of sensation just as the first human would have lived, when attaining physical development in the Third Race, had it not been for the Agnishwatta and the *Manasa Pitris*” (SD 2:525n). *See also* AGNISHVATTAS; MANASA-DHYANIS; MANASAPUTRAS

Manasaputras (Sanskrit) *Mānasaputra-s* [from *mānasa* intelligent from *manas* mind + *putra* son, child] Sons of mind. Mind manifesting in the universe is called mahat; when manifesting in particular entities it is called manas. Manasa signifies beings who are endowed with the fire of self-consciousness which enables them to carry on trains of self-conscious thought and meditation. Hence the manasaputras are children of cosmic mind, a race of dhyani-chohans particularly evolved along the lines of the manasic principle.

From the hierarchy of compassion, the light-side of nature as contrasted with the matter-side, came these semi-divine manasaputras who incarnated in the quasi-senseless, intellectually dormant human race at about the midpoint of the third root-race of this fourth round. By their own spiritual-intellectual fire and flame they quickened the latent mental fires in infant humanity stimulating the thought principle, just as parents teach a little child to think, quickening its mind, by means of books, by precept, by example, and by words. It is the most simple thing to do and yet a glorious achievement. It shows how inferior beings are protected and guided by higher beings, or dhyani-chohans, just as a child is watched, loved, and guided by its parents. Mind was quickened in mankind by the manasaputras, but there was already latent mind in man — unevoked; it required the coming of the superior developed mind, a part of the latter’s own flame to the wick of the unlighted candle, to set the unlighted candlewick aflame in its turn; but it could not be set aflame unless mind were already latent there.

These manasaputras are a mystery in the human constitution: they are both ourselves and a descent into us of our higher selves. They are entities from the buddhic hierarchy of compassion, from the luminous arc of evolving nature, and they are under the guidance of the Silent Watcher of the planetary chain, their supreme head.

“These advanced entities are otherwise known as the Solar Lhas, as the Tibetans call them, the solar spirits, who were the men of a former kalpa, and who during the third Root-race thus sacrifice themselves in order to give us intellectual light — incarnating in those senseless psycho-physical shells in order to awaken the divine flame of egoity and *self*-consciousness in the sleeping egos which we then were. They are ourselves because belonging to the same spirit-ray that we do; yet we, more strictly speaking, were those half-unconscious, half-awakened egos whom they touched with the divine fire of their own being. This, our ‘awakening,’ was called by H. P. Blavatsky, the incarnation of the Manasaputras, or the Sons of Mind or Light. Had that incarnation not taken place, we indeed should have continued our evolution by merely ‘natural’ causes, but it would have been slow almost beyond comprehension, almost interminable; but that act of self-sacrifice, through their immense pity, their immense love, though, indeed, acting under Karmic

impulse, awakened the divine fire in our own selves, gave us light and comprehension and understanding; and from that time we ourselves became ‘Sons of the Gods,’ the faculty of self-consciousness in us was awakened, our eyes were opened, responsibility became ours; and our feet were set then definitely upon the path, that inner path, quiet, wonderful, leading us inwards back to our spiritual home. . . .

“These Manasaputras, children of Mahat, are said to have quickened and enlightened in us the Manas-manas of our manas-septenary, because they themselves are typically manasic in their essential characteristic or Swabhava. Their own essential or manasic vibrations, so to say, could cause that essence of Manas in ourselves to vibrate in sympathy, much as the sounding of a musical note will cause sympathetic response in something like it, a similar note in other things” (OG 96-7).

The “descent” of the manasaputras before the middle of the third root-race was only a partial descent, and even today they are not yet fully incarnated in us, they have not yet fully manifested their splendor within us because our minds are not yet fully evolved. The descent is still in progress and will continue until the very end of the fifth round. Even the titan-intellec-tuals of the human race have not yet fully expressed the powers of the manasaputra above and within them. These manasaputras are incarnating ever more and more, just as the growing child develops more mental power as each year passes. As man proceeds along the evolutionary pathway and unfolds his inner nature, he will bring forth his own latent manasaputra and in the next manvantara he will light the way for lesser entities.

“In addition to this, there was still another class of Manasaputras who, as it were, started the whole thing going by inflaming . . . with their own fire of intelligent thought and self-consciousness those of the human race who, at that time, in the early part of the Third Root-Race in this Round, were ready, who caught the flame; and then their own mental apparatus, their own manasic powers, burst as it were into bloom as a rose unfolds rapidly its petals when the season comes for it to do so. And these Manasaputras . . . were the highly evolved entities from previous cosmic manvantaras, who deliberately, belonging as they do to the hierarchy of the Buddhas of Compassion, as it were left their own sublime spheres and descended among men and taught them — and then withdrew” (SOPh 468).

Manasa Rupa (Sanskrit) *Mānasa Rūpa* [from *mānasa* mental + *rūpa* body, form] Mind-body; the seat, veil, or vehicle of the reincarnating ego.

Manasarovara (Sanskrit) *Manasarovara* [from *mānasa* intelligent + *sarovara* lake of excellence] The lake of excellent intelligence; a sacred lake in the Himalayas of Tibet, as well as its tutelary deity said to be a naga (serpent, adept, sage). The lake, also called Anavatapta, is a place of yearly pilgrimage for the Hindus because the Vedas are claimed to have been written on its shores. Its name has reference to its historic occult connection with Sambhala, hence the reference is to its

being the source of the Vedas, of inspiration, and therefore of knowledge and wisdom.

Manasic [from Sanskrit *manas* mind] Anglicized equivalent of Sanskrit *manasika* (mental, intelligent).

Manas-samyama (Sanskrit) *Manas-samyama* [from *manas* mind + *samyama* concentration] Concentration of the mind; the perfect control and concentration of the mind during yoga practices. *See also* SANNYASA

Manas-sutratman (Sanskrit) *Manas-sūtrātman* [from *manas* mind + *sūtrātman* thread-self] The manasic or reincarnating ego, which reincarnates in earth-life after earth-life.

Manas-taijasa (Sanskrit) *Manas-taijasa* [from *manas* mind + *taijasa* radiant, radiating] The radiant mind; the mind which radiates its own manasic characteristic or *svabhava*. As this with invariability takes place when *manas* is stimulated by *buddhi*, it likewise signifies the union of *manas* with *buddhi*, or the *human* reason lighted by the inspiring fire of the spiritual or buddhic monad.

Manasvin (Sanskrit) *Manasvin* [from *manas* mind] Of the nature of intelligence; those essentially intellectual and even spiritual *dhyanis* or solar *pitris* who endowed man with intellectually spiritual and mental powers of understanding and self-consciousness. A variant of *manasas*, *kumaras*, *vairajas*, *manasaputras*, and *agnishvattas*; hence the *manasvin* are identified with the human egos.

Manava-dharma-sastra. *See* MANU, LAWS OF

Manavas or **Manavah** (Sanskrit) *Manavas*, *Manavaḥ* The nominative plural of *manu*.

Mandakini (Sanskrit) *Mandākinī* Going slowly; one name of the Ganges River, especially its flow on the plains of India.

Manawyddan (Welsh) Son of Llyr. Llyr Llediaith, “of defective utterance,” is the Irish Boundless Lir. *Manawyddan* probably equates with Irish *Mananan Mac Lir*.

Mandala (Sanskrit) *Maṇḍala* A circle, ball, wheel, ring, or circumference, as the orbit of a heavenly body, and hence a great circle in astronomy, an orb. Also one of the ten *mandalas* (circles, divisions) of the *Rig-Veda Samhita*.

Also the sacred circular pictures in Buddhist art.

Mandara (Sanskrit) *Mandara* A sacred mountain which in Hindu mythology served the gods and *asuras* as a churning-stick on the occasion of the churning of the ocean for the recovery of the *amrita* and 13 other precious and holy things, which had been lost during the preceding deluge. *See also* KURMA-AVATARA

Mandragora (Greek) The mandrake plant; it has somewhat vaguely the shape of a human body, frequently very suggestive in form and posture. It was and still is in some lands much prized, not only for its medicinal virtues as a narcotic, but for use as a philtre or antidote to barrenness; also it could be used by sorcerers in their malefic arts. In the secret catechism of the Druses, the sons of God create men by descending to earth and animating seven mandragoras — i.e., mannikins.

Mandrake. See MANDRAGORA

Mandukya Upanishad or **Mandukyopanisad** (Sanskrit) *Māṇḍūkyopaniṣad* [from *maṇḍūka* frog] A short but important Upanishad of the *Atharva-Veda*.

Manduka Yoga (Sanskrit) *Maṇḍūka-yoga* [from *maṇḍūka* frog] A “particular kind of abstract meditation in which an ascetic sits motionless like a frog” (Monier-Williams). However, all true yoga practice involves complete mental abstraction from exterior concerns and the outer environment, so that all yogis, while practicing yoga sit motionless “like a frog.” It is not a particularly high kind of yoga, in any case, for true spiritual yoga is the yoga of the inner man, implying intense intellectual and spiritual concentration on affairs and subjects of spiritual character, and need not necessarily involve any sitting in yoga whatsoever. The true disciple may be doing his master’s business and going about in pursuit of his duties from day to day, and yet be practicing this spiritual yoga without a moment’s intermission. All forms of yoga practice which involve postures, sittings or similar things in which the physical body is active or inactive, technically belong to one of the various kinds of hatha yoga and are to be discouraged.

Manes (Latin) [from *manus* good] Deified ancestral spirits, the benevolent class of shades, as distinguished from the larvae and lemures, which were malevolent. The word seems originally to have denoted a class of titans, kabiri, or dhyanis, and to have ranked in the sequence of patriarchs, heroes, and manes, who acted as divine instructors of earlier races. But far later, in Roman usage, the name became degraded and applied to the better astral shades or denizens in kama-loka, which in so many lands have been propitiated by offerings as is still the case with some peoples. Sometimes they wear a retributive aspect, as in Vergil, where the painful purification of the shades before they can pass to Elysium is described: “Each of us suffers his own Manes” (Aeneid 6:743).

Difficult as it is to distinguish as among the manes, larvae, and lemures, the manes were considered by Roman philosophers and poets equivalent to the human soul or monad; whereas the larvae and lemures were distinctly the shells or shades existent in the astral light and being the cast-off portions of the human monad when it ascends into, or reaches, devachan.

Manes. See MANICHAEANS

Man-Fish. See DAG; OANNES

Mani. See MANICHAEANS

Mania (Latin) In Latin mythology the mother of lares or dii lares, and likewise the guardian or possibly even the source of the manes; according to Arnobius, the mother of the seven kabiri — Blavatsky remarks that “Mania is the *female* Manu . . . Ila or Ida, the wife and daughter of Vaivasvata Manu . . . The *Manes* and Mania of Arnobius are names of Indian origin, appropriated by the Greeks and Latins and disfigured by them” (SD 2:143). Another name for this mysterious divinity was Lara or Larunda. In the human constitution the archaic Latins called the higher manasic element the genius (called in women the *juno*); the other parts of the human constitution consisted of a manes and a lares, which correspond with the lower and higher human ego.

Manichaeans A sect which originated in the 3rd century in Persia and rapidly diffused itself in Mesopotamia and beyond the Oxus, lasting under one or another form down to the 13th century. Its founder was Mani, said to have been a Persian, whose name in Greek became Manes or Manichaios. Little can be ascertained about him, but he is said to have been a natural mystic, conscious of a mission, and endowed with the breadth of view and concentrated zeal characteristic of the founders of systems. He successfully amalgamated the religious, philosophical, and mystical ideas of his time and surrounding countries into a coherent system adapted to the tastes of the age.

The salient feature of Manichaeism is its uncompromising dualism, for it recognized a world of light and a world of darkness as eternally coeval; and there is a God of light opposed to a hostile Satan. Teachings of the esoteric gnosis as taught by Neoplatonists, Gnostics, and others were materialized, and both doctrine and ritual assumed forms less exacting and therefore better calculated for perpetuation in an age of increasing materialism. It showed little affinity for Christianity or facility for combination with it, and Manichaeism and Christianity may be regarded as Oriental and Occidental products of the same materializing influence transforming and adapting the original gnosis. It has more affinity with Gnostic than with ecclesiastical Christianity, for there was a large amount of truly esoteric thought and teaching in what for centuries passed under the name of Manichaeism.

Manifestation. See MANVANTARA

Maninanjari (Sanskrit) *Mañimañjarī* Row of jewels or pearls; one of the writings of the Madhva philosophical sect.

Manipura (Sanskrit) *Mañipūra* Jewel-center, jewel-town; one of the seven most important chakras in the human body, connected with the solar plexus.

Manjusri (Sanskrit) *Mañjuśrī* [from *mañju* beautiful + *śrī* an epithet of holiness, dignity, and reverence] The holy beautiful one; a name of the dhyani-bodhisattvas, the guardians and Silent Watchers of the globes of our planetary chain. Another title is Vajrapanins.

In exoteric Buddhist literature, Manjusri is looked upon as the god of wisdom because the title is

personalized or anthropomorphized as an individual, but “It is erroneous to take literally the *worship* of the human Bodhisattvas, or Manjusri. It is true that, exoterically, the Mahayana school teaches adoration of these without distinction, and that Hiuen-Tsang speaks of some disciples of Buddha as being worshipped. But esoterically it is not the disciple or the learned Manjusri *personally* that received honours, but the divine Bodhisattvas and Dhyanī Buddhas that animated . . . the human forms” (SD 2:34n).

Man-Lion. See SIMHA

Manneras The title of one who had completed the seven degrees in the Egyptian Mysteries. As a symbol of the successful passing of all the degrees the one becoming a hierophant was given a tau (the Egyptian cross).

Mannheimar (Icelandic) [from *mann* man + *heimar* home] In Norse myths, the world or segment of the solar system which is the home of mankind, as distinct from other segments which are primarily inhabited by other forms of life, such as god-heimar (the abode of gods).

Mano (Gnostic) In the *Codex Nazaraeus*, chief scripture of the Nazarene Gnostics, the chief of the aeons, the King of Splendor, from whom shoot forth five refulgent rays of divine light. The Codex describes Mano as the supreme King of Light, the great first one: he who first emanates from Ferho, the unknown formless life, generally equivalent to the Second Logos in theosophy.

“He is the Second ‘Life’ of the second or manifested trinity ‘the heavenly life and light, and older than the architect of heaven and earth’ (*Cod. Naz.*, Vol. I, p. 145). These trinities are as follows. The Supreme Lord of splendour and of light, luminous and refulgent, before which no other existed, is called Corona (the crown); Lord Ferho, the unrevealed life which existed in the former from eternity; and Lord Jordan — the spirit, the living water of grace (*Ibid.* II., pp. 45-51). He is the one through whom alone we can be saved. These three constitute the trinity *in abscondito*. The second trinity is composed of the three lives. The first is the similitude of Lord Ferho, through whom he has proceeded forth; and the second Ferho is the King of Light — Mano. The second life is *Ish Amon* (Pleroma), the vase of election, containing the visible thought of the *Jordanus Maximus* — the *type* (or its intelligible reflection), the prototype of the living water, who is the ‘spiritual Jordan.’ (*Ibid.* II., p. 211) The third life, which is produced by the other two, is Abatur (*Ab*, the Parent or Father). This is the mysterious and decrepit ‘Aged of the Aged,’ the Ancient ‘*Senem sui obtegentem et grandaevum mundi.*’ This latter third Life is the Father of the Demiurge Fetahil, the Creator of the world, whom the Ophites call Ilda-Baoth . . . though Fetahil is the *only-begotten one*, the reflection of the Father, Abatur, who begets him by looking into the ‘dark water.’ Sophia Achamoth also begets her Son Ilda-Baoth the *Demiurge*, by looking into the chaos of matter. But the Lord Mano, ‘the Lord of loftiness, the Lord of all genii,’ is higher than the Father, in this kabalistic *Codex* — one is purely spiritual, the other material. So, for instance, while

Abatur's 'only-begotten' one is the genius Fetahil, the Creator of the physical world, Lord Mano, the 'Lord of Celsitude,' who is the son of Him, who is 'the Father of all who preach the Gospel,' produces also an 'only-begotten' one, the Lord Lehdaio, 'a just Lord.' He is the Christos, the anointed, who pours out the 'grace' of the Invisible Jordan, the Spirit of the *Highest Crown . . .*" (TG 204-5).

The trinity of Mano, Spiritus, and Lehdaio is equivalent to the Father, Mother, and Son of the Christian system. From one standpoint Mano is comparable also to the Hindu Manu (cf IU 2:229).

Manodhatu (Sanskrit) *Manodhātu* [from *manas* mind + *dhātu* world, sphere] The sphere or world of the mind or intellect; a generalizing name not only for one of the divisions of the mental plane, but also for the sum total of each person's mental faculties.

Manojava (Sanskrit) *Manojava* Swift as thought; a name of Indra in the sixth manvantara, which corresponds with the sixth manu of this round, the seed-manu of globe C, or again with the third root-race of this round.

Manomaya-kosa (Sanskrit) *Manomaya-kośa* [from *manas* mind + *maya* built of, formed of from the verbal root *mā* to measure, form, with the idea of illusory manifestation + *kosa* sheath] The sheath formed of mind, the human soul; according to the Vedantic classification of the human principles, the third of the pancha-kosa (five sheaths) which enclose the divine monad or atman. Manomaya-kosa corresponds with the lower manas combined with kama, and therefore has a closer affinity with the fourth principle, kama, than with the sixth or buddhi.

Mansarovara Lake. See MANASAROVARA

Manticism [from Greek *mantis* seer from *mainomai* to act ecstatically under a divine impulse] A seer, one inspired with divine ecstasy; according to Plato, one who uttered oracles while under a divine impulse, which in its lowest forms was a kind of frenzy, while a prophetes (prophet) was one who interpreted the oracles. Frenzy, now used only to denote madness or anger, meant in classic times a state of exaltation both of mind and psychical nature which enabled inner faculties of perception to come into play, whereby seership and prophetic power were attained. Certain exhalations from the earth would often act upon the body of the seer or seeress, inducing a state of physical receptivity, as occurred in the grotto of Delphi; and Cicero speaks highly of the better side of the power thus conferred. The condition produced by Bacchic rites was similar, but in later times degenerated into mere frenzy or ravings in the modern sense of the word; and as these rites became degraded into profligacy, the meaning of the word frenzy naturally altered *pari passu*.

Mantra (Sanskrit) *Mantra* That portion of the Vedas which consist of hymns as distinct from the Brahmana and Upanishad portions. The mantras considered esoterically were originally as magical as they were religious in character, although the former today is virtually forgotten, although remembered as a fact which once was. In the composing of the mantras the rishis of old

knew that every letter had its occult significance, and that the vowels especially contain occult and even formidable potencies when properly chanted. The words of the mantra were made to convey a certain hidden meaning by certain secret rules involving first the secret potency of their sound, and incidentally the numerical value of the letters; the latter however was relatively unimportant. Hence their merely verbal significance is something quite different from their meaning as understood of old.

The language of incantations or mantras is the element-language composed of sounds, numbers, and figures. He who knows how to blend the three will call forth the response from the regent-god of the specific element needed. For, in order to communicate with the gods, men must learn to address each one of them in the language of his element. Sound is “*the most potent and effectual magic agent, and the first of the keys which opens the door of communication between Mortals and the Immortals*” (SD 1:464).

The hidden voice or active manifestation of the latent occult potency of the mantras is called vach. The would-be magician attempting to evoke the “spirits of the vasty deep” by uninstructed chanting or singing of any ancient mantras will never succeed in using the mantras effectively in a magical way, until he himself has become so cleansed of all human impurities as to be able at will and with inner vision to enter into communion if not direct confabulation with the inner realms.

The Scandinavian runes in certain respects correspond to the Hindu mantras.

Mantra Period One of four periods into which Vedic literature has been divided, used especially to describe the Vedic hymns and sacrificial formulas. Some chronologists speculate that this period ended some 20,000 years ago — but may be as old as a million years into the past.

Mantra-sastra (Sanskrit) *Mantra-śāstra* The hymn portion of the Vedas; all the parts of the Vedas which are different from the Brahmanas (theological interpretations).

Mantra-tantra-sastra (Sanskrit) *Mantra-tantra-śāstra* A scripture on the science of magic and incantation.

Mantrika-sakti (Sanskrit) *Māntrika-śakti* The power or occult potency of mystic words, sounds, numbers, or letters — the power of the mantras. The vibrational, formative, or creative power inherent in sound — every sound being a vibration, and every vibration having its own numerical keynote. “The whole of the ancient Mantra Shastra has this force or power in all its manifestation for its subject-matter. The power of The Word which Jesus Christ speaks of is a manifestation of this Sakti. The influence of its music is one of its ordinary manifestations. The power of the mirific ineffable name is the crown of this Sakti” (Five Years of Theosophy 111).

Manu (Sanskrit) *Manu* [from the verbal root *man* to think] In Hindu mythology, the son of Svayambhuva, father and husband of Ila, parents of humanity as well as the prajapatis and other manus, who are the entities collectively which appear first at the beginning of manifestation, and

from which everything is derived. They are identical with the *sishtas*, and function as *prajapatis* in a smaller but strictly analogical manner. *Manu* is collective humanity: “*Manu* is the synthesis perhaps of the *Manasa*, and he is a single consciousness in the same sense that while all the different cells of which the human body is composed are different and varying consciousnesses there is still a unit of consciousness which is the man. But this unit, so to say, is not a single consciousness: it is a reflection of thousands and millions of consciousnesses which a man has absorbed.

“But *Manu* is not really an individuality, it is the whole of mankind. You may say that *Manu* is a generic name for the *Pitris*, the progenitors of mankind. They come . . . from the Lunar Chain. They give birth to humanity, for, having become the first men, they give birth to others by evolving their shadows, their astral selves. They not only give birth to humanity but to animals and all other creatures. . . . But, as the moon receives its light from the Sun, so the descendants of the Lunar *Pitris* receive their higher mental light from the Sun or the ‘Son of the Sun.’ For all you know *Vaivasvata Manu* may be an *Avatar* or a personification of *Mahat*, commissioned by the Universal Mind to lead and guide thinking Humanity onwards” (TBL 78).

The *manus* are said to have emanated the ten *prajapatis* or progenitors of mankind, called also *maharshis* (great rishis). It is said of *Brahma* that he emanated himself as *Manu*, and that he was born of, and was identical with, his original self, while he constituted his female portion *Sata-rupa* (hundred forms). There are 14 *manus* in any *manvantara* (“between *manus*”) arranged in pairs, a root-*manu* and a seed-*manu* for each portion of a cycle. These pairs of *manus* in a planetary round, a root-*manu* on globe A and a seed-*manu* on globe G, are given as: 1) *Svayambhuva*, *Svarochisha*; 2) *Auttami*, *Tamasa*; 3) *Raivata*, *Chakshusha*; 4) *Vaivasvata* (our progenitor), *Savarna*; 5) *Daksha-savarna*, *Brahma-savarna*; 6) *Dharma-savarna*, *Rudra-savarna*; 7) *Rauchya*, *Bhautya*.

“*Vaivasvata*, thus, though seventh in the order given, is the primitive Root-*Manu* of our fourth Human Wave (the reader must always remember that *Manu* is not a man but collective humanity), while *our Vaivasvata* was but one of the seven *Minor Manus*, who are made to preside over the seven races of this our planet. Each of these has to become the witness of one of the periodical and ever-recurring cataclysms (by fire and water) that close the cycle of every Root-race. And it is this *Vaivasvata* — the Hindu ideal embodiment, called respectively *Xisuthrus*, *Deukalion*, *Noah* and by other names — who is the allegorical man who rescued our race, when nearly the whole population of one hemisphere perished by water, while the other hemisphere was awakening from its temporary obscuration” (SD 2:309).

Manu is in one sense the Third Logos; in another the spiritual man, the monad, the real and deathless spiritual ego in us, which is the direct emanation of the one Life or the absolute deity of

our universe. The manus collectively, in this sense, are the four higher classes of dhyani-chohans who were the fathers of the concealed man — the subtle inner man.

Thus root-manus and seed-manus are sishtas, for the seed-manu at the end of a life-wave's evolution on a globe is virtually identical with the root-manu on that same globe when the life-wave reaches it again to begin on that globe a new course of racial development or evolution. The difference between root- and seed-manus being that the root-manus are really the seed-manus plus the most evolved monads of the life-waves reaching the globe first, conjoining with the seed-manus and thus slightly modifying things.

Manu is likewise the name of a great ancient Indian legislator, the alleged author of the *Manava-dharma-sastra* or *Laws of Manu*.

Manu, Laws of, Manava-dharma-sastra Also called the *Manu-samhita*; *The Code (or Institutes) of Manu*. Well-known archaic Hindu codes or institutes comprising maxims of various kinds, attributed to the first manu, known as Svayambhuva, who according to archaic records lived nearly 30 million years ago during the satya yuga of the race during which he appeared. One of the most important Smriti (unwritten traditional teachings).

The *Laws of Manu* is one of the main pillars of ancient Hindu law, and is held in the highest reverence. Tradition says that Manu wrote down the laws of Brahma in 100,000 slokas, which formed 24 books and a thousand chapters. He gave the work to Narada, one of the archaic sages, who abridged it for the use of mankind to 12,000 verses. Narada in his turn gave the Code to Sumati, a son of Bhrigu who for greater convenience reduced it to 4,000 verses.

The *Laws of Manu* is recognized as approaching the Vedas in age. It is not merely a law book in the European sense of being a mere code of legal enactments; the chief topics of its twelve extant books are 1) cosmogony; 2) the sources of the law, sacraments, initiation, discipleship; 3) marriage and the duties of a householder or the second social order; 4) means of subsistence, and private study and morals; 5) diet, purification, and the duties of women; 6) the duties of a recluse and ascetic, or the third and fourth social orders; 7) government, and the duties of a king and the military caste; 8) judicature and law, civil and criminal; 9) duties of husband and wife, miscellaneous regulations concerning conduct and the duties of a king; 10) duties and occupations of the castes and mixed castes; 11) penances and expiations; and 12) metempsychosis and final liberation.

Manusha (Manushya) Buddha (Sanskrit) *Mānuṣa*, *Mānuṣya-Buddha* [from *manu* man + *buddha* awakened one] A human buddha, born in a human body for compassionate work among mankind, generally mahatmas of a high degree and great initiates. There are three forms in which, or planes upon which, the Wondrous Being of the planetary chain manifests itself: 1) adi-buddha in the dharmakaya; 2) dhyani-buddha in the sambhogakaya; and 3) manusha-buddha living at will or need as a nirmanakaya. The last is the lowest, yet in one sense the highest aspect — highest on

account of the immense, willing *self-sacrifice* involved in its incarnation in human flesh. The manusha-buddhas are the eighth in the descending scale of the Hierarchy of Compassion. Each one of the seven root-races on this globe is ushered in by a manushya-buddha. Furthermore, preceding the racial cataclysm that ensues around the midpoint of each root-race, a manushya-buddha of less degree appears on earth. Hence, such a buddha is also termed a racial buddha. Gautama was such a manushya-buddha.

Every human being in his constitution contains elements and principles derivative from the universe ranging from the divine to the physical; consequently there is in every human being, expressed or as yet unexpressed, a manushya-buddha, who really is the spiritual-intellectual center of all the noblest impulses, intuitions, and energies active in the human constitution.

Evolution signifies the unfolding of already existing and fully active capacities, powers, functions, principles, and elements, latent in most men merely because the vehicle enabling them to manifest their transcendent powers in the ordinary human being has not yet been built up through evolutionary growth. Thus, the manushya-buddha is in every human being, though only in the rare evolutionary flowers of the human race coming at long intervals is a human being born who because of past striving is an imbodiment of the manushya-buddha within him. As the future brings forth what it has in store for the human race, all human beings living at the end of the seventh round will be human buddhas because already they will have become a dhyani-choanic host. Sometimes spelled Manushi-Buddha.

Manushya (Sanskrit) *Manuṣya* A human being; a man; as an adjective, human. Sometimes spelled manushi.

Manusmṛiti (*Manusmṛiti*). See MANU, LAWS OF

Manu-Svayambhuva (Sanskrit) *Manu-svāyambhuva* The self-producing manu, manu the self-become; a name of Brahma as son of Svayambhuva, the self-producer or Brahman. Identical with 'Adam Qadmon and the cosmic androgyne man of other philosophical systems, the Third Logos, and on a much lower scale the androgyne human referred to in Genesis. As 'Adam Qadmon is the synthesis of the Sephiroth, so is Manu-Svayambhuva the synthesis of the prajapatis (lords of progeny), ancestors or parents of all beings.

Manvantara (Sanskrit) *Manvantara* [from *manu* + *antara* between] Between two manus; a period of activity or manifestation. Manu is the entities collectively aggregated into a unity which appear first at the beginning of manifestation and from which, like a cosmic tree, everything is derived or born. A manvantara, therefore, is the period of activity between any two manus, on any plane, since in any such period there is a root-manu at the beginning of evolution and a seed-manu at its close, preceding a pralaya.

One has to gather from context what the meaning of the manvantara referred to is, remembering

that what is applicable to a lesser period applied also to a greater, and conversely. When speaking of a manvantara of our planet, a period of one round of the planetary chain is usually meant. There is also the manvantara of any globe of the planetary chain. Seven rounds of the planetary chain make a mahamanvantara of a planet, a Day of Brahma. A solar manvantara is a period of seven Days of Brahma. The Life of Brahma is a mahamanvantara or mahakalpa of the solar system. A minor or globe manvantara is the duration of the seven root-races on any particular globe of the planetary chain. Even a root-race is sometimes called a manvantara because there is a root-manu and seed-manu to each race. The period of a human life is sometimes called a paurusha manvantara; the period of a planet's life, a bhaumika manvantara; the life period of the solar system, a saurya manvantara, the life period of the universe, a prakritika manvantara, which last can become synonymous with the saurya manvantara.

When the time arrives for the re-opening of a planetary manvantara, the planet

“descends again into manifestation through the inner divine planetary thirst for active life and is directed to the same solar system, and to the same spot, relatively speaking, that its predecessor (*its former self*) had, attracted thither by magnetic and other forces on the lower planes. It forms, in the beginning of its course or journey downwards, a planetary nebula; after many aeons it becomes a comet, following ultimately an elliptical orbit around the sun of our solar system, thus being ‘captured,’ as our scientists wrongly say, by the sun; and finally condenses into a planet in its earliest physical condition. The comets of short periodic time are on their way to rebecoming planets in our solar system, provided they successfully elude the many dangers that beset such ethereal bodies *before* condensation and hardening of their matter shield them from destruction” (Fund 63).

In a similar manner at the re-opening of a solar manvantara, a cosmic nebula is gradually formed of the principles of the former cosmos with its sun and planets, etc. Then

“this cosmic nebula drifts from the place where it first was evolved, the guiding impulse of karma directing here and directing there, this luminous nebulosity moving circularly, and contracting, passing through other phases of nebular evolution, such as the spiral stage and the annular, until it becomes spherical, or rather a nebular series of concentric spheres. The nebula in space, as just said, takes often a spiral form, and from the core, the center, there stream forth branches, spiral branches, and they look like whirling wheels *within* wheels, and they whirl during many ages. When the time has come — when the whirling has developed *pari passu* with the indwelling lives and intelligences within the cosmic nebula — then the annular form appears, a form like a ring or concentric rings, with a heart in the center, and after long aeons, the central heart becomes the sun or central body of the new solar system, and the rings the planets. These rings condense into other bodies, and these other bodies are the planets circulating around their elder *brother*, the sun; elder, because

he was the first to condense into a sphere” (Fund 61-2).

In the first half of a manvantara (planetary as well as human) there is the descent of spirit into matter, and in the second half an ascent of spirit at the expense of matter. A manvantara or period of material manifestation is a temporary spiritual death, whereas the dawn of the succeeding pralaya is spiritual birth.

Maqom (Hebrew) *Māqōm* A place, a dwelling place; also a city, a village. In the Qabbalah a secret place, in the cosmos referring to the heavenly celestial matrix or womb, on earth to the mystical Holy of Holies, and in the human being to the womb. This purely physiological usage is a degradation of the original highly mystical and impersonal sense as the womb of space or of the Vedic Aditi — the cosmic Virgin Mother, continuously bringing into manifested birth universes and all that are in them.

Mara (Sanskrit) *Māra* [from the verbal root *mṛ* to die] That which kills, death, destroyer; in exoteric Indian literature, the representation of temptation, esoterically personified temptation through men’s vices, which kill the soul. Maha-Mara is the king of the maras, or temptations collectively, the great ensnarer, and is usually represented “with a crown in which shines a jewel of such lustre that it blinds those who look at it, this lustre referring of course to the fascination exercised by vice upon certain natures” (VS 76).

Mara is the god of darkness and death: “Death of every physical thing truly; but Mara is also the unconscious quickener of the birth of the Spiritual” (SD 2:579n). The hosts of Mara refer to the unconquered passions that the neophyte must slay or transmute before he is reborn spiritually, or can become a dvija (twice-born). Mara is also a name frequently given to Kama, the personified god of love or desire.

Marabout or **Marabut** [from Arabic *morabit* a hermit] A devotee or hermit; specifically, a member of the Moorish religious order of Northern Africa who were successors of the Morabits (or Al-moravides), Moslem Moors who flourished in Morocco and Spain during the 11th and 12th centuries. However the term now has the significance of a Moslem saint.

Marcionites Followers of **Marcion**, a reformer of Christianity of the 2nd century who, failing to bend the Church to his views, founded a society of his own in Rome, whence it spread to Asia Minor, gaining great influence and for a time seriously competing with the established Church. Though often described as a Gnostic, he holds a position rather between the Gnostics and those who sought to establish a less philosophical and more concrete system — a church. He had known Christianity at a time when the Gnostic teachings still formed a recognized element; but he found the existing Church too far along the path of materialization of metaphysical ideas and adaptation to mundane politics, and he sought to restore the doctrine and ritual to an older, purer form. He favored the teachings of Paul, whom he regarded as the true interpreter of Christianity, and condemned the Old Testament as being a corrupting influence, while regarding the historical view

of the Gospels as a literalization and carnalization of metaphysical allegories and symbolic teaching. His teachings contain many Gnostic elements: man is formed by the God of the Old Testament, who lays upon him laws which he cannot obey, so that he falls under the power of the lower Demiourgos. But another God, the God of Mercy, sends his son into the world to save man. Yet this son appears in the reign of Tiberius and is crucified in Palestine. The lower Demiourgos, the adversary of man and of the God of Mercy, is at the same time an agent of that God.

Among the many varieties of Christianity which had vogue, Marcionism was one of the best attempts to find a workable adjustment between the ancient teachings and the conditions of the world at that time. But the spirit of a declining age prevailed in favor of the Church; the influence of Marcion can be traced for a few centuries, but his association finally lost its identity amid divergences and absorptions into other systems, especially Manichaeism.

Marcosians Followers of Marcus, in Greek Markos, a 2nd century Gnostic, who gave out in some respects more of the esoteric truths than any other Gnostic. Among his teachings he describes the deity as a tetrad, or as represented by 30 letters composing four syllables (cf SD 1:351).

Marcus, Markus. See MARCOSIANS

Marduk (Babylonian) Also Merodach (Hebrew) Patron deity of ancient Babylon, the local Bel (lord) of later times. Originally a solar deity, as the son of space, and the titular god of that city, he was elevated to the supreme rank in the Babylonian pantheon under Khammurabi (c. 2250 BC) during the time that Babylon became the chief center of the states surrounding the Euphrates Valley. The attributes of the older Chaldean deities Bel and Ea were applied to Marduk, especially as he was regarded as the son of Ea — the son of himself — and this prominence was maintained until the downfall of Babylon except during the five centuries of the Cassite control (1750-1200 BC). After 1200 Marduk's only rival was Assur in Assyria. As well as the attributes, many of the mythologic exploits of Bel were transferred by the priests to Marduk, and thus he became known as the slayer of the serpent Tiamat. Marduk was also regarded as the creator of the world and of mankind (which was formerly attributed to Bel), and the eleven-day festival celebrating this event was held yearly at the time of the spring equinox (the New Year among the Babylonians).

The ideographic representation of the word Marduk is equivalent to “child of the sun,” significantly stressing his solar characteristics, while that of his consort Zarpanitu (or Sarpanit) is equivalent to “the shining one.” Marduk is also identified with the planet Jupiter.

Mare (Latin) The sea; after Christian influence southern European mariners associated Mare with Mary, the Virgin-Mother — the reference being to the sea of space, or the representation of the cosmic Virgin-Mother.

Marga (Sanskrit) *Mārga* Path; in Buddhism the noble eightfold path that leads to nirvana.

There are four commonly recognized margas, forms of yoga or spiritual and intellectual training:

1) karma yoga (path of action; 2) bhakti yoga (path of faith or love); 3) raja yoga (path of kingly yoga); and 4) jnana yoga (wisdom path). These four pathways correspond with the four Hindu castes: Sudra (the agricultural); Vaisya (commercial); Kshatriya (administrative, military, ruler); and Brahmana (philosopher, sage).

Marichi (Sanskrit) *Marīci* A ray of light; in the Puranas and the *Laws of Manu*, the chief of the maruts, one of the seven mind-born sons of Brahma, as well as one of the seven sages (saptarshi), father of Kasyapa and of Surya (the sun). Chinese Buddhists and Taoists “have made of this conception the Queen of Heaven, the goddess of light, ruler of the sun and moon” (TG 207).

Ma-rig-pa (Tibetan) Ignorance, nescience; equivalent of Sanskrit avidya.

Marisha (Sanskrit) *Māriṣā* Daughter of the sage Kandu and the celestial nymph Pramlocha, who gave birth to Marisha by means of the collected perspiration issuing from her pores. Soma matured this by his rays, and gradually it increased in size till the exhalation that had rested on the tree tops became the lovely girl (VP 1:15). She represents the second root-race or sweat-born.

With Prachetasas, the production of the mind-born sons of Brahma, Marisha gives birth to the patriarch Daksha, the father of the first humanlike progenitors of the third root-race, the egg-born.

Markandeya Purana (Sanskrit) *Mārkaṇḍeya Purāṇa* One of the 18 principal Puranas of ancient India, named from its supposed author Markandeya. It expounds the nature of Krishna and explains some of the incidents of the *Mahabharata*. It differs from many of the other Puranas in that its 9000 verses are largely narrative, rather than containing arguments of a sectarian character.

Marrtanda. See MARTANDA

Mars Next to Jupiter, probably the chief Roman divinity, the oldest form among the Italians being Maurs, which became Mars. Identified in later times with the very similar Greek Ares, both being gods of war and strength.

This divinity signifies creative energy, the initial act of generation; so Mars is not merely a martial deity but likewise a patron of tilth, sometimes identified with earth as a source of being (SD 2:143-4). Mars is in one sense identified with Brahma and Adam-Jehovah (Adam meaning red earth) as symbol for primitive and initial generative powers for human procreation (SD 2:43), corresponding to the Egyptian Artes or Ertosus, the Biblical Cain and Hindu Karttikeya and the Egyptian Gnostic Sabaos.

Also Mars is the fourth from the sun of the visible planets in our solar system and nearest to the orbit of the earth; enumerated as one of the seven sacred planets of the ancients. The celestial body we see, as indeed is the case with all the other visible planets including earth, is but the lowest globe of a septenary chain. Mars has an important connection with the earth, because the

rector or genius of the Martian planetary chain has a characteristic influence over globe F of the earth-chain, and by correspondence in earthly matters will have especial influence over the coming sixth root-race. In astrology, its zodiacal houses are Aries and Scorpio; its day of the week is Tuesday.

Mars is at present in obscuration — its life-waves are functioning on other globes of its planetary chain than the lowest sphere or globe D, which is the orb we see; nevertheless sishtas are present awaiting the proper time period for resuming their waking and intense evolutionary activities. Mars has ended its third round and is preparing now for the beginning of its fourth round.

Martanda or **Marttanda** (Sanskrit) *Mārtāṇḍa*, *Mārttāṇḍa* [from *mārta* mortal, transitory + *aṇḍa* egg] The sun or sun god of the Vedas; an earlier form is *mṛtāṇḍa*. Cosmologically a title applied to any celestial orb, though most commonly a name of the sun or Surya, as being phenomenal productions of Brahma-prakriti or of the productive and generative dual cosmic spirit. Just as the egg bears the seed of a future being, so the celestial bodies were each supposed to contain the life-germ of its own future imbodiment as a higher entity — in other words, the celestial bodies reproduce themselves in new imbodiments. The highest adaitya of the sun is likewise called preeminently Marttanda; it is also a name for the number 12, referring to the 12 solar logoi, intimately connected with the 12 mansions or constellations of the zodiac.

“Aether, whether *Akasa* is meant by the term, or its lower principle, Ether — is septenary. *Akasa* is Aditi in the allegory, and the mother of Marttanda (the sun), the *Deva-matri* — ‘Mother of the gods.’ In the solar system, the sun is her Buddhi and *Vahan*, the Vehicle, hence the 6th principle; in Kosmos all the suns are the Kama rupa of *Akasa* and so is ours. It is only when regarded as an individual Entity in his own Kingdom that Surya (the sun) is the 7th principle of the great body of *matter*” (SD 1:527n).

Martinists Followers of French mystic Louis Claude de Saint-Martin (1743-1803). After a brief career in the army, he devoted himself to study and become a theosophist and student of Boehme. He sought to restore Masonry to its primeval character and to reintroduce into it occultism and theurgy; his rectified rite has ten degrees, later reduced to seven. But his efforts met with failure and he was accused of introducing ideas and rites at variance with the supposed archaeological history of Masonry. His society was first established at Lyon; its members believed in the possibility of communicating with planetary spirits and minor gods and genii of the ultramundane spheres. It was the Martinists, according to some, who invented the name astral light.

Maru (Sanskrit) *Maru* [from the verbal root *mṛ* to die, become sterile] A sterile tract of land, a desert; a king belonging to the Ikshvaku family and also a country and its inhabitants.

Marut(s) (Sanskrit) *Marut-s* A class of spiritual or highly ethereal beings, properly classed as belonging to the middle sphere between heaven and earth. They are one of the classes of agnishvattas, and hence in strait union with the asuras — indeed leaving mythologic legends about

the maruts aside, there are times when the distinctions between the maruts and asuras vanish.

In the Vedas the maruts are described as children of heaven (spiritual spheres) and ocean (cosmic space), armed with golden weapons, such as lightning and thunderbolts, as having iron teeth and roaring like lions, and residing in the north, as riding in golden cars drawn by ruddy horses — all of which is merely mythologic elaborations of symbolic fancy. The maruts are mythologically represented as storm gods and the friends and allies of Indra. Esoterically they belong to the hierarchies of those dhyani-chohans who enlightened the early races of mankind. In one sense they are our human egos as emanations from the manasaputras, and from another viewpoint, they are the manasaputras themselves, a class of the agnishvattas. Hence the allegory of Siva transforming the lumps of flesh into boys and calling them maruts, to show senseless men transformed by becoming the vehicles of the solar pitris or fire-maruts, and thus rational beings. Again, they are the adepts who incarnate on earth to help mankind.

The *Vayu-Purana* shows that the Maruts, “the oldest as the most incomprehensible of all the secondary or lower gods in the Rig Veda — ‘are *born in every manvantara* (Round) *seven times seven* (or 49); that in each Manvantara, *four times seven* (or twenty-eight) they obtain emancipation, but their places are *filled up by persons reborn in that character.*’ ” In the *Ramayana* Diti, the lower or manifested aspect of Aditi, “anxious to obtain a son who would destroy Indra, is told by Kasyapa the Sage, that ‘if, with thoughts wholly pious and person entirely pure, she carries the babe in her womb for a hundred years’ she will get such a son. But Indra foils her in the design. With his thunderbolt he *divides the embryo in her womb into seven portions*, and then divides every such portion *into seven pieces again*, which become the swift-moving deities, the Maruts. These deities are only another *aspect*, or a development of the Kumaras [or agnishvattas], who are *Rudras* in their patronymic, like many others” (SD 2:613).

The maruts have their representatives on lower planes, which causes much of the confusion and apparently contradictory statements about them. “The Maruts represent (a) the *passions* that storm and rage within every candidate’s breast, when preparing for an ascetic life — this *mystically*; (b) the occult potencies concealed in the manifold aspects of *Akasa’s* lower principles — her body, or *sthula sarira*, representing the terrestrial, lower, atmosphere of every inhabited globe — this mystically and sidereally; (c) actual conscious Existences, Beings of a cosmic and psychic nature” (SD 2:615).

Marut-jivas (Sanskrit) *Marut-jīva-s* [from *marut* a class of divine beings + *jīva* monad] Those monads which have been, are, or will be during long ages passing through the evolutionary stage called agnishvattas or kumaras, a direct hint of the real significance of the term marut itself. All maruts are jivas, the latter explaining characteristics and functions of the maruts.

In a more specific and limited sense, marut-jivas are the monads of adepts who have attained liberation, nirvana, or are very close to attaining it, but who wish to be reborn on earth for the

sake of helping humanity. It is apparent that the nirmanakayas, as well as a large part of the sambhogakayas, therefore fall within the category of the marut-jivas.

Marutvat, Marutavan (Sanskrit) *Marutvat, Marutavān* Of the nature of the maruts; in a restricted sense a title meaning the lord of the maruts, a name of Indra.

Mary The Christian ecclesiastical teachings as to Mary's perpetual virginity, her absolute sinlessness, and the role of intercessor were unknown during the ministry of Jesus and the immediately succeeding beliefs of the primitive Christians; although these three ideas in connection with the cosmic Virgin-Mother were familiar to exoteric and mythologic thought worldwide for ages preceding their adoption by Christian theologians some time after primitive Christianity. As to the idea of the perpetual virgin, as early as the latter part of the 2nd century Clement of Alexandria mentions it, but without accepting it, and not until the 4th century did it become a doctrine of the Church. Absolute sinlessness as a dogma seems to have been accepted as reluctantly as the former idea. Both Augustine and Anselm state their view that Mary the mother "was conceived in iniquity," and born "in original sin." The dogma of the intercession was not recognized by the Church until the 3rd century, when a wave of popular emotion initiated feast and holy days that are still observed.

The month of May was made sacred to Mary by the Christians, copying an ancient Greco-Latin view and practice, for the same month had been sacred to the Greek Maia or the Latin Vesta.

Blavatsky associates Mary with the Egyptian Isis and the Hindu Devaki (mother of Krishna) — both of whom are represented as suckling an infant; with Maya, the mother of Gautama Buddha, there is an interesting association of both similarity in name and idea. By Southern European mariners after the Christian era Mary has been associated with Mare, the Latin word for the sea — there being here again an early pagan teaching of the sea of space, or the representation of the cosmic Virgin-Mother. In another distinctly mystical sense the sea, like the Sanskrit Maya (illusion), symbolizes the illusory nature of all phenomenal life — illusory because noneternal and yet the womb or matrix in and from which universes are born; and in the case of individual human beings, the birth of wisdom from experience in the illusions of life.

Thus the Christian Mary became clothed with various religio-mystical ideas and teachings associated from immemorial time with both cosmic events and with human experiences in life and initiation. The Christ in man is born as a child of the virgin-mother spirit, man's own higher consciousness — a mother which remains perpetually virginal, by its nature intrinsically sinless, and which functions between the personal man of flesh and the god within us as the intercessor, as indeed the inner Christ itself is. *See also ANA; ANAITIS*

Maryada (Sanskrit) *Maryādā* A limit, boundary, line, border; by extension of meaning, the content or outline of the intrinsic moral law, including likewise ethics, or established customs or rules, and hence signifying rectitude.

Mary Magdalene A woman of Palestine, who had been a woman of low repute but who reformed and became a follower of Jesus. In the Gospels, however, she first appears in company with “certain women, which had been healed of evil spirits and infirmities” (Luke 8:2), and it is specified that out of Mary in particular went seven devils. The women were all reputable apparently — among them Joanna, wife of the royal steward — and there is nothing in the text to indicate that the disorders were morally reprehensible.

The *Pistis Sophia* is a Gnostic work, and certain Gnostic schools were contemporaries of the primitive Christians and undoubtedly contributed heavily to primitive Christian belief. Here Mary Magdalene is one the twelve disciples, asking more questions than any one of the others, and making observations which called forth frequent commendation. Phrases like “And Jesus said, Well done, Mary” and “Jesus commended Mary” are numerous. The questions, many of them at least, appear to pertain to the highest Mysteries. The following is a typical one: “Mary Magdalene came forward and . . . said unto Jesus: ‘Bear with me O Master, and reveal unto us all the things which we seek out. Now therefore, Master, how is it that the First Mystery has Twelve Mysteries, where the Ineffable has One and only One Mystery?’ ” (sec 237). In section 231 we find the following as words of Jesus: “Wherefore I said unto you once on a time: ‘In the Region where I shall be, my Twelve Servants (*Diakonoi*) shall also be with me, but Mary Magdalene and John the Virgin shall be the most exalted among my Disciples . . .’ ”

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Mas-Me

Masculine Principle. See MALE PRINCIPLE

Mash-mak Said to be used by the Atlanteans, the fourth root-race, for the great potent sidereal force, which Bulwer Lytton called in one of its earthly manifestations Vril.

“It is this vibratory Force, which, when aimed at an army from an *Agni Rath* fixed on a flying vessel, a balloon, according to the instructions found in *Ashtar Vidya*, reduced to ashes 100,000 men and elephants, as easily as it would a dead rat. It is allegorised in the *Vishnu Purana*, in the fable about the sage Kapila whose *glance* made a mountain of ashes of King Sagara’s 60,000 sons, and which is explained in the esoteric works, and referred to as the *Kapilaksha* — ‘Kapila’s Eye’ ” (SD 1:563).

Masonry Operative masonry, the art of building in stone; speculative and emblematic Freemasonry, called such since 1717 when four English Lodges of operative masons established the Grand Lodge of England of Speculative and Emblematic Freemasonry, so called because building materials, tools, and instruments are symbolically and analogically used in the building of the universe and of man as a temple enshrining a god. Originally, however, among the ancient Masons, and today throughout the Orient “wherever magic and the wisdom-religion are studied, its practitioners and students are known among their craft as Builders — for they build the temple of knowledge, of secret science. Those of the adepts who are active, are styled practical or *operative* Builders, while the students, or neophytes are classed as *speculative* or theoretical. The former exemplify in works their control over the forces of inanimate as well as animate nature; the latter are but perfecting themselves in the rudiments of the sacred science” (IU 2:392).

Modern Freemasonry includes many Rites and Degrees, all the so-called higher degrees being based upon the three fundamental craft degrees — 1) Entered Apprentice; 2) Fellow Craft; and 3) Master Mason — which degrees alone comprise true Masonic secrets and have any valid claim to

descent from ancient Masonry. The lessons or keynotes of these three degrees are respectively 1) ethical, to subdue the passions; 2) intellectual, the training of the mind, the seven liberal arts and sciences, and the mounting of the stairway of wisdom; and 3) spiritual, the conquest of death. The lessons in each degree are enforced and illustrated by appropriate symbols and allegories. The central theme of modern Masonry is the building of King Solomon's Temple; the death of Hiram Abif and the consequent loss of the Word; the raising of Hiram Abif, and the communication of a Substitute Word.

“Modern Masonry is undeniably the dim and hazy reflection of primeval Occult Masonry, of the teaching of those divine Masons who established the Mysteries of the prehistoric and prediluvian Temples and Initiation, raised by truly superhuman Builders” (BCW 14:168).

“The Temple was the last European secret organization which, as a body, had in its possession some of the mysteries of the East. True, there were in the past century (and perhaps still are) isolated ‘Brothers’ faithfully and secretly working under the direction of Eastern Brotherhoods. But these, when they did belong to European societies, invariably joined them for objects unknown to the Fraternity, though at the same time for the benefit of the latter. It is through them that modern Masons have all they know of importance; and the similarity now found between the Speculative Rites of antiquity, the mysteries of the Essences, Gnostics, and the Hindus, and the highest and oldest of the Masonic degrees well prove the fact. . . .

“Freedom of intellectual thought and the restoration of one and universal religion was their secret object” (IU 2:380, 382).

“The simple truth is that modern Masonry is a sadly different thing from what the once universal secret fraternity was . . .” and “the time has come to remodel Masonry and restore those ancient landmarks, borrowed from the early sodalities, which the eighteenth century founders of speculative Freemasonry meant to have incorporated in the fraternity” (IU 2:387, 377).

Freemasonry in fact was started as a minor theosophical movement as also were the original Order of the Temple, and the Rosicrucian Order, each of which was designed with the purpose of keeping alive in the outer world as far as the times permitted a knowledge of the ancient wisdom-teachings.

Masorah or **Masoreth** (Hebrew) *Massōrāh*, *Massōreth* Division, separation, arrangement, supposedly based upon tradition; applied to a school of rabbis in Palestine which flourished towards the commencement of the Christian era. Scholars differ as to the exact date during which the work was in process of perpetuating the alleged traditional method of vocalizing, and hence of pronouncing the vowelless Hebrew Manuscripts of the Bible by means of “points” or “punctating,” but assign the 7th century as the date of completion of the texts. This work in vocalization enabled

the rabbis to place virtually any interpretation that they desired upon the vowelless Hebrew texts.
See also MASORETIC POINTS

Masoretic Points or Vowels A system adopted by the College of the Massoretes where certain signs were added to the vowelless consonants of the Hebrew manuscripts, in order to supply vowels as well as to mark the division of the consonants into words — hence the term Massorah — thus enabling a reader to give the supposedly correct meaning, pronunciation, and intonation of the texts when read in the synagogue or to oneself. Hebrew, written originally without any spaces between the words, naturally called for some system of division, or vocalizing the series of consonants, and hence arose the usage of the Massoretic points or vowels. The vowel indications consist for the most part of dots and dashes, commonly termed points, and the placing of these dots and points is called punctating. This method of punctating was developed in the schools of Palestine, some say mainly by the rabbis of the School of Tiberias; another system, however, was used in Babylon, which differed in notation rather than in pronunciation. For an illustration of the method of employing differing vowels to the same Hebrew consonants, *see also* BERE'SHITH

Massorah. *See* MASORAH

Massoretic. *See* MASORETIC

Mastaba (Arabic) [from *maṣṭaba*, stone bench] A long, low oblong ancient Egyptian structure, with sloping sides and flat top, used as a mortuary chapel and place for depositing offerings; it generally covered a sepulchral pit which led to the burial chamber, where the mummy was placed. “These tombs of the ancients were symbolical like the rest of their sacred edifices, and . . . this symbology points directly to the septenary division of man. But in death the order is reversed; and while the *Mastaba* with its scenes of daily life painted on the walls, its *table of offerings*, to the *Larva*, the *ghost*, or ‘Linga-Sarira,’ was a memorial raised to the two Principles and Life which has quitted that which was a lower *trio* on earth; the Pit, the Passage, the Burial Chambers and the mummy in the Sarcophagus, were the objective symbols raised to the two perishable ‘principles,’ the *personal* mind and Kama, and the three imperishable, the higher Triad, now merged into one. This ‘One’ was the Spirit of the Blessed now resting in the Happy Circle of Aanroo” (TG 209).

During the reigns of Userkaf and Men-kau-Heru (5th dynasty) the mastaba was surmounted with a pyramidal structure, erected in honor of Ra.

Master(s) Adopted in theosophical literature to designate those human beings further progressed on the evolutionary pathway than the general run of humanity, from which are drawn the saviors of humanity and the founders of the world-religions. These great human beings (also known by the Sanskrit term *mahatma*, “great self”) are the representatives in our day of a brotherhood of immemorial antiquity running back into the very dawn of historic time, and for ages beyond it. It is a self-perpetuating brotherhood formed of individuals who, however much they may differ among themselves in evolution, have all attained mahatmaship, and whose lofty purposes

comprise among other things the constant aiding in the regeneration of humanity, its spiritual and intellectual as well as psychic guidance, and in general the working of the best spiritual, intellectual, psychic, and moral good to mankind. From time to time members from their ranks, or their disciples, enter the outside world publicly in order to inspire mankind with their teachings.

Two of Blavatsky's teachers became publicly known under the names of Master M (Morya) and Master KH (Koot Hoomi). Some of their correspondence with one of Blavatsky's earlier theosophical helpers has been published as *The Mahatma Letters to A. P. Sinnett*.

Masters, The Three Ancient Grand In Freemasonry, a title applied to King Solomon, Hiram King of Tyre, and Hiram Abif, who are regarded by Masons as having been the Three Grand Masters of the Craft at the time of the building of Solomon's Temple: Solomon as architect upon whom his father King David laid the charge to build "an house for the Lord," and to whom he had given the plans, "the pattern of all that he had by the spirit" (1 Chron 28:12); King Hiram, who supplied the materials, in addition to those which had been collected by David; and Hiram as builder and artificer.

The Temple representing as it does both the universe and man, as the microcosm, the Three Ancient Grand Masters can be viewed either cosmically or particularly with reference to man. Cosmogonically these Grand Masters represent the trinity of nature and are identical with the triads which are found in all the great world religions: Brahma, Vishnu, and Siva in India; Osiris, Isis, and Horus in Egypt; the highest three Sephiroth in the Jewish Qabalah — Kether (the Crown), Hochmah (Wisdom), and Binah (Intelligence); and Father, Holy Ghost, and Son in Christianity.

Microcosmically the Three Ancient Grand Masters represent the highest triad of man's composite sevenfold nature: atman, the inner divinity; buddhi, spiritual soul, the principle of spiritual intelligence and understanding and of spiritual will; and manas, the mind which is the artificer or builder. More generally they represent threefold human nature: spirit, soul, and body, for the Temple of Man is built by each one from within himself by the unfolding of his inner faculties and powers. This trinity of man whether as highest triad or as spirit, soul, and body, being the key to the "lock of Magic," the trinity of nature.

Because nature is repetitive throughout, these Grand Masters are correspondentially related to the highest three of the four lower manifested planes of the seven planes of cosmic consciousness, in which exist the sevenfold manifested cosmos, the solar system, and the seven sacred planets. Specifically with reference to the seven globes of our earth-chain, Blavatsky gives these in the Chaldean Qabbalistic system as: 1) Archetypal World; 2) Intellectual or Creative World; and 3) Substantial or Formative World (SD 1:200). The lowest of the seven cosmic planes is the plane of our physical earth, which is the focus, result, and outermost expression of the energies and forces of the three higher planes. Thus our physical earth, as also physical man, are each the Temple, planned and built by the Three Grand Masters, according to the pattern which David has "by the

spirit,” the divine plan which is hidden in the heart of everything that is. In accordance with this divine plan all evolution proceeds by the progressive manifestation of the divine life and the cosmic and human spiritual energies, powers, and faculties, evolving and unfolding from within, until at last the building of the Temple shall be completed and adorned as a fit and worthy habitation of the inner god.

Matarisvan, Matariswan (Sanskrit) *Mātariśvan* [from *mātari* from *mātr* mother + the verbal root *śvas* to breathe] A name of Agni, the fire god, or of a divine being closely connected with the messenger of Vivasvat, who brings down the hidden fire to the Bhrigus. Matarisvan is related to the manasaputras, bringers of fire of mind to the early races of mankind. It corresponds to Prometheus, the fire-bringer of ancient Greece, while the Bhrigus thus intellectually inspired by Matarisvan were what the medieval Rosicrucians and Qabbalists would call the Salamanders, as the intellectual children of the cosmic intellect itself, or of what the Hindus have called the offspring of taijasa-tattva.

Interestingly the moon is often called mata (Mother), otherwise matri, although mata likewise means a measurer, supposedly of time.

Mater (Latin) Mother; used in the categories of alchemy as one of the triad flamma, natura, mater; corresponding to sulphur, mercury, salt; or to spirit, water, and blood. Also used in conjunction with other names, meaning mother.

Materialism In the rigid philosophical sense, any theory which considers the facts of the universe to be sufficiently explained by the existence and nature of matter. A familiar form of this is what has been called the atomo-mechanical theory, which derives all phenomena from the movements of material atoms in space. The philosophical definition of materialism differs according to the meaning of the word matter; as for instance, when we limit matter by no physical attributes or implications alone, but see in it the sevenfold prakritis or pradhanas of Hindu philosophers and mystics, matter is then seen to be but a name for the veil or shadow of spirit — the other side of spirit as it were. This distinction makes materialism but a synonym for spiritualism — i.e., the profound philosophic theory that the universe is built throughout, from and of the substances and attributes of spirit, which become matter in its innumerable and manifold forms and phases on the lower cosmic planes. What physicists have been calling matter is a percept derived from the interaction of the physical senses with the physical plane of prakriti or nature.

Matter is one of the twin aspects of universal life, coeternal with spirit and indeed spirit’s veil or vehicle, and hence is present on every plane of manifestation, from the highest to the lowest. When the manifested One of a universe is considered as a unit or unity, it is called the First or Unmanifest Logos; when it is considered as a duality it is called the Manifest-Unmanifested or Second Logos, and is spirit-matter or life, spirit being its positive pole and matter its negative. Matter is everywhere the vehicle of spirit, and in matter inhere the attributes which spirit

expresses in it. Hence materialism, in this sense, would define the whole theosophic philosophy.

The history of philosophy presents a rivalry of schools where materialism is contrasted with idealism, but all these rival schools originated outside of the Mysteries of the sanctuary, although many if not all contain substantial elements of occult verities. The attempt entirely to separate the notions of spirit and matter, of mind and body, of noumenon and phenomenon, results in futility and confusion; a purely ideal world is as unreal as a purely material one.

Materialism, however, stands commonly for an attitude of mind which exalts sense-life, together with its appropriate species of intellectualism, into a *summum bonum*; and which strives to devise a philosophy that will justify such an attitude. It is an attitude towards life consisting of mental and emotional attachment to externals, to the senses, and to reasoning based on sensory perceptions; and a corresponding neglect and denial of real values. This kind of materialism undermines morals by substituting self-interest or expediency for an innate moral sense, as the basis for conduct. It places illusory power in the hands of man, while at the same time depriving him of his real power of penetrating discrimination, and hence of his ability while under this illusion to use the powers of nature aright.

Materializations The taking on of an objective form or body by something of a subjective nature; used in modern spiritualism for appearances which the latter calls spirits of the dead.

“Theosophists accept the phenomenon of ‘materialization’; but they reject the theory that it is produced by ‘Spirits,’ *i.e.*, the immortal principles of the disembodied persons” (TG 209).

The post-mortem separation of man’s seven principles frees the higher triad, atma-buddhi-manas, for return to, and experience in, the arupa (formless) planes of existence. Then the human-animal soul — kama-manas — composed of the dregs of the selfish personal emotions, desires, and impulses, becomes for a shorter or longer time a coherent astral form, finding its natural level in kama-loka. These shells of the dead, as well as the various nature spirits and other astral entities, are normally invisible to us as we are to them. However, certain conditions attract them and help them to appear. Actual materializations, though rare, are possible, as are various similar phenomenal appearances; yet none are the spirits they are supposed to be by spiritualists. As a rule they all fall into three general classes: 1) the astral body of the living medium detaches itself and assumes the appearance of the so-called spirit by reflecting some invisible image already in the astral light, or in the mind of one or more of the sitters; 2) the astral shell of a deceased person, devoid of all spirit, intellect, and conscience, can become visible and even partially tangible when the condition of the air and ether is such as to alter the molecular vibration of the shell so that it can be seen; and 3) an unseen mass of chemical, magnetic, and electrical material is collected from the atmosphere, the passive medium, and the circle. With this material, the astral entities automatically make a form, which invariably reflects as pictures or portraits the shape or appearance of any desired person, either dead or alive. The astral entities, which are of various

kinds, use the mind-pictures or images which crowd the thoughts and auras of those present, as the astral light receives, preserves, and reflects when conditions are right, pictures or portraits of both dead and living, and indeed of all events. The confusion and illusion of it all may be increased by scenes related to the multiple personality of someone present whose aura presents pictured records of past lives.

An apparition of another kind which, though rare, is genuine and authentic, is due to a dying person's intense thought of another, making him for a brief moment objective to the latter. It may be due to an intense will to see or to appear to the other person, or it may be a more automatic projection of the *mayavi-rupa* of the dying one. These last cases, however, must be distinguished in quality from the adept's consciously exercised power to project his higher astral-mental form to any distance in his *mayavi-rupa*. "The rays of thought have the same potentiality for producing forms in the astral atmosphere as the sunrays have with regard to a lens. Every thought so evolved with energy from the brain creates *nolens volens* a shape" (BCW 10:224).

"As Kamaloka is on the earth plane and differs from its degree of materiality only in the degree of its plane of consciousness, for which reason it is concealed from our normal sight, the occasional apparition of such shells is as natural as that of electric balls and other atmospheric phenomena. Electricity as a fluid, or atomic matter (for Theosophists hold with Maxwell that it is atomic), though invisible, is ever present in the air, and manifests under various shapes, but only when certain conditions are there to 'materialize' the fluid, when it passes from its own on to our plane and makes itself objective. Similarly with the *eidola* of the dead. They are present, around us, but being on another plane do not see us any more than we see them. But whenever the strong desires of living men and the conditions furnished by the abnormal constitutions of mediums are combined together, these *eidola* are drawn — nay, *pulled* down from their plane on to ours and made objective. This is *Necromancy*; it does no good to the dead, and great harm to the living, in addition to the fact that it interferes with a law of nature. The occasional materialization of the 'astral bodies' or *doubles* of living persons is quite another matter. These 'astrals' are often mistaken for the apparitions of the dead, since, chameleon-like, our own 'Elementaries,' along with those of the disembodied and cosmic Elementals, will often assume the appearance of those images which are strongest in our thoughts. In short, at the so-called 'materialization' séances it is those present and the medium, who *create* the peculiar likeness of the *apparitions*. Independent 'apparitions' belong to another kind of psychic phenomena. Materializations are also called 'form-manifestations' and 'portrait statues.' To call them materialized spirits is inadmissible, for they are not spirits but animated portrait-statues, indeed" (TG 210).

Mater Terra (Latin) Mother earth; used for an eighth planet after the seven great planets or gods (SD 2:393). Earth was called mother (*mater*) as the all-nourishing and all-producing feminine parent, giving birth to, supporting, and feeding her children. Mystically it refers to the generative

or productive power working through the earth, and also to Mother Earth as the origin of future celestial bodies — thus referring directly to the next planetary chain.

Matha (Sanskrit) *Maṭha* A seat of learning or instruction and training, especially for young Brahmins; or occasionally a temple. Also a hut or cottage, particularly of an ascetic, as a center of mystical training.

Mathadhipati (Sanskrit) *Maṭhādhipati* [from *maṭha* a seat of learning, instruction, or training + *adhipati* chief or ruler] The head or chief of a center of mystical instruction and training; hence also the principal of a college.

Mathematical Point. See POINT; PRIMORDIAL POINT

Mathura (Sanskrit) *Mathurā* The birthplace of Krishna, situated in the province of Agra on the right bank of the Yamuna River.

Matra (Sanskrit) *Mātra* [from the verbal root *mā* to measure] feminine *mātrā*. A measure of any kind, a quantity, sum, size, duration, number; also a moment of time; hence a minute portion. Subba Row uses it in relation to the four degrees of pranava, drawing a correspondence with the four planes of the manifested solar system.

Matripadma (Sanskrit) *Mātrpadma* [from *matr* mother + *padma* lotus] Mother-lotus; the egg or womb of the universe which is to be: “the Matri-padma had not yet swollen. Her heart had not yet opened for the one ray to enter” (SD 1:28). “One of the symbolical figures for the Dual creative power in Nature (matter and force on the material plane) is *Padma*, the water-lily of India. The Lotus is the product of heat (fire) and water (vapour or Ether); fire standing in every philosophical and religious system as a representation of the Spirit of Deity, the active, male, generative principle; and Ether, or the Soul of matter, the light of the fire, for the passive female principle from which everything in this Universe emanated. Hence, Ether or Water is the Mother, and Fire is the Father” (SD 1:57).

Matris (Sanskrit) *Mātr*-s The divine mothers or personified spiritual energies of the principle gods of the Hindu pantheon. Their number is reckoned as seven, ten, or twelve, and they bear the same relation, each one to her respective consort or god, as prakriti does to Brahma, pradhana to Brahman, and on a still vaster scale as mulaprakriti does to parabrahman. They are the respective wombs of beings bringing to birth or pouring forth the cosmogonical hierarchies. When these matris are by analogy mentioned in minor cases, their functions and attributes correspond with the cosmic sense. The sakti are the personifications or analogical reproductions of the matris on lower planes of being.

Matronethah. See MATRONITHA’

Matronitha’ (Aramaic) *Maṭrōnīthā’*. The matron; a Qabbalistic term, sometimes associated with

the tenth Sephirah, Malchuth or Matrona' (the Mother, the Queen). She will be united with the King after the regeneration on the day of Sabbath — to take place during the seventh race of the seventh round (SD 1:240). In the *Zohar* Matronitha' is also regarded as the mediatrix between deity and man.

Matsya-avatara (Sanskrit) *Matsya-avatāra* The Fish-avatara; a descent of Vishnu, the cosmic sustainer of life, in the form of a fish — mystically not physically — in order to lead to safety from the deluge King Satyavrata and certain rishis, so that the seeds of hierarchical life might not perish from the earth. The *Matsya-Purana* is particularly descriptive of this incarnation.

One interpretation of this allegory is that Vishnu appears in such fashion at the time of a major deluge for the preservation of the *sishtas* — the fine flowers of all living things in their respective hierarchical classes, which are thus preserved as seeds of life from age to age. The Biblical Noah, the Babylonian Oannes, and the Chaldean Dagon are representations of the same cosmic or human event.

The ship or ark in which Vaivasvata-manu, the rishis, and all the seeds of living things were saved — in a still more remote cosmic event of actual cosmogonical history — was the symbol of the moon. In a merely human interpretation, but equally correct, the ship or ark carrying over, is the womb.

Matsya Purana (Sanskrit) *Matsya Purāṇa* One of the 18 principal Hindu Puranas, said to have been communicated to the seventh manu, Vaivasvata, by Vishnu in the form of a fish (*matsya*). It consists of over 14,000 slokas, but many of its chapters duplicate the *Vishnu-* and *Padma-Puranas*, and much of its material is drawn from the *Mahabharata*.

Matter In the widest sense, the negative pole of the one universal life regarded as a duality. The manifested One, considered as a unit, is called the manifested Logos; and as a duad it becomes spirit-matter or life. Matter is thus co-eternal with spirit, forming the vehicular or passive aspect of every plane. It is equivalent to *prakriti* (or *sakti*, *maya*, or *pradhana*), and just as there are seven, ten, or twelve *prakritis*, so there are seven, ten, or twelve matters: the root-essence of all the series is what the Hindus called *mulaprakriti* (root-nature). Equivalently, matter may also be defined as the illusory aggregate of veils surrounding the fundamental essence of the universe.

Matter in the scientific sense is a percept resulting from the interaction of our physical senses with the physical plane of *prakriti*. Formerly regarded as having an existence independently of the observer, its illusory nature is now better recognized. In attempting to conceive of matter in a general sense the mind must be relieved of familiar notions of physically extended space, of resistance, mass, bulk, etc. — properties peculiar to the physical plane of consciousness, but which we are apt to transfer unwittingly to our notions of other kinds of matter. We may speak of mind-stuff as the scene of mental activity and the vehicle of thought-force; but we can hardly view this as a kind of rare gas. Grossness, inertness, and immobility are attributes of the physical plane,

rather than of matter itself. Yet the word matter has come to be significant of grossness, animalism, and materialism, although it is but the shadow or veil of cosmic spirit, spirit concreted or manifesting under the multifarious forms of the planes of the universe.

Maubed. See MOBED

Maya (Sanskrit) *Māyā* [from the verbal root *mā* to measure, form] Illusion, the non-eternal; in Brahmanical philosophy, the fabrication by the human mind of ideas derived from interior and exterior impressions, as it tries to interpret and understand the universe. While the exterior world exists — or it could not be illusory — we do not see clearly and as they actually are that which our mind and senses present to us. A traditional Vedantic illustration says that at twilight a person sees a coiled rope on the ground and springs aside, thinking it is a snake; the rope is there, but no snake.

Thus maya means that our minds are blinded and perverted by our own preconceptions and imperfections, and so does not interpret the world as it is.

“Maya or illusion is an element which enters into all finite things, for everything that exists has only a relative, not an absolute, reality, since the appearance which the hidden noumenon assumes for any observer depends upon his power of cognition. . . . Nothing is permanent except the one hidden absolute existence which contains in itself the noumena of all realities. The existences belonging to every plane of being, up to the highest Dhyanchohans, are, in degree, of the nature of shadows cast by a magic lantern on a colourless screen; but all things are relatively real, for the cogniser is also a reflection, and the things cognised are therefore as real to him as himself. Whatever reality things possess must be looked for in them before or after they have passed like a flash through the material world; but we cannot cognise any such existence directly, so long as we have sense-instruments which bring only material existence into the field of our consciousness. Whatever plane our consciousness may be acting in, both we and the things belonging to that plane are, for the time being, our only realities. As we rise in the scale of development we perceive that during the stages through which we have passed we mistook shadows for realities, and the upward progress of the Ego is a series of progressive awakenings, each advance bringing with it the idea that now, at last, we have reached ‘reality’; but only when we shall have reached the absolute Consciousness, and blended our own with it, shall we be free from the delusions produced by Maya” (SD 1:39-40).

Though sometimes used as an equivalent for avidya, maya is properly applicable only to prakriti, which is doomed to disappear at the time of pralaya. It is thus prakriti and its productions or changes (vikaras) which, by reacting against the operations of the consciousness of a perceiving being, casts the perceiver into the bonds of illusions, out of which the deluded being has to strive in order to free himself from the maya with which he is surrounded.

“Just as milliards of bright sparks dance on the waters of an ocean above which one and the same moon is shining, so our evanescent personalities — the illusive envelopes of the immortal monad-ego — twinkle and dance on the waves of Maya. They last and appear, as the thousands of sparks produced by the moon-beams, only so long as the Queen of the Night radiates her lustre on the running waters of life: the period of a Manvantara; and then they disappear, the beams — symbols of our eternal Spiritual Egos — alone surviving, re-merged in, and being, as they were before, one with the Mother-Source” (SD 1:237).

Mayamoha (Sanskrit) *Māyāmoha* The intoxication of illusion; the form assumed by Vishnu in order to deceive ascetic daityas who were becoming too holy through austerities and hence too dangerous in power, according to the *Vishnu-Purana*.

Mayasabha (Sanskrit) *Māyāsabhā* [from *māyā* illusion + *sabhā* assembly] An assemblage of illusions; one of the wonderful gifts given to the Pandavas in the *Mahabharata* by Mayasura.

Mayasura (Sanskrit) *Māyāsura* The asura mentioned in the *Mahabharata*, who presented the Pandava brothers with a gift of a bundle of wonderful things.

Mayavi, Mayavin (Sanskrit) *Māyāvin* [from *māyā* illusion] Illusory; frequently anglicized as mayavic.

Mayavi-rupa (Sanskrit) *Māyāvi-rūpa* [from *māyāvin* illusory from *māyā* illusion + *rūpa* form] Illusory body or thought-body, a higher astral-mental form. The projection of thought-consciousness-will power to any distant place while the physical body is left “entranced.” It is the whole man except the sthula-sarira (physical body), the linga-sarira (the astral or model-body) and prana. This projection can assume any form at the will of the adept. This body is called illusory because when it has accomplished its purpose, it is withdrawn and thus disappears. Synonymous with protean soul, the medieval German doppelganger, and the Tibetan hpho-wa.

Mazdean (Persian) [from *Mazda* bestower of intellect or knowledge] Also Mazdeism. Applied to the ancient religion of the Iranians and to the scriptures of the Zoroastrians, who are represented today by the Parsis. The earliest followers of the Zoroastrianism, however, in their records called themselves Airyavo danghavo (Aryan races). Nowadays the Parsis call themselves Mazdiasnians, or Mazda-Yasna, which means worship of intellect, referring to all those who believe in the supremacy of light over darkness. From the time of the renovation of Zoroastrianism during the Sassanid period, this term has been used concurrently in the same sense as Zoroastrianism.

Mazdiasnian. See MAZDEAN

Mazzaroth (Hebrew) *Mazzārōth* [probably from the verbal root *nāzar* to consecrate] The consecrated or holy; the twelve constellations of the zodiac. The more common form of the word is *Mazzālōth* [from *nāzal* to flow, distill, run] with reference to the universal belief that the celestial bodies distill or flow forth influences affecting the earth and all beings on it.

M'bul. See MABBUL

Meborach, Meborakh (Hebrew) *Měborākh* [from *bārakh* to bless] The holy, the blessed; a participle commonly used as a reverential title or name for the divinity.

Medha (Sanskrit) *Medhā* Intelligence, vigor, vitality; ability connected with the ideas of intellectual activity.

Medhatithi (Sanskrit) *Medhātithi* [from *medhā* wisdom, intelligence + *atithi* guest] The guest of wisdom or intelligence; a luminary in law and commentator on the *Laws of Manu*.

Mediator An agent who stands or goes between, specifically one who acts as the conscious agent or intermediary of special spiritual power and knowledge. Most often applied to highly-evolved characters who mediate, not only between superhuman spiritual entities and ordinary men, but who also themselves consciously unite their own spiritual nature with their merely human souls. Such people attain to this lofty state by the great sanctity and wisdom of their lives, aided by frequent interior ecstatic contemplation. They radiate a pure and beneficent atmosphere which invites, and is congenial to, exalted spiritual beings of the solar system. Evil entities of the astral realms cannot endure their clean and highly magnetic aura, nor are they able to continue obsessing other unfortunate persons if the mediator be present and will their departure, or even approaches the sufferer. This powerful spiritual self-consciousness of the individual who is a mediator reaching upwards to superior spiritual realms, is in sharpest possible contrast with the passive, unconscious, weak-willed medium who, through ignorance or folly, becomes the agent for the use of any astral entity that may be attracted to the entranced body. Apollonius, Iamblichus, Plotinus, and Porphyry are examples of mediators: “but if the temple is defiled by the admission of an evil passion, thought or desire, the mediator falls into the sphere of sorcery. The door is opened; the pure spirits retire and the evil ones rush in. This is still mediatorship, evil as it is; the sorcerer, like the pure magician, forms his own aura and subjects to his will congenial inferior spirits” (IU 1:487).

Medicine As the healing art, medicine is as old as thinking man. Before the latent fires of mind were lighted in the third root-race, disease and death were unknown. However, with the physicalization of protoplasmic humanity, and the separation of the sexes, the unnatural linking with the animals in the third and fourth root-races disordered the harmonious relations between man and nature. In addition, self-conscious man's continued evolution into matter, with the involution of his spiritual nature, brought about forms of disorder, disease, and physical death. Then, beings from higher spheres descended, and dynasties of divine kings and spiritual guides taught men, leading them to the invention of all the arts and sciences, including the medical use of plants (cf SD 2:364).

Medicine was originally a divine science, providing for the well-being of the spiritual, mental,

psychic, astral, and physical man. Archaic medicine included a profound knowledge of genuine astrology, of true alchemy, of occult physiology, of the finer forces vibrating as sound, color, form, thought, and feeling, and whatever related man to his home universe of natural law and order. This was the basis of the natural “magic” which tradition has linked with the medical art. This knowledge was dual in its power to work for life or death, for good or evil ends. Its full comprehension required not only a trained intellect, but the intuitive understanding of a pure spiritual nature. Nevertheless, the Atlanteans acquired enough knowledge of the use of dangerous powers that they became — albeit with numerous and noteworthy exceptions — a nation of sorcerers. Then, the white magicians established the Mystery schools in which to safeguard the sacred teachings from evildoers and to protect humanity from their influence. Thus, the deeper truths of the healing art have ever since been entrusted only to pledged disciples and initiates. Such fragments of it as have been rediscovered by intuitive physicians from time to time have usually been in keeping with the general cultural level of their civilization. The exceptions have been men who have frequently been too far ahead of their times to be understood. Such a man was Paracelsus in medieval Europe, persecuted for heretical teachings such as the psychoelectric and magnetic play of sidereal forces which linked man with the stars — the *spiritus vitae* in man came from the *spiritus mundi*.

Of the archaic history of medicine — as of the race — little is to be found. However, echoes of the primitive wisdom have survived, and every country having a literature of its ancient periods has some account of the healing art. The Hindu sacred scriptures — the oldest literature extant — have treatises upon medicine and surgery, showing a profound and intimate knowledge of the subject. This high standard was not maintained when the Vedic writings became misunderstood and mutilated by later commentators. The exclusive Brahmins’ assumption of the right to all knowledge also prevented original thought and research. What writings are available today are of little practical value without the lost key. Even our typically matter-of-fact interpretation of legendary and classical beliefs and customs, and of archaeological findings, overlooks that what is known of ancient medical practice is largely exoteric, symbolic of a deeper teaching than we possess.

Records of ancient medicine in Babylonia, Egypt, Greece, etc., tell of the temples being used as hospitals, with priest-physicians supported by the state giving every care to the sick who came, both rich and poor. In addition to material means of treatment — many of which we have rediscovered — these devotees of the gods of healing used special incense, prayers, the “temple sleep,” invocations, music, astrology, etc., which we regard as harmless superstition of an earlier day. However, such conditions, intelligently adapted to each case, in making a pure, serene, uplifting atmosphere around the sick person, would invoke the influences of wholeness within and without him. By putting the inner man in tune with his body, his disordered nature-forces manifesting as disease would tend to flow freely in the currents of health. Natural magic is as

practical as the unknown alchemy which transmutes our digested daily bread into molecules of our living body.

There is a mystic science attached to the caduceus, the classical emblem of medicine. To the priest-physicians in the temples, this symbol was sacred not only to the god of wisdom and healing, but stood for profound cosmic truths, knowledge of which was held in common by all initiates. It symbolized the tree of life and being. Cosmically this symbol stood for the concealed root or origin of universal duality which manifests as positive and negative, good and evil, subjective and objective, light and darkness, male and female, health and sickness, life and death.

Medini (Sanskrit) *Medinī* [from *medas* fat, marrow] The earth; so called from its legendary creation from the marrow and fat of two demons who sprang from the ear of the sleeping Vishnu. Before they could kill Brahma, Vishnu awoke and killed them. Their bodies, thrown into the sea, produced so much fat and marrow that Narayana used it to form the earth. Here *medas*, while meaning fat or marrow, also signifies the stored-up richness of life or vitality, a treasury or fountain of vital power.

Meditation The attempt to raise the self-conscious mind to the level of its spiritual counterpart, to unite *manas* with a ray from *buddhi*. It is a positive attitude of mind, a state of consciousness rather than a system or a time period of intensive thinking. It corresponds in its more perfect form to the ecstasy of Plotinus, which he defines as “the liberation of the mind from its finite consciousness, becoming one and identified with the Infinite.” It is silent prayer in one real sense, for the heart aspires upwards to become freed from all desire for personal benefit, and the mind frames no specific object, but both unite in the aspiration; not my will, but thine, be done. When engaged in at the outset of the day, or on retiring to sleep, it often takes the form of reflecting profoundly and impersonally on spiritual teachings, as well as self-examination, attuning of the mind and heart to calm and unselfish thought and feelings, as well as the endeavor to realize in consciousness one’s highest ideals of duty, purity, and truth, and inducing thereby a general harmonizing and one-pointed adjustment of the whole nature.

“Meditate all the time — nothing is so easy and so helpful. Far better is this for most students than to have a set period: quiet, unremitting thought on the questions you have, continuing even when the hands are busy with the tasks of the day, and the mind itself quite absorbed by other duties. In the back of the consciousness there can still be this steady undercurrent of thought. It is likewise a protecting shield in all one’s affairs, for it surrounds the body with an aura drawn forth from the deeper recesses of the auric egg . . .” (FSO 39).

Medium Anything that serves as an intermediate, especially applied by modern spiritualists to a person who, alleged to be under the “control” of some other being, usually invisible, becomes a transmitting medium for phenomenal messages, feelings, or actions. These entities, mistakenly called spirits of the dead, are no part of the spiritual nature of composite man. On the contrary,

these communications come from various entities in the astral world which interpenetrates and surrounds the physical earth, just as our astral model-body and aura surround and interpenetrate our physical form, cell for cell. In our present state of evolution, the astral or model-body acts normally only when conjoined to the physical — a natural provision for protection from conditions with which we are as yet evolutionally unprepared to deal. The medium, however, is one who is born with or develops a peculiarly unstable and often actually dislocated state of the elements of his inner constitution. Thereby he becomes at times disorganized physiologically and in his nervous system, which connects the inner man with the outer world, and he suffers, in effect, a psychic dislocation. Then the entranced, unconscious medium functions with magnetic sympathy with currents and entities in the astral light, especially with those in the kama-lokic levels which are nearest the earth. Of these many entities, the types usually manifesting are nature spirits or elements of various kinds; kamic remnants, the shells or spooks of the dead; and elementaries or the imperfect astral remains of excarnate human beings who when alive on earth showed marked tendencies to gross and evil living. Being fated, because of their strongly materialistic biases and appetites, to exist in the astral realm, these last are a peculiarly dangerous and demoralizing influence, especially to people of weak will or of mediumistic temperament. Without physical body or real conscience, the elementaries yet are living entities of the unexpended force of their earth-passions and desires, eager to occupy and use a living body, meantime absorbing its vital essence if they can make psychic contact with it. They are psychomagnetically drawn to such conditions as the seance room usually offers. The delicate tingling on the medium's skin, supposed to come from angelic fingers, is actually an astral emanation of vitality to form an atmosphere or aura for the besieging control. These feathery touches are like the auras which often precede convulsive epileptic attacks where the pale, cold, unconscious body of the ousted sufferer becomes temporarily possessed. Each time when the passive medium is controlled, his spiritual will is progressively weakened, his higher mind is blurred, and he becomes an open door for all kinds of uncanny astral influences. It is true that psychic sensitives of clean life and honest purpose, may first attract entities belonging to higher kama-lokic levels. But the finest types of supposed spirit faces that they see are generally reflections from their own mental pictures of beloved ones, or of their own innate ideals.

Of the many types of astral elementals, connection with even those friendly to man are injurious, for they all use part of the living for their automatic actions. Moreover, black magicians who live in their kama-rupas — in the astral world — relatively few though they are, survive by using many of these nature spirits to vampirize vitality from the living. The elementaries who, unfortunately, are galvanized into a fictitious life by devitalizing the medium and the sitters — as clairvoyants have often seen — are making new evil karma, and even inviting final spiritual disaster.

At most, this dealing with the dead is necromancy — a wrong condemned by the wise in all ages as misleading at the least, very dangerous and ethically demoralizing at the worst. The passive

medium under alien astral control, is the very antithesis of the highly evolved human mediator whose awakened spiritual, intellectual, and psychic nature serves as a conscious channel of inspiring influence between lofty spiritual powers and ordinary men, or between mahatmas of the Great White Lodge and men.

Mediumship Usually, a peculiarly passive state or condition of a person, due to “disease or to the exuberance of nervous fluid,” either of which disturbs the normal balance of forces in his or her constitution. Thereby, the man or woman, becoming unconscious at times of his natural senses, is then made the automatic agent of various psycho-astral forces and entities, and these last are of several kinds: elementaries, astral shells or spooks, nature sprites, and astral and even physical elementals.

This entranced state is cultivated in modern spiritualism as a means of inviting spirit-control and of gaining special knowledge. However, the very relation of the seven human principles infallibly and necessarily prevents pure spirit from directly contacting physical matter. In the complete living man on earth, his spiritual nature — buddhi — is above, within, or beyond his higher mind (higher manas) yet can only act downwards through it. The spiritual does not directly contact or act through the lower mind and emotions (kama-manas). After death, the higher triad (atma-buddhi-manas) separates from the lower quaternary and ascends to its own realms, entirely beyond the reach of the personal man that was. Mediumship, moreover, is a negation of conscious selfhood and a reversal of natural evolutionary growth, whereby the reincarnating ego involved in material existence comes forth, step by step, taking positive, conscious control of its body, mind, and emotions. Our racial evolution reached the depths of materiality in Atlantean times, and therefrom made the turn onto the ascending arc. Hence, our future progress consists, not in trying further to materialize spirit, but in progressively spiritualizing matter.

Human mediumship is a voluntary, or more often involuntary, subjection to the lower planes of astral substance which, while more ethereal than ordinary matter, yet are of a quality more gross, more powerful, and usually more malefic. Entrance into these astral realms produces a species of astral intoxication, from the delusion of strange because unknown and often unequilibrated forces, deceptive astral pictures; and the astral intoxication is increased because of considering these experiences as wonder-phenomena. In other words, the conditions and experiences sensed are as genuine, and as unreliable and utterly useless, as are the hallucinations of the delirious or insane. Only an occultist of masterful will and great purity of life can rise consciously to the spiritual plane and, looking down on the astral levels below, understand, control, and remember what he sees. In untrained mediumship the atoms and molecules of the astrally “controlled” body which the alien astral entity uses to mold into a form and to move with its own desire-impulses, retain this astral psychomagnetic imprint. With repeated trances, the medium grows continuously and progressively less than his individual self, because of his thoughts and feelings becoming mixed with, overlaid, or blurred by ideas and emotions which per se are abnormal and

misleading. He therefore becomes irresponsible as a source of genuine spiritual knowledge and prevision, and still less responsible as a guardian of sacred truths. Because of this, untrained mediumship precludes initiation into the Mysteries as the person's faith in his astral "control" would dominate him instead of the rules of the sanctuary.

Medusa. See GORGON

Meenam. See MINA

Megacosm [from Greek *megas* great + *kosmos* world] Used of the astral light, in distinction from the entire macrocosm on the one hand and any microcosm, such as man or any other individual entity, on the other.

Meghayanti. See MAGHAYANTI

Mehen (Egyptian) *Meḥen*. A deity in the Egyptian *Book of the Dead*, represented as a serpent god. "In popular myths, the great serpent which represents the lower atmosphere. In Occultism, the world of the *Astral light*, called symbolically the Cosmic Dragon and the Serpent" (TG 211).

Meimra' (Hebrew) *Mēimrā'* The voice of the will, Qabbalistic term equivalent to the Greek logos. In the *Zohar* (1, 246b), the voice which goes out of the spirit and identifies itself with it in the supreme thought is at its foundation no other thing than the water, air, and fire; the north, south, east, and west, and all the energies of nature; but all these elements and forces are blended in one thing: the voice which goes out of the unknown.

Melanephoros or **Melanophoros** (Greek) Wearer of black; the third of the degrees which the neophyte under trial at Thebes (Egypt) entered, the first and second degrees being respectively Neokoros (temple guardian) and Pastophoros (shrine bearer) (IU 2:364).

Melchior (Hebrew) *Malkhī-'ōr* [from *melekh* king + *'ōr* light] King of light; one of the three Magi, kings or wise men of Christian legend, who followed the course of a brilliant star to Judaea in order to present homage and gifts to the infant Jesus — the "infant." The term was often applied to the planet Venus, which this King represents. The Greeks also called this planet Phosphoros, and the Latins Lucifer, both meaning "the light-bringer" or "light-bearer."

Melchizedek (Hebrew) *Malkhī-tsedeq* [from *melekh* king + *tsedeq* righteousness] My king of righteousness; the king-priest of Salem, who met Abraham and blessed him (Genesis 14:18), alluding to the ancient king-initiates, the founders of races as well as the eponyms of cycles and the representatives of spiritual powers. The name afterwards became generic (Psalms 110:4 and Hebrew 7 where a Messianic theory is hinted at), and Jesus is described as a high priest after the order of Melchisedek, which corresponds in mystical Judaism to the Order of Wisdom and Compassion in the theosophic philosophy. The term may signify the Maha-chohan, of the brotherhood of mahatmas, and also can stand for this Order itself or anyone who has reached a

high degree of initiation therein.

Melchizedek is identified with Kronos or Saturn and with Noah (SD 2:391-2), the variant spellings Sadik, Sydik, and Zedec being given. As a type-figure he is connected with the sun and moon and the story of Jesus Christ (Lucifer 1:493, Feb 1888).

Melech (Hebrew) *Melekh*, plural *Melākhīm*. A king; Melech Melachim (king of kings) referred to the king of Babylon. In the Qabalah applied as a title to the sixth Sephirah, Tiph'ereth (beauty). *See also* MAL'ACHIM; MOLOCH

Melhas (Tibetan) [from *me* fire + *lha* deity] Fiery deity, used both individually and collectively; equivalent to the Sanskrit agnideva. A class of elemental beings or nature spirits corresponding to the Salamanders of medieval Fire-philosophers. Esoterically, they are classed with the dhyani-buddhas, chohans, and bodhisattvas (SD 2:34), but this classification has no *necessary* reference to an advanced degree in evolution. It is a general term, including both evolved and unevolved beings of the original element of fire.

In *The Secret Doctrine* (2:63) Melha is the Lord of the Flames, a hierarchy of spirits, corresponding to St. Michael.

Melissai (Greek) Bees; applied to poets and certain priestesses of Delphi, or to Demeter and Artemis, and by the Neoplatonists to any pure and chaste being. Honey is a symbol of wisdom as representing garnered experiences, in the same sense as nectar and similar words; human beings collect and extract the pure essence from the flowers of experience, so that the word was sometimes used in ancient Greece and Rome for disciples.

Melitta, Melytta, or Mylitta Queen of heaven; an alternative name for Belit, Babylonian or Chaldean for "chief lady," a title applied to any goddess, most often to the consort of En-lil. Hence also applied to the moon, often regarded by the ancients as queen of heaven. Melitta is applicable to the feminine aspects of the chief hierarch of any hierarchy or of any planetary spirit.

Memrab. *See* MEIMRA'

Mendes [from Greek *Bendes* or *Mendes* from Egyptian *Ba-neb-Tet* ram] Generally associated with the worship of the Goat of Mendes, also known as Baphomet. However, the goat was really a ram, the ram symbol of later Egypt, probably adopted when the equinoctial point entered the sign of the Ram, seen in the common usage of ram-headed deities, especially Khnemu. Mendes was a town in the Nile delta where the worship of the mystical ram-headed Ammon or Amen prevailed, as it did at Hermopolis and Lycopolis. Ammon (the concealed) was a theological personification signifying the immense hidden divinity of the world who is not only self-engendered in his own spiritual being, but who is the source whence flow forth into manifestation the wide-flowing differentiated hierarchies of nature. Because this idea involved the conception of generation and reproduction, the thought very soon became degenerate even in Egypt, and thus it was that later ages clothed

Ammon with some of the merely naturally reproductive qualities that the Greeks gave their nature god Pan. Certain Greek authors twisted this into the story that the Egyptians worshiped a goat, probably from confusion with Pan, who was represented as being goat-limbed and who was, like Ammon but in a lower field of thought, a personification of nature.

Diodorus (1, 88) compares the worship of the Ram of Mendes to that of Priapus, while Manetho ascribes the origin of the cult to Kakau, a king of the 2nd dynasty.

Menglad (Icelandic, Scandinavian) [from *men* jewel + *glad* happy] She who is happy in possession of a jewel; in Norse mythology, a kenning for Freya, the goddess corresponding to Aphrodite and Venus in Greek and Roman myths. She is not merely the goddess of love and beauty, but the spiritual intelligence of the human race. The jewel on her breast, Brisingamen, is humanity on earth.

Menhir [from Breton *men* stone + *hir* high] In archaeology, an upright monolith, standing either alone or as part of an alignment or circle. *See also* CARNAC; DOLMEN

Mens (Latin) Generally equivalent to mind or manas. However, as used by a few of the Roman writers, it would be more exactly equivalent to buddhi-manas.

Mensambulism [from Latin *mensa* table + *ambule* walk] Table-walking, table-turning, a familiar spiritualistic phenomenon. To obtain this phenomenon the sitters are supposed to form a circle or “bridge” which enables the astral elements or forces to perform physical effects. The astral forces are thereafter used as the vehicles for the passing over of intelligent or quasi-intelligent communications by means of a code concerted among the sitters themselves. The intelligent answers sometimes accruing to the sitters arise either in the sitters’ own subconscious or are the pranks of more or less intelligent astral elementals, talking shells — attracted to the magnetic media — or elementaries in the astral light.

Attempts to label and classify such phenomenon are hampered by dividing things sharply into intelligent and mechanical; a lack of experience prevents people from imagining any other kind of intelligent being than a disembodied human spirit. All forces are intelligent in one degree or another; and there are ranges of beings between those which operate in the ordinary laws of physics and those which manifest themselves as the intelligent kingdoms of nature. We have found out how to call into action some of the by-plays of a few of these occult forces, which can produce at times powerful mechanical effects, and also at times exhibit a degree of intelligence or stupidity. The tendency is to try to fit them into the scheme of familiar knowledge, but what is needed is much more observation of the facts by those who experiment with these matters before they venture to theorize or even dogmatize about them.

Mental Science. *See* FAITH HEALING

Mercaba, Mercavah. *See* MERKABAH

Mercurius Vitae (Latin) Mercury of life; a medical compound made by Paracelsus said to contain mercury and antimony, but the word quicksilver did not mean the liquid metal mercury but the living silver or spirit of silver introduced into medicines by an alchemical process; and Paracelsus did not use ordinary mercury to restore life to patients (IU 2:620-1).

Mercury For the Latin god, see HERMES

Also the closest visible planet to the sun. Irregularities discovered in its orbit led astronomers at one time to suspect that there is an inter-Mercurial planet, and such a suspected planet, once claimed to have been seen crossing the solar disk, was named Vulcan. Mercury is included in the enumeration of the seven sacred planets of the ancients. Theosophy, as it does with all the visible planetary bodies, considers Mercury to be the lowest globe of a septenary chain of globes; so that this planet is not one of the seven globes of the earth-chain (SD 1:163 et seq). A connection with the earth-chain, however, is found in that the spiritual rector or genius of the Mercury planetary chain has especial influence over globe E of the earth-chain, and over the fifth or present root-race of our globe D. Astrologically, the zodiacal houses of Mercury are Gemini and Virgo; it has given its name to the day of the week Wednesday.

As Mercury is about ready to inaugurate its last or seventh round, it is far older as a chain in its present embodiment than is the earth-chain in its. It is supposed to receive seven times more light and other solar energies from the sun than the earth receives. “Mercury is, as an astrological planet, still more occult and mysterious than Venus. It is identical with the Mazdean Mithra, the genius, or god, ‘established between the Sun and the Moon, the perpetual companion of “Sun” of Wisdom’ ” (SD 2:28). Esoterically the planets Mercury, Venus, and the Moon in ancient ceremonial rites were represented by three initiators. This is the origin of the three Magi or wise men associated with Christmas and the birth of Jesus.

The metal mercury plays a great part in alchemy, being one of the trinity of sulphur, mercury, salt — denoting spirit, water, and blood; or flame, nature, and mother.

Mercury Trismegistus. See HERMES TRISMEGISTUS; PYMANDER

Merkabah (Hebrew) *Merkābāh* A chariot, vehicle; used in two senses: first, as a chariot, the Qabbalists saying that the Supreme forms and then uses the ten Sephiroth as a chariot for descending through the various worlds enumerated in the Qabbalah. These worlds are the ten Sephiroth themselves, and 'Adam Qadmon (the Heavenly Man) is the same as the ten Sephiroth considered as a hierarchic entity permeated by and inspired by the divine hierarch or Supreme. Here it is generally equivalent to the Sanskrit vahana.

Second, it is secret wisdom or knowledge: “without the final initiation into the *Mercaba* the study of the *Kabala* will be ever incomplete, and the *Mercaba* can be taught only in ‘darkness, in a deserted place, and after many and terrific trials.’ Since the death of Simeon Ben-Iochai this

hidden doctrine has remained an inviolate secret for the outside world. Delivered *only as a mystery*, it was communicated to the candidate orally, ‘*face to face and mouth to ear*’” (IU 2:349). The secret wisdom or knowledge is envisaged as a vehicle or chariot because what men call esoteric wisdom is the vehicle for the communication to human consciousness of the mysteries of the universe, and consequently of man.

Merodach. See MARDUK

Meru (Sanskrit) *Meru* The mythological sacred mountain, said in Hindu mythology to be the abode of the gods. Each nation also has its own sacred mountain — Mount Sinai for the Hebrews, Olympus for the Greeks, Tai-shan for the Chinese, etc. Theosophical and Puranic teachings place it as the north pole, pointing to it as the center of the site of the first continent of our earth after the solidification of the globe: “It is the north pole, the country of ‘Meru,’ which is the seventh division, as it answers to the Seventh principle (or fourth metaphysically), of the occult calculation, for it represents the region of Atma, of pure soul, and Spirituality” (SD 2:403). It is described in the *Surya Siddhanta* as passing through the middle of the globe, and protruding on either side. On its north end are the gods, on the nether end are the demons or hells. Its roots are in the navel of the world, which connects it with the central imperishable land, the land in which each day and night lasts six months. The above also has its symbolism in the human body. See also MOUNTAINS, MUNDANE

Mesha (Sanskrit) *Meṣa* A ram; the first zodiacal sign, Aries. “One of the synonyms of this word is *Aja*. Now, *Aja* literally means that which has no birth, and is applied to the Eternal Brahman in certain portions of the Upanishads. So, the first sign is intended to represent *Parabrahman*, the self-existent, eternal, self-sufficient cause of creation” (Theos 3:42, 12 Signs of the Zodiac).

Mesmer, Friedrich Anton (1734-1815) Austrian physician who rediscovered and applied the human magnetic fluid, called animal magnetism and then mesmerism. “He was an initiated member of the Brotherhoods of the *Fratres Lucis* and of Lukshoor (or Luxor), or the Egyptian Branch of the latter. It was the Council of ‘Luxor’ which selected him — according to the orders of the ‘Great Brotherhood’ — to act in the XVIIIth century as their usual pioneer, sent in the last quarter of every century to enlighten a small portion of the Western nations in occult lore. It was St. Germain who supervised the development of events in this case; and later Cagliostro was commissioned to help, but having made a series of mistakes, more or less fatal, he was *recalled*. . . . Mesmer founded the ‘Order of Universal Harmony’ in 1783, in which presumably only animal magnetism was taught, but which in reality expounded the tenets of Hippocrates, the methods of the ancient *Asclepieia*, the Temples of Healing, and many other occult sciences” (TG 213-4). See also MAGNETIC HEALING

Mesmerism Named for Friedrich Anton Mesmer (1734-1815), a Viennese physician who conceived the idea that diseases could be healed by stroking the afflicted parts of the patient’s body with

magnets. Later he discovered that the same healing effect could be produced by stroking or making passes over the afflicted parts with the hands. Hence the name animal magnetism as descriptive of this method of healing which today is generally called mesmerism.

Mesmer's fundamental idea was that there resides in man a power, an odic force or nerve energy, which can be projected by the will and directed either to heal and cure, or to harm and kill. All people possess this power in varying degrees. The very life-atoms which continually enter and leave not only our physical bodies, but the higher parts of our composite nature, are charged with and carry with them this odic force or mesmeric influence. We continually exchange these life-atoms with other beings, unconsciously to ourselves, and with those kingdoms according to their respective natures or planes. Mesmerism, however, means the conscious or unconscious projection by a human being of this odic or vital nerve force or magnetic fluid. But the possession of this power depends upon the physical vitality and health rather than the moral or spiritual status of the operator; while the *quality* of this power is very greatly influenced by the moral or spiritual status of the operator. In this lies the danger of the practice of mesmerism, for unless the operator is pure minded and of high moral character, the physical vitality or magnetic fluid which he projects to the patient will be morally tainted and may constitute a grave danger to the patient who, while apparently deriving physical benefit from the treatment, may become morally weakened by it, be it in however small degree.

In accordance with the constant transmigration of life-atoms between person and person, and among all the kingdoms of nature; and, as those life-atoms are of all planes — physical, vital-astral, psychic, intellectual, and spiritual, each being of the nature of that plane and hence the carrier of the life-essence, prana, odic force, or magnetism of that plane — it follows that no person can live to himself alone; but that all people influence one another either for good or ill, particularly those who are closely associated together. This is the occult significance of the power of example good or bad, the power of a cheerful, courageous, optimistic nature, or of a nature of opposite character. Hence we may speak of the mesmeric influence as operative theoretically on all planes; but when used for purposes of physical or psychic healing, it operates on the physical and psychic planes alone, because of the vital carriers or life-atoms in question.

Even so considered, the mesmeric influence not only supplements and thus arouses to renewed activity the latent vitality of the patient, but acts indirectly upon the patient's mind and will, by helping to remove the inhibitions upon the action of these due to physical suffering and lack of physical health; and can be used for either good or immoral ends when the influence is directed to the mental and psychic nature of the patient.

But mesmerism is *not* necessarily psychologization, which is control by psychic force of another's mind and will, resulting in a dislocation of the psychic nature of the latter, a usurpation or forcible direction of the thought and will of another by the psychologizer, an invasion of that other's most

sacred rights — immoral and evil in its results, whatever immediate appearances may be, and whatever be the motive, for it cripples that part in man without which he is not fully human. Nevertheless the psychologizer, as well as the so-called hypnotizer, invariably makes use of mesmeric influence, odic force, and the pranas, for these are the carriers of thought-energy and will, without which these latter could not reach and dominate the mind and will of the subject. Mesmerism, purely as such, depends solely upon the inherent natures of the pranas, and is solely a transference of pranic energy from the operator to the subject. Thus, according to the health, physical and moral, of the operator so will the subject be affected either for good or ill.

The greatest and only sure safeguard against baneful mesmeric influence, whether consciously directed against one or unconsciously exercised by another, is one's own aspirations, positive will, and endeavor to think and live one's best and noblest. If all people were spiritually enlightened, the true mesmeric power could be safely used for the healing of disease and even for aid in bringing about a rectification, by the patient's own will, of distortions and weaknesses in the patient's character or constitution. But as matters stand, the danger in meddling with the subtle pranic energies is invariably both very real and great. One may always use the power of suggestion when this is elevated to, and employed solely on, the high moral and intellectual planes, such as by lofty spiritual and ethical teaching, precept, and especially the power of high example — because these instill thoughts and ideals in the patient's mind arousing his *own* desire to follow them. These facts also demonstrate the real danger of suggestion when employed as it so often is on the lower planes, thus frequently taking the form of what are commonly called temptations.

Because mesmerism, psychologization, suggestion, and hypnotism are interlinked, all these have their respective play and place in any usage by one person of his vitality upon another.

Mesozoic Age, Era. See GEOLOGICAL ERAS

Messenger An intermediary between beings of a higher and a lower order, as between gods and men, or between the Great Lodge of Masters of Wisdom and ordinary mankind. There are buddhas, in whom the whole nature is perfect; avatars, in whom the intermediate nature, or part of it, is removed and replaced by that of another being superior to ordinary humanity who loans it temporarily for the purpose; lesser messengers, in whom the intermediate nature is partially — or even wholly — removed for a greater or less time, in order that they may become vehicles for the transmission of light undisturbed by the individual color of their own minds.

The word angel, from the Greek, means a messenger, and in the Occident referred to the various orders of spiritual beings above man. Early Christianity, as is evidenced in the works of Dionysius the pseudo-Areopagite, distinguished very clearly between the different hierarchies of angelic or spiritual beings; but Christianity for centuries has virtually forgotten or ignored these fundamental distinctions derivative from neo-Pythagorean and Neoplatonic teachings.

Messiah (Hebrew) *Māshīah* Anointed; translated into the Greek as Christos. The Hebrews had their

special form of the universal belief in the coming of avatars, and the Christians claimed that Jesus was the fulfillment of the particular Hebrew expectation. Hence Messiah is often used as a title for Jesus. Generally, a Messiah is an esoteric spiritual sun, surrounded by his spiritual family composed of twelve lesser powers (as in the 12 disciples); the term is connected with fish and water symbols and with the zodiacal sign Pisces (Fishes). Early Christian astrologers expected the coming of the Messiah to be signaled by a conjunction of Saturn and Jupiter in Pisces, in connection with other planetary configurations. As regards the future, the looked-for great avatara is the Kalki-avatara of the Brahmins, virtually identical with Maitreya, the fifth buddha.

Messianic Cycle Theosophical literature gives this cycle both as a period of 2,160 years, and as a grand cycle or cosmic year — the cycle of the precession of the equinoxes — totaling 25,920 years. This grand cycle is one of the fundamental and most important of the great periods of cosmic history and evolution. The Messianic cycle is therefore a recurrent time period, at whose opening (or close) a new spiritual and intellectual effort is made publicly by the Great Brotherhood, but strictly in accordance with nature's own cyclic vital periods or life-pulse.

Meta-spirit That which is beyond spirit; used in *The Key to Theosophy* to denote atman, or paramatman (Brahman) cosmically, the word spirit being reserved for emanated manifestations of this meta-spirit.

Metatron (Aramaic) *Məṭatrōn*. Messenger; the Presence-Angel of the Covenant, superior to all other angels, according to the Qabalah, considered as occupying as its Angel the second world ('olam Beri'ah), constituting the entire world of spirits or angels, as he governs the visible world, preserves the harmony, unity, and revolutions of the spheres, planets, and celestial bodies, and is the commander of all the myriads of the angelic hosts of the next inferior world (Yetsirah).

Metatron is equivalent to the Greek angel, the idea being that it steps down the first world ('Atstsiloth) of spirit to the third world of form. Metatron is the garment or visible manifestation of the projected spiritual and substantial energies from the first world, and his name equals 314, and thus is equal numerically to Shaddai, the Almighty (Zohar iii, 231a).

Metempsychosis Commonly used for the entry of the soul into a new body or re-embodiment; but etymologically it means the clothing of a monad with a new soul, while metempsychosis means the clothing of that ensouled monad with a new body. The new psychic vesture with which the monad is clothed — its metempsychosis in this case — is evolved from the monad itself. Metempsychosis is in one sense a transmigration, but transmigration is not necessarily metempsychosis; for transmigration merely means changing or passing over from one condition to another, and therefore may include metempsychosis. Metempsychosis also means that the soul "is an indivisible entity in its inmost essence, which is pursuing a course along its own particular evolutionary path as an individual monad, taking upon itself 'soul' after 'soul'; and it is the adventures which befall the soul, in its assumption of, or assuming, 'soul' after 'soul,' which in their aggregate are grouped

together under this word *Metempsychosis*.

“In ordinary language metempsychosis is supposed to be a synonym for transmigration, reincarnation, pre-existence, and palingenesis, etc., but all these words in the Esoteric Philosophy have specific meanings of their own, and should not be confused” (OG 107-8).

Metensomatosis (Greek) Putting into another body, in the sense of repetitive somatic imbodiments. It includes all forms of imbodiment and indicates, not a single process, but a succession of imbodiments in vehicles of differing kinds. Thus a monad, expressing itself in a succession of vehicles on successive planes, would be said to undergo metensomatosis, when the attention is fixed for the time being on these vehicles themselves. The term imbodiment, almost a synonym, differs from metensomatosis only in being somewhat more general, for a monad may be embodying itself in spiritual vestures, whereas the Greek word soma is used of the grossest vehicles on any plane, what in Sanskrit would be called the sthula-sarira.

Meteoric Veil or Continent Interplanetary space teems with fragmentary cosmic material of many kinds, from astral stuff to gross physical fragments, all being of the kind of which globes are built, but which has not yet for one reason or another been collected together into globes. The earth itself is magnetic, and these cosmic materials are mostly composed of magnetic metals; hence they are attracted to the earth and form a veil or continent or shell around it, at various heights above the explored regions of the atmosphere, and most numerous probably around the northern hemisphere. This veil or continent of magnetic material, consisting of astral stuff as well as of meteoric dust and stones, has immense and perhaps predominating influence on the weather; for the convection currents to which the changes in weather are usually attributed are only secondary causes, magnetism and indeed *vital* magnetism being the governing cause. This veil also interferes with, and in many ways alters, the luminous and thermal as well as other radiations from the sun and other heavenly bodies, and therefore makes unreliable attempts to calculate distances and other physical elements in accordance with the laws of radiation as they are measured on earth.

Most of the heat which the earth has, with which fact is intimately bound up what is called cold on earth, as well as most if not all of the meteoric phenomena to which the atmosphere of the earth is subject, originate in electric and electromagnetic interplay between the vital electricity and vital magnetism of the earth itself and the surrounding meteoric continent or veil. The idea of science that the earth's heat is communicated directly from the sun is mistaken, for such heat as the sun does convey to the earth — and this is the least part of the heat the earth possesses — is aroused not by direct transmission of heat from sun to earth, but springs from the forces emanating from the sun impinging, and thus arousing heat, on the surface of the earth.

Meteorites [from Greek *meteoros* above the earth, applied to celestial bodies, meteorological phenomena, and shooting stars] Masses of stone or various minerals that have fallen on earth

from interplanetary space. Planets are surrounded by veils or continents of meteoric stones and dust, and there is a continual fall of it upon the surface of planets. Some meteorites are in swarms orbiting around the sun, and are encountered by the earth periodically.

Blavatsky says that “they were used in the Mysteries for purposes to which we now apply the magnet” (IU 1:282). According to Herodotus, in Babylonia, Thebes, and Lycia, “the priestesses developed the prophetic vision in themselves by pressing one of these sacred stones against their heads and bosoms” (ibid., 331). Also *The Mahatma Letters* (p. 162) states that “all our temple knives are made of this ‘heavenly’ iron, which reaches us without having undergone any change — the magnetism of the earth keeping them in cohesion.”

Methuselah (Hebrew) *Methūshelah* A Biblical patriarch, son of Enoch and grandfather of Noah; his life-span was stated as 969 years. The patriarchs each represented a race or subrace, and the number of years, to which the necessary ciphers should be added, referred to the cycle of such a race. Each character likewise stood for a sign of the zodiac (IU 2:459-60). Further, Methuselah assisted Enoch in constructing an underground building with nine apartments, each one of which contained one of the nine names of deity — a reference to the occult or mystical language of initiation, and of the buildings constructed for its formal rites.

Metis (Greek) [cf Sanskrit *mati* counsel from *man* to think from the verbal root *mā*] Wisdom; the first spouse of Zeus, and often called the mother of Athena, goddess of wisdom. She represents divine wisdom, of which water is a symbol. For this reason many ancient cosmologies speak of the universe as springing forth from the waters of space or from the bosom of divine wisdom.

Metrology One key of the ancient symbol-language, which concealed and revealed certain aspects of the esoteric teachings. It is seen in Hebrew metrology and its connection with the numerical values of the Hebrew letters, some clues to which were discovered by Ralston Skinner, author of *The Source of Measures*. A measure, apart from number, reduces itself to a unit of measurement. It is hard to imagine how such a unit could be conceived, defined, or preserved, apart from physical objects; so that it would not be very surprising to find that such units have been preserved in ancient masonry. A number of well-defined units, generally called cubits, have thus been found.

If metrology is taken to include ratios, pi, the golden section, and other such constants may be sought among the proportions of ancient architecture. Clearly if we know the unit used, the length or other dimensions of a building will give us a number; and so those who knew the units would have the clue to the secret numbers.

Metronethah. See MATRONITHA’

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Mi-Mo

Michael (Hebrew) *Mīkhā'ēl* Who is as God; one of the seven archangels, in the Old Testament one of the chiefs of the heavenly host, regarded as the guardian angel or celestial patron of Israel. According to one legend, Michael was chief of the four or seven angels who surrounded the heavenly throne. The Roman Catholic Church regards Michael in much the same light, his festival, Michaelmas, being held on September 29. With the Gnostics, the first of the Aeons, called the savior. In the New Testament Michael leads the angelic host against the Apocalyptic Dragon, repeating the familiar tale of many ancient mythologies. Again, he is the chief opponent of Samael, the principal antagonist of the heavenly host. Originally, however, both Michael and Samael were as one, both proceeding from ruah (soul), neshamah (spirit), and nephesh (vitality) — as taught in the Qabalah (in the Chaldean *Book of Numbers*). “Samael is the concealed (occult) Wisdom, and Michael the higher *terrestrial* Wisdom, both emanating from the same source but diverging after their issue from the *mundane soul*, which on Earth is *Mahat* (intellectual understanding), or *Manas* (the seat of Intellect). They diverge, because one (Michael) is *influenced* by Neschamah, while the other (Isamael) remains *uninfluenced*. This tenet was perverted by the dogmatic spirit of the Church; which . . . made of Samael-Satan (the most wise and spiritual spirit of all) — the adversary of its anthropomorphic God and sensual physical man, the devil!” (SD 2:378).

In Ezekiel's vision of the Cherubim, or the four sacred animals, the angel with the face of the lion corresponds to Michael, as in the Ophite scheme.

Mico (Egyptian) *Mico*. Egg supported by tau cross.

Microbes. See BACTERIA

Microcosm [from Greek *mikro* little + *kosmos* world] A little world; applied to man or any other being considered as a miniature copy of the universe or macrocosm. The destiny and origin of man and the universe are said to be coeval, which is the key to understanding and the basis of practical

occultism. Man, as a microcosm, is a storehouse of universal types, not merely as a whole, all parts of his constitution included, but any part of his constitution such as his physical body is itself a microcosm. The decad is applicable in each case, as also septenary and duodenary classification.

Microprosopus (Latin) [from Greek *mikros* small + *prosopon* face] Qabbalistic rendition of the Chaldean phrase Ze‘eyr ‘Anpin (Short Face), which designates the nine smaller Sephiroth, in contradistinction from the Macroprosopus (Long Face). Microprosopus or the nine Sephiroth are the manifested universe or Third Logos unfolded in manifestation; whereas Macroprosopus (the Crown or Kether), the first and highest of the Sephiroth, is the First and Second Logoi considered as a unit, the purely spiritual universe and its roots. Hence the Microprosopus is the Logos manifested, and of such logoi there are many in boundless space. Naturally each such universe has its own Macroprosopus, Crown, or Kether, all these universes being united by their divine-spiritual roots in the Boundless.

Midgard, Midgardr (Icelandic) [from *mid* middle + *gardr* court] In Norse mythology, the central world where humanity lives. It is surrounded by the waters of space where is coiled Iormungandr, the Midgard serpent, one of Loki’s three dread offspring. It represents the equator, the plane of the ecliptic, or even the Milky Way, depending on the context. Midgards-veorr (the holy one of Midgard) is Thor, defender of the human world against the giants.

Midgard-serpent. See IORMUNGANDR

Midrash (Hebrew) *Midrāsh* [from *dārash* to search out, inquire] Any exegetical exposition, interpretation, or commentary treating of the Jewish scriptures; often used in the plural, Midrashim.

Also used for a certain body of Jewish expository literature, which is divided into two classes: Halachah, dealing with legal and ritual matters, flourishing particularly in the schools, where it often developed into casuistry; and Haggadah, writings on any other theme, generally dealing with traditions, stories, legends, allegories, and history.

Migmar (Tibetan) *mig dmar* [from *mig* eye + *dmar* red] The “red eye,” the planet Mars, whose symbol is an eye; corresponding to the Sanskrit mangala. Also Tuesday. The solar house of Mars is Aries, whose symbol is said to be written on the face in the eyebrows and nose. Mystical astrology states that there is a general correspondence among Mars, fire, and the human eye.

Mikael. See MICHAEL

Miles (Latin) Soldier; name given to the candidate who passed the third stage of initiation into the Mithraic Brotherhood.

Milky Way. See VIA STRAMINIS

Mimameid (Icelandic) [from *Mimir* a giant + *meid* tree] The Norse Tree of Knowledge, belonging to

the “wise giant” Mimir, owner of the well of wisdom from which Odin, Allfather of gods and men, daily drinks. Mimir represents basic matter from which all worlds are formed, corresponding to Mulaprakriti.

Mimameid is said to spread its branches over the land where Menglad (the goddess Freya) dwells. None may know of what root it is sprung but it “falls not for fire or iron.” In its topmost branches perches a golden bird named Wideopener, and in the Underworld a magic brew is secreted in an iron caldron secured with nine strong locks and guarded by the dread hag Sinmara.

According to the tale of Svipdag, a postulant undertaking initiatory trials, he must wrest from Sinmara the magic potion which alone can give him access to the Wideopener but, in order to get the potion he must bring her a feather from the golden bird! This impossible task illustrates how thorough a familiarity with all aspects of the Tree of Knowledge is demanded of one seeking union with his higher self, represented by Menglad, the principle of spiritual intelligence.

Mimansa (Sanskrit) *Mīmāṃsā* [from the verbal root *man* to think] Profound thought, profound consideration; one of the six Darsanas or Hindu schools of philosophy. There are two Mimansas, the older or Purva-mimansa, founded by Jaimini, and the younger or Uttara-mimansa founded by Vyasa. The older is commonly known as the Mimansa, and the younger as the Vedanta.

While the Uttara-mimansa is usually considered by European Orientalists to be the later in time, it contains the philosophic key to the entire system and in other senses may be called the theosophy of the Vedas. The word *vedanta* itself means “end of the Veda,” in the sense of being its philosophical explication or completion.

Mimir, Mimer (Icelandic, Scandinavian) In Norse mythology, the foremost of giants representing space on nine levels of existence, of which our physical space is but one — the number nine may stand for an infinite continuum rather than a precise figure.

Mimir is owner of the well of wisdom (Mimisbrunnr), of which Odin, the living deity, drinks each day (life). For this privilege he had to forfeit one eye, which is kept at the bottom of the well. Symbolically Odin (divine consciousness) enters spheres of life in space and partakes of the waters of wisdom through experience. In doing so he “raises the runes (of wisdom) with song,” i.e., with motion, life, activity. At the same time the matter-giant Mimir partakes of Allfather’s forfeit (divine vision) as he quaffs the waters.

It is possible that the lost eye of Odin has reference to humanity’s third eye which, according to theosophic tradition, retreated into the skull a long time ago, though a vestigial remnant of it remains imbedded in the brain as the pineal gland. There it awaits future use as the organ of the intuition or sixth sense, which in the far future is due to become active again.

During the war in heaven between the Aesir and the Vanir (lower and higher gods), Mimir was slain by Njord (time) and his body cast into a swamp. Of his severed head Odin made the “moon

shield” also called water divider. Odin consults Mimir’s head, gaining wisdom from it daily. In the realm of Night, Mimir judges the dead.

Mimir’s well is one of the three springs which water the Tree of Life, Yggdrasil, the other two being those of Hvergelmir and Urd. His tree, Mimameid, is the Tree of Knowledge, which spreads its branches over the heavenly abode of Menglad (Freya), the higher mind.

Mina (Sanskrit) *Mīna* Fish; the twelfth zodiacal sign, Pisces, which corresponds to the number 5, and thus also conveys the idea of the five elements — the usually accepted four plus the fifth or aether.

Mind The ancient wisdom taught that mind is one of the functions or innate attributes of the fundamental selfhood or consciousness of the monadic entity. There is the fundamental self, known from time immemorial as the atman, which in its self-unfolding or emanational activities produces the various attributes *of itself*, among which three almost indistinguishable attributes are what we call mind, intellect, and consciousness. When manifestation is ended, these various qualities are rolled back into themselves and gathered up into the fundamental monadic self, upon which the monad begins its periodic enjoyment — to use the Eastern term — of its own selfhood, unadulterate, noumenal, and unitary. Thus, in its widest sense, mind is an attribute of the spirit side of being, as contrasted with the matter side, which latter nevertheless is intrinsically unevolved or latent mind; hence we speak of cosmic mind, of which there are innumerable limited aspects in the manifested worlds.

A somewhat different definition is, “Mind is a name given to the sum of the states of Consciousness grouped under Thought, Will, and Feeling. During deep sleep, ideation ceases on the physical plane, and memory is in abeyance; thus for the time being ‘Mind is not,’ because the organ, through which the ego manifests ideation and memory on the material plane, has temporarily ceased to function. A noumenon can become a phenomenon on any plane of existence only by manifesting on that plane through an appropriate basis or vehicle; and during the long night of rest called Pralaya, when all existences are dissolved, the ‘Universal Mind’ remains as a permanent possibility of mental action, or as that abstract absolute thought, of which mind is the concrete manifestation” (SD 1:38). Here mind is consciousness in action, the phenomenon corresponding to a noumenon which, in the absence of vehicles for its expression, can only be described as mind in latency, or a possibility of mental action. The dhyani-chohans are the expressers of latent cosmic mind, who bring it into various degrees of manifestation. They are vehicles for the expression of divine thought and will, intelligent forces which give to nature its laws.

Mind-born Born of imagination and will — through kriyasakti, the power of thought and mind — not begotten or produced by any physical mode of procreation. It sometimes refers to sons of will and yoga, sons of wisdom, spiritual dhyanis, sons of the prajapatis, mind-born sons of Brahma, etc. They were the ancestors of the self-conscious human races first appearing numerous during the

fourth round, and otherwise known as solar lhas, solar spirits, angishvattas, manasaputras, dhyani-chohans. They had been self-conscious men in a former embodiment of the earth-chain, and it was their lot to awaken self-conscious mind in the mankind of this round. They entered the early third root-race and awakened the intellectual fire in them. The manasas rejected some earlier subraces as unfit vehicles for themselves, hence as refusing to “create,” i.e., emanate mind from themselves to inform these unready or unevolved human vehicles. The mind-born sons of the early third root-race were the first themselves to arouse the fire of mind in the unself-conscious human vehicles, and were the highest and therefore the least affected by such lower contact. Retaining their self-consciousness in full and therefore not falling into oblivion, these were the first founders as fully self-conscious humans of the earliest groups of god-inspired men, the forerunners of what later became the ancient Mysteries. A branch of these entities has continued from immemorial time as the Great Lodge of the Masters of Wisdom and Compassion.

In Hebrew allegory the connection among the ideas associated with Jehovah is this same archaic verity which in Hebrew Qabbalistic thought is exemplified as 'Adam Qadmon; and the word transliterated as Jehovah in a collective sense refers to the Benei 'Elohim (sons of the gods).

The universe itself is, from the viewpoint of emanational evolution, the mind-born or -produced offspring or son of universal Mother Nature or the Second or Manifest-Unmanifest Logos, whose characteristics have been looked upon by mystics as feminine — generative or productive. Virtually all peoples of antiquity trace their origin to a spiritual root, which is this Second Logos or Mother Nature manifesting through its son or the Third Logos; and various other mythoi trace their ancestry likewise to divine beings who were considered during the course of evolution at one time to have been asexual like Christian angels, and at another stage to have been bipolar in nature, or what in its physical manifestation were called hermaphrodites or androgynes.

Mind-Cure. See FAITH HEALING

Mindless In theosophy most commonly applied to entities which are not yet endowed with human self-conscious mind; applied to the first, second, and first half of the third root-races, but especially to the humanity of the early part of the third root-race, in which mindless vehicles some of the manasaputras incarnated. The term also applies to those of the third root-race who begat by miscegenation with animals the earlier simians, from which later, and from another more or less mindless miscegenation, sprang the anthropoids. It is also applied to animals in general as contrasted with human beings, because animals have not yet developed self-conscious possession of mind, but only the germs of it.

Minerva (Latin) Roman goddess of intelligence, inventiveness, arts practiced by women, and of school children, physicians, poets, etc. Her oldest sanctuaries were in Rome, and her chief festival was the Quinquatrus, celebrated on March 19. Later identified with the Greek Pallas Athena. See *also* ATHENA

Minos (Greek) King and legislator of Crete, son of Zeus and Europa, afterwards one of the judges of the shades in Hades or the Underworld. Also, a grandson of this Minos, also king of Crete figuring in the story of the Labyrinth and the Minotaur.

Miocene. See GEOLOGICAL ERAS

Mjolner. See MJOLNIR

Miracles [from Latin] Originally signifying some phenomenon in nature or human life which was considered highly noteworthy, extraordinarily remarkable, or a cause of wonderment; from this developed in Christian thought a conception regarding happenings originating in God Almighty, which were supposed to be contrary to or transcending the laws of nature. There are marvels enough in nature, and marvels that may be wrought in and upon nature by nature's laws used by the developed wisdom and will power of the initiate or adept, to correspond to most, if not all, of the most extraordinary so-called miracles of Christian theology; but all such wondrous phenomena are wrought by means of a knowledge of the laws of nature, and it is nature and its laws which are behind them all, and actually prove them as realities. To suggest that anything can be contrary to nature is an absurdity. Thus miracles actually are unusual phenomena, produced by the use of natural means.

Mirku (Chaldean) Noble crown; the savior from death of the gods, regarded as the creator of the Dark Race (Zalmat-qaqadi). The class of intelligent beings in the universe who through evolution bring about progressive unfolding growth from within outwards of all beings and entities, who thus are at one stage of their evolution the Dark Race, because sunken in matter, but are saved by the germs of intelligence expanding into cosmic realization within themselves. Hence the describing of intellect or intelligence as noble crown.

Mirror The astral light is often referred to as a mirror, as all manifestations are reflected in it. The Logos is also referred to as a mirror, reflecting divine mind, "and the Universe is the mirror of the Logos, though the latter is the *esse* of that Universe. As the *Logos* reflects *all* in the Universe of Pleroma, so man reflects in himself all that he sees and finds in *his* Universe, the Earth" (SD 2:25).

The monads are also living mirrors of the universe, every monad reflecting every other one (SD 1:623), as Leibniz taught. "The Luminous Mirror, *Aspaqularia nera*, a Kabbalistic term, means the power of foresight and farsight, prophecy such as Moses had. Ordinary mortals have only the *Aspaqularia della nera* or Non Luminous Mirror, they see only in a glass darkly: a parallel symbolism is that of the conception of the Tree of Life, and that only of the Tree of Knowledge" (TG 215).

Mishnah or **Mishneh** (Hebrew) *Mishnāh*, *Mishneh* [from *shānāh* to do something a second time, repeat] That which has been done a second time, a repetition; hence that which is handed on by repetition, oral tradition.

Specifically, a part of the Talmud, consisting of an arrangement of the extant Oral Law, divided into six Orders (sedarim) dealing with seeds, festivals, women, damages, holy things, and purifications.

Missing Link On the theory that man has been produced by evolution from the anthropoid apes, a type which shall be intermediate between the anthropoid and man. A misleading term, implying that a chain of graduated types between animals and men has been completely established except for the lack of a single link or type which, when found, will make the chain complete. The existence of such a nearly complete chain has always been largely suppositious. The Darwinian theory requires that man evolved by successive stages of continually greater refinement, from an unknown beast ancestor, then from a primitive savage and almost bestial type, up to the man of today. The numerous degrees of human refinement found living today or evidenced by their remains, do not represent a progressive, unbroken serial time scale of evolution, but merely a complicated assortment of types which in all times known to science appear to have existed contemporaneously with each other. Moreover the so-called primitive types are now recessive, and have been so for ages, being themselves to us the remote descendants of far earlier races, once civilized, but now represented merely by these degenerate remnants.

The existing anthropoid apes, however, are truly the closest of the animals or semi-animals to the human stock, actually having originated from a miscegenation by very early, quasi-mindless humans (actually undeveloped savages of those far distant times) with what then were fairly evolved simian types. Thus the present-day anthropoids are a somewhat, if slightly, advanced stock over *their* earlier forefathers who were the original anthropoids produced by the “sin” of unevolved and savage Atlantean tribes with simians. Precisely because the anthropoids have some human ancestry they will attract to incarnation in the future human egos as yet in a low state of unfolded spiritual and intellectual powers and capacities, and who will thus, as the cycles roll on, finally evolve into a low type of thinking and sensitive human being.

In theosophy evolution is unfolding or emanational development from within outwards of the incarnating monads; and the *bodies* in which these monads incarnate are the least important part of the matter. The bodies slowly follow, in improving sensitivity and relatively continuous perfection of the nervous system, including the brain and spinal cord, the unfolding impulses from within, which thus guide these bodies to greater degrees of perfection. As the egos or monads unfold from themselves the latent powers of spirit and mind, as well as of the psychological nature, the bodies feel the inner and compelling urges and impulses, and very slowly through the ages conform to become vehicles fitted to express the inner fires.

Mistletoe, Mistilteinn (Icelandic) [from *mistil* + *teinn* twig] A parasitic plant held in high esteem among the Druids and Anglo-Saxon peoples as well as the Norse. The Druids are said to have used it as a medicinal herb. In Norse mythology it is instrumental in bringing about the death of Balder

(the sun god) at the instigation of Loki, through the agency of Hoder, the blind god of darkness and ignorance.

The “death” of the sun god at the winter solstice marks the nadir of the cycle of the year before the rejuvenation of spring. One meaning of the story in the Edda is the inevitable withdrawal of the guiding gods from association with the early races of mankind, to enable humanity to become independent and to seek and find its own way back to its divine source.

Mitakshara (Sanskrit) *Mitākṣarā* Various concise commentaries, especially the celebrated commentary by Vijnanesvara on Yajnavalkya’s *Dharmasastra*.

Mithras (Greek) **Mithra**, **Mitra** (Avestan) [from Avestan *Mithra* from *mith*, *myth* light + *ra* subjective form] Ancient Persian deity; Yusti translates Mithra as the medium between the two lights: the invisible and the visible. Therefore, Mithra means the latent potential ability of understanding and the developing force in nature. It is the hidden beingness, the mysterious force of growth and the invisible light; philosophically, the latent power of cognition; astrologically, the source of the light of the heavens; and mystically, the creative force of love. Ahura-Mazda says: “I have created Mithra as worthy of sacrifice, as worthy of glorification, as I, Ahura-Mazda, am myself.” In late Persian times he became the god of the sun and of truth and faith. He punishes the Mithra-druj (he who lies to Mithra). He is represented as a judge in hell, in company with Rashnu (the true one, the god of truth) — who is an aspect of Mithra in his moral character. The Sanskrit Mitra in the Vedas is the god of light and friendship.

As known to the Greeks and Romans, Mithras was the god of the sun, of purity, moral goodness, and knowledge, whose worship spread over the Roman world, especially during the 2nd and 3rd centuries.

Mithraism The worship of Mithras, a remarkable and highly mystical religion which existed long before Zoroaster as the Society of the Magi (the Great Brotherhood of Man) giving its secret teachings to qualified candidates, the future initiates. Although supposedly a worship of the sun, originating in Persia, Mithraism was “really a religious philosophy based upon the Divine, Inner, and Invisible Sun, a vortex so to say of the Divine Spiritual Fire of the Universe, of the Heart of Things” (ET 609 3rd & rev ed). Mithraism spread throughout the Greco-Roman world, especially during the 2nd and 3rd centuries and for a time threatened to supersede Christianity. A number of the liturgical rites and ceremonies of Christianity are probably of Mithraic origin. For example, rites associated with Deo Soli Invicto Mithrae (to the Unconquered God-sun, Mithras), were held at the time of the winter solstice, especially the Night of Light — now Christmas — known as the birthday of Mithras, represented as having been born in a cave or grotto, hence often called the rock-born god. Exceedingly popular in the Roman armies as well as with the rulers of the Roman Empire, Mithraism was regularly established by Trajan about 100 AD in the Empire, and the Emperor Commodus was himself initiated into its mysteries. Sacred caves or grottoes were the

principal places of worship, where the Mysteries for which Mithraism was famed were enacted.

The candidate for initiation into the Mithraic Mysteries had to undergo twelve “tortures” or labors, but the enumeration of the twelve or seven degrees is varied. One consisting of twelve grades is as follows: the candidate first underwent a long probation, with scourging, fasting, and ordeal of water, whereupon he became a soldier of Mithras. Before the soul of the initiate could leave the terrestrial region, it had to pass through the zodiacal grades of the Bull and the Lion, each involving further probation. Then it ascended through the region of the aether by means of the grades of the Vulture, the Ostrich, and the Crow. The soul then strove to pass into the realm of pure fire, through the stages of the Gryphon, the Perses, and the Sun. Finally the soul attained complete union with the divine nature through the grades of Father Eagle, Father Falcon, and Father of Fathers.

One of the principal tenets of Mithraism was that a struggle between good and evil is continually going on in the world, and that this dualistic interworking and intermingling of cosmic and terrestrial forces is also occurring within every man and woman; each one has the power to aid in this conflict so that the good shall ultimately triumph. This is achieved by means of self-sacrifice and probation, and Mithras is ever ready to make the mystic sacrifice whereby the good may triumph. “The Persian Mithra, he who drove out of heaven Ahriman, is a kind of Messiah who is expected to return as the judge of men, and is a *sin-bearing* god who atones for the iniquities of mankind. As such, however, he is directly connected with the highest Occultism, the tenets of which were expounded during the Mithraic Mysteries which thus bore his name” (TG 216). Origen refers to the Mithraic teaching of the seven heavens, each of which was ascended by means of a ladder — representing the different stages or planes of the heavens — over which ruled the highest or most spiritual realm of nature. Celsus mentions their teaching concerning the seven sacred planets.

Especially associated with Mithraism is a representation of Mithra as a handsome youth in Oriental garments, kneeling on a bull which is thrown to the ground, the youth being about to cut the throat of the bull with his dagger. The bull is at the same time attacked by a dog, a serpent, and a scorpion, followed by two birds. Here the bull is an emblem of strength and of creative or generative power; Mithra is the spiritual man or sun killing or subduing his animal passions. This ritualistic representation later became so anthropomorphic that it aroused Zoroaster to bring about certain reforms and replace Mithra with Ahura-Mazda, an abstract concept.

Mithuna (Sanskrit) *Mithuna* A couple; the third zodiacal sign, Gemini or the Twins; intended to represent the first androgyny, or the androgynous portion of third root-race humanity.

Mitra (Sanskrit) *Mitra* Friend; a Vedic deity of light and friendship associated with Varuna; also a name of the sun or a form of the sun; likewise an aditya.

Mizraim (Hebrew) *Mitsrayim* The Biblical name for Egypt, the word being in the dual signifying

the two Egypts.

Mjólnir (Icelandic) [from *mjoll* meal, flour from *mala, mola* to grind, crush, mill] Also Miolnir. The hammer of Thor, the Thunderer in Norse mythology, a gift to the god from the dwarfs Brock (mineral kingdom) and Sindri (vegetation), sons of Ivaldi, the lunar life cycle. It is at once the instrument of creation and destruction, being the emblem of marriage on one hand and the weapon whereby the giants (cycles of material life) are destroyed. It is the magic mill which creates all things — gold, salt, happiness, peace, etc. — as well as grinding up all substance and recycling it for future use in worlds to come. Blavatsky likens the hammer of Thor to the fire weapon *agneyastra* of the Hindu Puranas and Mahabharata (TG 215).

Mjotudr (Icelandic) [from *mjot* measure + *udr* out of, exhausting] In Norse mythology, the dying phase of a Tree of Life, the second half of its existence when the energies are retreating from the material back toward the spiritual realm. Applies to any world tree, large or small. *See also* MJOTVIDR

Mjotvidr (Icelandic) [from *mjot* measure + *vidr* growing, expanding] In Norse myths, the first half of a life cycle of any Tree of Life, during which the energies are flowing into the material worlds and organizing forms for its component consciousnesses. *See also* MJOTUDR

Mlecchas. *See* MLECHCHHAS

Mlechchhas (Sanskrit) *Mleccha-s* [from the verbal root *mlech* to speak indistinctly; cf Greek *barbaroi*] Outcastes; Hindu name for all foreigners or non-Aryans.

Mnevis (Greek) **Ur-mer** (Egyptian) *Ur-mer*. The sacred bull of Heliopolis, described as the life of Ra, and connected with the sun. A bull with the disk of the sun and uraeus placed between his horns. Like Apis at Memphis, Mnevis was consecrated to Osiris — although the former was associated with the moon. The solar Mnevis, however, was often called the sun of Ptah whose animal symbol was a black bull. Thus Mnevis represents the “black,” i.e., the abstract, occult, or hid cosmic power guided by cosmic wisdom or Ptah, and therefore comprehending in its thought the inclusive secret and hid cosmic powers, behind and working through the visible universe; while Apis represents the detailed manifested ray working in and through the world of matter of which the moon stands as a type, although more or less filled with Osirian or spiritual powers.

Mobed (Persian) **Magupat** (Pahlavi) [from *mogh, magus* great] Also Maubed. The chief priest; the priest of Mazdeism and of the present-day Parsis. Mobeds are the middle class of priests, the highest class being the Dasturs. In ancient days the Maubedan Maubed was the chief high priest of Mazdeism, and today the chief high priest of the Parsis is also termed the High Mobed.

The priestly caste was hereditary; and a legend in the *Bundahis* tells of the Mobeds originating from King Minochir — similarly the Brahmins attribute their origin to Brahma.

Mode (Icelandic) [from *mod*; cf English *mood*, German *Muth* wrath] Thor, Norse god of thunder and lightning, in his capacity as electromagnetism in the infinite reaches of space, has two sons: Mode and Magne. Both mean power, though Mode has the connotation of anger, suggesting a repelling force, whereas Magne connotes power that is granted one. These two sons of Thor may represent attraction and repulsion, or gravitation and radiation on the cosmic level.

Moha (Sanskrit) *Moha* Bewilderment, perplexity, folly, delusion, error. In philosophy, delusion of mind, preventing the discernment of truth and leading to the belief in the reality of unreal worldly objects; closely similar to *maya*, but with an emphasis placed on the activity of the deceiving mind.

With Buddhists, ignorance, one of the three roots of vice. In the *Vishnu-Purana*, infatuation personified as the offspring of Brahma.

Moirai (Greek) Plural *morai* or *morae*. One's allotted share; destiny. As a proper name, there was originally only one Moira, but later there were three: Lachesis, Clotho, and Atropos. Lachesis is from a root *lach*, as in *lagchano* "to obtain that which has already been determined or fixed"; she is depicted as a grave maiden holding a staff pointing to a horoscope, signifying that which man has built in the past is now unfolding. She was occultly connected with the earth. Clotho or Klotho is from a verb meaning "to spin," and is represented as a woman holding a spindle, spinning thread which is man's destiny, that which he is at present weaving for the future, and is connected with the future in that what we weave now determines what our future shall be. Thus it is linked with the psychological part of human nature, and connected occultly with the moon. Atropos is from a verb meaning "impossible to set aside or evade," and therefore is translated as "inevitable, ineluctable." It was often represented as a woman pointing to a sundial signifying that as the sun brings its light to the earth, so the future shall bring its destiny to man, as the flying hours unfold what comes to us out of the womb of time. Thus we have Lachesis representing the ineluctable destiny coming to us in our present life on earth from our past; Clotho, the present spinning of our future destiny because of the actions and reactions, mental and emotional, by which we are now weaving the web of fate which someday will become the present; and Atropos, the ineluctable and inescapable future represented as held in store, every thread of which has been woven by ourselves in past and present. Their respective functions are sometimes interchanged. Equivalent to the Latin *Parcae* and *Fata*, and the Scandinavian *Norns*.

It is only in this world that the action of fate seems extraneous to human will, for in reality we are the weaver of our own fates. The *Morai* are karmic agents or forces rather than karma, which is fundamentally the law governing universal equilibrium. In its essence the constant working of cosmic harmony, karma must of necessity manifest itself in multimirriad forms and manners — in and through multimirriad agents or forces. Karma being essentially the law of cosmic unity and concord, it is only the individuals which disturb this universal equilibrium who can feel the reaction therefrom, whether in one life or in a later one; but the karmic effects are by no means

always identic with the originating causative action of the individual, because of the karmic agents of many kinds through which karma works. Thus, the gods, all human beings, the earth itself, and all its component forces and substances are karmic agents constantly interacting upon each other; so that while abstractly the action of karma is infallible and infinitely unerring and cannot ever be escaped or set aside, its reactions upon the individual who broke its laws may take place in diverse ways and usually through agents or instruments, since karma is no individual or cosmic god.

In the *Pistis Sophia*, Moira is enumerated as one of the principles of man, and called by Blavatsky the karmic ego (SD 2:605).

Moksha (Sanskrit) *Mokṣa* [from *mokṣ* to release, set free probably from the verbal root *much*] Freedom; freedom from sentient life for the remainder of a manvantara. Equivalent to nirvana, the absolute, mukti [from the verbal root *much*], the Palace of Love of the *Zohar*, the Gnostic Pleroma of Eternal Light, the Chinese nippang, and the Burmese neibban. “When a spirit, a monad, or a spiritual radical, has so grown in manifestation that it has first become a man, and is set free interiorly, inwardly, and from a man has become a planetary spirit or dhyān-chohan or lord of meditation, and has gone still higher to become *interiorly* a brahman, and from a brahman the Parabrahman for its hierarchy, then it is absolutely perfected, free, released: perfected for that great period of time which to us seems almost an eternity, so long is it, virtually incomputable by the human intellect. This is the Absolute: limited in comparison with things still more immense, still more sublime; but so far as we can think of it, ‘released’ or ‘freed’ from the chains or bonds of material existence” (Fund 183).

One thus released or freed is called a jivanmukta (freed monad), which is never again during that manvantara subject to the qualities of either matter or karma. But if these beings choose, for the sake of doing good in the world, they may incarnate on earth as nirmanakayas. *See also* ABSOLUTE

Moloch (Hebrew) *Molekh* Royal, king — another form of the more usual *melekh*; an idol of the Moabites and the Ammonites, also called Milcom, to which Jews after the time of Solomon are said to have sacrificed infants. Some scholars suggest that the Hebrews looked upon Moloch as the title of Yahweh or Yihweh (Jehovah). Even when occurring in the Bible the rendering is “the Molech,” and the idea is that of dedication — “to make one’s son or daughter pass through fire to (the) Molech” (2 King 23:10); and Jeremiah seems to indicate that immolation was practiced. Nothing of such a practice has been discovered in the ancient Assyrian or Babylonian empires, but ancient Greek writers have suggested that the Phoenicians had such a custom. Diodorus (19:14) mentions a Carthaginian idol made of brass into which children were placed, and compares it to the child-eating Kronos. Blavatsky suggests that the Moloch of the Ammonites was the King of the Hosts of Heaven, the sun (SD 1:397); and there was undoubtedly some such connection, yet antiquity has identified Kronos with the planet Saturn, which was held in reverence by all the ancient Shemitic peoples, the Jews included.

Moment of Choice The turning point in evolution, when the temporary balance between spirit and matter, or between upward and downward movements, has been reached. The evolving entity can then no longer remain neutral and undecided, but must choose definitely whether to continue upward or to enter upon a downward path. When the movement towards pralaya prevails, all the classes of evolving beings gravitate to their appropriate sphere: spirit to spirit, matter to matter, manas to mahat. But this dividing of the ways occurs for self-conscious entities at every step of the path, so that in this sense the moment of choice is continuous. Although this moment of choice is continuous for the individual, yet a point occurs in human evolution when the decision must definitely be made to follow the upward path or to follow the matter side of evolution. There is also the choice that must be made when the individual has reached the peak of human evolution on this globe, when the decision is finally to be made whether he will follow the path of the Buddhas of Compassion, or pursue the way of self and become a Pratyeka Buddha.

The human kingdom's moment of choice is that point in the evolutionary cycle reached on this globe in the fifth round when the monads not ready to continue their upward evolutionary journey must perforce wait for a future manvantara. The evolutionary moment of choice for the animal kingdom was that point in the cycle when the door to the human kingdom was closed, after which no monads can enter the human life-wave until the next manvantara. This occurred at the midpoint of the fourth round on globe D of the earth-chain, during the fourth root-race.

Monad, Monas [from Greek *monas* a unit, individual, atom] A unit, a one; something nondivisible and which is therefore conceived of as real, in contradistinction to compound things which (as compounds) are not real.

In the Pythagorean system the Duad emanates from the higher and solitary Monas, which is thus the First Cause or First Logos, the Duad being the Second Cause or Logos; and from the second emanates the third stage of individuality, the Triad, Third Cause or Logos. In the human constitution the Monas signifies atman, the Duad buddhi, and the Triad signifies manas.

The term monad was adopted from Greek philosophy by Bruno, Leibniz, and others. According to Leibniz there can be but one ultimate cosmic reality or monad, the universe; but he recognizes an innumerable multiplicity of monads which pervade the universe, copies or reflections of the universal monad regarded as real except in their relation to the universal monad. He divides his derivative monads into three classes: rational souls; sentient but irrational monads; and material monads, or organic and inorganic bodies. As regards the material monads, while recognizing that corporeal matter is compound, and the attributes by which we perceive it unreal, unlike Berkeley, he does not deny its existence but regards it essentially as monadic. Thus his universe is an aggregate of individuals. The relations of these individuals to each other and to the universal is a supreme harmony, implying both individuality and coordination, thus reconciling the antinomy of bonds of law and freedom. The interrelations of various groups of monads is as a series of

hierarchies. Theosophical usage is largely the same as that of Leibniz, as the focus or heart in any individual being, of all its divine, spiritual, and intellectual powers and attributes — the immortal part of its being. In *The Secret Doctrine* we find a triadic union of gods-monads-atoms, related to each other as spirit-soul-body (or more accurately spirit, spirit-soul, and spirit-soul-body). Monads and atoms are related to each other as the energetic and the material side of manifestation, the atoms being the reflections, veils, or projections of and from the monads themselves.

Monads are the ultimate elements of the universe, spiritual-substantial entities, self-motivated, self-impelled, self-conscious, in infinitely varying degrees. They engender other monads, which in turn engender others, and thus springs up the host of living entities forming the immense variety and unity of the manifested world. As any monad descends into matter, it secretes from itself various veils or vehicles adapted for its self-expression on the various cosmic planes. Thus in man there is the divine monad, the spiritual monad, the higher human or chain monad, the lower human or globe monad, the animal monad, and the astral-physical monad. The following diagram shows the relations between the cosmic principles; the monads, egos and souls in the human being; and the human principles

The monad, as its name implies, is ever-enduring as an individual, although at the end of each

manvantara it rises into a still higher or divine stage of perfect union with the boundless divine, only to re-issue forth again in due course as the monad it was before, thus beginning a new, immensely long time period of active individualized life as a spiritual consciousness-center. Thus it is that even the monads evolve, each on its own plane, for the hierarchies of the monads are innumerable and exist in all-various degrees at stages of evolutionary progression on the endless ladder of cosmic life.

Monadical Envelope. See AURIC EGG

Monadical Ray The monad, that divine-spiritual-intellectual seed or originant of each evolving being, does not itself descend into the planes of matter, but shoots forth from itself a multitude of rays. Each such ray forms the essential nature of the complex evolving being to which it pertains, and hence the monad is the primal or ultimate source of all that being's life and characteristic attributes, the immortal part of the being, whether that being be human, animal, vegetable, mineral, or what not. In man it is his essential self; it persists throughout all the evolutionary transformations in the life cycle and gathers around itself the life-atoms at each new incarnation of the reincarnating ego.

Thus the monad in any person is his inner god, the celestial buddha of his own septenary constitution, or again his individual Immanent Christ.

The rays from the person's individual monad which form the complex essential nature of his being, are the sources of the different centers in the human constitution, and in themselves are children monads, as it were, from their common source.

Monas. See MONAD

Monas Monadum In Leibniz' system of monads, the supreme monad, which is infinite and upon which there depend three classes of finite monads. This supreme monad held the place of God, an infinite perfect spirit, a Person of absolute power, wisdom, and goodness. In this case, the supreme monad is cosmically more than a person — for etymologically person means a mask or vehicle through and from which issue the attributes and powers of something incomparably higher than itself. Equivalent to the summit of the human hierarchy.

Monera, Moneron [from Greek *moneres* single] Coined by Haeckel for a group of unicellular organisms, without nucleus and multiplying by fission. Supposed to be neither animal nor vegetable but the root of both, the point at which "organic" life first appears from the minerals. Some of Haeckel's elementary organisms have since proved to be merely chemical.

Often used in the *SD* to denote a primordial particle of organic life, just as atom and molecule may be used for inorganic matter. Organic or inorganic do not signify living or nonliving, but merely entities or particles without organs even of the most primitive type. All matter, whether organized or in its so-called inorganic forms, is filled with life or vitality, each entity possessing life of its own

type and therefore being as fully vitalized in its own sphere as are the most highly organized entities.

Monism A philosophy which derives all phenomena from a single origin: thus, making mind the result of matter; matter the result of mind; or again, mind and matter the result of some unitary essence prior to both. Far from being incompatible with dualism, monism is logically interdependent with it. Duality prevails everywhere, and everywhere dualities can be referred back to unities. The triad is the true number of manifestation and the key to the dispute between monists and dualists. *See also* DUALISM

Monkey Any simian, but often restricted to the smaller, long-tailed simians, in contradistinction to apes. These monkeys according to occult history are descended from the offspring of unawakened human beings of the third root-race, who united with certain animals. The larger anthropoid simians or apes were produced later by renewed intercourse between undeveloped Atlanteans and the then existing part-human, part-animal descendants of the creatures just described. Thus, in theosophical writings, a distinction is drawn between simians or true monkeys, and the anthropoids or true apes.

The earliest race of human beings on this earth, of the third root-race, presented an appearance which today would be called to a certain extent monkey-like, but not because they were monkeys or descended from simians, but because that was the appearance presented by early human bodies. The apes and monkeys being descended at different times from the human race as one side of their ancestry, naturally show somewhat of the physical characteristics of these early human parents of their own stock on one side. *See also* ANTHROPOIDS

Monkey God. *See* HANUMAN

Monogenes (Greek) Begotten alone; of the same parentage. Plutarch defines it as “only begetting,” in reference to the meaning of Persephone in the Mysteries. It is the reappearance of a monad after its period of cosmic repose and nirvanic absence from the plane of cosmic manifestation.

The common Christian significance of only begotten should be distinguished from the original Greek significance of “brought forth alone.” Monogenes has direct reference to the reappearance or reissuing forth of the monad from the bosom of the Boundless, the reappearing monad thus being envisaged as a spiritual individual appearing as such unity or individual “alone”; and because such reappearance is on a high spiritual plane, the term later became wrongly restricted only to the rebirth of the Logos, which is only one of its meanings, as the term applies equally well to the reissuing forth of any one of the hosts of monads on its own plane.

Monogenesis [from Greek *monos* single + *genesis* origin] The theory that all forms of life were developed from a single cell, or that all humanity is sprung from a single primitive stock or root; opposed to polygenesis. Monogenesis may also mean that any living stock of beings, such as the

human, sprang from a single pair formerly living on some one part on the earth's surface. Modern scientific theories of polygenesis are a far closer approximation to the theosophic view, which states that the earliest or primordial forms of the human stock on earth sprang more or less contemporaneously from seven different roots (imbodied groups of lunar monads) living more or less together in the regions surrounding what is now the north pole, which then enjoyed a tropic or semi-tropic climate. It was from the dispersion of these seven different root-stocks that later sprang the various human races known in legend, story, and history. In a cosmic sense it is possible to trace back all living forms to the original cosmic monad from which, as from a cosmic fountain, flowed forth into later manifestation the infinitely varied phenomena of the solar system. However, even this quasi-mongenetic origin of a solar system was brought about by polygenetic seeds of life cooperating to produce it.

Monotheism Belief in a single or supreme god; opposed to polytheism and pantheism, although all polytheistic forms of thought recognize a supreme divinity, of which all others were children or offspring; and pantheism itself, when properly understood, likewise includes all forms or varieties of polytheistic belief. The Hebrews are a notable example of a people following a very definite monotheism in their religious beliefs; subsequent to this were the systems of Christianity and Islam. If deity be regarded as periodic cosmic mind or intelligence incessantly evolving through its emanated hierarchies — the structure inner and outer of the universe — which is the abode of such divinity, governed in its operations by its own spirit-wisdom, far transcending the remotest shadow of the limitations we call personality, then in this sense theosophists might be called pantheists, polytheists, and even monotheists, all in one. But where deity is by human imagination endowed with human attributes, however sublimated, and with human limitations of personality, an unphilosophical, impossible, and unnatural monotheism results. Such a god — being the offspring of human imagination, a creature of human fancy — cannot be universal, and must submit to rivalry with the humanly imagined gods of other religions.

Moon The earth's relatively little satellite is but a partial representative of the aggregate of occult influences or powers, of polar character, known among the ancients combinedly as Lunus-Luna, and its effect upon the earth includes much that is baneful as well as much that has been necessary in evolutionary development; but the moon is only a withered, decaying unit of a whole lunar planetary chain. The statement that sun and moon have existed through aeonic time periods, refers not to our decaying physical satellite which is but the dead body of now departed vital, spiritual, and intellectual essences, but to these essences themselves.

The moon that we see is the kama-rupa of one of the lunar chain's seven or twelve globes, each one having its own kama-rupa, since the entire chain of globes is dead. The material of our kama-rupic moon, however, is on the same prakritic plane as that on which our senses operate, so that it is visible and appears to be the original physical body of the moon. Besides transmitting to us certain influences from the sun, the moon also absorbs from and sends back influences to the

earth. Hence its effects upon gestation, physiological and mental cycles, the growth of vegetation, the periodic habits of many animals, and various other natural phenomena.

In theogonies, the moon is associated with the manifestation of the so-called feminine principle in universal nature on our cosmic plane, with especial relation to our earth; hence the moon is a minor form of the Great Mother, known by many names in various theogonies, and when applied to the moon in Mediterranean thought often called by the names Diana, Juna, Isis, and the like. Moon is spoken of as a triple deity, Diana-Hecate-Luna — Luna in occult corporeal influences as a dead planet, Diana in connection with its solar relations, and as Hecate manifesting occult lunar influences in the Underworld — these again often named Diva triformis, tergemina, triceps. Some cultures, such as the Hindu and Scandinavian, portray the lunar deity as masculine. All lunar deities have a twofold aspect, supernal and infernal, spiritual and material; and the astronomical moon has its light and dark phases, while the lunar crescent has its horns, which may point up or down, making the symbols of the dragon's head and tail, which stand for the north and south nodes of the lunar orbit.

The moon is the giver of one form of life, as well as of lower forms of mind, to our earth and its inhabitants; while the sun is the giver of life in general to the planetary system, as well as of the higher forms or aspects of mind. Remembering the extremely occult character of both moon and sun, when they are spoken of as givers this in no sense implies that they *give* to those who have it not, but rather give in the sense of being transmitters, nurses of, and producers of what already exists in those to whom the gifts are thus given. Thus a father or mother may be said to be the giver of life to the children, although the children themselves are in and from themselves a vital fountain: giving here means transmitting, fostering, producing, but not creating and donating.

The sun, moon, and cross in some ancient mystical thought form a symbolic triad, closely connected with the other triads of spirit, soul, and body or of Father-Mother-Son. Lunar worship is often compared unfavorably with solar worship as referring to the material side of nature. Jehovah, for instance, is disparagingly spoken of as a lunar god. Terms such as lunar magic or the lunar path refer to other extremely important natural facts, connected with the moon in its lower occult aspect as the orb of night, of death as well as of lunar life, etc.; further, these terms are always mentioned in connection with psychic rather than spiritual powers. *See also* LUNAR CHAIN

Moon-colored Races Four principal racial colors are enumerated in the Stanzas of Dzyan: moon-colored (yellow-white), yellow like gold, red, and brown or black. The subraces of the fourth root-race had these colors in serial order, and every root-race repeats the sequence in its own time period. In one allegory, Siva as Svetalohita, a root-kumara, goes through these (and other unmentioned) transformations of color. The moon-colored race disappeared entirely when the present fifth root-race appeared.

Moon Gods. *See* LUNAR GODS

Morality, Morals. *See* ETHICS

Moriah (Hebrew) *Moriyyāh* In the Bible, the Mount in Jerusalem on which Solomon built the temple (2 Chron 3:1).

Morning Star Astronomically, any star which rises after midnight, although referring particularly to Jupiter and especially Venus as the herald of the morning sun. Occasionally used in theosophical literature as bearing upon the duality in nature, when associated with the evening star, with especial application to higher and lower human nature. *See also* LUCIFER

Mosaic Books. *See* PENTATEUCH

Mot (Phoenician) Also Mut. Equivalent to Ilus, original cosmic substance or stuff which, according to the cosmogony of Sanchoniathon, was produced by the embrace of Chaos and Wind, a name for cosmic spirit as the Greek pneuma or Latin spiritus means both spirit and wind. Out of Mot proceeded the monads of the hierarchies of universal manifestation, and consequently the emanation of the universe. Like the Sanskrit mahat, it alludes to the cosmic womb out of which emanated the universe.

Mother-Father. *See* LOGOS; SVABHAVAT

Mother Nature The productive and generative powers of cosmic spirit, considered from the human standpoint as a feminine agent in universal nature, and hence often called the Great Mother, the Immaculate Virgin, space, the cosmic deep, mula-maya or root-maya, etc. The first stage of manifestation is the representation of the plain or empty disk, cosmic infinitude; the second stage is the First Logos or the disk with the central point; and the third stage, to which Mother Nature refers, is the disk with the horizontal diameter, or the Second or Manifest-Unmanifest Logos.

Mother Space, Mother Water Names for Deva-matri, the cosmic matrix, Aditi, the Boundless, the Great Sea, the watery or feminine principle as contrasted with the fiery or masculine.

Motion The essential characteristic of abstract motion, whether in space, time, or consciousness, commonly manifesting as change. Absolute abstract motion is one of two aspects under which is symbolized Be-ness, the other being abstract space, yet these are and must be one in essence; it is also called the Great Breath. On the planes of manifestation, motion prevails as the positive pole, equivalent to jivatman, spirit, etc., according to which plane is meant. Consciousness and thought are manifestations of motion in the guise of active intelligence, and are necessarily connected with their appropriate forms of prakriti or mulaprakriti. The beginning of differentiation is spoken of as the beginning of change. Life manifests as motion, and its passing from plane to plane produces what is called birth and death. Absolute motion and what humans call absolute rest — really but another form of incessant motion — converge into one. The tendency of cosmic motion is ever toward the spiral; in kinematics, simple harmonic motion generates ellipses, of which the straight

line and the circle are limiting cases.

Nineteenth-century science postulated matter and motion as two bases on which to build, but the attempt to define the nature or cause of motion within the limits of the science thus set up was futile. Motion was defined as an effect of force, force being itself expressed in terms of motion. To reach the cause of physical motion we must go outside of physics and refer it to spirit or some ultraphysical agency.

Motto of the Theosophical Society. Satyan nasti paro dharmah, usually translated: “There is no religion higher than truth” — adopted from the motto of the Maharaja of Benares.

Mount Atlas, Meru, Sinai, etc. *See* ATLAS, SINAI, MERU, ETC.

Mountains, Mundane or Holy Mountains in a generic sense mean high places, whether in the physical world, the kosmos, or in man; the meeting place of immortals and mortals, the former descending, the latter ascending. Moses went up Sinai to confer with Jehovah; on Parnassus, the home of Apollo and the Muses, the rites of Bacchus were celebrated. Olympus or Meru, Atlas or Sinai, may be actual mountains, but also signify much more. Sacred mountains are found in ancient cultures, for when there was less of artificial separation between the celestial and the material, between sacred and secular, the kinship between what is above and what is below was more than a mere analogy: it was a unity.

Many of the great mystical religions refer to mundane mountains or world-mountains, whether of cosmic or terrestrial character. These myths are always extremely recondite because connected with the spiritual and psychological forces continuously at work in the solar system. They are bound up with the teachings of the other globes of the earth planetary chain, and with the relations of such globes to the solar system. Also they refer to the north pole of the earth which was the situation of the first continent on our globe when manifestation began in the fourth round. This continent, the Sacred Imperishable Land, was likewise the seat of the first race of beings who through evolution became the human and superior races. It has been called sacred and imperishable because as a land mass or massif it endures from the beginning of the fourth round to its end, without finding a final watery grave as do succeeding continental massifs. The polar land does not remain unchanged, as there is constant change through the ages involving minor subsidences and elevations and inroads of the arctic seas into the land masses, so that there is a constant shifting in topographical outline. The meaning is that as a land mass, whatever its minor changes, it remains throughout the entire globe-manvantara.

Whereas temples or fanes of initiation were found among all peoples, as much on the plains as in the mountains, it was almost invariably the custom for centers of occult training, especially the higher branches, to be found on the lofty plateaus of mountain chains, and not solely because of the need of separation from the hurly-burly of human life as found in populated districts and their cities. An important reason why mountains or secluded spots are invariably chosen for secret

training centers is that the currents and waves of the astral light become quieter and more peaceful the higher one ascends above the surface of the earth.

Mout, Mouth. *See* MUT

Moyst Principle In the Egyptian Hermetic book, the Divine Pymander, the Moist Principle is the great deep; in ancient literature often spoken of as the waters of space, the Great Mother, or essential Mother Nature, or again considered as a more developed manifestation of Father-Mother, the Second Logos, the latter producing the first actual spatial differentiation in the cosmos manifesting itself. In medieval European alchemy Mercury is the radical moist, primitive or elementary water, containing the seed of the universe, fecundated by the solar fires. In this system the symbol of Mercury is a cross, combining the horizontal and vertical lines.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Mp-Mz

Mritanda. See MARTANDA

Mu (Senzar) Destruction of temptation; a portion of the mystic word in Northern Buddhism (TG 217).

Mudra (Sanskrit) *Mudrā* A symbol of power over invisible evil influences, whether as a simple posture or a posture considered as a talisman. Applied to certain positions of the fingers practiced in devotion, meditation, or exoteric religious worship, thought by some to imitate ancient Sanskrit characters, and therefore to have magic efficacy and to have a particular esoteric significance. Used both in the Northern Buddhist Yogacharya school and by the Hindu Tantrikas, with both symbolic and practical meanings.

Mukhya (Sanskrit) *Mukhya* As an adjective, first or primary. In the Puranas, seven creations of Brahma are enumerated, the fourth being called Mukhya, or the fundamental formation, production, or emanation of perceptible beings and things — the evolution or emanation of the mineral and vegetable kingdoms. This creation is called primary (mukhya), and not secondary, because it relates to the primordial cosmic emanative activities. As such, although the fourth in certain enumerations, it is considered the first as productive of the rupa worlds below. The powers, prakritis, and vikaras beginning with these rupa worlds are alluded to as the secondary emanation.

Mukta (Sanskrit) *Mukta* [from the verbal root *muc* to set free, release] Freed; one who is liberated from sentient life, freed from matter and karma connected with the earthly plane; one who already has entered into the state of moksha, being thus a candidate for future freedom from flesh and matter, or life on this earth. See also JIVANMUKTA

Mukti. See MOKSHA

Mulaprakriti (Sanskrit) *Mūlaprakṛti* [from *mūla* root + *prakṛti* nature] Root-nature; undifferentiated cosmic substance in its highest form, the abstract substance or essence of what later through various differentiations become the prakritis, the various forms of matter, concrete or sublimate. It is precosmic root-substance, the root-principle of the world stuff and all in the world; that aspect of parabrahman or space which underlies all the ethereally or materially objective planes or space of universal nature. It is again unmanifested primordial stuff or substance, divine-spiritual, undifferentiated, and therefore indestructible, eternal, parentless, and abstractly the Mother — space itself, and the vehicle, lining, or alter ego of parabrahman. It is “the noumenon of undifferentiated Cosmic Matter. It is not matter as we know it, but the spiritual essence of matter, and is co-eternal and even one with Space in its abstract sense. Root-nature is also the source of the subtile invisible properties in visible matter. It is the Soul, so to say, of the one infinite Spirit. The Hindus call it Mulaprakriti, and say that it is the primordial substance, which is the basis of the Upadhi or vehicle of every phenomenon, whether physical, mental or psychic. It is the source from which Akasa radiates” (SD 1:35).

Mulaprakriti along with parabrahman are the two aspects of the one universal principle which is unconditioned to any human conception, and similarly eternal. Parabrahman is unconditioned and undifferentiated reality, and mulaprakriti is its veil or inseparable vehicle. To the First Logos or cosmic ego emerging in parabrahman, “once this ego starts into existence as a conscious being having objective consciousness of its own, we shall have to see what the result of this objective consciousness will be with reference to the one absolute and unconditioned existence from which its starts into manifested existence. From its objective standpoint, *Parabrahmam* appears to it as *Mulaprakriti*. . . . *Parabrahmam* by itself cannot be seen as it is. It is seen by the *Logos* with a veil thrown over it, and that veil is the mighty expanse of cosmic matter” (N on BG 20-1). Mulaprakriti stands in the same relation to parabrahman as the Qabbalistic Life of Space does to 'Eyn Soph; similarly on lower planes, it is what pradhana is to Brahman, or what prakriti is to Brahma.

Muluk-taooos, Muluk-taus (Arabic, Yezidi) The lord peacock; symbol of the principal deity worshiped by the Yezidis, who is regarded as accomplishing the work of creation under the command of the supreme Deity. Although looked upon as a fallen angel and the source of all evil, he is not named the Devil, but is the emblem of intellectual pride on the one hand, and of hundred-eyed cosmic intelligence or intellect on the other: referring to the equivalent Persian legend of the creation of the peacock by the Evil One. The hundred-eyed peacock, however, may also stand for initiation, wisdom, the bird of the gods and goddesses connected with secret learning (SD 2:514; TG 218).

The Shemitic Muluk is identical with the Hebrew melech (ruler or lord); also the Hebrew mal'ach (messenger, angel).

Mummy [from Persian *mumiai* pitch, asphalt] The custom of preserving the dead by an elaborate

process of embalming, with attendant rites, practiced by the Egyptians and other ancient peoples such as the Incas in Peru.

Theosophical literature attributes the origin of this practice to the Atlanteans, the intent being to prevent the life-atoms which compose the human physical body from transmigrating through the lower kingdoms. The attempt, however, was unsuccessful, because a life-atom itself is the ensouling essence of an atom, which is destroyed neither by earth, air, water, nor fire, and pursues its own pathways both during human life and after death.

Mumukshutva (Sanskrit) *Mumukṣutva* [from the verbal root *muc*, *mokṣ* to free] To wish to be free; desire for liberation and final emancipation from the worlds of differentiation or manifestation.

Mundaka Upanishad or **Mundakopanisad** (Sanskrit) *Muṇḍakopaniṣad* [from *muṇḍa* shorn + *upaniṣad*] An Upanishad of the *Atharva Veda*, also called *Atharvanopanishad*, said to have taken its name from the hopeful idea that everyone who comprehends its sacred doctrine is shorn, i.e., liberated, from all error.

Mundane Egg. See HIRANYAGARBHA; WORLD EGG

Mundane Tree. See TREE; YGGDRASIL

Mundi Domini and **Mundi Tenentes** (Latin) Lords of the world, and keepers of the world; a name given by some of the Church Fathers to the Satanic Legions occupying the blue ether. These Fallen Angels are really in their higher classes the cosmocratores (world builders), hierarchies of subordinate creative powers; but as there was no philosophical place for them in the Christian theology, they had perforce to be classified as powers of darkness.

Muni (Sanskrit) *Muni* [from the verbal root *man* to think] An ascetic, monk, devotee, hermit (especially one who has taken a vow of silence); a person who has attained union with his inner divinity by means of aspiration, so that filled with inspiration as he is, and guided by the inner spiritual monitor, he is said to attain more or less fully the status of an incarnate divinity on earth. With the Sanskrit expression *hridayeshu sthitah* (abiding in the hearts), the phrase has direct reference to the Silent Watcher of our planetary chain, who is in a sense the spiritual and mystical parent of the higher part of the human constitution.

In the plural, the celestial seven munis, a collective title given to the seven stars of Ursa Major, the Great Bear. Here is the reason the marharshis of this constellation play so important a part in archaic Hindu and theosophical esoteric teaching — the genuinely evolved muni is one who is a true mahatma, one who has evoked into relatively full activity all the seven parts of his constitution.

Muni, however, is frequently used in Hindu writings in a merely complimentary or reverential sense, just as mahatma is, so that not every individual called muni or mahatma is such in the

theosophical sense.

Munin (Icelandic) [from *muna* to mind, call to mind, remember] In Norse mythology, one of Odin's two ravens which fly daily over the battlefield earth (Vigridsslatten) and report back to Allfather Odin. The other is Hugin (mind). Both are needed for the consciousness to learn and retain what has been learned in order to build further on it. The same idea is conveyed in Greek mythology, where Mnemosyne (memory) is the mother of all the Muses (arts and sciences).

Murari (Sanskrit) *Murāri* [from *Mura* an asura + *ari* enemy] The enemy of Mura; Krishna slew Mura, a great asura, and hence received this title.

Murti (Sanskrit) *Mūrti* [from the verbal root *mūrch* to become solid, take shape] A shape, a manifestation, imbodiment, or personification. The Trimurti, the "three manifestations" of divinity, is the Triad of the Hindu pantheon.

Murtimat (Sanskrit) *Mūrtimat* [from the verbal root *mūrch* to become solid, take shape] Of the nature or characteristic of murti; hence, for example, possessing a substantial or personified form.

Music [from Greek *mousike (techne)* the art of the Muses] The music of the Greeks did not signify merely the harmony of sounds, but actually imbodied the idea of inner harmony of the spirit, the becoming at one with the spirit of the Muses, so that the soul responded in harmonic rhythm to the beat of universal harmony. Music with the Greeks, therefore, included, besides vocal and instrumental music, choral dancing, rhythmic motions, and various modes of harmony expressed in action, perhaps most particularly that part of education which we should now classify as a striving for harmony in life combined with aesthetic, in contrast with intellectual and physical branches of study and development. It was culture of the essential person, the ego or soul, whereas the other two divisions care for and supply the needs of the mind and of the body.

Music, considered as the essential harmony not only in cosmic but in human life, has fallen from that high estate to being little more than the harmony of sounds, cultivated piecemeal under a number of varieties: one may be an expert instrumentalist without having much harmony in one's soul.

In this modern, limited sense music combines and appeals to the aesthetic and the mathematical. For, while we have the power to be enraptured by harmony and melody, we can also learn how these effects are related to numbers, ratios, vibrations, and all those physical facts studied in acoustics and the laws of modern musical harmony and counterpoint. When these two components of a full musical knowledge are sundered, both branches of study suffer.

Harmony and rhythm underlie the cosmos, as is expressed in the phrase, "the music of the spheres"; and number and proportion underlie the whole process of evolution. Apollo, uniting the attributes of the sun, bears in his hand a heptachord or seven-stringed lyre. The sacred number seven is characteristic of divisions of the octave, and we have the first six notes of the harmonic

chord, to which may be added a seventh.

Music, in all its various branches is represented as having been taught to man by his divine and divine-human ancestors, such as Isis-Osiris, Thoth, Edris (in the Koran), etc. It is one of the elements of the power known as mantrikasakti. Music was represented as one of four divisions of mathematics, the others being arithmetic, astronomy, and geometry. The music of sound arouses in us a power which needs to be controlled, as it can carry us to heights from which we may fall. If regarded as a sensual indulgence, even though a refined one, its true import is not realized. If carried into our lives, so as to aid in harmonizing our relationships to other lives, then it is the unfolding influence of the real music of the spheres of cosmic harmony. For music is “the most divine and *spiritual* of arts” (ML 188).

Music of the Spheres An extremely archaic teaching repeated by Pythagoras, and therefore in the West commonly associated with his doctrine, for he taught that the world had been called forth out of Chaos by sound or harmony, and that the universe is constructed on harmonic proportions. He further taught that the planets were arranged in relation to each other and to the Sun in the progression of a musical scale; thus the distance of the Moon from the Earth was called a tone, from Moon to Mercury half a tone, Mercury to Venus half a tone, Venus to Sun one and a half tones, Sun to Mars a tone, Mars to Jupiter half a tone, Jupiter to Saturn half a tone, Saturn to the zodiac a tone — thus completing the seven tones of the scale or the diapason-harmony, as it is reported that Pythagoras reckoned — although the actual addition of the half-tones and tones includes only 6 1/2 tones. As Censorinus (*De die natali* 13) expressed it, “the intervals correspond to musical diastemes, rendering various sounds, so perfectly consonant, that they produce the sweetest melody, which is inaudible to us, only by reason of the greatness of the sound, which our ears are incapable of receiving” (SD 1:433).

Theosophy teaches that every body, indeed every monad or life-atom, is in constant motion, and as it moves emits a sound, its own keynote, and that this sound is in musical harmony with nature’s all-inclusive harmonic symphonies. Furthermore, every particle of matter, every physical atom even, in its incessant movements produces a sound which is indeed a song, so that had we the power of spiritual hearing (genuine clairaudience), we would be able to hear this unimaginably grand symphony of sounds: we would hear the grass growing — as the ancient Welsh mystic has it; and the opening of a flower would itself be a marvelous natural orchestral performance.

Muspell, Muspellsheim, Muspellsheimr (Icelandic) Muspell, the Norse god of fire, equivalent to the Hindu Agni. From Muspellsheim (home of fire) sparks fell into Ginnungagap (the yawning void) and Niflheim (home of nebulae), creating vapor which became Ymir, the giant from whom the worlds were fashioned by the creative beneficent powers. From Muspellsheim will also come the destructive forces which will bring the end of life to our world at the final great battle called Ragnarok.

Mut, Mout (Egyptian) *Mut, Mout*. Mother; the second member of the triad of Thebean deities, generally known as the Lady of Thebes, and holding with Amen-Ra (Ammon-Ra) the principal position among the gods of the New Empire. Although mother of Khensu (or Khonsu — the third member of the triad) and wife of Amen-Ra, she is often called his mother. Her attributes are those of the world-mother, the inscriptions upon the ruins of her temple at Thebes address her as “Lady of Heaven, Queen of the Gods, she who giveth birth, but was herself not born.” Sometimes she is represented with androgynous aspects (with the head of a man and with the phallus). She is associated with Isis and Nekhebet, although more often made equivalent to Nut, goddess of the watery deep, mother of the gods, and of all that is. Mut also in many respects has the characteristics that were attributed to Hathor.

From these attributes of cosmic fecundity, Mut came to be associated on a smaller scale with the moon, the mother of earth and giver of material life. *See also* NEKHEBET

Mut. *See* MOT

Myalba (Tibetan) *dmyal ba* (nyal-wa) Northern Buddhist name for our earth, which they considered a hell for those whose karma it is to reincarnate on it for the purgation of suffering and experience. Exoterically, Myalba is usually translated and is looked upon as one of the hells. Equivalent to the Sanskrit naraka or avichi.

Mylitta. *See* MELITTA

Mystae. *See* MYSTES

Mystagogy [from Greek *mystes* an initiated person + *agogos* a conductor] Initiation into the Mysteries; also the teachings and practices of the Mysteries. The initiator was a mystagog.

Mystai. *See* MYSTES

Mysteries, The [from Greek *mysteria* Mysteries from *mystes* one initiated into the Mysteries from *mueo* to initiate from *muo* to close the eyes or lips] Applies chiefly to Greece, but once extended to Asiatic cults of religio-philosophical character, it acquired a wider range under the Romans, and is used in *The Secret Doctrine* in reference to equivalent institutions in any part of the world. The most celebrated in Greece were those of Eleusis pertaining to Demeter and Persephone, which gave rise to many branches and influenced schools of older foundation. Others were those of Samothrace, the Orphic Mysteries, and the Festivals devoted to Dionysos. Schools like that of Pythagoras diffused their influence, as did Academies such as that of Plato. The history of Greece furnishes notable examples of great men who had been initiated into such Mysteries. The Mysteries came into Greece from India and Egypt, and their origin goes back to Atlantean times. They were in historic times, what remained of the means whereby man’s divine ancestors communicated truths concerning the mysteries of cosmos and of human nature and of the communion between divinity and man.

In times when sacred knowledge was whole and not divided into sacred and profane, the human body, not yet desecrated, was held as sacred as any other part of function of human nature; so that the teaching embraced medicine, hygiene, singing, dancing, the useful arts and crafts; and the teachers of religion, philosophy, science, and of crafts, the founders of cities, and great artists derived their powers from this source.

The Mysteries were divided into the Greater and Less, inner and outer, esoteric and partly exoteric; and, as the former were guarded by well-observed secrecy the sources of ordinary information are mostly based on the latter. The more recondite Mysteries could not, from their very nature, be publicly divulged; they were revelations, appreciable only by an awakened spiritual perception and incommunicable to anyone not thus awakened. The Greater Mysteries were successive initiations for prepared candidates. The Less consisted of symbolic and dramatic representations for the public, in which, among other things, the profound symbology of the Greek mythology was employed.

The elevating and unifying influence of these institutions was acknowledged by Greek and Roman authorities and is apparent from a study of Greek history. With the advance of a cycle of materialism, the Mysteries became degraded, especially in Asia Minor in Roman times; the symbolism was perverted and even made to palliate licentious practices. What little was left to abolish was formally abolished by Justinian, who closed the mystic and quasi-esoteric Neoplatonic School of Athens in 529.

In a recognition of the ancient Mysteries we find a clue to the meaning of the universal prevalence, among peoples fallen into a degenerate and falsely called primitive state of life, of strange rites and black magical practices. These are the very dregs and distortions of the ancient holy teachings; but even here unprejudiced inquirers find that, when sympathetically approached, the existence of secret cults which preserve at least remnants of some of the essential teachings of the ancient wisdom.

As formal institutions, the Mysteries had their earliest origin during the fourth root-race, Atlantis, after its fourth subrace. Indeed, the still more primitive roots of the Mysteries can be traced to a much earlier time, probably during the third subrace of the Atlanteans, when the rapid degeneration of mankind into the worship of matter had brought about the absolute need of segregating the nobler and finer spirits of the human race into groups or schools where they could, under the vows of inviolable secrecy, study the deeper mysteries of nature and their own oneness with the divine. From that time the Mysteries became with every subrace more and more secret and entrance into them became ever more difficult. After the fifth root-race came upon the scene, the Mysteries had become well established in all countries of the globe, and their rites and functions, both of the Greater and the Less, were conducted as functions of the State.

Even from the time of the incarnation of the manasaputras in the third root-race, there has been

an unbroken line, stream, or succession of lofty spiritual teachers guarding the ancient god-wisdom received in primordial ages from the dhyanis; and the Mysteries, even in their heyday of splendor and in their most secret lines of work, were the outer side of clothing of this inner stream of inspiration and sublime teaching. The light has not yet died from off the earth, and the spiritual stream still exists and does its work in the world, although for ages it has been acting more secretly and esoterically than ever. However, the time is coming when the Mysteries will again be reestablished and will receive the common reverence and respect from mankind that in former ages they universally had.

Mysterium Magnum (Latin) The great mystery; used by Paracelsus and other alchemists to denote primordial undifferentiated matter, from which all the elements sprang, sometimes compared with Brahma, at others with aether the garment of akasa.

Mysteria Specialia [from *mysteria* mystery + *specialia* particular, specific] Particular mystery; used by European Medieval alchemico-mystical philosophers, such as Paracelsus. Mysterium is used by Paracelsus to denote the germinal state of a being, which is afterwards produced in the differentiated state; thus the seed is the mysterium of the future plant. Specialia implies that each organism pre-exists in its own special mysterium. Thus is indicated an intermediate state of differentiation, between the condition of undifferentiated chaos and that of separate and developed organisms.

Mystery-gods Several different groups of cosmogonic entities, among them the regents of the seven sacred planets, whose chief is the sun exoterically and the Second Logos esoterically; and in a limited sense, mystery-gods is used for two secret planets for which the sun and moon were used as substitutes. Also, in speaking of the dual nature of the Egyptian deities, the concealed or esoteric aspects of them are spoken of as mystery-gods. Again, the name is given to the kabiri or kabeiroi.

Mystery-names Names of cosmic and global potencies, which have both a secret meaning and an occult power depending on the sounds or letters used; the meaning is often disguised by transformation into their languages. The name Jaho, with its variants such as Jehovah or Jah, is a mystery-name which in the Greek Gnostics appears of Iao (the English *j* being originally a variation of the long *i*). Many Sanskrit words are of this nature; Subba Row, in his article on the zodiac, uses a literal and syllabic key in interpreting the names of the signs. Some words yield their meaning by gematria, the numerical value of the letters.

Mystery Schools Adopted in theosophical literature from Classical writings, to designate centers which were consecrated to the teaching of the truths of cosmic Being to those who were found fit and ready for their reception; and this body of teaching or instruction and training is imbodyed in the ancient wisdom which is the heritage of humanity. This wisdom was originally given to mankind during the infancy of the human race by celestial teachers. "The mysteries of Heaven and Earth, revealed to the Third Race by their celestial teachers in the days of their purity, became a

great focus of light, the rays from which became necessarily weakened as they were diffused and shed upon an uncongenial, because too material soil. With the masses they degenerated into Sorcery, taking later on the shape of exoteric religions, of idolatry full of superstitions, and man- or hero-worship” (SD 2:281).

Despite this almost universal degeneration of the original wisdom into dogmatic religious or philosophical forms, the heart of the teaching has always been preserved on earth, and the guardians of this heart have from that immemorial age kept the ancient wisdom whole and undefiled. From this heart esoteric centers were during the ages instituted from time to time in different parts of the earth where the holy truths were taught by hierophants, to use the Greek expression. “Alone a handful of primitive men — in whom the spark of divine Wisdom burnt bright, and only strengthened in its intensity as it got dimmer and dimmer with every age in those who turned it to bad purposes — remained the elect custodians of the Mysteries revealed to mankind by the divine Teachers. There were those among them, who remained in their *Kumaric* condition from the beginning; and tradition whispers, what the secret teachings affirm, namely, that these Elect were the germ of a Hierarchy *which never died since that period*” (ibid.).

Thus was formed the Great Brotherhood or Great White Lodge, which has remained on earth to this day in its secret retreat, known in Hindu legends as Sambhala. From time to time messengers are sent forth from this Brotherhood into the world, and these emissaries impart the holy doctrine of which they are the carriers to those who prove themselves ready, fit, and worthy to receive it. Such centers of esoteric training and communication have always been called the Mysteries, or Mystery schools; and the emissaries establish new centers or Mystery schools when and where it is found proper to do so. Every race and nation has had its teachers and their esoteric centers; the one fundamental doctrine of the heart was taught alike in them all, albeit after different manners, in different languages, and by different approaches, according to the psychological readiness and the needs of the people to whom these emissaries came. In later times, when these Mystery schools had to a greater or less degree lost the original impress and inspiration of the first communication, they were called sacerdotal colleges, or even temple-colleges or in ancient Greece the Mysteries. Such esoteric centers, where the original and archaic doctrine is taught, exist even today.

Mystes (Greek) [from *muo* to close the mouth] Plural *mystai*. An initiate to the first degrees of the Mysteries; the next higher rank being that of the *epoptes* (seer); and the highest function being that of the *hierophantes* (teacher or communicator). With the Pythagoreans the neophyte or *mystes* guarded silence as to what he had learned, and was authorized and empowered to speak or teach only when his mouth had been opened because of attaining the rank of *epoptes*. This custom has been borrowed by Roman Catholic Cardinals along with the term *Mystes*: “A word or two may be said of the singular practice of closing and subsequently opening the mouth of a newly created cardinal. Like almost everything else connected with the subject, this form had once a real significance, but has become a mere meaningless formality. Some reasonable time was originally

allowed to elapse before the pontiff in one consistory formally pronounced the mouth to be opened which he had declared to be closed in a previous consistory. Now the form of opening is pronounced within a few minutes of the form of closing” (Encyclopedia Britannica, 9th ed., “Cardinal”).

Mystic Death An experience at a certain stage of initiation, where the candidate undergoes the experiences of virtual death, differing from actual death in that his body is prevented from dissolution so that he may resume it when the trial has been passed. Through its symbolic representation in the exoteric Mystery dramas, it has passed into the substance of religious creeds where it has been adapted to those formulas, as in the story or mythos of the death and resurrection of Jesus. The Egyptian *Book of the Dead* is, among other things, a description of some of the experiences undergone by such a candidate.

Mysticism The doctrine that the nature of reality can be known by direct apprehension, by faculties above the senses, by intuition. “Mysticism demands a faculty above reason, by which the subject shall be placed in immediate and complete union with the object of his desire — a union in which the consciousness of self has disappeared, and in which therefore subject and object are one” (Encyclopedia Britannica, 9th ed. “Mysticism”). It overlaps in meaning such terms as the Neoplatonic ecstasis, and the theosophy of Iamblichus.

Myth, Mythology [from Greek *mythos* a secret word, secret speech] An occult tale or mystic legend; the modern use varies from an allegorical story to pure fiction. Myths are after all ancient history and are built on facts or on a substratum of fact, as has proved true in the case of Troy and Crete. A symbolic record of archaic truths, universally prevalent among mankind, as in such stories as that of the Ark, which are almost universally discoverable and identical not in detail but in essential underlying features among the most widely sundered peoples. Myths contain the universal keys which can be applied to anything, and preserve undying and essential truths, so that variations of external form are unimportant. Such truths, being preserved in the racial memory of mankind, can always be kept essentially true to standard; and thus this means of handing-on can correct itself.

Early races of mankind were taught directly by their divine instructors; and in later times, when this mode of teaching was no longer available, the instructions were committed to the racial memory in the guise of allegories: this is the origin of the world’s myths. The labors of Hercules, paralleled in the mythologies of some other lands, preserve an epitome of the history of evolution in twelve chapters; tales of heroes seeking to win damsels and having to slay dragons, preserve the drama of the soul in its quest for truth; and so on.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Na-Ne

Naaseniens, Naassenes [from Hebrew *nāḥāsh* serpent] A Gnostic school of the Ophites [from Greek *ophis* serpent], which regarded the spiritual dragon or serpent as the redeeming power and as a symbol of the intelligence by whose means Adam and Eve received a knowledge of the existence of higher beings than their creator. The dragon or serpent is an extremely ancient, universal symbol of wisdom and knowledge. Only in Christian times has it become endowed with infernal attributes and used as an emblem of the Evil One. Yet even the Christian scriptures declare that divinity itself can properly be symbolized by the dragon.

Naba' (Hebrew) *Nābā'* **Neba'** (Aramaic) *Nēbā'*. To deliver an oracle, prophesy, predict future events. *See also* NABI'

Nabatheans or **Nabateans** [from Shem *Nebo* Mercury] Worshipers of Mercury; a people of ancient Arabia, an offshoot of the Persian Yezidi, spoken of by Josephus, Jerome, Pliny, and others. Diodorus (312 BC) describes them as a tribe of some 10,000 warriors, preeminent among the nomad Arabs, eschewing agriculture, fixed abode, and wine, living by pastoral pursuits and trade.

Nabathean Agriculture was translated about 1860 by Orientalist Chwolsohn into German from the Arabic translation of the Chaldean, widely considered a forgery. The Jewish scholar Maimonides (1135-1204), however, spoke pointedly of it as a specimen of archaic literature, though he disagreed with its teachings. Chwolsohn describes the book as a complete initiation into the mysteries of the "pre-Adamite" nations, and a compendium of Chaldean and other ancient lore. But the book shows periods of incalculable duration and numberless dynasties preceding the so-called Adamic race. The doctrines propounded therein were originally told by Saturn to the Moon, who communicated them to her eidolon, who revealed them to the author of the original work, Qu-tamy.

That the work is a compilation is true enough, but not in the sense meant by skeptical scholars; for

its is a compilation of teachings of the archaic secret doctrine under the exoteric form of Chaldean symbols, for the purpose of at once cloaking and handing down the teachings.

Nabhastala (Sanskrit) *Nabhastala* The under side or bottom of the clouds, the regions of the atmosphere where clouds are; sometimes used for sky or heaven. Nabhasthala, another spelling, signifies the sthala (home, residence, place) of the clouds, and hence is often used for ether or the entire atmosphere of the earth, higher and lower.

Nabhi (Sanskrit) *Nābhi* According to one tradition, the grandfather of the great monarch and sage, Bharata, who gave his name to Bharata- or Bharata-varsha, or India.

Nabi' (Hebrew) *Nābī'* [from *nābā'* to deliver an oracle] A prophet, one inspired to foretell future events; the name given to prophecy in the Bible. One of the "spiritual powers, such as divination, clairvoyant visions, trance-conditions, and oracles. But while enchanters, diviners, and even astrologers are strictly condemned in the Mosaic books, prophecy, seership, and nobia appear as the special gifts of heaven. In early ages they were all termed *Epoptai*, the Greek word for seers, clairvoyants; after which they were designated as *Nebim* [nebi'im] 'the plural of Nebo, the Babylonian god of wisdom.' The kabalist distinguishes between the *seer* and the *magician*; one is passive, the other active; *Nebirah* [nabi'] is one who looks into futurity and a clairvoyant; *Nebi-poel* [nebi'-po'el], he who possesses *magic powers*" (IU 1:xxxvii).

Sons or disciples of prophets were called Benei Nebi'im.

Nabo, Nabu. See NEBO

Nachash. See NAHASH

Nachnis. See NAUTCH

Nada (Sanskrit) *Nāda* Sound; used by Blavatsky mystically for the voice of the silence or soundless voice: "Literally perhaps this would read 'Voice in the *Spiritual Sound*,' " (VS 73).

Nadabindupanishad (Sanskrit) *Nādabindūpaniṣad* One of the Upanishads of the *Rig-Veda*.

Nadi (Sanskrit) *Nāḍi* A tube, vessel, or channel; that along which something flows, be it a liquid or the current of a force. Applied indiscriminately to blood vessels and nerves, and to the three mystic channels that really form the spinal column, and which carry vital and other important currents in the human constitution. The nadis are all intimately connected in function and structure with the chakras, being the influent and effluent channels to and fro as between nadi and other nadis and the body generally; for the chakras, although mainly functional in the astral part of the auric body, nevertheless have corresponding organs in the physical body.

Naga (Sanskrit) *Nāga* Serpent; the symbol of immortality and wisdom, of renewed births, of secret knowledge and, when the tail is held in the mouth, of eternity. The nagas or serpents of wisdom

are, therefore, full initiates: “the first *Nagas* — beings wiser than Serpents — are the ‘Sons of Will and Yoga,’ born before the complete separation of the sexes, ‘matured in the man-bearing eggs produced by the power (Kriyasakti) of the holy sages’ of the early Third Race” (SD 2:181). These first nagas were the original human adepts, who were later symbolized by the terms serpents and dragons. “These ‘originals’ — called to this day in China ‘the Dragons of Wisdom’ — were the first disciples of the Dhyanis, who were their instructors; in short, the primitive adepts of the Third Race, and later, of the Fourth and Fifth Races. The name became universal, and no sane man before the Christian era would ever have confounded the man and the symbol” (SD 2:210).

The early Mexican word *nagual*, now meaning sorcerer and medicine man, is akin in its meaning, for “Some of the descendants of the primitive Nagas, the Serpents of Wisdom, peopled America, when its continent arose during the palmy days of the great Atlantis, (America being the *Patala* or Antipodes of Jambu-Dwipa, not of Bharata-Varsha)” (SD 2:182). The Hebrew equivalent is *nahash* also meaning magic, enchantment, thus showing the same connection of ideas.

Naga may be equated with Ananta-sesha, the seven-headed endless serpent of Vishnu, “the great dragon eternity biting with its *active* head its *passive* tail, from the emanations of which spring worlds, beings and things. . . . The *Nag* awakes. He heaves a heavy breath and the latter is sent like an electric shock all along the wire encircling *Space*” (ML 73).

Naga-dvipa (Sanskrit) *Nāga-dvīpa* The island of the dragons; one of the seven divisions of Bharata-varsha or India, according to the Puranas. The nagas were an historical people, but now unknown. “When the Brahmans invaded India they ‘found a race of *wise* men, half-gods, half-demons,’ says the legend, men who were the teachers of other races and became likewise the instructors of the Hindus and the Brahmans themselves. Nagpur is justly believed to be the surviving relic of Nagadwipa. Now Nagpur is virtually in Rajputana, near Oodeypore, Ajmere, etc. And is it not well known that there was a time when Brahmans went to learn Secret Wisdom from the Rajputs? Moreover a tradition states that Apollonius of Tyana was instructed in magic by the *Nagas* of Kashmere” (TG 222-3).

Nagal (Quiche) Usually rendered Nagual by the early Spaniards; title of the chief priest of the Quiches.

Nagarajas (Sanskrit) *Nāgarāja-s* Serpent or dragon kings; the guardian spirits of lakes and rivers, shown in Buddhist chronicles as having been converted to Buddhism, becoming arhats from yogis. Outside of meaning initiates or adepts, nagas were likewise an actual people who inhabited Naga-dvipa, one of the seven divisions of Bharata-varsha or India, according to the Puranas.

Nagarjuna (Sanskrit) *Nāgārjuna* A Buddhist arhat or sage generally recognized in Northern Buddhism as a bodhisattva-nirmanakaya. After his conversion to Buddhism, he went to China, and according to legend converted the whole country to Buddhism. He was famous for his dialectical subtlety in metaphysical argument, and was the first teacher of the Amitabha doctrine. He was one

of the most prominent representatives and a founder of the esoteric Mahayana system. The source of his deeper teachings is undoubtedly the secret school of adepts; and his esoteric doctrine is one with esoteric theosophy. He was called the Dragon-Tree on account of his esoteric wisdom; and was referred to as one of the four suns which illumine the world.

Naglfar (Icelandic) [from *nagl* nail + *far* to travel] In Norse tradition, a mythical ship built of the nails of the dead, which casts off when a world's life cycle comes to an end.

Nagkon Wat (Nakhon Wat) An imposing temple — situated about five miles south of Nakhon or Ankhon, the ancient capital of Kampuchea (Cambodia) — composed of three concentric rectangular enclosures, each rising above the other. “After the Pyramids this is the most occult edifice in the whole world. . . . entirely built of stone, the roof included, . . . the stones fitting so closely that the joints are even now hardly discernible” (TG 223).

Native historians attribute the foundation of the temple to the Prince of Roma, a legendary hero, while European scholars place it in the 13th century under Buddhist influence. This does not account for the preponderating scenes from ancient Hindu mythology, for the figures sculptured in the Egyptian manner (the side turned toward the front), for the man-fish deity (similar to Dagon of ancient Babylon) sculptured several times on the walls, or for the kabeirian gods of Samothrace, with their parent Vulcan. Though the Kabiri were once universally worshiped as the most ancient of the Asiatic mystery-gods, this worship was abandoned 200 years BC, and the Samothracian Mysteries had been completely altered by that time (IU 1:566).

Nagual. See NAGAL

Nahash (Hebrew) *Nāḥāsh* [from *nāḥash* to whisper, hiss, prognosticate, practice divination] Serpent; a constellation — the serpent or dragon in the northern quarter of the heavens; also a city. In the Bible, the name of two Ammonite kings (1, 2 Sam). Used by Western Qabbalists for the Evil One, supposedly meaning the “deprived,” referring to the serpent of the creation story as being deprived of limbs; but Blavatsky holds that this interpretation is erroneous, for “the Fire-Devas, the Rudras, and the Kumaras, the ‘Virgin-Angels,’ (to whom Michael and Gabriel, the Archangels, both belong), the divine ‘Rebels’ — called by the *all-materializing* and positive Jews, the *Nahash* or ‘Deprived’ — preferred the *curse* or *incarnation* and the long cycles of terrestrial existence and rebirths, to seeing the misery (even if *unconscious*) of the beings (evolved as shadows out of their Brethren) through the semi-passive energy of their *too spiritual* Creators. . . . This voluntary sacrifice of the Fiery Angels, whose nature was *Knowledge* and *Love*, was construed by the exoteric theologies into a statement that shows ‘the rebel angels hurled down from heaven into the darkness of Hell’ — our Earth” (SD 2:246). See also BRAZEN SERPENT

Naimittika Pralaya and **Naimittika Manvantara** (Sanskrit) *Naimittika-pralaya*, *-manvantara* [from *naimittika* occasional, unusual, due to external cause from *nimitti*] Occasional dissolution or manifestation; in Hindu literature, pralayas or manvantaras which are unusual or occasional

because occurring at wide intervals, either of time or circumstance, especially those separated by Brahma's Days and Nights. A naimittika pralaya occurs when Brahma slumbers: it is the destruction of all that lives and has form, but not of the substance, which remains more or less *in statu quo* till the new dawn after that Night of Brahma. At the end of a Day of Brahma there occurs what is called in the Puranas a re-coalescence of the universe, called Brahma's "contingent or naimittika re-coalescence or pralaya," because Brahma is this universe itself. A naimittika pralaya is thus similar to the bhaumika or planetary pralaya (cf SD 1:371-2, 376-7).

As another example of its usage, when a human being through a series of high initiation casts off the chains of material existence although retaining sufficient attraction to bring about a return to such existence, this could be called a naimittika event.

Nakash. See NAHASH

Nakshatra (Sanskrit) *Nakṣatra* Generally a star, constellation, or any heavenly body; sometimes collectively, the stars. Also a lunar mansion, the name of an asterism through which the moon passes, of which 27 are enumerated, and in later times 28. In the Vedas the nakshatras are considered the abodes of the divinities and of holy persons after death.

Naljor (Tibetan) *rnal 'byor* (nal-jor) A disciple undergoing training under the advice and guidance of one higher than himself, a holy man who is learned in the secret wisdom; and occasionally, a glorified adept — because even such an adept is inferior to others more advanced than himself, and under whose guidance and training he lives and strives towards higher things. Equivalent to the Sanskrit yoga-kshema (the acquisition of yoga, or maintaining yoga and acquiring).

Naman (Sanskrit) *Nāman* also *Nāma*. A name, appellation.

Nama-rupa (Sanskrit) *Nāma-rūpa* [from *nāma* name + *rūpa* body, form] The body with a name; personality, the symbol of the unreality of material phenomenal appearances. A highly technical term in Hindu philosophy, particularly in the Vedānta. Philosophically, naman signifies the particular characteristics of the manifesting personality. Every individual has his or its own particular naman, as well as his or its own particular rupa. In consequence nama-rupa is the personality working through its two or three forms or bodies, the kama-rupa, the linga-sarira (astral form), and the sthula-sarira (physical body). This term applies equally well to a manifested entity of any kind, but with particular meaning to the lower grades or classes of manifesting beings or things. The sun, for instance, embodies a divinity; but the nama-rupa of the sun is not the divinity, but the manifesting personality of the particular sun working through its particular rupa.

Namas (Sanskrit) *Namas* [from *nam* to bow, make reverence; cf Pali *namo*] A reverence, consisting of an inclination of the body; both in act and in writing a reverential salutation. "The first word of a daily invocation among Buddhists, meaning 'I humbly trust, or adore, or acknowledge' the Lord, as: 'Namo tassa Bhagavato Arahato' etc., addressed to Lord Buddha. The priests are called 'Masters

of Namah' [Namas] — both Buddhist and Taoist, because this word is used in liturgy and prayers, in the invocation of the *Triratna*, and with a slight change in the occult incantations to the *Bodhisattvas* and *Nirmanakayas*" (TG 224).

Namaste (honor, reverence, to thee!) is used in greeting gurus and spiritual sages.

Name The Word or Logos may be considered in a twofold aspect as Voice and Name, reminiscent of the Sanskrit nama-rupa (name and form), technical terms inasmuch as nama is not merely a human utterance but contains the idea of creative sound, and rupa (form) signifying not so much mere vehicle, but the conscious production of the creative akasa or sound.

In Simon Magus' Gnostic system, the first three pairs of emanations from divine fire are mind and thought, voice and name, reason and reflection; the first in each case is masculine, the second feminine. A name evokes a thought, which is a creative power, but in itself is the production of a creative thought.

People have concealed their names; others refrain from speaking theirs. The name becomes much more potent when spoken, for then is added the power of vibration. Most names of things are counters, for they differ in different languages; yet even these names acquire power by familiarity. But there are real natural vibrational names for things; to know the real name of a power gives one mastery over it and enables one thus to evoke that power. For this reason great secrecy throughout all past time among initiates has been preserved as to the real names of powers, deities, etc. The four-letter name of Jehovah is popularly described as ineffable and incommunicable, although the four letters are merely human makeshift for the vibrational energy of which the Tetragrammaton is a mere symbol. These epithets may mean that it cannot be spoken and communicated, or that it must not. If it cannot be spoken, then it has to be discovered by each one for himself.

Says the Christian Apocalypse: "To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it." The name thus denotes the essential character of the being.

Nameless Deity, Nameless One The real name of a thing is its essential characteristic, is *itself*; therefore that which is beyond all attributes must necessarily be nameless. It is nameless because incognizable; it is the One Reality, 'eyn soph, the Absolute. The expression may occasionally be applied to other beings whose name it is necessary to withhold, such as the Wondrous Being, who has to remain nameless (SD 1:207). *See also* WATCHER; WONDROUS BEING

Name of God, The In Welsh Enw Duw, written. This name was sounded at the birth of the universe, "whereupon latency flashed into existence more swiftly than the lightning reaches its home." This sacred word is given as O I W — the Welsh *w* being a vowel, equivalent to the Sanskrit *u*. But in Cywydd Cyfrinach ("The Poem of the Secret," by Rhys Goch o Eryri, c. 11th century), a

poem on this sacred word, we are told that the letters of it are to be taken from the words Awen and Menw, which would suggest the Sanskrit pranava Aum.

Name, Sacred Most names are labels, and according to ancient occult theory to disclose the real name of a being is to evoke the presence of that being, a knowledge which is made use of in magical evocations. To name the Deity would be an initiation, a revelation, fit only for ears prepared to receive it. Supreme deities are said to be ineffable — their names cannot or may not be spoken — as was the case with the Hebrew Tetragrammaton, IHVH, often written Jehovah, Jahveh, etc., but whose real pronunciation was secret and sacred. Qabbalists, in order to screen the real mystery-name of 'eyn soph (the boundless), substituted the name of one of the personal creative 'elohim, the hermaphrodite Jah-Eve; and the name was made sacred in order to conceal the deception (SD 2:126). As a substitute for Jehovah the name 'Adonai (my Lords), was afterwards used when reading the ancient Hebrew scriptures aloud for and instead of the יהוה, which appeared written on the manuscript, because YHVH was considered too holy for utterance.

Nanda (Sanskrit) *Nanda* [from the verbal root *nand* to rejoice] Joy, happiness; the name of the cowherd who brought up Krishna; also one of the kings of Magadha whose dynasty was overthrown by Chandragupta.

Nandi (Sanskrit) *Nandi* [from the verbal root *nand* to rejoice] The happy one; title given to many of the higher gods of the Hindu pantheon.

Nandin (Sanskrit) *Nandin* Rejoicing; a name of the sacred white bull of Siva, and also of his vahana (vehicle).

Nanna The Norse goddess of the now-dead moon, wife of the sun god Balder. When Balder was slain by his blind brother Hoder with the fateful mistletoe twig, Nanna died of a broken heart and was placed beside her husband on his pyre. Her half-sister is Idun, the present earth goddess corresponding to the Greek Gaia. Idun continues to carry out Nanna's task of supplying the gods with the apples of immortality of which they must partake daily to preserve their youth.

Nannak or **Nannar** (Chaldean) A name of the moon deity Sin, son of Mulil or Mul-lil, especially at Nippur, the principal seat of what was termed Chaldean magic. The Akkadians called him the Lord of Ghosts. In Chaldean or Assyrian mythology, the derivation of Nannak (the moon) from the sun is characteristic; whereas in the earlier mythology the moon is stated to be far older than the sun.

Nara (Sanskrit) *Nara* [cf Sanskrit *nṛ*, Zend *nar*, Greek *aner* Latin *nero*] A man; in the *Mahabharata* and the Puranas, sometimes used as an equivalent for cosmic Purusha — the primordial universal Man, or the hierarchical essence pervading the solar system often associated with Narayana, both being considered as cosmic rishis. The *Bhagavad-Gita* makes a poetic identification of Arjuna or the human monad with Nara, and Krishna or the Logos with Narayana — this distinction showing the same suggestive difference in the human sphere that exists between Nara and Narayana in the

cosmic.

In the plural, used in the *Mahabharata* and Puranas for a class of mythological beings closely allied with the gandharvas and kinnaras. Naras are described as being “Centaur, men with the limbs of horses and human bodies” (SD 2:65n).

Narada (Sanskrit) *Nārada* One of the ten great rishis, mind-born sons of Brahma, or prajapatis; the most difficult to understand of the Vedic rishis because the most closely connected with occult doctrines.

“Narada is here, there, and everywhere; and yet, none of the Puranas gives the true characteristics of this great enemy of physical procreation. Whatever those characteristics may be in Hindu Esotericism, Narada — who is called in Cis-Himalayan Occultism *Pesh-Hun*, the ‘Messenger,’ or the Greek *Angelos* — is the sole confidant and the executor of the universal decrees of Karma and *adi-Budh* a kind of active and ever incarnating logos, who leads and guides human affairs from the beginning to the end of the Kalpa.

“ ‘Pesh-Hun’ is a general not a special Hindu possession. He is the mysterious guiding intelligent power, which gives the impulse to, and regulates the impetus of cycles, Kalpas and universal events. He is Karma’s visible adjuster on a general scale; the *inspirer* and the leader of the greatest heroes of this Manvantara. In the exoteric works he is referred to by some very uncomplimentary names; such as ‘Kali-Karaka,’ *strife-maker*, ‘Kapi-vaktra,’ *monkey-faced*, and even ‘Pisuna,’ the spy, though elsewhere he is called Deva-Brahma. . . .

“What Narada *really is*, cannot be explained in print; . . . But it may be remarked, that if there is in the Hindu Pantheon a deity which resembles Jehovah, in tempting by ‘suggestion’ of thoughts and ‘hardening’ of the hearts of those whom he would make his tools and victims, it is Narada. Only with the latter it is no desire to obtain a pretext for ‘plaguing,’ and thus showing that ‘*I am the Lord God.*’ Nor is it through any ambitious or selfish motive; but, verily, to serve and guide universal progress and evolution.

“ . . . It is he who has charge of our progress and national weal or woe. It is he who brings on wars and puts an end to them. In the old Stanzas Pesh-Hun is credited with having calculated and recorded all the astronomical and cosmic cycles to come, and with having taught the Science to the first gazers at the starry vault” (SD 2:48-9).

Naraka (Sanskrit) *Naraka* In mythology, a place of torment, a hell, but such popular understandings are but exoteric blinds. The narakas are rather worlds in the spheres of matter, the globes of the planetary chain. They are called thus because they are rupa (form) worlds as contrasted with the arupa (formless) spheres of spirit. The narakas are generally regarded as 21 in number, as in the *Laws of Manu*. “These ‘hells’ are called *vivifying hells* because . . . any being dying in one is immediately born in the second, then in the third, and so on; life lasting in each 500 years

(a blind on the number of cycles and reincarnations). As these hells constitute one of the six *gati* [jatis] (conditions of sentient existence), and as people are said to be reborn in one or the other according to their Karmic merits or demerits, the *blind* becomes self-evident” (TG 225).

Narasimha-avatara (Sanskrit) *Narasimha-avatāra* also *Nṛsimha*. The man-lion avatara; a descent of Vishnu, the sustainer of life, in the form of a man-lion in order to deliver the earth from the demon Hiranyakasipu, a despoiler of the world. These various avatars, when considered in their order of appearance, present a picture of evolutionary progress from lower to higher avataric imbodiments. They are usually reckoned as ten in number, yet one or more of the Puranas reckon the avataric imbodiments as 22, having in mind the occult meaning behind all cosmic or geologic avataric appearances. As the *Bhagavata-Purana* states, innumerable are the imbodiments (in avataric form) of Vishnu, for they are like the rivulets emanating from a lake of inexhaustible power. Rishis, manus, gods, sons of manus, prajapatis are therefore all emanations or portions of Vishnu.

Narayana (Sanskrit) *Nārāyaṇa* [from *nāra* human from *nara* man + *ayana* going] The mover on the waters of space; a title of Vishnu in his aspect of the eternal breath or spirit; the highest hierarchies of the dhyanis or gods moving in and on the waters of creation (cf Manu 1:10). Here *nara* applies to the cosmogonical Logos, and *ayana* to the emanationary and evolutionary activity of the Logos in the waters of space, which are really the manifested form of Nara or Nara itself. In esoteric symbology Narayana stands for the primeval manifestation of the life principle spreading in infinite space, or again the Isvara, the Logos, the inner guide of all individual souls in the universe.

The opening verses of Genesis state that “the Spirit of God moved upon the face of the waters”: the waters are the great deep of infinite space, akasa; and the spirit is Narayana, Vishnu, or the cosmic Nara. This spirit “is invisible Flame, which never burns, but sets on fire all that it touches, and gives it life and generation” (SD 1:626).

Brahma is a permutation, so far as meanings go, of Narayana, the spirit of god entering into and fructifying nature — which indeed is itself. The cosmic Neptune or Poseidon, the Egyptian Ra, and the Hindu Idaspati (the master of the waters) correspond with Narayana or Vishnu.

Narjol. See NALJOR

Naros. See NEROS

Narrow-headed, Narrow-brained Mindless; the early third root-race, whose jivas were not ready, and who were therefore spurned by the manasaputric monads or lords ready for the over-enlightening or overshadowing of the then mindless human stock. The narrow-headed, at least a portion of them, afterwards took unto themselves huge she-animals and begat “dumb races,” the origin of the older simians. See also MINDLESS

Narthex (Greek) [cf Latin *ferula*] A tall umbelliferous plant, with a jointed stem from which the pith could be extracted, making it hollow; one of its varieties is the giant fennel. It is said that Prometheus, when he took the fire from heaven to bring it to man, hid it in a hollow narthex. Also used for the wand of the initiator in the Dionysian Mysteries. Greek and Roman palaces and temples contained an arcaded passage called narthex, and this has passed into the early Christian basilicas and so into modern churches.

The narthekophoros (reed carrier) was equivalent to the thyrsus bearer in the procession of the Mysteries, the allusion being to the higher self of man.

Nastika (Sanskrit) *Nāstika* [from *na* not + *āstika* one who believes in the existence of the orthodox exoteric divinity and divinities] One who rejects the orthodox and exoteric religious teachings concerning the divinities, and who in consequence is apt to be called an atheist by orthodox exotericists. As all such orthodox exotericism really consists, at least in very large measure, in looking upon the divinities in the universe as objects of adoration, much after the manner in which the populace worships idols, hence nastika can likewise be considered to mean one who rejects idols, including every anthropomorphic god. In this sense every genuine occultist is a nastika, although every occultist will affirm the existence of divinities, gods, spiritual beings, or dhyani-chohans — call them by what name is preferred — in the universe, stating indeed that the universe is filled full with divinities or essentially spiritual beings in the myriad stages of evolutionary development. But the occultist, while revering the more grandly spiritual hierarchies of these divinities, worships or adores none of them, reserving his unspeakably deep reverence for that nameless ineffable mystery which is beyond, above, and within the boundless All, and therefore is not only unspeakable but unthinkable.

Natakashala (Sanskrit) *Nāṭakaśāla* [from *nāṭaka* dancing + *śāla* hall, stage] Stage, dancing hall.

Natha (Sanskrit) *Nātha* [from *nāth* to be master] Lord, protector; title of gods and men, as Badrinatha (lord of mountains), a famous place of pilgrimage; and Gopinatha (lord of the shepherdesses), of Krishna.

Nativity In Christianity, the supposed birth of Jesus about the time of the winter solstice. This date is due to the labors of the 6th century Roman abbot, Dionysius Exiguus. The first year of this reckoning, which later became the accepted Christian era, is called 1 AD, and the preceding year is called by chronologers 1 BC, but others here insert a year zero. The epoch of the birth or nativity of Jesus is generally thought to be four years too late, but one may have well-grounded suspicions that these four years themselves are far too late, and efforts by various scholars have at times been made to place the birth of Jesus in the reign of Alexander Jannaeus, the son of Johannes Hyrcanus, the same Alexander having succeeded his brother Aristobolus I, as King of the Jews, in 104 BC.

Also used for the chart which is cast at the moment of a person's birth in drawing up a horoscope.

Natural Selection In Darwinian theory, an important factor in biological evolution. If, for example, a number of animals of one species are exposed to an unduly cold climate, many will die, and the survivors will be the hardier ones. These hardier ones are said to transmit their hardiness to their posterity, whereby the species becomes modified to that extent. A continual succession of such small changes, provoked by changes of environment, was supposed to act cumulatively, thus eventually producing the differences distinguishing one species from another. From this, in combination with other kinds of selection, such as sexual selection, the higher animal types have in the course of ages been derived from the lower.

The theory is open to grave objections on several grounds. There is a complete lack of evidence of the existence of any such permanently cumulative effect; further, such variations are temporary, and procreation tends to a reversion to the standard type as soon as the environmental influence is withdrawn. Again, such a process would tend to produce the greatest diversity and divergence among the species, each variety differentiating more and more widely in its own special direction, without any tendency toward a mounting scale of perfection from ameba to man. Such natural selection in itself is but a process or a result, and cannot become operative as a cause or agent except in connection with some purposeful directive energy from within or without. When novel varieties of fruit and flowers are bred, a breeder is at work, with energy and ideas in his mind.

The Mendelian principle of heredity and the combining of the genes in the germ-cells have been found so important in determining variations that the old “natural selection of chance variations” plays a far smaller part in thought concerning evolution than formerly. But the old question still stands: what brings about the combination of genes, or other outward mechanism, that results in the building of the ladder of life from the lowest known to the highest known manifestations of consciousness? Many modern biologists are looking upon evolution as the interaction of life and environment; but life is far more than the physicochemical properties of the genes, the supposed units of heredity. Natural selection, then, is inadequate to yield the results demanded of it; and it still remains to show how any evolution, any response or adaptation to environment, can take place without a pre-formed plan or an innate vital urge within the organism.

Natura Naturans (Latin) Nature naturing; Spinoza, who identified God and nature, distinguished between *natura naturans* and *natura naturata* (nature natured), the former being the immanent, universal causal nature which manifests itself in innumerable modes (physical, psychological, and other), the sum of all of which is *natura naturata*. This is pantheism, as far as it goes.

Natura naturans may be viewed as the continuously striving, ever-changing nature, yearning towards higher things, which thus brings about an unending and uninterrupted movement towards betterment, caused by the inner spiritual urge at the heart of beings to express throughout endless time ever fuller manifestations of latent power and faculty; whereas *natura naturata* is nature considered arbitrarily at any point in time and space, such as the continuous

present, being nature as it is at such arbitrarily chosen point.

Natura Non Facit Saltum (Latin) Nature makes no leap, nature does not go by jumps; used by biological evolutionists, especially Darwin, to denote the uniformity and unbroken continuity of natural processes of physical transformation. In this respect Darwin seems to have been a philosopher and idealist, since here he was trying to find factual evidence for an idea which he felt to be true, rather than making inferences from facts as observed. His difficulty in finding that evidence is well known. Since there is continuous development throughout nature, we infer that the hypothesis of separate organisms is an incomplete picture of reality. It will never be easy to explain how things are linked with one another, so long as we begin with the false assumption that they are radically separate.

The mutation or saltation theories seem to favor the idea that nature *can* make jumps; but processes which are gradual and uniform on the formative planes may often produce results comparatively sudden on the plane of physical manifestation.

If biological scientists recognize that inner and invisible worlds are the noumenal causes of the exterior or physical world, the difficulty in reconciling the perfectly true adage “nature makes no jumps,” would then vanish; they would then see that the physical plane in its manifestation is the effect of inner and driving causes, and that what appears separate on the physical plane is only so because it is the plane of bodies of a physically material character. Indeed, had we the percipient vision to see it and therefore to know it, we should perceive that even this apparently discrete physical plane, broken up as it apparently is into uncounted myriads of different entities, is really itself no exception to nature’s rule of unbroken continuity throughout; for even the apparently separate entities composing the physical plane are inextricably woven together into a vast web of life by the underlying substances of nature and the ever-active and continuously moving forces which are physical nature itself.

Nature Spirits Those imperfectly evolved elementals or elemental spirits which in their unthinkably vast aggregate form the entire background of all the manifested cosmos in its seven-, ten-, or twelve-fold ranges of being. The beings in hierarchies further advanced in evolution than the human kingdom are termed dhyani-chohans. The nature spirits of the three higher cosmic planes are of incomprehensibly greater power as well as even possibly of lofty spiritual and intellectual development than those of the four lower cosmic planes, although unevolved monads or spiritual elementals exist in multitudinous hosts on these three spiritual cosmic planes likewise. Hence it is that the harmonious work of all the cosmic planes depends upon their interactions and interrelations, under the guidance of highly evolved cosmic spirits or dhyani-chohans. The nature spirits therefore are as much present and active in the visible world as they are in the invisible spheres.

Called in different ages by a host of names, they are best known in Europe by the terms given by

the medieval Fire-philosophers: salamanders (beings of the element fire); sylphs (denizens of the element air); undines (the water elementals); and gnomes (beings of the element earth). These are all general terms for elementals, whether of spiritual or material worlds, though most commonly used for the more material elementals.

Nautch (Anglo-Indian) [from Hindi *nach* a dance, from the Sanskrit *nṛtya* to dance, perform dramatically] A dance with pantomimic gestures performed in India by professional dancers, called by Europeans nautch girls, the professional dancers attached to the temples of India.

One of the original ideas symbolized in archaic pantomimic dancing was the representation of the planets revolving around the sun. The *Vishnu-Purana* recounts that the dance was created by Krishna when, during his boyhood among the gopas or herds-people of Mathura, he taught it to the gopis (herdswomen). Its base-figure was the circling of many around one who remained in the center, and the Purana touches upon a mystery in the statement that Krishna, although dancing with each one in the circle, yet all the time remained in the center.

Nava (Sanskrit) *Nava* The number nine; also, new.

Nava-nidhi (Sanskrit) *Nava-nidhi* The nine jewels; in Hindu mysticism, “a consummation of spiritual development . . .” (TG 225).

Nave [from Latin *navis* a ship] Transferred to cruciform churches from the ancient basilicas, which in turn were evolved from temples; remembering that *navis*, together with boat, ark, and similar words denoting a receptacle, was a symbol of the Sidereal Vessel or womb of nature, one can understand its application to a temple, with its mystical and initiatory ceremonies in ancient days, where light and new birth were given to those who had prepared themselves to receive.

Navis. See NAVE

Naya (Sanskrit) *Naya* [from the verbal root *nī* to lead] Wisdom, prudence, harmony; also the essence of government in all its branches, and especially civil administration.

Nazar [from Hebrew *nāzar* to consecrate, devote, set apart] Also nazir, nezer. A Nazarite, or one consecrated; the specific name for Nazarite is nazir, a body or companionship of ascetics among the ancient Hebrews who set themselves apart, or consecrated themselves, to holiness and divine things. They belong to the school of ancient Chaldean initiates and “the nazars or prophets, as well as the Nazarenes, were an anti-Bacchus caste, in so far that, in common with all the initiated prophets, they held to the spirit of the symbolical religions and offered a strong opposition to the idolatrous and exoteric practices of the dead letter. Hence, the frequent stoning of the prophets by the populace and under the leadership of those priests who made a profitable living out of the popular superstition” (IU 2:129). Joseph, Samson, and Samuel are described as Nazars. Likewise “Paul must have belonged to this class of Initiates, for he himself tells the *Galatians* (i, 15) that he was *separated* or ‘set apart’ from the moment of his birth; and that he had his hair cut at Cenchrea,

because 'he had a vow' (*Acts xviii, 18*) *i.e.*, had been initiated as a Nazar; after which he became a 'master-builder' (*1 Corinth. iii, 10*)" (TG 226).

Nazarenes One of two early sects of Christians, the other sect being the Ebionites, which go back in their origin before the Christian era. They were disciples of that Jeshua ben Panthera who was an initiated teacher living in the reign of Alexander Jannaeus, who ruled over the Jews from 104-79 BC, and around whom, some state, that the Gospels story of Jesus was built (cf IU 2:201). The Greek for this name is Nazoraioi, confused both with Nazarenoi (inhabitants of Nazareth) and with the Jewish sect of Nazarites; for Matthew 2:23 says that Jesus came and dwelt in Nazareth, that the Jewish prophecy that he should be called a Nazoraioi might be fulfilled. This word has been translated Nazarene, as is also the case in Acts 24:5, where Paul is said to belong to the sect of the Nazoraioi. It would appear that the Jews claimed Jesus as a Nazarite [from Hebrew *nazar* to set apart, consecrate; cf *nazar*].

Like the Ebionites, the Nazarenes were followers of true esoteric teachings, and occupied themselves in adapting these to what they found around them; so that scholars cannot make up their minds whether to call them Jews, Christians, Judizing Christians, heretics, or what not. Other names for them were St. John Christians, Mendean, or Sabeans. Epiphanius, the 4th century Church Father, speaks of them as dwelling in Coele-Syria, where they had taken refuge after the expulsion of Jews in the siege of Jerusalem in 70 AD. Both his and Jerome's accounts represent them as partly Jewish and partly Christian, accepting the new covenant as well as the old. One of their main texts is the *Codex Nazaraeus*.

N'cabvah (Hebrew) *Něqēbāh* [from *nāqab* to hollow out, excavate] Cavity, pipe, or even a cavern, a phallic term applicable to the female, whether of beast or man, hence often used for woman or womb, equivalent to the Sanskrit *yoni*. Generally rendered female in English translations of the Bible, as in "God created man in his own image . . . male and female created he them" (Genesis 1:27). The words *sacr* together with *n'cabvah* comprise together a reference to the bipolarity in manifested nature, particularly as applicable to this globe; and in the phallic thought of a certain school of ancient Judaism intimately connected with an occult meaning of Jehovah as the so-called creator or bipolar producer; for the two words of which Jehovah itself is composed contain direct reference to original ideas of male-female, as birth-originator [*jah* or *jod* phallus + *hawwah*, *havvah* Eve, *yoni*] (cf SD 2:467).

Nebban or **Neibban** (Chinese) Equivalent to nirvana; often called *nippang* in Tibet.

Nebelheim. See NIFLHEIM

Nebo, Nabu, Nabi' (Hebrew) *Něbō* The proclaimer by prophecy; one of the chief deities of the Chaldean or Babylonian pantheon, the god of wisdom, recognized as fully by the ancient Hebrews as by the Chaldeans. The name and function of the divinity correspond to the Greek Hermes, the Egyptian Thoth, and the Hindu Budha, all of which are related to the regent of the planet Mercury.

Mercury throughout antiquity was always called the interpreter, often in the sense of a prophet or of one able to prophesy; Nebo from time immemorial has been the name for an initiate, an adept, particularly among certain Shemitic peoples, such as the Hebrews. Among other Shemites, such as the Assyrians and Chaldeans, this name forms a part of compound proper names, such as Nebuchadnezzar, Nabopolassar, and Nabonassar.

Nebo was among the Chaldeans and other peoples a god of the secret wisdom, and that particular divinity in those lands guiding the inner development of his children or little ones — names for initiated adepts.

The principal seat of his worship appears to have been at Borsippa (opposite the city of Babylon) where a temple-school flourished until the end of the neo-Babylonian empire — even surviving the conquest of Babylonia by Cyrus (538 BC). His original character cannot now be determined and he may have been a solar deity, although associated with water. His consort, Tashmit, is occasionally invoked with him. Nebo's worship flourished before that of Marduk (the Biblical Merodach, probably the planet Mars and its regent), and when the latter was elevated to the chief position of the Babylonian pantheon, Nebo was regarded as his son and the two thereafter are more or less inseparable. Even in Assyria the worship of Nebo was made more prominent than the chief deity, Assur ('Ashshur) by some of the monarchs (e.g., Assurbanipal, 668-626 BC). His hieroglyph was the stylus, for he was regarded as the god of writing, prophecy, sacred chanting, and hence of song, having charge of the tablets of fate, on which he inscribed the names of men and forecast their destiny. His wisdom was likewise associated with the study of the heavenly bodies, hence the temple-school became famed for its astrologers. "Nebo is a creator, like Budha, of the Fourth and also of the Fifth Race. For the former starts a new race of Adepts, and the latter, the *Solar-Lunar* Dynasty, or the men of these Races and Round. Both are the Adams of their respective creatures" (SD 2:456).

In the Bible Nebo is the name of a mountain near Jericho whereon Moses dies; also an adjacent city (Deut 32-4). "The fact that Moses is made to die and disappear on the mount sacred to Nebo, shows him an initiate and a priest of that god under another name . . ." (ibid.).

Nebu (Gnostic-Hebrew) The planetary genius of Mercury in the Ophite Gnostic scheme. The *Codex Nazaraeus* states that Nebu is "a false Messiah, who will deprave the ancient worship of God," according to Norberg (preface to his trans.)

Also, an alternative spelling of the Assyro-Babylonian god Nebo.

Nebula (Latin) Mist, cloud; in astronomy, cloudlike appearances seen at distances comparable to those of the fixed stars. A true or irresolvable nebula is said to be gaseous rather than a cluster of stars. Irresolvable nebulae are cosmic matter which has reached a plane of condensation where it is ready for building into worlds by the action of intelligent fohatic energy.

Dark nebulae are masses of unknown substance sufficient to obscure the light of the stars behind them. These are composed of primordial or dormant matter, or matter at times in a state of atomic dissociation. The kinetic activities of world-building in them have not yet begun, whereas the light nebulae represent the processes of building.

Theosophy holds that a nebula is the first stage of manifestation on the highest subplanes of the physical cosmic plane of the physical vehicle of a planet or star. Virtually all of the true irresolvable nebulae, however, are composed of matter which is hardly physical at all — physical matter in its 4th, 5th, 6th, or 7th state or condition counting upwards, and hence not the physical matter known and experimented upon in the laboratory.

Nebular Theory A theory of the origin of the solar system of Laplace, Herschel, and others, much in favor during the earlier part of the 19th century, but since fallen into disfavor. The hypothesis was devised to explain certain facts, especially that the planets all revolve in the same direction, that their satellites (except those of Uranus and Neptune) revolve around their primaries in this same direction, and that the planets so far as we know rotate in this same direction. The theory assumes the sun to have started as a very diffused, tenuous gas or nebula, extending much farther than its present volume. The combined influence of gravitation and of contraction by cooling resulted, in accordance with dynamic laws, in the separation of parts of the mass into rings, and these rings afterwards coalesced severally into planets; and their motions of revolution and rotation are thus according to this theory explained.

Better knowledge of the dynamic principles concerned has discredited the theory in its details; it conflicts particularly with the principle of the conservation of the moment of inertia and with the kinetic theory of gases. Moreover, the solar system is now seen to be more complex than had been supposed, the planetoids for instance having very eccentric motions.

In *The Secret Doctrine* Blavatsky credits the theory's authors with a great intuitional perception of certain cosmogonical facts, and to a certain extent approves the theory in its broad outline but not in its details. Any theory which attempts to explain the universe on purely mechanical principles can be no more than one of a number of possible systems of graphic representation. The attempt to abstract the physical universe from the universe in general, while useful for special practical purposes, does not conduct us to the truth; and this is preeminently the case with such a subject as the origin of the solar system and the motions of its parts. Yet the nebular hypothesis in certain of its main elements is in accord with theosophic teachings, insofar, for instance, as it glimpses the gradual condensation of matter from a tenuous condition, in its segregation around centers, and in the essentially circular character of motion.

In the theosophic view, not only the galaxy itself is alive — an animate organism — but likewise each and every solar system comprised in it is likewise alive and therefore an organism. The term *alive* comprises mind or intelligence and spirit. Thus not only is the sun alive, because it is the

body of a divinity, but likewise every one of the planets (excepting the moons) in the solar system is likewise an individual living entity, of which only the grossest or physical globe is apparent to our vision. The solar system, therefore, is a composite unit, formed of component individuals.

The nebular hypothesis was mainly rejected by the Masters and Blavatsky because of its typical materialistic and mechanical character. It is a fact that the solar system was originally formed from a vast nebula consolidating into the physical world from inner worlds — astral matter becoming physical matter — but guided by innate mind and life; and the various motions within the solar system arise from the innate vitality within it. Furthermore, although the planetary chains were originally born from this nebula, their respective life times are far shorter than that of the solar system itself, so that these planetary chains have their many reimpodiments during the life period of the solar system. Comets, if they survive, are usually destined to become planetary bodies in the solar system in their turn, running their life period, and then dying, to reappear as comets again after long ages of rest in inner worlds.

Ne-chung (Tibetan) *gnas chung*. The national oracle of Tibet, both the person and the monastery where he resides. The Nechung oracle is consulted in matters of extreme importance; most well-known is consultation to help determine the birthplace of a new Dalai Lama.

Necromancy [from Greek *nekros* corpse + *manteia* divination] The art of obtaining information by invoking the image or shade of the departed. The practice is dangerous to the sorcerer and baneful to the astral entity whose fading remnants are thus temporarily revived and disturbed.

The practice was ancient and widespread among the lower orders of the Greek and Roman peoples, and is expressly condemned by an uninterrupted testimony dating from archaic times, ancient legislators and philosophers condemning it, for it is a perversion of the real communion of the genuine spiritual theurgist with his own inner god. Modern Spiritualism is an unconscious blundering into necromancy; if the astral remains of the dead are really called up, then the normal processes of their dissolution are interfered with. If they are not called up, then they have been impersonated by still more harmful and dangerous denizens of the lower astral light.

Nefer-hetep. See KHENSU

Nehashim (Hebrew) *Nəḥāshīm* [from *nāḥash* to whisper, secrecy, silence, to practice magic, divine the future] Serpents, serpent's works; the study and practice of occult wisdom and magic. According to the *Zohar* (iii 302): “ ‘It is called *nehhaschim*, because the magicians (practical Kabalists) work *surrounded by the light of the primordial serpent*, which they perceive in heaven as a luminous zone composed of myriads of small stars’ . . . which means simply the *astral light*, so called by the Martinists, by Elephas Levi, and now by all the modern Occultists” (SD 2:409) — but it likewise shows the luminous zone as the Milky Way. The astral light is often referred to as the great deceiving serpent.

Nehhashim, Nehhaschim. *See* NEHASHIM

Nehhushtan. *See* NEHUSHTAN

Nehushtan (Hebrew) *Nēḥushtān* [from *nāḥash* to whisper, practice divination] A serpent, both actual and mystical, especially the brazen or brass serpent; Hezekiah “brake the images, and cut down the groves, and brake in pieces the brazen serpent that Moses had made: . . . and he called it Nehushtan” (2 Kings 18:4). Both the verbal root and its derivative nouns involve the meaning, not only of an omen or augury, but also enchantment, magic, incantation.

Neibban. *See* NIRVANA

Neith or Net (Egyptian) *Neith* or *Net*. One of the most ancient Egyptian deities, the Lady of the West. Her characteristic symbol is the arrow; later Greek writers equated her with Pallas Athene. In late dynastic times, Net was closely associated with Hathor, but in the earliest records she is connected with the primeval watery ocean or cosmic chaos, from which arose the sun god Ra. More often she was associated with Isis — her concrete or manifested self — being called “the great goddess, mother of all the gods, mistress of heaven who came into being in the beginning.” Net is portrayed as the virgin mother, suckling the infant Horus, similar to the representations of Isis. The famous passage given by Plutarch (*Isis and Osiris* ch 9) generally attributed to Isis, was said to have been found engraved upon a statue of Net. Plutarch also states that the Egyptians often called Isis Athene, signifying “I have come from myself” (ch 42).

When the Egyptians wished to depict Hephaestos they draw a scarab and a vulture, and when they want to represent Athene (Net) they draw a vulture and a scarab, for they believed that the world is composed of masculine and feminine forces, and these two deities are the only gods whom they believed to be both male and female.

Nekhebet (Egyptian) *Nekhebet*. A daughter of Ra, who in later texts becomes completely identified with Hathor, being styled the mother of the gods, she who brought forth light, etc. She and her sister Uatchit in the Underworld act as helpers of the dead. *See also* MUT

Nemesis (Greek) [from *nemo* distribute, allot] Originally a goddess of due proportion, who restores the proper order of things, but later used for the operation of divine wrath, for people who get their desserts tend to impute the wrath *they* feel to the divine law which allots. Nemesis has been called the retributive aspect of karma, yet in the earlier Greek writers she is the goddess who distributes both happiness and misery. It was only among the later writers that she became specially the punisher of crimes and the corrector of overweening exultation in good fortune. One of her names was Adrasteia, she whom no man can escape. But the idea of reward is, equally with that of punishment, man-made; for “Karma-Nemesis is the creator of nations and mortals, but once created, it is they who make of her either a fury or a rewarding Angel: (SD 1:642).

Nemesis is the automatic reestablishing of equilibrium brought about by the action of the human

being — a reestablishing as impersonal and impassive as the kosmic laws operating around us. Themis is the instinct for order and harmony which, when it is able to express itself in human life through man's active will, frees one from karmic necessity; for such harmony working in the human ego and faithfully followed is becoming at one with nature and following its inherent Law — which the word Themis means — of equilibrium. Human free will grows ever greater as it becomes the free will of the universe of which mankind is an integral and inseparable part. Thus, it is man who creates causes, and karma which adjusts the effects. *See also* KARMA-NEMESIS; MOIRA

Neolithic Man. *See* CAVE DWELLERS

Neophyte [from Greek *neophytos* newly-grown] One who, precisely because he has newly grown, is newly reborn, signifying one who has already passed successfully at least the first degree in initiation. Used for a novice in the Greek Septuagint and the New Testament, and often used for a candidate for initiation into the Mysteries, though not found in Greek literature in that sense; *mystae*, for example, describes neophytes or beginners who have already passed the first stages in initiation and who are therefore sworn to silence.

Neokoros (Greek) The custodian or guardian of a temple; in Greek Asia a title for a city, in reference to the deity venerated by that city with a temple: for example, Ephesus was a neokoros of Artemis.

Neoplatonism, Neoplatonists This famous school of Platonic theosophy originated in the 2nd century at Alexandria, with Ammonius Saccas (170-243), and was developed by his pupils, of whom Plotinus (204-270) was the outstanding philosopher and under whom Neoplatonism reached its culmination. Other famous representatives were Porphyry (the pupil of Plotinus, 233-305); Iamblichus (d. 330); Hypatia (d. 415); Synesius (378-430); Proclus (412-485); and concluding with Olympiodorus (6th century). Among other pupils of Ammonius Saccas were Longinus and Origen.

“The Neo-Platonists were the same as the Philaletheians and the Analogeticists; they were also called Theurgists, and by various other names. They were the Theosophists of the early centuries. Neo-Platonism is Platonic philosophy plus *ecstasy*, divine Raja-Yoga” (Key 340).

At the time that the Neoplatonists voiced their teachings, the Mediterranean world was in a condition similar in some respects to that of today: the Roman imperium had brought about a commingling of many cultures, ancient and modern, Eastern and Western, so that there was a suitable field for revival of the ancient wisdom-religion as the common source and reconciler of all faiths. Such a system may be called eclectic in a sense; but the expression is unjust if it is meant to imply a mere patchwork of borrowed fragments.

The declared purpose of the Neoplatonists was to demonstrate the reality of a fundamental wisdom, to draw together the elect of every faith, and likewise to sow the seeds for a unification of

faiths. The teachings are religious in the sense that they appeal to the religious instincts and inculcate the loftiest and purest morality; but on the other hand no church or creed was founded. The conditions of the times did not call for a scientific presentation of the ancient teachings; the regimentation of external life had turned men's hopes inward. Such a system could not be created by merely putting together borrowings from Plato and Pythagoras, the Jews, and Gnostics, etc. Behind the movement must have been minds initiated in the lore of ancient Egypt and India, and thus supplied with the design which alone could make a unity out of the elements. Through succeeding centuries, revivals of Neoplatonism have appeared, sometimes using the name itself. It deeply influenced the Christian church, not only in early times but later under the influence of the pseudo-Dionysius and still later of Erigena.

The teachings of the Neoplatonists are essentially those of modern theosophy; the later teachers of the schools laid much stress upon theurgy, and its practical aspect, the application of the teachings to self-development. Though these teachers emphasize the distinction between theurgy or divine magic and its evil counterpart, sorcery or necromancy, in so corrupt an age many deleterious cults supervened upon the withdrawal of the genuine schools.

Neopythagoreans The Pythagoreans of Alexandria and other cities on the Mediterranean coast in the 1st century with whom Apollonius of Tyana is often classed. As happened to the Neoplatonists, the atmosphere of the later Greco-Roman world was not conducive to abstract philosophy, and hence the tendency of the times produced the practical mysticism characterizing both the viewpoint of the Pythagoreans and the Neoplatonists. Both schools were highly philosophic and used abstract philosophic speculation; yet predominant in both was the yearning for the attainment of inner spiritual illumination by practices of physical abstinence and by purity of life.

Both schools, in fact, were in a very true sense a revolt against the degenerate religions and philosophies of the time, which had become almost wholly exoteric and ritualistic, and hence they strove to combine the teachings of speculative mystical philosophy with individual efforts at living the life. Extremists in each school, however, found that extremes meet, and therefore were in contact with the popular and widely spread magical practices of the multitude.

Nephesh (Hebrew) *Nefesh* [from *nāfash* to breathe, take breath] Originally the vital breath; by extension of meaning, the vital principle in living bodies; hence a living being itself, based on the fact that such a being has life. Again, the appetitive or animal soul as the seat of involuntary or unconscious volitions, the lower affections, and bodily appetites. Nephesh, therefore, corresponds almost exactly with the Greek psyche and Latin anima.

In the Hebrew Qabbalah, nephesh signifies the breath of life, the vital principle in conjunction with the emotions and passions, but modern Western Qabbalists have stressed the idea of the volitional aspect of the human constitution, wrongly making nephesh equivalent to manas rather than prana in the theosophical classification of human principles. Nephesh is the prana-kamic

principle. *See also* NEPHESH HAYYAH

Nephesh Hayyah (Hebrew) *Nefesh Ḥayyāh* [from *nefesh* the individualized anima or psyche + *ḥayyāh* a living being or thing, such as a beast or even the lower part of a human being] Also Nephesh Hhayyah. Used by Qabbalists for living soul, or the animal soul.

Nephilim (Hebrew) *Nēfīlīm* [from *nāfal* to fall] Giants (cf Genesis 4:4); any being, entity, or thing which falls from a higher to a lower estate, whether in the spirit, the astral, or the physical world. Thus the nephilim signify in one field of thought the manasaputras who fell into incarnation; also the human race at a later date which fell into physical generation; and other meanings implying descent. Termed Fallen Angels and equated with the third root-race and with the fallen ones of the fourth root-race (SD 2:279, 775). Theological tradition associates the nephilim with hairy men or satyrs.

Nephtys (Greek) **Nebt-het** (Egyptian) *Nebt-ḥet*. Lady of the house; an Egyptian deity, especially associated with the Underworld. Generally regarded as the daughter of Seb and Nut, sister of Osiris, Isis, and Set. In earliest times she is always Set's consort, giving birth of Anubis (Anpu). But more often she is mentioned with Isis, as the faithful sister. She was the personification of darkness; while Isis symbolized birth, growth, development, and vigor, Nephtys typified death, immobility, and the fountain of all. As in the case of Mut and Hathor, the darkness spoken of was the darkness of spirit as the womb of cosmic space, and hence the association of her name and attributes with death and the afterlife — death being the reservoir of all that has lived, and therefore the fountain of all that shall live in the future, the reproductions of the former. Isis represented the part of the world that is visible — hence the light or manifested part or day; Nephtys, or Neith, the part which is invisible — hence mystical, holy, and everlasting night, the precursor of day, and dark only because its mysteries in their fullness are utterly inscrutable to human intelligence. Thus one was associated with the things which are in manifestation, the other with those which are to come, or which forever are and produce what is to come.

Neqebah. *See* N'CABVAH

Nereus, Nereids Nereus pertains to the enclosed seas near Greece, in contradistinction to the ocean and the fresh waters. He is a later variant of Poseidon, the former ruling the sea in Atlantean times, the latter taking his place with the fifth root-race. The Nereids, the fifty daughters of Nereus, belong to the class of nature spirits presiding over water and recognized by various propitiatory rites. Like water spirits in general, they were beautiful maidens. Goats were sacrificed to them — a sign of their connection with the mysterious sign Capricorn.

Nature spirits include elementals both slightly developed and relatively highly developed, existing in widely diverse classes. There are elementals of high spiritual character possessing intellectual attributes and extensive sway over the kingdoms of nature; whereas others are but tiny elemental entities with relatively insignificant power.

Nergal (Chaldean) The Chaldean deity presiding over the realms of the dead. The entrance to his domain was through a large subterranean cavern named Aralu or Irkalla, which was under the special surveillance of the goddess Allatu (though his consort was Laz). His symbol was the lion, thus the colossal lions engraved upon edifices represented Nergal's guardianship. He was regarded as regent of the planet Mars.

As a deity with certain solar attributes, he was associated, especially in later times, with the summer solstice, and with the sun at its noon-day position, which was regarded as bringing calamities and destruction upon mankind. Thus Nergal became also associated with wars and pestilences.

In the Bible Nergal is named as an idol of the Cuthites (2 Kings 17:30). He "is also the Hebrew name for the planet Mars, associated invariably with ill-luck and danger. Nergal-Mars is the 'shedder of blood.' In occult astrology it is less malefic than Saturn, but is more active in its associations with men and its influence on them" (TG 228).

Nerig (Gnostic) The planetary genius of Mars, according to the Ophite Gnostic scheme.

Neros or **Naros** [from Chaldean] A period of years, a cycle; generally considered to consist of 600 terrestrial years. There was a great, a middle, and a less neros, with the less equaling 600 years. But the secret length of this cycle has never been divulged. It is commonly supposed that the neros was one-sixth of the saros, consisting of 3,600 years.

Nervous Ether The name given by Dr. Benjamin Ward Richardson to a hypothetical fluid or medium regarded by him as intervening between the minute structural elements of the human body and serving as the means of interaction between these elements. Dr. Richardson was a highly honored 19th century English physician, and his views though unorthodox commanded respect. He used the word ether in a way similar to that in which it was used by physicists: if the elements of a body are regarded as separate from one another, a medium of some sort must account for their mutual actions. Such a medium must differ in certain respects from ordinary physical matter, so whether it is a form of matter or of energy is left open. This theory is one of a numerous family — vital fluid, animal magnetism, odic force — a loose generalization covering a great many things, or as a first crude guess. It is inadequate compared with the complex analysis of the bodily structure and functions presented by Hindu books.

Prana and linga-sarira are general terms for the energetic and vehicular aspects of our physical constitution, and Dr. Richardson's nervous ether in many respects fits in with both of them. But the scientist begins with the physical structure, which he assumes as a self-existent basis, and then proceeds to add something to it; while the theosophist begins with the life principle and derives the physical structure from it. For the latter, every cell, every atom, is a living unit, endowed with its own power of movement; and no outside nervous ether need be added for the production of the

phenomena of life or vitality.

Neshamah (Hebrew) *Něshāmāh* [from *nāsham* to breathe] Used in the Qabbalah as an equivalent for the highest principle of the human constitution — not so much the purely abstract atman, as the highest duad atma-buddhi — rendered spirit or sometimes spiritual soul. Often mistaken as meaning the vital principle in the human body, which is properly rendered by the Hebrew hai. The mistake arose because the neshamah is spoken of as the breath of God, hence it is properly called the divine afflatus.

Even the vital essence of the lower part of the human constitution is in its origin the reflection or shadow of neshamah: or, in modern theosophical terms, the pranas are the representation on the lower planes of atma-buddhi in man.

Nesku. See NUSKU

Netsah, Netsahh, Netzah, Netzach (Hebrew) *Netsah* Firmness, permanence, sincerity; the seventh Sephirah, also called Victory, regarded by Qabbalists as the emanation of the preceding six Sephiroth. It is classed as a masculine active potency and forms the base of the right pillar of the Sephirothal Tree. Its Divine Name is Yehovah Tseba'oth; in the Angelic Order it is represented as the Tarshishim (brilliant ones). In its application to the human body, it is regarded as the right pillar or leg; applying it to the seven globes of our planetary chain it corresponds to globe E (SD 1:200). From this Sephirah is emanated the eighth, Hod.

Nf-Nz

Nidana (Sanskrit) *Nidāna* [from *ni* down, into + the verbal root *dā* to bind] That which binds, to earth or to existence, philosophically speaking. Originally meaning bond, rope, halter — that which binds. From this arose the implication of binding cause, or bonds of causation, and hence in Buddhist philosophy it signifies cause of existence, the concatenation of cause and effect. The twelve nidanas given as the chief causes are: 1) jati (birth) according to one of the chatur-yoni, the four modes of entering incarnation, each mode placing the being in one of the six gatis; 2) jara-marana (decrepitude) and death, following the maturity of the skandhas; 3) bhava, which leads every sentient being to be born in this or another mode of existence in the trailokya and gatis; 4) upadana, the creative cause of bhava which thus becomes the cause of jati, and this creative cause is the clinging to life; 5) trishna (thirst for life, love, attachment); 6) vedana (sensation) perception by the senses, the fifth skandha; 7) sparsa (the sense of touch) contact of any kind, whether mental or physical; 8) shadayatana (the organs of sensation) the inner or mental astral seats of the organs of sense; 9) nama-rupa (name-form, personality, a form with a name to it) the symbol of the unreality of material phenomenal appearances; 10) vijnana, the perfect knowledge of every perceptible thing and of all objects in their concatenation and unity; 11) samskara, action on the plane of illusion; and 12) avidya (nescience, ignorance) lack of true perception.

Nidana is also a title of Brahma, considered as the first cause, being the kosmic living aggregate of vital bonds forming the universe into an organic whole; reproduced through its own internal energies from the preceding manvantara.

Nidhi (Sanskrit) *Nidhi* A treasure; the nine divine treasures or jewels of Kuvera, the Vedic Satan, each under the guardianship of some demon — or rather a spirit more of the nature of the Greek daimon. These nine nidhis are popularly given as padma (lotus), mahapadma (great lotus), sankha (conch shell), makara (marine animal or fish), kachchhapa (tortoise), mukunda (kettle drum), nanda (joy), nila (a dark color or blue), and kharva (dwarf). They are sometimes personified as

attendants of Kuvera or of Lakshmi.

All these nidhis are the objects of special worship by the Tantrikas. They differ from the nava-nidhi, or nine treasures or jewels of wisdom referring to a consummation of spiritual development in occult training, occult life, or mysticism generally. In theosophy the “seven jewels of wisdom” are seven of the nine nava-nidhi.

Nidhogg (Swedish) **Nidhoggr** (Icelandic) [from *nid* down, libel, contumely + *hogg* to hew, chop] In Norse myths, the “gnawer from beneath,” the serpent which gnaws at the roots of the Tree of Life and which in due course will overthrow the mighty ash tree Yggdrasil and bring the life cycle to a close. There are nine such serpents, just as there are nine trees of life and nine matter giants, Mimer, indicating the Edda’s multiple system of worlds.

Nidhogg is also the devourer of the dead who sucks cadavers at the end of the world. When the gods leave for their own spheres at Ragnarok, Nidhogg absorbs the dregs of a defunct universe.

Nidra (Sanskrit) *Nidrā* Sleep or slumber; also a feminine aspect or form of Brahma.

Niflheim (Icelandic), **Nebelheim** (German) [from *nifl* mist, nebula + *heim* home] In Norse mythology, the home of mists in which nebulae form. When the heat from Muspellsheim (home of fire) meets the mist-cold vapors of Niflheim in Ginnungagap (the gaping void), Ymer, the frost giant, comes into being. He is used by the gods to create “victory worlds” wherein souls can evolve. Niflheim has also been regarded as a Hades where the dead are sent, but this appears to refer to the disposition of the forms (bodies) of departed souls.

Niflhel (Icelandic) [from *nifl* mist, nebula + *Hel* queen of the realms of death, daughter of Loki (mind)] In Norse myths, this realm of unliving matter comprises worlds of death and decay beneath our own, where substances that once built former worlds are ground to mist, recycled for use in worlds yet to come. In the Edda a giant is said to have come from worlds beneath Niflhel, which suggests an ancient, even beginningless past, unfathomed depths of matter from which progress is made toward future unimaginable heights of spirit.

Niflung(ar) (Icelandic) [from *nifl* mist, nebula + *unge* child] Children of the mist; in the Norse Edda comparable to the Sons of the Firemist of the Stanzas of Dzyan (SD 1:86). Beings that were part of earth’s primordial, nebular history before humanity had become distinct physical beings. They were succeeded by increasingly material races, among them the Volsungar (children of *volsi* phallus) representing a later stage of development after the separation of mankind into male and female. The tales of the Nibelungen give little of the broader import found in the Edda.

Nighantu, Nighantuka (Sanskrit) *Nighaṅṭu, Nighaṅṭuka* [from the verbal root *ghaṭ, ghaṅṭ* to collect, bring together] A glossary; particularly in the plural, the Vedic glossary explained by Yaska in his nirukta or glossarial commentary.

Night In ancient cosmogonies night is placed before day because these cosmogonies begin with the secondary cosmic creation; and the light which was then created was contrasted with what seemed, relatively, the eternal darkness of primary creation. For manifested light proceeds from absolute light, which by contrast has to be called darkness.

In a Hindu scheme, the first body of Brahma is called his body of night, and from it proceeded the three highest groups of pitris, the asuras or sons of wisdom; while the four lower classes of pitris proceeded from the body of twilight.

Night also refers to pralaya as in the Day and Night of Brahma. Night thus signifies that which precedes the opening, coming, and fulfillment of manifestation, called the day. These days and nights pertain directly to the coming into being of a universe, of which in boundless space the number is infinite. Thus, when a universe is in pralaya, it can be said to be in its night or time of sleep, yet surrounded by the illimitable kosmos itself infilled with universes in all phases of evolutionary growth.

Nilakantha (Sanskrit) *Nīlakaṇṭha* The blue-necked, a name for a peacock, also for Siva because his throat turned bluish-black from swallowing the poison produced at the churning of the ocean, in order to save humanity. The name of many authors in India.

Nilalohita (Sanskrit) *Nīlalahita* The blue and the red; a title of Rudra, the destroyer of the blue and red races (cf SD 2:192).

Nile God. See HAP

Nimbus (Latin) A cloud, a luminous atmosphere surrounding a high adept or deity when appearing on earth. In Oriental and Christian art the representations of deities or saints have a nimbus surrounding the head. Equivalent to aureole, glory, aura, halo, and the feathers on the head and down the spine of American Indian chiefs.

Any being in a state of high spiritual and intellectual ecstasy is surrounded with a glory or brilliant, coruscating aura, which at times can even be perceived by the physical eye; sometimes this nimbus or glory surrounds the head more particularly, and at other times it surrounds the entire body. It is shot through with colors coruscating and flashing brilliantly in a most beautiful fashion, because the vital aura which surrounds every animate being in times of spiritual ecstasy is stimulated to unusual activity, and thus surrounds the being with splendor. The sun in the heavens is a cosmic example, for the floods of sunlight which it pours forth are the vital aura, nimbus, or glory surrounding the solar heart. The adoption of the nimbus surrounding the heads or entire bodies of the Christian saints was a clear case of borrowing from the Orient, because from time immemorial the nimbus has been used there to signify spiritual ecstasy, as exemplified in large numbers of Buddhist images.

Nimitta (Sanskrit) *Nimitta* In Vedanta philosophy, the spiritual or efficient cause as contrasted

with upadana, the physical, material, or instrumental operative cause. Brahma is shown to be the nimitta of manvantaric manifestation.

Nimrod (Hebrew) *Nimrod* The traditional founder of the kingdom of Babylon, known in Babylonia as Izdubar or Gilgamesh. According to the Bible, the son of Cush; in legend a mighty hunter (Genesis 10:9). The name Nimrod has not been found prior to the period of the Israelites (500 BC). Blavatsky equates him with Bacchus, and calls him “the most powerful and strongest of physical men on this side of the flood — the last remnant of the antediluvian giants” (IU 1:150).

Nine Especially significant when regarded as a triad of triads, it is the number which reproduces itself in multiplication. “It is the sign of every circumference, since its value in degrees is equal to 9, *i.e.*, to 3+6+0. It is a *bad* number under certain conditions, and very unlucky. If number 6 was the symbol of our globe ready to be animated by *a divine spirit*, 9 symbolized our earth informed by a *bad* or evil spirit” (SD 2:581).

As nine is one less than ten, in a denary hierarchy it is all the units except the first, the first being regarded as the origin or synthesis of the emanated nine. Thus one and nine may represent spirit and matter, or unmanifest and manifest, a logos and its rays. In the Stanzas of Dzyan svabhavat is the numbers one and nine, which make the perfect ten; and the same is seen in the ten Sephiroth of the Qabalah, where Kether the Crown is often considered apart from the other nine. It was an especially favorite number in Norse mythology, appearing continuously throughout the Eddas.

In a denary system of hierarchies, in which the ending of one is the beginning of the subsequent hierarchy, we have actually a series or scale of nines. Many properties assigned to nine pertain to its position in the decimal scale. In many languages the word for nine is similar to that for new — Sanskrit navan, nava; Greek ennea, neos; Latin novem, novus; German neun, neu — which apprises us that nine has been considered from immemorial time the number of change or renovation, for it is followed by the complete number making 10, or springs from the monadic unit also making 10 — in either case the reckoning enters upon a new decimal series.

Ninib (Babylonian) A Chaldean deity originally with solar attributes, especially prominent at Shirgulla, where he was closely associated with Bel and regarded as his son. In hymns he is described as a healing god who releases men from illness. But he was also classed as a god of war, and represented as armed for the chase. The aspect stressed was the sun at the morning and the springtime season, showering beneficence upon mankind.

Theogonically, Ninib was regent of the planet Saturn, and the animal symbol connected with him was the swine.

Ninus In Greek mythology, founder of the city of Nineveh; hence also a name of the city itself. Ninus is regarded as the son of Belos (Bel) who founded the first empire after conquering the western part of Asia with the help of Ariaeus, king of Arabia.

Nina was the name given to the city by the Assyrians, as well as to Ishtar, patroness deity of Nineveh.

Niobe In Greek mythology, daughter of Tantalus, and wife of Amphion of Thebes. She arrogantly compared herself, with 14 children, to Leto who had but two — Apollo and Artemis. These two killed Niobe's children, and she was turned into a rock.

In one interpretation Niobe represents an Atlantean race, and her seven sons and seven daughters are its branches. She descends from the Atlantides, representative of the doomed continent. Her children are slain by Apollo and Artemis, representing the sons of will and yoga; and she was changed into a stone from which has flowed an unceasing stream — an allusion to the rivers of lives broken up into the various races and branchlets forming the living flowing stream of human existence.

Niramsa (Sanskrit) *Niraṃśa* [from *nir* without + *aṃśa* part] Without parts, whole; applied to Brahman or parabrahman, signifying the state preceding differentiation in manifested hierarchical existence.

Nirguna (Sanskrit) *Nirguṇa* [from *nis* destitute, without + *guṇa* quality] Devoid of qualities or properties; often applied to the cosmic hierarch as being itself without definable properties, and yet the origin of all the gunas which produce the manifested universe. Thus parabrahman or even Brahman is nirguna, whereas the manifested Brahma possesses gunas (attributes) and therefore is spoken of as saguna (with attributes).

Nirmanakaya (Sanskrit) *Nirmāṇakāya* [from *nirmāṇa* forming, creating + *kāya* body, robe, vehicle] Appearance body; the lowest of the trikaya, followed by sambhogakaya and dharmakaya. A state assumed by a bodhisattva who, instead of entering nirvana, remains on earth to help inferior beings. “A Nirmanakaya is a complete man possessing all the principles of his constitution except the Linga-sarira, and its accompanying physical body. He is one who lives on the plane of being next superior to the physical plane, and his purpose in so doing is to save men from themselves by being with them, and by continuously instilling thoughts of self-sacrifice, of self-forgetfulness, of spiritual and moral beauty, of mutual help, of compassion, and of pity” (OG 114). Beings in this state make a wall of protection around mankind, which shields humanity from evils.

There are two kinds of nirmanakayas: the natural is the condition of a high initiate who reaches a stage of bliss second only to nirvana; the assumed is the self-sacrifice of one who voluntarily gives up the absolute nirvana in order to help and guide humanity. The nirmanakaya, then,

“is that ethereal form which one would assume when leaving his physical he would appear in his astral body — having in addition all the knowledge of an Adept. The *Bodhisattva* develops it in himself as he proceeds on the Path. Having reached the goal and refused its fruition, he remains on Earth, as an Adept; and when he dies, instead of going into Nirvana,

he remains in that glorious body he has woven for himself, *invisible* to uninitiated mankind, to watch over and protect it. . . . to be enabled to help humanity, an Adept who has won the right to Nirvana, ‘renounces the *Dharmakaya* body’ in mystic parlance; keeps, of the Sambhogakaya, only the great and complete knowledge, and remains in his *Nirmanakaya* body. The esoteric school teaches that Gautama Buddha with several of his Arhats is such a *Nirmanakaya* . . .” (VS 96-7).

See also TRAILOKYA; TRIKAYA; TRISARANA

Nirmathya (Sanskrit) *Nirmathya* [from *nir* out of + the verbal root *math* to produce fire by friction from wood] “The sacred fire produced by the friction of two pieces of wood — the ‘fire’ called *Pavamana* in the Puranas” (TG 231).

Nirriti (Sanskrit) *Nirṛti* [from *nir* the verbal root *ṛ* to go out, dissolve, decay] Dissolution, destruction; often personified in the Vedas as the goddess of death and decay. Virtually synonymous with pralaya.

Nirukta (Sanskrit) *Nirukta* [from *nir* forth, out + the verbal root *vac* to speak, utter] Uttered, pronounced, expressed, defined; as a noun, the etymological interpretation of a word, also the name of such works, especially of a commentary on the Nighantus (a Vedic glossary) by Yaska, the oldest commentary on the Vedas presently known.

Nirupadhi (Sanskrit) *Nirupādhi* Without an attribute or vehicle; Purusha and prakriti (spirit and matter) are said to be nirupadhi during pralaya when beyond any of the planes of manifested existence.

Nirvana (Sanskrit) *Nirvāṇa* [from *nir* out, away + *vāṇa* blown from the verbal root *vā* to blow] Blown out, blown away; the monad’s freeing itself of the chains of all its inferior parts, so it can enter into relatively perfect wisdom and peace. It thus is, for the time, living in its own spiritual essence, a jivanmukta. One in this state understands essences exactly as they are, because the consciousness has for the time being become co-extensive and co-vibrational with the cosmic monad. He is free from the trammels of all the worlds of maya which he has thus far passed through.

“When our great Buddha — the patron of all the adepts, the reformer and the codifier of the occult system, reached first *Nirvana* on earth, he became a Planetary Spirit; *i.e.* — his spirit could at one and the same time rove the interstellar spaces *in full consciousness*, and continue at will on Earth in his original and individual body. For the divine Self had so completely disfranchised itself from matter that it could create at will an inner substitute for itself, and leaving it in the human form for days, weeks, sometimes years, affect in no wise by the change either the vital principle or the physical mind of its body. By the way, that is the highest form of adeptship men can hope for on our planet. But it is as rare as the

Buddhas themselves . . .” (ML 43).

Nirvana has also been called the vanishing point of differentiated matter. The purely nirvanic state is an assimilation with parabrahman, a passage of spirit back to the ideal abstraction of Be-ness which has no modifying relation with the manifested planes on which our universe exists during this manvantara. Being “blown out” refers only to the lower human principles, not to entitative annihilation.

Nirvana is also “the state of the monadic entities in the period that intervenes between minor manvantaras or Rounds of a Planetary Chain; and more fully so between each seven-Round period or Day of Brahma, and the succeeding Day or new Kalpa of a Planetary Chain. At these last times, starting forth from the seventh sphere in the seventh Round, the monadic entities will have progressed far beyond even the highest state of Devachan. Too pure and too far advanced even for such a condition as the devachanic felicity, they go to their appropriate sphere and condition, which latter is the Nirvana following the end of the seventh Round” (OG 115-16).

Nirvana, devachan, and avichi are states rather than localities, forming a continuum of consciousness from the superspiritual to the nether pole of the spiritual condition. There are nirvanas of different degrees: one so high that it blends insensibly with the condition of the cosmic hierarch of our universe. The lower degrees of nirvana, however, are attained at intervals by highly spiritual and very mystically-inclined people, who have had intensive spiritual training. They enter for a very short period into this state, but usually cannot remain there for long.

“Nirvana, while the Ultima Thule of the perfection to be attained by any human being, nevertheless stands less high in the estimate of mystics than the condition of the Bodhisattva. For the Bodhisattva, although standing on the threshold of Nirvana and seeing and understanding its ineffable glory and peace and rest, nevertheless retains his consciousness in the worlds of men, in order to consecrate his vast faculties and powers to the service of all that is. The Buddhas in their higher parts enter the Nirvana, in other words, assume the Dharmakaya-state or vesture, whereas the Bodhisattva assumes the Nirmanakaya-vesture, thereafter to become an ever-active and compassionate and beneficent influence in the world. The Buddha indeed may be said to act indirectly and by ‘long distance control,’ thus indeed helping the world diffusively or by diffusion; but the Bodhisattva acts directly and positively and with a directing will in works of compassion, both for the world and for individuals” (OG 116-17).

Nirvana-dharma (Sanskrit) *Nirvāṇa-dharma* [from *nirvāṇa* blown out, superspiritual state + *dharma* law, duty, justice, conduct] The path of nirvana, or the law of nirvana.

Nirvanic Anglicized adjectival form of nirvana.

Nirvanin, Nirvani (Sanskrit) *Nirvāṇin* One who enters, or has entered, nirvana; a jivanmukta. One

who is liberated for the remainder of the entire solar manvantara from the cycle of spiritual transmigrations through the various spheres of being, visible and invisible. The nirvanin, therefore, rests in crystallized bliss and purity, relatively at one with the cosmic spirit or Logos for the remainder of the cosmic manvantara and throughout the long pralaya which succeeds it. Only when the next manvantara opens will the nirvanin, through karmic necessity, be obliged to enter the pathways of experience in the new system of worlds. Also nirvanee.

Nirvva namastaka (Nirvana-mastaka?) The ability of a high adept to produce from within his focus of consciousness or to exteriorize from it a substitute on a lower plane, which thereafter functions in all respects as would the full inner spiritual person were he present in the vehicle in which the substitute is acting. It is the same power but on a higher plane which enables the adept to transfer his mayavi-rupa to different parts of the earth, and to act in it; a power which in Tibetan is called hpho-wa.

Nisan (Hebrew) *Nīsān Nisanu* (Babylonian) The first month of the Hebrew year (after the exile), corresponding to 'Abib (March-April), during which the Passover was celebrated.

Nishada (Sanskrit) *Niṣāda* The seventh of the seven primary notes of the Hindu musical scale. *See also SHADJA*

Nishkrama (Sanskrit) *Niṣkrama* [from *nis* away from + the verbal root *kram* to go, set forth] Going forth, hence leaving the worldly life; renunciation.

Nissi (Babylonian) One of the seven great gods, each of whom was the producer of a race of men.

Nitatni (Sanskrit) *Nitatni* One of the seven Pleiades.

Niti (Sanskrit) *Nīti* [from the verbal root *nī* to lead, guide] Right, wise, or moral conduct; the doctrine of ethics and of proper conduct in life.

Nitrogen Used to denote the familiar earthly element, and also its noumenon, of which it is the terrestrial manifestation. Thus, when air is said to stand for nitrogen in the enumeration of the four elements and when that which on earth is nitrogen is called the Son in the trinity Father-Mother-Son, it is evidently the noumenon which is meant (SD 1:253, 623). Nitrogen is also correlated with linga-sarira among the four lower principles.

Nitrogen plays the part of a vehicle, so far as oxygen of the air is concerned, but plays an extremely important part in plant life. The elements on earth are compound, being several generations below their original parents; and the gross elements contain all the subtle elements, but differ from each other in that each contains one of the subtle elements in a predominant proportion. It is often the subtle element that is meant when the word nitrogen is used in *The Secret Doctrine*.

Nityamuktas (Sanskrit) *Nityamukta-s* [from *nitya* continuous, always + *mukta* freed, emancipated]

Always emancipated, continuously emancipated; an Indian sect, the Madhvas, believe that all souls are divisible into three kinds, of which one is the *nityamuktas* who, whatever mischief or evil they do, because of their nature will inevitably be admitted into Vaikuntha, the abode of Vishnu. This is rejected by the principal Hindu philosophical schools and by Krishna in the *Bhagavad-Gita*.

Nityanarakikas (Sanskrit) *Nityanāarakika-s* [from *nitya* continual, perpetual + *nāarakika* an inhabitant of hell] Perpetual hellions, a class of people said by the Madhvas to be predestined to go to perdition, a doctrine rejected by the main Hindu philosophical schools.

Nitya-parivritti (Sanskrit) *Nitya-parivṛtti* [from *nitya* constant, continuous + *pari* around + the verbal root *vṛt* to turn, revolve, whirl] Continuously or constantly whirling, revolving, or wandering around in the spheres of manifestation, and sinking constantly lower and farther from the light of spirit. Mystically, a continuous descent towards extinction. The farther from the sun of spirit a monad or jiva wanders or is whirled, the less of the light of spirit shines through it, so that the monad is lost or extinguished in the whirlpools of material existence. The idea is identical with that of the Hebrew *gilgulim* (whirlings) of the Qabbalah.

Nitya Pralaya (Sanskrit) *Nitya-pralaya* Constant or perpetual destruction of all that is; continuous dissolution, taking place imperceptibly and without cessation in everything from sun or planet to the atom. It is continuous change, which can take place only by the destruction of the preceding condition or state, a state in which the indwelling entity remains, while its various principles and vehicles undergo incessant change. *Nitya* thus has no absolute reference to time period, but rather to unceasing, continuous changes or modifications of living things or beings, to growth and decay, life and death, as exemplified by the continuous change of the cells of our bodies.

Nityasamsarikas (Sanskrit) *Nityasamsārika-s* Those who are destined to be perpetually attached to worldly or mundane existences, a doctrine of the Madhvas, rejected by the main Hindu philosophical schools.

Nitya-sarga (Sanskrit) *Nitya-sarga* [from *nitya* continuous + *sarga* from the verbal root *srj* to emanate, flow forth, create] The endless productive or generative activity of the universe; and within any universe, the continuous creation or productive activity, from within outwards, of the emanative force of the cosmic hierarchy or cosmic monad. The opposite of *nitya pralaya*.

Nivritti (Sanskrit) *Nivṛtti* [from *ni* back + the verbal root *vṛt* to roll, turn, unfold] Involution of matter and the consequent evolution of spirit, used to express the process by which matter rebecomes spirit, ascending along the luminous arc back to the spiritual worlds. It is the process of inwrapping or infolding of monads into matter, or of matter-lives back into the spiritual realms.
See also PRAVRITTI

Nivritti-marga (Sanskrit) *Nivṛtti-mārga* [from *nivṛtti* infolding + *mārga* path, way] The path that leads through unfolding back to the spiritual worlds; often called the path of light or luminous arc.

See also PRAVRITTI-MARGA

Niyama (Sanskrit) *Niyama* [from *ni* the verbal root *yam* to hold back, curb] Restraining, checking, controlling, especially the wandering, erratic mind. The second of eight steps of meditation in Hindu yoga: restraint of the mind or religious observances of various kinds, such as watchings, fastings, prayings, penances, etc.

As a proper noun, necessity or law personified as a son of Dharma and Dhriti; also a name of Vishnu.

Niyashes. See NYAYIS

Nizam (Turkish, Urdu) [from Arab *nidam*] Title corresponding somewhat to prince, hereditary in the rulers of Haiderabad of the dynasty founded by Asaf Jah.

Nizir (Chaldean) The mountain to which the ark of Xisuthrus finally became moored in the Babylonian account of the flood; equivalent to the Hebrew Mt. Ararat.

Njord (Icelandic) A Norse deity, corresponding to Saturn of other mythologies and to Cronos (time). Njord is the father of Frey (the earth god), and Freyja (goddess of Venus, patroness of earth's humanities); he is the patron of commerce and traffic, of agriculture and fishery. His home (globe) is named Noatun (ships' harbor).

Of Njord is told a legend like that of Moses: as an infant he was set adrift on a sheaf of wheat and surrounded with his father's weapons; under the name Scaef he landed on the earth and became the instructor of humanity in the skills of agriculture and the arts.

Noah (Hebrew) *Noah* [from *nūah* to come to rest, be at rest, reach rest, settle down into repose] Biblical patriarch, son of Lamech, connected with the flood which overwhelmed the earth, as related in Genesis 7-9. According to Hebrew legend, he and his family alone survived the deluge by means of an ark, which he had been commanded to build and to place therein a pair of every living thing upon the earth. The Hebrew narrative is based upon that of Babylonia. These universal flood legends are derived from the historical catastrophe which befell Atlantis.

Noah stands for the present fifth root-race, as Enoch stands for the fourth, "thus symbolizing both the *Root-Manu* and the *Seed-Manu*, or the Power which developed the planetary chain, and our earth, and the *Seed Race* (the Fifth) which was saved while the last sub-races of the Fourth perished" (SD 2:597). Noah is connected with cyclic time periods and can be applied to shorter or longer cycles. Thus, there is a Noah for every root-race and for every globe of a planetary chain, and what might be called the chain-Noah, when the chain itself goes into pralaya.

Again, "the story of Noah is but another version in its hidden meaning of the story of Adam and his three sons, . . . Adam is the prototype of Noah. Adam *falls* because he eats of the forbidden fruit of *celestial knowledge*; Noah, because he tastes of the *terrestrial* fruit: the juice of the grape

representing the abuse of knowledge in an unbalanced mind. . . . But the descendants of both are shown as the wisest of races on earth; and they are called on this account ‘snakes,’ and the ‘sons of snakes,’ meaning the *sons of wisdom*” (IU 2:449). *See also* XISUTHRUS

Node [from Latin *nodus* knot] Astronomically, the two points of intersection of the orbit of a planet with the ecliptic, or the two points of intersection of the orbit of a satellite with the plane of the orbit of its primary. The point at which the moving body is going north is called the north node or ascending node; the other is the south or descending node. These nodes have a motion opposite to that of the moving orb, and it is very slow in comparison with the speed of the moving orb. The spinning of a gyroscope illustrates the matter. The moon’s nodes revolve in 18.6 years; they are known in Hindu astrology as Rahu and Ketu, the Head and Tail of the dragon. They are also used in modern astrology. These nodes, and those of the planets with reference to the ecliptic, mark important cycles of time. The period of the moon’s nodes is not commensurate with the period of the moon’s revolution; approximate coincidence of the two cycles marks eclipses.

Noetic [from Greek *noetikos* from *nous* mind] Pertaining to intelligence and spiritual reason, apart from mere mental ratiocination based upon appearances or the senses. The psychic part of our mind, the *kama-manas*, is intimately blended with the physical organism, and the interaction between the two seems to justify the conclusion that we move in a vicious circle under the sway of forces difficult to control when we center our consciousness in the psychic part of our constitution. However, by taking into account the noetic part of the human constitution, the *buddhi-manas*, which is independent of the sensual and emotional influences from the psychic nature, and by centering our consciousness in this noetic part of our being, we are at all times and in all places able fully to control, master, and therefore direct, the vigorous and erratic movements of the psychic nature. The noetic mind, because it is of a spiritual character, has no direct action on the physical brain or nervous system, but acts through the psychic part of the mind, and even then only through the finer elements of the cerebral and nervous texture.

Nofir-hotpoo [Nefir-Hetep]. *See* KHENSU

Nogah (Hebrew, Chaldean) *Nogah* [from *nāgah* to give light, shine, illuminate] Shining brightness, splendor, used for the light of the sun, moon, and stars; also applied to Lucifer the light-bringer — the shining morning star Venus. Used sometimes to signify the glory by which God is surrounded.

Nominalists, Nominalism [from Latin *nomen* name] In the 11th century, Scholastic controversy arose between the Nominalists and Realists, as to whether substantive reality should be ascribed to particulars or to universals. The Nominalists held that nothing exists but individuals, and that universals are mere names invented to express the qualities of particular things. Thus the conception “man” is a mere abstract idea, a figment of the mind, devised to express certain qualities which we have abstracted from our experience of individual men, but having no existence except as a name. The Realists, on the contrary, maintained that universals alone have

substantive reality, and that they exist independently of, and prior to, the individuals, which are derivative from them or expressive of them. The controversy dates back to Aristotle's question as to whether genera, species, and abstract nouns are real or only convenient abstractions and ways of speaking.

Intermediate between these doctrines is that of the Conceptualists, identified with the name of Abelard, who held that universals, while they exist only in the mind, yet correspond to real similarities in things, which previous to creation existed in the mind of God. These notions are well illustrated by the question as to the meaning of such words as motion, force, heat, or light. Are the things studied by science under those names generalizing terms, existing only in the mind and posterior to the objects which manifest them; or are they realities in themselves, prior to the objects, and of which the objects are manifestations? Science often unconsciously uses such words in both senses at once; force, for example, is treated as though it were at the same time a result of motion in matter and a cause of that motion.

Theosophy, because of the confusion arising in scholastic and modern disputes, points directly to all the phenomena of nature as expressed in beings, objects, entities, and things as arising in spiritual realms, or noumena. The hidden or invisible noumena of beings and things are both real and mere abstract names. Thus force — electricity, for instance — is both an existing emanation from cosmic entities, and yet also a “name” or abstraction because it is an aggregate of effects derivative from a hid cause which is the cosmic being or beings. All natural phenomena arise in and are therefore derivative from and emanations from causal and originating cosmic intelligences, which perdure in essence throughout eternity, but express themselves by means of phenomena or effects in cosmic manvantaras. Thus the phenomena which human intelligence cognizes are transitory but yet are real in their essence, because that essence lies in the perduring intelligence or intelligences from which they flow.

Non-being Used to express the condition of things in pralaya, preceding manifestation. It corresponds to the Sanskrit *asat*, while *sat* corresponds to Being. Yet both non-being and *a-sat* are frequently used for non-existence. It is philosophically questionable to bracket non-being with the Absolute, or again to bracket Absolute with Being (though the latter is often justifiable) as the words absolute, being, and non-being do not correspond to infinity; for Absolute corresponds to the Sanskrit *mukti* or *moksha*, that which is freed from manifested existence; whereas infinitude comprehends both nonmanifestation and manifestation, being and non-being, *sat* and *asat*, the absolute and the bound. One of the best correspondences to infinity is the term coined by Blavatsky: *Be-ness*, or pure abstract attributeless *esse*.

Non-being signifies the condition of the universe during pralaya, and the spiritual principles of the universe may then be said to be in their absolute condition or state, or in *paranirvana*; equally being in its most abstract sense can correspond to absolute. Hence it is correct to use non-being as

the state of high spirituality of a being or entity in paranirvana; thus the phrase “the bliss of non-being.”

Non-ego In European metaphysics, that which is external to or other than the ego; the object as opposed to the subject. Non-ego means both that which has risen above all lower egoities and become universal in its consciousness — in other words a jivanmukta, a monad which has attained mukti or moksha; and that which is beneath the state of egoity in its evolutionary development, in which this egoity has not yet been emanated or brought forth, such as the minerals, plants, and nearly all of the animal. Non-ego, therefore, in another sense corresponds to the term Absolute, that which is freed or above the circumscribing limitations of even egoity, which nevertheless is the abstract self or individual; or paradoxically enough the monad or ego in its jivanmukta form, where the ego becomes one with the surrounding cosmic spirit, while retaining its own individuality.

No-number The Boundless, the Unmanifest, pure non-being, the cosmic zero in symbolism; from which proceeds the first manifest or number one, the cosmic monad, the latter the Absolute of its universe, these universes in infinity or no-number being innumerable.

Noo. See NU

Noor Ilahee, Nur Illahi (Arabic) *Nur Illahī*. The light of the Elohim; divine knowledge, the light of the secret wisdom.

Norns [from Icelandic, Scandinavian] In the Norse Edda the three Norns, sometimes called the weird sisters, are the spinners of destiny, symbolizing past, present, and future. The first, named Urd (origin), represents the past which causes all that follows; the second, Verdandi (becoming), is the ever-changing present. These two fashion the third, Skuld (debt), all that is as yet unresolved and which determines the future. Thus the actions of past and present determine what is yet to come.

The Norns dwell under one of the three roots of Yggdrasil, the Tree of Life, which is watered by the spring of Urd (past causes). So also is every individual tree of life, large or little, watered by the causes created in the past, modified by the choices of the present, and helping to create the future.

When a human being dies, his life is judged by Odin Allfather at the well of Urd and on her advice the post-mortem condition is determined on the basis of the quality of the life just past. Before birth the soul once again visits the well of Urd, who then selects a mother for its coming birth into the world of earth.

The norns correspond to the Greek Moirai who also spin the thread of life for all beings.

North One of the four points of the compass, which mystically correspond with the cosmic four Maharajas, the four supporters of the world, the four sacred animals, etc. It is the upper pole of the

earth and corresponds with the upper pole in the human body. From it, mystically, come light and vital strength. From the north, as the primordial cradle of physical man, came gods, religions, myths. In early human history, surrounding the north pole was the Imperishable Sacred Land, the first continent; and somewhat farther south was the second continent, the so-called Hyperborean. It is from the north generally that new waves of rough but uncorrupted peoples have invaded decadent civilizations. To the cultures of such civilizations the influence from the north appears as hostile. Greek mythology speaks of the violence and ruthlessness of Boreas, the north wind. The contrast between the north and south poles resembles that between the spiritual and material poles. Mount Meru, in Hindu mythology, is placed at the north pole.

North Pole. See POLES, TERRESTRIAL AND CELESTIAL

Notaricon, Notarikon (Hebrew) *Nōṭārīqōn* [from Latin *notarius* stenographer] Writing down, used for that branch of study known as the literal Qabbalah. One method of notaricon consists in selecting a word and then taking each of its letters to stand for another whole word, thus making of the letters of the selected word a whole sentence. The first word of the Bible (*bereshith*) is a favorite one so employed. A second method consists of using the first and last letters of a selected word to form another word; or the two medial letters of the selected word. Needless to say, this method is solely one of individual skill and is a most difficult method for interpreting the Hebrew sacred scriptures.

No-thing. See NON-BEING, NO-NUMBER

Nought. See NON-BEING; ZERO

Noum. See KHNUM

Noumenon [from Greek *noeo* to perceive with the mind, think; cf *nous*] Plural **Noumena**. An object perceived by the mind apart from the senses, an object of cognition. Also the unknown real entity, substance, or essential thing-in-itself, which the mind perforce posits as the basis of the phenomenon, appearance, or objective thing; hence reality as distinguished from apparent or sensible qualities. Thus aether or akasa is called the noumenon of ether; noumena are the conscious guiding causes behind the physical cosmic forces and elements. The emphasis is upon consciousness and intelligence as opposed to mere appearances, or to the conception of the blind forces and inert elements of materialism. Behind every phenomenon must lie a noumenon: the former is the intelligent cause, the latter the produced effect or appearance.

Noun. See NUT

Nous (Greek) [from *noos* from the verbal root *no, gno*, cf Sanskrit *jñā*, Latin *nosco, gnosco*, German *kennen*, English *ken, know*] Mind; especially enlightened spiritual intelligence (*buddhi-manas*) as contrasted with the mere lower mind or ratiocinative faculty, deluded as it always is by passion and ignorance.

Platonic philosophy speaks of the soul (psyche) as able to ally itself either with divine mind (nous) or with passion (thymos); thus we have the same distinction as between buddhi-manas and kama-manas. Sometimes, however, psyche is used without qualification as the lower mind in contrast with the higher mind or nous.

Nout. *See* NUT

November One of the twelve months of the European year received from the Romans. All Saints Day (November 1) of the Christian calendar, which replaced, especially in Celtic lands, a previous festival dedicated not only to all the dead, and especially the worthy dead, but likewise to endings — an idea connected with death. “The Druids understood the meaning of the Sun in Taurus, therefore, when, while all the fires were extinguished on the 1st of November, their sacred and inextinguishable fires alone remained to illumine the horizon . . .” (SD 2:759).

Now A fundamental concept of the theosophical philosophy is the Eternal Now. The past lingers in the memory and the future is ever vanishing from the present into the past: only Now eternally exists. In the case of man, at any given moment he is the result of what he has fashioned himself to be out of all preceding moments; his future will therefore be the working out of his previous thoughts and actions, and one by one these disappear into what to us is the past, and yet is always present. These philosophical reflections apply universally.

“The three periods — the Present, the Past, and the Future — are in the esoteric philosophy a compound time; for the three are a composite number only in relation to the phenomenal plane, but in the realm of noumena have no abstract validity” (SD 1:43).

“Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration, and it does not exist where no consciousness exists in which the illusion can be produced; but ‘lies asleep.’ The present is only a mathematical line which divides that part of eternal duration which we call the future, from that part which we call the past. Nothing on earth has real duration, for nothing remains without change — or the same — for the billionth part of a second; and the sensation we have of the actuality of the division of ‘time’ known as the present, comes from the blurring of that momentary glimpse, or succession of glimpses, of things that our senses give us, as those things pass from the region of ideals which we call the future, to the region of memories that we name the past” (SD 1:37).

Nox (Latin) **Nux** (Greek) In Hesiod Chaos produces Erebus and Nux (darkness and night), from whose union under the action of Eros spring Aether and Day. Mystically darkness precedes light and generates it, because what we even in the highest reaches of our spiritual imagination refer to as light is a phenomenon, however sublime, belonging to the realms of manifestation; whereas darkness is that primordial essence of cosmic spirit-consciousness so utterly beyond even the

highest ranges of our spiritual conception that it seems to us to be dark. Actually from one standpoint, this darkness is absolute light, and the light of all manifested realms is its shadow.

Nu or **Noo** (Egyptian) *Nu* or *Noo*. The primeval cosmic deep, described in the Egyptian creation as a watery mass in a state of perduring, intense activity, eternally in motion in its structural detail yet eternally quiescent as a whole. Shu and Tefnut, the two firstborn deities, arose from Nu, the father. The Eye of Nu is the sun — any sun or star. In later dynasties there was also a god called Nu the son of Ra, referring to the solar system considered as the sun's kingdom and as the waters of the cosmic kingdom infilled with Ra's life. The ancient Hebrew in Genesis had the same conception when they spoke of the face of the deep over which brooded the soul of the 'elohim.

Numa Second of the so-called legendary kings of ancient Rome who, with Romulus, belongs to the class of eponymous ancestors, heroes, and instructors seen by us but dimly, which are met with in the traditional history of so many peoples. In Numa's case there has undoubtedly been considerable adaptation, even among the ancients themselves, as to dates, localities, and other accessories, due to the requirements of historians who were compiling a consecutive account of their people's ancestry and beginnings. It may even be that Numa is a generic name, standing for a dynasty or class of teachers, much as the names Solomon and Zoroaster did. The fables and myths that have come down to us about Numa show him to be one of those early initiated founders of civilizations and culture. Among all Romans, ancient and later, he was universally respected and regarded almost as the father of Latin civilization. As Romulus represents conquering might, so Numa stands for a succeeding period of consolidation and instruction. He is the teacher, not only of religion but of scientific arts. Tradition connects him with Pythagoras and the Etruscan hierophants. Romulus suggests the attributes of Aries, the first sign of the zodiac and the house of Mars; while Numa suggests the next sign, Taurus, a quiet sign under Venus and the Moon. He was the lawgiver, representing the second stage in the formation of a culture.

Number People usually think of number as merely a varying multiplicity of units, a plurality of individuals, which is correct enough. Yet "Number lies at the root of the manifested Universe: numbers and harmonious proportions guide the first differentiations of homogeneous substance into heterogeneous elements; and number and numbers set limits to the formative hand of Nature" (BCW 12:517) — a strictly Pythagorean vision and conception. Our reasoning minds lend a spurious reality to abstractions; and from this viewpoint the genuine realities appear in the guise of such abstraction. Number is such an apparent abstraction; we know it only by its effects in that world which seems to us so real, and of which we regard number as an attribute. Yet nothing can be more fundamental than number. As Balzac said, number is an entity, a divinity; the creative Logos itself is called the Number, meaning number one, arising out of no-number or the zero. After this we have the duad, triad, etc. For the Pythagoreans number was a creative, emanationally formative power, and the Hebrew *Sepher Yetsirah* (Numbers of Creation) gives out the whole process of evolution in numbers, while in China the *I Ching* speaks of celestial numbers. All

esoteric systems set great store by numbers — some systems more so than others. For “we see the figures 1, 3, 5, 7, as perfect, because thoroughly mystic, numbers playing a prominent part in every Cosmogony and evolution of living Beings” (SD 2:35). *See also* SEPHIROTH

Nuns Women of any age vowed to a celibate and meditative life. Nuns have existed in organized communities in all parts of the world, apparently in all ages, for there were convents or similar groups in ancient Egypt, Rome, Hindustan, Greece, ancient Peru, and elsewhere. Before the nuns, who in Christendom were consecrated to the Virgin Mary, there were the Vestal Virgins of Rome, the maidens of Isis in Egypt, and the Devadasis of the Hindu temples, who originally “lived in great chastity, and were objects of the most extraordinary veneration” (IU 2:210). “They were the ‘virgin brides’ of their respective (Solar) gods. Says Herodotus, ‘The brides of Ammon are excluded from all intercourse with men,’ they are ‘the brides of Heaven’; and virtually they became dead to the world, just as they are now. In Peru they were ‘Pure Virgins of the Sun,’ and the *Pallakists* [Pallakides] of Ammon-Ra are referred to in some inscriptions as the ‘divine spouses’ ” (TG 234).

Nuntius, Nuntium (Latin) Messenger; applied to Mercury as messenger of the gods. *See also* HERMES

Nusku (Babylonian) Prominent Babylonian and Assyrian deity of light and fire, very closely associated with the god Girru or Gibil. As in other countries, fire was regarded as the great purifier, along with Ea, the god of water; hymns were addressed to him as the great cleanser from diseases and illness. Nusku-Girru represented both heavenly and terrestrial fire. He was regarded as the son of Anu, the deity of the heavenly spaces; but at Harran, in Assyria, he was regarded as the son of the moon deity Sin. Because of the connection of fire with productivity and birth, he held a position of the family god somewhat parallel to that of the Lares and Penates in ancient Rome.

Nut (Egyptian) *Nut*. Also Noot, Noun, Nout, Nu. Goddess of the sky or cosmic space — whether of the solar system or the galaxy — daughter of Shu and Tefnut, wife of Seb (the cosmic earth or outspread space), mother of Osiris and Isis, and of Set and Nephthys or Neith; the heavens personified. Some manuscripts distinguish between Nut, the day sky, and Naut, the night sky, although the two are but lower and higher aspects of one cosmic divinity. Her attributes partake of those of the other nature goddesses in the Egyptian pantheon: she is addressed as Lady of Heaven, who gave birth to all the gods. The favorite representation of Nut is of a woman bending so that her body forms a semicircle — a part of the endless circle of space — upon which the stars are portrayed, while her consort, Seb, prostrate beneath her, completes the circle. Again, the solar boat is represented sailing up over the lower limbs, in order to pursue its journey over the day sky; and sailing down her arms to complete its cycle in the night sky.

Nut is an important goddess of the Underworld and figures largely in the *Egyptian Book of the Dead*. She is one of the twelve deities who judge the deceased. Her office was to supply food and

water, enabling the one entering the Underworld (Tuat) to rise in a renewed body, even as Ra, the sun god, arose from the egg produced by Seb and Nut. Thus, wherever possible, the sarcophagus had the figure of the goddess represented upon it, her protective wings spread over the deceased, her hands holding the emblems of celestial water and air.

The Greek nous

“was the designation given to the Supreme deity (third *logos*) by Anaxagoras. Taken from Egypt where it was called *Nout*, it was adopted by the Gnostics for their first conscious AEon which, with the Occultists, is the third *logos*, cosmically, and the third ‘principle’ (from above) or *manas*, in man. . . .

“In the Pantheon of the Egyptians it meant the ‘One-only-One,’ because they did not proceed in their popular or exoteric religion higher than the *third* manifestation which radiates from the *Unknown* and the *Unknowable*, the first unmanifested and the second *logoi* in the esoteric philosophy of every nation. The *Nous* of Anaxagoras was the *Mahat* of the Hindu Brahma, *the first manifested Deity* — ‘the Mind or Spirit self-potent’; this creative Principle being of course the *primum mobile* of everything in the Universe — its Soul and Ideation” (TG 234).

Some of the most abstract attributes connected with Nut place her at times as the Second Logos; but because the Second contains the Third Logos, and therefore the Mother being in a sense identical with her Daughter, it follows that not infrequently the attributes of Nut place her as the higher portion of the Third Logos.

Nux. See NOX

Nyaya (Sanskrit) *Nyāya* The first of the six Darsanas or Hindu schools of philosophy. This school has been called the Analytic or Logical School; nevertheless the title of the school would rather mean synthesizing by way of analogy or apposite likenesses, and hence it could equally well be called the synthetic or constructive method of reasoning. Nyaya is applicable to its method of treating all subjects, physical and metaphysical, rather than to its aims. This school has entered thoroughly into the laws and processes of ratiocinative thought, and in consequence has worked out a formal system of reasoning which forms the Hindu standard of logic.

The Nyaya school draws a clear distinction between matter and spirit, and has developed a careful and ingenious system of psychology. It distinguishes between the jivatmans, which are virtually infinitely numerous and eternal, and paramatman, which is one only, the kosmic hierarch, and therefore the seat of eternal wisdom and, so far as its own hierarchy goes, the Isvara (lord) of all things therein. The Nyaya is said to have been founded by the sage Gautama or Gotama.

The Vaiseshika school, founded by the sage Kanada, considered a contemporary of this Gautama, is sometimes considered to be a branch of the Nyaya school because the two schools in their

teachings supplement each other. The Vaiseshika is also called the Atomistic School, because it teaches the existence of a transient or illusory universe composed of aggregations of everlasting atoms or life-atoms, which are really but the vehicular expressions of the jivatmans of the Nyaya.

Nyayis (Persian) *Nyāyis*, **Nyayishn** (Pahlavi) *Nyāyishn*. To worship, serve; the five prayers in the Avesta, addressed to the sun, Mithra, moon, waters, and fire. The Nyayises of the sun and of Mithra are recited three times a day by the followers of Zoroaster; that to the moon, three times a month — when the moon is new, full, and on the wan; that to water and fire are recited every day when one is in the proximity of these elements.

Nyima (Tibetan) The sun in Tibetan astrology.

Nyingpo (Tibetan) *snying po*. Essence, pith, heart, equivalent to the Sanskrit hridaya; has all the senses of the English word heart. Applied particularly to the universal intelligent essence, alaya, which is “the basis of every visible and invisible thing, . . . though it is eternal and immutable in its essence, it reflects itself in every object of the Universe . . .” (SD 1:48). Hence it corresponds to the world-soul. In Tibet it likewise frequently is called tsang.

Nymph [from Greek *nymphē* bride] Applied to a numerous order of nature spirits, regarded as feminine, pertaining to water, mountains, trees, etc. They are undeveloped entities, occupying their own place in the evolutionary ladder, and finding their material vehicles in various natural objects. Both the Greek *nymphē* and the Latin *nympha* have the transferred meaning of water.

Oa-Oz

Oannes (Assyrian-Babylonian) A deity, half man, half fish, who rose every day from the Persian Gulf and taught the people wisdom, the arts and sciences, agriculture, etc. Identified with the deity Ea and also called Dagon (Dāgôn) and Annedotus. A somewhat similar story is related in the Sanskrit *Hari-Purana* about Vishnu during his Matsya-avatara (fish incarnation).

“There were Annedoti who came after him, five in number (our race being *the fifth*) — ‘all like Oannes in form and teaching the same’; but Musarus Oannes was the first to appear, and this he did during the reign of Ammenon, the third [fourth] of the ten antediluvian Kings whose dynasty ended with Xisuthrus, the Chaldean Noah. . . . This allegory of Oannes, the Annedotus, reminds us of the ‘Dragon’ and ‘Snake-Kings’; the *Nagas* who in Buddhist legends instruct people in wisdom on lakes and rivers, and end by becoming converts to the good Law and *Arhats*. The meaning is evident. The ‘fish’ is an old and very suggestive symbol in the Mystery-language, as is also ‘water.’ Ea or Hea was the god of the sea and Wisdom, and the sea serpent was one of his emblems, his priests being ‘serpents’ or Initiates. Thus one sees why Occultism places Oannes and the other Annedoti in the group of those ancient ‘adepts’ who were called ‘marine’ or ‘water dragons’ — *Nagas*. Water typified their human origin (as it is a symbol of earth and matter and also of purification), in distinction to the ‘fire Nagas’ or the immaterial, Spiritual Beings, whether celestial Bodhisattvas or Planetary Dhyanis, also regarded as the instructors of mankind. The hidden meaning becomes clear to the Occultist, once he is told that ‘this being (Oannes) was accustomed to pass the day among men, teaching; and when the Sun had set, he retired again into the sea, passing the night in the deep, *‘for he was amphibious,’* i.e., he belonged to two planes: the spiritual and the physical. For the Greek word *amphibios* means simply ‘life on two planes,’ . . . The word was often applied in antiquity to those men who, though still wearing a human form, had made themselves almost divine through knowledge, and lived

as much in the spiritual supersensuous regions as on earth. Oannes is dimly reflected in Jonah, and even in John, the Precursor, both connected with Fish and Water” (TG 236-7).

'Ob (Hebrew) *'Ob* Also aub. A necromancer, one who “calls up the dead” in order to learn from them future events; secondarily, the spirit of divination in the necromancer; and thirdly, the apparition, shade, or kama-rupa itself which is raised. 'Ob is “the messenger of death used by the sorcerers, the nefarious evil fluid” (SD 1:76), the lowest aspect of the astral light — “or rather, its pernicious evil currents” (TG 237). As the astral light in its lower aspects was sometimes symbolized by a serpent, so was 'ob often thus symbolized. As signifying the powers of darkness, the denizens in the lower regions of the astral light, and the evil and immoral practices of necromancy, it is the opposite of the Shemitic word 'or (light, glory; to enlighten, inflame with wisdom and knowledge), used also for mystic revelations and the communication of esoteric truth.

Obeah, Obi [probably from African] Also obea, oby. The sorcery practiced by sub-Sahara Africans, and sometimes found in the New World.

Obryn (Welsh) The second stage in Abred or the circle of transmigration, intermediate between Annwn (the elemental kingdoms) and Cydfil (the animal kingdom). It therefore includes the mineral and vegetable kingdoms.

Obscuration A state of sleep or dormancy of greater or less extent, that prevails between two successive periods of activity on a globe of a planetary chain as the life-waves succeed one another in their serial rounds on such a chain.

“A globe when a Life-wave leaves it does not remain in obscuration or continuously dormant until the same Life-wave returns to it in the next Round. The Life-waves succeed each other in regular file, and each Life-wave as it enters a globe has its period of beginning, its efflorescence, and its decay, and then leaves the globe in obscuration so far as that particular Life-wave is concerned. But the globe within a relatively short time receives a succeeding Life-wave, which runs through its courses and leaves the globes again in obscuration so far as this last Life-wave is concerned, etc. It is obvious, therefore, that a period of obscuration on any globe of the Planetary Chain is much shorter than the term of a full Planetary Round” (OG 118).

Obscuration should not be confused with pralaya, dissolution or death; obscuration is rest or dormancy, analogous to sleep:

“cyclic pralaya so-called are but *obscurations*, during which periods Nature, *i.e.*, everything visible and *invisible* on a resting planet — remains *in statu quo*. Nature rests and slumbers, no work of destruction going on on the globe even if no active work is done. All forms, as well as their astral types, remain as they were at the last moment of its activity. The ‘night’ of a planet has hardly any twilight preceding it. It is caught like a huge mammoth by an

avalanche, and remains slumbering and frozen till the next dawn of its new day — a very short one indeed in comparison to the ‘Day of Brahma’ ” (SD 2:660n).

See also SISHTAS

Obsession The act of besieging, or the state of being bothered or besieged by a foreign personality, especially by an evil spirit, before demonic possession. This condition is found among the sufferers from insanity, epilepsy, hysteria, drug addiction, dipsomania, severe asthmas, and mediumship; these sufferers are found to be suitable, negative instruments or vehicles through which disembodied entities of strong desire can contact sensuous life. Sometimes, even where organic degeneration is found to be present, questions arise whether this is the cause or the effect of continued nervous and mental wrongs. These latter are striking evidence of the vexing or besieging influence which appears in varying degrees, of restlessness with inner tension, of clouded consciousness, inhibition of will, unusual irritability, vague fears, suicidal impulses, epileptic befogged states, and sudden impulsions, criminal and otherwise. In these disorders those afflicted, although karmically sensitive to psychic conditions and influences, often retain enough normal resistance against surrendering to abnormal control to account for the many-sided inner conflict of the siege. This subjective conflict is sometimes disclosed, as in a patient who, subject to attacks of impulsive violence, anticipates them and asks to be restrained. Thus, psychiatrists note that in the insane, the will power to resist wrongdoing is usually lost before moral judgment is gone. Sometimes the inner man knows that he is not sane and longs for help, but cannot make himself understood.

What are technically classified as obsessing ideas and feelings are evidence of the subjective reality of the astral plane and its disembodied entities. Knowledge of man’s multifold nature, including the parts played by each of its principles both during life and after death, gives a key to many psychological problems in the postmortem survival of the kama-rupa. The differing aspects of obsession result from the varied types of the astral entities — ghosts or shades of the dead, elementaries of suicides and executed criminals, evil sorcerers, nature spirits, etc. The kama-rupic shells alone, being remnants of deceased personalities, differ as the latter had done in their embodied desires and impulses. The variety of obsessing influences accounts for the medley of typical symptoms in conditions of inert melancholia, of sustained catalepsy, of violent mania and convulsions, of emotional egoism in hysteria, of childish grimaces and erratic muscular contractions in essential chorea, of subjective horrors in delirium tremens, and of the perverted brutality in purposeless, unhuman crimes. Though only a seer’s inner vision could reveal just what entity was active in each case, yet a student of human duality can recognize the unseemly and distorted play of the animal, lower nature, separated from the conscience and higher mind — the kama-rupic condition. Mild types of these disorders frequently are simply the uncontrolled play of the person’s own selfish nature; but these are in danger of drifting into the severer forms, because like attracts like. *See also* POSSESSION

Ocean of Milk. See KURMA-AVATARA

Oceanus (Greek) *okeanos*. Probably “swift-flowing”; according to Hesiod one of the titans, children of Ouranos and Gaia (heaven and earth), who by his marriage with the titan Tethys became father of all rivers and waters. In ancient exoteric geography he was himself a mighty river encircling the supposedly flat disk of the earth; the notion of a vast reservoir of stationary water is derivative and does not pertain to the original meaning.

The original idea of Oceanus parallels that contained in the Hindu Puranas concerning the various oceans and islands which surround the earth. Oceanus at first was the ocean of space, which the Hebrews called the waters of space, surrounding all celestial bodies. The reference is likewise to the invisible realms and spheres which mystical thought often grouped under the idea of an environing as well as interpenetrating system of fluid spheres or worlds, the meaning behind the oceans and islands of the Puranas. Ancient Greek mythology states that on the banks of Oceanus are the abodes of the dead, making clear that the reference is not to physical geography but to secret teaching dealing with both the Overworld and the Underworld, with the invisible spheres, planes, and realms of the universe.

Occult Arts Blavatsky in “Occultism versus the Occult Arts” (Studies in Occultism), distinguishes between occultism (*gupta-vidya*, the path of wisdom) and occult arts (evil occultism, sorcery, black magic, spells, incantations, etc.). While true occultism completely renounces self, the occult arts are practiced with selfish motives or from love of evil. Even where there is no sinister motive in one who ventures upon the occult arts, yet he enters a field where danger and destruction threaten unless he is protected by a training in true occultism. He will arouse in himself forces with which he cannot cope, open doors which later he seeks in vain to close, and put himself at the mercy of evil wills probably stronger than his own.

Occultism [from Latin *occultus* hid] The science of things behind the veils of nature both visible and invisible, things hidden from the multitudes. In theosophy frequently synonymous with the esoteric philosophy or secret doctrine. The study of genuine occultism signifies penetrating deep into the *causal* mysteries of universal being; the occult arts, by contrast, include psychism, black magic, hypnotism, psychologization, and similar uninstructed or malevolent uses of astral and mental forces.

The term *occult* has noble, but largely forgotten origins. It properly defines anything which is undisclosed, concealed, or not easily perceived. Early theologians, for example, spoke of “the occult judgment of God,” while “occult philosopher” was a designation for the pre-Renaissance scientist who sought the unseen causes regulating nature’s phenomena. In astronomy, the term is still used when one stellar body “occults” another by passing in front of it, temporarily hiding it from view. Writing a century ago, when the word had not acquired today’s mixed connotations, H.P. Blavatsky defined occultism as “altruism pure and simple” — the divine wisdom or hidden

theosophy within all religions.

As the study or science of things which are hid and secret, occultism is a generalizing term because what is hid or secret in one age may readily be in a succeeding age more or less commonly known and open to public investigation. Many things that in medieval Europe were distinctly secret and therefore occult, are today the field of scientific investigation; and what is now considered to be occult, if science continues in its progress and research, may in the succeeding age in its turn become open and matter of common knowledge. Occultism then will simply have shifted its field of investigation and study to matters still more secret, still more recondite, still more deeply hid in fields of nature which are now scarcely suspected.

Theosophy or the wisdom-religion is the study of the ancient wisdom of the gods, and comprises in any one period that particular portion of knowledge which has been delivered to those who study it; whereas occultism in any age is that portion of the ancient wisdom dealing with matters which at such time are secret, hid, and unknown to the multitude. Thus occultism is that portion of theosophy which has not yet been openly and publicly promulgated. Occultism is founded on the principle that Divinity is concealed — transcendent yet immanent — within every living being. As a spiritual discipline occultism is the renunciation of selfishness; it is the “still small path” which leads to wisdom, to the right discrimination between good and evil, and the practice of altruism.

Occult Sciences The whole range of the sciences of the secrets of nature — physical, psychic, mental, and spiritual; also

“called Hermetic and Esoteric Sciences. In the West, the Kabbalah may be named; in the East, mysticism, magic, and Yoga philosophy, which latter is often referred to by the Chelas in India as the *seventh* ‘Darshana’ (school of philosophy), there being only *six* Darshanas in India known to the world of the profane. These sciences are, and have been for ages, hidden from the vulgar for the very good reason that they would never be appreciated by the selfish educated classes, nor understood by the uneducated; whilst the former might misuse them for their own profit, and thus turn the divine science into *black magic*” (TG 237).

Od; Odylic or Odic Force [*od* poss from Hebrew *'ud* to surround, enclose as by a mist, emanation, or cloud] Names given by Baron Karl von Reichenbach, German industrialist and chemist, to a cosmic force or fluid which he believed he had discovered (1845). His extensive experimental investigations on the luminous emanations from the human body, from magnets, plants, and minerals, aroused much interest among students of animal magnetism. But his results depended upon the evidence of sensitives, often invalids and people in the somnambulant condition and, as is usual under such circumstances, do not coordinate well with results obtained by others. This class of phenomena cannot be considered as entirely objective, so much being dependent on the seer. He made too broad generalizations on too narrow a basis; he was, unconsciously to himself, working with effects originating largely on the astral plane and, in spite of its delusiveness, he did

discover some facts which can be related to what theosophists call prana and the astral light; but he lacked the power and knowledge to coordinate them and thus to render his researches of practical use.

Od is also used, together with the Hebrew words ob ('ob) and aour ('or), by Eliphas Levi to denote aspects of the astral light. Ob is a well-known word for sorcery and necromancy, for a sorcerer or necromancer, as well as occasionally signifying an astral shade or spook. Aour, on the contrary, signifies light, brilliance, and hence revelation and the light of initiation.

Odacon (Babylonian) The fifth Annedotus (Dagon or Oannes), a man-fish who appeared from the deeps of the ocean to teach humanity. In the Babylonian description of the instructors and teachers of early humankind, their fishlike form is connected with their origin in the waters of space — spiritual beings taking human form and appearing out of the deeps of cosmic ether.

Oder. See ODR

Odic Chord The astral body, model-body, or linga-sarira is connected with the physical body by an extensible chord of astral-vital substance, which allows the astral to separate locally from the physical for a certain distance, as happens in sleep and trance, without severing the actual connection. When the chord is severed, however, physical death ensues. This chord is called magnetic and odic — words borrowed from the speculations of Reichenbach and the animal magnetists — for want of a better term.

Odin (Icelandic, Scandinavian) [from *Wodan* from *odr* cosmic mind; cf Greek *nous*, Sanskrit *mahat*] As a god, foremost of the aesir in Norse mythology; as a human being, the founder of the ancient Norse religion. Odin is the Great Sacrifice of our world system, hung or mounted on the Tree of Life throughout its duration, seeking runes of wisdom in the material worlds, “raising them with song” and at the end of time falling once more from the tree. He is said to have given one eye as forfeit to the matter-giant Mimer for the privilege of partaking of Mimer’s well of wisdom: experience in material life. Thus matter receives a part of divine vision during the god’s imbodiment.

As creative spirit Odin and his brother creators, Vili and Vi (will and awe), give rise to the worlds in manifestation. At the creation of humanity, Odin again participates with two creative energies on a lower level, Honer and Lodur (water and fire). Odin gives the breath of spirit, Honer mind, and Lodur vitality to the incipient humans.

In the myths Odin rides the eight-legged steed Sleipnir, wears a blue fur coat, and is the owner of a marvelous ring, Draupnir, from which eight more drip every ninth night, symbolizing proliferating cycles of every kind. His spear is named Gungnir (swaying), perhaps an allusion to the pendulum swing between life and death which is nature’s eternal way. Odin has two wolf hounds (the animal nature), Gere (greedy) and Freke (gluttonous); he feeds them, but himself

subsists on wine or mead (wisdom) alone. His two ravens, Hugin (mind) and Munin (memory), fly daily over the battlefield Vigridsslatten (plain of consecration, earth), and report back to Allfather by night.

Odin's hall is named Valhalla (hall of the chosen), where his heroes are brought by the Valkyries (crowners of the chosen) to feast with Yggjung (the ever-young, Odin).

As a planetary deity Odin is connected with Mercury, and his day is Wednesday (Woden's day). He has many names, each fitting the role he has to play. At the beginning of a life cycle he is named Ofner (opener), while at the end he is called Svafner (closer). Blavatsky refers to the human Odin as "one of these thirty-five Buddhas; one of the earliest, indeed, for the continent to which he and his race belonged, is also one of the earliest" (SD 2:423).

Odr (Icelandic) Mind, wit, soul, sense; in Norse mythology, cosmic mind, corresponding to the Sanskrit mahat. The name Odin is derived from it when Odin represents the Allfather. In one legend reminiscent of the Egyptian tale of Isis, Odr is the husband of Frigga, who weeps golden tears as she searches the worlds for him. Here he may stand for one of the divine ancestors of the human race, and his long journeys are the peregrinations made by the monad, Odr's spiritual aspect, through the worlds of form and matter. Odr is used for song or poetry in many compound words such as odar-smidr (song smith), odar-ar (speech oar, the tongue), odraerir (inspirer of wisdom, the vessel containing the blood of Kvasir: inspiration brought to the gods from higher gods).

Oeaoahoo Also Oeaihu, Oeaihwu. A very ancient form of the sacred and mystical holy name as it occurs in the Stanzas of Dzyan. These seven letters stand for seven vowels, and according to the method of pronunciation the name may be given "as *one*, three, or even seven syllables by adding an *e* after the letter *o*" (SD 1:68). The pronunciation is somewhat similar to the Chinese tones (kungs): the spelling of a word is the same, but according to the tonal value or stress given, its meaning alters.

This word is a way of expressing the cosmic life in all its seven, ten, or twelvefold divisions, each letter of the seven referring to one of the cosmic principles or elements. Their union into a single term calls attention to cosmic unity. It is a representation for the six manifested and the one unmanifested, thus making the mystic seven principle-elements of our home universe. Oeaoahoo the Younger is the reflection or mirroring on a lower plane of the universal unity; and therefore Oeaoahoo the Younger is, strictly speaking, the Logos considered as a triad and thus really comprising the First or unmanifest, the Second or partially manifest, and the creative, manifest, or Third Logoi.

Corresponding to Kwan-shai-yin, Oeaoahoo "contains in himself the Seven Creative Hosts (the Sephiroth), and is thus the essence of manifested Wisdom" (SD 1:72). In the human constitution, Oeaoahoo the Younger is the higher triad of atma-buddhi-manas, with an emphatic pointing to the

atman as the predominant life in this higher triad. Similarly so as regards the kosmos or universe. The meaning of one of its permutations, Oi-ha-hou, is “among the Eastern Occultists of the North, a circular wind, whirlwind; but in this instance, it is a term to denote the ceaseless and eternal Cosmic Motion; or rather the Force that moves it, which Force is tacitly accepted as the Deity but never named. It is the eternal *Karana*, the ever-acting Cause” (SD 1:93n).

The Gnostics used the seven vowels of the Greek alphabet AEHIOY-O on their gems; and in the *Pistis Sophia* the Rabbi Jesus in speaking to his disciples says: “Nothing therefore is more excellent than the mysteries which ye seek after, *saving only* the mystery of the seven vowels and their forty and nine powers, and their numbers thereof; and no name is more excellent *than all these vowels*” (SD 2:564).

Blavatsky gives several variants of the spelling of this word and the modern spelling is of minor importance; what is important is to get the mystic or metaphysical philosophical meaning behind the word.

Oedipus (Greek) *Oidipous*. Swollen-footed; Theban hero, son of Laius, named by the shepherd who found him with his feet swollen from the holes bored in them when he was exposed by his father, as it was predicted that he would kill his father and marry his mother — which he subsequently did. In many cosmogonies there are characters who slay their fathers or who are represented as both husband and son of the same goddess. This symbolism, being interpreted literally in Oedipus' case, has made a fine story of horror for the tragedians. Oedipus is also famous for having solved the riddle of the Theban Sphinx. Oedipus' romantic and tragic history formed the theme of three plays by Sophocles and by Aeschylus. The essential significance of the story is the inescapable consequences following upon karmic causes, from which there is no escape once these causes have been set in motion by man.

‘Og (Hebrew) *Ōg* A king of Bashan, represented in the Bible as being of gigantic stature, and therefore as a survivor of the giants (Deut 3:11).

Ogam. See OGHAM

Ogdoad [from Greek] The number eight, a group of eight. It symbolizes the eternal, spiral motion of cycles, as is suggested by the form of the numeral 8 which, lying on its side, makes the modern mathematical symbol for infinity. The ogdoad show the regular breathing of the kosmos presided over by the eight great gods — seven from the primeval Mother, the One and the Triad (SD 2:580). A septenate may be made into an ogdoad by counting in either the last of the preceding hierarchy, or the first of the succeeding. If to a group of seven forces be added either the one from which they proceed, or that manifestation in which they eventuate, an ogdoad is produced, as in the case of the eight sons of Aditi, seven plus Martanda (the sun). Eight is the third power of two, and a number pertaining to physical space, and seems correlative to seven, just as four is correlative to three. The eight great gods of the Mediterranean ancients are the seven sacred planets, usually

Saturn, Jupiter, Mars, the Sun as a substitute for a secret planet, Venus, Mercury, and the Moon as a substitute for another secret planet, with Earth as the eighth. It was not so much the physical celestial bodies which were intended as their respective rectors or planetary spirits. *See also* EIGHT

Ogham A cryptographic alphabet used in certain ancient Celtic inscriptions, notably in Britain and Ireland. Each character consists of from one to five parallel strokes, written over, under, and through the line, either upright or sloping. It was one of the means of intercommunication by the Druids both of the continent and of the British Isles.

Ogmios “The god of wisdom and eloquence of the Druids, hence Hermes in a sense” (TG 239).

Ogygia An island inhabited by the nymph Calypso, far from Greece to the west, on which Odysseus was shipwrecked. Despite her promise of immortality if he stays, Odysseus wishes to leave, and the gods compel her to let him go after seven years.

Ogyges is an early king in the legends of Boeotia and Attica, a son of Poseidon, in whose reign a great flood overwhelmed the land. It refers to the tradition of the sinking of one of the last remnants of Atlantis and previous migrations of some of its inhabitants to Greece, where they founded new settlements. Ogygia was one of the last islands of the vast Atlantean continental system, and it may very readily be but another name for the Poseidonis referred to by Plato. As Egypt was settled originally by emigrants from Poseidonis or Ogygia, Egypt’s most ancient name was Ogygia.

Oi-ha-hou. *See* OEAOHOO

Oitzoe (Persian) Also Atizoe. Used by Blavatsky in connection with the Rocks of Destiny and the Rocking-stones (SD 2:346), referring to Pliny who said “In India . . . and Persia, there is a stone called *atizoe*. . . . which the magi considered necessary at the consecration of a king” (Natural History 27:54).

Ojas (Sanskrit) *Ojas* Bodily strength, vigor, energy, ability, power; also the principle of vitality in the body, giving it both heat and action, and therefore likewise including virility or the generative power.

Okhal (Druze) [from Arab *akl* intelligence, wisdom] The hierophant and chief initiator of the Syrian Brotherhood of the Druzes or Disciples of Hamsa.

Okhema (Greek) *ochema* [from *echeo* to carry] A vehicle, both as a wagon and figuratively as the support or carrier of anything. Euripides calls Zeus the okhema of the earth. *See also* VAHANA

Okuthorr. *See* THOR

‘Olam (Hebrew) *‘Olām* **Ulom** (Phoenician) [from *‘ālam* to hide, conceal] Also oulom. Long duration,

long past time, great antiquity, hence occasionally used for the future; again, the world. Parallel to the Gnostic Aeon, which signifies a time period, something secret and esoteric, and the world which exists in the time period; also parallels the Sanskrit kala. Sometimes mistranslated as eternity. Frequently used in the plural ('olamin).

In the Qabbalah, however, 'olam particularly refers to a sphere or world, of which there are four, which come into being during the manifestation of a cosmos. They are enumerated as: 'olam 'atstsiloth (the sphere of condensation); 'olam had-Beri'ah (the sphere of creation); 'olam hay-Yetsirah (the sphere of formation); and 'olam ha-'asiyyah or Qeliploth (the sphere of action or of shells). Each 'olam is the emanation or continuation of its superior, so that each is as a pendant connected with its superior and a link in a chain from 'eyn soph. These four worlds or spheres form together a unit or macrocosm, termed 'Adam 'Illa'ah (the great man).

Considering man as a microcosm, each 'olam was made equivalent to the four principles into which man was divided according to the Qabbalah, each having its location as follows: 'atstsiloth — neshamah: to the head; beri'ah — ruah: to the breast or chest; yetsirah — nephesh: to the abdomen; and 'asiyyah or qeliploth — guph: the physical body.

Old Testament. *See* BIBLE

Oligocene Epoch. *See* GEOLOGICAL ERAS

Olympus (Greek) The abode of the great gods in Grecian mythology in Homer and Hesiod. Such heavenly abodes are usually associated with mountains, such as the Hindu Meru, the Greek Atlas, and the Hebrew Sinai; in this case the name was given to the summit of the range dividing Macedonia from Thessaly, but there were other mountains called Olympus. Later philosophers, perhaps more mystically minded, placed Olympus in the zenith, as the abode of the divinities. There were many Olympuses, the references in story occasionally being to the higher globes of the earth-chain, and in a cosmic sense the higher planes of the solar system. At one time in Greek legend both the gods and their abode had a character of voluptuousness, comparable with the Hebrew Eden (which means "delight"), the heaven of Indra, or the abode of the Arabian houris; but this was when degeneracy had set in and the people had forgotten the significance of the deities, and lost the key enabling them to interpret the myths and allegories forming their respective mythologic religions.

Although in Greek mythology the gods are said to dwell on Olympus, three of the main Olympian divinities, Zeus, Poseidon, and Hades (or Pluto), had their habitats respectively in what may be called heaven or the inmost world of spirit, the cosmic spaces or the waters of space, and the underworld of the universe. Yet these three same divinities, because of their permeant cosmic forces or energies, and strictly on the law of analogical reasoning, had the same functions and occupy the same relative places in the minor forms of their respective manifestations: as, Zeus in the sky, Poseidon in the oceans of the globe, and Hades or Pluto in the underworld of our earth. Or

again, the twelve great gods of the Mediterranean peoples may be considered to be the twelve main cosmic and intelligent powers whose all-permeant nature and activity is as apparent in the universe itself as in every atom or minor division thereof.

In the mystic language of ancient time, a holy mountain universally signified a school of esoteric teaching. Just as a mountain on earth raises its summits towards the free heaven, and therefore mystically towards spirit and the gods, so in the ancient esoteric schools the training and the initiations conducted raised the neophytes or initiants towards the spirit, both cosmically and inner, and hence likewise towards the gods. *See also* PARNASSUS

Om (Sanskrit) *Om* In Brahmanical literature, a syllable of invocation, considered very holy: “Om is the bow, the Self is the arrow, Brahman is called its aim” (Mandukya Upanishad 2:2). It is placed at the beginning of scriptures considered of unusual sanctity. “Prolonging the uttering of this word, both of the O and the M, with the mouth closed, it reechoes in and arouses vibration in the skull, and affects, *if the aspirations be pure*, the different nervous centers of the body for great good” (Fund 28). The virtue or spiritual and magical properties attributed to this word, however, arise out of the purity and devotion of the one uttering it. *See also* AUM

Omen [from Latin *os* mouth, as the voice of a god] As in augury and divination, the laws of correspondences and of the interrelation of all parts of the cosmos imply that it is possible to interpret the invisible and to forecast the future by observing visible signs. The right interpretation of omens demands knowledge and skill, and the subject affords a fertile field for self-deception and quackery. As with astrology, an undue concern with influences tends to subject a person to them; it is advisable to discriminate between what *might* happen and what *must* happen.

There was in ancient times a fairly exact and, when properly practiced, accurate science of divination based on omens. Since the kosmos is an organism, an organic whole — every part intimately interconnected with every other part, so that the smallest atom can affect a star as well as a star affect the smallest atom — logically whatever happens takes place because of a chain of events; so if one knew enough and were wise enough to interpret what one knew, it would be a fairly simple matter not merely to understand the invisible from the appearances of the visible, but likewise to foretell the future.

O-mi-to Fo, Amita Fo (Chinese) The Chinese form of Amita Buddha (Sanskrit, “boundless buddha”) a title given to the cosmic manifested buddhi or mahabuddhi, equivalent to the Second Logos, which is resident in the essence of every entity in the universe as its inspiring and guiding spiritual light.

Omkara (Sanskrit) *Om̐kāra* The sacred, mystical syllable Aum or Om; also one of the twelve lingas, the twelve powers of the creative or generative logoi of the solar system.

Om Mani Padme Hum *Om̐ maṇi padme hūṃ* (Sanskrit) Om! the jewel in the lotus, hum! One of the

most sacred Buddhist mantras or verbal formulas; used very frequently in Tibet and in surrounding countries of the Far East. Not only is every syllable said to have a secret power of producing a definite result, but the whole invocation has a number of meanings. When properly pronounced or changed, it produces different results, differing from the others according to the intonation and will given to the formula and its syllables. This mystic sentence above all refers to the indissoluble union between man and the universe, and thus conveys “I am in thee and thou art in me.” Each of us has within himself the jewel in the lotus or the divine self within. When understood in a kosmic sense, it signifies the divine kosmic self within, inspiring all beings within the range of that kosmic divinity.

Omoroka (Greek) [from Chaldean, cf Hebrew ‘*amaq* to be deep, profound; Hebrew ‘*amar* to heap together, overwhelm; and Arabic ‘*amar* to overwhelm with water] The deep, the ocean, whether physically or mystically; used in the Babylonian account of creation. One legend tells of Belus cutting Omoroka in two, from one part of which the heavens were formed, and from the other, the earth — showing that Omoroka signifies space.

In Chaldean mythology, Omoroka was a woman personifying the spatial deeps, and therefore divine water or the productive Logos of all manifestation. It likewise became connected with the moon, being equivalent to Selene, and was often used as the manifested wisdom or spirit.

In *The Secret Doctrine* Omoroka (the moon) presides over the monstrous creation of nondescript beings slain by the dhyanis; and further, while the gods were generated in svabhavat (mother-space), the reflection of wisdom became on earth Omoroka — the Chaldean Thalath, the Greek Thalassa.

Om Vajrapani Hum (Sanskrit) *Om vajrapāṇi hum* [from *Om* the mystical syllable, uttered at the commencement of mantras + *vajrapāṇi* from *vajra* thunderbolt + *pāṇin* holder + *hum* Tibetan mystical syllable equivalent to Om] Om! the holder of the thunderbolt, hum! Many of the mantras used in India and Tibet are not completed grammatical sentences, as the mantra is said to derive its potency from its rhythm as well as from its tonal utterance. The title of thunderbolt-holder is properly given to one who holds the thunderbolt of the spirit — one who has awakened the divine monad within himself. Vajrapani with Northern Buddhists is a class of celestial beings, and also a dhyanibodhisattva, the hierarch of this class of beings. This mantric sentence is therefore an appeal, by an elevation in aspiration, to at least temporary spiritual union with this class of celestial entities.

One By itself the One represents not pure unalloyed spirit, which is signified by the zero — the all-containing womb of space and being — but is the First Logos or Pythagorean Monas monadum (monad of monads). From this monad of monads flows forth through emanation the duad, then the triad, and then the entire manifested universe of interlocking hierarchies, emanated from the cosmic womb of being or the zero through the First Logos or the One of primordial manifested

spirit. “The sacredness of numbers begins with the great First — the one, and ends only with the nought or zero — symbol of the infinite and boundless circle which represents the universe. All the intervening figures, in whatever combination, or however multiplied, represent philosophical ideas, from vague outlines down to a definitely-established scientific axiom, relating either to a moral or a physical fact in nature. They are a key to the ancient views on cosmogony, in its broad sense, including man and beings, and the evolution of the human race, spiritually as well as physically” (IU 2:407).

The circle, zero, or nought is the symbol of the All, equivalent to Non-being, in contradistinction to being or the number One. With the Pythagoreans number One was equivalent to the cosmic monad, the Odd: odd numbers were considered by them to be perfect or celestial and the even numbers imperfect, manifested, or terrestrial. The cosmic One, the First Logos, alone was cosmic unity and therefore good and harmony, because no disharmony is to be found in the unitary One alone.

Yet “in all such numerical divisions the One universal Principle, — although referred to as (the) one, because the *Only One* — never enters into the calculations. It stands, in its character of the Absolute, the Infinite, and the universal abstraction, entirely by Itself and independent of every other Power whether noumenal or phenomenal” (SD 2:598). Here the cosmic One is intimately intertwined with the universal zero, the last being equivalent to the universal All. Analogies in different systems of thought are numerous; for instance, the cosmic zero corresponds to parabrahman-mulaprakriti, whereas the cosmic One or monad corresponds to Brahman. *See also* UNITY

One-eyed. *See* EYE OF SIVA; CYCLOPS

One Life. *See* LIFE

Onokoro, Onogoro (Japanese) In Japanese cosmogony, the island-world fashioned by the divine hero Isanagi when he thrust his jeweled spear into the primeval chaotic mass of cloud and water.

Oomancy [from Greek *oon* egg + *manteia* divination] The ancient art of divination by eggs was taught to mankind by Orpheus (SD 1:362); and the diviner was able by inspecting the contents of the egg to perceive whatever the bird born from it would have seen, had it ever been born. The possibility of divination is a logical deduction from the principle of universal correspondences and the interrelation and interpenetration of all parts of the universe. It is therefore only a question of esoteric knowledge and skill. The germ of the future lies concealed in the present, making prediction possible by one whose spiritual faculties have been awakened.

'Ophanim or **'Ophannim** (Hebrew) *'Ōfannīm* [plural of *'ōfān* wheel from *'āfan* to revolve, turn] The “wheels” seen by Ezekiel, and by John in Revelation, meaning world-spheres; also used in the

Sepher Yetsirah (book of creation). The 'ophanim signify the turning or revolving celestial bodies, especially the planets, with a constant eye upon the indwelling angelic hosts which give to the celestial bodies their respective individualities, their characteristic energies and substances, and which produce and control their various cyclical movements in both space and time. In this connection four of the constellations of the zodiac — Taurus the Bull, Leo the Lion, Scorpio the “Eagle,” and Aquarius the Man — have been from earliest Christian times attached to the four canonical Evangelists. In the *Zohar* (ii 43a) the 'ophanim are one of the ten classes of the angelic hosts comprising the yetsiratic world.

Ophis (Greek) Serpent; used by the Gnostic Ophites for Chnouphis, the Agathodaimon (good serpent), emblem of wisdom and of the unending cycles of time and constituting, with Ennoia, the Logos. Its opposite pole is Ophiomorphos [serpent-form from *ophis* serpent + *morphe* form]. The two are represented in the zodiac by Virgo-Scorpio. The serpent before his fall was Ophis-Christos, and after his fall was Ophiomorphos-Chrestos. The Roman Catholic Church identified Ophiomorphos with Michael, and the Gnostics identified him with Jehovah.

Ophis-Christos. See OPHIS

Ophites One of the earliest Gnostic sects, flourishing in Egypt in the 2nd century and using as their sacred symbol the serpent (ophis) as symbolizing the Christos immanent in man.

“While holding some of the principles of Valentinus [it] had its own occult rites and symbology. A living serpent, representing the *Christos*-principle (i.e, the divine reincarnating Monad, not Jesus the man), was displayed in their mysteries and revered as a symbol of wisdom, Sophia, the type of the all-good and all-wise. The Gnostics were not a Christian sect, in the common acceptance of this term, as the *Christos* of pre-Christian thought and the Gnosis was *not* the ‘god-man’ Christ, but the divine Ego, made one with Buddhi. Their Christos was the ‘Eternal Initiate,’ the Pilgrim, typified by hundreds of Ophidian symbols for several thousands of years before the ‘Christian’ era, so-called” (TG 241).

Opposites. See TWO

'Or (Hebrew) 'Ōr [from 'ōr to be or become light] Also aior, aour, aur. Light, with secondary meanings of dawn, daybreak, lightning; the light of life; mystically light in the sense of instruction, knowledge, hence doctrine. Metaphorically, happiness, prosperity, guidance, and a teacher. By extension when used with paneh (face), to make the face shine, said of a candidate during initiation.

Equivalent to the astral light, and the source and synthesis of the two aspects of the manifested astro-etheric light: the one being the light- and life-giving ('od) and the other the matter side ('ob), the dealer of death.

Oracle A divine saying, or the place or means by which a divine message is communicated. The soul, according to Plato, has a certain innate prophetic power. The person in whom this power is fully manifest needs no means of communication; in some it may be manifest temporarily and under certain conditions. In the Greek Heroic ages, deities spoke or appeared directly to man, as we see in Homer. Later, indirect means of communication were used, which may be classed under the general name of oracular. In some cases the intervention of a seer was employed, as in the Sibyllae of Rome and the Pythian seeress of Delphi. Sometimes the “spirits” of the dead were consulted, as in the case of Saul and the wise woman of Endor, and Aeneas and Anchises. The earth and the chthonic deities played an important part: at Delphi, though Apollo was consulted, yet the priestess was entranced, as alleged, through the influence of vapors from the earth; sometimes descent into subterranean caves was necessary, and the inquirer might have to undergo experiences analogous to those of one who dies, as in initiation. Again, it was often customary for the inquirer to sleep in a sacred place to obtain in a dream a revelation from the presiding deity. Or the message might be conveyed by some sign requiring the skill of a diviner for its interpretation, but this comes under the head of divination and omens. The whole purpose was to supplement the intelligence of the incarnate man by appealing to truly spiritual intelligences.

Although a species of necromancy, or consulting with the dead, was not infrequent in the countries bordering the Mediterranean Sea, yet invariably it was strongly discountenanced and in many cases rigorously put down by the State. Even in those cases where Greek and Roman literature show important personages in mythology consulting the dead, it was understood among the educated that the astral spooks or shades thus evoked were by no means spirits of exanimate human beings; but the attempt was to gather from the astral shades automatic responses from impressions retained in the astral corpses.

The famous Greek oracles (manteia or chresteria) had a widespread repute which attests their public use, though their repute outlasted their genuineness.

Orai. See OURAIOS

Orcus (Latin) [from Greek *horcos* an oath, the object by which one swears, the witness of an oath] Synonym for Hades, Dis, Pluto; Roman name for the presiding god of the Underworld, also for the Underworld itself. Horcos was the son of Eris (strife), who punishes the perjurer.

Also used in the *Codex Nazaraeus* for the bottomless pit: the more accurate meaning of the bottomless pit, however, is Tartarus.

Ordovician Period. See GEOLOGICAL ERAS

Orgalmer, Orgelmir (Swedish, Icelandic) [from *or* primal + *galmer* loud one] In Norse mythology, the first loud sound or keynote which, like the fundamental of an overtone series, echoing through the spaces of infinitude, originates the multiplying vibrations of a cosmic organism. The frostgiant

Ymer — utter immobility and nothingness — becomes Orgalmer when it is slain at the beginning of a universal life cycle by the creative deities Odin, Vile, and Vi (or Ve), who then use the giant body (latent matter) to create the worlds. Odin as Ofner (opener) is the galvanizing energy that organizes the frost giant (latent matter) into a cosmos. As Svafner (closer) Odin is paired with Bergelmir at the end of a cosmic lifetime.

Orion (Greek) A handsome giant and mighty hunter of Boeotia, who was placed among the stars. The constellation Orion was regarded as a giant not only in Greece but in Syria, Arabia, and Palestine; in Ireland and among the Mayas it is a warrior; in Egypt it is identified with Horus, the young sun, in the solar boat; and in Babylonia with Merodach, or Nimrod the mighty hunter.

Orlog (Icelandic) [from *or, ur* primal + *log* law] In Norse mythology, the primal law of all existence, corresponding to karma, the beginningless and endless succession of causes and effects constantly modifying each being's fate or destiny as a result of its own actions. The agents of Orlog are the three norns that represent the past (Urd, origin), present (Verdandi, becoming), and future (Skuld, debt). It is the inescapable result of all that has gone before and is presently creating the future, whether of universal gods or human beings.

Ormazd or **Ormuzd**. See Ahura-Mazda

Orpheus (Greek) An early religious teacher and reformer in Greece about whom clustered so many legends that in course of time his historic existence came to be disputed. He was, however, an actual historic character, probably born in Thrace about the 13th century BC, lived and taught at Pimpleia on Mount Olympus, revived the ancient wisdom-religion, reformed the then degraded popular religion, and was killed — according to the story — because of it. He gathered pupils or disciples about him, and founded a famous Mystery school from which in time emanated a vast literature, now perished with the exception of the *Orphic Hymns*, the *Lithica* (a poem on the nature of precious stones), the *Argonautica* (which recites the connection of Orpheus with the Argonautic expedition), and some other fugitive fragments — and in our time these are supposed to be apocryphal or of a far later date than Orpheus himself, although certainly containing Orphic elements.

There appears to have been no question in antiquity as to the actual historical existence of a godlike man who founded the Orphic religion or Mysteries, and whose work was continued by others in direct line, some of whom took his name, for no less than six different teachers by the name of Orpheus were known. When we add to the historic account the story of Orpheus as the Magician-Bard, and the legends of his divinity, his marriage with Eurydice (esoteric wisdom), his teaching, his agony and passion, and finally his martyr's death — legends almost identical with some of those attached to world-saviors such as Krishna, Buddha, Jesus, and Mithra — it is clear that he was not only a great teacher in himself, but an important link in the Hermetic Chain of esoteric succession.

The legendary Orpheus was the son of Apollo, god of music and the sun, and of Calliope, muse of epic poetry. With his seven-stringed lyre, the symbol of the cosmic and human constitution, he became the magical musician: rocks moved, trees bent, flowers sprang forth, mountains bowed themselves before his song. He journeyed with the Argonauts on their quest for the Golden Fleece. His mystic union with Eurydice, like the Argonautic quest, is clearly allegorical. Orpheus won his mystic bride by the power of his music and after the mystic union returned to Pimpleia on Mount Olympus where he lived and taught in a cave (recorded also of other great teachers).

When Eurydice died from the bite of a venomous snake, Orpheus visited the Underworld to reclaim her, and his descent there is a veiled record of initiation. Orpheus was permitted to take Eurydice back with him on condition that he did not look back, symbolic of a stern condition for successfully traveling the mystic path. But Orpheus did look back and his union with the esoteric doctrine, personified as Eurydice, was broken. After mourning, he withdrew to Mount Rhodope, where a group of Maenads or Bacchanals tore him limb from limb.

Blavatsky identifies Orpheus with Arjuna, son of Indra and disciple of Krishna, who taught mankind, established Mysteries, and went to Patala (hell or the Antipodes) and there marries the daughter of the naga king (TG 242).

Orpheus may be regarded both as an ideal or as a man and teacher. In either case, whether cosmic or terrestrial, Orpheus corresponds to the unceasing attempts of the higher or spiritual ego to raise the lower ego out of the toils of matter, much as in the Gnostic story the Christos attempts to raise the Sophia, his own lower self or vehicle, out of the mire and toils of the inferior worlds. If the call of impersonal compassion be so strong that it become personal, in other words if Orpheus looks back to see and becomes attracted to the lower planes, he loses his Eurydice. Eurydice means “wide judgment,” the function of reason in the human constitution. Orpheus here would represent intuition, and Eurydice the reason: manas sunk in the earthly nature is raised to wisdom through buddhi.

When the ideal Orpheus in the neophyte conjoins with Orpheus the struggling soul, then Orpheus becomes the initiate who during the trials in the Underworld secures the safety of mind (Eurydice) and thus becomes a son of the sun. Should, however, Orpheus look back — should buddhi itself become entangled in the lower morass — then Eurydice is not rescued, Orpheus is enchained, and the task must be essayed anew.

Orphism, Orphic Mysteries [from Greek *orphikos*] Orphism originally taught of the Causeless Cause on which all speculation is impossible; the periodical appearance and disappearance of all things, from atom to universe; re-embodiment; cyclic law; the essential divinity of all beings and things; and the duality in manifestation of the universe. It postulated seven emanations from the Boundless: aether (spirit) and chaos (matter), from which two spring the world egg, out of which is born Phanes, the First Logos; then Uranus (and Gaia) the Second Logos, with Kronos (and Rhea,

mother of the Olympian gods) a later phase of the Second Logos; and Zeus, the Third Logos or Demiurge — who starts a minor sevenfold hierarchy of emanation by begetting Zagreus-Dionysos the god-man, the divine son. Characteristic of Orphic cosmogony is the important place given to the number seven. “The rise of the Orphic worship of Dionysos is the most important fact in the history of Greek religion, and marks a great spiritual awakening. Its three great ideas are (1) a belief in the essential Divinity of humanity and the *complete* immortality or eternity of the soul, its pre-existence and its post-existence; (2) the necessity for individual responsibility and righteousness; and (3) the regeneration or redemption of man’s lower nature by his own higher Self” (F. S. Darrow).

The Orphic teachings were kept intact by the Golden or Hermetic Chain of Succession down to the days of the Neoplatonists after which (as symbolically told in the archaic story of Eurydice) they were killed — obscured or lost, so far as the public was concerned. Their keynote was consecration to the mandates of the god within: perfect purity, perfect impersonal love, perfect understanding, and devotion to the interests of humanity.

The three Orphic mystery-gods were Zeus, the divine All-father; Demeter-Kore, the earth goddess as both mother and maid; and Zagreus-Dionysos, the divine son. This trinity finds its counterpart in Egyptian, Indian, Chaldean, Christian, and other religions. There were two forms of baptism, one purification by water, later adopted into the Christian ritual; and the other a ceremony in which the face of the neophyte was cleansed with a mixture of earth and bran, symbolizing the washing away of stains from the soul.

The ceremony of the Eucharist was also adopted by the Christians and as Orphic ritual forbade the use of wine (substituting for it a mead of honey and milk), in the rite as adopted by the primitive Christians the neophyte drank not only wine but also milk and honey. Under Orphism, the honey symbolized not only purification and preservation, or endless life and bliss, but the secret knowledge obtained during initiation. Bees, the gatherers of honey, were emblems of the reincarnating soul, as was the butterfly; and as the bees gathered the nectar from flowers and made it into honey, so the human soul in its various peregrinations gathers from the beings and things of life the mystic experience and stores it away in the chambers of the soul. Milk symbolized knowledge, which fed the inner man, as a child of eternity, just as milk feeds the human child.

Orphism flourished from before the 14th until the 6th century BC, and again, after some five centuries of obscurity, during the first four centuries of the Christian era. Plato, Empedocles, the Pythagorean teachings, some of the Greek dramatists and poets are our main source material for the earlier period, as well as the various Orphic fragments including the Orphic Tablets. These Tablets, with the Orphic Hymns, consist of eight gold plates containing inscriptions, dating from about the 4th century BC. They consist of instructions given to the soul for its journey through the afterdeath worlds or states very reminiscent of the *Egyptian Book of the Dead*. The keynote is

spoken by the soul: “I am a child of earth and of starry Heaven, but my race is of Heaven (alone). . . . Lo, I am parched with thirst . . .” For the later period we have the writings of the Neoplatonists and their opponents, the early Christian Fathers.

That the entire Orphic mythogony is intentionally allegorical does not invalidate that a great prehistoric religious reformer named Orpheus lived, worked, taught, and founded a religion as the outgrowth of a genuine Mystery school.

Oshadhi-prastha (Sanskrit) *Oṣadhi-prastha* The place of medicinal herbs; “a mysterious city in the Himalayas mentioned even from the Vedic period. Tradition shows it as once inhabited by sages, great adepts in the healing art, who used only herbs and plants, as did the ancient Chaldees. The city is mentioned in the *Kumara Sambhava* of Kalidasa” (TG 243).

Osiris (Greek) **As-ar, Us-ar** (Egyptian) *Ās-ār, Us-ār*. The most famous deity of the Egyptian pantheon, corresponding to Zagreus-Bacchus of the Eleusinian Mysteries. In Plutarch’s *On Isis and Osiris*, Osiris is represented as the son of Nut, space and primordial matter (equivalent to the Greek Rhea) by Seb, celestial fire (Kronos). He became king of Egypt, teaching the people the worship of the gods, and husbandry, and formulating laws. His brother Set, filled with envy, brought about his destruction. Isis, his distraught wife, set out in search of the body, and finally recovered it. But Set then dismembered the body into fourteen pieces, scattering them over Egypt, of which Isis recovered all but one.

After meeting with death on earth Osiris became resurrected, and then became the ruler of the other world (Khenti-Amentet). His death and resurrection depict the drama of the initiation chamber which is one interpretation of glorification or osirification of the defunct human, as mystically portrayed in the *Book of the Dead*.

Cosmologically, Osiris is the Third Logos, containing in himself the seeds of all things and beings in the universe to be unrolled from the Logos:

“the self-existent and self-creative god, the first manifesting deity (our third Logos), identical with Ahura-Mazda and other ‘First Causes.’ For as Ahura-Mazda is one with, or the synthesis of, the Amshaspends, so Osiris, the collective unit, when differentiated and personified, becomes Typhon, his brother, Isis and Nephtys his sisters, Horus his son and his other aspects. . . . The four chief aspects of Osiris were — Osiris-Phtah (Light), the spiritual aspect; Osiris-Horus (Mind), the intellectual *manasic* aspect; Osiris-Lunus, the ‘Lunar’ or psychic, astral aspect; Osiris-Typhon, Daimonic, or physical, material, therefore passional turbulent aspect. In these four aspects he symbolizes the dual ego — the divine and the human, the cosmico-spiritual and the terrestrial” (TG 243).

Osiris’ place in cosmological mythology is seen to be that of the cosmic creator; thus on a more abstract scale Osiris is equivalent to the svabhavat of Buddhist thought. As in other archaic

religions and philosophies, when Osiris is considered as an individual divinity, he becomes the cosmic source from which flow forth in hierarchical series of emanations the gradually descending groups of the hierarchy of Light; and from this aspect he is the chief of all initiates of the right-hand path, who thus trace their spiritual ascendance and origin directly to the Third Logos itself.

Osiris-Isis-Horus. See TRIAD; TRINITY

Osraios. See OURAIOS

Otz-Chiim. See 'ETS HA-HAYYIM

Oulom. See 'OLAM

Ouo (Gnostic) With the Peratae, a sect of the Gnostic Naasseni, Chozzar is equated to Poseidon, and his five ministers are Aou, Aoai, Ouo, Ouoae, the name of the fifth being lost (SD 2:578); these being equivalent to the five prachetasas of Varuna.

Ouraios (Gnostic) Also Ourai. Corresponding to the genius of the planet Venus; one of the six stellar spirits, mystically dark spirits of manifestation or material existence, produced from Ildabaoth (child from the cosmic egg). These spirits of manifestation are to be contrasted with the stellar spirits of Light, spiritual originals, of which the latter are the reflections in matter. The Egyptian Gnostics postulated three Hebdomads of spirits: Ildabaoth, according to this theory, appertained to the intermediate or second Hebdomad.

Blavatsky places the progeny of Ildabaoth as belonging to the lowest of the cosmic realms of manifestation, making Ildabaoth the child of the cosmic egg which was the producer of our physical globe (TG 152-3). Ildabaoth is well-known as the dark side of the genius of the planet Saturn. See also ASTAPHAI

Ouranos (Greek) **Uranus** (Latin) [cf Sanskrit *Varuṇa*] Originally the celestial spaces of the starry deep, its spiritual, invisible fullness. Heaven or Ouranos is sometimes represented as the son of earth and sometimes as her husband; but earth may stand for Aditi (mulaprakriti) or for prakriti, unformed matter, in which case Ouranos, as chief of the adityas or seven planetary and solar gods, is a son; but Ouranos afterwards, with the Greek Gaia, becomes parent of many titans. Ouranos rules the world in the first age but, fearing his children, he shuts them into Tartarus; whereupon Gaia, with the aid of the titan Kronos, dethrones Ouranos, and Kronos takes his place. These legends conceal much esoteric astronomy and geology relating to cosmic matters, and on this earth the succession of human races and the terrestrial changes accompanying them. For Ouranos, like the other Olympian gods, has many significances, representing one of the noumena of the intelligent powers of nature, one of the dhyani-chohans, again one of the divine kings, etc., and his sway was over the second root-race and its continent. The titans who overthrew him were of the third root-race, who fell into physical generation and recognized and followed Ouranos no more.

Outer Round The passage of all the life-waves of a planetary chain to other planetary chains in serial order, at the completion of a specific cycle of manifestation on the original planetary chain. This outer round encompasses the seven sacred planets for seven or ten times, in accordance with the working of the circulations of the solar system. Also used for the journey of the human spiritual monad through the solar system after death. *See also* INNER ROUND; ROUND

Overshadowing Generally used in references to the spiritual influence exercised by a higher being upon a lower, as in the case of an incarnate buddha, who is said to overshadow and thus to inspire or enlighten living men on earth.

Oversoul When signifying the universal soul, oversoul corresponds to alaya, the consciousness aspect or crown of akasa; or it may be compared with mulaprakriti in its essence as the intelligent conscious basis or root of all in a universe.

Theosophy teaches “the fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root” (SD 1:17); Emerson speaks of “that unity, that *oversoul*, within which every man’s particular being is contained and made one with all other.” Mystically, the anima mundi is the spiritual essence emanating from alaya or the oversoul, anima mundi spreading throughout the spatial deeps of a universe and being the framework in or upon which the manifested planes of that universe are built. Thus when the oversoul is considered as anima mundi, it is alaya or the essence of akasa, or again in its highest it is nirvana, and in its lowest it is the astral light.

Oxygen The physical elements are merely the grossest manifestations or reflections on this material plane of invisible, intangible spiritual originants. In this context, all the matter in the universe can be reduced to four substantial elements: carbon, hydrogen, oxygen, and nitrogen. In the first manifested triad — Mother, Father-Son-Husband, Son — Oxygen corresponds to Father-Son-Husband; thus, the names of the chemical elements are also used to denote the subtler, more ethereal or spiritual elements from which they proceed.

“We would call hydrogen and oxygen (which instills the fire of life into the ‘Mother’ by incubation) in the *pregenetic* and even pre-geological ages — the *Spirit*, the *noumenon* of that which becomes in its grossest form oxygen and hydrogen and nitrogen on Earth — nitrogen being of no divine origin, but merely an earth-born cement to unite other gases and fluids, and serve as a sponge to carry in itself the breath of LIFE — pure air” (SD 1:626). Oxygen corresponds to vitality or prana in the lower quaternary of human principles. Moreover, an

elixir of life is said to be produced alchemically from ozone, an allotrope of oxygen (SD 1:144).

Ozone In chemistry, an allotropic form of oxygen, having a triatomic instead of a diatomic molecule, and being more active chemically on account of the ease with which the molecule parts with one of its atoms. Blavatsky stated that sound generates an ozone such as cannot be made by chemistry, and which can, in proper circumstances, resurrect a person; moreover, “He who would allotropize sluggish oxygen into *Ozone* to a measure of alchemical activity, reducing it to its pure essence (for which there are means), would discover thereby a substitute for an ‘Elixir of Life’ and prepare it for practical use” (SD 1:555, 144n). She mentions too, with approval, a theory that the cause of influenza may be an excess of ozone in the atmosphere, causing a rush of life and perhaps excessive oxidation and metabolism in the human body (BCW 12:109-10). Ozone is usually made in the laboratory by electric discharges, and it is similarly formed by lightning. All the above indicates that ozone is a physical form of a more subtle and potent original.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Pa-Peq

Paccera-yana. See PACHCHEKA-YANA

Paccham. See PACHCHHAM

Pachacamac (Peruvian) The ruins of an ancient wall in Peru, believed to be the remains of a temple, of Cyclopean style — large rocks of irregular size and shape fitted closely together, and similar to the ruins of Tiahuanaco (also in Peru) and masonry of Easter Island. “The oldest remains of Cyclopean buildings were all the handiwork of the Lemurians of the last sub-races” (SD 2:317), although the Atlanteans copied the Cyclopean style of the Lemurian buildings, so that some of the Cyclopean remnants are Lemurian in type, but of Atlantean handiwork.

Also “the name given by the Peruvians to the Creator of the universe, represented as *a host of creators*. On his altar only the first fruits and flowers were laid by the pious” (TG 245).

Pachcheka-yana (Pali) *Pacceka-yāna* [from *pacceka* for oneself or for the personal + *yāna* vehicle] Personal vehicle or personality, in contradistinction to the individuality (*amita-yana*); the Sanskrit is *pratyeka-yana*. In the sevenfold classification of the human principles, the personal ego or vehicle is a combination of the four lower principles illumined with as much of *manas* as the lower quaternary is capable of receiving and retaining.

Pachchham (Tamil) A period of 15 solar days, two *pachchham* forming one day of the *pitris* (or one month of mortals).

Pacis or **Bacchis** (Greek) **Bakha** (Egyptian) *Bakha*. The sacred bull of Hermonthis. Although not so celebrated as Apis and Mnevis, he was styled the bull of the Mountain of the Sunrise (*Bakhau*), and the lion of the Mountain of the Sunset. Like Mnevis he was depicted with the solar disk between his horns, the reference being not to the cosmic energy of the spatial Deeps represented by Mnevis, nor to the lunar energy represented by Apis, but to the opening (sunrise) and the closing (sunset)

of the solar system.

Pada (Sanskrit) *Pada* [from the verbal root *pad* to turn the mind towards, observe, go or move forwards] A step, foot, sign, footing, abode; a part; a quarter.

Padartha (Sanskrit) *Padārtha* [from *pada* step, stride, foot + *artha* relating to a thing or object; purpose or object, motive or reason] The meaning of a word; also that which corresponds to the meaning of a word, hence a material object and even a man, a person. In philosophy and logic, used as a category or predicament, the Vaiseshika school and the Vedantins enumerating seven, while the Sankhyas enumerate 25. Blavatsky compares the seven padarthas of the Vaiseshikas to the seven attributes of the seven principles as follows: dravya to sthula-sarira; guna to jiva; karma to linga-sarira; samanya to kama; visesha to manas; samavaya to buddhi; abhava to atman (BCW 4:580).

Padma (Sanskrit) *Padma* The lotus, a flower which has been held sacred from remotest antiquity by the Aryan Hindus, as well as revered in other lands such as Egypt. Mystically, it was looked upon as an emblem of productive nature growing between the spiritual sunlight above and the water or the astral light below; or in a more general sense between spirit and matter. It has also other meanings, such as in India, of the prolific earth, and even of Mount Meru. The lotus is “a very ancient and favourite simile for the Kosmos itself, and also for man. The popular reasons given are, firstly, . . . that the Lotus-seed contains within itself a perfect miniature of the future plant, which typifies the fact that the spiritual prototypes of all things exist in the immaterial world before those things become materialised on Earth. Secondly, the fact that the Lotus plant grows up through the water, having its root in the Ilus, or mud, and spreading its flower in the air above. The Lotus thus typifies the life of man and also that of the Kosmos; . . . The root of the Lotus sunk in the mud represents material life, the stalk passing up through the water typifies existence in the astral world, and the flower floating on the water and opening to the sky is emblematical of spiritual being” (SD 1:57-8).

Padma-kalpa (Sanskrit) *Padma-kalpa* The lotus age; the last kalpa or preceding manvantara which lasted a Year of Brahma.

Padmapani (Sanskrit) *Padmapāṇi* The lotus-bearer; one name in Tibetan mysticism of the bodhisattva Chenrezi, equivalent to the Sanskrit Avalokitesvara. His female aspect is equivalent to the Chinese Kwan-yin. On the manifested planes Padmapani is “the progenitor (in a spiritual sense) of men. . . . He is, evidently, like Daksha, the synthesis of all the preceding Races and the progenitor of all the *human* Races after the Third, the first complete one . . .” (SD 2:178). Thus Padmapani has cosmic, terrestrial, and human meanings.

Padma Purana (Sanskrit) *Padma Purāṇa* The Lotus-Purana; one of the Hindu Puranas which contains an account of the period when the world was “as a golden lotus (padma).” The scripture, considered to be the second in importance of the 18 principle Puranas, consists of 55,000 slokas,

and is divided into five books (khandas) treating of the creation, the earth, heaven (svarga), and patala, while the fifth book is a supplementary section.

Padmasana (Sanskrit) *Padmāsana* [from *padma* lotus + *āsana* seat, posture] The posture of a lotus; a yoga posture taken to develop concentration and religious meditation.

Padmayoni (Sanskrit) *Padmayoni* Lotus-born; applied to Brahma because legend says he sprang at the time of creation from a lotus which arose from the navel of Vishnu.

Paeon (Greek) In Homer, the physician of the Olympian gods; in later times as Paion (Latinized as Paeon), transferred not only to Apollo as healer, but to his son, Aesculapius. Later it acquired a general meaning for a healer, then as a song of joy, praise, triumph, etc.

Pagan [from Latin *paganus* an inhabitant of the country, a villager; cf peasant] Heathen, the Germanic parallel in origin and meaning, was also used to distinguish an urban dweller or cultured man from a country dweller or rustic; and so both words became terms of inferiority and ultimately of reproach. Pagans and heathen, in recent European usage, are those who are not Christian, Jews, or Moslems.

Pahad (Hebrew) *Paḥad* Fear, terror; an alternative name for the fifth Sephirah, Geburah.

Pahans (Prakrit) Village priests in India.

Pahlavi (Persian) [from Old Persian *parthawa* Parthian] Also Pehlevi. The language into which the Zoroastrian archaic sacred books were translated. It was due to this that the Pahlavi literature was preserved, for, other than these religious books, very few works are extant, principally the *Minoi-Khiradh* and the *Bundahish*. It is also called Middle Persian, in contradistinction to New Persian and Old Persian, the language of the ancient Persians during the time of Darius the Great which already shows distinct changes from that in which the Avesta was written. Pahlavi was the language of the northeastern people of Iran (Parthians) who ruled over the country soon after the downfall of Achaemenids until 224 AD under the name of Arsacids. For about nine centuries this remained the language of the whole empire. Pahlavi belongs to the Iranian class of the southern division of Aryan languages.

Pai-wuen-yen-fu (Chinese) Also Pai-wen-yen-fu. A remarkable dictionary prepared in China: “the greatest in the world, full of quotations from every known writer, and containing all the phrases ever used” (ML 364).

Paksha (Sanskrit) *Pakṣa* One half of the lunar month, or 14 days. Two pakshas make a month of mortals, but only a day of the pitri-devatas (father-gods) or lunar pitris.

Palaemon (Greek) *palaimon*. The wrestler; applied to Herakles and Melicertes, a name of Phoenician origin, taken from the Phoenician divinity Melcart. Ino, daughter of Cadmus and wife of Athamas, flying from her husband, sprang with her child Melicertes into the sea; the gods out of

compassion made her a sea goddess and her son a god under the name of Palaemon.

Paleocene Epoch. See GEOLOGICAL ERAS

Paleozoic Age, Era. See GEOLOGICAL ERAS

Palasa (Sanskrit) *Pālāśa* The tree *butea frondosa*, also called kanaka, “a tree with red blossoms of very occult properties” (TG 246).

Pali The language spoken in the north of India from and before the 7th century BC to about the 5th century AD. It is still the literary sacred language of Burma, Thailand, and Ceylon. There were two factors which made Pali one of the most important literary languages of the world: first, with the rise of the Kosalas into a kingdom, the language of its capital (Savatthi, in Nepal) became the form of speech almost universally adopted. Secondly, Gautama Buddha, being of Kosalan by birth, probably used the Pali language in giving forth his teachings, and therefore the subsequent philosophical writings of his disciples were similarly couched in this language.

Sanskrit, on the other hand, “was really the sacred language of the Brahmanas and held more or less private or secret by them. The Sanskrit even in those ancient times was the vehicle for the archaic Wisdom-teachings of the Aryan peoples of India, such as the Vedas, and the Puranas, and the Upanishads, and the great epics, the *Ramayana* and the *Mahabharata*. But Pali was one of several other languages of culture in ancient India, all which were of so-called Prakrit character, although very little is known about these other literary languages. Pali has survived to the present time because . . . it became the linguistic vehicle in which were enshrined the teachings of Buddhism, i.e., of Southern Buddhism, much as Latin has survived because enshrining the teachings of early medieval Christianity. Just as there were in ancient Italy many other Italic tongues, each one having its literary or cultured form, and likewise its popular idiom, so was it in ancient India.

“Pali is not a ‘washed-out Sanskrit.’ Sanskrit was rather a mystery-language which was ‘composed’ or ‘builded up’ to perfection by initiates of the Sanctuaries; and because it was thus constructed into an almost perfect expression of human thought, at least for that day, it was called *samskrita*, which means ‘composed,’ ‘constructed.’ Thus Pali is not a true child of Sanskrit, but is and was the literary form of one of the ancient languages of India popularly spoken over an apparently wide stretch of the Indian Peninsula, . . .” (SOPh 694-5).

In the 3rd century BC the language used throughout Northern India was practically one, and it was derived directly from the speech of the Vedic Aryans, retaining many Vedic forms lost in the later classical Sanskrit. The basis of the language used in the Buddhist canon was that used in Ujjayini, the capital of the Avanti district. The chief doctrines of Buddhism are recorded in the works known as the Suttas (Sutras in Sanskrit) — there being four Nikayas consisting of 16 volumes; the fifth Nikaya being the Jatakas (birth stories of the Buddha).

Palingenesis [from Greek *palin* again + *genesis* becoming] One type of reimpodiment or self-generation, the transmission of an identic life in cyclically recurring phases, whereby at each transformation a new manifestation or result is produced. This result can also be called a palingenesis or new-becoming of the life-stream. The word is used similarly by Schopenhauer, who regards all phenomena as a continual and repeated palingenesis of one reality — the Will. Transmigration, however, means the reappearance of a living entity in different forms adapted to specific conditions.

Palingenesis does not occur in Greek literature, as far as is known; palingenesia is used in the New Testament for spiritual regeneration. With the alchemists the word meant the artificial reproduction of the spectrum of a plant from its ashes. In biology palingenesis means reappearance of ancestral characteristics, instead of new characteristics (cenogenesis).

Pallas Athene. See ATHENA

Pan (Greek) [from *pa* to feed, or *pan* all] Arcadian pastoral deity originally representing nature as a whole, about in later usage meaning the forms of terrestrial creative forces. In historical times, Pan was the local god of a pastoral people, venerated as giver of fertility to flocks and pastures; as guide to travelers; as healer, revealing medicine in dreams; as patron of song, music, and dance, as shown by the syrinx or pan pipes. Sometimes the name becomes generic, and in the plural becomes the Latin fauni. He was associated with the Roman god Faunus, and also Iunus.

Panchabhutas (Sanskrit) *Pañcabhūta*-s [from *pañca* five + *bhūta* element] The five elements — prithivi (earth), apas (water), vayu (air), tejas or taijasa (fire), akasa (aether) — in the exoteric classification, there being seven elements or mahabhutas in the esoteric reckoning. In the above sense, more properly called the panchamahabhutas (the five great elements).

Panchadasa (Sanskrit) *Pañcadaśa* Fifteen or fifteenth.

Pancha-kama (Sanskrit) *Pañca-kāma* [from *pañca* five + *kāma* desire, aspiration] The five desires or aspirations.

Panchakara (Sanskrit) *Pañcakara* [from *pañca* five + *kara* hand, side] Five-sided, five-handed; hence a pentagon. Synonymous with Makara (the tenth sign of the zodiac, Capricorn); “the five-pointed star or pentagon represented the five limbs of man” (Theos 3:42; BCW 3:327). The more common Sanskrit word for pentagon is *pañcakona* (five-angled).

Panchakosa (Sanskrit) *Pañcakośa* [from *pañca* five + *kośa* sheath] Five sheaths; according to the Vedantic classification of human principles there are five sheaths which enclose the divine monad or atman, which makes the sixth. The highest is the anandamaya-kosa, closely corresponding to the spiritual soul or buddhi; second is the vijnanamaya-kosa, the higher manas; third, the manomaya-kosa, lower manas with kama, making the human soul; fourth, the pranamaya-kosa, the vital-astral soul or prana and linga-sarira; and fifth, the annamaya-kosa, the physical body or

sthula-sarira.

Pancha-krishtayas (Sanskrit) *Pañca-kṛṣṭayas* [from *pañca* five + *kṛṣṭi* race of men] The five races; referring to the five root-races of humanity which have thus far appeared during this fourth round on earth, our own being the fifth root-race. As krishti originally signified cultivated ground, then an inhabited land, and by extension its inhabitants, the term could likewise apply to continents; and in this sense the pancha-krishtayas would signify the five continental systems on which each of the five root-races found its respective home. *See also* PANCHA-PRADISAH

Panchama (Sanskrit) *Pañcama* The fifth of the seven primary musical notes of the Hindu scale. *See also* SHADJA

Panchanana (Sanskrit) *Pañcānana* [from *pañca* five + *ānana* the face] Five-faced; a title of Siva alluding to the five great root-races of mankind during this fourth round, which races Siva represents as the type of “the ever reincarnating Kumara throughout the [present] Manvantara” (TG 247). As this is the fifth root-race, the title also applies to Siva as the five-faced; and in the sixth root-race he will be called six-faced, for this reason.

Panchanga (Sanskrit) *Pañcāṅga* [from *pañca* five + *aṅga* division] Five parts, portions, or bodies; an almanac, calendar, the five divisions of such an almanac consisting of solar days; lunar days; nakshatras (the heavenly bodies); yogas (conjunctions); karanas — certain astrological divisions of the day, commonly reckoned as eleven in number, hence, calculations. One of the best known of the Hindu almanacs is the Tirukkanda Panchanga.

Pancha-pradisah (Sanskrit) *Pañca-pradiśaḥ* [from *pañca* five + *pradiś* continent, region] The five regions; the hymns of the *Rig-Veda* speak of these five great continents of the five great races or root-races of mankind.

Panchasikha (Sanskrit) *Pañcaśikha* [from *pañca* five + *śikha* crest] One of the seven kumaras who paid worship to Vishnu on the island of Sveta-dvipa, according to the Puranic allegory.

Panchasya (Sanskrit) *Pañcāsya* [from *pañca* five + *āsya* face] Five-faced, five-headed, five-pointed; as a noun, a lion, synonym for the zodiacal sign Simha or Leo, showing that the sign is intended to represent the five Buddhas or Brahmas — Isana, Aghora, Tatpurusha, Vamadeva, and Sadyojata (5YT 108).

Panchatantra (Sanskrit) *Pañcatantra* [from *pañca* five + *tantra* book] A collection in five books of philosophical and moral instruction often given in the form of dialogs between birds and beasts as well as humans. It was compiled by Vishnuserman about the end of the 5th century and is the original of the better-known *Hitopadesa*. The source of many familiar stories and doubtless the remote ancestor of Aesop’s Fables. It was translated into Pahlavi by order of Naushirvan in the 6th century; in the 9th century it appeared in Arabic as *Kalila o Damna*; it was translated into Hebrew, Syriac, Turkish, and Greek. From these, versions were made into all the languages of Europe, and it

became familiar in England as Pilpay's Fables (Fables of Bidpai).

Panchayatanapuja (Sanskrit) *Pañcāyatana pūjā* [from *pañca* five + *yatana* effort + *pūjā* worship] Five-effort worship; a ceremonial observance practiced by some Advaita Vedantists.

Panchen Rimpoche or Rimboche (Tibetan) [from *panchen* abbreviation for *pandita chenpo* from Sanskrit *pandita* pundit + Tibetan *chen po* great + Tibetan *rin po che* precious one] Precious great teacher; the title of the Tashi or Panchen Lama, the spiritual ruler of Tibet, who had his seat at Tashi Lhunpo. The second great incarnation (along with the Dalai Lama) of the Gelukpa sect.

Panchi-krita (Sanskrit) *Pañcīkṛta* [from *pañca* five + the verbal root *kr* to make, do] Made into five; used in Vedanta philosophy for an element which is combined with small portions of the four other elements. *See also* ELEMENT; TATTVA

Pandavarani (Sanskrit) *Pāṇḍavāraṇi* [from *Pāṇḍava* son of Pāṇḍu + *araṇi* figuratively mother] Matrix or mother of the Pandavas; a title given to Kunti in the *Mahabharata*. Similar to surarani (matrix or mother of the gods) because surarani is used for Aditi (space).

Pandavas (Sanskrit) *Pāṇḍava*-s [descendants of Pāṇḍu] The five well-known Pandavas were Yudhishtira, Bhima, Arjuna, Nakula, and Sahadeva. Also Pandus.

Pandita (Sanskrit) *Paṇḍita* Often anglicized to pandit or pundit; a scholar, learned man, teacher, or philosopher.

Pandora (Greek) All-gifted; in Greek mythology, after Prometheus enlightened man by bringing him the celestial fire, the enraged Zeus revenges himself by seducing man, for which purpose he has Hephaestos create a woman, Pandora, endowed with gifts from the great gods. She is brought to Epimetheus, the brother of Prometheus (“after-thought,” the brother of “fore-thought”), bringing with her a locked box containing all human ills, which she opens from curiosity, and the ills spread over the earth. Hesiod calls her the first woman, sent as a punishment to man for his theft of the divine fire. It evidently means that as soon as he quits his passive irresponsible state and acquires active will and intellect, man subjects himself to temptations from the lower world. Pandora is an earthly aspect of all-bounteous nature; a later interpretation of the story of the box makes it the container of blessings, which however fly away when it is opened, leaving behind only hope.

Pandu (Sanskrit) *Pāṇḍu* The pale one; a son of Vyasa by the wife of Vichitra-virya. The brother of Dhritarashtra and Vidura, and the father of the five Pandava princes of the *Mahabharata*.

Pandus. *See* PANDAVAS

Panini (Sanskrit) *Pāṇini* The most eminent of all Sanskrit grammarians of whatever age, the author of the *Ashtadhyayi*, *Paniniya*, and several other works. Panini was considered a rishi who received his inspiration from the god Siva. Orientalists are not certain in what epoch he lived, some guessing 600 BC, others about 300 AD; he is said to have been born in Salatura in Gandhara,

an Indian district west of the Indus. His grammar is composed in the form of 3,996 slokas or sutras arranged in eight chapters, the aphorisms extremely brief, and long study is often required in order to ascertain Panini's meanings. Grammar with him was a science studied for its own sake, and investigated with the most minute criticism.

Pansil [from Sanskrit *pañca-śīla* from *pañca* five + *śīla* practice, behavior] The five moral precepts embodied in practice which every Buddhist, layman and bhikkhu (or bhikshu), promises to observe. Taking pansil publicly is tantamount to becoming a Buddhist. It consists of undertaking abstinence from 1) injuring or killing any living thing (panatipata veramani sikkhapadam samadiyami); 2) theft or taking that which is not given (adinnadana veramani sikkhapadam samadiyami); 3) immoral sensual enjoyment (kamesu michchhachara veramani sikkhapadam samadiyami); 4) false speech or lying (musavada veramani sikkhapadam samadiyami); and 5) intoxication as tending to becloud and weaken the mind (sura-meraya-majja-pamada-tthana veramani sikkhapadam samadiyami).

Pansophia [from Greek *pan* all + *sophia* wisdom] All-wisdom, omniscience.

Panspermic, Panspermy [from Greek *pan* all + *sperma* seed] The theory that the so-called spontaneous generation of life is due to the omnipresence of vital germs. In theosophy, panspermy is the doctrine that every atom of the material world is essentially a life-atom, an entity possessing virtually unlimited powers of development or evolutionary unfolding, each individual entity according to its own inner characteristics or svabhava. *See also* SPONTANEOUS GENERATION

Pantacle or Pentacle An amulet, talisman, a geometrical figure so used. There is much confusion as to the derivation of this word, but it seems most likely that it comes through Italian and French from the root *pend-* "to hang," and so is equivalent to a pendant or charm hung about the neck. From the fact that one form of pentacle was the pentagram or star-pentagon, the word itself has been connected with the Greek *pente* (five). The word is used specially in *The Secret Doctrine* to denote the pentagram or pentalpha. The Solomon's seal is another pentacle, and there are many others, including the sigils of the seven planets.

Pantheism [from Greek *pan* all + *theos* god] According to Plato, *theos* is derived from *theein* (to move); hence pantheism may be defined as belief in an all-moving or all-living principle. It is the doctrine that the root-essence of the universe is utter divinity, that divinity pervades throughout and is the substratum, the inmost, of all beings and things — every atom, sun, universe, man, god. Theosophic pantheism excludes the idea that deity is separate from the universe; and while denying monotheism and polytheism when these two are regarded as being exclusive of each other, theosophy recognizes both as complementary albeit partial statements of truth. Everything that is, is a manifestation, in one degree or another, of the all-permeant, divine essence.

Pantheism, in its root-meaning, is thus the basis and cause of evolution, by which the inner divinity, the monadic essence, or the hosts of monads progressively evolve from lower to higher

manifestation, because the same ultimate essence is the very heart of each.

Pantheon (Greek) A temple dedicated to all the gods; also, figuratively, the totality of the gods.

Panthera or **Pandira** According to the apocryphal Jewish writing *Sepher Toledoth Yeshua* (book of the genealogy of Jesus), Jesus was the son of Joseph Panthera, supposed by tradition to have been a Roman soldier, and Mary; hence he was known as Ben Panthera (Panthera's son).

Panthomorphos [from Greek *panto* all + *morphe* shape] Having all shapes, and therefore mystically the totality of manifested nature as including all beings, things, and shapes.

Papapurusha (Sanskrit) *Pāpapuruṣa* [from *pāpa* wicked, sinful + *puruṣa* man] A wicked man; used as a personification of all sin, or the type of a sinner. Esoterically “one who is reborn, or reincarnated from the state of *Avitchi* — hence ‘Soulless’ ” (TG 248). *See also* SOULLESS BEINGS

Para (Sanskrit) *Para* In philosophy, infinite, supreme; the final limit.

Para (Sanskrit) *Parā* Supreme, the ultimate bound or limit, applied to Vach (mystic speech). Vach is of four kinds: para, pasyanti, madhyama, and vaikhari. Para-vach is the heart and origin of every vaikhari or uttered speech. Para-vach corresponds to Brahman in the cosmos, for the cosmological and cosmogonical significance of Vach very closely approximates the Greek cosmic Logos (cosmic Word).

Parabrahmadharaka (Sanskrit) *Parabrahmadhāraka* [from *parabrahman* the nameless universal spiritual principle + *dhāraka* containing, bearing] Coined by Subba Row for that cosmic carrier or container of the divine, the link between parabrahman and any cosmic hierarchy. Thus dharaka here is equivalent to the cosmic hierarch.

Parabrahman (Sanskrit) *Parabrahman* [from *para* beyond + *brahman* (neuter) universal self or spirit] That which is beyond Brahman; the self-enduring, eternal, self-sufficient cause of all, the one essence of everything in the kosmos. It is before all things in the kosmos, and is the one sole limitless life-consciousness-substance from which starts into existence a center of force which may be called the Logos. In the Vedic cycle of writing it is referred to as tat (that) as opposed to the world of manifestation called idam (this).

“Parabrahman is intimately connected with Mulaprakriti. Their interaction and intermingling cause the first nebulous thrilling, if the words will pass, of the Universal Life when spiritual desire first arose in it in the beginnings of things. . . . Parabrahman is no entity, is no individual, or individualized being. It is a convenient technical word with conveniently vague philosophical significance, implying whatever is beyond the Absolute or Brahman of any hierarchy. Just as Brahman is the summit of a kosmic Hierarchy, so, following the same line of thought, the Parabrahman is ‘whatever is beyond Brahman’ ” (OG 121).

The parabrahman of the Vedantists is likewise conceived of as an eternal and periodical law which causes an active and creative force to emanate from the ever-concealed and incomprehensible one principle at the beginning of every mahamanvantara or new cycle of cosmic life.

“*Parabrahmam* is an unconditioned and absolute reality, and *Mulaprakriti* is a sort of veil thrown over it. *Parabrahmam* by itself cannot be seen as it is. It is seen by the *Logos* with a veil thrown over it, and that veil is the mighty expanse of cosmic matter. It is the basis of material manifestations in the cosmos” (Notes on BG 21). Parabrahman has the same relation to the *Logos* as our atman does to our karana-sarira; and parabrahman is the very foundation of the highest self.

Parabrahman is identical with the 'eyn-soph of the Chaldean Qabbalah.

Paradesa (Sanskrit) *Paradeśa* [from *para* beyond, above + *deśa* region, country] The region above or beyond; said to be the highlands to which the first Sanskrit-speaking people have supposedly been traced. More truly, the cradleland of the first thinking man. It is also the sacred land in Central Asia inhabited by the Dragons of Wisdom or initiates, and in this sense is synonymous with Sambhala.

Paradise [from Greek *paradeisos* from Old Persian *pairidaeza* from Sanskrit *paradesa* region beyond] Applied in Persian and Greek to a pleasure park or royal domain. A Hebrew version (*pardes*) is found in the Bible, translated “orchard” (Eccl 2:5, Cant 4:3) and “forest” (Neh 2:8). An equivalent is the Hebrew *eden* (delight). Stories of a Paradise or Eden are universal; and while the general idea is simple, its applications are complex. It is the state of innocence and bliss from which there is departure, and to which there is eventual return. This may apply to the human race as a whole, to particular races, to the lands they inhabit, or to the pilgrimage of the individual human soul.

Persian tradition places a Garden of Delight far to the north of Caucasus in the Arctic regions, where was the Imperishable Sacred Land whence issued a stream from the earth's fount of life. *Adi-varsha* was the Eden of the first races and specifically of the primeval third root-race; the Eden of the fifth root-race is but its faint reminiscence. The Garden of Eden or of God (Ezek 31:3-9) was a home of initiates of Atlantis, now submerged.

The Eden in Genesis is a marvelous fusion of many meanings into one narrative, where the Adams of the various root-races are made into one. Eden was an ancient name for Mesopotamia and adjacent regions; and under that one name are comprised the meanings of an abode of initiates, a sacred land from which races emerged, and a goal of bliss in the future. The Eden of the Hebrew books, which Judaism, Christianity, and Islam alike have located in Mesopotamia and in the now sandy lands of Persia and Afghanistan, refers also to what was in prehistoric times a great and highly developed center of culture and the civilization which there had its seat, including a number of Mystery schools. When the changing cycles brought about a degeneration and final

breakup of this seat of archaic wisdom, it was represented as the loss by the then human Adam — the then race — of the Paradise in which he had dwelt. Edens and Paradises always contain trees; and these, by one interpretation, signify the initiates in the sacred land, and by another they are the Tree of Life and the Tree of Wisdom for man himself. In the Qabbalah, Eden is a place of initiation.

In later times, the symbol of Paradise has come to mean a bliss of sensual pleasure, like the Moslem Paradise of the Houris, the Olympus of the Greeks, or Indra's Heaven (svarga).

Parama (Sanskrit) *Parama* The highest or supreme in any series or hierarchical division.

Paramapada (Sanskrit) *Paramapada* Highest state or position; that which is not material but loftily spiritual, in and to which appertain jivanmuktas or monads who have attained freedom from karma; thus they attain the highest condition or state in any hierarchical sense. *See also* PARAMAVADHI

Paramapadatmavat (Sanskrit) *Paramapadātmavat* [from *paramapada* highest, supreme + *ātmavat* selfhood, partaking of the characteristics of selfhood] That which is of the very essence or nature of high spirit, bordering on the unconditioned nature of the hierarch. *See also* PARAMAVADHI

Paramapadha. *See* PARAMAVADHI

Paramarshis (Sanskrit) *Paramarṣi-s* [from *parama* highest + *rṣi* sage] The highest sages.

Paramartha (Sanskrit) *Paramārtha* [from *parama* highest, sublime + *artha* comprehension, aim] True or supreme self-consciousness; also a great mystic work, which according to legend is said to have been delivered to Nagarjuna by ancient initiates.

Paramartha, in the view of Buddhist initiates, is that final or ultimate goal possible of attainment in the present sevenfold planetary manvantara by the striving and advancing adept. When he has overcome, subdued, and transformed the characteristics of the lower quaternary of his sevenfold constitution so that he lives in the highest part of the upper triad — when he has attained self-conscious living in his own monadic essence — he thereupon attains paramartha or that absolute consciousness which, because of its freedom from all human qualifications or characteristics, can equally be called absolute unconsciousness. Expressed in another way, it is conscious existence as a nirvani. It is the state into which the upper triad of the buddha passes, once the buddha state has been reached. This entrance of the buddha's higher triad into nirvana by no means inhibits his lower quaternary from active service in the world, for his lower quaternary, being washed of all the characteristics of ordinary personality and overshadowed by the buddha's higher triad, is a nirmanakaya of high degree.

Paramartha-satya (Sanskrit) *Paramārtha-satya* [from *paramārtha* sublime comprehension + *satya* truth, reality] Absolute or sublime truth or reality; from another standpoint, the path of pure

wisdom-knowledge, bringing individual freedom to the adept, in contrast with samvriti-satya (relative truth). When the adept has reached the first stages of paramartha-satya he becomes a jivanmukta (freed monad), delivered thenceforward from the unceasing round of peregrinating reimbodiments until the end of the kalpa. The Tibetan equivalent is dondampai-denpa.

Paramarthika (Sanskrit) *Pāramārthika* [from *parama* highest + *ārthika* true substance of a thing, real] Relating to a high or spiritual object or to supreme truth; real, essential verity; in Vedantic philosophy, one of the three kinds of existence: the only real or true existence. *See also* PRATIBHASIKA; VYAVAHARIKA

Paramatman (Sanskrit) *Paramātman* [from *parama* highest + *ātman* self] Supreme self; the self which is higher than the self of the human ego. In the human constitution, the paramatman is the three highest principles, with special emphasis on the atman; hence this arupa triad is collectively called the paramatman, the summit or flower of the hierarchy that is man. It is likewise the root-base or source of the atman of the arupa triad. Thus paramatman is that which is beyond or above even the atman (highest self) of any hierarchy, the First or Unmanifest Logos of the universe.

Paramavadhi (Sanskrit) *Paramāvadhi* [from *parama* highest + *avadhi* a termination, limit] Highest ranges; a place or loka of purely spiritual character where, according to Visishtadvaita Vedantists, bliss is enjoyed by those who reach moksha or freedom in spirit and complete liberation from the manifested worlds. This place “is not material but made . . . ‘of *Suddhasatwa*, the essence of which the body of Iswara,’ the lord, ‘is made’ ” (TG 249).

Paramita (Sanskrit) *Pāramitā* [from *pāram* beyond + *ita* gone from the verbal root *i* to go] Gone or crossed to the other shore; derivatively, virtue or perfection. The paramitas vary in number according to the Buddhist school: some quoting six, others seven or ten; but they are the glorious or transcendental virtues — the keys to the portals of jnana (wisdom). Blavatsky gives these seven keys as (VS 47-8): 1) dana “the key of charity and love immortal”; 2) sila (good character), “the key of Harmony in word and act, the key that counterbalances the cause and the effect, and leaves no further room for Karmic action”; 3) kshanti, “patience sweet, that nought can ruffle”; 4) viraga, “indifference to pleasure and to pain, illusion conquered, truth alone perceived”; 5) virya (strength, power), “the dauntless energy that fights its way to the supernal TRUTH, out of the mire of lies terrestrial”; 6) dhyana (profound spiritual-intellectual contemplation, with utter detachment from all objects of sense and of a lower mental character), human consciousness in the higher reaches of this state becomes purely buddhic, with the summit of the manas acting as vehicle for the retention of what the percipient consciousness experiences; once the golden gate of dhyana is opened, the pathway stretching thence leads towards the realm of “Sat eternal”; and 7) prajna (understanding, wisdom), that part of the mind that functions when active as the vehicle of the higher self; “the key to which makes of man a god, creating him a Bodhisattva, son of the Dhyanis.”

The six, seven, or ten paramitas have reference to the three fundamental grades of training in

discipleship: six for the beginner, seven for the one who is more advanced, and ten which are practiced by the adept. A faithful following of these virtues is incumbent upon every disciple, and fidelity and perseverance in performance mark progress along the mystic way. The other three paramitas, making ten, are *adhishthana* (inflexible courage) that goes forward to meet danger or difficulty; *upeksha* (discrimination) which seeks and finds the right way of applying the paramitas; and *prabodha* (awakened inner consciousness) or *sambuddhi* (complete or perfect illumination).

Paranatellon (Greek) Rising up with; an astrological term applied to certain extra-zodiacal constellations which rise at the same time as the respective 36 decanates of the zodiac.

Parnassus (Greek) A range of mountains in central Greece, but especially its summits near Delphi, seat of Apollo and the Muses, sacred to Dionysos. Like other holy mountains, it was the abode of the chiefs of the communities of adepts. *See also* MOUNTAINS, MUNDANE; OLYMPUS

Paranirvana, Parinirvana (Sanskrit) *Paranirvāṇa, Parinirvāṇa* [from *para* or *pari* + *nirvāṇa* blown out from *nir* out + the verbal root *vā* to blow] That which is beyond nirvana; the period of cosmic rest (*mahapralaya* or Great Night of Brahma), lasting 311,040,000,000,000 terrestrial years. Likewise called the great Day Be-With-Us; the Egyptian Day of Come-To-Us; and the Christian Day of the Last Judgment which, however, has been materialized by modern dogmatism.

“The day when ‘the spark will re-become the Flame (man will merge into his Dhyān Chohan) myself and others, thyself and me,’ as the Stanza has it — means this: In *Paranirvana* — when *Pralaya* will have reduced not only material and psychical bodies, but even the spiritual *Ego(s)* to their original principle — the Past, Present, and even Future Humanities, like all things, will be one and the same. Everything will have re-entered the *Great Breath*. In other words, everything will be ‘merged in Brahma’ or the divine unity” (SD 1:265-6).

The cosmic pralaya is analogous to the death of the human being. The spiritual monads are drawn into higher ranges of being, to live and evolve, while the lower elements or bodies of the universe disperse as does our physical and lower psychological vehicles after death. *See also*

PARANISHPANNA

Paranishpanna, Parinishpanna (Sanskrit) *Paraniṣpanna, Pariniṣpanna* [from *para* or *pari* + *niṣpanna* finished, completed from *nis* + the verbal root *pad* to come forth, ripen, accomplish] The state of having gone forwards beyond; philosophically, the absolute perfection to which all existences attain at the close of a great period of activity (*mahamanvantara*). It is identical in meaning with *paranirvana*, and corresponds to the Tibetan *yond-grub*.

Parardha (Sanskrit) *Parārdha* [from *para* away + *ardha* one-half] The half of a period which has passed away; the period of one-half of the Age of Brahma or a *mahakalpa*, which has already expired — Age of Brahma and *mahakalpa* being general terms of differing time lengths.

Parasakti (Sanskrit) *Parāśakti* The supreme force or great power. The entire universe is built of

seven or ten prakritis, with their corresponding seven or ten purushas or cosmic energies. Parasakti, which in one sense is the highest of these seven forces, acts, like all the other saktis, not only on its own plane or in its own specific prakriti, but likewise extends itself throughout all the other six saktis or prakritis. For this reason every kosmic plane has its own dominant energy or prakriti or sakti; and yet at the same time contains those above it, and in undeveloped form those below it which flow forth from it in the procession of unfolding powers as evolution continues through the manvantara. Thus parasakti, which includes on the physical plane what we call light and heat, on its own primordial plane likewise produces the metaphysical origins of light and heat — the intelligent activity of the buddhi principle, signifying light combined with the vital warmth of kama or cosmic love (the Greek Eros).

Parasara (Sanskrit) *Parāśara* The Vedic rishi called the narrator of the *Vishnu-Purana*, also considered the writer of some of the hymns of the *Rig-Veda*. His commentaries on the Dharmasastras are often cited in *The Secret Doctrine*. He is said to be the father of Vyasa, who was the arranger of the Vedas.

Parasu-rama-avatara (Sanskrit) *Paraśu-rāma-avatāra* The avatara or descent of Vishnu known as Rama with the Axe who, according to the purely theological interpretation, terminated the Kshatriyas (warrior castes), which were disturbing and overruling the Brahmins (priestly and learned castes). Legends of avatars are based on cosmogonic, planetary, and even human history, and also on the principles of analogical repetitives in the unfolding aeons of time.

Paratantra (Sanskrit) *Paratantra* Used by the Yogacharyas to signify “that which has no existence of, or by itself, but only through a dependent or causal connection” (TG 250).

Parikalpita (Sanskrit) *Parikalpita* [from *pari* around + *kalpita* fixed from the verbal root *klṛp* to arrange, contrive, fix] That which is limitedly encompassed, that which is limited; error, the fruit of illusion. Parakalpita is spoken of as one of the great enemies of absolute knowledge.

Parinamin (Sanskrit) *Pariṇāmin* [from *pari* + the verbal root *nam* to change, be modified into] Changing, altering, subject to modifications.

The noun parinamana means bringing to full development, in relation to karma. *See also* APARINAMIN

Parinirvana. *See* PARANIRVANA

Parinishpanna. *See* PARANISHPANNA

Paroksha (Sanskrit) *Parokṣa* [from *paras* beyond + *akṣa* eye] Beyond the range of sight, invisible. As a noun, the intellectual or intuitive apprehension of truth by means of inner faculties.

Parthenogenesis [from Greek *parthenos* a virgin + *genesis* birth] A kind of reproduction, neither sexual nor asexual, where offspring is produced from a female ovum or gamete with no

fertilization either by the individual itself or by another individual. It occurs even at present in certain primitive animals as a stage in a process of alternation of generation. An imperfect female individual is hatched from an egg laid by a perfect female after impregnation, and continues to reproduce its kind for several generations without further fertilization. Males may also be reproduced in the same way, thus affording the means for renewed sexual reproduction. An analogous process is known in botany, where a perfect embryo is produced without the intervention of pollen. As is the case with other methods of reproduction, processes which presently are restricted to organisms lower than man, were in earlier cycles normal for those beings which then formed the human life-wave.

Partsuphin (Aramaic) *Partsūfīn*. Faces, visages, aspects; used in the Qabbalah as an equivalent for 'Anaph (plural 'Anpin), signifying manifested worlds, because each manifested world is an aspect or face of an indwelling spiritual, psychological, and material group of hierarchical entities. It thus stands for the globes, collectively, of a planetary chain.

Parvan (Sanskrit) *Parvan* Also *parva* (nominative singular). A division or section of a book, such as the *Mahabharata*.

Parsis. See ZOROASTER

Pasa (Sanskrit) *Pāśa* [from the verbal root *paś* to fasten, bind] A snare, noose, tie, bond, chain, fetter — both literally and figuratively. Especially used in connection with Yama, the Hindu god of death, represented as carrying a noose. The Jains and Buddhists use the term for anything that binds or fetters the soul, e.g., the outer world of matter and sense. “As an emblem of ‘door, gate, mouth, the place of outlet’ it signifies the ‘strait gate’ that leads to the kingdom of heaven, far more than the ‘birth-place’ in a physiological sense.

“It is a *Cross in a Circle* and *Crux Ansata*, truly; but it is a Cross on which all the human passions have to be crucified before the Yogi passes through the ‘strait gate,’ the narrow circle that widens into an infinite one, as soon as the *inner* man has passed the threshold” (SD 2:549).

Pasht or **Pakht** (Egyptian) *Pasht* or *Pakht* [from *pakat*, *pasht* tearer, destroyer] The goddess of Pehit, called the Lady of Ant and of Set, popularly looked upon as the punisher of guilt and remover of defilement. She was the female aspect of the lower cosmic Ptah — the intellectually creative principle — represented, because of her lunar attributes, as being a cat-headed or lioness-headed goddess, similar to Bast. As Lady of Sept (the star Sirius) she was identified with forms of Isis, Hathor, and Sekhet.

Pashut (Hebrew) *Pāshūt* [from *pāshaṭ* to uncover, strip] Stripped, uncovered; one of the four methods used by the Jews in interpreting the Bible.

Pass-not. See RING-PASS-NOT

Password. See WORDPASSING

Pastophori (Greek) Shrine-bearers; a class of candidates for initiation, especially in ancient Egypt, who bore the coffin containing the defunct — the sun god killed and resurrected — in the ceremony at which a candidate for higher initiation has to pass through the portals of death.

Pasu (Sanskrit) *Paśu* Any tethered or sacrificial animal.

Pasyanti (Sanskrit) *Paśyantī* One of the four kinds of mystic speech or vach, the other three called para, madhyama, and vaikhari. The pasyanti-form is cosmologically the cosmic Logos first made manifest.

Patala (Sanskrit) *Pātāla* [possibly from the verbal root *pat* to sink, fly down or alight] Nethermost, farthest underneath; the reference being not so much to locality or position in space, as to quality — grossness, heaviness, or material substance. The seventh, lowest, and most material tala. It is used in Hindu literature to signify the hells, underworlds, or infernal regions, or the antipodes or Myalpa. The corresponding loka or pole is bhurloka. “Meru — the abode of the gods — was placed . . . in the North Pole, while *Patala*, the nether region, was supposed to lie in the South. As each symbol in esoteric philosophy has *seven keys*, geographically, *Meru* and *Patala* have one significance and represent localities; while astronomically, they have another, and mean ‘the two poles,’ which meaning ended by their being often rendered in *exoteric* sectarianism — the ‘Mountain’ and the ‘Pit,’ or Heaven or Hell” (SD 2:357).

Patala, from one aspect, corresponds to the lower hierarchies of the Gandha, elementals ruling the sense and organ of smell. This lowest tala is the sphere of irrational beings, including animals, having little or no sense or feeling save that of self-preservation and the gratification of the senses — attributes of materiality which might include a vast number of the human species. Patala is also the sphere of intensely human as contrasted with human-spiritual beings, and is likewise the abode of the animal dugpas, elementals of animals, and multitudes of nature spirits, all belonging to the bipolar planes of bhurloka-patala.

In Atlantean times, America was the patala or antipodes of Jambu-dvipa, geographically. In the *Mahabharata*, Arjuna as Krishna’s chela is said to have descended into Patala, the antipodes, and there married Ulupi, the daughter of the King of the Nagas or initiates.

The Hindu rishi Narada, representing one of the most recondite and still living spiritual influences on earth, is said to have descended in bygone times into the regions of Patala, and to have been delighted with what he found there. On his return to the celestial regions, he gave to the gods a glowing account of the beauties of the hells, stating that they abounded in everything ministering to luxury and sensuous delight. For precisely these reasons, Patala as the lowest of the talas, has been called the infernal regions or hell. To beings evolving in the spheres of matter, these spheres are extremely pleasant despite the pain and suffering that invariably accompany sojourn in all

astral spheres, which the talas are. What the evolving entities lose in spiritual power, intellectual bliss, and higher faculty, is compensated for by the attachments and bonds of a sensuous character, tying them temporarily to these realms.

Pataliputra (Sanskrit) *Pāṭaliputra* The ancient capital of Magadha, a kingdom of Eastern India near the confluence of the Sona and Ganges rivers, identified with the modern city of Patna.

Patanjala (Sanskrit) *Pātañjala* The Yoga philosophy of Patanjali, which is classed as the fourth of the six schools or darsanas of Hindu philosophy. Patanjali's *Yoga Aphorisms* contains many excellent precepts and much excellent advice, although a hatha yoga work, by reason of its reference to physical processes. When carefully studied, it brings about no evil consequences, but it should not be studied apart from the other elements of Patanjali's philosophic work.

Patanjali (Sanskrit) *Patañjali* [from *pata* fallen + *añjali* palm] The founder of Yoga philosophy, also considered by many to have been the author of the *Mahabhashya*, a celebrated commentary on the Grammar of Panini. His date is assigned by some scholars as around 700 BC, and tradition considers him a contemporary of Panini.

Pater (Greek, Latin) Father; the seventh and last degree of initiation in the Mithraic Brotherhood.

Path. See MARGA

Paths of Wisdom or **Ways of Wisdom** Used in the Hebrew Qabbalah, especially in the *Sepher Yetsirah* (the book of formation) in which formation or creation is set forth in a series of numbers. The *Zohar* (iii, 290a), as well as the *Sepher Yetsirah* (1, i), state that Wisdom (Hochmah) generates or arranges all things by means of "thirty-two wonderful paths of wisdom." The number 32 consists of the ten Sephiroth added to the 22 letters of the Hebrew alphabet — the latter represented in the *Zohar* as the 22 utterances of the Divine Speech. Again man is regarded as being the synthesis of the 22 letters, which with the addition of the ten Sephiroth makes the complete synthesis of creation.

The idea in this curious mixing of alphabetic characters and numbers with living beings, such as the world or man, is that just as alphabetic characters are the structure of vocal speech, words, sounds, and therefore of the communication of intelligence made by words built of the alphabetic characters, so these characters symbolically stand for the elements of the universe: in either case in, above, and around the elements and principles of the universe there is the divine hierarchy, of which the element-principles are the outward manifestations or expressions.

Patriarchs One of the names given to rulers over men and racial periods. Chaldeo-Judaism has presented its gods as patriarchs. In the Qabbalah, the Sephiroth become the creators and afterwards temporal patriarchs, both of time and space. Mankind from the first root-race to the beginning or even middle of the third root-race, is ruled by watchers or guides; after, by patriarchs or demigods, heroes, etc., the names given to these different classes of overseeing entities varying

in different countries. But the word patriarch has special reference to the genealogies in Genesis: Adam to Noah, the descendants of Noah's three sons, the sons of Jacob. Those from Adam to Noah are given in two ways which do not agree; but, as is the case with Indian rishis, they are at times convertible and interchangeable. They represent, among other things, pre-diluvian races and ages; and if Adam be regarded as pertaining to the fifth root-race only, to pre-Adamic races. They are at different times chronological data, symbols of solar and lunar years, of astronomical periods, and even of physiological functions when applied to races, as in other symbolic systems of mythological belief. The number for Enoch is 365, which is recognizable; the sons of Jacob stand for the signs of the zodiac. We have here a fragment of the ancient mystery-language with its seven keys; a single name, for instance, standing for a person, a race, or an age, etc. The Sanskrit prajapatis (progenitors) is parallel in one sense, as are the Mazdean Ameshaspentas.

Paul A man by legend said to be of pure Jewish birth, of the tribe of Benjamin, at first a persecutor of Christians but who underwent a mystic enlightenment of which he speaks. His various letters prove that he was an initiate. He recognizes Christ — the Christos — as being principally the higher self in man, and strives to convey this truth to the minds of many congregations, adapting it to their power of comprehension. He evidently does his best to promote as high an interpretation of Christianity as might be possible among the varied and unpromising, and often indeed refractory, elements which he found at hand. His failure to mention the familiar gospel stories is due to the fact that the Gospels are of much later date. The brand of Christianity which has prevailed during the centuries would have been very different if Paul's philosophic teachings had been taken more seriously, for they are in the main clear enough even without any esoteric key. Often they have been disfigured in interpretation, as in the doctrine of justification by faith and not by works, attributed to him. On reading Romans 3 with an unprejudiced eye, we find him insisting that man is not made virtuous by following the letter of the law and doing pious deeds alone, but also by *pistis* — a full realization of the truth and determination to follow it. This has become perverted into the dogma that man cannot be saved by any amount of good deeds alone, but must believe that Jesus died in propitiation for his sins.

A contrast has been made between the teachings of Paul and of Peter — respectively often referred to as the Pauline and Petrine theology — as representing pagan and Jewish Christianity respectively; and these two have been the occasion of controversies and attempted reconcilements.

Paurusha Pralaya or Manvantara (Sanskrit) *Pauruṣa-pralaya, -manvantara* [from *pauruṣa* human from *puruṣa* man] The death, or the life, of a human being.

Pavaka (Sanskrit) *Pāvaka* [from the verbal root *pū* to purify] One of the three personified fires, whether kosmic or human; one of the three sons of Agni-Abhimani and Svaha. Agni-Abhimani, his three sons — Pavaka, Pavamana, and Suchi — and their 45 sons, constitute the mystic 49 fires of

occultism. Pavaka is the electric fire, or vaidyuta [from *vidyut* lightning], and is the parent of Kavyavahana, the fire of the pitris. *See also* ABHIMANI

Pavamana (Sanskrit) *Pavamāna* [from the verbal root *pū* to purify] One of the three personified fires, whether of the kosmos or man; one of the three sons of Agni-Abhimani and Svaha. Agni-Abhimani, his three sons — Pavaka, Pavamana, and Suchi — and their 45 sons, constitute the mystic 49 fires of occultism. Pavamana is the fire produced by friction, sometimes called nirmathya, and is the parent of saharaksha, the fire of the asuras. “In the metaphysical sense the ‘Fire of friction’ means the Union between *Buddhi*, the sixth, and *Manas*, the fifth, principles, which thus are united or cemented together; the fifth merging partially into and becoming part of the *monad*; in the physical, it relates to the *creative spark*, or germ, which fructifies and generates the human being” (SD 2:247).

Pavana (Sanskrit) *Pavana* [from the verbal root *pū* to purify] The purifier; often used for the wind. Pavana, as the god of wind, is said to be the father of Hanumat or Hanuman, the monkey king who becomes Rama’s helper in the *Ramayana*.

Pehlevi. *See* PAHLAVI

Peiru-un (Chinese) The traditional founder of China and progenitor of the Chinese peoples. According to legend this king, beloved of the gods, was warned by two oracles of the impending catastrophe awaiting the island-continent of Ma-li-ga-si-ma, which because of the iniquity of its giants sank to the bottom of the sea. He therefore set out with his family on the ocean and arrived on the shores of China. This is the Chinese version of the sinking of the continent of Atlantis.

Peling (Tibetan) Foreigner in general, but applied by Tibetans particularly to Englishmen; according to Mme. David-Neel, the Tibetans apply the term *urusso* and not “philing” to the Russians.

Penates (Latin) The household gods, or sometimes gods of the State, among the Romans. They were represented by images, to which honors were paid, and supposedly protected the hearth, home, and family. Aeneas transfers with great solicitude and piety the penates from Troy to his new Italian settlement. The universe is filled with hierarchies of intelligent beings, ranging from the highest to the lowest, in addition to those representing the organic kingdoms of nature. No nation of antiquity, indeed no people today outside Western civilization, but had or has its protective divinities of the home, field, mart, etc. Even in Western civilization the same undying belief finds expression in a thousand habits, customs, and ceremonies.

The idea of the penates underwent progressive change and possible degeneration; however, they undoubtedly belong to the great class of *genii*, whether of a family or of a State, and *genius* is anything from a planetary spirit to what the simple fancy of Medieval Europe called a fairy. Hence it is easy to understand how names originating in the ancient Mystery schools may pass down into

times when people are more concerned with their immediate physical needs, as at present. The consistent testimony of all Roman antiquity shows that the penates were the guardian angels supposed to watch over and, if possible, protect the individuals to whom these guardian angels were attached by karmic bonds.

As men individually and collectively are integral parts of nature, they are connected with spiritual powers of which mankind is not only the offspring, but in a certain sense the representative on earth. The reverence paid to the penates by the Romans is a manner of tacitly stating that every individual and group, such as a people, is under the watchful supervision of their spiritual prototypes in the celestial realms.

Penetralia (Latin) [from *pen* within] The inner parts of a house, etc.; hence also a shrine or sacred chamber, a Holy of Holies. The original conception of the Holy of Holies was of a place of such purity and sacredness that none might enter save the high priest, and he only on rare and special occasions. It might contain no image or concrete representation of a divinity. Later, this pure conception was degraded to phallicism.

The origin of the reverence and often worship paid to the Holy of Holies by some ancient peoples lay in Atlantean religious magic. For among them, there were actual places of earth, or penetralia, of particular sanctity; because by working of magic these were actually filled or infilled with a presence of spiritual-divine character. Indeed, these penetralia among the Atlanteans were of two classes: places in which the presence of a divinity was actually there, so that it could be felt by sensitives and communication had with it by trained adepts; and similar penetralia but of the left-hand path, in which dark spirits of the earth were enchained and were consulted by adepts of evil. In later times when the secrets of Atlantean magic were largely lost, the custom of building a Holy of Holies continued to be as common as in Atlantean times.

Pentacle. See PANTACLE

Pentagon A five-sided figure, usually meaning the regular pentagon. Pentagon, pentacle, and pentagram are not always properly distinguished, and sometimes pentagon is used for the star pentagon or five-pointed star; but the symbolic meaning is the same. It is among other mystical references, a glyph for the number 5.

Pentagram, Pentalpha The five-pointed star, or star pentagon, called pentalpha by Pythagoreans because its corners are like five (pente) alphas (A). It combines the two and the three, or the first even number and the first odd number after unity, representing therefore on the universal plane the union of cosmic substance with cosmic intellect. As a union or unity of five elements it stands for the heavenly or macrocosmic man, and its five points correspond to the head and limbs of the human body; the same general idea lies behind the five wounds which Christians ascribe to the crucified Jesus. Sometimes the five-pointed star is drawn with a point down and two horns up, signifying the polar opposite of the preceding, the nether or material pole of cosmic life, an

emblem of matter and black magic. The decad is produced by a combination of these two; and thus we may obtain a still more profound emblem of man's dual nature.

It is likewise used for the number five, and thus represents the five root-races which have so far been manifested, and their corresponding five elements. The numbers of pi are given the form of geometrical figures, among which the 5 is shown as the pentagram. The number five plays an important part in mensuration and the proportions of the regular polyhedra, giving rise to the ratio of the golden section.

Finally, in theosophic symbology the pentalpha is frequently employed as the emblem of the true ego, the higher manas or buddhi-manas. It is likewise one of the emblematic figures containing one of the keys to the correct calculation of time periods, whether these be cosmic or terrestrial. It is quite a mistake to suppose that accurate computations of time periods may be arrived at by the simple arithmetical use of the number seven, whether by division, multiplication, or by a simple addition or subtraction; all such time periods are calculable solely on the basis of a correct knowledge of the respective uses of the five, six, and one.

Pentateuch [from Greek *pente* five + *teuchos* books] A work in five books; the first five books of the Bible, containing stories of creation, of a flood, of the wanderings and settlement of the Hebrews, and the so-called Law of Moses. To these is sometimes added Joshua, sometimes also Judges and Ruth. Jewish belief in the authorship of Moses was adopted by the Christian Church, but internal evidence has now caused this to be rejected; and the form in which we have the present Pentateuch is usually attributed to Ezra, who reestablished the Jewish religion after the return of the Jews from the Babylonian captivity. If he did not write it, he certainly rewrote it. For Christians, the literal acceptance of this work as being divinely inspired has thrown a dark cloud over their faith.

The Pentateuch forms part of one of the world's sacred scriptures, being preceded by the Hindu, Mazdean, Egyptian, and Chaldean, counting only some of those well known to modern scholarship; so that we find the ancient teachings as they have reached us in a very confused and altered form. The Pentateuch is, exoterically, a collection of allegorical legends; but, in the light of the *Zohar*, the main book of the modern Jewish Qabbalah, the first four chapters at least of Genesis are a fragment of a highly philosophical page in archaic cosmogony. "Left in their symbolical disguise, they are a nursery tale, an ugly thorn in the side of science and logic, an evident effect of Karma. To have let them serve as a prologue to Christianity was a cruel revenge on the part of the Rabbis, who knew better what their *Pentateuch* meant" (SD 1:11).

If the Jehovistic portions are eliminated, the Mosaic books are found full of occult and priceless knowledge, especially in the first six chapters, even changed as they are and often veiled with thick garmentings of allegory. The Elohistic texts were written, according to the ideas of some Biblical scholars, 500 years after the date of Moses, and the Jehovistic 800 years. But these dates

seem to be wholly arbitrary and repose upon modern Biblical speculation. Archeological excavations on the Biblical sites may or may not support to some extent the Bible narratives, but such narratives, at least those of the early part of Genesis, are merely the raw material for the later allegory constructed around them.

Pentecost [from Greek *pentekoste* fiftieth day] The seven weeks, or fifty days counting inclusively, after the Hebrew Passover. First fruits of the harvest were offered, and later the day came to be regarded as commemorative of the reception of the law by the Children of Israel fifty days after the departure from Egypt. The Christian churches have taken it over and regard it as commemorative of the descent of the Holy Ghost upon the apostles in tongues of fire, as recorded in the New Testament; and they have made it the seventh Sunday after Easter.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Per-Pi

Peratae (Latin) **Peratai** (Greek) One of the Gnostic bodies or associations, the Naaseni or Ophites, the “Serpent Gnostics,” so called because of the mystical prominence of the serpent symbol in their rites and observances. This Gnostic body is said by scholars to have been founded by Euphrates, who possessed wide astrological knowledge, and because of the teachings which his school followed were they named Peratai — wanderers, i.e., on this earth of trial and tribulation; or “those of the other side,” signifying individuals who regarded themselves as merely wanderers or pilgrims in regions far from their native home, the spirit. Among other ideas, they held that the celestial bodies in a person’s horoscope are the instruments of destiny or karma, which because of causes engendered in other lives bring the individuals to birth on this earth under the destined yoke marked in the celestial spaces by the sun, moon, and planets; and in order to protect themselves from the malignant influence of the genii of the planets they wore serpent sigils or talismans. C. W. King states that the Ophites were the descendants of the Bacchic Mystae, basing this on the fact that coins of the period bear the Bacchic serpent, which is represented as raising himself out of the sacred coffer, while the reverse side of the coin shows two serpents entwined around torches (Gnostics and Their Remains 225).

Peregrinations of the Monad Used mainly for the post-mortem states and conditions of the spiritual monad plus its movements in and through the solar system guided by certain dominating spiritual-psychological factors, both in the monad itself and in the solar system. *See also* INNER ROUNDS; OUTER ROUNDS

Perfection, Perfectibility Absolute perfection is applicable, not to infinity, but to the Absolute of a universe, and theosophy teaches that all existences are tending through ever-growing evolutionary stages towards the relative perfection which all reach at the close of a manvantara; a state called paranishpanna in Sanskrit and yong-grub in Tibetan. Paranirvana is described as a state of perfect rest insofar as activity in the lower manifested realms of a universe is concerned, but not perfect

spiritual inactivity — entirely to the contrary. In a larger view comprehending a galaxy of universes, or a super-galaxy of galaxies, any notion that human intelligence can entertain of perfection is relative, for we cannot assign ends to evolutionary progress, growth, or expansion.

Peri, Pari (Persian) **Pairika** (Avestan) **Parik** (Pahlavi) A class of elemental or nature spirits corresponding in many ways to what Europeans call fairies. Just as in other national mythologies, the peris in ancient Persian thought are representative of those classes of conscious, self-conscious, and quasi-conscious beings who range all the way from simple sprites in the lower ranges, up to and including the classes of lower monads which are the psychological and even physical ancestors of the human race. They are, therefore, families of evolving monads in various grades of development, from the human down to the elemental kingdoms. The earlier races of peris, which in Persian mythology reigned for 2,000 years on earth, correspond to the progenitors of the first root-race. The later races of peris, occasionally looked upon as inimical in the Avesta, although smaller in stature than the devs — giants, strong and wicked, who reigned for 7,000 years — were wiser and kinder, and their king was Gyan. Here the devs and peris correspond to the Atlantean giants and the Aryans (SD 2:394).

In the Avesta, the pairikas “in the shape of worm-stars, fly between the earth and the heavens, in the sea Vouru-Kasha,” (Tir Yasht 5, 8), i.e., in the waters of space. They were flung by Angra-Mainyu “to stop all the stars that have in them the seed of the waters.” But Tishtrya, “the bright and glorious star who moves in light with the stars that have in them the seed of the waters, afflicts them, he blows them away from the sea Vouru-Kasha; then the wind blows the clouds forward, bearing the waters of fertility, so that the friendly showers spread wide over, they spread helpfully and friendly over the seven Karshvares” (Ibid. 46, 39-40).

Corresponding in origin to the Indian apsaras, the pairikas correspond to the elementals of the air, rather than water, called sylphs by the medieval Fire-philosophers. The rain-bestowing god Tishtrya corresponds to the sixth principle in man, buddhi, which fructifies the fifth and fourth principles. Thus it is only when the lower passions, the pairikas, have been mastered, that the light of Tishtrya — the buddhic splendor — may shine in the temple (Theos).

In the Persian mythology of the Arabian period, the peri is an elf or fairy, male or female, represented as a descendant of fallen angels, excluded from Paradise till their penance be accomplished.

Perigenesis A dynamic theory of generation, which assumes that reproduction is effected by rhythmic vibration of the plastidules (atoms of protoplasm), according to Haeckel, who adopted the dynamic theory from E. D. Cope, author of *Origin of the Fittest*. Haeckel seems to have thought that certain of these plastidules were transmitted through generations from the primeval parent.

Period(s). See CYCLE; GEOLOGICAL AGES

Peripatetics [from Greek *peri* about + *patein* to pace, walk] The followers of Aristotle (384-322 BC), either because he paced up and down when he lectured as commonly supposed, or from the peripatos or covered walk of the Lyceum. The chief representatives of the school are Theophrastus of Lesbos (372-287 BC), who with Eudemus of Rhodes, Aristoxenus of Tarentum, and Dicaearchus of Messene, were the personal disciples of Aristotle; Strato of Lampsacus (succeeded Theophrastus 288 BC); Andronicus of Rhodes (head of the school at Rome 58 BC); Alexander of Aphrodisias (commentator of Aristotle, 2nd and 3rd century AD).

The system of Aristotle as contrasted with that of Plato, is more scientific, and its tendency is to dispense with the immanence of the divine. The growing naturalistic tendency culminated with Strabo, who professed to need no divine in nature at all. Peripatetic applies to the commentators and exegetists of Aristotle who followed upon Andronicus' editing of Aristotle's works in the 1st century BC — although soon after his death the Peripatetic school, like all the other offshoots, merged into what is termed Neoplatonism.

In the Middle Ages peripatetics was often used to signify logicians.

Perisprit [from Greek *peri* around, surrounding + Latin *spiritus* spirit, vital atmosphere] Used by the followers of Allan Kardec, the French spiritualist, and by Eliphas Levi, to denote the human astral double.

Permanent Self Used by Blavatsky (Key, sec 8) for the incarnating ego, as contrasted with the earth vehicle, the personal self or ego; not to be confused with its own divine-spiritual monadic source or focus, the higher self (atman), the essential and eternally perduring divine selfhood per se.

Permian. See GEOLOGICAL ERAS

Perpetual Motion Equivalent of Latin *perpetuum mobile* (the ever-moving). The one eternal element is abstract space, coexistent with which are endless duration, primordial substance, and unending motion — the breath of the one element. Deity is all these, but to modern minds perhaps it is best pictured as eternal perpetual motion, at once the ever-becoming, the ever-present, and the ever-existing. Thus perpetual motion is an irresolvable first principle, and from it proceed relatively perpetual motions, such as the motions of the celestial orbs. Sir William Grove writes: "All motion is in one sense perpetual. In masses whose motion is stopped by mutual concussion, heat or motion of the particles is generated; and thus the motion continues, so that if we could venture to extend such thoughts to the universe, we should assume the same amount of motion affecting the same amount of matter for ever" (*The Correlation of Physical Forces*, p. 259). We are bathed, then, in an ocean of perpetual motion; motion means life, and life is everywhere. The physical universe is conceived as matter and motion, being the productions of originating substance and spiritual life; and hence, while wholly illusory in their appearances and phenomena, both in essence are indestructible, uncreate, and eternal. How much more so is the

ultraphysical, when considered as noumena apart from their manifested physical productions.

As to the problem of making a machine which will keep running of itself, or in addition will do useful work, scientists declare it impossible because it contravenes the law of conservation of energy. The equation of energies in seeming cases of perpetual motion, however, can always be made to balance by the introduction of outside factors, such as the earth's rotation. If we regard thought and volition as forms of energy, the scope of the problem is greatly altered and enlarged; so that perpetual motion is possible or not according to the way in which we define it.

Persephone (Greek) **Proserpina** (Latin) The daughter of Zeus and Demeter who became queen of the Underworld, after being carried off by Hades or Pluto, god of the Underworld. As Kore-Persephone, she becomes one of the great Eleusinian divinities, the Divine Maid. The role played by Persephone, Demeter, or Kore ("maiden," a title applicable to both) is part of a profound allegory in which is found a great deal of occult truth. Persephone or Demeter has a cosmic significance, as well as one applicable to the human race, for in the cosmic meaning the legend involves what the Hindus refer to under the various manifestations of prakriti running throughout manifested nature as a veil or garment of the indwelling cosmic consciousness; and the various permutations under which Kore-Persephone or Demeter is presented, show the various allegorical stages or modifications which the cosmic prakritis undergo. In the application of the legend to man, Kore-Persephone stands for both the spiritual soul and its child, the human soul, which in one manner of envisioning the facts are two; and in another manner, are one. *See also* DEMETER; KORE-PERSEPHONE

Personal Ego That aspect of manas which, in conjunction with kama, gives to man his sense of personality: that sense of being a unit distinct from others. This is an illusion from the standpoint of the spirit, although true enough as a fact of the lower quaternary in the worlds of matter. "The Lower, or Personal 'Ego' is the physical man in conjunction with his *lower* Self, *i.e.*, animal instincts, passions, desires, etc. It is called the 'false personality,' and consists of the *lower Manas* combined with Kama-rupa, and operating through the Physical body and its phantom or 'double' " (Key 176).

Being composite, at the death of the physical body the personal ego disintegrates, and at the next embodiment a new personality is brought together by the reincarnating ego, although this new personality is but a reconstruction of the old personality with only such changes as have been brought about by the working of karma over time.

Personal God The personal anthropomorphic extra-cosmic God of theology is a purely human creation — for personality is a limitation utterly inconsistent with the nature of the boundless and eternal. This theological God is merely a reflection of man. The infinite source of all cannot be defined, since every possible attribute which we might assign to it is a human mental creation. We are forced to speak of God as impersonal, but must beware lest in doing so we reduce the

conception to an empty abstraction. God may denote a divine being, a being who was once in our present human stage but has evolved beyond it, having transcended the limit of personality but without losing individuality. Or God may be applied to a being who has emanated from the divine source but is on the downward arc of evolution, not having yet become man; or again it may be a projection of the human mind, like the personal God of theology, but in this case it is a human mental creation — therefore containing human limitations because the human mind is finite — and therefore inadmissible.

The early Christians believed that the pagan gods were impersonated by evil demons or were actually merely daemona. It is hard to believe that Jehovah, Jupiter, the Christian God, Brahma, and the like are nothing more than merely abstract ideas, for they actually are human ways of expressing some of the active and distinctly concrete powers or potencies in the solar system.

The notion of a personal God implies arbitrary will, caprice, anger, susceptibility to propitiation, and many other human weaknesses; and the attempt to reconcile these wholly human projections of thought with the idea of abstract infinitude results in contradiction and absurdity.

It is clear enough that the universe is filled full with powers and potencies, of which all animate beings known to man, and man himself, are but minor examples; and hence polytheism when properly understood as the necessary and inevitable deduction of spiritual pantheism is seen to be true. The mistake of most polytheists in the past has been to endow these gods, divinities, or spiritual potencies with attributes all too human, instead of considering them as they ought to be considered as the formative forces of the universe, possessing consciousness and will. *See also* GOD; GOD(S)

Personality In distinguishing between individuality and personality, individuality is the simple fact of essential self-consciousness, the recognition that “I am I”; whereas personality is saying that “I am Mr. Smith.” In other words, individuality is the recognition of oneself as a distinct non-partite egoity, and personality is the identifying of oneself with a particular aggregate of qualities, the latter serving as vehicle for the individuality.

Personal Self. *See* PERSONAL EGO

Pert Em Hru (Egyptian) *Pert Em Hru*. [from *pert* to come + *em* forth in + *hru* day] To come forth in day; the title of several chapters of the Theban Recension of the papyrus manuscripts found placed with the Egyptian dead, generally called the *Book of the Dead*. The phrase itself refers to the successful entrance of the deceased into the realms of Osiris, after passing through the Judgment Hall.

A more significant meaning of the coming forth in the day or coming forth into light, relates to the fact that these papyri give in veiled language the rites of initiation as it was practiced from earliest times by the Egyptians, the light meaning the spiritual and intellectual splendor which clothes one

who has successfully passed from darkness into light.

Pesh-hun. See NARADA

Phaeton, Phaethon (Greek) Shining one; son of Helios, the sun, who wheedles his father into letting him drive the chariot of the sun across the heavens for one day, loses control of the horses of the sun, and nearly sets the earth on fire. “Phaeton meeting with his death while carrying heat to the frozen stars of the boreal regions, awakening at the Pole the Dragon made rigid by cold, and being hurled down into the Eridan, is an allegory referring directly to the changes of climate in those distant times when, from a frigid Zone, the polar lands had become a country with a moderate and warm climate, etc.” (SD 2:770).

Phaethon is also applied to Helios and other divinities, so that it is simply another form or alter ego of the sun, illustrating the manner in which archaic symbolism delineates religious, scientific, and philosophic facts in story form.

Also the name of one of the steeds of Morning.

Phala (Sanskrit) *Phala* [from the verbal root *phal* to burst open, bear fruit, ripen] Fruit, the kernel or seed of a fruit; used metaphorically for ripened consequences, effects, results, retribution (either good or bad).

Phalguna (Sanskrit) *Phalgunā, Phālgunā* A name of Arjuna, because he was born in the spring month of Phalguna — the month during which the full moon stands in the nakshatra Phalguni.

Phallic, Phallicism, Phallus [from Greek *phallos* penis] The phallus occurs frequently in Greek mythologic and mystical representation: it is carried by Pan; borne in Bacchic processions; carved on the pedestals of the Hermae in the streets of Athens. There is no reason, apart from appropriateness, for preferring or rejecting one part of the body rather than another as a symbol, so that the phallus of Pan may be quite on a par with the wings on the feet of Hermes. But the symbol has gone through stages of degradation, from being an emblem of spiritual generation to one of mere physical procreation, when physical procreation itself, once thought of in purity and with reverence, acquired associations of profligacy, sin, and shame. The words are chiefly used in *The Secret Doctrine* in reference to the degeneration of ancient doctrine and ritual from their originally exalted form into a materialized form, whether in Hebraic systems, Dionysian or Bacchic rites, Hindu ceremonial, etc.

All archaic and ancient mankind was strongly addicted to expressing spiritual and abstract cosmic verities under the forms of things which were concrete and visible. Thus not only has the sun at various times been an emblem of the light of the cosmic spirit or Logos, shining throughout the entire time period of the universe; but the moon has always been the symbol of the lower mind, the brain-mind reflecting the light of the spirit, just as the moon reflects the light of the sun.

In this impersonal and abstract manner of representation did the ancients symbolize the formative, creative, or procreative forces or energies of nature under appropriate emblems drawn from the animal kingdom, and most commonly from man himself. Thus it was that the phallus in Classical antiquity stood as the emblem of the abstract creative forces of the universe, as well as the solar system, and even of earth; precisely as the linga in India has always expressed the identic cycle of thought. Likewise the female organ has frequently been used to express the generative and maternally productive powers of nature. Modern European sophistication unwillingly recognizes this truth, and insists in giving to these symbols the most offensive of constructions. Yet even Western religious iconology has followed the same line of thought, and whether we refer to the lamb, or to the serpent or dove, we ascertain exactly the same thing.

Phanerosis (Greek) A making visible, manifestation.

Phanes, Phanes-Protogonos (Greek) [from *phaino* to make visible, appear, shine forth + *protogonos* first-born] In Orphic mythogony, Aether (the Father, spirit) and Chaos (the Mother, primordial matter) produce the world-egg, silvery and gleaming white, out of which Phanes, the Third Logos, is born. He is the Orphic counterpart of Eros, the divine love which sets the atoms of spirit in motion, and is both male and female, mythologically said to have golden wings which carry him everywhere and four eyes gazing in every direction. As Phanes, he is the first of the five cosmic rulers successively to appear; parent of the gods, the demiurge and creator of the world. Being thus the primordial father of gods, of the world, and hence of men, every such derivative offspring from Phanes contains Phanes in itself. Thus man, as an individual, contains Phanes as the primordial essence or original force of his own being. From another point of view, Phanes is equivalent to cosmic mahat, which as the universal formative spiritual power of the universe is at once the parent as well as the primordial substance of whatever is — as well as cosmic intelligence.

Nux (night) is associated with Phanes as both mother and wife. Zeus does not appear in the Orphic mythogony until later, as the fourth in the line of succession; but eventually, due to a loss in popular conception of the ancient verity, he absorbs his great prototype, who apparently did not figure largely in popular mythology.

Phanes was connected mystically and esoterically with four animal symbols of the zodiac — Aries the ram, Taurus the bull, Leo the lion, and Draco the dragon or serpent.

Phantasma [from Greek *phantazo* to make visible, become visible] Phantom; Greek equivalent for various astral appearances, not only for the occasional appearance of the linga-sarira to the physical eye, but also for the various astral phantoms or kama-rupas — all originating in the lower regions of the astral light. The notion behind the word is of an image, appearance, eidolon, not the reality but seeming to be so. In this case the physical person was regarded as the reality, as in life; the phantasm was the astral image, as that of the kama-rupa of the dead Hector appearing to

Aeneas.

Phantom [from Greek, Latin *phantasma* apparition] Specter, ghost; sometimes used of the early (astral) races of mankind, sometimes of the astral double, of various denizens of the astral plane, or even of one of the higher human principles (divine phantom).

Outside of mere mental images, often projected into quasi-objectivity by unconscious will-force, all phantoms originate in the astral light surrounding our earth and permeating it far more intimately than does the earth's air or atmosphere. Consequently, phantoms are of many and various kinds. The word is likewise used, although inaccurately, to signify the appearance to a living human being of the mayavi-rupa (thought-projection body) of an adept, the reason being that whether merely astral intrusions or mayavi-rupa, both are appearances and therefore logically classified as phantoms.

Phantomosophy [from English *phantom* + Greek *sophia* knowledge] Coined by Master KH to signify communication through mediums (ML 47).

Phenoch. See ENOCH

Phenomena [from Greek *phainomena* appearances from *phainomai* to appear] The impermanent, ever-changing outward appearances of things, as opposed to *onta*, the permanent enduring realities behind. Also, objects of perception as opposed to objects of cognition; that which is perceived by the senses, contrasted with that which is conceived by the mind. The word correlates with both meanings of noumena. Under the first meaning it may be said that, in one sense, everything is phenomenal except the one Reality; but the word may also be used relatively. Under the second meaning, we may speak of phenomena as a word stressing the mechanical aspect of things, as contrasted with the unseen intelligences behind, as in the contrast between the forces of science and the intelligent noumena of which they are merely the manifestations.

In modern popular use it also denotes a supernormal event, such as an exercise of occult or magical powers, or again a portent, what the Latins would have called a prodigy.

Phalaetheians [from Greek *phil* lovers + *aletheia* truth] Truth lovers; a name given to the Neoplatonic school, founded at Alexandria, Egypt, by Ammonius Saccas in the 3rd century. It lasted for two or three hundred years, and has often since been called a school of Analogists and Theosophists.

Philosopher's Stone [from Latin *Lapis philosophorum*] The stone or material which can transmute base metals into gold. The universal agent or great solvent, the mystical culmination of whose work is the production of spiritual perfect man. The base metals, in this mystical interpretation, are the passions and lower elements in the human constitution, which by the philosopher's stone are transmuted into the pure inner gold of his spiritual nature. Spiritual processes have their analogs in chemical processes, the latter being the sole object of most if not all of the later

alchemists.

Philosophy The Greek *philosophia* meant love of wisdom, but with equal power of significance, although perhaps not etymologically as correct, the meaning was wisdom of love; also, the systematic investigation and instruction of facts and theories regarded as important in the study of truth. In common usage it denotes the mental and moral sciences, in some respects being nearly equivalent to metaphysics, and including a number of divisions. Theosophists speak of a triad of philosophy, religion, and science as being merged by theosophy into a unity; but science was itself at one time called natural philosophy, so that the chief distinction is that between faith and reason.

Phlogiston [from Greek *phlog* fire] In the 17th century modern chemistry was in process of birth and alchemical ideas still survived, particularly those of the four elements and of the triad of sulphur, salt, and mercury. Stahl (1660-1734) enumerated four elements — water, acid, earth, phlogiston; and the phlogiston theory was elaborated by Priestley (1733-1804). All combustible bodies, it was said, contain phlogiston, and when they are burnt the phlogiston leaves its latent state and escapes from the body in the form of heat and light, leaving behind the ash or dephlogisticated residue. For example, magnesium gives out its phlogiston in an intense light and an inert ash is left. But later chemistry banished the imponderables, and formulated a physical system composed of ponderable matter and energy. Accordingly, when it was shown that the ash weighs more than the original substance, the phlogiston theory was abandoned, and in its place came abstract and indefinite conceptions quite as difficult of explanation as was the phlogiston theory itself, which may be grouped under the general term energy, and include heat, light, chemical energy, etc. The more recent progress of science has proved that the atomo-mechanical system, the representation of the physical world as divisible into matter and energy, or mass and motion, however useful in interpreting molar physics and facilitating practical applications, does not suffice for an interpretation of the intra-molecular world. The distinction between matter (or mass) and energy has become obliterated.

The Mahatma Letters state that phlogiston is the lowest and densest form of a universal essence and serves as the vehicle for dhyanis of a corresponding degree (p. 56); and the name is also given to the magnetic electric aura of the photosphere (p. 164). The idea of phlogiston overlaps that of caloric, with which is it sometimes confused.

Pho. See P'O

Phoebus (Greek) Pure, bright, radiant, beaming; the solar regent, and in Latin mystic mythology the sun god, offspring of Zeus and Latona: also known by the Greeks as Apollo or Phoebus-Apollo. This deity represented both physical and spiritual purity and radiance to the Greeks; and to the Greek mind the solar divinity bore intimate relationships with mankind through his Oracle at Delphi, situated on the slopes of Mount Parnassus in Phocis, where a temple and oracular sanctuary were erected in his honor, to which consultants and suppliants thronged from all parts

of the ancient world. Inscribed on the temple was the phrase associated with Socrates and Plato — *gnothi seauton* (know yourself). *See also* APOLLO; ORACLE

Phoenicians The ancient people who occupied the strip of seaboard on the west of Palestine, with Tyre and Sidon as principal towns; noted among other things for their great development in trade, commerce, and navigation. The Phoenicians themselves, and their neighbors the Israelites, called their land Canaan (Khena'an). According to Herodotus (2:44) Tyre was founded about 2300 years before his time, or 2756 BC.

The ancient deities of Phoenicia and their religion, as with other ancient peoples, were connected spiritually and physically with the great powers and processes of universal nature; indeed so far did this go that each river, spring, headland, etc., was under the influence of a deity; yet undoubtedly beyond and above all these hierarchical divisions there was always the ineffable, unthinkable, eternal, intelligence-life.

As time went on certain deities became more prominent in theological thought and speculation, acquiring celestial attributes as well as earthly ones, such as Ba'al, Astarte (made equivalent to Isis by Plutarch), and the Tyrian Melqarth (associated with Herakles). Originally each masculine deity had the title Ba'al ("lord," equivalent to Babylonian Bel), and the feminine deities had the title of 'Ammah (mother), just as the ancient Hebrews spoke of their 'em or 'ammah (fountain, beginning, womb, mother). The gods were called 'elomim or 'elim, from the original Shemetic root 'el. The god of the moon was Sin, the deity of the flame or lightning was Resh Reshuf and Eshmun was the god of vital force or healing (worshiped especially at Sidon) — clearly 'Eshmun is from the Shemitic verbal root 'esh (fire, cosmic fire or vitality) — cosmic vital electricity or fohat. Blavatsky states that the Phoenicians also propitiated the kabeiroi, deities of Samothrace.

Phoenix [from Greek *phoinix* phoenix, date palm, Phoenician] The sacred bird possibly taken from the Egyptian benu. The most familiar legend about it in Europe, dating from the early medieval period, is that a bird from India lives on air for 500 years when, leaving its native land, it flies to the temple at Heliopolis, with its wings laden with spices. Flying to the altar, it burns itself to ashes on the sacred fire, whence arises a new or young phoenix. This bird is already feathered on the day following the suicide of its parent which was its former self and, having its wings full grown on the third day, it wings its way forth. Pliny and Herodotus give slightly different versions. Ancient art pictured the phoenix as a bird with wings partly golden and partly red in color; in outline and size it was drawn to resemble an eagle.

The ancients gave different time periods as the extent of the cycle for which the phoenix stood as a symbol: 500 years, 600 years (the Babylonian naros), 1461 years, and others, as the phoenix did not symbolize any one cycle but was a general emblem of cycles themselves.

“The Phoenix — called by the Hebrews Onech (from *Phenoch*, Enoch, symbol of a secret cycle and initiation), and by the Turks, *Kerkes* — lives a thousand years, after which,

kindling a flame, it is self-consumed; and then, reborn from itself — it lives another thousand years, up to *seven times seven* . . . when comes the day of Judgment. The ‘seven times seven,’ 49, are a transparent allegory, and an allusion to the forty-nine ‘Manus,’ the Seven rounds, and the seven times seven human cycles in each Round on each globe. The *Kerkes* and the *Onech* stand for a race cycle, and the mystical tree Ababel — the ‘*Father Tree*’ in the Kuran — shoots out new branches and vegetation at every resurrection of the Kerkes or Phoenix; the ‘Day of Judgment’ meaning a ‘minor *Pralaya*’ . . . ‘The Phoenix is very plainly the same as the *Simorgh*, the Persian *roc*, and the account which is given us of this last bird, yet more decisively establishes the opinion that the death and revival of the Phoenix exhibit the successive destruction and reproduction of the world, which many believed to be effected by the agency of a fiery deluge’ . . . and a watery one in turn” (SD 2:617).

One equivalent in Hindu literature is Karttikeya riding on his peacock. In China the phoenix is the king of birds, eating only bamboo sprouts, drinking only spring water. His resting place is the tung tree.

Pho-hat. See FOHAT

Phorcys (Greek) A sea god, son of Pontos and Gaia (sea and earth), and father by Ceto of the Graiae, Gorgons, Sirens, Scylla, and Atlas. Mentioned in Orphism as one of the primeval titans.

Phoreg [Phorcys] One of the titans, not mentioned among Hesiod’s six Uranides, but discovered in the late 19th century “in an old fragment relating to the Greek myth. Thus their identity with the Seven rectoris is fully demonstrated” (SD 1:418).

Phorminx (Greek) The seven-stringed lyre of Apollo, which he gave to Orpheus; representing the sevenfold mystery of initiation, and other corresponding septenates. Among these, mainly perhaps, the seven-stringed lyre stands for seven-principled nature, both built by and producing sound when the breath of the spirit sweeps over its strings (principles or elements).

Phoroneus (Greek) A son of Inachos and founder of Argos; he may be called the Argive Prometheus. His mother was Melia (ash tree) and is mystically parallel with the Scandinavian Yggdrasil. His own name suggests a connection with the Sanskrit *bhuranyu* (rapid, quick), an epithet of the sun and of Vishnu. He was a carrier of the divine fire of spiritual intellect to men, whereby he made them participators — when they proved themselves worthy of it — in heavenly bliss.

Phosphorus (Greek) *phosphoros*. Light-bringing; equivalent of Latin Lucifer (the morning star; a torchbearer, e.g., Hecate, a form of the moon). Satan, according to Christian legend, was once Phosphorus, the redeemer. Also a personified aspect of the astral fire and light in the *anima mundi*. Eliphas Levi speaks of the interior phosphorus, meaning the astral light.

In alchemy and chemistry, applied to any substance which emitted light, but was monopolized for

the familiar chemical element first isolated by Brandt of Hamburg in 1669.

Photosphere The apparent, shining surface of the sun. Sunspots, which appear dark only because of the intense brilliancy of the surroundings, appear in the photosphere, and the bright areas commonly seen around them are called faculae. From the theosophic standpoint the photosphere as well as the reversing layer and the chromosphere are three different forms of the aura with which the sun clothes itself as a living being. This aura is the solar prana or vitality become visible to the human eye on account of the octave of radiation which it emits. Had our eyes not been evolved to sense this particular seven fold radiation which we call light, we should not see the sun, although indeed we should sense it and possibly even realize its presence intellectually. Finally, every being, precisely because it is alive, emits its own characteristic aura which, had we the eyes to see it, we should discern as a coruscating, scintillating play of light around the form of the entity. Thus the human being as an example emanates or radiates from himself such a vital aura, which is to the man exactly what the solar aura is to the sun.

Phren (Greek) Originally the diaphragm, also more loosely the adjacent intestines, and hence that part of the mind which is or seems to be located in those regions — as we might say the solar plexus. Thus it becomes a synonym for fear, joy, grief; but also for the seat of the mental faculties, thought, will, etc., answering to the several senses of the word wits. When a distinction is made for philosophical purposes, as by the Pythagoreans, phren is sometimes that mind which man has in common with the animals; at other times it answers to the kamic aspect of manas still overshadowed by buddhi-manas. In both these cases the phrenic mind is in contrast with the purely noetic mind, or buddhi-manas.

In the psychological division made by the ancient Greeks, the phren stands properly for that portion of the human constitution which is ordinarily designated as human mind or reason, the typical characteristic of the human soul which undergoes its devachan. Hence it is that Homer described the shade or ghost of Patroclus as having both psyche and eidolon, or animal instincts and kama-rupic shape, but entirely without phren — human mind or reason, which had already shaken off the kama-rupa and gone into its devachan. The reference to the phren still existing in the kama-rupic shade of Teiresias, in the *Odyssey*, shows that in this case this great Greek prophet and initiate is spoken of in connection with his nirmanakayic work in the astral world. So well was this known to the ancients, that Teiresias was supposed to retain all his powers after death, while the lower principles of other mortals who died became shades.

Phta. See PTAH

Phylogeny [from Greek *phylō* race + *geneia* producing] The racial history of an organism, as contrasted with ontogeny or the individual history. Phylogenesis is applicable to the process. This branch of biology takes into account the racial affinities of an organism, and forms an important part of the science of evolution.

Physical, Physicalization The physical plane of matter is that one of the many planes in universal nature which is coordinated with our physical senses; and the physical plane of consciousness is therefore the plane on which our consciousness functions when we are using those senses. It is characterized by the familiar qualities which science studies under the name of properties of matter. In order to understand biological evolution, it is necessary to admit the existence of the next plane above — the astral plane. The passage of the astral prototypes of organisms from the astral plane to the physical is called physicalization. Differentiation on the physical plane is caused by the psychological and astral life-agents acting in the protyle of the physical plane. Temporary and abnormal physicalization takes place in a spiritualistic materialization.

The quaternary is said, in the Pythagorean numerical system, to be the ideal root of all numbers and things on the physical plane, because the quaternary is projected downwards, so to speak.

Physical Body The most material sheath or instrument used by the forces manifesting as the human composite nature. This body is the evolutionary product of the inner man's experience during vast ages of time in and through all the kingdoms of nature. Thus the re embodying ego, having acquired knowledge of the earth's manifesting forms and forces, combines or correlates the principles and products of the mineral and vegetal life-atoms in its animal body, while evolving through its human incarnations. The atoms of a person's body which are dispersed on earth at death, are karmically drawn to him again in the next life. As the quality of his own thought and feeling has been impressed upon these atoms, their automatic magnetic return to him insures the justice of his self-made physical heredity.

The continuous interchange of the physical material of the earth itself and that of everything upon it, provides for the body's nutrition, endurance, and renewal. The similarity of material, chemically and otherwise, in the earth and in man has prevailed from the time when the filmy presentments of early root-races appeared on the then condensing globe. When the earth reached its depth of materiality during the middle of the Atlantean or fourth root-race, the physical bodies of the Atlanteans were the grossest and coarsest of any before or after this long period. Since then, everything having begun the turn on the upward or luminous arc, matter and man are slowly radiating finer qualities of substance and of force. This progressive refinement of matter reflecting humanity's mental and spiritual evolution, will continue until, in the far distant future, the human encasement will be relatively transparent, or diaphanous and luminous — an ethereal body of actually condensed light.

The human body has "Manasic as well as Kamic organs," so that the cells answer to physical, mental, and spiritual impulses. The higher ego cannot act directly on the body, as its consciousness belongs to another plane of ideation; it has to act through its alter ego — the personal self (BCW 12:368-9; or St in Oc 90-1). The inert physical body is built, cell for cell, upon the invisible substance of the astral model-body or *linga-sarira*. The latter contains the real organs of the senses and sensations, and it transmits the mental, emotional, and instinctual impulses to which the physical

body reacts. The lower mind acts upon the physical organs and their cells; but only the higher mind can influence the atoms in these cells, and arouse the brain to a mental conception of spiritual ideas. That is to say, ideal, mental, and physiological wholeness depend upon the dominance of the atomic, spiritual impulses over the desires of the selfish kama-manasic nature. The personal nature is limited in action to the material, molecular cell. This subtle but practical interplay of his physical and superphysical nature points to the natural unity of purpose in the trend of ethics and physiology. With power to know good and evil, and free will to choose, man is responsible for refining and perfecting his material, personal nature into becoming a responsive and powerful medium for manifesting his spiritual and higher intellectual individuality. The inner man is ever acting with the cosmic evolutionary urge toward perfection of type. It is this reincarnating ego which directs the atomic life of the fertilized germ-cells in upbuilding the body according to pattern; this is the mysterious organizer which eludes all analyses of biological researchers. Likewise, the morally and intellectually irresponsible entities evolving in the lower kingdoms are impelled, in addition to the urge of each individual entity's monad, by the instinctual phase of the universal mind which is directed by celestial beings acting with the so-called laws of nature.

The universe being a living organism functioning throughout consciously, has its analogy in the physiological operation of the human body. Hence, biological scientists who tamper with the natural arrangements of chromosomes or artificially combine different embryonic elements, instead of solving the problem of life, are only dealing with the matter which is manifesting the conscious creative powers of ideation. *See also* STHULA-SARIRA

Physical Organs Natural history reveals that the organs of the body acquire a greater individual importance, and in some cases occupy a larger proportion of the organism, as we ascend from the lower to the higher animal forms. G. de Purucker points out that "Every one of the organs of the human physical body, both collectively and distributively, is the organic representative in man's physical sheath or body of one part or portion of his complex inner and invisible constitution. . . . every one of the monadic centers in man's being . . . has its own corresponding organ in the physical body, each such organ functioning in the body as much as it can according to the characteristic or type-activity of its inner and invisible cause. Thus the heart, the brain, the liver, the spleen, etc., is, each one, the expression on the physical plane and in the human physical body of a corresponding consciousness-center in the invisible constitution of the sevenfold man" (ET 518 3rd & rev ed).

There are manasic as well as kamic organs. The brain and heart are "the organs of a power higher than the Personality" (BCW 12:367; or St in Oc 89). The liver is called the kamic organ; the spleen is the vehicle of the linga-sarira. Of the rhythmic tides of vital air in the chest, it is said: "The primeval current of the life-wave is then the same which assumes in man the form of the inspiratory and expiratory motion of the lungs, and this is the source of the evolution and

involution of the universe” (q from *Nature's Finer Forces* Rama Prasad, BCW 12:356 or *Studies in Occultism* 76). The uterus, within which a new manifestation of life appears, corresponds physically to the universal matrix — cosmic space — the fertilized cell being the point in the circle where differentiation begins. The eyes, from one standpoint at least, are the most occult of our senses. The fibers of the large optic nerves are interrelated with special organs of the senses and sensations — optic thalami, pineal and pituitary glands, etc. — which are grouped around the center of the brain.

Further, “every human organ and each cell in the latter has a key-board of its own, like that of a piano, only that it registers and emits sensations instead of sounds. Every key contains the potentiality of good or bad, of producing harmony or disharmony” according as the impulse comes from the higher or lower nature (BCW 12:368-9 or *St in Oc* 91). Memory has no special organ of its own in the brain, but has *seats* in every organ of the body. The whole body is a vast sounding board in which each cell bears a long record of impressions connected with its parent organ, and also it has a memory and consciousness of its own kind. These impressions are, according to the nature of the organ, physical, psychic, mental, or again mixed, as they relate to this or another plane, there being states of instinctual, mental, and purely abstract or spiritual consciousness. The physiological functions and reciprocal workings of cells and organs are in the body automatically directed by a “universally diffused mind” throughout that body, which is beyond all material analysis. Because of this intelligence operating throughout the organism, physiology is destined someday “to become the hand-maiden of Occult truths” (BCW 12:139; or *Studies in Occultism* 105).

On a larger scale, each organ has its own rhythm or vibratory rate of response to cosmic eternal motion. The response is animated by a “vital principle without which no molecular combinations could ever have resulted in a living organism, least of all in the so-called ‘inorganic’ matter of our plane of consciousness” (SD 1:603). The breaking of the normal rhythm of one organ disturbs that of all the rest, which accounts for the many reflex symptoms that often appear.

The general principles of occult physiology underlie and coordinate the numerous details of chemical, microscopic, and biological research. The human organism illustrates the modern scientific view of the electronic nature of matter. In man, the positive and negative phases of the one Life unite to manifest in functional currents of vitality; all of which has a significant bearing on the prevailing medical recourse to organotherapy, the end results of which are not recognized, as such, since they operate on inner lines of force. Each animal body — human or beast — is a complex organism whose various parts are vibrating in consonance with the synthetic character of its own evolutionary status of vital matter and conscious force — its selfhood. Hence, the injection of the physiologic essence of any one creature's organs into the life-currents of another, aiming to give a certain impetus to functional reaction, inevitably adds a subtly disturbing foreign element. The same physical matter composes all animal bodies, so that the human and beast life-atoms are interchangeable, but such interchange is governed or regulated by extremely occult causal

relations which raise their action outside or above the plane of human interference.

Organotherapy, as at present understood and practiced, is a divergence from nature's normal processes, having no analog in nature which, in turn, provides resources of wholesome remedial matter. These artificial mixtures of both physical and superphysical forces, involve vital issues beyond the ken of research laboratories. The end results of unbalanced forces might be sought among the increase in cases of malignant, degenerative, and mental and nervous disorders, with their unequilibrated operation of functioning vitality and of consciousness.

Pi The mathematical symbol for the incommensurable ratio of the circumference of a circle to the length of its diameter, and for corresponding ratios in plane and solid geometry. Its incommensurability is a particular instance of the impossibility of expressing geometrical magnitudes exactly in number. Bearing in mind that there is a geometrical key to interpretation of cosmic law and structure, and that the facts of geometry cannot possibly be arbitrary or meaningless but must be faithful representations of general laws; then we shall understand that the ratio π , involving such radial and important elements as the straight line and the circle, must be of paramount importance. The figures, either for approximate decimal evaluations or approximate fractional ratios, play an important part in the symbology of the ancient mystery-language. These figures and the numbers which they make are found in the numerical values of letters and words in the Hebrew and Greek alphabets. The problem of squaring the circle by a purely geometrical construction does not involve the use of π at all.

Pilgrim, Eternal The divine monad of man during its cycle of incarnation, so termed because of its manifold peregrinations downwards and upwards through the seven, ten, or twelve cosmic planes. It is the source of the entire septenary constitution of manifesting entities; and through the various processes of emanation from within itself, it provides itself with the various sheaths, veils, or garments of consciousness, which in their aggregate form the fully manifested septenary.

Pillaloo-codi *pillalu-kodi* (Tamil) Hen and chickens; popularly applied to the group of stars known as the Pleiades. In France the same idea is prevalent, where it is called Poussiniere.

Pillars The straight line and circle combined will make a cylinder, or pillar, which may be either a column or a disc, according to which element predominates. Thus the pillar denotes the positive creative potency or spirit as contrasted with matter. One principal use of the pillars in ancient temples, especially when four were used in the form of a square, was for the representation either of the four cardinal points, or of the four lower cosmic elements. This idea was likewise followed by the Jews in their erection of the Tabernacle. "It is the idea taken from the pyramids in Egypt and in Tyre, where the pyramids became pillars, the Genii, or Angels have their abodes in the four respective points" (SD 1:347).

To all intents and purposes the pillars set up by the Jews in front of their temples were similar to the lithoi placed before images of Siva in India. The two pillars, Jachin and Boaz, placed before the

Temple of Solomon, however, referred to the dual forces in manifested nature, producing the pairs of opposites. The two pillars are to some extent interchangeable with the two serpents of the Greek caduceus, and appear in India in mystical references to the two nadis — pingala and ida, on the left and right (or right and left) of the vertebral column. This duality has its geometrical analog in the right and left handed spirals. By taking the central or balancing third, as in the sushumna-nadi or the central pole of the caduceus (sometimes represented as a third serpent), we have the triad. This triad of pillars is represented in the three columns of the Sephirothal Tree, called the Pillars of Severity, Mildness, and Mercy. In one description of the Sephirothal Tree, it was surrounded by seven pillars: the world pillars or rectores.

Pillars of Hermes, Enoch Refers to an allegory told of Hermes or Thoth, the Father of Wisdom in ancient Egypt, who it is said concealed his books of wisdom under a pillar, and then found that the wisdom had become transferred onto two pillars of stone.

Josephus tells a similar story about Enoch, saying that the pillars of Enoch were still in existence in his day, and that they were built by Seth. Blavatsky comments: “and so they may have been, only neither by the Patriarch of that name, the fabled son of Adam, nor by the Egyptian god of Wisdom — Teth, Set, Thoth, Tat, Sat (the later *Sat-an*), or Hermes, who are all one, — but by the ‘sons of the Serpent-god,’ or ‘Sons of the Dragon,’ the name under which the Hierophants of Egypt and Babylon were known before the Deluge, as were their forefathers, the Atlanteans.

“What Josephus tells us, therefore, must be *allegorically* true, with the exception of the application made of it. . . . These two ‘pillars,’ however, are the prototypes of the two ‘tables of stones’ hewn by Moses at the command of the ‘Lord’ ” (SD 2:530).

Pineal Gland, Conarium, or Epiphysis Cerebri A small organ in the brain with a fancied resemblance to a pine cone; technically called the epiphysis, as being an “upgrowth” from the embryonic tissues which later form part of the ventricular or hollow center of the brain, which space is continuous with the central canal of the spinal cord. The pineal gland is described as a rounded, oblong body, about one-third of an inch long, of a deep reddish color, connected with the posterior part of the third ventricle, and intimately related to the optic thalami which physiologists find to be the organs of reception and condensation of the most sensitive and sensorial incitations from the periphery of the body. Thus this organ is in central relation to the coordinating organs of all the senses and sensations, and to the thinking brain which perfects and coordinates ideas. Its purpose, however, remains a mystery to the medical profession. A standard anatomy says: “The ancients had a grotesque theory that the epiphysis is the favorite and peculiar abiding-place of the human soul. Modern morphologists have shown it to be the homologue of the third eye which some reptiles possess.”

Blavatsky, repeating the ancient belief, says that this concealed third eye is the “seat of the highest and divinest consciousness in man — his omniscient spiritual and all-embracing mind” (Key 121).

She sketches the evolutionary history of this Deva Eye (SD 2:294 et seq) which was the only seeing organ in the beginning of the present human race, when the spiritual element in the then humanity reigned supreme over the as yet unawakened intellectual and psychic elements in the nature. Later on, as the ethereal and psychospiritual early races became self-conscious and physicalized, they used their spiritual and intellectual powers and faculties for selfish and sensual purposes. Meantime, the third eye withdrew, *pari passu*, into the central cavity of the developing brain. There it has remained until the present — a symbol of that past spiritual vision which we will regain as we progress consciously along the upward arc of the evolutionary cycle. As to scientific evidence of a once active third eye of objective vision in animals, the *Hatteria punctata*, a lizard type found in New Zealand, is pointed out. This land, being a part well above the waters of the ancient continent Lemuria, the home of the third root-race, would be likely to retain some remnants of early types of the creatures which once existed when “the third eye was primarily, as in man, the only seeing organ” (SD 2:299).

An ancient commentary says that by the middle of the fourth root-race, the “inner vision had to be awakened and acquired by artificial stimuli, the process of which was known to the old sages” (SD 2:294). Even now, the adept, with trained will, can arouse this ordinarily quiescent organ into activity, so that he becomes illuminated throughout and by it with a vision of infinitude. It was this sublime vision which overwhelmed Arjuna when Krishna, acting as the Logos within, gave the aspiring human monad the divine eye (BG ch 11). The analogy of enlarged vision holds good, in degree, when the spiritual teacher arouses the chela’s latent ability to see for himself hidden truth.

Descartes reasoned that the seat of the soul was the pineal gland which, he said, though it was tied to the brain, was yet capable of being put into a kind of swinging motion by the animal spirits that cross the cavities of the skull. He was right about the cavities being open during life, and about the organ’s response in oscillations; and what the ancients called animal spirits, is otherwise expressed in theosophical literature as circulating currents of the nerve-aura of occultism. In the adept, the third eye is aroused by aspiration and concentration of his human will upon the attainment of union of his mental with his spiritual faculties. By this conscious effort, he rises to the higher powers of will which, in its ordinary automatic and emotional phases, is usually diffused throughout the activities of the animal body and brain, by way of the main organ of will, the pituitary gland, the psychic associate of the pineal center. The x-ray may yet reveal ethereal emanations of nerve-aura in the human brain, as living evidence of the interrelation of mind and matter. Meantime, concrete examples of such interaction are found in the pineal gland, in the form of “brain sand,” or (acervulus cerebri). *See also* EYE OF SIVA; THIRD EYE; TRI-LOCHANA

Pingala (Sanskrit) *Piṅgala* A rishi said to be a great authority on the chhandas, the meter of the Vedas. His date is unknown, but he is sometimes rather arbitrarily identified with Patanjali, the author of the famous *Maha-Bhashya*, or commentary on the great grammarian Panini. Also an attendant of the sun, or even the sun itself; epithet of Siva; the name of a rudra, of a danava, and of

a number of archaic sages.

As an adjective, it signifies brown or yellowish-brown, a tawny color. *See also* PINGALA

Pingala (Sanskrit) *Piṅgalā* Reddish brown, reddish tawny; one of the three nadis (channels) actually forming the spinal column of the body, which are the main avenues for not only the psychovital economy of the body, but likewise of spiritual and intellectual currents as between the head and the body proper. In occultism the spinal column plays many roles in the physiological economy of the living body, but is especially threefold in its functions. The central channel is called the sushumna-nadi, and the two mystical channels on either side of it are the pingala-nadi on the right (or left), and the ida-nadi on the left (or right).

Pippala (Sanskrit) *Pippala* The sacred Indian fig tree, *Ficus religiosa*, which holds a highly mystical and symbolic position in Hindu mythology. It is closely connected with the Asvattha, the cosmic Tree of Life, or tree of the cosmic hierarchical structure, thus symbolized also in other countries of the world. It is interesting to note that both Asvattha and Pippala are names sometimes given to the sun, and that Buddhist legend has it that it was under such a tree, now commonly called the Bo or Bodhi Tree, that Gautama Buddha attained his final enlightenment.

Pippalada (Sanskrit) *Pippalāda* Eating the fruit of the pippala or *Ficus religiosa*; an ancient teacher of the *Atharva-Veda*, and also of a school of magic alleged to have been founded by him. The mystical significance refers to this tree's association with initiation or nirvanic attainment; it was under a pippala that Gautama Buddha is said to have attained nirvana, as well as buddhahood.

Pisachas (Sanskrit) *Piśāca*-s Shades, fading remnants or shells of human beings in kama-loka, which become elementaries, or malevolent astral beings, in the cases of people who live a consistently evil life while in incarnation. In southern Indian folklore the pisachas are ghosts, demons, larvae, and vampires — generally female — who haunt men. In the Puranas, they are goblins or demons created by Brahma.

In archaic Hindu literature, the pisachas are connected with the daityas, danavas, etc. Here they are no longer mere astral shells, but represent evolving beings of the earlier races of man: “The Demons, so called in the Puranas, are very extraordinary devils when judged from the standpoint of European and orthodox views about these creatures, since all of them — Danavas, Daityas, Pisachas, and the Rakshasas — are represented as extremely pious, following the precepts of the Vedas, some of them even being great Yogis. But they oppose the clergy and Ritualism, sacrifices and forms — just what the full-blown Yogins do to this day in India — and are no less respected for it, though they are allowed to follow neither caste nor ritual; hence all those Puranic giants and Titans are called Devils” (SD 1:415).

Pisces The fishes; the twelfth sign of the zodiac, a watery, common or mutable sign; one of the houses of Jupiter; corresponding anatomically to the feet. This sign is the last of the circle, and

consequently it again ushers in the first sign, Aries. It is Omega in the saying, “I am Alpha and Omega, the beginning and the end.” It signifies the conditions preceding the beginnings of rebirth, where the close of one cycle heralds the birth of the next. Its emblem is a pair of fishes; and mythology presents us with many stories of jewels or money cast into the sea and found again in the belly of a fish; the story of Jesus has one such; the story of Polycrates another. This sign is associated with deluges, world saviors, the dawn of a new cycle after closing of the old, and fishes and Jonahs, and similar symbols and allegories.

In the Hindu system it is Mina (fish or fishes), equivalent to the number 5, which may be taken to indicate the five exoterically recognized elements (pancha-mahabhutas). This sign also suggests particularly the cosmic element water — i.e. space.

Some Christians have held that Jesus was born at the moment the sun entered the sign of Pisces, but the real time of his birth is unknown, and both the Hindus and ancient Babylonians also associated their Messiahs with fishes (SD 1:653). It is also associated with the man-fish, Dagon or Oannes; and one is reminded of ancient Christian iconology and teaching that the Savior Jesus was the big fish, and that Christians themselves were the little fishes.

Assigning the twelve sons of Jacob in the Hebrew system to the twelve signs of the zodiac, Zebulon is ascribed to Pisces, he who dwells at the haven of the sea and is a shelter for ships.

Pistis Sophia An important treatise on Gnostic teachings, discovered in a Coptic manuscript in the British Museum by the Orientalist Schwartz, who rendered it into Latin and published the original text and his translation in 1851. It was translated into English by G. R. S. Mead and annotated by Blavatsky. The original version contains many Greek technical terms having no Coptic equivalents and preserved also in the later translations. The title itself is two such words, the names of two principal Aeons in the Gnostic system. Sophia means wisdom, enlightenment; pistis means intuitive trust, firm belief based on inner conviction, ardent devotion, that quality in the disciple which corresponds to the heart, as wisdom relates to his understanding — rather than merely faith. As the opening verses show, these are the esoteric teachings said in the treatise itself to have been given by Jesus to his disciples, when he was rising from the dead and teaching them for eleven years. This means that the teacher had passed eleven degrees of initiation, awaiting only the final degree. The work is a highly veiled version of some of the teachings of the archaic wisdom; it quotes abundantly from the Book of Enoch, and the doctrines of the Upanishads have, at least in degree, passed into it.

Pisuna (Sanskrit) *Pisuna* A spy; a name given in exoteric works to Narada, the divine rishi.

Pit In theosophy, the pit has a profound and wide range of meaning, in all cases referring to places (lokas) into which sink, because of persistent evildoing, those entities who choose evil, in greater or less degree, as their course of conduct. Hence, the general meaning is loss of spirituality involving a descent or dropping into realms of greater materiality.

Pit is often used for the nether pole of nature, whether geographically as the south pole, or in pure exotericism as hell. In the Bible (Ezek 28), the Prince of Tyrus is cast from the mountain of God into the pit. The mountain and the pit are often contrasted as the north and south poles, or as the heavenly and infernal regions. Pit is abundantly used in the Bible in this sense, metaphorically connected with a place for refuse or dishonored burial. The pit into which Prometheus is hurled is our earth, whither he descended to become mortal man; and the Mahasura, in Hindu legend, is hurled down to Patala. *See also* EIGHTH SPHERE

Pitaras or **Pitarah**. *See* PITRIS

Pitar-devatas. *See* PITRI-DEVATAS

Pithecoïd(s). *See* ANTHROPOIDS

Pitri(s) (Sanskrit) *Pitr-s* Fathers; referring to the merely human deceased father and grandparents; also to the progenitors of the human race. The pitris (progenitors) are of seven classes: three classes of arupa-pitris or higher dhyanis, which in our own solar system we call the solar pitris or agnishvattas; and the four lower classes known as barhishads or lunar pitris. The lunar pitris came from the moon-chain, while the solar pitris are those dhyani-chohans which have all the spiritual-intellectual fires, although they are too spiritual to have the physical creative fire. In preceding manvantaras they had finished their physical and astral evolution, but by cyclic necessity, enlightened the lunar pitris which had only the physical creative fire.

The pitris “are called ‘Fathers’ because they are more particularly the actual progenitors of our lower principles; whereas the Dhyani-Chohans are actually, in one most important sense, our own selves. We were born from them; we were the monads, we were the atoms, the souls, projected, sent forth, emanated, by the Dhyanis.

“ . . . the Lunar Pitris may briefly be said to be those consciousness-centers in the human constitution which feel humanly, which feel instinctually, and which possess the brain-mind mentality. The Agnishwatta-Pitris are those monadic centers of the human constitution which are of a purely spiritual type” (OG 125-6). These pitris were not forefathers of present humanity, but of our distantly remote ancestors named formerly by some writers the Adamic races.

The evolution of the first root-race of mankind from the astral bodies of the pitris took place on seven distinctly separated regions of the earth existing then at the arctic pole (cf SD 2:329). Of the succession of the root-races the Stanzas of Dzyan say: “*First come the SELF-EXISTENT on this Earth. They are the ‘Spiritual Lives’ projected by the absolute WILL and LAW, at the dawn of every rebirth of the worlds. These LIVES are the divine ‘Sishta,’ (the seed-Manus, or the Prajapati and the Pitris)*” (SD 2:164). As progenitors of the various human root-races, pitris refer pointedly to the life-waves, manus, prajapatis, and sishtas.

Brahma occasionally, as the generalized Progenitor, stands in Hindu literature for the pitris collectively, and is thus called Father.

Pitri-devatas (Sanskrit) *Pitr-devatā-s* [from *pitṛ* father + *devatās* spiritual beings] The paternal spiritual beings; a class of divine beings who were the progenitors of mankind — generalized under the term pitris. More particularly, the lunar ancestors of mankind, in all their various classes.

Pitripati (Sanskrit) *Pitrpati* Lord of the pitris or fathers; a title of Yama, the Hindu god of death and the judge of mortals — functions corresponding to those of Rhadamanthas of the Greeks. From the standpoint of occult history, Pitri-pati or Yama is the personification of the third root-race.

Pituitary Gland or **Hypophysis Cerebri** A small, bi-lobed, ductless gland, resting on the bony floor of the brain just above the palate. Its familiar name came from the mistaken notion that it secreted pituita (phlem) which was discharged through the nose. The technical term describes it as the “growth underneath” the brain with which it is connected. It is also closely related to the optic and other sensory nerves, as well as to the general coordinating centers of mental and physical sense and sensation in the region of the third ventricle, including the pineal gland.

Modern physicians have called the pituitary the driver gland, because of its active influence upon the growth and function of different parts of the body. Theosophy holds that the pituitary body is the seat of the organ of will; likewise, as an organ that functions through the sympathetic nervous system upon various levels of the psychic plane, it is one of the links that connect the intermediate nature of man with both his spiritual mind and his instinctual, animal mind. Thus it serves as manifesting point where the cosmic force of will, flowing through the spiritual center of man’s being, works as a physical energy. As the bodily organ of will, it acts as a vital transformer, stepping down the high power, electromagnetic currents of universal will and desire, thus providing a series of special currents of growth which are diffused through the thyroid and other ductless glands. These currents, acting as automatic or vegetative will power, first affect the linga-sarira (model-body), and through it stimulate the physical body.

The pituitary, as a transformer, may also step up these diffused currents of physical and animal will and desire, raising them into the aspiring mental-spiritual will and desire, as when the high adept concentrates his whole consciousness upon attaining spiritual vision and knowledge. When the focused power of the active pituitary is directed to the higher psychic levels, its influence, through radiated wave-energy, reaches the pineal gland which responds with spiritual clairvoyance. If, however, the increased activity is upon the lower astral levels, the effects are distorted and misleading. The pituitary being closely connected with the optic and other sensory nerves, and with the important nerve centers, its enlargement or uncontrolled, abnormal activity often give rise to strange hallucinations of vision, hearing, etc. This explains the bizarre sights, sounds, odors, or what not, which are so real to the sufferers from brain fever, delirium tremens,

insanity, epilepsy, and some other disorders.

However, no one of the organs of a human being can function alone and apart from coordinated activity with the other parts of the human constitution; thus it is that while the pituitary body can stimulate or arouse to increased activity the pineal gland, nevertheless the pineal gland in its turn can act strongly upon the pituitary body; and as the pineal gland is the physical seat of the spiritual and higher intellectual faculties of the human constitution descending to the physical brain through the *linga-sarira*, when the pineal gland thus influences by radiated wave-energy the pituitary, the latter is awakened and begins to vibrate, strongly influencing the physical brain with will-currents guided by the spiritual and higher intellectual inspiration from the pineal.

Piyadasi (Prakrit) *Piyadasī* [from *piya* lovely, beloved + *dasi* from Sanskrit the verbal root *drś* to behold; Sanskrit *priyadarśī*] Lovely to look at; a title applied to the Indian King Asoka (c. 234-198 BC), found on the rock-cut pillar inscriptions he erected. It refers to the love which his subjects bore to their monarch rather than to his physical appearance.

The title is likewise given to Asoka's grandfather Chandragupta, the Sandracottus of the Greeks. Another title given to these two monarchs was *devanampriya* (the beloved of the gods).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Pl-Pral

Plaksha-dvipa (Sanskrit) *Plakṣa-dvīpa* According to the Puranas, the second of the seven dvipas, the continents or islands which make up our world. Esoterically these seven dvipas represent our globe and its six invisible companion globes: jambu-dvipa represents globe D, while plaksha, salmala, kusa, krauncha, saka, and pushkara represent the six invisible globes of our planetary chain. These dvipas also correspond to the geographical continents of the seven great races and to the land divisions of the earth during the period of one root-race.

Plane Used figuratively for “the range or extent of some state of consciousness, or of the perceptive power of a particular set of senses, or the action of a particular force, or the state of matter corresponding to any of the above” (TG 255). Though the cosmic planes are different from one another, they are not separated by gaps, just as the spectral colors are distinct and characteristic yet merge imperceptibly into each other. Nor can it be supposed that at all stages of evolution the scheme of planes was the same as now: we hear of a physico-astral stage of humanity and of other beings which now no longer exist on earth, in much the same way as we find the fossils of types intermediate between existing types but now extinct.

No hard and fast enumeration can be made as to the number of planes in the kosmos. The number assigned depends on the particular purpose for which the definition is made. The septenary classification is often used, as in the seven planes of prakriti or the seven states of consciousness pertaining to each. But other enumerations may equally be made, and any plane is subdivided into subplanes.

Planet Usually refers to the visible satellites of our sun, though in its general sense including the planets belonging to other solar systems, and planets belonging to the universal solar system, whether visible or not on our plane. One particular meaning is that of the seven sacred planets: Mercury, Venus, Mars, Jupiter, Saturn, and two secret planets for which the Sun and Moon are

substituted exoterically. Uranus and Neptune do not belong to this group, although circulating around our Sun; Neptune while belonging to our universal solar system does not cosmogonically belong to our own minor solar system, and hence is what from our standpoint may be called a capture.

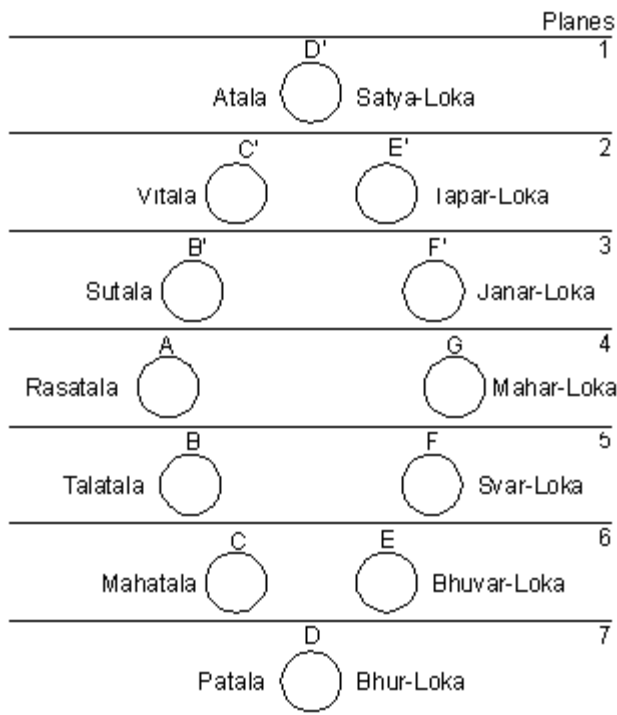

Each planet, like all other celestial orbs, is composed of seven or twelve globes, in coadunation but not in consubstantiality, forming a planetary chain on the various cosmic planes, only those on our particular physical plane being visible to us. Planets are the outer shell of living beings and have evolved from cosmic seeds, passing through various stages including that of comets. They are inhabited by denizens adapted to their conditions. Each planet of the solar system is in its own particular stage of planetary evolution, one planet being in one round of its own evolutionary course, another in a different round of *its* evolutionary development; and the substances or matters composing them are in respectively different states of materiality, ethereality, or spirituality. The periods of the planetary movements and of their nodes and apses are regulated by mathematical law originally impressed not only in the structure of the solar system, but in the *svabhava* or characteristic nature of each individual planet in the system, and these periods mark innumerable cycles of time, great and small. They shed influence on the earth and its inhabitants both as time indicators and by virtue of their quality as living beings. Each celestial body is the mansion, vehicle, or house of what is in its essence a divine entity; and these regents or governors, each one of its own sun or planet, are themselves undergoing courses of evolutionary unfolding in time periods so vast that mathematics of cosmic extent are required to compass them.

Planetary Chain Every kosmic body or globe, be it sun or planet, nebula or comet, atom or electron, is a composite entity comprised of inner and invisible energies and substances, and of an outer and often visible physical body. These elements all together, whether enumerated as seven or twelve, are the principles or elements of every self-contained entity or individual life-center. What theosophy calls a planetary chain is an entity composed of seven or twelve such multiprincipled globes, and which taken as a unit form one planetary chain. All celestial bodies are multiprincipled entities as man is, who is a copy in the small of what the universe is in the great, there being one life and one system of laws in that universe. Every entity in the universe is an inseparable part of it, therefore whatsoever the whole contains, is found in miniature in every part.

Our own earth-chain is composed of seven or twelve globes, of which only one, our physical earth, exists on this plane, perceptible to our physical sense apparatus because that apparatus is evolved to cognize this earth-plane and none other. But the life-waves of all the globes of the earth-chain pass in succession, following each other, from globe to globe, thus gaining experience of energy, matter, and consciousness on all the various planes and spheres that this chain comprises.

Limiting our explanation only to the manifest seven globes of the complete twelve, the six globes

other than the earth exist, according to one diagrammatic delineation, two by two, on the three planes of the solar system more ethereal than the physical plane. These three superior planes or worlds are each one superior to the world or plane immediately beneath it. Our earth-globe is the fourth and most material of all the manifest globes of the earth-chain. Three globes precede it on the descending or shadowy arc and three globes follow it on the ascending or luminous arc of evolution.

Planetary Spirits Every celestial body is under the directing influence of a hierarchy of beings, spiritual, quasi-spiritual, and astral, the higher of which may be called celestial spirits; the term planetary spirits is usually restricted to the highest class of these beings pertaining to planets, although the phrase is also used in other senses. These planetary spirits have evolved through past cosmic cycles of evolution from a state equivalent to the human; and the general hierarchy pertaining to each planet is closely linked with the destinies of the present various life-waves of that planet. We ourselves are destined in the future to become planetary spirits of a planetary chain that will be a later embodiment of our present earth-chain. This earth, being only in its fourth round, has not yet produced high planetary spirits; but it will have begun to do so at the end of the seventh round. At the summit of the hierarchy of planetary spirits is a supreme hierarch.

Planetary spirits parallel the Buddhist dhyani-chohans or dhyanis; with the exception that the Buddhist phrase has far larger application as it includes not merely planetary spirits but likewise spiritual beings of various grades in a solar system. The higher planetaries are those presiding over an entire chain of globes, and their influence extends over all the seven, ten, or twelve globes of a chain. There are also planetaries belonging to the same general planetary hierarchy who preside over a single globe of a chain, and again lower planetaries such as those in more or less

immediate touch with mankind. There are planetaries of high spiritual status, and planetaries of far lower status who at times even may be spoken of as dark planetaries. Thus it is that the work of the higher planetaries is beautiful, compassionate, and indeed sublime; whereas the lowest or dark planetaries are frequently the agents of matter as contrasted with spirit.

What the Christians, following the Greeks, call angels, are planetary spirits of high type, while the Christian archangels correspond roughly with the highest subclasses of the planetaries. In Hindu thought the manus are planetary spirits of various hierarchical grades in a planetary chain; the prajapatis also in certain cases are identical with the manus, the latter having a special connection with the human life-wave.

Planetesimal Hypothesis A modification of the nebular hypothesis — put forward by Lockyer and See, and developed by Chamberlin and Moulton in the early 20th century — according to which the nebulae from which planets originated were not gaseous but made up of a multitude of planetesimals or solid bodies varying in size from a mere particle up to a planetoid. According to theosophy, at a certain later stage in the formation of worlds there does take place such a concretion of large bodies out of small bodies and out of cosmic dust; but a particular and minor phase in the physical stage of development is far from a complete account of the origin of the solar system. It ignores all ultraphysical conditions, and therefore has to begin by assuming nine-tenths of the whole process, such as the eternity of physical matter, and the independent existence of such abstractions as gravitation, inertia, etc.

Planet of Death. *See* EIGHTH SPHERE

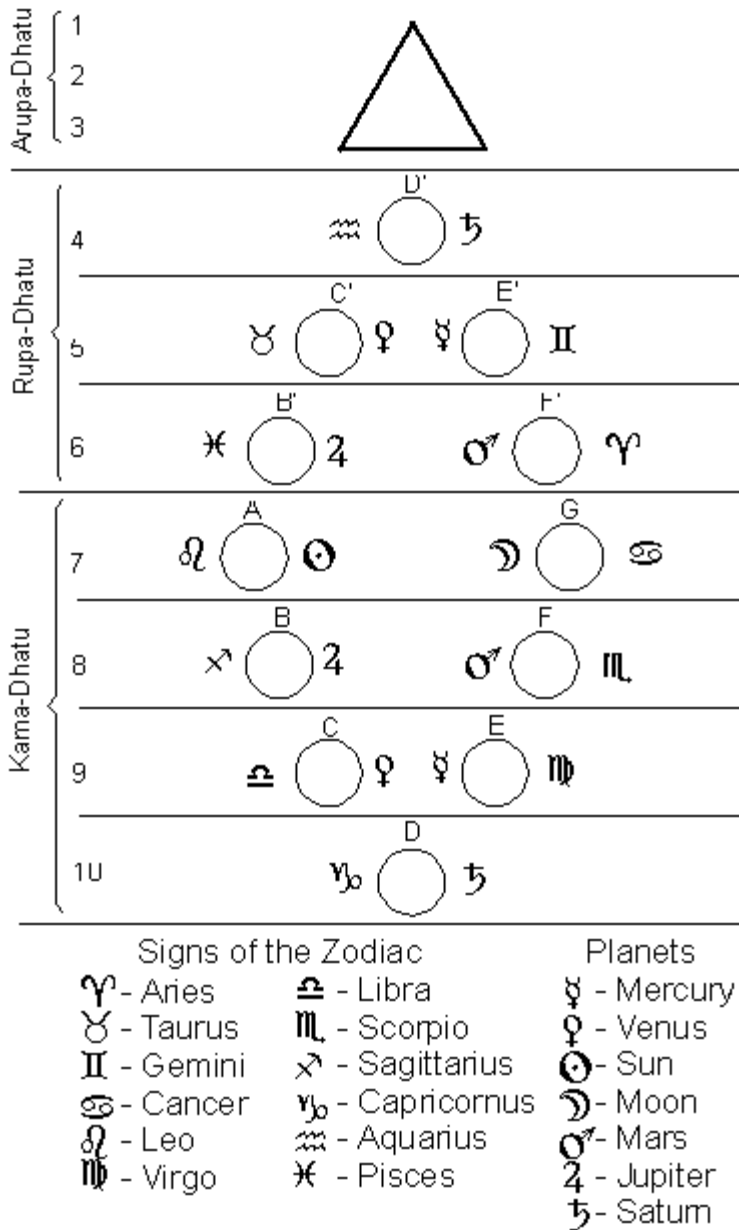

Planets, Seven Sacred The ancients spoke of seven planets which they named the seven sacred planets, and they were serialized as Saturn, Jupiter, Mars, Sun, Venus, Mercury, and Moon. The Sun and Moon are, however, used as substitutes for two secret planets, one near the sun and one over the moon, these secret planets being invisible to us at present. That near the Sun, an intra-mercurial planet, has been called Vulcan and was supposed to have been discovered in 1859, when a black spot was seen in transit across the solar disk; but since that time the discovery has not been verified by astronomers. The teaching regarding it is that it became invisible to our physical senses at about the midpoint of the third root-race; but as we have now reached again, on the upward arc, the plane corresponding to the same degree of development, in a relatively short cyclic period it should begin again to show itself.

The planet for which the Moon stands as a substitute, sometimes called the Planet of Death, is near the Moon and also invisible to our physical senses. It has a retrograde motion and is slowly dying.

Each of these seven planets is, like our earth, a chain of globes, sevenfold or twelvefold in composition, having six superior globes of finer, more ethereal matter above the physical globe. Only those globes which are on the same cosmic plane of nature are physically visible to each other. For instance, we can see only the fourth-plane planetary globes of each of the other

planetary or sidereal chains because we are on the fourth cosmic plane.

These seven planets are called sacred because every one of the globes of the earth chain is under the dominant guidance, and is actually largely formed by, one of these planets, assisted in each case by the other six. Further, every root-race of every one of the globes during each round is under the protection and guidance of one of the seven sacred planets.

But the main reason for calling them sacred is that our universal solar system is composed of seven planes of being, or worlds, over which are the seven primordial logoi. These are subdivided into seven minor logoi or powers, forming sevenfold groups or minor solar systems, and our solar system is one such group. In our solar system, our sacred planets are the respective houses, each house containing the seven forces of *one* of the seven chief rays of the solar logos: one such chief ray being our particular logos.

Plant(s). See VEGETABLE KINGDOM

Plasm Living material composing so-called living bodies, used in *The Secret Doctrine* in connection with Weismann's theory of the germ-plasm. Corresponding to the physical plasm are both the spiritual and ethereal plasms, which are the true directing influence of heredity. All these plasms are the deposits or lees of vital substances, which have their representative in the human physical body as the various pranas.

Plastic or Protean Soul. See LINGA-SARIRA; SOUL

Platonic School The philosophers of the Academy, who followed Plato and can be traced down to the days of Cicero, gradually undergoing change during that period and divisible into schools connected with the names of prominent philosophers. Distinguished from the Aristotelian or Peripatetic school, much as philosophy is distinguished from science or as idealism is distinguished from naturalism. The principal feature is the Platonic dualism: of noumenon and phenomenon, of the self-moving and that which is moved, of the Idea and its manifestation in an organic being, of the permanent and the impermanent, of soul and body, nous and psyche, etc. In epistemology this dualism appears as philosophia and sense experience — the wisdom which apprehends reality and that which forms concepts from the data of sense experience; in morals, as the contrast between the Good, which is altruistic because it apprehends the unity of all beings, and the ethic of self-seeking based on the illusion of separateness.

Plato's message was that of a person initiated in the sacred Mysteries, but under the usual necessity of reticence, of speaking in veiled language, and of casting his knowledge into the prevalent molds of thought.

Pleiades (Greek) Also Atlantides. Six stars (the seventh being invisible or missing) in the constellation Taurus, and their heliacal rising in May was considered by sailors as a sign of propitious weather. They were, especially Alcyone, regarded as the point around which the divine breath or motion works during the manvantara, and have been thought by modern astronomers to be the center of the sun's orbit.

In legend, the seven daughters of Atlas (Maia, Electra, Taygeta, Asterope, Merope, Alcyone, and Celaeno), who complained to the gods because they were pursued by Orion and were then changed into pigeons or doves and made into a constellation. Atlas represents the Atlantean root-race, and the daughters are the seven subraces. They married gods and became the mothers of heroes and the founders of city-states. They are connected with the destiny of nations, which is shaped by the events of their past lives, so that truly our destiny is written in the stars. In India, as the Krittikas, they were the wives of the seven rishis, six visible, one concealed; and the function of the rishis is concerned with times and events.

The first pyramids in Egypt are said to have been built at the beginning of a sidereal year under

Dhruva (alpha polaris), when the Kritikas looked over his head. They are mentioned in Job, who speaks of the sweet influence of the Pleiades, and Bailly makes a calculation as to the date when they had that influence. In India they have a very occult meaning connected with sound and other mysterious potencies.

Pleistocene. See GEOLOGICAL ERAS

Plenum (Latin) Full, fullness, as opposed to void or so-called empty space; the plenitude of fullness of matter in space which in fact forms space. Space in this sense is a plenum or pleroma, not a vacuum; yet philosophically, because of the nature of mahamaya, all manifested existence is illusory and hence empty in the mystical sense. Therefore those great systems of thought which have remained most faithful to the ancient wisdom, such as Northern Buddhism, speak of space and all the vast variety of existence as sunyata (the void).

Pleroma (Greek) Fullness, completion, entirety; used by the Gnostics, as for instance by Valentinus in the *Pistis Sophia*, to denote the fullness of the manifested universe as a whole; hence, space and its contents. In a more spiritual and accurate sense, it is absolute space with its seven, ten, or twelve planes or degrees of consciousness-substance. Evolution starts from a primal point and is fulfilled in the pleroma or manifested sum total of a manifested universe, with especial emphasis on its inner and invisible ranges and planes. Therefore, it is the kosmic abode of the invisible gods or divinities in all their many ranges and ranks, together with the planes, worlds, and spheres composing the fullness; the whole elaborately divided and subdivided into planes and hierarchies of emanations, one manner of treatment being geometrically symbolized by squares, circles, points, etc. For convenience' sake, pleroma is usually divided into three degrees, the highest, the intermediate, and the lowest. It was converted by the Christian Church into an abode for Fallen Angels, Principalities, and Powers.

Plexus (Latin) A network, used anatomically for certain networks of nerves or blood vessels. The nerve plexuses forming part of the sympathetic nervous system are closely related functionally to the viscera, and serve as coordinating centers for the various nerve tissues which regulate their muscular and organic action. They are intimately related to mental and emotional states, to such an extent that the chief of them, the solar plexus, has been called the abdominal brain.

The word has been used in theosophy to translate the Sanskrit chakra (wheel, nerve ganglion), but these chakras are better defined as forming centers in the vital-astral constitution of the organism. They are centers or foci of pranic energy, having special qualities which may be correlated to other groupings, such as the seven principles, the seven rays, etc. The seven chakras are: sacral, prostatic, epigastric (solar), cardiac, laryngeal, frontal, and cavernous.

Any attempt by an untrained student, without a teacher, to try to develop these chakras is sure to cause disaster, since it can result only in the arousing of powerful forces which he has not yet acquired the means to control, and which will therefore control him. Once awakened, they cannot

be put to sleep again, and the result will be disorganization, physical or mental or both, manifested in disease, insanity, depravity, or death; in the worst cases, the unfortunate dabbler may set his feet on a path of black magic ending in the final separation of his spiritual ego from its hapless psycho-vital-astral-physical vehicle. The spiritual and higher intellectual powers and faculties must be cultivated first; and this cannot be done by any attempt at artificial stimulation based on fixing the attention on spots in the body or head. The only safe way to practice the chela life is to forget about the body and its mechanism, thus allowing evolution to proceed in its natural course, and dangerous forces to life quiescent until they come naturally and harmoniously into operation.

Pliocene. See GEOLOGICAL ERAS

Pluto The outermost planet of the solar system yet found, discovered in 1930. It is only as bright as a star of the 15th magnitude and therefore is visible only to very large telescopes. It seems probable that Pluto does not congenitally belong to the solar system, but is a capture from some other source.

Pluto (Latin) [from Greek *ploutos* wealth, bounty of the earth] The Roman god of the Underworld, the same as the Greek Hades, Dis, and Orcus. The name Plutus, with which Pluto was sometimes confounded, is that of another deity, the god of wealth per se.

Pluvius (Latin) Rainy; with the ancient Romans Jupiter, as head of the pantheon, was viewed and invoked under several aspects, of which this is one: so that there is Jupiter Pluvius (the rain-giver), Jupiter Tonans (the thunderer), Jupiter Fulgurans (the source of lightning), etc., indicating different aspects of the deity as affecting weather.

Pneuma (Greek) [from *pneo* to breathe] Wind, air, breath, vitality, spirit, an animated being, also a spiritual being; in the New Testament (John 3:8) “The wind bloweth where it listeth . . . so is every one who comes into being (or becomes) out of the Spirit” — the word for both wind and spirit is the single word pneuma. It is also translated in the New Testament as “ghost,” as in Holy Ghost and yielded up the ghost, and as “spirit” in various senses. The same connection between air and spirit is seen in the Latin anima (life) and animus (mind), which derive from the same root as the Greek anemos (wind); also in spiritus [from *spiro* to blow, breathe], and the same holds good in other languages, illustrating the correlation of air or wind with vitality: jiva, prana, mind, manas, etc. The triad of sun or fire, moon or water, and pneuma, spirit, or wind, corresponds with Father-Mother-Son and with atma-buddhi-manas. The word is equivalent to breath so often used in *The Secret Doctrine*, in a comprehensive sense.

Pneumatology The study of gases; the study of beings intermediate between God or other divinity and man, including in the lower ranges angels, daimones, etc., and still lower possibly even demons and ghosts, etc.; the Christian theological doctrine of the Holy Ghost. G. de Purucker uses the term etymologically for the science of the pneuma or spirit, just as psychology is strictly speaking the science of the psyche. The psyche is the lower intermediate nature of man, kama-

manas; pneuma pertains to the higher duad, atma-buddhi. Modern psychology and psychoanalysis unfortunately deal mainly with the activities of the lower quaternary of the septenary being that is man, and ignore the activities or even the existence of anything else higher.

P'o (Chinese) In the *I Ching* “the full manifestation of the *kwei*” — the kama-manas or animal soul.

Poimandres. See PYMANDER

Point In mathematics a point is regarded as having no parts or magnitude, but is postulated for the purpose of defining position, for it cannot in itself have position unless space has been previously assumed. An abstract point cannot have location or relation to anything; it is devoid of attributes, unless we consider unity as an attribute. It is equivalent to the whole universe — Philo has said that the Chaldeans regarded the kosmos as a single point.

In the book of symbology given at the beginning of *The Secret Doctrine* a point appears in a circle as the first differentiation in the periodical manifestations of the ever-eternal nature. From the unknowable and concealed point emerged the creative cosmic triad of Eros, Chaos, and Chronos.

Another view of the mystical significance of a point describes it as an emanative center, a spot where energies from one plane enter another plane, a symbol of unity and homogeneity, representing the phase before polarity has set in — a logos, an indivisible, a monad. See also LAYA-CENTER; PRIMORDIAL POINT

Polar Cells, Polar Globules, or Polar Bodies Two minute cells thrown off by the unfertilized ovum in its process of maturation. Blavatsky speaks of the first stages of a germ-cell's development when the nuclear changes include the formation of double cone or spindle “*within* the cell. This spindle approaches the surface of the cell, and one half of it is *extruded* in the form of what are called the ‘*polar cells.*’ These polar cells *now* die, and the embryo develops from the growth and segmentation of the remaining part of the nucleus which is *nourished* by the substance of the cell. Then why could not beings have lived thus, and been created in *this* way — at the very beginning of *human and mammalian evolution*” The death of the polar cells “would *now* correspond to the change introduced by the separation of the sexes, when gestation *in utero, i.e., within the cell,* became the rule” (SD 2:117).

Polarity The property of having poles; duality throughout nature. Poles are antithetical in quality and yet interdependent; each presupposes the other, as without the other neither can exist. Similar poles repel, dissimilar attract. As long as they are apart, there is force; when they coalesce, they are said to neutralize each other — the force becomes latent. The most fundamental polarity is that of spirit and matter, which may also be called positive and negative, active and passive, etc. This is repeated endlessly on every plane and subplane. When the One becomes Two, it becomes polar; when the Two rebecomes the One, it ceases to be polar. The expansive and contractive forces (in themselves constituting a polarity) are seen everywhere in evolution and involution. The polarity

of right and left is hard to define absolutely, but gains significance when we consider the right-handed and left-handed groupings of atoms in the molecules of such compounds as dextrose and levulose — a contrast of similarities. In magnetism, electricity, and chemistry, we have familiar instances of polarity, in which the above general laws are illustrated. In the germinal cell, the One becomes the Two by the extrusion of the polar bodies. The human body is polar; Reichenbach discovered polarity in plants and minerals, as shown by the colors seen by his sensitives.

Benjamin Franklin invented the terms positive and negative to describe the two qualities or attributes of electricity as understood in his day. It has become customary to speak of things which are masculine, expansive, dispersive, etc., as being positive, and to speak of things which are centripetal, contractive, etc., as being negative, with perhaps an unconscious bias of thought in the direction of looking upon the positive as being the active, and the negative as being inactive or passive. Such usage is illogical and misleading, for it is well known that in both magnetism and electricity — as examples of fields of nature where polarity is native and studied — the negative can be as “positive” in its action as the so-called positive itself; and that furthermore action and reaction in these fields are equal and equivalent. Furthermore, a thing may be positive on one plane and negative on another plane or in another direction, or again positive at one moment and negative at the next moment — here using positive and negative according to their common significances.

Adopting such common parlance, it is not uncustomary to speak of the realms of spirit as being negative and the realms of manifestation as being positive; but in nature the masculine is no stronger or weaker than the feminine: they are coequal, reciprocal, interacting, always conjoined during manifestation, and paradoxically during manifestation continuously separate, but always in action and reaction, the one upon the other. Polarity is sometimes defined by the terms male and female; but, while using these symbolically, we must refrain from qualifying them by ideas drawn from merely physiological sex. Hence we see why it is to be regretted that these two terms have become so fixed in the language, and how much better had it been had the simple term polar been adopted.

However, if it be considered advisable to keep these terms, then one perhaps in the light of the theosophical philosophy, may be driven to say that the north pole of the earth, electrically and magnetically, is the negative pole, and the south pole is positive or dispersive; that spirit is negative and that matter is positive; though it is obvious that these allocations are arbitrary, so far as the words themselves are concerned, but correct enough as regards the facts.

Were we living in the realms of spirit rather than in the realms of material manifestation, we should probably be driven by the logic of circumstance to invert our usage of these terms, and declare the spiritual realms of our domain to be the positive ones, and the material realms to be the negative.

We are thus compelled to see that polarity reigns throughout nature, beginning with manifestation and closing with the beginning of pralaya, where polarity for the time ceases to exist; for polarity is one of the phenomenal products of manifested life. However, in the manifested universe, envisaging now the great cosmic planes, there is a relative homogeneity or vanishing of polarity at the apex or summit of any cosmic plane, that all intermediate parts of that cosmic plane showing polarity merge again into relative homogeneity, and the vanishing of polarity, at the extreme bottom of the said cosmic plane.

In *The Secret Doctrine* it is stated that fohat, in bringing worlds into being, makes whirls or gyrations in opposite directions, thus starting polarity; and of this we have an illustration in right-handed and left-handed helical or screw motions. Fohat or cosmic electricity, thus inducing polarity into the opening drama of manvantaric life, does so because the polarity unrolls from within fohat itself; fohat thus being instrumental in reproducing the many from out the One, being the steed ridden by cosmic mind.

Poles, Terrestrial and Celestial The poles of the earth are the extremities of its axis of rotation, and the great circle at right angles to this axis is the terrestrial equator. Corresponding to these in the celestial sphere are the celestial poles and equator. The terrestrial poles are storehouses of cosmic vitality, and here the fohatic forces result in the auroral phenomena of colored light and sounds. The north pole is heaven, Olympus, Mount Meru, the abode of the higher gods, and the place of the first continent, the Sacred Imperishable Land. The south pole is the pit, hell, patala, the vent of the earth. These two are often called the Mountain and the Pit. In the *Vendidad* the north pole is a serpent who bites spring and turns it to cold. The poles are variously personified in mythology, often rather distantly, e.g., as Castor and Pollux.

The extremities of the axis of the ecliptic point to the poles of the ecliptic in the celestial sphere. The axis of the earth is inclined to the axis of the ecliptic at an angle of something more than 23 degrees, called the obliquity, which makes the angle between the ecliptic and the equator. The obliquity is believed by modern astronomers to oscillate about a mean position to the extent of 1 degree 21 minutes on both sides in a period of about 10,000 to 18,000 years; but *The Secret Doctrine* states that the obliquity has been 90 degrees and 180 degrees, that it has had these positions repeatedly, and that the obliquity varies at the rate of nearly 3.6 degrees in each precessional cycle. It would appear from this that the earth's axis makes a complete circle or revolution with regard to the ecliptic axis, passing through angles of 90 degrees, 180 degrees, 270 degrees, and so back to the starting point. When the two axes coincide, there can be no seasons, no equinoxes or solstices. When they are at right angles, either the northern hemisphere or the southern, as the case may be, has six months of spring and summer, the opposite hemisphere having six months of autumn and winter; and the ecliptic poles being in the equator. When the axis is entirely inverted, although the zodiacal constellations remain the same, of course, because of the rotation of the earth, they apparently have a reversed movement from their present one (SD 2:785). Herodotus

learned from Egyptian priests that the two axes had once coincided and that they had been reversed three times since their records began; and the Denderah zodiacal charts show that the rectangular position and three inversions had taken place. Considering the dynamic bearings of the shifting in space of the earth's axis in light of the phenomena of the gyrostat, and how the application of an external force will produce a change in the direction of the axis of rotation, a mathematician might deduce the nature and value of the external forces which must in past ages have acted on the rotating earth in order to produce these axial changes.

Pole Star The north star, alpha polaris in the constellation of Ursa Minor, is within 1½ degrees of the north pole of the celestial sphere, to which the north end of the earth's axis points. This point is therefore the center around which the other constellations, in their daily apparent motion, revolve. The precession of the equinoxes shifts the position of the celestial north pole in a cycle of about 26,000 years, to a maximum extent of about 47 degrees; and thus we have a means of ascertaining ancient dates if we have any record of the position of the pole among the stars at the epochs in question. *The Secret Doctrine* speaks often in veiled terms of movements of the earth's axis and hence of the position of the celestial north pole. Of the first continent, the Sacred Imperishable Land, it is said that the pole star has his watchful eye upon it from the dawn to the close of the twilight of a day of the Great Breath. Again, at one time a star in the constellation Draco occupied the position.

In India the pole star is known as Dhruva, and the celestial or cosmic north pole, as well as the terrestrial north pole, is called Meru, the seat of Brahma.

Pollux, Polydeuces. See DIOSCURI

Polygenesis Used in biology and anthropology, meaning arising from many germs or roots; opposed to monogenesis, arising from a single germ or root, although the two theories can be complementary. The human race is distinctly polygenetic inasmuch as it was born from seven different psychomaterial foci on seven different centers of the earth; and mankind did not spring from an actual single couple. Yet it is equally true that mankind is one in origin, all its creators being spiritual beings, working on us and upon lower beings of a psychomaterial nature (SD 2:249, 610). Regarding the evolution of races, differentiation has existed for long ages; yet go far enough towards the origin, and polygenesis merges into a fundamental spiritual unity.

Polytheism The doctrine of and belief in a plurality of gods, cosmic spirits, or celestial entities under whatever name they may be described. The word came into use as a correlative of monotheism — the doctrine as of the Jews, Christians, and Moslems, of one and only one God. The unphilosophical nature of monotheism, which in the Occident is quite different from the significance of divine unity, is shown by the subterfuges resorted to in order to supply its deficiencies. As divinity cannot be successfully imagined as individually concerned with every operation in the universe, the general term nature is used to denote a kind of secondary god; while

the progress of science has analyzed this into various laws and forces, which paradoxically enough perform somewhat the same functions as the gods of polytheism, except in their wrongly supposed lack of intelligence. Less sophisticated and more profound intellects have never ceased to believe in a whole range of cosmic hierarchies, running from divinity down to the so-called nature spirits, and traditional peoples have always looked upon these as powers which are often dreaded and can be propitiated. Even Christianity has its saints, and its theology speaks of Angels and Archangels, of Dominions and Thrones, etc. As soon as we depart from the simple primeval idea of a universe filled with intelligent beings — and indeed formed of these beings themselves — of numerous hierarchies, grades, and kinds, we land in a maze of abstractions and contradictions.

The ancient and oriental pantheons are in reality allegories or personifications of the hosts and hierarchies of cosmic powers, divine, intermediate, and terrestrial, in uninterrupted serial sequences. Where an ignorant devotee might address prayers to some of these personifications, the enlightened one, in invoking Jupiter or Siva, would merely seek to evoke in himself the human power corresponding with the cosmic power, and of which the human is a direct, albeit a feeble, reflection.

Pomegranate. See RIMMON

Popol Vuh (Quiche) An ancient scripture of the Mayas. The manuscript which has come down to our day was discovered by Ximenez, a Dominican missionary in the 17th century, near Guatemala City, and translated by him into Spanish. Later, Brasseur de Bourbourg translated the manuscript from the original Quiche into French. But this manuscript was written or dictated by a native in the Quiche tongue and is not the original, for as the writer himself says in his preface: “This is the beginning of the ancient history of the country here called Quiche . . . We will publish it in the world of Christendom, because this National Book, the Popol Vuh, is seen no more, . . . This is the first book written in times of old, but it is hidden from the sight of him who sees and thinks.”

In addition to a historical account of the Quiche nation, the first portion of the scripture deals with cosmogony and the birth of humanity. The opening lines are similar in conception to the book of Genesis: “Here is the narrative of how all was in suspense, all was calm, all silent, all was motionless, all was peaceful, and empty was the immensity of the heavens. . . . The face of the Earth was not yet visible. Only the sea was, and all the space of the heavens.”

The first race of men mentioned in the Popol Vuh are described as “a race ‘whose sight was unlimited, and who knew all things at once’: thus showing the *divine knowledge of Gods*, not mortals” (SD 2:96). “In other words, they were the Lemuro-Atlanteans, the first who had a dynasty of *Spirit-Kings*, . . . actual living *Devas* (or demi-gods or *Angels*, again) who had assumed bodies to rule over them, and who, in their turn, instructed them in arts and sciences” (SD 2:221-2). And referring to the Lemurian or third root-race, the Popol Vuh describes their race as being fashioned out of the Tzite tree — very similar in this regard to the ancient Scandinavian mythology, where

Odin fashions man out of the ash tree. The early race of mankind mentioned in the Popol Vuh as able to live with equal ease under ground and water as upon the earth answers to the second and early third root-races (SD 2:160).

Porphyriion (Greek) Lurid, fiery; a gigante or giant born of the blood (vitality) of Ouranos (heaven) falling upon the earth. These giants were more human than the titans, and continued the war against the Olympian gods, which symbolizes the struggles which took place during the descending arc of evolution, cosmically and among the races of mankind, between the lower material forces and the celestial powers from above. Porphyriion is slain by the gods with the help of Hercules and buried in the abysses of earth.

Poruthu-madan (Tamil) Wrestling demon; the nature spirit associated with the air, or the sylph, described in popular myth as of great strength, and as aiding in the taming of wild animals. This elemental, it is asserted, aids in the phenomena of levitation, both in lifting and transporting objects, or in raising the passive body of a medium.

Poseidon (Greek) One of the twelve great Olympian deities, a son of Ouranos and Gaia, brother of Zeus and Hades; represented by the Latins as Neptunus. The brothers Zeus, Poseidon, and Hades are respectively the gods of heaven, the intermediate world or water, and of the underworld; and these represent the three great generalized powers or forces, each one ruling or vitalizing his respective third of the seven manifest cosmic planes. Poseidon presides over water, especially the ocean, and over horses, which he brought forth by a stroke of his trident on the earth. His symbols are the dolphin, one of his executive ministers; the trident; and the horse. It is Poseidon who shakes the earth and raises and quells storms at sea. He had numerous offspring by many wives, both mortal and immortal; mostly of a violent unruly character like himself — titans and giants. He stands as a personation of the spirit and race of Atlantis; for he is lusty, sensual, and at war with heaven. To consummate his intrigues, he assumes the forms of various animals — a way of alluding to bestial Atlantean black magic. The symbol is complex, for he is also a dragon. He is related to the northern constellations of Draco, Delphinus, and Pegasus (or Equus, the horse). Equivalent to Chozzar of the Peratae Gnostics and the good serpent of the Nazarenes (cf SD 2:578). As god of the waters he parallels Idaspati, Narayana, Vishnu, and Varuna.

Poseidonis Plato's *Timaeus* gives a story related to Solon by Egyptian priests, that a great island called Atlantis with a numerous population and a high culture, once existed west of the Pillars of Hercules and opposite Mt. Atlas. The name Poseidonis is given to this island in *The Secret Doctrine*, and it is said to have sunk in 9564 BC (ML 151). This last remnant in the Atlantic Ocean of the originally vast Atlantean continent, was said by ancient Mediterranean writers such as Plato to have been approximately the size of Ireland and, due to the wickedness of its otherwise highly civilized inhabitants, to have been swallowed up and submerged by the ocean in a night and a day.

Stories in ancient Sanskrit literature about Sankha-dvipa refer to the catastrophe which befell the

great Atlantean continent, as well as its last island-remnant.

Positive and Negative. See POLARITY; POLES

Positivism In general, a philosophy based on physical phenomena and ignoring underlying antecedent causes; specifically, the system of Auguste Comte (1798-1857), miscalled the Religion of Humanity. He held that all speculative thought passes through three phases — theological, metaphysical, positive: in the first, living beings having individual free will are regarded as the cause of phenomena; in the next, unverifiable abstractions are resorted to; positivism contents itself with a general description of phenomena. The universe is not composed of individuals with volition, but of an ordered organism — humanity — governed by necessary laws. The civilized community is a true organism, a great being, and should be an object of worship. In conformity with the last, Positivist churches continue to exist, with definite organization and procedure. As stated in *Isis Unveiled* (1:79), negativism might be a better term, since the system denies more than it affirms. Its rejection of individuals in favor of humanity certainly is a lapse into the rejected metaphysical stage of speculation, which Comte showed he had no true comprehension of. As a philosophy, holding that knowledge is based exclusively on the methods and discoveries of physical or positive science, it labors under great disadvantages. That speculation does pass through these and other stages is evident from the history of philosophy; but that positivism represents more than a passing phase is impossible to believe. It is one of the subtle forms of materialistic European philosophy so popular — and among certain minds still in vogue — during the 18th and 19th centuries.

Possession The state of being possessed or controlled by evil spirits, as demoniacal possession; theosophy explains it as that degree of obsession in which some besieging astral entity has obtained actual possession and use of a living body.

One or another of such harmful invaders compels their human victims to conduct themselves in all kinds of ways that are unnatural, mischievous, foolish, shocking, purposeless, and degrading. “In cases of murder, of every description, and of other crimes of a diabolical character, the act is attributed, in nine cases out of ten, by the offenders themselves, to *irresistible obsessions*. ‘*Something* whispered constantly in my ear . . . *Somebody* was incessantly pushing and leading me on.’ Such are the too-frequent confessions of the criminals. Physicians attribute them to hallucinations of disordered brains, and call the homicidal impulse temporary *lunacy*” (IU 1:276).

As the highly organized modern brain and nervous system grow more sensitive to psychic influences, as is evident in the steady increase in the number and phases of mental and nervous disorders, the current ignorance of the afterdeath state and the reckless disregard of life are releasing hosts of desperate entities of desire — despairing suicides and vengeful, executed criminals who survive in their kama-rupas to prey upon the living. Moreover, not a few of the increasing numbers of the insane result from following various practices advertised as means for

gaining psychic powers for selfish purposes; and the widespread use of hypnotism and the cultivation of mediumship leave many negative subjects weakened in will and in imminent danger of obsessing influences.

Pot Amun (Coptic) A priest and hierophant of the early Ptolemaic dynasty. A term said by Diogenes Laertius to signify one consecrated to Amun (Amen), the god of esoteric wisdom, as *amen* means “the occult.” “Pot-Amun is credited with having been the first to teach Theosophy, or the outlines of the Secret Wisdom-Religion, to the uninitiated” (TG 259).

Pothos (Greek) Desire; the divine love felt by spirit for its own principles (Chaos), thus the root of eros and cupido. Just as is the case with the various meanings given to the Sanskrit kama, so with pothos. Abstract kama is identic with abstract pothos, pothos itself; and as from abstract kama, spiritual divine love, springs forth the lower kama of the manifested worlds, just so from pothos mystically spring forth first eros, cosmic attraction on all planes, and then on a still lower and more material series of planes was born cupido, or attraction and yearning.

Powers In theosophical literature, usually those endowments and abilities (Sanskrit siddhis) which are said to be dormant in present mankind as a whole. It would be more accurate to say that mankind itself is at present dormant, while the powers themselves are not dormant but simply without ability to express themselves through the constitution of the present relatively sleeping mankind. Thus it is that by evolutionary advancement or initiatory training the neophyte does not rouse these powers into activity, but instead raises his human nature into the planes where these powers respectively already exist in full function. Thus, intellect is not dormant in mankind at present, but it is the human unevolved side of us which is as yet so imperfectly developed as to form a veil around the already fully evolved intellectual or manasaputric power within us. Thus, in a blind person, it is not the light which is latent or unawakened, but merely the blind person’s incapacity to see: the glorious sunlight is always there. Very often the word is employed with a qualifying adjective, such as spiritual powers, occult powers, man’s inner powers, etc.

Also, the sixth order of angels in the celestial hierarchy as enumerated by pseudo-Dionysius the Areopagite, ranking last in the second triad of Dominions, Virtues, and Powers. It translates the Greek exousiai; Latin, potestates (Eph 1:21; Col 1:16). In the ancient Syrian scheme, the Powers had governance over the sphere of the sun. *See also* PRINCIPALITIES

Prabhapala (Sanskrit) *Prabhāpāla* [from *prabhā* light, splendor + *pāla* protector, guard] Protector of light; in Buddhism, the name of a bodhisattva. Gautama Buddha “attained the state of Bodhisattva on earth when in the personality called Prabhapala” (TG 66).

Prabhavapyaya (Sanskrit) *Prabhavāpyaya* [from *prabhavā* the coming forth + *apyaya* the vanishing] That from which all things originate and into which they all resolve at the end of the life cycle; a synonym for Brahman-pradhana, or even for parabrahman-mulaprakriti. Less technically, even cosmic space in the above sense could be named as prabhavapyaya.

Prachetas (Sanskrit) *Pracetas* [from *pra* before + *cetas* mind] The preeminently intelligent one; a name of Varuna, the god of water. While the deity Varuna undoubtedly has its relations to earth, and more particularly to water of which he is the presiding genius, nevertheless in the cosmic sense water signifies space.

Prachetasas, Prachetasah (Sanskrit) *Pracetas, Pracetah* [from *pra* before + *cetas* mind, understanding] The preeminently intelligent ones; the ten prachetasas were sons of Prachinabarhis and (according to the *Vishnu-Purana*) Savarna, the daughter of the ocean — although Savarna is stated elsewhere to be the wife of the sun. They refer historically and physiologically to the latter portions of the second root-race and to the first portions of the third root-race. The reference here is to the inspiring evolutionary influence on the early human races brought about by the union or marriage of the mind-born sons of Brahma (manasaputras) with the early sweat-born and egg-born portions of the human race. Thenceforth the human race became truly intelligent and self-conscious. As nature repeats itself, they also represent the rishis of the early fifth root-race, standing for the adepts of the right-hand path.

The adepts of the left-hand path or the Atlantean sorcerers were called trees in ancient India, although trees likewise symbolized adepts of any kind. Hence, “When Vishnu Purana narrates that ‘the world was overrun with trees,’ while the Prachetasas — who ‘passed 10,000 years of austerity in the vast ocean’ — were absorbed in their devotions, the allegory relates to the Atlanteans and the adepts of the early Fifth Race — the Aryans. Other ‘trees (adept Sorcerers) spread, and overshadowed the unprotected earth; and the people perished . . . unable to labour for ten thousand years.’ Then the sages, the Rishis of the Aryan race, called Prachetasas, are shown ‘coming forth *from the deep*’ [symbol of wisdom and of occult learning], and destroying by the wind and flame issuing from their mouths, the iniquitous ‘trees’ and the whole vegetable kingdom; until Soma (the moon), the sovereign of the vegetable world, pacifies them by making alliance with the adepts of the *Right Path*, to whom he offers as bride Marisha, ‘the offspring of the trees’ ” (SD 2:495). This is an allegory of the struggle between the Sons of Light and the Sons of the Dark Wisdom.

Daksha is the son of the prachetasas and Marisha. In connection with the legend concerning the birth of Marisha, the “Sweat-born,” Daksha represents the earliest egg-born human races, those of the first portion of the third root-race. All these archaic allegories of ancient peoples are applicable, *mutatis mutandis*, to different periods of time, when cyclical events, under karmic government, reproduce themselves with more or less completeness. Thus it is that the prachetasas are sometimes referred to in connection with a later, Atlantean period.

The prachetasas are identical with the five ministers of Chozzar (Poseidon) of the Peratae Gnostics.

Pradhana (Sanskrit) *Pradhāna* [from *pra* before + the verbal root *dhā* to place] That which is first placed, or primal position, in a philosophical sequence of cosmic emanations. Undifferentiated

cosmic substance; that which is the root of and first originant of prakriti (nature visible and invisible). Some philosophical schools in India use akasa as a synonym of pradhana, and one might even say that pradhana is mulaprakriti, taken in the literal sense of “root of prakriti.” Strictly speaking, pradhana is mulaprakriti in the latter’s lower ranges, and thus pradhana in its lower ranges becomes akasa. Philosophically it is the first filmy appearance of root-matter “placed before” or around Brahman. It is spoken of as the cosmic veil of Brahman, the unmanifest or First Logos.

“That which is the unevolved cause is emphatically called by the most eminent sages, *pradhana, original base, which is subtle prakriti, viz., that which is eternal, and which at once is, and is not, a mere process*” (VP 1:2).

Pradhanika-Brahma Spirit (Sanskrit-English) Used to describe the condition of Brahman-pradhana in its perfect involution, philosophically, a state which obtains during cosmic pralaya. Hence it is truly the next thing to parabrahman-mulaprakriti. *See also* PUMS

Pragna. *See* PRAJNA

Prahlada or **Prahrada** (Sanskrit) *Prahlāda, Prahrāda* The son of Hiranyakasipu, chief of the daityas and as such, from the standpoint of the writers of the Puranas, theologically the adversary in philosophical speculation and outlook of Vishnu. Hiranyakasipu therefore has been mistaken by Occidental writers as occupying somewhat the same place in Hindu thought that Satan has occupied in Christian theology. Prahlada, his son, became an ardent devotee of Vishnu which, according to Puranic legend, enraged his father so much that Prahlada became subjected to a variety of punishments and tortures. To save his devotee from these Vishnu assumed the form of the Nara-simha avatara (the man-lion incarnation) and killed Hiranyakasipu.

Prajapati (Sanskrit) *Prajāpati* [from *prajā* that which is brought forth from *pra* forth + the verbal root *jan* to be born + *pati* lord] Lord or master of progeny; applied to several Vedic gods, in particular to Brahma, the evolver-producer, the first and most recondite figure of the Hindu triad. Brahma as Prajapati symbolizes personally the collective creators of the universe with all its numberless hierarchical productions of things movable and seemingly immovable. Brahma is also collectively the Prajapatis or the lords and givers of life.

Prajapatis (Sanskrit) *Prajāpati-s* [from *prajā* that which is brought forth from *pra* forth + the verbal root *jan* to be born + *pati* lord] The producers, evolvers, or givers of life to all on the earth’s planetary chain, and hence lords of offspring in the hierarchical sense. Prajapatis is likewise applicable *mutatis mutandis* to larger hierarchical divisions, such as a solar system or galaxy. The prajapatis

“are, like the Sephiroth, only seven, including the synthetic Sephira of the triad from which they spring. Thus from Hiranyagarbha or Prajapati, the *triune* (primeval Vedic Trimurti,

Agni, Vayu, and Surya), emanate the other seven, or again ten, if we separate the first three which exist in one . . . In the Mahabharata the Prajapati are 21 in number, or ten, six, and five (1065), thrice seven” (SD 1:89-90).

These seven, ten, or more prajapatis correspond likewise to the Mazdean Amesha-Spentas or Amshaspendas and the Hindu Saptarshis. The name prajapati is most commonly given to ten rishis or sages known as the mind-born sons of Brahma: Marichi, Atri, Angiras, Pulastya, Pulaha, Kratu, Vasishtha, Prachetas or Daksha, Bhrigu, and Narada. These are really collective names for the various classes of monads, each single prajapati representing also the spiritual-intellectual hierarch of his own particular hierarchy or class of monads. Hence the meaning of prajapati as lord or parent of offspring — the ten classes of monads corresponding each to its own proper prajapati. Further the prajapatis are the parents of the seven or ten manus. The Puranic myths with their genealogies of the seven prajapatis, rishis, or manus are “but a vast detailed account of the progressive development and evolution of animal creation, one species after the other” (SD 2:253).

“The whole *personnel* of the Brahmanas and Puranas — the Rishis, Prajapatis, Manus, their wives and progeny — belong to that pre-human period. All these are the *Seed* of Humanity, so to speak. It is around these ‘Sons of God,’ the ‘Mind born’ astral children of Brahma, that our physical frames have grown and developed to what they are now. For, the Puranic histories of all those men are those of our Monads, in their various and numberless incarnations on this and other spheres, events perceived by the ‘Siva eye’ of the ancient Seers, (the ‘third eye’ of our Stanzas) and described allegorically. Later on, they were disfigured for Sectarian purposes; mutilated, but still left with a considerable ground-work of truth in them. Nor is the philosophy less profound in such allegories for being so thickly veiled by the overgrowth of fancy” (SD 2:284).

Prajās (Sanskrit) *Prajās* [from *pra* forth + the verbal root *jan* to be born] That which is propagated or brought forth; creatures, offspring. Brahma, as Prajapati, is the lord of praja — lord of all creatures on earth.

Prajna (Sanskrit) *Prajñā* [from *pra* before + the verbal root *jñā* to know] To know through clear perception, to discern clearly; wisdom, intellectual perception or knowledge as contrasted with mere brain-mind ratiocination. Its cultivation is one of the Buddhist paramitas.

Prajnaparamita (Sanskrit) *Prajñāpāramitā* [from *prajñā* wisdom + *pāramitā* transcendental virtue] the wisdom transcendental virtue; one of the principal mystical works of the Mahayana school of Buddhism, supposedly written in the 2nd century BC. With the *Saddharma-Pundarika* (also written in Sanskrit), among the most important Mahayana works.

Prakṛita (Sanskrit) *Prākṛta* [from *prakṛti* the original element] As an adjective, original, primary. In the Puranas the primary creations or the first three of the seven creations were called the

prakrita creations — the developments of indiscrete nature beginning with the indiscrete principle. They are mahat-tattva (the universal soul, infinite intellect, or divine mind); bhuta or bhutasarga (elemental creation, appearances at the beginning of any manvantara of the seeds of lives now to begin their development as primordial prakritis); and indriya or aindriyaka (organic evolution).

Any provincial or vernacular dialect cognate with Sanskrit is called in India, Prakrita (Prakrit).

Prakriti (Sanskrit) *Prakṛti* [from *pra* forwards, progression + the verbal root *kṛ* to make, do] Production, bringing forth, originating, primordial state or condition, original substance. Nature; spiritual and ethereal substances in all their forms, visible and invisible. Its root or parent is mulaprakriti (root of prakriti), and it is to be considered with vikriti, which signifies change, alteration, or a production or evolution from the prakriti which precedes it.

“In common usage *Prakriti* may be called Nature in general, as the great Producer of entities or things, and through this Nature acts the ever-active Brahma or Purusha. Purusha, therefore, is Spirit, and Prakriti is its productive veil or sheath. Essentially or fundamentally the two are one, and whatever Prakriti through and by the influence of Purusha produces is the multitudinous and multiform *Vikritis* which make the immense variety and diversity in the Universe around us.

“In one or more of the Hindu philosophies, Prakriti is the same as Sakti, and therefore Prakriti and Sakti are virtually interchangeable with Maya or Maha-Maya or so-called illusion, Prakriti is often spoken of as ‘matter,’ but this is inexact although a very common usage; matter is rather the ‘productions’ or phases that Prakriti brings about, the *Vikritis*. In the Indian Sankhya philosophy Pradhana is virtually identical with Prakriti, and both are often used to signify the producing element from and out of which all illusory material manifestations or appearances are evolved” (OG 129-30).

In the Sankhya philosophy prakriti is sevenfold. These seven prakritis are mahat, ahankara, and the five tanmatras (rudimentary or subtle elements) — sabda, sparsa, rupa, rasa, and gandha.

The Visishtadvaita Vedantists teach as do theosophists that “every particle or atom of Prakriti contains *Jiva* (divine life), and is the *sarira* (body) of that Jiva which it contains, while every Jiva is in its turn the *sarira* of the supreme spirit, as ‘Parabrahm pervades every Jiva, as well as every particle of matter” (SD 1:522).

Prakritika Pralaya and **Prakritika Manvantara** (Sanskrit) *Prākṛtika-pralaya, -manvantara* [from *prakṛti* nature] The dissolution and manifestation of prakriti or nature; also called the elemental pralaya because the universe then returns to its original elements. Hence in one sense it is partial because the dissolution reaches as far as the elements and there stops. The inner portions or constitution of the universe remain as it were *in statu quo*, which does not signify that they are

inactive — any more so than the reincarnating ego is inactive when the lower quaternary of the human constitution undergoes its prakritika pralaya or death. A prakrita pralaya occurs, for instance, at the end of an Age or Life of Brahma, when the cosmos goes into pralaya; then everything that exists is resolved into the primal elements, themselves resolved into the One, only to be reissued or emanated anew at the end of the long Night or Brahma pralaya.

Prakritika pralaya may apply to a globe; when it refers to the cosmic pralaya, the resolving of the prakritis of nature goes even beyond the cosmic elements, for these are then resolved into the One.

Pralaya (Sanskrit) *Pralaya* [from *pra* away + the verbal root *lī* to dissolve] Dissolving away, death, dissolution, as when one pours water upon a cube of salt or sugar: the cube of salt or sugar vanishes in the water, dissolves, and changes its form. So during a pralaya, matter crumbles or vanishes away into something else which is yet in it, surrounds it, and interpenetrates it. Pralaya is often defined as the state of latency or rest between two manvantaras of great life cycles. During pralaya, everything differentiated, every unit, disappears from the phenomenal universe and is transferred into the noumenal essence which periodically throughout eternity gives birth to all the phenomena of nature. Pralaya is dissolution of the visible into the invisible, the heterogeneous into the homogeneous, relatively or absolutely — the objective universe returns into its one primal and eternally productive Cause, to reappear at the following cosmic dawn. To our finite minds, pralaya is like a state of nonbeing — and so it is for all existences and beings on the lower material planes.

A mahapralaya (great pralaya) is an absolute pralaya of a solar system or kosmos; a minor pralaya is a partial dissolution of some part of the solar system or cosmos, such as a planetary chain or a globe. After an absolute pralaya, when the preexisting manifested material consists of but one element, and breath “is everywhere,” the creation process acts from without inwardly; but after a minor pralaya, which involves the destruction of the corporeal vehicles of things, the inner vital essences remaining untouched, the celestial bodies begin at the first flutter of manvantara their resurrection to manifested cosmic life from within outwardly.

A pralaya is not the same as an obscuration, because an obscuration means the passage of a life-wave from a globe or equivalent celestial body to a globe on another plane. During such an obscuration the globe thus abandoned by the life-wave remains *in statu quo* — in a refrigerated condition, so to say — awaiting the influx of the succeeding life-wave. In the case of obscuration the vehicle remains dormant; yet this does not signify that the body is without movement, vital or psychic, of any kind. A person, for instance, when asleep is in obscuration, and it is obvious that his physical body is still alive and active after the manner of sleeping organisms.

“It is not the physical organisms that remain in *statu quo*, least of all their psychical principles, during the great Cosmic or even Solar pralayas, but only their Akasic or astral ‘photographs.’ But during the minor pralayas, once over-taken by ‘Night,’ the planets remain intact, though dead, as a huge animal, caught and embedded in the polar ice, remains the

same for ages” (SD 1:18n).

Theosophy divides the pralayas into several kinds: the paurusha pralaya (dissolution or death of an individual person); the atyantika pralaya (nirvana of a jivanmukta); the obscuration or individual pralaya of each globe, as a life-wave passes on to the next globe; the round-obscurations or minor pralayas of the planetary chain after each round; the bhaumika pralaya (planetary pralaya) which occurs when the seven rounds of our earth-chain are completed, also called the naimittika pralaya (dissolution during the Night of Brahma); the saurya pralaya (solar pralaya) when the whole solar system is at an end; the universal mahapralaya or Brahma pralaya, usually called the prakritika pralaya or dissolution of the cosmos at the close of an Age or Life of Brahma; and the nitya pralaya or constant, incessant evolutionary changes that take place throughout the universe and therefore affect all its parts.

“When the great period of the universal kosmic pralaya occurs, and the universe is indrawn (following the Oriental metaphor) into the bosom of Parabrahman, what then happens? The spiritual entities then enter into their paranirvana, which means exactly for them what is meant for us when we speak of the death of the human being. They are drawn by their spiritual gravitational attractions into still higher hierarchies of being, into still higher spiritual realms, therein still higher rising and growing and learning and living; while the lower elements of the kosmos, the body of the universe (even as does our physical body when the change called death comes . . .), follow their own particular gravitational attractions: the physical body to dust; the vital breath to the vital breath of the kosmos; dust to dust, breath to breath. So with the other kosmic principles, as with man’s principles at his decease: the kama of our nature to the universal reservoir of the kamic organism; our manas into its dhyan-chohanic rest; our monads into their own higher life. Then when the clock of eternity points once again for the kosmos to the hour of ‘coming forth into light’ — which is ‘death’ for the spiritual being, as death for *us* is *life for the inner man* — when the manvantara of material life comes around again (the period of spiritual death for the kosmos is the material life of manifestation), then in the distant abysses of space and time the kosmic life-centers are aroused into activity once more . . .” (Fund 183).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Pram-Prj

Prama (Sanskrit) *Pramā* [from *pra-mā* to measure out correctly from the verbal root *mā* to measure] Basis, foundation; in Vedanta philosophy, true knowledge, right measure.

Pramana (Sanskrit) *Pramāṇa* [from *pra-mā* to measure out correctly from the verbal root *mā* to measure] Measure, a standard, hence authority; thus Vedah pramanah means “the Vedas are the standards.”

In Vedanta philosophy, pramana signifies a means of acquiring certain knowledge (prama), six branches being enumerated: pratyaksha (perception by the senses); anumana (deduction or inference); upamana (analogy or comparison); sabda or aptavachana (trustworthy testimony or revelation); anupalabdhi or abhava-pratyaksha (proof by the negative method); and arthapatti (deduction or inference from circumstances). To these some schools add: sambhava (equivalence); aitihiya (tradition); and cheshta (gesture).

Pramantha (Sanskrit) *Pramantha* [from *pra-math* to stir about violently] The upper stick used by the ancient Brahmins to kindle fire. By rubbing it against the arani or under stick, the friction produced the heat and subsequent flame. It would be wide of the inner significance of the pramantha and arani to concentrate attention upon their supposed phallic or sexual significance as these are described both pragmatically and mystically in ancient Hindu works, although unquestionably the language used is at times suggestive. Mystically, the pramantha stands for the will in man, whirling and unceasingly active in and upon the passive portion of the human constitution, arousing the latter into corresponding activity, bringing about there the fire and flame of animate life. When the will is stilled the being is dormant; when the will acts all portions of the constitution touched by the whirling activity of the will react and spring themselves into corresponding motion.

Pramatha (Sanskrit) *Pramatha* The tormentor; a class of daimones attendant upon Siva.

Pramati (Sanskrit) *Pramati* Providence, care, overseeing; described as a son of fohat (SD 2:414). That aspect of the fohatic hierarchy impelled or inspired by, or contained in, pramati — as overseeing intelligence — directs the manifold cosmic operations of cosmic intelligent energy; the *manifested* intelligence active in manvantara, derivative from the latent intelligence inherent in fohat.

Prameya (Sanskrit) *Prameya* [from *pra-mā* to measure out from the verbal root *ma* to measure] An object of exact knowledge; hence a thing to be proved, a theorem to be established — used in Vedanta philosophy.

Pram-gimas (Lithuanian) Master of all; a title of deity.

Pramitabhas (Sanskrit) *Pramitābhas* [from *pramita* limited + *ābhā* splendor] Of limited splendor; a class of deities in the fifth manvantara.

Pramlocha (Sanskrit) *Pramlocā* [from *pra* forth + the verbal root *mluc* to go] One sent forth; one of the apsaras or celestial nymphs sent on earth by Kamadeva or Indra to tempt the sage Kandu from his devotions and austerities. She succeeded in her unholy purpose, and according to the account stayed with him 907 years six months and three days, which were to the sage as one day. After this she flew away, wiping the perspiration from her body with the leaves of the trees as she passed through the air. The child she had conceived by the rishi came forth from the pores of her skin in drops of perspiration: the trees received the living dew, the winds collected them into one mass, Soma (the moon) matured them till they became the lovely girl Marisha. This story is an allegory founded on the physical mode of procreation of the second root-race or sweat-born.

“Pramlocha is the Hindu Lilith of the Aryan Adam; and Marisha, the daughter born of the perspiration of her pores, is the ‘sweat-born,’ and stands as a symbol for the Second Race of Mankind.” The figures 907 years six months and three days are but the “exoteric figures given in a purposely reversed and distorted way, being the figure of the duration of the cycle between the first and second human race.” The allegory “shows the psychic element developing the physiological, before the birth of *Daksha*, the progenitor of real physical men, made to be born from Marisha and before whose time living beings and men were procreated ‘by the will, by sight, by touch and by Yoga’ . . .” (SD 2:175-6).

Prana (Sanskrit) *Prāṇa* [from *pra* before + the verbal root *an* to breathe, live] In theosophy, the breath of life; the third principle in the ascending scale of the sevenfold human constitution. This life or prana works on, in, and around us, pulsating unceasingly during the term of physical existence. Prana is “the radiating force or Energy of Atma — as the Universal Life and the One Self, — Its lower or rather (in its effects) more physical, because manifesting, aspect. Prana or Life permeates the whole being of the objective Universe; and is called a ‘principle’ only because it is an indispensable factor and the *deus ex machina* of the living man” (Key 176).

In working upon the physical body, prana automatically uses the linga-sarira (model-body) as its vehicle of expression during earth-life. Prana may be said to be the psychoelectric veil or field manifesting in the individual as vitality. The life-atoms of prana fly instantly back, at the moment of physical dissolution, to the natural pranic reservoirs of the planet. Further, occultism teaches that “(a) the life-atoms of our (*Prana*) life-principle are never entirely lost when a man dies. That the atoms best impregnated with the life-principle (an independent, eternal, conscious factor) are partially transmitted from father to son by heredity, and partially are drawn once more together and become the animating principle of the new body in every new incarnation of the Monads. Because (b), as the *individual* Soul is even the same, so are the atoms of the lower principles (body, its astral, or *life double*, etc.), drawn as they are by affinity and Karmic law always to the same individuality in a series of various bodies, etc. . . .” (SD 2:671-2).

In Sanskrit it refers to the life currents or vital fluids, variously numbered as three, five, seven, twelve, and thirteen. The five life-winds mentioned are samana, vyana, prana, apana, and udana. In this classification prana represents the expirational breath.

Jiva is sometimes used similarly to prana, but strictly prana means outbreathing and jiva means life per se. There is a universal or cosmic jiva or life principle, just as there are innumerable hosts of individualized jivas, which are the atoms of the former, drops in the ocean of cosmic life. These individualized jivas are relatively eternal, and correspond exactly to the term monad. Jiva, without qualification, is of general application; when considered as individualized, these jivas are used in the sense of individual monads; contrariwise, prana is applied to the life-fluid or jivic aura when manifesting in the lower triad of the human constitution as prana-lingasarira-sthularsira. Hence Blavatsky said that jiva becomes prana when the child is born and begins to breathe.

Pranagnihotra (Sanskrit) *Prāṇāgnihotra* [from *prāṇa* breath, life current + *agni* fire + *hotra* sacrifice] Sacrificing the fire of the vital currents; referring to one of the forms of yoga practiced by a Hindu sect. Also the name of a minor Upanishad.

Pranamaya-kosa (Sanskrit) *Prāṇamaya-kośa* [from *prāṇa* life, breath + *maya* built of, formed of from the verbal root *mā* to measure, form, with a consequent idea of illusion + *kośa* sheath] The sheath formed of life or breath, the vital-astral soul. According to the Vedantic classification of the human constitution, the fourth of the panchakosa (five sheaths) which enclose the atman or divine monad. It corresponds to prana and linga-sarira in the sevenfold human division.

Pranatma(n) (Sanskrit) *Prāṇātman* [from *prāṇa* life vital essence + *ātman* self] The vital spiritual field which unites the totality of the subtle bodies of man into a unity — hence in one sense equivalent to sutratman, although sutratman usually imbodies a higher conception than does pranatman.

Also the vital or animal soul — the third and lowest of the three souls of a human being: the personal ego in the human constitution. The vehicle of pranatman is the astral-vital monad in its

turn working through the human body. The pranatman, so far as man is concerned, may otherwise be called the human soul, which comprises manas, kama, and prana. This ego or pranatman is mortal, being a composite, and hence endures only during the cycle of one earth-life; while its range of consciousness is restricted to globe D of the earth planetary chain. Nonetheless, the monadic point around which the pranatman reassembles for each incarnation is immortal as a monad, albeit this monad is still in a low degree of evolutionary unfoldment.

Pranava (Sanskrit) *Praṇava* [from *pra-ṇu* to utter a droning or humming sound, as during the proper pronunciation of the word Om or Aum] The mystical, sacred syllable Om or Aum, pronounced by Brahmins, Yogis, and others during meditation. In Vedanta philosophy and the Upanishads, used in another sense: “In one sense *Pranava* represents the macrocosm and in another sense the microcosm. . . . The reason why this Pranava is called Vach is this, that these four principles of the great cosmos correspond to these four forms of Vach” (N on G 25, 26) — vaikhari, madhyama, pasyanti, para. These are called the four matras of pranava.

It is also equivalent to the second sign of the zodiac, Rishabha (Taurus).

The fact that this term is given to the mystical sacred syllable, and that it signifies a droning or humming sound, shows that anciently the word was uttered aloud, although in secret whenever possible. Modern Brahmins, however, are apt to condemn the vocal utterance of their sacred syllable, and sometimes assert that it should be uttered in silence — i.e., in the mind.

Pranayama (Sanskrit) *Prāṇāyāma* [from *prāṇa* breath + *āyāma* restraining, stopping] The fourth of the eight states of yoga, consisting of various methods of regulating the breath. The three forms of pranayama are puraka (the inhaling); kumbhaka (the retaining); and rechaka (the exhaling).

Any practice of pranayama can be fraught with serious danger, not merely to physical health, but in extreme cases to mental balance or stability. Pranayama, when actually practiced according to the exoteric rules, is a very different thing from the excellent and common sense advice given by doctors to breathe deeply, and to fill the lungs with fresh air. Pranayama should never be practiced by anyone unless under the guidance of initiated teachers, and these never proclaim themselves as teachers of pranayama, for the adepts use it only in rarest cases for certain pupils who for karmic reasons can be helped in this unusual and extraordinary way.

Pranidhana (Sanskrit) *Praṇidhāna* [from *pra-ni-dhā* to place in front] Persevering ceaseless devotion, profound religious meditation. It refers to the processes which the mind follows in meditation, because then placing in front of itself the mental figurations or pictures of lofty spiritual and intellectual themes to be meditated upon or brooded over.

Prapti (Sanskrit) *Prāpti* [from *pra-āp* to attain] One of the eight superhuman faculties (siddhis) of raja yoga; the power of transporting oneself from one place to another instantaneously, by the force of will, not in the physical body, but in the inner self by means of the mayavi-rupa. In Tibet

one of the phases of hpho-wa is that which allows the adept through the mayavi-rupa to appear elsewhere in the world at his wish.

Prapti sometimes also signifies “the faculty of divination, of healing, and of prophesying . . .” (TG 260).

Prarabhda (Sanskrit) *Prārabhda* [from *pra-ā-rabh* to begin, undertake] That which has commenced or been undertaken; that karma arising from the past which is already ripe and which begins to work itself out in the present incarnation. That class of karma which is in the making and will exhaust itself in the future is called sanchita-karma. Prarabhda-karma parallels the Greek idea of the Moira Lachesis; whereas sanchita-karma corresponds to Atropos; Clotho, third of the Moirae, is the spinner of the present, the karma or destiny which we are now spinning for ourselves. *See also* LIPIKA

Prasanga-madhyamika (Sanskrit) *Prasaṅga-mādhyamika* “A Buddhist school of philosophy in Tibet. It follows, like the Yogacharya system, the *Mahayana* or ‘Great Vehicle’ of precepts; but, having been founded far later than the Yogacharya, it is not half so rigid and severe. It is a semi-exoteric and very popular system among the *literati* and laymen” (TG 260).

Prashraya. *See* PRASRAYA

Prasraya (Sanskrit) *Prasraya* [from *pra-śri* to approach, defer to, show respect towards] Respectful demeanor, civility; synonymous with vinaya. It is the “ ‘progenetrix of affection.’ A title bestowed upon the Vedic Aditi, the ‘Mother of the Gods’ ” (TG 260).

Prasthanatraya (Sanskrit) *Prasthānatraya* [from *prasthāna* course, system + *traya* threefold] A collection composed of the *Bhagavad-Gita*, ten principal Upanishads, and the Brahmasutras, an authority upon which certain schools of ancient philosophy relied.

Pratibhasika (Sanskrit) *Pratibhāsika* [from *prati-bhās* to look like from the verbal root *bhās* to appear] Appearing as the similitude of something, hence illusory. In Vedanta philosophy, one of the three kinds of existence: the apparent or illusory life. *See also* PARAMARTHIKA; VYAVAHARIKA

Pratisamchara (Sanskrit) *Pratisamçara* [from *prati-sam-car* to move backwards together, return, dissolve, return to the originating source (prakriti or mulaprakriti) from the verbal root *char* to move] Returning; philosophically, reabsorption or resolution back again into prakriti — in this sense, a synonym of pralaya.

Pratisamvid (Sanskrit) *Pratisamvid* [from *prati-sam-vid* to recognize, attain knowledge by cognition or recognition] In Buddhism, “the four ‘unlimited forms of wisdom’ attained by an Arhat; the last of which is the *absolute* knowledge of and power over the twelve Nidanas,” the twelve causes of existence on earth (TG 260-1).

Pratisarga (Sanskrit) *Pratisarga* [from *prati* forwards, towards + the verbal root *srj* to flow forth, appear in manifestation] In Sankhya philosophy, the intellectual evolution of the universe; the secondary or continued creation out of primordial matter. In abstract philosophy, also applied to the portion of a Purana which treats of the opposite phase of cosmic rhythm, the destruction as well as the renovation of the universe. Pratisarga thus may be used both as a creation or dissolution.

Pratishtha (Sanskrit) *Pratiṣṭhā* [from *prati-sthā* to stand towards, stay from *prati* towards, upon, in the direction of + the verbal root *sthā* to stand] Dwelling place, residence, receptacle; preeminence, superiority. In the *Bhagavad-Gita* Krishna refers to himself as a pratishtha of Brahman or parabrahman; an image or manifestation of parabrahman or a hypostasis or representation of the divine in the worlds of manifestation. Thus the hierarch or manifested divinity in any world system is a pratishtha of the surrounding invisible life or Brahman, Brahman again being one of the infinitely numerous channels or pratishthas of parabrahman.

Pratyabhava (Sanskrit) *Pratyābhava* [from *prati-ā-bhū* to continue existence forwards] The continuance in repetitive existences or imbodiments in the rupa worlds.

Pratyagatman (Sanskrit) *Pratyagātman* [from *pratyak* interior, inner + *ātman* self] Jivatman or the spiritual monad; sometimes equivalent to the Logos.

Pratyahara (Sanskrit) *Pratyāhāra* [from *ā-prati-hṛ* to bring back, recover, withdraw, reabsorb] Withdrawals; the fifth state of yoga: the withdrawal of the consciousness from sensual or sensuous concerns, or from external objects, and the placing of the consciousness in the spiritual monad of the human constitution.

Also frequently a synonym for the processes eventuating in pralaya, the withdrawal or reabsorption of the world into cosmic spirit.

Pratyaharana (Sanskrit) *Pratyāharaṇa* [from *prati-ā-hṛ* to draw back, recover] The withdrawing of the senses from external objects; one of the preliminary exercises in practical raja yoga.

Pratyaksha (Sanskrit) *Pratyakṣa* [from *prati* against, in front of + *akṣa* eye] As an adjective, present before the eyes, perceptible, cognizable by any of the sense organs; also clear, manifest. As a noun, ocular evidence, direct perception — one of the four pramanas (modes of proof).

Pratyayasarga (Sanskrit) *Pratyayasarga* [from *pratyaya* understanding, discriminative comprehension, equivalent to buddhi + *sarga* that which is produced or brought forth, creation] Used especially in Sankhya philosophy for the evolutionary formation or development from buddhi, commonly rendered as intellectual creation, equivalent to the eighth (or fifth) evolutionary stage in development or creation in the *Vishnu-Purana*, called anugraha.

Pratyeka Buddha (Sanskrit) *Pratyeka Buddha* [from *prati* towards, for + *eka* one] Each one for

himself; exalted and in one sense holy beings who crave spiritual enlightenment for themselves alone. They “are those Bodhisattvas who strive after and often reach the Dharmakaya robe after a series of lives. Caring nothing for the woes of mankind or to help it, but only for this own *bliss*, they enter Nirvana and — disappear from the sight and the hearts of men. In Northern Buddhism a ‘Pratyeka Buddha’ is a synonym of spiritual Selfishness”; “He, who becomes Pratyeka-Buddha, makes his obeisance but to his *Self*” (VS 86, 43).

They achieve nirvana automatically as it were, and leave the world in its misery behind. Though exalted, nevertheless they do not rank with the unutterable sublimity, wisdom, and pity of the Buddhas of Compassion.

“The Pratyeka Buddha is a degree which belongs exclusively to the Yogacharya school, yet it is only one of high intellectual development with no true spirituality. It is the *dead-letter* of the Yoga laws, in which intellect and comprehension play the greatest part, added to the strict carrying out of the rules of the inner development. It is one of the three paths to Nirvana, and the lowest, in which a Yogi — ‘without teacher and without saving others’ — by the mere force of will and technical observances, attains to a kind of nominal Buddhahood individually; doing no good to anyone, but working selfishly for his own salvation and himself alone. The Pratyekas are respected outwardly but are despised inwardly by those of keen or spiritual appreciation. A Pratyeka is generally compared to a ‘Khadga’ or solitary rhinoceros and called *Ekashringa Rishi*, a selfish solitary Rishi (or saint)” (TG 261).

Pratyeka-yana (Sanskrit) *Pratyeka-yāna* [from *prati* towards, for + *eka* one + *yāna* vehicle, path] The path of each one for himself, or the personal vehicle or ego, equivalent to the Pali *pachcheka*. Fully self-conscious being cannot ever be achieved by following the path for oneself, but solely by following the *amrita-yana* (immortal vehicle) or the path of self-consciousness in immortality, the spiritual path to a nirvana of high degree, the secret path as taught by the heart doctrine. The *pratyeka-yana* is the pathway of the personality, the vegetative or material path to a nirvana of a low degree, the open path, as taught by the eye doctrine. These two terms describe two kinds of advancement towards more spiritual things, and the two ultimate goals thereof: the *amrita-yana* of the Buddhas of Compassion, and the *pratyeka-yana* of the Pratyeka Buddhas.

Although advancing steadily in spirituality and upwards towards a lower nirvana, and therefore evolving on a path which is not only not harmful to humanity and others, but in a sense is even passively beneficial, the Pratyeka Buddha, precisely because his thoughts are involved in spiritual freedom and benefits for himself, is really enwrapped in a spiritual selfishness; and hence in the intuitive, albeit popular, consideration of Northern Buddhism is called by such names as the Solitary or the Rhinoceros — applied in contrast to the Buddhas of Compassion, whose entire effort is to merge the individual into the universal, to expand their sympathies to include all that is, to

follow the path of immortality (amrita), which is self-identification without loss of individuality with all that is. When the sacrifice of the lower personal and inferior self, with all its hoard of selfish thought and impulses, for the sake of bringing into full and unfettered activity the ineffable glorious faculties and powers and functions of the higher nature — not for the purpose of selfish personal advancement, but in order to become a helper of all that is — the consequence is that as time passes, the disciple so living and dedicating himself finds himself becoming the very incarnation of his inner divinity. He becomes, as it were, a man-god on earth. This, however, is not the objective, for holding such an objective as the goal to be attained would be in itself a proof that selfishness still abides in the nature.

Abstractly, of course, pratyeka-yana can be used for sorcerers and the path of the Brothers of the Shadow, but such is not usual. Obviously the path of sorcery is a pratyeka path in the strictly logical sense. The path of the sorcerers is called the left-hand path, the path of darkness or of the shadows, the downward path, and is sometimes described by the term pratyeka-yana.

Actually, the path of the shadows and the path towards the light stretch in opposite directions; yet the ultimate goal of both is a nirvana. The path upwards, whether of the amrita or of the pratyeka, leads to the nirvana of spirit — the amrita ultimately being far higher than that of the pratyeka; whereas the downward path of the Brothers of the Shadow leads also to a nirvana, but to enchainment in the avichi-nirvana of absolute matter for that hierarchy.

Pravaha (Sanskrit) *Pravaha* [from *pra* forwards, onwards + the verbal root *vah* to carry] Carrying forwards; one of the seven winds or cosmic spirits — mystic, occult forces which give the impulse to, and regulate the course of, the stars and planets.

Pravritti (Sanskrit) *Pravṛtti* [from *pra* forth, forwards + the verbal root *vṛt* to roll, turn, unfold] Evolution or emanation; the process of unwrapping or unfolding-forth, as of spirit entities into matter or, conversely, of matter-lives back into spirit entities. It is usually restricted to the process by which spirit descends into matter or the passage of the monads down the shadowy arc. *See also* NIVRITTI

Pravritti-marga (Sanskrit) *Pravṛtti-mārga* [from *pra* forth, forwards + the verbal root *vṛt* to roll, turn, unfold + *mārga* path] The path of evolution into matter, the way which leads to imbodyed existence in the material worlds; the shadowy arc. In Hindu literature it is frequently employed to signify the path of activity in worldly or religious affairs, enabling a person to show what he can do. Such usage is a transference of the original mystical thought to mundane affairs. *See also* NIVRITTI-MARGA

Prayer As usually understood in the West, prayer implies the existence — whether actually so in nature or not — of a divine entity, such as God, Christ, an angel or saint, to whom petitions may be addressed and by whose favor benefits may be obtained, a view of prayer held in nearly all exoteric religious systems. Yet even among those who believe in personal divinities, some take a

higher view of prayer than that of asking for special favors, rather looking upon it as an act of resignation to the divine will: "Not my will, but thine, be done." Theosophy speaks of this as the endeavor of the aspiring human mind to establish individual communion between the personal man and his spiritual counterpart or inner god, the true meaning of the injunction to pray to our Father which is in secret. Thus prayer takes the form of aspiration combined with deep meditation, as has been the case with mystics, Eastern and Western. This involves a laying aside of personal wishes and a conscious desire for intuitive perception of the truth and for the power to follow it. If a personal wish is present, precisely because all personal wishes in the last analysis are restricted, and hence either physically or spiritually selfish, the act becomes one of black magic, for the person is seeking to evoke interior powers in furtherance of his own purposes, which in such cases are usually founded in self-seeking of some kind. Also, a well-intentioned person, praying on behalf of another, may unwittingly exercise on that other an interference with the latter's will, similar in many respects to that of hypnotism.

The absurdity of warring nations praying to the same God for victory over each other is often commented on; and the practice of many people combining together to pray for the conversion of people of another sect, or even for worse objects, is equally open to reprobation. This kind of prayer is merely a survival of one of the lower magic arts, where religious practice consists mainly in the invocation of tribal and local deities.

Precious Things, Fourteen. *See* KURMA-AVATARA

Precipitation A process essentially founded in the formation of a visual image of some object in the mind, and the transferring of that image in visible form to some receptacle, such as paper. Usually used in theosophical history in reference to the precipitation of writing in messages from the Masters. The messages were transmitted by will power as mental pictures to a chela at a distance; and the chela receiving these telepathic impacts or mental images, understood them in whole or in part, according to his skill, and then and there, either himself wrote down the message thus received for transmission to the addressee, or if a chela of advanced degree, materialized them into visible writing. Usually the messages thus mentally received were written down by the chela, and often in a handwriting closely similar to that of the Master, and then the message was transferred through the mail or otherwise to the addressee.

A mental image is a reality, and in materializing it the operator merely copies natural processes, since everything in the physical world is a materialization of something in the inner worlds working through the astral world into the physical. It is done by the use of psychic or psychophysiological faculties which have to be acquired by training, for even in the cases of those born with these powers, they exist because of training in previous lives. Some spiritistic mediums

instinctively possess the power of precipitation, but use it ignorant of its causes and rationale, and hence without conscious control. Were the adept or mahatma himself to employ precipitation for the conveying of intelligence to others, something which is very rarely done, the precipitation would be achieved by the will of the adept gathering astral and ethereal substance from the surrounding atmosphere by the power of his will and condensing it onto the paper.

Predestination The doctrine that God has foreordained everything; specifically, that God has foreordained what people shall be saved and what damned. Reprobation is used in reference to those foreordained to be damned, and election is used for those who are to be saved. Endless sectarian disputes have prevailed as to whether or not the salvation offered by Christ provides a way of escape from the doom of reprobation; and the eternal dilemma as to free will has never ceased to perplex the minds of theologians. How to permit free will to enter into the picture without derogating from the authority of God, how to attribute plenary power to God without destroying free will; how to find a *modus vivendi* or ingenious sophism by which the contraries may be reconciled — these matters may be found discussed in theological treatises on the subject.

The problem of cosmic law or processes in connection with the existence of human free will arises in the form of the apparent antagonism of free will with law, but in the theosophical view, free will is an intrinsic example of cosmic law in the particular, and hence there is no possibility of alleging any antagonism with one part of nature, man, with another part of nature, the remainder to the universe, for the twain are throughout but one. What rules the whole must necessarily rule the part; and what the part contains as an individual in nature must be found likewise in nature.

If one bear in mind the hierarchical system on which nature is constructed — one life, one intelligence, and hence one plan ruling throughout all the hierarchical branches, and yet every hierarchical branch containing in its inmost essence all free action within the confines of its field — one sees that there is no reconciliation needed between free will of individuals in any part of boundless nature and the common life, vitality, or intelligence which permeate the All. The difficulty arises in exoteric theological systems which from the beginning envisage a will in man wrongly supposed to be disjunct or different from the spiritual cosmic laws founded in the cosmic intelligence. A person uses his free will as much in refraining as acting — in other words, we cannot help using our free will. Neither can we help acting in accordance with the laws of our own nature and the laws of the universe in which we find ourselves.

The difficulty lies in the misuse of the adjective free, which is apparently understood to mean a will free from the cosmic unity, and all too often envisaged as running more or less wild if not contrary to the cosmic structure. Man is but a child of the universe, and is so in all his parts, but precisely because the part must contain everything that exists in the whole, therefore there is in man and in every other entity, an inseparable union with the cosmic root. Reluctance by man to acknowledge and to perform in his life the silent mandates of cosmic law induces the varieties of

evil, disharmony, and even disease with which human life is all too often cursed; and the way to freedom, spiritual peace, wisdom, and love is by subordinating the individual human will to harmony with the divine. In such cases man becomes a Buddha or Christ, a conscious and willing instrument of divinity.

Preexistence Existence in a former state: the soul may preexist the body; Christ preexisted as divinity before incarnation. The doctrine of the preexistence of the soul was once part of Christianity, being held as early as the 2nd century and including Justin Martyr, Origen, and many other then eminent Christians among its adherents; but it was formally condemned and anathematized by the Home-Synod held under Mennas at Constantinople around the year 540. The early Christian doctrine was that God emanated all souls of men, but afterwards incarnated them repetitively on earth as a punishment and probation.

Prehuman Races In a physical sense, the races from the first root-race to about the middle of the third, before man had a physical form similar to his present one; these races may be called prehuman since they were astral or semi-astral or ethereal. Again, it may refer to abortive attempts to produce beings on their way to future humanity. In another and far higher sense the prehuman races are the seeds of future humanity, these seeds being really lofty spiritual intellectual beings who had been men in a previous manvantara. These seeds have been called Sons of God, mind-born progeny of Brahma, rishis, prajapatis, manus, etc.

The Bible speaks of there having been giants in an early period in the earth's history, and theology speaks of these as pre-Adamite races.

Premonition, Presentiment A warning of an impending event, used mostly for warnings of danger or misfortune; a prophetic feeling that some calamity is about to happen. It differs from prevision in that it is a feeling rather than a picture.

An event on the physical plane may be preceded by causes not perceptible to our physical senses, yet of which our more subtle inner senses are aware. Some people and many animals may have a presentiment of an earthquake, through sensitiveness to certain astral and physical conditions which precede the actual earth-shock. Explaining such a case as that of avoiding a doomed train brings up the general question of prediction and the problem of time. In these cases the inner sense may perceive an event before it has happened on the physical plane, and such cases are too numerous for them to be lightly dismissed as imaginary or mere coincidences. *See also* PROPHECY

Pretas (Sanskrit) *Preta*-s [from *pra* away + the verbal root *i* to go] Gone ahead, departed; the remains in the astral light of the human dead, popularly called spooks or ghosts, and commonly in India signifying evil astral entities. In theosophy, the astral shells of human beings, especially of avaricious and selfish people, and more generally of those who have lived evil lives on earth. Pretas also can be the elementaries reborn as such in the kama-loka. *See also* BHUTA

Pretyabhava (Sanskrit) *Pretyabhāva* [from *pretya* having died, having departed + *bhāva* existence] The state after death; hence the future state. A very general term, referring in a vague way to the future after death, or more particularly to the temporary sojourn of a departed being in the astral light.

Prevision Foresight, seeing an event with the inner eye before or at the time of its occurrence. As the inner eye is independent of the time sequence on which our physical eyes and minds act, it is aware of things which to our physical perceptions belong to the future. Hence, if a contact is established between our consciousness and this inner sense, we may obtain a picture of events which have not yet come into the present. Events on the physical plane are the effects of causes which are preparing on invisible planes. The effect follows the cause — not infallibly, but with varying degrees of probability. Theosophy teaches an objective idealism, that while the universe in its phenomenal or manifested attributes is a product of maya, yet for all beings within such universe and subject to the sway of maya, events, manifestations, and similar things which occur are relatively real to their consciousness. Thus to the eye of the spirit — the awakened eye of Siva as it is called in the Orient — all events whatsoever, past, present, or future, appear as in an eternal Now, a shadow cast up from the waves of maya to the consciousness of the said seeing eye, and it is this underlying fact which gives the power of prevision, true premonition, foresight, etc. *See also* PROPHECY; PREMONITION

Priapus (Greek) A Greek god of fertility, worshiped as a protector of flocks, of the vine, and of other produce. His cult appeared on the coasts of Asia Minor, especially at Lampsacus, and he was undoubtedly well known and accepted as a member of the mythological hierarchy from a date long antedating both Homer and Hesiod. He is variously made the son of Dionysos and Aphrodite, of Adonis and Aphrodite, and of Hermes and Chione. The word also signified the phallus or phallic.

Priapus was the personification of the generative and productive fertility evident throughout all nature, on all planes of being. There was a divine or spiritual as well as a purely material Priapus, although the Priapus of the masses was always the lower or gross Priapus. Similarly with the goddess Aphrodite or Venus: there was Venus Urania, the celestial or heavenly Venus, and Venus Pandemus, the vulgar or popular goddess of generative production and vulgar love. The celestial Priapus was born of Venus and Bacchus, for they are post-types of Aditi and the spirit; while the later Priapus is no longer the symbol of abstract generative power, but symbolizes the four Adamic races (SD 2:458).

Prima Materia (Latin) First matter; the substantial basis of the physical universe, cosmic matter. *See also* PRIMEVAL MATTER

Primary Age. *See* GEOLOGICAL ERAS

Primary Creation Used in theosophy for the openings of the different dramas of life, as opposed to the secondary creation, their more or less present conditions and appearances. Yet primary

creation in strict logic appertains to those primordial beginnings of manifested life which precede the operations of nature when it has once entered into its established habits due to past karma, these established habits or courses of action being the karmic results of precedaneous causes. For example, the creation of the hierarchies of the gods or dhyani-chohanic hosts, and of their various worlds and activities, belong to the so-called primary creation; and at the close of this creation opens the drama of established nature and of the hierarchies and their respective operations beneath those hierarchies of gods.

Ancient cosmogonies begin with the secondary creation in cosmic things; hence, before the creation of light, they postulated darkness. But this darkness is the eternal light shining through and guiding the primary cosmogonical creation, and it was called darkness only by contrast with the manifested light of the secondary creation.

In the beginning of the primary creation the world, and on a smaller scale the earth, was in the possession of the three elemental kingdoms, and its three elements were fire, air, and water. It is the evolution of worlds from primordial atoms and from the pre-primordial atom; yet in the subsequent portions of primordial creation came forth into active manifestation the various hierarchies called angelic or dhyani-chohanic. Mahat, called lord in the primary cosmogonical creation, is universal cognition, thought divine; but in the secondary creation that which was mahat becomes the vast range of hierarchical manases which construct, inhabit, develop, and even emanate, manifested worlds.

Primary Era. See GEOLOGICAL ERAS

Primates In modern zoology, the highest order of mammalia, which includes man, apes, monkeys, and lemurs. Divided by some scientists into bimana (man) and quadrumana (the others); or again into the suborders of simiae (man, apes, and monkeys) and prosimiae (lemurs).

Theosophy does not admit the foregoing classification, for the reason that man comprises a kingdom by himself. The confusion arises because of the similarity of the apes and certain others of the higher mammalia with man's physical structure, explained theosophically by the fact that in former ages the originants of the apes as well as of the monkeys and lemurs sprang from man. While the human kingdom, among its other physical bodily characteristics, belongs to the mammalia, this is not enough to classify man as belonging to the same kingdom as that of the beasts.

Primeval Instructors. See DYNASTIES; ROOT-RACE, THIRD

Primeval Man In anthropology, a man which science is still looking for, christened *homo primigenius*; but in *The Secret Doctrine* it usually refers to the astral or ethereal man of the third round, as also of the latter part of the third root-race of this fourth round. This primeval man issued as chhayas (astral shadows) from the highly ethereal frames of his dhyani-chohanic

progenitors. He was man in form only, because for ages he was “mindless”: between his huge ethereal and uncompacted body and the spiritual-intellectual spark within, there was as yet no active link, no active middle principle.

Primeval Matter The negative pole of that cosmic duality of which spirit is the positive pole: homogeneous, undifferentiated substance, the noumenon of all known matter, called pradhana, mulaprakriti, akasa, the Logos. “Primeval matter — *i.e.*, as it *appeared even in its first* differentiation from its *laya* condition — is yet to this day homogeneous, at immense distances, in the depths of infinitude, and likewise at points not far removed from the outskirts of our solar system” (SD 1:589). We must try to divest ourselves of notions derived from experience of physical matter only — even electromagnetic waves are beyond our normal perceptions. “*That* matter, which is truly homogeneous, is beyond human perceptions, if perception is tied down merely to the five senses. We feel its effects through those intelligences which are the results of its primeval differentiation, whom we name Dhyān-Chohans” (SD 1:601).

Primeval or primordial matter is one of the primary spiritual hypostases, eternally coexistent with space, duration, and absolute motion. *See also* CHAOS; SVABHAVAT

Primordial Era. *See* GEOLOGICAL ERAS

Primordial Light The first-born of eternal divine and cosmic substance (Chaos), proceeding from celestial darkness. In its unity it is the seventh or highest principle, manifesting as daiviprakriti or primordial light; but in its differentiations it becomes the development of daiviprakriti, commonly fohat, this again manifesting as the seven primordial forces of nature. It is the Shechinah of the Qabbalah. Cosmic formation is the result of cosmic will and intelligence acting in primordial substance and calling out from it primordial light and the organizing life of the universe. *See also* LIGHT

Primordial Matter. *See* PRIMEVAL MATTER

Primordial Point, First Point A widespread idea, notably mentioned in the Hebrew Qabbalah, which postulates that when the Concealed of the Concealed wished to manifest itself, it did so by first making a point which became the first Sephirah, Kether the Crown. From this primordial point all invisible and visible celestial bodies came into being. This point is commonly represented in archaic symbology by a point within a circle, the circle representing the expanse of the spatial deeps of a hierarchy entering manvantara, and the point in the center of the circle representing the awakening into such manvantaric manifestation of the Monas monadum or monad of monads of that hierarchy, otherwise called the unmanifest or First Logos.

The Orphic cosmogony has a similar idea: Phanes (First or unmanifest Logos), Chaos (considered feminine because the container; the manifest-unmanifest or Second Logos); and Chronos (the actively creative or Third Logos) are the three cooperating principles, one in essence, which

emanate from the Concealed Point, a mathematical center of boundless space (Hindu parabrahman, Hebrew *eyn soph*), and through their interaction the work of emanation proceeds.

In the mythos of the Hindu emanator, Brahma is represented as evolved as and from a lotus which grows out of the navel of Vishnu the sustainer. The dual divinity rests on the waters of space with Ananta-Sesha — the serpent of infinity — which can also be read as the unmanifested coils of cyclic time. It is “the most graphic allegory ever made: the Universe evolving from the central Sun, the point, the ever-concealed germ” (SD 1:379). Blavatsky defines the term as “Metaphysically the first point of manifestation, the germ of primeval differentiation, or the point in the infinite Circle ‘whose centre is everywhere, and circumference nowhere.’ The point is the Logos” (TG 119).

Primordial Water Chaos, “the great green one,” the Egyptian Nu, the waters of space; a graphic descriptive term of cosmic space before manvantara begins.

Primum Mobile (Latin) The first movable, signifying the first or original movement or motion; the tenth and outermost of the crystalline spheres which surround the earth in the Ptolemaic cosmic system — a system common to nearly all the peoples surrounding the Mediterranean Sea, and which Ptolemy copied in his own cosmographic description. It answers to Plato’s and Aristotle’s *aeikinetos* (the evermoving), that which is perpetually in motion; but beyond this, Aristotle and Plato have an “unmoving motion,” the inherent motion or life and intelligence of boundless space, comparable to the *svabhavat* of Mahayana Buddhism, which as the cosmic womb of all hierarchies in being, and as their periodic producer, seems to answer to the *arche kineseos* (beginning or origin of motion), the *nous* of Anaxagoras (Key sec 6).

According to the popular enumeration of the crystalline spheres, they begin with the first sphere surrounding the earth, and count outwards towards the fixed stars and the vastness beyond; but it would perhaps be better to invert this system of counting, making the *primum mobile*, or the first movement of a system, the originator, and all within it its descending scale of enumerated spheres.

Principes (Latin) Chiefs; an order of *genii* or Sons of Light in the *Codex Nazaraeus*.

Principium (Latin) Beginning, first or primordial principle.

Principalities The seventh order of angels in the celestial hierarchy of the pseudo-Dionysius the Areopagite. This hierarchy is recognized in the New Testament: “I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, . . . shall be able to separate us from the love of God” (Rom 8:38-9). Principality here translates the Greek *arche* (beginning, first principle, province ruled over, ruler, and rule in the abstract); the Latin version gives *principatus* (beginning, sovereignty). The allusion is to recognized names in the Gnostic hierarchical systems of aeons or emanations. “From Mind proceeded the word, *Logos*, from the word, Providence [Divine Light, rather], then from it Virtue and Wisdom in Principalities, Power, Angels, etc.” (Basilidean teaching). All these various denizens of the sidereal world are copies of

archaic prototypes.

In a passage relating to the ancient Syrian scheme of hierarchies, the lowest or sublunary world — Earth — is ruled by Angels; the sphere of Mercury by Archangels; that of Venus by Principalities; that of the Sun by solar gods termed Powers; that of Mars by Virtues; Jupiter, Dominions; Saturn, Thrones.

The ninefold hierarchy divided into three triads, as given by Dionysius the Areopagite, is but a Christianized copy of ancient occult teaching taken over from Neoplatonic and Neopythagorean thought so widely current in the countries around the Mediterranean around the beginning of the Christian era and for some centuries afterwards. The ancient wisdom, from which all these various systems of thought originally sprang, likewise has its system of hierarchies which falls naturally into a similar range of nine, ten, or even twelve grades or divisions of cosmic power and substance. These different classes of celestial or angelic beings are the various grades of entities which infill and indeed make our solar system, and to which theosophy gives other titles than those used by Dionysius.

Principles A beginning, foundation, source, or essence from which things proceed; principles are thus the fundamental essences out of which and from which all things are and exist, usually enumerated as seven in theosophical writings. These kosmic principles, corresponding to the seven planes of the kosmos — the seven basic types of consciousness-substance of which the universe is formed — are manifested in the human being, so that we speak of the seven human principles, copies in the small of the seven principles of the universe.

The seven human principles are not a confederation of distinct entities, for man himself is essentially a unit, a monad, expressing his potentialities through a series of vehicles or vestures. The seven principles severally exist as aspects of human consciousness. Whether kosmic or human, they are usually divided into a higher triad and a lower quaternary, these being the numbers of the spiritual and material side of nature respectively. The higher triad is atman, buddhi, and manas (or, more correctly expressed, atman, atma-buddhi, and atma-buddhi-manas); the quaternary was originally given as kama-rupa, prana, linga-sarira, and sthula-sarira. In a later enumeration sthula-sarira was omitted from the list as not being a principle in itself but the vehicle of the other principles, and the quaternary was made up by adding the lower aspect of manas. The septenate may also be regarded as a higher and lower triad united by manas, which can attach itself to either and in our present stage of evolution is oscillating between the two. Since these seven rudimentary principles are omnipresent, they give rise to subordinate septenates within the larger septenates, so that each principle is itself subdivided into seven, repeating nature's fundamental structure indefinitely. This becomes clearer when we bear in mind that the universe in all its parts is composed of monads, and that every monad in manifestation expresses itself as a septenate. Though principles and elements are essentially the same, it is convenient to

make a distinction whereby the term principle is used for the force or spirit aspect, and element for the vehicular aspect; the principle being the inner, and the element the outer aspect, flowing forth from the principle as its vital vehicle or clothing.

Basically, these human principles are the original essences or elements in the constitution of any entity, macrocosmic or microcosmic, when these elements or essences are integrated into a unit by the power inherent in the essential self of such an entity. Thus there are principles of a cosmos or universe, of a sun, a globe, a man, beast, plant, mineral and of an elemental. All religions and philosophies in all times have taught, albeit after various manners, that man or world or any other being is much more than the physical body. The physical bodies or vehicles are but the outer shells or carriers of inward invisible, ethereal, and spiritual potencies or essences. In attempting to define the various parts of which our being is composed, many methods of dividing the human constitution have been adopted by different schools following different ways. The theosophic system is a division into seven principles or ultimate elements or essences; and everything within the cosmos is built of the same fundamental spiritual essence or substance and after the same general pattern. Other systems of division are possible, for instance the Christian threefold division of spirit, soul, and body. But the septenary classification is the most ancient one, and it is the common inheritance of all the esoteric schools “left to the sages of the Fifth Root-Race by the great Siddhas [Nirmanakayas] of the Fourth” (SD 2:636). The following table (cf SD 2:596) shows the analogy between the seven human aspects and the cosmic aspects:

Human Aspects	Cosmic Aspects	
1. Atman, <i>Spirit</i> , <i>Essential Self</i>	Unmanifested Logos, <i>Essential Self</i>	Paramatman, <i>Cosmic Monad, Self</i>
2. Buddhi, <i>Spiritual Soul</i>	Universal Ideation, Second Logos	Alaya, Adi-Buddhi,
3. Manas (Mind), <i>Human Soul</i>	Universal Intelligence, Third Logos	Mahat, <i>Cosmic Mind</i>
4. Kama (Desire), <i>Animal Soul</i>	Cosmic Energy (Chaotic)	Cosmic Kama, <i>Womb of Fohat</i>
5. Prana, <i>Life-essence</i> , <i>Vitality</i>	Cosmic Life-Essence or Energy	Cosmic Jiva
6. Linga-sarira, <i>Model-body</i>	Astral Ideation, <i>reflecting terrestrial things</i>	Cosmic Ether, <i>Astral Light</i>
7. Sthula-sarira, <i>Physical body</i>	Cosmos, <i>Physical universe</i>	Sthura- or Sthula- sarira

In this classification atman is enumerated first of the human principles in order to convey the idea that all the other six principles emanate or unroll forth from it. Thus buddhi is emanated first and

two portions of the scroll are unrolled, to adopt a Christian metaphor; then from buddhi is emanated manas (the other four principles being still infolded) and three portions of the scroll are unrolled; then from manas is emanated kama — and so forth until all seven principles are unfolded.

The ancient Persians also had a sevenfold division of man's aspects (Theos 4:21):

English	Avestic	Sanskrit
1. Physical Body	Tanwas (bones)	Sthula-sarira
2. Model-body	Keherpas (<i>aerial form</i>), Persian <i>kaleb</i>	Linga-sarira
3. Life-Essence	Ushtanas (<i>vital heat</i>)	Prana
4. Desire Principle	Tevishis (<i>conscious will</i>)	Kama- manas
5. Mind (Human Soul)	Baodhas (<i>perception through senses</i>)	Manas
6. Spiritual Soul	Urvanem (<i>Soul</i>), Persian <i>rawan</i>	Buddhi
7. Universal Spirit	Fravashem or Farohar (<i>Spirit</i>)	Atman

In the ancient Chinese *I Ching* a seven fold classification is also given; and Gerald Massey stated that the Egyptian text often mention “seven souls of the Pharaoh,” which he enumerated as follows (with Blavatsky's correction in SD 2:632):

English	Chinese	Egyptian
1. Physical Body	Kwei	Kha <i>soul of blood</i>
2. Model-body	Kwei shan <i>vital soul</i>	Khaba, the shade <i>covering soul</i>
3. Life Essence	Shan <i>vital principle</i>	Ba <i>soul of breath</i>
4. Desire Principle	Zhing or Zing <i>Essence of Will</i>	Akhu, intelligence <i>soul of perception</i>
5. Mind	Pho	Seb <i>ancestral soul</i>
6. Spiritual Soul	Khi	Putah, first intellectual father <i>intellectual soul</i>
7. Universal Spirit	Hwun <i>pure spirit</i>	Atmu <i>divine or eternal soul</i>

Lao-tzu in his *Tao-Teh-Ching* mentions five principles, pure spirit and the body being taken for granted therein (Key 117).

Adapting the classification of Egyptologist Franz Lambert who tabulated a Qabbalistic classification alongside a hieroglyphic division:

Sanskrit	Qabbalah	Hieroglyphics
1. Sthula-sarira	Guph	Chat: The Elementary Body
2. Linga-sarira	Nephesh	Ka: Astral Body, Evestrum, Sidereal

		Man
3. Prana	Khoah hag-Guph	Anch: Vital Force, Archaeus, Mumia
4. Kama	Ruah	Ab Hati: Heart, Feeling, Animal Soul
5. Manas	Neshamah	Bai: Intellectual Soul, Intelligence
6. Buddhi	Hayyah	Cheybi: Spiritual Soul
7. Atman	Yehidah	Chu: Divine Spirit

The classification usually met with in the Qabalah is a fourfold division: 1) neshamah, the most spiritual principle, the breath of being; 2) ruah, the spiritual soul; 3) nephesh, the vital soul; and 4) guph, the physical vehicle.

A sevenfold classification is stated to have been taught by the Gnostics, presented in the *Pistis Sophia*. "The *Inner Man* is similarly made up of *four* constituents, *but these are supplied by the rebellious AEons of the Spheres*, being the *Power* — a particle of the Divine light ('*Divinae particula aurae*') yet left in themselves; the *Soul* (the fifth) 'formed out of the tears of their eyes, and the sweat of their torments; . . . The *Counterfeit of the Spirit* (seemingly answering to our Conscience), (*the sixth*); and lastly the [Greek moira], *Fate* (Karmic Ego), whose business it is to lead the man to the end appointed for him . . .' — the seventh!" (SD 2:604-5).

The Pymander of Hermes states that the self is clothed with 1) the blissful garment of conscious selfhood; 2) the garment of knowing or reason; 3) the garment of fancy, etc., spoken of as the soul; 4) the garment of life or breath; and 5) the gross body.

The Vedantic classification commonly uses a sixfold division, while other systems employed by the Brahmins, especially the Taraka-Raja-Yogins, is fourfold:

Theosophical	Vedantic	Taraka-Raja-Yoga
1. Sthula-sarira	Annamaya-kosa	Sthulopadhi
2. Linga-sarira	Pranamaya-kosa	"
3. Prana		
4. Kama		
5. Manas		
a) <i>volitions, feelings</i>	Manomaya-kosa	Sukshmopadhi
b) <i>vijnana</i>	Vijnanamaya-kosa	"
6. Buddhi	Anandamaya-kosa	Karanopadhi
7. Atman	Atman	Atman

The ancient Greek writers had their own terms for the aspects of the universe or of man, besides the familiar nous and psyche:

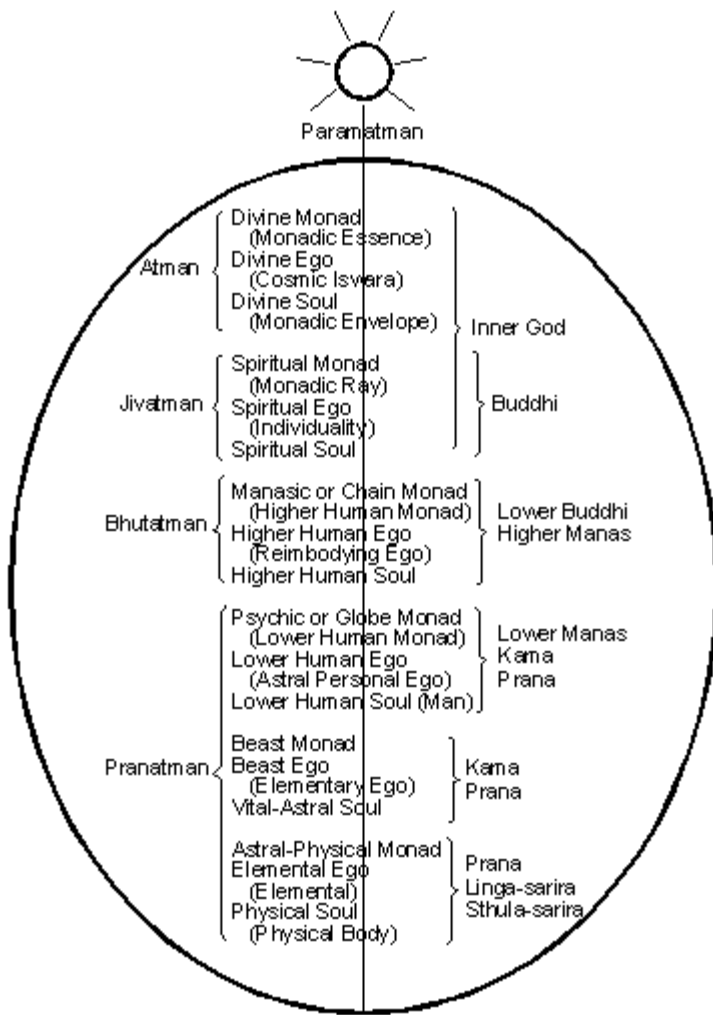

Theosophical	Greek	Roman
1. Sthula-sarira	Soma	Corpus

2. Linga-sarira	Phantasma or Phasma	Simulacrum or Imago
3. Prana	Bios	Anima
4. Kama-manas	Thymos	Animus
5. Higher Manas	Phren	
6. Buddhi-manas	Nous	Mens
7. Atman	Pneuma	Spiritus

In the human constitution the archaic Latins discovered almost as many different spiritual, psychic, and astral elements as the ancient Hindus did. Thus, for instance, there was in man the genius (called in women the juno), closely corresponding to the manasaputric element or higher manas; and when a man died the genius sought its own sphere. The other parts of the human constitution consisted of a member of the manes and a member of the lares, which two were probably closely identic with the lower human ego and the higher human ego; furthermore after the death of the man there appeared the lemur corresponding to the kama-rupa, shade, or specter; and the larva, which seems to have been identical with the lemur but with even less of the nobler human element in it; so that the lemur may be considered the kama-rupa in its early stages, and the larva when more greatly disintegrated. The physical body of course was considered simply to fall to pieces and to render its elements to the earth which gave it.

In the Scandinavian Eddas, Ask and Embla were two ash trees, and by means of the gifts bestowed upon them human beings were produced.

Another system of classification used in theosophical thought is the considering of the human constitution as composed of monads. The following table gives the monads and their relation to the principles.

See also FOURFOLD CLASSIFICATION

Prithi or **Prithu** (Sanskrit) *Pr̥thī, Pr̥thu* A mythical person, son of one of the manus, said to have been the first king, to have ruled also over beings lower than men, and to have introduced the arts of husbandry into the world. One of the rishis and the author of at least one of the hymns of the *Rig-Veda*, he is likewise called Prithu, and in this connection is the father of the earth (Prithivi). Prithu is said to have milked the earth and made her bear all vegetation, including vegetables and the grains.

Prithivi (Sanskrit) *Pr̥thivī* The broad or extended one, commonly the earth; one of the mahabhutas of the Sankhya philosophy, or the lowest of the cosmic tattvas (cosmic elements or principles).

Prithivi-bhuta (Sanskrit) *Pr̥thivī-bhūta* [from *pr̥thivī* earth + *bhūta* element] The earth element, the seventh and lowest in the descending scale of the seven cosmic bhutas of nature. This cosmic element has its corresponding analog in the human physical body, being in either case the general carrier of all the inner or hid substances and principles, whether of the universe or of any manifested entity therein. From the esoteric standpoint the physical universe or prithivi-bhuta is not larger in any sense than are the invisible planes or elements of being, but the opposite. The

idea behind the term calls attention to the fact that prithivibhuta appears through its illusory effect upon our senses to be the universe of expanded or extended substances. *See also* BHUTA; ELEMENT

Prithivi-tattva (Sanskrit) *Prthivī-tattva* [from *prthivī* spacious, earth + *tattva* thatness, reality] The earth principle; the seventh in the descending scale of the seven tattvas.

Privations The ideal types of corporeal beings and things. These types are not abstractions, but actual entities or existences which are the causes of the corporeal beings and things that they produce or evolve forth from themselves. Privation is an ontological category used by Aristotle, its literal meaning implying that *positive* — material — attributes are absent (deprived). He says that in order that a natural body may become objective, three principles are necessary: privation, form, and matter. Blavatsky explains that “Privation meant in the mind of the great philosopher that which the Occultists call the prototypes impressed in the Astral Light — the lowest plane and world of Anima Mundi. The union of these three principles depends upon a fourth — the life which radiates from the summits of the Unreachable, to become an universally diffused Essence on the manifested planes of Existence” (SD 1:59).

Kanada, founder of the Vaiseshika school of philosophy — one of the six orthodox schools of ancient India — adds to his six categories (substance, quality, action, genus, individuality, and concretion or co-inherence) a seventh called privation. Plato speaks of *to me on* (that which is not), equivalent to non-being; and the same contrast is seen in the terms ego and non-ego. The idea conveyed in the word is similar to that expressed in the words unmanifest or latent as opposed to manifested.

Priyavrata (Sanskrit) *Priyavrata* A son of Manu-Svayambhuva; the *Bhagavata-Purana* states: “Priya-vrata being dissatisfied that only half the earth was illuminated at one time by the solar rays, followed the sun seven times round the earth in his own flaming car of equal velocity, like another celestial orb, resolved to turn night into day.” Brahma stopped him and the ruts which were formed by the motion of his chariot wheels were the seven oceans. Thus the seven continents were made, which may also refer to the seven globes of our planetary chain.

As Priyavrata is one of the sons of Manu the self-generated — the first in serial order of the manus — it is evident that Priyavrata corresponds to one of the first or primordial human races referred to in theosophical literature.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Pro-Pz

Probation The process of testing undergone by an aspirant to initiation, who may be simply watched to see how he will meet the temptations and trials of life, or may be caused to encounter certain experiences specially designed to test his powers. The latter is very rare and appertains only to certain conditions of occult training. Life is the great school, and a person tests himself by his actions and reactions to himself and to surrounding nature. He alone thus defines or classifies himself. A candidate taking a vow places himself under such specific watching because he has issued a challenge to his lower nature, which thereupon begins a defensive warfare against him. The process is similar in principle to that undergone by an aspirant to a position of responsibility in worldly affairs, but the aspirant to wisdom has to dig deep into his own nature: he arrays against himself powers that formerly slept, ventures into regions where unknown dangers must be encountered, and by his own will and intelligence climbs the ladder to luminous victory and undreamed of success, or if he fails — he fails but to try again.

Procreation The progressive series of methods by which the human life-wave has reproduced its kind on earth is closely related to the unfolding of composite human nature, and is also a part of the evolutionary history of the rounds and races. The re embodying ego manifested its composite nature in the degree corresponding to the various gradations of matter in and through which it slowly descended, plane after plane, to the present state of things. Evidences of this series of former kinds of racial imbodyments, and of the progressive modes of reproduction are found repeated in the development of the human embryo, in the persistence of vestigial organs in adults, and in reproductive methods which still prevail in the lower kingdoms of plant and animal life. The histologist, in watching the division of cells, sees a microscopic review of the age-old history of mankind's series of imbodyments. He observes, in the lowest forms of life, a homogeneous speck of protoplasm dividing into two. Next, in a nucleated cell, the cell nucleus splits into two subnuclei which develop within the cell wall, or burst through to multiply outside into independent entities.

This fission is a copy of the reproductive method of the first root-race. The next type of cell division is budding, where a portion of the parent swells out at the surface, finally to separate and to grow into a full-sized individual, as in many vegetables, the sea anemone, etc. This repeats the way in which the primeval human race merged out of its first reproductive method. At the next step in biology, the parent organism throws off a single cell which develops into a multicellular organism like the parent, as in bacteria and mosses. The formation of these spores is followed by a type of intermediate hermaphroditism with the bisexual organs inhering in the same individual, as in plants. Corresponding to this, about the middle of the second root-race, the “buds” grew more numerous and became what zoologists would call human spores or seeds, or what Blavatsky described as vital sweat. Thus many of these buds at certain seasons when the parent entity had become mature, would leave it, as do the spores or seeds of plants today. These seeds were taken care of by nature and developed in the proper environment. At present, the exceptional cases of multiple human births hint at this long-past condition in procreation.

After several millions of years, the second root-race gradually developed into the early third root-race, when the then human individuals became androgynous. These produced a fertile germ which was cast off as an egg, somewhat as takes place in birds and certain reptiles today. These human eggs slowly matured, and finally the infant issued forth unaided much as the chick does now. The hermaphrodite early third root-race, under the impulse or urging of inherent laws of emanation or evolution, gradually began to separate the sexes in their prenatal eggs, so that as this race, in its turn, moved towards its merging into the fourth root-race, children were born in ever increasing numbers from the womb as they are today.

Not only have the series of reproductive methods been in keeping with the changing conditions of the rounds and races, but this is seen now in those races whose time is nearly run, where their end is hastened by an unusual sterility in the women, not otherwise explained. Furthermore, the present method of procreation, like all the preceding ones, is a passing phase of human re-embodiment and will in time become human evolutionary history, and other methods, already foreshadowed, will have taken its place. As man, evolving upon the ascending arc, brings forth his higher nature, his progeny will be brought forth from himself as generating source by his voluntary spiritual and intellectual creative powers.

Progenitors. See PITRIS

Prometheus (Greek) [from *pro fore* + *metis* counsel] The foreknower, he who knows beforehand, in contrast with his brother Epimetheus (the one who knows after, or when it is too late). Like other symbols, it has its seven keys of interpretation, which not merely reconciles but renders necessary the various versions of the story. Son of the titan Iapetos, Prometheus stole fire from heaven in a hollow tube (narthex) and brought it to mankind, who thereby was enlightened; for this Prometheus was chained by Zeus to a rock on Mt. Caucasus, where an eagle devours his liver

by day, the liver being restored by night; until finally he is released by Hercules or Dionysos.

Ovid tells that after Deukalion's flood, Zeus ordered Prometheus and Athene to create a new race of men out of mud; he made them in the image of the gods with an upright posture, after Epimetheus had succeeded in fashioning only mindless creatures. This represents a stage in the history of the downward arc of evolution, which may be interpreted cosmically, geographically, and in relation to man. It is in one sense the descent of the manasaputras, agnishvattas, and other Sons of Flame, who endowed the mindless forms with the divine spark; so that Prometheus is Lucifer, Phosphoros, the Light-bringer, the serpent of Eden, etc.

In the antithesis between Zeus (here not the supreme Olympian lord) and Prometheus, is the antagonism between the Hebrew Lord God and the serpent. The so-called disobedience of these fallen angels is an act of spiritual chivalry, in which the divine prerogative of free will is exercised in the spirit of compassion, an old order is superseded, and a new chapter in evolution is begun. In both stories the deity invokes a curse upon the fallen angel and his new humanity; and this curse is fulfilled in the suffering caused by the conflict between the two natures in man thus awakened. Prometheus, who may also be taken as representing humanity, is fastened to a rock representing karmic destiny, while the vultures of new-born knowledge and self-consciousness gnaw at his inner being. But the curse ends in a blessing, and Hercules or Dionysos delivers the Chrestos or immanent Christ, enlightens and raises the neophyte.

The story is in one sense but another version of that of manas between kama and buddhi. Zeus represents the host of primeval progenitors, pitris (fathers) who formed man without mind; and Prometheus symbolizes the host of spiritual creators who "fell" into matter — humanity — to enlighten the latter. The drama of Prometheus is thus still enacted through the ages — but man can rebecome the unfallen titan. Geographical allusions to the locations of the great root-races are seen in the mention of Mt. Caucasus, a name for the far north where the Aryan race, as an instance, was first developed.

The name of the Hebrew Prometheus is Azazel.

Promised Land Exoterically, the so-called Holy Land of Palestine, which was promised to the Hebrews as the goal of their wanderings. All peoples of the earth cherish the hope of reaching a Promised Land where peace, happiness, and prosperity will once again be the endowment of the human race. Esoterically it is nirvana or the pristine spiritual laya-state from which issued the eternal monad and to which it shall ultimately return. It also refers to the sublime consummation of human evolutionary destiny which will take place at the end of the seventh round on the last globe of our planetary chain; and to the reaching by the neophyte through self-devised efforts and initiation of the full status of mahatmaship or minor dhyān-chohanship even on this earth.

Promati. See PRAMATI

Propator (Greek) Forefather; in Gnosticism, the primordial or First Logos as distinct from that from which it emanates. The "Book of Numbers" explains that 'eyn soph (the boundless) is the only self-existent, whereas its depth or bythos, to which is given the name of Propator, is periodical, because the beginning of manvantaric manifestation. The distinction is the same as that between Brahman and Brahma.

Prophecy The power of predicting the future, either by mystic vision or by a knowledge of the laws of cycles. Those versed in the latter can predict future cataclysms, racial events, etc., as surely as astronomers can predict eclipses, and astrology insofar as it concerns prediction, comes under this head. Prophet originally meant one who speaks for another, usually the deity, as in the view of the Hebrews expressed in the Old Testament. *See also* PREVISION; PREMONITION

Propositions, Fundamental. *See* FUNDAMENTAL PROPOSITIONS

Proserpine. *See* PERSEPHONE

Protean Soul Any one of the several souls of the different monads or egos in nature and in man, which undergo numerous changes of type and form. More commonly used in theosophical writings to describe the vital-astral-physical part of the lower quaternary. Such souls are in their actions but reflexes of shifting thoughts and moods of the egos which they clothe. The name is taken from the Greek sea god Proteus who could take on all sorts of shapes.

Proteus (Greek) The prophetic old man of the sea, a subject or son of Poseidon. Homer places him in the island of Pharos, one day's journey from the Nile, while Vergil makes him an inhabitant of the Carpathian Sea between Crete and Rhodes. According to legend, he rose from the sea at midday and slept in the shade of the rocks, with sea monsters round him; anyone wishing to consult him must try to seize him at that time. To avoid prophesying, he assumed all sorts of dreadful shapes; if however he saw that his efforts were unavailing, he resumed his usual shape and gave his response. Here is an emblem of the astral light, so deceptive to the unwary and timorous, yet yielding its secrets to him who knows how to control it.

Protean is often used as epithet for anything that is changing and multiform, as for example the material basis of nature, which appears in so infinite a variety of forms. Human nature likewise is a protean monster; and he who would find his real spiritual self must be prepared to meet its many illusory phantoms and withstand them all, being neither seduced nor terrified. Thus Proteus may be described as ever-changing nature, the child of the waters of space; nature assuming all forms because of innate impulses and according to inherent laws, can give to the one who consults and controls it, intimations of the future as well as of the past.

Protogonos (Greek) First-born; variously used of first emanations, e.g., the Heavenly Man, the first emanation from the passive divine; the manifested Logos; or in reference to the first-born Light.

Used of any manifested god in a universe, and hence of our sun.

Protologos (Greek) First Logos; the archetypal cosmic man or synthesis of the ten Sephiroth in the Qabalah; the prajapati in India, etc. Used either collectively, as Brahman for instance; or distributively, protologoi, as his seven or ten sons. Equated with Vishnu, Purvaja, Atman, etc.

The protologoi are the primordial seven or ten formative conscious cosmic forces, or conscious cosmic rays emanating from Brahman, which the various religious systems tend to anthropomorphize into logoi or archangels.

Protomateria [from Greek *protos* first, original + Latin *materia* matter] The primordial matter which, infilled with the karmic seeds from the preceding manvantara, evolves out of itself the cosmos. In some of its aspects equivalent to subtle prakriti or pradhana.

Protoplasm [from Greek *protos* first + *plasma* form] The semi-fluid granular substance found in all forms of organic life; the primal type of physical matter which appears as merely homogeneous, amorphous, gelatinous substance, yet with the potentiality of differentiating into every known organized form and function. The biological basis of manifesting life on the physical plane, it is semi-astral matter operating at the level where “the two realms, the lower astral and the ethereal-physical, here melt or merge into each other” (ET 151 3rd & rev ed). As a physicalization of vital astral substance, it interlinks the tangible world of forms to the invisible world of living forces and the root-types in the evolutionary ground plan. “Astral matter, it must be noted, is fourth state matter, having, like our gross matter, its own ‘protyle.’ There are several ‘protyles’ in Nature, corresponding to the various planes of matter” (SD 2:737). This ethereal gradation of substances affords a medium or stairway for the transmission of the living impulses and forces of lofty intelligences which are the vitalizing and directing cause of every protoplasmic seed or center differentiating and evolving, each after its own kind and in its own degree of unfolding. In the lower kingdoms where all forms of plant and animal life begin in this seemingly indifferent substance, their essential nature and instincts operate under the vitalizing influence of a hierarchy of dhyanic-chohonic entities who, in the aggregate, represent and are the so-called laws of nature. In addition to this creative supervision, in self-conscious man his own spiritual essence is allied with the operation of the karmic agents in working out his fleshly imbodiments. The fertilized germ-cell of the human embryo is a microscopic copy of the protoplasmic second human root-race, “huge and highly ethereal astral Cells . . . infilled with the astral essence of the lowest of the Dhyanic-Choanic fluids” (ET 151 3rd & rev ed).

Protyle [from Greek *protos* first + *hyle* matter] Used by the English chemist Crookes (1832-1919) for a then hypothetical substance of which he believed the chemical elements to be differentiations; used in this sense by Blavatsky and also in a general sense for rudimentary, primordial, or undifferentiated matter. In this wider meaning, there are many protyles, each being the matter of its own plane in the undifferentiated condition; so that the protyle of Crookes would be the undifferentiated basis of physical matter, and therefore quasi-astral. The fundamental cosmic

protyle is pradhana or mulaprakriti.

Providence [from Latin *providens* foreseeing] In man, prudence, foresight, practical wisdom; but applied to a divine being, it has come to mean in the Occident protective care qualified by a wisdom superior to ours. Equivalent to the Greek phronesis, translated divine light. *See also* KARMA; NEMESIS

Prshu, Presha (Sanskrit) *Preṣa* [from *preṣ* to drive away, drive forth] Repulsion; “to lay down the scientific proposition that since *akrshu* (attraction) and *Prshu* (repulsion) are the law of nature, there can be no intercourse or relations between clean and unclean Souls — embodied or disembodied; and hence, ninety-nine hundredths of supposed spiritual communications, are, *prima facie* false” (ML 35).

Akrshu, commonly akarsha [from *a-krish* to attract, pull towards one] means attraction, a pull to oneself, and is used in connection with the magnet or lodestone.

Prthi, Prthu. *See* PRITHI

Prthivi. *See* PRITHIVI

Prthivi-bhuta. *See* PRITHIVI-BHUTA

Prthivi-tattva. *See* PRITHIVI-TATTVA

Prulpai-ku (Tibetan) *sprul-pahi-sku* [from *sprul-pa* a phantom, disembodied spirit] An incarnation or tulku, generally referring to a Tibetan lama; also used for a person in whom the emanation from some divinity or former saint is present in an occult manner.

Prunikos (Gnostic) One of the female Gnostic aeons emanated from the hierarch or supreme aeon. She is described as having descended into Chaos, and because of becoming so laden there with matter, she was unable to escape from it to return to the heavenly regions, nor was she able to descend to lower spheres, not having anything in her nature akin to those lower realms. Therefore she remained in midspace and produced a son, Ilda-Baoth. He in turn produced seven aeons, who by emanation produced the seven heavens.

Prunikos is also credited with infusing into man the celestial spark — his spirit.

Pryderi (Welsh) Anxiety, deep thought, meditation; son of Pwyll Pen Annwn. With Pwyll, a custodian of the cauldron of reincarnation (or initiation) in Caer Pedryfan in Annwn.

Pseudo-Dionysius. *See* DIONYSIUS THE PSEUDO-AREOPAGITE

Psuchikos, Psychikos (Greek) The adjective of psuche or psyche, manas in conjunction with kama. In its mental aspects psyche is the distorted reflection of the higher aspect of manas, whereas the nous is manas overenlightened by buddhi. In the New Testament psuchikos is translated “natural”

(1 Cor 15:46) and “sensual” (James 3:15) and thus is confused with the vital-emotional or corporeal parts of man, and the teaching of the duality of the human being is lost sight of. The correct word for the vital-physical or “natural” part of man is somatikos. *See also* PSYCHIC POWERS

Psyche (Greek) [from *psycho* breathe, blow; cf Greek *pneuma* from *pneo* to breathe, blow; Latin *anima, spiritus* all connected with breath, wind, spirit, life, soul] Used in classic Greek as vaguely as is our word soul; but in Platonic philosophy and theosophical usage, the lower or carnally influenced aspect of the mind or soul, as contrasted with the higher or spiritually influenced aspect: kama-manas as against buddhi-manas, the latter represented by the Greek nous. From these two words are derived the adjectives psychic and noetic.

The story of Cupid and Psyche — where Psyche represents the human soul as such, apart from special connection with buddhi or kama — depicts the search for happiness, or the course of human love. Psyche is of mortal birth, but so beautiful that Venus herself becomes jealous and sends Cupid to inspire Psyche with love for an unworthy object. But Cupid himself becomes enamored of Psyche. The love between Cupid and Psyche cannot be realized in the atmosphere of earthly passion and delusion, and is fulfilled only when Psyche, reconciled with Venus, is taken to the Olympian heights. The emblem of Psyche was the butterfly, which in winged joy comes forth into the sunlight from its prison of caterpillar and chrysalis.

The Greek verb from which psyche is derived also means to chill, make cold; and this has an application to the psyche as the lower part of the human soul and therefore closely connected with the kama-rupa and astral light after death. Hence it is that those who dabble in necromantic experiments, or even in psychic experiences, often refer to a damp, chill, and often clammy sensation in the atmosphere when contact with these kama-rupic entities is made. This should be warning that such contact is not only highly unwholesome, but a danger signal that one is dealing with death and decay.

Psychic Powers Powers pertaining to the lower intermediate human nature — i.e, between the mental-emotional and the physical — including powers of perception such as astral vision, the lower clairvoyance and clairaudience, the lower psychometry and seership, etc.; and lower biases or tendencies such as hypnotism, the power to produce minor occult phenomena of many kinds, and in connection with the power of automatic astral projection. In their nature they are morally neutral, being susceptible of use or misuse just as are physical powers. If used with an evil or selfish purpose, the action is black magic; and even if used without such motive or with good intention, they may prove confusing and therefore misleading for one who ventures to use them.

The existence of such powers should be recognized and we should hope some day to be able to avail ourselves properly of them, but a prime requisite in discipleship is equal and harmonious development. We may attain psychic powers by observing the conditions under which they may safely and profitably be allowed to develop. The presence of vanity, ambition, self-assertion,

egoism, and similar qualities prove a bar, and the aspirant who is sincerely desirous of eliminating these defects will not willingly adopt a course likely to enhance them. There is no hard-and-fast division of powers into psychic, physical, mental, etc.: we may contemplate the gradual development of our mental faculties without defining a point where we have stepped out of the ordinary into the occult; and our perceptions may become refined by gradual stages without any sudden jump from one plane to another.

Theosophy enjoins students to let psychic powers alone, until they develop normally and naturally in the progress of the student along the path of wisdom and self-mastery. The craze for psychic powers and attempts in their cultivation arise almost invariably out of ignorance of the existence in ourselves of far higher and more powerful forces which can always be employed with safety, and even profit, to the individual. These greater powers are those classed as spiritual and intellectual-aspirational — powers which ennoble and dignify man, containing in themselves capacities for amazing effects. Their use is always safe once they are understood and studied. By their side the psychic powers, attributes, and faculties are like the puny efforts of children to copy adults.

Psychikos. *See* PSUCHIKOS

Psychography Soul-writing; coined by theosophical writers on occult phenomena for various kinds of inspirational or phenomenally produced writing. In its highest sense it may mean writing under the influence of inspiration from a high source, whether within or without the nature of the writer, as when one writes things which in his ordinary state of mind he would be incapable of rising to. Or it may refer to physical mediumship, where the writing is produced unconsciously by the astrally controlled hand of the medium, and the ideas come from some source in the astral light. It can also include automatic writing of various kinds, and writing by precipitation. As regards the advisability of seeking or cultivating such powers, any practice which involves a surrender of control, either of the mind or the body, to an extraneous influence is detrimental. A writer in full possession of his faculties may by sincere aspiration draw upon higher sources within himself or upon the aid given by those Helpers who stand ready to respond to such aspirations. Self-deception, however, is one of the commonest failings of human nature.

Psychologization. *See* HYPNOTISM

Psychology In philosophy, the systematic study of mind, as opposed to physics or the study of matter. Applied in theosophy to the attributes, qualities, and powers of the human intermediate nature, contrasted with physiology. In ancient times psychology was the science of soul; and this science being the causative, and physiology the effective or consequential, no one was considered an informed or expert physiologist who was not previously trained in psychology. In modern days, due to an almost utter ignorance of the inner nature of man, psychology has largely been based on physiology, if indeed not a vague type of physiology itself.

Psychomental Referring to the human intermediate nature, manas and kama.

Psychometry In its scientific sense, the measuring of the time taken by mental processes and sensations; borrowed by Prof. J. R. Buchanan to signify the occult power of receiving from various articles impressions as to their owners or as to events connected with them. It is the seeing or reading with the inner sight of incidents that have taken place in the neighborhood of physical articles. The art has been applied to such objects as fossils, fragments of ancient ruins, and old manuscripts, and the psychometers have been able by touching these articles, putting them to their forehead, etc., to describe ancient civilizations and bygone, forgotten, or unknown pages in human or world history. These phenomena show that material objects retain the impressions of events with which they have been associated, and presumably exert an influence even upon people who do not have psychometric power. This throws light on the subject of talismans, amulets, relics, etc.

The astral light is nature's storehouse of the images of events, and contact with the object puts the psychometer in rapport with the impressions concerned. The psychometer brings his inner self in contact with the "soul" of the object. But as the phenomena involve the properties of planes other than the physical, any attempt to explain them in terms of the physical plane must necessarily be lame. The physical plane limits both the powers of nature and our own faculties, and the psychometer rises to a plane where some of these barriers are removed, for nothing is destroyed and there is unity and intercommunication throughout all nature.

Psychophobia Fear of soul; coined by Blavatsky (IU 1:46), and applied to all-denying materialists who refuse to believe anything outside of their experience of the physical world.

Psychopomp (Greek) A conductor of souls; applied to Charon, Apollo, and especially to Hermes, who was the conductor of souls to Hades or the Underworld and back again, an office assigned by Christians to Jesus Christ after his resurrection. The mystery of death, descent into Hades, and resurrection were enacted in initiation ceremonies, as depicted in Egyptian glyphs, where the dog-headed Anubis — the Egyptian Hermes — conducts the candidate.

“Mercury in his psychopompic character, conducting and guiding with the caduceus the souls of the dead to Hades and even raising the dead to life with it, . . . shows the dual power of the Secret Wisdom: the black and the white magic. It shows this personified Wisdom guiding the Soul after death, and its power to call to life that which is dead — a very deep metaphor . . .” (SD 2:364).

Ptah (Egyptian) *Ptah* [from to engrave, carve, fashion] One of the most ancient deities, and in his higher attributes one of the most abstract, whose worship goes back to the earliest part of the dynastic period; the principal deity of Memphis (Men-nefer), also known as Het-ka-Ptah (the city of Ptah). The deity is also called Ptah-neb-ankh (giver of life). He was addressed as the “father of beginnings; creator of the eggs of the sun and moon, he who created his own image, who

fashioned his own body”; and was depicted as fashioning the world-egg upon a potter’s wheel. Together with Khnemu, he carried out the commands of Thoth for the creation of the universe. While Khnemu fashioned man and the animals, whether of the cosmos or of earth, Ptah was engaged in the construction of the heavens and the earth. In later times the Greeks associated him with Hephaestos, the Latins with Vulcan; but in addition to the attributes connected with the earth, in the Underworld (Tuat) Ptah was regarded as the fashioner of the bodies for the pilgrims who entered that realm after death.

Ptah is the spiritual side of the demiurgic Third Logos, as Osiris was the more manifest side or aspect — Ptah being the cosmogonical prototype of Osiris. In his association with Osiris as Ptah-Seker, Ptah represents a personification of the union of the primeval creative power with a form of the inert powers of darkness, the creative powers before manifestation during pralaya. In his connection with the primeval god Tenen, Ptah-Tenen is portrayed as bearing the hook and flail of Osiris and to him is allocated certain regions of the Underworld.

Ptahil, Pthahil. *See* FETAHIL

Pudding-bags The name given by Blavatsky to the humans-to-be of the first root-race and the very earliest of the second root-race during the fourth round on globe D; so called because the human structural framework had not as yet begun to manifest by unfolding from within outwards, and because the shape of these still mindless individuals was roughly ovoid or egg-shaped. The consistency of these bodies was astral or condensed astral, verging into ordinary physical stuff of somewhat gelatinous or pudding-like character. As time passed, these pudding-bag bodies very quickly began to unfold into the roughly human form as we now know it, although due to the refining processes of evolution, our present bodies are of much shapelier outline than were the first appearances from the pudding-bags. Thus these pudding-bags in a sense may be truly described as huge astral-physical shells or skins. These early humans propagated themselves by fission, as do individual cells and unicellular organisms today. This procedure is an early evolutionary stage in the process of the bringing forth of the underlying true human structural framework as we now know it; the structure and organization of the pudding-bags, compared with what now they are, were then at a minimum. *See also* ROOT-RACE, FIRST

Puja (Sanskrit) *Pūjā* [from the verbal root *pūj* to honor, worship] An offering of reverence and honor; veneration; homage and respect to superiors or to something held divine or sacred, whether made to living beings or even to idols.

Pulaha (Sanskrit) *Pulaha* An ancient rishi, one of the mind-born sons of Brahma, also enumerated among the prajapatis.

Pulastya (Sanskrit) *Pulastya* An ancient rishi, regarded as one of the mind-born sons of Brahma and the medium through which some at least of the Puranas were given to mankind. It is stated that he received the *Vishnu-Purana* from Brahma and then communicated it through Maitreya. He

is also said to be the father of all the serpents, initiates, and nagas, and of other symbolical beings.

Puloma (Sanskrit) *Pulomā* One of the daughters of the danava Vaisvanara. She and her sister Kalaka were mothers of thirty million danavas by Kasyapa. They are said to have lived in Hiranyapura (the golden city), which floats in the air — the sun. Their children were called paulomas and kalakanjas.

Pums (Sanskrit) *Puṃs* Cosmic spirit, cosmic Purusha; one, pure, imperishable, eternal, all-pervading, it is a portion of that supreme manifested cosmic entity Brahma. Pums, like Purusha, means “man,” the term transferred to the cosmic spirit envisaged very much as the Hebrew Qabbalists envisaged 'Adam Qadmon (primordial cosmic man). Equivalent also to the First or Unmanifest Logos of Greek philosophy and the Father in the Christian Trinity.

Punarjanman (Sanskrit) *Punarjanman* [from *punar* again, anew + *janman* generation, birth, coming into being] Regeneration, rebirth, reimpodiment; it deals with the successive reimpodiments of nature and of all that it comprises, with death and initiation, and with spiritual birth. The Greek equivalent is palingenesis.

Pundarikaksha (Sanskrit) *Puṇḍarīkākṣa* The lotus-eyed; a title of Vishnu and Krishna, which implies that unity of divine compassion and divine intelligence which even in human beings has its faint reflection through the windows of the eyes.

Puraka (Sanskrit) *Pūraka* [from the verbal root *pr* to fill] Inhaling; one of the practices used in hatha yoga for the regulation of the breath. In puraka, the right nostril is closed with the forefinger and then the breath is drawn up through the left nostril; and then the left nostril is closed and the air drawn up through the right nostril. Unless such practices are conducted under direct supervision of an adept, the breath control practices of puraka, kumbhaka, and rechaka are very dangerous to the health and disturb the mental balance, often causing insanity, and hence cannot be recommended.

Purana (Sanskrit) *Purāṇa* Ancient, old, an ancient tale or legend. The 18 Hindu scriptures known today as the Puranas are ancient legends of olden times, written in verse, partly in symbolical and allegorical and partly in quasi-historical language. They are supposed originally to have been composed by Vyasa, the author of the *Mahabharata*. A Purana is a work which has five distinguishing topics (pancha-lakshanas): 1) the creation of the universe; 2) its destruction and renovation; 3) the genealogy of gods and patriarchs; 4) the reigns of the manus, forming the periods called manvantaras; and 5) the history of the solar and lunar races of kings.

The invariable form of the Puranas is of a dialogue between an exponent or teacher and an inquirer or disciple, interspersed with the dialogues and observations of other individuals. In addition to the Puranas there are 18 subordinate Upa-puranas. The Puranas are popularly classified in India under three categories corresponding to the gunas sattva, rajas, and tamas.

Those in which the quality of sattva (purity) prevails are: the *Vishnu, Naradiya, Bhagavata, Garuda, Padma, and Varaha Puranas*, also called the *Vaishnava-Puranas*. Those in which rajas (passion) are said to prevail, relating chiefly to the god Brahma, are the *Brahma, Brahmanda, Brahma-vaivarta, Markandeya, Bhavishya, and Vamana Puranas*. Those in which tamas (inertia) is said to prevail, relating chiefly to the god Siva, are the *Matsya, Kurma, Linga, Siva, Skanda, and Agni Puranas*.

The Puranas ingeniously interweave allegory with cosmic facts and far later human events. “Puranic astronomy, with all its deliberate concealment and confusion for the purpose of leading the profane off the real track, was shown even by Bentley to be a real science; and those who are versed in the mysteries of Hindu astronomical treatises, will prove that the modern theories of the progressive condensation of nebulae, nebulous stars and sun, with the most minute details about the cyclic progress of asterisms — far more correct than Europeans have even now — for chronological and other purposes, were known in India to perfection.

“If we turn to geology and zoology we find the same. What are all the myths and endless genealogies of the seven Prajapati and their sons, the seven Rishis or Manus, and of their wives, sons and progeny, but a vast detailed account of the progressive development and evolution of animal creation, one species after the other? . . .”

“. . . the Puranic histories of all those men are those of our Monads, in their various and numberless incarnations on this and other spheres, events perceived by the ‘Siva eye’ of the ancient Seers, (the ‘third eye’ of our Stanzas and described allegorically. Later on, they were disfigured for Sectarian purposes; mutilated, but still left with a considerable ground-work of truth in them. Nor is the philosophy less profound in such allegories for being so thickly veiled by the overgrowth of fancy” (SD 2:253, 284).

Puranic Anglicized adjective of Purana.

Purgatory [from Latin *purgare* to purify] The place whither, according to the doctrine of the Roman Catholic and Greek Orthodox Churches, the souls of those who have died in grace, but with sins yet unexpiated, pass for purificatory suffering before entering heavenly bliss. They are supposed, somewhat superstitiously, to be helped by the prayers of the living and especially by religious ceremonials such as the celebration of the Mass. The doctrine of purgatory is one of the immemorial beliefs of the human race found the world over, although expressed in different fashions; it is frequently referred to in various passages in the Greek and Latin literatures.

In theosophical teachings the defunct entity must pass through the various spheres of kama-loka, in the norm rising steadily upwards, in order to be purified from its gross and earth-bound attributes and elements, before entering into the state of devachan. These post-mortem purgatorial or cleansing processes are not of the nature of punishment, but are natural processes of purification escapable by none.

Purohita (Sanskrit) *Purohita* [from *purā* foremost, in front + *hita* from the verbal root *dhā* to place] One who has been placed foremost; a family priest or domestic chaplain. In Hindu myths the deity of the planet Jupiter, Brihaspati, was called the purohita of the Hindu Olympus and the spiritual guru of the gods.

Pururavas (Sanskrit) *Purūravas* In Hindu philosophical mysticism and epic literature, the son of Budha, regent of the planet Mercury and equivalent to cosmic wisdom. Budha is given as the son of Soma, the moon, and Ila or Ida, the ethereal earth. Pururavas is an extremely occult character, mentioned both in the Vedas and Puranas. In the Vedas he seems to be connected with the functions of the sun, Surya, while according to later writers he is one of the ten belonging to the class of visvadevas. His cosmic functions are those belonging to the realms of mahat or cosmic mind, and therefore Pururavas is that faculty of cosmic intelligence which guides cosmic evolution and directs it. The visvadevas are entities whose fields of activity are the intermediate region of our universe.

In the epics, Pururavas is the famous prince of the Soma-vansa (lunar dynasty), the father of Ayus and the ancestor of Puru, Dushyanta, Bharata, Kuru, Dhritarashtra, and Pandu. He is supposed to have instituted the three sacrificial fires, and is likewise the hero of the Vikramorvasi.

According to the Vedas and Puranas was famous for being the first to produce the sacred triad of fires by the friction of two sticks as many finger-breadths long as there are syllables in the Gayatri, and made of the wood of the asvattha tree (the tree of wisdom). This legend is full of occult meaning hid under archaic allusions. Pururavas is a generalized name for the human monad which in imbodiment is at once the son of divine wisdom and spirit, and of space or mystic earth. The triad of sacred fires are the fire of spirit or inspiration and intuition, the fire of intellect, and the fires of matter or space; and the union of these three into the one generalized fire of the human constitution forms in a sense the field of self-consciousness as well as of the self-conscious ego itself.

Purusha (Sanskrit) *Puruṣa* Man; the ideal or cosmic man, equivalent to the Qabbalistic 'Adam Qadmon. It contains with prakriti or nature all the seven, ten, or twelve scales of manifested being. Mystically, Purusha is used for the spiritual self or monad in each self-conscious entity, whether a universe, solar system, or human being; also it is sometimes interchangeable with Brahma, the evolver or creator. Purusha is what is called energy or force in science, if these words include the inseparable attribute of intelligence and moral harmony.

Purusha and prakriti stand to each other as the two poles of the same homogeneous, intelligent, living, cosmic substance, the root-principle of the universe, sometimes called svabhavat. In Kapila's Sankhya philosophy, "unless, allegorically speaking, Purusha mounts on the shoulders of Prakriti, the latter remains irrational, while the former remains inactive without her. Therefore Nature (in man) must become a compound of Spirit and Matter before he becomes what he is; and

the Spirit latent in Matter must be awakened to life and consciousness gradually” (SD 2:42).

Purusha corresponds to the Greek First or Unmanifest Logos; yet at times the svabhavica characteristics of Purusha are reminiscent rather of the Third or Manifest Logos, which shows the various functions attributed to Purusha in cosmogony which have gained currency at different times in Hindu thought. *See also* LOGOS; PUMS

Purusha Narayana (Sanskrit) *Puruṣa nārāyaṇa* The spirit moving on the waters of space, a title of Brahma, virtually equivalent to the Qabbalistic 'Adam Qadmon.

Purusha-pasu (Sanskrit) *Puruṣa-paśu* [from *puruṣa* man + *paśu* domesticated animal] Man-animal. *Nara-paśu*, also “man-animal,” is often applied contemptuously to an uninitiated person (a mere animal in sacred things).

Purushasukta (Sanskrit) *Puruṣasūkta* [from *Puruṣa* man, heavenly man + *sūkta* vedic hymn] The Purusha hymn, or hymn of the *Rig-Veda* (10:90) describing the cosmic soul or source of the universe. This hymn, harmonious and corroborative of the esoteric doctrines, relates to some of the earliest chapters of cosmogony, and also on the human scale to the earliest race or races of mankind.

Purushottama (Sanskrit) *Puruṣottama* [from *puruṣa* man, spirit + *uttama* best, highest, primordial] The best of men; metaphysically, the divinity within the heart of all things, the supreme spirit of the universe. Also a title of Vishnu.

Purvaja (Sanskrit) *Pūrvaja* [from *pūrva* before + *ja* born] Born before; a title of Vishnu. The first appearance of the cosmic Logos, its earliest or primordial activities or manifestations as being born before all else in the universe which will be emanated or evolved from it. Equivalent to the Orphic Protologos.

Purva-mimansa (Sanskrit) *Pūrvā-mīmāṃsā* [from *pūrva* prior + *mīmāṃsā* profound or striving thought or meditation from the verbal root *man* to think] Inquiry into the first portion of the Veda — the matra portion; the fifth of the six Darsanas or schools of Hindu philosophy. The school of philosophy in our days considered to be chiefly concerned with the correct interpretation of the Vedic texts; hence sometimes called the First Vedantic School. Jaimini is reputed to be its founder, as well as the author of the *Mimansa-darsana*, the sutras or aphorisms which constitute its chief doctrinal authority. This school is also sometimes termed Karma-mimansa because of the doctrine advocated that by its teaching one can be more or less freed from the making of new karma.

The more advanced portion of the Mimansa is called the Vedanta, which is the present-day theosophy of Hindustan. The Vedanta, also called the Uttara-mimansa, is attributed to Vyasa, the arranger of the Vedas, as its founder.

Purvardha (Sanskrit) *Pūrvārdha* [from *pūrva* first + *ardha* half] The first half or portion of

anything; as in the Orient, the East has always been called the first, purvardga signifies the eastern parts. In grammar an incomplete poetic line, the first half of a hemistich.

Purvashadha (Sanskrit) *Pūrvāṣādhā* The 18th or 20th lunar asterism.

Pushan (Sanskrit) *Pūṣan* [from the verbal root *puṣ* to nourish, feed] The nourisher; a name of the sun, who nourishes and feeds all within his kingdom from his own vital substance and power. As one of the Vedic gods, the surveyor of all things, the conductor on journeys, and the guide on the way to the next world, functions reminiscent of Hermes or Mercury in classical thought.

The *Taittiriya-Brahmana* says that “when Prajapati formed living beings, Pushan nourished them.” This Pushan is “the same mysterious force that nourishes the foetus and unborn babe, by *Osmosis*, and which is called the ‘atmospheric (or *akasic*) nurse,’ and the ‘father nourisher.’ When the lunar Pitris had evolved men, these remained senseless and helpless, and it is ‘Pushan who fed primeval man’ ” (TG 265).

Pushkala (Sanskrit) *Puṣkala* Complete, preeminent in perfected completion; a name of several entities or things, e.g., a son of Varuna, a rishi, a buddha, Siva, and an asura, as well as of Mount Meru, which is the most important meaning.

Pushkara-dvipa (Sanskrit) *Puṣkara-dvīpa* Blue lotus flower; in the Puranas, the seventh of the seven dvipas (continents or islands) of which the world is composed; or the seventh globe of the planetary chain.

P’u-to (Chinese) A sacred island in China, a famous seat of Buddhist teaching. Many statues are erected to Kwan-yin, the patron deity, and to Kwan-shai-yin.

Putra (Sanskrit) *Putra* Son.

Putrasthana (Sanskrit) *Putrasthāna* [from *putra* son + *sthāna* place, dwelling, astrological mansion] Son’s mansion; the fifth house or sign in Hindu astrology.

Pu-tsi-k’iun-ling (Chinese) The universal savior of all living beings; the inscription appearing over the statue of Kwan-shi-yin (Avalokitesvara). Also used as a title of the Buddha.

Puttam A Hindu term pertaining to a malicious imp or haunting spook said to haunt the places where bodies are burned, occasionally going from this region to torment the living; equivalent to the Sanskrit *pisacha*.

Pwyll (Welsh) Impulse, reason, sense, wit, discretion; a hero of the first branch of the Mabinogi, Prince of Dyfed (modern Pembrokeshire) who, while hunting set his dogs on a stag that was being hunted by Arawn, King of Annwn, with the result that he reigned a year and a day in Arawn’s stead in Annwn (the Underworld), and became known as Pwyll Pen Annwn (Pwyll, Chief of the Underworld). We also get glimpses of him as a vaster cosmic figure: when Arthur made his voyage

into the Underworld to obtain the cauldron of reincarnation, its custodians in Caer Perryfan were Pwyll and Pryderi (his son); and this voyage of Arthur as recounted in Taliesin's poem *Preiddieu Annwn* (the Spoils of Annwn) is a symbol of the descent of spirit into matter — the cosmic plan.

Pygmalion (Greek) In Greek legend, a king of Cyprus and a sculptor who makes an ivory image of a maiden, Galatea, so lifelike that he can scarcely believe it to be inanimate, and so beautiful that he falls in love with it. Thereupon he prays Aphrodite to animate it and, his prayer being granted, they are wedded and live in happiness. This story probably originated in the teachings about the building up in the constitution and life of the aspirant of a self-conscious and cognizing soul, which finally becomes conjoined in perfect unity with its own creator, the spiritual soul.

Pymander [from Greek *Poimandres* shepherd of men] The logoiic divine intelligence, or thought divine; the best known of the surviving portions of the Hermetic books, the writings of Hermes Trismegistus; also a title of Hermes himself. "The Egyptian Prometheus and the personified *Nous* or divine light, which appears to and instructs Hermes Trismegistus, in a hermetic work called 'Pymander' " (TG 266).

Said to be an abridgment of one of the Books of Thoth by a Platonist of Alexandria, remodeled in the 3rd century after old Greek and Phoenician manuscripts by a Jewish Qabbalist and called the Genesis of Enoch (SD 2:267n); said also to have been disfigured by Christian Qabbalists. Pymander as Hermes is described as the oldest and most spiritual of the logoi of the Western continent.

Pyramid The square pyramid as a symbol is an amplification of the triangle: it has lines, triangles, and a square, proceeding from a point downwards or conversely upwards merging into a point at the apex. Thus we have the four numbers of the tetraktys represented by point, line, triangle, and square. Reference is usually to stone monuments, especially those of Egypt and chiefly to the Great Pyramid of Cheops. All these pyramids, whether in Egypt, Central America, or elsewhere, are records constructed by initiates who journeyed to many lands, for the preservation of sacred knowledge through the dark ages, to be available to posterity.

In seeking to explain the meaning of these records we are faced with the difficulty of interpreting an ancient science into terms of modern ideas. The science of those days was a comprehensive whole, which has become decomposed into sundered fragments, which seem to us, because of having lost the keys to the ancient wisdom which brought about the construction of these noble monuments, to be unrelated to each other. Were the pyramids initiation chambers, records of astronomical data, of mathematical truths, or of standard measurements? They were all of these and more. When the candidate passed through the processes of initiation he enacted in his own person the self-same processes which occur on the cosmic scale, on the principle of the master-key of analogy, the size, shape, and orientation of the passages and chambers signifying at once cosmic and human mysteries.

A profound lore of numbers, measures, and their relation to the cosmic plan impelled their

architects to build their records according to these now forgotten mathematical principles. Many investigators have discovered fragments of this lore but have not succeeded in reconstructing the whole out of the fragments.

The angle between a side of the base and the slant height is in the neighborhood of 51 degrees 50 minutes; and within the limits of a difference of only three minutes of arc we obtain three remarkable results: 1) the periphery of the base is 2 times the height; 2) the cosine of this angle is .618 . . . , the ratio of the Divine Section; and 3) the ratio of the slant height to a side of the base is that of the ten-month lunar year to the solar year. If a certain ancient cubit be taken and used as unit, the side of the base gives the number of days in the solar year. Certain of our measures, usually believed to be arbitrary and modern, are thought by some to be based on cosmic facts and to be preserved in the Great Pyramid. That the decimal notation was used is shown by the fact that certain significant numbers are derived from each other by permutation of the digits, which would not hold good in any other scale or system of notation. The orientation shows the four cardinal points and symbolizes the four elements.

The age of the Great Pyramid is hinted by Blavatsky to be at least three precessional cycles, or about 78,000 years, old (SD 2:432).

Pyramis. See PYRAMID

Pyrrhonism The philosophy of Pyrrho, the Greek Skeptic (c. 365-275 BC); also a general name for philosophic doubt. Pyrrho left no writings, but lives in those of his pupil Timon. His doctrine was that we can know nothing about reality by the use of our senses or mental faculties; against every statement its opposite may be maintained with equal justice; hence it is necessary to preserve a balanced judgment, the result of which is imperturbability, a tranquil acceptance of the events of life. The moral attitude thus engendered is somewhat like that of the Epicureans and Stoics, which has often been wrongly described as a self-centered indifference, bent upon the happiness of the individual, but this is only the negative aspect of the doctrine. His teachings approximate those of the Sankhya philosophy, and of some later philosophers — as in the doctrine of maya, that all is illusion save the divine. Whether Pyrrho himself stopped short at a suspense of judgment, or whether his teachings were imperfectly handed down by his followers, may be questioned. The ardent desire for knowledge may result in that illumination by which we become aware of the deceptive character of our faculties and the illusory nature of the images they create; but if our skepticism is merely the result of an intellectual disillusionment, unaccompanied by any inward vision, the result is usually selfish indifference bringing about a lapse into mere sensuality.

Pythagoreans The school founded at Crotona, Italy in the 6th century BC by Pythagoras of Samos. Pythagoras was an initiate not only into the Mysteries of his own native state, but also into those of the ancient Orient, where he had pursued extensive studies. His special work was to translate his esoteric knowledge into terms of the Grecian thought of that period. He shows the ultimate

derivation of his wisdom and consequent teaching both by the content of his philosophical doctrines and by his insistence upon purity and self-mastery in life as a prime requisite to the attainment of wisdom.

His word metempsychoses is given as meaning the transference of the soul from one body to another; whereas by its Greek etymology it should mean the various highly occult transformations undergone by the soul-ego after death, and preceding the process of reensoulment — something of larger significant content than what the word reincarnation has mainly come to mean today, as implying merely soul-reimbodiment. It is the teaching of the various successive karmic transformations and imbodiments of a monad during its evolutionary cycle — not only in the larger sense of cosmic destiny, but also in the smaller sense of its karmic transformations between death and the succeeding physical birth.

Pythagoras is famous for his use of numerical and geometrical keys, which he illustrated by reference to the geometrical figures, the musical scale, astronomy, etc. He is supposed to have “discovered” the Divine Section, the regular polyhedra, and the proposition relating to the square of the hypotenuse; what he did was to show that these were keys to the interpretation of mysteries. Porphyry reports that the numerals of Pythagoras were “hieroglyphical symbols” by means whereof he explained ideas concerning the nature of things: (Vita Pythag) or, Blavatsky adds, “the origin of the universe” (SD 1:361). His tetraktys is a gem of condensed esoteric symbolism. The influence of his school may be traced in subsequent Greek history, inspiring such characters as Epaminondas; “It was Pythagoras who was the first to teach the heliocentric system, and who was the greatest proficient in geometry of his century. It was he also who created the word ‘philosopher,’ composed of two words meaning a ‘lover of wisdom’ — *philosophos*. As the greatest mathematician, geometer and astronomer of historical antiquity, and also the highest of the metaphysicians and scholars, Pythagoras has won imperishable fame. He taught reincarnation as it is professed in India and much else of the Secret Wisdom” (TG 266).

Pythia or **Pythoness** (Greek) Pytho was an older name for Delphi, and from it was formed the adjective Pythius, in the feminine Pythia. This was applied to the priestess or seeress who gave the oracles of Apollo at Delphi. “On the authority of Iamblichus, Plutarch and others, a Pythia was a priestess chosen among the *sensitive* of the poorer classes, and placed in a temple where oracular powers were exercised. There she had a room secluded from all but the chief Hierophant and Seer, and once admitted, was, like a nun, lost to the world. Sitting on a *tripod* of brass placed over a fissure in the ground, through which arose intoxicating vapours, these subterranean exhalations, penetrating her whole system, produced the prophetic *mania*, in which abnormal state she delivered oracles. Aristophanes in ‘Vaestas’ [*Vespae*] I., reg. 28, calls the Pythia *ventriloqua vates* or the ‘ventriloquial prophetess,’ on account of her *stomach*-voice. The ancients placed the soul of man (the lower *Manas*) or his personal self-consciousness, in the pit of his stomach. . . . The navel was regarded in antiquity as ‘the circle of the sun,’ the seat of divine internal light. Therefore was

the oracle of Apollo at *Delphi*, the city of *Delphus*, the womb or abdomen — while the seat of the temple was called the *omphalos*, navel” (TG 266-7).

Pythia also refers to the Pythian Games, celebrated every four years at Pytho (Delphi) in honor of the Pythian Apollo.

Pythius. See PYTHIA

Pytho (Greek) The older name for Delphi; also, meaning to rot, make rot, and in this sense equivalent to the Hebrew ‘ob, the pernicious evil currents of the astral light.

Python (Greek) The serpent slain by Apollo, who was therefore also called Pythius. At one time the world was covered with temples to the sun and dragon: the Ophites adopted it from Egypt, whither it had come from India. It is seen in the story of Bel and the Dragon, of St. George or St. Michael and the Dragon, of Osiris and Typhon, Krishna and Kaliya, and the Lord God and the Serpent of Eden. The cosmic dragon represents the shadow side of the logos, and the opposition between these two is the so-called war in heaven. The dual nature of the serpent is seen in Rahu and Ketu, the Dragon’s head and tail; and Typhon or Apophis, slain by Horus is also called Set, who is in one of his permutations Hermes, god of wisdom, and whose name likewise is that of the Biblical Seth and Satan. In initiations the inner enlightened individual had to confront his lower passions, now personified into a veritable astral monster, and to be either its victor or its victim; when victorious he became the spiritual serpent in its other sense of the dragon of wisdom. This double meaning has its correspondence in the fact that snakes shed their skin and reemerge purified, just as the neophyte through training and initiation sheds the Old Person and reemerges from the tests as the New Person.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Q-Rec

Qabbalah (Hebrew) *Qabbālāh* [from *qābal* to receive, hand down] Also Cabala, Kabala, Kabbalah, etc. Tradition, that which is handed down; the theosophy of the Jews. Originally these truths were passed on orally by one initiate to chosen disciples, hence were referred to as the Tradition. The first one historically alleged to have reduced a large part of the secret Qabbalah of the Chaldees into systematic, and perhaps written, form was the Rabbi Shim'on ben Yohai, in the *Zohar*; but the work of this name that has come down to the present day — through the medieval Qabbalists — is but a compilation of the 13th century, presumably by Moses de Leon.

The principal doctrines of the Qabbalah deal with the nature of the divine incomprehensible All ('eyn soph); the divine emanations of the Sephiroth; cosmogony; the creation or emanation of angels and men, and of their destiny. The Jewish Qabbalah was derived from the Chaldean Qabbalah, and “mistaken is he who accepts the Kabalistic works of to-day, and the interpretations of the *Zohar* by the Rabbis, for the genuine Kabalistic lore of old! For no more to-day than in the day of Frederick von Schelling does the Kabala accessible to Europe and America, contain much more than ‘ruins and fragments, much distorted remnants still of that *primitive system which is the key to all religious systems*’ . . . The oldest system and the *Chaldean* Kabala were identical. The latest renderings of the *Zohar* are those of the Synagogue in the early centuries” (SD 2:461-2).

Blavatsky refers to a work no longer extant, the Chaldean Book of Numbers, as the basis for the Qabbalah. Tentative mention is also made of an alleged manuscript left by Count Saint-Germain giving keys for interpreting the Qabbalah.

“The kabalist is a student of ‘secret science,’ one who interprets the hidden meaning of the Scriptures with the help of the symbolical *Kabalah*, and explains the real one by these means. The Tanaim were the first kabalists among the Jews; they appeared at Jerusalem about the beginning of the third century before the Christian era. The books of *Ezekiel*,

*Daniel, Henoah, and the Revelation of St. John, are purely kabalistical. This secret doctrine is identical with that of the Chaldeans, and includes at the same time much of the Persian wisdom, or ‘magic.’ History catches glimpses of famous kabalists ever since the eleventh century. The Mediaeval ages, and even our own times, have had an enormous number of the most learned and intellectual men who were students of the *Kabala* . . . The most famous among the former were Paracelsus, Henry Khunrath, Jacob Bohmen, Robert Fludd, the two Van Helmonts, the Abbot John Trithemius, Cornelius Agrippa, Cardinal Nicolao Cusani, Jerome Carden, Pope Sixtus IV., and such Christian scholars as Raymond Lully, Giovanni Pico de la Mirandola, Guillaume Postel, the great John Reuchlin, Dr. Henry More, Eugenius Philalethes (Thomas Vaughan), the erudite Jesuit Athanasius Kircher, Christian Knorr (Baron) von Rosenroth; then Sir Isaac Newton, Leibniz, Lord Bacon, Spinoza, etc., etc., the list being almost inexhaustible. As remarked by Mr. Isaac Myer, in his *Qabbalah* [p. 170], the ideas of the Kabalists have largely influenced European literature. ‘Upon the practical Qabbalah, the Abbe de Villars (nephew of de Montfaucon) in 1670, published his celebrated satirical novel, “The Count de Gabalis,” upon which Pope based his “Rape of the Lock.” Qabbalism ran through the Mediaeval poems, the “Romance of the Rose,” and permeates the writings of Dante.’ No two of them, however, agreed upon the origin of the Kabala, the *Zohar, Sepher Yetzirah*, etc. Some show it as coming from the Biblical Patriarchs, Abraham, and even Seth; others from Egypt, others again from Chaldea. The system is certainly very old; but like all the rest of systems, whether religious or philosophical, the Kabala is derived directly from the primeval Secret Doctrine of the East; through the Vedas, the Upanishads, Orpheus and Thales, Pythagoras and the Egyptians. Whatever its source, its substratum is at any rate identical with that of all the other systems from the *Book of the Dead* down to the later Gnostics” (TG 167-8).*

The Jewish Qabbalah even in its present partial or mutilated form is a more or less faithful echo of that once universal archaic wisdom-religion of mankind, which as the Qabbalah itself plainly states was originally delivered by “‘Divinity’ to a select company of angels in Paradise,” and from these angels — occult initiates or adepts — disseminated as the ages passed more or less faithfully among the different races of mankind.

Qadesh. See QODESH

Qadesh Qedeshim. See QODESH QODASHIM

Qadmon, Adam. See ’ADAM QADMON

Qaniratha, Qavaratha. See HVANIRATHA; KARSHVAR

Qedem (Hebrew) *Qēdem* The east, the eastern country; applied to the east wind. Also used for former times, antiquity, as that which precedes the present and the future, just as the east is the quarter where the sun begins its heavenly journey before it reaches midheaven and sinks into the

west.

Qelipboth (Hebrew) *Qēlīppōth* Shells, rinds, the outer covering or body of any entity. Because beings in the lowest world of the Qabbalah are considered shells infilled with a certain proportion of degenerate spiritual powers and functions, these beings are often called demons.

In the Qabbalah, the lowest of the four worlds, ‘olam ‘asiyyah, is therefore likewise called ‘olam qelipboth, in that all the beings pertaining to this sphere need the use of a vehicle, termed a rind or shell, which though subject to formation, birth, change, and dissolution as a form, is not so as to its essential life-atoms — except as these life-atoms themselves undergo rebirth and change, but not dissolution as do the shells.

Just as in the superior ‘olams there are the analogic divisions into the ten Sephiroth, likewise in this lowest sphere there are ten degrees, each growing denser and darker in its descent farther from the Sephirothic ray. The first two degrees of this descending scale are considered as absence of visible form — termed in Genesis Tohu Bohu. The third degree is termed the abode of darkness (the darkness which covered the face of the earth of Genesis). Then follow, in descent, the seven infernal halls Sheba’ Heichaloth, or hells in which are distributed the various princes of darkness and entities undergoing purgation — the prince of the whole region being Sama’el (the angel of “venom” or death).

“note what we read in the Zohar (ii. 43a): ‘For the service of the Angelic World, the Holy . . . made Samael and his legions, *i.e.*, the world of action, who are as it were the clouds to be used (by the higher or upper Spirits, our *Egos*) to ride upon in their descent to the earth, and serve, as it were, for their horses.’ This, in conjunction with the fact that Q’lippoth contains the matter of which stars, planets, and even men are made, shows that Samael with his legions is simply chaotic, turbulent matter, which is used in its finer state by spirits to robe themselves in. For speaking of the ‘vesture’ or form (*rupa*) of the incarnating *Egos*, it is said in the Occult Catechism that they, the Manasaputras or Sons of Wisdom, use for the consolidation of their forms, in order to descend into lower spheres, the dregs of *Swabhavat*, or that plastic matter which is throughout Space, in other words, primordial *ilus*. And these dregs are what the Egyptians have called Typhon and modern Europeans Satan, Samael, etc., etc. *Deus est Demon inversus* — the Demon is the *lining* of God” (TG 269).

Thus Qelipboth has a dual meaning: first and less customary, the unorganized matter of space out of which spiritual beings build their bodies in order to manifest on this physical plane; second and more customary, is the physical bodies themselves as thus built, containing the vital and other characteristics of living beings. The word corresponds to the rupa-worlds — the imbodyed beings of this world or sphere.

Qeren (Hebrew) *Qeren* [from *qāran* to emit rays, shine, have horns; power, strength, might] A horn, a vessel made of horn; a musical instrument; a ray, beam, flash, so that the deities

represented with horns — such as Ashtoreth or Astarte — might also be associated with rays or beams of light. The Greek god Pan was always depicted with horns, as were several Egyptian deities, while the Atef-crown uses the horns as a symbol of strength and power. Moses, too, was often depicted with horns.

Qarnayim or karnaim is the dual form, thus signifying “two horns.” *See also* CRIOCEPHALUS

Q’lippoth. *See* QELIPPOTH

Qodesh (Hebrew) *Qodesh* Also Kedosh, Kedesh. Holiness, sanctity; a holy place, sanctuary; that which is holy or consecrated. The feminine plural, Qedeshoth, and masculine plural, Qedeshim, in Biblical times referred to the women and men of degenerate times who were attached to certain temples as temple servants, the women here being equivalent to the nachnis (nautch-girls of the Hindu pagodas) or temple prostitutes. The men were “*Galli*, the mutilated priests of the lascivious rites of Venus Astarte, who lived ‘by the house of the Lord’ ” (TG 169).

Qodesh Qodashim The “holy of holies” in the temple; while in the *Zohar* the Holy Ancient one is called ‘Attiqua’ Qaddisha. In the *Codex Nazaraeus* the sun was named Kadush (holy).

Qoheleth (Hebrew) *Qoheleth* Preacher, speaker, one who addresses an audience; the title of Solomon in Ecclesiastes.

Qol (Hebrew) *Qōl* Also Kol. Voice, sound; rumor. Bath Qol (daughter of the voice) is an ancient Hebrew reference to inspiration or afflatus, whether arising within the prophet himself or heard from a source without him.

Quadrivium (Latin) [from *quattuor* four + *via* path] A place where four roads meet and cross; used by Boethius and medieval scholars to denote the higher division of the seven liberal arts: arithmetic, geometry, music, and astronomy; the lower division, or trivium, consists of grammar, logic, and rhetoric.

Quaternary A group of four; the number four, fourfold. Many quaternary groupings may be made. The septenate is divisible into three and four, usually as the higher triad and the lower quaternary; here the quaternary is terrestrial as opposed to celestial, mortal as opposed to immortal, material as opposed to spiritual. It is seen in the four lower human principles, the four lower cosmic elements, the fourfold shapes in physical bodies, etc. It is the square of the number 2; the first of the regular polyhedra is the tetrahedron or triangular pyramid, having four sides and four corners. The septenate may otherwise be regarded as two triangles and a central point, as in Solomon’s seal; and this gives two quaternaries, a higher and a lower, by adding the point to either of the triangles. These two quaternaries are also called the higher and lower — or celestial and terrestrial — tetraktys. The higher group is given in Platonism as: to agathon, nous, psyche, and hyle; and the lower group is the four cosmic elements of fire, earth, air, and water. The lower tetraktys is said to be the root of illusion or mahamaya, and this is what the Tetragrammaton, or

four-lettered name, becomes in materialized Judaism.

Deity is spoken of as fourfold, the four-faced Brahma, the creative Logos which is a three-in-one with its emanated light as a fourth; or in another system, the ineffable, silence, father, and truth; or again in still another system the three flames and four wicks. Of the seven groups of angels or higher dhyani-chohans, the rupa-dhyanis form a quaternary; often in exoteric writings only four of seven are mentioned, the higher three being esoteric.

The two principal meanings of the quaternary are summed up in the tetraktys; it has four planes, and the fourth plane is in itself a four. The higher triad with the material world added as a pendant unit makes a quaternary; and this material world unfolded makes a new quaternary. There is a celestial or spiritual quaternary, just as there is a material and physical quaternary; and the element-principles of the universe may be so divided that an intermediate quaternary springs into view.

Quaternary Era or Period. See GEOLOGICAL ERAS

Quetzalcoatl, Quetzocohuatl (Toltec, Nahautl?) The name of a great teacher, according to the traditions of the Toltecs, who came to them from Tullan or Yucatan and dwelt for twenty years among the people, teaching them to follow a virtuous life, to cease all wars and violent deeds of any kind, to abolish human and animal sacrifices and instead to give offerings of bread and flowers. He taught the people, likewise, the art of picture-writing and the science of the calendar and the artistry of the workers in metals for which Cholula later became famed.

Quetzalcoatl was described as a being of another race, a “white” man with noble features, long black hair and full beard, dressed in flowing robes, whereas the Toltecs were dark-skinned and nearly beardless. Legend tells that he departed to the land of Tlapallan; others say he went to Coatzacualco on the Atlantic coast. Native tradition there still keeps up the divine name of Gucumatz, which among the Quiche means feathered serpent — Quetzalcoatl in Aztec having the same meaning.

In Mexican religion Quetzalcoatl is regarded as a great deity, a god of the air. In the Quiche cosmogony, as told in the *Popol Vuh* Gucumatz is one of the first deities to appear, and holds the position of a minor creator.

Quetzalcoatl’s “wand and other ‘land-marks’ show him to be some great Initiate of antiquity, who received the name of ‘Serpent’ on account of his wisdom, long life and powers. To this day the aboriginal tribes of Mexico call themselves by the names of various reptiles, animals and birds” (TG 269).

Qui Circumambulat Terram (Latin) Who walks around the earth — said of the Devil by medieval theologians; but there is no reason for restricting it to the maleficent works of Satan. The Fall of ethereal and spiritual beings has been distorted by Christian theology to signify the evil works of

the Devil on earth, but theosophically the phrase could refer to the monads who fell from their spiritual estate in order to gain experiences in lower cosmic planes, and who thus pursue their peregrinations not only around the earth, but circle through the globes of our planetary chain and from planet to planet of the seven sacred planets of the solar system.

Quidditas (Latin) [from *quid* what] The whatness of a thing, its essential characteristic, that by virtue of which it is what it is, the svabhava, coined by the medieval Scholastics. Anglicized into quiddity.

Quietists A type of religious mysticism which arose within the Roman Catholic Church in Italy and Spain during the latter half of the 17th century, especially in connection with a priest named Miguel de Molinos, who published his *Spiritual Guide* in Rome in 1675. The book of this apparently simple and pious man shows how to attain a state of inward peace by withdrawal of the thoughts and desires from all earthly matters and fixing them in contemplation of what the aspirant conceives to be the divine and in prayer. This he regarded as the only essential, doctrine and ritual being of no consequence. His views won great popularity and he received high favors from the Pope; but they did not at all suit the purposes of those then in power. Molinos was condemned and imprisoned and a persecution instituted against Quietists in general.

Also used to denote other schools or sects of the same type, or to designate a particular attitude of mind or policy in which passive resignation is adopted. These Occidental Quietists of whatever affiliation represent what the hatha yogis are in India. While there are certain aspects of distinctly commendable character in true Quietism, it is nevertheless still more true that Quietism of any sort is in a sense spiritual and intellectual somnolence, and therefore runs directly counter to the far higher spiritual precepts wherein man is enjoined to be as fully awake and as alive as possible in the world in which he lives in order that he may do his full duty to his fellows and to the world, the while cultivating the higher spiritual, intellectual, and psychological parts of his constitution.

Quinary (Latin) A group of five, fivefold, the number five. A legitimate fivefold grouping of human and cosmic principles is found in some systems; the four commonly accepted elements or tattvas and their crown or synthesis, for example, make a quinary, but if the synthesis is regarded as a ternary, we get a septenary; and the same if we add to the five two higher principles which have been ignored.

But at the same time there is a fivefold grouping which in contrast with the sevenfold denotes evil and imperfection (cf SD 2:575-6).

Five has a special connection with the fact that we are in the fifth root-race, during which five elements will become partially manifest, and we use the denary scale. *See also* PENTAGRAM

Quindecimviri (Latin) [from *quindecim* fifteen + *viri* men] The priests in ancient Rome who had charge of the Sibylline Books. Originally two in number and called duoviri, they later became ten

(decemviri), and Sulla increased them to fifteen, Julius Caesar to sixteen, and some of the emperors in later times made further additions. Thus, as being members of a commission or board, or what the Romans called a Collegium, they were State functionaries with definite duties as well as powers.

Quis ut Deus (Latin) One like god; used in connection with the angelic power called by ancient medieval Hebrew and Christian mystics Michael [from Hebrew *mi* who + *cha* like + 'el God or a divinity].

Qu-tamy (Chaldean) The mystic student or initiate represented as receiving certain doctrines originally told by Saturn to the Moon, who communicated them to her idol, which revealed them to her devotee — according to the *Nabathean Agriculture*.

Ra-Rec

Ra (Egyptian) *Rā*. In the dynastic period, the deity of the sun, regarded as the maker of all visible things, of heaven and all its gods, and of the Underworld (Tuat) and its denizens. More generally, Ra was the cosmic formative activity of the universal soul or Logos, and therefore in one sense of the anima mundi in its highest parts. Hence another facet of its meaning is the everlasting light which dwells forever in the cosmic darkness which is — itself.

The worship of the sun was of very ancient origin in Egypt. Like Horus, Ra was depicted in a hawk-headed form known as Amen-Ra (Heru-khuti). The principal seat of the worship of Ra was at An or Heliopolis. The original deity of this city was Tem, but when the priests of Ra became more powerful during the 5th dynasty, they combined the two deities into one as Ra-Tem. In later dynastic times, although the priests of Ra were the most powerful in Egypt, the common people clung to their ideas of Osiris so tenaciously that eventually the priests placed Osiris as the deity of the sun — and this movement may have been initiated from within the sacerdotal sanctuary itself, because the attributes of Osiris and of Ra were alike, Osiris being a more limited entity than the abstract Ra of cosmic space.

Rabbi (Hebrew) *Rabbī* [from *rab* great, a chief, leader] My master, my teacher; the master was addressed by his pupils with the word *rabbi* or *rabbenu* (our teacher), Moses being customarily called *Mosheh rabbenu* (our teacher Moses). Equivalent to the Sanskrit *guru*, but during the closing decades of the Second Temple, the term became commonly associated with the scribes as merely an honorary title. Then during the time of the Mishnah period, all scholars were termed *Rabs* (or Chaldean plural *Rabbīn*). Later the sect of the Qaraites, who rejected the Talmud, designated all believers in its by this term. *Rabbi* is likewise now applied to the modern Jewish clergy.

Rabbinical literature is generally understood to mean writings concerning the Jewish traditions since the beginning of the Talmudic period.

Race(s) During evolution on each of the globes of the earth-chain, the human life-wave passes through seven evolutionary stages called root-races, of which we are at present in the fifth root-race of the fourth round on the fourth globe. Each root-race is divided into seven subraces, of which we are now in the fourth of the fifth root-race. These subraces are themselves subdivided into smaller divisions, and these again into still smaller racial units. G. de Purucker divides each root-race into: 1) primary subrace; 2) secondary subrace; 3) family race; 4) national race; 5) tribal race; 6) tribal generation; and 7) individual man (about 72 years) — each division containing seven of the succeeding type.

Each root-race reaches its evolutionary maximum at its midpoint, when a racial cataclysm occurs and the race begins to decline. At the same time the seeds of the succeeding root-race appear, and the new root-race in its infancy begins to run parallel with the race that is declining, so that there is continual overlapping.

The complex scheme of major races and their subdivisions — overlapping each other and in various stages of their evolution, intermingling and crossing with one another — gives rise to the immense variety of types which we see on earth today. *See also* ROOT-RACE(S)

Race-Buddha, Racial Buddha On each globe of a planetary chain, as the life-wave touches it in a round, there appears a mahabuddha; and another mahabuddha appears when the life-wave leaves the globe after completing its round. For each root-race during such a globe-round there appears a racial buddha, each of these being one of seven rays from the mahabuddha who appears at the opening of the round. At the middle of the root-race the racial buddha pertaining to it overshadows a human vessel and a manushya-buddha is born — the latest of these known in history being Sakyamuni or Gautama.

The appearance of these buddhas, particularly of the mahabuddhas, is identic in more than one way with the appearances of the manus, whether of a round, a globe, or indeed a race. A manu opening the drama of life is called the root-manu, and the manu ending the drama for whatever period it may be is called the seed-manu. *See also* MAITREYA-BUDDHA; MANUSHA-BUDDHA

Radha (Sanskrit) *Rādhā* Prosperity, success; as a proper noun, a celebrated cowherdess or gopi beloved by Krishna. Regarded by some as an avatara of Lakshmi, as Krishna was of Vishnu, she has been mystically interpreted as the human ego seeking Krishna, the spiritual ego in man.

Radiation Generally, the emission of life energies, or various kinds of energetic outflowings or productions radially outward from a center. Thus it is a name for the entire cosmic process of formation of worlds; the production of many out of one, the passing from unity to measureless diversity and multiplicity. The radiations of the ten or twelve solar logoi from the heart of the solar chain, streaming through and permeating the entire extent of the sun's kingdom and becoming focalized in the different planetary bodies, illustrate the modus of the general principle of

radiation.

According to theosophic teachings physical matter is a condensation of light, as is being experimentally verified. It is evident that the subject of the emanation of innumerable forms of life energy on all the planes of the cosmos is a very wide one, and the words fohat, light, life, electricity, etc., are used in this connection. These radiations may be classified on a septenary, denary, or duodenary system, as when we speak of the seven, ten, or twelve rays of the solar logos. *See also* RAY

Radioactivity Scientific discovery has done much to verify the occult axiom that there are no permanent bodies, but that everything is in a state of flux and interchange. Theosophy views the physical universe as an ocean of life, partly imbodyed and partly noncorporeal, and regards such terms as matter, energy, wave, and particle as descriptive of various manifestations of this life. The chemical elements are now considered by science to be centers or vortices in a fluid ocean, continually giving and receiving emanations from each other. Thus all forms of physical matter emit radiation and radioactive phenomena are instances of a general law. The emanations studied by science are described partly as actinic rays and partly as emitted particles; and the disintegration series results in a continual emission of both these forms of emanation, accompanied by an elevation of the temperature of the radioactive body above that of its surroundings, a loss of its own mass, the formation of temporary unstable elements of lower atomic weight, until an end-product is reached. Calculations as to the age of the solid crust of the earth, based on disintegration rates, are extremely unreliable, as they involve unverified assumptions as to the rate of this process in past ages. Theosophy states that during the descending arc of cosmic evolution, the process of concretion is predominant, and during the ascending arc the process of disintegration or etherealization is predominant. This indicates that the rate of radioactive disintegration has been on the increase in comparatively recent times, and will continue at an enlarging rate into the geologic future.

Raga (Sanskrit) *Rāga* Desire, passion, love, affection; in Patanjali's Yoga philosophy the five klesas (afflictions) are named: avidya (ignorance), asmita (egoism), raga (desire), dvesha (aversion), and abhinivesa (tenacity of mundane existence).

Ragnarok (Icelandic) [from *ragna* plural of *regin* ruler + *rok* sentence, judgment, reason, ground, origin] In Norse mythology, the time when the ruling powers (gods) return to their ground, are reabsorbed in their divine origin. The judgment is their evaluation of the life that has just been completed. Ragnarok has commonly been called the twilight of the gods, probably because of confusion with *rokr* (twilight). It has also been interpreted as the age of fire and smoke, because in Swedish *rok* means smoke. However, in Icelandic it has a more sacred meaning referring to wonders and signs, and the departure of the gods to their home ground, the source of their being.

On the cosmic scale Ragnarok brings to a close a universal cycle of activity. When a world dies the

god Heimdall, guardian of the rainbow bridge between the realms of the gods and Midgard, domain of humanity, blows the Gjallarhorn, summoning the gods of life to the final battle against the forces of destruction. Lesser judgments take place when single world systems reach their term, as recorded in the “Lay of Odin’s Corpse” (Odins Korpvalder), which deals with a death of one planet, and relates the deities’ efforts to elicit from the planetary soul an accounting of its past cycle of activity.

The end of the world is vividly portrayed in the foremost poem of the Elder Edda, Voluspa, which depicts horrors presaging the departure of the gods from this sphere of life. However, this is by no means the end for it is followed by a new creation, when a reborn earth is seen arising in serene beauty and contentment.

Ragnarok has sometimes been personified as a world-destroying monster which is held in check until its proper time. Its approach is heralded by an overwhelming preponderance of evil which presages the end of the gods’ reign. This is another way of depicting the withdrawal of the beneficent powers to their supernal realms, leaving matter in a condition of entropy.

Ragnarok is succeeded by the Fimbulvetr or Fimbulvinter — the long winter of nonbeing, when nothing exists (in the relevant portion of space) for there are no energies (gods) to organize matter. At the appropriate time Heimdall will once more summon the beneficent powers with his Gjallarhorn for a new tour of duty.

Rahasya (Sanskrit) *Rahasya* A secret doctrine or teaching; any subtle idea or recondite point of thought; mystical or esoteric teachings. Also a name of the Upanishads. As an adjective, secret, mysterious. The form sa-rahasya also means secret wisdom.

Rahat. See ARHAT

Rahamim (Hebrew) *Rahamim* Tender love or affection; mercy, compassion. In the Qabbalah, used for one of the sources of the three classes of soul-sparks coming from ’Adam Qadmon, corresponding to the latter’s three emanations: Hesed (grace or ardor) forming Hebel (or Abel); Geburah (strength or judgment) forming Qayin (or Cain); and Rahamim forming Sheth (or Seth). These three were subdivided into twelve, and the twelve into 70 or 72 species, called the principal roots of the human race.

Ra’hmin Seth. See RAHAMIM

Rahu (Sanskrit) *Rāhu* The seizer; a daitya supposed to seize the sun and moon and thus cause eclipses. “A giant, a Demi-god, the lower part of whose body ended in a Dragon or Serpent’s tail. During the churning of the Ocean, when the gods produced *amrita* — the water of Immortality — he stole some of it, and drinking, became immortal. The Sun and Moon, who had detected him in his theft, denounced him to Vishnu, who placed him in the stellar spheres, the upper portion of his body representing the Dragon’s head and the lower (Ketu) the Dragon’s tail; the two being the

ascending and descending nodes. Since then, Rahu wreaks his vengeance on the Sun and Moon by occasionally swallowing them. But this fable had another mystic meaning, since *Rahu*, the Dragon's head, played a prominent part in the mysteries of the Sun's (*Vikarttana's*) initiation, when the candidate and the Dragon had a supreme fight" (SD 2:381).

Rahula (Sanskrit) *Rāhula* The son of Gautama Buddha. Although the Buddha was a sixth-round man, his son was a fourth-round man; for a person's egoic monad is the real person which locates him on the evolutionary ladder of life, whatever his body may be. The ego of the Buddha's son was an egoic monad which had as yet evolved, not sixth round attributes and capacities, but only those of the fourth round. Thus a person's body belongs to the evolutionary race in which his ego incarnates, however much the body may be influenced from above by the egoic power. Rahula became a disciple of his father's teachings.

Raibhyas (Sanskrit) *Raibhya-s* A class of gods of the fifth manvantara, the first half of the third round. *See also* MANU

Raivata (Sanskrit) *Raivata* The fifth manu.

Raivata-manvantara (Sanskrit) *Raivata-manvantara* The manvantaric life cycle inaugurated and presided over by Raivata-manu, the fifth of the 14 manus. Another word for manus is dhyani-chohans. As there are seven root-manus and seven seed-manus for the seven rounds of our earth-chain, Raivata-manu inaugurated and presided over the third round as its root-manu.

Rajagriha (Sanskrit) *Rājagrha* The ancient capital of Magadha, famous for its conversion to Buddhism in the days of the Buddhist kings. It was the royal residence from Bimbisara-rajā to Asoka, and the seat of the first Synod or Buddhist Council held 510 BC.

The famous Saptaparna cave, in which the Buddha's select circle of arhats were initiated, was in this famous city.

Rajamsi (Sanskrit) *Rajāṃsi* [from *rajas* region of clouds, atmosphere, heavens, world above] Heaven worlds, atmospheres; the six rajamsi above prithivi, our earth-globe, refer to the six higher globes of our earth-chain (cf Rig-Veda 1:34; 3:56; 7:10, 411; 5:60, 6).

Raja, Rajan (Sanskrit) *Rājan* King or prince in India.

Rajarshi (Sanskrit) *Rājarṣi* [from *rājan* king + *ṛṣi* sage] Kingly or royal sages; kings and princes who follow the path of illumination and initiation, corresponding to the king-hierophants of ancient Egypt. There were three classes of rishis in India: the rajarshis, the devarshis, and brahmarshis.

Rajas (Sanskrit) *Rajas* In Oriental philosophy, one of the three gunas (qualities) in the correlations of force and matter, the other two being sattva (truth, goodness) and tamas (inertia). It is the guna of longing, passion, activity, resulting from the fundamental urge in nature producing change and

the longing for change. *See also* TRIGUNA

Rajasa (Sanskrit) *Rājasa* The adjectival form of rajas.

Rajasic Anglicized adjective of rajasika.

Rajasas (Sanskrit) *Rājasa*-s Shining ones; one name of the agnishvattas, especially the older or early ones called the kumaras, for this group of monads are the fire-pitris, fire often standing for intellectual light or life. This group of monads endowed mankind with the fire of mind and of intellect.

Raja-star or **Raja-sun** King sun; coined by the Master KH, referring to a sun having subordinate solar individuals under its control and oversight, one of the latter in our case being our own sun. Theosophy teaches that even suns evolve during the course of aeons of time; as every sun is but the visible representative or reflection of an inner spiritual power or essence, and as everything in the universe is progressive, whatever is, whether atom or sun, is but an entity pursuing its individual evolutionary course of unfolding destiny.

Such a raja-star is said to be “right behind Jupiter, that no mortal physical eye has ever seen during this, our Round. Could it be so perceived it would appear, through the best telescope with a power of multiplying its diameter ten thousand times, — still a small dimensionless point, thrown into the shadow by the brightness of any planet; nevertheless — this world is thousands of times larger than Jupiter. The violent disturbance of its atmosphere and even its red spot that so intrigues science lately, are due . . . to the influence of that Raja-Star” (ML 167).

Raja Yoga (Sanskrit) *Rāja-yoga* Royal union; more generally, the balance of all the faculties — physical, mental, moral, and spiritual. Raja yoga is a true system of developing psychic, intellectual, and spiritual powers and union with one’s higher self, the inner divine source of all our being. This royal union with the self within must be attained by self-directed evolution. Union with this inner divinity is the source of all human genius and inspiration. Man increases his receptivity to the divine powers in his inmost being by cooperating with nature on its spiritual even more than its physical and astral planes, and by intellectual and spiritual aspiration combined with a fervent love for all beings.

Raja Yogin, Raja Yogi (Sanskrit) *Rāja-yogin* A devotee who practices raja yoga.

Raka (Sanskrit) *Rākā* The 14th day of the waxing moon, when the moon is full; the goddess presiding over the actual day of full moon. This day, as also the two quarters and new moon, was considered as appropriate for occult practices not only in India, but over all the ancient world.

Raksha (Sanskrit) *Rakṣā* [from the verbal root *rakṣ* to protect] A bracelet or amulet; any mysterious token used as a charm or protection.

Rakshasas (Sanskrit) *Rākṣasa*-s [from the verbal root *rakṣ* to protect] The preservers; in modern

popular superstition in India, commonly associated with evil spirits and demons. Esoterically they are the gibborim (giants) of the Bible, the fourth root-race or Atlanteans:

“when Brahma created the demons, Yakshas (from *Yaksh*, to eat) and the Rakshasas, both of which kinds of demons, as soon as born, wished to devour their creator, those among them that called out ‘Not so! oh, let him be saved (preserved)’ were named Rakshasas (*Vishnu Purana Book I, ch. v.*). The *Bhagavata Purana* (III, 20, 19-21) renders the allegory differently. Brahma transformed himself into night (or ignorance) invested with a body, upon which the Yakshas and Rakshasas seized, exclaiming ‘Do not spare it; devour it.’ Brahma then cried out, ‘Do not devour me, spare me.’ This has an inner meaning of course. The ‘Body of Night’ is the darkness of ignorance, and it is the darkness of silence and secrecy. Now the Rakshasas are shown in almost every case to be Yogis, pious Saddhus and Initiates, a rather unusual occupation for *demons*. The meaning then is that while we have power to dispel the darkness of ignorance, ‘*devour it,*’ we have to preserve the sacred truth from profanation. ‘Brahma is for the Brahmins alone,’ says that proud caste. The moral of the *fable* is evident” (SD 2:165n).

The rakshasas or men-demons of Lanka, the opponents conquered by Rama in the *Ramayana*, are some of the latest representatives of the Atlanteans in their last days. These rakshasas correspond to the Greek titans, the Egyptian colossal heroes, the Chaldean izdubars, the Jewish ‘eimim (terrifiers) of the land of Moab, and with the famous giants anakim (‘anaqim) mentioned in Numbers 13:33.

Rakshasi-bhasha (Sanskrit) *Rākṣasī-bhāṣā* The language of the rakshasas, spoken of in old Sanskrit works; these rakshasas were Atlanteans. The Atlanteans, however, did not have one single language any more than has our own present fifth root-race; for during the millions of years that Atlantis lasted, numerous languages were born, attained their culmination, and finally died out. There were as many, if not more, distinctions and differences among the Atlantean languages as there are today among us. Just as present fifth root-race languages are highly inflected, the tongues of the Atlanteans would all more or less fall under what modern grammarians would call the agglutinative class. Further, just as we today have relics of Atlantean speech in the agglutinative specimens that have come down to our time, so the Atlanteans had historical remnants among them of tongues belonging to the preceding third root-race.

Ram The English word ram and the Latin aries contain the Aryan root *ar* or *ra*, so common in names denoting the masculine, fiery, and creative aspect of nature, seen in the word Aryan itself. In the zodiac of the fifth root-race the sign of the ram leads off, and in astrology is called a fiery, cardinal sign, the house of Mars (Ares), as well as the house of exaltation of the sun (Ra). The symbol of Aries is a ram’s horns, and it corresponds with the head in the human anatomy. Ram’s horns on the head of a hieroglyphic figure usually denote that an initiate is meant. The symbol of a

ram's head and horns is, however, often phallic, a symbol of generative power, though this can be but a degradation of its original meaning. Sphinxes with ram's heads, called criosphinxes, are said to represent the period of the equinoctial points passing through the sign Aries of the celestial zodiac, following upon the age when the bull was the sign.

Egyptian deities with heads of rams, "are solar, and represent under various aspects the phases of generation and impregnation. Their ram's heads denote this meaning, a ram ever symbolizing generative energy in the abstract, while the bull was the symbol of strength and the creative function" (TG 82). *See also* MENDES

Rama (Sanskrit) *Rāma* The seventh avatara or incarnation of Vishnu and the eldest son of King Dasaratha of the solar race. Hero of the *Ramayana*, his full name is Ramachandra, and tradition makes him the first king of the divine or earliest dynasties as given in the Hindu epics. He married Sita, a feminine avatara of Lakshmi (Vishnu's consort), who was carried away by Ravana, the demon-king of the rakshasas of Lanka, a remnant of Atlantis. This act led to the famous war related in the *Ramayana*.

Ramanujacharya (Sanskrit) *Rāmānujācārya* A celebrated Vaishnava reformer, founder of a Vedantic school which taught the doctrine of Visishtadvaita (qualified nonduality), that the human spirit is separate and different from the supreme spirit, though dependent from it and ultimately to be united with it. He lived at Kanchipura and Sri-ranga in South India, and is supposed by many Occidental Orientalists to have lived from 1017-1137. His followers believe him to have been an incarnation of Sesa.

This Vedantic sect is one of the three most important Vedanta schools, the other two being the Advaita (nondualistic) school, of which the chief exponent and teacher was the avatara Sankaracharya; and that of the Dvaitas (dualists). Of these three, the Advaita teachings of Sankaracharya is by far the closest to theosophy. The differences as among these three Vedantic schools are mainly manners of considering the relation of the human and cosmic spirit-souls. The Advaita in common with theosophy considered the cosmic spirit to be the fountainhead of all later differentiations of consciousness; and therefore it teaches that all such later individualizations are nevertheless all rooted in the cosmic spirit. The Dvaita school believes that there is a distinct difference of identity between individuals and the cosmic spirit (as likewise do the Christians), although individuals nevertheless issue forth from the cosmic spirit. The Visishtadvaita school believes that although all individuals ultimately issue forth from the cosmic source, they yet possess only qualified identity with it.

Ramayana (Sanskrit) *Rāmāyaṇa* [from *Rāma* an avatāra of Viṣṇu + *ayana* goings, adventures] One of the famous epic poems of India, relating the adventures of Rama, an avatara of Vishnu, in 48,000 lines. It is often termed the Iliad of the East.

"The whole History of that period [the struggle between the Atlantean and the Aryan adepts]

is allegorized in the *Ramayana*, which is the mystic narrative in epic form of the struggle between Rama — the first king of the *divine* dynasty of the early Aryans — and Ravana, the symbolical personation of the Atlantean (Lanka) race. The former were the incarnations of the Solar Gods; the latter, of the lunar Devas. This was the great battle between Good and Evil, between white and black magic, for the supremacy of the divine forces, or of the lower terrestrial, or cosmic powers. . . . The *Ramayana* — every line of which has to be read esoterically — discloses in magnificent symbolism and allegory the tribulations of both man and soul” (SD 2:495-6).

The siege and subsequent surrender of Lanka (whose remnant is Ceylon or Sri Lanka) to Rama is placed by Hindu chronology — based upon the zodiac — at many hundreds of thousands of years ago, and the statement that the present island of Ceylon is the northern headland of ancient Lanka gives a hint as to how far back these events are to be placed.

Raphael (Hebrew) *Rēfā’ēl* [from *rāfā’* to knit together, compose by joining, repair and mend, cure, heal + *’ēl* divinity] The builder of God, the composer of God; one of the four (later seven) angels stationed about the throne of God; also called Suriel or Suryal. In the vision of Ezekiel, the seer describes the four faces beheld: that of the face of the man is made equivalent to Raphael in the Ophite scheme. Originally the dragon was one of the four sacred animals, but it was altered to the face of a man (SD 1:127). In the Book of Enoch (ch 20) Raphael is considered as the angel of the spirits of men, and is commissioned to “heal [rebuild or re-compose] the Earth which the angels have defiled.”

Rasa (Sanskrit) *Rāsa* The mystery-dance performed by Krishna and the gopis, in which Krishna remains in the center while the shepherdesses revolve about him. This dance is still celebrated in a yearly festival, especially in Rajasthan. It represents, astronomically, the circling of the planets around the sun, as did other circle dances, e.g., the dance of the Amazons around the priapic image, the dance of the daughters of Shiloah (Judges 21), and the dance of David around the ark (IU 2:45).

In *rasa* we see the same general connection which the Pythagoreans referred to when they spoke of the music of the spheres, or again that a celestial body in following its path does so to the accompaniment of natural sound or music which the motion evokes. The *rasa* dance signifies stately, quiet, but continuous movement of the bodies of those participating around another in the center who represents the sun, while those dancing around him in various orbits or circles represent the planets. Such dances were representative of the life in nature moving in circular or spiral ways to the accompaniment of sound or music, the roots of such movements being found in the *akasa*, sound itself being the distinguishing characteristic of *akasa* according to ancient correspondences.

Rasatala (Sanskrit) *Rasātala* [from *rasā* taste + *tala* sphere, place] Place of taste or contact; a place

or sphere where the apparatus of the inner and outer organs of sense are active. The fourth counting downwards of the seven talas. The corresponding loka or pole is maharloka. Rasatala corresponds to sparsa (touch), and to some of the hierarchies of ethereal, semi-objective dhyani-chohans of the astral matter of the manasa-manas.

Rash. See BERE'SHITH

Ra-shu (Egyptian) *Rā-shu*. The solar force emanating from the sun (Ra). In chapter 17 of the Egyptian *Book of the Dead*, the Demiurge is represented as becoming this solar force. “The solar fires formed *in* and *out* of the primordial ‘waters,’ or substance, of Space” (TG 276).

Rasi (Sanskrit) *Rāśi* A heap, mass, quantity, number; in astronomy, a sign of the zodiac (as being a certain number of degrees); in astrology a mansion or house, a twelfth part of the ecliptic.

Rasi-chakra(Sanskrit) *Rāśi-cakra* [from *rāśi* number, assortment, mansion + *cakra* wheel] The zodiacal circle or zodiac.

Rasollasa (Sanskrit) *Rasollāsa* [from *rasa* fluid, liquid + *ud-las* to come forth, appear] Also *rasollāsā*. “The first of the eight physical perfections, or *Siddhis* (phenomena), of the Hatha Yogis. Rasollasa is the prompt evolution *at will* of the juices of the body independently of any nutriment from without” (TG 276).

Rasshoo. See RA-SHU

Rata (Sanskrit) *Rāta* [from the verbal root *ra* to give, grant] That which is given or offered; a sacrificial offering.

Rathapala (Sanskrit) *Rathapāla* A great Hindu arhat (cf VS 83-4); featured in the allegorical legend *Rathapala-sutrasanne*.

Ratnatraya. See TRISARANA

Ratnavabhasa-kalpa (Sanskrit) *Ratnāvabhāsa-kalpa* [from *ratna* jewel + *avabhāsa* splendor + *kalpa* age] The age that shall be as of the splendor of jewels — used in Buddhism for the closing kalpa or age of mankind on this fourth globe during the fourth round. “The age in which all sexual difference will have ceased to exist, and birth will take place in the *Anupadaka* mode, as in the second and third Root-races. Esoteric philosophy teaches that it will take place at the end of the sixth and during the seventh and last Root-race in this Round” (TG 276). Differentiation into two sexes is but a passing phase of human and animal evolution. It was preceded by hermaphroditism and other forms of reproduction. The very end of the fifth and the early sixth root-race will see the beginning of the ceasing of sex and the introduction of the anupapadaka or parentless mode.

Ratri (Sanskrit) *Rātri* Night, the darkness and stillness of the night; one of the four bodies of Brahma. Mystically and philosophically, it has a dual meaning: cosmic night as pure spirit which

preceded day or manvantara, signifies pralaya and is highly spiritual. In the other meaning night signifies the darkness of relatively perfect matter, unenlightened by the rays from spirit. To this last meaning is ascribed the ancient Hindu statement that Brahma assumed his body of Night for the purposes of emanating the hierarchies of the nether world or matter, commonly called collectively the rakshasas. This corresponds to the archaic Tibetan view of the dread mamochohans, as presiding not only at the pralayas, but as being the laws of night or absolute matter.

Raumas or **Raumyas** (Sanskrit) *Rauma-s, Raumya-s* [from *roma* hair] Hairy; a race or tribe of the early third root-race said to have been created from the pores of Virabhadra, a distinguished hero and one of the avatars of Siva, commonly stated to have had a thousand heads and a thousand arms and who destroyed Daksha's sacrifice. An allusion to the sweat-born races, they were called Raumas because their origin was from the romakupas (hair- or skin-pores).

Ravana (Sanskrit) *Rāvaṇa* The giant king-demon of the rakshasas, sovereign of Lanka (Ceylon or Sri Lanka), a remnant of Atlantis. One of the remaining ruling black magicians of the last days of the Atlantis period, he carried away Sita, Rama's wife, which led to the great war described in the *Ramayana*.

Raven In every ancient cosmogony the precosmic generative source of all is denoted by a circle, head, or egg, which because of its abstraction in thought is always associated with darkness or blackness, as dark and night precede light. Hence we find black birds — ravens, black doves, black swans, etc. — associated therewith, on the principle that birds are emblematic of the movements of the peregrinating monads in both time and space, wings being the important point here, in which connection we may include the winged globe of Egypt. Noah sends out first a raven after the Ark has settled; the deluge signifies cosmic pralaya, after which begins the real creation of our earth and humanity.

These cosmic birds, or the cosmic head or egg, do not signify boundless space, but are the cosmic points or foci of evolutionary development out of which grow, as from seeds, the celestial bodies, their inhabitants, and their karmic attributes.

The Raven (Corax) was also the lowest degree in the dignities of the Mithraic Brotherhood.

Ravi (Sanskrit) *Ravi* A particular form of the sun when regarded as one of the twelve adityas; also used for the sun in general, or for the divinity of which the sun is a reflection.

Ray [from Latin *radius* rod, staff, beam, ray] An indefinitely small thread of light or other form of radiant energy, whether undulatory or emissive, considered as propagated in a straight line and with a definite velocity. The figurative use of the word must not blind us to the fact that everything physical has its prototypes on planes above. As our sun sheds rays of a great number of kinds, and interchanges of radiation take place throughout our solar system and locally on each planet, so rays are emanated throughout the universe on all its visible and invisible planes, and represent

the spiritual, intellectual, and fohatic and life-giving forces — mystically in each case a Mercury on his winged way bearing the messages of the gods.

Reabsorption The return into the oneness of spirit, either of the cosmos or of man, at the end of the full cosmic cycle of evolution and involution. Since in this state there is no differentiation of substance or matter as human beings understand it, individuality is not lost but only temporarily asleep in a spiritual laya-state, and only for the time during which this state lasts; when reemergence takes place, the individual characteristics of the entities which have been absorbed and are now re-evolved, reappear. “The thread of radiance which is imperishable and dissolves only in Nirvana, re-emerges from it in its integrity on the day when the Great Law calls all things back into action” (SD 2:80).

Realism The doctrine of Realists as opposed to Nominalists; the doctrine that physical objects have reality independently of psychological factors, opposed to the idealism of philosophers such as Berkeley; a matter-of-fact attitude, as opposed to an imaginative one; Realism in art. In the first sense, the Nominalists held that particulars or individuals alone are real, and their attributes mere abstractions: e.g., that color and motion, considered apart from colored or moving bodies, are mere abstractions. The Realists held that universals or generals, such as color and motion, have at least a relative reality independently of objects which manifest them. An intermediate position was held by the Conceptualists, who recognized that abstractions have a psychological reality, an existence in the mind.

These views are all partial and one-sided; there can be but one absolute reality, by contrast with which all else is maya or appearance; hence, using the word reality in any other connection is to use it in a relative sense. Behind physical things and events lie causes which are relatively real; while these latter are themselves but manifestations of still more real causes on a still higher plane; and so forth.

Reality Words such as reality, truth, and good are understood in reference to their opposites; and the opposite of reality is appearance or illusion. There can be but one fundamental or all-pervading reality, and the word in this sense becomes an equivalent to the one All, parabrahman, by contrast with which all else is maya or appearance. Reality when implying various conceptions is therefore a relative term, and we can but say that one thing is real by comparison with another thing which is relatively unreal. A dream seems real enough until we awake, and then our waking mind seems real; yet this also will seem unreal when we awake to a still higher consciousness.

Reality, like truth and unity, cannot be an object of knowledge except by intuition, which then functions on its own plane; for any mental faculty beneath intuition is itself relatively unreal, and its findings or deductions partake of the nature of their source; and all such deductions are understandable only by reference to their opposites. It is precisely this existence in nature of opposites which brings about the various mayas under which human understanding necessarily labors.

Reason The wisdom which ensues from the union of buddhi with manas, as contrasted with the higher immanent wisdom of atma-buddhi; also the human mind, which finds its place in the union of the higher and lower nature through the mediating fourth principle or kama, which itself works through what the Qabbalists call nephesh or the Latins the anima. Again, in some European philosophers, the characteristics of the Logos, which is stated to be cosmic mind or the Third Logos.

In Greek mythology Prometheus is represented as endowing man with reason and the use of the mental faculties, which corresponds to the descent of the manasaputras during the third root-race. In present mankind reason is a quality of manas, and its presence is the chief characteristic distinction between man and animal.

Rebecca, Rebekah (Hebrew) *Ribēqāh* In the Bible the wife of Isaac, mother of Esau and Jacob. When Rebecca was about to become a mother, she felt that the children were struggling within her, so she inquired of the Lord as to the meaning of this, and received the answer: “Two nations are in thy womb, and two manner of people shall be separated from thy bowels; and the one people shall be stronger than the other people; and the elder shall serve the younger” (Genesis 25:23). Rebecca gave birth to twins, “and the first came out red, all over like an hairy garment; and they called his name Esau” (25:25); and the other was called Jacob.

Genesis 25:24-34 contains “the allegorical history of the birth of the Fifth Race,” as explained in Jewish allegorical fashion; and “Esau represents in the Bible the race which stands between the Fourth and the Fifth, the Atlantean and the Aryan” (SD 2:705).

Rebirth. See REINCARNATION

Recaka. See RECHAKA

Recapitulation Known as the biogenic law. In embryology, the supposed process in which any embryo reproduces many of the progressive type-forms of the organisms that precede it in the line of development. The points of similarity between the series of forms that prevail from the simplest types of life to those of higher animals, and the resemblances in embryonic development of different organisms, are interpreted as evidence of a common descent. This implies that the embodying entity — man, for instance — is the product of a progressive series of forms.

Theosophy, however, shows the original unit of every manifested being to be an unself-conscious

spark of divine life which becomes involved progressively in all grades and forms of matter during uncounted periods of time and varied rounds of experience. Thus the common descent and the evolutionary urge are fundamentally spiritual in origin.

The human embryo, in rapidly epitomizing its individual and racial history, sketches strange conditions which were normal in the early root-races. Its brain, in the second month, forms more than twenty percent of the body, as compared with about two percent in the adult body; the early embryonic and adult heart have similar relative proportions. This dominance of brain and heart, the external prominence of the pineal gland, the organ of spiritual sight, the indifferent sex, etc., all point to type-forms suitable for the spiritual and intellectual unself-conscious egos manifesting in their early racial career. Today the reincarnating ego, with its vast ages of experience in matter, is the unseen organizer which summarizes its past, in overseeing the building of its body according to karmic specifications. Primeval man, though ethereal, was potentially human, and had retained from previous life cycles the form-pattern and seed-types of all grades below him. Hence, from him came all the subhuman creatures that developed and became specialized in their evolutionary turn.

Rechaka (Sanskrit) *Recaka* [from the verbal root *rec* to empty, purge] A hatha yoga practice for the regulation of the breath: the breath is expelled from one nostril while the other nostril is held closed with the finger, and then the operation is repeated with the other nostril. These operations, extremely dangerous to health and mental balance, should be discouraged. *See also* KUMBHAKA; PURAKA; HATHA YOGA; YOGA

Recorders Members of a class of sacred writers, initiators, and recorders of the archaic teachings, as for instance, Enoch, Hermes, and Thoth. Cosmogonically, the lipikas or recorders of karma.

Rector (Latin) Ruler, regent; the seven hierarchies of the creative Logos have each its rector or chief dhyanis, and these may be called cosmocratores, maharajas, pillars, etc. Kepler supposed that the motions of the planets are due to rectors — sidereal and cosmic forces, and Plato assigns to the planets their rulers. In theosophy every cosmic body has its rector or indwelling spiritual monad.

Rectores Tenebrarum harum (the rulers of these darknesses) is an ecclesiastical expression equivalent to the cosmocratores of Ephesians 6:12. But the rectors of light are really the same as the cosmocratores, the two being merely opposite poles — the former the higher pole and the latter the lower pole; but ecclesiasticism has turned the lower aspect into evil demons and powers of darkness.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Red-Roos

Red Caps, Red Hats, Red Hoods Often applied, especially by Europeans to the adherents of the Unreformed Buddhist sects, called in Tibet the Ning-ma-pas, who wear red robes and hoods. This sect was founded in Tibet in the latter part of the 8th century during the reign of the Tibetan king Ti-song De-tsen, who was so impressed with the precepts of Buddhism that he summoned Padmasambhava from Udyayana in Northwest India to spread the religion of the Buddha in Tibet. But by this time the Buddhism of Northwest India and Nepal had become infected with tantric practices, and these practices predominated in Tibet until the great reformer Tsong-kha-pa (born 1358) founded the order of the Gelukpas or Yellow Caps.

Padmasambhava, called in Tibet Guru Rimpoche or Padma-jungne, is even today one of the patron saints of Tibet and the chief guru of the Red Caps — his image occupying the place of honor on all the altars of this sect, which he founded in 749.

Mme. David-Neel writes: “the Lamas who belong to the Yellow Cap Sects acknowledge the superiority of their brethren in the various Red Cap Sects in all questions more or less connected with magic and occult science” (*My Journey to Lhasa* 181). This is a misinterpretation; there has always been a traditional antagonism between the reformed and unreformed sects, each sect having more or less contempt for the beliefs and practices of the other; yet each sect nevertheless holding the other in some respect and paying such deference as is in either case properly due. The Red Cap sects are very largely given over to tantric and other magical practices often partaking of sorcery. The tantric element predominating in this sect is wholly foreign to the pure teachings of Gautama Buddha. It is the higher, more educated, and the initiates of the Yellow Cap body who condemn these practices, although acknowledging their existence and efficacy in use: yet, it is the reformed body which is the true exponent of genuine occult sayings and spiritual magic, in no wise verging upon sorcery, necromancy, or similar modes of thought. Mme. David-Neel's acquaintance was very largely among the frontier tribes and sects, where she would naturally

have a better acquaintance with the practices of the Red Cap body than with those of the extremely reserved and reticent Yellow Caps. *See also* GELUKPAS

Redeemer [from Latin *redimo* buy back] Usually applied by Christians to Jesus Christ as the Son of God who came to earth and “sacrificed himself as a propitiation for our sins.” Prometheus, Dionysos, and other equivalents, are called redeemers; for they are types of the redeeming power in man himself. The good serpent Agathodaimon is another name for the cosmic redeemer; Lucifer the Light-bringer, our tempter and at the same time our illuminator, is our inner redeemer, as was the mystic serpent who withstood the Jewish Lord God in Eden.

In theosophy the redeemer or redemption is found within the person himself, for such redeemer is the spiritual monad, the highest part of the constitution, and the redemption consists in becoming progressively at one with the spiritual monad or inner god. The disciple or pilgrim has the constant spiritual and intellectual support of more advanced beings than himself, but the disciple must himself choose to turn toward the source whence such help comes, and to take it.

Redemption The Christian teaching that man may be delivered from sin and its consequences by the sacrifice allegedly made by Jesus Christ. It includes the ideas of atonement, justification, regeneration, sanctification, and salvation. *See also* REDEEMER

Regeneration [from Latin *re* again + *generare* to beget] Renewal, regrowth, spiritual rebirth; as rebirth follows upon death, regeneration follows upon destruction, hence it implies immortality. It is one meaning of the serpent or dragon symbol. The Holy of Holies of the Hebrews, and the King's Chamber in the Egyptian pyramid of Cheops, were symbols of regeneration with the ancients, but in certain materializing interpretations became transformed into symbols of generation. Siva in the Hindu Trimurti, sometimes described as representing destruction, is better called the regenerator. The end of one cycle is the birth of another, as typified in the rebirth of the year, the festival of Easter, etc.

Regeneration is also often used in those cases where the lower through inner regeneration becomes transformed into the higher.

Regent [from Latin *regens* ruling] Ruler, rector; the divine-spiritual-intellectual ruler or cosmic spirit of any cosmic entity. Equivalent to the 'elohim, kabiri, rays of the Logos, the four Maharajas, the genii of the seven sacred planets, of the twelve zodiacal constellations, or of stars, worlds, etc.

Regimen Ignis (Latin) The dominion of fire; the realm of the first group of dhyān-chohans, which is divided into three classes synthesized by the first, thus making a tetraktys.

Reimbodiment One of the fundamental propositions of the ancient wisdom. It may include reincarnation, metempsychosis, rebirth, etc. It means that a living entity or life-center takes a new imbodiment, not necessarily physical or on earth, and does so repeatedly. Nearly the same as metempsychosis, but the latter by convention refers to human imbodiments on earth. *See also*

REINCARNATION

Reincarnating Ego In the intermediate aspect of man's being, manas-kama is the ordinary seat of human imbodyed consciousness; the upper or aspiring part is buddhi-manas, the reincarnating ego, "that which undergoes periodical incarnation is the *Sutratma*, which means literally the 'Thread Soul.' It is a synonym of the reincarnating Ego — Manas conjoined with *Buddhi* — which absorbs the Manasic recollections of all our preceding lives" (Key 163). At death the lower part sinks into oblivion, and the reincarnating ego passes into devachan, carrying with it the noblest aspects of the person that was. In this state it remains within the monad, while the monad peregrinates from sphere to sphere, until the time comes for reincarnation on earth. When the monad, passing through the spheres, approaches the earth, the reincarnating ego slowly reawakes to self-conscious activity, and is drawn by the karmic seeds of affinity within itself to the earth, attracting itself to the human seed whereby it builds its coming physical imbodiment.

Reincarnation Reimbodiment; specifically reinfleshment, the repeated imbodiment of the reincarnating ego in vehicles of human flesh on this earth. The unexhausted desire for earth-life draws the ego back to this globe, where it gathers to itself the material for a reincarnation and thus is finally born from a human womb. The process is repeated almost numberless times until the evolution of the inspiriting monad has reached a stage when reincarnation is no longer required. The interval between successive incarnations may be roughly estimated at 100 times the length of the preceding earth-life — a rule obviously subject to many exceptions.

Relativity Associated with Einsteinian physics; the first postulate of the theory of relativity is the relativity of all motion, a return to the idea of Newton, which holds that there is no stationary ether or any fixed system of coordinates in space, with regard to which motion can be measured. The second postulate states that the velocity of light in free space appears the same to all observers regardless of the relative motion of the source of light and of the observer. A well-known feature of the theory is that by which space and time are no longer treated as independent, but as component elements of a four-dimensional continuum, space-time, and in which the objects whose position and motion are measured are called events. This is a movement in the direction of simplification, since it economizes the number of separate data which we must assume in order to build up our system of interpretation. Einstein also postulates the relativity of the force concept, thus obviating the objection that the Ptolemaic system is dynamically inadequate as compared with the Copernican.

Apart from this scientific use of relativity, its wider meaning is of prime importance in theosophy. Though we may say, in a general way, that all things are relative to each other, yet for purposes of reasoning or calculation it is necessary to assume certain things as constant; as for instance, in measuring velocities on the earth, we may assume that the earth is motionless; though when we enter the field of astronomy, we regard the earth as in motion with regard to the sun, and again

may regard the sun as in motion relatively to some other position assumed as at rest. By applying this principle we arrive at the conclusion that nothing in the universe, whether physical, astral, mental, or spiritual, is completely specified to our human mind except by its relations to other things. This principle is expressed by such sayings as that all objects are manifestations of a universal principle or that there are no absolutes.

Thus the word immortality, for example, does not refer to a particular state of existence for the liberated soul, for the various elements of our complex nature have varying degrees of immortality. Each has its own cycle of existence, longer or shorter; and “absolute immortality” can apply only to the ultimate essence of man. In the same way good and bad are regarded as relative terms. This does not mean, however, that good and bad differ from each other solely in being relative to each other; but that what is good from one point of view may be bad from another.

Religion [from Latin *religare* to bind back, implying obligation; or from *relegere* to select, distinguish among various elements for the choosing of the best; ponder] In theosophy individual religion of conduct means faith in his own essential divinity as a source of wisdom and an unerring and infallible guide in conduct; an ever-growing realization of that truth, an ever-growing consciousness of one’s spiritual identity with the divine in nature; and constant devotion to the ideals thus inspired. Religion means a self-sacrificing devotion to truth, a resolve to live in harmony with all other lives, a sacrificing of the personal self to the greater self.

In theosophy there is no divorce between the devotional and speculative functions of the mind; science and philosophy do not conflict with the innate sense of rectitude. Ethics are not based on expediency, a social compact, or a special revelation, but are inherent in the laws of the universe.

The ancient wisdom is the quintessence of all religions, the universal parent-source of all faiths; and in proportion as each great world religion rises to the height of its own possibilities, so will the external divergences among the different faiths of mankind blend into the original fundamental unity.

Reliquiae (Latin) Leavings; the astral shells or spooks of human beings and animals which are left in the lower strata of the astral light after death. Equivalent to the Sanskrit bhuta.

Remission of Sins Remission in the New Testament (Greek *aphesis*, Latin *remissio*) means sending away, discharge. The original meaning of remission of sins was the sending away of sinfulness from one’s heart, the purification of one’s nature, resulting from pledging oneself to a new way of life, undergoing initiation, passing through the second birth. In Christianity remission of sins has come to imply the action of deity through a divine agent, as is supposed to have been the case in Jesus. Jesus’ statement at the Last Supper: “This is my blood of the new testament (covenant, dispensation), which is shed for many for the remission of sins” (Matt 26:28), echoes the initiatory rites of the ancient Mysteries, the remission of sins here meaning that when the vitality (blood) of the immanent Christ in the individual becomes the directing influence in his life, there is then no

room for sins, which thereafter are discharged, sent away, refused. The karmic consequence, however, of previous sin must in all cases be worked out.

In Mark 1:4, John is said to preach the baptism of repentance for the remission of sins; repentance being the Greek *metanoia*, a radical change of heart or mind, of feeling and understanding. The Christian teaching easily slips into the mistaken doctrine that the consequences of wrongdoing can be escaped by some especial intercession of a personal savior or by some ecclesiastical agent and/or ceremony, just as remission has come to mean a letting-off, excusing, or escaping. Thus in the case of a debt, the debtor may *remit* (wrongly escape) the amount owed, but the creditor may truly *remit* or discharge the debt. Theosophy accepts the doctrine in the sense that sinfulness can be banished from the nature by self-purification; but not the notion that we can escape the results of our acts — past, present, or future.

Renunciation Not a painful obligation, but the result of a free choice; nor the giving up of an object of desire in favor of another object of desire. The question of advantage or disadvantage does not enter into it; these are delusions of the personal ego. The one who truly renounces abandons the acquisitiveness and desire for personal advantage which are the law of the lower nature, and follows the law of the higher nature, which is the law of love and harmony. The question as to whether he gains or loses is then relatively meaningless for him, for he has forgotten himself, because he has found his greater self.

Repentance In theology, a change of mental and spiritual habit respecting sin, involving a hatred of and sorrow because of it, and a genuine abandonment of it in conduct of life. The frequent reference made by Christians with regard to death-bed repentance, however distorted, nevertheless is based upon a truth. However, a person must always face the causes he has set in motion — which will appear as effects in some subsequent life, these lives being linked together with the present one by and through the *skandhas*.

Repercussion Striking back, as when a wave rebounds from a surface. In theosophical literature, applied to the phenomenon in which a blow aimed at the phantom of a living person takes effect on the person himself, as though it rebounded. It can occur in spiritualistic seances, when something done to a materialized form takes effect on the body of the medium. It is one of the secrets of black magical practices, such as that where a wax image of a person is made, and objects stuck into it, thus causing equivalent injury to the living person aimed at.

A similar effect may be produced in an unborn child by something which happens to the mother. A mental picture, an astral form, and a physical form are three linked stages in a series; which explains how a sorcerer can use his imagination for his evil purposes, and how the imagination of a mother can affect the body of the unborn child.

Rephaim (Hebrew) *Rěfā'īm* The sons of Raphah, a Canaanite race of giants; also the weak ones, shades or specters, the quiet and wan inhabitants of Hades or the Underworld, which were

nevertheless considered beings of gigantic size, and hence the collocation of the meanings of gigantic magnitude coupled with intrinsic weakness. This last refers to the phantom or astral races of early mankind: the first, second, and early third root-races before they were illuminated and inspired by the manasaputric descent (SD 2:279).

The passage in Job (26:5) translated “Dead things are formed from under the waters, and the inhabitants thereof,” should be “dead rephaim.”

Reproduction In theosophical writing, usually confined to the various modes of physical procreation and excluding the production of offspring by kriyasakti. The essential principle in natural reproduction is that an individual separates a portion of itself, which then evolves independently into a similar individual. This may occur by fission, as in the amoeba and other unicellular forms, the mode of the first root-race of humanity. Or by budding, as in the sea anemone and many plants, and in the second root-race. By the throwing off of spores, as occurs in mosses and fungi. By the production of an egg, hatched within or without the body; the egg may contain the so-called positive and negative reproductive elements, and so be self-fertilizing; or it may contain only the negative element and so require fertilizing. The positive element may be contributed by the same individual as supplies the negative element; and then we have hermaphroditism. Or the positive and negative elements may be in different individuals, and we have the present usual mode of reproduction. The human body has at one time or another passed through all these states. Part of the second and the earlier third root-race were hermaphroditic, and the later third practiced ordinary sexual reproduction. Mankind is destined to transcend the present mode, which is but a passing phase in evolutionary history, and then pass to modes analogous to the modes which obtain on the descending arc.

Repulsion. See ATTRACTION AND REPULSION

Resha Trivrah. See RE'SH HIWWAR

Re'sh Hiwwar (Hebrew) *Rē'sh Ḥiwwār* **Reisha' Hiwwara'** (Aramaic) *Rēishā' Ḥiwwārā'* [from Hebrew *rē'sh* head, beginning, chief, supremacy + *ḥiwwār* white, colorless purity, the colorless compound glory emanating forth from the Rootless Root, the Qabbalistic Concealed of the Concealed] Beginning of purity, head of purity, White Head; a Qabbalistic term applied to the first emanation of the Sephirothal Tree, Kether (the Crown). Through this first Sephirah or Head flows the white hid fire (or colorless glory of the spirit) in 370 streams in all directions of the universe. This number means the 360 occult points of consciousness each emanating its own fiery energy, in addition to the ten basic hierarchical roots or fountains, thus forming 370. “But indeed it is not fire, but that splendor which is included in the subtile air” (Zohar, 'Idra' Rabba', col. 256). This fire is termed the Living Fire or Spirit of Light (SD 1:338). It is the full aggregate of the entire stream of consciousness-life-substance emanating from the ever Concealed of the Concealed and flowing forth in 360 streams, from ten hierarchical fountains or roots, and thus building up the full

hierarchical structure of our universe. *See also* ANCIENT OF THE ANCIENT; FACE; HEAD OF ALL HEADS

Re'shith (Hebrew) *Rē'shīth* [from *rosh* head, chief, principal, first, beginning] Beginning, headship, the most excellent or highest of a series; wisdom. The first word in the Bible (prefixed by the prepositional letter B, meaning in, through, or by means of). "The fathers . . . dreaded above all to have the esoteric and true meaning of the word *Rasit* [re'shith] unveiled to the multitudes; for if once the true sense of this sentence, as well as that of the Hebrew word *asdt* . . . were understood rightly, the mystery of the Christian trinity would have crumbled, carrying in its downfall the new religion into the same heap of ruins with the ancient Mysteries"; "Origen, Clemens Alexandrinus, Chalcidius, Methodius, and Maimonides, on the authority of the *Targum* of Jerusalem, the orthodox and greatest authority of the Jews, held that the first two words in the book of *Genesis* — b-rasit, mean *Wisdom*, or the *Principle*. And that the idea of these words meaning "in the beginning" was never shared but by the profane, who were not allowed to penetrate any deeper into the esoteric sense of the sentence" (IU 2:34, 35). The beginning of *Genesis* is quite correctly translated "by wisdom," or "by means of wisdom," (cf Fund 98-102). *See also* BERE'SHITH

Resurrection A rising again, implying a previous descent; a rebirth after death. In its widest sense, the universal law of cyclic renewal manifested in cosmic, solar, terrestrial, and human phenomena, applying to manvantaras, and to reawakenings of the earth and of man — whether humanity as a whole, races, or individuals. In the last case it means regeneration, the second birth, initiation, symbolized by the resurrection of the mystic Christ enacted in the Mysteries, when the candidate rose from that cruciform couch which he had undergone the experiences of death. In Christianity this has become an actual physical or bodily resurrection of Jesus, supported by the stories of the empty tomb and the appearances to the disciples. The dogma of the resurrection of the body, however, is pointedly related to the teaching of the migration of the life-atoms, whereby the reincarnating entity draws together the elements which it had previously discarded. There is an Arabic legend of the bone Luz, said to be one of the bones at the bottom of the spinal column, the os coccygis, as indestructible and forming the nucleus of the resurrection body. In the adytum or Holy of Holies of ancient temples was found a sarcophagus symbolizing the universal process of resurrection, but in degenerate times it was occasionally turned by ignorance into a symbol of physical procreation. Other emblems of resurrection are the frog, phoenix, and egg.

Retardation and Acceleration, Law of The working of the inherent law of progressive development in every entity is modified by this law. When an entity occupies a dominant place in the evolutionary scale, the inferior and subordinate entities under its sway can no longer find a fully free field for their own self-expression, and consequently their evolution is said to be retarded. Thus the hosts of subordinate entities which compose the human body are retarded because their activities must be coordinated with that of the dominating human; while the evolution of the latter is unimpeded except for higher retardative elements, and at certain periods

has its own phases of acceleration. This is part of the give-and-take policy by which corporate action among individuals of all hierarchical classes is rendered not only possible, but necessary.

The law of retardation means that certain individuals or groups are from time to time retarded in their forward development because the field of evolution immediately before them is already occupied by a superior aggregate group of evolving entities, which superior group exercises upon the inferior group an influence retarding the full expression of the evolving faculties of the individuals of the lower group. This can be illustrated by considering the evolution of the life-waves, or kingdoms, which run the rounds on our own planetary chain. The beasts are thus subject to a very definite law of retardation, because their immediate and future field of evolutionary unfolding is occupied by the evolving human kingdom, although it is equally true that the human kingdom exercises upon the beast kingdom beneath it a stimulating and elevating power. In the kingdoms of the planetary chain, if one such kingdom has not already reached a certain evolutionary standing on the ladder of life, it will have to wait in a more or less inactive or dormant evolutionary condition until room is made for its further progress by the passing ahead of the kingdom preceding it.

The beasts, for instance, as indeed all other kingdoms in similar circumstances, are undergoing retardation at the present time in another slightly different sense: because they have not as yet evolved forth human qualities and powers. They will not make the grade into the human kingdom on the ascending arc for all the remainder of the present chain-manvantara, and this is the meaning of the phrase frequently found in theosophical writings that the door into the human kingdom closed at about the midpoint of the fourth root-race.

Contrariwise, when an individual, group, life-wave, or kingdom has been thus retarded because of karmic necessity, when the way is finally opened for them to progress forwards, and if they are ready to do so, there is an immediate acceleration, a quickening or vivifying of the entire life-stream, so that their progress from the beginning of such acceleration is quick and runs rapidly on. Such individuals are prepared, and unfold or develop rapidly when the time comes — the law of acceleration, just the contrary of the law of retardation.

Retribution Repayment, fiscal or moral; often used as a synonym for karma in human affairs. A tendency exists to apply the word specially to the seemingly bitter aspects of karma, as being the so-called punishment for evildoing; and reward is commonly applied to that aspect of karma which brings forth happy, pleasurable, and elevating factors in human life. *See also* KARMA

Reuel-Jethro (Hebrew) *Rě'ū'el Yityrō* In the Bible a priest of Midian having seven daughters and giving one of them (Zipporah) in marriage to Moses (Ex 2:16). "Jethro is called the 'father-in-law' of Moses; not because Moses was really married to one of his seven daughters. Moses was an Initiate, if he ever existed, and as such an ascetic, a nazir, and could never be married. It is an allegory like everything else. Zipporah (the shining) is one of the personified Occult Sciences given by Revel-

Jethro, the Midian priest Initiator, to Moses, his Egyptian pupil. The ‘well’ by which Moses sat down in his flight from the Pharaoh symbolizes the ‘well of Knowledge’ ” (SD 2:465n).

That an initiate could never be married is true of the highest class of adepts, but history shows that both men and women initiates, although very rarely of the highest rank, have been married. It is likewise to be remembered that one of the grandest initiates known to human history, Gautama Buddha, married and had a child.

Indeed, in ancient India, according to the laws of life then prevailing, all students, whether higher or lower, had to pass through the four stages of embodied life on earth, and one of these was called grihastha — a man who had his home, wife, and children, as it was then a religious duty for everyone to carry on his own family line.

Revelation of John or Apocalypse The last book in the New Testament, a specimen of apocalyptic literature, which in Christianity consists of Jewish Christian mystical books of unknown authorship, attributed among others to Enoch, Ezra, and various apostles. John’s Apocalypse is in part based on the Book of Enoch, and is the work of a Jewish Qabbalist who adapted it to Judaeo-Christianity, and who had a hereditary aversion to the Greek Mysteries. Like apocalyptic literature in general, it takes the form of visions supposed to be seen by the alleged author, and its burden is the struggle between righteousness and evil, ending in the overthrow of the latter and the establishment of the kingdom of Christ. It marks a stage in the gradual adaptation of the original esoteric Christianity to the demands of a creedal and worldly religion.

Several different keys are needed to interpret the Revelations of John: “no less than the *Book of Job*, the whole *Revelation*, is simply an allegorical narrative of the Mysteries and initiation therein of a candidate, who is John himself. . . . The numbers *seven*, *twelve*, and others are all so many lights thrown over the obscurity of the work” (IU 2:351; cf SD 2:93&n, 516).

Revel-Jethro. See REUEL-JETHRO

Reversion to Type. See ATAVISM

Rg-Veda. See RIG-VEDA

Rhea (Greek) Daughter of Ouranos and Gaia, sister and consort of Kronos, mother of Zeus and others of the principal divinities. Identified by the Homeric Greeks with Cybele, the Asiatic Magna Mater; also, as the mother of Zeus, with Demeter. An Orphic fragment reads: “When she bore Zeus she became Demeter.” The six sons and daughters — Vesta, Demeter, Hera, Zeus, Poseidon, and Hades — are symbols of the powers and elements of invisible, and the divisions of visible, nature. Rhea in one aspect is also Isis — nature, divine and human, bearing to Kronos (time) the elements and powers that in both invisible and visible form constitute nature, only to see them swallowed by Kronos in the end, drawn back into the inner worlds in due course by all-ingulfing time. See also ORPHISM

Rhemata (Greek) Sayings, especially oracular sayings, as the Rhemata of Jesus; equivalent to logia and dicta.

Rhianon (Welsh) Nymph, goddess; wife of Pwyll Pen Annwn in the first branch of the Mabinogi.

Rhinoceros Used in the mystical schools of Northern Buddhism to signify a pratyeka buddha, a translation of the Sanskrit khadga. The nature of the rhinoceros is to be alone, walk alone, live alone, intent on its own affairs and more or less oblivious of what does not concern these. Transferring the idea of the solitary individual intent upon his own purposes, however spiritually high, to the pratyeka buddhas gives an outline of the entire Mahayana Buddhist doctrine.

Instead of khadga, the ancient Buddhist writers frequently used eka-sringa (one-horned), likewise signifying rhinoceros with the reference to the one-pointed spiritual self-interest and spiritual selfishness, of the prayeka buddhas.

Eka-sringa-rishi is the rhinoceros-rishi.

Rhipaeus, Mount The Rhipaei Montes were said by the ancient Greeks and Latins to be a chain of mountains located somewhere in the northern parts of Europe and Asia; a true tradition of the formerly existing Hyperborean continent.

Rhizomata (Greek) [plural of *rhizoma* root, element] The four elements forming the second quaternary in the Pythagorean system, according to Plutarch, the first quaternary being purely spiritual.

Rhotaliai Derived from the huge, highly civilized island called Ruta, which perished many millennia ago and which was one of the last strongholds of Atlantean culture and civilization. This island existed in the Pacific Ocean, and from it as from a focus flowed forth civilizing colonies into what were then virgin or quasi-inhabited lands of the Far East, these colonies carrying with them their religions, philosophies, customs, habits, laws, languages, and forms of writing.

In the distant past the sacred and secret language possessed by all schools of occult philosophers was spoken all over the civilized portions of the globe. This language included not merely the speech but the various forms of the written alphabets employed to embody it. The devanagari (god-city script), of which modern Hindu devanagari is the lineal descendant, was then the favorite alphabetic form, in which the sacred language was embodied when used by initiates. It then was used almost exclusively by the central seat of occult learning of the time. (cf 5 Years of Theosophy 423).

Ribhu (Sanskrit) *R̥bhu* Clever, skillful, inventive; applied to Indra, Agni, and the adityas in the *Rig-Veda*. As a noun, an artist, smith, builder. Also the name of three semi-divine beings, Ribhu, Vaja, and Vibhvan, the name of the first being applied to the three; “thought by some to represent the three seasons of the year, and celebrated for their skill as artists; they are supposed to dwell in the

solar sphere, and are the artists who formed the horses of Indra, the carriage of the Asvins, and the miraculous cow of Brihaspati; they made their parents young, and performed other wonderful works; they are supposed to take their ease and remain idle for twelve days (the twelve intercalary days of the winter solstice) every year in the house of the Sun. (Agohya); after which they recommence working; when the gods heard of their skill, they sent Agni to them with the one cup of their rival Tvashti, the artificer of the gods, bidding the Ribhus construct four cups from it; when they had successfully executed this task, the gods received the Ribhus amongst themselves and allowed them to partake of their sacrifices; they appear generally as accompanying Indra, especially at the evening sacrifice” (M-Wms Dict). In the Puranas, Ribhu is a son of Brahman, while Sankaracharya’s guru enumerates him as one of the seven kumaras (SD 1:457).

Ribhu thus is a generalizing term corresponding to one aspect of one of the manasaputras (sons of mind).

Rich (Sanskrit) *Ṛc* [from the verbal root *ṛc* to honor, praise, cover or hide from view] A verse of any of the Vedas; in the nominative case before a soft consonant it is euphonized to *rig*.

Riddhi (Sanskrit) *Ṛddhi* [from the verbal root *ṛdh* to increase, prosper] Increase, growth, good fortune, prosperity; also accomplishment, perfection, supernatural power.

Riddhi-pada (Sanskrit) *Ṛddhi-pāda* [from *ṛddhi* supernormal power + *pāda* step, way, ray, beam of light] The way or steps to the attainment of supernormal powers; four steps being enumerated in raja yoga. These “are the four modes of controlling and finally of annihilating desire, memory, and finally meditation itself — so far as these are connected with any effort of the physical brain — meditation then becomes absolutely *spiritual*” (TG 324).

Right-hand Path From time immemorial, in all countries and among all races, there have been recognized two antagonistic schools of occult training, known as the path of light and the path of darkness. They represent two fundamental courses in nature, and are more commonly called the right-hand path and the left-hand path, as in Greek, Latin, English, and many other languages the word for right-hand also means propitious or skilled, or right as opposed to wrong. Hence in symbology it implies goodness, rightness, light: solar as opposed to lunar, spiritual as opposed to material, etc.

The right-hand path is sometimes known as amrita-yana (the immortal vehicle or path of immortality) or as dakshina-marga (right path), and those who practice the rules of conduct and manner of life enjoined upon those who follow the right-hand path are known as dakshinacharins and their course of life is known as dakshinachara. It is a path leading to an ever wider consciousness, and those whose feet are firmly planted thereon are known as Masters of Wisdom and Compassion. *See also* LEFT-HAND PATH

Rig-Veda (Sanskrit) *Ṛg-Veda* [from *ṛc* verse, hymn of praise + *veda* knowledge] The first and most

important of the four Vedas; so named because it is the Veda composed of 1,028 suktas or hymns of praise addressed to the various entities and powers of nature. To this Veda also belong various subordinate commentaries and treatises of different classes: the Brahmanas, Aranyakas, and Upanishads.

“Thus, the Rig-Veda, the oldest of *all the known* ancient records, may be shown to corroborate the occult teachings in almost every respect. Its hymns — the records written by the earliest Initiates of the Fifth (our race) concerning the primordial teachings — speak of the Seven Races (two still to come) allegorising them by the ‘seven streams’ (I, 35, 8); and of the Five Races (*‘panca krishtayah’* [pancha-krishtayah]) which have already inhabited this world (*ibid*) on the five regions *‘panca pradicaḥ’* [pancha-pradisah] (IX, 86, 29), as also of the *three continents* that were” (SD 2:606).

Riksha (Sanskrit) *Ṛkṣa* A bear; the seven rishis or seven stars of the Pleiades. Also a star or constellation in general, and hence of one of the 27 lunar mansions or constellations. In astrology, used for that particular star in one of the 27 mansions of the moon under which a human individual is born.

Rime-thurses. See FROST GIANTS

Rimmon (Hebrew) *Rimmōn* A pomegranate; used as an ornament in architecture and as a symbol in Syrian temples, standing for the generative and productive feminine principle in nature, its seeds especially being an allusion to fertility. Thus it is found on the pillar of Boaz and other similar representations (2 Kings 5:18).

The pomegranate appears also in the Mysteries of ancient Greece — particularly in the mythos of Persephone and Hades. By eating of this fruit of earth while in the Underworld Persephone was doomed to spend six months of the year in those gloomy regions. This emblem of feminine fertility was mystically applied both to the womb of cosmic space containing the innumerable seeds or germs of beings to be, and also to nature’s productive or generative fertility in all smaller things.

Ring Employed in the early days of the Theosophical Society, especially in connection with the correspondence held by the mahatmas with A. P. Sinnett and A. O. Hume, to signify any one of the many evolutionary cyclings followed by the monads in and through the different kingdoms of nature, such as the elemental, mineral, vegetable, etc. Any group of such monads thus collected together is called a life-wave. Every one of the seven, ten, or twelve classes of monads must follow every one of such rings in order to evolve the karmic and latent powers and capacities involved in the monad and held by it as evolutionary tendencies or urges.

In connection with the human kingdom or life-wave, ring or rings has been superseded by the term root-races. See also ROUND

Ring-pass-not The limit in spiritual, intellectual, or psychological power or consciousness, beyond

which an individual is unable to pass until he evokes from within the strength and the vision to carry him forwards and over the circumscribing limits set by that individual's own karma. In the Stanzas of Dzyan, the lipikas are said to circumscribe the triangle, the first one, the cube, the second one, and the pentacle within the egg, which is the ring called pass not for those who descend and ascend and for those who are progressing toward the great Day Be-With-Us. Also called the dhyani-pasa (rope of the dhyanis or angels) that hedges off the phenomenal from the noumenal kosmos. The world circumscribed by this ring is signified mathematically by $31415 = 14$ expressing hierarchies of dhyani-chohans. The embodying monads, and men who are ascending towards purification but have not yet quite reached the goal, can cross the ring only on the Day Be-With-Us, the day when man will have freed himself from the trammels of ignorance and recognized fully the nonseparateness of his personal ego from the universal ego, and returns into conscious at-one-ness with Brahman.

These ring-pass-not are therefore obviously not actual rings of matter, but inability to pass beyond the limits set by one's own strength. They refer to tangible and intangible, albeit temporarily impassible, frontiers or barriers raised by past karma and guarded by the lipikas, those cosmic spirits of extremely mystical character who are at the same time the guardians and agents of karma.

The term is variable, inasmuch as what would be the ring-pass-not for the human hierarchy would not be so to a superior hierarchy. Similarly the ring-pass-not for the beings below the human kingdom is not a boundary for humans. This has an especial reference to states of consciousness, and the majority of the human host is still unable to extend its consciousness beyond the sphere of man's immediate activities — which thus at present form for humanity an intangible but very real ring-pass-not. There is a ring-pass-not surrounding globe D, this earth, and a ring of farther extension surrounding the earth planetary-chain, and beyond that still another surrounding the solar system, and a still larger one circumscribing the galaxy, etc.

Riphaeus. See RHIPAEUS

Rishabha (Sanskrit) *R̥ṣabha* Power, strength, excellence; the second zodiacal sign, Taurus the Bull; in the Vedas and Upanishads, often used to mean pranava or Aum. Abbreviated as rii, it is the second of the seven notes of the Hindu musical scale. According to the *Bhagavata-Purana*, the first teacher of the Jain doctrines in India; the first Jain Tirthakara (tirthankara) or arhat.

Rishi (Sanskrit) *R̥ṣi* An adept, seer, inspired person; in Vedic literature, used for the seers through whom the various mantras or hymns of the Veda were revealed. In later times the rishis were regarded as a particular class of beings, distinct from gods and men, the patriarchs or creators: thus there were the ten maharshis — the mind-born sons of Prajapati. In the *Mahabharata*, the seven rishis of the first manvantara are enumerated as Marichi, Atri, Angiras, Pulaha, Kratu, Pulastya, and Vasishtha. In *Satapatha-Brahmana* the Vedic rishis are named as: Gotama,

Bharadvaja, Visvamisra, Jamadagni, Vasishtha, Kasyapa, and Atri. The seven rishis (saptarshis) are especially associated with the constellation of the Great Bear.

Rishi-manus, Rishi-prajapatis (Sanskrit) *Ṛṣi-manu-s, Ṛṣi-prajāpati-s* Equivalent terms for the far-seeing and enlightened manus or progenitors, or in certain relations the architects of our world, equivalent to the seven or ten: Ki-y of China; amshaspendis of ancient Persia; annedoti of the Chaldeans; or Sephiroth of the Qabbalah. They are the inspired progenitors of all living beings and things, cosmic or on lower scales of nature. Both are more generally called dhyani-chohans, gods, or devas. It is only the very highest among them who can be called the architects or builders of the world, because the lower classes of them have as their particular labor the emanating and guidance of the various stocks or races of living beings, humans included.

Rishi-yogis (Sanskrit) *Ṛṣi-yogin-s* Adepts in yoga; these adepts of the Puranas acquired divine powers through self-exertion.

Ri-thlen (East Indian) Snake-keeping; “a terrible kind of sorcery practised at Cherrapoonjee in the Khasi-Hills. . . . As the legend tells us: ages ago a *thlen* (serpent-dragon) which inhabited a cavern and devoured men and cattle was put to death by a local St. George, and cut to pieces, every piece being sent out to a different district to be burnt. But the piece received by the Khasis was preserved by them and became a kind of household god, and their descendants developed into *Ri-thlens* or ‘snake-keepers,’ for the piece they preserved grew into a dragon (*thlen*) and ever since has obsessed certain Brahmin families of that district. To acquire the good grace of their *thlen* and save their own lives, these ‘keepers’ have often to commit murders of women and children, from whose bodies they cut out the toe and finger nails, which they bring to their *thlen*, and thus indulge in a number of black magic practices connected with sorcery and necromancy” (TG 278-9).

Ritu. See ROODOO

Rksa. See RIKSHA

Ro. See RU

Roc (Arabic) *rukḥ*. A giant bird, appearing in the *Arabian Nights*’; equivalent to the Arabian ‘anka or phoenix, the Hindu Garuda, and the Persian Simorgh.

Rohanee (Arabic) *Rūhānī*. Used by the modern Sufis, in some senses equivalent to the Sanskrit gupta-vidya (secret knowledge); “the Magic of modern Egypt, supposed to proceed from Angels and Spirits, that is Genii, and by the use of the mystery names of Allah; they distinguish two forms — Ilwee, that is the Higher or White Magic; and Suflee and Sheytanee, the Lower or Black Demoniatic Magic. There is also Es-Seemuja, which is deception or conjuring. Opinions differ as to the importance of a branch of Magic called Darb el Mendel, or as Barker calls it in English, the Mendal: by this is meant a form of artificial clairvoyance, exhibited by a young boy before puberty, or a virgin, who, as the result of self-fascination by gazing on a pool of ink in the hand, with coincident

use of incense and incantation, sees certain scenes of real life passing over its surface” (TG 280).

Rohini (Sanskrit) *Rohiṇī* [from *rohita* red] A red cow, represented as a daughter of Surabhi and mother of cattle, especially of Kamadhenu (the cow of plenty). Also the ninth lunar asterism, personified as a daughter of Daksha and favorite wife of the moon. Also one of Vasudeva’s wives and mother of Bala-Rama. Also one of Krishna’s wives. A common name for many personages of Hindu mythology.

Rohinila (Sanskrit) *Rohiṇīlā* [from *rohiṇī* red + *nīlā* blue] “The ancient name of a monastery visited by Buddha Sakyamuni, now called Roynallah, near Balgada, in Eastern Behar” (TG 279).

Rohit (Sanskrit) *Rohit* Red; a female deer, hind. In the Puranas Vach, the female aspect of Brahma, assumes the form of a rohit in order to escape the amorous pursuits of her father, Brahma, who nevertheless transformed himself for that purpose into a buck or red deer (*rohita*), Brahma’s color being red.

Events in cosmic evolution and emanation were told under the guise of fairy tales such as the above, in order to hide the meaning from those whose right to know had not yet been established through proper training, self-devotion to truth, and renunciation of the temptations of ordinary life. Here Vach is the feminine form of the Logos, and Brahma is the masculine form; the Logos is a unit, but when worlds are evolved it produces from itself its alter ego for the purpose of the ensuing manvantara, which is called the feminine Logos in which the masculine Logos of intelligence drops the seeds of thought, and from the spiritual matter or feminine Logos emanate the hierarchies of beings. The two aspects of the Logos are inseparable, but appear as a manifested duality only at the very beginnings of manvantaric time. It is thus seen that when Brahma emanates Vach as one half of his body or self, it means that for the purposes of manvantaric emanational productions, the Logos enters upon its creative activities. Brahma in this case becomes what would in the Christian Trinity be called the Father, Vach the Holy Spirit (always feminine among the early Christians), out of which comes forth the third aspect of the Logos, the manifested Logos. Brahma therefore is the First or Unmanifest Logos, Vach the Second or Manifest-unmanifest Logos; the intelligence creating the hierarchies of beings is the Third or Manifesting Logos. Thus the three Logoi are yet but one, as the Christian Trinity is said to be composed of three persons or masks philosophically, and yet to form one Godhead or Godhood.

Rohitaka-stupa (Sanskrit) *Rohitaka-stūpa* [from *rohita* red + *stūpa* a conical monument] The red stupa or dagoba built by King Asoka, and on which Maitribala-rajā fed starving yakshas with his blood.

Romakapura (Sanskrit) *Romakapura* [from *romaka* hairy + *pura* city, fortified town] City of hairy ones; in the *Surya-Siddhanta* (1:6; 12:39), the birth place of Asuramaya, the putative author of the *Surya-Siddhanta* itself, who states that he received the knowledge which the scripture contains by dictation from the sun. It is stated to have been told to Asuramaya when but little of the krita yuga

was left, making the work's age at least 2,200,000 years. The "fact of 'Romaka-pura in the West' being named as the birth-place of this hero of the archaic ages, is the more interesting because it is so very suggestive of the esoteric teaching about the 'Sweat-born' Races, the men born from the pores of their parents. 'Romakupas' means 'hair-pores' in Sanskrit" (SD 2:68). Romakapura therefore has a vague allusion to the land and cradle of the sweat-born of the third root-race, but more particularly in this case to the early days of Atlantis. The figure of 2,200,000 years ago brings Asuramaya and his work into the first part of the present fifth root-race.

Romakupas (Sanskrit) *Romakūpa*-s Hair- or skin-pores; from hair pores of those of the late second root-race and the early third root-race the Raumas or sweat-born tribes of the early third root-race were issued. The sweat-born races were therefore individuals taking physiological birth from the pores of their parents.

Romulus (Latin) The traditional founder of Rome, belonging to the class of heroes or semi-divine ancestors. Such names as Romulus, Herakles, or Solomon denote the genii presiding over the respective races or civilizations which they have founded, the cycles of time during which those races flourished, and various individuals or even dynasties who embodied the spirit of those genii. Romulus is of divine birth, and there are familiar stories also elsewhere of children to become heroes being cast away and found by a shepherd, nurtured by a wolf, etc. — a usual symbolic history of the founding of a new culture. Such a myth, especially in the hands of a hard-headed and pragmatic people like the Romans, would be likely to be tacked onto traditions about some particular person, and Livy's story is doubtless the result of such an adaptation.

Nevertheless, the myth originally undoubtedly contained occult truths, for the wolf stands for a certain fostering or nutritive factor in the legend, and does not mean the actual animal; and similarly with the shepherd in such legends.

Roodoo, Ritu *rtu* (Tamil) A period of sixty days or two months; an ancient astronomical time period connected with the moon, used also by the Chinese, Egyptians, and ancient Arabs. Three Roodoos make an ayana, as it is found in Sanskrit, or half a year (SD 2:620-1).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Root-Rz

Rootless Root The cosmic origin or womb of all, itself therefore necessarily without origin except itself — self-born, parentless. The name is applied to parabrahman, be-ness rather than being. “The One reality is *Mulaprakriti* (undifferentiated Substance) — the ‘Rootless root’ ” (ML 347).

From the Rootless Root spring forth into manifestation in ever succeeding and unending cosmic periods, the universes which are scattered like seeds over the limitless fields of space; but in and through this womb there is the ever living and working hiranyagarbha (golden germ or egg), signifying for each such manifesting universe its divine monad — its divine consciousness and intelligence. *See also* BOUNDLESS

Root-manu and Seed-manu Fourteen manus preside over our planetary chain during its life-cycle, there being two principal or round-manus for each round. The first of each pair, appearing at the beginning of a round, is called the root-manu; the second, appearing towards the end, before the intervening twilight or nirvana, is the seed-manu, who presides over the holding of the seeds of life until the coming of the life-waves at the beginning of the next round. The root-manu appears on globe A, the seed-manu on the seventh globe (globe G).

Root- and seed-manu, in certain relations, are spoken of as being respectively the prime cause and its accumulated final effect at the end of the round. As we are now in the middle of the fourth round, there have so far been seven principal or round-manus. By reason of nature’s analogical procedures, there is for each globe of a planetary chain a root-manu at the beginning of its several succeeding periods of activity, and a seed-manu at the end of the same; as being their spiritual offspring, the names are the same as those by which the principal or round-manus are known. This list of root- and seed-manus for each round is given in *The Laws of Manu* (cf SD 2:309): 1) Svayambhuva, Svarochi or Svarochisha; 2) Auttami, Tamasa; 3) Raivata, Chakshusha; 4) Vaivasvata (our progenitor), Savarna; 5) Daksha-savarna, Brahma-savarna; 6) Dharma-savarna, Rudra-

savarna; and 7) Rauchya, Bhautya.

Vaivasvata is the primitive root-manu of our fourth human wave. Manu, insofar as the human life-wave is concerned, is not a man but collective humanity; yet it is likewise true that Manu is a spiritual individual — a difficult doctrine to grasp at first presentation. The name Vaivasvata is also used for one of the seven minor manus who preside over the seven root-races of our planet. It is this latter that among other peoples is called Xisuthrus, Deucalion, Noah, etc. *See also* MANU

Root-matter. *See* MULAPRAKRITI

Root-principle Generally, the spiritual or energetic side of what is in its vehicular aspect called root-element, primordial matter or substance, mulaprakriti, or chaos.

Root-race The main serial divisions of the human life-wave on any globe of a planetary chain; for instance, the root-races on our globe D include the third or Lemurian, the fourth or Atlantean, and the present fifth. Each such root-race contains many and various races as the word is commonly understood. All the human beings alive today are part of the fifth root-race. Each life-wave when it has completed its cycle of seven root-races on one globe, transfers its life-energies to the next globe, whereupon begins the same sequence of seven root-races on that next globe. Thus each globe of a planetary chain has its seven root-races, which together constitute one globe-round, the whole set of seven globe-rounds completing one planetary round. *See also* RACE(S)

Root-race, First of the fourth round on globe D of our earth, composed of emanations of the lunar pitris produced by the processes of chhaya-birth — the ethereal lunar pitris emanated their own “shadows” or vehicles, as colossal ovoid bodies of tenuous astral substance, to us translucent, and having but rudiments or type of color. They were spiritual and ethereal within, and more condensedly ethereal outwardly, as yet possessing latent but not active intelligence, and therefore as yet having no speech; composed of all the elements, but as yet having no living intellectual fire manifest. Their habitat was the “Imperishable Sacred Land” around the region of the north pole, where they first appeared in seven more or less distinct but overlapping localities. Their method of reproduction in the earlier periods was by one form melting into its progeny. Later the race reproduced itself by fission; in all these cases there was no death to individuals, because the individuals became their own descendants, as is exemplified in certain elementary forms of life today. This race inhabited the globe when there was more water than land on the earth, and its destruction was by fire.

However, even in this first root-race in which individualized intelligence was not yet manifesting, because the forms were not yet ready to carry this intelligence, there were nevertheless certain representatives, the highest in the entire vast racial group, who were already intelligent because of unfolded manasic attributes, and who because of their more advanced state of evolution were enabled to build up an intermediary psychological apparatus of etherealized or tenuous character permitting the transmission of thought and intelligence from the monad into the physical frame.

These intelligent entities, few as compared with the vast numbers of the mass, were the first manasaputric incarnations, and were therefore the highest and most evolved, and in consequence the leaders and guardians of the unintelligent multitudes of this race.

Root-race, Second Like the first root-race of the present round on globe D of the earth-chain, the second was astral, though somewhat more concreted, physicalized, or materialized. The bodies were unlike what is now regarded as human, bearing but vaguely the human outline of a gelatinous, filamentoid, jelly-like nature, as yet without evolved bones, organs, hair, or true skin. Reproduction was by budding, as occurs in some lower organisms today. About the middle of the race, these buds became numerous and the process became modified to one analogous to the casting off of spores or seeds, or to the exuding of drops of vital sweat. These beings were mindless and unmoral, innocent, guided unconsciously by their spiritual instincts, nevertheless largely under the sway of lower rather than spiritual impulses, somewhat like the animals of today. For as yet no intellectual fire from the manasaputras (sons of mind) had been communicated to them, so that as yet there was no working bridge of mentality between spirit and matter in them.

Root-race, Third A period when human evolution passed through a stage analogous to that of the third round, but qualified by the fact that it belonged to the fourth round. The date of the beginning of this third root-race is set at some 22 or 23 million years ago; and 18,000,000 years ago is given in theosophical writings as the date of the awakening of mind and the separation of the sexes at or somewhat after the midpoint of the third root-race. The latter date is collated, according to the geology of Blavatsky's time, with the later Triassic and earlier Jurassic periods.

The geographical area was the enormous continent known as Lemuria and outlying islands, some even of semi-continental size; and, like the other odd-numbered races, in this geographical distribution the water-area predominated over the land-area, and its destruction finally came about through fire.

The filamentoid and boneless structure of the semi-astral human bodies at the end of the second root-race now thickened and condensed, separating itself upon a rapidly developing skeletal form into nervous, muscular, and other systems, combined with the appearance of definite organs, with specific functions, thus constituting the first truly physical human beings. The mode of reproduction at the beginning of the root-race was by the exudation from the surface of the body of vital "sweat" or cells, but with the hardening and specialization of the body itself, the production of the reproductive cells became localized in special organs and the mode of generation became oviparous; later these human eggs were no longer extruded as is the case with fowls today, but shrank greatly in size and were developed and fertilized within the body: first in a virginal manner, and then before true sex appeared there ensued a fairly long period of androgynous reproduction in which androgynous humans occasionally gave birth to individuals in whom one or the other sex predominated; and these occasional appearances, as time passed, became ever more frequent with the recession of androgyny, and the final appearance of true sex as it is

understood today. This process extended over hundreds of thousands, and even a number of millions, of years.

More important, however, than these biological facts was the awakening of mind, of self-conscious thinking, inaugurated by the descent of the manasaputras who not only at first projected sparks of their own full self-consciousness into the innocent and unthinking humanity of that early time, but who likewise so stimulated the appearance of mind that the latter finally became common in differing degrees to the entire human stock. *See also LEMURIA*

Root-race, Fourth Often spoken of as the Atlantean, the name given in theosophic writings to the land-system which it occupied; it followed the third or so-called Lemurian race, not suddenly but with overlapping. During the fourth root-race humanity reached its greatest phases of materiality, especially since it occurred during the fourth round. The fourth root-race was roughly contemporaneous with what towards the end of the last century was called Tertiary times and came to an end in what was then known as the middle Miocene. Its total duration was millions of years.

The stature of the generality of the fourth root-race peoples was what would be gigantic to us today, which is one source of the universal tradition as to giants on the earth in far antiquity. Its earlier language was the monosyllabic type of the latter half of the third root-race, yet the characteristic speech during a large portion of its span was of the agglutinative type, inflected speech coming with the fifth root-race. The mode of reproduction was sexual, as it was in the latter half of the third root-race. After the fourth root-race had reached its zenith, certain unevolved tribes committed miscegenation with the most evolved of the then-existing simians, which were the descendants of a previous miscegenation of representatives of the third root-race with true monkey stocks. This second miscegenation produced a hybrid stock from which the anthropoid apes are descended.

There was an enmity lasting for ages between the benevolent and the selfish portions of the fourth root-race, which continued with the Aryan adepts of the nascent fifth root-race and finally ended in the triumph of the positive; but nevertheless the karma of Atlantean black magic even yet blights our own fifth root-race, for the people of today were imbodied as the humans of Atlantean times. Descendants of fourth root-race humanity even now are among the inhabitants of the earth, together with rapidly dying out remnants of the third root-race, and also various mixtures of all these.

During the fourth root-race on this globe D of the fourth round, evolution reached the middle of its course for this planetary manvantara, and the door to entry into the state of spiritual and intellectual evolution called the human kingdom was closed. All entities beneath the humans (and probably higher anthropoids who were in existence before that epoch) must await until the next succeeding round before even the highest representatives of the beast kingdom can pass on to the

human stage. All subhuman kingdoms will show a tendency as time goes on to die out, because the monads of these kingdoms will go into latency for the remainder of the planetary manvantara; their chance for evolution into the human state will come again during the succeeding planetary manvantara. *See also* ATLANTEANS

Root-race, Fifth The human race at present on earth; the fifth root-race on this globe D in the fourth round originated from the seed-race of the middle fourth root-race and as the ages passed began to occupy the lands which have since gradually taken form in our present continental distribution. It is subdivided, like all other root-races, into seven subraces, and these again each into smaller divisions. The present predominant sub-subrace is the fifth of its fourth primary subrace, only a little beyond the point of greatest materiality of this root-race.

In one general sense, the fifth root-race actually comprises the many and extremely varied stocks which exist on the earth today, simply because they all live in the time period of the fifth root-race, although many of the stocks are lineal descendants of the last subrace of the fourth root-race more or less intermixed with what can be described as more characteristic fifth root-race stock. The Chinese, for example, although descended from the latest subrace of the fourth root-race, yet because of living in fifth root-race times are to be reckoned among fifth root-race peoples, of which indeed they are among the very oldest. The Semites in all their divisions are to be considered as an early offshoot of the fifth root-race, and not as a race essentially or radically distinct.

The fifth root-race is sometimes spoken of as the Aryan race, merely because the Aryans of India are an existing example of the earliest branches of the fifth, though the term Aryan is not in accordance with the various ethnological and linguistic distinction to which that name is commonly applied. The characteristic language of this root-race is inflectional, such as Sanskrit or Greek. The symbol of the fifth or Aryan race is “that which is its most sacred symbol to this day, the bull (and the cow)” (SD 2:533).

Root-race, Sixth The root-race which will succeed the present fifth root-race, sometimes called the Aryan race in theosophical literature because the Aryan Hindus were a part of the original first subrace of the fifth root-race. Care should be taken not to confuse the sixth root-race with the sixth subrace of the fifth root-race which was stated by Blavatsky to be in process of forming in America as seeds — the earliest pioneers, although already beginning to appear, will not be numerous for several thousand years. The preparation for the sixth root-race will take place during the sixth and seventh subraces of the fifth root-race in the Americas. When the time arrives, this future sixth root-race will be predominant on the earth, new lands will have appeared, and many of the present lands will be submerged. The surface of the globe will, in time of course, be entirely changed, and there will then be more land than water (as also was the case during the fourth root-race).

During the sixth root-race, humanity will not be gigantic in size (as were the fourth and third root-

ances), for spirituality will be on the ascendancy and materiality decreasing, so that at the end of the sixth root-race the development of spirituality will be parallel to what it was at the beginning of the second root-race plus, however, the added evolutionary experience gained during the preceding root-races. The characteristics of sex will gradually disappear, and humanity will be slowly once again becoming androgynous. Offspring will be born in a manner generally similar to that which prevailed during the second and early third root-race periods: toward the close of the sixth, mankind will begin to manifest the first appearances of reproduction by kriyasakti (propagation by means of will and imagination). Toward the close of the sixth root-race, humanity will be showing a steadily increasing tendency to evolve out of fleshly into more ethereal physical vehicles. These various changes are presentments of what will in the due course be established in relative perfection during the sixth round — coming events cast their shadows before. Indeed the sixth root-race will be as compared with our own fifth far in advance, spiritually, intellectually, psychically, and even physically; and the attainment by mankind of adeptship or mahatmaship will be notably more easy than is the case at present.

With the advent of each root-race a new cosmic element comes into proportionate manifestation, and a new physical sense apparatus appears: thus humanity in the sixth root-race will develop what is meant by a sixth sense. The fifth cosmic element (often named aether or akasa-tattva) will reach a development proportionate to the evolution of mankind during the fifth root-race in this fourth round; and after the same manner, a sixth cosmic element will make its appearance during the course of human evolution during the sixth root-race. Furthermore, just as a manushya-buddha comes to lead mankind in each root-race, so will one appear during the sixth root-race of the future.

Root-race, Seventh The seventh and last root-race of any round on any globe of a planetary chain. Reference is nearly always to the seventh root-race of the fourth round on globe D of the earth-chain. Its characteristics are analogous on a smaller scale to those of the seventh round, modified by the fact that it belongs to the fourth round. There is a return to conditions of purity which prevailed at the beginning of the round; but this return does not mean a going backward but an emanative evolutionary unfolding to the point where the cyclic motion brings all things back to the same plane, but on a higher subdivision. The great adepts and initiates — referring here specifically to the seventh root-race on globe D of the fourth round — will once more produce mind-born sons immaculately, and there will be a race of buddhas, sons of god, the purity of the krita-age being reestablished (SD 2:274, 483). The invisible north polar continent will once more become visible, and the bodhisattva Maitreya will appear (SD 1:328, 470). A seventh element will appear as a presentment, not however to be fully manifested until the seventh round. In this race some of the greatest adepts will return.

Root-types In biology animal or plant species derive from seven, ten, or twelve primeval physico-astral root-types, being in the case of every kingdom the origins of the widely differentiated,

greatly specialized individuals now found on earth. “Every new Manvantara brings along with it the renovation of forms, types and species; every type of the preceding organic forms — vegetable, animal and human — changes and is perfected in the next, even to the mineral, which has received in this Round its final opacity and hardness; its softer portions having formed the present vegetation; the astral relics of previous vegetation and fauna having been utilized in the formation of the lower animals, and determining the structure of the primeval Root-Types of the highest mammalia” (SD 2:730). Primeval astral man was the root-type of those early mammalians, from whom the anthropoids sprang by human miscegenation, although this does not apply to the animals beneath the mammals.

The point at issue between theosophic teachings and modern evolutionary theory is that species cannot be traced back to a unitary physical origin; instead, a number of types appeared on the physical planes, coming from the astral, through intermediate astro-physical stages, and each type proceeding to differentiate physically in response to physical conditions.

Ropt (Icelandic) [from *hroptr* crier, prophet (cf *hroptatyr* crier of the gods), slandered, maligned] In Norse mythology, the name by which Odin is known in Valhalla where his heroes, the One-harriers, are brought by the Valkyries when they have been “slain” on the field of battle. As the initiator or higher self of any human aspirant, Odin is said to be maligned for he not only instructs and inspires, he also subjects the soul to the severe testing it must undergo before it can be admitted to the Hall of the Elect (Valhalla). Hence only the successful initiate recognizes Odin as Ropt.

Rose-croix. See ROSICRUCIANS

Rosicrucians [from Latin *rosa* rose + *crux* cross] Rosy cross or rose cross, referring to the cross of the rose, the general medieval idea of the rose being an emblem of divine love, and the cross of renunciation and self-conquest. A medieval European mystical and quasi-occult fraternity, probably dating from about the mid-15th century. It represented one of the many cyclic attempts to reintroduce and keep alive the ancient wisdom, and its history is typical of most such enterprises. The name was first given to the disciples of a learned adept, Christian Rosenkreuz, the alleged surname itself being a German translation of rose-cross, leaving open whether Rosenkreuz was actually a family name or a surname mystically adopted to designate a particular body of mystical thought; the name Christian may be another such mystical name-adoption. At any rate, Rosenkreuz returned from a journey in Asia and founded a mystical order in Europe. He and his disciples encountered the determined opposition of the Christian Church which then held sway over so much of Europe. He dressed up his teachings in a Christian garb, using such names as Jehovah as screens for the real meaning, and communicating to his disciples the keys for an interpretation of his doctrines. He founded no formal association and built no colleges, for the utmost secrecy was necessary to escape persecution and even death. It is for these reasons that the

true history of the Rosicrucians is so difficult to trace. The original Rosicrucians were fire-philosophers, successors of the theurgists and the Magi.

The symbol of a cross within a circle, supposed to represent a rose with a cross in it, is really a perversion by Western Christian Qabbalists, who call it the great mystery of occult generation, whereas the true symbol of the reawakening of the universe is a circle with a point in it, and the circle with a cross is the true mundane cross. The real symbol of the Rosicrucians is that of a pelican tearing open its breast to feed its seven little ones — the symbol of the 18th degree of the order. The rosy cross is the cube unfolded (cf SD 2:19, 80, 601). Many associations, since the disappearance of the medieval Rosicrucians, have existed and still exist, who have borrowed the name and apparently as much of the Rosicrucians' teachings as they could understand. Blavatsky mentions Paracelsus as having been a true Rosicrucian, and Eliphas Levi as having had access to Rosicrucian manuscripts.

Ro-stan *Re-stau* (Egyptian) "Book of the Mysteries of Rostan; an occult work in manuscript" (TG 280).

Rosy Cross. *See* ROSICRUCIANS

Rotae (Latin) Wheels, referring to the animating principles of the stars and planets; the Hebrew is 'ophanim (wheels), much used in Ezekiel in relation to cosmogony. Absolute motion, which during pralaya is consciousness pulsating in every atom, tends at the awakening of a new cosmic Day to become circular, thus becoming a center of force and called a wheel, the nuclei around which worlds are built. This would indicate that the circular motions of heavenly bodies are primary and intrinsic and not a result of rectilinear forces alone, which are merely components into which the circular motion has been resolved, agreeably to a proposed dynamical system. *See also* ROTATION

Rotation Circular motion seems to be a primary attribute of monads — cosmic, planetary, or atomic. The modern dynamic system of the universe will not solve the problem until it is recognized that physical forces are but manifestations of the intelligence of living beings — intracosmic and not extracosmic — forming the body of nature itself. The speed of the earth's axial rotations has varied concurrently with changes in the inclination of its axis — which suggests gyroscopic action due to force external to the earth, but not external in the sense of being systemically distinct. Such a slackening of rotational speed caused the break-up of the Lemurian continent into smaller pieces. This cannot be the same as the alleged exceedingly slow secular retardation due to tidal friction.

Round In connection with a planetary chain, when the life-wave of any planet passes through the seven root-races of one of its globes, this is called a globe-round. But the life-wave also passes in turn through the seven or twelve globes, beginning with globe A, and after an interglobal rest, passes to globe B, on the next lower subplane, then to globe C in similar manner, and following it, to globe D, which is on the lowest plane for that planetary chain. Rising then it in like manner

passes through the three higher globes, E, F, and G. The circuit of these seven or twelve globes is called a planetary round, after which there is a planetary or chain-nirvana before the second round begins, which is made on a more advanced degree of evolution than was the first round.

Seven planetary rounds equal one kalpa, manvantara, or Day of Brahma. When seven planetary rounds (49 globe-rounds) have been thus accomplished, there ensues a still higher nirvana than that occurring between globes G and A after each planetary round. This higher nirvana is coincident with what is called a pralaya of that planetary chain, which lasts until a new planetary chain forms, containing the same hosts of living beings as on the preceding chain.

When seven such planetary chains with their various kalpas or manvantaras and pralayas have passed away, this sevenfold grand cycle is one solar manvantara, and then the solar system sinks into the solar or cosmic pralaya.

There are outer rounds and inner rounds. An inner round comprises the passage of the life-wave in any one planetary chain once from globe A to G, or from the first globe to the twelfth, and this takes place seven or twelve times in a planetary manvantara. The outer round comprises the passage of the entirety of a life-wave of a planetary chain along the circulations of the solar system, from one of the seven sacred planets to another, and in a specific serial order; and this seven or twelve times. Outer round can refer to two different events: the grand outer round, during which the spiritual monad makes a stay of varying length in each planetary chain; and the minor or small outer round, which is the post-mortem journey of the monad, after the death of an individual, to each of the planetary chains, but in this latter case its stay in each chain is relatively short. *See also* INNER ROUND; OUTER ROUND

Round, First The first evolutionary cycling of the monadic hosts through all the globes of the planetary chain. A globe-round consists of seven respective circlings by the life-wave on one of the globes of the planetary chain: in the case of the human life-wave these circlings are termed the root-races.

In the case of the first round, the evolutionary procedure is different from all later rounds because the monadic hosts must themselves fashion the outlines of their houses of life — these houses becoming the globes of the planetary chain. Thus, when the first host has completed its seven circlings on globe A, the greater portion of the monads — termed the surplus of lives — descend from globe A by attraction to the waiting laya-center on the second cosmic plane. Through this laya-center globe B comes into the first phases of manifestation, as the first host proceeds to go through its seven evolutionary circlings there. When the seventh turn is completed, then the surplus of lives of this first monadic host descends to the laya-center on a still lower cosmic plane, where globe C-to-be begins its first outlines of manifestation. In like manner the remaining globes of the chain are formed — globes D, E, F, . . . Z. Each of the ten hosts individually thus leaves its own characteristic pattern or attribute in and on each globe.

In the first round, the highest monadic host works with the lowest monadic kingdom to produce the initial framework of each globe in turn, laying the foundations for all the intermediate monadic hosts to build upon in completing what finally becomes the fully manifested globes. Thus every monadic host contributes its own characteristic elements to every one of the globes during the first round, as the monadic hosts or life-waves follow each other in serial order in passing through the waiting laya-centers. In this way, the globes themselves become fit habitats for their respective classes of dwellers or life-waves.

The monads of the human kingdom passed through all the forms and kingdoms during the first round. In the first root-race of the first round on globe D (our earth), man was highly ethereal and, although necessarily what we would call non-intellectual, nevertheless spiritual.

The globes of the earth-chain during their first round were in their first or elementary rupa stage, a condition entirely different from anything commonly known today. For during the first round — which followed upon three preliminary elemental rounds — one cosmic element was developed, namely that of fire. Manifested material fire as we know it had not appeared, but this first fire could be described as cool and luminous. Thus even the grossest globe (globe D), although formed into a sphere, was without solidity or other quality than a cold radiance. The other cosmic elements developed in similar fashion in succeeding rounds.

Round, Second The evolutionary course of the life-waves once around the entire planetary chain is termed a round. A noteworthy difference between the first round and all succeeding rounds is that during the first round all the vestures of various kinds used by the evolving monads, whether grouped as life-waves or not, were constructed as elementary outlines, the monads pursuing their

first cycling by building forms of a spiritual-ethereal character. This applies not only the globes of a planetary chain themselves, but to the various bodies in which the individual monads of the life-waves manifest. Some of these bodies remain on each globe of the chain and become *sishtas* (remainders) when their respective life-waves pass to the next succeeding globe; and this procedure began during the first round. These remaining vestures or *sishtas* are ready as evolutionary type-forms when the incoming monads of the life-waves re-enter the different globes after having passed around the chain. These returning monads of the life-waves imbodying themselves in and through the *sishtas*, are the beginnings of the different root-races on each globe. Evolution proceeds through this process after the end of the first round, thus avoiding what would have otherwise been the need of the monads of the incoming life-waves to build bodies from the ground up — the *sishtas* being relatively highly evolved vehicles waiting for the pioneer monads of the various life-waves.

Referring to the status of the human kingdom in the second round, man “is still gigantic and ethereal, but growing firmer and more condensed in body — a more physical man, yet still less intelligent than spiritual; for mind is a slower and more difficult evolution than the physical frame and the mind would not develop as rapidly as the body” (ML 87).

During the second round even globe D of the earth-chain had not attained its present coarse consistency but was of an ethereal nature, although more dense and heavy than during the first round. Its characteristic was airy — that element, “the purity of which would ensure continuous life to him who would use it. . . . *From the second Round, Earth — hitherto a foetus in the matrix of Space — began its real existence: it had developed individual sentient life, its second principle*” (SD 1:260).

“Matter in the *second* Round . . . may be figuratively referred to as two-dimensional. . . . equivalent to the second characteristic of matter corresponding to the second perceptive faculty or sense of man. But these two linked scales of evolution are concerned with the processes going on within the limits of a single Round” (SD 1:252). There is also a correspondence between the evolutionary development of the human principles and the rounds, so that the second round sees the development of the second human principle in its sevenfold or twelvefold aspects.

Round, Third During the third cycling of the monadic hosts or life-waves around the globes of a planetary chain, the same general trend is pursued as in the second round, but with the added development of a third factor in the evolutionary pilgrimage. Globe D of the earth-chain had not yet attained its present coarse consistency, for the third element-principle (water) was in process of evolutionary development; thus the globe was characteristically of a watery nature.

At that period even the more evolved monads of the lunar chain, representing and leading the human kingdom, had but reached the state of “presentments of men,” having huge ape-like forms; yet they were not apes in any sense of the word, for what we know now as monkeys and apes were

of far later development as partial offsprings from the human stock, which took place during the present fourth round. These third round men were “no fit rupa for the Brothers of the Fifth” (SD 2:57) — referring to the fifth class of monads or manasaputras.

At the end of the third round, there were forerunning monads who were already human in nature and characteristic, and who were leading the way towards the true humanity of the fourth round, and therefore were the guides of the less progressed human monads when it became the latter’s turn to incarnate during the fourth round. These advance-guard monads are sometimes termed the Sons of Yoga. As intellectual and moral responsibility appears in the evolving human monads only when mind enters the picture — which occurred for the majority of the human monads only during the third root-race of the fourth round — during the third round few monads had reached the stage of true intellectual and moral responsibility; and during the second round even these forerunners were themselves unfolding the powers and responsibilities of mind and of choice. During the third round: “He had now a perfectly concrete or compacted body; at first the form of a giant ape, and more intelligent (or rather cunning) than spiritual. For in the downward arc he has now reached the point where his primordial spirituality is eclipsed or over-shadowed by nascent mentality. In the last half of this third round his gigantic stature decreases, his body improves in texture . . . and he becomes a more rational being — through still more an ape than a Deva man” (ML 87-8) — that is, manas (mind) was not yet functioning. Thus while the third-round forerunners may be considered truly human, the great bulk of the human kingdom was still but in the elemental stages of intellectual and moral responsibility. Mind was only just beginning to show itself, and hence the humans were rather cunning than intellectual, instinctual rather than spiritual.

Another phase of evolution of the life-waves during the third round was the great outflow of differing animal forms which took place, due to the immense pressure of the inner urge of the various life-centers to express themselves in their respective phases of evolutionary unfolding. However, what we now call the mammalian stocks were a much later development, for these appeared during the fourth round; though there were forerunners even of the mammalia during the last part of the third round. Furthermore, all of these various stocks or groups of evolving beings originated in astral types thrown off by third round man. The present “amphibia, birds, reptiles, fishes, etc., are the resultants of the Third Round, astral fossil forms stored up in the auric envelope of the Earth and projected into physical objectivity subsequent to the deposition of the first Laurentian rocks” (SD 2:684) when this took place during the fourth round.

Round, Fourth The circling of each life-wave around the globes of a planetary chain for the fourth time is its fourth round. The midpoint of the fourth round is the turning point for this planetary manvantara. Before this point the monadic hosts pursue their gyrations downwards on the descending arc, karmically evolving material vestures from within the womb of spirit. During the fourth round on globe D, during the fourth root-race, the midway point of this manvantara is

reached, for the lowest point in the descent of the life-waves then takes place, and thereafter the monads begin evolving upwards on the ascending arc: the involution of matter and evolution of spirit.

What are termed the geologic eras are the product of nature's evolutionary forces at work during our present fourth round; and every one of the globes of the chain, including globe D, was of characteristically somewhat different aspect and consistency during each of the three previous rounds. Each round develops a cosmic principle, and the fourth principle, earth, is in process of developing during the fourth round (the three previous rounds having developed fire, air, and water) — these elements are not to be understood in their popular meaning, but in the sense in which they are used in archaic philosophy. Thus the fourth round “transformed the gaseous fluids and plastic form of our globe into the hard, crusted, grossly material sphere we are living on” (SD 1:260).

Naturally the geologic changes which the globe underwent up to our own time, took many, many millions of years; for example, sedimentation on globe D *in this round* began more than 320 million years ago. Sedimentation refers to the appearance of the mineral life-wave on globe D after preliminary work during the fourth round had been accomplished by the three preceding elemental kingdoms. After the mineral kingdom had run through its septenary cycling, then its surplus of life passed to the succeeding globe E, and the life-wave of the vegetable kingdom made its appearance on globe D; after the vegetable life-wave came the animal; and after the animal appeared the human, which in its turn will be followed by the life-waves of the three dhyanichohanic kingdoms.

At the beginning of the human stage of the fourth round on globe D, the lunar pitris or human monads projected their astral doubles from the bodies which these pitris had evolved during the third round, and “it is this subtle, finer form, which serves as the model round which Nature builds physical man” (SD 1:180). The *human* life-wave has completed its fourth root-race on this globe and has now reached the midpoint of its fifth root-race. The point of man's grossest *physical* development has already been passed and his body henceforth will evolve along the lines of increasing refinements and ethereality.

During the fourth round the fourth principle kama (desire) will be fully developed, both in man and in the world. Man became truly human with the intellectual enlightenment of early mankind in this round through the descent of the manasaputras. This great event occurred during the third root-race.

In regard to the beast kingdom, at the midway point in the manvantara, the “door” to the human kingdom automatically closed, for then began the ascending arc: i.e., all monads not reaching the evolutionary status where they were able to pursue their evolution by entering the human kingdom must thereafter remain in the lower kingdoms for the three and one-half rounds still to

come. The mammalian beasts all appeared in this round, but the first mammal on this globe was man himself, as the mammalian beasts were very early off-throwings or specializations from offthrowings originating in the human stock.

As to the vegetable kingdom, vegetation began in its ethereal form before what is termed the Primordial Epoch, continuing on through the Primary Era, during which it condensed, to our own time. It reached its fullest physical efflorescence in the early part of the Secondary, and probably even during the middle and later Primary, where the great coal deposits are now found.

Round, Fifth The fifth circling of the monadic hosts around the globes of a planetary chain. As mankind is now in the fifth root-race of the fourth round, on the fourth or globe D of the seven manifested globes of the earth-chain, the period before the beginning of the fifth round is hundreds of millions of years in the future. Nevertheless a few fifth rounders have been able to manifest on our globe as forerunners, the most evolved individuals of the human life-wave. Sixth rounders, however, are excessively rare.

Every round brings about a new evolutionary development on every one of the globes of the earth-chain, and a fundamental change in the physical, psychic, mental, intellectual, and spiritual constitution of man. The manas principle (the fifth or intellectual principle) will be fully developed at the end of the fifth round, and corresponding aspects of the human constitution will be evolved in minor degree during the sixth and seventh root-races of the fourth round. Although the vast majority of human beings in that future round will be far more evolved than is the present-day or fourth round mankind, nevertheless during the fifth round on this globe will occur what theosophical literature calls the moment of choice. At that time the monads which will continue to rise on the ascending arc must have reached a certain point in their unfolding evolution enabling them successfully to pursue their upward evolutionary journey towards spirit. Those monads who shall not have reached this evolutionary status, and who therefore are not able to continue the upward arc, must perforce wait for the future manvantara, a loss in evolutionary opportunity and in time of many hundreds of millions of years.

Every round also brings forth in evolutionary development a cosmic element-principle, and the fifth round will bring into manifestation the fifth cosmic element, aether, which will at that time even be semi-manifest in the globe's atmosphere. Then will permeability characterize the matter of our globe so that the then dense forms will appear to human perceptions somewhat as of the nature of a close and dense fog. The fifth element will then be the dominating influence of the fifth round.

Round, Sixth The sixth circling of the life-waves around the globes of a planetary chain. Following the serial evolution of the cosmic element-principles which have been developed on the five previous rounds, the sixth cosmic element will come into manifestation; but no hint as to its nature is given other than its name — purusha-sakti (ML 91). *“From the second Round, Earth — hitherto a*

foetus in the matrix of Space — began its real existence: it had developed individual sentient life, its second principle [air]. The second corresponds to the sixth (principle); the second is life continuous, the other, temporary” (SD 1:260).

In the humanity of that far-off time, the sixth principle (buddhi) will come into relatively full development. Mankind then will become a family of buddhas — for Gautama Buddha is known as a sixth rounder. Even the human physical body will have become greatly changed, and towards the end of the round will be an ovoid or globe emitting light.

Round, Seventh The final manifested round in the evolutionary life cycle of the life-waves coursing around a planetary chain. While little can be said regarding the condition of mankind in the seventh round, humans of the seventh round will have successfully become one with their sixth principle (buddhi); and as the seventh principle (atman) will be predominant in the seventh round, life on earth should then be glorious beyond present understanding. Only in the seventh root-race and in the seventh round will human beings truly and finally have become fully evolved septenary beings: then will they have attained the evolutionary status of dhyani-chohanship.

As each of the six previous rounds developed a cosmic element-principle, the seventh element will come into manifestation; we can obtain some conception of its nature by calling it adi-tattva. “Earth will reach her true ultimate form — (inversely in this to man) — her body shell — only toward the end of the manvantara after the Seventh Round” (SD 1:260). Long before the earth shall have reached her seventh round, our moon, the earth’s mother, will have dissolved into cosmic ether and dust. In its turn, long after the seventh round, the earth will be a moon to the planetary chain-to-be.

As the hosts of monads complete their cycling on the seven manifested globes of a planetary chain, one by one (commencing with globe A) each globe enters the state of pralaya, and the forces and higher substances comprising each globe are transferred to a laya-center, there to remain *in statu quo* until the time strikes for the new planetary chain to come into manifestation. These laya-centers are the focal points respectively for the birth of the globes of the new chain.

Round-Manvantara Period of one circulation of the life-waves around the planetary chain from the first globe to the last globe, a period of 308,448,000 years. It is one-seventh of a Day of Brahma. (Fund)

Rsi. See RISHI

Rsi-manus. See RISHI-MANUS

Rsi-yogins. See RISHI-YOGIS

Ru (Egyptian) *Ru*. A gate, outlet; when referred to the heavens, that place in the northern sky in which the sun is said to be reborn; mystically, that place whence proceeded the primeval light, “synonymous with ‘cosmic womb’ ” (TG 279).

Also the circle surmounting the cross in the ankh or Egyptian ansated cross.

Ruach-Elohim. See 'AHATH-RUAH-'ELOHIM-HAYYIM

Ruach Hajan, Ruach Hayan. See RUAH HAY-YOM

Ruah (Hebrew) *Rūah* Also ruahh. Vital breath, wind, air, very much in the sense that the Greek *pneuma* means spirit, wind, air, and breath; a breath, exhalation; the rational soul or mind, possessing counsel, purpose, and will — often confused with the vital principle placed in the breath and with the principle of life.

In connection with 'elohim, ruah denotes the rational and purposive mental quality of the gods — the mental breath or power appearing mainly in humans, feebly in animals. It was regarded in Genesis as moving over the chaos at the creation, and operating in and through the universe, producing that which is noble and good in man and leading him to virtue. Cosmic ruah is in many respects equivalent to the Third Logos of Greek philosophy. A similar meaning implied exceptional soul powers, as in the inspired ruler and the prophet; hence the prophetic spirit — which was often represented as passing from one person and resting in another.

In the Hebrew Qabbalah, ruah had the same general meaning, equivalent to *buddhi-manas* in the theosophical classification of human principles. But modern Western Qabbalists have confused ruah with the *kama-rupa*, or even sometimes with *kama-manas*, precisely as they have confused it with *nephesh*, the animal vitality connected with appetitive desire or *kama*.

Ruah Hay-yom, Ruah Hayyah (Hebrew) *Rūah Hayyōm* The breath or wind of the day, or the cool part, the evening. See also RUAH

Rudimental Kingdoms. See ELEMENTAL(S)

Rudimentary or Vestigial Organs These include a number of different tissue-remnants or organs of primitive type, some of which are only transients in the developing fetus, while others persist in the bodies of animals or man, where they are dwarfed, atrophied, or functionless as far as is known. The vermiform appendix, the ear muscles, the gill clefts, pineal gland, rudimentary tail of the embryo, etc., are referred to as affording silent testimony to the reality of functions which were vitally active in primeval life, but which have long since atrophied in the course of animal and human progress (SD 2:119). The fact of such organs in the human body is adduced in support of the Darwinian theory, but it can equally well support the theory that the mammals came from man. Again, we know that, though man did not evolve from the apes, there was a time when his form somewhat resembled that which the apes now have. The possession of distinct traces in each

sex of the reproductive apparatus of the other sex is biological evidence of ancient hermaphroditism. The undifferentiated sex of the embryo during its early growth also reviews the asexual character of the first root-races. The present routine process of maturation or reduction of chromosomes in the fertilized cell, and the death of the polar cells, appear to biologists as somehow unnaturally involved. This process, however, apparently in some degree, echoes distantly the change in the third root-race from an androgynous reproductive method to that of the separated sexes. The law of retardation which operates when a higher type has been evolved, now “preserves hermaphroditism as the reproductive method of the majority of plants and many lower animals” (SD 2:172n). Thus, man is not the copy but the evolutionary prototype, for “the potentiality of every organ useful to animal life is locked up in Man — the microcosm of the Macrocosm” (SD 2:685). The human form is the repertory of all mammalian forms, and nature preserves organs and functions in vestigial condition against a future time when, if these organs and functions be latent and not merely in process of disappearance, they will become active again. This accounts for the occasional reversion to utterly unknown primeval types as noted in teratology. A general unity of type has been preserved throughout the ages all through the multitude of organisms which grew out of a few basic types. “The economy of Nature does not sanction the co-existence of several utterly opposed ‘ground plans’ of organic evolution on one planet” (SD 2:683).

Rudra(s) (Sanskrit) *Rudra-s* [from the verbal root *rud* to weep] A class of monads or dhyani-chohans belonging to the upper worlds of nature, whether of our solar system or planetary chain; virtually identical to the higher manasaputras or kumaras who refuse to create, i.e., embody themselves in the then unprepared human vehicles. Certain individuals from among the highest of the class, however, were among the very first to obey karmic law, and they incarnated in chosen human vehicles of the third root-race during this present fourth round. The rudras are therefore equivalent to the solar lhas or pitris as contrasted with the lower four classes of monads, the lunar pitris.

The rudras are highly intellectual and spiritual entities, having through previous evolutionary periods attained self-consciousness by individually passing through the equivalent of the human kingdom. The rudras represent an aggregate of entities in the primary formation of worlds, as well as the intellectually informing principles of man. They are mythologically said to be at war with the shadowy entities and powers of the lower spheres, and hence are sometimes spoken of as the destroyers of outward forms. The *Vishnu-Purana* states that “at the end of a thousand periods of four ages, which complete a day of Brahma, the earth is almost exhausted. The eternal Avyaya (Vishnu) assumes then the character of Rudra (the destroyer, Siva) and re-unites all his creatures to himself. He enters the Seven rays of the Sun and drinks up all the waters of the globe; he causes the moisture to evaporate, thus drying up the whole Earth. . . . Thus fed with abundant moisture the seven solar rays become seven suns by dilation, and they finally set the world on fire. Hari, the

destroyer of all things, who is ‘the flame of time, Kalagni,’ finally consumes the Earth. Then Rudra, becoming Janardana, breathes clouds and rain” (6:3).

The rudras here are collectively spoken of as an individual equivalent to Siva, who has always been recognized as the patron or chief of initiates and of occult training. He is often spoken of as the destroyer, whereas regenerator would be a better term. Rudra is truly the Siva of the *Rig-Veda*, and in many respects the Agni of later writings. Like Siva, Rudra is a beneficent deity (because regenerating), and a mistaken maleficent deity (because destroying falsehoods and imperfections at the same time). As the beneficent one or spiritual healer, Rudra is the higher human ego aspiring to its own spiritual pure state; and as the destroyer he is the same imprisoned higher human ego whose war against imperfection, evil, and sin make him the “roarer” or the “terrible.”

Rudra is sometimes called the father of the maruts or Vedic storm gods. “To receive a name Rudra is said to have wept for it. Brahma called him Rudra; but *he wept seven times more and so obtained seven other names* — of which he uses one during *each* ‘period’ ” (SD 2:615n). The various names refer to the seven subordinate classes of the one generalized class.

“With regard to the origin of Rudra, it is stated in several *Puranas* that his (spiritual) progeny, *created in him by Brahma*, was not confined to either the *seven Kumaras* or the *eleven Rudras*, etc., but ‘comprehends infinite numbers of beings *in person and equipments like their* (virgin) father. Alarmed at their fierceness, numbers, and *immortality*, Brahma desires his son Rudra to form creatures of a different and mortal nature.’ *Rudra refusing to create*, desists, etc., hence *Rudra is the first rebel*” (SD 2:613n).

Thus the rudras are the sevenfold manifestations of Rudra-Siva, the seven subclasses of which Rudra-Siva is the hierarch; or again the seven intelligent subhierarchies of intellectual character in nature which reform or destroy in order to regenerate. They are also one of the classes of the “fallen” or intellectually incarnating gods, the progenitors of the true intellectual-spiritual self in man.

These extremely occult and important beings are connected with the kabeiroi because they are the intellectual offspring of these planetary deities; identical also with the ’elohim. Sometimes they are called in the ancient writings tushitas, jayas, adityas, asuras, vasus, rishis, kumaras, manus, and the spiritual rebels. They are even referred to as the ten vital breaths or pranas because these ten vital breaths are the ten varieties of intellectual energies or forces flowing from them, and which on the intellectual plane may be spoken of as the mental pranas.

Rudra-kumaras. See RUDRA

Rudra-Siva (Sanskrit) *Rudra-Śiva* Siva in the form of the regenerating god; also “the great *Yogi*, the forefather of all the Adepts — in Esotericism one of the greatest Kings of the Divine Dynasties. Called ‘the Earliest’ and the ‘Last,’ he is the patron of the Third, Fourth, and the Fifth Root-Races.

For, in his earliest character, he is the ascetic *Dig-ambara*, ‘clothed with the Elements,’ *Trilochana*, ‘the *three-eyed*’; *Pancha-anana*, ‘the five-faced,’ an allusion to the past four and the present fifth race, for, though *five-faced*, he is only ‘four-armed,’ as the fifth race is still alive. He is the ‘God of Time,’ Saturn-Kronos, as his *damaru* (drum), in the shape of an hour-glass, shows; and if he is accused of having cut off Brahma’s fifth head, and left him with only four, it is again an allusion to a certain degree in initiation, and also to the Races” (SD 2:502n). *See also* RUDRA

Ruhani. *See* ROHANE

Rulers, Divine The nations of antiquity, such as the Egyptians, Chaldeans, and Greeks, had traditions of early racial divine rulers and spiritual dynasties which preceded their human kings. In the later races, these rulers stood for the dynasties of the gods, rishis, pitris, manus, etc., who are said in theosophy to have incarnated themselves in the third root-race on this globe during our present round, and to be born again and again as spiritual teachers in succeeding cycles for the instruction of nations, among whom they appear from time to time.

Rune, Runa [from Swedish *runa*, Icelandic *run*] Originally a mystery, equivalent to the Greek theosophia (divine wisdom), which is the goal of human existence and the aim of evolution; later used for a sign or character which, inscribed on a stick, stone, or even furniture, was believed to have magical properties. A grammarian or one versed in the art of language was called runa-meistari (rune-master), one who knew how to read and write runes correctly.

In Havamal — a long poem of the Elder Edda — Odin relates how he “hung nine nights in the windtorn tree” (of life), seeking runes of wisdom (in the material worlds), and that he “raised them with song.” It is said that Odin first invented runes and carved them on various beneficent agencies that safeguard human life on earth. One is carved on the shield Grimnismal that “stands before the shining god; mountain and billion would burn away should he fall aside.” Another rune is inscribed on the ear of Arvakrand one on the hoof of Allsvinn (the horses that draw the solar disk across the sky); one is on the reins of Sleipnir, Odin’s steed, one on the paw of the bear, another on the tongue of Bragi (poetic inspiration), on the claws of the wolf and on the eagle’s beak, on the rainbow bridge (Bifrost); on glass, on gold, on wine, on herb; on Vili’s heart and Odin’s spear, on the nails of the Norns, etc. All were later scraped off, mixed with the holy mead of wisdom, and distributed throughout the three worlds for the benefit of gods and men.

Rupa (Sanskrit) *Rūpa* Form, image, similitude; body, vehicle; contrasted with arupa (formless). Also the first skandha, the material properties or attributes in relation to the skandhas.

Rupa-devas (Sanskrit) *Rūpa-deva-s* [from *rūpa* form + *deva* divinity] Celestial beings having form; that class of celestial beings or lower dhyani-chohans still having forms who “are the *intelligent* Rulers of this world of Matter, and who, with all this intelligence are but the blindly obedient instruments of the One; the active agents of a Passive Principle” (ML 107-8). These rupa-devas have completed their cycling as monads in the human stage and have graduated into the class next

superior to mankind. *See also* ARUPA-DEVAS

Rupa-loka (Sanskrit) *Rūpa-loka* [from *rūpa* form, body + *loka* world] Form-world; planes of existence where the substance or vehicles are more material and definite, in contrast to the arupa-lokas (formless worlds) where the body-forms are less definite from our current perspective and sense faculties. In theosophical literature, the four lowest cosmic planes with the seven globes are usually called rupa worlds, while the three higher cosmic planes with their five globes are called arupa.

Ruta (Sanskrit) *Ruta* One of the last islands of the great Atlantean system which disappeared some 850,000 years ago — ages before Poseidonis, the last island-remnant of Atlantis (which sank about 11,500 years ago). Ruta is known as the White Island in Hindu mythology. A large “equinoctial” island of nearly continental size, it was in the waters of what is now the Pacific Ocean. In Hindu tradition, from the speech of its inhabitants, the Rutas, the origins of the Sanskrit language were derived.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sa-Sal

Sa (Babylonian) The god of wisdom or of the cosmic deep; equivalent to Hea or Ea. As the remote and almost inscrutable divinity of the cosmic deep, the enclosure of all its cosmic children, Sa is seen to be the synthetic acme of the seven or twelve great gods — the cosmic hierarch of his own sphere.

Sabaeon, Sabaeanism. *See* SABEAN

Sabalasvas (Sanskrit) *Śabalāśva-s* Having dappled horses; the children or sons of Daksha.

Sabao. *See* SABAOTH

Sabaoth (Gnostic) Title of the genii of Mars, one of the planetary regents of the seven sacred planets as enumerated by Origen in his outline of the Gnostic system. Likewise one of the quaternary of emanations which formed the unity of Jehovah, according to the Gnostics: Iao, Adonai, Sabaoth, and Eloï.

Also one transliteration of the Hebrew Tseba'oth (q.v.).

Sabazius (Greek) [from *sabo* a god of health; or *sevas* reverential awe] A Phrygian or Thracian deity whose worship was connected with that of the Great Mother, Cybele, and of Attis. He was associated with the chthonian deities and his emblem was a serpent. Regularly conducted Mysteries were held, probably similar in nature to the Dionysian Mysteries because the ancient Greeks connected Sabazius with Dionysos, even giving the name to Bacchus (or Dionysos). “*Sabasia* was a periodical festival with mysteries enacted in honour of some gods, a variant on the Mithraic Mysteries. The whole evolution of the races was performed in them” (SD 2:419n). The Sabazia were revived in Rome during the 2nd century, practiced under the name *Sacra Savadia*.

The deity also became associated with the Jewish Sabaoth (Tseba'oth) for Plutarch states that the

Jews worshiped Dionysos, and that the day of the Jewish Sabbath was, in his opinion, a festival of Sabazius (Symposium. 4:6).

Sabbath (Hebrew) *Shabbāth* [from *shābath* voluntary repose] The seventh day of the week, appointed in the Hebrew decalog a day of rest, to be observed by the Jews — now equivalent to Saturday, Saturn’s day. The intimate relationship of ancient Jewish mystical and theological thought with the planet Saturn as the outermost then recognized of the planetary system provides a key.

In the deeper sense Sabbath “means *rest* or Nirvana. It is not the *seventh* day after *six* days but a period the duration of which equals that of the seven ‘days’ or any period made up of seven parts” (SD 1:240).

Sabda (Sanskrit) *Śabda* A sound, word, or tone; sometimes used mystically to mean the cosmic Word, thus equivalent to the Greek Logos.

Sabda-Brahman (Sanskrit) *Śabda-brahman* Word-Brahman, “the soul of Brahman expressing itself through its akasic veils as the Divine Logos, or Word, or Sound” (OG 149); analogous to the active unmanifested Logos of the solar system, and closely connected in meaning with the teachings concerning daiviprakriti.

In later ancient Hindu thought, because sabda meant word, and Brahman was considered to be revealed in the Vedas, Sabda-Brahman was often used as a title for the Vedas themselves, as being the revealed word of Brahman or Brahman expressed in words.

Sabean, Sabaeen, Sabian, Sabianism [from Hebrew *tsaba* host, army, celestial hosts] A name given by the Shemitic peoples to those who worship the spiritual beings in the universe; and because the celestial bodies were the most evident manifestations of some classes of these spiritual beings, this religion naturally became confused with the worship of the celestial bodies themselves as the dwellings or mansions of the regents above, in, and behind the visible orbs. Hence the Sabeans were called astrolaters or star-worshippers; but it was not the physical bodies of the celestial orbs which were worshiped, but the spiritual entities, powers, or spirits which ensouled these orbs. This was one of the very archaic religions of the human race, found all over the globe in various forms; and in its origins Sabianism was undoubtedly an outpouring of occult teaching from the archaic Mysteries.

The word Sabean itself has come down to us mainly through Greek and Latin writers, but so thoroughly imbued were the ancient Hebrews with this idea of the celestial hosts or cosmic spirits that the Bible is full of references where the context even wrongly endows the celestial hosts with the properties of the Most High God, and it has been so understood by Christian theologians; forgetting, however, that manifested deities, however high, are but the manifestations of the infinite and ineffable Mystery or parabrahman, from which all the celestial hosts flow or emanate.

Thus not only ancient and modern Judaism, but Christianity itself, is filled with the thought of the ancient Sabeans.

Sabeanism was unquestionably the main religious belief of the ancient Chaldeans and Assyrians, but likewise the very foundation stone of practically all the great religions of all the great peoples of the past. Upon the authority of the Jewish scholar Maimonides, scholars have considered the Sabeans as an ancient race whose principal religion was that of star-worship and closely affiliated with the Babylonians and Syrians. But the Sabeans were not a race, but those who followed and practiced the divine astrological astrolatry of the hoariest antiquity. Mohammed in the Koran mentions a sect between the Jews and Christians called *Sabi una* — to whom certain privileges were granted; older Moslem theologians were agreed that the Sabeans possessed manuscripts which they regarded in the light of a revelation, and the Mandeans came under the same protection granted to the Sabeans; hence the Mandeans also came to be regarded as Sabeans. Another sect of polytheists, the Harranians (830 AD), also affiliated with the Sabeans and shielded themselves under the same privileges; they were a remnant of a Mesopotamian cult, and star-worship had a prominent place in their system.

Certain Arabian writers termed the Sabean language the science of astronomy, but what we now call astronomy was but a minor portion of ancient astrolatry; they also state that Seth or Set was the founder of Sabeanism, and that the pyramids were regarded as the place of sepulture of Seth or Agathodaimon. We see here confusion, reductions of general principles to details, and anthropomorphizations of cosmic principles. Hermes is in many senses the same as Seth, and the pyramids were consecrated to the regents of the stars, rather than to the orbs (SD 2:362).

Sabha (Sanskrit) *Sabhā* An assembly, congregation; a place for meeting, social or political. *See also* MAHASABHA

Saccidananda. *See* SACHCHIDANANDA

Sacea. *See* SAKAS

Sacha Kiriya. *See* SAKTI-KRIYA

Sachchidananda (Sanskrit) *Saccidānanda* [from *sat* reality + *cit* pure consciousness + *ānanda* bliss] Abstract being, abstract consciousness, abstract bliss; the state of the cosmic spiritual hierarchy, Brahman or the Second Logos, the Absolute of our cosmic hierarchy. Subba Row wrote that the Logos is described as sachchidananda because as *sat* it is the efflux of parabrahman, as *chit* it contains within itself the whole law of cosmic evolution, as *ananda* it is the abode of impersonal bliss and the highest happiness possible for a person who has become a *jivanmukta* — a freed monad, when union with the cosmic Logos is attained.

Sacr, Zakhar (Hebrew) *Zākhār* Male, whether man or beast, as well as the masculine organ; and in connection with the Hebrew word for the feminine organ, *neqebah* (cavity), used whether of

woman or beast, even from Hebrew times has been surrounded all too often with phallic significance.

These words, however, can have the same impersonal and abstract significance that have the *linga* and *yoni* in India. *Zachar* is generally rendered “male” in the English translation of the Bible: “It is the phallus which is the vehicle of the enunciation; and truly enough, as the *sacr*, or carrier of the germ, its use has passed down through ages to the *sacr-factum* of the Roman priest, and *sacr-fice* and *sacr-ment* of the English-speaking race” (Source of Measures 236).

Because of the function of the human organs of generation, even from ancient times these organs were considered with reverential awe as being the representatives of the creative or productive abstract forces of nature; and so greatly was the creative function held among the ancients that marriage and its functions were invariably considered to be a religious rite. Hence the presence of *zachar* or *sacr* in such words as sacrament and sacrifice, always with the religious meaning, has prevailed to our own days. The archaic symbology of the separation of the sexes was represented by a horizontal line, crossed by a perpendicular, surrounded by a circle: with the Hebrews, however, this became degraded into the purely phallic meaning of the *sacr* and *n’cabvah* (*zachar* and *neqebah*).

Sacrament [from Latin *sacrare* to make sacred] Consecration, an oath, pledge; later a sacred rite. The Roman Catholic Church recognizes seven sacraments, and the Protestant churches in general but two, the eucharist and baptism. The Latin root *sacr-* (sacred, consecrated) is connected with the Hebrew *zachar* (male principle, often degraded into a purely phallic significance). Religious views as to the value of sacraments vary between those which regard them as channels by which actual grace is bestowed and those which regard them as merely symbolic and commemorative.

Sacrarium (Latin) The place wherein *sacra* (sacred objects) were kept; a shrine in a private house or temple.

Sacred Animals. See ANIMALS, SACRED

Sacred Four Used in the Stanzas of Dzyan in speaking of the primordial principles in cosmogenesis as numbers:

“I. The *Adi-Sanat*, the Number, for he is One.

II. The Voice of the Word, *Svabhavat*, the Numbers, for he is One and Nine.

III. The ‘Formless Square.’ (*Arupa*).

And these three enclosed within the O (*boundless circle*), are the sacred four” (SD 1:98).

The triad forms within the circle the tetraktys or sacred four, the square within the circle being the most potent of all magical figures.

The kumaras, though seven in number, are called the four, because the chief four of them sprang from the fourfold mystery. It is one of the several meanings of the svastika. This sacred four has to be distinguished from the manifested four or quaternary.

The most sacred oath of the Pythagoreans was “by the Sacred Four,” or tetraktys. *See also* ADINIDANA; ADISANAT; ARUPA; SVABHAVAT

Sacred Heart In modern times a Roman Catholic cult which uses the heart as a symbol, especially the heart of Jesus, to which they address devotions. From time to time there have been various Christians who have particularly stressed this aspect of their religious views, among them St. Gertrude and St. Francis of Sales (17th century) who gave this symbol to his order as its object. By edict of Pope Pius IX (1856) the day is observed in the general calendar of the Church.

In ancient times the heart was also a sacred symbol, in Egypt associated with Horus, in Babylon, with Bel, while in Greece the lacerated heart was connected with Bacchus. “Its symbol was the *persea*. The pear-like shape of its fruit, and of its kernel especially, resembles the heart in form. It is sometimes seen on the head of Isis, the mother of Horus, the fruit being cut open and the heart-like kernel exposed to full view” (TG 283).

Sacrifice The performance of sacred rites, but with the more restricted sense of ceremonies of invocation, communion, or propitiation between man and gods. Scholars, in studying these universal rites, are at a loss to find an essential significance by which to gather them all into one class, and as to which to include and which to exclude from such a class. Sacrifices may take the form of a meal offered to the gods or shared with them, an oblation of first fruits of the harvest or flocks, or a propitiation or act of atonement. The Romans dedicated a portion of food or a libation to the lares or other deities; the Hebrews offered the first fruits of the harvest or the yearlings of the flock. The word also has the meaning of an act of self-dedication for a noble cause.

Christianity, in addition to a great many so-called pagan ideas, also inherited and adapted Jewish sacrificial ideas, but the word became limited to the sacrifice of Christ for the sins of the world, and the sacrifice by man of his personal desires to the behests of his divinity. The true origin of the Christian atonement is in the Mysteries, when the hierophant offered his pure and sinless life as a

sacrifice for his race to the gods whom he hoped to rejoin (IU 2:42). The general sense in theosophy is that of sacrificing one's temporal interests to a lofty ideal.

Sadaikarupa (Sanskrit) *Sadaikarūpa* [from *sadā* always + *eka* one + *rūpa* form] Always the one and same body; the essence of immutable nature. This Hindu philosophical term means the cosmically perduring (through both pralaya and manvantara following each other alternately) of the karmic substance of universal nature, however much cosmic karma may mold or vary the cosmic fields in and upon which it is eternally active.

Sadasiva (Sanskrit) *Sadāśiva* [from *sadā* always + *śiva* name of the deity, commonly supposed to mean the auspicious] Always kind, prosperous; an epithet of Siva.

Sadducees [from Greek *saddoukaioi* from Hebrew *tsadoq* supposed to be the founder of the sect, meaning just, righteous] Among Europeans, a skeptic or doubter; originally the party of the Jewish priestly aristocracy which arose in the 2nd century BC under the later Hasmoneans. The Sadducees have come to be regarded as primarily a political party opposed to the Pharisees, called by some the party of the Scribes, but later Jewish tradition following Josephus more accurately regarded them as a philosophico-religious school. The Sadducees, a sect of erudite philosophers, opposed a great deal of the commonly accepted beliefs of the majority of the Jews, who were actually nearly all Pharisees — as for instance, the immortality of the personal soul, and the actual resurrection of the physical body; yet they strongly upheld what they considered the genuine meaning, and therefore the true authority, of the Jewish scriptures. They likewise opposed no small number of doctrinal or religious innovations, some of them true, and some of them less true in nature, which had been accepted by the body of the Pharisees — virtually by the Jewish people. And the reason for their reluctance to accept these innovations, whether of doctrine or interpretation of the Jewish scriptures, seems to be that they preferred a highly philosophical and even perhaps mystical interpretation, which they said the Jewish scriptures contained, rather than the more popular versions accepted by the Hebrew people as a whole. One may say that what the Gnostics were to the body of the Christians in the early centuries of the Christian era, the Sadducees were to the body of the Jews or Pharisees. The Sadducees likewise claimed to be the scientists and genuine philosophers of the Hebrews; although it is apparently quite true that as time went on their attitude of opposition, and even of reluctance, often became, at least among individual Sadducees, an attitude of cynicism and even possibly of cynical disbelief.

“Surely there must have been some very good reasons why the Sadducees, who furnished almost all the high Priests of Judea, held to the Laws of Moses and spurned the alleged ‘Books of Moses,’ the Pentateuch of the Synagogue and the Talmud” (SD 1:320-1n) — doubtless because they rejected the literal rendering of the Pentateuch, and in the beginning at least preferred their own interpretations of the Hebrew scriptures.

In regard to Jehovah: “Jehovah was a *substitute* for purposes of an exoteric national faith, and had

no importance or reality in the eyes of the erudite priests and philosophers — the Sadducees, the most refined as the most learned of all the Israelite sects, who stand as a living proof with their contemptuous rejection of every belief, save the Law” (SD 2:472-3).

Yet it must not be understood that the Pharisees were but the hypocritical and exoteric worshipers of the letter that Christian scripture and legend has endeavored to make them; for among the Pharisees themselves, as for instance Josephus (the greatest of Jewish historians), there were found many learned men. The wisest among the Pharisees desired to bring to the Jewish people as a whole certain more secret teachings, whether innovations or not, which for their own purposes the Sadducees strongly opposed.

Sadhu (Sanskrit) *Sādhu* [from the verbal root *sādh* to finish, perfect, complete, overcome, conquer] Feminine sadhi. A good and virtuous man; more particularly a holy man; especially with the Jains, a jina or deified saint. As an adjective, completed, perfected, hence accomplished; successful, effective (in regard to hymns), excellent, good, fit, proper. As an interjection, excellent! Well done! Good!

Sadhya (Sanskrit) *Sādhyā* [from the verbal root *sādh* to finish, complete, subdue, master] To be fulfilled, completed, attained; to be mastered, won, subdued. As a plural noun, a class of the ganadevatas (divine beings), specifically the jnana-devas (gods of wisdom). In the *Satapatha-Brahmana* of the *Rig-Veda* their world is said to be above the sphere of the gods, while Yaska (Nirukta 12:41) gives their locality as in Bhuvanloka. In *The Laws of Manu* (3:195), the sadhyas are represented as the offspring of the pitris called soma-sads who are offspring of Viraj; hence they are children of the lunar ancestors (pitris), evolved after the gods and possessing natures more fully unfolded; while in the Puranas they are the sons of Sadhya (a daughter of Daksha) and Dharma — hence called sadhyas — given variously as 12 or 17 in number. These various manners of describing the ancestry of the sadhyas originated in different ways of envisioning their origin. In later mythology they are superseded by the siddhas, the difference between sadhyas and siddhas being in many respects slight. Their mythological names are given as Manas, Mantri, Prana, Nara, Pana, Vinirbhaya, Naya, Dansa, Narayana, Vrisha, and Trabhu. Two of the names are two of the theosophic seven human principles — manas and prana; while Nara and Narayan, are other aspects of man, human or cosmic. Blavatsky terms the sadhyas divine sacrificers, “the most occult of all” the classes of the dhyanis (SD 2:605) — the reference being to the manasaputras, those intellectual beings who sacrificed themselves in order to quicken the fires of human intelligence during the third root-race. “The names of the deities of a certain mystic class change with every Manvantara” (SD 2:90); thus they are called ajitas, tushitas, satyas, haris, vaikuntas, adityas, and rudras. The key to the various names given to these higher beings lies in the composite nature of each one of them. In every manvantara and in each minor cycle of a manvantara, every being unfolds another aspect of itself, just as mankind unfolds new but latent powers and senses in each age. Special names were often given to each of the sevenfold, tenfold, or twelvefold aspects of

these high beings.

In the cosmic sense the sadhyas signify the names collectively of the twelve great gods, the first twelve cosmic hierarchs emanating from Brahma, out of which flow not only the twelve cosmic planes, but the hierarchies inherent in these twelve planes. Their importance lies in the fact that they are the earliest emanations in serial order from the formative and productive Brahma-prakriti, and therefore are really the origin of all beings and things in the cosmos arranged from the beginning in the duodenary hierarchical scheme. Plato had the same thought when he spoke of Divinity forming the universe according to the number twelve. They are reminiscent of the Latin *dii consentes*, taken over from the ancient mystical Etruscans who stated that these twelve “agreeing or consenting divinities” form the council of Jupiter, the Latin Brahma. The twelve *dii consentes* consisted of six feminine and six masculine divinities, and the Etruscan theology stated that they govern not only the world, but time also, coming into existence periodically at the commencement of a world period, and passing into rest or pralaya when the world period ended.

Seneca in his *Quaestiones Naturalis* (2:41) states that there is a more sublime Council of Divinities, superior even to Jupiter and the twelve *dii consentes*, whose combined will and intelligence govern even the deliberations of Jupiter and the twelve great consenting gods. *See also SATYAS*

Sadic, Sadik. *See* MELCHIZEDEK; TSADIQ

Saga, Sogn [cf Icelandic *sogn* from *segja* to tell, proclaim; Anglo-Saxon *secgan*, English *say*, Swedish *saga*] In the Scandinavian languages, something spoken, a saw, tale, or report which, like the Greek *logos*, refers both to an oral tradition and to the written history which ensued.

In Norse mythology, the name of an asynja (goddess) who occupies a world named Sokvaback (deep river) where she shares with Odin the draft of wisdom in golden goblets. Symbolically she represents the wisdom gained from experience of all the past, whether of humans or worlds. The sagor (plural of *saga*, stories) were the purveyors of wisdom.

Sagara (Sanskrit) *Sagara* With poison; a king of the solar dynasty and sovereign of Ayodhya, said to have been called *sagara* because he was born together with a poison given to his mother by the other wife of his father. Legend relates that he was the father of 60,000 sons who were turned into a heap of ashes by a glance of the sage Kapila, and their funeral ceremonies could be performed only in the waters of the Ganges, which had to be brought from heaven for the purpose of purifying their remains. This was finally accomplished by the devotion of Bhagiratha, who having led the river to the sea, called it *Sagara* in honor of his ancestor.

“That the story is an allegory is seen upon its very face: the 60,000 *Sons*, brutal, vicious, and impious, are the personification of the *human passions* that a ‘mere glance of the sage’ — the self who represents the highest state of purity that can be reached on earth — reduces to ashes. But it has also other significations — cyclic and chronological meanings, — a method

of marking the periods when certain sages flourished, found also in other Puranas” (SD 2:571).

The 60,000 sons also represent 60,000 years of the cycle known mystically as Jatayu, the son of Garuda, king of the feathered tribe.

Sagardagan. See SAKRIDAGAMIN

Sagittarius The archer; the ninth sign of the zodiac. In astrology, a common or mutable and a fiery sign, one of the houses of Jupiter. Its correspondence in the body is the thighs. Its symbol is an archer or sometimes a centaur with a bow and arrow.

Applying the twelve sons of Jacob in the Hebrew scheme to the twelve signs of the zodiac, Joseph is assigned to Sagittarius: his “bow abode in strength.” In a circular representation of the zodiac, Seth (son of Adam) is made equivalent to Sagittarius (IU 2:462).

In the Brahmanical zodiac called Dhanus, its deity being Ganesa, the elephant-headed god of wisdom, son of Siva. In numbers Dhanus is equivalent to 9, being the ninth sign; hence it refers to the nine Brahmas or the nine prajapatis who assist the Demiurgus in constructing the material universe (12 Signs of the Zodiac, Subba Row). Nine is the number of becoming and therefore of change.

Saha (Sanskrit) *Sahā* [from the verbal root *sah* to endure, suffer] One of the loka-dhatu or divisions of the world in Buddhist philosophy: the world inhabited by men, or the earth — Buddhists consider this earth a world of suffering. Adopted into theosophy to signify the earth and likewise any inhabited or manifested world or globe in the chiliocosm or sakvala. Theosophy recognizes no hells in nature except those spheres of experience, evolutionary progress, and purgation through suffering which all the manifested globes of space are in almost infinitely varying degrees.

Saha-loka-dhatu, Sahalo-kadhatu (Sanskrit) *Saha-loka-dhātu* [from *saha* unity, union + *loka* world, plane + *dhātu* essential element] United world-elements, chiliocosm or universe. Also a Buddhist phrase meaning “the world inhabited by men,” or the earth.

Saham-pati (Sanskrit) *Sahām-pati* The All-parent, or common progenitor, lord, or source of all; a synonym for Brahman or even mahabrahman or parabrahman.

Saharakshas (Sanskrit) *Saharakṣas* Strength preserving; commonly explained as the fire of the asuras or the sacrificial fire which receives the offerings to the rakshasas. In the Puranas, pavamana — the fire which is produced by friction — is represented as the parent of saharakshas.

Sahir (Hindi) *Sāhir*. A necromancer; equivalent to jadugar.

Sahu (Egyptian) *Sāhu*. The spiritual entity, the entity of the deceased in heaven. According to

popular legend it grew out of the dead body and was called into being by the ceremonies performed over the defunct. From the comparatively little that has come down to us, apparently equivalent to the reincarnating ego. In this sense, a spiritual entity, a development of the earthly experiences of the monad.

Saint George Patron saint of England; the universal allegory of the dragonslayer reappears in Christian ecclesiasticism as the archangel Michael who slays the red dragon, and again as St. George. It is a historical mystery both how this apocryphal legend came to be attached to the name of George of Cappadocia, the ecclesiastic put to death by Diocletian for opposing him in the persecution of the Christians; and that the Roman Catholic Church should have canonized so rabid an Arian. His is another form of the story of Bel and the dragon, Apollo and Python, Osiris and Typhon, etc., which denote the fallen angels or kumaras who, by bringing intellectual life to earth, thereby truly conquer death.

Saint-Germain, Count

“Referred to as an enigmatical personage by modern writers. Frederic II., King of Prussia, used to say of him that he was a man whom no one had ever been able to make out. Many are his ‘biographies,’ and each is wilder than the other. By some he was regarded as an incarnate god, by others as a clever Alsatian Jew. One thing is certain, Count de St. Germain — whatever his real patronymic may have been — had a right to his name and title, for he had bought a property called San Germano, in the Italian Tyrol, and paid the Pope for the title. He was uncommonly handsome, and his enormous erudition and linguistic capacities are undeniable, for he spoke English, Italian, French, Spanish, Portuguese, German, Russian, Swedish, Danish, and many Slavonian and Oriental languages, with equal facility with a native. He was extremely wealthy, never received a *sou* from anyone — in fact never accepted a glass of water or broke bread with anyone — but made most extravagant presents of superb jewellery to all his friends, even to the royal families of Europe. His proficiency in music was marvellous; he played on every instrument, the violin being his favourite. ‘St. Germain rivalled Paganinni himself,’ was said of him by an octogenarian Belgian in 1835, after hearing the ‘Genoese maestro.’ ‘It is St. Germain resurrected who plays the violin in the body of an Italian Skeleton,’ exclaimed a Lithuanian baron who had heard both.

“He never laid claim to spiritual powers, but proved to have a right to such claim. He used to pass into a dead trance from thirty-seven to forty-nine hours without awakening, and then knew all he had to know, and demonstrated the fact by prophesying futurity and never making a mistake. It is he who prophesied before the Kings Louis XV. and XVI., and the unfortunate Marie Antoinette. Many were the still-living witnesses in the first quarter of this century who testified to his marvellous memory; he could read a paper in the morning and, though hardly glancing at it, could repeat its contents without missing one word days

afterwards; he could write with two hands at once, the right hand writing a piece of poetry, the left a diplomatic paper of the greatest importance. He read sealed letters without touching them, while still in the hand of those who brought them to him. He was the greatest adept in transmuting metals, making gold and the most marvellous diamonds, an art, he said, he had learned from certain Brahmans in India, who taught him the artificial crystallisation ('quickenings') of pure carbon. As our Brother Kenneth Mackenzie has it: — 'In 1780, when on a visit to the French Ambassador to the Hague, he broke to pieces with a hammer a superb diamond of his own manufacture, the counterpart of which, also manufactured by himself, he had just before sold to a jeweller for 5500 louis d'or.' He was the friend and confidant of Count Orloff in 1772 at Vienna, whom he had helped and saved in St. Petersburg in 1762, when concerned in the famous political conspiracies of that time; he also became intimate with Frederick the Great of Prussia. As a matter of course, he had numerous enemies, and therefore it is not to be wondered at if all the gossip invented about him is now attributed to his own confessions: *e.g.*, that he was over five hundred years old; also, that he claimed personal intimacy 'with the Saviour and his twelve Apostles, and that he had reproved Peter for his bad temper' — the latter clashing somewhat in point of time with the former, if he had really claimed to be *only* five hundred years old. If he said that 'he had been born in Chaldea and professed to possess the secrets of the Egyptian magicians and sage,' he may have spoken truth without making any miraculous claim. There are Initiates, and not the highest either, who are placed in a condition to remember more than one of their past lives. But we have good reason to know that St. Germain could never have claimed 'personal intimacy' with the Saviour. However that may be, Count St. Germain was certainly the greatest Oriental Adept Europe has seen during the last centuries. But Europe knew him not. Perchance some may recognise him at the next *Terreur*, which will affect all Europe when it comes, and not one country alone" (TG 308-9).

"Saint Germain recorded the good doctrine in figures and his only cyphered MS. remained with his staunch friend and patron the benevolent German prince from whose house and in whose presence he made his last exit — Home" (ML 280).

Saint-Martin, Louis Claude de. See MARTINISTS

Sais (Greek) **Saut** (Egyptian) *Saut*. An important ancient city of Lower Egypt, the capital of the fifth nome: the residence of kings of the 26th dynasty. Only ruins mark the famous temple of Neith wherein was kept the ever-veiled statue of Neith-Isis, Neith being the principal deity of Sais, regarded as Athena by the Greeks. Festivals in honor of Osiris were held regularly as well.

"At Sais, also, in the sacred precinct of Minerva, behind the chapel and joining the whole of the wall, is the tomb of one whose name I consider it impious to divulge on such an occasion; and in the inclosure stand large stone obelisks, and there is a lake near, ornamented with a stone margin, formed in a circle, and in size, as appeared to me, much

the same as that in Delos, which is called the Circular. In this lake they perform by night the representation of that person's adventures, which they call mysteries. On these matters, however, . . . I must observe a discrete silence; and respecting the sacred rites of Ceres, which the Greeks call Thesmophoria although I am acquainted with them, I must observe silence, . . ." (Herodotus 2:170-1).

Saiva (Sanskrit) *Śaiva* The adjectival form of Siva; devotees of the sect of Siva. This divinity is the great patron of all yogis, quite apart from this sect claiming to be especial followers of Siva.

Saka (Sanskrit) *Saka* Applied to intellect or cosmic wisdom in the *Vishnu-Purana*, mystically and philosophically identical with cosmic mahat. Esoterically, the aggregate or synthesis of certain manifesting divine principles unfolding or emanating themselves through spirit into and throughout the web of Being. Hence saka is equivalent also to what the Chinese referred to as the Dragon of Wisdom — the synthesis of all the manifesting deities in any cosmic unit — and to the cosmic Logos.

Saka (Sanskrit) *Śaka* An era, epoch.

Saka-dvipa (Sanskrit) *Śaka-dvīpa* According to the Puranas, the sixth of the seven dvipas (continents or islands) which compose the globe. Esoterically these seven dvipas, among other things, represent our globe and its six invisible companion globes. Jambu-dvipa represents globe D, while plaksha, salmala, kusa, krauncha, saka, and pushkara represent the six higher and invisible globes of our planetary chain. These dvipas also correspond to the geographical continents of the seven great races, and even to the dry-land divisions of the earth during the period of one root-race. Some portions of America, Africa, and Central Asia, with the Gobi region, will have a part in the building of future continental dvipas (SD 2:404).

Sakas (Sanskrit) *Śaka-s* A people supposed to be of Western origin, Indo-Scythians; according to Orientalists, the same as the classical Sacae. It is during the reign of their King Yudhishtira that kali yuga is said to have begun.

Sakkayaditthi (Pali) *Sakkāyaditṭhi* [from *sakkāya* individuality + *ditṭhi* belief, theory; cf Sanskrit *sat-kāya* true individuality + *dṛṣṭi* appearance] The delusion of personality, rather than heresy of individuality, for in theosophical literature the individuality is that part of man which reincarnates again and again, clothing itself with one personality or imbodiment after another. As "the erroneous idea that 'I am I,' a man or a woman with a special name, instead of being an inseparable part of the whole" (TG 284), the term signifies the sense of separateness and personality, as opposed to the idea that man is an inseparable part of the universe throughout all the ranges of his composite constitution. It means that the personality of the imbodied man has the appearance, and thereby brings about the delusion that the merely personal man is the spiritual man.

In the Buddhist sutras, sakkayaditthi is the first chain to be broken upon entering the path; when the path is really entered this chain is in fact recognized to be nonexistent.

Connected with one of the skandhas, Sakkayaditthi together with attavada, “both of which (in the case of the fifth principle the soul) lead to the *maya* of heresy and belief in the efficacy of vain rites and ceremonies; in prayers and intercession” (ML 111).

Sakra (Sanskrit) *Śakra* The powerful, the mighty; a name of Indra.

Sakridagamin (Sanskrit) *Sakṛdāgāmin* [from *sakṛt* once + *āgāmin* one coming from *ā-gam* to come] In mystical Buddhist philosophy, he who will receive birth (only) once more; also the second stage of the fourfold path that leads to nirvana, the path of arhatship. *See also* ARHAT

Sakshin (Sanskrit) *Sākṣin* [from *sa* together with + *akṣa* eye] That which is before the eyes; an observer, witness. In philosophy, the ego or subject, as opposed to the object or that which is external to the observing ego. Subba Row used the term as the highest of the four aspects of a parabrahman within the human constitution (Five Years of Theosophy 108).

Sakta (Sanskrit) *Śakta* [from *śakti* power] Also sakteya, saktya. Relating to sakti; a worshiper of Sakti, especially in her aspect of Durga, the cosmic consort of Siva. The Saktas are a Hindu sect which base their doctrines largely upon the Tantras, their ritual being of two kinds: the more impure called vamachara (left-hand path), and the purer, dakshinachara (right-hand path). But present-day worshipers have strayed far from the original, quaintly philosophical teachings and consequently have degraded the conception throughout as well as its symbols.

Saktaya. *See* SAKTA

Sakti (Sanskrit) *Śakti* [from the verbal root *sak* to be powerful, energetic, have force] Universal energy, the feminine aspect of fohat; one of the seven forces of nature, of which six are manifest and the seventh partly manifest. It is energy that proceeds through itself, not being due to the active or conscious will of the one that produces it. Popularly, the wives or consorts of the gods — the energies or active powers of these deities represented as feminine influences.

“These anthropomorphic definitions are unfortunate, because misleading. The *Saktis* of Nature are really the veils, or sheaths, or vehicular carriers, through which work the inner and ever-active energies. As substance and energy, or force and matter, are fundamentally one, . . . it becomes apparent that even these *Saktis*, or sheaths, or veils, are themselves energetic to lower spheres or realms through which they themselves work.

“The crown of the astral light, as H. P. Blavatsky puts it, is the generalized *Sakti* of Universal Nature in so far as our solar system is concerned” (OG 150).

Sakti in another sense is soul-power, the mental-psychic energy of the god as of the adept. In the *Mahabharata*, Draupadi, the wife or sakti of the five Pandava brothers, represents a spiritual

power they all possessed in common. In legends and tales of the ancient peoples, the wives of the great heroes mystically represent the aggregate of the saktis or spiritual powers that the heroes had individually attained.

Considering the saktis as more or less conscious forces in nature, gives a picture of not only the turbulent and ever-active movements in the lower planes of nature, but likewise the calm and stately measures of spiritual activity. It is common in the West to associate power, activity, energy, and force with masculine correlations; but this is quite arbitrary, and an impassionate viewing of nature will show it to be continuously moved by vehicular as well as inspiring causes.

Cosmically sakti or the saktis originate in the summit of the astral light or akasa, which in one sense may be considered as not only the womb of the cosmic saktis, but as their playground and in another sense as the saktis collectively themselves. In man, sakti is the buddhi in its higher aspect, and the activities of the various pranas in the human constitution in its lower aspect. There is no essential distinction between any divinity and its consort, between Brahman and pradhana, Brahma and prakriti, or between parabrahman and mulaprakriti. Furthermore, all the saktis are either conscious entities in nature, or vital effluxes or emanations, cosmic fluids, with which nature is infused throughout.

The reason the occultist of all ages looks askance at the tantric practices, or the Tantras dealing largely with the saktis, is because these tantric books and practices are almost wholly occupied in relations and correlations both in nature and in man of the saktis in their lower aspect. The kundalini, for instance, is likewise born in the buddhi in man, but descending through the human constitution has its pranic or psychovital physical representations in the various chakras or vital centers of the human frame, and thus the kundalini is an example of sakti or of its fluidic effluxes in the lower portions of the human constitution.

The early Christians looked upon the Holy Spirit as of distinctly feminine characteristics, influence, or svabhava, as the center not only of vital but of spiritual and intellectual activity, whether in the universe or man, so that the Holy Spirit corresponds to a divine sakti. A notable instance in Hinduism is the Sakti or goddess Durga, having both a lofty or spiritual, and an inferior or distinctly material, function in nature, and therefore a beneficent as well as a terrible action therein — the very name Durga meaning “terrible in action,” or “terrible in going.” And yet Durga is the consort or sakti of Siva, often called the Mahesvara (Great Lord); and the name of this goddess arises from the utterly impartial, infinitely just, and yet often simply terrific action of the forces in nature, particularly when karmically directed to works of regeneration, often called destruction. Cosmic operations or cosmic justice are often indeed to human vision terrible in their operation, which can never be set aside, stayed, or diverted. Hence Durga is often represented in iconography as surrounded with a necklace of skulls or by similar ghastly emblems — a series of ideas which the pragmatic West misinterprets and consequently depicts as horrible and revolting.

Saktidhara (Sanskrit) *Śaktidhara* Power-holder, holder of a spear; an epithet of the Hindu god Karttikeya in his mystical function as a warrior.

Sakti-kriya (Sanskrit) *Śakti-kriyā* [from *śakti* power + *kriyā* action] An inner power or force recognized and taught from immemorial time in India, embracing spiritual, intellectual, as well as psychic elements, which can be exercised by any adept, whether ascetic or layman, and said to be most efficient when accompanied by meditation or bhavana. Its reality depends on the inner merits of one's character and on the intensity of one's will, added to an absolute faith born of knowledge in one's own powers. When applied to ceremonial or ritualistic practice, sakti-kriya is akin to a magic mantra.

Sakti-trimurti (Sanskrit) *Śakti-trimūrti* The feminine aspect of the Hindu Trimurti or Triad; passive complement or vehicle of the active principle. While sakti is often termed passive by comparison, in India it has always been considered to be the very active feminine energy of the divinities, or the intense activity of the vehicles in and through which divinities manifest.

Sakwala (Sinhalese, *Cakkavāḷa* in Pali) Gautama Buddha uttered this “word” (*bana*) in his oral instructions to denote “a solar system, of which there is an infinite number in the universe, and which denotes that space to which the light of every sun extends. Each Sakwala contains earths, hells and heavens (meaning good and bad spheres, our earth being considered as hell, in Occultism); attains its prime, then falls into decay and is finally destroyed at regularly recurring periods, in virtue of one immutable law. Upon the earth, the Master taught that there have been already four great ‘continents’ (the Land of the Gods, Lemuria, Atlantis, and the present ‘continent’ divided into five parts of the *Secret Doctrine*), and that three more have to appear. The former ‘did not communicate with each other,’ a sentence showing that Buddha was not speaking of the actual continents known in his day (for *Patala* or America was perfectly familiar to the ancient Hindus), but of the four geological formations of the earth, with their four distinct *root-races* which had already disappeared” (TG 285). *See also* SAHA

Sakya (Sanskrit) *Śākya* A clan in ancient India, with a capital called Kapilavastu. From this clan was descended Siddhartha-Gautama, the founder of Buddhism. Hence the patronymic Sakya, by which he is commonly known.

Sakyamuni (Sanskrit) *Śākyamuni* The Sakya sage, a name of Gautama Buddha.

Salagrama (Sanskrit) *Śālagrāma* A village situated on the river Gandaki, regarded as sacred by the Vaishnavas. It received its name from the sal trees growing near it. Also the name of Vishnu as worshiped in this village; and a supposedly sacred stone revered by the Vaishnavas and said by them to be pervaded by the presence of Vishnu. This stone is a black fossil ammonite and is stated to be chiefly found near this village.

Salamander The name given by the medieval fire-philosophers to the nature spirits of fire, the fire

elementals. The Greek salamandra meant a lizard-like animal believed to have power over and hence to extinguish fire — or to produce it. Marco Polo wrote that the salamander is not a beast but a substance found in the earth, corresponding from his description to asbestos.

Salmala, Salmali-dvipa (Sanskrit) *Śālmala-*, *Śālmali-*, *Śālmali-dvīpa* According to the Puranas, the third of the seven dvipas (continents or islands) which compose the world. Esoterically these dvipas, among other things, represent our globe and its six invisible companion globes. Jambudvipa represents globe D, while plaksha, salmala, kusa, krauncha, saka, and pushkara represent the six invisible globes of our planetary chain. These dvipas also correspond to the geographical continents of the seven root-races appearing in serial order, and even to the dry-land divisions of the earth during the period of any one root-race.

Salt Used in alchemy for a fundamental principle of nature, a member of the triad mercury, sulphur, and salt, corresponding to spirit, soul, and body; or to fire (or air), water, and earth. Paracelsus regarded these as the mystical elements of all compound bodies. All forms of matter were reducible to one or other of them — everything was either a sulphur, a mercury, a salt, or a compound. The philosopher's stone was said to be a compound of all three. Thus salt is the physical rudiment, as illustrated by the cubical crystals of common salt. Ancient thought regarded such elements as fundamental principles which manifest on various planes, nor did it make hard and fast distinctions between physical and nonphysical; but modern thought has given a fictitious reality to physical objects, and regards the ancient use of the terms as metaphorical. The veneration shown for salt was not a mere deification of its physical virtues, but a recognition of the salt-principle in nature, of which ordinary salt is merely a physical emblem. The well-known stimulant, flavoring, and preservative qualities of salt prove it to be a physical manifestation of an important principle; such phrases as bread and salt, and salt of the earth are therefore theosophy, as concerns not merely figures of speech but a use of salt in its more radical sense. For the same reason it played an important part, along with other substances, in sacrificial ceremonies. The word was also used to include other bodies besides sodium chloride or common salt, and is still used in chemistry in this generic sense. With some alchemists we find arsenic taking the place of salt in the fundamental triad, and this would be one of the salts of arsenic.

The Roman Catholic ritual of the exorcism of salt, promulgated in 1851 and 1852 under the sanction of Cardinal Engelbert, Archbishop of Malines, and of the Archbishop of Paris, runs: "The Priest blesses the salt and says: 'Creature of Salt, I exorcise thee in the name of the living God . . . become the health of the soul and of the body. Everywhere where thou art thrown may the unclean spirit be put to flight' " (IU 2:85). A Qabbalistic version is similar.

Salvation [from Latin *salvatio* from *salvare* to save] In Christianity, the saving of individual souls from supposed damnation, usually by faith in the Atonement. In theosophy, as concerns the individual, salvation is achieved by victory of his divine self over the illusions created by the

contact of the intermediate nature with the lower planes. In this sense the serpent of Eden, Satan even, is man's savior, as are Prometheus, Lucifer, etc. Mankind as a whole is saved by those manasaputras who descended into intellectually senseless mankind of the third root-race and who, by thus enlightening the minds of early humanity, became the elect custodians of the mysteries revealed to mankind by its divine teachers. Again, the Silent Watchers in their various grades, who refuse to pass on into a greater light and maintain their post for the protection and guidance of humanity, are saviors also. Yet no one can be saved by the vicarious merit of another; his salvation is achieved by means of that very free will and enlightened intelligence of his own through which he at first risks falling. But the great ones maintain the ideal which the multitude elect to follow, and thus light the path mankind will ultimately tread.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sam-Sap

Sama, Saman (Sanskrit) *Śama, Śāman* [from the verbal root *śam* to be quiet, calm, resigned] Tranquility, calmness, equanimity, absence of passion, emancipation from all the illusions of existence; the fifth of the eight bhava-pushpas (flowers of being) of Buddhism: charity, self-restraint, impersonal affection, patience, resignation, selfless devotion, meditation, and veracity. Through the practice of the eight flowers, sama secures the conquest and final delivery from all kinds of mental and psychological agitation.

Samadhana (Sanskrit) *Samādhāna* [from *sam-ā-dhā* to put together, restore] The collection of all the principles of a person's constitution into a single unity, thus restoring the person as an entitative being to the wholeness of the atmic reality. "That state in which a Yogi can no longer diverge from the path of spiritual progress; when everything terrestrial, except the visible body, has ceased to exist for him" (TG 286). It is true religious meditation, and profound intellectual absorption into and contemplation of pure spirit.

Samadhi (Sanskrit) *Samādhi* [from *sam* with, together + *ā* towards + the verbal root *dhā* to place, bring] To direct towards; to combine the mental faculties towards an object. Self-consciousness union with the spiritual monad by intense and profound spiritual contemplation or meditation. It implies "the complete abstraction of the percipient consciousness from all worldly, or exterior, or even mental concerns or attributes, and its . . . becoming the pure unadulterate, undilute super-consciousness of the god within. . . . *Samadhi* is the eighth or final stage of genuine occult Yoga, and can be attained at any time by the initiate without conscious recourse to the other phases or practices of Yoga enumerated in Oriental works, and which other and inferior practices are often misleading, in some cases distinctly injurious, and at the best mere props or aids in the attaining of complete mental abstraction from worldly concerns" (OG 150-1). The seeker on attaining samadhi becomes practically omniscient for his solar universe because his consciousness is functioning in the cosmic spiritual and causal worlds.

Bodhi (enlightenment) is a particular state of samadhi, during which the subject reaches the culmination of spiritual knowledge. Samadhi is the highest state on earth that can be reached while in the body; its highest stage or degree is called turiya. To attain beyond this, the initiate must have become a nirmanakaya.

Samadhindriya (Sanskrit) *Samādhīndriya* The root of meditation, the organ of meditation; “the fourth of the five roots called Pancha Indriyani, which are said in esoteric philosophy to be the agents in producing a highly moral life, leading to sanctity and liberation; when these are reached, the two *spiritual roots* lying latent in the body (Atma and Buddhi) will send out shoots and blossom. *Samadhindriya* is the organ of ecstatic meditation in Raj-yoga practices” (TG 286).

Samael (Hebrew) *Sammā’ēl* In the Hebreo-Chaldean Qabbalah, the Prince of Darkness, the Angel of Death or Poison, who rules the seven habitations called Sheba‘ Ha-yechaloth, zones of our globe, yet these seven habitations or infernal regions are the lower seven of the ten degrees which make the dwelling places of the beings inhabiting the fourth or lowest world of the Qabbalah, of which Samael is supposed to be the hierarch or prince. This fourth or lowest world of Qeliphoth (shells) is divided into ten degrees forming the lowest hierarchy of the Qabbalistic system corresponding to the ten Sephiroth. These ten stages of the world of shells are again subdivided into three higher or relatively immaterial, and seven lower, material, or infernal ranges; and of these seven Samael is supposed to be the hierarch or ruler. The Talmud states, however, that “the evil Spirit, Satan, and Sama’el the Angel of Death, are the same” (Rabba Batra, 16a); and Samael is also there made equivalent to the Biblical serpent of the Tree of Knowledge of Good and Evil. He is also termed the chief of the Dragons of Evil, and is popularly made responsible for the hot scorching wind of the desert — the simoom. In conjunction with Lilith he is represented as the Evil Beast (hiwyai’ bisha’).

Thus Samael, “the dark aspect of the Logos — occupies only the rind of that tree, and has the knowledge of EVIL alone” (SD 2:216n), i.e., the Tree of Knowledge of Good and Evil. In Explaining the Hebrew terms as applied to the theosophical sevenfold classification of the human principles, Blavatsky makes Samael equivalent to kama, the seat of desire and emotional energy (SD 2:378). Yet there is another aspect to Samael: “In the ‘Chaldean Book of Numbers’ Samael is the concealed (occult) Wisdom, and Michael the higher *terrestrial* Wisdom, both emanating from the same source but diverging after their issue from the *mundane soul*, which on Earth is *Mahat* (intellectual understanding), or *Manas* (the seat of Intellect). They diverge, because one (Michael) is *influenced* by Meschamah, while the other (Samael) remains *uninfluenced*. This tenet was perverted by the dogmatic spirit of the Church; which, loathing independent Spirit, uninfluenced by the external form (hence by dogma), forthwith made of Samael-Satan (the most wise and spiritual spirit of all) — the adversary of its anthropomorphic God and sensual physical man, the DEVIL!” (SD 2:378).

Precisely as all other cosmic forces or energies, then, Samael is dual, possessing in its higher aspects divine attributes, and in its lower aspects material or infernal attributes. Similarly, kama

not only in nature but in man is in itself an abstract and impersonal natural principle, with its divine side as well as its material side, and therefore is per se neither good nor bad in the human sense, but becomes either when used or misused by the human mind. *See also* SHEMAL

Samajna (Sanskrit) *Samājña* The enlightened one; a name of the Buddha; the famous vihara near Kustana (China) is called the Sangharama-Samajna (the monastery of the luminous sage). Also spelled Samadjna.

Saman (Sanskrit) *Sāman* A particular kind of sacred text or verse intended to be chanted — one of the four kinds of Vedic composition. *See also* SAMA-VEDA

Samana (Sanskrit) *Samāna* [from *sam* together + the verbal root *an* to breathe, blow] The vital air or life-current which carries on the chemical action in the body and is connected with the functions of digestion and assimilation. One of the pranas or vital airs which build and sustain the manifested vehicle. Its physical seat is in the abdomen. *See also* UDANA

Samanera (Pali) *Sāmaṇera* A novice in Buddhism.

Samantabhadra (Sanskrit) *Samantabhadra* The universal sage, the wholly auspicious one; a name of Gautama Buddha, and also of one of the four bodhisattvas of the Yogacharya school of Mahayana philosophy. A Yogacharya legend states that there are three celestial and four terrestrial bodhisattvas — an allusion to the upper triad and the lower quaternary of the seven human principles. The four terrestrial bodhisattvas act only in the present races, yet in the middle of the fifth root-race has appeared the fifth terrestrial bodhisattva, the Buddha Siddhartha-Gautama. It is said that he appeared somewhat before his periodic time and was obliged to disappear bodily from the world for a while. The four terrestrial bodhisattvas refer to the four rounds thus far appearing in our present planetary chain — three rounds having been completed, and the fourth about half run. The three celestial bodhisattvas mentioned refer to the spiritual forces or powers of the three rounds still to come — the fifth, sixth, and seventh rounds. These bodhisattvas are in celestial spheres awaiting their turn to take their place in the septenary line of cosmic teachers. Once they appear on earth they become terrestrial bodhisattvas, although remaining nevertheless celestial or transcendent — as the four bodhisattvas who have already appeared have done or are.

Samantaprabhasa (Sanskrit) *Samantaprabhāsa* Universal or perfect splendor; according to Buddhist legend, this is the general name by which each of the 500 perfected arhats will reappear as individuals on our earth as a buddha.

Samanya (Sanskrit) *Sāmānya* As a noun, that which is common, general, universal; a community or the commingling of qualities; also an abstract notion of genus, such as humanity. As an adjective, inclusive, whole, entire, general, or universal as opposed to specific or particular.

Samanya-sarira (Sanskrit) *Sāmānya-śarīra* [from *sāmānya* whole, entire, inclusive + *śarīra* body,

vehicle] The inclusive body or vehicle; referring to the elements in which the different human principles work — which thus become upadhis when considered as a unity. The aggregate of the transmitting elements in the human constitution conveying the light from atma-buddhi, the spiritual monad. It is the light from this spiritual monad which, traversing the aggregate of the elements of the human constitution (samanya-sarira) is called the light of the Logos, so far as man is concerned; the Logos here being the individuals.

Samanyas (Sanskrit) *Sāmānya-s* Brahmins conversant with the *Sama-Veda* and trained to chant and recite the sacred hymns.

Samapatti (Sanskrit) *Samāpatti* [from *sam-ā-pad* to progress to perfect fulfillment from the verbal root *pad* to go, progress] In Buddhism, a subdivision of the fourth stage of abstract meditation (there being eight samapattis); “perfect concentration” in the raja yoga system of occult training, a state of intellectual, spiritual, and psychic unfolding in which meditation becomes vision, and there ensues perfect indifference to things of this world. Said to be the final degree of development, upon reaching which the possibility of entering into samadhi is attained.

Samaritans The Shemitic people inhabiting a restricted portion of central Palestine west of the Jordan, Hebrews with their own special doctrinal beliefs and perhaps practices. Following Josephus and the New Testament, the term covers that portion of the Israelites who regarded themselves as descendants of the ten tribes of Israel, claiming to possess the orthodox religion of Moses in their manuscripts of the Pentateuch. The Samaritans, however, regarded the Jewish temple as well as the Jewish priesthood as having broken off from the orthodox law of Moses which they represented: they declared, further, that Mt. Gerizim overhanging Shechem was the true choice for the sanctuary of God, and not Zion.

The idea familiarly connected in the West with the term of a compassionate, humanitarian person, as in the good Samaritan, is based upon the parable in the New Testament (Luke 10:30-37).

Samavaya (Sanskrit) *Samavāya* [from *sam* together + *ava* down + the verbal root *i* to go] Coming together, meeting together; a concourse, assembly, etc. In philosophy, perpetual co-inherence, or an inner or intimate relation — one of the seven padarthas or categories of the Vaiseshika system founded by Kanada. The relation which exists between a substance and its qualities, or a whole and its parts; e.g., the relation between a piece of cloth and the threads composing it. Blavatsky compares the seven padarthas to the seven qualities of the seven principles.

Sama-Veda (Sanskrit) *Sāma-veda* The Veda of chants (samans); one of the three principal Vedas. Many of the hymns of the *Rig-Veda* are found in the *Sama-Veda*, modified so as to be better adapted for chanting, especially during the ceremonies of the soma sacrifices. The rhythms to be chanted to the arrangement of verses found in the *Sama-Veda* are given in a special treatise.

The *Sama-Veda* is mystically described as having come forth from or been inspired by the sun. It is

said by Hindu Vedic specialists to have reference to the pitris (ancestors), while the *Rig-Veda* has the gods as its object, and the *Yajur-Veda* men as its object.

Samaya (Sanskrit) *Samaya* [from *sam* together + the verbal root *i (aya)* to go] A coming together, meeting together, a compact, treaty, agreement. Also convention, law, rule, practice, precept, doctrine. In a religious sense, a regular ritualistic observance or religious obligation, combined with the accompanying precepts or instruction.

Samba (Sanskrit) *Sāmba, Śāmba* The reputed son of Krishna by Jambavati. According to esoteric tradition Krishna had no son; therefore Samba is symbolic of some power attained by Krishna. Through a curse of some holy sages, Samba was condemned to produce offspring in the shape of a terrific iron club for the destruction of the race of Yadu. Samba accordingly brought forth as iron club which was pounded and cast into the sea. But one piece which could not be crushed was subsequently found in the belly of a fish, and was used to tip an arrow used by the hunter Jaras (old age) to unintentionally kill Krishna. Thus old age finally overtakes and gathers in all things; and our future karma flows forth from our emotional and mental offspring, and sooner or later overtakes us all through time or old age. The iron club may represent the blows of destiny, based upon the kama of which iron is often a symbol; we may attempt to destroy the effects of our feelings and thoughts, but always there will be one little portion which cannot be crushed, and which is the seed of the future destiny, at least of our lower self.

Sambhala, Shambhala (Sanskrit) *Śambhala* A mystical and unknown locality, mentioned in the Puranas and elsewhere, from which will appear in due course the Kalki-avatara of Vishnu. Sometimes spelled Shambhala. Buddhists state that out of Sambhala will come the next buddha, Maitreya. Sambhala

“is an actual land or district, the seat of the greatest Brotherhood of spiritual Adepts, of great Sages and Seers, on the Earth today. It is the secret home of the Brotherhood of the theosophical Mahatmans and their Chiefs; and from Sambhala at certain times in the history of the world, or more accurately of our own Fifth Root-race, come forth the Messengers or Envoys of the Great Brotherhood has branches or Subordinate Lodges in various parts of the world, but Sambhala is the center of Chief Lodge. We may tentatively locate it . . . in a little known and remote district of the high table-lands of central Asia, more particularly in what is now called Tibet. A multitude of aeroplanes might fly over the place without ‘seeing’ it, for its frontiers are very carefully guarded and protected against invasion, and will continue to be so until the karmic destiny of our present Fifth Root-race brings about a change of location to some other spot on the Earth, which then in its turn will be as carefully guarded as Sambhala now is” (OG 152).

Sambhogakaya (Sanskrit) *Sambhogakāya* [from *sambhoga* enjoyment together, delightful participation + *kāya* body] Participation body; the second of the trikaya (three glorious vestures) of

Buddhism, the highest being dharmakaya, and the lowest nirmanakaya. A buddha in the sambhogakaya state still retains his individual self-consciousness and sense of egoity, and is able to be conscious to a certain extent of the world of men and its griefs and sorrows, but has little power or impulse to render aid. *See also* TRIKAYA; TRISARANA; TRAILOKYA

Sambhu (Sanskrit) *Śambhu* [from *śam* auspiciously, happily + *bhu* being, existing] Benevolent, causing happiness, kind, a title given to many of the Hindu gods.

Sankaracharya in his *Saundarya-lahari* addresses the light in which the Logos makes its appearance as “the body of Sambhu” (Notes on the BG 76).

Sambhuti (Sanskrit) *Sambhūti* Combination, conjunction, co-union; one of the daughters of Daksha, and consort of Marichi (light, light-monad), the father of the agnishvattas.

Samdhi. *See* SANDHI

Samdhya. *See* SANDHI

Samdhyansa. *See* SANDHYANSA

Samdhyabandana. *See* SANDHYAVANDANA

Samika (Sanskrit) *Śamika* In the *Vishnu-Purana* Parasara tells his disciple Maitreya that at the end of the kali yuga Maitreya will teach to Samika the whole of the Purana as it has just been related to him. Hence Samika represents some sage to come in the far future.

Samjna. *See* SANJNA

Samkalpa (Sanskrit) *Samkalpa* [from *sam-klṛp* to bring about, be desirous] A conception or idea formed in the mind or heart, especially will or purpose; also considered as the will personified.

Samkhya. *See* SANKHYA

Samma-sambuddha (Pali) *Sammā-sambuddha* Used by mystic Buddhists and raja-yogins to signify the complete or perfected knowledge of the whole series of one’s past lives, a phenomenon of memory obtained through the practice of true inner yoga or self-control. More generally, full or complete awaking, in the sense that all the higher nature of the individual is thoroughly awakened and active, thus conferring virtual omniscience as regards our solar system; it likewise brings with it great spiritual and psychic powers. It is the full efflorescence and self-conscious activity of the spiritual monad in and through the one who has attained to this sublime degree in spiritual unfoldment, the becoming at one with the cosmic Logos.

Also a title of Gautama Buddha referring to his perfect inner illumination.

Samnaddha. *See* SANNADDHA

Samnati (Sanskrit) *Samnati* [from *sam-nam* to bend together, bow] Reverence.

Samothrace An island in the north Aegean celebrated for a school of the Mysteries, more profound than the Mysteries of Eleusis, “perhaps the oldest [Mysteries] ever established in our present race” (TG 287). The island is of volcanic formation and connected with traditions of a deluge. Its Mysteries were related to the worship of the kabiri, the holy fires of the most occult powers of nature, which legend says formed on the seven localities of the island the kabir born of the Holy Lemnos sacred to Vulcan. It was colonized by Phoenicians and before them by the mysterious Pelasgians who came from the East, which indicates its connection with the ancient Mysteries of India. Here was enacted every seven years the Mysteries — what the Shemitic peoples of Asia Minor called the Sod. The sacred fire preserved at Samothrace was communicated to the candidates of initiation, who thus began a new life — the real meaning of baptism by fire and the spirit.

The Mysteries of Samothrace and of Eleusis were the two most famous in ancient Greek civilization, and it would be difficult to find which was held in greater reverence. Those at Samothrace were more scientific and philosophic, while those celebrated at Eleusis were more of a mystical and religious character.

Sampa-jnana (Sanskrit) *Sampa-jñāna* [possibly from *sam* + the verbal root *pat* to fall or fly, to rush together (sometimes given as *śampā*, lightning) + *jñāna*, wisdom] “Wisdom acting with lightning swiftness,” and hence a power of internal illumination.

Samsara (Sanskrit) *Samśāra* [prefix *sam* + the verbal root *sr* to go, proceed; to wander about] The word Samsara is commonly rendered as the wandering of the human monad under karmic impulses through enormously varying successions of states, and in different spheres or worlds of the manifested as well as unmanifest universe — the processes of metempsychosis and transmigration with particular application to human monads and the doctrine of reincarnation.

From another more general standpoint Samsara is the passage through the three worlds as commonly given in Buddhism: physical, astral, and mental; and from a more esoteric viewpoint the word could embrace the entire whirlings or wanderings of the monadic centers of beings through the seven Worlds.

Samskara (Sanskrit) *Samśkāra* [prefix *sam* together + the verbal root *kr* to make, to do; to compose, to impress] In philosophy the term is used to denote the impressions left upon the mind by individual actions or external circumstances capable of being developed on future occasion.

Samskara is intimately connected with causative action and its consequences, i.e., with karma. It is the creative mind continually weaving together new ideas and new notions in action which develops the propensities and impulses to consequent reactions or effects. As a metaphysical term Samskara is defined variously: as illusion, as notion, or as a species of discrimination. As the

eleventh Nidana, it is action on the plane of illusion with the essential significance as the causative impulses which impel to action on the plane of illusion.

Samskara is also the fourth of the Skandhas or attributes, the “tendencies of mind.”

Samtati (Sanskrit) *Samtati* [prefix *sam* together + the verbal root *tan* to stretch, extend] Continuity, uninterruptedness.

Samvara (Sanskrit) *Samvara* [prefix *sam* + the verbal root *vr* to enclose, to surround; to restrain or check] A name of a deity worshiped by the Tantrikas. Also applied to the preserving, continuative, or upholding functions of Vishnu.

Samvarta (Sanskrit) *Samvarta* [prefix *sam* + the verbal root *vrt*, to roll forwards] A minor Age or Kalpa. A period in creation after which a partial annihilation of the world occurs.

Samvat (Sanskrit) *Samvat* [a contraction of *sam* + *vatsara* year] A full year, having twelve (or sometimes thirteen) months. In later times, it referred especially to the Vigramma Era which commenced 58 BC as contrasted with the Śaka Era.

Samvriti (Sanskrit) *Samvriti* [prefix *sam* + the verbal root *vrt* to enclose; to cover, to involve] The holding of “false conception,” because the percipient ego is enclosed or covered or involved with material energies and powers. Samvriti hence may be called the origin of all illusion or maya. “One has to acquire true Self-Consciousness in order to understand Samvriti or the ‘origin of delusion’.” (SD 1:44n)

For the student of the Esoteric Philosophy, initiation is the casting aside of the enclosing or involving sheaths of consciousness and psychic integuments freeing the spiritual glory within.

Samvriti-Satya (Sanskrit) *Samvriti-satya* [from *samvriti* concealment, covering + *satya* truth] The cognizance of minor or relative truths. The student-initiate’s enlarging consciousness progressively demonstrates to itself the illusive character or mayavi emptiness of all mere things. Samvriti-satya is relative truth in contrast with Paramartha-satya, the Absolute Reality or Truth.

Samyag-Ajiva (Sanskrit) *Samyagājīva* [from *samyak* perfect, correct + *ājīva* livelihood] “Right Livelihood,” in Buddhism one Path of the Holy Eightfold Path, also mendicancy for religious purposes, and the vow of poverty obligatory on every Arhat.

Samyag-Drishti (Sanskrit) *Samyagdr̥ṣṭi* [from *samyak*, perfect, correct + *dr̥ṣṭi* vision, insight] “Right Insight,” in Buddhism one Path of the Holy Eightfold Path. The ability to understand and discuss truth.

Samyak-Karmanta (Sanskrit) *Samyakkarmānta* [from *samyak* perfect + *karmānta* accomplishment, conclusion of a sacred action] Literally, “working out perfectly the very end of one’s karmic destiny.” In Buddhism, “Right Action,” one Path of the Holy Eightfold Path.

Samyak-Samadhi (Sanskrit) *Samyaksamādhī* Perfect or complete meditation. As “Right Concentration,” one Path of the Holy Eightfold Path of Buddhism.

Samyak-Sambuddha (Sanskrit) *Samyaksambuddha* [from *samyak*, perfect + the verbal root *budh* to awaken with the prefix *sam* meaning excellence] One who is “fully awakened” and hence a “teacher of perfection.” One of the titles of excellence and reverence given to Gautama the Buddha.

Samyak-Sambuddhi (Sanskrit) *Samyaksambuddhi* The state of perfect enlightenment.

Samyama (Sanskrit) *Samyama* [from *sam* together + the verbal root *yam* to hold, to sustain; self-restraint, self-control, forbearance] Samyama is explained in Patanjali’s *Yoga Aphorisms* as follows: “When this fixedness of attention [*dhāraṇā*], contemplation [*dhyāna*], and meditation [*samādhī*] are practiced with respect to one object, they together constitute what is called Samyama. By rendering Samyama — or the operation of fixed attention, contemplation, and meditation — natural and easy, an accurate discerning power is developed.” (Bk. III, śl. 4,5)

Samyama is a very technical word that can vary with meaning according to the school. It does include more, though, than merely “fixed attention, contemplation, and meditation,” i.e., the idea of the restraining or controlling or checking of the ever-active, volatile, uncertain, and fleeting activities of the mind.

Samyutta-Nikaya (Pali) *Samyutta-Nikāya* One of the principal Buddhist works: one of five parts of the Suttanta-Pitaka — a collection of Suttas (dialogs between the Buddha and his disciples). Also spelled Samyuttaka-Nikaya.

Sanaischara (Sanskrit) *Śanaiścara* [from *śanaiḥ* slowly + *cara* moving] “The slowly moving one:” the planet Saturn, or of its regent. Also given as a name for the sun or other slowly moving heavenly bodies.

Sana, Sanaka, Sananda, Sanatana. See SANAT-KUMARA

Sanat-kumara (Sanskrit) *Sanat-kumāra* [from *sanat* from of old, always + *kumāra* youth from *ku* with difficulty + *māra* mortal] Eternal youth; the most important of the four groups of kumaras, the mind-born sons of Brahma who “refused to create.” These purely spiritual beings, being cosmically youthful, were destined by evolution to pass through the realms of matter. The four groups of kumaras — Sanat, Sananda, Sanaka, and Sanatana — as names, “are all significant qualifications of the degrees of human intellect” (TG 289). Personified, Sanat is the oldest of the progenitors of mankind. Although Hindu literature usually speaks of four kumaras, nevertheless it frequently hints at there being seven such mind-born sons. The four kumaras named above are considered exoteric, while three others are considered esoteric, and their names are given as Sana, Kapila, and Sanat-sujata.

Sanat-sujata (Sanskrit) *Sanat-sujāta* Always beautiful, perpetually and primevally well-born —

well-born signifying original derivation from spirit rather than from the realms of matter. One of the three groups of esoteric kumaras, “which contains the mystery of generation and reincarnation” (TG 289). *See also* SANAT-KUMARA

Sanatsujatiya (Sanskrit) *Sanatsujātīya* One episode in the *Udyoga Parva* of the *Mahabharata*, consisting of a dialogue between Sanatsujuata and Dhritarashtra; a philosophical treatise of high distinction, commented on by Sankaracharya.

Sancha-dvipa. *See* SANKHA-DVIPA

Sanchoniathon or **Sanchuniathon** (Phoenician) An ancient writer, said to have lived before the Trojan War. Fragments of his work were translated by Philo Byblius (1st-2nd century) whose writings are known to us only through the works of Eusebius. Scholars differ in regard to the extracts made from Sanchoniathon: some hold that they are translations from the Phoenician cosmogony; others maintain that Philo simply used this statement as a means for adding weight to his own writings, because the fragments appear to be a gathering together of information, showing great knowledge of Egyptian, Greek, and even Persian ideas, which are not believed to have been the original form of the Phoenician religion.

Sanchita (Sanskrit) *Sam̐cita* [from *sam-ci* to unite, accumulate] That which is piled together or gathered; sanchita-karma is that accumulated karma which is not yet worked out, and is therefore unripe, waiting for expression in manifestation. Prarabdha-karma is that karma which is ripe, which has arisen from the past and is expressing itself.

Sanctum Sanctorum (Latin) Holy of Holies. *See also* ADYTUM

Sandalphon (Hebrew) *Sandalfōn* Qabbalistic term alleged to be the name of the chief of angels: “the Kabbalistic Prince of Angels, emblematically represented by one of the *Cherubim* of the Ark” (TG 289). In the *Zohar* the name of the “supreme chief” of the seventh heaven who “introduces the prayer into the seven palaces, to wit, the Palaces of the King” (Sperling’s trans 4:185); again Sandalphon is described as the “angel in charge of the prayers of Israel,” who “takes up all those prayers and weaves out of them a crown for the Living One of the worlds” (ibid., 2:143).

Sandhi, Samdhi (Sanskrit) *Sam̐dhi* [from *sam* together + the verbal root *dhā* to place] That which combines or unites; the interval between day and night, twilight; also the period at the expiration of each yuga (age), or between two manvantaras or kalpas. Equivalent to 1/10 the duration of the yuga and lasts until the commencement of the next yuga. Such is the way the time periods of the yugas are calculated, whether according to divine years or solar years. However, when attention is concentrated solely on the dawns and twilights (there being a dawn and a twilight for each such time period in a yuga), every dawn and twilight conjoined is 1/6 of the length of each such time period: in other words, a dawn or twilight is 1/12 of the length of such period. As an example, a mahayuga of 4,320,000 solar years (or 12,000 Divine Years, 360 solar years making one Divine

Year) consists of four minor yugas — the krita, treta, dvapara, and kali, decreasing in length by the Pythagorean scale of 4, 3, 2, 1 respectively. Thus counting in Divine Years, the krita is 4800 such years long, the treta 3600 such years, the dvapara 2400 such years, and the kali 1200 such years. Otherwise phrased, the krita is 4000 years long plus 1/10 thereof — 400 years for its dawn and 400 years for its twilight. The treta is 3000 years long plus 1/10 that period or 300 years for its dawn and 300 years for its twilight. The dvapara and the kali are calculated by the same rule. With solar years, the system can be illustrated by stating that the kali yuga is 360,000 solar years long, 1/10 of that period or 36,000 years each for its dawn and its twilight, the total comprising the full duration of 432,000 years. Thus the 2/10 when added are 72,000, which is 1/6 of the total duration; and either the dawn or twilight is 1/12 of the total or 36,000.

Another form of the term is sandhya; whereas sandhyansa is often specifically used for the period ending or closing a yuga and is 1/10 of the length of the age that it closes.

Sandhya or **Samdhya**. See SANDHI

Sandhyansa or **Samdhyanasa** (Sanskrit) *Samdhyāṃśa* [from *saṃdhyā* a transition period, twilight, dawn + *aṃśa* part] Part of the transition period, the period of a sandhya immediately following or preceding a yuga, and thus either a twilight or dawn. It is often customary in ancient Hindu writings to speak of sandhyansa as the last portion of a sandhi, the end of a twilight; but this is taking only one of the two main junction periods as standing for both, because the end of dawn would be a sandhyansa likewise. See also SANDHI

Sandhyavandana or **Samdhyabandana** (Sanskrit) *Samdhyāvandana* [from *saṃdhyā* twilight, dawn + *vandana* salutation, worship, praise, prayer from the verbal root *vand* to greet, worship, praise] The morning and evening hymns and acts of worship.

Sandracottos. See CHANDRAGUPTA

Sanga (Sanskrit) *Saṅga* [from the verbal root *sañj* to adhere, attach] Worldly or selfish attachment or affection; “the Sankhyas say: give up *Sangam*, that *desire* to do *Karma*, which alone seems to connect the soul with it, and renounce this connection, which alone renders the soul responsible for the *Karma*” (N on BG 114).

Sangbai Dag-po (Tibetan) [from *sang ba* to remove (impurity), cleanse, be freed from (or *sang sbad* hidden, concealed) + *bdag po* (dak-po) lord] The concealed lord; applied to one who has entered nirvana; a title of “those who have merged into, and identified themselves with, the Absolute” (TG 289). Equivalent to the Sanskrit jivanmukta and nirvani.

Sanggyas (Tibetan) *sangs rgyas* (sang gye) Equivalent of Sanskrit buddha; one name of Gautama Buddha with a philosophical connection with Sanghai Dag-po. Sometimes panchen (the great ocean, great teacher) is added.

Sangha, Samgha (Sanskrit) **Sangha** (Pali) *Saṅgha, Saṃgha, Sangha* [from *sam* together + *han* to strike together, unite] Assemblage, gathering, convocation; in Buddhism, popularly applied to the assemblage of Buddhist priests (sangha-bhikkhu) and often rendered incorrectly as the Buddhist church. The Order or Brotherhood are also translations.

The idea conveyed is the unity of all who accept the doctrine of the Lord, i.e., Buddhists. More mystically applied by Buddhist initiates to signify likewise the unity or universal brotherhood of all human beings at any time or place, who through knowledge or natural intuition follow the law of the Buddhas, the law of right and compassion.

Sanguis (Latin) Blood; in alchemical symbolism, a member of the trinity spiritus, aqua, sanguis — spirit, water (soul), blood (body) — or sulfur, mercury, salt.

Sanhedrin (Hebrew) *Sanhedrīn* [from Greek *synedrion* assembly, cf Latin *synedrium*] An assembly, especially the gathering of the Jewish elders for judiciary purposes; originally the Jewish municipal council, called in the Mishnah the Great Council of 71 members and the Great Court of Justice.

Sani (Sanskrit) *Śani* The planet Saturn or its regent; in the Hindu pantheon, the son of Surya (the sun) and of either Sanjna (spiritual consciousness), the daughter of Visvakarman, or Chhaya (shadow), the spiritual shadow thrown off or left behind by Sanjna. Sani is almost invariably represented as a black individual clothed in black, and his titles include Saptarchi (seven-rayed one) and Asita (dark or obscure). The influence of Saturn, spiritually and astrologically, is enormous, and though commonly considered the great malefic in astrology, this is but a one-sided view, for Saturn's influence often is as helpful as it is dangerous upon occasions.

Sanjna, Samjna (Sanskrit) *Sañjñā, Saṃjñā* [from *sam* wholly, completely + the verbal root *jñā* to know] Full knowledge, understanding, comprehension; mystically, spiritual consciousness. According to the Puranas, the daughter of Visvakarman and wife of Surya (the sun). In the *Vishnu-Purana* (3:2) Sanjna, “‘unable to endure the fervours of her lord,’ gave him her *chhaya* (shadow, image, or *astral* body), while she herself repaired to the jungle to perform religious devotions, or *Tapas*. The Sun, supposing the ‘chhaya’ to be his wife begat by her children, like Adam with Lilith — an *ethereal shadow* also, as in the legend, though an actual living female monster millions of years ago” (SD 2:174). This refers to the creation of the first root-race, the “*chhaya-birth*, or that primeval mode of sexless procreation, the first-race having *eased out*, so to say, from the body of the Pitris . . .” (ibid).

Also the third of the skandhas (attributes), signifying abstract ideas (**sanna** in Pali).

Sanjna-veshin (Sanskrit) *Sañjñā-veṣin* One who wears the robe of understanding or spiritual consciousness, the initiation robe donned by these entering nirvana.

Sankalpa or **Samkalpa** (Sanskrit) *Saṅkalpa, Saṃkalpa* [from *sam-klṛp* to be brought into existence,

wish, produce] A conception or idea formed in the mind or heart; thought, ideation, desire. The Vedas say that the whole universe is evolved through sankalpa — the ceaselessly acting impulses of karma driven by cosmic kama — and hence it is only through sankalpa that the universe retains its karmic structure, appearances, and continuance.

Sankaracharya (Sanskrit) *Śaṅkarācārya, Śaṅkarācārya* [from *Śaṅkara* a personal name + *ācārya* teacher] The beneficent teacher; one of the greatest initiates of India. The Upanishads, Gautama Buddha, and Sankaracharya are considered by many to be the three lights of the wisdom of India. In a very mystical way Sankaracharya was Buddha's esoteric successor. He was an avatara, as was Jesus. Sankaracharya set himself to preserve the wisdom previously lighted, or brought to men, by Gautama Buddha. By his pure living and high thinking, causing an outpouring of lofty spiritual and intellectual thought from his very soul-life, he kindled the truth in the hearts of many who had lost it through following dogmatic trends of religion, rather than holding to the inner spirit of the ancient teachings. Sankaracharya worked mostly with the Brahmin order — the highest caste in India — where the advantages of heredity, of ages of high ideals and rigid discipline, could most easily, if accepted, receive the pure truths, and also could best supply a body of men fitted by character and training to master the higher knowledge, sustain it, and pass it on.

Sankaracharya did this in three ways: first by writing commentaries on the great Upanishads and the *Bhagavad-Gita* which revealed the original message of these old writings; secondly, by himself composing a series of original works, such as *Ata-bodha*, *Ananda-lahari*, *Jnana-bodhini*, and *Mani-ratna-mala*, as well as catechisms and manuals for students wishing to follow the path of wisdom; thirdly, by a system of reform and discipline within the Brahmin order itself, which if accepted and faithfully followed would so purify and clarify the mind and body, that his disciples finally became fit to receive his precepts.

Sankaracharya was also the founder of the Advaita-vedanta school of philosophy. The story of his life is very remarkable. He was born according to tradition in the 6th century BC, probably about 510. He lived, to be only 32 years old, but owing to his extraordinary capacities he accomplished many great and spiritual works for humanity. Probably most of the marvelous episodes recorded about his life are allegories of certain of his spiritual experiences and conquests, written in this form — as was the custom of students of the Mystery schools — in order to veil the deep mysteries of his life.

Sankha-dvipa (Sanskrit) *Śaṅkha-dvīpa* Spoken of in the Puranas as one of the nine divisions of Bharata-varsha or India. Blavatsky identifies it with the Poseidonis of Plato's Atlantis, which Solon declared to have reached its end some 9,000 years before his time. All the history given in the Puranas about Sankha-dvipa and Sankhasura is geographically and ethnologically Plato's Atlantis in Hindu dress. The Puranic account speaks of the island as still existing.

Sankhara (Pali) **Samskara** (Sanskrit) *Saṅkhāra, Saṃskāra* Tendencies (both physical and mental),

former impressions, former dispositions; the fourth of the skandhas (bundles of attributes) enumerated in Buddhism.

Sankhasura (Sanskrit) *Śaṅkhāsura* A daitya said in Hindu legend to have waged war against the gods and to have conquered them, upon which he stole the Vedas and hid them at the bottom of the sea, whence they were rescued by Vishnu in the form of a fish. There are also vague references in connection with one of the dvipas (Sankha-dvipa) and it is tempting to suppose that they are connected. Another Hindu legend mentions the killing of Sankhasura by Krishna — another instance of the way in which this avatara is placed in many different ages as the Krishna spirit in the world rather than as any incarnated avatara of that name: the death of Krishna is stated as having begun the kali yuga in 3102 BC, whereas Sankha-dvipa was one of the great islands of the Atlantean continental system of several million years ago.

Sankhya or **Samkhya** (Sanskrit) *Sāṃkhya* [from *sam-khyā* to reckon, enumerate] The third of the six Darśanas or Hindu schools of philosophy, founded by Kapila, called thus because it divides the universe, and consequently man, into 25 tattvas (elementary principles), of which 24 represent the various more or less conscious vehicles or bodies in which lives and works the 25th, Purusha or the true self. The whole purpose of this school is to teach the essential nature of the universe and of man as an inseparable part of the universe; so that this Purusha — the ultimate thinking spiritual ego, composed in its essence of pure bliss, pure consciousness, and pure being — may be freed from the clinging bonds of the other 24 tattvas.

Blavatsky suggests that there was a succession of Kapilas; but that the Kapila who slew King Sagara's 60,000 progeny was the founder of the Sankhya philosophy as stated in the Puranas. Further, the Sankhya philosophy may have been brought down and taught by the first, and written out by the last, Kapila, the great sage and philosopher of the kali yuga (cf SD 2:571-2).

As concerns the 24 tattvas, all derivative from the spiritual originant Purusha, they are divided into eight original prakritis (producers), and 16 derivatives of these eight prakritis called vikaras (productions). The eight prakritis themselves spring forth from mulprakriti (original nature or root-substance). In and through these 24 tattvas Purusha manifests itself during the manvantaric period. This system of tattvas therefore is applicable either to the universe or to any entity as a component part of the universe, since the fundamental law of things repeats itself in the great and the small.

The Sankhya school is closely related both in system and philosophical substance to the Yoga school founded by Patanjali.

Sankhya-karika or **Sankhya-saptati** (Sanskrit) *Sāṃkhya-kārikā*, *Sāṃkhya-saptati* A well-known textbook of the Sankhya philosophy; a collection of 72 verses by Isvara-Krishna, perhaps the oldest extant systematic exposition of the Sankhya system.

Sankhya-sara (Sanskrit) *Sāṃkhya-sāra* A work on the Sankhya philosophy by Vijnana-bhikshu.

Sankhya Yoga, Samkhya Yoga (Sanskrit) *Sāṃkhya-yoga* The realization, union, or at-one-ment with the higher self by the methods of the Sankhya system of philosophy. It is treated of in the second chapter of the *Bhagavad-Gita*.

Sanna. See SANJNA

Sannaddha or **Samnaddha** (Sanskrit) *Samnaddha* [from *sam* + the verbal root *nah* to be bound, covered, armed] The armed one, the equipped one; one of the seven principal rays or logoi of the sun.

Sannyasa (Sanskrit) *Samnyāsa* [from *sam* together with + *ni-as* to reject, resign worldly life] Putting or throwing down, laying aside, abandonment; particularly renunciation of the world and material affairs and the assumption of the path leading to mystic knowledge. The practitioner is called a sannyasin.

Sannyasin (Sanskrit) *Samnyāsin* [from *sam* together with + *ni-as* to reject, resign worldly life] One who abandons or sets aside worldly affairs and fixes his mind upon the attainment of mystic knowledge; more commonly, a devotee, ascetic, one who has renounced all worldly concerns and devotes himself to spiritual meditation and the study of the Upanishads, as also does a Brahmin in the fourth stage of his life. The sannyasin is one who practices sannyasas.

Sanskrit [from Sanskrit *saṃskṛta*] The ancient sacred language of the Aryans, originally the sacred or secret language of the initiates of the fifth root-race. The Sanskrit language possesses voluminous and valuable works in prose and in verse, some of which, like the Vedas, date back, in the opinion of certain scholars, to the years 30,000 BC or even far beyond. Almost every phase of philosophic thought, expressed and studied in the West, is represented in one form or another in ancient Hindu literature. Besides this, these old Sanskrit writings are replete with recondite subjects dealing with the wondrous potentialities of the human spirit and mind, the building and destruction of worlds and universes, etc.

The Sanskrit language, derives from one of the earliest of the Aryan tongues, a lineal descendant of an Atlantean progenitor.

“In ancient times in India, and in the homeland of the Aryans before they reached India by way of Central Asia, this very early Aryan speech was used not only by the Aryan populace, but in the sanctuaries of the Temples was taken in hand and developed or composed or builded to be a far finer vehicle for expressing abstract religious and philosophic conceptions and thoughts. This tongue thus composed or developed by initiates of the Aryan stock, because of this formative work upon it was finally given the name *Sanskrita*, signifying an original natural language which had become perfected by initiates for the purpose of expressing far more subtle and profound distinctions than ordinary people

would ever find needful. So great was the admiration in which the Sanskrit language thus perfected was held, that it was commonly said of it that it was the work of the Gods, because it had thus become capable of expressing godlike thoughts: profound spiritual subtleties and philosophical distinctions. Thus it was that Sanskrit is really the mystery-language of the initiates of the Aryan race; as the Sencar of very similar history was the mystery-language of the later Atlanteans; and is still used as the noblest mystery-language by the Mahatmas.

“Sanskrit was not known as a spoken tongue to the Atlanteans in their prime, but in the degenerate or later times of Atlantis, when the earliest Aryans already had appeared on the scene of history, this early Aryan speech above alluded to, was already in existence; and the Aryan initiates were then in the course of perfecting it as their temple-language or mystery-tongue . . . Thus Sanskrit was not spoken among the Atlanteans, nor can it therefore be called an Atlantean language; although its verbal roots of course go back to earliest Atlantean times, but only its verbal roots” — G. de Purucker

“The Vedas, Brahmanism, and along with these, Sanskrit, were importations into what we now regard as India. They were never indigenous to its soil. There was a time when the ancient nations of the West included under the generic name of India many of the countries of Asia now classified under other names. There was an Upper, a Lower, and a Western India, even during the comparatively late period of Alexander; and Persia (Iran) is called Western India in some ancient classics. The countries now named Tibet, Mongolia, and Great Tartary were considered by them as forming part of India. When we say, therefore, that India has civilized the world, and was the *Alma Mater* of the civilizations, arts, and sciences of all other nations (Babylonia, and perhaps even Egypt, included) we mean archaic, pre-historic India, India of the time when the great Gobi was a sea, and the lost ‘Atlantis’ formed part of an unbroken continent which began at the Himalayas and ran down over Southern India, Ceylon, and Java, to far-away Tasmania” (Five Years of Theosophy 179).

Blavatsky states that Sanskrit has never been known nor spoken in its true systematized form except by the initiated Brahmins. This form of Sanskrit was called — as well as by other names — Vach, the mystic speech, which resides in the sounds of the mantra. “The chanting of a Mantra is not a prayer, but rather a magical sentence in which the law of Occult causation connects itself with, and depends on, the will and acts of its singer. It is a succession of Sanskrit sounds, and when its strings of words and sentences is pronounced according to the magical formulae in the *Atharva Veda*, but understood by the few, some Mantras produce an instantaneous and very wonderful effect” (BCW 14:428n). This Vach, or the mystic self of Sanskrit, was the sacerdotal speech of the initiated Brahmins and was studied by initiates from all over the world.

“It is admitted that, however inferior to the classical Sanskrit of Panini, the language of the oldest portions of Rig Veda, notwithstanding the antiquity of its grammatical forms, is the

same as that of the latest texts. Every one sees — cannot fail to see and to know — that for a language so old and so perfect as the Sanskrit to have survived alone, among all languages, it must have had its cycles of perfection and its cycles of degeneration. And, if one had any intuition, he might have seen that what they call a ‘dead language’ being an anomaly, a useless thing in Nature, it would not have survived, even as a ‘dead’ tongue, had it not its special purpose in the reign of immutable cyclic laws; and that Sanskrit, which came to be nearly lost to the world, is now slowly spreading in Europe, and will one day have the extension it had thousands upon thousands of years back — that of a *universal language*. The same as to the Greek and the Latin: there will be a time when the Greek of Aeschylus (and more perfect still in its future form) will be spoken by all in Southern Europe, while Sanskrit will be resting in its periodical *pralaya*; and the Attic will be followed later by the Latin of Virgil. Something ought to have whispered to us that there was also a time — before the original Aryan settlers among the Dravidian and other aborigines, admitted within the fold of Brahmanical initiation, marred the purity of the sacred Sanskrita Bhasha — when Sanskrit was spoken in all its unalloyed subsequent purity, and therefore must have had more than once its rise and fall. The reason for it is simply this: classical Sanskrit was only *restored*, if in some things perfected, by Panini. Panini, Katyayana, or Patanjali did not create it; it has existed throughout cycles, and will pass through other cycles still” (Five Years of Theosophy 419-20).

See also DEVANAGARI

Santa (Sanskrit) *Śānta* [from the verbal root *śam* to cease, be extinguished] Placidity, quiet, “the primeval quality of the latent, undifferentiated state of elementary matter” (TG 290) — equivalent to *tamas*, one of the three *gunas* (qualities of nature).

Santati, Santhathi, Samtati (Sanskrit) *Samtati* [from the prefix *sam* together + the verbal root *tan* to stretch or extend] Continuous connection, progeny, lineage. Subba Row states in his *Notes on the Bhagavad-Gita* that each Root-Race is considered as the Santati of a particular Manu. (cf SD 2:140n)

Saoshyant (Avestan) **Soshyans, Soshans, Soshyosh** (Pahlavi) Used in the Gathas in the sense of a benefactor who renovates the world and brings salvation to mankind. In Avestic literature, there are three Sosyans named Hushydar, Hushydar-Mah, and Sushyant, who will come in succession at periods of one thousand years (Bundahesh 32). *See* SOSIOSH

Saphar. *See* SEPPER

Sapphire Many ancient peoples knew how to avail themselves of the magical virtues of precious stones. The sapphire was especially valued because supposed to enshrine some of the influences of Venus as transmitted through other attributes to Luna or the higher aspect of the Moon, and so to be able to induce equanimity and banish evil thoughts. ” ‘The sapphire,’ say the Buddhists, ‘will open barred doors and dwellings (for the spirit of man); it produces a desire for prayer, and brings

with it more peace than any other gem; but he who would wear it must lead a pure and holy life' ” (IU 1:265). Modern authorities surmise that the sappheiros of the Greeks and the sappir of the Bible were our lapis lazuli, while our sapphire was called hyacinthus. The same qualities are attributed to the color blue.

Sapta (Sanskrit) *Sapta* The numerical adjective seven.

Sapta-buddhaka (Sanskrit) *Sapta-buddhaka* The title of an “account in *Mahanidana Sutra* of *Sapta Buddha*, the seven Buddhas of our Round, of which Gautama Sakyamuni is esoterically the fifth, and exoterically, as a blind, the seventh” (TG 290).

Sapta-dvipa (Sanskrit) *Sapta-dvīpa* [from *sapta* seven + *dvīpa* island, continent] The seven islands or continents of the world as described in the *Vishnu-Purana*. Esoterically, the seven great continental systems each one lasting many millions of years, which come successively into existence as the respective homes of the seven root-races. On a greater scale they also may represent the seven globes of the planetary chain.

Sapta-loka (Sanskrit) *Sapta-loka* [from *sapta* seven + *loka* world, sphere, place] The seven great spheres or cosmic planes of manifested life.

Saptaparna (Sanskrit) *Saptaparna* Seven-leaves, sevenfold; the man-plant, sevenfold man, or seven-principled human being. The “mysterious number Seven, born from the upper triangle, the latter itself born from the apex thereof, or the Silent Depths of the unknown universal soul (*Sige* and *Bythos*), is the sevenfold *Saptaparna* plant, born and manifested on the surface of the soil of mystery, from the threefold root buried deep under that impenetrable soil” (SD 2:574).

Also a sacred plant spoken of in Buddhist legends; and a name of a famous cave of seven chambers where Gautama Buddha taught esoteric truths to his select circle of arhats, located near Mount Baibhar in Rajagriha, the ancient capital of Magadha; it was the Cheta cave of Fa-hian (SD 1:xx).

Saptaparna can apply to the entire range of the manifested universe in its seven manifesting planes, hanging like a seven-leaved pendant or jewel from the uppermost triad of the superspiritual, the seven plus the three of the uppermost triad thus forming the sacred cosmic ten. In its human application it signifies the entire range of the sevenfold or seven-principled human constitution, hanging in its turn like a seven-leaved or -faceted pendant from the uppermost triad or divine monad.

It is the unfolding of these seven leaves during manvantara that furnishes the whole course of evolutionary development, from the beginning of the cosmic manvantara to its end, and from the beginning of the cycle of human evolution to its end in buddhahood or human divinity.

Sapta-ratnani (Sanskrit) *Sapta-ratnāni* [from *sapta* seven + *ratnāni* jewels] Seven jewels; applied by the ancient esoteric schools of the Orient to seven key teachings or master keys, a knowledge of

which gives one a relatively complete understanding of nature and its operations, being a synopsis of all possible human knowledge on this earth during this present fourth round. These seven key teachings when properly understood in all their ramifications and recognized to be absolutely interconnected in meanings, supply the student with a relatively complete picture of the sevenfold nature in both its spiritual and material aspects.

In modern theosophy, the seven jewels are given as reimbodiment, karma, hierarchies, svabhava, evolution, the two paths, and atma-vidya (self-knowledge, the One and the many).

Saptarshis (Sanskrit) *Saptarṣi-s* [from *sapta* seven + *rṣi* sage] Seven sages or rishis; the seven great planetary spirits intimately connected with the constellation Ursa Major. Their names are commonly given as Marichi, Atri, Angiras, Pulastya, Pulaha, Kratu, and Vasishtha. “By the seven great Rishis, the seven great *rupa* hierarchies or classes of Dhyān Chohans, are meant. Let us bear in mind that the *Saptarshi* (the seven Rishis) are the regents of the seven stars of the Great Bear, therefore, of the same nature as the angels of the planets, or the seven great Planetary Spirits. They were all reborn, all men on earth in various Kalpas and races. Moreover, ‘the four preceding Manus’ are the four classes of the originally *arupa* gods — the Kumaras, the Rudras, the Asuras, etc.: who are also said *to have incarnated*. They are not the Prajapatis, as the first are, but their informing principles — some of which have incarnated in men, while others have made other men simply the vehicles of their reflections” (SD 2:318n). The seven rishis are also said to mark the time and the duration of events in our septenary life cycle.

The stars of our entire galaxy are all intimately connected together, spiritually, intellectually, psychically, vitally, and physically, which means a connection extending back to a unity of origin in a past so greatly remote that its period can be reckoned only in astronomical figures. In an exactly similar way all the planets of our solar system, especially the so-called seven sacred planets of the ancients, are connected in origin in a distant past, although in a past greatly nearer than the former.

Saptasati (Sanskrit) *Saptaśatī* Seven hundred; the feminine of Saptasata; the name of several works composed of 700 verses.

Sapta-sindhavas (Sanskrit) *Sapta-sindhavas* [from *sapta* seven + *sindhu* river from the verbal root *syand* to flow, trickle, pour forth] The seven sacred rivers spoken of in the Vedas, connected with the sapta-samudra (seven oceans). From the standpoint of the planetary chain, the oceans or seas of space which surround the different globes are intimately interconnected by similar lines of communication, which likewise can be called circulations. In Avestic works these sacred streams are called Hapta Heando. *See also* CIRCULATIONS OF THE COSMOS

Sapta-Surya (Sanskrit) *Sapta-Sūrya* The seven suns; the seven fundamental solar logoi of our own sun; as well as the seven suns of our Universal Solar System. They are likewise connected to the hierarchies of intelligent beings or dhyani-chohans of various classes which enter into creative

functions or action when the central sun emits creative light preceding the later periods of manvantaric activity. Those classes of the dhyanis-chohans who are the cosmic architects open the manvantaric drama by entering upon their respective functions, and once the lines of structure are thus laid, the lower classes of dhyanis-chohans — high though they may be in spirituality and intellectuality — begin thereupon their work as builders, which is ceaseless until the manvantaric end. References to these two general classes of ideative cosmic spirits, the architects and the cosmic masons or builders, are found in nearly all of the ancient religio-philosophic scriptures of the world.

Sapta-tathagatas (Sanskrit) *Sapta-tathāgata-s* [from *sapta* seven + *tathāgata* thus come and gone, name applied to the Buddha] “The chief seven *Nirmanakayas* among the numberless ancient world-guardians. Their names are inscribed on a *heptagonal* pillar kept in a secret chamber in almost all Buddhist temples in China and Tibet. The Orientalists are wrong in thinking that these are ‘the seven Buddhist substitutes for the Rishis of the Brahmans’ ” (TG 290). *See also* TATHAGATHA-GUPTA

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sar-Sec

Sarah, Sarai (Hebrew) *Śārāh* Princess; in the Bible, the wife of Abraham and mother of Isaac. Like Eve, a type-figure standing for motherhood and in a phallic sense for the womb. One key to interpreting the verses: “God said unto Abraham, As for Sarai thy wife, thou shalt not call her name Sarai, but Sarah shall her name be” (Genesis 17:15), lies in the moon and water; Blavatsky compares it to the Hindu legend of Brahma and Sarasvati or Sri (SD 2:77).

Sarama (Sanskrit) *Saramā* [from the verbal root *sr* to run] The fleet one, the runner; the dog belonging to Indra and the gods, the divine watcher “over the golden flock of stars and solar rays.” She is the mother of the two dogs called Sarameyas. Some European etymologists connect the names of the Greek Hermes and Helena with Sarama or Sarameya. Sarama has certain elements of mystical similarity to Agathodaemon in Greek Gnosticism, and to the Egyptian Hermes-Anubis, one of the dogs (vigilance) which watch over the celestial flock (occult wisdom and its students) (cf SD 2:28).

Sarameyas (Sanskrit) *Sārameya-s* The two children of Sarama (the female watchdog of Indra), four-eyed brindled watchdogs of Yama, the god of the Underworld, whose duties include watching over the celestial flock (occult wisdom and its students).

Saraph (Hebrew) *Śārāf* Fiery, burning, glowing, filled with light and warmth; also serpent. In the Old Testament, the serpent that Moses is ordered to make is the mystical Saraph, and in this almost purely physiological connection it represents Jehovah, the chief of the fiery serpents (SD 2:387). Flying serpent is the generally accepted translation of saraph me‘opheph (Isaiah 30:6) — commonly connected in Christian theology with the Devil; but the expression is metaphorical and has nothing to do with the Evil One. This curious, significant phrase more accurately means both covered or enwrapped flame or fire, or flying fire. And as saraph also signifies serpent, it could equally mean covered or concealed serpent, or flying serpent.

There is a strong mystical parallel, and possibly some remote etymological connection, between the Sanskrit sarpa (serpent) and the Hebrew saraph, the parallel doubtless arising in the same esoteric thread of mystical thought. *See also* SERAPHIM

Sarasvati, Saraswati (Sanskrit) *Sarasvatī* The ethereal, the elegant one; the divine consort or wife of Brahma, his feminine alter ego, a later form or aspect of Vach (voice or the Word), a title of the Third Logos in Greece as well as in India. This parallels the Bath Qol (daughter of the voice, daughter of the Word) of mystical Hebrew thought, which can be taken either as the feminine aspect of the Logos itself, or as its daughter — the inspiration flowing forth from, or the feminine or vehicular side of, the Logos. The goddess of hidden learning and esoteric wisdom, Sarasvati is usually shown riding on a peacock with its tail spread. She is similar to the Gnostic Sophia, to the Sephirah of the Hebrew Qabbalah, and to the Holy Ghost of the Christians.

Sarasvati is also a sacred river spoken of in the Vedas, and as a river goddess she was often invoked to bestow vitality, renown, and riches; elsewhere she is described as moving along a golden path and as destroying the monster-demon Vritra.

Sarcode (Greek) *sarkodes*. Fleshly; the name given by Dujardin (1835) to the rudimentary substance of unicellular organisms, and since replaced by the words protoplasm or bioplasm.

Sarcophagus (Greek) Flesh-eating; limestone in Assus in the Troad had the property of consuming the bodies placed in coffins made of it, and so was called sarcophagos lithos (flesh-eating stone) or lapis Assius (stone of Assus), and the name came to be applied to stone coffins in general. A sarcophagus was placed in the adytum of a temple and mystically signified the matrix of nature and resurrection. In initiation ceremonies the candidate, representing the energizing ray, descended into the sarcophagus representing nature's fecund womb, and emerged therefrom, which symbolized resurrection after death. In the King's Chamber of the Great Pyramid, the candidate descended into the sarcophagus, where his body was entranced while his spiritual ego confabulated with the gods, descended into Amenti or the Underworld, and did works of charity to invisible beings; being carried during the night before the third day to the entrance of a gallery where the beams of the rising sun awoke him as an initiate.

The Mysteries of ancient times, and the rites connected with them, were very largely based on the secret and carefully hid events which occurred to a person after death, so that the secrets of death, and the resurrection from death, formed a large part of the initiation ceremonies of the ancient Mysteries. Thus it was that the sarcophagus or coffin, the emblem of death, held not only the physical body of the dead person, but likewise the entranced body of the neophyte whose soul was peregrinating into the invisible worlds and in and through the Underworld.

Sargon *Sharru-konu* (Assyrian) Also Sarru-kinu. The legitimate king; of the two Sargons in Babylonian history, one is regarded as the first historical king in the old Babylonian period, whose reign has been placed about 3800 BC. He ruled over northern Babylonia, making Agade (Akkad) his

capital. He made conquests in Syria and erected the temple Eulbar in honor of Anunit. His story is cited by Blavatsky as the original of the familiar Biblical story of Moses: the mother of Sargon was a princess who placed her babe in an ark of rushes, sealing the ark with bitumen and setting it adrift on the river. The ark was found by a watercarrier, Akki, who brought up the child as his own. In time Sargon became the monarch of Babylonia, reigning at Agadi, which was near the city of Sippara (cf Zipporah, the name of the wife of Moses).

The second Sargon was king of Assyria from 722-705 BC.

Sarira (Sanskrit) *Śarīra* [from the verbal root *śri* to protect, shelter, enter into; or from the verbal root *śṛ* to waste away, decay] Body, bodily frame; that which is impermanent and subject to dissolution.

Sarisripa (Sanskrit) *Sarīsr̥pa* [from the verbal root *sr̥p* to crawl] Those who wish to crawl or creep; a creeping animal, reptile, snake, insect, or anything which, being small, crawls or creeps. As a proper noun, a name of Vishnu, with reference to the preserver's constant vital essence pervading or creeping throughout the manifested universe.

Sarku (Babylonian, Chaldean) Light race; in the Babylonian legends, the name of one of the two first races. While the dark race (Zalmat-Qaqadi) was the first to fall into generation or mortality, the light race remained apart for a long while — hence was considered to be a race of gods. The dark race has also been called by Europeans the Adamic race, which was “one of the two principal races that existed at the time of the ‘Fall of Man’ (hence our *third* Root-race) . . .” (TG 384).

Saros (Greek) [from Chaldean deity *Sar*] Sar's symbol was a circle, denoting a great cycle of time, as well as the number 3,600, the square of 60. The length of this cycle is not revealed, as we need to know the unit which is to be multiplied by 3,600. Just as the day is comprised in the year, so the year is comprised in the Great Saros. It is likely that the word applies to several different large cycles.

Also used now to denote the small cycle within which the luni-solar eclipses approximately recur: a period of 6585.32 days or 233 lunations.

In connection with the saros and the naros or neros, the key number of all these cycles is based on the duodenary system where the base number is 12. Thus, 5 times 12 is 60, itself an esoteric key number; and the square of 60 is 3,600. Again 60 plus 12 is 72, a key number of the highest esoteric import. Six hundred, commonly called the Chaldean naros or neros, is 50 times 12; and 50 and its double 100 are again highly important esoteric key figures. Thus 100 is the square of 10, a distinctly esoteric key number; 10 and 12 are intimately related in ancient chronological calculations.

Sarpa (Sanskrit) *Sarpa* [from the verbal root *sr̥p* to wriggle, creep, crawl] Serpent; the serpent has ever symbolized in occultism wisdom, immortality — therefore renewed birth — and secret

knowledge; hence sarpa is applied to an initiate, as is naga (Sanskrit serpent). “There is a notable difference *esoterically* between the words Sarpa and Naga, though they are both used indiscriminately. Sarpa (serpent) is from the root *Srip*, *serpo* to creep; and they are called ‘Ahi,’ from *Ha*, to abandon. ‘The sarpa was produced from Brahma’s hair, which, owing to his fright at beholding the Yakshas, whom he had created horrible to behold, fell off from the head, each hair becoming a serpent. They are called Sarpa from their creeping and *Ahi* because they had deserted the head’ (Wilson). But the *Nagas*, their serpent’s tail notwithstanding, do not creep, but manage to walk, run and fight in the allegories” (SD 2:181-2n).

Sarpa was the original Sanskrit term for a snake or serpent, whereas naga, although likewise signifying a snake or serpent — which it does consistently throughout the range of Sanskrit literature — nevertheless early became identified in mystical thought with initiates because of their power of casting off physical body after physical body almost at will. Both terms therefore signify serpent or snake, and both later were used almost indiscriminately to signify initiates; nevertheless, because of habit or use, naga is the more common term for a full initiate, sarpa in this sense being of less frequent usage.

Just as the forces of nature are in themselves neutral, and become “good” or “bad” as they are used by individuals, similarly so is a symbol usable in a good or a bad sense. In the use of nagas and sarpas, the Brothers of Light are properly called nagas, and the Brothers of Darkness are more properly called sarpas, as the root *srip* which means to wriggle, hence to insinuate, to creep in by stealth and deceive. Both the Brothers of Light and of Darkness are focuses of power, subtlety, wisdom, and knowledge; in the one case rightly and nobly applied, and in the other wrongly applied. The former are the nagas or serpents of light: subtle, wise, and with power to cast off the garment or vehicle when the body has grown old and to assume another at will. The latter are more strictly the sarpas or serpents of darkness, insinuating, worldly wise, selfishly shrewd, deceitful, venomous, and dangerous, and yet possessing the same powers, but in less degree, and using them wrongly, thus deceiving human hearts and succeeding in their work often by lies and misrepresentations. Nevertheless, precisely because nagas and sarpas are used almost indiscriminately, either word may apply both to the servants of light or of darkness.

Sarpanit. *See* ZARPANITU

Sarparajni (Sanskrit) *Sarparājñī* [from *sarpa* serpent + *rājñī* queen] The queen of the serpents;

“the Aitareya-Brahmana calls the Earth Sarparajni, . . . Before our globe became egg-shaped (and the Universe also) ‘a long trail of Cosmic dust (or fire mist) moved and writhed like a serpent in Space.’ The ‘Spirit of God moving on Chaos’ was symbolized by every nation in the shape of a fiery serpent breathing fire and light upon the primordial waters, until it had incubated cosmic matter and made it assume the annular shape of a serpent with its tail in its mouth — which symbolises not only Eternity and Infinitude, but also the globular shape

of all the bodies formed within the Universe from that fiery mist. The Universe, as well as the Earth and Man, cast off periodically, serpent-like, their old skins, to assume new ones after a time of rest ” (SD 1:74).

“The Earth is said to cast off her old *three* skins, because this refers to the three preceding Rounds she has already passed through; the present being the *fourth* Round out of the seven. At the beginning of every new Round, after a period of ‘obscuration,’ the earth (as do also the other six ‘earths’) casts off, or is supposed to cast off, her old skins as the Serpent does . . .” (SD 2:47).

Also, certain verses of the *Rig-Veda* deal with this subject.

Sarvada (Sanskrit) *Sarvada* [from *sarva* all + the verbal root *dā* to give] He who gives all, the all-sacrificing; title of Buddha, who in a former birth sacrificed everything to save others. Also a title of Siva.

Sarvaga (Sanskrit) *Sarvaga* [from *sarva* all + *ga* going, permeating] The all-permeant; the spirit-substance of the world, hence its soul. Equivalent to the anima mundi, or in a more abstract sense to the supreme cosmic essence or Second or Manifest-unmanifest Logos, which in early Christianity was feminine and called the Holy Spirit.

Sarva-mandala (Sanskrit) *Sarva-maṇḍala* [from *sarva* all, complete + *maṇḍala* globe, orb] The complete globe or orb; hence the Egg of Brahma or the universe, applicable to any of the numerous Eggs of Brahma, whether a galaxy, sun, planet, or even a nebula or comet.

Sarva-medha (Sanskrit) *Sarvamedha* [from *sarva* all, whole, universal + *medha* sacrifice] The universal sacrifice, spoken of in the *Rig-Veda* as being performed by Visvakarman, the cosmic architect or demiurge. It is a ten days’ sacrificial ceremony — the ten having reference not only to the ten cosmic planes, but to other decads in the universe, such as the ten primordial conscious forces, etc.

Sarvam Khalvidam Brahma (Sanskrit) *Sarvam khalvidam brahma* [from *sarvam* all + *khalu* indeed + *idam* this, the manifested universe + *brahma* the supreme mind or spirit of our universe] All this universe is indeed Brahman. Brahman is universal because the infilling, indwelling, and inspiring cosmic mind and consciousness of our home-universe; the reference is not to boundless infinitude or parabrahman (beyond Brahman).

Saratman (Sanskrit) *Sarvātman* [from *sarva* all + *ātman* self] The all-self; in the Vedas, the all-pervading spirit of the universe.

Sarvavasū (Sanskrit) *Sarvavasū* [from *sarva* all + *vasu* one of the 12 adityas or solar divinities, rays, or logoi] One of the seven principal logoi or rays of the sun.

Sarvesa (Sanskrit) *Sarveśa* [from *sarva* all + *īśa* lord, ruler] The lord of all; the supreme spirit, the

hierarchy of the universe, which can be connected either with Brahman considered as the First Logos, or with Brahma considered as the Third Logos.

Sastra (Sanskrit) *Śāstra* [from the verbal root *śās* to direct, bid, instruct] An order, precept, rule, advice; any instrument of teaching; any book or treatise, especially religious or scientific; any sacred scripture or composition of supposedly divine authority such as the Vedas.

Sastra-devatas (Sanskrit) *Śastra-devatās* [from *śastra* weapon + *devatā* celestial being, god] The gods of divine weapons; in the *Mahabharata* and *Ramayana*, the lords or conscious agents behind the mystical powers exercised by the great-souled heroes, rather than the weapons themselves. They are likewise in ancient Hindu conception the self-conscious, conscious, and quasi-conscious powers behind the forces of nature, especially those forces which can wreak injury or damage in the phenomenal world, such as earthquakes, tidal waves, storms of all kinds, and lightning.

Sat (Sanskrit) *Sat* [from the verbal root *as* to be] Being; the real, the enduring fundamental essence of the world, “for *Sat* is in itself neither the ‘existent,’ nor ‘being.’ *Sat* is the immutable, the ever present, changeless and eternal root, from and through which all proceeds. But it is far more than the potential force in the seed, which propels onward the process of development, or what is now called evolution. It is the ever becoming, though the never manifesting. *Sat* is born from *Asat* and *ASAT* is begotten by *sat*: the perpetual motion in a circle, truly; yet a circle that can be squared only at the supreme Initiation, at the threshold of Paranirvana” (SD 2:449-50).

Sat is not Being, but Be-ness, since whatever is manifested is something phenomenal, not everlasting. *Sat* (pure being), *chit* (pure thought), and *ananda* (bliss) together signify the state of the Absolute.

In the Vedanta, used as the self-existent or universal spirit.

Sata (Sanskrit) *Śata* Hundred.

Satan [from Hebrew *śāṭān* adversary, opposer from the verbal root *śāṭan* to lie in wait, oppose, be an adversary; or possibly from the verbal root *shut* to whip, scourge, run hither and thither on errands; Greek *satan*, *satanas*] Adversary; with the definite article (has-satan) *the* adversary in the Christian sense, as the Devil. This Satan of the exoteric Jewish and Christian books is a mere figment of the monkish theological imagination. From the second possible derivation many eminent Shemitic scholars have held that the Satan of the Book of Job was a good angel arranged by God to try the characters of men in order to help them; and therefore supposedly to be different from the Satan of other books of the Bible. The theosophist would not limit the good angel to the Book of Job alone, but would look upon the adversative or contrary forces of nature as being the means upon which each one tries his will, resolution, and determination to evolve and grow spiritually and intellectually. The Satan of this hypothesis is in a sense our own lower character combined with the lower forces of nature surrounding earth and elsewhere.

Sata-rupa (Sanskrit) *Śata-rūpā* [from *śata* hundred + *rūpa* form, body] The hundred-formed one; applied to Vach who, as the feminine Brahma or universal nature, assumes myriad forms. Hundred here does not denote a specific numerical limit, but is used as the Greek word myriad (10,000) often is, to signify an immense quantity; albeit the number has a distinct occult significance likewise.

According to archaic Hindu legend, Sata-rupa, as nature, was the daughter of Brahma, and likewise the mother of the first man, called Svayambhuva.

Satellite [from Latin *satelles* an attendant, assistant] Astronomically, a globe which revolves around a larger one which is its primary, but usually restricted to globes revolving around planets. The satellites of Uranus and Neptune have revolutions opposite in direction to that of the satellites of the other planets, said to be due to their axes having been inverted in the pregenetic battles fought by the growing planets before the final formation of the cosmos (SD 1:101).

In theosophy the moon is only physically a satellite of the earth; in other respects it is the earth's mother. Modern astronomy knows nothing as to the actual cosmological role played in the spatial deeps by the satellites of the planets or of the suns — particularly those moon-satellites, which being true moons (as is the moon of earth) are the extinct astral bodies or kama-rupas of the former physical imbodiments of the globe-chain, which now they accompany as attendants. The parts that the true moons especially play in the drama of cosmogonical history is enormous. Such true moons are the dwellers on the threshold of the globes which they thus attend.

Sati or **Satet** (Egyptian) *Sati* or *Satet* [from the verbal root *sat* to pour out, shoot, throw, emanate, evolve forth] Worshipped at Abu or Elephantine, the consort of Khnemu, and sister-goddess of Anket, and the second member of a triad. Together with Khnemu her attributes are watery, so that she is depicted as sprinkling water and scattering seed. She was associated with Isis-Sothis, and at Dendera with Isis-Hathor; and was associated by the Greeks with Hera. Her temple at Abu was considered one to the holy places in ancient Egypt, for in the *Book of the Dead* the Osirified defunct mentions that he has visited the Temple of Satet which was one of the ancient initiation localities. With Isis she was connected with the star Sept (Sirius), where dwelt the soul of Isis.

Satkiri Chakram of Vishnu. See SIX-POINTED STAR

Satta (Sanskrit) *Sattā* [from the verbal root *as* to be, exist] Being, existence; a name of Brahman as implying essential being.

Sattra (Sanskrit) *Sattra* A great soma sacrifice or a sacrificial session, which lasted one year and was based upon the revolution of the sun in its yearly course. Also, refuge, asylum, or place of sanctuary, which in ancient conceptions were supposed to be brought into being by mystical sacrifice.

Sattva (Sanskrit) *Sattva* [from *sat* being] True essence, spiritual essence, reality, true being. Also

one of the trigunas (three qualities), the other two being rajas and tamas. “Sattwa is the quality of truth, goodness, reality, purity. These three gunas or qualities run all through the web or fabric of Nature like threads inextricably mingled, for, indeed, each of these three qualities participate likewise in the nature of the other two, yet each one possessing its predominant (which is its own Swabhava) or intrinsic characteristic. One who desires to gain some genuine understanding of the manner in which the Archaic Wisdom looks upon these three phases of human intellectual and spiritual activity must remember that not one of these three can be considered apart from the other two. The three are fundamentally three operations of the human consciousness, and essentially are that consciousness itself” (OG 153-4). As the human being is the microcosm of the macrocosm, the same gunas can be discovered in the cosmos.

Sattvika or **Sattvic** (Sanskrit) *Sāttvika* [from *sattva* reality] Pertaining to the quality of goodness; sattvic is the anglicized form.

Saturn The sixth planet from the sun in our solar system, the last of the seven sacred planets of the ancients. In theosophy the regent or rector of Saturn exercises its own characteristic influence especially on our earth, globe D, and closely combines in this respect with the influence emanating from the moon; its influences was likewise especially felt over the fourth root-race. In astrology, its zodiacal houses are Aquarius and Capricorn; its day of the week is Saturday.

Family-races also are born under the especial influence or partial regency of Saturn — as for instance the Jews; but though Saturn in astrology is called the great malefic this is a one-sided view; and indeed astrologers themselves realize that there are influences which Saturn showers from itself, as does every planet, which are of distinctly spiritual and beneficent character.

With the Jews, the tribal deity Jehovah represents the racial divinity or Saturn, and hence it is that the Jews considered Jehovah as their own god, for he is in fact the dominating planetary influence on their race. The mystical type-figure for Saturn in the lands of the Near East was the ass, that patient, faithful animal, as greatly beloved as a companion of man in the Near East even today as the dog is in many parts of the West. One is reminded of the conqueror of Jerusalem who, entering the Holy of Holies in the temple of Jerusalem, stated that all he saw was a golden ass — nor was there either irony or sarcasm intended, for the ancients recognized all these matters as being allegorical and mystical. One is likewise reminded of the statement made in the New Testament that Jesus rode into Jerusalem on an ass and the foal of an ass.

The planet Saturn in one sense is spiritually farther advanced than is the earth, although in quite different sense it is younger in its present embodiment.

Saturnus [possibly from Latin *sero* to sow] was one of the oldest Italic deities — among other things patron of agriculture — who became assimilated with the Greek Chronos or Kronos. Like Kronos he dethrones his father Uranus and is himself dethroned by Jupiter (Zeus); his mutilation of his father indicates that eternal time becomes limited; his devouring of his children is symbolic

of time which both gives birth to events and then destroys them. He presides over the Golden Age of innocent but unprogressive peace, when men are unable to rule themselves and are ruled by genii; his kingdom was Lemuria. The Latins represented him as having, after his dethronement by Jupiter, become king of Italy, which was therefore called Saturnia, and presiding over the Golden Age; and Vergil voices the prophecy that such a Saturnian Age shall one day return.

The same idea underlies the Jewish Sabbath (Shabbath, a period of rest), the Lord's day, and Jehovah in one of its meanings is Saturn, the genius of the Hebrew nation. It was from Saturn that came the teachings revealed to Qutamy in *Nabathean Agriculture*. Among the many equivalents of Saturn are Chium, Seth, Cain, Ildabaoth among the Egyptian Gnostics, Agruerus, Sydyk (Melchisedec), and Satan — the girdle about the loins of Satan is the rings of the planet Saturn. In the Biblical list of Gnostic emanations, Saturn corresponds to Thrones.

Saturnalia (Latin) [from *Saturnus* Saturn] A Roman festival held on the 17th of December and for a week following, honoring the deity Saturnus; undoubtedly this was the beginning of the occult festival held in celebration of the winter solstice. Saturnus was identified by Roman scholars with the Greek Kronos, though his attributes at times are rather those of Demeter, who presides over the gifts of earth. Legend states that Tullus Hostilius founded the festival, but also that Romulus founded it under the name of Brumalia [from *bruma* winter solstice]. This is the time when the sun enters Capricorn, one of the houses of Saturn. The observances described are almost identical with those which we associate with Christmas; and Christmas again links up with a Norse version of the solstice festival. There was a general relaxation of discipline and social barriers; a spirit of joy and mirth; the interchange of gifts; abolition of distinctions of rank and social casts; no fighting or punishment. All over Europe, in Ancient Mexico, and in many other places, candles or fires were lighted. Even the harmless familiar Christmas and New Year festivals are themselves but exoteric forms of what in its essence was a dramatic presentation of the mysteries of initiation appropriate to this particular one of the four sacred seasons. Saturnalia has got its present meaning from the licentiousness into which this celebration degenerated.

Occultly the Saturnalia derived its name not only from the regent of the planet Saturn, but also from the esoteric teachings of the Mystery schools dealing with Saturn's cosmogonical role. There were also the somewhat distorted mythologic ideas concerning the Age of Saturn, or the period of beginnings, of human happiness and innocence. While the Age of Saturn is usually placed at the beginnings of human history, Saturn likewise closes an evolutionary period when the age of innocence and happiness plus spirituality and intellect shall have returned. Saturn therefore both opens and closes a grand evolutionary period.

Satya (Sanskrit) *Satya* Truth, reality, being or esse; as an adjective, true, virtuous, good, faithful, etc.

Satya-loka (Sanskrit) *Satya-loka* [from *satya* reality + *loka* world, place] Reality-world; the first or

highest of the seven lokas, its corresponding tala and nether pole being atala. Satya-loka is the abode of the nirvanis. Being the highest and most spiritual loka, it is therefore the inmost because closest to the radiating spiritual center, and yet it extends its influence in, above, through, and beyond all the other inferior lokas. It is also referred to as the abode of truth.

Satyan Nasti Paro Dharmah (Sanskrit) *Satyān nāsti paro dharmah* There is no religion (duty, law) higher than truth (reality); the motto of the Theosophical Society, adopted from the Rajas of Benares.

Satyas (Sanskrit) *Satya-s* [from *satya* truth, reality] A name given in each kalpa to the twelve great gods (jayas) emanated by Brahma to bring about cosmic production or being. *See also* SADHYA

Satyavrata (Sanskrit) *Satyavrata* [from *satya* truth + *vrata* vow] A vow of truthfulness; a name of Vaivasvata-Manu, the manu of our present manvantara, corresponding to Noah.

Satya Yuga (Sanskrit) *Satya Yuga* [from *satya* reality, truth + *yuga* age] The age of purity, reality, and truth, sometimes called the krita yuga, lasting 1,728,000 years. The first of the four great yugas constituting a mahayuga (great age). “The Krita is the age in which righteousness is eternal, when duties did not languish nor people decline. No efforts were made by men, the fruit of the earth was obtained by their mere wish. There was no malice, weeping, pride, or deceit; no contention, no hatred, cruelty, fear, affliction, jealousy, or envy. The castes alike in their function fulfilled their duties, were unceasingly devoted to one deity, and used one formula, one rule, and one rite. Though they had separate duties, they had but one Veda and practised one duty” (MB abrig Muir, 1:144).

What exist as the four great ages forming a great age, occur because of analogical repetitions. There is a greater age of immensely longer duration than even the mahayuga mentioned above: the same series of four immense periods — of length respectively in the ratios of 4, 3, 2, 1 — is likewise found in the manvantaric history of a globe as well as of a round. Every root-race has likewise its mahayuga; and it is evident that the satya yuga of the seventh root-race will be a far more advanced one than is the satya yuga of the fourth root-race, because in the former everything will be more evolved and on a higher plane. Consequently, there is not one single satya yuga, but many, both on lower and higher planes.

Satyrs [from Greek *satyroi*] The luxuriant psychovital powers of nature, associated with Dionysos or Pan. They were represented in mythology as having bristly hair, snub nose, pointed ears, incipient horns, a tail; when they became confused with the Latin fauns they acquired goat's horns and hoofs. They loved the music of the pipes, dance, song, and wine; and like Puck and nature spirits of Western Europe, they were elfish and given to pranks.

The satyrs of tradition represent historically an extinct race of quasi-animal men. The third root-race united themselves with animal beings, thus producing those creatures with which the late

Lemurians and early Atlanteans again mated, this unnatural union producing the anthropoids; but the first miscegenation was between races to which the names human and animal did not imply so marked a distinction as they do now, and the union was fertile and not so unnatural as it would be today. The Nephilim (giants) of Genesis 6:4 were late second and third root-race human protoplasts, and vague recollections of the former existence of these mindless races brought about their identification by the early Hebrews with the satyrs. It seems likely that the apparition of nature spirits to country people would be connected by them with the tradition of satyrs; and actual beings of this kind, though extinct as a physical race, persist in astral form.

Saul (Hebrew) *Shā'ul* A Biblical king; of particular interest is his anointing and initiation by Samuel, who said: "the Spirit of the Lord will come upon thee, and thou shalt prophesy with them, and shalt be turned into another man" (I Sam 10:6). After his initiation he was able to prophesy, but after he became king, the spirit of prophecy left him. Although Saul prohibited divination or necromancy by means of those who had familiar spirits, he himself commanded the wise woman of Endor to bring before him the spirit of Samuel.

Saundarya-lahari (Sanskrit) *Saundarya-laharī* [from *saundarya* beautiful + *laharī* large wave, billow] One of Sankaracharya's works, the title evidently a metaphor implying waves of beautiful thought or ocean of beautiful thought.

Saurya Pralaya and **Saurya Manvantara** (Sanskrit) *Saurya-pralaya*, *Saurya-manvantara* [from *sūrya* sun + *pralaya* dissolution; *manvantara* manifestation] The dissolution, or manifestation, of the solar system; frequently termed a mahapralaya or mahamanvantara.

Savarna (Sanskrit) *Sāvarṇa* Similar in color or appearance or class; the eighth manu. A name used either alone or in combination for all the manus succeeding the eighth, except the last two, the 13th and 14th. Being the eighth manu of our earth-chain, Savarna is the seed-manu of the present fourth round; and Savarna's culmination of svabhavic individuality will be during the last root-races on globe G of our planetary chain.

Savarna (Sanskrit) *Savarṇā* The feminine being substituted by Saranyu for herself as a wife or alter ego of the sun. She is said to have given birth to Manu, and is called in later legend Chhaya (shadow). Saranyu (the quick, the fleet) is the Vedic character for the Sanjna of the Puranas. Saranyu is represented in legend as being the wife of Vivasvat (the sun) and mother of the two Asvins. The legend of this substitution has reference to cosmological mysteries, for the consort of the sun, for purposes of production of the hierarchies of living beings in the solar kingdom, must be that portion of the solar entity which is capable of productive power, and not of the higher parts of the sun's entity. Thus Saranyu stands for the solar intellect or mind, while Savarna would be a fit prakriti-companion for the generative power of the sun.

Savior Applied to manasaputras, buddhas, bodhisattvas, avataras, messiahs, the Agathodaemon, etc. *See also* SALVATION

Savitri (Sanskrit) *Sāvitrī* [from the verbal root *sū* to pour out, stimulate, set in motion] Vivifier, stimulator; an aspect of the sun deity.

Also used interchangeably with Gayatri, a verse of the *Rig-Veda* (3, 62, 10).

Sayana or **Sayanacharya** (Sanskrit) *Sāyaṇa*, *Sāyaṇācārya* The celebrated commentator on the *Rig-Veda*, who flourished under Vira-bukka I of Vijaya-nagara (1350-79). Some of his works were written in conjunction with his brother Madhava, who was the prime minister of Vira-bukka, also known as Madhavacharya, a celebrated teacher and scholar. Madhavacharya brought into clearer focus the Dvaita-Vedanta (dualistic Vedanta), according to which Brahma and the human soul, although intimately connected, are distinct. This teaching is in direct contradistinction with that of Sankaracharya, the greatest historic exponent of the Advaita-Vedanta (nondualistic Vedanta), according to the teaching of which, spirit and matter, Brahman-atman (divinity) and the human spirit, are one in essence.

Scapegoat. See AZAZEL

Scarab [from Latin *scarabaeus* cf Greek *karabos* a beetle, Sanskrit *śarabha* a locust, Egyptian *kheperà* from *kheper* to become, come into being anew] The Egyptian symbol of the god Khepera — the urgent spiritual impulse of creation, or regenerative revolving and reimpodiment. In modern times applied to the beetle *Scarabaeus sacer* or *aegyptorum* — the sacred scarab. Orientalists generally regard the scarab as the symbol of resurrection because the beetle rolls a ball of dung containing its eggs, which it leaves to be hatched by the sun's rays. This is said to represent in the small what was believed to take place in the great, that the sun was moving across the heavens holding within itself the germs which in course of stellar time evolve forth and remanifest in the solar cosmos. “Khem, ‘the sower of seed,’ is shown on a stele in a picture of Resurrection after physical death, as the creator and the sower of the grain of corn, which, after corruption, springs up afresh each time into a new ear, on which a scarabaeus beetle is seen poised; and Deveria shows very justly that ‘Ptah is the inert, material form of Osiris, who will become Sokari (the eternal Ego) to be reborn, and afterwards be Harmachus,’ or Horus in his transformation, the *risen god*. The prayer so often found in the tumular inscriptions, ‘the wish for the resurrection in one's *living soul*’ or the Higher Ego, has ever a scarabaeus at the end, standing for the personal soul. The scarabaeus is the most honoured, as the most frequent and familiar, of all Egyptian symbols” (TG 293).

“This mystical symbol shows plainly that the Egyptians believed in reincarnation and the successive lives and existences of the Immortal entity. Being, however, an esoteric doctrine, revealed only during the mysteries by the priest-hierophants and the Kings-Initiates to the candidates, it was kept secret” (SD 2:552).

Schemal. See SHEMAL

Scheol. See SHEOL

Schesoo-Hor. See SHEMSU-HERU

Schoo. See SHU

Schools of the Prophets “Schools established by Samuel for the training of the *Nabiim* (prophets). Their method was pursued on the same lines as that of a Chela or candidate for initiation into the occult sciences, *i.e.*, the development of abnormal faculties or clairvoyance leading to Seership. Of such schools there were many in days of old in Palestine and Asia Minor. That the Hebrews worshipped Nebo, the Chaldean god of secret learning, is quite certain, since they adopted his name as an equivalent of Wisdom” (TG 294).

Blavatsky points so specifically to the Hebrew and other similar schools in Asia Minor because these are the best known; yet similar schools of the prophets, under other names, have existed in all countries and ages, as for instance in Greece, where they were called Mysteries, and in Egypt.

Science [from Latin *scientia* from *scire* to know] In its widest sense formulated knowledge, a knowledge of structure, laws, and operations. The unity of human knowledge may be artificially divided into religion, philosophy, and science. Science and philosophy, as presently understood, have in common the quality of being speculative, as opposed to religion, which in the West is supposed to be founded merely on faith and moral sentiments. The present distinction between science and philosophy lies largely in their respective fields of speculation. What is known as modern science investigates the phenomena of physical nature and by inferential reasoning formulates general laws therefrom. Its method is called inductive and its data are so-called facts — *i.e.*, sensory observations; whereas deductive philosophy starts from axioms. Yet a scientist, in order to reason from his data at all, must necessarily use both induction and deduction.

Modern science has limited its field of study to the laws of physical nature; but in the 20th century the illusive and entirely phenomenal nature of matter and energy, formerly assumed to be eternal and indestructible, is better realized by scientists who have traced the chain of physical causation to a point beyond physical limits altogether and admit that the physical world consists of phenomena occurring in an ultraphysical substance.

In modern sciences dealing with biology, evolution, and anthropology, legitimate inference from facts has been much interfered with by preconceived ideas. Modern science suffers from its failure to see the necessity of postulating an astral or formative world behind the physical, this astral world being in itself but one stage in a rising scale or ladder of invisible worlds. To ascertain the facts upon which to build a true inductive system, we must admit the existence in man of means of direct perception other than those afforded by the physical senses.

Scin-lecca, Scin-laeca, Scin-lac (Anglo-Saxon) [from *scinan* to shine, quiver with light, flash + *lic* body; cf Scandinavian *skin* shining] Shining body; adopted by Bulwer-Lytton in *A Strange Story* to

express an idea similar to the Sanskrit *mayavi-rupa*, which often signifies merely a doppelganger or astral human form. Blavatsky uses the term both as the astral double of a medium and as a spiritual double of an adept (IU 2:597, 104). In her later writings the term was dropped in favor of Sanskrit terminology.

The term has always had, even in Anglo-Saxon times, a distinctly mystic significance; e.g., *scin-sckaeft* meant magic or sorcery; *scin-laeca* a magician, wizard, warlock, sorcerer; *scinn*, a spirit, apparition, phantom, specter, ghost — all popular words in Anglo-Saxon England.

Scintilla (Latin) Spark; found in Lucretius and other ancient philosophical writers on cosmogony. *See also* SPARK

Scorpio The scorpion; eighth sign of the zodiac, in astrology a watery, fixed sign, the night house of Mars. Its physiological correspondence in the human being is the organs of reproduction. Metaphysically, Scorpio stands for one of the four Maharajas of the four quarters and corresponds to the eagle of the four sacred animals. This sign originally formed part of Virgo-Scorpio, and was later made into a separate sign.

A curious medieval European representation of the zodiac, called Ezekiel's Wheel (cf IU 2:461-2), places Scorpio as equivalent to Adam-Eve. "The Adam of the first chapter is the spiritual, therefore pure androgyne, Adam Kadmon. When woman issues from the left rib of the second Adam (of dust), the pure *Virgo* is separated, and falling 'into generation,' or the downward cycle, becomes *Scorpio*, emblem of sin and matter" (IU 2:463).

It was alleged by ancient Hindu philosophers that the sun when located in this division of the zodiac is called Vishnu and relates to the 12th skandha of Bhagavata (12 Signs of the Zodiac). In other respects, Scorpio is intimately and even causatively connected with the human organs of reproduction and their functioning, because it is a spiritually and otherwise productive and generative sign — functions which are primordially spiritual and which therefore have their reflection in all the lower hierarchical ranges emanating from the original spiritual productive power. Although Vishnu in other senses is looked upon as the sustainer or continuer, this is achieved by a constant efflux of productive or generative energy from the original cosmic power.

If the twelve sons of Jacob in the Hebrew scheme are made equivalent to the twelve signs of the zodiac, Dan is assigned to Scorpio; Dan is described as a serpent by the way, who bites the horse's heels and causes the rider to fall backward — and one must here remember the role always ascribed in archaic occultism to the serpent: the Agathodaemon or the Kakodaemon, the serpent of wisdom and the serpent of evil.

In the Brahmanical zodiac Vrischika corresponds to Scorpio and its deity is Kamadeva, the Hindu god of love. "The sign in question properly signifies the Universe in thought or the universe in the divine conception.

“It is properly placed as the sign opposite to Rishabham [Taurus] or Pranava. Analysis from Pranava downwards leads to the Universe of Thought, and synthesis from the latter upwards leads to Pranava (Aum)” (12 Signs of the Zodiac).

Scythian Applied by the Greeks originally to various peoples, but generally to the warlike nomads of the steppes of what is now southern Russia; during the Roman Empire, applied to similar peoples in the more northerly parts of Asia. Blavatsky says they are late Atlantean subraces (SD 2:774).

Sea. See OCEANUS; THALATTH; SPACE

Sea of Curds. See CURDS

Sea of Fire In the Stanzas of Dzyan, “the Super-Astral (*i.e.*, noumenal) Light, the first radiation from the *Root*, the Mulaprakriti, the undifferentiated Cosmic Substance, which becomes *Astral Matter*. It is also called the ‘Fiery Serpent . . .’” (SD 1:75).

Sea of Milk Cosmic matter, the “curds,” the Milky Way.

Seal of Solomon. See SIX-POINTED STAR

Seal of the Theosophical Society

Composed of a serpent in the form of a circle (Ananta-sesha) biting its tail — standing for eternity and boundless wisdom.

Its scales signify the illimitable diversity of wisdom or truth, and likewise the innumerable smaller cycles within boundless duration. The circumscribed svastika at the meeting point of the head and tail is a practically universal ancient emblem portraying evolution, the endless movement of spirit in and through matter.

Within the large circle formed by the serpent are two interlaced triangles (called in India the seal of Vishnu, in the West the seal of Solomon). The white triangle pointing upwards denotes the spiritual fire of consciousness, concealed wisdom, or spirit. The downward-pointing black triangle, sometimes colored blue or red, refers to the manifested worlds of matter, or to wisdom revealed in the worlds of manifestation. The two triangles interlaced form a six-pointed star, which means the manifested Logos, or the third cosmic emanation of the ineffable One. Again, the six-pointed star refers to the six general forces or powers of nature, the six principles, the six planes — which are represented as being all synthesized by their origin, the seventh, when a point or dot is placed within the star, for this point is what Pythagoras called the *Monas monadum* (the monad of monads).

“The double triangle — the *Satkiri Chakram* of Vishnu — or the six-pointed star, is the perfect seven. In all the old Sanskrit works — *Vedic* and *Tantrik* — you find the number 6 mentioned more often than the 7 — this last figure, the central point being implied, for it is the germ of the six and their matrix. . . . the central point standing for seventh, and the circle, the *Mahakasha* — endless space — for the seventh *Universal Principle*. In one sense, both are viewed as *Avalokitesvara*, for they are respectively the Macrocosm and the microcosm. The interlaced triangles — the upper pointing one — is Wisdom concealed, and the downward pointing one — Wisdom *revealed* (in the phenomenal world). The circle indicates the bounding, circumscribing quality of the *All*, the *Universal Principle* which, from any given point expands so as to embrace all things, while embodying the potentiality of every action in the Cosmos. As the point then is the centre round which the circle is traced — they are identical and *one*, and though from the standpoint of *Maya* and *Avidya* — (illusion and ignorance) — one is separated from the other by the manifested triangle, the 3 sides of which represent the three *gunas* — finite attributes. In symbology the central point is *Jivatma* (the 7th principle), and hence *Avalokitesvara*, the *Kwan-Shai-yin*, the manifested ‘Voice’ (or Logos), the germ point of manifested activity; — hence — in the phraseology of the Christian Kabalists ‘the Son of the Father and Mother,’ and agreeably to ours — ‘the Self manifested in Self’ — *Yih-sin*, the ‘one form of existence,’ the child of *Dharmakaya* (the universally diffused Essence), both male and female. Parabrahm or ‘Adi-Buddha’ while acting through that germ point outwardly as an active force, reacts from the circumference inwardly as the Supreme but latent Potency. The double triangles symbolize the Great Passive and the Great Active; the male and female; Purusha and Prakriti. Each triangle is a Trinity because presenting a triple aspect. The white represents in its straight lines: *Gnanam*

— (Knowledge); *Gnata* — (the Knower); and *Gnayam* — (that which is known). The black — form, colour, and substance, also the *creative, preservative, and destructive* forces and are mutually correlating . . .” (ML 345-6).

Within the star is placed the crux ansata, the handled cross or tau, one aspect of which is the particularized functions or activity of spirit in matter so far as our own world is concerned, and more especially insofar as intelligence is working upon cosmic matter. It is a symbol often associated with the adept or initiate as typifying his union with spiritual intelligence rather than with the powers and potencies of unspiritualized life in the material world.

When Blavatsky and Colonel Olcott went to India in 1879, the Sanskrit word Aum was placed above the seal, while below it was added the phrase: Satyan nasti paro dharmah (there is no religion [law] higher than truth [reality]) which was adopted as the motto of the Theosophical Society.

In some respects the seal of the Theosophical Society is similar to the personal seal of Blavatsky: however, in place of the tau within the interlaced triangles, her seal had the initials E B (E standing for Elena, pronounced Yelena in Russian, and B for Blavatsky). Inside the circle are astrological and Qabbalistic signs stated by some to refer to Blavatsky herself, while above the seal is a countess' coronet belonging to her family.

The seal of the Theosophical Society can be said to refer to a universe expanding into manifestation from its origin in cosmic spirit, emanation picturated by the comprehending serpent of space and duration. Just as the serpent periodically sheds its old skin, a universe, after a period of rest or dormancy, is again emanated, the child of its former self, for another period of cosmic manifestation.

Seance (French) A session; used of sittings of Spiritualists with a medium in order to obtain communications or other phenomena.

Seasons The seasons are at least in part due to the inclination of the earth's axis, and wholly according to this explanation in modern astronomy. If there were no inclination — if the ecliptic coincided with the equator, and the earth's axis with the poles of the equator — there would be no seasons. In satya yuga there were no changes of season, but an eternal spring which lasted as long as the lack of polar inclination endured, but which came to an end when the third root-race fell into “sin” — the two events coinciding. The earth's axis when without inclination is at right angles

with the plane of the ecliptic. The titans or kabiri are described in *The Secret Doctrine* as the generators and regulators of the seasons, thus showing that they take their part with the karmic lipikas in the cosmic history of the globe. Spring, summer, autumn, and winter correspond with other quaternaries, such as the four points of the compass and the four elements; and also represent a cycle of changes from birth to dissolution and rebirth.

In theosophical literature the earth's axis is said to undergo a secular movement of inclination with interims of pausings and smaller changes, or what may be called librations; and this secular movement is on the whole continuous, so that in course of long ages the axis of the earth becomes inverted, and consequently the poles are reversed; continuing their movement, they finally return to the position of right angularity with the plane of the ecliptic. Enormous changes must take place during this cycle upon the earth, not only as regards seasons, but likewise as regards geological and marine convulsions and cataclysms — evidences of which are apparent not only in the geological record, but in many otherwise unexplained and perhaps unexplainable botanical and zoological migrations. What is at one time land becomes sea, and vice versa. *See also* EQUINOX; SOLSTICE

Seb (Egyptian) *Seb*. One of the older Egyptian deities, the son of Shu and Tefnut, brother and husband of Nut, father of Osiris and Isis, Set and Nephthys. A goose (*seb*) was held sacred to the god. One popular legend states that Seb first appeared flying through the air in the form of a goose — reminiscent of the Sanskrit kala-hansa (bird of eternity). Seb was the vitalizing divinity of cosmic space, often called earth: the earth was described as being formed of Seb's cosmic body, and hence was in turn called the house of Seb. Being so closely associated with the earth, through popular misunderstanding he was regarded as the custodian of the dead in their tombs, and therefore held a prominent place in the scenes of the Underworld depicted in *The Book of the Dead*.

Heliopolis was the principal seat of his worship, it being held that at that spot, with his consort Nut, he produced the great Egg of Space, out of which emerged the sun god in the shape of a phoenix (bennu). Because of this he was styled the Great Cackler. Another of his titles was Erpat (chief of the gods), as he is more like the Hindu parabrahman than even Brahma, and hence the womb of cosmic being. A favorite representation of Seb is that of a prostrated man, one hand pointing to heaven, the other to earth — the prostrated form representing the earth — over whom bends a woman, Nut, her body being spangled with stars — representing the sky.

In Gerald Massey's series of seven principles of the Egyptians, Seb is enumerated as the fifth (ancestral soul) (SD 2:632). In the individual person Seb stands for the reincarnating ego or monadic root with its accumulated wisdoms of each human imbodiment, and hence the source and urgent impulse for future imbodiments. "*Manas* corresponds precisely with *Seb*, the Egyptian fifth principle, for that portion of *Manas*, which follows the two higher principles, is the ancestral soul, indeed, the bright, immortal thread of the higher Ego, to which clings the Spiritual aroma of

all the lives or births” (SD 2:632n).

Sebakh. See SEBEK

Sebek (Egyptian) *Sebek*. Also Sebeq and Sebeq-Ra. The planet Mercury in the Greco-Roman period in Egypt; also the crocodile-headed deity about whom very little has come down to us. Because of his association with the crocodile and Set, his attributes were popularly considered as evil; in *The Book of the Dead*, however, Sebek is named together with three other deities as dwelling on the mount of sunrise, helping Horus to be reborn daily. He is represented as giving the eyes to the deceased and assisting the pilgrim to be reborn.

Secondary Age. See GEOLOGICAL ERAS

Secondary Creation The creation of the manifested universe, after that of the unmanifested universe which is called the primary creation. In a more restricted meaning, the evolution and progression into manifestation of the almost innumerable hierarchies of builders of the universe, both higher and lower — the primary in this connection referring to the purely spiritual hierarchies and individuals which issued from the womb of space along the lines of primary spiritual emanation as already residing karmically in cosmic ideation.

Ancient cosmogonies in general begin with the secondary creation and with the creation of manifested light; what precedes this is called darkness or night, because the unmanifested absolute light can thus be named only by contrast with the manifested light. Thus in Genesis 1:2, darkness is upon the face of the deep, and in verse 3 “light” is created. When spirit has permeated every atom of the seven principles of kosmos, there is a period of stabilization and preparation, and then the secondary creation begins. In the primary creation earth is in possession of the three elemental kingdoms (SD 1:449-50, 2:312). In the primary creation, mahat functions as universal ideation or divine thought, while in the secondary it differentiates into innumerable emanating streams of individualization, which is the field for the coming into activity of the innumerable hosts of monads — described as the appearance of egoity. The primary creation is that of light or spirit; the secondary that of darkness or matter — these being employed in a relative sense, and in a sense the reverse of that mentioned above.

Second Birth In the New Testament, man is said to be born first of the flesh and afterwards of the spirit; in Christian theology, occasionally applied to regeneration — being admitted to the Kingdom of God or becoming a Christian. This is an echo of the Mysteries, where the successful candidate was said to be born again, just as in India the initiate is called *dvija* (twice-born), one who has undergone the second birth or the birth of the inner person in and from the subordinated outer or personal one. The second birth is no mere metaphor but an actual event in the candidate’s inner life, analogous in a way to the physical birth, resulting in a bringing into activity of the spiritual nature within, which thereafter passes through stages of growth from that of the newborn initiate or child upwards and onwards. An Egyptian papyrus bearing the emblem of an egg floating over a

mummy typifies the second birth of the Osirified dead (SD 1:365).

Second Coming. See MESSIAH; KALKI AVATARA; MAITREYA-BUDDHA

Second Continent Used in *The Secret Doctrine* to signify the land mass or configuration of our earth-globe during the second root-race, as each root-race is said to have a continent or group of land masses for the scene of its life history. “The ever-blooming lands of the Second Continent (Greenland, among others) were transformed, in order, from Edens with their eternal spring, into hyperborean Hades. This transformation was due to the displacement of the great waters of the globe, to oceans changing their beds; and the bulk of the Second Race perished in this first great throe of the evolution and consolidation of the globe during the human period” (SD 2:138). Also called the Hyperborean continent. See ROOT-RACE, SECOND

Second Death Adopted from its use by the ancients, such as the Greeks and Romans who wrote and taught of the second death even publicly (cf Key 98-9). When a person dies the three lower of his seven principles (sthula-sarira, linga-sarira, prana) are immediately cast off, and the four higher principles (kama, manas, buddhi, atman) enter kama-loka, there to await the second death. The length of time that this fourfold entity remains in kama-loka is determined by the general characteristics of the life just ended on earth: if there has been during life but small attachment in the intermediate nature (kama-manas) to things of earth, there will perforce by little or nothing to hold the entity in kama-loka, which it will traverse relatively rapidly; and the preparation for the entry into the next state of consciousness or devachan proceeds normally and smoothly.

The sojourn in kama-loka will be longer if the deceased has strong and active attractions earthward, for in such cases the defunct is earth-bound, and the time before the second death occurs, after which follows the entry into devachan, is in all cases proportionate to the strength of the attraction towards earth and its affairs.

The second death takes place when the two highest human principles, atman and buddhi, free themselves from the fourfold entity, but such separation of the monad takes place only after it has assimilated all the higher intellectual and truly spiritual attributes which the manas principle has stored up during the last life on earth. The ego then is freed from all low attractions and enters into devachanic bliss for a period according to its richness in human spiritual qualities. After the monad in the second death has abandoned the lower part of manas joined to kama, there remains the shell or spook (kama-rupa) which under normal conditions immediately begins to disintegrate in kama-loka. Thus after the second death the immortal triad — atman, buddhi, and all the spiritual and intellectual aroma of the manas — is freed, and the re embodying ego or higher manas enters the devachanic state, and sleeps blissfully there till beginning its new cycle of descent towards reincarnation.

Second Logos A logos is the unitary or monadic head of a cosmic hierarchy, such as a universe, from which emanates the various rays or subordinate members of the hierarchy. Next in cosmic

evolution after the Absolute of a universe comes the first manifestation called the First or Unmanifest Logos, the parent-precursor of the Manifest-unmanifest Logos, the Second Logos invested with feminine characteristics, and hence often called spirit-matter, life, the spirit of the universe, the combined Brahman-pradhana. It is likewise spoken of as Father-Mother or more commonly as the cosmic Mother. The First Logos does not create, but emanates the Second Logos, which in its turn gives birth to the Third Logos or Brahma-prakriti or Purusha-prakriti, which because of its generative and productive function in cosmogony is called the creative logos. Each higher logos emanates the one immediately below it. *See* LOGOS; SVABHAVAT

Second Principle When the seven human principles are counted from above, buddhi; when from below, linga-sarira.

Second Race. *See* ROOT-RACE, SECOND

Second Round. *See* ROUND, SECOND

Second Sight A Scottish name for natural or cultivated clairvoyance, as found among the Scottish Highlanders. The function partakes of several converging inner powers or attributes, but it generally means seeing in the astral light figures not physically visible, or distant scenes or future events.

Secrecy. *See* MYSTERIES; SODALIAN OATH

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sed-Sez

Sedecla. *See* WITCH OF ENDOR

Sed et Serpens (Latin) “But the serpent also,” “but creeping also.”

Seed The essence or germ of an entity, embodying its svabhava (essential nature) and determining the forms produced from it, partly by the accretion of various elements but mainly by the emanating stream working from within outwards or above downwards. The seed of a plant is a globule of physical matter, but the actual seed is ultra-physical. All seeds strictly speaking are the vital life-forces working in and through the physical germs, and hence these true seeds are ethereal organisms, structures composed of a higher order of matter (SD 1:201). Thus there is a succession of vital seeds pertaining to one individual entity, each such seed being the ultimate unit of that organism on a particular plane. There is the physical seed of a plant, containing the astral seed — a unit on its own plane containing a still subtler seed belonging to a higher plane, and so forth. Ultimately a seed is a life-atom, in itself the expression on a particular plane of a monad which is a thought in divine ideation.

Seed-Logos A translation or equivalent for the Stoic spermatic logos.

Seed-manu. *See* ROOT-MANU

Seer In its highest sense, one who discerns truths clearly by the use of the real inner vision, the Eye of Siva; who can see throughout the ranges of space and time belonging to a universe — not barring intuitions of the spaces and times of other surrounding universes. But it is also used for a number of varying degrees of ability to see clairvoyantly in the astral light. Swedenborg is sometimes called a seer, which he was in small degree, but because he was untrained, what he saw was mainly peculiar to himself, as is the case with seers of the same class. Instructions for aspirants to wisdom are replete with warnings as to the manifold dangers and deceptions of the

astral light, and the obstacles thrown up by the unpurified and undisciplined nature of the disciple. The ability to become a true spiritual seer using the inner eye, means the fruits of many lives of aspiration and training, involving the successful passing of many trials and initiations. The science called gupta-vidya is due to the collaboration and teaching of real seers, whose trained faculties enable them to have direct vision of actualities.

Sein. See SEYN

Seker, Seket (Egyptian) *Seker, Seket*. One of the aspects of Ptah, also the name of Osiris in Memphis, especially in his character of Lord of the Underworld — Ptah-Seker-Asar, the triadic god of the resurrection. Ptah-Seker is the personification of the union of the primeval creative power with a form of the inert power of darkness, or a cosmic rendering of the very mystical thoughts around the term the “night sun.”

The Seker-boat (Hennu), representing the second half of the daily journey of the sun through the Underworld, is so named because Ra the Aged is said to be like Horus, while Ra the Younger is said to resemble Seker.

Sekhem (Egyptian) *Sekhem*. A shrine or sanctuary; the gods of the shrine; the vital power of a human being; any power, spiritual or physical; as a verb, to read, be strong, etc.

Self Theosophical literature distinguishes between self and ego: self is a purely spiritual unit, divine in essence, the same in every being, expressed as “I am”; egos are many, different in different beings, and expressed as “I am I.” Egos are indirect or reflected consciousnesses, seeing themselves as apart from other egos, each having its own individualized characteristics. But the self or atman is the purest and strongest intuition of being as a universal principle and as the summit of the hierarchy called man. It is pure consciousness, the essential principle which gives to every person knowledge of selfhood. As it has no egoic consciousness, it seems to our reason to be unconsciousness. To become self-conscious, a vehicle is needed, so that the self may see itself reflected as in a mirror.

In humans what is called the personal self is a compound, in which the true selfhood or atmic ray shines dimly through many screens. This causes our various mental states to be regarded as pertaining to our own individuality, though they are actually influences which flow into and out of the mind, and to which we attribute a false sense of ownership, as when we say, “I am angry,” instead of “I am experiencing anger.” The path of liberation frees us progressively from these false selves; we abandon the heresy of separateness, and at last see the true self within us as being identical with that self in all beings.

Self-born Parentless, in Sanskrit aupapaduka or aja — terms used of the head of a hierarchy, such as the Logos, corresponding to the Son, the second person of the Christian Trinity. From another aspect, it is the cosmic dragon in the highest of its septenary meanings. All gods and beings born

through and from will, whether of deity or adept, are said to be self-born, e.g., the pitris, who issued from Brahma's body of twilight; or Daksha, a self-born power who sprang from his father's body. Each cosmic monad is svayambhuva (the self-become or self-born) and in its turn becomes a center of force from within which emerges a planetary chain.

The first root-race is called self-born, for the individuals of this race were the astral shadows of their progenitors, and their method of reproduction was by fission. Seven self-born primordial gods emanated from the triadic One. The self-born were the primary creation of seven creations, otherwise emanations of self-born gods, or 'elohim, as the Hebrews call them.

Theosophic philosophy postulates four methods of reproduction (chatur-yoni) in the manifested realms which run from the divine through many intermediate degrees to the physical: 1) the highest or self-born (aupapaduka), such as the inner birth at will of gods and bodhisattvas; 2) birth from the seeds of life of various kinds on the different planes, whether they be monads or physical seminal germs; 3) egg-born (andaja), such as reptiles and birds; and finally 4) womb-born (yonija), such as man and other mammalia. These four modes of birth are not given here in the order of their importance or spirituality, for human beings, who are womb-born, at a later stage through initiation and inner development finally attain the aupapaduka birth again.

Self-consciousness Awareness of oneself as the experiencer, attribution of one's experiences to an ego, consciousness of being a separate individual; whereas consciousness in the abstract is merely awareness of the experience. Animals and very young children are conscious, man is self-conscious; yet the adult, when engrossed in an experience, may lose his self-consciousness for a while. But even man is only partially self-conscious, because he can contemplate only part of his being; that in him which is now the contemplator may become part of what is contemplated. As the subject, the knower, shifts upwards and inwards, so to speak, more and more of the vestures pass into the category of objects or what is known. The Unknown manifests the universe in order to attain full self-consciousness; and in man, the microcosm, an unself-conscious spark of divinity passes through stages of evolution and experience in order to achieve relatively full self-consciousness. The potentiality of self-consciousness, however, is in every atom. In order to become self-conscious, spirit must pass through every cycle of cosmic being, until every ego has attained full self-consciousness as a human being or equivalent entity. Man's self-consciousness depends on his triple nature; it is man who is the separator of the One into various contrasted aspects.

Early humanity was not self-conscious; it was the living intellectual fires or manasaputras which gave to the human mind its self-perception and self-consciousness or manas. This manas is derived ultimately from cosmic mahat, and in man today it had become ahamship or ahankara. Full self-consciousness means consciousness of the one self, cosmic Purusha, the seventh principle, not only of the universe but likewise of man himself.

Self-directed Evolution That all evolution is caused by, and consists in the self-expression of the svabhava (essential characteristics) combined with the will of the monad dwelling within the form; in contradistinction to the doctrine that external circumstances are the determining evolutionary factor. The expression applies to every evolving entity, from the life-atom upwards, but has a special significance when applied to man, because he is endowed with the power to blend his personal consciousness with that of the monad within-above; so that what in the animal or unawakened person is an unconscious process becomes in the awakened person a process in which his mind and will acquiesce:

“no purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle — or the OVERSOUL — has (a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyani-Buddha)” (SD 1:17).

The sooner the individual realizes that he should take himself in hand, and govern or control his life by the highest within him, instead of being the slave of impulses arising from his lower nature, the more quickly will he reach the higher phases of his evolutionary progress, which humanity as a whole may take eons to attain through the slow procedures of the cosmic drive.

The phrase does not mean that each person should follow the bent of his own personal inclinations, but that he should follow the path of duty, which is the path of evolution, as revealed to him by intuition and purity of aspiration. He should become the master of his destiny, spiritually willing his future through self-devised training and efforts upwards.

Self-existent (Atmabhu, Svayambhuva) Existing in and by itself alone; applied to any self-contained entity when considered apart from others. Applied by Western theologians to Deity as contrasted with his creatures, whose being sprang from him and is dependent on him. In addition to its use in defining the cosmic monad or unity, it is also used for subordinate monads considered in relation to the entities which spring from them; for example, the logos or head of a hierarchy is self-existent by contrast with its emanations. In the Qabalah the Heavenly Man (’Adam Qadmon) is called the self-existent, and the same may be said of Brahman, or even of Brahma, in Hindu systems. *See SVAYAMBHUVA*

Selfishness Making the gratification of the personal self or ego the paramount aim in conduct; a disregard of the interests of others. While individualism is a necessary stage in evolution, yet humanity on the upward arc of evolution is on the road towards realization of the essential unity of all selves. Hence selfishness is our greatest obstacle in spiritual unfolding or development. It is not its grosser manifestations that are most harmful, but the subtler forms in which it may wear

the mask of the virtues. It is overcome by aspiration towards the source of our being, by recognizing the barrenness and futility of self-seeking and its destructive results, and by the cultivation of that primal instinct of altruism which is at the heart of every being.

What is here called selfishness corresponds in the minds of Buddhist philosophers and scholars to the ideas they disputed grouped about the word atman. They never intended to deny the fundamental meaning of atman or selfhood, and yet this misconception of ancient Buddhist teaching has brought about the false idea that Gautama Buddha and his followers taught that man has no essential self or selfhood. Because selfishness was popularly considered the permanent soulhood in man, the doctrine of anatma (in Pali, anatta) was strongly and continuously taught. The deduction shows clearly that even in India at the time of the Buddha, selfhood in its popular sense of concentration on the lower self and its interests was as popular and widespread as today. It is a paradox that in selflessness is found the noblest and highest emanation of self-expression of the atman or spiritual self in man.

Selflessness The attribute of the atman, the essential self or selfhood; on the upward arc of evolution we strive to wean our lower or personal self from attachments to objects of personal desire and to achieve the universality of feeling which pertains to this divine essence (atman). Without the altruistic intuition, no society, whether of animals or humans, could hold together. Instead of regarding selflessness as a lofty and difficult goal to be attained by climbing, we can regard it as an original “home” from which we have wandered.

Self-luminous Matter Matter which shines from itself and not by reflected light; the existence of such matter in interstellar space was believed in by Halley, and *The Secret Doctrine* states that matter in several phases of the nebulous condition, before it condenses into solar or planetary bodies, is self-luminous; and that the planets are also self-luminous before they become materially concreted globes. Science has long recognized self-luminosity in phosphorus, radium, and in some other bodies.

Philosophically, it is a mere matter of choice whether to regard light as primordial and rudimentary and deduce other phenomena from it, or to consider luminosity as a result of the vibration of molecules — since light is both. But theosophy agrees with archaic thought in placing light as the first of all manifested things, regarding light as the very essence of matter, not as a decoration of it. Nor is light necessarily associated with heat, as even the humble glow worm attests. Theosophy teaches that self-luminosity, with or without heat, is of natural necessity a characteristic of everything that is, although this self-luminosity is by no means always visible to our human physical senses. Every entity anywhere, great or small, as well as every aggregate of atoms, is continuously and uninterruptedly self-luminous, continually emanating forth because of the energies ever active within itself an unceasing stream of radiation; and this radiation is of several different kinds, usually enumerated as sevenfold, of which ordinary or physical light is but

one manifestation. Everything is radiant, radiating; radiant here meaning not only luminous, but self-luminous, generating radiation of many kinds from within itself. It is the imperfect ability of our organ of vision to see these many forms of radiation that causes us to be unconscious of them; our eyes have been evolved to sense only one small gamut in the great scale of radiation of the universe surrounding us. Science, with its various kinds of radiation, is becoming keenly cognizant of this ancient fact and scientists are pointing out that not only is visible light but a short stretch of the scale of radiation, but are envisaging the high probability that matter itself in all its forms is but concentered radiation or crystallized light.

Semele, Semele-Thyone (Greek) In Greek mythology, daughter of Cadmus, founder of Thebes, and of Harmonia, a daughter of Ares and Aphrodite. The Orphic myth is a permutation of Demeter-Kore the divine spouse, who becomes Semele the mortal maid and mother of Zagreus, later Zagreus-Dionysos, the third of the great Eleusinian deities in later times. Semele is beloved by Zeus, which excites the jealousy of Hera, who accordingly contrives a plot to destroy Semele. Appearing to her in the form of her nurse, Hera insinuates that the lover is not really Zeus, and persuades Semele to ask her lover to prove his identity by appearing to her in his divine panoply and form. Reluctantly Zeus does so, foreseeing the result yet bound by his pledge to her. Semele is reduced to ashes at the sight, and the babe which she had carried for seven months is snatched from the flames by Zeus himself who, that it might complete its term, sewed it up in his thigh. The babe Zagreus was born from the thigh of Zeus as Zagreus-Dionysos, the Savior. Identified with Iacchus, the divine son of Demeter-Kore in the later Eleusinian Mysteries, he visits the Underworld and brings his mother Semele back to earth, now as Thyone (the inspired) to reign with Demeter-Kore as the radiant queen and divine mother in the Orphic Mysteries.

Semele is a representative or type of the aspiring human soul which in its higher parts so passionately longs for complete union with the inner divinity, that when this unity of comprehension and being is once attained, the human soul is reduced to ashes and the son, the soul's self in its higher and newer form, is saved by the divinity within as the newly born dvija (initiate).

Semitic, Semites; Shemitic, Shemites Applied to a group of Asiatic and African languages, including Hebrew, Phoenician, Aramaic, Arabic, and Ethiopic, some of which are no longer spoken tongues. It was believed that the races speaking these languages were descended from the Biblical Shem (son of Noah), hence they were termed Shemites or Semites. Theosophy maintains that there is no fundamental racial division between the Aryans and the Semites, inasmuch as the latter are in fact later Aryans, belonging to the very earliest of the so-called Aryan racial strains although somewhat later in appearance than what is now called the Aryan stock. "The Aryan Hindu belongs to the oldest races now on earth; the Semite Hebrew to the latest. One is nearly one million years old; the other is a small sub-race some 8,000 years old and no more" (SD 2:470-1).

Semothees [possible corruption of Greek *hemitheos* half-god, demigod] Applied to the Druids of the Gauls (IU 1:18); like the true dvija (twice-born), one who is born of the spirit as well as of matter, and therefore, following the mystical language of archaic times, was the offspring of the divine spiritual parent on one side, and of human parenthood on the other, like the Greek heroes and demigods.

Sempe (Tibetan) *sems dpa'*. Mind-hero; a title of the celestial buddha, corresponding to the Sanskrit sattva (sentient being), especially in compounds like bodhisattva (Tibetan byang chub sems dpa') and mahasattva (Tibetan sems dpa' chen po). The Tibetan dor je sems dpa' (dor-je sem-pa) translates the Sanskrit vajra-sattva.

Sena (Sanskrit) *Senā* The active female energy or sakti of Karttikeya, sometimes referred to as Kaumari.

Senary [from Latin *senarius*] Pertaining to six or having six as a radix; as a noun, a group of six or the number six, equivalent to the Greek hexad. The septenate without its synthesis, the interlaced triangles without their central point, hence standing for manifested nature, as shown in the six directions of space, the six faces of the cube, and hexagonal structures in nature. It may be regarded as composed of two triads, mystically those of fire and water. It represents imbodyed man apart from the spiritual monad. The six rays of the creative Logos, considered apart from their synthesis, the six days of creation, etc., show the same idea.

More mystically, the senary or hexad stands for the six steps of progression in manifestation, and consequently for the six planes of nature, in and through which the monad, whether cosmic or individual, unfolds itself into full manifestation as an imbodyed being on the various planes of nature. Thus the senary represents in man all the sheaths of the atmic consciousness from buddhi downwards to the physical body, the atmic life-stream knotting or focalizing itself on each plane as a child monad of the atmic parent. *See also* SIX

Senses In general, gateways of communication between the perceiving function of the ego and the corresponding elements of the plane where it is functioning. The physical senses appeared in serial evolution in the order of hearing, touch, sight, taste, and smell. These senses were not developed out of nothing but are expressions or reflection on the physical plane of previous latent, inner causal functions residing in the structure of the inner person.

The five physiological senses are modifications or specializations of a general perceptiveness which has different modifications in different animal species where the organs are different, especially in the insects. Sensitives and clairvoyants may be able to receive visual, auditory, or other impressions without the use of the physical organ, or the usual functions of a sense organ may be transferred to another part of the body.

The human senses are actually seven including, besides the usual five already developed, the

organ or function of manas (mind) and of buddhi (understanding). These latter two are not senses in the physical significance pertaining to the bodily senses, but the emphasis is laid on organic and functional activities, both being inner and spiritual-intellectual. At the present stage of evolution man has not developed the power of manifesting the sixth and seventh sense functions and organs, but in the fifth round the development of ether will bring forth into relatively full evolution the manasic sense organ with the beginnings of the buddhic.

In exoteric mythologies the bodily senses and functions are said to have their presiding deities, so that there are two septenary sets: the causal spiritual, and their material reflections as effects. The cycles of septenary evolution bring forth the spiritual or divine; intellectual and higher psychological; the lower psychological, including the passional, and the instinctual; and the semi-corporeal and purely physical natures. The senses belong to the last two groups. The astral-vital-physical nature furnishes sensory organs, through which the inner senses can act, thus causing the functioning of the physical senses. These physiological senses develop *pari passu* with the physicalization of humanity.

In the first human protoplasts, the senses were nonexistent in the sense of being non-functional although latent; as evolution unfolded innate capacity and attribute, the functions and organs followed suit, and appeared in the evolving physical vehicle.

The senses belong to the third of seven creations mentioned in the Puranas, the first three constituting a group known as the prakrita creations: 1) mahat-tattva creation; 2) bhuta or bhutasarga; and 3) indriya or aindriyaka. These three are not so much senses as the three first or elemental prakrita creations of the cosmos, representing the first three stages of the development of manifestation after a solar pralaya. Nevertheless, as analogy is nature's rule throughout, these creations are equally applicable to the human senses, applying to the generalized development of sense function and sense apparatus more than to the sense organs themselves. The last of the three is, in its human application, a modified form of ahankara, the conception of the egoistic and mayavi "I" in man, the reflection of the spiritual ego or monad; and this third creation is also termed the organic creation or creation of the senses.

Senzar The name given to the ancient mystery-language unknown to modern philologists, that was known to all initiates of the inhabited and civilized world; the secret sacerdotal language or mystery-speech of the adepts of whatever class belonging to or owing allegiance to the chief esoteric brotherhood, "still used and studied unto this day in the secret communities of the Eastern adepts, and called by them — according to the locality — *Zend-zar* and *Brahma* or *Deva-Bashya*" (BCW 4:518n). In this language, besides its common use as a universal means of intercommunication, were written the secret works preserving the history of the archaic continents and races, as well as prophecies of the future. It was used in the secret commentaries and stanzas forming the basis for *The Secret Doctrine*, wherein they are called the Stanzas of Dzyan

or the Book of Dzyan.

“Tradition says, that it was taken down in *Senzar*, the secret sacerdotal tongue, from the words of the Divine Beings, who dictated it to the sons of Light, in Central Asia, at the very beginning of the 5th (our) race; for there was a time when its language (the *Sen-zar*) was known to the Initiates of every nation, when the forefathers of the Toltec understood it as easily as the inhabitants of lost Atlantis, who inherited it, in their turn, from the sages of the 3rd Race, the *Manushis*, who learnt it direct from the *Devas* of the 2nd and 1st Races” (SD 1:xlili).

As to the mode of writing this mystery-speech, “The sacerdotal language (*Senzar*), besides an alphabet of its own, may be rendered in several modes of writing in cypher characters, which partake more of the nature of ideographs than of syllables” (VS vii).

Separateness. See HERESY OF SEPARATENESS

Sepher (Hebrew) *Sēfer* Writing, something that is written, a book. In the plural (*sēfārīm*), books or writings, the Jewish holy scriptures. In the *Sepher Yetsirah*, an early Qabbalistic treatise and one of the most important in the Qabalah, the first verse states that the Lord and King of the universe formed “the universe in thirty-two secret paths of wisdom by means of three Sepharim: [1] Sephar, [2] and Sippur, [3] and Sepher, i.e. through [1] Numbering; [2] Numberer; and [3] Number.” The verbal root from which this word is taken originally meant to make marks — not only to write but also to number or count. Hence the play upon the three words, described as the three Sepharim, has reference to the activities of the Sephiroth in unfolding both intrinsic mathematical and numerical quantities and attributes by means of the spiritual beings forming the Sephiroth and eventuating in the “number” carpentry or structure of the cosmos.

Sepher Dzeniuta. See SIPHRA’ DI-TSENI’UTHA’

Sepher Yetsirah (Hebrew) *Sēfer Yētsīrāh* Book of formation or creation; a Qabbalistic work formerly attributed by Hebrew Qabbalists to the patriarch Abraham, but by most scholars today to Rabbi ‘Aqiba’ (Akiba). It is a small work treating of the evolution of the universe as based upon a system of numbers and correspondences. Deity is described as forming the universe by means of numbers by 32 paths or ways of secret wisdom corresponding to the 22 letters of the Hebrew alphabet and the ten fundamental numbers. The latter are the ten primordial numbers whence proceeded the universe in the Pythagorean sense. The 22 letters are divided into Three Mothers — a triad, a heptad, and a dodecad — corresponding to the three primal letters A M S, the seven planets, and the twelve signs of the zodiac. Blavatsky remarks that the *Sepher Yetsirah* is “the most occult of all the Kabalistic works now in the possession of modern mystics” (TG 165).

Sephira(h) (Hebrew, Chaldean) *Sēfirāh* [from *sāfar* to mark, scrape, write, engrave, count or number, plural *sēfirōth*; cf Sanskrit verbal root *lip* as in *lipika*] The emanations proceeding from

'eyn soph, these ten emanations being frequently called the Sephirothal Tree or the Qabbalistic Tree of (Cosmic) Life.

The primitive Qabbalists conceived the universe as coming into manifestation by a process of mathematical or numerical emanations, proceeding out of the bosom of 'eyn soph (no limit) in a series of nine or ten Sephiroth — embodying the idea of cosmic mathematical quantities on the one hand, and of cosmic karmic consequences from previous universes as being thus written or numbered from a former universe. Thus the universe is envisaged as a karmic picture of destiny unrolling itself from 'eyn soph in form or number, and therefore as being based on strictly mathematical relations derivative from destiny.

Sephirah is especially applied to the first emanation, Kether (the Crown), the other nine Sephiroth being involved or held in germ within the first emanation, and emanating therefrom one by one in serial order as “nine splendid lights” (Zohar 111 288a). The first Sephirah is also called 'eyn soph 'or (boundless light). “The Spiritual substance sent forth by the Infinite Light is the *first* Sephira or *Shekinah*: Sephira *exoterically* contains all the other nine Sephiroth in her. *Esoterically* she contains but two, *Chochmah* or *Wisdom*, a masculine, *active* potency whose divine name is *Jah* (□□), and *Binah*, a feminine passive potency, Intelligence, represented by the divine name *Jehovah* (□□□□); which two potencies form, with Sephira the third, the Jewish trinity or the Crown, Kether” (SD 1:355).

Sephiroth (Hebrew) *Sēfirōth* [plural of *sēfirāh*] Emanations; applicable to the ten powers or potencies which compose the Qabbalistic Tree of Life, named Kether (the Crown); Hochmah (wisdom); Binah (understanding); Hesed (compassion); Geburah (strength); Tiph'ereh (beauty); Netsah (triumph); Hod (majesty); Yesod (foundation); and Malchuth (kingdom). The higher ones of this series of cosmic emanations embody functions in cosmogony which exactly parallel the functions and attributes of the lipika in theosophical thought.

The Qabbalah states that when the Boundless ('eyn soph), driven by ineluctable destiny, wished to portray an aspect of itself, it caused a Point to appear in the bosom of space, and this primordial point expanded into the Sephirah Kether — the mother of the remaining nine Sephiroth. This primal point or Kether was therefore the first emanation of the universe, and is often called Sephirah. Having thus come into manifestation, the first Sephirah unrolled or emanated from itself a second Sephirah, Hochmah, which in its turn unrolled the third Sephirah, Binah; then the third unrolled the fourth, and so forth, each newly appearing Sephirah — though having its own individual characteristics — containing within itself the potencies and characteristics of all the preceding Sephiroth; and this process continued until the nine Sephiroth which had been inrolled within Kether all came into manifestation. Together the ten Sephiroth represent the cosmic Archetypal Man ('Adam Qadmon), — cosmic Purusha in Hindu thought. “The Sephirothal Tree is the Universe, and Adam Kadmon represents it in the West as Brahma represents it in India” (SD

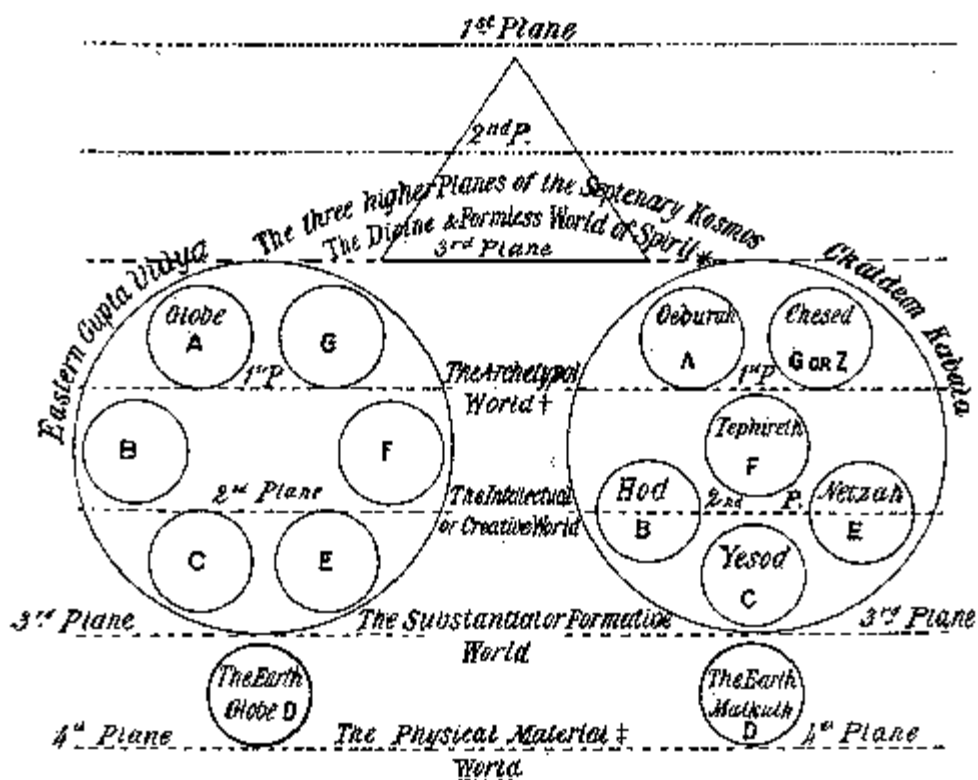

1:352).

The ten Sephiroth are often referred to in the Qabalah as the members or limbs of the manifested body of 'Adam Qadmon, and the parts were named as: 1) the head; 2) the right shoulder; 3) the left shoulder; 4) the right arm; 5) the left arm; 6) the heart; 7) the right thigh; 8) the left thigh; 9) the generative organs; and 10) the basis or feet.

The Sephiroth are often divided into three pillars, beginning as spiritual cosmic light and ending in matter by a process of increasing materiality. These three pillars represent three vertical streams of vitality or three currents of energy: the right pillar, considered to be the masculine stream and termed the Pillar of Mercy, consists of Hochmah, Hesed, and Netsah. The left stream or pillar is the feminine potency, called the Pillar of Judgment, and comprises Binah, Geburah, and Hod. The Middle Pillar is the stream of spiritual stability and consists of Kether, Tiph'ereh, Yesod, and Malchuth. Although the currents of the Middle Pillar run from the topmost to the lowest, nevertheless the potencies of the right and of the left pillars are interconnected so that the streams of vitality flow uninterruptedly through all of the ten Sephiroth.

Another way of viewing the Sephiroth is by a series of three triads, running from the uppermost downwards, known as three Faces or the three Qabbalistic Heads. The first Face, often termed the Supernal Triad or invisible triad, consists of the three highest Sephiroth Kether, Hochmah, and Binah; the second Face is emanated or produced from the first and comprises Hesed, Geburah, and Tiph'ereh; the third Face, the emanation of the first two triads, is formed of Netsah, Hod, and Yesod; and the three Faces find their base or fulfillment in Malchuth, the world as humans view it. The first Face or Head is called in the Qabalah the spiritual or intellectual world; the second is the formative world or world of perception; and the third is known as the basic world, often called the material or physical world, but more accurately comprising the lower ranges of the anima mundi. The three Faces then conjointly emanate the truly physical world around us, which thus contains the productive essences of all, and hence is the carrier or vehicle of all, precisely as the physical body with its vitality is the carrier of the other six principles of the human constitution.

In the case of the solar system the ten Sephiroth correspond to the lokas and talas of Brahmanical philosophy. There is a direct correspondence between the twelve globes of a planetary chain and the ten Sephiroth plus Malchuth (the earth) and the highest globe of that chain:

(diagram SD 1:200).

Septenary, Septenate. See SEVEN

Septerium [from Greek *septerion* pertaining to worship] In the Delphic legend, purification of Apollo after slaying Python took place in the laurel grove of Tempe, whence he returned after nine years of penance. This was represented in the festival of Septerium held at Delphi every nine years.

Seraphim (Hebrew) *Śērāfīm* [from the verbal root *śāraf* to burn; plural of *śārāf*] Fiery, burning, venomous, poisonous. The word came to have the significance of serpents, referring to those beings described in Isaiah 6:2 as possessing six wings, guarding the divine throne, and endowed with a voice with which they praise the deity; "they are the symbols of Jehovah, and of all the other Demiurgi who produce out of themselves six sons or likenesses — Seven with their Creator" (SD 2:387n). In later Jewish writings they are associated with the Cherubim and 'Ophanim (wheels) of Ezekiel. They parallel the Hindu nagas — semi-divine beings of serpent character. "The Seraphim are the fiery Serpents of Heaven which we find in a passage describing Mount Meru as: 'the exalted mass of glory, the venerable haunt of gods and heavenly choristers. . . not to be reached by sinful men. . . because guarded by Serpents.' They are called the Avengers, and the 'Winged Wheels' " (SD 1:126) — avengers in the sense of being the agents of karma. They are the Flames, a

class of dhyani-chohans who dried the “turbid dark waters” with which the earth was covered in an early stage of its development (SD 2:16).

In the Qabbalistic hierarchy of angels, the Seraphim correspond to the fifth Sephirah, Geburah. In the ancient Syrian system they are equivalent to the sphere of the nebulae and comets. The celestial hierarchy adopted by Dionysius the pseudo-Areopagite ranks them first.

In the hierarchy of emanations proceeding from the cosmic monad, the Seraphim precede the cherubim in emanational order, because in the hierarchical scheme the Seraphim stand for the formative or creative fires, the spiritual archetypes, whereas the cherubim are the builders of forms and hence are of the rupa class themselves. Thus the Seraphim belong to the arupa class which works through and in the Cherubim or rupa class. Thus the Seraphim, whose color is the spiritual red or spiritual fire, precede both in time and in hierarchical dignity the Cherubim whose color is blue — the idea being that before manifestation of both mind and of forms can take place there must be in the cosmic monad the awakening of divine desire, signified as fiery or flamy color, spiritual red. As the Veda has it: “desire first arose in It.”

Serapis [from Greek *Sarapis* from Egyptian *Ásár-Ĥāpi* Osiris-Apis] The most important deity at Alexandria during the time of Ptolemy Soter, its worship spread throughout Egypt and into the Roman Empire, establishing itself firmly even in Rome. Plutarch recounts that Ptolemy Soter in his desire to make Alexandria the chief center of his empire, sought to unite Greeks and Egyptians in a common worship. He dreamed that a strange god appeared to him and, on telling his friends, one said that he had seen such a statue at Sinope. The king immediately imported this statue, the Greeks, declaring that it represented Pluto, ruler of the underworld, with his guardian dog Cerberus, while the Egyptians stated that it portrayed Asar-Hapi (Osiris in the underworld) with Anubis. Plutarch states that Osiris is the same as Sarapis, “this latter appellation having been given him, upon his being translated from the order of Genii to that of the Gods, Sarapis being none other than that common name by which all those are called, who have thus changed their nature, as is well known by those who are initiated into the mysteries of Osiris” (On Isis and Osiris, sec 28).

A hieroglyphic text found on stelae and other objects in the Serapeum at Sakkara states that Apis is called “the life of Osiris, the lord of heaven, Tem (with) his horns (in) his head,” he who gives “life, strength, health, to thy nostrils for ever.” Thus Serapis is represented in the form of a man with the head of a bull; the horns being crescent-shaped, encircling the solar disk; in his hands he bears the scepter with the flail and crook of Osiris.

The fundamental idea ruling the worship and standing of Serapis among the later Egyptians corresponds to the Greek cosmic Logos, and particularly the creative or Third Logos, equivalent to the Hindu Brahma; and the bull-attributes connected with Serapis worship likewise refer to the generative power universally ascribed among ancient peoples to the bull, and in the cosmic sense to the creative urge inherent in the Logos itself, constantly producing, bringing forth, and

reproducing.

Serpent One of the most fundamental and prolific symbols of the mystery-language. Its most basic meaning is of the eternal, alternating, cyclic motion during cosmic manifestation. For motion, which to the physicist and the philosopher alike seems an abstraction, is for the ancient wisdom a primordial principle or axiom, of the same order as space and time, existing per se. Never does motion cease utterly even during kosmic pralaya. And motion is essentially circular: where physics would derive circular motion from a composition of rectilinear motions, the opposite procedure would be that of the ancient wisdom. This circular motion, compounding itself into spirals, helixes, and vortices, is the builder of worlds, bringing together the scattered elements of chaos; motion per se is essential cosmic intelligence. This circular motion, returning upon itself like a serpent swallowing its tail, represents the cycles of time. This conscious energy in spirals whirls through all the planes of cosmos as fohat and his innumerable sons — the cosmic energies and forces, fundamentally intelligent, operating in every scale or grade of matter. The caduceus of Hermes, twin serpents wound about a staff, represents cosmically the mighty drama of evolution, in its twin aspects, the staff or tree standing for the structural aspect, the serpent for the fohatic forces that animate the structure.

The serpent is characteristically a dual symbol. In the beginnings of creation two poles were emanated, spirit and matter; and forthwith began interaction between the downward forces of the one and the upward forces of the other. Hermes, Mercury, intelligence, may represent a sage or a thief; the serpentine wisdom may work in every plane of materiality. The perverse will of man may turn natural forces to evil purposes, and thus we speak of the good serpent and the bad, of Agathodaemon and Kakodaemon, of Ophis and Ophiomorphos. A serpent can be a sage or a sorcerer.

The dragon is the eternally vigilant one, guardian of the sacred treasures; but he is the ruthless destroyer of him who attempts to gain by force the riches to which he has not won a title. To gain knowledge, we must know how to tame the serpent which rules the nether worlds, as the Christ refuses to make obeisance to Satan.

The seven sacred planets, or again the seven human principles, form a serpent, often collocated with the sun and moon as making a triad. One form of this spiraling conscious energy, when manifesting in man, is kundalini-sakti, the serpentine power, which in the ordinary person today lies relatively sleeping and performing merely automatic vital functions; but when aroused can either waft to sublime heights of vision and power or blast like a lightning-stroke.

The power which a serpent has of casting its old skin is analogous to what the earth does at the commencement of each round, and to the clothing of the human jiva with a new body when it enters the womb. Again, the astral light is called a serpent; its lowest strata are dangerous and deceptive, while it extends through all planes up to the highest akasa, the vehicle of divine

wisdom.

In early Christianity there arose more than one Gnostic sect using the snake as a symbol, such as the Ophites, which in the vision of certain ecclesiastic Fathers was designated devil worship, or by other uncomplimentary names. *See also* NAGA

Sesha (Sanskrit) *Śeṣa* [from the verbal root *śiṣ* to leave a remainder or residue] Remainder; the karmic remainders of the preceding cosmic manvantara which become the basis for the manifestation of the present manvantara. Also the name of the seven-headed serpent of space on which Vishnu rests during pralaya, representing the seven principles of the cosmos in which the spiritual or unmanifested universe remains until the period for its new manifestation arrives, thereafter to become manifest by degrees. Sesha or Ananta, the couch of Vishnu, is an abstraction symbolizing ever-continuing cosmic life in space, which contains the remainders or germs of the future manvantara, and throws off periodically the efflorescence of these germs as the manifested universe. But during a solar pralaya, the cosmic spirit from which all flows forth, reposes sleeping upon Sesha, the serpent of eternity, in the midst of the kosmic Deep. Hence Sesha is considered Vishnu's first vahana (vehicle) in the primordial water of space, before manvantaric activity begins.

This serpent is often mythologically represented as also having a thousand heads, referring to the thousand main divisions of abstract time into which pralaya or manvantara can be divided; and as supporting, after giving birth to them by emanation, the seven lokas and seven talas out of which the manifested hierarchies of the universe are formed during cosmic manvantara. *See also* ANANTA-SESHA

Set or **Seth** (Egyptian) *Set* or *Seth*. According to the Heliopolitan mythology, the son of Seb and Nut, is the brother of Osiris, Isis, and Nephthys; and the father of Anubis by Nephthys. In later times he became associated with Typhon. The attributes of the god underwent several changes: he is described as very closely connected with Aroeris (Heru-ur or Horus the Elder), his chief office being that of helper and friend to the deceased; in this association a twin-god is pictured, having the hawk head of Horus (light) and the Set animal (darkness) upon one human body. Furthermore, Horus was the god of the sky by day, while Set was god of the sky by night: in this sense were they opposite yet identic deities in earliest times, one the shadow of the other.

Later the mythological account describes warlike combats between the two. Horus popularly represented the bright, upward motion of the sun — resulting in spring and summer; Set represented the downward motion, the mythologic account dwelling upon the fact that Set stole the light from the sun, resulting in autumn and winter. The combats engaged in by Set are rendered in four themes: against Horus, resulting in night coming upon day; against Ra, the sun god; against his brother, Osiris, resulting in the latter's death; and against Horus the Younger who was striving to avenge the death of his father, Osiris. In the fight between Osiris and Set (or

Typhon), Typhon is in one sense the shadow, and hence the material aspect of Osiris, “Osiris is the ideal Universe, Siva the great Regenerative Force, and Typhon the material portion of it, the evil side of the god, or the Destroying Siva” (TG 90).

In late dynastic times, all forms of evil and darkness were attributed to Set as well as all the storms of nature. His kingdom was placed in the northern sky in the constellation of the Great Bear — the north being designated as the realm of darkness, originally mystically meaning the darkness of recondite spirit. When Typhon or Set is allied with earth and matter, these refer not to physical matter but to the body of space itself, the garments or wraps of space, and hence the clothing of the inscrutable darkness of spirit which is boundless light. *See also* CROCODILE

Seth (Hebrew). *See* CAIN

Sethianites Also Sethiotai, Sethians, Sethites. A branch of the Gnostics Ophites, who regarded Seth, the son of Adam, as the first spiritual man, and maintained that Seth reappeared as Christ. The teachings of the Ophites in their different branches were extremely profound and highly philosophic, but the Christians neither could nor would understand the inner meanings of the Ophite doctrines, but took their allegories; and in the process of grossly distorting them, and misquoting them for the purpose of ridicule, succeeded in confusing later centuries as to just what the Ophites did teach.

Sevekh, Sevekt. *See* SEBEK

Seven The fundamental number of manifestation, frequently found in the different cosmogonies as well as in many religious dogmas and observances of the different ancient peoples. Although ten was called one of the perfect numbers by the Pythagoreans, seven was unique in their series of numbers because it has all the “perfection of the Unit — the number of numbers. For as absolute unity is uncreated, and impartite (hence number-less) and no number can produce it, so is the seven: no digit contained within the decade can beget or produce it” (SD 2:582). Seven is the number of the manifested universe, while ten or twelve is the number of the unmanifested universe.

Pythagoras taught that seven was composed of the numbers three and four, explaining that “on the plane of the noumenal world, the triangle was, as the first conception of the manifested Deity, its image: ‘Father-Mother-Son’; and the Quaternary, the perfect number, was the noumenal, ideal root of all numbers and things on the physical plane” (ibid.). Further, seven was called by the Pythagoreans the vehicle of life for it consisted of body and spirit: the body was held to consist of four principal elements, while the spirit was in manifestation triple, comprising the monad, intellect or essential reason, and mind.

There are innumerable instances of sevening — the seven days of the week, the seven colors of the spectrum, the seven notes of the musical scale — while special emphasis is placed upon the seven

human and cosmic principles; the seven senses (five senses now in manifestation and two more to be attained in the future through evolutionary unfolding); the seven cosmic elements; the seven root-races and seven subraces; the seven kingdoms, human and below; the seven rounds; the seven lokas and talas; the seven manifested globes of the planetary chain; the seven sacred planets; the seven racial buddhas; the seven dhyani-bodhisattvas and -buddhas; the seven Logoi; etc.

Man as well as nature is called saptaparna (seven-leaved plant), symbolized by the triangle above the square. While the senary was applied to man in all ranges from the physical to the spiritual, when completed by the atman, thus making the septenary, the latter signified the entire range of the constitution, whether of man or nature, crowned by the immortal spirit.

In Hindu literature the number seven continually appears: the saptarshis (the seven sages), the seven superior and inferior worlds, the seven hosts of deities, the seven holy cities, the seven holy islands, seas, or mountains, the seven deserts, the seven sacred trees, etc. In Greece seven was often connected with the gods and goddesses: Mars had seven attendants, seven was sacred to Pallas Athene and to Phoebus Apollo — the latter with his seven-stringed lyre playing hymns to septenary nature as well as to the seven-rayed sun; Niobe's seven sons and seven daughters, etc.

Apart from mythological considerations, in physical life manifestations of the number seven occur continuously: “if the mysterious Septenary Cycle is a law in nature, *and it is one*, as proven; if it is found controlling the evolution and *involution* (or death) in the realms of entomology, ichthyology and ornithology, as in the Kingdoms of the Animal, mammalia and man — why cannot it be present and acting in Kosmos, in general, in its natural (though occult) divisions of time, races, and *mental* development?” (SD 2:623n).

Seven is indeed the sacred number of life, and with the circle and the cross it forms a triad of primordial symbols of the ancient wisdom.

Seven Eternities Seven cosmic aeons or vastly long periods of duration, becoming time to human thought; and each such cosmic aeon is an eternity [from Latin *aeternitas* from *aetas* age, time period, a space of time] which the Latins looked upon as a generalizing term for an aeon (cosmic age). “The Seven Eternities meant are the seven periods, or a period answering in duration to the seven periods, of a Manvantara, and extending throughout a Maha-Kalpa or the ‘Great Age’ — 100 years of Brahma — making a total of 311,040,000,000,000 of years” (SD 1:36). The expression applies both to the mahakalpa and to the solar pralaya.

Sevenfold Division. See PRINCIPLES

Seven (Solar) Rays Sunlight contains the characteristic potency of every one of the seven solar logoi. It is possible for the adept to sound seven notes, each of which will be in more or less perfect synchrony with the vibrational rate of the respective solar ray or power issuing from its own solar

logos. Such ancient magic is not only an act of reverential unity with the lord and giver of life for the solar system, but puts one in synchrony of a spiritual and intellectual as well as psychical type with the spiritual and other powers resident in and issuing from the sun (cf ML 73). Mystic words of seven vowels refer in a general fashion to the same ancient wisdom-magic. *See also* OEAOHOO

Seven Rishis. *See* SAPTARSHIS

Seven Sacred Planets. *See* PLANETS, SEVEN SACRED

Seventh Principle Generically, the highest member of a septenary hierarchy, the crown from which emanate six rays. Among the seven sacred planets it is that one which, exoterically at least, was called the sun. In man it is the atman. It is likewise called the root of every atom, whether life-atom or chemical atom. This septenate is represented on lower planes of manifestation by an ogdoad, and correspondentially there are anthropomorphized religious doctrines where the seventh principle is no longer the crown but merely one of a group of eight (SD 2:358), although almost always occupying the position of first importance.

Seventh Race, Seventh Root-race. *See* ROOT-RACE, SEVENTH

Seventh Round. *See* ROUND, SEVENTH

Seven Vowels. *See* OEAOHOO; VOWELS

Sex As applied to the organism as a whole, the differentiation of the reproductive function and the character of being male and female. Organisms reproduce their kind in various ways: fission, gemmation, parthenogenesis, hermaphrodite reproduction, and sexual reproduction. In the course of evolution, organisms pass from one method to another; the passage from the hermaphrodite method to the one in which the sexes are in separate individuals took place in the animals in the third root-race of this round on this globe, and shortly afterwards in humanity (SD 2:184), the latter then being in the fifth subrace of the third root-race. The process of separation did not occur suddenly, but slowly. This is often called the Fall, and is so in one sense, since it is a descent from spirit toward matter, and was an initiation of the beasts. "THEY (*the animals*) BEGAN TO BREED. The TWOFOLD MAN (*then*) SEPARATED ALSO. HE (*man*) SAID: "LET US AS THEY: LET US UNITE AND MAKE CREATURES.' THEY DID" (ibid.). But from another viewpoint, it was simply a following of the natural course of unfolding progress in evolution. The separation is symbolized by a circle with a vertical diameter.

The hermaphroditic state is repeated in the developing embryo where the organs of both sexes arise from the same germinal layer of cells, and the differentiation does not occur until near the middle of the viable period of fetal life. Today, the orderly unfolding of embryonic cells into a human form is due to following the invisible model which, in keeping with the embodying ego's karma, is directed by creative spiritual entities and forces.

“Before man could become male and female *physically*, his prototype, the creating Elohim, had to arrange his Form on this sexual plane *astrally*. That is to say, the atoms and the organic forces, descending into the plane of the given differentiation, had to be marshaled in the order intended by Nature, so as to be ever carrying out, in an immaculate way, that law which the Kabala calls the *balance*, through which everything that exists does so as male and female in its final perfection, in this present stage of materiality. *Chochmah*, Wisdom, the Male Sephiroth, had to diffuse itself *in*, and *through*, *Binah*, intelligent Nature, or Understanding” (SD 2:84). After the separation, the third eye began to disappear, and death as we now understand it was not known until then.

Thus the primeval polarity of all things differentiated on the material plane — including sexual humanity — was of immaculate origin and purpose. This sublime ancient teaching has been degraded generally in theological interpretations of cosmic sex symbols in crude physiological terms, such as the substitution of a Jehovistic god of generation for an ineffable, unknown deity.

The originating causes of sex are not rooted in the higher principles or elements of the human composite constitution. It is the effect of former thought-deposits, of emotional and mental tendencies and biases given way to in preceding lives on earth. The predominating and it may perhaps truly be said that the main cause of sex-change in incarnation is strong attraction to the opposite sex during the few — or in rare cases it may be a fairly large number — preceding lives on earth. This attraction, which is the instrumental cause of the tendencies and biases spoken of, arising out of thought and emotional energy, feminizes the life-atoms, or masculinizes them, as the individual case may be, and the natural consequence is incarnation in a body of the sex to which attraction leads. Thus a reincarnating ego may have several incarnations in bodies of one sex, and then incarnate in bodies of the opposite sex for a number of times in succeeding incarnations. How many times, therefore, a reincarnating ego may embody in a male or a female body is not subject to any arbitrary rule but depends solely upon the karmic impulse laid aside in the treasury of psychomental experiences.

Though the distinction of sex is biologically regarded as a profound and nearly universal attribute of organized beings, yet knowledge of composite human nature shows that it does not reach into the roots of the human constitution. Its causes go no deeper than the lower part of the human ego or soul, the psychophysiological nature. It is an evolutionary condition or cycle of the reincarnating ego's development in this present stage of materiality. Therefore, it is a transitory event in its bipolar earthly experience. As sex has been nature's plan for the race for some 18 million years, it will continue to be the natural plan for some ages to come. Some ages hence, sex differentiation will have given way to the activities of impersonal, spiritual creative energies.

Sexual Worship. See PHALLIC; LINGA

Seyn, Sein (German) Being; the German philosopher Fichte distinguished between Sein and Dasein: and, according to him, in thought we know Sein (Being or the One) through Dasein

(Existence) or the manifested. Fichte's philosophical speculations on this point are echoes of tremendously old philosophical propositions in Hindu writings, where the Sein of Fichte is called the sat, and his Dasein the asat. It is equally permissible to invert these Sanskrit terms to propose an even more spiritual conception, making Sein equivalent to asat and Dasein the parallel of sat.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sh-Sir

Shaberon (Tibetan) *zhabs dpad blon* (shab-pe-lon) [from *zhabs dpad* lotus feet cf Sanskrit *padmapada* a title of respect + *blon*, *blon po* officer, minister] Exalted officer; often the head of a Tibetan monastery. The Shabérons are mentioned as occasionally possessing wonderful powers, but are not necessarily tulkus of the Buddha (as the Dalai Lama and Tashi Lama are generally believed to be). While the ordinary Lamaist and uninstructed Tibetan supposes these Buddha reincarnations to be those of Gautama Buddha, the instructed or initiated higher classes of the Tibetan hierarchy understand that in great men there is always a ray of the celestial buddha; and therefore that when these great men reincarnate, the buddha ray is likewise reimpodied.

Shadayatana (Sanskrit) *Ṣaḍāyatana* [from *ṣaṣ* six + *āyatana* seat, abode from *ā* towards + the verbal root *yat* to rest in or on] Six seats of the human sense organs, each of which has a physical means of expression and of reception: the eyes, nose, ear, tongue, body (for the sense of touch), and brain (the organ of mind). The physical organs of sense themselves are mere vehicles of the living impulses of sense acting from their seats within the astral constitution, these being the shadayatana. Commonly described as the organs of sensation through which consciousness passes to and fro, it is recognized as the eighth of the twelve nidanas.

Shaddai (Hebrew) *Shaddai* [from the verbal root *shādad* to be powerful, strong] The omnipotent, the Almighty — a form of the grammatical plural of excellence; commonly used in the phrase 'El Shaddai (omnipotent divinity), an epithet properly belonging to any cosmic hierarch, but in the Old Testament often applied to Jehovah.

Shaddai corresponds to the Latin Omnipotens or the Greek Pantokrator, all signifying all powerful.

Shad-darsana (Sanskrit) *Ṣaḍ-darśana* [from *ṣaḍ* six + *darśana* vision, school] The six schools of ancient Hindu philosophy. *See also* DARSANA

Shades The astral remnants of the dead, spooks, ghosts, phantoms, lemures, larvae, bhutas, etc. In the singular, also used for the *linga-sarira* or *khaba* in the Egyptian enumeration of souls.

Shadja (Sanskrit) *Ṣaḍja* Born of six; the first of the seven *svaras* or primary notes of music, so called because in Hindu theory it is supposed to be produced by six organs: tongue, teeth, palate, nose, throat, and chest. The other six *svaras* are *riishabha*, *gandhara*, *madhyama*, *panchama*, *dhaivata*, and *nishada*. *Nishada* and *gandhara* are referred to as the *udatta* accent, the acute accent or a high or sharp tone; *rishabha* and *dhaivata* as the *anudatta* accent, the grave accent or a general accentless neutral tone which is neither high nor low; and *shadja*, *madhyama*, and *panchama* as the *svarita* accent, corresponding to the Greek circumflex or a kind of mixed tone produced by a combination of a high tone and a low. The sound of the *shadja* is said to resemble the note of peacocks.

Shadows Everything on earth is the shadow or reflection of its prototype in superior and inner spheres; more generally, matter is the shadow of spirit; our sun is the central sun's shadow. The human *linga-sarira* (model-body) is called the shadow-body, and similarly the astral light is called the shadow of cosmic substance, both representing the nether pole of their respective higher counterparts. The Gnostics, speaking of good and evil, said that shadow is what enables light to manifest itself by giving to light objective reality; it is the necessary corollary which completes light or good — their creator on earth. Every deity has its accompanying dark aspect of shadow, frequently called its veil, sheath, or vehicle.

In the plural, used of the first root-race, a *chhaya* (shadow), reflection, or vehicle of the as yet latent indwelling monad, and hence this race is called *amanasa* (mindless), and sons of the self-born; they were the shadows in the sense that their spiritual progenitors, the first *dhyanis* whose evolutionary duty it was to form mankind in their own image, emanated forth or evolved their "shadows" for nature spirits to work upon. These shadows were later endowed with mind by *dhyanis* of a more highly evolved grade, *manasaputras* or intelligences.

Also used for the *bodhisattvas* of the celestial realms who are the shadows or spiritual living and self-conscious projections emanated by the *dhyani-buddhas*.

Shadowy Arc. See ARC, ASCENDING AND DESCENDING

Shaitan [from Arab *shaitan*] In the Koran an angel of high degree who was expelled from heaven because he refused to worship Adam at his Lord's command; often regarded as equivalent to *Iblis*.

Shakers A sect called the United Society of Believers in Christ's Second Appearing, founded by Ann Lee in England, which afterwards spread to the United States. Their asceticism and religious emotionalism often led to their being seized with violent tremblings, like those of the early Quakers or of the *Convulsionnaires* among the French Jansenists. In themselves, such exterior physical phenomena are due to a one-sided emotional development, and to the evoking of genuine

and powerful forces within a physical organism not properly and duly prepared to deal with and sustain them. Such conditions often lead to reactions which both physically and mentally are dangerous, and in the most extreme cases may render the physical organism peculiarly subject to being influenced by excarnate astral entities.

Shakya-thub-pa (Tibetan-Sanskrit) Sakya the mighty one; a name of Gautama Buddha in Tibet, equivalent to the Sanskrit Sakyamuni (the Sakya sage); Sakya was Gautama's clan name.

Shamael. See SAMAEL

Shaman [from Tungusian *saman*; Russian *shaman* an idolator] Originally magician or sorcerer of the wandering tribes of Tartary, Mongolia, or Siberia (either man or woman); follower of the primeval religions, such as the Bhon religion of Tibet. Today applied to sorcerers, medicine men, etc., among traditional peoples, or what is based on their practices, anywhere in the world.

There are two classes of Shamans, however; "The Shamans of Siberia are all ignorant and illiterate. Those of Tartary and Thibet — few in number — are mostly learned men in their own way, and will not allow themselves to fall under the control of spirits of any kind. The former are *mediums* in the full sense of the word; the latter, 'magicians. . . .'

"But, while the illiterate Shaman is a victim, and during his crisis sometimes sees the persons present, under the shape of various animals, and often makes them share his hallucination, his brother Shaman, learned in the mysteries of the priestly colleges of Thibet, *expels* the elementary creature . . ." (IU 2:625-6).

Shamanism Generally regarded as spirit worship, commonly and often unjustly classed with the religions of primitive peoples referring particularly to the beliefs of wandering tribes in Siberia, Tartary, and Mongolia. Belief in a supreme being is a prominent feature but this supreme being must be propitiated through secondary powers, both beneficent and malevolent, by means of intermediaries — priests or shamans. Blavatsky had contacted several shamans and wrote concerning it: "What is now generally known of Shamanism is very little; and that has been perverted, like the rest of the non-Christian religions. It is called the 'heathenism' of Mongolia, and wholly without reason, for it is one of the oldest religions of India. It is spirit-worship, or belief in the immortality of the souls, and that the latter are still the same men they were on earth, though their bodies have lost their objective form, and man has exchanged his physical for a spiritual nature. In its present shape, it is an offshoot of primitive theurgy, and a practical blending of the visible with the invisible world." "The true Shamanism . . . can no more be judged by its degenerated scions among the Shamans of Siberia, then the religion of Gautama-Buddha can be interpreted by the fetishism of some of his followers in Siam and Burmah. It is in the chief lamaseries of Mongolia and Thibet that it has taken refuge" (IU 2:615-6).

"Its followers have neither altars nor idols, and it is upon the authority of a Shaman priest that we

state that their true rites, which they are bound to perform only once a year, on the shortest day of winter, cannot take place before any stranger to their faith. . . . Whenever they assemble to worship, it is always in an open space, or a high hill, or in the hidden depths of a forest — in this reminding us of the old Druidical rites. Their ceremonies upon the occasion of births, deaths, and marriages are but trifling parts of their worship” (IU 2:624).

Shamash (Chaldean) The sun as one of the seven planets, also the Assyrian and Babylonian sun god, regarded as the all-pervading spirit of justice, as exposing injustice and wrong — as the morning sunbeams by their very presence disperse shadow and darkness. The principal centers of solar worship were in Babylon and Sippara, although temples were erected in all the principal cities of the empire, the structures being named ebarra (the shining house or house of the shining one). As with so many ancient peoples, the sun was popularly held to be driven across the sky by means of a chariot and horses, the charioteer being known as Bunene; while Justice (Kettu) and Right (Mesharu) followed as attendants.

With Ishtar (the nature goddess) and Sin (the moon deity), Shamash formed an important triad, regarded as the life-giving forces in all manifestation.

Shamayim (Hebrew) *Shāmayim* **Shemayin** (Aramaic) *Shēmayin*. Dual of “the heavens”; in the Qabbalah, the celestial world of the stars, sun, planets, and moon. “The real meaning of *Shamayem* is, that the heavens are made of □□□□ □□ i.e., *esh* fire, *mayeem* water; also *soo mayeem*, the heaven *carries the waters*” (Myer, Qabbalah 348). As a Hebrew dual form, the heavens were anciently conceived of as dual — the higher and lower heavens. Nevertheless, it is constantly used likewise to signify heavens in the usual sense of plurality.

Shambhala. See SAMBHALA

Shanah (Hebrew) *Shānāh* [from the verbal root *shānāh* to repeat, continue in cycles] A year; a cycle, circle, or ring, with reference to cyclic periods of time. The ancient Jewish year was a lunar year, based on the recurrence of new moons within the annual solar cycle.

Shang (Chinese) In the *I Ching*, the constant virtues — benevolence, laws, and rites of social life, righteousness, and correctness — constituting the tao of man. “If the man of eminent virtue cultivates those four virtues, he is first and principal, all-pervading, beneficent, and immutably correct” (Wen yen 1).

Shannagarikah (Sanskrit) *Ṣaṇṇagarikāḥ* Belonging to six towns or cities; “a famous philosophical school where chelas are prepared before entering on the Path” (TG 81).

Sheath Used as a translation of the Sanskrit kosa in the Vedantic enumeration of the human principles or five sheaths of atman. After atman (the essential self) comes anandamaya-kosa, corresponding to buddhi; vijñanamaya-kosa (buddhi-manas); manomaya-kosa (kama-manas); pranamaya-kosa (prana and linga-sarira); and annamaya-kosa (sthula-sarira). This system

expresses the idea that a human being is not a string or group of separate principles, but one self manifesting in and through a succession of veils or vehicles.

Sheba' (Hebrew) *Shēba'* [from the verbal root *shāba'* to swear, take or make oath] Seven; also the Biblical Queen of Sheba.

Sheba' Heichaloth (Hebrew) *Shēba' Hēikhālōth* **Shib'ah Heichalin** (Aramaic) *Shib'āh Hēikhālīn* [*shēba'* seven + *hēikhālōth* worlds] The seven worlds or habitations of the *Zohar*, and on a smaller scale the seven zones into which the world or underworld was divided according to the Qabbalah. This corresponds to the theosophical concept of the seven manifested globes of the planetary chain. In the Qabbalah, each world or zone belonging to the lowest of the septenary is inhabited by races of beings, called collectively shells (qeliploth — often wrongly rendered demons), under the dominion of Sama'el, Prince of Darkness or Angel of Death. The real meaning of these shells is that these races of beings living in the lower globes of each septenary are beings with bodies, imbodyed entities as contrasted with purely ethereal spirits; and these bodies are looked upon as shells. In another sense the seven worlds or globes refer to the seven sacred planets of antiquity.

Shechinah (Hebrew) *Shēkhīnāh* [from the verbal root *shākhan* to settle down or around, dwell] An emanation, a dwelling; referring both to the primordial emanation and to the dwelling or kingdom containing the Sephiroth, collectively considered the cosmic Tree of Life. In Jewish religious and mystical thought, the cloud of glory, or veil, surrounding a spiritual or divine manifestation. In the Qabbalah, used in a cosmic sense — termed the superior Shechinah — as the first splendor, or divine or spiritual substance, emanating from 'eyn soph and enveloping it as a veil, from which proceeded the hierarchy of the Sephiroth. This thought corresponds to the Hindu parabrahman and its splendorous veil mulaprakriti, from which proceed the hierarchies of the manifested universe. The inferior Shechinah is associated with the tenth or lowest Sephirah, Malchuth (kingdom or dwelling), which is equivalent to the material or physical universe, as the vehicle or carrier of all the preceding hierarchies of Sephiroth.

Whatever the stage of manifestation, there may always be said to be a radiance or splendor enveloping that stage; just as in ancient Hindu philosophy, pradhana is considered the veil or emanation of Brahman. The Jews also spoke of the cloud of glory enveloping the tabernacle, and its sanctum sanctorum, the holy of holies. Carrying the idea still farther, we might speak of the Shechinah which envelops the human being, his vital aura, which is the carrier of all his higher principles.

Shechinah is equivalent to Devamatri or Aditi — mother of the gods; to Vach; the music of the spheres of Pythagoras; and the Holy Ghost in the Christian Trinity. Shechinah is always regarded as feminine in the Qabbalah, “And so it is considered in the *exoteric* Puranas, for Shekinah is no more than *Sakti* — the female double or lining of any god, in such case. And so it was with the early Christians whose Holy Spirit, was feminine, as Sophia was with the Gnostics. But in the

transcendental Chaldean Kabala or 'Book of Numbers,' 'Shekinah' is sexless, and the purest abstraction, a State, like Nirvana, not subject or object or anything except an absolute Presence.

"Thus it is only in the anthromorphised systems (such as the Kabala has now greatly become) that Shekinah-Sakti is feminine. As such she becomes the *Duad* of Pythagoras, the two straight lines of the symbol that can never meet, which therefore form no geometrical figure and are the symbol of matter. Out of the Duad, when united in one basic line of the triangle on the lower plane (the upper Triangle of the Sephirothal Tree), emerge the Elohim, or Deity in *Cosmic Nature*, with the true Kabalists, the *lowest* designation, translated in the Bible 'God'" (SD 1:618-9).

Shedim (Hebrew) *Shēdīm* [plural of *shēd*] used in ancient Hebrew writings and in the Qabbalah with a general significance of nature spirits or elementals of various kinds, and therefore corresponding to the Greek daimonia, the Persian devs, and the Egyptian afrites. They were considered to be evil spirits of nature or demons of whom Lilith was popularly said to be the mother. "The Canaanites, we are told, worshipped these evil powers as deities . . . [and] shed the blood of their sons and daughters to them" (WWW in TG 298).

Shells Derivative from qelipboth in the Hebrew Qabbalah, having the sense of empty form. They are the astral remains of the lower parts of man disintegrating in kama-loka after the death of the physical body and the separation of the higher principles. These shells persist for a short time in the case of the good, and for a long time in the case of the evil; and may be used as vehicles by various evil entities, or endowed with a temporary vitality by the necromancy of the seance room, which enables them in the physical phenomena of the seance room, whereby the ignorant very often pathetically mistake them for the spirits of the dead when they are in fact but astral phantoms.

Shem (Hebrew) *Shēm* Name; eldest of the three sons of Noah (Genesis 10), reputed founder of the Shemitic race. The Hebrew legend of Noah and his sons populating the globe after the deluge can refer to any root-race or large subordinate subrace, Noah and his family standing for the seeds of life carried over from one global or minor catastrophe to the beginning of the new racial period; hence Noah stands for the collective humanity of the beginning of the fifth root-race, although the legend of Noah and his ark can apply equally well to larger things, such as the beginning of the pralaya of a globe or of a planetary chain.

Shemal (Hebrew) *Śēm'ol* North, the northern quarter, the left-hand, or the left quarter, the positions of space being taken from the observer who is supposed to be facing the rising sun (east). The spirit or regent of the earth, the shadow side of spirit, the darkness of matter.

"*Schemal*, the *alter ego* and the Sabean type of Samael, meant, in his philosophical and esoteric aspect, the 'year' in its astrological evil aspect, its twelve months or wings of unavoidable evils, in nature; and in esoteric theogony . . . both Schemal and Samael represented a particular divinity. With the Kabalists they are 'the Spirit of the Earth,' the personal god that governs it, identical *de*

facto with Jehovah. For the Talmudists admit themselves that Samael is a god-name of one of the seven Elohim. The Kabbalists, moreover, show the two, Schemal and Samael, as a symbolical form of Saturn, Chronos, the twelve wings standing for the 12 months, and the symbol in its collectivity representing *a racial cycle*. Jehovah and Saturn are also glyphically identical” (SD 1:417).

Shem Ham-mephorash (Hebrew) *Shēm Ham-měfōrāsh* [from *shēm* name + *ham* def article + *měfōrāsh* from the verbal root *pārash* to separate, declare, specify] The separated or distinguished name; a Qabbalistic term for the Great Name, said by some to have been pronounced by the High Priest in the Holy of Holies. “The mirific name derived from the substance of deity and showing its self-existent essence. Jesus was accused by the Jews of having stolen this name from the Temple by magic arts, and of using it in the production of his miracles” (TG 297).

This name is a mystical term implying — but without giving it — that among all the various names that might be given to the universal spiritual hierarch there is always one which is the highest and closest in descriptive power to the divine essence. From this idea flowed the logical deduction that if one could understand the divine essence sufficiently to realize what this best name for it might be, such knowledge *de facto* signified that the knower thereafter could wield a mighty spiritual power — because to understand the divine essence would signify that the understander already was an adept of the highest degree. All countries and peoples have believed that if one could give the exact and proper name to spiritual things, one could control them — a thought which has real occultism back of it, but which nevertheless has to be properly understood.

Shemsu-Heru or **Heru-Shemsu** (Egyptian) *Shemsu-Ĥeru* or *Ĥeru-Shemsu*. Followers of Horus, commonly called the children of Horus; four minor deities represented as the helpers of Horus (Heru), especially in regard to the embalming of the deceased. Hapi, dog-headed, and Tuamutef, jackal-headed, had charge of the two arms of the deceased; Mestha or Amset, a bearded man, and Qebhsennuf, hawk-headed, had charge of the two legs. These four deities also had surveillance of the four cardinal points: north, east, south, and west respectively.

Followers of Horus also applied to those early invaders and conquerors of Egypt who built up the great dynastic Egyptian civilization; over a number of centuries there was an inroad or influx from the Far East, possibly Southern India and Ceylon, or possibly even from the last remnants of the ancient Lanka of the Hindus, of immigrants who mingled with the then natives of Egypt — Atlanto-Aryans from Poseidonis — thus forming what became known in later days as the Egyptian people or race.

Shen (Chinese) In Taoism, when employed in relation to yang, it refers to the celestial or spiritual, hence the gods; in relation to man it is generally translated soul. Yang is defined as a supreme, universal shen — living, creating, dividing itself into an infinite number of shen — depositing the shen in the various beings of the worlds. “The shen are omnipresent; it is they which perform the unfathomable work of the Yang and the Yin. These two vital breaths (of the universe) create the

beings; their peregrinating hwun (or shen) are the causes of the changes (in nature), from which, accordingly, we may learn the actions and manners of the kwei and the shen” (I Ching, Hi-ts’ze 1).

With regard to man, the *Li Chi* states that “Man is a product of the beneficial operation of the Yang and the Yin, and the union of a kwei with a shen; he consists of the finest breath which the five elements contain” (Li yun 3). *See also* KWEI

Sheol (Hebrew) *Shě’ōl* or *Shě’ol* The region of the shadow of the dead, in the Old Testament generally translated hell or the pit. It was considered as the common abode both of the righteous and the unrighteous, where life was continued as a shadowy, wavering, or dim reflection of earth life. Those in Sheol have no part in earth life nor is there any knowledge or productive work there (Ecc 9).

Sheol has all the attributes of subterranean gloom and wan bloodless activity that characterize the Hades or Orcus of the Greeks and Latins. The dying, without exception, are all spoken of as going down to Sheol, which in most of its aspects corresponds to the modern theosophical astral world or kama-loka.

The main difference between Sheol and Gehenna is that the former may in certain conditions lead to the latter as an extreme; for whereas Sheol is a region of inactivity and wan stillness, Gehenna is both the region and the state of active dissolution of the compounded kama-rupas bereft of their higher principles.

She’ol-’ob (Hebrew) *Shě’ol ’ōb* [from *shě’ōl* the Hebrew Hades + *’ōb* a necromancer] One who raises the phantoms or kama-rupic shades of the dead from Sheol, a necromancer; intercourse or trafficking with the various kinds of inhabitants of the lower realms of the astral light or kama-loka.

Shigatse (Tibetan) *gzhis ka rtse* (Shi-ka-tse) The second largest city in Tibet, situated at the confluence of the Tsang-po River and one of its tributaries. Near the city stands the monastery of Tashi Lhunpo. However, references in *The Mahatma Letters* (where it is spelled Tzigadze or Tchigadze) do not seem to refer to this exoteric city.

Shi’ites [from Arab *shi’a* sectary] Moslems are divided into two main groups: the Sunnites, the most numerous, who accept the orthodox tradition (sunna), basing their beliefs on the words of the Koran); and the Shi’ites who uphold ‘Ali as the representative of Allah, and reject the pronouncements of the other caliphs. The shi’ites are located principally in Iran, although they are represented throughout the Moslem world. They incline towards interpreting the Koran, rather than holding to the letter of the law as do the Sunnites.

Shila. *See* SILA

Shin-sieu (Chinese) A sage and seer; the sixth Buddhist Patriarch of North China who taught the

esoteric doctrine of bodhidharma, one of whose sayings appears in *The Voice of the Silence*: “For mind is like a mirror; it gathers dust while it reflects. It needs the gentle breezes of Soul Wisdom to brush away the dust of our illusions. Seek, O Beginner, to blend thy Mind and Soul”; “The human mind is like a mirror which attracts and reflects every atom of dust, and has to be, like that mirror, watched over and dusted every day” (VS 26, 83).

Shinto (Japanese) [from *shin* god + *to, tao* way, path] The way of the gods; applied to the popular religion in Japan prior to Buddhism. Japan was considered to be the land of the gods — a conception current among nearly all ancient peoples, each one of which looked upon its own land as the land of the original divine incarnations — and the ruler (mikado) as the direct descendant and actual representative of the sun goddess (Tensho Daijin). Spiritual agencies were attributed to all the processes of nature, and a reverential feeling inculcated toward the dead. Hero worship took the direction in the prevalent belief that noble-minded warriors should be exalted nearly to the position of demigods.

The shrines or temples were of simple construction, without adornment or statuary, the outstanding characteristic being the torii or gateway always present before a temple. The gateway was erected as a perch for the fowls offered to the deities, but the tori came to be regarded as an offering to the deities themselves, hence as many as desired might be erected in the vicinity of a temple.

There is much that is distinctly elevating and beautiful in the ancient Shinto religion, especially the emphasis laid upon spiritual influences permeating the universe, so that everything that was, is, or will be, and everything that happens, is in the last analysis the production of spiritual influences. It was a religion notably without the ceremonial trappings of many other religious systems, for simplicity in all things was a particular teaching of Shinto itself.

Shittim (Hebrew) *Shittîm* The wood from the shittah plant, believed to be the *Acacia seyal*, a shrub held in high esteem by the Jews, as its wood was by legend stated as used for the building of the ark of Noah, also for the altar in the temple. The horns placed near the altar, which served as the place of sanctuary or refuge when grasped by a fugitive, were also stated to be made of shittim wood.

Shiva. See SIVA

Shloma. See SOLOMON

Shoo King. See SHU-KING

Showbread, Shewbread The bread placed by the ancient Jews every Sabbath before Jehovah on the table made of shittim wood, which was set in the holy place on the north side of the altar of incense. The bread itself was made of fine flour and baked into twelve cakes, as commanded by Moses: “two tenth deals shall be in one cake. And thou shalt set them in two rows, six on a row,

upon the pure table before the Lord. And thou shalt put pure frankincense upon each row” (Lev 24:4-8). The bread remained on the golden table throughout the week, and was then removed to the sanctuary and eaten by the priests alone.

Philo Judaeus states that Moses instituted the showbread with twelve loaves in order to represent the twelve tribes of Israel; and that he divided the nation into twelve tribes in order to represent the twelve signs of the zodiac.

Shu (Egyptian) *Shu* [from *shu* dry, parched] The Egyptian god of light, popularly associated with heat and dryness, and the ethereal spaces existing between the earth and the vault of the sky; often depicted as holding up the sky with his two hands, one at the place of sunrise, the other of sunset. The phonetic value of shu is the feather, which is the symbol of this deity, and appears above his headdress. Shu is manifest during the day in the beams of the sun, and at night in the beams of the moon; the solar disk is his home. He is likewise one of the chief deities of the underworld, the gate of the pillars of Shu (tchesert) marking the entrance to this region, the pillars representing the four cardinal points said to hold up the sky. Although the twin brother of Tefnut — often alluded to as the twin lion-deities — Shu is more often represented with Seb and Nut (deities of cosmic space and of its garment of ethereal substance) in his position of holding up the sky, because in theosophical terminology cosmic light as well as cosmic intelligence (the Logos) is born from Brahman and pradhana, or parabrahman and mulaprakriti.

Shu on the smaller scale is solar energy (SD 1:360).

Shudala-madan (Tamil) The class of elementals which haunt the vicinity of graveyards, and also hover about scenes of crime and murder and places of execution. Popular folklore describes them as half-fire and half-water dwellers, as Siva granted them the power of assuming any shape desired; also the power of transforming one thing into another, so that he aids the juggler in his feats by causing people to see that which they really do not see.

Shu-king (Chinese) Also Shoo King, Shu Ching. Popularly known as the Canon, or Book of History; one of the Four Shu Books compiled by Confucius from documents which were ancient in his day. Blavatsky refers to this work as “China’s primitive Bible” compiled from the Book of Dzyan (SD 1:xliv), remarking that it is full of reminiscences about the fourth root-race and the giants of bygone times (SD 2:280-1).

Shula-madan (Tamil) Furnace demon; the elemental associated with the earth, described in popular folklore as living underground and of mischievous nature: helpful if placated, but causing trouble if annoyed. He is said to be skilled in pottery and baking, and said to help the juggler in his feat of causing a mango tree to sprout and grow from a seed in a quarter of an hour and ripen its fruit.

Shule Madan. See SHULA-MADAN

Sibac or **Zibak** (Quiche) The pith of a little rush or reed, which the ancient Quiches used for making mats. In the *Popol Vuh*, woman is described as being made out of the sibac; however, “Sibac means ‘egg’ in the mystery language of the *Artufas* (or Initiation caves)” (SD 2:181n).

Sibika or **Sivika** (Sanskrit) *Śibikā*, *Śivikā* The weapon of Kuvera, the Vedic god of wealth equivalent to the Greek Pluto; made out of the parts of the divine splendor of Vishnu, a sun god, and filed off by Visvakarman, the architect of the gods.

Sibyl [from Greek *sibylla* probably from *sios bylla* Doric for *dios boule* she that tells the will of Zeus] Often confused with the Greek Pythia, Sibyls are reputed to have been possessed of occult knowledge, the power of prophecy and divination, and the inner sight. Practically nothing is known about their occult life, though in many cases they seem to have been initiates. Greek and Latin writers name ten, of whom the most famous is the Sibyl of the Cave of Cumae whom Aeneas consulted just before going down to Avernus (Aen 4:10) — a veiled record of one stage in the initiation journey. Others were the Delphian, Babylonian, Libyan, Cimmerian, Erythraean, Samian, Hellespontine, Phrygian, and Tiburtine Sibyls.

The Emperor Augustus consulted in the time of stress not only the Sibylline Books, but also a certain sibyl who dwelt in seclusion near Rome; as Numa, the second of the so-called legendary kings, consulted his consort Egeria, a wise woman who dwelt in seclusion in a forest, on all affairs of state. She is no more legendary than he, and it is upon the institutions he founded and the calendar he placed in order that the religious and civic institutions and the calendar of later Rome were built.

Such wise women or initiates are known in the Orient and also among ancient Germanic tribes with their amazing priestesses, without whose counsel and consent war could not be declared, who received deputations, at times dictated alliances and treaties, and were consulted as oracles in matters of state and religion both — Albruna, Ganna, Aurima, Valeda, and others. Such oracular or prophetic power is limited to no people and to no time, or to either sex, for what the sibyls and their Sibylline Oracles were in Greece and Rome the prophets and oracular priests and priestesses were to other countries. As far as Greece is concerned the Pythia or Prophetess of the Oracle of Apollo at Delphi was a sibyl, but of a somewhat different type, her functions being officially recognized by the Greek States and her responses received in accordance with traditional methods of interpretation. *See also* SIBYLLINE BOOKS; ORACLES

Sibylline Books The story of the origin of the Sibylline Books of the Romans tells how a mysterious old woman appeared to Tarquinius Superbus, the last of Rome’s seven kings, and offered him nine prophetic books at a certain price; how, when he refused to buy them, she destroyed three and offered him the remaining six at the same price; how he again refused and was offered the last three at the same price; and how he then bought these three, and entrusted them to a college of guardians. From that time on they were consulted by the senate on critical occasions until they

were destroyed in the burning of the temple of Jupiter; but they were replaced by other sibylline books collected at different times and from various places.

While the Romans produced critics and skeptics who attempted to throw doubt on the nature and reliability of these Sibylline Oracles, the greatest men of the Roman State held them in reverence, and they were most carefully guarded through the centuries of Roman history as being among the most important and sacred treasures of the royal, republican, and imperial archives. The Sibylline Oracles or Books were consulted on every occasion of important crisis which confronted the Roman State, and it would appear from existing records that when so consulted, the results following always accrued to the benefit and prosperity of the government and people.

Sibylline Oracles Early Christian ecclesiastical literature written in imitation of the archaic Sibylline Books, containing apparently no small amount of material derived from pagan sources. They mostly belong, as far as is now known, to the 2nd and 3rd centuries and are strongly colored by Jewish and Christian ideas; what is called Book IV of these is a virtual attack on the integrity of the archaic heathen sibyls, the records of which the writers of the Christian Sibylline Oracles nevertheless so closely imitated in many respects.

Siddhanta (Sanskrit) *Siddhānta* [from *siddha* accomplished from the verbal root *sidh* to accomplish, succeed + *anta* end, completion] An established or canonical textbook or scientific treatise on astronomy and mathematics. One of the best known and most ancient in India is the *Surya-Siddhanta*, whose age dates even from Atlantean times. The *Surya-Siddhanta* itself claims to have been written down under solar instruction by the Atlantean astronomer and mathematician Asuramaya, so that it is contemporaneous with the first appearance of the present fifth root-race.

Siddhapura (Sanskrit) *Siddhapura* [from *siddha* attained from the verbal root *sidh* to attain, perfect + *pura* city] City of the blest, or the White Island; in Hindu mythology a sacred city situated in the extreme north. “According to Tibetan tradition the White Island is the only locality which escapes the general fate of other dwipas and can be destroyed by neither fire nor water, for — it is the ‘eternal land’ ” (SD 2:408n). All the avatars of Vishnu are said to come from this sacred place.

Siddhapura is elsewhere stated in ancient Hindu writings to be located in the lower or most southern regions of our earth. Thus Siddhapura is a name for either one of the poles of the earth, otherwise called Meru. *See also* SVETA-DVIPA

Siddhartha (Sanskrit) *Siddhārtha* [from *siddha* attained from the verbal root *sidh* to accomplish, attain, succeed + *artha* object, aim] One who has attained or accomplished his object, one who has fulfilled the object of his coming on earth; a name given to Gautama Buddha. *See also* GAUTAMA

Siddhas (Sanskrit) *Siddha*-s [from the verbal root *sidh* to attain] Perfected one, one who has attained relative perfection in this manvantara through self-devised efforts lasting through many imbodiments towards that end. A buddha is in this sense at times called a siddha. Generally, a

hierarchy of dhyani-chohans who, according to Hindu mythology, inhabit the space between the earth and heaven (bhuvar-loka); the *Vishnu-Purana* states that there are 88,000 of them occupying the regions of the sky north of the sun and south of the seven rishis (the Great Bear). In later mythology they are confused with or take the place of the sadhyas, but in the Vedas the siddhas are those who are possessed from birth of superhuman powers — the eight siddhis — as also of knowledge and indifference to the world (Svetasvatara-Upanishad).

“According to the Occult teachings, however, Siddhas are the *Nirmanakayas* or the ‘spirits’ (in the sense of an individual, or *conscious* spirit) of great sages from spheres on a higher plane than our own, who voluntarily incarnate in mortal bodies in order to help the human race in its upward progress. Hence their innate knowledge, wisdom and powers” (SD 2:636n). In this sense siddhas may be applied to the highest class of manasaputras who incarnated in the first but best prepared human protoplasts in the early part of the third root-race in order to bring mind to nascent mankind.

Also applied to any inspired sage, prophet, or seer (e.g., Vyasa, Kapila), especially to one who has attained a state of beatitude; or to any great adept who has acquired the siddhis.

Siddhasana (Sanskrit) *Siddhāsana* [from *siddha* perfected + *āsana* seat] The sitting position for attaining siddhis (spiritual powers) in hatha yoga theory; a sedent posture in religious meditation, where the left heel is placed under the body and the right heel in front of it, the sight is fixed between the eyebrows, and the mind is directed on the syllable Om.

Siddhasena (Sanskrit) *Siddhasena* [from *siddha* perfected + *senā* lord, leader] The leader of the siddhas. As the siddhas are the highly evolved sages or saints who have become semi-divine and virtually a class of dhyani-chohans, it means the leader of the celestial beings of both heaven and earth who are endowed with occult yogi powers.

Also one of the many titles of Karttikeya.

Siddhi (Sanskrit) *Siddhi* [from the verbal root *sidh* to be fulfilled, perfected, attain an object] Perfect attainment, full accomplishment; philosophically, occult power or secret mystical power, “attributes of perfection”; phenomenal powers acquired through holiness by Yogis” (TG 298). Equivalent to the Pali iddhi.

There are two classes of siddhis: those pertaining to the lower psychic and mental energies, and those pertaining to the intellectual, spiritual, and divine powers — both possessed by the spiritual initiate. These siddhis should never be used for purposes of self, but always for the benefit of mankind and all creatures.

Siddim. See SHEDIM

Sidereale Force Used by Paracelsus to denote an emanation from the stars or stellar regions, which

helps to build and feed one of the inner human principles. He recognized the existence of higher forms of matter, subtler imbediments of the monad, and the intimate relations between the universe and man its offspring. There are a number of such sidereal forces, each one of which has its respective influence upon the different principles of the human constitution.

Words such as sidereal and astral, are used somewhat vaguely in theosophical literature to designate invisible manifested planes of various hierarchical grades both cosmic and human.

Sidereal Year The time taken by the center of the sun's disc, departing eastward from the ecliptic meridian of a given star, to return to the same; being at present 365.2564 days. As a Hindu value gives 365.25868 and the *Surya-Siddhanta* gives 365.2587565 (SD 1:665), does this indicate a slow slackening of the earth's speed of rotation, thus lengthening the day?

Also used in *The Secret Doctrine* to mean the precessional cycle. *See also* EQUINOX

Si-dzang. *See* HSI-TSANG

Sif (Icelandic) [plural *sifjar* affinity, kinship] Thor's wife in Norse mythology; the singular form occurs only in the proper name of the goddess whose golden hair is the harvest, pride and joy of all the gods. Sif is guardian of the sanctity of marriage and the ancient law which forbade the union of any couple more closely related than through the fifth generation.

One tale relates how Sif's hair was stolen by Loki who, with the aid of the dwarf Dvalin, was able to restore it.

Sigalions [from Greek *sigao* to be silent] Images of Harpocrates, the deity borrowed by the Greeks from one aspect of the Egyptian Horus, said to have been born with his finger on his lips and so represented in his statues. He thus becomes the emblem of both neophyte and initiate who seals in silence of both mind and voice what has been learned in the initiation crypts.

Sige (Greek) Silence; one of the fundamental hypostases in early Gnosticism. The gnosis was said to rest on a mystic square whose angles were sige (silence), bythos (the deep), nous (understanding), and aletheia (truth). In the Valentinian theogony, bythos and sige are the primordial binary. *See also* SILENCE

Sighra or **Sighraga** (Sanskrit) *Śighra*, *Śighraga* Swiftly moving; the father of Maru, "who is still living through the power of Yoga, and will manifest himself in the beginning of the *Krita* age in order to re-establish the *Kshatriyas* in the nineteenth *Yuga*' say the Puranic prophecies"; Moru (Morya, Maurya) standing for "the dynasty of Buddhist sovereigns of Pataliputra which began with the great King Chandragupta, the grandsire of King Asoka. It is the first Buddhist Dynasty" (TG 299).

Sight Among the elements, correlated with fire or light. Like the other senses it has its spiritual originant which expresses itself through its several forms, corresponding to the different planes.

The organ of spiritual vision in the human body is the third eye. Some of the Atlantean magicians and initiates had this inner sight, which was even in their material race highly developed, so that their vision could pass any distance and penetrate opaque bodies.

In the order of evolution of the physical senses and their organs, sight comes third, and was evolved as a physical sense towards the end of the third root-race, though existing in rudimentary form in the preceding root-race. The third eye was once external and an organ of physical vision, but retreated inwards when it was replaced by the two eyes as at present functioning; the third eye has now become the pineal gland.

Sigurd (Icelandic) [from *sig* victory] The hero of a long, involved tale in the Norse Edda, better known as the Wagnerian Siegfried. As a member of the Niflungen (Nibelungen) clan, he represents a very early humanity on this planet earth, before the globe and its components became physical as they are today.

Sigurd was persuaded by his teacher, the magician Regin, to slay the dragon Fáfnir who lay guarding his treasure on the heath. Sigurd did so with the magical sword to which he had fallen heir and, having tasted the dragon's blood, became able to understand the language of the birds.

In many mythological stories the serpent or dragon symbolizes an initiate teacher, while understanding the voices of nature represent true wisdom. Fafnir and his brother Regin who coveted his treasure, apparently stand for the two opposing poles of hidden wisdom, while Sigurd in his innocence represents a race of humanity which was taught by the wise ones but had yet to acquire by experience the discernment to choose its proper course for the furtherance of its evolution.

Sila (Sanskrit) *Śīla* [from the verbal root *śīl* to serve, practice] Moral fortitude, ethical steadiness, one of the Buddhist paramitas. Described as “the key of Harmony in word and act, the key that counterbalances the cause and the effect, and leaves no further room for Karmic action” (VS 47). The *Mahayana Sraddhotpada Sastra* says of practicing sila: “Lay disciples, having families, should abstain from killing, stealing, adultery, lying, duplicity, slander, frivolous talk, covetousness, malice, currying favor, and false doctrines. Unmarried disciples should, in order to avoid hindrances, retire from the turmoil of worldly life and, abiding in solitude, should practise those ways which lead to quietness and moderation and contentment. . . . They should endeavor by their conduct to avoid all disapproval and blame, and by their example incite others to forsake evil and practise the good.” (FSO p. 45)

Silence Like darkness and space, used in attempts to express the ineffable. To our minds they often seem negative qualities, yet if we ordinarily call silence the absence of sound, it is also possible to call sound the absence of silence. A maxim bids us learn the fullness of the seeming void, the voidness of the seeming full; and, applying this, we may name silence as a mighty positive power, not a mere emptiness. Silence is that in which sound becomes manifest; it is the container

of sound, the *privation* of sound. It means the rest of all the senses, both external and internal. To the personal man such silence may seem an unutterable horror, or a ring-pass-not; but it must be faced if he is to win to the sublimities beyond. All these words are used mystically: thus, what is a silence to our ears, and on higher planes a silence to our soul, may in either instance be celestial harmonies which our grosser nature cannot take in.

The early Gnostics mystically said that the gnosis rests upon a square whose corners are silence (*sige*), depth (*bythos*), divine mind (*nous*), and truth (*aletheia*). In the system of Simon Magus, the one root from which the aeons proceed is called silence; in Valentinus' system, silence and sempiternal depth proceed from the one root, depth. The Marcosians viewed God under four aspects: the ineffable, the silence, the father, the truth.

The Stanzas of Dzyan (2:2) speak of a time when there was neither silence nor sound; for these constitute a duality, and before this all was cosmic oneness.

Silent Watcher, In theosophy, highly advanced spiritual entities, each the summit of a spiritual-psychological hierarchy composed of beings working under their direct inspiration and guidance. Every hierarchy, high or low, has a Silent Watcher as its own supreme head. "There are human 'Silent Watchers,' and there is a 'Silent Watcher' for every globe of our Planetary Chain. There is likewise a Silent Watcher of the solar system of vastly loftier state or stage . . ." He is "one who through evolution having practically gained omniscience or perfect knowledge of all that he can learn in any one sphere of the kosmos, instead of pursuing his evolutionary path forwards to still higher realms, remains in order to help the multitudes and hosts of less progressed entities trailing behind him. There he remains at his self-imposed task, waiting and watching and helping and inspiring, and so far as we humans are concerned, in the utter silences of spiritual compassion. . . . He can learn nothing more from the particular sphere of life through which he has now passed, and the secrets of which he knows by heart. For the time being and for ages he has renounced all individual evolution for himself out of pure pity and high compassion for those beneath him" (OG 156). *See also* WATCHER

Silenus (Latin) **Seilenos** (Greek) The more elderly satyrs were called *sileni*, and their chief was Silenus, represented as a drunken pot-bellied old man with a wineskin, depicted as riding on an ass and the constant companion of Dionysos or Bacchus; sometimes also associated with Pan. These nature gods had a higher and a lower aspect and are most familiar to us in the lower, because of the common reference to them in popular mythology. Hence we find Silenus with all the marks of roistering jollity, but gifted, like Pan and the other satyrs, with the power of prophecy.

Esoterically, Silenus is represented as the chief of these lower productive powers of nature, usually connected with the fertilizing effect of water, which connects them immediately with the generative powers of the moon. Bacchus or Dionysos, on the other hand, in his higher aspect is representative of the spiritual fructifying and stimulating powers of the solar energies.

Silik-muludag (Akkad) The god among all the gods, offspring of the abstract divine wisdom — the great unseen divine, represented by the Akkadians as dwelling in the shoreless sea of space — cosmic spirit. In a more particular sense, referred to as the merciful guardian of humanity.

Siloam, The Sleep of [from Hebrew the verbal root *shalam* wholeness, completion, perfectness, peace, health] Used by one of the highest schools of initiates in Asia Minor, Syria, and upper Egypt for one of the processes of initiation. While the candidate was plunged in deep sleep, his spiritual ego was enabled to confabulate with the gods, descend into Hades, or perform works of divinely spiritual character. When the neophyte begins the holy sleep of Siloam, he leaves the body, and his consciousness enters into the river of Lethe, the pools of quiet, where the complete work or great work of inner understanding takes place. After this he is rendered whole or perfect, is completed and is safe, and is the master of the peace and quiet of inner unity — masterhood. The same holy event has been known in all times and among all peoples under various names.

Silurian Period. See GEOLOGICAL ERAS

Silver In Greek and Roman mythology, a racial or age division in the Hesiodic cycle of gold, silver, bronze, and iron, corresponding in the Hindu yugas to the treta yuga. This metal was regarded as standing next to gold in importance. The quicksilver of Paracelsus was not the mercury of familiar knowledge alone, but also the living spirit of silver. Silver in astrological symbolism corresponds to the moon.

Simha (Sanskrit) *Siṃha* Lion; the fifth zodiacal sign, Leo, said by some mystics to represent the jivatman or spiritual ego, corresponding to the immanent christos.

Simorgh (Persian) **Meregho-saena** (Avestan) **Sen-murv, Sene-muruk** (Pahlavi) The gigantic bird of fable likened by some to the hippogriff or griffin; half phoenix, half lion. In the ancient Zoroastrian scriptures of the Avesta, it is described as a gigantic bird whose resting place is the tree Jad-besh (opposed to harm of all seeds); when he rises aloft a thousand twigs shoot forth from that tree; when he alights, he will break off the thousand twigs and shed their seed. The bird Chanmrosh forever sits in that vicinity, and collects the seed which drops from the tree and conveys it where Tishtar seizes the water, so that it may rain on the world.

In later mythology, as in the epic of Firdusi, the simorgh is depicted as a gigantic bird who finds the infant Zal on the mountain Alberz [Berj], carries him to his nest and rears him “teaching him the language of the country and cultivating his understanding.” Simorgh-anke (simurgh-’anka), the steed of Taimuraz or Tahmurath equivalent to the phoenix or roc, was “a marvelous bird, in truth, intelligent, a polyglot, and even very religious. . . . It complains of its old age, for it is born cycles and cycles before the days of Adam (also Kaimurath). It has witnessed the revolutions of long centuries. It has seen the birth and the close of twelve cycles of 7,000 years each, which multiplied esoterically will give us again 840,000 years” (SD 2:397).

Behind the tales that have clustered around this wonderful bird, there was a deep symbology: “Simorgh was the guardian of the ancient Persian Mysteries. It is expected to reappear at the end of the cycle as a gigantic bird-lion. Esoterically, it stands as the symbol of the Manvantaric cycle” (TG 299). Simorgh symbolizes the ancient knowledge and the creative life force. In later Persian literature, it represents the perfect man who has exalted himself to the highest degree of freedom.

Simorgh-anke. See SIMORGH

Simulacra [plural of Latin *simulacrum* image, likeness, phantom] The kama-rupic images left in the astral light by the reincarnating ego after death, which resemble the former living physical body in appearance but in fact are disintegrating shells only — kama-rupas which all too often are the “spirits” of the departed of the seance room.

Sin Evildoing, moral obliquity expressed in thought and act; in its relation to human evolution, it applies especially to the misuse of human creative powers which occurred after the fall into material existence. The procreative act, for example, in itself is not sinful, for this is but nature’s arrangement for the continuing of the human strain, but the abuse of this power, especially for black magical purposes. This truth has been perverted by Christian theology, which regards the procreative act as essentially sinful and permissible only as a concession to the “original sin” stamped upon us by our first parents in the Garden of Eden, and only to be purged by the Atonement.

The fall of man is symbolized in the zodiacal signs of Virgo-Scorpio, and it is mankind who has become the serpent of Genesis and thus causes daily and hourly the fall and sin of the celestial Virgin, who becomes the mother of gods and devils at the same time. But karma in one of its senses would be a better word for this: “Karma . . . means, as a synonym of sin, the performance of some action for the attainment of an object of *worldly*, hence *selfish*, desire, which cannot fail to be hurtful to somebody else” (SD 2:302n).

Sin (Chaldean) The moon; also the Babylonian and Assyrian moon deity called Enzu (the lord of wisdom) and Nannar (the illuminer). The wisdom is that of the lower manas, the reflection of the higher, and this wisdom can all too often become the dark wisdom of evildoing and sorcery. Temples to Sin were erected in all the principal cities of the two empires, named E-gish-shir-gal (house of the great light). The worship of the moon deity predominated at Ur and Harran, and he was portrayed as an old man with flowing beard, having the crescent as his symbol and 30 as his number. Sin was known as father of the gods, creator of all things; and some of the ancient nations held that the moon was parent of the sun, and that the moon in its turn was once eons ago a sun itself.

The name is likewise found in the Hebrew Sinay, commonly written Sinai — a moon-mountain, referring indirectly to the fact that all such places in ancient times which were named mountain of the moon or a similar title, were then centers of occult training and initiation, whether good or

bad.

Referring to the forming of mankind, the Stanzas of Dzyan say: “Who perfects the last body? Fish, Sin, and Soma.” Soma was in Hindustan also a name of the moon, and fish refers to a similar fact — fishes often being taken as symbols of the productive power of the lunar influence because of their great fecundity. Fish, Sin, and the moon conjointly are the three symbols of the immortal Being (SD 1:263). As these symbols, among other things, stand for Pisces, karma, and the mother of terrestrial life, it would seem that the pilgrimage of the human monad through the halls of experience, and the completing of its evolution thereby, is indicated.

Sin A letter of the Hebrew alphabet.

Sinai (Hebrew) *Sīnai* Often Har Sinai (Mount Sinai). A holy mountain of the Jews, associated particularly with Moses and Jehovah (Ex 19). All races have had their holy mountains, “some. Himalayan Peaks, others, Parnassus, and Sinai. They were all places of initiation and the abodes of the *chiefs* of the communities of ancient and even modern adepts” (SD 2:494). The mountain has been associated with the moon, and its name links it with the Phoenician lunar deity Sin. “Mount Sinai, the Nissi of *Exodus* (xvii., 15), the birthplace of almost all the solar gods of antiquity, such as Dionysus, born at Nissa or Nysa, Zeus of Nysa, Bacchus and Osiris . . . Some ancient people believed the Sun to be the progeny of the Moon, who was herself a Sun once upon a time. *Sin-ai* is the ‘Moon Mountain,’ hence the connexion” (TG 299). As to the fire which Moses saw upon the mountain while the multitude saw it enwrapped in clouds and smoke, fire represented the “Wisdom of the true gnosis or the *real spiritual* enlightenment. . . . For Moses, the *fire* on Mount Sinai, and the spiritual wisdom imparted; for the multitudes of the ‘people’ below, for the profane, Mount Sinai in (*through*) smoke, *i.e.*, the exoteric husks of orthodox or *sectarian ritualism*” (SD 2:566).

Sing Bongha (Kolarian) Applied to the spirit of the sun by Kolarian tribes.

Singular Point Used in mathematics in contradistinction to an ordinary point or Euclid’s point, without length, breadth, or thickness. The singular point is made by the intersection of two lines, at the apex of a cone, where a decreasing magnitude reaches zero, the node of a vibration, or when something passes from one state to another. Sir James Jeans, in *Astronomy and Cosmogony*, says: “The type of conjecture which presents itself, somewhat insistently, is that the centers of the nebulae are of the nature of ‘singular points,’ at which matter is poured into our universe from some other, and entirely extraneous, spatial dimension, so that, to a denizen of our universe, they appear as points at which matter is being continually created.” This suggests that he avoids the idea that matter can be created, and resorts to a fourth-dimensional theory to explain its mysterious appearance. In theosophical philosophy, physical matter is formed or deposited from ultraphysical matter, as energy-substance passing from one plane to another, so there is no need to resort to a fourth-dimensional theory.

Sinivali (Sanskrit) *Sinivālī* The first day of the new moon when it rises with a scarcely visible

crescent, a day greatly connected with occult practices in India. Also a goddess said to preside over fecundity and easy birth, which relates her to lunar powers and to the festival itself known by this name which celebrates the first appearance of the new moon. She is sometimes called the consort of Vishnu. The Greeks, Latins, and other nations had various names for this divinity, commonly known, for instance, among the Greeks and Latins as Eileithya or Ilithya.

Sinsapa, Simsapa (Sanskrit) *Śimśapā* The tree *Dalbergia Sissoo*, the Asoka tree.

Siphra' di-Tseni'utha' (Aramaic) *Sifrā' di-Tsēnī'ūthā'*. "Their counting or telling of the concealed mysteries," the Book of Secrets or Mysteries; one of the principal books of the *Zohar* (Light); the secrets or mysteries dealt with are those relating to cosmogony and to the inhabitants of those worlds, thus forming the basis of the Hebrew Qabalah. The work opens with the statement: "The book of the concealed mystery is the book of the equilibrium of balance," and proceeds to expound this thesis in Qabbalistic terminology.

Blavatsky calls it "the most ancient Hebrew document on occult learning" (SD 1:xlii), although the language used is largely Chaldean, and states that it was compiled from the very ancient Book of Dzyan through the archaic Chaldean Qabalah.

Siphra Dtzenioutha. See SIPHRA' DI-TSENI'UTHA'

Sirius [from Greek *seirios* scorching] In classical myth, the dog of Orion, who followed his master when he was made a constellation; it is called the Dog-star; by the Egyptians, Sothis. The dog at times symbolizes Mercury or Budha, who was called Cynocephalus, the dog-headed. It is a symbol of watchfulness and guarding. The heliacal rising of Sirius coincides in the northern hemisphere with the sultry heat of late summer, and was regarded in antiquity as a cause of that heat, or as contributing a baleful quality to it.

"The star worshipped in Egypt and revered by the Occultists; by the former because its heliacal rising with the Sun was a sign of the beneficent inundation of the Nile, and by the latter because it is mysteriously associated with Thoth-Hermes, god of wisdom, and Mercury, in another form. Thus Sothis-Sirius had, and still has, a mystic and direct influence over the whole *living* heaven, and is connected with almost every god and goddess. It was 'Isis in the heaven' and called *Isis-Sothis*, for Isis was 'in the constellation of the dog,' as is declared on her monuments. 'The soul of Osiris was believed to reside in a personage who walks with great steps in front of *sothis*, sceptre in hand and a whip upon his shoulder.' Sirius is also Anubis, and is directly connected with the ring 'Pass me not'; it is, moreover, identical with Mithra, the Persian Mystery god, and with Horus and even Hathor, called sometimes the goddess Sothis. Being connected with the Pyramid, Sirius was, therefore, connected with the initiations which took place in it. A temple to Sirius-Sothis once existed within the great temple of Denderah. To sum up, all religions are not, as Dufeu, the French Egyptologist, sought to prove, derived from Sirius, the god-star, but Sirius-Sothis is certainly found in connection with every religion of antiquity" (TG 300).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sis-Som

Sishta (Sanskrit) *Śiṣṭa* Remainder, remains, residuals — anything that is left or remains behind; in theosophy, those superior classes of each kingdom left behind on a globe during its obscuration, serving as seeds of life for the returning life-wave in the next round. They are the most highly evolved monads of each of the life-waves, the forerunners who, because of the innate urge and karmic power behind them, have preceded in their development the great bulk of their life-wave. In the human life-wave, the sishtas will be the most evolved humans, the great sages, those who have outrun the evolutionary development of the human life-wave considered as a whole. They are called remainders merely because they remain behind on a globe in order to provide the seeds for inaugurating their own life-wave's evolutionary progress, when that life-wave once again reaches the globe on which the sishtas remain.

While the sishtas are dormant, sleeping, or resting, they are not inactive or in a dream-world corresponding to devachan. They are relatively dormant merely because the life-wave has passed them by. Yet they still carry on all the functions, processes, and *duties* required of the most advanced egos of that life-wave until the life-wave returns to the globe on which these sishtas are awaiting it.

The sishtas are thus the manus (or collectively the manu) of any life-wave — and hence the respective manus or manu for each life-wave. As there is a root-manu on every globe when a life-wave reaches it and begins to develop into the first root-race on that globe, and a seed-manu for that life-wave on that same globe when the life-wave has left it, the seed-manu and root-manu are thus virtually the same group of entities. The distinction lies in the two roles played by the sishtas when a life-wave leaves a globe and during the interim before the life-wave returns again, and what the sishtas do when the advanced egos of the life-wave begin to reach that same globe again: for with this incoming of new entities less progressed than the sishtas themselves, the seed-manu becomes what has been called the root-manu.

The *sishtas* are mentioned under various names in the world's sacred literatures: the 'Adam of the Hebrew Genesis represents the seed-manu of the human life-wave when it reached this globe during this round; the legends concerning Noah refer to the life-wave itself repopulating the earth after the so-called deluge of space — the ark of the Hebrew story being the globes of the planetary chain; and is the equivalent of *Vaivasvata-manu* in Hindustan. The *Desatir*, in the "Book of Abad, the Prophet" gives the same essential teaching: "In the beginning of each Grand Period, a new order of things commenceth in the lower world. And, not indeed the very forms, and knowledge and events of the Grand Period that hath elapsed, but others precisely similar to them will again be produced. And every Grand Period that cometh resembleth from beginning to end the Grand Period that is past. . . . at the conclusion of a Grand Period, only two persons are left in the world, one man and one woman: all the rest of mankind perish: And hence mankind derive their origin from the woman and man who survive, and from whose loins numbers issue in the new Grand Period" (vv 144-16 and Commentary).

In this Persian story of the conclusion of a *manvantara* of a life-wave on a globe, only "two persons" remain as *sishtas*, "one man and one woman," a popularized and easily understood allegory — although when the seventh root-race of mankind is ended, and our human life-wave passes onwards to the next globe, there will be no man and woman, but simply human beings.

Sister Planet "*Every world has its parent star and sister planet. Thus Earth is the adopted child and younger brother of Venus*" (SD 2:33). The reference, cosmogonically, is not only to parent stars, but more particularly to planetary chains, their origins and future evolutionary destiny as chains. Theosophical literature on the planetary chains contains but a small part of the material on this teaching.

Sistrum (Latin) [from Greek *seistron* from *seiein* to shake] The instrument used by the ancient Egyptians in the worship of Isis; a metallic oval hoop with a handle, and loose metal rods, running through holes in the sides of the metal and across the loop. This was held in the hand and shaken, its real purpose being, by means of its combination of metals, to produce magnetic currents and sounds. It is used to this day in Christian Abyssinia "to drive away devils"; likewise by the American Indians in their ceremonial dances.

Sisumara (Sanskrit) *Śiśumāra* [from *śiśu* child + *māra* killer] The child-killer; a group of stars and constellations said to resemble a dolphin, porpoise, or tortoise; held to be a form of Vishnu, and often considered as a representation of the great circle of time. As an imaginary belt, a symbolic representation of the celestial sphere, or a theoretical revolving zone or belt within which move the celestial bodies — which are the bodies of spiritual entities. This constellation has the "Cross placed on it by nature in its division and localisation of stars, planets and constellations. Thus in the *Bhagavat Purana* V., xxx., it is said that 'at the extremity of the tail of that animal, whose head is directed toward the South and whose body is in the shape of a ring (Circle), Dhruva (the ex-pole

star) is placed; and *along that tail* are the Prajapati, Agni, Indra, Dharma, etc.; and *across its loins* the Seven Rishis.' This is then the first and earliest Cross and Circle, into the formation of which enters the Deity (symbolized by Vishnu), the Eternal Circle of Boundless Time, *Kala*, on whose plane lie crossways all the gods, creatures, and creations born in Space and Time; — who, as the philosophy has it, all die at the Mahapralaya” (SD 2:549).

Sisupala (Sanskrit) *Śísupāla* Child-protector; a son of Damaghosha (King of Chedi), Krishna’s great enemy, slain by him at the sacrifice of Yudhishtira. The *Vishnu-Purana* states that Sisupala was in a former existence the unrighteous but valiant monarch of the daityas, Hiranyakasipu, who was killed by the avatara Nara-simha (the man-lion). He was next the ten-headed Ravana, the giant king of Lanka, and was killed by Rama. After this he was born as Sisupala. “This parallel evolution of Vishnu (spirit) with a Daitya, as men, may seem meaningless, yet it gives us the key not only to the respective dates of Rama and Krishna, but even to a certain psychological mystery” (SD 2:225n).

Sisyphus The crafty; in Greek mythology, a son of Aeolus (the keeper of the winds), the most cunning of all men. He was punished in the underworld by being compelled to roll a heavy stone block up a hill, only upon reaching the summit to have it roll down again, where upon he repeats the processes endlessly. Some ancient authors say he had betrayed the Mysteries of the gods; so that one intent of the legend was to point out to the masses that betrayal of the secrets of initiation brings inevitable retribution. It also may illustrate the vanity of human ambitions, which flourish hopefully right up to the point of expected attainment, only to meet with disappointment; again it may refer to certain experiences of the disembodied relics of our personality, doomed to repeat vain acts until the energy which prompted them is worn out.

Sita (Sanskrit) *Sītā* A furrow; Rama’s wife, so named because she is fabled to have sprung from a furrow made by King Janaka while plowing the ground to prepare it for a sacrifice instituted by him to obtain progeny. She was considered an avatara of Lakshmi, Vishnu’s consort in the heaven-world. In the *Ramayana* she is exiled with her husband, stolen by Ravana of Lanka, and finally rescued.

Siva (Sanskrit) *Śiva* The third god of the Hindu Trimurti (trinity): Brahma the evolver; Vishnu the preserver; and Siva the regenerator or destroyer. Siva is one of the three loftiest divinities of our solar system, and in his character of destroyer stands higher than Vishnu for he is “the *destroying* deity, *evolution and PROGRESS personified*, who is the *regenerator* at the same time; who destroys things under one form but to recall them to life under another more perfect type” (SD 2:182). As the destroyer of outward forms he is called Vamadeva. Endowed with so many powers and attributes, Siva possesses a great number of names, and is represented under a corresponding variety of forms. He corresponds to the Palestinian Ba’al or Moloch, Saturn, the Phoenician El, the Egyptian Seth, and the Biblical Chiun of Amos, and Greek Typhon.

“In the Rig Veda the name Siva is unknown, but the god is called Rudra, which is a word used for *Agni*, the fire god . . .”; “In the Vedas he is the divine Ego aspiring to return to its pure, deific state, and at the same time that divine ego imprisoned in earthly form, whose fierce passions make of him the ‘roarer,’ the ‘terrible’ ” (SD 2:613, 548).

Siva is often spoken of as the patron deity of esotericists, occultists, and ascetics; he is called the Mahayogin (the great ascetic), from whom the highest spiritual knowledge is acquired, and union with the great spirit of the universe is eventually gained. Here he is “the howling and terrific *destroyer of human passions and physical senses*, which are ever in the way of the development of the higher spiritual perceptions and the growth of the *inner* eternal man — mystically . . . Siva-Rudra is the Destroyer, as Vishnu is the preserver; and both are the regenerators of spiritual as well as of physical nature. To live as a plant, the *seed* must die. To live as a conscious entity in the Eternity, the passions and senses of man must first die before his body does. ‘To live is to die and to die is to live,’ has been too little understood in the West. Siva, the *destroyer*, is the *creator* and the Saviour of Spiritual man, as he is the good gardener of nature. He weeds out the plants, human and cosmic, and kills the passions of the physical, to call to life the perceptions of the spiritual, man” (SD 1:459&n).

Though Siva is often called Maha-kala (great time) which, while being the great formative factor in manvantara is also the great dissolving power, to the Hindu mind destruction implies reproduction; so Siva is also called Sankara (the auspicious), for he is the reproductive power which is perpetually restoring that which has been dissolved, and hence is also called Mahadeva (the great god). Under this character of restorer he was often represented by the symbol of the linga or phallus: “the Lingham and Yoni of Siva-worship stand too high philosophically, its modern degeneration notwithstanding, to be called a simple phallic worship” (SD 2:588). It is under the form of the linga, either alone or combined with the yoni (female organ, the representative of his sakti or female energy), that Siva is so often worshiped today in India.

In the *Linga-Purana*, Siva is said to take repeated births, in one kalpa possessing a white complexion, in another that of a black color, in still another that of a red color, after which he becomes four youths of a yellow color. This allegory is an ethnological account of the different races of mankind and their varying types and colors (cf SD 1:324).

Siva is known under more than a thousand names or titles and is represented under many different forms in Hindu writings. As the god of generation and of justice, he is represented riding a white bull; his own color, as well as that of the bull, is generally white, referring probably to the unsullied purity of abstract justice. He is sometimes seen with two hands, sometimes with four, eight, or ten; and with five faces, representing among other things his power over the five elements. He has three eyes, one placed in the centre of his forehead, and shaped as a vertical oval. These three eyes are said to denote his view of the three divisions of time: past, present, and

future. He holds a trident in his hand to denote his three great attributes of emanator, destroyer, and regenerator, thus combining all the usual qualities or functions attributed to the Trimurti. In his character of time, he not only presides over its beginning and its extinction, but also over its present functioning as represented in astronomical and astrological calculations. A crescent or half-moon on his forehead indicates time measured by the phases of the moon; a serpent forms one of his necklaces to denote the measure of time by cycles, and a second necklace of human skulls signifies the extinction and succession of the races of mankind. He is often pictures as entirely covered with serpents, which are at once emblems of spiritual immortality and his standing as the patron of the nagas or initiates. He is often mystically personated by Mount Meru, which esoterically is both the cosmic and terrestrial axis with their respective poles.

According to the belief of most Advaita-Vedantists, Sankaracharya, the great Indian philosopher and sage, is held to be an avatara of Siva.

Siva-Eye. See EYE OF SIVA; PINEAL GLAND; THIRD EYE

Siva-Rudra (Sanskrit) *Śiva-Rudra* The name Siva occupies a very inconspicuous position in the Vedas, where that deity is referred to as Rudra, the greatest of the kumaras, considered by occultists as their special patron.

He is for this reason called Trilochana (the three-eyed) or Mahadeva (the great divinity), etc. The function of Siva-Rudra is to destroy in order to regenerate the permanent entity on a higher plane; his functions being essentially those of action, as Vishnu's functions are essentially those of continuance or preservation.

Siva-Rudra is the hierarch of the rudras, who are essentially dhyani-chohans of an active spiritually-intellectual character — the manasaputras may be called rudras. See also RUDRA; RUDRA-SIVA

Six The number of manifestation; the ancients reasoned that since the basis of all manifested nature was sextal — such as six fundamental forces, planes, and hierarchies of beings — therefore nature throughout all its manifested structure and workings would be subordinate to this fundamental numerical key. Hence not only the structure of nature itself would be sextal, but so would cycles of time in their operation. Here is the fundamental reason the Hindus, ancient Babylonians, and the Mystery schools and teachers of other lands, adopted the sextal or sexagesimal keys as the numerical series of events in which time cycles repeated themselves, therefore corresponding to events in human and cosmic matters. Multiplied by itself, and then by ten (the perfect number), gives 360 — the number of the Hindu Divine Year, also of degrees in a circle and the basis of the Babylonian saros.

The combination with three (6+3) making nine, however, was looked at askance by the ancients, for “if number 6 was the symbol of our globe ready to be animated by a *divine spirit*, 9 symbolized

our earth informed by a *bad* or evil spirit” (SD 2:581).

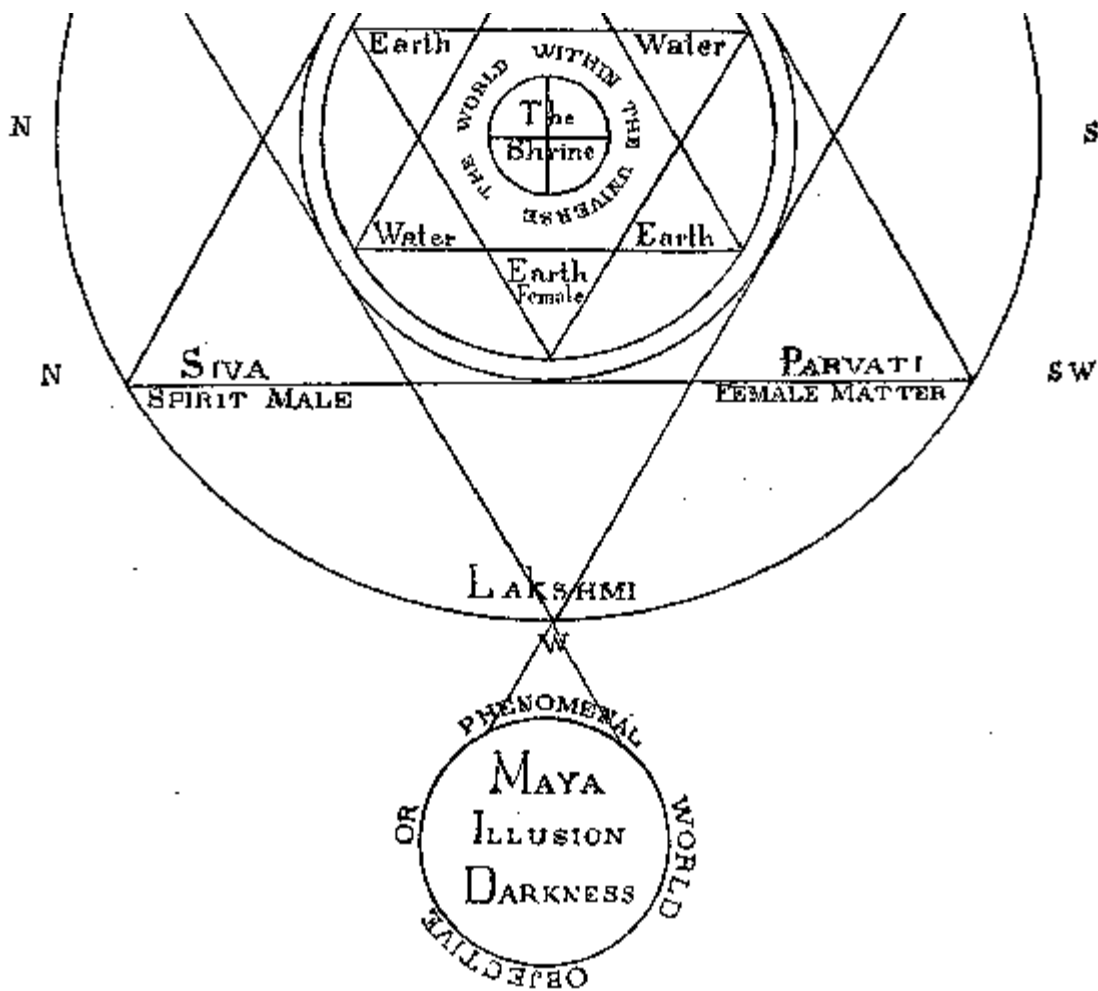

In Saint-Germain’s manuscript, six is regarded as the symbol of the animating or informing principle, and it was also the “symbol of the Earth during the autumn and winter ‘sleeping’ months” (SD 2:583).

In occultism six is represented by the cube representing the six dimensions — the four cardinal points, and the zenith and nadir; “while the *senary* was applied by the sages to *physical* man, the *septenary* was for them the symbol of that man *plus* his immortal soul” (SD 2:591).

Six is also present in the double triangles, which when interlaced form a six-pointed star; “this is the reason why Pythagoras and the ancients made the number six sacred to Venus, since ‘the union of the two sexes, and the spagyrisation of matter by triads are necessary to develop the generative force, that prolific virtue and tendency to reproduction which is inherent in all bodies’ ” (SD 2:592). *See also* SENARY

Six-pointed Star The double triangle or Solomon’s Seal; in India called the sign of Vishnu, where it “is the emblem of the Trimurti three in one. The triangle with its apex upward indicates the male principle, downward the female; the two typifying, at the same time, spirit and matter.”

(IU 2:270; cf also diagrams in IU 2:264-5, 452-3) The six-pointed star is found in symbolical representations of the earliest cosmogonies. When the six-pointed star is formed of two interlaced equilateral triangles — one light with the apex pointing upward, the other dark with the apex pointing downward, both triangles being symmetrically placed with regard to one central point — and the double figure is surrounded by a circle, the sign represents the universe, spirit and matter, the alpha and omega in the cosmos, and involution and evolution. In the Qabbalistic presentation of the figure, instead of a circle surrounding the star a serpent is portrayed as swallowing its tail, as in the seal of the Theosophical Society:

This is the Egyptian symbol of time and eternity, and of ever-recurring cycles: of birth and death, manvantara and pralaya, to which the universe and every entity within it are subject. In

theosophy it symbolizes further the six forces or powers of nature, the six cosmic planes, principles, etc., all synthesized by the seventh, or central point within the star.

The apex of the light triangle symbolizes the spiritual-divine monad, having its habitat in the spiritual-divine realms; the apex of the dark triangle, the human monad, having its habitat in the middle realm of conflict between spirit and matter, the apex itself being in the worlds of manifestation, the two sides extending from it reaching upwards towards the spiritual realm and representing evolution through aspiration and efforts towards a spiritual life. On the other hand, the two sides extending downwards from the apex of the light triangle represent the rays streaming from the spiritual-divine monad to enlighten, inspire, and uplift all beings in the manifested worlds. In the case of man, the human monad represented by the apex of the dark triangle is the reflection or child of the spiritual-divine monad or inner god.

The central geometrical point, having neither length, breadth, nor thickness, represents the invisible spiritual sun, the light of the unmanifested deity. Sometimes instead of a geometrical point, a crux ansata with a circle as its zenith appears — symbol of limitless, uncreated space, as is a cross within a circle.

Again, the pentagram or five-pointed star may take the place of the central point, in which case the pentagram symbolizes the microcosm or man, within the macrocosm or universe. “The double triangle representing symbolically, the Macrocosm, or great universe, contains in itself besides the idea of the *duality* (as shown in the *two* colours, and *two* triangles — the universe of Spirit and that of Matter) — those of the Unity, of the Trinity, of the Pythagorean Tetractys — the perfect Square — and up to the Dodecagon and the Dodecahedron” (BCW 3:313). *See also* SENARY; SEAL OF THE THEOSOPHICAL SOCIETY

Six Schools of Indian Philosophy. *See* DARSANA

Sixth Principle Buddhi in the ascending scale of the seven human principles. Cosmically Brahma is called the sixth principle, the seventh being Brahman (SD 1:18). In the solar system the sun, considered as the ruler of his own kingdom, is because of his spiritual effulgence, the buddhi or sixth principle of that kingdom, being the son of akasa, Aditi, Deva-matri (SD 1:527), three names for the same cosmic generative principle. That the sun is the buddhi principle in his own kingdom does not interfere with the fact that all the suns together form the kama-rupa of the galaxy or Milky Way.

Sixth Race, Sixth Root-race. *See* ROOT-RACE, SIXTH

Sixth Round. *See* ROUND, SIXTH

Sixth Sense The five senses which are at present physically developed need a sixth sense to register and record them, and this is what is now functioning as mental perception. A sixth sense, with its properly evolved sense organ, is also mentioned as not yet being manifested physically,

but beginning to be manifested during the sixth root-race. Its rudiments already exist in sensitive people, who have feelings and presentiments hard to define and not referable to any of the usual five senses. *See also* SENSES

Skanda (Sanskrit) *Skanda* The attacker; a title of Karttikeya, who killed Taraka, the deva-daimon.

Skanda Purana (Sanskrit) *Skanda Purāṇa* One of the 18 principal Hindu Puranas consisting of several samhitas and khandas. The most celebrated of the latter is the Kasi-khanda, in which the temples of Kasi (Benares) are exalted, and legends concerning Kasi are related. In this Purana Skanda (Karttikeya, the god of war) narrates the events of the Tatpurusha Kalpa, embroidered with many tales.

Skandhas (Sanskrit) *Skandha*-s Bundles, groups of various attributes forming the compound constitution of the human being. They are the manifested qualities and attributes forming the human being on all six planes of Being, beneath the spiritual monad or atma-buddhi, making up the totality of the subjective and objective person. They have to do with everything that is finite in the human being, and are therefore inapplicable to the relatively eternal and absolute. Every vibration of whatever kind, mental, emotional, or physical, that an individual has undergone or made, is derivative of and from one of the skandhas composing his constitution. Skandhas are the elements of limited existence. The five skandhas of every human being are: rupa (form), the material properties or attributes; vedana (sensations, perceptions); sanjna (consciousness, abstract ideas); sanskara (action), tendencies both physical and mental; vijnana (knowledge), mental and moral predispositions. Two further, unnamed skandhas “are connected with, and productive of *Sakkayaditthi*, the ‘heresy or delusion of individuality’ and of *Attavada* ‘the doctrine of Self,’ both of which (in the case of the fifth principle the soul) lead to the *maya* of heresy and belief in the efficacy of vain rites and ceremonies; in prayers and intercession”; “The ‘old being’ is the sole parent — father and mother at once — of the ‘new being.’ It is the former who is the creator and fashioner, of the latter, in reality; and far more so in plain truth, than any father in flesh. And once that you have well mastered the meaning of *Skandhas* you will see what I mean” (ML 111). The human skandhas are the causal activities which by their action and interaction attract the reincarnating ego back to earth-life. The exoteric skandhas have to do with objective man; the esoteric with inner and subjective man.

At death the seeds of causes sown which have not yet been realized remain latent in our inner principles as “psychological impulse-seeds” awaiting expression in future lives. The skandhas “unite at the birth of man and constitute his personality. After the death of the body the Skandhas are separated and so remain until the Reincarnating Ego on its downward path into physical incarnation gathers them together again around itself, and thus reforms the human constitution considered as a unity” (OG 158).

Similarly with suns and planets: at pralaya, the lower principles of such a cosmic body exist latent

in space in a laya-condition while its spiritual principles are active in higher realms. “When a laya-center is fired into action by the touch of wills and consciousnesses on their downward way, becoming the embodying life of a solar system, or of a planet of a solar system, the center manifests first on its highest plane, and later on its lower plane. The Skandhas are awakened into life one after another: first the highest ones, next the intermediate ones, and lastly the inferior ones, cosmically and qualitatively speaking” (ibid.).

The skandhas are likewise closely connected with the karmic pictures in the astral light, which also is the medium as well as the register of impressions.

Skidbladnir (Icelandic, Scandinavian) [from *skid* ski + *blad* blade] The mythical ship belonging to the Norse god Frey, who dwells in and sponsors the planet earth. Skidbladnir thus represents our globe. It contains the seeds of all life forms, and yet can be folded together like a kerchief when its life is over.

The Eddas relate how Skidbladnir was created for Frey by the dwarf Dvalin (undeveloped humanity) with the aid of the giant-god Loki (human mind), in a competition against the dwarfs Sindre (vegetation) and Brock (mineral kingdom), children of the moon god Ivalde. *See also* DWARFS

Skrymir (Icelandic, Scandinavian) A Norse giant, also called Utgarda-Loki (Loki of the outermost court), representing the worlds of illusion (matter) in which the gods (consciousnesses) are misled. A well known tale relates how Thor, Loki, and Thor’s servant Tjalfi are subjected to a number of “eye-shines” (illusions) and ignominiously outperformed by the giants in a series of contests, all by means of deceptive appearances.

In Norse mythology giants represent ages of manifest existence and each giant exhibits traits belonging to his particular eon. The giantesses who are his daughters represent lesser cycles of time within his longer age. Thurses are the gross, inert aspects of the elements which serve as vehicles for the imbodiments of conscious energies in worlds. They are represented as evil in most myths because their nature is opposed to the dynamism of the gods. Hence the gods and thurses or giants are constantly at war.

Skrymir and other giants exemplify also the gigantic forebears of our human race who inhabited the earth when forms were not yet coarse and weighty. Every mythic history contains references to giants: “in nearly every mythology — which after all is ancient history — the giants play an important part. In the old Norse mythology, the giants, Skrymir and his brethren, against whom the sons of the gods fought, were potent factors in the histories of deities and men” (SD 2:754).

Skuld (Icelandic) A debt, due; the third of the three norns who determine the fate of heroes in Norse mythology and who parallel the Greek Moirai. Skuld represents the future or unexpended karma, that which is due and owing. Her sister norns are named Urd (origin) and Verdandi

(becoming). Skuld is said to be *created* by her two sisters: by the causes set in motion in the past (Urd) and the decisions and actions taken in the present (Verdandi). Hence she is the inevitable consequence of what has gone before.

Sleep In sleep the ego becomes unconscious on the physical plane in its brain — except in the cases of dreaming; the connection between the mind and the bodily senses is quiescent and there is no direct self-conscious cognition of physical objects and events. In short, the ego is functioning on a different plane of consciousness. On awaking, we have confused recollections of experiences of the state of imperfect sleep which fringes the waking and sleeping states, but the sleeping state is not a single state. Many planes of consciousness are enumerated, of which what we call the waking state is one. One Hindu system has a fourfold division of consciousness into jagrat, the waking state; svapna, the dream state; sushupti, the state of dreamless sleep; and, highest, the turiya, which is relatively complete egoic or spiritual consciousness on interior planes. From this last state of perfect awakenment, the jagrat or physical waking state is the farthest removed; what is to us the dream state (svapna) is a closer approach; and sushupti, which to us is complete loss of physical brain-mind consciousness, is actually the closest approach to the complete consciousness experienced by the ego in turiya. Turiya is the complete oblivion to the outside world, for the ego is functioning in its spiritual vehicle of consciousness.

These four distinct states of consciousness into which the human egoic self can enter, are the manifestations during imbodiment of what takes place on a more profound and radical scale at death. Sleep is a small death, and death may be called a larger sleep: in both, the ego, liberated successively from various bonds, travels inwards and upwards through different grades of consciousness and reaches the experiences proper to those planes.

Sleep is also used figuratively, in contrast with waking, to denote a state of nonmanifestation, when there is no contrast between subject and object; the term so used is relative, and sleeping on one plane may coincide with waking on another.

Sleep, Sacred The sleep of the neophyte when he is thrown into oblivion by magical processes and draughts of soma remaining entranced as through dead for several days while he becomes the receptacle for divine communications from his Augoeides (IU 1:357). What he reveals while in this state is not known to him, nor to anyone but the few adepts privileged to be present. The same thing is referred to by Isaiah, in describing the purification necessary for a prophet: “Then flew one of the seraphims unto me having a live coal in his hand . . . and he laid it upon my mouth, and said, Lo, this hath touched thy lips; and thine iniquity is taken away, and thy sin purged” (6:6, 7). The state is in some respects different from the trance of the priestesses of Delphi, exhibited before the multitude.

Sloka (Sanskrit) *Śloka* A verse, generally formed of verses in four half-lines of eight, or in two lines of sixteen syllables each, the Sanskrit epic meter of 32 syllables.

Smaragdine Tablet The emerald tablet, alleged mystically to be of the Egyptian Hermes or Thoth, on which was inscribed, according to the Hermeticists, “the whole of magic in a single page.” In a letter to the Sophists, Paracelsus says: “The ancient Emerald Table shows more art and experience in Philosophy, Alchemy, Magic, and the like than ever could be taught by you or your crowd of followers.” Masons and Christian Qabbalists alleged it to have been found on the dead body of Hermes by Sarai, Abraham’s wife; this allegory may mean that Sarasvati (wife of Brahma and a legendary prototype of Sarai) found much of the ancient wisdom latent in the dead body of humanity and revived it. It is also said that the Emerald Tablet was found at Hebron, the city of the kabeiroi or cabiri (the gibborim, the Four Mighty Ones), by an Essenian initiate (TG 302, SD 2:556). It exists only in a late Latin form referred to in the 7th century.

Hermes was the Greek god of mystical thinking and interpretations, corresponding to the Egyptian Thoth, both divinities being overseers or hierophants of works of initiation concealing the archaic secrets of the god-wisdom. Thus the ascription to Hermes of profoundly mystical allegories is properly assigned, whoever their actual writers may have been.

A fundamental law of interpretation — analogy — is expressed in the Emerald Tablet in the famous aphorism, “That which is above is as that which is below; and that which is below, is as that which is above, for performing the marvels of the Kosmos. As all things are from the One, by the mediation of the One so all things arose out of this One Thing by evolving . . .”

Smarta, Smartava (Sanskrit) *Smārta, Smārtava* [from *smṛti* tradition from the verbal root *smṛ* to remember] A follower of Sankaracharya and the Advaita Vedantic doctrines. According to Blavatsky “this sect, founded by Sankaracharya, (which is still very powerful in Southern India) is now almost the only one to produce students who have preserved sufficient knowledge to comprehend the dead letter of the Bhashyas. The reason of this is that they alone, I am informed, have occasionally real Initiates at their head in their mathams, as for instance, in the ‘Sringa-giri,’ in the Western Ghats of Mysore. On the other hand, there is no sect in that desperately exclusive caste of the Brahmins, more exclusive than is the Smartava; and the reticence of its followers to say what they may know of the Occult sciences and the esoteric doctrine, is only equalled by their pride and learning” (SD 1:271-2). What the original Hebrew Qabbalists were — qabbalah itself meaning tradition or traditional knowledge handed down from generation to generation of adepts — was exactly what the Smartava-Brahmanas were.

Traditional teaching holds that truth is preserved far more clearly by oral transmission of knowledge than by its reduction to writing, whether openly or disguisedly expressed, which latter is called sruti in India, involving the static delivery of the written word without the atmosphere and life accompanying the traditional handing on of knowledge orally.

Smell. See SENSES

Smriti (Sanskrit) *Smṛti* [from the verbal root *smṛ* to remember] What is remembered; unwritten

teachings handed down by word of mouth, distinguished from srutis or teachings handed down in traditional writings. The Hebrew word qabbalah has a literally identical meaning.

The smritis were a system of oral teaching, passing from one generation of recipients to the succeeding generation, as was the case with the Brahmanical books before they were imbodyed in manuscript. The Smartava-Brahmanas are, for this reason, considered by many to be esoterically superior to the Srauta-Brahmanas. In its widest application, the smritis include the Vedangas, the Sutras, the *Ramayana*, the *Mahabharata*, the Puranas, the Dharma-sastras, especially the works of Manu, Yajnavalkya, and other inspired lawgivers, and the ethical writing or Niti-sastras; whereas the typical example of the sruti are the Vedas themselves considered as revelations.

Sruti means that which is “heard” or received as direct oral revelation from a superior being, considered by orthodox Hindus to be equally holy to smriti; yet in ancient times the most sacred and secret teachings were never committed to writing but were invariably passed on from teacher to pupil with “mouth at ear” and at “low breath,” whether among the Egyptians, Persians, Chaldeans, Greeks, Romans, Druids, Chinese, or Hindus.

Socharis. See SEKER

Sochoniston. See SANCHONIATHON

Sod (Hebrew) *Sōd* Originally to appoint, place, or found; later an assembly, people placed or appointed or founded to do some duty or work; hence a secret or occult assembly or company of individuals united for some specific purpose, corresponding almost exactly to the Greek mysterion (mystery).

Sod occurs frequently in the Old Testament, translated as secret or assembly, where Mysteries would be a more correct rendering: e.g., “Jacob called unto his sons, and said . . . Simeon and Levi are brethren; instruments of cruelty are in their habitations. . . . come not thou into their secret; unto their assembly” (Genesis 49:1, 5-6). The Bible is “a series of historical records of the great struggle between white and black Magic, between the Adepts of the right path, the Prophets, and those of the left, the Levites, the clergy of the brutal masses. . . . The great schism that arose between the sons of the Fourth Race, as soon as the first Temples and Halls of Initiation had been erected under the guidance of ‘the Sons of God,’ is allegorized in the Sons of Jacob. That there were two schools of Magic, and that the orthodox Levites did not belong to the *holy* one, is shown in the words pronounced by the dying Jacob” (SD 2:211).

The secret learning of the Hebrews was often termed Sod (plural, Sodim), Sodei Torah (secrets or mysteries of the Law), or Razei Torah.

Sodales (Latin) Members or fellows of a fraternity, society, or recognized corporation, hence

members of a mystic, secret, or occult fraternity. It suggests the Shemitic, as in the Hebrew *sod* (both an assembly or fraternity, and a secret and sacred mystery). Cicero in his *De Senectute* speaks of sodalities in the Idaean Mysteries of the Magna Mater (great mother, mystic nature).

Sodalian Oath An irrevocable pledge, implying that the final mysteries had been communicated to one so bound by oath (*sod* signifying secret, mystery). “The penalty of death followed the breaking of the Sodalian oath or pledge. The oath and the *Sod* (the secret learning) are earlier than the *Kabbalah* or Tradition, and the ancient *Midrashim* treated fully of the Mysteries or Sod before they passed into the *Zohar*. Now they are referred to as the *Secret Mysteries* of the Torah, or Law, to break which is fatal” (TG 303).

Soham (Sanskrit) *Soham* [from *sah* he + *aham* I] He is I; a mystical permutation of Ahamsa (I am he). Soham contains the mystical teaching of the identity of man’s essence with divinity. *See also* AHAMSA; HAMSA

Sokaris, Seket, Sokhit. *See* SEKER

Sol (Latin) Sun; it is said that the Latin *solus* (the only) was used of the One Good, and that this word afterwards became *sol*, the sun (SD 2:575). Pythagoras called Venus *sol alter* (the other sun); Arnobius says that Mercury also is *sol* — the vehicle of a solar logos. Every one of the sacred planets is *sol* in the same manner, for each is, so far as the solar system is concerned, the especial vehicle of one of the seven or twelve solar logoi.

Solar Devas. *See* AGNISHVATTA; MANASAPUTRAS; PITRI(S)

Solar Lhas [from *solar* + Tibetan *lha* a celestial being] Used in the Stanzas of Dzyan to indicate the higher beings derivative from the spiritual side of our sun who endowed the human monads of our planetary chain with the spirit of life. The solar Lhas warm and invigorate the protohuman shadows (SD 2:109), although they do not quicken their mind principle — except insofar as the life-energy reaches the manasic element in the constitution. These solar lhas refer particularly to the pranic activity in the individual human being; the solar lhas of a far higher class are equivalent to the agnishvattas, manasaputras, and kumaras who awaken the human mind. *See also* LHA

Solar Logoi Logos, when used in connection with the sun, is a generalizing term for the seven or twelve fundamental spiritual and intellectual solar powers, at the summit of which stands the solar hierarch, the physical sun being but the reflection or garment of these unified septenary or duodenary powers. In consequence, every being in the universe, great or small, has as its primordial origin a spiritual entity which, emanating from itself its own characteristic powers, produces these latter as its logoi. In the case of our sun there are seven or twelve chief forces or primary entitative rays which compose in their aggregate the true sun, unified at their summit or supreme hierarch; and these seven or twelve powers or forces are the solar logoi. On the descending evolutionary scale, each of these seven or twelve primary forces may be subdivided

into seven or twelve minor powers or forces.

The solar logoi were termed by the ancients the planetary rectorors or genii, each having its main habitat in one of the Houses of Life known as the sacred planets.

Solar Race. See SURYAVANSA

Solar System Commonly, the Sun with the nine principal planets — Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto — their satellites, and the minor planets, comets, and meteors; in theosophy, however, the solar system is a far more complex entity, for many of its worlds manifest on planes of being invisible to our senses.

The planets are individual manifestations of conscious intelligences, their distances from the sun being generally in rhythmical progression and their motions directed by mind and volition, as Kepler declared in his doctrine of Rectors, following the ancient teachings. The nebular hypothesis, once so popular in European scientific thought and now more or less rejected, was first suggested by Swedish seer Swedenborg and German philosopher Kant, and around the beginning of the 19th century was worked out in mathematical detail by the Frenchman Laplace. Though the nebular hypothesis as scientifically presented was unacceptable to theosophical thinkers, it nevertheless was based upon facts of cosmic evolution accepted by the ancient wisdom-religion and approximated somewhat more closely to what theosophy teaches as the facts of cosmogony than do the later tidal or planetesimal theories.

In theosophy the universe is the product of cosmic mind or intelligence, whose all-permeant activities manifest on our material plane as the laws of nature. The universe and all in it, proceeding from cosmic consciousness, is imbued throughout with the qualities and attributes of its divine originators; and as there is but one primordial fundamental life — and therefore one fundamental law — energizing and guiding all, the ancient teaching of analogy is the master key to understanding universal nature.

Calling the primordial origins of every being and thing by the term monads, as Leibniz did following Pythagoras, these monads may be looked upon as the seeds of cosmic life, life-centers or energy points, and in such case naught in the universe is the product of chance, but is the offspring of mind. Thus the solar system itself sprang from such a cosmic seed or monad; and the same holds true for the planets, nebulae, comets, and all other individually enduring cosmic bodies.

Comets are coordinated with earlier and later stages of nebular evolution, playing an activating part in the formation of individual celestial bodies. The planets did not emerge from the sun, but the sun is their “co-uterine brother” with the same nebular origin. The sun is the great distributor of light and other radiations, including vital energy, throughout the solar system, and is itself a member of a hierarchy of solar beings.

The ancient wisdom speaks of seven sacred planets which are especially connected with the earth,

as indeed our own earth is likewise especially connected with various planetary chains, which mutually assisted in the formation of the seven or twelve globes of the planetary chains. These sacred planets are: the Moon, Mercury, Venus, Sun, Mars, Jupiter, and Saturn — the Sun and Moon being substitutes for esoteric and invisible planets. The complete number of the planets of a solar system is twelve, which is the number of globes composing a planetary chain. These twelve sacred planets are closely linked with the twelve houses of the zodiac, these links of unity being the energetic coordinates tying our solar system in with the life and structure of the galaxy.

Theosophy makes a distinction between the solar system and the universal solar system — the former has especial reference to the twelve sacred planets, while the universal solar system refers to all bodies belonging to and revolving around a master- or king-sun (raja-sun) and within the latter's far-flung realm on seven or more planes of being. It therefore contains planets and suns invisible to our present range of sense perception. Uranus, Neptune, and Pluto are said not to belong to the solar system (nor are they included among the twelve sacred planets), but are members of the universal solar system.

In the Brahmanical system the solar system was regarded as an Egg of Brahma (brahmanda), the prakritic or prithivi-form of Brahma, so that its life span is equivalent to the length of Brahma's manifested life. A Day of Brahma for a planetary chain consists of a planetary manvantara — seven rounds of the various life-waves around that chain — a period of 4,320,000,000 terrestrial years. The ensuing pralaya or Night of Brahma is of an equivalent length, together equaling 8,640,000,000 terrestrial years. Forty-nine such planetary Days and Nights equal one solar manvantara, equivalent to a Year of Brahma; and each such year of Brahma is figured as being 360 of his Days; and 100 such Years of Brahma equal Brahma's Life, a period of 311,040,000,000,000 terrestrial years — including in this vast time period the various twilights and dawns. Theosophic philosophy states that one-half of Brahma's Life has been spent, or 50 Years of Brahma. At the end of Brahma's Life, the final consummation of the solar system, so far as the planetary chain is concerned, will occur, and everything within the bounds of this system will vanish, and the succeeding solar pralaya will commence.

Sollen (German) Ought; duty, moral obligation, so used by Kant in his theory of the categorical imperative, where he distinguishes between I ought and I wish, refusing to define duty as a form of expediency. The feeling of obligation, one of the noblest moral or ethical instincts, is not a phenomenon but an expression of the inner transcendental self, and greatly dignifies the mind which entertains and contains it.

Solomon, King of Israel and Judah (Hebrew) *Shēlomoh* [from *shālōm* prosperous cf Arab *zuleima*, Greek *Salomon* Latin *solomo*, genitive *solomonis*, French *Salomon*] Peace, prosperity; according to orthodox Biblical chronology, he lived 993-953 BC, the youngest son of David whom he succeeded through the influence of his mother Bathsheba and the prophet Nathan. Throughout the East,

especially in Arabia and thence in Europe, there are many legends of his wisdom and magical powers, and notably with regard to his seal, the six-pointed star or double interlaced equilateral triangles (Solomon's seal); his meeting with the Queen of Sheba and his answering of the questions and riddles propounded by her and others; and his judgments. Solomon is said to have gotten "his secret learning from India through Hiram, the king of Ophir, and perhaps Sheba" (IU 1:135, 136n).

If the exoteric literal account in the Bible is accepted, Solomon in his later years showed himself as very far from wise, indulging in licentiousness and idolatry (1 Kings 11); further, he began his reign with the murder of Adonijah, Joab, and Shimei and his last recorded act was that he sought to kill Jereboam.

In Freemasonry, King Solomon is especially honored as the builder of the Temple and as the first of the Three Grand Masters — the other two being Hiram, King of Tyre, and Hiram Abif — all of whom were concerned with the building of the Temple. The evil ending of Solomon's life, according to the Biblical account, is almost overlooked in Masonic ritual and literature. In the *Jewish Encyclopedia* ("Solomon"), according to one writer, Solomon is represented as "the wise king *par excellence*"; and "in Arabic literature, Solomon is spoken of as 'the messenger of God' "; according to another writer in the same work, however, "a critical sifting of the sources leaves the picture of a petty, Asiatic despot, remarkable, perhaps, only for a love of luxury and for polygamous inclinations." Only by interpreting the Bible esoterically can we arrive at the truth regarding King Solomon; and such interpretation fully corroborates the characterization of "the wise king *par excellence*"; and fully supports both Masonic ritual and tradition in regarding King Solomon as the first and chief of the Three Grand Masters.

What then is the explanation of the otherwise contradictory statements in the Bible regarding Solomon? Even from a historical and ethnological standpoint one may find a clue, for along purely exoteric lines there is nothing foreign in Solomon's "idolatry" and his worship of other deities. The same racial strain ran through all the surrounding peoples as in Israel, and the respective worships, gods, and goddesses were all closely interrelated, derived from the same Babylonian concepts, appearing under different names — Blavatsky shows the identity of the mystery gods of the Phoenicians, Chaldeans, and Israelites (SD 2:3). The gods and goddesses of the nations surrounding the Jews were all theologically interrelated, aspects or permutations of the same basic idea; and, as worshiped by the people, all were variants and, in their exoteric forms, degradations of the original conception on which every great theogony and cosmogony was built (cf SD 2:535 et seq).

As for Solomon's 700 wives and 300 concubines, these "are merely the personations of man's attributes, feelings, passions and his various occult powers: the Kabbalistic numbers 7 and 3 showing it plainly. Solomon himself, moreover, being, simply, the emblem of Sol — the 'Solar Initiate' or the Christ-Sun, is a variant of the Indian 'Vikartana' (the Sun) shorn of his beams by

Visvakarman, his Hierophant-Initiator, who thus shears the *Chrestos*-candidate for initiation of his golden radiance and crowns him with a dark, blackened aureole — the ‘crown of thorns.’ (See *The Secret Doctrine* for full explanation.) Solomon was never a living man. As is described in *Kings*, his life and works are an allegory on the trials of Initiation” (BCW 10:162-3n).

Solomon the Wise is a type-figure, and the legendary story of his life, wisdom and glory, and temptations and apparent fall, is a variant of the traditional history of certain wise ones recounted in every world-religion. Even granting that a king names Shelomoh reigned over Judah and Israel, the Biblical account and the many traditions of his life are an allegory of initiation.

Solomon’s Seal. See SIX-POINTED STAR

Solomon’s Temple. See TEMPLE OF SOLOMON

Solstice [from Latin *sol* sun + *stit* stand still] The two points in the ecliptic at which the sun is farthest from the equator, north or south; so called because the sun halts and turns back on its northerly or southerly course. These points are in the first degree of Cancer and Capricorn respectively — the summer and winter solstices; south of the equator the summer solstice occurs when the sun is south of the equator and in Capricorn, and the winter solstice when the sun is north of the equator and in Cancer; north of the equator the summer solstice occurs when the sun is north of the equator and in Cancer, and the winter solstice when the sun is south of the equator and in Capricorn. The solstitial points, like the equinoctial points, retrograde and complete their circle round the ecliptic in a precessional year of 25,920 years.

The solstices and equinoxes mark the four corners of the esoteric year, each associated with particular psychospiritual events in the initiation cycle. The winter solstice is associated with the birth of the inner Christ or Buddha; the summer solstice with the great renunciation of personal progress made by those of the hierarchy of compassion.

Solus (Latin) Only, sole; in SD 2:575, it refers to the One and Only Good, and is connected with Sol, the sun (Sol is usually derived from the Greek Helios).

The connection suggests the mystical ideas of spiritual individualities infilling the universe, of which Sol stands as the most prominent example in the solar system. By a slight extension of meaning solus could easily stand for a monad or spiritual individual, whether of cosmic or lesser magnitude, being an indirect reference to the class of monads which form the hierarchy of light or of compassion.

Solvent The universal solvent is an alchemical expression equivalent to the Philosopher’s Stone and the Universal Agent of medieval alchemy. It means a unity into which diverse elements can be resolved or from which they emanate or proceed; and has different applications according to particular planes. Thus “*whatsoever quits the Laya State becomes active life; it is drawn into the vortex of MOTION (the alchemical solvent of Life)*” (SD 1:258). One culmination of the “Secret Work”

is the union of the three elements (sulfur, mercury, salt), the occult solvent in the world-soul; while on the material plane the solvent is hydrogen (SD 2:113).

Soma (Greek) Body; equivalent to the Sanskrit sthula-sarira in the seven human or cosmic principles.

Soma (Sanskrit) *Soma* In Hinduism, the moon astronomically; mystically, a sacred beverage of initiates, “made from a rare mountain plant by initiated Brahmans” (TG 304). As the moon, Soma is an occult mystery, for the moon as a symbol stands for both good and evil, yet more often a symbol of evil than of good. Astrologically, Soma is the regent of the invisible or occult moon, while Indra represents the physical moon. “Soma is the mystery god and presides over the mystic and occult nature in man and the Universe” (SD 2:45). Soma or lunar worship was once purely occult and its rites were based upon a minute and profound knowledge of nature.

According to Hindu tradition, Soma as a sacred juice gave mystic visions and trance-revelations, the result of which union was Budha (esoteric wisdom). This sacred beverage was drunk by Brahmins and initiates during their mysteries and sacrificial rites.

“The ‘Soma’ plant is the *asclepias acida*, which yields a juice from which that mystic beverage, the *Soma* drink, is made. Alone the descendants of the Rishis, the *Agnihotri* (the fire priests) of the great mysteries knew all its powers. But the real property of the *true* Soma was (and is) to make a new *man* of the Initiate, after he is *reborn*, namely once that he begins to live in his *astral* body . . .; for, his spiritual nature overcoming the physical, he would soon snap it off and part even from that etherealized form. . . .

“The partaker of *Soma* finds himself both linked to his external body, and yet away from it in his spiritual form. The latter, freed from the former, soars for the time being in the ethereal higher regions, becoming virtually ‘as one of the gods,’ and yet preserving in his physical brain the memory of what he sees and learns. Plainly speaking, *Soma* is the fruit of the Tree of Knowledge forbidden by the jealous Elohim to Adam and Eve or *Yah-ve*, ‘lest Man should become as one of us’ ” (SD 2:498-9&n).

“A ‘soma-drinker’ attains the power of placing himself in direct *rapport* with the bright side of the moon, thus deriving inspiration from the *concentrated intellectual energy of the blessed ancestors*. . . .

“This which seems one stream (to the ignorant) is of a *dual nature* — one giving life and wisdom, the other being lethal. He *who can separate the former from the latter, as Kalahamsa separated the milk from the water, which was mixed with it, thus showing great wisdom — will have his reward*” (BCW 12:203-4).

“This Hindu sacred beverage answers to the Greek Ambrosia or nectar, drunk by the gods of Olympus. A cup of kykeon was also quaffed by the mysta at the Eleusinian initiation. He

who drinks it easily reaches *Brahma*, or the place of splendor (Heaven). The soma-drink known to Europeans is not the *genuine* beverage, but its substitute; for the initiated priests alone can taste of the real soma; and even kings and rajas, when sacrificing, receive the substitute. . . . We were positively informed that the majority of the sacrificial priests of the Dekkan have lost the secret of the true soma. It can be found neither in the ritual books nor through oral information. The true followers of the primitive Vedic religion are very few; these are the alleged descendants from the *Rishis*, the real Agnihotris, the initiates of the great Mysteries. The soma-drink is also commemorated in the Hindu Pantheon, for it is called King-Soma. He who drinks of it is made to participate in the heavenly king, because he becomes filled with it, as the Christian apostles and their converts became filled with the Holy Ghost, and purified of their sins. The soma makes a new man of the initiate; he is reborn and transformed, and his spiritual nature overcomes the physical; it gives the divine power of inspiration, and develops the clairvoyant faculty to the utmost. According to the exoteric explanation the soma is a plant, but, at the same time it is an angel. It forcibly connects the *inner*, highest 'spirit' of man, which spirit is an angel like the mystical soma, with his 'irrational soul,' or astral body, and thus united by the power of the magic drink, they soar together above physical nature and participate during life in the beatitude and ineffable glories of Heaven.

"Thus the Hindu soma is mystically, and in all respects the same that the Eucharist supper is to the Christian. The idea is similar. By means of the sacrificial prayers — the mantras — this liquor is supposed to be transformed on the spot into real soma — or the angel, and even into Brahma himself" (IU 1:xl-xli).

The mystical drink has been known in all ages and among all peoples. The ancient Teutonic tribes, whether of the Germanic or Anglo-Saxons, spoke of their divine mead, the drink of the gods. The Hindus spoke of Soma, the direct distillation from the moon and from the overseeing and guiding eye of the sun; the Greeks of the Homeric age spoke of ambrosia or nectar, a drink of the gods which renewed their understanding and gave them inspiration as well. Another branch of the Greeks belonging to the Dionysian and Orphic branches of mystical thought, spoke equally mystically of the mystic wine, and also of the mystic cereal, partaken of during the Mysteries, and it is from this last that the mystical wine and cereal or bread of the Christians was taken over almost completely from the Dionysian Eucharist, only among Christians even from quite early times it became degraded into actual blood and flesh of Jesus.

The evident meaning must be connected with the old occult thought that wine, or the mead of the northern peoples where the grape and soma were unknown or uncultivated, all had the meaning of the inspiration of initiation, a kind of ecstasy of vision and knowledge brought about through initiation, of which the physical intoxication of wine, mead, or the soma juice has all the lower and materialized aspect, every spiritual thing having its material counterpart, every right-hand

thought or rule in occultism having its left-hand or sorcerer perversion or counterpart. Thus in the highest initiation, even today and from immemorial time, the holy drink or potation was entirely mystical, and had a dozen of these significances, all bound up together; yet despite this fact, for some of the lower initiations where a student found difficulty in throwing off the physical and astral influences, a harmless — when administered rightly — drug or drink was given which temporarily stupefied the lower quaternary; but it is to be noted that this substitute of the physical drink came about when neophytes began to find it very difficult to do what their more spiritual forerunners had done: raising themselves solely by inner aspiration up to inspiration, by inner insight up to the eopteia or vision.

Thus the question whether the mystical drink was an actual drink, or merely a mystical one, cannot be answered by a simple yes or no. Originally it was entirely mystical, later it remained as mystical as ever, but the body with its grossness, and the astral influences with their terrible power over the men and women of the time, were temporarily reduced to quiescence by a preparation known to initiates to have the power of bringing about the condition required, without any permanent or even long after-effect, very much as a sedative will be given by a physician today. It is of course true that if this drink, however relatively innocent in a single instance, were to be constantly repeated, it would have developed into a drug habit.

Some of the later peoples in their initiations actually did use a kind of physical soma which had the effect of bringing about a dulling of the restless brain-mind for the time being, so that the inner powers were temporarily freed from the clogging influences of the astral light and the body.

The use of drugs in initiatory ceremonies of any kind, however, is a relatively late and degenerate practice, and has never at any time been, nor will it ever be, introduced by the Mother-Lodge coming down to us even from the middle of the third root-race. With it the old tradition burns more brightly than ever that the true soma, the true mead of the gods or wine of the spirit, is the raising of the human into the spiritual by aspiration, training, and strict following of the traditional laws of discipleship, so that finally the neophyte feels the sunlight from above stealing through the moon of his mind.

So strongly is this the case, that even today in theosophical occult studies, drug taking of any kind is strictly forbidden, including alcohol, for alcohol is a drug, a product of natural decay and decomposition, and while less spectacular and violent as a rule than drugs such as opium and its derivatives, it is far more easily procurable and is therefore more specifically pointed to as objectionable. The idea of the occult student is to have the body absolutely normal, healthy, clean, and functioning in the smoothness of health, so that even overeating is seen to be a harmful thing, because it clogs the body, dulls the mind, and could even actually lead to physical disability.

There is and has been a great deal of confusion, not only at present but throughout the ages, about these matters, and several mystical schools have even chosen the language of the tavern and

drinking house as the cloak for conveying occult or semi-occult teaching. A noted example is the Sufi school with its poems lauding the flowing bowl and the joys of the tavern and the bosom friends therein, and the beloved's breast. Here the tavern was the universe, the flowing cup or wine was the wine of the spirit bringing inner ecstasy, the bosom of the beloved was the raising oneself into inner communion with the god within, of which the Jewish bosom of Abraham is a feeble correspondence. The friends of the tavern are those perfect human relations brought about by a community of spiritual and intellectual interests, and the associations of the tavern are the mysteries of the world around us with their marvels and arcana. Nevertheless in various countries as the fourth root-race ran toward its evil culmination, the mystic became translated into the material, the spiritual degenerated into the teaching of matter, so that indeed in later Atlantean times the drugging of initiates was common, and the results always disastrous, this being one of the sorceries for which the Atlanteans in occult history have remained infamous. Yet even in the fifth root-race, due to the heavy Atlantean karma still weighing on us, many nations as late as historic times employed more or less harmless potations to bring about a temporary dulling or stupefying of the brain and nervous system — a procedure always vigorously opposed by the theosophic occult school which has never at any time allowed it.

Soma-loka (Sanskrit) *Soma-loka* [from *Soma* moon + *loka* world, place] The region or world of the regent of the moon, Soma; equivalent to *pitri-loka*, abode of the lunar pitris.

Somapas (Sanskrit) *Somapās* Those who drink or have drunk the soma juice. Soma itself was the mystical initiatory drink or potation of the ancient Hindus, which modern Orientalists suppose to have been the plant *Asclepias acida*. Originally soma had somewhat the same meaning that the mystics of other nations indicated by wine or mead. Hence the somapas are those people who, having become more or less infilled with the essence of their inner spirit, were mystically spoken of as having drunk of the soma juice, otherwise those in or under the ecstasy of intellectual illumination. In India the somapas are more or less restrictedly stated to be the especial spiritual progenitors of the Brahmins, but this idea is sectarian, for any human being, Brahmin or not, who had drunk of the inner wine of the spirit, or of the mystical soma of inner illumination, was a somapa.

Somatic Plasm [from Greek *soma* body] The substance or stuff of the body cells, as distinguished from the germinal plasm. In speaking of the modes of reproduction prevalent in the second root-race humanity and in parts of the third, this plasm, because of not containing the human germ, could not be the origin of the new races of the human races, but could only form the nucleus for the development of forms of organic beings evolutionally lower than human.

Somavansa (Sanskrit) *Somavaṁśa* [from *soma* moon + *vaṁśa* race] The lunar race or dynasty. See also CHANDRAVANSA

Somnambulism [from Latin *somnus* sleep + *ambulare* to walk] Sleepwalking; in this condition the

person moves about as if entranced, like a human automaton. Though unconscious, he may read, write, compose music or poetry, execute skilled movements, tread dangerous heights safely, etc.; he may not only carry out the various activities of his waking state, but may perform both physical and mental feats of which he is normally incapable. He may then return to his bed, still asleep, and upon awakening retain no memory of his strange experience.

The puzzle of this psychophysiological state is explained by the ability of the different selves of composite human nature to function consciously upon the several planes of his own being. For instance, the ordinary somnambulist may be conscious in his own astral body which then is reflexly stimulating the instinctual cerebellum which presides over bodily movements and functions. Such a case is analogous to the unusual performances of an entranced medium. As in common dreams at night, so in sleep walking, one part of the brain, say the cerebrum, may be asleep, while the cerebellum may be awake and active. In rare cases, however, the somnambulist may so far transcend his usual character that he evidently is functioning above the astral level of his nature.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Son-Sq

Son-kha-pa. See TSONG-KHA-PA

Son of Man Frequently used in Ezekiel, applied to Ezekiel himself as a seer, by the voice of the Lord addressing him. Also used in the New Testament by Jesus, applied to himself. Of Qabbalistic origin, it refers not only to the cosmic Heavenly Man ('Adam Qadmon), but also to an initiated human being, because of springing forth like a fine evolutionary flower from the human stem.

Jesus makes a distinction between God and the Holy Ghost on the one hand, and himself on the other: he is not a god, he is a son of man. "Whosoever speaketh a word against the Son of man, it shall be forgiven him; but whosoever speaketh against the Holy Ghost, it shall not be forgiven him" (Matthew 12:32; cf Revelation 1:13). In its cosmic mythical sense it is the equivalent of the first Manu of the Hindus, or Fetahil of the Gnostics. In several systems man as a race was regarded as the Third Logos: the monad, having attained the human stage of intellectual and spiritual self-consciousness, racially is the representation of the manifest or Third Logos on this earth (SD 2:25).

Sons of Fohat The vital intelligent powers in nature subordinate to fohat, being the seven distinct primary forces of cosmic electricity or magnetism. These seven sons are also fohat's brothers, for Fohat is forced to be born time after time whenever any two of his son-brothers indulge *in too close contact* — whether an embrace or a fight. To avoid this, he binds together and unites those of unlike nature and separates those of similar temperaments. This, of course, relates, as any one can see, to electricity generated by friction and to the law involving attraction between two objects of unlike, and repulsion between those of like polarity" (SD 1:145). The seven primary forces of cosmic electricity are only visible on our physical plane as physical effects, not as primary forces, and hence sound, light, color, magnetism, heat, cohesion, lightning, and so forth, are but its phenomena in the world of senses, the distant results of originating spiritual powers engendered by conscious causes.

Four electropositive sons of fohat are placed in the four Circles — the equator, the ecliptic, and the two parallels of declination (or the tropics) — to preside over the climates. “Other seven (sons) are commissioned to preside over the seven hot, and seven cold *lokas* (the hells of the orthodox Brahmins) at the two ends of the Egg of Matter (our Earth and its poles). The seven *lokas* are also called the ‘Rings’ elsewhere, and the ‘Circles.’ The ancients made the polar circles *seven* instead of two” (SD 1:204).

The seven sons of fohat, also referred to as the Seven Radicals, are sometimes represented as a six-pointed star with a dot in the center.

Sons of God An idea, containing divine as well as historic events, known among all ancient peoples. In ancient Biblical Hebrew, these sons of the Divine or sons of God are called the Benei 'Elohim (sons of the 'elohim) who in Genesis 6 “descend” in order to gain experience by incarnation in astral-physical bodies. They are the so-called fallen angels, one class of which corresponds to manasaputras. Also used for those evolved beings, or men graduated from lower classes of human experience, who at a primordial period descended and taught humanity the arts and sciences which were preserved and afterwards practiced by the initiates of the different root-races. Again, used of men of the seventh root-race, who are to be born of immaculate parents when they appear ages hence.

Elsewhere these sons of God are mystically spoken of as sons of Light, for the various hierarchies generalized under these phrases are all emanations from the manifest or Third Logos.

Sons of Light Rays of the manifest or Third Logos, the noumena or spiritual originants of all phenomena more directly connected with the light side of nature, the almost innumerable hierarchies of light. Issuing forth, they manifest themselves in respective hierarchies and in serial order on all the planes of cosmic matter, and are thus said allegorically to clothe themselves in the fabric of darkness. Darkness may signify the original Absolute Light which to all human cognizance seems darkness, or the various fields of cosmic substance or matter in which the luminous spiritual entities function and act, which by contrast with the light of the spiritual beings seems to be dark or obscure.

Astronomically sons of light may refer to the luminous celestial bodies — nebulae, comets, suns, and even to the regents of planets — the spiritual beings in and originally producing the various bodies in the universe.

Sons of the Shadow. See MAGIC

Sons of Will and Yoga Applied to the androgynous third root-race, before the separation of the sexes, which created by kriyasakti the Sons of Will and Yoga — the ancestors or spiritual forefathers of all subsequent arhats and mahatmas. After the separation of the sexes, they were invited to multiply as the rest of humanity did, but the Sons of Will and Yoga refused to do so until

the seventh root-race, when humanity will once more have acquired the power of spiritual-intellectual or immaculate reproduction. In another sense they are the nagas or good serpents, and mythology recounts the struggles which took place when the Sons of Will and Yoga, together with the last “unfallen” remnants of the third root-race, warred against the “fallen” Atlantean sorcerers sunken in the beguilements and illusion of gross material existence. They took refuge from the great cataclysm which brought about the end of the Atlantean continental system, in the “Sacred Island” in Central Asia, whose site is now hid in mystery and surrounded by immense desert wastes.

The Sons of Will and Yoga is also a title given in any root-race to those who carry on the original divine archaic tradition from age to age — the initiates of every race who thus form a group set apart, originating during the third root-race and continuing as a body of more or less steadily increasing numbers into our own day.

Sons of Wisdom. See MANASAPUTRAS

Son-Suns “The Rejected Son is One, the ‘Son-Suns’ are countless” (SD 1:103). Our own sun, because of certain cosmic reasons of destiny, was “rejected,” but the sun-sons or stars in general, are countless. Our sun is represented in an ancient allegory as being placed in the center of his kingdom, hence rejected, where he turns slowly around himself. Son-suns refer not only to the planets of the solar system, but likewise to the stars and other heavenly bodies, the term itself holding the key to the ancient teaching: “only a reflection of the Central Spiritual Sun, *Surya* [our sun] is the prototype of all those bodies that evolved after him” (SD 1:100).

Sooniam (Eastern Indian) Used by certain tribes or racelets of the Indian peninsula to describe a specific form of black magical practice; “a magical ceremony for the purpose of removing a sickness from one person to another” (TG 305).

Sophia (Greek) Wisdom. Used in a general sense by St. Paul, as when he speaks of earthly and heavenly wisdom; but by the Gnostics, especially Valentinus in his *Pistis Sophia*, it is the great Mother of all, corresponding to Sefhirah, Isis, Vach, divine wisdom, akasa, anima mundi, and the Holy Ghost (when considered as feminine). Sophia among the Gnostics was considered the feminine aspect of the Logos, whether the Second of the Third. The idea of a cosmic mother precedes that of the cosmic father, and Sophia is the daughter, the feminine Logos of the cosmic mother; and this feminine Logos has seven sons, constituting the ogdoad. In the human constitution, Sophia may be equated with buddhi or on a somewhat lower plane, with the buddhi-manas.

According to the *Pistis Sophia*, the power of Sophia resides specially in the solar Logos, whose planetary vehicle is Venus. This dual symbol has an upper and a nether pole, like akasa and the astral light. The lower pole is called Achamoth; Sophia-Achamoth is used sometimes in the sense of the lower aspect, and sometimes to denote the two poles together.

Sophia Achamoth In the Gnostic *Pistis Sophia*, the second or inferior Sophia, the personification of the productive force in nature — which on its lowest plane is the astral light. Sophia Achamoth is shown lost in the waters of chaos on her way to the supreme Light, and as being delivered by Christos — the masculine manifestation of the Cosmic Logos in this case. She was the mother of Ildabaoth, the proud and impure spirit, who rejected the spiritual light of the middle space, offered him by his mother, and set himself to create a world of his own; but he is obliged to call upon his mother to illumine the monsters he has made. In some passages in *The Secret Doctrine* Sophia-Achamoth is used to mean both aspects together, or sometimes even when the higher Sophia is intended.

Sorcerers [from Latin *sors* lot] Those using occult powers and arcane knowledge for evil purposes. It covers various degrees of black magic, from ignorant practitioners — such as the followers of Voodoo — to others who, with greater knowledge and a larger intellectual development, are often called black magicians instead of sorcerers, though these terms are virtually synonymous.

Sortes Sanctorum (Latin) [from *sors* lot + *sanctum* holy] Divination of the holy ones; the oracular responses, sayings, or prophecies of the oracles. In a more popular sense, the mere casting of lots, or the attempt to ascertain the future by methods which have been popular throughout the ages. Divination was sometimes resorted to in the early Christian Church, and sanctioned even by Augustine, with the proviso that it must be used only for pure and lofty purposes. One manner probably consisted in picking a passage in holy writ, after praying for divine guidance. In the ancient sanctuaries, however, a genuine divination was practiced by actual seers who based their operations upon mathematics and on the fact that nature foreshadows what is to come to pass, because all her processes are regulated by law, and are consistent sequences of phenomena connected in a causal chain from spiritual originants. Thus the ancient seer or forecaster, taking almost any natural occurrence, or a series of them, could from his trained faculties, forecast what the present series of events in nature were inevitably leading towards. To do this successfully one would have to be a genuine seer, which means employing the awakened intuition and spiritual clairvoyance which lie latent in most human beings.

Sortilegium (Latin) [from *sors* lot + *lego* choose] Divination by drawing lots; a practice of wide diffusion in antiquity, and constantly mentioned in literature of classical Greek and Latin as well as of other countries, and still practiced in some places. One form of it consisted in picking at random in the pages of a book, after due concentration of the mind on the object to be obtained. This was done by the Romans in their *sortes Virgilianae*, and the early Christians practiced it with the Bible, as a means of ascertaining the divine will or obtaining guidance. Augustine even sanctioned this practice, provided it was not done for worldly ends, and indulged in it himself. The word sorcery is also derived from *sors* through late Latin and French, and sortilege was often regarded as a form of sorcery — as indeed it was when the knowledge sought was desired for the purposes of evil. It is the motive in these matters which distinguishes the good from the bad. *See*

also DIVINATION

Sosiosh, Soshyos (Persian) In Zoroastrianism, the deliverer of the world, who shall come on a white horse in a tornado of fire. According to the Avesta (Yast 19:89), he will be born from a maid near Lake Kasava; he will come from the region of the dawn to free the world from death and decay, from corruption and rottenness — ever living and ever thriving, the dead shall rise and immortality commence. This prophecy corresponds to that of the coming of Maitreya-Buddha, or of the Kalki-avatara of Vishnu, also repeated in the Christian Revelation of St. John.

Sossus (Chaldean, Babylonian) A cycle of time, given by Berosus, the Chaldean astrologer at the temple of Belus at Babylon, as a period of 60 years. *See also* SAROS

Sotapanna (Pali) *Sotāpanna* One who has entered the path of Sotapatti, the stream to nirvana, the first of the four paths that lead to liberation. *See also* SROTAPATTI

Sotapatti (Pali) *Sotāpatti* Equivalent to the Sanskrit *srotāpatti* — the first of the four paths that lead to nirvana; the other three paths in Pali are sakadagamin, Anagamin, and arahatta.

Sothic or Sothic Cycle In ancient Egypt, a cycle formed by compounding the rounded year of 365 days with the Sothic year of 365 1/4: the two kinds of year, running concurrently, would coincide after 1,461 of the former and 1,460 of the latter. The Sothic year was fixed as the interval between two successive heliacal risings of Sothis (Sirius), which at that time took place near the summer solstice. Its length is an approximation to the tropical year and is the same as the Julian year. The epoch from which Sothic cycles were dated is not known, but the Roman scholar Censorinus (3rd century) states that a cycle ended 139 AD.

Soul Generally, the manifesting vehicle or garment in which an ego clothes itself. First in serial order is the monad, on whatever plane and of whatever class; its vehicle or carrier is its efflux, the ego; which in its turn clothes itself in its own vital garment which is soul. Cosmically, therefore, soul is the vehicle or upadhi of spirit. As the monad creates for its manifestation successive vehicles, soul in its widest sense includes all these, even the physical body; but it is usually used in an aggregative sense to designate the intermediate nature, excluding the monad on the one hand and the physical body on the other. Such division produces the triad of spirit, soul, body, where soul is the vehicle of spirit, and body is the vehicle of soul and spirit. The soul is evolved by experiences on different planes. In itself it is merely a vehicle; but, informed by the monad, through the latter's ego, it is a living conscious entity. The broad meaning is particularized with qualifying adjectives such as animal soul, human soul, etc. Saying that every living thing — animal, vegetable, or mineral — has a soul, refers to the intermediate nature of the being, of which its physical body is the vehicle. Souls, like bodies, are aggregates of innumerable subordinate lives or life-atoms of various orders. Equivalent to the Greek psyche and the Hebrew nephesh.

Soulless Beings Men and women who are still connected, but usually quite unconsciously, with

the monad, the spiritual essence within them, but not *self-consciously* so; they live very largely in the brain-mind and in the fields of sensuous consciousness. “We elbow soulless men in the streets at every turn,” wrote Blavatsky. This does not mean that those people have no soul, but that the spiritual part of these human beings is unable to manifest itself through the unawakened brain-mind and feelings. They are animate humans with an animate working brain-mind, but otherwise soulless in the sense that the soul is insufficiently expressive. This is what Pythagoras meant when he spoke of the living dead, or the spiritually useless portion of mankind. They live in the ordinary mind and in the body, thinking only of and in these small and restricted spheres of consciousness. Such “soulless” people are very numerous. Soulless beings are not to be confused with lost souls.

Soul of the World Translates the Latin *anima mundi*. In its highest aspect it is akasa and the seat of nirvanic conditions; in its lower aspects it is the astral light and the physical world — the last both its physical carrier and its grossest expression. *See also ANIMA MUNDI*

Sound In physics, a name for a group of phenomena, and in common speech auditory sensations; but in theosophic philosophy, sound is an attribute of one of the fundamental cosmic elements, akasa. Being such, sound becomes more than a mere name describing an attribute: it is an actual efflux or production of the universal working of the akasic fluid. Hence, in a sense, it may be said to be an entity, a real force in nature, and the said phenomena and sensations only some of its effects.

Like the terms light, heat, air — all of which are entities in occultism — sound will have different shades of meaning according to the particular manifestation or plane concerned. In its most fundamental meaning, sound is the characteristic effect or spiritual efflux of the Third Logos, the upper end of that septenary ladder of being which constitutes the one manifested Life. In this sense akasa, considered as one of the tattvas (elementary substances), may be said to be the third cosmic Logos; although in a more universal sense akasa is the universal substantial space from which emanates the first cosmic Logos of an individual cosmic hierarchy, such as our solar system. As such, this akasic Third Logos, whose characteristic production is sound, occupies the apex of a triangle, combining both the active and passive potencies of creative energy. Logos is Greek for Word, what the Latins called *Verbum*, including both forms and vibratory force. Sound is therefore a tremendous occult creative power: it called worlds into being out of chaos, as is said in every cosmogony. This power descends to man, through his divine ancestry, as well as from the higher parts of his constitution, and the power of sound is known to adepts and used by them, being called *mantrika-sakti*.

Always and everywhere the power of mantras and incantations has been recognized. Orators use mantras — they call them slogans — with instinctive knowledge of their efficacy, and set afloat phrases that stir the public mind and strongly influence events. Often in daily conversation we instinctively forbear to speak a name or a word, though we would make no objection to writing it.

Sound is a property of akasa, the primary of aether, sometimes called space. In the list of the five commonly accepted tattvas, senses, and organs, akasa-tattva is at the top, corresponding to sound and hearing. The aether of space has seven principles and is the vibratory soundboard of nature in all its seven differentiations. Sound is directed in its operations by fohat, being one of seven radicals.

The power of sound is connected with rhythmic vibration and sympathetic vibration; a powerful voice, sounding the right tone, may shatter a wineglass; and the imagination suggests dangerous applications of this principle. To dabble experimentally in it, or to follow the teachings of pseudo-occultists, would be like an ignorant person meddling with the switches in a powerhouse.

South Pole In a general cosmic sense, any nether pole wherever situated. However, the different hells mentioned in ancient literatures have other meanings, and are not necessarily connected with the south or nether poles of the celestial globes.

From immemorial antiquity occultly it was taught that the south pole was the vent of the earth, and hence the abode of elemental entities, whether terrestrial or cosmic, or of inferior kinds. Thus it was sometimes called the Pit. "The two poles are called the right and left ends of our globe — the right being the North Pole — or the head and feet of the earth. Every beneficent (astral and cosmic) action comes from the North; every lethal influence from the South Pole. They are much connected with and influence '*right*' and '*left*' hand magic" (SD 2:400n).

Another teaching of theosophy in regard to the poles is that all civilizations originate in the far north of the globe, and through the revolving minor ages of a root-race gravitate gradually and steadily towards the south pole as they approach their end. *See also* POLES, TERRESTRIAL AND CELESTIAL

Sozura [from Greek *sozein* save + *auron* tail] Tail-keeping; a term coined by Haeckel, not generally recognized today, for a group of tailed batrachians, which lose their gills but not their tails when adult; in contrast to the anura, which have no tails, and the sozobranchia, which lose their gills.

Space Usually the universe as perceived by our physical senses. It is disputed whether space exists apart from objects or is a property of objects, and also whether it is objective or subjective. Such difficulties arise from our attempt to abstract extension from the reality of which it is an aspect, just as we attempt to abstract matter and energy. The physical basis of our universe appears under these three aspects, and the attempt to conceive each of the three as separate existences and to construct the universe out of them is to court contradiction and to proceed in the inverse order.

In most arguments about the nature of space, space is unconsciously assumed at the outset of the inquiry, so that the reasoning becomes viciously circular. Is space the ultimate residue left after we have removed everything conceivable? In that case how can we define it in terms of anything which is supposed to be derived from it? We must either leave it undefined, as a primary

postulate, or else define it in terms of something which lies beyond the physical plane altogether.

Again, the question whether the dimensions belong to space or to material objects arises from a false separation between these two, so that we speak of objects being *in* space, just as we speak of life as being *in* matter. We think of space as an absence of matter, as we think of darkness as an absence of light, and silence as absence of sound; and having thus created vacuums we proceed to fill them. In the view of occultism it would be nearer the truth to say that light is the absence of darkness, sound the absence of silence, and matter a form of the presence of space; and this is true in the sense that those things which appear to us most real are derived from those which seem to us most unreal, because not immediately physically perceivable. In theosophy, space is the infinite, eternal background of Being, Being itself, the ever-lasting substratum of, as well as the presence of, the universe; its apparent vacuity is due only to its lack of physical qualities to which our senses respond, and also to its perfect unity and uniformity. Space is living, incomprehensibly conscious, and hence a divinity; it is the only *real* world, while our manifested world born from and in it is a *mayavi* (illusory) one.

Theosophy, regarding the physical universe as merely one of many planes of kosmos, applies the term space to a much larger range. Yet it has the same characteristic meaning in all its applications: it figures, for instance, as one aspect of the trinity of space, energy, matter which is equivalent to the primordial unity. The fundamental hypostases are all derivative from ever-enduring, frontierless space, and Beingness is symbolized by space, which no mind can either exclude nor conceive, and motion. In this conception are combined abstract space, motion, and duration.

Space is symbolized by the circle; a central point denotes spiritual monadic activity arising within abstract space. It is equivalent to akasa or aether, water or the waters; Chaos as the spatial deeps. Sometimes space in its manifestation is represented as a serpent with seven heads or as the great sea or deep. Occasionally called *aupapaduka* (parentless), because it is primary and the source of all, it is spoken of both as *mulaprakriti* and as *parabrahman*. In its manifested aspect it is bright space, son of dark space, the former being the ray dropped into cosmic depths. Parent space is the eternal ever-present cause of all — the incomprehensible divinity, whose invisible robes are the mystic root of all matter and of the universe. Space is called Mother before its cosmic activity, and Father-Mother at the first stage of reawakening of manifestation.

In this connection a very clear distinction is drawn between abstract space, the limitless, frontierless, beginningless, and endless encompasser, container of all the various manifested spaces, which as individuals appear from and in its fathomless womb; and these latter spaces which are its offspring and which are collectively and individually the spatial ranges comprised within the boundaries of any manifested universe, such as a galaxy or solar system. Thus, we have the boundless spatial All or abstract space, and the innumerable universe or limited spaces arising

within it. The former is absolute infinity and eternity; the later are the innumerable, relative spaces or universe scattered over the fields of the Boundless, called the spawn of the Great Mother.

Physical space is said to have six directions, the four cardinal points plus the zenith and nadir; or eight directions given by the axes joining the opposite corners of a cube. The six and the eight combine in the cube and octahedron. Nothing in the definition of geometrical space excludes the possibility of other spatial constructions, coexistent with our space and interblended with it and with each other. This helps in understanding such matters as chains of globes — which, when we attempt to represent them by drawn diagrams, seem so confusing and contradictory — and the manner in which other planes of consciousness and of objectivity may be related to the physical.

Space-time A concept taken over by Einstein from Minkowski, in which time (considered as a vector) is no longer regarded as independent of spatial extension, but is made a fourth coordinate in determining the position of an event. Our ordinary threefold spatial extension is a concept due to our physical experience, so that there is no reason why we cannot adopt a concept of another order if we find it suits our purposes better. We can view the universe under the form of a threefold spatial extension and an independent time, or we can view it under the form of a four-dimensional continuum, wherein a coordinate representing position in time takes its place along with three others representing position in space. The points of light form distant stars which we view in the sky are separated from each other not only by spatial distances but also by distances in time, owing to the time taken by light to travel. Space-time is a mathematical conception, useful in certain measurements demanded by modern science, but not answering to anything of which we can form a clear mental image. It is difficult to picture a line drawn from the American President in Washington to Cicero in the Roman Forum; or vice versa, but such a line in either direction would according to modern mathematical theory traverse space-time.

Spark A scintilla or atom of fire. Fire in its septenary or denary forms exists on all planes, so that we hear of sparks in various senses. Atman is the homogeneous divine spark which radiates in millions of rays, in their aggregate producing the primeval seven. The same idea in more mechanical form is found in Lucretius, who says that all fires come from the one scintilla. Sparks may be worlds, monads, or even atoms, though the word usually means the jiva within the atom. The divine spark hangs from the flame by the finest thread of fohat and journeys through the seven worlds of maya, passing upwards in its evolutionary course through the animate kingdoms. In man it is the monad in conjunction with the aroma of manas, and is called a jiva; it is that which remains from each personality and hangs by a thread from atman. The personalities are like the sparks that dance on moonlit waves — fleeting reflections of their spiritual prototype.

With the Hebrews, the 'elohim, sparks, and cherubs are the devas, and fires and flames, and the rishis, the rudras and the 49 agnis or fires. In the Chaldean Book of Numbers, the Worker's Hammer strikes sparks from the flint (space), which become worlds. The sparks are the seven

wicks of the divine flame. Terrestrial creative and generative fire are created by friction, and this is the analog of the celestial fire latent in, the union of buddhi and manas.

Spark, Sacred Used in the Stanzas of Dzyan in reference to the early history of the human race, and particularly to its intellectual evolution. It means the manas principle, which was awakened in man on this globe by the manasaputras at about the midpoint of the third root-race. The fashioners of astral and physical man, the barhishad pitris, had brought the physical human being in evolutionary development to the point where mind could be contained and function therein: beings from an intellectual line of cosmic evolution, the manasaputras, awakened the intellectual spark in early humanity, and man thereafter became a reasoning, thinking, and intellectually and morally responsible entity.

Some races are said to be devoid of the sacred spark (SD 2:421), for they are still relatively unenlightened. Yet this condition is not radical but evolutionary only, for even these portions of the human race have intellect latent, though not evoked; indeed this last remark applies with equal truth to all the lower kingdoms of nature — the animal, the vegetable, and the mineral. *See also* FIRE, SACRED

Sparsa (Sanskrit) *Sparśa* [from the verbal root *sprś* to touch] The sense of touch; as one of the active energies or seats of action or sense in the human constitution, the seventh nidana; looked upon distributively and as a thing in itself, it is also one of the tanmatras or essential senses.

Sprul-pahi-sku. *See* TULKU

Specter [from Latin *spectrum* an appearance, apparition, image] Any apparition, although most commonly associated with the dead; rarely used in connection with living persons, as when the adept's mayavi-rupa is seen, or the linga-sarira (model-body). Apparitions appearing in the proximity of cemeteries, etc., are the decaying remnants of kama-rupas, which the ancients commonly called shades (Latin *umbræ*), in English called ghosts and spirits.

Speech The vocal expression of thought in language, which implies the existence of mind which has reached self-consciousness on this plane, was not fully developed in mankind until the fourth root-race. The first root-race was devoid of mind on our plane; the second had a sound language of vowels, and its speech was largely onomatopoeic in character; the third developed in its beginning a speech which was little better than what are now known as animal sounds, but towards its end the first approximately fully developed human beings had monosyllabic speech, after the awakening of their minds by the manasaputras. Before that there was communication by what may be called thought-transference. After this monosyllabic speech, came the agglutinative, spoken by some Atlantean races, and then the inflectional language of the fifth root-race, represented by Sanskrit and its derivatives, and closely related languages such as Greek and Latin.

The great number and variety of languages is evidence of the great antiquity of the human race

and its extensive division and subdivision. The elaborateness of languages spoken by so-called primitive peoples, especially their frequently highly complicated and extensive vocabulary, for which their modern representatives have but little use, shows that they are remnants of once highly civilized peoples.

That the priests of Atlantis addressed their gods in the language of those gods, is a mystical statement: they addressed the regents of the elements in the sound-language appropriate to the particular element. Vach is the mystic speech by which occult knowledge is communicated to man. *See also* LOGOS; MANTRA; SOUND

Speanta Armaiti (Avestan) **Spandarmatz** (Pahlavi) **Spandarmaz** (Persian) One of the seven Amesha Spentas, the reflection of the first three male Amesha-Spenta in the supreme world; in man, the link with the source of intellect. She is the life-giving breath of love that embraces the whole. In the enumeration of the ethical qualities attributed in the Avesta to these intelligences, divine piety is watched over by Spenta Armaiti. When personalized, she became the goddess or genius of the earth. The *Vendidad* refers to her as the fair daughter of Ahura-Mazda. The Amesha Spentas correspond with the cosmocratores, the builders, and the Qabbalistic Sephiroth.

Spermatik Logos The Stoics taught that things do not exist solely or originally by reason of some definite end to which they are tending, but because of something living and acting within and through them, the essential law of evolutionary growth. This inner power they called the logos spermatikos (Greek for spermatik or seed-logos), the monad of individuality in living and evolving beings. It is the unfolding by such a logos spermatikos of its inherent or characteristic qualities, powers, and functions which bring about the evolutionary growth of the vehicles of consciousness in and through which the logos lives and works. It corresponds to the particular monad of each entity which contains its svabhava, and hence determines all its subsequent destiny, particularized individualizations, and forms.

Sphere Conventionally, the geometrical representative of the manifested one All, combining unity, comprehensiveness, simplicity, and symmetry; whereas the ever-unknown frontierless womb of boundless space is conventionally represented by the zero. All the sections of a sphere are circles; its surface is an infinite plane, having neither boundaries nor parts and therefore measurable perhaps solely by the rules of geometry. A balance of centrifugal and centripetal forces produces the sphere, as in a soap bubble. Its center and its surface represent opposite poles, between which radiate expansive and contractive energies. The earth is virtually a sphere. The heavens, the limits of our vision, form the surface of an ideal sphere, whose center is everywhere, and whose periphery is nowhere.

Also used in the sense of a region. Its meaning has analogies with the ideas connected with the circle.

Spindle In biology, a fusiform arrangement of fibrils which appears at the nucleus of a cell that is

about to divide; for in this early stage of the development of a germ-cell the nucleus forms a double cone which resembles a spindle.

Sphinx As a mystical figure, one of the emblems made when the human race fell into materialism, and sacred knowledge had to be withdrawn to avoid profanation. The Sphinx preserves a mystery without revealing it to those not qualified to know. This mystery, among other things, is connected with the evolution of the human race from the spiritual and, at a far later date, from the androgynous race. Sphinxes are found in Egypt, Assyria, and Greece, usually man-lions, with either male or female human heads, with or without wings. Oedipus did not solve the riddle of the Sphinx, but in a sense profaned it. Sacred symbols were anthropomorphized, and the Sphinx leapt into the sea to preserve her secret wisdom.

The Great Sphinx of Egypt, a recumbent man-lion 188 feet long hewn out of solid rock, is the emblem of Hor-em-akhu (Horus in the horizon).

Spiral The path of a point (generally plane) which moves round an axis while continually approaching it or receding from it; also often used for a helix, which is generated by compounding a circular motion with one in a straight line. The spiral form is an apt illustration of the course of evolution, which brings motion round towards the same point, yet without repetition.

The serpent, and the figures 8 and ∞ , denoting the ogdoad and infinity, stand for spiral cyclic motion. The course of fohat in space is spiral, and spirit descends into matter in spiral courses. Repeating the process by which a helix is derived from a circle produces a vortex. The complicated spirals of cosmic evolution bring the motion back to the point from which it started at the birth of a great cosmic age.

Spirit Cosmically, the homogeneous emanation from the universal cosmic monad; in man, the direct emanation of his spiritual monad, the immortal element in us which never was born and which retains through the mahamanvantara its own quality, essence, and characteristics. It sends its ray through the laya-centers of all the various sheaths of consciousness-substance, and is itself a ray of the all-spirit, and, again applied to man, is used specifically for the union of the higher part of manas with atma-buddhi.

“The lack of any mutual agreement between writers in the use of this word has resulted in dire confusion. It is commonly made synonymous with *soul*; and the lexicographers countenance the usage. In Theosophical teachings the term ‘Spirit’ is applied solely to that which *belongs directly to Universal Consciousness*, and which is its homogeneous and unadulterated emanation. Thus, the higher Mind in Man or his *Ego* (Manas) is when linked indissolubly with Buddhi, a spirit; while the term ‘Soul,’ human or even animal (the lower Manas acting in animals as instinct), is applied only to Kama-Manas, and qualified as the *living soul*. This is *nepshesh*, is Hebrew, the ‘breath of life.’ Spirit is formless and *immaterial*, being, when individualised, of the highest spiritual substance — *Suddasatwa* [Suddha-

sattva], the divine essence, of which the body of the manifesting *highest* Dhyanis are formed. Therefore, the Theosophists reject the appellation ‘Spirits’ for those phantoms which appear in the phenomenal manifestation of the Spiritualists, and call them ‘shells,’ and various other names. (See Suksham Sarira [sukshma-sarira].) Spirit, in short, is no *entity* in the sense of having form; for, as Buddhist philosophy has it, *where there is a form, there is a cause for pain and suffering*. But each *individual* spirit — this individuality lasting only throughout the manvantaric life-cycle — may be described as a *centre of consciousness*, a self-sentient and self-conscious centre; a state, not a conditioned individual. This is why there is such a wealth of words in Sanskrit to express the different States of Being, Beings and Entities, each appellation showing the philosophical difference, the plane to which such *unit* belongs, and the degree of its spirituality or materiality. Unfortunately these terms are almost untranslatable into our Western tongues” (TG 306-7).

When paired with matter, it denotes the active, positive, or energetic side of dual manifestation; and saying that spirit and matter are one means they are one essentially, being different only as aspects of one fundamental unity. In many languages the same word means both spirit and breath or wind; spirit is related to air among the subtle cosmic elements (maha-tattvas or mahabhutas).

Spirit, considered as the cosmic Ens (being) or Brahman is not the cosmic primordial root, but its first manifestation, corresponding to the Greek First Logos — either parabrahman-mulaprakriti, when applied to the galaxy; or Brahman-pradhana when applied to our solar system.

Spirit(s) Although of a wide and general use, in theosophy it means incorporeal intelligences of a high degree, such as dhyanis or planetary spirits, those hosts of arupa (bodiless) monads or egos which spring more or less directly from the universal consciousness or cosmic spirit. Thus the spiritual monad in man is, strictly speaking, a spirit as derivative directly from the cosmic intelligence, mahat or mahabuddhi manifesting through mahat. Spirits exist in almost limitless ranges of hierarchical classes, highest, intermediate, and lower.

A great distinction is drawn between spirit and soul, the vehicle of an ego. Theosophy objects to its use for astral kama-rupas of the seance room.

Spirit-hyle [from Greek *hyle* matter, stuff] The Second Logos, Father-Mother, spirit-matter, Purusha-prakriti. Hyle was used by certain Greek philosophers to signify original cosmic spirit-stuff, and therefore is equivalent to the Sanskrit pradhana, or in a higher, more spiritual essence, mulaprakriti (root-substance). Thus hyle or spirit-hyle is the primordial quasi-conscious matter-substance of cosmic space, both before cosmic manifestation begins and through the entire period of the cosmic manvantara — the cosmic spiritual substantial background, or Mother of space. Again, spirit-hyle, in its prakritis aspect, is the spiritual sediment of surrounding universal chaos, the great deep of cosmic consciousness. Thus it is the primordial element-principle, out of which an objective universe is formed, and into which it again sinks when the cosmic manvantara ends,

only to reissue forth at the end of the cosmic pralaya.

Spirit-kings Incarnated devas or demigods become human, mentioned as a dynasty of the Lemuro-Atlanteans. These monads, manifesting as devas, assumed bodies to rule over the less evolved men of their own period; but because they descended into matter and therefore were manifesting as rupa beings, they had the possibility of falling into error or evil, as happened historically with more than one who took the left-hand path and corrupted their Atlantean subjects. The dynasty of the spirit-kings, like the general run of the Atlanteans, were divisible into those who followed the right-hand path, and those who followed the left-hand path. The former were called Sons of Light, and the latter Sons of the Shadow.

Spirit-man Corresponds to the spiritual ego, spiritual soul, spiritual self, or human spirit; for the higher mind or manas united with its spiritual prototype buddhi. A sharp contrast is drawn between the spirit-man and the human soul, the clothing or vehicle of the human spirit formed of kama-manas. The spirit-man is unconditionally immortal for the duration of the solar manvantara, whereas the human soul is conditionally immortal.

Another name for the spirit-man is monad used in a generalizing sense, which becomes confusing when one remembers that in the human septenary constitution there are several monads coordinately evolving. There is the divine monad, virtually atman; the spiritual monad, buddhi-manas overshadowed by atman; the human monad or reincarnating ego, the higher manas in conjunction with the aroma of kama and overshadowed by atma-buddhi; then on still lower scales of evolutionary unfolding come the animal monad seated in the manas-kama; the astral monad seated in the prana-lingasarira; and finally the physical monad, the lingasarira-sthulararira under the gentle efflux of the higher principles, which accounts for the permanency, albeit changeability, of the physical person. In reality every portion of human pneumatology is a monad, each one producing all that any other produces, each lower being the vehicle or seat of the next higher, and the higher ones being merely more unfolded than the lower ones.

Spirit-soul Atma-buddhi, the spiritual monad, the monadic essence. Buddhi could have no existence if divorced from atman, its origin as well as its inner vivifying principle; and atman without buddhi would be unmanifest on all planes lower than itself. Spirit-soul is therefore the highest manifested entity in kosmos, otherwise called mahabuddhi, and the spiritual monad in man is a direct derivative therefrom.

Spiritual Ego The spiritual monad, the first vehicle of the atman, divine ego, or jivatman. It expresses itself through the spiritual soul or buddhis. Also called the spirit-man.

Spiritual Monad The second monadic center in the descending scale of intimately related human monadic centers; in the septenary constitution, atma-buddhi-manas, with an emphasis on the buddhi-manas, atman being the divine monad. It is man's individual monad, the spiritual center of his own stream of consciousness, in the heart of which abides his inner god or "Father in heaven."

“The human constitution is a composite or compound, and may be figured . . . as a stream of consciousness flowing forth from the deathless Center or Spiritual Monad, which last is at once the immortal Root of the human being and his Essential Self” (ET 384 3rd & rev ed). It corresponds to the spiritual self or jivatman.

After death, when the second death occurs, man’s consciousness is withdrawn from the higher astral regions into the next superior sphere or plane — the human monad is indrawn into the spiritual monad. Then occurs the state of devachan.

Spiritualism Properly, the philosophy, religion, or pneumatological science held by those who believe in the universal spirit as the cosmic originant of all the hierarchies of evolving monads; its opposite is materialism. Spiritualism is “in philosophy, the state or condition of mind opposed to materialism or a *material conception* of things. Theosophy, a doctrine which teaches that all which exists is animated or informed by the Universal Soul or Spirit, and that not an atom in our universe can be outside of this omnipresent principle — is *pure* Spiritualism. As to the belief that goes under that name, namely, belief in the constant communication of the living with the dead, whether through the mediumistic powers of oneself or a so-called *medium* — it is no better than the materialisation of spirit, and the degradation of the human and the divine souls. Believers in such communications are simply dishonouring the dead and performing constant sacrilege. It was well called ‘Necromancy’ in days of old” (TG 307).

The modern movement which began about the middle of the 19th century, mainly with the Fox sisters, embraces a large range of differing beliefs, so that any strictures directed against certain phases of it may justly be resented by those to whom such strictures do not apply. But the characteristic doctrine which identifies Spiritualism or astralism as such, is the belief that it is possible for the living to communicate with the departed spirits of the deceased. Theosophy, however, holds that at death the personality disintegrates, the individuality of the person passing into the devachanic state, while its lower components gradually fade out in the kama-loka. It is impossible to obtain communications with the ego in devachan, except when a purely impersonal love of one human being for another reaches into the devachanic condition and comes into spiritual rapport with the devachani. A far lower rapport may be established with the astral or kama-lokic remains which have been left behind to disintegrate in the lower regions of the astral light.

All the apparent proofs of identity of “spirit” can be accounted for otherwise than by supposing the actual presence of the departed individual in the seance room. Such communications as are received evince no knowledge beyond that which we already have, and show no signs of emanating from a high source — and almost invariably such communications are trifling and paltry. Mediumship and seances are most harmful practice, as they open the door to the entry of pernicious obsessing influences from the lower astral realms. Moreover such practice may

obstruct and retard the natural decomposition of the discarded lower elements of the deceased, and thus keep alive his kama-rupa beyond the term of its natural astral death. The appeal of astralism is very powerful to those who feel convinced that they have thereby obtained assurance of immortality and of the continued existence of their lost loved ones.

Spirituality Considering spirit and matter as contrasted aspects in the evolutionary process, as opposite poles in the kosmos, this word applied to the higher or causal aspect. The course of evolution, the monad begins as an unself-conscious god-spark and ends its evolutionary career in any one universe as a self-conscious god. The monads pass from spirit into matter, and then back again to spirit with the addition of evolved intellectual self-cognition or self-consciousness. So far as the rounds and races of our earth is concerned, the first two were characterized by direct but non-egoic spiritual qualities of consciousness, while in the third intellectuality and finally materiality began strongly to make their appearances, reaching the final evolutionary point for our planet in the fourth, when spirituality was nearly submerged by materiality. But these terms are relative, having varying meanings as applied to different planes and differing conditions of the rounds and races. Absolute spirituality or perfection in its very nature implies the loftiest type of spiritual and intellectual activity, with the relative quiescence of the enshrouding sheaths of consciousness. The distinction is to a certain degree that drawn between absolute thought or the All as opposed to the ratiocinative activity of mental action, which involves limitations and matters (SD 2:490).

Spiritual Powers Generally used in contradistinction to psychic powers; for while psychic powers pertain to the intermediate, psychomental part of human nature, the spiritual powers pertain to the higher part. Hence the psychic powers, precisely because intermediaries, may become the instrument either of our higher or of our lower nature, being vehicular products in themselves and subject to influx from above or below. The spiritual powers cannot be used for selfish and personal ends because their svabhava is universality and impersonality, attributes which link man with the surrounding universe. They emanate from the spiritual monad, atma-buddhi. We are able to use spiritual powers when our manas acts in conjunction with the spiritual monad. Such powers cannot be evoked by personal ambition or any form of acquisitiveness, because they do not rise above the intermediate or psychic nature and make no appeal to the spirit above; in fact, spiritual powers are the fruit of renunciation, of the replacing of the personal with the universal, the resigning of the limited for the virtually limitless, the giving up of the small for the great. Spiritual powers consist in a clear intuition of the truth, leading to right conduct, an ability to help and teach others — the powers which we attribute to a Buddha or Christ.

The eye of Siva or Dangma, with its all-penetrating vision, must be included among spiritual powers; the siddhis and saktis given in various enumerations comprise some that are spiritual — in fact the ones of permanent value are all spiritual. Since psychic powers are in themselves intermediaries, veils of what is within and behind them, they should become adjuncts to spiritual

powers. Sharp lines of demarcation cannot be drawn in a universe whose very structure involves virtually infinite variety, and interblending, of interacting life and lives.

Spiritual Principles Atma and buddhi are the two essentially spiritual principles in man; and manas is to be classed as a spiritual principle when it is the vehicle for atma-buddhi, although manas itself is monadic in essence, and therefore at its heart — but not in its present manifested condition or evolutionary state — is as spiritual as the two former. There is an atman and a buddhi of the manas itself, and belonging to the manasic principle itself; and it is precisely this svabhavic atma-buddhi in the manas which allows the atman and buddhi principles to coalesce with the manas and use it.

Spiritual Self Used for buddhi-manas, the spiritual monad.

Spiritual Soul Buddhi; in man, typically the immortal individual monad. The first vehicle of the atmic monadic ray is the spiritual ego, a copy in miniature of the monad, individualized throughout manvantaric evolution. The second vehicle is the spiritual soul, the bearer, veil, or carrier of the spiritual ego.

Spiritus (Latin) Breath, air, spirit; in medieval European alchemy it corresponds with fire and sulfur in the triad of sulfur, mercury, and salt — or spirit, soul, and body. With the Nazarenes, the female aspect of the anima mundi, the manifested part as contrasted with its unmanifest or divine aspect.

Spleen One of the abdominal viscera, located on the left side just below the diaphragm. In medicine, it has been variously studied as a blood-making organ, a special lymph gland, etc., but its exact role has always puzzled the physiologist. However, its intimate relations with the fluidic currents of the vascular, lymphatic, and digestive systems hint at its organic astral character, as the mobile watery or fluid element corresponds to the astral phase of matter. Thus, the spleen is an organic medium or channel for the transference of the pranic life-currents throughout the physical body, and the physical seat of the astral model-body or linga-sarira, the vehicle of the life principle; likewise it is the especial organ through which manifests the svadhishshana chakra. It has a physiological place in the vital borderland of metabolic changes where food stuffs and nature forces are transmuted into the regenerating energy and substance of human or animal tissue. This organ has its own rhythmic action which, as reported, “seems to arise from some intrinsic nervous mechanism.”

The leukocytes born in the spleen are analogous, in their spherical, nucleated, colorless, ameboid, and regenerating character, to the bloodless, astral, rounded form of the second root-race which reproduced its kind by spores or budding. This early type of racial imbodiment continued through the transition stages which led up to the physicalization of the grosser layers of the astral body when the third root-race evolved into red-blooded, sexual, organized form not unlike the present humanity.

Spontaneous Generation In science, abiogenesis (the production of living from nonliving matter), archeogenesis, or archebiosis; in theosophy, however, there is no nonliving matter, for even the rocks are but concreted living monads, which because of their temporarily passing through this state of concretion do not manifest the innate powers and functions of vitality which they do on inner an invisible planes. Thus, the only distinction between what is popularly called living and nonliving matter is the differences in organic development on this physical plane. Everything is always alive, life self-expresses itself everywhere — in organized beings of flesh, in the vegetation, and in the rocks. To the occultist magnetism and electricity, forms of radiation, are but manifestations of cosmic vitality; and even the atoms and their component particles, being themselves electrical in essence, are but life particles.

In now forgotten epochs of past history, spontaneous generation was on earth the most common way by which life broke through into this plane from the inner invisible worlds.

“Should spontaneous generation be indeed proven impossible in our present world-period and actual conditions — which the Occultists deny — still it would be no demonstration that it could not have taken place under different cosmic conditions, not only in the seas of the Laurentian period, but even on the then convulsed Earth. . . .

“If spontaneous generation has changed its methods now, owing perhaps to accumulated material on hand, so as to almost escape detection, it was in full swing in the genesis of terrestrial life” (SD 2:150-1).

Every point in space, every particle of even material substance, is a living being or life-atom; such a life-atom finding itself in proper physical surroundings on our own plane, and if impelled by its own karmic urge, will begin to express itself on this plane and to gather nourishment to itself, first by osmosis from the surrounding ether or air, and finally from the environing matter of the place where it is. Now if such a life-atom thus appearing on our plane has the evolutionary history behind it enabling it to develop into a being of high order it will so continue to grow, barring accidents or similar preventive causes; if again its karmic urge working from within outwards will take it no higher than a being of intermediate class, such as an animal or plant, it will express itself as an animal or plant, or if its urge from stored up karma can take it no higher on the evolutionary ladder than the mineral kingdom on this plane, then it will express itself as a mineral atom. What actually takes place in the history of the life-germ even on earth today, as in the growth of the human seed into the embryo and thereafter into the human child, is but a more complicated picture of what spontaneous generation was in the early history of our globe, when almost any point of physical matter was quivering with life and actually anxious to self-express itself through evolutionary unfolding as a living being. Spontaneous generation, therefore, is simply growth appropriate, living beings will begin to evolve into expanding growth in almost any appropriate medium.

Spook [cf German *spuk*; Dutch *spook* etc.] A ghost, apparition, or hobgoblin, in theosophical writing applied to elementals elementaries, kama-rupic shells, and astral images.

Spring. See SEASONS

Square In theosophical literature, occasionally used to represent the quaternary, the four lower principles of nature or of man, the triangle standing for the upper triad, the three higher principles in the sevenfold classification. the Logos “is the apex of the Pythagorean triangle. When the triangle is complete it becomes the Tetraktis, or the Triangle in the Square, and is the dual symbol of the four-lettered *Tetragrammaton* in the manifested Kosmos, and of its radical triple RAY in the unmanifested, or its *noumenon*” (SD 2:24).

As to the cross inside of the square, “The philosophical cross, the two lines running in opposite directions, the horizontal and the perpendicular, the height and breadth, which the geometrizing Deity divides at the intersecting joint, and which forms the magical as well as the scientific quaternary, when it is inscribed within the perfect square, is the basis of the occultists. Within its mystical precinct lies the master-key which opens the door of every science, physical as well as spiritual. It symbolizes our human existence, for the circle of life circumscribes the four points of the cross, which represent in succession birth, life, death, and immortality. Everything in this world is a trinity completed by the quaternary.” (IU 1:508). The squaring of the circle is a cosmogonic and mystical mystery indeed. See also QUATERNARY

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sr-Sum

Sraddha (Sanskrit) *Śraddhā* [from *śrad* truth, faithfulness + the verbal root *dhā* to place] Faith, trust, reverence, loyalty.

Sraddha (Sanskrit) *Śrāddha* A ceremony in honor and for the welfare of dead relatives, observed with great strictness at various fixed periods and on occasions of rejoicing as well as mourning by the surviving relatives. It is not a funeral ceremony, but an act of reverential homage to a deceased person performed by relatives, and is supposed to supply the dead with strengthening nutriment after the performance of the previous funeral ceremonies has endowed them with ethereal bodies. In Hinduism, the deceased relative is considered a preta (wandering ghost) until the first sraddha ceremony, when he attains a position among the spiritual pitris in their blissful abode.

Sraddha-deva (Sanskrit) *Śrāddha-deva* Any god presiding over sraddha rites; especially an epithet of Yama, the god of death and king of the Underworld.

Srama (Sanskrit) *Śrama* [from the verbal root *śram* to toil, labor] Exertion, labor, toil; often used for the different methods of mental and physical austerity used in several of the yogas of Hindustan. Mystically, srama is active labor, exertion, and training which the disciple undergoes in the acquiring of esoteric wisdom.

Sramana (Sanskrit) *Śramaṇa* [from the verbal root *śram* to exert] Making effort or exertion; toiling, laboring; one who performs acts of penance and mortification — an ascetic of such type. Particularly applied to Buddhist monks or mendicants, to Buddha, or to a Jain ascetic.

When a sravaka from theory goes into the actual practice of self-control in all its senses, he becomes a sramana, a practicer of the esoteric instructions. Mere asceticism, however, apart from strict spiritual aspiration and intellectual training, is of little value, and too often distracts the attention of the student merely to care for the body and its appetites. The story of the Buddha

himself well illustrates this, for the time came when he abandoned ascetic mortification of the body and turned his entire attention to the far greater and more difficult spiritual and intellectual discipline and evolution.

Sramanacharya (Sanskrit) *Śramaṇācārya* [from *śramaṇa* ascetic + *āchārya* teacher] A Buddhist or Jain teacher of ascetic type.

Srastara (Sanskrit) *Srastara* A couch or sofa for reclining; “consisting of a mat or a tiger’s skin, strewn with *darbha*, *kusa* and other grasses, used by ascetics — gurus and chelas — and spread on the floor” (TG 307).

Sravah (Avestan) In the *Vendidad* (19:42) Zoroaster in his invocation against Angra-Mainyu says: “Invoke the seven bright Sravah with their sons and their flocks.” Orientalists have been unable to give a meaning to the word; however Blavatsky equates them with the Amesha Spentas “in their highest occult meaning. The ‘*Sravah*’ are the noumenoi of the phenomenal Amshaspends, the souls of spirits of those *manifested* Powers: and ‘their sons and their flock’ refers to the planetary angels and their sidereal flock of stars and constellations. ‘Amshaspend’ is the exoteric term used in terrestrial combinations and affairs only” (SD 2:385).

Sravaka (Sanskrit) *Śrāvaka* [from the verbal root *śrū* to hear] One who listens or attends to the esoteric instructions, a disciple or chela. In Buddhism, a student of the exoteric teaching of Gautama Buddha, and a practicer of the four great truths of Buddhism.

Sri (Sanskrit) *Śrī* [from the verbal root *śri* to honor, be devoted] Light, luster, radiance, glory, beauty; prosperity, success, high rank. As a proper noun, Lakshmi as goddess of prosperity or beauty. Also commonly used as an honorary prefix, equivalent to holy, sacred, e.g., Sri Sankaracharya.

Sri-antara. See SIX-POINTED STAR; SOLOMON’S SEAL

Srichakra (Sanskrit) *Śrīcakra* [from *śrī* light, radiance + *cakra* wheel, mystical center or plexus] A magical diagram or circle, exoterically supposed to represent the circle of the earth. When applied to man, an astrological division of the body representing the uterine or pubic region. Subba Row writes: “The *Sreechakram* referred to in ‘*Isis Unveiled*’ is not *the real esoteric Sreechakram* of the ancient adepts of Aryavarta”; to which Blavatsky adds: “Very true. But who would be allowed to give out the ‘real esoteric one’?” (5 Years of Theosophy 156-7)

Sridhara (Sanskrit) *Śrīdhara* A well-known Hindu author of various commentaries.

Srimad-bhagavat (Sanskrit) *Śrīmad-bhagavat* That which is beautiful and worthy of praise; a title of the *Bhagavad-Gita*.

Sringa-giri (Sanskrit) *Śrīṅga-giri* [from *śrīṅga* peak + *giri* mountain] The mountain peak; a hill and town on the ridge of the Western Ghats in Mysore in Southern India; also the chief matha

(monastery) of the Advaita and Smarta Brahmins, also called Sringeri, founded by Sankaracharya in this town. Because it is the residence of the philosophico-religious head of the Advaita Vedantists, each one of these heads, whether by courtesy or spiritual right, is himself called Sankaracharya.

Sripada (Sanskrit) *Śrīpāda* [from *śrī* holy one + *pāda* foot] The Lord's foot; the supposed impression of the Buddha's foot; also the name of several men.

Srivatsa (Sanskrit) *Śrīvatsa* The favorite of Sri (lord or goddess); a mystical mark worn by Siva in his representations, as well as used in various ways by the Jains as the emblem of the tenth Jina. This emblem is a particular curling of hair on the breast of Krishna or Vishnu and of other divine beings, said to be white and often in iconography pictured as cruciform and supposed to represent a flower.

Sriyantra, Sri-antara. See SIX-POINTED STAR; SOLOMON'S SEAL

Srng-giri. See SRINGA-GIRI

Srotapanna (Sanskrit) *Srotāpanna* [from *srota* river, stream + *āpanna* entered] One who has entered the stream, leading to nirvana; one who has entered on the first of the four great paths that lead to Nirvana. See also SROTAPATTI

Srotapatti (Sanskrit) *Srotāpatti* [from *srota* stream, river + *āpatti* entering into a state or condition from *a-pad* to enter] One who has attained the first path of comprehension of the real and the unreal, the first of the four paths that lead to nirvana: the path of arhatship. "Once thou hast passed the gate Srotapatti, 'he who the stream hath entered'; once thy foot hath pressed the bed of the Nirvanic stream in this or any future life, thou hast but seven other births before thee, O thou of adamant Will" (VS 46). See also ARHAT

Srotriya (Sanskrit) *Śrotriya* [from the verbal root *śru* to hear, listen] A Brahmin who practices the Vedic rites and the sacred knowledge he studies, as distinguished from the Vedavid, the Brahmin who studies them only theoretically; traditionalist, as a Qabbalist in Hebrew though is the theosophical traditionalist of the Jews. It is precisely those who follow the tradition who are among the most eminent and successful disciples of the inner meaning of the sacred teaching in India, as contrasted with the mere bibliolaters, who read with reverence but without desire themselves to practice and follow the teaching and precepts which they study. Thus, books are seen to be great helps, if taken for the purpose for which religious books were originally written, and yet distinct stumbling blocks when they become the mere containers of the revealed faith which cannot be changed. The traditionalist seeks and finds the living reality, whether imbodyed in books or not; the bibliolater or book-man is content with what already has been received.

Sruti (Sanskrit) *Śruti* [from the verbal root *śru* to hear] What is heard; teachings handed down in traditional writing, distinguished from smritis, the unwritten teachings handed down by tradition

by word of mouth. The Srutis in India are considered to be divine in origin and everlasting, for they are the teachings of the divine oral revelation. Yet exactly the same observation may be made regarding the smritis — the unwritten tradition. The Srutis comprise first and foremost the Vedas, including the Mantras, Brahmanas, and Upanishads. The Hindu Srutis are all written in more or less metaphorical language.

Stanzas of Dzyan Archaic verses of philosophical and cosmogonical content drawn from the Book of Dzyan, which form the basis of *The Secret Doctrine*. They present the esoteric teachings in regard to cosmogenesis and anthropogenesis, and are the ancient heritage of humanity as preserved by the brotherhood of mahatmas. Every race and nation has drawn from this source through the medium of its initiated or inspired teachers and saviors. Only portions of the original verses are given in *The Secret Doctrine*, and Blavatsky's presentation there represents the first time that they have been set down in a modern European language; her endeavor always was to represent the meaning rather than to give a merely literal rendering of the words: "it must be left to the intuition and the higher faculties of the reader to grasp, as far as he can, the meaning of the allegorical phrases used. Indeed it must be remembered that all these Stanzas appeal to the inner faculties rather than to the ordinary comprehension of the physical brain" (SD 1:21).

Especially is this the case when the Stanzas refer to events and conditions of cosmic or human life of which mankind today has virtually lost all memory, except for the scattered fragments of archaic writings which have reached us out of the darkness of prehistory. Only deep meditation and contemplation upon the mystical symbols used will awaken the faculty to comprehend them:

"The history of cosmic evolution, as traced in the Stanzas, is, so to say, the abstract algebraical formula of that Evolution. . . .

"The Stanzas, therefore, give an abstract formula which can be applied, *mutatis mutandis*, to all evolution: to that of our tiny earth, to that of the chain of planets of which that earth forms one, to the solar Universe to which that chain belongs, and so on, in an ascending scale, till the mind reels and is exhausted in the effort.

"The seven Stanzas given in this volume represent the seven terms of this abstract formula. They refer to, and describe the seven great stages of the evolutionary process, which are spoken of in the Puranas as the 'Seven Creations,' and in the Bible as the 'Days' of Creation" (SD 1:20-1).

These archaic stanzas are written preeminently in symbolic language, with the intention of giving, perhaps, a sevenfold meaning; "as there are seven keys of interpretation to every symbol and allegory, that which may not fit a meaning, say from the psychological or astronomical aspect, will be found quite correct from the physical or metaphysical" (SD 2:22n). *See also* BOOK OF DZYZAN

Star Popularly, all points of light in the firmament; more accurately, the so-called fixed stars or

suns, as distinct from planets. Also a star-polygon, such as the five-pointed star; or a symbol.

Adepts in genuine archaic astrology know the peculiar qualities of the various stars and the influences they shed around them, and therefore likewise on earth and man; the tattered remnants of this knowledge have been handed down to modern astrologers. One branch concerns worship of the genii of the stars, the star-angels or -rishis especially — because of a certain occult mystery — the seven of the Great Bear. All entities, whether worlds or men, have each its own parent-star or mahadhyani-buddha; but this does not refer to the dominant star in merely natal astrology. There is an analogy and intimate connection between the celestial hierarchies of orbs and the hierarchies of human principles, for every star we see is one globe of a chain of six or eleven other star-globes, just as our earth is one globe of a planetary chain. Thus our sun is the visible representative of a solar or stellar chain, of which only the most physicalized, concreted globe is visible to us as our day-star. Every star or sun is the imbodiment of a conscious living being, pursuing its own pathways of destiny, and most intimately bound together not only with its own planetary family but with all the other stars and suns in the galaxy to which it belongs. This fact was the real basis of the wide diffusion of what is popularly called sun worship.

Star-angels the regents or cosmic spirits of the stars: “Every planet according to the esoteric doctrine is in its composition a *Septenary* like man, in its principles. That is to say, *the visible planet is the physical body* of the sidereal being, the *Atma* or Spirit of which is the Angel, or Rishi, or Dhyan-Chohan, or Deva, or whatever we call it” (BCW 10:31). This was the basis for the worship of star-angels by all antiquity, a worship which in modified form was taken over by primitive Christianity and still exists in the Roman Catholic Church, although the esoteric meaning was lost. The seven star-angels — Michael (like unto God), Gabriel (the strength of God), Raphael (divine virtue), Uriel (God’s light and fire), Scaltiel (the speech of God), Jehudiel (the praise of God), and Barachiel (the blessing of God) — referred to the rectors of the seven sacred planets. “It is through their ‘divine attributes,’ which have led to the formation of the names, that these archangels may be identified by an easy esoteric method of transmutation with the Chaldean great gods and even with the Seven Manus and the Seven Rishis of India” (BCW 10:19).

Stauros (Greek) A cross, especially used in the New Testament for the Roman instrument of crucifixion. Its form was represented by the Greek letter T.

Stellar Spirits. See PLANETARY SPIRITS

Sterility The otherwise unaccountable sterility which ethnologists note among certain so-called primitive peoples is a physiological prevision by which karmic law hastens the closing scenes for the remnants of a racial cycle. American Indians, Eskimos, Papuans, aboriginal Australians, most of the Polynesians, etc., are all said to be dying out as the tidal wave of incarnating egos rolls past them to harvest experience in less senile stocks. It is a physical proof of karma “that the lowest races of men are now rapidly dying out; a phenomenon largely due to an extraordinary sterility

setting in among the women, from the time that they were first approached by the Europeans. A process of decimation is taking place all over the globe, among these races whose ‘time is up’ — among just these stocks, be it remarked, which esoteric philosophy regards as the senile representatives of lost archaic nations” (SD 2:779-80). She adds that while the cruelties and abuses perpetrated by colonists, as well as changes in diet, etc., have done much to reduce these peoples in number, “the people that have been most spared . . . Hawaiians or Maoris, have been no less decimated than the tribes massacred or tainted by European intrusion” (ibid.).

The theosophic study of sterility also throws a strong light upon the origin of the anthropoids. This dates back to hybrids resulting from the union of certain imperfectly evolved groups of the Atlanteans with females of a semi-human, if not quite animal race, itself the progeny of the “sin of the mindless” Lemurians. This took place at the period of the greatest materialization of physical man, when the unnatural union was fertile “because the mammalian types *were not remote enough* from their Root-type — Primeval Astral Man — to develop the necessary barrier” (SD 2:688-9; cf 195-6). Since then, nature has changed its ways, and the general rule for the crime of human bestiality is a resulting sterility.

Sterope. See PLEIADES

Sthana (Sanskrit) *Sthāna* A state or condition; any place, abode, or dwelling. When such abode or place is considered to be the center of a deific influence or power, ayana (going, with the significance of circulation or moving power) is also used.

Sthavara (Sanskrit) *Sthāvara* [from the verbal root *sthā* to stand] Fixtures; as an adjective, unmoving or fixed. Used for entities which are alive but not self-moving, and therefore applicable to the minerals and plants; used in contrast with jangama (goers), the animal and human kingdoms.

Sthavira or **Sthavirakaya** (Sanskrit) *Sthāvira*, *Sthāvirakāya* [from *sthāvira* old; an old and venerable bhikṣu] The school of the elder, president, or chohan; one of the earliest philosophical contemplative schools, founded in 300 BC, distinctly Buddhist in character. In 247 BC, it split into three divisions: the Mahavihara (dweller of the great monasteries); Jetavanīyah; and Abhaya-girivasiṇah. It is one of the four branches of the Vaibhashika school founded by Katyayana, one of the disciples of Gautama Buddha and author of the *Abhidharma-Jnana-Prasthanasāstra*. All these schools are highly mystical, although frequently stated to be materialistic, which may be the fact in later times when they had degenerated and literalism took the place of the original mystical intent and significance of their teachings. See also ABHAYAGIRI

Sthiratman (Sanskrit) *Sthirātman* [from *sthira* firm, constant + *ātman* self] Constant, eternal; applied to the spiritual self of the universe, of which the soul of the universe is the vehicle.

Sthiti (Sanskrit) *Sthiti* [from the verbal root *sthā* to stand] The attribute of preservation; stability,

permanence.

Sthula (Sanskrit) *Sthūla* [from the verbal root *sthūl* to become bulky, increase in size or volume] Large, thick, bulky, massive; similar to sthura. In philosophy, gross, material, tangible, in opposition to sukshma (subtle, intangible, minute). Especially used in the compound sthula-sarira (physical body), the lowest and most impermanent of the seven human principles.

Sthula-maya (Sanskrit) *Sthūla-maya* [from *sthūla* gross, bulky + *maya* built of] Consisting of grosser elements; material, differentiated and conditioned. A Hindu philosophical term also applicable to one of the four principles of the Taraka-Raja-Yoga system, called sthulopadhi, corresponding to the three lower principles of the theosophical septenary classification: prana, linga-sarira, and sthula-sarira.

Sthula-sarira (Sanskrit) *Sthūla-sārīra* [from *sthūla* coarse, gross, not refined, heavy, bulky, fat in the sense of bigness, conditioned and differentiated matter + *sārīra* to molder, waste away] A gross body, impermanent because of its wholly compounded character. The physical body, usually considered as the lowest substance-principle of the sevenfold human constitution. This human form is the result of the harmonious coworking on the physical plane of forces and faculties streaming through their astral vehicle or linga-sarira, the pattern or model of the physical body. The sthula-sarira may be considered concreted effluvium or dregs of the linga-sarira. Hence, the sthula-sarira is the vehicle or carrier on this plane of all the other human principles. The physical body is built up of cosmic elements from all parts of the universe. The millions of tiny lives that make up our bodies are much more enduring than is the body itself as a unit. These little lives are constantly undergoing birth and rebirth because constantly changing or evolving, and thus the human body also changes as the years pass by. The physical body is the outermost, and therefore the feeblest, expression of all the wondrous qualities and forces working in man.

The human body was once in far-distant ages a globe of light, and will once more become ethereal and radiant as man in his evolutionary development rises upwards along the ascending arc. As the inner man unfolds himself, so his bodies on all planes of his constitution become more refined, ethereal, and perfect in their coordinated activities.

“Strictly speaking the physical body is not a ‘principle’ at all; it is merely a house, man’s ‘carrier’ in another sense; and no more is an essential part of him — except that he has *excreted it, thrown it out from himself* — than are the clothes in which his body is garmented. Man really is a complete human being without the Sthula-sarira; and yet this statement while accurate must be taken not too literally, because even the physical body is the expression of man’s constitution on the physical plane. The meaning is that the human constitution can be a complete human entity even when the physical body is discarded, but the Sthula-sarira is needed for evolution and active work on this sub-plane of the solar kosmos” (OG 164-5).

Sthulopadhi (Sanskrit) *Sthūlopādhi* [from *sthūla* gross + *upādhi* base, vehicle] The gross base or vehicle in the human constitution, consisting of the physical body (*sthula-sarira*), the astral model-body (*linga-sarira*), and the vital activities (*prana*). According to the Taraka-Raja-Yoga school there are three upadhis (bases) in the human constitution: *karanopadhi*, *sukshmopadhi*, and *sthulopadhi*. The *sthulopadhi* corresponds to the combination of the *annamaya-kosa* and *pranamaya-kosa* of the Vedantic classification.

Stigmata (Latin) [plural of Latin, Greek *stigma* pricked mark, brand] The mark produced on the skin of ecstasies, in the case of Christian ecstasies said to represent the wounds of Christ. Ecstasies could have produced any other kind of marks on their skin or body if they had been sufficiently strongly under the intense psychomental strain bringing about stigmata on the body by automatic reaction. Any picture in the mind if it is sufficiently clear and definite in outline, and if held with sufficient intensity of feeling and thought, can be transferred to the model-body (*linga-sarira*) and thence reproduced in the physical body, where it is outlined in congested blood or pigmentation of the skin. It is not infrequent in these cases that extravasation of blood or serum occurs, producing the cases of bleeding wounds produced by emotion and thought power. Such instances of the body reacting thus to inner psychomental strain are common enough in all countries and ages, and have nothing to do with abstract religious or philosophical truth.

If the West possessed a genuine psychology, stigmata would not be looked upon with awe as miracles or quasi-miracles or considered to be inexplicable phenomena. They could be reproduced at will by the adept on his own body, but why should he do so useless a thing, involving not only an unnatural condition of his constitution, but possibly suffering of the body itself? The whole matter of stigmata in human subjects is but an intensification in very unusual circumstances of what biological science knows to occur commonly and automatically in the bodies of the lower creatures, which not merely change color, but undergo curious transformations under conditions of fright, anger, etc.

Furthermore, the curious birthmarks which occur are often traceable to some visual impression accompanied by emotion on the part of an expectant mother.

Stock-race. See ROOT-RACE

Stoicheia (Greek) [plural of *stoichos* a row of steps, succession of similar things] First principles, elements as used by Plato and Aristotle; employed by Greek physicists for the first and simplest component parts; likewise the elements of a science, or the points, lines, and surfaces in geometry, or the signs of the zodiac in astrology. It corresponds quite loosely with the planes, degrees, or stages in a cosmic hierarchy — the degrees or divisions of the one undivided divine element. Yet the reference here is not to boundless infinitude, but to the summit of a cosmic hierarchy or universe.

Stoics [from *stoa* corridor in Athens in which Zeno held his school and taught] Stoicism is most

familiar as a great ethical system; its aim was to make wisdom practical. It set virtue above outer, physical, or social happiness as an ideal to be aimed at, and both its watchword and its consequent objective was duty. Though in the form familiar to us it arose in Greece, its qualities were better adapted to Hellenistic than to purely Greek appreciations, and especially to the Romans of the Empire with their graver temperament and individual subjection to the imperium. So far as Greece is concerned, its practical character can be traced to the influence of Socrates and of the Cynics; but it received Asiatic influence from its founder (Zeno, 4th century BC), of Asiatic origin.

It recognized a supreme and all-harmonious divinity of hierarchical character and various subordinate deities, and the unity of man with nature and of nature with this divinity. This divinity, however, was not personal God, but the cosmic spiritual originant, recognized as but one of innumerable others in the boundless fields of illimitable space. Stoicism recognized in man the existence of wisdom and will, whereby he might transcend the distractions of lower forces and realize the ideal of harmony with nature and resulting equanimity.

This great system is worthy of being enumerated among the outpourings of the ancient wisdom and may be said to have been the religion of the Roman world under the early empire. Even Christian sectarianism admits that paganism reached one of its great heights of ethical idealism under the Stoics; and it has reverberated in wave after wave through succeeding ages down to the transcendentalism and “new thought” of our times.

Stone(s) There is available numerous testimony as to animated stones, speaking stones, etc. There is the Christ-stone, which followed the Israelites; the Jupiter Lapis swallowed by Saturn; the testimony of Pausanias as to the Grecian worship of stones; the Ophites and Siderites, serpent-stones and star-stones, the former being alleged to have the gift of speech; the baituloi or alleged animated stones mentioned by Sanchoniathon and Philo Byblius; the liafail or speaking stone of Westminster; Pliny's stones which ran away when a hand approached them; the importance attached to stone monuments and rocking stones; etc. (SD 2:341 et seq). Again, we have the vast subject of talismans and of gems with potent properties.

A stone is an organism enshrining a divine spark or monad. The difference between the stone and the man consists largely in the fact that what is expressed in man is latent in the stone. Why then should not the hierophants of genuine magic or occult science have been able to evoke from the stone its latent potencies? Why should not particular stones, like particular plants, animals, or men, possess particular virtues?

Unless modern science is prepared to make of the physical atom a primordial existence, it must seek the origin elsewhere. Physical matter is a concretion of universal light or radiation; but it needs the eye of a seer to perceive what starry virtue lies sleeping in the gem or the talisman; the skill of the magician to know what can be done by placing stones in a particular grouping, perhaps with certain ceremonies, etc.

The word has symbolic uses, as in the white stone with a new name inscribed in it, which is given to him that overcomes in Revelations; the stone that the builders rejected; stones in the Guardian Wall; etc.

Stone Age According to current theories of human evolution, the comparatively recent time when man had found out how to make stone implements only, not having yet learnt the use of metals. Subdivided by scientific theorists into the Paleolithic and Neolithic (old and new stone ages). Though people in all ages have used such implements and still do in some places — which fact does not place us all today in the Stone Age — it is evident that the use of stone implements by savage peoples in no wise tends to establish a theory of human evolution. Races branch out like the limbs of a tree, so that different people may be in various stages of their racial evolution at the same time; also a degenerating race may revert to the use of stone implements.

Stonehenge The well-known megalithic structure on Salisbury Plain, England, the most wonderful prehistoric relic in that country, now preserved as a national monument. The larger stones are about 18 feet high and weigh about 20 tons apiece. There are two concentric circles; the outer circle, now badly interrupted by breaks and disturbances, being a hundred feet in diameter and consisting of upright stones with horizontal ones across the tops, originally forming a continuous structure. The inner circle has no lintels at present. Within is a horseshoe line of great trilithons and monoliths, and inside that another horseshoe of smaller stones. In the center is a large block called the altar. Outside, facing the altar and the opening of the horseshoes, stand two outer stones, believed by some to mark the place of sunrise at the summer solstice about 1680 BC. Some of the stones, including the altar, were brought from a great distance. Transportation of such heavy stones from such a distance would require great skill and organizing power.

Stonehenge is mentioned in *The Secret Doctrine* in connection with traditions of men of great power and large stature. Reference is made to initiate priests from ancient Egypt who traveled by dry land across what is now the British Channel to supervise the building of “menhirs and dolmens, of colossal zodiacs in stone” (SD 2:750). Modern geology places the appearance of the British Channel about 8,000 years ago, so that land communication with the Continent would have been possible till then. The Badarian culture in Lower Egypt shows that 14,000 years ago the people were sufficiently civilized to make good pottery and wear linen.

Megalithic monuments, more or less similar to Stonehenge, are found widely scattered over the globe, even in the wild Triobrand Islands near New Guinea. To know why such buildings were erected we should need far more knowledge than we have of the actual builders, their ideas and aims, and innumerable other conditions. The subject is connected with what is said about a lost science which could avail itself of the normal latent magical properties of stones.

Striges (Latin) [from Greek] Also strygis. Screech owls or some such nocturnal bird of prey; applied in classical mythology to a species of vampire which sucked the blood of children. A

distinct mythologic reference to astral entities more or less earthbound, which can at times come into even physical relation with human beings, whether younger or older, at the time in a state of negative receptivity. Corresponds to the Hindu pisacha.

Stupa (Sanskrit) *Stūpa* A conical monument, sometimes domed, in India and Ceylon, erected over relics of the Buddha, of arhats, or other great men.

Sub-astral The lower portions of the astral realms, whether of the solar system or of the constitution of a living being. The astral light is divided into a number of degrees, enumerated as seven, ten, or twelve. More generally the astral is triform — the highest astral, the intermediate astral, and the lowest or sub-astral.

Subconscious In *The Secret Doctrine*, used for a degree of consciousness less evolved than that with which we are familiar. Generally today, psychic researchers and psychoanalysts define it as a kind of mental action not yet revealed to ordinary consciousness and not easily apparent to introspection. Our own consciousness is known by experience; that of others is inferred from analogy and from its results. In the same way, our conduct is found to be largely influenced by something which we must presume to be a conscious intelligence, yet of which we are not aware by actual experience. We cannot get a clear definition of this until we have analyzed the concept of consciousness more fully, as is done in Hindu systems. But, as a practical question, our mental nature includes a far larger field than that occupied at any one time by the focus of attention. Subconscious may merely mean *behind* conscious; but if it taken to mean below, the expression is unfortunate as implying lower and more sinister regions of our mentality; and this indeed is actually the region studied and accepted by prominent modern psychoanalysts.

Sub-element Secondary elements derived from parent elements which to them are primary, as the physical elements in relation to their ultraphysical primaries; or chemical elements which have been proved to be resolvable into simpler elements. In this sense, the sub-elements are more compound and less simple than the elements; and the prefix denotes a lower order rather than an underlying essence.

Subhava (Sanskrit) *Subhāva* Being; the self-forming substance, equivalent to svabhava (characteristic individuality). It is the spirit within the substance, or the essence of the entity governing its noumenal and phenomenal appearances; “in the Vedanta and Vyaya Philosophies: *nimitta*, efficient, and *upadana*, the material, causes are contained in subhava co-eternally. Says a Sanskrit Sloka: ‘Worthiest of ascetics, through its potency, [that of the ‘efficient’ cause’] every emanated or evolved thing *comes by its own proper nature*’ ” (TG 310).

Subjectivity Subjective and objective are interdependent, having meaning only in relation to each other. Subjective is said to apply to whatever is referred to the thinking subject, the ego; objective to whatever belongs to the object of thought, the non-ego. Subjective and objective express a relation between the act of perception and the object perceived. To some extent the two words

correspond to mind and matter, but parts of mind itself may become objects of some higher perceptive subject. Modern idealists say that the cooperation of subject and object results in the sense object or phenomenon, but this does not hold good on all other planes than that of the physical senses. Subject and object, however, are contrasted on every plane, and this contrast represents the experience of the perceiving ego. But the peak of omniscience, or knowledge of things in themselves, is not reached until the duality or contrast of subject and object vanishes into unity (SD 1:329, 320).

In scientific materialism, the word subjective is often used to mean unreal, in contrast with the physical world which is regarded as real — despite the fact that it is one of the commonplaces of scientific thought that the physical world is perhaps of all things the most unreal of entities subject to knowledge. Thus an apparition may at times be described as being purely subjective, meaning that in such cases instead of being an actual external object it is a mental image considered objectively by the mind itself.

Subnuclei These result when, in the division of the nucleated cell, the nucleus splits into two subnuclei, “which either develop within the original cell-wall or burst it, and multiply outside as independent entities” (SD 2:166), as often occurred during the earlier root-races, and still exists in certain low forms of life.

Subphysical Kingdoms The three elemental kingdoms, kingdoms of nascent and relatively conscious but not self-conscious entitative forces. In evolutionary development, they precede the mineral kingdom in the series of evolutionary life-waves.

Subrace Used to distinguish the major or root-races from the minor races which are offshoots from the mother-race (ML 83). In a planetary chain, there are seven rounds in a manvantara (period of activity) and root-races during each round; further that there are seven subraces in every root-race, and septenary offshoots from the subraces.

Because of the successive divisions into septenary units, it is at times difficult to determine just what subrace may be intended by a writer, and careful study is needed. The length of a subrace is given as approximately 210,000 years (SD 2:435) — and here no qualifying adjective appears to define which subrace is intended; on the same page the present European race is referred to as a family race of approximately 30,000 years.

As to the position of humanity in regard to the fifth root-race: “we are in the mid-point of our *sub-race* of the Fifth Root Race — the acme of materiality in each . . .” (SD 1:610). This is interpreted by de Purucker as meaning “*the middle point of the fourth of any cyclical series: for instance, the fourth Primary Subrace; the fourth subrace of the fourth primary subrace of the fifth root-race*” (Fund 281). Thus we have at present nearly reached the middle period of the fifth root-race, and are therefore in our fourth primary subrace, but in a smaller sub-subrace which is the fifth of its own cycle.

Ancient mythologies often designated an individual as standing for a race as its eponym, thus the legend of Latona and Niobe, whose sons and daughters were slain by Apollo, may be interpreted as Latona standing for the Lemurian races, while Niobe stands for the Atlantean race, her seven sons and seven daughters personifying the seven subraces or branches of the fourth race (SD 2:771). *See also* ROOT-RACE

Substance. *See* MATTER

Substance-Principle. *See* PRINCIPLE

Substitute Word According to Masonic ritual, the Master's Word was lost through the death of Hiram Abif; the other two Masters, King Solomon and King Hiram agree that the Word shall be used as a substitute for the Master's word, until such time as the true one is discovered. Among the Pythagoreans the ineffable Word "was considered the *Seventh* and highest of all, for there are six minor substitutes, each belongs to a degree of initiation" (IU 2:418). Among the Jews, 'Adonai is *spoken* as a substitute for the Tetragrammaton, incorrectly transliterated in the Bible as Jehovah, and always pronounced as Adonai.

"It was the secrecy of the early kabalists, who were anxious to screen the real Mystery name of the 'Eternal' from profanation, and later the prudence which the mediaeval alchemists and occultists were compelled to adopt to save their lives, that caused the inextricable confusion of divine names. This is what led the people to accept the Jehovah of the *Bible* as the name of the 'One living God.' . . . Therefore, the biblical name of Jehovah may be considered simply as a *substitute*, which, as belonging to one of the 'powers,' got to be viewed as that of the 'Eternal.' . . . the interdiction did not at all concern the name of the exoteric Jehovah, whose numerous other names could also be pronounced without nay penalty being incurred. . . . the 'Eternal' being something higher than the exoteric and personal 'Lord' " (IU 2:400-1).

Ancient names were always symbols or representations; thus all the names of the Eternal, the infinite and incomprehensible, are substitutes, merely names, attempts to define what is indefinable and unutterable. "The word Jehovah, if Masonry adheres to it, will ever remain as a substitute, never be identified with the lost mirific name" (IU 2:398). *See also* INEFFABLE NAME; LOST WORD

Subtle Bodies In Vedantic philosophy, the five kosas or sheaths, whether of the cosmos, man, or any other being, through which the atman as sutratman (thread-self) passes. In a more restricted and biological sense, the chhayas (shadows) or astral bodies emanated by original humanity to become the vehicles of the future humanities. Those who projected or emanated these chhayas or subtle bodies were the pitris (fathers, progenitors).

Succuba, Succubi. *See* INCUBUS

Suchi (Sanskrit) *Śuci* White, purified, resplendent; one of the three personified fires, whether in the kosmos or man, a son of Agni-abhimani and Svaha. Agni-Abhimani, his three sons — Pavaka, Pavamana, and Suchi — and their 45 sons, constitute the mystic 49 fires of occultism. Suchi, the solar fire or saurya [from *surya* the sun], is the parent to Havyavahana, the fire of the gods. Also a name of Indra. *See also* ABHIMANI

Sudarsana (Sanskrit) *Sudarśana* Good-looking, beautiful; the chakra or circular weapon of Vishnu-Krishna, a flaming weapon called the disc of the sun. Occultly, it is that power possessed by the highest initiates and semi-divine men, avatars, buddhas, etc., which is an emanation or outpouring from their spiritually intellectual or buddhi-manasic principle. Intellect in its smooth and magical operations is sudarsana (beautiful to consider), and of immense power even among men on our low plane. When used as a power or “weapon” by god-men or similar beings it is virtually irresistible.

Suddhasattva (Sanskrit) *Śuddhasattva* [from *śuddha* pure + *sattva* goodness] Pure goodness, reality per se; a state of conscious spiritual egoity or egoship, and at the same time pure spiritual essence. Considered from the substance viewpoint, it is a supermaterial or ultramaterial essence or substance which to us is invisible, yet on its own plane luminous if not indeed light itself. Of this stuff or essence the bodies of the highest dhyanis and the gods are formed. It is spiritual substance without adulteration of the differentiated matters of the lower cosmic planes.

Suddhodana (Sanskrit) *Śuddhodana* [from *śuddha* pure + *udana* water, flow] Pure flow; the King of Kapilavastu, father of Gautama Buddha. The name — whether actual or given him in later years for reverential considerations — bears the idea of the pure flow of the spirit or spiritual wisdom giving birth to its offspring, the Buddha.

Sudha (Sanskrit) *Sudhā* Welfare; the food and beverage of the gods, skin to amrita, the substance which gives immortality; equivalent to the ambrosia and nectar of ancient Greece.

Sudra (Sanskrit) *Śūdra* A member of the lowest of the four castes or social divisions made in the Vedic period in India. In the *Laws of Manu*, the Sudra was regarded as a servant to the three other castes: the Brahmins or priest-philosophers, the Kshatriya or administrator-king and soldier, and the Vaisya or agriculturist or trader. The Sudra is said to have sprung from the feet of Purusha, while the *Rig-Veda* gives his origin as coming from the feet of Brahma. *See also* CHATUR-VARNA

Sudyumna (Sanskrit) *Sudyumna* The beautifully resplendent one; Ila or Ida, when during her repetitive changes of sex the male character was in evidence. Ila was the fair daughter of Vaivasvata-Manu, who sprang from his sacrifice when he was left alone after the flood. An androgynous creature, being one month a male and the next month a female, she is related to the moon. In another sense this Puranic allegory has direct reference to the androgynous early third root-race.

Sufi, Sufi, Sufiism [from Arab *suf* wool; *sufi* he who wears woolen garments] A school of thought that emphasizes the superiority of the soul as opposed to the body. A Sufi wears harsh, raw woolen garments constantly irritating his skin to remind him that the body is the part which prevents the soul from attaining higher goals. The first public pronouncement of mysticism in Moslem lands is attributed to Rabi'a, who lived in the 1st century of the Hejira (622 AD) and expounded the theory of divine love: God is love, and everything on earth must be sacrificed in order eventually to attain union with God. However even before the time of Mohammed there were two principal schools of Arabic thought: the Meshaiuns (the walkers), who later became the metaphysicians after the appearance of the Koran, and the Ishrachiuns (the contemplators) who became affiliated with the Sufis. The Sufis, in fact, put an esoteric interpretation on the Koran, as well as the collected saying of Mohammed, the Sufi movement representing an infiltration into the rigidity of Islamic doctrine of the pre-Islamic mystical or quasi-occult stream of thought, especially from Persia. Blavatsky states that the Sufis acquired their "proficient knowledge in astrology, medicine, and the esoteric doctrine of the ages" from the descendants of the Magi" (IU 2:306).

By the year 200 of the Hejira a definite sect of mystics had arisen, and following the instructions of a prominent member, Abu Said, his disciples forsook the world and entered the mystic life with a view of pursuing contemplation and meditation. These disciples wore a garment of wool, and from this received their name. Sufiism spread rapidly in Persia, and all Moslem philosophers were attracted to this sect, as great latitude in the beliefs of its followers was at first permitted, until in the reign of Moktadir, a Persian Sufi named Hallaj was tortured and put to death for teaching publicly that every man is God. After this the Sufis veiled their teachings, and especially in their poetry used amorous language and sang of the delights of the wine cup. In spite of the amorous trend of poetry followed by the Sufis, to the observing eye there appears a beauty and a spirituality of thought which has found many devotees. Ideas of pantheism abound, for God is held to be immanent in all things, expresses itself through all things, and is the transcendent essence of every human soul. For a person to know God is to see that God is immanent in himself.

There are three synonymous words in modern Persian often interchangeably used — Sufi, Aref, and Darvish — each with its own nuance. Sufi represents the most institutionalized Islamic mysticism, while Aref and Erfan (school of thought-cognition) conveys cognitive aspects of mystic teachings and are more philosophic; Dervish and Darvishi (state of being Dervish) conveys freedom from attachments to worldly possessions. Hafi (the most loved and best known of the mystic poets) often refers to Sufis as those who rigidly adhere more to religious teachings than cognitive aspects of truth. These differences occurred when the mystics, due to religious persecution, had to veil their ancient beliefs with religious teachings. This made their teachings appear ambiguous, as a result of which, some confused esoteric mysticism with esoteric religion.

Sugata (Sanskrit) *Sugata* One who has fared well, one who has "gone" in accordance with the immemorial Buddha tradition; a name given to Gautama Buddha, similar to Tathagatha.

Suggestion, Hypnotic. See HYPNOTISM

Suhhab (Babylonian) One of the seven great gods, each of whom produced a race of men, according to Babylonian legends.

Suicide As an inseparable part of the universe, whether considered as an organism or as a huge animated machine, we cannot violently remove ourselves from the pattern without interfering with the harmonious working of the other parts; and just here enters the immense moral or ethical import of the evil of suicide. But even had we a right to destroy our life, it would be futile. We may destroy the body, but we cannot destroy the mind. The suicide, after the temporary but complete unconsciousness which succeeds death, awakes in kama-loka the same person, in the same state of consciousness, minus only the physical triad (body, astral body, and gross physical vitality). His state of consciousness is one of torture, the repetition over and over of his suicidal act and the emotions that induced and accompanied it; this happens automatically because the mind, like an automaton repeats incessantly perforce the controlling or dominating impulses that governed it when the person took his physical life. And as the higher ego has its own life term, he has to remain in that condition until what would have been the natural term of life on earth is ended, body or no body.

When that period ends he passes again into unconsciousness, undergoes the second death, and all that is spiritual in him passes on to devachan, leaving the lower parts to pursue their own transmigrations. Aside from extremes of mental suffering which he would not otherwise have had to endure, the suicide is deprived of the full fruitage of bliss in devachan, for the latter is in direct ratio to the extent of earthly experiences and their spiritual quality. As he is still alive, his punishment is largely due to the very intensity of that life and to his longing to enjoy earthly contacts. If his life on earth was evil and sensual, this longing tempts them to find some living being or creature through whom he can make contacts that to him were pleasures — to live again by proxy, as it were. Many crimes, obsessions, and manias, such as dipsomania, find their explanation here. Mediums and sensitives are open doors to such contacts; and these suicided astral beings, who are often called earth-walkers and who in many cases actually astral reliquia, having by their own act severed their connection for the time with their highest principles — the spiritual soul (buddhi) and inner god (atman) — deprived thus of the urge and counsel of these highest principles, too often rush into these “open doors,” and “by so doing, at the expiration of the natural term, they generally lose the *monad* for ever” (ML 109).

Because self-destruction, so called, is always wrong, and an unwarrantable and violent interference with the orderly processes of nature, the act is bound to bring disharmony and trouble for all concerned. But in laying down general laws we must always allow for specific instances, for there is no dogmatic hard-and-fast rule in these matters. Suicides among themselves differ enormously as between the cowardly and selfish act of an evil person, the uncontrolled act

of the insane, and the utterly mistaken but perhaps even compassionate act of one who thinks that by suicide he can aid others. These extremes are simply enormous, and nature which in its actions is perfect justice, albeit automatic, watches over and protects, as far as natural laws permit, these last cases of sincere but erroneous belief or thought, born of ignorance. We dare not judge in default of full knowledge of the karmic heritage, or the deeper causes which culminated in the act.

In a world that is almost rent asunder in certain aspects, by selfishness, fear, and hatred, with a mounting suicide toll in all countries capable of statistical review, the truth about suicide and the fate of the suicide is not a subject for sentiment but for persistent reiteration.

Suka (Sanskrit) *Śuka* The bright one; applied to several Hindu mythological characters. In Buddhist literature, a Brahmin ascetic said to have been a maharshi, who became a jivanmukta.

Sukhavati, Sukhavati (Sanskrit) *Sukhavatī, Sukhāvatī* The heaven of Buddha-Amitabha, exoterically situated in the West; equivalent to devachan (cf ML 99-100).

Suki (Sanskrit) *Śukī* A daughter of the rishi Kasyapa, wife of Garuda, the king of the birds and vehicle of Vishnu; the mythical mother of parrots, owls, and crows (VP 1:21). In some legends, the wife of Kasyapa.

Suklapaksha (Sanskrit) *Śuklapakṣa* [from *śukla* bright, light + *pakṣa* half a month] The light half of a month, the 15 days of the moon's increase from new to full. *See also* KRISHNAPAKSHA

Sukra (Sanskrit) *Śukra* The bright one; the planet Venus, and its regent. According to theosophy each of the seven globes of the earth planetary chain, and each of the seven root-races, is under the particular guidance and protection of one of the regents of the seven sacred planets. Sukra is the guide and protector of the third globe, globe C, and also analogically of the third root-race.

The astronomical sign of Venus is the ansated cross: the Qabbalah explains this as signifying the existence of parturient energy, yet this is an unfortunate disguise, for it is the moon which controls parturition on earth, and the effluences from Venus are rather those which govern the creative action of the intellect. Venus is often viewed mystically as hermaphroditic in operation, Venus being at times represented as bearded in Greek mythology. Here we see a connection of Sukra with the hermaphrodite early third root-race.

Mystically Usanas-Sukra (Usanas being another name for Venus) is the earth's and man's spiritual guru and preceptor, just as in ancient Hindu mythology Usanas was the guru and preceptor of the daityas. Hence Venus is spoken of as the "older brother" of the earth, whose functions during its present evolutionary stage are those of kama-manas in the solar system and therefore in man (cf SD 2:31, 33).

Sukshma (Sanskrit) *Sūkṣma* As an adjective, fine, subtle, intangible; as a noun, ethereal matter or, in a generalized sense, the subtle all-pervading spirit.

Matter is said in Hindu philosophy to exist in two general conditions, the sukshma or latent and undifferentiated, and the sthula or gross and differentiated condition; “the whole manifested solar system exists in its *sukshma* form in this light or energy of the *Logos*, because its image is caught up and transferred to cosmic matter, and again the whole cosmos must necessarily exist in the one source of energy from which this light emanates” (N on BG 26).

Sukshma-sarira (Sanskrit) *Sūkṣma-śarīra* [from *sūkṣma* fine, ethereal, subtle + *śarīra* body] Subtle body, popularly astral body; often confused with the linga-sarira. Blavatsky remarks that the sukshma-sarira is a “ ‘dream-like’ illusive body, with which are clothed the inferior Dhyanis of the celestial Hierarchy” (SD 1:132).

In the Vedantic fourfold classification of the human constitution, it is the second division — the others being 1) sthula-sarira, 3) karana-sarira, and 4) atman. The sukshma-sarira “bears to the physical body the same relationship which the astral world bears to the objective plane of the solar system. It is sometimes called *kama-rupa* in our theosophical dissertations. This unfortunate expressive has given rise also to a misconception that the principle called *kama* represents this astral body itself, and is transformed into it. But it is not so. It is composed of elements of quite a different nature. Its senses are not so differentiated and localized as in the physical body, and, being composed of finer materials, its powers of action and thought are considerably greater than those found in the physical organism” (Notes on BG 30-1).

In the *Laws of Manu* (1:17) sukshma used in the plural refers to the six subtle principles from which the grosser elements are evolved (ahamkara and the fine tanmatras); other systems define 17 subtle principles of the five organs of sense, six organs of action, five elements, buddhi, and manas.

The term is more or less equivalent to the sukshmopadhi of the Taraka-Raja-Yoga school.

Sukshmopadhi (Sanskrit) *Sūkṣmopādhi* [from *śūkṣma* subtle, fine, ethereal + *upādhi* base, vehicle] The subtle base or vehicle, in the human constitution the combined qualities of the higher manas, the lower manas, the kama-energy, and their astral veil or vehicle infilled with life. According to Taraka-Raja-Yoga there are three upadhis in the human constitution: karanopadhi, sukshmopadhi, and sthulopadhi. The sukshmopadhi comprehends manas in its dual aspect in union with kama and the vital-astral portions in the theosophic sevenfold division of man, and likewise corresponds to the manomaya-kosa of the Vedantic classification. The state of consciousness known as the swapna or sleeping condition is connected causally with the sukshmopadhi. This upadhi when developed and trained in the adept is the seat of a number of remarkable faculties or powers, among them spiritual clairvoyance and clairaudience. In the ordinary person, it is the lower portion of sukshmopadhi which ordinarily acts automatically, producing flashes of unconscious clairvoyant vision, dreams of various kind, and other psychic phenomena.

Sulanuth (Hebrew) A monster in the sea described as being ordered by God “to come up and go

into Egypt . . . and she had long arms, ten cubits in length . . . and she went upon the roofs and uncovered the rafting and cut them . . . and stretched forth her arm into the house and removed the lock and the bolt and opened the houses of Egypt . . . and the swarm of animals destroyed the Egyptians” (Jasher 80:19-20).

Sulfur, Sulphur In European medieval alchemy, a cosmic element of which the mineral sulfur was regarded as a manifestation or correspondence. In classical Latin, also used for lightning, and the Greek for sulfur is theion (divine); it was regarded as having a purifying, and protective power. The alchemical division of nature and man into spirit, body, and soul shows sulfur as denoting spirit and the element fire. It is used as a purificatory agent in modern medicine, and popular usage has sanctioned its efficacy in the insoluble form of brimstone.

Sulphur. *See* SULFUR

Sumati (Sanskrit) *Sumati* Benevolent, kindness; devotion, prayer. As a proper noun, the name of many celebrated people, such as a son of Bharata who gave his name to Bharata-varsha (India).

Sumeru (Sanskrit) *Sumeru* Exalted Meru.

Summer. *See* SEASONS

Summerland Sometimes used by Spiritualists for what they hold to be the abode of departed spirits, which actually exist in astral regions, disintegrating before the second death.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Sun-Sz

Sun The central focus of radiating energy, physical and spiritual, of any solar system. In our solar system the sun is one of several suns subordinate to the more central sun of the universal solar system. In the solar cosmos as a whole it is the Logos, the head of the septenary hierarchy of creative forces, corresponding to the Christos, Abraxas, Mithras, Dionysos, etc., in man. Its names among the many peoples of the earth are countless: Osiris, Ormazd, Apollo, Phoebus, Ammon-Ra, Helios, Surya, etc. Symbolized by the circle with a central point, it is for its own system the All-Father. Sun worship, in the occult sense, was once the universal foundation of religion, but it has mostly given place to what is really lunar worship. The sun is often found contrasted with the moon as spiritual is with material; and solar magic means white magic as contrasted with the dark lunar magic. Thus we find deities classed as solar and lunar, or particular deities have both a solar and a lunar aspect. As Father and Son he is seen in Osiris and Horus, atman and buddhi-manas, God and Christos.

Our visible sun, though the center of its system, is not the father of the planets but their “co-uterine brother,” one of the “eight sons of Aditi.” It is not the creator of the fohatic forces, but their radiating focus. Nor is it an incandescent and cooling body; it is nature’s great laboratory of intelligently vital and electromagnetic forces for our system. “*The Sun is the heart of the Solar World (System) and its brain is hidden behind the (visible) Sun. From thence, sensation is radiated into every nerve-centre of the great body, and the waves of the life-essence flow into each artery and vein. . . . The planets are its limbs and pulses*” (SD 1:541). Physiologically, the sun pulsates life through the solar system, in connection with the 11 and 22 year sunspot phenomena — the solar spots being due to the contraction of the solar heart.

The sun is a vitally electric glowing sphere; what our eyes see is a reflection, the shell of the *real* sun, which is hidden behind this reflection. Further, the sun is the storehouse of the vital force of the solar system, which is the “*Noumenon* of Electricity”; it issues forth from the sun as life

currents not only for the earth and every organism upon it, but for all the planets of the solar system (SD 1:531). The production of this vital energy will not cease until the end of the solar manvantara when the sun will instantaneously disappear, after certain long-standing premonitory symptoms.

The sun, like each of the planets, is a chain of globes, of which we see only the globe on the fourth cosmic plane — a highly ethereal body composed of the fifth, sixth, and seventh, states of matter (counting upwards) of the fourth cosmic plane.

Regarding the elements which scientists state are present in the sun, because such elements are present in spectroscopic observations, theosophy holds that no element on the earth is missing in the sun, and there are other elements there which are unknown to science, yet which are present in the sun.

In the enumeration of the seven sacred planets the sun is used as a substitute for an esoteric planet.

The enormous importance which the sun assumes in nature is based on its being the spiritual and intellectual head of solar system, as well as the general physical and psychological life-giver.

Sunahsepha (Sanskrit) *Śunaḥśepha* In ancient Hindu legend, for instance in the *Ramayana*, the son of the sage Richika, corresponding in some ways with the Hebrew Isaac. His father “sold him for one hundred cows to King Ambarisha, for a sacrifice and ‘burnt offering’ to Varuna, as a substitute for the kings’ son Rohita, devoted by his father to the god. When already stretched on the altar Sunasepha is saved by Rishi Visvamitra, who calls upon his own hundred sons to take the place of victim, and upon their refusal degrades them to the condition of Chandalas. After which the Sage teaches the victim a *mantram* the repetition of which brings the gods to his rescue; he then adopts Sunasepha for his elder son” (TG 313).

Sun-Force Adopted by Dr. B. W. Richardson (1828-96) from Metcalfe; also called caloric, to designate a universal active life principle. Starting with the generally held theory that nature results from the interaction of matter and force, Metcalfe denied that force is a mere mode of motion or a vibration in a mysterious fluid, and held that this force is itself a semi-material or ethereal agent, acting within the particles of physical matter. It is in its ultimate simply the universal life principle directed and governed by fohat.

In theosophy every body in space, whether nebula, sun, planet, or galaxy, is a focus or organ of universal life; every sun, as an instance, being the channel — having nevertheless an individuality of its own distinct from other similar individualities — through which pour various cosmic forces, combined with the individual jiva of each sun itself. The ancients used to speak of the sun as being seven-rayed — a forecast of the seven rays of the solar spectrum — or even ten- and twelve-rayed, the reference being to the septenary, denary, or duodenary forces pouring from it. *See also*

CALORIC

Sung-ming-shu (Chinese) The Tree of Knowledge and of Life in China. Under this tree religious miracles were formerly stated to be performed by the high priest.

Sun God(s) Sometimes applied to the cosmic logoi, which collectively are not only symbolized, but actually are represented by and through the septenary sun. Deities of masculine character are often called sun gods. Like the sun, a sun god may be on various planes, from that of a Logos to that of the absolute in various subordinate hierarchies. Sun gods in mythology usually slay dragons, as Apollo slays Python, and often have serpents for their emblems, the serpent being dual in aspect — high and low, inner and outer, active and passive, positive and negative, spiritual and material. As in Egyptian mythology, Osiris the sun god manifests as Horus, his own son, who is also a sun god, in similar fashion sun gods are manifested in man and on the lower planes of nature; similar to the Egyptian Osiris we have Adonis, Bacchus, Krishna, Christ, etc., as the sun god or spiritual monad in man; and cosmically we find sun gods on various planes.

Sunspots Astronomers describe the spots appearing upon the photosphere of the sun as irregularly ring-shaped penumbra enclosing a darker central umbra. Although the umbra looks black in comparison with the bright surrounding photosphere, it is actually quite brilliant. The spots have no permanence, either in time or shape: they often arise from combinations of contiguous smaller spots, or from no apparent cause on the sun's face, within a short period (often about a day). Bridges may form across a spot and thus give shape to two spots. All spots are carried across the sun's body by the sun's rotation, very few being found near the equator nor at 45 or more degrees from the equator.

In theosophy the spots are due to the diastolic and systolic movements of the sun — which is the heart as well as the brain of the solar system — in its rhythmic pulsations, by which the life forces of the system are circulated in a period roughly ranging from ten to twelve years, and usually given as being eleven years — the sunspot cycle of astronomy. “Thus, there is a regular circulation of the vital fluid throughout our system, of which the Sun is the heart — the same as the circulation of the blood in the human body — during the manvantaric solar period, or life; the Sun contracting as rhythmically at every return of it, as the human heart does. Only, instead of performing the round in a second or so, it takes the solar blood ten of its years, and a whole year to pass through its *auricles* and *ventricles* before it washes the *lungs* and passes thence to the great veins and arteries of the system.

“ . . . It is similar to the regular and healthy pulsation of the heart, as the life fluid passes through its hollow muscles. Could the human heart be made luminous, and the living and throbbing organ be made visible, so as to have it reflected upon a screen, . . . then every one would see the Sun-spot phenomenon repeated every second — due to its contraction and the rushing of the blood” (SD 1:541-2). The sunspots serve not only as vents for egress and ingress of the steams of lives in

constant circulation throughout this solar system, but such solar pulsations are cosmically rhythmic and the well-being of the entire solar system is controlled by the vital and intellectual energies constantly active in and through the sun, and whose functional operations are physically expressed by the appearance and disappearance of the sunspots.

Sun Worship All ancient pantheons contain a deity associated with the sun, so that the reverence and worship paid to the sun was ritually universal even where lunar worship may have predominated. With the Zoroastrians, sun worship was the dominant religious theme although a pantheon of other deities was not excluded.

It was not the visible orb which was worshiped as the solar divinity, but the spiritual power or being within or above the physical sun, which was but its reflection. The lord of the solar system sends its septenary forces and substances to all parts of the solar kingdom, thus binding it into a single organic individual.

Sunyata (Sanskrit) *Śūnyatā* A void, vacuum, emptiness; the Boundless or Void. In mystical philosophy, especially Mahayana Buddhism, illusory being or existence, the emptiness of cosmic manifestation when compared with the nonmanifest reality. This recognizes that all manifested existence, high or low, on whatever plane, as compared with essential reality is after all illusory deception and therefore relatively false by comparison. Being false and unreal it is therefore empty of essential significance, although possessing a very positive relative reality, so to speak.

In a still more profoundly mystical sense, the word by inversion has come to signify the utter fullness of cosmic reality, which is a seeming emptiness to our imperfect human vision, and yet is the only Real.

The objective idealism which the theosophic philosophy teaches when considering the noumena and phenomena of existence shows a fundamental reality behind these, above and beyond all manifestations whatsoever, as the root and basis of all entities and things, which although relatively unreal in themselves because products merely, or because based on the various prakritis, nevertheless because so based have a relative reality derivative from this basic root. *See also* PLEROMA

Suoyatar (Finnish) One of the forces of evil in the *Kalevala*, who gives birth to the serpent of evil or death by means of her spittle. The origin of all serpents is attributed to Suoyatar. *See also* HISI

Superastral The *Pyramander* of Hermes speaks of a sea of fire, which is the superastral, the noumenal light, mulaprakriti or undifferentiated matter, the first radiation from the root; afterwards it becomes astral matter (SD 1:75).

There are no absolute separations among the planes of the universe, because all of them, while existing distinctly from each other, on their frontiers blend insensibly with the contiguous planes. Thus the lower portions of the superastral blend insensibly with the higher portions of the astral.

Astral in a general sense is equivalent to the cosmic astral light, itself composed of numerous subordinate planes ranging from the spiritual through the ethereal, until the lowest subplanes merge into and become the physical world. Thus the cosmic sea of fire spoken of by ancient mystics and philosophers is another way of speaking of pure spirit and the divine or superspirit; out to spirit and superspirit flows in emanational degrees what becomes through another unfolding the astral light.

Supernatural Beyond or above nature; but, as nature in its esse is space, the Boundless both inner and outer, the term is meaningless. Supernormal fits better the common usage for phenomena beyond the customary range of our experiences or not explainable by what we know of the laws of nature. In theology supernatural implies a separation between divine beings, spiritual beings, or human saints on the one hand, and nature on the other hand, in virtue of which the normal procedure of nature supposedly can be interfered with — a conception which is an absurdity from the standpoint of theosophy. Physical nature surrounding us is actually the least part of universal nature, as it is the invisible inner universes and spheres of being which are causal, and our physical universe merely the garment or effect of the invisible superior parts of universal nature.

Superspiritual Those realms and spheres of the cosmic being and life which are the causal noumena even of the spirit; and hence we may speak of the superspiritual as being the divine, out of which the spiritual flows during the course of cosmic evolution. The spheres of action of the combined forces of evolution and karma are the superspiritual or noumenal, the spiritual, the psychological, the astro-ethereal, the subastral, the vital, and the purely physical. Man in the first round and first root-race on globe D was a highly ethereal being, nonintelligent in our sense, but spiritual, and the offspring of superspiritual monadic essences; and the same rule applied, but less forcibly, in the first root-race of the fourth round.

Supporters The cosmocratores, rectores mundi, Pillars of the World, exemplifying the Scandinavian ases and the planetary spirits of certain Christian mystics. In Hinduism they are the guardian deities of the eight cardinal points, and are called loka-palas.

In theosophy, so far as our own solar universe is concerned, the supporting spiritual powers involved in the carpentry of the universe, referring to the rectors of the planets. Just as a human community is formed by individuals, just so is a solar system formed by the solar chief and the planetary individuals which not only by their life and energies and substances make such solar system, but continuously support it and keep it going as a cosmic individual throughout its entire life term.

Supralapsarians A class of Calvinists who believe that God's decree of election determined that man should fall, so that by redemption part of the race could be saved. This decree of redemption was made *before* the Fall, hence supra-laps-arian. *See also* PREDESTINATION

Supreme Self Paramatman, the summit or hierarch of a cosmic hierarchy. To speak of one

ultimate supreme self as infinite and eternal is a logical contradiction, although such paramatmans are virtually infinitely numerous in the frontierless ranges of the Boundless, parabrahman (beyond Brahman), or 'eyn soph (without bounds or limits).

Sura(s) (Sanskrit) *Sura*-s Used in the Vedas for gods in general, equivalent to devas; originally solar deities, as is shown by the name surya (sun), and correspond in many instances to the manasaputras and agnishvattas of theosophy. Later by the Indian exotericists the suras arbitrarily became asuras (not suras), yet “the ‘Ancestors’ *breathed* out the first man, as Brahma is explained to have breathed out the *Suras* (Gods), when they became ‘*Asuras*’ (from *Asu*, breath)” (SD 2:86).
See also ASURA; MAHASURA

Surabhi (Sanskrit) *Surabhi* Sweetly-smelling, lovely, charming; a name for the earth, also for the mystical cow of plenty, Kamaduh, one of the 14 precious things yielded by the ocean of milk (space) when churned by the gods to produce the worlds. Among other meanings in all ancient lands, both bull and cow were emblems of the moon and of its manifold generative and productive influences.

Surarani (Sanskrit) *Surāraṇi* [from *sura* god, divinity + *araṇi* the disk in which fire is kindled] The matrix of the gods; applied to Aditi, the mother of the gods. A somewhat similar term, Suravani [from *avani* the earth, whether as the cosmic element or our grossly material globe] is applied to the earth as the mother of the gods or Aditi. The term *sura*, equivalent to *deva*, shows that these beings are in intimate connection with Surya (the sun), and thus are solar entities.

Surasa (Sanskrit) *Surasā* Sweet, lovely, charming; a daughter of Daksha who became one of Kasyapa’s wives, and was the mother of a thousand multi-headed mystical serpents and dragons.

Surpa (Sanskrit) *Śūrpa*, *Sūrpa* A winnowing basket.

Surplus of Life Used in theosophy to express the original processes building the globes of a planetary chain, as well as the living beings forming the hierarchies of the chain. Applying the Christian analogy of the unrolling of a scroll to the manifestation of the globes of a chain, when the first globe (globe A) has come into manifestation, only 1/7th of the scroll has been unrolled or opened out, leaving 6/7ths of the scroll intact or unopened. The surplus of life applies to the 6/7ths still not manifested — which would be globes B, C, D, E, F, and G. After the appearance of globe A, the surplus of life moves down a plane in order to develop globe B, and thus the scroll is opened another seventh, leaving 5/7ths intact; and so the process continues until all the seven globes of the planetary chain have appeared.

The analogy may also be applied to the seven principles composing the human being. Atman is the first principle to be unrolled, the other six principles (buddhi, manas, kama, prana, linga-sarira, and sthula-sarira) remaining infolded or involved. The surplus of life of the human constitution then unrolls another principle to manifest buddhi, the other five still being infolded, and so the

process continues until all seven principles are unrolled or emanated.

Surt (Scandinavian) **Surtr** (Icelandic) [from *svartr* the black] Also Surtur, Surter. A Norse fire giant, the world-destroyer in the Edda. In the Norse myths Surt will lead the hosts of Muspellsheim (home of fire) at Ragnarok, when the gods depart the realms of life, and the worlds perish in universal conflagration. Surt himself will slay Frey, the bright god, and when all the combatants are slain, Surt will fling his firebrand, and everything animate or inanimate will be plunged into an ocean of fire, and the nine homes will be no more. Surtarlogi (flame of Surt) represents the volcanic and cosmic forces which will cause the destruction of our world when its life is over. The world, universe, or solar system becoming an ocean of cosmic flame or light refers to the ending of a manvantara and the opening of pralaya. The ocean of fire is the passing of matter back into its primordial fiery spiritual nature and the nine homes are the nine or ten cosmic planes, the nine grades or divisions of the cosmic hierarchy.

Surukaya (Sanskrit) *Surukāya* [from *svar* the sun + *kāya* robe, vesture] The sun-robe; one of the seven buddhas (sapta-tathagatas), also equivalent to “clothed with the sun.” Likewise a consequence of one phase in the initiatory cycle.

Survival of the Fittest According to Darwin, the most important factor in organic evolution was natural selection, operating on small casual variations in the organisms whose peculiarities were best adapted to their environment would have the best chance of surviving and, their superiority being transmitted to their offspring, the net result would be a survival of the fittest and an elimination of the unfit.

Modern biologists attach much less importance to this principle as a factor in evolution, cite facts which cannot be explained by it, and dispute whether acquired characteristics are transmitted. The general tendency is to attach more importance to hereditary influences than to environment. In any case, environment could produce no effect except in response to an urge arising within the organism itself: the phrase is descriptive of a process and does not stand for an agent. Again, the theory of the survival of the fittest by no means signifies the survival of the best or most evolved.

Surya (Sanskrit) *Sūrya* The sun, its regent or informing divinity; in the Vedas, the sun god, the most concrete of the solar gods, generally distinguished, at least in name, from Savitri and Aditya. He was regarded as one of the original Vedic triad: Indra or Vayu presiding over the atmosphere; Agni, over the earth; and Surya, over the space of the solar system. In Vedic literature, Surya is also called Loka-chakshuh (eye of the world). He is considered the son of Dyaus, the cosmic spirit — pictured as the spatial extent of cosmic mind — and of Aditi (space). He is represented as moving through the celestial sphere in a chariot drawn by seven ruddy horses or by one horse with seven heads, referring to the seven principles or elements of the solar system, or to his own seven principles as a unit with their seven different logoi or heads; or the former refers to the seven logoi as manifested in the regents of the seven sacred planets, the latter to their common origin from the

one cosmic element, often figuratively called fire (SD 1:101).

In later mythology Surya is particularly identified with Savitri as one of the twelve adityas of the sun in the twelve months of the year, and his seven-horsed chariot is described as driven by Aruna (dawn). Surya was represented also as the husband of Sanjna (spiritual consciousness, cosmic or human), and the offspring of Aditi (space), mother of all the gods. One legend represents Surya as crucified on a lathe by Visvakarman — his father-in-law, the creator of gods and men, and their carpenter — and having an eighth part of his rays cut off, which deprives his head of its effulgency, creating round it a dark aureole — “a mystery of the last initiation, and an allegorical representation of it” (TG 313).

Sanjna is the sakti of Surya, just as a human spiritual consciousness or buddhi is the sakti of atman, at once its vehicle, its manifestation, and itself in action. This is the reason the sun is considered the patron, parent, and governor of all the manasaputras, and therefore in a generalized sense the source of mind — sanjna, spiritual intellect or consciousness.

The names of the seven principal rays of the sun are: Sushumna, Harikesa, Visvakarman, Visvatryarchas, Sannaddha, Sarvasvasu, and Svaraj. “These seven rays are the entire gamut of the seven occult forces (or gods) of nature, as their respective names well prove. . . . As each stands for one of the creative gods or Forces, it is easy to see how important were the functions of the sun in the eyes of antiquity, and why it was deified by the profane” (TG 315). These principal rays of Surya are from another standpoint the seven solar logoi, each one of the seven having its respective home in the seven sacred planets; equally, there may be said to be twelve rays of the sun, and twelve sacred planets, each one a home or mansion of one of the solar logoi.

Surya is only the appearance on this cosmic plane of the solar heart or central spiritual sun; although in a more mystical sense, Surya, our sun, is one of the reflections of a galactic center, which astronomically is the prototype, albeit far more advanced in cosmic evolution than is the sun itself. The visible reflection of the sun is composed of highly ethereal matter belonging to the fifth, sixth, and seventh substrates of the lowest cosmic plane or prithivi. Within and above all these rise in ever more sublime steps six other cosmic planes, on and in which are the other globes of the solar chain. The sun’s primary essence belongs to the highest division of the seventh state of mother-substance (adi-tattva). This primary sun, of which our visible sun is the reflection, is concealed from the gaze of all but the very highest dhyani-chohans.

Suryamana (Sanskrit) *Sūryamāna* [from *sūrya* sun + *māna* from the verbal root *mā* to measure] The sun’s measure; the method of reckoning time in which the year consists of 365 days, 15 ghadias, and 31 vighadias. One of several methods of calculating time in India, two others being chandramana (moon measure) and barhaspatysmana (Jupiter measure).

Surya-mandala (Sanskrit) *Sūrya-maṇḍala* Orb or globe of the sun; the sun’s circle, all included within the frontiers of the sun’s power or range of action, and hence both astronomically and

mystically the solar kingdom or solar system. This kingdom is not merely the visible matter, but the entire Brahmanda (solar egg of Brahma) and therefore the solar system in its septenary range from paramatman to sthula-sarira.

Surya-Siddhanta (Sanskrit) *Sūrya-Siddhānta* A celebrated astronomical and cosmogonical work of ancient India of enormous antiquity. This work shows marvelous mathematical skill and comes very close to the modern time periods of astronomy that the most skilled mathematicians and astronomers have determined. It also deals with yugas in their various lengths, divisions of time itself into infinitesimal quantities, and general astronomical subjects, including not only the time periods of the sun, moon, and planets, but also eclipses, seasons of the year, etc.

The *Surya-Siddhanta* states that it was dictated more than two million years ago, towards the end of the krita yuga (golden age) by the sun himself, through a projected solar representative, to the great sage Asuramaya who wrote down the revelation. From the commencement of our kali yuga to the end of the satya yuga is 2,164,965 years ago. The *Surya-Siddanta* was therefore a very late Atlantean work or an early work of the fifth root-race, for though the so-called Aryan or fifth root-race was already nearly 1,728,000 years old at the time of the writing of this work, the race was still in its early periods, and was still practically a part of the Atlantean civilization; hence Asuramaya has been called an Atlantean astronomer. The fifth root-race has been a race *sui generis* for only about a million years from our present time.

Suryavansa (Sanskrit) *Sūryavaṃśa* [from *sūrya* sun + *vaṃśa* race, lineage] The solar race; the race or lineage whose founder was said to be descended from the sun, just as the origin of the other great lineage, the Chandravansa, was attributed to the moon. The king who founded the suryavansa, Ikshvaku, was the son of Vaivasvata-Manu who sprang from the sun; he reigned at Ayodhya at the beginning of the second or treta yuga. The two branches of the suryavansa were the dynasty of Mithila, founded by a younger son of Ikshvaku, and that of Ayodhya, in which branch the avatara Rama was born, whose exploits are recounted in the *Ramayana*. The *Vishnu-Purana* enumerates the members of the Ayodhya dynasty, which amounts to about a hundred rulers. Several Rajput tribes still claim to belong to this race.

Suryavarta (Sanskrit) *Sūryāvarta* Sun revolution; a degree or stage of samadhi.

Sushumna (Sanskrit) *Suṣumṇa*, *Suṣumna* Astronomically, the highest of the seven principal rays or Logoi of the sun, the others being Harikesa, Visvakarman, Visvatryarchas, Sannaddha, Sarvavasu, and Svaraj. These rays “are all mystical, and each has its distinct application in a distinct state of consciousness, for occult purposes. The *Sushumna*, which, as said in the *Nirukta* (II, 6), is only to light up the moon, is the ray nevertheless cherished by the initiated Yogis. The totality of the Seven Rays spread through the Solar system constitute, so to say, the physical *Upadhi* (basis) of the *Ether of Science*; in which Upadhi, light, heat, electricity, etc., etc., — the forces of orthodox science — correlate to produce their terrestrial effects. As psychic and spiritual effects, they emanate from,

and have their origin in, the supra-soar Upadhi, in the ether of the Occultist — or Akasa” (SD 1:515n).

Sushumna (Sanskrit) *Suṣumṇā, Suṣumnā* [probably from *su* excellent, excellence, excelling + *sumna* musical hymn, happiness, joy] Perfect harmony; one of the three channels forming the spinal column of the body. These three channels are the main avenues not only for the psychovital economy of the body, but for spiritual and intellectual currents between the head and the body. In occultism the spinal column plays many physiological roles, but is especially threefold in its functions. The central channel or nadi, the sushumna-nadi, is the especial carrier of the “solar ray,” which comprises not merely physiological forces and attributes, but the spiritual and intellectual qualities and powers. The two other channels are the ida and pingala; exoteric Hindu works vary in regard to the positions of these, some place the pingala on the left and the ida on the right, and others the reverse. The sushumna connects the heart with the brahmarandhra and plays an important part in yoga practices.

Sushupti (Sanskrit) *Suṣupti* [from *su* well, good, fine + *supti* sleep] Fast asleep, deep sleep; the deep sleeping state when human consciousness is plunged into profound self-oblivion, “when the percipient consciousness enters into the purely manasic condition . . .” (OG 72). Sushupti is the third of the four states of consciousness mentioned in yoga philosophy, the others being jagrat, svapna, and turiya.

Sushuptyavastha is the sleeping state or condition.

Suspended Animation Cases of extreme insensibility where the vital activity has temporarily ceased, and the person appears to be dead. Outstanding examples are seen in persons resuscitated from drowning; in cases of those Oriental fakirs who are revived after being buried alive for days or weeks; and in those spiritual adepts who leave their body at will, and consciously go thousands of miles in their mayavi-rupa (thought-body). In the higher degrees of initiation, the trained initiate leaves his protected body while, in his higher nature, he traverses extraterrestrial spheres of existence. The adept comes and goes when the occasion justifies the effort, because his lives of training and aspiration have made him master of his lower nature, and enabled him to live and act in his liberated spiritual principle. These and other states of suspended animation show that the conscious existence of the inner man is not dependent upon his physical body.

Susruta (Sanskrit) *Suśruta* Very famous; the author of a system of Hindu medicine, with Charaka considered the two leaders of Hindu medicine and medical practice, their work being still held in great esteem. They laid down the system of medicine which some scholars believe Hippocrates followed later.

Sutala (Sanskrit) *Sutala* [from *su* good, excellent + *tala* sphere, place] Good place, i.e., still better for matter; the third counting downwards of the seven talas. Its corresponding loka or pole is janarloka. Sutala is a differentiated state of highly ethereal astral substance, corresponding with

sabda (sound) and with the higher manas in man, and therefore with the higher ego; likewise with the Manushya-buddha state, like that of Gautama on earth. Sutala is the abode of the hierarchies of some of the manasaputras, every one in this series of seven talas having its own respective inhabitants; and due to the evolutionary ascents and descents that take place through the ages, there is a more or less continual intercourse between tala and tala.

Sutra (Sanskrit) *Sūtra* [from *siv* to sew] A string, thread; the sutras are strings of rules or aphorisms written in verse form, composed in terse and symbolic language with the obvious intention of their being committed to memory. This was a favorite form among the Hindus, as among all ancient peoples, of embodying and transmitting rules of ancient religious and philosophic thought. There are sutras written upon almost every subject, but the sutras commonly signify those connected with the Vedas, of which there are three kinds: the Kalpa-sutras (rules of ritual); the grihya-sutras (domestic rules) treating of ordinary family rites such as marriage, birth, name-giving, etc.; and the Samayacharika-sutras which treat of customs and temporal duties. The Kalpa-sutras belong to the class of writings called Srutis (heard or revealed); while the other two types of sutras belong to the Smritis (remembered), carried traditionally from generation to generation by word of mouth.

In Buddhist writings, the Sutras are the second division of sacred works, generally known under the equivalent Pali term Suttas.

Sutrantaka (Sanskrit) *Sūtrāntaka* [from *sūtra* maxim, precept + *anta* inner meaning, final meaning] One who follows the inner and spiritual meaning of the Buddhist Sutras or teachings. Everywhere Buddhism predominates, there are two distinct classes of Buddhists: those who adhere closely to the spirit of the Buddha's original teachings, and those who not only make the teaching popular, but who perhaps also are followers of their letter. These are another phase of the two methods said to have been taught by the Buddha, called the heart doctrine and the eye doctrine: the former was the doctrine of occult wisdom and deep mystery; the latter, containing the same teaching but expressed in such a way as to be more easily understood, was the outer teaching, and came to be called the doctrine of the Buddha's eye. Likewise these two aspects might be called the doctrine of the spirit, and the doctrine of the intellect. To one who understands both, and coalesces the two into a single unity, full illumination comes regarding the complete content of the archaic wisdom-religion which Gautama Buddha taught.

Sutratma-buddhi (Sanskrit) *Sūtrātma-buddhi* [from *sūtrātman* thread-self + *buddhi* human spiritual soul] The buddhic monad passing from life to life as the thread-self or spiritual thread of self, and hence the spiritual essence of all past incarnations, the higher self in each person. *See also* BUDDHI

Sutratman (Sanskrit) *Sūtrātman* [from *sūtra* thread + *ātman* self] The thread-self; the golden thread of self-conscious individuality, the stream of egoic self-consciousness, on which all the

substance-principles are strung like pearls on a golden chain. It is this sutratman, or stream of egoic consciousness-life, “which is the fundamental Selfhood in all beings, and which, reflected in and through the several intermediate vehicles or veils or sheaths or garments of the invisible constitution of man, or of any other being in which the Monad enshrouds itself, produces the egoic centers of self-conscious existence.

“The Sutratman, therefore, is rooted in the Monad, the monadic essence, but its stream is colored by the individuality of the Reincarnating Ego hitherto sleeping in the bosom of the Monad, which now after Reincarnation is awakened into self-conscious activity; and this ‘colored stream’ working through the appropriate vehicles of man’s inner constitution, in other words, through his mind and through his emotions, his aspirations, his intellect and so forth, produces the individual consciousness which man recognises in himself” (“H. P. B.: The Mystery,” *Theosophical Path*, October 1930, p. 329). Vedanta philosophy also teaches that atman passes like a thread through the five subtle bodies or kosas, and therefore is called sutratman.

In a more relative sense the sutratman is the egoic pilgrim, the immortal individuality, or that thread of being which animates a person and passes through all the countless personalities which he uses during the course of his manvantara-long evolutionary progress. “In each of us that golden thread of continuous life — periodically broken into active and passive cycles of sensuous existence on Earth, and super-sensuous in Devachan — is from the beginning of our appearance upon this earth. It is the *Sutratma*, the luminous thread of immortal *impersonal* monadship, on which our earth lives or evanescent *Egos* are strung as so many beads . . .” (SD 2:513).

In the latter sense sutratman is a synonym of the reincarnating ego, manas conjoined with buddhi which absorbs the manasic recollections of all and each of our preceding lives. It is so called, because, like the pearls on a thread, so is the long series of human lives strung together on that one thread-stream of self-conscious being. The cosmic sutratman bears the same relation to the universe that ours does to the human constitution, being the cosmic hierarch of a galaxy, solar system, or planetary chain.

Sutta-pitaka (Pali) *Sutta-piṭaka* [from *sutta* (Sanskrit *sūtra*) dialogue, originally a thread + *piṭaka* basket] The third section of the Buddhist canon (the *Tripitaka* or Three Baskets) treating on the dialogs (suttas) of the Buddha and his disciples, especially those in the style of discourses and narratives.

Suttee [from Sanskrit *satī* faithful wife, one who burns herself on a funeral pyre, either on the same pyre as her husband's corpse or at a distance] The practice of voluntary self-immolation by widows was prohibited by the British in India and finally abolished. When its cessation was first commanded, the Brahmins — who were principally responsible for the continuance of this dreadful custom — maintained that their sacred scriptures approved of the practice, but Orientalists have demonstrated that the texts so cited had been altered. “Professor Wilson was the

first to point out the falsification of the text and the change of 'yonim agre' into 'yonim agneh' [womb of fire] . . . According to the hymns of the 'Rig-Veda,' and the Vaidic ceremonial contained in the 'Grihya-Sutras,' the wife accompanies the corpse of her husband to the funeral pile, but she is there addressed with a verse taken from the 'Rig-Veda,' and ordered to leave her husband, and to return to the world of the living" (Max Muller, *Chips from a German Workshop* 2:35).

The original Sanskrit of the *Rig-Veda*, supported by the Commentaries and the ceremonials without variation of text or meaning, is: *a rohantu janayo yonim agre*, "the wives (or mothers, i.e., women) may first ascend to the sacred place." These words finally were misread by the Brahmins as: *a rohantu janayo yonim agneh*, "wives (mothers, women) may or should ascend to the sacred place of fire" i.e., womb of fire — construed as the funeral pyre).

Suttee therefore has been confused by the West as the custom of the burning of widows itself; but the word really means the widow herself who, because of her great virtue in unfailing fidelity to her one husband, prefers to sacrifice her life on the funeral pyre rather than to live on earth alone after his death. The custom is *not* commanded or even approved by Vedic or other Hindu scriptural authority, but on the contrary is, indirectly if not directly, forbidden. How the custom ever arose is still obscure, but may be ascribed to a mixture of priestcraft and unreasoning sentimental and religious devotion on the part of the ignorant masses.

Suttung, Suttungr (Icelandic) In the Norse Edda, a giant who guards the mead (of experience) in the depths of matter, where the gods must find it and raise it to higher levels. Odin is said to have enlisted the aid of a squirrel or bore to penetrate the mountain in which the mead was hidden, and to have entered through the borehole in the guise of a serpent. Once in, he seduced Suttung's daughter into giving him a draft of the precious mead.

Symbolically, Odin (the divine consciousness) enters the mountain (material world) with the aid of the squirrel that runs in the Tree of Life (human intelligence) to seek the mead (experience in life). Suttung, the matter giant, represents a cycle or lifetime, and his daughter a subordinate cycle of somewhat less materialistic bent.

Sva (Sanskrit) *Sva* As a noun, oneself; as an adjective, one's own.

Svabhava, Swabhava (Sanskrit) *Svabhāva* [from *sva* self + *bhū* to become, grow into] Self-becoming, self-generation, self-growing into something; the unfolding of the self or monadic essence by *inner* impulse, rather than by merely mechanical activity in nature — *self*-becoming or self-directed evolution. Each entity is the result of what it is in its own higher nature. "Its Swabhava can bring forth only that which itself is, its essential characteristic, its own inner nature. Swabhava, in short, may be called the essential Individuality of any monad, expressing its own characteristics, qualities, and type, by *self-urged evolution*. . . . Consequently, each individual Swabhava brings forth and expresses as its own particular vehicles its various *swarupas*, signifying characteristic bodies or images or forms" (OG 166-7). The essential self, like a sun, sends

a ray from itself into manifestation, and the vehicles formed by this ray express its own unique individual essence and path of evolutionary growth and experience. Every entity, in all ranges of its being, reflects its own essential individuality which is stamped on its inmost essence.

A parallel thought is the Stoic spermatikoi logoi (seed-reasons or -causes), “which were the fruits or results, the karmas, of former periods of activity. Having attained a certain stage of evolution or development, or quality, or characteristic, or individuality in the preceding manvantara, when the next period of evolution came, they could produce nothing else but *that which they were themselves*, their *own inner natures*, as seeds do. The seed can produce nothing but what it itself is, what is in it; and this is the heart and essence of the doctrine of swabhava” (Fund 149).

Svabhavat, Swabhavat (Sanskrit) *Svabhavat* [from *sva* self + the verbal root *bhū* to become, to be] That which becomes itself, self-existent, self-becoming, that which develops from within outwardly its essential self by emanation or evolution. Svabhavat is the essence of cosmic world-stuff,

“a state or condition of cosmic consciousness-substance, where spirit and matter, which are fundamentally one, no longer are dual as in manifestation, but one: that which is neither manifested matter, nor manifested spirit, alone, but both are the primeval Unity; spiritual Akasa; where matter merges into spirit, and both now being really one, are called ‘Father-Mother’ — spirit-substance. Swabhavat never descends from its own state or condition, or from its own plane, but is the cosmic reservoir of Being, as well as of beings, therefore of consciousness, of intellectual light, of life; and it is the ultimate source of what science . . . calls the ‘energies’ of Nature Universal. . . .

“Swabhava is the characteristic nature, the type-essence, the individuality, of Swabhavat — of any Swabhavat, each such Swabhavat having its own Swabhava. Swabhavat, therefore, is really . . . the plastic *essence* of matter, both manifest and unmanifest” (OG 167-8).

Svabhavat may be considered as parabrahman-mulaprakriti (superspirit-rootmatter), the one underlying cosmic being or substance, the divine source; the self-existent and, to our as yet undeveloped minds, the great vacuity — mahasunya. It is equivalent to the Northern Buddhist adibuddhi (primordial buddhi), the Brahmanical akasa, and the Hebrew cosmic waters.

Svabhavika (Sanskrit) *Svābhāvika* [from *svabhāva* self-becoming] The Svabhavika school, perhaps the oldest existing school of Buddhism, is one of the principal Buddhist philosophical systems and is still prevalent in Nepal. Its teachings are highly mystical, and when properly understood may be said to have remained faithful in large degree to the esoteric teachings of Gautama Buddha. The Svabhavika philosophers teach the becoming or unfolding of the self by inner impulse or evolution of the inherent seeds of individuality lying latent in every monad or jiva.

Like all other profound philosophic systems, the Svabhavika has been subjected to misinterpretation, in this case taking the form of a somewhat materialistic framework of thought.

The inner essential teaching, however, is identic with the more spiritual outlook of Mahayana systems of Northern Asia.

Svadha (Sanskrit) *Svadhā* [from *sva* self, oneself + the verbal root *dhā* to place, fix, constitute, sustain, maintain] In Hinduism the essential individuality or individual nature of a being, whether man, god, or other entity; almost a synonym for *svabhava*, yet signifying the entity's individuality as manifested through the vehicles which contain it, rather than the intrinsic characteristic of the egoity itself. This is the reason *svadha* is often used as a name for *maya* or *prakriti* as the source of the universe.

In a more restricted sense, *svadha* is also the sacrificial offering or oblation made to each god, and is thus allegorically represented as a daughter of Daksha and wife of at least one class of the *pitris*, the *agnishvattas* and the *kumaras*. A *svadha* was therefore considered the highest form of benediction at a sacrifice, the inmost meaning being that one's own essence is laid on the altar of self-abnegations to the good of all. The inmost self is "placed" or "fixed" in its own vitality, which becomes the carrier, supporter, and maintainer of the inner spiritual power.

Svaha (Sanskrit) *Svāhā* [from *su* good, excellent, virtuous + the verbal root *ah* to speak, say] One of the daughters of Daksha and consort of Agni; also an exclamation used in making oblations to the gods, meaning Hail! May a blessing rest on! or So be it!

Svamin. See SWAMI

Svapna (Sanskrit) *Svapna* [from the verbal root *svap* to sleep] The dreaming-sleeping state of consciousness, "the state of consciousness more or less freed from the sheath of the body and partially awake in the astral realms, higher or lower as the case may be" (OG 72).

The second of the four states of consciousness mentioned in Yoga philosophy, the others being *jagrat*, *sushupti*, and *turiya*. *Svapnavastha* is the dreaming-sleeping state.

Svar, Svah (Sanskrit) *Svar, Svah* Heaven, the ethery spaces, or the sky, popularly supposed to be the cosmic space between the sun and the polar star, also in the Veda signifying the sun. It is likewise the last of the four sacred words uttered by every orthodox Brahmin when beginning his daily devotions: Om *vyahritis, bhur, bhuvah, svar*.

Svara (Sanskrit) *Svara* [from the verbal root *svr* to utter sound] Sound, tone, voice, noise; tone in recitation, a note of the musical scale (seven tones being enumerated: *nishada, rishabha, gandhara, shadja, madhyama, dhaivata, panchama*). "I am informed by persons competent to judge of the matter, that the Vedas have a distinct dual meaning — one expressed by the literal sense of the words, the other indicated by the metre and the *swara* (intonation), which are, as it were, the life of the Vedas. . . . Learned Pundits and philologists of course deny that *swara* has anything to do with philosophy or ancient esoteric doctrines; but the mysterious connection between *swara* and *light* is one of its most profound secrets" (Subba Row, *Five Years of Theosophy*)

While this is true enough, it is more important to understand that everything great or small, high or low, has its own keynote of sound, its mathematical number, so to speak. Hence every atom has its own particular characteristic sound or note; and it is possible to control such atom, or any other entity, provided one knows the characteristic sound which mathematically represents such entity. We see here one reason the mysteries of sound have been so carefully guarded, because “control” combined with knowledge would throw wide open the door to black magic of the worst kind, were such knowledge and power to fall into the hands of those morally unfit to possess it. The secret of all mantras, from the standpoint of practical magic, is not so much the words themselves or the letters they hold, although these latter have a certain meaning, but rather the finding of the keynote and chanting it. Rhythm, of course, is of the very essence of harmonic sympathy.

Svaraj (Sanskrit) *Svarāj* The self-ruling, the self-resplendent; one of the seven principal rays of the sun, “the last or seventh (synthetical) ray of the seven solar rays; the same as Brahma” (TG 315). These seven are really the entire range of the seven occult forces, or divinities, of the solar system; hence the names of these seven rays are names given to them in Hindu semi-occult philosophical literature as Sushumna, Harikesa, Visvakarman, Visvatryarchas, Samnaddhas, Sarvavasus, and Svaraj. Otherwise these seven rays are the seven solar logoi whose functions in the solar system are at once creative — or the intelligent impulses behind cosmic evolution — and supportive of the solar system, in addition to bringing about the various regenerating changes. The seven rays are elaborations of the Hindu Trimurti of Brahma, Vishnu, and Siva. *See also* SURYA

Svarga (Sanskrit) *Svarga* In Hindu philosophy, a heavenly abode — also often called Indraloka, or Svarloka, said to be situated on Mount Meru. It corresponds in theosophical writings to devachan.

Svarloka (Sanskrit) *Svarloka* [from *sva* heaven + *loka* world, place] Heaven-world; the fifth counting downwards of the seven lokas. The corresponding tala and nether pole is talatala. Svarloka is also exoterically said to be a paradise situated on Mount Meru, the abode of Brahma and Vishnu, and the Hindu Olympus, “described geographically as ‘passing through the middle of the earth-globe, and protruding on either side.’ On its upper station are the gods, on the nether (or South pole) is the abode of the demons (hells)” (SD 2:404). The sphere of influence of svarloka is said to reach to the pole star. *See also* JANARLOKA

Svarochisha (Sanskrit) *Svārociṣa* [from *sva* self + *ruci* light, splendor] Self-shining, brilliantly shining from inner power; the name of the second manu.

Svarupa (Sanskrit) *Svarūpa* [from *sva* own, characteristic + *rūpa* form] Characteristic form or body; every hierarchy, considered as an individual, whether it is sun, star, god, man, plant, or atom, under the stress of inherent evolutionary urge brings forth its own characteristic individual vehicle or form, its svarupa, in which it encloses or embodies itself. The svabhava of a sun brings forth is svarupa, a sun-body; the svabhava of a human being brings forth his characteristic

svarupa, a human body, and so forth.

Therefore, any jiva or monad of necessity imbodyes itself in vehicles or sheaths flowing forth from its own essence or vitality — for it can do nothing else. Such a sheath, vehicle, or body is the svarupa of the indwelling svabhava — character or individuality — of the jiva or monad.

Sva-samvedana (Sanskrit) *Sva-samvedana* Self-examination, self-knowledge; mystically regarded as self-analyzing reflection. The highest and purest form of knowledge, because essentially intuitive knowledge of the spiritual self. Consequently it is synonymous with paramartha. “The condition of Paranishpanna, without Paramartha, the Self-analysing consciousness (Svasamvedana), is no bliss, but simply extinction (for Seven Eternities). Thus, an iron ball placed under the scorching rays of the sun will get heated through, but will not feel or appreciate the warmth, while a man will” (SD 1:53-4).

Svasti (Sanskrit) *Svasti* Well, happily; a salutation meaning, may it be well with thee! Hail! So be it! Adieu! Amen! Also a noun meaning success, prosperity, fortune, health; a goddess so personified. Any particular auspicious object, supposed to denote good luck, is called svastika, among which is the familiar cross to which this name is given.

Svastika, Swastika (Sanskrit) *Svastika* An auspicious or lucky object; especially applied to the mystic symbol — a cross with four equal arms, the extremities of which are bent sharply at right angles, all in the same direction — marked upon persons and things in order to denote good luck, although originally the symbol had a far deeper significance. Sometimes the arms are bent to the left, sometimes to the right. The symbol is very widespread, and extremely ancient, engraved on every rock-temple and prehistoric building in India, and wherever Buddhists have flourished, as well as in Greece, among the ancient Scandinavians, and in ancient America. It has been called the Jaina Cross; Fylfot, Mjølner, or Thor’s Hammer by the Scandinavian peoples; and in the Chaldean *Book of Numbers* the Worker’s Hammer.

One of the most comprehensive, important, and philosophically scientific symbols, it is a symbolic summary of the whole work of evolution in cosmos and man, from Brahman down to the smallest biological unit. “Few world-symbols are more pregnant with real occult meaning than the Svastika. It is symbolized by the figure 6; for, like that figure, it points in its concrete imagery, as the ideograph of the number does, to the Zenith and the Nadir, to North, South, West, and East; . . . It is the emblem of the activity of Fohat, of the continual revolution of the ‘wheels,’ and of the Four Elements, the ‘Sacred Four,’ in their mystical, and not alone in their cosmical meaning; further its four arms, bent at right angles, are intimately related . . . to the Pythagorean and Hermetic scales. One initiated into the mysteries of the meaning of the Svastika, say the Commentaries, ‘can trace on it, with mathematical precision, the evolution of Kosmos and the whole period of *Sandhya*.’ Also ‘the relation of the Seen to the Unseen,’ and ‘the first procreation of man and species’ ” (SD 2:587). The bent arms also signify the continual revolution of the invisible cosmos of forces, which on our

plane becomes the revolution in time of the world's axes and their equatorial belts. In alchemy it shows that by the unceasing revolution of the four elements, equilibrium about a stable center is attained, the circle is generated out of straight lines, the complex and changeable nature becomes one. The two crossed lines represent spirit and matter, male and female, positive and negative. It shows man to be a link between heaven and earth, for the horizontal arm having one hook pointing up, the other down. In its applicability to all planes it contains the key to the seven great mysteries of kosmos.

Svastikasana (Sanskrit) *Svastikāsana* [from *svastika* the four-footed cross + *āsana* sitting in a posture] A particular mode of sitting practiced in hatha yoga, in which the toes are placed in the inner hollow of the knees; “the second of the four principal postures of the eighty-four prescribed in Hatha Yoga practices” (TG 315).

Svayambhu, Swayambhuva (Sanskrit) *Svayambhū, Swayambhuva* Self-generating, self-evolving; in Hindu metaphysics the cosmic primordial beginnings of the solar system from the womb on Aditi, or the spatial Deeps. Less accurately, the Self-existent, or Self-manifesting. A name applied to Brahma, issuing from the still more abstract essence of Brahman, equivalent to universal spirit, not the Boundless or infinitude, but the self-manifesting spiritual essence in the beginnings of its cosmic appearance, which lies at the root of any solar system.

“Each Cosmic Monad is ‘Swayambhuva,’ the self-born, *which becomes the Centre of Force, from within which emerges a planetary chain* (of which chains there are seven in our system), and whose radiations become again so many Manus Swayambhuva (a generic name, mysterious and meaning far more than appears), each of these becoming, as a *Host*, the Creator of his own Humanity” (SD 2:311). Thus svayambhu means the primordial or self-evolving monad of a celestial entity, whether solar system or an individual body such as a planetary chain.

Not to be confused with Swayambhuva, a name of the first manu.

Svayambhu-sunyata (Sanskrit) *Svayambhū-sūnyatā* [from *svayambhū* self-becoming + *sūnyatā* void] The self-becoming void of infinitude; in Hindu and Buddhist metaphysics, sunyata means that which is empty or void to human eye or understanding because of feebleness of penetrating vision, but otherwise the absolute fullness of spirit. “Spontaneous self-evolution; self-existence of the *real in the unreal, i.e., of the Eternal Sat in the periodical Asat*” (TG 315).

Svayambhuva (Sanskrit) *Svāyambhuva* [from *svayambhū* self-becoming] The self-becoming one; a name of the first manu.

Svedaja (Sanskrit) *Svedaja* [from the verbal root *svid* to sweat, perspire, exude + the verbal root *jan* to be born] Sweat-born, born by exudation or gemmation; according to theosophy the second root-race reproduced its individuals by what today is called budding or gemmation — a swelling appeared on the outer surface of the body of one of these entities. This swelling then grew in size,

and as it grew became constricted near the point of junction with the parent-body, until at length the bond of union became a mere filament, which finally broke, thus freeing the bud, which then grew into another entity in all respects like its parent. This method of reproduction is represented today both in the lower animal and vegetable kingdom and also in certain processes of cell division.

Sveta (Sanskrit) *Śveta* The white; a word with many applications in Hindu religion and philosophy. Sveta, as son of Kasyapa, was a serpent-dragon or deity connected with the sun.

Sveta-dvipa (Sanskrit) *Śveta-dvīpa* The white island; the abode of the blessed in the Puranas, also called the abode of Vishnu, Mount Meru, and the island inhabited by the mahayogis. “All the Avatars of Vishnu are said to come originally from the White Island. According to Tibetan tradition the White Island is the only locality which escapes the general fate of other dwipas and can be destroyed by neither fire nor water, for — it is the ‘eternal land’ ” (SD 2:408n).

Sveta-dvipa is connected with the land of the first root-race, the Imperishable Sacred Land, which is around the north pole. Blavatsky calls Greenland and Eastern and Western Siberia, the lotus-leaves of Sveta-dvipa (SD 2:327), the reference being purely geographical. In more restricted sense, Sveta-dvipa is mystically used for Sambhala, the source of the great mahayogis of the human race as a whole, and hence called “the land of the ‘Gods’ under their chiefs the ‘Spirits of this Planet’ ” (SD 2:6). Instances are very numerous in ancient writings of names being used not only for one single person, entity, geographical locality, or thing, but on analogical principles for similar persons, entities, and so forth. *See also* DVIPA

Sveta-lohita (Sanskrit) *Śvetalohita* The white and red; a name of Siva “when he appears in the 29th Kalpa as ‘a moon-coloured Kumara’ ” (TG 316).

Svetasvatara Upanishad or **Svetasvataropanishad** (Sanskrit) *Śvetāśvataropaniṣad* The very white horse Upanishad; one of the Upanishads of the *Yajur-Veda*.

Svipdag (Icelandic, Scandinavian) [from *svip*, *svep* appearance + *dag* day] Appearing as day; in Norse mythology, the hero Svipdag seeks the hall of Menglad (Freya) hoping to win her hand. After receiving from his dead mother (his own past) all needful virtues and qualities, he succeeds in reaching the abode of his beloved, only to be stopped at the magic gate by Odin in the guise of Verywise. Here he must satisfactorily answer a number of testing questions before he is finally admitted to the hall of Menglad, who has been eagerly awaiting his arrival. She represents his own divine hamingja (higher self).

Swabhava. *See* SVABHAVA

Swabhavat. *See* SVABHAVAT

Swabhavika. *See* SVABHAVIKA

Swami (Sanskrit) *Svāmin* An owner, master; occasionally husband; also a spiritual preceptor, a learned Brahmin or pundit. Used as a title of honor at the end of names. In compounds the form svami is used.

Swar. See SVAR

Swara. See SVARA

Swarga. See SVARGA

Swarupa. See SVARUPA

Swastika. See SVASTIKA

Swastikasana. See SVASTIKASANA

Swayambhuva. See SVAYAMBHUVA

Sweat-born Used to describe the method of reproduction of the second root-race in this fourth round when the offspring were born by means of vital droplets issuing from the bodies of individuals. A formative energy-substance was exuded, which changed the drops of vital sweat into greater drops, which grew into ovoid bodies in which the human fetuses gestated for a year or more. See also ROOT-RACE, SECOND

Sybil. See SIBYL

Sydyk. See MELCHIZEDEK; TSADIQ

Sylph The nature sprites or elemental beings inhabiting the element air, defined by Paracelsus for instance as holding a place between immaterial and material beings. “In space there are millions of beings, *not literally spiritual*, for they have all, like the animalculae [animacula] unseen by the naked eye, certain forms of matter, though matter so delicate, air-drawn, and subtile, that it is, as it were, but a film, a gossamer, that clothes the spirit. . . . Yet, in truth, these races differ most widely . . . *some of surpassing wisdom, some of horrible malignity; some hostile as fiends to men, others gentle as messengers between earth and heaven*” (Bulwer-Lytton, *Zanoni*; italics Blavatsky’s).

Of the four classes of elementals, the sylphs are the most dangerous because of their affinity to mankind in his present evolutionary stage.

Synagog, Synagogue [from *synagoge* an assembly; translation of Hebrew *khenesheth*, Aramaic *khenash* a congregation] Originally a gathering of Jews for worship or religious instruction, but later applied to the building in which the gatherings were held. As a characteristic Jewish institution, the synagogue rose to prominence after the reforms instituted by Ezra, for the gatherings were the means whereby the populace received instruction, especially in the reading of the law on every Sabbath. The rites on Sabbath morning as outlined in the Mishnah consisted of readings

from the Old Testament (particularly from Deuteronomy and Numbers), followed by prayer, then the lessons from the law and the prophets, a sermon thereon, and finally the blessing.

The building was generally, in accordance with ancient mystery-habits, situated near a body of water and orientated from north to south, the synagog having three doors to the south; the interior was divided by columns into a nave and two aisles.

Synodial Months [from Greek *syn* together + *hodos* path] Also synodical, synodal. The month which is measured by the successive conjunctions of the sun and moon as seen from the earth, i.e., from one new moon to the next, the average time of which is 29.5306 days. Sometimes called a lunar month to distinguish it from a solar month which is one twelfth of a year. The number of synodical months in any period is equal to the difference between the number of revolutions of the moon and the number of years in that period.

Synya. See SUNYATA

Syzygy [from Greek *syzygia* conjunction] Used in reference to the geocentric conjunction of the Sun, Moon, Venus, and Mercury, or some of them, the occurrence being especially favorable for certain initiations, particularly at the time of the winter solstice, because at such periods the influences of these bodies cooperate in producing the necessary occult natural conditions. Astronomically syzygy refers to the union in a more or less straight line as seen from the earth, of any two or more bodies with the earth.

In quite a difference sense, a Gnostic term in connection with the aeons, meaning a couple: one being an active potency, the other passive.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ta-Tel

Ta'arua (Tahitian) The chief Tahitian god who broke out of the darkness within the cosmic egg. After living alone, he created a daughter with whom he made the manifested world. Later he fashioned man out of red earth, and then put him to sleep for ages — referring to the ages during which the mind principle had not yet awakened to conscious activity. During this sleep Ta'arua extracted a bone from the man, and from this fashioned woman, a reference to the third root-race when the androgynous mankind separated into the present type of sexual humanity. The mental sleep of the third root-race mankind lasted from a number of minor time periods after the separation, and before mind really incarnated in the relatively mindless bodies. Whether the myths relating to the creation of man and woman are indigenous or imported from Christianity is debated.

Taaut (Phoenician) A Phoenician deity described as having four eyes, two in front and two in back, and four wings. “The eyes denote that the god sees in sleep, and sleeps in waking; the position of the wings that he flies in rest, and rests in flying” (Sanchoniathon quoted in IU 2:235). Taaut is in some respects equivalent to the Greek Kronos or Saturn; yet there are elements in what is known of him reminiscent of the Roman Janus, seeing with two faces, and seeing both the past and the future which coalesce in the Eternal Now.

Tabernacle Used mainly to describe the portable sanctuary instituted during the wandering of the Israelites. The references in the Jewish history before Deuteronomy are different from later writings in the Old Testament which mention a very elaborate edifice containing a courtyard, outer and inner chambers, with sacrificial and atoning rituals, albeit erected so that it could readily be taken down and transferred to another place. The sanctuary referred to in the Priestly Code, however, is the sanctuary of the ark (in Hebrew *mishkan ha'eduth*, “the tabernacle of revelation”), i.e., the receptacle in which lay the ark of testimony, the chest in which it is alleged that the stones containing the inscriptions of the decalog were placed.

The real meaning of the tabernacle can be traced to Egypt:

“In the Egyptian temples, according to Clemens Alexandrinus, an immense curtain separated the tabernacle from the place for the congregation. The Jews had the same. In both, the curtain was drawn over five pillars (the Pentacle) symbolising our five senses and five Root-races esoterically, while the four colours of the curtain represented the four cardinal points and the four terrestrial elements. The whole was an allegorical symbol. It is through the four high Rulers over the four points and Elements that our five senses may become cognisant of the hidden truths of Nature; and not at all, as Clemens would have it, that it is the elements *per se* that furnished the Pagans with divine Knowledge or the knowledge of God. . . . For what was the meaning of the square tabernacle raised by Moses in the wilderness, if it had not the same cosmical significance? ‘Thou shalt make an hanging . . . of blue, purple, and scarlet’ and ‘five pillars of shittim wood for the hanging . . . four brazen rings in the four corners thereof . . . boards of fine wood for the four sides, North, South, West, and East . . . of the Tabernacle . . . with Cherubims of cunning work.” (Exodus, Ch. xxvi, xxvii.) The Tabernacle and the square courtyard, Cherubim and all, were precisely the same as those in the Egyptian temples. The square form of the Tabernacle meant just the same thing as it still means, to this day, in the exoteric worship of the Chinese and Tibetans — the four cardinal points signifying that which the four sides of the pyramids, obelisks, and other such square erections mean. Josephus takes care to explain the whole thing. He declares that the Tabernacle pillars are the same as those raised at Tyre to the four Elements, which were placed on pedestals whose four angles faced the four cardinal points: adding that ‘the angles of the pedestals had equally the four figures of the Zodiac’ on them, which represented the same orientation (*Antiquities I, VIII, ch. xxii*).

“The idea may be traced in the Zoroastrian caves, in the rock-cut temples of India, as in all the sacred square buildings of antiquity that have survived to this day” (SD 2:125-6).

The sacred chest or receptacle — in which was supposed to reside either a god’s presence or mystically holy or sacred emblems connected therewith — is also virtually universal throughout the world.

Tabernacles, Feast of The feast which the Hebrews celebrated in the autumn as a thanksgiving for the produce gathered, especially for the harvest of olives and grapes, which was called the feast of ingatherings (Ex 23:16) or the feast of booths (Deut 16:13). It commenced on the 15th of the month Ethanim and lasted until the 22nd. While the festival of the Eleusinian Mysteries was held in the month Boedromion — corresponding to September, the time of grape gathering — Plutarch thought that the feast of booths was not the Eleusian but the Bacchic rites.

Table-turning The spiritualistic or astral phenomenon of motion produced in a table when the sitters at a seance hold their hands over or on it, and varying from risings into the air and movings

around the room, to giving tilts in answer to code-questions. Ordinary Occidental intelligence seems incapable of imagining anything between a purely mechanical action and a full-blown human intelligence. The phenomena are usually supposed to be either due to tricks or some kind of unconscious muscular action on the part of the sitters, or to be spirits of the departed. But there are a variety of degrees between physical mechanism and self-conscious volition, just as there are multitudes of living beings in widely differing states of materiality filling the gap between physical organisms and the spirits of the departed. The astral light is filled with an enormous variety of beings, mostly of a low type, not using physical bodies, not human in their nature, but having a sort of consciousness of their own; and the conditions provided by the vitality of the medium and sitters may vitalize, stimulate, and to a certain extent direct, these beings and thus at times cause them to become active in the production of physical phenomena. Again, the human organism in all its ranges itself is composed of a vast number of elements, physical, astral, etc., which in normal life are held together in a unit and in subordination to the general life of the person. Some of these elements may become temporarily extruded, especially in natural mediums or those who have cultivated mediumship; and thus the phenomena may be caused unintelligently or ignorantly by the sitters themselves — and just here is the instrumental cause of nearly all the physical phenomena produced by mediums, or mediums and sitters together.

Tabnith (Hebrew) *Tabnīth* A model, pattern; image, likeness. In the Qabbalah, a form.

Tabula Smaragdina. See SMARAGDINE TABLET

Tad. See TAT

Tadaikya (Sanskrit) *Tadaikya* [from *tat* that, the Boundless + *aikya* oneness, harmony, identity from *eka* one] Oneness or unity with the Boundless or parabrahman, the frontierless, unknowable kosmic essence, which is never limited by any name but is commonly called *tat* (That). In the relations of the human being with the kosmic spirit, *tadaikya* signifies the reentrance of the higher human ego into its supernal source, *atman*, which in Buddhist philosophy is called assuming the *dharmakaya*, the equivalent of entering *nirvana*.

T'Agathon. See AGATHON

Tahmurath (Persian), **Takhmorab** (Pahlavi) *Takhmōrab*, **Takhma-rupa** (Avestan) [from Avest *takhmao* strength, force + *rupa* body, form] Also Teimuraz, Tahumers, Tahmuras, Taimuraz. The third king of the legendary Pishdadi dynasty, succeeding his father Hushang. His steed, the Simorgh-Anke, was more rare and rapid than his father's twelve-legged horse. He is called Div-band (the binder of divs) in Firdusi's *Shahnameh*, for he waged war on the divs and captured them all. Tahmurath ordered their death, whereupon they promised to teach him the art of writing if he spared their lives. Granting their entreaty, he was taught not one but thirty languages.

A chapter of the *Desatir*, "The Book of Shet the Prophet Tahmuras," consists of a hymn addressed

to the sun, which is depicted as being “stationed in the fourth heaven” (v. 31).

Tahor (Hebrew) “*Mundus*, the world; a name given to the Deity, which identification indicates a belief in Pantheism” (TG 317).

Taijasa (Sanskrit) *Taijasa* [from *tejas* light] Radiant, flaming, bright; sometimes the higher parts of a human being, such as the *manasa-rupa*, are designated as *taijasa*. A star is called *taijasi*, the feminine form.

Taijasa-bhuta (Sanskrit) *Taijasa-bhūta* [from *taijasa* radiant, flaming + *bhūta* element] The flaming, radiant, sparkling element; the fire element of nature, the fourth in the descending scale of the seven cosmic bhutas. This element is directly connected with what in the human constitution is called the *kama*, and also has direct reference, because of its cosmically intellectual qualities, to the nature of the radiant or sparkling vehicles of the *manasaputras*.

Taijasa-tattva (Sanskrit) *Taijasa-tattva* [from *taijasa* sparkling + *tattva* thatness, reality] The fiery, sparkling principle of nature — the fire principle which contains in itself both intellectual energies or seeds and the roots of *kama*; the fourth in the descending scale of the seven *tattvas*. *See also* ASURA

Taimuraz. *See* TAHMURATH

Tairyagyonya (Sanskrit) *Tairyagyonya* [from *tiryañc* crooked, curved] “Of beings with crooked digestive canals,” i.e., of animal origin. In the Puranas seven creations of living beings are enumerated, the fifth being called *tiryaksrotas* or *tairyagyonya* (animal evolution).

Taittiriya (Sanskrit) *Taittirīya* The collection of hymns known as the *Black Yajur-Veda*; also the name of a Brahmana and of an Upanishad of the *Black Yajur-Veda*. The Taittiriyas were the pupils of Tittiri.

Tala (Sanskrit) *Tala* Lower or inferior portions of a series, inferior world; also a chasm, abyss, floor. All these ideas suggest lower or inferior planes. Often used in conjunction with *loka* (place, world). The *talas* stand for the material aspects or substance-principles of the different worlds which are the cosmic universe, in contrast with the *lokas* which suggest the spiritual aspect of the universe. The number of *loka-talas* is generally given as seven, though the number varies, all the seven *lokas* and seven *talas* interblending and interworking to form the universe and all its various hierarchies. The seven *talas* are generally given in theosophical writings as *atala*, *vitala*, *sutala*, *rasatala*, *talatala*, *mahatala*, and *patala*.

Because the *lokas* are more particularly the spheres of spiritual and intellectual character, and the *talas* the spheres of vehicular or more substantial character, it has been customary in Indian literature to speak of the *lokas* as heavens and the *talas* as hells — neither heavens nor hells bearing the shades of meaning attached to them in Christian theology. Every substantial globe is

considered a hell; our own earth, for instance, bhurloka-patala, is so considered. All these talas are in the last analysis rising or descending realms forming the astral light which is not one sole restricted realm or sphere.

Talapoin (East Indian) A Buddhist monk of Ceylon, Siam, or Burma. The laws laid down for the Talapoins are very strict, particularly in regard to unchastity. Many of these ascetics have demonstrated their remarkable powers over nature, especially in medical practices (cf IU 2:620-1).

Talatala (Sanskrit) *Talātala* [from *tala* place + *atala* no place] Place no-place; the fifth counting downwards of the seven talas, its corresponding loka or pole being svarloka. This term draws attention to the fact that the talas from this point become rapidly more material. Talatala corresponds to the hierarchies of rupa- or sight-devas, possessed of three senses: hearing, touch, and sight. It is the abode of certain kama-manasic entities and of certain classes of the higher elementals, among which may be classed the sylphs and undines of the medieval Rosicrusians. The state of talatala corresponds in man on earth with an artificial state of consciousness, such as that produced by hypnotism or drugs.

Taley. See DALAI LAMA

Taliesin (Welsh) He of the radiant brow; a transformation of Gwion, eaten as a barley-grain by Ceridwen as an old black hen. She bore him nine months in her womb, and when he was born, set him afloat in a basket of rushes on the Teifi River where Elphin found him and named him Taliesin.

Seventy-seven poems attributed to Taliesin come down, supposedly from the 6th century, though critics maintain that they are forgeries of the 12th or 13th. But the poetry of the later centuries is exceedingly different from the poetry of the Cynfeirdd — Talesin, Myrddin Gwyllt, Llywarch Hen, and Aneurin — said to have lived in the 6th century. Of these four, the first two are mystical and Druidical. The verse forms are simple, the rhythm is lofty: the thought, when it is apparent — for the language is exceedingly archaic and difficult — is in the grand manner. Twelfth and 13th century poetry on the other hand is ultra-tortuous in form — the extreme old age of a literature, when thought and inspiration are gone, and only delight in curious form remains — while the subject matter is practically always the Bard's praise of his chieftain. Purely literary criticism would most certainly place the Cynfeirdd many centuries earlier than the 12th century poets.

The note of the real Taliesin is pagan, that after-centuries were so desperate to make a Christian:

I have been in many a shape
Before I attained a congenial form
I have been a word in a book
I have been a drop in the air.
I have born a banner

Before Alexander
I was in Canaan
Before Absalom was slain
I was on the high cross
Of the merciful Son of God.
My original country
Is the region of the summer stars:
I am a marvel
Whose origin is not known
Nine months was I then
In the womb of Ceridwen
I was Gwion the Little;
Now I am Taliesin.
Not of father and mother
My creator created me,
But of nine-formed faculties
Of the fruit of fruits
Of the god of the Beginning
Of primroses and hill blooms
Of the blossoms of nettles
Of the ninth wave's water.
I was enchanted by Math
Before I became immortal:
(Then) I was enchanted by Gwydion
The Initiator of the Britons,
Of Eurwys, of Euron,
Of Euron, of Modron,
Of five battalions of Adepts
Teachers, the Children of Math.

Math fab Mathonwy was a famous enchanter; in the *mabinogi* he is the teacher of Gwydion. Men are “enchanted by Math before” they “become immortal,” then by Gwydion the Initiator.

A great deal of what is too obscure to be intelligible, breaking now and again into bursts of great poetry, wherein deep esoteric meanings are apparent: such are the 77 poems of Taliesin.

Talisman [from Arab from Greek *telesma* completion, initiation, incantation] A charm made by engraving, for instance, the seal or sigil of a certain planet on a disc of metal corresponding to that planet, the operation being done at a time when the influence of that planet is strong. This, being worn, secured the help or influence of the genius of the planet, and is thought to be protective

against one or another evil influence. The application extends beyond the planets, and an indefinite number of signs might be used to propitiate or protect against various genii, evil or good.

Such symbols as the cross, the svastika, and the serpent may serve as talismans, for a true symbol is more than a mere arbitrary sign and actually plays its part in the evocation of certain influences — but only when intense faith is conjoined in the production of magical effects. Talismans are utterly useless and foolish unless intense faith operates because all such talismanic emblems depend for their efficacy upon the faith of the possessor of them. When a person believes beyond any shadow of doubt and is thoroughly worked up in such conviction, his will power through such faith when concentrated upon a talisman or similar object can actually bring about the functioning of a potent creative power. This is the root of all genuinely magical operations; but the true magician has no need for such exoteric paraphernalia or adventitious aids. He produces his effects through the sole power of his will combined with his wide knowledge of nature and natural laws.

Talmud (Hebrew) *Talmūd* [from the verbal root *lāmad* to teach, train in learning, discipline] Study of and instruction in anything (whether by anyone else or by oneself); learning acquired; style, system (as such it is synonymous with Mishnah — oral tradition — in one of its meanings); theory in contradistinction to practice; interpretation of the Mosaic law as is apparent on the surface and not requiring further disquisition; the noncanonical tradition (Barayetha’); the oldest commentary on the canonical tradition (Gemara’); the texts of tradition and commentary combined — this last meaning being the one commonly applied. The Talmud is the body of Rabbinical commentaries on Judaism.

There are two recensions of the Talmud: 1) that of Palestine called the *Jerusalem Talmud* although the work was prepared by the pupils of Rabbi Yohanan ben ’El’azar in the school of Tiberias situated some 45 miles north of Jerusalem: it was entitled Talmud of the Benei Me-’arba’ (of the Sons of the West) by early writers; 2) that of Babylon composed principally in the 5th century from old oral courses by Rabbi ’Ashshei bar Sinai, headmaster of the Academy at Sura’ and completed in the 6th century by Rabbi Yosei. These works are not the religious or natural philosophy of the Jews, but oral traditions and discussion of the rabbis upon these legends. Christian Orientalists have given most attention to the Palestinian recension, although the Babylonian is preferred by the rabbis who call it the Shas — i.e., Shishshah Sedarim — six books ordered or arranged. The Babylonian is four times as large as the Jerusalem.

The Talmud proved the greatest factor for keeping alive the religious ideas of the Jewish people, especially after the fall of Jerusalem and its temple, together with the Old Testament becoming the Bible of the Hebrews. Both were regarded reverentially, for whereas the Pentateuch was the Torah or written word of Moses, the Talmud was believed to be the prophet’s oral teaching transmitted.

Tamala-pattra (Sanskrit) *Tamāla-pattra* [from *tamāla* dark-barked + *pattra* leaf] A leaf of the

tamala tree, the *Xanthochymus pictorius*, the bark of which is dark, but its blossoms white and very fragrant. Also used for a leaf of the *Laurus cassia*, “a tree regarded as having various very occult and magical properties” (TG 318). When a person is compared to the tamala-pattra, he is considered stainless, pure, and sage-like.

Tamarisk A shrub especially adapted to warm arid climates. In Egypt it was considered to possess great occult virtues. “Many of the temples were surrounded with such trees, preeminently one at Philae, sacred among the sacred, as the body of Osiris was supposed to lie buried under it” (TG 318).

Tamas (Sanskrit) *Tamas* The quality of darkness, illusion, ignorance; also quiescence, passivity, rest, inertia. One of the three gunas — qualities or essential attributes of manifested beings — the others being rajas and sattva.

“The condition of manifested existence in the state of cosmic pralaya is in one sense of the word the tamasic condition, signifying quiescence or rest. When the universe is in the stage of active manvantaric manifestation, we may in a generalizing sense say that the universe is in the rajasic state or condition; and that aspect of the universe which we may call the divine-spiritual, whether in the universe itself or in the manvantara or in pralaya of a globe, can be spoken of as the sattvic state or condition. From these observations it should be evident that the three gunas, *sattva*, *rajas*, *tamas*, not only can exist contemporaneously and coincidentally, but actually do so exist, and that in fact the three are inextricably interblended. They are really three phases or conditions of imbodyed consciousnesses, and each has its noble and each its ‘evil’ side” (OG 169-70).

See also TRIGUNAS

Tamasa or **Tamasic** [Sanskrit *tāmasa*] Pertaining to the quality of sloth or darkness, adjectival forms of *tamas*.

Tamasha (East Indian) Used by Hindus and Anglo-Indians to signify show, representation, phenomenon, hence often illusion.

Tamaz. *See* TAMMUZ

Tamil The principal member of the non-Aryan races in Southern India, generally termed Dravidian, and regarded as aboriginal. Because of intermixture with early Aryan immigrants, they are very similar to the Indo-European type. The Tamil language is the principal one of the Dravidian group spoken in Southern India: it is not akin to Sanskrit and instead of the Devanagari uses a Brahmanical adaptation of the Grantha letters (corresponding to the Vatteluttu or round-hand letters) — an alphabet once common throughout the Pandyan kingdom. At one time Tamil was classed with the Mongoloid races because of the close affinity of their languages. Blavatsky suggests, however, that as the language is said to be akin to the Basque in Spain, this points to a

similar origin from offshoots of Atlantean settlements in the Pacific (SD 2:790).

Tammuz or **Thammuz** A Syrian and Phoenician deity corresponding to Adonis. In Babylonia, the Greek story of Venus and Adonis is repeated in that of Ishtar and Tammuz with slight variations. The myth relates that Ishtar wooed Tammuz in the springtime and in the midsummer he met his death. To save her husband from the clutches of the goddess of the nether world Ishtar journeys thither. Her return to earth marks the return of spring.

The Jews took over the name of the deity and in the Old Testament we find: “Behold there sat women weeping for Tammuz” (Ezek 8:14) — in Hebrew tammuz. “The women of Israel held annual lamentations over Adonis (that beautiful youth being identical with Tammuz). The feast held in his honour was solstitial, and began with the new moon, in the month of Tammuz (July), taking place chiefly at Byblos in Phoenicia; but it was also celebrated as late as the fourth century of our era at Bethlehem, . . . Indeed, in the Mysteries of Tammuz or Adonis a whole week was spent in lamentations and mourning. The funereal processions were succeeded by a fast, and later by rejoicings; for after the fast Adoni-Tammuz was regarded as raised from the dead, and wild orgies of joy, of eating and drinking, as now in Easter week, went on uninterruptedly for several days” (TG 318-9).

That the Tammuz festival was solstitial, began with the new moon in July, and lasted for a week more or less, and that the whole ceremony comprised a dying and resurrection from the dead — all these facts point directly to one of the mysteries of the four great initiatory cycles of the year, one of which is referred to in the mystical story of Jesus in the New Testament. All the great ancient initiations comprised a purification or preparation (katharsis), a trance followed by a dying, and a later resurrection of the initiate or neophyte as a fully born initiate, adept, or new man.

Tamra (Sanskrit) *Tāmrā* One of the wives of Kasyapa and the mother of Garuda, the mystic chief of the feathered tribe.

Tamra-parna (Sanskrit) *Tāmrā-parṇa* [from *tāmrā* of a red-coppery color + *parṇa* leaf] Part of Bharata-varsha or ancient India — Ceylon or Sri Lanka, the ancient Taprobana.

Tamti, Tamtu (Assyrian) The personified sea, whether of the cosmic space of our solar system, or of a sea of earth; hence primordial humidity, personified as a goddess equivalent to Belit, the Nature Mother, worshiped particularly at Erech, the great Chaldean necropolis. Tamti also typified turbulent chaos or matter, hence called the great dragon. In planetology, Tamti is theogonically equivalent to Ishtar, Astoreth, or Venus. *See also* THALLATH; TIAMAT

Tanga-tango (Peruvian) An ancient Peruvian deity, “the symbol of the *Triune* or the Trinity, . . . [which] existed before our era” (TG 319).

Tanha (Pali) *Taṇhā* Thirst; in Buddhism the thirst or longing for material existence, the desire to

return to the familiar scenes of earth-life. It is “the lower *Ego*, or *personal Self* . . . with its fierce Selfishness and animal desire to live a Senseless life (*Tanha*), which is ‘the maker of the tabernacle,’ as Buddha calls it in *Dhammapada*” (SD 2:110). This desire to live and the clinging to life on earth is the effectual cause producing rebirth. Equivalent to the Sanskrit trishna.

Tanjur (Tibetan) *Bstan-hgyur, bstan 'gyur* (ten-gyur, ten-jur) Translation of the sastras; the second part of the Tibetan Buddhist canon, the first part being the Kanjur (both words came into Western languages via Mongolian). The Tanjur is divided into three parts: a one-volume collection of hymns or praises to the Buddha, and two voluminous collections of sastras: tantra commentaries and sutra commentaries. Although called commentaries, these also include independent treatises, and the sutra-commentaries section also includes miscellaneous works such as letters, dictionaries, grammars, medical works, etc. The Tanjur is even larger than the Kanjur, containing up to 225 volumes. Four editions are known in the West: Narthang, Peking, Derge, and Cone (cho-ne) — all 18th century blockprints, although the Tanjur is much older as a manuscript collection. The Tanjur contains works assumed to be Tibetan translations of the works of Indian Buddhist masters, other than the Buddha himself. Compositions by Tibetan masters, however authoritative, are not included in the Tanjur.

Tanmatras (Sanskrit) *Tanmātra-s* The subtle essences of the five elements, popularly given as earth, water, fire, air, and ether; and in one sense they are referred to as sabda (sound), sparsa (touch), rupa (sight), rasa (taste), and gandha (smell). They are equivalent to the five mahabhutas (foundation-substances of the world). The tanmatras are the abstract sources or originants, devoid of properties and qualities from our point of view, but when the tanmatras emanate what becomes the pertinent qualities and properties of nature, then they become the mahabhutas. In the order of cosmic emanation, each of the seven logoi produces its vehicular expression which is the tanmatra, from which again is emanated the respective propertied and qualified mahabhuta or cosmic element.

Tannaim (Hebrew) *Tannā'im* Teachers; initiated teachers among the Jews; adepts and Qabbalists who, says Blavatsky, were “the sole expounders of the hidden meaning contained in the *Bible*,” said to be the first Qabbalists among the Jews, appearing at Jerusalem about the beginning of the 3rd century BC. (IU 2:220; 1:xxxiv).

Tantras (Sanskrit) *Tantra-s* Loom, the warp or threads in a loom; a rule or ritual for ceremonial rites. Religious treatises teaching mystical and magical formulas for the attainment of magical powers, and for the worship of the gods; treating of the evolution of the universe and its destruction; the adoration of the divinities; the attainment of desired objects, especially of six superhuman faculties; and methods of union (usually given as four) with the supreme divinity by contemplative meditation. They are mostly composed in the form of dialogues between Siva and his divine consort or sakti Durga, who is worshiped as a personified female power.

The tendency of these works for long ages has been towards black magic. “The origin of the Tantras unquestionably goes back to a very remote antiquity, and there seems to be little doubt that these works, or their originals, were heirlooms handed down from originally debased or degenerate Atlantean racial offshoots. There is, of course, a certain amount of profoundly philosophical and mystical thought running through the more important tantrika works, but the tantrika worship in many cases is highly licentious and immoral” (OG 17;1).

Tantric, Tantrika [Sanskrit *tāntrika*] The adjectival form of tantra; sometimes employed to signify one who is deeply versed in some study — a scholar; but more accurately pertains to the Tantras themselves and the doctrines in them.

Tao (Chinese) The way, road, path; the Chinese treat of tao in two aspects: the tao of man (jen tao); and the tao of the universe — which is again divided into two aspects, the tao of heaven (t’ien tao) and the tao of earth (t’i tao). There is no supreme god in this system of philosophy, no Demiurge or maker of the cosmos: the yearly renovation of nature is due to the spontaneity of tao. As explained in the *I Ching*, tao brings about the revolving mutations of the yin and yang: “there is in the system of mutations [of nature] the Most Ultimate which produced the two Regulating Powers [the yin and yang], which produce the four shapes [the seasons]” (Hi-tsze).

“Tao is the ultimate reality in which all attributes are united, it is heavy as a stone, light as a feather; it is the unity underlying plurality. It is that by losing of which men die; by getting of which men live. Whatever is done without it fails; whatever is done by means of it, succeeds. It has neither root nor stalk, leaf nor flower. Yet upon it depends the generation and the growth of the ten thousand things [the cosmos], each after its kind” (Kuan tzu, 49).

The Sanskrit svabhavat is an equivalent, also the deep akasic abysses of the highest reaches of the cosmic anima mundi, manifesting periodically.

Tao Teh Ching or Tao Te King (Chinese) [from *tao* path, way + *te* virtue + *ching* book] The canon of tao and virtue, or the Book of Taoistic virtue; the principal work on tao, attributed to Lao Tzu, consisting of 81 short chapters written in a terse, pithy style which makes its translation and explanation most difficult. When Lao Tsu was departing through the pass, it is said that at the request of its keeper, Yin Hsi (a famous Taoist), he wrote a book in regard to his ideas on tao and te running to somewhat over five thousand characters. Its teaching is principally imparted by means of paradoxes, the object being that by startling the mind one may perceive truth without ratiocinations.

“It is a kind of cosmogony which contains all the fundamental tenets of Esoteric Cosmogony. Thus he says that in the beginning there was naught but limitless and boundless Space. All that lives and is, was born in it, from the ‘Principle which exists by Itself, developing Itself from Itself,’ *i.e.*, *Swabhavat*. As its name is unknown and its essence is unfathomable, philosophers have called it *Tao (Anima Mundi)*, the uncreate, unborn and

eternal energy of nature, manifesting periodically. Nature as well as man when it reaches purity will reach *rest*, and then all become one with Tao, which is the source of all bliss and felicity. As in the Hindu and Buddhistic philosophies, such purity and bliss and immortality can only be reached through the exercise of virtue and the perfect quietude of our worldly spirit; the human mind has to control and finally subdue and even crush the turbulent action of man's physical nature; and the sooner he reaches the required degree of moral purification, the happier he will feel" (TG 320).

Taparloka (Sanskrit) *Tapar-loka* [from *tapas* devotion + *loka* world, place] Also *tapoloka*. Devotion world, contemplation world, because of the intellectual entities popularly considered to be sunken profoundly in contemplative devotion; the second, counting downward, of the seven lokas, the corresponding *tala* being *vitala*. *Taparloka* is often called in Hindu literature the mansion of the blest because considered the abode of *vairaja*-deities, *agnishvattas*, Sons of Brahma, the highest classes of *manasaputras* and *kumaras* who are often spoken of as spiritual *nirmanakayas* because connected with the hosts of beings who descended and informed man when the *manvantaric* period to do so arrived. These *kumaric* *nirmanakayas* are connected with but not identical with those highly evolved human beings also called *nirmanakayas*.

Tapas (Sanskrit) *Tapas* Warmth, fire, heat; abstraction, meditation. To perform *tapas* is to sit for contemplation or undergo some special observance. Occultly the inner fire or spiritual flame aroused by intense abstraction of thought or meditation. The *Laws of Manu* says *tapas* with the Brahmins is sacred learning; with the *Kshatriyas*, protection of subjects; with the *Vaiśyas*, giving alms to Brahmins; with the *Sudras*, service.

Tapasa-taru (Sanskrit) *Tāpasa-taru* [from *tapas* meditation + *taru* tree] The tree of ascetics, the *Sesamum orientale* or *Terminalia catappa*. This tree was "very sacred among the ancient ascetics of China and Tibet" (TG 320).

Tapasvin (Sanskrit) *Tapasvin* [from *tapas* religious observance or asceticisms; inner fire] An ascetic; *tapasvi* is the nominative singular.

Taphos (Greek) A tomb; in ancient Greece, the mystical tomb or sarcophagus placed in the crypt of initiation, sometimes called the *adytum*, and in which the neophyte lay during the trance preceding illumination. It was called a tomb because the person for the time being is "dead" — death and resurrection being involved in all ancient initiations.

Tapo-loka. See TAPARLOKA

Tara, Taraka (Sanskrit) *Tārā, Tārakā* The wife of *Brihaspati* (Jupiter). The Puranas relate that *Soma*, the moon, carried *Tara* off with him, which brought about the great war in heaven between the gods and the *asuras*. *Brahma* put an end to the war and had *Tara* restored to *Brihaspati*. She then gave birth to a son, *Budha* (esoteric wisdom), whom she claimed was the son of *Soma*.

“Soma is the moon astronomically; but in mystical phraseology, it is also the name of the sacred beverage drunk by the Brahmins and the Initiates during their mysteries and sacrificial rites. . . .

“Soma was never given in days of old to the non-initiated Brahman — the simple *Grihasta*, or priest of the exoteric ritual. Thus Brihaspati — ‘guru of the gods’ though he was — still represented the dead-letter form of worship. It is Tara *his wife* — the symbol of one who, though wedded to dogmatic worship, longs for true wisdom — who is shown as initiated into his mysteries by King *Soma*, the giver of that Wisdom. Soma is thus made in the allegory *to carry her away*. The result of this is the birth of Budha — *esoteric Wisdom* — (Mercury, or Hermes in Greece and Egypt.) He is represented as ‘so beautiful,’ that even the husband, though well aware that Budha is not the progeny of his *dead-letter* worship — claims the ‘new-born’ as his Son, the fruit of this ritualistic and meaningless forms. Such is, *in brief, one of the meanings of the allegory*” (SD 2:498-9).

See also SOMA; TARAKAMAYA

Tara-daitya (Sanskrit) *Tāra-daitya* A daitya or danava described in the Puranas as practicing such severe spiritual and intellectual tapas as a yogi, that the gods feared lest he surpass them; therefore he was slain by Vishnu.

One is reminded of the Hebrew story in Genesis, where the 'elohim fear lest man, represented by Adam, should eat of the fruit of the Tree of Knowledge and become like unto them. The conception behind these jealousies of divinities is a warning in popular form that while the noblest human duty is to become like the gods — our spiritual parents — yet before we can, we must have brought forth from within ourselves the divinity latent there, lest we bring disharmony and the selfish interests of the human material world into the serene and law-abiding cosmic spheres of the divinities.

Taraka (Sanskrit) *Tāraka* The daitya or giant-demon whose yoga austerities were so extraordinary that he had obtained all the divine knowledge of yoga-vidya and occult powers. The gods feared his superhuman powers and Skanda or Karttikeya, the god of war, was miraculously born to destroy him.

Tarakajit (Sanskrit) *Tārajit* Conqueror of Taraka, name given to the Hindu god of war, Karttikeya, because he conquered Taraka, a daitya whose austerities had made him formidable to the gods — the daityas being those early beings or races who, because of their developing intellectual powers, were found to be identical with the asuras, who were opposed to the more or less passive spiritual forces — devas or suras. In another sense, because of this developing intellectuality, the daityas, somewhat like the Greek titans or giants, were the opponents of the gods of mere ritualistic or scholastic theory, and hence the enemies of puja (ritualistic sacrifices).

Tarakamaya, Taramaya (Sanskrit) *Tārakāmaya, Tārāmaya* The war in heaven; the struggle between the gods and the asuras for the rescue of Tara or Taraka, the wife of Brihaspati, who had been carried off by Soma. This war may be interpreted in many ways. Spiritually, the gods with Brihaspati as their head represented ritualistic, ceremonial, and exoteric worship, and the asuras were the allies of Soma who was the parent of esoteric wisdom (SD 2:498-9). *See also* TARA

Taraka-Raja-Yoga (Sanskrit) *Tāraka-rāja-yoga* A philosophical and secret Brahmanical yoga system; “its real tenets are never given out publicly. It is a purely intellectual and spiritual school of training” (Key 366).

Tarchon (Etruscan) Legendary founder of theurgy among the Etruscans, stated by Blavatsky to have lived far earlier than the siege of Troy.

Targum (Hebrew) *Targūm* [from the verbal root *rāgam* to arrange, explain, interpret] Interpretation; paraphrases of books of the Old Testament in Chaldee, or especially Aramaic, made at a time when the Aramaic superseded the Hebrew as a spoken language among the Jews, it being then found that the general mass of people were unable to understand the Hebrew scriptures. The date is given as about the 2nd century BC. The introduction of Targums is ascribed to Ezra by the Jews.

“Some of the Targums are very mystical, the Aramaic (or Targumatic) language being used all through the *Zohar* and other Kabbalistic works. To distinguish this language from the Hebrew, called the ‘face’ of the sacred tongue, it is referred to as *ahorayim*, the ‘back part,’ the real meaning of which must be read between the lines, according to certain methods given to students. . . . The *Book of Daniel* begins in Hebrew, and is fully comprehensible till chap. ii, v. 4, when the Chaldees (the Magician-Initiates) begin speaking to the king in Aramaic — not in Syriac, as mistranslated in the Protestant Bible. Daniel speaks in Hebrew before interpreting the king’s dream to him; but explains the dream itself (chap. vii.) in Aramaic. ‘So in *Ezra* iv., v., and vi., the words of the kings being there literally quoted, all matters connected therewith are in Aramaic,’ says Isaac Myer in his *Qabbalah* [p. 53]. The Targumim are of different ages, the latest already showing signs of the Massoretic or vowel-system, which made them still more full of intentional blinks. The precept of the *Pirke Aboth* (c. i., §I), ‘Make a fence to the Torah’ (law), has indeed been faithfully followed in the Bible as in the Targumim; and wise is he who would interpret either correctly, unless he is an old Occultist-Kabbalist” (TG 321).

Tartarus, Tartaros (Greek) Son of Aether and Gaia (earth), who by his mother became father of the giants Typhoeus and Echidna. Other names for Tartarus as a deity are Pluto, Hades, Orcus, and Dis — all referring to the underworld. As a place, in the *Iliad* it was one of the four regions, as far below Hades as heaven or Olympus is above earth, and into which were thrust the titans who rebelled against Olympus. In later times it became synonymous with Hades. In theosophical

literature it is sometimes equated with avichi.

With the first appearance of Lemuria, the three polar giants were imprisoned by Kronos in the polar circle, where they were kept in by seas; but they were liberated by Zeus in order to overthrow Kronos, which points to the supersession of Lemuria by Atlantis.

Tashi Lama, Teshu Lama. *See* PANCHEN RIMPOCHE

Tashi Lhunpo (Tibetan) *bKra-sis-lhun-po*. The seat of the greatest collegiate monastery in Tibet, containing at one time about 4,000 monks; the residence of the Panchan Rimpoche or Tashi Lama, the spiritual ruler of Tibet. It was founded by Geden-tub-pa, the successor of Tsong-kha-pa. *See also* PANCHEN RIMPOCHE

Tasichozong (Tibetan) The summer capital of Bhutan; “the residential capital in Bhutan of the ecclesiastical Head of the Bhons — the Dharma Raja. The latter, though professedly a Northern Buddhist, is simply a worshipper of the old demon-gods of the aborigines, the nature-sprites or elementals, worshipped in the land before the introduction of Buddhism” (TG 321).

Tassissudun. *See* TASICHOZONG

Taste The fourth sense in order of development, corresponding to the element water or apas. *See also* SENSES

Tat or Djed or Tet (Egyptian) *Ṭeṭ* [from the verbal root *ṭeṭ* to establish] The emblem of stability; the pillar found in connection with Osiris in hieroglyphic texts and inscriptions, especially in the scenes depicting what is called the funeral of Osiris, scenes which are one aspect of the initiation cycle held in the Mysteries of ancient Egypt. The hieroglyphic representation of the tat is that of a tapered pillar surmounted by four crossbars, said to represent the branches of a tree, and to be connected with the four cardinal points. It was a favorite form for amulets fashioned out of lapis lazuli and carnelian. “The top part is a regular equilateral cross. This, on its phallic basis, represented the two principles of creation, the male and the female, and related to nature and cosmos; but when the *tat* stood by itself, crowned with the *atf* (or *atef*), the triple crown of Horus — two feathers with the uraeus in front — it represented the *septenary* man; the cross, or the two cross-pieces, standing for the lower quaternary, and the *atf* for the higher triad” (TG 322).

Also the name of Osiris in ancient Busiris; in all the chief sanctuaries in Egypt which were dedicated to Osiris, festivals were celebrated during the month Khoiak; and on the last day of that month the tat was set up with elaborate ceremonies.

Tat, Tad (Sanskrit) *Tat* That; used by Vedic and archaic Hindu writers to describe the unutterable Principle or boundless All, from which all in a universe springs, in contrast to *idam* (this), the manifested universe. The old sages would ask their disciples, “Kas twam asi?” (who are you?); and then would tell them, “Tat twam asi” (That [the Boundless] you are). The ancient wisdom teaches

as one of its fundamental postulates, that we are inseparable parts of the universe, and therefore we have all within us, whether active or latent, that the universe contains.

Tathagata (Sanskrit) *Tathāgata* [from *tathā* thus + *gata* gone; or + *agata* arrived, come] Thus come or thus gone; a title given to the long serial line of the Buddhas of Compassion as they appear each after his predecessor among mankind; likewise a title of Gautama Buddha, the last of this line of buddhas to have appeared thus far. It is a beautifully exact expression illustrating the common spiritual character of the great ones who have gone before ourselves as well as of those destined to come in the future. As a title of the buddhas, it signifies also “one who has followed the inward way, the inner pathway, the still small path coming down, so to say, from the universal self, passing through the human constitution onward until it disappears again in the heart of being from which we came” (Fund 625).

Tathagata-gupta (Sanskrit) *Tathāgata-gupta* [from *tathāgata* thus gone, thus come, a name applied to Buddha + *gupta* secret, concealed] The secret or concealed tathagata; “the ‘guardian’ protecting Buddhas” (TG 322), used of the nirmanakayas.

Tattva (Sanskrit) *Tattva* [from *tat* that] Thatness, the reality behind phenomenal appearance. The tattvas represent the consciousness-, force-, or spirit-side of being, in contrast to the dhatus or bhutas which as elements represent the vehicular or matter-side of being. Hence the tattvas are called the principles of nature, and the dhatus or bhutas the elements of nature. These tattvas and dhatus or bhutas are inseparable and work together constantly, for spirit and matter are fundamentally one. Exoterically the tattvas are usually reckoned as five, but esoterically they are reckoned as seven: adi-tattva (primordial); aupapaduka-tattva (parentless or unevolved); akasa-tattva (aether); taijasa-tattva (fire); vayu-tattva (air); apas-tattva (water); and prithivi-tattva (earth). Each of these tattvas is reflected and active in the human constitution, since man is a copy in miniature of the cosmos.

Tattva-jnanin (Sanskrit) *Tattva-jñānin* [from *tattva* thatness, elementary principle + *jñānin* knower from the verbal root *jñā* to know] The knower or discriminator of the principles in nature and man.

Tattvatraya (Sanskrit) *Tattvatraya* [from *tattva* reality, essential cosmic element + *traya* threefold, triad] The three primordial elements in the cosmos, according to the Visishtadvaita or modified nondualistic Vedantists. They state that the tattvatraya is the Logos, its light, and mulaprakriti. Mulaprakriti thus becomes their achit; the light from the Logos is their chit; and the Logos itself is their Isvara (supreme lord).

Tau. See ANK

Taurus The bull; second sign of the zodiac, a constellation containing the Pleiades. In astrology a fixed earthy sign, the night house of Venus, corresponding to the throat, neck, and base of the

brain. It is the bull among the four sacred animals who are the Maharajas of the four quarters, and presides over the south. Called in Sanskrit Rishabha, dedicated to Yama, the god of the Underworld, it stands in Hindu reckoning for Pranava or Aum (12 Signs of the Zodiac). Frequently it is connected with Logos, Verbum, Vach — for it is another form or aspect of the Third Logos.

Taurus stands for both sun and moon gods, its symbol being sometimes a bull and sometimes a cow, the Third Logos mystically being considered androgyne, differentiation into the two opposites not yet having supervened. Thus Taurus was usually connected with sun gods, such as Osiris; and at others connected with moon goddesses — Isis, Diana, Cybele, etc. — with the moon, and with the far higher Magna Mater (great mother), source of Taurus as the Second Logos, a distinctly feminine aspect.

Its symbol represents the cow horns which are also a symbol of the moon and lunar goddesses. “Ancient mystics saw the ansated cross, in the horns of Taurus (the upper portion of the Hebrew *Aleph*) pushing away the Dragon, and Christians connected the sign and constellation with Christ. St. Augustine calls it ‘the great City of God,’ and the Egyptians called it the ‘interpreter of the divine voice,’ the *Apis-Pacis* of Hermonthis” (TG 323).

Designated by the first letter of the alphabet, Taurus is described in many ancient systems as being number one among the signs, because this ascription took place and became static at a time in past history when Taurus opened the spring, and hence was reckoned as the first. Blavatsky suggests that the constellation Taurus was in the first sign of the zodiac at the beginning of kali yuga (3102 BC.), and consequently the equinoctial point fell therein (TG 387).

Associating the Hebrew patriarchs with the signs of the zodiac, Cain presides over Taurus (IU 2:465).

Ta-urt (Egyptian) *Ta-urt*. One name of the hippopotamus goddess more commonly known as Rert or Rertu; regarded as the consort of Typhon, and closely associated with the beast portrayed in the Judgment scene from *The Egyptian Book of the Dead* called the Eater of the Dead — the Devourer of the Unjustified. Abstractly, Ta-urt represents not so much the punitive but the retributive aspect of karma, with a special application to the postmortem conditions of the defunct in kama-loka. *See also* HIPPOPOTAMUS

Taut. *See* THOTH

Taw, Tau (Hebrew) *Taw* The last letter of the Hebrew alphabet; sometimes because of similarity of sound interchanged with teth. Its numerical value is 400. In Ezekiel (9:4) the foreheads of the men in Jerusalem who sighed were to be marked “with the *signum Thau*, as it is translated in the Vulgate” (SD 2:557), and Moses also speaks of marking the lintel and door posts (Ex 12:22).

It likewise signifies a cross which was used in ways closely approximating that of the cross in Christian countries: it was often employed as a mark or subscription, as is done even today by

people who cannot write their names. The reason for this was that the old Phoenician alphabet as well as the coins of the Maccabees in Judaea both used the written form of this alphabetic character which was like a cross.

Taygeta or **Taygete** (Greek) *taugete*. One of the seven Pleiades, daughters of Atlas, who in one sense represent the seven subraces of Atlantis.

Teachers In theosophical writings, often used to designate masters of wisdom, adepts, mahatmas, or messengers qualified to instruct and guide pupils on the path of wisdom. Teachers are of various grades, belonging to different degrees of different benevolent hierarchies; at the summit are those buddhas and manus who serve as inspirers and light-bringers to the races of mankind. Below these highest come lesser teachers, pertaining to the lesser cycles of time. The mythology of ancient peoples contains reference to divine instructors of various ranks.

The term teachers is applied specially in theosophy to the mahatmas or masters of wisdom, from whom comes the light that guides and aids, but does not govern or control, working through many channels to keep alive mankind's spiritual intuitions. These masters of wisdom send into the world messengers who have earned the right to labor for mankind, including the sublime duty of teaching. On the other hand, false teachers have always abounded in the world, and the pupil

needs to discriminate between the false and the true. If his own motives and aspirations are lofty and pure, he will be satisfied with nothing less than what appeals to these aspirations and motives.

A true teacher is recognizable by the universality of his teachings, which are not circumscribed by sectarian, national, credal, party, or other limitations. The true teacher never constrains the will of his pupil nor exacts unconditional acceptance of any doctrines: he points the way in answer to the pupil's call, his authority is that of the torchbearer, seeking to evoke and stimulate the pupil's own spiritual and intellectual strength and inner vision. Teachers always stand ready to answer all who are able to give the right knock; and an aspirant who has the right spirit will find his teacher in due season.

Teachers succeed one another and thus pass on the teachings from age to age; as in the succession of the buddhas and especially of the bodhisattvas in Buddhism; the guruparampara chain in Brahmanism; and even in exoteric life in ancient times, and in far less degree, there were the hierophants in the various Mystery schools, such as in the Eleusinia.

Teba' (Hebrew) *Ṭeba'* [from Hebrew verbal root *ṭāba'*, Chaldean verbal root *ṭēba'* to assume shape, become round or spherical] Also *tebah*. In Chaldean, that which is to be formed or shaped — hence the primary substance of the world, the cosmic element — and also nature, which in late Hebrew “mystically and esoterically is the same as its personified Elohim” (TG 325).

Tebel (Hebrew) *Tēbēl* [from the verbal root *yābal* to flow (as of water), glide, go forward as in a solemn procession; or from the verbal root *tābal* to be fruitful, productive, connected with moisture and heat] Also *theivhel*, *theiohel*. The earth, globe, world, especially the inhabited earth. It expresses the idea not only of the earth as a globe in motion, but as flowing forth or as a fruitage from previous manifestations.

Tefnut (Egyptian) *Tefnut*. [from *tef* to be moist] Egyptian goddess inseparably connected with her twin brother Shu, being brought forth by the sun god Tem (later known as Ra). Tefnut was the goddess of moisture, of the gentle rain and soft wind. She is represented as a woman wearing upon her head the solar disk, or more often with the head of a lioness. Thus, Tefnut is the clothing or garment of Shu as *pradhana* is to Brahman or *mulaprakriti* is to parabrahman.

Teimuraz. See TAHMURATH

Tejas. See TAIJASA

Telchines (Greek) [from *thelgo* to enchant] A race of ethereal or semi-ethereal beings or genii, said in one legend to be descended from Poseidon, god of the sea — supposed to have lived especially in Crete, Cyprus, and Rhodes. They are represented as cultivators of the soil and ministers to the gods; as sorcerers and envious demons; and as teachers of metallurgy and other useful arts to

mankind. They are in one aspect the kabeiroi and titans, in another the Atlanteans. The telchines have been connected mystically because of similar attributes with the Latin Vulcan and even with the Hebrew Tubal-cain.

Telepathy [from Greek *tele* far off, at a distance + *pathos* feeling] The transference of thought or feeling from mind to mind independently of ordinary modes of communication. This very interesting and common fact may be noted as not only existing between human beings, and humans and animals, but likewise between animals and insects — the last being one of the commonest phenomena of natural history — and in the plant kingdom. People have always known that they talk to each other through the air, or through air vibrations, and that these strike the ear and are conveyed to the brain. The notion of transference from one mind to another across a distance is a physical conception, and its applicability to minds is questionable. Mind can hardly be regarded as physical, and though our brains are physical and separated by distances, the mind is not synonymous with the brain, for if it were telepathy would be impossible because brain does not physically touch brain in the transference of thought, therefore it is not brains which send and receive except as instruments, but it is minds which touch or interpenetrate along the inner planes.

We live in a common mental atmosphere, taking in and giving out thoughts and feelings, which must often pass from mind to mind, though we may not be aware of the fact. The undoubted fact of our having separate minds does not mean that these minds are closed systems, and not mutually penetrable. The experiments which are made to prove thought transference defeat their object to a great extent, because the mind of the transmitter is not concentrated on the idea to be transmitted, so much as on the idea that he is trying to transfer it. The most conclusive proofs, and curiously enough the most common, are unpremeditated, and actually are daily occurrences.

A thought entertained by one person may pass inwardly through planes of consciousness until it reaches a point where minds are no longer separate, and from thence it may travel outwardly to the brain of another person. It may even be said that what we require is not so much an explanation of thought transference as an explanation of why thoughts are so seldom transferred — why our minds are so separate; and the explanation is the concentration of each individual's normal daily consciousness upon affairs immediately concerning himself. This clothes the individual in a mental shell of interests, around which rush the radiatory influences emanating from the thinker. Universality of sympathy therefore is the key to successful telepathic communication.

Telesphoros (Greek) [from *telos* end + *phero* bring] Bringing to an end, completing; said of the number seven by the Pythagoreans.

Tellurian [from Latin *tellus* earth] Terrene, pertaining to the earth.

Telugu A language spoken in Southern India, classed by scholars in the Dravidian group — the

principal tongue of this group being Tamil. The Dravidians were a pre-Aryan race.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Tem-Thn

Templar. See KNIGHTS TEMPLARS

Temple [from Latin *templum*, *tempulum* a small division from Greek, Latin *tem* to cut off, mark out] Templum was a spot marked off for sacred purposes by the augur with his staff, and might be on the ground or in the sky, where it was a region designated for the observation of omens. This connects the idea with that of the celestial mansions or zodiacal signs. From being a mere marked-off spot, it gradually evolved into elaborate edifices, and it has also a figurative use, as when the body is called the temple of God or the earth is described as a temple. When a temple in ancient days was constructed by adepts for specific purposes, it became a center or receptacle of spiritual energies attracted and focused there; and from this arose the merely exoteric ideas, true in their origin but absurdly untrue today, that a consecrated portion of a temple or church was the Holy of Holies or the Seat of God, etc.

The temple then is the shrine of the divine presence, and as such plays a predominant role in all cults, appearing as a Holy of Holies, a tabernacle, etc., and with many elaborations and accessories, such as special chambers, images, sacred vessels, and the like. The word becomes equivalent to all those signifying the receptive side of universal nature, such as moon, ark, and womb. The object of making inner understanding and inner vision seem more real to the mere man, by constructing edifices consecrated to divine worship and designed to draw down divine presences, is one that can readily be understood, and which may be either an assistance or a drawback according to whether the spirit of the worshiper is less or more materialistic.

There is a suggestive connection with temple and tempus (Latin “time,” from the same root), divided time as opposed to duration or undivided time.

Temple of Solomon The building of this temple, according to the Bible, was first projected by King David, but on command of the Lord was not carried out by him because he had “shed much

blood.” David, however, assembled materials and workmen. To aid him in building the Temple, his son Solomon appealed to Hiram or Hiram, King of Tyre, to send him a skillful artisan, and King Hiram sent Hiram Abif to Solomon, also workmen and additional supplies of timber.

According to the Biblical account the Temple was completely built, while according to Masonic tradition the building was left unfinished on account of the death of Hiram Abif. The temple after its completion retained its original splendor for only 33 years when the Egyptian King Shishak made war upon Rehoboam, Solomon’s son, captured Jerusalem, and took away all the treasures of the temple and of the king’s house. Its history is one of repeated profanation and of alternate spoils and repairs, until finally in 588 BC it was entirely destroyed by Nebuchadnezzar in the reign of Zedekiah. Yet Herodotus who, some 150 years later, visited Tyre and described the temple of Melkarth and Astoreth, does not even mention the Temple of Solomon, supporting the view that there never was such a structure actually built.

Granting that there may be some historical background for the Biblical account, it is nevertheless allegorical throughout. Blavatsky compares the measurements given in the Bible with those of the Great Pyramid and the Tabernacle of Moses, all of which were constructed upon the same abstract formula derived from the number of years in the precessional cycle, and also upon integral values of pi, the ratio of the circumference of a circle to the diameter. Moses symbolized these “under the form and measurements of the tabernacle, that he is supposed to have constructed in the wilderness. On these data the later Jewish High Priests constructed the allegory of Solomon’s Temple — a building which never had a real existence, any more than had King Solomon himself, who is simply, and as much a solar myth as is the still later Hiram Abif, of the Masons, as Ragon has well demonstrated. Thus, if the measurements of this allegorical temple, the symbol of the cycle of Initiation, coincide with those of the Great Pyramid, it is due to the fact that the former were derived from the latter through the Tabernacle of Moses” (SD 1:314-5). And she refers to “the undeniable, clear, and mathematical proofs that the *esoteric foundations*, or the system used in the building of the Great Pyramid, and the architectural measurements in the Temple of Solomon (whether the latter be mythical or real), Noah’s ark, and the ark of the Covenant, are the same” (SD 2:465).

The key to the meaning of Solomon’s Temple is given by W. Q. Judge: it

“means man whose frame is built up, finished and decorated without the least noise. But the materials had to be found, gathered together and fashioned in other and distant places. . . . Man could not have his bodily temple to live in until all the matter in and about his world had been found by the Master, who is the inner man, when found the plans for working it required to be detailed. They then had to be carried out in different detail until all the parts should be perfectly ready and fit for placing in the final structure. So in the vast stretch of time which began after the first almost intangible matter had been gathered and kneaded,

the material and vegetable kingdoms had sole possession here with the Master — man — who was hidden from sight within carrying forward the plans for the foundations of the human temple. All of this requires many, many ages, since we know that nature never leaps. And when the rough work was completed, when the human temple was erected, many more ages would be required for all the servants, the priests, and the counselors to learn their parts properly so that man, the Master, might be able to use the temple for its best and highest purposes” (Ocean 20).

Thus David, who collected materials for the building but was not permitted actually to build the temple, represents the evolutionary and preparatory work of earlier rounds and of the earlier root-races preceding the middle of the third root-race of this round, when humanity appeared upon the scene — Solomon, David’s son — takes up the task of the actual building of the human temple. David thus mystically may stand for the lunar or barhishad-pitris, and Solomon for the solar or agnishvatta-pitris.

According to the Old Testament, the building of the temple was completed, but it was used for its high purposes only briefly. Allegorically this was during the Golden Age of the childhood of the human race — the building was complete only as regards childhood when the gods walked among mankind and were their divine instructors; but humanity was not yet truly human, for manas (mind) had not yet been awakened by the manasaputras of whom Hiram Abif was a type. It is here that Masonic tradition should be studied together with the Biblical account. Then with the awakening of manas, and the eating from the Tree of Knowledge and hence the power to choose between good and evil — in other words, with the beginning of *self-directed* evolution, the temple was desecrated again and again. “The building of the Temple of Solomon is the symbolical representation of the gradual acquirement of the *secret* wisdom, or magic; the erection and development of the spiritual from the earthly; the manifestation of the power and splendor of the spirit in the physical world, through the wisdom and genius of the builder. The latter, when he has become an adept, is a mightier king than Solomon himself, the emblem of the sun or *Light* himself — the light of the real subjective world, shining in the darkness of the objective universe. This is the ‘Temple’ which can be reared *without the sound of the hammer, or any tool of iron being heard in the house while it is ‘in building’*” (IU 2:391).

Again, the building of a temple, sanctuary, Holy of Holies, etc., always signified in the occult language of ancient days the founding and dissemination throughout the world or a portion of mankind of a secret doctrine of nature. In a more restricted sense, the building of a temple referred to the actual establishment of an initiation center, where not only for such territory the ancient wisdom and its divine significances were taught, but disciples were trained and brought to the “new” or “second” birth, and thenceforth themselves became adepts or initiates. On these lines the building of Solomon’s Temple was the inauguration and establishment of the teaching of nature’s occult wisdom in Judea and surrounding territory.

Tempter In general, the human mind, whether reacting to outside impulsions or impressions, or from within its own relatively small and uninspired powers; it has been commonly typified by the dragon, Satan, Zeus, etc. “Zeus is represented as a serpent — the intellectual tempter of man — which, nevertheless, begets in the course of cyclic evolution the ‘Man-Saviour,’ the solar Bacchus or ‘Dionysus,’ *more than a man*” (SD 2:419-20). Indeed, often it is our higher nature which “tempts” us upwards by calling forth latent or inner powers which, once evoked, are the ladder by which we climb. Thus our tempter is also our redeemer. The esoteric teaching of the tempting of humankind by awakening in its light of intellect has been materialized into a sensual temptation by a Devil in the Garden of Eden; and in the Bible, an evolutionary phase has been theologically degraded into a sin. The astral light is also spoken of as the tempter, especially by Eliphas Levi.

Temptation in its better sense is trial, probation, and testing, such as a candidate for knowledge must necessarily incur. In its worse sense, temptation is the evocation of action in and from the human mind and emotions, either by outside impacts, or because of the undeveloped characteristics of the mind itself.

Temurah (Hebrew) *Tēmūrāh* Changing, exchanging, permutation; an anagrammatical method used by Qabbalists in the study of the literal Qabbalah, consisting of substituting another letter of the alphabet in place of one or her letters in a selected word; the change yielding a word of quite different meaning. The letters of the Hebrew alphabet are placed in two lines (11 in each line alphabetically), one below the other; the top line reading from right to left, the lower reading from left to right. The key-letter that is selected (any of the 22) is placed under the first letter of the alphabet. A word is then chosen for re-reading: the letter which appears in the opposite line to the one designated is substituted — and a new word is made by this process. Thus a table of 22 commutations results from temurah, and this series is called tsiruph [from the verbal root *tsaraph* to refine, examine, prove, interpret]

Ten One of the most sacred fundamental numbers in occultism, for ten — or more accurately perhaps twelve, as Plato pointed out — is the key of the numerical structure upon which the universe is laid and built. Where seven represents the manifested universe or brahmanda, ten or twelve includes the unmanifested aspects as well. Ten is the foundation of the decimal system and because of this is universal in its relations. With the Pythagoreans ten was the most sacred number, the mystical dekad involving and expressing the mysteries of the entire kosmos, “the absolute All manifesting itself in the Word or generative Power of Creation” (SD 2:553); and among certain other schools, as in the Orient, ten was symbolically synthesized by the vertical line traversing the circle.

The early Gnostics also considered ten to contain the knowledge of the universe, both metaphysical and material. The Pythagorean dekad “representing the Universe and its evolution out of Silence and the *unknown* Depths of the Spiritual Soul, or *anima mundi*, presented two sides

or aspects to the student. It could be, and was at first so used and applied to the Macrocosm, after which it descended to the Microcosm, or Man. There was, then, the purely intellectual and metaphysical, or the 'inner Science,' and the as purely materialistic or 'surface science,' both of which could be expounded by and contained in the *Decade*. It could be studied, in short, from the Universals of Plato, and the inductive method of Aristotle. The former started from a divine comprehension, when the plurality proceeded from unity, or the digits of the decade appeared, but to be finally re-absorbed, lost in the infinite Circle. The latter depended on sensuous perception alone, when the Decade could be regarded either as the unity that multiplies, or matter which differentiates, its study being limited to the plane surface; to the Cross, or the *Seven* which proceeds from the ten — or the perfect number, on Earth as in heaven” (SD 2:573).

A great deal of the highly mystical and occult meanings of the dekad were symbolized by the Pythagoreans in their sacred tetraktys, which was considered by them so holy that their most binding oath was made upon it. Other symbols of the number ten are two interlaced triangles — for the septenary and the triad are there present at the same time — and the line within the circle , unity within zero (cf SD 2:581).

“Every Cosmogony began with a circle, a point, a triangle, and a cube, up to number 9, when it was synthesized by the first line and a circle — the Pythagorean mystic *Decade*, the sum of all, involving and expressing the mysteries of the entire Kosmos; recorded a hundred times more fully in the Hindu system, for him who can understand its mystic language. The numbers 3 and 4, in their blending of 7, as those of 5, 6, 9, and 10, are the very corner-stones of Occult Cosmogonies. This decade and its thousand combinations are found in every portion of the globe” (SD 1:321).

See also DECAD

Ten-brel Chug-nyi (Tibetan) *rTen-hBrel hchu-gnis*. In philosophy, the twelve interdependent contributories to the origination of all phenomena, equivalent to the Sanskrit nidanas. As each one of these twelve originants or causes is dependent upon its predecessor, from which it is emanated, owing to a process of reaction the predecessor is karmically also dependent for its manifestation on its successor, and thus the twelve are not simultaneous in origination but occur in a certain regular sequence; because of this inseparable interdependence they also of necessity coordinate in action. They are rendered in the *Pratitya-samutpada* as: 1) ma-rig-pa (Sanskrit avidya) nonwisdom; 2) hDu-bYed (Sanskrit samskara) aggregative forces; 3) rNam-Ches (Sanskrit vijnana) will, consciousness; 4) rMin-gZugs (Sanskrit nama-rupa) name-form; 5) Skye-mched (Sanskrit shadayatana) the six sense organs; 6) sparsa (Sanskrit sparsa) contact (for mind or senses); 7) tShor-ba (Sanskrit vedana) feeling; 8) sRed-pa (Sanskrit trishna) desire, thirst; 9) len-pa (Sanskrit upadana) sensual enthrallment; 10) sird-pa (Sanskrit bhava) being; 11) che-ba (Sanskrit jati) birth; and 12) rGa (Sanskrit jaramarana) old age and death.

Ten-brel chug-nyi is the Tibetan expression of the causal relations inherent in and affecting peregrinating monads, which bring about manifestation in successive imbodiments; this Buddhist teaching shows a somewhat more elaborate philosophical development in the Tibetan doctrine than elsewhere. Freedom from the entangling relations affecting consciousness is to be found by an earnest and strict following of the Four Noble Truths leading into the Noble Eightfold Path; yet the essence of the religion of the buddhas is in the words of Gautama Buddha: “To cease from all evil or wrong doing; to become enamored of virtue; to cleanse one’s own heart or nature — here is the religion of the Buddhas.” *See also* NIDANA

Tenshoko Daijin or **Ten Sho Dai Jiu** (Japanese) The Shinto sun goddess, the first of the five generations of so-called earthly deities — two of which generations are yet to be evolved forth — these seven in their turn following the seven earlier generations of heavenly deities.

Tephireth. *See* TIPH’ERETH

Teulu (Welsh) The bodyguard of a king, consisting of 120 noble youths, whose business was to die before the king dies in battle.

Terah (Hebrew) *Terah* One of the stopping places of the Israelites in the deserts as narrated in Numbers 33:27; also one of the descendants of Shem, the son of Nahor and father of Abram, dwelling in the land of Ur of the Chaldeans. His lifespan is given as 205 years. One of a triad of initiates, the other two being Zoroaster and Abraham (IU 2:38); Terah is said to have worshiped the kaeiroi or kabiri, in Hebrew called Teraphim (TG).

Teraphim (Hebrew) *Tērāfīm* The household, family, or domestic idols or gods of the Jews, popularly consulted for divination; in many respects closely similar to the lares and penates of the ancient Latins. Blavatsky cites Maimonides: “The worshippers of the *Teraphim* (the Jewish Oracles) ‘carved images and claimed that the light of the principal stars (planets) permeating these through and through, the angelic Virtues (or the regents of the stars and planets) conversed with them, teaching them many most useful things and arts.’ And Seldenus explains that the *Teraphim* were built and composed after the position of certain planets . . .” (SD 1:394).

The records of the Hebrews declare that the archaic Hebrews were as much given to consulting oracles or idols, statues, images, etc., as were any of the pagan peoples. The teraphim were just such oracular statues.

Teratology [from Greek *teratologia* a telling of marvels from *teras* monster + *logia* discourse] Scientific term for a subject which in its broadest sense includes abnormal developments both in the fields of zoology and botany; in a more restricted sense, abnormalities in animal embryology. Technically, the old term monsters is reserved for those malformations with the most striking defects, many of them being hideous and unable to live postnatally. All such monsters or malformed births in human beings are due to the causative action of natural forces which,

working in the proper environment, bring these forth because the mother for the time being has been under the sway of a current in the astral light. These births are more or less perfect or imperfect reproductions of germ-growths which are throwbacks to discarded evolutionary courses, attempting to reproduce what once were fairly common births in far past human history.

Termini (Latin) The boundary stones which Numa ordained that every landholder should set up to mark his land. Annual ceremonies were performed at these stones, called terminalia. Terminus was the Roman divinity presiding over boundaries. The stones were sacred to Hermes-Mercury and are said by Montfaucon to have been cruciform. It was sacrilege to remove them — similar to the Biblical anathemas against him who removes his neighbor's landmarks.

Terra or **Tellus** (Latin) Equivalent to the Greek Gaia or Ge, earth; mother of the titans by Coelus — Ouranos or heaven. Terra is often used to designate our physical earth or its planetary chain. *See also* GAIA

Tertiary Age. *See* GEOLOGICAL ERAS

Teshu Lama. *See* PANCHEN RIMPOCHE

Teth (Egyptian). *See* SET; THOTH

Teth (Hebrew) *Ṭēith* The ninth letter of the Hebrew alphabet, standing for the number nine. In the Qabalah, used as a symbolic device for the cosmic intelligent electric force, in theosophy called fohat, “whose symbol is the serpent which played such a prominent part in the Mysteries. Its universal value is nine, . . . and the ninth door of the fifty portals or gateways that lead to the concealed mysteries of being” (SD 1:76).

Tethys (Greek) The wife of Oceanus and mother of a host of water deities. The Hesiodic theogony makes both Oceanus and Tethys titans, born of Uranus and Gaia (heaven and earth), or the spatial reaches of cosmic intelligence and the spatial vehicular aspects of the cosmos, here called earth. Sometimes Tethys is identified with Gaia, and hence with earth, but the earth meant is not our earth, but primordial matter in process of formation.

Tetractis. *See* TETRAKTYS

Tetrad [from Greek *tetras* four] The number four; a collection of four. “The *Tetrad* is esteemed in the Kabala, as it was by Pythagoras, the most perfect, or rather *sacred* number, because it emanated from the *one*, the first manifested Unit, or rather *the three in one*” (SD 2:599).

In chemistry, an atom, radical, or element that has a combining power of four. *See also* QUATERNARY; TETRAKTYS; TETRAGRAMMATON

Tetragrammaton [from Greek *tetra* four + *gramma* letter] Used by Qabbalists to designate the four Hebrew characters יהוה — variously rendered in Roman letters YHVH, IHVH, JHVH, etc. —

forming the word Jehovah (Yehovah). Present-day scholars regard this rendition of the four letters as erroneous, and some suggest that the proper reading should be Yahveh or Yahweh — depending on another manner of applying the vowel-points to the consonants. The Jews themselves, however, never pronounced the name when reading their sacred scriptures, but utter 'Adonai (the Lord) in its place. Nevertheless, the Qabbalists (more particularly medieval and modern authors) have attached special importance and significance to this four-lettered word, particularly to the Hebrew equivalent for Tetragrammaton, Shem-ham-Mephorash, sometimes called the mirific name.

The four letters themselves do not hold any especially occult significance, nor their sequence nor numerical value (10, 5, 6, 5, totaling 26), nor to which of the ten Sephiroth it is to be applied.

“The name [Jehovah] is a circumlocution, indeed, a too abundant figure of Jewish rhetoric, and has always been denounced by the Occultists. To the Jewish Kabbalists, and even the Christian Alchemists and Rosicrucians, Jehovah was a convenient *screen*, unified by the folding of its many flaps, and adopted as a substitute: one name of an individual Sephiroth being as good as another name, for those who had the secret. The Tetragrammaton, the Ineffable, the sidereal ‘*Sum Total*,’ was invented for no other purpose than to mislead the profane and to symbolize life and generation. The real secret and *unpronounceable* name — ‘the word that is no word’ — has to be sought in the seven names of the first seven emanations, or the ‘Sons of the Fire,’ in the secret Scriptures of all the great nations, and even in the *Zohar* . . . This word, composed of seven letters in each tongue, is found embodied in the architectural remains of every grand building in the world . . .” (SD 1:438-9).

“Some students, in view of the sacredness of Tetraktis and the Tetragrammaton, mistake the mystic meaning of the Quaternary. The latter was with the ancients *only a secondary* ‘perfection,’ so to speak, because it related only to the manifested planes. Whereas it is the *Triangle*, the Greek *delta*, \triangle , which was the ‘vehicle of the unknown Deity’ ” (SD 2:582).

Other forms of this same name were current among the nations surrounding the Jews, as among the Syrians, some sects of whom worshiped their Iao, sometimes spelled Iaho or Yaho. Iao was one of the most sacred divinities of the Phoenicians and was supposed to be the spiritual light understandable only by the highest human intellectual faculty, and this is the idea or spiritual light of the spiritual sun. The Gnostics likewise had a mystery-god of the same name, and with the same variations in spelling, and with the same significance that it had with the Phoenicians as representing the intellectual power or potency of the solar system.

Tetraktys (Greek) The number four or a group of four, a tetrad or quaternary. The Tetraktys of Pythagoras, as an emblem, consisted of a triangle formed by ten dots, of which he says: “In what you conceive as four there are ten; then, a perfect triangle and the tetraktys [four] make seven.” and Proclus says: “the Father of the golden verses [Pythagoras] celebrates the Tetraktys as the

fountain of perennial nature” (On the Timaeus 3).

Some Qabbalists made their Tetraktys upon the Tetragrammaton in the following manner:

Pythagorean = Qabbalistic

1. = 10

2.. = 15

3 . . . = 21

4. . . . = 26

10 = 72

This represents four stages of evolution: a monad, a dual creative force or duad, the world of forms, and the world of complete and concrete manifestation. This arrangement of dots enables one to deduce any of the numbers from 1 to 10. It was held in such high esteem by the Pythagoreans that their most binding oath was made upon the Tetraktys. “it has a very mystic and varied signification . . . First of all it is Unity, or the ‘One’ under four different aspects; then it is the fundamental number Four, the Tetrad containing the Decad, or Ten, the number of perfection; finally it signifies the primeval Triad (or Triangle) merged in the divine Monad. . . . The mystic Decad, the resultant of the Tetraktys, or the $1 + 2 + 3 + 4 = 10$, is a way of expressing this idea. The One is the impersonal principle ‘God’; the Two, matter; the Three, combining Monad and Duad and partaking of the nature of both, is the phenomenal world; the Tetrad, or form of perfection, expresses the emptiness of all; and the Decad, or sum of all, involves the entire Kosmos” (TG 326).

Tetratomic A tetratomic molecule is a molecule of an element which consists of four atoms of that element.

Teufel (German) [from Greek *diabolos* accuser] Devil.

Thalamus, Optic [from Greek *optikos* visual from *op* to see + *thalamos* chamber] The optic thalami are the two great posterior ganglia at the base of the brain, forming part of the wall of the third ventricle. They are the bed from which the optic fibers arise, as well as a special center for the correlation and transmission of sensory, motor, and ideational impressions which, consciously and subconsciously, interact between the body and the brain. The thalami are a central station for the reception, condensation, and transmission of all the intercommunicating lines between the conscious, thinking person and the external world.

Embryology shows the optic thalami playing an early and leading part in connection with the

pineal gland, then at the apex of the developing head, a biological review of early racial conditions when the pineal gland functioned as the only eye of vision. At that stage of evolution, the human was as unselfconscious in personality and as gelatinous in physical structure as the embryo now is at first. Nevertheless, he was a spiritual being, as he now is, being the reincarnating ego which directs the evolution of its marvelous body from the unit of a fertilized cell. The embryo repeats the gradual growth and dominating position of the cerebral hemispheres which, in the history of the third root-race, gave play to intellectual faculties at the expense of spiritual vision. Then the pineal “eye,” no longer active, retired to the hollow of the brain where the optic thalami became concerned with the development of the two eyes of physical vision. “It is a curious fact that it is especially in human beings that the cerebral hemispheres and the lateral ventricles have been developed, and that the *optic thalami*, *corpora quadrigemina*, and *corpora striata* are the principal parts which are developed in the mammalian brain” (SD 2:301).

Thalath, Thallath (Chaldean) **Thalassa** (Greek) Sea, ocean; mystically the great generative principle of the spatial deeps. Thallath was the sea, personified as a goddess in the cosmogony of Berossus; used as one of the names of the great deep or abyss, Tiamat, or Chaos. It could breed only monsters, but was destroyed by Belus, and then the gods created heaven and earth. The reference is to the mystical waters of space, or the more concrete aspect of space itself, as the great source or womb of cosmic manifestation, out of which all things come and into which at the end of the cosmic manvantara all things again return. The moon is connected in its cosmogonical function with the waters of space.

Also called Omoroka, which is the reflection in Tamti (matter) of divine wisdom.

Thamasa. See TAMASA

Thammuz. See TAMMUZ

Tharana [probably Hindi; cf Pali *tharana* strewing, spreading; Sanskrit *starana* from the verbal root *stri* to strew, scatter] Self-induced trance or self-hypnosis; “an action in India, which is of magical character and a kind of exorcism. *Lit.*, ‘to brush or sweep away’ (evil influences, *tharhn* meaning a broom, and *tharnhan*, a duster); driving away the bad bhuts (bad aura and bad spirits) through the mesmeriser’s beneficent will” (TG 327).

That Translating the Sanskrit tat or tad, the nameless or ineffable. Beyond the utmost that can be defined must necessarily be postulated that which cannot be defined; beyond the utmost confines of the comprehensible must be placed that which cannot be comprehended: the All, symbolized by the circle without a central point. It is abstract space, and the point in the center is Aditi or potential space. It is the One, which is Brahman and pums (spirit) and pradhana (primordial matter), immutable because being abstract infinite space without attributes, preceding all manifestations, remaining after all manifestations have vanished in pralaya. Therefore it is nonbeing to us in the sense that it is Be-ness, abstract space and frontierless duration as one. The

Qabbalistic equivalent, 'eyn soph (without bounds), is before all numbers, and is that from which all numbers proceed.

Thaumaturgy [from Greek *thaumatourgia* wonder-working from *thauma* wonder + *ergon* work] Used often for mere conjuring tricks; but in ancient times used in Greece to signify one of the branches of genuine practical magic, the performance of occult phenomena by the adept, with the help of elementals and various other denizens of the invisible spheres.

Thavatth. See THALATTH

Theanthropism [from Greek *theos* god + *anthropos* man] The state of being both man and god, such as are the buddhas and the higher bodhisattvas; less correctly, the ascription of human attributes to a god, or anthropomorphism; the common belief in a divine incarnation or avatara.

Theist [from Greek *theos* god] Since medieval times, used to signify one who believes in a singular cosmic God. In *The Secret Doctrine*, used of those believing in an anthropomorphic God, principally the various kinds of Christians, in contrast with those who believe in an impersonal spiritual divinity behind all phenomena of whatever kind. Less commonly used to signify the opposite of atheism, in which case it includes both polytheism and pantheism.

Theli, Tali (Aramaic) *Tālī*. The great dragon which symbolically envelops the universe; the mundane serpent, whether mystically as the serpent of wisdom, or materially as the psychoelectric current or pathway of the lower ranges of the astral light. "Tali (Dragon) in the universe ('olam) is like a king upon his throne (in authority); a cycle in the year is like a king in his kingdom; the heart in the living man (nephesh) is like a king in authority (during war)" (Sepher Yetsirah 6:4). Similar ideas were held by many ancient peoples, but stressed particularly by the Scandinavians. See also NIDHOGG

Themis (Greek) Goddess of justice, who preserves harmony, adjusting effect to cause; considered, when conjoined with Nemesis and Adrasteia, as personifying karma.

Theocrasy [from Greek *theokrasia* from *theos* god + *krasia* a mixing] Used by Iamblichus, among other Greek philosophers, to denote a state of divine intermingling in a universe, signifying that everything is inseparably interblended and conjoined or intermingled with all the rest of the whole.

Also used of people who worship a mixture of gods, as when the Israelites mingled the worship of Jehovah with that of peoples alien to themselves.

Theodice, Theodicy [coined from Greek *theos* god + *dike* justice] A vindication of divine justice; a system or method of intellectual theorizing about the nature of so-called divine justice, having in view vindication of the justice and holiness of God, in connection with evil. Ancient philosophers all taught that the heart of things was divine harmony and that whatever evil, distortion, and

obliquity might exist in the world is ultimately traceable back to the imperfect intelligence of evolving beings, who by their manifold conflicts of thought and will thus produce disharmony, relative confusion, and hence evil, in the scheme of things. This view was replaced during Christian ages by the attempt of many writers to rescue the reputation of the Christian God, who on the one hand is said to be the creator of everything and who yet is supposed to be the fountain of love, mercy, harmony, and goodness. In view of the evils and suffering in the world, such Christian attempts have been futile, for it is obvious that if God is the creator of all that is, He must have been either directly or indirectly the creator of all the disharmony, wickedness, and misery in the world, as was indeed alleged by many Jewish rabbis, following statements in the Hebrew scriptures. But this thought has been denied by Christians who refuse to accept their God of love and justice as the creator of evil, and thus they had recourse to the Devil, who himself must have been created by their omniscient God.

Theodidaktos (Greek) [from *theos* god + *didaktos* taught] God-taught; used in Christian writings, e.g., “Ye yourselves are taught of God to love one another” (1 Thessal 4:9); also applied to Ammonius Saccas, the founder of the Neoplatonic Eclectic School at Alexandria in the 4th century, because he was taught by divine wisdom.

Every initiate is a theodidaktos in greater or less degree, depending upon his stage of understanding of the teachings received by him, and also in his inner unfoldment. Each such initiate is taught from within by his own inner god in strict proportion to the degree with which the person has made alliance with his spiritual self.

Theogony [from Greek *theogonia* from *theos* god + *gon* generation] A genealogy of gods or divine beings, or a treatise on this, such as that of Hesiod; more generally, the philosophical science which traces the coming into being of any hierarchical universe by means of the succeeding hosts of divinities which, by manifesting themselves on various planes, produce the composite universe. A universe is in its origin and essence divine, built by and of the substance of the hierarchies of gods. It is the spiritual aspect of cosmogony or world-building.

Theoi. See THEOS

Theomachy [from Greek *theomachia*] Fighting against the gods, as the titans did; or a battle among the gods, as occurs in Homer.

Theomancy [from Greek *theos* god + *manteia* divination] Divination by divine inspiration; more commonly, divination by means of oracles, such as at Delphi in ancient Greece.

Theopathy [from Greek *theos* god + *pathos* experience, feeling] The seventh stage of initiation in the Mysteries, where the candidate becomes a selfless channel for communion with his inner god; the third and last stage of spiritual development — the first being theophany, the second theopneusty. The sense of theopathy, originally used in the Greek Mysteries, was that the adept

“suffered” the full influence of the god within him, becoming a selfless, consenting channel for the divine power pouring through him, in utter disregard of the personal self. Because of the immense personal renunciation involved, such an adept was said to suffer — meaning to bear or carry the divinity within. The second of these three initiatory grades, theopneusty, was the same as the third, but in less full degree, and signified that the initiate received the inspiration from above-within and, as it were, was breathed into from above, but did not carry the full load of the spiritual fire or inspirational flow. The first stage, theophany, was by comparison a temporary occurrence and signified the appearance of one’s divinity to the initiate’s self-conscious perception; the neophyte met his own inner god face to face, and the appearance or theophany lasted for a greater or less time depending upon various circumstances.

Such terms were held secret in the ancient Mysteries, although the words themselves, as time passed, slowly filtered outwards and often became misunderstood, as by Christian theologians.

Theophany [from Greek *theophaneia* from *theos* god + *phainesthai* to appear] The appearance of a god; a degree in the ancient Mysteries, where the candidate was illumined by his own inner god, and differing from epiphany in being of a more lasting nature. In Christian ecclesiasticism, used for the incarnation of the Christos. In the outer or Lesser Mysteries it meant the showing of representations of the gods to the people — as at the festivals held at Delphi. *See also* THEOPATHY; THEOPNEUSTY

Theophilanthropists Love of God and man, or of God through man; a modern sect headed by Revelliere-Lepeaux, a member of the French Directory (1795-99) and a bitter opponent of ecclesiastical religion (especially Roman Catholicism), who seized a moment of attraction towards the Revolutionary ideas to forward his new religion and turn churches into Theophilanthropic temples. It was a species of deism, believing in God but not in a special revelation or any of the church doctrines; and seems to have been one form of the generally vague quasi-religious, quasi-philosophical ideas which were current in the latter part of the 18th century in France and ran like wildfire over the whole country.

Theopneusty [from Greek *theos* god + *pneo* breathe] Divine inspiration or inbreathing; signifying in the ancient Greek Mysteries a stage in initiation, coming between theophany and theopathy, where the candidate received the inspiration of his own inner god, but did not bear the full load of the inspirational flow to the extent that took place in theopathy.

Theopoea [from Greek *theopoeia* from *theos* god + *poiein* to make] The making of god-figures or their statues, the magic practice of endowing inanimate representations of deities with life or its semblance by means of akasic or astral forces. Reminiscent of the Greek story of Pygmalion who made an ivory image of a beautiful maiden, with which he fell so violently in love that he prayed to Aphrodite, goddess of love, to breathe life into it. The goddess is said to have granted his wish. *See also* THEURGY

Theos, Theoi (Greek) [from *thein* to run, in reference to the planetary deities who perform the formative work in cosmic evolution; or cf Sanskrit *deva*, Latin *deus* (connected with Zeus or Dios) the bright or shining one] God, gods; builders or cosmocratores. The two derivations are not antagonistic because the planets, stars, and suns are the bright and shining ones. Used in the triad of chaos, theos, cosmos — three hypostases on the matter side of cosmic evolution — meaning respectively the storehouse of cosmic seeds, the builders, and the universe built thereby.

Theosebeia (Greek) Reverence for divinity; used by Plato and others as the adjective *theosebes* (plural *theosebeis*), “those who know.” It embodies the principle of occult training that reverence for spiritual things is based on intuition, and hence those who are intuitive or reverent in their attitude towards truth are those who know. Skepticism itself closes the door to the gaining of larger increments of knowledge: there are none so blind as those who refuse to know.

Theosophia. See THEOSOPHY

Theosophical Society, The Founded in New York City on November 17, 1875 by H. P. Blavatsky, Colonel H. S. Olcott, William Q. Judge, and several others. The original “Preamble and By-laws” state its objectives as “to collect and diffuse a knowledge of the laws which govern the universe.” Over time its objects have been somewhat enlarged to: 1) to diffuse among men a knowledge of the laws inherent in the universe; 2) to promulgate the knowledge of the essential unity of all that is, and to demonstrate that this unity is fundamental in nature; 3) to form an active brotherhood of humanity, without distinction of race, creed, sex, caste, or color; 4) to study ancient and modern religion, science, and philosophy; and 5) to investigate the innate human powers.

The Theosophical Societies at present existing in the world are parts of a spiritual and intellectual movement which, known or unknown, has been active in all ages. Indeed, this movement took its rise in the earliest origins of self-conscious humanity. At times this movement has disappeared from sight, during “periods of spiritual barrenness,” as Plato expressed it, yet its work continues, although not always recognized and known. The aims and purposes of the Society are religious, philosophical, and scientific, as well as distinctly humanitarian or philanthropic: it aims to restore to mankind its ancient heritage of wisdom — knowledge of the truths of being — and to inculcate in human hearts and minds the great worth and intrinsic beauty of its lofty ethical code. The Theosophical Society is nonpolitical and nonsectarian. It has members belonging to different races who may or may not be likewise members of other religious or philosophical bodies. It has no creed or dogmas in the modern sense, and its members are essentially searchers and lovers of truth.

Blavatsky announced from almost the very beginning of her public work that she had been commissioned by the Mahatmas M and KH to form a nucleus of a universal brotherhood of mankind, and the formation of the Theosophical Society was the first fruit of her labors to this end. The dissemination of the teachings of the wisdom-religion now called theosophy was the main

purpose of the Society. Writing to A. P. Sinnett, KH said: “The chief object of the T. S. is not so much to gratify individual aspirations as to serve our fellow men” (ML 7-8); and M wrote: “The sun of Theosophy must shine for all, not for a part. There is more of this movement than you have yet had an inkling of, and the work of the T. S. is linked in with similar work that is secretly going on in all parts of the world” (ML 271).

Theosophy [from Greek *theosophia* from *theos* god, divinity + *sophia* wisdom] Divine wisdom, the knowledge of things divine; often described as attainable by direct experience, by becoming conscious of the essential, divine part of our nature, self-identification with the inner god, leading to communion with other similar divine beings. Theosophy actually is the “substratum and basis of all the world-religions and philosophies, taught and practised by a few elect ever since man became a thinking being” (TG 328). Also called by such names as the secret doctrine and the esoteric tradition, its teachings have been preserved, checked and rechecked with every new generation of its guardians and adepts.

The word became familiar to Greeks in the 3rd century with Ammonius Saccas and the Alexandrian Neoplatonists or Theurgists, who taught of divine emanations, whereby the entire universe as well as humans and all other beings are shown to be descendants of the highest gods. Theosophist is also applied to mystics in later times such as Eckhart, Boehme, and Paracelsus. It was adopted in 1875 by H. P. Blavatsky and others associated with her at the founding of the Theosophical Society as the name for the modern form of the archaic wisdom-religion which she promulgated. This wisdom-religion “was ever one and being the last word of possible human knowledge, was, therefore, carefully preserved. It preceded by long ages the Alexandrian Theosophists, reached the modern, and will survive every other religion and philosophy” (Key 7-8).

“The Secret Doctrine is the accumulated Wisdom of the Ages, and its cosmogony alone is the most stupendous and elaborate system: *e.g.*, even in the exotericism of the Puranas. But such is the mysterious power of Occult symbolism, that the facts which have actually occupied countless generations of initiated seers and prophets to marshal, to set down and explain; in the bewildering series of evolutionary progress, are all recorded on a few pages of geometrical sign and glyphs. The flashing gaze of those seers has penetrated into the very kernel of matter, and recorded the soul of things there, where an ordinary profane, however learned, would have perceived but the external work of form. But modern science believes not in the ‘soul of things,’ and hence will reject the whole system of ancient cosmogony. It is useless to say that the system in question is no fancy of one or several isolated individuals. That it is the uninterrupted record covering thousands of generations of Seers whose respective experiences were made to test and to verify the traditions passed orally by one early race to another, of the teachings of higher and exalted beings, who watched over the childhood of Humanity. That for long ages, the ‘Wise Men’ of the Fifth Race, of the stock saved and rescued from the last cataclysm and shifting of continents, had

passed their lives *in learning, not teaching*. How did they do so? It is answered: by checking, testing, and verifying in every department of nature the traditions of old by the independent visions of great adepts; *i.e.*, men who have developed and perfected their physical, mental, psychic, and spiritual organisations to the utmost possible degree. No vision of one adept was accepted till it was checked and confirmed by the visions — so obtained as to stand as independent evidence — of other adepts, and by centuries of experiences” (SD 1:272-3).

One of the mahatmas referring to the guardianship of the divine wisdom, wrote: “For countless generations hath the adept builded a fane of imperishable rocks, a giant’s Tower of Infinite Thought, wherein the Titan dwelt, and will yet, if need be, dwell alone, emerging from it but at the end of every cycle, to invite the elect of mankind to co-operate with him and help in his turn enlighten superstitious man. And we will go on in that periodical work of ours; we will not allow ourselves to be baffled in our philanthropic attempts until that day when the foundations of a new continent of thought are so firmly built that no amount of opposition and ignorant malice guided by the Brethren of the Shadow will be found to prevail” (ML 51). *See also* THEOSOPHICAL SOCIETY

Thera (Pali) *Thera* A Buddhist priest, especially a bhikkhu of Gautama Buddha’s community; specifically a senior member. Three grades were distinguished: *thera bhikkhu* (a senior); *majjhima bhikkhu* (middle or secondary disciple); and *nava bhikkhu* (novice). Four characteristics are mentioned, however, making a man a *thera*: high character, knowing the essential doctrines by heart, practicing the four *jhanas* (stages of meditation), and being conscious of having attained at least relative freedom through the destruction of the mental intoxications. A senior woman was termed *theri* or *therika*.

Therapeutae [from Greek *therapeutes* servant, especially of the divinities, healer] Described by Philo Judaeus in “On the Contemplative Life” as a monastic order among the Jews, particularly in Egypt, where their great center was on Lake Mareotis. They were allied to the Essenes, and Philo distinguishes them as being contemplative, while the Essenes he regards not only as contemplative but as practical. They were servants of God and at the same time healers for, rather than a sect, they were an esoteric body within Alexandrian Judaism generally, corresponding to the European mystics or illuminati.

Theraphim. *See* TERAPHIM

Thermodynamics That branch of the theory of heat which concerns the relations between heat and mechanical energy. The first law of thermodynamics states that when heat is converted into mechanical energy, or vice versa, the quantities of each are equivalent; it is a statement of the law of conservation of energy, so far as heat and mechanical energy are concerned. The second law states that heat cannot pass of itself from a cold body to a hotter body; or that it is impossible by means of inanimate material agencies to derive mechanical effect from any portion of matter by cooling it below the temperature of the coldest surrounding objects. This law has been supposed to

lead to the conclusion that the material universe is running down, its energy passing into unavailable forms, like water power running down to a dead level, and that eventually there will be nothing left but a mass of cold matter, from which no further energy can be derived. However, this second law is not experimental but only a conjecture, subject to contradiction by any facts which may be discovered to the contrary. Further, these laws relate only to what is called a closed system, and are subject to modification by agencies from outside the system, as is shown by the qualifying clauses in the definitions.

Thesmophoria (Greek) [from *thesmophoros* law-giving] A Mystery festival celebrated at Athens, Abdera, and possibly also in Sparta, in honor of Demeter-Thesmophoros, as goddess of justice, law, and order. During its celebration, prisoners were released, the law courts of the city-state were closed, and the senate did not meet. Celebrated by women only, it took place on three days, beginning with the 11th of Pyanepsion — October 24-26. The first day was called Anodos (the way up), but also Kathodos (the way down, the descent). It celebrated with a great processional the return of Demeter with her daughter Persephone from the underworld, and as Kathodos, her descent into it. The second day was Kalligeneia (mother of beauty); and third was Nesteia (the fast), passed by the women in silence and fasting, sitting on the ground to celebrate Demeter's sorrow. There is no information as to the rites of the second day, and nothing is actually known of the *private* ritual of any of the three days.

Theurgy (Greek) *theurgia* [from *theos* god + *ergon* work] Mystery-term popularized by Iamblichus for a method of individual communion with the gods, or bringing the gods down to earth. It consisted in purifying the psycho-astral links between the mind and its divine counterpart, whereby the theurgist was not only brought into conscious communion with his own higher self, but also with other divine entities. The first school in the Christian period

“was founded by Iamblichus among certain Alexandrian Platonists. The priests, however, who were attached to the temples of Egypt, Assyria, Babylonia and Greece, and whose business it was to evoke the gods during the celebration of the Mysteries, were known by this name, or its equivalent in other tongues, from the earliest archaic period. Spirits (but not those of the dead, the evocation of which was called *Necromancy*) were made visible to the eyes of mortals. Thus a theurgist had to be a hierophant and an expert in the esoteric learning of the Sanctuaries of all great countries. The Neo-platonists of the school of Iamblichus were called theurgists, for they performed the so-called ‘ceremonial magic,’ and evoked the *simulacra* or the images of the ancient heroes, ‘gods,’ and daimonia (divine, spiritual entities). In the rare cases when the presence of a *tangible* and *visible* ‘spirit’ was required, the theurgist had to furnish the weird apparition with a portion of his own flesh and blood — he had to perform the *theopaea*, or the ‘creation of gods,’ by a mysterious process well known to the old, and perhaps some of the modern, *Tantrikas* and initiated Brahmans of India” (TG 329-30).

The varied uses by different writers shows the term's applicability to a considerable range of practices.

“The popular prevailing idea is that the theurgists, as well as the magicians, worked wonders, such as evoking the souls or shadows of the heroes and gods, and other thaumaturgic works, by *supernatural* powers. But this never was the fact. They did it simply by the liberation of their own astral body, which, taking the form of a god or hero, served as a *medium* or vehicle through which the special current preserving the ideas and knowledge of that hero or god could be reached and manifested” (TG 330).

Plotinus was opposed to theurgy, and Porphyry says that it can but cleanse the lower or psychic portion and make it capable of perceiving lower beings, such as spirits, angels, and gods; it is powerless to purify the noetic or manasic (intellectual) principle. But Porphyry was persuaded by his master Iamblichus to concede the value of theurgy under certain limitations. Porphyry's views highlight the difference between raja yoga and hatha yoga. In the case of such a person as Iamblichus, practices might be quite safe which would be fraught with nothing but harm in the hands of another or without the help of such a teacher. For once the barriers are down a way is opened for communion with all kinds of undesirable entities, against which the experimenter will not know how to protect himself.

In the ancient Mysteries, theurgy was divided into different degrees. To illustrate, in one of the highest initiatory degrees the initiate was brought face to face with the divinity within himself, and in order to accomplish this the initiate had to give of his own spiritual and intellectual substance and vitality so that his inner god might embody itself on inner and invisible planes, the rite thus providing a temporary and illusory divorce which was really an essential union of the divine in man with the spiritual-intellectual — the latter recognizing for the time being its own divine origin and coalescing with it. In a less perfect form of such theurgical practice, and in a lower degree of the Mysteries, the initiate gave of his own astral and physical substance, the effluvia of his astral body and of his flesh and blood, to provide a vehicle through which a spiritual entity might have a tangible, although very temporary, embodiment; and for the time being the initiate was thus enabled to see, touch, and converse with a being of the inner worlds who otherwise would have been utterly unable to enter our physical sphere except by those spiritual-akasic currents of forces which human beings recognize as inspiration.

Thevetat, Thevetata An ancient king of one of the divisions of Atlantis, the submerged continental system of the fourth root-race (SD 2:222). He is instanced as one of the natural born adept-magicians who neither learned nor acquired knowledge, but who knew all without being initiated. “Under the evil insinuations of their demon, Thevetat, the Atlantis-race became a nation of wicked magicians” (IU 1:593).

Third Eye Possessed by early humans and, up to the physicalization of the third root-race, it was

the only seeing organ in most living species. At the beginning of that root-race, the organ which has developed into the eye was beneath a semitransparent covering or membrane, like some of the blind vertebrata today. In early humanity, the third eye was the organ of spiritual vision, as it was that of objective vision in the animals (SD 2:299), as indeed it still remains, and it appears as the pineal gland inside the skull of modern mankind. In the course of physical evolution, with corresponding loss of spiritual vision, the cyclopean eye was gradually replaced by the physical vision of the two front eyes. The original eye has since then continued to function — although unrecognized by the vast majority of people — as the organ of intuitive discernment. As this recession was not complete before the close of the fourth root-race, there were late subraces of Lemurians and of early Atlanteans who were still in some degree at least physically three-eyed (SD 2:302).

Hindu mystics speak of this inner organ as the eye of Siva, the Tri-lochana (three-eyed). In Tibet the same functional organ was called the eye of Dangma, and references to it may be found under various names scattered throughout the world's literatures. *See also* PINEAL GLAND

Thirteen Today, popularly considered unlucky, and a great number of superstitions have come to be associated with it; in the numerical scale of 12, 13 begins a new duodecad. In popular Occidental belief, 13 seems regarded as being one too many, 12 being a complete number; and reference is made in Christian story to the 13 present at the “Last Supper,” one being the alleged traitor Judas. However, there is no ancient basis for this negative view.

In the Qabbalah 13 is used in several passages, e.g., in cosmogenesis, “Thirteen depend on thirteen (forms) of the most worthy Dignity” (Siphra’ Di-tseni’utha’ 1:16), “refers to the thirteen periods personified by the thirteen Manus, with Swayambhuva the fourteenth (13, instead of 14, being an additional *veil*): those fourteen Manus who reign within the term of a Mahayuga, a ‘Day’ of Brahma. These (thirteen-fourteen) of the objective Universe depend on the thirteen (fourteen) *paradigmatic, ideal forms*” (SD 1:375); the fourteenth is supplied by the synthesis under the inflow of the coordinating and stimulating spirit. In the same way a group of six is counted as a septenate.

Again, of Macroprosopus, “Thirteen curls of hair exist on the one side and on the other of the skull” (v. 80), signifying “six on one and six on the other, the thirteenth being also the fourteenth, as it is male-female, ‘and through them commenceth the division of the hair’ (the division of things, Mankind and Races)” (SD 2:625).

This When translating the Sanskrit idam, used of the manifested kosmos, in contradistinction to that (Sanskrit tat, tad).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Tho-Tre

Thor (Scandinavian) **Thorr** (Icelandic) [from *thonor* thunder; cf Swedish *tordon*, German *donner*] Best known as the Norse god of thunder and lightning, champion of the gods and subduer of giants in the ongoing battle between these opposites: gods meaning energy and giants typifying inertia. Like the Latin Jupiter, Thor controls the weather and represents the planet Jupiter. The hair of his beautiful wife Sif represents the golden harvest, whether of grain or of experience — the mead or nectar of the gods.

The sagas depict Thor as blunt, hot-tempered, without fraud or guile, of few words and ready blows. His chariot, drawn by the two goats Toothcrusher and Toothgnasher, has an iron whiffletree, and sparks fly from its wheels and from the goats' hooves. Thor's fiery eyes color the scarlet clouds, his beard is red, on his brow he wears a crown of stars, and under his feet rests the earth whose defender he is. His chariot cannot cross the rainbow bridge, Bifrost, for its lightnings would set the bridge on fire, so the god daily fords the river beneath it when he attends the Thing (parliament) of the gods.

The symbology connected with this deity is multiform and complex, as he functions on many levels. Thor's various names indicate his many aspects as electromagnetic force which he represents in all its spectrum. His "shelf" (plane) is Thrudvang, his mansion Bilskirnir (flash, from *bil* momentary + *skirnir* shining). He is comparable to the Greek Eros, the Vedic Kama, the primal motive power which gave rise to the creative divinities from whom emanated the cosmos. In this capacity he is named Trudgalmer (sound of Thor, Icelandic Thrudgelmir), the sustaining power that maintains the cosmos as a viable functioning entity throughout its existence. Trudgalmer has two sons in space: Mode (force) and Magne (strength), the forces of repulsion and attraction recognized in radiation and gravitation or as centrifugal and centripetal force. As the life force in all living beings Thor is called Vior; as electricity on earth his name is Lorrider. The terrestrial Lorrider has two adopted children, Tjalfe (speed) and Roskva (work).

Thor is sometimes known as Akuthor [from the verbal root *aka* ride in a vehicle, travel], sometimes as Vingthor (winged Thor) or Vingner (the winged one). His day is Thursday (Thor's day, Anglo-Saxon Thunresdaeg). His hammer mjolnir (miller) is the sacred instrument with which life forms are created and annihilated. It symbolizes the power that brings beings to birth and is the slayer of giants, whereby their lives are ended, for giants represents the lifeterms of living beings.

Thor's Hammer. See MJOLNIR

Thoth, Thot (Greek) **Tehuti** (Egyptian) *Teḥuti*. Egyptian god of wisdom, equivalent to the Greek Hermes, Thoth was often represented as an ibis-headed deity, and also with a human head, especially in his aspect of Aah-Tehuti (the moon god), and as the god of Mendes he is depicted as bull-headed. Although best known in his character of the scribe or recorder of the gods, holding stylus and tablet, this is but another manner of showing that Thoth is the god of wisdom, inventor of science and learning; thus to him is attributed the establishment of the worship of the gods and the hymns and sacrifices, and the author of every work on every branch of knowledge both human and divine. He is described in the texts as “self-created, he to whom none hath given birth; the One; he who reckons in heaven, the counter of the stars; the enumerator and measurer of the earth [cosmic space] and all that is contained therein: the heart of Ra cometh forth in the form of the god Tehuti” — for he represents the heart and tongue of Ra, reason and the mental powers of the god and the utterer of speech. It has been suggested that Thoth is thus the equivalent of the Platonic Logos. Many are his epithets: his best known being “thrice greatest” — in later times becoming Hermes Trismegistus.

In *The Egyptian Book of the Dead*, the deceased must learn to master everything he encounters in the underworld, and does this through the instruction of Thoth, who also teaches the pilgrim the way of procedure. Finally when the deceased reaches the stage of judgment, it is Thoth who records the decree pointed out to him by the dog-headed ape on the balance, the scales of which weigh the heart against the feather. The gods receive the verdict from Thoth, who in turn announce it to Osiris, enabling the candidate to enter the realm of Osiris, as being one osirified. Thus Thoth is the inner spiritual recorder of the human constitution, who registers and records the karmic experiences and foretells the future destiny of the deceased, showing that each person is judged *by himself* — for Thoth here is the person's own higher ego; as regards cosmic space, Thoth is not only the cosmic Logos, but its aspect as the intelligent creative urge inherent in that Intelligence.

Thoth was also arbiter of the gods as in the battle between the god of light and the god of darkness, restoring the equilibrium which had been destroyed during the conflict. Similarly in the fights between Horus and Set, when the evil has a temporary ascendancy, Thoth restores harmony.

Interestingly,

“Thoth remains changeless from the first to the last Dynasty. . . . the celestial scribe, who records the thoughts, words and deeds of men and weighs them in the balance, liken him to the type of the esoteric *Lipikas*. His name is one of the first that appears on the oldest monuments. He is the lunar god of the first dynasties, the master of Cynocephalus — the dog-headed ape who stood in Egypt as a living symbol and remembrance of the Third Root-Race” (TG 331).

Thothori Nyan Tsan (Tibetan) *Tho-tho-ri-gnan-btsan*. An early Tibetan king of the 4th century, during which Buddhism was first introduced into Tibet.

Thot-Sabaoth, Thautsabaoth, Thantabaoth The bear; found mainly on early Gnostic and even later Hebrew talismans, one of the planetary regents governing its own hierarchy of intelligent and quasi-intelligent nature powers in the planetary system of the Chaldeans, which with variations is virtually universal in the Eastern countries surrounding the Mediterranean.

Thought In *The Secret Doctrine*, used in senses quite different from the ordinary: abstract absolute thought, of which mind is a concrete manifestation, or of which voice or the Logos is a manifestation. *Pymander* is quoted as saying that passive or unconscious mind generates active idea — and active idea here is the same as the activity of the Logos. Thought, impressed on the astral light, exists in eternity, whether active or passive.

Kriyasakti, one of the innate human powers, is the power which thought has of expressing itself analogically in action. Thoughts are imbodyed elemental energies. The human brain does not create them, it only transmits them, because the human brain is but the vehicle transmitting intellectual, mental, and emotional energy from the monadic center within, and this monadic center itself originates thought.

Thought Transference. See TELEPATHY

Thraetaona (Avestan) *Thrāetaona*, **Freton** (Pahlavi) *Frētōn*, **Feraydun** (Persian) *Feraydūn* [from Avestan *thrae* trice + *taona* potent] The Avestan fire god possibly connected in meaning with Traitana or (Trita in the Hindu Vedas), or the son of the waters, in India generally called Apam Napat and stated to be born from the cloud through the lightning. He slew the dreadful serpent Azhi Dahaka in the four-cornered Varena (the heavens) — Feraydun (Thraetaona) with his three sons versus Azhi Dahaka with three heads. In the *Vendidad* (20) he is described as the first healer. Blavatsky calls Thraetaona the Persian Michael, and equates Apam Napat with fohat.

Another meaning of Feraydun is the sphere of the fixed stars (the light spheres). See also AZHI-DAHAKA; ZOHAK

Thread-soul, Thread-self. See SUTRATMAN

Three The first odd truly manifested number in the Pythagorean system, the second in emanation from the first odd number, the unit or monad. Because it was odd, like its grandparent the monad, it partook of the qualities and attributes of the latter and hence occupied a noteworthy place in the mystical numerative system of the Pythagorean school. It was designated as corresponding to a superficies because it is the first of all numeral causes generating a plane figure. Even a circle probably may in one sense be said to comprise a triad, for it has a center, a circumference, and a space contained within the latter. The number three, however, was commonly represented by the ancient thinkers by the triangle, the three sides making a complete plane figure. “This number is truly the number of mystery *par excellence*,” remarks Blavatsky; in order to understand the esoteric side of the mysteries connected with it, however, one is obliged to study the Hindu symbolism of numerals “as the combinations which were applied to it are numberless” (SD 2:575).

The Pythagoreans regarded the number seven as a compound of three and four: “On the plane of the noumenal world, the triangle was, as the first conception of the manifested Deity, its image: ‘Father-Mother-Son’; and the Quaternary, the perfect number, was the noumenal, ideal root of all numbers and things on the physical planes” (SD 2:582). The early Pythagoreans regarded the number three mystically as the vehicle of deity. If the duad was considered by these and other thinkers to be the first numerical element in cosmic manifestation, so following the same line the triad or three was considered the first number with which began the emanative series of hierarchies building all the planes inner and outer of the manifested worlds. *See also* TRIAD

Three-dimensional The physical plane of objectivity is often spoken of as the three-dimensional world, because in our space considered as a system of points, three rectilinear coordinates are necessary to determine the position of a point. When one of these three dimensions becomes zero, the volume of the body also becomes zero, and it vanishes from the physical planes. Mathematics speaks of n-dimensions, but some of these dimensions may be vectors, such as force or velocity, so that it is necessary to avoid drawing false analogies.

Dimension or dimensional is a word which when strictly used refers to measuring in one or another direction. Now the intuition which has led many modern scientists and philosophers to speak of more than three dimensions of space is a true one, but a more correct way of phrasing these suppositions dimensions would be to speak of the philosophical qualities or attributes of space. Thus, time in the Relativity Theory of Einstein may logically enough be considered a dimension, because it is a quality or mode of measuring space from event to event, so that by such mensuration the mind can picture to itself not only the continuous present, but likewise the past and future. Furthermore, any entity possessing the commonly accepted three dimensions could not exist or be, unless the time element entered into the equation; in other words, unless a being or thing exists in time it obviously cannot exist at all, and thus it is that time logically and correctly can be called a dimension of space. As long as matter or physical space exists, however, there will be for such physical space three dimensions and no more, to which it is likewise philosophically

accurate enough to add the fourth dimension modernly called time; but theosophy is not satisfied with restricting itself to these four ways of measuring the attributes or qualities of space, but adds others, one of the most important being consciousness, which is such an attribute of abstract space as time is, or as our length, breadth, and thickness.

The objection to the terms dimensions and dimensional arises merely because they apply with strict accuracy only to the three standard manners of measuring physical objects, and likewise to the time element or points of duration; but when applied to the higher modes or qualities of the cosmic continuum, these words can be strictly used only by distorting the idea of mensuration they involve. We cannot easily say that consciousness is capable of mensuration in the manner in which we mensurate off particles or bodies of physical substance, for such mensuration does not apply. But to speak of space as containing in itself a quality which we humans cognize as intelligence, consciousness, love, or hate is to speak with accuracy, for all these qualities exist.

Three Faces Generally refers to the Hindu Trimurti — the three-faced deity known as Brahma, Vishnu, and Siva; but also refers to the Qabbalistic Faces or Heads: the Long Face (Macroprosopus), the first Sephirah; the Short Face (Microprosopus), the lower nine Sephiroth; and the White Face (or White Head), from which the other two faces originate. The three Faces have a close analog in the three persons of the Christian Trinity in the original form of the procession — Father, Holy Ghost, and Son — and whether Faces or Persons, they are the three veils, masks, or personae of the one godhead: one in three, and three in one. There are similar triads in other mystically religious systems. “There are two Faces, one in *Tushita* (Devachan) and one in *Myalba* (earth); and the Highest Holy unites them and finally absorbs both” (TG 333).

Three Fires Used by theosophists for the three higher principles of the human constitution, atma-buddhi-manas, which when united by will and aspiration become the one holy flame; represented in *The Egyptian Book of the Dead* by three birds.

Three-in-One In the order of succession of cosmic principles, as represented by numbers, two Ones are spoken of: the unmanifested One and its offspring, the semi-manifested One. The latter in turn emanates *its* offspring, a third One, which is often called the Three-in-One. In every cosmogony this triad or trinity is found at the head of cosmic manifestation; it is a unit, yet can be viewed under its three aspects. For when considering the activities taking place at the beginning of a cosmic awakening, our human minds find it exceedingly difficult to conceive complete divine unity, but must intuit it in its triple aspect. Various names are given to this triad, such as non-ego, spiritual darkness, and spirit-matter-life.

There is a Three-in-One within every human being: “Rudimentary man . . . becomes the perfect man . . . when, with the development of ‘Spiritual Fire,’ the *noumenon* of the ‘Three in One’ within his Self, he acquires from his inner Self, or Instructor, the Wisdom of Self-Consciousness, which he does not possess in the beginning” (SD 2:113).

The tetrad was esteemed by the Qabbalists and Pythagoras as a relatively perfect number because it emanates from the One, and is the fulfilled emanational rounding out of the originating One, the first unit or rather the Three-in-One.

Three-tongued Flame The immortal spiritual triad, atma-buddhi-manas; the four wicks are the four lower principles (SD 1:237). Also called the three fires, which when reunited in nirvana become one. *See also* THREE FACES

Thrones An angelic group in the Christian celestial hierarchy, as outlined by the pseudo-Dionysius the Areopagite. The Thrones rank third in the ninefold scheme, being preceded by the Seraphim and Cherubim; the second and intermediate triad is formed of Dominions, Virtues, and Powers; while the third triad is formed of Principalities, Archangels, and Angels. This scheme was derived from Hebrew angelology, which comes from the Chaldean; although this Christian angelic scheme has been philosophically powerfully affected by Neoplatonic and neo-Pythagorean thought. “They who are called in Theology ‘the Thrones,’ and are the ‘Seat of God,’ must be the first incarnated men on Earth” (SD 2:80). The *Zohar* states that the Benei ’Elohim (sons of god) belong to the tenth subdivision of the Thrones. The ancient Syrians defined their world of Rulers similarly to the Chaldeans: the lowest world was the sublunary, our earth, ruled by Angels; then Mercury, Archangels; Venus, Principalities; Sun, Powers; Mars, Virtues; Jupiter, Dominions; and Saturn, Thrones.

The pseudo-Dionysius was a Christian writer of unknown date; the first authentic mention in extant early Christian literature of his writings is found in the records of the Council held at Constantinople, 532 AD, under Emperor Justinian.

Thrud(r), Thrudgelmir (Icelandic) **Trudgalmer** (Swedish) [cf Greek *gymnazein*, Scandinavian *idrott* sport, German *drude*] The dynamic principle, Thor on a cosmic scale, where this dynamism is the primary force to emerge from the great Unknown at the start of any period of manifestation. In this capacity Thrud appears before any of the gods, as does the Hindu Kama and Greek Eros.

Thumoeides (Greek) [from *thymos* passional soul + *eidos* form] The name given by Plato to a division of the psychomental nature, the animal or passional soul, kama-manas, in contrast with a still lower division of kama-manas which he called epithumetikon (appetitive, or that which has appetite for). Above both these, which together comprise what other Greek philosophers called the psyche, is the nous, the seat of inspiration, intuition, the highest intellection, and similar noble attributes or faculties, corresponding to the buddhi-manas or atma-buddhi-manas.

Thummim (Hebrew) *Tummīm* [from *tom* innocence, integrity, truth] Truth, perfections; associated as an appurtenance with the breastplate of the Jewish high priest. In the casting of the Urim and Thummim, the latter showed a man’s innocence (cf 1 Sam 14:41, where tamin is translated “lots”). The urim and thummim

“were the instruments of *magic* divination and oracular communication — theurgic and astrological. This is shown in the following well-known facts: — (1) upon each of the twelve precious stones was engraved the name of one of the twelve sons of Jacob, each of these ‘sons’ personating one of the signs of the zodiac; (2) both were oracular images, like the *teraphim*, and uttered *oracles* by a voice, and both were agents for hypnotisation and throwing the priests who wore them into an ecstatic condition. The *Urim* and *Thummim* were not original with the Hebrews, but had been borrowed, like most of their other religious rites, from the Egyptians, with whom the mystic scarabaeus, worn on the breast by the Hierophants, had the same functions. . . . when the Jewish ‘Lord God was called upon to manifest his presence and speak out his will through the *Urim* by preliminary incantations, the *modus operandi* was the same as that used by all the Gentile priests the world over” (TG 334).

Thumos (Greek) Similar to soul, but generally referring to the passional or emotional nature, and answering to *kama-manas*.

Thunder Sometimes called the voice of God, as used frequently in the Old Testament and the Apocalypse. With the Romans it was popularly considered a manifestation of Jupiter Tonans — hence the name thundering Jupiter. Apart from its physical relations, and as one of the phenomena of sound, it may be considered a manifestation of the fifth cosmic element, *akasa*, whence sound is born, it being understood that what our ears feel as sound is a sense interpretation to us of vibrational effects. Science appears to identify sound per se with the merely vibrational effects which accompany it or are caused by it, or even at times evoke it.

Thunderbolt Now usually, a discharge of lightning, but it implies a missile. The thunderbolts of Jove are well known, and the Lord God thunders from heaven, considered in both cases a sign of wrath. Jupiter Tonans (Jupiter, the thunderer) was one aspect of the Roman Lord of Heaven; Indra, in India, was wielder of the thunderbolt. Atmospheric thunder is a manifestation of electricity, heat, light, and sound; and must have its correspondences on higher cosmic planes. A deeper knowledge of nature would unfold to us the connection between outward events and those inner events of which the former are the manifestation. The arts of ancient augurs and diviners were based on such knowledge, but in the accounts about this we may certainly find much which is mere superstition.

A certain aspect of the ancient view regarded the crash of lightning and its destructive effect as due to a bolt or missile, nor need we imagine, as exotericists of all ages have, that a god hurls his missile upon earth or the heads of his rebellious human children. Nature, being a hierarchy composed of almost innumerable subordinate entities, is under the strict governance or law of divine intelligences, so that nothing whatsoever happens haphazardly. From this viewpoint, the thunderbolt is an actual discharge of energy reaching objectivization, not by chance but in

accordance with intelligent causation or law — not by inscrutable fate, but by past actions whose effects in time produce the thunderbolt. The same reasoning applies to other natural phenomena, such as earthquakes, tidal waves, sinkings of continents, volcanoes and, on a smaller scale, such life-giving and fructifying events as rains, sunshine, storms, and those continuous but nondestructive electrical interchanges which are so largely instrumental in producing the varied phenomena of life around us.

Thurse (Icelandic) [possibly related to Danish *tosse* fool] Giant; the difference between the giant and the thurse, as these terms are used in Norse mythology, is subtle. From the tales it would appear that giant is used most often to indicate the passage of a long time (cf Greek *aeon*), whereas the thurse aspect is accentuated to show the senselessness of matter uninspired by the gods.

Thyan-kam (Tibetan) Attributed to the great Buddhist Tibetan adept Tsong-kha-pa in a work of Aphorisms: “the power or knowledge of guiding the impulses of cosmic energy in the right direction” (SD 1:635).

Ti (Chinese) In the *I Ching*, the name for the beneficent sustaining power or chief spirit of the universe. One of the minor deities is described there as engaging in rebellion against his superior, in which he maintains that he himself is ti. In consequence of this the rebellious spirit with seven choirs of celestial spirits were exiled upon earth: this “*brought a change in all nature, heaven itself bending down and uniting with earth*” (SD 2:486) — a Chinese version of the Fallen Angels. Back of this tale itself lies the fundamental concept that all things originate in the divine, emanate from it, and ultimately return to it, so that at any stage of this spiritual procession, any minor entity can claim that its inmost selfhood is identical with the highest, the originating source.

Tiahuanaco A region near the southern shore of Lake Titicaca on the borders of Peru and Bolivia, the site of cyclopean ruins of vast edifices whose age is unknown. The lake is 12,500 feet above sea level, and owing to its altitude the district is capable of sustaining only a scanty population, yet it was evidently the seat of a great civilization in prehistoric times when the climate appears to have been far milder. Within a comparatively recent period, geologically speaking, the Andes have risen to their present height. Opinions are sharply divided as to the age of the monuments, ten to fifty thousand years having been suggested. Blavatsky inclines to a greater age, suggesting that these remarkable works were erected by people of Lemurian stock, but who actually then were of Atlantean racial connection, and who had inherited at least fragments of the pre-Atlantean-Lemurian tradition. Three main types of pre-Inca constructions exist: the buildings made of enormous polygonal stones, the Tiahuanaco style, and the pre-Inca roads and aqueducts. Markham, in *The Incas of Peru*, speaking of Tiahuanaco, writes: “The city covered a large area, built by highly skilled masons, and with the use of enormous stones. One 36 ft. by 7 ft. weighs 170 tons, another is 26 ft. by 16 by 6. Apart from the monoliths of ancient Egypt, there is nothing to equal this in any other part of the world . . . The point next in interest to the enormous size of the

stones is the excellence of the workmanship. The lines are accurately straight, the angles correctly drawn, the surfaces true planes . . . Not less striking are the statues with heads adorned with curiously shaped head-dresses . . . There is ample proof of the very advanced stage reached by the builders in architectural art.”

Tiamat (Chaldean) Chaldean serpent, slain by Bel, the chief deity. The tale is repeated in the later Babylonian account, with the exception that Marduk or Merodach (producer of the world) replaces Bel. The mythologic serpent, described as the embodiment of evil both physical and moral, was enormous (300 miles long), it moved in undulations 6 miles in height. When Marduk finally slew Tiamat he split the monster into two halves, using one as a covering of the heavens, so that the upper waters would not come down. Tiamat is cognate with the Babylonian tiamtu, tamtu, “the ocean,” rendered Thalath by Berossus in his Chaldean cosmogony. There is here likewise the reference to the waters of wisdom, the divine wisdom and the lower wisdom of manifestation.

Blavatsky explains that the serpent Tiamat is the great mother, “the living principle of chaos” (TG 334). “The struggle of Bel and then of Merodach, the Sun-god, with *Tiamat*, the Sea and its Dragon, a ‘war’ which ended in the defeat of the latter, has a purely cosmic and geological meaning, as well as an historical one. It is a page torn out of the History of the Secret and Sacred Sciences, their evolution, growth and death — *for the profane masses*. It relates (*a*) to the systematic and gradual drying up of immense territories by the fierce Sun at a certain pre-historic period; one of the terrible droughts which ended by a gradual transformation of once fertile lands abundantly watered into the sandy deserts which they are now; and (*b*) to the as systematic persecution of the Prophets of the Right Path by those of the Left” (SD 2:503). *See also* TAMTI

Tiaou, Tiau. *See* TUAT

T’ien (Chinese) Heaven, the abode of the ancestors; when applied to the human being, spirit: “Wander to where the ten thousand things [the cosmos] both begin and end, unify your nature, foster your life-breath, concentrate your ‘power’ till it is one with the force that created all things after their kind — do this, and your *t’ien* (heaven) shall maintain its integrity” (Chuang Tzu, 19:2).

T’ien-chan (Chinese) The universe, referring to the matter side or forms.

Tien-Hoang. *See* T’IEN-HUANG

T’ien Hsin (Chinese) The heaven of mind or that which is absolute, referring to the ideal or subjective heaven, and therefore to the state or condition of the Absolute of any hierarchy. “Universal Ideation and Mahat, when applied to the plane of differentiation” (TG 345).

T’ien-huang (Chinese) The aggregate of the heavenly hierarchies of the dhyanis, described in legends as twelve hierarchies of celestial beings, with human faces and dragon bodies. They evolve men by incarnating themselves in seven figures of earth, “the dragon standing for *divine Wisdom* or Spirit” (SD 2:26).

T'ien-Sin. See T'IEN HSIN

Tikkoun, Tikkun. See TIQQUN

Timaeus (Greek) A dialogue of Plato in which the Pythagorean philosopher Timaeus gives an account of aspects of cosmogenesis and anthropogenesis. Timaeus himself is stated to have written what was regarded by Pythagoras as a book of great worth entitled *Peri Psyche Kosmou Kai Physeos* (On the Soul of the World and of Nature).

Time Theosophy speaks of absolute undivided time or duration, and of manifested or divided time: the former as causal or noumenal, the latter as effectual or phenomenal, and therefore mayavi or illusional. "Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration, and it does not exist where no consciousness exists in which the illusion can be produced; but 'lies asleep' " (SD 1:37). Duration is 'olam (occult or hid) in the Qabalah, signifying duration in eternity or endless perpetuity. Among the Greeks it was called Chronos and even Kronos, and sometimes referred to as Saturn among the Latins; yet its occult or eternally secret activities during periods of manifestation were at times referred to in Hindu philosophic thought as Rudra-Siva, or occasionally as Vishnu.

Theosophy divides boundless duration into unconditionally eternal and universal time, and a conditioned or periodic or "broken" one (SD 1:62). One is the abstraction or noumenon of infinite endless time (Kala); the other its phenomenon, appearing periodically. The symbol of causal or relatively boundless time, so far as the universe is concerned, is often given as a circle, which mathematically is a beginningless and endless line. A spiral line represents time returning upon itself in cycles, and yet transcending itself at each cyclic sweep, devouring its children, as Kronos among the Greeks is said to do; and the serpent with its tail in its mouth often stands for the same ideas. Time, meaning divided or phenomenal time, or manvantaric cycles, is often mentioned as an offspring of space, the latter considered as a container of manifestation. Mystically, theosophy looks upon present and past as well as future as being illusional effects of that beginningless and endless Now, eternal duration.

Tiph'ereh (Hebrew) *Tifereth* Beauty, glory, honor; the sixth Sephiroth which according to the Qabalah is emanated from the five preceding Sephiroth, although this Sephirah is particularly regarded as the union of the two immediately preceding — Mercy or Love, and Power or Judgment. These three form the second triad or face, the so-called Microprosopus or Inferior Countenance, called in the Qabalah Ze'eyr 'Anpin. Being thus regarded as the union of the masculine and feminine potencies, Beauty — excluding Kether (Crown) — forms the head of the central Pillar of the Sephirothal Tree. Its Divine Name is commonly given as 'Elohim; in the Angelic Order it is represented as the Shin'anim. In its application to the human body, as corresponding to the Heavenly Man or 'Adam Qadmon, Tiph'ereh is regarded as the chest or region immediately beneath the heart, the second great center following upon the first, or that of the head, Kether. In

its application to the seven globes of our planetary chain it corresponds to globe F (SD 1:200). From this Sefhirah is emanated the seventh, Netsah.

Tiqqun (Aramaic) *Tīqqūn* [from the verbal root *tāqan* to prepare, establish, set in order, make form or solid] The first manifestation or Third Logos: the Logos of creative activity or the Demiourgos (world-builder). If one adds the philosophical idea always connected with the Third Logos of the immanent karma from the past manvantara guiding through divine ideation the operations of the creative Logos, the deep significance of the term becomes clear. Tiqqun may be called the first born from the active-passive field of logoc activity which in connection with its emanated hierarchies is termed in the Qabbalah the Heavenly Man, 'Adam Qadmon.

Tirthakas. See TIRTHIKAS

Tirthankara (Sanskrit) *Tīrthaṃkara* [from *tīrtha* a place of pilgrimage + *kara* maker, or doer from the verbal root *kr* to make, do] Also tirthakara. Jain saints and chiefs, of which there are 24; equivalent to Jaina, or Jaina arhat.

Tirthikas (Sanskrit) *Tīrthika*-s [from *tīrtha* holy place] The holy ones; “the Brahmanical Sectarrians ‘beyond’ the Himalayas called ‘infidels’ by the Buddhist in the *sacred land*, Tibet, and *vice versa*” (VS 85-6).

Tirukkanda Panchanga (Tamil-Sanskrit) The Tirukkanda Almanac, a Tamil calendar compiled by Chintamany Raghavaracharya, son of the famous Government astronomer of Madras, and Tartakamala Venkata Krishna Rao in 1884-5 for the Kali yuga 4986. These learned Brahmins based their labor upon fragments of very ancient astronomical works attributed to Asuramaya — the celebrated Atlantean astronomer (SD 2:51). See also PANCHANGA

Tiryaksrotas (Sanskrit) *Tiryaksrotas* [from *tiryak* horizontal, lying crosswise, crooked + *srotas* stream, current] Those animals in which the digestive canals are involved or crooked; according to the Puranas, the fifth of the seven creations of living beings by Brahma, the creation of sacred animals. “The esoteric meaning of the expression ‘animals’ is the *germs of all animal life* including man. Man is called a *sacrificial animal*, and an animal that is the only one among animal creation who sacrifices to the gods. *Moreover*, by the ‘sacred animals,’ the 12 signs of the zodiac are often meant in the sacred texts . . .” (SD 1:446n).

All these seven emanations or creations of Brahma refer to the seven periods of the evolution of living racial classes, whether higher or lower, and whether involving large or smaller time periods. The Tiryaksrotas (or Tiaryagyonya) creation corresponds only on earth to the dumb animal creation. “That which is meant by ‘animals,’ in *primary* Creation, is the germ of awakening consciousness or of *apperception*, that which is faintly traceable in some sensitive plants on Earth and more distinctly in the *protistic monera*” (SD 1:455). See also URDHVASROTAS

Tiryns A city in Argolis, belonging to the Achaean age, said to have been founded by Proetus,

brother of Acrisius, who was succeeded by Perseus; and the scene of the early life of Heracles. The site was excavated by Schliemann and Dorpfeld, and an ancient palace discovered. The walls, together with cyclopean masonry in other places, were constructed under the guidance of very late Atlantean initiates, who colonized parts of Europe when it had begun to arise from under the waters of the Atlantic, and when their own vast continental system had largely disappeared. Actually, it may be that the builders of the so-called cyclopean stonework or masonry structures in Greece, Italy, and Asia Minor, and perhaps elsewhere, were immigrants from Plato's Atlantis or Poseidonis, as related in the *Timaeus*, and referred to by other Greek and Roman writers.

Tishya (Sanskrit) *Tisya* The sixth or eighth nakshatra (asterism); also a name in the *Mahabharata* and *Harivansa* for kali yuga (the fourth age, our present age) which commenced at the death of Krishna in 3102 BC.

Tismat. See TIAMAT

Titanidae. See TITANS

Titans (Greek) In Greek mythology, builders of worlds, often called cosmocratores, and as microcosmic entities the progenitors of human races; as such, of various orders, so that in mythology they were considered good or bad, as angels or entities of matter. Hesiod's original heaven-dwelling titans, six sons and six daughters of Ouranos and Gaia (heaven and earth), were Oceanos, Coios, Creios, Hyperion, Iapetos, Kronos, Theia, Rheia, Themis, Mnemosyne, Phoebe, and Tethys, but other names were later included, such as Prometheus and Epimetheus; and later still the name was given to any descendant of Ouranos and Gaia. Rebellions taking place against the rulers of heaven, followed by falls and castings out, refer to the descent of creative powers to form new worlds and races. In the rebellion of titans, first against Ouranos in favor of Kronos, then against Kronos in favor of Zeus, the titans are mixed up with other sons of heaven and earth — Hecatoncheires (hundred-handed), Cyclopes, etc. — and the accounts in detail are extremely intricate and confused.

The titans, in one respect, are fourth root-race giants, the Hindu daityas, who at one time obtain the sovereignty of earth and defeat the minor gods; they are thus fallen beings — Python, suras and asuras, corybantes, curetes, Dioscuri, anaktes, dii magni, idaei dactyli, lares, penates, manes, aetae, kabeirio, manus, rishis, and dhyani-chohans — who watched over and incarnated in the elect of the third and fourth root-races.

Titiksha (Sanskrit) *Titikṣā* [from the verbal root *tij* to urge, incite to action, be active in endurance or patience] Patience, resignation, endurance; not mere passive resignation, but an active attitude of patience in supporting the events of life. Mystically, the fifth state of raja yoga — “one of supreme indifference; submission, if necessary, to what is called ‘pleasures and pains for all,’ but deriving neither pleasure nor pain from such submission — in short, the becoming physically, mentally, and morally indifferent and insensible to either pleasure or pain” (VS 93). The meaning

however is not of a cold, heartless, impassive attitude towards the sufferings of others, but an active positive attitude, so far as one's individual pleasures or pains are considered, but likewise involving an active attitude of compassion for the tribulations and sufferings of others. The same thought is involved in the title Diamond-heart, given to adepts: as hard and indifferent to one's own sorrows as the diamond is hard and enduring, yet like the diamond reflecting in its facets as in mirrors the sufferings and sorrows of all around.

Also personified as a goddess, the wife of Dharma (divine law) and daughter of Daksha.

Tityus The divine deluge, a giant of Euboea, son of Gaia (earth), referring to a great flood (SD 2:142). The father of Europa, an ancient Atlantean chief on the rising shores of Europe, the descendants of whose companions were the first Europeans.

T'murah. See TEMURAH

To Agathon. See AGATHON, TO

Tobo In the *Codex Nazaraeus*, a being who conducts the soul of Adam from Orcus to the place of life. Adam represents mankind, and Tobo is the wise ones who send down light to show the way out of the darkness of ignorance. In 2 Chronicles 17, Tob-Adonijah and Tobijah are two of the Levites sent to preach to the cities of Judah, tob here meaning good.

Todas Regarded as one of the so-called autochthonous tribes of India, living in the region of the Nilgiri or Blue Hills in the Madras Presidency in Southern India. Their language is said to be different from any other in India, likewise their characteristics and features appear to be unique in many respects. Blavatsky claims that it is not only their exterior looks which make them distinct from the barbarous tribes surrounding them, but the spiritual world of their inner life which sets them apart, their having remarkable psychic power based upon spiritual understanding and knowledge. The other four tribes of the Nilgiris, who all revere the Todas, state that these Todas were originally in possession of the mountains when their own ancestors first arrived, seeking permission from the Todas to inhabit these mountain slopes. Blavatsky asserts that they possess a species of literacy something like the cuneiform of the ancient Persians; and further that the Todas divide themselves into seven clans, and this total of 700 men is supposed to remain constant at this figure — children being born to them only as they are needed to keep the group up to the fixed number.

Tohu Bohu, Tohu-vah-bohu (Hebrew) *Tohū Bohū* [from *tohū* wasteness + *bohū* emptiness, void] Used in Genesis (*tohu wabhu*) for the state preceding the appearance of the manifested universe — primeval chaos. “And the earth was without form, and void; and darkness was upon the face of the deep” (Genesis 1:2). These two words are closely similar in meaning, *tohu* signifying that which lies waste, without inhabitants or other manifested activity; and *bohū* signifying that which is empty or void; so that the combination can be translated as the uninhabited void, which corresponds

exactly to the Greek Chaos, the nonmanifest condition of our solar system or even galaxy, before manvantara began — the condition during pralaya.

Tong-pa-ngi, Tong-pa-nid A spiritual, intellectual, and psychic condition entered upon by an adept during trial in an initiation (ML 375); the virtually unsolvable mystery of the unfathomable abysses of the spirit.

To On (Greek) [from *to* the + *einai* to be] That which is, the reality as opposed to the seeming; the essence or real nature of a thing, used by Plato for the ineffable All of the universe, equivalent to the First Logos.

Tophet (Hebrew) *Tofeth* An abhorrence, that which causes loathing; a place in the valley of Ben Hinnom (called Gehenna), near Jerusalem, celebrated for the worship of Moloch, where fires were kept burning and human sacrifices were at one time said to have been offered (Jer 7:31). “The locality is thus the prototype of the Christian Hell, the fiery Gehenna of endless woe” (TG 335). Its occult meaning was virtually identic with that of the Gehenna or Avichi, and was the type on earth of the ultimate condition of those who through a course of earth-lives have deliberately chosen evil as their god.

Torah (Hebrew) *Tōrāh* Instruction, doctrine, precept; a revelation, oracle. Used by the Hebrews to describe the Mosaic writings, the Pentateuch. A distinction was drawn between the original written law — the Mosaic Torah and the rest of the scriptures (torah shabbichethab, “law which is in the writing”) — and what the later Jews called the oral law or torah by mouth (torah shebbe‘al peh,

“law which is upon the mouth” or from the lips) which became codified as the Mishnah and is supposed to have been handed down by Ezra.

“Of the ‘hidden Thorah’ it is said that before At-tee-kah (the ‘Ancient of all the Ancients’) had arranged Itself into limbs (or members) preparing Itself to manifest, It willed to create a Thorah; the latter upon being produced addressed It in these words: ‘It, that wishes to arrange and to appoint other things, should first of all, arrange Itself in Its proper Forms.’ In other words, Thorah, the *Law*, snubbed its Creator from the moment of its birth, according to the above, which is an interpolation of some later Talmudist. As it grew and developed, the mystic Law of the primitive Kabbalist was transformed and made by the Rabbins to supercede in its dead letter every metaphysical conception; and thus the Rabbinical and Talmudistic law makes Ain Soph and every divine Principle subservient to itself, and turns its back upon the true esoteric interpretations” (TG 331).

Tortoise In China, a favorite symbol, and Confucius regarded it as sacred; in India the same veneration is given to it, for in one of the preceding manvantaras Vishnu is said in the Puranas to have taken the form of a tortoise to uphold the earth and its beings; his second avatara is called the

Tortoise or Kurma avatara.

The *Satapatha-Brahmana* tells of the collective creator, Prajapati, taking the form of a tortoise to create offspring, and it states that the name of one of the celebrated rishis, Kasyapa, means a tortoise. Also in Hindu astronomy the tortoise is prominent, for the host of stars and constellations are regarded as being placed on a rotating belt in the figure of a sisumara or tortoise.

Touch Second in serial order in the evolution of the elements and senses, corresponding with the element air. *See also* SENSES

Toum. *See* TUM

Tower of Babel. *See* BABEL

Towers An edifice which rests on earth and, mystically speaking, aspires upwards toward heaven; coming under the general description of high places appropriate, like mountaintops and other natural and artificial elevations, to the worship of celestial powers. Found in many parts of the world, their origin is lost in the obscurity of ages. Prominent among them are the round towers found in Ireland, Scotland, Corsica, Sardinia, etc., undoubtedly used for different purposes at different times: by warriors as fortresses, by priests as sanctuaries and initiation chambers, or as watchtowers, belfries, or places of refuge. The cylindrical shape indicates symbolically the great positive and active principle in nature. In the Bible the tower is erected physically, and spoken of metaphorically, as an emblem of might and aspiration.

Toyambudhi (Sanskrit) *Toyāmbudhi* [from *toya* river + *ambudhi* ocean] The collector or receptacle of rivers; “a country in the northern part of which lay the ‘White Island’ ” (TG 336) or Sveta-dvipa — one of the seven islands or continents spoken of in the Puranas.

Trailokya (Sanskrit) *Trailokya* [from *tri* three + *loka* world, sphere] Also Triloka. The three worlds — heaven, earth, and the lower regions (esoterically the spiritual, psychic or astral, and terrestrial spheres); as ordinarily given in Brahmanical philosophy as Bhur (earth), Bhuvah (firmament, heaven), and Svar (skyey atmosphere). The Buddhist trailokya or division into three worlds is somewhat different, being from lowest to highest: kama-dhatu or -loka (desire world), rupa-dhatu (form world), and arupa-dhatu (formless world).

The trailokya are all, in each case, nonphysical spheres, and pertain to the postmortem states of entities. These three worlds are wholly exoteric groupings — not meaning false, but not sufficiently explained in the exoteric literature to develop the real significances. In theosophy there are seven or ten groupings of the postmortem realms or states. These states cannot be grouped under the Brahmanical three worlds, but under the three Buddhist dhatus or lokas. Rupa-dhatu and arupa-dhatu may be called dhyanas (contemplation), thus designating the deeply contemplative character of the excarnate egos sunken in the profound deeps of consciousness. *See also* TRIBHUVANA

Trance [from Latin *transpire* to cross, pass over] A state in which the soul seems to have passed out of the body into another state of being, a rapture, an ecstasy. In a general way, the entranced conditions thus defined are divided into varying degrees of a negative, unconscious state, and into progressive gradations of a positive, conscious, illumining condition. Examples of all degrees of these conditions have occurred among peoples in all ages, and the two conditions may exist coordinately, or either may exist as an active factor to the virtual exclusion of the other.

Although in both kinds of entranced cases there is a more or less temporary dissociation of the human soul — a disruption of the normal relations of the personality — the resulting psychological conditions in typical cases of the two classes are distinctly opposite. In the unconscious state, the person's mental-psychological or intermediate nature is in a subnormal and unnatural condition, even if he is seeing and reporting clairvoyant visions of unknown past events and of as yet unknown future. While his dislocated intermediate nature is thus functioning upon the chaotic astral plane, he is devoid of the judgment and will power of his higher mind, and is as helpless as in a nightmare or disorderly dream.

This subnormal state may result from self-psychologization or from the hypnotic or psychological influence of another person; the person may be the unconscious victim of primitive nature forces; or he may be controlled by some disembodied human elementary, as sometimes happens in cases of mediumship. In any one of the above unconscious "absences," no memory of the experience is self-consciously retained afterwards.

In cases of ecstasy, on the other hand — or of the true seer — there is supernormal activity of the mental-spiritual nature of the person whose human soul in being freed or absent from its kama-manasic desires and consciousness, becomes allied with his higher mind. Thus he becomes intellectually highly lucid, spiritually conscious, and illumined. His now quiescent personal self offers no bar to the reality of the light of truth flowing into him from his own higher nature. His condition, whether a spontaneous exaltation, a state self-induced, or invoked at will, is a direct contrast with the mediumistic state. He is vividly self-conscious of his experience, and he retains the memory of it. Such an exalted state of entrancement is only possible for those individuals who are prepared by great purity of life and a trained will, which are also prerequisites for the mystic rites of the higher initiations.

A person is entranced in various minor degrees when he is temporarily absent-minded, or is absorbed in a brown study, and even in a certain sense when he is asleep. Many persons of mediumistic or psychic constitution become negatively absent from their ordinary senses, or they cultivate such a state for the purpose of becoming conscious on the astral plane. These unfortunates, who yield to the psychic lure of the unknown, receive nothing but a confused and unreliable vision. Worse yet, they thus open their own natures to the invasion and possible possession by astral entities of all kinds, even by excarnate actively evil beings — the elementaries

— seeking physical satisfaction of unexpended intense desires. Not a few of such victims become such from their craving to get out in the astral, and to cultivate powers for the controlling of others, as taught by various pseudo-occultists who brazenly advertise their appeals to selfish human nature.

Any phase of negative trance state is therefore unnatural and often highly dangerous, because the whole trend of nature is towards an ever greater self-consciousness and a stronger spiritual will and nobler intellectual activity.

Transcendentalists Those who assert that true knowledge is obtained by faculties of the mind which transcend sensory experience; those who exalt intuition above empirical knowledge, or that derived from the sense organs, and even that derived from ordinary mentation. Used in modern times of some post-Kantian German philosophers, and of the school of Emerson. The term, however, has been used in different senses by different people.

Transfiguration Most familiar in reference to the event described in Matthew 17 where Jesus is said to have taken three disciples onto a high mountain and is transfigured before them, so that his face shines as the sun and his raiment is as white as the light; and Moses and Elias appear with him. A church festival exists in commemoration of this event. The Greek word is metamorphosis (transformation). The phenomenon occurred at a certain stage in the initiation of a candidate in the Mysteries, when his personal self made contact with the god within him, the *augoeides* (the glorious) and caused his body to shine with radiance.

Transformation The process by which a substance takes on a new form, as for example when oxide of hydrogen appears first as water and then as steam. Colloquially we say that the water has changed into steam, but it would be more accurate to say that something which manifested as water manifests now as steam. The distinction is important because of the serious errors made by overlooking it. As applied to evolution it means that a soul takes on different bodies. It is the soul or monad that is transformed, rather than the form. Wherever there is change of form there is an underlying substance, power, or essence which remains the same throughout the changes, the same in essence but different in form. The Greek equivalent is metamorphosis.

Transformism Adopted from the French, it is the process of evolution as understood by Lamarck and Darwin, as distinguished from evolution in its true etymological sense as used in theosophy. It means the supposed transformation of one kind of organism into another kind of organism, by purely physical processes. Evolution means that a living monad or soul unfolds itself from within outwards, thus producing the forms by which it manifests itself on the physical planes; and clothing itself in a graduating and constantly improving succession of forms, according to changes in its own growth and requirements.

Translucid Earth The material of which the earth is composed is subject to evolution, like everything else; and it has reached its present condition only after a series of changes. There was a

time when the earth, as also the beings upon it, were semi-ethereal and translucent (translucid); later it became opaque, and later still cooled and hardened by stages to its present condition (cf SD 2:312).

Transmigration The belief that human souls after death pass into other bodies either human or animal, and mistakenly given as a synonym for reincarnation, metempsychosis, etc.

Transmigration in general means the passing of an entity from one imbodiment to another, without regard to the status of the entity or the form of the imbodiments, so that it includes various specific meanings denoted by other terms. Actually the word refers to the transmigration of life-atoms, especially those of the human vehicles after dissolution. According to their own affinities and degree of development, these life-atoms which have composed the lower human principles transmigrate to other physical psychomental bodies, there to pursue each its own further specific evolution, unretarded by the temporary association with its former body. Eventually, when the proper cyclic time arrives, they are all again attracted back to the reincarnating human entity to which they formerly belonged. The teaching as to the transmigration of the life-atoms is very important in elucidation of the unity of all life, the interaction of all nature, and the working of karma.

The meanings of transmigration, metempsychosis, metempsychosis, the Hebrew gilgulim, etc., are not synonymous. Each one of these words has its own particular significance, although many of these different words overlap to a certain extent. Thus a being who reincarnates on earth — takes up a body of flesh — likewise transmigrates in the sense of passing over from one condition of life to another, followed by a third and yet others; and that during this process there is a certain change of the condition of the soul or migrating entity which is the particular meaning of metempsychosis; and furthermore, the assumption of a new physical body which is part of the meaning of reincarnation appears in the specific term metempsychosis, and yet again the phase of rebirth is likewise involved. Each one of these different terms, and others, sets forth one particular aspect of the destiny and adventures of the peregrinating entity.

Transmutation Generally the transmutation of inferior metals into gold, although the reverse process properly falls under the same term. Three things are involved: the old metal, the new metal, and the underlying essence common to both. To transmute lead into gold we must change something which is now lead so that this something will then be gold. Transmutations are now being performed in chemistry on this principle. The alchemists reasoned that, since all elements come from a root-element, it must be possible to perform transmutations by reducing the gross elements to their subtle substratum. Apart from the love of knowledge, one sees no object in the physical process other than that of acquisitive gain. If the language of alchemy is taken allegorically, as it very frequently was and is, transmutation means the refinement of the gross elements of human nature. The scientific thinkers and researchers who are leading the world in scientific experimentation in the ultimates of matter are the modern alchemists or

transmutationists.

Transubstantiation The doctrine of the Roman Catholic Church that the bread and wine of the Eucharist or Communion are miraculously transmuted into the *veritable* (literal) body and blood of Jesus, due to a literal interpretation of figurative language used by Jesus. It is not mere consecration of the elements — bread and wine — though in what the difference consists it is hard to define. *See also* BREAD AND WINE

The ancients had their own views about such things, as in the Bacchic rites of Greece and Rome in which bread and water or wine were considered to be mystically — not veritable and actual — symbols of certain of the mysteries of the divinity they revered.

Tree A variant of the cross or tau, to be considered in connection with the serpent which is wound round it. The two together symbolize the world tree with the spiritual, intellectual, psychic, and psychological aggregate of forces encircling the world tree and working in and through it — these forces often grouped in the Orient under the name of kundalini. In minor significance, the two together symbolize the life-waves, or any life-wave, passing through the planes, spirit circling through matter, fohat working in the kosmos. Thus the tree symbol stands for the universe, and correspondentially for man, in whom the monadic ray kindles activity on the several planes; while the physiological key of interpretation applies to the analogies in the human body with its various structures through which play the pranic currents. The tree, by its form, represents evolution, for it begins with a root and spreads out into branches and twigs; only as applied to the kosmos the root is conceived to be on high and the branches to extend downwards. Thus there is the Asvattha tree of India or bodhi tree, the Norse Yggdrasil, the tree Ababel in the Koran, the Sephirothal Tree which is 'Adam Qadmon. In the Garden of Eden it is stated that there were two trees, the Tree of Life and the Tree of the Knowledge of Good and Evil, which signifies the two knowledges. It is said in Gnosticism that Ennoia (divine thought) and Ophis (serpent), as a unity, are the Logos; as separated they are the Tree of Life and the Tree of Knowledge, the former spiritual, the latter manasic. Adam eats the fruit of the Tree of Knowledge which means in one important allegory of human evolution that mankind after the separation of the sexes became endowed with manas, or that when humanity began to be endowed with dual manas, the rays then separated into the opposite sexes; and lest he should partake of the Tree of Life and become immortal, in the then imperfect state of evolution, he is turned out of Eden. It is stated that buddhi becomes transformed into the tree whose fruit is emancipation and which finally destroys the roots of the Asvattha, which here is the symbol of the mayavi life. This latter tree is also the emblem of secret and sacred knowledge, guarded by serpents or dragons; it may also refer to a sacred scripture. Dragons guarded the tree with the golden apples of the Hesperides; the trees of Meru were guarded by a serpent; Juno, on her wedding with Jupiter, gave him a tree with golden fruit, as Eve gave the fruit to Adam. Blavatsky says of Eve: "She it was who first led man to the Tree of Knowledge and made known to him Good and Evil; and if she had been left in peace to do quietly that which she wished

to do, she would have conducted him to the Tree of Life and would thus have rendered him immortal” (*La Revue Theosophique* 2:10). *See also* ASVATTHA, YGGDRASIL

Both adepts and sorcerers were called trees. Tree worship in decadent times degenerated into a variety of phallicism.

Tretagni (Sanskrit) *Tretāgni* [from *tretā* triad + *agni* fire] A triad of fire; in Hindu religious ritual the three sacred fires taken collectively — the sacrificial, the household, and southern fire. These three sacred fires are obtained by the attrition of sticks commonly made of the wood of the Asvattha tree, mystically called the Tree of Wisdom and Knowledge.

Treta Yuga (Sanskrit) *Tretā Yuga* [from *tretā* triad, triple + *yuga* age] The second of the four great yugas which constitute a mahayuga (great age). It is said that during this age three parts of truth prevail; its duration is 1,296,000 years.

In the *Mahabharata* Hanuman, the learned monkey chief, gives a description of the treta yuga: “In the Treta Yuga sacrifice commenced, righteousness decreased by one-fourth; men adhered to truth, and were devoted to a righteousness dependent on ceremonies. Sacrifices prevailed with holy acts and a variety of rites. Men acted with an object in view, seeking after reward for their rites and their gifts, and were no longer disposed to austerities and to liberality from a simple feeling of duty” (abridgment by Muir 1:144). *See also* SATYA YUGA

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Tri-Tz

Triad A group of three, a triple unity, three-in-one, the number three; it represents the limits of ratiocinative thought, for we cannot go beyond the duality of subject and object, and must postulate a unitary essence common to both. A triad stands at the head of all great cosmogonies and philosophies: spirit-matter, Purusha-prakriti, subject-object, male-female, father-mother, motion-space, etc., plus the fundamental unity and source enclosing each emanated duad — the ineffable, parabrahman, 'eyn soph, etc. Theosophy shows three distinct triadic representations of the universe, making nine, or with a synthesis ten: the ever-existing, the pre-existing, and the phenomenal, allegorized as the initial, the manifested, and the creative triads.

Another form of the triad is that in which the unit is considered as the offspring of the duad, as in the familiar triad Father-Mother-Son; and thus we get a quaternary of the primordial triad with the manifested universe as Son. These two triads or triangles represent fire and water respectively; interlaced they make Solomon's seal or the seal of Vishnu. The triad and quaternary together make the septenate; the higher triad in man is atma-buddhi-manas; kama, prana, and linga-sarira make a lower triad. The triad and the quaternary here repeat the duality of spirit and matter, metaphysical and physical. The Qabbalistic Sephirothal Tree shows an upright triad, two inverted triads, and a synthesizing unit below called Malchuth.

Triangle An emblem of the triad or three-in-one, expressing more than the three dots alone: the points, lines, and the whole figure give a septenate composed of two triads and a monad. The triangle also symbolizes twin rays proceeding from a central point, and when the other ends of these lines are joined, the base line signifies that which is produced by the interaction and interblending of the two formative rays. The apex, the side lines, and the base thus represent the three chief stages of cosmic evolution. The idea is further elaborated in the square pyramid. The Pythagoreans recognized the triangle as the first regular rectilinear figure, as three is the first odd number — the one being considered as the origin and unit, out of which all subsequent parts flow.

The usual form of the triangle in symbology is equilateral, with the apex up or down. The circle, triangle, and square form another important triad representing stages in evolution. For interlaced triangles, *see also* SIX-POINTED STAR

Triassic. *See* GEOLOGIC AGES

Tribal Race, Tribal Generation. *See* RACE(S)

Tribhuja (Sanskrit) *Tribhuja* [from *tri* three + *bhuja* arm, side] Three-sided, a triangle.

Tribhuvana (Sanskrit) *Tribhuvana* Three worlds; in Hindu literature the three bhuvanas are svarga (heaven), bhumi (earth), and patala (the lower regions). Esoterically the tribhuvanas are the spiritual, psychic or astral, and terrestrial spheres.

Trailokya, although also referring to the exoteric three worlds, involves in its mystical and esoteric meaning a far wider range of geography of the invisible spheres.

Tri-bochana. *See* TRILOCHANA

Tricephalos. *See* TRIKEPHALOS

Tridandin (Sanskrit) *Tridaṇḍin* [from *tri* three + *daṇḍa* staff] A class or sect of sannyasins (ascetics) who constantly hold a kind of club branching off into three rods at the top. Also one who possesses three kinds of self-command: control of his own thoughts, words, and deeds. The name at times has been given to the threefold Brahmanical thread.

Tridasa (Sanskrit) *Tridaśa* [from *tri* three + *daśa* ten] Thirty; as used in ancient India, it refers in round numbers to the general cycles of the Vedic deities, of which there were 33 ordinary ones: the 12 adityas, the 8 vasus, the 11 rudras, and 2 asvins. When the Hindu trimurti or triad is added to these, the number becomes 36, one of the archaic numbers of esoteric computation, not only in chronology but likewise in theology and theogony. Thirty-six is half of 72, which is 1/5 of 360, and 1/6 of the highly mystical key number 432, with ciphers added or not, according to the computation undertaken. Following the law of chronological analogy, thirty, which is 1/12 of 360, is the foundation number of esoteric computation, to which ciphers may be added according to the scheme held in mind. The 33 crores (330 million) deities usually enumerated in the Hindu pantheon are to be understood similarly, 33 being a round number for 36; for here too the 33 crores must be taken in connection with the trimurti of Brahma, Vishnu, and Siva, themselves aggregates, giving the important figure 36.

Trigunas (Sanskrit) *Triguṇa-s* The three qualities; all differentiated beings and matter are considered to possess three inherent qualities or characteristics: sattva (purity, goodness, truth); rajas (activity, passion, desire); and tamas (quiescence, indifference, darkness). Each of these three qualities has both a good and an imperfect or evil side, and possesses in itself the other two qualities; for instance, there is sattva-sattva, rajas-sattva, tamas-sattva, etc. Thus in the different

hierarchies in the cosmos, the beings composing these hierarchies may be classified not only under one of the three gunas, as essentially manifesting that characteristic, but likewise during their evolution they pass through the phases of the other two qualities, although under the dominance of the main quality from which they as individuals derive.

In the *Bhagavad-Gita* (chs 14, 17) the three great qualities are spoken of as born from nature and binding the imperishable self to manifested life. Of these the sattva quality by reason of its characteristics entwines the soul to rebirth through its attachment to wisdom and knowledge; rajas produces aspiration as well as propensity and thirst, and imprisons the ego through the consequences produced from such action; tamas has its good side but likewise is the deluder of all creatures, and imprisons the ego in a body by characteristics such as indifference, idleness, and sleep. The fruit of righteous acts is called pure and holy and appertains to sattva; from rajas is gathered fruit both good and that which produces pain or sorrow; and tamas produces steadfastness and immovability in a good cause, as well as in a bad sense being the cause of senselessness, ignorance, and indifference. Those in whom the sattva quality is established are said to mount on high; those who are full of rajas remain in the middle sphere, the human world; while those who are overborne by the evil aspect or quality of tamas sink below.

The wisdom which perceives in all nature one single principle, indivisible and incorruptible, not separate essentially but only evolutionally in the separate objects seen, is of the sattva quality. The knowledge which perceives different and manifold principles as present in the world of created beings as being intense and aggressive in action is of the rajas quality. The knowledge which perceives enduring stability and disdain of useless change, or which on the other hand is mean, attached to one object alone as if it were the whole, which does not see the true cause and meaning of existence, is of the tamas quality. Thus each of the three qualities has its positive and negative side, and the initiate or adept seeks to make all three qualities manifest in his life in their highest aspects.

Trijnana (Sanskrit) *Trijñāna* [from *tri* three + *jñāna* knowledge] The threefold knowledge, consisting of three degrees: knowledge based on faith or inner conviction, on theoretical knowledge, and on personal and practical knowledge.

Trikaya (Sanskrit) *Trikāya* [from *tri* three + *kāya* vesture, body] The three glorious vestures or states in which the consciousness of an adept clothes itself: 1) the nirmanakaya (Tibetan pru-lpai-ku) in which the bodhisattva after entering the path to nirvana by the six paramitas appears to mankind in order to teach and which thus is associated with the Buddhas of Compassion; 2) the sambhogakaya (Tibetan dzog-pai-ku) the body of bliss impervious to all material sensations assumed by one who has fulfilled the three conditions of spiritual, intellectual, and moral perfection; and 3) the dharmakaya (Tibetan chos-ku) the nirvanic body or robe in which all nirvanis and full Pratyeka Buddhas exist.

The Wondrous Being or hierarch manifests in three forms, the highest being in direct spiritual intercommunion with cosmic adi-buddha, and this highest aspect or form is the dharmakaya state in which, at least in the inferior portions of it, the dhyani-buddha abides; the second form or state is that of the dhyani-bodhisattva, who is in the sambhogakaya state in direct intercommunion with the lower part of the dhyani-buddha just above it in abstruse power and consciousness; the third and lowest form or aspect, yet in one sense the highest morally on account of the immense, willing self-sacrifice involved, is the manusha-buddha who lives and works in the nirmanakaya state.

“This is a most abstruse teaching which, however, once understood, explains the mystery of every triad or trinity, and is a true key to every three-fold metaphysical symbol. In its most simple and comprehensive form it is found in the human Entity in its triple division into spirit, soul, and body, and in the universe regarded pantheistically, as a unity composed of a Deific, purely spiritual Principle, Supernal Beings — its direct rays — and Humanity. The origin of this is found in the teachings of the prehistoric Wisdom Religion, or Esoteric Philosophy. The grand Pantheistic ideal, of the unknown and unknowable Essence being transformed first into subjective, and then into objective matter, is at the root of all these triads and triplets (TG 338-9).

See also DHARMAKAYA; NIRMANAKAYA; SAMBHOgakAYA; TRISARANA.

Trikephalos (Greek) Three-headed; with the Latin triplex (triple), applied to Hermes or Mercury, as one with the Sun and Venus (SD 2:542).

Trikota (Sanskrit) *Trikūṭa* The three peaks; a “mountain on which Lanka (modern Ceylon) and its city were built. It is said, allegorically, to be a mountain range running south from Meru. And so no doubt it was before Lanka was submerged, leaving now but the highest summits of that range out of the waters. Submarine topography and geological formation must have considerably changed since the Miocene period. There is a legend to the effect that Vayu, the god of the wind, broke the summit off Meru and cast it into the sea, where it forthwith became Lanka” (TG 339-40).

Trilochana (Sanskrit) *Trilocana* [from *tri* three + *locana* eye] The three-eyed; an epithet of Siva.

Triloka. *See* TRAILOKYA

Trimorphos (Greek) Triple-formed, triple; applied to a triple personification of the moon in ancient iconology representing the lunar body as a goddess with three heads, which also became with the ancient Romans *Diva triformis* (the triple goddess): Diana-Hecate-Luna. Also applied to the three Fates — *Moirai trimorphai*.

Applicable in mysticism to any entity or thing which was subject to understanding in three manners. Thus even time could be considered as threefold because of being divisible in our human conception into past, present, and future, etc.

Trimurti (Sanskrit) *Trimūrti* [from *tri* three + *mūrti* imbodiment, form] The Hindu triad, consisting of Brahma, the emanator or evolver; Vishnu, the sustainer or preserver; and Siva, the beneficent, the destroyer, and the regenerator. These three entities as individualized divinities form the apex or crown of the spirit of the solar system. In the human being, Brahma, Vishnu, and Siva represent the three divine-spiritual principles of the seven — directly following forth from the highly recondite superspiritual triangle which, with the seven principles, make the full ten human principles.

In the world of matter, Brahma, Vishnu, and Siva are each personified by earth, water, and fire, i.e., each of these divinities combines in itself these three elements, one predominating when the divinity manifests one of its three fundamental gunas. “In Indian Puranas it is Vishnu, the first, and Brahma, the second logos, or the ideal and practical creators, who are respectively represented, one as manifesting the lotus, the other as issuing from it” (SD 1:381n). But Brahma, for instance, because of the significance of expansion inherent in the name, could equally well be looked upon as the source of Vishnu, manifesting as the cosmic waters or Second Logos. This perhaps is the reason why in this Trimurti, Brahma is called the emanator or evolver, and Vishnu the sustainer or preserver.

These three persons or aspects of the triad are really three sides of the same cosmic reality; and to gain an accurate understanding of their respective functions it should be born in mind that any one of the three may at any time, if the matter is considered from a different viewpoint, be said to contain the functioning elements of the other two in addition to its own. “Brahma, Vishnu, and Siva are a trinity in a unity, and, like the Christian trinity, they are mutually convertible. In the esoteric doctrine they are one and the same manifestation of him ‘whose name is too sacred to be pronounced, and whose power is too majestic and infinite to be imagined’ ” (IU 2:277-8).

In the Vedas, where neither Brahma nor Siva is known under these names, the trinity usually consists of Agni (fire), Vayu (air), and Surya (sun), the originants of the terrestrial, atmospheric, and heavenly fire respectively. The *Padma-Purana* states that in the beginning the great Vishnu desiring to produce the whole world, became threefold, in himself the creator, preserver, and destroyer. In order to produce the world, the supreme spirit emanated from the right side of his body, himself, as Brahma; then, to preserve the universe, he produced from the left side of his body, Vishnu; and to destroy the world he produced from the middle of his body the eternal Siva.

The three persons of the Trimurti are the three qualificative gunas or attributes of the universe of differentiated spirit-matter, self-formative, self-preserving, and self-destroying for purposes of regeneration and perfectibility. Because Brahma is the considered the formative or emanative force, it is said to be personified imbodiment of rajas, the quality of activity, of desire for creation — that desire owing to which the universe and everything in it is called forth into being. Vishnu because of its preservative and sustaining function is said to be the imbodied sattva, which

characterizes the intermediate period between full growth and the beginning of decay; and Siva is said to be the imbodiment of *tamas* which, in one of its functions, is the attribute of stagnancy and final decay, and thus becomes the destroyer.

The Jewish Qabbalistic triad, *Sephirah*, *Hokhmah*, and *Binah*, is identical in certain philosophical respects with the Hindu *Trimurti*.

Trinity The divine powers at the head of every theogony. In the Christian Trinity, the original idea of a triune divinity is preserved but has become confused and adapted to theological speculation. If the Holy Ghost is regarded as feminine, as it was in primitive Christianity, we have the trinity of Father-Mother-Son. The present manner of the procession of the Holy Ghost in the Occident is due to the early theological quarrels which was one of the main causes of the final rupture between the Greek Orthodox and the Roman Catholic Churches — the *filioque* (“and from the son”) controversy. The Orthodox held with the original procession of Father, Holy Ghost, and Son, while in the West the Holy Ghost or Spirit has become a kind of emanation from the Father or Son, or both of them, and is scarcely distinguishable in its attributes from the Son; while the place of Mother has been filled in the Roman Catholic Church by Mary who, though the mother of Jesus, nevertheless is not a member of the Trinity.

But there is another trinity besides that of Father-Mother-Son, that of the one divine root and its dual aspects — a conception altogether lost in Christianity. The Christian God is at best but a *Demiourgos* or inferior creative power, and his necessary attributes clash irreconcilably with those pertaining to the supreme hierarch of our universe; but in many of the sayings of Jesus and in the Epistles of Paul is clear evidence of the true teachings as to the Trinity and the relation of the Father and the Son.

In the orthodox Christian view of its theological Trinity the three persons of the Godhead are not three gods but one God, and yet three Persons or individuals. So that we have one Godhead who is three-in-one, and yet one-in-three, which is not three gods, nor yet one God, but both. Moslems aver that the Christian Trinity is not one God in three aspects, but actually three gods manifesting as one, and the strict monotheism of Islam refuses to admit the logical monstrosity. The Christian Churches lost sight of the mystical origin of its own trinity out of the neo-Pythagorean and Neoplatonic mysticism.

All the great religious and philosophical systems of antiquity contained a divine or spiritual triadic unity as the cosmic source and focus of all beings and things, out of which emanate the universe and all that is in it. Examples are the Osiris-Isis-Horus of Egypt or the Brahma-Vishnu-Siva of India; yet these triads of gods are emanated reflections or representatives on lower planes of the still more sublime and ineffable triadic mystery above and beyond them.

Tripada (Sanskrit) *Tripada* Three-footed; for instance, fever in India is said to be three-footed because it has three stages of development: cold, heat, and sweat.

Tripitaka (Sanskrit) *Tripitaka* [from *tri* three + *pitaka* basket] The three baskets, *pitaka* being the name by which one of the collections of Buddhist sacred scriptures is known. This threefold collection consists of *Sastra-pitaka* often called the *Sutra-pitaka*, the rules or precepts; *Vinaya-pitaka*, the discipline and rules for the priesthood and ascetics; and *Abhidharma-pitaka*, the philosophical and metaphysical dissertations. “There is a fourth division — the *Samyakta Pitaka*. But as it is a later addition by the Chinese Buddhists, it is not accepted by the Southern Church of Siam and Ceylon” (TG 341).

Triplex [from Latin *ter* thrice + *plicare* to fold] Threefold or triform; applied to Mercury, as being in close esoteric connection with the Sun and Venus; and to Diana (in the aspects of Diana, Luna, and Hecate), etc.

Tripurantaka-Siva (Sanskrit) *Tripurāntaka-Śiva* [from *tri* three + *pura* city + *antaka* making an end, destroying] A title of Siva, said to have destroyed Tripurasura.

Tripurasura (Sanskrit) *Tripurāsura* [from *tri* three + *pura* city + *asura* god] The three cities of the asuras. Hindu legend says that Maya or Asuramaya built for the asuras a threefold city of gold, silver, and iron, in the sky, air, and earth respectively. The god Siva destroyed this city with a threefold flame.

Triratna. See TRISARANA

Trisarana (Sanskrit) *Triśaraṇa* The three refuges or protections, also called triratna or ratnatraya (three jewels); the Buddhist formula Buddha, dharma, sangha or samgha. Originally bodhi, dharma, and sangha (wisdom, its laws, and its priests or spiritual exponents).

“The philosopher of the Yoga-charya School would say — as well he could — ‘Dharma is not a person but an unconditioned and underived entity, combining in itself the spiritual and material principles of the universe, whilst from Dharma proceeded, by emanation, Buddha [‘reflected’ Bodhi rather] as the creative energy which produced, in conjunction with Dharma, the third factor in the trinity, viz., “Samgha,” which is the comprehensive sum total of all real life.’ Samgha, then, is not and cannot be that which it is now understood to be, namely, the actual ‘priesthood’; for the latter is not the sum total of all *real* life, but only of religious life. The real primitive significance of the word Samgha or ‘Sangha’ applies to the Arhats or Bhikshus, or the ‘initiates,’ alone, that is to say to the real exponents of Dharma — the divine law and wisdom, coming to them as a reflex light from the one ‘boundless light’ ” (TG 342).

Further, the Buddha meant is not any particular Buddha but Adi-Bodhi or the First Logos, “whose primordial ray is Mahabuddhi, the Universal Seal, *Alaya*, whose flame is ubiquitous, and whose influence has a different sphere on each of the three forms of existence, because, once again, *it is Universal Being itself* or the reflex of the *Absolute*” (TG 343).

Trishna (Sanskrit) *Tṛṣṇā* Thirst, longing; equivalent to the Pali *tanha* (thirst for life); the thirst or desire which draws the intermediate nature or human ego back into incarnation in earth-life.

“After death has released the intermediate nature, and during long ages has given to it its period of bliss and rest and psychical recuperation — much as a quiet and reposeful night’s sleep is to the tired physical body — then, just as a man reawakens by degrees, so does this intermediate nature or human ego by degrees recede or awaken from that state of rest and bliss called *Devachan*. And the seeds of thoughts, the seeds of actions which it had done in former lives, are now laid by the fabric of itself — seeds whose natural energy is still unexpended and unexhausted — and inhere in that inner psychical fabric, for they have nowhere else in which to inhere, since the man produced them there and they are a part of him. These seeds of former thoughts and acts, of former emotions, desires, loves, hates, yearnings, and aspirations, each one of such begins to make itself felt as an urge earthwards, towards the spheres and planes in which they are native, and where they naturally grow and expand and develop” (OG 175-6).

Also the fifth of the twelve *nidanas*; because every human faculty has its nobler aspect, *trishna* can likewise mean love, signifying pure devotion. The pure love and desire that a *bodhisattva* expresses when becoming a *nirmanakaya* is the spiritual aspect of *trishna*.

Trismegistus (Greek) Thrice greatest; a title given to the mysterious personage after whom the Hermetic philosophy is named. In Egypt, he is equivalent to the god *Thoth*, but the title was also a generic name assumed by many ancient Greek writers on philosophy and alchemy. This title was likewise given to the supreme initiator in the ancient Mystery-system and therefore corresponding directly, both as regards function and position, to what in theosophical philosophy is called the *mahachohan*. The title, therefore, applies both to the divinity and its human representatives. See *also* HERMES; PYMANDER

Trisula (Sanskrit) *Triśūla* The trident of Siva.

Trisuparna (Sanskrit) *Trisuparṇa* [from *tri* three + *su* beautiful + *parṇa* wing, leaf] A Brahmin who is thoroughly familiar with certain parts, supposedly three in number, of the Vedas.

Triton (Greek) A deity of the sea, offspring of Poseidon and Amphitrite, represented as dwelling with them under the sea, and as having the upper part of his body human in shape, the lower part that of a dolphin, whose functions are mythologically represented as arousing or calming the billows by means of his conch shell. The dolphin was placed by Poseidon among the signs of the zodiac, and became with the Greeks *Aigokeros* (goat-horned) or *Capricorn* — the monster with a goat’s horns and the hind parts of a dolphin.

“Triton belongs in esoteric interpretation to the group of fish symbols — such as *Oannes* (*Dagon*), the *Matsya* or Fish-avatar, and the *Pisces*, as adopted in the Christian symbolism.

The dolphin is a constellation called by the Greeks *Capricornus*, and the latter is the Indian *Makara*. It has thus an anagrammatical significance, and its interpretation is entirely occult and mystical . . . Suffice to say that it is as physiological as it is spiritual and mystical. (See *Secret Doctrine* II., pp. 578 and 579.)” (TG 344).

Poseidon, Amphitrite, and Triton may either be considered as cosmic powers or entities, or as their microcosmic reflections as powers of the seas of earth. This shifting of significances, all nevertheless having a fundamental or essential identity, is typical of ancient mystical thought of all countries.

Triune. See THREE-IN-ONE

Trividha-dvara (Sanskrit) *Trividha-dvāra* [from *trividha* triple, threefold + *dvāra* door, gate, entrance, opening] The threefold gate, which is “body, mouth, and mind; or purity of body, purity of speech, purity of thought — the three virtues requisite for becoming a Buddha” (TG 344).

Trividya (Sanskrit) *Trividya* [from *tri* three + *vidyā* knowledge, science] The three knowledges or sciences; the three fundamental axioms in mysticism: “(a) the impermanency of all existence, or *Anityata*; (b) suffering and misery of all that lives and is, or *Dukha* [dukhata]; and (c) all physical, objective existence as evanescent and unreal as a water-bubble in a dream, or *Anatmata*” (TG 344).

Trivikrama (Sanskrit) *Trivikrama* [from *tri* three + *vikrama* step, stride, pace — progression or permeating possession] The three steps of Vishnu; also applied to this deity in the *Rig-Veda* in connection with the three strides which he made as he stepped through the seven regions of the universe. “The first step he took on earth, in the form of Agni [god of fire]; the second in the atmosphere, in the form of Vayu, god of the air; and the third in the sky, in the shape of Surya, the sun” (TG 344).

Triyana (Sanskrit) *Triyāna* [from *tri* three + *yāna* vehicle, way] The three vehicles, ways, conditions, or degrees by which the neophyte, and later adept, crosses the ocean of births, deaths, and rebirths or samsara. The three vehicles are likewise three degrees of yoga known as sraavaka, pratyeka-buddha, and bodhisattva.

“The term Triyana is also used to denote the three schools of mysticism [in India] — the Mahayana, the Madhyimayana and Hinayana schools; of which the first is the ‘Greater,’ and the second the ‘Middle,’ and the last the ‘Lesser’ Vehicle. All and every system between the Greater and the Lesser Vehicles are considered ‘useless.’ Therefore the Pratyeka Buddha is made to correspond with the Madhyimayana. For, as explained, ‘this (the Pratyeka Buddha state) refers to him who lives all for himself and very little for others, occupying the middle of the vehicle, filling it all and leaving no room for others.’ Such is the selfish candidate for Nirvana” (TG 344-5).

Triyuga (Sanskrit) *Triyuga* [from *tri* three + *yuga* age] The three ages — the satya yuga, the treta yuga, and the dvapara yuga — preceding our present age or kali yuga. See also YUGA

Trizna (Bulgarian) [from Slavonic *tryzen* pang, torment] A festival for the dead held in Bulgaria, Moldavia, and Wallachia on the 7th of May. The principal feature of the feast is the placing of a light on every grave, drenching the grave with wine, and the burning of great quantities of fragrant herbs or incense on the graves. Sometimes the evocation of the departed one is resorted to by means of drops of blood which are pricked from the eldest surviving relative of the deceased. The Bulgarians believe that the seven weeks from the eve of Easter Sunday to Trinity Day is a period when the souls of the deceased descend on earth, to commune with their loved ones or to beg forgiveness of those they have wronged.

Trojans. See TROY

Troy, Trojans Since Schliemann rediscovered at Hissarlik the several superincumbent sites of ancient Troy, there has been increasing reason for placing confidence in the historicity of what have been regarded as fables. The Trojan War, for instance, is now known to be a historical fact, although according to *The Secret Doctrine* it should be dated much earlier than the 1200 BC or so at present allowed by archaeology. In *Isis Unveiled* the Homeric account of this war is described as a Greek counterpart of the *Ramayana*. Allegory and fact are curiously mixed in such narrations, but it is well known that mythoi were originally and intentionally built on a basis of former factual occurrences.

Ragon, in his defense of the antiquity of Masonry, recalls the statements of classical writers that Neptune and Apollo offered themselves to Laomedon as masons “to build the city” of Troy, a well-known expression symbolically interpreted as meaning to establish a religious cult or Mystery school. Troy lay in a strategic position in regard to the trade routes of the ancient world and relics from distant lands prove that it was an active center of traffic. Even the first city, built in what archaeologists call the Neolithic period, was a strong and dominant center. Excavations at the lowest level revealed a great fortified wall with two towers and a stone carving of a human face, antedating by some 18 centuries the Troy of which Homer sang and which was the seventh city of the nine, counting upwards, that successively occupied the same site.

Troll (Scandinavian) In common usage, an evil gnome or spirit depicted in stories as an ugly and dangerous sprite. As a prefix, used in Scandinavian tongues to denote magical or extrasensory means (e.g., *trollkonst* magic art, *trollkaring* old woman, hag, who practices magic arts). In this context it has come to mean almost exclusively an evil influence but there remain tales where a troll is seen as a model of gratitude and faithfulness. This may be a case where the spiritual influences of one culture become regarded by succeeding peoples as demonic. It is also possible that the trolls exemplified less evolved characteristics which become the faithful servants of him who overcomes these weaknesses in himself.

Tropical Year The time taken by the center of the sun’s disc to travel from one tropic to the same tropic again, and being 365.2422 mean solar days, or 365 days, 5 hours, 48 minutes, 45.5 seconds.

This is shorter than the sidereal year (the interval between two successive passages of the sun across the same point in the stellar sphere), because the tropics recede by precession. On the tropical year depends the regular succession of the seasons, and it is the one which is adapted to the civil calendar by the Julian and Gregorian intercalations. *See also* YEAR

Tsaba' (Hebrew) *Tsābā'* [from the verbal root *tsābā'* to go forth or march out to war] A host, army; tseba' hash-Shamay (the host of heaven) refers either to the host of cosmic spirits or angels, or to the manifested dwellings of the lower hierarchies of them, the stars. *See also* TSEBA'OTH (the plural).

Tsadiq (Hebrew) *Tsaddīq* He that has a righteous cause; innocent, just, righteous; a title of Melchizedek (King of righteousness), also applied to Noah (Genesis 6:9). Some hold that Sadic (Tsaddiq) was the patriarch Noah (as also Melchizedek) and "the identity of Noah and Melchizedek being established, the further identity of Melchizedek, or Father Sadik, with Kronos-Saturn is proved also"; Blavatsky also terms Noah a kabir, the kabiri being sons of Sydic or Zedek, and shows Sadik as a regent over the eighth planet, Terra (SD 2:391).

Tsala. *See* TSELEM

Tsang (Tibetan) *bTsan*. Strength, might; used particularly as an equivalent for nyingpo or alaya, the world-soul. Alaya is used mainly in the Mahayana contemplative schools of Northern Buddhism, being equivalent of mulaprakriti *in its essence* as the root or substance of all things; hence alaya is likewise equivalent frequently to akasa, especially in the mystical sense.

Tsaphon. *See* TZYPHON

Tseba'oth (Hebrew) *Tsēbā'ōth'* Plural of *tsābā'* (host, army) with a general application to groups of active beings in celestial spheres or on earth; used in the phrase hosts or army of heaven, and likewise as signifying the host of the individuals of an army of men. It is also used of the aggregate of the stars, sun, and moon, etc., conceived as living beings. In the Old Testament the name is occasionally connected with Jehovah (Yehovah); thus Yehovah Tsebao'th appears, signifying association with war or conflict.

In ancient times the name came to be linked frequently with Sabazius, usually identified with Dionysos, Plutarch in several places (cf Symp 4:6) hinting that the Jews in their worship were connected in some manner with Sabazius or Dionysos. Blavatsky states that the Jewish connection is with Saturn, both with the god and the planet, who was "the patron-guide of Israel" (SD 1:459).

Tsedeq. *See* TZEDEQ

Tsela' (Hebrew) *Tsēlā'* A rib, side; a quarter of the heavens; a part or division. Used in reference to the Biblical allegory of the formation of Eve or woman from a rib, side, or portion of Adam (Genesis 2:21-3), who was the first man only in the sense of first humanity or mankind. The Biblical

allegory refers to the teaching that the third root-race was androgynous or hermaphrodite — that the individuals of humanity were dual-sexed — so that when the sexes separated into the distinct male and female portions of mankind, as mankind is at present, the Jewish writers described this biological and historical physiological event as the separation of woman from man. One could equally say that man was separated from woman, or that man was made from a rib or side of woman. The ridiculous supposition that the female part of mankind was born from the male part of mankind because the first woman was separated from the first man by the Lord God taking one of the ribs of the latter and forming a woman out of it, arose from the error of understanding the Hebrew word Adam as signifying one individual human being of the present male type.

Tselem (Hebrew) *Tselem* A form, image, likeness; a shadowy image, a shadow. Hence also the astral “shadow” of the human physical body — the model-body or *linga-sarira*. It corresponds to the Sanskrit *chhayas*: in the *tselem* of 'elohim was made 'Adam (Zohar iii, 76, Crem ed.), i.e., in the image of the *pitris* was fashioned mankind (cf Genesis 1:27); but not only “in the image” but likewise of the substance of the shadow itself humanity was formed; in other words, the *pitris* projected their astral shadows which became the lower principles of the individuals of the human race. *See also* TSULMA'

Tsien'sin, Tsien-sin. *See* T'IEN HSIN

Tsien-Tchan. *See* T'IEN-CHAN

Tsimtsum (Aramaic) *Tsimtsūm* [from the verbal root *tsāmam* to contract, press together] Contraction; a Qabbalistic term containing the philosophical idea of a previous expansion — otherwise there could have been no subsequent contraction. Hence, *tsimtsum* is used to designate centrifugal and centripetal motion, expansion and contraction, which under the direction of the supreme of the Sephiroth brought forth and maintains the universe.

“The Unknown Absolute, above all number, manifested Itself through an emanation in which it was immanent yet as to which it was transcendental. It first withdrew Itself into Itself, to form an infinite Space, the Abyss; which It then filled with a modified and gradually diminishing Light or Vitalization, first appearing in the Abyss, as the centre of a mathematical point which gradually spread Its Life-giving energy or force throughout all Space. This concentration or contraction and its expansion, being the centripetal and centrifugal energies of creation and existence, the Qabbalists called *Tzimtzum*. The Will of Ain Soph then manifests Itself through the Ideal Perfect Model or Vitalizing Form, first principle and perfect prototype in idea, of all the to be created, whether spiritual or material. This is the Mikrokosm to the Ain Soph, the Makrokosm as to all the created. It is called the Son of Elohim, i.e., God, and the Adam Illa-ah or Adam Qadmon, the Man of the East or Heavenly Adam” (Myer, *Qabbalah* p. 231).

This idea is analogous to the Hindu inbreathing and outbreathing of Brahma.

Tsimtsum is stated to be particularly active in the third 'olam or lowest triad of the Sephirothal Cosmic Tree — each Sephirothal Tree is divided into a set of three triads, called respectively 1) intelligible or intellectual world; 2) formative or paradigmatic world; and 3) the natural world. It is in this last triad of Sephiroth, called 'olam ham-Muteba', where tsimtsum is specifically active.

Tsiruph. See TEMURAH

Tsi-tsai (Chinese) The Self-existent, that which is the unknown darkness, the root of wu-liang-shih (the boundless age).

Tso-ch'an (Chinese) Sitting dhyana or contemplation, practicing dhyana; equivalent to the Taoist tso-wang (sitting with blank mind), defined as "Slackening limbs and frame, blotting out the senses of hearing and sight, getting clear of outward forms, dismissing knowledge and being absorbed into That which Pervades Everything" (Chuang Tzu 6:10).

Connected with the meditation there was practiced by certain individuals some form of breath control, as expressed by Chuang Tzu: the breathing of the sage is not like ordinary men, "he breathes with every part of him right down to the heels" (6:2). However, this author condemned physical exercises analogous to the yoga asanas (postures).

Tsong-kha-pa (Tibetan) "The man from Tsong-kha," a district in Amdo — his personal name was Blo bzang grags pa (Lo-zang Dag-pa); a great teacher and reformer of Tibetan Buddhism (1357-1419), founder of the Gelukpa school.

Tsulma' (Aramaic) *Tsūlmā'*. A shadow, image; used in the Qabbalah in connection with the neshamah and ruah: during the last seven days of man's life, it is said, every night the neshamah goes up from a person and the tsulma' is no more shown; when the tsulma' goes away the ruah goes with it (Zohar i 117a, Crem ed). The Hebrew equivalent is tselem (shade or shadow, hence a likeness or image of a being or thing), corresponding more or less both to the human model-body or linga-sarira, and to the mayavi-rupa or higher image of a human being, sent forth at will.

Tsurah (Hebrew) *Tsūrāh* Prototypal form; in the Qabbalah, the divine prototype considered as the highest principle "which remains above." "In Occultism it embraces Atma-Buddhi-Manas, the Highest Triad; the eternal divine *Individual*" (TG 349). The plural is *tsūrōth*.

The Qabbalah likewise states that the tsurah produces as its reflection the neshamah, and that the latter is connected with its divine prototype by a vital thread of spiritual radiance, up which even the neshamah aspires to rise to perfect union with its prototype. The tsurah is the spiritual monad, including as it does the three highest principles, and because this monad is an emanative product from the all-encompassing cosmic divinity, it is the divine prototypal form or entity; next, the highest part of the tsurah or monad is the neshama or spirit, which clothes itself in ruah or buddhi-manas; which again clothes itself in the astral monad represented by nephesh; which in its

turn incarnates in guph, or the material physical body. The Hebrew Qabbalah so frequently strives to clothe its thought from the vulgar vision by detailed — although usually correct — modification of essential ideas, that its real significant teaching is not always readily apparent.

Tuat (Egyptian) *Tuat*. Also Tiau, Tiaou. The region of the underworld or of the dead, though it was not situated under the earth, or answer to the popular conception of the Christian hell, even though the Tuat is often described as a place of retribution. One of the post-mortem states described in *The Egyptian Book of the Dead* as being situated in the region of the moon.

In popular mythology the Tuat was separated from the world by a range of mountains and consisted of a great valley, shut in by mountains, through which ran a river (the counterpart of the Nile, reminding one of the Jordan of the Jews and Christians), the banks of which were the abode of evil spirits and monstrous beasts. As the sun passed through the Tuat great numbers of souls were described as making their way to the boat of the sun, and those that succeeded in clinging to the boat were able to come forth into new life as the sun rose from the eastern end of the valley to usher in another day. Tuat was also depicted as the region where the soul went during night, returning to join the living on earth during the day.

Originally it was described as the abode of the night-sun, through which the sun god Ra passed during the night, only to arise renewed in the morning. “What is the *Tiaou* The frequent allusion to it in the ‘Book of the Dead’ contains a mystery. *Tiaou* is the path of the Night Sun, the inferior hemisphere, or the infernal region of the Egyptians, placed by them on the *concealed side of the moon*. The human being, in their exotericism, came out from the moon (a triple mystery — astronomical, physiological, and psychical at once); he crossed the whole cycle of existence and then returned to his birth-place before issuing from it again. Thus the defunct is shown arriving in the West, receiving his judgment before Osiris, resurrecting as the god Horus, and circling round the sidereal heavens, which is an allegorical assimilation to Ra, the Sun; then having crossed the *Noot* (the celestial abyss), returning once more to Tiaou: an assimilation to Osiris, who, as the God of life and reproduction, inhabits the moon” (SD 1:227-8).

The Tuat was divided into twelve regions, called fields (sekhet), corresponding to the number of hours of the night; or again it was described as being composed of seven circles (arrets), each under the guardianship of a watcher. The realm of Osiris is represented as Sekhet-Aarru or -Aanre (the fields of Aanroo), which was divided into 15 Aats (houses), having 21 Pylons. One of the regions of the Tuat was known as Amenti (Egyptian Amentet, “the hidden place”), a term often applied to the whole region of the dead.

Tubal-Cain (Hebrew) *Tūbal Qayin* According to the Biblical account, the son of Lamech and Zillah, “an instructor of every artificer in brass and iron” (Genesis 4:22). Blavatsky calls him a kabir, the equivalent of Hephaestos or Vulcan, and also says that it “is a word used in the Master-Mason’s degree in the ritual and ceremonies of the Freemasons” (TG 345).

Tula (Sanskrit) *Tulā* Balance; the seventh zodiacal sign, Libra, representing sevenfold man or Nara encased or involved in the 36 tattvas (elements), pendant from the inmost principle, paramatman or the superdivine monad, who is itself free from all material attachments and lives in cosmic ranges.

Tulku (Tibetan) *sprul sku* [short for *sprul pa'i sku* (tul-pe-ku) from *sprul pa* phantom, disembodied spirit; cf Sanskrit *nirmāṇakāya* body of magical transformation] Applied to a lama of high rank, often to the head abbot of a monastery; specifically, to those lamas who have proved their ability of remembering their office and standing in a former incarnation, e.g., by selecting articles belonging previously to themselves, describing details of a former life, surroundings, etc. The two most important tulkus in the Tibetan Buddhist hierarchy are the Tashi and Dalai Lamas. Tulku is often referred to as an incarnation but, outside of the many varieties of an incarnating or imbodying power or energy, incarnation in popular usage is the direct continuance of a previous imbodiment. These so-called living buddhas of Tibet are one kind of tulku — the transmission of a spiritual power or energy from one Buddha-lama of a Tibetan monastery when he dies, to a child or adult successor. If the transmission is successful, the result is tulku.

Tulku is of many different kinds and very closely parallels the Hindu doctrine of avatara. Taking Jesus as an example: here was a life-long tulku, a ray from a divinity; a tulku of that divinity so far as that ray goes, a divine manifestation, and hence a true avatara in the Brahmanical sense. Again, Gautama Buddha was tulku of his own inner buddha or inner god. The average person, however, is merely overshadowed occasionally, if he really aspires, by a touch of the divine flame from within the higher parts of his own constitution, and yet even for these fugitive instants such person is tulku. But when Gautama attained buddhahood, he was relatively infilled with his own inner buddha, and therefore was that god's human tulku. That was for Siddhartha the man, nirvana; he then entered dharmakaya and this portion of him was then known of men no more: that portion of him was a man become divine.

Another kind of tulku is where a human mahatma will send a ray from himself, or a part of himself, to take imbodiment, perhaps only temporarily, perhaps almost for a lifetime, in a neophyte-messenger that this mahatma is sending out into the world to teach. The messenger in this instance acts as a transmitter of the spiritual and divine powers of the mahatma. Blavatsky was such a tulku, imbodying frequently the very life of, and hence guided by, her own teacher. While this incarnation of the teacher's higher essence lasted, she was tulku. When for one reason or another the influence or ray was withdrawn for a longer or shorter period, tulku then and there became nonexistent.

Still another aspect of the tulku doctrine is illustrated by the case of Blavatsky. Where is she now? Blavatsky has not yet again reincarnated — she has not yet been born as a child — but she has at certain times, and for one certain individual, with that individual's consent, organized as it were tulku for that individual. For the time being, therefore, we can say that Blavatsky has partially

imbodied in that chosen individual for the purpose of special transmission. In all cases of tulku, they are incarnations or appearances. If Blavatsky, for instance, were to make tulku of a person for a month or a year, for the time being that person would be tulku, but when that particular work was done, the influence would be withdrawn and tulku would stop.

There is again another kind of avataric incarnation or tulku, a temporary physical appearance of an adept in the mayavi-rupa. Certain Tibetan lamas are known to be able to perform this feat, and thus they too have been properly called tulkus, which is the type of tulku that certain Orientalists have referred to as “an appearance.”

Another type of tulku of an opposite and essentially evil character is that brought about by a hypnotist who temporarily displaces the psychological nature of his entranced subject through psychologization or even hypnosis plus mesmerism. This, however, is more often than not an act of black magic and fraught with grave dangers, both to the hypnotist and the one entranced. Every clever hypnotist actually makes a tulku of his victim in a black magic sense. When he puts an idea into the brain of his victim, that one week from now at three o'clock in the afternoon he is going to do some essentially foolish or undignified act — for the time being that hypnotist is working a black magic tulku on that victim, and every psychologist and hypnotist knows the possibility of this fact, though the scientific explanation of the term may be strange to him. A key example of black magic tulku was what the medieval Europeans used to call werewolves. This doctrine of the tulku, however, is at heart beautiful and sublime, and hence highly revered by the Tibetans.

Tum (Egyptian) *Tum*. A primordial divinity issued from Nut, considered equivalent to the Vedic Aditi or kosmic space; as one of the main functions of Tum is generating the heavenly bodies and all celestial beings, it is a virtual equivalent of fohat. He generates the other gods and gives himself whatever form he likes, issuing from Nut, “the great female which is in the bosom of the waters” — the great deep or space. In *The Book of the Dead* he is described as the north wind, spirit of the west, and the setting sun of life — which is “the vital electric force that leaves the body at death, wherefore the *defunct* begs that Toun should give him the breath from his *right* nostril (positive electricity) that he might live in his *second* form. . . .

“ . . . Both Fohat and Toun are addressed as the ‘Great ones of the Seven Magic Forces,’ who, ‘conquer the Serpent *Apap*’ or Matter” (SD 1:673-4). *The Book of the Dead* clearly portrays the activities of Tum-Fohat during manvantara, and during pralayas Tum sinks into Akab, the great deep or space.

Tum [possibly Sanskrit *tvam* thou] An ancient fraternity, formerly existing in Northern India, and well known in the days of the persecution of Buddhists there. Tum “has a double meaning, that of darkness (absolute darkness), which as absolute is higher than the highest and purest of lights, and a sense resting on the mystical greeting among Initiates, ‘Thou art thou, thyself,’ equivalent to saying ‘Thou art one with the Infinite and the All’ ”; “The ‘Tum B’hai’ have now become the ‘Aum

B'hai,' spelt, however, differently at present, both schools having merged into one. The first was composed of Kshatriyas, the second of Brahmans” (TG 345).

In Slavic languages *tma* is still in use as a word meaning darkness.

Turanian A word of vague meaning, used as an alternative to Mongolian in that scheme which divides humanity into three main divisions of 1) Black, Ethiopian, or Negro; 2) Yellow, Mongolian, or Turanian; and 3) White, Caucasian. It thus excludes Aryans, Semites, and Hamites, which are subdivisions of the Caucasian; also it incorrectly gives Ethiopian as synonymous with Negro. The name is derived from Tur, one of three brothers in Persian legend who were ancestors of three divisions of the human race. In accordance with the idea of basing ethnography upon linguistics, it has since been replaced by the word Ural-Altai, as denoting a group of peoples and their languages in northern and central Asia, eastern Russian, and Turks, Magyars, Finns, Basques, and Lapps in Europe. The languages are agglutinative.

Turiya (Sanskrit) *Turiya* The fourth; the state of consciousness which the Buddhas and Christs, and occasionally great but less evolved people, reach in their times of spiritual ecstasy — high samadhi. It is the fourth state of the famous Taraka-Raja-Yoga system in India, equivalent to a raising and temporary coalescence of the human consciousness with the atman, otherwise called nirvana. In this turiya state the divine self is perceived by the individual entitative self as its parent; and the atman thus is realized to be in its essence free of any mayavi distinction from its universal divine source. Turiya, the highest of all the states into which the consciousness may cast itself or be cast, “which is a practical annihilation of the ordinary human consciousness, is an attainment of union with atma-buddhi overshadowing or working through the higher manas. Actually, therefore, it is becoming at one with the monadic essence” (OG 72).

Turiya is a state or condition of consciousness which to the eye of an observer seems to be that of the deepest abstraction from things of the material world — that state which to most people would seem to be a complete or perfect trance, physically speaking. The higher consciousness of the human being, often unconsciously to the brain-mind consciousness, enters into turiya and brings about for the physical person a condition of perfectly dreamless sleep; however, it is a state of the highest or most exalted spiritual and intellectual activity.

“In Pralaya, or the intermediate period between two manvantaras, it [the monad] loses its name, as it loses it when the real ONE self of man merges *into Brahm* in cases of high Samadhi (the *Turiya* state) or final Nirvana; ‘when the disciple’ in the words of Sankara, ‘having attained that primeval consciousness, absolute bliss, of which the nature is truth, which is without form and action, abandons this illusive body that has been assumed by the *atma* just as an actor (abandons) the dress (put on)’ ” (SD 1:570).

See also JAGRAT; SUSHUPTI; SVAPNA

Turiya-avastha, Turiya-samadhi. See TURIYA

Turvasa (Sanskrit) *Turvaśa* A legendary hero and ancestor of the Aryan race; Subba Row mentions that he was a maharshi who became a jivanmukta.

Tushitas (Sanskrit) *Tuṣita-s* [from the verbal root *tuṣ* to become calm, be satisfied or pleased] One name of the Hindu adityas, planetary regents because of their intimate connection with the sun, the son of Aditi, called Martanda. Hence in esoteric Northern Buddhism, the tushitas are a class of divinities of great purity said to have a deva-loka (celestial region) of their own, but in the highest parts of the material plane where all the bodhisattvas are reborn before they descend on this earth as future buddhas. See also JAYA

Tvashtri (Sanskrit) *Tvaṣṭṛ* The divine artist and carpenter of the gods, father of the gods and of the sacred creative fire, and therefore equivalent to the Greek cosmic Demiurge. Maker of divine weapons, such as Indra's Thunderbolt, and teacher of the ribhus or adityas, he was considered as the great patron of initiates. The Tvashtri of the Vedas is synonymous with the Visvakarman of the Puranas. Many of the functions ascribed in Hindu legend to Tvashtri are reminiscent of similar functions ascribed to the Greek Hephaestos or Latin Vulcan.

Twelve Perhaps the most esoteric of all numerals; so profound was the reverence with which the ancients regarded it that the records concerning it are almost innumerable, found in virtually all branches of human thought and activity. Thus we find it in the twelve hours of the day and of the night; the twelve months of the year; the twelve great gods of ancient pantheons; the twelve apostles in the New Testament and the twelve tribes in the Old Testament; the twelve nidanas in Buddhism; and pointing directly to cosmogonical matters, the twelve signs of the zodiac.

As Plato puts it in the *Timaeus*, the universe was constructed by divinity in accordance with geometrical laws, the first cosmogonic basis of which was the dodecahedron — outside of the ever-productive and cosmically fecund One. Philo Judaeus likewise regarded twelve as a sacred number, writing that the sun visits serially the signs of the zodiac monthly, during the twelve months of the year, “and it is to honour that sign that Moses divided his nation into twelve tribes, established the twelve cakes (Levit. xxiv, 5) of the *shewbread*, and placed twelve precious stones around the *ephod* of the pontiffs (See *De Profugis*)” (SD 1:649).

In the Qabbalah it is said that creation was accomplished during the twelve hours of a day: “The ‘twelve hours of the day’ are again the dwarfed copy, the faint, yet faithful, echo of primitive Wisdom. They are like the 12,000 divine years of the gods, a cyclic blind. Every ‘Day of Brahma’ has 14 Manus, which the Hebrew Kabalists, following, however, in this the Chaldeans, have disguised into 12 ‘Hours.’ The *Nuctameron* of Apollonius of Tyana is the same thing. ‘The Dodecahedron lies concealed in the perfect Cube,’ say the Kabalists. The mystic meaning of this is, that the twelve great transformations of Spirit into matter (the 12,000 divine years) take place during the four great ages, or the first *Mahayuga*” (SD 1:450).

In theosophic writings the complete number of globes of a planetary chain is given as twelve: five globes being unmanifested and seven manifested.

Twice-born. See DVIJA

Twilight When used in theosophic philosophy, refers to the sandhya or sandhi, an interval between the light and dark, or dark and light, part of a cycle, smaller or greater, thus the cosmic cycle called an Age of Brahma is 311,040,000,000,000 years, of which 2 percent is the sum of the twilights.

Also used for the four bodies Brahma assumed at creation: night, evening twilight, day, and morning twilight; archaic Hindu legend states that the three higher classes of pitris were born in the body of night, the four lower classes from the body of evening twilight, gods from the body of day, and men from the morning twilight.

In Greek mythology, Castor and Pollux were day and night, and their consorts Phoebe and Hilaira were the twilights.

Twin-Souls To quote Blavatsky: “The star under which a human Entity is born . . . will remain for ever its star, throughout the whole cycle of its incarnations in one Manvantara. But *this is not his astrological star*. The latter is concerned and connected with the *personality*, the former with the individuality. The ‘Angel’ of that Star, or the Dhyani-Buddha will be either the guiding or simply the presiding ‘Angel,’ so to say, in every new rebirth of the monad, *which is part of his own essence*, through [though] his vehicle, man, may remain for ever ignorant of this fact. The adepts have each their Dhyani-Buddha, their elder ‘twin Soul,’ and they know it, calling it ‘Father-Soul,’ and ‘Father-Fire’ ” (SD 1:572-3).

Thus when Jesus speaks of my Father and your Father, he means the cosmic paramatman or universal spirit presiding over our universe, of which every monad in the present solar manvantara — except those peregrinating through our solar system as visitors — is an offspring or spark; furthermore, every class of adepts has its own bond of spiritual communion which knits them together, because of identity of origin in a dhyani-buddha of our universe; and thus it is that every buddha, indeed every great adept, meets at his last initiation all the great adepts who had reached buddhahood during the preceding ages. “Such communion is only possible *between persons whose souls derive their life and sustenance from the same divine ray*” (Subba Row in SD 1:574). The awareness of such a community of origin pertains to planes of being far above the personal self, and it has nothing to do with so transitory a phase of human evolution as sex.

However, certain human beings, because of a common monadic origin in an identic spiritual source, are by that fact of the same spiritual family, and in consequence have bonds among themselves of intensive sympathy, and sympathetic intellectual understanding and processes of mentation, which cause them to feel more at-one with each other than with human beings

similarly united but not derivative from the same spiritual ray. Yet all these different cosmic dhyanibuddhas or spiritual rays themselves converge or coalesce on a still loftier plane into another kosmic entity still more sublime than the former ones; and this again is but one of many others who on a divine plane still loftier than the last, find their common point of origin in a kosmic individuality still grander.

Two The prime religious and mystical meaning in the science of numeration is finite completion, involving defined limits, and hence standing in sharp contrast to the indefiniteness associated with the nonfinite or cosmic; and therefore Pythagoras and his school looked upon two as beginning the series of even numbers, each one signifying a completion or a balance, suggesting the material worlds as contrasted with the spiritual. The binary was regarded as “the origin of differentiation, hence of contrasts, discord, or matter, the beginning of evil. . . . With the early Pythagoreans, however, the duad was that imperfect state into which the first manifested being fell when it got detached from the Monad. It was the point from which the two roads — the Good and the Evil — bifurcated. All that which was double-faced or false was called by them ‘binary’ ” (SD 2:574-5). It was represented geometrically as a line, because two is produced by the first motion from indivisible spiritual nature: the line also forms the tie or union between two points.

Two is the significant primal number of manifestation, of the famous pairs of opposites. Pure unmanifested spirit is in human understanding unitary, and not broken up into manifested and therefore contrasting minor points or units, and for this reason partakes of some of the attributes of non-finity, which becomes through manifestation finite points — generated by the duality emanating at the beginning of manifestation, which duality is expressible mathematically by the duad or the number two: “the Duad, although the origin of Evil, or Matter — thence *unreal* in philosophy — is still Substance during Manvantara, and is often called the *third* monad, in Occultism, and the connecting line as between two Points And from this Duad proceeded all the *Scintillas* of the three upper and the four lower worlds or planes — which are in constant interaction and correspondence” (SD 1:618).

Two-dimensional Space Used figuratively to denote the aspect of nature in the second round, when but two elements had been unfolded. It may be used mathematically to denote a twofold manifoldness. It is wrongly used in those ingenious speculations as to the possibility of an objective two-dimensional space; for the three dimensions of matter in space are interdependent, and if one vanishes, the other two vanish. A surface may be defined graphically and suggestively as two-dimensional, but it is only an aspect of a solid body.

Twofold Man Used of the period in human history when human beings were androgynous. This in one sense was the representative on earth of the cosmic 'Adam Qadmon which becomes the Microprosopus (small face) as distinguished from the cosmos itself, called in the Qabalah Macroprosopus (great face). The twofold man, whether cosmic or terrestrial, belongs to the

secondary creation, the creation of darkness or matter, or the vast intricacies of cosmic differentiations, as distinguished from the primary creation, the first emanations from cosmic spirit embodying entities of spiritual and intellectual power, and hence often called the creation of light, which in its latter stage became that of the self-evolved gods or 'elohim.

Tylwyth Teg (Welsh) The fair family; the Welsh fairies, also known as Bendith y Mamman (mothers' blessings).

Tyndareus A king in Lacedaemon, expelled and received by King Thestios of Aetolia, by whose daughter Leda he becomes father of the Dioscuri or Tyndaridae, Castor and Pollux. In some accounts both these children are the offspring of Zeus, in others Pollux only, and in still others both are sons of Tyndareus. Most commonly Leda is considered the bride of both Zeus and Tyndareus, and the result of this double union was the birth of Polydeuces (or Pollux) and Helena, later Helen of Troy, who were the children of Zeus, and of Castor and Clytemnestra, the children of Tyndareus. *See also* DIOSCURI

Tyndaridae. *See* DIOSCURI; TYNDAREUS

Typhoeus, Typhon (Greek) Typhoeus in Hesiodic theogony is a son of Tartarus and Gaia, a fire-breathing titan with a hundred heads and begetter of destructive hurricanes. He rebels against the gods and is killed by Zeus with a thunderbolt and buried under Mount Etna. Typhon was originally his son — post-type of himself — but the two were later identified. He represents the necessary counterpart of Zeus, as darkness is of light, Set of Osiris, or Satan of God. He is the Dragon Apophis, the Accuser in *The Egyptian Book of the Dead*, murderer of Osiris, destroyed by Horus; the dark side of Zeus, as Set is the dark side of Osiris, and night the dark side of day; Python, Loki, Rahu, and falling demons in general. In one form he is the dragon slain by St. Michael or St. George.

The original meaning is sublime, for Typhon in its prototypal significance is chaos, the unorganized womb or fountain of production, which calls forth the creative energy by resisting it, and is equally necessary with the former. When humanity falls into matter, then these dark-side potencies of nature acquire for mankind a distinctly evil connotation, and their names can be given to vast destructive forces which the misuse of the human will has engendered.

In a more restricted sense as connected with our earth, Typhon was not only the causative agent, but likewise the symbol of all seismic and volcanic phenomena, as well as being, even according to ancient Greek philosophical thought, in intimate connection with meteorological phenomena as evidenced by winds and storms. *See also* SET; CROCODILE

Types, Ancestral In biology used in connection with theories of evolution, which seek for ancestral types which may have served as starting points for physical development. But the causes operative on the physical plane on which science relies, are in fact only secondary causes. The true ancestral types are astral, and indeed, because of distant causal action, even spiritual models

reflected in the astral and thence into the physical, and thus governing shape, form, and their correlations with other effects. The secondary causes come into play mainly after the physicalization of the astral forms (cf SD 2:648-9).

Tyr, Tivi (Icelandic) [Used mainly in plural, *tivar* gods; cf Latin *divus*, Sanskrit *deva*, Greek *dios*, *Zeus*] In Norse mythology, often used in combinations like *valtira* (god of the slain, or god of the chosen, god of choice). Tyr is the generic name for a lofty divinity. As a planetary deity, Tyr represents the valiant Mars, god of war, of fresh undertakings, and of beginnings. He is associated with the zodiacal constellation Aries, which has similar connotations. Tyr's day is Tysdagr (Tuesday).

In the Edda, Tyr is represented as having had one hand torn off by the wolf Fenris, a sacrifice he willingly made for the perpetuation of life.

Tzabaoth. See TSEBA'OTH

Tzaila. See TSELA'

Tzedeq (Hebrew) *Tsedeq* Straightness, righteousness; suffix in Melchizedek (king of righteousness). Also used as a Qabbalistic name for the planet Jupiter.

Tzelem. See TSELEM

Tzigadze. See SHIGATSE

Tzim-tzum. See TSIMTSUM

Tziruph. See TEMURAH

Tzite (Quiche) A berry tree with red seeds, used for divination by the ancient Quiche seers and sorcerers together with maize grains. In the *Popul Vuh* one of the early races of mankind is described as being fashioned out of tzite wood. Blavatsky explains that this was the third root-race; in Hesiod's cosmogony Zeus creates his third human race out of the ash tree, and in the Scandinavian cosmogony mankind is also produced from the ask or ash tree.

Tzon-kha-pa. See TSONG-KHA-PA

Tzool-mah. See TSULMA'; TSELEM

Tzuphon. See TZYPHON

Tzurah, Tzure. See TSURAH

Tzyphon (Hebrew) *Tsāfōn* [from the verbal root *tsāfan* to conceal, hide, hold back, treasure] The north or northern quarter, hence the north wind and, because the north was regarded among the ancients as a land of darkness and obscurity, this word came to mean whatever is hid or

concealed, hence treasured up or held back. Thus it has come to signify among certain Shemitic mystics a doctrine which is concealed or secret — esotericism.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ua-Uz

Uchchaih-sravas (Sanskrit) *Uccaiḥśravas* [from *uccaiḥ* aloft, high above + *śravas* ear] Long-eared, he who hears what is above, one having spiritual or inner hearing; the white horse of Indra, one of the 14 precious things that issued from the waters churned by the gods in Hindu legend, regarded as the prototype and king of horses. In this connection one is reminded of the many statues of the buddhas with pendant ears, symbolizing a spiritual power — he who hears the cries of all.

Udambara. See UDUMBARA

Udana (Sanskrit) *Udāna* [from *ud* out + the verbal root *an* to breathe, blow] The life-current which rises upwards; one of the vital airs or life-currents of the human or animal body which vitalize, build, and sustain it. Udana is said to have its physical expression in speech, including mouth, tongue, and voice. Mystically, it is the vital current or fluid which cooperates with and reinforces all the other pranas, such as samana, vyana, prana, and apana. “And the control of this [udana], which is the control of all five . . . leads to the Supreme Self” (SD 2:568).

Esoterically these life-currents are each the manifestation of the corresponding human principle and element. The various forms of hatha yoga emphasize ways of directing or exercising these vital airs.

Udara Ramaputra (Sanskrit) *Udāra rāmaputra* The illustrious Ramaputra or Rudraka, one of the gurus of Gautama Buddha.

Udayana (Sanskrit) *Udayana* Modern Peshawar in Northwest Pakistan: “the classic *land of sorcery*,” according to Hiun-Tsand (TG 351).

Udayana-raja (Sanskrit) *Udayana-rāja* A king of Kausambi, called Vatsaraja, who was the first to have a statue of Buddha made before his death (TG 351).

Udbhijja (Sanskrit) *Udbhijja* [from *ud-bhid* to divide, break forth + *ja* born] Born by fission, separation, or sprouting; theosophy teaches that the first root-race reproduced by fission or division of individuals into two or more parts, these parts called udbhijja.

Udumbara (Sanskrit) *Udumbara* A variety of the fig tree, *Ficus glomerata*; also a rare species of lotus called the nila-udumbara (blue lotus), regarded by Buddhists as a highly noteworthy omen whenever it blossoms, which it is said to do but rarely.

“Arhans and Sages of the boundless Vision are rare as is the blossom of the Udumbara tree. Arhans are born at midnight hour, together with the sacred plant of nine and seven stalks, the holy flower that opens and blooms in darkness, out of the pure dew and on the frozen bed of snow-capped heights, heights that are trodden by no sinful foot” (VS 39). The arhans born at midnight refers to the mystic births that take place during the higher initiations, the sacred plant of nine and seven stalks referring to the entire constitution of the human being, all of whose principles, elements, and spiritual and intellectual functions, become more or less operative during the initiation period.

Ugrasena (Sanskrit) *Ugrasena* A king of Mathura, and father of the Kansa who was slain by Krishna. Krishna after killing the latter restored Ugrasena to the throne.

Ukko (Finnish) [cf Magyar *agg* old, an old being, grandfather] The highest god in the mythological hierarchy of the ancient Finns — the Suomilainen (fen-dwellers), as they called themselves. Ukko was represented as dwelling in Jumala (thunder-home) in the sky: seated on a cloud he bore the heavens on his shoulders. Snow, hail, ice, wind, and rain, sunshine and clouds are due to his activities; thus he is termed the leader of the clouds, the god of breezes, father of the heavens. He is most often depicted like the Scandinavian Thor, swinging a hammer amidst the thunder and lightning, his robe sparkling with fire, striking down evil beings on the mountains.

Ulfilas [from Gothic *wulfila* little wolf] A Gothic Christian bishop (311-81) who translated the Bible into Gothic, thus preserving the Gothic tongue even to our day. For his translation he invented a written alphabet by building upon the Greek alphabet and supplementing it for some of the Gothic runes. The principal manuscripts of his translation are preserved at the University of Upsala, called the Codex Argenteus (Silver Codex), as it is written in silver characters on a purple ground.

Ullambana (Mongolian) [from Sanskrit *ud* up, completion + the verbal root *labh* to reach, attain] Attainment or recovery of spiritual status; the festival of all souls, “held in China on the *seventh* moon annually, when both ‘Buddhist and Tauist priests read masses, to release the souls of those who died on land or sea from purgatory, scatter rice to feed Pretas [thirty-six classes of demons ever hungry and thirsty], consecrate domestic ancestral shrines, . . . recite Tantras . . . accompanied by magic finger-play (mudra) to comfort the ancestral spirits of seven generations in Naraka’ (a kind of purgatory or *Kama Loka*)” (TG 351).

Ullr (Icelandic) **Ull** (Swedish) Also Uller. In the Norse Edda, one of the twelve aesir (gods), the son of Sif and stepson of Thor, said to excel at archery and skiing. He is the patron of hunting and the shield, which is also called the ship of Ullr.

The shield or protection of Ullr has a special meaning as he is the god of a “cold” (unformed) world: one of the most highly spiritual of the globes in our sun’s realm. The lay called Grimnismal promises that “the blessing of Ull and all the gods is his who first touches the fire” of this supernal sphere. The mansion of Ullr is named Ydalar — the primal dells of rain and storms, and the root and sacred source of earth’s existence.

Ulom (Phoenician) The intelligible deity, the intellectual reflection of the ever-concealed divine; and in the theogony of Mochus also the intellectual universe expressing itself in the objective or material universe. Equivalent to the pleroma of the Gnostics. In the theogony of Mochus, aether or cosmic space is manifested first, followed by air (cosmic spirit) from which Ulom is born out of the mundane egg. Identical with the Hebrew ‘olam, meaning both hid or occult, the duration or perpetuity of cosmic time, and the universe or world in general. Thus ‘olam and ulom both are connected with the physical and metaphysical cosmos and all that is in these. *See also* ‘OLAM

Ultima Thule (Latin) Farthest Thule, Thule being the Greek and Roman name of an alleged island somewhere north of Britain and considered as the northern limit of the habitable globe; figuratively, any ultimate goal.

Ultramontanes Beyond the mountains, particularly the Alps. Originally used, from the point of view of Rome, to signify countries north of the Alps, but later used, from the point of view of France, to signify Rome and the Roman doctrine of Catholicism, as opposed to the Gallican or Jansenist views. The matter at issue was whether supreme authority on questions of the religious administration should rest with the Pope of Rome or should be shared with an ecumenical council or with the civil government of France. The French monarchy claimed the right to institute prelates and to exercise various other ecclesiastical functions in accordance with local and national policy; and was able for a time to extort concessions in these matters from the Papal See. But the Vatican Council of 1869-70 virtually made the principles of ultramontanism dogmas of the Church, and set the authority of the Pope above that of national churches or ecumenical councils.

Ulupi (Sanskrit) *Ulūpī* The daughter of Kauravya, king of the nagas of Patala — the initiates in ancient prehistoric America, according to Blavatsky. When Arjuna, the disciple of Krishna, traveled to Patala, Ulupi fell in love with the stalwart bowman and married him (cf Mahabharata).

Ulysses (Latin) **Odyseus** (Greek) Homeric hero who, because of his shrewdness and canny actions, has become a stock literary figure typifying cunning. His ten-year journey home from the Trojan War to Ithaca is told in the *Odyssey*. The story of his putting out the eye of the Cyclops is an esoteric allegory of the triumph of the oncoming fourth root-race, whose greater brain-mind cunning caused the atrophy of the third eye of the third root-race as typified by Polyphemus.

Uma-kanya (Sanskrit) *Umā-kanyā* [from *u-mā* O [child], do not [practice austerities] — the exclamation addressed to Pārvatī by her mother + *kanyā* maid, virgin] The daughter of Himavat, who became the consort of Siva; also called Parvati and Durga. Uma-Kanya “being her esoteric name, and meaning the ‘Virgin of light,’ Astral Light in one of its multitudinous aspects” (SD 1:92). Now the goddess is worshiped as Durga-Kali (the black and inaccessible one); in this character “human flesh was offered to her every autumn; and, as Durga, she was the patroness of the once murderous Thugs of India, and the special goddess of Tantrika sorcery. But in days of old it was not as it is now. The earliest mention of the title ‘Uma-Kanya’ is found in the *Kena-Upanishad*; in it the now blood-thirsty Kali, was a benevolent goddess, a being of light and goodness, who brings about reconciliation between Brahma and the gods. She is Saraswati and she is Vach. In esoteric symbology, Kali is the dual type of the dual soul — the divine and the human, the light and the dark soul of man” (TG 352).

Umbra (Latin) A shade; the kama-rupic spook which remains in the lower regions of the astral light after physical death and often hovers in the neighborhood of the tomb. “The ancient Latin races . . . believed that after death *Anima*, the pure divine soul, ascended to heaven, a place of bliss; *Manes* (the Kama Rupa) descended into Hades (Kama Loka); and *Umbra* (or astral double, the *Linga Sharira*) remained on earth hovering about its tomb, because the attraction of physical, objective matter and affinity to its earthly body kept it within the places which that body had impressed with its emanations. Therefore, they said that nothing but the astral image of the defunct could be seen on earth, and even that faded out with the disintegration of the last particle of the body which had been so long its dwelling” (TG 353).

Umsimi. See ANZU

Una (Sanskrit) *Ūna* Lower, inferior; in philosophy, the subordinate or secondary aspect of a thing, hence the material.

Unavoidable Cycle. See KUKLOS ANANKES

Unborn Applied to the Logos, particularly to the First Logos, which radiates directly from the divine monad; also to kama, signifying not ordinary desire but cosmic love, born from the heart of Brahma; in another sense, Krishna as representing the Logos, or embodying its ray. The Sanskrit word is *aja*, connected words are self-born and *atman-bhu* or *atma-bhu*.

Unconsciousness The universe being a vast aggregation of conscious beings, only the one source of all is unconscious, *paramartha* is described as absolute being and consciousness which are absolute non-being and unconsciousness from the human standpoint. Theosophy rejects the idea of anything being unconscious in the absolute sense, save on this plane of illusion. The Vedantic idea of an Unconscious behind all manifestation has reappeared in Occidental philosophy, notably in that of Eduard van Hartmann. Unconsciousness and consciousness are used in theosophy with

direct reference to human understanding, so that what we call unconsciousness is merely consciousness on a plane so high, and with a range so vast, that human understanding cannot contain it; or that what we call consciousness would be unconsciousness to less evolved beings because these cannot contain or understand our consciousness. We may look upon spirit as being both conscious and unconscious: active spirit we would call the consciousness of spirit; but those incomprehensibly vast ranges of spirit beyond our power of understanding we would call inactive spirit, merely because we cannot comprehend it and therefore say it is relatively non-existent, although actually being the basis of all being.

Unconsciousness is often used in a relative sense, as for instance in speaking of the state of the first two and one half root-races as being one of mental torpor and unconsciousness, or in speaking of the three lower elemental kingdoms in comparison with the higher kingdoms. Also what is called unconsciousness may be only lack of power to register a memory, as in the case of a mesmerized subject on being aroused, or a person waking from sleep.

Unconditioned Having no attributes (gunas), used of the one reality of our kosmos, and of the still more abstract conception called the Rootless Root or All. In the categories of philosophy the term would apply also to spirit-substance extending into differentiations of the kosmos which, at least by comparison, is itself without attributes.

Underworld Classical mythology divides the universe into the heavens, the earth, and the underworld, each presided over by its particular deity. The underworld was the nether pole of the cosmic hierarchy, great or small, and hence the land of shadows, synonymous with Dis, Hades, Pluto, Orcus, Limbo, Tartarus, Amenti, Atala, She'ol, etc. The underworld for human beings may be the lower ranges of kama-loka, the region of the shades; the mystical pit or Planet of Death; or all the ranges, in a generalizing sense, of the cosmic planes beneath the solar plane on which our earth is located.

Undine [from Latin *undina* water spirit from *unda* wave, water] The class of nature sprites, elementals, or elemental beings inhabiting and forming water, generally but wrongly described as always being female. Paracelsus stated that if an undine ever should marry a mortal and bear a child, the undine-mother would receive a soul.

Undulatory Theory The theory that light is propagated in waves, devised by Young, Fresnel, and others to explain certain phenomena, such as diffraction, which could not be explained by the corpuscular or emission theory of Newton. It has been elaborated into that branch of physics known as physical optics.

Waves imply a medium to convey them — the hypothetical luminiferous ether, and here we encounter difficulties due to the attempt to endow it with the attributes rendered familiar by our experience of physical matter. The existence of waves is demonstrable and they can be measured; but the ether is necessarily neither gas, liquid, nor solid, and we need to wait until we have

discovered more about its properties. “Atoms, Ether, or both, modern speculation cannot get out of the circle of ancient thought; and the latter was soaked through with archaic occultism. Undulatory or corpuscular theory — it is all one. It is speculation from the aspects of phenomena, not from the knowledge of the essential nature of the *cause* and *causes*” (SD 1:528).

Light, as one of the forms of radiation, is in the view of theosophy an efflux or substance, ultimately to be traced back to a source or focus which gave it birth and from and through which it therefore pours as a radiation of vitality. Light, and most other forms of radiation, partake of both an undulatory and corpuscular character, for in one sense it is both, and in another sense it is neither, for its undulations or its discrete particles are merely the methods by which it subjects itself to human examination. In itself it is both force and substance, and as everything in the universe is in an unceasing state of vibration or constant movement, even a discrete particle — and an aggregate of discrete particles, because of their vibrational activities — is as readily conceivable as undulatory in character as corpuscular. The important thing about light is not so much its modes of motion or manifestation, but the fact that light is the vital efflux or substance flowing forth from a living being, whether microcosmic or macrocosmic. The same observations, *mutatis mutandis*, may be said of other forms of radiation — electricity, magnetism its alter ego, heat, and even, on far higher planes, thought and consciousness.

Unity Kosmic unity, incomprehensible to humans, implies wholeness, homogeneity, uniformity, indivisibility — individuality. Its primary expression is kosmic space. Unity can be applied to any individual, such as the First Logos or any subordinate logos; again, any individual monadic unit is *de facto* a unity. Unity, in contrast with duality or multiplicity, is relative, as when we speak of a whole in relation to its parts, the unitary essence of a compound body, or the hyparxis of a hierarchy. The tendency of evolution on an upward arc is towards unity; on a downward arc, towards diversity; and both tendencies are active in the human being.

With Pythagoras, one is not a number but the root of all numbers flowing out of it, but in modern views it is the first number. It may be called mystically dual, for as a power of 2 it must be even, while as 1 less than 2 it must be odd. Unity may be viewed as simple or as all-inclusive; it appears as the goal of both analysis and synthesis.

In considering how the One becomes the many, how the homogeneous becomes heterogeneous, during the differentiations during manvantara, we are posing the ultimate problem. The unity during manvantaric kosmic differentiation does not lose its unity in the vast diversities of such differentiation, for the unity forever remains the originant and expresses itself at the same time as its integral unity and as the emanated hierarchies which temporarily flow forth from it, in time to return into it again.

Universal Brotherhood. See BROTHERHOOD

Universal Mind The sum of the states of kosmic consciousness grouped under the human

expressions thought, will, understanding, and feeling, collectively expressed in the Sanskrit as mahat. During deep sleep, the human mind is in abeyance on the physical plane, because our consciousness is not affecting the physical brain which in waking hours expresses it, although during the svapna (sleeping-dreaming) state the brain dreams; and similarly in the cosmos at the manvantaric dawn universal mind “was not” because there was as yet no vehicle for its expression through the cosmic hierarchies, this vehicle being the collective Ah-hi or hosts of dhyanichohans. Universal mind remained during pralaya in a state of intense spiritual-intellectual activity, as the permanent root of subsequent cosmic mental action arising during manvantara. Universal mind is the manifested One, from the still more abstruse One or kosmic unity, and simultaneously with the evolution of universal mind the cosmic supreme One or hierarch also manifests itself in manvantara as avalokitesvara (Logos or atman) through its veil, universal substance or mulaprakriti — a unity with triple aspects. It is the mother of the manasaputras or sons of mind, and is kosmic buddhi or mahabuddhi.

All generalizing terms such as universal mind have various applications, because nature is built throughout on analogical structure and function, and hence what applies to the great likewise applies to the small. Thus universal mind is applicable either to a solar system, a galactic system, or a system comprising a number of galaxies, etc. *See also* MAHAT; UNIVERSAL SOUL

Universal Pralaya. *See* MAHAPRALAYA

Universal Solar System The sum-total on all planes of all the bodies, visible or invisible, which pertain to the inclusive Brahmanda (egg of Brahma) of which our sun with its family of planetary chains forms a part. The Logos of the universal solar system, called the universal sun, has its foci of spiritual, psychological, ethereal, and material fields of action in and through emanated rays or minor logoi or suns, of which our sun is one, and each of these last has its corresponding subdivisional activities and functions. Our solar system, septenary or denary in itself, pertains to a single one of the primary seven rays of the universal solar system.

Universal Soul At one time identified as mahat or mahabuddhi, the vehicle of kosmic spirit or paramatman, but more frequently called anima mundi, the world-soul, alaya, the astral light of the Qabbalists, the spiritually and ethereally material reflection of the immaterial cosmic paramatmic ideal; hence the universal soul is the source of life of all beings. It is regarded as sevenfold, tenfold, or twelvefold in its nature and structure. Taking the triad of spirit, soul, and body, it stands for the middle region, being at once the vehicle of spirit and the prototypical model of the material worlds. Thus it stands for the higher ranges of the astral light as the storehouse of ideas impressed upon it by the creative spiritual forces, and the transmitter of them to the world of material and physical objectivity. In this view it would be the source of the intermediate human principles. *See also* UNIVERSAL MIND

Universal Spirit In the hierarchy of cosmic principles, the unmanifest or First Logos; in the

human constitution, atman or atma-buddhi.

Universals A philosophical and logical term, used in opposition to particulars. For example, matter may be called a universal, and material bodies may be called particulars; or life may be a universal, and living beings particulars. The universal is sometimes defined as that which is left when all particularities or differences have ceased to be. The question arises as to which shall be considered real. If the particulars are realities, then the universals become mere abstract ideas: thus mankind would be merely an indefinite number of human beings. But if the universal is real, then we regard particular humans as being each a manifestation on respective lower planes of man, the Heavenly Man or Qabbalistic 'Adam Qadmon. Again, if living beings are real, then life becomes an abstraction. But if life is a real entity in itself, then living beings are its particular manifestations. The philosophy which starts with universals and proceeds to particulars is called deductive: it is that of theosophy and of Pythagoras and Plato. The inductive philosophy of Aristotle and Francis Bacon proceeds from particulars to universals. Space, motion, duration, intelligence, etc., in themselves abstract realities, are regarded by theosophy as universals, whereas from the opposite viewpoint they appear as only abstractions from experience. The deductive method has its uses in applied science, but in fact it tacitly assumes certain universals and reasons back to them from particulars.

Universe [from Latin *universum* combined into one from *unus* one + *versus* turned] The sum total of all that is. Theosophy distinguishes the spirit side and the matter side of the universe, each of these being composed of an aggregate of conscious living monads, the former being self-conscious in infinitely varying degrees and animating the latter, who are not self-conscious or not fully so, and serve as vehicles to the former, thus constituting matter in its various grades. The word may be used in limited senses, as for instance in speaking of the physical universe, when it comprises the totality of physical matter in the solar systems, nebulae, or galaxies. And this again may be subdivided as when we speak of our own home-universe. *See also* KOSMOS

Unknowable In the procedures of human thought there always arrives a philosophical point beyond which the mind seems unable to penetrate, and this point is for that particular line of thought unknowable. Therefore, there must be as many unknowables as there are beyonds in the processes of human thinking, and hence it becomes highly inadvisable to reduce the term unknowable to one specific meaning. It has been applied to the one ultimate cause of our universe, the rootless root of all within that specific universe, since this unknowable confessedly cannot be an object of cognition by mind. However, it has been used by modern agnostics, in particular Herbert Spencer, to denote things which are not unknowable, but merely the noumenal which underlies the phenomenal, which limits the knowable world only to that which we can comprehend with our present physical faculties and the mental notions based on them. It is therefore but a convenient way of shelving all inquiries which seem to stand in the way of the formulation of a materialistic philosophy.

Unlucky Numbers Even numbers, and preeminently the binary, have been regarded by Pythagoras, Gnostics, and others as pertaining to matter; hence even numbers have shared the obloquy so often attached to this side of nature, as illustrated by such epithets as evil and unlucky. The primordially odd numbers stood for the unfolding or evolution of spirit and were considered good and propitious.

Unmanifest or Unmanifested Usually used of the First Logos in contradistinction to the manifest-unmanifest or Second Logos; though this unmanifested Logos is correctly said to be the first manifestation of the Absolute or the summit or primordial originant of a cosmic hierarchy, of which there are innumerable multitudes in boundless space. The unmanifest corresponds to primordial unity where the totality of the manifested universe is “all numbers.” Behind the ultimate which can be conceived, we have to postulate an unknown indefinable antecedent, which may therefore be called unmanifest.

Used in limited senses in reference to planes of manifestation: thus the unmanifested causes of things on the physical plane may be manifest to the consciousness pertaining to the higher planes. *See also* MANIFESTATION

Un-nefer (Egyptian) *Un-nefer* [from *un* to make manifest + *nefer* beauty] The name of Osiris (Asar in Egyptian) in his aspect of the Lord of Amenti (the underworld); also used in late dynastic times in place of Asar.

Upadana (Sanskrit) *Upādāna* [from *upa-ādā* to receive] The act of taking or appropriating for oneself: in philosophy, the act of withdrawal, or receiving into the inner being, of the organs of sense from the outer world. In Buddhist literature the term is enlarged to signify the grasping at or clinging to existence caused by trishna (desire, thirst) causing bhava (new births); likewise the fourth of the twelve nidanas (bond, causes of existence), the chain of causation. In Vedantic philosophy, a cause, motive, or material cause of any kind; thus, when analyzed, the meaning is the same in Vedantic and Buddhist philosophies.

Upadana-karana (Sanskrit) *Upādāna-kāraṇa* [from *upādāna* material cause + *kāraṇa* causative action] Causes arising into action because of upadana; in Vedantic philosophy, a proximate or a close cause. As explained by Subba Row, Brahman should not be regarded as upadana-karana in the sense that one may regard earth and water as the proximate cause of a pillar.

Upadhi (Sanskrit) *Upādhi* Limitation, peculiarity, disguise, vehicle; in theosophy, “ ‘that which stands forth following a model or pattern,’ as a canvas, so to say, upon which the light from a projecting lantern plays. An ‘upadhi’ therefore, mystically speaking, is like a play of shadow and form, when compared with the ultimate Reality, which is the cause of this play of shadow and form. Man may be considered as being composed of three (or even four) essential *upadhis* or *bases*” (OG 178).

According to the classification of the Taraka-Raja-Yoga philosophy, man is divided into three upadhis which are synthesized by, and are the vehicle of, the highest principle or atman. These three upadhis are: karanopadhi, the upadhi of the causal or spiritual mind; sukshmapadhi, the upadhi of the higher and lower manas plus the astral vehicle and the life-essence combined with kama; and the sthulopadhi, the physical body, which thus is the general vehicle or upadhi of the six principles composing the human constitution.

Mulaprakriti (primordial physical matter) in Hindu philosophy is the upadhi or vehicle of every phenomenon, whether physical, mental, or psychic. “Matter is *Eternal*. It is the *Upadhi* (the physical basis) for the One infinite Universal Mind to build thereon its ideations” (SD 1:280). An upadhi, then, is the vehicle, carrier, or means by which a higher or superior energy of whatever plane is enabled to manifest its characteristics and qualities on the lower plane, out of the substance of which lower plane the upadhi is built.

Sometimes upadhi is interchangeable with vahana (vehicle); thus manas is spoken of as the upadhi or vahana of buddhi. But the more frequent use of upadhi is as a foundation or base. For instance, Blavatsky speaks of hydrogen as the upadhi of both air and water; and of akasa as the upadhi of divine thought. “Cosmic Ideation focussed in a principle or *upadhi* (basis) results as the consciousness of the individual Ego. Its manifestation varies with the degree of *upadhi*, e.g., through that known as *Manas* it wells up as Mind-Consciousness; through the more finely differentiated fabric (sixth state of matter) of the *Buddhi* resting on the experience of Manas as its basis — as a stream of spiritual intuition” (SD 1:329n).

Upadhyaya (Sanskrit) *Upādhyāya* [from *upa* near, according to + *adhi* above + the verbal root *i* to go] He who makes go (i.e., learn) according to, a standard of truth or doctrine; a spiritual guide, preceptor, leader, or guru.

Upadrashtri (Sanskrit) *Upadraṣṭṛ* [from *upa-drś* to look on] Nominative Upadriashṭa. A witness, spectator.

Upadvipa (Sanskrit) *Upadvīpa* [from *upa* adjacent, near + *dvīpa* island] Generally, a small adjacent island or minor island. In explaining about the various dvipas, however, Blavatsky wrote: “Let us bear in mind that *Upadvipas* means ‘root’ islands, or the dry land in general” (SD 2:404n); hence one meaning of upadvipa is an island of larger or smaller size which is destined to be the root or nucleus for a vast land-tract to appear in a far later time period.

Upadvipas. See UPADVIPA

Upamana (Sanskrit) *Upamāna* [from *upa* according to, towards + the verbal root *mā* to measure] Comparison, resemblance, simile, analogy; in logic, recognition of likeness, comparison — the third of the four pramanas (modes of proof). Synonymous with upamiti.

Upamiti. See UPAMANA

Upanishad (Sanskrit) *Upaniṣad* [from *upa* according to + *ni* down + the verbal root *sad* to sit] Following or according to the teachings which were received when sitting down; esoteric doctrine. “Literary works in which the *rahasya* — a Sanskrit word meaning esoteric doctrine or mystery — is embodied. The Upanishads belong to the Vedic cycle and are regarded by orthodox Brahmans as a portion of the Sruti or ‘Revelation.’ It was from these wonderful quasi-esoteric and very mystical works that was later developed the highly philosophical and profound system called the Vedanta” (OG 179).

The Upanishads belong to the third division of the Vedas and are appended to the Brahmanas. The number of Upanishads hitherto known is about 170, though probably only a score are now complete without evident marks of excision or interpolation. These Upanishads belong to different periods of antiquity, some being of a much later date than others. Although the Upanishads are usually considered by modern scholars to be as a whole of later date than the Brahmanas, the original Upanishads were composed in an antiquity which anteceded that of the Brahmanas, and are probably coeval with the composition of the Vedas themselves.

“The *Upanishads* must be far more ancient than the days of Buddhism, as they show no preference for, nor do they uphold, the superiority of the Brahmans as a caste. On the contrary, it is the (now) second caste, the Kshatriya, or warrior class, who are exalted in the oldest of them. As stated by Professor Cowell in Elphinstone’s *History of India* — ‘they breathe a freedom of spirit unknown to any earlier work except the *Rig-Veda* . . . The great teachers of the higher knowledge and Brahmans are continually represented *as going to Kshatriya Kings to become their pupils.*’ The ‘Kshatriya Kings’ were in the olden times, like the King-Hierophants of Egypt, the receptacles of the highest divine knowledge and wisdom, the *Elect* and the incarnations of the primordial divine Instructors — the Dhyani Buddhas or Kumaras. There was a time, aeons before the Brahmans became a caste, or even the *Upanishads* were written, when there was on earth but one ‘lip,’ one religion and one science, namely, the speech of the gods, the Wisdom-Religion and Truth. This was before the fair fields of the latter, overrun by nations of many languages, became overgrown with the weeds of intentional deception, and national creeds invented by ambition, cruelty and selfishness, broke the one sacred Truth into thousands of fragments” (TG 354).

Thirteen of the principal Upanishads are: Aitareya, Kaushitaki, Kena, Taittiriya, Maitri, Katha, Brihadaranyaka, Prasna, Mundaka, Mandukya, Isa, Chhandogya, and Svetasvatara.

Upanita (Sanskrit) *Upanīta* [from *upa* near + *nī* to bring, lead] One who is invested with the Brahmanical thread which, twisted or woven of fibers, is an emblem of the various threads of consciousness woven into a single unity clothing the neophyte and adept; the significance is extended to signify one who is brought or drawn to a spiritual teacher.

Uparati (Sanskrit) *Uparati* [from *upa-ram* to cease] A cessation; In Vedantic philosophy a state

where the yogi desists from sensual enjoyment or any worldly action, and there is an absence of desires which could be affected by exterior stimuli or influences.

Upasaka (Sanskrit) *Upāsaka* [from *upa-ās* to serve, worship, engage in reverential and devoted study as a disciple from *upa* by the side of, with the implication of reverential following + the verbal root *ās* to sit] Serving, worshiping; worshiper, follower, disciple, pupil; also in Buddhism a lay worshiper as distinguished from a bhikshu.

Upasika (Sanskrit) *Upāsikā* A woman votary of the Buddha, as distinguished from a bhikshuni — a Buddhist mendicant or nun. The title was given to Blavatsky by the Mahatmas.

Upasruti (Sanskrit) *Upāsṛuti* [from *upa* near + the verbal root *śru* to hear] One who is heard nearby; the voice of a person at a distance who is able to project his voice and astral image to any person whatsoever, regardless of distance; “the ‘double’ or the echo of the voice of a living man or woman” (TG 354). *See also* HPHO-WA

Upeksha (Sanskrit) *Upekṣā* [from *upekṣ* to overlook, disregard from *upa* + the verbal root *īkṣ* to look at] Indifference, disdain, disregarding, abandonment; also endurance, patience. Enumerated as one of the ten paramitas, similar in meaning to viraga (cf VS 48), although viraga is not commonly enumerated when the paramitas are counted as six.

Upper Triad In a hierarchy of ten planes or principles, the summit is a Three-in-One, which may be called the upper triad to distinguish it from the triad which follows it. These two triads may be spoken of as the uppermost triad and the upper triad respectively. Or in a septenary hierarchy there may be an upper triad and lower quaternary. Again, the first three of the ten Sephiroth of the Qabalah may be called the upper triad.

Upward Cycle. *See* ARC, ASCENDING AND DESCENDING

Ur Light, city of light; a town famous in ancient times as one of the chief seats of lunar worship in Babylonia, being an important center of the worship of the masculine god of the moon. It was commonly called among the Chaldeans 'ur khasdim (Ur of the Chaldeans).

The meaning of city of light is not merely that it was a town which revered the light of the moon, but refers to ceremonials of occult instruction and initiation which evidently were conducted in this ancient place. Ur is supposed to be the capital of the Sumerian civilization, situated on the south bank of the Euphrates near the Persian Gulf. More than 5,000 years ago it had reached a highly advanced cultural and commercial prominence. Positive proof was found at Ur of a flood which completely broke up the continuity of the history of the Mesopotamian plain dwellers, and which confirms the Babylonian, Sumerian, and Biblical traditions of a devastating flood, though of course it was only a local catastrophe. Christian Biblical scholars generally believe that Abraham's birth in “Ur of the Chaldees” took place about 1900 or 2000 BC, but the excavations have produced nothing referable to him.

Uraeus [from Greek *ouraios* of the tail] Refers to the sacred serpent of Egypt (aar, aart, aartu in Egyptian); usually only the head and neck of the serpent are represented by the ancient Egyptians in the headdress of many divinities, and in the headdress of royal persons as a symbol of power, both occult and temporal. Egyptologists state that the physical basis of the symbol is supposed to be the Egyptian asp or cobra — *Naja haje*, naja being closely akin to the Sanskrit naga: “Occultism explains that the uraeus is the symbol of initiation and also of hidden wisdom, as the serpent always is” (TG 355). Generally, the representation of the sacred uraeus in headdresses — before the symbol became degraded into a mere ritualistic, formalistic emblem — meant that the individual wearing it had become an initiate and bore the badge of wisdom. Two deities in particular were always represented with the uraeus, Isis and Nephthys (Neith), therefore they were termed by the Egyptians snake goddesses (aarti). The uraeus crown itself was named tept.

Sometimes the uraeus is represented with a circle over its head, and again with the winged solar disk, a variant of the serpent and egg symbol met with in so many forms among ancient peoples. Egyptologists interpret the uraeus placed on either side of the winged solar disk as emblematic of the supremacy of the sun, of good over evil, or of Horus over Set; but also the uraeus is associated with the immortal human principles, for one of its identities in *The Book of the Dead* is the flame. In Aanroo or Aaru — one of the divisions of the underworld — the soul of the spirit is devoured after death by the uraeus (ch 99). Blavatsky in explaining this verse speaks of the uraeus as “the Serpent, Son of the earth (in another sense the primordial vital principles in the sun),” and says further that “the Astral body of the deceased or the ‘Elementary’ fades out and disappears in the ‘Son of the earth,’ *limited* time. The soul quits the fields of Aanroo and goes on earth under any shape it likes to assume” (SD 1:674n).

In its universal aspect the uraeus is the serpent emblem of the cosmic fire — thus, in its universal aspect, being a symbol either of kosmic mahat (kosmic mind) or of fohat (kosmic vital-electrical fire).

Uragas (Sanskrit) *Uraga-s* [from *ura* breast + *ga* going] Breast-going, a serpent; serpents or nagas dwelling in Patala — popularly considered hell, but according to Hindu legend, the Indian antipodes or America. These nagas were the

“Adepts, High Priests and Initiates of Central and South America, known to the ancient Aryans; where Arjuna wedded the daughter of the king of the *Nagas* — Ulupi. . . . In Mexico the chief ‘sorcerers,’ the ‘medicine men,’ are called *Nagals* [Naguals] to this day; just as thousands of years ago the Chaldean and Assyrian High Priests were called *Nargals*, they being chiefs of the Magi (Rab-Mag), the office held at one time by the prophet Daniel. The word *Naga*, ‘wise serpent,’ has become universal, because it is one of the few words that have survived the wreck of the first universal language. In South as well as in Central and North America, the aborigines use the word, from Behring Straits down to Uruguay, where

it means a 'chief,' a 'teacher,' and a 'serpent.' The very word *Uraga* may have reached India and been adopted through its connection, in prehistoric times, with South America and Uruguay itself, for the name belongs to the American Indian vernacular" (TG 355).

Uranides (Greek) Those titans who were sons of Uranus and who rebelled against Kronos, called the divine titans. They were the enemies of the lower titans who, in the similar line of Jewish thought, were represented by Samael or Jehovah. In Hesiod they were said to be six: Oceanus (Okeanos), Coeus (Koios), Crius (Krioz), Hyperion, Iapetus, and Kronos or Saturnus. The name of a seventh called Phoreg [Phorcys] has been added, his name being found in an old Greek fragment relating to the myth.

Mystically, the Uranides were the Greek prototypes of what in Christian theology are called fallen angels.

Uranus The planet discovered by William Herschel in 1781. It was not enumerated as one of the seven sacred planets of the ancients, nor was it mentioned among the ancient lists of planets. Thus although not belonging to the immediate family of twelve sacred planets intimately associated with the earth planetary chain, Uranus does belong to the universal solar system. The satellites of Uranus revolved in the reverse direction.

For Roman god, *see* OURANOS

Urd, Urdr (Scandinavian, Icelandic) [cf Swedish *ur* original, fundamental; Anglo-Saxon *wyrd*, English *weird*] Also Urdar. The principal of the three norns (Fates) in Norse mythology, representing the past in the sense of causation: all that has gone before, giving rise to the present. Her sister norns are Verdande (becoming), usually translated as the present; and Skuld (debt), obligations yet to be repaid. The past and present *create* the third sister, norn of the future, which is suggestive of karma, where the future is the outcome of all past and present acts.

The three norns are pictured by the fountain of Urd who from that source (the past) waters one of the three roots of the Tree of Life. Of the other two roots one is watered by the spring of mother matter, the other by that from which flow the many rivers of lives: the forms taken by all the kingdoms of nature.

Every individual's Tree of Life is watered by these three springs and, after each death, the past life is evaluated at the well of Urd by its divine judge, its Odin, whose decrees are determined by the advice of Urd. Before each birth Urd also is instrumental in selecting the future life and destiny.

Urdhvasrotas (Sanskrit) *Ūrdhvasrotas* [from *ūrdhva* upwards, straight + *srotas* current, channel, canal] Those whose digestive organs or life-currents are upright. In the Puranas, the sixth of the seven creations of Brahma, or emanations of living beings, being the emanation or spiritual beings or dhyanis. "These (divinities) are simply the prototypes of the First Race, the fathers of their 'mind-born' progeny with the *soft* bones. It is these who became the *Evolvers* of the 'Sweat-born' . .

.” (SD 1:456). These creations or stages in evolutionary development refer especially to globe D, but have a cosmic significance likewise when the reference is to cosmic time periods.

Uriel (Hebrew) *’Ūrī’ēl* Flame or light of divinity; one of the four, seven, or ten angels stationed about the throne of divinity, according to the ancient Hebrews. Specifically, the angel or divinity of light — not merely of physical light, but of its ultraspiritual origin, implying intellectual illumination.

“The different worlds which successively emanated from the *En Soph* and from each other, and which sustain the relationship to the Deity of first, second, third, and fourth generations, are, with the exception of the first (*i.e.*, the World of Emanations), inhabited by spiritual beings of various grades. . . . the first world, or the Archetypal Man, in whose image everything is formed, is occupied by no one else. The angel Metatron, occupies the second or *the Briatic World* ([’olam beri’ah]), which is the first habitable world; he alone constitutes the world of pure spirits. He is the garment of [Shaddai], *i.e.*, the visible manifestation of the Deity; his name is numerically equivalent to that of the Lord. (*Sohar*, iii, 321 *a.*) He governs the visible world, preserves the unity, harmony, and the revolutions of all the spheres, planets and heavenly bodies, and is the Captain of the myriads of the angelic hosts who people the second habitable or *the Jetziratic World* ([’olam yetsirah]), and who are divided into ten ranks, answering to the *ten Sephiroth*. Each of these angels is set over a different part of the universe. One has the control of one sphere, another of another heavenly body; one angel has charge of the sun, another of the moon, another of the earth, another of the sea, another of the fire, another of the wind, another of the light, another of the seasons, &c., &c.; and these angels derive their names from the heavenly bodies they respectively guard. Hence one is called Venus ([Nogah]), one Mars ([Ma’adim]), one the substance of Heaven ([’etsem hash-shamayim]), one the angel of light ([’Uri’el]), and another the angel of fire ([Nuri’el]). (*Comp. Sohar*, i, 42, &c.)” (Ginsberg, *Kabbalah* pp. 108-110)

’Urim (Hebrew) *’Ūrīm* [plural of *’ūr* light, flame, revelation, illumination from the verbal root *’ārar* to curse] Lights; the *’urim* and *tummim* [plural of *tom* fullness, wholeness, complete truth] of the Hebrews are said to have been placed in the breastplate of judgment of the high priest (Ex 28:30), the guilt or innocence of a person being judged by means of the *urim* and *thummim*. Some writers believe them to have been small tablets of wood or of bone.

“The *’Urim* and *Thummim*’ originated in Egypt, and symbolized the *Two Truths*, the two figures of *Ra* and *Thmei* being engraved on the breastplate of the Hierophant and worn by him during the initiation ceremonies. Diodorus adds that this necklace of gold and precious stones was worn by the High Priest when delivering judgment. . . . Philo Judaeus affirms that *Urim* and *Thummim* were ‘the two small images of Revelation and Truth, put between the double folds of the breastplate,’ and passes over the latter, with its twelve stones typifying the twelve signs of the Zodiac, without explanation” (TG 355-6).

The breastplate and the physical appurtenances were but emblems, much as a ring worn on the finger is an emblem of cycling time re-entering itself, of eternity, and therefore of utter stability, which is equivalent to abstract truth and reality. These physical appurtenances are of small moment, quite as much so as was the sapphire image worn as the symbol of truth by the high judges of the Egyptians. The 'urim and tummim among the Jews were mere emblems of initiation, whereby the adept came to know light or revelation, and consequently the fullness of truth, and because of this was enabled to interpret properly the secrets of the universe, and to give proper answers often in a prophetic manner or as prophecy of what might come before him. In later times among the Jews, as indeed in other nations, the emblems occupied nearly all the attention of students and the inner significance of nearly all these emblems was lost.

Urja (Sanskrit) *Ūrjā* [from *ūrj* to invigorate, refresh] A daughter of Daksha who became the consort of Vasishtha and the mother of his seven celebrated sons.

Ursa Major and Minor The northern constellations of the Big and Little Bear, or the Big and Little Dipper. These two septenates form part of the astronomical key to the ancient wisdom, Ursa Major corresponding to the seven creative rishis, builders, mind-born sons of the first lord called Avalokitesvara in Buddhism. The founders of root-races were connected mystically with the pole star; and as the Aryan Hindus claim that their pole star was in Ursa Major, and at a later date in Ursa Minor, the antiquity is shown. The Little Bear represents a secondary septenate of creative powers. According to Clement of Alexandria the two cherubs placed in the Tabernacle on opposite ends of the Mercy Seat were the Big and Little Bear, representing the two hemispheres of the universe. Clement likewise points out that as each cherub has six wings, both together have twelve wings, thus signifying the twelve houses or mansions of the zodiac, and ever-moving time progressing through them (Miscellanies 5:6).

Urschleim (German) Primitive slime; the name given by natural philosopher Oken (1779-1851) to the primitive cell-stuff out of which organic beings were held to have been evolved. Oken, a member of the deductive or transcendental school of natural philosophy of Fichte and Schelling, sought to formulate a science of the physical world deductively from fundamental principles laid down by Kant and applied to the mental and moral worlds. Reasoning from these principles he inferred that all organic beings are formed from aggregates of cells containing urschleim, arriving at results which have been verified by microscopic observation.

Urvasi (Sanskrit) *Urvaśī* [from *uru* wide, broad + the verbal root *aś* to pervade] Widely extending; in the *Rig-Veda* a beautiful divine nymph who, cursed by the gods, settled on earth and became the wife of Pururavas, the grandson of Soma (the moon) and son of Budha (esoteric wisdom, Mercury). Their love is the subject of Kalidasa's drama, the *Vikramorvasi*. Urvasi originated in teachings connected with the human buddhi principle, the center and source or mother of all spiritual and intellectual beauty in the human constitution; cosmically therefore Urvasi is mahabuddhi (cosmic

buddhi).

Usanas (Sanskrit) *Uśanas* [from the verbal root *vaś* to desire, wish] The regent of the planet Venus, or Sukra; also the planet itself. In Hindu myth Usanas is described as the guru of the daityas or asuras, and also as being possessed of vast wisdom and knowledge — the attribute of spiritualized intellectuality corresponding to occult characteristics ascribed to the regent of Venus.

Usanas-Sukra (Sanskrit) *Uśanas-śukra* [from *uśanas* Venus + *śukra* bright, resplendent] Venus-Lucifer, Venus as the light-bringer, referring not so much to physical light as to the light of intellect and inner vision. The guardian spirit, with reference to the solar system, of earth and of mankind; for what the buddhi-manas is in the human constitution when compared with the kama-manas, that same role, *mutatis mutandis* on the cosmic scale, the regent of Venus plays in the solar system, wherein by comparison the earth is the vehicle for kama-manas. Also commonly called in Hindu mythology Kavi or Kavya, signifying poet and the feeling that the true poet is intellectually intuitional with reference to “feeling” or “seeing” some, at least, of the mysteries of nature.

Ushas (Sanskrit) *Uśas* [from the verbal root *uṣ* to burn, warm by illumination or light] The dawn, daughter of heaven, identical with the Latin Aurora and the Greek Eos. First mentioned in the Vedas, “wherein her name is also *Ahana* and *Dyotana* ([both words meaning] the illuminator), and is a most poetical and fascinating image. She is the ever-faithful friend of men, of rich and poor, though she is believed to prefer the latter. She smiles upon and visits the dwelling of every living mortal. She is the immortal, ever-youthful virgin, the light of the poor, and the destroyer of darkness” (TG 356).

Mystically, dawn is the bringer of spiritual and intellectual light, and therefore the sweet and holy comforter, allusions to which are found even in the New Testament with reference to Paraclete.

Ushnisha (Sanskrit) *Uṣṇīṣa* [from the verbal root *uṣ* to be warm, flaming; mystically warmth through inner light, intuition, vision] A turban, diadem, or crown; also a kind of “excrescence” on the head of a buddha. Like the long ears so often seen in figures of the buddhas, the meaning of the ushnisha is entirely occult, and was in no sense whatsoever intended to signify a tuft of hair, nor any fleshly excrescence on the skull, but was a way of suggesting the radiating power of the eye of Siva or organ of vision and of intuition, working at relatively full power within the skull of a great adept. The eye of Siva is the pineal gland; originally an external and active eye in the head of primitive mankind during this fourth round on earth, it gradually retreated within the skull, which grew to cover its place with bones, skin, and hair. As this presently so-called third eye retreated within the skull, its place was progressively taken by the two present organs of vision. At this period of our racial development it is buddhas, avataras, and other initiates of relatively high status who alone use the organ of spiritual vision, for in them the pineal gland has become active and is to some extent physiologically enlarged; although in everyone else it is more or less nonfunctional, yet to some degree functional.

Hence the ushnisha represents that radiant crown of buddhic fire that surrounds the head of initiates when they are in deep samadhi or meditation. The initiate's head becomes surrounded with rays from the vital inner fire of the third eye, the spiritual organ of the brain, which likewise is the source from which radiates the spiritual, intellectual, and psychovital nimbus or aura surrounding the head — known to the iconographies of every religion. These rays thus form a glory around the head and sometimes even around the entire body. “They stream upwards from the back of the head, often symbolically represented in the buddha-iconography as one single, lambent flame soaring upwards from and over the top of the skull. In this case you may perhaps find that the ushnisha is missing, its place being taken by this flame issuing from the top of the head, a symbolic representation of the fire of the spirit and of the aroused and active buddhic faculty in which the man is at the time” (Fund 493).

Many statues of buddhas and bodhisattvas possess certain peculiar headgear called crowns or ushnishas. Hence ushnisha is also used in the sense of turban, because this particular headgear, given to these statues, somewhat resembles a turban of spiral conical form, somewhat like the spiral shell of some snails.

Utpala-varna (Sanskrit) *Utpala-varṇā* [from *utpala* flower of the blue lotus (*Nymphaea caerulea*) from *ut-pal* to move upwards + *varṇā* color, from the verbal root *varṇ* to color] A woman, said in some accounts to be one of the three wives of Gautama Buddha, along with Gopa and Yasodhara. But these are names for three mystical powers which are possessed by every initiated adept.

Uttanapad (Sanskrit) *Uttānapad* [from *uttāna* stretched out + *pad* foot, progression, permeation] Often signifies vegetation, the whole range of upward-germinating plants.

Uttara-Mimansa (Sanskrit) *Uttara-mīmāṃsā* [from *mīmāṃsā* profound thought, profound consideration, striving after truth by means of philosophic reflection from the verbal root *man* to think + *uttara* latter, later, inquiry into the latter portion of the Veda — the Upanishads] The last of the six Darsanas or schools of Hindu philosophy, and called the Vedanta. *See also* VEDANTA

Uttarayana (Sanskrit) *Uttarāyaṇa* [from *uttara* northern + *ayana* road, path] The northern way, the progress of the sun to the north of the equator or the summer solstice. In mystic philosophy, it represents in one sense the path of light leading inwards spiritually, or the nivrittimarga, the path of the involution of matter and the evolution of spirit. *See also* DAKSHINAYANA

‘Uzza’ (Hebrew) *‘Uzzā’*, also *‘Azā’* Strength, might, power; an angel mentioned in the Qabbalah, representing one of the higher orders of pitris. In describing the attempts at forming man, the *Zohar* (iii, 208a) relates that after the ’elohim had formed man and he had sinned, the angels ‘Uzza’ and ‘Aza’el or ‘Azza’el twitted the Holy One about it, whereupon they were told that, had they been in man’s place, they would have done worse, and they were thrown from their high estate in heaven and changed into men upon earth. “This means simply that the ‘Angels,’ doomed to incarnation, *are in the chains* of flesh and matter, under the *darkness* of ignorance, till the ‘Great

Day,' which will come as always after the seventh round, after the expiration of the 'Week,' on the Seventh Sabbath, or in the post-Manvantaric Nirvana" (SD 2:491).

Here these angels represent that higher class of pitris who deferred their own incarnation on earth until a later date, and had to suffer the karmic consequences thereof.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Va-Vih

Vach (Sanskrit) *Vāc* Sound, voice, word, the mystic sound (svara) or essence of spirit of the divine creative activity, the vehicle of divine thought; and of this the Word is the manifested expression. Vach, or its equivalents in other cultures, is always considered feminine. Cosmically she is the carrier or mother of the Third Logos — the Word or Verbum — because of carrying perpetually within her the essence of divine thought, the First Logos; and hence Vach is the Second Logos, equivalent to the early Christian Holy Spirit or Holy Ghost — later transmogrified into a cosmic male. In Hindu mythology Brahma separates his body into masculine and feminine, the feminine becoming Vach, in whom he creates Viraj, who is himself again Brahma. Here we have the three Logoi: Brahma, the First Logos, the divine thought; Vach, the Second Logos, the divine voice; and Viraj, the Third Logos, or the divine word, the philosophical equivalent of the Son of the Christian Trinity.

Hence Vach is associated with the work of creation, with the prajapatis. She calls forth the mayavi form of the universe out of abstract space or Chaos, of which the first cosmogonical stage are the seven cosmic elements. Mystically Vach is masculine and feminine at will, as in the Hebrew Genesis Eve is with Adam. It is through her power that Brahma produced the universe. Blavatsky points out that Brahma produced through Vach in the same way that the incomprehensible assumes a tangible form through speech, words, and numbers (cf SD 1:430). Vach through her productive powers produced what Pythagoras called the music of the spheres. The teachings of Pythagoras also speak of the hierarchies of the heavenly host as numbered and expressed in numbers. Vach is equivalent, in some aspects, to Isis, Aditi, mulaprakriti, the waters of space, chaos, and the Qabbalistic Sephirah.

“Whether as Aditi, or the *divine* Sophia of the Greek Gnostics, she is the mother of the seven sons: the ‘Angels of the Face,’ of the ‘Deep,’ or the ‘Great Green One’ of the ‘Book of the Dead’ ” (SD 1:434). These feminine logoi are all correlations of light, sound, and ether. In many

aspects Vach approaches Kwan-yin, she of the melodious voice. Sarasvati, the goddess of divine wisdom, is a later form of Vach. The Hebrew Lahgash is nearly identical in meaning with Vach as the hidden power of the mantras, the divine sound. “But Vach being also spoken of as the daughter of Daksha — ‘the god who lives in all the Kalpas’ — her Mayavic character is thereby shown: during the *pralaya* she disappears, absorbed in the one, all-devouring Ray” (SD 1:430-1).

Vach is also called Savitri (the generatrix), the mother of the gods and of all living. She is identical in the human range with Eve, who is also called the mother of all living. Ila or Ida is but the second repetition of Vach in a different period of cosmogony. Vach refers to the cosmic and divine theogony, while Ila refers to a later period in the earth’s history when the physiological transformation of the sexes took place during the third root-race. In this last sense Vach corresponds with Eve.

Vach is often called Sandhya (twilight), also Satarupa (a hundred forms) to describe the feminine logos unfolded into the ten planes and subplanes of the universe. The cow is a symbol of Vach, for the cow has always been the emblem of the passive generative power of nature.

Vach is also mystic speech “by whom Occult Knowledge and Wisdom are communicated to man, and thus Vach is said to have ‘entered the Rishis.’ . . . she is called ‘the mother of the Vedas,’ since it was through her power (as mystic *speech*) that Brahma revealed them . . .” (SD 1:430). The *Rig-Veda* and Upanishads give four kinds of Vach — vaikhari, madhyama, pasyanti, and para — corresponding to the four cosmic principles: the physical universe, the light of the Logos, the Logos itself, and parabrahman or the infinite.

Vach-sata-rupa (Sanskrit) *Vāc-śata-rūpā* The goddess in a hundred forms, or Vach as the immanent feminine aspect of divinity in the innumerable phases and forms of nature. Vach as Sata-rupa is the divine creative activity unfolded into the ten planes and their many subplanes of the universe. Each of these has its own keynotes and subordinate keynote. The union of Svayambhuva-Manu with Vach-sata-rupa, his own daughter (here representing the first manifestation of prakriti), is explained cosmically as the symbol of the root-life, the germ from which spring all the solar systems, worlds, and gods, because here Svayambhuva-Manu is the cosmic manu; on the smaller scale, he with his consort plays the same role in the planetary chains of the solar system, and on a still smaller scale on any globe thereof.

In another early Hindu myth, Sata-rupa was at once the other half and the daughter of Brahma, and from their association, bipolar in character, sprang the first manu called Svayambhuva.

Vach-Viraj (Sanskrit) *Vāc-virāj* The feminine aspect or alter ego of Brahma, the creator, when considered as the Second Logos emanating the Third Logos or Viraj.

Vacuum Emptiness, the necessary correlative of plenum or fullness: the two being one of those

pairs of opposites which the mind is bound to postulate as a basis of reasoning. It stands for the spiritual condition of a cosmic hierarchy before it emanates its streams of manifestation — “the symbol of the absolute Deity or Boundless Space, esoterically” (TG 357). Democritus taught that the first principles are atoms and a vacuum, which is equivalent to the manifest and the unmanifest, deity latent and deity patent, but the atoms of Democritus, being spiritual indivisibles, are not the atoms of science but what in theosophy are called monads, and likewise the vacuum of void of Democritus is the equivalent of the archaic Buddhist sunyata or the ancient Buddhist or Brahmanic arupa (formless) spheres.

The atomo-mechanical theory of physics starts with atoms and a vacuum and then tries to fill the vacuum; here the notion of emptiness has become confused with spatial extension, giving rise to the idea that there can be an extended and measurable void, and raising the difficulty of the transmission of influence across it.

The word is used relatively to signify the absence of something, as the absence of physical matter in an evacuated bulb. But another form of matter is still present, for we can transmit light as well as many other forms of radiation. Thus proceeding by successive steps we come to the logical limit in the conception of the cosmic void — which nevertheless from the spiritual viewpoint is a pleroma or utter fullness. The physical vacuum of the laboratory has become confused with the scientific and mystical void of the archaic philosophy.

Vadduku (Babylonian) One class of subterranean genii in ancient Babylonian mythology, regarded as below the angels of earth.

Vahana (Sanskrit) *Vāhana* Vehicle, carrier; a vehicle of an entity which allows it to manifest on planes inferior to its own. The human constitution is comprised of a number of vahanas, each enabling the spiritual or intellectual entity to express itself on the plane where the vahana is native. Generally, the soul is the vehicle of a monad, the ego is the vehicle of a soul, and the body is the vehicle of an ego — of whatever type or degree.

In *The Secret Doctrine*, fohat is spoken of as the vahana of the “Primordial Seven”; physical forces as the vehicles of the elements; and the sun as the vahana or buddhi of Aditi (I 108, 470. 527n). Again, all gods and goddesses are “represented as using vahanas to manifest themselves, which vehicles are ever symbolical. So, for instance, Vishnu has during Pralayas, *Ananta* ‘the infinite’ (Space), symbolized by the serpent Sesa, and during the Manvantaras — *Garuda* the gigantic half-eagle, half-man, the symbol of the great cycle; Brahma appears as *Brahma*, descending into the planes of manifestation on *Kalahansa*, the ‘swan in time or finite eternity’; Siva . . . appears as the bull *Nandi*; Osiris as the sacred bull *Apis*; Indra travels on an elephant; Karttikeya, on a peacock; Kamadeva on *Makara*, at other times a parrot; Agni, the universal (and also solar) Fire-god, who is, as all of them are, ‘a consuming Fire,’ manifests itself as a ram and a lamb, *Aja*, ‘the unborn’; Varuna, as a fish; etc., etc., while the vehicle of Man is his body” (TG 357-8).

Vaibhashika (Sanskrit) *Vaibhāṣika* An ancient Buddhist school, formed of the followers of the *Vibhasha-sastra*. Originally of distinctly mystical character, due to later degeneracy this school became materialistic; its philosophy holds “that no mental concept can be formed except through direct contact between the mind, *via* the senses, such as sight, touch, taste, etc., and external objects” (TG 358).

Vaidhatras (Sanskrit) *Vaidhātra-s* [from *vi-dhātṛ* producing, creating from *vi-dhā* to produce, bring forth, creation] Creators, producers, emanators, diffusers; the patronymic given to the kumaras who sprang from Vidhatri, a name of Brahma the creator.

Vaidyuta (Sanskrit) *Vaidyuta* [from *vidyut* lightning] As an adjective, flashing, electric; as a noun, electric fire, as seen in lightning. Vaidyuta is “the same as *Pavaka*, one of the three fires which, divided, produce forty-nine mystic fires” (TG 358).

Vaijayanti (Sanskrit) *Vaijayantī* A flag, banner; the masculine noun *vaijayanta* refers specifically to the emblem of Indra. In the Puranas, used as the name of a magical necklace of Vishnu, “imitated by certain Initiates among the temple Brahmans. It is made of five precious stones, each symbolizing one of the five elements of our Round; namely, the pearl, ruby, emerald, sapphire and diamond, or water, fire, earth, air and ether, called ‘the aggregate of the five elemental rudiments’ — the word ‘powers’ being, perhaps, more correct than ‘rudiments’ ” (TG 358).

Vaikhari (Sanskrit) *Vaikhari* As feminine adjective commonly connected with Vach (mystic speech) which is of four kinds: para, pasyanti, madhyama, and vaikhari. Vaikhari is that form of speech which is uttered, expressed, or otherwise manifested as the vehicle of thought. As one of the four main aspects of the Logos in space, Vaikhari-Vach is the whole cosmos in its objective or manifested form.

Vaikunthaloka (Sanskrit) *Vaikuṅṭhaloka* Vishnu’s heaven, variously described as situated in the northern ocean or on the eastern peak of Mount Meru. *See also* VAIKUNTHAS

Vaikunthas (Sanskrit) *Vaikuṅṭha-s* One of the names given in each kalpa to the twelve great gods or jayas who were emanated by Brahma as the first hierarchical productions in the formation and bringing forth of manifestation.

Vairaja(s) (Sanskrit) *Vairāja-s* [from *virāj* widely shining one] A class of gods emanating from Brahma in his aspect of creator collectively as Viraj, the Third Logos; hence, the celestial beings immediately derived from Viraj. Identified with the kumaras and the manasaputras, as well as the agnishvattas. They are the hierarchies of cosmic conscious and self-conscious dhyanichohans who spring forth directly from the Third Logos, and furnish the intellectual background and vital urge of the hierarchies of beings who later produce the manifested universe from the ideation emanating from the Third Logos and the vairajas.

“In the popular belief, semi-divine beings, shades of saints, inconsumable by fire,

impervious to water, who dwell in Tapo-loka with the hope of being translated into Satya-loka — a more purified state which answers to Nirvana. The term is explained as the aerial bodies or astral shades of ‘ascetics, mendicants, anchorites, and penitents, who have completed their course of rigorous austerities.’ [*Vishnu-Purana*, Wilson, 2:229] Now in esoteric philosophy they are called *Nirmanakayas*, Tapo-loka being on the sixth plane (upward) but in direct communication with the *mental* plane. The Vairajas are referred to as the *first gods* because the *Manasaputras* and the *Kumaras* are the oldest in theogony, as it is said that even the gods worshipped them (*Matsya Purana*); those whom Brahma ‘with the eye of Yoga beheld in the eternal spheres, and who are the *gods of gods*’ (*Vayu Purana*)” (TG 358).

Vairaja-loka (Sanskrit) *Vairāja-loka* [from *vairāja* a class of celestial beings (agniṣvāta) + *loka* sphere, realm, place] The realm of the vairajas or agnishvattas.

Vairochana (Sanskrit) *Vairocana* A son of the sun (Virochana — the spiritual sun); a generalizing term for some of the highest classes of dhyani-chohans emanating directly from the Third Logos, and therefore virtually identical with the vairajas, kumaras, manasaputras, and agnishvattas, called collectively children of the sun.

“A generic personification of a class of spiritual beings described as the embodiment of essential wisdom (*Bodhi*) and absolute purity. They dwell in the fourth *Arupa Dhatu* (formless world) or *Buddhakshetra*, and are the first or the highest hierarchy of the five orthodox Dhyani Buddhas. There was a *Sramana* (an Arhat) of this name (see Eitel’s *Sansk. Chin. Dict.*), a native of Kashmir, ‘who introduced Buddhism into Kustan and laboured in Tibet (in the seventh century of our era). He was the best translator of the semi-esoteric Canon of Northern Buddhism, and a contemporary of the great Samantabhadra . . .” (TG 358-9).

Vaisakha (Sanskrit) *Vaiśākhā* “A celebrated female ascetic, born at Sravasti, and called *sudatta*, ‘virtuous donor.’ She was the mother-abbess of a Vihara, or convent of female Upasikas [students], and is known as the builder of a Vihara for Sakyamuni Buddha. She is regarded as the patroness of all the Buddhist female ascetics” (TG 359).

Vaiseshika (Sanskrit) *Vaiśeṣika* [from *vi-śiṣ* to distinguish, particularize] The analytic school, the second of the six Darsanas or Hindu schools of philosophy. Because of its emphasizing of the atomic structure of the universe, it is likewise called the substantial or Atomistic School or sometimes the Discriminating school, because it divides matter into eternally distinct elements, atoms, or infinitesimal parts. It discriminates among these elements, considering each one as perpetually distinct from the others. This school is considered by many as a branch of the Nyaya, and was founded by the sage Kanada, who lived about the same time as Gautama or Gotama, the founder of the Nyaya school.

Vaishnava (Sanskrit) *Vaiṣṇava* A follower of any sect recognizing and worshiping Vishnu as the sectarian supreme divinity. There are at present four principal Vaishnava sects: the Ramanujas founded by Ramanujacharya; the Madhvas founded by Madhva; the Vallabhas or Vallabhacharyas founded by Vallabhacharya; and a sect in Bengal founded by Chaitanya. Other minor sects are those founded by Ramananda and Kabir. All these Vaishnava sects are of relatively modern origin, though they use at least some of the ancient Hindu writings as their texts.

Vaisvanara (Sanskrit) *Vaiśvānara* [from *viśva* all + *nara* man] Relating to or belonging to all men; omnipresent, universal. In Hindu philosophy, it represents one of the four states of Brahma, and hence is a manifestation of Brahma in and through prakriti. Cosmically it is the astral light, or “in another sense, the living magnetic fire that pervades the manifested solar system. It is the most objective . . . and ever present aspect of the One Life, for it is the Vital Principle” (SD 2:311). In the human being it is represented in the *Anu-gita* as a sevenfold fire which blazes up in the midst of the five pranas (life-streams) which circulate in the body, and a commentary on this work says that Vaisvanara is often used to denote the self. Blavatsky remarks: “In the astronomical and cosmical key, Vaisvanara is Agni, son of the Sun, or Viswanaras, but in the psycho-metaphysical symbolism it is the Self, in the sense of non-separateness, *i.e.*, both divine and human” (SD 2:568n).

Vaisya (Sanskrit) *Vaiśya* A man who settles on the soil; also a peasant or working man. The third of the four castes into which Hindu society was divided in Vedic and post-Vedic periods. In those times it also referred to one whose occupation was that of trade as well as of agriculture. *See also* CHATUR-VARNA

Vaivasvata (Sanskrit) *Vaivasvata* Solar, coming from the sun (Vivasvat). Generally, the name of the seventh manu, who was saved in an ark, built by the order of Vishnu, from the deluge; the father of Ikshvaku, the founder of the solar race of kings.

In theosophic philosophy, the root-manu of our present fourth round, and in a more restricted sense the manu of the fourth root-race; and again the manu of the fifth subrace of the present fifth root-race. Vaivasvata corresponds to Xisuthrus, Deukalion, Noah, etc. — all head-figures or eponyms of races inaugurating a “new” humanity after a deluge, whether universal or partial, astronomical or geological, according to the interpretation. *See also* SURYAVANSA

Vajra (Sanskrit) *Vajra* Diamond or thunderbolt; one possessing this scepter, or diamond-thunderbolt, possesses great spiritual, intellectual, and psychic powers; among others, the occult ability to repel evil influences by purifying the air, as ozone does in chemistry. The vajra mystically refers to indestructibility and to the wondrous reflective powers of the diamond. One who possesses the vajra reflects the suffering, joys, and sorrows — and beauties — of the world, but can never be injured by them. It has been said that the heart of the perfect person is a mirror: it reflects all things, but holds nothing for self alone. Thus also is the heart of one wielding the scepter of the vajra.

In Hindu literature this vajra is the scepter of Indra (similar to the thunderbolt of Zeus), with which he as the god of the skies was said to slay evildoers. In mystical Buddhism it is the magic scepter of priest-initiates and adepts, the symbol of the possessions of siddhis (superhuman powers), wielded during certain mystical ceremonies by initiated priests and theurgists. It is also the symbol of the Buddha's power over evil spirits or elementals. The possessors of this scepter are called vajrapanins.

Vajracharya (Sanskrit) *Vajrācārya* [from *vajra* diamond + *āchārya* spiritual teacher] The diamond-teacher; the name Yogacharyas give to their spiritual preceptor or the supreme Master of the Vajra.

Vajradhara (Sanskrit) *Vajradhara* Diamond-holder; the First Logos, supreme buddha, or adibuddha, equivalent to the Tibetan dorjechang. "As the Lord of all Mysteries he cannot manifest, but sends into the world of manifestation his heart — the 'diamond heart,' Vajrasattva (*Dorjesempa*)" (SD 1:571). Vajra here expresses the indestructibility and spiritually adamant quality of this "One unknown, without beginning or end" — unknown to the average worldly person, but recognized by full initiates as the source of their divine inspiration and intuitions.

Vajrapanin (Sanskrit) *Vajrapāṇin* [from *vajra* diamond, thunderbolt + *pāṇi* hand] Holder of the diamond-thunderbolt, an epithet of the dhyani-bodhisattvas, the guardians and Silent Watchers of the globes of our planetary chain, the spiritual reflections or sons of the dhyani-buddhas. They are born directly from their predecessors subjectively, and have a subjective form of existence.

Also a title given a buddha because of his power over evil spirits and elementals. By the profane, a vajrapanin is worshiped as a god, but by initiates it is considered a subjective force. *See also* MANJUSRI

Vajrasattva (Sanskrit) *Vajrasattva* [from *vajra* diamond + *sattva* essence, reality] Diamond-heart, diamond-essence; a title given to mahatmas of the highest grade, or to bodhisattvas whose whole personality as a living essence is merged in their compound sixth and seventh principles (atman-buddhi). Vajra here expresses the spiritual adamant quality of the inner natures of these glorious beings. Vajrasattva is a manifestation of the heart of vajradhara, the First Logos or adibuddha; hence vajrasattva is "the second *logos* of creation, from whom emanate the seven (in the exoteric blind the five) Dhyani Buddhas, called the Anupadaka, 'the parentless,' " (SD 1:571). Dorjesempa is the Tibetan equivalent.

Vajrasattva is often used for celestial beings, entities belonging to the hierarchy of light or compassion. The vajrasattva quality is likewise one which can be possessed in less degree by any human being, depending upon his degree of advancement.

Vakil Lawyer, barrister (ML 12-13).

Vala, Volva (Swedish, Icelandic) [possibly cognate with Greek *sibylla*] In Norse mythology, the

wise sibyl who instructs Allfather Odin in “the origin, life, and end of worlds.” She represents the record of all the cosmic past, which is consulted by Odin, the divine consciousness-energy, as told in Voluspa, the principal lay of the poetic or elder Edda.

Valentinus Famous 2nd century Gnostic who in many ways was the unacknowledged teacher of the Church Fathers Origen and Clement. His teachings, largely those of the ancient wisdom, were probably derived from the esoteric schools in Alexandria. He is author of “The Shepherd of Hermes” and various Homilies and Epistles, and is said to have been the author of the celebrated Gnostic gospel, the *Pistis Sophia*, where his doctrines are set forth. His school, the Valentinians, had Italian and Asiatic branches, which gave rise to other offshoots, thus spreading his influence far and wide and exerting an enduring effect on thought. He averred that the apostles had not publicly given out all they knew, but that they had esoteric knowledge.

He taught that the primal cause, which he names Bythos (depth), manifested itself as the pleroma (fullness), the sum total of all manifestation. His teachings on pleroma are defined by a vast, intricate diagrammatic scheme, representing a process of emanation on a hierarchical plan with threefold, sevenfold, tenfold, and twelvefold hierarchies; mankind itself forming a lower branch of these hierarchies. Thus he is enabled to explain the origin of mixture or evil, and to reconcile the goodness of God with the imperfection of nature by pointing to minor demiurgic creators; thus too he can give the true meaning of Christ and redemption.

Valfader, Valfodr, Valfadir (Swedish, Icelandic) [from *val* choice, death + *fader* father] Odin in Norse mythology is often addressed as father of the Chosen or father of the Slain, i.e., Odin’s warriors are those who have “died” to the demands of the personal self. These elect are also called Odin’s One-harriers for they are those who “harry” or are in total command of *one*, their own nature. These warriors are said to feast with Odin in Valhalla by night and to re-emerge each day to do battle against the forces of darkness.

Valhalla (Scandinavian) **Valholl** (Icelandic) [from *val* choice, death + *hall, holl* hall] In Norse mythology, the hall of the chosen or of the slain where Odin’s heroes, the One-harriers, are brought by the Valkyries at the end of each day’s battles to feast with Ropt, the maligned or misunderstood god (Odin). “The hall of the chosen glows golden in Gladhome,” one of the superior “shelves” or ethereal planes which are closely related to our planet earth. The walls of Valhalla are built of the spears of the warriors, it is roofed with their shields, while inside the hall “the benches are strewn with byrnies.” Over the entrance door are transfixed the wolf (bestiality) and the eagle (pride). All of these are symbolic of the sacrifice of properties that have been relinquished by Odin’s chosen warriors, for these represent, in the Norse tales, the initiated adepts who have elected to serve the cause of universality and aid the progress of human evolution. Abandoning progressively all weapons of offense, then of defense, and finally all personal protection, exemplifies the universal service of the chosen.

The One-harriers of Odin emerge daily to do battle on the plain of consecration (Vigridsslatten, life on earth) and by night return to feast with Allfather Ropt in the sacred hall on the mead brewed from their experience of life.

At the feast of the warriors in Valhalla they are served three boars, representing three elements as well as three principles of cosmic life: Andrimner (air, spirit), Sarimner (water, mind), and Eldrimner (fire, desire). A suggestive verse in Grimnismal may then be read as: “Spirit lets mind be steeped in desire. Few know what nourishes the One-harriers.”

The tales concerning Valhalla have been sadly misunderstood in popular mythologies. Far from being an account of gross debauchery, there is mystical meaning hidden in every detail of the description of Odin’s domain and of the feasting of his warriors. For example, Valhalla is said to have 540 doors, through each of which 800 warriors issue abreast. This makes the number of One-harriers total 432,000, an oft-recurring number in Hindu and Babylonian time tables dealing with mystic and mythic history. Their message is in fact one of the noblest and most inspiring of mythic tales, when read between the lines of allegory, for here the warriors of emerge willingly to be “slain” daily in the cause of humanity’s evolutionary progress.

Vali, Vale (Icelandic, Scandinavian) In Norse mythology, a son of Odin who avenges the death of the sun god Balder; also a son of Loki. This paradox may be resolved in that the son of Loki (mind), being also the offspring of Allfather Odin as all beings are, is the future human race in its character as a redeemer and consummation of human evolution. He also may be a personification of karma-nemesis.

Of all the gods, only Vali and Vidar survive the destruction of the world, Ragnarok, when the gods return to their ground, thus preparing the seed for the future world, the child and successor of the present one.

Valkyries [from Icelandic, Swedish *Valkyrja* from *val* choice, death + *kyrja* to crown, possibly akin to *kyrra* calm] Among some of the most intriguing mysteries of Norse mythology are these “crowners of the slain” who select the heroes “slain” in battle when they aid the gods in their eternal struggle against the forces of darkness. There is a vast and complex symbology attached to the tales of Odin’s warrior-maidens who daily revive those slain on Vigridsslatten (the field of consecration), and bear them to Valhalla to feast with the gods on the mead of their life experience.

The valkyries represent the higher self of the human “warrior,” his inner spiritual mentor and teacher, as we learn in the tale of Sigurd Fafnesbane who seeks his sleeping valkyrie and is taught by her.

Vallabhacharyas (Sanskrit) *Vallabhācārya-s* A Vaishnava sect founded by Vallabhacharya, a sectarian mystic said to have been the disciple of Vishnu-svamin, a celebrated teacher of his time.

His followers are called Gosvami-maharajas and have a considerable amount of landed property and numerous temples in Bombay.

Vallabhacharya was born in the forest of Champaranya in 1479. At an early age he began traveling to propagate his doctrines, and at the court of Krishna-deva, king of Vijaya-nagara, succeeded so well in his controversies with the Saivas, according to the reports of his followers, that many Vaishnavas chose him as their chief. He then went to other parts of India, and finally settled at Benares, where he composed 17 works, the most important of which were commentaries on the *Vedanta-* and *Mimansa-Sutras* and another on the *Bhagavata-Purana*, on which this sect seems in the main to base their doctrines. He left 84 disciples. He taught a non-ascetic view of religion and deprecated all self-mortification as dishonoring the body which contained a portion of the supreme spirit. His emphasis on human affections and emotions seems at times to fringe closely the frontiers of licentiousness.

Vamadeva (Sanskrit) *Vāmadeva* The beautiful or fair god; a title of Siva. Also one of the Vedic rishis, stated to have been the author of many hymns.

Vamana-avatara (Sanskrit) *Vāmana-avatāra* The dwarf-avatara; a descent of Vishnu the preserver in the form of a dwarf. According to the Puranic allegory, Vamana of the Three Strides came to dispossess the demon Bali from dominion over the three worlds. Vamana petitions Bali for only as much of the world as he could compass in three steps. Vamana then resumed his godlike stature and in three world-encompassing strides deprived Bali of the heavens and the earth, all save the regions of Patala (the lower spheres of manifestation).

These three strides of Vishnu represent the godlike emanation or essence passing through the three cosmic planes superior to the fourth or material plane, informing and inspiring as the essence proceeds.

Vampire While discussions of vampirism generally center on Slavonic and other countries of southeastern Europe, vampirism was known to the Hindus and Hebrews as well as many other peoples. It was believed that a deceased person whose instincts were very degraded and sensual may leave behind a kama-rupic spook strong enough to be able to suck the blood of the living, especially if the deceased was a sorcerer. In cases of vampirism it was said that if the grave was opened, that the corpse of the vampire was always fresh and rosy. *Isis Unveiled* explains that such evil persons may be buried before the astral has entirely separated from the body — when they are in a state of catalepsy. In this case the part of the astral buried with the body draws back the rest of the astral into the body, and the being either perishes with the natural processes of suffocation or becomes a vampire, and is thus enabled to perpetuate its cataleptic life in the tomb. The traditional remedy consisted in driving a stake through the heart of the vampire's corpse, or otherwise destroying it. The meaning of the word can be extended to include other forms of obsession of the living by the astral reliquia of the dead.

Vanir, Vaner, Vanr (Icelandic, Scandinavian) [plural of *van* wont, accustomed, lacking, defective] Sometimes Wane. A class of Norse gods, representing the waters of space or infinitude. Because the vanagods are associated with the waters of space, they are usually believed to be water gods who were supplanted by the aesir in the course of time. However, the evidence points to the vanir having a range of activity extending through far vaster realms of space. They are evidently superior to the aesir, whose dwelling is Asgard and who embody in the worlds of the solar system, and are almost always referred to by the aesir as “the wise Vanir.”

The vanagods are said to have battled the aesir (the war in heaven) and remained victorious in the celestial realms, while the aesir were “ousted” and descended into material spheres, where they are the regents of worlds.

Following the war in heaven there took place an exchange of “hostages” between the aesir and vanir, and Njord (Saturn) was a vanagod sent as hostage to the aesir. He represents the saturnian qualities, among them those of Chronos (time). His children are Frey, the earth deity, and Freya, Venus, who is the guardian and protectress of the intelligent kingdom (humanity) on earth. This suggests that Njord was an emissary or avatara from the wise vanir to the active planetary gods, and that the vanir inspire avataric figures among the aesir. There are indications also that the aesir may graduate to the stature of the wise vanagods.

Vananin-Lamer, Vananin-Lamertade (Gnostic) The seventh pair of aeons or emanations, represented as Father-Mother in the Valentinian scheme as recorded by the early Christian writer Epiphanius.

Var (Scandinavian) Goddess of vows; ninth of the 14 goddesses Asynjur of the Eddas: she hearkens to oaths and covenants, and takes vengeance on those who perjure themselves, avenging every breach of faith.

Closely associated with her was the tenth goddess Vor, she who is wise and of a searching spirit; none can conceal anything from her. Both are classed as handmaidens of the goddess Freya (Venus).

Vara (Avestan) **War** (Pahlavi) **Baru** (Persian) An enclosure, vehicle; the ark or argha of the Avesta. In the *Vendidad*, after Yima enlarged the earth three times, he assembled the excellent mortals and gods. Yima was instructed to make a vara two miles long on every side, and to bring there the seeds of sheep, animals, men, fires, and plants: “Thither thou shalt bring the seeds of every kind of tree, of the greatest, best, and finest kinds on this earth; thither thou shalt bring the seeds of every kind of fruit, the fullest of food and sweetest of odour. All those seeds shalt thou bring, two of every kind, to be kept inexhaustible there, so long as those men shall stay in the Vara” (Farg. 2:28).

The similarity of this allegory to Hebrew and certain Hindu writings is obvious, and from the standpoint of humanity on earth, “Those ‘men’ in the ‘Vara’ are the ‘Progenitors,’ the heavenly

men or Dhyani, the future *Egos* who are commissioned to inform mankind. For ‘Vara,’ or the ‘Ark’ (or again the Vehicle) simply means man. . . .

“ . . . *Vara* meant the man of the Fourth Round, as much as the Earth of those days, the moon, and even Noah’s ark, if one will so have it . . .” (SD 2:291-2). *See also* KARSHIPTA

Vara (Sanskrit) *Vara* [from the verbal root *vr* to choose] Superior, choice, excellent.

Varaha-avatara (Sanskrit) *Varāha-avatāra* The boar-avatara; a descent of Vishnu in the form of a boar, to deliver the world from the demon Hiranyaksha — the ruler of the fifth region of Patala (the nether world) — who had carried the earth into the lower regions of his spheres. The contest between Vishnu in this form and Hiranyaksha took place beneath the water, according to the Puranas; Vishnu emerged victorious and raised the earth from the deep. This legend, among several other interpretations, may refer to the risings and sinkings of continents.

The *Taittiriya-Sanhita* says: “This universe was formerly waters, fluid. On it Prajapati, becoming wind, moved. He saw this [earth]. Becoming a boar, he took her up. Becoming Visvakarman, he wiped [the moisture from] her. She extended. She became the extended one [prithivi].”

Variation Used in Darwinian theory as complementary to heredity, representing the tendencies towards variety of forms in living organisms, while heredity tends to perpetuate fixed types. Darwin held that species denotes merely a temporal cross section through a continuously flowing stream of gradual variation; but further study has shown that there is no such continual, uniform, and unidirectional flow of variation, but that there are reversions to original type and comparatively sudden emergence of new types. The causes assigned by Darwin for variation, though he premises the existence within the organism of a susceptibility to variation, are physical, being responses to environment. Such causes, purposeless and chaotic, could not produce ordered results; the facts indicate an intricate design and manifold purposes in nature, originating in spiritual and ethereal entities belonging to nature’s hierarchical structure. Nature in fact is composed of living beings, and the ultimate cause of variation is to be sought in the operations of cosmic ideation, which reproduce their effects finally in physical organisms throughout nature.

Varna (Sanskrit) *Varṇa* Color; caste. The four chief varnas named by Manu are Brahmanas, Kshatriyas, Vaisyas, and Sudras. *See also* CHATUR-VARNA

Varsha (Sanskrit) *Varṣa* [from the verbal root *vr̥ṣ* to rain] A division of the earth as separated off by mountain ranges; nine are enumerated in the Puranas: Kuru, Hiranmaya, Ramyaka, Ilavrita, Hari, Ketumala, Bhadrasva, Kimnara, and Bharata.

Varshayanti (Sanskrit) *Varṣayantī* One of the seven Pleiades.

Varuna (Sanskrit) *Varuṇa* [from the verbal root *vr̥* to surround, envelop] The all-enveloping sky; originally Varuna represented the waters of space, or the all-investing sky, akasa, but in later

mythology he became the god of the ocean. In the *Mahabharata* he was one of the four guardians of our visible kosmos, the guardian of the West.

“Uranos is a modified Varuna, ‘the Universal encompassor,’ the all-embracer, and one of the oldest of the Vedic deities — Space, the maker of Heaven and Earth, since both are manifested out of his (or its) seed. It is only later that Varuna became the chief of the Adityas and a kind of Neptune riding on the *Leviathan* — *Makara*, now the most sacred and mysterious of the signs of the Zodiac. Varuna, ‘without whom no creature can even wink,’ was degraded like Uranos, and, like him, *he fell into generation*, his functions . . . having been lowered down from heaven to earth by exoteric anthropomorphism. As the same Orientalist [Muir] says, ‘The attributes ascribed to Varuna (in the Vedas) impart to his character a moral elevation and sanctity far surpassing that attributed to any other Vedic Deity.’ But to understand correctly the reason of his fall, like that of Uranos, one has to see in every exoteric religion the imperfect and sinful work of man’s fancy, and also to study the mysteries which Varuna is said to have imparted to Vasishtha. Only . . . ‘his secrets and those of Mirat *are not to be revealed to the foolish*’ ” (SD 2:268-9n).

Writing of Varuna, Muir says:

“The grandest cosmical functions are ascribed to Varuna. Possessed of illimitable knowledge . . . he upholds heaven and earth, he dwells in all worlds as sovereign ruler. . . . He made the golden . . . sun to shine in the firmament. The wind which resounds through the atmosphere is his breath. . . . Through the operation of his laws the moon walks in brightness, and the stars . . . mysteriously vanish in daylight. He knows the flight of birds in the sky, the paths of ships on the ocean, the course of the far-travelling wind, and beholds all the things that have been or shall be done. . . . He witnesses men’s truth and falsehood” (TG 360).

Varuna, essentially the all-encompassing ether of space, is the Vedic representative of cosmic spirit, and therefore has always been one of the noblest, most mysterious conceptions of divinity.

Vasishtha (Sanskrit) *Vasiṣṭha* The most wealthy; a celebrated Vedic rishi, representing the typical Brahmin sage. Many legends have clustered about him, especially in regard to his conflict with the sage Visvamitra — the king who raised himself from the Kshatriya to the Brahmanical class. Many hymns of the *Rig-Veda* are attributed to these two sages: one hymn represents Vasishtha as the family priest of King Sudas, and in the *Rig-Veda* (7:33:11) he is called the son of the apsaras Urvasi by Mitra and Varuna, hence his name Maitravaruni. He is also supposed to have owned Nandini, the cow of plenty (offspring of Surabhi). As this cow was able to grant the sage all his wishes, he became the master of every vasu (desirable object).

In *Manu* (1:35) Vasishtha is enumerated as one of the ten prajapatis, the patriarchs produced by Manu-Svayambhuva for the peopling of the earth. In the *Mahabharata* he is regarded as the family priest of the Suryavansa (solar race), and also as one of the seven great rishis associated with the

seven stars of the Great Bear. In the Puranas, Vasishtha is represented as one of the arrangers of the Vedas in a dvapara yuga of a certain chatur yuga, and as the father of seven celebrated sons.

Vastubhuta (Sanskrit) *Vastubhūta* [from *vastu* substance, matter + *bhūta* having become from the verbal root *bhū* to become] Substantial, material, essential stuff or matter. Most generally, the various vikritis, as the offspring or productions of prakriti, with an eye on the hosts of monads in their peregrinations through the substantial realms. Once these beings have contacted the realms of matter, they may be described as being vastubhuta (imbodying in or working in matter).

Vasudeva (Sanskrit) *Vasudeva* Father of Krishna and husband of Devaki, likewise brother of Kunti (the mother of the five Pandava princes). He belonged to the Yadava branch of the Somavansa or lunar race.

Vasudeva (Sanskrit) *Vāsudeva* The son of Vasudeva — Krishna. The *Mahabharata*, however, gives another explanation why Krishna was given this name: as the divinity is present, or has its dwelling (*vasana*), in all beings, so does Krishna, for he issued as a Vasu from a divine womb. This reference to Krishna is not so much to the imbodyed human semblance of the divinity, but to the divinity itself working in and through this imbodiment.

Vasus (Sanskrit) *Vasu-s* A class of eight Vedic deities, each representing a host and not one single being. “The wise call our fathers Vasus, our paternal grandfathers Rudras, our paternal great grandfathers, Adityas; agreeably to a text of the Vedas” (Manu 3:284).

Vau (Hebrew) *Wāw* Sixth letter of the Hebrew alphabet, װ, variously rendered as vav, waw, etc.; third letter of IHVH, referred to as the Tetragrammaton. With vowel points, most often used as a prefix conjunction meaning “and,” “also.” As a noun, a nail, hook. Its numerical value is 6.

Vayu (Sanskrit) *Vāyu* Air; one of the five cosmic elements. Personified, the god and sovereign of the air and the king of the gandharvas. Agni, Vayu, and Surya formed the primeval Vedic Trimurti: “ ‘Agni (fire) whose place is on earth; Vayu (air, or one of the forms of Indra), whose place is in the air; and Surya (the sun) whose place is in the air’ [celestial spaces]. (*Nirukta*.) In esoteric interpretation, these three cosmic principles, correspond with the three human principles, Kama, Kama-Manas and Manas, the sun of the intellect” (TG 361). These three deities in this connection are three manifestations of cosmic fohat, guided and directed by cosmic mahat.

In later mythology Vayu is the father of Hanuman, the monkey-king who aids Rama in the *Ramayana*. The allegory of Hanuman becoming the son of Vayu by Anjana (an ape-like monster) refers to the first glimmering of mind coming into the highest apes through the miscegenation of unevolved late third root-race and early fourth root-race humans with certain simians, themselves the descendants of a previous and parallel origin during an earlier time of the third root-race.

Vayu-bhuta (Sanskrit) *Vāyu-bhūta* [from *vāyu* air, wind, cosmic spirit + *bhūta* element] The air element; fifth in the descending scale of the seven comic bhutas. The cosmic element

corresponding with prana in the human constitution.

Vayu-tattva (Sanskrit) *Vāyu-tattva* [from *vāyu* air, wind, cosmic spirit + *tattva* thatness, reality]
The air principle; fifth in the descending scale of the seven tattvas. *See also* ASURA

Ve (Scandinavian), **Vei, Vi** (Icelandic) [cognate with *vigan* to carry high, venerate] Sacred, holy; in Norse mythology, the brother of Odin (spirit) and Vile (will), the creative deities who bring a universe into existence. They are born of the primeval pair Bore and Bestla, karmic residue from the previous life cycle, and correspond to the Greek Logos, the Word or intelligence from which emanate the divine forces which organize kosmos out of chaos. Odin and his two brothers “slay” the frostgiant Ymer — the latent matter of worlds — transforming him into an orderly universe, into which they infuse consciousness and life from their own essence.

Veda (Sanskrit) *Veda* [from the verbal root *vid* to know] Knowledge; the most ancient and sacred Sanskrit works of the Hindus. Almost every hymn or division of a Veda is ascribed to various authors. It is generally believed that these subdivisions were revealed orally to the rishis or sages whose respective names they bear; hence the body of the Veda is known as sruti (what was heard) or divine revelation. The very names of these Vedic sages, such as Vasishtha, Visvamitra, and Narada, all of which belong to men born in far distant ages, shows that millennia must have elapsed between the different dates of their composition. Krishna Sastri Godbole proves by astronomical data and mathematics that the Vedas must have been taught at least 25,000 years ago (cf Theosophist 2:238). Hindus claim that the Veda was taught orally for thousands of years, and then finally compiled by Veda-Vyasa 3,200 years ago, on the shores of the sacred lake Manasa-sarovara beyond the Himalayas in what is now Tibet (TG 362). Though compiled at that date their previous antiquity is sufficiently proved by the fact that they are written in an ancient form of Sanskrit, different from the Sanskrit of known later writings.

There are four Vedas: the *Rig-Veda*, *Yajur-Veda*, *Sama-Veda*, and *Atharva-Veda*, this last commonly supposed to be of later date than the former three. The *Laws of Manu* always speaks of the three Vedas. The *Rig-Veda* is the original work, the *Yajur-Veda* and *Sama-Veda* in their mantric portions are different arrangements of its hymns for special purposes. The Vedas are divided into two parts, the Mantra and Brahmana. The Mantra part is composed of suktas (hymns in verse); the Brahmana part consists of liturgical, ritualistic, exegetical, and mystic treatises in prose. The Mantra or verse portion is considered more ancient than the prose works; and the books in which the hymns are collected are called sanhitas (collections). More or less closely connected with the Brahmanans (and in a few exceptional cases with the Mantra part) are two classes of treatises in prose and verse called Aranyaka and Upanishad. The Vedic writings are again divided into two great divisions, exoteric and esoteric, the former called the karma-kanda (the section of works) and the latter the jnana-kanda (section of wisdom).

Subba Row in “Brahmanism on the Sevenfold Principles in Man” (Theosophist 3:93) says: “The

Vedas were perhaps compiled mainly for the use of the priests assisting at public ceremonies, but the grandest conclusions of our real secret doctrine are therein mentioned. I am informed by persons competent to judge of the matter, that the Vedas have a distinct dual meaning — one expressed by the literal sense of the words, the other indicated by the metre and the swara (intonation), which are, as it were, the life of the Vedas . . . the mysterious connection between *swara* and *light* is one of its most profound secrets.”

Vedana (Sanskrit) *Vedanā* [from the verbal root *vid* to know] Perception or knowledge conveyed by the senses, sensation. The sixth nidana and the second skandha.

Vedanta (Sanskrit) *Vedānta* The end or completion of the Veda; the final, most perfect exposition of the Vedic tenets. As Uttara-mimansa, one of the six Darsanas or Hindu schools of philosophy, it is said to have been founded by the compiler of the Vedas, Vyasa. Sankaracharya is the main popularizer of the Advaita or nondualistic Vedantic philosophy, which is virtually identical with Central Asian Buddhism.

“The Vedanta is the highest form that the Brahmanical teachings have taken . . .

“The Vedanta may briefly be described as a system of mystical philosophy derived from the efforts of Sages through many generations to interpret the sacred or esoteric meaning of the Upanishads. . . . The Hindus call the Vedanta *Brahma-jnana*” (OG 181).

Veda-vyasa. See VYASA

Vedhas (Sanskrit) *Vedhas* Arranger, disposer, giver; a name given to Brahma, Siva, and Vishnu; also to the sun and to the moon (Soma). Likewise the name of a Vedic rishi.

Vegetable Kingdom In the vegetable stage of the monad’s evolution, the faculty of apperception begins to be clearly manifested, which differs from mere perception in that it is accompanied with a certain amount of awareness of results to be achieved. This is shown in the many ways in which plants can care for themselves, as in sending out rootlets for water or providing for fertilization. In the list of seven creations (cf SD 1:450), the fourth is there called the mukhya or primary because it begins the following system of the four subsequent creations; and the Hindu systems place vegetable bodies in this fourth emanation because they possess individualized lives. All the seven kingdoms or life-waves are manifestations of different groups or life-waves of monads in various degrees of emanational self-manifestation.

Vehicle A principle or element, through which an entity is able to express itself, and which can therefore be called the carrier of that entity. Thus the human physical body is a vehicle for all the other human principles that express themselves through it; the linga-sarira is similarly a vehicle for all superior to it; or buddhi is a vehicle for atman. The same principle can be both a vehicle for what is above it, and an entity using another inferior principle as a vehicle. Equivalent to such terms as soul, or the Sanskrit vahana, yana, and upadhi (a carrier).

Vehicle of Life Generally, any vehicle of vitality; specifically among ancient Pythagoreans and others, the entire constitution of the normal human being (or other entity), consisting of seven distinct principles or elements which together form the complete person.

Vendidad (Pahlavi) [from *vi-daevo-datem* the anti-demonic law] The principal book of the Avesta, consisting of 22 sections or fargards. The major part of the book is concerned with detailed instructions and teachings on how to avoid sin and defilement by moral and physical purification, “each of which teachings is based on Occult laws” (TG 363). The first fargard tells the story of the creation, and the legend of Yima and the Golden Age. Another tells of the formation of our earth and its six companion karshvares or globes.

The *Vendidad* is the only complete Zoroastrian Nask that has come down to our day. The Pahlavi Rivayats state that after the wholesale destruction of ancient literature brought about by the vandalism of Alexander the Great, the 21 Nasks forming the Avesta were searched for — but only the 19th was found, the *Vendidad*. “It is a pre-eminently *occult* treatise, full of symbolism and often of meaning quite the reverse of that which is expressed in its dead-letter text” (ibid.).

The *Vendidad Sadah* (“pure Vendidad”) is the original text alone, without Pahlavi translation.

Ventus (Latin) [cf root *ven, van* in Sanskrit *vata*, English *wind*, Greek *anemos*, Latin *animus, anima*] Wind; wind and spirit were convertible, in the literatures of most ancient nations.

Venus The second visible planet from the sun in our solar system, and the brightest orb in the heavens except the sun and moon: regarded by the ancients as one of the seven sacred planets. Astrologically its zodiacal houses are Taurus and Libra; its day of the week is Friday.

“Venus is the most occult, powerful, and mysterious of all the planets; the one whose influence upon, and relation to the Earth is most prominent. . . .

“ . . . According to the Occult Doctrine, this planet is our Earth’s *primary*, and its spiritual prototype. . . .

“*Every sin committed on Earth is felt by Usanas-Sukra [Venus]. The Guru of the Daityas is the Guardian Spirit of the Earth and Men. Every change on Sukra is felt on, and reflected by, the Earth*” (SD 2:30-1).

In theosophy the regent or rector of Venus has a particular influence over globe C of the earth-chain, and likewise over the third root-race of the earth’s globe D. The sign of Venus (the circle over the cross ♀) represents the fall of mankind and animal life into sexual generation at the end of the third root-race.

As Venus has no satellites, the ancients said that Venus adopted the Earth, the progeny of the Moon. “*Every world has its parent star and sister planet. Thus Earth is the adopted child and*

younger brother of Venus, but its inhabitants are of their own kind” (SD 2:33). The inhabitants of Venus have bodies in one sense more gross than those of Earth-dwellers; yet despite this the former are far more intelligent than are the humans of Earth. Furthermore, Venus is said to be in its seventh round (cf SD 1:602; FSO 327-9).

For the Roman goddess, *see* APHRODITE

Vera Cause (Latin) Real cause; as distinguished from a secondary cause, or occasionally by contrast with a merely apparent cause. The real causes of physical phenomena cannot be found in the physical world, but in the world of noumena.

Verbum (Latin) Word; adopted by later Latin-speaking philosophers and Christian theologians to represent the cosmic Logos (word), often used in the more concrete sense as the spoken word in reference to the vibratory power of sound; or in its application to Christos in theology.

Whether the Greek logos or Latin verbum is used, the philosophical meaning is the same and arose from the fact that a word is the audible expression of the inner, ever-active but silent idea. Hence cosmic spirit, the field of cosmic ideation, by its very activity of producing cosmic thought manifests itself as the word — or words. A person has a thought to which he gives utterance as a word; similarly the cosmic Logos was metaphorically spoken of in Greek philosophy, especially by the Platonists, as the cosmic Word of the secret idea or thought of the cosmic intelligence. Parallel also to the Hindu Vach.

Verdandi (Icelandic) [from *verda* to become] In Norse mythology, the second of the three norns who determine the fate of heroes. All beings are subject to these three Fates, who correspond to the Greek Moirai. They have been described as Past, Present, and Future, though their names imply much more. Verdandi, the present, literally means “becoming,” the ever-renewed present moment wherein all things are possible and the future is determined.

Her sisters are Urd (origin), irrevocable causes set in motion in the past; and Skuld (debt), who is created by her two sisters, the past and present. She is the debt of karma owed to the future, the inevitable result of past and present causes.

Vernal Equinox. *See* SEASONS

Vesica Piscis Fish bladder; vesica was used for a variety of receptacles and may be translated receptacle, so that the term may be rendered, the receptacle of the Christ. In ecclesiastical art, an aureole or glory shaped like a pointed oval, consisting of the intercepted arcs of two equal circles whose circumferences pass through their respective centers; a geometrically conventionalized variant of an earlier fish symbol, a well-known emblem of the mystical Christ, being a symbol of world saviors in general, likewise of the end of a cycle and the inauguration of another, of floods, and of the last sign of the zodiac. Frequently found in the Roman catacombs, it is seen surrounding the figures of sacred persons such as Jesus or the Virgin Mary. It stands for the mystic Mother, and

is connected with the cosmic Virgin; the oval shape and its representation as an aureole surrounding the figure suggests the symbol of the egg.

The vesica piscis is an instance of a large class of highly involved and entangled mystical emblems, where the phallic aspect seems to dog the footsteps of attempts to depict highly spiritual, deeply profound facts. The human mind, so desirous of making graphic emblems of purely abstract realities, sooner or later loses sight of the abstract truth, so that only the picture itself remains. *See also* ICHTHYS

Vesta (Latin) **Hestia** (Greek) Daughter of Saturn (Kronos) and Rhea, sister of Jupiter, Juno, Ceres, Pluto, and Neptune (Zeus, Hera, Demeter, Hades, and Poseidon). The first-born, she became, as Terra or Gaia, the earth goddess. She is variously represented as the wife of Uranus, and again as a divine maid, both accounts probably being remnants of an earlier myth similar to those centering around Demeter, Isis, Neith, and other goddesses.

Traces of the worship of goddesses equivalent to Vesta are found in prehistoric times. The cult reached a place of sanctity and importance in ancient Ireland, the Hebrides, and among the Incas of Peru. None, however, is so fully documented as the Roman cult of Vesta worship, centering around the guardianship of the sacred fire, symbol of the loftiest ideals of the state, and hence of the home and domestic life. In Rome the cult grew in importance until the position of the priestesses almost rivaled that of royalty. There is a tradition that Numa introduced the worship of Vesta into Rome and founded the Temple of Vesta.

Vestal Virgins The priestess-guardians of the sacred fire of the Roman State; originally four in number, later six, then seven. Their special duty was to keep burning the sacred fire, which must never be allowed to go out. Once a year, however, it was extinguished with appropriate ceremonies, and then rekindled by means of “pure” or elemental fire — fire produced by friction or by means of a burning-glass.

The Vestals were chosen when mere children, their election being the king’s prerogative; under the Empire and Republic, that of the pontifex maximus. The one selected took a vow of chastity for thirty years, after which she was free to return to the world and marry if she chose. So highly regarded was this honor that few availed themselves of this privilege, and despite the requirements there were always more candidates for the position than could be accepted. A violation of her vows subjected the Vestal to extreme penalties.

Vestals enjoyed special privileges in the State, and in most respects were not subject to the Roman law. On state occasions they were preceded by a lictor and at public spectacles the best seats were reserved for them. In all the greater ceremonies and state festivals they took a prominent part. They had undisputed power to pardon any criminal whom they might meet when on his way to execution, providing the meeting was not prearranged. They could be buried within the walls, a privilege they shared with the Roman Emperor alone. Public slaves were appointed to serve them;

they were the custodians of important state papers. They lived in almost royal splendor in the magnificent Atrium Vestae which adjoined the official fanum of the pontifex maximus himself. Their chief festival was the Vestalia, held on June 9th. From the central fire which they tended, the altars of other gods obtained their fires, and even distant colonies were not held to be consecrated until their own altar fires were lighted with fire from the central hearth. Compared with this cult in other parts of the world, especially in India where originally there was a lofty worship requiring the completest chastity and renunciation of the devadasis or nachnis of the temples, the cult in Rome, despite worldliness, seems to have suffered less degeneration than might have been expected from the theoretical and actual power surrounding it.

Vestures. See TRIKAYA

Vetala (Sanskrit) *Vetāla* A ghost, spook, or elementary astral entity, haunting cemeteries and occupying corpses for a temporary animation.

Vetala-siddhi (Sanskrit) *Vetāla-siddhi* One of the practices of sorcery; a “means of obtaining power over the living by black magic, incantations, and ceremonies performed over a dead human body, during which process the corpse is desecrated” (TG 364).

Vi. See VE

Via Straminis (Latin) The way of straw, the wispy way; the Milky Way, the name evidently referring to the wisps of light with which the Milky Way is strewn, as straw was often used to strew the roads in ancient times. The ancient Syrians in their system of describing the stages of nature, called the spiritual regents within and behind the Milky Way their First Principle. Theosophy regards the Milky Way as not only the origin of all manifested solar systems but likewise as the repository of these solar systems when they finish their evolutionary course and return to the invisible background of the galaxy for their long pralayaic rest. Yet this is but a minor part that the Milky Way plays in the cosmic economy, for that pathway of the gods, as many ancient mystics called it, contains some of the deepest mysteries that the human mind in its endless research for truth and knowledge has unfolded. The Romans used two other expressions to denote the Milky Way: the *circulus lacteus* (milky circle) and *via lactis* (milky way).

Vibha-vasu (Sanskrit) *Vibhā-vasu* [from *vibhā* shining with great brilliance + *vasu* a name of Agni, cosmic fire, or fohat; also shining primordial cosmic substance] Brilliantly shining substance; pralaya opens when Agni in its form of destroyer begins to shine forth with the destructive or regenerative brilliance, or even heat — thus inaugurating the dissolution of manvantara culminating in pralaya.

Vibhutayah (Sanskrit) *Vibhūṭayah* [plural of *vibhūti* mighty, powerful; superhuman power] Siddhis, magical or superhuman powers, potencies. The eight vibhutayah especially attributed to Siva are also said to be perpetually attainable by humans, for example: animan (the power of

becoming as minute as an atom); laghiman (extreme lightness); prapti (attaining or reaching anything); prakamya (irresistible will); mahiman (illimitable bulk); isita (supreme dominion); vasita (subjugating by magic); and kamavasayita (suppressing all desires).

Vibhuti. *See* VIBHUTAYAH

Vibration(s) Motion is a fundamental principle in universal nature, coeval with boundless space, ceasing not even during pralaya; and we can form only a relative idea of its real nature, yet can have intuitions of it through its manifestations, the most fundamental of which is vibration. The essential characteristic of vibration is periodicity or cyclic motion. It appears in the alternation of manvantara and pralaya in the cosmic Great Breath and in the most rapid oscillations of minutest particles. The relative periodicity of various vibrations is found to constitute a mathematical scale, according to which phenomena may be classified.

The principle of sympathetic vibration involves mysteries relating to the tremendous potency of sound, some of which are familiar to physicists. The discoveries of John Worrell Keely (cf SD 1:555-66) were of this nature. He was able to develop enormous energy in an engine without using the principle of pressure; but his discoveries were premature and their results were frustrated.

Sound is a universal principle which manifests itself physically as vibrations in the mass and particles of bodies. Physicists, by a logical confusion, have called the effects “sound,” whereas they are only one of the productions of causal sound. We might as well define fear as a trembling of the body; whereas we know that the trembling is an effect produced by the emotion. The same applies to heat, light, and others of the list of physical forces which manifest themselves in vibrations.

Vibration, in all its myriad manifestations, is the consequence of inner hidden causal agencies. The vibrations ensuing from such inner movements expressing themselves through bodies or veils, are always in accordance with the causal rhythms and mathematics involving quantities such as rate, intensity, and quality, there being vibrations of as many kinds as there are different causal agents. Thus there are vibrations as effects on our gross physical plane, other vibrations which manifest themselves on the astral, emotional, and psychological or lower mental planes. There are again vibrations of higher type which originate in the intellectual and spiritual monads of the human constitution.

Furthermore, because it is an expression of energy, all vibration is force and energy itself, and hence capable of arousing energies or forces of exactly the same quality or rate of intensity in other beings which they affect — this being the reason behind sympathetic vibration. When vibrations thus interlock and synchronize in rate, intensity, and quality, we have what is called sympathy, love, or attraction, and such sympathetic vibration is operative on all the planes of universal nature. Not only is this the case in all relations of humans with each other, but likewise sympathetic vibration plays an enormous part in such matters as mob psychology, quick electrical sympathies affecting audiences, hates and rebellions — even what is known as health and disease

are communicated by means of vibrations, the one first affected being able to communicate his “affection” of whatever kind to others who are at the time negative to the vibrational impact and in time vibrating synchronously with the impacting energy. There is, of course, such a thing as resistance, which expresses itself in manifold ways, such as being able to throw off the vibration affecting it, and even to return it upon the sender, consciously or unconsciously; and herein lies the secret of the old medieval saying that curses come home to roost, or that if the magician is not stronger than the elementals or nature spirits he attempts to control, he is almost invariably destined to become their victim.

All vibrational activity of whatever rate, intensity, or attributive characteristic is always an effect, although always capable of becoming in its turn a cause producing effects of its own type. In other words, there is always the originating or causal agent for any specific instance of vibration; thus the thinker produces mental vibrational activity which we call thinking or thoughts, or emotion or feeling.

Indeed, every entity or thing in the universe is in incessant motion or vibrational activity arising from force inherent in the entity or thing itself; and these interblending activities of vibration produce the vast diversity of the universe around us. Thus every atom, electron, molecule, or being anywhere, sings its own vibrational note, which is the sound production of its own characteristic *svabhava* or individuality; so that our physical bodies, could we but hear their mystical music, would sound like a vast and marvelous symphony of interblended sound. For this reason Pythagoras spoke of the music of the spheres, ascribing to each celestial body its own dominant note, and pointing out that from the blending of such individual notes or sounds arise the harmony of the spheres.

Vicarious Atonement In Christian theology, the idea that God accepted the sacrifice of Jesus Christ as a substitution for the guilt incurred by man at the Fall, and that mankind will consequently escape punishment, provided that they accept by faith Jesus Christ’s sacrifice. The idea that by an atoning for evil done or sin committed, one undoes the past — broadened by Christian theology to include the doctrine of the vicarious atonement by some great spiritual being for the sins of others — is a theory rejected by the theosophic philosophy. To those who believe the Christian doctrine that every person was born into this world burdened with inevitable doom through Adam’s sin, such a compensatory doctrine seems to be necessary; but it discourages people’s faith in their own innate divinity and in their power thereby to effect their own spiritual and moral salvation, and violates our sense of justice by offering a way of avoiding the consequences of our own bad actions — which avoidance of sin already incurred is distinctly denied in several places in the New Testament where the ancient theosophical doctrine of karma is taught that as a man sows, *that* (and not something else) must he invariably reap. Vicarious atonement may be a distorted doctrine of reconciliation, in Christian notion reconciliation between God and man; also of the idea that the spiritual monad in man takes on itself the consequences for actions or “sins” committed

by the less evolved human monad. Every human being is raised by the sacrifice made by the Christos within himself, so that whoever believes in and conforms his acts to his own spiritual nature, is “saved.”

Vidadhafshu Keshvar. *See* KARSHVAR

Vidblainn (Norse) Wide blue; one of the dwellings of the Norse gods, the third “heaven”; Blavatsky says it refers to the third globe of the earth chain on the ascending arc (globe F).(SD 2:100)

Vidhdhala. *See* VITTHALA

Vidya (Sanskrit) *Vidyā* Wisdom in spiritual things; also occult science. *See also* JNANA

Vidyadhara (Sanskrit) *Vidyādhara* A possessor of magical knowledge; a kind of ethereal being almost always of astral habitat,

“also called *Nabhas-chara*, ‘moving in the air,’ flying, and *Priyam-vada*, ‘sweet-spoken.’ They are the Sylphs of the Rosicrucians; inferior deities inhabiting the astral sphere between the earth and ether; believed in popular folk-lore to be beneficent, but in reality they are cunning and mischievous, and intelligent Elementals, or ‘Powers of the air.’ They are represented in the East, and in the West, as having intercourse with men (‘intermarrying,’ as it is called in Rosicrucian parlance . . .). In India they are also called *Kama-rupins*, as *they take shapes at will*. It is among these creatures that the ‘spirit-wives’ and ‘spirit-husbands’ of certain modern spiritualistic mediums and hysteriacs are recruited. These boast with pride of having such pernicious connexions (*e.g.*, the American ‘Lily,’ the spirit-wife of a well-known head of a now scattered community of Spiritualists, of a great poet and well-known writer, and call them angel-guides, maintaining that they are the spirits of famous disembodied mortals. These ‘spirit-husbands’ and ‘wives’ have not originated with the modern Spiritists and Spiritualists, but have been known in the East for thousands of years, in the Occult philosophy, under the names above given, and among the profane as — *Pishachas*” (TG 364).

Their name is not given to them because they are the possessors of cosmic wisdom, since these vidya-dharas are hierarchical ranges below the gods who are the holders of cosmic wisdom; but they are called the possessors of at least a certain portion of the instinctive or innate magical knowledge of the realms of maya, and for this reason have always been looked upon as among the most dangerous and misleading beings in the multifarious interacting hierarchies of the universe. They are, in fact, a species of semi-intelligent, or in their higher grades intelligent, cosmic elementals or genii, and may be either beneficent or highly maleficent to mankind, depending upon mankind’s innate strength of resistance or innate weakness to impressions received from them.

Vighadia (East Indian) [cf Sanskrit *vighaṭikā*] A medieval and modern Hindu term used in the

reckoning of time; sixty vighadias equal one ghadia so that a vighadia equals 24 seconds.

Vignanamaya Kosa. See VIJNANAMAYA-KOSA

Vigrid, Vigridr. See VIGRIDSSLATTEN

Vigridsslatten (Icelandic, Scandinavian) [from *vigr* battle or *vigan* to bear high, consecrate + *slett* (Swedish *slatt*) battlefield] Plain of consecration; in Norse mythology, the plain where the battle of life is fought daily. Corresponding to the Hindu dharmakshetra (*Bhagavad-Gita*), it is where the Valkyries search for Allfather Odin's fallen heroes who have earned entrance to Valhalla (the hall of the chosen), where they are regaled at the end of each day's struggle. They are those who have died to their lower nature and entered on a larger life as champions of the gods.

Odin's two ravens, Hugin and Munin (mind and memory), fly over the battlefield and report back to Odin on the events taking place there.

Vihara (Sanskrit) *Vihāra* [from *vi-hṛ* to spend or pass time, roam, wander through] A Buddhist or Jain monastery or temple; originally a hall where the monks met or walked about, afterwards used as temples. Today those viharas are in towns and cities, but in earlier times they were generally rock-temples or caves found only in unfrequented jungles, on mountaintops, and in the most deserted places.

Viharasvamin (Sanskrit) *Vihārasvāmin* The svami (swami) or superior of a vihara.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Vij-Vz

Vijnana (Sanskrit) **Vinnana** (Pali) *Vijñāna, Viññāṇa* [from *vi-jñā* to know exactly, perceive clearly from the verbal root *jñā* to know] Mental powers; the perfect knowledge of every perceptible thing and of all objects in their concatenation and unity; the faculty of the higher manas. The tenth nidana or causes of existence; and the fifth skandha, “an amplification of the fourth — meaning the mental, physical and moral predispositions” (ML 111).

Vijnanamaya-kosa (Sanskrit) *Vijñānamaya-kośa* [from *vijñāna* intelligence, understanding, discernment + *maya* built of, formed of, illusory manifestation from the verbal root *mā* to measure, form + *kośa* sheath] The sheath formed of knowledge or discernment, the manasaputric soul. According to Vedantic classification of the human principles, the second of the panchakosa (five sheaths) which enwrap the divine monad or atman. This sheath corresponds to the higher manas.

Vikara (Sanskrit) *Vikāra* [from *vi* change + the verbal root *kṛ* to act, make] A change of form or nature, an alteration or deviation from any natural state. A change from the naturally quiescent and peaceful condition of the inner being to a worse state, thus signifying deterioration; hence, mental or other perturbation, emotion, or passionate feeling. In the Sankhya philosophy, vikara is a result or evolution of an entity from its source or prakriti. Thus, we have as the originants or sources one or other of the various prakritis, and then the vikara derivative from the former. On a cosmic scale, then, the manifested universe is a vikara in all its quasi-infinity of details from the originant seven or ten cosmic prakritis.

Vikartana (Sanskrit) *Vikartana* [from *vi* asunder + the verbal root *kṛt* to cut, divide] The one cutting asunder or dividing; a title of the sun as the divider or distributor of solar life, and in a more restricted sense the sun as conqueror of Rahu, the Dragon's head (an eclipse). When taken in a passive sense, it signifies the sun when “shorn of his rays,” and hence a name given to an initiated neophyte in a certain stage of his spiritual training, when he is laid on the cross and must

make the supreme conquest of the dragon or the influence of the moon.

Vikshepa (Sanskrit) *Vikṣepa* [from *vi* away, apart + *kṣip* to throw] The act of throwing away; dispersion, scattering; sometimes used as the opposite of *samyama* (contemplation or meditation) which collects or controls the activities and vagaries of the mind and rises above them; hence consequent bewilderment or perplexity bringing agitation.

In Vedantic philosophy, the projecting power of *maya* or *avidya*, the mental activity which brings upon the mirror of the soul enveloping illusions producing the apparently real appearance of an external world.

Vili, Vile (Icelandic, Scandinavian) Will, wish, desire; in Norse mythology, one of Odin's two brother-creators. Together these three bring worlds into being at the beginning of a life cycle. The idea is reminiscent of that in the *Rig-Veda*: "Desire first arose in It," when worlds were to emanate from the divine source of life.

In the Eddas, Odin (spirit), Vili (will), and Vi (sanctity or awe) are born from Bore and Bestla, the karmic residue carried over from the preceding world cycle. The present universe is thus the direct result of its predecessor. The triune creative deity slays the frostgiant Ymir and from his latent (frozen) body form the matter of worlds-to-be.

Vimana (Sanskrit) *Vimāna* A car or chariot of the gods, capable of traveling through the air. While Indian mythology speaks of the *devas* or gods as possessing rapid self-moving chariots or vehicles with which they traverse space, gods was often used by ancient Indians for their highly intellectual, extremely scientific forefathers of now forgotten antiquity. Thus, the *vimanas* which were used by the Atlanteans are spoken of as being self-moving and carrying their occupants through the air (cf SD 2:427-8).

In the *Ramayana*, aerial vehicles are also mentioned as being used by the *rakshasas* of Lanka (Ceylon); and Ravana's *vimana* was called *Pushpaka*.

Vimoksha (Sanskrit) *Vimokṣa* Final emancipation, liberation; nirvana.

Vina (Sanskrit) *Vīṇā* An ancient musical instrument of the guitar family, still in use in India. Although generally termed a lute, its construction is quite different, having two gourds for its sounding boards rather than the single one used in the lute and modern musical instruments. In playing the *vina*, the performer places one gourd on the shoulder and the other on the hip. It usually has seven strings, and a long finger board containing 19 and occasionally 21 frets or supports. There are many varieties classed according to the number of strings. Its invention is attributed to Narada, one of the seven great rishis.

Vinata (Sanskrit) *Vinatā* A daughter of Daksha, and the consort of Kasyapa; hence one of the creators of our world. She brought forth an egg from which was born Garuda, the vehicle of

Vishnu and, in our world, the symbol of the earth's greatest time cycle.

Vinaya (Sanskrit) *Vinaya* [from *vi-nī* to lead towards, instruct, educate] Education, discipline, control; in Buddhism, the rules of discipline, with special application to monks.

Vinaya-pitaka (Sanskrit) *Vinaya-piṭaka* [from *vinaya* discipline + *piṭaka* basket] The second section of the Buddhist canon treating of the training and discipline of monks; Tripitaka (three baskets) is the name given to the Buddhist canon.

Vine A symbol of inspiration and of spiritual fertility, both as a tree with many branches and as the producer of grapes and wine. It was sacred to Dionysus-Bacchus when that god and his wine stood for spiritual inspiration and when the only kind of inspiration was artificial stimulation of the lower vital centers. It occurs frequently in the Old Testament, and in John (15:1, 5) we read: "I am the true vine, and my Father is the husbandmen . . . I am the vine, ye are the branches." Osiris-Isis is said to have taught humanity the use of the vine, music, astronomy, and geometry, as well as other sciences and arts.

Much could be said about the vine and the juice — fresh or fermented — of its fruit. Ancient peoples selected certain animals or plants as emblems of spiritual and mystical facts. Thus with the Mediterranean peoples the juice of grapes was chosen as an emblem of inspiration.

Vinnana. See VIJNANA

Viprachitti (Sanskrit) *Vipracitti* [from *vi-pra-cit* to distinguish through meditation from the verbal root *cit* to think] The chief of the danavas or Hindu titans, giants said to have warred against the gods.

Virabhadra (Sanskrit) *Vīrabhadra* Heroically beneficent or benevolent; an avatara of Siva, the patron of occult study and achievement. Ancient Indian myth represents him as a monster to human vision, being a thousand-headed and thousand-armed entity born of the breath of Siva-Rudra — Siva under his form of Rudra, and therefore the great destroyer because regenerator. In the *Mahabharata*, Siva commissions this entity "to destroy the sacrifice prepared by Daksha. Then Virabhadra, 'abiding in the region of the ghosts (ethereal men). . . . *created from the pores of the skin (Romakupas)*, powerful Raumas, (or Raumyas)' " (SD 2:182-3). This allegory refers in human history to the evolution of the "sweat-born" or second root-race and the destruction of the remnants of the first root-race.

Cosmically Siva-Rudra is the active force of mahat (cosmic mind), both regenerative and destructive; and following the same line of thought Virabhadra in his human application has reference to the incessant effort of the manasaputras to break forth through the veils of maya to bring mind to the mentally somnolent or imperfectly awakened earliest human races. Hence, the reference to Virabhadra as thousand-headed, -eyed, or -armed may likewise be applied to mind — for mind is not only all seeing but all performing and all wise.

Viracocha (Peruvian) Foam of the sea; the supreme being or cosmic hierarch of the ancient Peruvians. It brings to mind Venus and other divinities mythologically alleged to have been born of the sea foam or of the waters of cosmic space.

Viraga (Sanskrit) *Virāga* [from *vi* without + *rāga* passion, desire, color] Absence of desire, indifference to pleasure and pain.

Viraj (Sanskrit) *Virāj* Sovereign, splendid; in Hindu mythology, the son of Brahma who on analogical lines becomes Manu. In the *Laws of Manu* Brahma divides his body into male and female parts and in the female part (Vach) creates Viraj, who is also Brahma, the type of all male beings, as Vach is the type of female beings. “Manu declares himself created by Viraj, or Vaiswanara, (the Spirit of Humanity), which means that his Monad emanates from the never resting Principle in the beginning of every new Cosmic activity: that *Logos* or Universal Monad (collective Elohim) that radiates *from within himself* all those Cosmic Monads that become the centres of activity — progenitors of the numberless Solar systems as well as of the yet undifferentiated *human* monads of planetary chains as well as of every being thereon” (SD 2:311). A verse in the *Rig-Veda* (10:205) has Viraj spring from Purusha, and Purusha spring from Viraj.

Viraj is comparable in some aspects to the Egyptian Horus and equivalent to the Third Logos.

Viraja-loka. See VAIRAJA-LOKA

Virasvamin (Sanskrit) *Vīrasvāmin* The father of Medhatithi, the author of the *Manubhashya*, the commentary on the *Laws of Manu*.

Virgin In ancient mystic philosophy the feminine potency of nature as well as cosmic space which is often referred to as the immaculate celestial virgin (cosmogonically undifferentiated cosmic matter, alaya, mahabuddhi, etc.), or the astral light which is sometimes called the celestial virgin. Again, it refers to the numerous Queens of Heaven, such as Isis, Moon, Ashtoreth, Nuah (the Chaldean feminine Noah considered as one with the cosmic arc), Belita, Diana, Artemis, Ark, etc. — most of these names having reference to the moon. However, a sharp distinction should be made between the idea of the virgin connected with the lower planes of matter, including celestial bodies such as the moon, and the immaculate or undifferentiated cosmic virgin which is the immaculate spatial mother of the cosmic deep. On lower planes the Mother-Virgin is the various wombs of hierarchies, a feminine Manu or Prajapati, through whom pour the seeds of life from higher cosmic planes. The cosmic virgin is immaculate, and the zodiacal sign Virgo is her emblem; in human affairs she represents the nature of humanity before the division into sexes, in commemoration of which the sign Virgo became divided into Virgo and Scorpio. The name may also be used of a virgin male such as a kumara.

The ideas of the Virgin Mary in orthodox Christianity have been taken over from the pagans, as for example from the mother in the triad which heads all cosmogonies of the countries surrounding

the Mediterranean Sea (Isis, Juno, etc.). The word Mary from the Hebrew would seem etymologically cognate with the Latin mare (sea); the Hebrew word meaning bitter, and the sea likewise being bitter it is also cognate with other words meaning water, as in the Jewish expression, the waters of space, or the feminine productive principle. *See also* IMMACULATE CONCEPTION; VIRGIN BIRTH

Virgin Birth Often applied to any kind of reproduction which is not sexual, including that of human races before the separation of the sexes. In a mystical sense, it applies to some of the rites of initiation, where the candidate has to go through by an anticipatory process the experiences which mankind will live through in the course of the next two root-races. Among these was the experience of the mystical virgin birth. The corresponding fact concerning mankind of the future is, that there will be in due course of evolutionary time no more sexual birth, which will then have run its course and will have disappeared, but instead, reproduction will be by the power of kriyasakti: by thought and will.

The mystic Christ, by whatever name, is said to be virgin-born, as emanating from the higher nature of the individual, not engendered by the terrestrial nature. The symbol has often been materialized, so that the divine quickening or overshadowing of a human virgin, whether man or woman, is spoken of as being a virgin-born.

Virgin Men, Virgin Youths. *See* KUMARAS

Virgo The virgin; the sixth zodiacal sign, an earthy, feminine, common or mutable sign, the house and exaltation of Mercury. Its bodily correspondence is the abdomen.

In an older zodiac, which had only ten signs exoterically (though there were two other secret signs), the three present signs of Virgo, Libra, and Scorpio were combined in a single sign between Leo and Sagittarius, representing a stage of evolution before the separation of the sexes. When Eve, according to the Hebrew story, was drawn out of the “side of Adam,” and the human race fell into generation, the sign then representationally was split into two, Virgo and Scorpio, and the balancing sign Libra was added.

In following the Hebrew system of assigning the twelve sons of Jacob to the zodiac, if Gemini represents Simeon and Levi conjoined, there is one son too few for the signs; and this may be adjusted by putting Jacob’s daughter Dinah for Virgo.

In the Hindu zodiac the sixth sign is also named the Virgin, Kanya and is presided over by Karttikeya, the god of war. Subba Row says that Kanya represents Sakti or Mahamaya, and its number six indicates that there are six primary forces in nature, which in their unity represent the astral light, this unity thus making a seventh (Theosophist Nov 1881, p. 43). To this Blavatsky added: “Even the very name of *Kanya* (Virgin) shows how all the ancient esoteric systems agreed in all their fundamental doctrines. The Kabalists and the Hermetic philosophers call the Astral Light

the ‘heavenly or celestial Virgin.’ The Astral Light in its unity is the 7th. Hence the seven principles diffused in every unity or the 6 and one — two triangles and a crown.”

The Dendera zodiac in Egypt, circular in form, has three Virgins, showing that three precessional cycles had elapsed and that this length of time had been recorded. Virgo is assimilated to Astraea, goddess of justice.

Virtues One degree in the celestial hierarchy of Dionysius the pseudo-Areopagite, whose doctrines, arising about the 4th or 5th century, have exercised a great influence on Christian thought. He divides the heavenly host into three triads: Seraphim, Cherubim, Thrones; Dominations, Virtues, Powers; Principalities, Archangels, Angels. As a hierarchy of emanating powers, this system is allied to, and in large part derivative from, Neoplatonic teachings of the time, as well as having strong elements of Pythagorean thought. The Virtues correspond to the planet Mars, according to the hierarchical scheme of the Syrians. *See also* ANGELOLOGY

Virya (Sanskrit) *Vīrya* Strength, dauntless energy, fortitude and firmness in thought and conduct; one of the Buddhist paramitas.

Vis (Latin) Force, energy; synonymous with *energia naturae* (energy of nature). According to ancient thought all the various forms of *vis* — *vis formativa* (formative force), *vis generatrix* (force that brings forth or generates), *vis viva* (living force) — are inherently living, so that *vis viva* means not so much living force as live in active rather than passive manifestation.

Viscid Earth Applied principally to the semi-astral material of our earth globe during the third round, and likewise to our earth during the first part of the present fourth round and during the first, second, and early third root-races of mankind when the earth, although quasi-astral and nearly compact, was nevertheless more concrete and solid than were the earliest root-races of mankind. Because the first and second root-races were far more ethereal or astral than the earth was, it is almost hopeless to expect to find fossils of these earliest humanities at the present time; they were too ethereal in their earliest portions to leave fossil remains in the earth which was more solid in consistency than they.

Visesha (Sanskrit) *Viśeṣa* [from the verbal root *śiṣ* to distinguish, particularize] Distinction, characteristic difference or property. In the Vaisesika system used as the fifth padartha (logical category), *visesha* belonging to the nine substances (*dravyas*) of the Nyaya philosophy. Used in the Nyaya to signify the everlasting distinctions characterizing the primary substances or elements (*mahabhutas*).

Visha (Sanskrit) *Viṣa* Poison, death, evil.

Vishnavites. *See* VAISHNAVA

Vishnu (Sanskrit) *Viṣṇu* [from the verbal root *viṣ* to enter, pervade] The sustainer or preserver; the

second of the three gods of the Hindu Trimurti or Triad. Brahma, Siva, and Vishnu together are infinite space, of which the gods, rishis, manus, and all in the universe are simply the manifestations, qualities, and potencies. Vishnu is called the eternal deity, and in the *Mahabharata* and the Puranas he is declared to be the embodiment of sattva-guna, the quality of mercy and goodness, which displays itself as the preserving power in the self-existent, all-pervading spirit. His symbol is the chakra (circle). He is identical with the Hindu Idaspati (master of the waters) and with the Greek Poseidon and Latin Neptune.

Blavatsky gives a passage about Vishnu from the *Laws of Manu*, with interpolated remarks (SD 1:333): " 'Removing the darkness, the Self-existent Lord' (Vishnu, Narayana, etc.) becoming manifest, and 'wishing to produce beings from his Essence, created, in the beginning, water alone. In that he cast seed . . . That became a Golden Egg.' (V.6, 7, 8, 9) Whence this Self-existent Lord? It is called this, and is spoken of as 'Darkness, imperceptible, without definite qualities, undiscoverable as if wholly in sleep.' (V.5) Having dwelt in that Egg for a whole divine year, he 'who is called in the world Brahma,' splits that Egg in two, and from the upper portion he forms the heaven, from the lower the earth, and from the middle the sky and 'the perpetual place of waters.' (12, 13.)"

In the *Mahabharata* (3:189:3) Vishnu says: " 'I called the name of water *nara* in ancient times, and am hence called Narayana, for that was always the abode I moved in' (*Ayana*). It is into the water (or chaos, the 'moist principle' of the Greeks and Hermes), that the first seed of the Universe is thrown. 'The "Spirit of God" moves on the dark waters of Space'; hence Thales makes of it the primordial element and prior to Fire, which was yet latent in that Spirit" (SD 2:591n).

Vishnu has many names and is presented in many different forms in Hindu writings. Riding on Garuda, the allegorical monstrous half-man and half-bird, Vishnu is the symbol of Kala (duration), and Garuda the emblem of cyclic and periodical time. Vishnu as the sun represents the male principle, which vivifies and fructifies all things. The Puranas call Ananta-Sesha a form of Vishnu on which the universe sleeps during pralaya. In the allegorical Vaivasvata-Manu deluge, Vishnu in the shape of a fish towing the ark of salvation represents the divine spirit as a concrete cosmic principle and also as the preserver and generator, or giver of life. In the *Rig-Veda* Vishnu is a manifestation of the solar energy and strides through the seven regions of the universe in three steps. The Vedic Vishnu is not the prominent god of later times.

Vishnu as the giver of life is the source of one line of avatars. The ten mythical avatars of Vishnu are: Matsya, the Fish; Kurma, the Tortoise; Varaha, the Boar; Narasimha, the Man-lion (last animal stage); Vamana, the Dwarf (first step toward the human form); Parasu-rama, Rama with the axe (a hero); Rama-chandra, the hero of the *Ramayana*; Krishna, son of Devaki; Gautama Buddha; and finally, Kalki, the avatara who is to appear at the end of the Kali yuga "mounted on a white horse" and inaugurate a new reign of righteousness upon earth.

" 'In the Krita age, Vishnu, in the form of Kapila and other (inspired sages) . . . imparts to the

world true wisdom as Enoch did. In the Treta age he restrains the wicked, in the form of a universal monarch (the Chakravartin or the 'Everlasting King' of Enoch) and protects the three worlds (or races). In the Dwapara age, in the person of Veda-Vyasa, he divides the one Veda into four, and distributes it into hundreds (*Sata*) of branches.' Truly so; the *Veda* of the earliest Aryans, before it was written, went forth into every nation of the Atlanto-Lemurians, and sowed the first seeds of all the now existing old religions. The off-shoots of the never dying tree of wisdom have scattered their dead leaves even on Judeo-Christianity. And at the end of the Kali, our present age, Vishnu, or the 'Everlasting King' will appear as Kalki, and re-establish righteousness upon earth. The minds of those who live at that time shall be awakened, and become as pellucid as crystal" (SD 2:483).

Again,

"If we only search for the true essence of the philosophy of both *Manu* and the *Kabala*, we will find that Vishnu is, as well as Adam Kadmon, the expression of the universe itself; and that his incarnations are but concrete and various embodiments of the manifestations of this 'Stupendous Whole.' 'I am the Soul, O, Arjuna. I am the Soul which exists in the heart of all beings; and I am the beginning and the middle, and also the end of existing things,' says Vishnu to his disciple, in the *Bhagavad-Gita* (ch. x)" (IU 2:277).

Vishnu Purana (Sanskrit) *Viṣṇu Purāṇa* One of the most celebrated of the 18 principal Puranas, conforming more than any other to the definition of pancha-lakshana (five distinguishing marks) assigned as being the character of a complete Purana by Amara-Simha, an ancient Sanskrit lexicographer. It consists of six books: the first treats of the creation of the universe from cosmic prakriti, and the peopling of the world by the prajapatis or spiritual ancestors; the second book gives a list of kings with many geographical and astronomical details; the third treats of the Vedas and caste; the fourth continues the chronicle of dynasties; the fifth gives the life of Krishna; and the sixth book describes the dissolution of the world, and the future re-issuing of the world after pralaya.

Visishtadvaita (Sanskrit) *Viśiṣṭādvaita* [from *viśiṣṭa* distinguished, particular + *advaita* nonduality] Qualified nonduality; the Vedantic school founded by Vaishnava teacher Ramanuja, intermediate between the Advaita (nondualistic) Vedanta of Sankaracharya and the Dvaita (dualistic) Vedanta.

Just as the Advaita teaches that essentially there is an absolute reality, and that all things issue forth from the incomprehensible womb of cosmic life — which therefore is the only abstract as well as substantial reality of all beings — so the Dvaita teaches the opposite: that while all beneath the abstract reality issue forth from it, they do so rather as creations than as essences, parts, or portions of the eternal reality. The Visishtadvaita school straddles these philosophical views, asserting with the Advaita that all are at one in essence, yet holding that the distinctions during

manifestation between the eternal reality and all its offspring are relatively real. This stand is little favored by either of the other schools.

The Visishtadvaita school teaches that the human spirit is separate and different from the one supreme spirit, though dependent on it and ultimately to be united with it, as well as originally in some manner springing forth from it. The Visishtadvaita speaks of the supreme spirit almost as monists do, because apparently ascribing to it a type of individuality, which is as offensive to the rigid logical impersonal eternal All of the Advaita as is the franker dualism of the Dvaitins. This arises from the fact that the Advaitins claim that it is utterly improper to ascribe individuality, personality, or monadism of any kind to the infinite — a claim which is precisely that of modern theosophy. However, “Dualistic and anthropomorphic as may be the philosophy of the Visishtadvaita, when compared with that of the *Advaita* — the non-dualists, — it is yet supremely higher in logic and philosophy than the cosmogony accepted by either Christianity, or its great opponent, modern Science” (SD 1:522).

Visva (Sanskrit) *Viśva* [from the verbal root *viś* to pervade] All, every, all-pervading; a title applied, for example, to Krishna in the *Bhagavad-Gita*. As a neuter or feminine noun, the universe; as a masculine noun, the intellectual faculty in Vedantic philosophy.

Visva-deva(s) (Sanskrit) *Viśva-deva-s* The all-divine; also a class of deities, usually given as ten.

Visvakarman (Sanskrit) *Viśvakarman* The omnificent, the all-worker; in the *Rig-Veda*, the highest and oldest of the cosmic architects, and hence the father, initiator, or teacher of the hierarchies of later gods under him. As a collective name, he corresponds in many respects to the Greek cosmocratores, in some to the Third Logos. He is spoken of as the divine artist and carpenter, the architect of the universe, the creative god, father of the creative fire, the builder and artificer of the gods, and the great patron of initiates.

“The Secret Doctrine teaches that ‘He who is the first to appear at Renovation will be the last to come before Re-absorption (pralaya).’ Thus the logoi of all nations, from the Vedic Visvakarma of the Mysteries down to the Saviour of the present civilised nations, are the ‘Word’ who was ‘in the beginning’ (or the reawakening of the energising powers of Nature) with the One Absolute. Born of Fire and Water, before these became distinct elements, It was the ‘Maker’ (fashioner or modeller) of all things . . . who finally may be called, as he ever has been, the Alpha and the Omega of manifested Nature” (SD 1:470).

In the *Rig-Veda*, Visvakarman is said to sacrifice himself to himself. This refers, among other things, to the fact that when manvantara opens, in order for its vast content of worlds and hierarchies to appear, the originating entities must — because of karmic mandate or impulse — themselves form the beginnings of things from themselves, thus sacrificing themselves to themselves so that the cosmos may appear in manifestation. Another significance of the statement is the reference to the spiritual resurrection at the end of the manvantara or, in the case of man, to

the choice to be spiritual rather than material, to rise self-consciously from material existence into the one Life. “Then he ascends into heaven indeed; where, plunged into the incomprehensible absolute Being and Bliss of Paranirvana, he reigns unconditionally, and whence he will re-descend again at the next ‘coming,’ which one portion of humanity expects in its dead-letter sense as the *second advent*, and the other as the last ‘Kalki Avatar’ ” (SD 1:268).

His mother Yoga-Siddha (striving to become one with the inner god) and his daughter Sanjna (spiritual consciousness) show his mystic character, for no actual mother or daughter is here intended, but the ideas of human spiritual and intellectual reformation taking place within himself from yoga-siddha, from which is brought forth the spiritual consciousness which is the fruit or daughter of perfect achievement.

From another viewpoint, he represents spiritual humanity collectively and is equivalent to Purusha, synonymous in the Epic and Puranic period with Tvashtri, he is also called Karu (worker, builder) or Takshaka (carpenter, etc.).

Visvamitra (Sanskrit) *Viśvāmitra* Friend of all; a celebrated rishi (sage), famed for his contests with the sage Vasishtha. By birth a Kshatriya of the lineage of Pururavas of the lunar dynasty, he was employed at the court of Raja Sudas of the Tritsus, as was Vasishtha. Visvamitra was constantly worsted in his struggles for supremacy over the great Brahmin Vasishtha, and determined to elevate himself to the rank of a Brahmin, which he succeeded in doing after many strenuous austerities. Many verses of the *Rig-Veda* are said to have been written by him, and he is also credited with authorship of a law book.

In the *Ramayana*, Visvamitra is stated to be a counselor of Ramachandra.

Visvanara (Sanskrit) *Viśvānara* Benefiting all creatures; another name for Savitri, the sun, and also of the father of Agni (fire). Visvanara is the physical basis from which the objective world begins its existence, corresponding closely to the European protyle. True cosmic protyle, however, is the cosmic Duad or Second Logos, a cosmically androgynous spirit-substance one step more inward than Visvanara or the Third Logos. Because of the close interrelationship between Visvanara and the cosmic Duad, they are frequently cited as being the same.

Visvarupa (Sanskrit) *Viśvarūpa* [from *viśva* all + *rūpa* form] Having all forms, manifold, omnipresent; often applied to Vishnu and at times to Krishna in the *Bhagavad-Gita*; likewise to Siva.

Visvatryarchas (Sanskrit) *Viśvatryarcas* [from *viśva* all + *tri* three + *arcas* shining] The triple ray shining everywhere; the fourth of the seven principal mystical rays of the sun (SD 1:515n). *See also* SURYA

Visvavedas (Sanskrit) *Viśvavedas* [from *viśva* all + *veda* knowledge] The all-knowing or omniscient one; a name given to the supreme hierarch of any cosmic hierarchy.

Vitala (Sanskrit) *Vitala* Better place, i.e., better for matter, in that its substance is more material or differentiated than atala which precedes it; the second on the descending scale of the seven talas, corresponding to taparloka. Vitala is related on earth to the state of samadhi, and in one sense also to human buddhic consciousness. No adept, save one, can be higher than this in the tala side of his consciousness and continue living on earth. All the different talas and their corresponding lokas are connected both with states of consciousness and with varieties of vehicles on which these various consciousnesses work. Every tala with its respective loka forms a bipolar sphere containing its own hosts of conscious entities imbodyed in vehicles appropriate to the loka-tala or tala-loka in which they are.

Vital Fluid, Force. See VITAL PRINCIPLE

Vitalism The theory that the phenomena of organic life cannot be explained by the properties of physical matter alone, and that consequently they must be due to some nonphysical vital principle. Attempts to define such a principle have been vague and various. If it is spirit, then what can spirit be, apart from matter, or how can it act on matter? Perhaps it is another kind of matter — an aether, fluid, or what not.

The theory amounts to trying to correct one error by means of another. If we suppose the physical universe to be composed of inert particles, how can we explain their activity? Materialistic science has simply shelved the difficulty. It is necessary to postulate an immaterial force, which in its origin is immaterial and in its manifestations substantial or material, but materialistic science does not recognize anything basically immaterial. It speaks of energy and matter as twin in destructibles, but merely assumes the former without explaining its nature. Moreover the words force and energy are used by science to denote *effects* occurring in matter. Are these effects without causes?

The difficulty encountered by vitalists, as regards the nature of the vital principle and its power of acting upon matter, is fundamental in the entire materialistic philosophy. The matter and force of materialistic science are highly metaphysical abstractions. No such thing as an inert material particle exists or can exist, for all such inert matter is but life or force in one of its multiform phases of quiescence or equilibrium. Nor can there be an absolutely immaterial force, without relation of function or action in the material worlds. The universe consists of living beings, whose activities may be expressed collectively by the word life. The term matter has been applied to the static aspect of life, and the term force to the dynamic aspect. No distinction valid for this purpose can be drawn between organic and inorganic beings. If there is need of a vital principle for animals and plants, working upon yet other than essential stuff or substance, there is equal need in the case of minerals; but there is no need to postulate such divorce between force and matter in either case.

The jiva or prana of theosophy is not an immaterial spirit different from matter acting on a lifeless

body; it is itself substantial, consisting in fact of streams of living beings, life-atoms; and so far from acting on something other than itself called the body, it actually composes the body. The minute analysis to which science is now able to subject physical matter has not succeeded in finding anything more rudimentary than living, moving fire, light, and electricity — in short, the ocean of jiva.

Vitalis Vitalia (Latin) Life of life; Gerald Massey gives it as a translation of the Greek inscription *zotiko zotike* (“the (feminine) living being in the (masculine) living being”) — the feminine or passive aspect of life inherent in the masculine, active, or manifested form of life (SD 2:586). The correct Latin translation is *vitali vitalis* (the alive within the living). This highly mystical and profound phrase has both a cosmic and human significance: thus we have mahabuddhi in the universal and buddhi in the human constitution, as being the feminine aspect of the precedaneous atman, and likewise as containing the inherent life of the offspring of such feminine aspect which is the cosmic mahat or the human manas. In iconographical mysticism this can be represented by the cross, whether in the ordinary Latin form, or the more mystical svastika. Here also is an indication of the mystical significance of a Christos crucified.

Vitality The jiva or life-force which manifests through the different principles of the human septenary being, as well as through the multiform hierarchies of nature. It animates the cosmic entity in which we live as vital monadic units and in man manifests as the pranas: “there is a regular circulation of the vital fluid throughout our [solar] system, of which the Sun is the heart — the same as the circulation of the blood in the human body . . .” (SD 1:541). The lowest principle of cosmic jiva is diffused through all nature and, among its innumerable activities on all the cosmic planes, on our plane produces all living beings and entities — man, beast, plant, mineral, and the three kingdoms of the elemental world. “The animal tissues only absorb it according to their more or less morbid or healthy state,” matter being the necessary vehicle for its manifestation on this plane (SD 1:537). On cosmic planes of consciousness, the corresponding aspects of jiva are the vehicles of cosmic thought or ideation which manifest more or less consciously in entities, and automatically as the laws of nature. Likewise, in the human being the psychoelectric field of life-currents, vital fluids, or pranas provides the vehicles or avenues for transmitting his thought, feeling, emotion, and instincts. The tension of this life principle — in one sense the liquor vitae of Paracelsus — may be too high or too low, owing to the nervous changes in the matter it invests. Thus, an equilibrium of the vital currents of the body means a state of health, as disturbed or disordered conditions make for disease.

Vitality is not created by the nutrition and functional activities which afford conditions for its play in the body. Too much or too little of the lifestream may produce fatal convulsions or collapse, it being a neutral force with a potential action for both life and death — for death is but a manifestation of life, and can as easily supervene from a vital excess which tears the body to pieces in time, as through a pranic defect therein. When its cohesive role is neutralized after death,

it begins its dispersive “work on the atoms *chemically*” (SD 1:538).

The source of jiva manifesting as the human pranas is in the divine monad or atman, a reflection of the same fact on the cosmic scale where cosmic jiva originates in Brahman or paramatman.

Vital Principle, Fluid, or Force Synonyms for life or jiva, for in theosophy life is not only a force or principle which is an entity, but actually a fluid — not a mere abstraction signifying haphazard results from natural forces. It is the universal activity of spirit in matter: Purusha-prakriti, consciousness-substance, the First and Second Logos. Cosmically, life is in essence one of the spiritual-substantial aspects of Brahman or paramatman, guided by cosmic intelligence; and this cosmic vital fluid or principle, sometimes called fohat, is the universal source of both energy and matter, the carrier of consciousness.

As the cosmic stuff from which spring in their *manifestations* the living beings which constitute the universe, it is omnipresent, nor can there be anything without life. But there are many grades or conditions of life, just as there are many orders of living beings who are its aggregate expressions. Thus we can speak of the relatively animate and inanimate, as when comparing a mineral with a plant or a corpse with a living body. But the mineral has life of its own kind, and what has left the corpse is one kind of life, but the life in the physical atoms remains. Materialistic philosophy, for the purposes of its own analysis, has sought to separate life into two independent elements — an inert mass or particles, and more or less theoretical forces which actuate them. Unfortunately these forces are defined as functions of the movements of the particles themselves, which is a logical confusion. Others more logically have supposed a vital fluid; but if this fluid is entirely distinct in nature from the dead matter it is supposed to actuate, we cannot explain how the one can come into relation with the other. More recent advances in physics have shown the futility of trying to separate matter from motion or mass from energy.

An example of the dual aspect of substance and force underlies to some extent Weismann’s biological analysis of the fertilized cell. Add to his description the directing influence of the dhyanichohanian astral fluid which on the physical plane is a vital force, i.e., the astral fluid of the re embodying ego, and this illustrates the vital action of matter-force. *See also* JIVA; LIFE-ATOMS; PRANA

Vitatha (Sanskrit) *Vitatha* In the *Harivansa* (generally regarded as an addition to the *Mahabharata*), one name of the rishi Bharadvaja, regarded as the author of many Vedic hymns.

Vithala, Vithoba. *See* VITTHALA

Viththala. *See* VITTHALA

Viti Chorea Sancti (Latin) St. Vitus’ Dance, one name for the dancing epidemics which prevailed in Germany and other parts of Europe during the Middle Ages. These epidemics in general have been called tarantism because they were believed to be started by a tarantula bite; the name St.

Vitus' Dance was given to a particular outbreak in Germany for it was to his shrine that the patients repaired for a cure. The name has passed into medicine, where it is often used for chorea, which applies to isolated cases. Pathology refers it to a disorder of the nervous system, but such disorder can be but a secondary cause or symptom, though doubtless certain pathological conditions render the patient susceptible to the disease. It is of the nature of a psychic obsession, as shown by its epidemic character, and is of the same character, but apparently on a lower psychic plane, and without the voluntary element in it, as is found among dancing manias among dervishes, shamans, Shakers, bacchanals, etc. *See also* CHOREA

Vitthala (Sanskrit) *Viṭṭhala* also written *Viṭhala*, *Viṭhṭhala*, *Viḍhḍhala*. A god worshiped at Pandharpur in the Deccan and considered an incarnation of Krishna, commonly called Vithoba.

Vivanghat (Avestan) *Vīvanghat*, **Vivanghan** (Pahlavi) *Vīvanghan* [cf Sanskrit *Vivasvat*] One name of the Zoroastrian cosmic hierarch; in the Avesta, the parent of Yima, the first man.

Vivasvat (Sanskrit) *Vivasvat* The brilliant one; a name for the sun.

Viwan. *See* VIMANA

Vodhu (Sanskrit) *Voḍhu* The sixth of the seven kumaras as enumerated in the Uttara-kanda of the *Padma-Purana*. The seven are Sanaka, Sanandana, Sanatana, Sanat-kumara, Jata, Vodhu, and Pancha-sikha.

Vohu-Mano, Vohu-Mana (Avestan) **Vahman** (Pahlavi) **Bahman** (Persian) [from Avestan *vohu* goodness from the verbal root *vah* to love cf Sanskrit verbal root *vas* + the verbal root *man* to think, be aware] In the Gathas, Vangaheush Manangho, Vohu-Manangha. Good thoughts, good state of being, which is pure consciousness and the most exalted state of existence. It is only through Vohuman, as said in the Gathas, that the laws of life are fulfilled and ever renewed. In Mazdean literature, white is the color of Vohu-Mano. In later mystic Persian literature, it has been regarded as the first intellect, homogeneously in harmony with the totality of life.

Bahman is the name of the 11th month of the Iranian calendar (Aquarius) and the ancient feast of Sadeh (fire celebration) is held on the 10th of this month.

Voice The concrete expression of an abstract thought; a creative power that has quality besides energy, given as a septenate of logoi represented by seven mysterious vowels, uttered vocally, as in the Gnostic *Pistis Sophia* and the Christian Revelation. Abstract thought and concrete voice together make the Word (SD 1:99). The Qabbalistic *Sepher Yetsirah* says that the Holy Spirit is Voice-Spirit-Word. The gandharvas in India are (physically) the noumenal causes of sound and the voices of nature (SD 1:523), i.e., the seven tones of Pythagoras and his music of the spheres. In Simon Magus' teachings the six radicals are given as mind, intelligence, voice, name, reason, thought — all emanating from the seventh or highest, spiritual fire. Synonymous are Vach in India and Kwan-yin in China.

At a certain stage of initiation a voice speaks audibly to the candidate, as discussed in *The Voice of the Silence*. The Bath Qol (daughter of the voice) of the Qabalah is a spiritual communication of somewhat the same kind; and Deity often communicates in a voice in the Old Testament. Voice is one way in which a divine presence manifests itself to a mind, as when, according to the Bible, the Lord manifested himself to Elijah in a still small voice.

The Army of the Voice of *The Secret Doctrine* is the prototype of the Host of the Logos, or the logoi, the sevenfold expression of divine thought. See also LOGOS; VACH; VERBUM

Void. See SUNYATA

Volcano [It from Latin *Vulcanus* the fire god] Small special manifestations of the general, large-scale phenomenon of volcanism, by which the continents are cyclically subjected to catastrophes, alternatively with the cyclic cataclysmal deluges. The geological record contains proofs of volcanism in the vast outpourings of lava-sheets now found interstratified with the sedimentary rocks. It is the physical manifestation of the work of the kabeiroi, whose father was Vulcan or Hephaestos.

From another standpoint, volcanic phenomena are outlets of energy of various kinds which accumulate under the surface of the globe, dissipating the dangerous accumulations. But for these outlets, the earth would be subjected to far more severe catastrophic changes than those now known to have occurred, and which to a certain extent are still occurring.

Volsung(ar) (Icelandic, Scandinavian) [from *volsi* phallus + *unge* child] In Norse mythology, an early race of humanity, the first to reproduce by sexual means, remote descendants of the Niflungar (children of the mist), who represent humanity before the globe had condensed from the primordial nebula. The tale of Sigurd the Volsung is one of the classic stories in the younger or prose Edda.

Volundr (Icelandic) In Norse mythology, the hero of “Volundarkvida” or “Volundskvadet”; in German tales he is named Wieland, in English Wayland. In all versions he is a smith, a legendary artisan who was captured and imprisoned by King Nidud (an evil age) and forced to forge treasures of gold and silver for the king.

The symbology suggests that the smith represents a race of humanity which had fallen prey to influences of a totally material age when human genius and craftsmanship were prostituted to unworthy ends. The tale ends with the artisan escaping in a flying device of his own making, leaving the evil king bereft of his sons, his daughter, and his smith.

Voluspa (Icelandic) [from *volva*, *vala* sibyl + *spa* see clairvoyantly] The foremost lay of the poetic or Elder Edda, sung by the “wise sibyl” in response to Odin’s quest for knowledge. The vala represents the indelible record of the past, which here is consulted by the god Odin. Odin Allfather

is the central character in Norse myths, and represents evolving consciousness, whether human, solar, planetary, or cosmic. Odin questions the vala and she responds with an account of creation and foretells the future destiny of conscious beings. From this record of the past history of the world, Odin learns about our planet's destiny and of nine former worlds that preceded the present one. The entire process of cosmic evolution is here comprised in a thumbnail sketch, which is all but incomprehensible unless amplified by the other lays of the Elder Edda.

The Wagner opera cycle "The Ring of the Nibelungen" is based on the Voluspa, which relates the beginning and end of the world, and the fresh, new creation to follow. The sibyl speaks of Ragnarok, when the gods retreat from existence into their own celestial spheres, presenting a grim and fearsome prospect, but the narrative ends with a note of hope for a serene future world to follow.

Volva, Volfa. See VALA

Voodoo or Voodooism [from Fongbe dialect *vodunu* from *vodu* moral and religious life of the Fons of Dahomey] A definite system of African black magic or sorcery, including various types of necromantic practice. It reached the Americas with the African slaves brought from the West Coast, and in and around the Caribbean various degrees of the cult persist and constitute a recognized if little understood social feature in the history and life of the people. Especially significant in the original Fon religion are the principal temples in the sacred forests, with symbolic hieroglyphics on the walls, depicting the exploits of their kings, voodoo legends, etc., and explaining their belief in the unknowable god Meru (Great Master); this unmanifest god, too far removed from men for them to give to him any form, dealt with them through lesser gods and nature spirit, i.e., voodoo; the priestesses serving the temple in a secret cult with four degrees of initiation, and having passwords unknown to laymen; the cult of the snake or adder as the most primitive form of the religion. Such findings in voodoo history, however degraded in course of time and overlaid by beliefs and customs of cruder native tribes, have the basic elements of a hierarchic religion so enveloped in mystery as to indicate an origin far beyond the creative imagination of any people. Rather, here in strange temples of dark mystery, were the lingering echoes of some ancient wisdom teaching of those who were truly "as wise as serpents." The least altered of the original system is probably the voodoo music with its solemn, insistent rhythm in the mood of prayer or an invocation. This rhythm persists, even when the ritual songs in Haiti are composed entirely of Creole words, or of a series of unintelligible sounds.

Counterparts of the debasing and malign system of voodoo are found elsewhere under many different names, like the left-hand Tantrika of India, and the Dugpas of Tibet. In general, all of these unholy practices date back to the abuse of spiritual knowledge and power by the late Atlanteans.

Voordalak (Slavonic) A vampire, "a corpse informed by its lower principles, and maintaining a

kind of semi-life in itself by raising itself during the night from the grave, fascinating its living victims and sucking out their blood” (TG 366). Many examples are given in *Isis Unveiled*, as well as the popularly accepted means for dealing with these beings and rendering them powerless.

The reality of these vampires has been known in all times and ages, and their existence is still firmly believed in, in all parts of the Orient, as for instance in India where one of their kinds, although in this case a purely astral entity, is called the pisacha.

Vortex-Atom Theory The theory devised by Kelvin (1824-1907), more or less copied after misunderstood teachings of the ancients, to represent the atoms of matter as vortices in a homogeneous, incompressible, and perfectly nonviscous fluid. It can be shown, both mathematically and by experiments with smoke rings, that such vortices would have many of the properties attributed to atoms — they are indestructible, when two meet they rebound and vibrate — but the property of mass is not sufficiently explained. A vortical motion in such a fluid should keep on forever, but the hypothesis supplies no explanation of how such a motion could ever have been started. Descartes propounded a vortical theory, relating however to the physical universe of stars and planets; but, in his theory, it was God who set his vortices in motion.

Voru Barshti, Vourubaresti. See KARSHVAR

Voru-Zarshti, Vouruzaresti. See KARSHVAR

Votan A legislator and deified hero of ancient America, regarded as the traditional founder of culture in Central America. The traditions of the people as recorded by Abbe Brasseur de Bourbourg tell that he came across the waters in large ships, he and his companions wearing long flowing garments and speaking a language akin to the Nahuatl — which is similar to the story told about Quetzalcoatl. He found the people of Central America, from Darien to California, in a barbarous condition, living in rude huts or caverns, using skins of beasts for clothing. Votan instructed the people in the sciences and arts, such as in the use of agriculture and the art of weaving; established forms of government; and taught them the truth about the gods and their supreme head called the god of truth, who was at first worshiped without temples and without altars. According to legend he founded the city of Palenque, said to be the oldest city in Central America.

Votan is “probably the same as Quetzal-Coatl; a ‘son of the snakes,’ one admitted ‘to the snake’s hole,’ which means an Adept admitted to the Initiation in the secret chamber of the Temple” (TG 366).

Vourubaresti, Vouruzaresti. See KARSHVAR

Vowels [from Latin *vocabilis* pronounceable cf Greek *phone* vowel, voice] Largely synonymous with voice. Vowels are the most easily pronounced of speech sounds; no mute consonant can be pronounced without a vowel, and a liquid consonant is a type of vowel. Hence the subject connects

with that of the power of sound.

Marcus, a Gnostic of early Christian days, speaks of a vision in which he saw seven heavens, each sounding one vowel as they pronounced the names of the angelic hierarchies, a typical Gnostic way of revealing — and hiding — under simple, popular expressions the existence of differentiated characteristics of the cosmic hierarchy. The seven mystic vowels are the same as the Hindu seven fires, three plus four. Brahma at creation utters five vowels. The *Pistis Sophia* speaks of IEOV as a four-voweled name, being the First Man. *See also* OEAOHOO

Vrata (Sanskrit) *Vrata* plural *Vratani*. [from the verbal root *vr* to select, choose] Power, law.

Vridha-garga (Sanskrit) *Vṛddha-garga* Old Garga; an ancient sage who was one of the oldest writers on astronomy.

Vridha-manu (Sanskrit) *Vṛddha-manu* [from *vṛddha* old + *manu* an ancient legislator] An ancient recension of *The Laws of Manu*, probably the original work, referred to in some Sanskrit writings, but not known to Orientalists.

Vril A tremendous magical force wielded by people in *The Coming Race*, a posthumous novel by Bulwer-Lytton. Blavatsky compared it with the Atlantean Mash-Mak, the vibratory force of J. W. Keely, the power of sound, Eliphas Levi's astral light, akasa, etc.

Vrischika (Sanskrit) *Vṛścika* Scorpion; the eighth zodiacal sign, Scorpio. Some Hindu mystics say it represents Vishnu expanded as the universe: the expansion of the mystic bija (seed) of Vishnu into the universe, as a manifested emblem of creative activity.

Vritra (Sanskrit) *Vṛtra* The demon of drought in Vedic literature, the great foe of Indra, god of the firmament, with whom he is constantly at war. Vritra was finally mastered and slain by Indra, hence the latter was named Vritra-han (slayer of Vritra).

Vritra-han, Vritra-jit (Sanskrit) *Vṛtra-han, Vṛtra-jit* The destroyer of Vritra; a title of Indra, god of the firmament, who was in constant warfare with Vritra, the Vedic demon of drought.

Vriscika. *See* VRISCHIKA

Vul (Chaldean) The god of the atmosphere, equivalent to the Hindu Indra. He was superseded in later times by Anu, the god of heaven, who with Bel and Ea formed the great Babylonian triad.

Vulcan [from Latin *Vulcanus*] Astronomers at times have suspected the existence of a planet nearer the sun than Mercury, basing this upon perturbations of more than one kind observed in connection with Mercury and its orbit. Long ago the name Vulcan was suggested for this planet. It has been recorded that on March 26, 1859, a body was seen to be making a transit across the solar disk, yet nothing has been seen of this body since that time, although search has been made for it.

Theosophy teaches that there is a planet, at present generally invisible to human scrutiny, closer to

the sun than Mercury, and that it became generally invisible to human sight during the third root-race, after the fall of mankind into physical generation. The ancients spoke of seven sacred planets, and the sun was often enumerated as a substitute or blind for this planet.

Also, the ancient Roman fire god, who has always been identified with the Greek Hephaestos, popularly regarded by the Latins as having his workshops under several volcanic islands, but especially under Mt. Aetna. The isle of Lemnos was always sacred to him. He is represented, as are similar divinities such as the Hindu Visvakarman or Tvashtri, as a fashioner, artificer, or architectural builder of the cosmic structure; and like his counterparts, the smith of the gods and maker of their divine weapons, lord of the constructive arts, master of a thousand handicrafts, etc. Not only was his forge in Olympus supplied with fire, anvils, and all the necessities of a blacksmith, according to the figurative stories of Greek and Latin mythology, but he was attended by automatic handmaidens whom Vulcan himself had fashioned. The deity is prominent in the Homeric poems, where he is represented as the son of Jupiter and Juno.

As the divine artificer, working both in a cosmic and microcosmic manner, legends tell that Vulcan assisted in the production of the human race. He also fashioned Pandora, and aided in the birth of Minerva — for he opened Jupiter’s head with an axe in order to allow the goddess to spring forth from the head of the father of both gods and men.

Vulcan corresponds to the theosophical fohat.

Vyahritis (Sanskrit) *Vyāhṛti-s* [from *vi-ā-hṛ* to utter] The mystical utterance of the names of the seven lokas (worlds): bhur, bhuvah, svar, mahar, janar, tapar, and satya. The three first are called the great vyahritis, and in the *Laws of Manu* (2:76) are said to have been milked by the prajapatis from the Vedas: bhur or bhuh from the *Rig-Veda*, bhuvar or bhuvah from the *Yajur-Veda*, and svar or svah from the *Sama-Veda*. These three mystical words “are said to possess creative powers. The *Satapatha Brahmana* explains that they are ‘the three luminous essences’ extracted from the *Vedas* by Prajapati (‘lords of creation,’ progenitors), through heat. ‘He (Brahma) uttered the word *bhur*, and it became the earth; *bhuvah*, and it became the firmament; and *swar*, which became heaven.’ *Mahar* is the fourth ‘luminous essence,’ and was taken from the *Atharva-Veda*. But, as this word is purely *mantric* and magical, it is one, so to say, kept apart” (TG 367).

In mystical Hindu thought the seven vyahritis are words lighted by and born of the fire of mind, and their names suggest the respective characteristics of the seven lokas.

Vyakta (Sanskrit) *Vyakta* [from *vi-añj* to cause to appear, display, manifest, emanate] As an adjective, manifest, visible; hence when mulaprakriti (root-matter) becomes vyakta, it becomes differentiated and conditioned — it emanates from itself the seven prakritis, which in their turn produce the different vikritis. Thus the universe in all its multiform ranges of differentiated hierarchical being is manifested.

As a noun, the manifested one; a title of Vishnu.

Vyana (Sanskrit) *Vyāna* [from *vi* separation + the verbal root *an* to breathe, blow] One of the pranas or vital life-currents in the human or animal body, which vitalize, build, and sustain the manifested vehicle, being the vital “air” which is separative or disintegrative. Hence it is connected with the digestion and other functions implying separative or disintegrative action in the health of the body, and thus operates to maintain the body’s equilibrium. Vyana is said to have its physical action throughout the body. *See also* UDANA

Vyasa (Sanskrit) *Vyāsa* One who expands or amplifies, an interpreter or revealer;

“applied in days of old to the highest Gurus in India. There were many Vyasas in Aryavarta; one was the compiler and arranger of the *Vedas*; another, the author of the *Mahabharata* — the *twenty-eighth Vyasa or revealer in the order of succession* — and the last one of note was the author of *Uttara Mimansa*, the sixth school or system of Indian philosophy. He was also the founder of the Vedanta system. His date, as assigned by Orientalists . . . is 1,400 B.C., but this date is certainly too recent. The *Puranas* mention only twenty-eight Vyasas, who at various ages descended to the earth to promulgate Vedic truths — but there were many more” (TG 367).

Vyavaharika (Sanskrit) *Vyavahārika* [from *vy-ava-hṛ* to act or behave in affairs from the verbal root *hṛ* to carry, receive, obtain, hold] Relating to business or practice, hence practical. Pertaining to the ordinary pragmatic affairs of life or custom. In Vedantic philosophy one of the three forms of existence in human life in contradistinction to the only real life (paramarthika) and the illusory life (pratibhasika).

Vyaya (Sanskrit) *Vyaya* [from *vi* away + the verbal root *i* to go, change] Change, passing away, mutable; whatever is subject to change or decay, however long its duration may be, especially when used in opposition to *avyaya* (unchanging).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Wa-X

Waking State The state of human consciousness when perceiving the physical world, conscious of other people and things. Termed the jagrat state in Hindu philosophy, it is the lowest of the four states into which human consciousness is divided: jagrat, svapna, sushupti, and turiya.

The reason we cannot remain continuously in the waking state, but must seek another aspect of consciousness during sleep, is that “our senses are all dual, and act according to the plane of consciousness on which the thinking entity energizes. Physical sleep affords the greatest facility for its action on the various planes; at the same time it is a necessity, in order that the senses may recuperate and obtain a new lease of life for the *Jagrata*, or waking state, from the *Svapna* and *Sushupti*. . . . As a man exhausted by one state of the life fluid seeks another; as, for example, when exhausted by the hot air he refreshes himself with cool water; so sleep is the shady nook in the sunlit valley of life. Sleep is a sign that waking life has become too strong for the physical organism, and that the force of the life current must be broken by changing the waking for the sleeping state. Ask a good clairvoyant to describe the aura of a person just refreshed by sleep, and that of another just before going to sleep. The former will be seen bathed in rhythmical vibrations of life currents — golden, blue, and rosy; these are the electrical waves of Life. The latter is, as it were, in a mist of intense golden-orange hue, composed of atoms whirling with an almost incredible spasmodic rapidity, showing that the person begins to be too strongly saturated with Life; the life essence is too strong for his physical organs, and he must seek relief in the shadowy side of that essence, which side is the dream element, or physical sleep, one of the states of consciousness” (TBL 58).

Human beings, animals, and plants die not because of a lack of life, but because their vehicles become finally worn out, precisely because the life-currents within have become too strong, and the building power of the vehicles less able to repair the damages of the life-force. Paradoxically, it is the life-force which itself brings about both sleep and death, and thus life repairs its own

damage, both building and destroying.

Waldenses A movement arising in the last quarter of the 12th century in the south of France, when Peter Waldo, a rich merchant of Lyons, distributed his wealth among the poor and went forth as a preacher of voluntary poverty, likewise preaching the doctrines of the Christ. He had the Bible translated into the language of the Provence, which he and his followers read and interpreted in their own way. This brought upon them the wrath of the clergy. At length Pope Alexander prohibited them from preaching without the permission of the bishops (1179). To this Waldo replied that he must obey God rather than man — for which he was excommunicated by Lucius III in 1184, which brought on a persecution of the Waldenses which continued through the Middle Ages. During the cruel and bloody crusade against the Albigenses, the Waldenses were also attacked and almost exterminated: they survived by fleeing into the mountains and secluded valleys of the Alps. Nevertheless the persecution continued inasmuch as their doctrines were called heretical. Many adherents joined the various reforming movements which arose in Europe from time to time — such as the Hussite, Lutheran, and Protestant — although a center remained in the valleys of the Vaudois even to the present day.

Walhalla. *See* VALHALLA

Wan. *See* SVASTIKA

Wand The wand of Hermes or caduceus, the magician's wand, the rods of Moses and Aaron, the scepter of kings which shows the force of temporal power, and the crosier of a bishop, are prototypes and antitypes of a universal principle — the straight line, representing the masculine, active, positive power in nature. The magician may be said to possess a magic wand — a name for the power he can wield — and there may be various material copies of this, ranging from an actual magic wand supposedly prepared according to secret formulas, down to the humble stick or cudgel with which the ruffian enforces his will. The words rod and staff are often used figuratively as well as literally in the Bible.

In the four symbolic suits of the Tarot, the first is that of the batons, now become the clubs.

Watcher or Silent Watcher, Wondrous Being Generically the dominant self or overlord of any hierarchy. Throughout a human being's complex nature dwells his own spiritual Wondrous Being, the fountain and fundamental law of his whole nature; there is the Silent Watcher of the Brotherhood of Compassion, who is identical with the Watcher for our globe; the Watcher for our planetary chain; for our solar system, its habitat being the solar chain; for the Milky Way; and for

the home-universe. At the other extreme there is a Silent Watcher for every atom, as for every other entity, whether large or small. The Watcher for individual people is the monad, the divine prototype at the upper rung of the ladder of being; an individual dhyani-chohan, the spiritual individuality during the manvantara, and as best it can it works through its “shadows” or incarnations.

In the earlier third root-races, the Sons of Wisdom produced by kriyasakti a progeny called the Sons of Ad, Sons of the Fire-mist, or Sons of Will and Yoga. This was not a race, but “at first a wondrous Being, called the ‘Initiator,’ and after him a group of semi-divine and semi-human beings. ‘Set apart’ in Archaic *genesis* for certain purposes, they are those in whom are said to have incarnated the highest Dhyanis, ‘Munis and Rishis from previous Manvantaras’ — *to form the nursery for future human adepts*, on this earth and during the present cycle” (SD 1:207). This Wondrous Being, who descended in the early part of the Third Age, is the tree from which have come the great historically known sages and hierophants, and it holds spiritual sway over the initiated adepts. “He is *the* ‘Initiator,’ called the ‘great sacrifice.’ For, sitting at the threshold of light, he looks into it from within the circle of Darkness, which he will not cross, nor will he quit his post till the last day of this life-cycle. Why does the solitary Watcher remain at his self-chosen post? Why does he sit by the fountain of primeval Wisdom, of which he drinks no longer, as he has naught to learn which he does not know . . .? Because the lonely, sore-footed pilgrims on their way back to their *home* are never sure to the last moment of not losing their way in this limitless desert of illusion and matter called Earth-Life. Because he would fain show the way to that region of freedom and light, from which he is a voluntary exile himself, to every prisoner who has succeeded in liberating himself from the bonds of flesh and illusion. Because, in short, he has sacrificed himself for the sake of mankind, though but a few Elect may profit by the great sacrifice” (SD 1:208).

The Watchers of the seven spheres are the rectors or governors of the seven planets, also called Watchers of the earth and man. The Watchers of the four quarters of the sky are the mystical four Maharajas. Watchers reign more or less directly over mankind during satya and subsequent yugas down to the beginning of the third root-race, after which come patriarchs, heroes, etc. Each people or nation has its *direct* Watcher, guardian, or Father-in-Heaven, as for instance Jehovah-Sabaoth-Saturn for the Hebrews.

Water A primary cosmic element with almost innumerable manifestations, corresponding to the Hindu apas tattva and to the akasic waters of space. Its most fundamental meaning is that of space or akasa, the great mother of all, the feminine receptive principle over and in which broods the fire of spirit. “The first principle of things, according to Thales and other ancient philosophers. Of course this is not water on the material plane, but in a figurative sense for the potential fluid contained in boundless space. This was symbolized in ancient Egypt by *Kneph*, the ‘unrevealed’ god, who was represented as the serpent — the emblem of eternity — encircling a *water-urn*, with

his head hovering over the waters, which he incubates with his breath. ‘And the Spirit of God moved upon the face of the waters.’ (*Gen. i*). The honey-dew, the food of the gods and of the *creative bees* on the Yggdrasil, falls during the night upon the tree of life from the ‘divine waters, the birth-place of the gods.’ Alchemists claim that when pre-Adamic earth is reduced by the Alkahest to its first substance, it is *like clear water*. The Alkahest is ‘the one and the *invisible*, the water, the first principle, in the second transformation’ ” (TG 368).

Water corresponds with soul, representing the middle world between spirit or fire on the one hand, and matter or earth on the other. It corresponds to the astral plane as compared with the physical; and here we see its quality of instability, mobility, having no fixed shape but adapting itself to other shapes, dissolving solid bodies and re-precipitating them. It corresponds to the psychomental nature as contrasted with the spiritual and the physical, and to the liquid state of physical matter, though in this sense it is the water subdivision of the earth element. Water and fire are necessary elements of life, as are their correspondences the moon and sun.

Water Lily In the West equivalent to the Eastern symbol of the lotus, especially in the Greek and Latin Churches. It particularly signifies spiritual productions or manifestations, thus the Archangel Gabriel is sometimes represented as appearing before the Virgin Mary bearing a lily or a bunch of water lilies. “This spray typifying fire and water, or the idea of creation and generation, symbolizes *precisely the same idea as the lotus* in the hand of the Bodhisat who announces to Maha-Maya, Gautama’s mother, the birth of the world’s Saviour, Buddha. Thus also, Osiris and Horus were represented by the Egyptians constantly in association with the lotus-flower . . .” (SD 1:379n).

Just as the water lily or lotus rises out of the mud through the more ethereal water into the still more ethereal air, permeated by the sun, so does the individual follow the same progression of developing spirituality from the world of matter upwards through the astral light into the world of spirit illuminated by the divine sun as master of life.

Water of Life The Book of Dzyan says that light is cold flame, flame is fire, and fire produces heat, which yields the water of life in the great mother; Blavatsky explained that all these are, on our plane, the progeny of electricity — which is perhaps the most important physical manifestation of the cosmic jiva or life, emanating from fo-hat, or vice versa.

Also a synonym for Chaos, the great cosmic deep, as in the opening verses of Genesis, when the soul of the ’Elohim or hierarchy of dhyani-chohans moved through and over the waters.

Again, in myth and folktales, a magic liquid that cures all illnesses, brings the dead to life, or gives immortality. For example, in the Babylonian myth of Ishtar and Tammuz, the goddess descends to the underworld seeking the water of life to restore Tammuz to life. *See also* AB-E-HAYAT

Waters of Space Chaos, the great deep, the great cosmic Mother, the universal cosmic matrix. According to Thales and other ancient philosophers, the water of cosmic space was the first

principle emanating from the spatial deeps of spirit and producing the universe through emanational evolution. Various Greek philosophers have represented aether, fire, air, or water as the primordial cosmic principle; and each of these was true, though giving only a part of the truth. These philosophies as aspects of a whole in much the same way as the several great schools of Hindu philosophy are.

Thus the waters of space are equivalent to the veil of cosmic spirit. Water in ancient cosmogonies corresponded to the Hindu prakriti or pradhana, and like the Greek Second Logos was endowed with feminine or productive characteristics. Thus the archaic Greeks in one form of their cosmogonical philosophy taught that all things, including the gods, came forth from Ocean and his wife Tethys:

“Ocean is the immeasurable space (Spirit in Chaos), which is the Deity . . .; and Tethys is not the Earth, but primordial matter in the process of formation” (SD 2:65).

“But there are two distinct aspects in universal Esotericism, Eastern and Western, in all those personations of the *Female Power* in nature, or nature — the *noumenal* and the *phenomenal*. One is its purely metaphysical aspect, . . . the other terrestrial and physical, and at the same time *divine* from the stand-point of practical human conception and Occultism. They are all the symbols and personifications of *Chaos*, the ‘Great Deep’ or the Primordial Waters of Space, the impenetrable veil between the Incognisable and the Logos of Creation” (SD 1:431).

We. See VE

Week The period of seven days was known to the Hindus, Egyptians, Hebrews, and other ancient nations, but not used by the Greeks or Romans until the Christian Emperor Theodosius. It is not based on any exact astronomical cycle, so far as is ordinarily known, though it may be considered roughly as a subdivision of the month. It was well known to the Hebrews, and in the New Testament the word week translates the Greek Sabbator which is the Hebrew Shabbath. Though commonly Sabbath is taken to mean a seventh day after six, a more esoteric sense makes it a period of seven time units of rest after a period of seven active time units — in other words after a septenary manvantara comes a septenary pralaya. The word is also used of other sevenfold time periods, such as a week of years or of ages; for each of the days in a week of years represents 360 solar years, and the whole week 2,520 years. The Hebrews “had a Sabbatical week, a Sabbatical year, etc., etc., and their Sabbath lasted indifferently 24 hours or 24,000 years — in their secret calculations of the Sods. We of the present times call an age *a century*” (SD 2:395).

The nomenclature of the seven days of the week according to the seven sacred planets is serially uniform in the various calendars, and points to a common origin of this knowledge. It can be arrived at by dividing the day into 24 hours and assigning a planet to each hour, for instance, first counting from Saturn, then Jupiter, then Mars, Sun, Venus, Mercury, down to the Moon when, by

this system of counting and pausing at every fourth, both inclusive, the first planetary hour of each day, beginning with the sunrise, will be found to be governed by the planet which is assigned to that day. The same occurs with a ten-hour day, or by counting the planets in order and giving one to each quarter of the day (cf Fund 250).

Here are the names of the days of the week in the English, ancient Anglo-Saxon, Scandinavian, Greek, and Latin systems as being sacred to their deities:

English	Anglo-Saxon	Scandinavian	Greek	Latin
Sunday	Sunnandaeg	Day of the Sun	Phoebus	Apollo
Monday	Monandaeg	Day of the Moon	Artemis	Diana
Tuesday	Tiwesdaeg	Day of Tiw	Ares	Mars
Wednesday	Wodnesdaeg	Day of Odin	Hermes	Mercurius
Thursday	Thunresdaeg	Day of Thor	Zeus	Jupiter
Friday	Frigedaeg	Day of Frigga	Aphrodite	Venus
Saturday	Saeterndaeg	Day of (?)	Kronos	Saturnus

Blavatsky writes that in the course of time the seven-headed or septenary Dragon-logos became split up into “*four* heptanomic parts or twenty-eight portions,” which suggests the division of the week and the month, into the seven days of the week, and the 28 days of the lunar month, and the four seasons of the year. “Each lunar week has a distinct occult character in the lunar month; each day of the twenty-eight has its special characteristics; as each of the twelve constellations, whether separately or in combination with other signs, has an occult influence either for good or for evil” (SD 1:409).

The ancient Mexicans had a different system of dividing their weeks and months: their week consisted of five days, and their month of 20 days. There were likewise other weeks among other nations or peoples as, for instance, the Athenians had a week of ten days, etc.

Werewolf. See LYCANTHROPY

West The forces of the four cardinal points have each a distinct occult property, and are ruled over by the four regents. Blavatsky states that there is occult philosophy in the early Christian doctrine, echoes of which still linger in both the Orthodox Greek and the Roman Catholic Churches, that public calamities are due to invisible messengers from the north and west, and particularly from the west, the conjunction of the two points being combined in the northwest (SD 1:123). Most good, on the other hand, flows forth from the north and east. The Egyptian goddess Hathor is spoken of as the infernal Isis, the goddess preeminently of the west or nether world. East and west are not localities but directions, and when used in reference to localities the meaning is purely relative. Good and evil, too, are relative terms as experienced by human beings, for such messengers and influences are in all cases strictly karmic agents; and often what people in their blindness and weakness think a calamity or misfortune may indeed be a blessing in disguise. See also CARDINAL

POINTS

Wheat Brought to earth by Lords of Wisdom from other spheres, as were all the grains, and indeed all plants and animals. Yet wheat is said not to be known in the wild state nor to have been developed from any grass. Plato speaks of inventors — gods and demigods incarnate in human beings — who appeared successively among the races of mankind after their divine rulers had departed, and discovered fire, wheat, and wine. The kabiri and also Isis are said to have brought wheat, as is Isis. In Egyptian symbology the Osirified defunct becomes Khem, who gleans the field of Aaru — i.e., “he gleans either his reward or punishment, as that field is the celestial locality (Devachan) where the defunct is given *wheat*, the food of divine justice” (SD 1:221).

In ancient Greece wheat was always associated with Demeter or Ceres (whence the word cereal), and as Demeter was the preeminent goddess of the Mysteries, sheaves of wheat also were associated with the Mysteries. Maize held the same place in ancient America. In the Christian Church wheat is still the food in the bread — the literal, physical “body of Christ.”

Wheel Perpetual gyratory motion; a vortex, a center of revolving force. Matter is not only motion itself in low ranges of the cosmos, but has likewise many modes of motion, although not in the sense in which this phrase was used in the 19th century. Lord Kelvin’s vortex-atoms illustrate the point, for he showed that many of the properties attributed to atoms could be represented by regarding atoms as vortices in a frictionless, incompressible fluid. More recent analysis of the atom has failed to resolve it into anything more than electric particles whose properties are functions of their motions. “Atoms are called ‘Vibrations’ in Occultism . . .” (SD 2:633). Fohat traces spiral lines and forms wheels or centers of force around which primordial cosmic matter expands and contracts and passes through stages of consolidation ending in globes, and later through stages of etherealization. Vortical motion is a universal law, as seen in the stellar universe and in the electronic constitution of the physical atom, giving a fuller meaning to the word cycle.

Wheel, cycle, globes, and revolutions all pertain to the same fundamental conception of whirling, revolving, or gyratory motion of beings and substances; and as no motion can take place except in matter, space, and time, the whirlings and revolutions of beings and things include likewise the time periods or cyclic returns of beings and events throughout duration. Wherever there is a whirling or turning, whether of matter or of an event in time, it is because it is a being or thing which is active in reproducing itself in cyclic events (cf Ezekiel 1:15-21). This is one of the archaic ways of understanding what is now called the principle of Relativity. Indeed, so intimate and entangled are the actor and the act — the being and its movements in time — that it is not always easy to distinguish the actor inherent and moving from the effects in space and time of such movement; so that when we speak of a cycle of time we are perforce obliged to conceive of a moving entity producing the cycle, albeit the moving entity may not be visible to us and indeed may be incomprehensible. Hence, the frequent and often perplexing usage of wheel or wheelings found in ancient occult writings. *See also* WINGED WHEEL; GLOBE, WINGED

Whirling Souls Used in reference to the Hebrew Gilgulim, the cyclic journeys or whirlings of the monad, and the Qabbalistic teaching that during the course of these peregrinations or transmigrations it enters body after body.

Whirlwind A gyrating wind; in theosophy, when applied to the movements of a universe, a name for the moving of the Great Breath and for the various functions and activities of fohat. Motion, the divine breath, becomes the cosmic whirling or whirlwind and sets in motion the particles in space, bringing about now their coagulation and concretion, now their dissipation and dispersion. Deity thus mystically becomes a whirlwind; pulsatory life assumes a whirling movement. Stages in world formation are described as diffused cosmic matter, then the fiery whirlwind, the first stage in the formation of a nebula, leading eventually to the formation of solar system and more particularly of a globe or group of solar or planetary globes. The primordial seven forces, the first seven breaths of the cosmic dragon of wisdom or cosmic manifest intelligence, produce from their circumgyrating motions the fiery whirlwind. The first chapter of Ezekiel mentions a whirlwind and other descriptions of cosmic evolution, especially wheels.

White Regarded as the source whence the seven prismatic colors diverge, it stands for the Logos of a hierarchy. Nearly all the archaic religio-philosophies state that light or white is born of darkness, the incomprehensible deeps of universal life which is darkness only to our poorly evolved sense and mind. In this sense, darkness may often be spoken of as absolute light.

As opposed to black, it mystically signifies pure and good: for example, white magician or white magic.

White Island Translation of the Sanskrit sveta-dvipa; an island mentioned frequently in ancient Hindu Puranic accounts of the various continents or islands which have flourished and disappeared in past geologic ages, as well as those which now are or which will come into being in time. It was an actual continental system with outlying islands lying mainly within the arctic regions, and its remains (with partial submersions and re-elevations within geologic history) are today known as Greenland, Siberia, and several other places. It is equivalent to the second continent in theosophical teaching, although there were at much later dates than this continental system a few small islands also called white.

Another dvipa mentioned in the Puranas, Saka-dvipa, has not yet come into existence and is now mainly under the floors of the oceans. It may be called the sixth continent. Both Sveta-dvipa and Saka-dvipa have been confused by some writers with the islands called Ruta and Daitya, which have both disappeared: Ruta between 800 and 900 thousand years ago, and the smaller Daitya at a much later date but still several hundred thousand years ago. Ruta and Daitya were remnants of the fourth or Atlantean continent.

Mystically, although based on geological history, Sveta-dvipa is often called part of the Eternal

Land or north pole and the lands immediately surrounding it. The unvarying traditions of a large part of the Orient state that it is the only locality which escapes the fate of most other dvipas: total submersion under the waters of the oceans. All the avatars of Vishnu were said to have come originally from the White Island. It is sometimes called preeminently the home or source of white magicians, and is contrasted with Atala, often called the abode of black magicians.

White Magic, White Magicians. *See* MAGIC

White Stone “To him that overcometh will I give of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it” (Rev 2:17). In Revelation, a symbolic record of John’s initiation, the white stone is the new, pure, inner psychological vehicle in the person which the spirit within him is enabled to acquire and work through when the victory in initiation has been won; and the new name signifies the new self which has thus become manifest in him. The stone “had the word *prize* engraved on it, and was the symbol of that word given to the neophyte who, in his initiation, had successfully passed through all the trials in the Mysteries. It was the potent white cornelian of the mediaeval Rosicrucians, who took it from the Gnostics” (TG 369). In exoteric rites this truth was represented by the gift of an actual stone or gem, and we hear of the *alba petra* (white stone) of initiation; while the Gnostic gems and their inscriptions are well known. It also calls to mind the philosopher’s stone.

Widow’s Son “A name given to the French Masons, because the Masonic ceremonies are principally based on the adventures and death of Hiram Abif, ‘the widow’s son,’ who is supposed to have helped to build the mythical Solomon’s Temple” (TG 369). *See also* HIRAM ABIF

Will The ensouling creative essence of abstract, eternal motion throughout the kosmos. As an eternal principle it is neither spirit nor substance but everlasting ideation. In its abstract sense, it is a hierarchy of intelligent forces emanating from the aggregate of the hosts of beings, visible and invisible, which are nature itself. The so-called laws of nature are the action and interaction of the combined consciousnesses and wills which pervade the kosmos. The will pours forth in floods of light and life from the primal Logos. These floods, following the pathways of universal circulation, come to us from the central heart of the solar system — insofar as our solar universe is concerned. They thus descend, plane by plane and cycle by cycle, into the depths of matter, from which finally they arise again towards their primal source. In this progressive descent and ascent, will is made to manifest in keeping with each plane or state of consciousness which it enters. There is, therefore, the one fundamental kosmic will-ideation, breaking into innumerable streams of *willing* entities during periods of manifestation, and thus it operates in myriad ways, in every round of the endless ladder of life.

Divine or universal thought and will come into manifestation through the collective hosts of spiritual beings, the dhyani-chohans, who are the vehicles through which the unmanifested appears. “They are the Intelligent Forces that give to and enact in Nature her ‘laws,’ while themselves acting according to laws imposed upon them in a similar manner by still higher Powers; but they are not ‘the personifications’ of the powers of Nature, as erroneously thought” (SD 1:38). The natural law which preserves the balanced motion of planetary rotation was explained by Herschel’s saying “that there is a *will* needed to impart a circular motion and *another will* to restrain it” (SD 1:503).

In the composite human being — the microcosm — there are the divine, spiritual, intellectual, emotional, animal, astral, and even physical wills. The old maxim “behind will stands desire” accounts for the paradoxical influence of this colorless force which is used to energize both good and evil motives. Thus, as it operates through the intermediate human nature, the individual consciously and unconsciously gives it a right or wrong direction, according to his use of free will in choosing his course of conduct. The divine will is expressed in the sublime, impersonal desires of lofty celestial deities; while at the opposite pole, selfish, sensual, animal desires too often direct the action of the human will. The origin of good and evil lies respectively in the harmony and the conflict of wills in the kosmos.

The special physical organ of the human will is the pituitary gland. The brain and body show the different action of the conscious, positive, volitional will and of the negative, automatic, vegetative will. The latter energizes the mysteries of organic functions carried on by various conscious or semiconscious elemental entities who themselves act instinctively under the intelligent, harmonious laws of nature for the body’s welfare.

Will power is a mighty, colorless force or energy which can be set in motion by one who has the power and knowledge to do so. In India, in combination with abstract desire, it is mentioned as one of six primary powers (ichchhasakti) by which the adept accomplishes many of his wonders. “The ancients held that any idea will manifest itself *externally*, if one’s attention (and Will) is deeply concentrated upon it; similarly, an intense volition will be followed by the desired result . . . For creation is but the result of will acting on phenomenal matter, the calling forth out of the primordial divine *Light* and eternal *Life*” (SD 2:173). The occult power of will explains many scientific problems of animate and inanimate matter. In human beings, it may consciously and unconsciously act upon other human wills and upon that of beasts; likewise, it may act upon physical and astral substance to produce various phenomena such as levitation, fire-walking, birthmarks, etc. “Paracelsus teaches that ‘determined will is the beginning of all magical operations. It is because men do not perfectly imagine and believe the result, that the (occult) arts are so uncertain, while they might be perfectly certain’ ” (TG 370).

Will-born Used in *The Secret Doctrine* as equivalent to mind-born — referring specifically to those

beings in the early third root-race “while it was yet in its state of purity” who were created by means of will power through kriyasakti by the Sons of Wisdom. This progeny is termed the Sons of Ad, Sons of the Fire-mist, or Sons of Will and Yoga. “It was not a Race, this progeny. It was at first a wondrous Being, called the ‘Initiator,’ and after him a group of semi-divine and semi-human beings. ‘Set apart’ in Archaic *genesis* for certain purposes, they are those in whom are said to have incarnated the highest Dhyanis, ‘Munis and Rishis from previous Manvantaras’ — *to form the nursery for future human adepts*, on this earth and during the present cycle” (SD 1:207). Theosophy teaches that in future ages generation by means of will power through krisiyasakti will again be the method of producing offspring.

The Puranas also refer to will-born progeny, termed chhandajas.

Willi. *See* VILI

Will-less A condition of beings who have not yet evolved forth free will, hence without initiative or self-determination. A specific instance is the case where will-less may be applied to the gods in heaven against whom Satan rebelled (as narrated in Milton’s *Paradise Lost*). In theosophical literature, used in reference to mankind in its early stages before manas (mind) became awakened, hence to the first and second root-races and early third root-race. Even among these early races the will was not absent, but it had not yet come into functional activity.

Will Power. *See* WILL

Wind Often used synonymously with spirit and breath, which are denoted by similar or identical words in many languages. In the New Testament (John 3:8) Jesus uses the simile of wind for spirit: “The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit.” Another equally exact translation reads: “The Spirit breathes wither it will, and you hear its voice (or power), but know not whence it comes and whither its destination; thus is everyone who arises out of the spirit.”

Wind is also used alternatively with air. The regents of the cosmic forces of north, south, east, and west — the four Maharajas connected with karma — have as their material agents the four corresponding winds or spirits, which mightily influence all living things.

With the Greeks, “the cave of the winds was the earth, and the winds were the winds of the spirit, the circulations of the universe figured as winds: a cave of which the north gate was made of horn through which they ascend also, but mainly descend. And the south gate of the earth, or of the cave of the winds, was made of ivory, signifying the elephants of the south, as the horn does the tusks of the animals of the north. And out of the south gate go the hordes of men” (SOPh 321-2). *See also* ANIMA; PNEUMA; SPIRITUS

Wine Used as an emblem of life and spirit, as in the Mysteries, where at one stage of the initiatory rites wine and bread were offered to the candidate as symbols of spirit and body, the meaning

being the same as that conveyed elsewhere by fire and water, or blood and flesh. It was necessary for the aspirant to be perfected in both ways. The rite was very early adopted from the Dionysian Mysteries by the Christian churches in the sacrament of the Eucharist where wine represents the blood of Christ, and the bread his body. Wine is also connected in the same mystical manner with the Greek god Dionysos or Bacchus, for this divinity represented the Christos or initiator, teacher, and savior of mankind; and thus wine stands for inspiration and holy enthusiasm, varying from divine inspiration and spiritual quickening all down the scale to merely phrenetic exaltation, and even when grossly degenerate, orgiastic, and drunken excitement, such as marked the degraded forms of Bacchic worship.

In the New Testament the parable of the turning of water into wine is another way of stating that exoteric or mythologic teachings were explained and illustrated so that the inner wisdom became known, the wine standing for the inner aspect. Only an adept or initiate is able to do this. *See also* BREAD AND WINE; SOMA; VINE

Wing(s) Often signifying flight, but more accurately the soaring power of the spirit, literally or metaphorically, as in the wings of Mercury, of Christian, Hebrew, and other angelic figures of the Mesopotamian nations, of the horse Pegasus, of the sphinxes representative of the several human powers, of the winged dragons, of the winged wheels mentioned in Ezekiel's vision of initiation, and also as descriptive of the workings of fohat. The eternal bird, the flutter of whose wings produces life, represents the dual forces proceeding from boundless space, and the emblem is equivalent to Hansa, the Hindu bird of wisdom. Similar to this is the winged globe of Egypt.

As the emblem in ancient symbolic art, representative of the soaring power of the human spirit-soul within, and from this fundamental idea the emblem has been applied to derivative symbolic ideas, such as the flight of the inner self into interior worlds during the trials of initiation, or the soaring intelligence of the initiate penetrating into the mysteries and secrets of interior worlds.

Winged Globe. *See* GLOBE, WINGED

Winged Wheel Used in mystic philosophy worldwide, depicted under many forms, whether as a winged wheel, globe, egg, disk, etc. The Stanzas of Dzyan state that "Fohat takes five strides, and builds a winged wheel at each corner of the square for the four holy ones." Here winged wheel is a name for the four Maharajas who are the guardians or regents of the cosmic forces of the cardinal points north, south, east, and west (SD 1:122).

More generally, the winged wheel or globe suggests cyclic time unrolling its mysterious destiny, emerging from the darkness of the mists of the past, passing through the present, and pursuing its equally mysterious but always karmic courses into the future. In a more restricted sense, it applies to the re embodying monads, the egg, wheel, or disk representing the monad or consciousness-center, and its wings suggesting its passage through not only duration but space. *See also* WHEEL

Wisdom. See ATMA-VIDYA; BODHI; HOCHMAH; SOPHIA, ETC.

Wisdom-eye. See PINEAL GLAND

Witch of Endor The wise woman of Endor or 'Eyn-dor, mentioned in the Bible as having “a familiar spirit” (Sam 28:7-25), who called up the shade of Samuel at the request of the dejected Saul, saying: “I saw gods ascending out of the earth”; and the prophecy of Saul’s death and Israel’s fall into the hands of the Philistines proved to be correct. Blavatsky speaks of her as “Sedecla, the Obeah woman of Endor” (IU 1:494); Sedecla may be a transliteration of an old Hebrew name Tsedeqlah [from *tsedeq* righteous, just, exact, accurate] — a possible reference to her necromantic skill. She was one of the class of psychic seeresses so well known in ancient story, whose practices were almost universally condemned.

Passages in holy scriptures, such as 1 Samuel, have misled many Europeans into believing that such methods of attempting to peer into the future were proper and considered morally permissible by the wise of ancient days. Yet one has but to read this chapter to see that the woman knew her practice was done against the law then prevailing, which apparently made necromantic intercourse of this type punishable with death (cf 28:9). Traffic with the dead was not infrequently resorted to in ancient times, but was censured as unholy, if not evil. Such raisings of the dead have been common in all ages by necromancers, sorcerers, and traffickers in lower magic; although it is quite true that ancient legend and story provides a number of instances where people of prominence resorted in moments of desperation to such methods in an attempt to gain foreknowledge of events coming to pass: for example, the incident related by Homer of the raising of the shade of the seer Teiresias by Odysseus (Odyssey bk 11) and again the necromantic practices of Sextus, the son of Pompey, through the “witch” Erictho on the plains of Thessaly, as described by Lucan (Pharsalia Bk 6, vv. 570-820).

Witches’ Sabbath [from Anglo-Saxon *wicca* from *wit-ga* seer, prophet; later, wizard, witch] A gathering of witches for the purpose of celebrating their orgies, one of the functions of which was dancing around a goat, undoubtedly a remnant of the ancient worship of Pan. Every race and people believed that witches conferred directly with the devil, “and some believe in it still. Thus the chief headquarters and place of meeting of all the witches in Russian is said to be the Bald Mountains (*Lyssaya Gora*), near Kief, and in Germany the Brocken, in the Harz Mountains. In old Boston, U. S. A., they met near the ‘Devil’s Pond,’ in a large forest which has now disappeared. At Salem, they were put to death almost at the will of the Church Elders, and in South Carolina a witch was burnt as late as 1865. In Germany and England they were murdered by Church and State in thousands, being forced to lie and confess under torture their participation in the ‘Witches’ Sabbath’ ” (TG 371).

One of the mystical and popular meanings in medieval times of the Hebrew sabbath — signifying

rest, inactivity, and therefore applicable in the cosmic scale to pralaya — is a midnight meeting.

Wittoba. *See* VITTHALA

Wodan, Woden. *See* ODIN

Woman In philosophy, symbolizes the mother aspect of nature or feminine characteristic of the universe always found in the triads of Father-Mother-Son (changed in the Christian scheme to Father, Son, and Holy Ghost — the Holy Spirit in primitive Christianity always being considered feminine). From time immemorial it has been customary to associate primordial spirit-substance, later becoming matter, with the cosmic feminine principle represented symbolically by a horizontal line); and spirit has always been associated with the masculine principle (represented by a vertical line); but the words feminine and masculine are merely borrowed from human beings, and the characteristics of originating cosmic principles were far better expressed by pairs of opposites such as negative and positive.

In cosmogenesis, the feminine principle is represented by the waters of space or great deep, often called the womb of nature. From this figure of speech was born the conception found in some ancient cosmogonies, such as the Hebrew, of the ark, containing all the germs of lives of a universe and pictured as resting or moving on the cosmic waters. Another symbol for the feminine principle was that of the lotus, which likewise rests upon the water, finally rising above it when it blossoms. One symbol of the universe in germ before any aspect of manifestation occurs is the matripadma or closed “mother lotus,” before the cosmic blossom has been quickened by spirit into expanding into becoming the universe. It is also referred to as devamatri (the divine mother), the matrix from which all the suns and planets were born.

In the cosmogony of the Hebrew Qabbalah, the first Sephirah which emanates from latent divinity is at times represented as feminine; yet when this feminine emanation becomes creative it is then represented as conjoining masculine traits with its own, so that at this stage it is envisaged as masculine-feminine. This first spiritual emanation, emanating from itself the next phase of cosmogonical production, is termed the Shechinah, the mother of all the successively emanated Sephiroth. Thus the Shechinah is an echo of archaic Hindu cosmogonic speculation, corresponding to pradhana or prakriti.

In theosophic cosmogony space is often called the Great Mother before cosmic activity commences and, at the opening of manvantara, Father-Mother with space becomes emanative and is called svabhavat or mother-space. Svabhavat is the emanation from cosmic space or darkness — so called because its utter and undiluted essential spirit is virtually beyond the reach of the light of mind as manifested in humanity.

Metaphors such as woman and mother are always symbolical when referring to motherhood, and have no associations with physical sex, for “esotericism ignores both sexes. Its highest Deity is

sexless as it is formless, neither Father nor Mother; and its first manifested beings, celestial and terrestrial alike, become only gradually androgynous and finally separate into distinct sexes” (SD 1:136n). This was clearly understood originally, so that there was no degrading or misinterpreting of these figures of speech. With descending cycles, however, humanity’s religious conceptions equally materialized: the key ideas having been forgotten or lost, abstractions became concreted into materializations, a masculine Creator or feminine Creatrix were then placed at the summit of the various pantheons, and early religious philosophy — which was as scientific as it was religious and philosophical — cast upon the background of the spatial universe images of human surroundings and way of life; so that the deities in the mythologies finally became human images, more powerful but equally swayed by passion, driven by impulse, and restricted by these even as human beings are. Such projection of human attributes into the cosmic spaces led to a still more materialized visioning of the divinities, so that the feminine or productive characteristics of nature in the popular religious mythologies finally gave way before the masculine, and the earlier, essentially beautiful idea of the mother of nature was swallowed up in the purely masculine traits of national divinities, many of them distinctly male and evil, such as the Jewish Jehovah, who waxed wroth and smelt the sweet savor of burnt sacrifices, or again the Greek Zeus swayed by ignoble passions.

“No exoteric religious system has ever adopted a female Creator, and thus woman was regarded and treated, from the first dawn of popular religions, as inferior to man. It is only in China and Egypt that Kwan-yin and Isis were placed on a par with the male gods” (SD 1:136n). The aspects of Isis, for instance, are familiar enough: as the mother with her child, and as the faithful spiritual consort of Osiris — these were for easier understanding by the populace; but in the sanctuary Isis remained universal cosmic nature, the cosmic producing mother, the goddess whose veil of nature no mere human had ever raised. Plutarch recorded an inscription addressed to Isis: “I am everything which has been, and which is, and which shall be, and no one has ever drawn my veil” (De Iside at Osiride); to which were added “the fruit of my womb became the Sun” (Proclus, Commentary on the Timaeus, 1:82).

In China, however, the ideal cosmic feminine was named Kwan-yin, the mother of mercy and knowledge, what in Hindustan is called mahat or cosmic buddhi; she is called the triple of Kwan-shai-yin “because in her correlations, metaphysical and cosmical, she is the ‘Mother, the Wife and the Daughter,’ of the *Logos*, just as in the later theological translations she became ‘the Father Son and (the female) Holy Ghost’ — the *Sakti* or Energy — the Essence of the three” (SD 1:136).

With the Gnostics truth itself was portrayed as a disrobed divinity, every part of her cosmic form being numbered and lettered. This divine wisdom they called Sophia, virtually the same as the Qabbalistic Shechinah. Even in the modern Occident, instinct has determined that justice shall be pictured as feminine, as also liberty and peace. “The Gnostic Sophia, ‘Wisdom’ who is ‘the Mother’ of the Ogdoad . . . is the Holy Ghost and the Creator of all, as in the ancient systems. The ‘father’ is a

far later invention. The earliest manifested Logos was female everywhere — the mother of the seven planetary powers” (SD 1:72n).

Womb The productive and reproductive powers of nature have often been symbolized by peoples in world history; and as production or reproduction is perhaps most familiar in the sacred function of motherhood, to many minds the womb has seemed an especially suggestive emblem in the small of nature’s reproductive principles on the macrocosmic scale. There are various applications of the emblem; mystically as well as historically, the moon is one such, being not only the cosmic mother of the earth, but in fact its former material imbodiment. Hence both moon and womb are considered to have been, or to be, the containers and nourishers of the seeds of life. Very frequently instead of the womb, nature itself is considered. In a personified sense, it is called the Great Mother, mother-space, or primeval chaos. In a somewhat less clear application, nature’s womb is considered to be the waters of space, as found for instance in Genesis, for the manifested universes are conceived and nourished therein.

Still another emblem is that of the ark or argha, well known in the Occident from the Bible story, the ark here meaning the container or seeds of lives left by a departed life-wave or group of life-waves, remaining stored in the womb of nature for the generation of new races.

In a more mystical sense, the same series of ideas is connected with emblems such as the solar boat of ancient Egypt carrying the seeds of life across the waters of space from one cosmic world to another; even the navis or nave of a temple or church was connected with the original idea of the birth of the new person, the nave being but a later popular appearance of the initiation chamber of the sanctuary, which was the womb of the new life giving birth to the reborn — the dvijas of ancient India.

In archaic Sanskrit writings the same general ideas are frequently noted, as in the Sanskrit compound hiranyagarbha (golden womb), the life-germ enclosed in the golden light or womb of space, and more mystically for the individual, the golden womb of his inner consciousness, out of which regeneration of character into the new life is born.

Wondrous Being Often equivalent to Silent Watcher, the supreme head of a hierarchy; and since hierarchies are innumerable, there are innumerable Wondrous Beings. Thus there is a Wondrous Being or Silent Watcher of cosmic magnitude for the Brotherhood of Compassion; a Wondrous Being for our globe, who is identical on a smaller scale; and a Wondrous Being for our planetary chain. In the other direction, there are Wondrous Beings for all less hierarchies even down to that of the atom: it is the highest egoic form of the divine spark everywhere. In *The Secret Doctrine* the Wondrous Being is made equivalent to the root-base or ever-living-human-banyan.

“This ‘Wondrous Being’ descended from a ‘high region,’ they say, in the early part of the Third Age, before the separation of the sexes of the Third Race. . . .

“The ‘Being’ just referred to, which has to remain nameless, is the *Tree* from which, in subsequent ages, all the great *historically* known Sages and Hierophants, such as the Rishi Kapila, Hermes, Enoch, Orpheus, etc., etc., have branched off. As objective *man*, he is the mysterious (to the profane — the ever invisible) yet ever present Personage about whom legends are rife in the East, especially among the Occultists and the students of the Sacred Science. It is he who changes form, yet remains ever the same. And it is he again who holds spiritual sway over the *initiated* Adepts throughout the whole world. He is, as said, the ‘Nameless One’ who has so many names, and yet whose names and whose very nature are unknown. He is *the* ‘Initiator,’ called the ‘great sacrifice.’ For, sitting at the threshold of light, he looks into it from within the circle of Darkness, which he will not cross; nor will he quit his post till the last day of this life-cycle” (SD 1:207-8).

The Wondrous Being of the human constitution is the higher monad called atma-buddhi-manas or the inner god, to which Jesus referred when he spoke of his Father. *See also* WATCHER

Word In religious and philosophical usage, a translation of the Greek logos or Latin verbum. Its meaning here is that of reason manifested, employed mainly in a cosmogonic sense. “The esoteric meaning of the word *Logos* (speech or word, *Verbum*) is the rendering in objective expression, as in a photograph, of the concealed thought. The *Logos* is the mirror reflecting divine mind, and the Universe is the mirror of the *Logos*, though the latter is the *esse* of that Universe. As the *Logos* reflects *all* in the Universe of Pleroma, so man reflects in himself all that he sees and finds in *his* Universe, the Earth” (SD 2:25). This word was chosen because human thought, or immanent conscious intelligence or mind, manifests itself through words. It is familiar to Christians through the opening verse of John: “In the beginning was the Word, and the Word was with God, and the Word was God”; “And the Word was made flesh, and dwelt among us” (1:1, 14). In the former quotation the meaning is entirely cosmogonic; in the latter, it has been diminished to signify the innate Word or divinity in man, which when in full control of the human adept can, by a stretch of metaphor, mean that the innate Christ, Buddha, or god in man so controls the human personality as to have become the latter, and thus to manifest among men.

Cosmogonically, theosophy considers the universe and all in it, from its first divine appearance to its last material modification, as being *in toto* as well as in all manifested details an emanation from the universal mind. This emanation takes place at the beginning of a manvantara in three separate stages or degrees: the First or unmanifest Logos; the Second or manifest-unmanifest Logos; and finally the Third or manifest Logos. Logos is applicable to these three stages because each is the manifesting of the wisdom in its divine predecessor, each stage carrying within itself, on the principle of the emanational scheme, the attributes or qualities of its predecessors. The Second Logos has invariably been considered feminine, and the Third Logos is regarded as the creative power.

Corresponding to the three Logoi in the Hindu scheme are Brahman, Brahma, and Isvara emanating originally from parabrahman-mulaprakriti. In the highly philosophical visioning of Mahayana Buddhism is adi-buddha, mahabuddhi, and the celestial buddha, occasionally indirectly called dharmakaya. On a scale of less magnitude, Hindu thought has developed the triad Brahma, the emanator or original emanation; Vishnu, the supporter or sustainer, a feminine characteristic nevertheless; and Siva at once the regenerator and producer in the sense of destroying but to regenerate. Still a third Hindu scheme is found in the series of paramatman, mahabuddhi or alaya, and mahat or cosmic creative mind.

A somewhat similar usage in the Qabbalah is Meimra, or 'imrah (word, particularly from divinity) [both from Hebrew verbal root *amar* to say, speak, use words]. One of the Stanzas of Dzyan refers to the Army of the Voice, which is explained to be “the prototype of the ‘Host of the Logos,’ or the ‘word’ of the Sepher Jezirah, called in the Secret Doctrine ‘the One Number issued from No-Number’ — the One Eternal Principle” (SD 1:94). *See also* LOGOS

Wordpassing, Passwords Communication or passing of the word or words in two contexts: 1) in the sacred Mysteries, by one hierophant just before his death to his successor; and 2) as the culminating act of initiation, from the initiate to the candidate or neophyte, as in Freemasonry by the Master of the Lodge, representing King Solomon, to the candidate after his raising.

In the first case, the hierophant could either offer his pure life “as a sacrifice for his race to the gods whom he hoped to rejoin,” or an animal victim. This last is a blind, for no initiate of the right-hand path ever sacrificed the life of an animal or any life. The sacrifice performed is the complete conquest of the lower, animal nature, either in this or a lower degree; hence the alternative. The sacrifice of their lives “depended entirely on their own will. At the last moment of the solemn ‘new birth,’ the initiator passed ‘the word’ to the initiated, and immediately after that the latter had a weapon placed in his right hand, and was ordered *to strike*. This is the true origin of the Christian dogma of atonement” (IU 2:42). Blavatsky mentions a widespread superstition among the Slavs and Russians that a magician or wizard cannot die before he has passed the word to a successor, which she traces to the ancient Mysteries.

In the Egyptian initiatory rites taking place in the Great Pyramid, the neophyte,

“upon returning — received the *Word*, with or without the ‘heart’s blood’ of the Hierophant.

“Only in truth the Hierophant was never killed — neither in India or elsewhere, the murder being simply feigned — unless the Initiator had chosen the Initiate for his successor and had decided to pass to him the last and supreme Word, after which he had to die — only one man in a nation had the right to know that word . . .

“But he died, he was not killed. For killing, if really done, would belong to black, not to divine Magic. It is the transmission of light, rather than a transfer of life, of life spiritual and

divine, and it is the shedding of Wisdom, not of blood” (BCW 14:262-4).

That the initiate was compelled to kill the initiator was allegorical and exoteric.

Turning to the second meaning, in Freemasonry every degree has its password or words, which are given to the neophyte during initiation into that degree, the possession of which is a requisite for admission into the working of that degree, and to the conferring of it upon others. By means of it, initiates, as of Freemasonry, may become known to one another. In the ancient Mysteries such words were key words, words of power — not mere words or phrases which could be communicated to anyone merely after taking part in a ceremony however symbolic, but only to those who were inwardly qualified and worthy of receiving them; who, in fact, had achieved the right of demanding them. Thus in a sense such words were ineffable, not only not to be uttered but unutterable to anyone not entitled to receive them, anyone who had not attained through aspiration, self-conquest, and inner development of mind and heart that stage wherein an understanding of them would be possible. Such inner development must in fact have been begun before one could be truly initiated even into the lowest degree, and must be attained progressively in greater and greater measure as an indispensable qualification for advancement into a higher degree. This use of passwords is also seen in the Egyptian *Book of the Dead*.

World Frequently used to signify various facts of nature: a cosmic plane or subplane, a cosmic sphere, or less accurately an entire cosmic hierarchy. Hence it is common to speak of superior and inferior worlds, or worlds of spirit and of matter, which are not separated from each other; for the worlds of spirit or the superior worlds are the origins of the lower or inferior worlds, as these latter are in the course of cosmic emanation unfolded from cosmic space.

A division is generally made between the superior (arupa or formless) worlds and the inferior (rupa or form) worlds, the latter situated on the four lower planes of the septenary hierarchy. These are also referred to as the noumenal and phenomenal, unmanifested and manifested, “the worlds of *Idea* and the worlds of *Matter*. ‘As above, so below,’ states the Hermetic philosophy. This lower world is formed on its prototype — the higher world; and ‘everything in the lower is but an image (a reflection) of the higher.’ (*Zohar*, ii, fol. 20 A.)” (TG 372).

World Egg, Mundane Egg The virgin or eternal egg is chaos, which is fecundated by the ray from spirit, and yet remains immaculate. According to the Stanzas of Dzyan, “The ray shoots through the virgin egg; the ray causes the eternal egg to thrill, and drop the non-eternal germ, which condenses into the world-egg” (SD 1:28). The non-eternal egg signifies the transitory worlds of manifestation and is often used for the universe in germ preceding its emanational unfolding. The first cause of a universe, its emanating spirit, was figured as a bird which dropped an egg into chaos, the egg in course of aeons becomes the manifested universe.

According to the *Laws of Manu*, hiranyagarbha “is Brahma *the first male* formed by the undiscernible Causeless cause in a ‘Golden Egg resplendent as the Sun,’ ” (SD 1:89). The *Rig-Veda*

says that the incomprehensible divine germ of our universe, ” ‘the one Lord of all beings . . . the one animating principle of gods and man,’ arose, in the beginning, in the Golden Womb, Hiranyagarbha — which is the Mundane Egg or sphere of our Universe” (ibid.).

Ptah, the Egyptian god of creation, is represented as bringing forth beings from a lump of clay on a potter’s wheel. This lump of clay represents the world egg, out of which all the beings creep. And the winged globe, so prominent in Egyptian symbology, is another symbol of the world egg. *See also EGG*

World-germs A metaphor for cosmic monads, fundamental elementary principles of all ancient religious and philosophical systems. Each monad is an eternal cosmic unity, albeit they appear, disappear, and reappear during the eternally revolving cosmic cycles. In themselves they are divine consciousness-centers, divine-spiritual particles, points of abstract, conscious, cosmic substance existing during manvantaras in a state of primeval differentiation. The world-germs, are scattered like spawn throughout space. Each one pursues its karmic destiny, descending from a state of pure spirit through various phases by emanating from itself a series of sheaths or veils until the karmic limit has been reached, when each has become the cosmic spirit of a universe, world, sun, planet, etc., as the case may be. The spiritual essence of any world-germ or cosmic monad at no time actually descends or leaves its own high plane or status, but in the words of Krishna in the *Bhagavad-Gita*, each establishes a world, universe, or hierarchy with karmically destined portions of itself, and yet remains separate, transcendent.

During the course of this descent into manifestation, fohat sets in motion the primordial world-germs, the aggregation of cosmic atoms and matter, some one way, some another. The world-germs come into frequent meetings and separations, or collisions and partings, until forming their final cosmic aggregation; afterwards as individuals they pass through the nebular phase and then become comets in space.

World-germs are “viewed by Science as material particles in a highly attenuated condition, but in Occult physics as ‘Spiritual particles,’ *i.e.*, supersensuous matter existing in a state of primeval differentiation” (SD 1:200-1).

World Pillars. *See* COSMOCRATORES

World Serpent or Snake Ideas connected with the world snake are not those associated with the legend of a hero slaying a serpent but with a more profound concept. In the Hindu system, there is Ananta-Sesha, the serpent of infinity; in the ancient Scandinavian cosmogony, the world serpent

Nidhogg, is represented as encircling the globe with its tail in its mouth. The same representation is found in the Egyptian teachings:

“In the oldest Egyptian imagery, as in the cosmogonic allegories of Kneph, the mundane snake, when typifying matter, is usually represented as contained within a circle; he lies straight across its equator, thus indicating that the universe of astral light, out of which the physical world evolved, while bounding the latter, is itself bound by Emepht, or the Supreme First Cause. . . . When the serpent represents eternity and immortality, it encircles the world, biting its tail, and thus offering no solution of continuity. It then becomes the astral light” (IU 157).

Another interpretation of the snake in the circle is that “The active is attracted by the passive principle and the Great Nag [Ananta-Sesha], the serpent emblem of the eternity, attracts its tail to its mouth forming thereby a circle (cycles in the eternity) in that incessant pursuit of the negative by the positive” (ML 71).

A sublime conception has also its human analog: the world serpent as the cosmic naga or grand universal 'Adam Qadmom, the sublime cosmic initiate, the cosmic wisdom which lives from manifesting universe to manifesting universe as its Purusha or spirit. It is the source of cosmic laws, wisdom, and life which infill the universe of which each such world serpent is the divine originating cause. The same thought in its human application refers to the great adept or master of wisdom and love.

World-soul, World-spirit World-soul pertains to the lower or active side of cosmic manifestation, world-spirit to the passive side of cosmic life. World-soul is but another name for the anima mundi, whereas the world-spirit corresponds directly to the Hindu Brahman and to either the First or Second Logos, according to the manner of thinking when the application is made.

World-stuff Primordial substance out of which universes, solar systems, or worlds are developed; mulaprakriti (root-matter). Primordial matter in its first form of condensation, the radiant spiritual essence, the spiritual or ethereal “curds” which later become differentiated into the prakritis.

World Tree. See TREE; YGGDRASIL

Wraith, Wraie The fleeting apparition of a person, about the moment of death, to another person in kinship or psychomagnetic sympathy. Though wraith may cover different cases, in general it is due to the mayavi-rupa of the person who is dying. It is produced by his thought, though he is unaware of the effect he is producing. An intense and anxious thought about the person he wishes to see becomes objective to the seer, and the apparition wears the aspect and commonly the ordinary clothing of the dying person. In some cases the apparition may not be due to any thought on the part of the dying person, but to abnormal sensitiveness or clairvoyance on the part of the

seer. Being in close sympathy with the dying one, he bears the image of that one in his latent memory; and when the event occurs, his higher senses, being aware of it, cause the objectivization of this memory as a visual apparition. The thought itself is objective to a mind capable of perception on that plane; but to become objective to the physical senses, it must clothe itself in matter of a lower grade; and this objectivization may vary from a picture in the mind's eye to an apparition seen by the physical vision. In any case the organism of the seer can provide the necessary vehicle for such an objectivization. Distance plays no part in the phenomenon, and there is no projection of a physically substantial body through space from one place to another. The above case should be distinguished from an appearance of the astral double seen near the graves of the recently deceased. *See also* EIDOLON; PHANTOM; SPECTER

Writing. *See* DEVANAGARI; SPEECH

Wu-liang-shih, Wu-liang-shu (Chinese) Also Wuliang-sheu. Boundless age; equivalent to the Hebrew 'eyn soph (without bounds). The root of wu-liang-shih is the unknown darkness — the Self-existent (tsi-tsi). *See also* AMITABHA

Wu Wei (Chinese) Inaction, inactivity; quiescence, placidity. Used in Taoism in relation to the tao of man, the idea being that "Heaven is emptiness" and by practicing wu wei (inaction) and becoming "empty" one becomes at one with heaven or tao. Reminiscent of the highly mystical import of the Buddhist sunyata (Sanskrit, "emptiness," "void"). In all such words the difficulty is in finding ordinary language to convey the thought. There is not an absolutely empty point of space in all infinitude; what seems to the human senses to be cosmic vacuity is actually complete or absolute fullness, a pleroma as the Gnostics said. Cosmic sunyata or wu wei is emptiness simply because it lacks the lowest forms of matter — forms and bodies which are like the spume or bubbles on the sea of cosmic reality, which to human senses is empty because invisible, intangible, and not subject to sense perception.

Xisuthrus, Xisuthros (Greek) [from Chaldean *Khas-is-adra*] Also Sisuthrus. The tenth king of Chaldea, son of Ardates according to Berosus, the last king of the mythical age, who reigned for 18 Sari. According to Chaldean legend during his reign a great flood occurred. Xisuthrus was warned in a vision by the gods to build a vessel five stadia long and two in breadth, and to take with him into it his friends and relatives, likewise to place therein all species of animals, and to trust himself to the deep. Eventually the ark settled on the mountain of Nizir, the dwelling of the gods, also regarded as the cradle of the Chaldean race. The Jewish story of Noah was taken from this earlier Chaldean legend.

The Xisuthrus-Noah story has more than one application in now forgotten human history. In one, Xisuthrus is the ideal figure of a race passing over from one to the next succeeding continental system; or on the cosmic scale, of the transmigration of the various classes of monads with their chief from one dying planet to the succeeding planet, the child of the former. In the case of the

earth, it is the transmigration of the ten or twelve classes of monads from the moon-chain to the earth-chain, the ark standing for the cosmic surroundings governed by karmic law and holding the monads together as classes. Xisuthrus or Noah, therefore, is the collectivity of all these monadic classes into a unity for purposes of mythologic story.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ya-Yz

Yadava (Sanskrit) *Yādava* A descendant of Yadu; also a great race of Hindustan in which Krishna was born. The founder of this race, Yadu, was the son of Yayati and Devayani, and ruled over the country west of the Jumna River, adjoining the Kurus. He was the half-brother of Puru, who became the founder of the Paurava line of the Chandravansa (lunar dynasty) — to which also belonged the Kurus and Pandus. The greatest of the Yadavas in Hindu story was Krishna (hence he is called Yadava, “son of Yadu”). He established the Yadavas in Gujarat, his capital city being Dvaraka, to which Krishna brought all the inhabitants of the city of Mathura after he had slain his wicked cousin Kansa who had usurped the throne. Sometime after Krishna’s death (3102 BC), a catastrophe occurred at Dvaraka in which the city and all its inhabitants were engulfed by the ocean. Only a few members of the race who were absent from the city were saved. The present rajas of Vijaya-nagara maintain that they are living descendants of the Yadavas.

Yadus. See YADAVA

Yah, Yaho (Hebrew) *Yāh, Yāhō* Yah is an abbreviation of Jehovah, but equally well Jehovah could be said to be merely an enlargement of the original form Yah. The *Zohar* says that the 'Elohim used this word to form the world.

“To screen the real mystery name of ain-soph — the Boundless and Endless *No-Thing* — the Kabalists have brought forward the compound *attribute*-appellation of one of the personal creative Elohim, whose name was *Yah* and *Jah*, the letters *i* or *j* or *y* being interchangeable, or *Jah-Hovah*, i.e., *male* and *female*; *Jah-Eve* an *hermaphrodite*, or the *first form of humanity*, the original Adam of Earth, not even *Adam-Kadmon*, whose ‘mind-born son’ is the earthly *Jah-Hovah*, mystically. And knowing this, the crafty Rabbin-Kabalist has made of it a name so secret, that he could not divulge it later on without exposing the whole scheme; and thus he was obliged to make it *sacred*” (SD 2:126).

Both Yah and Yaho were Hebrew mystery-names; Yah is “a later abbreviation [of Yaho] which, from containing an abstract ideal, became finally applied to, and connected with, a phallic symbol — the *lingham* of creation” (TG 374). Thus Yaho and Yah are two forms of the same original Shemitic god-name found throughout Asia Minor, and which appeared in its Greek form as Iao. The Gnostics revived the Chaldean and Phoenician mystery-god Iao, placing it above the seven heavens as representing spiritual light. Its ray was nous, standing for the Demiurge as well as the divine manas. “*Y-ha-ho* was a sacred word in the Egyptian mysteries, which signified ‘the one eternal and concealed deity’ in nature and in man; *i.e.*, the ‘universal Divine Ideation,’ and the human Manas, or the higher Ego” (TG 375). Yaho in consequence must not be confused with Yehowah or Jehovah, for Jehovah was merely the inferior reflection in the higher material worlds of the spiritual light called Yaho. Yaho, therefore, is equivalent in type, standing, and character to atman, the universal, of theosophical literature.

Yah-Havvah, Yah-Hovah. See JEHOVAH

Yahweh. See YAH; JEHOVAH; TETRAGRAMMATON

Yajna (Sanskrit) *Yajña* In Vedic literature, worship, devotion, prayer, praise; in post-Vedic literature, an act of worship or devotion, an oblation, sacrifice, also sacrifice personified or fire.

” ‘The Yajna,’ say the Brahmans, ‘exists from eternity, for it proceeded from the Supreme, in whom it lay dormant from *no beginning*.’ It is the key to the *Trai-Vidya*, the thrice sacred science contained in the *Rig-Veda* verses, which teaches the Yajna or sacrificial mysteries. As Haug states in his *Introduction to the Aitareya Brahmana* — the Yajna exists as an invisible presence at all times, extending from the *Ahavaniya* or sacrificial fire to the heavens, forming a bridge or ladder by means of which the sacrificer can communicate with the world of devas, ‘and even ascend when alive to their abodes.’ It is one of the forms of Akasa, within which the mystic Word (or its underlying ‘Sound’) calls it into existence. Pronounced by the Priest-Initiate or Yogi, this Word receives creative powers, and is communicated as an impulse on the terrestrial plane through a trained *Will-power*” (TG 375).

Yajna-vidya (Sanskrit) *Yajña-vidyā* [from *yajña* sacrifice + *vidyā* knowledge] The knowledge or science of sacrificial rites. These religious rites are performed by the Brahmins to produce certain results, although the esoteric significance of the true yajna has been lost sight of. The four vidyas are yajna-vidya, maha-vidya (the great magic knowledge, now degenerated into Tantric worship), guhya-vidya (the science of mantras, etc.), and atma-vidya (true spiritual and divine wisdom), the last of which contains the keys to the other three.

Yajus (Sanskrit) *Yajus* A sacrificial prayer or formula, also particular mantras muttered in a special manner at a sacrifice, distinguished from the *rich* and *saman* verses also recited at sacrifices.

Yaldabaoth. See IALDABAOTH

Yaksha (Sanskrit) *Yakṣa* [from the verbal root *yakṣ* to devour] A class of ethereal, astral, or semi-astral beings, regarded as attendants of Kubera or Kuvera, the deity of riches; occasionally they are associated with Vishnu. The yakshas are variously described as the sons of Pulastya, Pulaha, Kasyapa, Khasa, or Krodha. One legend represents them as springing from the feet of Brahma, while one Puranic account shows them as springing from the body of Brahma with the rakshasas and immediately attempting to devour his body. However, frequently the yakshas are regarded as beings beneficent to humans. In Kalidasa's *Meghaduta*, the hero is a yaksha, represented as a banished lover who employs a cloud to bear a message to his beloved.

In later popular folklore the yakshas are associated with and classed with the pisachas, and therefore regarded with dread and made responsible for many demoniacal obsessions. "In esoteric science they are simply evil (elemental) influences, who in the sight of seers and clairvoyants descend on men, when open to the reception of such influences, like a fiery comet or a shooting star" (TG 375).

Yama (Sanskrit) *Yama* [from the verbal root *yam* to subdue, control] A curb, rein, bridle; hence the act of curbing, suppression, self-control. Especially prominent in yoga as self-restraint: it is the first of the eight angas or means of attaining mental concentration.

As a proper name, the deity who rules over the shades of the dead in the *Rig-Veda*, corresponding to the Greek Hades or Roman Pluto. Hence Yama is the personification of the third root-race, because these were the first to taste death — the first self-consciously intellectual humans who died and departed after death to devachan. Hence also the ascription in Hindu mythology to Yama as the ruler of the pitris. In the *Mahabharata*, he is described as dressed in blood-red garments, with a glittering form, a crown on his head, glowing eyes and, like Varuna, he holds a noose with which he binds the spirit after drawing it from the body after death.

"Yama is represented as the son of Vivaswat (the Sun). *He had a twin-sister named Yami*, who was ever urging him, according to another hymn, to take her for his wife, in order to perpetuate the species" (TG 375-6). Yama and his twin sister is a distinct reference to the androgynous character of the human race from the middle of the third root-race forward. The *Rig-Veda*

"nowhere shows Yama 'as having anything to do with the punishment of the wicked.' As king and judge of the dead, a Pluto in short, Yama is a far later creation. One has to study the true character of Yama-Yami throughout more than one hymn and epic poem, and collect the various accounts scattered in dozens of ancient works, and then he will obtain a consensus of allegorical statements which will be found to corroborate and justify the Esoteric teaching, that Yama-Yami is the symbol of the *dual Manas*, in one of its mystical meanings. For instance, Yama-Yami is always represented of a *green* colour and clothed with *red*, and as dwelling in a palace of *copper* and *iron*. Students of Occultism know to

which of the human ‘principles’ the green and the red colours, and by correspondence the *iron* and *copper*, are to be applied. The ‘twofold-ruler’ — the epithet of Yama-Yami — is regarded in the exoteric teachings of the Chino-Buddhists as both judge and criminal, the restrainer of *his own* evil doings and the evil-doer himself. In the Hindu epic poems Yama-Yami is the twin-child of the Sun (the deity) by Sanjna (spiritual consciousness); but while Yama is the Aryan ‘lord of the day,’ appearing as the symbol of spirit in the East, Yami is the queen of the night (darkness, ignorance) ‘who opens to mortals the path to the West’ — the emblem of evil and matter. In the *Puranas* Yama has many wives (many Yamis) who force him to dwell in the lower world (Patala, Myalpa, etc., etc.); and an allegory represents him with his foot lifted, to kick *Chhaya*, the handmaiden of his father (the astral body of his mother, Sanjna, a metaphysical aspect of Buddhi or Alaya). As stated in the Hindu Scriptures, a soul when it quits its mortal frame, repairs to its abode in the lower regions (Kamaloka or Hades). Once there, the Recorder, the Karmic messenger called *Chitragupta* (hidden or concealed brightness), reads out his account from the Great Register, wherein during the life of the human being, every deed and thought are indelibly impressed — and, according to the sentence pronounced, the ‘soul’ either ascends to the abode of the Pitris (Devachan), descends to a ‘hell’ (Kamaloka), or is reborn on earth in another human form” (TG 376).

Yamabooshee. See YAMABUSHI

Yamabushi (Japanese) A sect in Japan of ancient origin, but now inclining to Buddhism. Often regarded as the fighting monks, inasmuch as they have not hesitated to take up arms in case of necessity somewhat like certain yogis in Rajputana or the lamas in Tibet. They are perhaps most numerous near Kyoto, where they are famed for their healing powers. Yamabushi hold a “Japanese Secret Science of the Buddhist Mystics,” calling their seven mystery-teachings the seven precious things or jewels (SD 1:67).

Yamyad Yasht. See ZAMYAD YASHT

Yana (Sanskrit) *Yāna* [from the verbal root *yā* to go] Path, road, vehicle; there are two recognized paths of action in nature, the *pratyeka-yana* (the path of each one for himself) and the *amrita-yana* (the immortal vehicle or path of immortality). There are also two schools of philosophy in India using this term: the *Hinayana* (the lesser, inferior, or defective vehicle) and the *Mahayana* (the greater or superior vehicle).

This contrast is an exoteric rather than an esoteric one. It is a recognition of the fact that the religion of Gautama Buddha has separated into two general paths of action; but both the *Hinayana* and the *Mahayana* are recognized because known to possess each one its own particular value in training. The combination of the two is what one might call the esoteric path. The *Hinayana* is that portion of the esoteric path in which the mystic traveler takes the lower passional and elemental

sides of himself into strict discipline and self-control, the while following certain simple rules of day-to-day procedure; whereas the Mahayana aspect includes rather the training of the spiritual, intellectual, and higher psychic parts of the human constitution, such as is brought about by a profound study of philosophy, of the truths of nature, the mystical side of religion, and the higher parts of kosmic philosophy — all these collected together around the heart of the Mahayana which is mystical study and aspiration.

Yang (Chinese) The bright aspect — as the sunny side of a hill — in contrast to yin, the dark side. In mystic Chinese literature and in Taoism, yang is associated with the masculine aspect, while yin refers to the feminine aspect. Thus tao is regarded as the interaction of the revolving changes produced by the yang and yin: yang referring to immaterial, celestial force and substance; yin, to material equivalents.

Popularly everything of a beneficial aspect is associated with yang, while everything of maleficent tendency is related to yin. However, this limits the original conception of yang and yin as forming the two contrasted sides of the universe, for one cannot exist without the other, and each in its own way is as important as the other.

Yao (Chinese) One of the ancient legends of China tells of a flood and of a hero, Yao, who escapes the deluge in a vessel. He carries with him seven figures, which he proceeds to animate when he lands, using them for human seeds. This is a version of the worldwide deluge tales, such as those of Noah and Xisuthrus.

Yasha. *See* ZAMYAD YASHT

Yasna (Pahlavi) Worship; also the name given to each of the 17 songs of the Gathas, known too as Haiti (hat in Zoroastrianism today). Other Yasnas have been added to the original Yasnas of Gathas, making 72 in total. It is the principle liturgical book of the Parsis, containing the texts read at the sacred ceremonies in honor of the Zoroastrian deities. The part of this book of particular interest, the Gathas (ch 28-54), contain the discourses of the prophet Zoroaster, written in a metrical style and in a dialect older than and differing from that in which the other portions of the extant Avesta are written.

Yasatas (Avestan) **Yaztan** (Pahlavi) **Yazdan, Izad** (Persian) The adorable ones, worthy of worship; pure celestial spirits, gods lower in order than the Amesha Spentas. Their opposers were the Drvants. According to the Avesta there were yasatas of the fire and of the water, between whom stood Apam-napat — both an Avestic and Vedic Sanskrit name — meaning son, descendant, or offspring of the waters, i.e., the waters of space or of cosmic aether. Therefore Apan-napat corresponds to fohat and is a Sanskrit name sometimes given to Agni or cosmic fire. The emanational procession gives 1) the waters of space; 2) their offspring or son, Apan-napat, fohat, or Agni; from whom again, 3) spring the yasatas of fire.

Speaking of the great antiquity of the Zoroastrian scriptures, Blavatsky remarks that the forefathers of “the Neo-Aryans of the post-diluvian age . . . had met *before the Flood*, and conversed with the pure ‘Yazathas’ (celestial Spirits of the Elements), whose life and *food* they had once shared” (SD 2:356).

In later Zoroastrianism some of these yasatas are equivalent to the archangels. The best known among these divine beings represent the three aspects of truth in action; Atar (the life-giving force and consciousness); Sraosha (the awakening voice within); and Ashi (the resulting bliss). The number of Yasatas including the Amesha Spentas is often 33.

Yasodhara (Sanskrit) *Yaśodharā* [from *yaśas* glory, splendor + *dhāra* bearing from the verbal root *dhṛ* to bear, support] Bearer of glory. The wife of Prince Siddhartha who became Gautama Buddha, and the mother of his son Rahula. She was the daughter of a Koliyan chief and was wedded to her cousin in his 19th year. Subba Row states that the name stands for one of three mystical powers (cf utpala-varna).

Yati (Oriental) A measure of three feet.

Yatus, Yatudhanas (Sanskrit) *Yātu-s, Yātudhāna-s* A kind of spirit corresponding to the Greek daimon, one of the hierarchies of spiritual, semi-spiritual, and ethereal entities — among many other similar classes, such as the nagas, gandharvas, devas, rishis, apsarasas, and yakshas. In the human constitution, those elemental or semi-elemental beings which are instrumental in carrying out the mandates of the higher parts of man; in the solar system they perform a similar function of cosmic character. Along with the other classes, they are the “Sun’s attendants throughout the twelve solar months; in theogony, and also in anthropological evolution, they are gods and men — when incarnated in the *nether* world” (SD 2:211).

Ya-va, Yave. See YAH; JEHOVAH

Yavana (Sanskrit) *Yavana* The name by which the Greeks were designated in India. In later times the word was applied to the Moslems and to Europeans in general; hence in Sanskrit literature often equivalent to foreigner.

Yazatas. See YASATAS

Year There are several years — the sidereal, tropical, lunar, and others — known to astronomy and calendrical science. Among nations we find numerous artificial years used for purposes of adapting civil requirements to celestial necessities, or for carrying out particular methods of computation: e.g., the year of 365 days, the Julian year of 365 1/4 days, an ancient Mexican year of 260 days, and a variety of Hindu years. There is also the occult year of 360 days, which may be looked upon as a year based upon a deep knowledge of astronomy and celestial principles. The year of 360 days may likewise be considered as an average, i.e., the year which the earth hovers around and attempts through the evolving cycles of time to attain and to hold. The lunar year of

twelve lunations has been widely used in ancient times, and is still used by some nations; and there is a large number of intercalary devices for accommodating this to the solar year. Blavatsky speaks of years of six months and of two months (SD 2:621), and uses the word year as synonymous with cycle as applicable to various periods, known or secret, and even to so long a cycle as that of the precession.

The solstices and equinoxes are found in history as starting points for the year among different nations. Our own was intended for the winter solstice, but confusions of the calendar have shifted the date. The 4th of January is mentioned in theosophical writings as being the right time for the beginning of the civil year, as marking the date of the first full moon after a winter solstice coincident with a new moon. This has relation to initiatory rites.

The solar year has sometimes been used correctly enough as a symbol of solar gods and powers. Its length in full days, 365, is given by the letters in certain names, taken as numerals in accordance with the rules of the Greek alphabet: Abraxas, Meithras, Neilos, all add up to 365. This is often contrasted with the lunar year of 354 days, for which similar symbolism may be found.

The actual mysteries connected with the computations of the annual cycle of the sun are very numerous, yet all have a common background of identical fact, though the details vary considerably from people to people. As an example of the many ideas connected with the year, what is now popularly but rather mistakenly called the Babylonian method of dividing the circle or a cycle of time into 360 divisions called degrees, and each such degree again into 60 minutes, and each minute again into 60 seconds, was itself based on the occult year of 360 days, each day consisting of 12, or indeed 24, hours, each hour consisting of 60 minutes, and each minute again comprising 60 seconds.

Year of Brahma. See BRAHMA'S DAY

Ye-damma, Ye-dhamma (Pali) **Ye-dharmah** (Sanskrit) *Ye-dhammā, Ye-dharmāḥ* Generally, laws or established procedures in nature, meaning by extension the phenomenal world.

Yeheedah. See YEHIDAH

Yehidah (Hebrew) *Yēḥīdāh* [from masculine *yāḥīd* the one, the only, the unique from the verbal root *yāḥad* oneness, union; cognate with the Hebrew *'eḥād* one] In the Qabbalah, the highest human principle, as being the unique or single and indivisible individuality of the constitution, and therefore corresponding to the spiritual monad. Blavatsky places this term in context of the entire person, as presented in the Qabbalistic system: yehidah is

“esoterically, the highest individuality or Atma-Buddhi-Manas, when united in one. . . . At the time of the conception, the Holy ‘sends a *d'yook-nah*, or the *phantom* of a shadow image’ like the *face of a man*. It is designed and sculptured in the divine *tzelem*, i.e., the shadow image of the Elohim. ‘Elohim created man in his (their) *tzelem*’ or image, says *Genesis* (i. 27).

It is the *tzelem* that awaits the child and receives it at the moment of its conception, and this *tzelem* is our *linga sharira*. ‘The *rua’h* forms with the *Nephesh* the actual personality of the man,’ and also his *individuality*, or, as expressed by the Kabbalist, the combination of the two is called, if he (man) deserves it, *Yeheedah*. This combination is that which the Theosophist calls the *dual* Manas, the *higher* and the Lower Ego, united to Atma-Buddhi and become one. For as explained in the *Zohar* (i., 205b, 206a, Brody Ed.): ‘*Neshamah*, soul (*Buddhi*), comprises three degrees, and therefore she has three names, like the mystery above: that is, *Nephesh*, *Rua’h*, *Neshamah*,’ or the Lower Manas, the Higher Ego, and Buddhi, the Divine Soul. ‘It is also to be noted that the *Neshamah* has three divisions’; says Myer’s *Qabbalah*, ‘the highest is the *Ye-hee-dah*’ — or Atma-Buddhi-Manas, the latter once more as a unit; ‘the middle principle is *Hay-yah*’ — or Buddhi and the dual Manas; ‘and the last and third, the *Neshamah*, properly speaking’ — or Soul in general. ‘They manifest themselves in *Ma’hshabah*, thought, *Tzelem*, phantom of the image, *Zurath*, prototypes (mayavic forms, or *rupas*), and the *D’yooknah*, shadow of the phantom image. The *D’mooth*, likeness or similitude (physical body), is a lower manifestation’ (p. 392)” (TG 377-8; cf SD 2:633).

Ye-hou-vih, Yaheweh, Yahaweh (Hebrew) *Yahēweh, Yahaweh* He will cause to be; a rendering for Jehovah (YHVH) given by Prof. Gibbs; Blavatsky cites this detail with some approval, stating that Gibbs, in the thought behind his rendering, had cut the Gordian knot of its true occult meaning (SD 2:129).

Yellow Caps. See GELUKPAS

Yellow-faced Used in an archaic commentary on the Book of Dzyan (SD 2:427-8), referring to people on Atlantis, the continent of the fourth root-race, who remained true to their teachers, in contradistinction to the Black-faced — those who followed their sorcerer-leaders in practices of black magic — who were engulfed in the cataclysm which submerged Atlantis. The Yellow-faced, the ancestors of the succeeding fifth root-race, were led to safety by their teachers, the Sons of Wisdom. Thus the fifth root-race — sometimes referred to as Aryans because the Aryan Hindus are the descendants of the first subrace of the fifth root-race — are said to be the descendants of “the *yellow Adams*, the gigantic and highly civilized Atlanto-Aryan race”; “they ‘of the yellow hue’ are the forefathers of those whom Ethnology now classes as the Turanians, the Mongols, Chinese and other ancient nations; and the land they fled to was no other than Central Asia. There entire new races were born; there they lived and died until the separation of the nations. . . . Nearly two-thirds of one million years have elapsed since that period” (SD 2:426, 425).

The foregoing does not mean that the modern Chinese, for instance, are the first subrace of the fifth root-race; for actually the true Chinese are the remains existing today of the last or seventh subrace of the fourth root-race, although indeed, due to many millennia of intermarriage with more truly Aryan stocks, the Chinese today are to be classed as part of the fifth root-race.

There is an old legend prevalent among many peoples that the color of human skin changes from light to dark as the ages slowly pass by: the legend stating that the first in any new great racial group or stock is light-colored or moon-colored, slowly changing to a more ruddy shade verging into cream or yellow, becoming gradually brown and darker brown, and ending with chocolate or what is called black. Yet the meaning is not that every race runs through these changing tints from light to dark during the course of its evolution, but that the different minor racial groupings, appearing each in its day during the course of the slow evolution of a root-race, gradually range from the root-race's beginning from the light, and passing gradually through the different stages to the chocolate. Nor is it again to be understood that theosophy teaches that all mankind sprang either from an original pair, as metaphorically taught in the Bible, but that in the beginnings of time seven primary seed-groupings appeared on earth from inner realms, each with its own tint or color as we would now say, and each of the seven having its own karmically defined position on the ladder of evolution.

The Negroes or people of chocolate-tinted skin are nevertheless not to be understood as being the seventh or last subrace of the fourth root-race, for the Chinese were these last. The chocolate-skinned men arose as a racial group at the very close of the Atlantean cycle, and are thus racially not degenerated from a previous higher evolutionary state, but are a human seed-stock born at the end of Atlantean development, destined in time through racial miscegenation to be one of the racial contributories to the humanity of the future. *See also* YELLOW RACE

Yellow Father. The sun, in the Stanzas of Dzyan.

Yellow Race(s) The intermingling of races is very complicated, and has been an ethnological fact for almost innumerable millennia in the past, so that we can only use the term in the plural and say yellow races, in reference to peoples in which a yellow or near-yellow skin is predominant and characteristic. Even during the fourth root-race on Atlantis “there were brown, red, yellow, white and black Atlanteans,” “who represented several *humanities*, and almost a countless number of races and nations”; “The present yellow races are the descendants, however, of the early branches of the Fourth Race” (SD 2:433; 199). Certain European ethnologists say that three fundamental colors enter into the human complexion — red, yellow, and black — and that these mingle in various proportions, giving the numerous other shades.

The first physical or “solid” race (in contradistinction to the previous ethereal or astral races) appeared after the middle of the third root-race after the fall into generation. In its very beginnings, its color was light yellow or golden cream. This race gave birth to the fourth, and Siva transformed that part of humanity which became black with sin into red-yellow, whose descendants are Amerindians and Mongolians; and finally into brown-white races, which together with the yellow races, form the great bulk of present humanity (SD 2:250).

Yene, Anganta Obsession; used in India for mediumship.

Yesod (Hebrew) *Yēsōd* [plural *yēsōdōth*] Foundation, basis; the name of the ninth Sephirah, regarded as the union of Netsah and Hod, being classed as androgynous. Not counting the summit, Kether the Crown, it is the second in the central pillar of the Sephirothal Tree. Its Divine Name is 'El Hai (the living one) or occasionally Shaddai (the mighty one); in the Angelic Order it is represented as the 'Ishim (flames). In its application to the human body, as representative of 'Adam Qadmon, the cosmic man, Yesod stands for the generative organs; applied to the classification of the seven globes of a planetary chain it represents globe C (SD 1:200). From this Sephirah is emanated the tenth, Malchuth.

Yesod together with the preceding five or six Sephiroth are often considered to form the Microprosopus (the inferior Countenance or Small Face, Ze'eir 'Anpin).

Yetsirah (Hebrew) *Yēsīrāh* [from the verbal root *yātsar* to form, fashion] Also Yetzirah, Jesirah, Jetzirah. 'Olam hay-yetsirah is the sphere of formation, the third of the four worlds or 'olam of the Qabbalah. It is an emanation or continuation of the second world, 'olam hab-beri'ah. It is considered as the abode of the angels or intelligences which preside over the celestial bodies, including the sun and planets; further, on earth, over all the manifestations of nature such as fire, light, wind, rain, change of seasons, etc. It is also called the world of the builders, constructive as opposed to ideally planning architects, reminiscent of the architects and builders of *The Secret Doctrine*; therefore 'olam hay-yetsirah is frequently referred to by its Chaldean name for angels (messengers or builders) — Mal'achayya'.

Following the division into ten, as is the case in the superior spheres, the angelic hosts are grouped into ten classes as:

Mal'achim Messengers, Angels, Builders

'Er'elim Heroes or Mighty Ones

Seraphim Fiery Ones

Hayyoth Lives

'Ophanim Wheels

Hashmallim Shining Ones

'Elim Imbodied Divinities

'Elohim Gods

Benei 'Elohim Sons of the Gods

'Ishim Men (cf Zohar ii, 43a)

In this 'olam there is little taint of the earthly matter found in the world of action, the fourth world, 'olam ha-'asiyyah, emanated from the yetsiratic world.

Yeu. See YU

Yezidis (Arabic) [possibly from Persian *yazdān* god; or the 2nd 'Omayyad Caliph, Yezid (720-4); or

Persian city Yezd] A sect dwelling principally in Kurdistan, Armenia, and the Caucasus, who call themselves Dasni. Their religious beliefs take on the characteristics of their surrounding peoples, inasmuch as, openly or publicly, they regard Mohammed as a prophet, and Jesus Christ as an angel in human form. Points of resemblance are found with ancient Zoroastrian and Assyrian religion. The principal feature of their worship, however, is Satan under the name of Muluk-Taus. However, it is not the Christian Satan, nor the devil in any form; their Muluk-Taus is the hundred- or thousand-eyed cosmic wisdom, pictured as a bird.

Yezod. See YESOD

Yggdrasil (Scandinavian, Icelandic) [from *ygr* fierce, awesome, brooding + *drasill* steed, gallows] The Norse Tree of Life, on which Odin, Allfather of the universe, is mounted or hanged during a period of manifestation. From the tree drops the honeydew which feeds all creatures. The squirrel Ratatosk (intelligence) runs up and down its trunk, while on its topmost bough perches an eagle with a hawk seated between its eyes.

The tree has three roots watered by three wells. One is in Asgard, home of the gods, where it is watered by the three norns: the past (Urd, origin), the present (Verdandi, becoming), and the future which is created by them — owing (Skuld, debt). A second root penetrates the world of matter, where it is watered from the well of the giant Mimer whose waters are experience of life. Odin gave one eye as forfeit in order to receive a draft of that well, while Mimer has the use of Odin's eye which is sunk in the bottom of the well. The third root is watered by Hvergelmir, source of all the rivers of lives (kingdoms of nature) which rises in Niflheim, the world of mists (nebulae) where worlds are born.

Yggdrasil is not immortal. Its lifetime is coeval with the hierarchy the tree is used to represent. Its leaves are constantly being eaten by four stags, its bark is nibbled by two goats, and its roots are gnawed by the serpent Nidhogg which, in due course, will topple the "noble ash tree." During the first half of its life, the tree is named Mjotvidr (measure increasing); during the latter half Mjotudr (measure diminishing). When in due course the tree dies, its indwelling consciousnesses (Life and Lifthrasir), the human race, will be secreted in the "memory hoard of the sun" until their next emergence into a new existence.

Y Ching, Yi King. See I CHING

Yih-sin The atman, "the child of *Dharmakaya* (the universally diffused Essence), both male and female" (ML 346). The seventh principle of any being, whether cosmic, microcosmic, or infinitesimal; the spiritual germ-point from which is emanated the subsequent karmically necessary septenary being. It is the spiritual seed or atmic center, beginning its manifested activity as a septenary or duodenary entity.

YHVH. See TETRAGRAMMATON

Yima (Avestan) **Yam** (Pahlavi) **Yama** (Sanskrit) **Jam, Jamshid** (Persian) The son of Vivanghan (the brilliant light of the good, father of duality, consciousness, or knowledge of good and evil), Yama has been mentioned in Vasna 30:3 in the sense of twins, and in the Gathas as one who made earthly things attractive and did not strive for the uplift of the spirit. Sometimes incorrectly called the first man of the Avesta. In the *Vendidad*, the first mortal before Zoroaster with whom Ahura-Mazda conversed, asking him to be a preacher and the bearer of his law; but Yima replied that he was not born or taught to do this. As Zoroaster is the third intellect and the bearer of the divine law, Yima is the second intellect, not yet developed for that task. Blavatsky explains that

“Yima . . . as much as his twin-brother Yama, the Son of Vaivasvata Manu, belongs to two epochs of the Universal History. He is the ‘Progenitor’ of the Second human Race, hence the personification of the shadows of the Pitris, and the father of the *postdiluvian* Humanity. The Magi said ‘Yima,’ as we say ‘man’ when speaking of mankind. The ‘fair Yima,’ the first mortal who converse with Ahura-Mazda, *is the first ‘man’ who dies* or disappears, not the first who is born. The ‘Son of Vivanghat,’ was, like the Son of Vaivasvata, the symbolical man, who stood in esotericism as the representative of the *first three races* and the collective Progenitor thereof. Of these races the first two never died but only vanished, absorbed in their progeny, and the third knew death only towards its close, after the separation of the sexes and its ‘Fall’ into generation” (SD 2:609).

In the *Vendidad* Ahura-Mazda informs Yima of a severe winter that will destroy life on earth and tells him to make a vara (enclosure) known as Var-jam-kard (enclosure built by Jam) and bring the seeds of men and women of the greatest, best, and finest kinds on this earth, as well as the seeds of every kind of cattle, bird, trees, and fruit, and the sweetest of the odors, along with the red, blazing fires, excluding any deformity, impotency, lunacy, poverty, falsehood, meanness, jealousy, etc.

In later Persian literature, Jamshid has often been interchangeably taken for King Solomon, while some Islamic scholars consider him identical with Lamech in the Old Testament. Jamshid in Shah-Nameh is the Yima of the Avesta who, as a blessed king, ruled for 700 years over seven keshvars, created civilization, and categorized the people and their tasks into four groups. He built palaces and colossal monuments by channeling the savage powers of demons, discovered the secrets of nature, and cured all maladies. Such innovation and achievements called for festivities and celebration, called the New Age (Nou-Rouz). From then on, this day — which coincides with the entrance of the sun into the sign of Aries; also the day that Gayomarth, the first man, became king of earth — has been celebrated by the Iranians. For 300 years Jamshid gloriously ruled with justice, during which period death, pain, and evil disappeared, until vanity and narcissism blinded him and caused his downfall. Azi-Dahak, who takes over Jamshid’s throne, then appears on the scene by murdering his own father.

Yin (Chinese) The dark aspect, as the shady side of a hill, while yang means the bright or sunny

side. In Taoist and mystic Chinese literature, used philosophically as the opposite of the light side of nature or yang; thus yin is said to be the female aspect, often mistakenly called the weak side. Chinese scholars have described tao as the annual revolution of changes produced by the yin and yang. The yin is popularly assimilated with the earth, which is cold and dark. Yin is considered as the binary, while yang is the unitary (SD 2:554).

Yi-shu-lu-chia-lun (Chinese) The Chinese translation of the *Ekasloka-sastra* of Nagarjuna (Lungshu). *See also* YU

Y-King. *See* I CHING

Yliaster Used by Paracelsus for primordial matter, the universal matrix of the kosmos, identical with the highest part of the anima mundi, alaya, and akasa. These highest parts are, so far as consciousness goes, nirvana; whereas the lowest parts of the anima mundi or yliaster are the astral light.

Ymir (Icelandic, Scandinavian) In the Norse creation tale, the primeval frostgiant from whose substance the worlds are formed by the aesir (gods) at the beginning of time. According to the Voluspa (sibyl's prophecy) in the Edda, Ymir was "slain" — transformed — by the creative deities Odin Allfather (spirit), Vile (will), and Vi or Ve (awe, sanctity) into the substances that form the worlds in space.

One version relates that sparks from Muspellsheim (realm of fire) fell among the droplets of water vapor in Niflheim (realm of mists or nebulae) creating vapor in Ginnungagap (the yawning void). From this arose the likeness of a man, Ymir, who was nourished by the four streams of milk flowing from the udder of the cow Audhumla — symbol of fertility. Ymer represents the frozen immobility of non-existence when the universe is not. The Vala (sibyl) relates in Voluspa that the frostgiant's two feet mated with each other and that from them arose all the matter-giants from which all physical creation was formed. She describes poetically how the blood of Ymir became the oceans of water, his bones became mountains, his skull the heavenly vault, but "from his brain were surely all dark skies created." Midgard (central court), the earth, is surrounded and protected by his eyebrows and each quarter of space is governed by one of the four ruling powers, named for the four cardinal points, North, South, East, and West.

Yo (Japanese) The male ethereal essence or substance of Shinto cosmogony, which in conjunction with In, the female essence, produces manifestation. Equivalent to the Chinese yang.

Yod, Yodh (Hebrew) *Yōd* The tenth letter of the Hebrew alphabet י representing the number 10. A great deal has been written about this Hebrew character by Jewish Qabbalists because it is the first character in the name of the Hebrew God (IHVH) transliterated as Jehovah or Yahweh. The pronunciation of this name for ages past has been lost, and the Jews, when coming upon it in the Bible, have either mentally or aloud substituted the word 'Adonai (my Lords).

The Jewish IHVH was but the ancient Hebrew form of the deity equally recognized, although with far less reverence, by other ancient nations of the Near East, called Yaho among the Phoenicians, Iao among the Gnostics, etc. It was an androgynous deity, recognized as existing in nature, and mystically having an intimate magnetic connection with the planet Saturn. The influence of this cosmic bipolar force is known everywhere, expressing itself as positive and negative or in human beings as male and female. This deity is by no means one of the highest or most spiritual in the solar system, being one of the manifested cosmic powers rather than one of the unmanifest spiritualities. In fact the four-lettered name, IHVH or Tetragrammaton, from one view is as Blavatsky remarks, “pre-eminently *phallic*.” Ancient Jewish initiates equally with initiates of other countries turned to their 'eyn soph as the loftiest encompassing universal life-wisdom, very much as the ancient Hindus turned to parabrahman for the same reasons.

Yodcheva. See YOD-HEVA

Yod-heva, Yodh-heva, Yod-hewa, Yod-havvah (Hebrew) *Yōd-ḥawwāh* [from *yōd* a Hebrew letter, the number 10, and the masculine generative power + *heva* (*ḥawwāh*) from the verbal root *hāwāh* to have life, breathe, desire or long for, signifying the feminine generative power] A Qabbalistic phallic term used by Blavatsky to allow theosophy to represent the androgynous aspect of the Hebrew creative deity Jehovah (Yehovah). It also in a sense represents the Tetragrammaton. See also YOD

Yoga (Sanskrit) *Yoga* Union; one of the six Darśanas or schools of philosophy of India, founded by Patanjali, but said to have existed as a distinct teaching and system of life before that sage. Yajnavalkya, a famous and very ancient sage of pre-Mahabharatan times, to whom the *White Yajur-Veda*, the *Satapatha-Brahmana*, and the *Brihadaranyaka* are attributed, is credited with inculcating the positive duty of religious meditation and retirement into the forests, and therefore is believed to have originated the yoga doctrine. Patanjali's yoga, however, is more definite and precise as a philosophy, and embodies more of the occult sciences than any of the extant works attributed to Yajnavalkya.

The objective of the Yoga school is attaining union or at-one-ness with the divine-spiritual essence within which is virtually identical with the spiritual essence or Logos of the universe. True yoga is genuine psychology based on a complete philosophical understanding of the entire inner human constitution.

There are several states leading to spiritual powers and perception. The eight stages of yoga usually enumerated are: 1) *yama* (restraint, forbearance); 2) *niyama*, religious observances such as fastings, prayer, penances; 3) *asana*, postures of various kinds; 4) *pranayama*, methods of regulating the breath; 5) *pratyahara* (withdrawal), withdrawal of the consciousness from external objects; 6) *dharana* (firmness, steadiness, resolution) mental concentration, holding the mind on an object of thought; 7) *dhyana*, abstract contemplation or meditation freed from exterior

distractions; and 8) samadhi, complete collection of the consciousness and its faculties into union with the monadic essence.

There are several types of yoga such as karma yoga, hatha yoga, bhakti yoga, raja yoga, and jnana yoga. “Similar religious aspirations or practices likewise exist in Occidental countries, as, for instance, what is called ‘Salvation by Works,’ somewhat equivalent to the Hindu Karma-Yoga, or, again, ‘Salvation by Faith — or Love,’ somewhat similar to the Hindu *Bhakti-Yoga*; while both Orient and Occident have, each one, its various forms of ascetic practices which may be grouped under the term *Hatha-Yoga*.

“No system of Yoga should ever be practiced unless under the direct teaching of one who knows the dangers of meddling with the psycho-mental apparatus of the human constitution, for dangers lurk at every step, and the meddler in these things is likely to bring disaster upon himself, both in matters of health and as regards sane mental equilibrium. The higher branches of Yoga, however, such as the Raja-Yoga and Jnana-Yoga, implying strict spiritual and intellectual discipline combined with a fervid love for all beings, are perfectly safe. It is, however, the ascetic practices, etc., and the teachings that go with them, wherein lies the danger to the unwary, and they should be carefully avoided” (OG 183).

The various forms of yoga from the standpoint of theosophy when properly understood are not distinct, separable means of attaining union with the god within; and it is a divergence of the attention into one or several of these forms to the exclusion of others that has brought about so much mental confusion and lack of success even in those who are more or less skilled. Every one of these forms of yoga, with the probable exception of the lower forms of hatha yoga, should be practiced concurrently by the one who has set his heart and mind upon spiritual success. Thus one should carefully watch and control his acts, acting and working unselfishly; he should live so that his daily customs distract attention as little as possible away from the spiritual purpose; his heart coincidentally should be filled with devotion and love for all things; and he should cultivate, all at the same time, his will, his capacity for self-sacrifice and self-devotion to a noble cause, and his ability to stand firm and undaunted in the face of difficulties whatever they may be; and, finally, in addition and perhaps most importantly, he should do everything in his power to cultivate his intuition and intellectual faculties, exercising not merely his ratiocinative mind, but the higher intuitive and nobly intellectual parts. Combining all these he is following the chela path and is using all the forms of yoga in the proper way. Yet the chela will never obtain his objective if his practice of yoga is followed for his own individual advancement. He will never reach higher than the superior planes of the astral world even in consciousness; but when his whole being follows this yoga as thus outlined with a desire to lay his life and all he is on the altar of service to the world, he is then indeed on the path.

Yogacharya (Sanskrit) *Yogācārya* [from *yoga* union + *ācārya* teacher] A teacher of yoga; a mystic

and highly esoteric school founded by the original Aryasangha, who lived at a date long preceding the pseudo-Aryasangha of the 5th or 6th century who taught the doctrines of the Tantra besides some of the elements of the Yogacharya system. The earlier Aryasangha was an arhat and founded the original Yogacharya school, a thoroughly esoteric institution; the latter's school is a branch of the Mahayana, and is of a truly spiritual type, its teachings being identical in essence with those of theosophy. This Yogacharya school must not be confused with the Mahatantra school which was founded by Samantabhadra, whose teachings were later collected and glossed around the 6th century by the pseudo-Aryasangha in connection with litanies, formularies, spells, etc. This school is wholly exoteric, popular, and its works are largely composite of Tantric worship and ritualism that can lead the student only to black magic and sorcery.

Yoga Vidya (Sanskrit) *Yoga vidyā* [from *yoga* union + *vidyā* knowledge, science] Spiritual knowledge, the attaining of liberation, moksha, or initiation. Practically identical with jnana-vidya.

Yogi, Yogini (Sanskrit) *Yogin, Yoginī* A devotee who practices a full yoga system; the yogi state is that which, "when reached, makes the practitioner thereof absolute master of his six 'principles,' *he now being merged in the seventh*. It gives him full control, owing to his knowledge of Self and Self, over his bodily, intellectual and mental states, which, unable any longer to interfere with, or act upon, his Higher Ego, leave it free to exist in its original, pure, and divine state" (TG 381).

More commonly, a practitioner of one or more various subordinate branches of yoga. There are many grades and kinds of yogis, and the term has become in India a generic name for every kind of ascetic. "In some cases, yogins are men who strive in various ways to conquer the body and physical temptations, for instance by torture of the body. They also study more or less some of the magnificent philosophical teachings of India coming down from far-distant ages of the past; but mere mental study will not make a man a Mahatma, nor will any torture of the body bring about the spiritual vision — the Vision Sublime" (OG 183).

Yojana (Sanskrit) *Yojana* [from the verbal root *yuj* to join, yoke] A harnessing or yoking; the distance traveled in one harnessing or without unyoking of horses, variously computed as equivalent to four or five English miles, or to nine krosas or nine English miles.

Yom (Hebrew) *Yōm* A day; by extension an age or time period. The Jews reckoned the days of the week by number instead of by name, thus *yom 'ehad* (day first); *yom sheni* (day second); *yom shelishi* (day third); *yom rebi'i* (day fourth); *yom hamishi* (day fifth); *yom shishshi* (day sixth); and *yom shebi'i* (day seventh) — which last is likewise the Sabbath (shabbath).

Yong Grub (Tibetan) *yons-grub* [from *yongs* wholly + *grub* anything accomplished or done by itself without any agent] That which is completed, equivalent to absolute or the Latin *absolutum*, and the Sanskrit *paranishpanna*: the absolute freedom from the limitations of manifestation to which all beings attain at the close of a great period of cosmic activity (*mahamanvantara*). It signifies attaining and identifying with the seventh principle of nature; when applied to monads, the state

attained by the fully liberated jivanmuktas. Hence yong grub means nirvana, or in its largest sense the still more sublime condition of paranirvana.

Yoni (Sanskrit) *Yoni* The womb; more generally, the female principle. In ancient India the yoni was the common female symbol of the universal Mother of the gods. This symbol corresponds to Noah's ark, and to the navis or shiplike form of the crescent, the sidereal vessel. The ancient Hindu interpretation of the linga and yoni is entirely metaphysical and psychological, but the once highly philosophical and sublime worship of the linga and yoni of Siva worship has degenerated in modern times to mere phallic worship. The Hebrew interpretation of these same symbols likewise finally became realistic and physiological (cf SD 2:469-70). However, as Monier-Williams wrote in *Folklore Record* (vol 3, pt 1, p. 118): “[The linga and yoni are] mystical representations, and perhaps the best possible impersonal representatives, of the abstract expressions of paternity and maternity.”

Yourodevoy (Russian) A person suffering from mental deficiencies, such as a half-wit or idiot.

Youths English translations of the Sanskrit kumaras (virgins), applied mainly in ancient Hindu writings to spiritual, semi-spiritual, and occasionally ethereal beings, who follow evolutionary courses very different from those of present greatly materialized mankind, and who are looked upon as students of divine wisdom. Youths is applied to the dhyani-chohans, kumaras, or agnishvattas who “refused to incarnate.”

In a more restricted sense, applied to the kumara-births of Siva, representative of spiritual beings in each root-race which are mythologically referred to in India as four youths: four white, four red, four yellow, four dark or brown. It means that in every root-race there are a number of karmically elect who strike the keynotes of evolution and succeeding civilizations in a root-race, and thus labor to keep alive and to increase the spiritual and intellectual fires during that race's evolutionary course.

Yowahous (African) The name given by some tribes to specters or apparitions.

Yu (Chinese) Being; according to the *Yi-shu-lu-chia-lun* (translation of Nagarjuna's *Ekasloka-sastra*), “ ‘the Substance giving substance to itself,’ also explain . . . as meaning ‘without action and with action,’ ‘the nature which has no nature of its own’ ” (SD 1:61). Chinese mystics have made it the synonym of svabhavat or Father-Mother, corresponding to the Second Logos of theosophy.

Yu evidently refers to the primordial spiritual substance of the universe, which is at once intelligence and spiritual matter, life and consciousness, from which all proceeds as a fountain or source, and into which all will ultimately return when the great cosmic world period or manvantara reaches its end, and the cosmic pralaya begins. Yet this is not the highest in the cosmic hierarchical scale, because over, in, and throughout yu is the super-essential cosmic primordial abstract being, which the Pythagoreans spoke of as the all-embracing cosmic monad.

Yu Emperor of China, called “the Great” and considered a national hero. Founder of the Hsia dynasty, his reign has been assigned by scholars to the years 2205-2198 BC; he is one of the three so-called Good Emperors of the Shu Ching; son of Kun, his labors and feats are extolled in the Confucian account known as the Yu-kung (tribute to Yu).

Blavatsky mentions him as being “a pious mystic and great adept,” said “to have obtained his knowledge from the ‘great teachers of the Snowy Range’ in Si-dzang” (Hsi Tsang or Tibet), these great teachers being called “brothers of the Sun in the Chinese records” (SD 1:271n).

Yudhishtira (Sanskrit) *Yudhiṣṭhira* One of the principal heroes of the *Mahabharata*, eldest of the five Pandavas, son of Kunti by the god of justice, Dharma. Because he possessed virtuous character and all the attributes of a model ruler, he was selected as heir apparent to the throne of Hastinapura by his uncle Dhritarashtra: this choice led to the enmity of his cousin Duryodhana and his followers (the Kauravas or Kurus), and eventually to the great conflict on the field of Kurukshetra described in the opening chapter of the *Bhagavad-Gita*. The Pandavas were victorious in this struggle, and Yudhishtira was crowned king.

One section of the *Mahabharata* is devoted to the attainment of svarga (heaven) by Yudhishtira. He set out on this pilgrimage with his dog, four brothers, and their wife Draupadi, who one by one fell by the way. Alone Yudhishtira and the dog ascended to svarga to be met by Dharma, who said the dog was not permitted to enter. Yudhishtira refused to enter without his dog and turned away from the goal, but Dharma explained that it was only a test of his compassion. Yudhishtira also descended into the underworld successfully, aiding his brothers and wife whom he found there, and they all ascended to svarga.

Orientalists have speculated as to whether there was a monarch named Yudhishtira at the time of the commencement of the kali yuga (3102 BC). The computation of periods in Hindu accounts, however, applied to cosmic events as well as to terrestrial catastrophes, and names were used in the same manner. Thus Yudhishtira, “the first King of the *Sacea*, who opens the Kali Yuga era, which has to last 432,000 years — ‘an actual King and man who lives 3,102 years BC,’ applies also, name and all, to the great Deluge at the time of the first sinking of Atlantis. He is the ‘Yudhishtira born on the mountain of the hundred peaks at the extremity of the world *beyond which nobody can go*’ and ‘immediately after the flood’ ” (SD 1:369-70). About the time of the reign of Yudhishtira the epic tells of a small flood which destroyed the Yadavas. Yudhishtira is both an eponymous hero, and an epic hero, an historical character, such as were also Arjuna, Krishna, and the many other heroes mentioned in the *Mahabharata*, stated to have lived when kali yuga began, now some 5,000 years ago.

Yuga(s) (Sanskrit) *Yuga* Age; an age of the world, of which there are four — satya yuga, treta yuga, dvapara yuga, and kali yuga — which proceed in succession during the manvantaric cycle. Each yuga is preceded by a period called in the Puranas, sandhya (twilight, transition period, dawn) and

followed by another period of like duration often called sandhyansa (a portion of twilight). Each of these transition periods is one-tenth of its yuga. The group of four yugas is first computed by the divine years or years of the gods — each such year being equal to 360 years of mortal men. Thus we have, in divine years:

1. Krita or Satya Yuga.. 4,000
Sandhya. 400
Sandhyansa. 400
4,800 or 1,728,000 mortal years

2. Treta Yuga. 3,000
Sandhya. 300
Sandhyansa. 300
3,600 or 1,296,000 mortal years

3. Dvapara Yuga. 2,000
Sandhya. 200
Sandhyansa. 200
2,400 or 864,000 mortal years

4. Kali yuga. 1,000
Sandhya. 100
Sandhyansa. 100
1,200 or 432,000 mortal years

Total: 12,000 a Mahayuga or 4,320,000 mortal years

Of these four yugas, our present racial period is the kali yuga (black age), often called the Iron Age, said to have commenced at the moment of Krishna's death, usually given as 3102 BC. These yugas do not affect all mankind at the same time, as some races, because of their own special cycles in running, are in one or in another of the yugas, while other races are in a different cycle. This series of 4, 3, 2, 1, with ciphers added or not according to circumstances, are among the sacred computations of archaic esotericism, which shows that all the various kinds of yugas, the small being included within the great, are each governed by the same periodic and regular series — all of which makes calculation no easy thing.

“All races have their own cycles, which fact causes a great difference. For instance, the Fourth Sub-Race of the Atlanteans was in its Kali-Yug, when destroyed, whereas the Fifth was in its Satya or *Krita* Yuga. The Aryan Race is now in its Kali Yuga, and will continue to be in it for 427,000 years longer, while various ‘family Races,’ called the Semitic, Hamitic, etc., are in their own special cycles. The forthcoming 6th Sub Race — which may begin very soon — will be in its Satya (golden) age while we reap the fruit of iniquity in our Kali Yuga”

(SD 2:147n).

The four yugas refer to any root-race, although indeed a root-race from its individual beginning to its individual ending is about double the length of the great yuga as set forth in the above chart. The racial yugas, however, overlap because each new great race is born at about the middle period of the parent race, although the individual length of any one race is as above stated. Thus it is that by the overlapping of the races, a race and its succeeding race may for a long time be contemporaneous on the face of the globe.

As the four yugas are a reflection in human history of what takes place in the evolution of the earth itself, and also of the planetary chain, the same scheme of yugas applies on larger scales: there exist the four yugas in the time periods of the evolution of a planetary chain, as well as in the general time period of a globe manvantara. These cosmic yugas are very much longer than the racial yugas, but the same general scheme of 4, 3, 2 applies throughout.

“The sacredness of the cycle of 4320, with additional cyphers, lies in the fact that the figures which compose it, taken separately or joined in various combinations, are each and all symbolical of the greatest mysteries in Nature. Indeed, whether one takes the 4 separately, or the 3 by itself, or the two together making 7, or again the three added together and yielding 9, all these numbers have their application in the most sacred and occult things, and record the workings of Nature in her eternally periodical phenomena. They are never erring, perpetually recurring numbers, unveiling, to him who studies the secrets of Nature, a truly divine System, an *intelligent* plan in Cosmogony, which results in natural cosmic divisions of times, seasons, invisible influences, astronomical phenomena, with their action and reaction on terrestrial and even moral nature; on birth, death, and growth, on health and disease. All these natural events are based and depend upon cyclical processes in the Kosmos itself, producing periodic agencies which, acting from without, affect the Earth and all that lives and breathes on it, from one end to the other of any Manvantara. Causes and effects are esoteric, exoteric, and *endexoteric*, so to say” (SD 2:73-4).

Yuh-kai (Tibetan) Also chikhai. Equivalent to the Sanskrit kama-loka; although a state or condition of entities, it is also a locality for it is “the abode of Elementaries” (ML 105).

Yu-posah Used by KH as equivalent to the Sanskrit upasika (chela, disciple) (ML 236).

Yurbo-adonai. See IURBO ADONAI; ADONAI

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Za-Zz

Zabulon. See ZEBULUN

Zachar (Hebrew) *Zākhār* A male; used in “male-and-female [zachar u neqebah] created he them” (Genesis 1:27). This refers not to the formation of a man and a woman, but of an androgyne or bisexual being who was at once male and female conjoined, and thus has reference to the third root-race in theosophy. See also SACR

Zagreus, Zagreus-Dionysos (Greek) Dionysos was an earlier name for Bacchus. The mythos concerning Zagreus belongs to the cycle of teachings of the Orphic Mysteries rather than to mythology, so no references occur in the writings for the people, such as Homer and Hesiod. The references that have come down to our day occur principally in the manuscripts of the ancient Greek dramatists, poets, and in other ancient fragments.

As cosmic evolution was taught in the Orphic Mysteries by allegory, so was the evolution of the individual soul or microcosm, centering in the mythos of Zagreus, later Zagreus-Dionysos, the Greek savior, which the Greek Dionysian Mysteries sought to unfold in dramatic and veiled or symbolic literary form. “Dionysos is one with Osiris, with Krishna, and with Buddha (the heavenly wise), and with the coming (tenth) Avatar, the glorified Spiritual *Christos* . . .” (SD 2:420).

Zagreus has three distinct meanings: 1) the mighty hunter (the pilgrim-soul, hunting for the truth, its aeonic pilgrimage back to divinity); 2) he that takes many captives (the Lord of the Dead); and 3) the restorer or regenerator (King of the Reborn or initiates). Zagreus (later Bacchus or Iacchos) is the divine Son, the third of the Orphic Trinity, the other two being Zeus the Demiurge or divine All-father, and Demeter-Kore, the earth goddess in her twofold aspect as the divine Mother and the mortal maid.

The mythos relates that Zagreus, a favored son of Zeus, aroused the wrath of Hera, who plotted his

destruction. First she released the dethroned titans from Tartaros to slay the newborn babe. They induced the child to give up the scepter and apple for the false toys which they held before him: a thyrsos or Bacchic wand (symbol of matter and rebirth into material life), a giddy spinning top, and a mirror (maya or illusion). As the child was gazing at himself in the mirror, they seized him, tore his body into seven or fourteen pieces (as in the Egyptian Mystery tale of Osiris); boiled and roasted and then devoured them. Discovered in this enormity by Zeus, the titans were blasted with his thunderbolt and from their ashes sprang the human race.

The titans with their false gifts symbolize the pursuing energies of the personal, material life, which enchain and delude the soul. They are earth powers which lead the soul from the path by the lure of things of sense. The dismembered body is first boiled in water — symbol of the astral world; then roasted, “as gold is tried by fire,” symbol of suffering and purification and the reascent of the victorious soul to bliss.

Apollo or the Muses, at the command of Zeus, gathered the scattered fragments and interred them near the Omphalos (navel of the earth) at Delphi. The coffin was inscribed: “Here lies dead, the body of Dionysos, son of Semele,” as the Zagreus myth was known only to those initiated into the Orphic Mysteries; and the Semele myth was popularly known. The exoteric myth represents the divine Son as the son of Zeus by the mortal maid Semele, Demeter-Kore in the guise of a mortal woman, to whom the still beating heart of Zagreus was entrusted when he was slain, that she might become its mother-guardian.

Hera, however, poisoned the mind of Semele with suspicion when the new-forming body of Zagreus within her reached the seventh month of gestation, and Semele impelled Zeus to reveal himself to her in his true form, whereupon the mortal body of Semele was destroyed by the divine fire. The holy babe was saved from death by Zeus, who sewed the child up in his own thigh until “the life that formerly was Zagreus, was reborn as Dionysos,” the risen Savior, at Easter (the spring equinox), while as Zagreus he had been born at Semele’s death at the winter solstice. Here we see the myth’s solar significance.

The nymphs of Mount Nysa reared him safely in a cave, and when he reached manhood, Hera forced him to wander over the earth. He overcame all opposition and was successful in establishing Mystery schools wherever he went. After his triumph in the world of men, Dionysos descended into the underworld and led forth his mother, now rechristened as Semele-Thyone (Semele the Inspired), to take her place among the Olympian divinities as the divine mother and radiant queen, and later, with Dionysos, to ascend to heaven.

Zagreus as Dionysos is known as the god of many names, most of which refer to his twofold character as the suffering mortal Zagreus, and the immortal or reborn god-man. Many titles also refer to him as the mystic savior. He is the All-potent, the Permanent, the Life-blood of the World, the majesty in the forest, in fruit, in the hum of the bee, in the flowing of the stream, etc., the earth

in its changes — the list runs on indefinitely, and is strikingly similar to the passage in which Krishna, the Hindu avatara, instructs Arjuna how he shall know him completely: “I am the taste in water, the light in the sun and moon,” etc. (BG ch 7).

The philosophers, dramatists, and historians who held the Dionysian mythos to be purely allegorical and symbolic take in the great names of antiquity, including Plato, Pythagoras, all the Neoplatonists, the greatest historians, and a few of the early Christian Fathers, notably Clement of Alexandria; Eusebius, Tertullian, Justin, and Augustine, also write of it.

The exoteric literature of Orphism is scanty, while the esoteric teachings were never committed to writing. Outside of the Orphic Tablets and Orphic Hymns, no original material has been discovered to date. Scholars judging from the *Homeric Hymn to Demeter*, have held that the Eleusinian Mystery-drama was based solely on the story of Persephone; but later researches indicate that, under the influence of Epimenides and Onomakritos, both deep students of Orphism, the Orphic Mystery tale of Zagreus-Dionysos was incorporated in the Eleusian ritual, the divine son Iacchos becoming thus identified with the Orphic god-man, Zagreus-Dionysos.

Cosmically this highly esoteric story refers to the cosmic Logos building the universe and becoming thereby not only its inspiriting and invigorating soul, but likewise the divinity guiding manifestation from Chaos to complete fullness of evolutionary grandeur; and in the case of mankind, the legend refers to the origin, peregrinations, and destiny of the human monad, itself a spiritual consciousness-center, from unself-consciousness as a god-spark, through the wanderings of destiny until becoming a fully self-conscious god. The key to the symbolism of Zagreus-Dionysos is given by Plato in the *Cratylus*: “The Spirit within us is the true image of Dionysos. He therefore who acts erroneously in regard to It . . . sins against Dionysos Himself,” i.e., the inner god, the divinity in man. The legend thus contains not only past cosmic as well as human history, but contains as a prophecy what will come to pass in the distant future.

Zakhar. See ZACHAR

Zalmat-Gaguadi, Zalmat-Qaqadi (Babylonian) Dark race; in the Babylonian legend one of the two first races, represented as being the first to fall into mortality and therefore into generation. It is “the *Adamic* race, one of the two principal races that existed at the time of the ‘Fall of Man’ (hence our *third* Root-race) . . .” (TG 384). See also SARKU

Zama Zama Ozza Pachama Ozai (Greek) [from Hebrew] Usually given as “the robe, the glorious robe of my strength”; more accurately “Veil! Veil! Strength! Loveliness! My Strength!” A Gnostic inscription, the five words supposedly written on or inherent in the akasic or shining garment of Jesus at his glorification. Here the initiate is stating that his strength or power, spiritual and intellectual, lies in the wonderful veil, vital, full of energy and wisdom, which surrounds him, and which is the vehicle of his spiritual and intellectual strength.

These words were an anagrammatical blind of five mystic powers represented on and by the “robe of the ‘resurrected’ Initiate after his last trial of three days’ trance; the five becoming *seven* only after his *death*, when the Adept became the full Christos . . . merged in Nirvana” (SD 2:580).

Zamyad Yasht, Zamdat (Avestan) **Zamik** (Pahlavi) **Zami** (Persian) [from *zam* Avestan *zam* earth + *yad* that which earth has begot + *yasht* an act of worship, a Zoroastrian scripture] The 19th Yasht in the extant Zoroastrian scriptures, the Yashts generally being writings in which the Izedes are praised. This Yasht is inscribed to the genius of the earth, Spenta Armaiti. Its third section is devoted to the Amesha Spentas.

The 28th day of the month in the old Iranian calendar.

Zamzummim (Hebrew) *Zamzummīm* [from the verbal root *zāmam* to meditate, think upon, devising successful plans, ponder successfully; to be strong, vigorous, powerful] A race of prehistoric giants in Palestine, described in the Bible (Deut 2:21). *See also* ANAK, SONS OF

Zarathustra, Zarathushtra. *See* ZOROASTER

Zarevna Militrissa (Russian) [from *zarevna* (*carevna*, anglicized *tsarina*) queen + *militrissa* grandiloquent title, possibly Greek] Prominent in Russian fairy tales as the queen of heaven, represented with a moon on her forehead; a name of the moon, on account of her regency over the hosts of elemental and other beings working under, by, and through her influences.

Zarpanitu, Sarpanit (Babylonian) Also Zer-banit; Zirat-banit. The shining one, its ideographs suggest the words *zer* seed, *banit* producing. A Babylonian goddess consort of Marduk or Merodach. In later Babylonian times (after 1200 BC) when Marduk was elevated to the position of chief deity of the pantheon in place of the older Chaldean deities, Zarpanitu was regarded as the great nature goddess, replacing Belit (consort of Bel). A triad was formed by the addition of Nebo, the god of wisdom, equivalent to the Hindu Budha and the Greek Hermes. “As Budha was the Son of Soma (the Moon) in India, and of the wife of Brihaspati (Jupiter), so Nebo was the son of Zarpanitu (the Moon Deity) and of Merodach, who had become Jupiter, after having been a Sun God” (SD 2:456). Herodotus called Zarpanitu “Zeus-Belos.”

Zartaoth (Chaldean) Also ‘Onioth. The mule or ass; in the Chaldean system, one of the hierarchies of nature powers. In addition to Zartaoth, there were Michael, Gabriel, Raphael, Thantabaoth, etc. (cf SD 2:115n), all names of the genii presiding over the constellations and therefore by influence over the planets, according to the astrological and astrolatrical systems of the ancient Shemitic peoples.

Zarvan-akarana. *See* ZERVAN AKARANA

Zebulun (Hebrew) *Zēbūlūn* [from the verbal root *zābal* to encircle, encompass, referring to the planetary spheres] Also Zabulon, Zebulon. The tenth son of Jacob; also the tribe named after him.

In connecting the twelve patriarchs with the twelve signs of the zodiac, equivalent to Pisces. Zebulun or Ba'al Zebul (lord of the [seventh] sphere or heaven) refers in ancient Shemitic astrology and astrology to the planet Saturn.

Zedic. See TSADIQ

Ze'eir 'Anpin (Aramaic) *Zē'ēir 'Anpīn*. **Ze'eir 'Appayim** (Hebrew) *Zē'ēir Āppayim* [*zē'ēir* small, short + *'apīn* face, countenance] Short face, the less visage; its Greek equivalent is Microprosopus. A Qabbalistic term applied to the lower nine Sephiroth, emanating from the first Sephirah (Kether the Crown) or the Long Face ('Arich 'Anpin). The nine lower Sephiroth are not able to envisage or express the full Sephirothal Tree or scheme nor the full radiance of the Concealed of the Concealed. The Short Face is the union of the nine Sephiroth considered as a composite individual, corresponding to the Qabbalistic 'Adam Qadmon, the Heavenly Man or the manifest or Third Logos. See also YESOD

Zeir Anpin. See ZE'EIR 'ANPIN

Zend, Zand (Pahlavi) **Zantay** (Avestan) [from the verbal root *zan* cognition, knowledge cf Old Persian *dan*] Commentary, interpretation, explanation; in the Occident, Zend refers to a language in which the Avesta is written, but modern Parsi scholars and older Pahlavi books speak of the language and writing as Avesta. Blavatsky links Zend with Zensar or Senzar, the mystery-language of the initiates.

Zend also means "The 'rendering of the esoteric into exoteric sentences,' the veil used to conceal the correct meaning of the *Zen-(d)-zar* texts, the sacerdotal language in use among the initiates of archaic India. Found now in several undecipherable inscriptions, it is still used and studied unto this day in the secret communities of the Eastern adepts, and called by them — according to the locality — *Zend-zar* and *Brahma-* or *Deva-Bhashya*" (BCW 4:517-8n). See also ZEND-AVESTA; AVESTA; SENZAR

Zend-Avesta (Pahlavi) [from Old Persian *zend* commentary, interpretation + *aba-ta* the law] The writings of the religion of the Parsis, still used by them as the basis of their faith. The Parsis themselves call this collection of documents the Avesta; Zend was principally used by the Parsis to denote the Pahlavi translations and commentaries on the Avesta.

Zenith One of six cardinal points, the others being the four points of the compass and the nadir; these are symbolized by the number six and by the svastika. They are not fixed points, but directions relative to a central point which represents the observer.

Zensar, Zendzar. See ZEND; SENZAR

Zera-Ishtar. See ZERU-ISHTAR

Zer-banit. See ZARPANITU

Zero [from Arabic *sifrom* an empty thing cf cipher] As a mathematical idea, the absolute zero obtained by the subtraction of equal quantities (expressed by $a - a$), or the ideal zero denoting the imaginary limit of an infinite diminution (expressed by the quotient a/b , where a is indefinitely smaller than b). In physical measurement, a lower limit or point of origin, as in the zero of a scale or the absolute zero of temperature.

As a symbol, the absence of all number or quantity, necessary in our system of notation in order to preserve the principle of positional value by occupying positions which would otherwise be filled by one of the nine digits. In scales of notation where the radix is other than 10, the value of the zero sign would be altered correspondingly. Though in one sense no number, yet in ordinal reckoning it has to be counted as a member of the series.

Its symbol, the circle, represents at once nothing and everything; it is the symbol of boundless infinity; and a circle may be defined either as a single undivided and untermated line, or as an infinite number of infinitely short lines. Ends meet; there is no essential difference between the infinitely great and infinitesimal. The zero point is the vanishing point, the *laya* or neutral state. In mathematics it is the neutral position between the series of positive and negative numbers. It is also the neutral state of matter between two planes; when physical matter is reduced to the zero or *laya*-state, it is ready to become manifest on the next higher plane, or vice versa. The same applies to consciousness and its planes.

Absolute nihility is a term which has no meaning in reality; and we find in algebra that a to the 0 power = 1, which is a formulation of the fact that an entity in the zero state is not abolished but is still a monad. The symbol , or unity within zero, symbolizes manifest divinity, the hierarchical universe, and complete man — in other words, full manifestation, all contained within the monad having emanated from it and established the unfolded entity; and a symbol which also is sometimes numerically figured as 10. These two symbols, the circle denoting immaculate mother nature, and the line denoting the fructifying spirit, make up the number ten in the denary scale of notation.

The use of the zero to secure position value in a scale of decimal notation came to us, through the Arabs, from India. Modern scholarship seeks among the records of antiquity for some date which it may assign as the *origin* of decimal notation; but the fact that other systems were in use does not prove that it was unknown, as it may have been kept secret; and indeed we have other systems, besides the decimal, in use of the earth today. In discussing the matter we must distinguish between the decimal notation with the zero, and a mere method of counting in groups of ten and using special signs for ten, a hundred, etc. Blavatsky points to the symbolical character of the upright stroke and the circle, as denoting the number ten and also the masculine and feminine principles; the inference being that the antiquity and universality of this symbol implies a knowledge of decimal notation.

Zero Point Vanishing points, laya-centers, those points at which matter is transferred from one plane to another. Somewhat similar to the singular points of physicists and astronomer Sir James Jeans.

Zeruam (Chaldean) Rich in gold and silver; the ancient king of the golden age, pictured as a very old man and representing time. Pliny states that Sim, the son of Zisuthrus was also called Zeru-an. The Zeruana Akarana (Pahlavi; Zervan Akarana in Avestic) of the Persians, meaning boundless, limitless, or cyclic time, is closely connected with Zeru-an. For from Zervan Akarana — equivalent to the 'eyn soph of the Hebrew Qabbalah or the Hindu kala (endless time) — radiates Ahura-Mazda, the eternal Logos or primordial light, from which in turn emanates in hierarchical sequence everything that has existence and form.

Zeru-Ishtar (Chaldean) The chief or high priest of the Chaldeans, also called the Magian hierophant.

Zervan Akarana (Avestan) [from *zervan* time (cf Pahlavi *zervam*, *zarvan*, *zurvan*) + *arana*, *akrana* boundary] Also Zeruana Akerne. Boundless spirit (BCW 4:328); in Zoroastrian literature there are two different kinds of time — boundless time, pre-existing and ever-existing — and finite time, which lasts for 12,000 symbolic years, the period during which the two forces of Ahura-Mazda and Ahriman are engaged in their never-ending struggle. According to the Avesta, Zervan Akarana has always existed; its glory is too exalted, its light too resplendent, for human intellect to grasp and comprehend. Its first emanation is eternal light, which becomes Ahura-Mazda, the Logos; from whom emanate the six Amesha Spentas, and everything that has being, existence, and form. Another translation is “duration in a circle,” the circle being the symbol for the endless, the beginningless, the unknown — hence boundless time. Zervan Akarana is thus the Mazdean equivalent of Parabrahman or 'eyn soph.

The cycle marking the time period of the world (a fixed period, in contradistinction to boundless time) was called in the Avesta, Zervan daregho-hvadata (the sovereign time of the long period), measured as twelve periods of a thousand years, but what is generally understood in the 'Avesta' system as a *thousand* years, means, in the esoteric doctrine, a cycle of a duration known but to the initiates and which has an allegorical sense” (IU 2:221n).

Zetetic [from Greek *zetetikos* he or that which has relation to inquiry, search, seeking — with truth as the objective] A name often given to the Sceptics among Greek philosophers, skeptic meaning originally one who is a searcher for truth at whatever cost.

Zeus (Greek) Chief of the manifested gods of the Greek pantheon, represented in poetic and mythologic story as throned in the heavens, gathering the clouds and refreshing the earth with rains and winds, also sending storms and lightning, his chief weapon being the thunderbolt with which he strikes those who work against his will.

Zeus, in the conception of the ancient Greek philosophers who nearly all were initiate-thinkers, was not the highest god. It was because all public mention of the cosmic hierarch was forbidden that Homer omitted to mention this first principle, and even the secondary, the Chaos and Aether of Orpheus and Hesiod, commencing his cosmogony with Night, which Zeus reverences — Night here being equivalent to the Hindu pradhana-prakriti.

Zeus was not always portrayed as the ineffable cosmic principle, as in the dramas of Aeschylus, especially in his trilogy on Prometheus. “In the case of Prometheus, Zeus represents the Host of the primeval progenitors, of the pitar, the ‘Fathers’ who created man senseless and without any mind; while the divine Titan stands for the Spiritual creators, the *devas* who ‘fell’ into generation. The former are spiritually lower, but physically stronger, than the ‘Prometheans’: therefore, the latter are shown conquered. ‘The lower Host, whose work the Titan spoiled and thus defeated the plans of Zeus,’ was on this earth in its own sphere and plane of action; whereas, the superior Host was an exile from Heaven, who had got entangled in the meshes of matter. They (the inferior ‘Host’) were masters of all the Cosmic and lower titanic forces; the higher Titan possessed only the intellectual and spiritual fire. This drama of the struggle of Prometheus with the Olympic tyrant and despot, sensual Zeus, one sees enacted daily within our actual mankind: the lower passions chain the higher aspirations to the rock of matter, to generate in many a case the vulture of sorrow, pain, and repentance” (SD 2:421-2). This inferior host is the various classes of the lunar pitris; whereas the higher host, collectively represented by Prometheus, is the aggregate of the agnishvatta-pitris or agni-dhyanis.

Again, “between Zeus, the abstract deity of Grecian thought, and the Olympic Zeus, there was an abyss. . . . Zeus was the human soul and nothing more, whenever shown yielding to his lower passions, — the *jealous* God, revengeful and cruel in its egotism or I-am-ness” (SD 2:419). In another aspect Zeus is the deity of the fourth root-race, while his father, Kronos, represents the third root-race.

Some of the deities in the Greek pantheon were often represented in a hermaphrodite aspect, thus Zeus is occasionally depicted with female breasts; while one of the Orphic hymns, which was sung during the Mysteries, says: “Zeus is a male, Zeus is an immortal maid.”

The Latin Jupiter was equivalent to the Greek Zeus, so that the following citation refers to both deities: “The four-fold Jupiter, as the four-faced Brahma — the aerial, the fulgurant, the terrestrial, and the marine god — the lord and master of the four elements, may stand as a representative for the great cosmic gods of every nation. While passing power over the fire to Hephaistos-Vulcan, over the sea, to Poseidon-Neptune, and over the Earth, to Pluto-Aidoneus — the aerial Jove was all these; for AETHER, from the first, had pre-eminence over, and was the synthesis of, all the elements” (SD 1:464).

Zeus, as the Father of the Gods, was Aether itself, and hence by the Greeks was sometimes called

Zeus-Zen, precisely as the Latin races called Jupiter Pater Aether (Father Aether).

Zhing. See HSING

Zim or **Zikum** (Chaldean) The spirit of the deep; spirit-substance, primordial matter. In later Babylonian theology, applied to the spirit present in both gods and men. Also the name of one of the seven gods represented as each producing a man, referring to the fashioning of man by the different classes of pitris.

Zing. See HSING

Zio (Germanic) The ancient Germanic sword god or war god, corresponding to Tyr in Norse mythology. He was called Tivisco by Tacitus, who describes him as a hidden god, held in such reverence by the Swabians that no one could enter the sacred grove of the Semnones, a prominent tribe of the Swabians, without being bound with a chain. The earth goddess Nerthus was regarded as his wife.

Zipporah (Hebrew) *Tsipporāh* A circling, revolving, hence song or singing as a circling of sound; in the Bible, one of the seven daughters of Jethro, the Midianite priest, given in marriage to Moses after the latter had assisted her at the well (Ex 2). In one interpretation, “Jethro is called the ‘father-in-law’ of Moses; not because Moses was really married to one of his seven daughters. Moses was an Initiate, if he ever existed, and as such an ascetic, a nazar, and could never be married. It is an allegory like everything else. Zipporah (the shining) is one of the personified Occult Sciences given by Revel-Jethro, the Midian priest Initiator, to Moses, his Egyptian pupil. The ‘well’ by which Moses sat down in his fight from the Pharaoh symbolizes the ‘well of Knowledge’ ” (SD 2:466n).

Zipporah is similar to the City Sippara — situated on the Euphrates River north of Babylon — where the casting of the infant Sargon occurred, which is practically identical with the story of Moses, only said to have happened about 1100 years earlier. Blavatsky concludes that Ezra applied this story to that of the prophet Moses when he compiled his history in Exodus.

Zmey Gorenetch, Zmej Goronech (Russian) [from *zmej* serpent + *goro* mountain] The serpent like a mountain; a favorite character in Russian folklore and fairy tales, representing the sinister powers which must be vanquished by the hero.

Znachar (Russian) One who knows; a sage or wise man; commonly used also for a sorcerer or wizard [from Anglo-Saxon *wit-ga* seer, one who sees from *witan* to know]. Feminine **Znaharka**.

Zodiac [from Greek *zodiakos kyklos* circle of animals] The zone extending on both sides of the ecliptic, with a total width of about 16 degrees, so as to include the apparent paths of the planets and moon. It is divided into twelve equal parts or signs, which are counted from the position of the vernal equinoctial point. The position of this point recedes westward along the ecliptic at the rate of about 50” of arc per year. The Hindus call this the fixed zodiac, giving the name of movable

zodiac to the zodiacal constellations. The ancient figure for the length of a precessional cycle is 25,920 years, also the length of an important racial unit in human evolution.

“A simple calculation will show that at this rate the constellation Taurus (Heb. *Alph*) was in the first sign of the zodiac at the beginning of the Kali Yuga, and consequently the Equinoctial point fell therein. At this time, also, Leo was in the summer solstice, Scorpio in the autumnal Equinox, and Aquarius in the winter solstice; and these facts form the astronomical key to half the religious mysteries of the world — the Christian scheme included” (TG 387).

The zodiac is found everywhere among the civilized nations, such as the Chaldeans, Hindus, Egyptians, Chinese, and in Job (said to be the oldest book in the Bible); but its antiquity is lost in the night of time. The zodiac may briefly be described as a book on evolution in twelve chapters, and as such its applications and correspondences are innumerable. Time is marked by the passage of the planets through its signs, by their conjunctions in various positions, and by the movement of the nodes and apsides of planets; so that the whole course of cycles large and small can be calculated and the past and future read by those who understand. The twelve divisions of the ecliptic or fixed zodiac have the same names and significance as the zodiacal constellations. They may be applied to cycles in history, such as the Messianic cycle, to races of mankind, and to the human constitution, mental and physical. When applied to the globes of the earth planetary chain — using the esoteric computation of a twelvefold system — the rectors of the houses of the zodiac have each predominance over one globe of the earth-chain.

“Each of these constellations, together forming the twelve houses of the zodiac, is a cluster of stars karmically united by past bonds of destiny, each having its own . . . spiritual electricity or fohatic magnetism, . . . each one producing its own type of influences in the outflow of its emanations around its, and extending through space” (FSO 125).

There was once a division of the zodiac into ten signs because two were kept secret, and the twelve were made up by the Greeks by dividing Virgo-Scorpio into two and introducing between them the balancing sign Libra. An Egyptian mural painting shows a somewhat different arrangement of the ten and the twelve, there being twelve gods on ten seats, numbers 7 and 8, and 11 and 12 being paired. The Hindu astrologers have other divisions, subdividing the twelve houses; and also having 27 or 28 lunar mansions. Speaking of the knowledge of the ancient sages, Blavatsky remarks that “if such men as Kepler and even Sir Isaac Newton believed that stars and constellations influenced the destiny of our globe and its humanities, it requires no great stretch of faith to believe that men

who were initiated into all the mysteries of nature, as well as into astronomy and astrology, knew precisely in what way nations and mankind, whole races as well as individuals, would be affected by the so-called ‘signs of the Zodiac’ ” (TG 387-8).

The Chinese zodiacal system was quite complicated. Besides being divided into 28 and 24 parts, it included two distinct duodenary series. The Chinese method of dividing “the yellow road of the sun” was by means of twelve cyclic animals named the rat, ox, tiger, hare, dragon, serpent, horse, sheep, monkey, hen, dog, and pig. The opening sign corresponds to Aquarius, and it is interesting to observe that in the East, the rat is often used as an ideograph for water. But the Chinese series proceeds in a retrograde direction, against the course of the sun; thus the second sign (the ox) takes the position of Capricorn, etc.

The Aztecs had a month of 20 days, and seven of the names of the days of the month had animal appellations — four the same as the Chinese (the hare, monkey, dog, and serpent), while three were strictly American animals, the ocelot, lizard, and eagle.

Zohak (Pahlavi) The Pahlavi translation of the Avesta personifies the serpent Azhi Dahaka into the Evil One, dwelling in Bawru (Babylonia). Zohak is represented as a man with two snakes’ heads growing from his shoulders where he was kissed by Ahriman; “the human head denotes the physical man, and the two serpent heads the dual manasic principles — the dragon and serpent both standing as symbols of wisdom and occult powers” (TG 333). He usurps the throne of King Jemshid (Yima), and after ruling a thousand years he is vanquished by Prince Feridun (Thraetaona). But Zohak could not be slain; he was bound to Mount Davand, there to lie in bonds till the end of the world, when he shall be let loose and then be slain by Keresaspa.

In the Shah-namah of Firdusi, the figures in this myth become historical characters: “It is apparent, therefore, that by Zohak is meant the Assyrian dynasty, whose symbol was the *purpureum signum draconis* — the purple sign of the dragon. From a very remote antiquity (Genesis 14) this dynasty ruled Asia, Armenia, Syria, Arabia, Babylonia, Media, Persia, Bactria, and Afghanistan. It was finally overthrown by Cyrus and Darius Hystaspes, after ‘1,000 years’ rule. . . . Zohak probably imposed the Assyrian or Magian worship of fire upon the Persians” (IU 2:486).

Zohar, Sepher haz-Zohar (Hebrew) *Zohar, Sēfer Hazzohar* [from the verbal root *zāhar* light, to be bright, to shine] Book of the light; the principal work or compendium of the Qabbalists, forming with the Book of Creation (*Sepher Yetsirah*) the main canon of the Qabbalah. It is written largely in Chaldean interspersed with Hebrew, and is in the main a running commentary on the Pentateuch. Interwoven are a number of highly significant sections or books scattered apparently at random through the volumes: sometimes incorporated as parallel columns to the text, at other times as separate portions.

These auxiliary books, so casually appended to the text as we now have it, are considered by Qabbalists to be the chief contribution of the *Zohar*. The following form the bulk of the Zoharic

writings outside of the commentary itself, as found in present editions, though in one or two editions a few additional fragments of minor importance are included:

1. *Tosephta'* (Additions or supplements);
2. *Heichaloth* (Mansions, Abodes) usually enumerated as seven, describing the structure of the upper and lower realms;
3. *Sithrei Torah* (Mysteries or Secrets of the Law [Pentateuch]) describing the evolution of the Sephiroth;
4. *Midrash Han-Ne'elam* (The Hidden Interpretation), deducing esoteric doctrine from the narratives in the Pentateuch;
5. *Ra'ya' Meheimna'* (The Faithful Shepherd), recording discussions between Moses the faithful shepherd, the prophet Elijah, and Rabbi Shim'on ben Yohai (the reputed compiler of the *Zohar*);
6. *Razei deRazin* (Secrets of Secrets), a treatise on physiognomy and higher psychology;
7. *Saba' deMishpatim* (The Aged in Decisions, Judgments), the Aged One or Scholar is Elijah who discourses with Yohai on the doctrine of metempsychosis;
8. *Siphra' di-Tseni'utha'* (The Book of the Mysteries), discourses on cosmogony and demonology;
9. *Ha-'Idra' Rabba' Qaddisha'* (The Great Holy Assembly), discourses of Rabbi Yohai to his disciples on the form of the deity and on pneumatology;
10. *Yenoqa'* (The Youth), discourses on the mysteries of ablutions by a young man of such high talent that he was thought to be of superhuman origin;
11. *Ha-'Irda' Zuta' Qaddisha'* (The Lesser Holy Assembly), discourses on the Sephiroth to six disciples.

The *Zohar* was compiled by Rabbi Simeon Ben-Iochai, and completed by his son Rabbi Eleazar, and his secretary Rabbi Abba. "But voluminous as is the work, and containing as it does the main points of the secret and oral tradition, it still does not embrace it all. It is well known that this venerable kabalist [Simeon] never imparted the most important points of his doctrine otherwise than orally, and to a very limited number of friends and disciples, including his only son. Therefore, without the final initiation into the *Mercaba* the study of the *Kabala* will be ever incomplete, . . . Since the death of Simeon Ben-Iochai this hidden doctrine has remained an inviolate secret for the outside worlds" (IU 2:348-9).

The *Zohar* contains the universal wisdom or theosophy of the ages. Nevertheless it "teaches practical occultism more than any other work on that subject; not as it is translated though, and commented upon by its various critics, but with the secret signs on its margins. These signs contain

the hidden instructions, apart from the metaphysical interpretations and apparent absurdities . . .” (IU 2:350). The present “approximation of the *Zohar* was written by Moses de Leon in the 13th century. “Mistaken is he who accepts the Kabalistic works of to-day, and the interpretations of the *Zohar* by the Rabbis, for the genuine Kabalistic lore of old! For no more to-day than in the day of Frederick von Schelling does the Kabala accessible to Europe and America, contain much more than ‘ruins and fragments, much distorted remnants still of that *primitive system which is the key to all religious systems*’ . . . The oldest system and the *Chaldean* Kabala were identical. The latest renderings of the *Zohar* are those of the Synagogue in the early centuries — *i.e.*, the *Thorah*, dogmatic and uncompromising” (SD 2:461-2).

The *Zohar* has been widely studied by European mystical and other scholars for centuries past, and many speculations have been made by these scholars as to its age, some affirming with perfect truth that the roots or origins of the Qabalah go back into the very night of time and are probably to be traced to now unknown originals in ancient Chaldea, while others points out that in several places the *Zohar* mentions facts of history that have taken place in Europe after the beginning of the Christian era, such as the Crusades, and the mentioning of the Massoretic vowel points which came into use at the time of the Rabbi Mocha, 570 AD, the mention of a comet which can be proved by the context to have appeared in 1264, etc. Moses de Leon was probably the first to edit or give to the world the volume of the *Zohar* as we now have it considered as a whole. We thus have a work of progressive compilation, the form in which it has reached our hands showing the labor of several, if not many, minds since the beginning of the Christian era, but which nevertheless in its typically Chaldean thought and manner of envisioning religious and philosophical principles prove it to have come down from an unknown time in Chaldean history.

Zoolatry [from Greek *zoon* animal + *latreia* worship] Animal worship; animal symbols are found in all religions, as in the religions of ancient Egypt and in Christianity, as the dove and the lamb. The Maharajas of the four quarters of space are sometimes represented as elephants; most of the zodiacal signs are animals, as the name implies. These symbols should not be regarded as arbitrarily chosen on account of a fancied resemblance: the animals are actually emblems, if not in all cases manifestations, of the powers in question. It is the same with plants and stones: they are not emblems only but actually enshrine certain occult qualities. If plants may have medicinal virtues, and stones possess magical powers, why may not animals have the same? The phrase animal worship implies that the veneration has often been transferred from the power to its symbol or emblem, as in the case of idolatry.

Yet no polished or cultivated nation of antiquity, no more so than the Christians today, worshiped these animal emblems as otherwise than figurations, or also at times as manifestations, of cosmic powers or beings — end-products of divine cosmic originants. Man himself falls into the same category, not only as being an offspring of the gods, but as an end-product of a divine hierarchy manifesting in greater or less degree the spiritual-divine attributes, functions, faculties, and

powers of his sublime ancestors or parents.

Zoonisation [from Greek *zoon* animal] Also Inzoonization. Coined by Master KH (ML 81), signifying the monads performing that phase of their evolution through the animal kingdom.

Zoroaster, Zarathustra, Zarathushtra (Avestan) **Zaradusht, Zartosht** (Persian) [from Avestan *zarat* yellow or old + *ushtra* he who bears light, the intellect in the act of cognition] He who bears the ancient light; the great teacher and lawgiver of ancient Persia in the Avesta, founder of the Mazdean religion, preserved by the modern Parsis.

“Founder of the religion variously called Mazdaism, Magism, Parseeism, Fire-Worship, and Zoroastrianism. The age of the last Zoroaster (for it is a generic name) is not known, and perhaps for that very reason. Zanthus of Lydia, the earliest Greek writer who mentions this great lawgiver and religious reformer, places him about six hundred years before the Trojan War. But where is the historian who can now tell when the latter took place? Aristotle and also Eudoxus assign him a date of no less than 6,000 years before the days of Plato, and Aristotle was not one to make a statement without a good reason for it. Berosus makes him a king of Babylon some 2,200 years B.C.; but then, how can one tell what were the original figures of Berosus, before his MSS. passed through the hands of Eusebius, whose fingers were so deft at altering figures, whether in Egyptian synchronistic tables or in Chaldean chronology? Haug refers Zoroaster to at least 1,000 years B.C.; and Bunsen . . . finds that Zarathustra Spitama lived under the King Vistaspa about 3,000 years B.C., and describes him as ‘one of the mightiest intellects and one of the greatest men of all time. . . the Occult records claim to have the correct dates of each of the thirteen Zoroasters mentioned in the *Dabistan*. Their doctrines, and especially those of the last (*divine*) Zoroaster, spread from Bactria to the Medes; thence, under the name of Magism, incorporated by the Adept-Astronomers in Chaldea, they greatly influenced the mystic teachings of the Mosaic doctrines, even before, perhaps, they had culminated into what is now known as the modern religion of the Parsis. Like Manu and Vyasa in India, Zarathustra is a generic name for great reformers and law-givers. The hierarchy began with the divine Zarathustra in the *Vendidad*, and ended with the great, but mortal man, bearing that title, and now lost to history. . . the last Zoroaster was the founder of the Fire-temple of Azareksh, many ages before the historical era. Had not Alexander destroyed so many sacred and precious works of the Mazdeans, truth and philosophy would have been more inclined to agree with history, in bestowing upon that Greek Vandal the title of ‘the Great’ ” (TG 384-5).

Zoroaster, the son of Pourushaspa, is said to be the same as Br Abrahm (Abraham) who brought down the holy fire which had no smoke and could not injure because it had no burnable substance. He divided this fire into ten parts and placed each in a different location.

Also, the first created, the abstract light, active mind.

WELCOME to the home page of The Theosophical Society, International Headquarters, Pasadena, California. The Society was founded in 1875 in an effort to promote the expressed awareness of the Oneness of Life.

THEOSOPHY: The word is derived from the Greek *theos* (god, divinity) and *sophia* (wisdom). Its philosophy is a contemporary presentation of the perennial wisdom underlying the world's religions, sciences, and philosophies.

*We are not brought into
existence by chance nor
thrown up into earth-life like
wreckage cast along the
shore, but are here for
infinitely noble purposes.—*

Katherine Tingley
