chronology (4Q559), figures are not spelled out but are expressed in numerical symbols. These are known from weights and Hebrew inscriptions of the First Temple period and from Aramaic papyri of the fifth-fourth centuries BCE from Elephantine in Egypt: a slanted stroke (∟) signifies one; a hook (∟) stands for the number ten; two superimposed hooks (∟) indicate the number twenty. In some cases, the numbers three and four are presented as units of slanted strokes in opposite directions (∟, ∟).

Months are indicated by ordinal numbers, as in the ancient Israelite tradition (e.g., *Gn.* 8.4, 8.13, 8.14; *Ex.* 12.1; *Lv.* 23; *Hg.* 1.1; *Zec.* 1.1) and as occasionally seen in *Maccabees*, and not by Babylonian month names, which the returnees from the Babylonian exile are said to have brought back with them (*J.T., R. ha-Sh.* 1.50d) and which occur predominantly in postexilic books (e.g., *Zec.* 1.7; *Est.* 3.7, 3.13; *Neh.* 2.1), or by Canaanite appellations, some of which are preserved in biblical texts pertaining to the preexilic period (e.g. *Ex.* 13.4, 23.15, 34.18; *Dt.*

16.1; *1 Kgs.* 6.1, 6.37, 6.38, 8.2). However, Babylonian month names do occur in the fragmentary Zodiology and Brontology (4Q318) and the month name *Shevat* is mentioned once in a small fragment of Historical Work^c (4Q333). In several Qumran documents the number of days in each of the recorded months is given. At times, these details are combined with a summary reference to the number of days in an annual quarter.

The sequence of the annual quarters parallels the progression of the four major agricultural seasons in the Rule of the Community: "the seasons of reaping to [that of] summer [fruits]; the season of sowing to the season of [cutting] green fodder" (1QS x.7). These terms echo the designations of the agricultural seasons in *Amos* 7.1-4 and 8.1-2 and in the Gezer Calendar (c.900 BCE). The beginnings of the quarters, possibly observed as festivals and marked by special prayers (cf. Liturgical Prayers [1Q34 and 34^{bs}], *Jub.* 6.23-25), coincide with the onsets of the astronomical seasons—vernal equinox, summer solstice, autumnal equinox, and winter solstice—which are paraphrastically referred to in *1 Enoch* 82.16-19: "these are the signs of the days . . . glowing heat and dryness . . . all the trees bear fruit . . . the wheat is ripe for harvest . . . the trees produce their fruits ripe and ready . . . and all the fruits of the earth are gathered in."

The covenanters' calendrical documents are not in almanac form. Only "holy seasons" are recorded and secular workdays are altogether omitted. This schema appears in fragments of an item, which seems originally to have contained thirteen extremely narrow columns with lines of between three and ten letters and spaces (MMT^a [4Q394 i-ii]). In this document the dates of every single Sabbath throughout the year are registered, together with the dates of the covenanters' harvest festivals for the (New) Wine, the (New) Oil, and the "Wood Offering" (cf. Reworked Pentateuch^c [4Q365 23.9]), which occur at intervals of fifty days and do not have an explicit biblical basis but are seemingly derived from pertinent scriptures

CALENDARS AND MISHMAROT. TABLE 1. *The Enoch/Jubilees/Qumran Solar Calendar.*

DAYS OF THE WEEK	MONTHS		
	1, 4, 7, 10	2, 5, 8, 11	3, 6, 9, 12
Wednesday	1, 8, 15, 22, 29	6, 13, 20, 27	4, 11, 18, 25
Thursday	2, 9, 16, 23, 30	7, 14, 21, 28	5, 12, 19, 26
Friday	3, 10, 17, 24	1, 8, 15, 22, 29	6, 13, 20, 27
Saturday	4, 11, 18, 25	2, 9, 16, 23, 30	7, 14, 21, 28
Sunday	5, 12, 19, 26	3, 10, 17, 24	1, 8, 15, 22, 29
Monday	6, 13, 20, 27	4, 11, 18, 25	2, 9, 16, 23, 30
Tuesday	7, 14, 21, 28	5, 12, 19, 26	3, 10, 17, 24, 31

(*Nm.* 18.12; *Dt.* 18.4; *Neh.* 10.40, 10.35). In addition, summaries of the number of days in each annual quarter and of the total 364 days in the year are given:

The twenty third of it [the second month] is a Sabbath. The thirtieth [of it] is a Sabbath. The seventh of the third [month] is a Sabbath. The fourteenth of it is a Sabbath. The fifteenth of it is the Festival of Weeks. The twenty-[fir]st of it is the Sabbath. The twenty-eighth of it is a Sabbath. After it, the first and second day [of the week] a day is added and the quarter terminates [with] ninety-one days . . . [The twenty-fir]st of it [the sixth month] is a Sabbath. The twenty-second of it is the Festival of the [New] Oil.

The 364-day system ensures the smooth rotation of the annual cycle of the holy seasons. The first and fifteenth days of the first month of each quarter fall invariably on the fourth day of the week. On this day God created the luminaries (*Gen.* 1.14–19), which are the indispensable bases of all calendrical schemata. The Sabbaths always fall on the same monthly dates, and each festival falls on the same weekday. The offering of the Passover lamb is celebrated as a separate feast late Tuesday afternoon on the fourteenth of the first month, and the festival of Passover is celebrated on Wednesday, the fifteenth of the month. Shavu'ot is observed on Sunday, the fifteenth of the third month (cf. *Jub.* 15.1, 16.13, 44.1–5), fifty days after Sunday, the twenty-sixth of the first month, which follows upon the first Sabbath (*Lv.* 23.11–16) after the Passover festival. Thus the date of Shavu'ot is aligned with the dates of Passover on the fifteenth of the first month and Sukkot on the fifteenth of the seventh month. Ro'sh ha-Shanah, on the first of the seventh month, and Sukkot, on the fifteenth, fall again on a Wednesday. Yom Kippur is observed on Friday, the tenth of the seventh month, immediately before the ensuing Sabbath. The covenanters probably hailed this propinquity as the most accurate realization of the term *shabbat shabbaton*, which designates this day in the Priestly code (*Lv.* 16.31, 23.32), presumably taking it to mean "double Sabbath" or "one Sabbath after the other."

In the documents of the Qumran community, only the first days of the week-long festivals of Passover and Sukkot are recorded. There is no mention of the last day designated throughout the Hebrew Scriptures (*Ex.* 12.16; *Lv.* 23.8, 23.36; *Nm.* 28.25, 29.35; *Dt.* 16.8; *Neh.* 8.18; *2 Chr.* 7.9). The last holy seasons fall in the seventh month of the covenanters' calendar: Ro'sh ha-Shanah on the first, Yom Kippur on the tenth, and Sukkot on the fifteenth. Hanukkah and Purim, which depends on the biblical book of Esther that is not extant among the Qumran finds of biblical books, observed by mainstream Judaism in the ninth and the twelfth months respectively, are not listed. [See Festivals.]

The fragments of chronological schedules discovered at Qumran are remains of documents or scrolls (e.g., Calendrical Document A [4Q320] and Calendrical Document B^a [4Q321]) that contain a variety of calendrical rota and provide chronographic guidelines for the conduct of the individual and the community as a socio-religious entity. The correct observance of Sabbaths and festivals and the efficacy of ritual, foremost the sacrificial acts, depend on accurate timing. Since the schedule of sacrifices in the Jerusalem Temple was adjusted to the lunar year of 354 days, which mainstream Judaism followed, the covenanters abstained from participating in the Temple service. They filled the resulting void in their religious life by instituting prayers that were to be offered at prescribed times every day of the month, every Sabbath, and every festival by humans on earth and by angels in heaven (e.g., 1Q34; 4Q286–293, 400–407, 434–444, 449–457, 507–509).

An interesting consequence of the Qumran calendar is Annie Jaubert's thesis that the presentation of the Last Supper in the Synoptic tradition as the celebration of the Passover meal on the Tuesday evening of Holy Week conforms with its fixed date in the solar calendar of 364 days. In distinction, the *Gospel of John* dates the beginning of Passover to the Friday evening, presumably in accordance with the lunar calendar of mainstream Judaism. Critics have taken exception to the thesis on several counts. It has been argued that it clashes with the reports that Jesus and the disciples observed the festivals regularly in accord with the orthodox Jewish calendar and that adherence to a sectarian calendar would have totally divorced him and his followers from the mainstream community.

Mishmarot. This is the second category into which the covenanters' calendrical works can be divided. The covenanters considered their abstention from the Jerusalem Temple only a temporary state of affairs. They awaited fervently the rebuilding of a new Temple in which their own priesthood would conduct the holy service in accord with their solar calendar and their ritual rulings (Temple Scroll^a [11Q19], New Jerusalem [1Q32]). The various tables of priestly "watches" or "courses"—the *mishmarot* cycle—relate to this area of cultic concern. The genesis of the schema is traced back in the Otot scroll to the very beginning of the world: "Creation [was] on the fourth [day] of Ga[mul]" (4Q319 i.11). This concept is echoed in Calendrical Document A; an account of the Creation culminates in a reference to the fashioning of the great luminaries on the fourth day (cf. *Jub.* 2.8–9). Only the closing remark, which speaks of the moon's "appearing from the east . . . in the midst of heaven . . . from evening until morning" (4Q320 1.1–3), is preserved. The cosmic event is immediately linked to a roster of concordant dates in the

lunar and the solar calendar, with corresponding days in a three-year cycle of priestly watches, which opens (1.3–5): “On the fourth in the week [of service] of the sons of Gamul, in the first of the month, in the first year (2.i.1, 5 [the sons] of Gamul at the head of all years”). Through this linkage, the covenanters’ system of *mishmarot* becomes a salient feature of the creation of the cosmos.

Mishmarot lists fall into several subcategories that answer to the particular requirements of the priestly hierarchy. Some are enumerations of the names of the priestly watches that serve a one-week rotation every half-year. Their names accord with the biblical roster of twenty-four priestly families (1 Chr. 24.7–19), although this roster causes difficulties when applied to the fifty-two weeks in the solar year of 364 days. The covenanters solved the problem by establishing a six-year cycle with a staggered rotation system. The four weeks by which the solar year exceeds the lunar year are covered by three watches that serve three times and two that are on duty for an additional half-week, one at the beginning of the year, and one at its end:

Gamul [second half of his service] Delaiah Maaziah Joiarib Jedayah Harim Seorim Malkiah Miyamin Haqqots Abiah Jeshua Shekaniah Eliashib Jaqim Huppah Jeshbeab Bilgah Immer Hezir Happittet Petahaiyah Jehezkel Jakin Gamul Delaiah Maaziah Joiarib Jedayah Harim Seorim Malkiah Miyamin Haqqots Abiah Jeshua Shekaniah Eliashib Jaqim Huppah Jeshbeab Bilgah Immer Hezir Happittet Petahaiyah Jehezkel Jakin Gamul Delaiah Maaziah Joiarib Jedayah [first half of his service]

This arrangement is reflected in the War Scroll (1QM ii.1–2): “The fathers of the community are fifty-two. The major priests shall be appointed after the high priest and his deputy in twelve courses to serve constantly before God. And twenty-six heads of courses shall serve in their appointed term.” This seemingly baffling statement actually summarizes the turns of duty of twenty watches that served semiannually and covered forty weeks and of four that served three times and covered twelve weeks, fifty-two weeks in all; their “heads” are the “fifty-two fathers of the community.”

In 1 Chronicles 24.7–19 the priestly watches are listed by name and ordinal number: “the first [is] Joiarib, Joiada the second . . . Maaziah the twenty-fourth.” In the Qumran community rosters, only the names of the *mishmarot* are given (Calendrical Document F^a [4Q328 2, restored]). The ordinal numbers one through twenty-four of the biblical roster were presumably dropped because they did not tally with the twenty-six-watch system based on the solar calendar.

In some documents, years, quarters, months, and the first day of a quarter are identified by the name of the

first priestly watch then on duty. In Calendrical Document F^a and Calendrical Document F^b (4Q329) a list of *mishmarot* that served at the beginning of the years in a six-year cycle is followed by a roster of priestly watches that officiated at the onset of each quarter.

[In the first year Gamul, in the second Jedayah, in the third Miyamin, in the fourth Shekaniah in the fifth Jeshbeab, in the sixth Happittet

These are the [watches at the] beginnings of the years
In the first [year] Gamul Eliashib Maaziah [Huppah]
[in the] second Jedayah Bilgah Se[o]rim He[zir]
[in the third] Miya[min] Petahaiyah Abi[ah] Jakin
[in the fourth] Shekaniah De[laiah] Jaqim Joia[rib]
[in the fifth] Jeshbeab Harim Immer] Malkiah
in the si[x]th Happittet Haqqots Immer Jeshua]

Calendrical Document A (contains a fragmentary register that details names of the *mishmarot* that served at the beginnings of the months in a given year, together with the number of days in each month: “the second thirty [Jedayah], the third [thirty] one [Haqqots], the fourth thirty [Eliashib].” Calendrical Document C^d (4Q324^a 1.ii.3) specifies: “the fourth day [in] Malkiah this is the first in the tenth month” (cf. 4Q324^a and Calendrical Document C^c [4Q324 1.5]). Calendrical Document D (4Q325) lists the fifty-two annual Sabbaths that are named after the watches that enter the Temple on Saturday afternoon and begin their duties on Sunday morning, together with the “Beginnings of the Months,” the special festivals of the “First Wine,” the “First Oil,” the “Wood Offerings,” and the biblical “Festival of the (First) Grain,” but without mentioning other biblical festivals. In contrast, Calendrical Document B^a (4Q321 2.ii–iv) presents a roster of the first watch on duty in every single month of a six-year cycle, next to a list of the annual biblical festivals and the names of the *mishmar* in whose week of service each falls. Calendrical Document A (4Q320 4.ii), restored on the strength of evidence culled from other documents, does not record the covenanters’ special festivals:

- 1 The first year (of the six-year cycle) <vacat> its feasts:
- 2 On the 3rd (day) in the week of the sons of Maaziah [falls] the Pesah
- 3 On [the 1st in] Jeda[iah] the Swinging of the [Omer]
- 4 On the 5th in Seorim the [Second] Pesa[h]
- 5 On the 1st in Jeshua the Feast of Weeks
- 6 On the 4th in Maaziah the Day of Remembrance
- 7 [On the six]th in Joiarib the Day of Atonement
- 8 [On the 10th in the] seventh <vacat>
- 9 [On the 4th in Jeda]iah the Feast of Booths

It should be noted that there is no mention between lines 2 and 3 of the Festival of Unleavened Bread, which falls on the fourth service day of Maaziah. Further, if the proposed text restoration is correct, the Day of Atonement—

and only this day—is identified by a calendrical date, the tenth day of the seventh month, in addition to the day on which it falls in the week of Jojarib.

Calendrical Document G (4Q329^a 1) contains remains of a roster that pertains ostensibly to the “holy seasons” in one year of a six-year cycle but in fact records only the names of the priestly watches in whose week of service Passover falls:

[The first year its festivals, on the third day in] the week of [Maaziah the Passover; the second (year) its festivals, on the thir[d] [day in Seorim the Passover; the thir[d] (year) its festivals, on the third (day) [in the week of Abiah the Passover]; the fourth (year) its festivals, on the third (day) of [Yakim the Passover; the fifth (year) its festivals, [on the third (day) of Immer the Passover]

In all *mishmarot* texts the dating by the name of a priestly watch and the day in the weeks of its service pertains to recurring features of the annual cycle of holy days. Only in the tiny fragment of Historical Work⁴ (4Q333) is a one-time event dated in this fashion: “(x) killed (y) on the fif[th day] in Jedaiah.”

Synchronization Tables. The third category into which the calendrical works of the community can be divided consists of synchronization tables of two phases of the moon’s monthly revolution in a six-year cycle, identified by days in the week of service of the pertinent priestly course and by concordant dates in the solar year (4Q320 1.i–iii). In Calendrical Documents B^a and B^b (4Q321 and 4Q321^a), the first phase, [a], is defined by date alone, the second, [b], by date and the otherwise unknown term *duqah* or *duqo[h]*. Most scholars (including J. Baumgarten, J. T. Milik, and J. VanderKam) derive the term from the words *duq* or *diq* (“exactitude”) while S. Talmon connects it with *daq* (thinness). Calendrical Document B^a (4Q321 i.1–2) illustrates this schema: “a, On the second [day] in [the week of] Abijah [which falls] on the twenty-fifth [of the eighth lunar month]; and *duqah*; b, on the third day in Miyamin [which falls] on the twelfth in it [the eighth solar month].” The alignment of only two specific days in every lunar month with dates in the solar calendar does not evince an intention to synchronize the solar year with the lunar year, singling out the propitious nights of the new and the full moon, as is the prevailing opinion. Rather, the two phrases pertain to the unfavorable phases of the moon’s waning and total eclipse. These ominous days and dark nights are identified by dates in the solar calendar so that the covenanters would beware of them.

The terminology of calendrical and *mishmarot* texts is marked by a manifest dependence on biblical linguistic usage. Months are identified by numerals rather than by

appellations. The prevalent employment of the word *qets*, signifying “period” rather than “end,” parallels the Biblical Hebrew *‘et* (“time”) and *mo‘ed* (“seasons”) found in *Ezekiel* and *Daniel* (e.g. *Ezek.* 7.6, 21.30, 21.34; *Dn.* 12.6–7, 8.19, 11.27, 11.35). The entrance of a priestly watch into the Temple on Saturday afternoon is called *bi’at yeda‘yah* in Calendrical Document C^b and Calendrical Documents C^{d-1} (4Q323, 4Q324^{a-c}). This technical term echoes the biblical appellation of the incoming temple guard (*ba‘ei ha-Shabbat*), which spells the outgoing contingent (*vots‘ei ha-Shabbat*; 2 *Kgs.* 11.7, 11.9). The completion of a time segment of a year or quarter is defined by derivatives of *shlm*: *ve-shalmah ha-shanah* (“the year is complete” in MMT^a [4Q394 3–7.i]), *be-hishalem hoq tiqqunam* (“when the statute of their [the festivals] norm is completed” in Rule of the Community [1QS x.6–7]), and possibly *mo‘ed shillum[am]* (“the time [or festival] of their completion (in Festival Prayers^c [4Q509 i.3]). This use of *shlm*, which also underlies diverse translational references to the solar calendar in *1 Enoch* 82.6 and *Jubilees* 6.30 and 6.32, appears to derive from *Isaiah* 60.20: *ve-shalmu yemei evlekh* (“the days of your mourning shall be ended”).

Otot. Timetables of the Otot, the fourth category of Qumran calendrical works, cover fifty-year periods (jubilees) and are found in the Otot scroll (4Q319), in fragments of astronomical treatises in which the phases of the moon are recorded (4Q335–336), in Phases of the Moon (in Cryptic A script; 4Q317), and in Zodiology and Brontology (4Q318), which bear resemblance to the astronomical discourses in the Book of the Luminaries in *1 Enoch* 72–82.

The Calendar Controversy. The schism between the covenanters and mainstream Judaism is deeply rooted in the calendar controversy. The major features of the Qumran ephemeris are identical with those of the solar calendar propagated in *1 Enoch’s* Book of the Luminaries (*1 En.* 72–82) and *Jubilees*.

1 Enoch and Jubilees. According to *1 Enoch*, “The sun and stars (the moon is significantly omitted!) will bring in the years exactly so that they do not advance or delay their position by a single day unto eternity; but complete the years with perfect justice in 364 days” (*1 En.* 74.12; cf. 72.32).

This calendar is traced back to Enoch in Pseudo-Jubilees: “He wrote [down] everything [concerning the] heavens and the ways of their hosts, [the mo]nths” (4Q227 2), “the days of appointed times in the four parts of the year” (*Jub.* 5.23; cf. 2 *En.* 40.6), stating that “all the days . . . will be . . . fifty-two weeks” (*Jub.* 6.30). Enoch is said to have taught these details to his son Methuselah (*1 En.* 82). This knowledge was then divinely imparted to Noah,

who transmitted it to his descendants: "Now you command the Israelites to keep the years in this number—364 days. Then the year will be complete" (*Jub.* 6.32).

In Commentary on Genesis A (4Q252 i–ii), as in the version of the Noah episode in *Jubilees* (*Jub.* 6.23–27), the story of the flood unfolds in accord with this timetable. The successive stages of the deluge, detailed in *Genesis* 7.6–8.19, are fitted into a framework of dates from the seventeenth of the second month in the sixth-hundredth year of Noah's life (i.3–4) to the seventeenth (the Masoretic Text says the twenty-seventh) of the second month in the next year, so that Noah left the ark after exactly 364 days, at the completion of one year (4Q252 ii.2–3).

The prologue of *Jubilees* (*Jub.* 1.4, 1.25, 1.29) reports that the calendar was transmitted down to the generation of Moses, engraved on "heavenly tablets" that were given to him on Sinai together with the tablets of the Decalogue:

Moses remained on the mountain for forty days and forty nights while the Lord . . . related to him the divisions of all the times . . . Now you write all these words which I tell you . . . what is to come during all divisions of time . . . in the weeks of their jubilees until eternity. . . The angel of the presence . . . took the tablets [which told] of the divisions of the years . . . for the weeks of their jubilees, year by year in their full number.

The authors of *Jubilees* and the Book of the Luminaries extol the immutability of the sun, which never increases or decreases, favoring it over the instability of the moon, which is subject to a monthly process of waxing and waning (*I Eu.* 73–74). The preeminence of the 364-day solar calendar is demonstrated by the fact that in this ephemeris the festivals always occur on the same days of the week, whereas in the 354-day lunar calendar they do not, and special computation is required to determine the day on which a festival will fall in a given year.

The opposition to the lunar calendar is at the very heart of the covenanters' controversy with mainstream Judaism, but since both the sun and the moon were divinely created, the moon too must be given attention (cf. Calendrical Document A [4Q320]). The author of the Rule of the Community (1QS x.4–6) indeed mentions the moon in the Song of the Seasons but seems to deny it any role in matters calendrical, which are exclusively tied to the sun. God had created the sun, "the great (luminary) for the Holy of Holies . . . for the beginning of appointed days . . . at the new years and at the period of their appointed times."

The author of *Jubilees* discusses the moon in reference to light and darkness, day and night, but at the same time he does not assign it any role in the revolution of the appointed seasons:

And on the fourth day he (God) made the sun and the moon and the stars. And he set them in the firmament of heaven so that they might give light upon the whole earth. . . And the Lord set the sun as a great sign upon the earth for days of Sabbaths, months, feast (days), years, sabbaths of years, jubilees, and for all the (appointed) epochs of years . . .

God then warned Noah:

All the Israelites will forget and will not find the way of the years. They will forget the first of the month, the season[s] and the Sabbath[s]; they will err in respect to the entire prescribed pattern of the year. . . . There will be people who carefully observe the moon . . . it is corrupt (with respect) to the seasons.

Everyone will join together both holy days with the profane and a profane day with the holy day. . . and will not make a year (exactly) three hundred and sixty-four days.

(*Jub.* 6.36–38)

This warning is echoed in Pseudo-Moses' (4Q390 i.8–10): "they will forget ordinance and appointed time, and Sabbath and covenant. And they will violate everything, and they will do what I consider evil. Consequently, I will hide my face from them. I will hand them over to the hand[s] of their enemies and deliver them to the sword" (cf. *Jub.* 1.12–14).

In contrast, praising God's mighty deeds at Creation, the author of Psalms 8.4–5 mentions the moon and the stars but omits any reference to the sun: "When I look up at thy heavens, the work of thy fingers, the moon and the stars, set in their place by thee, what is man that thou shouldst remember him?" In Psalms 104.19 the moon is explicitly lauded as the divinely appointed source of the seasonal cycle: "Thou hast made the moon to mark the seasons." *Ben Sira* also praises the role accorded to the moon at Creation; his praise is couched in terms that bring to mind the covenanters' calendrical vocabulary: "The moon prescribes the periods [*itot*], [his is] the rule over appointed time [*qets*] and an everlasting sign [*ot 'olam*]. His [is every] festival [*mo'ed*] and from him [every] feast [*fiag*]" (*Sir.* 43.6–7).

To the advocates of the solar calendar adherence to the lunar ephemeris meant walking "in the feasts of the Gentiles, after the errors and their ignorance" (*Jub.* 6.37). Rabbinic tradition turned the accusation around: "Israel reckons by the moon and the Gentiles reckon by the sun" (*Mekhilta de-Rabbi Yishma'el*, Tractate Pisha, ed. J. Z. Lauterbach, 1933). The Sages stressed the exclusive legitimacy of the lunar calendar by quoting Psalm 28.5:

Because they regard not the works of the Lord nor the operations of his hands he shall destroy them: "the operation of his hands," these are the new moons, as is written, "he appointed the moons for seasons" (Ps. 104.19) . . . ("he shall destroy them") these are the heretics who do not reckon either ap-

pointed days or periods . . . He will destroy them in this world and will not build them up in the world to come."

(*Midrash Psalms*, 1947, ed. Buber, p. 230)

Minor discrepancies between the covenanters' calendar and the *1 Enoch/Jubilees* ephemeris may have arisen from a variety of factors: scribal mistakes in the textual transmission of the apocryphal books or their original Hebrew texts, the translators' incomplete understanding of the ancient time register, or inaccurate renditions in the Greek and/or Ethiopic translations. Long before the discovery of the covenanters' writings, R. H. Charles cast doubt on the reliability of *1 Enoch* in matters calendrical: "The chronological system of this book is most perplexing. It does not in its present form present a consistent whole and probably never did" (Charles, p. 149). In contrast, the covenanters' calendar is wholly consistent. In some instances, Qumran texts actually enable us to recover an original Hebrew technical term that evidently underlies an Ethiopic reading or to resolve a textual difficulty and emend a misconceived calendar in *1 Enoch* or *Jubilees*.

There is, though, a telling difference between the covenanters' calendrical documents and calendar-related statements in the pseudepigraphal books. The authors of the pseudepigraphal books never tire of stressing the "indisputable" superiority of the 364-day solar calendar, holding it up as the only legitimate Jewish calendrical system, or of disenfranchising the 354-day lunar calendar that the mainstream community followed. Again and again they outline the essential principles of the solar calendar and its basic structure but do not delve into details of its application in daily life. The pseudepigraphal books are addressed to indeterminable groups of the "Enoch circles" type and not to a structured community that geared its everyday life and cultic observance to the 364-day solar calendar. In contrast, the authors of the Qumran calendrical documents give less attention to solar doxology, dwelling instead on select features that have an evident bearing on actualities of communal organization and cultic life, such as the Sabbaths and festivals. In their writings, the bitter calendar controversy of Second Temple period comes into full light. Whereas the pseudepigraphal books theorize, the Qumran documents breathe actuality.

A stemmatic arrangement of passages in the Damascus Document brings to the fore the dependency of the covenanters' calendrical system on the calendar propagated by *Jubilees* and the latter's dependency on *1 Enoch*. In the Damascus Document, the Book of Division of Times, undoubtedly the Book of *Jubilees* as we know it or a close version of that work, is juxtaposed to the Book of Moses: "Therefore a man shall impose upon [himself] by oath to return to the Law of Moses for in it everything can be

learnt. And the exact statement of the epochs of Israel's blindness to all these, behold it can be learned in the Book of Division of Times into their Jubilees and Weeks" (CD xvi.1–4). This juxtaposition appears to echo a pertinent statement in the prologue of *Jubilees*: "These are the words regarding the divisions of the times of the law and of the testimony, of the events of the years, of the weeks of their jubilees throughout all the years of eternity as he related [them] to Moses on Mt. Sinai when he went up to receive the stone tablets."

The above reference in the Damascus Document proves that when the Damascus Document was written (by the middle of the second century BCE), *Jubilees* was already considered an authoritative source for calendrical matters. The book could not have attained such a distinctive status unless its teachings had been known for a considerable length of time—not less than two or three generations—and unless the intrinsic opposition to the lunar calendar that it reflects was also already in full force (*Jub.* 6.32–38). The author of *Jubilees* (*Jub.* 4.15–18) traces the roots of his solar calendar to the antediluvian patriarch Enoch (cf. Pseudo-Jubilees^c [4Q227]) and to the book of *Enoch*:

He (Enoch) was the first of mankind . . . who wrote down in a book the signs of the sky in accord with the fixed pattern of their months so that mankind would know the seasons of the years. . . . The weeks of the jubilees he related, and made known the days of the years; the months he arranged, and related the sabbaths of the years, as we had told him.

The reliance of *Jubilees* on *Enoch* in calendrical matters implies that in the author's days the Book of the Luminaries was as much appreciated as *Jubilees* was when the Damascus Document was composed. We may therefore conclude that the composition of the Book of the Luminaries cannot be dated later than the second half of the fourth century BCE.

Introduction of the lunar calendar. Thus the solar calendar of 364 days was not the covenanters' innovation but rather was rooted in Jewish tradition. In light of the Qumran discoveries, Annie Jaubert theorized that the biblical solar calendar was in fact identical with the covenanters' 364-day ephemeris. The application of this calendar to the dates in the biblical literature has surprising results. During their years of wandering in the desert following the Exodus from Egypt, the Israelites are credited with avoiding travel on Sabbaths and festivals by breaking camp on Sunday or after a "holy season" and arriving at the next station on Friday or before another "holy season." Although critics have pointed out events in the biblical sources that cannot be accommodated in this system, the theory still has merit.

The ten-day difference between the lunar and solar cal-

endars necessitates periodical adjustments to keep the lunar and solar years from being thrown out of kilter. But nothing in the biblical or covenantal literature indicates that adjustments were effected systematically on the basis of astronomical computations. It has been suggested that Calendrical Document A (4Q320 2.i-iii) implies that a serviceable concordance was achieved through adding one month of thirty days at the end of every third lunar year. But this conclusion is doubtful. The author merely records in detail the loss of ten days per year in the lunar calendar vis-à-vis the solar year, without ever hinting at a need for, or the existence of, a fixed practice of intercalation. The author of *1 Enoch* similarly summarizes the difference between the two calendars for periods of three, five, and eight years, again without giving a reason for doing so (*1 En.* 74.10-17). We must therefore assume that, if intercalation was practiced at all, the lunar year was realigned with the solar year only when the divergence between them had become too great. Likewise, the Qumran documents do not contain any information concerning a calibration of the 364-day solar year with the true solar year of 365 days and six hours. Presumably intercalation was practiced by calibrating units of weeks and not of months, so as to maintain the proper functioning of the *mishmarot*. The 364-day calendar is kept in step with the seasonal year by adding one week every seven years and possibly by adding two weeks every twenty-eight years.

The question of whether the covenanters counted the day from the evening before, as in the lunar calendar of mainstream Judaism, or from the morning, as could be expected in solar ephemeris is still debated. Relying on the Daily Prayers scroll (4Q503), in which schedules proceed from evening to sunrise, some scholars reason that the covenanters followed a lunar calendar and that the day began for them with sundown. Others presume that the lunar calendar was introduced into the Jerusalem Temple during the Second Temple period. No definite information on this can be elicited from the sources at our disposal. The hypothesis that it occurred in the days of the Seleucid emperor Antiochus IV Epiphanes, who in approximately 167 BCE imposed the lunar calendar on the Jerusalem Temple, has little merit. It is highly improbable that the Jewish leadership and the sacerdotal establishment would have willingly submitted to a heathen ruler's imposition of such change in the Temple schedule. It stands to reason that the introduction of the lunar calendar into the Temple occurred at a much earlier date and that it was connected with an internal rift in Judaism. At some juncture in the fourth or third century BCE, a rival priestly house that adhered to the lunar calendar ousted the officiating priesthood that followed a solar ephemeris. The founding fathers or forerunners of the Qumran

community remained loyal to the deposed priestly house, persevered in their adherence to the ancient solar calendar, and dissented from the community that acknowledged the new priesthood and acquiesced in the scheduling of Temple services according to the lunar calendar.

The considerable number of chronographic rota and calendar-related statements from the Qumran site stands out in comparison to texts discovered at various other Judean Desert sites. Remains of biblical books, apocryphal and liturgical compositions, and historical documents have turned up at Masada, Wadi Murabba'at, Naḥal Hever, and Naḥal Şe'elim. But not a single fragment of a calendrical work was found at any one of these sites. The covenanters' intense preoccupation with the issue of the calendar has no parallel in Hellenistic, early Christian, or rabbinic reports about schismatic communities in Judaism at the turn of the era. The singular proliferation of calendar-related materials evinces their importance in the covenanters' communal and private life and highlights the pivotal role of the calendar in their increasingly hardening confrontation with mainstream Judaism. The 364-day solar calendar was the most significant and conspicuous boundary marker that separated the Qumran community from the other socio-religious enclaves during the Second Temple period.

The Teacher of Righteousness and the Wicked Priest.

An early stage of the calendar controversy appears to be reflected in *Miqtsat Ma'asei ha-Torah* (MMT). The writer adduces a series of legal-cultic statutes over whose interpretation he and the addressees are divided, foremost among them being the 364-day calendar. It is significant that in the editors' reconstruction of MMT^a (4Q394 3-7.i) this list is headed by the end of an account of a 364-day solar calendar. "[The twenty-eighth in it (viz. the twelfth month) is] a Sabbath. Un[t]o it after [th]e Sa[bbath] the first and second day (of the week) a day] is [ad]ded. And the year is complete (in) three hundred and si[xty-four] days."

In MMT^c the writer matter-of-factly states that because of these halakhic differences "we have separated ourselves from the multitude of the people" (4Q396 7-8). The rather conciliatory tone suggests that when MMT was composed, the covenanters were intent on winning others over. However, their estrangement from the mainstream community progressively intensified. Concomitantly, Qumran authors criticized their opponents' views and standards of behavior with an increasing passion and bitterness. It is remarkable that of all the theological and legal differences that come to the fore in the covenanters' writings, the calendar controversy emerges in *Pesher Habakkuk* as the crucial issue in the direct confrontation between the Teacher of Righteousness and his opponent the Wicked Priest. The words of the biblical prophet, "Woe

to you who make your companions drink from the cup of your wrath, making them drunk" (*Hb.* 2.15), are interpreted in Peshar Habakkuk (1QpHab xi.4–8) as a proleptic reference to the Wicked Priest's pursuit of the Teacher of Righteousness to his (and his followers') "abode of refuge" (*abet galuto*) (literally "the place of his [self-imposed] exile")—Qumran: "at the appointed time of their rest, the Day of Atonement, he appeared before them to confuse them and to cause them to transgress the Day of Fasting," forcing them to eat and drink on that day. It is evident that the Wicked Priest would not have violated the holiest day of the year by traveling from Jerusalem to the shores of the Dead Sea. We must therefore conclude that his Day of Atonement did not coincide with the covenanters' "fast day of their rest" and that their observances of the holy seasons throughout the year were likewise differently timed.

The Wicked Priest rightly viewed the covenanters' adherence to a solar calendar as an act of religious and civil rebellion and set out to nip it in the bud. His violent interference brought their opposition to mainstream Judaism to a climax: "One may no longer join the house of Judah. Each must stand on his watchtower" (CD iv.11–12). The author exhorts "all who were brought into the covenant," to whom God had revealed "hidden things in which all Israel strayed—his holy sabbaths, the glorious appointed times, his righteous testimonies" (CD iii.13–15). They are "not to enter the sanctuary to light his altar in vain" (CD vi.11–12), so as not to be like their adversaries who offer sacrifices at the wrong times. Rather, the members of the Qumran community are admonished "to make known [the difference] between the holy and the profane . . . to observe the Sabbath day in its exact detail, and the appointed times and the day of the fast as ordained by those who entered the [re]new[ed] covenant in the land of Damascus" (CD vi.17–19). The rift is final: "the fence is built, the boundary extends far" (CD iv.12).

Rabbinic calendar controversy. The Yom Kippur episode related in Peshar Habakkuk invites comparison with a report in the Mishnah (*R. ha-Shl.* 2.8–9) of a calendar controversy between Rabban Gamliel II, leader of the Sanhedrin at Yavneh and Rabbi Joshua ben Hananiah at the end of the first century CE. Although astronomical computations of the moon's orbit were available (*B.T., R. ha-Shl.* 25a), the high court officially announced the onset of the new month when two reliable witnesses affirmed that they had actually sighted the new moon. On the strength of such a statement, Rabban Gamliel II proclaimed the beginning of the new month, evidently the first month of the year (Tishrei), and thus fixed the entire annual cycle of festivals. Rabbi Dosa ben Harkinas, himself a prominent sage, declared the witnesses to be liars

because his own observation proved that on the crucial night the moon was still full: "How can one say of a woman that she has given birth and on the next day she is still visibly pregnant." Rabbi Joshua invalidated the men's evidence and demanded that the proclamation of the new moon be deferred. But Rabban Gamliel stood by his resolution. Apprehensive lest Rabbi Joshua's dissenting opinion cause a rift in the community, with some following Gamliel's decision and others fixing the holy days in accord with Joshua's opinion, Gamliel ordered Joshua to present himself before him in Yavneh on the day on which, according to Joshua's computation, Yom Kippur fell, carrying his staff and his purse, so as publicly to desecrate his Day of Atonement. The rather similar episodes differ however on two points. While Rabbi Joshua's dispute with Rabban Gamliel pertained to differences regarding the lunar calendar that both men followed, the clash between the Teacher of Righteousness and the Wicked Priest revolved around the lunar versus solar controversy. And whereas Rabbi Joshua followed the counsel of Rabbi Dosa ben Harkinas and acted as ordered, thus preserving the unity of Israel, the fact that the Teacher of Righteousness persevered in his adherence to a nonconformable ephemeris put the final touch on the Qumran community's schismatic dissent from mainstream Judaism.

CANON. The term "canon" is derived from the Greek word *kanon*, which in turn is related to the Hebrew *qaneh*, meaning a reed, a measuring instrument. It eventually acquired the sense of norm and in that meaning was used by Christians, beginning in the fourth century CE, to designate the list of inspired, authoritative books that made up the church's Bible. These constituted a norm in the sense that books on that list defined faith and practice and were the final authorities for settling matters in dispute. There appears to have been no corresponding term in Judaism in the Second Temple period, and thus, in asking which books were included in a canon at that time, one runs the risk of anachronism. Yet, while the term "canon" is not attested in the Jewish texts, the concept of inspired, authoritative books was present because many compositions document the idea that for the authors some works possessed supreme authority in the sense of defining teachings and practices and refuting opponents.

Definitions. Discussions of canon, especially in relation to Qumran, tend to be at cross-purposes owing to a lack of clear definitions, and so it is important to distinguish between an authoritative text, a book of scripture, the process toward formation of the eventual canon, the Bible, and the canon.

An authoritative text is a text (e.g., a law code or a sacred book) that a community, secular or religious, acknowledges to hold authority over the members; it is a guide for the conduct of life to which all are accountable. A book of scripture is a sacred authoritative text which, in the Jewish or Christian context, the community acknowledges as having authority over the faith and practice of its members. The process toward formation of the canon ("the canonical process") is the long journey from the community's first acknowledgment that a certain sacred text is binding for faith and practice to the final, largely agreed-upon decision that the collection of certain books, and only those books, is universally and permanently binding. The Bible, in the singular, usually carries the implication of a codex, that is, a book with a front cover, a back cover, and a defined table of contents, as

opposed to the form that the scriptures would have had in the Qumran period, a collection of individual scrolls. Although the plural term "*ta biblia ta hagia*" (the holy books) does occur, for example, in *1 Maccabees* 12.9 in a subordinate clause, it seems to denote simply a collection of sacred books available (as in the Prologue to *Ben Sira*), not a restricted collection; at that time *Enoch* and *Jubilees*, for example, may well have been envisioned as part of that collection, but *Daniel* may not have been.

The term canon, though it is used loosely in a number of ways, is a religious *terminus technicus* with a specific meaning used over a long history. It means the established and exclusive list of books that hold supreme authoritative status for a community. There are three aspects of the technical use of "canon" that are important (see Ulrich, 1992): (a) "Canon" represents a reflexive judgment; that is, the community may long guide its life according to certain authoritative books, but it is not until questions are raised, debates held, and communal or official agreements made defining the exact contents that a canon properly so called comes to be; (b) It concerns books, not the specific text form of a book; for example, it is the *Book of Jeremiah* that is canonical or "defiles the hands," regardless of whether it is the earlier, short edition as witnessed in the Septuagint or the later, longer, and rearranged edition witnessed in the Masoretic Text; (c) It denotes a closed list; the formation of the canon "was a task, not only of collecting, but also of sifting and rejecting" (Metzger, 1987). "The crucial element is the question of *closure*. . . . A 'canon' is thus by definition a way of setting *limits* to the books recognized as holy" (Barton, 1996).

When it is used in the context of Qumran, the question usually concerns one of two aspects: whether a certain work was acknowledged as having authoritative status as sacred scripture, or whether there existed a canon, that is, an acknowledged list of books with authoritative status as sacred scripture. This dichotomy gets to the root of the confusion: the active sense of "canonical" as *norma normans*, an authoritative book that governs faith and practice, in contrast to the passive sense as *norma normata*, the authoritative list of those books which do, in conscious exclusion of those which do not, hold supreme status as governing faith and practice. The answer to that first question is certainly positive. It is clear that certain works were long since established and acknowledged as possessing this status. But that certain books exercised authoritative status does not mean that there was a canon yet. The answer to the second question is negative: there is no evidence in the scrolls (or in wider Judaism prior to the fall of the Temple), of a considered, inclusive-and-exclusive list. The period from the early existence of some

books with “canonical” (in the active sense) status to the decisions about a definitive list constitutes the process toward canon, but the canon itself is a post-biblical phenomenon. In fact, the halakhic disputes of the first century, together with the Roman threat of annihilation and the emergence of Christianity in the second, may well have been the stimuli that brought the canonical process on to the homestretch toward conclusion.

Clues in Jewish Texts. Several Jewish texts from the Second Temple period do indicate that at least for certain groups some traditional literature of the Jewish people merited special status and study, and in some cases they offer classifications of the texts. So, for example, Ben Sira (ca. 180 BCE), in praising Israel’s famous ancestors in chapters 44–50 of his book, mentions characters and events from most works in the Hebrew scriptures, usually in the order that later became fixed. The list begins with Enoch and ends with the high priest Simon II (219–190 BCE). On the other hand, certain major figures and books are not mentioned. Three questions can be raised: (a) Whether it was the few verses in *Genesis* 5 or rather the greater Enochic literature that merited Enoch’s inclusion; (b) Whether Ben Sira viewed his own book as scripture, since Simon does not appear elsewhere in the Bible; and (c) Whether Ben Sira viewed his laudatory parade of heroes as a rehearsal from scripture as such or rather from his nation’s proud and wise literature.

Ben Sira’s grandson (after 132 BCE), in his Prologue to the Greek translation of the book, refers three times to the law and the prophets and the other ancestral books. Some scholars interpret the third group as already regarded as scripture, and thus that the traditional sacred literature was already divided into three categories as it is today in the Hebrew Bible. Others, however, interpret Ben Sira’s divisions as two classifications: scripture, that is, the Law and the Prophets, and the other books, not scriptural but helpful toward instruction and wisdom. Some of this latter group would later have been elevated to the rank of scripture, others would later be classified as the apocrypha or pseudepigrapha, and yet others would be simply lost. In support of the second interpretation is the absence for the next two centuries of awareness by any other author of a tripartite classification.

The author of *Luke-Acts* (ca. 90 CE) usually refers to the scriptures as the law (or Moses) and the prophets (*Lk.* 10.10, 29, 31; 24.27; *Acts* 20.22; 28.23), though *Luke* 24.44 speaks of the law of Moses, the prophets, and the psalms in a context where “everything must be fulfilled.” *4 Ezra* 14.23–48 (ca. 100 CE) speaks of ninety-four inspired books, of which twenty-four (which may well coincide with the books of the Hebrew Bible) are said to be for all to read, whereas the other seventy are only for the wise.

The latter number shows that for the author the number of inspired works was not limited to the ones in the Hebrew scriptures. This is instructive, for it illumines the danger of simply finding a single ancient reference and automatically retrojecting upon it our later categories and views. Finally, Josephus, writing at about the same time as *4 Ezra*, states the number of books that are “justly accredited” as twenty-two and even lists which they are: five books of Moses, prophetic histories covering events from the time of Moses to Artaxerxes in thirteen books, and four works of hymns and precepts (*Against Apion* 1.37–43). These twenty-two books do not easily coincide with the books of the traditional Hebrew Bible (Beckwith, 1985), and it is noteworthy that the division between the Prophets and the Writings does not coincide with the Masoretic division.

Evidence in the Scrolls. The writings composed by the group that inhabited Qumran have made a significant contribution to our knowledge of the topic by providing different kinds of first-hand data about which books were considered authoritative. Naturally, it is not valid to extrapolate from the Qumran evidence—just as it is not from the testimony of Ben Sira, Josephus, or *4 Ezra*—to the views held by all Jews at this time, but the texts from Qumran do demonstrate what one group representing a particular Jewish tradition thought about authoritative literature in the late Second Temple period. Moreover, just as the biblical scrolls were the product of general Judaism, not of the group at Qumran, so too much of the evidence in the texts found at Qumran is evidence for the views of broader Judaism.

No text from Qumran supplies a list of which books were considered uniquely authoritative, but a number of works from Qumran refer to the Law (or Moses) and the Prophets as special categories of revelation. An example is the Rule of the Community (1QS), which is based on the Law and the Prophets. The *maskil* (sage) is to teach them “to seek God with all their heart and with all their soul, to do that which is good and upright before him, just as he commanded through Moses and all his servants the prophets” (1QS i.1–3).

The *Miqtsat Ma’asei ha-Torah* (4Q394–4Q399 C.9–10) indicates the writers’ knowledge of certain categories of books, which they wanted their opponents to understand: “[And also] we [have written] to you that you may have understanding in the book of Moses [and] in the book[s] of the P[ro]phets and in Dav[id . . .].” We can be confident about which books were included in Moses’ law and about many that would have been classified among the prophets; but exactly which other texts were subsumed under “prophets” is not obvious, and it is unlikely that “David” here refers to anything beyond *Psalms*. After “Da-

vid" the damaged sequel in the fragments ("[. . .] generation after generation") may add yet another book or category—perhaps annals.

Since none of the scrolls gives a list of authoritative books, one must search for other ways of uncovering which books (leaving aside the issue of oral traditions) enjoyed supreme status at Qumran. A study of the texts shows that there is evidence for the authoritative status of a large number of books that would become part of the fixed Hebrew Bible at a later time and for the authoritative status of some other writings that did not find their way into the official Hebrew Bible.

1. One approach is to check which books are cited as authorities and how the citations are introduced. There is a series of Qumran texts in which the writers refer to a book and introduce it as the words of God. For instance, the Damascus Document introduces a quotation of *Ezekiel* 44.15 with "as God promised them by the prophet Ezekiel" (CD iii.20–21); and the same text prefaces a citation of *Isaiah* 24.17 with "just as God said by Isaiah the prophet, the son of Amoz, saying" (CD iv.13–14). See also CD vi.13–14 (*Malachi*); viii.9 (*Deuteronomy*); and ix.7–8 (*Leviticus*).
2. Another method is to check which books were considered worthy of commentary. To compose a commentary on a book, especially considering the amount of labor required for doing so in antiquity, was to attribute a high level of importance to it, and the *pesharim* among the scrolls provide even more evidence that the writers of the commentaries believed those books—the writings of God's servants the prophets—to have been revealed and to contain the keys for understanding the latter days in which they were living. The commentaries that have been identified are on the books of *Isaiah* (six: 3Q4; 4Q161–65), *Hosea* (two: 4Q166–67), *Micah* (one: 1Q14; cf 4Q168), *Nahum* (one: 4Q169), *Habakkuk* (one: 1QpHab), *Zephaniah* (two: 1Q15; 4Q170), and *Psalms* (three: 1Q16; 4Q171; and 4Q173).
3. The number of copies found and the frequency of citation also provide, though not proof, some indication of status. The Pentateuch and the Prophets, including *Psalms* and *Daniel*, are heavily represented, as are *Enoch* and *Jubilees*. But the Writings are sparse and seldom quoted.
4. In addition to the cases in which books now in the Hebrew Bible are quoted or alluded to as authorities, there is a saturated and pervasive influence of the language of the scriptural books on the writings composed at Qumran.
5. There are also a number of indications that some books that did not become part of the Hebrew Bible

were accorded lofty status at Qumran. First, the claim that all 4,050 of David's compositions, not just those in the Psalter, were spoken "through prophecy given him by the Most High" is made in 11QPsalm^s (11Q5 27.11). The fact that these poetic works were considered prophecy harmonizes well with the existence of *pesharim* on parts of *Psalms*, as well as the New Testament's use of the *Psalms* as prophecy. Second, the commentary on *Habakkuk* states that the Teacher of Righteousness was the one "to whom God made known all the mysteries of the words of his servants the Prophets" (1QpHab vii.4–5). Third, there are several books that present themselves as revelations from God, are present in multiple copies at Qumran, and exercised noticeable levels of influence on other Qumran texts. The best examples are the booklets of *Enoch* (quoted as scripture in *Jude*) and the *Book of Jubilees* (quoted in the Damascus Document). A different type of case is the Temple Scroll (11Q19 and 11Q20), which presents itself as the direct speech of God to Moses and which embodies legal material that was accepted at Qumran.

The Jewish texts found at Qumran and those composed there give us a glimpse into the time between the two points when much of the "biblical" literature was written and when it was formally recognized in a canon of scripture. They provide evidence that many of the books that would become the Hebrew Bible were regarded as authoritative and were so used, but they also show that the boundaries and classifications of authoritative literature were not yet settled in Judaism.

CANTICLE OF CANTICLES. See Five Scrolls.

CARBON-14 DATING. Radiocarbon testing is the primary method used by archaeologists for dating organic and other materials containing the radioactive carbon isotope C^{14} . All plant and animals absorb C^{14} from the environment. The C^{14} isotope is continually produced in a reaction from the bombardment of nitrogen atoms with cosmic radiation in the upper atmosphere. When an organism dies, it ceases to be in equilibrium with its surroundings (that is, ceases taking in new carbon). The C^{14} isotope at the point of death decays at a known half-life rate (about 5,700 years). By measurement of the ratio of today's remaining C^{14} compared to carbon isotopes that have remained stable, the amount of radioactive decay that has occurred since the death of the plant or animal can be calculated.

Since the amount of new C^{14} production in the atmosphere varies through time, a means of calibration is necessary to convert these measurements into calendar years. Radiocarbon measurements on dated tree-ring sequences provide such a means of calibration going back some 11,000 years before present. Radiocarbon measurements are expressed by laboratories in terms of one-sigma (68 percent confidence) and two-sigma (95 percent confidence) calibrated date ranges. These figures represent lab estimates of confidence that the true dates of samples are within the reported date ranges.

The method was discovered in 1949, about the same time as the discovery of the Dead Sea Scrolls, by Willard F. Libby at the University of Chicago. In the fall of 1950 Libby measured a sample of linen from Cave 1 at Qumran that had been used to wrap a scroll. Libby measured

this linen (before calibration) as 1,917 radiocarbon years older than the year 1950, plus or minus 200 years.

Until the late 1970s radiocarbon dating of parchment or papyrus texts was not practical due to the amount of sample material required to be destroyed (5–10 gms of carbon). This changed with the development of Accelerator Mass Spectrometry (AMS) methods, which permitted dating of small samples on the order of milligrams. This method was applied to Dead Sea manuscripts in 1990 at a Zurich AMS facility. Fourteen texts were dated, including eight from Qumran, two from Masada, and four items from other Dead Sea sites bearing internal dates.

A second battery of scrolls radiocarbon dating (and a dating of Qumran Cave 4 linen) was undertaken at an AMS facility at Tucson, Arizona in 1994–1995. Of the Dead Sea texts dated between the two labs, seven had internal dates (none of these texts were from Qumran). The radiocarbon dates for six of these seven were in excellent agreement with these texts' true dates. For the literary texts from Qumran, a large number of calibrated date ranges fell in the first century BCE, indicating that text activity in that century is certain. A few of the texts (e.g., Isaiah⁴ [IQIsa⁴]) appear from the radiocarbon dates to be older, perhaps in the second century BCE, whereas others gave dates that appear to be younger, in the latter part of the first century BCE or in the first century CE. For about 80 percent of the text datings there was overlap between some part of the radiocarbon date possibility range and paleographic date estimates. [See Paleography.]

When conducting radiocarbon datings of Qumran texts, samples are cut from margins of the columns so that writing is not destroyed. In the lab the samples are subjected to chemical pretreatment to remove contaminants. Finally, the sample is converted (by combustion) to carbon, and the carbon then measured for C^{14} and other relevant isotopes. Because of the sensitivity of AMS measurements to the presence of even minute amounts of contamination, radiocarbon scientists emphasize the importance of multiple measurements, the conducting of radiocarbon datings in batteries, and interpretation of patterns of date rather than reliance upon single radiocarbon measurements considered in isolation.

There are several hundred radiocarbon laboratories throughout the world engaged in a wide range of datings for archaeologists, museums, and research projects. International radiocarbon conferences are held every three years, and the journal *Radiocarbon* reports continuing research and applications of radiocarbon dating methods.

CATENA. Two manuscripts found in Qumran's Cave 4 have been labeled Catena (i.e., a "Chain" of quotations), 4Q Catena A (4Q177) and 4Q Catena B (4Q182).

Thirty-four fragments have been assigned to Catena A. Thirty of these were transcribed and published by J. M. Allegro (Allegro, 1968, pp. 67–74); to these, J. Strugnell added four more. The fragments have been reedited by Steudel (Steudel, 1994, pp. 57–124). She has convincingly placed twenty of them in five columns. Her reconstruction is based on the content of the fragments and their damage patterns. Several of the fragments preserve straight vertical breaks, with the result that one can visualize how a rolled scroll was flattened in antiquity and broke into pieces where it was creased. Fragment 11 preserves traces of stitching, so what remains of 4Q177 belongs to at least two sheets of parchment. Steudel has reckoned that the five extant columns come from the middle of a scroll, so she labels them columns 8–12. The preservation of both top and bottom margins in fragment 5 shows that the manuscript was written with sixteen lines per column.

The handwriting is "Rustic Semiformal" (Strugnell, 1970, p. 236), typologically from the early Herodian period. 4Q177 was probably penned in the second half of the first century BCE. The orthography of the manuscript is generally full.

Column i (5, 6, 8 Steudel, viii) begins in the middle of a sentence, and is therefore not the beginning of the scroll. It contains quotations from *Isaiah* 37.30 and 32.7 (parallel to Ps. 10.2, 10.7–11) which seem to conclude a discussion of Psalm 10 by describing the "boasters" and possibly "the man of scorn (*ish ha-latson*)" (cf. CD i.14, in the plural in CD xx.11; 4Q162 ii.6, ii.10; 4Q525 23.8) who are the enemies of the Qumran community. Then Psalm 11.1–2 is cited and interpreted with the aid of *Micah*

2.10–11. This unit describes the persecution of the honest. Psalm 12.1 is cited next, and is interpreted by reference to *Isaiah* 27.11, 22.13, and possibly *Jeremiah* 6.14; the context is too broken to understand.

The extant portion of column ii (7, 9, 10, 11, 20, 26 Steudel, ix) begins with a quotation of Psalm 12.7 interpreted through *Zechariah* 3.9 and *Isaiah* 6.10 (according to the Septuagint). The Sons of Light and the Interpreter of the Law (cf. 4Q174 1.i.11; CD vi.7, vii.18) will ultimately be protected against the men of Belial. Then Psalm 13.2–3 is used to explain the delay in divine intervention by asserting that it is due to the community's need to be purified. The enemy mentioned in Psalm 13.5 is identified with the Seekers after Smooth Things and then interpreted through *Ezekiel* 25.8.

Column iii (1, 2, 3, 4, 14, 24, 31 Steudel, x) opens with a quotation from *Deuteronomy* 7.15, which completes a section of interpretation before Psalm 16.3, which is in turn interpreted through *Jonah* 2.2 and *Nahum* 2.11. Then Psalm 17.1 is interpreted, partly through *Zephaniah* 3.4, with a long discourse on the blessings to come for those who have resisted Belial; such things are inscribed on tablets and confirmed through a citation of *Hosea* 5.8, whose trumpet is identified either as "the Book of the Law again" (Strugnell, 1970, p. 241; Steudel, 1994, p. 109; cf. 1QpHab v.9–12; 4QpIsa' 23 ii.14a) or as "the book of the Second Law," (Allegro, 1968, p. 68) which might be the Temple Scroll (Yadin, 1983, 1.396–7) or some other work.

Column iv (12, 13, 15, 19 Steudel, xi) contains quotations of *Ezekiel* 22.20 and *Jeremiah* 18.18 which lead into the citation of Psalm 6.2–6. Its interpretation describes the defeat of Belial and the rescue of the Sons of Light. Steudel's ordering of the fragments is most questionable in the case of this column. If the reconstruction is granted, then the presentation of Psalm 6 comes after that of Psalms 12–17 in the previous three columns. No *Psalms* manuscript from Qumran contains the Psalms in that order, though in the separate fragments of 4QPsalms^a (4Q83) there are remains only of Psalms 5–6 and those after Psalm 31. Thus, rather than providing a running commentary on the *Book of Psalms*, some other matter is the principal motivation behind the whole composition.

Column v (Steudel, xii) survives in only a few lines on the left of fragment 13. Again the subject is Belial in the last days.

For Steudel, 4Q177 is a copy of the same composition as is found in 4Q174 and probably also in 4Q182, 4Q178, and 4Q183. She has labeled all five manuscripts "Eschatological Midrash." However, despite several similarities in form and content, none of these manuscripts contains any overlap with the others. 4Q177 is clearly sectarian as can be seen in phrases like "Sons of Light" (iv.12, iv.16),

"Seekers after Smooth Things" (ii.12; cf. 4QPesher Nahum 3-4.i.2, ii.2, ii.4, iii.3, iii.6-7), and "council of the community" (ii.5).

4Q177 is not a catena in the strict sense (a chain of quotations of either primary or secondary source material), since interpretative comments are given between the scriptural citations. It appears that the composition is a thematic commentary on a series of Psalms, some of which are cited merely by their opening verse(s), others more extensively. The Psalms are the principal texts in the commentary; Deuteronomy and the Prophets provide secondary supportive quotations. Both levels of quotation are formulaically introduced, the Psalms by some form of *amar* ('he said,' i.e. David), the other quotations generally by *kattu* ('it is written'). The interpretations are also carefully structured. The term *peshet* is found twice (ii.9, iii.6) and is only used directly after a Psalms citation (as in 4Q174); the Psalms are viewed as unfulfilled prophecy. The structure is similar to that found in later *midrashim*, and it may not be entirely inappropriate to label the work *midrash*. The Psalms and Prophets are treated as if they have predicted present events; single words or phrases are identified atomistically; the original context of the proof-texts generally retains some relevance.

If Steudel's order of the fragments is correct, then it seems that 4Q177 is organized as a description of the sequence of events in the last days. The running narrative within the interpretation covers the flight of a persecuted community, description of various participants in the last days, a statement of the sure blessings that will be given to the Sons of Light, and the defeat of Belial and the men of his lot. The whole narrative is eschatological as the frequent use of the phrase "the last days" makes clear (ii.10, iii.5, iv.7, v.6), though there has been some dispute as to whether this term refers to the end time, the period before the end, or simply to the future.

Two small fragments are assigned to 4QCatena B (4Q182). They were associated with 4QCatena A for two reasons: Both fragments speak of "the last days," and fragment 1 contains part of a formulaic introduction to a quotation from *Jeremiah*. Steudel has proposed that 4QCatena B should also be renamed "Eschatological Midrash" and that the fragments should be seen as yet another copy of the same composition.

CELIBACY. Among Jewish groups of the Second Temple period, the only literary evidence for the practice of celibacy comes from the descriptions of the Therapeutae and the Essenes.

The Therapeutae were depicted by Philo as a small order of men and women living in a settlement near Alexandria, where they devoted themselves to a contemplative religious life "following the truly sacred instructions of the prophet Moses" (*On the Contemplative Life* 64). Although the women, seated separately, were equal participants in the ceremonial and philosophical activities of the group, they were not married to the men but were "most of them aged virgins, who have kept their chastity . . . of their own free will in their ardent yearning for wisdom" (*On the Contemplative Life* 68). We infer that a few women may have been previously married, but they were not devoted to the life of the spirit. Among men, too, the senior members were "those who from their earliest years have grown to manhood and spent their prime in pursuing the contemplative branch of philosophy" (*On the Contemplative Life* 67). It is noteworthy that the neglect of familial life is not viewed here as incompatible with Mosaic law, a perspective that may be compared with the blessing of the virtuous eunuch and barren woman in the *Wisdom of Solomon* 3.13–14. There is also no trace in Philo's laudatory description of the female Therapeutae of the mistrust of women that he elsewhere proffered (*Hypothetica* 11.14–17) as a rationale for celibacy among the Essenes.

The misogynic rationale for Essene celibacy was also introduced by Josephus into his account of their community (*The Jewish War* 2.120–121). However, unlike Philo who stated flatly that "no Essene takes a wife," Josephus reported the existence of "yet another order of Essenes" who did marry. They believed that failure to do so threatened "the chief function of life, the propagation of the race" (*The Jewish War* 2.160). The latter was for them the sole legitimate purpose of marriage; hence, they took pains to determine the fecundity of their prospective wives and forbade intercourse during pregnancy (*The Jewish War* 161).

The third major ancient writer to refer to the Essenes, Pliny the Elder, either did not know or chose to ignore the marrying Essenes. [See Pliny the Elder.] Instead, he offered readers of his *Natural History* the following dramatic depiction of Essene celibates:

Gens sola, et in toto orbe prater ceteras mira, sine ulla femina, omne venera abdicata, sine pecunia, socia palmarum. . . . Ita per seculorum milia (incredibile dicitur) gens aeterna est, in qua nemo nascitur.

They are a lonely people, the most extraordinary in the world, [who live] without women, without love, without money, with the palm trees for their [only] companions. . . . So, through thousands of generations, hard though it is to believe, this people among which no one is born, has endured.

(*Natural History* 5.17)

Despite the apparent chronological exaggeration, as we shall see, Pliny's description has a verbal parallel with a pivotal passage in the Damascus Document.

Celibacy at Qumran. The idea that celibacy was also found among the Qumran Covenanters emerged as an outgrowth of the widely held hypothesis that they were to be identified with the Essenes. Many similarities in organizational structure, in the sharing of goods, in the geographical location near the Dead Sea, as well as details concerning particular practices were noted by scholars as soon as the Rule of the Community was published. Moreover, although celibacy is nowhere mandated in the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community, 1QS), its regulations and the penal code appear to reflect the discipline of an all-male "monastic" order: "And together they shall eat, together they shall recite benedictions, together they shall counsel" (1QS vi.2–3). Each man is seated according to his rank in the presence of the presiding priest (1QS vi.4). Wherever there are ten men, there must be one studying the Torah day and night, "each man relieving another" (1QS vi.7). Infractions of discipline are punished by reduction of the food allotment or suspension of the right to come in contact with the pure food of the many (1QS vi.25). Presumably, this presupposes that the men would not have the option of recourse to their own domestic board.

Women and children are nowhere mentioned in 1QRule of the Community. The blessing of "long life and fruitfulness of seed" (1QS iv.7) may be figurative. However, the education and marriage of young men in the End of Days figure prominently in the Rule of the Congregation (1Q28a). Here, twenty is set as the husband's minimal age for marriage, and the wife shares responsibility for keeping their marital relations within the bounds of the precepts of the Torah (1Q28a 1.11). This may well be an allusion to the restriction of nonprocreative intercourse, also found among the marrying Essenes. That women were instructed in the precepts of the Torah is implied by their required presence at the assembly where the Law was read (1QS i.4).

Unlike 1QRule of the Community, the law code of the Damascus Document embraces several rules pertaining to marriage and family life: marriage is limited to one spouse in one's lifetime, marriages between uncles and nieces are banned as incestuous, the right of a husband to annul the vows of his wife is elaborated, sexual relations in the city of the sanctuary are forbidden, and provision is made for the oath of the covenant by sons when they reach the age of twenty. Proponents of the identification of the Qumran community with the Essenes were thus led early on to attribute the Damascus Document to

the marrying Essenes. However, in light of the additional texts now available from Cave 4, this dichotomy between 1QRule of the Community and the Damascus Document no longer appears as straightforward as was thought. Although we have manuscripts of the latter with additional laws pertaining to marriage, we also have substantial parallels to the penal code of 1QRule of the Community, which apparently was capable of being adapted to a non-monastic setting. One previously unknown penal rule from Damascus Document^c concerns "one who comes near to fornicate with his wife contrary to the Law" (4Q270 7.i.12–13), which we have suggested most likely refers to forbidden intercourse. Another sets a penalty for murmuring against the mothers (4Q270 7.i.14), thus indicating that the latter had an honored place in the congregation.

An Allusion to Men of Perfect Holiness. Despite these indications that marriage and family were considered normal in the law code of the Damascus Document, there is one passage that contains a significant allusion to celibacy as the lifestyle of an elitist element within the community. The Damascus Document (CD vi.11–vii.6) contains an extended list of duties incumbent upon "those that walk in the perfection of holiness." For their dedication they are assured that "the covenant of God shall stand faithfully with them to keep them alive for thousands of generations" (CD vii.6, xix.20). The latter phrase corresponds to Pliny's *saeculorum milia* ("through thousands of generations"). Immediately following we have an adversative provision: "And if they dwell in camps according to the order [*serekh*] of the land and take wives and beget children, they shall walk according to the Law" (CD vii.6–7). The conditional phrase "And if" indicates that the previously mentioned aspirants to perfect holiness did not dwell in scattered camps in the conventional manner of the land, did not take wives, and did not beget children. Yet, they too were assured existence for "thousands of generations" through the continuity of the *gens aeterna*, *'am 'olamim* ("eternal people"; Ritual of Marriage, 4Q502 24.3).

If the celibate men of perfect holiness did not dwell in camps, where would one have found them? One possibility is that the practice of celibacy was confined to the communal center at Qumran and its environs. It has been estimated from the sampling of the graves in the cemeteries that 90 percent of the men lived here without their wives. This, however, may merely reflect temporary separation during the intensification of purity associated with the renewal of the covenant.

More pertinent to the reference to "camps" in the Damascus Document (CD vii.6) is Elisha Qimron's observation that in Miqtsat Ma'asei ha-Torah (MMT) texts found in Cave 4 at Qumran (4Q394–399), Jerusalem is distinguished from other "camps" as "the chief of the camps of

Israel" (4Q395 62) and as "the holy camp" (4Q395 60). This finds expression in various stringencies in the laws of purity applicable to the city of the sanctuary, especially the ban on sexual relations (CD xiii.1). The Temple Scroll^a (11Q19 xlv.11) excludes from the Temple city anyone who has had sex or a seminal flux during the preceding three days. The model for this severe restriction was probably found in the preparations of Sinai (*Ex.* 19.15), but its application to people living in Jerusalem would have made celibacy for them a practical necessity. Yet, the Damascus Document does not localize the residence of the men of perfect holiness to Jerusalem, which in the present "period of evil" would rather have been a place upon which "to close the door" (CD vi.12–14). Qimron therefore invokes the further hypothesis that the men of perfect holiness regarded themselves as a kind of substitute for Jerusalem.

The Qumran Concept of Marriage. Qumran writings reflect a markedly idealistic view of marriage as an exclusive covenant between one man and one woman "in their lifetime." This is in accord with the "foundation of creation" as found in *Genesis* 1.27, "male and female he created them."

It required full maturity on the part of the husband, attainable only after the age of twenty, "when he knows good and evil" (1Q28a i.11). The wife, too, was to be of unblemished character and knowledgeable of the laws applicable to marriage, although no minimal age is specified. Remarriage after the death of a spouse was condoned (11Q19 lvii.17–19) but apparently not after divorce. Polygamy was seen as one of Belial's traps.

The ideal relationship between husband and wife is alluded to in the Ritual of Marriage (4Q502), a fragmentary but significant text. One fragment alludes to "[Adam] and his wife." The pairing of male and female is further indicated by the word *re'iyatov* ("his companion"). Another fragment has an alternation of blessings. First a man extends a blessing to a woman for "long life amidst an eternal people." Then the woman invokes a similar blessing for longevity upon the man. The editor, Maurice Baillet, and other scholars assume this to be an exchange of vows between a bridegroom and his bride. This writer, however, noted that the ceremony takes place "in the council of elderly men and women" and that allusions to old men, collectively called "Brothers," and their female counterparts, called "Sisters," occur prominently in these fragments. This raises the question of whether the exchange of blessings rather might be between happily married senior members honored at some festive communal occasion. However this may be, the text shows clearly that women of virtue (one is called "Daughter of Truth"), rather than being denigrated, were honored for their longevity within the Qumran community.

In conclusion, there is no evidence that celibacy was ever made into a general norm at Qumran. To the contrary, marriage for the purpose of raising children "in the way of the land" was the general rule. This has been used as one of the major arguments against the identification of the Qumran community with the Essenes by Norman Golb and other critics of this widely held hypothesis.

However, the pervasive concern with purity in Qumran law could not have been without its consequences. Aside from the sharply dualistic ethic that contrasts spirit and flesh, those who aspired to perfect holiness would have found the practical maintenance of normal marital life difficult, if not impossible. A. Guillaumont has noted the tradition, found already in Philo, that Moses renounced all conjugal relations from the time that he began to prophesy. This has relevance to the Covenanters, who may not have viewed themselves as prophets but who lived with the constant expectation of revelations granted to those who were spiritually worthy. For many, this may have meant protracted periods of separation from their wives, especially when participating in the general sessions of the community. For a few, the men of perfect holiness, it apparently led to the renunciation of marriage and family life for a higher level of spiritual attainment.

CEMETERIES. The Qumran and Wadi-Ghweir cemeteries reveal burial practices that differ considerably from the accepted normative Jewish customs found in Jerusalem, Jericho, and 'Ein-Gedi in the Second Temple period.

The fundamental differences in placement and structure of the tombs and the demography of the cemeteries, as well as type of deposition, seem to reflect different attitudes toward death, with the Qumran community separating itself from mainstream Judaism. [See 'Ein-Gedi; Ghweir, Wadi; Jerusalem.]

Qumran. The Qumran cemetery was used during periods Ib-II of the Qumran settlement during the first century BCE until the destruction of the site in 68 CE, with intensive use for several years. This dating agrees with that of the community who lived at Qumran and its environs, probably in caves, huts, and tents. The Qumran cemetery was a central community burial place; however, these clearly are not family tombs. Although the number of excavated tombs is small, it is apparent that the Qumran community practiced primary burial with or without a wooden coffin in individual shaft graves. The burials also lack inscriptions. The graves are carefully dug out and arranged, which seems to rule out the assumption by some scholars that the tombs were dug in haste for a large group of dying people involved in the First Jewish Revolt against the Romans (66-70 CE). [See Rome.] Scholarly controversy exists about the question of identifying the Qumran community and cemetery with the Essene sect. [See Essenes.]

The main cemetery of Qumran is located 30-40 meters east of the settlement and contains about 1,100 graves. Only fifty-two tombs were excavated (forty-three by de Vaux and nine by Steckoll) in the main and secondary cemeteries. In the main cemetery (and its extensions) twenty-six tombs were excavated, in different parts of the cemetery. The tombs are arranged in neat, ordered rows, separated by two alleys into three plots. Nearly all the tombs are oriented on a north-south axis, and each grave is marked by a heap of stones on the surface. The tomb form is a shaft hewn as a rectangular cavity at the bottom, cut horizontally to accommodate the corpse. The dead were placed supine: the head oriented to the south with a stone beneath it or small stones beside it; arms stretched along the sides of the body or crossed on the pelvis. In three tombs remnants of wooden coffins were found. On the downward sloping hills, seven more tombs were found with less regularity of orientation.

In the main cemetery area all the excavated tombs contained males, while in the extended areas of the cemetery four of the six skeletons examined are female, and one is a child. Two female skeletons had beads and earrings, but no other objects were found in the tombs.

Two secondary cemeteries were found at Qumran. One cemetery, located north of Qumran, was the site of a group of twelve tombs, similar to the tombs in the main cemetery. The two that were excavated contained one male and one female skeleton, respectively. The other

secondary cemetery is located to the south of Wadi Qumran and consists of a group of thirty tombs of varying orientations. Four tombs were excavated: one contained a woman, the others children. The burial of large numbers of males in the main cemetery and a much smaller number of women and children in the extensions of the main cemetery and in the secondary cemeteries may be significant.

Wadi Ghweir. The cemetery of Wadi Ghweir is contemporary with the Qumran cemeteries (first century BCE–first century CE). Seventeen tombs were excavated in this cemetery located 800 meters north of a building. The form of the tombs is similar to those at Qumran: their orientation is north-south, and each grave is marked by a heap of stones. The interred lay supine. Remains of twelve men and six women were discovered in the north hill tombs; a man and a child were found in the south hill tombs. Some broken vessels and potsherds were found placed on the tombs. Among the finds was a jar inscribed with the name Yehoḥanan.

The large building at Wadi Ghweir served for ceremonial and assembly purposes, much as the public center at Qumran, although the community members probably lived in caves, tents, and booths. The cemetery of Wadi Ghweir served the settlement's occupants. The inhabitants of Qumran and Wadi Ghweir seemingly belonged to the same sect.

Other Judean Desert Sites. Several tombs dated to the Second Temple period were excavated in the 'Ein-Gedi area. Six small caves were excavated at Naḥal David and used for primary burials and reinterments. These burials, probably of the inhabitants of 'Ein Gedi, are dated to the first century BCE, during the Hasmonean period. In Caves 1 and 4 remnants of wooden coffins were discovered, (one of them decorated with bone and wood inlays). Other finds included a wooden bowl and cup, basket remnants, and fruits. Also a wrapped skeleton was preserved, still with leather shoes. In Caves 2 and 3 bones, pottery vessels, and bronze ladles were found, and, in Cave 5, several skulls, cooking pots and a glass bottle. In the small Cave 6 only fragments were discovered.

The nine tombs found at 'Ein-Gedi (second-first centuries BCE) were badly eroded: some were found still with the sealed entrance intact. They consisted of loculi (burial recess hewn in tomb wall), a chamber, and central pit. The burial customs of the 'Ein-Gedi tombs show several modes of burial: the most prevalent was primary burial in wooden coffins. Others consisted of primary burial on the tomb floor with the corpse wrapped in mats or shrouds. Secondary burial was in wooden coffins or in stone or wooden ossuaries. These modes of burial are based on only a few examples, so it is difficult to describe the actual practices and their chronological development.

It should also be noted that nothing was found to prove that the 'Ein-Gedi burials were Jewish, except for finds and customs similar to those found at the Jewish cemeteries of Jerusalem and Jericho.

About forty wooden coffins were found: rectangular chests with four small legs and gabled or flat lids, mostly made of sycamore and seldom decorated. The construction of the 'Ein-Gedi coffins consists of planks joined at the corners with uprights to function as legs, all joined by tapered wooden pegs and unlike the technique used for the coffins at Jericho.

Other finds in the 'Ein-Gedi tombs consisted of wooden vessels and bowls; cosmetics items (ointment bowls, combs, a kohl tube); bronze objects (a jug, ladles, and kohl sticks); pottery vessels; glass and stone beads; remains of palm mats and a basket; and remains of textiles, possibly burial shrouds. [See 'Ein-Gedi.]

The graves from other sites in the Judean Desert indicate that they were not from organized or designated cemeteries, like others of the Second Temple period. As the skeletal remains from these graves showed no signs of violence, the assumption is that they died of hunger and thirst during a long siege at the place they were hiding, probably in the second century CE, in connection with the Bar Kokhba Revolt.

At Masada, in the Cave of the Skeletons, a great heap of about twenty-five skeletons and bones (including women and children) was found above objects such as pottery and fragments of mats and remnants of food. They seem to have been tossed down haphazardly, probably at the end of the Masada siege in 73 CE. [See Masada, *article on Archaeology*.] Several graves were found in the Cave of Horror (Cave 8), with forty corpses, including women and children. The finds consisted of fragments of cloth and two iron awls which were found beside the pelvis of a complete skeleton; ostraca (inscribed pottery fragments), probably connected with the graves; three fragments of parchment with Hebrew writing. In the Cave of Letters, Burial Niche 2, in the eastern wall of Chamber III, included secondary burials in three groups: three baskets, each of which contained several skulls; a group of graves, in which some of the bones were wrapped in cloth; and a single grave covered by cloth. Some of the graves are of women and children. It is apparent that the bones were collected and placed in and among the baskets, possibly by refugees.

Cemeteries of the Second Temple Period. The Jerusalem and Jericho cemeteries constitute our data for funerary customs in the Second Temple period. Their location was outside the town limits, in accordance with Jewish law.

The Jerusalem cemeteries consisted of tombs surrounding the walls of the city, in three major areas to the

north, south, and east. Several crowded burial quarters and plots exist in the present-day areas of Mount Scopus, Dominus Flevit and French Hill, Sanhedria, and other parts of Jerusalem. The majority of the tombs are loculi tombs and in many of them burial in ossuaries was found, as well as a few sarcophagi. A group of monumental rock-hewn tombs, such as the Kidron Valley tombs (the tomb of Zachariah, the Bene-Hezir tomb, and the Monument of Absalom), the Jason Tomb, and the Tomb of the Kings—probably belonging to prominent Jerusalem families—have a memorial (*nefesh*) in the shape of a pyramid or tholus standing above the ground and richly ornamented facades. In spite of the lavish ornamentation, burial was probably similar to that of the simpler, undecorated loculi tombs. Many of the tombs were found in a disturbed, looted state.

The Jericho cemetery was located outside the town, on the hills flanking the Jordan Valley. Approximately 120 rock-hewn loculi tombs were discovered containing either primary burials in wooden coffins or secondary collected-bone burials in ossuaries or in heaps.

The tomb forms. The tombs found in Jerusalem and Jericho consist of rock-hewn tombs cut into the hillsides. Two basic tomb plans exist: one is known as the loculi type (*kokhim*); the other, the arcosolia type. Both types of plans are found in the Jerusalem necropolis, but the Jericho cemetery consists of only loculi tombs. Occasionally, single-loculus tombs were constructed.

The form of the loculi tomb is square, often with a pit dug into its floor, deep enough for a man to stand upright. The rim of the pit forms three or four benches, along each side of the tomb. One to three arched loculi (1 meter high and 2 meters long) are hewn into three of the walls, the entrance wall being excepted. The entrance to the tomb is rectangular; in Jerusalem it sometimes has a forecourt and an ornamented facade. The entrance is closed either by a blocking stone, sometimes in the shape of a large "stopper," or by mud bricks and small stones.

The evidence from Jericho proves conclusively that loculi tombs were first designed and used for primary, that is, permanent, burial in wooden coffins. The same tomb plan continued to be used in the case of ossuary burials. The origin of the plan for the rock-cut loculi tomb of the Second Temple period in Judea is to be found in Egypt, particularly in Leontopolis, from as early as Hasmonean times.

A few tombs have a courtyard with benches and an attached *miqveh* (ritual bath where purification rites took place), which was used probably for mourning and for memorial services, as at the "eulogy place" mentioned in Jewish sources. Courtyards with benches dating to the third century are also found at Beth Shearim and probably served a similar purpose.

In the Jerusalem tombs a later type of burial is found: the *arcosolium*, which is a benchlike aperture with an arched ceiling hewn into the length of the wall. In several cases the deceased was interred in a trough grave hewn in the arcosolium.

Both types of burial, in the common loculi tomb, and in the arcosolia tomb, were in use at the end of the Second Temple period. These tombs served as family tombs, with provision for separate burial of each individual in the loculus or arcosolium and its container.

Several shaft (dug-out) tombs, similar to the Qumran tombs, were found in several locations in Jerusalem, especially Beit Zafafa. (In Jericho, however, the shaft tombs are reused Middle Bronze tombs.) Some scholars suggest that these tombs were burial places of individuals who belonged to the Dead Sea sect who lived in Jerusalem; others maintain that the shaft graves might have been in frequent use in Jerusalem and elsewhere, but did not survive as well as the rock-hewn tombs.

Wooden coffins were discovered in the Jericho, 'Ein-Gedi, and Qumran tombs. The form of the Jericho coffin was a wooden chest with a post at each corner, constructed by mortise and tenon joinery (that is, with wooden pegs which interlocked with rectangular-shaped cavities). The lid of the chest was usually gabled, and consisted of one plank on each side and a pediment at each end. One well-preserved example, however, has a hinged lid. Iron nails and knobs found with the coffins were probably used only for decoration or structural support. The coffins were decorated with red- and black-painted geometrical patterns and designs. The most common types of wood were sycamore, Christ's-thorn, and cypress. Earlier examples of similar wooden coffins, dating to the fourth century BCE, have survived in Egypt and South Russia.

It should be noted that the wooden coffins in Jericho were used for primary burials only and not as containers for secondary burials. This is in contrast to the wooden coffins at 'Ein-Gedi, which were also reused as ossuaries.

Ossuaries were hewn from one large block of limestone, usually in the shape of a small, rectangular box, often decorated, resting on four low legs, and measuring approximately 60 by 35 by 30 centimeters for adults, and less for children. A stone lid, flat, slightly curved, or gabled, was placed on top. Inscriptions on ossuaries, incised, scratched, or written, have been found on the front, back, sides, and lid. They usually contained the name of the interred person and his family relations; sometimes the inscriptions included a profession or a status. Special kinds of inscriptions were sometimes found—such as an alphabet—or objects, such as a unique, inscribed funerary bowl from an ossuary tomb at Jericho.

Dates for the burials are still the subject of debate. Nevertheless, the Jericho cemetery can provide a chronology for the two different types of burials: Primary burials in coffins can be dated from the mid-first century BCE to 10 CE, and secondary burials in ossuaries immediately followed, dating from 10 CE to 68 CE. Rahmani dates the practice of secondary burials in ossuaries in Jerusalem to 30/20 BCE–70 CE, continuing sporadically until 135 CE or even the third century.

Burial practices. Jewish burial practices of the late Second Temple period reveal a corresponding importance placed on both the individual and the family. At Jerusalem, Jericho, and 'Ein-Gedi, this is reflected in the plan of the loculi tomb and arcosolia tomb, which provided for individual burial in a coffin, in an ossuary, or in a separate loculus, yet allowing a family to be buried together in the same tomb. All strata of the population, not just the upper classes (as in the Israelite period), were accorded individual burials. This practice is probably related to the increasing importance placed on the individual in contemporary Hellenistic society, and to the Jewish belief in individual resurrection of the body. This belief is reflected in sources dating as early as the second century BCE. [See *Death; Religious Beliefs, Qumran Sect.*]

As far as deposition of the remains is concerned, the excavations in the extended Jerusalem necropolis and the Jericho cemetery reveal that two completely different burial customs, one chronologically following the other, were practiced by Jews of the Second Temple period. The earlier custom (first century BCE), found in Jericho, 'Ein-Gedi, and Qumran, is a primary individual burial in a wooden coffin. The second burial custom found later in Jerusalem and in the Jericho cemetery (and in some of the 'Ein-Gedi wooden coffins) is the deliberate secondary burial of the bones, either in communal burials in loculi or pits or in individual ossuaries; this practice lacks parallels with any other contemporary neighboring culture. This complete change in burial customs occurred during the beginning of the first century CE, simultaneously with a change in the political status of Judea, which then became a Roman province. [See *Judea, article on History.*] So far, no theory has been able to account for this drastic change in burial customs; unfortunately, all ancient sources dealing with ossilegia (the act of collecting bones and placing them in an ossuary) describe only the custom itself, without mentioning the reasons for its sudden appearance. Rahmani (1994, p. 53) suggests that ossuary burial began as an attempt to expiate sins through the decay of the flesh, which would then allow resurrection of the purified physical individual. This seems to be plausible, particularly in view of the historical events of the period.

The Judean Desert Documents and Burial Practices. The Temple Scroll (11QT) is the only document of the Dead Sea Scrolls in which burial customs are mentioned. [See *Temple Scroll.*] It deals with the commandments regarding uncleanness contracted from the dead, discussing burial grounds (xlvi.11–14); the house of the dead person (xlix.5–21); uncleanness of a grave (l.5–9). The scroll bans random burials in dwellings and cities, instead stipulating that one burial place should be assigned to every four cities (per tribe), so as not to pollute all the land. However, the archaeological finds indicate some different practices in this period: the cemetery of Qumran was found in the area east of the buildings; the excavated cemeteries of Jerusalem and Jericho of the Second Temple period are hewn on hills outside the cities.

The uncleanness of the house, its residents and contents, and the manner of its purification and cleansing are treated in the Temple Scroll in detail (xlix.11–17). [See *Purity.*] Uncleanness occurs also by contact or by touching the bone of a dead man, blood of a dead man, or a grave. Yigael Yadin asserts that the scroll intimates that all these proscriptions concerning uncleanness contracted from the dead, usually only applied to the priests, should apply instead to all the people of Israel.

Thus there are no clear rules indicated by the Dead Sea manuscripts. As interpreted by Yadin and Lawrence H. Schiffman, they seem to follow the usual Jewish laws with some modifications. Significantly, the writings do not explain the significance of some of the Qumran burial customs.

CHRONICLES, FIRST AND SECOND BOOKS

OF. The manuscript of Chronicles (4Q118), preserved in only one fragment, belongs paleographically to the late Hasmonean period (ca. 50-25 BCE). The portion of text contained in column ii corresponds to 2 *Chronicles* 28.27-29.3. This sole surviving manuscript is enough to attest the presence of *Chronicles* in the Qumran library. The reading *veta'aleni* ("raise me") in column i, 1.3 does not have any counterpart in the Masoretic Text of *Chronicles* and *Kings* nor in the presumed original of Septuagint *Chronicles* (Trebolle). It suggests a psalmodic context (cf. *Ps.* 71.20, 102.25), raising the possibility that 4QChronicles is rather a historiographic work parallel to *Chronicles* that contains a prayer or psalm; also the Paraphrase of Kings et al. (4Q382) seems to intercalate prayers and prophecies (A. Rofé, private communication).

The author of *Chronicles* knew a text of *Samuel-Kings* similar to that attested by Samuel^a (4Q51), the Old Greek and its proto-Lucianic recension of *Samuel-Kings*, and Josephus (Cross; Ulrich). The Greek translation (*Paraleipomena*) reflects this textual tradition. Many variants that were ascribed to the author(s) of *Chronicles*, particularly historical or theological changes, are rather to be explained as elements proper to that textual tradition of *Samuel-Kings* (Lemke; Klein). *Chronicles* preserves some readings that are older than the parallel in Masoretic Text *Samuel/Kings*, as *ish ba'al/ish boshet* (1 *Chr.* 8.33; 2 *Sm.* 2.8).

As a reworking of inherited biblical material, *Chronicles* has been characterized as exegesis, targum, midrash, or "rewritten Bible." It is, however, a unique work. The unparalleled materials of *Chronicles* have always raised the question of possible extra-biblical sources. As for the section about the building of the Temple (2 *Chr.* 3), it has been suggested that, besides 1 *Kings* 6-8, the author knew a text akin to that of the Temple Scroll (11QT [11Q19] v-vii) (Steins).

The Greek version, *Paraleipomena*, probably dated to second century Egypt, although extensively revised, is best preserved in manuscripts B (Vaticanus), S (Sinaiticus) and minuscule c₂ (Allen). Not a few of its many variants represent preferable readings to those of the Masoretic Text (1 *Chr.* 2.24, 4.15, 26.17; 2 *Chr.* 1.13, 14.6, 19.8, 3.22, 32.22, and many more) (Japhet). It often agrees with the Masoretic Text or the Septuagint *Samuel-Kings* against the Masoretic Text *Chronicles*. The translator

made use of the Greek version of *Kings*, possibly in a non-revised form (Shenkel). The text of the supplements in 2 *Paraleipomena* 35-36 is taken from the old, nonrevised Greek of *Kings*, or at least from an old pre-Lucianic recension (Klein). G. Gerleman and L. C. Allen argue, rather, in favor of a secondary assimilation of both Greek versions.

A "Prayer of Manasseh, king of Judah, when the king of Assyria put him in prison" is among the Noncanonical Psalms found at Qumran (4Q381, frg. 33.8; cf. 2 *Chr.* 33). The *Second Book of Chronicles* 20.7 is alluded to in the Commentary on Genesis A (4Q252 ii.7-8) where the "tents of Shem" (*Gn.* 9.27) are identified as the land given "to Abraham, his beloved." Work with Place Names (4Q522) mentions the "rock of Zion" in a context similar to that of 1 *Chronicles* 21.18-22.1.

JULIO TREBOLLE BARRERA

CHURCHES. The emperor Constantine (died 337) and his mother Helena were the first to erect churches in Palestine. Earlier, Christians did not have a prayer house with distinctive architectural features. Their place of assembly was a *domus ecclesia*, a domestic building that was adjusted to serve this purpose. The erection of churches was a major domain of imperial enterprise.

Four churches were erected by Constantine: the Church of the Holy Sepulchre in Jerusalem, the Church of the Nativity in Bethlehem, the Church of Abraham's Oak at Mamre, and the Eleona Church on the Mount of Olives. Other churches were erected by later emperors, wealthy donors, and community members.

To date, about three hundred churches from the Byzantine period are known in Israel. But their number was much larger, since every Christian village and monastery possessed at least one church, and there were several in each town or city. The first effort toward a synthetic study of the churches of Palestine, done by Crowfoot (1941), was augmented and elaborated by Ovadiah's *Corpus of Byzantine Churches in the Holy Land* (1970), which was continually updated (Ovadiah and de Silva, 1981–1984). Other important contributions were made by Bagatti (1971), and more recently by Bottini, Di Segni, and Alliata (1990), and Tsafir (1993).

The churches in the Judean Desert, known as the desert of the Holy City in the contemporary ecclesiastical sources, were mainly monastic chapels. [See Monasteries.] These include the chapels at Masada and the chapels in the monasteries of the desert of Zif near Capharbaricha (Bani Naim), the chapels in the desert of Natufa near Thecoa, the Sabas and Euthymius monasteries in the desert of Rouba to the east of Bethlehem and Jerusalem, and the monasteries of the desert of Jordan near Jericho. Hermitages of *laura* monks were regularly equipped with private chapels (Patrich, 1995; Tsafir, 1993, pp. 233–243). Three small basilical churches were found in lower Herodium, and another monastic chapel was found on the hilltop (Bottini et al., 1990, pp. 165–176; Tsafir, 1993, pp. 219–232).

Besides the daily prayers and the celebration of the Eucharist, the cult of relics of martyrs and saints took place in the church. Relics were generally held in a special stone or marble container shaped like a tiny sarcophagus, a reliquary. Generally, the relics were placed under the main altar, but more than one saint could have been venerated in a single church, and then one or both of the lateral rooms or apses flanking the central apse could have been used for this purpose. The baptismal rite was another function associated with a church. In the monastic context of the Judean Desert it was associated mainly with the conversion to Christianity of the Arab tribes of the desert (Bottini et al., 1990, pp. 501–522).

Pilgrims were attracted to monasteries, looking for counsel and healing from the monks, some of whom were venerated as holy men and workers of wonders. The original cave of the founder or his tomb was sometimes given an elaborate architectural shape that included a chapel. Holy sites associated with monastic events, possessing their own chapels, came into being along secondary

routes running between the monasteries and the dispersed hermitages (Hirschfeld, 1993). From a spot adjacent to Capharbaricha (Jerome, *Epistle* 108.11.5) pilgrims used to have an overlook over the desert wastes, the Dead Sea, and the former sites of Sodom and Gomorrah.

In the Jericho Valley and near the Jordan River there were several important pilgrim churches associated with the site of baptism and with some traditions of the Hebrew scriptures and the New Testament, since as a rule a church was erected over a holy site, which soon became a center of pilgrimage. The road from Jerusalem to the Jordan River via Jericho was a busy pilgrimage route. Guesthouses along this route and elsewhere had chapels as well. A map of the monasteries and of the pilgrimage sites in the Judean Desert and the Dead Sea region thus matches the map of chapels and churches (see the map of churches in Tsafir, 1993, and in Tsafir et al., 1994).

From the early fourth century (Eusebius, *Onomasticon* 59.18) the baptismal site at Bethabara (Makhadet el Hajla) was the most important pilgrimage site near the Jordan. According to the pilgrim Theodosius (before 581 CE), the place where Christ was baptized was marked by a marble pillar on which an iron cross was set. The emperor Anastasius erected a church dedicated to John the Baptist nearby; it was supported by great vaults, high enough to withstand the Jordan floods. Each of the monks residing in this church received six gold coins (*solidi*) a year from the imperial treasury for his livelihood. The church at Bethabara is depicted on the sixth-century Madaba mosaic map. The Piacenza pilgrim (ca. 570) gives a detailed description of the Epiphany rite at the site of baptism, where on both banks there are steps leading down to the river. Near the site of baptism he mentions a very large monastery of Saint John, which had two guesthouses. Arculf's pilgrimage, from approximately 681 to 684, recounted by Adamnan at the end of the seventh century, gives further details on the site of baptism in his day: a tall wooden cross was set in the riverbed, near the western side. From this cross a stone causeway supported on arches stretched to the bank, and people could approach the cross going down the ramp and returning to the riverbank. Right at the river's edge stood a small rectangular church, supported by four stone vaults and with a tiled roof. According to the local tradition it was built at the place where Jesus' clothes were placed while he was baptized. Farther up, upon a hill overlooking the church, there was a great monastery. Enclosed within the masonry wall of the monastery was the church built in honor of Saint John the Baptist. According to a post-Byzantine tradition (Epiphanius), a stone on which John the Baptist stood when baptizing Christ was set in the apse of the Forerunner Church.

One mile north of Jericho was the site of Galgala (Julju-

lieh), with the twelve stones that the sons of Israel took up from the Jordan. The Jewish site of pilgrimage was taken over by the Christians in the early fourth century. A church depicted on the Madaba mosaic map is first mentioned by the Piacenza pilgrim, who relates that the twelve huge stones were shown in the basilica, behind the altar. In front of the basilica he mentioned a plain, the Lord's Field, which Jesus sowed with his own hands. The crop, reaped in February, was used for Communion at Easter.

The Piacenza pilgrim mentions a cave on the bank of the Jordan in which were cells for seven virgins who were placed there as small girls; when one of them died, she was buried in her cell, and another cell was hewn from the rock, so that another girl could be placed there to make up the number. They had people outside to look after them. Pilgrims went in to pray there, but they were not allowed to see the face of any of the virgins.

The church at the spring of Elisha, at the foot of biblical Jericho (Tell es-Sultan), depicted on the Madaba map, is first mentioned by Theodosius as being two miles from Byzantine Jericho. Another site indicated by him at Jericho is the house of Rahab the prostitute, who received the spies. According to the Piacenza pilgrim, the house had a guesthouse, and the bedroom where she hid the spies served as a chapel of Saint Mary. Not far from Jericho to the south, the Piacenza pilgrim was shown the tree that Zacchaeus the tax collector climbed in order to see Jesus. The tree had been surrounded by a chapel and grew through the chapel's roof, but it had already dried up in his day. The steep ascent of the road leading from Jericho to Jerusalem was known as the ascent of Zacchaeus (*Miracles of the Holy Virgin in Choziba* 1). Epiphanius the monk (750–800 CE) mentioned farther along this road, twelve miles from the monastery of Euthymius, the church where Adam stayed and wept at losing Paradise. Near this church was the House of Joachim, a monastery (Khan Saliba). Farther to the west, along the road leading to Jerusalem, at the site of Qasr Ali, another station along the road was identified as the Church of Saint Peter, founded by the empress Eudocia.

To the north of Jericho there were churches at Phaselis (Jon Moschus *Leimonarion* 92), Archelais (Khirbet Beiyudat, a basilical church), and Khirbet Unm. Zaquma (a chapel). Another church nearer to Jericho (excluding monastic churches and chapels) was found at Tell Matleb, identified by some authors with Galgala. (For references see Tsafir et al., 1994, under site names.)

On the southern side of the Dead Sea, the sanctuary of Saint Lot depicted on the Madaba map near Zoara (Ghor es Safi) was identified with the basilical church discovered in the monastery at Deir Ain Abata. The pilgrim Theodosius knew about a pillar of stone interpreted as

Lot's wife; the Piacenza pilgrim mentioned many hermits in this neighborhood, the region of Segor.

JOSEPH PATRICH

CISTERNs AND RESERVOIRS. A necessary component of water systems in the Judean wilderness in antiquity was a means of storing the water; this was accomplished with cisterns and reservoirs. Cisterns were small, private, water storage units, whereas reservoirs were larger in size and designed to store water for public use. Tsuk (1997, p. 112) defines a cistern as a water storage facility holding up to 100 cubic meters (3,532 cubic feet); something holding more than that amount would be considered a reservoir. Every household in the Roman-Byzantine period had a cistern with an average capacity of 30 to 50 cubic meters (1,059 cubic feet to 1,766 cubic feet), which would supply the family with water throughout the year.

In the Hellenistic and Roman periods cisterns and reservoirs were generally square or rectangular in shape. Cisterns were normally cut into bedrock and often covered for sanitation and to reduce evaporation loss. Reservoirs, because of their size, were usually partially cut into bedrock and partially built of stone, and lacked roofs. In order to be watertight, cisterns and reservoirs were lined with an impermeable plaster. The water supply was directed to a small settling basin adjacent to the storage tank to remove impurities. Water was drawn from a cistern by means of a jar or pail on a rope. Water from reservoirs, on the other hand, was usually directed to secondary facilities by means of channels or pipes.

The more remarkable of the Judean wilderness cisterns, pools, and reservoirs are to be found at Jericho, Qumran, and Masada.

Jericho. At the site of Tujul Abu el-'Alayiq, the Hasmonean and Herodian kings built a luxurious complex of palaces, villas, estates, and gardens. Of special interest are the swimming pools adjacent to the palaces. During the Hasmonean period, a total of seven swimming pools ranging in size from 7 by 7 meters to 12.5 by 20 meters (23 by 23 feet to 41 by 65.6 feet) were constructed at the site, a phenomenon unparalleled elsewhere in the Middle East. Five of the pools had steps along one side, while two did not. The pools were surrounded by patios, gardens, pavilions, and ritual baths. Many of the pools continued in use in the Herodian period, with the addition of a large 40 by 92 meters (131 by 302 feet) pool and a bathhouse. The most famous event to have taken place in a pool in the Judean wilderness occurred during the reign of Herod the Great. Josephus reports that the seventeen-year-old Hasmonean Aristobulus III, Herod's brother-in-law, high priest, and rival, was drowned in one of the palace pools:

After a while, the young man, at the instigation of Herod, went into the water among them, while such of Herod's acquaintances he had appointed to do it, dipped him as he was swimming, and plunged him under the water, in the dark of the evening, as if it had been done in sport only; nor did they desist till he was entirely suffocated. (*Jewish Antiquities* 15.3.3)

East of the palace area was an enormous reservoir, Birket Mousa, which evidently served the practical needs of the palaces. The largest reservoir in Palestine, it measured 220 by 160 by 21.5 meters (722 by 525 by 70.5 feet) and had a capacity of 756,800 cubic meters (over 2 million cubic feet). [See Hasmoneans; Herod; and Josephus Flavius.]

Qumran. The most striking feature of the ruins at Qumran is the number of cisterns and reservoirs in close proximity. The settlers of Period Ia (third quarter of the second century BCE) refurbished a round cistern built in

the Iron Age and also built two new cisterns. Both were rectangular, and both had steps at one end extending the full width of the cistern. The full-width steps are a unique feature of the Qumran cisterns, which suggests that they were used for communal ritual immersion. In Period Ib (late second century–first century BCE) one additional cistern, without steps, was constructed, along with three stepped cisterns, maintaining an approximate two-to-one ratio of cisterns with steps to cisterns without steps. One of the stepped cisterns was subsequently abandoned because of damage from the earthquake of 31 BCE. In Period II (first century CE), a wall was built across the middle of another of the stepped cisterns to create two cisterns out of one—one to continue as a ritual immersion facility, and the other to be used as a functional cistern for daily needs.

It is clear that the stepped cisterns at Qumran were used for communal ritual immersion as described by Josephus (*The Jewish War* 2.2, 5, 13) and in the Rule of the Community from Cave I at Qumran (IQS iii.4–5, 9, v.13–14). [See Rule of the Community.] Not only the design of the stepped cisterns would suggest this but also the capacity of the system. The amount of water needed for a community of approximately two hundred people and their pack animals, for the eight months of the year during which rainwater was not available, is around 258 cubic meters (9,112 cubic feet). System capacity, on the other hand, including allowance for evaporating losses, is approximately 578 cubic meters (20,413 cubic feet), more than twice what was needed. The water volume of the cisterns without steps, on the other hand, was around 259 cubic meters (9,147 cubic feet), more than enough to meet the practical needs of the community. [See Qumran, *article on Archaeology*.]

Masada. Herod ensured a secure water supply for his fortress atop Masada by having a well-engineered water system. Aqueducts delivered water from nearby wadis during the rainy season to twelve storage reservoirs located on the northwest slope of the mountain. The square-shaped reservoirs were cut into the slope of the rock in two parallel rows—eight in the upper row and four in the lower. The upper eight had a capacity of around 3,000 cubic meters each (105,348 cubic feet), while the lower four had a capacity of approximately 4,000 cubic meters (141,264 cubic feet) each, for a total capacity of some 40,000 cubic meters (over 1 million cubic feet). A number of large reservoirs were also cut into the summit on the north, south, and east sides. Water was transported from the northwest slope to the summit by means of human labor or pack animals. From the Snake Path on the northeast side and the Water Gate on the northwest side, water could be directed to the upper reservoirs by means of channels. Sufficient water was

available to maintain bathhouses and a swimming pool on the summit. [See Masada.]

COMMUNITY ORGANIZATION. [This entry comprises three articles: Community Organization in the Rule of the Community, Community Organization in the Damascus Document, and Community Organization in Other Texts.]

Community Organization in the Rule of the Community

The Qumran community (*ha-yahad*) was organized according to a strict and rigid hierarchy. Many scholars maintain that it was controlled, at least during the early period of its existence, by priests and Levites. However, 4QS^d, a copy of the Rule of the Community which dates from the later decades of the first century BCE (see Cross, 1996), may represent an earlier version than that of the Rule of the Community from Cave 1 at Qumran (hereafter, 1QRule of the Community; 1QS), the scroll in which the Rule of the Community is best preserved and which dates from approximately 100 to 75 BCE. 4QS^d is conspicuously missing the words "the priests, the Sons of Zadok" (see Charlesworth and Strawn, 1996; Vermes and Metso correctly think 4QS^d witnesses to "an earlier stage of the literary evolution of the Community Rule"). According to

4QS^d, "the men of the Community" are not "answerable to the Sons of Zadok, the priests who keep the covenant" (1QS v.2).

Foremost in the Qumran community is the overall concept of "oneness" (*yahad*); that is, the full members of the community held all things in common and were devoted in oneness to all responsibilities and the task of preparing the way for God's final act of judgment, the final war at the end of time, and to the coming of the Messiahs of Aaron and Israel, at least beginning in the first century BCE (1QS ix.11; this section of 1QRule of the Community seems to reflect a later period in the community's existence; it is not present in 4QS^d, which seems generally to be an earlier version; see Charlesworth in *Qumran Messianism* [1997] and Metso). They ate "(in) unity," said "benedictions (in) unity," and gave "counsel (in) unity" (1QS vi.2–3). All members of the community were predestined to be "the Sons of Light" in contrast to "the Sons of Darkness," who were all those who were not members of their sect, even (and especially during the first phase of the community's existence) the ruling priests in Jerusalem. It took at least two years to become a member of the community; during this probationary period the novices, "the Sons of the Dawn" (Words of the Sage to the Sons of Dawn 4Q298), were instructed by a *maskil* ("master") and eventually examined by the "examiner" (*mevaqqer*) regarding their knowledge and purity.

In the community the hierarchy was so strict that predetermined "lots" were discerned and then assigned, by discerning God's will; hence, love was measured out according to the lot of a Son of Light. That is, the members of the community are exhorted "to love all the Sons of Light each according to his lot in the council of God" (1QS i.9–10). At least during the early years at Qumran, the hierarchy, from the top down, consisted of the Righteous Teacher (Teacher of Righteousness) to whom God alone had revealed all the mysteries of the words of the prophets (Peshar Habakkuk, 1QpHab 7), the priests (the Sons of Zadok), the Levites, and then Israel (all members of the community). [See Teacher of Righteousness.] The hierarchy was centered upon the priests (1QS vi.3–4). During special ceremonies, as at the yearly ceremony for the renewal of the covenant, the hierarchic distinctions were strictly demanded and followed (1QS ii.19–25). Josephus was most likely thinking about this sect of Jews and this phenomenon when he reported that the Essenes were so hierarchical that a member lower in rank must not touch one above him; otherwise the latter must purify himself from the resulting pollution (*The Jewish War* 2.150). [See Josephus Flavius.]

Numerous technical terms designating social groups or leaders are found in the Rule of the Community. It is not wise to seek to systematize the meanings of all these

terms and relate them, because this quintessential Qumran document reflects the evolutionary nature of the Qumran community; that is, the terms most likely had different meanings at different periods in the history of the community and perhaps also at the same time.

Technical Terms for Social Groups within the Community. The Qumranites called their group the "community" (*yahad*) and sometimes the "Community of God" (1QS i.12). The use of *yahad* in this sense is unique to Qumran. While in the Rule of the Community the term *serekh* denotes the "rule" that contains the regulations of the community, in the War Scroll (1QM) it designates the military organization of the Qumranites.

The "Council of the Community" (*'atsat ha-yahad*) usually indicates a group of twelve men, including three special priests (1QS viii.1, however, can also be read to mean twelve men plus three priests [see Weinfeld]). The council of the community had awesome responsibilities; it was "a most holy assembly for Aaron, (with) eternal truth for judgment, chosen by (divine) pleasure to atone for the land and to repay the wicked their reward" (1QS viii.5-7). These twelve leaders were to be "perfect in everything which has been revealed from the whole Torah" (1QS viii.1-2); thus each one was "to perform truth, righteousness, justice" and "merciful love," and to walk circumspectly "with his fellow" (1QS viii.2). According to some passages in the Rule of the Community the members of the "Council of the Community" seem to have been the judges (1QS viii.3, viii.10); but, according to other passages in this composite document, it is possible that they arrived at some judgments, while most jurisdiction within the community was not before the council but before the "Many" (1QS vi.1). Either the priests in the council of twelve men must be "Sons of Aaron," since they are the only leaders who administer justice and property according to the end of the Rule of the Community ("the Sons of Aaron alone shall rule over judgment and property"; 1QS ix.7), or the latter rule applied only to an earlier phase in the life of the community.

The "Many" (*rabbim*; 1QS vi.7-21) is the name of the whole assembly when it deliberates over the business of the community. It is not wise to attempt to distinguish always between *rabbim* and *yahad*; they are virtually synonyms. The "Many" constituted all who have remained faithful, the novices who have passed all requirements, and those members who have been reinstated in the community. They made judicial decisions and were responsible for excommunications and readmission (1QS viii.19-ix.2). Thus, although the community was controlled in the early years by the Righteous Teacher, in practice it was sometimes oligarchic and even democratic; it seems likely that after the death of its "Teacher," "the Priest," the community became less monarchical. The "Many"

also gather together to worship and study: "The Many shall spend the third part of every night of the year in unity, reading the Book, studying judgment, and saying benedictions in unity." (1QS vi.7-8). During a session of the Many a member may not mention anything that is not pertinent to the Many (1QS vi.11).

The technical term *rabbim* does not appear in other Jewish literature that antedates 70 CE. It is, however, found in rabbinic literature. There it denotes a large gathering of Jews organized together for some business (i.e., *Qiddushin* 4.5; see also B.T., *Yev.* 80b, which Weinfeld suggests is close to Qumran usage).

Technical Terms for Leaders in the Community. "The Righteous Teacher" (*moreh ha-Tsedeq*) was the founder of the community. While he was alive he was the most important figure in the community. He was the bearer of God's special revelation (1QpHab), he was considered like Moses "the Lawgiver," he was the author of some of the hymns chanted in the community, and he most likely composed many of the rules to be memorized by members of the community (most likely, but not certainly, 1QS iii.13-4.16). It is unlikely that his office was inherited by others; rather, he was revered and praised by his followers far above any of his near or far contemporaries.

The "priests" (*ha-kohanim*) were the elite members of the community. They marched at the head of the yearly ceremony for covenant renewal (1QS ii.19-20). They were the first to sit in the session of the Many (1QS vi.8). Their authority was prescribed; a priest must be present when ten men gathered (1QS vi.3-4). The priest was to be the first to stretch out his hand to bless the bread and the new wine (1QS vi.5). The priests, as "the Sons of Aaron," "alone" were in charge of judgment and property (1QS ix.7).

All who joined the community swore to be "answerable to the Sons of Zadok, the priests who keep the covenant" (1QS v.2). The "Sons of Zadok" (*benei tsadoq*), who seem to be synonymous with the "Sons of Aaron" (*benei 'aharon*), are, of course, priests. They are the ones who were in charge of almost everything, especially the interpretation of Torah. The "Interpreter of Torah" (*doresh be-Torah*) mentioned in 1QRule of the Community (1QS vi.6) is not necessarily a separate office but a function performed by a leader (in Testimonia 4Q175 1-3.11 he is a messianic figure who will arise "in the latter days"). Each leader was most likely empowered to interpret Torah, but there were probably ceremonial events in which a specially designated person was recognized as the "Interpreter of Torah," following the model of the Righteous Teacher, the interpreter of Torah par excellence for the members of the community.

The "elders" (*zeqanim*) are mentioned only in 1QRule

of the Community (1QS vi.8), and there they are second in authority and power only to the priests; that is, for the "session of the Many" the priests are to sit first, then the "elders," and finally all others. Because of this brief reference to the "elders," it is impossible to discern their functions at Qumran or compare them with the "elders" who were officials in synagogues and the Sanhedrin (cf. *Acts* 4.5, 4.8) or "the elders" (*hoi presbuteroi*) mentioned in the New Testament as heads of a church (i.e., *Acts* 15–16, *1 Tm.* 5.17, *Ti.* 1.5, *Js.* 5.14, *1 Pt.* 5.1, *2 Jn.* 1, *3 Jn.* 1).

The "Examiner" (*mevaqquer*; 1QS vi.12, 20; CD xiii.6, 7, 13; xiv.13; xv.8, 11, 14) was the most important official and functioned as the head of the community (the president or General superior). He was responsible, perhaps with the counsel of the *maskil*, for examining the novices (Rule, 5Q13 frg. 4.1, CD xv.11). He controlled discussions (1QS vi.11–13) and presided at plenary sessions. His authority was not absolute and could not become autocratic, since a member who was not recognized to speak by the examiner could appeal to the Many, and if they allowed him to speak, then he could address them (1QS vi.11–13). The examiner recorded all that went into the common storehouse (1QS vi.20). He had to be between thirty and fifty years of age, according to the Damascus Document (CD xiv.8–9; cf. Rule of the Congregation 1Q28a i.14–18), but it is not clear if that rule applied to the Qumran community.

The "Overseer" (*paqid*) was most likely the second most important officer, although it is conceivable (especially because the "Community" and the "Many" tend to be synonymous) that one person sometimes performed the tasks assigned to the "Examiner" and the "Overseer." He was "at the head of the many." He also examined the insight and works of all those who wished "to join the council of the community"—here meaning anyone who wished to join the community (1QS vi.14). The "Overseer" was to be between thirty and sixty years of age, according to the Damascus Document (xiv.6–7; cf. 1Q28a i.14–18), but it is impossible to discern if that rule applied at Qumran.

The "Master" (*maskil*), a wise and learned man, was the officer who taught the novices (4Q298). The *maskil* is not "only another title for the *mevaqquer*" (against Treballe Barrera, 1995, p. 57). He was the one who had mastered "all understanding" (1QS ix.12–14). He evaluated "the Sons of Righteousness" (Rule of the Community^c 4Q259), who are "the chosen ones of the end time" (1QS ix.14), which probably denoted the novices. He was responsible for their advancement (1QS ix.15–16). His major task was to guide the devotees and "instruct them in the mysteries of wonder and truth in the midst of the men of the community" (1QS ix.18–19). The most important lesson to be taught to "the Sons of Light" by the "Master" is the in-

struction regarding "the two spirits," by which all humans are influenced:

It is for the Master to instruct and teach all the Sons of Light concerning the nature of all the sons of man, . . . From the God of knowledge comes all that is occurring and shall occur. . . . In a spring of light emanates the nature of truth and from a well of darkness emerges the nature of deceit. In the hand of the Prince of Light (is) the dominion of all the Sons of Righteousness; in the ways of light they walk. But in the hand of the Angel of Darkness (is) the dominion of the Sons of Deceit; and in the ways of darkness they walk. (1QS iii.13–21)

Structure of the Community. Men who wished to join the community faced at least two years of examination in knowledge and in conduct (1QS vi.21). If after the probationary period a novice passed all tests, he was admitted by the decree of the Many. He was then recorded and given a rank in the community. Finally, his property was placed in the common storehouse (1QS vi.22). Members could be punished, primarily by losing a portion of their food, be dismissed for a specified period of time, and even banished (1QS vi.25–7.18). Meals were eaten together, probably in one large room.

New Testament and Christian Origins. After the publication of the scrolls found in Cave 1, some New Testament specialists claimed that the *mevaqquer*—a term found at Qumran only in the Damascus Document and in the Rule of the Community, but nowhere else in other Jewish literature, including the apocryphal compositions and rabbinic writings—significantly helps explain the title and function of the bishop in the early church (Dupont-Sommer, 1950). The links, however, are not so persuasive, and the *mevaqquer* is not as dominant as the bishop seems to have been, and certainly became, in the church (Nötscher, 1961; Reicke, 1957). The parallel between twelve men with three special members is strikingly similar to the twelve men Jesus chose, among which were three special leaders (Peter, James, and John); but the number twelve symbolized Israel and its twelve tribes and the early synagogues may well have been led by twelve men. [See Twelve Patriarchs, Testaments of the.]

JAMES H. CHARLESWORTH

Community Organization in the Damascus Document

The discovery of fragments of eight manuscripts of the Damascus Document in Cave 4 at Qumran (4Q266–273) significantly increased our knowledge of the text of this work, which previously had been known only from two manuscripts found in the Cairo Genizah (CD MS A and MS B). Small fragments of the Damascus Document were also found in Caves 5 and 6 at Qumran (5Q12, 6Q15), but these were much less important. The Damascus Document consists of two sections, the Admonition and the Laws, but the Cave 4 discoveries showed that the text preserved in the Cairo Genizah manuscripts lacked the beginning of the Admonition, and the beginning and the conclusion of the Laws, as well as part of the Laws section itself. The corpus of Laws can now be seen to form about two-thirds of the entire work, and the Admonition

essentially serves as an introduction to the Laws; it is within the Laws that the sections of the Damascus Document concerned with community organization are to be found.

The Laws section provides legislation for a community of Jews who lived among other Jews and gentiles, were married and had children, had male and female slaves, practiced agriculture, engaged in trade, had private income from which they were expected to contribute the wages of at least two days per month to support members of the community who were in need. They adopted a positive attitude toward the Temple, in that they were concerned about maintaining its purity and participated in its cult. In short, the legislation was intended for a group of Jews who were not cut off from society, even though they formed a separate community. It is assumed here that this community was Essene and that the legislation essentially was Essene legislation. But it has been widely recognized that the corpus of Laws is a composite and that it consists of two main types of material: general *halakhah* and interpretation of the Torah on the one hand, and communal laws on the other. The former is represented, for example, by the detailed regulations concerning the observance of the Sabbath (CD x.14–xi.18); this type of material appears to have been intended for all Israel (cf. CD xii.19–22) and may include interpretations of the Torah that go back to the time before the formation of the Essenes. The latter is represented above all by CD xii.22–xiv.19, which is set off in the manuscript by the heading "And this [is] the rule for the settlers of [the] c[amps]." Other parts of the corpus of Laws are also concerned with communal organization, particularly the passage concerned with admission procedures (CD xv.5–xvi.6), the list of punishments for infringements of community law (4Q266, 270), and a ritual for expulsion from the community (4Q266, 270).

The community legislation of the Damascus Document invites comparison with that of the Rule of the Community (hereafter, 1QRule of the Community; IQS v–ix). The relationship between the two works has often been explained on the basis that the Damascus Document was intended for those members of the sectarian movement who lived in towns and villages among other Jews, while 1QRule of the Community, which appears to embody a stricter law, was intended for those Essenes living at Qumran itself. It is perhaps more accurate to say that the two documents belong to different, but related, communities, and that, whatever the chronological relationship between the Damascus Document as a whole and 1QRule of the Community, the legislation of the Damascus Document is older than that of 1QRule of the Community, dating in its final form from about 100 BCE.

The Damascus Document refers to the community with

which it is concerned as a "congregation" (*'edah*; e.g., CD x.4, 5, 8; 4QD^a 8.i.9, 8.iii.4 4QD^f 7.i.14), but it also uses the expressions "association" (*hever*; CD xiv.16; 4QD^a 10.i.10) and "association (*hibbur*) of Israel" (CD xii.8). Like Israel in the wilderness period, the congregation is said to live in "camps" (*mahaiot*; e.g. CD ix.11; x.23; 4QD^f 11.17; 4QD^f 7.ii.14); behind the references to the term *camps* we should envisage groups of members of the community living among their fellow Jews in towns and cities—just as the Essenes were said to do by both Philo and Josephus. Each camp consisted of a minimum of ten men (cf. CD xiii.1), and each group was under the direction of a priest and an officer called "the overseer of the camp."

A summary of the duties of the priest (CD xiii.2–7) is introduced by the statement "And where there are ten, let there not be lacking a priest learned in the Book of Hagu" (CD xiii.2; cf. 1QS vi.3–4). What precisely is meant by the term the *Book of Hagu* (*Book of Meditation*) remains uncertain, but it may refer to the Torah or a collection of interpretations of the Torah. [See Hagu, Book of.] The priest was to exercise authority ("by his word shall they all be ruled" CD xiii.2–3); this probably refers to determining the interpretation of the Torah) and to hand down decisions in cases of skin disease (see *Lv.* 13). In interpreting the Torah, if the priest was "not experienced in all these [matters]" (CD xiii.3) and a Levite was, authority was to be exercised by the Levite. In cases involving skin disease, the priest was to be instructed in the interpretation of the law by the overseer; but even if the priest was ignorant, it was he who had to pronounce the legal decision. The application of the laws on skin disease was evidently a matter of concern to the members of the community, and more information on the role of the priest in applying the law is contained in a separate section on skin disease, which is preserved in fragmentary form in Damascus Documents^{a,d,g,h}.

The "overseer [*mevaqqer*] of the camp" is also referred to as "the overseer of the many" (CD xv.8) or simply "the overseer." His duties consisted of exercising pastoral oversight over members of the camp and being responsible for the admission of new members, in which he had the final word (CD xiii.7–13). The duties assigned to the overseer are similar to those assigned to the "wise leader" or "master" (*maskil*) in the Rule of the Community (1QS ix.14–21), which suggests that the two offices were related. It is worth noting that in 1QRule of the Community (1QS vi.12) the title *overseer over the many* is used, apparently to refer to the individual called elsewhere the "wise leader," and that in the Damascus Document the title *wise leader* occurs several times but only in contexts too fragmentary to interpret. The overseer also was assigned to keep a record of witness statements in cases where a

capital offense was witnessed by a single individual, so that, if further offenses were committed, the requirement of the law of *Deuteronomy* 17.6 might be met by the cumulative record (CD ix.16–22). In a passage concerned with proper arrangements for marriages (Damascus Document^l 4Q271 3) the overseer was responsible for the arrangements for confirming the good moral character of a prospective bride (3.14).

The procedure for admission to the community is treated in more detail in the Damascus Document (CD xv.5–xvi.6) and was much simpler than that described in the 1QRule of the Community (1QS vi.13–23). According to the Damascus Document a potential member first was examined as to his suitability by the overseer and then required to swear "the oath of the covenant that Moses made with Israel, the cove[n]ant to re[turn t]o the law of Moses with all [his] heart and [with all his] soul." Sons of members were also required to take the oath, at the age of twenty (cf. *Ex.* 30.14). Once the new member had taken the oath, the community was free of the blame incurred by him if he transgressed; but he was eligible to be instructed by the overseer for one year. Those who were mentally or physically impaired were not permitted to join the congregation "because the holy angels [are in their midst]" (Damascus Document^a 4Q266 8i.6–9), the implication being that no person should be included who might offend the angels.

The section of the Damascus Document that is headed "The rule for the session of all the camps" is concerned with the organization of the entire community and describes the hierarchical order in which the members were to be registered and to conduct their meetings: "the priests first, the Levites second, the sons of Israel third, and the proselyte[s] fourth" (CD xiv.3–17). This passage also refers to two officers, "the priest who is appointed at the head of the many" and "the overseer of all the camps," whose responsibilities covered the entire congregation, not just an individual camp. The former, like the priest attached to each camp, had to be "learned in the Book of Hagu" in order to be capable of expounding the Torah. The latter, who was required to be master of "every secret of men and every language of their cla[n]s," was the ultimate source of authority in the congregation (CD xiv.9–17). He was responsible, together with the judges (see CD x.4–10), for receiving the contributions of at least two days' wages per member of the community, for the support of fellow members who were in need. With regard to commercial relations between members, in the Damascus Document it is said that they should not buy from or sell to fellow members, here called the "Sons of Dawn," except "hand to hand" (CD viii.14–15). Apparently, this means that they should not seek to profit from commercial dealings with fellow members of the community, but

provide for their needs on the basis of exchange and mutual trust. They were not to make agreements for buying or selling without informing the overseer of the camp (CD xiii.15–16).

Communal discipline was enforced by a series of punishments, and a list of these is given near the end of the corpus of Laws. The beginning of the list survives in fragmentary form in the Cairo Genizah manuscript of the Damascus Document (CD xiv.20–23) but much more has been preserved in Damascus Document^a and Damascus Document^c (4Q266 10.i, ii; 4Q270 7.i). Similar lists of punishments are found in 1QRule of the Community (1QS vi.24–vii.25) and in the fragments of Serekh Damascus (4Q265). Punishments range from a penance of ten days for interrupting the speech of another member or for leaving the assembly three times without reason, to thirty days exclusion and ten days of penance for falling asleep in the assembly or for indecent exposure, to exclusion for one year and six months of penance for insulting a fellow member. The ultimate sanction—expulsion—was levied for at least five offenses: a malicious accusation in a capital case, slandering the community, fornication with one's wife in violation of the law (where the precise nature of the breach of the law is unclear), murmuring against "the fathers" (apparently an honorific applied to senior members of the community), and despising the communal law. A good deal remains unclear about the list of punishments, including the precise nature of the penance—whether it involved loss of rations or some other punishment, such as exclusion from communal deliberations—but the list provides a revealing insight into the issues that were important to members in relation to the internal working of the community.

As noted above, the punishment for those who despised the communal law was expulsion, and the final part of the corpus of Laws consisted of a ritual of expulsion for "everyone who despises these regulations in accordance with all the statutes that are found in the law of Moses." The ritual is preserved in Damascus Document^a and Damascus Document^c (4Q266 11; 4Q270 7.i, ii) and the expulsion occurred at the time of the annual ceremony of the renewal of the covenant in the third month (4Q266 11.17), almost certainly on the occasion of Shavu'ot. The ritual of expulsion includes a prayer uttered by "the priest who is appointed over the many" (4Q266 11.8). Those who were associated with the man being expelled were to leave with him, and a record was to be kept by the overseer, presumably the "overseer of all the camps" (4Q266 11.14–16). Community Organization in Other Texts

The Rule of the Community from Cave 1 (hereafter, 1QRule of the Community, 1QS) and the Damascus Document (CD 4Q266–4Q273, 5Q12, 6Q15) are not the only texts found at Qumran that reflect something of the communal life of those responsible for the Dead Sea Scrolls. Three other texts deserve to be mentioned on account of their communal legislation: Serekh Damascus (4Q265), Rebukes by the Overseer (4Q477), and the Rule of the Congregation (1Q28a).

Serekh Damascus, which survives only in fragmentary form, reveals affinities with both 1QRule of the Community and the Damascus Document, but its legislation does not correspond exactly with that of either work. Thus, affinities with the 1QRule of the Community can be observed in the list of punishments, specifically the provision for a cut of half the food ration (4Q265 1.i, cf. 1QS vi.25) although the amount is not the same) in the procedure for admission (4Q265 1.ii, cf. 1QS vi.13–23), and in the provision for a council of fifteen men, the members of which would make atonement for the land (4Q265 2.ii, cf. 1QS viii.1–10; ix.3–6). The passages in 1QRule of the Community indicate that the atonement would be made, not by sacrifice, but by prayer and by proper observance of the Torah. On the other hand, the Sabbath legislation of Serekh Damascus (4Q265 2.i) is very similar to that of the Damascus Document (CD x.14–18).

The few small fragments of the work known as Rebukes by the Overseer preserve the remains of a record of rebukes of community members who had committed an offense. Both 1QRule of the Community (1QS v.24–vi.1) and the Damascus Document CD ix.2–8 refer to the

duty of members to rebuke their fellows, apparently as a preliminary stage in the judicial process, and the Damascus Document (CD ix.16–20) provides that a record of such rebukes was to be kept by the overseer. Rebukes by the Overseer perhaps would be better entitled “The Overseer’s Record of Rebukes.” The offenses listed are essentially ones that affected the internal life of the community, such as being short-tempered or offending the spirit of the community, and the text is additionally important because it is the first in which the actual names of members are preserved.

1QRule of the Congregation is a short text that appears as a kind of appendix at the end of the version of the Rule of the Community found in Cave 1 at Qumran. It provides legislation for a community living “at the end of days,” and it includes regulations for the common meals that would be eaten when the two messianic figures expected by the community, the priest and the Messiah of Israel, had appeared. But at the same time it seems very likely that the legislation contained in the document reflected the actual practice of the community that produced it. As in the case of the Damascus Document, the community with which the Rule of the Congregation is concerned is frequently described as a “congregation” (*edah*; e.g., 1Q28a i.1, 6)—hence the title given to the work—but terminology familiar from the Rule of the Community, namely, “the council of the community” (see e.g., 1Q28a i.26, 27), is also used. The Rule of the Congregation legislates, again, like the Damascus Document, for a community whose members were married and had children: The first part of the document (i.6–25) is concerned with the education of children and the stages in the lives of members. Thus, at the age of twenty, members were registered in the community and were permitted to marry, and at the ages of twenty-five and thirty they achieved higher levels of seniority in the community; these thresholds were based on biblical precedent (cf. *Ex.* 30.14; *Nm.* 1.3; 4.3; 4.23; 8.24) and may be compared with the ages in the Damascus Document (CD x.6–10; xiv.6–10) and the War Scroll (1QM vi.13–vii.3).

The central part of the Rule of the Congregation (1Q28a ii.25–ii.11) is concerned with procedure at assemblies of the congregation, from which those who were ritually unclean or who suffered from a physical defect were to be excluded. The reason given is the same as the reason given in Damascus Document³ (4Q266 8.i.6–9) for exclusion from the congregation, namely, “because the holy angels are [in] their [congregat]ion.” The final part of the text (1Q28a ii.11–22) contains the legislation for the communal meals to be eaten in the messianic age. At these meals the messianic priest, who no doubt is to be identified with the Messiah of Aaron in 1QRule of the Community, would have precedence over the Messiah of Israel. The legislation in the Rule of the Congregation concerned

with the common meal of the messianic age bears an obvious similarity to the regulation in 1QRule of the Community, (1QS vi.4–5) which, although in much briefer form, is concerned with the common meals of the community responsible for that scroll; this suggests that the common meals were seen as an anticipation of the common meals that would be eaten in the messianic age.

The legislation in the Rule of the Congregation for the common meals ends as follows: “It is in accordance with this statute that they shall proceed at every me[al at which] at least ten men [g]ather” (1Q28a ii.21–22). The group of ten is referred to in both 1QRule of the Community (cf. 1QS vi.3–4, 6–7) and the Damascus Document (CD xiii.1–2) Josephus also refers to such a group of ten in his account of the Essenes, and the rabbinic writings likewise regard ten men as the minimum needed to perform certain religious activities.

The above texts reveal a number of interesting connections with the communal legislation of the 1QRule of the Community and the Damascus Document, which make it clear that all the texts stem, if not from the same community, at least from related communities. But it is also clear that no simple picture is likely to do justice to the complexities of the relationships between the texts or the communities that lie behind them.

The texts mentioned above are explicitly concerned with community organization. There are, however, a number of other legal texts which, although they consist primarily of interpretations or amplifications of biblical law, nonetheless do occasionally touch on matters of community organization. To mention just one example, *Ordinances*^a (4Q159; cf. *Ordinances*^b [4Q513, 4Q514]) has been described as an anthology of elaborations of biblical laws on diverse topics and has been thought to be close in style to parts of the corpus of Laws in the Damascus Document. Here, alongside laws on such topics as the amount of the harvest that the poor may garner (cf. *Dt.* 23.24–25) or on slavery (cf. *Lv.* 25.39–46), there is reference to a tribunal of twelve men, including two priests, which had the power to impose the death penalty. By contrast, the Damascus Document (CD x.4–10) provides for a tribunal of ten judges, four of whom were to be priests.

CONSERVATION. The first of the Dead Sea Scrolls was discovered in 1947 and exploration continued in the area of Qumran until 1956. Some of the scrolls were found wrapped in linen cloths in jars, other in niches in the walls of caves or on the floor buried in dirt and partially disintegrated by the action of water, insects, and mold. By the end of 1959, most of the fragments that had been found, and those that had been bought from bedouin who searched the area as well, were arranged in the so-called Scrollery, on the premises of the Rockefeller Museum. After two thousand years in the caves, the scrolls began to be treated by the scholars under drastically different climatic conditions, raising a number of issues concerning the scrolls' conservation.

The majority of the scrolls are written on hides, the others on papyrus. The skin of the Dead Sea Scrolls is neither leather nor parchment, as we understand these terms today.

Previous Conservation. When the international team of scholars began preparing an edition of the Dead Sea Scrolls for publication, the scrolls were moistened, then flattened and sorted, according to the text. In the course of sorting, pressure-sensitive tape was used for backing and connecting. The flattened fragments of parchment and papyri were placed between sheets of ordinary window glass without framing. Fragments lay loose between glass plates, sometimes slipping out. These plates were piled one above the other, causing additional pressure on the fragments. Thus, the process of penetration of the greasy and sticky adhesive of the cello tape into the parchment was accelerated.

It is interesting to note the description of the state of the scrolls given by John M. Allegro, one of the first editors of the scrolls, in 1966: "On a recent visit to the Museum I saw for myself just how perilous is the situation. Fragile fragments, which have been out of their desert

habitat now for more than fourteen years, are lying still between the glass plates where we left them many years ago, mostly unsecured, and in some cases, as I was horrified to see, subjected to intolerable pressure by the plates lying on top of one another in a large cabinet."

In 1955, Harold Plenderleith, the Keeper of the Research Laboratory of the British Museum, was approached about the matter. In his technical notes of that year he describes how he attempted to separate and analyze scroll fragments contained in three boxes that had been sent to London. "After many experiments the process eventually adopted was to expose the scroll fragments at 100% relative humidity for a few minutes and then to transfer them to a refrigerator for a like period. The degree of freezing was sufficient to congeal the surface of the black material while leaving the membrane sufficiently limp."

When Plenderleith came to Jerusalem in March 1962 he tried to unroll a rigid scroll. The method just described having failed, he carried out a dissection with appropriate tools, using as support the thinnest white silk, spread thinly with polyvinyl acetate and brought into intimate contact with the clean flat surface of the scroll. In 1963, Valerie H. Foulkes of the British Museum visited the Rockefeller Museum in order to prepare the scrolls for an exhibition in the British Museum. She wrote in her report: "It was a shock to discover the extent of the contamination caused by Scotch Tape. The cello tape was removed with trichloroethylene as recommended by Mr. Plenderleith. Gummed silk strips or gold beater skin was used in order to join the fragments, with polyvinyl acetate as adhesive. Special leather dressing was applied to the reverse."

Only in the 1970s and 1980s were some of the parchments and papyri (that were stored in glass plates) restored in the laboratories of the Israel Museum. According to documentation, the cello tape was removed with a scalpel, and greasy spots of adhesive with trichloroethylene. The fragments were treated with the disinfectant thymol. They were then backed with white lens tissue, using perspex glue as a solution in acetone and polyvinyl acetate glue. Some of the glass plates were replaced by acid cardboard, the kind available in Israel at that time.

Thus, the scrolls passed through many hands, were exposed to drastic environmental changes, and treated by various methods. Unsuitable treatments in the fifties, sixties and seventies—excessive humidity, leather dressing, polyvinyl acetate, and perspex solution—compounded the deterioration.

Current Methods. In 1991, a laboratory for the conservation of the scrolls was established by the Israel Antiquities Authority in the Rockefeller Museum. The state of the scrolls had deteriorated further. The fragments had been penetrated by the adhesive of the cello tape; they were darkened; on some, the text was no longer legible; and,

worst of all, the edges of some of the fragments had already gelatinized. After experiments with blank samples of parchment, it was decided to exclude parchment glue and adhesives based on organic solvents because of the difficulty of reversibility and the creation of rigid surfaces. It was found that water-based adhesives such as methylcellulose could be used. This was placed on Japanese tissue in a thin layer, left to dry to form a film, and then applied in narrow strips with a little moisture.

It was realized by our team of four conservators that the removal of the pressure-sensitive tape and the stains would take many years and divert our attention from other tasks. It was therefore decided to start a "first-aid treatment" as an emergency measure, which meant removing the fragments from the acid boards and glass plates and placing them between acid-free cardboard. This was done as follows: First, a work record was made with full documentation of the condition of the fragment, which included a scheme showing its position and where it had been stuck with pressure-sensitive tape; second, a description was given of the damage suffered by the skin and the text; third, the kind of intervention that had been carried out previously was recorded; and fourth, the fragments were attached to lens tissue with hinges of Japanese tissue in the order shown on the original photographs taken by the scholars. This was a temporary measure to dispense quickly with the glass and acid board and is now completed.

Parallel with the first-aid treatment, an operation to remove the pressure-sensitive tape was started. The old and well-established method of protecting the recto side temporarily with Japanese tissue is laborious. Each fragment is checked and treated with the aid of a stereomicroscope. Delaminated areas of leather are reinforced with minute quantities of methylcellulose glue carefully introduced into every peeling. After the recto side has been reinforced, the pressure-sensitive tape is removed piece by piece by means of a heated surgical scalpel or a scalpel and a hot-air gun. A thick layer of greasy and sticky adhesive remains. In this case solvents are used in the form of vapors or a mineral powder (Fuller's Earth) dampened with a little methyl ethyl ketone or acetone. The operations cannot be standardized because of the varying extent of the adhesion of the tape and the amount of the dark and sticky residues that render the text illegible. After reinforcing the verso side, which has been freed of cellotape, the Japanese tissue, which had been applied temporarily to the recto side, is easily removed. The restored fragments are kept in acid-free passe-partouts and attached with hinges of Japanese paper.

When preparing the plates for exhibition, another method of mounting is used. Fragments are sewn between two layers of polyester net stretched in an acid-free

cardboard. The polyester net is very thin and transparent, in various shades of color.

Preservation of Papyrus. At first glance, the state of preservation of papyrus seems to be much better than that of parchment. The sticky adhesive of the pressure-sensitive tape did not penetrate the papyrus and remained on the surface, which makes its removal less troublesome. But removing the pressure-sensitive tape itself from such a fibrous material as papyrus without causing damage is a problematic undertaking.

A fair number of papyrus fragments have text on both sides; on them cellotape is glued on the script itself. This makes the process of removing tape extremely complicated. We attempted several methods—chemical means as well as laser rays. For the time being, the hot-air method seems to be the most appropriate. Tiny strips of Japanese paper with methylcellulose glue are used to fix and unite the papyrus fragments. This procedure is performed together with removing cellotape and is a permanent reinforcement. Cotton wads dampened with a solvent (methyl ethyl ketone acetone) are used to remove adhesive residues from the papyrus surface. The protruding papyrus fibers can then be softened with a brush dampened in distilled water, pressed down, and dried under a press.

Future Research. The Dead Sea Scrolls constitute an almost virgin field for research in conservation. Fortunately, a team of conservators and scientists from the Getty Conservation Institute came to our assistance. Since 1992, studies have aimed to determine the exact character of the damage to the scrolls and the changes that have occurred, and to answer questions about the climate in the caves, the origin of the minerals found in the scrolls, and the causes of physical, chemical, and biological deterioration.

Samples of damaged blank skins were analyzed in the laboratories of the Getty Conservation Institute before and after treatment. It was found that there is no loss of natural oils from the skins.

Studies are being carried out by the Getty Conservation Institute inside the Qumran caves where the scrolls were found. Temperature and Rh conditions were examined and will be published by the institute.

In the course of the joint project, samples of leather, ink, salt crystals, and mold fungi were examined and continue to be examined. Preliminary results show that the inks are carbon inks with traces of iron, copper, zinc, titanium, and manganese. Luckily the mold and fungi are in a passive state. A great quantity of salt crystals were found. Their presence evidently is the cause of the condition of the leather.

Unfortunately, the process of aging cannot be halted. We would be satisfied if we succeed in arranging to slow

it down. We are trying to accomplish this with as little intervention as possible and by using reversible methods. We hope that our work contributes to the preservation for the future of these two-thousand-year-old treasures.

CONTRACTS. About sixty-five published documents from the Judean desert are included in what loosely may be called contracts. One of the documents (farming contracts Mur 24) contains copies of at least eleven separate leases; two others (purchase of a date crop 5/6Hev 21; sale of a date crop 5/6Hev 22) are nearly identical documents written from the perspectives of each of the parties. Seventy-five transactions are represented. All are written on papyrus, as documents, in contradistinction to literary remains, which generally are on animal skin (contract? Mur 7; contract XHex/Se 7; and probably *Eretz Israel* 20 [1989] 256 = *Journal of Jewish Studies* 45 [1994] 287). There are said to be three unpublished fragments of contracts written on leather classified among the material from Cave 4 at Qumran. Of the published documents, about a third are so fragmentary that they yield little or no sense of their contents beyond the fact that they are the remains of contracts.

Most were found in caves in Wadi Murabba'at and in Nahal Hever, the same places in which correspondence of Shim'on Bar Kokhba were found. Of those formerly ascribed to Nahal Se'elim, certainly some, and probably all, in fact came from Nahal Hever. In nearly all of them the parties, or at least one of the parties, to the contracts are Jewish, or, in a small number of instances, the documents relate to property subsequently owned by Jews. All but two or three (debt acknowledgment Mur 18, 55/56 CE; sale 5/6Hev 36, 56-69 CE; and recognition of debt Mur 114, possibly of 171 CE) are dated explicitly or by paleography to the years between 70 and 135 CE, that is, the period between the First Jewish Revolt and the Bar Kokhba Revolt, with the distribution heaviest toward the end of the period. The documents, it may be supposed, were brought to the caves by Jews who left their homes in the settled parts of the vicinity during the critical parts of the latter revolt and either met their death in the caves

or, if they succeeded in escaping, left the documents behind.

Of the main texts of these documents, about half (counting Mur 24, the register of multiple leases in Hebrew, as one) are in Aramaic, the traditional language of the region for legal transactions; about a quarter are in Greek, the language of civil administration in the eastern provinces of the Roman Empire. Nine are in Hebrew, all from the years between 133 and 135 CE, that is, during the Bar Kokhba Revolt, and represent 60 percent of the contracts from those years (76 percent if the eleven contracts of Mur 24 are counted separately), a reflection of the nationalist revival of Hebrew associated with the revolt. Six contracts are in Nabatean, all written in the region of Arabia, all but one when that region was an independent Nabatean kingdom not yet a province of the Roman Empire. What governed the choice of language between Aramaic and Greek is not clear. The proportion of documents written in Greek is substantially higher for those written in the province of Arabia than for those written in Judea. At any rate, it was not the main language of the parties that determined the language of the documents, since in nearly half of the Greek documents the subscriptions of the parties were written in Aramaic, indicating that those parties themselves could not write Greek.

A peculiar feature of about half the contracts is the form in which they were drawn up, that of the double contract. The scribe of this sort of document wrote the text of the document twice on the same sheet of papyrus, one copy above the other. The lower copy was usually written first. The part of the sheet on which the upper copy was written was then folded in narrow horizontal strips from the top down to the end of the upper copy, tied with string looped and knotted at several points, and in at least one case (deed of sale Mur 29) sealed. Witnesses affixed their signatures on the back of the sheet, one next to each of the ties, perpendicular to the direction of the writing of the text on the front. The bottom copy would be similarly folded in horizontal strips from the bottom up, but neither tied nor sealed. The two copies are known, therefore, as the inner and outer (in 5/6Hev 12.3: *en tots exoterois*) copies, respectively. Presumably, the inner sealed copy would provide a check on the authenticity of the text in case it was claimed that someone had tampered with the unsealed outer text. This form of document is familiar from Greek documents found in Egypt mainly from the third century BCE. By the end of that century the practice had become attenuated in Egypt as registry in public archives of one sort or another replaced double documentation as the preferred method of authentication. The inner copy turned progressively more summary, becoming no more than symbolic, and by the time of the Roman conquest of Egypt in 31 BCE it had

disappeared almost entirely. Where Greek double contracts have appeared elsewhere, as in Dura Europos, the inner copies also are abbreviated in varying degrees. It is remarkable, then, that when this form is used in contracts found in the Judean Desert, the inner text generally is a completely unabridged, occasionally even augmented, copy of the outer text (an exception is deed of sale of plot Mur 30), even when registry in a public archive is anticipated, as in writ of divorce Mur 19. It now is generally accepted that the double contract form did not originate with the Greeks but rather was adopted by them from the double contracts of their eastern, Semitic neighbors, for which cuneiform precedents have been adduced. The full use of this form by Jews even in Greek language contracts—the form is distributed among the languages in roughly the same proportions as the contracts in general—can be considered, then, an expression of their Jewish and Semitic heritage, rather than of Hellenization. This is likely the form of the sale document mentioned in *Jeremiah* 32.11 and 14, though the interpretation has been disputed. It apparently is the *get mequshar* discussed in *M. Bava Batra* 10.1 and the associated pericopes in each Talmud. These documents confirm the interpretation of the Talmudic passages given by the thirteenth-century rabbi Me'ir Abulafia in *Yad Ramah*.

The contracts generally are signed by witnesses, in varying numbers. In the documents whose state of preservation allows determination of the number of witnesses, the most common number in contracts from Wadi Murabba'at is three and in the Nahal Hever documents seven. The "IOU" published by Magen Broshi and Elisha Qimron (1989, 1994) has two witnesses, as does the confirmation of divorce, not properly a contract, XHev/Se 13. (Nahal Hever documents submitted to government authorities, not contracts, are signed by five witnesses.) In addition, the contracts generally are signed by at least one of the parties. Talmudic literature does not refer to this practice even though the law is insistent that only the signatures of the witnesses are legally determinative. In Talmudic literature it seems that such subscriptions by the parties took the form of a simple statement: "I, so-and-so, wrote this [the signature]." In the Greek papyri from Egypt, on the other hand, the subscription took the form of a summary of the transaction. In the contracts from the Judean Desert, the form of the subscription follows the language of the main body of the document. In documents whose main language is Aramaic, the subscription invariably is of the short form. In documents whose main language is Greek, the subscription is in the form of a summary, irrespective of whether the subscription itself is written in Greek or, as often, in Aramaic.

Of the Greek documents sufficiently preserved for investigation, most are couched in the form of a *homologia*,

that is, a declaration by one (or less commonly by both) of the parties that he acknowledges that a binding transaction has taken place or that he has undertaken an obligation. Thus, the main body of the text begins with a form of the verb *homologeio* ("acknowledge"). Most of these are couched in "subjective style," that is, the verb *acknowledge* is in the first person, and references to the parties are thereafter in the first and second persons. A small number (remarriage contract Mur 115, deposit 5/6Hev 17, and perhaps marriage contract 5/6Hev 37) are couched in objective style, with the verb for *acknowledge* and all subsequent references to the parties in the third person, in *oratio obliqua*. Three Greek documents certainly are not homologies but rather assert directly in objective style that a transaction occurred. Two of these are marriage documents (marriage contract 5/6Hev 18 and double contract; marriage contract XHev/Se Gr. 2; see Cotton, "A Cancelled Marriage Contract [from the Judean Desert]," 1994); the third (deed of gift 5/6Hev 19) is a gift given on the occasion of the marriage in marriage contract 5/6Hev 18. A fourth document, marriage contract 5/6Hev 37, may well be of this form, even though Cotton (1997) confidently restores a form of the verb *acknowledge* where the original editor, Naphtali Lewis, more prudently declined to do so. The Hebrew and Aramaic documents are evenly divided in this respect. Those that are couched as a *homologia* have the verb for *say* in the third person and continue in the first and second persons of *oratio directa*. The others are in either objective, subjective, or mixed style. Two declarations of indebtedness, debt acknowledgment Mur 18 in Aramaic and the "Hebrew IOU Note" (see Broshi and Qimron, 1989, 1994), present an enigma because of anomalies at the beginning or end. I suggested taking the documents as straight homologies, closely modeled on the Greek, despite the anomalous placement of the parties' signatures at the end. Other scholars have followed Segal (1991) in taking the introductory verb *acknowledge* as a passive whose subject is the name of the creditor, despite the problematic syntax thus created and the separation from both Greek and Aramaic models of homology.

Several documents, deposit 5/6Hev 17, marriage contract 5/6Hev 18, concession of rights 5/6Hev 20, purchase of a date crop 5/6Hev 21, sale of a date crop 5/6Hev 22, marriage contract 5/6Hev 37, and XHev/Se Gr. 5 (census declaration, rent or tax receipt, unclassified fragments; Cotton, 1995), end with a phrase to the effect that, having been asked, one or both of the parties to the transaction acknowledge that the transaction was done correctly. This is a declaration that the Roman *stipulatio* had taken place. That would have the effect in Roman law of turning the obligation into a unilateral *stricti juris* one. It certainly is doubtful whether a proper exchange of question

and answer as required by the Roman *stipulatio* really took place in any of these cases, but it is significant in light of the extent of Romanization of the region that the scribes took the trouble to write the phrase into the written contracts, nearly a century before this was done in Egypt and in Dura Europos.

Some twenty of the contracts are for the sale, probably or certainly, of real estate, whether fields or houses. Sixteen, if those of farming contracts Mur 24 are counted separately, are leases of real estate. Eleven are contracts of deposit, loan, or acknowledgment of debt; nine are contracts of marriage or dowry. There also are scattered documents of purchase of crop, gift, sale of movables, concession of rights, and divorce.

On the whole, the language of the contracts in Hebrew and Aramaic is what may be expected on the basis of rabbinic literature. Marriage contract 5/6Hev 10, Babatha's *ketubbah*, is the most striking document in this respect. Similarly, the contracts written in Greek follow the conventions of Greek documents known from Egypt. I have argued, and A. Wasserstein and Hannah Cotton have vigorously denied, that even the Greek documents display elements drawn from the Jewish tradition.

RANON KATZOFF

COPPER SCROLL. Often called the most enigmatic of the Dead Sea Scrolls, the Copper Scroll (3Q15) is a list of hidden treasures, inscribed in Hebrew on thin copper sheets. The text consists of sixty-four sections, arranged in twelve columns, each typically describing a hiding place and the treasure to be found there. A representative section is the first, which reads as follows: "In the ruins which are in the Valley of Achor, under the steps which go eastward, forty rod-cubits: a strongbox of silver and its vessels—a weight of seventeen talents." The hiding places listed appear to be mainly in and around Jerusalem, and the treasure described is enormous, consisting of many tons of silver and gold, as well as other valuables.

The Copper Scroll was discovered in Cave 3 (about 2 kilometers north of Qumran) on 20 March 1952 by archaeologists working under the joint auspices of the American School of Oriental Research, and École Archéologique Française de Jérusalem, and the Palestine Archaeological Museum. Since 1956, the Copper Scroll has been housed in the Archaeological Museum of Amman, Jordan. [See Amman Museum.]

Distinctive Features. The Copper Scroll stands out among the other Dead Sea Scrolls in a number of ways: writing material; script; orthography; subject matter; language; literary structure; and the inclusion of Greek letters.

Writing material. Whereas the other texts are written on parchment or papyrus, the Copper Scroll is inscribed on copper sheets. The original scroll consisted of three

copper sheets riveted together, but it was found in two rolled-up pieces. Apparently one of the three sheets had become detached before the scroll was rolled up and hidden. The metal is of exceptional purity (99 percent copper) and thinness (about 1 millimeter), and would have been very costly. The size of the sheets (roughly 30 by 30 centimeters each), as well as the way they were attached to each other and inscribed in columns, indicated that the Copper Scroll is a replica of a standard parchment scroll. It is unclear why copper was chosen as the medium on which the text was inscribed; the choice may have been dictated by considerations of durability or ritual purity.

The uniqueness of the writing material had two important consequences. Firstly, the text of the Copper Scroll was not so much "written" by a trained scribe as "engraved" by one or more metalworkers, who may themselves have been illiterate. The letters of the text appear to have been hammered into the copper with a punch (each letter requiring several blows), with the result that they showed through on the reverse side of the thin copper. Secondly, during the period of almost two thousand years that the scroll lay hidden, the copper was completely oxidized. This meant not only that some parts of the scroll were completely destroyed by corrosion, but also that its two rolled-up pieces could not be unrolled without destroying them.

Script. The paleographical analysis of the Copper Scroll is complicated by the fact that the engraver or engravers were themselves likely illiterate, copying from a *Vorlage*. As a result, the shape of the writing looks rough and unpracticed, and many look-alike letters of the Hebrew alphabet are not distinguished at all, notably *bet* and *kap*, *dalet* and *resh*, *he* and *het*, *waw* and *yod*. Despite these irregularities, it is possible to classify the script of the Copper Scroll as a "vulgar semiformal" variety of the late Herodian script. There are some indications that the *Vorlage* used cursive forms.

Orthography. The Copper Scroll has its own brand of Hebrew spelling, which conforms to neither the "Qumran orthography" characteristic of many of the literary Dead Sea Scrolls, nor to any other standard orthography. Some notable features are the use of *alep* instead of *he* to represent a final long *-a* (e.g., *hwmm'*, "wall," in ii.10), the use of *samek* instead of *sin* (e.g., 'sr, "ten," in ii.9), and the occasional dropping of gutturals (e.g., *mrb* for *m'rb*, "cave," in xii.1).

Subject matter. Whereas almost all the other Dead Sea Scrolls contain material which can be broadly classified as "religious" or "literary," the Copper Scroll appears to be an administrative document which simply enumerates, in a dry bookkeeping style, a series of physical locations and the valuables that are hidden there. In connection with its bookkeeping character, it should be noted

that the Copper Scroll is one of the very few autographs among the Dead Sea Scrolls; almost all the others, heterogeneous as they are, appear to be copies of works belonging to a religious or literary canon.

Language. The Copper Scroll is written in an early form of Mishnaic Hebrew, and thus constitutes an invaluable linguistic link between Late Biblical Hebrew and the language of the Mishnah. Its affinity with Mishnaic Hebrew can be demonstrated in the areas of morphology (e.g., *-în* instead of *-în* as the regular masculine plural ending), of syntax (e.g., the frequent use of *šel* to indicate the genitival relationship), and of lexicon (some fifty vocabulary items illustrate words or usages characteristic of Mishnaic Hebrew). Another feature which it shares with Mishnaic Hebrew, and which sets it off from the literary Hebrew of the other scrolls, is the frequent use of Greek loanwords (e.g., *prstlyn* for *peristylon*, "peristyle," in i.7). The language of the Copper Scroll, therefore, is important evidence that there was a form of Hebrew used around the turn of the era that already had clearly Mishnaic features, and that this Hebrew differed significantly from the classical language used in literary works. Linguistically speaking, the closest analogue to the Copper Scroll among the other Dead Sea Scrolls is 4QMMT, although the latter still differs in important respects from Mishnaic Hebrew (e.g. the absence of *-în* and *šel*).

Literary structure. Although the Copper Scroll is not "literary" in the sense of belonging to *belles lettres*, it does have a very specific structure by which its content is organized. In an unvarying pattern, the sixty-four sections present material in the following order: a designation of a hiding place, a further specification of the hiding place, a command to dig or measure, a distance expressed in cubits, a treasure description, additional comments, and Greek letters. Each of these standard slots has stereotypical features of its own. For example, the second slot regularly begins with *šel* plus a preposition, and the fourth typically consists of the word *'mwt*, "cubits," followed by a number written out in full. Although no section includes all seven slots, a section is always filled in the order indicated. As a result, the text as a whole reads like a bookkeeper's ledger.

Greek letters. The seventh slot consists of two or three Greek letters (e.g., KEN in section 1, and HN in section 6), and is found in only seven of the sixty-four sections, all of them in the first three columns. Although various theories have been offered to explain the Greek letters, they remain an enigma. It may be significant that they could in each case be the beginning of a Greek proper name.

Making the Text Available. Another way in which the Copper Scroll is unique is the way in which it was initially opened for reading, and its text subsequently published.

Opening the scroll. After their discovery in 1952, the two rolled-up pieces of the scroll remained unopened for three and a half years. They could not be unrolled, since the oxidized copper crumbled to the touch. During this time, scientists searched in vain for a way to reconstitute the original copper, so that the scroll could be unrolled in the ordinary way. In the end, the two pieces were successively brought to Manchester in 1955 and 1956, where they were opened by being coated on the outside with an adhesive, and then cut into narrow strips by means of a small circular saw. After cleaning, the concave side of the resulting twenty-three curved segments of oxidized copper revealed the inscribed text. This delicate operation was successfully carried out by H. Wright Baker at the Manchester College of Science and Technology. He was advised and assisted by John Allegro of the University of Manchester, a member of the international team of scholars entrusted with the publication of the Dead Sea Scrolls, who had arranged for the Copper Scroll to be brought from Jerusalem to Manchester, and who was the first to transcribe and translate the Hebrew text of the scroll as it became legible. [See *biography of Allegro*.]

Publishing the text. Although black-and-white photographs of the Copper Scroll segments have been published in *Discoveries in the Judaean Desert, 3* (Oxford, 1962), these are virtually illegible, both because the indented letters do not stand out visually from the surrounding oxidized and corroded copper, and because the curvature of the segments makes reading difficult. In the absence of legible photographs, the text of the Copper Scroll has been made available in the form of hand-drawn facsimiles. Three of these have been published. The first was prepared in collaboration with Allegro by the Jordanian artist Muhanna Durra, who copied directly from the twenty-three segments in Amman. This is the text published by Allegro (1960). The second facsimile is that prepared by Wright Baker in Manchester, published in *Discoveries in the Judaean Desert, 3* (*Planche XLV*), in 1962. This was based on various photographs of each segment, taken from different angles, and was checked against the original, but by someone without a knowledge of Hebrew. The third facsimile is a revision of the second done by the expert Hebraist J. T. Milik, who also had an opportunity to consult the original in Amman. [See *biography of Milik*.] His facsimile, which may be considered the most authoritative of the three, was also published in *Discoveries in the Judaean Desert, 3* (*Planches XLVIII–LXX*). However, the many divergences between the three published facsimiles still introduce a significant element of uncertainty in the detailed textual study of the Copper Scroll.

Given this situation, and the fact that the twenty-three copper segments have experienced further deterioration

since 1956, it is highly desirable that a reliable reproduction of the Copper Scroll text be made available as the basis for further scholarly study. An important step in this direction will be the publication of the original photographs made in Manchester, as well as the publication of the sophisticated new color photographs taken by Bruce and Kenneth Zuckerman in 1990.

Major Issues of Interpretation. Apart from many differences over questions of exegetical detail, scholarship on the Copper Scroll has been divided over three major issues which affect the overall interpretation of this enigmatic document.

Dating. Although Cross, in his paleographical excursus on the Copper Scroll in *Discoveries in the Judaean Desert, 3*, dated its script to the period 25–75 CE, some scholars have relied on the later paleographical dating proposed by Albright, namely 70–135 CE. Depending on the dating chosen, it is thus possible to associate the Copper Scroll either with the First Jewish Revolt of 66–70, or the Second Jewish Revolt of 132–135—or the period in between.

The archaeological evidence with respect to the dating question has also been interpreted in two different ways. If the Copper Scroll was deposited in Cave 3 at the same time as the fragmentary manuscripts and broken pottery which were also discovered there, it must be dated to the time around 68 CE. According to William Reed, who reported on the discovery of the Copper Scroll (*Bulletin of the American Schools of Oriental Research* 135 [1954], 10): it is "certain that the rolls were placed on the floor of the cave prior to 70 AD." This has been the view of most scholars. However, some have argued that the archaeological evidence does not exclude the possibility that the Copper Scroll might have been a later deposit, and therefore had nothing to do with the other artifacts in Cave 3.

Authenticity. From the moment that the text of the Copper Scroll first became known, there has been scholarly disagreement about its authenticity. Could the enormous amounts of gold and silver, some of it buried at a depth of 17 cubits (about 9.3 meters), really be taken seriously as real treasure actually hidden in antiquity? Milik, followed by a number of other scholars, argued that they could not, and that the Copper Scroll therefore represented a kind of folklore, comparable to other legendary accounts of hidden treasure. The opposing viewpoint was taken by Allegro and others, who argued that a fictional account would not have been laboriously inscribed on such an expensive material, nor composed in such a dry bookkeeping style. Advocates of the latter view account for the high numbers in the scroll in different ways, either as historically plausible at face value, or as in fact representing smaller amounts. Most recent students of the scroll have adopted the view that it is realistic, partly

because the legendary interpretation may originally have been influenced by political considerations, as well as a desire to discourage treasure hunters.

Relation to the other scrolls. If the documents found in the caves near Qumran all belonged to the "library" of a quasi-monastic group residing at Qumran, then the Copper Scroll can reasonably be taken to be a product of that same community, and should be interpreted in that light. However, because the Copper Scroll is so distinctive in many respects, it has been argued that it was a later deposit, which has no historical connection with the other scrolls found in the vicinity. Alternatively, if the Qumran scrolls are a heterogeneous collection emanating from Jerusalem, then the Copper Scroll may be of the same date as the other scrolls, but with no essential connection to them.

The Major Theories. Because of the different answers which students of the Copper Scroll have given to the question of its date, its authenticity, and its relation to the other scrolls, a number of distinct theories of interpretation have emerged. They can be classified under the following six headings (for bibliographic details, see Wolters, 1994, pp. 285–292).

1. The treasure is authentic, and belonged to the Qumran community before 70 CE. This view was defended in the 1950s by Dupont-Sommer, and, more recently, by Goranson (1992).
2. The treasure is authentic, and belonged to the Temple in Jerusalem before 70 CE. Prominent defenders of this view in the 1950s and 1960s were Roth, Rengstorff, Allegro, and Driver. This theory was revived by Golb in 1980, who has since been followed on this point by many scholars, including Wilmot (1984), McCarter (1994), Lefkowitz (1993), Wise (1994), and Wolters (1994).
3. The treasure is authentic, and belonged to the Jewish rebels under Bar Kokhba around 135 CE. The French scholar Laperrousaz and the Israeli scholar Luria independently put forward this interpretation in the early 1960s, but they have had no followers.
4. The treasure is authentic, and represents undelivered temple contributions after the destruction of the Temple in 70 CE. This is the theory of Lehmann, who believes the Copper Scroll can be dated to the period 70 to 90–92 CE.
5. The treasure is legendary, and was part of the folklore of the Qumran community before 70 CE. This was the view of a number of scholars in the 1950s, including Harding, Cross, Silberman, and Mowinckel. It was also held by Milik and De Vaux before 1959.
6. The treasure is legendary, and was part of Jewish folklore around 100 CE, when the Copper Scroll was de-

posited in Cave 3. This view, which Milik adopted in 1959, is reflected in his authoritative edition of the Copper Scroll in *Discoveries in the Judaean Desert*, 3 (1962). Milik was followed by de Vaux and Rodrigues in the 1960s, but by virtually no one thereafter.

Evaluation. In assessing the various theories, it needs to be borne in mind that the burden of proof rests on those who assign a post-68 CE date to the Copper Scroll. It may be true (though this has been disputed by Pixner) that the archaeological evidence does not rule out the possibility that the Copper Scroll was a later deposit in Cave 3. However, there is no positive indication that this was in fact the case. In the absence of evidence to the contrary, it is methodologically preferable to assume that the material remains found in Cave 3 were all deposited there at the same time, probably around 60 CE. In other words, there is something inherently implausible about theories three, four, and six.

Furthermore, it is difficult to imagine any document less like folklore than the Copper Scroll, with its dry catalogue of locations and valuables. Besides, the attempt to classify it under that heading can be shown to have an identifiable political background (see Wolters 1990). These considerations count heavily against theories five and six.

The weight of the evidence therefore seems to point to the theories numbered 1 and 2 above: The treasure is authentic, and belonged, prior to 68 CE, to either the Qumran community or the Jerusalem temple. Almost all recent scholarship on the Copper Scroll (with the notable exceptions of Laperrousaz and Lehmann) has moved in this direction.

Two further considerations tip the scales in favor of linking the Copper Scroll with the Jerusalem temple rather than the Qumran community. The first is the enormous size of the treasure, which (if taken at face value) could only have come from the vast wealth of the temple. The second is the incidence of cultic terminology in the scroll, which is much higher than previously recognized. Many terms in the Copper Scroll, especially in the treasure descriptions, identify specifically temple-related items (for example, *ma'aser sheni*, "second tithe," in i.10 and *mnqy'wt*, "libation bowls," in iii.3).

If the treasure of the Copper Scroll is indeed part of the legendary wealth of the Second Temple, and if it was hidden shortly before the destruction of the temple in 70 CE, then the most likely historical context for the scroll and its treasure is the military conflict between the Romans and the Zealot-led Jewish forces in Jerusalem.

AL WOLTERS

COSMETICS during the Roman and Byzantine periods included expensive powders, ointments, perfumes, and fragrant oils, which were produced from various plants and resins mixed with vegetable oil or animal fat.

Physical remains of cosmetic preparations are rare in the archaeological evidence from the Judean Desert. Numerous artifacts, however, associated with cosmetic use have been discovered at several Judean Desert sites, indicating their common usage. The widespread popularity and acceptance of cosmetics are also clearly reflected in later Roman period rabbinic sources: women were permitted by Jewish law to adorn their faces with kohl and rouge (B.T., *Mo'ed Q.* 9b) and a husband was obliged to give his wife ten *dinars* for her cosmetic needs (B.T., *Ket.* 66b).

The containers and utensils associated with cosmetic application discovered in the Judean Desert include small containers made out of wood, glass, and pottery, shell and stone palettes, and metal cosmetic applicators. Other objects associated with personal beautification include mirrors and combs. The most complete sets of cosmetics utensils were found at Masada, associated with the later reuse of Herod's fortress-palace complex by the Sicarii during the First Jewish Revolt, and in the Cave of the Letters (Naḥal Hever), dating to the Bar Kokhba Revolt. Several items related to cosmetic use are known from the caves in Naḥal Hever, Naḥal David, Qumran, Murabba'at, and Naḥal Şe'elim.

The most noteworthy cosmetic container is the cylindrical wooden box with a lid found in the Cave of the Letters. Traces of a reddish powder found in this box may be remnants of rouge. This *pyxis*, unusual due to the excellent state of its preservation, is a well-known cosmetic container form and imitates more expensive examples made out of metal. More common cosmetic containers include pottery perfume vials, such as those found at Masada. Small ceramic juglets and glass bottles, which are found at most Judean Desert sites and throughout Palestine, probably contained precious oils or substances as well.

Other typical items associated with cosmetics include kohl sticks and palettes. The kohl stick, used for painting the eyes, was thickened at one end, for applying the paint, while the other end was shaped like a little spoon or spatula, for extracting paint from the container. Several bronze kohl sticks have been found at Masada and in the 'Ejn-Gedi tombs. Stone and shell cosmetic palettes were also among the personal items found in rooms inhabited by the Sicarii at Masada.

During the Roman and Byzantine periods, much attention was devoted to hair care among both men and women. Hair treatment included washing, combing, dyeing, and oiling, the latter practice mentioned in the New Testament (*Mt.* 26.7). Numerous wooden combs have been found at Masada, Cave 1 at Qumran, the Murabba'at caves, the Cave of Horror and the Cave of the Letters in Naḥal Hever, the Naḥal Şe'elim caves, and the Cave of the Pool (Naḥal David). These combs, with fine

teeth on one edge and coarser teeth on the other, were typical of a general type known throughout the Roman Empire. Several of these combs even revealed traces of lice and their eggs attached to them.

Mirrors were commonly used during this period. Two well-preserved handheld mirrors have been found among the personal belongings of the refugees from the time of the Bar Kokhba Revolt, in the Cave of the Letters in the Judean Desert. Each mirror was formed by a thin disk of polished tinned copper with a lead handle, one of which was decorated with a leaf design. The mirror was placed in a wooden case comprising two halves. The disk was fastened to one of the two halves, and the second half served as the lid. An additional mirror case made from bronze was recovered from Masada.

Though ancient sources and archaeological evidence are largely silent regarding cosmetic preparations, several classical authors, including Pliny, do provide some information about the cultivation of plants and recipes used to produce perfumes and ointments from them. The most famous and precious of all perfumes, balsam, was produced from a plant grown at 'Ein-Gedi and Jericho. The special climatic conditions of the Dead Sea area were especially suitable for the cultivation of this unique aromatic plant, whose production secrets were closely guarded. Pliny (*Natural History* XII.III), for example, records that as the army of Titus advanced through the balsam-growing area on its way to Jerusalem in 70 CE, Jews attempted to chop down the precious orchards to prevent them from falling into the hands of the Romans. However, the Roman army did capture the orchards and later Titus displayed balsam trees in his triumphal procession in Rome.

Balsam is also mentioned in several inscriptions from Masada. Two inscriptions were found on ceramic storage jars, one with the words *balsam balsama* on it in Aramaic and Hebrew, and a second inscribed *balsaneh*. Two papyrus fragments in Latin, also from Masada, mention *xylobasanum*—the inferior product of the balsam tree. This may indicate that the Roman soldiers stationed in that fortress were involved in the balsam trade.

One possible clue regarding the identity of the balsam plant, now extinct in the 'Ein-Gedi and Jericho regions, is the discovery in Cave 13 at Qumran of a ceramic juglet wrapped in palm fibers, which contained a small amount of a viscous plant oil. Chemical analysis failed to identify the fluid as any known vegetable oil, and scientists have suggested that it may be remains of the famous balsam oil.

The balsam industry may be alluded to in an inscription on a sixth-century CE mosaic pavement in the 'Ein-Gedi synagogue. This long inscription contains a curse on "whoever shall reveal the secret of the town to the gen-

tiles." It has been suggested that the "secret" referred to in this inscription concerns the production of the perfume derived from balsam. During recent excavations at 'Ein-Gedi, a fortified towerlike structure in Nahal Arugot has been suggested as one of the locations at which balsam was processed during the early Byzantine period.

Another indication of the importance of this region for the preparation of perfumes and cosmetics is the discovery at 'Ein-Buqeq of a first-century CE building complex, possibly a workshop for the production of fine fragrances, ointments, or other cosmetics.

The discovery of cosmetics containers and implements at Judean Desert sites, especially at locations associated with refugees during the First and Second Jewish Revolts, indicates the common use of cosmetics. Their importance to women—who, even during troubled times, were not willing to part with these items of personal beautification—is evident.

ANN E KILLEBREW

COURT TALES. A popular genre of the Persian and Hellenistic periods, court tales existed both outside and inside Judaism. As an international genre, it may be defined as a story of the adventures of a deserving person in the royal court, who (usually) achieves success through skill or wisdom. A good example of this genre is the Aramaic *Story of Ahiqar*, which tells of the adventures of Ahiqar, a courtier of the Assyrian king, who is persecuted by his nephew, narrowly escapes death, and is ultimately vindicated through his wit. Although Ahiqar is not Jewish, this story must have been popular with the Jewish

community, for it appears among the documents of the Jewish colony at Elephantine. Eventually it was translated into many languages used by the Christian church.

Within Judaism, the genre may be most widely defined as the story of the adventures of a Jew in the court of a foreign king. This tale takes two forms: the contest and the conflict. In the contest, a wise person of undistinguished status solves a problem, interprets a dream, and so forth, and as a result is elevated. In the conflict, a wise courtier begins in a respected position, is persecuted, suffers a fall, and is finally vindicated. The Hebrew scriptures and the Apocrypha contain several examples of both types of court tale. The Joseph story (*Gn.* 37–50), *Daniel 2*, *Daniel 4*, *Daniel 5*, and the story of Zerubbabel in *1 Esdras 3–4* are all examples of the contest type, while *Esther*, *Daniel 3*, *Daniel 6*, and *Bel and the Dragon* are examples of the conflict type. A related type of tale uses the same basic structure but is not set in a royal court, for example, the story of *Susanna*. These tales often present ideals of Wisdom in popular narrative form. There was a natural association of the royal court with Wisdom (e.g., the figure of Solomon), and the tales are human rather than God centered; that is, it is the wit and wisdom of the protagonist that saves him or her rather than the direct intervention of God (*Daniel 3* and *Daniel 6* are exceptions).

The discovery of the Dead Sea Scrolls offers evidence that the court tale existed in Judaism outside the Hebrew scriptures and the Apocrypha. Of the biblical examples, several have been found at Qumran. The Joseph story has been found in fragmentary form in Genesis^{a,c,f,j} (4Q3, 4Q5, 4Q6, 4Q9), Genesis-Exodus^d (4Q1), and paleo-Genesis-Exodusⁱ (4Q11). Fragments of *Daniel 1–6* appear in Daniel^d (1Q71, 4Q112) and Daniel^b (1Q72, 4Q113) while the tale of Daniel and Susanna may appear in Daniel-Susanna? (4Q551). No manuscript of *Esther* has been found at Qumran.

At least two new compositions that are related to the court tale have been identified at Qumran. The first is the Prayer of Nabonidus (4Q242), an Aramaic composition dating to the late second or early first century BCE. Although the Prayer of Nabonidus itself does not take the form of a court tale, it is generally agreed that the text is the original form of the court tale now found in *Daniel 4*. The Prayer of Nabonidus concerns the last Babylonian emperor, Nabonidus (556–539 BCE), who, according to the text, was afflicted by an “evil ulcer” in Teima (Nabonidus’s historical capital in Arabia). He was healed by an unnamed Jewish exorcist, who forgave his sins and commanded Nabonidus to recount the incident in writing, to glorify the name of God. The text breaks off at the beginning of Nabonidus’s written statement. Evidently, the au-

thor of *Daniel* (or his predecessor) took this tale and recast it, changing the location to Babylon, switching the king’s name to the much better known Nebuchadnezzar, and greatly expanding the account of the king’s illness. Most importantly, the author of *Daniel* identified the unnamed Jewish exorcist of the Prayer of Nabonidus with his hero Daniel, thus bringing the tale into the Daniel cycle where it appears in *Daniel 4* in the form of a contest tale.

The second composition uncovered at Qumran is an Aramaic text officially named Proto-Esther^{a-f} (4Q550), but which would be better entitled Tales of the Persian Court. This composition, which exists in three separate manuscript groups, dates paleographically to the late Hasmonean period. The story (or stories), set in the Persian court, bears certain similarities to the Hebrew and Greek versions of the *Book of Esther*, raising the possibility that the composition may have influenced the author of *Esther*. The first set of fragments (a–c) is set in the court of Xerxes I and involves an unnamed protagonist whose father, Patireza, was a servant of the royal wardrobe. One day the king has his father’s annals read to him, in which is found, evidently, a record of the deeds of Patireza. The king then rewards the son for Patireza’s good works. Although fragmentary, this story seems to take the form of a conflict tale, spread out over two generations. The story is not specifically Jewish.

The second set of fragments (d), again set in the Persian court, seems to tell the tale of a conflict between Bagasraw, a Jew, and Bagoche, a gentile, in which Bagasraw triumphs. The king, evidently as a result of Bagasraw’s triumph, venerates the Jewish God. This set of fragments bears certain similarities to *Daniel 1–6* as well as to both the Hebrew and Greek versions of *Esther*.

The third set of fragments (e–f) are very broken, but the contents do not seem to take the form of a court tale. It is impossible to suggest a direct relationship between Proto-Esther^{a-f} and the *Book of Esther*, but an indirect relationship is extremely plausible.

Other compositions found among the Dead Sea Scrolls share certain affinities with the court tale, although they are not court tales themselves. These include the Genesis Apocryphon (1QapGen) and Tobit (4Q196–200).

COVENANT. A contractual agreement between parties, a covenant in Jewish literature is primarily made between God and his people or God and an individual.

Covenant in the Hebrew Scriptures. The Hebrew scriptures describe covenants between the deity and Noah (*Gn.* 9), Abra(ha)m (and his children; *Gn.* 15 and 17), Israel (*Ex.* 19-24), Levi (*Mal.* 2.4-5), Phinehas (*Nin.* 25), and David (*2 Sm.* 7). While some covenants are called eternal, and promises in the form of grants without conditions are given to Abraham, Phinehas, and David, agreements normally include conditions imposed on the human party. The most prominent example is the covenant between God and Israel at Mount Sinai. The laws of this covenant, found between *Exodus* 20 and *Numbers* 10, are intended to give concrete shape to ongoing life in community with God and neighbors. The arrangement is sanctioned by promised blessings for obedience and curses for disobedience (*Dt.* 27-28). The prophetic books contain complaints about Israelite violations of the covenant and threats that the penalties, including exile from the land, would be implemented if no changes occurred. Jeremiah refers to a new or rather renewed covenant between God and his people in which he would place his "law within them" (*Jer.* 31.31-34). *Nehemiah* 9-10 recounts an occasion on which the postexilic inhabitants of Jerusalem confessed their sins and those of their ancestors and made an agreement to adhere to the divine law.

Covenant in the Apocrypha and Pseudepigrapha. The author of *1 Baruch* confesses that the nation has not upheld the covenant yet holds out the hope that repentance in exile will lead to an everlasting covenant that will be obeyed, so that God would never again remove the people from their land (*1 Bar.* 1.15-3.8). The *Prayer of Azariah and the Song of the Three Young Men*, part of the *Additions to Daniel*, also offers a confession and a plea that God not annul his covenant (*Sg. of 3* 11). In *Ben Sira*

24.23, wisdom is identified as "the book of the covenant of the most high God, the law that Moses commanded us"; the author also refers to the covenants with Noah (*Sir.* 44.18), Abraham (*Sir.* 44.20-21), Isaac (*Sir.* 44.22), Jacob (*Sir.* 44.23), Moses (*Sir.* 45.5), Aaron (*Sir.* 45.7, 15, 25), Phinehas (*Sir.* 45.24), and David (*Sir.* 45.25, 47.11; cf. Commentary on Genesis A, 4Q252 v.4). The *Books of the Maccabees* describe a time when Jewish people fought to preserve the covenant against the threat posed by both Jewish apostasy and Antiochus IV Epiphanes' decrees (175-164 BCE) outlawing the Jewish religion. The *First Book of the Maccabees* says that certain Jews who "removed the marks of circumcision . . . abandoned the holy covenant. They joined with the gentiles and sold themselves to do evil" (*1 Mc.* 1.15). Under Antiochus IV Epiphanes, "[a]nyone found possessing the book of the covenant, or anyone who adhered to the law, was condemned to death by decree of the king" (*1 Mc.* 1.57). The faithful, however, "chose to die rather than to be defiled by food or to profane the holy covenant; and they did die" (*1 Mc.* 1.63). When he sounded the cry of revolt, Mattathias said: "Let every one who is zealous for the law and supports the covenant come out with me!" (*1 Mc.* 2.27; cf. 2.20). He exhorted his sons from his deathbed to "show zeal for the law, and give your lives for the covenant of our ancestors" (*1 Mc.* 2.50). According to *2 Maccabees* 1.2, the Jews of Judea wrote to their kindred in Egypt asking that God remember his covenant with the patriarchs. In the story about the martyrdoms one learns that the brothers who made the supreme sacrifice received "everflowing life, under God's covenant" (*2 Mc.* 7.36; cf. 8.15).

Among the pseudepigrapha, covenant is a central theme in *Jubilees*, a significant precursor of Qumran thought and a popular book among the sectarians. The covenant serves as a framework within which the author views biblical history from its beginnings until the people of Israel arrived at Mount Sinai. The first chapter places *Jubilees* in a covenantal context by dating the revelation to Moses to the sixteenth day of the third month, that is, the day after the ceremonies ratifying the covenant. The overarching significance of the covenant is indicated by God's declaration that the history revealed in the book would prove that he had been more faithful than the people of Israel, who had abandoned the covenant and suffered punishment (*Jub.* 1.5-6). Once the people repented in their places of exile, God would restore them to their land and to proper covenantal relations with him (*Jub.* 1.15-18, 1.22-25). As *Jubilees* begins with the covenant, it ends with the story about the covenant at Mount Sinai.

In *Jubilees* the covenant is made initially between the Lord and Noah with his sons on the occasion of Noah's sacrifice after the Flood, a sacrifice dated to the first of

the third month (*Jub.* 6.1, 4). The law against consuming blood was then revealed (*Jub.* 6.11). The Angel of the Presence connects the later Sinaitic covenant with the Noachic one:

During this month he made a covenant before the Lord God forever throughout all the history of the earth. For this reason he [God] told you [Moses], too, to make a covenant—accompanied by an oath—with the Israelites during this month on the mountain and to sprinkle blood on them because of all the words of the covenant which the Lord was making with them for all times. (*Jub.* 6.10–11)

The passage, by connecting the first and last covenantal ceremonies in the book, shows that Sinai marked a renewal and updating of the ancient covenant that also was made in the third month. The same chapter stipulates for *Shavu'ot*, to be celebrated on the fifteenth day of the third month: "For this reason it has been ordained and written on the heavenly tablets that they should celebrate the Festival of Weeks during this month—once a year—to renew the covenant each and every year" (*Jub.* 6.17). The writer also indicates that Abram's covenant (*Gn.* 15) was made in the middle of the third month (*Jub.* 14.1, 18; cf. 48.8) and identifies this agreement with Noah's covenant (*Jub.* 14.20). The covenant of circumcision (*Gn.* 17) was concluded on the same date (*Jub.* 15.1–14) some twenty-two years later. The Lord also reaffirmed the covenant with Isaac, who was born in the middle of the third month (*Jub.* 16.13–14; see 15.19, 21, 24.11; cf. 24.22–23). Abraham prayed during one celebration of *Shavu'ot* (*Jub.* 22.1) that the same covenant would be renewed with Jacob and his descendants (*Jub.* 22.15, 30; cf. 27.21–25). [See *Shavu'ot*.]

For the author of *Jubilees*, the covenant involves not only promises of land and progeny but also laws that are progressively revealed. The first was given to Noah and his sons, and that law was later supplemented with commands about circumcision (*Jub.* 15), sacrificial procedure (*Jub.* 21), separation from the gentiles (*Jub.* 30), and so on. A person could not be condemned for violating a law that had not yet been revealed (see *Jub.* 33.15–17).

Covenant in the Qumran Texts. The concept of covenant is an important one in several of the documents found at Qumran, among them the Rule of the Congregation (1Q28a), the Rule of the Blessings (1Q28b), the War Scroll (1QM), Liturgical Prayers (1Q34), *Hodayot*^d from Qumran Cave I (hereafter, 1QHod^d, 1QH^a), Apocryphal Lamentations B (4Q501), the Words of the Luminaries^a (4Q504), and Temple Scroll^a (11Q19), but especially in the Rule of the Community (1QS, 4Q255–264a, 5Q11) and the Damascus Document (CD, 4Q266–273, 5Q12, 6Q15). In general, the covenant mentioned in these works is considered the same agreement as the one made and

renewed in the Hebrew scriptures (Talmon, 1994, p. 13). It is the ancient covenant, the one made with the ancestors (see CD i.4; vii.17–18; xix.30–31; 1QM xiii.7; xiv.8; xviii.7; cf. 11Q19 xxix), and it is eternally valid (1QS iii.11–12; iv.22; v.5–6; 1QM xvii.3; 1Q28b i.2; ii.25; CD iii.4). The group(s) behind the texts are the chosen who keep that pact in this present age of wickedness (1QS v.2; 9 [for Zadokite priests]; 1Q28a i.3; CD xx.17). God has remembered the covenant and renewed it with the community (e.g., 1Q34 3.ii.5–6; CD i.4; vi.2; xix.1; cf. 4Q501 2; 4Q504 v.9–11). In these texts several verbs appear frequently that refer to members of the group(s) and the covenant:

1. *bw'* ("enter"); 1QS ii.12, 18; v.8, 20; vi.15 [causative]; CD ii.2; iii.10; vi.11 [causative], 19; viii.1; ix.3; xiii.14; xv.5; xix.14; xx.25; 1QH xiii.23 [v.21]; xxi.9 [xviii.24; causative];
2. *'br* ("cross over"); 1QS i.16, 18, 20, 24; ii.10; CD i.20 [causative]; xvi.12;
3. *h'zq* ("hold fast to"); 1QS v.3; 1QH x.28 [ii.26]; xj.39 [iv.38]; xxi.9 [xviii.8]; 1Q28b i.2; iii.23; cf. CD xx.27.

Those who have entered or crossed over into the covenant hold strongly to it by obeying its rules. The covenant is to be renewed annually, and the ceremony for renewal seems to have taken place in the third month, presumably on *Shavu'ot* as in *Jubilees*. The principal difference between the biblical covenant involving Israel and the one in the sectarian texts is that in the latter the covenantal community has shrunk: most Israelites—those who violated the laws of the covenant as the group understood them—are excluded. Only those who pledged to adhere to the covenant in sectarian terms were considered members.

The Damascus Document appears to have the structure of a covenantal text (Davies, 1983, pp. 50–53), and covenant is a central theme in it. It begins with a covenantal lawsuit. Israel had forsaken God who delivered them to the sword.

However, when he remembered the covenant of the very first, he saved a remnant for Israel and did not deliver them up to destruction. . . . Three hundred and ninety years after having delivered them up into the hands of Nebuchadrezzar, king of Babylon, he visited them . . . (CD i.4–7)

Thus, the remnant is tied directly to the ancient covenant. The opponents of the Teacher of Righteousness, the leader of the group, are those on whom the curses of the covenant fall; these enemies are apparently fellow Jews (CD i.21–ii.1). The Damascus Document deals with the ways of those who are inside and outside the covenant (CD ii), referring to the patriarchs as eternal members of the covenant (CD iii.4). A key statement about the cove-

nant and the points of dispute between the group and other Jews appears in the same column:

But with those who remained steadfast in God's precepts, with those who were left from among them, God established his covenant with Israel for ever, revealing to them hidden matters in which all Israel had gone astray: his holy Sabbaths and his glorious feasts, his just stipulations and his truthful paths, and the wishes of his will which man must do in order to live by them. He disclosed (these matters) to them and they dug a well of plentiful water [= the Torah]; and whoever spurns them shall not live. (CD iii.12-17; see also vi.3-4)

The eternal covenant continued with God's new priestly and lay remnant, men of knowledge from Aaron and wise men from Israel (CD vi.2-3). The ones who had entered this pact were no longer to "enter the Temple to kindle his altar in vain" (CD vi.12).

The Damascus Document introduces the phrase "the new covenant in the land of Damascus" (CD vi.19; cf. viii.21; xix.33-34; xx.10-12), which apparently designates the renewed covenant that had been described previously. Whatever the precise meaning of "Damascus" may be, it is at least associated with the group's consciousness of having originated in a situation of exile. The renewed covenant required that those who entered it were to separate from the impure Temple cult and its wealth and from the apostates; they were also to refrain from mistreating the poor and were to differentiate between the clean and the unclean. The writer orders them to follow the exact interpretation of the law, including observing Sabbaths and festivals "according to what they had discovered, those who entered the new covenant in the land of Damascus" (CD vi.19; see also vi.11-vii.4). For those who obey the laws, the covenant guarantees life for one thousand generations (CD vii.5-6, xix.2), while those who renege after entering the agreement will be judged (CD viii.2-3; cf. xix.14, 16, 34-35). [See Festivals.]

The one who enters the covenant is enrolled with the oath of the covenant (CD xv.5-8; sons are also mentioned), and testing and approval by a superior are required:

On the day when he talks to the Inspector of the Many, they shall enroll him with the covenant oath which Moses established with Israel, the covenant to re[vert to] the law of Moses with the whole heart [and with the whole] soul, to what has been discovered that has to be put into practice in all the [age of wickedness]. (CD xv.7-10)

No one with defects was permitted entry because the angels were present (CD xv.16-17). Relations with outsiders were severely circumscribed (e.g., CD xii.10-11, xiii.14-15), while disputes within the community were to be resolved without vengeance or resentment (CD ix.2-8).

Judges in the group were to be learned in covenantal principles (CD x.6).

The fragmentary copies of the Damascus Document found in Cave 4 at Qumran not only preserve a number of the passages mentioned above but also add an important detail about covenant in the work. In a passage without parallel in the Cairo Genizah copies (but apparently following on CD xiv.8-21), one finds a series of penalties for violations, a ceremony for expelling those who despise the regulations of the Torah, and provision for recording their sentences: "The sons of Levi and the men of the camps will meet in the third month and will curse whoever tends to the right [or to the left of the] law" (4Q266 11.17-18 [4Q270 7.ii.11-12 in Baumgarten, 1996]; 4Q267, 18.v.16-18 [4Q270 11.ii.11-12 in García Martínez, 1996]). Mention of covenantal curses uttered by Levites (and other members) reminds one of *Deuteronomy* 27.14-26, where the covenant is being renewed, and also of the first columns of Rule of the Community (see below), which describe the annual covenantal ceremony. Hence, it is likely that the curses in the Cave 4 fragments of the Damascus Document are part of a covenantal ceremony that probably occurred on Shavu'ot.

The Rule of the Community in the form preserved in 1QS from Qumran Cave 1 (hereafter, 1QRule of the Community) contains several statements about covenant in the first column and details a covenantal ceremony in columns i-iii. Sections of these columns are attested in Rule of the Community^{a-c} (4Q255-257) and Rule of the Community^b (4Q262) (see also 5Q11), although they are not found in Rule of the Community^d (4Q258), which may begin the text with what is column v in the Cave 1 copy. Among the tasks assigned to the *maskil* is to

welcome into the covenant of kindness all those who freely volunteer to carry out God's decrees, so as to be united in the counsel of God and walk in perfection in his sight, complying with all revealed things concerning the regulated times of their stipulations; in order to love all the Sons of Light, each one according to his lot in God's plan, and to detest all the Sons of Darkness, each one in accordance with his blame in God's vindication. (1QS i.7-10)

The text emphasizes voluntary compliance by members to conduct themselves perfectly in God's revealed way (including the observance of correct festal dates according to their calendar), designates members as Sons of Light who are to love one another, and requires that they hate all others, all the Sons of Darkness. The covenant community does not include all Israel; it consists only of the Sons of Light, who do not attain their position by heredity. [See Calendars and Mishmarot.] The point is further elaborated:

All those who enter the Rule of the Community shall establish a covenant before God in order to carry out all that he com

mands and in order not to stray from following him for any fear, dread, or grief that might occur during the dominion of Belial. (1QS i.16-18, see also 4Q256 1)

The covenantal ceremony (1QS i.18-iii.12) involves priests, Levites, and individuals who are entering or reaffirming membership in the people of the pact. The priests recite the gracious acts of God, but the Levites detail Israel's sins during Belial's dominion. The entrants then offer their own confession and recognition of God's merciful behavior toward them (1QS i.24-ii.1). Next, the priests bless "the men of God's lot," that is, the entire covenantal community (1QS ii.1-4); their words are an expansion of the priestly blessing in *Numbers* 6.24-26. The Levites follow with curses on "all the men of the lot of Belial" (1QS ii.4-9). Their curses are a negative elaboration of the priestly blessing. Once those entering the covenant have responded to the blessings and curses with "Amen, Amen," the priests and Levites together curse any person who enters the covenant insincerely (1QS ii.11-17). Again, the entrants answer "Amen, Amen." The ceremony itself ends at this point, but the text goes on to supply more information about it. It is to be conducted annually (1QS ii.19), with the priests leading, the Levites second, and all who enter third (1QS ii.19-23). The writer describes the ideal atmosphere that was to prevail within the community (1QS ii.24-25), explains why the sinner is to remain outside it (1QS ii.25-iii.9), and exhorts such a person to walk perfectly in God's way. Should he become obedient, "he will be admitted by means of atonement pleasing to God, and for him it will be the covenant of an everlasting community" (1QS iii.11-12).

The Rule of the Community contains a few other references to covenant. For example, it speaks of "those of perfect behavior" who are "selected by God for an everlasting covenant and to them shall belong all the glory of Adam" (1QS iv.22-23, v.5-6 refers to them as the "community of the eternal covenant"). The Cave 1 copy requires that members accept the rule of the Zadokite priests, "who safeguard the covenant," and that of "the multitude of the men of the Community, those who persevere steadfastly in the covenant" (1QS v.2-3, see also 9). However, Rule of the Community^d (4Q258 1.i.2-3) lacks the reference to the authority of the Sons of Zadok.

Józef Milik first suggested that Berakhot^e (4Q286-290) constitute the text of the blessings that were pronounced during the annual covenantal ceremony (4Q287 4.1 refers to the annual recital). The wording of the Berakhot manuscripts differs from that of the Rule of the Community and reflects other biblical texts; nevertheless, they could preserve a later (the copies date from approximately 1 to 50 CE), expanded version of the script for the covenant renewal ceremony (Nitzan, 1994). Some phrases indicate the liturgical character of these texts, for

example, "[the men of the] community council shall say, all together, Amen, Amen. And afterward, they shall damn Belial and all his guilty lot" (4Q286 7.ii.1-2).

Covenant in the New Testament and in Rabbinic Texts. While the New Testament contains references to the covenants of the Hebrew scriptures (e.g., *Acts* 7.8, *Rom.* 9.4) or to contemporary events as fulfillments of the ancient promises (*Lk.* 1.72), it also furnishes several instances of the phrase "a/the new covenant." In *Luke* 22.20, Jesus calls the wine at the Last Supper "the new covenant in my blood" (*Mt.* 26.28 and *Mk.* 14.24 lack "new" although many manuscripts add it). Paul uses the same word for the cup (*1 Cor.* 11.25) and calls himself and his associates "ministers of a new covenant, not of letter but of spirit" (*2 Cor.* 3.6; cf. 3.7-18). Also, the writer of *Hebrews* calls Jesus "the guarantee of a better covenant" than the old one and its priesthood (*Heb.* 7.22; see also 8.6-7 [*Jer.* 31.31-34 is quoted in *Heb.* 8.8-12], 8.13, 10.16-17). Christ is the mediator of "a new covenant" (*Heb.* 9.15, 12.24), and "the blood of the eternal covenant" is mentioned (*Heb.* 13.20).

In rabbinic literature, covenant, while not mentioned frequently, is everywhere presupposed. The covenant is made with the ancestors (in the Mishnah, especially the covenant of circumcision) and with the people of Israel at Mount Sinai. God had elected Abraham, Isaac, Jacob, and Israel and through his revealed law showed them the way to remain in proper communion with himself and one another. Israel's response to divine grace was to obey. Although there were certainly disputes about interpretation of laws, the scope of covenant in rabbinic literature is wider than at Qumran in that the covenant was viewed as one with all Israel, not just with one small group.

CREATION. According to the biblical doctrine of creation set forth in *Genesis* 1–3 and widely assumed in the Qumran writings, God (who is identified as the God of Israel) made the heavens and the earth, gave mankind stewardship over the earth, and despite mankind's sin continues to care for the created universe. For example, the Paraphrase of *Genesis* (4Q422 1.i.6–12) includes the final elements from the priestly account of *Genesis* 1.1–2.3 (the creation of the heavens and the earth, God's Sabbath rest) as well as material from *Genesis* 2.4–3.24 ("He set him in charge to eat the fruits . . . not to eat from the tree of the knowledge of good and evil"). Mankind's sin is traced to rebelliousness ("he rose up against [God]") and the "evil inclination." Another paraphrastic treatment of *Genesis* 1–3 appears in the Words of the Luminaries^a (4Q504 8–9.4–9), which describes in terms of *Genesis* 1.26 and 2.7–8 the creation of the first human ("our father you formed in the likeness of [your] glory") and his subsequent rebellion and its consequences ("you obliged him not to turn aside . . . he is flesh, and to dust . . .").

The Hymn to the Creator in Psalms^a (11Q5 xxvi.9–15) stands in the biblical tradition (see *Pov.* 8 and *Sir.* 24) that attributes creation to the wisdom of God and is a pastiche of biblical phrases (see Ps. 89.5–7, 135.7; *Jer.* 10.12–13, 51.13, 51.15–16). It first describes the "great and holy" Lord in his majesty, with grace and truth around him, and with truth, justice, and righteousness as the foundations of his throne. Then it considers God's work in creation as "separating light from darkness" and establishing the dawn "by the knowledge of his heart." God's action in creation astounds the angels ("he showed them what they had not known"), and God provides food for every living thing. The hymn concludes with a blessing that highlights the role of God's wisdom in creation: "who establishes the world by his wisdom; by his understanding he stretched out the heavens."

In *Hodayot*^a from Qumran Cave 1 (hereafter, 1QHodayot^a, 1QH^a) there are frequent allusions to God as creator, and creation often provides the horizon against which other theological concerns are developed. The distinctive approach to creation in 1QHodayot^a is expressed in this

way: "And by your wisdom you established the eternal . . . and before you created them you knew all their works forever and ever. For apart from you nothing is done, and nothing is known without your good pleasure" (1QH^a ix.7–8 [i.5–6]). Besides alluding to wisdom's role in creation, the text asserts the absolute sovereignty and foreknowledge of God. This affirmation in turn raises the theological questions of determinism or predestination and human freedom.

Goal of Creation. According to 1QHodayot^a, the goal or end of creation is the glory of God: "You have stretched out the heavens for your glory; all their host you have established for your good pleasure" (1QH^a ix.9–10 [i.7–8]). Just as the heavenly bodies and the forces of nature follow the plan of God, so do the earth and the seas: "You have established them by your wisdom, and everything that is in them you have established for your good pleasure" (1QH^a ix.14–15 [i.12–13]). Although mankind has been given dominion over the earth, humans too are subject to the sovereignty and foreknowledge of God: "By the wisdom of your knowledge you have established their course before they exist. According to your good pleasure everything happens, and apart from you nothing is done" (1QH^a ix.19–20 [i.17–18]). While much clearly depends on biblical teachings (God's sovereignty, God's wisdom as the agent, God's glory as the goal), the emphasis on divine foreknowledge is distinctive.

The same basic doctrine of creation appears elsewhere in 1QHodayot^a to express God and the fragile, sinful human race: "By the mysteries of your insight you have apportioned all [these] to make your glory known. But what is the spirit of flesh to understand your great and wondrous counsel?" (1QH^a v.19–20 [xiii.13–14]). But if God is the creator of all and sovereign over all, God must then in some way be responsible for both the righteous and the wicked among human beings: "For you alone have created the righteous ones . . . and the wicked you have created for the time of your wrath" (1QH^a vii.18–21 [xv.14–17]).

Doctrine of the Two Spirits. How these various theological elements regarding creation—God's sovereignty, God's foreknowledge, and the mixed character of mankind—fit together receives a full and systematic presentation in the "Treatise on the Two Spirits" in 1QRule of the Community (1QS iii.13–iv.25). The instruction was intended as a theological treatise for the community's spiritual director (the *maskil*) as he teaches the "Sons of Light." It begins with an affirmation of God's absolute sovereignty over creation: "From the God of knowledge is all that is and will be, and before they existed he established all their design; and when they come into being according to their course, it is in accord with his glorious

design that they fulfill their task and without change" (IQS iii.15–16).

The questions of the mixed character of mankind and the existence of evil in God's creation are resolved by the doctrine of the two spirits. Receding for the present from direct involvement in human affairs, God has appointed "two spirits in which to walk until the time of his visitation" (IQS iii.18). These two spirits are identified as Truth and Falsehood. Under the leadership of the Prince of Light (Truth), the children of light do the deeds of light. And under the leadership of the Prince of Darkness (Falsehood), the children of darkness do the deeds of darkness. This will continue "until the determined end and the renewal" (IQS iv.25), the eschatological intervention that will result in the vindication of the righteous and the destruction of the wicked when God's sovereignty over creation will be fully manifest once more. Thus, the existence of sin and evil in God's creation is explained by a doctrine of modified dualism whereby the sovereign creator and Lord grants temporary control over human affairs to the two spirits. The text acknowledges the problem of determining to which spirit one belongs and gives a brief answer ("according to whether each one's inheritance be great or small," IQS iv.16), without going deeply into the theological questions raised by such a solution.

Other Qumran texts reaffirm various aspects of the understanding of creation found in *Hodayot* and the Rule of the Community. The high priest's discourse in the War Scroll lists all the things in the heavens and on earth that God has created: "the dome of the sky, the host of luminaries, the tasks of the spirits and the dominion of the holy ones . . . beasts and birds, man's image . . . sacred seasons and the cycles of years and times everlasting" (IQM x.11–16). Having established reasons for trusting in the sovereignty of God and assuming that this sovereign God is on the side of the Sons of Light, the high priest proclaims: "The battle is yours!" (IQM xi.1).

Sovereignty of God. The theme of God's foreknowledge with regard to creation appears in other texts. According to the Ages of Creation, God established beforehand what would happen in each age: "Before he created them, he determined their works . . . age by age" (4Q180 1.2–3). According to the Damascus Document, God knew that wicked persons would turn aside from the way of righteousness: "For God did not choose them from the beginning of the world, and before they were established he knew their deeds" (CD ii.7–8). The contrast between the orderliness of creation as established by the sovereign creator and the ignorance and disobedience displayed by humans is developed in the Liturgical Prayers: ". . . the great light for [day-]time, [and the small one for night-time . . .] without breaking their laws . . . and their do-

minion is over all the world. But the seed of mankind has not understood all that you gave them to inherit, and they have not known you, to do your word" (1Q34 3.ii.1–3).

Several fragments from the large wisdom apocryphon known as Sapiential Work A (1Q26; 4Q415–418, 423) refer to God's action in creation as a framework or horizon for human understanding and wise activity. In Sapiential Work A^b (4Q146 1, 7, 10, which may have been the beginning of the work), the instructor appeals both to the orderliness of God's creation ("and the host of the heavens he has established") and to the coming judgment ("in heaven he will pronounce judgment upon the work of wickedness, and all his faithful children will be accepted with favor by him"). In the context of God's judgment, the instructor in Sapiential Work A^a affirms the omnipotence and omniscience of God the creator: "they do not come into being without his favor, and apart from his wisdom" (4Q418 126.ii.5).

A peculiar part of the instruction in Sapiential Work A^c (4Q423 2.1–8) weaves together phrases from *Genesis*: "every fruit of produce and every tree pleasant and delightful to contemplate" (4Q423 2.9); "and over it he has set you in authority, to till it and to keep it" (4Q423 2.15); "thorn and thistle it will cause to sprout forth for you" (4Q423 3.18); and perhaps "she gave birth, and all the wombs of the pregnant ones . . ." (4Q423 3.16). Although the use of the creation story from *Genesis* 2–3 is obvious, its lesson is not.

Much of what the Qumran scrolls say about creation and God's sovereignty over creation stands squarely within the biblical tradition. As in *Ben Sira* and *I Enoch*, there is a living interest in creation and God's creative activity as a horizon for ethical instruction. Further, the idea of the purpose of creation to glorify God also echoes biblical sentiments (see *Psalms* 19.1, 24.9–10, 29.3).

What is most interesting from a theological perspective is the insistence in several texts on God's predetermination and foreknowledge of every aspect of creation. As in the New Testament (see *Romans* 9–11), the theological emphasis is on the sovereignty of God and the divine grace offered to the elect. Nevertheless, such language does raise questions about the evil actions of humans and God's responsibility for them in the unfolding of creation.

The "Treatise on the Two Spirits" (IQS iii.13–iv.25) attempts to explain, if not resolve, those questions by asserting that God has freely ceded control over creation to the two spirits (Truth and Falsehood) who will remain locked in cosmic struggle until the final divine intervention or visitation. This framework of modified dualism, which affirms God's absolute and ultimate sovereignty while assigning the present incompleteness and sinfulness of creation to the permissive will or mysterious plan

of God, seems to be the assumption of much Pauline (see *Romans* 1–8) and Johannine theology. The crucial difference is that for early Christians, God's decisive intervention through Jesus' death and resurrection had already broken the real power of sin, death, and the Law (Paul), and of darkness or the "world" (John), whereas the Qumran texts are more oriented to the future for such an intervention (though there are elements of "realized eschatology" in them).

These issues are glimpsed also in Josephus's contrasting descriptions of the Pharisees and Sadducees (*The Jewish War* 2.162–166; see also *Jewish Antiquities* 13.297–298, 18.12–15; *Acts* 23.6–10), though allowance must be made for his addressing non-Jewish readers in their own terminology (fate, immortality of the soul) and the shifting meaning of the term *Sadducee*. The Pharisees are said by Josephus to ascribe everything to fate and God, whereas the Sadducees deny fate and hold that God is so remote that he can neither commit sin nor even see it. For the Pharisees the decision to choose to do right or wrong rests mainly with human beings; nevertheless fate is at work in every action. But the Sadducees say that humans are entirely free to choose between good and evil, and each individual chooses his course of action without the influence of God or fate. The Pharisees are said to have believed in the immortality of the soul as well as in reward and punishment after death, whereas according to Josephus the Sadducees denied both. The rabbis generally followed the Pharisees's balanced combination of divine guidance and human freedom in choosing what one should do.

DANIEL J. HARRINGTON

CROSS, FRANK MOORE, was born on 13 July 1921. He received a bachelor of divinity degree from McCormick Theological Seminary in 1946 and a doctor of phi-

losophy, under William F. Albright, from Johns Hopkins University in 1950. He then taught at McCormick until he was appointed to the Hancock Professorship of Hebrew and Other Oriental Languages at Harvard University in 1957. He remained at Harvard until his retirement in 1992. During those years he supervised more than one hundred doctoral dissertations and was curator and then director of the Harvard Semitic Museum. He has been very active in learned societies such as the American Schools of Oriental Research and the Society of Biblical Literature, serving as president of both.

Cross's first essay on the Dead Sea Scrolls appeared in 1949, and in light of his training under Albright in epigraphy, paleography, and orthography, he was appointed in 1953 as the first member of the newly formed team of scholars to join Józef T. Milik in the sorting and editing of the innumerable fragments from Qumran Cave 4. He identified the many thousands of biblical fragments, forming copies of *Genesis* (13), *Exodus* (9), *Leviticus* (6), *Numbers* (1), *Deuteronomy* (18), *Joshua* (2), *Judges* (2), *Samuel* (3), *Kings* (1), *Jeremiah* (5), *Ezekiel* (3), *The Twelve Minor Prophets* (6), *Job* (2), *Ruth* (2), *Song of Songs* (3), *Ecclesiastes* (2), *Lamentations* (1), *Daniel* (5), *Ezra* (1), and *Chronicles* (1). He published preliminary editions of several of these manuscripts, and all have now been published in the Discoveries in the Judaean Desert series (vols. 12, 14–17), many of them by his students whose dissertations he had supervised.

Cross was a pioneer of many insights that have shaped Qumran studies. He expressed his views in his widely used introduction to the Dead Sea Scrolls, *The Ancient Library of Qumran and Modern Biblical Studies* (first edition, 1958; second edition, 1961; a third edition of the work appeared in 1995 under the shortened title *The Ancient Library of Qumran*).

He wrote a series of essays on the implications of the textual variants in the biblical manuscripts for the development of the texts of the Hebrew Bible. He argued that in the Second Temple period there were three local texts of the Pentateuchal books (the one represented now in the Masoretic Text, of Babylonian origin, the one in the Septuagint, of Egyptian origin, and the one in the Samaritan Pentateuch, of Palestinian origin) and that when the text was standardized after the fall of Jerusalem in 70 CE, one of these, the Masoretic Text, was chosen as the normative text. For other books in the Hebrew Bible there were two textual families and again just one was chosen after 70 CE. He was also able to clarify the history of the Greek text through use of the Qumran Hebrew texts and evidence from other Judean Desert sites.

In addition to his contributions to the study of the text of the Hebrew and Greek Bibles, Cross also produced

"The Development of the Jewish Scripts" (1961), which still remains four decades later the standard paleographical study of the scribal hands used in writing the Qumran manuscripts and other finds from the Judean Desert.

EUGENE ULRICH

CRUCIFIXION. Extremely widespread as a method of execution even before Rome conquered the East, sources such as *Esther* (7.9–10), *Ezra* (6.11), and Herodotus (for example, *Hdt.* 1.128.2) suggest that crucifixion originated among the Persians. By the fourth century BCE at the latest, this mode of punishment had become familiar to the Greek-speaking world. Crucifixion is apparently attested in Ptolemaic papyri, and during the fourth and third centuries BCE, Alexander the Great and his successors, the Diadochi, especially the Ptolemies and the Seleucids, all employed it. Among the Seleucids, Antiochus III, who directly ruled the Jews beginning in 203 BCE, is particularly noteworthy for crucifying several individuals.

Crucifixion may have become a penalty for state crimes among the Jews as early as the Maccabean Revolt, and it remained as such under the early Hasmoneans. According to Josephus (*Jewish Antiquities* 12.256), Antiochus IV Epiphanes imposed the penalty on some Jewish loyalists who refused to abandon their ancestral traditions in 168/167 BCE: "They were scourged and their bodies mutilated. While still breathing and alive they were crucified. Their wives and children, whom they had circumcised in contravention of the king's orders, were strangled, then hung from the necks of the crucified fathers." [See Antiochus IV Epiphanes.] It should be noted, however, that some scholars doubt the reliability of Josephus on crucifixion during the Maccabean period. No mention of the penalty appears in *Maccabees*. During his reign the Jewish high priest Alcimus executed a large number of Hasideans who had deserted Judah the Maccabee to ally themselves with him. Although it is not certain, numerous scholars believe that these executions, dating to 162 or 161 BCE, were by crucifixion. [See Hasideans.] The *Testament of Moses* (8.1) contains a reference to either these crucifixions or other contemporary crucifixions (again, the historical reliability of this source is questionable, since it underwent some revision during the Roman period).

Not too many years later (perhaps in 77 BCE, if the colophon refers to Ptolemy XII), the *Book of Esther* was translated from Hebrew into Greek. The Greek version unquestionably understood Haman's execution as a cru-

ifixion, for it rendered *Esther's* Hebrew *talah* ("hang") by the Greek *stauroo* ("crucify"). Since the Jewish translator presumably interpreted the biblical events in light of his own contemporaries' use of *talah*, this version is crucial for understanding the apparent references to crucifixion found in the Dead Sea Scrolls. All these references use the verb *talah*. The *Esther* translation shows that this ambiguous term was the normal Hebrew word for the term *crucify* in the period of the scrolls.

In the Roman legal tradition, crucifixion represented the supreme penalty. This was true by the time of Cicero (*In Verrem* 2.5.168), and when the works of the jurist Julius Paulus were compiled in the *Sententiae* some four centuries later, *crux* ("the cross") still stood at the head of the list of "supreme penalties," followed by burning and decapitation. The *Sententiae* include as crimes properly punished by crucifixion desertion to the enemy, betraying of state secrets, inciting to rebellion, murder, prophecy regarding the health of rulers, magic, and aggravated falsification of wills.

In the areas of Roman rule, crucifixion was presumably a common punishment, generally inflicted on members of the lower classes. Presumably, for the elite there were less horrible alternatives because the literary and inscriptional evidence regarding crucifixion is limited; only a single Latin epigraph appears to refer to it, and mentions in literary contexts are sparse. Martin Hengel (1977, p. 38) has suggested that "the relative scarcity of references to crucifixions in antiquity, and their fortuitousness, are less a historical problem than an aesthetic one, connected with the sociology of literature. . . . The cultured literary world . . . as a rule kept quiet about it."

Two—perhaps three—passages in the Dead Sea Scrolls refer to crucifixion. As noted, in each case the verb *talah* is used. The word first appears in Temple Scroll^d (11Q19 lxiv.6–9). This portion of the Temple Scroll is reacting to *Deuteronomy* 21.22–23, which reads in part: "If a man is guilty of a sin whose sentence is death, let him be put to death. Then you shall hang him on a tree." The biblical passage leaves many questions unanswered, but it clearly indicates that the guilty party is first executed, then hung on a tree. The object is not crucifixion, but rather exposure of the corpse. Temple Scroll^e rewrites *Deuteronomy*:

If a man is a traitor against his people and gives them up to a foreign nation, so doing evil to his people, you are to hang him on a tree until dead. On the testimony of two or three witnesses he will be put to death, and they themselves shall hang him on a tree. If a man is convicted of a capital crime and flees to the nations, cursing his people and the children of Israel, you are to hang him, also, upon a tree until dead.

Two points stand out in the scroll's treatment of the biblical text. First, the author (or an earlier source upon which he relies) has reversed the order of the biblical

text's verbs for "put to death" and "hang." By this reversal the text is modified, requiring that the guilty party be hung on a tree while still alive, that is, crucified. Second, Temple Scroll^a has specified the crimes for which crucifixion is the penalty. The two crimes are among those the Roman law punished by such means: betrayal of state secrets and desertion to the enemy. Presumably, therefore, the author of Temple Scroll^a or his sources were familiar with aspects of Roman jurisprudence. A halakhic text (4Q524) also contains a form of the Temple Scroll's treatment. Whether this work represents a source used by the author of Temple Scroll^a or whether it is a quote from the scroll remains to be determined.

A second text that mentions crucifixion is Peshar Nahum (4Q169 3-4.i.6-9). The author of the work interprets a passage from *Nahum* (Na. 2.12b-13a). He writes:

"[He fills] his cave [with prey], his den with game." This refers to the lion of wrath [. . . ven]geance against the Seekers of Smooth Things, because he used to hang men alive, [as it was done] in Israel of old. For to anyone hanging alive on the tree [the verse applies]: "Behold, I am against [you, says the Lord of hosts."

Before the discovery of Temple Scroll^a, scholars had supposed that Peshar Nahum was against crucifixion; they had restored the crucial lacuna "alive, [which was never done] in Israel of old." It was Yigael Yadin, the editor of the Temple Scroll, who, on the basis of the Temple Scroll's laws, first proposed the restoration adopted here, which has since become the consensus.

Furthermore, scholars agree that the crucifixions described in Peshar Nahum are those noted by Josephus, who narrates the reign of Alexander Jannaeus. [See Alexander Jannaeus.] Alexander Jannaeus had been engaged in a civil war against the Pharisees and their supporters and eventually was able to quell the revolt. Alexander Jannaeus had leaders of the opposition, numbering some eight hundred men, crucified (*Antiquities* 13.380). This event probably occurred in 88 BCE. The particular crime for which these Pharisees were crucified was that of inviting Demetrius III Eukerus, the Seleucid king of Syria, to ally with them and invade Judea. [See Demetrius III Eukerus.] Thus, they were guilty of treason and suffered crucifixion in accordance with Temple Scroll^a. Some scholars have argued that both Temple Scroll^a and Peshar Nahum reflect events that occurred under Alexander Jannaeus, making it possible to arrive at a *terminus post quem* for the composition of the Temple Scroll. Since, however, abundant evidence exists for the use of crucifixion to punish crimes against the state as far back as the Maccabean period, this argument has failed to win a substantial following. A much more important result of the comparison of the Peshar Nahum passage with Jose-

phus's description is that it makes possible the identification of the group designated in a number of scrolls as the "Seekers after Smooth Things": the Pharisees and their faction.

A third text in the Dead Sea Scrolls in which a reference to crucifixion has been found is Aaronic Text A = Aramaic Levi^{d?} (4Q541). In a very difficult portion of the manuscript (4Q541 24.4), Émile Puech read the Aramaic word *taliva* and understood it as a noun, "hanging." Yet, there are fundamental objections to this understanding. First, the usual and therefore expected root in Aramaic for "crucifixion" is *šlb* (although *tl'* is not unknown; it exists in Syriac, for example). More telling is criticism of the reading itself. Several scholars have questioned the correctness of the first two letters of Puech's rendering, and various other suggestions have been made that would eliminate any reference here to crucifixion. If these scholars are correct, and this seems to be the growing consensus, the number of references to crucifixion in the scrolls is reduced from three to two—Temple Scroll^a and Peshar Nahum.

MICHAEL O. WISE

CYNICS were adherents of a philosophical sect that derives ultimately from Antisthenes (c.440–366 BCE), one of Socrates' students. He not only discounted the importance of a good general education as a prerequisite for philosophical study, but also rejected both logic and physics as indispensable aspects of philosophy. This same stance was adopted by Diogenes, often regarded as the second founder of Cynicism. Because they and their successors concentrated on ethics as the only necessary branch of philosophy, Cynicism was often depicted as a shortcut to virtue and happiness. This emphasis also led to the ancient debate as to whether Cynicism was truly a philosophy or simply a distinctive manner of life.

Cynics were famous for wearing a short cloak, carrying a begging bag, and using a staff. Many also wore long hair, went barefoot, and had a simple, day-to-day existence in which they drank water from fountains and springs, begged for bread, ate plants that grew by the road, and slept on the ground. As a result of their rugged way of life, they experienced numerous hardships and often had an unkempt appearance that critics found repulsive. Yet the Cynic's austere life was freely chosen and expressed his conviction that a simple life of self-control and virtue lived in accordance with nature was sufficient for happiness. His serene endurance of adversity demonstrated his virtue and proved that poverty was utterly insignificant. In addition, the Cynic's independent manner of life showed his freedom from the conventions and values of Greco-Roman aristocratic society, provided a model of self-sufficiency, and gave him the moral authority to speak boldly to all those whose lives he deemed deficient. Some Cynics did this harshly, whereas others used a more gentle approach. Such verbal "biting" and occasional "doggish" disregard for societal mores were in keeping with the fact that the term *Cynic* means "dog," and Cynics saw themselves as society's watchdogs.

Zeno of Citium, the founder of Stoicism, was the student of Crates, one of early Cynicism's most important and learned representatives. As a result, Stoicism inherited much from Cynicism, and this legacy meant that Cynic tenets, often in a modified form, influenced Greco-Roman society during the period of Stoicism's philosophical dominance. Indeed, imperial Stoics often presented Cynics as models of the ideal wise man. Furthermore,

there was a revival of Cynicism during the early empire, so that Cynics once again became conspicuous during this period and produced pseudonymous letters in the names of the early Cynics and other ancient philosophers.

In recent years, A. J. Malherbe has convincingly demonstrated that Paul was well aware of Cynic traditions and adapted these to express his own self-understanding as well as to address debated issues in his churches (Malherbe, 1989). More controversial and less persuasive have been claims that Jesus and John the Baptist are depicted as Jewish Cynics in the gospel tradition's earliest layers. The Essenes were certainly not Cynics, yet they are sometimes described in terms congenial to Cynicism. Philo, for example, depicts them as rejecting both logic and physics (except for theology and creation) and devoting themselves exclusively to ethics, a subject in which they were trained to know what is truly good, evil, and neutral. Thus, like the Cynic sage, they were models of virtue, endurance, and self-control, totally free from the love of money and reputation (*Every Good Man Is Free* 80.83–84).

D

DALIYEH, WADI ED-. [*This entry comprises two articles: Archaeology and Written Material.*]

Archaeology

Located about halfway between Jericho and Samaria in the central hill country, Wadi ed-Daliyeh is one of the depressions through which the winter rains tumble into the Jordan Valley. The hill country begins to descend about four miles east of the village of el-Mughâyir, where the ridge consists of rolling tableland farmed by the villagers, and the wadi makes a sharp gash into the eastern rim of the hill country, leaving steep cliffs sometimes of a hundred feet or more. It descends to the narrow plain five miles from Khirbet Fasâyil, which lies about fifteen miles north of Jericho in the Jordan Valley.

Caves honeycomb the sides of the wadi. Some are small; others contain thousands of feet of passageways. It was in one of these caves, Mugharet Abu Shinjeh, that the Wadi ed-Daliyeh, or Samaria papyri, were found.

On the south side of the wadi, Mughâret Abu Shinjeh ("Cave of the Father of the Dagger") was investigated by the Ta'amireh bedouin in the winter of 1962 when they were driven north of their usual encampments by drought. Since the original discovery of the Dead Sea Scrolls in 1947, they had been making systematic searches of the hill-country caves and recognized that dryness, and often the accumulation of layers of bat excrement and the sealing of a cave by collapsed limestone at its entrance, preserved ancient finds within. Their usual method of exploration was to dig test pits through the bat guano and to tap the rocky façade and cave walls for the hollow thud that would indicate accessible passages.

Their efforts in Mugharet Abu Shinjeh brought to light fragments of mats, human bones, a gold ring, ancient pots (which they broke in their search for gold or manuscripts), some stamped lumps of clay (bullae, or seals), and finally a few beads, coins, more seals, and some rolls and fragments of papyri. The papyri made their way through fellow Ta'amireh bedouin to Khalil Iskandar Shahin in Bethlehem and finally reached the scholarly community in Jerusalem in April 1962. [*See Scrolls Research; biography of Shahin.*] When a small papyrus fragment with Aramaic written on both sides came to the at-

ention of Yusif Saad of the Palestine Archaeological Museum and Roland de Vaux of the École Biblique et Archéologique Française, then head of the Dead Sea Scroll team, they recognized their possible importance. They took some fragments to the American Schools of Oriental Research in Jerusalem where the director Paul Lapp, after a night of study, reported that the largest fragment was part of an official document in a script dating from about 375 BCE, in which the city of Samaria was clearly mentioned.

The collection offered for sale by the bedouin consisted of many small worm-eaten papyrus fragments, including a few rolls (none complete), several dozen bullae, and a few coins. First efforts concentrated on financing this purchase, and by November 1962 a fund had been established within the American Schools of Oriental Research. By the end of the month the purchase was made.

Besides the study of the documents and seals, it was important to examine the context in which they were found and, if possible, the circumstances under which they were deposited there. Through further negotiations, the Ta'amireh disclosed the cave of their explorations, and examination indicated the probability of their claim. The next step was scientific excavation to reveal any possible remaining evidence. This task fell to Lapp.

The first campaign took place early in 1963; the second in February 1964. Logistics always presented extreme difficulties. Tents for sleeping and working were pitched in the mouths of the caves on both sides of the wadi, and water as well as all food and excavation supplies had to be brought in by donkey along a circuitous, uphill, five-mile route. In the second campaign it was possible to bring in small generators by camel, which slightly improved excavation conditions. The staff consisted of ten to fifteen archaeologists, with about fifty additional workers for each campaign.

Excavation was first carried out in the Manuscript Area (the section of the cave from which it was believed the papyri had come) and in a meter-wide (about 1 yard) trench from the mouth of the cave back to the part of the cave designated the *Manuscript Area*. The trench would provide the occupational history of the cave and would reveal any other possible openings or passages the bedouin had not found.

The meter-wide trench stretched and turned about fifty

meters back to the Manuscript Area. The trench and small alcoves off the trench yielded pots and sherds (pottery fragments) from the latter part of the fourth century BCE covered by a thin scattering of early Roman sherds. By the end of the second campaign all the debris of the Manuscript Area had been excavated and sifted, producing pieces of pots (recently broken) and sherds from the second half of the fourth century BCE; bones and bone fragments; a few beads; a fibula (a pin for fastening clothing); two bullae; pieces of cloth, mats, pits, seeds; and bits of papyri with hints of a letter or two. One larger fragment, the only one the bedouin seemed to have missed, had six lines of text. Two other areas of the cave, called the *Bat Dome* and *Hot Room*, were excavated and produced similar material. A tiny silver coin was found in the passageway between the Manuscript Area and the Bat Dome, where the bedouin claimed to have found five silver coins (probably those offered for sale with the papyri).

The archaeological evidence on the whole supports the finds as reported by the bedouin: three hundred skeletons (however, archaeological evidence points to between thirty and fifty skeletons) covered by mats near which were the papyrus rolls and other finds. The explanation for their presence is suggested by the historians Josephus and Curtius Rufus, who wrote that the inhabitants of the city of Samaria had burned alive Andromachus, Alexander the Great's prefect in Syria, while Alexander was in Egypt; Alexander returned and destroyed the city. The Wadi ed-Daliyeh finds seem to indicate that leaders of Samaria who may have been implicated in the rebellion fled, probably down Wadi Farah into the wilderness to hide out in Wadi ed-Daliyeh. They took their food, pottery containers, jewelry and luxury items, and sealed legal documents with them. Their hiding place most likely was discovered by Alexander's Macedonian troops, and a fire built in the mouth of the cave probably suffocated the victims.

Excavations were conducted in a second cave, 'Arâq en-Na'sâneh (Caverns of the Sleepy One), although the finds were not related to the Samaria papyri. 'Arâq en-Na'sâneh was located slightly up and on the other side of the wadi from Mughâret Abu Shinjeh. This cave, though entered through a small hole, opened into a large room and many additional caverns, providing well-circulated air. Undisturbed finds indicated occupation during the Middle Bronze I period and the period of the Bar Kokhba Revolt. The latter occupation is paralleled by finds in the caves of Wadi Murabba'at and the Judean Desert.

Written Material

The written material from the Abu Shinjeh cave in the Wadi ed-Daliyeh, about 14 kilometers north of Jericho on the western rim of the Jordan rift, consists of fragmentary papyri and a few legible sealings and coins. Most of these were discovered in the early spring of 1962 by the Ta'amireh bedouin. Subsequent archaeological explorations in January 1963 and February 1964 contributed modestly to the initial find and put the written materials in a more definite context (cf. P. W. Lapp and N. L. Lapp, 1974). [See Daliyeh, Wadi ed-, *article on Archaeology*.]

The most significant of these written remains, the papyri, are quite fragmentary. Eighteen of the fragments are long enough, that is, complete enough in their vertical dimension, to be called "papyri." The largest papyrus, a deed of slave sale (WDSP 1), is no more than 45 percent extant. A few of these fragments are no more than a thin strip of papyrus; a couple of others are in tatters. Nine or ten further pieces are sizable enough to allow some assessment of their legal import. Nine other museum plates contain nearly 150 additional fragments of various shapes and sizes. All the plates are housed in the Rockefeller Museum in Jerusalem.

Despite the location in which they were found, the papyri are all legal documents originally drafted in Samaria in the fourth century BCE. The place where the documents were executed is given either in the first or last line of the document. In the eleven documents in which the place is preserved, it is named as the city or province of Samaria. The documents were also dated by the reign of the current Persian king in their first or last lines. Where the name of the king is preserved, it is usually Artaxerxes (at least five times). One document is dated to sometime between the thirtieth and thirty-ninth year, and therefore must come from the reign of Artaxerxes II (Mnemon), between 375 and 365 BCE. The date of WDSP 1 is fully preserved as 19 March 335 BCE, the second year of Darius

III (Codomannus; Cross, 1985). Most of the papyri were probably written during the reign of Artaxerxes III (Ochus; 358–337 BCE). The late pre-Alexandrine coins found in the cave strongly corroborate the internal indications of dating (Cross, 1974), the latest being of a Tyrian issue of 334 BCE. The script of the papyri is somewhat more advanced typologically than the script of the Aramaic corpora from the late fifth century and so fits well within this horizon.

The Samaria papyri provide a rich and varied paleographic resource, from a previously underrepresented period, for better understanding the development of the Aramaic script in the second half of the first millennium BCE. Since the Samaria papyri are dated, their scripts provide an invaluable guide to dating other papyri and ostraca from Egypt and Palestine in the same general period. They are also important for reassessing the scripts of the oldest manuscripts from Qumran (Cross, 1974). But aside from the importance of this resource for epigraphists, archaeologists, and historians, familiarity with these fourth-century Aramaic scripts is crucial to biblical text critics for assessing possible transcriptional errors in restoring the biblical text.

The language of the Samaria papyri is "Official Aramaic," the ideal standard language in which scribes of the Persian period (probably from Darius I to Darius III [522–333 BCE]) would draft documents of an official nature (Gropp, 1997). The language of the Samaria papyri is virtually identical to the language of the fifth-century Elephantine legal papyri and the Arsames correspondence. In fact, despite being chronologically later, the language of the Samaria papyri is even more consistently conservative in its conformity to the norm of Official Aramaic than the language of the other two corpora. In spite of its later provenance, it also reflects little or no Persian influence in contrast to the Elephantine papyri, but especially to the Arsames correspondence where Persian influence is more extensive. The Samaria papyri do show a greater proportion of specifically late Neo-Babylonian loanwords, but this is clearly related to the origins of its legal formularies (Gropp, 1990).

If it were not for some auspicious circumstances, which provide extraordinary possibilities for reconstructing the text of the papyri, their significance would have been greatly reduced. The possibilities of reconstruction correlate directly with the legal genres represented. The best represented type of deed is the slave sale. It has proved possible to propose full reconstructions for nine or ten of these deeds despite their fragmentary condition. The slave sale deeds seem to share a common formulary to such an extent that they provide us with partially overlapping bits and pieces of the same formulary. There is remarkably little variation in the verbal realization of

each formula, and even less variation in the sequence of formulas within the sale formulary. The date, the names of the principals, the names of the slaves, the sale prices, and the amount of the penalty for contravention of the sale are basically the only elements that vary from deed to deed. Each papyrus contributes a little to our knowledge of that formulary. By constant comparison and re-arranging of all the bits of writing serially, Frank Moore Cross and Douglas Gropp have been able to reconstruct the entire formulary. Proposed reconstructions have been tested against estimated line lengths for each papyrus. In addition to the constraints of space, we have been aided by legal parallels from Mesopotamia to Egypt. Circular reasoning, while not wholly escaped, can be reduced to a minimum. Now that this formulary for the deeds of slave sale is established, it can be applied as a kind of template for interpreting other deeds of conveyance. Such a procedure has been successful in reconstructing a deed of house sale, but only modestly helpful in interpreting texts of other genres.

Of the fragments sizable enough to allow some assessment of their legal genre, at least half are slave sales. Some of these represent the sale of a single slave (WDSP 1, 3, 4, 11 recto, 18, 19, and 26?), others of multiple slaves (WDSP 2, 5, 6, 7, 8, 9, and 20). But a variety of other legal genres are represented. There is a clear instance of a house sale (WDSP 15) and a conveyance of chambers in a public building (WDSP 14), in addition to several deeds of sale whose objects cannot be ascertained (WDSP 21, 22, 24, and 25). Two or more documents look like a pledge of a slave in exchange for a loan (WDSP 10, 12, 13 recto?, and 27?). It is impossible to be confident about the terms of these fragmentary contracts apart from some hermeneutical key provided by closer legal parallels. One conveys a vineyard, possibly as a pledge rather than as a sale (WDSP 16). Several documents may resolve some contingency, but in most cases the papyri are too fragmentary for confident interpretation. There is a receipt for the repayment of a loan involving a pledge (WDSP 17: a double document), the release of a pledged slave (WDSP 13 verso), the settlement (?) of a dispute over a slave (WDSP 11 verso), and possibly a judicial settlement by an oath (WDSP 23).

The Samaria papyri may ultimately prove most interesting for the light they shed on the history of law. They provide an especially promising occasion for the study of the contact between Aramaic and cuneiform traditions. Comparison of legal formularies provides one of the most controllable instances for the study of cultures in contact. The legal formulary of the slave sales is obviously dependent proximately or ultimately on cuneiform antecedents. But aside from a few important parallels, the extent to which the formularies of the Samaria papyri differ from

the formularies of the Elephantine legal papyri is remarkable. On the other hand, the Samaria papyri share a large number of features with the later Murabba'at and Nahal Hever deeds. The Samaria papyri thus provide some counterbalance to the understandably heavy reliance on the Elephantine legal papyri for reconstructing the early development of Jewish law.

To be more specific, the origin of the sale formulary of the Samaria papyri is threefold: (1) Aramaic scribes in Babylonia adopted the late Neo-Babylonian formulary for the sale of movables (from the time of Darius I on) as their basic model, (2) Aramaic scribes (still in Babylonia) creatively modified this model by drawing on formulas from other types of late Neo-Babylonian documents, and (3) Aramaic scribes (probably in Palestine) further modified the adopted formulary by partially assimilating it to their own native legal traditions.

Notwithstanding a great deal of functional equivalence between the formularies of the Elephantine deeds of conveyance and the Samaritan deeds of sale, there is very little concrete phrasing in common. The two groups of legal papyri represent fundamentally different legal traditions. The Elephantine legal papyri stem from a somewhat provincial Neo-Assyrian tradition probably of the late ninth or early eighth centuries BCE (Muffs, 1969). Both formularies provide evidence of an extended symbiosis between Aramean and Akkadian scribes. But the two cases of symbiosis are parallel and analogous rather than homologous. The Elephantine legal papyri stem ultimately from an Assyro-Aramean symbiosis (Tadmor, 1982), whereas the Samaria papyri derive from a Babylonian-Aramean symbiosis (Greenfield, 1982). The agreement in language between the Elephantine papyri and the Samaria papyri thus offers a counterpoint to the divergence in legal traditions. The formularies of the deeds from Murabba'at and Nahal Hever represent a later stage of this Babylonian-Aramean symbiosis more than a simple direct inheritance from the legalese of fourth-century Samaria. Nevertheless, they stand in the same general tradition. The evidence of the Samaria papyri both clarifies and expands our picture of the role of Aramaic scribes as creative intermediaries of cultural traditions throughout the ancient Near East.

Because the Samaria papyri are so formulaic, they offer the historian only limited evidence of the realities of life in fourth-century Samaria. They do, however, provide a few details about administration. The city of Samaria is variously designated as a "city" (*qiryata'*) and as a "citadel" (*hrtu'*) within the Persian province (*medintu'*) of Samaria. The papyri name two types of officials, the chief being "the governor" (*pahut shontrayin*), and the second being "the prefect" (*segana'*). The fragmentary evidence of the papyri and of an inscribed bulla (WD 22) suggests

that the governorship, if not also the prefecture, was kept within the Sanballatid family. [See Sanballat.]

A diversity of personal name types attested in the documents points to a diversity in the ethnic composition of the population of fourth-century Samaria. Hebrew names, most of which can be paralleled in biblical and epigraphic Hebrew, predominate. Many of these are Yahvistic. But other personal names can be identified as Aramaic, Edomite, Phoenician, Akkadian, Persian, and perhaps belong to other ethnic groups as well. It is certainly possible to make false inferences from personal names. For instance, the bearers of the Akkadian names may in fact be Arameans. Similarly, the hybrid name *ylvbygh* ("Yahu is God") cautions us from drawing too much from the impeccably Persian *byghrt* ("by God lifted up, esteemed"). The slaves sold are as likely to bear Yahvistic names as either the sellers or the buyers. In one case, a woman becomes the new owner of a male and a female slave (WDSP 2).

The slaves are generally sold for life (contrary to the regulations of *Lv.* 25.39-47). [See Slavery.] It is not completely clear whether the loan contracts are constructed in such a way as to circumvent a ban on interest. Antichretic use of the pledged slave or vineyard may have stood in place of interest. Because the term for chambers in a public building (*nshkt'*) in WDSP 14 is only rarely used outside of a sacral context, it has fueled the debate as to whether there was a temple in Samaria before the coming of Alexander (Eshel, 1996).

DOUGLAS M. GROPP

DAMASCUS. Located on the banks of the Barada River, Damascus is the capital of modern Syria. In ancient times abundant waters created fertile oases (Weber, 1989), whose most famous export was the wine of Helbon (*Ezek.* 27.18-19; Millard, 1962). The name *Damascus* may mean "wine pourer" (Gordon, 1952).

How long the city had existed before its mention in the victory list of Thutmose III (c.1482 BCE) is uncertain—archaeological work has been sporadic and unsystematic. After the Amarna Letters, which thrice mention Damascus, there is a long silence until 2 *Samuel* 8.5-7 notes David's victory over the Aramaeans of Damascus. Rezon recaptured the city from Solomon and proclaimed himself king (*1 Kgs.* 11.23-25). Thereafter Damascus enjoyed great political power as the capital of Aram, which was the implacable enemy of the northern kingdom of Israel. In the late eighth century BCE the Assyrians reduced Damascus to the status of chief town of a province, a role it retained under the Babylonians in the sixth century.

Damascus recovered much of its former glory in the framework of the Persian empire (Strabo, *Geography* 16.2.20). The city changed hands repeatedly in the struggles between the Ptolemies and the Seleucids, and in the early first century BCE it was occupied by Aretas III of Nabatea and Tigranes of Armenia. In 63 BCE Pompey made Damascus part of the Roman province of Syria, whose capital, however, was Antioch-on-the-Orontes. The territory of Damascus extended to the frontier of Sidon (Josephus, *Jewish Antiquities* 18.153). It was considered a city of the Decapolis (Pliny, *Natural History* 5.16.74). The absence of coins of Caligula and Claudius confirms Paul's report (*2 Cor.* 11.32-33) that it came under Nabatean control, probably shortly after the death of Tiberius in 37 CE (Taylor, 1992). Roman coins begin again with Nero.

Herod the Great's donation of a gymnasium to Damascus (Josephus, *The Jewish War*, 1.422) probably attests a

well-established Jewish community (Smallwood, 82), whose origins may go back several centuries. According to Josephus, the Jews in the city were numerous. This is all that can be deduced from his conflicting assertions that 10,500 (*The Jewish War* 1.599-61) or 18,000 (*The Jewish War* 7.368) were slaughtered at the beginning of the First Jewish Revolt.

The translation of *medīnat dameseq* (Genesis Apocryphon, 1QapGen xxii.5) as "the land of Damascus" (Maier, 1960, vol. 1, p. 164) is inadequate; the choice must be between the "province" or "city" of Damascus (Fitzmyer, 1971, p. 169). The same document in writing "as far as Helbon to the north of Damascus" (1QapGen xxii.10) substitutes the well-known *Helbon* for the unknown *Hobah* in *Genesis* 14.15. In these two texts there is no doubt that Damascus is to be understood geographically. Regrettably the same cannot be said of the other references, all of which occur in the medieval manuscripts of the Damascus Document. The sole preserved instance of *Damascus* in the Qumran fragments is in Damascus Document^b (4Q267 3.iv.8 [= Damascus Document CD-A vii.19]). [See Damascus Document.]

All except two instances in CD-A contain the formula *be-'erets dameseq*, "in the land of Damascus." We are told of "the converts of Israel, who left the land of Judah and lived in the land of Damascus" (CD-A vi.5). "The new covenant" was enacted "in the land of Damascus" (CD-A vi.19, 8.21; CD-B xix.34, xx.12). The pattern is broken by the citation of *Antos* 5.26, in a form that does not agree with the Masoretic Text, "I will deport the Sikkut of your King and the Kiyvum of your images away from my tent to Damascus," in CD vii.15 (Rabin, 1954, p. 28; cf. Maier, 1960, vol. 1, p. 56), which is followed in the same context by "the star is the Interpreter of the Law who will come to Damascus" (vii.18-19).

When the Damascus Document was first published, its references to *Damascus* were understood in a straightforward geographical sense, and this meaning is still retained in various reconstructions of Essene history (Davies, 1982, p. 16; Stegemann, 1993, p. 207). Others, however, considered the real Damascus as inappropriate both politically and theologically and argued that *Damascus* was a symbolic name for Qumran (Jaubert, 1958). R. North made an effort to reconcile these two interpretations by emphasizing *land* rather than *Damascus*. He argued that the Nabateans controlled southern Syria and the northern end of the Dead Sea, and that their entire territory could be named after its most important city. Hence Qumran was in the land of Damascus. This hypothesis has neither archaeological nor textual support (de Vaux, 1973, p. 114). [See Nabatean.]

The Qumran interpretation is excluded by Damascus Document, CD-A vi.5, because Qumran is in "the land of

Judah." The Babylonian exile was the most significant exodus from Judah, and it is to this period that we are directed by the historical survey of CD-A ii.18–3.12. In this perspective *Damascus* would be an allegorical name for the place of captivity (Rabinowitz, 1954, p. 17, note 20b), that is, Babylon (Jaubert, 1958, p. 226; Davies, 1982, p. 122). No convincing objections have been raised against this hypothesis (Murphy-O'Connor, 1985, pp. 224–230). The destination of the Exodus and its coercive nature are confirmed by the way *Amos* 5.25–27 ("I will take you into exile beyond Damascus") is cited in CD-A vii.14–15, where "beyond Damascus" becomes simply "Damascus." The obvious hypothesis that *Damascus* here was intended to mean Babylon is supported by the way Luke cites the same prophetic text, "I will remove you beyond Babylon" (*Acts* 7.23).

If *Damascus* designated the original place of exile in which the Essene movement began, there is no difficulty in its subsequent transferral to Qumran, the place of self-imposed exile, and thus to the community that lived there (cf. *Zec.* 9.1). This is the sense of *Damascus* demanded by CD-A vii.18–19. The community expected eschatological figures to appear in its midst (Rule of the Congregation, 1Q28a ii.11–17); note the parallel with the Florilegium (4Q174 11–12), especially in the light of the identification of the community with Jerusalem. [See Florilegium; Jerusalem; and Rule of the Congregation.] The radically divergent interpretations of *Micah* 1.5–6 in Peshet *Micah* (1Q14 10.3–6) exclude any possible objection to *Damascus* having two different symbolic meanings.

JEROME MURPHY-O'CONNOR

DAMASCUS DOCUMENT. First published in 1910 by Solomon Schechter under the title *Fragments of a Zadokite Work*, the Cairo Damascus Document (CD), as it came to be known, has since the discovery of the Dead Sea Scrolls been recognized as one of the foundational works of the Qumran Community. Of the two medieval manuscripts from the Cairo Genizah, manuscript A (tenth century) has sixteen columns, while manuscript B (twelfth century) has two long columns. These still contain the largest continuous portions of the text. However, Qumran Cave 4 has yielded eight ancient manuscripts with not only substantial parallels to the Genizah texts, but major supplements, including the beginning and end of the work. The following is a list of the known Qumran manuscripts:

Eight manuscripts from Qumran Cave 4 have been identified by J. T. Milik:

- Damascus Document^a (4Q266) is written in a semi-cursive Hasmonean hand of the first half of the first century BCE. The eleven plates of facsimiles embrace the opening and end of the work, as well as substantial additions to the corpus of laws.
- Damascus Document^b (4Q267) is written in an early Herodian formal hand from about the end of the first century BCE. The two plates of photos include parallels to the parenetic as well as the organizational portions of CD.
- Damascus Document^c (4Q268) is written in a calligraphic Herodian bookhand from the early first century CE. The single plate parallels the opening of the Genizah text.
- Damascus Document^d (4Q269) is written in an early Herodian formal hand from the late first century BCE. The relatively small fragments extant contain rules of purity and communal discipline.
- Damascus Document^e (4Q270) is written in a Herodian formal hand from the first century CE with guidelines.

The five plates include various Qumran legal norms, a list of the sins of transgressors apparently among contemporaries, as well as the end of the concluding column of the work.

- Damascus Document¹ (4Q271), written in an early Herodian bookhand, contains a variety of legal rulings, including substantial parallels to the Sabbath code of CD.
- Damascus Document² (4Q272), written in an early Herodian formal hand, deals with the biblical laws of skin disease and fluxes.
- Damascus Document³ (4Q273), written on papyrus in a formal Herodian script, is very poorly preserved. Extant are halakhic rules, some with parallels in the other manuscripts.

Damascus Document (5Q12) is a small fragment from Cave 5, which corresponds to CD ix.7-10.

Damascus Document (6Q15) from Cave 6 consists of five fragments, four of which correspond to passages from the Admonition of CD, while one has a few words of laws concerning forbidden sexual relations found also in Damascus Document⁴.

Summary of Contents. (Segments found only at Qumran are marked with an asterisk.)

The admonition

- *1. The work begins with a teacher's first person call to the Sons of Light to separate from transgressors.
2. Based on the concept of preordained periods of wrath and redemption, a historical discourse on the emergence of a penitent remnant 390 years after the Babylonian destruction of the Temple.
3. A second discourse on the lessons of biblical history.
4. The Three Nets of Belial: fornication, wealth, pollution of the sanctuary. Fornication is exemplified by the sins of polygamy and uncle-niece marriages. The sanctuary is defiled by those who have intercourse with women during their menstrual impurity.
5. The Community of the Renewed Covenant and the future punishment of backsliders.

The laws. (The placement of some of the Qumran pericopes is tentative.)

- *6. A catalogue of transgressors of various kinds ending with an appeal to those who know how to choose between the paths of life and perdition.
- *7. The Zadokite priests and their communal role; rules about priestly disqualification.
- *8. Diagnosis (by the priests) of skin diseases; menstruant and parturient women.

- *9. Harvest laws: gleanings, fruits of the fourth year, measures, and tithes.
- *10. Impurity of idolaters' metals; corpse impurity; disqualification of minors to sprinkle the purification water
- *11. The *Sotah* (wife suspected of adultery) ordeal.
- *12. Integrity in commercial dealings and arrangement of marriage.
13. The oath of those entering the covenant; exclusion of the mentally and physically incompetent.
14. Laws about oaths, vows, and bans.
15. Law about a "ban" of destruction against a person.
16. Laws about judicial procedures.
17. "Concerning purification in water."
18. "Concerning the Sabbath," an extended pericope of Sabbath rules.
19. The purity of the Temple and the Temple City.
20. Treatment of blasphemers and gentiles.
21. Dietary and purity rules. End of the rule for "cities of Israel."

Communal rules

22. Priests, Levites as legal deciders for communal cells.
23. The function of the Overseer.
- *24. The penal code.
- *25. Ritual for the expulsion of offenders at the annual renewal of the covenant. Conclusion of the work.

The Laws. It is apparent from the above outline that the corpus of laws, augmented by the now available Qumran fragments, constitutes the central body of the Damascus Document. This is indicated not merely by the preponderance of space allotted to the laws, but by the summation formula found at the end of the work: "This is the explanation of the laws to be followed during the entire period of visitation. . . . Behold it is all in accordance with the final interpretation of the Law" (Damascus Document⁴ [4Q266] xi.18-21). Hartmut Stegemann (1993) suggests that *Final Interpretation of the Law* was the actual title of the Damascus Document. This term, however, occurs elsewhere within the legal corpus (4Q266 5.i.16) and may merely indicate that the explanation of the laws is in conformance with the latest insights granted to the sect's legists. In any case, it is noteworthy that the legal corpus, which some scholars were disinclined to consider as an integral part of the Damascus Document, now emerges as its central core. The Admonition on the other hand appears to serve primarily as a hortatory preface to the nomistic pronouncements of the Qumran teachers.

The laws themselves may be broadly divided into two categories: (a) interpretations of religious law and gen-

eral *halakhah* and (b) communal regulations. Among the religious laws there are a number with similarities to rabbinic tradition, that which the Talmud later called Oral Law. Thus, in the Sabbath code the cessation from work on the eve of the Sabbath begins well before sundown, the limit (*tehum*) of walking more than two thousand cubits outside the city is applied to pasturing animals, and the ban on handling working implements is strictly followed. Such similarities led Louis Ginzberg in 1922 to identify CD as a Pharisaic work, although he was able to maintain this conclusion only by dismissing the allusion in CD xvi.2–4 to the solar calendar of *Jubilees* as a later interpolation. He also had to recognize the prohibition of polygamy and uncle-niece marriages as departures from the norms of what became rabbinic *halakhah*. In the light of the Qumran findings Ginzberg's thesis can no longer be maintained.

The Cave 4 supplements to the legal corpus supply significant new illustrations of the sect's opposition to contemporary Pharisaic practices. Thus, in preparing the waters mixed with the ashes of the red cow and in sprinkling them for purification, it was customary in Temple times to use young boys who had never been ritually defiled, as recorded in *M. Para.* 3.2. The Qumran ruling, referred to above, that a minor below twenty is ineligible to perform the sprinkling, was ostensibly directed against this practice. Only mature priests were held eligible to do the rites of purification.

With regard to the fourth-year fruit of newly planted trees, which rabbinic *halakhah* treated like second tithe belonging to the farmer, the Qumran legists held it to be like firstfruits given to the priests. In the case of *hallah*, the priestly portion of the dough, which rabbinic practice required to be separated from every kneading, Qumran deemed it to be a like a first-fruit offering brought "once a year."

The Qumran view of fetal life differed from that prevailing in rabbinic *halakhah*. This view emerges from two transgressions listed in the catalog of sins found in Damascus Document⁴. The first is the slaughter of pregnant animals, which Qumran saw as violating the biblical ban on slaying the parent with the young (*Lv.* 22.28, *Dt.* 22.6). Implicitly, the fetal animal was regarded as a distinct creature. The second transgression, in accordance with a probable restoration, is intercourse with a pregnant woman. The reason given is somewhat obscure, "he causes blood to stir (?)" (*meqits dam*), which may refer to possible harm to the fetus or causing bleeding through coital pressure, thus making intercourse illicit. Normative talmudic *halakhah* did not forbid marital relations during pregnancy.

The wide range of biblical law treated in the legal corpus of Damascus Document thus comprises both similar-

ities and contrasts with the Pharisaic-rabbinic system. Methodologically, it is noteworthy that some of the laws are accompanied by exegetical references, such as the biblical citations used to support the sectarian polemic against polygamy and uncle-niece marriages. However, the bulk of the rules found in Damascus Document⁴ are formulated apodictically, without scriptural proof. This is likewise characteristic of the Mishnah. Of special interest are the topical rubrics used to introduce particular subjects: "Concerning one who is purifying himself in water" (CD x.10), "Concerning the Sabbath" (x.14), "Concerning the oath of a woman" (xvi.10). Here we have the first post-biblical collections of legal rulings by subject categories, a process which later in rabbinic tradition culminated in the six major orders of Rabbi Judah's Mishnah.

Since the study of scripture and the exposition of law were the perpetual activities to which the sect was devoted (*Rule of the Community*, IQS vi.6), we may presume that some of the religious laws were academic in nature and do not necessarily reflect the community's own experience. The communal regulations, on the other hand, are indubitably the product of the sect's organizational development. The Damascus Document and the Community Rule have in common the references to one of the important communal institutions, the annual renewal of the covenant. In the former this is found at the end of the work after the description of the ritual for the expulsion of sinners: "All the inhabitants of the camps shall congregate in the third month and curse those who turn right or left from the Law." The date derives from *Exodus* 19.1, where the preparations for the Sinaitic covenant are detailed, and similarly lacks specification as to which day of the third month. Milik places the annual renewal of the covenant on Pentecost, the fifteenth of the month, but it may be that the ceremony was intended as preparatory for Pentecost.

Many scholars have pointed out the differences in communal lifestyle between the Rule of the Community and the Damascus Document. The Rule appears to stem from a community of men living in a close-knit order (*yahad*), sharing their goods and a discipline in accordance with a strict penal code. The Damascus Document, by contrast, presupposes men and women living a normal family life, with private property, and a discipline consisting primarily of adherence to the laws of the Torah. As far as the Genizah manuscripts are concerned, this depiction was adequate, although it failed to account for a vestige of the penal code (CD xvi.20–21) that deals with the offense of deliberately lying about property. The same offense is found in the Rule (IQS vi.24–25). We now have in the 4Q manuscripts an extensive pericope from the penal code that closely parallels that of the Rule in substance and in wording. However, the penalty of a reduction in the food

ration (1QS vi.25) is absent in Damascus Document, which suggests that it was applicable only to men living together in the *yahad*. On the other hand, the penal code of Damascus Document includes offenses such as "fornication" with one's wife, apparently involving violation of some sexual ban, and murmuring against the Fathers and Mothers of the community. These offenses presuppose conventional family life. Another difference from the Rule is the consistent pattern of dual punishment in the penal code of Damascus Document, suspension of access to purities and another penalty, each for a specified period of time.

The plurality of social practices has also been inferred from CD vii.6–7, which distinguishes between members of the sect who walk in "holy perfection" and those who dwell in camps in the manner of the land, marrying and bearing children, while following the Torah. This may reflect a bifurcation in social patterns, celibate and family oriented, within the Covenant community, not unlike what Josephus records about the Essenes (*The Jewish War* 2.160–161).

Theology. The Damascus Document does not contain any explicit formulation of the sect's theological beliefs comparable with that found in the Rule. Yet, it is clear that its author/s shared the deterministic and dualistic Qumran view of the world and of man. Neophytes are ranked according to their "inheritance in the lot of light" (CD xiii.12). In the now available opening passage the sage addresses his instruction to the "Sons of Light," warning them about the "fixed time of visitation" against the "spirit of iniquity." This is elaborated in a characteristically predestinarian fashion, "for they can neither come before or after their appointed times."

This determinism is also applied to the contrasting destiny of Israel and the nations. The expulsion ceremony at the end of Damascus Document opens with a blessing, which acclaims the universal creator who "established peoples according to their families and tongues for their nations, but made them go astray in a trackless void," while "our ancestors you did choose and to their descendants you gave your truthful statutes" (Damascus Document [4Q266 1.xi.1]). Here the nations are baldly depicted as being led astray by divine decree.

The messianic references in the Damascus Document to "the Messiah of Aaron and Israel" have been the subject of much debate between those who take them as designations for a single Messiah with priestly and royal functions, and those who interpret them in conformity with the Two Messiahs doctrine of the Community Rule. In CD xiv.19 the reference to the Messiah of Aaron and Israel is followed by the phrase "and he will atone their sin" (*wa-yekhapper 'avonam*), which could be taken to mean that the Messiah has the power of forgiveness for

sin. In *Mark* 2.7–10 the claim of such authority by Jesus is considered blasphemy in the eyes of the scribes.

History. One of the valuable aspects of the Damascus Document is the account of how the Qumran sect viewed its own history. According to the first historical discourse the community began with a nucleus of penitents who realized the errors of their ways "in the period of wrath," 390 years after the Babylonian conquest. After a twenty-year period of blind groping the Teacher of Righteousness became their guide. Among his antagonists was a figure called the Man of Mockery, whose followers "sought smooth things," a pejorative epithet applied elsewhere in Qumran writings to the Pharisees. This and other nicknames, such as "removers of the bounds" and "builders of the wall," are metaphors for religious laxity in matters of law. The Teacher of Righteousness and his faithful went into exile in "the land of Damascus" and entered into a "new covenant." The Damascus Document, in its present form, was composed after the death of the Teacher, whose "gathering in" is referred to in CD xx.14.

The utilization of this account for historical purposes is complicated by a number of factors. The number "three hundred and ninety" may be derived from *Ezekiel* 4.5. Moreover, we don't know whether the Qumran writers had any realistic knowledge of biblical chronology. "The land of Damascus" is ostensibly influenced by *Amos* 5.26–27, which refers to an exile "beyond Damascus." Many scholars have therefore argued that it does not refer to Syria, but to the sect's exile at Qumran. The author/s characteristic use of sobriquets for the protagonists in the sect's conflicts makes their individual identification little better than conjecture. Nevertheless, one can with greater confidence infer that the sect's image of its own history was that of a reformist group intent on disassociating itself from the religious and moral errors of its age. This would tend to support S. Talmon's characterization of the Covenanters as a millenarian movement with an anti-traditional, though hypernomistic posture.

Time and Sources. Of the Qumran manuscripts of the Damascus Document, the oldest copy is estimated to come from the beginning of the first century BCE. One may presume that the work in substantially its present form was in existence earlier. A *terminus post quem* is provided by the allusion to the death of the Teacher of Righteousness, which some scholars hypothesize occurred circa 110 BCE. However, these estimated parameters do not necessarily apply to each of the varied components that constitute the work. Thus, there are grounds for believing that the penal code of the Damascus Document represents an earlier system of penalties than that of the Rule, to which it is closely related.

Scholars have long attempted to apply source-critical techniques to the Admonition, but there has been little

agreement in delimiting the literary segments and their chronological provenance. Murphy-O'Connor proposed four independent sources prior to the Essene occupation of Qumran: the missionary exhortation (ii.14–vi.1), the memorandum (vi.11–viii.3), the critiques of the princes of Judah (viii.3–18), and the call to faithfulness (xix.33–xx.34). P. R. Davies (1983) sees a different fourfold structure of the Admonition: a historical description of the community's origin (i.1–iv.12a), a demonstration of the validity of the sect's stringent laws (iv.12b–vii.9), a secondary midrashic expansion added to reinforce the sectarian claims (vii.5–viii.19), and a supplement stemming from the "new covenant" Qumran group led by the Teacher (xix.33–xx.34). Both of the aforementioned writers are inclined to accept S. Iwry's thesis that the sect originated from a nucleus of returnees (*shavei yisra'el*) from the Babylonian exile. However, most other proposed reconstructions of Qumran history are based on the premise of a Judean background for the community.

Influences. The importance of the Damascus Document in the Qumran library can be gauged by the number of manuscripts that are extant. The work is, as far as we know and as we would expect, nowhere referred to in rabbinic literature. However, it was very likely of great interest to the early Karaites as an ancient antecedent for their rejection of rabbinic tradition. Schechter already noted in his introduction to *Fragments of a Zadokite Work* that the tenth-century Karaite scholar Al-Qirqisani refers in his history of Jewish sects to Zadok, the reputed founder of the Zadokites, as "the first to expose the errors of the Rabbanites." He reports that Zadok produced no proof for anything that he claimed "except for one thing, namely, the prohibition of marrying one's niece, which he deduced from her being analogous to the paternal and maternal aunt." This fits very well with the exposition in CD v.8–11. Of the legal doctrines of the Zadokites, Al-Qirqisani records that they prohibit divorce, although it is permissible according to scripture. No explicit prohibition of divorce is found in the Damascus Document, although some have inferred this from the ban on "taking two wives in their lives" (CD iv.20–21). Concerning the Zadokite calendar, he states that "they make all months of thirty days; perhaps they rely in regard to this upon the story of Noah." Schechter suggested plausibly that this alludes to the 150 days (*Gn.* 8.3; cf. *Jub.* 5.27) reckoned for the five-month duration of the flood. Interestingly, the writer of a Qumran text (Commentary on Genesis A [4Q252]) tried to harmonize this with the solar calendar, in which the third month of each quarter has thirty-one days, by interpolating two additional days between the end of the flood and the coming to rest of the ark.

The possibility that the medieval manuscripts of the Damascus Document were copied by Karaite scribes from an ancient *Vorlage*, which perhaps became available through an earlier scroll discovery, seems worthy of further consideration. It would account for the surprisingly close textual correspondence between the portions of Damascus Document preserved in the Genizah manuscripts and their ancient counterparts from Qumran Cave 4, despite the chronological gap of over a millennium, which separates them.

JOSEPH M. BAUMGARTEN

DANIEL, BOOK OF. [*This entry comprises three articles: Hebrew and Aramaic Text; Greek Additions; and Pseudo-Daniel.*]

Hebrew and Aramaic Text

The figure of Daniel and the literary traditions surrounding him exercised a strong attraction for Judaism in the Second Temple period, and the community gathered at Qumran apparently shared this interest. Eight manuscripts of the *Book of Daniel* were discovered there, as were fragments of several other lost works related to Daniel.

Of the *Book of Daniel* fragments, two manuscripts were recovered from Cave 1, five from Cave 4, and one on pa-

papyrus from Cave 6, while seven sets of fragments from other related works were found in Cave 4:

Daniel ^a (1Q71)	Prayer of Nabonidus (4Q242)
Daniel ^b (1Q72)	Pseudo-Daniel ^a (4Q243)
Daniel ^c (4Q112)	Pseudo-Daniel ^b (4Q244)
Daniel ^d (4Q113)	Pseudo-Daniel ^c (4Q245)
Daniel ^e (4Q114)	Aramaic Apocalypse (4Q246)
Daniel ^f (4Q115)	Daniel-Susanna? (4Q551)
Daniel ^g (4Q116)	Four Kingdoms ^{a,h} (4Q552–553)
Daniel (6Q7)	

With those eight copies, the *Book of Daniel* ranks next after the Torah, *Psalms*, and *Isaiah* in popularity. Only those books of the ones in the present Hebrew Bible boast more copies at Qumran. In contrast with this small book, eight copies of the twelve Minor Prophets (treated as a single book in the scrolls) and only six of *Jeremiah* and six of *Ezekiel* were found at Qumran, even though those three books are three times larger than *Daniel*. For yet other large books, such as *Joshua*, *Judges*, *Samuel*, *Kings*, *Job*, and *Proverbs*, no more than four copies survive.

Date and Characteristics of the Scrolls. With regard to date, Daniel^f and Daniel^g are the oldest manuscripts of the book that are extant, dating paleographically from the early Hasmonean period (the late second or beginning of the first century BCE). Thus, they were copied only about a half century after the composition of the book. Though parts of the composite *Book of Daniel* date from the Persian period, the traditional twelve-chapter edition of the book as in the Masoretic Text dates between the persecution initiated by Antiochus IV Epiphanes in 168 BCE and the Maccabean victory in 164 BCE. For the Hebrew Bible, this half-century distance between original composition and extant manuscript parallels the New Testament papyrus of the *Gospel according to John* from the second century CE in the John Rylands Library in Manchester.

Daniel^f is inscribed in an early semicursive script dated to “the late second century” BCE by Frank Moore Cross (1961, p. 43). In his comprehensive study of the development of Jewish scripts, Cross gives a description of the script and a paleographic chart (“The Development,” pp. 181–188 plus 149, fig. 4, line 2; “Palaeography,” pp. 395–401 plus plate 12, line 2). In these articles he assigned the date of the script to 100–50 BCE, but he has maintained his original date both through personal communication and in print (1974, p. 26), pointing to the evidence of the Daliyeh papyri as his basis for preferring the earlier date.

Daniel^g is copied in a large semicursive script. Only five tiny fragments survive, with three complete and thirteen partial words, so firm conclusions are difficult to attain. It appears to have had only nine lines per column (assuming a text similar to that in the Masoretic Text). A rough

calculation indicates that, if it had been a scroll of the entire *Book of Daniel*, about 120 columns would have been required. It is more likely that this scroll, with such an unusually small format, preserved only a portion of *Daniel*, perhaps just the prayer of 9.4–19. That would have required approximately ten columns, measuring slightly more than one meter in length. Other short, excerpted biblical texts, often prayers of liturgical passages, are known at Qumran (cf. 4QDeut^{11a} [4Q37, 4Q41, 4Q44], 4QPsalms^{a,h} [4Q89 and 4Q90], and 5QPsalms [5Q5]). It is even conceivable, in view of the early date of this scroll, that it is a copy of an originally independent prayer that had been incorporated into the *Book of Daniel* because of its appropriateness. If this were to prove correct, Daniel^f could, like the Prayer of Nabonidus, be considered as a source for the *Book of Daniel*.

Daniel^c (4Q112; hereafter called 4QDaniel^a) is written in an elegant formal hand from the late Hasmonean period or the transition into the Herodian period (from around the middle of the first century BCE). It attests parts of every chapter of the book except chapters 6, 9, and 12. In its sixty-six variants, it never agrees with the Masoretic Text in contrast to other scrolls or the Old Greek. One correction by the original scribe is interesting. The first verse of chapter 10 reads: “In the third year of King . . . , a word was revealed.” When writing the first verse of chapter 8, the scribe wrote: “In the third year of King . . . , a word was revealed” (as in 10.1), then crossed out “a word was revealed” and wrote the correct reading, “a vision was seen.”

Daniel^b (1Q72; hereafter called 1QDaniel^b) was also copied in the Hasmonean period, whereas Daniel^a (1Q71; hereafter called 1QDaniel^a) and Daniel (6Q7) were copied later in the Herodian period (the late first century BCE or first half of the first century CE). With regard to the dual-language traditional form of the book, 1QDaniel^a shows the shift from Hebrew to Aramaic precisely at *Daniel* 2.4b as expected, and this shift is supported by 4QDaniel^a as well, since it has chapter 1 in Hebrew and its next fragment at 2.9–11 in Aramaic. 4QDaniel^a and Daniel^b (4Q113, hereafter called 4QDaniel^b) also document the shift from Aramaic back to Hebrew at 8.1.

Daniel^d preserves only about a dozen small fragments that are identifiable. Its decipherment is especially difficult because apparently acid in the ink has badly corroded and eaten through the leather, so that often only the vague outlines of the letters remain. Since the script displays few exact features, dating is uncertain, but it appears to be from the late Hasmonean or early Herodian period (near the middle or latter part of the first century BCE). The text seems to be of the same general form as that in the other *Daniel* scrolls and the Masoretic Text,

including 3.24 following directly after 3.23, without the *Prayer of Azariah* and *The Song of the Three Young Men*. But there are numerous orthographic, morphological, and textual differences, sometimes inferior, from the traditional text.

4QDaniel^b is copied in a large, clear, stately hand described by Cross as a “developed Herodian formal script” from approximately 20–50 CE (“The Development,” pp. 173–181 and 139, fig. 2, line 6; “Palaeography,” plate 10, line 6). It is curious that, with regard to orthography, 4QDaniel^b expands considerably beyond the spelling practices of 4QDaniel^a and the Masoretic Text, which are generally similar, whereas the textual variants show a dramatically different arrangement. In the few places where their fragments overlap, 4QDaniel^a and 4QDaniel^b share two certain pluses and two probable pluses as variants against the Masoretic Text, with two of those four being shared by the Old Greek as well. In contrast, neither of the two Qumran scrolls ever agrees with the Masoretic Text in a textual variant against the other Qumran scroll. Though it cannot be proved, it is intriguing to question whether Daniel^b may have been copied from 4QDaniel^a while expanding its orthography.

Contents of the Scrolls. The eight manuscripts preserve the following passages:

1QDaniel ^a	4QDaniel ^f
1.10–17	10.5–9, 11–16, 21
2.2–6	11.1–2, 13–17, 25–29
1QDaniel ^b	4QDaniel ^d
3.22–30	3.23–25
4QDaniel ^a	4.5–9, 12–16
1.16–20	7.15–23
2.9–11, 19–49	4QDaniel ^e
3.1–2	9.12–17
4.29–30	6QDaniel
5.5–7, 12–14, 16–19	8.16–17?, 20–21?
7.5–7, 25–28	10.8–16
8.1–5	11.33–36, 38
10.16–20	
11.13–16	
4QDaniel ^b	
5.10–12, 14–16, 19–22	
6.8–22, 27–29	
7.1–6, 11?, 26–28	
8.1–8, 13–16	

Although no fragments have been identified as containing the Greek “additions” to *Daniel*, all the chapters of the Hebrew-Aramaic book are represented except chapter 12. That chapter, however, was certainly known, since another manuscript, the Florilegium from Cave 4, quotes *Daniel* 12.10 with the formula for introducing citations from scripture: “. . . it is written in the book of the

prophet Daniel . . .” (4Q174 1–3.ii.3–4). In considering Daniel a prophet, and thus the *Book of Daniel* among “the Law and the Prophets,” the Qumran community shared the common Jewish view. The *Gospel according to Matthew* refers to Daniel as a prophet (Mt. 24.15; see also Mk. 13.14), as does Josephus (*Jewish Antiquities*, 10.249, 266–267). The Christian Bible kept *Daniel* among the Prophets, whereas the first evidence within Jewish tradition that places *Daniel* among the Writings as opposed to the Prophets is the fifth-century CE Babylonian Talmud (B.B. 14b). It is likely, however, that after the Roman destruction of Jerusalem and the threat of Christianity, the rabbis began to emphasize the wisdom aspects of the book in contrast to the prophetic or apocalyptic aspects. Melchizedek from Cave 11 (11Q13 2.18) also refers to *Daniel*, apparently intending *Daniel* 9.25.

Textual Form. All the identified fragments from Daniel at Qumran share the same general text tradition as that transmitted in the Masoretic Text (as opposed to the longer Greek edition), though there are numerous interesting variants. There are also some small fragments appearing to belong to those manuscripts that cannot be placed using only the Masoretic Text form of the text. It is also possible that there are unidentified Hebrew and Aramaic fragments that simply have text from *Daniel* beyond that known from the Masoretic Text, whether small variants or from Hebrew or Aramaic forms of “the additions” to *Daniel*. The fact that Proto-Theodotion includes “the additions” in his Greek recension, while he is thought to have revised the Old Greek translation back toward a Hebrew-Aramaic text of his day, suggests that he may have known a Semitic text of *Daniel* for those parts that otherwise survive only in the Greek.

Growth of the Traditions. The literary traditions centering around Daniel first appear to have gained prominence within the biblical tradition in the Aramaic chapters 2–6 of *Daniel* during the Persian period (fifth–fourth centuries BCE). There are, of course, brief indications of age-old admiration, broader in scope than Israel but including Israel, of an ancient sage revered for his wisdom. The Canaanite myth of Aqhat from the second millennium BCE discovered at Ugarit has King Dan’el (“El/God judges”) as the father of Aqhat; as with Solomon, wisdom was associated with the royal leader. *Ezekiel* 14.14, 20 (cf. 28.3) also attests to the age-old figure alongside Noah and Job, singling out these three as models of righteousness. In the context of an oracle of judgment against a country that has sinned against the Lord and is then about to be punished, the message was that “even if these three, Noah, Dan’el, and Job, were within it, they could save (only) their own lives because of their righteousness” (*Ezek.* 14.14; cf. 14.20), whereas the rest of the population would be punished.

There does not seem to be any evidence warranting more than a general connection between the ancient figure of the wise Dan'el and the protagonist of *Daniel* in chapters 2–6. These stories probably circulated as wisdom stories in the Persian period, functioning as model stories for teaching the youth how to succeed in the foreign imperial court service while also remaining faithful to the Jewish God, religion, and people.

The Prayer of Nabonidus (4Q242), considered by many to be in some sense a source upon which chapter 4 of *Daniel* was built, also illuminates the growing traditions. Nabonidus (556–539 BCE) was the Babylonian king who is credited with losing that magnificent empire to Cyrus, founder of the Persian empire. The words of his prayer relate that he had been plagued for seven years with a virulent inflammation at God's command while he was in the desert oasis of Teima. He had, for those seven years, been praying to "the gods of silver and gold, [bronze and iron], wood, stone, and clay" (see *Dn.* 5.4), and "was changed" (presumably into some animal's mind; see *Dn.* 4.16). A Jewish exorcist suggested that he write down his account and give glory to God, who "forgave my sins" and presumably healed the king. *Daniel* (chap. 4) relates a similar story, now told about the more famous king Nebuchadnezzar, known more widely to Jews and all too well as the king who had sacked Jerusalem and taken the Jewish people into exile.

With the persecution of Antiochus IV Epiphanes (175–164 BCE), the apocalyptic sections, chapters 7–12, were added to the collection as visions from that ancient seer. The distant time of the ancient wisdom figure now became the exilic period, whereas to the exilic prophet Ezekiel, the distant time had been that of Noah and Job.

The twelve-chapter form of the collection, preserved in the Masoretic Text, thus assumed its present shape somewhere around 166 BCE, and the Hebrew-Aramaic manuscripts found at Qumran exhibit generally this form of the text tradition. Further traditions centered around *Daniel*—it is unknown whether these were composed in Hebrew/Aramaic or in Greek—continued to be collected in the textual form transmitted in the Greek, including *Bel and the Dragon*, *Susanna*, the *Prayer of Azariah*, and *The Song of the Three Young Men*.

Daniel's Impact on Qumran. The vocabulary, apocalyptic thought, angelology, and other aspects of the late parts of *Daniel* strongly impacted the thought and vocabulary of the closely contemporary group at Qumran (e.g., "inaskil," "the many," and "the time of the end," *Dn.* 12.3–4). Even the characteristic method by which Qumran Covenanters interpreted the scriptures, clearly exemplified in the *peshtarim*, is visible in *Daniel* 9.2, 24–27. Daniel studies "the books," in this case *Jeremiah*, to learn how long the devastation of Jerusalem brought on by Anti-

ochus will last. In the "seventy years" that he read in *Jeremiah* 25.11–12 and 29.10, he found the clue to the revealed divine plan (*ruṣ*). The author, removing the number from the historical context that Jeremiah was addressing, multiplies the number for Gabriel's revealed interpretation (*pesher*). The "seventy weeks of years" (*Dn.* 9.24) brings the time down to the general period of Antiochus and the time of the "end" (*Dn.* 9.26).

This method of understanding prophetic revelation, as seen in *Daniel* and at Qumran, was shared by other Jews who focused on prophecy, including the early Christians. Revelation was seen as the word of God spoken long ago through the prophets. Its main application was found, not in what the prophet had meant and in what his audience had understood by his words, but in the illumination that those words now provided for their own time (e.g., *Mt.* 1.22–23; 2.5–6, 15, 17–18; *Heb.* 1.5–13; 5.5–6).

Greek Additions

Sections of the *Book of Daniel* are contained in the Greek translation and its daughter versions, but not in the Masoretic Text. Although some or all of these sections may be older than parts of the Aramaic and Hebrew *Book of Daniel*, they are surely additions to the originally composed form of the book (167–164 BCE). Nonetheless, they are integral parts of the versions in which they are included and are canonical scripture for the Roman Catholic and Eastern Orthodox Churches.

The Greek version of *Daniel* has been preserved in two different text forms (Collins, 1993, pp. 3–11). The Old Greek version (OG, c.100 BCE) is extant in its entirety in only two manuscripts (88 [ninth to eleventh century] and the SyroHexapla [616–617 CE]), and parts of it are preserved in two fragmentary papyri (967, c.200 CE; 29255, fifth century CE). The translation ascribed to Theodotion (the turn of the era), which came to replace the Old Greek in Christian usage, is thought to be, alternatively, a revision of the Old Greek or an independent translation (Collins, 1993, pp. 9–11; McLay, 1996, favors the latter).

The Story of Susanna. According to this short story set in Babylon, Susanna, a devout and virtuous Jewish woman, is propositioned by two elders who are smitten by her beauty. When she refuses them, they accuse her of adultery. Susanna prays for deliverance, and God prompts the young Daniel to come to her defense. He interrogates the elders and finds contradictions in their testimony that show their charges to be false. Susanna is delivered from death, and her accusers are executed.

Aspects of the story are reminiscent of widespread folk motifs (Moore, 1977, pp. 88–89); however, its theme and plot line closely parallel the court tales in *Daniel* 3 and 6 and, to a degree, *Genesis* 37–45 and the *Book of Ahiqar* (Nickelsburg, 1981, 1985). The protagonist is conspired against, condemned to death, rescued by God, and vindicated. Like the heroes in *Daniel* 3 and 6, Susanna's piety is the cause of the accusations against her. The story differs from other examples of the genre in that the protagonist is an ordinary person rather than a court official and a woman rather than a man. Certain details in the story, however, parallel the story of Joseph and Potiphar's wife (*Gn.* 39), with the male and female roles reversed. Although the story of *Susanna* is set in the Diaspora, it

focuses on the situation in the Jewish community and encourages obedience to God in the midst of the temptations and pressures that could arise in the Israelite community. There is also a certain antiestablishment motif present, with the young charismatic Daniel set in opposition to the elders of the community, who abuse their judicial functions for their own selfish and sinful ends. Brüll's hypothesis that the story of *Susanna* was created as a Pharisaic polemic against the court procedures and theories of the Sadducees has not found wide acceptance.

Theodotion's version of *Susanna* presents a more elaborate form of the story than the Old Greek and is marked by a heightened focus on Susanna. It alone contains the episode about Susanna's bath that enhances the story's dramatic and erotic interest (Collins, 1993, p. 426) and plays a major role in artistic and musical interpretations of the story. In the Old Greek the story is placed at the end of the *Book of Daniel*, either before or after the tale of Bel and the Dragon. The story concludes by praising the single-minded, pious, and wise youths of Israel, of which Daniel is the epitome. This conclusion diverts the focus of the story from the virtuous conduct of the protagonist, Susanna, to the upright behavior of her deliverer, who is the main character in the book to which the story is attached. In the manuscript tradition of Theodotion, the story stands at the beginning of the *Book of Daniel*, and its last verse provides a transition to the stories in chapters 1–6 by explaining that the Susanna incident contributed to Daniel's rise to prominence.

The use of Greek wordplays in the text has led some critics to suppose that the story was composed in that language; however, old wordplays can always be recreated in a translation (see Milik, 1981, pp. 350–353, for suggestions in Aramaic). More persuasive is the evidence presented for mistranslations and alternative translations from a Semitic-language original (Moore, 1977, pp. 82–84; Collins, 1993, pp. 427–428). Milik suggests that Daniel-Susanna(?) (4Q551) preserves fragments of an Aramaic version of the story, but the fragments show remarkable verbal parallels to the *targum* of the biblical story of the Levite and his concubine (*Jgs.* 19.16–30) (Nickelsburg, 1997).

Bel and the Dragon. This triple narrative stands at the end of the Greek version of the *Book of Daniel*, where it serves as a final story depicting Daniel's interaction with the kings of Mesopotamia. (The reference to Cyrus in *Daniel* 10.1 has no counterpart in the narratives in chapters 1–6.) The first episode sets the living God and his servant Daniel in opposition to the god Bel and his servants, the priests, and King Cyrus (vv. 3–22). Daniel challenges the divine nature of the idol, while the king acclaims Bel. In the end Bel is shown to be only clay and brass, the priests are killed, and Bel is destroyed. In the

second episode (vv. 23–30), the living God and Daniel oppose the dragon (or perhaps better, serpent) and Cyrus. With the king's permission, Daniel feeds the beast a lethal concoction that causes it to explode. The people claim that "the king has become a Jew" and demand that Daniel be handed over to them. This leads to the third episode (vv. 31–42), in which Daniel is thrown into a lions' den, from which he is rescued by the prophet Habakkuk. Now the king acknowledges the power and uniqueness of Daniel's God, and Daniel's enemies are destroyed.

This story has clear thematic and narrative parallels with the stories in *Daniel* 1–6. Daniel, the servant of the true God, is pitted against a Mesopotamian monarch and his idolatrous god. A life-threatening ordeal vindicates Daniel and results in the monarch's declaration of faith in God and the destruction of Daniel's enemies. The episode about the lions' den, in particular, is a version of the story preserved in *Daniel* 6. Some of its elements seem more developed than *Daniel* 6 (Nickelsburg, 1985, p. 40); but other considerations may indicate that the two versions developed independently of one another (Collins, 1993, pp. 411–412). The other two episodes may have originated as separate stories (Moore, 1977, pp. 121–125). In any case, the three parts of the story are presently bound together by a single plot that moves from the king's idolatrous worship of Bel and opposition to Daniel and his God to the king's acclamation of Daniel's God.

Its many parallels in *Daniel* 1–6 notwithstanding, *Bel and the Dragon* has its own peculiar emphasis: an explicit and repeated polemic against idolatry. A string of similarities between *Bel and the Dragon* and *Isaiah* 45–46 may indicate that the double stories about Bel and the dragon developed or were enhanced by an exegesis of these chapters of *Isaiah*. Other elements in the text reflect traditional motifs. The term "living God" frequently is found in Jewish polemics against idols. The sarcastic touches in the narrative stand in a long tradition of such polemics (*Is.* 44.9–20, *Wis.* 13–14, *Let. Jer.*, Ap. Ab. 1–8; see Roth, 1975, pp. 42–43). Daniel's destruction of Bel's temple recalls similar incidents attributed to Abraham (*Jub.* 12.1–14) and Job (*Testament of Job* 2–5).

Although the language of the story's composition is uncertain, it may well have been composed in a Semitic language (Collins, pp. 410–411). The time and place of composition also are uncertain, but there is no compelling evidence that they were composed with a knowledge of the present book of *Daniel* or even chapters 1–6 (Collins, 1993, p. 412).

Prayer of Azariah and the Song of the Three Young Men. This section of text, inserted between *Daniel* 3.23 and 3.24 of the Aramaic text, comprises a prayer of confession ascribed to Azariah (Abednego) and a hymn of thanksgiving placed on the lips of the three young men.

The addition of the liturgical compositions into a narrative context has a number of biblical models (e.g., *Ex.* 15, *Jgs.* 5, and *1 Sm.* 2).

Azariah's prayer is a confession of the nation's sins based on traditional covenantal theology, particularly as expressed in *Deuteronomy* 28. It has especially close parallels in *1 Baruch* 1.15–3.8, *Daniel* 9.4–19, and *Words of the Luminaries*. [See *Words of the Luminaries*.] The prayer seems to have been a previously extant composition inserted into the narrative according to a typical literary pattern (deliverance comes in response to prayer). Its contents fit the general circumstances of the Babylonian exile or the persecution under Antiochus IV Epiphanes rather than the specifics of the young men's predicament. The prayer may well have been composed during the Antiochan persecution, possibly in Hebrew (Collins, 1993, pp. 202–203).

A prose insertion following the prayer emphasizes the ferocity of the fire (thus heightening the miraculous rescue of the three young men) and provides a transition to the song of thanksgiving. This hymn divides into four sections: a doxology to the God who is enthroned in his temple (vv. 31–33), perhaps the heavenly temple (v. 34), and a threefold appeal for the whole creation to join in the praise of God (heaven and its inhabitants and elements, vv. 35–51; the earth and its inhabitants, vv. 52–60; and Israel, vv. 61–65). The hymn has been influenced by the language and style of the canonical *Book of Psalms*, particularly Psalms 136 and 148. Its lack of specific relevance to the particulars of its context suggests that it was an independent composition, written quite likely in Hebrew at some unknown date prior to the Greek translation of *Daniel* (Collins, 1993, p. 205).

The Qumran corpus contains several works that use Daniel's name or are reminiscent of the Daniel stories and visions. The Prayer of Nabonidus (4Q242) recalls the setting of *Daniel* 4, while Pseudo-Daniel^a (4Q243–245) mentions him and apparently attributes to him a survey of biblical history and the last days. The Aramaic Apocalypse (4Q246) reminds one of *Daniel* 2 and 7. [See *Aramaic Apocalypse*.] None of these texts, however, seems to be connected with the additions found in the Greek forms of *Daniel*; this is further evidence for a wider cycle of Danielic works than had been recognized before. The Prayer of Nabonidus may provide a glimpse at a form of the story about Nebuchadnezzar's illness in *Daniel* 4 that is earlier than the one preserved in the canonical text. The Pseudo-Daniel texts from Qumran may parallel or elaborate on various parts of an existing text of *Daniel*.

Importance for the Hebrew Scriptures, Septuagint, and Early Jewish Literature. As is indicated by the parallel biblical passages cited above, each of the additions to *Daniel* attests the ongoing life of biblical traditions in

Jewish narrative and liturgy of the Hellenistic period. The inclusion of these additions in the Greek *Daniel* is evidence that its translators felt free to elaborate on a received biblical text (the Hebrew scriptures form of Daniel) that they did not yet consider to be fixed. The process has parallels in the development of the Hebrew scriptures (in *Jubilees*) and later in some of the *targumim*. The stories of *Susanna* and *Bel and the Dragon* are parts of literary corpora that provide evidence about the status of women in Hellenistic Judaism (Levine, 1995) and reflect the Jewish aversion to idolatry. The incorporation of the prayer and hymn into the story in *Daniel* 3 is a reminder that one should include the practice of liturgical piety in one's reconstruction of the history of Judaism, which is often dominated by a focus on religious ideas, that is, theology.

Pseudo-Daniel

The name Daniel occurs in three manuscripts found at Qumran that are not part of the *Book of Daniel*, Pseudo-

Daniel^{a-c} (4Q243–245). In addition, there are four other manuscripts where a relationship to the *Book of Daniel* has been proposed.

Pseudo-Daniel^{a-c}. The Pseudo-Daniel manuscripts were partially published by Józef T. Milik (1956). Pseudo-Daniel^{a-b} overlap and clearly belong to the same manuscript. Milik tentatively proposed that Pseudo-Daniel^c belonged to the same work, but this now seems doubtful. Pseudo-Daniel^{a-b} present a speech by Daniel in a royal court. The speech is an overview of history, beginning with Noah and the flood and continuing down to the Hellenistic period. (The document contains several personal names. Only one, Balakros, is fully preserved. This name was borne by several figures in the early Hellenistic period.) Pseudo-Daniel^c contains a long list of names. In part, this list gives the names of high priests from the patriarchal period (Oathath) down to the Hellenistic age (Onias, Simon). It then continues with a list of kings, including David, Solomon, and Ahaziah. It is difficult to see how these lists could be integrated into the document preserved in Pseudo-Daniel^{a-b}. The latter document views Israel in the context of universal history and is concerned with the problem of foreign domination; Pseudo-Daniel^c is focused on the internal history of Israel. The two documents may come from the same or related circles, but their relationship seems to be only complementary.

Forty fragments of Pseudo-Daniel^a and fourteen fragments of Pseudo-Daniel^b have been preserved. Both manuscripts are written in Herodian script (late first century BCE). Although Milik found affinities between this text and the *Book of Daniel* in allusions to seventy years and a four-kingdom schema, neither element is actually found in the fragments. The reconstruction of "seventy years" seems more plausible than any alternative in Pseudo-Daniel^a, fragment 16. The reference, however, might not necessarily refer to the Exile, as it does in *Daniel* 9; Pseudo-Moses^c (4Q390) has two references to seventy years, neither of them in an exilic context. The four-kingdom schema is inferred from the fourth line of the same fragment, which reads *hi' malkhuta' qad[]* ("it is the . . . kingdom"). Milik restored *qad[mita']* ("first"). This reconstruction is problematic on two counts (see Collins and Flint, 1996). First, two lines earlier in the same fragment we read that "he will save them." It seems unlikely that an act of salvation would be followed immediately by the inauguration of the first of a series of gentile kingdoms. Second, if Milik's interpretation were correct, this would be the only case in which the four-kingdom sequence (known from the *Book of Daniel* and the fourth *Sibylline Oracle*) is inaugurated after deliverance from the Exile. The first kingdom is always either Babylon or Assyria. Alternative reconstructions are possible. The phrase can be read as *malkhuta' qadishta'* ("holy king-

dom"), and the passage may be located in the eschatological phase of the prophecy.

Pseudo-Daniel^c survives in four fragments, one of which contains the list of names already noted. The second fragment contains a passage reminiscent of the Damascus Document (CD 1), where some people are said to wander in blindness. There follows a statement that "these then will rise" (*yequmun*). Milik saw here a reference to resurrection and a parallel to *Daniel* 12, but the verb *qum* is not used in *Daniel* 12 and does not necessarily refer to resurrection at all. The following line says that some people "will return" (*yetuvun*). It seems then that these fragments may be largely independent of the *Book of Daniel* and derive from distinct pseudepigraphic compositions, which attributed new revelations to the biblical sage.

We can only guess at the provenance of these compositions. Even if Pseudo-Daniel^c did not form a part of Pseudo-Daniel^{a-b}, these probably had an eschatological conclusion. Fragment 24 of Pseudo-Daniel^a speaks of the gathering of the elect, and fragment 25 seems to imply an eschatological battle ("the land will be filled . . . with decayed carcasses"). Pseudo-Daniel^{a-b} share several motifs with other quasi-prophetic pseudepigrapha of the time. Israel at large lives in error, owing to the influence of demonic spirits. Eschatological restoration is the destiny of an elect group, who walk in the way of truth, in contrast to the "error" of others. The eventual emergence of this elect group is surely one of the major themes of this work. In this respect it resembles such works as the "Animal Apocalypse" (*I En.* 83–90), the "Apocalypse of Weeks" (*I En.* 93.1–10, 91.11–17), the Damascus Document, and Pseudo-Moses^c. While all these works resemble each other in describing the emergence of an elect group, there are too many differences between them for all to be attributed to the same circle of authors.

The best known "elect group" that emerged in the second century BCE was the Qumran sect. There are distinct parallels in Pseudo-Daniel to the Damascus Document in the account of the Exile as giving Israel into the hand of Nebuchadnezzar for the desolation of the land (see CD i.12; v.20). Yet there is no mention of a *yahad* sect, and no unambiguously sectarian language. Pseudo-Daniel's relation to the Dead Sea sect may be analogous to that of *Jubilees* or *1 Enoch*, which were evidently treasured at Qumran but which derived from separate, older movements.

Pseudo-Daniel^c also envisages a group that wanders in blindness and another group that "returns." The key to the provenance of the document, however, lies in the list of names. The priestly names include *Honiah* (Onias) and, in the following line, *Shim'on*. The name preceding *Shim'on* ends in *n*, and the trace of the preceding letter

seems more like *tav* than *nun*. The possibility arises that the text is referring to Jonathan and Simon Maccabee. If this is so, Jonathan and Simon may be presented simply as the culmination of a series of high priests, or the fragmentary text may have regarded them as usurpers of the priesthood (see Collins and Flint, 1996). Since the following fragment speaks of people wandering in blindness and envisages some eschatological reversal, the latter possibility seems more likely. Nothing is certain, however, in view of the fragmentary state of the text.

Prayer of Nabonidus. Together with the Pseudo-Daniel fragments, Milik also published fragments of the Prayer of Nabonidus (4Q242), which is relevant to the interpretation of *Daniel* 4. While there are some problems of interpretation, the text is clearly presented as a proclamation of Nabonidus, the last king of Babylon, who says that he was afflicted with a disease during his sojourn at the oasis of Teima in Arabia and that he was instructed by a Jewish diviner to pray to the most high God. The historical Nabonidus was absent from Babylon and lived in Teima for ten years. The Qumran text gives the sojourn as seven years, the same length as Nebuchadnezzar's madness in *Daniel* 4. Long before the discovery of the prayer of Nabonidus, scholars had suspected that the legend in *Daniel* 4 had its origin in the prolonged absence of Nabonidus from Babylon. *Daniel* 4 also tells of a Babylonian king brought low by distress, who is directed to the true God by a Jewish exile. It is likely, then, that the prayer preserves some older aspects of the tradition that underlies *Daniel* 4.

Some scholars have restored the text of the prayer in ways that enhance the parallels with *Daniel* 4. Frank Moore Cross (1984) reconstructs line 3 of column i to read "I was like a beast" (cf. *Dn.* 5.21). Rudolf Meyer (1962) reconstructs a dream about a great tree in column ii. These reconstructions go beyond the available evidence (Collins, 1996). It is not necessary to suppose that *Daniel* 4 depended directly on the Prayer of Nabonidus, but the two texts draw on a common tradition.

Aramaic Apocalypse. A clear relationship to the *Book of Daniel* can also be seen in the Aramaic Apocalypse (4Q246), the so-called Son of God text, where there is a general similarity in setting. The Aramaic Apocalypse is the interpretation of a vision, apparently the vision of a king, by someone who falls before the throne in the opening verse. There are verbal parallels to *Daniel* (ii.5): "His kingdom is an everlasting kingdom" (cf. *Dn.* 4.3, 7.27), and "His sovereignty is an everlasting sovereignty" (ii.9; cf. *Dn.* 4.31, 7.14). Another possible allusion to *Daniel* is the use of the word "to trample" (*dush*) [ii.3]; (cf. *Dn.* 7.7). These parallels give rise to the suspicion that the Aramaic Apocalypse may be an adaptation of *Daniel* 7, although it is certainly not a systematic interpretation. Émile Puech

(1992), however, prefers to regard the text as a roughly contemporaneous parallel to *Daniel* that shares some language with the biblical book.

Two other vaguely Danielic writings may be noted more briefly. Milik (1956) referred to a text with four talking trees. The first is asked its name and responds "Babylon." The following line reads "[Y]ou are he who rules over Persia." The text is extremely fragmentary; it is identified as Four Kingdoms^{a-b} (4Q552-553). Robert Eisenman and Michael Wise (1992) have translated the text and proposed some reconstructions. The motif of four kingdoms was known apart from the *Book of Daniel*; however, here a relationship with *Daniel* is suggested solely because Babylon is identified as the first kingdom (Assyria usually holds that position in texts other than *Daniel*, e.g., *Sihylline Oracle* 4). Milik has also tentatively suggested that Aramaic fragment Daniel-Susanna? (4Q551) belongs to the story of Susanna. The basis for the suggestion is that the fragment appears to deal with the selection of a judge, but this is hardly sufficient evidence to warrant an identification with Susanna. Finally, Magen Broshi and Esther Eshel have proposed that 4Q248 (= 4QHistorical Text) (Acts of a Greek King) was a source for the Book of Daniel. This fragment reports the activities of a king in Egypt and Israel, including "the city of the sanctuary," Jerusalem. Broshi and Eshel read lines 9 and 10 as [*u-kekhalot*] *nappets yad 'am ha-[qodesh*: "and when the shattering of the power of the holy people is complete." This would correspond to *Daniel* 12.7, except for the omission of a definite article in the biblical text. The parallel is exceptionally interesting, since most scholars have emended the text of *Daniel* to read "when the power of the oppressor of the holy people comes to an end," and the emendation would now seem unlikely. The actual reading of the key phrase, however, is very doubtful. The *nun* of *nappets* has to be reconstructed, and other scholars read *h* (*het*) instead of *p* (*pe*). If the reading *nappets* is not correct, this text has no relationship to *Daniel*.

DAVID. David's role and portrait in the Dead Sea Scrolls has much in common with what we find in the Hebrew Bible (where it occurs more than one thousand times), but has been further developed in significant ways. In the Hebrew Bible, David is an important theological symbol and a paradigmatic figure who features as: (a) Israel's greatest king and founder of Israel's foremost dynasty with whom God made a covenant; (b) the man after God's own heart who accomplished much despite his flaws; (c) the Psalmist par excellence; and (d) the inspiration for the messianic hopes of Jews and Christians.

The discussion below is confined to material found in the Qumran caves (and the Cairo Damascus Document), where references to David are conveniently grouped under four headings: (1) David as Psalmist, (2) David as Righteous Example, (3) David as a Wisdom or Prophetic Figure, and (4) David in Eschatological and Messianic Traditions. Some overlap between these categories will inevitably occur.

David as Psalmist. Any treatment of David at Qumran should include the *Psahns* scrolls, which contain material

that differs markedly from our received book of 150 *Psalms*. A total of 40 *Psalms* scrolls were found in the Judean Desert (37 at Qumran), which makes the psalter by far the best represented book. Its prominence is reflected in the halakhic letter MMT^d (4Q397 14–21, C.9–10): “the book of Moses and the books of the Prophets and David,” which apparently denotes the emerging third division of the Hebrew Scriptures by the Psalter as the foremost Davidic book.

Although none of the *Psalms* scrolls is complete, it seems that Psalms 1–89 were generally in the form now preserved in the Masoretic Text. For Psalms 90 onward, however, the picture is markedly different. At least three *Psalms* scrolls (4Q87, 11Q5, and 11Q6) preserve the latter part of a distinctive Psalter, both in the presence of additional Psalms (e.g., the Apostrophe to Zion) and in the ordering of compositions (e.g., Psalms 141→133→144→155→142→143). The arrangement of such material, the inclusion of Davidic superscriptions in two Psalms (104 and 123) where these are lacking in the Masoretic Text, plus the final two autobiographical *Psalms* (151A and 151B) give this “11Q5 Psalter” a far stronger Davidic character than the Masoretic Text 150 Psalter.

The statement in “David’s Compositions” that David, son of Jesse, wrote 3,600 psalms and a total of 4,050 pieces (11Q5 xxvii.4–10) indicates that for its compiler David wrote many more psalms than those preserved in the Masoretic Text. These would include all or most of the “apocryphal” pieces found in Psalms^a (11Q5, hereafter called 11QPsalms^a) and the other *Psalms* scrolls, some of which contain Davidic superscriptions (notably 151A and 151B in 11QPsalms^a, and the final piece in Apocryphal Psalms^a [11Q11]), as well as compositions found in some other scrolls (possibly Noncanonical Psalms A [4Q380] and Noncanonical Psalms B [4Q381]). “David’s Compositions” also makes it clear that the number of psalms and songs written by David has some relationship to the solar calendar of 364 days. Since the calendar was related to the festivals where psalms were sung, it is not surprising to see David in a calendrical role. In *1 Chronicles* 24.1–19 he is described as the founder of the *mishmarot* or priestly shifts that feature so prominently in some calendrical texts found at Qumran. David’s role in arranging the festivals and their times throughout the year is also specified in *Ben Sira* 47.10.

David as Righteous Example. Several scrolls refer to the historical David and events in his life, usually to illustrate his faithfulness to God or his virtues. Two interesting cases are *Psalms* 151A and 151B in 11QPsalms^a, the only “Davidic” Psalms that are *unambiguously* autobiographical in terms of their content. For example, 151A reads: “Smaller was I than my brothers, . . . so he made me shepherd of his flock. . . . He sent his prophet to

anoint me, Samuel.” *Psalms* 151B continues: “Then I [saw] a Philistine uttering defiance from the ranks of the enemy”. David’s triumph over Goliath is also celebrated in the War Scroll (1QM): “Indeed, Goliath the Gittite, a mighty man of valor, you delivered into the hand of David your servant, because he trusted in your great name and not in sword and spear. For the battle is yours” (1QM 11.1–2). Such passages portray David as faithful to God and as a model of piety and virtue. In a similar vein the Damascus Document states that “the deeds of David were all excellent” (CD v.5), while MMT^c (4Q398) urges the reader to “remember David, he was a pious man” (4Q398 2.ii.1).

But David’s failings are not simply ignored. The two passages quoted immediately above continue: “(were all excellent), except for the murder of Uriah, but God forgave him for that” (CD v.5–6); and “(a pious man), and indeed he was delivered from many troubles and forgiven” (4Q398 2.ii.1). As occurs earlier in the Chronicler’s retelling of *Samuel* and *Kings*, several Qumran texts accentuate the positive in David and his virtues, playing down his failures and sins. Yet one more example is found in CD v (= 4Q273 frg. 5), which is critical of those who practice divorce and remarriage and quotes *Deuteronomy* 17.17 with respect to “the leader”: “He shall not multiply wives to himself” (line 2). Since David had several wives and would thus be culpable, the passage proceeds to excuse David because he was unaware of this ruling: “David had not read the sealed book of the Law in the Ark; for it was not opened in Israel from the day of the death of Eleazar and Joshua and the elders who served the goddess Ashtoret. It lay buried (and was not) revealed until the appearance of Zadok.”

David as a Wisdom or Prophetic Figure. David’s connection with prophecy and wisdom is particularly evident in David’s Compositions:

And David, the son of Jesse, was wise, and a light like the light of the sun, anditerate, and discerning and perfect in all his ways before God and men. And the Lord gave him a discerning and enlightened spirit. And he wrote . . . 4,050 (compositions). . . . All these he composed through prophecy which was given him from before the Most High. (xxvii.2–11)

The notion of David as a wisdom figure is rare in the scrolls, and is not a prominent component of his profile at Qumran. The above quotation is perhaps best viewed as serving a special function of claiming Davidic authorship and authority for the Psalter found in 11QPsalms^a or of associating it with wisdom circles. Another relevant passage is *Pesher Isaiah*^a (4Q161) quoting *Isaiah* 11.1–2: “[A rod will grow from] Jesse’s stock, a sprout [will bloom] from his [roots]; upon him wi[ll rest] the spirit of [the Lord: a spirit of] wisdom and insight, a spirit of good

coun[sel and strength], a spirit of true know[ledge and reverence for the Lord," which relates to messianism as well as wisdom (frgs. 8–10).

Although it has been claimed that David was regarded as a "prophet" at Qumran, caution seems advisable. 11QPsalms^a tells us that he composed his works "through prophecy," but does not call him a prophet; compare 1 Samuel 16.13, which says that the spirit of the Lord came upon David, and 2 Samuel 23.1–7, which describes his last words as an "oracle" or "declaration." The evidence seems to suggest that at Qumran David was associated with prophecy, but falls short of identifying him as an actual prophet. Such caution seems justified in view of the apparent distinction between "the books of the Prophets" and "David" in MMT^c (quoted above). The notion of David as prophet is evident in the New Testament (Acts 2.30–31), and is more fully articulated in rabbinic writings such as the Babylonian Talmud: "Who are the first prophets? Rabbi Huna said: 'They are David, Samuel, and Solomon'" (B.T., *Sot.* 48b).

David in Eschatological and Messianic Traditions. References to David in this section are of two main types, both of which are significant for messianic expectation in the Qumran scrolls. First, some texts refer to David's kingship or eschatological themes without overt reference to the Qumran *yahad* or its distinctive doctrines. One example is the Words of the Luminaries^a (4Q504), which affirms God's covenant with David and the everlasting Davidic dynasty: "And you chose the tribe of Judah, and your covenant you established with David so that he would be like a shepherd, a prince over your people, and would sit on the throne of Israel in your presence for ever" (4Q504 frg. 4.5–8). Such imagery is often reminiscent of biblical texts, in this case Psalm 89.3–4 and 2 Chronicles 21.1.

The second group of texts in this category are more closely associated with the Qumran covenants or contain "sectarian" language or imagery characteristic of the *yahad*. One rather intricate example is CD vii.15–17 (= Damascus Document^d, 4Q269 frg. 5), which understands the "fallen tent of David" that will be set up again (Am. 9.11) as referring to the king or leader of the nation. The Florilegium (4Q174 frg. 3.10–13) affirms the "throne of his kingdom [for e]ver" (2 Sm. 7.13) and interprets the "son" of 2 Samuel 7.14 as the "Shoot of David, who is to arise with the Interpreter of the Law, and who will [arise] in Zi[on in the La]st Days." Like CD vii, this text also quotes Amos 9.11, specifically stating that "this passage describes the fallen Branch of David, [w]hom He shall raise up to deliver Israel." Another relevant text is the Commentary on Genesis A (4Q252 1.v.1–6) on Genesis 49.10, which also affirms the everlasting Davidic dynasty ("[And] the one who sits on the throne of David [shall

never] be cut off"), the coming of "the Righteous Messiah, the Branch of David," and the giving of "the covenant of the kingdom of his people to him and to his seed" for ever, because [this king] "has kept . . . the law together with the men of the *yahad*."

The *pesher* on Isaiah³ quotes *Isaiult* 11.1–5 as referring to "[the Branch of] David, who will appear in the Las[t Days]." This passage offers several more characteristics of the coming Davidic messiah: for example, the spirit of the Lord will rest upon him, a spirit of wisdom and insight, of good counsel and strength, of true knowledge and reverence for the Lord, and he will delight in reverence for the Lord. But the War Rule (4Q285) tells us that this messiah will also judge and slay his enemies: "A shoot shall come out from the stump of Jesse [and a branch shall grow out of his roots (*Is.* 10.34–11.1). This is the] Branch of David. Then [all forces of Belial] shall be judged, [and the king of the *Kittim* shall stand for judgment] and the Leader of the nation—the Bra[nch of David]—will have him put to death. [Then all Israel shall come out with timbrel]s and dancers, and the [High] Priest shall order [them to cleanse their bodies from the guilty blood of the c]orpse[s of] the *Kittim*" (4Q285 frg. 5.2–6).

The references to David in the Qumran scrolls build on themes in the Hebrew Bible but also offer new emphases. Most prominent is the fuller and more extensive picture of David as Psalmist, and as a messianic figure whose throne and kingdom will last for ever and who will judge and slay his enemies.

DAVID, NAHAL. See Sdeir, Wadi.

DEAD SEA. With its northern shore located about 20 kilometers (13 miles) due east of Jerusalem, the Dead Sea figures prominently in biblical, Jewish, and Christian literature. The name *Dead Sea* was first used by Pausanias (*Periegesis* 5.7, 4-5) in the second century CE. In the Hebrew scriptures, it is most frequently called "Salt Sea" (e.g., *Gn.* 14.3 and other texts in the Hexateuch), "Sea of Arabah" (e.g., *Dt.* 3.17), and "Eastern Sea" (in relation to Jerusalem, e.g., *Ezek.* 47.18). In *2 Esdras* 5.7, sometimes in Josephus, and in the Talmud, it is the "Sea of Sodom" (e.g., Josephus, *Jewish Antiquities* 5.1.22; B.T., *Shab.* 108b); Greek and Roman writers, including also at times Josephus, called it "Sea of Asphalt" (e.g., Pliny, *Natural History* 5.15.15); Arabic literature calls it "Sea of Sodom and Gomorrah," "Sea of Zo'ar," and, since medieval times, "Sea of Lot"; a few European travelers called it "The Devil's Sea." Early Greek writers who mention it include Aristotle (*Meteorology* 2.3, 39) and Strabo (5.2.42). The mineralogical importance of the region was known from very ancient times. Alexander the Great's generals Antigonus and Demetrius tried, but failed, to subdue the Nabateans of the region in order to get at the minerals (Diodorus 19.95-96). The southern end of the Dead Sea was known for its bitumen even in biblical times (*Gn.* 14.10).

Physical Properties. The Dead Sea is one of the most interesting geographical features of the earth. The area immediately around it is the lowest spot on the planet not covered with water, and the sea itself contains the highest proportion of salts of any major body of water. It is rapidly becoming a major tourist attraction for those wishing to float in its buoyant waters and others who fancy health and beauty advantages in its mineral-rich water and black mud.

The geological existence of the Dead Sea is the result of plate tectonics in which the Mediterranean plate, which includes Palestine, is pulling away from the Arabian plate, creating the Great Rift Valley. This is a deep graben, or trough-shaped, valley, stretching from southern Turkey to eastern Africa, a distance of about 6,000 kilometers (3,500 miles). It includes the Beqa' Valley of Lebanon, the Hulah-Galilee-Jordan-Dead Sea-Arabah Valleys of Palestine, the Red Sea, and the Olduvai Gorge of eastern Africa. This geological activity causes frequent earthquakes in the region as the continental plates pull apart in relatively small blocks of land between transverse faults.

About 100,000 years ago, the Red Sea stretched into the Great Rift Valley up to the Galilee basin. Over time, this long bay shrank to a large inland saline sea called Lake Lisan, named after the peninsula which divides the present Dead Sea into two parts (*lisan* means "tongue" in Arabic). It extended from the Galilee basin in the north to a

point about 30 kilometers (18 miles) south of the present Dead Sea and was about 200 meters (700 feet) higher than today's level. Alluvial deposits built up in the lake as rivers flowed into it; they are preserved today as light-colored gravels known geologically as *Lisan marls*. Many ancient sites in the Jordan and Dead Sea Valleys, including Qumran, were built on ridges made up of this marl. They tend to reach out into the valley, providing excellent strategic locations, often with perennial streams flowing beside them, especially those on the eastern side of the valley.

The present Dead Sea is the remnant of Lake Lisan. Until recently, it extended about 80 kilometers (45 miles) in length and was an average of 14 kilometers (9 miles) wide. Now, because of intensive irrigation agriculture by both Israelis and Jordanians, the level of the Sea has fallen over 10 meters (33 feet) and the bay south of the Lisan Peninsula has largely disappeared. Indeed, except for a small canal built by Israeli chemical companies, there is dry ground from Masada in the west to the Lisan Peninsula. As a result, the Dead Sea is considerably smaller than it was thirty years ago. However, there is literary and archaeological evidence that the level of the Sea has oscillated significantly through time. A Roman road probably crossed on dry ground from the Lisan Peninsula toward Masada, indicating that the level of the sea was similar to that of today and making Masada, which was occupied at that time, less remote than its recent isolation would suggest. At an even earlier period, the story in *2 Chronicles* 20.2 would make more sense if the Ammonites and Moabites had crossed here as well.

After the recent drop in level, the Dead Sea shoreline today is slightly more than 400 meters (1,325 feet) below sea level; the bottom of the sea in the northeastern portion is another 400 meters deep. Mean monthly temperatures range from 13 to 32.5 degrees Celsius (55 to 90.5 degrees Fahrenheit) with a mean extreme monthly range from 10 to 45 degrees Celsius (40 to 113 Fahrenheit). Because of its depth and location in the rain shadow behind the Judean hills, the region gets very little rain, about 100 millimeters (2.5 inches) in the north and only 20 to 30 millimeters (1 inch) in the south. The high temperatures, long periods of solar radiation, and lack of rain cause a high rate of evaporation, estimated by some to be about 1.4 meters (55 inches) per year. This evaporation is an important part of the regional climate, especially for the areas to the east of the sea, which receive some of that evaporation as rain during the winter months and as dew during the summer. Both the Israelis and Jordanians use the resources of the sea for tourism and chemical exports. Both countries are likewise concerned with the drop in level. Two large-scale engineering projects have been proposed to solve the problem. The first, called the Med-

Dead solution, would construct a canal from the Mediterranean Sea, bringing water through a closed canal and tunnel system beneath the hill country and into the Dead Sea. The second, called Red-Dead solution, would see an open canal flowing through the Arabah from the Red Sea. Most solutions accept the need for continued usage of runoff for irrigation, meaning that very little rainwater will flow into the Dead Sea in the foreseeable future.

Because the sea has no outlet, the salts flushed into it by the rivers over thousands of years, made all the stronger by large concentrations of rock salt in the mountains along the southwestern coast, have raised the salt content of the Dead Sea almost 30 percent, almost ten times that of the oceans. The salts include chlorides of magnesium, sodium, calcium, and potassium, as well as magnesium bromide. Magnesium chloride constitutes the largest amount. The salt density allows swimmers to float nicely, but it also causes a strong burning sensation to open sores and causes pain to the eyes. The water appears "oily" to sight and touch, but this is more apparent than real. Rocks under the water are not slippery and fresh water easily washes off the thin sheen of salts. Moreover, no oil floats on the surface. Estimates suggest that there are about 135 cubic kilometers of water in the Dead Sea, containing approximately 44 billion tons of salts.

The heaviest concentration of salts is in the lowest level of the sea, below 40 meters (130 feet), in the northern part of the sea. This water layer seems to be "fossil" water; that is, it has been in its present state for millennia. The thick brine in the lower level has deposited extremely thick layers of salts at the bottom.

Settlement Patterns. In spite of the adverse climate during the long summer months and the impossibility of using Dead Sea water for any type of agriculture, the environs of the Dead Sea were almost never bereft of settlements. There are several reasons for this. The depth of the Great Rift Valley meant that significant springs gushed forth from a variety of locations, including that of 'Ejn-Feshkha just south of Qumran. The winter rains in the eastern highlands provided several perennial streams which flowed into the sea and the Arabah just to its south. These could be irrigated into highly productive agricultural areas (*Gn.* 13.10) which can, when well managed, produce three or four crops a year, providing a boom economy for its inhabitants. In *Genesis* 13, Lot's choice of the Sodom area seems to reflect this type of situation. Certainly, except for a short time in the winter, this is not an enviable climate for a happy existence. The economic rewards need to be significant for occupation to flourish. Political stability was also necessary for sedentary occupation (nomads probably always came down to the valley during the winter, as the bedouin still do in Jordan today). Generally, settled activity was at its great-

est when a strong political organization controlled the highlands on either side of the valley.

Settlement patterns fall into two geographic zones, divided by the major escarpments on both the west and east sides of the sea, roughly one third of the way from north to south. The escarpment on the east rises in a series of cliffs and terraces about 1,600 meters (about one mile) to the highlands above. The cliffs on the east are similar, but not quite so abrupt. Before the present drop in the level of the sea, cliffs descended directly into the sea on the east and nearly so on the west. There is very little evidence for ancient roads traversing the shoreline from north to south on either side. The Israelis built the present highway on the west only after the 1967 war, and the Jordanians completed a new highway on the east early in the 1990s. Construction crews for both highways needed to dynamite portions of the cliffs. This meant that, in ancient times, communication from the northern to the southern parts of the Dead Sea could occur only by roads ascending high into the hills surrounding the sea or by boat.

This difficulty of north-south communication seems to be represented in the settlement patterns. Many sites have been found by surveys on the broad plains and valleys bordering the southeastern shores of the sea, including every period from Paleolithic flint scatters (above the level of Lake Lisan which was present at the time) to modern times. Except for Stone Age settlements, when the climate was probably wetter and colder (at least during global glacial periods), most inhabitants probably desired the economic advantages of year-round irrigation agriculture. Especially significant were the many small settlements of almost every period around the perennial streams at Wadi Isal, Safi (Wadi Hasa) and Feifeh at the southeastern edge of the sea. These include everything from sherd scatters to fortresses to major towns. The most important excavated sites in this area include the Early Bronze Age (third millennium BCE) sites of Bab edh-Dhra' and Numeira; Deir 'Ain Abata was a Byzantine monastery dedicated to St. Lot. There are several important unexcavated sites from most other periods, including Iron II fortresses (the time of the Hebrew kings), Roman fortresses and towns, Byzantine monasteries and towns, Crusader anchorages, and medieval Arab settlements (sugar plantations).

Excavations on the western shore have exposed a Chalcolithic temple (fourth millennium BCE) as well as an Iron Age, Persian, and Hasmonean town at 'Ein-Gedi. Hellenistic (Hasmonean), Roman, and Byzantine settlements seem to have existed at 'Ein-Buqeq and, at least from the Roman and Byzantine periods, at Masada. Evidence for shipping on the sea comes from literary sources for the Roman period, when Vespasian pursued rebel-

lions Jews by ship (Josephus, *The Jewish War* 3.9.522–531). The Madaba mosaic map from the Byzantine period depicts two sailboats on the sea, apparently shipping grain south and bitumen north. The Crusaders also supplied their castles at Kerak and Shobak by shipping across the sea.

The northern shores of the sea, where Qumran and the caves of the Dead Sea Scrolls are located, supported fewer settlements in virtually every period, probably because of the limited space between the sea and the cliffs and the lack of water resources. Although the oasis at Jericho is a bit removed from the sea, it contained one of the most important Neolithic (c.10,000 BCE) settlements in Palestine; arguably the most important Chalcolithic (5,000–3,500 BCE) site was at Tuleilat Ghassul, near the northeastern edge of the sea, but other sites also existed in caves of the Wadi Murabba'at and Tell Azeimeh, near Ghassul. Bronze Age sites (3,500–1,200 BCE) are rare—the most important was at Jericho.

Near the end of the Iron II period (seventh and sixth centuries BCE), small agricultural sites arose in the Buqei'a plateau above the cliffs to the west of Qumran, and small fortresses and settlements have been found by excavations and surveys at Qumran, 'Ein-Feshkha, and two other locations along the sea, south of Qumran. These were undoubtedly connected with the Kingdom of Judah from the time of Hezekiah to the Babylonian conquest. The Iron Age site at Tell Azeimeh may have been Ammonite.

With the extension of Hasmonean control across the valley to the highlands of Transjordan, including Heshbon, near Mount Nebo, other small settlements sprouted up: at Qumran, 'Ein-Feshkha, Khirbet Sweimeh, and Zara. The latter site, probably to be identified with Roman Callirhoë, had thirty-eight separate thermal springs ranging in temperature from 45 to 64 degrees Celsius (113–147 degrees Fahrenheit). Herod the Great frequented them during the winter (Josephus, *The Jewish War* 1.33.5). The site may have been on a road to Transjordan, which split north of the Dead Sea, one branch ascending to Machaerus (a fortress site on a prominent hill much like that of Herodium) in the south and the other to Amman (Philadelphia of the Decapolis), perhaps via Heshbon, in the north. These sites continued into the early Roman (or Herodian) period and were contemporary with Qumran. With a flourishing settlement pattern in the highlands on both sides of the Rift Valley, as well as royal Herodian palaces at Jericho and Machaerus, there must have been considerable traffic on a major road crossing the valley south of Jericho going from Jerusalem to the Amman area. Qumran was not far from this road, and we should probably not consider it to have been as isolated as is sometimes assumed. Although it does not seem to have

been ideally suited as a way station on this road, the site was not difficult to access by travelers.

The region again saw activity (but not very much of the settled variety) in the late Roman period with the Bar Kokhba rebellion (caves in the Wadi Murabba'at and coins at 'Ein-Feshkha). In the Byzantine period a monastery was built at 'Ein-Feshkha, and surveys have shown other settlements at Khirbet Sweimeh and Tell Azeimeh. The Ayyubid/Mamluk period (thirteenth-fifteenth centuries CE) probably saw sugar plantations at the last two sites as well.

Very little human activity took place in the Dead Sea area during the Ottoman Empire. Two early European explorers met their demise while trying to navigate the sea: C. Costigan died in 1837 when a storm shipwrecked him on the Lisan Peninsula without food and water; T. Molyneux died in 1847 shortly after he returned to Beirut after going by boat from Galilee to the Dead Sea. The first potash and bromine works began in 1930 on the north-west coast of the Sea at Rabbat Ashlag.

LARRY G. HERR

DEATH. To a certain degree, ancient Israel shared the concepts of life and death that are common to the literatures of the Near East, well known for the abundance of elaborate rituals to ward off the malevolent action of divinities, demons, and spirits associated with death and the underworld. Some mythological accounts retell the efforts of heroes in search of immortality, such as Gilgamesh, who set out to seek the plant of life for his friend Enkidu. The figure of Gilgamesh is still attested in a few Aramaic fragments from Cave 4 (Book of Giants^{b-c} 4Q530–531). [See Giants, Book of.] Also, to counter the destructive powers of illness and death, such as those of Resheph, the god of the plague (*Hb.* 3.5, *Jb.* 5.7, etc.), people developed incantations, invented various protective charms, and institutionalized certain practices. These practices, which initially arose out of polytheistic beliefs, did not totally vanish from the monotheistic religion of Israel. These included a belief in the power of insatiable Death, necromancy, a certain cult of the dead, and the use of all sorts of talismans. Apocryphal Psalms^a (11Q11) bears witness to the use of psalms of exorcism attributed to David; Songs of the Sage^{a-b} (4Q510–511) may also play a comparable role.

Death, the "return to dust," is seen as the normal end of life (2 *Sm.* 14.14) when a person dies in the fullness of days, leaving behind descendants (*Gn.* 25.8); but death poses a dilemma as an injustice when it occurs prematurely. Biblical etiology, then, suggests that death is the consequence of disobeying God. Along with suffering it is a punishment imposed on humanity, since God is the ori-

gin of life and death (*Dt.* 32.39). Thus biblical humanity praises God for his total mastery, and praise is a sign of life just as the inability to praise is a sign of death (*Ps.* 30.9–10; 6.6; 88.11–13; *Is.* 38.9–20; Qumran hymns and prayers). [See *Psalms, Hymns, and Prayers.*] For their part, the wisdom texts associate life with the path of justice, while the way of perversity leads to death (*Prv.* 12.28; 15.24, etc.). [See *Wisdom Texts.*] Therefore what matters is to follow Lady Wisdom and not Lady Folly. Every sensible man ought to flee the foreign woman (cf. *Wiles of the Wicked Woman*, 4Q184) who would lead him into sin and death. [See *Wiles of the Wicked Woman.*] In making life choices each one has a personal responsibility. The just are destined for the resurrection, to be awakened from the dust of the dead, while the wicked are doomed to punishments and everlasting disgrace (*Is.* 26, *Dn.* 12, *Ages of Creation* 4Q181, etc.).

This biblical conception is found again in the New Testament where Paul affirms that the “wages of sin” is death (*Rm.* 6.23), that death came through one man, and that all die in Adam (*1 Cor.* 15.21–22, *Rm.* 5.12–21). God alone is immortal (*1 Tim.* 6.16); every person is mortal (*Heb.* 9.27) except Enoch (*Gn.* 5.24, *Heb.* 11.5) and Elijah (*2 Kgs.* 2.11, *Sir.* 48.9, 48.12), who were taken up into heaven. But the gift of immortality is promised at the return to everyone who believes in Christ (*1 Cor.* 15.53). By his death and resurrection the second Adam has obtained justification that gives life (*Rm.* 5.10, 18). He has overthrown Death and Sin (*1 Cor.* 15.26, 56; *Heb.* 2.14; *Tim.* 1.10) Death could not keep in its power the Lord of the living and the dead (*Acts* 2.24, *Rm.* 14.9). Christ has received the keys of Death and Hades (*Rv.* 1.18). Seen in the light of the resurrection of Jesus, death is no longer any more than a break, not the end of human life; it is even a gain since “life is Christ” (*Phil.* 1.21), eternal life already experienced by the believer (*Jn.* 3.36) but lived in its fullness at the time of judgment in the transformation into glory (*1 Cor.* 15.50–53, *1 Thes.* 4.16–18). The New Testament attests the belief in a general resurrection, following *Daniel* 12 (Septuagint) and other Jewish writings, for rewards and punishments (*Rv.* 20), with the punishment of the Devil who was a murderer from the beginning (*Jn.* 8.44) and of the Beast in the fire, and the appearance of the heavenly Jerusalem, of a new heaven and a new earth (*Rv.* 21). But it is the Messiah Jesus, seated upon the throne of glory, who welcomes the just into the Kingdom and sends the damned away into everlasting fire (*Mt.* 25.31–46).

Somewhat at the pivotal point between the world of the Old Testament and that of the New Testament is where we find the Essene conceptions of death, life after death, the last judgment, the eternal punishments of the wicked (Jews and pagans) and of Belial and the evil angels, and

in contrast the rewards of the just Essenes in the company of the angels. [See *Angels; Eternal Life; Heaven; and Resurrection.*] The vocabulary is nearly the same: *mwt*, (“die”); *ʿsp*, (“gather”); *hrg*, (“kill”); *ʿbd*, (“perish”); *nkh*, (“smite”), *hll*, (“pierce”); *mm*, (“be complete”) or metaphorically *shkb* (“sleep”), although it is even richer in the non-Essene texts with *yslm* (“sleep”), *lwn* (“lodge”). However, only the Qumran texts use *gpʿ* for the wicked who fall stone cold into Hell, and the image of the bridge (Messianic Apocalypse 4Q521 5.ii). These words have to be related to the noun *Death* as the “return to dust” of the creature made of clay, and to the abstract terms *Sheol*, *Abaddon*, *abyss*, *darkness*, *punishments*, *extermination*, (as opposed to *healing*, *life*, *length of days*, *light and eternal joys*, *peace*, *glory of Adam*, *delights*, *crown of glory*, *eternal rest*, *rewards*). This vocabulary, directly linked to individual eschatology, should be connected to the images of collective eschatology: resurrection, Visitation, eternal Judgment, universal conflagration, and renewal of creation, which follow upon the images of the Messianic kingdom and the eschatological war that seals the victory of the good over the evil. *Sheol* is no longer the place of no return where God would abandon the just.

This vocabulary and these images show that Essene eschatology inherited the prevalent Jewish and biblical conception but adapted it to its own conception of the sole elect remnant, the true Israel, for whom the Teacher of Righteousness was recipient of revelations of the divine mysteries. [See *Teacher of Righteousness.*] Thus, following upon the religious experience of a life of intimacy with God perceived by the biblical person, of the happiness of paradise lost and yet awaited in the life to come, the Qumran texts emphasize the election and the favors of which the members of the community are presently beneficiaries, until the fulfillment of the divine promises in the life to come. Of course this eschatological fulfillment depends on commitment and acting in the present, hence the experience of the faithful one who already lives in communion with God in the company of the angels. However, he awaits the prolongation of this communion in the eternity of the end of time, beyond death, according to a paradigm of altogether individual and collective eschatology, while strongly underscoring the personal identity of the beneficiary of the eternal rewards (Hodayot^a from Cave 1 at Qumran [hereafter, 1QHodayot^a], 1QH^a xi [iii].)

Far from being a belief in reincarnation or reanimation of a corpse, the resurrection of the dead or the glorification of the living faithful is awaited as the entry into eternal life in the presence of God. Personal identity is emphasized by the resurrection of individual bodies as already found in *Visions of Amram*^{1?} (4Q548 1.ii), but also in *Pseudo-Ezekiel*² (4Q385, 386–387, 388), *Messi-*

anic Apocalypse (4Q521), *Ages of Creation*, necropolises of Khirbat Qumran and of 'Ein-el-Ghweir, and the *Elenchos* of Hippolytus concerning the belief of the Essenes. [See Amram; Ezekiel, Book of, *article on Pseudo-Ezekiel; and Visions.*] This conception is subsequently shared by the Pharisees, particularly the School of Shammai, and the New Testament, but rejected by the Sadducees. [See Pharisees; Sadducees.]

Visions of Amram? (4Q548 1.ii.12–16) already links victory over death and the illumination of the just to the great judgment and to the resurrection along the lines of *Isaiah* 26, thus anticipating *Daniel* 12. Taking up the vision of *Ezekiel* 37, Pseudo-Ezekiel from Cave 4 at Qumran (which may be an Essene composition) places that victory in a context of the individual retribution of the just at the end of the time of distress, the resurrection of the faithful at the end of time being the reward for their present devotion. In an exhortation to the devout to persevere in their choice, the Messianic Apocalypse outlines the stages in the divine plan of salvation: first the blessings that God himself will accomplish upon the arrival of the messianic times that have been prepared by the return of Elijah: “He shall heal the wounded, the dead he shall raise up. . . .” (4Q521 1.ii–iii); then at the judgment at the end of time when God will act with power as in the first creation: “the damned shall be destined for death [when] the life-giver shall [raise] the dead of his people,” for in his justice “the Lord [has delivered] the son[s of death] and has opened” [next come the allusions to the “valley of death] . . . , and the bridge of the Abyss [. . . , the damned have petrified] . . . , and the heavens have welcomed [the just . . . and all] the angels” (4Q521 5.ii, 7). [See Messianic Apocalypse.] These lines are the most explicit of all the Qumran texts for the description of the End of Days: the last judgment with the allusion to the punishments of the damned in Hell, where they fall rigid and frozen, while the Lord rewards the blessed by raising up the dead and delivering the living from death, which was the common lot of mankind. The just man does not have to fear death, because God will again bestow life on him, restoring to him the glory that was lost and welcoming him into the company of the angels. This text foreshadows *Matthew* 24.31–46, in particular, with its conception of the eternal rewards and punishments connected with the last judgment, although it had not yet, in the biblical rereadings of the synagogues (Septuagint, *targums*), gone as far as in favor of a belief in a general resurrection. It remains at the stage of resurrection and glorification for the just alone, the Essene faithful. But it also shows some extrabiblical influences, Zoroastrian to be more precise, that came from Persia (e.g., the *Bridge of the Abyss*).

This Essene belief in the resurrection as victory over

death, which Josephus (*The Jewish War* 2.151–158) fairly well distorted when he attributed to Essenes neo-Pythagorean beliefs about the fall of immortal souls, which death frees from the prison of their bodies, was properly transmitted by the *Elenchos* of Hippolytus of Rome (9.27–29). He affirms the immortality of the soul, the intermediate state, the resurrection of the body for the just, the judgment, the universal conflagration, and the eternal punishments of the wicked. [See Hippolytus; Josephus Flavius.] The image of the conflagration can be read in several places including 1QHodayot^a (1QH^a xi.20–37 [= iii.19–36], xiv.38 [= vi.35], the Florilegium (4Q174 1–3.ii; see *I Pt.* 4.12), and the image of the renewal of creation at the judgment in the Rule of the Community from Cave 1 at Qumran (1QS iv.25, cf. 1QH^a xix.16–17 [= xi.13–14], 28–29 [= xiii.11–12]. [See Florilegium; Hodayot; Rule of the Community.] Thus, even though the later expression *tehiyyat ha-metum* (Mishna *Sanhedrin* [“resurrection of the dead”] 10.1) is not used, the belief in the resurrection is present in the Essene texts, just as it is in the Hebrew scriptures or the apocryphal texts (see also 1QH^a xiv.32–39 [= vi.29–36], 4Q181 1.ii.3–6, where “the just shall be destined for life” while “the wicked shall be for everlasting disgrace”; cf. 4Q521 7, “the damned shall be destined for death”). But this does not require their resurrection for judgment and damnation, as will later be the case in Pharisaic and Christian circles (second death).

As expected, this belief, which is rooted in the scriptures (*Isaiah* 26 and *Daniel* 12 are very frequently cited in the manuscripts) and is reflected in some of the apocryphal books (*I Enoch*, *Visions of Amram* from Cave 4 at Qumran more particularly), influenced the funeral practice of the Qumran communities. [See Cemeteries.] The individual tombs and the cemeteries of Khirbat Qumran, which are aligned south-north, are clearly turned away from the Holy City and its temple administered by wicked hands in order to look toward the north where, according to *I Enoch*, the paradise of righteousness, the divine throne, the reservoir of souls, the tree of life, and the New Jerusalem are found. Thus, upon being awakened, the deceased (man/Essene) will arise facing the north in order to enter into the paradise of the blessed. It is likely that, following *Deuteronomy* 32.43, the Essenes may have attributed to the land of Israel a power to purify the flesh of sin while they await the resurrection. This would explain the individual tombs directly in the ground without any disturbance of the bones during their eternal rest, in contrast to the *ossilegium* (common bone repository) of family tombs and even the use of ossuaries afterward. Victory over death, seen as the consequence of Adam's sin, is to restore the just Essene to the glory of Adam, an immortal being living once again in intimate relationship

with God in a new world. Since death and the tomb were not seen as the end of an Essene's existence—in contrast to the view of the Sadducees, the resurrection of the body is not awaited as a reanimation of a corpse or a return to former life, but as a re-creation of the person in eternal glory in the company of the angels.

Translated from French by Robert E. Shillen

DEEDS OF SALE. The so-called Samarja papyri were discovered in 1962–1963 in a cave at Wadi ed-Daliyeh near Jericho, where wealthy people from Samaria hid their documents and themselves during the revolt against Alexander the Great (331 BCE). Twenty-seven documents survived, mostly slave conveyances, one sale of a house (WDSP 15), one sale of a vineyard (WDSP 16), and one receipt of payment (WDSP 17, the only “double document”). All were written in Samarja (“the city/citadel in Samaria the province”). The language is Imperial Aramaic, the legal tradition neo-Babylonian. The earliest document dates from 375 or 365 BCE and the latest from 335 BCE.

The formulary of a slave conveyance starts with the date (day, Babylonian-Jewish month, and the accession year of Artaxerxes II, Artaxerxes III, or Darius III) and the place of execution (Samarja). (Some documents conclude with the date and place of execution.) There follows a description of the sale (the object and its provenance; the description of the slave), the name of the seller and of the buyer, and the “exact and full price” (*shhrtts dnyyn gnyrn*). Then follows the confirmation of payment and of taking possession of the object, along with the clause that confers upon the buyer and his sons the power of disposition of the object. Next is a long clause in which the seller guarantees his performance of the contract. This is made in the framework of an obligatory covenant (*'srh*) established between the parties. It contains the defension

clause: in the case of litigation involving the object, the seller agrees to restore the object to its former purity (cleansing clause), and if the seller violates the covenant by denying the sale or the payment or by returning the payment made by the buyer, the seller remains liable and has to pay a penalty to the buyer without litigation (tenfold the amount of the purchase price; the penalty clause). This obligatory covenant ends with a clause that again confirms the buyer in his power of disposition of the object. The deed of sale ends with the validation of the document: executed before provincial officials (like “the governor of Samaria”) and the following witnesses, whose seals are affixed.

The private legal documents found since 1951 in the caves near Khirbet Qumran, in Wadi Murabba'at, Khabra, and Nahal Se'elim, include twenty-nine deeds of sale: three in Hebrew, twenty in Aramaic, six (?) in Nabatean, and two in Greek.

Hebrew: deed of sale of land Mur 22, deed of sale Mur 29, deed of sale of plot Mur 30; outer text of contract (Kefar Baru) XHev/Se 8.

Aramaic: sales of land 4Q345–346; deed of sale? Mur 23, deed of sale of land Mur 25, deeds of sale Mur 26–28 (Mur 26 is now together with deed of land sale XHev/Se 49, now promissory note on parchment XHev/Se 50), fragments of deeds of sale Mur 31; sale of donkey 5/6Hev 8 (not yet published), deed of sale of half of a garden I 5/6Hev 47a (not yet published), deed of sale of half of a garden II 5/6Hev 47b (not yet published); contract XHev/Se 7, contract (Kefar Baru) XHev/Se 8; contract (Kefar Bario?) XHev/Se 8a; deed XHev/Se 9, deed of sale XHev/Se 21, unclassified document XHev/Se 22, deed XHev/Se 23, deed of land sale XHev/Se 49 (now together with Mur 26 as XHev/Se 50).

Nabatean (all unpublished): sales of property 5/6Hev 2–3, sale 5/6Hev 4, lease of land? 5/6Hev 6, quittance 5/6Hev 9; contract XHev/Se Nab. 1.

Greek: purchase of a date crop 5/6Hev 21, sale of a date crop 5/6Hev 22.

The oldest documents are sales of land 4Q345 (Accelerator Mass Spectrometry date 373–171 BCE) and 4Q346 (late first century BCE), followed by the Nabatean sales of property 5/6Hev 2–3 and sale 5/6Hev 4 (99 CE), the sale of a donkey 5/6Hev 8 (122 CE), the Greek purchase and sale of a date crop 5/6Hev 21–22 (130 CE), and, from the time of the Bar Kokhba Revolt (c.132–135 CE), deed of sale of land Mur 22, deed of sale? Mur 23, and deed of sale Mur 29 (132 CE); promissory note on parchment XHev/Se 50 (formerly XHev/Se 49; 133 CE); deed of sale of land Mur 25 (134 CE); contracts XHev/Se 7 and (Kefar Bario?) XHev/Se 8a (134/35 CE); and contract (Kefar Baru) XHev/

Se 8, deed of sale of plot Mur 30, and deeds of sale of half of a garden I and II 5/6Hev 47a–47b (135 CE). Documents whose dates are unclear but are before 135 CE are deeds of sale Mur 27–28, fragments of deeds of sale Mur 31, deed XHev/Se 9, deed of sale XHev/Se 21, unclassified document XHev/Se 22, and deed XHev/Se 23.

All documents are written on papyrus, with the Hebrew and Aramaic ones written in a more or less cursive script (a modification of the Jewish square script), the Nabatean ones in a Nabatean cursive script (a predecessor of the Arabic script), and the Greek ones in more or less a bookhand script. [See Paleography.]

The language of the Hebrew documents is proto-Mishnaic (with Aramaisms), and the Aramaic documents are in post-Achaemenid Imperial Aramaic (with Hasmonean characteristics and influenced by the spoken Judean Aramaic; Beyer, 1984). The Nabatean ones are in Nabatean Aramaic (influenced by the spoken Arabic; Beyer, 1984), and the Greek ones are in postclassical Koine Greek (with Semitisms; Lewis, 1989, pp. 13–16).

Except for the Aramaic sale of donkey 5/6Hev 8, contract (Kefar Bario?) XHev/Se 8a (not clear Mur 27; 4Q346; XHev/Se 23), Nabatean quittance 5/6Hev 9, and Greek purchase and sale of a date crop 5/6Hev 21–22, all documents are so-called double documents (cf. *Jer.* 32.10–15; *B.B.* X,1.2; *T. B.B.* XI,1; Koffmahn, 1968); that is, the text is written twice on one side. The upper one (the inner text) is mostly an abridged version written in a strongly cursive script, rolled and tied up and sealed for protection against forging. The one below (the outer text) is only folded, so that it could be read every time. The signatures of the parties and of the witnesses are written on the back of the outer text at a right angle to the script on the front. The inner and outer text are written upside down in deeds of sale of half of a garden I and II 5/6Hev 47a–b, and in contract (Kefar Baru) XHev/Se 8, the languages differ (the inner text is Aramaic, the outer text Hebrew). So-called simple documents are sale of donkey 5/6Hev 8; contract (Kefar Bario?) XHev/Se 8a; both Greek documents, purchase and sale of a date crop, 5/6Hev 21–22; and perhaps deed of sale Mur 27. The signatures stand under the text, which is written only once on the front side.

Under the Greek text of purchase of a date crop 5/6Hev 21 follow a summary and the signatures in Aramaic script and again a summary in Aramaic script on the back. The summary under the Greek text of sale of a date crop 5/6Hev 22 is Nabatean, and the signatures are in Aramaic script.

The Nabatean sales of property 5/6Hev 2–3, sale 5/6Hev 4, lease of land? 5/6Hev 6, and the Greek purchase and sale of a date crop 5/6Hev 21–22 belong to the archive of Babatha, a rich woman from Maoza in the district of

Zoara. The documents in this archive offer information about the legal practices of the Roman province of Arabia (from the autumn of 106 CE). Legal authority of the Nabateans is vested in the council of the people of Petra (extract from council minutes 5/6Hev 12 15.27). The department for complaints regarding legal affairs is the court and the tribunal of the Roman governor (*hegemon*; 5/6Hev 14.15.25), the Legatus pro Praetore (summons 5/6Hev 23 26) at Petra or in Rabbat Moab (summons, countersummons 5/6Hev 25). It seems that Judea exercised more or less autonomous jurisdiction in the years before and during the Bar Kokhba Revolt. The documents distinguish between Jewish and Greek law and customs (cf. marriage contracts 5/6Hev 10, 18, and 37; *n(w)mws/s* and *nms'* in marriage contract Mur 21 11; lease of land 5/6Hev 46 6; 17). The deeds of sale often use the term *as customary* (*kedi hazah*) to refer to existing Jewish law and custom (XHev/Se 8 5.7; XHev/Se 9 5.11; XHev/Se 21 5; XHev/Se 50 7).

Jerusalem and nearby towns are the places in which some of the documents written during the Bar Kokhba Revolt were executed. Deeds of sale of half of a garden I and II 5/6Hev 47a–b were written at 'Ejn-Gedi, according to registration of land 5/6Hev 16 (127 CE): "a village of the district of Jericho in Judea." Most of the land at 'Ejn-Gedi belonged to the crown from the time of the Hasmoneans Alexander Jannaeus and Shelamzion Alexandra.

All deeds of sale from the Judean desert as well as all Aramaic deeds of sale from outside Palestine are drawn up from the point of view of the seller (*ex latere venditoris*). The structure and language of the formulary are stereotyped, similar to the Aramaic legal style from Elephantine (fifth or fourth century BCE; cf. Cowley 13; Kraeling 1.12.13), which is in full correspondence with the Egyptian practice, while the formulation from the point of view of the buyer (as in deeds of purchase 5/6Hev 8 and the Greek 5/6Hev 21) conforms more with the old Babylonian and neo-Assyrian practice (Yaron, 1961, pp. 124f), although the Greek purchase and sale of a date crop 5/6Hev 21–22 point to the Roman concept of purchase and sale (*emptio venditio*; Lewis, 1989, p. 94). Obviously the legal formulary is related to the Greek, to the Roman, and also to the Talmudic legal language (cf. Yaron, 1989, pp. 99–128; Gulak, 1935, pp. 95–102).

The deeds of sale start with the date. The Hebrew and Aramaic documents begin with the day, the Babylonian-Jewish month, and the year of the era of the "freedom of Israel/Jerusalem" ("in the name/days of Simon, the son of Kosiba, the prince of Israel" or only "of Simon, the son of Kosiba"). The Nabatean documents open according to the Roman consulship, the year of the Roman Caesar, and the day, Babylonian-Jewish month, and year of the Nabatean era ("this *eparchia*" from the autumn of 106 CE

or the year of the Nabatean king with the addition "who maintained life and brought deliverance to his people"). The Greek documents begin according to the accession year of the Roman Caesar and of both Roman consuls, the day and month of the Roman calendar, the year of the Nabatean era, and the day of the Macedonian month. Then follows the place of execution (Mur 29 and 30, Jerusalem; XHev/Se 9, Yaqim; Mur 28, Harrimmona, all not far from Jerusalem; 5/oHev 47a-b, 'Ein-Gedi; XHev/Se 8-8a, Kafar Barrai(u); 5/oHev 2.8, 21, 22, Mahoza). The deed of sale of plot Mur 30 adds the names of four notaries in Jerusalem (*hotmim*). Next comes the statement of the transfer, always the sale, in 5/oHev 8 and 21 (the purchase). Sometimes this statement is introduced by a greeting (5/oHev 21 and 22) and by "he said: I acknowledge that I have sold/bought," and sometimes there follows a description of the condition, "of his own free will." After the transfer, the name and provenance of the transferor(s) are mentioned together with the object; what is transferred (real estate, house, land, garden, date crop, donkey) is described according to its measure. Then the price of the object is quoted ("silver zuz," "silver denar," "denar of Tyrian silver," together with the rate in "sela") or the payment in natural produce. Then follows a detailed description of the object (its belongings and its borders according to the four cardinal points). Next follows the confirmation of payment ("the [full] price" [*damim* (*gemiru*)]); in XHev/Se 8a already within the quotation of the price) or the confirmation of taking possession of the object and of the payment (5/oHev 8).

Then begin the special clauses. First, the clause of confirmation of ownership: the buyer's power to dispose of the object (*shallit* clause; with reservations in Mur 22 and XHev/Se 8a). In the next clause the seller confirms his liability against his possessions to keep the sold object clean of someone's claim to the object by demurrer, and the seller confirms that he will perform the contract (cleansing clause, defension clause). Only sale of a date crop 5/oHev 22 and sale of property 5/oHev 2 mention the payment of a penalty in case of nonperformance of the contract. Deed of sale of plot Mur 30 has a benefit clause for the wife of the seller, but contract (Kefar Bario?) XHev/Se 8a excludes it. Then follow clauses to the effect that only this document is valid, that restitution is to be paid from the possessions of the seller, and that the seller has to return the document when the buyer wants it (restitution clause). Deed of sale Mur 26, now promissory note on parchment XHev/Se 50, confirms again that only the buyer has power over the object. In contract XHev/Se 8a there follows a statement about the kind of document in question ("simple [*peshit*] and signed inside [*wa-hatim be-gaveh*]); cf. Hebrew XHev/Se 49, now 50). The last section of the formulation brings the validation of the document: the signatures on the double documents on the

back and on the simple documents on the front. The Greek documents purchase and sale of a date crop 5/oHev 21 and 22 introduce this section with a brief summary of the contract in Aramaic and Nabatean. In the deeds of sale only the seller signs with his name and the phrase "for himself" (obligatory, *'al na/shaf*). If his wife is participating in the contract, she also signs, including this phrase. In the deeds of purchase (5/oHev 8 and 21), the buyer signs without this phrase but with the words "has written it" (*ketubah*; 5/oHev 21). If the seller (Mur 29; XHev/Se 8a; XHev/Se 49, now 50) or the buyer (5/oHev 8) is illiterate, someone else writes the seller's or buyer's name together with his own name. After the signature of the seller or buyer, sometimes set off by spacing (Mur 29 and 30), come the signatures of the witnesses, only males, usually three but sometimes more, always with the addition "witness" (Hebrew: *'ed*; Aramaic: *sahed*), sometimes interrupted by the signature of the scribe of the document (XHev/Se 49, now 50; 5/oHev 21 and 22). At times the respective place of residence of the seller, the scribe, and the witnesses is mentioned.

G. WILHELM NEBE

DEMETRIUS III EUKERUS, among the last of the kings of the house of Seleucus [See Seleucids.] The son of Antiochus Grypus, Demetrius III (nicknamed Eukerus) ruled between 96 and 88 BCE. He was crowned in Damascus at the invitation of Ptolemy Lathyrus, king of Cyprus. Demetrius ruled part of Syria, and Philip, his brother, ruled another part of Syria.

In 88 BCE, the Pharisees invited Demetrius to invade Judea and to fight against the Hasmonean ruler Alexander Jannaeus. With the aid of the Pharisees, Demetrius gained a victory in a battle near Shechem. Soon after, six thousand Jews turned from Demetrius and instead supported Alexander Jannaeus. Demetrius returned to Syria. After Demetrius had retreated, Alexander Jannaeus captured eight hundred of the Jewish leaders who had rebelled against him and crucified them in Jerusalem. [See Alexander Jannaeus.]

Immediately after this, a war erupted between Demetrius and Philip II. Demetrius was taken prisoner and exiled to the court of Mithridates II of Pontus, where he died in captivity.

Pesher Nahum (4Q169) is unique among the Dead Sea Scrolls in that it mentions the names of Seleucid kings. [See Pesher Nahum.] An attempt was made in the *pesharim* not to mention historical figures (primarily rulers) by their true names but by nicknames that had been agreed upon (for instance, the Hasmonean leaders were nicknamed in the *pesharim* the Evil Priest, the Lion of Wrath, and the Man of Belial). In his interpretation of *Nahum* 2.1-14, the author of Pesher Nahum mentioned the names of gentile kings for whom there were no agreed-upon nicknames. Therefore, the author of the *pesher* called Antiochus and Demetrius III by their names.

Demetrius was called "king of Greece" by the author of Pesher Nahum; in this instance, *Greece* refers to the Seleucid kingdom. In Pesher Nahum it is explained that the Seekers after Smooth Things, who are the Pharisees, invited Demetrius to Jerusalem. [See Pharisees.] The author of Pesher Nahum wrote his composition following the Roman conquest in 63 BCE. The *pesher* dealt with Demetrius's invasion of Judea on account of the incident of the execution by hanging of the rebellious leaders by Alexander Jannaeus.

It appears that the events of 88 BCE were mentioned in Pesher Hosea^b (4Q167) as well. [See Pesher Hosea.] In this composition, fragments of Pesher Hosea^b were preserved:

And Ephraim saw its illness and Judah its wound and Ephraim went to Assyria and sent for a rival king, but he will not be capable of curing you or removing your wound. For I will be like a lion to Ephraim and like a cub to the house of Judah. I shall prey and go away, and I shall carry away and there will be no savior
(4Q167 5.13-14)

The fragments of the *pesher* for these passages mentioned the Lion of Wrath, the usual nickname of Alexander Jannaeus. The Lion of Wrath set forth his hand to hurt Ephraim. Ephraim in the *pesharim* and other Qumran compositions is a nickname for the Pharisees. It seems that the author of Pesher Hosea^b interpreted the words "And Ephraim went to Assyria and sent for an enemy king" in *Hosea* 5.13 as describing the events of 88 BCE and the invitation of Demetrius to Judea by the Pharisees. *Hosea* 14.5, which mentions that the lion will harm Ephraim and that the house of Judah will be without a savior, was understood by the author of Pesher Hosea as relating to the execution (by Alexander Jannaeus) of the rebels who had invited Demetrius to invade Judea.

[See also Hasmoneans.]

HANAN ESHEL

Translated from Hebrew by Daphna Krupp

DEMONS. Qumran writings mention demons and evil forces in several places. Nowhere is this demonology presented in a coherent fashion; it comprises different traditions that might be conceived as sometimes opposing views of the subject. Because of the dualistic views necessary for any demonology, such a belief puts the so-called Jewish monotheism of the biblical and postbiblical tradition seriously into question. It seems, therefore, that belief in demons could emerge and find expression only

slowly. To what degree biblical tradition suppressed existing demonologies is open to question (see Psalm 91). However, the Persian and Hellenistic periods evince a growing interest not only in angelology but also in its negative counterpart, demonology (Baumgarten, 1991). [See Angels.] The Qumran writings combine what might be called demons with two major figures, namely Belial and Mastemah, who quite frequently are depicted as the cause of evil; hence, the discussion of beliefs in demons in the Dead Sea Scrolls includes discussion of the "evil one."

The Greek term *daimon* ("demon") and the modern equivalents (mostly dependent upon the specific meaning given to the term in the literature of the New Testament) have hardly any precise parallels in Biblical Hebrew (the usual rabbinic term *shed*, itself originally an Assyrian word, is used only twice in the Hebrew scriptures, in *Deuteronomy* 32.17 and *Psalms* 106.37; it occurs in the Aramaic version of *Tobit* [in *Tobit*^{a-b}, 4Q196–197, five times, always parallel to the Greek *daimon*]; in *Songs of the Sage*^{a-b}, 4Q510–511; and in *Apocryphal Psalms*^d, 11Q11 i.3).

Other Hebrew names denoting that specific kind of supernatural being were formed for the first time during this period. Here, too, the Qumran texts are part of the general Jewish developments of the time. The variety of names causes some trouble, since it is not self-evident that heavenly beings with negative effects on humans are necessarily opposed to God. They may just fulfill his will, and their deeds will then appear as punishing acts (e.g., *Rule of the Community* from Qumran Cave 1, hereafter, *1QR* *Rule of the Community* 1QS, iv.12–13; cf. Davidson, 1992, pp. 157–158; Gammie, 1985; Mach, 1992, pp. 105–112). The Hebrew terminology for these beings is not yet systematized. Given this situation, one has to judge from text to text whether the beings involved are to be understood in modern terms as demons or else as God's ministers who happen to perform certain acts. The same terms may be used in each case, for example, the destroying angels, the angels of darkness, Belial's or Mastemah's angels, the spirits of bastards.

Despite the diffuse references to the demons, the Qumran belief is much more coherent than expected. For a better understanding, one has to include *1 Enoch* and *Jubilees*, which did not originate at Qumran but are present in several copies in the sect's library.

In *Songs of the Sage*^{a-b}, in combination with *1 Enoch* 6–16, the term *spirits of the bastards* discloses the origin of the demons: they are the illegal offspring of the sexual intercourse between the rebelling angels and women (following *Gn.* 6.1–4). One of the three nets of Belial (Damascus Document, CD iv.12) is accordingly fornication. The combination of illegal sexual behavior and idol worship is commonplace at several stages of Jewish tradition and

seems to be implied by *1 Enoch* and the members of the Qumran community alike. Within this broader topic belongs the text *Wiles of the Wicked Woman* (4Q184). This has been interpreted convincingly by Joseph Baumgarten as depicting Lilith, a well-known Babylonian female demon who seduces young men and harms young women. Interestingly enough, Lilith is depicted in *Wiles of the Wicked Woman* with wings and perhaps with horns (though the latter are not certain; see Baumgarten, 1991, p. 140).

However, these spirits must be seen in a wider context. The famous division of humanity according to the Angel of Light and the Angel of Darkness (the "Treatise on the Two Spirits" in *1QR* *Rule of the Community*, 1QS iii.13–iv.26) is reflected in many texts mentioning Belial (e.g., CD iv.12, v.18–19; *War Scroll*, 1QM xiii.10–12; *Catena*^d, 4Q177; *Hodayot*^d from Qumran Cave 1, hereafter, 1QHodayot^d, 1QH^d ii.22; cf. Davidson, 1992, pp. 162–165) and his rule over this world (e.g., 1QS i.16–18; CD vi.10, xvi.5; 1QM xiii.11). The community stands against all those who belong to the lot of Belial (e.g., 1QS ii.19) and curses Belial and his angels during the yearly renewal of the covenant (a rite that is to take place during all the time of Belial's reign [1QS i.16–18, ii.19; 1QM xiv.9–10; *Berakhot*^{a-h}, 4Q286–287 2–7] is problematic; see Kobelski, 1981, p. 43). Belial's reign is a reign of injustice (1QS iv.19–20; cf. Davidson, 1992, pp. 162–165), and he appears to be the "prince of the kingdom of wickedness" (1QM xvii.5–6). The destroying angels are placed under his dominion as are the people who do not belong to the community (cf. *Jub.* 14.31–33, 1QM xiii.10–13).

This latter element may be connected to the more elaborated story in *Jubilees*, where Mastemah is the prince of all the unclean spirits. According to that source (also well attested in Qumran), Mastemah begs God not to destroy all his spirits, since then he could not fulfill his duty to seduce humans (*Jub.* 10.8; cf. 11.5). He is granted a certain number of destroying angels. In the following story, Mastemah operates much as Satan does in other sources (so at the binding of Isaac [*Gn.* 22, *Jub.* 17] and during the Exodus out of Egypt [*Jub.* 47ff.]). The functional equivalence of Belial and Mastemah can be seen by comparing *Jubilees* 15.33 (Belial) with the Damascus Document (CD xvi.3–6; the angel of Mastemah).

The name Belial occurs several times in the Hebrew scriptures, yet its meaning is uncertain and debated. Without entering into the details of that discussion, one generally may say that Belial denotes either a negative attitude or a mythological figure. At least in some places in the Bible, Belial is connected with death and the underworld (*Ps.* 18.5, *2 Sm.* 22.5). The term appears at other times in connection with a critique of officials of the cult (*1 Sm.* 2.12) or as a designation for those who lead Israel

astray from legitimate worship; these are "the men, sons of Belial" (*Dt.* 13.14). What remains in dispute mostly is the question of to what degree, if at all, the biblical term was related to a mythological figure, for example, the ruler of the underworld. (If taken as an abstract noun, *belial* often is translated as "worthlessness"; but even that meaning is disputed among scholars of the Hebrew scriptures.) The understanding of Belial and Mastemah as demonic beings best fits the context of the Qumran sect. It is noteworthy that the Hebrew term for "demon," namely, *shed*, is used in the biblical references in connection with idol worship (*Dt.* 32.17 and *Ps.* 106.37).

The principal question of whether Mastemah is used as a personal name or as an abstract noun in the Qumran literature as well as in *Jubilees* is debated. It seems that the noun is a derivative form of the Hebrew *stm*, a variation of *stm*, from which the name Satan was constructed. Scholars tend to understand Mastemah in the Dead Sea Scrolls more often as an abstract noun, meaning "hostility," than as a personal name. Belial occasionally is referred to as "Belial in his hostile scheme" (*Berakhot*).

Belial/Mastemah, who should be identified with the Angel of Darkness in the "Treatise on the Two Spirits," rules this world with his angels or spirits. Significantly, these are sometimes called "spirits of (ritual) uncleanness." Yet, these spirits and angels are not only the forces that stand against God; they may fulfill his punishment as, for example, in the Damascus Document (CD ii.5–7). This might be an accurate understanding of the "strong angel" in Apocryphal Psalms^a (11Q11 3.5). The "Treatise on the Two Spirits" makes it abundantly clear that predestination alone is not responsible for human deeds. The world outside the covenant is under Belial's rule; yet, even the covenanters might be afflicted by him. During his reign, Belial lies in wait extending three nets: those of unchasteness, wealth, and defiling the sanctuary (CD iv.12–18). It is evident that such warnings describe a group who fears these nets more than the demons or their leader.

However, being tempted by Belial is no excuse for human beings. Varying evaluations as to whether the spirits exercise the more neutral task of punishing or a demonic role are probably due to differing theological opinions of the various authors (and redactors) of the scrolls (see Davidson, 1992, pp. 157–158).

Even in their hostility toward humans and their own wickedness, these forces were created by God for that purpose, as explicitly stated by, for instance, the War Scroll (1QM xiii.10–15): "You have made Belial to corrupt, a hostile angel. . . his counsel is aimed toward wickedness and guiltiness. All the spirits of his lot, angels of destruction, are behaving according to the statutes of darkness; toward it is their one [de]sire. . . Who, be he

an angel or a commander, is like the help of p[. . .]." Yadin has restored the last word as "your face" and takes it as an allusion to *Isaiah* 63.8–9.

One of the possibilities for escaping the influence of the evil one and his angels is to return to the "Torah of Moses," as clearly taught in the Damascus Document (CD xvi.4–5). Several texts point in the same direction: membership in the covenant and the yearly renewal are part of the community's protective devices against Belial (CD vii.2, xix.14; IQS iv.11–12). Under certain conditions the angel of his [God's] truth stands helpfully at the covenanter's side against Belial and his angels (4Q177). According to *Jubilees* 1.20, Moses asked God not to allow Belial to do any harm to Israel.

Prayer is one of the means by which to guard against these demons. This becomes clear from the fact that Qumran prayers contain phrases like "do not allow Satan or any spirit of uncleanness to rule over me" (Psalms^a, 11Q5 19.15–16; cf. Nitzan, 1994). The formulation here is comparable to those in some traditional Jewish prayers used up to the present.

However, the same scroll includes "four songs to play for those stricken (by evil spirits)" (11Q5 27). At this point it becomes apparent that the members of the Qumran community did not only pray for deliverance from the evil spirits but also used special liturgies that were to be recited or performed in a manner defined as "magic" by modern commentators (see Baumgarten, 1991; Nitzan, 1994). An apocryphal psalm is most obviously an exorcisatory ritual (11Q11 iii; see Puech, 1990) probably ascribing to David and Solomon the usage of divine names against the demons. Only in light of such exorcistic practices can a certain ordinance in the Damascus Document be understood more clearly: "anyone who is possessed by spirits of Belial and speaks apostasy is to be judged in accordance with the law of the necromancer and the familiar spirit" (CD xii.2–3). Songs of the Sage^{a,b} are long exorcisatory rituals, referring to the female demon Lilith (Nitzan, 1994). Baumgarten (1991) rightly adds to this list the Hymn from Qumran Cave 8 (8Q5; Baillet, 1962, p. 161).

Within such a framework the belief in demons easily could be introduced into scriptural exegesis. The statement that the Prince of Light installed Moses and Aaron, whereas Jannes and his brother were installed by Belial (CD v.17–19), alludes to the whole set of traditions concerning Jannes and Jambres, the two Egyptian sorcerers who allegedly assisted Pharaoh against Israel.

Yet, the war at the End of Days will bring about the destruction of all the evil forces. The War Scroll includes this statement within the high priest's speech before the last battle (1QM xvii.5–8). Words of the Luminaries^a (4Q504) describes the future salvation as a time without

any Satan. The Florilegium interprets the repose granted to David in this light (4Q174 7–9), and another fragmentary narrative text (4Q463) seems to imply an eschatological salvation from Belial.

The world is now under the reign of the leader of these demonic forces who constantly try to lead the righteous away from God's ordinances, who will perform the judgment of the sinners, and, not really fitting the picture, who will be punished for their deeds at the end of time. These forces are to be feared (and certain protective means are available); however, they indeed rule the wicked. They are organized under the rule of their leader Belial/Mastemah.

DEPARTMENT OF ANTIQUITIES OF JORDAN.

As the primary body of government charged with preserving the archaeological remains and monuments of the Hashemite Kingdom of Jordan, the Department of Antiquities of Jordan played a central role in the initial attempts at recovery and preservation of the Judean Desert manuscripts. From 1948 to 1967, during the period of Jordanian control over the northwest shore of the Dead Sea and the northern Judean Desert region, officers of the Jordanian Department of Antiquities coordinated the activities of foreign institutions in the study and publication of the manuscripts finds. They also participated in the excavation and preservation of Khirbet Qumran and other archaeological sites in the region. Since the 1967 Arab-Israeli War, the Department of Antiquities of Jordan has retained custody of the Copper Scroll (3Q15) and has underwritten intensive efforts to record its contents and ensure its physical preservation.

At the time of the initial discovery of the Judean Desert manuscripts in the winter of 1946–1947, the Department of Antiquities of the British Mandatory government was gradually losing its effectiveness. In fact, it was not until after the Israeli-Jordanian cease-fire concluding the 1948 war, in which Qumran and the surrounding area came under Jordanian control, that efforts could be made to locate the site of the find. In January 1949, Captain Philippe Lippens, an officer of the United Nations cease-fire observer force, assisted by Captain Akkash el-Zebn of the Arab Legion, located the site of Cave 1 and alerted the director of the Jordanian Department of Antiquities, Gerald Lankester Harding. In February and March, Harding joined forces with Roland Guérin de Vaux of the École Biblique et Archéologique Française in Jerusalem to excavate the cave, document its location and inner dimensions, and recover fragments of about seventy scrolls and shards from dozens of scroll jars. [See École Biblique et Archéologique Française.] In the following months the Jordanian Department of Antiquities also began to purchase scroll fragments that had been illegally excavated by the Ta'amireh bedouin.

In October 1951, soon after the Ta'amireh made another important discovery of manuscript materials in Wadi Murabba'at, Inspector Awni Dajani of the Jordanian Department of Antiquities, alerted to the unauthorized looting, directed a salvage excavation in which additional texts of the Bar Kokhba Revolt were retrieved. [See

Murabba'at, Wadi.] In November and December, large-scale excavations at Khirbet Qumran were begun under the sponsorship of the Jordanian Department of Antiquities and the *École Biblique*. This project continued for five excavation seasons between 1953 and 1958, during which the nearby site of Ein-Feshkha was also explored. [See *Ein-Feshkha*.] In February 1952, the Jordanian Department of Antiquities coordinated the efforts of French and American teams in an intensive survey of caves in the vicinity of Qumran.

With the news of the discovery of the enormous cache of texts in Cave 4 at Qumran by the Ta'amireh in September 1952, the involvement of the Jordanian Department of Antiquities intensified. After organizing a salvage excavation in Cave 4 to retrieve the remaining manuscript finds, Harding worked closely with the trustees of the Palestine Archaeological Museum to mount an international effort to raise funds for the purchase of the illegally excavated texts that remained in private hands. [See *Palestine Archaeological Museum*.] Yet the purchase of the scroll fragments was only the initial challenge. Although the government of Jordan guaranteed a sum of fifteen thousand Jordanian dinars to recover the texts, an international team of scholars had to be recruited to study and publish them. Therefore, in the summer of 1953, the trustees of the Palestine Archaeological Museum, working closely with Harding, assembled a small group of scholars from England, France, Germany, Poland, and the United States to oversee the transcription and publication of the Cave 4 texts from Qumran.

The Suez Crisis of 1956 and the rise of Arab nationalist sentiment within Jordan eventually affected the workings of the Jordanian Department of Antiquities and the ongoing study of the Dead Sea Scrolls. The conspicuous involvement of foreign institutions in the efforts to purchase scroll fragments (on the basis of agreements that promised certain texts to the contributing institutions after the completion of their initial study and publication in Jordan) aroused protest in the Jordanian press. With the government decision to replace all non-Jordanians serving in high administrative posts in the kingdom, Harding was succeeded on 1 October 1956 as director of the Jordanian Department of Antiquities by Dr. Abdul Karim al-Gharaybeh. During his tenure, additional policy decisions were taken by the Ministry of Education to make it clear that all the Judean Desert manuscripts were the property of the Hashemite Kingdom of Jordan and that no fragments or original photographs would be transferred abroad. On 25 February 1957 Education Minister Shafiq Rusheidat established a new committee to oversee the study and publication of the scrolls consisting of the mayor of Jerusalem, the director of antiquities, the direc-

tor of the American Schools of Oriental Research, and the director of the *École Biblique*. On 27 July 1960 the Council of Ministers further ruled that the Dead Sea Scrolls were not to be taken out of the country, and all sums contributed by foreign institutions for their purchase from the Ta'amireh and their agents were to be reimbursed.

With the appointment of Dr. Awni Dajani as director of the Jordanian Department of Antiquities in 1960, excavation projects in the Qumran region resumed. An expedition headed by John Allegro was unsuccessful in its search for treasures mentioned in the Copper Scroll at Qumran and nearby sites along the northwestern shore of the Dead Sea. Yet, as a close confidant and colleague of Dajani, Allegro was appointed Scroll Advisor to His Majesty's Government in 1961.

A final administrative decision by the Council of Ministers in November 1966 resulted in the nationalization of the Palestine Archaeological Museum. On 28 November 1966 the museum and its collections, including the scrolls, came under the supervision of former Jerusalem mayor Aref al-Aref, who was named director general of the museum. Together with Dajani of the Jordanian Department of Antiquities, al-Aref began a long-term reassessment of the state of scroll study and preservation. Before any changes could be made, however, the 1967 Arab-Israeli War intervened, and the oversight of Qumran, the Palestine Archaeological Museum, and the manuscripts that were stored there passed to the Israel Department of Antiquities.

With only a few manuscript fragments and the Copper Scroll remaining in the custody of the Department of Antiquities of Jordan in Amman, where they had been on exhibit when the 1967 Arab-Israeli War broke out, the Judean Desert manuscripts subsequently became only a minor part of the department's responsibilities. [See *Copper Scroll*.] Yet over the years, interest in the Dead Sea Scrolls in Jordan continued. In the 1980s, the recognition of the seriously deteriorating physical condition of the Copper Scroll led the Department of Antiquities of Jordan to undertake an ambitious project of photographic documentation and physical preservation. In 1993, the scroll was transferred to Paris under the auspices of the Department of Antiquities of Jordan and the French Institute of Archaeology of the Middle East (*Institut Française d'Archéologie du Proche Orient*), where it was cleaned and remounted by the technical staff of the Valectra Laboratories of Electricité de France (EDF). In addition to the physical preservation work, the restoration team performed a digital scan of the scroll's surface to prepare highly accurate, three-dimensional reproductions of the text for the use of scholars around the world. In 1997, at

the conclusion of the restoration project, the Copper Scroll was returned to the National Museum in Amman.

NEIL ASHER SILBERMAN

DETERMINISM, as a philosophical concept, is the view that "given certain initial conditions, everything that ensues is bound to happen as it does and in no other way" (Marcoulesco, 1987). A closely related notion is that of predestination, which is the determination, by a conscious and voluntary act of a deity, of the destiny of individuals or groups as salvation or damnation (double predestination). Free will, on the contrary, is the conviction that human beings have a capacity to make deliberate choices, especially between moral alternatives, and therefore bear full responsibility for the ultimate consequences of their actions. A middle position, compatibilism, considers that even if a certain amount of causality does exist, either in natural laws or as the result of a divine decision, there is nevertheless room for personal options.

Josephus summarizes the divergent opinions of the Pharisees, Sadducees, and the Essenes about fate. The Essenes maintain, he says, "that fate is ruler of all things, and that nothing happens to people except it be according to its decree" (*Jewish Antiquities*, 13.172), whereas for the Pharisees "only some things are the work of fate" and none according to the Sadducees. Later on, Josephus adds another short statement about the Essenes' position: "The doctrine of the Essenes is that they like to leave all things to God" (*Antiquities*, 18.18). The same deterministic beliefs show up in the Qumran literature, and this fact is regularly used to support the identification of the Qumranites as a group of Essenes (see Beall). Scholars are divided, however, about the exact meaning of texts which contain statements about determination or predestination, particularly when the same texts apparently claim also some form of human freedom. Various solutions

have been proposed to this riddle. Questions have also been raised about the sources of Qumran determinism and its influence on later Jewish and Christian literature.

Determinism and Predestination in the Dead Sea Scrolls. In the Dead Sea Scrolls, a group of nonsectarian wisdom texts express the idea of a preexistent, hidden order of the world; Armin Lange has scrutinized these texts and demonstrated how the sectarians took over and modified this concept. In 4Q Sapiential Work A^c (4Q417 2.i.1–18), a sage is admonished to recognize, among other things, the "mystery of becoming" (*raz nihyeh*), that is the dualistic plan of the creation, through which God has separated good from evil as well as the ways of mankind and their sanction (*pequduh*) for all times, including the *eschaton*. This sapiential order, engraved on heavenly tablets, was revealed through both the Torah and a "vision of explanation" received by Enosh, the son of Seth. The eschatological realization of the "mystery of becoming" is emphasized in the Mysteries (1Q27 1.i.1–12): rejecting mantic means of gaining knowledge about the preexistent order of the world, the text states, in a prophetic form, that it will be fully revealed only at the end, when evil and folly will disappear forever while justice and knowledge will stand. Another allegedly non-Essene text, the Instruction on the Two Spirits (1QS iii.13–iv.26), teaches that, before creating them, the God of knowledge has designed the "plans" (*malṣuḥvah*) of all beings according to a dualistic order which unfolds without a single change and is manifested at various levels, cosmic and anthropological (conflict between light and darkness within the universe and the human heart), ethical (virtues and vices), and eschatological (salvation versus destruction). The *yahad* later stressed the dualistic character of the Instruction in order to sustain its claim to be the only legitimate heir to the covenant between God and his people. [See Dualism.] The Fifth Song of the Sabbath Sacrifice (4Q402 4.1–15) hints that all epochs of history, starting with the distribution of knowledge at creation and culminating with the eschatological war, are affected by the preexistent order of the world. This view would have been developed in sapiential circles to answer the crisis faced by the experiential denial of the traditional postulate of retribution; prophetic and apocalyptic tones were added by the integration of eschatology and history into its original cosmological and ethical perspective.

Among the texts displaying sectarian features, a hymn praises God for having created the heavens, the earth, and humanity according to his wisdom, knowing all their deeds in advance (1QH^a ix.1–x.4). In the same way as he set the course of stars or separated the earth from the seas, God has, for human beings, divided (*pileig*) "their tasks in all their generations" for all periods of history and "ordered (*hekhin*) their [w]ays" along with the sanc-

tion which brings them either fulfillment or affliction. The section ends with the statement that "in the wisdom of your knowledge, you have ordered their destiny (*te'uduh*) before they existed, and everything happens according to [your] wi[ll], and nothing is done without you" (ix.17–22). The Damascus Document (ii.2–13), addressed to those entering the covenant, declares that God did not choose the wicked at the beginning of the world and that he knew their deeds already, hated them, and caused them to stray; on the other hand, he raised up those called to become a remnant and revealed to his prophets the (celestial) record of their names. A fragmentary thematic *peshet* from Qumran (4Q180.1.1–10) details the ages of history. If read correctly, the introduction (frg. 1 1–3) refers to a period, prior to the creation, for God "to comple[te all that was] and is to be," to order their deeds for the present time until the *eschaton*, and to write this down on (heavenly) tablets; hence, for the *peshet* as for some apocalypses, the preexistent order of beings includes the course of history. The Peshet Habakkuk shares this conviction and urges the truthful not to abandon their service in spite of the delay of the *eschaton*, "for all periods of God will come according to their order, as he inscribed it for them in the mysteries of his wisdom" (vii.5–14). By taking over the deterministic notion of a preexistent order of beings, stressing its historical dimension, and spelling out the predestinations of individuals which it implies, the sect could make sense of a reality that apparently disproved its claims and hopes.

In addition to the concept of a preexistent order of the world, attention has also been drawn to related texts that suggest a belief in determinism or in the predestination of individuals (Hengel, Lichtenberger, Merrill, etc.). Similar ideas are found in 1QHodayot^a vii.16–26, where God is said to have fashioned every spirit and established its plan (?) before he created it. He made both the just and the wicked, and has determined for the former a period of approval and for the latter the day of annihilation, as witnesses to his own glory and might. The human, who is but flesh and dust, cannot understand God's design unless he is given inspired knowledge of it, and he is unable to change anything in it. The last section of the hymn concluding 1Q Rule of the Community (xi.9–22) stresses even more the nothingness of a human being, who is unable to establish his own step. Only God, who has ordered everything according to his plan, can do so by remitting all sins and by cleansing the one shaped from dust and fashioned with clay.

Such texts have completely evacuated the biblical notion that humankind is made in the image of God, as does also the "Treatise on the Two Spirits" (Maier). But one still finds in the Qumran literature the idea that God could take the initiative of electing Israel or a group

within it, Jerusalem as the holy city, or an individual (see, for example, 1QM x.9; 4Q504 iii.9, iv.3–8; 4Q266 x.11; 4Q534), while rejecting others, such as sinners of the past (1Q34 3.ii.4), or leading them astray as in the case of foreign nations (4Q260 xi.9–11; cf. 1Q27 1.1.9–12). This concept has been appropriated by those who have joined the community: they express their conviction to be "those that God has chosen" (*buhar*), "cast in the lot (*gorul*) of light" (as opposed to the lot of Belial) to become an "everlasting people," and to "inherit the lot of the holy ones" (see, for example, 1QS ii.1–18, iv.22, ix.7–8.16; 1Q28b i.1–2; 1QM xiii.9–10; 1QH^a xix.10–14).

It is to be noticed, however, that even within this community of the elect, individuals themselves are variously gifted and are to be differentiated according to their specific "inheritance" (*nahaluh*) in the spirits of light and darkness (1QS iv.24; see CD xiii.12 and 4Q267 9.iv.9), perhaps in relation to the time of their conception or birth (4Q186). When someone enters the community, the sons of Aaron are to test his "spirits," to assess his insight and his deeds in law, and to rank him in the proper place among his fellows. This classification, strictly observed during the communal gatherings, is to be reviewed yearly (1QS ii.23, v.19–25). In another section of 1Q Rule of the Community (ix.12–16) a similar role of discrimination is played by the instructor who "should separate and weigh all the sons of Zadok according to their spirits," promote or demote them on the basis of their intelligence and behavior, and consequently love or hate them (see also 1QH^a vi.19).

Free Will. These observations do not leave much room for chance, and there is indeed no real hint in the Qumran literature that nature or history could escape God's determination or that God's plan could be changed substantially. As far as human beings are concerned, however, things seem to be different, since voluntary actions are referred to in many instances, strongly suggesting some form of free will. In the first place, entrance in and belonging to the community is the result of a deliberate individual decision: The men of the community are people "who freely volunteer (*mitnadvim*) to convert from all evil and to keep themselves steadfast in all he [= God] prescribes in compliance with his will" (1QS v.1; cf. 1.7.11, v.6.8.10.21–22, vi.13; 1Q14 x.7). This decision is expressed in the form of a "binding oath to return to the Law of Moses . . . with all heart and with all soul" (1QS v.8–9). When living in the community, the member aims at loving God "freely," with his whole heart (1QH^a vi.26), and "freely delights" in all that happens to him, probably understood as sent by God (1QS ix.24). In liturgical terms, his perfection of way is compared to a "pleasant free will offering" (*ke-nidvat minhut ratson* 1QS ix.5). In military terms, it could be understood as a "whole-

hearted" enrollment for the eschatological war against darkness (War Rule, 4Q285 vi.5, ix.5).

But among those entering the covenant there might be a false convert who is ritually cursed for "leaving his guilty obstacle in front of himself to backslide (*le-hussog*) over it" (IQS ii.11-12). Sometimes, members were assaulted by Belial and the spirit of his lot, who were to make them stumble (*le-hakhshil*) (IQS iii.24) and eventually they could not stand the purifying test of the crucible (see, for example, IQM vi.15, xvii.1.9). On such occasions, those who were not living up to their commitment were rebuked by the overseer of the community (as witnessed by 4Q477) or punished according to the gravity of their offense on the basis of elaborated penal codes (IQS vi.24-vii.25; CD xiv.20-22; 4Q266 10.ii, 4Q267 9.vi, 4Q269 11 i-ii, 4Q270 7 i). Ultimately those whose behavior did not improve were not to be "reckoned among all the sons of his truth" and were to be expelled (4Q266 11). This implies that each individual was held at least partly accountable for his misconduct and was conceived of as usually having the possibility of rectifying it if he was determined to do so. Up to a certain point, then, even his eschatological fate rested in his own hands.

Accounting for the Tension. Various attempts have been made to explain the apparent tension between determinism or predestination on the one hand and human free will on the other. Beside attempts to stress one of these two dimensions or to put them in an evolutionary perspective, scholars integrate both in different forms of compatibilism. Gerhard Majer and Martjn Hengel see the Qumranites as being in continuity with Ben Sira, but much more pessimistic than the latter (*Sir.* 15.11-20, 33[36].7-15) in viewing the human as transitory, weak, sinful, impure, and unable to understand divine mysteries. In their view, this anthropology led the Essenes to formulate, in the "Treatise on the Two Spirits," the strongest teaching on predestination ever found in Judaism. Other scholars see the determinism as dominant. The only freedom that one is given, in Devorah Dimant's words, "is not to choose where to go but to discover where he is," which is fully realized for the elect only through the divine gift of knowledge (cf. Lichtenberger). In Nötscher's opinion, things are less one-sided: The Qumranites were certainly conscious of being dependent on God and having physical as well as moral deficiencies, but they were just as convinced of having duties and responsibilities without which their communal religious life would have been impossible. As Alfred Marx reads them, the Qumran texts teach that the individual is responsible for his conversion, even if he always needs divine grace for it. There is no predestination as such in texts like the "Treatise on the Two Spirits," but only God's eternal decision to reward those who walk in the spirit of truth and to punish others.

Roland Bergmeier explains the conflicting statements about predestination and free will by their different origin. Free will is not in tension with the original determinism found in the earlier Qumran literature, but only with predestination found in texts which came later or from other sources. The hymns attributed to the most influential leader of the community, the Teacher of Righteousness (see, for example, IQH^a x.1-19, xii.5-xiii.4, xiii.20-xv.5), display deterministic and antithetic structures common to wisdom creation theology, but leave room for free choice. The Teacher had indeed urged the righteous among the Israelites to accept the interpretation of the Torah revealed to him, to separate from the wicked, and to join the community of the covenant. This view was modified afterward in the communal hymns of IQRule of the Community (xi.10-11) and IQHodayot^a (iv.17-25, vi.8-22, vii.15-26; xxiii-xv) which praise the creator for predestining his creatures rather than simply determining the structure of the world. Under such conditions, one is no more in a position to achieve salvation through personal decision. This new interpretation of deterministic thinking is deepened further in dualistic texts from other sources such as the Damascus Document (ii.3-13) or the "Treatise on the Two Spirits" (cf. Baudry).

A few authors have articulated more clearly what could have been the compatibilist understanding of the Qumranites. Since one encounters in IQHodayot^a texts "which unquestionably teach predestination" as well as affirmations of free will, Eugene H. Merrill concludes that "the Qumran sectarians found it possible to hold for the need for individual, voluntary response to divine promptings within the framework of a rigid predestinarianism": God had a foreknowledge of how human beings would respond to his "gracious overtures" and, on that basis, had assigned their destinies before their creation (cf. with variations, E. P. Sanders, Hopkins, Röhser).

Origins and Further Developments. The origins of the determinism of the Dead Sea Scrolls have been searched for in similar ideas, such as the sapiential conception of the world, the apocalyptic theology of history, and the teachings of foreign philosophic or religious systems. The representation of a preexistent order of the world, identified as wisdom, is already found in sapiential works from the Second Temple period (*Job*, *Proverbs* 1-9, *Ecclesiastes*, *Ben Sira*; *1 Baruch* 3-4). It is characterized as cosmological and ethical and is even personified (Hengel, Lange, von Rad). As observed by von Rad, *Ben Sira* (33.12) suggests that the control of history is also subject to the divine determination. For prophetic traditions, God's interventions are usually the result of decisions made during the course of time. Later didactic and apocalyptic writings interpret them rather as the unfolding of an irrevocable divine plan engraved on heavenly

tablets and encompassing all epochs of history. The heavenly tablets (a motif also known in Mesopotamian and Greco-Roman literature) were read by patriarchs like Asher, who learned from them that his children were to disobey God and not to pay attention to his law (*Testament of Asher* 7.5, cf. also *Testament of Levi* 5.4; *1 En.* 106.19-107.3). According to the book of the *Jubilees*, their contents, that is, "the first things and the last things that shall come to pass in all the divisions of the days . . ." (*Jub.* 1.4, 1.26-29), were revealed to Moses by an angel on Mount Sinai. The setting of history in predetermined periods is already evident in the depiction, found in *Daniel* 2 and 7, of the four successive kingdoms (Babylonian, Median, Persian, and Hellenistic) which are to be superseded soon by the kingdom of God. In *1 Enoch*, an even sharper periodization takes two different forms. The "Animal Vision" (*1 En.* 85-90) offers a zoomorphic representation of nations and persons in history, down to the Maccabees. In the "Apocalypse of Weeks" (*1 En.* 93.1-10, 91.12-17), Enoch is shown, on heavenly tablets, the course of all of history, which appears as a succession of ten separate units, with a turning point at the end of the seventh. The righteous are then chosen to initiate over the wrongdoers the final judgment, which culminates in the tenth, final period. Fragments of these or of similar works (*Daniel*; *Pseudo-Daniel*; *Jubilees*; *Enoch*; *Apocalypse of Weeks?*), as well as other documents, like the Ages of Creation (4Q180 and 181) and the Peshar Habakkuk, confirm that these deterministic ideas were known at Qumran, but the more sectarian material has a sharper dualistic tone and often lacks the usual apocalyptic tropes. There is no heavenly journey, no revelatory angel, no images to symbolize various epochs or historical characters, and so forth. This suggests that the Qumranites and their forerunners, though they share a similar view of history, have elaborated different variations of it.

Scholars have also discussed possible foreign influences, especially from Iran or Greece, on the deterministic thought of the Scrolls (Hengel, Martone, Röscher). Attention has been drawn particularly to the schematization of world history in the Iranian conception of eschatology reported by Theopompus (fourth century BCE). According to him, the Iranians envisioned history as a succession of several periods of three thousand years dominated alternatively by two opposite heavenly figures, Oromazes and Ahriman. These were to be followed by a period of conflict between the two which would eventually result in the victory of Oromazes, thereby opening an era of well-being for humanity. The correspondence with the general model of eschatology attested, for example, in the "Treatise on the Two Spirits" or in the War Scroll is striking, but a direct connection is hard to demonstrate, since these and other Iranian ideas were known elsewhere in the Hellenistic world. On the other hand, the

strict determination of the cosmos as well as of human action is characteristic of the Stoic philosophy, which was also quite widespread. In Chrysippus' teaching, fate (*heimarmene*) is the precise ordering, rooted in nature itself, of everything that occurs in the universe as well as in the life of each individual; the true sage is the one who fits himself within this order. The determinism of the Qumran texts, including those displaying astronomical and astrological interest, is arranged on a similar pattern, but is at variance on a fundamental point: It is based on a "nontraditional revelation" rather than on a "rational ground" (Martone). Determinism is not attributed to an impersonal fate but to God's plan, "as the free disposition of his personal transcendent power" (Hengel).

The teachings of the Dead Sea Scrolls about determinism have echoes in other Jewish texts from the period which they could have influenced directly or indirectly, particularly if the Qumranites are to be identified as a group of Essenes. Dualistic and deterministic features appear in additions or variations in the Hebrew text of *Ben Sira* (11.16, 15.14, 16.15-16, 33.14); this may be the result of an Essene recension of the book by or after the middle of the first century BCE. Later, rabbinism usually allowed for both "God's foresight and providence directing all things and human freedom of choice with respect with doing good or evil" (Wallace).

The problem of the divine determination of the course of history and of the destiny of individuals was a matter of reflection in Gnosticism (Bergmeier) and in early Christianity (Bergmeier, Maier, Röscher), as witnessed particularly by the writings of John (*Jn.* 6.37-45, 6.65, 8.47, 10.1-30, 12.39-40, 17.12, 18.37) and Paul (*Rom.* 8.24-30, 9-11, *Eph.* 1.3-14, *Phil.* 2.12-13, *2 Thes.* 2.13). Many of these concepts have significant parallels in deterministic sections of the Dead Sea Scrolls (cf. IQS i.3-4, iii.13-iv.26, vi.7-13; CD ii.9-13, viii.14-15, IQH^a iv.24, vi.8-12, ix.5-27, xii.29-32). On the basis of these similarities, Maier has concluded that even if Paul has conceived his view of predestination after *Ben Sira* 33, he is much closer to the Essenism of Qumran and is probably arguing against Pharisaic views (perhaps consciously against *Odes of Solomon* 9.4).

The sapiential and sectarian groups mirrored in the Dead Sea Scrolls have elaborated, through deterministic teachings, an understanding of the ordering of the cosmos, history, and individuals according to God's hidden plan. As part of the "social symbolics of knowledge," these provided powerful means "to resolve the ideological and historical contradictions created by the political domination of international empires" (Newsom) and to overcome a seemingly hopeless situation of marginalization and oppression (Hengel). These texts tend to support Josephus' statements about the Essenes' beliefs, but the ambiguity around their origins cannot be dissipated

completely, since their interpretation is still open to debate.

JEAN DUHAIME

DEUTERONOMY, BOOK OF. Manuscripts recovered from Qumran and other major sites in the Judean Desert provide ample testimony to the importance of the *Book of Deuteronomy* in ancient Judaism. The fifth book of the Pentateuch is widely represented, in copies of the biblical book, in texts used for prayer and study, and in sectarian and other nonbiblical compositions. In this article these witnesses will be examined under four categories: biblical manuscripts; phylacteries and *mezuzot*; excerpted texts; and nonbiblical compositions.

Biblical Manuscripts. Among the biblical scrolls coming from the Judean Desert, twenty-nine manuscripts of *Deuteronomy* have been identified. Three of these are manuscript fragments discovered at Wadi Murabba'at (Mur 2; hereafter, MurDeuteronomy), Masada (Masle; hereafter, MasDeuteronomy), and at Nahal Hever (XHev/Se3, hereafter XHev/SeDeuteronomy; see Greenfield, 1992). [See Hever, Nahal, *article on Written Material*; Masada, *article on Written Material*; Murabba'at, Wadi, *article on Written Material*; and Se'elim, Nahal, *article on Written Material*.] The other twenty-six all have come from the caves near the western shore of the Dead Sea at Khirbet Qumran. The number of copies confirms that *Deuteronomy* was a popular book at Qumran, rivaled only

by the *Psalms* (found in thirty-six copies). The other four books of the Pentateuch are represented in significantly lower numbers (*Genesis*, in nineteen; *Exodus*, in seventeen; *Leviticus*, in twelve; and *Numbers*, in six).

All the manuscripts found thus far were written in Hebrew, with the exception of one fragmentary Cave 4 scroll written in Greek (Septuagint Deuteronomy [4Q122]). The various *Deuteronomy* manuscripts were copied over a span of roughly three centuries (with the date being established on paleographical grounds). [See Paleography.] The oldest witness to *Deuteronomy* is paleo-Deuteronomy^d (4Q46), a scroll consisting of one small fragment containing *Deuteronomy* 26.14–15, dated to the second half of the third century BCE. The oldest copy of *Deuteronomy* in the square script sequence is from Cave 5 at Qumran (5Q1; hereafter 5QDeuteronomy); it contains portions of chapters 7, 8, and the beginning of 9 and was written around the first quarter of the second century BCE. Late copies of the book are seen in the manuscripts from Masada and Murabba'at, and in Deuteronomy^f from Cave 4 at Qumran (4Q37; about the first century CE). All the scrolls are inscribed on leather, with one possible exception from Cave 6, a small piece of papyrus that contains a few letters uncertainly identified as *Deuteronomy* 26.19 (Deuteronomy? [6Q3]).

Despite the abundance of manuscripts, textual evidence for the form of *Deuteronomy* at Qumran remains slim, since the majority of these manuscripts are relatively fragmentary (there is no manuscript that even approaches the completeness of the great Isaiah scroll from Cave 1, Isaiah^a [1QIsa^a]). In fact, fifteen of the twenty-nine scrolls preserve ten verses or fewer of the book. The largest *Deuteronomy* manuscript from the Judean Desert is Deuteronomy^e from Cave 4 at Qumran (4Q30), which contains one hundred twenty verses from nineteen chapters. Deuteronomy^f (4Q33) and paleo-Deuteronomy^d (4Q45) are next, having ninety-two verses each. In all these cases as well, however, material is more often than not fragmentarily preserved.

Because of their fragmentary state, the affiliations of the various manuscripts with the three major traditions—the Masoretic Text, the Septuagint, and the Samaritan Pentateuch—cannot be established in most cases. In a few instances, however, an alignment with one of the three may be discerned: Deuteronomy^e (4Q34) is virtually identical to the tradition underlying the Masoretic Text in spelling practices, paragraph divisions, and content. Deuteronomy^b (4Q29) shows affinities with the Hebrew text behind the Septuagint in that it concurs uniquely with it in a few distinctive errors. In addition to this biblical text, excerpted manuscript Deuteronomy^g (4Q44), which preserves the end of the Song of Moses from chapter 32 (vv. 37–43), agrees with the Hebrew fore-

runner of the Greek text in additional lines of text that are not found in the other traditions (see Skehan, 1954). No biblical manuscripts of *Deuteronomy* show an affinity with the Samaritan Pentateuch; however, three excerpted texts, Deuteronomy^v, Deuteronomy^{ll}, and Deuteronomyⁿ (4Q37, 38, 41), show certain typological similarities with it, attesting the kinds of expansions, minor explications, and harmonizations that are the hallmark of that tradition (on the textual character of these three manuscripts see Duncan, 1997). Deuteronomyⁿ, also referred to as the “All Souls Deuteronomy,” exhibits the most striking example of a harmonization akin to the sort found in the Samaritan tradition, containing an addition to the Decalogue that harmonizes the passage with its *Exodus* form. In the Sabbath command, the motive clause of *Deuteronomy* 5.15, which cites Israel's servitude in Egypt and the Exodus, is augmented with the version of the motivation from *Exodus* 20.11: “For on the sixth day, the Lord made the heavens and the earth, the sea, and all that is in them, and he rested on the seventh day.” In this way two divergent traditions for the sanctity of the Sabbath are blended into one text.

With respect to the overall textual character of these scrolls, it may be observed that they not infrequently attest slightly expanded variant readings—minor explications or readings influenced by closely parallel phrases. Though these textual phenomena mark, to varying degrees, the transmission process of any biblical book, they are particularly prevalent in the witnesses to *Deuteronomy*, owing to the distinctive style of the book. *Deuteronomy* is characterized by repetition—replete with formulaic phrases echoing one another closely—and, in the legal portions, by an elaborative and redundant style. In the Dead Sea manuscripts these (mostly minor) expansionistic textual traits are exhibited not only in the later texts but in some of the more primitive manuscripts as well (for instance 5QDeuteronomy [c.200–175 BCE], Deuteronomy^e [c.150–100 BCE], and paleo-Deuteronomy^d [c.100–50 BCE]), thus demonstrating that this textual phenomenon entered the transmission process early on (see Wevers, 1978, who has documented this trait in the Greek witnesses). This particular category of variants, arising from the singular style of the book, accounts for more than a quarter of all the variants attested in the *Deuteronomy* material from the Judean Desert. A comparison of the major witnesses in such variants shows that the tradition that appears to have escaped this sort of expansionistic tendency most consistently is the (proto-) Masoretic. The Samaritan Pentateuch is next after it. By contrast, the Dead Sea Scrolls and the Greek are the most heavily influenced in this direction (the Greek tradition slightly more so than the scrolls). The relative relationship of the witnesses seen in this comparison is, on the whole, the

same in a more comprehensive analysis of all extant variants. A total of 208 variants are preserved in the 28 texts from the Judean Desert (the Masada text of *Deuteronomy* is not included in this assessment; for a preliminary treatment see Talmon, 1998). Of these a preferable reading can be determined with reasonable certainty in 153 cases (the Greek can be assessed in 123 of these). The Masoretic Text carries the preferable reading in 74 percent of these instances. The scrolls attest the preferable reading in only 50 percent, followed closely by the Septuagint with 47 percent. The Samaritan Pentateuch, with 60 percent preferable readings, falls between the Masoretic Text on the one hand and the latter two witnesses on the other.

Some of the *Deuteronomy* texts from Qumran in particular have helped to shed further light on the nature of the Septuagint as translation. Especially striking are some readings from ancient poetry, where variants from Qumran have substantiated a Hebrew *Vorlage* for the Greek where none previously was known. One such variant is found in *Deuteronomy* 32.8 in the Song of Moses. The Masoretic and Samaritan traditions read here:

When Elyon apportioned the nations,
When he distributed humankind,
He established the boundaries of the peoples
According to the number of the *sons of Israel*.

In place of the reference to the "sons of Israel" the Greek witnesses read "angels of God" or "sons of God" (the latter is found in the most ancient tradition), a reading presupposed in several early sources and referred to as late as the medieval period (see Fishbane, 1985, p. 69). The *Vorlage* of the Greek is now confirmed by *Deuteronomy*^h, which preserves the phrase "sons of Elohim" (cf. Psalm 82.1 for a similar reference to divine beings). This is in all likelihood the original reading, as it is more probable that a reference to divine beings was later suppressed for theological reasons than that it was substituted for the reading "sons of Israel." Another noteworthy variant from Qumran supporting the Greek occurs in the poem of *Deuteronomy* 33, known as the Blessing of Moses. In the blessing of Benjamin (v. 12) the Masoretic text reads: "The beloved of the Lord will dwell securely upon him" with the parallel line reading: "(He) encompasses him all day long." The text is problematic since the logical end of the first phrase appears to be at the word *securely* (in fact the Samaritan tradition omits "upon him"); moreover the subject of the following line is unclear. Prior to the Qumran finds it was suggested that "upon him" should instead be read as the divine name 'Eli, meaning "(Most) High One," and said to be a variant form of 'Elyon (the consonantal text is very close to this epithet). This conjecture finds some support in the Greek, which reads "God" (Theos), and also clarifies this point as the beginning of

a new phrase by placing a conjunction before the proper name. A reading preserved by a Cave 4 manuscript, *Deuteronomy*^h (4Q35), now provides further support for this proposal, though the specific form of the divine name attested is the more common El rather than 'Eli. In addition to this example, *Deuteronomy*^h preserves a few other readings that agree with the *Vorlage* of the Greek (most of them from the blessing of Levi; see Duncan, 1995). *Deuteronomy*^h is of additional interest for its special relationship to a nonbiblical text, Testimonia (4Q175).

Phylacteries and Mezuzot. Select portions of *Deuteronomy* are attested in the nine *mezuzot* and thirty-three phylacteries found among the Judean Desert documents. [See Phylacteries and Mezuzot.] The phylacteries include segments from *Deuteronomy* 5.1–6.9 (the Decalogue and the Shema^h, that is, the passage introduced by "Hear, O Israel"), and/or *Deuteronomy* 10.12–11.21, and/or passages from *Exodus* 12.43–13.16. In one instance, verses from *Deuteronomy* 32 (the Song of Moses) are preserved. Both the range of passages and their delimitations are noteworthy, since the selection prescribed by the rabbis is restricted to *Deuteronomy* 6.4–9 and 11.13–21 and *Exodus* 13.1–16 (see B.T., *Men.* 34a–37b and 42b–43b; *Massekhet Tefillin* 9). Especially significant is the inclusion of the Decalogue, which is found in the Qumran material only. Mishnaic evidence suggests that the Qumran texts may, in fact, reflect general practice prior to the promulgation of rabbinic legislation (see Vermes, 1959). According to *Tamid* 5.1, in the Second Temple period recital of the Decalogue (along with the Shema^h and *Dt.* 11.13–21) was a part of the morning Temple prayer service (see Habermann, 1954). A statement in the Jerusalem Talmud implies, moreover, that these texts also were recited outside the precincts of the Temple (J.T., *Ber.* 3c). Direct evidence for such a liturgical use of the Decalogue outside of Jerusalem is seen in the Nash Papyrus from Egypt (second century BCE), which contains the Decalogue and the Shema^h on a single leaf and appears to have been a type of lectionary (see Mann, 1927, p. 288). It is significant that phylacteries found at two sites occupied by refugees at the time of the Bar Kokhba Revolt (c.132–135 CE)—Naḥal Şe'elim and Murabba'at—do not include the Decalogue (and moreover attest only the restricted corpus for the other sections), thus indicating that the Mishnaic practice had obtained by at least the early second century CE.

Two of the eight *mezuzot* found at Qumran attest portions of the Decalogue. Other passages included in these texts are the Shema^h and portions from *Deuteronomy* 10–11 (the *mezuzah* from Cave 8 [8Q4] clearly once contained *Deuteronomy* 10.12–11.21 in its entirety), along with *Exodus* 13. The single *mezuzah* from Murabba'at is no longer readable.

Excerpted Texts. A few *Deuteronomy* texts (from Cave 4), originally thought to be biblical manuscripts, have now been identified as special selections excerpted from various parts of the book: *Deuteronomy*^l, *Deuteronomy*^{kl}, *Deuteronomy*^l, and *Deuteronomy*ⁿ (see Duncan, 1997; (Crawford) White, "4QDt," 1990; Stegemann, 1967). These texts, all dating from the Herodian period (30 BCE–68 CE), include portions from one or more of the following passages: *Deuteronomy* 5.1–6.3, 8.5–10, 11, and 32. *Deuteronomy*^l is of special interest as it also includes passages from *Exodus* 12.43–51 and 13.1–5. (The *Exodus* fragments originally were classified with *Deuteronomy*^l on the working assumption that this was a biblical scroll containing interpolations from *Exodus*. It was clear, in any case, that both derived from the same scribal hand.) Since all the *Deuteronomy* manuscripts are fragmentary, it was some time before the specific nature of these scrolls as selections (versus fragmentary remains) could be substantiated. It is, in particular, the emergence of the Qumran phylacteries and *mezuzot* with their broader repertoire of passages that has facilitated the identification of these four scrolls as special-use texts. In fact, with the exception of *Deuteronomy* 8 portions of all the passages found in these four scrolls are attested in the Qumran phylactery and *mezuzot* texts. Corroborating evidence has been provided by material aspects of the scrolls themselves. For instance in *Deuteronomy*^l, which preserves the final verses of *Deuteronomy* 32, a very wide margin, without stitching, follows the end of the poem, clear indication that the passage was not followed by *Deuteronomy* 33 and 34. In *Deuteronomy*^l material evidence is more tenuous; however, it appears that *Exodus* 12.43 (the beginning of a paragraph) is preceded by verse 21 of *Deuteronomy* 11 (in any case the preceding word that is preserved could not have come from *Exodus* 12.42, whereas reconstruction indicates it might well be from *Deuteronomy* 11.21 [see Duncan, *Discoveries in the Judaean Desert*, 14, 1995, p. 88]). *Deuteronomy*^p, the best preserved of the four scrolls, contains the most dramatic material evidence. Here a column consisting of *Deuteronomy* 8.5–10 clearly precedes the Decalogue of *Deuteronomy* 5 (see (Crawford) White, "4QDt," 1990). In fact, chapter 8 of *Deuteronomy* appears also in *Deuteronomy*^l, which preserves precisely the same section (here, too, as in *Deuteronomy*ⁿ, a discrete column appears to have been reserved for it). (On the status of *Dt.* 8.5–10 as a special text, see Stegemann, 1967, who notes that it is distinguished as a separate paragraph in the Samaritan Pentateuch, and Weinfeld, 1992, who observes that in rabbinic tradition *Dt.* 8.5–10 is the basis for the duty of the blessing after meals, B.T., *Ber.* 44a.)

A material feature that unites all these manuscripts is the small proportions of their columns (shorter by almost

half than the columns in most biblical manuscripts), further indication that these scrolls contained less material than full-scale biblical manuscripts. Though the *Sitz im Leben* and precise function of these texts are debatable, it seems most likely that the greater part of them would have had a liturgical or devotional function, especially given the fact that they so clearly duplicate the corpus of the phylacteries. One might stress, however, an important distinction between these two kinds of texts. In the phylacteries it was not considered necessary to write passages out in their entirety, whereas in the excerpted texts it is apparent, despite their fragmentary state, that the selections were written out fully and continuously (witness the Decalogue in *Deuteronomy*^l and *Deuteronomy*ⁿ). This difference probably reflects the more symbolic function of the phylacteries, as opposed to some more practical function of the excerpted scrolls as texts for study and/or for prayer services.

Deuteronomy in Major Nonbiblical Compositions. In addition to the biblical manuscripts and the prayer and study texts of *Deuteronomy*, the book is quoted, alluded to, or paraphrased in several of the major Judean Desert texts. Use of it indicates that the book was of central importance and was considered authoritative (it is probably cited as such more than any other book of the Torah; see VanderKam, 1994, pp. 149–153). Among the legal texts it is found notably in Temple Scroll^a from Cave 11 (11Q19). The latter sections of this lengthy composition contain legal material largely drawn from *Deuteronomy*, written, however, in the voice of the first person (thus the contents are presented as the direct address of God). *Deuteronomy* also is cited (eight times) in the fragments of the Damascus Document from Qumran (4Q266–273, 5Q12, 6Q15). Citations from *Deuteronomy* occur in three thematic commentaries from Qumran (compositions made up of various passages from scripture focusing on one or a few themes). Melchizedek (11Q13), a very fragmentary manuscript containing biblical interpretation around the figure of Melchizedek from *Genesis* 14, cites *Deuteronomy* 15.2 (at least). Testimonia (4Q175), an anthology of passages having in common a messianic motif, and Florilegium (4Q174), which takes as its focus *2 Samuel* 7 (the promise of an eternal dynasty for David) and *Psalms* 1 and 2, also cite *Deuteronomy*. Notably, both compositions include the same section from the ancient poem of *Deuteronomy* 33—the blessing of Levi (vv. 8–11)—though it is only very fragmentarily preserved in the Florilegium. The latter also contains a portion from the blessings of Zebulun and Gad (vv. 19–21), again in a very fragmentary state. Testimonia also cites *Deuteronomy* 5.28–29 and 18.18–19 (the latter speaks of a prophet like Moses). A special feature of interest in the blessing of Levi in Testimonia is the striking

similarity between its text and that of biblical manuscript Deuteronomy^h, discussed above. A few textual features are shared exclusively by these two scrolls, suggesting that this quotation in Testimonija is dependent on a textual tradition like Deuteronomy^h (see Duncan, "New Readings," 1995). The *Book of Deuteronomy* also is the primary influence in the poetic work of the Apocryphon of Joshua (4Q378–379). In the extensive but fragmentary Reworked Pentateuch (4Q158, 364–365, 366–367), a biblical paraphrase, *Deuteronomy* is covered through chapter 19.

JULIE A. DUNCAN

DE VAUX, ROLAND (1903–1970), French archaeologist, was born in Paris on 17 December 1903. He was ordained a priest in 1929, and he entered the Dominican

order the same year. He left for Jerusalem in 1933 and, from 1934 until his death on 10 September 1970, he taught at the École Biblique. De Vaux was editor of the *Revue biblique* from 1938 to 1953. He was director of the École Biblique from 1945 to 1965. It was both as director of the École Biblique and as an archaeologist that he became closely involved in the finding of the manuscripts at Qumran and in the excavation of the site.

The archaeological activities of de Vaux were certainly very important: a Byzantine mosaic at Mâ'in starting in 1937; a caravansary at Qaryet el-'Enab/Abu Gôsh in 1944; and Tell el-Far'ah near Naplouse between 1946 and 1960 (nine campaigns). He began excavations at Khirbet Qumran and the surrounding area in 1949, and they lasted until 1958.

With the end of the Arab-Israeli War in 1948, it became possible to excavate the cave where the Dead Sea Scrolls, which Archbishop Athanasius Yeshua Samuel and Professor Eleazar L. Sukenik had bought, had been found. This cave (Qumran Cave 1) was reopened at the end of January 1949. G. Lankester Harding, director of the Antiquities Department of Jordan, asked de Vaux to carry out the excavation of this cave (15 February–15 March) with the assistance of the Antiquities Department and the Palestine Archaeological Museum. In addition to a large quantity of pottery (cf. Discoveries in the Judaean Desert, 1, 1955, pp. 8–17), many fragments of written documents were found during the excavation, and, in some cases, they allowed a link to be made to manuscripts held by the Hebrew University in Jerusalem (see IQIsaiah^b [IQ833.35] and Discoveries in the Judaean Desert, 1, 1955, pp. 66, 135–136).

After 1949, archaeological excavations continued first of all on the site of Khirbet Qumran, but also in other caves as they were gradually discovered. The first caves to be excavated were those of Murabba'at (21 January–3 March 1952), and the archaeological results were published in 1962 (cf. Discoveries in the Judaean Desert, 2, 1961, pp. 3–50). The importance of the texts from the period of the Roman occupation became clear, especially from the time of the Bar Kokhba Revolt (132–135 CE), because the caves served as a hiding place for those who were fighting against the Romans. In 1952, Qumran Caves 2 and 3 were excavated (10 March–29 March). In September of the same year, Caves 4 through 6 were found in the marl plateau around Khirbet Qumran. In 1955 (7 February–15 March), Caves 7 through 10 were excavated and, in 1956, Cave 11 was excavated. The results of the excavation of these caves, except Qumran Cave 11, were published by de Vaux (Discoveries in the Judaean Desert, 3, 1962, pp. 3–36 and, in the case of Cave 4, Discoveries in the Judaean Desert, 6, 1977, pp. 3–22). [See Discoveries in the Judaean Desert.]

In 1951, the first campaign of excavations began on the site of Khirbet Qumran; although interrupted by the work in the caves, the excavations were resumed from 1953 to 1955. In 1958 (25 January–21 March), de Vaux directed excavations at 'Ein-Feshikha, a site 3 kilometers to the south of Qumran.

In 1961, de Vaux presented the main historical conclusions of the excavations carried out at Khirbet Qumran. Leaving aside the remains from Iron Age II, the occupation of the site divides into three periods: Period I (subdivided into Ia and Ib), which began shortly before John Hyrcanus (135–104 BCE) and extended to 31 BCE, when an earthquake shook the region; Period II, which extends from the reign of Herod Archelaus (4 BCE–6 CE) until 68 CE, when the site was destroyed by the Roman army; and Period III, which is represented by a military post occupied by the Romans from 68 to 73 CE. Subsequently, the abandoned buildings were used as a shelter during the Second Jewish Revolt (132–135 CE), but only briefly.

These results are open to discussion, but the absence of a final report means that we have to keep them in abeyance while we wait until such time as a much more detailed account of the excavations is published, an account that de Vaux was unable to produce himself. However, in 1994 this account began with a first volume edited by Jean-Baptiste Humbert and Alain Chambon (Humbert and Chambon, 1994) and presenting 538 photographs and a synthesis of the field notes of de Vaux. Four other volumes are expected.

Before 1947, de Vaux was also chairman of the Board of Trustees of the Palestine Archaeological Museum (sponsored by the Rockefeller Foundation), alternatively directed by the American, British, and French Schools of Archaeology at Jerusalem. [See Palestine Archaeological Museum.] For this reason he played an important part in the purchase of fragments owned by bedouin and in the search for funds for the publication.

De Vaux was not himself an epigraphist, but he published three fragments from Qumran Cave 1 (de Vaux, 1949). However, in 1954 he became editor in chief for the publication of manuscripts, and he retained this position until his death in 1970.

JACQUES BRIEND

DIDACHE, or "Church order," is a collection of ethical instructions and guidelines for rituals and organization of an early Christian community. The Greek text survives in one eleventh-century manuscript, complete but for the final lines, which was discovered by Theophilus Bryennios in 1873 in Constantinople and first published in 1883. A fragmentary Greek papyrus of the late fourth century (P.Oxy. 1782) contains a portion of the text. There exist also a Coptic fragment (*Br. Mus. Or. 9271 [Copt.]*) and evidence of Ethiopic and Georgian translations. The fourth-century *Apostolic Constitutions* paraphrased the whole *Didache* (*Ap. Const.* 7.1.2-32.4). Other ecclesiastical sources through the Middle Ages indicate knowledge of the text or of its sources.

The collection begins with ethical instruction, apparently to be used in baptismal catechesis (1.1-6.3). Ritual instructions follow, treating baptism (7.1-4), fasting and prayer (8.1-3), and the Eucharist (9.1-10.7). A section on ecclesiastical discipline deals with itinerant prophets and apostles (11.1-12), other obligations of hospitality (12.1-5), prophets and teachers who wish to remain in a community (13.1-7), confession and reconciliation (12.1-3), and the election of bishops and deacons (15.1-4). The incomplete concluding chapter offers parenesis in the context of an eschatological scenario (16.1-8). The text was probably composed in the late first or early second century CE in a Jewish-Christian environment in Syria or Palestine.

There is a broad generic similarity between the Rule of the Community (IQS) and the *Didache*, since both have homiletic elements and are concerned with questions of community order. Of particular interest is the initial section of the *Didache*, the "Two Ways" Tractate, which parallels the Rule of the Community (IQS iii.18-iv.26).

The *Didache* has probably used a source document, likely to be of Jewish origin, to which the author, or perhaps a subsequent redactor, added a series of specifically Christian precepts (1.3b-2.1). Some (e.g., 1.4: "turn the other cheek") are reminiscent of the Sermon on the Mount; others (e.g., 1.6: "let your alms sweat in your hands until you know to whom you are giving it") are

later developments. Whether this section was developed directly from the Synoptic Gospels or from parallel early Christian oral tradition remains debated.

The rest of the Way of Life (1.1-3a, 2.2-4.14) contains admonitions based on the Ten Commandments (2.2-3), expanded to condemn such evils as magic and abortion; proverbial directives to the "child" to avoid the sources of evil acts (3.1-6); encouragement to meekness and humility (3.7-10); rules for social behavior (4.1-10); and a concluding exhortation to pursue this Way of Life (4.11-14). The Way of Death (5.1-2) consists of a brief list of vices to be avoided, followed by a general conclusion (6.1-2).

Material similar to the "Two Ways" tradition used by the *Didache* enjoyed considerable popularity in early Christian circles. A close parallel, without the New Testament material of *Didache* 1.3b-2.1, appears in the second-century *Epistle of Barnabas* (18.1-20.2). Later patristic works also transmit modified forms of the "Two Ways" teaching. These include the Latin *Doctrina apostolorum*, probably composed in antiquity but preserved in an eleventh-century manuscript, and the fourth-century Greek *Apostolic Church Order* or *Canons of the Holy Apostles* and its *Epitome*. Other works, such as Ps.-Athanasius *Synagoga doctrinae*, *Fides CCCXVIII patrum*, the Arabic *Life of Shenoute*, and the *Rule of Benedict*, show traces of the "Two Ways" schema.

The *Didache* and Rule of the Community represent different versions of the venerable motif. Biblical and post-biblical Jewish literature frequently used the contrast of two ways, often combining them with value-laden dichotomies, for example, Psalm 1.1-6; *Proverbs* 4.18-19 ("light" and "darkness"); 12.28 ("life" and "death"); *Jeremiah* 21.8 ("life" and "death"); *1 Enoch* 94.1-5; *2 Enoch* 30.15 [long recension] ("light" and "darkness"); *T. Ash.* 3.1-5 ("two spirits"); *Sibylline Oracles* 8.399-401 ("two spirits"); cf. *M. Avot* 2.9. The version of the treatment in the Rule of the Community (IQS iii.18-iv.26), unlike the *Didache*, uses the notion of two cosmic spirits to frame balanced lists of virtues ("meekness, patience, compassion, etc.," IQS iv.3) and vices ("greed . . . irreverence, deceit, pride, etc.," IQS iv.9); each set is followed by a discussion of the appropriate reward or punishment. The *Didache*, using the contrast of life and death, absent from Rule of the Community, displays more formal diversity in the material in the Way of Life, which receives greater emphasis than its negative counterpart. Both texts share a concern with virtues of the "meek" (IQS iv.3; *Did.* 3.7-10).

Other parallels are few. In comparison with the scrolls' fragmentary Baptismal Liturgy (4Q414), the *Didache*'s instructions for baptism offer no responsory prayer. They focus on the action of the officiant, the type of water to be used, and the requirement to fast. A trinitarian formula indicates the ritual's Christian character in the *Didache*.

The *Didache's* instructions for the the community meal prescribe recitation of "eucharistic" or thanksgiving prayers before (9.1-5) and after (10.1-7) the meal. The *Didache*, like CD vi.16-17 and 20-21, excludes novices, for the *Didache* the unbaptized, from the sacred meal. The prayer after the meal (10.1-7) resembles the *Birkat Ha-Mazon* (Grace after Meals), now paralleled in Grace After Meals? (4Q434a). Both bless the Lord's name, the *Didache* for the knowledge made known through Jesus (10.2), the scroll for the Law.

HAROLD W. ATTRIDGE

DISCOVERIES IN THE JUDAEAN DESERT. The international team whose task it has been since 1953 to publish the scrolls found in the Judean Desert created a series, Discoveries in the Judaean Desert (of Jordan), in which these texts would be published. The editor in chief of the international team served at the same time as the general editor of this series: Roland de Vaux (vols. 1-5), Pierre Benoit (vols. 6-7), John Strugnell (vol. 8), and Emanuel Tov (vols. 9-). The volumes are produced by Oxford University Press, under the (often joint) auspices of the Jordan Department of Antiquities (vols. 1-3), École Biblique et Archéologique Française (vols. 1-3, 5), Palestine Archaeological Museum (vols. 1-5), and the American Schools of Oriental Research (vols. 3-4). No such auspices are listed for volume 6 (1977) and subsequent volumes. Volume 8 and all subsequent volumes were and are published under the auspices of the Israel Antiquities Authority, which has been actively involved in the publication effort since 1990. Throughout, the series has been named Discoveries in the Judaean Desert, with an interlude (1962-1968) during which volumes 3-5 were named Discoveries in the Judaean Desert of Jordan.

All the fragments and artifacts found in the Judean Desert from 1947 to 1956 by archaeologists or purchased from bedouin are scheduled to be published in the Discoveries in the Judaean Desert series, as well as the archaeological background of the sites. These volumes thus cover texts and artifacts found within the boundaries of Mandatory Palestine (Cave 1, 1947) and of the Hashemite

Kingdom of Jordan during those years, with the exception of material from Nahal Hever in Israel, brought to Jordan and incorrectly labeled as being from Seiyal (note, for example, the small fragments of the Greek Minor Prophets scroll found at Nahal Hever after the large scroll had become known as "Seiyal"—see vol. 8, p. 1). In his preface to volume 1, G. Lankester Harding, Director of the Department of Antiquities of the Hashemite Kingdom of Jordan, describes the area covered by the Discoveries in the Judaean Desert series as "the area of the Judaean desert between, roughly, Jericho and Wady Murabba'at." The following sites are thus covered, from north to south: Wadi ed-Daliyeh, Khirbet Qumran and the caves of Qumran, Khirbet Mird, 'Ein-Feshkha, Wadi Murabba'at, Seiyal = Nahal Şe'elim (although most documents from Seiyal actually derived from Nahal Hever).

The scholars involved in the publication of the texts in the first seven volumes of Discoveries in the Judaean Desert were the members of the initial international team, which consisted of the following eight scholars (in alphabetical order): John M. Allegro, Frank M. Cross, C. H. Hunzinger (subsequently replaced by Maurice Baillet), József T. Milik, Patrick W. Skehan, Jean Starcky, John Strugnell, and Roland de Vaux. The work of these scholars (as well as that of Pierre Benoit and Dominique Barthélemy) was supplemented by a few technical appendixes such as on linen textiles from Cave 1 (vol. 1, pp. 18-38), and by the publication of Psalms^a from Qumran Cave 11 (11Q5) by James A. Sanders in volume 4. The work of Skehan was published posthumously, in conjunction with Eugene Ulrich and Judith E. Sanderson (vol. 9).

It was the intention of the original team that the Discoveries in the Judaean Desert series would contain the official publication of the texts in conjunction with a commentary, but not in all cases was this the *editio princeps*. A concise publication of some texts was presented elsewhere in individual instances, sometimes involving mere transcriptions without photographs, and in other cases only photographs without transcriptions. Over the years the number of such preliminary editions increased, often constituting a full-fledged edition of the text, of which a revised version appeared later in Discoveries in the Judaean Desert.

The basic format of the series, as determined in volume 1, contains the following components:

1. a general introduction to each document describing its physical condition, color, orthography, paleography, and textual character;
2. a transcription of the text(s), with or without reconstructions, approaching as closely as possible the layout and content of the fragments;
3. a translation of the nonbiblical fragments or sections;

4. short notes on the readings, sometimes suggesting alternative readings;
5. a commentary on the contents of the fragments, in the biblical fragments involving comparisons with the other textual witnesses;
6. plates and figures documenting all the fragments published in the volume (with or without scale indicators), accompanied by drawings in the case of the Copper Scroll (3Q15) from Qumran Cave 3 in volume 3. These plates are usually based on the latest arrangement of the fragments recorded in the Palestine Archaeological Museum photos of the forty-three series taken in 1959–1961, sometimes accompanied by earlier photographs, or by more recent photographs of the Israel Antiquities Authority.

In these text editions the presentation of the text (transcription) is often the most important element. For many nonbiblical texts that were previously unknown and for which there are no parallel texts, the identification of the text and the presumed sequence of the fragments is very uncertain (cf. the introduction to vol. 1, pp. 43–45). Upon their publication, several texts were identified differently. The most well-known example is probably that of the Greek fragments from Qumran Cave 7 (7Q3–18) published as “fragments non identifiés,” but tentatively identified by J. O’Callaghan and C. P. Thiede as reflecting segments of the New Testament and by others as reflecting parts of the Septuagint and other works. In other cases, different manuscripts of the same composition given to different scholars and published with different names were subsequently combined. For example, text 4Q158 was published by John M. Allegro in volume 5 as *Biblical Paraphrase* and then was renamed *Reworked Pentateuch^a* by Emanuel Tov in volume 13 in conjunction with the publication of other manuscripts of that composition as *Reworked Pentateuch^{b,c}* (4Q364–367).

The general philosophy behind the Discoveries in the Judean Desert editions is to provide the scholarly public with a workable edition of the text, which, though presenting the best possible edition according to its editor, is likely to be improved upon by subsequent generations of scholars. In accordance with this philosophy, most scholars provided a minimal commentary (especially John M. Allegro in vol. 5), to be improved upon and augmented subsequently by others or by themselves.

The first volume of Discoveries in the Judean Desert introduced a system of presentation of the texts that attempts to represent in the transcription all the elements of the text as precisely as possible, including the exact position of the letters in the columns and fragments and the spaces between them, corrections, crossing out with a line, erasures, supralinear additions, the existence of

margins, marginal notes, dots between words in the paleo-Hebrew script, letters or words in the paleo-Hebrew script, numbers, and so on (see the detailed description in vol. 1, pp. 44–48: “Table des sigles”). According to this system, partially preserved letters are indicated with a supralinear dot or circle in accordance with the different degrees of certainty regarding the preserved part of the letter, and undetermined remnants of letters are indicated with midline circlets. This system has been used from volume 1 onward, and, although there are necessarily different conceptions of the certainty of the preserved parts of letters, basically the system has been used consistently. At the same time, differences exist between scholars over the amount of reconstruction they allow themselves for the segments that have not been preserved. Also, some scholars will make more suggestions than others regarding the column structure of the scroll on the basis of the preserved fragments, and even on the length and height of the column.

The “Table des sigles” in volume 1 also presents the system used in Discoveries in the Judean Desert for designating the fragments found in the Judean Desert, a system that is more or less followed throughout for newly discovered or identified fragments. When devising the system of presentation of the partially preserved texts, the members of the international team found little guidance in the scholarly literature of Semitic texts in the beginning of the 1950s, while in many ways their system resembles that of the Greek papyrological conventions. At the same time, some conventions developed only later. For example, the designation *Paleo* for the texts written in the Paleo-Hebrew script was not yet used, thus paleo-Leviticus from Qumran Cave 1 (1Q3) was described in Discoveries in the Judean Desert as “Lévitique et autres fragments en écriture ‘Phénicienne.’” The term *Paleo* appears for the first time in volume 3, page 104, with regard to text 6Q1 (“Genèse en écriture paléo-hebraïque”), now entitled 6Qpaleo-Genesis. Likewise, only at a later stage did “pap(yrus)” become an integral part of the name of compositions.

Most volumes are published or scheduled to be published in English, while a smaller number were published in French (vols. 1, 2, 3, 6, 7). The sequence of publication is not determined by the manuscript numbers (which follows a basic biblical and nonbiblical arrangement). Rather, as often occurs in the publication of a series, the volumes are not released according to a specific sequence. Thus, the first volume of material from Qumran Cave 4 (vol. 5) covered texts 4Q158–4Q186, although many may have expected to see the publication of *Genesis-Exodus* (4Q1) and the following biblical texts first (see the foreword of de Vaux to vol. 5). Since 1991, a general timetable has been established expanding the complete series to thirty-

nine volumes (of which twenty-eight are devoted to Qumran) and grouping the material, for the most part, on the basis of literary genre.

The contents of the volumes as recorded in the aforementioned list reflect in the first place the different places of origin (Murabba'at, Nahal Hever, Qumran, Wadi ed-Daliyeh), and in the second place the different caves. Thus, volume 1 is devoted to all the texts found in Qumran Cave 1 (except for the Peshet Habakkuk, 1QpHab; Isaiah^a, 1QIsa^a and 1Q8; the Rule of the Community, 1QS; the War Scroll, 1QM; the Genesis Apocryphon, 1QapGen and 1Q20; and Hodayot^a, 1QH^a), volume 2 is devoted to Murabba'at, and so on. The first ten volumes are mainly the work of individuals or combinations of one, two, or three scholars. By far the greatest number of volumes is devoted to Qumran Cave 4, for which no fewer than twenty-seven volumes are ultimately scheduled to appear. Within all these volumes the material is further subdivided according to a binary division of biblical and non-biblical texts, in which the appellation *biblical* refers to the canonical texts of the Hebrew scriptures.

The nonbiblical texts further reflect a subdivision into literary genres. Thus, the nonbiblical texts of volume 1 are subdivided into "commentaires, livres apocryphes, textes juridiques et liturgiques, recueils hymniques, groupes non caractérisés." Likewise, the nonbiblical texts from Qumran Cave 4 in volume 13 reflect single literary genres, for example, parabiblical texts (vols. 13, 19, 22). That is, while it was the original intention of the international team that the published volumes should reflect the different allotments to the individual scholars, which in themselves often reflected different literary genres, subsequently this arrangement was changed. With the reorganization of the team in 1990, a different procedure was started for the Qumran Cave 4 material, resulting in the publication of the texts in the first place according to their literary character.

While most volumes contain publications of texts, several volumes (1, 2, 3, 6, 8, 9, 38) also publish archaeological data on the caves in which the scrolls or artifacts were found, on the artifacts themselves, and on the archaeological missions. These descriptions comprise the following topics: the pottery found in Qumran Cave 1 (vol. 1, pp. 8–17), in the "Minor Caves" (vol. 3, pp. 13–41), and in Qumran Cave 4 (vol. 6, pp. 15–20), as well as at Murabba'at (vol. 2, pp. 14–15, 26–34); the linen textiles of Qumran Cave 1 (vol. 1, pp. 18–38) and of Murabba'at (vol. 2, pp. 51–63); and the fastenings on the Qumran manuscripts (vol. 6, pp. 23–28). The volumes also include an archaeological description of Qumran Cave 1 (vol. 1, pp. 3–7), of the "Minor Caves" (vol. 3, pp. 3–13), and of Qumran Cave 4 (vol. 6, pp. 9–22), as well as a very detailed description of the different caves of Murabba'at (vol. 2, pp. 1–63).

A similar description is planned for Cave 11 (vol. 27). All these descriptions are accompanied by plates.

Volumes 1–8 contain indexes (single words) of the Hebrew, Aramaic (vols. 1, 2), Greek (vol. 2, 3, 8, 9), Latin (vol. 2), and Arabic (vol. 2) words of the nonbiblical texts or sections as well as signs (vol. 7). These indexes refer to all the texts included in a volume, while volume 3 lists the words of the Copper Scroll (3Q15) separately. Using a different system, volumes 10 on contain concordances (keyword in context) of all the words in the nonbiblical texts or sections, listed separately for the different texts. In addition, the volumes recording the biblical texts from Qumran Cave 1 (vol. 1), the "Minor Caves" (vol. 3), and Qumran Cave 4 (vols. 6, 9, 12, 14, 15) list the exact biblical passages recorded in the volume (vols. 16–17 are scheduled to contain similar indexes). Volume 10 also contains a reverse index to the Hebrew words. As a rule, the analysis and commentary in the first volumes of Discoveries in the Judean Desert are shorter than those in volumes 8 on. Also in these later volumes the description of the orthography, physical appearance, and paleography is usually more extensive than in the earlier volumes.

EMANUEL TOV

DISCOVERY AND PURCHASE. The earliest manuscript finds in the Judean Desert are reported by Origen, who in his hexapla used a Greek translation that was discovered "together with other Hebrew and Greek books in a jar near Jericho," probably about 217 CE, discoveries later referred to by Eusebius (*Ecclesiastical History* VI xvi 1).

In about 800 CE, Timotheus I, Nestorian patriarch of Seleucia, mentioned manuscripts found in a cave near Jericho, manuscripts later related to the Karaites. Several

medieval Arab authors refer to "scriptures" used by "cave-men" in the area of Jericho, probably a reference to ancient recollections of the Qumran community.

Modern Discoveries. The first scrolls discovered in the Judean Desert in modern times came from Qumran. A number of scrolls were discovered at other sites in the Judean Desert as well.

Qumran. Published accounts of the discoveries of the scrolls near Qumran have contained contradictory details from the beginning. The main points, however, seem to be established. Sometime between November 1946 and February 1947 (possibly one or two years earlier), at least three Ta'amireh bedouin, Muhammed edh-Dhib Hasan (Muhammed Ahmed el-Hamed, possibly to be identified with Abu-Daoud, who died in Bethlehem in January 1998, or with another bedouin who died in Jordan in 1997), Jum'a Muhammed (reported to be alive in Bethlehem as late as 1994), and Khalil Musa, accidentally discovered a cave near Qumran while shepherding sheep and/or goats. Either as a result of a game to see who could hit an opening in the mountainside, or the sighting of an opening during a search for a lost goat, a rock was tossed into this hole, and the sound of breaking pottery was heard. Thinking that something valuable might be contained in the pots, edh-Dhib and at least one other companion investigated, probably the next day after securing candles and a rope. Upon entering the cave, the men discovered several large clay jars (at least ten, perhaps as many as fifty), all with lids, some or all sealed to the jars with clay. Breaking open the jars, expecting perhaps to find gold or other treasure, the bedouin discovered only seeds (or "red dirt" or something resembling "dead bugs"), except in one jar, which contained three (or four) bundles wrapped in linen coverings that had a "green" color.

Taking them back to the camp, the bundles were hung in a bag on a corner tent pole for some months (early accounts say as long as two years), and one is reported to have been destroyed by children playing with it (a fourth original scroll?).

In March 1947, Jum'a and Khalil offered three scrolls to Ibrahim 'Ijha, a carpenter and antiquities dealer in Bethlehem, who showed them to another antiquities dealer, Faidi Salahi. 'Ijha kept them for several weeks but then returned the bundles, fearing they were stolen goods. These were the complete Isaiah scroll from Cave 1 at Qumran, Isaiah^a (hereafter, 1QIsaiah^a; 1QIsa^a), Peshet Habakkuk (1QP^aHab), and the Rule of the Community (hereafter, 1QR^aRule of the Community; 1QS).

Jum'a next showed the scrolls to George Isha'ya (Shamoun), a Bethlehem peddler, but he did not entrust George with the scrolls. Then Jum'a showed the scrolls to Sheikh 'Ali Subh, chief of the Ta'amireh, who suggested

they bring them to Khalil Iskander (Kando Shahin), a Syrian Orthodox merchant in Bethlehem.

During Holy Week of (April) 1947, George mentioned the manuscripts to the Syrian Orthodox metropolitan Athanasius Yeshne Samuel at Saint Mark's Monastery in Jerusalem's Old City. Kando and George brought one manuscript, 1QRule of the Community, to Metropolitan Samuel within about a week's time. Samuel realized that it was written in Hebrew and offered to buy it or any other similar manuscripts. Kando left with the scroll, not contacting the metropolitan again for about ten weeks.

Some months after the original discovery, probably in May or June 1947, Jum'a returned to the cave (or perhaps another cave) with George and removed four more scrolls. Three of these they sold to Faidi Salahi, the Bethlehem antiquities dealer who had seen the first three. These three were later bought by Professor Eleazar L. Sukenik: Isaiah^b (hereafter, 1QIsaiah^b; IQ8), the War Scroll (IQM), and Hodayot^b (IQ35). The fourth, Genesis Apocryphon (1QapGen), was kept by Kando.

About 5 July 1947, Kando sent Jum'a Muhammed, George Isha'ya, and Khalil Musa to the monastery in Jerusalem, where they were rudely turned away at the door by one of the monks, Bulos Gilf, who had not been informed about Kando's previous offer. The bedouin and Kando were deeply offended, but two weeks later Kando returned, this time with five scrolls (1QIsa^a, 1QpHab, IQS in two halves, and 1QapGen). On 19 July 1947, Kando took the scrolls on consignment from the bedouin for one-third of whatever he could obtain for them. He sold these to Metropolitan Samuel shortly afterward for £P (Palestine pounds) 24 (\$97.20), of which he gave £P16 (\$64.80) to the bedouin according to the agreement.

During the next few days Metropolitan Samuel consulted Stephan Hanna Stephan, a Syrian Christian employed by the Palestine Department of Antiquities, and Fathers Marmardji and van der Ploeg, all of whom examined the scrolls but considered them late (medieval) and therefore of no great value.

During August 1947, the metropolitan sent another of Saint Mark's priests, Father Yusef, with George Isha'ya to check the cave for further details, at least the second trip back by the bedouin or others after the discovery.

In September 1947, Anton Kiraz traveled with Metropolitan Samuel to Homs, Syria, where the scrolls were shown to the Syrian Orthodox patriarch of Antioch, who also doubted their antiquity. Metropolitan Samuel next traveled to Beirut to show them to the Professor of Hebrew at the American University, only to find that he was on vacation. On September 26, the metropolitan returned to Jerusalem, still confident that the scrolls were ancient but without any support for his views on their antiquity.

During the first week of October, Anton Kiraz and Met-

ropolitan Samuel became partners in the scrolls in return for Kiraz's financial support. The metropolitan again asked for help from Stephan Hanna Stephan, who brought along a Jewish expert and specialist in antiquities, but both steadfastly identified the scrolls as late. In October 1947, the metropolitan asked Dr. Maurice Brown for assistance. Dr. Brown contacted Dr. Judah L. Magnes, president of Hebrew University of Jerusalem on Mount Scopus. Magnes sent two librarians, who examined the scrolls but never returned to see them again, despite the metropolitan's agreement that they might photograph some of the columns. Another Jewish antiquities dealer, Mr. Sassun, suggested sending the scrolls to experts in Europe, but the metropolitan declined.

In early February 1948, Reverend Butros Sowmy, assistant to Metropolitan Samuel, recalled having visited the American Schools of Oriental Research (now the Albright Institute of Archaeological Research), where he had been given a cordial welcome some ten years before. He suggested to Metropolitan Samuel that he might obtain information there about the antiquity of the scrolls. On February 18, Sowmy telephoned the school, only to discover that the director, Millar Burrows, was in Iraq. Dr. John C. Trever, acting director in Burrows's absence, invited Sowmy to come to the school on the following day. In a few weeks' time, Trever, with the help of William H. Brownlee, was able to photograph 1QIsaiah^a, Peshar Habakkuk, and 1QRule of the Community. He later sent copies of the photographs to William F. Albright, who dated the scrolls paleographically to about 100 BCE.

Meanwhile, in West Jerusalem, on 23 November 1947, an Armenian antiquities dealer had contacted Sukenik. Sukenik subsequently met with the Armenian (identified only as Mister X in published accounts) across a barbed wire fence at the gateway to Military Zone B in Jerusalem. Sukenik was shown a scrap of leather with Hebrew script written on it. He was told that bedouin had brought several parchment scrolls from the Dead Sea region to a mutual friend, an old antiquities dealer in Bethlehem (Faidi Salahi), who wished to offer the scrolls to the Museum of Jewish Antiquities of the Hebrew University. Sukenik recognized the script of the fragment as similar to that on some coffins and ossuaries from before the Roman destruction of Jerusalem (which he previously had excavated on Anton Kiraz's property) and requested that the Armenian dealer proceed to Bethlehem to obtain more samples.

On 27 November the Armenian telephoned Sukenik to say that he had additional fragments, and they met at the Armenian's shop in the Old City. Sukenik and Mister X decided to go to Bethlehem to arrange a purchase of the bundles from Salahi, who had two jars in which bundles had been found, removed by the bedouin at the time of

the original discovery. After reading one of the scrolls, written in Biblical Hebrew, the text of which was unfamiliar to him, Sukenik took the scrolls for inspection and returned to Jerusalem.

Back in Jerusalem Sukenik continued to read the scrolls and later informed Salahî, through his Armenian friend, that he would purchase them. Sukenik bought the War Scroll and Hodayot^a (hereafter, 1QHodayot^a; 1QH^a) from Salahî on November 29. Later that night the United Nations voted to partition Palestine, the first step in the establishment of the modern State of Israel. Sukenik purchased an Isaiah^b fragment on 22 December 1947 and possibly some Daniel fragments as well.

Not long afterward, Sukenik received a telephone call from Mister X saying that he hoped to get more scrolls from the same source in Bethlehem. Now Sukenik began to seek a personal loan from the bank in order to buy the scrolls.

He visited Mister X several times in the Old City, asking him to encourage the Arab dealer to obtain whatever else he could from the bedouin. At the end of January 1948, Sukenik received a letter from Anton Kiraz, offering to show Sukenik ancient Hebrew scrolls. Sukenik met Kiraz at the YMCA building in Jerusalem and was shown several scrolls, including one of the entire book of Isaiah (1QIsa^d). Sukenik believed these scrolls to be of the same origin as those he had obtained from the Bethlehem dealer and established that his friend had bought these from Ta'amireh bedouin, the same tribe that had brought scrolls to the Bethlehem dealer Salahî. Kiraz said that these scrolls now belonged to him and the metropolitan (though Metropolitan Samuel later denied consenting to this meeting). Sukenik took these scrolls home for examination and made partial transcriptions and copies of some of the texts.

Sukenik's bank refused his loan request, and he was unable to contact officials at the Jewish Agency and Bialik Foundation for funding. On 6 February, Sukenik returned the second set of scrolls to Kiraz at the YMCA in West Jerusalem. Although they negotiated, they were unable to agree on a price. A few days later Sukenik received word from the Jewish Agency that it would fund the purchase of the scrolls, but it was too late.

Weeks passed, and finally Sukenik received a letter from Kiraz and Metropolitan Samuel informing him that they had decided not to sell. Sukenik later discovered that two weeks after he returned the scrolls, Sowmy had gone to the American Schools of Oriental Research, resulting in Trever's photographs and eventual publication by the school of 1QIsaiah^a and Peshar Habakkuk (1950) and 1QRule of the Community (1951).

With war impending, Father Sowmy took the scrolls to

Beirut for safekeeping on 25 March 1948. Trever left Jerusalem on 5 April, and the British Mandate ended on 15 May, precipitating the Israeli War of Independence.

Probably in August 1948, George Isha'ya visited the cave again and secured some Daniel and Prayer Scroll fragments, as well as a few others, which he turned over to Saint Mark's. In November, Isha'ya, Kando, and others excavated the cave and secured many more fragments.

In January 1949, O. R. Sellers and Yusef Saad, secretary of the Palestine Archaeological Museum, attempted to locate the cave, but George Isha'ya demanded payment to guide them, and negotiations ceased. On 24 January, Captain Philippe Lippens asked for help from the Arab Legion to locate the cave, which was accomplished on 28 January.

On 29 January 1949, Metropolitan Samuel arrived in the United States with four scrolls and various fragments. Six days later, on 4 February, Trever met the metropolitan in New Jersey to begin arrangements for unrolling the "fourth scroll," the Genesis Apocryphon.

Additional scroll discoveries, for the most part by the bedouin, soon followed. Cave 1 at Qumran was excavated between 15 February and 5 March 1949 under the direction of G. Lankester Harding (Palestine Archaeological Museum) and Roland de Vaux (École Biblique et Archéologique Française), with fragments of about seventy scrolls and pieces of fifty pottery jars and covers recovered.

From 7 to 9 April 1949 the Saint Mark's fragments in the United States were separated, mounted, photographed, and identified as parts of Daniel^{a-b} and later as Liturgical Prayers.

On 10 April a large fragment of the fourth scroll was separated from the roll and tentatively identified as the Lamech Document, later named the Genesis Apocryphon. Four days later it was taken to Harvard's Fogg Art Museum to be prepared for complete opening, but it was completely unrolled only in 1956 by Yigael Yadin and Bjeberkraut after its arrival in Israel. That summer, 1QIsaiah^b was opened at Hebrew University.

Yusef Saad finally succeeded in purchasing the remainder of the Cave 1 fragments from Kando in the spring of 1950: the Rule of the Congregation (1Q28a) and the Rule of the Blessings (1Q28b).

For six years the metropolitan tried to sell the four scrolls in his possession in the United States. Trever repeatedly but unsuccessfully tried to raise money to buy them. Just when he thought he had succeeded, Yadin (son of Sukenik, who had died in 1953) announced their purchase for Israel. During June 1954, Morty Jacobs of New York had called Yadin to inform him that the scrolls were advertised for sale in the *Wall Street Journal*. The next day a banker, acting as an intermediary for Yadin,

replied to the advertisement. On 11 June 1954 an agreement was reached to purchase the four scrolls for \$250,000, through the assistance in various ways of Avraham Harman, Isak Norman, Samuel Rubin, and Teddy Kollek. Later that month, Professor Harry Orlinsky of the Hebrew Union College-Jewish Institute of Religion in New York, posing as a Mr. Green, authenticated the scrolls, and after the conclusion of the agreement and transfer of the scrolls, Samuel Gottesman donated the money to cover loans made for their purchase. The scrolls were shipped back to Israel separately, and on 13 February 1955 Yadin announced to the world that the scrolls were now in Israel and had been reunited with those purchased by his father some years before.

Between 24 November and 12 December 1951, de Vaux and Harding made soundings at Khirbet Qumran, confirming the site's connection with the scroll cave through pottery and establishing an approximate date through coins. Cave 2 was discovered close to Cave 1 in February 1952. From 10 to 20 March 1952 a team led by de Vaux and William Reed, director of the American Schools of Oriental Research, explored about 225 caves in the Qumran region, discovering Cave 3 with the Copper Scroll (3Q15) together with several dozen fragments from other scrolls.

Cave 4 was discovered adjacent to Khirbet Qumran by bedouin in August 1952. According to Abu-Daoud (possibly to be identified with Muhammed edh-Dhib Hasan), he and his friends heaped as many fragments as possible in their kaffiyehs and carried them off. They also found "pieces of wood" (shelves?), which they threw out of the cave into the wadi.

Fragments from Cave 4 were purchased by the Palestine Archaeological Museum from bedouin over a period of three years, mostly through Kando as intermediary. For example, on 20 September 1952 the Palestine Archaeological Museum was offered a group of approximately fifteen thousand fragments, for which the Jordanian government paid 15,000 dinars (\$42,000) in early 1953. A second large purchase was made in February 1954 and a third in July 1958. Funds for Cave 4 purchases came, among others, from the All Souls Church (New York); the federal government of Bonn and the government of Baden-Württemberg on behalf of the University of Heidelberg through K. G. Kuhn; the Jordanian Government; Manchester University and one of its donors; McCormick Theological Seminary; McGill University; an unnamed widow; the endowment of the Palestine Archaeological Museum; and the Vatican Library.

From 22 to 29 September 1952, de Vaux and his team excavated Cave 4, recovering fragments from about one hundred manuscripts. More than forty thousand frag-

ments later were identified as having come from nearly six hundred manuscripts in Cave 4, of which at least one hundred were biblical.

Cave 5, discovered a short distance north of Cave 4 in September 1952, was excavated by Józef T. Milik, and nearly at the same time Cave 6 was discovered by bedouin in a cliff of Wadi Qumran. Caves 7, 8, 9, and 10 were discovered between February and April 1955 in the terraces around Qumran. All these caves yielded relatively small numbers of fragments.

The eleventh and final Qumran cave was discovered by bedouin in February 1956. Fragments were secured partly through donations from Kenneth and Elizabeth Hay Bechtel and the Royal Academy of Sciences of the Netherlands. On 1 March 1956 the Palestine Archaeological Museum paid JD (Jordanian dinars) 16,000 (\$44,800) to Kando for "eight cardboard boxes and one package of fragments" from Cave 11 and, on 17 July of the same year, JD14,000 (\$39,200) for New Jerusalem from Qumran Cave 11 (hereafter, 11QNew Jerusalem; 11Q18) and Targum of Job (hereafter, 11QTargum of Job; 11Q10) bought in 1961 by the Royal Academy of Sciences of the Netherlands. Temple Scroll" (11Q19) was not recovered by scholars until 1967 when Yadin seized it from Kando immediately after the capture of Bethlehem during the 1967 Arab-Israeli War (the Israel Department of Antiquities and Museums later paid Kando more than \$100,000).

Wadi Murabba'at. In October 1951 Ta'amireh bedouin made another discovery, this time in the caves of Wadi Murabba'at, south of Qumran. Two fragments of inscribed leather were offered for sale, first in Jerusalem, and from November 1951 through January 1952, Kando offered many other fragments to the Ecole Biblique et Archéologique Française. From 21 January to 3 March 1952, Harding and de Vaux interrupted their excavations at Qumran to search caves at Murabba'at. In March 1955 a Hebrew scroll of the Minor Prophets (Mur 88) was discovered by bedouin in a fifth Murabba'at cave. The last fragments from Murabba'at were purchased in 1958 by the Palestine Archaeological Museum and the École Biblique et Archéologique Française.

Khirbet Mird. In July 1952, bedouin also discovered Byzantine and early Arabic manuscripts, including some Greek New Testament manuscripts, all from about the sixth through seventh centuries CE at Khirbet Mird (Horqaniah), the ruins of a monastery about 5 miles from Qumran. This site was excavated by R. de Langhe of the University of Louvain-la-Neuve between February and April 1953.

Wadi ed-Daliyeh. In February 1962, bedouin discovered about forty Samaritan papyrus documents in a large cave (Abu Shinjeh Cave, Cave of the Papyri) in Wadi ed-

Daliyeh, about 9 miles north of Jericho. First offered to the Palestine Archaeological Museum by Kando, they were brought by the American Schools of Oriental Research through Bechtels. These documents, left behind by Samaritans, date to the fourth century BCE.

Masada. Between 18 and 29 March 1955 an Israeli expedition found one papyrus fragment. A further survey between 7 and 17 March 1956 turned up no other fragments, but excavators working under Yigael Yadin at Masada from October 1963 to April 1964 and December 1964 to March 1965 discovered fragments of many manuscripts, including parts of *Leviticus*, *Deuteronomy*, *Ezekiel*, *Psalms*, and *Ben Sira* (MasIa-Ih), Songs of the Sabbath Sacrifice (MasIk), and other Hebrew and Aramaic documents, as well as a large number of Latin and Greek documents.

Nahal Hever. Between July and August 1952, bedouin brought to Jerusalem manuscripts from a cave, probably Nahal Hever, which included a Greek text of the Minor Prophets. Taking the lead from recent bedouin discoveries in the area, an Israeli expedition surveyed the 'Ein-Gedi region from 23 March to 6 April 1958 and found a cave in Nahal Hever with fragments from *Psalms* and fifteen papyrus letters in Hebrew, Aramaic, and Greek. The following March, Nahal Hever was further excavated, and about forty papyrus business documents in Hebrew, Aramaic, Nabatean, and Greek dating from about 88 CE to 132 CE were recovered.

The Cave of the Letters (Cave 5/6) in Nahal Hever was excavated by Yadin from 23 March to 6 April 1960, during which he discovered the Bar Kokhba letters. Another expedition, from 14 to 27 March 1961, discovered the Babatha archive and land contracts originally from 'Ein-Gedi.

Also between 14 and 17 March 1961, Yohanan Aharoni excavated the Cave of Horror (Cave 8), discovering the very important Greek Minor Prophets.

Nahal Se'elim (Seiyal). By early 1960, rumors that many fragments brought to Jerusalem by bedouin had come from Nahal Se'elim resulted in a survey of the valley by Aharoni. In an excavation of several caves in 1960, documentary fragments were found only in Cave 34.

Wadi el-Mafjar. Hanan Eshel excavated Wadi el-Mafjar between April and May 1986 and 22 to 23 June 1986. Fragments discovered there included an Aramaic list of names, fourth-century BCE Aramaic legal documents, and second-century BCE nonliterary documents in Greek.

Wadi en-Nar and Wadi Ghweir. Neither location is precisely known. According to bedouin accounts, Greek and Hebrew/Aramaic documents on papyrus and skin were discovered in these regions.

Wadi Sdeir. Bedouin sold fragments from a Genesis scroll (Sdeir 1) and at least two Greek documents found here.

Ketef Jericho. The latest discovery of scrolls occurred in November 1993, when Hanan Eshel discovered Aramaic and Greek commercial/nonliterary documents from the Bar Kokhba period on an upper shelf of a cave in Ketef Jericho, near Jericho.

DOCUMENTARY TEXTS. Reflecting daily, normal life in the place and time in which they were written, documentary texts give us insight into various aspects of society: social, economic, legal, administrative, and linguistic. Documentary texts are to be contrasted with literary and pseudoliterary texts, and, in the case of the documents from the Judean Desert, with biblical, parabiblical, sectarian, and Christian texts. The documents surveyed here were written on leather, papyrus, sherds (ostraca), and jars (*tituli picti*). Inscriptions (on stone and metal) and graffiti are excluded. The more substantial docu-

ments preserved are legal deeds. [See Legal Works.] A great part of the documents from the Judean Desert has remained unpublished to this day or has been only preliminarily published. The emphasis in the following survey naturally will be on the published material.

Chronologically four main groups of documentary texts can be discerned (a few single documents from other periods are ignored).

Samaritan Papyri. In the Aramaic language, from the fourth century BCE (375–335 BCE), the Samaritan papyri were found in Wadi ed-Daliyeh. [See Daliyeh, Wadi ed-, *article on Written Material.*] Only deed of slave sale WDSP 1, a slave conveyance from 335 BCE, has been published to date (Cross, 1985). The majority of the other documents are also slave conveyances. The papyri belong to wealthy slave owners from Samaria who seem likely to have hidden in the cave in Wadi ed-Daliyeh in the wake of the revolt of Samaria against Alexander the Great in 331 BCE (Curtius Rufus: *De rebus gestis Alexandri magni*, 4.8–9–11). The legal formulas in the Samaritan documents are familiar from the Elephantine papyri of the fifth century BCE. Some other Aramaic fragments from the same period were found in the Cave of Avi'or in Ketef Jericho (Eshel and Misgav, 1988). [See Deeds of Sale; Elephantine Texts; and Mafjar, Wadi el-.]

The Aramaic ostraca from Idumea from the fourth century BCE, although not strictly from the Judean Desert, should be mentioned here. Their precise provenance is unknown since they were not found in the course of controlled excavations. They were written during the last thirty years of Persian rule and the beginning of the Hellenistic period (360–311 BCE). They shed some light on demographic and economic aspects of Idumea at the time. The *Onomasticon* reveals the mixture of Edomite and Arabic names in the area with which we are acquainted from later sources. Of the many hundreds of these ostraca, some two hundred were published recently (Lemaire, 1996; Lozachmeur and Lemaire, 1996). We must see these ostraca in the contexts of the Arad ostraca of the fifth century BCE, the Beersheba ostraca of the fourth century BCE, and other contemporary Aramaic ostraca discovered in other sites in southern Palestine.

Masada. The material from Masada is dated to the period before the fall of the fortress in spring of 73 (or 74) CE. It falls into three groups.

The majority of *tituli picti* in Jewish script (Mas 462–553), Latin (Mas 795–852), and Greek (Mas 854–914) on local and imported storage jars are likely to belong to the Herodian period at Masada (37–4 BCE), reflecting the economic activity stimulated by the setting up of Herod's stores (Josephus, *The Jewish War* 7.295–296). Some of the imported jars contained luxury products—choice wines, fish sauce, and apples—and carried Herodian dates. *Ti-*

tuli picti, both dated and undated, advertising the contents of the jars and/or their owner's names, are known from other parts of the Roman world; they are collected in the volumes of the *Corpus inscriptionum Latinarum* under *instrumentum domesticum*. For comparison with the Masada texts, see the collections from Rome and Pompeii in *Corpus inscriptionum Latinarum*, volumes 15 and 4, respectively.

The ostraca in Jewish script (Mas 1–461) and in Greek (Mas 772–792) as well as the Greek papyri (Mas 739–747) belong to Jews, and probably to the Sicarii who occupied Masada between 66 and 73/74 CE. The majority bear witness to the food-rationing system adopted by the Sicarii (Mas 1–428, 739–747, 772–792); others testify to the Sicarii's strict observance of ritual laws concerning tithes and dietary laws (Mas 441–461). [See Sicarii.]

The Latin papyri and ostraca, to be dated from approximately 72 to 73/74 CE, belong to soldiers of the Tenth Legion, the legionary garrison of the province of Judea, which together with auxiliary forces, besieged and conquered Masada in 73/74 CE (*The Jewish War* 7.252–407). The papyri constitute a random and mostly fragmentary collection of discarded texts. The most important items are a line from Virgil's *Aeneid* (4.9: Mas 721), a legionary pay record of a cavalry man from 72 CE (Mas 722), and a list of hospital supplies (Mas 723). Not much can be gleaned from our material to add to what is already known about the Tenth Legion in Palestine. It is of paramount importance, though, that all Latin documents found at Masada have a precise historical context and date. This is crucial not only for students of Latin paleography but also for military historians, who now have more dated information about the bureaucratic development of the Roman army. The evidence from Masada can now be added to that derived from Egypt and Dura Europos in Syria.

The entirety of the documentary material discovered at Masada in 1963–1964 and 1964–1965 has been published. Renewed excavations at Masada in 1995–1996 and 1996–1997 uncovered more material that has not yet been published. [See Hever, Nahal, *article on Written Documents*; Se'elim, Nahal, *article on Written Material*.]

Documents from Wadi Murabba'at, Nahal Hever, Nahal Se'elim, and Other Sites. Most of this corpus owes its preservation to the upheaval caused by the Bar Kokhba Revolt (132–135 CE). [See Bar Kokhba Revolt.] Most of it is thus limited in time to the years immediately preceding the Bar Kokhba Revolt and those of the revolt itself (although some documents are much earlier; for example, debt acknowledgment, Mur 18, written in Aramaic, from 55 or 56 CE, contract XHev/Se Nab. 1, from 60 CE, Mur 29 and 30 from before the First Revolt [Cotton, 1999]). On the other hand, people attested in the doc-

uments come from villages as scattered as Mazra'a and Mahoza/Maḥoz 'Eglatain in the Dead Sea area in the province of Arabia: Sophathe in the Perea in Transjordan, which belonged to the province of Judea: 'Ein-Gedi on the western shore of the Dead Sea; Kesalon and Hardona in the vicinity of Jerusalem; Kaphar Barucha, Yaqim (or Yaqum); and Aristoboulias in the area southeast of Hebron; Bethbassi near Herodium; Galoda in eastern Samaria, and Betharda in southern Samaria. The great majority of the documents, whether letters or legal deeds, were written by, or at least involve, Jews, thus giving a glimpse of Jewish village society in the Roman provinces of Arabia and Judea at the time that they were written.

Four private archives (i.e., a collection of documents belonging to a person or a family) were found among the documents: those of Babatha, Salome Komaise daughter of Levi, Jonathan son of Baianos, and Yeshu'a son of Galgula. The Babatha archive, P.Yadin 1–35, was discovered in the Cave of the Letters in Naḥal Hever. [See Babatha.] It begins on 11 August 94 CE and ends on 19 August 132 CE. Only the Greek part (P.Yadin 5, 11–35) of the Babatha archive has so far been published (Lewis, 1989). The archive of Salome Komaise daughter of Levi (XHev/Se 12, XHev/Se 60–65) also is from the Cave of the Letters in Naḥal Hever. This archive begins on 29 January 125 and ends on 7 August 131 CE. The Nabatean contracts XHev/Se Nab. 1–5 are likely to belong to one of these archives or to both. The documents designated XHev/Se belong to the so-called Seiyâl (Naḥal Se'elim) collection, the majority of which come from Naḥal Hever. The Aramaic, Hebrew, and Greek documents that belong to this collection (but not the Nabatean documents) were published by Hannah M. Cotton and Ada Yardeni (1997).

The two archives revolve around the legal affairs of Jewish families in Maḥoza/Maḥoz 'Eglatain, a village on the southern shore of the Dead Sea, in what used to be the Nabatean kingdom and in 106 CE became the Roman province of Arabia. They contain legal documents in Nabatean, Aramaic, and Greek: receipts, hypothecary loans, land declarations, renunciations of claims, summonses to the Roman governor's court, marriage contracts, deeds of gift, promissory notes, deeds of purchase and sale, minutes of a city council, and copies of legal formulas. The documents demonstrate the successful integration of the Jews into the Nabatean environment: Jews own houses and orchards in Maḥoza/Maḥoz 'Eglatain; their Nabatean neighbors serve as witnesses and subscribers to their documents and as guardians of their children. The frequent appeals in the Babatha archive to the Roman governor of Arabia and the latter's accessibility and involvement in legal affairs between Jews reveal an aspect of Roman-Jewish relations not often in evidence.

The two archives belong to two of Bar Kokhba's admin-

istrators. The archive of Jonathan son of Baianos from 'Ein-Gedi (P.Yadin 49–56, 58–60, unpublished), contains letters in Aramaic and Greek from Bar Kokhba to Jonathan and sometimes to Jonatban together with Masabalai son of Shim'on. It was also found in the Cave of the Letters in Naḥal Hever. The archive of Yeshu'a son of Galgula (Mur 42–44) contains three letters addressed to him in Hebrew: two letters from Bar Kokhba and one from the *parnasim* ("administrators") of Beit-Mahiko. The archive was found in Wadi Murabba'at. It is possible that these archives, like the ones just discussed, were brought to the caves by women of the family: Miriam daughter of Baianos (of P.Yadin 26), Babatha's second husband's first wife, might be the sister of Jonathan son of Baianos; and Salome daughter of Iohannes Galgula, the wife in the Greek remarriage contract from Wadi Murabba'at (Mur 115 of 124 CE), might be the sister or niece of Yeshu'a son of Galgula.

The Babatha archive reveals the existence of intimate ties between families in 'Ein-Gedi in the province of Judea and those in Maḥoza/Maḥoz 'Eglatain in the province of Arabia: people described in the documents as from 'Ein-Gedi reside in Maḥoza, own property there, and intermarry with the Jews of Maḥoza. These ties may well go back to the time of the First Jewish Revolt when 'Ein-Gedi, raided by the Sicarii from Masada in 68 CE (*The Jewish War* 4.402) and later by the Romans, must have been practically abandoned, at least for a while (Pliny, *Natural History* 5.73). Part of its population may have settled in Maḥoza/Maḥoz 'Eglatain, a place with similar climatic conditions, similar types of cultivation, and a similar watering system (P.Yadin 7, XHev/Se 64, and the unpublished P.Yadin 42). The Bar Kokhba Revolt reunited the families: notwithstanding their relations with their neighbors, the Nabateans, the well-off Jews of Arabia left their property behind and crossed over to Judea to take part in the Bar Kokhba Revolt. Only this can explain the presence of their documents in the same caves where documents from 'Ein-Gedi are found.

Another group of documents includes leases and subleases of land in Ir ha-Nahash (in the region of Beth Guvrin? Mur 24A–L, 134 CE) and in 'Ein-Gedi (P.Yadin 42–43, 132 CE, and P.Yadin 44–46, 134 CE, unpublished). They were written in Hebrew and Aramaic by the Bar Kokhba administration. 'Ein-Gedi is attested in 124 CE as "a village of our Lord Caesar" (P.Yadin 11 and XHev/Se gr 67). The leases and subleases attested in the documents from Wadi Murabba'at and Naḥal Hever, as well as some of Bar Kokhba's letters to his administrators in 'Ein-Gedi, imply that Bar Kokhba laid his hands on parts of the imperial domain and especially on the precious balsam grove in 'Ein-Gedi.

Finally, many private documents belonging to single

people and including letters, legal deeds, lists of names, and accounts in Aramaic, Hebrew, and Greek (small fragments and scraps are excluded here) come from Wadi Murabba'at (Mur 18–23, 25–33, 89–97, 113–116) and Nahal Hever (XHev/Se 7–13, 49–50 [mostly Aramaic], 66–73 [Greek]). More than a dozen documents allegedly from Cave 4 at Qumran are published with the Seival collection. A few other documents in Greek and Aramaic come from the Cave of Horror in Nahal Hever, Nahal Şe'elim, Ketef Jericho, Nahal Mishmar, and Wadi Sdeir. [See Mishmar, Nahal, *article on Roman period.*] None of them has been published.

The double document, which fell into desuetude in Egypt in the first century BCE (with the exception of documents submitted by Roman citizens), is very typical of the legal texts in all three languages from the Judean Desert, as it is of legal documents from other parts of the Roman Near East. Roman influence is detectable in the dating formulas of private documents from Arabia and Judea, like those from Syria and Mesopotamia, and in contrast to those from Egypt, use consular dates and Roman months, often in addition to regnal years of the Roman emperor and the provincial era. The exceptions are the documents that are dated by the years of the Bar Kokhba Revolt.

It is especially in the case of legal documents written in Greek (almost all of which are now published) that one is struck by the absence of anything that might mark them as "Jewish" apart from the identity of the parties as disclosed by their names. Thus we find deeds of sale, renunciations of claims, land registrations, receipts, mortgages, promissory notes, deeds of gift, and even marriage contracts bearing a striking resemblance to their Egyptian and other Near Eastern counterparts, thereby revealing the remarkable degree of integration of Jewish society into its environment, which may upset some deeply entrenched views about the contrast between Jews and non-Jews in the Greco-Roman world. However, as demonstrated by their Aramaic subscriptions and signatures, and sometimes by the faulty Greek they use, these are not Hellenized Jews. To say that Jews are writing "non-Jewish" contracts is merely to say that the legal usage current in these contracts is not always in harmony with what eventually came to be normative Jewish law. The diversity and fluidity manifested in the documents from the Judean Desert, and the incursion of different legal systems sometimes, but not always, overlapping with what came to be halakhic law, are the best evidence we have for the state of Jewish law and the authority exercised by the rabbis at the time.

Arabic, Greek, and Syriac Documents from Khirbet Mird. The one hundred Arabic texts (out of one hundred fifty) of the eighth and ninth centuries published so far

are extremely fragmentary and yield little information about the period of the Umayyad dynasty in Palestine. The documents include protocols (i.e., the manufacturer's label on the first sheet of the papyrus roll), legal texts, lists, and official and private letters. Of the two hundred Greek texts, presently stored mainly at the University Library of Leuven with some at the University of Chicago, only five have so far been published; two of them are letters. Of more than ten texts in Syriac, one letter was published. The editors suggest that the Syriac and Greek texts are connected with the monks of the monastery of Kastelion founded by Saint Sabas. It seems unlikely that the Greek texts from Khirbet Mird, fragmentary as they are, will yield anything to compare with the archive of Petra and Nessana.

HANNAH M. COTTON

DUALISM, as opposed to monism, is defined by Ugo Bianchi as the doctrine of a religion or a worldview that postulates two irreducible principles as the cause of the constitutive elements of all that which does or seems to exist in the world. It is more than dichotomy, polarity, or duality: Dualism properly exists only when pairs of op-

posites are understood as “the principles responsible for bringing the world and man into existence,” that is, when cosmogony or anthropogony is involved. Mircea Eliade adds an ethical dimension to the concept: True dualism means that the negative aspects of life, “until then accepted as constitutive and unexceptionable parts of the cosmic totality, lost their initial function and began to be interpreted as various manifestations of *evil*.”

In the Dead Sea Scrolls, there is no radical dualism in the narrow sense defined by Bianchi, since God’s transcendence and authority are never questioned. But, using somewhat broader definitions and typologies, scholars have identified various forms of an attenuated dualism (a dualism “under God”) in many documents from the Qumran literature and, above all, within the “Treatise on the Two Spirits” and related sectarian texts. The scope of the corpus to be considered is a debated issue, as are problems concerning the origin, development, and coherence of Qumran dualistic teachings.

“**The Treatise of the Two Spirits**” is found in its full form in columns iii and iv of the Cave 1 copy of the Rule of the Community (1QS iii.13–iv.26), dated paleographically from 100 to 75 BCE; remnants of a few lines are also preserved in a fragment of a contemporary copy of the same Rule found in Cave 4 (4QSc frg. 2). In 1QRule of the Community, the beginning of the Treatise (iii) is marked graphically by a blank and a marginal tick; similar devices signal five sections within the Treatise itself.

The opening lines (iii.13–15a) describe what follows as the doctrine to be taught by a master, the *maskil*, to disciples identified as “Sons of Light.” It is therefore a catechesis for people who stand on one side, light, as opposed to darkness. It claims to make them understand the “nature (*toledot*) of all human beings according to their types of spirits,” as well as the particular characteristics of their actions and of their consequent destiny. The introductory section then grounds the whole teaching within the framework of an exclusive monotheism and a strong determinism (iii.15b–18a). God is characterized as the knowing one who has masterminded every element of Creation beforehand, the God whose design is unfailingly realized at appointed times, and the ruler who takes care that the prescriptions pertaining to his creatures be applied in every matter. Without detailing these, the text focuses directly on its specific topic, the ancillary role of the two spirits for the mission of humankind: “He created humankind for the domination of the world and he has provided it with two spirits according to which to behave (*le-hithalekh*) until the fixed time of his visitation.”

The two spirits are identified ethically as the spirit of truth (*emet*) and deceit (*avel*), but, also, from a cosmic standpoint, as the spirit of light (*or*) and the spirit of darkness (*hoshekh*). Their origin, leadership, and fellow-

ship are briefly considered, side by side (iii.18b–iv.1): Having their origin (*toledot*), respectively, in light and darkness, truth and deceit are under the dominion of supernatural powers, a Prince of lights and an Angel of darkness who in turn influence two separate groups of human beings, the “sons” of righteousness, who walk in light, and the “sons” of deceit, who walk in darkness. There is conflict and hostility between the two parties. The righteous, who are harassed by the Angel of Darkness and his spirits, resulting in sin and guilt, are granted the help of the God of Israel and his Angel of Truth. No explanation is provided for such a negative pressure, except that it is mysteriously allowed by God for a limited time. Being ultimately responsible for the situation, since he has created the two spirits and established upon both the course and judgment of every deed, God nevertheless everlastingly prefers the ways of the spirit of light over those of the spirit of darkness.

The ways of the spirits “in the world,” along with their rewards, are listed in two separate sections introduced by a single heading. The key words “light” and “truth” frame the list of virtues (iv.2–6a), as the words “deceit” and “darkness” frame the list of vices (iv.9–11a); each begins with a general statement, followed by short series of related terms arranged in larger units; each section ends with the proper rewards.

The last section (iv.15–26) specifies that God has set a sharp division (*miflagah*) between these spirits and has made them hostile to one another from the beginning until the end time. All human beings inherit various portions of them and act accordingly, generation after generation, in a world dominated by deceit. At the end time, however, a dramatic shift will take place. Deceit will be destroyed altogether by God, and truth will rise up forever in the world. Those persons who behave properly will have the spirit of deceit removed from the innermost part of their flesh and the spirit of truth sprinkled upon them as purifying waters. Being restored in the initial glory of Adam and made partners of God for an eternal covenant, they will share some of the divine understanding, as wise angels do. But until then, the spirits of truth and deceit allotted to a person struggle within his heart. They prompt his love or his hate for them, provide him with a knowledge of good and evil, and lead him to wise or foolish conduct.

The dualism found in the Treatise is multiform. It is cosmic and mythological in that the fundamental structure of the world, as planned and created by God, consists in the division between light and darkness as two separate domains under the power of antagonistic supernatural leaders. As spirits, they rule over human beings as well and influence their behavior, by which they are qualified ethically as sons of righteousness or sons of de-

ceit. This dualistic teaching also has anthropological and psychological dimensions, for each individual inherits and internalizes various proportions of both spirits. Finally, the whole system is set in an eschatological framework. The two spirits, their heads, and those under their command are thought of as being hostile to one another and maintaining an antagonistic relationship from the very beginning to the very end of history. At the appointed time, deceit will be eradicated forever and human beings will be given their proper reward—a few of them selected by God to be purified and granted knowledge and glory.

Other Documents from Qumran preserve only fragmentary descriptions of the cosmological speculations of the sectarians or their forerunners (e.g. 4QJubilees I vi = *Jubilees* 2.1–4). Such speculations are probably at the basis of the complex calendar systems of these groups (cf. 4QPhases of the Moon, 4QZodiology and Brontology; 4QCalendrical Documents) and are reflected especially in the attempt to synchronize the daily prayers with the “decree recorded forever” in the daily alternation of light and darkness, together with the movement of the sun, the moon, and the stars (1QRule of the Community ix.1–8, 1QHodayot^a xx.4–11, 4QDaily Prayers). The regular disappearance of darkness before the light is also seen as pointing to the vanishing of evil before justice (1QMysteries I.i.5).

Under various names, such as Michael, the majestic angel, or Melchizedek, on the one hand, and Belial, Mastemah, the Prince of dominion of evil, or Melchirescha^c, on the other hand, the supernatural leaders of light and darkness appear in texts which insist less on the physical extent of their respective dominions than on their actual power over human beings and their rival action in history and eschatology (1QRule of the Community i–ii; Damascus Document v.17–18; War Scroll i, xii–xix; 4QVisions of Amram; 11Q Apocryphal Psalms^d; 11QMelchizedek; etc.; see Kobelski, 1981). They do not always stand side by side in the same text, however. Belial (Mastemah, etc.) is sometimes mentioned alone (e.g. Damascus Document iv.12–vi.1, viii.1, xii.2, xvi.5; 4QMMT c28–30) or countered directly by God himself rather than by the angel who represents his mighty hand (1QRule of the Community i–ii, 1QHodayot^a xii.12–14, War Scroll xiii.1–6, 4QBerakhot^a 7.ii, 4QBerakhot^f, etc.). The prayer of the sage offers another means of stopping the influence of ravaging angels, bastard spirits, and demons who “lead astray the spirit of knowledge . . . in the era of the rule of wickedness and in the periods of humiliation of the Sons of Light” (4QSongs of the Sage^g I 5–7).

The most recurrent form of dualism in the Qumran literature is the ethical one. A general expression of it is found, for instance, in the patriarch Levi’s exhortation to

his sons that they act in truth and justice, sow goodness, and harvest the good (4QAramaic Levi^a 5 i–8, cf. 4QTestament of Qaḥat i.7–13); similarly, the sage’s disciple is invited to “consider all the paths of truth and examine all the roots of evil” (4QSapiential Work A^b 2.iii.13). According to the sectarians, the present era is under the dominion of Belial (1QRule of the Community i.18, i.24, ii.19; War Rule xiv.9; etc.), who leads astray the children of Israel through the three nets of fornication, wealth, and defilement of the Temple (Damascus Document iv.15–17; cf. 4QWiles of the Wicked Woman). Those who enter the community repent from sin and are willing to “walk unblemished” in God’s paths, while the “men of the lot of Belial” continue to perform “wicked, blameworthy deeds” (1QRule of the Community i.21, ii.10); they are to “do what is good and just” in the presence of God and “to love everything that he selects and to hate everything that he rejects,” to “love all the Sons of Light (. . .) and to detest all the Sons of Darkness” (1QRule of the Community i.2–8; cf. Damascus Document ii.14–16; War Scroll i, xv.9; 4QCatena^a; 4QFlorilegium 1–3.i.7–9; 11QMelchizedek, and so forth). The will of God is known through the Law of Moses, and its true interpretation has been revealed to the sons of Zadok who lead the community (1QRule of the Community v.8–9; cf. Damascus Document xv.8–9). The halakhic letter 4QMMT suggests that such a claim could have motivated the Qumran community’s split from the larger society, whereas the conviction that God had “revealed the paths of truth and the deeds of evil, wisdom and folly” and freed the faithful “from the zeal of the sowers of deceit, from the congregation of the interpreters of flattering things” is expressed in the hymns (1QHodayot^a v.9–10; x.31–32). Law and wisdom are closely related, as in *Ben Sira* (cf. 4QWisdom Text with Beatitudes 2.ii.3–4, 4.9–14).

The sharp division between truth and deceit is never to be taken for granted once and for all. The Peshet Habakkuk describes not only the external conflict of the Teacher of Righteousness with the Wicked Priest or other opponents, but also his internal fight with the Man of Lies who challenged his authority and “rejected the Law in the midst of their whole comm[unity]” (1QPeshet Habakkuk v.10–12; cf. 4QPeshet Psalms^a i.26–27, 1QHodayot^a xiii.23–25). Among themselves, the covenanters regularly deal with false converts who still regard “darkness as paths to light” (1QRule of the Community iii.3), “plot intrigues of Belial,” look for God “with a double heart” and “are not firmly based” in his truth (1QHodayot^a xii.13–14; cf. xiii.23–25, xiv.19–22). A document from Cave 4 preserves the rebukes of an overseer against members of the community who do evil, are short-tempered, haughty in spirit, choose a good life, and so forth (4QRebukes of the Overseer; cf. 1QRule of the Commu-

nity iv.9–11a). If their conduct does not change, such members are to be expelled (1QRule of the Community vi.24–vii.27; cf. Damascus Document xx.1–13, 4QDamascus Document^a 11.5–14).

The ambiguity of human behavior may be explained by one's lot in God's plan and by the war which the spirits of light and darkness are waging within one's heart (1QRule of the Community vii.20–21, x.21; Damascus Document viii.1–2; 1QHodayot^a xiv.19–22; 4QBerakhot¹). The basic anthropology behind this view is that God, who has created every spirit (1QRule of the Community i.10; 1QHodayot^a vi.16b–32, ix.7–9), has allotted to each human being various parts of light and darkness (1QRule of the Community i.10, ii.20; 1QRule of the Congregation i.17–18; 1QHodayot^a vi.8–16; cf. 4QHodayot^b 7; 4QSapiential Work A^a 81). According to a horoscopic document from Cave 4 (4Q186), one's condition may be deduced from the position of stars and planets at the time of conception or birth. Whoever has a substantial part in light and enters the community swears with a binding oath "to revert to the Law of Moses with all its decrees, with whole heart and whole soul" (1QRule of the Community v.8–9; cf. v.4–5; Damascus Document xv.4–5). His spirits are to be tested, and his rank among his fellows is to be reviewed regularly "according to his insight and his deeds . . . in order to upgrade each one to the extent of his insight and the perfection of his path, or to demote him according to his failings . . ." (1QRule of the Community v.21–24; cf. vi.17; Damascus Document xiii.11–12; 1QHodayot^a vi.17–22, xvii.15–16, xviii.27–29). The instructor (*muskil*) plays an important role in the process, particularly among neophytes (1QRule of the Community ix.14–16), but one is also educated through God's wisdom (4QBeatitudes 2). The convert is purified by means of suffering and testing, like pure gold refined in a crucible (Damascus Document xx.2–3; War Rule xvi.15, xvii.1, xvii.9; 4QFlorilegium 1–3.ii.3; 4QCatena^a ii.9–11; 4Q183 3–7; 1QHodayot^a x.14–19, xiv.6–8). Everyone needs such purification, since the human being is nothing but dust and wicked flesh strongly inclined toward evil (1QRule of the Community xi.9–20; 1QHodayot^a iv.25, v.20–21, ix.21–33, xii.29–35, xiii.16, xiv.32, xviii.3–12, xx.24–27, etc.). God, however, supports those who acknowledge their condition and beg for his mercy (1QHodayot^a vi.23–27, viii.12–26, xvii.6–18, xvii.23–26), so that they may be cleansed and enabled to stand in his presence, united with the assembly of heaven (1QHodayot^a xi.21–22, xv.26–32, xix.3–14).

The eschatological character of Qumran dualism surfaces in numerous documents. The present period is experienced as an age of wickedness (Damascus Document vi.14, xii.22–23, xv.6–7; 4QDamascus Document¹ 2.12; 4QSongs of the Sage^a 1.6; 4QSongs of the Sage^b 10.3),

during which the world is under the dominion of Belial (1QRule of the Community 1.16, 1.23–24, ii.19; Damascus Document iv.12–14; War Scroll xiv.9). The situation is about to change radically with the coming of the end of days, depicted as a time of visitation, judgment, and retribution (4QMMT^a 11–13.4, 14–17.ii.6; War Scroll; 4QFlorilegium; 11QMe|chizedek; 4QPesher Isaiah^{a–c}; 1QPesher Micah; 4QPesher Nahum; 1QPesher Habakkuk; 4QCatena^a; 4QAgnes of Creation). In the War Scroll, it is viewed as "a time of salvation for the people of God and . . . of everlasting destruction for all the lot of Belial . . . with no remnant remaining . . . [for the So]ns of Darkness" (War Scroll i.5–6). A fierce battle is expected between the Sons of Light and the Sons of Darkness, wherein angels and their leaders side with both camps; this fight will culminate in God's final destruction of Belial, all the angels of his dominion, and all the men of his lot (i.14–15). Those promised salvation will escape this age of visitation (Damascus Document xix.10) and be freed from the hand of Belial (11QMe|chizedek ii.13, ij.25). God or his Messiah will indeed perform marvelous acts for them (4QMessianic Apocalypse); they will be granted peace, knowledge, joy, glory, and eternal life among the angels (1QRule of the Community ii.1–4a; Damascus Document iii.20, vii.4, xix.1; War Scroll i.9; 1QHodayot^a iv.15; 4QSapiential Work A^a 69 12; 1QRule of the Blessings iv.25–26; etc.). The followers of Belial will be destroyed forever either by God's sword or through various mediations, such as that of "the sons of his truth," the Messiah of Aaron and Israel, or even Belial himself. In any case, they are doomed to complete annihilation, as are Belial and his spirits (1QRule of the Community ii.4b–18, v.12–13; Damascus Document viii.1–2, xix.5–11; 11QMe|chizedek iii.7; 1QHodayot^a xiv.29–33; 4QSapiential Work A^a 69 8; 4QBerakhot¹; 4QBerakhot^a 7.ii.4–6).

Debated Issues about Qumran dualism are numerous. The role and importance of the "Treatise of the Two Spirits" within the Qumran community has usually been taken for granted among Qumran scholars. Generally considered the authoritative expression of the sectarian dualistic doctrine, it is believed to have had a huge and lasting influence on the members of this group (Besch, Collins, Huppenbauer, etc.). However, on the basis of the differences between this text and other sectarian documents, such as the final form of the War Rule, the Hodayot from Cave 1, and the astrological document from Cave 4 (4Q 186), Harmut Stegemann has suggested that the Treatise could mirror the particular teaching of a specific member of the community or even be an external composition preserved in the group without representing an essential aspect of its theology. He even doubts that dualism is the primary concern of this text.

The scope of the corpus to be considered in the study

of Qumran dualism is a critical question as well. In his 1959 work, Hans W. Huppenbauer made use of the Damascus Document and of all relevant manuscripts from Cave 1 available at the time. Since then, the release of many other texts from Qumran displaying dualistic elements has raised the question of whether all these documents are of sectarian origin. The problem needs to be addressed if one wishes to understand the specific character of the dualistic view of this particular community and to assess correctly its relationship with the ideas of antecedent or related groups. In his study of the anthropology of the Qumran community, Hermann Lichtenberger has analyzed only texts possibly belonging to the community established by the Teacher of Righteousness. Bernt Besch has selected for his dissertation on Qumran dualism only a core group of texts limited to 1QRule of the Community, the Damascus Document, War Rule, 1QHodayot⁴, 4QFlorilegium, 4QPesher Psalms⁵, 11QMelchizedek, 4QPurification Rules, 4QBerakhot, and the Songs of the Sabbath Sacrifice (4Q400–407, 11Q17, Mas 1k). Further study must be made in that direction.

Scholars are divided on the subject of the historical origin of Qumran dualism. As early as 1952, the dualism found in the "Treatise of the Two Spirits" was related to similar Iranian ideas expressed in the old Gathas attributed to Zoroaster (*Yasna* 30, 45) and in the later Zurvanite myth reported by Plutarch in his *De Iside et Osiride* (Hengel, Philonenko, Shaked, Winston). This view is still maintained, but is also regularly disputed by opponents who argue that a clear relationship with Iranian thought is far from demonstrated and that Qumran dualism may be an inner development of the biblical and Jewish traditions as well (Barr, Besch, Duhaime, Osten-Sacken, etc.). Other concepts that might have contributed to the development of Qumran dualism include the symbolic meaning of light and darkness (*Gn.* 1.4, *Is.* 5.20, 45.7), the evocation of a good or an evil spirit (*Jgs.* 9.23, *I Sm.* 16.14–16, *I Kgs.* 22.13–28), the rivalry between two angels (*Zech.* 3, *Dan.* 10), the doctrine of the two ways (*Ps.* 1), the blessings and curses attached to God's covenant with Israel (*Dt.* 27–28, 30.15–20), the opposition between the just and the wicked (*Ps.* 37, *Prov.*, etc.), the victory of God over the powers of chaos (*Ps.* 74.12–14), the traditions of holy war (*Num.* 10, *Josh.* 6, *Jgs.* 4–5, *I Sam.* 4–5, etc.), the expectation of the Day of the Lord (*Is.* 2.9–22, 13, 34; *Am.* 5.18–20, etc.), and the judgment against Gog (*Ezek.* 38–39). The historical context of the Maccabean revolt also would have been fertile ground from which Qumran dualism could sprout.

Questions have been raised about the development and coherence of Qumran dualism. According to Peter von der Osten-Sacken, the oldest form of dualism is preserved in the first column of War Rule and consists in the antici-

pation of an eschatological conflict between Israel and the nations; it is pre-Qumranian and mirrors the tensions of the Maccabean era. It shows clear connections with the book of *Daniel* and with traditions about the Day of the Lord and holy war. The other dimensions of Qumran dualism would be secondary developments in the direction of ethics, anthropology, history, and cosmology. Data not available to Osten-Sacken, such as the Visions of Amram (4Q543–548), suggest, however, that the ethical dualism is at least as ancient as the eschatological one and may be pre-Qumranian as well (Duhaime). Jörg Frey proposes that two patterns of dualism with different origins were conflated and developed in Qumran literature: the "Treatise of the Two Spirits" witnesses to a multidimensional, ethically oriented, cosmic dualism with a sapiential background, whereas a priestly type of sheer cosmic dualism is found in War Rule, 4QVisions of Amram, and 11QApocryphal Psalms⁶. Osten-Sacken's thesis also seems to deny the possibility that the various forms of dualism found in the sectarian texts themselves could have worked as a relatively coherent multidimensional system, as Besch, Collins, and others maintain.

The similarities and influences of Qumran dualism have been widely explored. It is claimed that its theology of the two ways could have inspired Jewish works as various as the *Testaments of the Twelve Patriarchs* or Philo's commentary on Exodus (*Quaest. in Exod.* i:23, etc.); the ethical dualism of Qumran also has remote similarities with the idea that a person is attracted by both a good and an evil inclination (*yetser*; cf. *Ben Sira* 15.14, B.T., *Ber.* 61a, etc.). In the New Testament, the Gospel and Epistle of John display a similar sharp division between light and darkness, truth and perversion, the spirit of truth and the spirit of error, and the victory of Christ over Satan (Bergmeier, Charlesworth). In later Christian literature, different dualistic views are found in works such as *Didache*, the *Epistle of Barnabas*, the *Shepherd of Hermas*, the *Pseudo-Clementine Homilies*, Lactantius's *Institutiones* and *De opificio*, and also in various forms of gnosticism (Couljano, Philonenko).

Dualism, with its various forms and its complex development, seems to have been a key theological feature of the Qumran community. Grounded in biblical teachings, but probably integrating Iranian components as well, it displays a strong concern for understanding the nature and role of the human being within the basic structure of the universe, establishing its relationship to God and other supernatural powers, and clarifying the ambiguity of its behavior and its corresponding fate. In a critical period of Jewish history, it provided this sectarian group, as well as related ones, with the theological and ideological legitimation for its separation from the larger community. It helped to shape its radical interpretation of the

Law, to set and maintain very high ethical standards for its members, and to support their commitment until the final vindication, triumph, and exaltation promised to them.

- Huppenbauer, Hans W. *Der Mensch zwischen zwei Welten*. Abhandlungen zur Theologie des Alten und Neuen Testaments, 34. Zurich, 1959. The first extensive monograph on Qumran dualism; still worth reading.
- Lichtenberger, Hermann. *Studien zum Menschenbild in Texten der Qumrangemeinde*. Studien zur Umwelt des Neuen Testaments, 15. Göttingen, 1980. Studies dualism as part of the structure of the anthropology of the Qumran community, along with determinism, predestination, etc.
- Osten-Sacken, Peter von der. *Gom und Belial. Traditionsgeschichtliche Untersuchungen zum Dualismus in den Texten aus Qumran*. Studien zur Umwelt des Neuen Testaments, 6. Göttingen, 1969. A detailed attempt, although not totally convincing, to reconstruct the origin and development of dualism in the Qumran literature.
- Philonenko, Marc. "La doctrine qumrânienne des deux esprits. Ses origines iraniennes et ses prolongements dans le judaïsme essentiel et le christianisme antique." In *Apocalyptique iranienne et dualisme qumrânien* by Geo Widengren, Anders Hultgård, and Marc Philonenko, pp. 163-211. Recherches Inter testamentaires, 2. Paris, 1995. A strong claim for the Iranian origin of Qumran dualism and for its survival in later Jewish and Christian literature.
- Shaked, Shaul. "Qumran and Iran. Further Considerations." *Israel Oriental Studies* 2 (1972), 433-446. Holds that contacts between Jews and Iranians helped in formulating the dualism found at Qumran.
- Stegemann, Hartmut. "Zu Textbestand und Grundgedanken von IQS III,13-IV,26." *Revue de Qumrân* 13 (1988), 95-131. Sees the Instruction on the Two Spirits as a particular teaching not as authoritative and influential in the Qumran community as usually believed.
- Winston, David. "The Iranian Component in the Bible, Apocrypha, and Qumran: A Review of the Evidence." *History of Religion* 5 (1965-1966), 183-216. Argues that cumulative evidence suggests the probability of an Iranian penetration into Qumran.

JEAN DUHAIME

DUPONT-SOMMER, ANDRÉ (1900-1983), was a French epigraphist and historian. He was born on 23 December 1900 at Marnes-la-Coquette in France. After leaving secondary school, his interest in the history of the peoples of the ancient Near East led him to study at the Sorbonne, where he obtained a *Licence-ès-Lettres* in 1924. He stayed in Jerusalem at the École Biblique et Archéologique Française and took part in archaeological digs (Ramat el-Khalil, Byblos). Upon his return to France, he taught at the École Pratique des Hautes Études (1938-1971) and also at the Faculté des Lettres de Paris (1949-1953). Later he became a professor at the Collège de France (1963-1971), where he held the chair of Hebrew and Aramaic. He was elected as a member of the Académie des Inscriptions et Belles-Lettres in 1961; he became general secretary in 1968.

Dupont-Sommer was interested in many areas, as demonstrated by his work in Phoenician, Aramaic, and Hebrew epigraphy and the archaeology and the history of the ancient Near East. He developed a passionate interest in the Hebrew and Aramaic manuscripts discovered in the caves near the Dead Sea, because he saw in these documents the means of deepening knowledge of Jewish life just before Christianity was established. His first article

dates back to 1949, and his first published synthesis, *Aperçus préliminaires sur les manuscrits de la Mer Morte*, came out the following year; it was translated into English in 1952. He quickly published a translation of the known Qumran texts (the first edition appeared in 1959), which was reprinted in *La Bible, Ecrits intertestamentaires* (1987). This work has been translated into German (*Die essenische Schriften vom Toten Meer*, 1960) and into English (*The Essene Writings from Qumran*, 1961). In this book Dupont-Sommer defends the idea of an Essene origin for Christianity, an idea carried forward by Edmund Wilson (*The Scrolls from the Dead Sea*, London, 1955).

The first publications dealing with the Qumran texts reveal Dupont-Sommer's ability to discover in the published texts their relationship with the Essene community mentioned by Pliny the Elder, his interest in the Teacher of Righteousness and his actions, and finally, his concern to establish a link between the texts and early Christian-

ity. If his conclusions sometimes have been criticized, his publications nonetheless have contributed to understanding the historical importance for Judaism as well as for Christianity of the documents that have been discovered.

EARLY CHRISTIAN WRITINGS. The Qumran scrolls and early Christian writings have been particularly susceptible to parallelomania. Sometimes similarities between the scrolls and early Christian practices and texts have been mistakenly thought to indicate identity or a genetic relationship between the groups represented by them. While in most cases scholars have not been convinced of direct connections and contacts between the earliest Jesus movement and the Qumran community, it is clear that the scrolls provide what Joseph Fitzmyer (1974) has called “an intelligible Palestinian matrix for many of the practices and tenets of the early Church.” The relationship between the scrolls and non- and post-New Testament Christian literature, however, has been much less studied than that between the scrolls and the New Testament.

Early Christian Fathers and the Greek Prophets Scroll. Dominique Barthélemy’s study of the Greek Minor Prophets Scroll discovered at Nahal Hever (8Hev I) demonstrated that this translation, designated *kaige* for the unique manner in which the word *ve-gam* (“and also”) was rendered, attempts to bring the Greek into closer agreement with the developing Hebrew text of the scriptures. [See Minor Prophets.] Several Christian writers knew and used this translation. Justin Martyr’s citations of the Minor Prophets, most prominently a quote of *Micah* 4.3–7 in *Dialogue with Trypho* 109, agree with the text of the Greek Minor Prophets scroll. Origen’s Quinta text of the Minor Prophets, Jerome’s citations in his commentaries on these prophets, the “hébraïsmes” of Codex Washingtonensis and the Coptic versions of the Minor Prophets all reflect this textual tradition. [See Origen.]

Parallel Ideas in Early Christian Writings and the Judean Desert Corpus. One must distinguish between those places where early Christian literature shows contact with the Qumran scrolls and those where the scrolls and early Christian texts simply demonstrate parallel ideas. Evidence suggesting the former is scarce before approximately 800 CE when a Christian bishop named Timotheos writes about manuscript discoveries made near the Dead Sea. The parallels between the scrolls and early Christian literature, however, help to elucidate Christian practices and ideas, and they most likely represent religious impulses or options in Judaism that early Christians and the Qumran sectarians independently exercised.

Many of these common ideas and practices, such as eschatological expectation, attitudes toward the Temple, a communal meal, the place of Jesus as compared with the Teacher of Righteousness, and theological dualism, pervade earliest Christianity and indicate the continuity of the earliest followers of Jesus with Judaism. In the second century CE and following, Ebionite Jewish-Christian writings evidence some of the closest parallels to practices found in the Judean Desert corpus, so close in fact that J. L. Teicher (1951) identified the two, and Oscar Cullmann (1954) proposed that the Qumran sectarians joined the Ebionites after the First Jewish Revolt. [See Ebionites; Jewish Christians.] Fitzmyer concludes that although some similarities do exist, the differences between the Ebionites and the Qumran sectarians make Teicher’s and Cullmann’s positions untenable. The Ebionite criticism of the Hebrew scriptures noted by Epiphanius (*Panarion* 30.18) and the Ebionite rejection of animal sacrifice are especially noteworthy in this regard. The Pseudo-Clementine literature contains the closest similarities to the Qumran scrolls, but other Christian texts, like the *Apostolic Constitutions*, that use Jewish sources may also bear examination. [See Apostolic Constitutions; Pseudo-Clementine Literature.] Some of the most important points of possible contact are:

Baptism. For the Qumran community, lustrations, which were performed frequently, served the purposes of spiritual regeneration (Rule of the Community from Cave I at Qumran [hereafter, 1QRule of the Community] 1QS iii.9) and purification (1QS iii.4–5, 9, iv.20–21). The Pseudo-Clementine literature is also evidence of repeated lustrations. In *Homilies* 11.27–30 (from the *Kerygmata Petrou*, a basic Jewish-Christian source of the Pseudo-Clementine literature), an initiatory baptism is followed by repeated washings that remove ritual uncleanness, like that contracted through sexual intercourse.

Communal meal. The Qumran sectarians observed a communal meal restricted to members only (1QS vi.3–6), which is given eschatological importance in that the Messiah of Israel will celebrate the meal with the community (Rule of the Congregation 1Q28a ii.11–22). The Pseudo-Clementine literature prohibits eating with unbaptized nonmembers (*Homilies* 3.4; *Recognitions* 2.71) and indicates the practice of a communal meal, which is apparently not the Eucharist and at which people are seated

according to rank (*Recognitions* 4:37). It is not, however, given an eschatological interpretation. The messianic meal mentioned in *Recognitions* 4.35 is not the same as the communal meal and reflects the eschatological banquet that appears in several New Testament books.

Dualism/two ways. There is at least a surface similarity between the dualism evident in Qumran texts like IQRule of the Community, the War Scroll (IQM), and Hodayot^a (hereafter, IQHodayot^a; IQH^a) from Cave 1 at Qumran, and the Pseudo-Clementine literature. [See Hodayot; Rule of the Community; War of the Sons of Light against the Sons of Darkness.] The idea in *Homilies* 7.6–7 of the two paths governed by belief and unbelief compares with the two spirits of truth and perversity in IQRule of the Community (IQS iii.18–26). The doctrine of the syzygies (that created things exist in paired opposites) found in Pseudo-Clementine literature, however, has a physical aspect grounded in the created order not found in the Qumran texts. The two paths/two spirits idea also finds a clear parallel in *The Shepherd of Hermas* 36, *Epistle of Barnabas* 18–21, and the *Didache* 1–6. [See *Didache*; Dualism.]

Biblical interpretation and eschatology. Much has been written about the common aspects of interpretation of the Hebrew scriptures at Qumran and the New Testament, especially as it pertains to the *peshet* method. Both Qumran exegesis and some early Christian texts regard the biblical texts as a code that must be cracked to reveal the mysteries of the *eschaton*, which for the Qumran community and some early Christians was their own generation, but for many Christians still remained in the future. God revealed to the prophets secrets whose unraveling could only be done in the “present” time. The most prominent example at Qumran is Peshet Habakkuk (IQpHab) vi.15–7.5 in which the claim is made that it was only to the Teacher of Righteousness that God revealed the “mysteries of the words of his servants the prophets.” [See Peshet Habakkuk.] Irenaeus of Lyons (*Against the Heresies* 5.34.2), to cite one Christian example, evidences a similar attitude in a comment about *Daniel* 7.27: “And lest the promise named should be understood as referring to this time [i.e., the time of Daniel], it was declared by the prophet, ‘Come and stand in your lot at the consummation of the days,’” a clear reference to the prophecy’s expected fulfillment in Irenaeus’s own day. In this vein also see *Barnabas* 4.3–6, a section that cites the book of Enoch and *Daniel* and that begins, “The final scandal is at hand concerning which it has been written.”

Prayer and liturgy. Book 7 of the *Apostolic Constitutions* contains a form of the Seven Benedictions, probably adapted from Jewish synagogue prayers (Fiensy, 1985). IQRule of the Community x.16, part of the “order of

benedictions” identified by Shemaryahu Talmon (1959–1960), may represent an early form of the benediction in the *Apostolic Constitutions* 7.33–38. Research into the Qumran prayers and liturgical texts and early Christian literature would appear to be an area of great promise.

Christian Use of Jewish Texts Found at Qumran. Though clear similarities exist between some ideas in early Christian texts and the Qumran scrolls, early Christian writings contain no clear example of citation from any of the Qumran sectarian texts (i.e., IQRule of the Community, the War Scroll, the *pesharim*), and it is unclear whether early Christian writers knew any of them. The “two ways” material in the *Didache*, *Shepherd of Hermas*, and *Epistle of Barnabas*, however, may bear examination in this regard. Scholarly understanding of some Jewish apocrypha and pseudepigrapha known primarily through Christian transmission (like *1 Enoch*, *Jubilees*, *Testaments of the Twelve Patriarchs*) has been enhanced by their discovery among the Qumran scrolls. One of the more prominent examples is the Book of the Luminaries (*1 En.* 72–82) whose Qumran version is longer and more detailed than the version transmitted in Ethiopic Christianity, where *1 Enoch* is part of the biblical canon. [See *Enoch*, Books of.]

Church fathers, however, knew and used nonsectarian Jewish apocrypha and pseudepigrapha, the existence of which was otherwise unknown until the Judean Desert discoveries. For instance, among the Cave 4 finds were several copies of a previously known Jewish pseudepigraphal work, Pseudo-Ezekiel^{a-c?} (4Q385, 386–387, 388, 391). [See *Ezekiel*, Book of.] This work, framed as a dialogue between Ezekiel and God and based largely on the biblical book of *Ezekiel*, was known to the author of *Barnabas* (Kister, 1990) and the *Apocalypse of Peter* (Bauckham, 1992). It may perhaps have some relationship to the Greek *Apocryphon of Ezekiel* cited by several church fathers (Mueller and Robinson, 1983). In another case, Yiphtah Zur (1993) has posited a relationship between the Syriac *Acts of Thomas* 6–7, the “Hymn of the Bride,” and the Wiles of the Wicked Woman (4Q184).

It may be as well that some citations in the works of Christian authors whose source is unknown originated in texts found at Qumran. One citation in *1 Clement* 50.4 may reflect the text of Pseudo-Ezekiel^a (4Q385 12; Wright, 1997). Possible relationships between anonymous citations in Christian literature and the Judean Desert corpus constitute another potentially fruitful avenue for research.

Christian Gnosticism. Birger Pearson (1984) has shown the extensive use of Jewish traditions by Christian Gnostics, several of which are parallel to material found in the Qumran scrolls. For example, the *Apocryphon of John* (NH II.26.15–22) contains a discussion of the Spirit

of life and the "opposing spirit" that resembles closely the two spirits of IQRule of the Community. Also Melchizedek, an important figure at Qumran (Kobelski, 1981), is the subject of a fragmentary Nag Hammadi Codex tractate that shows the use of "pre-Christian Jewish Melchizedek material" (Pearson). [See Melchizedek.] The Enochic Book of Giants now known from Aramaic fragments at Qumran was used as a source by Mani for his *Book of Giants* (Pearson; Milik, 1976). [See Giants, Book of; Gnosticism.]

BENJAMIN G. WRIGHT III

EBIONITES. The Judeo-Christian sect of Ebionites (Gr. *Ebionaiot* or *Ebionitai*; Lat. *Ebionaei* or *Ebionitae*) took its name from the Hebrew word *'ebyonim* meaning "poor ones." The designation may have been adopted by them from the phrase "Blessed are the poor in spirit" in *Matthew* 5:3//*Luke* 6:20. Eusebius (c.263-339 CE) wrote that the name Ebionite indicated the poverty of their intelligence (*Ecclesiastical History* 3.27.6). However, it may have reflected, besides their spiritual humility, their low social status and actual poverty (cf. e.g. *Is.* 2:1-7). The Ebionites were considered heretics by both Jews and Christians. They accepted some of the principal Jewish laws such as circumcision and sabbath observance, but Epiphanius says that they rejected certain parts of the Pentateuch (*Panarion* 30.18.7). Eusebius adds that for them Jesus was an ordinary man who became righteous through improving his character and who was born in a natural way from Mary and her husband (*Ecclesiastical History* 3.27.2). According to *Panarion* 30.16.3, they believed that Jesus was elected and named God's Son after the descent of the Christ from above in the form of a dove. The so-called *Gospel of the Ebionites* speaks of the dove descending and entering Jesus in the baptismal scene (see *Panarion* 30.13.7; cf. *Lk.* 3:21-22; *Ps.* 2:7; *Hb.* 1:5; 5:5). Hippolytus, too, indicates that for them Jesus' justification and his being named *Christ* came about because he obeyed the law; the Ebionites were therefore also to obey the law so that they could become christi (*Refutatio* 7.22). Eusebius does say that there was a group of them who accepted the virgin birth but even these did not acknowledge his divine pre-existence as Logos and Wisdom (*Ecclesiastical History* 3.27.3).

Their views about the prophets are not clear. Irenaeus says they had an unusual way of interpreting prophecies (*Hereses* 1.26.2), but Epiphanius gives the impression that they rejected the prophets and psalms (*Panarion* 30.15.2). The Ebionites also rejected the letters of Paul

who was regarded as an apostate from the law. They were vegetarians and, after their baptism, engaged in daily baptisms according to Epiphanius (*Panarion* 30.153–16.1).

It seems that the Ebionites were among the Christians who fled from Jerusalem (before it was destroyed in 70 CE) to the town of Pella (*Panarion* 30.2.7; cf. *Rm.* 15:26; *Gal.* 2:10 where Paul calls some Jerusalem Christians “the poor”). Symmachus, who translated the Hebrew Bible into Greek, was an Ebionite (so Eusebius, *Ecclesiastical History* 5.8; 6.17). B.T., *Shabbat* 116a makes mention of the “house of the Ebionites” along with the “house of the Nazarenes.”

The sources indicate that the Ebionites used only the *Gospel of Matthew* which they called the *Gospel according to the Hebrews*. However, the contents of the quotations from their gospel in *Panarion* 30.3.13–14, 16.21 lead one to think that it was composed on the basis of all three synoptic gospels. Epiphanius thought that their gospel was a distorted version of *Matthew* written in Hebrew (that is, in Aramaic). Some scholars believe that the *Gospel of the Ebionites* is to be identified with the *Gospel of the Twelve* (that is, the *Gospel according to the Apostles* mentioned by Origen [*Homily I on Luke*] and Jerome [in *In. Matt.* Prologue and *Dialogi Contra Pelagianos* 3.2]) on the grounds that in the fragments found in the *Panarion* the apostles are the narrators, but others have opposed this conclusion.

From the earliest days of Qumran studies, the use of the term *'evyonim*, “poor ones,” in the Dead Sea Scrolls has been compared with the designation for this Jewish Christian group. In Peshar Psalms^a (4Q171) 1–10.ii.10 and iii.10 the Qumran community is called “the congregation of the poor ones” (*'adat ha-'evyonim*; cf. War Scroll^a [4Q491] frg. 11.i.11 which refers to the “council of the poor ones” [*'atsat ha-'evyonim*]). Several times the sectarians are called simply “poor ones” (*'evyonim*; for examples, see 1QpHab xii.3, 6, 10; 1QM xi.9, 13; xiii.13–14; cf. also 1QH^a ii.32; iii.25; v.16, 18, 22; frg. 16.3). The Qumranites also referred to themselves as “oppressed ones/humble ones” (*'aniyyim*) and “simple ones” (*peta'yim*), as if contrasting themselves with the Pharisaic “sages” (*hakhamim*) and “pupils of the sages” (*talmidei hakhamim*). In the War Scroll (1QM xiv.7) we meet the expression “poor in spirit” (*'aniyyei ruah*; an alternate reading is *'anwei ruah* “humble in spirit”). In light of Hippolytus's comment that the Ebionites' main goal was to fulfill the law, it is worth noting that the Qumranites designated themselves *'osei ha-torah* “the doers of (that is, those who fulfill, observe) the law” (e.g. 1QpHab vii.11; viii.1; xii.4–5; 4QpPs^a 1–10.ii. 15, 23; cf. *1 Mc.* 2:67; 13:48; *John* 7:19; *Js.* 4:11; *Rm.* 2:13). In connection with the baptismal scene in the *Gospel of the Ebionites*, one should

also mention 1QSa ii.11ff, which describes the coming (begetting) of a lay messiah, with an obvious allusion to Ps. 2:7. 4Q534 i.10, in connection with “the elect one of God” refers to his birth and apparently calls him “the breath of his spirit.” In 4Q246 the lay messiah is called the “son of God (Most High).”

J. L. Teicher proposed that the Qumran texts were composed by the Ebionites and identified the Teacher of Righteousness, the charismatic leader of the Qumran congregation [see Teacher of Righteousness], with Jesus Christ and his antagonist and oppressor, the Wicked Priest [see Wicked Priest], with the Apostle Paul. His proposal has not received much support, however.

ECCLESIASTES, BOOK OF. See Five Scrolls.

ÉCOLE BIBLIQUE ET ARCHÉOLOGIQUE FRANÇAISE. The École Pratique d'Études was founded on 15 November 1890 by Father Marie-Joseph Lagrange (1855–1938), on the premises of the Dominican Monastery of Saint Stephen in Jerusalem. Its location in the Holy Land permitted the École to undertake wide-ranging exploratory journeys that enabled it to study the Bible in the physical and cultural context in which it had been written. The results were published in the periodical *Revue biblique* (1882–) and in the monograph series *Études bibliques* (1903–). The original name of the school was modified in 1920 when the Académie des Inscriptions et Belles-Lettres in Paris recognized its achievements and designated it the École Biblique et Archéologique Française. It has developed a comprehensive teaching program and is the only foreign national school of archaeology in Jerusalem to award doctorates in bibli-

cal studies. Its celebrated library is known particularly for its detailed subject catalog.

The faculty of the École and scholars-in-residence had contact with the Dead Sea Scrolls, almost from the time of their discovery. For example, J. van der Ploeg, a Dutch biblical scholar who was staying at the École in 1947, was shown the scrolls then in the possession of Archbishop Athanasius Yeshue Samuel and was apparently the first to recognize one of them as a copy of the *Book of Isaiah*. He concluded, however, that the scrolls were medieval. Like many others, the faculty of the École had serious doubts regarding the authenticity of the original Dead Sea Scrolls when knowledge of their existence first became available. That attitude did not last long. At the invitation of Gerald Lankester Harding, Director of Antiquities of Jordan, Roland de Vaux, then director of the École, participated in the excavation of Cave 1 at Qumran (15 February–5 March 1949). In October 1951 significant new scroll fragments came on the market, and soundings at Khirbet Qumran brought to light pottery identical with that found in Cave 1. Harding invited de Vaux to participate in the excavation of the Qumran site. A short exploratory dig in late 1951 was followed by four full seasons (1953–1956). De Vaux also spent one season in the caves of Wadi Murabba'at (1952; he had contacts in Jerusalem with the bedouin responsible for finding written materials there) and one season at 'Ein-Feshkha (1958). Between 10 and 29 March 1952, in association with the Palestine Archaeological Museum and the American Schools of Oriental Research in Jerusalem, the École was involved in conducting a systematic search of the cliffs for 4 kilometers (2.48 miles) on either side of Qumran. Two hundred sixty-seven caves were investigated.

De Vaux published annual reports on the excavations in the *Revue biblique* and offered a synthetic overview in his 1959 Schweich Lectures of the British Academy, which he brought fully up-to-date for its English translation *Archaeology and the Dead Sea Scrolls* (1973). The first volume of the final report has been published by Jean-Baptiste Humbert, professor of archaeology at the École, and Alain Chambon (1994). The succeeding volumes are the responsibility of Professor Robert Donceel of the University of Louvain-la-Neuve in Belgium, who was appointed in 1987 to publish the archaeological material from Qumran.

The École became responsible for the publication of the first scrolls by default. The fledgling Jordan Department of Antiquities had no textual expert, and the political situation before 1967 excluded Jewish cooperation. The task of publication fell to the youngest professor, Dominique Barthélemy, and Josef Milik, a Polish priest studying at the École. They co-opted Father Maurice Baillet when he arrived as a student at the École in 1952.

With the growing number of fragments, de Vaux recognized that more scholars had to be recruited if the material was to be published quickly.

De Vaux won the consent of the Jordanian government to the formation of an international and interconfessional team, of which he became the coordinator. Barthélemy and Pierre Benoit were the only professors of the École to whom manuscripts were assigned. From 1974 Emile Puech, who later became a member of the faculty of the École, worked with Jean Starcky, and upon Starcky's death in 1988, Puech assumed full responsibility for his material. In 1986 Puech succeeded Jean Carmignac to become editor of the *Revue de Qumrân*.

The first five volumes of *Discoveries in the Judean Desert* appeared under the general editorship of de Vaux. He also contributed several articles of his own, including one devoted to the texts from Wadi Murabba'at and an introduction to the edition of the Copper Scroll. By the time he died (10 September 1971) the chairman of the editorial team had only two functions: to encourage the members to publish quickly and to make arrangements with the publisher. The team chose Benoit, then director of the École, as the new chairman. The slowness of publication was becoming a scandal as scholars denied access to the unpublished scroll fragments became more vociferous in their complaints. Convinced of the justice of their case, Benoit did his best to exert pressure on tardy editors, but only two more volumes of *Discoveries in the Judean Desert*—volume 6 (1977) and volume 7 (1982)—had appeared before his death on 23 April 1987. John Strugnell, who, like many other scrolls scholars, often resided at the École but had no official connection with it, was then chosen to be the new chairman.

That the first two chairmen of the editorial team were members of the Dominicans, a Roman Catholic religious order once associated with the Spanish Inquisition, became the basis of a popular conspiracy theory. Michael Baigent and Richard Leigh claimed that the Vatican, fearing that revelations in the Dead Sea Scrolls would be damaging to Christianity, had placed de Vaux and Benoit at the École to subvert the editorial process.

This accusation provoked an outburst of media hostility despite the real situation as to access to the scrolls: no important manuscripts were confided to Dominicans, and de Vaux and Benoit had no authority to permit manuscripts to be seen by anyone else, once they had been assigned to members of the team and no authority to forbid the team members to show them to outsiders. Only when the publication of all the photographs of the scrolls confirmed that nothing in the scrolls posed the slightest danger to Christianity did the shadow of scandal subside.

JEROME MURPHY-O'CONNOR

ECONOMIC LIFE. According to Josephus and Philo, wherever the Essenes lived, they were organized in cooperative fellowships, which to some extent were closed economic units. [See *Judea*, *article on Economy*.] The literary testimonies (descriptions by sectarian and nonsectarian writers), the archaeological finds from Khirbet Qumran and the surrounding area, and the background of the ecological conditions at the Dead Sea coast allow us to draw a number of conclusions concerning the economic structure and way of life of the Essene sect.

Khirbet Qumran was not the only Essene center along the northern bank of the Dead Sea. A second sectarian center was discovered to the south of Qumran at Wadi Ghweir. At this site, located about 18 kilometers (11 miles) to the south of Qumran, P. Bar-Adon excavated a large structure (19.5 by 43 meters [64 by 141 feet]) which was in use during the same time period as the Khirbet Qumran site, from the late Hellenistic period to 68 CE. [See *Ghweir, Wadi*.] In addition, tombs of the type existing at Qumran were uncovered near Jericho, and at Hiam el-Sa'aha (north of Murabba'at) and el-Bugeia. An additional cemetery of this type was discovered in Jerusalem. Philo and Josephus write that there were more than four thousand Essenes. [See *Essenes*.] The sites found in the Judean Desert could have supported only a small portion

of this number, which is no more than a general estimate. [See *Archaeological Surveys*; *Archaeology*.]

Khirbet Qumran was not a residential site, but rather a communal center used for common meals, immersion, study, and workshops. Most of the members slept in the marl caves. These dwellings were rock-cut and established at a distance from the site not exceeding the Sabbath bounds (1.2 kilometers [0.75 miles] in each direction). The network of paths that connected the caves with the site bears signs of intensive use (sandal nails, pottery vessels, and coins). Additional structures discovered near 'Ein-Feshkha apparently were used by the inhabitants of Qumran. The number of members using the Qumran site was not large. B. Wood attempted to estimate the number of users on the basis of the quantity of water that accumulated in the ruins. The quantity of water required by the community, however, was flexible and cannot be estimated, as was proved by G. Stephens, especially as a large part of the drinking water was brought from the 'Ein-Feshkha springs. According to Magen Broshi's calculations, the dining room could have held at most 150 diners with modern-day seating arrangements. If they reclined as was common in Hellenistic society, and during festive meals in Jewish society, it could have accommodated only half as many diners. The quantity of serving utensils found near the dining room attests to a maximum participation by two hundred people in the common meals.

The climatic conditions of the Dead Sea area severely hinder any agricultural activity based on rainwater, and only those areas that are watered from springs are cultivatable. The soil in the Dead Sea region is salty and can be prepared for agriculture only with great effort. Arable areas are to be found near 'Ein-Feshkha and in the vicinity of 'Ein-el-Ghweir. Floodwaters are an additional source of water, but considerable effort is required to utilize this source. There is a limited number of floods, only two to three annually, and each carries along a tremendous quantity of water. Therefore, even if the water was diverted from the streambeds by aqueducts, a large number of reservoirs would have had to have been built in order to hold the great quantity of water that sporadically flowed through.

The Late Second Temple Period Settlement in the Dead Sea Area. To the north of Qumran was Jericho, which was a flourishing town and governmental center at the time. A government estate in which balsam, dates, and other crops were cultivated was constructed near Jericho. The winter palaces of the Hasmonean dynasty and King Herod were constructed in the center of this estate. At 'Ein-Gedi, an oasis surrounded by several perennial springs on the western shore of the Dead Sea to the south of Qumran, was another settlement. Its economy was based on the production of balsam, dates, grapes, and ad-

ditional crops. [See 'Ein-Gedi.] Pliny writes that the flourishing settlement was second only to Jerusalem in agricultural quality (*Natural History* 5.73), although some scholars feel that in this instance Pliny is mistaking 'Ein-Gedi for Jericho. There was a royal palace on top of the desert fortress of Masada, south of 'Ein-Gedi on the western shore of the Dead Sea. In the time of Herod, the fortress was an economic center and an important consumer of services. Additional sites were located to the south of the fortress. At 'Ein-Buqeq, M. Gichon excavated a workshop that may have been used to produce balsam. The survey conducted by Bar-Adon uncovered seven structures constructed along the western shore of the Dead Sea, as well as two small villages. On the northeast shore of the Dead Sea, opposite Qumran, was Callinthe, with its medicinal baths that were used by King Herod and others. A bit to the south of this site are the medicinal hot baths of Ba'ara.

Living conditions in the Dead Sea region are difficult. Nonetheless, the area flourished in the late Second Temple period, probably due to the cultivation of balsam in the oases of Jericho, 'Ein-Gedi, 'Ein-Buqeq, and probably 'Ein-Zohar. The high price of the spice derived from this tree justified the tremendous effort required of those engaging in agriculture in the Dead Sea region. Another item produced in the region was salt, an essential and costly commodity in the Roman period. The production of and trade in this commodity was a natural resource of the area. Bitumen is another mineral present in the Dead Sea area; its economic significance has not been determined. As a consequence of these unique natural resources, the region became the site of a trade route as well as a source of livelihood. In order to accommodate the increased commercial activity, a number of ports were built along the Dead Sea, such as Maoza, the port of Zoara. A ship at 'Ein-Gedi is mentioned in one of the Bar Kokhba letters, and several ships' anchors were discovered at the site. A large pier leading to a structure constructed in the Hasmonean period was discovered at Rujm el-Bahr, on the northern coast of the Dead Sea to the south of 'Ein-Feshkha. The Dead Sea area thrived and was the center of an open and specialized economy in the late Second Temple period. The inhabitants of the region produced special goods, the proceeds from which enabled them to purchase essential commodities. At least a portion of the area's inhabitants were wealthy, and the entire population was quite well established. There were governmental interests in the Dead Sea region; consequently, if the inhabitants of Khirbet Qumran were desirous of evading the watchful eye of the authorities, then their choice of the Dead Sea shore was ill advised.

The Socioeconomic Ideology of the Sect Members.

The rabbinic literature mentions a sect known as the Sons of Rekhav. The tannaitic traditions collected by Z.

Safrai regarding this sect indicate that it was an organized group whose members left their homes and went into the wilderness to study Torah. They are described as "water drinkers," that is, they abstained from wine. The members of the Sons of Rekhav community generally did not visit the Temple. On one occasion, one of their number came to the Temple, and his offering was accepted only after much deliberation. The sect members did not live in houses, but in booths and tents, and did not anoint themselves with oil. A certain degree of divine inspiration and Torah scholarship was attributed to them. Their migration to the wilderness apparently ensued from their desire to engage in Torah study, asceticism, and also because they heralded the advent of the Messiah, similar to other heralds such as Elijah and Melchizedek. All these characteristics are suitable to a general description of the Essene sect. These *midrashim* regarding the Sons of Rekhav may preserve the memory of the *yahad* ("community"), as it was recalled a generation or two after the Essenes ceased to continue to be a tangible threat to the rabbis. These testimonies regarding the Sons of Rekhav are consistent with the economic character of the group residing at Qumran.

The historical descriptions portraying the Essenes and the scrolls found in Qumran enable us to reconstruct the ideology of the group resident in the area. [See Essenes.] It should be noted, however, that life there was difficult and many groups throughout history that possessed a religious economic policy were often forced to compromise some of their principles when everyday needs undercut the realization of their economic ideals. The authors describing the Essenes stress the ascetic orientation of these groups. Philo states that the Essenes do not amass property, are not interested in large estates, and despise a life of luxury. Josephus also emphasizes that they reject a life of riches (*The Jewish War* 2.122-127). The sexual abstinence prevalent in some of these groups also harmonizes with this tendency, albeit with additional reasons for such conduct. The element of abstinence is not stated outright in the sectarian writings, but allusions to that effect do appear in one of the wisdom writings, namely, Sapiential work A^b (4Q416). In this composition, poverty is a fact and not an ideological goal. Other works express opposition to unjust riches, such as Rule of the Community from Qumran Cave 1 (1QS xi.2, xxii.9) and Hodayot^a from Qumran Cave 1 (1QH^a x.22-25). Their opposition, however, is directed against wrongful riches, and not against the accumulation of property per se.

Going forth to the wilderness was a central component of the sectarian experience even though there were Essenes who did not live in these barren areas. They believed that the messianic era would be revealed in the wilderness, as the prophet states, "A voice rings out: 'Clear in the desert a road for the Lord!'" (*Is.* 40.4). Their time

was the proper time to clear a road (or "turn") to the desert (IQS viii.15). Additionally, the wilderness facilitated a socioeconomic separation from the Jewish environment. The desire for an ascetic life also played a part in the decision to move to the wilderness. Going forth to the wilderness, however, did not constitute an attempt to flee from the authorities.

A central motivating force in the life of the sectarians was the desire to limit their economic ties with anyone not belonging to the group. While the nonsectarian sources such as Josephus, Philo, Pliny, and the rabbinic literature do not emphasize this aspect, the sectarian scrolls found at Qumran do indeed make explicit mention of the subject. However, the economy of the sectarians was based on commercial relations with the surrounding nonsectarian environment, and, consequently, it would seem that no prohibition was imposed on the sale of agricultural produce to people who were not members of the community.

Josephus and Philo relate that the Essenes maintained a communal system of property ownership. Work was done jointly, with all profits given over to the treasurer (IQS vi.2, with many additional testimonies in other scrolls found at Qumran). According to Josephus and the Rule of the Community, any new member had to transfer his possessions (Greek: *tagmata*, Hebrew: *hon*) to the community (IQS vi.20, vi.23; 11Q19 lvii.21). An ostrakon discovered at Qumran in 1996 contains a writ documenting the transfer of a house, vineyard, figs trees, olive trees, and a slave (apparently from Transjordan) by a new sectarian member to the community. The number of those joining the sect was most likely substantial. Some of the Essene fellowships opposed marital life, and the continued existence of these groups was made possible only by sufficient numbers of new members. Philo and Pliny say that many joined the sect. Even if these reports are somewhat exaggerated, there were significant numbers of new recruits whose entrance into the sect allowed for a steady flow of property into the public treasury. It is not inconceivable, however, that the members of the community retained some private possessions. Most of those transgressing the laws of the sect were punished by partial excommunication. The lack of economic sanctions attests to the absence of private property held by individual members. Nonetheless, the individual who caused loss to the property of the community had to pay (IQS vii.7), and was presumably capable of doing so.

Josephus and Philo presented sectarian economic cooperation as a continuation and consequence of the ascetic worldview. The literature of the sect, however, provides an alternative explanation: "They shall bring all their knowledge and their powers and their wealth into the community of God . . . according to the perfection of

his ways and all their wealth by the counsel of his righteousness" (IQS i.12-13). This is an application of the biblical commandment: "You shall love the Lord your God with all your heart and with all your soul and with all your might (*me'odekha*)" (*Dt.* 6.5). The rabbis understood *me'odekha* to mean money, which is the precise interpretation of the biblical and sectarian term *hon*. Consequently, *hon* had to be an instrument for the service of the Lord, and obviously could not be used for nonsacred purposes. The shared nature of property was therefore part of the totality of requirements imposed upon the sect members, a demand intended to bring about absolute devotion to the worship of the Lord, and was not a goal unto itself. Beyond the communal ownership of property, it is noteworthy that the productive labor of the sect's members was done on a cooperative basis, under the direction of the community's leaders. Consumption also was on a common basis. Josephus speaks of excess property that was given to charity, and to aid the elderly and sick members of the sect. He makes no allusion, however, to any help extended to individuals not belonging to the community.

Economic Livelihood of the Qumran Sect. 'Ein-Feshkha is a significant and consistent source of water; however, some of the water is saline to different degrees. Moreover, the level of the Dead Sea changes, and every variation either reveals or covers many springs and alters the salinity level of the water. At any rate, 'Ein-Feshkha is larger than the 'Ein-Gedi springs. [See 'Ein-Gedi.] The area of land that can be cultivated in the 'Ein-Feshkha region is 1.5-2.0 square kilometers, and water of only an intermediate quality or better sufficed to utilize this area (a dunam of plantations requires 150-200 cubic meters annually). Terraces and remains of aqueducts were discovered in a survey of the area between Qumran and 'Ein-Feshkha, and it may be assumed that the water and land were used in the late Second Temple period to grow dates, the only crop not affected by the salinity level of the water. [See Cisterns and Reservoirs; Water Systems.] The water supplied by the springs in 'Ein-el-Ghweir is estimated at 5,000,000-15,000,000 cubic meters annually, but the salinity level varies from one spring to another, and, again, only some of this water is suitable for agrarian purposes. The arable area at 'Ein-el-Ghweir is about 300 dunams, and this area was fully utilized for the cultivation of dates.

Our sources do not mention the cultivation of balsam at 'Ein-Feshkha or 'Ein-el-Ghweir. The water at 'Ein-Feshkha and 'Ein-el-Ghweir was most likely too salty for the cultivation of balsam, and was used to grow dates instead. The rabbinic *midrashim* mentioning the Sons of Rekhav state that they earned their livelihood, among other ways, as planters, a possible reference to the dates

that provided an economic livelihood for the members of the sect who prohibited anointing with oil, and probably also frowned upon the use of an expensive spice such as balsam. Fish are to be found to this day in the pools at 'Ein-Feshkha, thus raising the possibility that the inhabitants of Qumran may have pursued the raising of fish in these ponds as an additional source of food or income for the sect.

An additional occupation that provided a living for the inhabitants of Qumran was sheep raising. Two sheepfolds were built between Caves 11 and 1, and a large portion of the scrolls were written on sheep parchment. De Vaux conjectured that various installations unearthed at 'Ein-Feshkha were workshops for the production of parchment from hides. (DNA tests of the scrolls, currently in progress, seek to determine if there is any genetic relationship between the physical remains of sheep and goats in the area and the hides on which the scrolls were written; if such a relationship exists, then the hides came from the same flock.) In the desert region, a sheep requires about 16 dunams of natural pasture. The plateau around Qumran in which the sect members lived totals about 5 square kilometers (1,236 acres), only about half of which is suitable for grazing, the rest consisting of steep cliffs. Only 150–200 sheep can be raised in this area. Assuming, therefore, that all the inhabitants of Qumran did not distance themselves from the site and that all were careful to participate daily in the prayers and the common meals, then sheep herding was no more than an ancillary economic branch that provided the Qumran inhabitants with some meat, milk, and wool. [See Agriculture.] If, however, it may be assumed that some members of the sect or the candidates were not required to physically participate in the religious ceremonies at Qumran, or that they entrusted their flocks to professional shepherds who were not members of the community, then they may very well have possessed larger flocks that wandered throughout the Judean Desert. One of the jars discovered at Qumran attests to the practice of dyeing wool red at the site. The jar, which had two rims, was found resting on a stone basin in the central courtyard of the eastern structure at Qumran. One member used the dye in the jar to write his name (Yohanan Haqla) on the vessel itself. To the best of our knowledge, the members of the Qumran sect wore white garments, but they most likely also used red wool threads. The burnt sheep bones unearthed in the Khirbet Qumran excavations indicate that meat was eaten at the common meals. A structure composed of stables was discovered on the western side of Khirbet Qumran, but these were probably for donkeys.

To the west of Khirbet Qumran is el-Buqei'a, a mountainous plateau with moderate topographical features. The entire region is arid, and on average about 150 milli-

meters of rain falls annually in el-Buqei'a. Notwithstanding this meager precipitation, the people of Qumran apparently attempted to grow barley in this region, which required those involved in this work to be absent from the communal ceremonies for a few days. The descent from el-Buqei'a to Qumran takes about three hours, while the ascent to the plateau takes more time, and it would thus seem that it was not possible to go to el-Buqei'a and return to Qumran on the same day. At the beginning of winter a group of sect members would most probably go out to plant barley in el-Buqei'a, and if the crop proved to be successful, they would go out after the Passover holiday to harvest the grain. The discovery of Qumran-type tombs in el-Buqei'a tends to confirm the hypothesis of sectarian involvement at the site.

In his description of the Essenes, Josephus emphasizes their employment in various crafts, and Philo mentions their work both as farmers and in different crafts. These descriptions reflect life in the Essene centers outside Qumran. In Qumran itself, agriculture was the primary form of occupation, although the inhabitants of this center also engaged in a number of branches of labor. Khirbet Qumran itself did not contain dwellings, but rather functioned as a communal center. Traces of a number of installations were found at the site, such as a pottery kiln. The members of all the sects of the late Second Temple period were meticulous in their observance of purity, in excess of the demands of the *halakha*. Under these conditions, during periods of respite in the intersectarian struggles, some sectarians likely preferred to purchase pottery vessels that had been produced by potters whose observance of purity practices was impeccable. The marl on which Khirbet Qumran was built assured the potters in Qumran of a sufficient supply of raw material for the production of pottery vessels.

Room 30 at Khirbet Qumran contained a number of tables and inkstands, leading scholars to conclude that some of the scrolls were copied there. The Qumran library contained hundreds of scrolls, and copying most probably became an important economic activity providing a livelihood for sect members. The last two assumptions regarding the production of pottery and the copying of texts have not been proved, but the *midrashim* describe the Sons of Rekhav, "whose livelihood came from [the production] of pottery vessels." They are also described as "the families of the 'scribes' [*soferim*]" (*Midrash ha-Gadol* on *Exodus* 18.27, p. 371; Safrai, 1979 *A.R.N.*, version A, chap. 35, p. 53).

Thousands of date pits and presses were found in the south part of Khirbet Qumran. Date honey was probably produced here. As was noted, the inhabitants of Qumran raised dates in areas irrigated by the 'Ein-Feshkha springs, and the crop was most likely processed in a

workshop producing honey that was sold outside Qumran. The *midrash* refers to the Sons of Rekhav, as those “who dwelt at *Neta'im*,” thus attesting to their livelihood from plantations (*metta'im*).

In 1992, V. Jones excavated a cave containing an accumulation of organic material. The excavator claimed, without any specific basis or historical probability, that these were remnants of the components of incense. This find is most likely a store of *borit* (“lye”), a sort of soap, which was a mixture of Dead Sea salts and various forms of desert vegetation. This, therefore, attests to an additional industrial activity that provided a livelihood for the inhabitants of Qumran.

Only a small portion of the sectarian halakhic material was concerned with the economic world. A copy of the Cairo Damascus Document from Qumran Cave 4 contains agrarian *halakhot*. Of special interest is the obligation to give the priest only 1 percent of what is obtained by trapping or fishing (11Q19 lx.8–10), which constituted part of the livelihood of the sect members. The connection between the Temple Scroll and the economic conditions prevailing at Qumran is likely to be wholly incidental. Halakhah^a (4Q251) is concerned with the use of animal hides and the prohibition of carrying items outside a tent enclosure on the Sabbath. Other *halakhot* are of a more commercial nature, such as the prohibition in *Miqtsat Ma'asei ha-Torah* (4Q394–399) of the use of metal vessels and the grain of gentiles.

The Standard of Living of the Qumran Sectarians. The authors who describe the Essenes portrayed them as opposing wealth, but not as being poor. The inhabitants of Qumran lived a simple life, they lived in marl caves in the desert, but conclusions should not be drawn from this regarding the communal standard of living. The high standard of living of the Qumran community may be inferred from several kinds of evidence.

1. Hundreds of silver and bronze coins were unearthed at Qumran. These coins, which were published by de Vaux, Sharabani, and Arif, attest to the dimensions of the commercial activity and the open nature of the Qumran economy. As was noted, the open economy of the Dead Sea region was exceptional.
2. Great quantities of water were accumulated at Qumran (Wood, 1984) relative to the number of people at the site (Broshi, 1992).
3. The aqueduct bringing water to the site is short but highly sophisticated, and required the use of Roman measuring instruments and technology.
4. Many utensils were unearthed next to the dining room, some of which were serving utensils used to bring food to the tables. The majority were individual utensils for dining: 210 plates, 708 bowls, and 75 bea-

kers. The numbers of utensils in the dining-room storeroom probably corresponded to the approximate number of sectarians partaking of meals in the dining room. The presence of a pottery workshop at Qumran undoubtedly facilitated the supply of vessels. The two hundred plates found in the storeroom were probably more than sufficient, since the dining room could not accommodate a greater number of diners, leading us to conclude that fewer than two hundred people inhabited the site. The seven hundred bowls found in the storeroom (even if some were surplus) attest to tables set with several dishes served at the communal meals, which therefore differed from the simple meals depicted by Josephus. The quantity of burnt bones found at the site shows that meat was served in the dining room. Meat was expensive in Judea, and slightly less costly in the desert, with its expansive pasture lands, but the consumption of meat on a daily basis is not consistent with poverty. D. Flusser noted that the *pesharim* scrolls mention that people joined the community when a famine was raging in Judea, thus indicating that the community resident at Qumran succeeded in maintaining itself and providing living conditions that attracted people from Judea during times of crisis.

5. The structure at Qumran and the meager finds unearthed there also show that the people of Qumran were not poverty-stricken. The *midrashim* preserve the memory of the Sons of Rekhav as a group that emerged from the wealthy class in Judea (Safrai, 1979, p. 46). Another *aggadah* describing the secession of the Sadducees and the Boethusians stresses that the dissidents “used silver vessels and gold vessels.” (*A.R.N.*, version A, chap. 5; version B, chap. 10.) This obviously is nothing more than an aggadic portrayal, but it nevertheless gives expression to a dim memory that the members of the groups that broke away from Jerusalem were wealthy individuals. Those who joined the sect came primarily from the elite strata of Judean society, and when they joined the Qumran community, they brought with them considerable funds and means of production. The aforementioned ostrakon discovered in Qumran in 1996 attests to a propertied new member who gave over his possessions to the community. The supposition that those joining an ascetic community came from the ranks of the wealthy may be surprising. Throughout history, however, members of the elite strata have been the ones to initiate many social revolutions, from the monastic movement to the Communist movement in Europe. This assumption explains the halakhic proximity between the Sadducees and the Essenes, and the tension and rivalries between the two movements, which emerged from a similar social context.

ZE'EV SAFRAI
HANAN ESHEL

EGYPT, the Nile Delta and the narrow strip of land stretching along the Nile up to the First Cataract, has always been characterized by two unique qualities. First, the fact that it was surrounded by large deserts, and afforded only a few, and easily defensible, approaches, assured it relative security against foreign invaders. Second, its dependence on the Nile's yearly flooding, rather than on rain, for agricultural production, assured it a greater degree of immunity to famine than most other countries in the ancient world. These two factors determined Egypt's major role in the regional politics of the Eastern Mediterranean basin and the Fertile Crescent. From a Jewish perspective, Egypt's unique position entailed both a fear of Egyptian power and the allure of emigrating there in times of economic or political hardship. Thus, one finds in the Hebrew scriptures several references to Egyptian campaigns in Palestine, and numerous references to its economic appeal for Palestine's inhabitants. By far the most enduring biblical image of Egypt, however, is that connected with the Jews' enslavement following the emigration there of Jacob's sons, and the subsequent Exodus, described and alluded to in innumerable biblical passages. Moreover, while some of the biblical references to Egypt evince little interest in the land or its people, other passages—such as the Joseph cycle of *Genesis*, or the prophets' railings against Egyptian idolatry—demonstrate an intimate familiarity on the part of many Jews with the geographical, social, and cultural *realia* of Egyptian life.

Egypt's importance in Jewish eyes is amply reflected in the literature of the Second Temple period as well. Numerous narratives recount and embellish the events connected with the Jews' exile in Egypt and the Exodus. Naturally, texts written by Egypt's Jews (e.g., *Joseph and Asenath*, Ezekiel's *Exagoge*, and the works of Artapanus and Aristobulus) display a greater familiarity with Egypt than those written in Palestine (e.g., *Jubilees*, Pseudo-Philo's *Biblical Antiquities*), but even the latter are not uninterested in the land of the Nile, its people, its gods, and its Jewish inhabitants. Other writings of Egypt's Jews—such as the *Letter of Aristeus*, the *Sibylline Oracles*, and 3 *Maccabees*—focus not on Egypt's biblical past but on its Jews' more recent history and on their hopes for the future.

In comparison with the references to Egypt in the Hebrew scriptures and later Jewish literature, the references to that land in the scrolls—excluding the biblical manuscripts and those of the Apocrypha and pseudepigrapha (such as *Jubilees*)—are quite disappointing. As often is the case, many references to Egypt appear in fragments too small to allow any appraisal of their nature and meaning (e.g., 4QPesher Hosea^b 17 1, 1; 4QPesher Isaiah^c 28 1, 1; 3Q14 17 1, 2; 4Q225 1.5; 4Q226 1.3; 4Q391 1.2,

5.4, 48.2, 70.2). Moreover, many of the better-preserved passages that mention Egypt consist of common stock phrases such as “the Lord who brought you out of Egypt,” or general allusions to the Exodus (e.g., 1QDM 1, 1; 4QOrdinances 2-4.i.3; 4Q379 12 1, 5; 11QTemple Scroll^a liv.16, lxi.14). Other passages merely repeat, or allude to, biblical references to Egypt, such as the injunction upon the king not to make the people go back to Egypt (11QTemple Scroll^a lvi.16; cf. *Dt.* 17.16), or the admonition in the sapiential work 4Q185 1-2.i.15 to remember the miracles that God had performed in Egypt.

In addition to such references, several Qumran texts display amplifications or modifications of biblical scenes connected with Egypt. In the Damascus Document iii.5, a reference to the Jews' sins in Egypt adds an element not found in the book of *Exodus*. In the Genesis Apocryphon, the biblical account of Abraham and Sarah's sojourn in Egypt and their brush with the Egyptian king is greatly expanded (cf. Genesis Apocryphon col. xixff. with *Gn.* 12.10-20). Numerous details are added to the biblical account—including such data as the name of one of Pharaoh's princes (*Hrqmwsh*)—but no attempt is made to add an authentic Egyptian coloring to the story. In both texts, Egypt itself did not attract the authors' attention.

Finally, a small number of texts refer to Egypt in ways that seem not to depend on existing biblical models. Unfortunately, here too the texts' poor preservation hinders our understanding of their context or significance. In one unidentified narrative (4Q462), a description of the Jews' plight in Egypt and their appeals for God's help—and, presumably, the Exodus itself—is followed by the statement that “they were delivered up to Egypt for a second time at the end of the kingdom . . . to the dwellers of Philistia and Egypt for despoliation and destruction, and they shall raise it . . .” Unfortunately, it is not clear from the text whether the reference to a second exile in Egypt relates to the events following Gedaliah's murder (cf. *Jer.* 42ff.), or to events of the Persian or Hellenistic periods. In the War Scroll, on the other hand, the context of the two references to Egypt is somewhat clearer: in the first (1QM 1.4), the forces of the *Kittim* (i.e., Romans) in Egypt are mentioned in the scenario for the great eschatological war. In the second (1QM xiv.1), God's destruction of the Sons of Darkness is compared to his destruction of the idols of Egypt (cf. *Ex.* 12.12, *Is.* 19.1, etc.). Here, too, however, there is little evidence that the authors of the Dead Sea Scrolls had any specific interest in, or knowledge of, Egypt.

EGYPTIAN RELIGION. The most conspicuous aspects of the Egyptian religion in the Greco-Roman world were its specialized caste of priests, its numerous temples, its strong emphasis on the soul's life after death and, above all, its worship of animal deities. This zoolatrous tendency, and the abundance and polyform iconography of the Egyptian gods, constituted the greatest difference between that religion and anything known among Greco-Roman Jews. Beyond these major differences, however, there were many traits of Egyptian religion that find interesting parallels in the Jewish world, including that of Qumran.

Unlike the practice among Greeks and Romans, where priesthood commonly was taken up by nonspecialized men and women for set periods of time, in Egypt religious and cultic functions were the domain of a hereditary class of male priests who served in the temples for life. These priests were not only responsible for conducting the temple rituals, they also were in charge of all sacred knowledge, including writing, and were expected, and obliged, to adhere to purity laws and taboos far stricter than those of ordinary Egyptians. Moreover, the complexity of the Egyptian writing systems, and the lack of any one body of core religious texts, ensured that the process that took place among Greco-Roman Jews—the rise of nonpriestly groups of religious experts—was virtually impossible in Egypt prior to the rise of Christianity. As among the Jews, the Egyptian priests' high social status, and the economic benefits that accrued to them, facilitated rapid Hellenization among them. On the other hand, the available evidence for anti-Greek sentiments in Ptolemaic Egypt—and especially the so-called Potter's Oracle—also seems to stem from Egyptian priestly circles, and it is clear that the foreign presence in Egypt was interpreted by at least some priests in line with the myth of the struggle between the good god Horus and his wicked brother Seth, the god of all evil foreigners. But Egypt's great size and regional diversity, its numerous temples, and the Ptolemies' active support of these temples, all prevented the emergence of any major rift between different groups of priests on the question of Hellenization, similar to the one that emerged in Jerusalem around the time of the Maccabean Revolt.

As noted above, Egyptian priests observed an elaborate set of rules of ritual purity. These included not only circumcision and the avoidance of certain foods, but also the wearing of linen garments and the removal of all bodily hair, practices that made the priests visibly different from all other Egyptians. Ordinary Egyptians also observed certain taboos, especially in matters of diet, and these often differed from one region to the next, according to the different animals held most sacred by each region. Such divergence—the refusal of the residents of one region to eat certain fish, while those of another avoided

harming dogs, and so forth—could also lead to violent local disputes, and, together with Egyptian zoolatry in general, was a cause of great amazement to Greek and Roman observers.

The Egyptian religious literature of the Greco-Roman period was abundant and multifarious, consisting both of older texts and of contemporary compositions, including works of Egyptian religiosity translated into Greek or composed in the Greek language itself. Hymns, prayers, lamentations, funerary texts, and mythological texts were all common, as were collections of spells and rituals for success in this life and the next, and treatises of an astrological or mystical nature. Religious speculation focused on the different gods and their manifestations, as well as the soul's travels and trials in the underworld. The strong belief in an afterlife was the motivating force behind the widespread Egyptian practice of mummification; it also entailed a strong exhortation to live a life of justice in this world, so as not to be punished in the next.

The Egyptian calendar was solar, comprising twelve months of thirty days each, to which five epagomenal ("additional") days were added at the end of the year. Several attempts to amend the calendar, and make it conform fully to the true solar year—about three hundred and sixty-five and a quarter days—did not prove successful, and the Egyptian year, with all its festivals, slowly moved backward with respect to the natural seasons. The worship of the Egyptian gods was not limited to the native Egyptians, but encompassed many of the foreigners who settled in Ptolemaic and Roman Egypt. The Egyptians themselves, in turn, were not averse to worshipping the newcomers' gods as well, and only rarely did the Egyptian gods, or their adherents, display clear signs of any religious exclusivity. Moreover, several Egyptian gods, and especially Isis and Sarapis, won great popularity outside Egypt as well. Both the Judeo-Greek literature and the Rabbinic writings display some familiarity with the Egyptian gods and their myths, and especially with Isis, Osiris, and Sarapis. But, as among the Greeks and Romans, it was especially the Egyptians' zoolatry that the Jews found so fascinating—and repulsive. From the *Letter of Aristeas* and the *Third Sibylline Oracle* in the second century BCE, to Philo's writings and the *Wisdom of Solomon* in the first century CE, Judeo-Greek writers railed against the worship of "dumb and senseless animals." Only rarely does one find a positive Jewish attitude toward the Egyptian gods, such as Artapanus' claim (second century BCE?) that it had been Moses himself who instituted Egyptian zoolatry. In the Qumran writings, on the other hand, there is little evidence of any interest, even polemical, in Egyptian religion. Of course, the members of the Qumran community were well aware of the biblical condemnations of Egypt, such as Ezekiel's mocking references to the divinization of the Pharaoh (*Ezekiel*

29). They may even have been aware of some of the Judeo-Greek references to Egyptian religion, as fragments of Judeo-Greek works were found among the fragments from Cave 7. And yet, the Hebrew and Aramaic texts from Qumran show little interest in this topic, even on such occasions when references to Egyptian religion might have been inserted (e.g., in the Genesis Apocryphon's description of Abraham in Egypt, or in the apocryphal Jeremiah materials).

In noting the Qumranians' disinterest in Egyptian religion, some signs of possible connections between the Qumran community and the Jews of Egypt should also be noted. Several Judeo-Greek texts may display Essene influences (e.g., the *Testament of Job*), and the Jewish community of the Therapeutai, known to us solely through one Philonic treatise, seems to have shared certain practices with the Essenes. Moreover, the flight to Egypt of Onias IV and his followers and the establishment there of a second Jewish temple raise the possibility of some connection between these Jewish priests and the other priestly groups who challenged the authority of the Hasmonean high priests. The Dead Sea Scrolls, however, provide no firm evidence to support such links, nor are such links clearly attested in any other source.

GIDEON BOHAK

'EIN-EL-GHWEIR. See Ghweir, Wadi.

'EIN-EL-TURABEH. Along the shore of the Dead Sea, south of 'Ein-el-Ghweir, near the springs that in Arabic are called *Al el-Turbah* lies 'Ein-el-Turabeh (Ar., *Katser el-Turbi*). It appears that this site should be identified with the Nibshan mentioned in *Joshua* 15.62. Explored and excavated by Ian Blake in 1966, the site is divided into two parts: a nearly square structure, 15 by 13 meters (49 by 42 feet), and a courtyard, 19 by 20 meters (62 by 66 feet), which adjoins the structure's northern side. The entrance to the courtyard was also on the northern side, and guard rooms were erected adjacent to the courtyard gate. On

the northern side of the courtyard and on the southern side, rows of pillar foundations that parallel the walls of the courtyard were discovered. The pillars were made of wood and are well preserved.

The entrance to the square structure was from within the courtyard. A ramp through which one entered the square structure was built parallel to the southern wall of the courtyard. The ramp led from the square structure to another room (6 meters by 3.2 meters [20 feet by 10.5 feet]) surrounded by seven smaller rooms. Outside of the square structure's western and southern sides is an inclined wall: its thickness is approximately 2 meters (6.6 feet), while the southern wall is approximately 2.5 meters (8.2 feet) thick. Blake reported that much brick material was found around the walls. The structure had a stone foundation while the building above it was made of brick.

The pottery at the site is primarily from the eighth and seventh centuries BCE. It appears that the structure was already abandoned during the course of the First Temple period. A small amount of pottery from the Hellenistic and Roman periods was also discovered in the structure. Hence one can assume that the structure was used again in the latter days of the Second Temple period. From this period an assemblage of three cooking pots and three pitchers was discovered. A similarity does indeed exist between the inclined wall discovered at 'Ein-el-Turabeh and the inclined wall adjacent to the tower in the ruins of Qumran; but the square structure at 'Ein-el-Turabeh is from the Iron Age while the tower at Qumran is from the Hellenistic period. [See Qumran, *article on Archaeology*.]

HANAN ESHEL

Translated from Hebrew by Daphna Krupp

'EIN-FARA, located approximately 8 kilometers northeast of Jerusalem, is the westernmost of the three perennial springs of Wadi Qilt and the most abundant one. In this area the wadi has cut a deep canyon, approximately 1.5 kilometers long, and many caves are located in the steep cliffs. This section of the wadi is identified with "the valley known as Pheretae," the location of the cave encampment of Simeon son of Gioras mentioned by Josephus Flavius (*The Jewish War* 6.511-513) in his account of the civil war in Judea in 68-69 CE, when the pressure of the Roman army on the rebels was temporarily lifted. This may also be the ravine of Beth Tamar mentioned in

the Copper Scroll (3Q15 xi.14-15, ed. Milik), unless the reference is to the cliff of Wadi Suweinit. [See Nahal Michmash.] At the beginning of the fourth century CE, the monk Chariton, the founder of monasticism in the Judean Desert, established near the spring the first laura in the Judean Desert, which was called Pharan. [See *Monasteries*.] The church of the laura was consecrated in a cave where Chariton had been kept captive by bandits, from whom he was saved by a miracle. This large artificial cave (no. 7), consisting of a spacious rectangular hall (8.3 by 6.3 meters), with three rooms annexed to its eastern end, was presumably first cut into the rock by the men of Simeon son of Gioras, and served as his headquarters.

Nineteen rock-cut caves were discovered and explored in 1983-1984, during the Archaeological Survey of the Judean Desert Caves carried out on behalf of the Institute of Archaeology at the Hebrew University of Jerusalem and directed by J. Patrich. Most caves were located high in the southern cliff. Their locations and configurations indicate that they were originally cut to serve as hideouts. The natural crevice-like appearance of their mouths was not touched, thus concealing the existence of a large chamber hollowed out of the rock beyond. On the basis of size and shape the caves were classified into several types: small cells (6-10 square meters in area) cut in the perpendicular bank or high in the inner wall of a large, natural cave; cells in several levels along a narrow natural crevice; and caves with a large inner chamber. Storage cells were cut in the walls of some caves, and some caves had built-in cisterns.

A peculiar feature, common to some types of caves (no. 2 and no. 7), is a vertical rock-cut entrance shaft, cut in the floor of the cave; the cross section of the shaft is generally 1 meter square, and its depth is generally 2 to 5 meters. Projections and depressions in the shaft's vertical walls facilitate climbing, and in the bottom there is a well-cut entrance. Such entrance shafts were also common in the contemporary hideouts at Nahal Michmash, a northern tributary of Wadi Qilt. [See Michmash, Nahal.] A stable (no. 18), consisting of a series of eight niches cut side by side in the wall with holes in their floors to tether animals, is located at the western end of the site.

Shards and stone vessels dating to the end of the first and the beginning of the second centuries were found on the surface of many of the caves, indicating that they were cut in the Second Temple period and then reused as hideouts during the Bar Kokhba Revolt. Some caves also contained pottery from the Byzantine period, when they were used by monks. Cave 13 contained a heap of ropes made of palm fibers, as well as a braid of human hair. There were no inscribed finds. Some natural caves in the canyon, which are lower and more readily accessible,

contained quantities of shards from the Early Bronze Age and human bones.

Hermitages of the Byzantine *laura* extend along an approximately 3-kilometer section of its course. Some were reusing the earlier hideouts, and others were built of masonry. The *laura* core, including two chapels, one in the cave and another built of masonry, was adjacent to the spring. A secondary center to the east, which seems to be associated with the *laura*, is comprised of four ruined buildings, including a chapel with a colorful mosaic floor, cisterns, pools, and many tombs. It is located at Jurat Musa, approximately 1 kilometer to the east of the spring, near the confluence of Wadi en-Nimr to Wadi Fara. It got its water from the spring by means of two aqueducts.

JOSEPH PATRICH

'EIN-FESHKHA. Located by brackish springs on the northwest shore of the Dead Sea, 'Ein-Feshkha lies 3 kilometers (2 miles) south of Khirbet Qumran. The site was excavated in 1958 by Roland de Vaux of the *École Biblique et Archéologique Française* in Jerusalem. De Vaux uncovered the remains of a building complex contemporary with the settlement at Qumran, which he believed was inhabited by the same community.

Main Building. The complex at 'Ein-Feshkha consists of a main building with an industrial area to the north and an enclosure with a porch or shed to the southwest. The main building is a large rectangle measuring 24 by 18 meters (76.8 by 57.6 feet): it had an open courtyard in the center surrounded by rooms on four sides. Two side-by-side doorways on the eastern facade provided access into the building. De Vaux suggested that the northern passage (L9; L = locus [findspot]) provided access to the northern suite of rooms (L21-22), while the southern passage (L11A) led into the central courtyard.

The rooms along the northern side of the courtyard (L21, L22, and L22bis) were entered through a single

doorway and were separated from each other by low, narrow walls. De Vaux suggested that these rooms and those on the southern side of the courtyard (L7, L10) were storerooms; the last two were separated by a poorly constructed wall and were paved with small stones. Thirty-two coins were found in a room in the southeast corner of the building (L11B) that had a drain running diagonally through it to carry water away from the courtyard. Perhaps it and rooms on the western side of the building (L3 and L5) served as residential quarters or offices. One of the western rooms (L3) was paved with small stones, while the other (L5) had a semicircular paved area against the east wall. A cut column drum was found in the debris in this room. A staircase on the southeastern side of the building led up to a roof terrace above the rooms on the northern and southern sides of the courtyard and to a second story of rooms on the western side (above L3 and L5). A square pier in front of the rooms on the western side of the courtyard (L3 and L5) originally supported a balcony in front of the rooms above.

Industrial Area. Excavations in the eastern half of the enclosed area to the north of the main building revealed a system of basins and water channels. Water flowed through a sluice in the northern enclosure wall (L29) to a small rectangular tank (L23). One channel running south from the rectangular tank fed a large, square, plastered basin (L24), the bottom of which was covered with a whitish deposit. An opening at the base of the southeast wall of this basin led to a trough and a plastered pit on the other (south) side (L25). Another branch of the channel that fed the plastered basin encircled it on the west and terminated at a second plastered basin (L27). A second channel ran southeast from the rectangular tank, leading to a rectangular basin (L26). The area between the plastered basins (L24 and L27), the plastered pit (L25), and the channel that fed the rectangular basin (L26) was paved with large stone slabs. An intact jar and two large oblong stones were found lying in this area; a third stone lay at the bottom of the large, square, plastered basin (L24). De Vaux pointed out that the shallowness of these basins indicates that they were not cisterns, while the absence of steps rules out their use as baths. This must have been an industrial installation in which water played a major role. However, the nature of the industry is unknown. De Vaux suggested that it was a tannery. He believed that the absence of tannin in the deposits could be explained if production of parchment instead of leather had occurred here. In this case, some of the parchment used for the Dead Sea Scrolls might have originated in the workshop at 'Ein-Feshkha. Frederick Eberhard Zeuner, noting the absence of animal hairs in the deposits, suggested instead that fish were raised in the basins. De Vaux objected to this because of the small size

of the basins and the presence of plaster on the basin walls.

Enclosure. To the southwest of the main building lay an enclosed area measuring over 40 meters on each side. The only structure found within it was a row of square piers running parallel to the northern wall of the enclosure, which created a porch or shed that was open to the south. A pavement of small stones covered much of the floor of the porch, ending neatly to the south of the row of piers, at the point where the roof would have terminated. Rooms or enclosed areas at either end of the porch (L20 and L19) could have been used as living quarters. The rest might have provided temporary shelter for people or animals, or, as de Vaux suggested, might have been used as a drying shed for dates (which may have been cultivated in the brackish water of the springs).

Chronology of 'Ein-Feshkha. The main phase of occupation distinguished by de Vaux at 'Ein-Feshkha is contemporary with Period II at Qumran (c.4/1 BCE–68 CE). Most of the pottery recovered in the excavations belongs to this phase, and the dating is supported by the numismatic evidence. As at Qumran, Period II at 'Ein-Feshkha ended with destruction by fire. De Vaux also found traces of an earlier phase of occupation, Period I. The architectural evidence for this phase is scanty, consisting mostly of an earlier level in a small room in the northwestern corner of the courtyard in the main building (L6) and in the rooms along the northern side of the courtyard (L21 and L22). Most of the pottery associated with Period I is fragmentary, and much of it comes from piles of rubbish that were cleared out of the main building and discarded outside its northern wall when the site was reoccupied at the beginning of Period II. Neat piles of square white limestone tiles found outside the northern wall of the main building (L28) and white limestone and dark bituminous square and triangular tiles (recovered in the fill of L11A-B) may have belonged to *opus sectile* ("tile") floors of Period I. Though he equated it with Period Ib at Qumran (c.100–31 BCE), de Vaux noted that there is no evidence that Period I at 'Ein-Feshkha ended with violent destruction, either an earthquake or fire. However, the fact that the building was cleared out suggests that it was abandoned for some time.

The pottery and coins published from Period I contexts at 'Ein-Feshkha point to a date no earlier than the reign of Herod the Great for this phase. De Vaux was, however, puzzled by the fact that there was no evidence for the earthquake of 31 BCE at 'Ein-Feshkha, which is just 3 kilometers (2 miles) from Qumran. In view of this, a post-31 BCE date for the initial phase of occupation at 'Ein-Feshkha would account for the absence of earthquake destruction at the site. Because of the limited nature of the published ceramic material, it is difficult to

determine whether the end of Period I at 'Ein-Feshkha is contemporary with the end of Herodian Period Ib at Qumran, that is c.9/8 BCE or some time thereafter. At any rate, the ceramic evidence does not contradict the possibility that 'Ein-Feshkha was abandoned (but not destroyed) at the same time as Qumran.

De Vaux also distinguished a third phase of occupation (Period III), which was attested only in the rooms along the northern side of the main building (L21 and L22). On the basis of the ceramic and numismatic evidence, he attributed this phase to a small unknown group in the late first century CE or to Jewish rebels at the time of the Bar Kokhba Revolt (c.132–135). Finally, de Vaux dated the rebuilding of the room at the eastern end of the porch or shed (L20) to the Byzantine era, when he suggested that a garden was cultivated by monks from nearby Khirbet Mird.

The settlement at 'Ein-Feshkha was apparently established after 31 BCE. The main phase of occupation lasted until 68 CE, when it suffered a violent destruction. Despite its physical proximity and contemporaneity, the absence of scrolls and scroll jars from 'Ein-Feshkha leaves open the question of whether it was occupied by the same community as at Qumran.

JODI MAGNESS

'EIN-GEDI. The largest oasis on the western shore of the Dead Sea, 'Ein-Gedi lies 38 kilometers (24 miles) southeast of Jerusalem, and comprises an area of about 1.4 square kilometers (0.5 square miles). 'Ein-Gedi, which means "spring of the young goat," is the Hebrew name of a perennial spring flowing from the rocks about 200 meters (656 feet) above the Dead Sea, in the northwest section of the oasis. In Greek and Latin sources, it is referred to as *Engadi*, *Engade*, *Engedene*, *Engedon*, and *Engadenos* and similar versions. Its Arabic name—'Ein Jidi—led to its identification with the ancient 'Ein-Gedi by Edward Robinson in 1841.

The "wilderness of 'Ein-Gedi" and the "strongholds of 'Ein-Gedi" appear in the stories of David's flight from Saul (*1 Sm.* 23.29, 24.1). 'Ein-Gedi is mentioned in the list of the cities of Judah among those in the wilderness (*Jos.* 15.62) and is identified, rather arbitrarily, with Hazazon-Tamar in a record of an Ammonite-Moabite invasion of Judah during the reign of Jehoshaphat (*2 Chr.* 20.2). It is also mentioned in a prophecy of Ezekiel (*Ezek.* 47.10), and its vineyards are mentioned in the *Song of Solomon* (1.14).

Historical References. The first permanent settlement was founded at Tell Goren, in the southwest of the oasis, toward the end of Iron Age II period in the seventh century BCE (or perhaps slightly earlier?), probably in connection with the cultivation of balsam (*G., opobalsamon*), apparently under royal auspices. The settlement was destroyed early in the sixth century BCE, perhaps by the Edomites in 582/81 BCE. Its importance as a center for growing and producing balsam remained its economic mainstay until the sixth century CE, however. It was thus rebuilt in the postexilic period (fifth century BCE) and may have been destroyed during the Tennes rebellion (c.345 BCE). It was settled during the Hellenistic period and came under Hasmonean control during the reign of John Hyrcanus (c.112/111 BCE). It is not known whether the oasis was entirely or partly abandoned between the late first century BCE and the early first century CE owing to a change in the level of the Dead Sea. Josephus mentions it as one of the eleven districts (toparchies) of Judea before the First Jewish Revolt (*The Jewish War* 3.55). The Sicarii of Masada raided it during Passover in 68 CE, killing more than seven hundred women and children and rifling the provisions (*The Jewish War* 4.402–404). In the period between the First Jewish Revolt and the Bar Kokhba Revolt (70–132) it was garrisoned by a Roman auxiliary force. In a legal document from the Cave of the Letters, it is referred to as "Ein-Gedi village of lord Caesar." It seems likely that 'Ein-Gedi was crown property from its earliest days to its end during the Byzantine period.

During the Bar Kokhba Revolt (c.132–135) 'Ein-Gedi was of special importance for the insurgents, its port serving to receive badly needed supplies. [See Bar Kokhba Revolt.] From the third century to the sixth century CE, 'Ein-Gedi flourished and is described in the *Onomasticon* by Eusebius (early fourth century CE) as "a very large Jewish village" (Klostermann, ed., p. 86, 1.18). Besides balsam, 'Ein-Gedi was famous for its date groves, sacramental wine, and baskets and mats plaited from date branches. Jewish 'Ein-Gedi was destroyed early in the reign of Justinian I (c.531 CE). It was settled sporadically during medieval times as a place where its inhabitants were safe from nomadic raids.

Archaeology. The first archaeological survey of 'Ein-Gedi was carried out by Avraham Reifenburg and Benjamin Mazar in 1949 for the Hebrew University of Jerusalem; surveys of the oasis and its agricultural terraces and irrigation installations have been undertaken since 1956. Extensive excavations followed in 1961–1962 and 1964–1965 at numerous sites in the oasis conducted by Mazar, Immanuel Dunayevsky, and Trude Dothan. The synagogue, which dates from the third through the sixth century CE, was excavated in 1970–1972 by Dan Barag and Yosef Porath. Work was resumed near the site of the synagogue by Gideon Hadas in 1995 and Y. Hirschfeld in 1996. A cemetery from the Hasmonean period was excavated by Nahman Avigad in the Nahal David wadi, on the northern borders of the oasis, and nine similar tombs were cleared by Hadas in the oasis between 1984 and 1989. [See Cemeteries.]

On the cliffs 150 meters (492 feet) above the 'Ein-Gedi spring are the remains of a temple enclosure from the Chalcolithic-Ghassulian culture, dating from the fourth millennium BCE, which were excavated in 1962 and 1964. The temple probably served as a cult center and was abandoned after a relatively short period. It stands to reason that the spectacular treasure of 416 ritual copper objects, such as mace heads (and a small group of objects made of ivory and hematite), discovered by Pessah Bar-Adon in the Cave of the Treasure in Nahal Mishmar in 1961, was among the temple furniture of this important sanctuary. [See Mishmar, Nahal.]

The remains of the ancient site of 'Ein-Gedi were discovered on the narrow and steep hillock of Tell Goren and excavated in 1961–1962 and 1964–1965. In Stratum V (late eighth–early sixth century BCE) traces of numerous houses on the slopes of the hill were discovered. Ovens and vats, apparently belonging to industrial installations connected with the production of perfumes from the balsam plants, were uncovered along a street. Finds include two Hebrew stone seals, one of Uriyahu [son of] 'Azaryahu and another of Tobshalem, as well as a hoard of silver ingots probably used as currency. Most of the many pottery vessels date from c.630–582/81 BCE, except for a handle stamped with the royal four-winged Judean seal of the city of Ziph and an unusual royal two-winged seal impression.

The Persian period settlement of Stratum IV (fifth–mid-fourth century BCE) extended over a larger area than that of Stratum V. On the northern slope a stone building of twenty-three rooms was cleared along with the remains of other houses in its vicinity. Among the finds are stamped pottery handles bearing the seals of the Persian province of Yehud (Judah) and potsherds of imported Attic vessels. This settlement was destroyed c.400 BCE and again in the mid-fourth century BCE. A citadel occupied

the summit of the site during Stratum III, dating from the Hellenistic period, and served garrisons of Ptolemies and Seleucids (third century–second century BCE) and Hasmoneans (c.112/111–37 BCE). Wooden coffins, wooden vessels, pottery, mats, shoes, and bronze wine ladles with duck-head handles were discovered in the multiple burial caves of the first century BCE at Nahal David and other locations in the oasis. [See Sdeir, Wadi.] The finds differ from regular Jewish tombs of that period and may belong to Idumeans converted to Judaism by John Hyrcanus. To Stratum II (first century CE) belongs a tower added to the citadel and a house on the northern slopes that yielded a hoard of 139 bronze coins dating from 42/43 to 67 CE. It was destroyed in 68 CE. During the Roman and Byzantine periods Tell Goren became an area of cultivated terraces.

The built-up area of that period was northeast of Tell Goren; a bathhouse from the period 70–132 CE was excavated there. It included the typical elements of a Roman bath set in a row: a frigidarium (cold room), a tepidarium (warm room), a caldarium (hot room), and a furnace, as well as numerous pools. A synagogue was excavated some 300 meters (984 feet) northeast of Tell Goren. [See Synagogues.] In Stratum III B (third century CE) it was a simple prayer hall with two entrances in the northern wall oriented toward Jerusalem. Its black and white mosaic pavement included a panel with a swastika. In Stratum III A (fourth century CE) the central northern entrance was blocked and turned into a niche for a Torah ark; a “seat of Moses” was constructed on its eastern side. The building was divided into a nave and eastern and southern aisles. Three entrances were constructed on its western side, and a porch with three columns was added. In Stratum II (mid-fifth century–c.531 CE) a large Torah ark with an apse and a small rectangular area enclosed by a chancel-screen (*himali*) in front replaced the earlier niche and ark; a new mosaic pavement with birds and three seven-branched menorahs was also added. A narthex was built on the western side of the building.

In the new western aisle (the former porch) there are five mosaic inscriptions in Hebrew and Aramaic. The first quotes *1 Chronicles* 1.1–4. The second lists the names of the twelve signs of the zodiac, the twelve months of the year, the three patriarchs, and the three companions of Daniel. The third inscription, in Aramaic, blesses three donors and warns against those who cause dissension in the community, pass malicious information to the gentiles, or reveal the secrets of the town. (The latter may be secrets connected with the cultivation of the balsam.) The fourth inscription, in Aramaic, refers to two of the three donors of the third inscription, and the fifth inscription, in Aramaic, blesses all the people of the town who renovated the synagogue. The synagogue was destroyed by fire c.531 CE. A short-lived attempt to reconstruct it may

have been made in the early seventh century during the Sassanian occupation (611–629 CE). A very remarkable find from Stratum II is a cast bronze menorah about 22 centimeters (9 inches) wide that served as a decoration.

Relation to the Dead Sea Scrolls. Property in ‘Ein-Gedi belonging to Babatha, daughter of Simon, is mentioned in ten of the thirty-seven legal documents that date from 93/94–132 CE, and that were discovered by Y. Yadin in the Cave of the Letters. [See Babatha; Hever, Nahal.] The marketplace and a synagogue at ‘Ein-Gedi (both unidentified) are also mentioned. Yadin’s explorations in the Cave of the Letters yielded twenty-one documents in Aramaic, Hebrew, and Greek from the time of the Bar Kokhba Revolt (c.132–135 CE). Six documents belong to Bar Kokhba’s administration at ‘Ein-Gedi, concerning, for example, the leasing of state-owned land. A group of fifteen letters includes thirteen written in the name of Bar Kokhba to his two officers at ‘Ein-Gedi. These documents furnish very important information about Bar Kokhba’s administration, legal and economic matters, and topographical issues and are reminiscent of the Bar Kokhba documents from Wadi Murabba’at. [See Murabba’at, Wadi, *article on Written Material.*]

DAN BARAG

ELECT OF GOD. Some fragments of a somewhat poorly preserved Aramaic manuscript (Elect of God [4Q534]), the copy of which is dated from the early Herodian period (second half of the first century BCE), were at first understood in a messianic sense. In a preliminary edition, Jean Starcky proposed attributing to a unique and very characteristic expression in this manuscript, *be-hur `elaha* (“Elect of God”), the full-blown meaning it is given in the “Book of Parables” in *1 Enoch* and the New

Testament reference to a messianic figure (*Jn.* 1.34). However, in the few fairly well preserved lines of the text, nothing warrants such a clear-cut conclusion:

[And] he shall know the mysteries of mankind and his wisdom shall go to all the peoples and he shall know the mysteries of all the living. [And] all their calculations according to him shall be fulfilled and the number / the opposition of all the living shall be great [. . . according to] to his calculations because he is the Elect of God. His progeny and the spirit of his vital breath [. . . , therefore] his calculations shall be for eternity.

The presentation of this personage in this manuscript emphasizes his conception and his life as being in accordance with the tripartite divisions of zodiac signs and with certain features of his body, the significance of which is described in physiognomic texts (see fragment 1.i.1–3, 9–10; compare a Qumran Cave 4 horoscope work, 4Q186). From a very young age, this individual is to acquire the knowledge of the three books in order then to gain “prudence and knowledge [. . . and the language (?)] of visions in order to depart above the higher (sphere) and with his father and his ancestors [. . . [life] and old age, with him shall be counsel and prudence” (frg. 1.i.1–7). Such a description better fits the mystic initiation of Noah, which takes up again the dream experiences of Enoch, than it does the Messiah, Elect of God—and even more so since it does not involve kingship or priesthood. [See Messiahs.] It is significant that one medieval Samaritan tradition recounts: “At the age of seven (Noah) learned the three books of creation: the Book of Signs, the Book of the Stars and the Book of Wars, that is to say, the Book of the Generations of Adam” (see Milik, “Écrits esséniens de Qumrân: d’Hénoch à Amram,” in *Qumrân. Sa piété, sa théologie, et son milieu*, by M. Delcor, Paris, 1978, p. 94).

This identification, proposed by Joseph A. Fitzmyer (1965) and Pierre Grelot (1975) based on other factors, was accepted by Starcky (*Le Monde de la Bible* 4 [1978], 56) and was defended at length by F. García Martínez (1992), and even more since the mention of the “waters” in fragment 2.14 seems to lend weight to this solution. Others proposed identifying this individual with other figures: “Melchizedek” (J. C. Greenfield) or the “Elect” of the “Book of Parabes,” “Enoch *redivivus* (who has come back to [life])” (A. Dupont-Sommer and A. Caquot, in Caquot 1991, p. 155). But since Enoch was the first one who wrote books (see *Jub.* 4.17–22), it would therefore seem impossible for him to learn from the “three books”; furthermore, these books were passed down by inheritance (*1 En.* 82.1, etc.). Noah, the only one who survived the Flood, was then able to hand down his wisdom to all the peoples (see *Wis.* 10.4).

The main fragment is placed after the birth of the hero, describing the physical marks of divine election that destine him for the particular role he is to play after his training in the ancestral books of wisdom and his learning the knowledge of the mysteries of mankind.

ÉMILE PUECH

Translated from French by Robert E. Shillenn

ELEPHANTINE TEXTS. Aramaic papyri from Elephantine Island were acquired on the antiquities market by Charles Edwin Wilbour in Aswan in 1893 and are now housed in Brooklyn. Ostraca and papyri excavated on Elephantine Island between 1906 and 1909 by Otto Rubensohn and Friedrich Zucker of Germany are now located in Berlin and Cairo, and Charles Clermont-Ganneau, Jean Clédat, and Joseph-Étienne Gautier of France brought papyri to Paris. Individual ostraca were acquired as early as the 1870s and excavated as recently as 1988 and are scattered in ten museums and libraries (Oxford, Cambridge, London, Munich, Berlin, Vienna, Moscow, Cairo, Elephantine, Jerusalem). For a long time Arthur E. Cowley was synonymous with Aramaic papyri. His work later was supplemented by the publications of Emil G. Kraeling (1953), Edda Bresciani, and Murad Kamil (1960, 1966). A multivolume collation of all Egyptian Aramaic texts has been published by Bezalel Porten and Ada Yardeni (*Textbook of Aramaic Documents from Ancient Egypt [TAD A-D]*). Fifty-two of these texts have been supplied with updated commentary in *The Elephantine Papyri in English* by Porten (1996 [EPE B1–52]). Documentary papyri in Hebrew, Aramaic, Nabatean, and Greek were uncovered by Bedouin and in the Judean Desert in excavations at Wadi Murabba‘at and apparently at Nahal Hever (including those excavated by Yigael Yadin). The Murabba‘at texts were published by J. T. Milik (1961) and the Nahal Hever texts by Naphtali Lewis (1989), Ada Yardeni (1995), and Hannah Cotton and Yardeni (1997). The remaining Aramaic and Nabatean texts will be published by Ada Yardeni and Baruch Levine. Their external features are discussed here for purposes of comparison.

Letters. The Aramaic letters on papyri number thirty-six. Not all are fully intact, and many are fragmentary. Twenty-eight belong to Elephantine (*TAD* A3.1–10, 4.1–10, 5.2, 5.5, 6.1–2) or Syene (*TAD* A2.1–4), written in the fifth century BCE. Unlike contracts, letters were usually written on both sides of the papyrus (except *TAD* A3.4, 3.9, 4.4, 5.2), beginning on the side perpendicular to the fibers. The bottoms were then turned up and the letters were concluded on the side parallel to the fibers. Occasionally, the piece was turned sideways (*TAD* A3.9). There were two standard sheet widths: scroll height approximately 32 centimeters (*TAD* A3.4–10, 4.2–4, 4.7–8, 5.2, 6.1–2) and 27–28 centimeters (*TAD* A2.1–7, 3.11, 4.1). Unlike contracts, which were rolled up and folded in thirds, letters were rolled up and folded in half, addressed on one of the exposed bands with the name of the sender and the recipient (and sometimes the destination [*TAD* A2.1–7]), and then tied and sealed just like the contracts. Two official letters have a second entry on the other exposed band recording scribe and date (*TAD* A6.1–2). Contracts were meant to be stored for extended periods of time, so top sheets were left blank as insurance against external damage obliterating any part of the opening lines. Since letters were meant to be opened and read immediately, there was no need for a top blank sheet. Letters were shorter than contracts, usually running between five (*TAD* A2.7, 3.11) and fifteen lines (*TAD* A2.1–4, 3.2, 3.3, 3.8, 4.2), with the average length being ten lines (*TAD* A2.5, 2.6, 3.5, 3.9, 3.10, 4.1, 4.3, 4.4). Official letters dealing with matters of great importance (*TAD* A4.7–8) or requiring detailed enumeration (*TAD* A6.2) run as much as twenty-three or twenty-nine and thirty lines.

Letters may be classified according to four categories—private, communal, official, satrapal. At least eighteen letters may be assigned to the first category (*TAD* A2.1–7, 3.1–11). They were dispatched by peripatetic correspondents, Aramaean and Jewish soldiers in government employ (*peras* ["salary"; *TAD* A2.3:8, 3.3:3; B4.2:6]) traveling between Migdol and Syene (*TAD* A2.5–7, 3.3; cf. *Ezek.* 29.10, 30.6). One parcel of six Aramaean family letters (*TAD* A2.1–6) was written for the stepbrothers Nabushezib and Makkibanit by the same scribe, probably one after the other on the same papyrus roll, sealed with the same Egyptian seal, and addressed to different women all designated as "sister" and to Psamj, designated by Makkibanit alternately as "my lord" and "my father" (*TAD* A2.3, 2.4). The letters communicate matters of concern and issue instructions about the management of affairs: they request the dispatch of certain items (e.g. castor oil, containers, and garments), and report on the purchase of other items (oil and cloth), awaiting a reliable traveler for dispatch. The letters are particularly fulsome in sending

greetings and expressing interest in the personal welfare of others. Economic activity is featured in a letter from the Jew Hosea, who instructs Haggus to raise money either by taking an interest-bearing loan or selling real estate (*TAD* A3.8). Persians and Egyptians also wrote to each other in Aramaic (*TAD* A3.10).

The ten papyri in the communal archive of leader and perhaps high priest Jedaniah bar Gemariah are historically the most significant of the Elephantine texts (*TAD* A4.1–10). The fragmentary Passover letter sent to him in 419/18 BCE by one Hananiah instructs the Jewish garrison in the proper observance of the two festivals of Passover and of Unleavened Bread (*TAD* A4.1). Three letters attest to the tension between the Jews and the priests of Khnub, triggered by the arrival of one Hananiah (*TAD* A.4.2–4) and culminating in the destruction of the Jewish temple by the priests of Khnum during the summer of 410 BCE, in connivance with the Persian governor Vidranga. Reports of the destruction, petitions for restoration, and follow-up responses fill five letters and one memorandum (*TAD* A4.5–10). The Elephantine Jews appealed to the authorities in Jerusalem and Samaria to intercede and were prepared to accept restoration of a cult limited to meal and incense and excluding animal sacrifices. It is from the last contract of the Anani archive, dated 13 December, 402 BCE (12 Thoth, 4 Actaxenxes [II]), that we learned of the continued presence of the temple of YHW (*TAD* B3.12:18–19), indicating that if it had not yet been rebuilt, its place had not been taken by another structure.

Four letters may be classified as official, two concerning a hereditary land lease (*TAD* A5.2, 5.5) and two involving the satrap Arsames. One is addressed to him by a panoply of Persian and Egyptian officials involving the disposition of a *menat* ("share") of land (*TAD* A6.1); the other, sent by him through his Jewish chancellor and scribe Anani, illustrates the bureaucratic procedure necessary to repair a boat held in hereditary lease by two Egyptian "boatholders of the Carians" (*TAD* A6.2).

Letters discovered from the Dead Sea region were all official. Seven Hebrew items and many fragments were found in Wadi Murabba'at (Mur 42–48, 49–52), three addressed to Jeshua' ben Galgoula (Mur 42–44) and one to Joseh (Mur 46). More than a dozen letters, (two Greek; four Hebrew [P.Yadin 49, 51, 61; also XHev/Se 30] and eight Aramaic [P.Yadin 50, 53, 54 (wood), 55–58, 63] were discovered by Yigael Yadin in a cave in Nahal Hever, carefully tied in a bundle and deposited in a water skin alongside a woman's personal possessions. Fleeing from 'Ein-Gedi, she took with her letters addressed to her husband(?) Jonathan ben Beaya, and his colleague, Masabala ben Simeon. Written in the name of Simeon son of

Kosiba (*Khosiba* in Greek) by different scribes (132–135 BCE), these letters followed no clear tradition regarding the size and shape of the writing material. The papyrus sheets were of varying widths, as narrow as 7 centimeters and as wide as 22, with a median width of 9.5–11.5 centimeters. Some were palimpsests (5/6Hev 63) or cut from the lower edge of a previous document (5/6Hev 57). They contained between four (5/6Hev 58) and fifteen lines (5/6Hev 50), the mean being eight to ten lines (P. Mur. 43–44; 5/6Hev 55–56, 61, 63; XHev/Se 9), usually written parallel to the fibers (exceptions are 5/6Hev 53, 57–58) and therefore folded sideways. One letter was written in two columns, of six–eight lines each (5/6Hev 49; cf. *TAD* A4.5). The height of a horizontally written piece was usually the height of the original scroll, but these pieces varied in size from 6.6 centimeters (5/6Hev 57) to 26.2 centimeters (5/6Hev 51). Some had little or no lower margin (P. Mur. 46; 5/6Hev 49, 53, 57), while others left 11–14 centimeters blank at the bottom (5/6Hev 51, 55–56). There is no evidence of an external address on the Hebrew and Aramaic letters, but two Greco-Roman bullae (originally attached to the Greek letters?) were found in the cache. Most of the letters are stern in tone and thus reminiscent of the rebukes and reprimands of the satrap Arsames and his aristocratic peers (*TAD* A6.8, 10, 13–15). [See Letters.]

Legal Documents. Elephantine has yielded forty-three contracts, most intact, and numerous fragments written between 495 and 400 BCE. They are usually written on only one side of the papyrus (*TAD* B1.1, 2.3–4, 3.3, 4.4 are exceptions), perpendicular to the fibers and parallel to the joins. The width of the papyrus sheet (height of the scroll) in the first half of the fifth century measured between 25.5 and 28.5 centimeters (*TAD* B1.1, 2.1–6, 3.1–2, 4.2–4) and between 28.5 and 34 centimeters in the second half of the century (*TAD* B2.7–11, 3.3–13, 6.1, 6.4). A small-sized document of fourteen to fifteen lines with no blank space at the top or bottom would measure between 27.5 (*TAD* B3.3) and 32.7 centimeters (*TAD* B3.2), while a long document of forty-five lines with blank space at the top and bottom would be almost a meter tall (*TAD* B3.8). Upon completion, a scribe usually rolled his document up from the bottom to just below the top, turned down a fold or two, wrote a one-line summary on the exposed band (endorsement), folded the roll in thirds, tied and sealed it. The few preserved anepigraphic bullae are Egyptian or Persian. Four pieces from the end of the century were written parallel to the fibers and perpendicular to the join (*TAD* B4.6, 7.1–3). These were folded from left to right and no endorsement has been preserved. During the course of the fifth century, there appears to have been an increase in the size of the rolls, from 25.5–28.5 centimeters with a mean width of the individual sheets

at approximately 10 centimeters (*TAD* B1.1, 2.1–6, 3.1–2, 4.2–4) to a height of 28.5–34 centimeters with the mean width of the individual sheets rising to approximately 14 centimeters (*TAD* B2.7–11, 3.3–13, 6.1, 4).

Some fifty Hebrew (Mur 22, 24, 29–30; 5/6Hev 44–46), Aramaic (Mur 18–21, 23, 25–28, 32–33; 5/6Hev 7–8, 10, 42–43), and Nabatean (5/6Hev 1–4, 6, 9, 36+P. Starcky; XHev/Se 2) contracts were discovered in the caves near the Dead Sea (c.54/55–135 CE). One or two were written on leather (XHev/Se 7; P. Nah Se 49) and the rest on papyrus. With a few exceptions, they were double documents (tied documents [*Bab. Bath* 10.1]), probably like the one drawn up by the prophet Jeremiah (*Jer.* 32.1–14; 587 BCE) and as evidenced by the earliest Elephantine Greek papyri (P. *Eleph.* 1–4 = *EPE* D2–5). The document was written perpendicular to the fibers, sometimes with blank space at the top, and turned bottoms-up when completed. A second version, usually in a smaller, more cursive script, was sometimes begun at the bottom of the verso and continued in the blank space at the top of the recto; at other times it began on the recto. The top of the document was then folded down to the end of the inner text and tie-stitched some five or seven times. The document was turned back to the verso, tilted ninety degrees, and signed by the witnesses next to the stitch holes. Returned to the recto, the outer document was then rolled up to meet the inner document, and the piece, sometimes folded in half, was tied with cord and perhaps protected by some wrapping. No seals were applied, and only once, in a marriage document, was there an outside endorsement (5/6Hev 10). Nor does there appear to have been any standard size width. The Murabba'at rolls ranged from 11 to 12 centimeters (Mur 19, 56), to 13–14 centimeters (Mur. 18, 29, 32), to 15 or 16 centimeters (Mur 21–22). The Hebrew and Aramaic rolls from Nahal Hever and Nahal Se'elim were wider, between 14–16 centimeters (5/6Hev 7–8, 46; XHev/Se 50), 18–19 centimeters (5/6Hev 10, 42; XHev/Se 21), and 23–27 centimeters (5/6Hev 47; XHev/Se 8, 9). The Nabatean documents from Nahal Hever were written on smaller scrolls, 12.8 to 18 centimeters tall (document width). Only some of the Greek texts measured approximately 31 centimeters (5/6Hev 15, 28–30), like the Elephantine papyri. The height, of course, varied with the number of lines. A marriage contract with five lines of inner text (upper) and fifteen lines of outer text (lower) measured 27 centimeters tall (Mur 21) while a Nabatean conveyance with ten upper lines and forty-nine lower measured 81 centimeters (5/6Hev 1). The longest text totaled twenty-nine lines of inner text (ten of which were on the back) and forty-three of outer text, though it measured only 43.9 centimeters tall (5/6Hev 7). For leases, the sale of a donkey or of a house to a neigh-

bor, or a quitclaim, a “simple document” sufficed; the writing was parallel to the fibers and witnesses signed below. These documents ranged between eleven and thirty-four lines and stood 10.9 to 26.8 centimeters tall (5/6Hev 8, 42, 44–46; XHev/Se 8a, 13).

The most intact of all the Elephantine papyri were those acquired by purchase on the antiquities market. These constitute two family archives. The other legal documents (loosely referred to as “contracts”) may be divided into five categories: deeds of obligation (*TAD B4.1–6*), conveyances (*TAD B5.1–5*), documents of wifehood (*TAD B6.1–4*), judicial oaths (*TAD B7.1–4*), and court records (*TAD B8.1–12* [only Saqqarah]). Representative documents from the first three categories also appear in the family archives. Except for Egyptians, the parties regularly were identified by ethnicon, occupation, and residence, witnesses and neighbors less regularly. The alienor was presented as speaking to the alienee. The documents were drawn up by a scribe skilled in legal terminology “upon/at the instruction of” the alienor and occasionally of the alienee, when (s)he was one of the speakers (*TAD B3.8*, 6.3–4). There were thirteen known scribes at Elephantine, six with Hebrew names and seven with non-Hebrew (“Aramaean”) names. Jewish scribes, with but one exception (*TAD B7.1*), drew up their documents at Elephantine (*TAD B2.9–10*, 3.6, 3.8, 3.10–12), while Aramaean scribes, with but one exception (*TAD B2.11*), drew up theirs at Syene (*TAD B2.2–4*, 3.9, 3.13).

The Mibtahiah archive contains eleven documents and spans three generations (471–410 BCE) of one of Elephantine’s leading Jewish families. The first four documents constitute a miniarchive concerning a house plot bequeathed by the hereditary property holder Mahseiah to his daughter Mibtahiah (*TAD B2.1–4*). The second set of four documents introduces Mibtahiah’s spouse(s), presents her Egyptian connection, and shows her property expanded (*TAD B2.5–8*). The last three documents in the archive cover the decade 420–410 BCE and deal with problems arising out of the estate of the deceased parents (*TAD B2.9–11*).

The Anani(ah) archive contains thirteen documents (*TAD B3.1–13*), touches upon two interrelated families, and spans two generations (456–402 BCE). A minor temple official married an Egyptian handmaiden, Tamet (*TAD B3.3*), acquired a piece of abandoned property from a Caspian couple (*TAD B3.4*), and parceled it out over the years, first to his wife (*TAD B3.5*), then to his daughter Jehoishma (*TAD B3.7*, 10–11), and finally to his son-in-law Anani (*TAD B3.13*). Tamet, who had virtually no dowry upon marriage, was eventually emancipated (*TAD B3.6*) and handsomely endowed by her adoptive brother Zaccur, son of their former master, Meshullam bar Zaccur (*TAD B3.8*).

Accounts and Lists. The most significant account, religiously and onomastically, is the eight-column Collection Account from Elephantine, probably of 400 BCE (*TAD C3.15*), which lists one hundred twenty-eight Jewish contributors of two shekels each, initially designated for Yahveh but in the end divided up between him and the deities Eshembethel and Anathbethel. The scribe of this list was probably the one who drew up in the same year what is now a fragmentary account (parts of three columns have been preserved) of the disbursement of barley to the Aramaean garrison at Syene (*TAD C3.14*). On the back of the Bisitui inscription and following immediately upon its conclusion is a multicolumn record of memoranda of the transfer of vessels from one person to another (*TAD C3.13*). Ethnically, the five lists display the cosmopolitan nature of society in the Persian period: three consist essentially of Jews, with a sprinkling of Aramaean and Egyptian names (*TAD C4.4:2*, 7, 9; 4.5:9; 4.6:3, 5, 8, 9); one of Persians only (*TAD C4.7*); and one of mixed Egyptian and Aramaean names, with a sprinkling of Jewish and Babylonian names (*TAD C4.8:1*, 3, 8, 9). Lacking or missing titles, the lists conceal their intent. They may have constituted military units, collection lists (cf. *TAD C3.15*), or ration lists (cf. *TAD C3.14*, 3.27). The list of Persians (*TAD C4.7*) may be one of officers or officials.

Literary and Historical Texts. In addition to the letters and contracts are one literary text “the Words of Ahigar” (*TAD C1.1*); one historical text—a fragmentary version of the Bisitui inscription of Darius (*TAD C2.1*); some eight accounts (*TAD C3.3–4*, 9–10, 13–16); and five lists (*TAD C4.4–8*). The distinctive characteristic of these texts is the mode of their inscription. Written in columns parallel to the fibers and perpendicular to the join, the scrolls were rolled from left to right rather than from bottom to top.

Eleven sheets containing fourteen columns of the Ahigar text are preserved (*TAD C1.1*). The first five columns relate the story of the “wise and skillful scribe . . . counselor of all Assyria and [be]arer of the seal” for King Sennacherib and his son King Esarhaddon; the last nine columns contain some one hundred twenty proverbs, mostly pithy one-liners. (For example, “[My] son, do not d[a]mn the day until you see [nig]ht” [line 80].) Extensive papyrological and textual work has restored seventy-nine lines of the approximately one-hundred ninety lines of the Bisitui text, copied around 420 BCE, perhaps to commemorate the one-hundredth anniversary of the victory of Darius I over nineteen rebels in one year.

The nine preserved paragraphs correspond to eight campaigns, with separate paragraphs for individual battles in the two Aramaean campaigns. The tenth and final paragraph is a composite piece, which corresponds to the last paragraph of the Naqshi-Rustam inscription of Darius.

Fragments. Among the numerous document fragments, thirty may be classified as letters (*TAD* D1.1–14, 1.18–31, 33–34), almost thirty as contracts (*TAD* D2.1–28), and over twenty-five as accounts and lists (*TAD* D3.1–26). In addition, more than seventy fragments do not permit classification (*TAD* D4.1–33, 5.1–41).

Ostraca and Jar Inscriptions. Some three hundred eighty Aramaic ostraca have been discovered, almost all from Elephantine and most from excavations (twenty-six by the Germans and almost three hundred by the French). Almost all the ostraca unearthed by the Germans have been published, but ninety years after their discovery only a handful of the pieces discovered by the French have been published. The ostraca may be divided into four groups: letters (*TAD* D7.1–54), the most numerous; accounts (*TAD* D8.2); lists (*TAD* D9.1–14); and abecedaries (*TAD* D10.1). Most letters were written by a single scribe in the first quarter of the fifth century BCE, who took dictation at Syene from soldiers needing to communicate with their families and friends in Elephantine. The letters were written on randomly shaped sherds that measured roughly 7 by 10 centimeters, beginning regularly on the concave side and continuing on the convex, and averaging a dozen lines. They contained reports, requests, instructions, and occasionally matters of religious import and were sent by the regular ferry service that ran, then as now, between the mainland and the island.

Only about half of the thirty-five jar inscriptions from Elephantine have been published (*TAD* D11.2–20). These include Aramaic and Phoenician names and the notations *le'mulka* ("for the king") followed by a tet-like sign, written, incised, or inked on the jar, usually at the top, at the time of its manufacture, transport, or storage: in this case, two scribes were responsible for eighty-four jar inscriptions apiece (*TAD* D1.4–7, 8–11). Finally, there are a handful of inscriptions on leather, wood, and stone: an indecipherable text (completely legible but the language is uncertain [*TAD* D6.2]), two lists of names (*TAD* D12.1, 13.3), a palette (*TAD* D13.1) and part thereof (*TAD* D13.4), a stamp(?) (*TAD* D13.5), a mummy label (*TAD* D19.7), and a limestone dedicatory inscription (*TAD* D17.1).

BEZALEL PORTEN

ELIJAH, ninth century BCE prophet in the northern kingdom of Israel. Elijah's zealous loyalty to the Lord, his role as prophet and teacher, his struggle against the Baalim (Canaanite and Phoenician gods), his going up to heaven in the fiery chariot, and his expected return are biblical motifs (1 Kgs. 17–21; 2 Kgs. 1–2; Mal. 3.1.23) that were further developed in the Jewish and Christian traditions.

Elijah's command of the heavens is referred to in *Ben Sira* 48.3: "he shut up the heavens and . . . brought down fire." In *Revelation* 11.4–7, Elijah is one of the "two olive trees," usually identified as Elijah and Moses, who has authority "to shut the sky . . . and to turn water into blood." Among the Dead Sea Scrolls, the expectation of Elijah as precursor to the Messiah is attested in a fragmentary Aramaic text called Vision B (4Q558). Line 4 reads "therefore I will send Elijah before . . ." In the messianic Apocalypse (4Q521 2.ii.1 ". . . heaven and earth will obey his messiah"), there is an allusion to an anointed prophet who speaks of the End of Days, either Elijah or a prophet like Elijah. The lines "for he will heal the wounded, give life to the dead . . ." (4Q521 2.ii.12) and "I will free them" (4Q521 2.iii.1) seem to refer to Elijah or an Elijah-like figure, in whose time the sick are healed and the dead are raised. The most surprising parallel comes from *Matthew* 11.2–5, and *Luke* 7.22; which identify John the Baptist with the messenger sent to prepare the way (Mal. 3.1). The signs alluded to in these passages could suggest that Jesus was Elijah *redivivus*, an identification envisaged also in *Mark* 6.14–15 and 8.28. In *John* 1.19–21, John the Baptist denies that he is either the Messiah, Elijah, or "the Prophet."

The Interpreter of the Law, "he who teaches justice at the End of Days" (Damascus Document CD vi.11; cf. Florilegium 4Q174 1–3.i.11) could be identified with Elijah. Later rabbinic tradition applied *Hosea* 10.12, "until he comes and teaches righteousness for you," to Elijah and

assigned to him, as precursor of the Messiah, the role of settling the unresolved controversies in Jewish law.

The translation of Elijah to the heavens together with the accounts of Moses' shining face may be the models for the transfiguration and ascent to heaven motifs in some texts (cf. Aaronic Text A = Aramaic Levi^d 4Q541).

Elijah's return was a classical motif in Jewish apocalypses that was rooted in *Malachi* 3.23, "I will send you the prophet Elijah before the great and terrible day of the Lord comes." A traditional view based mostly on the New Testament (*Mk.* 9.11) takes for granted that in the first century BCE it was generally believed that Elijah would return before the coming of the Messiah. Elijah has an eschatological role in *Ben Sira* 40.10, but the concept of Elijah as forerunner of the Messiah is not widely attested in the Pseudepigrapha (4 *Ez.* 6.26, *Sib. Or.* 2.187–189, the Coptic *Apocalypse of Elijah*, and the Hebrew *Apocalypse of Elijah*).

In later Jewish tradition Elijah, of Aaron's tribe (*Lives of Prophets* 21), was often regarded as a priest or high priest, through an association with Phineas and their shared motif of zeal (Pseudo-Philo's *Biblical Antiquities* 48; *Pirqei de-Rabbi Eli'ezer* 47.3). Elijah would anoint the Messiah (Justin, *Dialogue with Trypho* 49) and destroy the Antichrist (*Apocalypse of Elijah* 5.32; *Apocalypse of Daniel* 14). He is considered by some one of the righteous men of old (*Apocalypse of Zephaniah* 9). The tradition of his martyrdom is found in *Apocalypse of Elijah* 4.7–19.

In the Samaritan tradition, the eschatological role of messianic restorer (*tahib*) is related to Elijah; the same may be true of Taxo (*Testament of Moses* 9.1).

JULIO TREBOLLE BARRERA

ELISHA (ninth century BCE), like Elijah, a prophet in the northern kingdom of Israel. The Elijah-Elisha biblical tradition (1 Kgs. 19.16, 21.29; 2 Kgs. 2–13) combined vi-

sionary prophecy and thaumaturgy (the performance of miracles). The later Jewish traditions developed the master-disciple relationship and Elisha's thaumaturgical character, zeal, and holiness.

There are a number of texts in the Dead Sea Scrolls that mention Elisha. The Damascus Document's statement, "This is the word that . . . Elisha [spoke] to Gehazi his servant. . . ." (CD viii.20–21, A text) seems to apply the lesson of Gehazi's punishment for betraying his master from 2 Kings 5.26–27 to the punishment of those who abandon the teachings of their master. The citation could be related to a lost pseudepigraphic work.

The fragmentary text mentioning Elisha (4Q481a) is a manuscript from the late Hasmonean period preserved in three fragments. The text of fragment 2, lines 3–6, seems to correspond to 2 Kings 2.14–16. Lines 1–2 of fragment 2, as well as fragments 1 and 3, probably belong to a paraphrastic work on the Elisha story. The word *qinuh* in fragment 3, line 3, suggests a text of "lamentation" following "and he said." The words *ra'v* or *'a'v wa-'adon* ("chief [teacher] and master" or "[father and master]") seem to imply a master-disciple relationship (cf. 2 Kgs. 2.12, MT *'by*, targum *rby*).

Paraphrase of Kings et al. (4Q382 9;11) also quotes 2 Kings 2.3–4 adding parabiblical material. Fragments 1–5, 9–11, 30, and possibly 40 seem to be a paraphrase or a rewriting of the stories of Elijah and Elisha.

Further mention of Elisha occurs in *Ben Siru* 46.12, which seems to allude to the story of Elisha's bones (2 Kgs. 13.20–21), while *Ben Siru* 49.9 refers to Elisha's anointing by Elijah (1 Kgs. 19.16) and 48.12 to his double portion of Elijah's spirit (2 Kgs. 2.9–10). Elisha's fearlessness is praised in *Ben Siru* 48.12–14.

In *Lives of Prophets* (22.2) Elisha is a prophet born to destroy the idols in Israel. Josephus is more interested in the prophet's public miracles such as the deliverance from the Syrian army, characterized as an epiphany of the Israelite God (*Jewish Antiquities*, 9.4.4). In *The Jewish War* (4.8.3) Josephus rewrites 2 Kings 2.19–21, making Elisha a Greco-Roman "divine man."

In the New Testament, *Luke* 4.26–27 uses the Elijah-Elisha stories as a typology of the prophet rejected by Israel or as a prefiguration of the mission to the Gentiles. In *Acts* 9.36–42, Luke makes an implicit comparison between Elisha and Peter as a counterpart to Jesus and Elijah in his gospel (7.11–17).

In *Gospel of John*, Jesus is perhaps presented as the new Elisha who accomplishes seven of the prophet's miracles: transformation, healing of a sick boy, multiplication of food, healing of a sick man, levitation, healing of a blind man, and raising of the dead. The story of Naaman (2 Kgs. 5.1–14) has influenced *John* 5.1–11, and the account of the multiplication of food for the crowd (*Jn.* 6.1–14) is influenced by 2 Kings 4.42–44.

The rabbinic literature praises Elisha's holiness discerned by the Shunammite woman (2 Kgs. 4.9) because of the pleasant fragrance surrounding him. Elisha did not refuse her hospitality because a sage may benefit from the generosity of his followers (B.T., *Ber.* 10b). He revived two dead persons, one more than his master, the leper Naaman being considered a dead man (B.T., *Hul.* 7b). Elisha sanctified God's name when he refused to accept any recompense from Naaman (*Nim. Rab.* 7.5).

JULIO TREBOLLE BARRERA

ELKESAITES. Also known as Elchasaites, the Elkesaites were Jewish Christians in the second to the third centuries CE. [See Jewish Christians.] One of their missionary leaders, a certain Alcibiades, came from Apamea in Syria and was active in Rome (c.220). Elkesaites were also active in Palestine in the third century and seem to have originated in Transjordan at the beginning of the second century, during the reign of the emperor Trajan (98–117 CE). Their name stems from their sacred writing, the "Book of Elkesai," containing a revelation from an enormous angel and originally written in Aramaic. Elkesai (or Elchasai) was probably the name of this angel rather than of the author.

The sources for our knowledge of the Elkesaites (and their book) are Hippolytus (c.170–236 CE; *Refutation of All Heresies* 9.13–17, 10.29), Origen (c.185–254 CE) in a sermon quoted by Eusebius (c.260–340 CE; *Ecclesiastical History* 6.38) and Epiphanius (c.315–403 CE; *Panarion* 19.1–4, 30.17, 53.1). [See Epiphanius; Hippolytus; and

Origen.] Origen and Eusebius call these Jewish Christians "Helkesaites." The form used by Epiphanius is "Elxai," which he derives from an Aramaic term meaning "hidden power." "Elchasai" is the form of the name used by Hippolytus.

The information provided by these church fathers about the beliefs and practices of the Elkesaites is very limited and of uncertain value. The Aramaic original of the "Book of Elkesai" is lost, and we must rely on the fragmentary and tendentious accounts of the church fathers (who wrote in Greek) for its contents and for an account of Elkesaite beliefs and practices. The Elkesaites apparently rejected the letters of Paul (so Origen), while Alcibiades required that Christians practice circumcision and observe the Mosaic law (so Hippolytus). The Elkesaites prayed facing Jerusalem though they rejected sacrifices and priestly rites (Epiphanius). Both Origen and Hippolytus report that the Elkesaites promised forgiveness of sins to all those who heeded their "Book of Elkesai."

In at least two respects, the beliefs and practices of the Elkesaites have notable similarities to the community of Qumran, its literature, and its ideology.

First, the "Book of Elkesai" apparently contained elements of an apocalyptic prophecy concerning an imminent eschatological, angelic war: "when three years of the emperor Trajan are complete, from the time when he subjected the Parthians to his own authority, when these three years are fulfilled, the war between the godless angels of the north will break out" (Hippolytus 9.16.4, 9.15.1, 9.16.1; cf. War Scroll [IQM])

Second are the instructions to be baptized "a second time" for gross sexual sins (bestiality, homosexuality, incest, adultery, fornication [cf. CD iv.15-19], but also false prophecy [cf. 4Q339]) and to undertake repeated immersions for sickness and demon possession: "The consumptive are also to baptize themselves in cold water forty times in seven days, and likewise also those possessed by demons" (Hippolytus). The Elkesaites thus seem to have combined an initiatory rite of baptism with the practice of repeated washings, as did (in their own way) the community of Qumran (see Rule of the Community from Cave 1 at Qumran [IQS] and the Damascus Document [CD]). According to Josephus, the Essenes bathed themselves daily and did so "in cold water" (*The Jewish War* 2.129). [See Josephus Flavius.]

MARTINUS C. DE BOER

ENCRATITES were early Christian ascetics. The name *Encratites* is derived from a Greek word (*enkrateia*) meaning self-control, which was a virtue extolled by Plato and Aristotle and highly regarded by the Stoics. The ideal of self-control found its way into Judaism in the Hellenistic period (cf. *Sir.* 18.30-19.3, *4 Mc.* 5.34, the Alexandrian Jewish philosopher Philo) and into Christianity via Paul, who lists it alongside love, joy, peace, and so forth, as a fruit of the Spirit (*Gal.* 5.23; cf. *1 Cor.* 7.9, 9.25; *Ti.* 1.8; *Acts* 24.25; *2 Pt.* 1.6). In *1 Corinthians* 7.9, as a concession, Paul recommends marriage for Christians who cannot exercise sexual "self-control" as he does.

In the second and third centuries, the church fathers Irenaeus (c.130-200 CE), Clement of Alexandria (c. 150-215 CE), and Hippolytus (c.170-236 CE) applied the name Encratites to a diverse array of early Christian groups adopting ascetic practices such as celibacy, abstinence from wine, and vegetarianism. Particularly important is an organized Jewish-Christian community that, according to Irenaeus (*Adversus omnes Haereses* 1.28), was founded in the latter part of the second century in Mesopotamia by Tatian. [See Jewish Christians.] Tatian was a pupil of Justin Martyr (c.100-165 CE) and author of the *Diatessaron* (a famous harmony of the four canonical Gospels). Mesopotamia was Tatian's homeland, and he apparently returned there after Justin's death. Almost nothing, however, is known about the Encratite community supposedly founded by Tatian. Irenaeus claims that they rejected marriage, abstained from meat, and denied the salvation of Adam (*Adversus omnes Haereses* 1.28). To what extent the asceticism associated with Qumran influenced the practices of these Encratites (and other Christian groups to whom the label was somewhat loosely applied) remains unclear. Although the men who lived at Qumran were in the opinion of most scholars Essenes who were apparently celibate, they were not vegetarians, nor did they abstain from wine.

MARTINUS C. DE BOER

ENOCH, the seventh antediluvian forefather according to the genealogy in *Genesis* 5. The terse account of Enoch's life (*Gn.* 5.21-24) diverges from the other biographical summaries provided in *Genesis* in three ways: his life span is significantly shorter (a mere 365 years); his piety is noted "and Enoch walked with God" (*Gn.* 5.22); and no mention is made of his death. Instead, the text states "then he was no more, because God took him" (*Gn.* 5.24).

This passage provides the background for the much richer portraits of Enoch produced in Second Temple Jewish pseudepigraphal literature. Enoch's sudden disappearance from human society encodes an ascent experience, whereby Enoch is granted access to all manner of heavenly mysteries regarding the governance of the cosmos and the progression of terrestrial history. His exemplary righteousness qualifies him for permanent residence with the angels, a reward that eventually is heightened in later literature by his transformation into the angel Metatron. Finally, his association with the number 365 connects him with the reckoning of the solar year, and hence Enoch is credited with the invention of astronomical science, chronological sequencing, and the means by which these discoveries can be transmitted to future generations—the art of writing. Enoch thus enjoyed renown as an authoritative author and scribe. Two pseudepigraphal books of Enoch were preserved among certain Christian scribal circles, and they are conventionally designated *1 Enoch* (the only complete version is in Ethiopic) and *2 Enoch* (the two recensions are in Old Slavonic).

Interest in the figure of Enoch and his alleged literary productions is evident from the Dead Sea Scrolls, doubtless due to sectarian concern about issues pertaining to revelatory authority, calendrical computation, scribal wisdom, and eschatological events. Eleven Aramaic manuscripts, all recovered from Cave 4 at Qumran, preserve parts of four early Enoch texts: they are the oldest extant specimens of Enochic literature.

In addition to material allegedly authored by Enoch, the Dead Sea Scrolls also include examples of literature in which Enoch figures prominently. One such work is the *Book of Giants*, an elaborate Aramaic expansion of the brief story about what was understood to be the birth of the Giants in *Genesis* 6.1-4. According to the extrabiblical elaboration of this narrative, two of the Giants expe-

rience troubling dreams. To secure an authoritative interpretation, they dispatch an emissary to the habitation of Enoch, a place situated "beyond the wastelands, the great desert . . ." (4Q530 3.5). The need for such a journey clearly alludes to the tradition about Enoch's removal from the customary haunts of humankind (*Gn.* 5.24), as does the distinctive epithet used with his name in the Enoch Giants^a "the scribe (who is) set apart" (4Q203 8.4, 4Q530 2.14). Enoch presents the messenger with two tablets expounding the ominous dreams, an illustration of his supernaturally acquired prophetic prowess.

Similarly, the Genesis Apocryphon from Cave 1 (1Qap-Gen) mentions a lengthy journey undertaken by Methuselah, son of Enoch, to the dwelling place of his father in order to learn whether the infant prodigy Noah was truly of human parentage (ii.19-26). The account of this interview, portions of which parallel the story in *1 Enoch* 106-107, once occupied the bulk of fragmentary columns iii-v of the Genesis Apocryphon. Enoch eventually reassures his nervous interrogator of Noah's legitimate status (v.4). The same composition later portrays Abram instructing three visitors from the Egyptian royal court in "wisdom and truth," employing for this purpose what scholars have plausibly reconstructed as "a [book] of the words of [En]och" (xix.25; see also *Pseudo-Enoch*). Finally, *Pseudo-Jubilees*^c (4Q227) mentions Enoch's educational sojourn among the angels and his production of writings about "the heavens and the courses of their hosts . . .," an attribution reminiscent of *Jubilees* 4.17-24. The copy of *Ben Sira* found at Masada (Mas1h) shows that Enoch was mentioned only in 49.14 and not in 44.16.

JOHN C. REEVES

ENOCH, BOOKS OF. A group of revelatory writings composed in the name of the patriarch mentioned in *Genesis* 5.18-24, the term designates three related literary corpora. The first, usually known as *1 Enoch*, or the Ethiopic *Apocalypse of Enoch*, is the focus of this article. Its component parts were composed in Aramaic between approximately 400 BCE and the turn of the era and were translated into Greek and from Greek into classical Ethiopic (Ge'ez), in which version alone the full collection is

preserved. The Greek version of *1 Enoch*, or a similar corpus, was the basis for *2 Enoch*, an Egyptian text of uncertain date that is preserved in a Church Slavonic translation of its Greek original. The Hebrew *Apocalypse of Enoch*, also known as *3 Enoch*, is a collection of Jewish mystical traditions, written in Hebrew over a long period of time and edited into their present form probably in the fifth or sixth century CE.

Content. The book *1 Enoch* is divided into five major sections, to which two appendices have been added. The core of the first book, the "Book of Watchers" (chaps. 1–36), is a set of mythic narratives about the origins and ultimate obliteration of sin and evil (chaps. 6–11). Based on *Genesis* 6.1–4 and non-Israelite myths about the mating of gods and mortals and the rebellion of Prometheus or a similar figure, these traditions ascribe the presence of violence and sexual promiscuity to a primordial rebellion by the angels ("watchers"). They mate with women, who give birth to a race of giants who devastate the earth, and they reveal secrets about metallurgy and mining, magic, and astrology. These myths of ancient rebellion and its punishment in the Flood depict a prototype for the evils of the authors' own times, which they expect to be eradicated in coming judgment that will usher in a new, final age of divine blessing. The myths, which were composed possibly as part of a cycle of stories about Noah, are elaborated in a set of narratives about Enoch, who ascends to heaven to be commissioned as a prophet of doom to the watchers (chaps. 12–16) and then travels across the earth in the company of angels to view the places of eternal reward and punishment (chaps. 17–36). The final editor of the "Book of Watchers" (c.250–200 BCE) prefaced this material with an oracle of judgment that identifies Enoch as the first prophet and the source of a wide-ranging revelatory tradition (chaps. 1–5). A scrap of tradition in *1 Enoch* 81.1–82.3 indicates that the "Book of Watchers" ended with Enoch's viewing the heavenly record of human deeds and returning to earth to write down his revelations, so that his son Methuselah could preserve them as Enoch's testament and testimony for future generations.

The Enochic "Book of Parables" (chaps. 37–71) dates from the turn of the era. Explicating traditions from the "Book of Watchers," it recounts Enoch's ascent to heaven, his cosmological and eschatological visions, and his final translation to Paradise. Traditional Enochic material includes references to the angelic rebellion and revelation of forbidden secrets to mankind. Enoch's viewing of celestial phenomena (see below on chaps. 72–82), and his journeys to the places of punishment. To these are added traditions about Noah and the Flood. The book's special character lies in a set of heavenly tableaux about the coming judgment and the events associated with it. The cen-

tral figure in these scenes is an enthroned heavenly figure, who combines features drawn from biblical texts about the Davidic king, oracles about the servant of the Lord in *Isaiah* 40–55, and the vision in *Daniel* 7. The author designates the protagonist as "the anointed one," "the chosen one" and the "righteous one," and the "son of man." The champion of God's chosen and righteous ones, he will judge their persecutors, "the kings and the mighty," a designation for the Romans and Herod the Great. In its present form, the "Book of Parables" ends as Enoch's final translation is interpreted as his transformation into the Son of Man who had dominated the scenes he had witnessed.

The "Book of Parables" is followed in the present form of *1 Enoch* by the "Book of Luminaries" (chaps. 72–82), which recounts Enoch's journeys through the heavens in the company of the angel Uriel, who explains the celestial and cosmic phenomena that validate a 364-day solar calendar as the basis for religious observance. It is perhaps the oldest stratum in the Enochic corpus, dating back to the fourth century BCE. [See Calendars and Mishmarot.]

The fourth book of *1 Enoch*, the "Book of Dreams," recounts two Dream Visions. In the first the child Enoch foresees the Flood (chaps. 83–84). The second, which Enoch dreamed as a young man, is an extended allegorical account of the history of humanity from creation to the end time (chaps. 85–90, known as the "Animal Apocalypse"). It was written in 164 BCE, shortly after its last recorded historical event—Judah the Maccabee's battle at Beth Zur.

The Dream Visions are followed by a testamentary scene (chap. 91, which is related to 81.1–82.3), in which Enoch asks Methuselah to gather Enoch's children, so that they can hear his revelations about the future. This leads to the last major section of the corpus, the "Epistle" (chaps. 92–105), which Enoch wrote for the benefit of his "children" in future generations. It consists mainly of alternating strings of woe oracles against sinners and admonitions encouraging the righteous to have faith and hope and not to fear. Its Enochic character is indicated by its superscription (92.1) and by the "Apocalypse of Weeks" (93.1–10, 91.11–17), in which Enoch summarizes the history of humanity as he saw it recorded on the heavenly tablets (cf. 81.1–4). The "Epistle" is laced with references and allusions to events and phenomena that had been revealed to Enoch in heaven and in the hidden places of the earth according to the "Book of Watchers" and the "Animal Apocalypse." The "Epistle" was composed either at the beginning or toward the end of the second century BCE and reflects serious concern about the rich oppressing the poor and false teachers "leading many astray" and "perverting the eternal covenant."

To the "Epistle" is appended a narrative about Noah's

birth (chaps. 106–107) that depicts Noah as a savior figure who will renew the earth. Chapter 108 concludes the corpus with a reprise of earlier Enochic visions about the judgment and its consequences.

Manuscripts and Texts. Fragments of eleven Aramaic manuscripts from Cave 4 attest the presence at Qumran of all major parts of the corpus except the “Book of Parables” and chapter 108. These manuscripts, the fragments of which preserve only bits and pieces of the relevant sections, are the following (dates are those of their editor, J. T. Milik, 1976): Enoch^a (“Book of Watchers,” 200–150 BCE), Enoch^b (“Book of Watchers,” c.150 BCE); Enoch^c (“Book of Watchers,” “Animal Apocalypse,” “Epistle [104],” “Noah’s Birth,” 30–1 BCE); Enoch^d (“Book of Watchers,” “Animal Apocalypse,” 30–1 BCE); Enoch^e (“Book of Watchers,” “Animal Apocalypse,” 100–50 BCE); Enoch^f (“Animal Vision,” 150–125 BCE); Enoch^g (chapter 91 + “Epistle,” c.50 BCE); and on separate manuscripts, portions of the “Book of Luminaries” and related material: Astronomical Enoch^h (4Q208, c.200 BCE); Astronomical Enochⁱ (4Q209, early first century CE); Astronomical Enoch^j (4Q210, c.50 BCE); Astronomical Enoch^k (4Q211, 50–1 BCE).

The Greek translation of *I Enoch* was completed by the end of the first century CE since it is attested by citations in the *Letter of Jude* and the *Epistle of Barnabas*. Parts of the Greek text are preserved in three manuscripts: the Chester Beatty papyrus (97.6–107.3, fourth century CE); Codex Panopolitanus (1.1–32.6, fifth or sixth century CE); Oxyrhynchus papyrus fragment 2069 (77.7–78.1, 78.8, 85.10–86.2, 87.1–3, fourth century CE), and knowledge of it, or its contents, is widely attested in the Greek and Latin church fathers of the second to fourth centuries. Part of the “Book of Watchers” is also preserved in the Chronography of George Syncellus (6.1–11.2, 15.8–16.1, ninth century), who draws on chronographers of the fourth century. The Ge’ez translation of *I Enoch* was made in the fifth or sixth century and is included in the manuscripts of the Ethiopic Bible. Other textual witnesses to *I Enoch* include a fragment of the Apocalypse of Weeks (93.3–8) from a sixth- or seventh-century Coptic manuscript and an abridged Latin version of *I Enoch* 106.1–18 in an eighth-century manuscript.

Original Language. The Qumran Aramaic manuscript tradition resolves earlier debates about the language of composition, making it virtually certain that the “Book of Watchers,” the “Book of Luminaries,” the “Book of Dreams,” the “Epistle,” and the narrative about Noah’s birth were composed in Aramaic. The wordplay on the verb *varad* (“descend”) in *I Enoch* 6.5, which is impossible in Aramaic, may be a remnant of Hebrew tradition, but it scarcely indicates that any substantial part of chapters 6–11 was composed in Hebrew. The language of

composition for the “Book of Parables” is generally thought to have been either Hebrew or Aramaic.

Worldview and Religious Thought. Blending the idioms and literary forms of Israelite prophecy and sapiential tradition, the Enochic authors presented an apocalyptic worldview that mediated spatial and temporal dualities by means of a revelation that had the power to save the chosen who lived in the last times and trusted in its message. In contrast to the present evil time and the troubling world of experience, the revelation transmitted knowledge about the future judgment and the hidden places of the universe where God and the angels lived and presided over the mechanisms of reward and punishment. The book *I Enoch* makes scant reference to the Mosaic covenant and Torah and ties its authority to revelations that Enoch received when he penetrated the hidden spaces and obscure future long before the birth of Moses. Although the corpus of *Enoch* uses material from most of the books of the Hebrew scriptures, it never refers to them. Instead, it claims to be scripture itself, the written deposit of the wisdom that constitutes the eschatological community of the chosen.

Provenance and Relation to Qumran. Texts like *I Enoch* 90.6–7 and 93.9–10 suggest that the Enochic authors were leaders in one segment of a broader reform movement that appealed for a return to righteous behavior based on revealed wisdom. *Jubilees* 23.17–31 and the *Testament of Moses* provide further evidence for the history of such a movement, though they identify revealed wisdom with the Mosaic Torah. The presence of *Enoch* manuscripts at Qumran and the similarity between *I Enoch* 90.6–7 and 93.9–10, the Damascus Document (CD i), and the Rule of the Community from Cave 1 (1QS) viii.1–16 indicate that at least some members of the Qumran Community stood in historical continuity with the authors of the Enochic corpus. The large number of *Jubilees* manuscripts at Qumran and the community’s emphasis on the revealed interpretation of the Mosaic Torah, however, complicate an attempt to reconstruct this historical continuity.

It is uncertain to what degree and when the Enochic corpus may have been considered scripture by the Qumran community. The “Book of Luminaries” informed calendrical calculation in Qumran, and other Enochic texts supported the eschatological convictions and apocalyptic worldview of the Qumran community, speaking to their anti-Temple attitudes and their self-understanding as the persecuted righteous. The dating of the manuscripts suggests that at the turn of the era, the “Book of the Luminaries” continued to be used, but that the popularity of the other works was waning, perhaps because of the community’s emphasis on Mosaic Torah and its tying of its eschatology to an exegesis of the canonical prophets.

Related Texts. The influence of the Enochic tradition is attested by a range of other texts found at Qumran, but for the most part not composed there. The *Book of Giants*, (1Q23, 1Q24, 2Q26, 4Q203, 4Q530-533, 6Q8) continues the narrative tradition about the watchers and their progeny. A Noah fragment (1Q19) written in Hebrew is closely related to *1 Enoch* 9-10. *Jubilees* interpolates into its retelling of *Genesis 1-Exodus 12* substantial pieces of the narrative in *1 Enoch* 6-11 and celebrates Enoch as "the first one to write a testimony." [See *Jubilees, Book of.*] The Genesis Apocryphon (1QapGen, 1Q20) elaborates the story of Noah's birth in *1 Enoch* 106-107. The Ages of Creation (4Q180-181), which may have been composed at Qumran, is an interpretation of the "Apocalypse of Weeks." The presence of these texts at Qumran indicates an interest in the concerns of the Enochic authors, while at the same time the non-Qumranic origin of these texts attests the influence of the Enochic writings outside of Qumran.

The "Book of Parables" is a special case. Noting that the Book of Parables is not represented at Qumran, J. T. Milik (1976, pp. 89-98) has argued that it is a Christian composition written in Greek from the third century CE. Most scholars, however, see the Book of Parables as a Jewish composition of the late first century BCE or the first century CE. Thus, the book reflects the ongoing life of the Enoch tradition, which had begun prior to the formation of the Qumran community and which was transmitted in Jewish circles outside of Qumran.

Value for the Study of Judaism and Christianity. The Enochic writings bear witness to the richness and complexity of Judaism in the Greco-Roman period and complement evidence from the late books of the Hebrew scriptures, the Apocrypha, the Qumran sectarian documents, the writings of Philo and Josephus, and later rabbinic texts. *1 Enoch's* fusion of prophetic and sapiential traditions and its lack of interest in the Mosaic Torah attest a significant aspect of the religious development in Judaism of the Hellenistic period. Its combination of astronomy, cosmology, and eschatology presents a form of apocalypticism that is earlier and more variegated than that of *Daniel*. It also provides a context for the rise of the Qumran community.

The Enochic writings are crucial for an understanding of the history of early Christianity. Speculation about Jesus as the Son of Man derives from the interpretation of *Daniel 7* found in *1 Enoch's* "Book of Parables." The "Book of Watchers" and its explanation of the origins of evil and the demonic realm influenced major orthodox writers from the second to the fourth centuries and played an important role in Gnostic and Manichaean speculation.

Eventually the Enochic writings fell into disrepute in

Mediterranean Christianity, probably because they were used by the heretics and because their mix of primordial myth and apocalypticism did not suit the philosophical interests of the orthodox fathers. But before this process of rejection was complete, Egyptian or Syrian missionaries brought the Enochic writings to Ethiopia, where they fit well with the worldview of these new Christians and were accepted into their Bible. In Ethiopia they are still cited in theological discourse, and thanks to the ancient biblical manuscripts preserved in Ethiopian libraries, they have shed light on the history of the communities that created, used, and then disavowed the Enochic texts.

GEORGE W. E. NICKELSBURG

EPHRAIM AND MANASSEH. A number of sectarian texts use the terms *Ephraim* and *Manasseh*, evolving contemporizing exegesis of biblical verses. This type of exegesis exists in the *pesherim* and in a number of similar texts, for example in segments of the Damascus Document and in one of the paragraphs of Testimonia (4Q175). The terms *Ephraim* and *Manasseh* were chosen to designate the sects that were active at the end of the Second Temple period, because the sectarian authors knew many biblical verses mentioning the tension between Ephraim and Manasseh and Judah. The authors of the *pesherim* identified with the tribe of Judah and saw the sect to which they belonged as representing the Kingdom of Judah. The term *Ephraim* was used in their writings to designate the Pharisees, while the term *Manasseh* was used to designate the Sadducees.

From *Pesher Nahum* (4Q169) it is clear that Ephraim designates the Seekers after Smooth Things as the Pharisees. In this composition a *pesher* to *Nahum* 3.1 appears in which the author of the *pesher* identified Nineveh, the city against which the prophet Nahum prophesied, as the city of Ephraim, which is led by the Seekers after Smooth Things, who will go in the path of robbery and lies. In an interpretation of *Nahum* 3.4, the author of the *pesher* explained that Nineveh, meaning Ephraim, entices nations and families. Following this he specifies the nations and families enslaved by the people of Ephraim in whose

"instruction [*Tahmud*] is their falsehood." The use of the term *tahmud* regarding the people of Ephraim, the Pharisees, already in the days of the Second Temple is more intriguing, even though it is possible to explain it not as a technical term but as denoting a method of instruction. In the *pesher* to *Nahum* 3.6–7 the author called the people who followed Ephraim the "simple of Ephraim." Likewise, he noted that when the honor of Judah is revealed (in this instance Judah is a phrase denoting the name of the sect to which the author of the *pesher* belonged), the simple ones who were fooled and followed Ephraim will return to the correct path and will join Judah. In the continuation, the author of the *pesher* revealed his opinion that he and his group are the "true Israel." [See *Pesher Nahum*; Pharisees; Seekers after Smooth Things.]

As noted, the author of *Pesher Nahum* identified Nineveh as the city of Ephraim, while he identified Thebes (No amon) as Manasseh. In the *pesher* to *Nahum* 3.8 we see that Manasseh had leaders and, if the restoration is correct, the heads of the city strengthened Manasseh. From an interpretation of *Nahum* 3.9 and 10 we see that the reign was that of Manasseh and that this kingdom will be disgraced in the final age. This is an additional indication that *Pesher Nahum* was composed after the conquest of Pompey (63 BCE). Definite evidence of this exists in the first column of this text, where it is noted that the rulers of the *Kittim*, meaning the Romans, will conquer Jerusalem.

In *Pesher Psalms*^a (4Q171) there appears an interpretation of Psalm 37.15–16 in which the author of the *pesher* identified the poor and the destitute with the Teacher of Righteousness, while identifying the wicked who tried to harm the Teacher with the wicked of Ephraim and Manasseh. It cannot be determined from this paragraph that there was a difference between the wicked of Ephraim and the wicked of Manasseh; however, this distinction exists in *Pesher Nahum* and it is reasonable to assume that the author of the *pesher* to Psalm 35 utilized it as well. *Pesher Psalms* was composed after 63 BCE, because the author of the *pesher* explained that verse 16 established that the wicked of Ephraim and Manasseh were given into the hands of the nations; this most likely alludes to the conquest of Pompey. [See *Pesher Psalms*.]

In the first column of *Pesher Nahum* the author of the *pesher* explained that *Nahum* 2.12–13 addresses the events of the year 88 BCE. In this year the Seekers after Smooth Things invited Demetrius III Eukerus to conquer Judea. After Demetrius retreated from Judea, the Lion of Wrath, who clearly is Alexander Jannaeus (103–76 BCE), punished the Seekers after Smooth Things and hanged them alive upon a tree. Likewise, in *Pesher Hosea*^b (4Q167) there is an interpretation of *Hosea* 5.14 that apparently speaks of the events of 88 BCE. Alexander Jan-

naeus is called the last priest in this *pesher*, and he punishes the Pharisees who had invited Demetrius to Judea. [See Alexander Janneus; Demetrius III Eukerus.]

In the Damascus Document (CD vii.9–14) as well there is a passage in which Ephraim's departure from Judah is emphasized; that is to say, the Pharisees are portrayed as the ones who secluded themselves from Judah. The term *Judah* designates in this instance the sectarians.

At the end of page thirteen and the beginning of page fourteen of the Damascus Document an additional interpretation is brought to *Isaiah* 7.17. In this *pesher* it is noted that very hard times arrived when the people of Ephraim departed from Judah; however, these hard times would not befall those faithful people who kept the oath and were loyal to the Lord, meaning the sectarians, but would only affect the simple who deviated from the path of the righteous.

It appears that in Testimonia as well the term *Ephraim* is utilized to mean Pharisees. In a *pesher* to *Joshua* 6.26 the author described the evil of Hyrcanus's sons, whom Hyrcanus appointed as rulers of Judea. The author of the *pesher* alluded to Aristobulus and Antigonos, the sons of John Hyrcanus, as harming the Pharisees and Judah, which most likely in this instance also designates the members of the sect of Qumran.

HANAN ESHEL

Translated from Hebrew by Daphna Krupp

EPICUREANS. Adherents of a philosophical school established by Epicurus (341–270 BCE) were fiercely loyal to their founders and fittingly called *Epicureans*. Epicurus, a native of Samos who was greatly influenced by the atomistic philosophy of Democritus, moved to Athens in 307/6 and purchased a house with a garden where he lived together with his followers. Because of this setting, his school became known in antiquity as "the Garden." Epicurus was a prolific author who wrote about three

hundred works on papyrus rolls; unfortunately, only the following documents survive: a *Letter to Herodotus* (an epitome of his physics), a *Letter to Pythocles* (on astronomy and meteorology), a *Letter to Menoecus* (an elementary summary of his ethics), a collection of forty moral maxims known as the *Kyriai doxai* or *Ratae sententiae* (*Principal Doctrines*), a similar collection of eighty-one short sayings known as the *Vatican Sayings*, and fragments of his *magnum opus*, *On Nature*.

Because so few of Epicurus's own writings survive, the works of three later Epicureans have received great attention. The first of these is the Latin poet Lucretius (c.94–55 BCE), who wrote a philosophical poem *On the Nature of Things* in six books. The second is Philodemus (c.110–c.40 BCE), a native of Gadara who was active at Herculaneum in southern Italy. A number of his works were discovered there among the carbonized papyrus scrolls found in the library of the Villa of the Papyri at Herculaneum and are slowly in the process of being (re)edited and translated. They include works on the history of philosophy, scientific method, aesthetics, rhetoric, theology (*On Piety* and *On the Gods*), and ethics. The third is Diogenes of Oenoanda, who erected a massive Greek inscription that contains the basic tenets of Epicureanism.

Accepting *ataraxia* ("imperturbability") as their ideal, Epicurus and his followers argued that the tranquillity of human life was disturbed by the irrational fear of the gods, of pain, and of death. To remove these fears they applied the *tetrapharmakos*, or "fourfold remedy," necessary for happiness. Succinctly stated, this remedy consists of the knowledge that "god presents no fears" (for the gods do not intervene in human affairs either to reward or to punish); "death occasions no worries" (for the soul, which is not immortal, disintegrates upon death and thus feels no sensation); "the good can be easily attained" (by adopting an Epicurean understanding of the nature of reality); and "pain can be readily endured" (for extreme pain is experienced only briefly, whereas chronic pain can be offset through carefully chosen pleasures). Furthermore, since involvement in political affairs is not conducive to living an undisturbed life, the Epicureans tended to withdraw from public life and pursue the goal of pleasure by living simple lives in the company of friends. The Epicureans were famous for their practice of friendship, which involved the ethical responsibility of admonishing fellow members who failed to live by the tenets of the group.

Josephus (*The Jewish War* 2.164–165; *Jewish Antiquities* 13.173, 18.16) depicts the Sadducees as Jewish Epicureans, denying the power of fate, the immortality of the soul, and all postmortem rewards and punishments. [See Josephus Flavius; Sadducees.] Although such beliefs do not coincide with those articulated in the Dead Sea

Scrolls, there are some points of comparison between the Epicureans and the community at Qumran. These include a withdrawal from society at large and entry into a close-knit alternative community that lived simply, carefully studying and transmitting the teachings of the founder as well as admonishing and punishing those members who failed to abide by the community's standards. Finally, the Epicureans' cultivation of friendship recalls Josephus's statement that the Essenes had the closest bonds of affection of any Jewish sect (*The Jewish War* 2.119).

JOHN T. FITZGERALD

EPIPHANIUS (c.315–403), bishop of Salamis. Born in Palestine, Epiphanius was trained by monks from an early age to uphold Nicene Christianity. When he was twenty years old, he founded a monastery at Eleutheropoli (Beth Guvrin) in Judea. Appointed bishop of Salamis in Cyprus in approximately 367 CE, he was strongly against any teachings other than Nicene Christianity, especially the teachings of Origen.

Epiphanius's major literary work, written in less than three years (between 374 and 377), is the *Panarion* ("Medicine Chest"). It is a massive fifteen-hundred-page treat-

ment of eighty sects from ancient times to Epiphanius's own time. Since Epiphanius viewed these sects as wild beasts or serpents, he regarded his *Panarion* as the medicine chest that would provide the antidote for those who might be bitten (*Panarion* Proem 1.1.2).

The first twenty sects discussed by Epiphanius are pre-Christian. These are divided into five main groups: Barbarism, Scythianism, Hellenism, Judaism, and Samaritanism. Judaism is further divided into seven sects (Scribes, Pharisees, Sadducees, Hemerobaptists, Ossaeans, Nasaraeans, and Herodians), while Samaritanism has four offshoots: Gorothenes, Sebuaeans, Essenes, and Dositheans (*Panarion* Proem 1.3.1–5). For Epiphanius, then, the Essenes are a sect of the Samaritans, not of the Jews.

Epiphanius's treatment of the Essenes is very brief. He states that they agree with the other Samaritan sects in matters of circumcision, the Sabbath, and other points of the Law. The Sebuaeans, however, changed the dates of the feasts (Unleavened Bread, Passover, Shavu'ot, and Sukkot), but the Gorothenes did not. The Essenes who lived near the Sebuaeans went along with them, but Essenes elsewhere observed the normal feast days. Epiphanius also notes that the Essenes "kept to their primitive way of life without transgressing it in anything" (*Panarion* 10.1.1–12.1.2). As to the current state of the Essenes, Epiphanius writes that "there are no Essenes at all; it is as though they have been buried in darkness" (*Panarion* 20.3.4).

Epiphanius also mentions the Ossaeans, a sect of Judaism that originally came from the Transjordan region. He translates their name as "sturdy people" and describes them as hypocrites and skillful in their inventiveness (*Panarion* 19.1.1–3). He notes that they observe the Sabbath, circumcision, and keeping the whole Law, while forbidding the books of Moses (*Panarion* 19.5.1). Most of his description of the group is taken up with an unflattering portrait of Elxai, a man who joined the group later on, during the reign of the Roman Emperor Trajan (98–117). Epiphanius notes that there exists in his day a remnant of Ossaeans who no longer practice Judaism but have joined with a sect called the Sampsites (*Panarion* 20.3.2–4).

Evaluation of Epiphanius's description of the Essenes and the Ossaeans is difficult. Much of his information is derived from earlier sources (including Irenaeus, Hippolytus, Hegesippus, and Eusebius), and scholars agree that his descriptions of sects closer to his own time are far more reliable than the others, especially the pre-Christian sects. [See Hippolytus.] It is strange that he does not mention the Judean Essenes known by other ancient writers, and instead links the Essenes with the Samaritans. Josephus, however, states that the Essenes "have no one city, but many settle in each city" (*The Jewish War* 2.8.4).

[See Josephus Flavius.] Further, some biblical manuscripts from Qumran reflect the Samaritan recension (for example, paleo-Exodus^m [4Q22]) though without the explicitly Samaritan sectarian variants. In light of our limited knowledge of the history and scope of the Essenes, it would perhaps be wisest to defer judgment on the existence of a Samaritan branch of Essenes at some point in their history. [See Samaritans.]

As for the Ossaeans, some scholars have suggested that they were the original group of Essenes at Qumran, who then migrated to the Transjordan region after the destruction of Qumran by the Romans in 70 CE. There is, however, little corroborating evidence outside of Epiphanius for this hypothesis.

ESCHATOLOGICAL PRIEST. See Messiahs.

ESCHATOLOGICAL PROPHET. See Messiahs.

ESCHATOLOGY, or the doctrine of "last things," embraces several complexes of motifs in the context of biblical studies, many of which deal with the future of Israel and the expectation of divine intervention for judgment and salvation. One strand of tradition emphasizes the cosmic character of this intervention and describes it in mythological language; another allows more room for hu-

man agency and envisages the restoration of Israel in more realistic terms. In the Hellenistic period, and especially in the apocalyptic literature, there arises the expectation of the judgment of individuals after death, resulting in everlasting salvation or damnation. This judgment may or may not entail bodily resurrection. The apocalyptic books (e.g., *Daniel*, *1 Enoch*) frequently contain panoramic overviews of history, dividing it into a set number of periods (seventy weeks of years, four kingdoms, etc.) and culminating in a catastrophic judgment that entails the end of this world. All these motifs and ideas play a part in the Dead Sea Scrolls.

The End of Days in the Bible. It will be useful at the outset to highlight two biblical motifs that establish a context for eschatological expectations. The first is the "End of Days" (*aharit ha-yamim*). The second is the "end" (*qets*) as in the day of judgment or the day of the Lord.

The phrase *aharit ha-yamim* probably originally meant "in the course of time," or "in future days." A cognate expression with this sense is found in Akkadian. The phrase appears in the Pentateuch in *Genesis* 49.1 (the blessing of Jacob) and *Numbers* 24.14 (Balaam's oracle). Both passages contain archaic prophetic texts, which originally referred to the future in an unspecified but limited sense, but were interpreted in the postexilic period so that they were now understood to refer to a final, definitive phase of history. In the Prophets, the "End of Days" implies a definitive transformation of Israel in the distant future. Usually, the reference is to the time of salvation (e.g., *Is.* 2, *Mi.* 4), but in *Ezekiel* and *Daniel* the concept was broadened to include not only the age of salvation but also the drama that leads up to it. This broader usage is continued in the Dead Sea Scrolls.

The expectation of an end is also found in the Prophets, however, with reference to a more specific, decisive event, the day of judgment. When the prophet Amos proclaims that "the end has come upon my people Israel" (*Am.* 8.2), he speaks of the end of Israel as an independent kingdom, not of the end of the world. He also speaks of this event as "the day of the Lord," which would be darkness and not light (*Am.* 5.18–20). Other prophets expanded this concept into a day of cosmic judgment (*Is.* 2.10–22, 13.9–13; *Zep.* 1.14–16). The motif of the day of the Lord usually places the emphasis on destruction, but it also entailed the exaltation of the Lord and deliverance for the faithful. The double aspect of the day of judgment is clear in *Daniel* 12.1, which promises both a time of anguish and deliverance for "your people." Deliverance in *Daniel* entails resurrection of the dead.

There was another development in the *Book of Daniel* of momentous importance for later tradition. Here, for the first time, we find an attempt to calculate the time of the end, grounded in an elaborate schema that is spelled

out in *Daniel* 9, where Jeremiah's prophecy that Jerusalem would lie desolate for 70 years is reinterpreted as 70 weeks of years, or 490 years. This period could also be interpreted as ten jubilees. (For the notion of jubilee, see *Leviticus* 25.) The last week of years, or seven-year period, was initiated by the murder of the high priest Onias, and the midpoint of the last week was marked by the "installation that makes desolate" in the Temple, an event that is usually dated to December 167 BCE (*Dn.* 9.26–27). The conclusion to be drawn from Daniel's prophecy, then, is that the end would come three and a half years after the profanation of the Temple, some time in the summer of 163 BCE. The same chronology is implied in *Daniel* 7.25, which gives the length of the persecution as "a time and times and half a time." Daniel makes more specific attempts to calculate the precise number of days until the end in *Daniel* 8.14 and 12.11–12.

One other development in apocalyptic eschatology should be noted before turning to the Dead Sea Scrolls. The "Apocalypse of Weeks" (*1 Enoch* 91.11–17, 93.1–10) is a revelation in the name of Enoch, written about the time of the Maccabean Revolt. Here, as in *Daniel*, history is divided into weeks, presumably weeks of years. At the end of the seventh week, "the chosen righteous from the eternal plant of righteousness will be chosen," but history does not come to an end. In the eighth week a sword is given to the righteous, to execute judgment. In the ninth, "the righteous judgment will be revealed to the whole world . . . and the world will be written down for destruction." Finally, in the tenth week, there will be a great judgment, the old heaven will be taken away, and a new heaven revealed. Thereafter, "there will be many weeks without number." Even though this apocalypse envisages the end of this world, the end is not exactly a fixed point. Rather, we have an eschatological scenario in which there is a series of ends as the old order passes away and is replaced by the new.

The End of Days in the Dead Sea Scrolls. Each of the traditions we have considered so far plays an important part in the eschatology of the Dead Sea sect. The expression *aharit ha-yamim* occurs more than thirty times in the Dead Sea Scrolls (Steudel, 1993). The *Miqtsat Ma'asei ha-Torah* (MMT; 4Q394–399) declares that "this is the End of Days," and the *Rule of the Congregation* (1Q28a), one of the supplements to the *Rule of the Community* from Qumran Cave 1, is introduced as "the rule for all the congregation of Israel in the End of Days." There are two references in the *Damascus Document*. The great majority of the occurrences, however, are found in exegetical literature, in the *pesharim*, and in midrashic texts such as the *Melchizedek* scroll (11Q13) and especially the so-called eschatological midrash (the *Florilegium*, 4Q174; the *Catena*³, 4Q177), which contains

approximately one-third of the references. Surprisingly, the phrase does not occur in the *Rule of the Community*, *Hodayot*, or the *War Scroll*, a manuscript of the *War Rule*.

The End of Days in the scrolls has two aspects. It is a time of testing, and it is a time of at least incipient salvation. The time of testing is explicit in the *Florilegium*: "it is a time of refining that co[m]es . . .] . . . as is written in the *Book of Daniel*, the prophet . . ." In the context of *Daniel*, the time of refining is the period immediately before Michael rises in victory, although arguably it may continue into the time of distress that follows Michael's rise in *Daniel* 12.1. Several other passages corroborate the view of the End of Days as a time of testing. *Catena*³, which may be part of the same document, speaks of testing and refining the men of the community at the End of Days. *Pesher Habakkuk* refers to traitors and ruthless ones at the End of Days (1QpHab ii.5–6; cf. 4Q169 3–4.ii.2). But the *Florilegium* also refers to the temple that the Lord will establish with his hands at the End of Days, in contrast to the "temple of men" (which serves in the interim) and to the Branch of David who will arise with the Interpreter of the Law at the End of Days.

The positive aspects of the End of Days are clearly still in the future from the perspective of the authors of the scrolls. There is no suggestion anywhere that the Messiahs have already come. Many scholars hold, however, that the time of testing was already being experienced by the sect (Brooke, Steudel). The language of the scrolls is often ambiguous; for example, the phrase "a time of refining that co[m]es . . .]" can mean grammatically either that the time has come or that it is coming. Annette Steudel has argued that it must mean that the time has already come. *Pesher Psalms*^{a-b} (4Q171, 4Q173, respectively), speak of attempts to lay hands on the Teacher of Righteousness at the time of refining, and Steudel assumes that the Teacher was already dead when the *pesher* was written. If she is right, we must assume that the End of Days entails two phases, the time of testing and the coming of the Messiahs, and that the first phase had already begun.

Only one text in the Qumran corpus says explicitly that the End of Days has already begun. This is the *Miqtsat Ma'asei ha-Torah* (4Q394–399), but its presentation of the End of Days is exceptional in a number of respects. *Miqtsat Ma'asei ha-Torah* from Qumran Cave 4 C 13–15 cites *Deuteronomy* 30.1–3: "And it is written 'and it shall come to pass, when all these things [be]fall you,' at the End of Days, the blessings and the curses, ['then you will take] it to hea[rt] and you will return unto Him with all your heart and with all your soul,' at the end. . . ." The text goes on to say that "we know that some of the blessings and the curses have [already] been fulfilled as it is written in the book of Moses," but the reference is appar-

ently to the blessings experienced under David and Solomon and the curses experienced from the time of Jeroboam to the Babylonian Exile. The fulfillment of these curses and blessings, then, is not itself part of the End of Days and is hardly proof that the End of Days is at hand. Nonetheless, the *Miqtsat Ma'asei ha-Torah* continues: "And this is the End of Days when they will return to Isra[el]." Thus, the point is not that signs of the End of Days have recently begun to appear, but that the time of decision is now. The *Miqtsat Ma'asei ha-Torah* is exceptional among the Dead Sea Scrolls insofar as it is addressed to someone outside the sectarian community. Consequently, it makes no attempt to argue from the experience of the sect that prophecy is being fulfilled, since the recipient of the document could not be expected to accept such an argument.

The precise limits of the End of Days are never clearly defined in the scrolls. The ambiguity of the situation may be illustrated with reference to the opening column of the Damascus Document. There we are told that at the time of the Babylonian Exile, God saved a remnant from Israel. Then, "in the age of wrath, 390 years after having delivered them up into the hands of Nebuchadnezzar, king of Babylon, he visited them, and caused a plant root to spring from Israel and from Aaron." It is not clear, however, whether the whole 390 years qualify as "the age of wrath" or whether that age begins only after 390 years. The phrase "age of wrath" (*qets haron*) involves a word-play on "the last age" (*qets ha-'aharon*), a phrase from the *peshtarim*, which can scarcely be distinguished from the "End of Days" and must also be related to the "last generation" (*dor ha-'aharon*) of the Damascus Document (CD i.12). This is the period when "Belial is loosed against Israel" (CD iii.13). It is hardly possible that the End of Days was thought to have begun as early as the Babylonian Exile, but its beginning could well have coincided with the emergence of the sect. As I have noted already, the period extends to the coming of the Messiahs, which clearly remains in the future according to all the Dead Sea Scrolls. The Rule of the Congregation (1Q28a) assumes that the conditions of human existence are not greatly altered by the coming of the Messiahs (Schiffman, 1989). Provision must still be made for the education of children and for community meals and regulations. One of the tasks of the princely Messiah, however, was to wage war on the *Kittim*, the gentile enemies of Israel (Collins, 1995, pp. 49–73). This war is included in the End of Days in Peshier Isaiah (4Q161). The phrase is never applied, however, to the conditions that ensue after the eschatological war. We should perhaps allow for some variation in the way the motif is used, but in general we may agree with Steudel (1993, p. 231) that the

End of Days is "the last period of time, directly before the time of salvation." [See *Kittim*.]

There are also indications in the scrolls, however, that the Dead Sea sect envisaged a more specific end point (cf. 1QS iv.18–19). This end was not in the vague and distant future but was expected at a particular time in the sect's history. There are primarily two pieces of evidence that point to such a specific expectation, one passage in Peshier Habakkuk and another at the end of the Damascus Document.

Peshier Habakkuk comments on *Habakkuk* 2.3 as follows:

For there is yet a vision concerning the appointed time. It testifies to the end time [*qets*], and it will not deceive. The interpretation of it is that the last end time [*qets ha-'aharon*] will be prolonged, and it will be greater than anything of which the prophets spoke, for the mysteries of God are awesome. If it tarries, wait for it, for it will surely come, and it will not be late. The interpretation of it concerns the men of truth, those who observe the Law, whose hands do not grow slack in the service of the truth, when the last end time is drawn out for them, for all of God's end times will come according to their fixed order. (1QpHab vii.6–13)

(This passage from Habakkuk is also cited several times in *Daniel* [Dn. 8.17, 10.14b, 11.27, 11.35, 12.12] to make the point that the vision will only be fulfilled at its appointed time.)

The prolongation of the end time is not merely a theoretical possibility; it is the experience of the community, for which the author seeks an explanation in the prophetic text. It is reasonable to infer, then, that the end was expected shortly before the *pesher* was written. While we do not know the exact date of the *pesher*, all indicators point to the middle of the first century BCE. The manuscript is dated on paleographic grounds to the Herodian period (F. M. Cross, *The Ancient Library of Qumran and Modern Biblical Studies*, Garden City, N.Y., 1961, p. 120, n.20), but it is not an autograph, and it contains copyist errors. The *Kittim* in this document are clearly the Romans, who "sacrifice to their standards" (1QpHab vi.3–4). The prediction that the wealth and booty of the "last priests of Jerusalem will be given into the hand of the army of the *Kittim*" (ix.6–7) suggests that the conquest of Jerusalem by the Romans (63 BCE) either was imminent or had already taken place. Peshier Nahum (4Q169) refers to events in the early first century BCE, down to the time of Hyrcanus II (63–40 BCE) and Aristobulus II (67–63 BCE). If we assume that these *peshtarim* were written at about the same time, a date around the middle of the century is plausible.

The other witness to the expectation of an end at a specific time, the Damascus Document, also points to a date

toward the middle of the first century BCE. In the Damascus Document (CD xx.14) we are told that "from the day of the ingathering of the Unique Teacher until the destruction of all the men of war who turned back with the Man of Lies there shall be about forty years." This calculation is evidently related to the figures found in column i of the same document. The time from the Babylonian Exile to the emergence of the sect is 390 years. Then the first members wander in blindness for 20 years until the arrival of the Teacher of Righteousness. If we allow the conventional figure of 40 years for the Teacher's career, this brings us to 450 years. Forty years after his death would then bring us to 490 years, the time stipulated in the *Book of Daniel*. That this figure was important for the eschatology of the sect is clear from the Melchizedek scroll (11Q13): "Now the D[ay of Expi]ation i[s the end] of the tenth [ju]bilee, when expiation (will be made) for all the sons of [light and] for the m[e]n of the lot of Mel[chi]zedek." The end of the tenth jubilee is of course the culmination of 70 weeks of years, or 490 years.

It appears then that the Dead Sea sect expected the fulfillment of Daniel's prophecy about forty years after the death of the Teacher of Righteousness. Unfortunately, we do not know when this took place. A date around the end of the second century BCE seems likely, but we must allow a generous margin of error. If the Teacher died about 100 BCE, this would point to an end about 60 BCE, which would be highly compatible with the evidence of Peshar Habakkuk.

Some scholars believe they can reconstruct the date at which the end was expected with greater specificity (Steudel, 1993, pp. 233–240). Fundamental to any such attempt is the assumption that the figure of 390 years in the Damascus Document, for the period from the Babylonian Exile to the rise of the sect, is reliable chronological information. Two possible calculations have been proposed. Assuming the modern chronology of the exile and postexilic period, we arrive at the year 197/196 BCE for the emergence of the plant root from Aaron and Israel and 177/176 BCE for the advent of the Teacher of Righteousness. It has been pointed out, however, that some ancient Jewish authors calculated a later date for the exile and a shorter postexilic period. The Jewish chronographer Demetrius, who wrote in Egypt in the late third century BCE, calculated that there were 338 years between the Babylonian Exile of Judah (587/586 BCE) and Ptolemy IV (222 BCE) rather than 364 or 365 years as modern historians reckon (Antti Laato, "The Chronology in the Damascus Document of Qumran," *Revue de Qumrân* 15 [1992], 605–607). This adjustment of twenty-six years, would make possible the emergence of the Teacher of Righteousness at about 150 BCE, shortly after the usurpa-

tion of the high priesthood by Jonathan (Hasmonean), which many scholars have supposed to be the occasion for the secession of the Qumran sect. If we then allow forty years for the career of the Teacher and a further interval of forty years following his death, we conclude that the end was expected about 70 BCE.

These suggestions are intriguing and are not impossible; however, they are unreliable. While there is evidence for speculation on biblical chronology, such as we find in Demetrius, in such document as *Jubilees* and the Aramaic Apocryphon of Levi, there is no actual evidence that the Damascus Document used the chronology of Demetrius. The argument is simply that this chronology would support a popular hypothesis about the origin of the Dead Sea set—a hypothesis far from established fact. Besides, the chronological data attributed to Demetrius are confused and contradictory. The figure of forty years for the career of the Teacher of Righteousness is only a round number. The same must be said for the 390 years of the Damascus Document, which is a symbolic number for the duration of the desolation, derived from *Ezekiel* 4.5. The attempt to derive chronological information from it rests on a shaky foundation. It is no more likely to be accurate than the 490 years in *Daniel* 9.

This is not to deny that the sectarians of Qumran had a specific time in mind for the coming of the eschaton. In order to arrive at that date, however, they did not need to verify every stage of the chronology. It was sufficient that they remember how much time had passed since the death of the Teacher of Righteousness. Even the Damascus Document did not claim that divine intervention would come exactly forty years after that event, but an approximate number was enough to fuel lively expectation. There is no evidence that anyone at Qumran ever counted the days, in the manner of the *Book of Daniel*, or that their expectation ever focused on a specific day or year. Nonetheless, as the years passed, they were aware that the end time was prolonged. "About forty years" could not be extended indefinitely. The lack of a specific date, however, mitigated the disappointment, and made it easier for the community to adapt to the postponement of their expectations.

The Nature of the End. The texts are not as explicit as we might wish about what was to happen forty years after the death of the Teacher of Righteousness. The Damascus Document still expected the coming of the Messiahs, so this is one obvious possibility. Their coming is described as "the age of visitation" when the unfaithful will be put to the sword (CD xix.10). The Damascus Document speaks explicitly of the destruction of the men of war who turned back with the Men of the Lie. The Damascus Document does not indicate, however, how long

the judgment would take. The Rule of the Community from Qumran Cave 1 speaks of "an end to the existence of injustice" (1QS iv.18). The Melchizedek scroll says that after the tenth jubilee is the time for "Melchizedek's year of favor" when he will exact "the ven[geance] of E[is] judgments" (11Q13 ii.13). It is also "the day [of salvation about w]hich [God] spoke [through the mouth of Isa]iah the prophet" (11Q13 ii.15). From these passages it is clear that the community expected a day of judgment, as foretold by the prophets. Other passages, however, indicate that a lengthier process was envisaged. The day of salvation in the Melchizedek scroll is the occasion of the arrival of the herald, the "anointed of the spirit" or eschatological prophet. We might expect that he would be followed by the messiahs of Aaron and Israel (cf. 1QS ix.11) and then by the eschatological war, which takes forty years according to the War Scroll.

It is not apparent, however, that all these texts were ever synthesized into a coherent system. The Melchizedek scroll does not speak of messiahs (except the "anointed of the spirit"), and the Rule of the Community from Qumran Cave 1 does not mention the tenth jubilee. Different texts provided different models for the end time or highlighted different aspects of it. Some of these, such as the expectation of messiahs, envision the restoration of a utopian Israel on earth. Other aspects, such as the dualistic conflict between the archangel Michael and Belial, have a cosmic and supernatural character. These different emphases cannot be clearly separated in the Qumran documents. The major rule books (Rule of the Community, Damascus Document, War Rule) all allude both to messianic figures and to the conflict with Belial. Presumably, these different aspects were regarded as complementary, but there is no evidence that they were ever synthesized into a consistent doctrine.

While the various models of eschatology found in the scrolls do not yield a fully coherent system, some ideas may be characterized as typical of the sect. One such idea is the expectation of an eschatological war. This is described elaborately in the War Rule, although even the War Scroll found in Qumran Cave 1 (1QM) combines traditions that are in some tension, if not contradictory. But the final war is also alluded to in the *pesharim*, *Hodayot*, the Rule of the Community, and other texts. A messianic prince would play an important role in this war (4Q285, 4Q161). There was also place for an angelic deliverer, variously identified as Michael, Melchizedek, or the Prince of Light. These deliverers might be accented differently in different documents; the crucial affirmation was that God would put an end to wickedness.

There are surprisingly few descriptions of the state that was to follow the eschatological war. The War Scroll

mentions the rule of Michael among the angels and the kingdom of Israel on earth (1QM xvii.7-8), and this is in accordance with the *Book of Daniel*. There are frequent references to the blessed state of the elect after death, but references to resurrection are remarkably rare, and the few clear texts are of uncertain provenance.

Eschatology of the Essenes. It is interesting in this regard to compare what we find in the scrolls with the descriptions of the eschatology of the Essenes, with whom the Dead Sea sect is most frequently identified. We have, in fact, two sharply different accounts of Essene eschatology. According to Josephus, "It is a firm belief among them that although bodies are corruptible, and their matter unstable, souls are immortal and endure forever" (*The Jewish War* 2.154-158). He goes on to compare the ideas of the Essenes to those of the Greeks with respect to reward and punishment after death, comparing the abode of the righteous dead with the Islands of the Blessed. He says nothing about any transformation of this world. Hippolytus of Rome, in contrast, writing more than a century later, claims that "the doctrine of the resurrection has also derived support among them, for they acknowledge both that the flesh will rise again, and that it will be immortal, in the same manner as the soul is already imperishable." He goes on to compare Essene and Greek concepts of eschatology in terms very similar to those used by Josephus, including the comparison with the Islands of the Blessed. In addition to the postmortem rewards and punishments, however, Hippolytus allows for "both a judgement and a conflagration of the universe" (*Refutation of All Heresies* 27).

There is good evidence that Josephus and Hippolytus used a common source; Hippolytus was not dependent on Josephus for his information. Some of the statements that are peculiar to Hippolytus seem to be due to confusion; he says that the Essenes are also called Zealots and Sicarii (*Refutation of All Heresies* 26). He may preserve some information that was omitted by Josephus. The idea of a conflagration of the universe finds striking support in a passage in *Hodayot*^b (1Q35 xi.29-32; formerly iii.29-32). This is, however, the only passage in the scrolls that attests to such a belief, so it does not appear to have played any central role in the expectations of the sect.

Hippolytus's claim that the Essenes affirmed bodily resurrection receives little support from the Dead Sea Scrolls. While the belief in resurrection is prominent in the apocalypses of Enoch and Daniel, which were also found at Qumran, only two of the previously unknown texts clearly affirm such a belief. These are the Messianic Apocalypse ("He will . . . revive the dead"; 4Q521 2.ii.12) and *Pseudo-Ezekiel*^a and *Pseudo-Ezekiel*^b (4Q385, 4Q386). Neither can be identified unambiguously as a product of

the Dead Sea sect. Even if they are sectarian compositions, the evidence suggests that resurrection was only a minority belief at Qumran and was not typical of the eschatology of the sect. The sectarians hoped for fellowship with the angels and for "eternal joy in life without end," while they condemned the wicked to "destruction by the fire of the dark regions" (IQS iv). The resurrection of the body did not figure prominently in their hopes. Josephus's account, although admittedly cast in Hellenistic terms, corresponds more closely to the typical expectations of the scrolls.

It must be admitted, however, that neither Josephus's nor Hippolytus's account of the Essenes corresponds completely with what is found in the scrolls. No ancient account of the Essenes mentions the expectation of messiahs nor the prospect of an eschatological war. This discrepancy is not fatal to the view that the Dead Sea sect was Essene. The source on which Josephus and Hippolytus drew was evidently composed for a Hellenistic audience, and the author may have judged that some aspects of Essene belief were better ignored. But if the scrolls contain firsthand evidence of Essene views, then the accounts of the Greek authors (Philo, Josephus, and Hippolytus) are less than fully reliable.

ESSENE GATE. In the description of the walls of Jerusalem prior to the city's fall in 70 CE, Josephus also tells about the western and southern sections of the First Wall (*The Jewish War* 5.145); starting from the Hippicus tower (the approximate site of the present-day citadel), the First Wall passed by a place called Bethso (q.v.) to the Essene Gate.

The likeliest candidate for this gate is the one excavated in 1894-1895 by F. J. Bliss and A. C. Dickie and reexcavated with its surroundings between 1977 and 1988 by Bargil Pixner, Doron Chen and Shlomo Margalit. The gate, built with well-cut ashlar stones, is 2.66 meters (9 feet) wide and lies close to the southwestern corner of the city. Its earliest stage (out of three) is to be dated to the Herodian period, an intrusion into the Hasmonean wall.

A gate in the Western Wall unearthed between 1973 and 1978 by Magen Broshi and Shimon Gibson was identified by Yigael Yadin as the Essene Gate. Yadin's suggestion is hard to accept since this seems to have been a private entrance to Herod's palace and not a public thoroughfare.

It is highly plausible that the Essene Gate got its name from a nearby Essene neighborhood. However, no archaeological remains were unearthed in the vicinity of the gate that would show that this area was settled by sectarians (but it is doubtful that nonmonastic Essene residences differed from those of other Jews). The existence of an Essene community in or near Jerusalem was proven recently by the discovery of a large cemetery, the tombs of which are very similar to those of Qumran. In this cemetery, 4.5 kilometers (3.8 miles) to the southwest of the Essene Gate in the southwestern corner, B. Zissu excavated in 1996 over forty shaft graves totally different from the normal Second Commonwealth burials but of great similarity to those dug at Qumran. [See Cemeteries.]

MAGEN BROSHI

ESSENES were members of a Jewish sect existing from the second century BCE to the end of the first century CE. This sect is described by various Greek and Latin writers, the most important of whom are Philo, Josephus, and Pliny. These ancient testimonies provide an enlightening and sometimes contradictory account of the customs and beliefs of the Essenes. Following the discovery of the Dead Sea Scrolls in 1947, most scholars have identified the community responsible for the scrolls as Essene. If that identification is correct, then the sectarian texts of the Dead Sea Scrolls provide much additional information about the Essenes at Qumran and elsewhere.

Etymology. The name of the sect is given variously in the classical sources. In Greek the group is called *Essenoi* (by Josephus [fourteen times], Dio, Hippolytus, and Epiphanius) or *Essaioi* (by Philo, Hegesippus, and Josephus [six times]); in Latin it is called *Esseni* (by Pliny). Epiphanius also mentions a group he called the *Ossenoi*, but the relationship of this group to the Essenes is unclear, especially because Epiphanius also mentions a different group he calls the *Essenoi*. [See Epiphanius.]

The etymology of the name remains difficult, although there have been many proposals. Philo himself suggests that it may be related to the similar-sounding Greek word *hosiotēs*, "holiness," and later calls the group *hosioi*, "holy ones" (*Every Good Man Is Free* 12.75; 13.91). But it is more likely that the name had a Semitic origin. Others (for example, Cross, 1995) regard the name as derived from the Aramaic *ḥasayya'*, the equivalent of Hebrew *hasidim*, "pious ones." If this identification is correct, it might indicate that the Essenes are related to the Hasideans (*ḥasidim*; Greek *asidatoi*) mentioned in *1 Maccabees* 2.42, 7.13, and *2 Maccabees* 14.6. One problem with this pro-

posal is that the root *ḥsy* does not generally mean "pious" in the Palestinian dialect (although a passage in the Aramaic *Levi*^b [4Q213a] does contain the word with this sense). [See Hasideans.]

Many suggestions for the etymology of "Essene" have been proffered in light of the Qumran material. Although none is without difficulties, three of the more possible are as follows:

1. It has been derived from the Hebrew word *'etsah* meaning "council" or "party" in Qumran literature. The Essenes would thus be "Men of the Council" (so Dupont-Sommer). But the linguistic derivation is problematic, and it seems more likely that the sect would rather have chosen *yahad* ("community").
2. It has been linked to the common Hebrew verb *'asah*, meaning "to do, bear, bring forth," with the idea that the Essenes are the "doers" of the Law (e.g., *Pesher Habakkuk* [1QpHab vii.11]) who will "bring forth" redemption (Goranson). Though ingenious, there is no explicit evidence for this linkage.
3. Others have suggested that the term is derived from the Aramaic *asayya'*, "healers" (so Vermes, 1978), which would fit with Josephus's statement that the Essenes sought out medicinal roots and stones for healing diseases (*The Jewish War* 2.136). This might also tie in nicely with Philo's description of the *Therapeutae* (lit., healers) and his statement that the Essenes are especially devout in the *therapeutai* of God (*Every Good Man Is Free* 12.75). But in the context *therapeutai* probably means "service" rather than "healers," and as mentioned above, Philo himself gives a quite different explanation of the meaning of "Essene." Furthermore, healing does not appear to be so characteristic of the group that it would provide the basis for its name. [See *Therapeutae*.]

Sources. Unlike the Pharisees and Sadducees, the Essenes are not mentioned in the New Testament or in Talmudic literature. Information concerning the group is limited to the classical sources, possibly supplemented by the Dead Sea Scroll material if the Qumran community was, in fact, Essene. Since this identification is not accepted by all scholars, it is best to consider first the information about the Essenes from the classical sources and then to compare that with the data from Qumran.

The earliest mention of the Essenes comes from Philo, an Alexandrian Jew, in two works written prior to 40 CE: *Every Good Man Is Free* (12-13.75-91) and *Hypothetica* (11.1-18, preserved in Eusebius, *Praeparatio evangelica*). [See Philo Judaeus.] Philo does not appear to have first-hand knowledge of the group, and he presents a somewhat idealized picture of the Essenes with frequent favor-

able comparisons to Greek thought and practice. Philo also speaks in a third work (*The Contemplative Life*) of a group in Egypt called the Therapeutae, who are similar to the Essenes, but live a more contemplative life.

A second important early reference to the Essenes comes from the Roman writer Pliny. In a section of his *Natural History*, completed in 77 CE, Pliny describes the topography of Judea (5.15.73). He speaks of the Essenes to the west of the Dead Sea, then 'Ein-Gedi below the Essenes, and Masada south of 'Ein-Gedi. The location of the Essenes in the same area as Qumran is most intriguing.

In a brief testimony, Dio Chrysostom (c.40–112 CE), a Greek orator and philosopher, also locates the Essenes by the Dead Sea. In words similar to Pliny, Dio's biographer Synesius (c.370–413 CE) speaks of Dio's praise for the Essenes, "who form an entire and prosperous city near the Dead Sea, in the center of Palestine, not far from Sodom" (*Dio* 3.2).

The most detailed ancient description of the Essenes comes from the Jewish historian Josephus (ca. 37–100 CE). Josephus mentions the Essenes thirteen times in his works, including two major passages: one in *The Jewish War*, written circa 73 CE (*The Jewish War* 2.119–161) and one in *Jewish Antiquities*, completed in 94 CE (*Jewish Antiquities* 18.11, 18–22). Josephus claims to have spent time with the Essenes when he was sixteen, but from the chronology he presents of his life he probably spent no more than six months with them (*Life* 1.10–12). Still, the fact that Josephus was a Palestinian Jew who probably had some direct contact with the group makes his detailed accounts of unique importance among the classical sources. As with Philo, however, Josephus's apologetic purpose to explain Judaism in a favorable light to a Greek-speaking world undoubtedly resulted in some idealization and accommodation to Greek thought in his depiction of the Essenes. [See Josephus Flavius.]

Brief mention of the Essenes is also made by Hegesippus, a second-century Christian historian, fragments of whose work is preserved in Eusebius. Hegesippus lists the Essenes in a group of seven Jewish sects.

The Roman bishop Hippolytus (c.170–236 CE) provides a description of the Essenes in his *Refutatio Omnium Haeresium* (9.18–28). This account is similar to Josephus (*The Jewish War* 2.119–161), and may be dependent upon him or derived from a common source. One interesting difference is that Hippolytus describes the Essenes as believing in a bodily resurrection. Hippolytus is the first of many later Christian writers to view the Essenes as a heretical Jewish sect (*Refutatio* 9.17) rather than simply as one of several mainstream Jewish sects.

As noted above, Epiphanius (c.315–403 CE) mentions

both the Essenes (as a sect of the Samaritans) and the Ossaeans (a sect of Judaism that denies the Mosaic Law), but gives little information about either group. [See Epiphanius.] The later Christian writers provide no new information about the Essenes.

Customs and Beliefs of the Essenes According to the Classical Sources. The following brief summary of the major customs and beliefs of the Essenes is derived largely from the writings of Philo, Pliny, and Josephus.

Location. Philo and Josephus both agree that the total number of Essenes was over four thousand, and that they lived in many cities in Palestine (*The Jewish War* 2.124; *Hypothetica* 11.1). Elsewhere, however, Philo contradicts himself by saying that they lived in villages and avoided the cities (*Every Good Man Is Free* 12.76). Pliny puts them by the Dead Sea. Thus there appears to have been a major settlement in the Dead Sea region with other, smaller groups elsewhere in Palestine.

Admission. Josephus describes a three-year initiation period. During the first year, while the novice remained outside, he was required to follow the sect's way of life. In the second and third years, he was permitted to join in their purificatory baths, but could not partake of the common meal. Finally, after taking "awesome oaths," he was admitted as a full member into the community (*The Jewish War* 2.137–42).

Organization and authority. The sect was highly organized. Josephus states that nothing was done "except by the order of their overseers" (*The Jewish War* 2.134). One of the oaths of the initiate was trustworthiness to all, especially to those in authority (*The Jewish War* 2.140). In addition, the teachings of the sect were to be kept secret from nonmembers (*The Jewish War* 2.142). Obedience to the elders was stressed (*The Jewish War* 2.146), and in the case of disobedience or other matters of justice, at least one hundred members constituted the court. Severe offenses resulted in expulsion from the order (*The Jewish War* 2.143–145).

Communal property. All three first-century sources stress that a major tenet of the Essenes was communal property. Those entering the sect transferred their property to the order, so that no one was richer than another (*The Jewish War* 2.122; *Jewish Antiquities* 18.20; *Hypothetica* 10.4; *Every Good Man Is Free* 12.77; *Natural History* 5.15.73). Even food and clothing were held in common (*Hypothetica* 11.12). Hatred of riches is stressed by both Josephus and Philo (*The Jewish War* 2.122; *Hypothetica* 11.11). Josephus reports that, as a result of their frugality, the Essenes did not replace clothing or sandals until they were completely worn out (*The Jewish War* 2.126). Overseers of the common property were elected by the members (*The Jewish War* 2.123; *Hypothetica* 11.10).

Celibacy. Pliny states that the Essenes renounced love entirely and were without women (*Natural History* 5.15.73). Philo likewise states that "no Essene takes a wife" (*Hypothetica* 11.14–17). Josephus also notes the Essenes did not marry because wives caused factions. They did, however, adopt other peoples' children at an early age (*Jewish Antiquities* 18.21; *The Jewish War* 2.120). In contrast, Josephus later mentions another order of Essenes who *did* marry.

Daily work. Josephus states that Essenes worked entirely in agriculture (*Jewish Antiquities* 1.19), while Philo adds that they were also shepherds, beekeepers, and craftsmen in different trades (*Hypothetica* 11.8). Commerce was forbidden because it led to greed. They did not make any implements of war, nor did they own any slaves (*Every Good Man Is Free* 12.78–79). However, Josephus depicts John the Essene as leading in war at Ascalon (*The Jewish War* 3.9–12).

The daily routine consisted of prayer before sunrise, work until midday, participation in a purificatory bath and a common meal, work until evening, and a second common meal (*The Jewish War* 2.128–132).

Rituals. The Essenes were very concerned with ritual purity. Philo states that they demonstrated their love for God by their continual purity (*Every Good Man Is Free* 12.84). Josephus speaks of a daily purificatory bath taken by all Essenes except novices prior to the midday meal (*The Jewish War* 2.129). He also mentions that senior Essenes touched by juniors "must wash as if they had been in contact with a stranger" (*The Jewish War* 2.150). They were always dressed in white clothing (*The Jewish War* 2.123).

Both Philo and Josephus mention the Essene common meal, Josephus saying that they went into the dining room "even as into some holy shrine." The priest would pray before and after the meal, which was eaten in relative silence (*The Jewish War* 2.129–133).

The Essene attitude toward sacrifice is unclear. Philo states that the Essenes "have shown themselves especially devout in the service of God, not by offering sacrifices of animals, but by resolving to sanctify their minds" (*Every Good Man Is Free* 12.75). This statement may mean that the Essenes did not sacrifice at all, but it also might simply mean that sacrifice was not the focal point of their worship. The Epitome and Latin versions of Josephus state that the Essenes did *not* offer sacrifices, but the Greek text (probably to be preferred on the basis of slightly superior external evidence) omits the negative. According to the Greek text, Josephus says that while the Essenes offered sacrifices, they were excluded from the common court of the Temple because of a difference in their purification rites, and thus offered sacrifices by themselves (*Jewish Antiquities* 18.19).

Josephus describes the ritual morning prayers of the Essenes: before the rising of the sun they "direct certain ancestral prayers towards it, as if entreating it to rise" (*The Jewish War* 2.128). The reference is probably to the direction the Essenes faced as they prayed (i.e., eastward), rather than to worship of the sun.

The Essenes were devoted to the law and thus were strict observers of the Sabbath. Josephus says that they held Moses in greatest reverence (after God; *The Jewish War* 2.145), and he writes that "they were stricter than all Jews in not undertaking work on the seventh day" in that they did not cook, move a vessel, or even relieve themselves (since to do so they would need to dig a pit; *The Jewish War* 2.147; so also Philo, *Every Good Man Is Free* 12.81–82).

Other beliefs. The Essenes were deterministic in their outlook. Josephus states that they "like to leave all things to God" and believe that "fate is the ruler of all things" (*Jewish Antiquities* 18.18; 13.171–172).

The Essenes were also very interested in the study of "holy books" and "the writings of the ancients" (*The Jewish War* 2.136; 2.159; see also Philo, *Every Good Man Is Free* 12.80–82). Certainly this would include the biblical books, but might encompass other books as well, because Josephus states further that the Essenes used these writings to "search out medicinal roots and the properties of stones" to heal diseases (*The Jewish War* 2.136).

Also important to the Essenes were angels. The person joining the community had to swear to preserve "the books of their sect and the names of the angels" (*The Jewish War* 2.142).

Josephus also mentions that some Essenes professed to foresee the future. He adds that "rarely, if ever, do they err in their predictions" (*The Jewish War* 2.159). Elsewhere Josephus gives three examples of Essene prophecy. One involves an Essene named Judas in the time of Aristobulus I, who "never erred in his predictions" (*The Jewish War* 1.78–80; *Jewish Antiquities* 13.311–313); in another case Simon interpreted the dream of Archelaus correctly (*The Jewish War* 2.111–113; *Jewish Antiquities* 17.346–348); and in the third example Menahem made several accurate predictions concerning Herod. Josephus notes that it is because of the virtue of Menahem in particular and the Essenes in general that they were "thought worthy of this acquaintance with divine things" (*Jewish Antiquities* 15.371–379).

Finally, Josephus speaks at length on the Essene teaching of the immortality of the soul. The body was regarded as a prison house of the soul, but once the body died the soul was set free. Good souls went to a refreshing place "beyond the ocean," while evil souls went to a gloomy place "filled with incessant punishments" (*The Jewish*

War 2.154–158). Josephus mentions that this doctrine is similar to that of the Greeks. One wonders how much of the Greek flavoring of this Essene teaching is the author's own invention. Similarly, when treating the Pharisees, Josephus speaks of their doctrine of the immortality of the soul, but does not mention their belief in a bodily resurrection (*Jewish Antiquities* 18.14; *The Jewish War* 2.163). Hippolytus goes beyond Josephus at this point and states that the Essenes believed in a bodily resurrection (*Refutatio* 9.27). It is uncertain whether Hippolytus is simply adding a Christian slant to the Essenes' beliefs, or whether his account here is more trustworthy than that of Josephus.

Relationship of the Essenes to the Dead Sea Scroll Community. Ever since the discovery of the Dead Sea Scrolls, many scholars have identified the Dead Sea Scroll community as Essene. It is still the most widely held view among scholars today. Since a full description of the Qumran community and alternative identifications of the community are treated elsewhere, the focus in this section will be the evidence for the identification of the Qumran community as Essene.

Chronology. Chronologically, Josephus's first mention of the Essenes is in connection with Jonathan Maccabee in the mid-second century BCE (*Jewish Antiquities* 13.171). In addition, he attests to the presence of Essenes during his lifetime (*Life* 1.10–12). This fits with the archaeological and paleographic data, which confirm the existence of the Qumran community from the mid-second century BCE to 68 CE.

Location. The geographical reference by Pliny makes the identification of the Qumran community with the Essenes somewhat compelling. In describing the western side of the Dead Sea, Pliny speaks of the Essenes to the west of the Dead Sea, then 'Ein-Gedi below them (*infra hos Engada*), and then Masada further south. Although some have objected that Pliny (writing in 77 CE) could not be talking about Qumran in the present tense because it was destroyed in 68 CE, it is probable that he used earlier source material. Pliny also notes that the Essenes live among palm trees, which would fit the region between Khirbet Qumran and 'Ein-Feshkha, the spring just south of their farm area.

Communal life and practice. There are many similarities between the practices of the Essenes as described by the ancient sources and those presented in the Dead Sea Scrolls, particularly the Rule of the Community (1QS) and the Damascus Document (CD). While there are other fragmentary copies of both works from the Qumran caves, the most complete copies, 1QS and CD, will be referenced here.

Admission. Admission into the sect is described in a

lengthy section in the Rule of the Community (1QS vi.13–23), which is quite similar to that described by Josephus. While there is some difference in details, both sources agree on the following: a period of time spent outside the sect; a two-year period of initiation within the community itself; participation in the common meal denied to the novice; and a solemn oath made prior to full acceptance into the community. We know of no other group in ancient Judaism that had such an elaborate multi-year process of admission.

Organization and obedience to authority. As in Josephus's account of the Essenes, order within the community and obedience to authority were stressed in Qumran. Those who joined the community had to submit to the authority of the leaders (1QS v.2–3), obey those of higher rank (1QS v.23, vi.2, 25–26), and respect the authority of the community (1QS vii.17).

Communal property. Sharing of property is also evident in Qumranian literature. New members transferred their property to the community, and the full member mingled his property with that of the community (1QS i.11–12, v.1–2; vi.17–22). But in 1QS vii.8–9 the requirements for a person to reimburse the community for damage to communal property imply that some members had personal property. In the Damascus Document property could be lost or stolen from its owner (CD ix.10–16; see also CD xiv.12–13). The archaeology of Qumran confirms pooled possessions: hundreds of coins were found in the administration building, but not a single coin in the living quarters. Also an ostrakon found by excavators in 1996 at the base of the eastern perimeter wall may record the gift of a man's property, including a slave, to the community. If the Cross/Eshel reconstruction (disputed by A. Yardeni) is correct, it would provide further evidence from archaeology of a new member's transfer of his property to the community.

Celibacy. The Dead Sea Scrolls do not speak of a prohibition of marriage (as Philo and Josephus do), although the Rule of the Community is silent on the subject, not mentioning women at all. But the Damascus Document does speak of marriage (in a prohibition of polygamy, CD iv.19–v.2; in other contexts, CD v.6–7, vii.6–7, xii.1–2, xvi.10–12), as does the Rule of the Congregation, where a young man was prohibited from sexual relations with a woman until he was twenty (1Q28a i.9–12).

The archaeology of Qumran may shed light on this important question, as all the skeletons excavated in the main, planned part of the cemetery were male, while skeletons of women and children were found only on the outskirts. This may indicate that there was both a celibate group as well as a married group (who lived elsewhere?) among the sectarians, which would fit well with Josephus's

statement that there was both a celibate group of Essenes and another group of Essenes who married.

Daily work. Archaeology of the Qumran area indicates that the inhabitants were occupied in both agriculture and craft work. This fits well with the statements of Josephus and Philo concerning the Essenes.

Rituals. Purificatory washings, mentioned by Josephus, were apparently practiced at Qumran. Archaeologists have found seven large cisterns with steps that might have been used for this purpose. Both the Rule of the Community (e.g., 1QS v.13–14) and the Damascus Document refer to purificatory washing (CD xi.21–22), although neither refers to the daily washings mentioned by Josephus.

Josephus notes that the Essenes avoid oil because it is a defilement (*The Jewish War* 2.123), and the Damascus Document says that substances with oil are impure (CD xii.15–17). In 4QMMT (4Q394–4Q399) the reason for the impurity of oil is that liquids transmitted ritual impurity from one item to the next.

Avoidance of spitting is also mentioned by Josephus as a practice of the Essenes (*The Jewish War* 2.147). The Rule of the Community contains a similar prohibition (1QS vii.13).

The common meal spoken of by Josephus is well attested at Qumran, both by the archaeological evidence (with a pantry containing more than one thousand vessels for eating adjacent to a large room) and direct statements in the scrolls. The Rule of the Community states that “they shall eat together and they shall bless together” (1QS vi.2–3) and goes on to describe the common meal (1QS vi.4–5; cf. 1QS v.13, vi.16–17, 22, 24–25, vii.19–20 and viii.16–18).

The evidence concerning sacrifice in the Dead Sea Scrolls is not much clearer than Josephus’s testimony on the same subject. Although the evidence, notably CD vi.11–14 and xi.17–22, could be interpreted in different ways, it is probable that both Josephus and some Qumranian literature permitted Temple sacrifices, but with a great concern for ritual purity in the process.

Devotion to the law and strict observance of the Sabbath, both emphasized by Josephus, are likewise mentioned often in the scrolls (1QS viii.22; cf. 1QS i.1–3, v.8; CD xv.8–9, 12–13, xvi.2). With respect to the Sabbath, the Damascus Document contains a long list of activities prohibited on the Sabbath; this list is sometimes even more strict than rabbinic law (CD x.14–xi.18; so also CD iii.14, vi.18, xii.3–6).

Other beliefs. The deterministic outlook mentioned by Josephus as characteristic of the Essenes is also evident throughout the scrolls. For example, the Hodayot states that “before You created them You knew all their deeds forever and ever. [Without You no]thing is done, and

apart from You will nothing ever can be known” (1QH^a i.7–8; so also 1QH^a vii.31–32, xv.12–15, 17; 1QS iii.15–16, ix.23–24; the War Scroll [1QM] xvii.5).

The Essene interest in the study and use of books, as mentioned by Josephus, is overwhelmingly evident at Qumran. Biblical, deuterocanonical, and pseudepigraphical books are well attested, as are many sectarian works. Interest in healing may also be seen in the Genesis Apocryphon (1QapGen xx.19–20) as well as in the numerous copies of Jubilees and Enoch, both of which speak of healing.

Interest in angels is another point of agreement between Josephus’s testimony about the Essenes and Qumran. Not only are angels abundantly mentioned in Enoch, but they are likewise referenced in the rule books, the Hodayot, the War Scroll (see especially 1QM ix.14–17, xii.1–5), and the Songs of the Sabbath Sacrifice.

Josephus’s statement concerning Essene interest in the prophets and in prophecy is seen in the Qumran texts. There are direct statements concerning the importance of the prophets in the Rule of the Community and the Damascus Document (1QS i.2–3, ix.11; CD vii.17–18), as well as numerous copies of the biblical prophetic books and a large number of citations from these books in the rest of Qumranian literature. Furthermore, the *pesharim* (“commentaries” on biblical passages) found at Qumran contain reinterpretations of prophetic texts in which the fulfillment is found in the contemporary situation of the community (see, e.g., Peshar Habakkuk [1QP^{Hab}]).

Finally, concerning the afterlife, there is mention of everlasting life (1QS iv.6–8; CD iii.20; see also Rule of the Blessings [1Q28b] iv.24–26), and several passages may speak of bodily resurrection, although the evidence is not clear (see 1QH^a iii.10–22, iv.34 [“they that lie in the dust raise the banner and the worms of the dead raise the standard”]; xi.12; 1QM xii.1–4; and especially Messianic Apocalypse [4Q521]). The ancient sources on the Essenes and the scrolls agree on eternal life for the soul, but the sources disagree on the Essene view of the fate of the body (Hippolytus asserts resurrection of the body, but not Josephus), with the data from the sectarian scrolls inconclusive.

Possible discrepancies. Aside from the areas where either our sources concerning the Essenes or the Qumranian documents contain internal disagreements within themselves (for example, Philo’s assertion of celibacy versus Josephus’s statement that there is a marrying group of Essenes), there are surprisingly few disagreements between the Dead Sea Scrolls and the accounts of the Essenes. There are small differences in entrance procedure and oaths, but overall there is more similarity in the two descriptions. In some cases, both the Essene accounts and the scrolls are unclear (for example, the issue of sacrifice or the belief in a bodily resurrection).

While some correspondences between the Essenes and the scrolls could characterize any Jewish group, many agreements, even in minutia such as avoidance of spitting, or the priestly praying before the common meal, are impressive.

Still, there are some areas where the scrolls do not appear to line up with the Essene identification. The scrolls speak of the importance of priests and of prominent figures such as the Teacher of Righteousness and the Wicked Priest. In addition, the scrolls highlight the group's messianic expectation (with dual messianic figures) and their unusual solar calendar. Yet, with the exception of a brief mention of priests in Josephus, none of these areas is discussed in the classical descriptions of the Essenes.

With the recent publication of *Miqtsat Ma'asei ha-Torah* (4Q394–4Q399), some scholars have revived an earlier proposal that the Qumran community originated as a group of Sadducees. *Miqtsat Ma'asei ha-Torah* contains some agreements in a few legal matters with the Sadducees over against the Pharisees. One of these is the view that a stream of liquid conveys impurity from one item to the next. But this document supports Josephus's statement about the Essene avoidance of oil, and contains no inherent contradiction with any known Essene position. Furthermore, it is highly unlikely that the Qumran sect was Sadducean, since the scrolls teach the non-Sadducean doctrines of the existence of angels and the importance of fate.

In any discussion of the identification of the Qumran group or the movement of which it was a part, it is important to remember that works such as the Rule of the Community and the Damascus Document may represent different stages in the community's development, and this may well account for some of the discrepancies between the Qumran documents as well as between these documents and Josephus. Overall, Josephus's description of the Essenes more closely parallels the Rule of the Community than the Damascus Document. With respect to matters that are reflected in the scrolls but not mentioned by the ancient sources, Josephus and Philo may have thought that these matters (messianic expectation, solar calendar) were not important or relevant to their purpose—making this Jewish sect appealing to the Greek mind. While there is still much that is not known about either the Essenes or the writers of the scrolls, on balance it is still likely that the identification of the Qumran community as Essene in some form is correct.

History of the Group. The ancient sources say little about the history of the Essenes. Josephus notes that the three philosophies among the Jews were “inherited from the most ancient times” (*Jewish Antiquities* 18.11) and Pliny states that “for thousands of centuries a race has

existed which is eternal” (*Natural History* 5.15.73). Neither statement helps identify the beginning of the Essenes.

Josephus first speaks of the Essenes during the rule of Jonathan Maccabee (160–43 BCE) (*Jewish Antiquities* 13.171). He mentions three Essene prophets by name: Judas, during the reign of Aristobulus I (104–103 BCE) (*The Jewish War* 1.78–80; *Jewish Antiquities* 13.311–313); Menahem, who made two predictions concerning Herod the Great (ruled 37–4 BCE) (*Jewish Antiquities* 15.371–379); and Simon, who in 4 BCE interpreted a dream of Archelaus, ethnarch of Judea (4 BCE–6 CE), to mean that his reign would last for ten more years (*The Jewish War* 2.111–113; *Jewish Antiquities* 17.346–348). In his autobiography, Josephus mentions spending some time with the Essenes when he was about sixteen years old (ca. 53–54 CE).

Finally, Josephus speaks of the Essenes during the time of the first Jewish Revolt against the Romans (66–70 CE). In particular he mentions John the Essene, one of three generals who led an abortive attempt to take Ascalon in 67 CE (*The Jewish War* 2.566–568; *The Jewish War* 3.9–21).

Josephus records the Essene fearlessness in the war with the Romans in a remarkable passage in the *The Jewish War*. He says that this war “tested their souls in every way.” Although tortured horribly, they did not “blaspheme the lawgiver or eat something forbidden”; instead, “they gave up their souls cheerfully, confident that they would get them back again” (*The Jewish War* 2.152–153). That is the last historical reference to the Essenes in Josephus.

Thus, from our ancient sources we have verification of the Essenes from c.150 BCE to the war against the Romans in 66–70 CE.

If, as was argued above, the Qumran community is Essene, then there is further information both from the archaeology of the Qumran site and from the scrolls themselves that may assist in establishing an outline of the history of the Essenes. Unfortunately, the scroll data are cryptic, and scholars do not even agree as to which of the scrolls were written by the sect. And once again various documents may have been written at different stages of the community's existence. All of this complicates the attempt to come up with a history of the Essenes and the Dead Sea Scroll sect. Several hypotheses are discussed briefly below.

One theory of the origin of the Essenes (held by Vermes, 1978; Cross, 1995; and many others) sees the group as springing from within Palestine, possibly from the Hasideans, in the mid-second-century BCE during the Maccabean period. *1 Maccabees* states that the Hasideans first supported the Maccabean revolt, but later broke with them (*1 Mc.* 2.42; 7.13–14). Some of these Hasideans

may have become the Essenes (note the possible etymological link between the two names discussed earlier). The Damascus Document speaks of a period of twenty years of blind groping (CD i.9–10), which may be the period of support for the Maccabees. There arose a man called in the scrolls the Wicked Priest, who as a non-Zadokite usurped the high priesthood (see Peshet Habakkuk [1QpHab] viii.8–13, ix.9–12, xi.4–6, xii.7–9). The Wicked Priest has been identified as either Jonathan, when he was appointed High Priest in 152 BCE, or (less likely) Simon, when he and his house were given the high priesthood by decree in 140 BCE. It is noteworthy that Josephus's first mention of the Essenes is during the rule of Jonathan. The Wicked Priest was opposed by the Teacher of Righteousness (the leader of the group, and a priest himself according to Peshet Psalms^a, 4Q171 I, 3–4.iii.15), who led his group to the desert of Qumran.

A second theory of Essene origins (championed by Murphy-O'Connor, 1974) traces the beginning of the sect to Jews deported to Babylon in 586 BCE. The idea is that some of these Jews returned to Palestine after Judas Maccabee's victory, which created an independent Jewish state. But they became quickly disillusioned with Hellenistic tendencies they found there, so as a result a group of Essenes retreated to the desert of Qumran. Support for this theory comes from the beginning of the Damascus Document, which speaks of God causing a root of planting to spring up "390 years after He delivered them into the hands of Nebuchadrezzar king of Babylon" (CD i.5–8). In addition, the Damascus Document speaks of "the returnees of Israel who went out from the land of Judah and were exiled in the land of Damascus" (CD vi.5). Damascus may be symbolic for Babylon (another place of exile; see *Am.* 5.27, cited in CD vii.15; cf. *Acts* 7.23), although others see it as referring to Qumran or to Damascus itself.

A third theory (called the Groningen Hypothesis) has emerged recently from Florentino García Martínez and A. S. van der Woude. They argue that the Essene sect is Palestinian with ideological roots in the apocalyptic tradition of the late third century or early second century BCE. According to this view, there was a rift in the Essene movement dealing with calendar issues (and the corresponding cycle of feasts), temple worship, and purity. When other Essenes resisted the Teacher of Righteousness's attempt to push these issues, he led a break-off group to the desert retreat of Qumran in the days of John Hyrcanus (134–104 BCE). According to this theory, the Wicked Priest refers to a succession of high priests from Judas Maccabee (164–160 BCE) to Alexander Jannaeus (103–76 BCE).

Whatever the precise origin of the Essenes, it is clear from our ancient sources that they existed in numerous places other than Qumran. Josephus speaks of Judas as

living in Jerusalem (*Jewish Antiquities* 13.311). He also refers to a "Gate of the Essenes" in Jerusalem (*The Jewish War* 5.145), which has apparently now been excavated (Pixner, 1997). [See Essene Gate.]

The history of the Essene (?) settlement at Qumran is described elsewhere. [See Qumran.] The site was occupied until 68 CE when the Romans conquered it. Some believe that the Zealots joined the group during this last phase of occupation prior to Roman conquest.

What happened to the Essenes after 68 CE is not known. Although the destruction of the Qumran site itself did not extinguish the Essenes who lived elsewhere, the effect of the war and the Roman occupation probably caused the Essenes to dissolve as an independent sect. Some Essenes may have joined the resistance at Masada until its capture in 74 CE (a copy of the Songs of the Sabbath Sacrifice was found there). There is no solid evidence of their existence after this time.

TODD S. BEALL

ESTHER, BOOK OF. As is well known, only two of the books of the Hebrew scriptures as it now stands were not found among the fragments of the Judean Desert corpus, the books of *Esther* and *Nehemiah*. However, since the books of *Ezra* and *Nehemiah* are often found together on one scroll, and fragments of the *Book of Ezra* are found in one manuscript from Qumran, Cave 4, it is considered that *Nehemiah* was most likely present at Qumran as well. *Esther*, therefore, is unique as the only biblical book not found among the Dead Sea Scrolls. Several reasons have been advanced for this anomaly: First, since the book is short, it is merely an accident or chance that no fragments have been preserved (after all, the book of *Chronicles* survived in only one fragment). Second, the all-male community at Qumran did not wish to possess a book in which a female was the heroine. Since the notion of an all-male, celibate community at Qumran has been seriously challenged, this argument appears to be groundless. Third, the community at Qumran, with its stringent rules concerning purity, was opposed to *Esther*, in which the Jews mingled freely with gentiles and did not observe the dietary laws. Fourth, the *Book of Esther*, written in the Diaspora, was not known in Palestine prior to the destruction of the Second Temple, and its festival, Purim (which would have been celebrated on a Sabbath in the 364-day calendar), was not celebrated there. Fifth, some scholars date the Hebrew version of *Esther* as late as the second century CE, making it too late for inclusion in the Judean Desert corpus. The first and fourth explana-

tions appear to be most likely, depending upon one's dating of the book.

However, there is one text among the Dead Sea Scrolls that resembles the *Book of Esther* in style and setting. This text, Proto-Esther¹⁴ 4Q550, was published by J. T. Milik in 1992 and entitled by him "4QprotoAramaic-Esther," although subsequent commentators have suggested that the title "Tales from the Persian Court" would be more apt. The manuscript, which is written in Aramaic (a language closely related to Hebrew), consists of six fragments which date approximately to the second half of the first century BCE. Although very small, they seem to recount the adventures of a group of Jews in the court of the Persian kings Darius and Xerxes. In general setting, the parallel to *Esther* is clear. However, the parallels are more particular than simply the setting. Fragments a-c describe the possible rivalry between a high functionary of the Persian court and a minor servant of the royal wardrobe. Within the fragments, the Persian king, identified as the son of Darius and thus Xerxes, has the royal annals read aloud to him, as in *Esther* 6:1. However, there are also clear differences. The protagonists are not clearly Jewish, and there is little evidence of a court conflict as is seen between Mordecai and Haman in the *Esther* story.

In addition to parallels to the Hebrew *Book of Esther*, fragment d of *Tales of the Persian Court* contains parallels to the Greek Additions C and D found in the Septuagint version of *Esther*. These Septuagint Additions are particularly important for their inclusion of religious elements, such as the prayer missing in the Hebrew version of *Esther*. The fragment opens with a prayer of a Jew to God, which has certain similarities to *Esther's* prayer in the Septuagint, Addition C. Other parallels to the *Book of Esther* follow: There is evidently a power struggle between a non-Jew and a Jew, in which the Jew emerges victorious, there is a dialogue between the Persian king and a female protagonist, and at the end of the fragment the king makes a proclamation praising God, as in the Septuagint, Addition E. However, there are also important differences (for example, the protagonist's name is Bagasraw, and his presumed enemy is Bagoche) which make it impossible to posit a direct relationship between these Aramaic fragments and the Hebrew or Greek versions of the *Book of Esther*. Fragments e and f of *Tales of the Persian Court* are small and do not give much information, although fragment f contains a quotation of *Isaiah* 14:31-32, again a startling difference from the *Esther* corpus, which shows no awareness of other biblical texts. The conclusion that must be drawn concerning *Tales of the Persian Court*, therefore, is that it is not directly related to the *Esther* corpus as it has been preserved. However, it is possible that these fragments

formed part of a cycle of tales concerning Jewish protagonists in the Persian Court, and this hypothetical cycle of tales may have served as a source for the Hebrew and Greek versions and their daughter versions of *Esther*.

Another small manuscript that may bear some relation to the biblical book of Esther is the so-called Apocryphon of Esther from Masada (MasIm), so named by Yigael Yadin because of certain similarities of phrasing to the book of Esther, for example, "they hanged" (cf. *Est.*, 7.10) and "favor in his eyes" (cf. *Est.* 5.8, 7.3). This small Hebrew manuscript, which dates to the Herodian period, survives in fifteen fragments reassembled into two columns. Unfortunately, the manuscript is so fragmentary that it is difficult to make sense of it, but there does not seem to be much in content that connects it with the *Book of Esther*.

SIDNIE WHITE CRAWFORD

ETERNAL LIFE. Granted by God as a reward to the righteous, eternal life is life that overcomes death. Sometimes eternal life is a consequence of resurrection. *Daniel* 12.2 employs the expression *hayyei 'olam*, which is usually translated as "eternal life" or "everlasting life." The verse apparently alludes to the scenario in *Isaiah* 65.17-25, which says that after God re-creates the heavens and the earth, the righteous will live very long lives in the new Jerusalem. A parallel passage in *1 Enoch* (25.3-6) likens this to the fabulously long lives of the patriarchs. [See Resurrection.] However, even if *Daniel* 12.2 envisions a bodily life on earth, verse 3 states that the wise teachers "who brought many to righteousness" will receive special glory. Evidently exalted to the heavenly realm, they will "shine like the firmament" and "like the stars forever and ever." This notion of heavenly ascent and everlasting life is broadened in *1 Enoch* 102.4-104.8: the spirits or souls of all the righteous will be brought from Sheol to heaven, where they will shine like the luminaries and share the joyous company of the angels. The *Second Book of the Maccabees* 7 combines belief in a bodily resurrection with language about eternal life. The seven martyred brothers and their mother expect that God "will raise us to an eternal revivification of life" (*eis aiouon aiubiosin zoes hemas anastesei*; verse 9). Verse 36 seems to state (the text is uncertain), however, that the dead brothers are already drinking from the fountain of "ever-flowing life."

Immortality of the Soul and Eternal Life Apart from the Body. Although it has been argued that the Hebrew belief in resurrection of the body stands in contrast to Greek ideas of the immortality of the soul (Cullman, 1965), the distinction cannot be sustained for three reasons. First, an eternal life apart from the body need not imply or be stated in terms of a Greek notion of immortality of the soul. Second, a Hebrew/Greek antithesis contradicts the historical fact that Judaism in the Greco-Roman period was substantially Hellenized in many ways. Third, a number of Jewish texts do, in fact, posit a bodiless, heavenly existence, which on occasion is described as "immortality" or "incorruption."

Three texts in the Hebrew scriptures may already imply a postmortem life in the presence of God (Ps. 16.10-11, 49.15, 73.23-25; Martin-Achard, 1960, pp. 158-165). If such an idea is present, it should be interpreted not as immortality of the soul, but as a function of God's power to transcend death—conceived without specificity as to how or in what form this happens. Perhaps the earliest Jewish text that clearly refers to a life in God's presence apart from the body is *Jubilees* 23.31, which promises the righteous that "their bones will rest in the earth, but their spirits will have much joy." The idea parallels *1 Enoch* 103.4 and 104.4, which may be roughly contemporary with *Jubilees*, but *Jubilees* gives no indication that joy in God's presence will be preceded by a resurrection or, indeed, that a future resurrection will rejoin spirit and body.

Translation to a state of bliss immediately upon death is explicit in the *Wisdom of Solomon* 2-5, a heavily Hellenized work that clothes the idea of the soul's immortality in the Greek language. According to the *Wisdom of Solomon* 3.1-4, the righteous only seem to die. In fact, they are at peace, and they will live forever in God's presence (*Wis.* 5.15). An important aspect of this work's theology is the notion that death, on the one hand, and immortality and eternal life, on the other, are characteristic of the present existence of the wicked and righteous. The wicked have already made a covenant with death, while the righteous participate in the life whose consummation they will enjoy after they draw their last breath.

A similar belief in immortality, incorruptibility, and eternal life appears in *4 Maccabees* 7.3, 9.22, 14.5-6, 15.3, 16.13, 17.12, a Jewish philosophical treatise that recasts the story in *2 Maccabees* 7. Here, the moment of death is the transition from earthly life to immortality and eternal life in the presence of Abraham, Isaac, and Jacob (*4 Mc.* 9.22, 13.17, 16.25, 17.18-19). There is no hint that this author expects the bodily resurrection that is so central to *2 Maccabees* 7.

Belief in immortality of the soul also characterizes the contemporary writings of Philo (Wolfson, 1968). The *Wisdom of Solomon*, *Maccabees*, and the writings of Philo dif-

fer from typical Greek notions of immortality in that they conceive of immortality not as an inherent property of the soul, but as God's gift to the righteous.

Eternal Life in the Qumran Scrolls. That the authors of the Qumran scrolls believed in some form of substantial afterlife is a scholarly consensus. Evidence for such belief appears in the Rule of the Community (IQS iv.6–8) and Hodayot^a (IQH^a xi.19–23 [iii.18–22] and xix.10–14 [xi.7–11]). With respect to the texts in Hodayot, scholars debate whether they refer to a future resurrection of the body or whether they infer entrance into the community as the passage from death to life. The latter seems more feasible: the authors of these hymns believe that they are already participating in the blessings of eternal life, which will be consummated when they have taken their last breath. This viewpoint would parallel that of the *Wisdom of Solomon* and *4 Maccabees*, even though the scrolls do not use words that can be translated as “immortality” and “incorruptibility.”

The Rule of the Community (IQS iii.15–iv.26) is a piece of ethical instruction that describes good and evil human actions as walking on two paths in the company of a good or evil angel (Nickelsburg, 1972, pp. 156–159). Catalogs of righteous and wicked deeds, which constitute the ways of light and darkness, are followed by lists of their consequences, which are the eternal postmortem blessings of the righteous (IQS iv.6–8) and the eternal punishments of the wicked (IQS iv.11–14). It is not clear, however, when these rewards and punishments occur. According to the Rule of the Community (IQS iv.18–26), there will be a final consummation, not unlike the scenarios described in Jewish apocalyptic writings (e.g., *1 En.* 10.16–11.2). The Rule of the Community does not state explicitly whether the blessings and curses will be effected at this future time or whether the righteous and wicked will receive their recompense at the time of their death. The interpretation of Hodayot favored above fits best with the latter notion. The righteous already participate in the blessings of eternal life, and their physical death is a transition to the consummation of these blessings in the presence of God. This viewpoint is also compatible with Two Ways theology; as one walks in the way that will issue in life, one already participates in that life.

Immortality and Eternal Life in Later Texts. Although belief in the resurrection of the dead is central to New Testament Christianity, a number of New Testament texts reflect the views of eternal life found in the scrolls. Especially noteworthy is the *Gospel of John*, where belief in Jesus entails experience of eternal life already in the present time (Nickelsburg, 1992, p. 690). Somewhat related ideas occur in *Romans* 6–11, where Paul uses a Two Ways theology, albeit with caution (Nickelsburg, 1992, pp. 688–689).

A belief in eternal life or immortality apart from the

body and without a resurrection appears in four texts, which have been preserved only in Christian manuscripts, but which may well be Jewish in origin (Nickelsburg, 1981, pp. 244, 248–253, 260–261). The *Testament of Abraham* presents a detailed description of a postmortem judgment of the souls of the righteous and the wicked, which takes place immediately after death. For the author of the *Testament of Job*, the suffering patriarch finds hope in the knowledge that he has an immortal throne in heaven. In *Joseph and Aseneth*, when Joseph's Egyptian bride is converted from idolatry to the worship of the true God, she is transformed from death to immortality. The *Testament of Asher* in the *Testaments of the Twelve Patriarchs* interprets Psalms 73–74 in terms of Two Ways theology. The angel who leads one on the right or wrong path during life also escorts one to one's eternal destiny at the moment of death (Nickelsburg, 1972, pp. 161–162). According to rabbinic tradition, eternal life can be achieved only after the resurrection of the dead, which takes place after the coming of the messianic era.

ETERNAL PLANTING. The expression *eternal planting* is used in several texts composed during the period of the Second Temple to explain a biblical tradition that describes the restored people of Israel as a plant, established by God in the land and lovingly tended so that it produces righteous deeds, glory to God, and future growth (see *Is.* 60.21 and 61.3). The metaphor is expressed as *matta'* (Hebrew) or *nitsbah* (Aramaic; "plant" or "planting") with the following modifiers: "eternal" (Rule of the Community from Qumran Cave I, hereafter, 1QRule of the Community, 1QS, and Hodayot^a from Qumran Cave I, hereafter, 1QHodayot^a, 1QH^a), "righteous" (*Jub.*), or "truthful" (*1 En.*). There appears to be no significant connection between the eternal planting and the tree of life or the biblical metaphor of the world tree (*Dn.* 4.9–12, *Ezek.* 31.2–14), except for one or two cases where the metaphors are mixed. Eternal planting seems to be a relatively fixed metaphor, and therefore we must assume a common cultural matrix in which *Jubilees*, *1 Enoch*, 1QRule of the Community, and 1QHodayot^a were first composed and transmitted. No specific literary dependence or common community origin need be assumed.

There are two interpretive directions in which the metaphor is taken. Some texts use it to describe the future, restored people of God, established on a restored earth (*1 En.* 10.16; *Jub.* 1.16). The Ethiopic *Apocalypse of Enoch* 10.3 interprets this to designate the future (from Enoch's point of view) of righteous individuals living at the time of Noah, those who will survive the eschatological judgment (see also *1 En.* 84.6). Other texts use the metaphor to describe non-eschatological Israel (*1 En.* 93.2, 5, 10; *Jub.* 16.26, 21.24, 36.6). In 1QRule of the Community (1QS viii.5; xi.8) and 1QHodayot^a (1QH^a xiv.19 [vi.15]; xvi.7 [viii.6]) both interpretations are combined, and the referent of the metaphor is significantly narrowed to apply only to the community itself or its immediate predecessors, and not to all Israel. The metaphor is often thought to be a sectarian self-designation indicating election; however, although it is used of the community, it does not imply that only the members of the community are elect.

1QHodayot^a (1QH^a xiv.19 [vi.15]) elaborates on the meaning of the metaphor. A shoot that will grow into a plant with branches big enough to cover the world and reach to the skies and with roots deep enough to reach down to the abyss represents the remnant of God's people

who will be purified, pardoned, instructed, and established in a council where they will recount God's mighty deeds in company with the angels.

Jubilees 1.16, hinting at what will become in other works a regular association of the plant with the heavenly temple, refers to the "righteous plant" immediately before proclaiming "I will build my temple among them and will live with them." In *Jubilees* the metaphor itself does not imply an association with the heavenly temple, nor is the plant a present reality. In the pre-Qumranic wisdom text Sapiential Work A^a (4Q418) however, it is likely that the addressee, an "understanding one" (line 15), is part of the "eternal planting" (4Q418 81.i.13). There is, however, no indication that the addressees constitute a distinct social group. Since the addressee is called a "most holy one" (line 4) and is told to "bless the holy ones" (line 1) and to "open a fountain (?) for the holy ones" (line 12), the students of this teacher of wisdom were probably expected to have some association with angels. Accordingly, the sectarian documents (1QRule of the Community and 1QHodayot^a) regularly juxtapose "eternal planting" with indications of the heavenly status of the community. This juxtaposition probably indicates that the communities of these texts are the righteous remnant that already enjoys certain eschatological blessings. The Damascus Document (CD i.7) mixes the metaphor of planting with that of a root that represents a tiny remnant of the righteous ("root of planting").

ETHICS. The manner in which people should live was a major concern of Jews who were dispersed throughout the Greco-Roman world during the Second Temple era. This issue was viewed as important among both those Jews who had access to a Greco-Roman intellectual and literary education and those who relied on a Semitic tradition of study and interpretation. In order to describe Jewish ethics in the Second Temple period, we cannot presume the relatively modern distinction between religion and morality. Rather, we must presuppose that the stipulations of particular practices pertaining to both the conduct of human affairs and the relationship with the divine actions required justification, the rationale for which is related to issues of religious identity and perspective. Differing opinions within Second Temple Juda-

ism regarding religious practice were most commonly rooted in interpretations of the Hebrew scriptures, the central religious document for Jews in the Greco-Roman period. The authors of the documents attributed to Qumran as well as the other inhabitants of the sectarian communities are part of this ethical tradition.

An attempt to describe the ethics of the sectarian authors and their communities must rely primarily on their literary legacy, most particularly on the literature attributed to the site of Qumran; secondarily, on descriptions of their lifestyle and ideology from outside observers from the Second Temple era and immediately thereafter; and, finally, on data collected as the result of archeological excavation and research. With such a diversity of sources, generalizations regarding a common ethical stance cannot simply be presumed. Connections between various sources must be carefully evaluated when attempting to describe their ethics.

Dualistic Worldview. The most dramatic ethic in this literature is the one described in the so-called sectarian texts, where it is rooted in a viewpoint characterized by dualism and determinism. New adherents who voluntarily chose to accept the Rule of the Community from Qumran Cave 1 (hereafter, 1QRule of the Community) were to "bring all their knowledge, powers, and possessions into the community of God" (1QS i.11-12). Purity was at the heart of this communitarian ethic, which sanctioned its distinctiveness within the Jewish communities of the time on the basis of a rigorous, well-defined interpretation of the commandments of God and an exclusive festal calendar. The worldview that sustained the mandated lifestyle was dualistic: in 1QRule of the Community (1QS iii.13-iv.26) all human beings are either children of righteousness who are ruled by the Prince of Light and walk in the ways of light or children of iniquity who are ruled by the Angel of Darkness and walk in the ways of darkness. Those who enter the covenant are to love all the children of light and hate all the children of darkness. The children of light are said to possess a spirit characterized by attributes such as humility, patience, abundant compassion, constant goodness, zeal for the statutes of righteousness, and a glorious purity that detests all unclean idols and the concealment of the truth about the mysteries of knowledge. Those outside the Rule of the Community are characterized by a spirit of iniquity, greed, falsehood, pride, slackness in the execution of righteousness, and insolent zeal for abominable deeds in a spirit of fornication and for defiled paths in the service of uncleanness (1QS iv.2-14). While those who are admitted into the community are equated with the children of light, there is a recognition that all human beings are ruled by both spirits and walk on both paths. This division between and within mankind will be brought to an

end only in the final age when God will purify every deed of man with his truth.

This dualistic viewpoint undergirds a sectarian ethic emphasizing the common life of the group, including a regimen of work and study regulated by a ranked hierarchy. Money and property are turned over to the group. The Rule of the Community emphasizes the fraternal obligations and respect that should characterize the life of all its adherents. This fraternal emphasis includes almost no ethical obligations to those Israelites and gentiles outside the sect and in fact includes injunctions about hiding the knowledge to which members are privy from the remainder of the population. This ethic is supported by a determinism that sees world history bound up with the fate of the sect and the lives of the individual members whose lot is determined by God. The corresponding view of the low worth of individual human beings is reinforced in other sectarian texts, particularly in the Hodayot from Qumran Cave 1 (1QH^{a,b}). Such determinism inspires the final sequence of events of world history spelled out in compositions such as the War Scroll (1QM, 4Q471, 4Q491-497), the Melchizedek text (11Q13), the Aramaic Apocalypse (Son of God text; 4Q246), and the Messianic Apocalypse (4Q521), thereby supporting the sectarian ethic identified in the Rule of the Community and the copies of the Damascus Document. [See Secrecy.]

Purity Laws. The stipulations spelled out in the Damascus Document (CD, 4Q266-273, 5Q12, 6Q15) for the adherents of the new covenant at certain points overlap with the legislation of the Rule of the Community (1QS, 4Q255-264a, 5Q11) but are placed within the context of the group's self-understanding of its historical development. Here, ethical injunctions such as the prohibition of polygamy, divorce, incest (including the marriage of an uncle to his niece), and "unlawful intercourse," (probably referring to sexual relations during the woman's menstrual period) are described in terms of purity and righteousness. These injunctions, stipulated for the adherents of the "new covenant in the land of Damascus," constitute a critique of the remainder of Judaism. Since they are found primarily in the Damascus Document (CD iv-vi; 4Q266 3.i-ii; 4Q269 3-4.i; 4Q270 I.ii.b), they are well integrated into the ideological and historical justification for the development of this "new covenant" within Judaism. After those particular features of this ethic are described and justified, we find more attention to those ordinances that sustain the common life of this branch of Judaism. While the detailed fraternal obligations in 1QRule of the Community are not present in the Damascus Document, the obligation to reprove erring sect members is present and given an exegetical justification on the basis of *Leviticus* 19.15-18 in the Damascus Document (CD vi.20-vii.3 and developed in CD ix.2-x.3, 4Q266 8.ii.10, 4Q267 9.i,

4Q270 6.iii.17–19). The command in the Damascus Document, “A man should seek the welfare of his brother” (CD vi.21) is followed by the injunction, “A man should reprove his brother according to the commandment and not bear a grudge from day to day” (CD vi.2–3). Detailed prescriptions similar to those in the Rule of the Community can be found in other manuscripts of the Damascus Document such as Damascus Document^{a,b,c} (4Q266 18.iii–iv, 4Q267 12, 4Q270 11.i) and related material in Serekh Damascus (4Q265 1). [See Marriage and Divorce.]

The emphasis on purity that undergirds the ethical injunctions found in the Damascus Document differentiates the adherents of the new covenant from the rest of Judaism by distinguishing between the clean and unclean, and the holy and the profane (CD vi.17–18, xii.19–20; 4Q266 3.ii.23, 9.ii.6–7). These prescriptions enjoined them to be separate from all manner of uncleanness in accordance with the commandment (CD vii.3). We can see in the Damascus Document (CD v.6) the manner in which they understood these prescriptions to be anchored in the purity associated with the Temple: “Also they defile the sanctuary in that they do not separate according to the Torah.” Intercourse with a menstruating woman and the marriage of an uncle and a niece are then cited as examples. The ethical stance for those who enter into the new covenant is to model the purity of those in the Temple, the congregation of men of perfect holiness, who have the holy angels in their midst (4Q266 17.i.8–9). In addition to repeating and/or developing material found in the Damascus Document (CD i–viii) and some of the Qumran Cave 4 manuscripts, the latter portion of the Cairo Genizah text of the Damascus Document also contains additional material. Notable here is the description of the exclusive binding oaths sworn by the adherents (CD xv–xvi, 4Q266 8.i, 4Q270 6.i.21–ii.9, 4Q271 4.i.10–ii.4) and the very strict Sabbath laws advocated by this group (CD x.14–xii.6, 4Q266 9.i, 4Q267 9.ii, 4Q270 6, 4Q271 5.i). These texts emphasize the divergent calendar that marked the members of the new covenant (cf. CD iii.12–16, vi.18–19). A rigid regulation of relationships with gentiles also characterizes this legislation (CD xii.6–11, 4Q266 9.i.16–17, 4Q267 9.iii, 4Q271 5.ii.2–9).

The composition from the Cave 4 fragments with an implied ethic most similar to that of the Damascus Document is *Miqtsat Ma'asei ha-Torah* (MMT^{a-1}, 4Q394–399). In the available fragments the author notes that “we have separated from the remainder of the people” (4Q396 7; 4Q397 14–21.7). The substantive part of this composition is a legal section that lists practices by which this group distinguished itself from the remainder of Judaism. Relations with gentiles, purity laws with regard to the Temple and its sacrifices, other purity laws such as the uncleanness conveyed by the pouring of liquids, and marriage

laws form part of this legislation that would have helped the group's adherents form a unique and identifiable body within Second Temple Judaism, thereby providing a basis for the ethical stances that governed its daily life.

Absent from *Miqtsat Ma'asei ha-Torah* is any hint of the cosmological dualism undergirding the ethic of the Rule of the Community. While the texts of the Damascus Document contain hints of such dualism (for example, figures such as Belial are mentioned), they share with *Miqtsat Ma'asei ha-Torah* a critique based on a particular religious interpretation and an emphasis on cleanliness that form the basis for a social separation from the rest of Jewish society. An ethic based on this critique will have been shared by the adherents of the “new covenant in the land of Damascus” and those who lived by the legislation listed in the *Miqtsat Ma'asei ha-Torah* scrolls. This same social separation is justified by the cosmic dualism of 1QRule of the Community, which presumably provided the basis for the more extreme sectarian ethic characteristic of those persons who actually inhabited a remote site such as the one at Qumran.

A stringent interpretation of the separation between clean and unclean also characterizes the radical reworking and expansion of Pentateuchal legislation that comprises the Temple Scroll (11Q19–20). The unique festal calendar and the very particular purity laws of this composition would have provided an exegetical basis and hence ideological support for the distinctive ethical viewpoint and issues developed in the literature already discussed.

Practical Ethics. Biblical scholars have often related practical ethics to the wisdom literature of the Hebrew scriptures. Also noted has been the manner in which this practical wisdom becomes integrated with the Torah in *Ben Sira*. This correlation is also present in wisdom texts from Qumran, most notably in the sapiential work labeled 4Q185 and in the Wisdom Text with Beatitudes (4Q525 2.ii). The manuscripts of both Sapiential Work A and B (4Q415–419, 4Q423) and Mysteries (1Q27, 4Q299–300) contain repeated references to *mishpat* (“judgment”), *mishpatim* (“laws” or “judgments”) and *huqqim* (“statutes”), pointing to the manner in which practical ethical instruction is rooted in the legal tradition of scripture in these texts. “Righteousness” and “the righteous” also receive prominent attention, a feature these works share with the versions of the Damascus Document. These texts also make frequent mention of the *raz nihyeh* (“mystery that is to be/come”), thereby pointing to the important role of eschatology in providing the rationale for the ethical injunctions that comprise these texts. While these compositions do not contain the sectarian injunctions characteristic of 1QRule of the Community and 1QHodayot, the use of the term *mystery* appears in simi-

lar dualistic contexts in both types of texts. [See Sapiential Work.]

Ethics of Essenes. The descriptions of the Essenes in the Greek and Latin texts also demand our attention. The rigorous ethic attributed to this "philosophy" is described most extensively in Josephus's *The Jewish War* 2.119–161, an account that finds some remarkable parallels in Hippolytus, *Refutation of All Heresies* 9.18–28. The descriptions in Philo, *Quod omnis probus liber sit* 75–91 and *Hypothetica* 11.1–18, resemble the account of Josephus in many of the essential characteristics with regard to lifestyle. While both authors stress the Essenes' dispersal throughout Judea, Philo describes them as eschewing city life and living only in rural villages (*Quod omnis probus liber sit* 76). As noted also in 1QRule of the Community, the property of persons admitted to full membership is turned over to the group (*The Jewish War* 2.122). This stipulation provides an example that illustrates the similarities between the ethic ascribed to the Essenes by Josephus and that developed in 1QRule of the Community and various texts of the Damascus Document (CD, 4Q266–273; and Serekh Damascus, 4Q265).

The account of Josephus similarly emphasizes the obligations of the sectarian members to one another, noting that "They neither buy nor sell anything among themselves; each man gives what he has to whoever needs it, and receives in return whatever he himself requires" (*The Jewish War* 2.127). The member also "swears to conceal nothing from the members of the sect, and to reveal nothing to outsiders, even though violence unto death be used against him" (*The Jewish War* 2.141). The strong code of conduct backed by a distinct hierarchical system of teaching and discipline is also described.

Purity laws are emphasized with regard to issues such as frugal meals, the use of white garments that are worn until torn or completely worn out, the Sabbath, defecation, and the avoidance of the use of oil on their bodies. While some of the practices mentioned differ between this account and the Hebrew texts just listed, the basic characteristics of the ethic described in both literatures are remarkably similar. The ideological justification, however, for the ethical system differs. While the Hebrew texts listed have their basis in a cosmological and ethical dualism, Josephus justifies the Essene ethic on the basis of the renunciation of pleasure and the virtue of resistance to control by the passions (*The Jewish War* 2.120). The basis of this disparity may be the different contexts of the respective writers and their intended audience. Josephus's emphasis, for example, on the importance of fate for the Essenes is probably a reference to the determinism noted above (*Jewish Antiquities* 13.172).

Two particular features of Essene ethics deserve comment. Both Philo and Josephus attribute the rejection of

marriage to the Essenes (*Hypothetica* 11.14–17; *The Jewish War* 2.120–121; *Jewish Antiquities* 18.21). No such prohibition is to be found in the Hebrew texts of the Dead Sea Scrolls and, as noted above, both the Damascus Document and the Temple Scroll contain legislation regarding marital life. The concerns of purity rather than of celibacy are addressed in the latter works. Josephus does describe a group of Essenes who marry as an exception to his general description (*The Jewish War* 2.160–161). Graves containing the bones of women and children have been excavated at the Qumran site. [See Essenes; Josephus Flavius; and Women.]

Also noteworthy is the Essene prohibition of owning slaves (*Quod omnis probus liber sit* 79; *Antiquities* 18.21), justified on the basis of an appeal to freedom and equality. The Damascus Document (CD xii.11), however, does contain legislation concerning slaves and Temple Scroll⁴ (11Q19 lxii.8) speaks of forced labor for those from an opposing city who surrender. The extent to which these texts are repeating biblical statements rather than representing an ethical viewpoint held by this sect in the second or first centuries BCE is very hard to determine.

EXEGESIS. See Interpretation of Scriptures.

EXILE. The existence of the kingdoms of Israel and Judah was in each case brought to an end by the exile of the population (2 Kgs. 17.1–6, 25.1–21). Although the inhabitants of the northern kingdom were believed to have remained in exile in Assyria (2 Kgs. 17.23), the exile of Judah to Babylon is conventionally understood to have been brought to an end by the decree of Cyrus permitting the rebuilding of the Temple (Ezr. 6.3–5) and—according to the versions of the decree recorded in *Ezra* 1.2–4 and *2 Chronicles* 36.23—the return of the exiles to Jerusalem. In line with this, the books of *Ezra* and *Nehemiah* preserve a number of traditions, albeit at times confused and contradictory, concerning the return of the exiles, the rebuilding of the Temple, and events in the postexilic period. However, a very different understanding of the period of exile and its aftermath is reflected in a series of traditions in the Damascus Document concerning the origins of the group, assumed here to be the Essenes, responsible for this work.

According to the Damascus Document, the origins of the Essenes are to be traced directly back to the time of the exile. Thus in the Damascus Document (CD i.1–ii.1), reference to the events of the exile is followed immediately by the statement: “And in the time of wrath, 390 years after he [God] had given them into the hand of Nebuchadnezzar, king of Babylon, he visited them and caused a plant root [cf. *1 En.* 93.10; *Jub.* 1.16] to spring from Israel and Aaron, to possess his land, and to grow fat on the good things of his ground” (CD i.5–8). The passage goes on to refer to the raising up by God of the Teacher of Righteousness after a further period of twenty years.

It is significant in the above passage that no reference is made to the return from exile or to the events of the postexilic period. The emergence of the plant root—a symbolic term for the Essenes or for the group from which the Essenes emerged—is presented as the first event to have occurred since the start of the exile. The implication of this is that Israel remained in a state of exile long after their return at the end of the sixth century and that this state of exile was only brought to an end by God’s bringing into existence the plant root. This essentially theological understanding of the exilic and postex-

ilic period is underlined by the reference to the 390 years. The figure has been taken from *Ezekiel* 4.5 and serves in the Damascus Document to mark the length of Israel’s period of punishment. It has been argued that the references to the 390 years and the twenty years (CD i) are secondary, but if so, they came into the text at a very early stage because they appear in Damascus Document^a, from Cave 4 at Qumran, which dates from the first half of the first century BCE.

The same theological interpretation of the exilic and postexilic periods is found in two other passages in the Damascus Document concerned with Essene origins (CD iii.9–20; v.20–vi.2). The first forms the climax of a survey of Israel’s history in which a summary description of the exile (iii.9–12a) is followed immediately by the statement that it was with a faithful remnant that survived the exile that God made his covenant and to which he granted a special revelation (iii.12b–20). The second passage uses the symbolism of the well as the law (based on *Numbers* 21.18) to describe God’s bringing into existence a group devoted to the interpretation of the law as the next event after the desolation of the land at the time of the exile.

The evidence of the Damascus Document led Jerome Murphy-O’Connor and Philip Davies to argue that the origins of the Essenes go back historically to the Babylonian exile. This view is, however, quite unlikely and, apart from other considerations, takes no account of the fact that the theological presentation of the exilic and postexilic periods that is found in the Damascus Document is also found in biblical and pseudepigraphal writings from the same period, particularly *Daniel* 9.24–27, *1 Enoch* 93.8–10, and *Jubilees* 1.13–18. The theological pattern in these writings differs slightly from that of the Damascus Document, which does not refer explicitly to the postexilic period: *Daniel* 9.25 does allude to the rebuilding of Jerusalem and the return at the end of the sixth century, describing the postexilic period as a troubled time, and all three writings describe the exilic and postexilic periods as a time of apostasy (*Dn.* 9.24, *1 En.* 93.9, *Jub.* 1.14). But all three writings, like the Damascus Document, present the exilic and postexilic periods as a unity, a state of exile, which was only brought to an end long after the return in the sixth century—in *Daniel* 9 in the events of the time of Antiochus IV Epiphanes; in the Damascus Document, *1 Enoch*, and *Jubilees*, which are probably all concerned with the origins of the same group, by God’s bringing into existence a chosen group, the Essenes or their immediate predecessors.

Although the Damascus Document does not refer explicitly to the postexilic period, a concern with this period is to be found in other texts from Qumran, where it is presented both as a time of suffering and oppression (Apocryphon of Joseph^b, 4Q372 i.10–15) and as a time of

apostasy (Pseudo-Moses', 4Q390, where the first generation of returnees is, exceptionally, exempted from blame).

The texts discussed above all offer a theological interpretation of the exile of Israel. But the concept of exile is also used in a quite different way to refer to the history of the community (or communities) responsible for the Qumran Scrolls. For example, a prophecy of judgment concerning exile "beyond Damascus" in *Ainos* 5.27a is quoted in a revised form in the Damascus Document (CD vii.14-19) and interpreted to refer to the establishment at "Damascus" of a community devoted to the study of the law. In Peshet Habakkuk (1QpHab) xi.4-8 the Wicked Priest is said to have pursued the Teacher of Righteousness to "his place of exile"; however, although it is often assumed that this place was Qumran, this can only be a theory. The author of *Hodayot*^a (1QH, vii.8-9), who is often thought to have been the Teacher of Righteousness, describes himself as being driven from his land "like a bird from its nest," and the same imagery is also used, apparently in reference to the men of the community, in *Catena*^a (4Q177 i.8-9). In the latter case the passage is fragmentary, but the verb meaning "to go into exile" appears.

MICHAEL A. KNIBB

EXODUS, BOOK OF. Before the discovery of manuscripts at Qumran there were three major sources for the text of *Exodus*. The first, the Masoretic Text, is the Hebrew text passed down in Jewish circles in an unbroken manuscript tradition from antiquity to the present, and

is, overall, quite a good text that often (but by no means always) preserves the original reading. The second, the Septuagint, is an idiomatic, but accurate, translation into Greek made in the third century BCE. It has numerous small differences from the Masoretic Text, many of which seem to have been present in its Hebrew *Vorlage*. Finally, the Samaritan Pentateuch tends to expand the text by frequently inserting parallel material from other places in the Pentateuch.

Frank Moore Cross, following William Foxwell Albright, has argued that these three sources developed through long transmission in three different locations—Babylon, Egypt, and Palestine, respectively—and should be considered three distinct text-types. This theory has been widely challenged, especially by Emanuel Tov, and few, if any, scholars now accept the suggested geographical origins. I have argued that Cross is correct in essence, but that we should speak of two text-types—the Masoretic Text and the Septuagint—and one deliberate revision or recension, the Samaritan Pentateuch, based on the proto-Masoretic Text.

The textual basis of *Exodus* outlined above has been widened considerably by the recovery of at least sixteen fragmentary manuscripts of the book from Qumran: *Exodus* (1Q2), *Exodus*^{a-c} (2Q2-4, hereafter called 2Q*Exodus*^{a-c}), *Genesis-Exodus*^a (4Q1), *paleo-Genesis-Exodus*^l (4Q11), *Exodus*^{b-e} (4Q13-16, hereafter called 4Q*Exodus*^{b-e}), *Exodus-Leviticus*^l (4Q17), *Exodus*^{g-h+k} (4Q18-21), and *paleo-Exodus*^m (4Q22). Another scroll containing *Exodus* (as well as *Genesis*, *Numbers*, and perhaps the entire Pentateuch) was found in the Wadi Murabba'at (Mur 1.4-5). Some of these manuscripts (*Exodus*, 2Q*Exodus*^a, *Exodus*^a, *Exodus*^b, and *Exodus*^l) are too fragmentary to give us much useful information on their contents and textual alignments.

The text of *Genesis-Exodus*^a (which preserves parts of *Exodus* 1-8 or 9) is closely related to the Masoretic Text for the most part. *Paleo-Genesis-Exodus*^l (containing material from *Exodus* 1-3, 8-12, 14, 16-20, 22-23, 25-28, 36, and 40[?]) appears, mostly on the basis of reconstruction, to lack the typographical expansions characteristic of the Samaritan Pentateuch and *paleo-Exodus*^m (see below), but is not obviously tied closely to any of the previously known textual traditions in its shorter variants. Reconstruction indicates that 4Q*Exodus*^a (with text from chapters 7-15 and 17-18) probably lacked the typological features of the Samaritan tradition and *paleo-Exodus*^m, but otherwise it does not show a clear filiation with any previously known textual tradition. It also has frequent cases of parablepsis—the inadvertent skipping of a word or phrase during copying of a manuscript. The text of the small fragments of the Murabba'at manuscript are identical to the Masoretic Text.

Paleo-Exodus^m (an exceptionally well-preserved manuscript containing fragments of chapters 6–37) is very closely related to the Samaritan Pentateuch. It shares many of the typological expansions of that tradition, but apparently lacks the sectarian Samaritan alterations of the text. The Samaritan Pentateuch expands the Ten Commandments in *Exodus* 19 in three places, and reconstruction indicates that two of these additions were probably also present in paleo-Exodus^m. However, the sectarian addition after 19.17 was missing. This expansion added *Deuteronomy* 11.29–30 and an altered version of *Deuteronomy* 27.2–7, making worship at Mount Gerizim (a Samaritan doctrine) the tenth commandment. The fact that this addition was not present in paleo-Exodus^m seems to indicate that the textual tradition involving typological expansions of the Pentateuch predated the Samaritan schism, but also that this recension was adopted by the Samaritans and further altered for their own purposes. Exodus-Leviticus^f, one of the earliest manuscripts from Qumran, dating to the third century BCE and preserving material from *Exodus* 38–40, is also related to the Samaritan tradition. This manuscript confirms that the expansionistic textual tradition of the Samaritan Pentateuch was present in Palestine in the Second Temple period outside and independent of the Samaritan community. It is probable that the scant fragments of Exodus^d should also be reconstructed according to this expansionistic tradition.

4QExodus^b, which contains fragments of chapters 1–5, has a close textual relationship to the Septuagint. It contains numerous readings that demonstrate that often, apparent variants in the Greek translation reflect a variant Hebrew *Vorlage* (e.g., in 1.1, 1.5, 1.19, 2.11, 2.14, 3.16, 3.19; and see below). 2QExodus^a (with material from chapters 1, 7, 9, 11, 12, 21, 30, and 32) also has a number of variants in common with the Greek tradition (e.g., in 1.12).

Two manuscripts are of special interest because their texts are radically different from all other textual traditions of *Exodus*. One fragment of 2QExodus^b contains *Exodus* 19.9 followed by a blank line, after which comes 34.10. It would appear that the text skipped from the middle of the introduction to the events on Mount Sinai to the later renewal of the covenant, omitting the Book of the Covenant (*Ex.* 20–23), the covenant ceremony and the ascent of the elders and Moses (*Ex.* 24), the account of the Tabernacle (*Ex.* 25–31), and the story of the Golden Calf and its aftermath (*Ex.* 32–34.9). Nonetheless, other fragments of the same manuscript contain material from chapters 21–22, 27, and 31 (as well as 4, 12 [?], 18), which seems to imply that the text was presented in an order unfamiliar to us. Likewise, the small fragment 4QExodus^d contains *Exodus* 13.15–16 followed directly by 15.1, per-

haps with half a blank line to be restored between them. It may be that *Exodus* 13.17–14.31 was omitted entirely or the text of the book may have been given in a different order. Perhaps both of these manuscripts were excerpted (liturgical?) texts rather than copies of *Exodus* strictly speaking. The Nash Papyrus is such an excerpted manuscript: this fragment from first or second century BCE Egypt contains the Ten Commandments according to a composite text of *Exodus* and *Deuteronomy*, along with the *Shema*^c passage from *Deuteronomy* 6.4–5. Deuteronomy^j (4Q37) likewise combines texts from *Deuteronomy* 5–6, 8, 11, and 32 with a passage from *Exodus* 12–13. The phylacteries from Qumran contain a similar range of material. One or two other Deuteronomy manuscripts (Deuteronomyⁿ [4Q41] and perhaps Deuteronomy^{k1} [4Q38]) are also excerpted; the fourth commandment of the Ten Commandments in the former is influenced by the parallel text in *Exodus*.

A number of readings in the *Exodus* manuscripts are of interest in themselves and a few will be discussed here. The Masoretic Text of *Exodus* 1.5 reports that Jacob's offspring numbered seventy persons—a typically biblical round number. The Septuagint, however, reads seventy-five. The latter calculation is based on a different enumeration of Jacob's descendants in the Septuagint of *Genesis* 46.20 and 27, wherein five additional sons and grandsons of Manasseh and Ephraim are named (cf. *Acts* 7.14). The reading “seventy-five” is also found in *Exodus* 1.5 of Genesis-Exodus^a and 4QExodus^b, confirming that both calculations go back to Hebrew *Vorlagen*. However, it is interesting to note that the readings in the two Qumran manuscripts are slightly different. The text of Genesis-Exodus^a gives the number as “[seventy] and five,” whereas the order in 4QExodus^b (and the Septuagint) is “five and seventy.” Perhaps the manuscript tradition behind Genesis-Exodus^a originally read “seventy,” but was altered to reflect the general tradition of a larger number entering Egypt, although not the exact variant text behind the tradition.

Frank Cross and David Noel Freedman have argued on the basis of linguistic and orthographic criteria that the poem in *Exodus* 15.2–18 is exceedingly ancient—probably written before the founding of the Israelite monarchy in approximately 1000 BCE. Part of this poem is preserved in 4QExodus^c (15.12–18) and it is interesting to note that a number of the unusual and perhaps archaic features found in the Masoretic Text are not present in this manuscript. The nunation on the third person plural imperfect form of the verb *rgz*, “to tremble,” is missing in verse 14. The unusual form *'eymatah*, “terror,” in verse 16 is read as *'eymah* as with the Samaritan Pentateuch. The archaic third masculine plural pronominal suffix *-mo* is read as the normal form *-m* twice in verse 17. These mi-

nor variants seem to show the distinctive language of the poem being homogenized into normal classical Hebrew.

Besides the systematically reworked redactions of the *Book of Exodus*, best exemplified by paleo-Exodus¹, there are documents that are inspired by *Exodus* (or by the Pentateuch overall) and that paraphrase it, sometimes closely. The text known as the Reworked Pentateuch (4Q158, 4Q364-365, 4Q366-367) is based on the Pentateuch but heavily rewrites, reorders, and supplements the material in it. For example, the poem in *Exodus* 15 is augmented by additional poetic material. The Hebrew text of *Jubilees* is preserved in fragments (1Q17-18, 2Q19-20, 3Q5, 4Q216-224, 11Q12). This book, presented as a revelation to Moses on Mount Sinai, rewrites *Genesis* and summarizes much of *Exodus*, paraphrasing much more freely than the Reworked Pentateuch. The scattered fragments of Pseudo-Jubilees (4Q225-227) also allude to events in *Genesis* and *Exodus*. Paraphrase of Genesis-Exodus (4Q422) paraphrases the Creation, Fall, and Flood narratives of *Genesis*, along with the story of the Egyptian oppression of the Israelites and the ten plagues from *Exodus*. A number of copies of a Moses pseudepigraphon (4Q385a, 4Q387a, 4Q388a, 4Q389, and 4Q390) show interesting parallels to material in the Old Testament pseudepigrapha preserved outside Qumran (including *Jubilees*, the "Animal Apocalypse," the *Testament of Levi*, and the *Testament of Moses*), as well as to the Qumran sectarian literature, especially the Damascus Document. Other manuscripts mentioning Moses include Words of Moses (1Q22), Liturgy of Three Tongues of Fire (1Q29), Discourse on the Exodus/Conquest Tradition (4Q374), and Apocryphon of Moses B^{a b} (4Q375-376), which may or may not be connected to the Moses pseudepigraphon. The Visions of Amram (4Q543-548) involves Amram (*Ex.* 7.20), the father of Moses, Aaron, and Miriam (her name also appears). Another text (4Q549) refers to Hur (mentioned several times in *Exodus*) and Miriam. One poorly preserved document, Biblical Chronology (4Q559), gives a schematic chronology of at least the period between Abraham and the Judges, and the names Amram and Aaron are found in it. An exceedingly fragmentary Greek manuscript (pap4QParaExod gr) mentions Moses, Pharaoh, Egypt, angels, and sins, and may refer to Aaron and Miriam. It clearly paraphrases elements of *Exodus*, but nothing of the story line can now be reconstructed.

The large number of copies of *Exodus* recovered from Qumran, as well as its wide influence on Second Temple texts also found there, indicate that this book was a very important work to the compilers of the Qumran library and to Second Temple Judaism in general.

BIBLIOGRAPHY

Most of the *Exodus* manuscripts from Qumran Cave 4 were published in *Discoveries in the Judaean Desert* 9 and 12. Most of the

Hebrew manuscripts of *Jubilees* and some of the other paraphrases were published in *Discoveries in the Judaean Desert* 13. These are extremely technical studies of the original texts and are meant for the specialist.

EZEKIEL, BOOK OF. [This entry consists of two parts: Biblical Text and Pseudo-Ezekiel.]

Biblical Text

The biblical book that bears the name of Ezekiel son of Buzi, priest and prophet contains a diverse collection of oracles and visions believed to have been received by Ezekiel himself as well as elements that have been incor-

porated by later tradents and editors, some of whom may have belonged to his immediate circle of associates (that is, members of his prophetic guild). Most of the book's contents are dated to roughly the sixth century BCE. Following a brief introduction (1.1–3), the book consists of a large block of material that contains an account of Ezekiel's commission and a number of vision reports (1.4–24.25), oracles against foreign nations (25.1–32.32), an initial set of oracles concerning Israel's judgment and restoration (33.1–34.31), an oracle against Mount Seir and Edom (35.1–15), a second group of oracles describing the restoration of Israel (36.1–39.29), and a vision of the new Israel, Jerusalem, and Temple (40.1–48.35).

Of the book's many themes, some of the more important include: the prophet as moral sentinel (3.16–21), theological justification for the impending siege of Jerusalem (5.1–17), the dispersion of those who survive Israel's destruction (6.8–10), the departure of Yahweh's glory from the temple (10.18–22, 11.22–23), the persistence of the divine presence with those in exile (11.16), individual responsibility for sin (18.19–20), Yahweh's judgment against Ammon, Moab, Edom, Philistia, Tyre, and Sidon (25.1–32.32), and the future restoration of Israel (37.1–14, 40.1–48.35).

The Judean Desert has yielded only modest textual remains of *Ezekiel*. Six manuscripts have been found in four caves at Qumran (1Q9 [hereafter 1QEzekiel], 3Q1 [hereafter 3QEzekiel], 4Q73 [hereafter Ezekiel^a], 4Q74 [hereafter Ezekiel^b], 4Q75 [hereafter Ezekiel^c], and 11Q4 [hereafter 11QEzekiel]) and one from Masada (Mas1d [hereafter MasEzekiel]). In all (excluding the material from Masada, which has just been published), these provide partial witnesses for some seventy-six verses of the book. This raises some questions about the relative importance of the book to those responsible for the textual assemblages at Qumran and elsewhere in the Judean Desert. It also makes drawing any far-reaching conclusions about the textual character of these remains problematic.

1QEzekiel is made up of two fragments. The first contains a portion of 4.16–5.1. Dominique Barthélemy and J. T. Milik (1955, pp. 68–69) have described the paleography as “assez classique” and have also suggested the possibility that this is a citation from *Ezekiel* rather than a manuscript fragment. The extant reading is identical to that of the Masoretic Text. Its orthography appears to conform with Masoretic conventions as well. The content and context of the second fragment are difficult to establish because so few letters remain.

3QEzekiel contains a single fragment preserving part of *Ezekiel* 16.31–33. M. Baillet (1962) has described its script as a careful Herodian hand that leans slightly to

the left. There is little evidence upon which to make a thorough assessment of the manuscript's orthographic conventions. The portion of the text that is legible preserves a reading identical to that of the Masoretic Text. The *hapax legomenon* (that is, a word used only once in the entire Hebrew scriptures)—*le-qilles*—was a strong indicator to the original editors that the fragment was from *Ezekiel*.

Ezekiel^a is made up of five fragments. The first two, which represent the bottom and top of contiguous columns, contain text from *Ezekiel* 10.6–11.11. The third preserves parts of 23.14–15, 23.17–18, 23.44–47. The fourth and fifth have text from 41.3–6. In terms of paleography, Sanderson (Ulrich, 1997) has described the script as Hasmonian with early semiformal Herodian tendencies and has dated it to the mid-first century BCE. She has noted that the orthography is similar to that of the Masoretic Text and that the manuscript contains only six minor variants from that text and is, thus, quite similar to it.

Ezekiel^b contains six fragments representing three contiguous columns. They preserve text from 1.10–11 (frg. 1), 1.10–11 (frg. 2), 1.11–12 (frg. 3), 1.13 (frg. 4), 1.16–17 (frg. 5), 1.19 (frg. 6i), and 1.20–24 (frg. 6.ii). The hand has been described by J. Sanderson (Ulrich, 1997) as an early first century CE Herodian script. She has also noted that the orthography of the manuscript disagrees with the Masoretic Text in only two instances and that the text itself preserves two errors. The first, *ya'amodu* in 1.21, has a supralineal correction (the *dalet*). The second, *u-demutam*, is not corrected (cf., *u-demot* in the Masoretic and Old Greek Texts). In addition to these errors, Sanderson has indicated that the manuscript preserves only two other minor variants and is, thus, similar to the Masoretic Text.

Ezekiel^c consists of a single fragment preserving five complete words and six individual letters from *Ezekiel* 24.2–3. Sanderson (Ulrich, 1997) has classified its script as Hasmonian and has dated it to the first century BCE (early to middle). These fragmentary remains preserve a reading identical to the Masoretic Text.

A preliminary edition of 11QEzekiel was prepared by W. H. Brownlee (1963–1964). He has noted that the scroll was found in a very poor state of preservation, only a small portion of it was capable of being salvaged and read, and the remainder was thought to be of sufficient size to contain most of the entire book. Unfortunately, the parchment scroll had solidified over time into a single mass from which only five fragments could be recovered. These fragments preserve parts of 44.3–5 (frg. A), 5.11–17 (frgs. B and C), 7.9–12 (frg. D), and 10.11 (frg. E). The text of fragment A agrees with the Masoretic Text.

Brownlee has commented that when read together, fragments B and C preserve two minor orthographic differences and one insubstantial textual variant that agrees with the Old Greek against the Masoretic Text. The text of fragment D is identical to the Masoretic Text as is that of fragment E. The paleography of the scroll is, according to Brownlee, either late pre-Herodian or early Herodian, and he has offered an approximate date range of 55–22 BCE. He has concluded that its text is quite similar to that of the Masoretic Text.

The *Ezekiel* material from Masada (MasEzekiel) has just been published. Ulrich (1995) has indicated that it consists of fragments from *Ezekiel* 31.11–37.15. Thus, an assessment of paleographic, orthographic, and other conventions employed in these texts cannot be offered at present.

As for other major witnesses to the text of *Ezekiel*, Emanuel Tov's (1992: 282–284, 333–334) comments are most illuminating. He has estimated that the Masoretic Text represents a longer text (by roughly 4 to 5 percent) than the supposed Hebrew *Vorlage* (underlying version) of the Old Greek version and has suggested that a "literary layer" (283, 334) consisting of "explicative-exegetical, harmonizing," (333) and other types of expansions was added to this older text to form the Masoretic Text. He has also noted that this Hebrew *Vorlage* contained a single recensional anomaly at 7.3–9 where verse order and content are at variance with the Masoretic witness. Otherwise, the Old Greek version offers what he has termed a "relatively literal" (333) translation. P. K. McCarter Jr. (1986: 91) has suggested that the Old Greek of *Ezekiel* is represented by LXX^b (Codex Vaticanus, a Septuagint manuscript from the fourth century), in chapters 1–27 and 40–48, but not in chapters 28–39, where witnesses to the Lucianic recension are crucial in reconstructing the Old Greek.

The Pseudo-Ezekiel (or Second Ezekiel) materials at Qumran (4Q385–4Q388, 4Q391) present their own unique set of hermeneutical difficulties (cf., Strugnell, 1988; Dimant, 1989; 1992; 1994). Devorah Dimant has offered the following general observations about Pseudo-Ezekiel: (1) that it consists of visions and divine explanations set within an autobiographical context in which the prophet Ezekiel functions as narrator, (2) that it includes visions from the biblical book of *Ezekiel*—for example, that of both the *Merkavah* and Dry Bones—along with others, and (3) that it contains a recapitulation of history that bears stylistic similarities to historical apocalypses such as 2 *Baruch*, 4 *Ezra*, and others (Strugnell, 1988: 46, 48; Dimant, 1992: 409). She has also pointed out that, in terms of lexical inventory and style, the authors of Pseudo-Ezekiel employed the biblical book of *Ezekiel* as

a model, and that in those instances where Pseudo-Ezekiel contains a citation from its biblical counterpart, the Masoretic Text is quoted almost exactly.

Several other sources appropriate and/or interpret parts of *Ezekiel* as well. Those noted in the pertinent secondary literature (cf., Lust, 1986: 92–93; Strugnell, 1988: 47, esp. note 6; Dimant, 1990: 332, esp. note 3) include the Florilegium (4Q174), the Damascus Document (eight fragmentary copies of which were found in Qumran Cave 4—4Q266–273), Temple Scroll^{a-b} (11Q19–20), Songs of the Sabbath Sacrifice^{a-b} (4Q400–4Q407), Songs of the Sabbath Sacrifice (11Q17), and the Masada Songs of the Sabbath Sacrifice (Mas1k). The presence of such interpretive works is a strong indicator that the book was in fact a viable part of the ongoing intellectual life of the Qumran community. Moreover, it would appear that the vision of the *Merkavah* and the vision of the Temple garnered particular attention (on these interpretive texts, see especially Allegro, 1968; Yadin, 1983; Brooke, 1985; Newsom, 1985; Broshi, 1992; Baumgarten, 1996). It is also possible that Ezekiel's vision of the stream that would flow from the Temple to the Dead Sea near 'Ein-Gedi (chapter 47) influenced the original Qumran group to choose Khirbet Qumran as its place of residence. Unfortunately, it is difficult to say much more than this at present.

As stated above, the paucity of evidence from the Judean wilderness makes it especially difficult either to say much about the general character of *Ezekiel* manuscripts or to offer an in-depth analysis of the book's textual history. At most, one can offer a single rather modest conclusion—that taken together, the *Ezekiel* manuscripts found in the caves of Qumran are quite similar to the Masoretic Text and may be tentatively classified as pre-Masoretic in character.

HUGH ROWLAND PAGE, JR.

Pseudo-Ezekiel

The Hebrew work now entitled Pseudo-Ezekiel (or sometimes, Second Ezekiel) was originally identified by John Strugnell. He assigned to it six copies, the ones enumerated below together with Pseudo-Ezekiel^f (4Q387), Pseudo-Moses^c (4Q389), and Pseudo-Moses^e (4Q390). I split the collection into two different groups, representing two works: Pseudo-Ezekiel and the Apocryphon of Jeremiah. Each has a distinct style, themes, and vocabulary. According to my division, Pseudo-Ezekiel has survived in five fragmentary copies. Most of them date to around 50 BCE.

Description of Copies. Pseudo-Ezekiel^a (4Q385) dates to 50-25 BCE. Fragments 1-6 and 12 can be assigned with certainty to Pseudo-Ezekiel. Fragment 12 is to be joined to the lower part of the column preserved in fragment 2. Pseudo-Ezekiel^b (4Q386; 50-1 BCE) is a single large fragment preserving remains of three columns. Two additional tiny fragments have survived. Pseudo-Ezekiel^c (4Q387) consists of eight fragments (earlier numbered as 6, 19, 24, 24-27, 30, 38). Fragment 1 (earlier numbered as 4Q385 24) comes clearly from Pseudo-Ezekiel, since the name of the prophet is explicitly mentioned. Pseudo-Ezekiel^d (4Q388) consists of fragments 1-7 (earlier numbered as 7-14) and dates from around 50 BCE. Fragment 7 (earlier numbered as 8) overlaps Pseudo-Ezekiel^a (4Q385 2 1-5). Pseudo-Ezekiel^e? (4Q391) is a papyrus manuscript, and is the oldest copy of Pseudo-Ezekiel. It is dated to the second half of the second century BCE. There is no actual overlapping between this manuscript and the other copies of Pseudo-Ezekiel. Also, this manuscript displays some unique features, such as narrative sections and the mention of the activities of Ezekiel (e.g. 4Q391 9, 36, and 55) told in the first person. However, the obvious drawing upon canonical *Ezekiel* makes it extremely likely that it is another copy of the same work, which has preserved sections not preserved in other copies.

Content and Structure. It can be inferred from the text that the work has to do with the prophet Ezekiel, who speaks in the first person, but is not identical with the canonical *Book of Ezekiel*. The Qumranic text attaches itself to *Ezekiel* by quoting, rewriting, and expanding scriptural prophecies. The fragments belonging to Pseudo-Ezekiel can be identified with certainty by the mention of the name *Ezekiel* (4Q385 4 [earlier numbered as 3] 4; 6 [earlier numbered as 4] 5; 4Q385b 1 [earlier numbered as 24] 1), by drawing on the canonical theme,

and by imitation of the style of the biblical prophet. For instance, God addresses Ezekiel with the title "son of man" (4Q385 2.5; 3 [earlier numbered as 12] 4; 4Q386 3 [earlier numbered as 1] ii.2). The surviving fragments preserve several visions revealed to the prophet and the nonbiblical explanations of them given by God following the queries of the prophet. In one of the fragments the Vision of the Dry Bones related in *Ezekiel 37* is presented (4Q385 2; 4Q386 1.i; 4Q388 7 [earlier numbered as 8]). In another fragment the Merkabah Vision of Ezekiel 1 is preserved (4Q385 6 [earlier numbered as 4]). A third vision regarding Egypt and Babylon has no biblical counterpart, although it is obviously modeled on *Ezekiel 29–32* (4Q385 1.ii–iii). Apparently, additional noncanonical visions were included in the compositions (e.g., 4Q385b 6 [earlier numbered as 9]), but due to the fragmentary state of the text it is difficult to make out the vision's content or context. The biblical visions are introduced by condensed and slightly altered quotations, omitting repetitions and redundancies. Occasionally such quotations are supplemented by small nonbiblical details. The meaning given to these visions by the author of Pseudo-Ezekiel is presented as divine responses granted to queries made by Ezekiel. Presumably such queries and answers were originally included for both the Vision of the Dry Bones and the Merkabah Vision, but only those pertaining to the first vision have survived. For the Merkabah Vision only the quotation itself is preserved.

According to Pseudo-Ezekiel the Vision of the Dry Bones is shown to the prophet as an answer to his query about the future recompense of the righteous. The author of this work found at Qumran understood, then, the biblical vision as referring to such future recompense. However, the true meaning of this vision for the author is conveyed by a nonbiblical detail added to the biblical description: according to it the resurrected people stood up and blessed God who had raised them (4Q385 2.8–9 and probably 4Q385 3 [earlier numbered as 12]), which describes the blessing uttered by a crowd of people, and therefore seems to fit the same context). Such a detail can hardly be interpreted in a metaphorical way, for it makes no sense in a metaphorical context. It shows rather that the author meant it literally, thus indicating that he understood the vision as referring to a real resurrection of the righteous in the eschatological future. Pseudo-Ezekiel, then, constitutes the earliest witness for such an understanding of *Ezekiel 37, 1–14*, an understanding which later became widespread among Jews and Christians. In attesting the early existence of the belief in the resurrection of the righteous, Pseudo-Ezekiel joins *Daniel 12.2*, which must be roughly its contemporary in the first half of the second century BCE. Moreover, the blessing after resurrection seems to be based on *Isaiah 26.19*, which

reads: "awake and sing (Septuagint: "they awoke and sang"), you (Septuagint: "those") who lie in the dust." Indeed, later interpreters took the *Isaiah* verse to refer to the resurrection, and to the following blessing (e.g., Aquila to *Is. 26.19*, in *B.T., San.* 92b the blessing is attributed to the resurrected of *Ezekiel 37*). Pseudo-Ezekiel seems to have the same understanding two centuries earlier. In fact, in speaking of resurrection in *Daniel 12.2*, it also refers to *Isaiah 26.19*. Both *Daniel* and Pseudo-Ezekiel show that already during the second century BCE *Isaiah 26.19* was read as referring to resurrection. On the basis of *Daniel 12.2* and *2 Maccabees 7* the belief in the resurrection of the righteous was explained as devised to comfort martyrs during the Antiochene crisis. The fact that in Pseudo-Ezekiel the idea of resurrection is introduced without any connection to martyrdom suggests its independent, and perhaps more ancient, origin.

In another fragment, Pseudo-Ezekiel^a (4Q385 4 earlier numbered as 3), God consents to grant Ezekiel's request to hasten the days in order to speed up the redemption of Israel. Although materially the fragment is not joined to fragment Pseudo-Ezekiel, 4Q385 2, containing the Vision of the Dry Bones, it is connected to the Vision through the underlying thematic development and exegetical links. The connection between the awaited eschatological resurrection and the hastening of time is expressed explicitly by Pseudo-Philo's *Biblical Antiquities* 19.13, and by *1 Clement* 50.3. It seems that such a link underlies the fragments of Pseudo-Ezekiel. Together with the passage on the Vision of the Dry Bones, Pseudo-Ezekiel^a (4Q385 4 earlier numbered as 3) attests to the interest of the author in things to come at the final stages of history.

The same concern is apparent in the interpretation of a third vision, found in Pseudo-Ezekiel^b (4Q386 1 ii–iii), which is not biblical. Ezekiel beholds the land of Israel lying desolate (inspired by *Ezek. 36.35, 38; Jer. 36.10, 12?*) and asks when the gathering of Israel from the Diaspora will come about. The divine response is given in the form of a forecast, relating events to take place in an unspecified time. The forecast speaks of events in Egypt (col. ii) and events in Babylon (col. iii). Perhaps the designations Egypt and Babylon are intended to refer to the kingdoms that occupied the same territories at the time of the author, namely to the Ptolemies in Egypt and the Seleucids in Syria-Mesopotamia. The events alluded to in connection with Egypt remain enigmatic. The apocalypse mentions "a Son of Belial" who planned to persecute Israel but was killed by divine intervention. The Israelites are to be rescued from Egypt. The identification of this figure and the events connected with it are uncertain, but the episode is obviously modeled on the Exodus story. Column iii has preserved a few words, perhaps alluding to a battle in Babylon.

Yet another fragment (4Q385b 1 earlier numbered as 24) rewrites one of Ezekiel's prophecies against the nations and especially Egypt (*Ezek.* 30.1–6), but it differs from treatments of the same theme in Pseudo-Ezekiel^b 4Q386 1 ii) and in a copy of the Apocryphon of Jeremiah, 4Q385b 17 (earlier numbered as 6) ii.3–9. Coming from a different composition, this column (4Q385a 17.ii) quotes Nahum's prophecy on Egypt (*Nu.* 3.8–10) rather than the one from *Ezekiel*.

Pseudo-Ezekiel does not contain any of the terminology and ideas distinctive of the Qumran community. Nor do the copies use the Qumranic scribal system. The affinities Pseudo-Ezekiel displays are with non-Qumranic apocalyptic visions, which foretell eschatological events. Pseudo-Ezekiel shows special affinity with two second-century CE pseudepigraphic apocalypses, *4 Ezra* and *2 Baruch*, both preserved only in translation. It is therefore of interest that the apocalyptic traditions embodied in these two writings are now extant in a much earlier Hebrew form. The meager remains of the work do not permit us to say anything on the origin and currency of this work. It seems to have been authored outside the Qumran community no later than the second century BCE. It is impossible to say whether Pseudo-Ezekiel is identical with one of the two books attributed by Josephus (*Jewish Antiquities* 10.80) to the prophet Ezekiel. Also the church fathers quote from an apocryphon of Ezekiel (e.g., Epiphanius, *Against Heresies* 64–70, 5–17), but apart from the general similarity of theme, that of resurrection, no quotation overlaps the extant fragments from Qumran.

It has, however, been suggested that the work was quoted by two early Christian writings: the *Epistle of Barnabas* 12.1 quotes Pseudo-Ezekiel^a (4Q385 2.9–10), referring to "a tree which will bend and will stand erect" (Kister, 1990). The *Apocalypse of Peter* 4.7–8 quotes 4Q385 2.5–6. Both quotations add similar nonbiblical details to the Vision of the Dry Bones (Bauckham, 1992). In both cases it can be argued that the similarity which has led some scholars to identify these as quotations may be explained as common earlier traditions. It should be noted that the two alleged quotations are taken from the same passage on the Dry Bones and resurrection, a subject and a prooftext popular among Jewish as well as early Christian writers.

DEVORAH DIMANT

EZRA AND NEHEMIAH, BOOKS OF. Only three fragments from *Ezra* have been recovered from the Judean wilderness (4Q117) and none from *Nehemiah*. The fragments correspond to *Ezra* 4.2–6 (parallel to *1 Esd.* 5.66–71), 4.9–11 (cf. *1 Esd.* 2.17), and 5.17–6.5 (cf. *1 Esd.* 6.21–26), the first Hebrew, the second and third Aramaic. In all, seventeen lines or about fifty words, fragmentary or entire, are legible. With only minor variations (*u-vuqqar* for the Masoretic Text *u-tuqqaru*, *Ezr.* 6.1; *ve-hevelu* for the Masoretic Text *ve-hevel*, *Ezr.* 6.5), the text from Qumran is identical with the Masoretic Text and diverges significantly from the assumed *Vorlage* (underlying text) of *1 Esdras*. Frank Moore Cross (1975) aligned the Masoretic Text of *Ezra* and *Ezra* from Cave 4 at Qumran with his conflate and expansionist Palestinian text family as against the Egyptian-Alexandrian text type represented by *1 Esdras*. According to this view, the Hebrew-Aramaic *Vorlage* of *1 Esdras* represented a shorter and more pristine text than the Masoretic Text, which, together with *1 Chronicles* 10–2 *Chronicles* 34, comprised an older edition of the Chronic work dating to the time of Ezra. However, the Qumran fragments are too meager to affect the debate on the relation between canonical *Ezra* and *1 Esdras*, begun by H. H. Howorth in the late nineteenth century, quite apart from the objections that have been raised against this theory of geographically distinct text families. It seems more likely that *1 Esdras*, composed in the late second or early first century BCE, drew either on a no longer extant Greek version of *Ezra-Nehemiah* or di-

rectly on the canonical Hebrew-Aramaic text. It gives the appearance of being a well-structured work dealing with the restoration of cult successively under Josiah, Zerubbabel, and Ezra, rather than an excerpt from an earlier edition of the Chronistic work, and its omission of *Nehemiah* appears to be deliberate. *1 Esdras* agrees with the Old Greek version (*Esdras B*) against the Masoretic Text in only one instance (*1 Esd.* 2.25, *meth' hippou*; *2 Esd.* 4.23, *en hippos* [with a horse]) and, in general, is quite different in character.

The Hebrew and Aramaic text of the Masoretic Text of *Ezra-Nehemiah* has been well transmitted on the whole. The very literal Old Greek version has a few superior readings, listed by Wilhelm Rudolph (1949, p. xx), as does the Syriac version, not originally part of the Peshitta,

which follows the Masoretic Text quite closely. Apart from *Daniel*, *Ezra-Nehemiah* is the only biblical book without a Targum.

F

FALSEHOOD. See Truth.

FAMILY LIFE. Discoveries in the region of the Dead Sea shed light on family life in ancient Judea in two areas: (1) evidence from Qumran relating to marriage and families in sectarian circles and (2) documentary evidence from Nahal Hever relating to family life in the time of Bar Kokhba (d.135 CE). Copies of *Ben Sira* and *Tobit*, which are greatly concerned with family life, have also been found at Qumran but do not alter the understanding of family life to be found in these books. [See *Ben Sira*, Book of; *Tobit*, Book of.]

Evidence from Qumran. There is very little discussion of family life in the major sectarian texts, but the fact that there are any references at all has attracted attention because of the hypothesis that Qumran was a settlement of celibate Essenes. A key text is found in the Damascus Document (CD vii.6–9): “And if they dwell in camps in accordance with the rule of the land, and take wives and beget children, they shall walk in accordance with the Torah and according to the commandment of the teachings, according to the rule of the Torah that says ‘between a man and his wife, and between a father and his son.’”

This passage probably implies that not all members of the new covenant married and had children but that marriage was an option. There is an implicit contrast with “those who walk in perfect holiness,” for whom God’s covenant is a guarantee that they will live a thousand generations (CD vii.5–6). The Rule of the Community, in contrast, says nothing about family life, and consequently is often thought to be the rule for a celibate community (of “the men of perfect holiness”). The phrase “between a man and his wife” is an allusion to *Numbers* 30.17, but the reference is not very illuminating. *Numbers* refers to “a father and his daughter,” and the context concerns the vows of women. The implication in the Damascus Document is that family life should be governed by the laws of the Torah and is not subject to special regulation. The Damascus Document had its own understanding of how the Torah should be interpreted, as can be seen especially in its stipulations about sex and marriage (CD v). But it does not have laws for the members of the new covenant that differ from those that apply to the rest of Israel. The Damascus Document also affirms the right of fathers and

husbands to annul the oaths of their wives and daughters, but only if they know that they should be annulled (CD xvi.10–13). It provides for a common fund to support the needy, including orphans and unmarried women who have no relatives. Surprisingly, widows are not included in this list, despite the restrictive position taken on divorce in the document CD v. Another passage warns against the widow who has intercourse after she is widowed (4Q269 9.5; 4Q270 5.19; 4Q271 3.12). The following passage speaks of a girl who acquires a bad name while in her father’s house. The danger of such an occurrence was a matter of great concern in ancient Judaism and inspires a notorious outburst on the subject of daughters by Ben Sira (*Sir.* 42.9–14).

The Rule of the Congregation (1Q28a) in the End of Days legislates for all who rally to the covenant, including women and children. It is clear that those who join the covenant in the End of Days are expected to continue to have families. The text stipulates how the children should be brought up. They are to be instructed in the Book of Hagu, according to their level of understanding. At the age of twenty they may join the holy congregation, together with their families. The Damascus Document (CD xv.5–6) also stipulates that the sons (*banim*; it is possible that daughters are included) of those who join the covenant should take an oath when they come of age. Young men are not allowed to have sexual intercourse until they reach the age of twenty. (In Talmudic law, twenty is the *terminus ante quem* for marriage, B.T., *Qid.* 29b.) It is not clear then what is meant by their families in the Rule of the Congregation. It may mean that young men are allowed to join their parents and older siblings in the sacred congregation when they reach the age of twenty. Alternatively, it may mean that their future wives and children are granted automatic membership, but this seems less likely.

Celibacy and restrictions. The clear provision for marriage in these texts is often raised as an objection to the identification of the Dead Sea sect with the Essenes. Josephus, Philo, and Pliny all emphasize the celibacy of the Essenes. According to Josephus, the Essenes

regard marriage with contempt, but in adopting other people’s children who are still pliable for learning, they consider them as their own kin and mold them according to their customs. They do not reject marriage and the propagation that

comes from it, but they guard themselves against the licentious allurements of women and are persuaded that not one of them keeps her pledge to one man

(*The Jewish War* 2.120–121)

Josephus also grants, however, that “there is another order of Essenes, who have the same views as the rest in their way of life, customs, and laws, but are at variance in their opinion of marriage” (*The Jewish War* 2.160–161). These Essenes, however, test their wives for the ability to bear children and do not have intercourse during pregnancy, “demonstrating that they do not marry for self-gratification, but for the necessity of children.”

Josephus, Philo, and Pliny all relied on other sources for their knowledge of the Essenes (despite Josephus’s claim that he had tried out all the Jewish sects). Their accounts assimilate the Essenes to Greek models. Those who defend the identification of the Dead Sea sect with the Essenes argue that the Greek and Latin accounts distort their subject. The marrying Essenes were probably the norm, and the celibate ones the exception. I have noted above that the Damascus Document (CD vii) seems to imply that not all members of the sect married and had children. The Rule of the Congregation is concerned with the End of Days, when all Israel is expected to join the covenant. While the stipulations mentioned are presumably derived from sectarian practice in the present, the Rule of the Congregation does not require that all members of the covenant have families. The War Scroll also takes note of the existence of women and children at the time of the eschatological war but is mainly concerned with their removal from the camp in the time of active warfare (1QM vii.2–4). [See Josephus Flavivus; Philo Judaeus.]

While the Damascus Document and the Rule of the Congregation allow for marriage, they take a restrictive approach to sex. The Damascus Document and the Temple Scroll both prohibit sex in “the city of the sanctuary” (11Q19 xlv.11; CD xii.1–2). The laws of the Damascus Document include a provision that apparently forbids intercourse during pregnancy (as reported by Josephus on the marrying Essenes), and one fragment (4Q270 7.i.13) prescribes a penalty for the man who “approaches to fornicate with his wife in violation of the law.” Such a person must depart and return no more. The nature of the offense is unclear. It may refer to relations during menses, which are specifically denounced in the Damascus Document (CD v.6–7). Alternatively, the code may presuppose a rule of temporary abstinence for married members of the sect.

The presence of women and children in a community is not necessarily incompatible with celibacy. Philo describes the Therapeutae as a celibate community, which is in many ways a surrogate family. The young men who

serve the meal behave “like sons to their real fathers and mothers” (*De vita contemplativa* 72). It has been suggested that the Ritual of Marriage (4Q502) may be related to a similar celebration. This text describes a ritual that pairs male and female, sons and daughters, old men and old women, boys and girls, but it is extremely fragmentary, and the context is far from clear. The Damascus Document^c (4Q270 7.i.14) prescribes penalties for those who murmur against the Fathers and the Mothers, although the penalty is less for those who murmur against the Mothers. “Fathers” and “Mothers” appear to be honorific titles here, whether the people in question were actually fathers and mothers or not. [See Ritual of Marriage.]

Instructions. The most practical instructions relating to family life in the Dead Sea Scrolls are found in Sapiential Work A^b, Sapiential Work A^c, and Sapiential Work A^a (4Q416–418). This text reiterates the injunction to honor parents, which is commonplace in Jewish wisdom literature from the Hellenistic era (e.g., *Ben Sira*, 3.1–16; *Pseudo-Phocylides* 8; Josephus, *Against Apion* 2.206). Like *Ben Sira*, this text promises length of days to those who honor their parents and reminds the children that their own honor is also at stake. A distinctive note is sounded in the recommendation to “honor your father in your poverty and your mother in your low estate.” It is unclear whether the poverty in question is economic or spiritual. The Qumran text, however, provides one formulation of the honor due to parents that is without parallel in other Jewish literature of the time: “For as God is to a man, so is his father, and as a master is to a fellow, so is his mother.” (“God” here is an emendation. The text reads “for as a father is to a man, so is his father,” which is tautological. See Harrington, 1994, p. 44) The parity of esteem for father and mother is not unusual and is also found in *Ben Sira* 3.1–16. [See Sapiential Work.]

The Qumran wisdom text relates marriage to *Genesis* 2.24: “Walk together with the help-meet of your flesh according to the statute engraved by God that a man should leave his father and his mother . . . and that they should become one flesh” (4Q416 2.iii.21–iv.1). The motif of the help-meet is also paralleled in *Ben Sira* 36.29–30. Like *Ben Sira*, the Qumran text insists on the authority of the husband over the wife. If any other man claims authority over her, he “has displaced the frontier marker of his life” (4Q416 iv.6). The text goes on to reaffirm the authority of the husband to annul the vows of the wife, in accordance with *Numbers* 30. The Qumran text, however, lacks the derogatory, even misogynistic, remarks that characterize *Ben Sira*’s view of women. Indeed, the only derogatory picture of women in the Qumran scrolls is found in *Wiles of the Wicked Woman* (4Q184), and that text uses a particular kind of woman as a symbol of evil. [See *Wiles of the Wicked Woman*; *Wisdom Texts*.]

It is clear, primarily from the Damascus Document, that marriage and family life were permitted in the "new covenant." Nonetheless, the paucity of interest in family matters in the scrolls is striking. Where issues of marriage and family are discussed in the sectarian compositions, the discussion is often dominated by concern for purity.

Murabba'at and Nahal Hever. The Qumran scrolls are conspicuously lacking in marriage contracts and personal archives. Precisely these kinds of documents have been found at Murabba'at and Nahal Hever, dating from the early second century CE. Four marriage contracts have been found at Murabba'at, two in Aramaic and two in Greek, and also a bill of divorce in Aramaic. Four marriage deeds were found at Nahal Hever, one in Aramaic and one in Greek, and also another document relating to a divorce.

Three of the contracts from Nahal Hever belong to the archive of the woman Babatha, including the contract relating to her own second marriage. The Aramaic contracts are very similar in form to the later Jewish marriage document, the *ketubbah*. The husband promises to support his wife and records the amount of the *mohar* (bride price) due to the woman. (Since this was a paper figure, and was paid only in the event of divorce or widowhood, it is often referred to simply as the *ketubbah*.) None of these marriage contracts refers to divorce, although the practice of divorce is referred to in other documents. (J. T. Milik erroneously restored references to divorce in his edition of marriage contracts [Mur 20 and 21] in P. Benoit, J. T. Milik, and R. de Vaux, *Les Grottes de Murabba'at*, Discoveries in the Judaean Desert, 2, pp. 109–117. Oxford, 1961.)

Provisions of the marriage contract. Babatha's contract specifies that if she is taken captive her husband must redeem her and may not deduct the cost from her *ketubbah* money. This is in accordance with a provision in the Mishnah (*Ket.* 4.9). The contracts go on to make provision for male and female children and for the wife in the event of widowhood, again in accordance with the Mishnah. Sons inherit the money owed to the mother. Daughters are to be supported at home until marriage. The provision for widowhood in Babatha's contract reads as follows: "If I go to my eternal home before you, you will dwell in my house and be provided for from my house and from my estate until the time that my heirs wish to give you your *ketubbah* money." According to the Mishnah, the people of Jerusalem and Galilee used to write that the wife could remain in the house as long as she remained a widow, but the people of Judea gave the heirs the right to evict her if they paid her *ketubbah* money (*Ket.* 4.12). Babatha's contract conforms to Judean practice. The Greek contracts differ from the Ara-

maic insofar as they make no reference to "the Law of Moses and the Jews," and they are acknowledgments of the dowry brought by the wife rather than records of the *mohar* owed by the husband.

Polygamy and division of property. The Babatha archive throws interesting light on family life in Judea in the Roman era in two respects: it provides evidence of polygamy, and it illustrates the problems that arose in the administration of the estate of a deceased father and husband.

Babatha came from the town of Maoza, at the southern end of the Dead Sea. Her father gave all his possessions to her mother before his death, and Babatha inherited them. Her first husband, Yeshua ben Yosef, died and left a son, also named Yeshua. Babatha then married one Yehudah Khithousion from 'Ein-Gedi. Yehudah was already married to a woman named Miriam, whose brother was a lieutenant of Bar Kokhba. When Yehudah died, Babatha became involved in litigation over his property. One document records a summons she had issued to Miriam for her to appear before the Roman governor, "since you [Miriam] plundered everything in the house of Yehudah son of Eleazar Khithousion, my and your husband. . . ." Miriam replied: "I warned you not to approach the property of my husband. . . you have no claim against the said Yehudah, my husband, regarding the property." Ranon Katzoff has argued that Yehudah may have divorced Miriam, and that the rival claims may have derived from separate contracts that he had made with each in turn. The situation, then, would be serial monogamy rather than polygamy (Katzoff, 1995, pp. 128–32). But if Miriam had been divorced, Babatha would most certainly have pointed this out and not referred to "my and your husband" (Lewis, 1997, p. 152). We have here, then, clear evidence of bigamy, in a fairly remote rural area, among people of moderate means. While Babatha was not a poor woman, she was illiterate. Predictably, the rival wives were involved in bitter dispute over property after Yehudah's death.

When Babatha's first husband died, the town council of Petra appointed two men to be guardians of the orphan boy, who had been left a trust fund of four hundred denarii by his father. Almost immediately Babatha began to complain that the monthly allowance was inadequate. After she remarried, she summoned the guardians to the governor's court and offered to take full responsibility for her son if the trust funds were put at her disposal. Babatha offered to pay interest on the money and to put up her property as collateral. She was apparently unsuccessful, as she was still accepting the original monthly allowance seven years later. The incident underlines the dependent position of women under the law. Even a capable woman of means, who had herself enjoyed the right of

inheritance, still had to accept male guardians of her own son after the death of his father.

One other aspect of the Babatha archive deserves notice here. Babatha's archive was found in the Cave of the Letters, where a number of Jews perished during the Bar Kokhba Revolt. The archive included the marriage contract of Babatha's stepdaughter Shelamzion, the daughter of Yehudah and Miriam. This fact suggests a close relationship between these two women, despite the litigation between Babatha and Miriam. It has been suggested that Babatha may have provided Shelamzion's dowry. This would explain why the younger woman's marriage contract was found in Babatha's archive. It is reasonable to infer that there were some bonds of affection involved, but the fact that Babatha kept the record of the dowry suggests that the money may have been a loan rather than an outright gift. [See Babatha.]

The documents from Nahal Hever and Murabba'at are dominated by concerns arising from divorce, remarriage, and property rights. The prominence of these features here directs our attention to their absence from the Qumran scrolls, where divorce was most probably forbidden and property was shared, to varying degrees. The papyri from Nahal Hever and Murabba'at stand in a well-established tradition. The same concerns are found in Elephantine papyri from the fifth century BCE, and to some extent also in the wisdom literature. Quite apart from the disputed issue of celibacy, the literature preserved in the Qumran scrolls is atypical of Second Temple Judaism where family life is concerned, because of its great concern for purity and its strict views on such issues as sex and divorce.

JOHN J. COLLINS

FESTIVALS. The Hebrew scriptures yield a list of festivals, some recalling great events of sacred history, and often elaborate on when, how, where, and why they were to be celebrated. The most detailed information about holidays appears in *Leviticus* 23 and *Numbers* 28-29.

Passover, a ritual meal on the fourteenth day of the first month, signified the remembrance of the Egyptian bondage and Exodus. It was to be celebrated in the home or, during some periods (2 Kgs. 22-23), at the central sanctuary. For those who were unable to observe Passover at the regular time, the Second Passover fell on the fourteenth day of the second month. [See Passover.]

The Festival of Unleavened Bread was observed from the fifteenth day to the twenty-first day of the first month. No leaven was to be consumed, recalling the hasty departure from Egypt. Around the time of Passover and the Festival of Unleavened Bread, on the "day after the Sabbath" (Lv. 23.11, 15) the Waving of the 'Omer ('omer, "sheaf of new barley") was celebrated, when the first fruits of the barley harvest were to be presented before the Lord. Shavu'ot (Feast of Weeks) was celebrated on the fiftieth day after the Waving of the 'Omer. At this time, the first fruits of the new wheat crop were presented before the Lord. [See Shavu'ot.]

The first day of the seventh month was a day of complete rest. It was observed with trumpet blasts.

On the tenth day of the seventh month, Yom Kippur (the Day of Atonement) was observed. Ceremonies were conducted to remove the guilt of Israel's sins for the past year. [See Yom Kippur.]

From the fifteenth day to the twenty-first day of the seventh month, Sukkot (Feast of Tabernacles) was celebrated to recall Israel's wandering in the wilderness, where they lived in booths. It marked the end of the harvest season. [See Sukkot.]

Purim, observed on the fourteenth and fifteenth days of the twelfth month, commemorated the saving of the Jews from destruction in the time of Queen Esther.

The Greek translation of the Bible adds one more festival to the list (1 Mc. 4.52-59). Hanukkah was observed for eight days, beginning on the twenty-fifth day of the ninth month, to celebrate the dedication of the Temple

after it had been desecrated in the early Maccabean period.

These holidays became the standard Jewish festivals in rabbinic times. The Judean Desert documents mention all the rabbinic festivals except Purim and Hanukkah; some of the texts add several new holidays. *Jubilees*, many copies of which were found at Qumran and which influenced Qumran thought and practice, indicates that Shavu'ot took place on the fifteenth day of the third month and was a time for annual covenantal renewal (*Jub.* 6.17, 15.1); it also suggests that the festivals of the first fruits marked the points after which the old crops were no longer to be eaten (*Jub.* 32.11–14). The Temple Scroll offers the lengthiest enumeration of festivals, their dates, and the sacrifices that were to be offered on those days, while the calendrical documents allow one to infer the dates for most of the festivals. The Qumran texts contain a system based on a 364-day solar calendar in which a series of four first-fruits festivals (Waving of the 'Omer, Shavu'ot, Festival of the New Wine, and Festival of the New Oil) are each separated by fifty days. The expanded list of festivals from the Dead Sea Scrolls is as follows.

In a fragmentary column of Temple Scroll^a the first day of each month (11Q19 xiv.7–8) is mentioned. A possible Festival of the New Year might be designated for the first day of the first month (11Q19 xiv.9–18) when a prohibition against labor and specifications for sacrifices are given. Apparently starting after the Festival of the New Year, a consecration festival inducting priests and high priests is referred to in damaged columns of Temple Scroll^a (11Q19 xv.3). This consecration festival lasted seven days (11Q19 xv.14).

Passover is mentioned in Temple Scroll^a (11Q19 xvii.6–9) and in some of the calendrical documents, where it is designated as the fourteenth day of the first month as in the Bible. According to Temple Scroll^a, the Passover sacrifice was to be offered before the evening sacrifice and eaten in the Temple courtyards. (See also Calendrical Document A, 4Q320 4.iii.2, 12; 4.iv.7; 4.v.1, 10; 4.vi.5; Calendrical Document B^a, 4Q321 2.ii.4, 9; 2.iii.3, 7; cf. Calendrical Document G, 4Q329a 1.4–5; Rule of the Community^f, 4Q259 8.3; Serekh Damascus, 4Q265 4.3.)

Temple Scroll^a (11Q19 xvii.10–16 [cf. xi.10]) specifies the fifteenth day of the first month as the beginning of the Festival of Unleavened Bread, a seven-day holiday, and stipulates the sacrifices. The festival is rarely mentioned in the calendrical texts (Calendrical Document E^a, 4Q326 1.3; Temple Scroll[?], 4Q365a 1.2).

The Waving of the 'Omer is explicitly dated in the Qumran texts to the twenty-sixth day of the first month (the date implied in *Jubilees*). The Qumran community understood "the day after the Sabbath" to mean the day after

the weekly Sabbath (the twenty-fifth day of the first month), which occurred after the seven days of the Festival of Unleavened Bread. Temple Scroll^a (11Q19 xviii.2–10) describes the sacrifices for it, but the date comes from Calendrical Document A (4Q320 4.iii.3, 13; it can be calculated because the number of the day in the week of service of the priestly course Yedaiah is given [4Q320 4.iv.8; 4.v.2, 11; 4.vi.6; 4Q321 2.ii.4, 9; 2.ii.3, 7; 4Q326 1.4]). In this last passage, the holiday is dated to the twenty-sixth day of the first month and is called the Festival of the New Barley since the first of the barley harvest was presented to the Lord on that day. Hence, the Waving of the 'Omer became a first-fruits festival.

Although Temple Scroll^a does not mention the Second Passover, it does appear several times in the calendrical texts (4Q320 4.iii.4; 4.iv.9; 4.v.3, 12; 4.vi.7; 4Q321 2.ii.5, 9; 2.iii.8). The system of priestly rotation of duty allows one to calculate the date as the fourteenth day of the second month.

Although Shavu'ot is not tied to a specific date in the Bible, the Qumran texts, with *Jubilees*, place it on the fifteenth day of the third month. Temple Scroll^a (11Q19 xviii.10–xix.9 [cf. xi.10]) deals with the method for counting the fifty days between the Waving of the 'Omer and Shavu'ot (*Pentecost* in Greek). It is also a first-fruits festival, when the first of the wheat is to be presented (11Q19 xviii.14, xix.9), just as in *Jubilees*. Temple Scroll^a (xl.iii.3, 6–7) indicates that old wheat must be consumed by the time of the festival the following year. It is also mentioned in Calendrical Document A (4Q320 4.iii.5; 4.iv.1; 4.v.4, 13; 4.vi.8), Calendrical Document B^a (4Q320 2.ii.1, 5; 2.iii.4, 8), and Rule of the Community^c (4Q259 7.1). Shavu'ot appears to be the time when the covenant renewal ceremony took place (see Damascus Document^a, 4Q266 11.17–18 = Damascus Document^c, 4Q270 7.ii.11–12).

Temple Scroll^a treats the Festival of the New Wine, an extrabiblical holiday (11Q19 xix.11–xxi.10). It prescribes that one is to count fifty days from Shavu'ot and to offer new wine as a drink offering on that date (the third day of the fifth month). Temple Scroll^a (11Q19 xliii.3, 7–8) describes wine as subject to the standard first-fruits law; that is, it must be consumed before the festival comes around in the following year. The wine festival is never mentioned in the preserved sections of the calendrical texts.

The Festival of the First Fruits of the Oil, according to Temple Scroll^a, was to be observed fifty days after the previous first-fruits festival, that is, on the twenty-second day of the sixth month (11Q19 xxi.12–xxiii.9). The scroll stipulates that the oil is to be used before the festival occurs the following year (11Q19 xliii.3, 9–10). An occasion that is probably the same festival (although a different

word for oil is used) is mentioned in Calendrical Document E^b (4Q327 1.ii.4–7; there the twenty-second day of what seems to be the sixth month is given as its date [4Q327 2.ii.6–8]). The addition to *Leviticus* 23.42–24.2 in the Reworked Pentateuch^c found in Cave 4 at Qumran (4Q365 23.4–11) includes a reference to the Festival of the New Oil (23.9) followed immediately by a reference to bringing wood (see below).

Temple Scroll^a (11Q19 xxiii.2–xxv.2) deals with the times when wood was to be brought to the Temple for burning sacrifices. This practice, known as the Festival of the Wood, is attested elsewhere; however, Temple Scroll^a alone seems to date the activity to six days (two of the twelve tribes offering wood on each day) following the Festival of the New Oil. Since the next holiday mentioned is on the first day of the seventh month, Yigael Yadin suggested that the Festival of the Wood should be dated to the twenty-third through the twenty-ninth day of the sixth month. The festival is not mentioned in the calendrical documents, but Calendrical Document E^b (4Q327 1.ii.10–11) may preserve part of the reference to it (cf. 4Q365 23.9–11).

Temple Scroll^a (11Q19 xxv.2–10, which is very fragmentary) probably deals with the first day of the seventh month, called the “Day of Remembrance” elsewhere in the Qumran texts and the “New Year” in the rabbinic texts. It figures in Calendrical Document A (4Q320 4.iii.6; 4.iv.2; 4.v.5), Calendrical Document B^a (4Q320 2.ii.2, 6; 2.iii.9), and Rule of the Community^c (4Q259 8.4).

Yom Kippur is mentioned in Temple Scroll^a (11Q19 xxv.10–xxvii.10), which prescribes offerings for the Day of Atonement, and was to be observed on the tenth day of the seventh month. The day is also mentioned in Peshar Habakkuk (1QpHab xi.4–9), where it is also called “the day of fasting, the Sabbath of their rest” (1QpHab xi.9). It was the time when the Wicked Priest attacked the Teacher of Righteousness and his followers. [See *Teacher of Righteousness and Wicked Priest*.] It is possible that the Damascus Document (CD vi.19) and Peshar Psalms^a (4Q171 1–10.ii.10; 1–10.iii.3) also refer to Yom Kippur as the Day or Festival of Fasting. Yom Kippur is mentioned in the calendrical texts in Calendrical Document A (4Q320 4.iii.7, 4.iv.3, 4.v.6, 4.vi.1), Calendrical Document B^a (4Q321 2.ii.2, 6); Rule of the Community^c (4Q259 7.2), and Rule (5Q13 4.2).

Sukkot is mentioned in Temple Scroll^a (11Q19 xxvii.10–xxix.2 [or 3]). The section in which it is mentioned dates the first day of the holiday to the fifteenth day of the seventh month; the incomplete listing of days reaches the fourth day before breaking off (cf. 11Q19 xi.13). The author of Temple Scroll^a (11Q19 xlii.10–17) commands that booths be built on the roof of the third story of the Temple; various groups are to sit there during the offerings

for the festival. Sukkot appears frequently in the calendrical texts: Calendrical Document A (4Q320 4.ii.9, 4.iv.4, 4.v.7, 4.vi.2), Calendrical Document B^a (4Q320 2.ii.2, 7; 2.iii.2, 6, 9), and Rule of the Community^c (4Q259 4.3[?]; cf. 4Q365 23.1–2; *Lv.* 23.42–43). The festival also appears in the Bar Kokhba documents: Simon gives orders to bring the “four kinds” (*Lv.* 23.40) that were used in the celebration of Sukkot (5/6Hev 15—an Aramaic document). In the Greek letter 5/6Hev 3, Soumaios (apparently a Greek form of Simon’s name) writes about transport of citrons by someone named Agrippa. He indicates that the items are needed soon for the festival.

JAMES C. VANDERKAM

FIRST JEWISH REVOLT. The war that broke out in Judea in 66 CE was preceded by 130 years of active resistance against the Roman administration (beginning with Pompey’s conquest of Jerusalem in 63 BCE) and internal violence within the Jewish population. The Romans introduced direct rule in 6 CE after Herod’s son Archelaus, the ethnarch, proved unable to handle constant insurrection. Every Roman prefect and procurator who is more than a name in the sources had to deal with Jewish rebellion in some form. After the death of the Jewish king Agrippa I, whose brief reign (41–44 CE) provided a peaceful interlude in direct Roman rule, the situation steadily deteriorated as Jewish revolutionary movements spread and the Roman procurators became more deliberately provocative. Ventidius Cumanus (48–52 CE) was recalled for mishandling four violent incidents, Antonius Felix (52–60? BCE) “practiced every kind of cruelty and lust” (Tacitus *Historiae* 5.9.3), Porcius Festus (60–62 BCE) was plagued by Sicarii and “false prophets,” and Lucceius Albinus (62–64 BCE) was notorious for theft, venality, and corruption. Finally, “the Jews’ patience lasted until Gessius Florus became procurator” (Tac. *Hist.* 5.10.1). Josephus felt that Florus “made Albinus seem a paragon of virtue by comparison” (*The Jewish War* 2.277). His mishandling of the Jewish-Greek conflict in Caesarea, his re-

removal of seventeen talents from the Temple treasuries, and his attack on Jews demonstrating good-will in Jerusalem provided fuel for the more extreme revolutionary elements, and in 66 CE they committed the nation irrevocably to war by stopping the regular sacrifices in the Temple on behalf of the Roman emperor and massacring the Roman garrison in Jerusalem.

Jewish Resistance Groups. The Jewish population was not united in its resistance to Roman rule. Revolutionary movements of all kinds proliferated in the decades before the war, not only inciting insurrection against Rome but competing with each other, often violently. Some, but certainly not all, were messianic, either heralding their own charismatic leader as the anointed king or anticipating his imminent arrival. The diversity of eschatological visions may be witnessed in the apocalyptic texts surviving from the period, including some of the scrolls from the Judean Desert. Apocalyptic fervor increasingly translated into political action in this period (apparently unlike the sect at Qumran), as many viewed war with Rome and with Jewish rivals as a cosmic battle heralding a new age. Yet, despite their common theme and purpose, the various apocalyptic texts show little unity in doctrine or details, and, more importantly, the various eschatologically motivated rebel groups, as well as those without such visions, showed little inclination to unify or cooperate, but were quite intolerant of each other.

Most rebel groups remain nameless. Individual Sadducees, Pharisees, and Essenes are known to have fought in the war, but there is no reason to believe that these sects participated as a whole. The two rebel organizations that are best known, because, unlike others, they survived to 66 CE and took an active part in the war, are the Zealots and the Sicarii. The former was a priestly group professing "zeal in their devotion to good deeds" (*The Jewish War* 4.161), led by Eleazar ben Simon, who became a major player in wartime Jerusalem. The Sicarii ("knife-men") were a dynastic group with messianic overtones, founded by Judah the Galilean in 6 CE, in response to the Roman census. This group is probably to be associated with the Fourth Philosophy, also founded by Judah, adhering to Pharisaic teachings in all matters except for "an almost unconquerable love of freedom" and refusal to submit to any master but God (*Jewish Antiquities* 18.23). Judah and his heirs kept up their militant defense of Jewish "freedom" for sixty years, apparently claiming more Jewish victims than Roman, for they did not shrink from "vengeance against relatives and friends" who did not share their passions (*Jewish Antiquities* 18.23). As the most successful and violent of the groups, their part in bringing on full-scale rebellion was considerable. Yet Judah's grandson Menahem, who led the Sicarii's bid to gain con-

trol of the rebellion in Jerusalem in 66 CE, was murdered by rival revolutionary factions, after which the Sicarii retreated to Masada where, under the leadership of Eleazar ben Yair (probably a great-grandson of Judah), they contented themselves with local raids and sat out the siege of Jerusalem.

Jews against Jews. Economic hardship contributed to the increasingly extreme and violent political expressions and aspirations. There is some evidence from the first century of demographic pressures, dislocations, shortages of cultivatable land, and heavier tax burdens (both Jewish and Roman), which caused prominent Jewish figures to be targeted along with the Roman administration. Banditry is mentioned as a growing problem, although the distinction between professional robbers and political revolutionaries is hard to see in the sources, as it must have been in the field; it depended on the subjective judgment of the observer, and the main sources reflect the Roman view. Yet, economic factors may be overemphasized (and have been in recent scholarship): well-off and aristocratic Jews associated themselves with anti-Roman ideas and actions as the political situation deteriorated, and inter-Jewish battles were as likely to be motivated by ideological as by economic differences. The Jewish War was at once a rebellion against Rome and a civil war, but the population did not split along class lines (an anachronistic notion in any case) and there were many more than two sides.

Campaigns. The uprising in Jerusalem sparked particularly gruesome anti-Jewish violence in Judea, Galilee and Perea, Syria, and Egypt. The Roman authorities concentrated on quickly crushing the revolt. The Syrian governor Cestius Gallus swept through Galilee and Judea, but inexplicably had to raise his siege of Jerusalem and hastily retreat, during which his troops were cut to pieces in the pass at Beth Horon. Cestius's humiliation made suppression of the revolt a matter of utmost importance for the Romans, not only to restore order in the area but to maintain peace throughout the empire. The emperor Nero assigned the task to his experienced general, Vespasian, who assembled a force of three legions (V, X, and XV) and many auxiliaries totaling perhaps sixty thousand. He launched his offensive in the spring of 67 CE.

After Cestius's defeat, the Jews formed a government in Jerusalem. At its head stood some of the leading aristocrats of that time, including high priests, noble priests, and wealthy lay nobility. This government saw to the war preparations, most importantly provisioning the capital and planning a strategy. The country was divided into administrative-military districts, and armed rebel groups were transformed into a kind of army, which, however, remained inactive after a failed attack on Ascalon in 66 CE. The historian Josephus, son of a distinguished Jerusa-

lem priestly family, was dispatched to organize the defense of Galilee. The government also started minting coins both to fulfill propagandistic purposes and to meet its financial obligations: a brilliant silver shekel bearing the legend "Jerusalem the Holy" and a parallel bronze series with the legend "The Freedom of Zion," later modified to "The Redemption of Zion."

Vespasian's simple and obvious strategy was systematically to conquer the country from the periphery inward, drawing an ever-tightening circle around Jerusalem. The Roman army first conquered Galilee in a swift and effective campaign, abetted by the Jews' lack of cohesion. Many places fell with little struggle, and long sieges were required at only two places, Jotapata (where Josephus was captured) and Gamala. The revolutionary John of Gischala escaped to Jerusalem when Titus attacked his city. All of the north was in Roman hands by the autumn of 67 CE.

In the spring and summer of 68 CE, Vespasian subdued Perea, Samaria, Judea, and Idumea. It was probably during these campaigns that Qumran was destroyed, not without resistance, judging from the Roman arrowheads discovered there and the fact that the place was burned to the ground. No literary source records the event, and the archaeological evidence is not sufficient to determine the identity of the defenders: they could have been the inhabitants of the place, or the Sicarii from Masada (or elsewhere), or both. (The discovery of some of the same texts at Qumran and Masada is not conclusive either way.) Nero's suicide in June 68 CE plunged Rome into a year of civil war, causing Vespasian to postpone the attack on Jerusalem; he had to content himself the following year with limited operations in the south, expelling the revolutionary leader Simon bar Giora, who took his large army to Jerusalem. Late in 69 CE, Vespasian went to Egypt and then Italy to make himself emperor, leaving his son Titus to finish the war.

Roman delays were not exploited by the Jews, who were distracted by their own internal struggles. Sometime in the winter of 67/68 CE, after the fall of Galilee, the armed rebel factions in Jerusalem, apparently led by the Zealots, seized control of the Temple Mount, murdered the government leaders, and established themselves in power, legitimizing their actions by appointing their own high priest (a certain Pinchas, also mentioned in rabbinic sources). John of Gischala, who had drawn close to the first regime, betrayed his friends and emerged as one of the leaders of the second regime. Once the militants gained power, they started quarreling among themselves; John was not a Zealot and for the rest of the war had unstable relations with this group. Internecine struggles became much more violent and destructive once Simon bar Giora, who had amassed a sizable army in Idumea,

was admitted into the capital in the summer of 69 CE through the connivance of high priests who were probably survivors from the first regime. Turf wars occupied the rest of that year, during which many people were killed and the considerable food supplies burnt. The destruction of the food supplies—recorded by Josephus, Tacitus, and the rabbis—was particularly unfortunate since Jerusalem's population had been swollen by the refugees arriving from all parts of the country conquered by the Romans.

The people of Jerusalem were divided and starving by the time Titus arrived in the spring of 70 CE with four legions (Leg. XII had been added to the force he received from his father) and numerous auxiliaries to begin the siege. The city was protected by three walls on the north, its only vulnerable side. The outer wall fell after three weeks of intense fighting, and the second wall nine days after that. The determination of the Jewish fighters, and their frequent successes in hand-to-hand combat, impressed even outside observers. Yet the Jews' defense of the city was hampered by almost continuous fighting within the walls as well as by spreading famine. Both Josephus and the rabbis tell awful tales of starvation. The suffering increased when the Romans, in response to the loss of quite extensive earthworks to Jewish counteroffensive measures at the innermost wall, surrounded the entire city with a siege wall, which blocked both escape from the city and the smuggling of food inside. Unburied corpses began to accumulate inside the city, and bloody purges took place as the ruling coalitions began to crack under the pressure.

Despite the effects of the siege wall, the Jewish defense did not completely collapse for another three months. Construction of new siege works took another three weeks, and the struggle for the Temple Mount—during which the two main Jewish factions abandoned turf wars to defend the Temple—was long, desperate, and costly for both sides. During six weeks of almost daily battles, the Romans slowly but systematically took possession of the Antonia fortress and surrounding porticoes. In the midst of the struggle, on 17 Panemos, according to the Macedonian calendar (= 17 Tammuz), the daily sacrifices stopped in the Temple because of the lack of sacrificial animals. Finally, on 10 Loos (= 10 Av, one day later than the traditional Jewish date commemorating the destruction), the Romans set fire to the Temple, which burned for days. The remnants of the rebel factions fled to the Upper City, where they were able to resist for about another month. After their final defeat, the Romans completed their systematic destruction of the city. Titus took Temple spoils and thousands of Jewish prisoners back to Rome, where they were displayed in the triumph, and Simon bar Giora was executed according to custom.

The war did not end with the destruction of Jerusalem, for the three fortresses—Herodium, Machaerus, and Masada—were still held by rebel forces. The governor, Lucilius Bassus, subdued the first two with little effort, and in 74 CE his successor, Flavius Silva, took Masada after a difficult siege, during which the Sicarii killed themselves to avoid falling into Roman hands.

Even the most skeptical or patriotic reader knows that most information about the First Jewish Revolt, and to a large extent how it is conceived and understood, depends on Josephus. Other sources—Greek and Latin literature, coins and archaeological finds, rabbinic literature—are comprehensible only by comparison to Josephus. The documents from the Judean Desert, given their nature, contain no clear direct reference to the struggle against Rome or the specific conflicts within the Jewish population attending the First Revolt. The allusions to Rome (*Kittim*) and visions of a monumental conflict at the end of time in the Qumran texts are general, schematic, and idealized, and merely help to clarify the factors that led to the massively destructive struggle.

JONATHAN J. PRICE

FIVE SCROLLS. The *Megillot*, or Five Scrolls, are five books belonging to the *Ketuvim*, or Writings, division of the Hebrew scriptures: *Song of Songs*, *Ruth*, *Lamentations*, *Ecclesiastes*, and *Esther*. These books were grouped together rather late in rabbinical tradition, and each is associated with a particular Jewish festival, during which it is read in its entirety: *Song of Songs* with Passover, *Ruth* with Shavu'ot, *Lamentations* with the Ninth of Av (the commemoration of the destruction of the First and Second Temples), *Ecclesiastes* with Sukkot, and *Esther* with Purim. All of the books, with the exception of *Esther*,

appear in several copies in the Judean Desert corpus. They do not appear there as a group, but as separate scrolls. In addition, three of the books, *Song of Songs*, *Ecclesiastes*, and *Esther*, share the distinction that their place in the canon has been questioned at different times. Although it is difficult to determine the extent of the canon in the period of the Second Temple beyond the Torah, Prophets, and Psalms, the presence of *Song of Songs* and *Ecclesiastes* at Qumran would at least indicate their acceptability as reading matter during the Second Temple period.

The *Song of Songs* is a love song between a man and a woman, which was interpreted by the rabbis as a metaphor of God's relationship with Israel, and by Christians as a metaphor concerning Christ and the Church. Its composition is difficult to date, although tradition ascribes it to King Solomon, famous for his many wives. Its *terminus ante quem* (the latest date), however, is the dates of the four copies of *Song of Songs* which appear at Qumran. Three manuscripts from Cave 4 preserve fragments of the *Song of Songs*. 4QCanticles^a, dated paleographically to the early Herodian period, contains portions of chapters 3.7–11, 4.1–7, 6.11[?]–12, and 7.1–7. 4QCanticles^b, dated to the end of the first century BCE, contains portions of chapters 2.9–17, 3.1–2, 3.5, 3.9–10, 4.1–3, 4.8–11, 4.14–16, and 5.1. 4QCanticles^c, also dated to the end of the first century BCE, contains 3.7–8. 4QCanticles^a and 4QCanticles^b are what their editor, E. Tov, calls "short texts" of the *Song of Songs*. That is, sections of the *Song of Songs* are deliberately omitted from these manuscripts, leading one to the conclusion that these are excerpted texts, rather than straight biblical manuscripts. For example, 4QCanticles^a omits the material in the *Song of Songs* from 4.8 to 6.11, while 4QCanticles^b omits the material between 3.5 and 3.9. The fact that these omissions are not the same indicate that the whole text of the *Song of Songs* was known, and that these manuscripts are shortened copies of it. The reason for the abbreviations is unclear. It is possible that they were liturgical texts. In addition, 4QCanticles^b contains scribal markings which resemble either Paleo-Hebrew or Cryptic A script; the purpose of these markings is uncertain. 4QCanticles^b also shows Aramaic influence in its grammar and morphology; this seems to be a scribal peculiarity and is not an indication of an Aramaic *Vorlage*. One manuscript from Cave 6 survives: 6QCanticles, which contains 1.1–7 and which M. Baillet dated to c.50 CE. This manuscript deviates in small details from the Masoretic Text of the *Song of Songs*, but too little material survives to make a definitive judgment. The *Song of Songs* has not yet been shown to have been used elsewhere in the literature of the Dead Sea Scrolls.

The book of *Ruth*, a charming novella telling the tale of

Ruth, a Moabite who becomes the ancestress of King David, is, in the Greek biblical tradition, grouped with the histories, where it appears in chronological order, after *Judges* and before *1 Samuel*. Its date is not easily determined, although a postexilic date seems preferable. *Ruth* occurs in four manuscripts from Qumran, two from Cave 2 and two from Cave 4. 2QRuth^a, which is dated paleographically to the first century CE, contains 2.13–23, 3.1–8, and 4.3–4, and differs little from the received text of *Ruth*. 2QRuth^b dates to c.50 BCE and contains 3.13–18. It displays, according to its editor, M. Baillet, a “certain independence” in its text, although there does not seem to be enough material remaining to determine its textual nature. 4QRuth^a contains 1.1–12, and 4QRuth^b contains 1.1–6, 1.12–15, not enough material to make any kind of textual statement. *Ruth* has not yet been shown to have been used elsewhere in the Judean Desert corpus.

The book of *Lamentations* is a collection of five poems, written in *qinah* meter, lamenting the destruction of Jerusalem by the Babylonians in 587 BCE. *Lamentations* was probably written shortly after that destruction in 587, and its author is unknown, although it is traditionally ascribed to the prophet Jeremiah. In fact, in the Greek tradition *Lamentations* is placed directly after the book of *Jeremiah*, and Josephus seems to group *Jeremiah* and *Lamentations* together as one book (*Against Apion* 1.8).

Lamentations occurs in four copies at Qumran, one from Cave 3, one from Cave 4, and two from Cave 5. 3QLamentations, a Herodian manuscript, contains 1.10–12 and 3.53–62. In it, the divine name *Yahveh* is written in Paleo-Hebrew script, but the remains are too small to make a judgment about the character of the text. 4QLamentations, written in a Herodian vulgar semiformal script, contains three columns comprising 1.1–18, and a small scrap containing 2.5. According to its editor, F. M. Cross, it occasionally presents better readings than the received text. 5QLamentations^a, dated to the first century CE, contains 4.5–8, 4.11–16, 4.19–22, 5.1–13, and 5.16–17. According to its editor, J. T. Milik, “the relationship of 5QLam^a to other recensions of the same book [i.e., Masoretic Text, Septuagint] is not clear” (Milik, 1962, p. 175). 5QLamentations^b also dates to the first century CE, but is written in a different hand than 5QLamentations^a. It contains 4.17–20, which is not enough material to make a textual statement. *Lamentations* is not quoted or alluded to in other texts of the Dead Sea Scrolls.

The book of *Ecclesiastes* (or, in Hebrew, *Qohelet*) is part of the Wisdom corpus of the Hebrew scriptures (the other texts being *Proverbs*, *Job*, and certain of the *Psalms*), and dates probably to the fourth or third century BCE, although it is traditionally ascribed to Solomon, the legendary wise king. *Ecclesiastes* had trouble gaining canonical status because of the distinct antireligious tone adopted

throughout the book; it was saved only by the pious coda (12.13–14), probably not the work of the original author.

Ecclesiastes exists in two manuscripts from Cave 4, Qumran, 4QOheleth^a and 4QOheleth^b. 4QOheleth^a is dated paleographically to 175–150 BCE, which makes it certain that the manuscript was not copied at Qumran, but was brought there from elsewhere, since the archaeological evidence places the founding of the settlement no earlier than circa 150 BCE. It contains 5.13–17, 6.1, 6.3–8, 6.12, 7.1–10, and 7.19–20. 4QOheleth^b, dated to c.50 BCE, contains 1.10–14 (15?). Both manuscripts show only minor variants from the received text. *Ecclesiastes* is not cited or alluded to in other literature of the Dead Sea Scrolls.

The book of *Esther* is the only book of the Hebrew scriptures not preserved among the Dead Sea Scrolls (no trace of *Nehemiah* is found either, but scholars assume in its case that since it was often copied on the same scroll as *Ezra*, and *Ezra* is found at Qumran, *Nehemiah* was there as well). Several reasons have been advanced for the absence of *Esther*, but the more likely explanations are:

1. It is mere accident or chance that no fragments have survived.
2. The book, written in the Diaspora, was relatively unknown in Palestine at this time and its festival of Purim was not celebrated.
3. Some scholars date the Hebrew version of *Esther* as late as the second century CE; therefore it could not fall within the dates of the Judean Desert corpus, all prior to 135 CE.

While *Esther* itself does not appear among the Dead Sea Scrolls, there is an Aramaic text from Cave 4, 4Q550 or “Tales from the Persian Court,” which resembles the book of *Esther* in style and setting. 4Q550 contains stories concerning Jewish protagonists in the Persian Court, and gives rise to the theory that there existed a cycle of tales concerning Jews in the Persian Court from which the book of *Esther* was derived, in much the same way as the book of *Daniel* was derived from a cycle of Daniel tales.

Although these five books do not appear as a group among the Dead Sea Scrolls, they do have certain characteristics in common. The four which are preserved at Qumran appear only in Cave 4 (the major storage cave) or in the minor caves. They are preserved in only a few copies, at most four, and these are all fragmentary. None of them is cited or alluded to in other literature of the Dead Sea Scrolls. While no conclusion can be drawn from this evidence concerning these five books’ canonical status, it is possible to surmise that these texts were peripheral to the main currents of thought in the Qumran corpus, and occupied a less important place than other

books that were not later canonized, such as *1 Enoch* and *Jubilees*.

FLORILEGIUM. The text in 4QFlorilegium (4Q174) is not strictly a florilegium (anthology), but a thematic interpretation of various passages of scripture, notably parts of *Deuteronomy* 33, *2 Samuel* 7, and *Psalms* 1, 2, and 5. The term "the last days" occurs several times and has resulted in several scholars' designating the composition "Eschatological Midrash" (Allegro 1958:350–351; Steudel 1994). The composition shares many aspects of its formal presentation and vocabulary with the 4Q Catechism^a (4Q177), but there is no textual overlap between the two manuscripts, so they should be considered separate compositions for the time being (as also 4Q178, 4Q182, 4Q183).

Twenty-six fragments from Qumran Cave 4 in an early Herodian formal script with some rustic semiformal elements (Strugnell 1969–1970:177) have been assigned to this manuscript, which can be dated to the second half of the first century BCE. The orthography is generally full.

The editions of Allegro (1968) and Brooke (1985) analyzed the fragments largely independently of one another. In a more detailed study, Steudel (1994) has arranged the extant fragments according to their damage patterns. She has suggestively proposed that eighteen fragments can be assigned to six different columns belonging to two different sheets of parchment. The principal scriptural pas-

sages being interpreted are thus coincidentally in canonical order: *Deuteronomy*, *Samuel*, *Psalms* (Puech 1993:573; cf. *Sir.* 1.24–25). Steudel's column numbers are used in this article.

The extant part of column i (frgs. 6, 7, 8, 9) contains quotations of *Deuteronomy* 33.8–11 and 33.12, the blessings of Levi (cf. the Testimonia in 4Q175 14–20) with a small amount of interpretation between them. The remains of column ii (frgs. 4, 9, 10, 11) contain a quotation from *Deuteronomy* 33.20–21 with interpretation; fragment 4 has hints of a discussion of the rule of Belial and may have contained a secondary quotation of *Isaiah* 24.17–18 (Steudel 1994, 40; cf. CD iv.10–14) before leading into *2 Samuel* 7.10 (Puech 1993, 573).

Column iii (frgs. 1, 2, 21) preserves top and bottom margins, showing that there were nineteen lines per column in this manuscript. The column begins with a continuation of the quotation of *2 Samuel* 7.10–11, which is then interpreted through the secondary use of *Exodus* 15.17–18 stressing the sovereignty of God. The "place" (*maqom*) of *2 Samuel* 7.10 is interpreted as referring to the eschatological Temple, to which there will be limited access (cf. *Deut.* 23.2; 4Q396 1–2.i.5). This eschatological Temple, probably the Temple that God himself will make (cf. 11Q Temple Scroll^b xxix.9), is proleptically anticipated by the community, which is described as a "sanctuary of men" (*miqdash adam*) (Dimant 1986), a phrase some have understood as "sanctuary amongst men" and others as "sanctuary of Adam" (Wise 1994). Quotation of part of *2 Samuel* 7.11 allows the commentator to argue that eschatological rest will be given to the sons of light, and the sons of Belial will stop all their devious scheming. *2 Samuel* 7.11–14 is then cited in a carefully abbreviated form and interpreted through the secondary quotation of *Amos* 9.11 (cf. CD vii.16; *Acts* 15.16). It is explained that the "Branch of David" (cf. *Jer.* 23.5, 33.15; 4Q161 7–10 iii.22; 4Q252 v.3–4; 4Q285 v.3–4) will arise with the Interpreter of the Law (cf. CD vi.7, vii.18) in the last days. The Interpreter of the Law is best understood as the anointed priestly counterpart to the Davidic messiah. Perhaps the earlier use of *Deuteronomy* 33.8–11 was interpreted to refer to this priestly messiah. The two figures together reflect the common community expectation of two messiahs. The Davidic messiah will arise in Zion to save Israel.

The whole passage (iii.1–13) is a delightful play on the full range of meanings of "place," "house," and "sanctuary"; reference is made to the Temple, past (iii.5–6), present (iii.6), and future (iii.3–4), to the community as sanctuary (iii.6; cf. *The Rule of the Community*, 1QS vii.5–9), and to the house of the Davidic messiah (iii.10–13). The sanctuary of men is described as a place where offerings will be made to God. These offerings are described as

“works of thanksgiving” (*ma’asei todah*), probably a subtle play on the phrase “works of the Law (*ma’asei ha-torah*)” (4Q398 2.ii.3; cf. 1QpHab viii.1, xii.4; 4Q270 9.ii.19; 4Q398 18; CD iv 18, vi 14). The sanctuary of men may also be Adamic, inasmuch as it anticipates the time when the paradisiacal sanctuary (cf. 4Q265 2.ii.1–17; *Jub.* 1:17) will be restored and the community will share in “all the glory of Adam” (CD iii.20).

In a new paragraph introduced with the phrase “Midrash of” (*midrash min*), Psalm 1.1 is cited and then interpreted through the secondary use of *Isaiah* 8.11 (cf. CD vii.16) and *Ezek.* 37.23. There follows a citation of Psalm 2.1. Those who meditate on the Law are those who turn aside from the way of the wicked and are no longer defiled with idolatry. The interpretation of the Psalm runs into the top of column iv (frgs. 1, 3, 5, 12, 24) and includes the secondary quotation (some of it supralinear) of *Daniel* 11.32, 11.35, and 12:10. There is a detailed description of the community as the elect ones who will endure suffering and thus be like the righteous ones of *Daniel* 11.32. The community is also called the Sons of Zadok (cf. CD iv.3–4), and probably the House of Judah (4Q174 ii.15, iv.1; cf. CD iv.11, vii.12–13; 1QpHab viii.1).

To column v Steudel has assigned fragments 13 and 14, which contain part of Psalm 5.3 with interpretation. Fragments 15 and 19 (col. vi) probably contained a secondary quotation of *Isaiah* 65.22–23 and its interpretation.

Overall, this sectarian composition is concerned with the way various unfulfilled blessings and prophecies are being and will be fulfilled in the experiences of the community. The exegetical methodology of the interpreter is clear: secondary supportive proof texts are joined to the passage they interpret through catchwords (as in the rabbinic *gezerah shavah*). For example, *Exodus* 15.17–18 is joined to 2 *Samuel* 7.10 through their common use of “to plant” (*nt*). As in 4QCatena^a, only the *Psalms* quotations have interpretation introduced with a formula using the technical term *pesher*. The use of the term *midrash* in iii.14 seems to be technical, not referring to a literary genre (as the later rabbinic *midrashim*), but identifying a method of scriptural exposition.

The principal fragments are primarily concerned with the sovereignty of God himself and with the character of the community as the eschatological Temple in anticipation and as the elect of Israel who are enduring a time of trials. There is also some interest in the Davidic messiah,

though “his messiah” of Psalm 2:2 is interpreted to refer to “the elect ones of Israel,” the community itself, rather than the Davidic messiah.

2 *Samuel* 7 and Psalm 2 are also treated together in *Acts* 13.33–37 and *Hebrews* 1.5. Several of the concerns of the Florilegium are also to be found in 2 *Corinthians* 6.14–7.1, commonly thought to be an interpolation.

GEORGE J. BROOKE

G

GENESIS, BOOK OF. Before the discovery of manuscripts at Qumran, there were three major sources for the text of *Genesis*. The Masoretic Text (MT), the Hebrew text passed down in Jewish circles in an unbroken manuscript tradition from antiquity to the present, is overall quite a good text and often (but by no means always) preserves the original reading. The Septuagint is an idiomatic but accurate translation into Greek made in the third century BCE. It has numerous small differences from the Masoretic Text, many of which seem to have been present in its Hebrew base text. The Samaritan Pentateuch tends to expand the text by frequently inserting parallel material from other places in the Pentateuch. These expansions are relatively rare in *Genesis*, however.

Frank Moore Cross, following William Foxwell Albright, has argued that these three sources of the Pentateuch—the Masoretic Text, the Septuagint, and the Samaritan Pentateuch—developed through long transmission in three different locations (Babylon, Egypt, and Palestine, respectively) and should be considered three distinct text types. This theory has been widely challenged, especially by Emanuel Tov, and few, if any, scholars now accept the suggested geographical origins. My contention is that Cross is correct in essence, but that we should speak of two text types (the Masoretic Text and Septuagint) and one deliberate revision or recension (the Samaritan Pentateuch) based on the proto-Masoretic Text (see Davila, 1993, 3–37; “Text-Type and Terminology: Genesis and Exodus as Test Cases” (*Revue de Qumrân* 16/61 [1993] 3–37).

The textual basis of *Genesis* outlined above has been widened considerably by the recovery of at least nineteen fragmentary manuscripts of the book from Qumran: 1QGenesis (1Q1), 2QGenesis (2Q1), 4QGenesis-Exodus^a (4Q1), 4QGenesis^{b-g} (4Q2–7), 4QGenesis^{h1} (4Q8), 4QGenesis^{h2} (4Q8a), 4QGenesis^{h-title} (4Q8c), 4QGenesis^{h-k} (4Q9–10), 4QPaleo-Genesis-Exodus^l (4Q11), 4QPaleo-Genesis^m (4Q12), 4QGenⁿ (no inventory number), Genesis or Jubilees? (4Q483), 6QPaleo-Genesis (6Q1), and 8QGenesis (8Q1). (4QGenesis^{h-title} contains only the title of the book—misspelled!) Several other manuscripts of *Genesis* have been found elsewhere in the Judean Desert: Mas-Gen?, Mur 1:1–3, Mur?Genesis, and Sdeir 1. Some of these manuscripts (especially 4QGenesis^{h1}, 4QGenesis^{h2}, 4QPaleo-Genesis^l, and 4QGenⁿ) preserve only a few words or letters of the book. None of the Genesis manuscripts

from anywhere in the Judean Desert is well preserved. All the Qumran manuscripts that contain enough material for analysis belong to the same text type as the Masoretic Text (4QGen^b is virtually identical), but most have some orthographic differences from it and contain minor textual variations. The fragments of *Genesis* from other sites in the Judean Desert are even closer to the Masoretic Text, with very few textual or orthographic variants. The variants in the Genesis manuscripts from the Judean Desert, including Qumran, all involve orthography or individual readings. There are no variant redactions like those found for *Exodus*, *Numbers*, and *Jeremiah*.

Some of the readings are of interest in themselves. For example, the text of *Genesis* 1.9 in the Septuagint has two significant variants from the Masoretic Text, both of which are attested in Hebrew at Qumran. Instead of “place” (*maqom*), the small scrap that constitutes 4QGenesis^{h1} reads “gathering-place” (*niqveh*). A fragment of 4QGenesis^k adds the phrase “[and the waters were gathered beneath the heavens to their gathering-places] and the dry la[nd] appeared” to the end of the verse, filling it out according to the normal structure of the acts of creation in the chapter. This longer reading is supported by the Septuagint and seems to be original. A smattering of readings in the manuscripts demonstrates that there were Hebrew base texts for a number of other variants in the Septuagint, confirming that at least some of the differences from the Masoretic Text found in the Septuagint were due to a different Hebrew base text rather than creative exegesis by the translator. This at least partial vindication of the Septuagint as a translation is probably the most important new datum provided by the *Genesis* manuscripts.

A particularly striking individual variant in *Genesis* 22.14 is found in a small fragment of 4QGenesis-Exodus^a and appears in no other text, with the possible exception of a Sahidic Coptic manuscript. In the other textual witnesses to this verse, Abraham names the place where his son Isaac was nearly sacrificed *Yahveh yir'eh*, “Yahweh sees.” But in 4QGenesis-Exodus^a the name is given as [*E*]lo[*h*]im yir'eh, “God sees.” This difference is significant because many scholars have argued that the narrative in *Genesis* 22.1–4 was derived from the E (Elohistic) source, a source that is reconstructed to have used no divine name but *Elohim*, “God.” The presence of the name

Yahveh in 22.14 has always been a difficulty, and it is my contention that it is secondary and that the original reading has been preserved by 4QGenesis-Exodus^a. Thus the Qumran manuscripts of *Genesis* are relevant for source criticism of the Pentateuch as well as textual criticism.

Although there are no systematically reworked redactions of *Genesis* at Qumran, there are documents that are inspired by it (or by the Pentateuch overall) and that paraphrase it, sometimes closely. The text known as the Reworked Pentateuch^a (4Q158, 4Q364–365, 4Q366–367) is based on the Pentateuch but heavily rewrites, reorders, and supplements the material in it. There are also fragments of Peshet-type commentaries on *Genesis* (4Q252–254a). The Hebrew fragments of the book of *Jubilees* (1Q17–18; 2Q19–20, 3Q5, 4Q216–224, 11Q12), a work known as Pseudo-Jubilees^a (4Q225–227), and 4QExposition on the Patriarchs (4Q464), as well as the Aramaic Genesis Apocryphon (1QapGen, 1Q20) and so forth, follow the story line of *Genesis* but rewrite it and expand it more freely than the Reworked Pentateuch. 4Q422, entitled Paraphrase of Genesis-Exodus, also paraphrases the creation, fall, and flood narratives of *Genesis*, along with the story of the Egyptian oppression of the Israelites and the ten plagues. It is possible, although quite unlikely, that 6QGenesis? (6Q19) is an Aramaic translation or paraphrase of *Genesis*. Other texts, such as the Enoch literature (4Q201–202, 4Q204–212, etc.) and the Book of Giants (1Q23–24, 2Q26, 4Q203, 4Q530–532, 4Q533?, 6Q8), draw on the subject matter of *Genesis* without adhering to the wording or story line to any significant degree.

The large number of copies of the work recovered from Qumran, as well as its wide influence on Second Temple texts also found there, indicate that *Genesis* was a very important work to the compilers of the Qumran library and to Second Temple Judaism in general.

JAMES R. DAVILA

GENESIS, COMMENTARY ON. Four fragmentary manuscripts from Cave 4 (4Q252, 4Q253, 4Q254, 4Q254a) contain implicit and explicit commentary on the *Book of Genesis*, or selected passages thereof.

The most extensive of these is 4Q Commentary on Genesis A (4Q252; formerly 4QpGen^a). Originally, two fragments containing quotation and interpretation of parts of *Genesis* 49 were allotted to J. M. Allegro, who published one of them as 4Q Patriarchal Blessings. As the remaining fragments from Cave 4 were sorted, J. T. Milik realized that those two fragments belonged with others as part of a single composition. Altogether, six fragments in an early Herodian hand have been assigned to this manuscript.

Based on various physical features, it can be determined that the scroll almost certainly consisted of a single sheet of parchment about 60 centimeters long with six columns of writing. The first four columns (7–9 cm) are wider than the last two (6.5 cm). The commentary covers various texts from *Genesis* 6–49. In those places where non-Masoretic variants are attested in the cited biblical text, these tend to reflect the type of text known from manuscripts of the Septuagint, an intriguing matter, since nearly all the manuscripts of *Genesis* from Qumran predominantly anticipate the Masoretic Text.

The contents of the scroll are especially significant because of the variety of types of biblical interpretation that are represented, including rewritten Bible, halakhic exegesis, and *peshet*. The opening (4Q252 i.1–ii.5) is a rewritten form of the flood narrative. Calendrical matters in the account are highlighted, and the chronology of the flood is shown to fit precisely with a 364-day year (cf. 11QPsalms^a xxvii.6–7) in which dates are given according to the days of the week (first, second, etc.) as well as the days of the month. The 364-day calendar also lies behind the festival calendar of the Temple Scroll. Nothing in the flood narrative takes place on a Sabbath.

The commentary then explains (ii.5–8) why Canaan was cursed rather than Ham: in a poetic style which uses the phrasing of *Genesis* 9.1, 9.27 and 2 *Chronicles* 20.7, the descendants of Ham and Japheth are excluded from divine favor. It is likely that this reflects a political wish

at the time the commentary was composed for the exclusion of foreigners from the land of Israel (cf. 1QM i.6, xviii.2). A second section with chronological concerns treats the entry of Abram into the Land; ii.8-10 attempts to solve the textual problems of *Genesis* 11-12 by rewriting the narrative of *Genesis* 11.31 with a precise dating system. The commentary is thus interested in both annual calendars and also longer periods of years.

Several very fragmentary sections concerning Abraham, about which little can be said, follow: They appear to be concerned with the Covenant of the Pieces (*Gn.* 15.9, 15.17; 4Q252 ii.11-13); the twelve princes (*Gn.* 17.20; 4Q252 iii.1-2); the destruction of Sodom and Gomorrah (*Gn.* 18.31-32; 4Q252 iii.2-6), in which there is halakhic interpretation using phrases from *Deuteronomy* 13.16-17, 20.11, and 20.14; and the binding of Isaac (*Gn.* 22.10-12; 4Q252 iii.6-10). Then there seems to be reference to the blessing of Jacob (*Gn.* 28.3-4; 4Q252 iii.11-14). Discussion of the destruction of Amalek follows (*Gn.* 36.12 with *Dt.* 25.19; 4Q252 iv.1-3). Because Saul spared Agag and took the booty, his dynastic aspirations were forfeited; the exegesis shows that the destruction which Saul failed to carry out will be fulfilled in the eschatological period. Thus *Genesis* 36 becomes a kind of unfulfilled prophetic text. Other contemporary texts discuss the destruction of Amalek (*T. Sim.* 5.4-6.5; Pseudo-Philo, *Biblical Antiquities*, on *Judges* 19); Amalek is commonly associated with promiscuity and sexual misdemeanors.

From iv.3 to the end the text is a commentary on the blessings of the sons of Jacob. Parts of those for Reuben (*Gn.* 49.3-4), Judah (*Gn.* 49.10), as well as Asher and Naphtali (*Gn.* 49.20-21) survive. In this section the commentary takes the form of the explicit quotation of the biblical text followed by commentary formulaically introduced by the term *pesher*. The blessing of Reuben is completely represented. Its interpretation states that Jacob reproved Reuben for sleeping with his concubine Bilhah (*Gn.* 35.22). The blessing of Judah is interpreted with the language of *Jeremiah* 33.17 and understood to speak of the branch of David (cf. *Jer.* 23.5, 33.15; 4Q161 7-10.iii.22, 4Q174 i.i.11, 4Q284 5.3, 5.4), the royal Messiah. At this point the interpretation is clearly sectarian with mention of the "men of the community" (cf. 1QS vi.21, vii.20, viii.11).

It is difficult to discern how the commentator went about his task. Many of the interpretations explain problems in the plain meaning of the text of *Genesis*, but others are eschatological and sectarian. It seems that the commentator worked from a collection of sources which were written in different styles. This helps to explain the abrupt shift between the various pericopae and also the great variety of genres of interpretation in the six extant columns. The whole is organized according to the order

of *Genesis* itself, but because only a selection of passages is discussed, it is not a continuous, running commentary (like the *Pesher Habakkuk*). The overall compilation can be read as a kind of exhortatory historical exegesis, setting right the chronologies of the past and indicating how the unfulfilled blessings and curses of *Genesis* are to be fulfilled. Alternatively, the commentary may have functioned as a quasi-legal document in which the commentator makes a claim to the Land (no sections of *Genesis* dealing with Abraham or Joseph outside of the Land are included) and makes a particular plea for how the true heirs to the Land should lead lives of calendrical and sexual propriety.

To 4QCommentary on *Genesis* B are assigned three fragments in a late Hasmonean or early Herodian hand. There are no overlaps with the Commentary on *Genesis* A. Fragment 1 mentions the Ark of the Covenant. Fragment 2 may be associated with Jacob and his cultic activities. Fragment 3 speaks of Belial, but cannot be placed in relation to the text of *Genesis*.

4QCommentary on *Genesis* C survives in seventeen small fragments written in an early Herodian formal hand. None of the fragments is extensive, but, like the Commentary on *Genesis* A, this text seems to offer interpretations of blessings and curses: the curse of Canaan (*Gn.* 9.24-25), the events leading up to the binding of Isaac (*Gn.* 22.5-17), as well as the blessings of Judah (*Gn.* 49.8-12), containing an allusion to the "two sons of oil" of *Zechariah* 4.14, of Issachar (*Gn.* 49.14-15), of Dan (*Gn.* 49.16-17), and of Joseph (*Gn.* 49.22-25).

The fourth manuscript in this group, 4QCommentary on *Genesis* D, is extant in three fragments in a developed Herodian formal hand. In fragments 1-2 there is a description of the measurements of Noah's ark, partly citing *Genesis* 6.15. Fragment 3 is concerned with Noah's disembarkation (cf. 4Q252 ii.1-5) and something that the raven makes known to the latter generations.

GEORGE J. BROOKE

GENESIS APOCRYPHON. This fragmentary text 1QapGen, discovered in 1947 among the seven major scrolls from Cave 1 at Qumran, contains parts of twenty-three columns of an Aramaic paraphrase of stories in the *Book of Genesis*. Only three columns (1QapGen xx–xxii) are more or less completely preserved; three others (1QapGen ii, xii, xix) have a substantial part that is legible; and other columns (1QapGen i, iii, v–vii, x–xi, xvi–xvii) have preserved a few words or a few lines. To this text also belongs 1Q20 ("Apocalypse de Lamech"), which in a recent identification by Bruce Zuckerman and Michael O. Wise has been shown to be part of column 0, as well as the seven-line so-called Trever fragment, now lost, which still awaits official publication.

Written in a late Herodian script, this copy is dated paleographically to 25 BCE through 50 CE (plus or minus twenty-five years). It has not been subjected to radiocarbon dating. [See Carbon-14 Dating.] That date may also serve as the time of composition of the Genesis Apocryphon (1QapGen), because this copy may be the autograph; no other copy has been found. If it is not the autograph, then the date of composition might be pushed back to the early first century BCE because of its literary dependence on *Jubilees* and *1 Enoch*. L. F. Hartman (*Catholic Biblical Quarterly* 28, 1966, 497–498) has shown that the chronology of Abram's life is a development of *Genesis* 16.3 but closely tied to the "weeks" chronology of *Jubilees*. The text was composed in the Palestinian form of Middle Aramaic now known from other Qumran texts, which is transitional between the Aramaic of Daniel and that of the earliest of the classical Targums (Onkelos and Jonathan; Kutscher, 1958, p. 22).

The conventional title, Genesis Apocryphon, assigned by the original editors, is a misnomer; it says nothing about the literary form of the writing. Although the Aramaic at times translates literally the Hebrew text of *Genesis* (e.g., *Gen.* 14.1–24 in 1QapGen xxi.23–xxii.24), it more frequently renders the biblical text freely. Phrases literally translated then become part of an expanded paraphrase. Hence, the Genesis Apocryphon (1QapGen) is scarcely a Targum, not even one like the later paraphrastic Targums. Some of its expansions resemble elements found at times in classical *midrashim* of the later rabbinic period, but as a whole the text is not a *midrash* on *Genesis*. It is a form of parabiblical literature, resembling *Jubilees* (on which it depends); part of *1 Enoch*, and Pseudo-Philo's *Biblical Antiquities*. A more appropriate title was suggested by B. Mazar, "The Book of the Patriarchs," which in Aramaic would be *Ketav Avahata*.

The Genesis Apocryphon (1QapGen) narrates in expanded form the story of two biblical patriarchs: Noah (0–xvii?) and Abram (xviii?–xxii). [See Abraham; Noah.] The first well-preserved part recounts Lamech's anxiety about the conception of the remarkable child, Noah, born to his wife Bilenosh, and his consultation of his father Methuselah and of Enoch (i.–iii.). It then tells of Noah's family and God's message about the Deluge, Noah and his family's entrance into the ark and eventual sacrifices (vi.–x.), God's covenant with Noah, the children born to him after the Deluge and the planting of a vineyard on Mount Lubar (xi.–xii.30), Noah's vision of trees and heavenly effects on them (xiii.–xv.), and finally Noah's division of the earth among his sons and his descendants (xvi.–xvii.).

The better preserved second part paraphrases the story of Abram in six sections:

- Abram in Ur and Haran (xviii.–?)
- Abram in Canaan (xviii.–xix.10a)
 - Journey to Bethel (xix.–6)
 - Journey from Bethel to Hebron (xix.7–10a)
- Abram in Egypt (xix.10b–xx.33a)
 - His descent into Egypt because of the famine in Canaan (xix.10b–13)
 - His dream about the cedar and date palm on entering Egypt (xix.14–23a)
 - The visit to Abram by three Egyptian courtiers (xix.23b–27)
 - Sarai's beauty described to Pharaoh by the courtiers (xx.2–8a)
 - Sarai's abduction to Pharaoh and Abram's grief (xx.8b–11)
 - Abram's prayer that Sarai not be defiled (xx.12–16a)
 - A plague strikes Pharaoh and his household (xx.16b–21a)

- Pharaoh's cure by Abram's prayer and exorcism (xx.21b-31a)
- Pharaoh sends Sarai and Abram out of Egypt (xx.31b-33a)
- Abram in the Promised Land (xx.33b-xxi.22)
 - Abram's return with Lot to Bethel (xx.33b-xxi.4)
 - Lot's departure from Abram and settlement in Sodom (xx.5-7)
 - Abram's dream about the Promised Land (xxi.8-14)
 - Abram's exploration of the extent of the Promised Land (xxi.15-22)
- Abram's defeat of the four invading kings (xxi.23-xxii.26)
 - The war of the four kings against the five Canaanite kings (xxi.23-34a)
 - Lot is taken captive (xxi.34b-xxii.1a)
 - Abram learns of Lot's capture and his pursuit of the four kings (xxii.1b-12a)
 - The kings of Sodom and Salem meet Abram on his return from the defeat of the kings (xxii.12b-17)
 - Abram's refusal to retain any of the booty of the king of Sodom (xxii.18-26)
- Abram's vision of God, who promises him an heir (xxii.27-?)
 - Eliezer will not inherit him (xxii.27-34) [lost]

Despite claims to the contrary, the Genesis Apocryphon (1QapGen) is not a sectarian composition; it contains nothing related to the tenets or the dualistic theology of the Qumran community such as are expressed in its sectarian writings (rule books, hymnbooks, the War Scroll, [1QM] or the *peshtarim*). Moreover, this text is composed in Aramaic, whereas the Qumran sectarian writings were composed in a form of postbiblical Hebrew. The Genesis Apocryphon represents, then, a text composed by Jews, which was found acceptable for reading and study in the Qumran community. Although it does show some relation to *Jubilees* and part of *1 Enoch*, that relationship explains only why it would have appealed to the members of the Qumran community. As do those writings, the Genesis Apocryphon reveals a way that biblical writings themselves were being interpreted among Palestinian Jews of the pre-Christian era. The text paraphrases the biblical story of two paragons of righteousness: Noah (*ish tsaddiq*, Gn. 6.9) and Abram (*va-yahsheveha lo tsedaqah*, Gn. 15.6).

Two elements of the Genesis Apocryphon are noteworthy: the insert into the *Genesis* story about Sarai's beauty (1QapGen xx.2-8a) and the insert about Abram's exploration of the Promised Land (1QapGen xxi.15-22). The first insert enables Egyptian courtiers who have visited Abram to laud Sarai's extraordinary beauty before the Pharaoh so that he abducts Sarai to be his wife. The poetic ac-

count of her beauty has been related to the literary genre known in Arabic literature as *watsf*, "description," which extols the personal charms of a loved one. Outside of the *Song of Songs*, this may be the only instance of such a form in Jewish writings. It is far more extensive than any of the statements about Sarai's beauty in later rabbinic literature (B.T., *Sanhedrin* 8.69b; *Tanhuma*, Lekh 5; *Genesis Rabbah* 58.1).

The second insert tells how Abram went from Bethel, where he was living, to explore the land that God in a dream promised to give him and his posterity. God had instructed Abram to climb up to Ramath-Hazor, north of Bethel, to the highest spot in the Judean mountains, from which he would gaze to the east, south, west, and north. Abram did that on the day following his dream and gazed from the River of Egypt (the Nile) to Mount Lebanon and Senir (Mount Hermon), from the Great Sea (the Mediterranean) to Hauran (the plateau between the Pharpar and Yarmuk Rivers), at all the land of Gebal (Seir) as far as Kadesh, and at all the Great Desert (Syrian Desert) to the east of the Hauran as far as the Euphrates. God told Abram to travel through this area, which he proceeded to do. The insert itself (1QapGen xxi.15-22) tells how Abram started at the Gihon River (part of the Nile), moved along the (Mediterranean) Sea to the Mount of the Ox (Taurus mountain range), then from the Great Sea to the Euphrates River, then down along the Euphrates to the Red Sea (Persian Gulf and Indian Ocean), then along the Red Sea to the tongue of the Reed Sea (tongue-shaped Gulf of Suez), then back to the Gihon River, whence he started. Then he returned to Hebron, where he feasted with his Amorite friends. What is noteworthy in this description of Abram's travels is the distinction of *yamma simmoqa*, "Red Sea," from the *lissan yam suf*, "the tongue of the Reed Sea." Josephus (*Jewish Antiquities* 1.39) also knows that the Tigris and the Euphrates empty into the Red Sea (*Erythran thalassan*), as do other ancient writers. Also remarkable is the geographical extent of what the Promised Land was to be.

Likewise important is the treatment of the king of Sodom and Melchizedek in the Genesis Apocryphon (1QapGen) xxii.12-23, which purports to be a rendering of *Genesis* 14.17-24. First, it tells of the king of Sodom coming to "Salem, that is Jerusalem" (1QapGen xxii.13). This equation stands in contrast to *Hebrews* 7.1-2, where Melchizedek himself is called "the king of Salem," which is said to mean "king of peace," a popular etymology current in the first century CE. The identification of "Salem" with "Jerusalem" is to be traced to the tradition preserved in *Psalms* 76.2, where Salem stands in parallelism to Zion (cf. Josephus, *Jewish Antiquities* 1.180). It stands in conflict, however, with the opinion of some modern scholars (Hermann Gunkel, W. F. Albright), who maintained that

Genesis 14.18–20 originally had nothing to do with Jerusalem. In the Genesis Apocryphon (1QapGen) xxii.14–15, Melchizedek is said to have brought out “food and drink for Abram and all the men who were with him”; so the “bread and wine” of *Genesis* 14.18 are interpreted. This agrees with the paraphrase of this *Genesis* text in Josephus's *Jewish Antiquities* 1.181 but differs from the sacrificial interpretation given to it by some patristic writers. Again, *Genesis* 14.20 records that after Melchizedek blessed Abram “he paid him a tithe of everything.” Ever since the time of Jerome (*Epistles* 73.6; *Corpus scriptorum ecclesiasticorum Latinorum* 55.20), the ambiguity of the statement about tithes has been noted: Who paid whom? No subject of the verb is expressed in either the Masoretic Text or the Septuagint, and the subject of the preceding verb is Melchizedek. The Genesis Apocryphon (1QapGen) xxii.17, however, solves the problem: “And he gave him a tenth of all the flocks of the king of Elam and his confederates.” Thus Abram paid tithes to Melchizedek, and so the ambiguous text gets the same interpretation as *Hebrews* 7.2, where *Abraam* has been inserted.

When Melchizedek exercises his priestly office in blessing Abram, he invokes not “the most high God, the creator of heaven and earth” (*Gn.* 14.19) but “the most high God, lord of heaven and earth” (1QapGen xxii.16). The latter title is undoubtedly venerable in Jewish tradition but not often found (see *Tb.* 7.17; Septuagint mss. B,A [unfortunately not preserved in *Tobit*⁴ 4Q196–200]). It has its Greek counterpart in *Matthew* 11.25 and *Luke* 10.21. Lastly, when Abram swears that he will take none of the booty of the king of Sodom, he raises his hand “to the most high God, the lord of heaven and earth” (1QapGen xxii.21), and the Tetragrammaton of *Genesis* 14.22 (*el YHVH el 'elyon*) is lacking. It thus confirms the suspicion of modern scholars who have regarded YHVH as a gloss in the Masoretic Text, since its counterpart is absent in the Septuagint and Peshitta.

JOSEPH A. FITZMYER, S.J.

GENTILES. The view of the non-Jewish nations, known as gentiles, in Jewish literature of the Second Temple period embodies both the deprecation of paganism and the universalism inherent in prophetic teaching. This duality may already be illustrated in the later components of the *Book of Isaiah*, where the nations are esteemed as nothing before the Lord (*Is.* 40.17), yet the foreigner is beckoned not to remain separate but to join his covenant with Israel (*Is.* 56.3–8). Hellenistic Jewish literature comprises not only cosmopolitan works, such as the *Letter of Aristeas*, in which the Torah is portrayed as compatible with the finest gentile ethics and wisdom, but also works such as *3 Maccabees*, which has a point of view characterized as narrowly Jewish and antigentile. Among Judean writings the latter view is most prominent in the *Psalms of Solomon*, where the depiction of gentiles reflects the oppression by the Roman conquerors. *Jubilees* (23.23) likewise describes the “sinners of the nations” who have no mercy for old or young. Qumran writings have many affinities with these works and share their pejorative estimate of pagan culture. Among heathen “abominations,” Temple Scroll singles out their burial of the dead in homes (11Q19 xlviii.12), the cult of Molech (lx.17), and necromancy (lx.19). The savagery of the *Kitim*, who are generally identified as the Romans, is vividly portrayed in Peshet Habakkuk (1QpHab).

As one might expect, the deprecation of pagans is most pronounced in the War Scroll (1QM), where expressions such as “nations of wickedness” and “nations of futihty”

are frequently found. In accordance with the deterministic bent of Qumran theology, the contrasting character between Israel and the nations was attributed to divine destiny. The expulsion liturgy found at the end of the Damascus Document blesses God, "who established peoples in accordance with their families and tongues for their nations, but made them go astray in a trackless void; but our ancestors you did choose and to their descendants you gave your truthful statutes" (4Q266 11.9-11). The depiction of the contrasting destiny of Israel and the gentiles may have been influenced by *Deuteronomy* 4.19 and has some similarities with the rabbinic *'Aleinu* prayer. However, the latter was customarily followed by the expressed hope for the end of paganism through the recognition of God's kingdom by all mankind, a redemptive hope not compatible with the fatalistic view of evil at Qumran.

In the Qumran legal sphere, there are a number of rules that pertain to relations with non-Jews. It has been suggested that these support the hypothesis of a diaspora origin for the Qumran community (Murphy-O'Connor, 1974). Actually, the rules seem more to reflect the treatment of gentiles living in areas under Jewish control. According to the law code of the Damascus Document, violence against non-Jews or their property is prohibited, unless sanctioned by *Hibbur Yiśra'el*, a Jewish governing authority (CD xii.6-8). The reason given, "so that they will not blaspheme," implies a sensitivity to blasphemy on the part of gentiles. One may not send a gentile to do his business on the Sabbath (4Q266 11.2). It is improper to spend the Sabbath day in a place near pagans (4Q266 11.14). One should not sell clean animals to gentiles in order that they not sacrifice them (4Q266 12.8-9). Conversely, metals from which heathen images were fashioned were defiled for reuse (e.g., 4Q269 8.ii and parallel Damascus Document fragments from Cave 4 at Qumran). A priest who was in captivity among gentiles or who migrated into areas under their jurisdiction is disqualified for Temple service (4Q266 5.ii.5-9). Slaves and maid-servants of a Jewish household who entered the "covenant of Abraham" may not be sold to pagans (4Q266 12.10-11).

The foregoing laws are largely compatible with the picture of Jewish-pagan coexistence in Second Temple Palestine as depicted by David Flusser. Even though they lived side by side, Jews and gentiles went their separate ways. As early as the Persian period most Jews do not appear to have been greatly attracted to paganism. In Jewish regions they were very careful to keep out pagan symbols, and Roman governors for the most part respected their sensibilities. Jews accepted the reality of paganism, though they longed for its final disappearance from the Holy Land.

The Damascus Document states that "Any man who destroys a man among men by the statutes of the gentiles is to be put to death," a law formulated somewhat ambiguously (CD ix.1). It was construed by Chaim Rabin to mean that "those condemned to death by the sect are to be handed over to the gentiles for execution." This interpretation was based on the notion "that the sect would hardly have added to the biblical death penalties" (Rabin, 1954). In *Temple Scroll*^d, however, we clearly have additional capital penalties, including death by hanging, prescribed for one who betrays his people to a foreign nation or curses his people after fleeing to the gentiles (11Q19, lxiv.6-11). The crime of revealing a secret of the people to the gentiles is also listed in the catalog of transgressions appended to the laws in the Damascus Document^e (4Q270 2.ii.13). It is, therefore, highly probable that the Damascus Document (CD ix.1) intended that the death penalty be imposed on anyone who brought about the death of a Jew by gentile authorities.

Despite the aforementioned legal barriers and the self-enclosed nature of the Qumran community, one should by no means assume that the latter was impervious to foreign influences. Among the possible borrowings from the Greek world, scholars have compared the disciplinary and procedural rules of the Qumran community with those of Hellenistic associations. The hypothesis of Pythagorean influence upon the Essenes, already recorded by Josephus (*Jewish Antiquities* 15.371), has been reevaluated since the finding of the Dead Sea Scrolls. Possible Pythagorean influences have been noted in the honoring of the founder, procedural rules at assemblies, common meals, initiation rules, and ethical standards. (Cf. Hengel, vol. 1, pp. 243-247.) [See Pythagoreans.] The unprecedented theological credo in the Rule of the Community (iii-iv) with which the *maskil* (instructor) was to indoctrinate all the Sons of Light is part of what Martin Hengel terms the "intellectualization of piety" (1974). Iranian influence may be seen in the sharp dualism between light and darkness that is used in the War Scroll (1QM) to describe the apocalyptic battle of Israel with the gentile nations. It has also been suggested by David Flusser that this very dualism, in which the wicked of Israel are consigned to the realm of darkness together with pagans, served ultimately to redraw the moral boundaries between good and evil along ethical rather than ethnic lines.

JOSEPH M. BAUMGARTEN

GEOGRAPHY IN THE DOCUMENTS. The geography of the Qumran literature requires special discussion in two respects. First, a very small number of the texts are documentary rather than literary in character—that is, they preserve records of the current activities of the people to whom they belonged—and they contain references to the contemporary geography of the region. Second, the literary texts that are sectarian in character, reflecting the distinctive religious ideas of the Qumran community, often envision geography in idealized ways, so that the place names they contain may be symbolic or cryptic. Otherwise, the geography of the Qumran library is the geography of the Bible and of Judea in the Hasmonean and Herodian periods.

Apart from coins, the only Qumran texts of undisputed documentary character are two inscribed potsherds found at the base of the eastern perimeter wall of Khirbet Qumran in 1996. Only one of the two broken ostraca is sufficiently well preserved for decipherment, and it contains a single geographical reference, evidently naming Jericho as the place where the transaction recorded on the ostrakon occurred. An increasing number of scholars believe that the Copper Scroll is a documentary text, despite the conclusion of its first official editor that its catalog of hidden property is traditional and legendary rather than real. If this is true, the list of documentary references to geographical locations becomes much longer, and in any case the Copper Scroll provides the most complete picture of the geography of the Judean wilderness that survives from the time of the Qumran community. [See Copper Scroll.]

Since it is an inventory of hiding places, the Copper Scroll is replete with place names and references to topographic features. Many of these correspond to places known from other ancient sources, but only a few can be

identified with modern sites. For example, Kohelit (*khlt*), one of the key sites in the inventory, is mentioned in the Babylonian Talmud (B.T., *Qid.* 66a) as a wilderness region containing sixty fortresses conquered by John Hyrcanus, but the scroll mentions a specific place, a mound or tell, and the opinions of scholars about its location differ widely. In general, however, it is clear that the majority of the Copper Scroll caches are in the northern part of the Judean desert, east of Bethlehem and Jerusalem, and as far north as the wilderness region above Jericho.

The list begins at a place called Harubah (*hrbh*, "ruin"?) in the Valley of Achor, the location of a number of caches at the beginning of the list and elsewhere. According to *Joshua* 15.7 this valley lay on the northern border of Judah near Jericho. Thus it was the biblical name of the Judean Buqeia, the level basin that lies above the cliffs overlooking the terrace where Khirbet Qumran is located, but there is some evidence that by the Roman period the name Achor had shifted north to a valley system above Jericho. A significant number of places in the vicinity of Jericho are mentioned, and some are identifiable, such as Doq, the ancient name of the Jebel Qarantal, which was surmounted by the Hasmonean fortress mentioned in *I Maccabees* 16.15 as the site of the murder of Simon (the Hasmonean). The spring of Kozeba is probably the place where the 'Ein Qilt empties into the Wadi Qilt, near which are Herodian aqueducts and the fifth-century monastery of Saint George of Kozeba. A location in the Jericho region is probably also to be sought for the Copper Scroll's reference to Mount Gerizim. Sources from late antiquity consistently place Ebal and Gerizim near Jericho, despite the traditional biblical location of the two mountains at Shechem (Nablus). Anti-Samaritan polemic is the likely explanation for this change of position, which is also presupposed in the arrangement of the story of the Israelites' entry into the Promised Land in Josephus (*Jewish Antiquities* 5.19–20) and in a Qumran biblical manuscript (4QJosh).

A large number of Copper Scroll caches are located in the Judean wilderness south of Jericho in the wadi systems running from Jerusalem to the Jordan Valley and the Dead Sea. These include, from north to south, the Wadi Kippa (*kp'*), possibly the Wadi Kuteif where the modern Jerusalem-Jericho road passes, the Wadi el-'Ašla (*'sl'*), part of the large system of deep wadis extending from the Mukellik to the Daber, the Valley of Secacah (*skk'*), which drains the central Buqeia, and the Qidron (*qdrwn*), which forms the southern boundary of the Buqeia. The last two names in this list are biblical. The Qidron, figuring in the Bible primarily in its upper reaches where it divides the central hills of Jerusalem from the Mount of Olives (see, for example, *2 Sm.* 15.23), gouges a deep channel through the Judean wilderness on its way

to the sea, and it is here, in the gorge (*tstuf*) of the Qidron that one of the Copper Scroll caches was concealed. Secacah is included in a biblical list of six "villages" (actually small forts) in the wilderness district of Judah (*Jos.* 15.61–62). It appears prominently in the scroll, once as the name of a dammed valley (*ge'*) and elsewhere as that of a village or fortress where several caches were hidden. An argument can be made for identifying Secacah with Khirbet Qumran itself, since it was occupied in the biblical period and since the nearby Wadi Qumran is a suitable candidate for the Valley of Secacah. A more widely accepted identification of Secacah, however, is with Khirbet Samra, the central ruin of the Buqaja, and Khirbet Qumran is believed to have been the biblical City of Salt, another of the forts in the wilderness district. If this is correct, we are forced to the surprising conclusion that the community center is not mentioned by name in the Copper Scroll or any other document from the eleven caves.

The Copper Scroll also provides the contemporary names of a number of places on the outskirts of Jerusalem, east and southeast of the city, where several caches of property were hidden. The Natof (*ntp*), the location of at least one and perhaps as many as four caches, is probably the 'Ein Natuf, which empties into the deep Wadi Khareitun (Nahal Teqoa') southeast of Bethlehem; the spring preserves the name of the biblical village of Netophah (see, for example, *Ezr.* 2.22), probably Khirbet Bedd Faluh. Beth-haccherem (*beit ha-kerem*), where there was a reservoir in which two caches were concealed, is a biblical toponym—it was the residence of a district governor in the time of Nehemiah (*Neh.* 3.14)—and it is also mentioned in the Genesis Apocryphon and the rabbinical writings. The modern site is believed to be Ramat Rahel, midway between Bethlehem and Jerusalem. Two caches are said to have been hidden in the Shaveh. This was the valley where, according to *Genesis* 14.17–18, Abraham was greeted by Melchizedek, king of Jerusalem, and the king of Sodom after his victory over the coalition of Chedorlaomer. The name there is glossed as "the King's Valley," which is also mentioned in *2 Samuel* 18.18 in a context that suggests a location very close to Jerusalem; it is usually thought to be the upper Qidron or part of it.

The eastern bank of the upper Qidron, today a vast necropolis, was already a traditional burial ground in antiquity, and a number of Copper Scroll caches are distributed here and there in the cemetery and other locations southeast and east of the Temple platform. The grave marker called "Absalom's Monument" (*yad Avshalom*) is also mentioned by Josephus. It is less likely to have been the actual pillar referred to in *2 Samuel* 18.18 than a later monument to which the name became attached, possibly the same prominent first-century BCE tomb that bears the

name today. The reservoir of Bethesda (*byt 'shdtyh*) may correspond to the twin pools of Iron Age and Seleucid date near Saint Anne's Church, northeast of the Temple mount.

Just as the Copper Scroll provides an inventory of the real geography of the region in which the Qumran community lived, the sectarian literature reveals an idealized picture of the same geography. Like other apocalyptic groups, the Qumran covenanters viewed the world in which they lived as a temporary facade that would be altered or swept away with the dawn of the new age. Apparent realities were untrustworthy. The truth was hidden and revealed itself only in cryptic or symbolic language. Even geography was described in idealized terms. From this point of view, the failure noted above of the contemporary name of Qumran itself to appear in the community's literature is less surprising. It is probable, in fact, that the residence of the community is mentioned in the sectarian literature, but by its ideal or apocalyptic designation, "the land of Damascus." According to the Damascus Document (CD vi.5), this was the place to which the community migrated when it went into exile from the land of Judea. Some scholars have taken this to mean that there was an early migration to the actual city of Damascus in Syria, following which the community returned to Judea and settled in the wilderness, or that "the land of Damascus" was the name of the larger administrative district to which Qumran belonged. In all probability, however, "the land of Damascus" was a code name for Qumran itself.

Such code names—and the ideal geography in general—were derived from the distinctively apocalyptic interpretation of scripture as reflected in the sectarian literature. The understanding of the place of exile as Damascus, for example, was derived from the exegesis of *Amos* 5.26–27, which refers to Israelites carrying a "star" into exile beyond Damascus. Though the star in *Amos* is an image of a foreign god, for whose worship the Israelites are condemned to exile, the Qumran sectarians understood it to refer to their own divinely inspired Interpreter of the Law, who went into exile in "Damascus," that is, Qumran (CD vii.18–19).

At the center of this ideal, scripture-based geography was Jerusalem, which was understood, according to the same kind of apocalyptic exegesis, not only as the chosen place of *Deuteronomy* 12 (4Q395 32–33, 60–61) but also as the camp in the wilderness as described in *Numbers* 1–10 (4Q395 29–30, 58–62). The language of the wilderness camp is also used, especially in the Rule of the Community (1QS) but also in other sectarian literature, to describe the residence of the sectarian community, which was organized on the pattern of the tribes encamped in the wilderness in Mosaic times. In the logic of apocalyptic ways of thinking, these two ways of understanding the

wilderness camp are not contradictory, for the camp represented the sacred center of Israel, which was supposed to be Jerusalem and would eventually return to Jerusalem, but which during the present world age was exiled in the wilderness. In Jerusalem the Temple was the sanctuary, corresponding to the tabernacle in the wilderness camp, but in the sectarian community center the Community Council served in lieu of the sanctuary (1QS viii.4–9, ix.3–6). This equation of the Community Council with the Temple permitted the interpretation of Habakkuk's reference to "the violence done to Lebanon" (*Hb.* 2.7) as an allusion to the Wicked Priest's mistreatment of the Community Council (1QpHab xii.3–4), since "Lebanon," even apart from Qumran apocalypticism, was a traditional way of referring to the Temple (see, for example, B.T., *Yoma* 39b).

As the last example shows, it is in the *peshet* material that the use of ideal geographical terms becomes most arcane. Biblical toponyms are often interpreted apocalyptically, while their interpretations are expressed in code names, so that the uninitiated reader is twice removed from real geography. Elsewhere in *Peshet Habakkuk* (ii.10–12), for example, a statement about the Chaldeans in *Habakkuk* 1.6 is interpreted as a reference to the *Kitim*, a biblical term for Cypriotes or, more generally, the coastal peoples of the Mediterranean basin, which in Qumran sectarian literature is the standard code word for the Romans. Using these principles it was possible in *Peshet Nahum* (4Q169) to find allusions to the Qumran community's rivals, the Pharisees and the Sadducees, in the text of *Nahum* 3.7–8. These verses are part of Nahum's taunt against the Assyrian city Nineveh on the eve of its destruction (612 BCE). In the *peshet* (iii.5–7), Nineveh is interpreted as "the Seekers of Smooth Things," the Qumran sobriquet for the Pharisees, who earlier in the *peshet* (ii.2) are referred to by another code name, "Ephraim." The biblical text continues with a comparison of the destruction of Nineveh to that of the Egyptian city Amon (Thebes), "situated by the Nile," and in the *peshet* (iii.9) Amon is identified as "Manasseh," the code name for the Sadducees, and the Nile (a grammatical plural in Hebrew) is identified as "the great men of Manasseh," that is, the Sadducee leaders.

P. KYLE MCCARTER, JR.

GHWEIR, WADI. Naḥal Qaneh (in Hebrew) is the name of a short precipitous ravine descending from the steep escarpment fault to the Dead Sea approximately 15 kilometers (9 miles) to the south of Qumran. At its outlet, a two-kilometer (1 mile) long oasis of thick and swampy vegetation, the Wadi extends from 'Ein-el-Ghweir (called 'Ein Ghazal by the bedouin; 'Emot Qaneh in Hebrew) in

the north to 'Ein et-Trābeh or 'Ein at-Turaba ('Emot Samar in Hebrew) in the south. The spring water of 'Ein-el-Ghweir is of a better quality than that of 'Ein-Feshkha, which has a very high salt content. Archaeological remains of the Iron Age II and the Late Hellenistic/Early Roman periods are scattered along the moderate, narrow strip of land between the foothills and this oasis. The remains scattered along more than 1 kilometer of the northern part of the oasis, referred to by P. Bar Adon as 'Ein-el-Ghweir, were divided by him into six areas, designated A to F, from north to south. Bar Adon identified the site with biblical Nibshan of *Joshua* 15.62. Qasr at-Turaba located near 'Ein at-Turaba, at the southern end of the oasis, was considered to be a separate settlement, which he suggested was biblical 'Ir Ha-Melah (Town of Salt).

The archaeological remains were first explored in the years 1964–1966 on behalf of the British School of Archaeology at Jerusalem by I. Blake, and then between 1967 and 1970 on behalf of the Israel Department of Antiquities by P. Bar Adon.

Iron Age II Remains (eighth–seventh centuries BCE). A 600 meter (1,968 feet) long fenced wall (designated as area D) with eighteen rooms dispersed on either side along its course, some of them with rounded corners, is the most peculiar feature of the site. A similar fenced wall, dated to the same period, was traced by de Vaux in the area between 'Ein-Feshkha and Qumran. The rooms were built against the wall, most of them on the eastern side; some on the western. A layer of ashes was found in most of the rooms. A few finds of the Roman period were located on the upper layer. Another structure with similar finds was excavated in area E farther to the south.

A building—presumably a workshop for the manufacture of perfumes—was excavated by Bar Adon, near 'Ein-el-Ghweir. Rectangular in shape, it is 8 by 11 meters (26 by 36 feet), with five rooms and a courtyard of 9.5 by 10.5 meters (31 by 34 feet) to its east. The walls were 0.7–1 meter (2–3 feet) thick, and there were plastered floors. The entrance room was the largest—3.20 by 6.50 meters (10 by 21 feet) in dimension. A raised plastered platform, a drain, and traces of fires point to an industrial installation.

Qasr at-Turaba, approximately 2 kilometers (1 mile) from 'Ein-el-Ghweir to the south, was a fortified tower adjacent to the southern springs of 'Ein at-Turaba, located near the southern end of Area D. It was first excavated by Blake, and then in 1971 by Bar Adon. The tower, 15 by 13 meters (49 by 43 feet), was appended on the north by a 19.5 by 18.5 meter (64 by 61 foot) courtyard. The building, constructed of clay/bulrush blocks, was destroyed by an intense fire. In the adjacent cliffs to the west, two caves yielding Chalcolithic–Early Bronze, Iron

Age II, and Hellenistic pot sherds were explored by Bar Adon. In a cave explored by Blake, jars and a Greek ostracon were found, presumably of a Byzantine hermit.

All buildings were abandoned at the destruction of the First Temple. A cave above 'Ein-el-Ghweir yielded Iron Age II pot sherds.

Second Temple Period Remains. Besides a reoccupation of the earlier structures, a settlement (designated by Bar Adon as area C) contemporary with Qumran Ib and II was established near 'Ein-el-Ghweir, with a Qumran-type cemetery adjacent to it. [See Cemeteries.] The central building occupied an area of 43 by 19.5 meters (141 by 64 feet), consisting of a wall 0.7 meters (2 feet) thick enclosing a courtyard. A 27.5 meter (90 feet) elongated structure on the southern side was entered through a 1 meter (3 foot) wide opening. This elongated structure consisted of an open space (I) 9.2 meters (30 feet) wide (too wide to substantiate Bar Adon's interpretation of it as a hall), flanked on the north by a shaded area (II) 15.5 meters (51 feet) long by 3.2 meters (10 feet) wide. This part had a light roof (presumably of local bulrush), supported by four wooden posts resting on bases of stones. Stone partitions extending from the western wall and running between the two western posts converted this section to a more closed area. Two ovens and two granaries found east of them suggest that this part served as a kitchen. Two other rooms (III and IV), 7.9 meters (26 feet) and 5.1 meters (17 feet) wide respectively, were located farther to the east, but their southern part was almost entirely washed away. It seems that they were store-rooms. A 10–30 centimeter (4–12 inch) thick layer of ash covered the floor of these rooms. A sounding in the northern end of the shaded space II uncovered two level pavements, each covered by a 10–20 centimeter (4–8 inch) thick layer of ash. These two layers of ash were uncovered in other places as well. It was not possible to distinguish between the two phases by the pottery. Seven identifiable coins were found: five in area I, adjacent to the western wall, retrieved in an intervening stratum and two from room III. Five coins are of Herod, one of Archelaus, and one of Agrippa I. The pottery finds include sherds of jars, cooking pots, kraters, bowls, jugs, flasks, and two "Herodian" lamps. Also were found a bronze nail and buckle, and a fragment of a stone measuring vessel. No *miqveh* was found so far at the site, but Bar Adon mentions structures north of the large building, which were not excavated. The site was abandoned in the First Jewish Revolt (66–70 BCE).

On a hill approximately 800 meters (one half mile) north of the principal building was the cemetery of the settlement. Eighteen graves were excavated; most are oriented north-south, four slightly deviate to the northwest, and one (tomb 15) is oriented east-west. The pit graves,

resembling those of Qumran, are cut in the ground to a depth of about 2 meters (7 feet). A large stone juts out on the southern end of the tomb, where the skeleton head is to be found. The skeleton was placed in a niche at the bottom of the grave, but along the east wall. The niche was covered by slanting stone slabs set perpendicular to the niche. Sherds of bowls or jars were placed over the covering stones. An almost completely restorable jar found in tomb 18 bears a Hebrew inscription of which only the name *Yehohanan*, written in black ink on the shoulder near its handle, was decipherable. The remains of twelve men and three women were found in the graves. A second cemetery located on a second hill to the south seems to be a small bedouin cemetery, since the graves here are oriented east-west. Two tombs were opened on this hill, yielding the remains of a man and a seven-year-old child.

Two unpublished fragments are labeled in the archives of the Rockefeller Museum (PAM) as coming, presumably, from Wadi Ghweir: Ghweir? 1 is a papyrus fragment written in cursive Greek and Ghweir? 2 is a fragment bearing Semitic script. The exact spot where they were found is unknown (Reed, 1994, pp. xlii, 281).

JOSEPH PATRICH

GIANTS, BOOK OF. The name given to a literary work represented by a group of Aramaic fragments recovered from several Qumran caves is the *Book of Giants*. The contents of these fragments suggest the existence of an extended narrative whose exegetical anchor was the terse biblical story about the birth of "giants" found in *Genesis* 6:1–4. Such an expansion is extant in the first part of the Enochic "Book of Watchers" (*1 En.* 6–16), but the surviving portions of the Aramaic Book of Giants (as well as later testimonies) indicate that the latter work was considerably more elaborate than its *1 Enoch* analogue, featuring frequent dialogue between the main characters, descriptions of martial encounters, symbolic dreams, journeys to distant regions, and emotion-laden soliloquies. Moreover, there are indications that the *Book of*

Giants may have once contained a variant version of the Flood narrative.

Credit for the identification of the Qumran Book of Giants as a narrative entity belongs to Józef T. Milik, who in two 1971 articles and subsequently in his 1976 edition of the Qumran Aramaic Enoch manuscripts published much of the relevant textual corpus. Therein Milik identified fragments from at least six separate copies of the *Book of Giants* (1QEnoch Giants^a [1Q23], 4QEnoch Giants^a [4Q203], 4QBook of Giants^{b-c} [4Q530-531], so-called 4QEnGi^e [= 4Q533?], and 6Q8). He also called attention to additional manuscripts that might possibly stem from the *Book of Giants* (Enoch Giants^b [1Q24], 2QEnoch Giants [2Q26], 4QEnoch^c [4Q206], 4QBook of Giants^d [4Q532], and so-called 4QEnGi^f [=?]). Milik's recognition of these disparate fragments as portions of an integral work was grounded in his brilliant discovery that the Qumran fragments bore a close resemblance to the surviving Middle Iranian fragments of the Manichaean *Book of Giants*, a writing allegedly authored by Mani, the third-century CE founder of a Mesopotamian gnostic religious community that rapidly achieved an almost worldwide dispersal. [See Manichaeans.] The Manichaean *Book of Giants* enjoyed canonical status within that religion, and to judge from the prominent appearance of its title in Greek, Coptic, Middle Iranian, Arabic, and Chinese testimonia, must have been extensively distributed by Manichaean missionaries. Portions of the Manichaean *Book of Giants* were recovered earlier this century from Turfan in Central Asia and published by W. B. Henning (1943-1946) and W. Sundermann (1973). Despite the damaged condition of both manuscript collections, the surviving references to the characters and the narrative events confirm Milik's suspicion that the Qumran Book of Giants is the literary ancestor of the Manichaean text.

Intriguing references and allusions to certain characters and events presented therein suggest that copies or later versions of the *Book of Giants* circulated among certain Jewish, Christian, and Muslim circles well into the medieval era.

Contents of the Work. The *Book of Giants* is an extra-biblical narrative embellishment and expansion of the cryptic *Genesis* 6.1-4, the infamous passage about the illicit intercourse between the sons of God and mortal women, which resulted in the appearance of *giborim*, "giants." A reconstruction of the narrative would appear to have the following form.

In the generation of Jared, the father of Enoch, two hundred angels ("Watchers") descend from heaven to earth under the leadership of Shemihazah. Beholding the beauty of mortal women, they are seized by sexual desire and unite with them, thereby engendering a hybrid race

of lawless Giants. The Giants quickly overrun hapless humankind by engaging in widespread slaughter, destruction, and moral corruption.

Apparently sometime prior to the manifestation of these disasters, Enoch had been removed from human society (*Gn.* 5.24). The distressful situation upon earth is now revealed to Enoch, and Enoch in turn beseeches God to exact judgment upon the Watchers and Giants for their wickedness. God resolves to bring the Flood, but apparently in keeping with his attribute of mercy, decides to give the Giants an opportunity for repentance. He dispatches symbolic dreams to the two Giant sons of Shemihazah, identified by name as Ohyah and Hahyah. These dreams presage an impending universal destruction, which only four individuals will survive. Despite the transparency of the dream imagery to the modern exegete, Ohyah and Hahyah are perplexed by the dreams, but are sufficiently alarmed to relate their dreams before an assembly of gathered Giants. The assembled Giants are also baffled by the dreams. To secure an authoritative interpretation of the dreams, they resolve to send one of their number to visit Enoch for a consultation.

They accordingly commission a Giant named Mahaway, the son of the Watcher Baraq'el, to go to Enoch's abode "beyond the wastelands" in order to procure an interpretation. Mahaway makes this journey and receives two tablets from Enoch inscribed with the true meaning of the dreams and God's impending judgment. He returns to the Giants with the tablets, and they are read aloud before their assembly. The terrible message elicits two distinct responses. Some of the Giants are chastened by the message and counsel repentance, but others, apparently the majority, react with open defiance and arrogantly challenge God to act against them. At this point in the story the Qumran fragments break off, leaving us with a hint that the Flood was eventually described in that text. The Manichaean fragments testify that fierce battles break out between the archangelic hosts of God and the arrogant Giants, who were with difficulty finally subdued.

One particularly exciting feature of the contents of the *Book of Giants* in both its Qumran and Manichaean versions involves the appearance within it of characters from the Mesopotamian Epic of Gilgamesh. In the Qumran *Book of Giants*, the names Gilgamesh and Hobabish (i.e., Humbaba) occur, but lack an intelligible narrative context. However, the Manichaean *Book of Giants* preserves the name Hobabish in a context that identifies him as one of the Giants engendered by the fallen Watchers. Apparently the Jewish author(s) of the *Book of Giants* considered these renowned epic characters to be simply two of the wicked Giants. Newly published fragments from the

Manichaean *Book of Giants* include mention of the Giant Atambish, whose name seems to be a later reflex of the name Utnapishtim, the Mesopotamian Flood-hero featured in Tablet XI of the Epic of Gilgamesh. The appearance of this name within the Manichaean *Book of Giants*, like that of Hobabish, was presumably dependent upon the occurrence of the name Utnapishtim within the Qumran Book of Giants. The appearance of these names within a Jewish composition of the Second Temple era attests to the vitality of Mesopotamian literary traditions among literate circles of the ancient Near East, probably transmitted via Aramaic versions.

Milik proposed that the *Book of Giants* was originally a part of *1 Enoch*, occupying the space later taken by the so-called Similitudes (*1 En.* 37–71), but few scholars have accepted his arguments. Obviously, the *Book of Giants* is closely related to the Enochic corpus of writings, particularly *1 Enoch* 6–16. The figure of Enoch plays an important narrative role in the *Book of Giants*, but is not credited (in the extant fragments) with the work's authorship. It seems more likely that the *Book of Giants* circulated as an independent composition among intellectual circles interested in the exegesis of *Genesis* 6.1–4.

Dating the production of the *Book of Giants* is extremely problematic: Milik's suggested time frame of 125–100 BCE rests upon several arguable points. Subsequently, Florentino García Martínez (1992) and K. Beyer (1984) have proposed alternative dates for the composition of the work, the latter suggesting the late third century BCE as a possible time of origin. Insofar as the *Book of Giants* appears to be allied with those circles responsible for the production of the Enochic "Book of Watchers," a date in the late third or early second centuries BCE would not be unreasonable.

GLASSWARE. Many of the Judean Desert sites have yielded a wealth of material culture, and glass forms a significant portion of these finds. Found in association with datable texts, the glassware from the sites where the Judean Desert texts were found provide a unique opportunity for the dating of such wares. It was during the first and/or the second centuries CE that several sites such as Masada, 'Ein-Gedi, and Qumran flourished and that the caves of the region were used as hiding places during periods of strife. The occupants, even when seeking temporary refuge, left behind remains of their daily lives, and glass had become an everyday household item by this period. Highly prized luxury items were also taken to the caves for safekeeping.

Glass recovered from these sites generally survives in a remarkably good state, with little corrosion or deterioration. Glass tends to deteriorate in more humid environments, often forming heavy skins of corrosion and leaving little of the original material intact. Glass from the desert, however, can survive in a clean, fresh state, often revealing the original appearance of the vessels.

Although most of the glass excavated in the region is well preserved, it is unfortunate that relatively little has been fully studied. It is principally one scholar, Dr. Dan Barag of the Hebrew University, who has examined and written the existing reports about this glass, many in the form of preliminary notes.

The Cave Sites. The Israeli Judean Desert Expedition of 1961–1962 conducted the first systematic archaeological expedition to explore the caves in the valleys between 'Ein-Gedi and Masada. Finds from these explorations revealed that numerous caves had been occupied during the Roman period and many could be dated to the period of the Bar Kokhba Revolt. At the outset of this project,

four areas were defined. Expedition A, supervised by Nahman Avigad, covered one of these areas and first examined Nahal Se'elim and later Nahal David at 'Ein-Gedi. Among the caves of Nahal David, the team excavated the Cave of the Pool, revealing fourteen fragments of glass vessels (Barag, 1962, pp. 167–183). Like other finds in the cave, the glass was dated to the first or first third of the second century CE.

The glass from this cave, as at other sites in the Judean Desert, was well preserved due to climatic stability. The color, which could be viewed without distortion by the iridescence of weathering, was generally a bright bluish green, with the exceptions of one fragment that was clear and one other that was bright green. All were blown vessels of normal household types.

The remains are quite fragmentary and support the excavators' conclusion that the cave served as a refuge for families from 'Ein-Gedi during the last days of the Bar Kokhba Revolt and that, owing to the pool constructed as a water source, these people did not perish in this cave. Further supported by the lack of any human remains, this theory concludes that the fortunate refugees survived to depart from the cave, taking with them any possessions of value and leaving behind only broken and discarded material. It was, therefore, only the most fragmentary glass remains that were discovered in this cave.

Among the examples were four fragments of tall-necked bottles. These included a neck fragment of a type well known throughout Syria and Palestine on pear-shaped and "candlestick" bottles (Barag, 1962). Two fragments from a lesser-known type of bottle were also discovered. These pieces come from a ribbed bottle, also dated after the late first century CE and are comparable to another from the Cave of Horror. Rims and bases from bowls were also recovered, consistent with types dating to the second century. One rim has a double fold in the wall just below the lip. Another preserves remains of a crimped handle, a type known into the third century, but best dated from this and other Judean Desert finds such as the one described by Barag (Yadin, 1963, pp. 104–105, no. 7).

The caves of Nahal Hever were explored by the Israel Department of Antiquities and Museums in 1953, followed in 1955 by the exploration of the Cave of Horror, so called because of the skeletal remains found within it. Yohanan Aharoni directed these expeditions as well as the later excavations (1960–1961) as part of Expedition B of the Judean Desert Expedition. The glass was published by Barag (1962, pp. 208–214, figs. 1–18). Unlike the scanty finds in the Cave of the Pool, this expedition recovered two complete bowls and approximately two hundred other glass fragments, making it the most extensive group of glass found in the Judean caves. Dates for these finds

were consistently in the second century CE. While most were identified as Syro-Palestinian types, there were also imports. The vessels were predominantly everyday wares, although several were fine wares.

Vessel types included deep bowls, some with folded walls like the example from the Cave of the Pool (Barag, 1962). Barag notes (p. 210) that deep bowls of this type were common from the last third of the first century CE onward, but that these rim types are rather uncommon. The same sort of rim also appeared on a few shallow bowls, one with a crimped handle. Several other bowls are recognized as imports. These consist of very clear glass with just a slight yellow-green color, and were mold-made and polished. Barag cites parallels from Karanis and Britain, dated no later than the mid-second century CE. Fragments of candlestick bottles were also found and represent Syro-Palestinian production. Also of interest are several fragments from a number of mold-blown vessels, which form a class of fine ware produced in Syria-Palestine. Included is an example of a ribbed bowl like the one discovered in the Cave of the Pool.

Located on the opposite side of Nahal Hever is the Cave of the Letters, excavated by Yadin in 1960–1961 as Expedition D of the Judean Desert Expedition. Barag summarized the glass finds in Yadin (1963, pp. 101–110). Although the number of glass finds was far smaller than that discovered in the Cave of Horror, the nature of these finds is remarkable. Because they were uncovered from many loci, some carefully concealed among the rocks and some strewn over the floor, Barag concluded that the glass finds had been broken and scattered or hidden in antiquity. Most of the vessels were presumably of Syro-Palestinian production, blown and generally a pale bluish green, some ranging to green or yellow green in color. There were three complete vessels and approximately fifty fragments. In contrast to these remains, there were three mold-made vessels of a color and style pointing to a foreign manufacture (Yadin, 1963, pp. 106–108).

The blown vessels were types well known in Syria-Palestine, including candlestick bottles, a cylindrical jug, a deep bowl with crimped handles, and a globular flask. Most are types that appeared from the second half of the first century CE onward.

The mold-made vessels are far more extraordinary. Since blown glass had almost completely supplanted the mold-made forms by the second century, these are noteworthy in their contexts. Furthermore, perfect preservation and the quality of these three vessels contribute to the richness of this discovery. Almost colorless, the two plates and the bowl are in pristine condition. They were found still carefully wrapped in palm fibers and hidden in the cave. It was assumed that such luxury possessions were there for safekeeping, but not used while in the

cave. The two plates are very similar to one another and like the bowl have a base ring, convex sides, and a broad overhanging rim. They are each incised with a small circle at the interior center. The bowl is more ornate, decorated with bands of cut circles and lines. Parallels come from Karanis from second- to third-century CE contexts, and while most scholars agree that these seem to have come from the same production center, one outside Syria-Palestine, that center is not yet known. Donald B. Harden believed the center of production to have been in Egypt, perhaps Alexandria (Harden, 1936).

The Permanent Occupation Sites. Although glass from stratified excavation of occupational sites in the Judean Desert is certainly abundant, almost none has been studied. While the very rich finds from the Cave of the Letters reveal something of the nature and diversity of glass owned by refugees from 'Ejn-Gedi, glass finds from the oasis site itself remain virtually unpublished. A brief passage by Barag (1979, pp. 78-79) refers to Avigad's examination of a number of Hasmonean tombs at this site and his discovery of both a mold-made and a blown vessel in a tomb dated no later than 31 BCE. Little else can be gleaned from the literature about the glass from this site.

Masada's glass is barely any better known in publication. Barag, however, has given his preliminary impressions concerning this important corpus (Barag, 1991, pp. 137-140). Archaeological investigation has indicated that most of the glass finds date to no later than 73/74 CE. While most of the finds are Julio-Claudian, there are also remains from the period of the later Roman garrison, present until 115 CE. There is also some Byzantine glass, probably in association with the small late fifth- to early-sixth-century CE chapel.

Glass finds from Masada, mostly fragments, number into the thousands and are the largest corpus of their period known in the eastern provinces. There is some diversity, but by far the majority of the remains are pale bluish green, the color generally associated with the Syro-Palestinian wares. Some examples of imported wares include dark-colored luxury materials. Hellenistic forms, probably of the Herodian period, are well attested; several core-form vessels are perhaps the earliest examples. A few pieces of Early Roman mosaic glass are also present, as are numerous fragments of pillar-molded bowls of this period. Of later date in the first century CE are many fragments from bowls, drinking vessels, small bottles, and a large number of long-necked, pear-shaped bottles, some intact. Conspicuously absent are the candlestick bottles, with only two examples of early variants of this type, supporting a Flavian date (69-96 CE) for their development. A number of mold-blown types are also well represented. Cylindrical beakers, some with inscriptions, also offer

well-dated comparative material. Some western types are attested at Masada while generally unknown in most other sites of the eastern provinces. These include ribbed bowls with marvered white-thread decoration and dark blue bowls with enameled polychrome paintings. Barag concludes that their discovery in this area points to a more eastern origin than the often proposed northern Italy, perhaps Alexandria, instead. The study and publication of the glass from Masada are crucial.

Another corpus of glass, still inaccessible, which will certainly provide valuable data, is the material from Qumran. In this case the nature of the small finds can certainly shed light on the ongoing debate regarding the function of the site. Again, this important class of artifacts remains to be published.

LISA KAHN

GNOSTICISM. A term first used in the seventeenth century to refer to the doctrines of various heretics mentioned by the early church fathers, here Gnosticism refers to a religion of salvation based on revealed knowledge (*gnosis*) that arose around the turn of the common era. Gnosticism influenced, and was influenced by, both Judaism and Christianity.

Gnostic Religion. In the Gnostic religion, *gnosis* ("knowledge") is requisite to salvation. This knowledge, communicated in a revealed myth, changes the status of the knowers (gnostics) by revealing to them the transcendent God, their own original consubstantiality with God, and their heavenly origins and destiny. The transcendent

God is above and beyond the creator of the world and his archons. The world-creating and world-ruling powers try to keep the elect shackled and somnolent in their material bodies, which are the product of these lower powers. The basic Gnostic myth seems to have been developed by Gnostic teachers familiar with Platonist metaphysics as popularized in the Mediterranean world from the first century BCE, but the chief components of the myth itself reflect the use and reinterpretation of biblical texts and Jewish exegetical traditions.

Until comparatively recently, the chief sources for the study of Gnosticism consisted of reports prepared by their opponents, mainly the fathers of the church and other ancient writers, including Plotinus (*Enneads* 2.9). The church fathers, starting with Justin Martyr, traced the Gnostic heresies back to the Samaritan wonder worker Simon Magus, first mentioned in the *Acts of the Apostles* (8.9–24).

The discovery of a whole library of Gnostic texts in Upper Egypt, near the modern town of Nag Hammadi, has put the scholarly study of the Gnostic religion on an entirely new footing, resulting in a better understanding of Gnosticism: its essential features, its origins, and the history of its early development.

The Gnostic religion, in the form of Manichaeism, became a world religion that survived in China until the seventeenth century. Another branch of ancient Gnosticism survives to this day in the form of Mandaeanism (Mandaic, a form of Eastern Aramaic, *manda'* means *gnosis*). The home of the Mandaeans ("Gnostics") is the marshlands of modern Iraq and Iran, though they trace their ancient origins to the Jordan Valley.

Nag Hammadi Codices. In December 1945, some months before the discovery of the first of the Dead Sea Scrolls, two brothers, Muhammad and Khalifa Ali, peasants from the village of Hamra Dom, were digging for *sebakh* (a nitrate soil used for fertilizer) at the base of the Jabal et-Tarif when they uncovered a jar. Muhammad Ali broke the jar and out came thirteen leather-bound books, papyrus codices inscribed in Coptic. The story of this discovery and the subsequent history of the codices is now well known as a result of the careful research of James M. Robinson of Claremont University in Claremont, California, who also was the driving force in the publication of the manuscripts. The Nag Hammadi Codices have been published in a facsimile edition (1972–1977) and in various critical editions in several languages. A one-volume English translation of all forty-six tractates in the Nag Hammadi collection, plus two from a related Coptic codex (Papyrus Berolinensis 8502), appeared first in 1977.

The Nag Hammadi Codices were inscribed and bound toward the end of the fourth century CE, probably in a

monastic setting, and buried shortly afterward. All the tractates are Coptic translations of texts originally produced earlier in Greek. Not all the tractates are Gnostic, and those that are represent various sects and groups with differing beliefs and practices. By far the most important of the Nag Hammadi tractates for the study of Gnosticism is the *Apocryphon of John*, preserved in four different copies, plus an excerpt corresponding to part of this text found in Irenaeus's treatise *Adversus omnes Haereses* 1.29, composed in approximately 185 CE. The myth found in this tractate can be said to represent that of classic (or Sethian) Gnosticism, circulating among people referred to by Irenaeus as Gnostics and the Gnostic sect (*Adversus omnes Haereses* 1.29.1 and 1.11.1, respectively). This variety of Gnosticism was the basis for the Christian sect founded in the early second century by the influential heresiarch Valentinus, according to Irenaeus (*Adversus omnes Haereses* 1.11.1). Some of the tractates in the Nag Hammadi library come from the Valentinian sect.

Gnosticism and the Dead Sea Scrolls. Gnosticism and the religion of the Dead Sea Scrolls have in common certain features that offer interesting points of comparison and contrast. The contrasts are such as to make it clear that the religion of the Essene sect, the sect of the Dead Sea Scrolls, cannot be subsumed under the category of Gnosticism.

Knowledge. A key concept in the writings of the Qumran community, the idea of knowledge (*gnosis*, *da'at*) is especially prominent in Hodayot^a from Cave 1 at Qumran (1QH^a) and in the hymnic material at the end of the Rule of the Community from Cave 1 at Qumran (hereafter 1QRule of the Community; 1QS). Several Hebrew words are used for the verb *to know* and the noun *knowledge*, but the most frequent words are *yada'* and *da'at*, respectively. In the Qumran sectarian literature, *da'at* has an important role to play in salvation. The object of this knowledge is God (see 1QH^a xii.11, for example) and the "mysteries" or "secrets" (*razekhhah*, "your secrets") that he reveals to his elect (1QH^a xii.20; cf. 1QS xi.5). One of the fragmentary Qumran texts is *Mysteries* (1Q27; *Mysteries*^{a-c} 4Q299–301), detailing various kinds of mysteries, including the "mystery that was coming into being" (*raz nihyeh*, 1Q27 [twice], as translated by Lawrence Schiffman in his edition of *Mysteries*^{a-c}, pp. 35–36), which ordinary people "did not know." The knowledge of God's mysteries or secrets is clearly an esoteric knowledge, reserved for the elect. Those in possession of this knowledge can even be referred to as *yode'im* ("knowers," 1QH^a xi.14; cf. *gnostikoi*). Thus the concept of revealed *da'at* at Qumran invites comparison with the revealed *gnosis* of the Gnostic literature. But the contrasts are crucial: in Gnosticism the God who is revealed is a transcendent being above the lower creator of the world. The self-knowledge of the

Gnostic relates to the divine spark currently trapped in a material body and not to the weakness of his flesh or his sinful condition as in the Qumran literature. Finally, in Gnosticism it is *gnosis* that is the very basis of salvation, whereas in the Qumran literature *da'at* relates to a salvation based on repentance, forgiveness, and observance of covenant law.

Dualism. An important feature of the religion of the Dead Sea Scrolls, dualism is important to the Jewish apocalyptic worldview in general. [See Dualism.] Dualism characterizes all of the sectarian literature, though with variations in detail from one text to another. A classic text representative of Qumran dualism is the section of 1QRule of the Community that deals with the two opposing spirits (1QS iii.13–iv.26). This text teaches that God, in the beginning, created two spirits or angels, one good and the other evil. The good spirit is associated with light, truth, and righteousness; the evil spirit is associated with darkness, falsehood, and sin. The dualism is qualified in that God is the ultimate creator of both, and the evil spirit, elsewhere called Belial, has a fixed time for his activity in the world (“the dominion of Belial,” e.g., 1QS i.18), after which he will be destroyed. Gnostic dualism is comparable with that of Qumran in some respects: it is not absolute, for in the Gnostic myth good and evil are posterior to the transcendent God and subject to dissolution at the end. But in Gnostic dualism the transcendent God is not the creator of the world. The world is the product of a lower being (e.g., Yaldabaoth-Saklas-Samael in the *Apocryphon of John*) or beings (e.g., the seven creator-angels of Saturninus’s system, according to Irenaeus, *Adversus omnes Haereses* 1.24). In classic Gnostic texts the creator of the world is at once the God of the Bible and a world ruler comparable to Belial, the evil spirit of the Qumran literature. Moreover, the Gnostic dualism of spirit versus matter is clearly grounded in Platonist metaphysics, though modified with features drawn from Jewish apocalyptic traditions.

The divine vs. the earthly. The Qumran literature sets up a strong contrast between human beings and God. Humans are formed from dust, and to dust they will return (e.g., 1QH^a x.3–4), a teaching derived from the Bible (*Gn.* 3.19). The basic biblical view of the human as a creature of weakness, mortality, and sin is heightened in the Qumran literature with its doctrine of the “flesh” (*basar*) as the locus of sin, and “righteousness” as something wholly given by God (e.g., 1QS xi.5–12). The Gnostic view of the human constitution is very different. Though the Gnostics despise the flesh, they look upon the essential human being as a “spark” of the divine: Gnostic humanity comes from God as a part of God, and to God it will return. *Gnosis* thus provides its own answer to the basic human questions: “what we were, what we became; where we

were, whither we have been thrown, whither we hasten, whence we are delivered; what birth is, what rebirth” (Clement of Alexandria, *Excerpta ex Theodoto* 78). Gnostic anthropology is essentially dualistic and grounded in Platonist traditions relating to the soul.

Dualism does impinge in a way on the Qumran anthropology, too. This is especially clear in its classification of human beings into two groups: the sons of light governed by the spirit of light and the sons of darkness governed by the spirit of darkness (1QS iii.14–iv.16). This predestinarian doctrine has a counterpart in Gnosticism. The *Apocryphon of John* contains a Gnostic catechism very much like that of the aforementioned passage from 1QRule of the Community. In this passage (Nag Hammadi Codices 2.25, 16–27, 30, and parallels) the fate of human souls, salvation or reprobation, is tied to the operation of two spirits, the spirit of life and the imitation spirit. An apocalyptic Jewish source may, in fact, be posited for this passage, though with a Gnostic twist in that three groups of people are in view: the “perfect,” who are saved, “ignorant” souls who are given another chance in another incarnation, and “those who did know but have turned away” who are “punished with eternal punishment.”

Baptism. Ritual washing—baptism—was an important feature of the communal life of the Qumran sectaries, though the Dead Sea Scrolls provide surprisingly little information about it. Josephus reports that the Essenes practiced a purificatory immersion twice daily before meals (*The Jewish War* 2.129, 132), and this is likely to have been the case among the Qumran sectaries. The emphasis, of course, is on ritual purity. Some fragments of the Baptismal Liturgy (4Q414) recently have been published, and these fragments reflect a repeatable community rite of ritual purification. Concern for ritual purity naturally also would enter into the process of initiation into the community. The references to “purifying water” and cleansing by the “spirit of holiness” in 1QRule of the Community (1QS iii.4–12) very likely reflect a ceremony of initiation into the covenant, as the context would imply (cf. Josephus, *The Jewish War* 2.138).

Baptism was an important feature of Gnostic ritual as well, though in Gnosticism the initiatory feature predominates over the concern for ritual purity. The Nag Hammadi texts, especially those reflecting a Sethian provenance, are replete with allusions to baptismal initiations. Some Gnostic groups, however, rejected water baptism altogether (e.g., the Manichaeans; cf. Nag Hammadi Codices *Paraphrase of Shem* [8.1] and *Testimony of Truth* [9, 3]). On the other hand, repeatable ritual washings, comparable to those of the Qumran sectarians, are a feature of the one Gnostic group surviving from antiquity, the Mandaeans. Indeed, there even may have been a close rela-

relationship between the original Mandaeans and Jewish baptismal sects of the Jordan Valley, such as the Essenes of Qumran. In any case, it seems clear that Gnostic baptism, as attested in our sources, is rooted in the ritual practices of sectarian Judaism.

Shared Traditions. Some ancient Gnostic writers used, in addition to the Bible, Jewish traditions and writings also represented among the Dead Sea Scrolls.

Melchizedek lore. One of the Nag Hammadi tractates, *Melchizedek* (9.2; unfortunately very fragmentary), is formally an "apocalypse of Melchizedek" in which the "priest of God most high" (12, 10–22; cf. *Gn.* 14.18b) receives and transmits revelations mediated by heavenly emissaries. The core of the revealed material has to do with the future career of Jesus Christ and the ultimate identification of Jesus with the recipient of the revelation, Melchizedek himself. This text in its present form obviously is a Christian text, and its view of Melchizedek is based in large part on *Hebrews* 7. However, there are also aspects of the interpretation of Melchizedek that are traceable to Jewish apocalyptic speculation, unmediated by Christianity. Melchizedek is depicted as a heavenly holy warrior who, as a heavenly high priest, emerges victorious in an eschatological battle with demonic forces. The only known Jewish apocalyptic text that contains precisely this combination of roles and attributes is Melchizedek from Cave 11 at Qumran (11Q13). That text (also unfortunately fragmentary) features Melchizedek as a heavenly warrior-priest virtually identical to the archangel Michael. He appears in the tenth and final jubilee of world history (11Q13 ii.7) to rescue the "men of the lot of Melchizedek" (11Q13 ii.8) from Belial and his fellow spirits (11Q13 ii.13). Melchizedek's triumph is described as a high-priestly act of "expiation" (11Q13 ii.8). While it cannot be demonstrated that the author of the Nag Hammadi tractate *Melchizedek* knew and used the Dead Sea Scroll Melchizedek, it nevertheless is clear that he was familiar with Jewish apocalyptic traditions about Melchizedek very much like those found in the Melchizedek manuscript from Cave 11.

Enochic "Book of Watchers." A number of Gnostic texts refer to the biblical patriarch Enoch and cite revelations attributed to him. In some cases it is possible to see in the Gnostic material influence from specific Enochic writings. Probably the clearest case of this is the use in the *Apocryphon of John* of the "Book of Watchers," the first and perhaps oldest of the parts that make up what we now know as *1 Enoch*. *Apocryphon of John* 2.29, 16–30, 11 is a Gnostic reinterpretation of the myth of the fallen angels found in *1 Enoch* 6–11 and 15. In the Gnostic version the chief archon, that is, the biblical Creator, plays the role of the wicked Shemihazah, chief of the watchers (the "sons of God" of *Gn.* 6.2). The Qumran sectari-

ans had several copies of the various parts of *1 Enoch* in their library (except the "Book of Parables" [chapters 37–71]), as attested in Aramaic fragments found in Qumran. The myth of the fallen watchers not only was part of the Enoch literature kept at Qumran but also was incorporated into the sect's own teachings (see Damascus Document CD ii.17–19). [See Enoch, Books of.]

Enochic "Book of Giants." Among the books used by the Manicheans was one called the *Book of Giants*. From the eighteenth century it was thought that this book was somehow related to the Enoch literature, especially the "Book of Watchers." (The giants are the progeny of the watchers, according to the Enochic myth.) Fragments of this Manichean book exist in several Oriental languages, and now its association with the Enoch literature has been proven by the discovery among the Dead Sea Scrolls of Aramaic fragments of a Jewish Book of Giants ascribed to Enoch. Its place in Manichaean literature can be accounted for by positing that the prophet Mani knew of the Jewish *Book of Giants* circulating in Aramaic in the Jewish Christian Elkesaite community in which he was reared. Mani liked the book and adapted it for use in the communities that he founded.

From Jewish Apocalyptic Thought to Gnosis. All of the available evidence indicates that Gnosticism arose among circles in which Jewish apocalyptic traditions were current. The Dead Sea Scrolls are important for the study of Gnosticism because the literature produced by the Qumran sect and other Jewish literature circulating in it attest to the kinds of apocalyptic traditions that play such a prominent role in the origins and early development of the Gnostic religion.

BIRGER A. PEARSON

GOD. The community reflected in the texts that have been found at Qumran, as far as we can see from the scrolls, oriented its entire life to God and his commandments. The Qumran community used a calendar with 364 days, which corresponded to God's plan of salvation as it seemed to be expressed in the Sabbath scheme of Creation and the history of Israel. Although the literature of this community deals in detail with instructions for a life in accordance with the will of God, indications are sparse as to how they imagined God and what kind of theology they may have had. Therefore, it has to be reconstructed first by examining the variety of terminology and attributes, and then by analyzing the development of concepts of God in their historical context.

Attributes of God. God is regarded by the covenanters of Qumran as the one majestic almighty ruler, all his creatures being infinitely below him. This is shown by the hymns and prayers at Qumran, which take up the tradi-

tion of *Genesis 2*, that man is made of the dust of the ground in order to emphasize the immense distance between the creator (cf. liturgy, 4Q409) and human beings (cf. Hodayot^a from Cave 1 at Qumran [1QHodayot^a] 1QH^a xx.27, xii.34 [xii.24, xv.21]). But God can also be named as the loving one (e.g., Rule of the Community from Cave 1 at Qumran [hereafter 1QRule of the Community], 1QS iii.26). [See Rule of the Community.] He has done just deeds and given his merciful favors to Israel (1QS i.21–22). His justice can cleanse and atone for the sins of the community (1QS ii.14); all his acts are true and just, from the times of the fathers he bestowed his grace and mercy on those who live according to the covenant (1QS i.26; cf. the reconstruction of S. E. Scheepstra).

God acting directly. There are some texts that quite definitely show God speaking or acting directly. In Temple Scroll^a from Cave 11 (11Q19), the Tetragrammaton YHVH is used and God speaks to the community of Moses in the first person. [See Temple Scroll.] There are even some instances where the biblical text has been changed from the third to the first person (cf. Nm. 30.3–4 in 11Q19 lii.14–15). Presenting God in this way, as speaking directly, emphasizes the authority of this document, which presents itself as a Torah and binding commandment.

The Aramaic Genesis Apocryphon from Cave 1 at Qumran (1QapGen) has to be seen differently. According to column xx, God intervenes directly after a prayer of Abraham by sending a chastising spirit. [See Genesis Apocryphon.] In columns xxj and xxij he appears and speaks directly to Abraham. In this text the portrayal of God's immediate effectiveness promotes the concreteness of the narrative and arouses confidence in God's intervention. Even if we do not know whether these two texts (Temple Scroll^a and the Genesis Apocryphon) were written at Qumran, they were copied and used there. The experience of God acting directly is also witnessed in Peshar Habakkuk (1QpHab vii.4–5), according to which "God has disclosed to the Teacher of Righteousness all the mysteries of the words of his servants, the prophets." [See Peshar Habakkuk.] In a similar way, the elect of God knows the mysteries of all living things (Elect of God, 4Q534). It is not certain whether this title refers to a messianic figure or not. [See Messiahs.]

God and the gods. The majority of texts from Qumran no longer speak of God as acting directly. His effectiveness can only be imagined as mediated by other celestial beings. This phenomenon can also be detected in other documents from the late postexilic period, above all the *Book of Daniel*. It is the consequence of a more transcendent, strictly monotheistic conception of God. The celestial beings can be named as Gods, for example, in Songs of the Sabbath Sacrifice^a (4Q400 1–2; *elim* or *elohim*). [See Songs of the Sabbath Sacrifice.] God himself there-

fore is regarded as "God of gods" (cf. Songs of the Sage^a 1.2 [4Q510]). Further names are "gods of the light" (Songs of the Sabbath Sacrifice^d 4Q403 1.ii.35) or "gods of knowledge" (cf. 4Q400 2.8); the latter designation is surely to be connected with the name *El ha-de'ot*, "God of knowledge" for the one God (e.g., 1QS iii.15). In other instances they are called "cherubim of knowledge" (4Q400 1.6), "eternal holy ones" (1.15) or "most holy ones" (Songs of the Sabbath Sacrifice^b, 4Q401 14.i.7). Also individual figures like Melchizedek can be designated as "angel" and therefore as "God" (cf. Melchizedek 11Q13 ii.9–11 as an interpretation of Ps. 82.1). [See Melchizedek.]

An apocalyptic work (4Q246) that is only fragmentarily preserved even speaks of a "son of God," a "son of the Most High," who also belongs to the angelic sphere (García Martínez, 1992). He can be compared with figures like Melchizedek or the "splendid counselor" from 1QHodayot^a (1QH^a iii.10). The Florilegium (4Q174 i.10) explains the son of God from 2 Samuel 7.12 as the messianic branch of David, who will rise up in Zion in the last days. In other texts the members of the community seem to be designated as sons of God (cf. 11Q13 ii.8–14 and Words of the Luminaries, 4Q504^a iii). [See Words of the Luminaries.] The angel-Gods are called *benei shamayim*, "sons of heaven," according to 1QRule of the Community (1QS xi.8).

Further designations for celestial beings are *mal'akhim*, "angels" (so in the Songs of the Sabbath Sacrifice) and *ruhot*, "spirits" (cf. 1QS iii.14). [See Angels.] Both of these terms can be applied to good and bad powers because of the dualistic ideas of the covenanters. [See Dualism.] Songs of the Sabbath Sacrifice (11Q17) offers a collection of designations for those spirits, showing the whole range of what was possible. The marking of single angels by giving them proper names, which is well known from other texts, is found at Qumran, too. One can find, for example, Gabriel, Michael, Sariel, and Raphael (War Scroll, 1QM ix.15–16) or Uriel (Astronomical Enoch^b, 4Q209 25.3). According to the Songs of the Sabbath Sacrifice it is the primary function of the angels to praise and worship God, the king of glory, in their heavenly service. When the community fulfills the cultic regulations of the Torah, its worship is in harmony with that of the angels.

This merging of earthly cult and divine sphere can also be traced in the Songs of the Sage^{a-b} (4Q510–511). In reciting these collected prayers and praises, thus exalting the name of God (4Q511 35.6), the *maskil* ("instructor") is expelling the bastard spirits. In effect, he is protecting the sons of light from their seductions. The *maskil* thus participates in a magical way in the divine power. The distinctions between earthly and heavenly spheres become fluid.

Epithets for God. To show the goodness and majesty of God, many attributes and epithets were used, especially in hymnic contexts. In fact there are some instances where one can read about God's anger, his angry face, or the God of vengeance (cf. 1QS ii.9; iv.12). But as a rule, positive designations were used to describe God. He is characterized by truth and justice (1QS i.26); he is a God of salvation (1QS i.19). He, the God of Israel, the God of the fathers, is a God of mercy (Catena^a 4Q177 10.9); he can be addressed as "foundation of my well-being, source of knowing, spring of holiness, peak of glory, and all-powerful one of eternal majesty" (1QS x.12). God is the most high (*'elyon*; cf. 1QS x.12), the Lord of the universe (*Adon ha-kol*; cf. 4Q409 1.6), Lord of eternity (Words of Michael 4Q529 11) or Lord of the heaven (1QapGen ix.17). The same epithets can be used with "king" (*mel-ekh*) instead of "lord" without a recognizable difference in meaning (cf. 1QM xii.8). In using those epithets, the covenanters showed their deeply felt reverence for God and his helpful acts for those observing his Torah.

God in Historical Context. The Dead Sea Scrolls show how biblical traditions (including *1 Enoch* and *Jubilees*) are used as the primary sources to develop a more or less coherent concept of what is meant by the terms used for God. They reflect the ambivalence of particularistic and universalistic, empirical and eschatological modes of speaking about God, which are already present in the Bible.

God the creator. The basic confession of faith in God as creator of heaven and earth is put at the beginning of the Torah by the first creation account in *Genesis* 1. In some Dead Sea Scrolls the meaning of God's acts of creation is specified further and combined with his words attested in the prophetic literature. This specific view is interested in the long perspective of the connection between the heavenly and earthly realms: From God's side the spirits become agents of the continuation of the process of creation, while from the side of humanity right knowledge and religious practices open the gates of heaven to reach affirmation about the eschatological purpose/goal of the divine intention. The intersection of both areas of reality is dominated by the works fulfilled by good and evil spirits, which correspond to good and evil knowledge/work within humanity and its surroundings (cf. 1QS iii.13–iv.26). Both aspects of spirits are authored by God; they build the bridge between anthropology, cosmology, and eschatology (cf. liturgical work, 4Q392). This concept in the Dead Sea Scrolls is influenced by earlier texts like *1 Enoch* 15, which speaks about the fact that the fall of the watchers produced in humanity a mixture of spirit and flesh, and *Jubilees* 2, which reports the creation of natural phenomena together with corresponding spirits.

The implied dynamic of God's salvation history, which is produced by the ambivalence of creation, by light and darkness, is an elaboration emerging from God's self-declarations primarily given in *Isaiah*, the prophetic book that was most frequently copied among the Dead Sea Scrolls. [See Light and Darkness.] One can compare *Isaiah* 45.7, where emphasis is given to the creation of darkness as well as to the making of light. In *Isaiah* the shift to the eschatological situation is also promised: God "will arise upon thee, and his glory shall be seen upon thee" (*Is.* 60.2). The theophany of God himself "will be the eternal light" (*Is.* 60.19; cf. Osten-Sacken, 1969, p. 82).

God as a man of war. God's activity becomes more indirect in the War Scroll. He acts through the ones whom he has enlightened, that is, the heavenly and earthly "sons of light": "the sons of justice shall shine" and fight "the war of extermination against the sons of darkness" (1QM i.8–10). [See War of the Sons of Light against the Sons of Darkness.]

God's history with its cosmological and anthropological background is displayed for the end time as a war. This is a development of biblical tradition where God is called "a man of war" (*Ex.* 15.3). God and his "exalted greatness will shine for all the [eternal] times" (1QM xi.8), only after the last victory of those who demonstrate his power up to the ends of the earth.

Demonstrating God's power by warlike acts has ancient precedents in the Hebrew scriptures. It has to be stated that this is only a mode of language, not an actual pattern of behavior. The addition of liturgical material in the War Scroll as well as in several other Dead Sea Scrolls shows that not only cultic assemblies in the desert tradition of camps but also liturgical practices are the framework for understanding this language.

With the Song of the Sea, the biblical tradition offers a starting point for an integration of military and liturgical metaphors that are used up to modern times in synagogal services: God, "the man of war" (*Ex.* 15.3) "shall reign for ever and ever" (*Ex.* 15.18). The second element, with the confession of divine kingship, occurs in many psalms as well. But this kingship required development to a higher level, when even earthly kings claimed to be "king of kings," as is the case at least from Persian times on (cf. *Dn.* 2.37). The concept of a heavenly kingdom that incorporates even foreign kings and rulers, combined with the monotheistic idea of God, requires a universal confession: "God is the God of gods, and the Lord of kings. . . ." (*Dn.* 2.47). Within the Dead Sea Scrolls, one further step in the correspondence of the earthly and heavenly realms can be seen in the use of the double designation that is "God of gods of all the chiefs of the heights, and king of kings of all the eternal councils" (4Q403 1.34; cf. *I En.*

9.4). Within the thirteen Songs of the Sabbath Sacrifice this central statement is made as the climax reached on the seventh Sabbath and again at the center of the seven praises of this day (Schwemer, 1991, p. 95).

God's dwellings. This concept of the heavenly kingdom and worship oriented to the celestial temple breaks down the barriers between the earthly and heavenly realms and brings together all the tongues of praise in one common service. The certainty that angels are accompanying the communities is one of the characteristics of many of the Dead Sea Scrolls, requiring purity and holiness on the part of the members. Because of their cultic assemblies, both realms are merged with each other; it is even possible to state that God's temple is represented by the community that forms a "temple of men" (4Q174 i.6 as an interpretation of *Ex.* 15.17–18; Brooke, 1997, p. 70).

This temple seems to be a proleptic representation of God's theophany, which will result in a new creation and a new temple when, according to the prophets, God will "dwell in the midst of them forever" (*Ezek.* 43.9; cf. *Lv.* 26.11; 11Q19 xxix.8–10). In *Jubilees* 1.16–18 this hope is combined with the imagery of the "righteous plant" that God himself takes care of at all times. This metaphor of the eternal plant gives an important key for the self-understanding and theology of the groups behind the Dead Sea Scrolls (e.g., 1QS viii.5; xi.8; CD i.7; 1QH^a vi.15, viii.6, viii.9, viii.10). [See Eternal Planting.]

They see certain texts as a coherent chain of motifs.

- the announcement by Moses that God himself enables the planting of his people in the promised inheritance (*Ex.* 15.17)
- the throne vision seen by Isaiah in which God decrees that a remnant of the stable root will remain (*Is.* 6.13)
- the words of Isaiah about future salvation, where the growing of the plants is announced together with enlightenment and anointing by God's spirit (*Is.* 60.19–61.3)

These eschatological plant metaphors of the Hebrew scriptures were already fundamental in the Apocrypha and pseudepigrapha predating most of the Dead Sea Scrolls (e.g., *I En.* 10.16–19, 84.6, 93.2, 93.5, 93.10; *Jub.* 7.34–37, 16.26, 21.24, 36.6).

God's revelation. A further important development in speech about God and his modes of action is visible in *I Enoch* 2–5, where in a mode of wisdom teaching, the addressees are requested to observe natural phenomena. Their signs are used to demonstrate the connection between heaven and earth as well as to make inferences from God's creation regarding the hope of fulfillment of his blessings and curses in the end time. [See Blessings and Curses.] The experiences of seasons, times of heat and rain that determine the appearance of trees, permit

indirect speech about God. This chain of affirmative metaphoric language is taken up in the parables of growing in New Testament and rabbinic literature.

But even this empirical approach needs the right spirit of understanding. To interpret the meaning of things as authored by God makes it necessary to know how good and evil spirits are connected with creation and how they provide the real background of the visible phenomena, which fulfill God's hidden plans. The realization of this "mystery" of all things (already in existence and to come) marks in many Dead Sea Scrolls the revelatory process (e.g., 1QS xi.3, 5, 9). A counterpart to this is the confession of sin and self-humiliation of those who want their eyes, ears, and heart to be prepared for the perception of God's mysteries and to be members of his covenant (cf. *Is.* 6.10 against *Dt.* 29.3). As in *Isaiah* 55.7–9, people are able to return to God and are confronted with God's thoughts, which seem to reveal no simple mode of predestination.

God's blessings and his appointed times. The affirmation of the right knowledge about God and the possession of the right spirit given by God himself are enacted in the lifestyle and rituals of the communities: They study documents that reveal his will and they practice a cultic-liturgical life that guarantees that it is his light that shines upon and through the covenanters. The priestly blessing from *Nm.* 6.24–26 marks the fate of each individual as an effect of God's activity: may God "bless you, . . . make his face to shine upon you, . . . and give you peace." But according to the prophetic tradition of *Isaiah*, this is not applicable to the wicked, who will have "no peace" (*Is.* 48.22, 57.21). This sentence is taken over as a central message of *Enoch* to the fallen watchers and their followers (*1 En.* 12.5–6, 13.1, 16.4). It corresponds to the message of judgment. In *1 Enoch* 1.8 only the righteous ones receive the blessing of *Numbers* 6, with the eschatological announcement of mercy, peace, and God's saving light upon them. The wicked, in contrast, have to expect God's firelike theophany as judgment that brings the curses upon them: they will have "no peace" (*1 En.* 1.9, 5.4–7). Among the appointed times the main festivity in the communities of the Dead Sea Scrolls is depicted as a covenantal festival of the Torah (*Dt.* 27–28; 29–30). They assemble according to the precept of Moses and perform "your passing over into the covenant of YHVH" (*Dt.* 29:11) in connection with the ritual of blessings and curses that are invoked upon each of the participants (1QS i.16–ii.18; cf. *Berakhot*, 4Q286 7.i–ii). A similar yearly ceremony is dated in the final column of Damascus Document^b (4Q266 11–17) to the third month, the month of the giving of the Torah on Mount Sinai and the corresponding festival of weeks or oaths (*Shavu'ot*; cf. *2 Chr.* 15.12–15).

[See Damascus Document.] Here on the one hand are curses for the wicked who do not walk in God's Torah. But on the other hand the confession of faith in God as creator and in "the people of your ransom" is the basis for hope. It corresponds to the willingness to stand in his service "during the ages of anger and in their steps to all those who [dwell in their camps and in their cities]" (4Q267 18.v.9–12, 18.v.18–20). In reenacting this biblical situation the community reaffirms the final intention of God's Torah and his covenant.

UWE GLEBMER

GREAT REVOLT, THE. See First Jewish Revolt.

GRECO-ROMAN GUILDS. Trade guilds and voluntary associations abounded in the Greco-Roman world from the fourth century BCE to the late Roman period. One theory to explain the popularity of the guilds is that they provided a sense of community and belonging at a time when real participation in the life of the *polis* had been diminished under the changed conditions of first the Hellenistic kingdoms and then the Roman Empire. They appeared under various names such as *eranos*, *thiasos*, and *koinon* in Greek and *collegium*, *secta*, and *factio* in Latin.

Classification and Organization. Although these and other terms are used in the sources without any clear distinction, making it difficult to come up with any neat system of classification based on terminology alone, most scholars recognize three basic types of associations: trade guilds, religious associations, and burial clubs. A certain amount of overlap exists between these categories, however. For instance, many of the trade guilds were devoted to the worship of a patron deity, and religious associations often contributed toward the funeral expenses of deceased members, as did the burial clubs. Hence, the distinction between the types should not be seen as one of function but rather of emphasis and organizing principle. Indeed, most guilds functioned to meet a variety of needs ranging from social to religious to economic.

The economic activity of the guilds, however, was mostly directed to helping poorer members with personal expenses. In contrast with modern labor unions, the main goal of ancient trade guilds was not to improve the working conditions of members, and only in a few instances does one find guilds acting to protect a perceived threat to their livelihood (cf. *Acts* 19.24–25). Also infrequent is any mention of political activity. An exception is found at Pompeii, where "election posters" inscribed on the facades of buildings show that *collegia* supported candidates for office in the first century CE. In the earlier period such activity was likely more common, since Rome passed laws strictly controlling the formation of new guilds from 64 BCE onward.

The organization of the guilds in many ways mirrored that of the *polis*. Thus, they were rather democratic institutions with a set of rules ratified by the members and serving as a constitution of sorts. The rules usually had to do with the meetings of the association and stipulated such things as when meetings were to be held, who was to contribute what, and how members were to act toward each other. Breaking of the rules was punishable by fine or, for more serious offenses, exclusion. Periodically, the rules were read and assented to by the membership. They also had elected officials to carry out the routine business of the group.

The guilds usually were organized and functioned only on the local level, though a few did apparently extend over a province. The local nature of the guilds meant that their membership was limited. The average size was about thirty to thirty-five people, though a few had as many as two hundred to three hundred (cf. Marcus Tod [1974] and John Kloppenborg and Stephen Wilson [1996]). The composition of the membership also varied from group to group. Some associations had an all-male membership, some all-female, while others were mixed and some even included children. There were also associations made up of poorer people for whom the group provided the certainty of a decent burial at death. In the most inclusive guilds, however, men and women, slaves and freeborn, and rich and poor would all come together.

Qumran as a Guild. H. Bardtke (1961) was the first scholar to raise the question of whether the Qumran group was organized along the lines of a guild or voluntary association. His work was furthered by C. Schneider (1963), B. Dombrowski (1966), and W. Tyloch (1967), and set in a wider context by M. Hengel (1974). The fullest study to date, however, is the monograph of Moshe Weinfeld titled *The Organizational Pattern and the Penal Code of the Qumran Sect* (1986).

All these investigations have shown that there are a number of parallels between Qumran and the guilds. Thus, for example, the term that the Qumran group uses to refer to itself is *yahad* ("community"), which is quite similar to the Greek words *koinon* and *koinōnia*, used to refer to Greek guilds. Indeed, if one accepts that the Qumran group was in some way related to the Essenes, then it is significant that both Philo and Josephus use the same two Greek terms, *koinon* and *koinōnia*, when describing the Essenes.

Also like the guilds, the Qumranites had works such as the Rule of the Community (1QS) and the Damascus Document (CD) outlining the organization and rules of their group. Although differing slightly in their details, both these documents describe a community that is structured remarkably like a voluntary association with a

governing council, various officers having clearly defined duties, and a specific process of initiation. Importantly, it is just such matters as initiation, for which there is clearly no biblical precedent, that strengthen the likelihood of direct imitation of the guilds.

The same is true with regard to the various rules that govern conduct within the group. The requirement of unwavering fidelity, the regulations stipulating what is acceptable behavior at meetings, the prescribing of a fixed seating order at meetings and meals, the establishment of a fund for mutual aid of members, and the process for resolving disputes and misconduct all have analogies with practices in the guilds. Once again, it is just in those areas where there is no specific biblical prescription that the parallels with the guilds are revealed.

Still, in spite of the similarities just noted, there are also some differences. Both the Rule of the Community and the Damascus Document are longer and more detailed than the statutes of the societies. The range of issues dealt with in the Qumran works is more extensive, covering marriage laws, diseases, bodily emissions, and tithes. All these topics reflect issues that derive from the Torah and were of specific concern to Jews. At the same time, certain issues that were commonly mentioned in association statutes, such as provision for sacrifices at meetings and proper burial for deceased members, are absent from the Qumran compositions (though the absence of the former is undoubtedly because of the unique requirement in Judaism that sacrifice be offered only in Jerusalem).

Different also is the inclusion of poetry (cf. 1QS i.25–ii.17; x.1–xi.22) and religious instruction (cf. 1QS iii.13–iv.26, the so-called Treatise on the Two Spirits) that is missing from the pagan statutes but common in the Torah. Finally, one notices a polemical tone to both the Qumran works that is not found in the pagan statutes. This controversial element has to do specifically with the proper observance of the Torah. It is not merely a reflection of Israel's conviction of the exclusive claims of monotheism vis-à-vis paganism, however, for while the Qumran literature evidences no great esteem for gentiles, it is equally harsh on Jews not belonging to the group who are viewed as transgressing God's law.

The question thus becomes how to account for both the similarities and the differences between Qumran and the guilds. Weinfeld's view is that while the organization and structure of the Qumran community clearly reflect those of the guilds, the overall purpose and many of the specific practices of the community took their inspiration from uniquely Jewish religious ideals. His conclusion, however, has been challenged from two very different perspectives by Matthias Klinghardt (1994) and Sandra Walker-Ramisch (1996).

Klinghardt criticizes Weinfeld for recognizing most of the parallels but failing to draw the only proper conclusion, namely that Qumran was an association pure and simple. Furthermore, since he accepts that Jewish synagogues in the Diaspora were organized as associations, the type of association described in 1QRule of the Community is best understood as a Palestinian synagogue. Contrary to Klinghardt, Walker-Ramisch maintains that Weinfeld has failed to realize that parallels between groups such as the Greco-Roman guilds and the community of the Damascus Document can only be validated in light of their overall systems of belief and practice. She finds that it is the sectarian mentality of the latter group, based on religious ideology, antagonistic to the rest of society, and informing every aspect of its organization and conduct, that ultimately distinguishes it from the associations.

Of the three views, that of Klinghardt is the most problematic. Leaving aside the rather dubious assumption that since synagogues were associations, any Jewish association must be a synagogue, Klinghardt's theory fails to account satisfactorily for the differences between Qumran and the guilds, such as the all-encompassing nature of Qumran law, the translocal nature of the community (especially the references to "camps" in the Damascus Document, but cf. also 1QRule of the Community vi), and the sectarian outlook of the *yahad*. It is primarily what Walker-Ramisch sees as the pervasive influence of the last of these that leads her to conclude that the group behind the Damascus Document was not an association. The problem with her study is that after having drawn this fundamental conclusion, she is totally silent concerning the origin of the striking parallels that led to the whole discussion in the first place.

Strangely lacking in all three studies is the question of what the Qumranites themselves intended. Did they consciously set out to establish an association in imitation of their pagan neighbors and did they intentionally pattern their behavior after the guilds? Given the general attitude toward gentiles in the scrolls, the answer is likely no (see also Hengel [1974]). Of course, the lack of intentional borrowing does not mean that there has not been any influence at all. But such influence was likely indirect at most. This is corroborated by the fact that some of the most prominent shared traits between the guilds and Qumran also show up in other Jewish groups. Thus, with regard to initiation, S. Lieberman (1952) has shown that rabbinic literature describes a similar process for joining the *havurah* in the time of the Mishnah, though it is perhaps of even earlier Pharisaic origin. Similarly, the closest parallel to the brotherly reproof described in 1QRule of the Community (v.24–vi.1) and the Damascus Document (CD ix.17–23) is not that of the guilds but that of the early church as outlined in *Matthew* 18.15–17.

In sum, then, the most important differences distinguishing Qumran from the guilds are the all-encompassing legislation of the Qumran rules, the polemical tone (which entails a different motive for membership than merely choice—it is a matter of being faithful to God), and the translocal nature of the community (as envisioned in CD and perhaps in 1QS vi). Where the parallels to the guilds do exist, they may in part be coincidental, but more likely represent some kind of indirect Hellenistic influence exerted upon Judaism as a whole during the Greco-Roman period.

ERIK W. LARSON

GREECE. The long history of Greece can be only partly reviewed here. At the beginning of the fifth century BCE, the Greeks found themselves locked in a struggle with the Achaemenid dynasty of Persia, which some forty years earlier had allowed the Jews to return to their homeland.

This struggle was brought on by the rebellion of the Greek-speaking cities of Ionia in southwest Asia Minor in 499 BCE and resulted in two Persian invasions of the Greek mainland in the years 490 and 480–479 BCE, respectively. The Greeks, led by the two powerful city-states of Athens and Sparta, decisively defeated the Persians. The city of Athens, destroyed during the war, was rebuilt, and it was often there in the succeeding century and a half that brilliant new elements were added to the Greek heritage, forming what is often called classical Greek civilization. Among its characteristics were the ideal of democratic rule, a distinctive style of architecture and city planning, sophisticated art and sculpture, the development of tragedy and comedy, the rise of the discipline of history writing, and the flowering of philosophy.

Unfortunately, the political situation in Greece was not as propitious. From 431 to 404 BCE Athens and Sparta fought the Peloponnesian War, which resulted in a rather pyrrhic victory for Sparta. After the war, continued struggles between various city-states exhausted Greek military strength. Meanwhile, to the north of Greece a new power was rising in the person of Philip II, king of Macedonia. In 338 BCE Philip defeated the combined forces of Athens and Thebes at the battle of Chaeronea and became the undisputed master of the entire Greek world. Two years later he died by poisoning and was succeeded by his young son Alexander, later called the Great.

Shortly after his accession, Alexander was ready to avenge the Persian invasions of a century and a half earlier. In 334 BCE he crossed the Hellespont and in a series of battles crushed the numerically superior Persian forces. East and West were now united in one vast empire, and Greek language and culture were spread throughout the Near East, a process known as Hellenization, by the founding of Greek-style cities such as Alexandria in Egypt. In 323 BCE Alexander died, as did his empire, which was immediately divided up between certain of his generals. In Egypt, Ptolemy founded a dynasty that lasted from 323–30 BCE, while in Syria, Seleucus established a kingdom that lasted from 312 to 64 BCE. It was during the rule of the Seleucid Antiochus IV Epiphanes (175–164 BCE) that the Maccabean Rebellion broke out in Judea, partly as a reaction against the spread of Greek culture.

The Hebrew word for Greece is *Yavan*. This term is clearly derived from the Greek word *Ionia*, which as noted above refers to the area of southwest Asia Minor inhabited by Greek-speaking peoples since at least 1000 BCE. It is with this meaning that *Yavan* is used in biblical passages such as *Isaiah* 60:19; *Ezekiel* 27:13, 19(?); *Joel* 4:6; and *Zechariah* 9:13. In the genealogies of *Genesis* and *1 Chronicles*, *Yavan* is the eponymous ancestor of these peoples.

By the time of the *Book of Daniel*, the use of the word

was extended to include the Greek-speaking territories on the western side of the Aegean too, and particularly the area ruled by Alexander the Great (cf. *Dn.* 8.21, 10.20, 11.3). In a similar way, the word *Kittim*, connected to *Yavan* in the biblical genealogies and originally signifying Cyprus, also underwent an extension in meaning so that it too could denote Greeks in general. The semantic overlap between *Yavan* and *Kittim* in Second Temple literature is well illustrated by the fact that in *Daniel* 8.21 Alexander is associated with *Yavan*, but in *1 Maccabees* 1.1 with *Kittim*. However, in Peshar Nahum (4Q169) 3–4.i.3 a clear distinction is made between *Yavan* and *Kittim*, so that the former refers to Greeks and the latter to Romans.

In the nonbiblical texts from Qumran, the word *Yavan* occurs twice in Peshar Nahum 3–4.i.2–3, twice in the Damascus Document (viii.11, xix.24), and once in Genesis Apocryphon 12.xii. Another possible instance occurs in Tanhumim (4Q176) 34.2 where *ywnym* (in plural, cf. *Jl.* 4.6) is found, but not enough context is provided to determine whether one should translate it as "Greeks" or "doves."

Peshar Nahum 3–4.i.2–3 is one of the most noteworthy passages in the *pesharim* since it actually provides names and events that can be correlated to other historical sources. Line 2 mentions Demetrius III Eukerus (95–88 BCE) and calls him "king of *Yavan*," *Yavan* here clearly meaning the Seleucid realm. Line 3 further mentions a series of kings of *Yavan*, "from Antiochus until the appearance of the rulers of the *Kittim*." Again, this is a clear reference to the Seleucid dynasty, with Antiochus being either Antiochus III (223–187 BCE) or more likely Antiochus IV (175–164 BCE), and the coming of the *Kittim* referring to the end of the dynasty at the hands of the Roman general Pompey in 64 BCE.

The two instances of *Yavan* in the Damascus Document actually represent the same sentence as found in the two slightly different versions of the Cairo Geniza manuscripts. The lines immediately preceding contain a condemnation of a certain group called "the princes of Judah," who acted wickedly and followed the ways of the gentiles. Fittingly, these apostates will be punished by one called "the chief of the kings of Greece (*Yavan*)" who will come to execute vengeance on them. The fact that the author of the Damascus Document envisions the activity of this king as taking place in the future makes it impossible to know precisely whom, if anyone in particular, he had in mind. Nevertheless, it is likely that one of the Seleucids is intended, as is certainly the case in Peshar Nahum.

ERIK W. LARSON

GREEK. The Greek of the texts from the Judean Desert, both literary and nonliterary, is the *koine*, a common language which replaced the variety of dialects of classical Greek, and can be seen as a transitional stage between classical and modern Greek. This is the language of Hellenistic prose, both pagan and Jewish, the Septuagint and other translations of the Hebrew scriptures, the New Testament, and the inscriptions; in its nonliterary form it is the language of the papyri and the ostraca. Following Alexander's conquests, Greek supplanted Official Aramaic as the language of government in the Near East. It retained this status even after Rome had ousted the Hellenistic kingdoms. Nevertheless, the majority of the texts from the Judean Desert are written in dialects of Aramaic—Jewish Aramaic and Nabataean—and Hebrew. Furthermore, Qumran texts evince a deliberate and conscious avoidance of Greek loanwords. This runs counter to the prevailing trend in spoken and written Aramaic and Hebrew at the time. On the other hand, the Greek of the documentary texts, which mostly involve Jews, reflects the influence of the local spoken Aramaic language of the writers. The pervasive Semitisms in the papyri from the Judean Desert stand in sharp contrast to the resistance of the Greek language to native influences in the Greek papyri from Egypt. Certain lexicographic features of our texts, shared with Greek papyri from other parts of the Near East, are either not attested at all in the Greek papyri from Egypt, or occur in them only at a much later period. This feature may well be a product of the influence of the Aramaic world in which they were written. The influence of Latin, the language of the Roman administration and army, is limited: it expresses itself mainly in the use of the Roman calendar, the literal translation of legal formulas and transcriptions of Latin words.

Literary Texts. With one exception, no Greek literary texts were found in the Judean Desert. The exception is Mur 108, not a "philosophical text," as its first editor suggested, but iambic trimeters, and thus a fragment of a comedy (see C. Austin, *Comicorum Graecorum Fragmenta in papyris reperta*, 1973, no. 360). Mas739, a fragment of a line dated to the first century CE, and Mur 109–112,

fragments of literary texts of the first half of the second century CE, scarcely alter the picture.

Nor did the caves yield a rich crop of biblical texts in Greek. The most important text is undoubtedly the Greek translation of the Minor Prophets, 8HevXIIgr, which comes from Cave 8, the "Cave of Horror," in Nahal Hever. The fragments belong to a single manuscript, of which more than half has survived, written on leather in two different book-hands which can be dated to the later first century BCE. The translation is a revision of the Septuagint translation, based on the same Hebrew text. Its literal and pedantic tendencies are especially noticeable in the attempt to render every Hebrew word by its Greek equivalent.

Fragments of Greek translations of the Hebrew scriptures come from Qumran Cave 7 and Cave 4, 7Q1, which contains two small fragments of *Exodus* 28.4-6 and 28.7, is dated to c.100 BCE; 4Q119 and 120, Septuagint Leviticus^{a,b}, are dated to the first century BCE—they thus antedate other Greek witnesses to Leviticus by approximately four centuries; 4Q121, Septuagint Numbers, could be somewhat later than the previous two; 4Q122, Septuagint Deuteronomy, may belong to the earlier or mid-second century BCE. In addition, there are texts which may not have a Hebrew *Vorlage*: The Cave 7 Epistle of Jeremiah is dated to c.100 BCE and the Cave 4 Greek Paraphrase of Exodus to the first century BCE or early first century CE.

Kh. Mird P.A.M. 2 + 1 of the eighth or ninth century CE, a private copy of a liturgical hymn (*tropologion*), and Kh. Mird P.A.M. 22 of the eighth century, a series of metrical units called *doxastika*, were both written in book-hands of the early Byzantine period. Almost the entire corpus of Greek texts from Khirbet Mird (approximately two hundred texts) has so far remained unpublished. It may well contain more literary texts from these centuries. Mur 156, a fragment of Christian liturgy, is dated paleographically to the eleventh century CE.

Documentary Texts. The Greek texts from Masada are the earliest dated Greek documentary texts from the Judean Desert. With the exception of one Byzantine papyrus (Mas742), all the Greek documentary texts from Masada come from a Jewish milieu, and thus date from no later than 73 (or 74) CE, when the fortress fell to the Romans. These texts include papyri (Mas739-741, 743-747), ostraca (Mas772-794), and jar inscriptions (Mas854-914). Some of the ostraca (Mas772-777) show signs of having been used for daily transactions and are therefore likely to have been written by the Sicarii who occupied the fortress from 66 to 73 (74).

The Greek texts from Wadi Murabba'at, Nahal Hever (Cave 5/6, the Cave of Letters, and Cave 8, the Cave of

Horror), Nahal Se'elim, Nahal Mishmar, and Ketef Yeriho are likely to have been written no later than the last part of 135 CE (the conclusion of the Bar Kokhba Revolt). Those which bear dates fall between 99 or 109 (XHev/Se Gr. 66) and 132 (P.Yadin 35). From Wadi Murabba'at come documents on leather (Mur 89-107) and on papyrus (Mur 113-125 and the tiny fragments 126-155). From Nahal Hever come the Babatha archive (of which P.Yadin 5, 11-35 are in Greek), the archive of Salome Komaise daughter of Levi (XHev/Se Gr. 60-65), two letters from the Bar Kokhba circles (P.Yadin 52 and 59; there may be more among the unpublished material in the Rockefeller-Museum), and probably also XHev/Se Gr. 67-73 and the unidentified fragments XHev/Se Gr. 74-169. The material from Nahal Se'elim, Nahal Mishmar, and Ketef Yeriho will be published in the series *Discoveries in the Judean Desert* (Oxford, 1955-).

The second-century documentary hands from the Judean Desert have been studied by Crisci and others, and the conclusions are summarized by Thomas:

The hands from the Judean Desert have affinities with contemporary Egyptian documentary hands, but at the same time show features similar to those found in some of the hands from Dura . . . The general impression we get from them is of less cursive scripts with fewer ligatures than would be normal in papyri from Egypt of a similar type. None of the scripts makes a serious attempt at bimetricity, and indeed the variable size of the letters . . . is a notable feature of most of the texts.

Mas742 and Kh. Mird P.A.M. 22 and 8(b) are Byzantine.

HANNAH M. COTTON

H

HABAKKUK, BOOK OF. See Minor Prophets; Peshor Habakkuk.

HAGGAI, BOOK OF. See Minor Prophets.

HAGU, BOOK OF. The expression, appearing either as *spr hgw* or *spr hgy*, and usually translated as the "Book of Meditation," occurs four times (one occurrence is restored) in the Dead Sea Scrolls. It is not attested in either the Hebrew scriptures or other ancient Jewish writings. Therefore, its correct vocalization (*sefer he-hagol he-hagu/he-hagil ha-hagil/he-hegisha-hegeh*) and meaning have been a matter of debate. Three out of the four passages in which the expression appears are in the Damascus Document (CD x.6; xiii.2; xiv.8 [restored]; Rule of the Congregation 1Q28a i.7). In the last passage the reading is clearly *hgy*, whereas in the first two it could be *hgw* or *hgy*, the letters *vav* and *yod* not being clearly differentiated by the scribe. The latter is favored by Elisha Qimron in his transcription of the Damascus Document (CD) in *The Damascus Document Reconsidered* (Jerusalem, 1992) and appears to be confirmed by fragments of the Damascus Document found in Cave 4 at Qumran (4Q260 8.iii.3.5; 4Q267 9.v.12; 4Q270 o.iv.17; see Baumgarten, 1996, p. 67).

In each occurrence, the expression is the object of study or learning. In the Damascus Document (CD), it is used to denote the expert learning of a leading priest, or judges, characterized as "learned (*mevonen*) in the Book of Meditation." In the Rule of the Congregation it refers to youth who are to be "instructed in the Book of Meditation." In two of the four passages (CD x.6; 1Q28a i.7), expertise or instruction in the Book of Hagu is to include communal laws, (*yesodei ha-berit*; *huqqei ha-berit*); whereas in another passage (CD xiv.9 [restored]) it is linked to "all the judgments of the Torah (*mishpelei ha-torah*)."

Scholars have been divided about whether the phrase refers to what is elsewhere called "the Torah of Moses" (e.g., 1QS v.8; viii.22; CD xv.9 xv.12; xvi.2; xvi.5; 4Q260 11.8) or "the Book of Torah" (e.g., CD v.2; 4Q260 5.ii.2-3; 4Q177 3.14; 4Q396 10), or to some more esoteric, sectarian collection of rules, whether extant (e.g., the Temple

Scroll [11Q19] or the Rule of the Community from Cave 1 [1QS]) or not.

While there is no consensus, most scholars appear to prefer the first alternative. In an apparent parallel to a sentence in the Damascus Document (CD xiii.2-3), "And in a place of ten, there shall not be lacking (*'al-yamush*) a priest learned in the Book of Meditation," we find, "And in the place where there are ten, there shall not be lacking (*'al-yamush*) a man who studies the Torah day and night continually" (1QS vi.6-8). Both passages are commonly understood to be reworkings of *Joshua* 1.8 (with an echo of *Psalm* 1.2), in which God charges Joshua: "Let this Book of Torah not cease (*lo' yamush*) from your lips, but recite (*hagita*) it day and night, so that you may observe faithfully all that is written in it." Thus it is argued that the Book of Torah, which is to be recited or meditated upon continually, is sometimes called "the Book of Meditation" in the Dead Sea Scrolls and set alongside the study of the community's own esoteric laws and teachings.

HASIDEANS. The Greek term *Asidaioi*, which is a transliteration of the Hebrew *hasidim* ("pious ones") and perhaps the Aramaic *hasidayya'*, is used to designate a specific group of Jews who participated in events at the time of the Maccabean Revolt. The three references to this body in the books of the *Maccabees* constitute the primary evidence for its existence: *1 Maccabees* 2.42, 7.13 and *2 Maccabees* 14.6. The textual evidence for their appearance in *1 Maccabees* 2.42 is not above dispute. While the name appears to be rooted in the use of the term *hasid* in the Hebrew scriptures, there is no evidence to postulate that Psalm 149.1 or other references in the *Psalms* should be taken as evidence for the existence of this group.

The term *hasidim* is found rather infrequently in the Qumran corpus. While the allusions in the Messianic Apocalypse (4Q521 2+4.ii.5, 7) and the Apocryphal Psalms^a (11Q11 xviii.10, xix.7, xxi.3, 6) have sometimes been cited as evidence of this group, the fact that the term is used as a synonym for "the righteous," "the humble," and other such designations suggests a general reference to piety rather than to the group mentioned in *1* and *2 Maccabees*. Other references, such as those in the Florilegium (4Q174 6-7.3) and the Testimonia (4Q175 14), are merely biblical quotations. Possible allusions to the term in the Apocryphon of Moses (4Q377 2.i.8, 2.ii.12) and the Apocryphon of Joshua^a (4Q378 2b.6) are so fragmentary as to contribute little to the discussion. They do appear to contain the phrase *ish hasadim*, used to describe David in 4QMMT (398) 14-17.ii.1. The name *Hisday*, found on an ostrakon from Qumran, is attested elsewhere as a common personal name from that era.

This group has often been viewed in modern scholarship as the forerunners of the Pharisees and the Essenes of the Second Temple period. Many scholars argue that the term *Essenoi* is derived from the plural form of the Aramaic term *hasya'*, the supposed equivalent of the Hebrew *hasid*. Due to their role in the events of the Maccabean era, scholars have also considered them to be part of the apocalyptic tradition. The frequent references to the *hosioi* (the Greek translation of *hasidim*) in the *Psalms of Solomon*, and especially to the "synagogue of the pious" in 17.16, have also been considered evidence of these connections. None of these identifications is beyond dispute.

The first reference in *1 Maccabees* 2.42 includes the *Hasidim* within the account of the growth and development of the Hasmonean movement. *1 Maccabees* 2.39-48 describes the origins of the Maccabean Revolt as stemming from the actions of Mattathias and his friends. The *Hasi-*

dim are included among those forces which allied themselves with Mattathias after the king's troops attacked on the Sabbath those Jews who had fled to the wilderness for refuge, as described in *1 Maccabees* 2.29-38. The *Hasidim* are described in *1 Maccabees* 2.42 as *ischivroi dynamei*, usually translated "mighty warriors" but which could equally well refer to "mighty men," a group of leading citizens of Judea. The members of this elite group "offered themselves willingly for the Law," pledging to violate the prohibition instituted by Antiochus IV against its observance (*1 Mc.* 1.41-50). Included among the prohibitions were sacrifices and offerings in the Temple as well as the observance of Sabbaths, festivals, and the rite of circumcision.

The leading role of this group is attested in the story of *1 Maccabees* 7.12-18. In verse 12 they are identified as a "company of scribes" and in verse 13 they are said to be "first among the Israelites." The political significance, however, of this leading group is discounted by the pro-Hasmonean author of this dynastic history. The *Hasidim* are said to have trusted the "peaceable words" of Alcimus and Bacchides in verse 15, a confidence badly misplaced, since it resulted in the murder of sixty members of their company in one day (*1 Mc.* 7.16). Judas and his brothers had already rejected the "peaceable but treacherous words" of Alcimus and Bacchides in *1 Maccabees* 7.10-11. It appears that the trust of the *Hasidim* was based upon the presence of Alcimus, "a priest of the line of Aaron." The Hasmonean historian who authored *1 Maccabees* thought that the *Hasidim* naively trusted a Greek general due to the presence of a Jewish priest with the army. So the *Hasidim* are portrayed in this account as an important but misguided group of leaders at this crucial stage in Israelite history during which the foundation was laid for the establishment of the Hasmonean dynasty. The use in *1 Maccabees* 7.17 of Psalm 79.2-3 as a proof text explaining the fate of the *Hasidim* suggests that the author did regard them as legitimate martyrs on behalf of Israel.

The reference to the *Hasidim* in *2 Maccabees* 14.6 is placed in the context of a direct quotation attributed to Alcimus. Identifying Judah the Maccabee as their leader, Alcimus accuses the *Hasidim* of "fighting and causing insurrection, not permitting the kingdom to find stability." From the viewpoint of the epitomist of this history, this is a positive statement about Judah. The role of these leading citizens of Israel in the insurrection is used as evidence of the military leadership and accomplishments, as well as the piety and purity, of Judah the Maccabee, the hero of this account.

The appearance of the name in Greek transliteration rather than translation also attests its significance. At the very least, the translator of *1 Maccabees* in the second century BCE, the editor of *2 Maccabees*, and, almost cer-

tainly, Jason of Cyrene (whose five-volume history is summarized in *2 Maccabees*) understood the name to be a proper noun. Any argument that claims these references merely allude to pious Jews in general must be rejected on this account.

The foregoing description demonstrates that any simplistic presentation of the *Hasidim* as either pacifists who deviated from their basic ideology in support of Mattathias or as the religious wing of the revolution that broke ranks with the Hasmoneans when their religious objectives were accomplished does not find support in these sources. Clearly, the history of this important Jewish group is much more complicated than either of those perspectives would suggest. The details are, however, irretrievable from our limited sources. The literary evidence does not support a link between the *Hasidim* and the refugees in the desert "who were seeking righteousness and justice," described in *1 Maccabees* 2:29–38. This link has been regarded as a crucial piece of evidence for connecting the *Hasidim* with the Essenes.

References to the term *hasid* in both the singular and plural are to be found in early rabbinic literature. Individuals such as Honi the Circle Drawer and Hillel the Elder bear this designation. While some scholars have considered Hanina ben Dosa, a miracle worker in the rabbinic tradition, to be a *hasid*, he is not referred to with this epithet in early rabbinic texts. Actions attributed to him resemble incidents and activities ascribed to the "early *Hasidim*" in related rabbinic accounts. The major references to the "first" or "early *Hasidim*," Mishnah, *Berakhot* 5.1, Tosefta, *Baba Qamma* 2.6, Babylonian Talmud *Niddah* 38a–b, Babylonian Talmud *Nedarim* 10a, and Babylonian Talmud *Menaḥot* 40b–41a, show that this group was used in the Talmudic tradition to demonstrate exemplary behavior rather than as authorities in Talmudic disputes or as evidence of a divergent halakhic tradition.

JOHN I. KAMPEN

HASMONEANS are the family of priests who played the leading role in the Jewish rebellion against the Seleucid Empire (beginning in 167 BCE), an uprising that ultimately led to the establishment of an independent Jewish state. The origins of the title Hasmonean are unclear; while it was known to Josephus and frequently mentioned in rabbinic literature, the *Books of the Maccabees* and other sources of the Second Temple period make no reference to it. Josephus states that "Asamoniaios" was the great-grandfather of Mattathias (*Jewish Antiquities* 12.265), and also claims that his own mother was a descendant of Asamoniaios, whose offspring "for a very considerable period were kings, as well as high-priests, of our nation" (*Life* 2). Rabbinic literature refers at times to "[the Kingdom of] the House of Hashmonay" or "the Sons of Hashmonay," which merely suggests the name as that of an eponymous family ancestor. The text of the rabbinic prayer (*Al ha-Nissim*) commemorating the victory of the Hasmoneans, however, refers to Mattathias as "son of Yohanan, great priest, Hashmonay and his sons," and this has led certain scholars to claim that the name was an additional one for Mattathias himself (Goldstein, 1976, p. 18, n. 34). Most scholars tend to view the title as alluding to a geographical origin, probably the village of Heshmon (*Jos.* 15.27).

The Hasmonean chapter in Jewish history can be divided into two sections: (a) the years of the revolt, beginning with the initial opposition of Mattathias to any submission to the religious decrees issued by Antiochus IV Epiphanes (168–167 BCE) and culminating with the removal of all vestiges of Seleucid political control in Judea

(142 BCE); and (b) the emergence of an independent Jewish state ruled by the descendants of Mattathias, initially in their capacity as high priests but at a later stage assuming royal title as well. The independent Hasmonean state was conquered by Pompey in 63 BCE, and the Hasmonean monarchy was also abolished at that time. However, a vassal Jewish state, ruled by Hyrcanus II as high priest and ethnarch, extended Hasmonean control of the Jewish portions of Judea until 40 BCE. The Parthian invasion and short-lived conquest of much of the Near East in 40 BCE restored Hasmonean glory to Judea, and for one final time a member of the family, Mattathias Antigonus, briefly ruled as king in Jerusalem. His defeat and the reconquest of the land by Rome (37 BCE), with the assistance of Herod, brought Hasmonean rule to a close, and Herod was appointed by Rome to succeed the Hasmoneans as king of Judea. The new king considered the Hasmoneans his natural enemies, and while his marriage to the Hasmonean Mariamme extended the family's prominence by a few generations, most notably through the reign of Agrippa I (41–44 CE), Herod would also be remembered in subsequent Jewish literature as the monarch who systematically persecuted the Hasmoneans (*Ass. Mos.* 6.2; *B.T., B. B.* 3b).

Unless stated otherwise, the following historical outline until the end of Simon's rule depends largely on the narrative of *1 Maccabees*, and thereafter on the accounts of Josephus. The first member of the Hasmonean family for whom we have any historical information is Mattathias, a priest of the prominent family of Joarib (*1 Chr.* 24.7), who settled at some unknown stage in the village of Modi'in (*1 Mc.* 2.1), on the border between Judea and Samaria. It was to this village that Greek officers were dispatched at the early stages of forced implementation of the religious decrees issued by Antiochus IV Epiphanes, and Mattathias is described as refusing the Greek request to set an example by submitting to the king's demands. Mattathias proceeded to kill both a potential Jewish collaborator as well as the Greek official on the scene, and this event was projected as the raising of the banner of rebellion against Seleucid attempts forcibly to change the religious character of the Jewish nation (*1 Mc.* 2.19–22).

Mattathias, his sons, and supporters abandoned Modi'in for the hills north of Jerusalem, and thus began a classic guerrilla war. The Jewish fighters appear initially devoid of any military tradition, and even refuse to defend themselves when attacked on the Sabbath, causing the deaths of one thousand Jewish men, women, and children. Mattathias is credited with proclaiming it permissible to fight when attacked on the Sabbath (*1 Mc.* 2.41), and the transition from episodic clashes and isolated opposition to an organized and popular uprising is formulated ideologically in Mattathias's deathbed exhortation

to his five sons (166 BCE; *1 Mc.* 2.49–68). Of these, Judah Maccabee was appointed military leader, and his leadership raised the level of organized Jewish opposition.

Support for the Hasmonean uprising in the hills surrounding Jerusalem created a situation whereby the Greek garrison in the city, as well as the pro Seleucid Jewish party in it, slowly found themselves under siege. For three years Seleucid armies attempted to link up with Jerusalem, but were repeatedly surprised and defeated by the growing forces under Judah's command. By December 164 BCE Judah was sufficiently in control of the area surrounding Jerusalem, and after retaking the city had the Temple cleansed of the various impurities introduced into it while under Hellenistic rule. The ensuing rededication of the Temple established the basis for the annual festival of Hanukkah, and in one sense marks the culmination of the initial stage of the Hasmonean uprising.

Under Judah, who continued to clash with Seleucid forces for the next four years (164–160 BCE), a gradual transition from religious uprising to a quest for national autonomy occurred. To this end, Judah entered into an alliance with Rome (161 BCE; *1 Mc.* 8), which shared, for its own reasons, the objective of weakening Seleucid control over the Near East. This alliance between Rome and the Hasmoneans was destined to become a mainstay of Hasmonean policy, both before and after the achievement of complete independence.

Judah's death in battle in 160 BCE served only to slow down Hasmonean progress toward independence. He was succeeded by Mattathias's remaining sons, Jonathan (160–142 BCE) and Simon (142–135 BCE), under whom the final steps were taken toward a complete removal of Seleucid rule in Judea. More than military genius, it was brilliant political instinct that now advanced Hasmonean goals. In particular, the growing weakness within the Seleucid monarchy provided the Hasmonean leaders with the opportunity to offer their support to one or another of a series of contenders to the Syrian throne, all of whom eagerly vied for such support by granting the Hasmonean brothers greater authority within Judea. In 152 BCE Jonathan was recognized as high priest by one of these Syrian pretenders, Alexander Balas (*1 Mc.* 10.18–20), and this office would remain in Hasmonean hands for more than a century, ending only in 35 BCE with the drowning in Jericho, under Herod's orders, of Aristobulus III, the last of the Hasmonean high priests.

Jonathan and Simon consolidated their position by annexing the districts of Lydda, Ramathaim, Ephraim, and Ekron, on the northern and western borders of Judea, to the territory already under their control. With the conquest of the port city of Jaffa, the Hasmoneans secured an outlet to the Mediterranean. Hasmonean designs on statehood also were evident through an active

diplomatic initiative undertaken by Jonathan. Not only did he renew the pact with Rome (*1 Mc.* 12.1), but he also embarked on a correspondence with Sparta, in which it was even suggested that the two nations enjoyed a common kinship (*1 Mc.* 12.2–23). Indeed, it was this enhanced Hasmonean political fervor that momentarily proved their undoing. In 142 BCE, Jonathan was taken captive by the Syrian general Tryphon, a supporter of yet another Seleucid pretender, and ultimately executed. This setback, however, was shortlived, and immediately upon the succession of the last son of Mattathias, Simon, the final trappings of independence were achieved. In 142–141 BCE, Simon succeeded in gaining control of the Greek citadel in Jerusalem (*1 Mc.* 13.49–52), the last vestige of Seleucid rule in the land.

The establishment of Jewish independence under the Hasmoneans was formally recognized through a declaration issued by “a great synagogue of priests and people and leaders of the nation and elders of the community” that convened on the eighteenth day of Elul in “the third year of the reign of Simon the high priest” (140 BCE). The declaration in essence serves as the constitutional basis and formal recognition of the Hasmonean dynasty, both as political leaders as well as high priests “until a true prophet should arise” (*1 Mc.* 14.27–49). This last clause, which seems to downplay the overwhelming power now in Hasmonean hands, may in fact be an attempt at pacifying the first stirrings of opposition to the family, either for usurping the high priesthood or for joining that office with supreme political control over the nation. It is not surprising, therefore, that a majority of scholars have identified “the Wicked Priest who was called by the name of truth at the beginning, but when he ruled over Israel his heart became haughty” (Peshar Habakkuk [1QPHab] viii.8–13) as the Dead Sea sect’s description of either Jonathan or Simon. The fact that the Wicked Priest also “took the wealth of the nations” might easily correspond to the conquests carried out by the last two sons of Mattathias, and inasmuch as this same priest is also accused of pursuing “the Teacher of Righteousness” (Peshar Habakkuk xi.5–8; Peshar Psalms^a [4Q171] 1–10.iv.8–9), it is highly probable that the establishment of the Hasmonean state also served as one of the crucial junctures in the formation of the Dead Sea sect. These events may provide the backdrop for the composition of 4QMMT.

Peshar Habakkuk (1QPHab ix.8–12) claims that the Wicked Priest ultimately met with a violent end at the hands of his enemies, and indeed Simon, like his brother Jonathan, was also murdered, together with most of his sons, by his own son-in-law while at a feast at the Fortress of Duk overlooking Jericho (*1 Mc.* 16.16–21; some have connected Simon’s murder with certain violent events at Jericho related in Apocryphon of Joshua^b

[4Q379] 22.ji.7–14 = Testimonia [4Q175] 21–40). One of Simon’s sons, John Hyrcanus I (134–104 BCE) survived the massacre, and under his lengthy rule the Hasmonean state expanded significantly. In fact, it was under Hyrcanus I that major portions of Judea not inhabited by Jews now came under Hasmonean rule. These areas included Idumea, Samaria, and Scythopolis (Beth Shean) as well as portions of the Transjordan, and no less noteworthy is Hyrcanus’s forcible conversion of the Idumeans to Judaism.

A major expression of Jewish independence under Hyrcanus I is the appearance for the first time of Hasmonean coins. The inscriptions on these early Hasmonean coins project the major components of Jewish sovereignty, for they mention “Johanan high priest and the congregation [or nation] of the Jews (*hever ha-yehudim*).” Some coins describe Hyrcanus as “head of the congregation of the Jews” (*ro’sh hever ha-yehudim*), and the monarchical implications in such titles may be one of the causes leading to the dissonance between the Hasmonean ruler and the Pharisees (*Jewish Antiquities* 13.288–296; compare B.T., *Qid.* 66a and B.T., *Ber.* 29a). Nevertheless, John Hyrcanus I is the first of the Hasmoneans (other than Mattathias) to be mentioned in rabbinic sources by name, with a number of references made to ordinances established by him in matters of Temple procedure (which may lie behind some matters discussed in the Temple Scroll^a [11Q19] xxxiv) as well as regarding the tithing of agricultural produce (*Ma’as. Sh.* 5.15; *T. Sot.* 3.10). One legendary rabbinic source claims that John Hyrcanus I heard a voice from the sanctuary proclaim the victory of his sons in battle “at Antioch” (*T., Sot.* 13.5; cf. *Jewish Antiquities* 13.282–283), probably an allusion to their victory over Antiochus IX Cyzicenus at Samaria.

Hyrcanus’s heir, Aristobulus I, ruled for only one year (104–103 BCE), during which the Hasmonean conquest of Galilee was completed. Like his father John Hyrcanus I, he too imposed conversion on a local Semitic tribe, in this case the Itureans, who had moved from the Lebanon into Northern Galilee (*Jewish Antiquities* 13.318). Josephus states that Aristobulus I was the first to place a royal crown on his head (*Jewish Antiquities* 13.301, *The Jewish War* 1.70) while the Greek geographer Strabo of Amaseia claims that it was his brother and successor Alexander Jannaeus who “was first to declare himself king instead of priest” (*Geography* 16.2.40). Scholars have attempted to reconcile these diverse claims by suggesting that the Hasmonean move to monarchy was carried out in stages: Aristobulus I assumed the title of king primarily for foreign consumption, while remaining high priest in Jewish eyes (hence the sole title of “high priest” on his coins), whereas Jannaeus completely transformed the government of Judea into a monarchy (Stern, 1974, p.

307). Jannaeus, in any case, proclaimed his royal status on his coins in Hebrew, Aramaic, and Greek, and so is the best candidate with whom "Jonathan the King" (probable reading) should be identified (Apocryphal Psalm and Prayer [4Q448] B2).

Under Alexander Jannaeus (103–76 BCE) the Hasmoneans reached the zenith of their power and territorial expansion. The entire coast of Palestine (save for Ashkelon) came under Jewish rule, as did many of the Greek cities of the Transjordan. However, Jannaeus's reign was marked by a period of internal dissension (90–83 BCE), possibly a result of opposition to his extended military campaigns, not all of which were successful, but also a reflection of growing displeasure with the direction that the Hasmonean dynasty had taken. Josephus describes the slaughter of thousands of Jews at the hands of Jannaeus (*Jewish Antiquities* 13.376), and even relates that Jews joined the forces of the Seleucid King Demetrius III Eukerus (95–88 BCE) in his campaign against the Hasmonean king. These rebels were ultimately defeated by Jannaeus, who reportedly had eight hundred of them crucified (*Jewish Antiquities* 13.380). The events are almost certainly alluded to in Peshet Nahum, which describes "[Deme]trius, king of Greece, who sought to enter Jerusalem with the counsel of the interpreters of false laws" and who also made war "against the Lion of Wrath" (Peshet Nahum, 4Q169 3–4.i.2–6). The "Lion of Wrath," almost universally assumed to be Jannaeus, took revenge "in that he hanged men alive" (Peshet Nahum, 4Q169 3–4.j.7–8), descriptions all closely mirroring those of Josephus. The Hasmonean state, in its final stages, indeed takes on a decidedly negative appearance in the writing of Josephus, but this fact must be tempered by the realization that Josephus's primary source for this era was not a Jewish one, but rather Nicolaus of Damascus, the court historian and ally of Herod, and certainly not one expected to portray the Hasmoneans in a positive light (Stern, 1974, p. 230). Jannaeus's attitude and exploits or those of his father may have provoked some of the restrictions on the king aspired to in the "Law of the King" (Temple Scroll^a, 11Q19 vi.12–lix).

Jannaeus was succeeded by his widow Shelamzion Alexandra (76–67 BCE), who is mentioned in Calendrical Document C^a (4Q322) ii.4 and Calendrical Document C^c (4Q324b) I.ii.7. Save for isolated forays (an attempt to capture Damascus) the queen's rule was for the most part peaceful. Some internal unrest resulted from her decision to join ranks with the Pharisees. They may now have tried to settle old scores with their opponents, who had earlier enjoyed considerable influence under previous Hasmonean rulers. Later rabbinic sources, not surprisingly, portrayed Shelamzion's rule in idyllic colors (B.T., *Ta'an.* 23a). In fact, however, harbingers of the demise of the

state began to appear during her rule. Her sons Hyrcanus II and Aristobulus II were already jockeying for position, and upon her death Aristobulus assumed power forcibly. His elder brother, Hyrcanus, was convinced by Antipater, the governor of Idumea, not to concede his rightful claim to the high priesthood, and the years 67–63 BCE were marked by civil war. The dispute was resolved with the appearance of Roman legions in Judea under the command of Pompey, who was probably accompanied by Aemilius Scaurus (cf. Calendrical Document C^d, 4Q324a 2.iv.8). Hyrcanus II was granted the high priesthood, Aristobulus and his sons were taken prisoner, and most of the non-Jewish territories conquered by Hyrcanus's predecessors were now torn from the truncated Hasmonean vassal state established by Pompey. Opponents to the Roman conquest would nevertheless continue to rally around the Aristobulan branch of the Hasmonean family, and the legacy of the Hasmonean era assumed a significance far exceeding the years of independent statehood. The success of the Hasmonean rebellion and the state that followed in its wake preserved Jewish self-identity for more than a century, and the failure of Roman attempts to divide the nation into separate administrative districts (under Gabinus, 57–55 BCE) attests to the Hasmonean success in forging a common Jewish identity throughout their territories. This legacy assured an enduring Jewish presence in Judea.

ISAIAH M. GAFNI

HAVERIM. The term *haver* was used in Jewish society during the last decades of the Second Temple period and apparently occurs only in sources compiled after 70 CE. It refers in particular to a male individual who belonged to a *havurah* (fellowship), which was very strict about the setting aside of *terumot* (priestly portions) and *ma'aserot* (tithes), as well as about the observance of the laws of ritual purity. Organization into *havurot* was an accepted phenomenon at the time for meeting certain mutual needs or achieving certain common ideals. Some of these *havurot* had rules and ways of living that required segregation and even total withdrawal from normative society, as with the Judean Desert sect, while other *havurot* continued to live in settled areas and within the community. These latter included *haverim*, who formed a kind of elite stratum among the Pharisees.

There is relatively little evidence on the customs, lifestyle, and day-to-day life of these *havurot* because no book or document written by a *haver* has survived with evidence of this kind. Evidence about the *havurah* is all drawn from Talmudic literature, which for the most part reflects the period after the destruction of the Second Temple. Moreover, the obligations undertaken by the members of the *havurah* did not usually become religious laws that were binding on most Jews, and were never a

central concern in the discussion of the sages. In a number of places in Talmudic literature, however, collections of religious laws have been preserved, which include the obligations of a *haver* and the conditions for his acceptance into a *havurah* (M. Dem. 2.2–3; T. Dem. 2.2–3, 15, [Lieberman edition, pp. 68–77]; J.T., Dem. 2.22d–23a; B.T., Bekh. 30b–31a). The majority of these religious laws and sayings present *haverim* in contrast with the *ammei ha-'arets*, Jews who were defined in the Second Temple period as people who neglected precisely those areas of religious law that the *haverim* observed with the greatest stringency. Thus, the *haver* stands at the top of the social scale in the eyes of Pharisaic religious law, while the *ammei ha-'arets* are considered to be at the bottom.

A candidate for membership in a *havurah* had to undergo a probationary period. During this time, he gradually took on the obligations of a *haver*, and correspondingly gradually joined in and was accepted as a member of the *havurah*. These conditions of membership were obligatory for all candidates, even sages. The sources do not give an exact description of the entry stages and how long they lasted. Nevertheless, it is clear that the criterion for the graduated entry into the *havurah* was the extent of the stringency with which the laws of purity were observed. There is a considerable degree of similarity between the entry stages described in the collections of religious laws noted above, and the levels of impurity in Pharisaic law, so that a person outside the *havurah* who was not scrupulous about the laws of purity was considered to be a generator of impurity (*av ha-tum'ah*), like a man with a genital discharge, and was defined as an *am ha-'arets*. A candidate for membership in a *havurah* at the beginning of his probationary period was considered to be subject to the first degree of impurity, by which he conveyed impurity to ordinary things. He was therefore forbidden to come near the pure *havurah* at this stage. In the second stage of his probationary period, he was considered to be subject to the second degree of impurity, whereby he no longer conveyed impurity to food and utensils, so he was now allowed to approach the pure *havurah*. However, he was still liable to contaminate drink, for the laws of purity are more stringent about liquids than about solid food. Consequently, he was still not allowed to touch liquids belonging to the *havurah*. After he had undergone all the stages of acceptance, the candidate became a *haver*: he was considered completely free of all impurity, and was accepted into the *havurah* with all the obligations and rights of a full member.

Some scholars think that the halakic commitment undertaken by the members of a *havurah* was no stricter than normative halakic practice and that the main goal of forming these fellowships was to make it easier for the members to observe the laws of the Torah as the Phari-

sees interpreted them. But the stringent long-drawn-out acceptance procedures, and the situation reflected in the various religious laws, which mention the obligations of a *haver* and the lifestyle of a *havurah*, produce what is almost a picture of life in a total institution. The conclusion to be drawn is that the *havurah* took on themselves exceptional stringencies in various areas, and especially in the laws of purity and impurity, where the peak of their achievement was eating ordinary nonconsecrated food in a state of total purity. Their extreme scrupulousness about ritual purity in their daily lives was normally only demanded of priests in connection with the Temple rites and with the eating of consecrated food.

It is very probable that the *havurah* held communal meals, as has been implied already in the stages of acceptance to the *havurah*. The term *havurah* is often mentioned in Talmudic literature with reference to communal meals. Thus the Mishnah mentions meals held by a *havurah* in connection with the sanctification of the month (*San.* 8.2) as well as the *havurot* who ate the Passover meal together (e.g., *Pes.* 7.13; 8.4) and so on. Communal meals are known among the Essenes and the Judean Desert sect; the early Christians also held communal meals, as did some pagan societies, such as the Nabateans. At Petra, the Nabatean capital, special rooms have been found cut out of the rock for this purpose. Judaism gave a value of its own to these communal meals, in that their ceremonial aspects were compared to the rites of sacrifice in the Temple, so that the table was seen as equivalent to the altar and the grace before and after the meal was parallel to the prayers before and after the offering. The formal invitation to the grace after meals was largely intentionally produced for the communal meals of the *havurah*.

As a member of a *havurah*, a *haver* had to be scrupulous in carrying out his obligations and also had to relate with the strictest discipline toward his *havurah* and its institutions. A *haver* was obliged to give a full account of his actions: as the Jerusalem Talmud puts it, he was to "answer to the *havurah*" (*J.T., Dem.* 2, 23a). If he departed from the principles laid down by the *havurah*, he was liable to sanctions and punishment. In extreme cases he was excluded from the social framework of the *havurah*: "They send him away from his *havurah*" (*J.T., Dem.* 2, 23a), and in some instances he was not allowed to atone for his actions and be reinstated. The members of a *havurah* kept their own property and had the right to own land and slaves. They continued to have reciprocal relations with neighbors who did not belong to a *havurah*, but they were careful not to contract impurity from them or to receive untithed produce. *Haverim* also preserved the framework of the family. The wife of a *haver*, his nuclear family, and his slaves had to take on

themselves all the principles that were obligatory for the *havurah*. However, they were not obliged to go through a period of candidacy or trial, but had to promise the *haver*, who was master of their household, that they would carry out these obligations. They were accountable to him, not to the institutions of the *havurah*. Thus, they formed a sort of periphery to the *havurah* and belonged to it passively; all relations with it were via the *haver* who was head of the family. Thus it is clear that the *havurot* preferred to preserve the framework of the family rather than adopt the stricter policy of celibacy.

There is a great deal of similarity between the description of the *havurot* in Talmudic literature and between the membership conditions, obligations, and customs of the Judean Desert sect. In particular, scholars agree that *haverim* are similar to the members of the community of the *yahad*, whose rules are to be found in the Rule of the Community (*Serekh ha-Yahad*). A comparison of the conditions for membership makes it clear that, both in the case of the *haverim* and in the case of the Judean Desert community, there was a public undertaking of the obligations of the *havurah*; a period of learning the rules; a trial period and graduated acceptance based on the measure of reliability in the area of purity; and a final stage of acceptance, which allowed the new member access to liquids (see the Rule of the Community vi.14–23; compare also the entry conditions of the Essenes [*The Jewish War* 2.137–142]). The central importance of communal meals is noteworthy both with the *haverim* and with the Judean Desert sect.

In spite of these similarities, the contention that the *havurot* and their members are identical to the Judean Desert sect cannot be upheld. First, it should be noted that such comparisons must by their nature be forced because the surviving evidence is so fragmentary and lacking in particulars, and because everything related to *haverim* is contained in works edited at the earliest well over a hundred years after the time of the *havurot*. Second, even the evidence that has been preserved points to essential differences between the *haverim* and the sect. The most essential of these differences is the way in which the sect broke away from normative Jewish society as well as its ascetic way of life (it is probable that there were no women in the dominant group of the sect, for they are not mentioned in some sources), and its communal ownership of the use of property (according to the majority of scholars). *Haverim*, in contrast, remained part of their hometowns and villages, maintained their families and their private property, and participated in local life.

A particular phenomenon among the *havurot* who continued to be part of normative society were those *havurot* whose rules and lifestyles included social and religious obligations to the community within which they lived.

The outstanding examples of this are the "*havurot* which were in Jerusalem," which worked for the good of the general Jewish community and its poor. There is evidence about these *havurot* from Rabbi Eleazar the son of Rabbi Zadok, who was active around the time of the destruction of the Temple and in the Yavneh period (after 70 CE), and who provides many descriptions of the customs of different groups in Jerusalem at the end of the Second Temple period.

"Rabbi Eleazar the son of Rabbi Zadok said: 'The *havurot* which were in Jerusalem used to operate like this: some [helped] with meals to celebrate engagements, some with wedding meals, some with circumcision feasts and some with collecting bones, some [helped] with celebrations and others with mourning'" (T., *Meg.* 3.15; Lieberman edition p. 357). These *havurot* were typified by the help they gave to the individual in the community in times of joy and sorrow (cf. the work of the *beit ha-ḥever* of Damascus Document^a [4Q266] 10.i.10). They contributed to the ritually prescribed feasts celebrated by the individual, as well as providing for the needs of the sick and the bereaved. Indeed, there are parallels between the communal meals that were a central part of the lifestyle of *haverim* and the ritually prescribed meals in which the "*havurot* which were in Jerusalem" took part. In the Damascus Document^a (4Q266 10.i.10) the rules for groups related to the *yahad* in some way include one mention of the communal house (*beit ha-ḥever*), which is the focus for the care of the disadvantaged members of the group; this is the only instance of a phrase terminologically comparable with the *havurah* of later rabbinic sources. It is necessary to understand "the counsel of the joint communal body of Israel" ('*atsat ḥever yisrael*: Damascus Document^b [4Q267] 9.iii.3 = ca. xii.8 [*havur*]) in some other way, perhaps as comparable with the designation *ḥever ha-yehudim* on Hasmonean coins.

Another term that is connected both to *haverim* and to the "*havurot* which were in Jerusalem" is *ḥever 'ir*, which appears to be defined as *havurah*, rather than an individual, in relation to a town or village. From the sources it is clear that the *ḥever 'ir* carried out certain functions in the local leadership of the settlements. The *ḥever 'ir* is mentioned in religious laws dealing with mourning, so that it is clear that this institution was engaged in charitable activities. It was also active in carrying out the religious laws that depend on settlement in the Land of Israel and have social repercussions, like the poor man's tithe and the sabbatical year. Religious law stresses the special place of the *ḥever 'ir* in the synagogue and in relation to the prayers. Here, too, there is a connection between the *ḥever 'ir* and the "*havurot* which were in Jerusalem," for Rabbi Eleazar the son of Rabbi Zadok notes that the people in Jerusalem who engaged in social help were con-

nected with the synagogue (T., *Suk.* 2.10, Lieberman edition p. 265), and it would appear that he is referring to the "*havurot* which were in Jerusalem." There are also similarities between *haverim* and the "*havurot* which were in Jerusalem," and between the early *hasidim*. All of these groups stress the importance of help for the individual in social and communal life. [See Hasideans.]

Another socially active group that appears to be connected to *haverim* and to the "*havurot* which were in Jerusalem" is that of the "pure-minded of Jerusalem," whose actions are highly praised. Communal meals are noted among their customs (for example: B.T., *San.* 23a), and they too were to be found in Jerusalem. Jerusalem at the end of the Second Temple period was a spiritual center for different groups of *havurot*, another facet of the city's special status as a socially unifying force.

It is especially interesting to compare the two extremes of the social spectrum, the *haverim* and the '*amnei ha-'arets*, and the way they related to each other before and after the destruction of the Temple. The *haverim* of Temple times kept their distance from the '*amnei ha-'arets*, but this was simply because they did not want to be contaminated with impurity or to receive untithed produce. Religious law recognized the possibility of forming family ties between *haverim* and '*amnei ha-'arets*, and there are records of *haverim* and '*amnei ha-'arets* who lived as very close neighbors. After the destruction of the Temple, when the study of the Torah took pride of place in Jewish life instead of the Temple and the laws connected with it (such as offerings, ritual purity, and tithes), the terms used to describe different classes of the community changed accordingly. The term *haver*, used in connection with tithes and purity, disappeared. Its place in society was taken over by the learned sage, who then took over the title *haver* as well: "There are no *haverim* apart from the sages," states the Babylonian Talmud (B.T., *B.B.* 70a). In contrast, the term '*am ha-'arets* became a description of an ignoramus, far removed from the world of Torah study. The tolerance shown by the *haverim* in their relations with the '*amnei ha-'arets* at the end of the Second Temple period gave way to mutual hatred between the sages and the illiterate '*amnei ha-'arets* after the destruction.

It is not possible to pinpoint the exact time when the *haverim* and *havurot* began to appear during the Second Temple period, but the spread of the phenomenon probably took place in the period's last decades. This was a time of institutional decline and decay, which also gave rise to sectarianism, preparing the ground for the appearance of different sorts of groups. Indeed, some of the disagreements between the schools of Hillel and Shammai include religious laws that deal with *haverim*. The destruction of the Temple brought about the decline of the

havurot: the *havurah* ceased to be the definitive form of organization, and its place was taken by the community. But the ideals of the *haverim* and the “*havurot* which were in Jerusalem” continued to exist, and they are found to a certain extent in the world of the sages, to a greater extent among the circles of *hasidim* who operated on the fringes of that world, and to an even greater extent in various sporadic phenomena like the *havurah* that was called the “Holy Community of Jerusalem.” This *havurah* was active in Jerusalem in the days of Rabbi Judah ha-Nasi [the Patriarch] more than a hundred years after the destruction of the Temple.

AHARON OPPENHEIMER

HEALING. Historical demographers agree that the average life expectancy of prehistoric and early historic peoples was less than thirty years, perhaps substantially less. Where mortality rates are high, the health of the living is likewise poor. The majority of inhabitants of the Mediterranean region in the Greco-Roman period, especially those who lived in cities, suffered from one chronic health problem or another; sickness was everywhere.

Eye diseases, skin rashes, and missing limbs are mentioned again and again in ancient sources describing urban life. Contracts of the period described the parties involved in terms of disfigurements, mostly scars, for purposes of identification. One papyrus in particular (*P.Abinn.* 67.v) comprises a fairly long list of debtors, all of whom were scarred. Further, ancient letter writers constantly mention matters of health, both their own and that of their recipients. Formulas such as the Latin *salve* were not polite banalities—they were often expressions of

real concern. Women were particularly afflicted by ill health because of infections that accompanied childbirth and abortion. Given this dismal reality, it is only to be expected that healing would be a central aspect of both paganism and Judaism. Numerous Dead Sea Scrolls touch on the matter from a variety of perspectives.

In Judaism, poor health was often equated with sin. Numerous precedents could be drawn from the Hebrew scriptures to support this outlook: the plague that followed David's census, for example (2 *Sam.* 24). New Testament authors certainly believed in this equation: “Therefore, confess your sins to one another, and pray for one another, that you may be healed” (*Jas.* 5.16). The assumption behind this exhortation is that if one can somehow expunge sin, health will return. The equation of forgiveness with healing—often to be accomplished through prayer—appears at more than one juncture in the Dead Sea Scrolls. The clearest passage lies in the Genesis Apocryphon (1QapGen xx.21–29 [xxi.21–29, if 1Q20 fragments are included as the original column]).

The story is told of Pharaoh's taking Sarai from Abram. [See Abraham; Sarah.] Pharaoh and his court are then stricken with disease—gonorrhoea, perhaps—and no Egyptian medicine successfully cures the condition. A courtier of the pharaoh, Hyrcanos, discovers that the seizure of Sarai lies behind the problem and comes to Abram:

Then Hyrcanos came to me, asking me to come pray for the king, and to lay hands upon him and cure him—for [he had seen me] in a dream. . . . Hyrcanos told the king, “All these smittings and plagues by which my lord the king has been smitten and afflicted are because of Sarai, the wife of Abram! Let him return Sarai to Abram, her husband, and this plague will depart from you, that is, the spirit causing the discharges of pus.” So he called me to himself and asked me, “What have you done to me because of your wife [Sar]ai? . . . Here she is; take her, go. . . . But first, pray for me and my house that this evil spirit may be exorcised from us.” So I prayed for him, that blasphemous, and laid my hands upon his [he]ad. Thereupon the plague was removed from him, the evil [spirit] exorcised [from him,] and he was healed.

A further aspect of healing in the scrolls, and in Judaism more generally, is prominent here: an evil spirit as the agent of disease. To be cured, one must be forgiven of the sin that was the root cause, but one had also to deal with the evil spirit(s). That might involve exorcism, as in the Genesis Apocryphon above or the Prayer of Nabonidus below.

Nabonidus, the last of the Neo-Babylonian kings, is portrayed as describing what happened to him while he was in Teima:

[I, Nabonidus,] was smitten [with severe inflammation] lasting seven years. Beca[use] I was thus changed, [becoming like a beast, I prayed to the most high,] and he forgave my sins.

An exorcist—a Jew, in fact, a mem[ber of the community of exiles—came to me and said,] “Declare and write down this story, and so ascribe glory and gre[at]ness to the name of [God most high”]. (4Q242 i-iii.2-5)

The connection between sin and disease is very clear in the Prayer of Nabonidus, but less clear is the role of the exorcist. Some scholars reconstruct and read the text differently, with the result that the exorcist, not God, is the one forgiving the king’s sin. Given the fragmentary textual remains, the debate cannot be settled decisively, but it does seem unlikely that any Jewish text of the period would suggest that someone other than God could forgive sin. In reply, of course, advocates of the forgiving exorcist point to the Gospels and Jesus’s claiming the power to do just that.

Proverbs(?) (4Q560) concerns itself with the prevention of demon possession rather with than its treatment. The work is actually not a collection of proverbs, as it was once supposed, but an apotropaic formula(s) for protection against demons. The surviving rubric mentions childbirth and attendant health concerns, consumption or tuberculosis, fevers, chills, and chest pain—all addressed as their eponymous demons. The author adjures them in “[the Name of YHVH, ‘He who re]moves iniquity and transgression” (Ex. 34.7). Songs of the Sage^{a-b} (4Q510–511) and Apocryphal Psalms^a (11Q11) are similarly involved with the binding of demons to prevent sin and disease.

In Songs of the Sage^a the *maskil* (“instructor,” an officer of the sect or sects that composed some of the scrolls) declares “I, the *maskil*, proclaim His [God’s] glorious splendor, so as to frighten and te[r]rify all the spirits of the destroying angels, and of the bastards, demons, Lilith, howlers and [desert dwellers . . .] and those who fall upon men without warning, to lead them astray from a spirit of understanding . . .” (4Q510 i.4–6). Having sinned, of course, people would be subject to punishment in the form of disease; better to prevent the entire cycle before it begins. So, too, Apocryphal Psalms^a, which preserves an incantation attributed to David and intended to be uttered against Resheph, an ancient Semitic deity whom the Jews now cast as a demon. Here the chief weapon is mockery: “Who are you? [Withdraw from] humanity and from the ho[ly] race. For your appearance is [nothing], and your horns are horns of sand” (11Q11 iv.6–7). It has been suggested that the apotropaic psalms of Apocryphal Psalms^a are those mentioned at the conclusion of Psalms^a (11Q5). Here, included in a list of writings attributed to David, one reads of “four songs for charming the demon-possessed with music” (11Q5 xxvii.10). In light of the extremely fragmentary condition of Apocryphal Psalms^a, however, this possibility must remain only that.

An intriguing and almost universally misunderstood passage on the legal aspects of demonic possession and

healing appears in one of the central sectarian works, the Damascus Document. It reads:

Any man whom the spirits of Belial rule so that he preaches apostasy shall be judged in accordance with the law of the necromancer and the medium. But anyone he leads astray so as to profane the Sabbath or the festivals should not be executed; rather, his confinement becomes a human responsibility. If then he should be healed of it (the evil spirit), then they must observe him for seven years (to assure proper behavior). Afterwards, he may re-enter the congregation. (CD xii.2–6)

The “law of the necromancer and the medium” is an allusion to *Leviticus* 20.27, which requires that such people be stoned to death. The phrase “preaches apostasy” is a reference to *Deuteronomy* 13.6, a passage describing prophets or diviners who “preach apostasy” and must therefore be purged from Israel. False prophets were thought to operate under the influence of evil spirits, as did mediums, diviners, and necromancers; they must all be executed in the same manner. The content of the apostasy is defined: breach of laws that would result in profanation of the Sabbath or festivals. Included in such preaching of apostasy would be advocacy of the false (Pharisaic) calendar. [See Calendars and Mishmarot.] Members of the group who fell under the inimical influence of false prophets were not to suffer the same penalty as the prophets themselves. Being deceived in such a way was only possible, it was believed, because a person was possessed by demons—“led astray” (compare the wording of the Damascus Document text with that of 4Q510 above). The hope was that such victims might be healed, presumably by exorcism, though the passage does not specify the means.

Finally, there is a significant passage in the scrolls that refers to the healing of mortal wounds, even resurrection from the dead, in the messianic era. In reference to the coming of “God’s messiah,” the scroll Messianic Apocalypse describes a wondrous era when God will “honor the pious upon the th[ro]ne of his eternal kingdom” (4Q521 ii.7). At that time, God or his messianic agent (certainty about which is precluded because of damage to the text, though of course God is involved either way) will “heal the mortally wounded, revive the dead, [and] bring glad tidings to the poor” (ii.12). This description of the messianic era, it has been noted, is precisely that of the Gospels at a certain juncture (*Mt.* 11.4–6, *Lk.* 7.22–23 [Q source]). In that day, impossible healings would become possible, for God himself would act.

In view of the frequent connection made between the scrolls and the Essenes, this discussion would not be complete without noting the suggestion of Geza Vermes, that the term *Essene* derives etymologically from an Aramaic term for healing, *’asa*. No linguistic obstacle disallows this possibility. On the other hand, the Aramaic

word in question occurs only a few times in the scrolls (in the Genesis Apocryphon) and is never used in the sectarian texts at all, much less as a self-designation for the group.

HEAVEN. In contrast to the speculations about the contents and spatial configuration of the heavens that one finds in many apocalypses (e.g., *1 Enoch*, *2 Enoch*, *2 Baruch*, *Apocalypse of Abraham*, *Testament of Abraham*), sectarian literature from the Dead Sea Scrolls shows comparatively little interest in such matters. Presumably, the descriptive tradition of apocalypticism was known to the Qumran community, since copies of *1 Enoch* were preserved there. In their own literature, however, and in the texts that seem most closely related to it, references to heaven tend to be brief and nondescriptive. The one partial exception to this generalization is Songs of the Sabbath Sacrifice (4Q400-407, 11Q17, MasIk). Similarly, in the nonapocalyptic, nonsectarian literature found at Qumran, references to heaven are brief and incidental. [See Songs of the Sabbath Sacrifice.]

In *1 Enoch* 14, Enoch describes a visionary journey to heaven, specifically, to the palace that contains the

throne of God. [See Throne.] This heavenly structure consists of two rooms, the second more splendid than the first. The outer room is described numinously through the use of contradictory images. It is "hot as fire and cold as snow," constructed of what appears to be hailstones and snow but also of burning fire. Cosmological and meteorological images are invoked to describe the roof of the structure, which is like the path of the stars with lightning flashing in it. Images of cherubim, also described in terms of fire and water, suggest a connection between this heavenly structure and the Temple (cf. *1 Kgs.* 6.29-32). The description of the inner throne rooms is similar although more glorious. The throne itself appears like ice, with rivers of fire flowing from it, and the figure whom Enoch sees sitting upon it is described in terms of the radiance of the sun (cf. *Dn.* 7.9-10, *Ezek.* 1.26-28). In attendance upon the enthroned God are cherubim, myriads of angels, and the high ranking angels called the "holy ones." [See Angels.]

Nothing comparable to this detailed description is to be found in the hymns and liturgical compositions from Qumran. As in the Hebrew scriptures, "the heavens," the paired terms *heaven and earth*, and *angels in heaven* often occur in hymns of praise, as part of a descriptive catalog of God's creative acts (as in Hodayot^a from Qumran Cave I, hereafter 1QHodayot^a, 1QH ix.10-14 [i.8-12]; Noncanonical Psalms B, 4Q381 1.3; Psalms^a from Qumran Cave II, hereafter, 11QPs^a, 11Q5 xxvi.14-15), as those called upon to praise God (as in the War Scroll, 1QM xji.1; Psalms^f, 4Q88 10.5-6; Words of the Luminaries^a, 4Q504 7.4-12), or occasionally in connection with times for praise (Daily Prayers, 4Q503 3.1; cf. 1QH^a xx.4-9 [xji.1-6]). Little can be gathered from these texts concerning the nature of heaven, although one fragmentary liturgical work (4Q392) refers to heaven not only as the dwelling of God but also as a place of perpetual light, in contrast to the earth, where light and darkness are separated. [See Light and Darkness.]

A little more information about the heavens is disclosed in those texts that share aspects of the religious ideology of apocalypses. Incantations and songs against demons speak of a divine judgment, which occurs in heaven against divine beings and on earth against humans (Songs of the Sage^b, 4Q511 10.11-12; Apocryphal Psalms^d, 11Q11 2.6-8), a motif that also occurs in wisdom texts and *peshtarim* that display eschatological interest (Sapiential Work A^b, 4Q416 1.10-16; Melchizedek, 11Q13 2.8-11). The heavens are also said to contain tablets upon which are inscribed the predetermined acts for every age, apparently including the deeds and judgments of both the "sons of heaven" and humans (Ages of Creation, 4Q180-181; Apocryphon of Jacob, 4Q537).

Heaven is, above all, the place of God's presence and

rule, as well as the place of the holy angels who serve God and have knowledge of truth and mysteries. One of the distinctive features of Qumran sectarian literature is that it speaks of membership in the community as an entry into a communion with "the congregation of the sons of heaven" (1QH^a xi.19–22 [iii.18–21], xix.11–14 [xi.8–11]; Rule of the Community from Qumran Cave 1, hereafter, 1QRule of the Community, 1QS xi.7–8; Ages of Creation from Qumran Cave 4, 4Q181 1.3–5). Although emphasis in these references is on the communion with the angels, heaven is described in terms of its opposition to the *pit*, *Sheol*, and *Abaddon* (terms for the underworld), as an "everlasting height," and as a "limitless plain" (1QH^a xi.19–20 [iii.18–19]). The eschatological blessing of the high priest speaks of his serving in the "holy dwelling," that is, the heavenly temple, like an Angel of the Presence (Rule of the Blessings, 1Q28b iv.24–28); and a covenant liturgy (Berakhot^{a-b}, 4Q286–287) includes in its blessings brief descriptions of the glories of heaven, the multiple chariot thrones that attend God, and the heavenly spirits.

The most extensive description of the heavenly realm in Qumran literature, however, is found in the Songs of the Sabbath Sacrifice. Since this text is a liturgical composition that invokes angelic praise in the heavenly temple, its descriptive passages occur within the context of acts of praise, not, as in apocalypses, in a narrative context. Also, whereas apocalyptic descriptions often mention the heavenly temple as one part of what is found in the heavens (e.g., *Testament of Levi* 3), in Songs of the Sabbath Sacrifice the heavenly temple is not related to other heavenly structures but is the sole focus of attention.

In continuity with biblical and other Qumran literature, heaven in the Songs of the Sabbath Sacrifice is often referred to as "the highest height" and as the "dwelling" of God and the angels. Most of the description, however, refers to the structure of the heavenly temple itself. The terminology is partly drawn from the various biblical accounts of the Tabernacle (*Ex.* 25–27) and the Solomonic Temple (*1 Kgs.* 7–8) but is particularly indebted to Ezekiel's description of the ideal temple (*Ezek.* 40–48). Various general expressions are used to identify the heavenly temple (e.g., "temple," "sanctuary," "holy place," "tabernacle," "building"), along with numerous references to the particular architectural features of the temple (e.g., gates, portals, vestibules, pillars, corners, beams). Relatively little reference to the furnishings of the heavenly temple occurs, although figures engraved on the walls of the temple chambers and embroidered on the *parokhet* veil are mentioned, as well as the divine throne and footstool. Considerable attention is given to describing the heavenly *devir* ("holy of holies") and the *merkavah* ("chariot throne"), with its attendant cherubim and *'ofanim*

("wheels"). In addition to the chariot throne upon which God is enthroned, there are also multiple chariot thrones that praise God in the heavenly temple, a feature that is known from later Jewish mystical literature (*Ma'aseh Merkavah* 6; cf. also 4Q286). The heavenly temple is not an inanimate structure but rather a construction of spirits, so that the various features of the temple are capable of praising God. The numinous quality of the temple is also suggested by recurrent references to fiery phenomena, light, and colors. Serving in the heavenly temple are various priestly councils, headed by the seven chief and deputy princes, who praise and bless. The splendid garments of the high priestly angels are described in technical terms that evoke the garments of Israel's high priest (e.g., *hoshen* ["breast-piece"], *ephod*) and the techniques for making them (brocade, woven work), yet their ineffable quality is so suggested. Although praise is one of the primary features of the heavenly temple, the Songs of the Sabbath Sacrifice also refer to offerings that are made there (e.g., sacrifices, grain offerings, drink offerings).

Several passages in Songs of the Sabbath Sacrifice refer to seven territories or sanctuaries, and in one passage antiphonal praise from multiple chariot thrones is said to pass from "devir to devir." In other passages, however, only one heavenly temple and *devir* seem to be envisioned. Parallels exist in later Jewish mystical literature for the notion of seven heavens, each with its own chariot throne (*Re'uyot Yehizqel*), but these heavens are not envisaged as sanctuaries. Certain Jewish mystical texts, however, speak of seven *heikhalot* ("palaces," "temples") where praise is offered to God by thousands of chariot thrones (*Ma'aseh Merkavah* 6). Other texts depict the seven *heikhalot* as concentrically arranged, with an inner shrine at the center (*3 En.* 1.1–2, *Heikhalot Rabbati* 15–16). How closely the Songs of the Sabbath Sacrifice scrolls compare to these later traditions is difficult to say, since the Qumran texts never specify a spatial or hierarchical relationship among the seven sanctuaries. Perhaps the *Heikhalot* literature represents a later rationalization of the elusive and numinous evocation of the heavenly temple as both one and seven in Songs of the Sabbath Sacrifice.

HEBREW. Hebrew accounts for the largest portion of the Judean Desert documents among the languages in which they are written. The remaining languages are Aramaic, Greek, Nabatean, Syriac, Christian Palestinian Aramaic, Arabic, and Latin. Besides a large amount of mostly fragmentary manuscripts of biblical books, the corpus includes a sizable collection of nonbiblical, original compositions in Hebrew as well as ephemeral documents such as letters and deeds. According to one recent estimate, the total length of these Hebrew texts amounts roughly to 11 percent of the Hebrew Bible. This sheer quantity of new documents and the fact that their general provenance and date—at least that of the manuscripts—can be determined with reasonable certainty add to their considerable importance as valuable primary sources for advancing and extending our knowledge of the Hebrew language of the period concerned, approximately the early second century BCE to the middle of the second century CE.

Although the great majority of the Hebrew Dead Sea Scrolls were actually unearthed, or are at least assumed to have been unearthed, in one of the eleven caves in Khirbet Qumran, other adjacent sites in the wilderness of Judea such as Masada, Wadi Murabba'at, Nahal Hever, Nahal Se'elim, and Nahal Mishmar have also produced a quantity of documents, some of great importance for their contents as well as their language.

While the provenance of a given manuscript does not necessarily mean that it was composed at the site or in the general area, some documents such as deeds, contracts, and Bar Kokhba letters leave no doubt in this regard. Even when no internal evidence enables us to identify a document's provenance or place of composition, paleographical considerations and the very fact that it was read by or addressed to individuals or members of the various sites in and around Qumran and stored there justify our use of these documents as witnesses to Hebrew as it was used and understood in Palestine of the above-mentioned time span, roughly 200 BCE–150 CE. In this sense, the use of the generic designation Qumran Hebrew is admissible.

Varieties within Qumran Hebrew. Over a period of 350 years a natural language could undergo considerable changes. Partly due to our still insufficient knowledge of Qumran Hebrew, no clear, historical changes within it have been identified.

On the other hand, certain linguistic features occur exclusively or predominantly in certain documents, as has been noted in one of the pioneering studies by Goshen-Gottstein (1958) on Qumran Hebrew. The striking syntagm <t noun> for the standard <'t + noun> is to be found only in Bar Kokhba letters: *m'yd 'ny 'ly t shmyrn*, "I invoke Heaven" (Mur 43.3). The periphrastic syntagm <lyh + participle> to indicate a durative, repetitive, or habitual action is extremely frequent in certain parts of the Temple Scroll. However, a single document may attest to two features each of which is considered to be characteristic of a different phase of Hebrew or a different tradition of it. Thus, Miqtsat Ma'asei ha-Torah from Qumran Cave 4 shows a definite preference for the relative pronoun *sh-*, which is typical of late Biblical Hebrew and Mishnaic Hebrew, though we once encounter the standard Biblical Hebrew equivalent *'s/r* (B 32).

The quality of the language can also vary, as can be gauged, for instance, from the varying number of corrected scribal errors. The bewildering variety of spellings in Miqtsat Ma'asei ha-Torah (for example, *tm'* versus *tmh* "impure"; *lyh* versus *ly'* "was"; *lbyrkh [wh]qll* "the blessing and curse") has led Shelomo Morag (1996) to conclude that the Teacher of Righteousness or his circle, to whom the document has been attributed by some, would be embarrassed by such an ascription. On the other hand, a phonetic spelling such as *t shmyrn* in a Bar Kokhba letter mentioned above may be excused on the ground of the document's ephemeral nature.

Though we still know too little about the nature of Qumran Hebrew to speak of chronological developments or local dialects, it is clear that the language is far from uniform, and this is not to speak of varieties of style and vocabulary, which are largely a function of the content of the documents in question.

Orthography and Phonology. Since Qumran Hebrew is written totally unvocalized and there is no tradition whatsoever of pronunciation represented by the documents written in it, one's knowledge of the phonology of Qumran Hebrew is largely dependent on spelling variations within the documents and their deviations from the traditions of Hebrew about whose orthography and phonology one possesses more information. Some orthographical features also provide clues as to the morphology of words.

Scriptio plena. One of the orthographic features that characterize many Qumran Hebrew (and Aramaic) documents is a rather liberal use of certain letters of the alphabet to indicate vowels within a word, in particular, the letter *vav* and, though to a much lesser extent, the letter *yod*. These originally indicated, and still do, a presumably bilabial semivowel /w/ and a palatal semivowel /y/, respectively. The former is now often found marking a variety

of either *o* or *u* vowels, and the latter a variety of *i* or *e* vowels. The emergence of these so-called *matres lectionis*, "vowel letters," had been a gradual process, and no absolute consistency in their use and nonuse (the latter known as *scriptio defectiva* as against *scriptio plena*) can be assumed for any ancient Hebrew or Aramaic document of any meaningful length. Thus, words or forms that are never spelled *plene* in the Masoretic Text are so spelled almost as a rule: for example, *mwšh* /moshe/ "Moses" (1QIsajah^a at *Is.* 63.12), *shlwmwli* /shlomo/ "Solomon" (4QMMT C 1—for the standard spelling *shlmh*), and *kwhm* /kohen/ "priest." The use of *yod* as a *mater lectionis* is exemplified by spellings like *ysh* (with a supralinear *yod*) /'ešah/ "her wood" (Peshet Habakkuk, 1QpHab x.1) and *ry'ykh* /re'ekha/ "your fellow-man" (Temple Scroll, 11Q19 liv.20). The spellings *r'wsh* and *rw'sh* instead of the standard spelling *r'sh* /rosh/ "head," also attest to the same orthographic tendency. Eduard Kutscher's (1974, pp. 20–23) suggestion that this tendency was due to the scribe's desire to avoid possible confusion between Hebrew and Aramaic applies only to a small number of instances.

In view of this prevailing *plene* orthography, one is puzzled by spellings in Bar Kokhba letters such as *nnn*, *d'gn*, and *'kln*, all *Qal* principles for which one would expect a *vav* after the first letter.

In Hebrew and Aramaic texts evincing the more "orthodox" orthography, the two vowel letters were, as a rule, used, though never consistently, in word-medial positions when the vowels in question were historically long. In Qumran Hebrew, however, such a constraint does not necessarily apply: *mwkhi* /mukke/ (1QIsa^a at *Is.* 53.4); *nwlrlh* "purity" (Rule of the Community from Qumran Cave 1, hereafter, 1QRule of the Community, 1QS vi.22), and *hwdslylm* "their months" (War Scroll, ii.4), which correspond to /tohora/ and /hodshehem/, respectively, in the Tiberian Masoretic tradition.

The abundance of *matres lectionis* or the origin of their use does not necessarily have to do with the poor command of the language on the part of scribes or the declining knowledge of the language on the part of the reader. The feature is attested almost from the earliest Hebrew (and Aramaic) documents, though admittedly on a more modest scale.

As Józef Milik (1962, p. 224) appositely remarks, the bilingualism led to some orthographic rules that were equally applicable to Hebrew and Aramaic: the use of *alef* to indicate word-final *a* (*l'gdwl'*, *b'* "in her," *l'hw'm* "the wall") or *e* (*z'* "this" [masculine], *šwp'* "looking toward"), and the use of *alef* in word-final digraphs (see below).

Digraphs. The phenomenon of the digraph, namely, the use of two consecutive letters to mark a single vowel, especially at the end of a word with *alef* as the second,

otiose letter, is another notable feature of Qumran Hebrew (and Aramaic). It is attested by the ubiquitous *ky'*, which is the conjunction /ki/ spelled *ky* in the standard orthography. Likewise, *y'mymw'* "they will believe" (1QpHab ii.6), *hw' /lo/* "to him" (1QS vi.27). The negator *hw'* does not belong here, since the final *alef* was originally consonantal.

This feature is not unique to Qumran Hebrew (and Aramaic): there are two instances of it in an Aramaic text from the fifth century BCE (Sheikh Fadl cave inscription)—*pr'h nkw'* "Pharaoh Necho," and in Biblical Aramaic—*shyšy'* "he completed" (*Ezra* 6.15).

Weakening of gutturals. The frequent deletion of guttural letters, by which are meant *alef*, *he*, *het*, and *'ayin*, and their indiscriminate interchange, as eloquently illustrated by four conflicting spellings of the demonstrative pronoun—phonetically, /zot/—*z't*, *z'wt*, *zw't*, and *zwt*, attest to the general weakening of these consonants in Qumran Hebrew. Examples of missing guttural letters are *nspym* (1QIsa^a at *Is.* 13.4) for the Masoretic Text's *n'spym* /ne'esafim/, *ybwr* (1QIsa^a at *Is.* 28.15) for the Masoretic Text's *y'br* /ya'avur/, *lwlk* (1QS v.10) for the standard *lwlh* /lehithallekh/. Examples of arbitrary substitution are *b'wpy'* (1QS x.2) for the standard *blwpy'* /behofia'/ "in appearing," *nrlhb* (1QIsa^a at *Is.* 30.23) for the Masoretic Text's *nrlhb* /nirhav/, *'msym* (1QIsa^a at *Is.* 64.1) for the Masoretic Text's *lmsym* /hamasim/, *hslkm* for *'slkm* "with you" (Mur 43.4), *hlzq* "take courage" (Mur 44.7), followed by *hzq* "fortify." All this, however, does not have to mean that the gutturals had become weakened throughout Palestine already at this period, an invalid conclusion as has been cogently argued by Kutscher in his *Studies in Galilean Aramaic* (Ramat-Gan, 1976), pages 67–96.

Penultimate stress. Tiberian Hebrew shows a marked drift toward the ultima stress. There are indications, however, that in some categories of verb morphology, Qumran Hebrew still retained the earlier stress on the penultimate syllable. While in Tiberian Hebrew the penultimate stress is well-nigh confined to finite verb forms with vocalic morphemes—thus, typically, /yishmoru/ and /shamaru/—which also appear in pausal position, the penultimate stress appears to be almost the rule in the imperfect and imperative *Qal* where *plene* spellings occur, and that irrespective of pause: for example, *yshqwlw yskwrw . . . ysgwdw* (1QIsa^a at *Is.* 46.6) for the Tiberian /yishqolu viskeru . . . visgedu/, *'bwrw . . . sqwlw* (1QIsa^a at *Is.* 62.10–11) for the Tiberian /'ivru . . . saqqelu/, and *zkrw* (1QM xvii.2) for *zkrw* /zikhru/. Ben-Hayyim (1958, pp. 202–203) rightly pointed out the affinity of Qumran Hebrew with Samaritan Hebrew, though general penultimate stress as in Samaritan Hebrew is not likely since nouns of the *qul* pattern are very often spelled *qwl* in the *status con-*

structus, whereas in the *status absolutus* they are spelled *qwʾl* with a mere handful of exceptions of the *qtwl* type, as shown by Elisha Qimron (1986, p. 38). One would also hesitate in postulating penultimate stress for *Qal* imperfections and imperatives of the types mentioned above when they are “defectively” spelled.

Sibilants. One set of spellings with the twenty-first letter of the Hebrew alphabet where the sound represented corresponds to Proto-Semitic /s/, and hence the letter *samekh* is expected, remains puzzling: for example, *m’s˜w* “they despised” (1QpHab i.11), *ms˜h* “testing” (11Q19 liv.12), *pšh* “Passover” (4QPhylactery i.8). If /s/ had changed to /š/, the change could not have come about via Greek, which lacks the latter consonant.

Morphology. There are two features that typify the morphology of the personal pronouns in Qumran Hebrew. The first is unique to Qumran Hebrew, not shared by any tradition of Hebrew either prior to or after it: the third-person singular masculine *hw’h* and feminine *hy’h*, which occur very frequently, the latter being as common as the standard *hy’* (nineteen times as against twenty-one times according to Qimron 1986, p. 57). They confirm that the final *alef* of the traditional forms was not originally a vowel letter. That the forms ended with a second vowel, *a*, is known from Arabic and Ugaritic. In Arabic, it is, however, short, and the spelling with *he* may go back to *-at*—the corresponding forms in Assyrian, Old Phoenician, and Classical Ethiopic end with *t*. Finally, the glottal stop, /ʔ/, as a constituent of these pronouns, occurs in Old Phoenician and Classical Ethiopic. Thus, the Qumran forms have every appearance of great antiquity: Carl Brockelmann (*Grundriss der vergleichenden Grammatik der semitischen Sprachen*, I, 1908, p. 303) holds *hū’a* to be the earliest Proto-Semitic form for “he.” They are hardly artificial creations, though one does not know how such archaic forms managed to survive in this isolated speech community and in this relatively late phase of Hebrew.

That these archaic forms coexisted in Qumran Hebrew along with their younger and shorter forms is evident from such phonetic spellings as *hw* (Copper Scroll 3Q15 x.20) and *hy* (Mur 42.4). Therefore, not every *hw’* or *hy’* can be a defective spelling of the long, archaic form.

The second noteworthy feature is the presence of doublets, short and long forms: second masculine plural *ʾtmh* versus *ʾtm*, third masculine plural *hmh* versus *hm*, third feminine plural *hmh* versus *hm*. As a matter of fact, already in Biblical Hebrew the long form is much more common for the third-person masculine, and the feminine form is generally assumed to have been originally long, the long masculine form being an analogical extension of it. Qumran Hebrew may then be said to have extended this analogy a step further.

These long morphemes are also found in suffixal pro-

nouns and personal endings of the verb in the perfect tense: third-person feminine singular *-lh* or *-h’* alongside *-h*, second-person masculine plural *-kmh* alongside *-km* as in *lkmh* “to you” (1QMysteries, 1Q27 l.i.8), third-person masculine plural *-mh* alongside *-m* as in *nps˜mh* “their soul” (1Q27 l.i.4), third-person common plural *-lmh* versus *-lm* as in *lmh* “to them” (Apocryphal Prophecy, 1Q25 i.5), *ʾkltmh* “you ate” (Apocryphal Prophecy from Qumran Cave 2, 2Q23 3). In Biblical Hebrew, according to the Tiberian tradition, these long, suffixal morphemes are virtually unknown.

These long forms, whether suffixal or not, constitute another important isogloss shared by Qumran Hebrew and Samaritan Hebrew, as emphasized by Ben-Hayyim (1958, p. 202). On the other hand, the long second- and third-person morphemes are one of several significant features that indicate that Qumran Hebrew and Mishnaic Hebrew are distinct, for the latter attests to the short form only, though they may have developed as a result of the apocopyation of word-final, unstressed vowels. But how does one explain *ʾt* “you (masculine singular)” in Mishnaic Hebrew?

Another feature that contrasts Qumran and Mishnaic Hebrew is the separate pronoun for the first-person plural, for which Biblical Hebrew uses *ʾnlnw*, while Mishnaic Hebrew knows only *ʾnw*, which occurs only once in *Jeremiah* 42.6 as *Qere*. In contrast to other Qumran documents, Miqtsat Ma’asei ha-Torah uses only the long form, as many as ten times.

Another interesting matter is the spelling of the third-person masculine singular suffix attached to a masculine plural noun. Besides the standard spellings *-w* with a singular noun and *-yw* with a plural noun, one often comes across cases of the reverse situation as in *ydyw* in *ydyw ntwyh* “his hand extended” (1QIsa^a at *Is.* 5.25), *wryqlh nps˜hyw* “and his soul is empty” (1QIsa^a at *Is.* 29.8), on the one hand, and *ytdwtw* “its stakes” (1QIsa^a at *Is.* 33.20) and *m’hrw* “from after him” (1QS i.17), on the other, though there is no consistency. The latter category can be explained as cases of defective spellings, as is attested not infrequently in the Masoretic Text. Such an explanation, however, cannot account for the former category. Many scholars see here another isogloss shared by Qumran Hebrew and Samaritan Hebrew, where the diphthong /aw/ of the plural suffix has contracted to /o/ or /u/.

Finally, the abundance in Qumran Hebrew of *plene* spellings of the possessive suffix *-kh* next to *-k* and the perfect tense suffix *-th* next to *-t* for the second-person masculine singular has laid to rest P. Kahle’s theory that the long morphemes are artificial forms created by the Tiberian scholars under the influence of Arabic.

Biblical Hebrew already attests to a small number of Aramaizing masculine plural (and dual) endings *-in/*.

Given the multilingual milieu in Palestine in our period as delineated by Joseph Fitzmyer (1979), it is not surprising to see this trend reinforced in Qumran Hebrew, particularly the Copper Scroll and Bar Kokhba documents: for example, *'šty* "twenty" (next to *šty[m]* "two"—Mur 24 B 1), *lmslt kwryn h[ty]n* "five kors of wheat" (Mur 44.2-3), *m'tyn* "two hundred" (3Q15 iv.10), *lmym hqrw-byu* "the approaching water" (3Q15 ix.11-12). It should be remembered that Bar Kokhba's circle has also left us documents written in Aramaic, tinged in their turn with some Hebraisms. The feature in question was, to a certain extent, reinforced by the general neutralization of the phonological distinction between the two nasals in word-final position, a phenomenon evident from the Second Temple period onward, as shown by Kutscher in his *Studies in Galilean Aramaic*, pages 58-67.

Judging from the way certain nouns are spelled in Qumran Hebrew, one may conclude that they represent a formation pattern different than the Tiberian one: for example, *lwhb* (IQM vi.2) or *lhwb* (Hodayot^a from Qumran Cave 1, hereafter, IQHodayot^a, IQH^a iii.30) "flame" for the Tiberian *lahav*, *'rw* for *'orel* "uncircumcised" for *'erel* or *'^aral*; *tm'h*, possibly to be read as *t'im'a* as in the Babylonian pronunciation of Hebrew as against the Tiberian *tum'a*; *sdwm* or *swdm* "Sodom" for the Tiberian *sedom* (compare *Sodoma* in the Septuagint). In some of these cases our decision depends on the paleographic choice between *waw* and *yod*, two letters that are notoriously difficult to tell apart in many Dead Sea documents. Thus, if we read *k'yb* at IQIsaiah^a at Is. 17.11, it would be a *plene* spelling of the Tiberian form */ke'ev/* "pain."

The *Qal* imperfect, the imperative, and the infinitive construct with an object suffix, notably that of the third-person singular, synthetically attached display some striking forms: *ydrws'hw* "they will examine him" (IQS vi.17), *ydwrs'hw* (IQS vi.14), same meaning. These are explained by Qimron (1986, p. 52) as analogical developments based on the infinitive construct with an object suffix of the types *qtwlny* and *qwtlny* in the Tiberian tradition of Biblical Hebrew. The difficulty with this view is that the first pattern is not attested when a vowel intervenes between the last root letter and the suffix, which is the case with the first- and third-person pronouns. One is reminded, however, that even the Tiberian phonology is not averse to a vowel in an unstressed, open, and pretonic syllable in the case of the *yiqtal* imperfect (and the related imperative) as can be seen in forms such as */yiqra'uhu/* and */shma'enna/*.

The infinitive absolute had become almost obsolete: rare examples are *y'yrw . . . hlwk w'wr* "they will continue to shine . . ." (IQM i.8), *bkw t'bh* "she shall surely weep" (Apocryphal Lamentations A, 4Q179 ii.9), *hkh t'kh* "you

shall surely smite" (11Q19 iv.6). The use of the infinitive absolute continuing a finite verb, a syntagm typical of late Biblical Hebrew, is attested once in *Miqtsat Ma'asei ha-Torah*: *hy' nsl . . . wnslw'hw lhaya nišsal . . . venišloah lo* "he was being rescued . . . and pardoned" (C 26). Otherwise, the infinitive absolute has disappeared from Mishnaic Hebrew.

Qumran Hebrew appears to be continuing the trend already visible in late Biblical Hebrew in which a verb used intransitively in *Qal* may also be used in *Hifil* (and possibly *Piel*) without any functional opposition. For example, *Qal rsh'* "to act wickedly" occurs in 2 *Samuel* (once; also in the parallel psalm), *Kings* (once; also in the parallel passage in *Chronicles*), *Daniel* (once), *Ecclesiastes* (once), while its *Hifil* occurs in *Chronicles* (twice), *Nehemiah* (once), *Daniel* (twice), as well as in *Job* (once) and *Psalms* (once). The *Hifil* of this verb occurs as an intransitive verb in *hrsh'nw* "we acted wickedly" (IQS i.25) in a confessional formula, though the same formula in the Damascus Document (CD xx.29) uses the *Qal* form: *rsh'nw*. One cannot speak here of a general drift. Each lexeme needs to be examined separately. Thus, still in the same formula (and in quite a few additional Qumran texts), we find a synonymous verb root *'wh* used in *Nifal*, while early Biblical Hebrew prefers *Hifil* and late Biblical Hebrew the *Qal*.

In the *Hifil* perfect, the first and second persons of hollow roots show a separating vowel as in *h'yrwth* "you have illumined" (IQH^a iii.3), while Mishnaic Hebrew and Samaritan Hebrew do without such a vowel: the form just quoted would be *h'rth*.

Morphosyntax and Syntax. The process of deterioration of the inverted tenses characteristic of the classical Hebrew narrative style had started in late Biblical Hebrew, culminating in Mishnaic Hebrew, from which such forms virtually disappeared. Kutscher (1974, pp. 350-358) noted not a few examples in which the scribe of IQIsaiah^a had changed conversive imperfects of the Masoretic Text to perfects, and, conversely, conversive perfects to imperfects. However, as shown by Mark Smith (1991), Qumran Hebrew, taken as a whole, presents a rather complex picture in this respect. The system of inverted tenses is far from dead. On the contrary, there is every indication that authors of "classical" Qumran Hebrew documents were quite at home with this system of tenses. While it is not surprising to find plenty of inverted imperfects attached to the conjunction *vav* in parabiblical narrative texts, one comes across a few examples even in 4QMMT, the language of which is thought by some to be a specimen of Hebrew spoken in the Qumran community: *shyglh' wkbs* "that he should shave and wash" (4QMMT B 66), *shytqn 't 'tsik whrl'nyq mnik . . . wnhshbh lk ltsdqh* "that he strengthen your will and remove from

you . . . and it will be counted for you as credit" (4QMMT C 28–31).

The proclitic particle *sh-*, though undoubtedly of ancient origin as shown by its occurrences in the oldest layer of the biblical literature (see the Song of Deborah in *Judges* 5), had become an unmistakable hallmark of late Biblical Hebrew and would subsequently take the place of *asher* in Mishnaic Hebrew. However, that the shorter particle was felt to be alien to a certain register of Qumran Hebrew is shown by its pattern of distribution. The scribe of 1QIsaiah^a, despite his various efforts to make the language of the ancient prophet easier to comprehend for his contemporary readership, did not find it right to modernize and popularize even a single *asher* in his original text by converting it to *sh-*. Elsewhere the shorter particle is confined to documents such as the Bar Kokhba letters, Copper Scroll, and 4QMMT, which is couched in the form of a halakhic dialogue. Absolute consistency, however, is not to be expected, for even in 4QMMT we find *asher* at B 32. That the language of 4QMMT is not entirely Mishnaic in this respect is rightly emphasized by Qimron (1994, pp. 74–75), for it retains *ky* as a particle of cause, a function that in Mishnaic Hebrew is also covered by *sh-*.

While Qumran Hebrew still maintains the classic mode of synthetically connecting two substantives by means of the construct chain, certain documents attest to an alternative, analytical syntagm mediated by the particle *shel*, most likely reinforced by its formal equivalent in contemporary Aramaic idioms with *zil* or *dil*, although a related Hebrew syntagm is already attested thrice in the *Song of Songs*: *karmi shelli* "my own vineyard" (*Song* 1.6, 8.12), and *mittato shellishlomo* "Solomon's couch" (*Song* 3.7). Examples are *hprnsyn shl byt nshkw* "the managers of Beth-Mashko" (Mur 42.1), *m'rt h'mwd shl shny [h]phtlyn* "the cave of the column of the two entrances" (3Q15 vi.1). The second constituent may be a personal pronoun as in *lynwmyt shlw* "to its small water basin" (3Q15 xi.13). The particle *shel* is also found without the preceding noun head in *shhy shlw* "which was his" (Mur 42.4) and *shhyw shl hgw'yn* "who were of the gentiles" (5bHev 5). Further, we also find examples of the anticipatory pronoun (prolepsis) exactly as in the above-quoted *Song of Songs* 3.7: *'shtw shl dwsts zh* "the wife of this Dostheus" (Mur 30.25). Note, however, that unlike Mishnaic Hebrew and the *Song of Songs* 3.7, Qumran Hebrew spells *shl* as a separate word when followed by a substantive. Another difference from Mishnaic Hebrew is that the second noun in this analytic syntagm often has the definitive article: for example, *bm'r' shl hkn' shl hrgm* "in the cavity of the base of the rock" (3Q15 vi.7).

Vocabulary. Qimron's provisional list of words, forms, meanings, or usages of words in Qumran Hebrew not

previously known from Biblical or Mishnaic Hebrew goes up to nearly three hundred (Qimron, 1986, pp. 105–115). Examples of new words are *bdn* "form," and *zrq* "dart." New forms of known roots: *Hifil* (instead of *Qal*) *gyl* "to rejoice," *byn* "understanding" (for *bina*). New meanings: *Qal g'r* "to exorcize," *b'wl* /*ba'ul*/ "well-versed, accustomed," *yhd* "community." New collocations: *byt r'sh* "helmet," *h'yr lb* "to enlighten the mind."

Qumran Hebrew in the History of the Hebrew Language. Even this necessarily limited overview of Qumran Hebrew makes it plain that, as Qimron (1992 and 1994) emphasized, it is too simplistic to characterize Qumran Hebrew in terms of a linear chronological development, early or classical Biblical Hebrew → late Biblical Hebrew → Qumran Hebrew → Mishnaic Hebrew. We have shown, on one hand, that Qumran Hebrew itself is not entirely uniform, and, on the other hand, that there are features that cannot have developed from late Biblical Hebrew as well as features that cannot have later developed into Mishnaic Hebrew features. The long forms of the third-person singular pronouns are unique to Qumran Hebrew.

Against the current, well-nigh universal consensus that, during the period represented by the Dead Sea documents, Hebrew was only one of the languages of Palestine, or more precisely, of Judea, Qumran Hebrew reveals features that are so organically integrated into the texture of the language and other features that can be adequately accounted for only in terms of phonological processes and development such that it must have had its basis in a community that used Hebrew as a means of oral communication. It is hardly an artificial and merely biblicalizing means of literary creativity, but a natural, vibrant idiom. Since the notion of writing as one talks is a fairly modern development, none of the documents is likely to reveal the writer's spoken Hebrew in full, which equally holds for Mishnaic Hebrew. As is the case with every natural language, the written register constantly feeds on its spoken form. Joshua Blau (1997), however, has rightly cautioned us against invoking the notion of *diglossia* in evaluating Qumran Hebrew.

Lines of isoglosses extend in various directions: late Biblical Hebrew, Aramaic, Samaritan Hebrew, the Babylonian tradition of Hebrew, and others, but not in one direction only. Nevertheless, Qumran Hebrew, despite some signs of internal diversity observable even within the bulk of the documents originating from a single location, namely Qumran itself, appears to constitute a distinct idiom of its own.

TAKAMITSU MURAOKA

HEBREWS, LETTER TO THE. An elaborate, anonymous homily urging an early Christian community to renew its commitment to Christ, who is portrayed as the cause of their salvation (2.10, 5.9, 9.14) and the model for their behavior (12.1–2), the *Letter to the Hebrews* drives its message home through forceful exhortations and various elaborate interpretations of passages from the Hebrew scriptures. The parallels with the Dead Sea Scrolls arise primarily in these exegetical arguments.

Publication of the first scrolls prompted suggestions by, among others, Yigael Yadin and Celas Spicq, that *Hebrews* was directly influenced by the piety of the scrolls. Yadin, for example, maintained that *Hebrews* was written to oppose Christians who knew of the Qumran community, anticipated resumption of the Temple cult, and took the Israelite organization in the desert period as their model. Critical reviews of the suggested parallels followed by F. F. Bruce and Herbert Braun, among others. Most scholars today find the scrolls useful for illustrating first-century exegetical techniques and some strains of eschatological thinking relevant to *Hebrews*. Specialized studies of individual works, such as Paul Kobelski's treatment of Melchizedek (11Q13) and related texts, have been fruitful for illuminating the background to *Hebrews*.

The opening chapter of *Hebrews* (*Heb.* 1.5–14), consisting of a series of citations primarily from the *Psalms*, argues that Christ is superior to the angels. The series is formally similar to a group of citations interpreted messianically (*Testimonia*, 4Q175; *Florilegium*, 4Q174). The

Florilegium cites two passages also joined in *Hebrews* 1.5, 2 *Samuel* 7.14, and Psalm 2.7. The overall argument of the first chapter of *Hebrews* may reflect a kind of piety in which angels, particularly angels involved in heavenly worship, played a role. Such piety is amply attested in the scrolls, particularly in Songs of the Sabbath Sacrifice (4Q400–407). *Hebrews*, however, does not directly criticize such mystical traditions.

A central feature of *Hebrews* is its portrait of Christ as a heavenly high priest. The text bases that portrait on its application of Psalm 110.4 to Christ. Early Christians frequently used the first verse of that royal psalm as a description of Christ's heavenly exaltation. The fourth verse, designating the royal figure a "priest after the order of Melchizedek," understood as an address to Christ, enables the author to consider him a priest. Through an interpretation of the "order of Melchizedek" as a heavenly and eternal reality (*Heb.* 7), the verse permits the construing of Christ as a special kind of high priest. This conceit is necessary for the central argument of *Hebrews* 8–10, that Christ at his death performed a definitive atoning sacrifice. The Melchizedek text (11Q13) indicates the presence of speculation on the mysterious figure of Melchizedek, who appears only in *Genesis* 14 and Psalm 110. The fragmentary eschatological *midrash* ("interpretation") apparently identifies Melchizedek as one of the Elohim ("divine beings") of Psalm 82.1 and attributes to him an eschatological role as judge; it also refers to Yom Kippur and speaks of Melchizedek's atoning work. The Qumran text thus illustrates one strand of speculation on Melchizedek as a heavenly entity, perhaps associated with or identical to the angel Michael. Although *Hebrews* is careful not to commit itself to any definite statement about the status of Melchizedek, such speculative traditions in the Judean Desert documents may lie behind its argument about the "order of Melchizedek."

There may be some remote analogy between the priestly messianism of *Hebrews* and the expectation of the scrolls that there would be in the end time a messianic priest who accompanies the Messiah of Israel. He is called the Messiah of Aaron (IQS ix.11; see also CD xii.23–xiii.1, xiv.18–19, xix.10–11, xix.33–xx.1), the Interpreter of the Law (4Q174 1.10–13; CD vii.18–19; 4Q177 10–11.5), or simply chief priest or priest (often in the War Scroll, IQM; cf. 4Q161 8–10.17–29; 4Q285 3–5). In one passage he and the Messiah of Israel carry out an atoning function at the end of this era (CD xiv.18–19). *Hebrews*, however, argues that Jesus cannot be a messiah in the line of Levi (7.13).

Having established that Christ is a heavenly high priest, *Hebrews* considers the character of his priestly work. To do so, the homilist argues that Christ's death was a sacrifice, like the sacrifices of Yom Kippur, but more defini-

tively effective. *Hebrews* also considers this sacrifice to parallel the covenant-inaugurating ritual of *Exodus* 24.8, when Moses sprinkled blood on the Israelites. Thus, for *Hebrews*, Christ's death fulfilled the promise of a "new covenant" found in *Jeremiah* 31.31–34, cited in *Hebrews* 8.8–12. The notion of a new covenant, and the fidelity that it requires, is essential to the hortatory program of *Hebrews*. The community of the Damascus Document also understood itself to be involved in a new covenant (CD vi.19, xx.12) and explicitly invoked the prophecy of *Jeremiah* (CD viii.21). The notion that the followers of Jesus constituted a community of a new covenant is found in other early Christian sources (*Mt.* 26.28 and parallels; *1 Cor.* 11.25; *2 Cor.* 3.6).

Hebrews exhorts renewed fidelity to Christ in the light of his imminent coming in judgment (10.25, 10.37–38, 12.25–29). To support that exhortation, it cites *Habakkuk* 2.3–4, a text that receives extended treatment in Peshar *Habakkuk* (1QpHab vii.10–viii.3). Both *Hebrews* and the Qumran *peshar* call for continued fidelity but construe its objects differently. Peshar *Habakkuk* insists, in view of the approaching eschatological judgment, upon fidelity to Torah and to the Teacher of Righteousness. *Hebrews*, using a Greek translation, construes the prophecy to apply to Christ's second coming and urges imitation of Christ's fidelity to God in the face of persecution (*Heb.* 12.1–2).

The eschatological tableau sketched in *Hebrews* 12.22–25 has points of contact with imagery in the scrolls, including images of the heavenly court (IQS x.8; IQ28a ii.8; IQM vii.6) or the new Jerusalem (IQ32, 2Q24, 4Q554–555, 5Q15, 11Q18). Similarly, *Hebrews* 13.15 and Rule of the Community (IQS ix.4–5) share the widespread use of cultic language as a metaphor for prayer. Strands of Jewish piety thus attested in the scrolls survive in an altered form in *Hebrews*.

HAROLD W. ATTRIDGE

HEBREW UNIVERSITY OF JERUSALEM. As one of the oldest institutions of higher learning in Israel, the Hebrew University of Jerusalem has played an important role in the study and preservation of the Judean Desert manuscripts from the time of their discovery. During the early 1950s, the university was actively involved in the acquisition, study, and publication of documents from Cave 1 at Qumran. In the early 1960s, the institution served as co-sponsor of the excavations conducted by Professor Yigael Yadin in the Judean Desert caves and at Masada, which resulted in the recovery of important manuscripts. Although the bulk of the primary publications of Qumran material came from the International Team at the Palestine Archaeological Museum in the Jordanian sector of Jerusalem during the later 1950s and 1960s, the Hebrew University Institute of Archaeology was a cosponsor of Yadin's research on the Bar Kokhba and Masada documents, and, after 1967, of Yadin's publication of the Temple Scroll¹ (11Q19). Following the administrative reorganization of the International Scrolls publication project in 1991, the Hebrew University once again became a central institution and clearinghouse for Dead Sea Scrolls scholars all over the world. [See Masada; Palestine Archaeological Museum; and *the biography of Yadin*.]

Despite later developments, the initial contacts of officials of the Hebrew University with Qumran texts were singularly unproductive. In August 1947, soon after his acquisition of four scrolls from Cave 1, the Metropolitan Athanasius Yeshue Samuel sought the advice of two (still unidentified) staff members of the Jewish National Library, affiliated with the university, about the value of the texts. They mistakenly regarded them as relatively modern copies of biblical manuscripts. In October 1947, Archbishop Samuel consulted Hebrew University linguist Tuvia Wechsler, who offered an even more discouraging assessment. According to Samuel, Wechsler expressed skepticism that manuscripts from the Second Temple period could have survived. He reportedly asserted to Samuel that "If that table were a box and you filled it full of pound notes, you couldn't even then measure the value of these scrolls if they are two thousand years old as you say!" (Trever, 1964, p. 110) [See also *the biography of Samuel*.]

Yet in November 1947, when Hebrew University archaeology professor Eleazar L. Sukenik was approached by Jerusalem antiquities dealer Nasri Ohan with an offer to purchase another group of scrolls from Cave 1 that had come into the hands of Bethlehem dealer Feidi al-Alami, the result was dramatically different. Sukenik immediately recognized that the scrolls' script closely resembled that of inscribed ossuaries from the Second Temple period. Thus recognizing the scrolls' probable date and potential value, Sukenik immediately sought to purchase

these manuscripts for the Hebrew University. By December 1947, with the support and financial intervention of university president Judah L. Magnes, Sukenik was able to acquire the War Scroll (1QM), 1QHodayot² (1QH), and Isajiah³ (1Q8). Although Sukenik was not initially successful in acquiring the texts still in the possession of Archbishop Samuel, he was able to examine them in March 1947 and compiled a report on the style and contents of all seven of the complete texts from Cave 1. This report was published in August 1948, with a second installment in 1950. [See also *the biography of Sukenik*.]

Throughout the early 1950s, Sukenik worked steadily on the transcription and publication of the three Cave 1 scrolls he had obtained for the Hebrew University, closely assisted by Nahman Avigad and Jacob Licht. [See also *the biography of Licht*.] Other scholars at the Hebrew University who took an early interest in the study of the Judean Desert documents and contributed to the ongoing scholarly discussions included David Flusser, whose main interest lay in the relationship of this literature to known apocalyptic texts and to the origins of Christianity, and Shemaryahu Talmon, who contributed important insights on the implications of the Qumran calendar. Sukenik's death in 1953 temporarily brought the work of publication of the Hebrew University scrolls to a halt. However, it was resumed at an intensified pace with the eventual purchase of Samuel's scrolls by Sukenik's son, Yigael Yadin, in the summer of 1954. Sukenik's longtime assistant, Nahman Avigad, completed the final publication of Sukenik's scrolls in 1955. Yadin published his transcription and commentary on the War Scroll in the same year, and Yadin and Avigad collaborated on an initial publication of the Genesis Apocryphon (1QapGen) that was produced by the Magnes Press of the Hebrew University in 1956. The Hebrew University also played a role in the first public exhibition of the scrolls in Israel in 1955, when they were displayed in the university's main administration building at the Givat Ram campus.

The combined Hebrew University-Israel Department of Antiquities-Israel Exploration Society expedition to the Judean Desert caves in 1960/1961 brought to light a wealth of new documents, particularly from Yadin's excavations in the Cave of the Letters in Nahal Hever. [See Israel Antiquities Authority; Israel Exploration Fund; and Hever, Nahal.] Additional important manuscript finds came from Yadin's large-scale excavations at Masada (1963-1965), also cosponsored by the Hebrew University. Yadin's acquisition of the Temple Scroll (11Q19) during the 1967 Arab-Israeli War and its publication in 1977 by the Israel Exploration Society and the Hebrew University added an important new text to the corpus. The Temple Scroll transformed the direction of the study of the Dead Sea Scrolls, challenging the accepted interpretations of

the nonlegal character of the finds and offering some intriguing new links to the origins and crystallization of *halakhah*. [See Temple Scroll.]

With the reconstitution of the International Dead Sea Scrolls Publication Team in the autumn of 1991, several faculty members of the Hebrew University took important leadership roles. Emanuel Tov was designated editor in chief, and Shemaryahu Talmon and Jonas C. Greenfield, along with Tov, were appointed to the Israel Antiquities Authority scroll advisory board, entrusted with the task of overseeing the pace and character of future publications. The Hebrew University also became the headquarters of the Orion Center for the Study of the Dead Sea Scrolls, established October 1995 under the direction of Michael Stone. The center began to serve as a clearing house for the work of Dead Sea Scrolls scholars from all over the world, organizing and promoting public lectures and scholarly conferences and maintaining a World Wide Web site for the study of the Dead Sea Scrolls and related literature.

NEIL ASHER SILBERMAN

HEGESIPPUS was a second-century CE Christian church historian. Most of our knowledge of Hegesippus's life and works comes from Eusebius (c.260-339 CE), who writes that Hegesippus was a converted Jew who "belonged to the first generation after the Apostles" (*Historia ecclesiastica* 2.23.3; 4.22.8). Hegesippus wrote five short books entitled *The Memoirs*, fragments of which are preserved in Eusebius. These works contain a history of the

early church and a refutation of the heresies that had sprung up since the time of the Apostles.

After quoting Hegesippus's account of the Christian heresies that had emerged since the Apostles, Eusebius notes that Hegesippus also names the Jewish sects. He quotes as follows from Hegesippus: "There were various groups in the circumcision, among the children of Israel, all hostile to the tribe of Judah and the Christ. They were these—Essenes, Galileans, Hemerobaptists, Masbothians, Samaritans, Sadducees, and Pharisees" (*Historia ecclesiastica* 4.22.7).

For Hegesippus, then, the Essenes were part of a group of seven Jewish sects. Unlike the later (fourth century) testimony of Epiphanius, who lists the Essenes as a sect under the Samaritans, Hegesippus recognizes both the Essenes and the Samaritans as Jewish sects. This is consistent with the earlier sources such as Josephus and Philo.

Hegesippus's statement that the Essenes were "hostile to the tribe of Judah and the Christ" is intriguing. Does this mean that the Essenes also comprised the beginnings of a Christian sect? His mention of exactly seven Jewish sects (immediately after describing seven Christian heretical sects) may indicate that Hegesippus is trying to link the origin of the Christian sects back to these Jewish sects. Since we have only fragments of Hegesippus rather than a complete text, it is impossible to be certain on this point. Nonetheless, there is no indication either from the other ancient sources concerning the Essenes or from Qumran literature that the Essenes had any particular hostility toward Jesus or the early Christian Church.

Another excerpt of Hegesippus states that "the sects mentioned above did not believe either in a resurrection or in one who is coming to give every man what his deeds deserve," though some from these sects did come to believe in Jesus (*Historia ecclesiastica* 2.23.8-9). Since scribes and Pharisees are mentioned later in this same excerpt, it is probable that Hegesippus is referring to the seven Jewish sects. If so, Hegesippus is saying that none of the Jewish sects, including the Essenes, Pharisees, and Sadducees, believed there would be a resurrection. With respect to the Essenes, Hippolytus states that they did believe in a resurrection (*Refutation of All Heresies* 9.27.1), while Josephus says that they believed the soul was immortal (similar to the Greeks; *The Jewish War* 2.154-157). Certainly the Sadducees did not believe in resurrection, but the Pharisees did. Thus, the testimony of Hegesippus appears to be of limited value in determining the Essene attitude toward resurrection.

HEIKHALOT LITERATURE. The first major expression of mysticism in postbiblical Judaism can be found in the writings that make up the Heikhalot literature. [See *Mysticism*.] This corpus comprises a number of discrete textual units that were composed and redacted over a period of several centuries. Two central themes run through the Heikhalot texts: the mystical ascent through the heavenly realms, culminating with an ecstatic vision of the luminous form on the throne located in the seventh palace of the seventh heaven; and the adjuration of angels through mentioning the divine names and displaying the magical seals, which facilitates the acquisition of knowledge of the secrets of Torah. [See *Angels*; *Throne*.] It is virtually impossible to separate mysticism and magic, either conceptually or textually, in these compositions: the mystical component embraces in a fundamental way magical techniques, and the magical component is frequently linked to an experience of a mystical nature. [See *Magic and Magical Texts*.] From a redactional standpoint, therefore, there is little justification to employ the terms *mysticism* and *magic* to refer to distinct phenomena reflected in these texts, nor is there sufficient reason to ascribe priority to the one over the other. Certainly the medieval authors, who received and in some instances helped to shape these sources, made no discernible attempt to isolate the mystical and magical elements.

The six most important texts that provide descriptions of the mystical ascent to the throne of glory are *Heikhalot Zutarti*; *Heikhalot Rubbati*; *Sefer Heikhalot*, also known as *3 Enoch*; the treatise published by Gershom Scholem with the title *Ma'aseh Merkavah*; *Hotam ha-Merkavah*, a

fragment from the Cairo Genizah referred to by scholars as the Ozhayah text; and *Massekhet Heikhalot*. The protagonists of these ascent texts are Yishma'el, 'Aqiva, and Nehunya ben ha-Qanah. The use of these rabbinic figures, however, must be seen as merely a literary device to transmit the mystical teachings in the name of established authorities. The precise historical and social context of the authors who produced these works is not at all clear, but it is likely that this mystical praxis was cultivated in Babylonia sometime in the amoraic period (fourth through fifth centuries). It may be assumed that the texts in the form in which they have been preserved were redacted sometime between the seventh and twelfth centuries. Not only do the first explicit references to Heikhalot compositions occur in geonic material, but the first account of mystical techniques employed for ascent is provided by Hai Gaon (939–1038). Additionally, there is substantial textual evidence from this period to show that interest in the mystical and magical traditions (especially connected with divine names) continued to have a decisive impact.
