Introduction

Ever since the early days of the Theosophical Society there has been a call for a comprehensive glossary that would define and explain the thousands of philosophical and mystical terms found in *The Secret Doctrine* and *The Mahatma Letters to A. P. Sinnett*. H. P. Blavatsky's *Theosophical Glossary*, posthumously issued in 1892, while containing valuable material, is inadequate and cannot be said to bear the stamp of HPB's careful eye, for she had seen only the first thirty-two pages in proof and thus had been unable to clarify and expand the definitions. As G. R. S. Mead wrote in the Preface: "This is all the more regrettable, for H. P. B., as was her wont, was adding considerably to her original copy, and would no doubt have increased the volume far beyond its present limits."

In 1930, within a year after succeeding Katherine Tingley to the leadership of the Theosophical Society with international headquarters at Point Loma, California, Gottfried de Purucker proposed to his Literary Committee that work begin on an enlarged glossary which must pass the test of scholarship and also meet the exacting test of fidelity to the universal wisdom-teaching as restated by H. P. Blavatsky. The proposal was received enthusiastically. Professor Charles J. Ryan was appointed to spearhead the project, assisted by Drs. Lydia Ross, Grace Knoche (Sr.) and, briefly, Gertrude W. van Pelt, all long-time students of *The Secret Doctrine*. In the beginning, as material was collected, Dr. de Purucker dictated emendations and/or additions to his private secretary, Elsie Savage, and, as convenient, to Helen Savage, Irene Ponsonby, and Margherita Siren. Progress, though steady, was slow, and to respond in part to the immediate demand for a handbook of frequently used theosophical and oriental terms, Dr. de Purucker, with the aid of Geoffrey Barborka, issued his *Occult Glossary* in 1933.

By the spring of 1934 it was clear that someone was required to coordinate the growing file of manuscripts received from the contributors who by then also included Drs. Henry T. Edge and Joseph H. Fussell, joined later, for the Sanskrit terms, by Judith Tyberg. So, on March 23, G. de Purucker appointed Geoffrey Barborka chairman of the Glossary Committee, a post he filled with unremitting diligence, following the ground rules laid down by Dr. de Purucker in his March 16, 1934, letter to Professor Ryan:

- 1) Aim to produce a *Theosophical* Glossary only, not merely an encyclopedic Glossary of every term used by Tom, Dick, or Harry during past centuries.
- 2) Make your Glossary not a mere definition of terms, but a true Glossary, to wit, the word itself, and then a brief article upon it, said article running from two or three lines to half a page, but hardly longer. I use the word "article" not to mean an essay, but a glossarial explanation of the word, somewhat more elaborate and extended than a mere dictionary-definition is.
- 3) I would limit the Glossary to all the Theosophical, occult, and mystical words found in our Theosophical literature. This would of course include words from other religions and philosophies which our writers have used, but not necessarily words from religions and philosophies which we do not need to use, or our writers have not used.
- 4) Have a simple system of cross-reference . . . by the simple device of saying "See . . ." or "Cf. . . ." and then write the other word.

It is not necessary to bother with Sanskrit or Hebrew words unless they are found in our literature. Then they should be explained in the regular way adopted.

. . . The book really will be for Theosophical and occult students, and we cannot afford to waste our time in merely getting out a tremendous and elaborate book such as some literary

crank might issue in his spare hours for the sake of explaining, or trying to explain, every term he might find in a lifetime of reading.

Dr. de Purucker further recommended that all quotations be taken from original sources, wherever possible, and rendered verbatim et literatim even when the terms cited therein are incorrectly given; but terms in the body of the text should be spelled accurately.

Inevitably when several people contribute to a work of this kind, there is bound to be unevenness of quality due to differences of educational background and temperament. The editor's role, as G. de Purucker conceived it, was not to bring the whole into a unity of style, but rather to examine every term and make corrections and additions as required. This he did until May 1941; thereafter, for another year, he continued to clarify moot questions, and also saw to it that Masoretic points were added to the Hebrew characters on all Qabbalistic terms.

This project has always been close to my heart, for I was privileged to take Dr. de Purucker's dictation on all Glossary material from 1935 to 1942. In the 1980s an editorial team composed of A. Studley Hart, Sarah Belle Dougherty, Elsa-Brita Titchenell, and myself began a careful review of the Glossary. While it was possible to make editorial changes to modernize the text, improve the style, and remove obviously dated material, much work remains to be done: the extraordinary advances that have revolutionized our thinking in every branch of learning since Dr. de Purucker's death in September 1942 — in the proliferating scientific disciplines, in psychology and parapsychology, in Tibetan and Egyptian language studies and Gnosticism, for example — make it imperative that the content of the manuscript be updated. Furthermore, several important theosophical books — including several books by G. de Purucker and H. P. Blavatsky's *Collected Writings* in 14 volumes — have been published since the glossary was originally written, containing terms that need to be reviewed for inclusion.

Much of the material, however, is of value in its present edited form, particularly that dealing with theosophical and philosophical concepts. To make this resource available to the public, Theosophical University Press is issuing the *Encyclopedic Theosophical Glossary* online as a work in progress: editorial and scholarly review of the Glossary will proceed, and changes will continue to be made. We hope that those using it will send in to the Editorial Committee any errors of fact or typography that they find in this online edition. Readers' comments and suggestions are also welcome.

We believe this glossary will prove an effective and convenient reference for students of theosophical literature, and that its value will continue to grow as specific areas are enriched by the findings of modern scholarship.

A-Adh

Aam (Egyptian) [probably from *ám* to eat, devour] A name for the god Tem, regarded as a form of the sun god, especially at the city of Annu (Heliopolis). A verse from the *Book of the Dead* associates Aam with the sun god Ra: “I am *Ra*, I am *Aam*, I ate my heir”; Blavatsky adds, “an image expressing the succession of divine functions, the substitution from one form into another, or the *correlation of forces*. *Aam* is the electro-positive force, devouring all others as Saturn devoured his progeny” (SD 1:674n).

Aanroo, Aanre (Egyptian) *Áanru, Áanre*. More fully, Sekhet-Aanre (the fields of the reeds); more often called Aarru or Sekhet-Aarru; also Aanru, Aaru. The first region of the Afterworlds (Amenti) reached by the deceased in the afterdeath state, which he enters as a khu. “The second division of Amenti. The celestial field of Aanroo is encircled by an iron wall. The field is covered with wheat, and the ‘Defunct’ are represented gleaning it, for the ‘Master of Eternity’; some stalks being three, others five, and the highest seven cubits high. Those who reached the last two numbers entered the state of bliss (which is called in Theosophy Devachan); the disembodied spirits whose harvest was but three cubits high went into lower regions (*Kamaloka*). Wheat was with the Egyptians the symbol of the *Law of Retribution* or *Karma*. The cubits had reference to the seven, five and three human ‘principles’ ” (TG 1).

Beyond Aanroo, in Amenti, are seven halls with guardians, associated with kama-loka by Blavatsky: “Those only of the dead, who know the names of the janitors of the ‘seven halls,’ will be admitted into Amenti *for ever*; *i.e.*, those who have passed through the seven races of each *round* — otherwise they will rest in the *lower fields*; and it represents also the seven successive Devachans, or *lokas*” (SD 1:674n). *See also* AMENTI

Aarea (Tahitian) Red soil from which, in Tahitian legends, the first men were made; similar to the red earth of Hebrew Adamic man and the Norse mud giant.

Aaron (Hebrew) 'Aharon [from the verbal root 'āhar to be enlightened, illuminated] The enlightened; reputedly the first high priest of the Hebrews (Exodus). As elder brother and the first initiate of Moses, Aaron “heads the line, or Hierarchy, of the initiated *Nabim*, or Seers” (TG 1-2). Benei 'Aharon (children of Aaron) are priests.

Aarru, Aaru. See AANROO

Ab (Hebrew) 'Āb [from the verbal root 'ābab to blossom, bear fruit] Father, hence founder, forefather, ancestor; by extension, teacher or counselor. Originally a Babylonian name.

Fifth month of the Hebrew ecclesiastical or sacred year, according to the system used after the Babylonian captivity; also the 11th month of the civil year. Likewise the 11th month of the Palmyrenes and Syrians, equivalent to July-August and the zodiacal sign Leo. See also ABBA.

Ababel (Arabic) [cf Hebrew 'āb father] The Father Tree or mystic Tree of Life in the Koran, that sends forth new branches and leaves at every rebirth of the kerkes or phoenix, up to seven times seven or 49 times — “an allusion to the forth-nine ‘Manus,’ the Seven Rounds, and the seven times seven human cycles in each Round on each globe” (SD 2:617).

Abacus (Latin) [from Greek *abax* slab from Hebrew 'abaq dust] Anciently a sand-strewn board or table used for writing, geometrical figures, etc.; a counting-board on which sums were worked with counters on the board or beads in vertical grooves; and also a calculating device consisting of balls strung on wires set in a frame.

In archaeology, abacus is the upper plinth of a capital of a column, supporting the architrave; also, the mystic staff carried by the Grand Master of the Templars.

Abaddon (Hebrew) 'Abaddōn [from the verbal root 'ābad to perish, be cut off] Destruction, abyss; the region of the dead, synonym of She'ol in the Old Testament. Equivalent to the Greek apollyon (destruction, laying waste — Rev 9:11). Thus Abaddon, Apollyon, Hades, and Orcus all signify the underworld — the kama-loka or region of disintegrating “shells,” human or other.

Abathur (Gnostic) [from Hebrew 'āb father] In the Nazarene or Bardesanian system, the father of the Demiurgus or architect of the visible universe. In the *Codex Nazaraeus*, Abathur opens a gate, walks to the dark water (chaos), and looks down into it. The darkness reflects his image, and a son is formed who becomes the Logos or Demiurge, Ptahil or Fetahil. After Ptahil finishes his work he reascends to his father.

Abathur, a mystery-figure, is sometimes called the Third Life, equivalent to the Third Logos because first of the third triad of “lives” in the Nazarene system, which correspond to the three Logoi. He is analogous to the Ancient of Days of the Qabbalah, the Hindu Narayana, and the Christian Holy Spirit, while his ideal counterpart is Abathur Rama (lofty Abathur). As weigher of souls after death, Abathur is equated with Thoth, lord of the scales in the Egyptian *Book of the*

Dead.

Abba (Aramaic) *'Abbā*. Father, origin, source, transliterated in the Greek text (Mark 14:36) as *'Abba*. The phrase “Abba Father” has become a title of invocation to the first person of the Trinity; in Coptic and Syriac churches, Abba (father or master) is a title of the patriarch of bishops. In the Qabbalah, *'Abba* is the original principle symbolized by Kether (the Crown).

Ab-e-Hayat or **Ab-e-Zendegi** (Persian) *Āb-e-Hayat* or *Āb-e-Zendegi* [from Persian *āb*, Avestan *āp*, Pahlavi *āv*, water, purity, brilliance, honor, bliss, fortune] Water of life or immortality; it is believed that the Water of Life is hidden in the most northern part of the earth in the dark. He who finds and drinks of it will become immortal. Some Persian allegories say that Alexander the Great sought after it in vain. It is also said Khezr, the prophet, found it and that is how he became immortal. Esoterically it represents the universal self and life's principal substance. It corresponds to the use of “water” in Genesis 1:2. The ancient Iranians believed that the first created was Mithra (Mehr), the reflection of Being, the essence of light, in the water of life; so the creation was the synthesis of these two, named Mehrab. Mehrab later became the sacred place of worship in mosques among Moslems.

The water of life is also called Ab-e-Bagha (water of immortality), Ab-e-Heyvan (water of animation), and Ab-e-Khezr (water of Khezr).

Abel (Hebrew) *Hebel* [from the verbal root *hābal*, to breathe, blow, be vain, transitory] The second son of Adam and Eve, a “keeper of sheep,” slain by his brother Cain (Genesis 4). According to Blavatsky, Cain and Abel represent the third root-races or the “Separating Hermaphrodite,” who produce the fourth root-race, Seth-Enos. Abel (Hebel) is the female counterpart of the male Cain, and Adam is the collective name for man and woman. Abel is “*the first natural woman*, and sheds the *Virgin blood*,” during the separation of the sexes (SD 2:388); the “ ‘murdering’ is blood-shedding, but not taking life” (SD 2:273n; also 2:127, 134).

Abel thus is a generalizing term for womankind and Cain for mankind, when the sexes began separating in the third root-race but were not yet completely apart, before the androgynous humans became the present humanity with distinct sexes. A similar word, hebel (the pain of childbirth), is connected by some scholars with Abel. *See also* HABEL

Abhasvara (Sanskrit) *Ābhāsvara* [from *ā* near to, towards + the verbal root *bhās* to shine upon, illuminate] Brilliant, shining; a class of 64 devas or demigods representing a certain cycle of manifestation and the active phase of the evolutionary process set in motion by an act of will of Brahman, who remains transcendent while emanating forth the world.

Abiogenesis. *See* SPONTANEOUS GENERATION

Ab Hati (Egyptian) *Āb Ḥāti*. The animal soul, heart, or feelings in F. Lambert's rendering of the Egyptian sevenfold human constitution (SD 2:633). *See also* PRINCIPLES

Abhava (Sanskrit) *Abhava* [from *a* not + *bhava* being from the verbal root *bhū* to be, become] Nonbeing, destruction, end of the world. *See also* ABHĀVA; BHAVA

Abhava (Sanskrit) *Abhāva* [from *a* not + *bhava* being from the verbal root *bhū* to be, become] Nonexistence, nonentity, negation; applied to the material universe, noumenal substance, or subjectivity. In Kanada's system of negation of individual beings or objects, abhava is classed as seventh in his categories. In Vedanta philosophy, first of the six pramanas (means of obtaining knowledge), and as such corresponds to the fifth pramana, abhava-pratyaksha, nonperception when applied to the physical, but more accurately apprehension of subjective or spiritual being.

Ordinary usage has attached the meaning of death or annihilation to abhava, but only because to the materialistic mind that which cannot be cognized by the sense organs has no existence. Like other philosophical terms, it has a dual meaning: nonbeing or nonexistence, when taken objectively; mystically, the only true being, that of spirit which is nonbeing to those who do not accept spiritual realms and their life.

According to Sankaracharya: "Those who say that there is such a thing as Abhava on earth, are neither Srotis (those who understand the Srutis), knowers of Sastras, knowers of Truth, nor Sadhus. Listen! both Bhava and Abhava (existence and nonexistence) are also Brahma" (*Mahavakyadarpanam*, vv. 129-30). Thus Brahman is essentially the source or foundation of all that is: both becoming or being, and nonbecoming or nonbeing; and because bhava and abhava exist in the universe, both are Brahman.

A more subtle, deeply philosophical concept is the application of abhava to the unmanifest — that state of the cosmic essence before "becoming" began its work of differentiation into hierarchical orders, thus bringing about bhava. *See also* ASAT; BHAVA; SAT

Abhaya (Sanskrit) *Abhaya* [from *a* not + *bhaya* fear from the verbal root *bhī* to fear] Fearlessness, peace, mental serenity; a title of both Siva and Buddha; one of Dhritarashtra's hundred sons; also reputedly a "son" of Dharma.

Abhayagiri (Sanskrit) *Abhayagiri* [from *a* not + *bhaya* fear + *giri* mountain, hill] Mount Fearless; a mountain in Sri Lanka. According to Fa-hien, the Chinese traveler, in 400 AD. Abhayagiri had an ancient Buddhist vihara (monastery) of some 5,000 priests and ascetics, whose studies comprised both the Mahayana and Hinayana systems, as well as Triyana (three paths), "the three successive degrees of Yoga. . . . Tradition says that owing to bigoted intolerance and persecution, they left Ceylon and passed beyond the Himalayas, where they have remained ever since" (TG 2-3).

Abhayagiri-vasinah (Sanskrit) *Abhayagiri-vāsināḥ* [from *vas* to dwell, inhabit] Dwellers on Mount Fearless; also a branch of Katyayana's disciples (3rd century BC).

Abhichara (Sanskrit) *Abhicāra* [from *abhi* toward + the verbal root *car* to go, often used

derogatorily as to act wrongly toward another, charm, enchant, possess] Exorcising; employing a charm or spell, usually for malevolent purposes, causing death or disease; mesmeric powers used by sorcerers in India.

Abhidhamma (Pali) *Abhidhamma* [from *abhi* towards, with intensified meaning + *dhamma* law, religion, duty from the verbal root *dhr* to hold fast, preserve, sustain] The supreme dhamma or law as expounded in the third and last portion of the Pali Tipitaka (Sanskrit Tripitaka) or “three baskets” of the canonical books of the Southern School of Buddhism. The *Abhidhamma-pitaka*, which deals with profound metaphysical themes, is believed to be the source from which the Mahayana and Hinayana got their fundamental doctrines.

Abhidhamma (Sanskrit abhidharma) is defined by Buddhaghosha as “that higher law (dharma) which goes beyond (abhi) the popular or common law.”

Abhidharma. See ABHIDHAMMA

Abhidina (Sanskrit) *Abhidīna* [from *abhi* towards + *dīna* flight from the verbal root *ḍī* to fly] One of the siddhis (occult powers) of a buddha; similar to khechara (skywalker, one who has the power of projecting his mayavi-rupa whither he will in the lower ranges of the cosmos), but on a more sublime scale. It is the power to transcend the limitations of the lower quaternary of the cosmos and to “fly” or ascend self-consciously into the spiritual planes of the universe and function there in full self-possession, with complete control of circumstances and time. One of the most mystical and least known teachings of esoteric Buddhism, it is closely connected with samma-sambodhi and nirvana.

Abhijit (Sanskrit) *Abhijit* [from *abhi* towards + the verbal root *ji* to conquer] Sometimes *Abhijita*. As a noun, a soma sacrifice, a lunar mansion, the principal star in the constellation Lyra, a name of Vishnu, etc. As an adjective, victorious, also referring to one born under the constellation Abhijit.

Equivalent to aghijin-muhurta, the eighth muhurta or period, comprising 24 minutes before and 24 minutes after midday — an auspicious period; Sankaracharya is said to have been born at this time.

Abhijna (Sanskrit) *Abhijñā* [from *abhi* towards + the verbal root *jñā* to know, have special knowledge of, mastery over; Pali *abhiñña*] Inner perception; in Buddhism the five or six transcendental powers, faculties, or superknowledges attained on reaching buddhahood. Gautama Buddha is said to have acquired the six abhijnas the night he attained enlightenment. Generally enumerated as: 1) divyachakshus (divine eye) instantaneous perception of whatever one wills to see; 2) divyasrotra (divine ear) instantaneous comprehension of all sounds on every plane; 3) riddhisakshatkriya, power of becoming visibly manifest at will, intuitive perception; 4) purvanivasajnana (power to know former existences) also called purvanivasanu-smritijnana (recollection of former existences); and 5) parachittajnana (knowledge of others' thoughts)

understanding of their minds and hearts.

In China a sixth is listed as asravakshaya (stream-mastery, pain destruction), destruction of all ignorance and the entering of the stream of supernal knowledge. While these abhijnas may be acquired in the process of achieving spiritual progress, the Buddha frowned upon any attempt to develop them; and if they should spontaneously become manifest, then one must avoid any display of such extranormal powers.

Abhimana (Sanskrit) *Abhimāna* [from *abhi* towards + the verbal root *man* to think; thinking towards oneself] Pride, arrogance, hence delusion. Covetousness manifesting in acquisitiveness, bringing about longing for what is thought about, in its turn inducing conceit. In Sankhya philosophy, a high or egotistic conception of oneself (usually therefore erroneous). It springs into action in the human constitution when awakened by the propulsive or impulsive energy of kama. Ahamkara, the human ego-function, is the prime motivator of abhimana.

Abhimanin, Abhimani (Sanskrit) *Abhimānin, Abhimānī* [from *abhi* towards + the verbal root *man* to think, reflect upon] Longing for, thinking upon; name of an Agni, eldest son of Brahma. By Svaha, Abhimanin had three sons of surpassing brilliancy: Pavaka, Pavamana, and Suchi, the personifications of the three fires that produced our earth and humanity (VP 1:10). Abhimanin, his three sons, and their 45 sons constitute the mystic 49 fires of the Puranas and the Esoteric Philosophy.

As the eldest son of Brahma, Abhimanin represents the cosmic Logos, the first force produced in the universe at its evolution, the fire of cosmic creative desire. His three sons, according to the *Vayu-Purana*, stand for three different aspects of Agni (fire): Pavaka is the electric fire, Pavamana the fire produced by friction, and Suchi the solar fire. Interpreted on the cosmic and human planes, these three fires are “Spirit, Soul, and Body, the three great Root groups, with their four additional divisions” (SD 2:247). They are said to have been cursed by the sage Vasishtha to be born again and again (cf BP 4:24,4; SD 2:247-8).

“Every *fire* has a distinct function and meaning in the worlds of the physical and the spiritual. It has, moreover, in its *essential* nature a corresponding relation to one of the human psychic faculties, besides its well determined chemical and physical potencies when coming in contact with the *terrestrially* differentiated matter” (SD 1:521).

Abhimanyu (Sanskrit) *Abhimanyu* [from *abhi* towards + the verbal root *man* to think] Son of Arjuna by Subhadra, sister of Krishna. In the mystic interpretation of the *Bhagavad-Gita*, Abhimanyu represents high-mindedness, akin to dhyana (meditation). Abhimanyu killed Duryodhana’s son Lakshmana on the second day of the great battle of Kurukshetra, while he himself was slain on the thirteenth day. The *Mahabharata* tells of Abhimanyu’s previous birth as Varchas, son of Chandra, and the agreement entered into by Chandra with the devas to send his son to be born as the son of Arjuna in order to fight against the “wicked people.” Chandra imposed

the condition, however, that Abhimanyu should be slain by the opposing forces so as to return to him in his sixteenth year.

Abhinivesa (Sanskrit) *Abhiniveśa* [from *abhi* towards + *ni* down + the verbal root *viś* to enter; to enter into completely] Application, intentness, devotion, tenacity, determination to effect a purpose or attain an object. In the *Bhagavad-Gita*, when used with *manas* (mind) and *atman* (self) it means to devote one's attention to.

In the Sankhya and Yoga systems, *abhinivesa* or tenacity for life is the last of the five hindrances (*klesas*). W. Q. Judge defines it as “idle terror causing death” — a permissible extension of meaning (WG 1).

Abhinna. See ABHIJNA

Abhrayanti (Sanskrit) *Abhrayantī* [from *abhra* cloud] Forming clouds, bringing rain; one of the seven *Krittikas* (Pleiades).

Abhutarajas (Sanskrit) *Abhūtarajas* [from *a* not + the verbal root *bhū* to be born, produced + *rajas* passion] Those not produced by or born with the quality of passion; a class of 14 gods or divinities belonging to the “fifth manvantara,” the fifth Manu of which was Raivata (cf VP 3:1). The *abhutarajasas* are a hierarchy of divine beings, similar to the *kumaras* and *manasaputras*, who have passed through the material worlds in previous evolutionary periods. Having risen above all passion to the lower spheres, these three classes of deities are reckoned as exempt from passion — in the sense of suffering passively, one of passion's original connotations. These divinities are masters of themselves, not passive subjects.

In the theosophical scheme of rounds and races, the fifth manvantara of the Puranas refers to the first half or descending arc of the third round of our present planetary chain, and the fifth man, Raivata, to the root-manu of this third round; further, the passage of the life-waves through each round of all the globes of the planetary chain — i.e. from globe A to globe G — consists of two “manvantaras,” and thus it is that the first half or descending arc of the third round is the fifth of these manvantaras. Moreover, just as in the third root-race on this globe in our present fourth round the *manasaputras* incarnated in the then relatively intellectually senseless humanity to awaken its self-conscious mind, so in their own way and on their own planes did the *abhutarajasas* act. In the descending arc of the third round they played the same part, albeit in a more diffuse and less active way, that they later did in the early part of the third root-race of the fourth round on this globe, when the human vehicles were evolutionally ready for a more intensive incarnation.

Abhyasana. See ABHYASA-YOGA

Abhyasa-yoga (Sanskrit) *Abhyāsa-yoga* [from *abhi* towards + the verbal root *as* to be, exist + *yoga* union from the verbal root *yuj* to join, yoke] Sometimes erroneously *abhyasana*. Repeated practice and application of yoga, meditation, or recollection; the effort of the mind to attain an unmodified

condition of perfect serenity and quiet. One of the eight disciplines or requirements of yoga: persistent concentration of attention. When accompanied with physical postures, it is a form of hatha yoga, and practiced without the spiritual training of raja yoga, it has its dangers. As a system of mental concentration directed to impersonal, altruistic ends, it is beneficial. Krishna (BG 12:9-10) points out that abhyasa-yoga is not only useful for training in one life but, if performed for the sake of the Supreme, is likely to leave permanent helpful impulses in the soul which will aid it in future incarnations and lead it ultimately to union (yoga) with the divine.

Abib (Hebrew) *'Ābīb* [from the verbal root *'abab* to be fresh, green; to blossom, bear fruit] Ear or sprout (of grain); first month of the Hebrew sacred year, equivalent to March-April and beginning with the new moon. Hodesh ha-'abib was the "month of green corn"; later, after the exile, called Nisan during which the vernal equinox was celebrated.

Abiegnus Mons (Latin) [from *abies* fir-wood, a letter inscribed on a wooden tablet + *mons* mountain] Wooded mountain; according to Wynn Westcott, a mystic name "from whence, as from a certain mountain, Rosicrucian documents are often found to be issued — 'Monte Abiegnus.' There is a connection with Mount Meru, and other sacred hills" (TG 3).

Abif, Hiram. See HIRAM ABIF

Ab-i-hayat. See AB-E-HAYAT

Abir (Hebrew) *'Ābīr*, *'Abbīr* [from the verbal root *'ābar* to be strong] As an adjective, durable, strong; as a noun, protector, hero. Cognate in thought with *kabbir* (cf *kabiri*, *kabeiroi*) and *geber* (cf *gibborim*), all generally signifying power, might, strength, although each has its distinct connotation.

Also, wing or pinion, implying flight or soaring.

Abjayoni (Sanskrit) *Abjayoni* [from *abja* lotus from *ap* water + the verbal root *jan* to be born, produced + *yonī* womb, spring, source] Lotus-born; applied to Brahma, said to have sprung at the time of creation from a lotus which arose from the navel of Vishnu.

Ablanathanalba (Gnostic) Used as a magical charm during the later Roman Empire when Gnosticism flourished in most great centers of population such as Alexandria. In Greek characters it is a palindrome. See also ABRACADABRA.

Abortion The destruction of the fetus in the uterus. The issues involved in the act are more vital and far-reaching than is generally suspected. Blavatsky in classifying feticide as unjustifiable murder, says: "yet it is neither from the standpoint of law, nor from any argument drawn from one or another orthodox *ism* that the warning voice is sent forth against the immoral and dangerous practice, but rather in occult philosophy both physiology and psychology show the disastrous consequence. . . . For, indeed, when even successful and the mother does not die just

then, *it still shortens her life on earth to prolong it with dreary percentage in Kamaloka*, the intermediate sphere between the earth and the region of rest, . . . a necessary halting place in the evolution of the degree of life. The crime committed lies precisely in the wilful and sinful destruction of life, and interference with the operations of nature, hence — with Karma — that of the mother and the would-be future human being. The sin is not regarded by theosophists as one of a *religious* character, . . . But foeticide is a crime against nature” (BCW 5:107-8).

Abracadabra [possibly from Celtic *abra* or *abar* god + *cad* holy; Blavatsky from an elaboration of the Gnostic *Abrasax* or *Abraxas*, a corruption of a Coptic or Egyptian magic formula meaning “hurt me not”] Mystical word used as a charm by the Gnostic school of Basilides. The Gnostic physician Serenus Sammonicus (2nd-3rd century) prescribed it as a remedy for agues and fevers. On amulets the word is often inscribed as a triangle with the point down, beginning with all eleven letters, below which are the first ten, and so on down to the single letter at the point. The power of any charm lies, not in the word itself, but in the hidden science connecting sounds and symbols with the potencies in nature to which they correspond. *See also* ABLANATHANALBA

Abraham (Hebrew) *'Abrāhām* Traditionally the founder of the Hebrew and South-Arabian peoples, whose original name was Abram. “Neither shall thy name any more be called Abram, but thy name shall be Abraham; for a father of many nations have I made thee” (Genesis 17:5). Blavatsky holds that Abraham “belongs to the universal mythology. Most likely he is but one of the numerous aliases of *Zeruan* (Saturn), the king of the golden age, who is also called the old man (emblem of time)” (IU 2:216). Such figures are described in various ways: as historical characters, as mythoi, and as rulers of sidereal and terrestrial powers to be interpreted astronomically and cosmically.

Abrayanti. *See* ABHRAYANTI

Abraxas, Abrasax (Gnostic) Mystical term used by the Gnostics to indicate the supreme entity of our cosmic hierarchy or its manifestation in the human being which they called the Christos. Abraxas has the value of 365, based on numerical equivalents of the Greek alphabet. Because 365 represents the cycle of one revolution of our planet around the sun, they held that in Abraxas were mystically contained the full number of families of entities composing a hierarchy. These entities received from their supreme illuminator, Abraxas, the streams of life and inspiration governing their existence. Thus in a sense Abraxas is the cosmic Oversoul, the creative or Third Logos, Brahma. The Basilidean Gnostics taught that from this supreme God was created nous (mind). Abraxas also was identified with the Hebrew *'Adonai*, the Egyptian Horus, and the Hindu Prajapati.

Gnostic amulets known as Abraxas gems depicted the god as a pantheos (all-god), with the head of a cock, herald of the sun, representing foresight and vigilance; a human body clothed in armor, suggestive of guardian power; legs in the form of sacred asps. In his right hand is a scourge,

emblem of authority; on his left arm a shield emblazoned with a word of power. This pantheos is invariably inscribed with his proper name IAO and his epithets Abraxas and Sabaoth, and often accompanied with invocations such as SEMES EILAM, the eternal sun (Gnostics and Their Remains 246), which Blavatsky equates with “the central spiritual sun” of the Qabbalists (SD 2:214). Though written in Greek characters, the words SEMES EILAM ABRASAX are probably Semitic in origin: *shemesh* sun; *‘olam* secret, occult, hid, eternity, world; *Abrasax* Abraxas. Hence in combination the phrase may be rendered “the eternal sun Abrasax.”

Abred, Cylch yr Abred (Welsh) Inchoation; the cycle of inchoation. The lowest of the three cycles of existence in Druidism, including the human kingdom and probably the animal and vegetable: “the Cycle of Abred, in which are all embodied and dead existences.” Abred has four stages: Annwn, Obryn, Cydfil, and Dyndeb. *Hawl yr ail* (the second examination) reads:

Q. Whence didst thou proceed? and what is thy beginning?

A. I came from the Great World, having my beginning in Annwn.

Q. Where art thou now? and how camest thou to where thou art?

A. I am in the Little World, whither I came, having traversed the circle of Abred, and now I am a man at its termination and extreme limits.

Q. What wert thou before thou didst become a man in the circle of Abred?

A. I was in Annwn the least possible that was capable of life, and the nearest possible to absolute death, and I came in every form, and through every form capable of a body and life, to the state of man along the circle of Abred, where my condition was severe and grievous during the age of ages, ever since I was parted in Annwn from the dead, . . .

Q. Through how many forms didst thou come? . . .

A. Through every form capable of life, in water, in earth, and in air. (Bard 227).

Absolute [from Latin *ab* away + *solvere* to loosen, dissolve] Freed, released, absolved; parallel to the Sanskrit *moksha*, *mukti* (set free, released), also to the Buddhist nirvana (blown out), all three terms signifying one who has obtained freedom from the cycle of material existence.

Absolute, in European philosophy, is used somewhat loosely for the unconditional or boundless infinitude. On the other hand, Sir W. Hamilton (Disc 13n) considers the Absolute as “diametrically opposed to, . . . contradictory of, the Infinite,” which is correct from the standpoint of both etymology and abstract philosophy. Blavatsky uses the term both ways: sometimes equating it with infinity, at other times with the first cause or one divine substance-principle.

Strictly speaking, absolute is a relative term. It is the philosophic One or cosmic originant, but not the mystic zero or infinitude. An absolute or a cosmic freed one is not That (infinity), for infinity has no attributes: it is neither absolute nor nonabsolute, conscious nor unconscious, because all attributes and qualities belong to manifested and therefore noninfinite beings and things (cf FSO 89-90). The boundless or infinite, in which exist innumerable absolutes, includes the cognizer, the

cognized, and the cognition, and is both matter and spirit, subject and object; all egos and non-egos are included within it.

From the zero emanate an infinite number of cosmic Ones or monads. Every absolute is not only the hierarch of its own hierarchy, the One from which all subsequent differentiations emanate, but is also a cosmic jivanmukta, a released monad freed from the pull of the lower planes. Every monad at the threshold of paranirvana reassumes its primeval essence and becomes at one with the absolute of its own hierarchy once more. The absolute is thus the goal of evolution as well as the source, the highest divinity or Silent Watcher of the hierarchy of compassion, which forms the light side of a universe or cosmic hierarchy.

Absoluter Geist (German) Absolute spirit; used by Eduard von Hartmann in his *Philosophy of the Unconscious* to signify the cosmic hierarch or originant of a hierarchy. *See also* ABSOLUTE.

Absolution [from Latin *ab* away + *solvere* to set free, loosen, dissolve] Release; in Christian usage, mainly Roman Catholic, remission of sins, the setting free by a priest of a person from guilt, the penalties of guilt, divine punishment, or the censure of the church.

In the Greek, remission (of sins) meant sending away, the intent being that the disciples and the assembled believers together were able to work a change of heart in the sinner so that he would sin no more (James 5:16), not a remission of the karmic penalty due. Only much later was the power of remission taken over by the priest. Moreover, for a thousand years the formula used was “May Christ absolve thee,” superseded by “I absolve thee.” While clearly a priest may release one from the penalties imposed by his church, he cannot release anyone from the natural consequences of his acts; yet Christians have attached extreme importance to death-bed absolution by a priest. Such death-bed repentance had its origin in the fact that the last thoughts of a dying person color his afterdeath experiences, and even his next incarnation. But though well-wishers and people of high attainment can help with their counsel and example, they cannot set aside the laws of nature. Real absolution must be emancipation from error and wrongdoing, not an escape from the demands of justice or karma.

Absolution also conveys the mystical significance of the Sanskrit moksha and mukti. When one’s whole being has been turned upwards and inwards to a more or less perfect union with the god within, one is absolved, released, or set free from the entanglements of the lower nature and, in this sense, one has absolution or freedom. *See also* ABSOLUTE.

Ab Soo. *See* APSU

Absorption [from Latin *absorbere* to suck up, swallow] In *The Secret Doctrine*, the reabsorption of all manifestation at the coming on of the Great Night or mahapralaya, “when *Pralaya* will have reduced not only material and psychical bodies, but even the spiritual *Ego(s)* to their original principle — the Past, Present, and even Future Humanities, like all things, will be one and the

same. Everything will have re-entered the *Great Breath*" (1:265-6).

Likewise the reentering of the human into the divine, of the personality into the individuality, achieved in moments of samadhi even during the lifetime of the initiate on earth; also entrance of the individual into the nirvanic condition.

Abyss [from Greek *a* not + *byssos*, *bythos* deep, depth] Bottomless, unfathomable; chaos, space, the watery abyss which becomes the field of manifestation or cosmos — a concept found in all mythologies. With the Sumerians, Akkadians, and Babylonians the great Deep gave birth to Ea, the All-wise, unknowable infinite deity, while in the Chaldean cosmogony Tiamat, the female principle, is the embodiment of chaos. The Abyss or chaos was the abode of cosmic wisdom. Egyptian cosmogony speaks of Nut as the celestial abyss while Scandinavian cosmogony tells of Ginnungagap (chasm of offspring of Ginn), the infinite void or the abyss of illusion (SD 1:367).

Acacia (Greek) *akakia* [from *a* not + *kakia*, *kakos* evil] Innocence, harmlessness; equivalent to Sanskrit ahimsa.

A leguminous plant bearing white or yellow flowers found in the warmer regions of the globe. In Freemasonry, acacia has a threefold symbolism: 1) immortality of the soul, as the plant continually renews itself; 2) innocence, purity, integrity; and 3) initiation or birth into a "new" life. The *acacia seyal* is the shrub believed to be the shittah-tree (Isaiah 41:19) that furnished the shittim-wood for the Ark of the Covenant and for the Tabernacle.

Acervulus Cerebri Brain-sand; minute particles of a yellowish, semi-transparent, hard, brilliant substance found in the pineal gland in the human brain. Its exceptional absence occurs in congenital idiots, in young children, and in the senile aged. The physiologists report that this "sand" is composed of alkaline phosphates and carbonates and some animal matter, but they fail to account for its presence or purpose. The fact that this brain-sand is of mineral rather than of osseous character is in keeping with the occult history of the once external, active third eye of early humanity. The ancients knew that, with the racial evolutionary descent into gross matter, this spiritual eye, gradually becoming atrophied and petrified, retreated deeply within the developing brain when its course was run (SD 2:294&n). The pineal gland being the chief organ of

spirituality in the human brain at present, this mysterious sand is the result of the work of mental electricity upon the surrounding matter. This is based on the ancient idea that every atom of matter is only a concretion of crystallized spirit or akasa, the universal soul. *See also* PINEAL GLAND.

Acetana. *See* ACHETANA

Achaitanya (Sanskrit) *Acaitanya* [from *a* not + the verbal root *cit* to be conscious of, understand] Void of intelligence and consciousness, lack of spirituality. An ancient Sanskrit verse runs: Achaitanyan na vidyate, Sarvan sarvatra sarvada (“A thing without intelligence or consciousness is not known. All is everywhere at all times”).

Achala (Sanskrit) *Acala* [from *a* not + the verbal root *cal* to be moved, agitated] Immovable, not moving. As a masculine noun, a mountain, rock; also the number seven. As a proper noun, a name of Siva. As a feminine noun, the earth; also one of the ten stages or degrees of a bodhisattva in his progress toward buddhahood. Used in the *Bhagavad-Gita* (2:24) to describe the self in contradistinction to the not-self: “He is eternal, all-pervading, unchanging and immovable (achala).” Also a heroic charioteer on the side of the Kurus slain by Arjuna.

Acharya (Sanskrit) *Ācāra* [from *ā* towards + the verbal root *car* to approach, proceed, behave] Custom, behavior, practice; also an established rule of conduct, a precept, etc., often used in compound form for names of books dealing with the understanding and application of moral precepts.

Acharya (Sanskrit) *Ācārya* [from *ā* towards + the verbal root *car* to proceed, practice, conduct oneself] One who proceeds or practices; a teacher, instructor, or guide. Usually applied to a spiritual teacher or guru, such as Sankaracharya.

Achath. *See* 'AHATH

Achath-Ruach Elohim-Chiim. *See* 'AHATH-RUAH-'ELOHIM-HAYYIM

Acher (Hebrew) *'Aḥēr* In an allegory in the *Talmud* (Hag 14b), one of four tanna'im (teachers) to enter the Garden of Delight, i.e., to seek initiation into the sacred science. His real name was 'Elisha' ben 'Abuyah. A famous Talmudic scholar before he “failed” the initiation, he became an apostate and was called Aher (stranger). Of the four that entered, Ben Asai looked — and died; Ben Zoma looked — and lost his reason; Aher made ravages in the plantation; and Aqiba, who had entered in peace, left in peace (Kab 67-8).

Acheron (Greek) [probably from *achos* pain, distress; Etrusc. *Acceruns*] The River of Woe, one of five rivers surrounding Hades. The others were Cocytus (river of wailing), Styx (the hateful), Pyriphlegethon (the fiery), and Lethe (forgetfulness).

In later traditions, a son of the sun (Helios) and Demeter who supplied the titans with drink when

they were fighting against Zeus, and was therefore transformed into a river of the underworld. These rivers have reference to the circulations of the universe, and in this connection the ancient Greeks and Romans had certain mystical rites relating to the “deification” of souls after death and their passage into other spheres.

Achetana (Sanskrit) *Acetana* [from *a* not + the verbal root *cit* to be conscious of, understand] Without consciousness, inanimate, insensible. *See also* ACHAITANYA

Achidrupa (Sanskrit) *Acidrūpa* [from *a* not + *cit* intelligence + *rūpa* form, body] A form or body without an intelligence; the negative or opposite of chidrupa, pure intelligence and consciousness, which is applied to the hierarch or supreme being of a hierarchy. Achidrupa signifies whatever entity or thing is not yet self-consciously cognizant of the chit (intelligence) within itself, i.e., without an atman or conscious self. Hence achidrupa could apply to the material spheres, or even to intelligences greatly inferior to the chidrupa. Like most Oriental philosophical terms, the meaning shifts in connection with the framework of thought in which it is used.

Achit (Sanskrit) *Acit* [from *a* not + the verbal root *cit* to perceive, understand] Unperceptive, unthinking; used as a noun and applied to the cosmos, absolute nonintelligence in contrast to chit, absolute intelligence. In theosophical writings, achit frequently stands for the unintelligent, material, or vehicular side of nature.

Achod. *See* 'EHAD

Achyuta (Sanskrit) *Acyuta* [from *a* not + the verbal root *cyu* to move to and fro, fall, fade] Unfalling, undecaying; the imperishable or indestructible, as applied to Brahman (BG 2:21, VP 1:2); also used as a title of Vishnu and Krishna.

The reverse of chyuta, the fallen or perishable, achyuta refers not so much to an individualized divinity, however sublime, because such divinity would be an entity and therefore limited; but rather to a condition of essential cosmic Being, consciousness-life-substance, the source and final destiny of all entities and things.

Acidrupa. *See* ACHIDRUPA

Acit. *See* ACHIT

Acthna An invisible subterrestrial fire, sometimes causing volcanic eruptions, an “element in the life of the ‘great snake’ Vasuki, that according to Hindu mythology encircles the world, and by whose movements earthquakes may be produced” (BCW 7:283). Also “a certain state of the ‘soul’ of the earth, a mixture of astral and material elements, perhaps of an electric or magnetic character” (F. Hartmann, *ibid.*).

Actio in Distans (Latin) Action at a distance. Can force be transmitted across an empty space? On the automechanical theory of the universe, such action is inexplicable and yet inevitable, for if the

universe consists entirely of matter made of atoms separated from each other by empty spaces, the transmission of force from one atom to another cannot be explained except by supposing some medium to intervene. If this medium is atomic, the old difficulty reappears; if it is continuous, there is no reason for supposing it, since matter might in the first place have been supposed to be continuous. Thus if we choose to represent reality as a system of points in space, we must assume *actio in distans* as an axiom. The difficulty that a body cannot act where it is not, may be gotten over by stating that wherever it can act, there it is. Scientific theories, carried to a logical conclusion, support the idea that all things in the universe are connected with each other, so that whatever affects one part affects every other part. Notions of physical space do not enter to the realm of mind, thought, and feeling.

To meet this difficulty of action at a distance, early European scientists invented various kinds of ethers to bridge the supposed gap of nothingness between atom and atom or body and body. These finally were abandoned, with the exception of the luminiferous or light-carrying ether, which remained until the Michelson-Morley experiment, after which it was abandoned.

Nevertheless, theosophy postulates the existence of atomic and subatomic ethers of various degrees of tenuity, ranging from physical to spiritual. Collectively these ethers are the different planes or ranges of *akasa*, the fundamental substratum of the universe and the garment in which the cosmic divinity clothes itself — the various *prakritis* as outlined especially in the Sankhya philosophy. Any scientific ether is not the *akasa* or aether, but solely the lowest plane of the *akasic plenum*, some of the ranges of the astral light, which in one sense is the highest principle of the earth's atmosphere — a subtle ethereal energy-stuff permeant through and interpenetrating physical matter of all kinds. *See also* Aether; Ether

Acyuta. *See* ACHYUTA

Ad or Adad, Hadad (Semitic) [from *'adad* to be powerful, strong] Powerful, mighty; the primeval One, similar to the Sanskrit *ad* (first, primeval). In the Babylonian system, according to Blavatsky, Ad or Ad-ad is the great first cause “who is never named, but only acknowledged in thought as the Hindu Swayambhuva. From this he becomes manifest as Anu or Ana — the one above all — Monas” (IU 2:170). Ad or Adad is without attributes and therefore viewed as the source from which the Demiurge or world builder came into manifestation.

Adad is a national and guardian deity of the Syrian races and the Edomites, found as early as 3000 BC in Syrian cuneiform tablets. In the Babylo-Assyrian pantheon 'Adad is named in the second divine triad, that of the life-giving nature forces, with Shamash (the sun god) and Sin (the moon deity), and is always represented with a bull. In the Babylonian flood myth Adad is the god of storms, rains, and harvests, whose emblem is the thunderbolt, apparently the Semitic equivalent of the Greek Zeus, Roman Jupiter, and Norse Thor. His consort is Atargatis (Astarte, Asthoreth, Ishtar) who at times takes his place. *See also* AD, SONS OF

Ad-ah (Hebrew) *Ādāh* [from *‘ādāh* to pass over, march along, continue, advance in perpetuity] Progress in time and space; eternal change. Adopted by Blavatsky to designate the races of early mankind — the first root-race of our globe and, by analogy, the first great subrace of our present fifth root-race — both being referred to as the “sons of Ad-ah” (SD 2:203).

In Genesis (4:19-20) ‘Adah, the first of the two wives of Lamech, gave birth to Jabal (Yabal), meaning a flowing or streaming, as of a river, and hence, like ‘Adah his mother, transitory in time and/or space. Jabal is said to stand for the nomadic Aryan race, whose homeland stretched from the Euxine to Kashmere and beyond (IU 1:579). Used in Isaiah (45:17) with ‘olam (world, age, aeon) to signify eternity of eternities.

Ad, Sons of Used by Mahatma KH in response to a question asked by Sinnett whether there had ever been civilizations “as great as our own in regard to intellectual development”: “Do you know that the Chaldees were at the apex of their Occult fame *before* what you term as the ‘bronze Age’? That the ‘Sons of Ad’ or the children of the Fire Mist preceded by hundreds of centuries the Age of Iron, which was an old age already, when what you now call the Historical Period . . . had hardly begun” (ML 145, 153).

Adam (Hebrew) *Ādām* [from *‘ādām* to be red, ruddy] Used in Genesis for man, original mankind; the Qabbalah enumerates four Adams. The Archetypal or Heavenly Man (‘Adam Qadmon) is the prototype for the second, androgyne Adam. From these two emanates the third Adam, preterrestrial and innocent, though still further removed from the divine prototype Adam Qadmon. The fourth Adam is “the Third Adam as he was after the Fall,” the terrestrial Adam of the Garden of Eden, our earthly sexual humanity (*Qabbalah Myer* 418).

With regard to the elohim bringing man forth “in their own image” (tselem), Blavatsky says: “The *sexless* Race was their first production, a modification *of* and *from* themselves, the pure spiritual existences; and this as Adam *solus*. Thence came the *second* Race: Adam-Eve or *Jod-Heva*, inactive androgynes; and finally the *Third*, or the ‘*Separating* Hermaphrodite,’ Cain and Abel, who produce the Fourth, Seth-Enos, etc.” (SD 2:134). Again, “finally, even *the four ‘Adams’* (symbolizing under other names the four preceding races) were forgotten; and passing from one generation in to another, each loaded with some additional myths, got at last drowned in that ocean of popular symbolism called the Pantheons. Yet they exist to this day in the oldest Jewish traditions, as the *Tzelem*, ‘the Shadow-Adam’ (the *Chhayas* of our doctrine); the ‘model’ Adam, the copy of the first, and the ‘male and female’ of the exoteric genesis (chap. i); the third, the ‘earthly Adam’ before the Fall, an androgyne; and the Fourth — the Adam after *his fall*, *i.e.* separated into sexes, or the pure Atlantean. The Adam of the garden of Eden, or the forefather of our race — the fifth — is an ingenious compound of the above four” (SD 2:503). *See also* ‘OLAM; SEPHIRAH

Adam-Adammi (Hebrew) *Ādām Adāmī* [*‘adam* mankind + *‘adāmī* fortress] Used by Chwolsohn in his *Nabathean Agriculture* and regarded by Blavatsky as “a generic compound name as old as

languages are” (SD 2:452). Adam-Adami, like Adam, was not a man but a race, specifically the “dark Race” which was “the first to fall into generation” in contradistinction with Sarku, or the light Race, which remained pure much longer (SD 2:5). “Adam-Adami is a personation of the *dual* Adam: of the paradigmic Adam-Kadmon, the creator, and of the lower Adam, the terrestrial . . .” (SD 2:456). *See also* ADAM; ’ADAM QADMON.

Adamas (Greek) Adamant, inflexible; used by Greek and Latin writers for a stone (as a diamond) of impenetrable hardness. One of the main mystical type-figures of the Gnostic system. In *The Gospel of the Egyptians* (3: 2), “the incorruptible man Adamas” is a light which radiated from the light; he is “the eye of the [light]. For [this is] the first man, he through whom and to whom everything became, (and) without whom nothing became” (Nag Hammadi Library 198n).

Adamic Earth or **Adam’s Earth** The “original matter” of alchemy; undifferentiated matter on our plane. Called the true oil of gold or the primal element in alchemy, “it is but one remove from the pure homogeneous element” (TG 6). It is the “next-door neighbor to the alkahest, and one of the most important secrets of the alchemists. . . . ‘it would explain *the eagles* of the alchemists, and how the eagles’ wings are clipped,’ a secret that it took Thomas Vaughan (Eugenius Philalethes) twenty years to learn” (IU 1:51).

Adamic Races Early humanity after the incarnation of the manasaputras and the full separation of the sexes several million years ago (SD 1:406-7, 2:91n, 289n, 315; IU 1:305).

’Adam ’Illa’ah (Hebrew) *’Ādām ’Illā’āh* [from *’ādām* mankind + *’ālāh* to ascend, rise] Superior Adam; in the Qabalah the spiritual Adam as contrasted with the terrestrial Adam; equivalent to ’Adam Qadmon (the Heavenly Adam): cosmic man, cosmic spirit.

Adam Kadmon. *See* ’ADAM QADMON

Adam Primus. *See* ’ADAM ’ILLA’AH; ’ADAM QADMON

’Adam Qadmon (Hebrew) *’Ādām Qadmōn* [*’ādām* mankind + *qadmōn* to be before, precede] Primordial man, Adam Primus; in the Qabalah macrocosmic man in contrast to the earthly Adam, the microcosm. Often called the Heavenly Man because symbolically he is the Sephirothal Tree of Life, each of the Sephiroth having its correspondence with a part of the body, the head being Kether (Crown), and the feet standing for Malchuth (Kingdom). ’Adam Qadmon corresponds mystically to the Hindu Purusha: both are generalizing terms used to represent the cosmic Logos or hierarch of their respective hierarchies.

Blavatsky compares ’Adam Qadmon to the first manu, Svayambhuva, “the synthesis of the fourteen Manus” (TG 206); also to the Greek Prometheus and the divine Pymander of the Hermetica — the power of the thought divine “in its most spiritual aspect” (IU 1:298).

’Adam Ri’shon (Hebrew) *’Ādām Ri’shōn* [*’ādām* mankind + *ri’shōn* first, primeval, original] The

first Adam, Adam Primus; used in Job (15:7): “Art thou the first man that was born? or wast thou made before the hills?” Blavatsky says that “Adam Rishoon is the lunar Spirit (Jehovah, in a sense, or the Pitris) and his three Sons — Ka-yin [Cain], Habel [Abel], and Seth — represent the three races” of mankind (SD 2:397). *See also* ’ADAM QADMON

Adbhitanya [possibly corruption of Sanskrit *adbhutama* or *adbhutva* from *adbhuta* marvelous, wonderful] In the *Vishnu-Purana* (3:2), *adbhuta* is the name of the Indra of the ninth manvantara. Commentary quoted by Blavatsky refers to the first continent once “*inhabited by the Sons of Sveta-dwipa* [the White Island], *the blessed, and Adbhitanya, east and west, the first, the one and the pure . . .*” (SD 2:319). Another name for this land or primevally inhabited part of the earth is *Adi-varsha*.

Adbhuta-Brahmana (Sanskrit) *Adbhuta-brāhmaṇa* [from *adbhuta* wonderful, marvelous + *brāhmaṇa* portion of the Vedas treating of ritual, prayer, sacrifices, and mantra] One of the eight Brahmanas belonging to the *Sama-Veda*, dealing with omens, auguries, and extraordinary wonders.

Adbhuta-dharma (Sanskrit) *Adbhuta-dharma* [from *adbhuta* wonderful, marvelous + *dharma* law, truth, religion] One of the nine angas (divisions of Buddhist texts) that treats of marvels and wonders.

Adept [from Latin *adeptus* from *ad* toward + *apiscor* to reach, attain] One who has attained; in theosophical literature, one who has attained mastery in the art and science of living, an initiate or mahatma.

Adharma (Sanskrit) *Adharma* [from *a* not + *dharma* law, justice, morality, truth from the verbal root *dhṛ* to bear, sustain, resolve] Untruth, unrighteousness, immorality; in the *Bhagavad-Gita* (4:7) Krishna says: “O Bharata, whenever there is in the world a decline of *dharma* and spread of *adharma* I reproduce myself.”

As a proper noun, name of a prajapati (progenitor); also of an attendant of the sun. Its feminine form, *adharma*, personifies the bride of death.

Adhi (Sanskrit) *Adhi* Above, over; by extension supreme, paramount.

Adhi (Sanskrit) *Ādhi* [from *ā* near, towards + the verbal root *dhi* to hold] Place, foundation, site; a pledge or deposit.

Adhi (Sanskrit) *Ādhī* [from *ā* near, towards + the verbal root *dhi* to mind, care for] Mental anxiety, meditation, thought, concern.

Adhibhautika (Sanskrit) *Ādhibhautika* [from *adhi* above + *bhūta* has been from the verbal root *bhū* to be, become] Belonging or relating to elementary beings, to what is produced or derived from primordial elements; elemental. When applied to pain (*duhkha*), it is the second of the three kinds of afflictions (*klesa*) classified in Hinduism as “that affliction proceeding from material objects or external things,” such as from human beings or animals (cf VP 5:23; 6:5).

Adhidaiva, Adhidaivata (Sanskrit) *Adhidaiva, Adhidaivata* [from *adhi* over, above, superior + *deva* god] The original or primordial deity; also the divine agent manifesting through beings and objects. A generalizing term applicable to the divine part of any being; hence to *adhyatman* or primordial *atman* (cf BG 7:29-30; 8:3).

Adhidaivika (Sanskrit) *Ādhidaivika* [from *adhi* above, over + *deva* god] Heavenly or shining one, relating to or proceeding from the *devas*; celestial or spiritual beings or gods, also divine influences. When combined with *duhkha* (pain) the third of the three kinds of *klesa* (afflictions) in Hinduism: that proceeding from “divine” agencies or from nature, such as wind, rain, or sunstrokes; also unexpected accidents such as the falling of houses (cf VP 6:5). *See also* ADHIBHAUTIKA; ADHYATMIKA

Adhikamasa, Adhimasa (Sanskrit) *Adhikamāsa, Adhimāsa* [from *adhika* additional, intercalated + *māsa* moon] An intercalated month.

Adhima *See* Adima

Adhipa (Sanskrit) *Adhipa, Adhipā* [from *adhi* over, above, superior + the verbal root *pat* to rule, master] A chief ruler, governor, king, or sovereign.

Adhipati. *See* ADHIPA

Adhishthana (Sanskrit) *Adhiṣṭhāna* [from *adhi* over, upon + the verbal root *sthā* to stand upon] A basis, seat, or focus of action (cf BG 3:40, 18:14). Often applied to a principle or element which inheres in another principle; i.e., the active agent working in *prakriti* would be *adhishthana*. Also, precedent, rule, as when used as a name for one of the ten *paramitas* (rules of conduct).

Adhishthana-deha or *-sarira* (-body) is a subtle intermediate body with which the departed is clothed after death.

Adhiyajna (Sanskrit) *Adhiyajña* [from *adhi* above, paramount + the verbal root *yaj* to consecrate, offer, sacrifice] Paramount sacrifice or sacrifice from above; synonymous with the cosmic Logos which, by coming into manifestation, “sacrifices” itself for the benefit of all sentient beings, thereby giving an opportunity to the waiting hosts of monads to undergo their own evolutionary course as they live and move and have their being within the Logos.

Every *avatara* repeats in the small the primordial history of the cosmic Logos: the divinity

sacrificing itself for the sake of all the hierarchies within it. This is the sacrifice which took place “before the beginning of the world,” the core of the mythologic story of the Christos, the Logos or cosmic Word incarnate as man.

Adhyaropa (Sanskrit) *Adhyāropa* [from *adhi* above, over + *āropa* superimposition from *ā-rup* to confound, disturb] Usually, erroneous deduction. In Vedantic philosophy, a wrong attribution or misconception, e.g., to conceive of silver as being innate in mother-of-pearl, the sheen common to both being an *adhyaropa*. The mind in its absorption in the unreal (*avidya*, “ignorance”) superimposes a world of duality and plurality on the real — on Brahman — and as a result there is a multiplicity of confusing and often conflicting goals.

Adhyasa, Adhyasika (Sanskrit) *Adhyāsa, Adhyāsika* [from *adhi* above, over + the verbal root *as* to throw, cast; throwing over or casting upon] Misconception or erroneous attribution, the significance being that the mind casts upon facts, which are misunderstood, certain mistaken notions; hence false or erroneous attribution. Equivalent to *adhyaropa*.

Adhyatma-jnana (Sanskrit) *Adhyātma-jñāna* [from *adhi* over, superior + *ātman* self + *jñāna* knowledge from the verbal root *jnā* to know, understand] Knowledge of the supreme self, equivalent to *adhyatma-vidya*.

Adhyatman (Sanskrit) *Adhyātman* [from *adhi* over, above + *ātman* self] The supreme or original self, equivalent to *paramatman* (cf BG 7:29; 8:3).

Adhyatma-vidya (Sanskrit) *Adhyātma-vidyā* [from *adhi* over, above + *ātman* self + *vidyā* knowledge from the verbal root *vid* to know, perceive, learn] Knowledge of the supreme atman or self; used interchangeably with *adhyatma-jnana*.

Adhyatmika (Sanskrit) *Ādhyātmika* [from *adhi* above + *ātman* self] Relating to the supreme self or atman; more abstractly, pertaining to original atman.

Adhyatmika-duhkha (Sanskrit) *Ādhyātmika-duḥkha* [from *adhi* above + *ātman* self; *duḥkha* trouble, difficulty from *dush* to be defiled] The first of the three kinds of *klesa* (affliction) or worldly pain (cf VP 6:5). Those arising from oneself, generally classed as bodily ailments (headaches, fevers, diseases, etc.), but more properly those pains or troubles originating from mental and other inner causes such as weakness of will, vagrant and misleading emotions, and imperfect mentation, which lead to physical ailments. The other two *klesas* are *adhibhautika* and *adhidaivika*.

Adhyaya (Sanskrit) *Adhyāya* [from *adhi* over, above + the verbal root *i* to go, move] A chapter, division, or section of a book; the *adhyayas* or divisions of music are eight in number.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Adi-Ag

Ad-i Name given by the Aryans to “the first *speaking* race of mankind” in the fourth round (SD 2:452). The root *ad* is prominent in many ancient words: Sanskrit *adi* (first, primeval); Hebrew 'Adon (lord), 'Adonim (angels or planetary lords) — “the first spiritual and ethereal sons of the earth” (ibid.). The Sons of *Adi* (sons of the first) are often called Sons of the Fire-Mist (TG 6).

Adi (Sanskrit) *Ādi* First, beginning; used in compound words to signify original, prime, e.g., *adi-buddhi*, *adi-sanat*.

Adibhuta (Sanskrit) *Ādibhūta* [from *ādi* first, original + *bhūta* element from the verbal root *bhū* to be, become] The first, original, or primordial element in nature; the “primeval, uncreated cause of all worlds” (VP 4:1), sometimes called the Nameless in theosophical writings. Cause and source of the succeeding seven cosmic *bhutas*, it is the seed from which they emanate.

Adi-buddha (Sanskrit) *Ādi-buddha* [from *ādi* first, original + the verbal root *budh* to awaken, perceive, know] First or primeval buddha; the supreme being above all other buddhas and bodhisattvas in the later Mahayana Buddhism of Tibet, Nepal, Java, and Japan. In theosophical writings, the highest aspect or subentity of the supreme Wondrous Being of our universe, existing in the most exalted dharmakaya state.

“In the esoteric, and even exoteric Buddhism of the North, *Adi-Buddha* (*Chogi dangpoi sangye*), the One unknown, without beginning or end, identical with Parabrahm and Ain-Soph, emits a bright ray from its darkness.

“This is the *Logos* (the first), or Vajradhara, the Supreme Buddha (also called *Dorjechang*). As the Lord of all Mysteries he cannot manifest, but sends into the world of manifestation his heart — the ‘diamond heart,’ Vajrasattva (*Dorjesempa*)” (SD 1:571). *Adi-buddha* is the individualized monadic focus of *adi-buddhi*, primordial cosmic wisdom or intelligence, synonymous with *mahabuddhi* or

mahat (universal mind). Otherwise expressed, adi-buddha is the supreme being heading the hierarchy of compassion and our solar universe; the fountain of light running through all subordinate hierarchies and thus the supreme lord and initiator of the wisdom side of our universe.

The Great Brotherhood of the mahatmas on earth, through their chief, the Mahachohan, is the representative on our globe of adi-buddha. Because of this, Tibetan Buddhism recognizes the continuous “reincarnations of Buddha” — not that Gautama Buddha is thus reimpodified but that adi-buddha through its human ray perpetuates itself by reflection in fit and chosen human beings. As adi-buddha is the individualized divine ideation of our universe, all-permeant and omnipresent, those individuals who raise themselves to become self-consciously at one with a ray from adi-buddha are de facto “reincarnations,” greater or minor imbodiments of the cosmic buddha. Adi-buddha manifests through the hierarchy of the celestial buddhas or dhyani-buddhas, these again manifest through the manushya-buddhas and in lesser degree through human individuals who, though great, are inferior to the manushya-buddhas.

Adi-buddhi (Sanskrit) *Ādi-buddhi* [from *ādi* first, original + *buddhi* from the verbal root *budh* to know, perceive, awaken] Original or primordial buddhi; the cosmic essence of divine intelligence imbodified in adi-buddha, the divine-spiritual head of the cosmic hierarchy of compassion, “the spiritual, omniscient and omnipotent root of divine intelligence” (SD 1:572). Adi-buddhi or dharmakaya is “the mystic, universally diffused essence . . . the all-pervading supreme and absolute intelligence with its periodically manifesting Divinity — ‘Avalokiteshvara’ . . . the aggregate intelligence of the universal intelligences including that of the Dhyani Chohans even of the highest order” (ML 90).

Adi-budha (Sanskrit) *Ādi-budha* [from *ādi* first + *budh* wisdom] Primordial wisdom; the first or nameless deity (SD 1:xix, 54n; 2:48)

Adikrit or **Adikartri** (Sanskrit) *Ādikṛt*, *Ādikarṭṛ* [from *ādi* first + *kṛt* doing (*karṭṛ* doer, author, producer) from the verbal root *kṛ* to do, make, accomplish] The first produced or evolved, synonymous with adikara. In Hindu mythology, the creator; in the Puranas, the personified aspect of the formative or cosmically generative force, which in its root is eternal but periodic in its manifestations. During periods of manifestation adikrit is personified as Vishnu or Brahma (VP 6:4); during periods of rest it is represented as sleeping upon the ocean of space in the form of Vishnu. The term applies to any universe or hierarchy, great or small, whether a cluster of galaxies, a solar system, a planet, or a human being.

Adima (Sanskrit) *Ādima* In the *Siva-Purana*, the first man created by Siva, who with Heva is the ancestor of present humanity (IU 1:590, 579n).

Adinatha (Sanskrit) *Ādinātha* [from *ādi* primeval, first + *nātha* protector, lord from the verbal root *nāth* to seek aid] Primordial protector or lord; occasionally applied to adi-buddha and other cosmic

hierarchs, such as Siva. Adinatha is also known as Rishabha, the first of the 24 Tirthankaras or Jain teachers.

Adinidana (Sanskrit) *Ādinidāna* [from *ādi* first + *nidāna* binding from *ni* down + *dāna* band, rope from the verbal root *da* to bind on, fasten] A binding, halter, fetter; the first and supreme causality or originating link in the succeeding chain of nidanas, called in Buddhist writings the twelve causes of manifested existence; otherwise a chain or concatenation of cause and effect throughout the range of manifested being.

Adinidana-svabhavat (Sanskrit) *Ādinidāna-svabhavat* [from *ādi* first, primordial + *nidāna* causation + *svabhavat* self-being, self-becoming from *sva* self + the verbal root *bhū* to be, become] Primordial causation of self-becoming; as in Buddhist thought nidana also signifies primal essence or substance and svabhavat is equated with the Father-Mother of manifestation, the term could be translated “primordial causality-essence Father-Mother.” It is the highest portion of the manifesting or Third Logos of our galaxy; and because the Third Logos of every solar system is a reflection of the galactic Third Logos, the adinidana-svabhavat of any solar system is in its reaches the adinidana-svabhavat of the galaxy.

The phrase occurs in the Stanzas of Dzyan: ” ‘Darkness’ the Boundless, or the no-number, Adinidana Svabhavat” (SD 1:98) — which, as the summit of the Third Logos, can be rendered as darkness and no-number since it is darkness to human intellect and yet the beginning of numeration of all hierarchies that flow forth from it. Hence for all beneath it, adinidana-svabhavat may likewise be called the Boundless, signifying the cosmic essence or spiritual substance without restricting frontiers.

Adisakti (Sanskrit) *Ādiśakti* [from *ādi* first + *śakti* power, energy] Primeval power; the divine force or direct energetic emanation from mulaprakriti, hence the feminine aspect or clothing of any spiritually formative potency. Personified in the Hindu pantheon as the consort of a divinity, every divinity having its own sakti or formative power-substance. Also a name for maya, significant because illusion begins with manifestation (SD 1:10).

Adisanat (Sanskrit) *Ādisanat* [from *ādi* first + *sanat* from of old, always] The ever-primeval one, a name applied to Brahma. In the Stanzas of Dzyan, it expresses that which preceded svabhavat in cosmic evolution: first there was no-number; then adisanat, “the Number, for he is One”; then svabhavat, the numbers (SD 1:98). Comparable to the Qabbalistic ‘Attīqa’ de‘Attīqin (the Ancient of Ancients) of the *Zohar*; also to the Pythagorean cosmic monad which, born in and from the womb of the Ever-enduring or No-number, manifests itself as the source of the cosmos and retires into “silence and darkness,” retaining its own condition while acting as the ineffable source from which all manifestation hangs as a pendant in the spaces of space.

Again, adisanat is the ever-enduring germ of cosmic mind, and because it lasts from cosmic manvantara to cosmic manvantara, sinking merely into periods of nonmanifestation during the

cosmic pralayas, it is named the Primeval Ancient, the Ever-primeval One.

Adishesha (Sanskrit) *Ādiśeṣa* [from *ādi* first + *śeṣa* from the verbal root *śiṣ* to leave remainders] Primeval residue; the mythological thousand-headed serpent (naga) upon which Vishnu “sleeps” during the pralayas (intervals between manifestations); also represented as supporting the seven patalas (hells) with the seven regions above them and therefore the entire world (VP 2:5). More often called simply Seshha; or Ananta, infinite; or Ananta-sesha.

As seshha means “remainder,” “what is left over,” the main significance is that during the pralayas Vishnu, representing the cosmic divinity, is conceived as sleeping upon the substance of a spiritual character remaining over after the dissolution of the worlds. Thus Adishesha (primeval substance or remainder) is the cosmic spatial ocean of consciousness-substance left over from the previous cosmic manvantara which acts as the mother-substance or chaos from and in which the future worlds of manifestation will be born when pralaya ends. *See also ANANTA-SESHA*

Aditattva (Sanskrit) *Āditattva* [from *ādi* first + *tattva* thatness, essence] Original principle; used in theosophical literature to denote the first or highest of seven tattvas or principles in the descending arc of nature’s structure; in the numeration of the kosmic principles aditattva corresponds to the First Logos.

Aditi (Sanskrit) *Aditi* [from *a* not + *diti* bound from the verbal root *da* to bind] Unbounded, free; as a noun, infinite and shoreless expanse. In the Vedas, Aditi is devamatri (mother of the gods) as from and in her cosmic matrix all the heavenly bodies were born. As the celestial virgin and mother of every existing form and being, the synthesis of all things, she is highest akasa. Aditi is identified in the *Rig-Veda* with Vach (mystic speech) and also with the mulaprakriti of the Vedanta. As the womb of space, she is a feminized form of Brahma. The line in the *Rig-Veda*: “Daksha sprang from Aditi and Aditi from Daksha” has reference to “the eternal cyclic re-birth of the same divine Essence” (SD 2:247n). In one of its most mystic aspects Aditi is divine wisdom.

Aditi has correspondences in many ancient religions: the highest Sephirah in the *Zohar*; the Gnostic Sophia-Achamoth; Rhea, mother of the Greek Olympians; Bythos or the great Deep; Amba; Surarani; Chaos; Waters of Space; Primordial Light; and the source of the Egyptian seven heavens. Sometimes she is linked with the Greek Gaia, goddess of earth, to denote dual nature or the mother of both the spiritual and physical: Aditi, cosmic expanse or space being the mother of all things; and Gaia, mother of earth and, on the larger scale, of all objective nature (cf SD 2:65, 269).

Aditi-prakriti (Sanskrit) *Aditi-prakṛti* [from *aditi* unbounded + *prakṛti* nature from *pra* forth + the verbal root *kr* to do, make] Spiritual-physical nature; Father-Mother within before it appeared in space, the universal matrix of kosmos personified in the dual character of the universe or of man. Aditi signifies infinity personified as a goddess; prakriti, nature considered as the evolver or producer in its original condition.

Aditi-Vach (Sanskrit) *Aditi-Vāc* [from *aditi* unbounded + *vāc* speech, voice from the verbal root *vac* to speak, utter] The cosmic Logos considered in its feminine aspect as the veil surrounding the evolving cosmic monad. “These feminine Logoi are all correlations, in their *noumenal* aspect, of Lights, and Sound, and Ether . . . ” (SD 1:431).

Adityas (Sanskrit) *Āditya*-s [belonging to, issuing from *aditi* unbounded expanse] Sons of Aditi, space; in the Vedas a name for the sun; also referred to variously as five, seven, eight, and twelve in number. The eighth aditya (Marttanda) was rejected by Aditi, leaving seven son-suns, each manifesting a particular solar energy (cf RV 10, 72, 8-9). “ ‘The Seven allow the mortals to see their dwellings, but show themselves only to the Arhats,’ says an old proverb, ‘their dwellings’ standing here for planets” (SD 1:100).

The Brahmanas and Puranas generally reckon twelve adityas. In a preceding manvantara they were called tushitas, but when the end of the cycle was near they entered the “womb of Aditi, that we may be born in the next Manwantara; for, thereby, we shall again enjoy the rank of gods.” Hence in the present seventh manvantara, they are known as adityas (VP 1:15). When the pralaya (dissolution) of the world comes, twelve suns will appear (MB 3:3, 26; Dict Hind 3). The twelve adityas are the twelve great gods of the Hindu pantheon; also, the twelve signs of the zodiac or twelve months of the year.

The adityas are the sustainers of the solar divine life which exists in all things, and in our present Vaivasvata manvantara they are the divine solar pitris (fathers) — not the lower or lunar pitris — which incarnated in early humanity. “The wise call our fathers Vasus; our paternal grandfathers Rudras, our paternal great grandfathers, Adityas . . . ” (Manu 3:284).

Adivamsa (Sanskrit) *Ādivamśa* [from *ādi* primeval, first + *vamśa* lineage, race] The first race; used in the *Mahabharata* for the primeval race, the original family.

Adivarsha (Sanskrit) *Ādivarṣa* [from *ādi* primordial, first + *varṣa* a division of the earth from the verbal root *vṛṣ* to rain, pour forth] The first land; used for the “Eden of the first Races” of humanity (SD 2:201).

Adm, Admi. See ADAM

Adon (Hebrew) *’Ādōn* plural *’ādonīm* [from *’ādan* to fix, determine] Commander, lord, master, ruler; “The *Adonim* and *Adonai* . . . which the Jews applied to their Jehovah and angels . . . were simply the first spiritual and ethereal sons of the earth; and the god Adonis, who in his many variations stood for the ‘First Lord’ ” (SD 2:452). Used by Blavatsky also to signify the celestial or angelic hierarchy of the *Codex Nazaraeus* (IU 1:301).

Applied by the ancient Hebrews and Phoenicians not only to gods or divinities, but to kings and priests. See also ADONAI

Adonai (Hebrew) *'Adonāi* [from *'ādōn* lord] My Lords; through usage, Lord, a plural of excellence. Originally a sort of appeal or prayer to the hierarchical spiritual powers of the earth planetary chain, and more particularly of the planetary spirit of the earth itself; later it became a mere substitute for the unutterable name of God, usually for Tetragrammaton (YHVH).

“As the inner nature of YHVH is hidden; therefore He (YHVH) is only named with the Name of the Shekhinah, Adonai, i.e., Lord; therefore the Rabbins say (of the name YHVH); Not as I am written (i.e., YHVH) am I read. In this world My Name is written YHVH and read Adonai, but in the world to come, the same will be read as it is written, so that Mercy (represented by YHVH) shall be from all sides” (Zohar iii 320a). Adonai is rendered Lord in the Bible, although it means “my Lords”; whereas *'elohim* is translated God in the English Authorized Version.

In the Sephirothal scheme, the Divine Name of the Sephirah of Malchuth was *'Adonai*. The Gnostics taught that Iurbo and Adonai were names of Iao-Jehovah, who is an emanation of Ilda Baoth. According to Origen the Gnostics considered Adonai the genius of the sun. Blavatsky writes: “Both Aidoneus and Dionysius [Dionysus] are the bases of Adonai, or ‘Jurbo Adonai,’ as Jehovah is called in Codex Nazaraeus. . . . Baal-Adonis of the *sods* or Mysteries of the pre-Babylonian Jews became the Adonai by the Massorah, the later-vowelled Jehovah” (SD 1:463). *See also* 'ADON; IAO; JEHOVAH

'Adonim. *See* ADON

Adonis [from Hebrew *'ādōn* lord] Title of the Babylonian god Tammuz, whose cult was imported into Asiatic Greece. A beautiful youth beloved of Aphrodite, he was killed by a boar. Aphrodite was so grief-stricken that the gods of the lower world allowed him to spend half of every year with her on earth. His death and resurrection were symbolized in annual festivals.

He is one of many symbols of the mystic Christ, the God made man. Though the son of Father and Mother, he is identical with the Father. Adonis is identified with both Osiris and Horus; with the Semitic Thammuz in Ezekiel, Athamaz, Tamaz, and *'Adam Qadmon* (SD 2:43-4); with the Indian Aditi; and the Hebrew Adon or *'Adonai*. Adonis is spoken of as both a lunar and solar god, since what is solar from one point of view may be lunar from another — for instance, he may represent the sun in a lunar system. Adonis is connected with the solar year, as shown in the allegory of his six-months alternation.

Adrasteia (Greek) [from *a* not + *didraskein* to run away] That which cannot be escaped; a personification of one aspect of karma; a surname of Nemesis, not a synonym. Nemesis, Adrasteia, and Themis form a trinity: Adrasteia is the causes created by man himself, therefore inescapable; Nemesis personifies reverence for law, i.e., conscience; while Themis represents divine order and harmony, the inherent equilibrium in the cosmic structure. Adrasteia therefore signifies the effects that flow upon one sooner or later as the results of his good or evil doing.

Adrishta (Sanskrit) *Adṛṣṭa* [from *a* not + the verbal root *dr̥ṣ* to see, learn, perceive with the mind or intuition] Unseen, unforeseen, invisible; an unforeseen danger. In philosophy, that which is beyond the reach or observation of the percipient consciousness. W. Q. Judge defines it as “the merit or demerit attaching to a man’s conduct in a former incarnation, and the corresponding (apparently arbitrary) punishment or reward in the present or a future incarnation” (WG 2). This is clearly seen in the compound term *adrishta-phala* (unseen fruit), karma not yet come into force. Hence the connotation of fate, luck (sometimes bad luck) that is attached to *adrishta*. (BCW 5:580 with Kanada as “unseen force”; 4:61 with Nyayas as invisible principle)

Adunai (Gnostic) Used by the Ophites and Nazarenes in connection with Iurbo. “Turbo and Adunai, according to the Ophites, are names of Iao-Jehovah, one of the emanations of Ilda-Baath”; and Adunai “under the polishing hand of Ezra becomes finally the later-vowelled Adonai of the Massorah — the One and Supreme God of the Christians” (IU 2:185, 131).

Advaita (Sanskrit) *Advaita* [from *a* not + *dvaita* dual from *dvi* two] Nondual; the Advaita or nondualistic form of Vedanta [from *veda* knowledge + *anta* end] expounded by Sankaracharya teaches the oneness of Brahman or the paramatman of the universe with the human spirit-soul or *jivatman*, and the identity of spirit and matter; also that the divine spirit of the universe is the all-efficient, all-productive cause of the periodic coming into being, continuance, and dissolutions of the universe; and that this divine cosmic spirit is the ultimate truth and sole reality — hence the term *advaita* (without a second). All else is *maya*, in proportion to its distance from the divine source.

The greatest initiates and yogis since Sankaracharya’s time are reputed to have come from the ranks of the Advaita-Vedantists. “Yet the root philosophy of both Advaita and Buddhist scholars is *identical*, and both have the same respect for animal life, for both believe that every creature on earth, however small and humble, ‘is an immortal portion of the immortal matter’ — for matter with them has quite another significance than it has with either Christian or materialist — and that every creature is subject to Karma” (SD 1:636; cf 2:637).

Advaitin (Sanskrit) *Advaitin* An adherent of the Advaita philosophy. Also written Advaititee or Advaita-Vedantist

Advaya (Sanskrit) *Advaya* [from *a* not + *dvi* two] Not two, without a second; unique. As a masculine noun, name of a buddha. As a neuter noun, nonduality, unity, identity — especially as applied to Brahman — with the universe, or of spirit and matter; hence ultimate truth.

Advent [from Latin *ad* to, toward + *venio* to come] Arrival; in Christianity a period of some four weeks preceding Christmas.

In pre-Christian Greece one of the great seats of initiation was Eleusis, a Greek word meaning coming or advent. All the Mystery schools of antiquity taught and dramatized doctrines dealing

with that which is to come: the mysteries of death, rebirth, and initiation — the birth or awakening of the inner Buddha or Christos in the neophyte. This was called the coming or advent of the god within.

Advent may also be used to signify the serial comings into the human sphere of a nirmanakaya who embodies a dhyani-buddha — a perfected human being from a preceding manvantara — in order to enlighten the humanity of the current cycle. Such nirmanakayas work in the sphere of our earth as invisible or occasionally visible helpers of mankind.

The “second advent,” referring to a second coming of Christ, was considered imminent by some early Christian sects, and is still expected by certain sects today. This echoes the archaic teaching concerning the advent of Maitreya-Buddha — the next great Buddha to appear in the long line of Buddha-succession — as well as the second coming of Elijah among the Jews, and the coming of the Kalki-avatara among the Hindus.

Adversary. See SATAN

Adwaita. See ADVAITA

Adytum (Latin) [from Greek *adytos* from *a* not + *duo* to enter] plural **adyta**. Not to be entered; the innermost shrine of a temple. The holy of holies or sanctum sanctorum was common in the architectural plan of the temples of all ancient nations. It frequently contained a sarcophagus and the image of the god to whom the temple was dedicated. A symbol of regeneration, resurrection, and initiation. The Jews, when they become exclusive and wholly exoteric in their religious beliefs and practices, made the adytum the symbol of their national monotheism, exoterically; and esoterically a symbol of mere generation rather than regeneration. Yet the true meaning can be read in the story of David dancing before the ark, for the dance was essentially a Bacchic rite, whose meaning was unfolded only in the Mysteries; and the ark is the symbol of that vehicle in which are preserved the germs of all living things destined to repeople the earth in a new cycle.

The King’s Chamber in the Pyramid of Cheops is an Egyptian adytum, in which the candidate for initiation, representing the solar god, descended into the sarcophagus, thus representing the energizing ray entering the fecund womb of nature; whence, after a mystic death, he rose again.

Aebel-Zivo (Gnostic) Employed by the Nazarene Gnostics in the *Codex Nazaraeus*, equivalent to the Hebrew Metatron, Shaddai in one of its forms, the angel Gabriel, and the Legatus (ambassador) who is sent by the Lord of Celsitude as the first messenger of light. A manifestation of the divinity in man, a conscious union of the personal man with his inner god, as in the case of an avatara like Jesus, or an illuminated leader like Moses (IU 2:154).

Aed-en. See EDEN

Aegir (Icelandic) Ager (Scandinavian) An old mythical word, whose root is much older than the

Norse languages; possibly akin to the Greek okeanos, both derived from an Indo-European root; it may be related to the Old Gothic ahwa (water). In Anglo-Saxon eacor is the sea, also the bore on rivers.

Aegir represents the waters of space in all their various aspects. In Norse myths he is the giant who brews the mead for the gods when they feast at the stellar and planetary “tables” — when they embody in worlds. He and his consort Ran have nine daughters who are the waves. Aegir has two servants, Eldr (fire) and Fimafeng or Funafeng (spark), possibly St. Elmo’s fire and phosphorescence in the sea. An aspect of Aegir is Hler (lee, shelter). Blavatsky regards Ogir (Aegir) or Hler as “the highest of the Water-gods, and the same as the Greek Okeanos” (TG 239).

A E I O V These five vowels (V is the classic U) were often inscribed on Roman temples, after the manner of the Greeks, who recorded the number of the root-races in their temples “by the seven vowels, of which *five* were framed in a panel in the Initiation halls of the Adyta” (SD 2:458).

These five vowels have the same essential meaning as the Oeaoohoo of *The Secret Doctrine*. They are symbolic of the seven kosmic breathings of the universal spirit or primal logos; in other words, of the seven kosmic original fires or energies whose breathings throughout the universe are the life or streams of lives which form the background of the universe. Consonants were mystically considered to be the vehicles of sounds or breathings or “voices” which were the vowels. Consonants gave the vowels body, in the same way as spirit expresses itself through the rigid structural framework of entities. “The manner of pronunciation depends on the accent. This is an esoteric term for the six in one or the mystic *seven*. The occult name for the ‘seven-vowelled’ ever-present manifestation of the Universal Principle” (TG 239).

These five- or seven-voweled voices, sounds, or breathings also represent the seven fundamental fires or energies of the human constitution. All ancient mystical schools had their own way of viewing and explaining these vowels.

Aeolians [from Latin *Aeolis*, *Aeolia* an ancient country in Asia Minor from Greek *Aiolis*] A people who in early prehistoric times were settled in Thessaly and Boeotia, occupied some parts of the Peloponnesus before the Achaeans, and colonized Lesbos and the adjacent coast of Asia Minor. One of the connecting tribal links between a remnant of Atlantis and the early Aryans (BCW 5:215-19). Traditions represent them sailing through the Pillars of Hercules and settling in parts of northern Greece, adding that, though from the last islands of Atlantis, they were not Atlanteans but Aryan settlers of abandoned Atlantean islands who had acquired Atlantean affinities.

Aeolus (Greek) In Greek and Roman mythology, son of Hippotes, appointed by Zeus as guardian of the winds. He lived on the island of Aeolia in the far west, its steep cliffs encircled by a brazen wall. There he kept the winds confined in a cave, letting them out as he pleased or as he was commanded by the gods. Later he was said to dwell on an island north of Sicily.

Also a grandson of Deucalion and son of Hellen and the nymph Orseis, who was king of Magnesia in Thessaly and mythic ancestor of the Aeolian race. *See also* WIND

Aeon(s) (Latin) **Aion** (Greek) [from *aion* time] An age, a period of time; used alone, equivalent to the word logos, but the usual meaning includes a spiritual being considered as an emanation from the divine essence and also a period of time which is brought about by the existence of this spiritual being.

In the Gnostic systems it signified the various creative powers issuing from the demiurgic Logos, and varying in degree from the most spiritual or ethereal planes to the most gross. Valentinus held that a perfect aion called Propator, equivalent to the First Logos, existed before bythos or the spatial deep (equivalent to the Second Logos). Blavatsky explains that it is “Aion, who springs as a Ray from Ain-Soph (who *does not create*), and Aion, who creates, or *through* whom, rather, everything is created, or evolves” (SD 1:349). This twofold use of a word to denote a period of time and a deific power, also appears in Manu, and in the names of the Biblical patriarchs and the periods assigned to their respective lifetimes. (See FSO 194-5 for more detail)

The adjective aeonios occurs frequently in the New Testament, where it is mistranslated as eternal or everlasting.

Aeonology of the Marcians Given by Blavatsky in her “Commentary on the Pistis Sophia” (BCW 13:53) as: First Tetractys — 1) Arrhetos (ineffable) with 7 elements; 2) Sige (silence) with 5 elements; Pater (father) with five elements; and 4) Aletheia (truth) with 7 elements, for a total of 24 elements. Second Tetractys — 1) Logos (word) with 7 elements; 2) Zoe (life) with five elements; 3) Anthropos (man) with five elements; and 4) Ekklesia (assembly) with 7 elements, for a total of 24 elements, which together with Christos gives a total of 49 elements.

Aerial Fire Every element being dual in nature, there is a celestial and a terrestrial fire; while between them is what may be called aerial fire, which is the intermediate stage through which celestial fire pours forth its energies on the physical plane, producing the terrestrial fire. Aerial fire is a lower kabir (creative power).

Aeriform Having the form or nature of air; used by Blavatsky to describe one of seven fundamental transformations of the constituent particles of matter of the globes (SD 1:205). Also used to describe primeval man on this earth during the fourth round, who was aeriform, devoid of compactness, and mindless (SD 2:80).

Aerobes and **Anaerobes** [from Greek *aer* air + *bios* life] Bacteria which need free oxygen for their sustenance, and those which do not, respectively. Each division includes some forms which can adapt themselves to either condition. When free oxygen is not obtainable, oxygen is obtained by decomposition of the surrounding substance, and the bacteria become destructive — destruction means recombination, as death is rebirth. Also connected with the processes of fermentation.

Pasteur's researches in fermentation are mentioned by Blavatsky as showing how so-called vital processes shade off indistinguishably into so-called inorganic or chemical processes. These physical builders and destroyers are analogous to their prototypes on the higher planes.

Aerolites. See METEORITES

Aesar An ancient Irish god, philosophically analogous to Isvara; also an old Etruscan word meaning god (SD 2:114).

Aeschylus One of the three greatest Greek tragic poets, born at Eleusis (525-456 BC), the seat of the Mysteries of Demeter, into which he undoubtedly was initiated. Of his perhaps 90 plays, only seven survive. Plato accuses him of impiety and Cicero describes him as almost a Pythagorean. He profaned the Mysteries in the eyes of the Athenians (e.g. in the real meaning of the allegories present in *Prometheus Bound* and *The Eumenides*) and has been accused of introducing antagonism among the celestial powers, transferring the political radicalism and demagogy of Athens from the agora to Olympus. His works introduced a second actor, thus creating true dramatic dialogue; he also introduced masks and imposing headdresses and costumes for the actors.

His portrayal of Zeus in different dramas is inconsistent, since there were two Zeuses: the abstract deity of Grecian thought, and the Olympic Zeus. While the former represents the head of the hierarchy of divinities, the latter is, in man, the human soul or kama-manas. Prometheus, who steals fire from heaven and brings it to mankind in a fennel-stalk, is buddhi-manas, mankind's savior. Zeus is the serpent, the intellectual tempter of humanity, which nevertheless begets in due time the man-savior, the solar Dionysus (SD 2:419-20). Harmony results from the equilibrium of contraries, and the drama of evolution as depicted in man shows the clash of descending and reascending cycles, the antimony of law and free will. These dramas have been immortalized for all generations by Aeschylus who, in his daring and self-sacrificing enthusiasm, may himself be styled a Prometheus offending the powers that be in order to bring light to mankind.

Aesculapius, Asklepios God of healing and medicine, son of Apollo by Coronis, educated by the centaur Chiron. When Aesculapius brought the dead back to life, Zeus at the behest of Hades killed him with a thunderbolt.

He is often identified with Mercury, the divine healer or cosmic serpent, represented by the caduceus of Mercury; and in some of his functions he is the same as Ptah in Egypt, creative intellect or wisdom, and as Apollo, Baal, Adonis, and Hercules (SD 2:208; 1:353). Also called the serpent and the savior: "Esculapius, Serapis, Pluto, Knoum, and Kneph, are all deities with the attributes of the serpent. Says Dupuis, 'They are all *healers*, givers of health, spiritual and physical, and of *enlightenment*' " (SD 2:26). Thus Aesculapius is mystically the divine healer or healing power, the ray of divine wisdom emanating from the spiritual sun in man.

Aeser. See AESIR

Aeshma-Daeva (Avestan) *Aēshma-Daēva* **Eesham-Diev**, **Hesham-Diev** (Pahlavi) [from *aēshma* wrath, ill wish, anger from the verbal root *ish* desire, passion + *daēvas* evil spirits (originally gods); cf Sanskrit *deva*, Persian *dievs*] The fiend of the wounding spear in the Avesta. The Aryan gods or daevas having become anthropomorphic, they were denounced by the Aryan initiates who had settled in Airya-Vaeja (Eran or Iran). Zarathustra in the Gathas refers to Kavis and Karpans, the leaders of the ancient Aryan faith, as daevas because they had polluted the abstraction of Mazdean philosophy with ritualistic ceremonies.

In Pahlavi and Pazand writing Aeshma-Daeva changed form to Heshm-Diev, from which Asmodeus, the medieval evil spirit, is derived. Aeshma is known to be Sraush's opponent.

Aeses. See AESIR

Aesir (Icelandic) [from *ass* the ridgepole supporting a roof] plural **ases**; feminine **asynja**, feminine plural **asynjor**. Creative gods of the Norse Eddas, inhabiting Asgard (*gard*, yard or estate), where they retire to feast on the “mead” of experience gained in spheres of life. The twelve deities who build their mansions on various “shelves” of our universe are: Odin Allfather, who occurs on every level of life and is inherent in every living thing; his consort, Frigga; Thor, the power of life and electromagnetism, who corresponds to the Tibetan fohat and in one aspect corresponds to Jove; Balder, the sun god; Njord, the Norse Saturn; Tyr, the Norse Mars; Frey, the deity of planet Earth; Freya, of Venus; Hermod (an aspect of Odin), of Mercury. Heimdall, “the whitest Ase,” is the watcher on the rainbow bridge who sounds the gjallarhorn (loud horn) at Ragnarok when a world ends. Brage is poetic inspiration. The most mysterious and lofty ase is Ull, a cold, wintry (unmanifest) world. Paradoxically, “blessed is he who first touches the fire” of that sphere. Forsete is the god of justice who corresponds to the lipikas, agents of karma.

In the Eddas the aesir are in perpetual opposition to the jotunn (giants; Icelandic jotnar), as energy is opposed to inertia. When the gods withdraw at Ragnarok, the universe ceases to be. The aesir's reign or life was preceded by a period of quiescence, during which nothing existed. This was Ymir, the frostgiant, the transformed Bargalmer (Icelandic Bergelmir), fruitage of a previous cycle of universal life, who was “saved on a boatkeel” or “ground on the mill” to furnish substance for the succeeding world. This was to be created by All-father Odin and his two brothers, Vile and Vi (or Ve). The frost giant is killed — transformed — by the three gods, and from his substance (Orgalmer) the worlds are created. They are sustained by Trudgalmer until the gods again withdraw. In his capacity of creator Odin is named Ofner (opener), energetic counterpart of Orgalmer, while at the end of a cosmic life he becomes Svafner (closer) and paired with Bargalmer.

The aesir are not the highest gods, even though cosmic Odin in his capacity of Allfather is the father of gods and men by virtue of being descended from a previous era of evolution. “All the creative gods, or *personal* Deities, begin at the secondary stage of Cosmic evolution” (SD 1:427). The aesir were ousted from Asgard by the vaner, superior gods who remain in their high realms while

the aesir dwell in living spheres. Nevertheless even the aesir receive a “hostage” (in one interpretation an avatara) from the vaner and in exchange furnish the mind and matter which enable these exalted beings to evolve.

“The brew of the as,” “Odin’s brew,” or the “bardic mead” is inspired poetry, the runes of ancient wisdom sought by Odin in the giant worlds. The “driving of the as” or Tordon (Thor’s din) is thunder.

Aether, Ether (Greek) [from *aitho* shining, fire] The upper or purer air as opposed to *aer*, the lower air; the clear sky; the abode of the gods. In Classical antiquity it denoted primordial substance, Proteus or protyle, the unitary source both of all substances and energies, the mask of all kosmic phenomena. Often used loosely to embrace a domain which extends from the All-Father himself down to the atmosphere of our earth. Vergil speaks of “Jupiter omnipotens aether,” and Cicero describes aether as the ultimate zone of heaven encircling, embracing, and permeating all things. At one time a member of the pantheon and object of veneration, at another the quest of the alchemist in search of the “absolute element” which would give him power over nature, and finally a hypothetical medium of science for conveying light waves.

Sometimes aether is used in translating the Sanskrit akasa, which has the same etymological and philosophical meaning. Here it is an element or principle coming after manas and kama and before the astral light and ether. Again, it is a high aspect of akasa, having itself also seven subordinate aspects. There are in kosmic space at least seven aethers or prakritis, which exist one within the other in a rising scale of spirituality. Collectively they may be called spirit-aether or akasa.

Generally in *The Secret Doctrine* it is the fifth kosmic element from below, a link between kosmic mind or mahat and the lower manifested world, the vehicle of the former and the parent of the latter. Looking at aether in a more general kosmic way, it is the field of activity of the kosmic Third Logos, Brahma-prakriti, and therefore the great womb of manifested being, the treasure house of all kosmic types, forth from which they flow at the opening of manifestation and back into which they will again be ingathered at the beginning of kosmic pralaya. It is in consequence the great mother-substance out of which all the hierarchies are built. It interpenetrates everything, lasting from the beginning of the universal manvantara to its end, and indeed, may be said to continue, in its most spiritualized form throughout kosmic pralaya as the seed-house or storehouse from which everything will flow into manifestation again when the new period of kosmic activity arrives. Considered as the cosmic mother of all things, aether in its highest feminine aspect is the same as the Vedic Aditi or the Hera or Juno of Greece and Rome. Thus in one sense it is also mulaprakriti, the generator or producer of the seeds of beginnings and things. The Old Testament refers to aether as the kosmic waters. In its highest parts it is mystically alaya (the kosmic spirit-soul) or what in Northern Buddhism is called svabhavat, more mystically adi-buddhi. *See also* ACTIO IN

DISTANS; AKASA

Aethiopians, Ethiopians An undefined but powerful group of peoples, generally placed south of Egypt and east of Babylon; often spoken of as being at one time a monarchy and able to contribute kings to the Egyptian throne. Blavatsky shows the archaic racial connection between Egypt and India (SD 2:417; IU 1:569-70). Migrants from northwestern India to Africa took with them the names of their great river, variously called Aethiops or Nila, now called the Indus. These immigrants were the so-called Sons of Horus or Blacksmiths of Egyptian records, mighty builders but somewhat later than the Atlantean descendants who built the first pyramids. This makes the Aethiopians — and also, therefore, some of the Egyptians — Aryans. A highly advanced urban civilization of Mohenjo-Daro has been discovered on the Indus “between Attock and Sind,” exactly the location mentioned in *The Secret Doctrine* as the abode of the Aethiopians.

The reason classical Greek and Roman writers speak of the Egyptian Aethiopians was that the Aethiopians of southern Egypt were then considered to be the last remnants of an Aryan immigration from South India, which took place in prehistoric antiquity, and Greek and Roman writers not infrequently contrasted and identified the Aethiopians of Egypt with the Eastern Aethiopians. It was originally these Eastern Aethiopians who were known to the prehistoric Greek nations as the Aethiopians — the only ones then considered as rightfully bearing this name. These Eastern Aethiopians inhabited the central and especially the southern part of the Indian peninsula including Ceylon, and therefore were the descendants of one of the last subraces of that portion of Atlantis existing earlier on a land south of India called Lanka, of which Ceylon, then one of its northern highlands, is the only present geological remnant.

Aethrobacy. See LEVITATION

Aetna, Mount A frequently active volcanic mountain in northeastern Sicily, the highest volcano in the Mediterranean region (c 10,900 feet). In Greek mythology, Zeus is said to have hurled Mt. Aetna at Typhon, who lies beneath the mountain, sending up smoke and flames; also Hephestos is sometimes said to have a forge there. See also MOUNTAINS, HOLY

Affinity In physics, an unknown force which manifests in cohesion, chemical action, etc. In any particle theory of the universe, affinity has to be *assumed*, but the assumptions necessary to a mechanical interpretation of nature cannot be defined in terms of mechanism. In the physical world it is but a manifestation of that universal force which tends to bring diversity into unity, the counterpart of the force of repulsion, the two forces cooperating in cosmic harmony. Fohat in its highest aspect as divine love — eros, the electric power of affinity and sympathy — brings spirit into union with subtle nature, producing in man the soul, in nature the first link between the unconditioned and the manifested (SD 1:119).

Leucippus taught that space is filled with atoms — really monads — in ceaseless motion, and Epicurus and Lucretius added the idea of affinity, though doubtless Leucippus had the same idea

in mind. The life-atoms discarded after incarnation return to the same individuality by affinity at the next rebirth.

Afrit (Arabic) [from *ifrit* demon] A class of nature spirits or elementals represented in Arabic mythology as a powerful evil jinn.

Agade or **Akkad** [from *aga* crown + *de* fire] Also Agadi. The ancient city of the Babylonian ruler Sargon I (2637-2587 BC), the word referring to the city's patron deity, Ishtar or Anunit.

Agama (Sanskrit) *Āgama* [from *ā* toward, near + the verbal root *gam* to come, go] Coming near, approaching. As a masculine noun, approach, appearance; studying, reading, acquisition of knowledge, science. In philosophy, traditional teaching handed down; likewise a collection of sacred doctrines such as the Brahmanas.

Saivites (devotees of Siva) recognize 28 agamas as continuing the full doctrine; Saktas list 77 agamas or tantras; Vaishnavas (followers of Vishnu) regard the *Pancharatra Agamas* as their sacred books; and the Jain agamas as a whole constitute the Jain canon.

Agamin (Sanskrit) *Āgāmin* [from *ā* toward + the verbal root *gam* to come, go] Coming, approaching; when applied to karma, impending, future; when applied to auguries, casual, changeable, as opposed to *sthira* (fixed).

Agami-karma is the karmic seeds that would be sown were one to pursue one's life normally, i.e., karma not yet contracted.

Agapae (Greek) [plural of *agape* brotherly love, loving kindness, charity] Love feasts; not only the love for God, but the love of Christians for each other as being members of a divinely inspired communion. The agapae were meetings for prayer, song, reading, exhortation, exchange of news, and ended with the brotherly kiss. With the lapse into worldliness, abuses crept into these love-feasts, which in time became so notorious that they were finally abolished.

Agasti, Agastya (Sanskrit) *Agasti, Agastya* [from *aga* mountain + the verbal root *as* to throw, cast off] Mountain-thrower; a celebrated muni and the reputed author of a number of hymns in the *Rig-Veda*; he also appears in the *Mahabharata* and *Ramayana*. Agastya is said to have been born in a water jar, to have been of short stature, to have swallowed the ocean, and compelled the Vindhya Mountain to prostrate itself before him. Hence his name: mountain-thrower.

In Tamil literature, Agastya is traditionally held to have brought literature and science to Southern India and to have instructed the Dravidians in medicine, astrology, and magic arts.

Agastya is also the name of the regent Canopus (cf VP 2:8).

Agathodaemon, Agathodaimon (Greek) The good genius (represented as a youth holding a horn of plenty and a bowl, or a poppy and ears of corn) to whom at Athens a cup of pure wine was

drunk at dinner; in one of his many forms, the kosmic Christos, the serpent of eternity — which in the human mind becomes the serpent of Genesis — which after the fall of Mediterranean civilizations became Satan. Brahma, in order to create hierarchies, becomes fourfold and emanates successively daemons, angels, pitris, and men. Agathodaimon refers to the first of these emanations, sons of kosmic darkness, signifying incomprehensible light which is prior to manifested light. Christian theology has recognized this in making Satan's host the first sons of God, but has unconsciously perverted their descent in order to enlighten man into a rebellion against Almighty Power. Thus in later times Agathodaimon became the enemy of divine goodness. The same has happened in the case of the asuras in India, and of the kosmic serpent. In Gnostic gems it appears under the name Chnouphis or Chnoubis.

Clement of Alexandria, as an initiated Neoplatonist, knew that Agathodaimon was the kosmic Christos and the true spiritual savior of mankind, like Prometheus — an early form of the Agathodaimon teaching applied to the enlightening of the human race through the influence of an incarnating spiritual power. Opposite to him stands a Kakodaimon, the evil genius or lower serpent, the Satan who bids Christ worship him and “I will give thee all the kingdoms of the earth.” Kakodaimon is the nether or inferior aspect of Agathodaimon, kama-manas the deluder as opposed to buddhi-manas the redeemer.

Agathon, To (Greek) The good (principle), the highest or supreme good in a moral sense, summum bonum; Plato's name for that aspect of the divine otherwise called the unmanifest or First Logos. Although sometimes equated with atman, which corresponds to the Greek pneuma, paramatman is a better equivalent for to agathon. It is likewise equivalent to the Buddhist alaya (the indissoluble or everlasting).

Agham. See OGHAM

Aghora (Sanskrit) *Aghora* [from *a* not + the verbal root *ghur* to frighten] Nonterrifying; as a masculine noun, a title of Siva in the *Mahabharata*; also of a devotee of Siva and his consort Durga. As a feminine noun, the fourteenth day of the dark half of Bhadra (a rainy month in August-September) sacred to Siva.

Agneya (Sanskrit) *Āgneya* [from *agni* fire] Belonging to or consecrated to fire or the god of fire, Agni. A name of the god of war (Skanda, Karttikeya, etc.); also, the son of Agni.

The *Agni-* or *Agneya-Purana* is so named because Agni imparted to the sage Vasishtha the twofold

knowledge of Brahman: that acquired through study of the “word,” the Vedas; and that higher apprehension attained through mystical contemplation (cf VP preface lviii; also 6:5).

Agneyastra (Sanskrit) *Āgneyāstra* [from *āgneya* fiery weapon from *agni* fire + *astra* missile weapon, arrow] Fiery weapon; one of the magic weapons used by some of the gods and heroes of the *Mahabharata* and *Ramayana*. The *Vishnu-Purana* (3:8) recounts that the agneyastra was given by the sage Aurva to his disciple King Sagara. A magic weapon said to have been “wielded by the adept-race (the fourth), the Atlanteans” (TG 9), and to have been built of “seven elements” (SD 2:629). It can signify a weapon of fiery character used in physical warfare, or on a cosmic scale can denote the employment of a force of nature by an intelligent being either for offensive or defensive purposes. In archaic thought fire, in its abstract sense, is almost equivalent to spirit, and permeates the sevenfold nature of the universe.

Agni (Sanskrit) *Agni* [from the verbal root *ag* to move tortuously, wind] Fire; as god of fire, one of the most revered of Vedic deities. As mediator between gods and humans, from whose body issue “a thousand streams of glory and seven tongues of flame,” Agni represents the divine essence or celestial fire present in every atom of the universe. Often used synonymously with the adityas. The three chief gods of Vedas are Agni, Vayu, and Surya — fire, air, and the sun — whose elements respectively are earth, air, and sky. One of the four lokapalas or world-protectors, Agni is guardian of the southeast quarter, and in the *Rig-Veda* as Matarisvan, messenger of Vivasvat, the sun, Agni brought down the “hidden fire” for humankind. To “kindle a fire,” therefore, is synonymous to evoking one of the three great fire-powers or “to call on God” (SD 2:114).

Fire is spoken of as the Primary in the Stanzas of Dzyan: “The Spirit, beyond manifested Nature, is the fiery breath in its absolute Unity. In the manifested Universe, it is the Central Spiritual Sun, the electric Fire of all Life. In our System it is the visible Sun, the Spirit of Nature, the terrestrial god. And in, on, and around the Earth, the fiery Spirit thereof — air, fluidic fire; *water*, liquid fire; *Earth*, solid fire. All is fire — *ignis*, in its ultimate constitution, or I, the root of which is 0 (*nought*) in our conceptions, the All in nature and its mind. *Pro-Mater* is divine fire. It is the Creator, the Destroyer, the Preserver. The primitive names of the gods are all connected with fire, from Agni, the Aryan, to the Jewish god who ‘is a consuming fire’ ” (ibid.).

In the Puranas, Agni is variously a rishi of the fourth manvantara, the name of a kalpa, and also a star. *See also* FIRE.

Agni Abhimanin (Sanskrit) *Agni Abhimānin* The oldest son of Brahma who had three sons, who in turn had 45 sons, and these with Brahma made the 49 fires or agnis (cf VP index).

Agnibahu (Sanskrit) *Agnibāhu* [from *agni* fire + *bāhu* arm from *bahu* much, abundant] Arm of fire, smoke; as a proper noun, a son of Svayambhuva, the first manu, called law-giver because he laid down the sacred laws that should govern the soul as well as rules for harmonious and orderly living. Agnibahu, who adopted the religious life, is also named as one of the ten sons of

Svayambhuva's son Priyavarta by Kanya (cf VP 2:1).

Agnibahu or Agnivahu is given as the first of seven rishis who will live in the fourteenth manvantara yet to come (our present world period being the seventh or Vaivasvata).

Agnibhu (Sanskrit) *Agnibhū* [from *agni* fire + the verbal root *bhū* to be, become] Fireborn; one of the names of Karttikeya or Skanda, god of war; applied to the Kshatriyas or warrior caste, whose ancestors were said to have sprung from fire (TG 10). Also a Vedic teacher.

Agnibuva See AGNIBHU

Agnidagdha (Sanskrit) *Agnidagdha* [from *agni* fire + *dagdha* burnt from the verbal root *dah* to burn] Consumed by fire; a class of pitris (fathers, ancestors) who when living regularly maintained the household fires and offered oblations with fire. Those who refrained from doing so were called anagnidagdhas (not consumed by fire).

The agnidagdhas, corresponding to the lunar pitris of *The Secret Doctrine*, are as mysterious as the higher or arupa classes of kumaras or agnishvattas. The agnidagdhas are the vehicles of the arupa classes and, because of their grosser or more materialized essences, are able to coalesce with the forces and substances of nature on more material planes of the solar system. Known also as barhishads, they “kept up the household flame,” and thus were conversant with and living with flames of the material or quasimaterial realms. Such “material” flames are the fiery or magneto-electric forces and substances of the lower worlds, which include the flame of desire and passion as well as the electric fire of the physical universe. They not only equipped man with the lower parts of his constitution, but likewise projected their chhayas (shadows or astral vehicles), thus furnishing the astral-physical vehicle of early humanity.

The anagnidagdhas are the more spiritual and intellectual classes of pitris who provided nascent humanity with its spiritual, intellectual, and higher psychic principles. Blavatsky writes: “The first or primordial Pitris, the ‘Seven Sons of Fire’ or of the Flame, are distinguished or divided into seven classes . . . [VP 3:14; Manu 3:199] three of which classes are Arupa, formless, ‘composed of intellectual not elementary substance,’ and four are corporeal. The first are pure Agni (fire) or Sapta-jiva (‘seven lives,’ now become Sapta-jihva, seven-tongued, as Agni is represented with seven tongues and seven winds as the wheels of his car). As a formless, purely spiritual essence, in the first degree of evolution, they *could not create that, the prototypical form of which was not in their minds*, as this is the first requisite. They could only give birth to ‘mind-born’ beings, their ‘Sons,’ the second class of Pitris (or Prajapati, or Rishis, etc.), one degree more material; these, to the third — the last of the Arupa class. It is only this last class that was enabled with the help of the Fourth principle of the Universal Soul (Aditi, Akasha) to produce beings that became objective and having a form. But when these came to existence, they were found to possess such a small proportion of the divine immortal Soul or Fire in them, that they were considered failures. . . . The three orders of Beings, the Pitri-Rishis, the Sons of Flame, had to merge and blend together their three higher

principles with the Fourth (the Circle), and the Fifth (the *microcosmic*) principle before the necessary union could be obtained and result therefrom achieved” (BCW 6:191-3).

Agni Dhatu Samadhi (Sanskrit) *Agni Dhātu Samādhī* A type of yogic contemplation where kundalini is excited and “the infinitude appears as one sheet of fire.” (TG 10)

Agnidhra (Sanskrit) *Agnīdhra* [from *agnīdh* kindler from the verbal root *agni* fire + the verbal root *indh* to kindle, light] Fire kindler; eldest of the ten sons of Priyavarta, the eldest son of Svayambhuva Manu. Three of Priyavarta’s sons became mendicants, the other seven became kings famed for valor and wisdom. Priyavarta divided the earth into seven dvipas or continental islands, giving one of each of his king-sons to administer. Agnidhra ruled over Jambu-dvipa which he in turn apportioned among his nine sons (VP 2:1). Blavatsky correlates the Puranic allegory to the seven globes of a planetary chain, Jambu-dvipa being equivalent to globe D in the theosophical scheme.

Sometimes spelled Agnidhra, especially with reference to the priest who kindles the sacrificial fire (RV 2:36:4).

Agnihotra (Sanskrit) *Agnihotra* [from *agni* fire + *hotra* oblation from the verbal root *hu* to sacrifice] Fire offering; an important Vedic sacrifice to Agni, consisting of milk, oil, and sour gruel, which the head of the family is expected to observe twice a day, before sunrise and after sunset. The priest who kindles the sacred fire is called agnihotri, also agnidhra.

Agniputra (Sanskrit) *Agniputra* [from *agni* fire + *putra* son, offspring] Son of Agni, fire; a name of the god of war, Skanda or Karttikeya (cf MB, skanda 9). While every individual of the numerous hierarchies which infill, and indeed are, space, is an offspring or “son” of the cosmic spirit or fire, Agniputra particularly designates one whose characteristic qualities make him an active instead of a passive or quasi-passive agent in the cosmic drama. Thus it is that the planet Mars and its influences — or Skanda, the god of war of the *Mahabharata* — because of their characteristic intense activity of a fiery type are referred to as Agniputra.

In the plural, used in *The Secret Doctrine* (2:363) for those spiritual-intellectual entities who brought intellectual light to the world and endowed humanity with intellect and reason. Thus they are linked to the manasaputras.

Agniratha (Sanskrit) *Agniratha* [from *agni* fire + *ratha* chariot from the verbal root *r* to go] Fire-chariot; archaic flying vehicles, allegorized in the *Ramayana* and ancient works on magic. “This vibratory Force, which, when aimed at an army from an *Agni Rath* fixed on a flying vessel, . . . reduced to ashes 100,000 men and elephants, as easily as it would a dead rat” (SD 1:563).

Agnishtoma (Sanskrit) *Agniṣṭoma* [from *agni* fire + *stoma* praise, a hymn from the verbal root *stu* to praise, eulogize] Praise of Agni, fire; an ancient Vedic ceremony or sacrifice performed by a Brahmin desirous of obtaining svarga (heaven), who himself maintained the sacred fire. The

offering to Indra and other deities was the soma. The ceremonies continued for five days, with 16 priests officiating. Although in later times it may have become merely a matter of form, originally the agnishtoma was connected with the initiation rites of the soma Mysteries.

In the Puranas, Agnishtoma is given as the seventh son of Manu Chakshusa, the sixth manu descended from the first manu, Svayambhuva (cf VP 1:177).

Agnishvatta (Sanskrit) *Agniṣvāṭta* [from *agni* fire + the verbal root *svad* to sweeten, taste] Tasted or sweetened by fire; one of the higher of the seven classes of pitris or progenitors spoken of in the Puranas as those “devoid of fire.” They are thus popularly represented as grihasthas or householders who in previous births failed to keep up their domestic fires and to offer burnt sacrifices, etc. In contrast, the pitris “possessed” of fire are the barhishads, those who kept up their household fires (cf VP 1:10).

Mystically the agnishvattas are far higher beings than are the barhishads because they are devoid of the fire of creative passion. Being too divine and pure for this, they are devoid (i.e., freed) of the grosser creative fire, and thus unable to form physical man. They are, on the other hand, possessed of spiritual-intellectual fire and are the endowers of the human conscious, spiritually immortal ego or selfhood. Hence the agnishvatta-pitris are those who are “purified by fire” — which may be interpreted as either 1) the fire of suffering and pain in material existence producing great fiber and strength of character or spirituality; or 2) from the esoteric standpoint as signifying those entities who have through evolution become one in essence with the aethery fire of spirit.

The agnishvattas signify our ancestral solar selves in contradistinction to the barhishads, our lunar ancestors. The agnishvattas are variously spoken of in *The Secret Doctrine* as the fashioners of the inner man, manasa-dhyanis (lords of mind), solar devas, sons of the flame of wisdom, givers of human intelligence and consciousness, and fire-dhyanis. In ancient Greece they were collectively personified by the epic figure of Prometheus, and in China by the Fiery Dragons of Wisdom.

The agnishvattas, our solar spiritual-intellectual parts, are those who in preceding manvantaras completed their evolution in the realms of matter; and when evolution had brought the nascent human stock to the state where they had only the physical creative fire, the agnishvattas came to their rescue by inspiring and enlightening these lower lunar pitris with spiritual and intellectual energies or fires (OG 14-15; SD 2:91-2).

In the Puranas, the agnishvattas are identified with the seasons, and are spoken of as one of the classes of deities presiding over the cyclic divisions of the year.

Agni-Vishnu-Surya (Sanskrit) *Agni-Viṣṇu-Sūrya* [from *agni* fire + *viṣṇu* from the verbal root *viś* or the verbal root *viṣ* to pervade + *sūrya* sun] Fire-pervader-solar deity; this triad of gods is probably a permutation of the original Vedic triad Agni-Indra-Surya, having their influence and place respectively on earth, in the atmosphere, and in the sky. Agni-Vishnu-Surya has been called the

“synthesis and head, or the focus whence emanated in physics as in metaphysics, from the Spiritual as from the physical Sun, the Seven Rays, the seven fiery tongues, the seven planets or gods” (SD 2:608).

Agnoia or **Anoia** (Greek) [cf Sanskrit *jna*; Latin *gnosco, nosco*; English *know*, etc.] Mindlessness, folly; the opposite of nous. In Plato the soul (psyche) attaches itself either to nous or to anoia, which is analogous to the theosophical teaching regarding buddhi-manas and kama-manas.

Agnosticism [from Greek *a* not + *gnostos* known] The mental attitude denying the possibility of the real knowledge of truth and hence of the ultimate or fundamental nature of the universe. The term was coined by T. H. Huxley to denote his own attitude, in contrast to Gnosticism which implies the possibility of knowing truth and the inner and invisible realities of the universe. It differs from atheism in not denying the existence of God or cosmic divinities.

Agnostos (Greek) Unknown or unknowable in the sense of the unknowable Divine (cf Acts 17:23-8).

Agnus-Castus Plant A species of *Vitex*, a willow-like tree sometimes called the chaste tree [from *hagnos* chaste vs *agnos* willow-like]. “Prometheus is represented as crowned with the Agnus-Castus plant (logos), the leaves of which formed the Crown of the Victors in the ‘Agonia’ of the Olympic games; . . . This Agnus-Castus plant was used also in the fete of the Thesmophoria, in honour of Demeter — the law — ‘nomos’ — bringer, whose priestesses slept on its leaves as encouraging chaste desires. In Christian times this custom survived among Nuns, who used to drink a water distilled from its leaves, and Monks used knives with handles made of its wood with the same intention of encouraging chastity” (BCW 9:267, 10:90)

Agnus Dei (Latin) [from *agnus* lamb + *deus* god] Lamb of God; originating in the New Testament: “The next day John seeth Jesus coming unto him, and saith, Behold the Lamb of God, which taketh away the sin of the world” (John 1:29). It is applied to various emblems, cakes, anthems, etc., used in the services of the orthodox Christian churches. As a lamb was sacrificed and partaken of in the Jewish feast of the Passover, John said in effect: behold the true divine Paschal Lamb. However, the original idea that impurity is burnt out by the divine fire from the radiant source within each person was perverted, both in the case of agni and the Lamb of God, into the idea of vicarious atonement (cf SD 2:383).

Agrae A small town on the banks of the Ilissus near Athens, where in ancient Greece in the spring were celebrated the Minor Mysteries, preliminary to the Greater Mysteries held in the autumn at Eleusis. Those at Agrae were associated with Kore-Persephone and were held about the middle of the month Anthesterion, when the grain crop was young.

Agrammachamareg (Gnostic) In the *Pistis Sophia*, one of the Triad of Invisibles, which also included Barbelo and Bdelle, in the Region of the Left (Hyle) where is the thirteenth aeon. (BCW

13:24)

Agrasamdhani (Sanskrit) *Agrasaṃdhānī* [from *agra* foremost, beginning + *sam* together, with + the verbal root *dhā* to fasten, unite] That which is fastened or strung together from the beginning; the register of human actions kept by Yama, Hindu god of the dead; linked with Chitragupta, scribe of Yama, who records in the Agrasamdhani the deeds and thoughts of every human being (cf MB 13). *See also* LIPIKA

Agruerus (Phoenician) The great god of the Phoenicians, identical with Kronos or Saturn. His seven sons were analogous to the titans or kabiri “connected with the Flood and the seven Rishis” (SD 2:142).

Aguna (Sanskrit) *Aguna* [from *a* not + *guna* quality] Devoid of qualities or attributes (gunas); applied particularly to the supreme divinity — nirguna (without qualifying attributes). As a noun, a fault — devoid of good qualities.

Agyrmos (Greek) A collection of men, assembly; referred to initiation into the Mysteries, synonymous with synaxis. Hesychius called the first day of the initiation into the Mysteries of Ceres, goddess of the harvest, by these terms. The term synaxis was eventually dropped by Christians in favor of *missa* or mass. (BCW 11:99&n)

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ah-Al

Aham (Sanskrit) *Aham* Ego, I, conception of one's individuality; the basis and psychologically the magic agent which is the root of ahamkara, the organ or faculty which produces in human beings the sense of egoity or individuality on whatever plane. While this faculty is perhaps the most powerful agent in the forward drive of evolutionary unfoldment, it is, nevertheless, but an illusory manifestation within the individual of paramatman, the supreme self of the hierarchy. The individuality, which is a characteristic of the monad, is not likewise merely maya, any more than human egoity manifesting is the full expression of the cosmic paramatman. The first cosmic Logos or paramatman is as creative of multitudes of children monads as is a human being, or indeed any other entity on its own plane. Every such child-monad is identic in substance, intelligence, and consciousness with parabrahman, and yet each is an eternal individual. As the Buddhist metaphor suggests, the sea of cosmic life is divided into incomputable hosts of drops of spirit called monads, each of which is predestined to undertake through long eons its cosmic pilgrimage in evolutionary unfoldment, finally to return and merge into the cosmic sea which gave it birth — “the dew-drop slips into the shining Sea” (*Light of Asia*).

Aham-atma (Sanskrit) *Aham ātmā* [from *aham* I + *ātman* self] I am self; meaning that every self is but a manifestation of the essential self or atman; in the case of mankind, a reflection of the Logos within. As man progresses in evolution his human self will become united with his atman, the spiritual source of his composite constitution. In the *Bhagavad-Gita* (10:20) Krishna says: ahamatma gudakesa sarvabhutasayasthitah (I am the atman, O Gudakesa, living in the heart of all beings).

Aham Eva Parabrahma (Sanskrit) *Aham eva parabrahma* [from *aham* I + *eva* indeed, verily + *para* beyond + *brahma* creative deity from the verbal root *br̥h* to expand] Also *aham asmi parabrahma*. I am verily parabrahma, the Boundless; embodies the teaching that above and within every entity whatsoever is everything that is in universal space or boundless infinitude, so that each person is

fundamentally one with all that is because the same divine consciousness flows through every point in space, in that all worlds, gods, human beings, and atoms are each one derived from the same original source.

Ahamkara (Sanskrit) *Ahaṃkāra* [from *aham* ego, I + *kāra* maker, doer from the verbal root *kr* to do] I-maker; conception of egoity or I-am-I-ness. In its lower aspect, the egoistical and mayavi principle, born of avidya (ignorance), which produces the notion of the personal ego as being different from the universal self. In Sankhya philosophy ahamkara is the third emanation: from prakriti (primal nature or substance) issues mahat (the great), standing for universal mind, which in turn produces ahamkara, selfhood, individuality; from ahamkara come forth the five tanmatras, the subtle forms of the elements or principles and “the two series of sense organs” (*Samkhya-Sutra* 1:61).

In the *Bhagavad-Gita* (7:4), prakriti manifests in eight portions — “earth, water, fire, air, ether [space: kham-akasa], mind [manas], understanding [buddhi] and egoity, self-sense [ahamkara]” — all of which relate to the object side, which gives an erroneous sense of identity or egoity.

As universal self-consciousness, ahamkara has “a triple aspect, as also *Manas*. For this conception of ‘I,’ or one’s *Ego*, is either *sattwa*, ‘pure quietude,’ or appears as *rajas*, ‘active,’ or remains *tamas*, ‘stagnant,’ in darkness. It belongs to Heaven and Earth, and assumes the properties of either” (SD 1:335n).

Ahammana (Sanskrit) *Ahaṃmāna* [from *aham* ego + *māna* from the verbal root *man* to think, reflect upon] Egoism, self-illusion; hence spiritual ignorance, the maya produced by reflecting upon or imagining one’s “I” as of primary importance. “When soul is associated with prakriti, it is vitiated by egotism [ahammana] and the rest, and assumes the qualities of grosser nature, although essentially distinct from them, and incorruptible [avyaya]” (VP 6:7).

Ahamsa (Sanskrit) *Ahaṃsa* [from *aham* ego + *sa* (*sah*) he] A mystic anagram used as a title of Brahman, the first or unmanifest kosmic Logos, to suggest the identity of man’s essence with the essence of kosmic divinity: “I am he,” “I am Brahman” (cf SD 2:465). See also HAMSA; KALAHAMSA

Ahan (Sanskrit) *Ahan* Day (*ahan*, *ahas* are base forms of some of the grammatical cases of *ahan*). In the *Vishnu-Purana* (1:5), one of the four bodies of Brahma: “Jyotsna (dawn), Ratri (night), Ahan (day), and Sandhya (evening)” which are “invested by the three qualities” (triguna). Esoterically this has “a direct bearing upon the seven principles of the manifested Brahma, or universe, in the same order as man. Exoterically, it is only four principles” (SD 2:58n). Hence only four bodies of Brahma are mentioned in the Puranas.

Ahancara, Ahankara. See AHAMKARA

’Ahar (Hebrew) *’Ahar* After, behind, later in time; used by some Qabbalistic writers as a name for the hierarchies of gods. Over these, the Jews said that Jehovah — the Achad (’Ehad) — was *the*

supreme God. *See also* 'AHATH; 'AHER

'Ahath (Hebrew) *'Aḥath* The feminine form of the cardinal numeral one, signifying at times single, alone, sole; applied to the feminine aspect of the Logos or head of a hierarchy. In Hebrew occultism 'ahath or achath represents, together with the masculine form achod ('ehad) "the collective aggregate, or totality, of the principal Creators or Architects of this visible universe" (SD 1:129). Incorrectly applied to the Sephiroth-'elohim as Sephiroth, since these last are only vehicles or manifestations of the Logos. Achath-Achod ('ahath-'ehad) corresponds to the Sanskrit adi (first, primeval) or eka (One), meaning crown or hyparxis, and therefore the originant or cosmic hierarch, which divides into the many when its spiritual and substantial energies stream downwards into the planes of illusion and matter — which indeed these energies themselves compose. *See also* 'AHATH-RUAH-'ELOHIM-HAYYIM; 'EHAD

'Ahath-Ruah-'Elohim-Hayyim (Hebrew) *'Aḥath-Rūaḥ-'Elohīm-Ḥayyīm* One soul, gods, lives; the Ancient of the Ancient (the cosmic originant, the hierarch of a cosmic hierarchy) which, being the source of the universe rolled out from within its own divine essence, thus becomes the universe itself; the Ancient of Days — not human days but cosmic manvantaras — or the Ancient of the Ancient is the soul (ruah), which thus expresses itself through the hierarchies of gods ('elohim) and the innumerable minor hierarchies of lives (hayyim) of which the universe as an organism is built.

There is a close connection in thought with the theosophic and Hindu teaching of the atman or paramatman — Brahman, the egg out of which the universe is born, filling the universe with divine and spiritual inspirations and dwelling in and working through the innumerable hierarchies of minor beings which compose and build that hierarchy, and which indeed *are* the universe. Another parallel is the Pythagorean teaching of Monas monadum (monad of monads). In the Qabbalah itself the correspondence is to Kether the Crown, out of which all the other, lower hierarchical grades flow emanationally. This Kether, the highest of the Sephiroth, is the Macroprosopus (the great or immense cosmic face) — an intuition of which may be gained by looking into the violet dome of night begemmed with worlds and instinct with life; the Chaldean 'Arikh 'Anpin (the vast countenance of nature), hiding the indwelling spirit. Kether, Macroprosopus, 'Arikh 'Anpin, and 'Adam Qadmon are but different manners of expressing the same hierarchical acme or originant which thus is the manifested vehicle of the Qabbalistic 'eyn soph, the parabrahman of the Vedantists, or the Boundless. Speaking of this phrase, Blavatsky remarks that it "denotes the Elohim as androgynous at best, the feminine element almost predominating, as it would read, 'One is She the Spirit of the Elohim of Life' " (SD 1:130n). *See also* ARBA-IL

Aheie. *See* 'EHYEH

'Aher (Hebrew) *'Aḥēr* To be after, behind, secondary, another; the plural 'aherim, especially when used in conjunction with 'elohim, means "other or strange gods," which were supposed to be

merely idols. As the Hebrew scriptures themselves show, the ancient Hebrews never at any time denied the existence of the gods of other peoples, but being utterly and strongly tribalistic, their own god Jehovah was to them supreme. Their tribal god is the regent of the planet Saturn, who was their planetary hierarch, and consequently, to them, the supreme god — the god over all other gods. Had the Jews been born as a people under the regent of some other planet, the hierarchical regent of this other planet would then have been in their opinion the supreme god.

Ah-hi (Senzar) A group or class of celestial or spiritual beings known in different countries under various names: dhyanichohans, angels or angelic hosts, 'elohim, the Greek minor logoi, etc. Vehicles for the manifestation of cosmic mind and will, they are “the collective hosts of spiritual beings” through which the universal mind comes into action. “They are the Intelligent Forces that give to and enact in Nature her ‘laws,’ while themselves acting according to laws imposed upon them in a similar manner by still higher Powers; but they are not ‘the personifications’ of the power of Nature, as erroneously thought” (SD 1:38). During pralaya “Universal Mind was not, for there were no Ah-hi to contain it,” no celestial beings to manifest mind (Stanzas of Dzyan 1:3).

Commenting on this, Blavatsky describes the Ah-hi as entities who “being on the highest plane, reflect the universal mind collectively at the first flutter of Manvantara. After which they begin the work of evolution of all the lower forces throughout the seven planes, down to the lowest — our own. The Ah-hi are the primordial seven rays, or *Logoi*, emanated from the first Logos, *triple*, yet one in its essence. . . .

“Like all other Hierarchies, on the highest plane they are *arupa*, i.e., formless, bodiless, without any substance, mere breaths. On the second plane, they first approach to *Rupa*, or form. On the third, they become *Manasa-putras*, those who became incarnated in men. With every plane they reach they are called by different names . . .” (TBL 17, 20-21).

Ahi (Sanskrit) *Ahi* [from the verbal root *amh* to press together, strangle] A serpent; in the *Rig-Veda*, the serpent of the sky, also called *Vritra*, mythologically referred to as the demon of darkness and drought who absorbed the cosmic waters. Indra, god of the sky and rainmaker, battles with *Ahi* and finally slays him, releasing the waters across the land.

Ahi is likewise a name of the sun; also of *Rahu*, the ascending node of the moon and the *daitya* (demon) who periodically “swallows” (eclipses) the sun and moon.

AHIIH (Hebrew) A Qabbalistic form of the tetragrammaton, representing the Macroprosopus, in contradistinction to IHVH (Jehovah), representing Microprosopus. It is connected exoterically with ‘eyeh (absolute Be-ness) and with “I am that I am.” (BCW 8:142, 147)

Ahimsa (Sanskrit) *Ahiṃsā* [from *a* not + the verbal root *hiṃs* to injure, kill, destroy] Harmlessness; one of the cardinal virtues. The sanctity of life is embodied in the teachings of the Buddhists and Jains, as well as of many Hindu schools. Asoka, the first Buddhist emperor, particularly espoused

ahimsa as part of the practice of dharma. According to *Manu* (4:148), one may acquire the faculty of “remembering former births” by the observance of ahimsa.

In the *Vamana-Purana*, ahimsa is personified as the wife of Dharma, whose offspring, Nara and Narayana (epithets of Arjuna and Krishna respectively), pointed the way to spiritual enlightenment.

A’hoor. See ’AHOR

’Ahor (Hebrew) *’Āḥōr* The hinder part, back; in the Qabbalah used in contradistinction to ’anpin, (face; a Chaldean word also spelled ’anaph, in Hebrew ’appayim, as of Macroprosopus).

Ahriman (Persian) [from *ah* (Avestan) conscious life + *riman* the corruptor, disturber of order in the cosmos, the corruptor of mind] Personification of the evil spirit in the world. According to Mazdean philosophy, life originates from two principles: Ahura-Mazda (the light principle) and Ahriman (darkness). Shahrestani, 12th century Islamic scholar, in *Al-Melall Va Al-Nehal* (Nations and Sects) writes that “Magis were of three sects: Geomarathians, Zurvanians and Zoroastrians. They all shared the view that two principles govern the universe: Ahura-Mazda and Ahriman. Ahura-Mazda is the being who pre-existed and Ahriman the created one.” He further narrates allegorically that “Ahura-Mazda wondered how it would be if he had a rival. From this thought Ahriman, the evil spirit, was born, who revolted against the light and declined to abide by its laws. A battle took place between the armies of the two. The Angels came forward as mediators and agreed upon a truce that the underworld be given to Ahriman for seven thousand years and then to the Ahura-Mazda for another seven thousand years. The creatures who previously existed all vanished. Then Man, Gaeo-Marth, and an animal, taurus, appeared. They both died. From man’s head, sprouted a rhubarb and from rhubarb male and female, Mashia and Mashiana, were born, who were mankind’s progenitors. From the head of the taurus all animals originated. Their belief is that light gave mankind two choices: to remain as bodiless spirits keeping away from Ahriman, or to clothe themselves with bodies to fight against him; mankind chose the latter. The destruction of Ahriman’s army would be the day of resurrection. Man’s reason for clothing himself in a physical body was to enable him to battle against Ahriman; and his salvation depends upon defeating him.”

In later Pahlavi writings we find the progeny of Ahriman, six opponents who in their turn stand up against the Amesha-Spentas (the six immortal benefactors). See also ANGRA-MAINYU

Ahti (Finnish) Finnish god of water, pictured as an old man and helpful to fishermen; his wife is Vellamo. Also a name for Lemminkainen, called the dragon of knowledge in the Kalevala.

Ahu (Avestan) [from the verbal root *ah* consciousness of life; cf Sanskrit *asu*] Sometimes Ahum, Akhum. The most aware and therefore best prepared to rule in the physical world. Fravashi, on the other hand, is least aware of the material world and yet is the source of awareness and closest

to the source of absolute Being. According to later Pahlavi writings Ahu's task is to establish order in the human physical body; therefore it can be considered the ruler in the physical world.

Rumi, 13th century Iranian mystic poet, considers ahu (jan) conscious life, in which the immutable divine knowledge is reflected. Molavi attributes three qualities to jan: consciousness; ability to distinguish between good and evil; and an inclination towards good and resentment towards evil (Massnavi bk 6). Ferdowsi, 10th century Iranian poet, considers kherad (intellect) the preserver of ahu, the first creation and the integral part of jan.

In Mazdean literature ahu corresponds to the first of the five life-giving forces or fires namely: ahu, daena, baudha, urvan, and fravashi in the order of awareness; James Darmesteter translates them respectively as: spirit, conscience, intelligence, soul, and fravashi (Yasna 26, 4).

Ahu (Sanskrit) *Ahu* [probably from *paro'mhu* beyond the range of sight] Invisible, unknown, secret, mysterious; Blavatsky equates it with the Sanskrit eka (one) and Hebrew echod, that which begins an emanation-series from the Unknowable (SD 1:113).

Ahum (Avestan) The lower personal existence or personal life; the lowest triad in the human septenary constitution: the physical body, the vital principle, and the astral body.

Ahura (Avestan) [from the verbal root *ahu* conscious life; cf Sanskrit *asura*] The lord of life, the one life from whom all proceed; as daevas who were originally gods of the Aryans changed to demons among the Iranian branch of the Aryans, asura also changed to demons among the Indians. In the earlier Vedas, asura is especially used for Varuna, the ruler of the heavenly sphere. "The Mazdean Scriptures of the *Zend Avesta*, the *Vendidad* and others correct and expose the later cunning shuffling of the gods in the Hindu Pantheon, and restore through Ahura the *Asuras* to their legitimate place in Theogony . . ." (SD 2:60-1).

Blavatsky gives a human interpretation of Ahura: "The Magian knew not of any *Supreme* 'personal' individuality. He recognized but Ahura — the 'lord' — the 7th Principle in man, — and 'prayed', *i.e.* made efforts during the hours of meditation, to assimilate with, and merge his other principles — that are dependent on the physical body and ever under the sway of Angra-Mainya (or matter) — into the only pure, holy and *eternal* principle in him, his divine monad. To whom else could he pray? Who was 'Ormuzd' if not the chief *Spent-Mainyu*, the monad, our own god-principle in us? . . .

"And wisely does it [the occult doctrine] explain to us that Ahura is our own inner, truly *personal* God and that he is our Spiritual light and the 'Creator of the material world' — *i.e.*, the architect and shaper of the Microcosm — *Man*, when the latter knows how to resist Angra-Mainyu, or Kama — lust or material desires — by relying on him who overshadows him, the Ahura-Mazda or Spiritual Essence. . . . Ahura-Mazda is also the Father of Tistrya, the *rain-bestowing* god (the 6th principle) that fructifies the parched soil of the 5th and 4th, and helps them to bear good fruit

through their own exertions, *i.e.*, by tasting of Haoma, the tree of eternal life, through spiritual enlightenment” (BCW 4:520-23).

Ahura-Mazda (Avestan) **Aura-Mazda** (Old Persian) **Auhr-Mazd** (Pahlavi) **Hormazd, Hormoz, Ormazd, Ormuzd** (Persian) [from Avestan *ahura* lord of life from the verbal root *ahu* conscious life + *mazda* the creator of mind, remembering, bearing in mind from the verbal root *man* to think + *da* the creator, bestower; cf Pahlavi *dehesh* creation] The lord of life and creator of mind; the immutable light, the uncreated supreme deity of the Mazdean system. Porphyry writes that Pythagoras taught that the Iranian Magis consider Ahura-Mazda a being whose body is of light and his soul is of truth. He is referred to as the maker of the material world and father of the six Amesha-Spentas. In later Persian literature similar descriptions of the supreme creator have been given. Ferdowsi refers to him as the lord of *jan* (consciousness) and *kherad* (intellect).

Regarding the dualistic cosmic system of the Zoroastrians — good and evil — Blavatsky comments: “No more philosophically profound, no grander or more graphic and suggestive type exists among the allegories of the World-religions than that of the two Brother-Powers of the Mazdean religion, called Ahura-Mazda and Angra-Mainyu, better known in their modernized form of Ormuzd and Ahriman. Of these two emanations, ‘Sons of Boundless Time’ — *Zeruana-Akarana* — itself issued from the Supreme and Unknowable Principle, the one is the embodiment of ‘Good Thought’ (*Vohu-Mano*), the other of ‘Evil Thought’ (*Ako-Mano*). The ‘King of Light’ or Ahura-Mazda, emanates from Primordial Light and forms or creates by means of the ‘Word,’ Honover (*Ahuna-Vairyā*), a pure and holy world. But Angra-Mainyu, though born as pure as his elder brother, becomes jealous of him, and mars everything in the Universe, as on the earth, creating Sin and Evil wherever he goes.

“The two Powers are inseparable on our present plane and at this stage of evolution, and would be meaningless, one without the other. They are, therefore, the two opposite poles of the *One* Manifested Creative Power, whether the latter is viewed as a Universal Cosmic Force which builds worlds, or under its anthropomorphic aspect, when its vehicle is thinking man” (BCW 13:123-4).

Because Maz or Mez in the word Mazda can also be another way of pronouncing myth, Mazda can mean that which is created by Mez, by the hidden truth. Then Ahura-Mazda would mean the life-bearer who is created by the hidden truth.

Aidoneus. See HADES

Aij-Taion The chief god of one of the Yakut tribes of Siberia who dwell principally near the Lena River. This deity presides at the formation of all the worlds, although not producing them itself. Aij-Taion is stationed on the ninth heaven, whereas the minor deities are located in the seventh heaven.

Aima (Aramaic) *’Immā’* or *’Īmmā’*. The great mother; corresponding in the Qabbalah to *’Abba’* (father) and having the metaphorical significance of the beginning or foundation of anything.

Binah (understanding, intelligence), the third Sephirah, is termed the Heavenly Mother ('Imma' 'illa'ah): "the 'woman with child' of Revelation (xii.) was Aime, the great mother, or Binah, the third Sephiroth, 'whose name is Jehovah'; and the 'Dragon,' who seeks to devour her coming child (the Universe), is the Dragon of absolute Wisdom — that Wisdom which, recognising the non-separateness of the Universe and everything in it from the Absolute All, sees in it no better than the great Illusion, *Mahamaya*, hence the cause of misery and suffering" (SD 2:384n).

Ain. See 'EYN SOPH

Aindri (Sanskrit) *Aindrī* [feminine adjective of *indra* probably from the verbal root *ind* to drop] Pertaining to the god Indra; as a feminine proper noun, the consort of Indra; also called Aindri-sakti, Indrani, and Aindriya. Aindri (masculine) means a descendant of Indra, occasionally referring to Arjuna, son of Indra by Kunti.

Aindriya. See AINDRI

Aindriyaka (Sanskrit) *Aindriyaka* [from *indriya* sense, power; belonging to Indra] In the Puranas, the creations of Brahma are variously enumerated as six, seven, and nine. Aindriyaka represents the organic creation involving the evolution or unfolding of the senses (cf VP 1:5).

Air One of the four primary elements which also include fire, water, and earth. It does not denote the earth's atmosphere, since ordinary air is a particular gas, and the gaseous state is only one of the conditions of matter — it might be called the air division or air condition of earth, since earth denotes physical matter. The primary elements have secondary derivatives, and these have again other derivatives. In the first round only one element was developed, fire; in the second round the elements were fire and air; in the third, water was added; in the fourth, earth; and ether will appear in the fifth round. Fire is spoken of as the One, air as the Two, water as the Three, earth as the Four. Air is the Father, the creative element. The *Vishnu-Purana* describes the attributes of air: it corresponds to the sense of touch, and gives bulk.

The states of matter give clues by means of correspondence to the understanding of the primary elements. Gases are indefinitely expansible and their particles have great freedom and range of movement and are always in rapid motion. It would seem by analogy that the solid state corresponds to the physical planes, the liquid state to the astral or psychic plane, air to mind, and fire to spirit. Air may be called the vehicle of fire, as mind is the vehicle of spirit. Fire is analogous to points or foci of energy; air, being number two, suggests lines of force or radiation, motion. The

air which, according to the teaching of the medieval Fire-philosophers, is the domain of sylphs is certainly not our familiar mixture of oxygen and nitrogen, which is merely a correspondence of the element on our plane; it is when on our own astral air plane that these beings may be encountered.

Airavata (Sanskrit) *Airāvata* [from *irāvat* moisture-possessing from *irā* drink, food] Son of Iravati; a vast elephant produced at the churning of the ocean and appropriated by the god Indra. When seated upon Airavata, Indra blesses the earth with rain, i.e., with the water that is drawn up by Airavata from the underworld. According to the *Matangalila*, Airavata was born when Brahma sang over the halves of the shell from which Garuda hatched, followed by seven more male and eight female elephants.

In the *Mahabharata* (Adi-parvan, ch 66) Airavata guards the eastern zone. Four such “elephants” (sometimes eight, each with its sakti or feminine potency) uphold the structure of the earth. The mighty four-tusked Airavata, therefore, represents one of the lokapalas (world protectors) — called by Buddhists maharajas (great kings) — which are the guardians and supporters of the universe. They are also mystically connected with the lipikas, the eternal karmic scribes. In the *Bhagavad-Gita* (10:2, 7) Krishna, in naming his divine manifestations, says that among elephants he is Airavata.

Airiod-Lamh An old Irish name for Zoroaster. “In an ancient Irish MSS Zarusht is called *Airiod-Lamh*, or the ‘Golden Hand,’ the hand that received and scattered celestial fire (Wm. Ouseley, Oriental Collections 1:303).” (BCW 3:462)

Airyaman (Persian) The divine aspect of Ahriman (the personification of evil in the Zoroastrian system) before he “became a dark opposing power, a Satan. For Ahriman is of the same essence with Ahura-Mazda, just as Typhon-Seth is of the same essence with Osiris” (TG 12). He is invoked in the *Airyama-ishyo*. (SD 2:517)

Airyana-Vaego, Airyamen Vaego, Airyana-Varsedya. See AIRYANMEN VAEJA

Airyana-ishejo. See AIRYEMA-ISHYO

Airymanmen Vaeja, Airyena-Vaegah, Airyana-Vaeja (Avestan) **Airyam-Veg** (Pahlavi) “The Aryans (the noble ones) are said in the Avesta to have had their original home in the far land of Airyana Vaeja (the cradle land of the Aryans), the first among the lands created by Mazda. It was at the center of the earth and in its very center stood the mountain Harabareza. This corresponds with the Hindu descriptions of the Land of the Gods with Mount Meru at its center” (Taraporewala, *The Religion of Zarathushtra*). The Aryans divided the universe into seven regions or keshvars: 1) Arzah or Arzahe; 2) Shabah, Sava-Cavahe; 3) Fradadafsh, Fradadhfsha; 4) Vidadafsh, Vidadahfshu; 5) Vorubarst, Vourubaresti; 6) Vorugarst, Vourujaresti, Vouruzaresti; and 7) Khvanuras, Ganiratha, Hvaniratha. The seventh land is situated in the middle of the other six. According to the

introduction of Abu-Mansouri's Shah-Nameh (the older Shah-Nameh), the seventh land, which the kings named Iran-Shahr (Airya-Vaeja) is also in the middle of the other six.

Airyānem Vaejō is the primeval land of innocence and bliss of the Vendidad, similar to the Sveta-dvipa (white island) of Puranic literature or to Mount Meru. In this “beautiful land,” by the river Daitya, “the stars, the moon, and the sun are only once (a year) seen to rise and set” (Vendidad). Blavatsky equates it with the cradleland of physical humanity, and locates it in Central Asia. It is identical to Sambhala and to Arghya Varsha from which the Kalki avatara is expected (SD 2:416; BCW 4:526-7).

In Persian legend, the serpent appeared in Airyanem Vaejo and by his venom transformed the beautiful, eternal spring into winter, generating disease and death. Interpreting this geologically and astronomically, “every occultist knows that the Serpent alluded to is the north pole, as also the pole of the heavens. The latter produces the seasons according to the angle at which it penetrates the centre of this earth. The two axes were *no more parallel*; hence the eternal spring of Airyana-Vaego by the good river Daitya had disappeared, and ‘the Aryan magi had to emigrate to Sagdiani’ — say exoteric accounts. But the esoteric teaching states that the pole had passed through the equator, and that the ‘land of bliss’ of the Fourth Race, its inheritance from the Third, had now become the region of desolation and woe. This alone ought to be an incontrovertible proof of the great antiquity of the Zoroastrian Scriptures” (SD 2:356).

Airyema-ishyo (Avestan) *Airyemā-ishyō*. The much-desired brotherhood, or Yasna 54: “May brotherhood of man, for which we yearn, come down amongst us and rejoice the hearts of men and maidens of Zarathustra’s faith. Bringing fulfillment unto Vohu Man; when souls of men receive their precious mead, I pray too Asha in His Grace to grant these blessings for which human souls do long, which Mazda hath meant for all.” “This verse, though actually not included in the Gathas, follows immediately after the Fifth Gatha. Both the language and the metre are exactly the same, as those of the Fifth Gatha. . . . This verse is recited during the Zoroastrian marriage service as part of ‘the blessing’ ” (Taraporewala, *The Religion of Zarathushtra* 148).

Aisa (Greek) Goddess who “*gives to all their portion of good and evil, and is therefore karma.*” (SD 2:604-5n)

Aish (Hebrew) *’Ish* Man; the name Jesus was said by Blavatsky to have been derived aish (BCW 9:228n). Regarding the symbology of the crucifixion, Blavatsky remarks that “the early compilers of the Christian Mysteries were well versed in Esoteric philosophy and the Hebrew occult metrology, and used it dexterously. Thus they took the word *aish* . . . and used it in conjunction with that of *Shanah* ‘lunar year,’ so mystically connected with the name of Jehovah, the supposed ‘father’ of Jesus, and embosomed the mystic idea in an astronomical value and formula” (SD 2:561).

Aistheton (Greek) Sensible, perceived by the senses; used by Plato in contrast with *noeton* (intelligible) to indicate the visible aspect of the primeval cause of the manifested world. (FSO 194)

Aisvarika (Sanskrit) *Aiśvarika* [from *īśvara* lord, prince, master from the verbal root *īś* to be valid, powerful, master of] Relating to a lord or king; the hierarch or supreme spirit of a hierarchy. One of the four philosophical schools or systems in Nepal (the others being Karmika, Yatnika, and Svabhavika). In this system, adi-buddha is individualized as the cosmic spirit of our hierarchy, attention being centered on this individualization to an extent unusual in Buddhism. While it is true that the highest individualized manifestation of adi-buddhi is adi-buddha, which is the isvara or supreme hierarch of our own cosmic hierarchy, nevertheless both adi-buddhi and adi-buddha are abstract principles of the galactic spaces.

Aitareya (Sanskrit) *Aitareya* [from *itara* other; also from *itarā* mother of Aitareya] Name of a Brahmana or literary work attached to the *Rig-Veda*; also of Mahidasa, author of a Brahmana and an Aranyaka. The *Aitareya-Brahmana* (or *Aitareyaka*) contains forty adhyayas (sections) in which the duties of a hotri (priest) are enumerated. The *Aitareya-Aranyaka* consists of five books or aranyakas, the second and third of which are called the *Aitareya-Upanishad* (although sometimes the last four sections of the second book alone are so designated).

Aithihya (Sanskrit) *Aitihya* [from *iti* thus, in this manner + *ha* emphatic particle] Thus indeed it was; traditional instructions, tradition. Closely similar to itihasa, a name applied to semi-legendary and epic accounts; also to the *Mahabharata* and *Ramayana*. As the instructors of certain schools in handing on teaching (especially oral teaching delivered with “mouth to ear”) invariably commenced an installment with the phrase “iti maya srutam” or “iti ha maya srutam” (truly thus have I heard), such instruction came to be called aithihya or aitiha. The adjectival form aithasika also means what is communicated or derived from tradition, ancient legend, or heroic history.

Aja (Sanskrit) *Aja* [from *a* not + the verbal root *jan* to be born, produced] Unborn; title given to many of the primordial gods. In the *Rig-Veda*, the equivalent of the First Logos, which is a radiation or first manifestation on the plane of illusion of the cosmic One — the Absolute or cosmic paramatman. The *Purusha-Sukta* or Hymn of Man (RV 10:90) states that the thousand-headed Purusha is dismembered at the foundation of the world so that from his remains the universe might arise. This is the foundation of the later Christian symbol of the sacrificial lamb, for there is here a play on words: Aja the “unborn” — Purusha or manvantaric spirit — may also be derived from the verbal root *aj* (to drive, propel), whose meanings include a he-goat, a ram, and the sign Aries. Spirit disappears — dies, metaphorically — the more it becomes involved in cosmic matter, and hence the sacrifice of the unborn, the lamb, or the ram (cf TBL 56).

Aja when derived from the verbal root *aj*, is also a title given to various Vedic divinities such as Rudra, Indra, Agni, the sun, the maruts, and in post-Vedic works to Brahma, Vishnu, and Siva, as well as to cosmic Kama, counterpart of the Greek cosmic Eros — all these gods being considered leaders of their respective hierarchies in the sense of urging, driving, or propelling life and intelligence therein.

In its feminine form, aja signifies maya (illusion) and hence prakriti (evolving nature).

Ajapa (Sanskrit) *Ajapa* [from *a* not + the verbal root *jap* to speak in a low voice] One who does not use orthodox prayers; a reciter of heterodox mantras or works. Ajapa is the form of mantra called hamsa, consisting of a series of inhalations and exhalations.

Ajita (Sanskrit) *Ajita* [from *a* not + the verbal root *ji* to conquer, triumph] The invisible, unsurpassed; in the *Vayu-Purana*, the highest of twelve gods, named jayas, who were created by Brahma to aid him at the beginning of the manvantara. But because they neglected his directives, Brahma “cursed” them to be born in each succeeding manvantara until the seventh, the Vaivasvata-manvantara (cf VP 1:15; n2, p. 26). These twelve jayas are the Hindu equivalent of the twelve great gods of Greco-Roman mythology. Because of their all-permeant character, on a lower scale these divinities are identical with the manasa, the jnana-devas, the rudras, and other classes of manifested deities. In these lower manifestations of their functions, they are identical with those dhyanic-chohanic groups which “refuse to incarnate,” spoken of in *The Secret Doctrine*.

Also the name of the second of the 24 Tirthankaras or Jain teachers.

Ajnana (Sanskrit) *Ajñāna* [from *a* not + *jñāna* knowledge from the verbal root *jñā* to know, perceive, understand] More often absence of knowledge rather than ignorance. An ajnana is a profane, one who is outside the sanctum or inner temples of the Mysteries.

Akar. See AKERT

Akarsha (Sanskrit) *Ākarṣa* [from *ā* near to, towards + *kṛṣ* to draw, pull, lead] Drawing towards oneself, attraction, fascination as by magnetism. The law of attraction, and its alter ego repulsion, is a fundamental and universal operation of nature and is active on all planes and in all spaces and times. It is, in another sense, one of the functions of that unceasing motion which is an inherent attribute of cosmic consciousness. “Motion is the eternal order of things and affinity or attraction its handmaid of all works” (ML 67).

Akasa (Sanskrit) *Ākāśa* [from *ā* + the verbal root *kāś* to be visible, appear, shine, be brilliant] The shining; ether, cosmic space, the fifth cosmic element. The subtle, supersensuous spiritual essence which pervades all space. It is not the ether of science, but the aether of the ancients, such as the Stoics, which is to ether what spirit is to matter. In the Brahmanical scriptures, akasa is used for what the Northern Buddhists call svabhavat, more mystically adi-buddhi (primeval buddhi); it is also mulaprakriti, cosmic spirit-substance, the reservoir of being and of beings. Genesis refers to it as the waters of the deep. It is universal substantial space, and mystically in its highest elements is alaya.

As universal space, it is also known as Aditi, in which lies inherent the eternal and continuously active ideation of the universe producing its ever-changing aspects on the planes of matter and objectivity; and from this ideation radiates the First Logos. This is why the Puranas state that akasa

has but one attribute, namely sound, for sound is but the translated symbol of logos (speech) in its mystic sense. Akasa as primordial spatial substance is thus the upadhi (vehicle) of divine thought. Further, it is the playground of all the intelligent and semi-intelligent forces in nature, the fountainhead of all terrestrial life, and the abode of the gods.

Akasa is the noumenon and spiritual substratum of differentiated prakriti, otherwise the seven or ten prakritis, the root or roots of all in the universe. These prakritis are not merely in akasa, but are the manifestations of akasa in its various grades or degrees of evolutionary development. All the ancient nations mythologically deified akasa in one or another of its aspects and powers (cf IU 1:125 for a descriptive listing of the many names anciently used for akasa). It is the indispensable agent in all religious or profane magic: occult electricity, the universal solvent, in another aspect kundalini. “Akasa is the mysterious fluid termed by scholastic science, ‘the all-pervading ether’; it enters into all the magical operations of nature, and produces mesmeric, magnetic, and spiritual phenomena. As, in Syria, Palestine, and India, meant the sky, *life*, and the *sun* at the same time; the sun being considered by the ancient sages as the great magnetic well of our universe” (IU 1:140n).

Sometimes the astral light is used as a convenient but inaccurate phrase for akasa. In clarifying the difference between these Blavatsky says: “The Astral Light is that which mirrors the three higher planes of consciousness, and is above the lower, or terrestrial plane; therefore it does not extend beyond the fourth plane, where, one may say, the Akasa begins.

“There is one great difference between the Astral Light and the Akasa which must be remembered. The latter is eternal, the former is periodic. The Astral Light changes not only with the Mahamanvantaras but also with every sub-period and planetary cycle or Round. . .

“The Akasa is the eternal divine consciousness which cannot differentiate, have qualities, or act; action belongs to that which is reflected or mirrored from it. The unconditioned and infinite can have no relation with the finite and conditioned. . . . We may compare the Akasa and the Astral Light . . . to the germ in the acorn. The latter, besides containing in itself the astral form of the future oak, conceals the germ from which grows a tree containing millions of forms. These forms are contained in the acorn potentially, yet the development of each particular acorn depends upon extraneous circumstances, physical forces, etc.” (TBL 75-6; also IU 1:197).

The astral light is the tablet of memory of earth and of its child the animal-man; while akasa is the tablet of memory of the hierarchy of the planetary spirits controlling our chain of globes, and likewise of their child, each spiritual ego. The astral light is simply the dregs or lower vehicles of akasa. Gautama Buddha held only two things as eternal: akasa and nirvana. In the *Chandogya Upanishad* (7:12:1-2) akasa (ether, space) is equated with Brahman.

Akasa-bhuta (Sanskrit) *Ākāśa-bhūta* [from *ākāśa* ether, space + *bhūta* element, existing, being

from the verbal root *bhū* to be, become] The aether element, the Father-Mother element, third in the descending scale of seven cosmic bhutas which in the Upanishads are reckoned as five, and in Buddhist writings as four. Akasa-bhuta has its analog in the Third Logos, which because it is formative or creative is called Father-Mother. Not the ether, which is merely one of its lowest principles and only slightly more ethereal than physical matter.

Akasa-sakti (Sanskrit) *Ākāśa-śakti* [from *ākāśa* ether, space + *śakti* power, energy, from the verbal root *śak* to be strong, able] Used by Blavatsky for the soul or energy of prakriti: “The Tibetan esoteric Buddhist doctrine teaches that *Prakriti* is cosmic matter, out of which all visible forms are produced; and *Akasa* that same cosmic matter — but still more imponderable, its spirit, as it were, ‘*Prakriti*’ being the body or *substance*, and *Akasa-Sakti* its soul or energy” (BCW 3:405n). Each divinity is supposed to have his sakti (active energy), mythologically referred to as his consort or feminine counterpart. Thus akasa-sakti is used as the akasa-power in the all-various differentiations of prakriti.

Akasa-tattva (Sanskrit) *Ākāśa-tattva* [from *ākāśa* ether, space + *tattva* thatness, reality from *tat* that] The brilliant, shining, spiritually luminous, evolving substratum of nature; the third in the descending scale of the seven tattvas. According to one manner of enumerating the cosmic procession of consciousnesses, this tattva corresponds to the feminine aspect of the creative or Third Logos; but as nature repeats itself constantly in its processes of evolutionary unfolding, it is likewise proper to derive the subordinate First Logos from akasa when it is considered as virtually identical with mulaprakriti. In view of this repetitive functioning in nature, it is important not to allow the mind to crystallize around any one definition of a stage in any series of “descents” as being the only stage properly so described. This is seen with the First Logos: adi-tattva, first of the five or seven tattvas, may be called the First Logos; from another aspect the First Logos is born from akasa-tattva as the formative or creative mental impulse.

Akasic [from Sanskrit *ākāśa* ether, space] The anglicized adjectival form of akasa.

Akasic Magnetism In theosophy both electricity and magnetism are considered as the vital fluids or effluxes of living beings, which flow forth from them and, interblending and interworking, produce the multimyriad forms of electric and magnetic phenomenal activity common everywhere. This means that both magnetism and electricity are to be traced to their source in cosmic akasa, which is in the great what the magnetism of an individual is in the small. The changes occurring in the earth’s magnetism “are due to *akasic* magnetism incessantly generating electric currents which tend to restore disturbed equilibrium” (ML 160). Hence all magnetic or electrical activity on earth is produced by astral magnetism and electricity incessantly generating electric and magnetic currents which reproduce themselves in the physical sphere.

Akasic Samadhi [adjective of *ākāśa* ether, space + *samādhi* profound meditation from *sam-ā-dha* to hold or fix together (in abstract thought)] Used for the state of consciousness into which victims

of accidental death enter: “a state of quiet slumber, a sleep full of rosy dreams, during which, they have no recollection of the accident, but move and live among their familiar friends and scenes, until their natural life-term is finished, when they find themselves born in the Deva-Chan . . .” (ML 109).

This condition of human consciousness differs from the devachanic state. As used above, akasic samadhi was applied to those individuals dying by accident who on earth had been of unusually pure character and life. It is a temporary condition, equivalent to an automatic reproduction in the victim’s consciousness of the beautiful and holy thoughts that the person had had during incarnated life; in fact, a sort of preliminary to the devachanic state. Such dream state immediately succeeds the first condition of absolute unconsciousness which the shock of death brings to all human beings, good, bad, or indifferent. In the above cases there is no conscious kama-lokic experience whatsoever, because the shock of death has brought about the paralysis of all the lower parts of the human constitution. Only adumbrations of the consciousness of the buddhi and atman, with the most spiritual portion of manas are then active (ML 131). In certain cases the condition of samadhi in the akasic portions of the human constitution may last until what would have been the natural life term on earth is completed; and then these individuals glide into the devachanic state.

Aker (Egyptian) *Aker*. An Egyptian god represented as a lion god stationed at the door of dawn, through which the sun entered each day. In later Egyptian civilization two lions were pictured, called the Lion of Yesterday (Sef) and of Today (Tuau), represented with human heads. In the conflict between the sun god Ra and Apep (the serpent of evil), Aker aids the forces of light by binding and chaining the serpent.

Akert (Egyptian) *Ákert*. Name for the underworld, of which Osiris in his aspect of Un-nefer was the lord. Also the name of the god of the fifth hour of the day.

Akhu. See KHU

Akkadians, Accadians A non-Semitic race which preceded the Semites in Babylonia, evidence for whom is mainly found in some of the cuneiform inscriptions. The name comes from the city of Agade, the capital of Sargon I. Blavatsky says in *The Secret Doctrine* that the Akkadians were not Turanian, but were emigrants from India and were the Aryan instructors of the later Babylonians. There is an Akkadian Genesis, which stands in the line of descent leading to the Biblical Genesis.

The ethnology of the ancient peoples inhabiting Mesopotamia is extremely obscure. The records of occult history show that in a previous geological period, all that portion of western and central-western Asia, which includes Persia, Babylonia, Turkestan, Baluchistan, Afghanistan, etc., was once a highly fertile and well-populated portion of the earth’s surface, not only bearing once famous and brilliant civilizations, but likewise the seat of different peoples living side by side. When immense climatic and geological changes took place, this vast stretch of territory became

the seeding-place or focus whence spread to the east, south, and west various emigrant offshoots which populated what were then less fertile territories, which in time became on the one hand northern India, Afghanistan, Baluchistan, and Turkestan, and on the southwest Iran, Mesopotamia, Asia Minor, and the Caucasus district. It was far later that a reverse current of emigration left what is now northern India and proceeded westward settling to a certain extent in the lands of their ancient forefathers, and this accounts not only for the similarities between the west and east of this district, but the Indian influence perceptible in Mesopotamia and the close linguistic and other links that existed between the ancient Zoroastrians and the Brahmanical streams of thought.

Akrishu, Akarsha (Sanskrit) *Ākṛṣu, Ākarṣa* [from *ākṛṣ* to attract, pull towards one] Attraction, contrasted with *prishu* or *presha* (repulsion) (ML 35).

Aksha (Sanskrit) *Akṣa* [from the verbal root *akṣ* to reach, pass through, pervade] An axle, axis, wheel, car; a die for gambling, a cube; rarely, inner knowledge, as the axis or pivot of life. As a neuter noun, either an organ or an object of sense perception. In the *Ramayana*, Aksha (akshakumara) was one of the three sons of Ravana, king of the demons, and was slain by Hanuman in Lanka.

Akshara (Sanskrit) *Akṣara* [from *a* not + *kṣara* flowing from the verbal root *kṣar* to flow, melt away] Imperishable; name of Brahman, also on occasion of Siva and Vishnu, signifying their enduring, imperishable nature for the term of the mahamanvantara. Krishna tells Arjuna that there are two Purushas in the world — *kshara* and *akshara* — the perishable and the imperishable; that all beings are *kshara* in the sense used by the Greek philosopher Heraclitus: *panta rhei* (all things flow); and that which dies not is *akshara* (BG 15:16-17). But the highest Purusha is still another, the paramatman (supreme atman).

Akshanvat, Akshanvanta (Sanskrit) *Akṣanvat, Akṣanvanta* One furnished with eyes; used in the Vedas (10:71:7), where friends emulate each other in singing. Connected by Blavatsky with the development of sight, hearing, and human language, and with the fact that words for light and sound originate from the same roots. (BCW 7:67)

Akta (Sanskrit) *Akta* [from the verbal root *aj* to drive, propel; also from the verbal root *añj* to smear, bedaub, anoint] Propelling force; also anointed. Linked with both *christos* (anointed) and *Visvakarman* (Tvashtri), divine artist and architect in Vedic literature personifying the cosmic formative force or energy of the Logos (SD 2:101&n).

Akupara (Sanskrit) *Akūpāra* [from *a* not + *kūpāra* ocean] Unbounded; the mythical tortoise which upholds the earth (sometimes *kupara*). Also the sea, whether earthly or cosmic; likewise a name for the sun (cf MB Vana-parvan, ch 199).

Al. See EL

Al-ait (Phoenician) The god of fire, a “very mystic name in Koptic occultism” (TG 14).

Alaparus (Chaldean) The second divine king of Babylonia who reigned “three Saroi,” a saros being 3600 years. According to Berosus, the first king of the divine dynasty was Alorus, who reigned ten saroi. These figures refer not to human individuals but to subraces: since each definitely distinctive subrace has its own svabhava or individuality, the ancients spoke of each as an individual.

Alawn (Welsh) [from *alaw* song, harmony] One of the three primitive Bards, the disciples of Tydain Tad Awen by whom Druidism was founded, the other two being Plenydd and Gwron. A Druidic movement being started would be presided over in turn by a Plenydd or light-bringer, a Gwron or stabilizer, and an Alawn or harmonizer, and so on in succession.

Alaya (Sanskrit) *Alaya* [from *a* not + *laya* dissolution from the verbal root *lī* to dissolve] Nondissolution; the indissoluble; used in Buddhism for the universal soul or higher portions of anima mundi, the source of all beings and things. Mystically identical with akasa in the latter’s highest elements and with mahabuddhi; also with mulaprakriti as root-producer or root-nature (OG 5).

With Mahayana Buddhists alaya is both the universal soul and the spiritual self of an advanced sage. Aryasangha taught that “he who is strong in the Yoga can introduce at will his Alaya by means of meditation into the true Nature of Existence” (cf SD 1:49-51; also FSO 98n).

The Secret Doctrine (1:49) mentions Alaya in the Yogachara system, most probably referring to *alaya-vijnana*, but adds that with the “Esoteric ‘Buddhists’ . . . ‘Alaya’ has a double and even a triple meaning.”

Alaya-mahat (Sanskrit) *Alaya-mahat* [from *alaya* abode, dwelling + *mahat* cosmic mind] The universal mind, of which the personal or individual mind (buddhi-manas) is a temporary reflection. (BCW 12:313, 371)

Alaya-vijnana (Sanskrit) *Ālaya-vijñāna* [from *ālaya* abode, dwelling from *ā-lī* to settle upon, come close to + *vijñāna* discernment, knowledge from *vi-jñā* to distinguish, know, understand] Abode of discriminative knowledge; the cognizing or discerning faculty, the mental power of making distinctions, hence the higher reasoning. When used mystically as “a receptacle or treasury of knowledge or wisdom,” it corresponds very closely to the Vedantic vijnanamaya-kosa, the “thought-made sheath” of the human constitution, the higher manas or reincarnating ego.

In Mahayana Buddhism, alaya-vijnana has acquired a somewhat larger and higher significance: alaya (an abode, in the sense of focus of activity), the prepositional prefix *a* (meaning position or limitation) with the verb *li* (to dissolve) signifies solution or coalescence in unity. Used much as the term human monad is in theosophy, equivalent to the higher manas or even buddhi-manas, it therefore signifies the focus or interior organ of consciousness into which is collected at the end of each incarnation the aroma of the higher experiences during that lifetime, thus forming a kind of

treasury.

Alaya Vinyana. *See* ALAYA-VIJNANA

Alba Petra (Latin) White stone; “To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it” (Rev 2:17). The meaning of the white stone is initiation, the purified nature of the adept-initiate. The new name written in it is a way of expressing the new man who is thus reborn in the initiation chamber; and because he has thus become a new man, he is entitled to the new name which is that of adept-initiate. Clearly, no man knows this new name except him who receives it.

Albigenses A sect arising in Southern France in the 11th century and opposed by the Roman Catholic Church, which exterminated it in the 13th century. It had affinity with the Catharists and also more distantly with the Paulicians, derivatives of the Eastern Church. The doctrines and the pedigree of the Albigenses show it to be a distant offshoot of Manichaeism, so long the formidable rival of orthodox Christianity in Europe and Asia. There was the characteristic Manichaean dualism and belief in some form of transmigration and metempsychosis. There was, according to some, the Docetic view of Christ — that his body was a mere appearance, his spirit being the reality. The authority of the Old Testament was not admitted as inspired.

Alborz. *See* BORJ

Alcahest. *See* ALKAHEST

Alchemy [from Arab *al-kimiya* from *al* the + *kimiya* philosopher’s stone from Greek *chyma* fluid] The art of divine magic under a chemical symbolism. The ancient alchemists, more conscious of the unity of nature, perhaps did not need to distinguish between a natural and spiritual alchemy or to regard one as symbolic of the other. Alchemy was introduced into Europe by the Arabs, from whom it may be traced to Egypt and India. Modern Europe knows it best from medieval alchemists, who studied its physical aspects, though some could interpret the symbolism and work out the analogies between the physical elements and processes and their spiritual counterparts.

Alchemy seeks the primal unity beyond diversity: a homogeneous substance from which the many elements were derived; a pure gold which could be obtained from baser metals by purging them of the dross with which the pure element was alloyed; an elixir of life which would cure all diseases. The transmutation of metals was their magnum opus; the agent to be employed was the philosopher’s stone. Though these processes are possible physically, the spiritual processes to which they correspond are incomparably more important. The base metals are the passions and delusions of the lower mind; and the pure gold is the wisdom of the manas in alliance with buddhi.

The homogeneous substance and the elixir of life have virtually the same meaning. The perpetuum mobile (ever moving) and the inexhaustible lamp have their counterparts in the eternal motion

and the spiritual fire. The three elements sulfur, salt, and mercury denote spirit, body, and soul, or fire, earth, and water.

Alcoholism. See DELIRIUM TREMENS

Alcyone The brightest star in the Pleiades. Alcyone and the Pleiades are the central group of “the system of sidereal symbology. . . . the focus from which, and into which the *divine breath*, Motion, works incessantly during the Manvantara” (SD 2:551). The culmination of the Pleiades and Alcyone on the meridian at midnight in November has been celebrated worldwide by festivals, chiefly in honor of the dead.

Aldebaran A first magnitude ruddy star, the principal star in Taurus the Bull. It is one of the four Royal Stars of the ancient Persians, which approximately marked the solstices and equinoxes about 4000 BC. It represented the spring equinox; the others being Antares in Scorpius (summer solstice), Regulus in Leo (autumnal equinox), and Fomalhaut in the Southern Fish (winter solstice). They have been connected from an early time in India with the legends concerning the four Maharajas (regents of the cardinal points) and the four primitive elements, and have come down to us in connection with Hebrew and Semitic writings as the archangels Uriel, Gabriel, Michael, and Raphael, as well as in the Christian symbols of the four evangelists: the bull, the eagle (Scorpio), the lion, and the angel or man. Blavatsky says that the spring equinox was in Taurus at the beginning of the kali yuga (3102 BC), though it was approaching Aries. Aldebaran symbolizes the Hebrew aleph (A or 1).

Alectryomancy, Alectoromancy [from Greek *alektyon*, *alektor* cock] Divination using a cock or other bird; “a circle was drawn and divided into spaces, each one allotted to a letter; corn was spread over these places and note was taken of the successive lettered divisions from which the bird took grains of corn.” (TG 16)

Aleph (Hebrew) *’Ālef* The first letter in the Hebrew alphabet (Hebrew char), having the ox or bull for its symbol; also having the numerical value of 1. In its composition it is said by Qabbalists to symbolize waw (Hebrew char) between yod (Hebrew char) and dalet (Hebrew char), thus the letter itself represents the word yod (which again is the perfect number 10).

Alesia Ancient Gaulish city (now called St. Reine) known for its Celtic Mysteries; the revolt of the central Gauls against the Romans under Caesar resulted in “the slaughter of the garrison at Alesia (or Alisa), and of all its inhabitants, including the Druids, the college-priests and the neophytes; after this the whole city was plundered and razed to the ground” (BCW 14:294-5), with the loss of the Druidic libraries. With the destruction soon after of nearby Bibractis (present-day Autun), Druidism was destroyed in Gaul. (BCW 14:311)

Aletae (Phoenician) [from *Al-ait* the god of fire] Fire worshipers; the seven kabiri or rishis, the titans, sons of Agruerus or Kronos. In one of aspect, synonymous with the maruts.

Aletheia (Greek) [from *a* not + *lethein* to be hid] Truth, as opposed to a lie or to unreality. Also a sapphire ornament worn by the Egyptian high priest (Diodorus and Aelianus).

Alexandrian Library Begun by Ptolemy Soter (367?-283 BC), and zealously pursued by his successor Ptolemy Philadelphus. The two principal libraries were in the Bruchium and the Serapeum; the number of rolls or “books” is variously estimated between 400,000 and 700,000, but these rolls had not the contents of a modern printed volume. The Bruchium was accidentally set on fire when Caesar burnt the fleet in the harbor, but many rolls were rescued. The Bruchium quarter was destroyed by Aurelian in 273 and probably the library with it; and in about 390 Theodosius ordered the destruction of the Serapeum, and its books were pillaged by Christians. The Moslem Caliph ‘Omar is reputed finally to have destroyed the remainder of the library.

Alexandrian School Alexandria flourished from the 4th century BC to the 7th AD, being a remarkable center of learning due to the blending of Greek and Oriental influences, its favorable situation and commercial resources, and the enlightened energy of some of the Macedonian Dynasty of the Ptolemies ruling over Egypt. The Alexandrian school was formed of the Neoplatonist philosophers whose appearance marks the later outburst of Alexandrian culture; and with them may perhaps be classed those Gnostic schools which originated there. This philosophy is a characteristic presentation of parts of the archaic wisdom-religion, being derived from contact with India and with knowledge still then accessible in Egypt.

The Macedonian rulers had established here one of the most famous centers of learning known to history including a museum and a library with its famous collections of books; and the injury done to this center of learning and philosophy by various Roman potentates and Moslem invaders was a disaster for ensuing ages.

Alexeterioi (Greek) Tutelary gods whose figures were located in the sky, that Seldenus explains were used in building the Jewish teraphim (oracles). (SD 1:394)

Alfheim, Alfhem (Icelandic, Swedish) [*alf* elf (cf Icelandic *elf* from river, channel) + *heim, hem* home] The home of elves in Norse mythology; the meaning commonly ascribed to the word *elf* as a fairy or sprite needs reexamination, as the myths bear out the assumption that an elf denotes a channel between the divine source of an entity and its vehicle or body; in other words, that the elf is the intermediate nature or soul of any being.

In the Edda, Alfhem is the “teething gift” bestowed in the morning of time on the god Frey, the planetary deity, indwelling consciousness, or lord of our earth-system with all its components, so that Elf-home is the abode of souls on this sphere. The warriors of Odin on earth use the sword of Frey (the spiritual will) to do battle in the “giant world” of matter. Alfhem is to Frey as the human soul (elf) is to a human being.

Alhim (Hebrew) *’Ēlīm* [plural of *’ēl* god] One method of transliterating *’elim*, although the insertion

of the *h* is incorrect. The number-values of the letters of 'Elohim, transliterated as alhim are 13514: when used anagrammatically they may be read as 31415, the value of pi. *See also* ELOHIM

Alipta (Sanskrit) *Alipta* [from *a* not + *lipta* smeared from the verbal root *lip* to smear, anoint] Unstained, unsoiled, undefiled; philosophically, unlimited, unbound. The highest principle in the human constitution, atman, may be called alipta — unstained and therefore unbound by all the principles inferior to it — since only those human principles which are imperfectly evolved, imperfect emanations from the latent divinity within, can be said to enjoy or suffer because of being soiled or defiled by being enchained to lower things.

Alkahest First used by Paracelsus to denote the Menstruum or universal solvent which, according to Paracelsus and Van Helmont, can reduce all bodies, simple or compound, to the *primum ens*. In one sense it is akasa, which in its lower form is the anima mundi or astral light. Van Helmont believed that such a general solvent is obtainable by chemical means, so far as it applies to physical things. But psychologically it signifies that the multiform and changing elements which rule our actions can be brought under control of the enlightened will by reducing them to the essence from which they all spring. The alkahest from its metaphysical, psychological, and mystical aspect is therefore the higher self which by its intrinsic energies, working upon matter or “lead,” produces in time the “pure gold,” or in other words brings the entire human constitution into perfect harmony and spiritual sympathy with the alkahest, monadic essence, or higher self.

All, The The Boundless, the Ineffable. To our physical ideas, the All appears as a vast aggregation of separate parts, but here the contrasted notions of unity and multiplicity merge. Infinitely great and infinitely small, as said in Hindu writings, the All is at once the emptiness of utter plenitude, and the shoreless fullness of kosmic space.

Allfather, Alfadir (Icelandic) [from *al* all + *fadir* father] Odin, father of gods and men. As Allfather, Odin occurs on many levels: as the indwelling divinity in a universe and in every part of the universe. He is also, together with his two brother-gods, the creative power of life on each level of existence. Odin (divine intelligence, Sanskrit mahat), Vile (will), and Vi or Ve (awe, sanctity) comprise the cosmic creative trinity. They spring from Bur, the quasi-manifest or Second Logos, which in turn emanated from Buri, the legendary king of cold. Buri was immersed in the ice of non-being until the cow Audhumla, symbol of fertility, uncovered his head when licking the ice blocks for salt.

On the next level Odin is again instrumental in creation. Here his brother creators are named Honir and Lodur. The gods of this second trinity correspond to the Hindu tattvas: Odin stands for air (breath, spirit), Honir for water (fluidity, intelligence), and Lodur for fire (energy, will and vital heat). They found on the earth “Ask (ash) and Embla (alder), indeterminate,” and gave to these vegetative life forms out of their own nature the properties needed to complete the human constitution.

In his capacity as Allfather, Odin “hung nine nights in the windtorn tree pierced by a spear,” in order to “raise runes of wisdom” from the nether worlds: the cosmic spirit sacrificed “my self to my Self above me in the tree” to gain universal experience.

Allgeist. *See* ALKAHEST

All Saints’ Day, All-Hallows, Hallowmas. A festival originally on the first of May, said to have been instituted for the martyrs in European countries about the 4th or 5th centuries. In the 7th century, Pope Boniface instituted it on May 13 to replace a pagan festival of the dead. In 834 the day was moved to November 1st by Gregory III and was then celebrated for all the saints. The Greek Church celebrates it on the first Sunday after Pentecost. Closely connected with the celebration was the keeping of the preceding evening, known as the vigil of Hallowmas or Halloween. This was especially kept in Scotland and in Brittany, France. In Scotland an important item was the lighting of a bonfire at each house. The Celts kept two festivals, one called Beltane (Bealtine or Beiltine) in which fires were lighted on the eve of May 1st, and the other called Samtheine on the eve of November 1st, in which people jumped over two fires placed very close together. “The Druids understood the meaning of the Sun in Taurus, therefore, when, while all the fires were extinguished on the 1st of November, their sacred and inextinguishable fires alone remained to illumine the horizon, like those of the Magi and the modern Zoroastrians” (SD 2:759). The Germanic nations had their Osterfeuer and Johannisfeuer.

Alogon (Greek) Used by Pythagoras and Plato for the irrational soul in man, divided into the thymichon and epithymichon; the rational soul was called logos. (BCW 7:229)

Al-om-jah A name by which the highest Egyptian hierophants were known.

Al-Orit. *See* AL-AIT

Alorus, Adi-ur (Chaldean) According to Berosus, the first king of the mythical age of Babylon, the period before the flood of Xisuthrus. Alorus reigned for a period of ten saroi or 36,000 years. *See also* ALAPARUS

Alpha and Omega The first and last letters of the Greek alphabet. “I am Alpha and Omega, the beginning and the end,” says the Lord in Revelations. This means not only “I am all,” but also, for instance, the beginning and end of a divine-spiritual dragon or cosmic serpent, of which the alpha is the Logos or Second Person of the Trinity, and the omega is the wise men of earth. In another significance, the Logos of the solar system is the originator of a cosmic manvantara, and all the hierarchies of spiritually inferior beings flowing forth from this Logos undertake the work of building, preserving, and finally destroying the solar system when the manvantaric term is ended. Then the alpha or outflowing energy recombines with the omega or inflowing energy, recombining into their original oneness.

Alpha Draconis. Also Thuban. A third magnitude star, north of the constellation of the Great Bear,

which was the pole star about the third millennium BC. Around 2170 BC it shone down the descending passage of the Great Pyramid at its lower meridian transit, but Egyptologists generally believe that the Pyramid is much older than that. In the previous precessional period Alpha Draconis would be in about the same position rather less than 26,000 years earlier. After it ceased to be the pole star, it shared the fate of all the fallen gods and was treated as an evil demon.

Alsvidr, Alsvinnr (Icelandic) [from *al* all + *svinnr* quick, clever] Also Alswider. Quick (with words), having a ready tongue; also prudent, wise. In the Lay of Grimner (Elder Edda), the horses that “draw the supple sun over the sky” are Arvakr and Alsvinnr (Early-awake and Prudently-wise). Alsvinnr has the runes of Odin inscribed on his hoof, while Arvakr has them in his ear. “Under their flanks the merciful powers have hidden the isarnkol (ironcold)” to protect them from the sun.

Altar [from Latin *altare* from *altus* high] Usually an elevation of earth, stone, or wood for the worshiper to kneel on, or for the offering of sacrifices, or as the pedestal of an invisible divinity or its statue. In the Old Testament it appears as part of the furniture of the Jewish tabernacle, that sacred shrine of the Deity. This altar has horns at each end, which is said to symbolize the fecund cow — in common with the ideas of Hindus and ancient Egyptians — which again represents Mother Nature; so the connection with the Holy of Holies, which stands for the great Mother, resurrection, and birth, is apparent. In general the altar is the earthly throne or supposed seat of a deity; and its familiar metaphorical use suggests both this and also the idea of sacrifice. The altar has been taken over by Christendom, where it has become the communion table. It also has the idea of refuge and sanctuary, for it was commonly so used both with the Hebrews and the Classical ancients.

Althotas First teacher of Cagliostro, “a great Hermetic Eastern Sage” or adept said to have given Cagliostro his symbolic name (BCW 12:79-80). Althotas is “a curious word containing the Arabic definite article ‘the,’ suffixed with a common Greek ending ‘as,’ and containing the Egyptian word *Thoth*, who was the Greek *Hermes* — the *Initiator!*” (SOPh 30)

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Am-Ani

Am (Hebrew) 'Ēm Mother; occasionally any female ancestor; also a mother-city, and by the same metaphor occasionally the earth as the common mother of all. *See also* AIMA; 'IMMA' 'ILLA'AH

Amaltheia, Amalthea (Greek) In Greek mythology a nymph who cared for the infant Zeus when his mother Rhea concealed him in a cave in Crete to keep him from being devoured by his father Kronos. Another legend credits the nymphs Ida and Adrastea with his care, but names the goat which suckled him Amaltheia. Amaltheia is associated with the cornucopis, the broken-off horn of the goat. As the horn of Amaltheia it became a symbol of inexhaustible abundance and was adopted as a favored attribute by various divinities, among them Hermes, Demeter, Gaia, Pluto, and Cybele.

In Roman legend, Amalthea is the Sibyl, the Cumaean, who offered the Sibylline Books to Tarquin.

Amanasa (Sanskrit) *Amānasa* [from *a* not + *mānasa* from *manas* mind from the verbal root *man* to think, perceive, reflect upon] Without mind, want of perception or intellect; applied to the early races of humanity before the manasaputras (sons of mind) had incarnated in them and effected the enlightening of manas (mind).

Amarakosa (Sanskrit) *Amarakośa* [from *a* not + *mara* dying from the verbal root *mṛ* to die + *kośa* treasury, sheath, dictionary] Also Amarakosha. Immortal treasury; a dictionary written by Amara or Amara-Simha, sage, scholar, and Buddhist, about whom not very much is definitely known. Orientalists place him anywhere between the 2nd and 6th centuries. They are unanimous, however, in rating the *Amarakosa* as equal in quality and importance for the Sanskrit language as is Panini's grammar.

Amarakosa is also sometimes applied to the highest of the kosas (sheaths).

Amata-yana (Pali) *Amata-yāna* [from *a* not + *mata* dead, from the verbal root *mṛ* to die + *yāna*

leading, going, vehicle, from the verbal root *ya* to go, proceed, advance] Immortal vehicle or way; equivalent to the Sanskrit *amrita-yana*, the immortal vehicle or individuality in contradistinction to the personal vehicle or ego (*pachcheka-yana*). It is, therefore, the immortal part of the human being, “a combination of the fifth, sixth, and seventh” principles — *atman*, *buddhi*, and *manas* (cf ML 114).

Amazarak In the Book of Enoch, one of the seven first instructors of the fourth root-race (SD 2:376).

Amba (Sanskrit) *Ambā*, *Amba* Mother; a woman of respect or distinction. A name of Durga, consort of Siva; in the *Mahabharata* the eldest of the three daughters of the King of Kasi who were abducted by Bhishma to become the wives of his brother Vichitravirya. When Bhishma learned that Amba was already pledged to the Raja of Salva, he sent her to him. The Raja, however, rejected her because she had been in another man’s house. Deeply hurt, Amba retired to the forest to practice extreme austerities in order that she might gain the power to avenge the wrong done to her by Bhishma. She ended her life voluntarily on a funeral pyre and was reborn as Sikhandin, who eventually, in the great battle between the Kauravas and Pandavas, slew Bhishma. Her sisters, Ambika and Ambalika, became respectively the mothers of the blind king Dhritarashtra and of Pandu, father of Arjuna.

Amba likewise is the eldest of the seven Kritikas (Pleiades), represented as being the consorts of the Saptarshis (seven rishis) or Saptarkshas of the Great Bear. From immortal antiquity the mystical mythology of many ancient peoples, including the Hindus, has connected the constellation of the Great Bear with the Pleiades, implying an intimate bond of some kind. It is of interest, therefore, to note that astronomers have discovered a family connection between the stars of these two groups.

In *The Secret Doctrine* Amba is a term of mystical reverence applied to Aditi and akasa, “the celestial Virgin-Mother of the visible universe” (1:460).

Ambamata (Sanskrit) *Aṃbāmātā* Mother of the mountain; Rajastani aspect of Kali or Durga, the great mother, “patroness and guardian of boys, the future warriors” (Caves and Jungles 623). Equivalent to *mater montana*, a title of Cybele or Vesta as guardian of children. ()

Ambarvales, Ambarvalia (Latin) Italian festivals in honor of Ceres held at Rome on May 29, when the fields were blessed; in rural areas, the people walked three times round their fields following a hog, ram, and bull which were then sacrificed after a prayer for fruitfulness to Ceres (originally to Mars). Its rituals with cake, wine, water, and chalice were identical with and the origin of those of the Christian mass (BCW 11:100).

Amber Pale yellow, brown, or reddish fossilized resin, capable of a negative electric charge by friction. In Greek mythology amber was formed from the tears of Meleager’s sisters, or alternately

of Phaeton's sisters dropped into the Eridan after he was killed trying to drive the chariot of the sun. While the Eridan is usually identified with the Po River in Italy, Blavatsky holds that it was a northern sea (SD 2:770n). In Scandinavian myths it was attributed to the tears of Freya. In China amber was said to be the soul of the tiger transformed into a mineral after its death. It has been used widely for medicinal, religious, and decorative purpose.

Ambhamsi (Sanskrit) *Ambhāṃsi* [from *ambhas* water, from the verbal root *bhā* to shine] Water; in the Vedas the celestial waters and also a synonym for gods, but in the Brahmanas and Puranas the four orders of beings that variously “shine” or flourish: deva-manushyah (gods and men), pitris (fathers or manes), and asuras (demons, not-gods). This is “because they are all the product of waters (mystically), of the Akasic Ocean . . . If the student of Esoteric philosophy thinks deeply over the subject he is sure to find out all the suggestiveness of the term Ambhamsi, in its manifold relations to the Virgin in Heaven, to the Celestial Virgin of the Alchemists, and even to the ‘Waters of Grace’ of the modern Baptist” (SD 1:458n).

Ambrosia (Greek) [from *ambrotos* immortal from *a* not + *mortos* or *brotos* mortal; cf Sanskrit *amṛta* from *a* not + the verbal root *mṛ* to die; Latin *immortalus* from *in* not + *mors* death] In Classical myths variously the food, drink, or unguent of the gods or divine wisdom, connected with nectar; anything that confers or promotes immortality. Equivalent to the Sanskrit amrita and soma and the northern European mead. In a Chinese allegory, the flying Dragon drinks of ambrosia and falls to earth with his host. The laws of evolution entail a so-called curse or fall upon virtually all the hosts of monads frequently called angels, whereby they are cast down to the nether pole and undergo peregrinations in the realms of matter; in the case of many such “fallen angels,” this involves imbodiment or incarnation on earth. Man himself at a stage of his evolution experiences a similar “descent” and speeding-up, due to the impulses of the immortal urge within his breast to grow, progress, evolve, and become cognizant of larger reaches of truth. This is evident in the highly mystical Hebrew story of the forbidden Tree and in the various legends pertaining to soma in Hindu literature.

Yet on the upward arc of an evolutionary cycle, partaking of this sacred ambrosial food signifies initiation, the partaking by the initiate in the Mysteries of the “drink” of spiritual immortality. This drink is symbolized by the cup and its contained liquid, but actually is the receiving into the consciousness from the inner nature of the life-giving streams, the draught of everlasting life, or the elixir of life. After partaking of this ambrosial elixir, brought about by lives of selflessness and by final initiation, the adept learns to live in the minor and intermediate spheres of the solar system as a fully self-conscious co-laborer with the gods in their cosmic work. Such are the higher nirmanakayas, true buddhas, etc.

Amdo (Tibetan) *a mdo*. The northeastern-most region of the Tibetan cultural area, roughly equivalent to the northeastern quarter of the present Chinese province of Tsinghai (Qinghai),

including the area around the Koko Nor. Tsong-kha-pa was born here, in the locality of Tsong-kha, southeast of the Koko Nor. In the time of the third Dalai Lama the great monastery of Kumbum (Tibetan *shu 'bum*) was founded at Tsong-kha-pa's birthplace.

Amen (Hebrew) *'Āmēn* [from *'āman* to be firm, faithful, trustworthy, sure] Firmness, permanency, durability, truth, fidelity; as an adverb truly, certainly, verily, so be it. The significance of amen is in many cases almost identical with that of the Sanskrit Aum (Om). For this reason in Christian prayers or church services it has been adopted as the final word closing a prayer — another usage closely similar to the way in which Om is used in Sanskrit writings. In later Gnostic times Amen was one of the angelic host.

In ancient Egypt one of the great gods was called Amen or Ammon. *See also* AMMON

Ame No Mi Naka Nushi No Kami (Japanese) Divine monarch of the central heaven; the first of three arupa (formless) spiritual beings to appear from kon-ton (chaos) in Japanese cosmogony (SD 1:214).

Amen-Ra. *See* AMMON-RA

Amenti, Amentet (Egyptian) *Amenti, Amentet*. The underworld (Tuat), the hidden place or secret region. The 15th or last house (Aat) of the Tuat, called Amentet-nefert (beautiful Amenti) and described as the dwelling place of the gods, where they live upon cakes and ale — in this respect similar to the Scandinavian Valhalla, the heaven world or devachan. The afterworlds were also referred to as Sekhet-hetep or -hetepet (the fields of peace), called in Greece the Elysian Fields, under the dominion of Osiris, lord of Amenti. Some of the texts speak of Amenti as situated far to the north of Egypt, although it is more commonly referred to as the Silent Land of the West. Other texts place it either below or above the earth, and the deceased is pictured as needing a ladder to ascend to the region.

The deceased, entering the domain as a khu, performs the same activities that he did on earth: plowing, reaping, sailing his boat, and making love. On entering Amenti, Anubis conducts the soul to the hall of Osiris where it is judged by the 42 judges and its heart is weighed against the feather of truth. If the soul passes the test, it goes to the fields of Aalu. If the names of the 15 Aats, the 7 Arrets (circles), the 21 Pylons, as well as the gods and guardians of these domains are all known, the deceased is enabled to pass from one mansion to the other, and finally to enter the Night Boat of the Sun, which passes through the Tuat on its way to arise in the heavens. The shades who miss this boat, the unprogressed egos, must remain in the afterworld or kama-loka, while those who enter the boat are carried to the heaven world or devachan where they wander about until they return to earth for rebirth. This refers to the passing from world to world by the ego proficient in knowledge of the “names,” and thereafter entering the secret or invisible pathways to the sun. The knowledge of the names indicates spiritual, intellectual, and psychic development, by which the ego of the defunct is no longer attracted to the lower spheres, but having knowledge of them

correctly answers the challenges and thereafter follows the attraction upwards and onwards.

Writing on the symbol of the egg which is often depicted as floating above a mummy, Blavatsky says: “This is the symbol of hope and the promise of a *second birth* for the *Osirified* dead; his Soul, after due purification in the Amenti, will gestate in this egg of immortality, to be reborn from it into a new life on earth. For this Egg, in the esoteric Doctrine, is the *Devachan*, the abode of Bliss; the winged scarabeus being alike a symbol of it” (SD 1:365).

The mystical and mythologic teachings concerning Amenti were all more or less symbolic descriptions of the series of afterdeath states and adventures experienced by the excarnate entity. Thus kama-loka, devachan, and the postmortem peregrinations of the excarnate monad are all combined under the one term Amenti.

Amers One of the “transgressing” angels in the Book of Enoch, who taught Fourth Race mankind the “solution of magic” (SD 2:376).

Amesha-Spentas (Avestan) *Ameshā-Spentās* [from *a* not + *mesha*, *mara* mortal, mutable + *spenta* benefactor, holy, soul-healing] Immortal benefactors; six in number: Vohu-Manah, Asha-Vahishta, Khshathra-Vayria, Spenta-Armaiti (love), Haurvatat (perfection), and Ameretat (immortality). The first three are attributes of Ahura-Mazda, abstractions without form. These male positive creative forces leave their impressions in the mental world and give birth to the second trinity, who lead man to freedom. “The Amshaspendas, [are] our Dhyani-Chohans or the ‘Serpents of Wisdom.’ They are identical with, and yet separate from Ormazd (Ahura-Mazda). They are also the Angels of the Stars of the Christians — the Star-yazatas of the Zoroastrians — or again the seven planets (including the sun) of every religion. The epithet — ‘the shining having efficacious eyes’ — proves it. This on the physical and sidereal planes. On the spiritual, they are the divine powers of Ahura-Mazda; but on the astral or psychic plane again, they are the ‘Builders,’ the ‘watchers,’ the *Pitar* (fathers), and the first Preceptors of mankind” (SD 2:358).

“Zarathushtra is the Divine Universal Force that directs everything within the universe towards perfection. This force is known as Amesha-Spenta” (Shahrestani, *Al-Melal Va Al-Nehal*). This force is equivalent to the Gnostic primeval ruler or governor, the closest being to the creator; the active mind or intellect which is the source of divine bliss and providence, with the Manichaen pure or holy spirits; the Hebrew *elohim*, the Arabic *Malaeka* (angels); the Koranic soul within the angels; and the theosophic *dhyani-chohans* or *dhyani-buddhas*. They are the rulers of the seven globes of the earth-chain.

A verse in the *Ormazd Yasht* (prayer to Ahura-Mazda) hints at another aspect of the Amesha-Spentas connected with the afterdeath state. Each one is named, and the verse ends: these “are the reward of the holy ones, when freed from their bodies, my creatures” (v 25).

Some consider Ahura-Mazda as the chief of the six Amesha-Spentas, but this is valid only when

Ahura-Mazda is taken for the pure, unmanifested light and not as the father of all creation. *See also* AMSHASPANDS

Ameyatman (Sanskrit) *Ameyātman* [from *ameya* immeasurable from *a* not + the verbal root *mā* to measure, mark off + *ātman* self] Immeasurable soul or self; applied to Vishnu as one possessing extraordinary or immeasurable wisdom and magnanimity (VP 3:17; 5:9).

Amilakha (Mongolian) The state of those beings who entered or animated human forms; referring especially to the dhyani-buddhas and divine bodhisattvas.

Amitabha (Sanskrit) *Amitābha* [from *a* not + the verbal root *mā* to measure + *ābhā* (*ābha*) splendor, light from *ā-bhā* to shine, irradiate] Unmeasured splendor; mystically, as boundless light or boundless space, one of the five dhyani-buddhas of Tibetan Buddhism, more often referred to as the five tathagathas or jinas (victorious ones). Originally these dhyani-buddhas represented cosmic spiritual attributes and influences emanating from adi-buddhi, but they have become mythologized as gods, ruling over the central realm as well as the four cardinal directions.

Amitabha of the West, whose Tibetan name is Wod-pag-med (O-pa me) is the ruling deity of Sukhavati (the western paradise or pure land) and in China and Japan is universally worshiped as Amida-buddha. Esoterically, there are seven dhyani-buddhas (five only have manifested thus far) who represent “both cosmic entities and the rays or reflections of these cosmic originals which manifest in man as monads” (FSO 507; cf SD 1:108).

The Panchen Lama has been traditionally regarded as the tulku of Amitabha, and the Dalai Lama as the tulku of Avalokitesvara (Tibetan Chenrezi).

Amitabha corresponds to the First Logos, the Father in the Christian Trinity, the Pythagorean monad of monads, and in the human being to atman. From a philosophical-mystic standpoint, Amitabha also means “no color” or the “white glory,” the primal spiritual element-principle of the solar system, from which are born the seven differentiated “colors” of the manifested prismatic cosmic hierarchies.

Amita-buddha (Sanskrit) *Amita-buddha* Chinese and Tibetan Buddhist name for universal, primeval wisdom or soul, equivalent to adi-buddha. Also the celestial name of Gautama Buddha. Tsong-kha-pa is considered a direct incarnation of Amita-buddha (BCW 14:425-8; SD 1:108&n).

Amitayus (Sanskrit) *Amitāyus* Universal life or boundless vitality, “with distinct reference to that part of the cosmic hierarchy of our solar system which manifests itself throughout as intelligent, unifying, and all-encompassing vitality issuing from the heart of the sun” (FSO 508).

Ammon (Greek) *Ámmōn* **Amen** (Egyptian) *Ámen*. Also Amun, Amon. In the Egyptian 5th dynasty, Amen and his consort Ament were among the primeval gods, mentioned immediately after the deities connected with primeval matter, Nau and Nen (gods of the cosmic watery abyss). He was

envisaged as “All-nature,” the universe itself, especially in its occult and secret aspects. After the 12th dynasty, however, this god additionally became looked upon as having solar attributes, and therefore was called Amen-Ra — the chief deity of the powerful priesthood of Thebes, whose sway encompassed the whole of Egypt. Ammon was identified particularly with the hidden aspect of the sun, for the hymns are addressed: “he who is hidden to gods and men,” “he who is unknown,” “thy name is hidden from thy children in thy name Amen.”

Ammon-Ra (Greek) *Ámmōn-Rā* **Amen-Ra** (Egyptian) *Ámen-Rā*. When the princes of Thebes had conquered all rival claimants to the sovereignty of Egypt and established themselves as rulers of the dual Empires, they followed in religious, mystical, and occult matters the thought of the powerful priesthood of Thebes. Thus after the 12th dynasty a new manner of visioning the ancient god Ammon came into prominence, under the name Ammon-Ra, although the latter’s preeminence as chief god of Egypt did not occur until the 17th dynasty. The attributes of the hidden deity Ammon were combined with the solar god Ra, and this deity was acclaimed by the priests as the chief of the gods of Egypt. Ammon-Ra seems to be devoid of most, at least, of the mystical symbols that are present in representations of the older deities, although the hymns to the god that were carefully prepared by the priests incorporated all the attributes and phraseology prevalent in the other scriptures.

Amon. See AMMON

Amorites (Hebrew) *’Emorī* An Amorite; originally a mountaineer, but finally a Canaanite people living in the land east and west of the Jordan. Used in the Bible interchangeably with Canaanites (though the latter generally referred to people still living, while Amorites especially referred to the people of the past), the term is evidently connected with the Assyrian name Amurru, Egyptian Amar, and Babylonian Mar-tu, referring to the lands north of Palestine as far as Kadesh on the Orontes — although there was a district of the name Mar-tu in the neighborhood of Babylonia.

Amphain-Essumen (Gnostic) Also Amphian-Essumene. The sixth pair of aeons or emanations as given in the Valentinian scheme by the Christian Father Epiphanius.

Ampsiu-Ouraan or -Auraan (Gnostic) The sempiternal depth and silence; a pair of Aeons in the Valentinian system as given by Epiphanius, the first emanation of the eternal bythos (depth), from which the other 14 pairs of Aeons emanate, equivalent to the Second Logos (SD 2:569n).

Amrita (Sanskrit) *Amṛta* [from *a* not + *mṛta* dead from the verbal root *mṛ* to die] Immortality; the water of life or immortality, the ambrosial drink or spiritual food of the gods. According to the Puranas, *Ramayana*, and *Mahabharata*, amrita is the elixir of life produced during the contest between the devas and asuras when churning the “milky sea” (the waters of life). It has been stolen many times, but as often recovered, and it is still preserved carefully in *devaloka*.

In the Vedas, amrita is applied to the mystical soma juice, which makes a new man of the initiate

and enables his spiritual nature to overcome and govern the lower elements of his nature. It is beyond any guna (quality), for it is unconditioned per se (cf SD 1:348). Mystically speaking, therefore, amrita is the “drinking” of the water of supernal wisdom and the spiritual bathing in its life-giving power. It means the rising above all the unawakened or prakritic elements of the constitution, and becoming at one with and thus living in the kosmic life-intelligence-substance.

Amrita-yana (Sanskrit) *Amṛta-yāna* [from *a* not + *mṛta* dead from the verbal root *mṛ* to die + *yāna* path, vehicle] The path of immortality; in *The Voice of the Silence* the path followed by the Buddhas of Compassion or of Perfection. It is the “secret path,” the arya (noble) path of the heart doctrine of esoteric wisdom. The Buddhas of Compassion instead of donning the dharmakaya vesture and then entering nirvana, as the Pratyeka Buddhas do, give up nirvana and assume the nirmanakaya robe, thus enabling them to work directly for all beings less evolved than they; and because of this great individual sacrifice, the nirmanakaya condition is in one sense the holiest of the trikaya (three vestures). The amrita-yana is thus a lofty spiritual pathway, and leads to the ineffable glories of self-conscious immortality in the cosmic manvantaric “eternity.”

The term may also refer to the “immortal vehicle” within each person, the individuality in contradistinction to the evanescent personality; that is, “the Spiritual Soul, or the Immortal *monad* — a combination of the fifth, sixth and seventh” principles (ML 114).

Amsa, Amsu (Sanskrit) *Aṃśa, Aṃśu* Fragment, particle, part; name of one of the adityas in the *Mahabharata*; also of Surya (the sun) whose solar energy was so tremendous that the divine architect Visvakarman cut off an eighth part of his glory. From the luminous fragments (amsa) which fell to earth, Visvakarman made a number of implements for the gods, including Vishnu’s discus and Siva’s trident. In the *Bhagavad-Gita* (15:7), Krishna emanates an amsa of himself which, becoming a jiva (monad) in the world of living beings, draws to itself manas (mind) and the five senses which originate in prakriti (nature).

Also, the tonic or predominant note in a raga, a Hindu mode of musical notes or melodic sounds so formulated as to arouse intensity of emotion, often of a high order, appropriate to the different portions of the day and night.

In theosophy amsa may be applied to particles of any kind: to a life-atom as well as to a monad as points or “fragments” of the cosmic consciousness-life-substance.

Amsamsavatara (Sanskrit) *Aṃśāṃśāvatāra* [from *aṃśāṃśā* (*aṃśa* + *aṃśa*) portion of a portion, fragment + *avatāra* descent from *ava-tṛ* to cross over down, descend] The descent of a part of a part; applied to the numerous manifestations of Vishnu and Brahma; in the *Vishnu-Purana* more particularly to Krishna and to the “actions he performed as a part of a part [amsamsavatara] of the Supreme, upon the earth” (5:1). An avatara or so-called divine descent is never a “descent” or incarnation of the wholeness or entirety of a divinity, but only of a part of it; so that every avatara involves a descent only of a part of a part, and hence, strictly speaking, may be called an

amsamsavatara. Obviously, the greater the avatara, the greater in influence though not necessarily of form is the amsa or portion which descends (cf MB Adiparvan 7).

Amshaspands (Pahlavi) Also Amshaspends. The seven bright and glorious ones, Pahlavi version of the Avestic Amesha-Spenta. They refer to the six attributes of Ahura-Mazda, both in the spiritual and mental worlds. The first three — Vohu-Man (Bahman), Asha-Vahishta (Ordibehesht), and Khshathra-Vayria (Shahrivar) — are the three aspects of truth. Spenta-Armaiti (Spandar-Maz or Esphand), Haurvata (Khordad), and Ameretat (Amordad) are reflections of the first male trinity in the mental world. The total sum of the six is kherad (intellect), man's liberating force, which is not to be mistaken as Ahura-Mazda, the supreme creator.

The Amshaspands in ancient Persian theology bore the same general relation to the universe that the seven or ten prajapatis have in the Hindu scriptures, or that the seven or ten Sephiroth have in the Hebrew Qabbalah. *See also* Amesha-Spenta.

Amsumat, Amsuman (Sanskrit) *Aṃśumat, Aṃśumān* [from *aṃśu* filament, ray of light] As an adjective, threadlike or filamentoid, luminous as the sun and moon; also rich in soma plants and soma juice. As a noun, Amsuman is a prince of the solar race, son of Asamanjas, and grandson of King Sagara whose 60,000 sons were consumed by the glance of Kapila's "eye." Their remains were discovered by Amsuman who brought back to earth the horse which had been abducted from Sagara during the Asvamedha sacrifice (cf SD 2:570).

Amula-mula (Sanskrit) *Amūla-mūla* [from *a* not + *mūla* root, basis] The Rootless Root; used by Blavatsky for mulaprakriti (TG 20), the spiritual root or essence of nature, the spiritually substantial originant of all, because the veil or garment of parabrahman, the boundless.

Amun (Coptic) The god of hidden or secret wisdom, equivalent to the Egyptian Ammon or Amen. *See also* POT AMUN

Ana (Chaldean) The invisible heaven; the astral light, the heavenly mother of the terrestrial sea. One of the triad comprising the goddesses Ana, Belita, and Damkina. As mother of the sea, a likely origin of the Christian symbology of the Virgin Mary standing on the crescent moon and of her connection with the sea. "Anna (the name of the Mother of the Virgin Mary) . . . is derived from the Chaldean Ana" (SD 1:91).

In the Hindu pantheon a cognate is Annapurna (a name of Devi-Durga, wife of Siva), meaning "full of food" — the fecund mother, the "Astral Light in one of its multitudinous aspects" (SD 1:92). *See also* ANAITIS; MARY

Anaces, Anactes. *See* ANAKTES

Anaerobes. *See* AEROBES

Anagamin (Sanskrit) *Anāgāmin* [from *a* not + *āgāmin* from *ā-gam* to come, proceed toward] One

who does not come; in Southern or Theravada Buddhism, a “never returner,” one who will not be reborn on earth again — “unless he so desires in order to help mankind” (VS 88). The third stage of the fourfold path that leads to nirvana, the path of arhatship. *See also* ARHAT

Anagnidagdha. *See* AGNIDAGDHA

Anagraniyam (Sanskrit) *Anagrāṇīyam* [possibly *anagrāṇīya* from *an* not + *agra* beginning, point + *aṇīyas* exceedingly minute from *aṇu* atom] Used in *The Secret Doctrine* (1:357) with reference to parabrahman as being “smaller than the smallest atom, and greater than the greatest sphere or universe: *Anagraniyam* and *Mahatorvavat*.” It is possible that the Sanskrit phrase for “smaller than the small, and greater than the great” (*anor anīyan mahato mahīyan*) was meant. The salient point is that the heart of parabrahman (or Brahman) is identic in essence with the heart of an anu (atom). *See also* Aniyamsam aniyasam

Anahata-sabda (Sanskrit) *Anāhata-śabda* [from *an* not + *ā-han* to beat, strike + *śabda* sound from the verbal root *śabd* to make noise, cry out, invoke] Unstruck circle of sound; the immaterial sound produced by no form of material substance; a mystical bell-like sound at times heard by the dying which slowly lessens in intensity until the moment of death. Also heard by the yogi or contemplative at certain stages of his meditation. The Theravada Buddhists speak of this inner signal as the voice of devas which resemble the “sound of a golden bell” (Digha-nikaya 1:152). The anahata-sabda is, in reality, a reflection of the inherent sound-characteristic of akasa (cf VS 18, 78).

Anahita (Avestan) *Anāhita*, **Nahid** (Persian) *Nāhīd* [earlier form in full *Arədvī Sūrā Anāhitā*, from *ared* to grow straight or high, expand + *sūra* strong, powerful + *anāhita* undefilable from *a* not + *ahit* unclean] The Avestan goddess of the waters dwelling in the region of the stars; similar to the Hindu Ganga, she is described as “the large river, known afar, that is as large as the whole of the waters that run along the earth; that runs powerfully from the height Hukairya down to the sea Vouru-Kasha [the waters of space]. All the shores of the sea Vouru-Kasha are boiling over, all the middle of it is boiling over, when she runs down there, when she streams down there, she, Ardivi Sura Anahita, who has a thousand cells and a thousand channels: the extent of each of those cells, of each of those channels is as much as a man can ride in forty days, riding on a good horse. From this river of mine [Ahura-Mazda’s] alone flow all the waters that spread all over the seven Karshvares [the seven globes of the earth-chain]; this river of mine alone goes on bringing waters, both in summer and in winter” (Aban Yasht 3-5).

According to Berosus, it was Artaxerxes Mnemon (404-361 BC) who first instituted formal worship of a divinity hitherto held too holy and sacred for public adoration, erecting statues under the name of Venus-Anahita — thus she became the Anaitis of the Greeks. Blavatsky equates her with the Hindu Sarasvati.

In the old Persian Language Ardivi-Sur-Nahid has been used in the sense of powerful and unblemished water; Nahid is also the name of Venus. Anahita represents the water of life or the

primordial substance in which the life-giving Mithra penetrates and creates light. Mehr-Ab [Mithra + water] is the name given to the most sacred place of worship or altar in all mosques, usually represented with a triangle over a square, geometrically pertaining to the number seven. This symbol can also be seen in some carpet designs and many Persian artifacts of different periods, both Islamic and pre-Islamic.

Anaitis, Anait (Chaldean) Also Anaitia, Aneitis, Tanais, Nanaea. A goddess whose worship was widespread over large portions of the Near East; “identical with the Hindu *Annapurna*, one of the names of Kali — the female aspect of Siva — at her best” (TG 21). Identified with the Greek Artemis and Aphrodite. “Anna (the name of the Mother of the Virgin Mary) . . . is derived from the Chaldean Ana, heaven, or Astral Light, Anima Mundi; whence Anaitia, Devi-durga, the wife of Siva, is also called Annapurna, and Kanya, the Virgin; ‘Uma-Kanya’ being her esoteric name, and meaning the ‘Virgin of light,’ Astral Light in one of its multitudinous aspects” (SD 1:91-2).

Anak, Sons of; Anakim (Hebrew) ‘*Ānāq*, ‘*Ānāqīm* An ancient race of giants in the Bible. When Moses sent Joshua to spy out the land of Canaan, the people seen were “men of a great stature. And there we saw the giants, the sons of Anak, which come of the giants: and we were in our own sight as grasshoppers, and so we were in their sight” (Numbers 13:32-3). Blavatsky comments that the giants of antiquity “lived and flourished one million rather than between three and four thousand years ago. The *Anakim* of Joshua . . . are thus a piece of Israelite fancy, unless indeed the people of Israel claim for Joshua an antiquity and origin in the Eocene, or at any rate in the Miocene age, and change the millenniums of their chronology into millions of years” (SD 2:340).

Anaktes, Anakes (Greek) Also Anactes, Anaces. Kings, chiefs; applied by Homer and other Greeks to the gods, as for instance the Dioscuri. When used of creative powers, they are identified with the kabeiroi, corybantes, curetes, etc.

Analogeticists Name for the disciples of Ammonius Saccas, from their use of analogy and correspondence in the interpretation of myths and symbolic legends.

Anamnesis (Greek) [from *ana* back again + *mimnesco* remember] Recollection; used by Plato in his theory of knowledge. He taught that the human elements of consciousness sprang from seeds of inherent knowledge in the soul, present in the mind as the result of past experiences of the egoic center or reincarnating ego. Thus the acquisition of knowledge is a process of reminiscence or recollection of former experiences.

Ananda (Sanskrit) *Ānanda* [from *ā-nand* to rejoice, be delighted] Bliss, joy, happiness; the favorite disciple of Gautama Buddha, who served his teacher with utmost devotion for twenty years and is credited with having recited, shortly after the Buddha’s parinibbana (great passing away), the entire buddhavachana (word of Buddha).

In Vedantic philosophy, the third word of the phrase sat-chit-ananda (sachchidananda): the three

attributes given to atman or Brahman, or the cosmic Logos. *See also* CHIT; SAT.

Ananda-lahari (Sanskrit) *Ānanda-lahari* [from *ānanda* joy, bliss + *lahari* a large wave] A poem attributed to Sankaracharya, written in the guise of a hymn of praise to Parvati, consort of Siva, and containing highly mystical teaching (TG 21).

Anandamayakosa (Sanskrit) *Ānandamayakośa* [from *ānanda* bliss, joy + *maya* built of, formed of from the verbal root *mā* to measure, form + *kośa* sheath] Bliss-built sheath; in the Vedantic classification, the first of the panchakosa (five sheaths) of the human constitution which enclose the divine monad (atman); it corresponds to the spiritual soul (buddhi). Anandamayakosa is sometimes mystically referred to as the sheath of the sun. *See also* KOSA

Ananga (Sanskrit) *Anaṅga* [from *an* not + *aṅga* limb, member, division] Without limbs or parts; hence bodiless, incorporeal. Name of the god Kama (Kamadeva) because as Puranic legend has it he was made bodiless by a flash from Siva's third eye when attempting to disturb Siva's life of austerity (cf also *Ramayana*, Balakanda 23). Siva is the patron of esotericists, and what is represented by the Eye of Siva "mystically, must be acquired by the ascetic before he becomes an adept" (SD 2:282, 615). By extension, precisely because ananga means without limbs or parts, it is a graphic and suggestive title of all spiritual potencies, qualities, or attributes; also a title of akasa, the sky or cosmic ether, and of manas (mind). Thus not only is the god Kama bodiless, but every distinct portion of the human spiritual nature is equally so.

Anagna is also the name of the main sacred writings of the Jains.

Ananta-sesha (Sanskrit) *Ananta-śeṣa* [from *an* not + *anta* end + the verbal root *śiṣ* to leave remainders] Endless sishtas or remainders; name of the serpent of eternity described in the Puranas as the seat or carrier of the divine Vishnu during the periodical pralayas of the universe. It is thus infinite time itself, figured as the great seven-headed serpent on which rests Vishnu, the manvantaric Logos when the Logos sinks into pralayaic inactivity. This compound signifies the ever-continuing sishtas (spiritual cosmic seeds or residues) carried over from manvantara to manvantara through the intervening pralaya, and thus through eternity. It is on this endless aggregate of cosmic sishtas that Vishnu the cosmic Logos reclines, the thread of logic consciousness being thus passed from manvantara to manvantara through the pralaya. Just as Vishnu in theosophy is a generalizing term for all the innumerable interblending hierarchies of beings and things which are unfolded during manvantara, so during pralaya Vishnu stands for the same aggregate of hierarchies conceived of as resting on the karmic remainders or "sleeping" webs of substance left over from the previous manvantara. *See also* SSHA

Anastasis (Greek) Rising up; used in referring to the dead and to resurrection. However, this ancient mystical term was originally used for the rising of the initiate when, having completed the dread trials of initiation, he rose a new man, one who was reborn, or what in India was called a dvija (twice-born). Another significance belonging from earliest times to the cycle of initiation is

that when a person through severe training, initiation, and a complete turning away from things of matter to things of spirit, had succeeded in becoming at one with his inner god at least on occasions, he was then considered to have arisen or to have become resurrected out of all the lower ranges of kosmic life, and to have attained self-conscious existence in the spirit. Having attained anastasis, he took his place in the hierarchy of light or compassion as one of the co-laborers with the gods.

Anatman (Sanskrit) *Anātman* [from *an* not, non + *ātman* soul, self, variously derived from the verbal root *at* to move, the verbal root *an* to breathe, the verbal root *va* to blow] Non-self, non-spirit; as an adjective, destitute of mind or spirit, corporeal. Used of the cosmos it signifies, in contrast to atman which is absolute spirit, its shadow or non-spirit, the corporeal or vehicular side of the universe, often mystically spoken of as the cosmic shadow. *See also* ANATTA

Anatta (Pali) *Anattā* [from *an* not + *attā* self, soul] Non-self, nonegoity; a Buddhist doctrine postulating that there is no unchanging, permanent self (*atta*, Sanskrit atman) in the human being, in contrast to the Upanishad view that the atman or inner essence of a human being is identic with Brahman, the Supreme, which pervades and is the universe. While Gautama Buddha stresses the nonreality of self, regarding as continuous only its attributes (the five *khandas*; Sanskrit *skandhas*) which return at rebirth, there is scriptural testimony in both Southern and Northern Schools that the Buddha recognized a fundamental selfhood in the human constitution (ET 593-4 3rd & rev ed).

In the *Dhammapada*, one of the most respected texts of the Southern Buddhists, we read: “The self is the master of the self [*atta hi attano natho*], for who else could be its master?” (12:160); in the *Mahaparinibbana-sutta* (2:33, 35): *attadipa attasarana*, “be ye as those who have the self [*atta*] as their light [*diva*, also translated as island]; be ye as those who have the self [*atta*] as their refuge [*sarana*]” (cf RK Dh. 12, 45). Also we find Nagarjuna stating in his commentary on the *Prajna-paramita*: “Sometimes the Tathagata taught that the *Atman* verily exists, and yet at other times he taught that the Atman does not exist” (Chinese recension of Yuan Chung).

Anatum or **Antum** (Chaldean) Consort of the god of heaven, Anu, supreme god of the Assyro-Babylonian pantheon. Whereas Anu represented heaven and height, Anatum represented the earth and depth. She was regarded as the mother of the gods, as well as being the mother of the god Ea or Hea. “Astronomically she is Ishtar, Venus, the Ashtoreth of the Jews” (TG 21). Anu and Anatum correspond to Ouranos and Gaia in Hesiod, and therefore in one of her mystical significances Anatum corresponds with the Hindu prakriti.

Anaxagoras of Clazomenae (500?-428 BC) A Greek scientific philosopher who lived in Athens and associated with the distinguished men of the Periclean era. Like Parmenides he denied the existence of birth or death, seeing the two processes as a mingling and unmingling. The ultimate elements of this process are the infinite number of indivisible, imperishable particles (atoms or homoeomere), acted on and ordered by spirit or pure cosmic reason (*nous*, equivalent to the

Hindu mahat). He openly taught the Pythagorean astronomical ideas concerning the movement and nature of the planets, moon, sun, stars, etc., and attempted to explain all phenomena by natural causes. He “firmly believed that the spiritual prototypes of all things, as well as their elements, were to be found in the boundless ether, where they were generated, whence they evolved, and whither they returned from earth” (IU 1:158).

Anaximenes of Miletus (611-547 BC) Ionian Greek philosopher, pupil of Anaximander, who held air to be the fundamental principle from which fire arose through rarefaction and water and solids arose through condensation. He also held that the universe was alive, and that the individual soul was a small portion of the most rarefied “air” or ultimate world-substance, trapped within the individual being (cf Guthrie, *Greek Philosophers* 80). He taught that mankind had evolved from the animals, though not in the Darwinian sense. (BCW 6:204) (BCW 11:270; IU 1:238, SD 1:77, 590)

Ancestors. See PITRIS

Ancestor Worship A cult variously observed around the world and usually defined as the cult of the spirits of parents and forefathers. It implies belief in the continued existence of the deceased and in certain cases in their power of being interested in and affected by the fortunes of their living descendants; the sense of a perpetual spiritual unity and moral reciprocity in obligations and services; and a dependence of the fortunes of the living on the fulfillment of these obligations. This can be seen from the ancient Roman ideas portrayed in the *Aeneid*, where the household gods (lares and penates) are so carefully preserved through all vicissitudes. This belief and practice point to times when death was regarded as merely an event in a continuous life. With the ancient cults, the sense of personal separateness seems merged in the more vivid sense of family unity, from whose privileges and obligations death is no discharge.

The basic idea behind ancestor worship seems to be that its holders envisaged unity in a continuous and never-ending stream of lives, perpetuating itself in succession through the ages, and out of which and back into which individuals arise and sink, an idea in direct contrast to the modern view that the individual is the most important factor in life.

Ancient of Days [translation of Chaldean 'Attīq Yōmīn] Used by Qabbalists to designate the first or primeval Ancient, equivalent to Adi-sanat. In one aspect it is the third of the Qabbalistic trinity of 'eyn soph, Shechinah, and the Ancient of Days. One passage in the Chaldean *Book of Numbers* says: “The first triad of the body of Adam Kadmon (the three upper planes of the seven) cannot be seen before the soul stands in the presence of the Ancient of Days” (SD 1:239).

Ancient of the Ancient [translation of Chaldean 'Attīqā' dē'attīqīn] Qabbalistic term referring to the primordial aspect of the first Sephirah: “He is formed and yet is not formed. He is formed to sustain All and not formed because He is not found. When He is formed nine flaming Lights go out from Him; and from these Lights are emitted flames and they expand themselves out to all

directions, like a lamp which spreads light to all sides” (Zohar iii 288a). The nine flaming lights refer to the nine consequential emanations of the Sephirothal Tree.

The Qabalah here uses “He” to describe one of the most profound and mystical — because purely impersonal — conceptions in cosmogony; because the first Sephirah is Kether the Crown and hence the first of the cosmic rays emanating from the abysmal cosmic deep. From this Crown, called Ancient of the Ancient, flowed forth in emanational procession all the other developments of the cosmic Tree of Life or cosmic hierarchy.

Anda (Sanskrit) *Aṇḍa* An egg; a name of Siva, because of his connection and identification with brahmanda, the egg or world of Brahma. Just as a bird’s egg contains the seed of the chick to be, just so a globe, planet, universe, or any other brahmanda is the world egg containing the seeds of what later in cosmic time will develop forth its essential life powers, whether as a planetary chain, solar system, galaxy, or cluster of galaxies. Each is an anda of Brahma.

Also used for “the central hemispherical dome of solid earth, brick, or stone which forms the core of the Buddhist *stupa*”.

Andaja (Sanskrit) *Aṇḍaja* [from *aṇḍa* egg + *ja*, from the verbal root *jan* to be born] Egg-born, oviparous; the mode of reproduction of birds, reptiles, and fish. In theosophical writings the androgynous human creatures of the early and middle third root-race reproduced themselves by means of huge eggs dropped from the parent-body during the proper season of the year; and that these eggs after a period of incubation in the open air broke, thus freeing the human young, much after the fashion that prevails today among birds and certain reptiles.

Anda-kataha (Sanskrit) *Aṇḍa-kaṭāha* [from *aṇḍa* egg + *kaṭāha* cauldron, semi-spheroidal container, from the verbal root *kaṭ* to rain, encompass] Shell of an egg; in the *Vishnu-Purana* (2:4, 7) used for the encompassing shell of the world egg.

Andarah [possibly Sanskrit *andhakāra* darkness, blindness from *andha* blind, dark, turbid from the verbal root *andh* to make blind + *kāra* making from the verbal root *kr* to do, make; or possibly Sanskrit *antarāla* midway, intermediate space from *antar* internal, intermediate + *āla* probably for *ālaya* dwelling, asylum] Possibly darkness or intermediate space; used in *The Mahatma Letters*: “(remember the Hindu allegory of the *Fallen Devas* hurled by Siva into Andarah who are allowed by Parabrahm to consider it as an intermediate state where they may prepare themselves by a series of rebirths in that sphere for a higher state — a new regeneration) . . .” (p. 87).

Andhakara. See ANDARAH

Androgyne [from Greek *androgynos* man-woman] Hermaphrodite; applied to a dual principle containing both the active and passive powers of nature, as the androgyne ray, the Second Logos, Purusha-prakriti, spirit-matter; to a race, such as the second root-race, whose members are physiologically of both sexes; and in biology to certain animals which have dual sex. Bipolarity, the

contrast and interaction between the energetic and formative sides of nature, is universally prevalent. Sex is merely a particular and, evolutionally speaking, passing phase of this universal law, and its terms are often used in a purely symbolic sense to define these two sides of nature. We should be careful not to take the symbols literally and ascribe physiological attributes to higher powers.

When androgynous or hermaphrodite is used in philosophy, it does not mean physically or ethereally double-sexed — except when physical dual-sexed beings are distinctly referred to — but means the dual characteristic of nature in manifestation. Very often this duality is separated into “masculine” and “feminine,” using the words familiar to human life, although this duality is perhaps more accurately described by the words positive and negative, or by spirit and matter, or again by consciousness and vehicle. Here we have the reason for the separation of the deities in ancient pantheons into gods and goddesses, although occasionally in the mythological tales deities are represented as dual sexed. This androgynous or dual character of all the manifested worlds commenced with cosmic buddhi, or mahabuddhi, although the first more defined manifestations of individualized duality began on the plane of cosmic kama where fohat especially works. Above that the two rays from the One ascend again to reunite.

Androgyne Ray An expression for the second stage of manifestation — the Second Logos in the system of emanations of the logoi; the Father-Mother in the cosmic conception adopted by Blavatsky; and the Sanskrit Brahma-prakriti or Purusha-prakriti. Each is the producing cause of manifestation through its son, the manifested Third Logos, which in a planetary chain is designated as the primordial or originate in Manu Svayambhuva. “These two, Brahma and Prakriti, are really one, yet they are also the two aspects of the one Life-ray acting and reacting upon itself” (OG 97).

Andvari (Icelandic) [from *and* spirit + *vari* watcher, guardian] In Norse mythology, a dwarf, owner of the treasure around which center the complex events related in the Nibelungen cycle. This gold has a twofold meaning and a markedly twofold effect on the various protagonists who covet it. See *also* FAFNIR

Anedots. See ANNEDOTUS

Anemos (Greek) [cf Latin *animus*, *anima*] Wind, spirit.

Anesthesia [from Greek *anaesthesia* no feeling] Want of feeling; a condition of total or partial insensibility, particularly to touch. The many classical references to anesthetics indicate that the ancients knew much about the subject that has not been rediscovered. Blavatsky refers to the sacred beverage used by the hierophants in ceremonies to free the astral soul from the bonds of matter, so that the inner man might rise to the level of spirit (IU 2:117, 1:540).

Surgical patients suffering from fright and fear before or during the induction of an anesthetic

take it with more difficulty, and feel more aftereffects, than those who meet it without anxiety. The first stage of general anesthesia, usually not unpleasant, ends with the loss of physical consciousness. Then begins the second, or stage of struggling more or less vigorously, evidently due to the automatic reaction of the physical body, from which its conscious astral soul is being dissociated. In the third stage, the muscles relax and the disturbed heart and lungs settle down to regular rhythm, controlled by the sympathetic nervous system, as in a deep, dreamless sleep. The self-conscious ego, thus withdrawing from its ordinary state of being, enters more or less deeply into the subjective realm of its inner life. It is in a state of what has been called, paradoxically, conscious unconsciousness. The danger here is that the soul may become so far separated from its body that it does not come back again, and then death results.

However insensible the person is of externals, he is conscious in some part of his composite nature, just as each principle of his being has its own range of awareness after death. Some people have brought back a more or less clear memory of a state of being transcending anything they had ever imagined on earth. Their first feeling is one of a delicious peace and liberation; then comes a mental clearness with majestic visions of perfect truth, and a realization of a self-existent "I" as a part of a universal whole. The spiritually-minded person may attain to an instant and complete buddhi-manasic vision of "things as they are." Such a one, at the moment of recovery, is often vividly sensible of being aroused from a state of superior existence, but is unable to recall what it was. Again, any gleams of knowledge that do survive the transit may be misinterpreted by the brain-mind from its preconceived philosophical or religious ideas. The average person, however, brings back little if any remembrance of his experience.

The anesthetized person may also be conscious of standing aside or looking down upon his own body under operation, and retains a vague memory of the out-of-body experience. *See also* SOMA

Angara, Angaraka (Sanskrit) *Āṅgāra, Āṅgāraka* [from the verbal root *ag* to move tortuously, wind (cf *agni*); or from the verbal root *aṅg* to go] The planet Mars; also charcoal, as being a latent seat of fire. *Ara* is another name of the planet Mars (cf Greek *Ares*) as well as of the planet Saturn. In the *Mahabharata* *Angaraka* is variously listed as one of the world guardians; a planet; and one of the 108 names of the sun (vB 2:51, 228).

Angel(s) [from Greek *angelos* messenger, envoy, announcer] In the Old Testament, used to translate the Hebrew *mal'ach* (messenger); in Christian, Jewish, Moslem, and some other theologies, either a messenger of God or one of various hierarchies of celestial beings, the idea of a guardian angel also being familiar. However, the idea of hosts of formative powers, *rectores mundi*, or other beings between divinity and man, serving as intermediaries or means of communication between man and high spiritual entities has largely vanished from popular Christianity, though Angels, Principalities, and Powers are mentioned by Paul, and the archangel Michael by Jude; while the influence of the Gnostics, Neoplatonists, and Jews on early Christianity

gives a wider meaning to the term.

Angels, then, are members of numerous hierarchies of celestial powers, from the septenary formative host that emanates from the formative Third Logos down to the presiding genius or spirit of an atom, acting as intermediaries or envoys between the divine and the human or terrestrial.

Angel of Death. *See* SAMAEL

Angelology A hierarchical system of angels, messengers, celestial powers or emanations, especially those of the Jews and Christians. The Jewish system is Qabbalistic; the Christian system, chiefly due to the *Celestial Hierarchy* and to the *Ecclesiastical Hierarchy* of Dionysius the pseudo-Aeropagite, was adopted from the 5th or 6th centuries and had an immense influence on later Christian theology. It was divided into a tenfold plan after the manner of Pythagoras and the Neoplatonists, the summit of this Christian hierarchy being the divine, termed God. The hierarchy includes: 1) Expanse of the Divine Presence; 2) Seraphim; 3) Cherubim; 4) Thrones; 5) Dominations or Dominions; 6) Virtues; 7) Powers; 8) Principalities; 9) Archangels; and 10) Angels.

The word may also mean a treatise on the subject, or a body of doctrine on it.

Angels of Darkness The fallen angels, corresponding to the Hindu asuras, whose darkness is that of absolute light. They are identified with the kumaras and other celestial entities who refused to create because they were too spiritual (SD 1:457; 2:489, 506).

Angels of the Presence In Christianity, the seven Virtues or personified attributes of God, which were created by him and became the archangels. Equivalent to the seven manus produced by the ten prajapatis created by Brahma. "As it is the Lipika who project into objectivity from the passive Universal Mind the ideal plan of the universe, upon which the 'Builders' reconstruct the Kosmos after every Pralaya, it is they who stand parallel to the Seven Angels of the Presence, whom the Christians recognise in the Seven 'Planetary Spirits' or the 'Spirits of the Stars;' for thus it is they who are the direct amanuenses of the Eternal Ideation" or of Plato's divine thought (SD 1:104) (SD 2:237, 573).

Angels of the Stars. *See* 'OPHANIM

Angelus Rector (Latin) Ruling angel; according to Kepler, the angel or divine being who caused a planet to pursue its course around the sun; equivalent to the planetary rectors or spirits of theosophy (SD 1:479).

Angerboda (Icelandic) [from *anger* sorrow, regret + *boda* bode] In Norse mythology, the boder of regret is a giantess, wife of Loki; it is suggestive that the giantess wife (matter aspect) of Loki (human mind) should have produced the three offspring Hel (death), Iormungandr (the Midgard serpent or equator), and Fenris (the wolf who is to devour the sun when its life cycle is over).

Angha. See SIMORGH

Angiras (Sanskrit) *Aṅgiras* [from the verbal root *aṅg* to go, move tortuously (cf *agni*)] One of the Saptarshis (seven rishis) or manasaputras (mind-born sons of Brahma) of the first manvantara; a secondary projection of Brahma's mind and will because his first "mind-engendered progeny . . . did not multiply themselves (VP 1:7; SD 2:78). Hence Angiras is one of the prajapatis or progenitors whose sons and daughters people the earth in succeeding manvantaras, mankind included in their progeny.

These progenitors are divided into two main classes: those which are incorporeal, such as the agnishvattas, and those which are corporeal, such as the angirasas, the descendants of Angiras (VP 3:14). Theosophically, angirasas are a class of manasaputras, the emanated offspring of the incorporeal agnishvattas or kumaras. In the Vaivasvata or seventh manvantara (our present one) Angiras is given as the son of Agni, though originally Agni was born from Angiras. In astronomy Angiras is both the father or regent of Brihaspati (the planet Jupiter) and the planet itself; also a star in Ursa Major, inasmuch as Angiras is one of the seven great rishis. As such the name of Angiras is linked with the bringing of light and associated with luminous bodies.

A number of hymns in the *Rig-Veda* are attributed to Angiras, and in one of his births he is famed for his supreme virtue and as an expounder of brahma-vidya (divine or transcendental wisdom). In the *Vayu-Purana* and elsewhere in Puranic literature some of the descendants of Angiras were said to be Kshatriya by birth and Brahmins by calling (VP 4:8n p.39).

Angirasas (Sanskrit) *Aṅgirasa-s* [from *aṅg* to go, move tortuously] The descendants of Angiras through his son, Agni; a name occurring in Vedic hymns addressed to luminous deities, and later extended to all phenomena connected with light. Specifically, the hymns of the *Atharva-Veda* are called Angirasa, as are those priests who recite them and perform the sacrifices according to the Atharva-vedic rules. " 'Angirases' was one of the names of the Dhyanis, or Devas *instructors* ('guru-deva'), of the late Third, the Fourth, and even of the Fifth Race Initiates" (SD 2:605n).

The name is also written in its adjectival form, angirasas, who are a class of pitris of the corporeal type.

Angra-Mainyu (Avestan) The personification of evil of the later Avesta. In the Gathas, Zarathustra speaks of two spirits that Mazda created who revealed themselves as twin co-workers, constantly at war with each other — one created life, the other nonlife; one truth, the other falsehood (druj). These opposing forces that maintain the visible universe are Spenta-Mainyu and Angra-Mainyu, the root cause respectively of all good and of all evil. Angra-Mainyu being taken for Ahriman has made some scholars arrive at the conclusion that Spenta-Mainyu must also represent Ahura-Mazda. In Mazdean philosophy Ahura-Mazda is the supreme creator whereas Ahriman is a created being. In the Avesta, Angra-Mainyu is described as the fiendish Druj, the Daeva of the Daevas, the leader of the evil powers; he is all darkness and ignorance, dwelling in the infinite night.

Whatever the good spirit makes, the evil spirit mars, even though “the two Spirits created the world, the Good Spirit and the Evil One” (Yasht 13, 76). When the world was created, Angra-Mainyu broke into it, and for every creation of Ahura-Mazda’s, he counter-created by his witchcraft a plague; he killed the firstborn bull that had been the first offspring and source of life on earth, created 99,999 diseases, etc. “Ahriman destroys the bull created by Ormazd — which is the emblem of terrestrial illusive life, the ‘germ of sorrow’ — and, forgetting that the perishing finite seed must die, in order that the plant of immortality, the plant of spiritual, eternal life, should sprout and live, Ahriman is proclaimed the enemy, the opposing power, the devil”; “Terrestrially, all these allegories were connected with the trials of adeptship and initiation. Astronomically, they referred to the Solar and Lunar eclipses” (SD 2:93, 380).

Although Angra-Mainyu and his host of evil forces, personalized in the Avesta as daevas, seem to have their way in the world, the day will come when they shall be overcome by Ahura-Mazda — when the shining one shall send his Holy Word to incarnate in Sosiosh (Saoshyant), then shall he conquer Angra-Mainyu, bringing about the regeneration of the world. *See also* Ahriman; Ahura; Ahura-Mazda.

Angula (Sanskrit) *Āṅgula* [from the verbal root *ag* or *aṅg* to move] A thumb or finger, a digit’s breadth, a measure equal to eight barley corns; 12 angulas make a vitasti (span), and 24 a hasta (cubit). In astronomy, a digit or 12th part. Anguli-panchaka is the five fingers.

Anhika The sections or chapters in the *Mahabhashya*, the great work of Patanjali.

Anima (Latin) Air, wind, breath; secondarily life, soul, spirit, mind. A distinction, not generally observed, has been made between anima and animus, where animus is very close to the mentality or manas of theosophical terminology and anima is equivalent to the theosophic usage of prana. Because equivalent to prana, it exists on seven planes, from the atman to the physical; and consequently there is an anima for every class of celestial being, anima not being limited only to human beings, beasts, and other beings having bodies of material substance. From anima came “animal,” a being with a living personal soul. The vegetable and mineral kingdoms do not have it; but the earth has, and the earth was called an animal in consequence.

There was in classical times a distinction between three souls of the defunct: anima (pure spirit) went to the heaven world, while manes went to the nether regions, and umbra hovered on earth (IU 1:37). Anima is spoken of as pure spirit because the essence of prana is indeed spirit, as it is derivative directly from the atma-buddhic monad, although colored on the lower planes by its intimate connection with the personal ego or manes.

Animalculists Thinkers of the 17th and 18th centuries who taught that the all future human offspring were carried in the male reproductive plasm of the earliest human ancestor or ancestors. The animalcule was the tiny human offspring thought to reside already completely formed in each

human sperm. (MIE 213)

Anima Divina (Latin) Divine spirit or soul; in Rome and Greece, the human soul was presented as dual: the anima divina or immortal soul (Greek nous or logos) and the anima brutus or animal soul (Greek phren, thymos, or alogos). *See also* PRINCIPLES (BCW 7:205-6n, 228)

Animal Kingdom One of the main divisions or life-waves of entities on earth, separated from the human kingdom by its lack of the emanated or evolved self-conscious mind, a faculty which can be acquired only by the aid of beings already having it — the manasaputras. The entities now pursuing their evolution in the animal kingdom will in a future embodiment of the planetary chain become human in the same way, although a certain number of the highest animal stocks now living, such as the apes and possibly some of the monkeys, may attain incipient humanity before the end of the seventh round in the present planetary manvantara.

The mammals in this fourth round came later in time than man, having arisen from germinal cells thrown off from the bodies of the individuals of the human racial stem millions and millions of years ago, when nature still allowed such a procedure. These early mammals have since become highly specialized. The animals below the mammals originated from the human stock in the preceding third round, and hence their ancestors or sishas were on earth and provided the origins of the later widely disseminated sub-mammalian stocks in this round, even before the human sishas felt the incoming human life-wave and multiplied over the earth.

Animal Magnetism. *See* MESMERISM

Animal Soul. *See* KAMA-MANAS; KAMA-RUPA; PRINCIPLES

Animals, Sacred Many ancient peoples have attached great importance to animals in their rituals; and they may have had facts to support their theories. If the hierarchical system of the universe is a reality, it follows that every animal is a feeble representative on its plane of cosmic potencies that descend from lofty sources. Ceremonial magic, however, may be better suited to one age than to another; so that it may be better to explain than to attempt to reintroduce the ancient practices as to the use of sacred animals in ritual.

It is equally true that such words as lion, bull, and scorpion are often used in occult writings to denote, not the physical animals, but the potencies to which they correspond. Zodiac means the circle of (sacred) animals. As man himself is on this earth the model and storehouse of all forms, those as yet unexpressed as well as those which have already appeared, he had in his own composition the ideal forms and attributes of all the various animals who in eons of past history as stocks were derivatives from him as their superior. *See also* ZOOLATRY

Anima Mundi (Latin) World-soul, world-mother; the divine-spiritual-astral-physical source of emanations, the cosmic generative and animating principle of all beings, the creative Third Logos in its female aspect. In its highest and intermediate portions, it corresponds to the alaya of

Northern Buddhism and hence to akasa. Identified variously with Isis, Sephira, Sophia, the Holy Ghost, mahat, mulaprakriti, etc., but used in a hazy and often materializing sense, so that it cannot be accurately regarded as a synonym for any one of these. "It is in a sense the 'seven-skinned mother' of the stanzas in the *Secret Doctrine*, the essence of seven planes of sentience, consciousness and differentiation, moral and physical. In its highest aspect it is *Nirvana*, in its lowest Astral Light. It was feminine with the Gnostics, the early Christians and the Nazarenes; bisexual with other sects, who considered it only in its four lower planes. Of igneous, ethereal nature in the objective world of form (and then ether), and divine and spiritual in its three higher planes. When it is said that every human soul was born by detaching itself from the *Anima Mundi*, it means, esoterically, that our higher Egos are of an essence identical with *It*, which is a radiation of the ever unknown Universal Absolute" (TG 22-3).

Theosophically, anima mundi may be regarded as a synonym of different other words, rather than as indicative of any definite entity or principle apart from others. The higher human egos or manasaputras are essentially identical with the higher portions of anima mundi; and similarly the various life-atoms in the lower spheres may be considered as in essence identical with the lower portions of the anima mundi. It is in short the life-consciousness-essence of the universe from the divine to the physical.

Animan (Sanskrit) *Añiman* [from *añu* atom] Minuteness, fineness, thinness; the condition of the infinitesimal or atomic, often used in the nominative form anima. The first of the eight mahasiddhis (great powers): that of making oneself infinitesimal, or as minute as an atom in size.

Anima Supra Mundi (Latin) The intelligent life above or within the world; the higher part of the anima mundi or cosmic intelligent akasa, hence in a sense the universal ego (SD 1:131).

Animism The name given by anthropologists to the attribution of life or mind to inanimate objects, such as trees, mountains, rivers, or images. This belief of the ancients and of many existing peoples was a recognition of the universal sentience of nature.

Also the doctrine of Georg Ernst Stahl (1660-1734) that the soul is the vital principle and responsible for organic functions in the body, and synonymous with Vitalism. This doctrine avoids the logical absurdity of making life at once the cause and the effect of the properties of matter; but it errs in making life something entirely distinct from matter, for such a separation reduces both to mere abstractions.

Animus (Latin) The rational soul, as opposed to anima (the vital or animal soul); though both words were often loosely used by the Romans, much as we use soul and mind. It corresponds with the theosophical kama-manas, and anima with prana-manas.

Aniyamsam Aniyasam (Sanskrit) *Añiyāṃsam añiyasām* [from *añu* atom, minuteness; *añiyāṃsam*, accusative of *añiyas*, comparative of adjective *añu* + *añiyasām* genitive plural of *añu*]

Philosophically, atomic of the atomic; otherwise the smallest of the small. A phrase lifted from one of the Hindu scriptures (cf VP 1:15n), without changing the first word to its nominative case. It is applied to the universal divinity whose vital intelligent essence is everywhere, to the absolutely spiritual atom which is the divine monad of every entity, great and small, in the cosmos. In Vedantic philosophy, often used as a name of Brahman, conceived as being smaller than the smallest atom and equivalently as greater than the greatest sphere or universe. The conception applies equally well to paramatman. This universality whether in infinitesimals or in cosmic reaches is expressed in the almost equivalent phrase anor aniyamsam (smaller than an atom) (BG 8:9); likewise, anor aniyam (smaller than the small) in combination with mahato mahyam (greater than the great) in the Upanishads (Katha 1:2, 20; Svetasvatara 3:21).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Anj-Arc

Anjala. *See* ANJALI

Anjali (Sanskrit) *Añjali* [from the verbal root *añj* to smear with, anoint, honor] Salutation; a gesture of respect when the hands placed side by side and slightly hollowed are raised to the forehead. This salutation of reverence and benediction has been universally used by Hindus since ancient times, not only as a sign of reverence to gurus or those to whom it is desired to show special respect, but also frequently as a gesture of prayer directed to divinities.

The form anjala is used at the end of a compound. Blavatsky speaks of anjala as one of “the personified powers which spring from Brahma’s body — the Prajapatis” (TG 23).

Anjana (Sanskrit) *Añjana* [from the verbal root *añj* to smear with, anoint, honor] Ungent, cosmetic; magic ointment. As a proper noun, one of the thousand mythical serpents having many heads, descended from Kadra, consort of the rishi Kasyapa (DP 1:21 p 74n); one of the four guardian elephants of Space — of the west or southwest quarter. Also the name of a mountain.

Anjana (Sanskrit) *Añjanā* [feminine of *añjana*] The mother of Hanumat or Hanuman, the celebrated monkey god of the *Ramayana*, who is therefore called Anjaneya (son of Anjana). In her previous birth she was a goddess, but due to a curse was born as a monkey in the Himalayas. The birth of her son, Hanuman, lifted the curse and after a period Anjana ascended to svarga (heaven).

Ank, Ankh (Egyptian) The symbol of life in ancient Egypt, represented as the tau-cross surmounted by a circle, and often called crux ansata (cross with a handle). Usually placed in the hand of every representation of god or goddess; likewise in the hand of the initiate, and again on the mummy. Also the present astronomical planetary sign for Venus; and the ansated cross reversed is the sign of the earth.

One meaning of the ankh is “esoterically, that mankind and all animal life had stepped out of the divine spiritual circle and fallen into physical male and female generation. This sign, from the end of the Third Race, has the same phallic significance as the ‘tree of life’ in Eden” (SD 2:30-1).

Anna (Chaldean). *See ANA*

Anna (Sanskrit) *Anna* [from the verbal root *ad* to eat, consume] Edible; food or victuals, boiled rice. Also food in a mystical sense: the lowest manifestation or body of Brahman, the supreme spirit, which manifestation is looked upon as “food” by the entities living therein, who thus feed mystically upon the body of their progenitor. Hence the word also occasionally means earth and water. “Beings are generated by food (anna); food is produced by rain; rain comes from sacrifice (yajna), and sacrifice is born of works (karma)” (BG 3:14; cf Taittiriya Upanishad 2:2).

Annamayakosa (Sanskrit) *Annamayakośa* [from *anna* food + *maya* from the verbal root *mā* to measure, delimit + *kośa* sheath, treasury] Food-built sheath; according to the Vedantic classification of the human constitution, the fifth and grossest of the panchakosa (five sheaths) which enclose the atman (divine monad), corresponding to the sthula-sarira (physical body) in the sevenfold theosophical division.

Annapurna (Sanskrit) *Annapūrṇā* [from *anna* food + *pūrṇa* filled, abundant from the verbal root *pṛ* to fill, nourish] Giver of food; a name applied to the goddess Durga, consort of Siva, popularly considered in one of her aspects as the goddess ever granting food. Originally she was Ammapurna, mother of plenty [from *amma* mother]. In ancient Rome the goddess of plenty was called Anna Perenna, whose festival was celebrated during the Ides of March. The mystical significance of the name is Eternal Mother, ever filled with the seeds of beings, constantly nourishing and producing. Likewise, Durga is looked upon as the dark side of nature, for the reference is not to the spirit side of Siva, but to his consort, the veil or sheath of universal nature, which is both the container of all seeds of beings and consequently the feeder, and likewise the bringer about of death. It is a curious paradox that by food all beings are generated, but likewise by food death comes to all beings. *See also ANNA.*

Annedotus (Greek) Berosus’ rendering of the significance of the Chaldean Oannes, the mystical man-fish. There were ten and seven Chaldean Annedoti, which are comparable to the Sephiroth, amshaspendis, rishi-manus, etc., representing the divine races ancestral to human races and constituting a degree in the hierarchy of emanations proceeding from the primordial dhyani-chohans (SD 2:365-6). Berosus begins his history with creation and the stages intervening before the human races, which are full of mystical information for those with the keys to his myths.

Annihilation Complete destruction of consciousness is an impossibility in nature, for there can be no annihilation of the consciousness which makes the essential person. The universe is built of illimitable hosts of evolving entities existing in all-various grades of evolutionary unfoldment. All are passing through a continual series of changes — comprising the shedding of sheath after sheath — involving their essential consciousness. These entities continuously modify the vehicles through which they express themselves on the various cosmic planes. When the elements forming a compound become dissociated, the compound *as such* ceases to exist, at least temporarily; but there still exists that which brought the elements into the compound union. The human personality is constantly changing, even during a single life, and even more greatly through rebirth; indeed, the higher states of individualized consciousnesses, though they may endure for periods so vast as to seem to be everlasting, must disappear for a time during the kosmic pralaya. Even then, when the physical, psychic, and spiritual vehicles are reduced to unity, it is not annihilation any more than a person in dreamless sleep is annihilated while his higher self is in its original state of absolute consciousness, though it leaves no impression on the sleeping and therefore unconscious brain. “Nor is the individuality — *nor even the essence of the personality*, if any be left behind — lost, because re-absorbed. For, however limitless — from a human standpoint — the paranirvanic state, it has yet a limit in Eternity. Once reached, the same monad will *re-emerge* therefrom, as a still higher being, on a far higher plane, to recommence its cycle of perfected activity” (SD 1:266).

Nirvana, then, does not mean utter annihilation, nor did the Buddha teach utter annihilation or wiping out. Thus fundamental consciousness is uninterrupted from eternity to eternity, although undergoing continual change. But such change is not a difference of essence, but a continuously enlarging and ever greater unfolding of the inner essence.

Annunciation Announcing; in Christianity, the foretelling to Mary of Jesus’ birth by the angel Gabriel, celebrated on Lady Day, March 25. The fire and lamps used in this ceremony apparently point back to the marriage of Vulcan with Venus, to the Magi watching over the sacred fire in the East, to the Vestal Virgins in the West, and to the marriage of Father Sun with Mother Nature.

Some parallels from other religions are the luminous San-tusita (Bodhisat) appearing to Maya and announcing the coming birth of Gautama Buddha; the Hindu legend that there would be born the son of the Virgin (Krishna), the date of whose death marked the beginning of kali yuga; and in Egypt where scenes of an annunciation appear in the temple of Luxor.

Annus Magnus (Latin) Great year; the precessional cycle of 25,920 years. Also, the interval between two successive ecliptic conjunctions of all the planets, including sun and moon. The Hindus date the beginning of the kali yuga from such a conjunction said to have taken place in 3102 BC. It was a general belief in antiquity that cycles of varying lengths marked the terminal or initial points of eras, the occurrence or recurrence of cataclysms, and the consequent recurrence

of similar events.

Annwn (Welsh) In Druidism, the great deep below the human world, the lowest plane of Abred. The soul had its origin in Annwn and evolved up thence through every possible form of life till it reached the human world. By long continued persistent evildoing, it might then sink into Annwn again, through Cydfil and Obryn, such sinking into Annwn being final and leading to annihilation: Nid a i Annwn ond unwaith (there is but one descent into Annwn) — avichi.

Anoia. See AGNOIA

Anointed [from Latin translation of Greek *christos* anointed] Smearred with sacred unguent, having oil or unguent poured on the head; a ceremony originally symbolically denoting a high degree of initiation, but later borrowed for minor purposes by the Christian churches in consecrations and coronations. A true anointed or christos is one who has achieved the great victory over self in initiation and therefore in life, and thus has become a full or complete adept or mahatma.

Anouki. See ANUKIS

Ansamsavatara. See AMSAMSAVATARA

Ansated Cross. See ANK

Antahkarana (Sanskrit) *Antaḥkaraṇa* [from *antar* interior, within + *karaṇa* sense organ] Interior organ or instrument; defined variously as the seat of thought and feeling, the thinking faculty, the heart, mind, soul, and conscience. In Vedanta philosophy, it is looked upon as a fourfold inner instrument or intermediary between spirit and body, with mind being the go-between or bridge. One could say that there are several antahkaranas in the human septenary constitution: one for every path or bridge between any two monadic centers. Man is a unity in diversity, and the antahkaranas are the links of vibrating consciousness-substance uniting these various centers (cf OG 5). Blavatsky describes it as “the path that lies between thy Spirit and thy self, the highway of sensations, the rude arousers of *Ahankara*” (the sense of egoity); and that when the two have merged into the One and the personal sacrificed to self impersonal, then the antahkarana vanishes because no longer useful as a functioning bridge between the two. Further, the antahkarana is “the lower *Manas*, the Path of communication or communion between the personality and the higher *Manas* or human Soul. At death it is destroyed as a Path or medium of communication, and its remains survive in a form as the *Kamarupa* — the ‘shell’ ” (VS 56, 88-9).

Antahkarana also has the general sense of an intermediary between something or someone that is low to one that is high. Every messenger of truth and light is an antahkarana between the Masters of Wisdom and mankind. Likewise every great and good man or woman is an antahkarana between humanity and the spiritual essence of his or her own inner god. A person living in the noblest and loftiest part of his being, becomes such a bridge between the spiritual realm he is in

touch with and all other entities and things contacted by him which belong to human life.

Antarakasa (Sanskrit) *Antarākāśa* [from *antar* within, in the middle + *ākāśa* space, ether from *ā-kāś* to shine, be brilliant] The akasa of akasa, the essence of akasa; interior or inner aether. The spiritual-divine aether or pradhana which is the seat of the primordial atman, on the cosmic scale or as applicable to an individual entity. “Now what is within the *brahmapura* (city of brahman) is an abode, a small lotus-flower; within it is a small space (*antarakasa*). What is within that, should be searched out; that, assuredly, is what one should desire to understand” (ChU 8:1:1).

Antaratman (Sanskrit) *Antarātman* [from *antar* interior, within + *ātman* self] Interior self; the inner self or primeval heart of an individual. The goal of the yogi is ultimate union with the antaratman.

Antarctic. See SOUTH POLE

Antariksha, Antariksha (Sanskrit) *Antarīkṣa, Antarikṣa* [from *antar* within, interior + *īkṣa* from the verbal root *īkṣ* to behold, see] The mid-region; the firmament or space between earth and heaven, the abode of apsaras (nymphs), gandharvas (celestial musicians), and yakshas (nature sprites of many types) along with the mythical wish-granting cow of plenty, Kamadhenu. In the Vedas, antariksha is the middle or second of three lokas (spheres) usually enumerated as bhur, bhuvar, and svar. Above these rise in serial order the four higher lokas of the ordinary Brahmanical hierarchy. Hierarchically, taking the bhurloka as the physical sphere, bhuvarloka or antariksha corresponds with the astral plane. In the *Vishnu-Purana* (3:3), Antariksha is named as the Vyasa (arranger of the Veda) in the 13th dvapara yuga in the Vaivasvata manvantara, our present world cycle.

Antaryoga (Sanskrit) *Antaryoga* [from *antar* interior, within + *yoga* union from the verbal root *yuj* to join, unite] Interior union; a state of deep thought or abstraction signifying that high stage of inner spiritual and intellectual recollection in which all the superior part of a person’s constitution is gathered together and focused as it were into a single point of consciousness. It is involved in the attaining of the higher states of consciousness such as turiya-samadhi.

Antaskarana. See ANTAHKARANA

Anthesteria (Greek) [from *anthos* flower] Flower festival; part of the Dionysion Mysteries celebrated from the 11th to the 13th of the month of Anthesterion (February-March). At Athens on the first day the casks of new wine were opened; on the second day a beaker of new wine was served to each guest at a public banquet and the wife of the Archon Basileus, representing the whole country, was married to Dionysos. These two days were considered of ill-omen, and the souls of the dead were thought to walk abroad. On the third day, offerings of cooked pulse were offered to Hermes as psychopomp and to the souls of the dead.

“At the mysteries of the Anthesteria . . . after the usual baptism by purification of water, the *Mystae*

were made to pass through to another door (gate), and one particularly for that purpose, which was called, 'the gate of Dionysus,' and that of 'the *purified*' " (IU 2:245-6). These were the Lesser Mysteries, preliminary and complementary to those held in the month of Boedromion (September) in Eleusis. Some scholars, seeing the analogy between climatic seasons and the stages of initiation, have supposed that the festival celebrated primarily the advent of spring and that the rites were symbolic of this; whereas others believe that the initiations were the main events and were held at times when nature harmonized with the purpose in view.

Anthropogenesis That stage of theogony when the spiritual monads of the central spiritual fire are passing through the human kingdom. If we include under "human being" everything from the primal spark to the culminating point of evolution, then anthropogenesis would become coextensive with cosmogenesis. The two cannot be sharply separated, for not only is man involved in those cosmic kingdoms which are at other stages than the human, but the human being, in common with every other organism, is an epitome of the universe. Three lines of evolution converge in humankind: the monadic or divine-spiritual, the intellectual from the manasa-dhyanis, and the vital-astral-physical. But we are not a mere product generated by external forces or creative powers outside of ourselves; it is the *growth* outwards from our own inner essence that is fundamental.

Anthropoids The larger or manlike apes. During the period when the fourth root-race of mankind in this fourth round on globe D (our earth) was passing its climax, certain humans as yet only partially conscious miscegenated with the then existing types of simians or monkeys, which were themselves the offspring of an earlier similar miscegenation of the third root-race. That the anthropoids are a product descended partly from the human stem, and not forms ascending towards man in the sense of earlier Darwinism, is shown by a study of the structural and functional differences and resemblances between anthropoids and man (cf MIE 94-116, 305-12).

Since the middle of the fourth root-race, no monads from the animal kingdom could any longer enter the human kingdom because from that time the earth started on its ascending arc of evolution. Nevertheless, the monads imbodyed in the anthropoids will enter the very lowest and least evolved branchlets of the human kingdom during the fifth round. The monads now in anthropoid bodies will disappear from incarnation during the present fifth root-race to enter their inter-round paranirvana, remaining as astral monads until the next (fifth) round. A relatively few individuals among the anthropoids, because of having attained the most advanced degree of evolution in the anthropoid stock, will reach quasi-human status, although still in anthropoid bodies, before the fifth root-race has reached its end. Even these exceptional anthropoids will probably have died out before the fifth root-race is ended or by the early sixth root-race — a period several million years from now.

Anthropomorphism The ascription of human qualities, attributes, and possibly human form to

divine beings; also, more generally, the degradation of symbolism by giving it a humanized, materialistic, or animalistic interpretation. This error has a more or less mystical origin: because human beings are children of the universe, embodying in themselves all qualities, attributes, powers, and functions that the universe has on the macrocosmic scale, it is easy through careless thinking to slip into the idea that therefore the divinities must be copies of humans. As form in religious and philosophic conception took precedence over the spirit, the original religious, philosophic, and mystical ideas became clothed or embodied, and the spirit then was more or less lost sight of.

Anthropos (Greek) Man, mankind; philosophically equivalent to Adam or primal humanity. In Gnosticism, the first principle, also called Ieov (the four-voweled name), corresponding to Brahma (SD 1:449; BCW 13:35; 14:205).

Antichrist [from Greek *anti* against + *christos* anointed] An adversary of Christ. The Epistles of John refers to the belief in the coming of an antichrist, and also uses the word to signify any of the deniers of Christ who existed in those times. This refers to the belief among Jews and Jewish Christians that the second coming of the Messiah would be preceded by a reign of wickedness under Antichrist, as found in Paul's Epistles and in Revelation. Moslem literature tells of the false messiah (mesihu 'd-dajjal) who will overrun the earth, ruling for 40 days and leaving only Mecca and Medina unharmed. Such beliefs are ancient and universal: the nether pole of manifestation which, though a necessary factor in cosmogenesis and anthropogenesis, has been converted by doctrinal theology into an evil demon, such as Satan, Devil, Lucifer, Angra-Mainyu, and Prometheus.

A more mystical significance is founded in the fact that when a buddha or avatara appears or whenever an effort is made to aid mankind along spiritual lines, the powers of darkness automatically react along their own lines. This corresponding tendency to evil is the fundamental significance of Antichrist — Christos being the name of the high initiate in whom was embodied a ray of the Logos.

Antimimon Pneumatos (Greek) Counterfeit or counterpart of the spirit; one of the inner human principles, according to the *Pistis Sophia*. It is not "our conscience, but our *Buddhi*; nor is it again the 'counterfeit of Spirit' but 'modelled after,' or a *counterpart* of the Spirit — which *Buddhi* is, as the vehicle of *Atma* . . ." (SD 2:605n).

Antipodes. See PATALA

Antum. See ANATUM

Anu (Chaldean) Supreme god of the Babylonian pantheon, king of angels and spirits, ruler of destiny, lord of the city of Erech or Uruk — later Ur. One of the loftiest of Babylonian divinities, part of a trinity with Enlil and Ea, he was especially the god of heaven, creator of star spirits and of

the demons of cold, rain, and darkness. His consort Antum or Anatum was mother of the gods. Anu was the concealed deity; in the Chaldean account of Genesis, he is the passive deity, however, “the primordial chaos, the god time and world at once, *chronos*, and *kosmos*, the uncreated matter issued from the one and fundamental principle of all things” (IU 2:423).

In later Babylonian history, one of the trinity Anu, Bel, and Ea, associated with the three divisions of the universe: heaven, earth, and the spatial or watery deep. In another aspect, Anu is identical with Sin (the moon). “And the Moon in the Hebrew Kabala is the Argha of the seed of all material life, and is still more closely connected, kabalistically, with Jehovah, who is double-sexed as Anu is. They are both represented in Esotericism and viewed from a dual aspect: male or spiritual, female or material, or Spirit and Matter, the two antagonistic principles” (SD 2:62). In the astrological theology of Babylonia and Assyria, Anu, Bel, and Ea became the northern, middle, and southern zones of the ecliptic respectively.

There seems little doubt that the Chaldean Anu and the Sanskrit anu (atom) are identical in origin. Anu is a title of the formative Brahma who philosophically is often envisaged as the cosmic atom or infinite universe. The mystical significance is the ever-invisible, unreachable divine center — whether of a being or universe — which is the divine-spiritual focus of essential consciousness, from which flow forth all the streams of consciousness in its multiform varieties.

Anu (Sanskrit) *Aṇu* As a noun, an atom of matter; as an adjective, atomic, fine, minute. A title of Brahma, conceived as both infinitesimal and universal, thus pointing to the pantheistic character of divinity. Hence, every anu is “a centre of potential vitality, with latent intelligence in it” (SD 1:567; cf FSO 273-5, 431). In the *Bhagavad-Gita* (8:9) Arjuna is enjoined to meditate on the “seer,” i.e., the enlightened, omniscient One, who is “more atomic than the atom” (anor aniyamsam) and yet “the supporter of all” (cf VP 1:2, 5:1; ChU 3:14, 3-4, Katha 2:20, MU 3:1, 7).

In Jainism the soul is represented as being like an anu, atomic in size, and seated within the heart, while the jiva (life-monad) is the quickening element that pervades the whole.

Besides meaning a particle of substance, anu also means an atom of time, being equivalent to the 54,675,000th part of a muhurta (48 minutes).

Anubis (Greek) **Anpu** (Egyptian) *Ānpu*. The Egyptian jackal-headed deity, lord of the Silent Land of the West (the underworld). To him with Thoth was entrusted the psychopompic leading of the dead. In the judgment after death, Anubis tests the balance in the scene of the weighing of the heart. His offices were likewise those of the embalmer, mystically speaking. Originally the god of the underworld, he was later replaced by Osiris. In Heliopolis during the later dynasties he was identified with Horus, for he was often regarded as the son of Osiris and Isis — more often of Osiris and Nephthys (Neith). Plutarch writes: “By *Anubis* they understand the *horizontal circle*, which divides the invisible part of the world, which they call *Nephthys*, from the visible, to which they give the name of *Isis*; and as this circle equally touches upon the confines of both light and

darkness, it may be looked upon as common to them both . . . Others again are of opinion that by *Anubis* is meant *Time* . . .” (On Isis and Osiris, sec 44).

The mysteries of Osiris and Isis were revived in Rome, and Apuleius (2nd century) in *The Golden Ass* tells of the Procession of Isis, in which the dual aspect of Anubis was portrayed: “that messenger between heaven and hell displaying alternately a face black as night, and golden as the day; in his left the caduceus, in his right waving aloft the green palm branch” (*Gods of the Egyptians*, Budge 2:264-5). In most of his attributes, Anubis is a lunar power, Plutarch connecting him with the Grecian Hecate, one of the names for the moon; and this is further emphasized by his being a guide of the dead. Also identified with Hermes as psychopomp. *See also* Hermanubis

Anugita (Sanskrit) *Anugītā* [from *anu* after, alongside + *gītā* sung, chanted, song from the verbal root *gai* to sing, intone] After-song; chapters 16-92 of the *Asvamedhika-parvan*, 14th book of the *Mahabharata* that deals with the asvamedha (horse sacrifice) conducted by Yudhishtira, a rite that stems from the Vedic period.

Like the *Bhagavad-Gita*, the *Anugita* is a discourse between Krishna and Arjuna, an “after-song” in which Krishna gives a fuller unfolding of teaching with many mystical allusions.

Anugraha, Anugrahana (Sanskrit) *Anugraha, Anugrahana* [from *anu-grah* to support, uphold, foster, treat kindly] Favor, kindness, promoting or favoring a good object. In the *Vishnu-Purana* (1:5) applied to the eighth creation (in the *Matsya* and other Puranas to the fifth creation), the period of formative development “which possesses both the qualities of goodness and darkness.” In Sankhya philosophy *anugraha-sarga* is the creation or formation of “the feelings or mental conditions.”

Blavatsky calls the *anugraha* creation a blind, “for it refers to a purely mental process: the cognition of the ‘ninth’ creation, which, in its turn, is an effect, manifesting in the *secondary* of that which was a ‘Creation’ in the *Primary (Prakrita)* Creation. The *Eighth*, then, called *Anugraha* (the *Pratyayasarga* or the *intellectual* creation of the Sankhyas . . .), is ‘that creation of which *we have a perception*’ — in its esoteric aspect — and ‘to which we give intellectual assent (*Anugraha*) in contradistinction to *organic creation*.’ It is the correct perception of our relations to the whole range of ‘gods’ and especially of those we bear to the *Kumaras* — the so-called ‘Ninth Creation’ — which is in reality an aspect of or reflection of the sixth in our manvantara (the *Vaivasvata*)” (SD 1:456).

All these various “creations” mentioned in the Puranas represent stages of evolutionary production, following each other in regular serial order, and thus unfolding into manifestation what lay originally latent in the seed out of which these various stages arise. Thus the reference in the *Vishnu-Purana*, for example, by analogical reasoning can apply either to a universe, solar system, planetary chain, or to the developmental history of earth and its inhabitants.

Anukis [Greek from Egyptian *Ānqet* from *ānq* to surround, embrace] Third of the triad of deities of Elephantine, consisting of Khnemu, Sati, and Anqet or Anukis. Her worship was common in northern Nubia, but later centered at Sahal, where her principal temple was situated. At Philae she was identified with Nephthys or Neith, it being common to regard Khnemu as a form of Osiris: hence Sati and Anqet became associated with Isis and Nephthys. However, Anqet is also represented with the disk and horned headdress of Isis and is called the lady of heaven, mistress of all the gods; giver of life and of all power, and of all health and joy of heart. The goddess is also associated with the embracing waters of the Nile, though the root itself shows that she is the embracing and all-surrounding cosmic life as well as its minor functions in manifestation. The ascriptions given to Anukis as the giver of life and of all power associate the goddess with the moon, whether in the cosmogonical or lower generative sense.

Anuma. See ANUMANA

Anumana (Sanskrit) *Anumāna* [from *anu-mā* to infer, conclude, conjecture] An inference, conclusion, or deduction from given premises. In the Sankya yoga the second of the three pramanas (proofs or modes of cognition) by which perception or knowledge is sought. The Nyaya system recognizes four sources of accurate knowledge, of which anumana (inference) is also the second. Anuma and Anumiti are virtually synonymous.

Anumati (Sanskrit) *Anumati* [from *anu-man* to approve, grant] Assent, permission, approbation; personified frequently as a goddess. The fifteenth day of the moon's age "when one digit is deficient" (VP 2:8), a time said to be propitious for the offering of oblations to devas and pitris.

It is therefore the moon at full: "when from a god — Soma — she becomes a goddess" (TG 25). Mythologically the first fortnight of the moon or waxing period is often regarded as being masculine, and its second fortnight or waning period as feminine. The moon in some cultures is looked upon as masculine, in others as feminine. In Latin the moon was both *lunus* (masculine) and *luna* (feminine), but in most other languages the moon is almost consistently either masculine or feminine.

Anumiti. See ANUMANA

Anunit (Chaldean) One of the popular nature goddesses of the early Babylonian peoples, who in one aspect is called Ishtar. Her worship was prominent at Sippar in the later Babylonian period. A sanctuary was erected in her honor by Sargon of Akkad at Babylon (3800 BC). Blavatsky held that Anunit was the planet Venus as the morning star, whereas the same planet as the evening star was Ishtar of Erech.

Anunnaki (Chaldean) In Babylonian mythology, a hierarchy of lower angels: the angels of earth or the underworld, star gods who had sunk below the horizon and become judges of the dead. Below the annunaki were several classes of genii — *sadu*, *vadukku*, *ekimu*, *gallu* — some of which were

represented as being good, some evil. The anunnaki are “terrestrial Elementals also” (TG 25).

In Sumerian mythology, the children and followers of An, judges of the dead.

Anupadaka, Anupapadaka. *See* Aupapaduka

Anupapadaka-bhuta. *See* Aupapaduka-bhuta

Anupapadaka-tattva. *See* Aupapaduka-tattva

Anuttara, Anuttaras (Sanskrit) *Anuttara, Anuttarās* [from *an* not + *uttara* comparative of *ud* up] Nonsuperior; unrivaled, unexcelled, chief, principal; secondarily inferior, base, low. Often used adjectivally in compounds: anuttara-bodhi (unexcelled intelligence or wisdom), anuttara-dharma (unexcelled law, truth, religion). In Buddhism anuttara-tantra, one of the four classes of tantric treatises, expounds the yogic procedures for the acquisition of the highest truth.

Anuttaras (masculine plural) is a class of deities among the Jains.

Anuttara-samyak-sambodhi (Sanskrit) *Anuttara-samyak-sambodhi* The unsurpassingly merciful and enlightened heart; applied to jivanmuktas or liberated, perfected beings collectively, who then may “pass through all the six worlds of Being (Rupaloka) and get into the first three worlds of Arupa” (BCW 14:409).

Anyamsam Aniyasam. *See* ANIYAMSAM ANIYASAM

Anzu or Zu (Babylonian) The lion-headed eagle, often portrayed as “master of the animals.” Plotting to assume sovereignty and command the gods, he stole the Tablet of Destinies (DUB-šima-a-ti) from the empty throne of his master, the high god Enlil, then flew off to hide in the inaccessible mountain. Warrior-god Ninurta was sent to battle Anzu, slay him, and return the Tablet. George Smith’s 1875 translation (cited in SD 2:283n) was tentative at best and is now superseded by modern translations such as in Dalley, *Myths from Mesopotamia*, 1989.

Ao. *See* IAO

Aoi (Gnostic) Among the Peratae Gnostics, one of the ministers of Chozzar, equivalent to the Greek Poseidon; the other three ministers being Aou, Ouo, and Ouoab. The name of the fifth was kept secret and was in reality triple, thus making seven. These ministers in one sense correspond to the Hindu kumaras, whose number was variously four, five, or seven according to the meaning to be conveyed. Also comparable to the prachetasas (ministers of Varuna, the Hindu water deity), the five words of Brahma, and other groups of five (cf SD 2:578).

Aour. *See* 'OR

Ap, Apas, Apah (Sanskrit) *Ap, Apas, Āpah* [from *ap* water] Watery, water; in the plural [*apah, apas* the waters], considered as feminine deities and mothers from whom all issue forth. Cosmically

apah or apas are the waters of space, out of which the universe is produced. “*Apah* (the waters) assume different forms of this earth, this atmosphere, this sky, the mountains, gods and humans (*deva-manushyah*), beasts and birds, grass and trees, animals together with worms, flies, and ants. *Apah* (water) indeed is all these forms” (ChU 7:10, 1).

Apas or Ap is the name of the rakshasa associated with the month Karttika (October) (VP 2:10, p.5n); Apas is listed also as a prajapati of the second manvantara, son of Vasishtha (VP 3:1, n1).

Apamnapat (Sanskrit) *Apāṃnapāt* [from *apām* of waters from *ap* water + *napāt* child, son, offspring] Son of the waters; in the Vedas one name of Agni (cosmic and terrestrial fire), as having issued as lightning from the firmament or cosmic spaces, so frequently called waters in ancient scriptures. This connects Apamnapat with fohat: just as fohat is cosmic vitality manifest in one of its forms as fire (agni) or as electricity and magnetism in their manifold appearances, so is fohat or apamnapat the child or offspring of cosmic space or the cosmic waters. But these waters “are not the liquid we know, but Ether — the fiery waters of space” (SD 2:400n). Fohat likewise is called the son of ether in the latter’s highest aspect, akasa.

Apamnapat is also an Avestan name which means “Son of the Waters” and, like his Vedic counterpart, is closely linked with the fire of lightning as well as the spring or source of the waters (Sirozah 1:8, T in Yasht 2:4; ZA II, 6, 94, SBE 23).

Apana (Sanskrit) *Apāna* [from *apa* away, off, down + *an* to blow, breathe] Down-breath; one of the vital airs, life-currents, or pranas which vitalize, build, and sustain the human or animal body. As *apa* indicates, it is the prana which ejects from the system material which it no longer requires, such as wastes, etc. Opposite in function to the upward-tending breath, udana.

Apap or **Apep** (Egyptian) *Āpep* **Apophis** (Greek) The serpent of evil, generally denoting matter in its lower reaches of differentiation from spirit; the slayer of every soul too loosely linked to its immortal spirit. Typhon, having slain Osiris, incarnates in Apap and seeks to kill Horus (the personal ego), but is slain by Horus through the power of Horus’ father Osiris, the buddhic principle. It is also the serpent which is slain by the sun god Ra. The combat is another aspect of the myth of the battle between Horus and Set, these deities representing cosmic and physical light and cosmic and physical darkness respectively. “Apap is called ‘the devourer of the Souls,’ and truly, since Apap symbolizes the animal body, as matter left soulless and to itself. Osiris, being, like all the other Solar gods, a type of the Higher Ego (Christos), Horus (his son) is the lower Manas or the *personal* Ego. On many a monument one can see Horus, helped by a number of dog-headed gods armed with crosses and spears, killing Apap” (TG 26).

The same general story is found in St. George and the Dragon, Michael and Satan, etc. Apap, the serpent of evil, is slain by Aker, Set’s serpent, showing the twofold meaning of the serpent symbol. Cosmologically this means the bringing into order of the confused and turbulent principles in chaos; in the human being it refers to the trials of initiation; in astronomy, to eclipses.

Aparavidya (Sanskrit) *Aparāvidyā* [from *a* not + *parā* supreme + *vidyā* knowledge from the verbal root *vid* to see, know, percieve] Nonsupreme knowledge; in Vedanta philosophy the lower wisdom of Brahman, relative knowledge acquired by the intellect and through the performance of ritual worship and duties, in contradistinction to paravidya (supreme wisdom), the transcendental knowledge of Brahman attainable by him who has achieved moksha (liberation) during life. This distinction between the exoteric and esoteric tradition and doctrine is found in practically all cultures.

Aparinamin (Sanskrit) *Apariṇāmin* [from *a* not + *pari* around, about + the verbal root *nam* to bend, turn, change] Unchanging; used in connection with Purusha and prakriti or pradhana, when regarded in their fundamental essence of continuous spiritual substance. In the Puranas, for example, Purusha (spirit per se) is called both avyaya (imperishable, undecaying) and aparinamin (immutable, unchanging); while prahana or prakriti (matter in its elemental state) is vyaya (perishable) and parinamin (subject to change) (cf VP 1:2; SD 1:582). However, when Purusha and prakriti are regarded from the standpoint of the periods of manifestation, their aspects become mayavi (illusory), and hence in their interblending actions subject to the modifications of manvantaric evolution.

Aparoksha (Sanskrit) *Aparokṣa* Direct perception.

Apas-bhuta (Sanskrit) *Apas-bhūta* [from *ap* water + *bhūta* element from the verbal root *bhū* to be, become] The water element; sixth in the descending scale of the seven cosmic bhutas (of which five are popularly reckoned), and second in the ascending scale of the cosmic ladder of elements. Apas-bhuta has its analog in the human constitution in the linga-sarira, the model or astral body. *See also* APAS-TATTVA.

Apas-tattva (Sanskrit) *Apas-tattva* [from *ap* water + *tattva* thatness, reality] Also *Āpas-tattva*. The water principle; sixth in the descending scale of the seven tattvas, the principles or categories of nature. In the Upanishads and Vedanta only five tattvas are enumerated.

Apava (Sanskrit) *Āpava* [from *ap* water] Water-mover; associated with Narayana, “he who moves in or on the waters of space,” and hence with Vishnu and Brahma. In the *Harivamsa*, Apava performed the office of Brahma: dividing himself into male and female he produced Vishnu, who produced Viraj, who in turn brought the first man, Manu Svayambhuva, into being. This man then brought forth the ten prajapatis, the progenitors of the manifested world (cf VP 1:7). In the *Mahabharata*, a name of the prajapati Vasishtha.

Apavarga (Sanskrit) *Apavarga* [from *apa-vrj* to leave off, fulfill] Emancipation of the soul from the necessity of repeated rebirths; moksha or liberation.

Ape. *See* ANTHROPOIDS

Apeiros (Greek) The boundless, infinite; frontierless expansion. Used by Anaximander and Anaximenes, and by Plato in *Philebus*; the equivalent term *apeiria* was used by Anaxagoras and Aristotle. Corresponds to 'eyn soph, and according to Porphyry to the Pythagorean monad (one), the “*cause of all unity and measure of all things*” (SD 1:353, 426; FSO 71).

Apep. *See* APAP

Apherides (Greek) Idas and Lynceus, sons of Aphareus, paternal uncle of Castor and Pollux, by whom Castor is killed in a quarrel over stolen cattle or over the rape of the Apherides' betrothed, Phoebe and Hilaria. *See also* DIOSCURI

Aphophis. *See* APAP

Aphrodite (Greek) Greek Goddess of love and beauty, in older times regarded as signifying the harmony of cosmos. Originally the daughter of Zeus and Dione, a lunar deity like Aphrodite, both being represented with the horns of the moon or of the zodiacal sign Taurus; but the same deity in ancient mystical philosophy may be at once mother, wife, and daughter — so difficult is it to find among our common notions a symbolism that will convey the full meaning anciently intended. Later, under Eastern influence, she was said to have been born from the sea foam and to have landed in a seashell on the isle of Cythera. A sea goddess as well as an earth goddess of gardens, groves, and springtime, she was the wife of Hephaestus and connected also with Ares and Adonis; mother of Eros. As Aphrodite Urania, she was identified with the goddess of heaven Astarte, and later under Platonic influence came to represent spiritual love as opposed to earthly love, represented by Aphrodite Pandemos. Among her analogs are Isis, Ishtar, Mylitta, Eve, Vach, etc., all the mother of all living beings and of the gods, cosmically. The Romans identified Aphrodite with Venus, and the Egyptians with Hathor.

Apis (Greek) **Hap** (Egyptian) *Hap*. The sacred bull of Memphis into which Osiris was thought to incarnate. Classical Greek authors all mention the veneration with which the Egyptians regarded the bull, Manetho stating that it was under Ka-kau (2nd dynasty) that Apis was appointed a god. The Egyptians believed that after the death of a sacred animal, on reaching 28 years (the age Osiris was killed by Typhon), the soul of Apis joined Osiris, forming the dual god Asar-Hapi (Osiris-Apis), which the Greeks in the Ptolemaic period renamed Serapis. “As in the exoteric interpretation of the Egyptian rites the soul of every defunct person — from the Hierophant down to the sacred bull Apis — became an Osiris, was Osirified . . .” (SD 1:135).

Generally speaking the bull was the symbol for terrestrial and physical generation, linking it with the moon — as indeed was Apis; although the bull is also connected with the sun, as in the case with Mnevis, the sacred bull of Heliopolis. In any event, “it was not the Bull that was worshipped but the Osiridian symbol; just as Christians kneel now before the Lamb, the symbol of Jesus Christ, in their churches” (TG 26). *See also* BULL; SERAPIS

Apocalypse. See REVELATION OF JOHN

Apocatastasis (Greek) Restoration, return; used by Plato and Plutarch for a return of the stars to the same places.

Apocrypha [from Greek *apokryphos* secret] Esoteric, hid, secret; later spurious. First applied to writings regarded as esoteric, for private instruction, and of profounder import than the exoteric writings; but the rise of bogus esoteric schools gradually brought the word into contempt and clothed it with its later meaning of spurious or doubtful.

Apollo (Greek) Also called Phoebus (the pure, shining); son of Zeus and Leto (Latona), the polar region or night, and twin brother of Artemis (Diana). His birth shows the emanation of light from darkness. One of the most popular gods of Greek mythology, he is primarily the god of light, and is also associated with the sun, hence a giver of life, light, and wisdom to the earth and humanity. Apollo and Artemis are the mystic sun and the higher occult moon (SD 2:771). Apollo stands for order, justice, law, and purification by penance. His attribute as a punisher of evil is shown by his bow, with which as an infant he slew Python. He is the deity who wards off evil; the healer, father of Aesculapius and often identified with him; and the god of divination, associated especially with the Oracle at Delphi. The other principal seat of his worship was at Delos, his birthplace. He was also the patron of song and music, of new civic foundations, and protector of crops and flocks. His lyre is the sacred heptachord or septenary, seen in the sevenfold manifestations of the Logos in the universe and man; he is also the sun with its seven planets. He answers in some respects to the Hindu Indra and Karttikeya and in others to the Christian archangel Michael; Janus was the Roman god of light.

Apollonius of Tyana First-century neo-Pythagorean, known for his ascetic life, moral teachings, and occult powers. His biography is a Hermetic allegory, though based on facts. A theurgist and adept of high powers, he studied Phoenician sciences as well as Pythagorean philosophy. He traveled widely, journeying to Babylon and India where he associated with the Chaldeans, Magi, Brahmans, and Buddhists. His life was spent preaching noble ethics, prophesying, healing, and performing many well-attested phenomena or “miracles.” Before his death he opened an esoteric school at Ephesus. Blavatsky states that he was a nirmanakaya rather than an avatara.

Apollyon (Greek) The destroyer; derived from the same verb as Apollo, the term recognizes that involved in every growth there is an equivalent energy of destruction or dissipation, which aids the new growth. Originally a significant mystical term, it became in Christian times one of the aliases of Satan. Ecclesiastical monotheism required that some of the beneficent creative powers should be eliminated from heaven and relegated to the bottomless pit.

Apophis. See APAP

Aporrheta (Greek) Forbidden, secret, mystical, not to be spoken (things); secret instructions

delivered to a candidate for initiation in the Mysteries. More importantly, facts of nature of rigidly esoteric character learned by adepts through initiation and improper to divulge to the uninitiated; hence spoken of as forbidden.

Apostolic Succession The doctrine held in various branches of the Christian Church that the episcopal power necessary for the valid administration of the sacraments, for the transmission of orders, etc., has been handed down in unbroken succession from Saint Peter, to whom it was said to have been entrusted by Jesus.

One of the ideas which early Christianity took over from the esoteric teaching of the Mediterranean peoples, the apostolic succession was originally derived from the passing on of light from one adept to another at initiation, thus constituting what is called the guruparampara or the succession of teacher following teacher in regular serial order. A similar institution existed in the Eleusinian Mysteries, whose hierophants were drawn from one family, the Eumolpidae, as well as in many other parts of the world.

Apparition. See GHOST; MAYAVI-RUPA

Apperception Perception involving self-consciousness; cognition through the relating of new ideas to familiar ideas. Used by Leibniz to denote a stage higher or more subtle than perception. The impressions received through perception are apprehended by the mind and are related to other impressions which the memory holds, so that complex ideas are formed. Apperception may be called perception accompanied by awareness and an interpretative power. In contrast to the theory that the higher faculties of mind are built up synthetically from the lower, Leibniz's views support the theory that the intuitive or original inner powers are primary. "Nascent *apperception*, which is the *Mahat* of the lower kingdoms, especially developed in the third order of Elementals . . . [is] succeeded by the objective kingdom of minerals, in which latter that apperception is entirely latent, to re-develop only in the plants"; and "that which is meant by 'animals,' in *primary* Creation, is the germ of awakening consciousness or of *apperception*, that which is faintly traceable in some sensitive plants on Earth and more distinctly in the *protistic* monera. . . . Neither plant nor animal, but an existence between the two" (SD 1:454-5&n; cf ET 505 3rd & rev ed).

Apportation The carrying or projecting of an object through space, whether a human form or any other thing; commonly met with in Indian stories, and those of Christian saints and such figures as Apollonius of Tyana (WQJ Echoes 1:378-82, 2:292).

Apsaras (Sanskrit) *Apsaras* [from *ap* water + *saras* flowing from the verbal root *sr* to flow, glide, blow (as of wind)] Moving in the waters; a class of feminine divinities known as celestial water nymphs, whose location is commonly placed in the sky between the clouds rather than in the waters of earth, although they are often described as visiting earth. These fairy-like wives of the gandharvas (celestial musicians) can change their shape at will, often appearing as aquatic birds. In *Manu* they are held to be the creations of the seven manus, but in the Puranas and the

Ramayana their origin is attributed to the churning of the cosmic waters, and it is said that neither gods nor asuras would have them for wives. Since mythologically they were common to all, they are called Sumadatmajas (self-willed pleasers) — 35 million of them, of whom Kama, god of love, is lord and king. One of their roles is to act as temptresses to those too ardent for divine status. Only the individual who can withstand the perfumed entreaties of the apsarases is worthy of full enlightenment. In the *Yajur-Veda* the apsarases are called sunbeams because of their connection with the gandharva who personifies the sun.

Blavatsky looks upon the apsarases as “both *qualities* and *quantities*” (SD 2:585) and also as “‘sleep-producing’ aquatic plants, and interior forces of nature” (TG 28).

In the Puranas the apsarases are sometimes divided into two classes, the daivika (divine or belonging to the devas), hence highly ethereal beings, and the laukika [from *loka* worldly], belonging to the worlds of manifestation, such as a physical plane. Considered apart from mythologic references, the apsarases bear a strong resemblance to the undines of medieval Europe, nature forces and elementals appurtenant to all ten ranges of their hierarchical distribution, from the spiritual to the grossly material and physical. Every one of the seven or ten cosmic elements (bhutas) or principles (tattvas) has its own class of inhabitants.

Apsu (Babylonian) **Abzu** (Sumerian) Also Ab Soo. The primordial deep; the waters of space in the Babylonian epic of creation *Enuma Elish* (when on high). From Apsu and Tiamat were born all the gods, man being fashioned from the clay of Apsu in a Sumerian version, and from the blood of Kingu, son and second consort of Tiamat, in *Enuma Elish*. The deep is the abode of Ea (wisdom) who saves humanity from destruction by Apsu, Apsu being transformed into still or stagnant subterranean waters.

The Babylonian hero-creator is Marduk, whose prowess against the monstrous forces of Tiamat (matter) caused the gods to endow him with the power to overcome them and to complete the creation of heaven and earth.

Apuleius, Lucius Second-century Latin writer, born and educated in North Africa. Student of Platonism at Athens and initiate into many of the Mysteries of his time; best known for his *Golden Ass* (*Metamorphoseon libri XI de Asino Aureo*), a satire on mores and religious conditions.

Aquarius (Latin) Pertaining to water; the water-bearer, the 11th sign of the zodiac. In astrology an airy, fixed, masculine sign, the principal house of Saturn, though sometimes said to be ruled by Uranus. In about 1898, the equinoctial point passed from Pisces to Aquarius of the stellar (movable) zodiac, thus initiating a new Messianic cycle succeeding that of Pisces — the fish-man, associated with Jesus Christ. The Gnostic sun god is depicted as a man covered with breasts, having a fish on his head and a sea monster at his feet, which plainly indicates the group of three signs — Pisces, Aquarius, and Capricorn — and points to a fourfold division of the zodiac, each division embracing three signs; Taurus perhaps represented by the Egyptian bull Apis, standing for the

triad of signs which preceded Aquarius.

The Brahmanical equivalent to Aquarius, presided over by the sky god Indra, is Kumbha, which Subba Row states is equivalent in its numerical value to 14, a number intended to represent the 14 lokas or chaturdasa-bhuvana (Theos, Nov 1881). Assigning the twelve sons of Jacob in the Hebrew system to the signs of the zodiac, Reuben is ascribed to Aquarius, who is “unstable as water”; also associated with Rimmon, the god of storms and rain (SD 2:353), and equated with Ganymede.

Arachne (Greek) In Greek mythology the daughter of the dyer Idmon of Colophon, who was so skillful a weaver that she dared to challenge Athena to a competitive trial. Indignant because Arachne had presumed to depict the amours of the gods in her weaving, Athena tore her work, Arache hung herself, and Athena turned the presumptuous maiden into a spider, doomed to spin her web forever. The amours of the gods woven by Arachne signify the weaving of the marvelous web of manifested existence in all its intricate hierarchical structure.

Araea. *See* AAREA

Arahant (Pali) *Arahant* [from the verbal root *arh* to be worthy; or from *ari* foe + the verbal root *han* to slay] The worthy one; enemy, slayer. One who has attained the highest state next to being a buddha, especially one who has freed himself from the asavas (Sanskrit asrava) — intoxication or bewilderment of mind or sense. The term arahant, like the Sanskrit arhat, is often popularly used for individuals of less exalted grade. *See also* ARHAT; ARAHATTA

Arahatta (Pali) *Arahatta* [from the verbal root *arh* to be worthy; or from *ari* enemy, foe + the verbal root *han* to slay] State of arhatship; in Buddhism the state or condition of an arahant, free from the asavas (intoxication of mind or sense); by extension of thought, final and complete emancipation, the state of nibbana (Sanskrit nirvana). *See also* ARHAT

Arambha (Sanskrit) *Ārambha* Beginning; the Hindu philosophic stance that a supreme divinity formed the universe out of pre-existing material. It includes the Nyaya and Vaiseshika schools of philosophy, the two atomistic schools, and corresponds to the scientific outlook in the Western division of science, religion, and philosophy. It “envisions the universe as proceeding forth as a ‘new’ production of already pre-existent cosmic intelligence and pre-existent ‘points’ of individuality, what we would call monads rather than atoms. Although such newly produced universe is recognized as being the karmic resultant of a preceding universe, the former ‘self’ of the present, nevertheless emphasis is laid upon *beginnings*, upon the universe as a ‘new’ production, very much as scientists construe the universe to be” (FSO 101; SOPh 33).

Arani (Sanskrit) *Araṇi, Araṇī* [from the verbal root *r* to tend upward, move, insert, fix] Moving around; being fitted in or inserted. Arani (sing) is one of the two ceremonial rubbing-sticks used to ignite the sacrificial fire: the upper stick, uttararani or pramantha, is held upright and set into a groove in the lower stick, adhararani, and when twirled or rotated rapidly it generates heat and

flame. According to the *Rig-Veda*, the upright stick was made from the sami tree (*Mimosa suma*), and the horizontal from the asvattha or pipal tree (*Ficus religiosa*), the sacred fig tree. In the *Satapatha-brahmana*, however, both sticks were carved from the wood of the asvattha.

The arani (dual) represent the father and mother elements in nature, the creative, generative energy producing the offspring from the receiver, the mother. While the male/female metaphor has application physiologically, it may be interpreted cosmically: “this idea of the creative power of fire is explained at once by the ancient assimilation of the human soul to a celestial spark” (M. G. Dech 261); again “The ‘female Arani,’ the mistress of the race, is Aditi, the mother of the gods, or Shekinah, eternal light — in the world of Spirit, the ‘Great Deep’ and Chaos; or primordial Substance in its first remove from the Unknown, in the manifested Kosmos” (SD 2:527).

Aranya (Sanskrit) *Āraṇya* [from *araṇya* distant land, wilderness] As an adjective, relating to a forest, wild; as a noun, a wild animal.

Aranyaka (Sanskrit) *Āraṇyaka* [from *āraṇya* forest-like from *araṇya* wilderness, forest] Forest-born; a hermit or holy man who dwells in the forest during the process of becoming a genuine spiritual yogi. Aranyakas (plural) are a class of Vedic treatises of a mystical nature attached to the Brahmanas and closely associated with the Upanishads. They were called such either because they were written in the solitude of the wilderness or because they were intended for study and contemplation by those who had retired from the world to lead the life of spiritual recluses. The Aranyakas are ritualistic, treating of special ceremonies either omitted or dealt with only in part in the Brahmanas, and hence are considered to be supplemental to the latter.

Only four Aranyakas are presently known to exist: the *Aitareya* (Rig-vedic) forming part of the *Aitareya-Brahmana*; the *Kausitaki* (Rig-vedic) whose third and final chapter is the *Kanusitaki Upanishad*; the *Taittiriya*, of ten books, belonging to the *Yajur-Veda*; and the *Brihad* (Yajur-Veda) which forms a part of the *Brihadaranyaka Upanishad* attached to the *Satapatha-Brahmana*.

Ararat (Hebrew) *’Arārāt* The mount on which the ark is supposed to have rested at the first subsiding of the flood. Mystically, the earth, in reference to the preservation of the human seed by incarnation on earth. The Chaldean equivalent is Nizir; the Arabian, Jebel Judi; the Hindu, Himalaya (SD 2:145). The Biblical flood is symbolic, as there never was a universal deluge covering all the earth.

Arasa-mara (Sanskrit) *Arasa-mara* [from *arasa* sapless, tasteless + *mara* dying, death] The banyan tree, considered in one of its aspects as the Tree of Knowledge or the Tree of Life. According to popular Hindu belief, under one of these trees Vishnu taught during one of his incarnations on earth, hence it is held sacred. “Under the protecting foliage of this king of the forests, the Gurus teach their pupils their first lessons on immortality and initiate them into the mysteries of life and death” (SD 2:215).

Arba-Il (Hebrew) 'Arba'-'ēl [from 'arba' four + 'ēl divinity] Four great divinities synthesized into a unity; mystically the four are one, precisely as the divine triad in nearly all ancient religious philosophies are both a divine unity and a trinity — one in three, three in one, according to the Christian system. “This is the Kabalistic abstract Trinity, so unceremoniously anthropomorphized by the Fathers. From this triple one emanated the whole Kosmos. First from one emanated number two, or Air, the creative element; and then number three, *Water*, proceeded from the air; *Ether* or *Fire* complete the mystic four, the Arba-il” (SD 1:447). “These are the ten Sephiroth out of Space (or the Void); One, from the Soul of the 'Elohim (or divinities) of living beings emanated Soul (Air); from the Air Water; from the Water Fire or Ether”; and from this last the manifested universe (Sepher Yetzirah 1:9). *See also* 'AHATH-RUAH-'ELOHIM-HAYYIM.

Arca. *See* ARK

Arcana (Latin) Secrets, mysteries; in ancient times almost invariably what was secret, sacred, and taught in silence and privacy in the Mysteries, whether such teachings comprised the revelation of truth, the explanation of difficult points regarding ceremonies, or the hidden wisdom.

Arcanum (singular) sometimes meant in medieval and modern Europe, an elixir, philosopher's stone, or magical agent, whether physical or spiritual.

Arc(s), Ascending and Descending Also Luminous and Shadowy Arcs. A cycle of development, such as that of a planetary chain, can be divided into two halves, the first from the first globe to the middle of the most material globe, and the other extending from this midpoint upwards to the last globe. The first half is the downward or shadowy arc; the second is the ascending or luminous arc. The descending arc represents an involution of spirit and a concurrent evolution of matter resulting in a progressive materialization of spirit and a continuous grossening or concretion of the texture of matter; the ascending arc represents an evolution of spirit and involution of matter, resulting in a progressive dematerialization, spiritualization, or refinement of matter as it increasingly manifests the qualities of spirit. Yet spirit and matter are fundamentally one essence at different stages of development.

Archaeus, Archeus [from Greek *archaios* original, ancient] Used by Paracelsus and others after him to denote the unitary cosmic or human spiritual-vital force or essence. It is one aspect of the anima mundi and therefore the source of all astral-physical phenomena, whether as energy or substance; also called Father-Ether.

From another standpoint, Archaeus is one phase of fohat manifesting as energy on lower planes of the universe. Indeed, even in a spiritual sense archaeus in its highest portions may be called fohat itself, as it is a combination of intelligent energy and original substance working as soul and vehicle.

Archangel [from Greek *arch* higher, original + *angelos* messenger] A higher or original order of

angels; cosmic powers synonymous with the highest class of dhyani-chohans. In Christian legend, they number seven; in the Koran, four. In Catholic theology, the eighth of the nine divisions in the divine hierarchy. Jewish astrology associates the archangels with the planets: Raphael with the Sun, Gabriel with the Moon, Michael with Mercury, Aniel (Anael) with Venus, Samael with Mars, Zadkiel (Sachiel) with Jupiter, and Kafziel (Cassiel) with Saturn. In medieval Europe, influenced by the Islamic system of Averroes, the planets of Michael and Raphael were reversed. The archangels parallel the Babylonian planetary spirits, the Zoroastrian amesha spentas, and the Hindu adityas.

Archebiosis [from Greek *arch* original + *bios* life] Life from the beginning; in some scientific uses, life not derived from life, spontaneous generation. Such generation occurs even today but pertains specially to certain stages of evolution. Archebiosis is used to designate a life origination occurring in a fifth stage of evolution (SD 1:455); but this origination means a manifestation of life on the seven planes concerned.

Archetypal World or Universe [from Greek *archetypos* original pattern] Either an abstract type in the divine mind, or a subtle form which is the model for a grosser form. In the processes of cosmic manifestation, forms are built by the builders working on a particular plane from abstract models already existing on a higher plane. In order for ideation to pass from the abstract into the concrete or visible form, the creative logoi see in the ideal world the archetypal forms of all and proceed to build upon these models forms both evanescent and transcendent (SD 1:380).

The Archetypal Man of the Qabbalah is the host of the higher dhyani-chohans collectively called 'Adam Qadmon or the upper triad of the ten Sephiroth, also svabhavat or the fourfold anima mundi, whence proceed the creative, formative, and material worlds. The archetypal world has three planes, corresponding to the First, Second, and Third Logoi, and to parabrahman with mulaprakriti or to Brahman with pradhana. In the human hierarchy, this is paramatman (the supreme self) from which fall the armies of rays which permeate every atom on every plane, constituting the unity in the divine selfhood which is the essence of all. In contrast with the septenary hierarchy below, this upper triad is called arupa (formless).

Archetypal world is also used to designate the fourth cosmic plane.

Archeus. See ARCHAEUS

Architects [from Greek *architektones* master-builders] Among groups of the creators such as the cosmocratores, demiourgoi, and dhyani-chohans, architect applies to the designers, those possessing and using the ideational faculties, and the term builder applies to the workmen or those who execute the general design. "The architects form the higher or more spiritual side, and actually form the line of the luminous arc; and the builders or constructors form, on the other hand, the shadowy arc" (Fund 507-8). The architects are the dhyani-buddhas, the principle creators, the elohim, synthesized by demiourgos; they follow the plan of the inherent divine thought.

Architecture [from Latin *architectura* from Greek *architekton* master-builder] Signifies not building in itself, but the science or art of building in accordance with certain principles or rules which endure through the ages, because rooted in cosmic order and beauty. Architecture is reckoned as one of the five great arts, and the monuments of antiquity in whatever land show clearly that those who designed them had, besides a knowledge of materials and the technique of using them, some knowledge at least of the great cosmic laws of harmony and beauty, and their derivative, proportion.

Primeval self-conscious humanity — not savage by any means, however much it may have needed spiritual guidance — was watched over and protected by divine instructors, and among the arts taught by these great beings, architecture had a prominent place: “No man descended from a Palaeolithic cave-dweller could ever evolve such a science unaided, even in millenniums of thought and intellectual evolution. It is the pupils of those incarnated Rishis and Devas of the third root race, who handed their knowledge from one generation to another, to Egypt and Greece with its now lost *canon of proportion*. . . . It is Vitruvius who gave to posterity the rules of construction of the Grecian temples erected to the immortal gods; and the ten books of Marcus Vitruvius Pollio on Architecture, of one, in short, *who was an initiate*, can only be studied esoterically. The Druidical circles, the Dolmens, the Temples of India, Egypt and Greece, the Towers and the 127 towns in Europe which were found ‘Cyclopean in origin’ by the French Institute, are all the work of initiated Priest-Architects, the descendants of those primarily taught by the ‘Sons of God,’ justly called ‘The Builders’ ” (SD 1:208-9n).

Archobiosis. See ARCHEBIOSIS

Archon, Archontes (Greek) *’archon*. Ruler; originally celestial beings, these primordial planetary spirits or dhyanichohans transfer their mystic fluids or essences into their “shadows” or vehicles, thus enabling them to manifest on the various planes of the universe. In one sense, they are the fallen angels, counterparts alike of the highest celestial beings of the hierarchies and of the human personalities at the lowest rung of the ladder of emanations. Hence they are humanity’s teachers or guardian angels, made by theology into evil spirits, and contrasted with archangels, their own supreme and primordial essences. These beings are concerned with a kind of hypostatic action or a transference of consciousness, vitality, and force from a higher to lower planes through various vehicles or sheaths in which the descending ray clothes itself on the different planes of the universe that it traverses.

Archon also was the Athenian name for the supreme authority established after the abolition of royalty in 1068 BC. After 683 BC nine were chosen by election or lot, each holding office for one year, one of whom, the Archon Basileus (ruler king), was the initiated and initiating hierophant in the Mysteries of Eleusis. In accordance with all ancient initiations the initiator, whether supreme or secondary, was held to be an imbodiment, at least temporarily, of spiritual-intellectual powers

which worked for the time being through him.

Archytas of Tarentum (flourished 400-365 BC) Greek Pythagorean philosopher, general, statesman, scientist, and mathematician, contemporary of Plato. He was the first to distinguish harmonic progression from arithmetical and geometric progression, is credited with inventing the pulley, and contributed to the study of acoustics, music, and mathematics.

Ard-Asr

Ardan. *See* ERIDANUS

Ardeshan Zoroastrian teacher who, according to the Christian Eutychius, was appointed by Nimrod to watch the sacred fire. A voice from the fire told him that priests of the Magians must commit incest, which Blavatsky explains as a misconstruction of the idea of uniting oneself to the earth, our mother; humanity, our sister; and science, our daughter. (BCW 3:459)

Ardhamatra (Sanskrit) *Ardhamātra*, *Ardhamātrā* [from *ardha* half + *mātra* or *mātrā* a metrical unit] Half a short syllable; the *Nadabindu-Upanishad* in speaking of Aum says that the syllable or character A is considered to be Kalahamsa's right wing; U, the left wing; M, the tail of the Swan, and the ardhmatra its head (cf VS 5, 74-5). In the *Mahabharata* kalahamsa is the name of several species of the hamsa bird, a goose or swan. Ardhmatra is a mystical term for one of the portions of the swan of time — Brahma or the manifest or Third Logos of the universe, whose emanation or creative activity is hamsa-vahana (the vehicle or carrier of the swan). Ardhmatra, therefore, has reference to the egoic individuality of the cosmic Third Logos or Brahma (also called Purusha), considered to be “one-half the measure” of the eternal past and the eternal future — such egoic individuality being the product in space and time of the continuously re embodying spirit of the universe, evolving and changing its nature by evolution as the cycles of time pass from the present into the past, and forwards into the future.

Ardhanari or **Ardhanari-natesvara** (Sanskrit) *Ardhanārī*, *Ardhanārī-nāṭeśvara* [from *ardha* half, middle + *nārī* woman; *nāṭeśvara* from *nāṭa* dancer + *īśvara* lord] Half-female; lord of dancers. The androgynous aspect of Siva cosmically, when bearing the duality of the polarized forces of nature — what is generally termed on lower planes masculine and feminine. Blavatsky depicts Ardhnanari surrounded by the six-pointed star or seal of Vishnu and compares it to the wheel of Adonai of the Hebrew seer Ezekiel (IU 2:453). *See also* ARDHANARISA

Ardhanarisa or **Ardhanarisvara** (Sanskrit) *Ardhanārīśa, Ardhanārīśvara* [from *ardha* half + *nārī* woman + *īśvara, īśa* lord] Half-feminine lord; a form of Siva, also applied to the first cosmic androgyne, equivalent to the mystically androgynous Sephirah-'Adam Qadmon of the Qabbalah. Cosmic entities are not sexual or sexed in the human sense, for sex as known in the human and animal kingdoms is a transitory phase of evolution. The application of terms such as androgyne, masculine, or feminine to cosmic divinities has reference to states of cosmic force or energy and substance which may be polarized or unpolarized. Human energies and substances in our present evolutionary stage — and this applies likewise to the animal kingdom, and to a degree to the vegetable kingdom — are divided into opposites which bring about sex conditions. When the forces are partially polarized, the androgynous or hermaphroditic condition results. When the forces or substances are unpolarized during pralayas and at the beginnings and endings of manvantaras, then each entity contains within itself and manifests a state of undivided unity — a complete and perfect individual.

Ares, Areus (Greek) God of war, equivalent of the Latin Mars; commonly the god of battles, bloodshed, and strife. In a higher sense he is Migmar of the crimson veil, the light of daring burning in the heart, the dauntless energy that fights its way to supernal truth.

Paracelsus adopted Ares as signifying the power back of the differentiating forces in the kosmos, or those differentiated forces themselves, which Blavatsky equates with fohat.

Aretia Considered by some a female form of Artes (Egyptian Mars). Berosus states that Titaea Magna was called Aretia and worshiped with the earth, while Diodorus identifies Titaea with the mother of the Titans. In consequence Aretia represents earth considered as a source of being or the generative principle (SD 2:143-4&n).

Arets, Aretz (Hebrew) 'Erets With the definite article, *ha-'arets*. The earth, globe, ground, land, country; particularly dry land in contradistinction to water. In cosmogony the original veil or garment surroundings, as wrap or vehicle of expression, a cosmic monad within it; just as in India pradhana surrounds and manifests Brahman, or mulaprakriti with parabrahman.

Arg. See ARK

Argeak, Argenk A mythologic giant who, according to Persian traditions, built a gallery in the mountains of Kaf, in which there are statues called Sulimans (Solomon) or the “wise kings” of the East. These statues are said to depict ancient men in all their forms.

Argen. See ARGEAK

Argha (Sanskrit) *Argha* [from the verbal root *arh* to be worthy of, merit] Worth, value; respectful reception of a guest of distinction by various offerings, such as flowers, durva grass, or water in a small boat-shaped vessel or container; often confused with the Chaldean Argha. See also ARGHYA

Argha (Chaldean). *See* ARK

Arghya (Sanskrit) *Arghya* [from the verbal root *arh* to be worthy, deserve] Variant of argha. As an adjective, venerable, deserving; as a noun, an oblation reverently offered to gods or exceptionally worthy human beings and consisting of flowers, water, rice, and durva grass; also the container or vessel in which the libation is made.

Arghyanatha (Sanskrit) *Arghyanātha* [from *arghya* worthy + *nātha* lord, protector] Lord of libations, a title of the Mahachohan (SD 2:416n).

Arghyavarsha (Sanskrit) *Arghyavarṣa* [from *arghya* worthy, valuable + *varṣa* raining, cloud, division of the earth separated by a mountain range from *vṛṣ* to rain, bestow abundantly] Land of libations; “the mystery name of that region which extends from Kailas mountain nearly to the Schamo Desert — from within which the *Kalki Avatar* is expected” (SD 2:416n). *See also* AIRYANMEN VAEJA

Argonauts In Greek mythology, those who sailed in the ship Argos with Jason, a generation before the Trojan War, on his quest to retrieve the golden fleece from Aea or Colchis on the Black Sea. Besides Jason, among the fifty heroes were Hercules, Castor and Pollux, and Orpheus.

Argus, Argos (Greek) Shining, bright-eyed; a giant in Greek mythology also called Panoptes (the all-seeing) because he had a hundred eyes, so that they were never all closed at once. Hera appointed Argus to keep watch over Io in the form of a heifer, but Zeus sent Hermes, who managed to lull Argus to sleep and then slaid him. Hera collected the eyes and put them into the tail of the peacock.

Also a son of Phrixus and Chalciope, said to have built the Argo; or to have been shipwrecked and carried to Colchis by the Argonauts.

Argua. *See* ARK

Arhan. *See* ARHAT

Arhat (Sanskrit) *Arhat* [from the verbal root *arh* to be worthy, merit, be able] Worthy, deserving; also enemy slayer [from *ari* enemy + the verbal root *han* to slay, smite], an arhat being a slayer of the foe of craving, the entire range of passions and desires, mental, emotional, and physical. Buddhists in the Orient generally define arhat in this manner, while modern scholars derive the word from the verbal root *arh*. Both definitions are equally appropriate (Buddhist Catechism 93).

As a noun, originally one who had fully attained his spiritual ideals. In Buddhism arhat (Pali arahant) is the title generally given to those of Gautama Buddha’s disciples who had progressed the farthest during his lifetime and immediately thereafter; more specifically to those who had attained nirvana, emancipation from earthly fetters and the attainment of full enlightenment. Arhat is broadly equivalent to the Egyptian hierophant, the Chaldean magus, and Hindu rishi, as

well as being generally applicable to ascetics. On occasion it is used for the loftiest beings in a hierarchy: “The *Arhats* of the ‘fire-mist’ of the 7th run are but one remove from the Root-base of their Hierarchy — the highest on Earth, and our Terrestrial chain” (SD 1:207).

Arhat is the highest of the four degrees of arhatship or the fourfold path to nirvana, of which the first three are srotapatti (he who has entered the stream), sakridagamin (he who returns to birth once more), and anagamin (the never returner who will have no further births on earth).

Arhat is both the way and the waygoer; and while the term is close philosophically to anagamin, the distinction between the two lies in their mystical connotations rather than in their etymological definitions. Arhat has a wider significance inasmuch as it applies to those noblest of the Buddha’s disciples who were “worthy” of receiving, because comprehending, the Tathagata’s heart doctrine, the more esoteric and mystical portions of his message.

As early as one hundred years after the Buddha died and had entered his parinirvana, differences in the doctrines and discipline of the Order become manifest. In the course of the centuries two basic trends developed into what has become popular to call the Hinayana (the lesser vehicle or path) or Theravada (doctrine of the elders), and Mahayana (the greater vehicle or path). The Theravada emphasized the fourfold path leading to nirvana, total liberation of the arhat from material concerns. The Mahayana held the bodhisattvayana as the ideal, the way of compassion for all sentient beings, culminating in renunciation of nirvana in order to return and inspire others “to awake and follow the dhamma.” It is this fundamental difference in goal that characterizes the Old Wisdom School (arhatship) from the New Wisdom School (bodhsattvahood). *See also* BUDDHA OF COMPASSION; PRATYEKA BUDDHA

Ariadne (Greek) In Greek mythology, the daughter of King Minos of Crete, who fell in love with Theseus when he came to kill the Minotaur confined in the labyrinth. She gave Theseus a clue of yarn or thread by means of which he found his way out of the labyrinth again. Ariadne fled with him, but he abandoned her on the Isle of Naxos at the request of Dionysos, who then married her and raised her to immortality. Ariadne was identified in Italy with Libera, goddess of wine. “*Analogy* is the guiding law in Nature, the only true Ariadne’s thread that can lead us, through the inextricable paths of her domain, toward her primal and final mysteries.” (SD 2:153)

Arian Heresy Originated by Arius (d. 336), a presbyter in Alexandria who did not confuse the cosmic Logos with its ray on earth, the Christ entity, whose human expression was called Jesus. Arius could not accept a consubstantial trinity with the human Son as the first or second remove from its Father aspect — he made a sharp distinction between the three Logoi and any human expression of such logoiic triad manifesting on earth as an inspired man. Arius in consequence taught that God was alone, unknowable, and separate from every created being; that the Son, or creative Logos was created by God, who through this Logos brought forth the world and all that is in it. He held, therefore, that Christ was not God in the fullest sense and should be worshiped as a

secondary deity, and that at the incarnation the Logos assumed a body but not a human soul. Arianism was condemned as heretical at the Councils of Nicaea (325) and Constantinople (381).

'Arikh 'Anpin (Aramaic) *'Arīkh 'Anpīn* [*'arīkh* long, great + *'anpīn* face, countenance] Long Face or the Great Visage; Qabbalistic term applied to Kether, the first emanation of the Sephirothal Tree, equivalent to the Greco-Latin Macroprosopus. Also called *'Arich 'Appayim*, the latter word in the dual, so that the phrase means “long of faces” or “long of countenances”: duality or the upper and the lower being referred to. This first Sephirah is called by at least seven names, among them being Crown, Primordial, White Head, and Long Face. From Kether emanate the remaining nine Sephiroth. “The first emanation is the Ancient, beheld Face to Face, it is the Supreme Head, the Source of all Light, the Principle of all Wisdom, whose definition is, Unity” (Zohar iii, 292b).

Aries The ram; the first sign of zodiac, in astrology a masculine, cardinal, fiery sign which governs the eastern quarter and, in the human frame, the head. It is the positive house of Mars and the exaltation of the sun.

In Sanskrit it is called Mesha, presided over or dedicated to the Vedic divinity Varuna, one of the interpretations of the latter being the primeval ocean of galactic space. The twelve great gods of the ancients were equivalent to the celestial regents presiding over the twelve signs of the zodiac. Equating the sons of Jacob with the signs of the zodiac, Aries falls to Gad.

If we take 1897-8 as date of the approximate entry of the sun into Aquarius, the Aries cycle would then have begun about 2400 BC [[originally given as 2443 BC, Blavatsky gives 2410 BC in BCW 8:174n]] and closed around 263 BC when the Pisces cycle began. This agrees very well with other calculations based on the 25,920 years of the precessional cycle, and with very early Babylonian zodiacal records, making due allowance for the uncertainties inherent in the problem.

Arimaspi, Arimaspes (Greek) *arimastioi*. In Greek mythology, a one-eyed people of the extreme northeast of Scythia, perhaps near the region of eastern Altai, mentioned by Aristeas of Proconnesus, from whom Herodotus derives his account. They stole gold from the griffins who guarded it, and Apollo destroyed them with his shafts. The allegory, which is mixed up with history in Herodotus' account, refers to the supersession of a degraded remnant of third-eye people by the coming fifth root-race, as in the case of the Cyclopes.

Arion (Greek) In Greek mythology, the first and fleetest horse, offspring of Poseidon or Neptune (god of the sea) and Ceres (goddess of the harvest). Also a Greek poet and musician of Lesbos (fl. 625 BC), best known for having been rescued on a dolphin's back after an attempt was made to drown him at sea for his treasure. “Arion, their progeny, is one of the aspects of that ‘horse,’ which is a cycle.” (SD 2:399n)

Aristarchus of Samos (ca. 270 BC) Greek mathematician and astronomer. “The immobility of the Sun and the orbital rotation of the earth were shown by Aristarchus of Samos as early as 281 B.C.”

(SD 1:117&n)

Arithmomancy Interpretation by means of numbers, or divination by means of numbers. The Pythagoreans and Plato used the numerical key in theogony and cosmogony, based on the science of correspondences as prevailing among gods, men, and numbers or numerical quantities. Hence, the numerical key to nature can be used as the basis of various methods of divination for the discovery of truth or error.

Arius. See ARIAN HERESY

Ariya Atthangika Magga (Pali) *Ariya Aṭṭhaṅgika Magga* [from *ariya* noble + *aṭṭhaṅgika* eight-limbed, eightfold from *aṭṭha* eight + *aṅga* limb, division + *magga* way, road from the verbal root *mṛg* to track, trace, investigate] Noble eightfold path; the fourth of the Four Noble Truths (chattari ariyasachchani) traditionally held to constitute the initial discourse of Gautama Buddha, comprising: 1) right insight (sammaditthi); 2) right resolve (sammasamkappa); 3) right speech (sammavacha); 4) right action (sammakammanta); 5) right living (sammajiva); 6) right effort (sammavayama); 7) right mindfulness, right recollection (sammasati); 8) right concentration (sammasamadhi). See also ARYASHTANGAMARGA (for Sanskrit equivalents).

Ariyasachcha (Pali) *Ariyasacca* [from *ariya* noble, distinguished, of high birth + *sacca* real, true] Noble truth; in the plural, the Four Noble Truths (chattari ariyasachchani) set forth by Gautama Buddha in his first sermon: 1) pain (dukkha); 2) cause, origin of pain (samudaya) is desire (panha); 3) destruction of desire eliminates pain (nirodha); and 4) the road or footpath (magga), the noble eightfold way (ariya atthangika magga). See also ARYASATYA (for Sanskrit equivalents)

Arjuna (Sanskrit) *Arjuna* White, clear; third of the Pandu princes, son of the god Indra by Kunti, also known as Pritha. During the fratricidal war between the Kauravas and the Pandavas which forms the bulk of the *Mahabharata*, Arjuna and his opponent, Duryodhana, seek Krishna's aid. Krishna offers them a choice: his well-equipped army or himself, weaponless. According to protocol, Arjuna, being the younger of the two, was given first choice. To the immense delight of Duryodhana, Arjuna chose his brother-in-law, Krishna, who agreed to serve as his charioteer, i.e., his counselor and friend.

Mystically, Arjuna represents Everyman, the human ego, in contradistinction to Krishna, who stands for the spiritual monad as well as the avatara who comes forth from age to age in order to overthrow adharma (lawlessness) and restore dharma (respect for law, justice, and truth) in the land (BG 4:7-8).

The complete *Bhagavad-Gita* is a good deal longer than the 18 chapters that form the philosophical instruction imparted by Krishna to Arjuna on the eve of the 18-day contest that is to follow. While the preliminary portion lacks philosophic content, it gives the setting and background for the *Gita*.

Arjuna-misra (Sanskrit) *Arjunamisra* A commentator on the *Mahabharata*.

Ark [from Latin *arca* chest] A chest, covered basket, or other closed receptacle; the womb of nature, wherein are preserved the seeds of preceding ages which at a later date inaugurate and unfold into a new system of evolutionary development. Thus reappears after its periodic rest a new universe, solar system, planet, or being such as man; each such entity being the reimpodiment of a previously living entity. The connection with *sishtas* is apparent.

The ark or *argha* was used by the high priests in ceremonials connected with nature goddesses such as Ishtar or Astarte: at such times the representative emblem or ark was shaped as an oblong vessel, and occasionally fish-shaped, the most familiar instance being the Ark of the Covenant. Oftentimes a mystical flame representing reproducing life was associated with the ark, which thus became a distinctly phallic emblem of maternal reproduction, and also referred to the spiritually and intellectually generative power of the upper triad working in and through the lower quaternary of the septenary principles of either nature or man.

The crescent moon, because of its curved form, either represented the mystic ark itself or was conjoined with it in various manners, for the moon in archaic teaching was the fecund yet presently dead mother of our earth, the latter being its reimpodiment. Thus the moon stood as an emblem of the cosmic matrix or ark floating in and on the watery abyss of space — just as the ark in the Jewish form of this cosmogonic legend was associated with the flood waters as the bearer of all the seeds of lives. In the view of the later rather materialistic Hebrew rabbis the human womb became the *maqom* or ark, the place representative on earth of what the moon was in the cosmic sphere.

It was natural in time to connect the ark with a ship, as in the symbolism of the ancient Egyptian boat, on which the chest or typical ark was so prominently placed as the repository or womb of the seeds of lives.

Thus the ark has both a cosmic and a human significance. In one sense it is man himself who is the ark; for, having appeared at the beginning of sentient life, man (as he then was) became the living and animal unit, whose cast-off clothes determined the shape of every life and animal in this round. In its widest sense the symbolism refers to the first cosmic flood, the primary creation, and so the ark also is Mother Nature; but it likewise refers to terrestrial deluges where its application is twofold, for it means the saving of mankind through physical generation, and also cyclic deluges, especially the Atlantean one. The ark is *argha* in Chaldean, *vara* in Persian, and is referred to in the stories about Noah, Deucalion, Xisuthrus, Yima, etc. The ark in which the infant Moses is saved is an instance of many similar legends conveying the same root idea. The ark, therefore, is the receptive aspect of the principle of reproduction and regeneration, ranging from the most fundamental Mother Nature to her every correspondence on the various planes.

Arka (Latin). *See* ARK

Arka (Sanskrit) *Arka* [from *arc* to shine, be brilliant, honor, praise] A ray, flash of lightning, hence a name for the sun; used in compounds, such as arkakara (sunbeam), arkagraha (solar eclipse), arkadina (solar day), arkaja (sunborn, coming from the sun), etc.; a name for Indra and for fire; also a hymn, song.

Arkites The priests who were associated with the ark, whether Egyptian or Hindu, seven in number, like the priests of the Egyptian Tet “or any other cruciform symbol of the *three* and the *four*, the combination of which gives a male-female number. The *Argha* (or ark) was the four-fold female principle, and the flame burning over it the triple *lingham*” (TG 31).

Ark of Isis In ancient Egypt deities were frequently associated with a boat in the temple ceremonies. “At the great Egyptian annual ceremony, which took place in the month of Athyr, the boat of Isis was borne in procession by the priests . . . This was in commemoration of the weeping of Isis for the loss of Osiris . . .” (TG 30). *See also* ARK

Ark of the Covenant The coffer or chest in the Holy of Holies of the Jewish synagogue. All ancient religions used the mystical ark, or something similar, in their respective ceremonial worships: “Every ark-shrine, whether with the Egyptians, Hindus, Chaldeans or Mexicans, was a phallic shrine, the symbol of the *yonis* or womb of nature. The *seket* [sektet-boat] of the Egyptians, the ark, or sacred chest, stood on the *ara* — its pedestal. The ark of Osiris, with the sacred relics of the god, was ‘of the same size as the Jewish ark,’ says S. Sharpe, the Egyptologist, carried by priests with staves passed through its rings in sacred procession, as the ark round which danced David, the King of Israel. . . . The ark was a boat — a vehicle in every case. ‘Thebes had a sacred ark 300 cubits long,’ and ‘the word *Thebes* is said to mean *ark* in Hebrew,’ which is but a natural recognition of the place to which the chosen people are indebted for their ark. Moreover, as Bauer writes, ‘the Cherub was not first used by Moses.’ The winged Isis was the cherub or *Arieh* in Egypt, centuries before the arrival there of even Abram or Sarai. ‘The external likeness of some of the Egyptian arks, surmounted by their two winged human figures, to the ark of the covenant, has often been noticed.’ (*Bible Educator*.) And not only the ‘external’ but the *internal* ‘likeness’ and sameness are now known to all ” (TG 30).

Aroeris, Haroiri (Greek) **Heru-ur** (Egyptian) *Heru-ur* [from *heru* he who is above + *ur* the aged] Horus the elder, as distinguished from Heru-pa-khart (Horus the younger) — these two gods are often confused because there are the cosmic Osiris and Isis known as Ra (the sun god) and Hathor, whose son was the Older Horus, and there are likewise the more commonly known Osiris and Isis of our own globe, whose son was the Younger Horus. Aroeris is a deity associated with the sun, and the head of a triad of deities, the other two members being his consort Ta-sent-nefert and their son P-neb-taui (the child). His principal seats of worship were at Sekhemet (Latopolis) and at Ombos where Heru-ur absorbed all the characteristics and qualities of Shu, while his consort took on the characteristics of Tefnut. Heru-ur is depicted in the form of a man (or lion) with the head of

a hawk, wearing the crowns of the South and North Egypt united — meaning cosmogonically, the material and the spiritual universes — surmounted by a crown of plumes, uraei, and the disk of the sun.

Plutarch designates Aroeris as the son of Kronos and Rhea (i.e., Seb and Nut), which would make him the brother of Osiris, also the son of Nut. Originally Heru-ur was the twin god of Set, being the Face of the Sun by day, while Set was the Face by night. One representation of him is with the horns and the solar disk, similar to Khnemu or Khnum, with whom he is equivalent.

“If we bear in mind the definition of the chief Egyptian gods by Plutarch, these myths will become more comprehensible; as he well says: ‘Osiris represents the beginning and principle; Isis, that which receives; and Horus, the compound of both. Horus engendered between them, is not eternal nor incorruptible, but, being always in generation, he endeavours by vicissitudes of imitations, and by periodical passion (yearly re-awakening to life) to continue always young, as if he should never die.’ Thus, since Horus is the personified physical world, Aroueris, or the ‘elder Horus,’ is the ideal Universe; and this accounts for the saying that ‘he was begotten by Osiris and Isis when these were still in the bosom of their mother’ — Space” (TG 31). *See also* HORUS

Arrhetos (Gnostic) Ineffable, unspeakable or, as used in Greek mystical philosophy, not to be divulged. Connected with the Greek Mysteries and of constant occurrence in Greek mystical literature dating from earliest times. Whatever was considered too holy, too sacred, or improper from every aspect to divulge to the public whether in speech or writing, was called arrheton (neuter). The word was taken over by the Gnostic sects and signified among other matters the sevenfold nature of the one formative Logos, the first cosmic hebdomad or septenary (this name of the ineffable is composed of seven letters in the Greek).

Artemis (Greek) Greek divinity, commonly identified with the Roman Diana, daughter of Leto and Zeus, twin of Apollo. Goddess of chastity and protectress of youths and maidens against the wiles of Aphrodite, she is celebrated in Arcadian rites and legends which are older than those of Homer. These show her to be a nature goddess, patroness of fields and forests, goddess of life-giving waters, marshes, rivers, and springs. As goddess of agriculture, she brings increase to the fields, drives away mice and pests, and is the friend of the sower and reaper. The legend of the Calydonian boar shows her to have been worshiped as a harvest goddess. She was also called the tamer, the goddess of the chase, and the healer. She is the protector of the beasts, rather than their persecutor in the chase.

Artemis was also the protectress of mankind and was specially active in regard to the education of the child and youth. Boys and girls were consecrated to her in the temples. She was goddess of marriage and presided over births. Her chief festival, that of Ephesia or Artemisia, was held in the spring.

The connections of various kinds between Aphrodite (or Venus) and the moon, represented under

various names, were numerous and highly suggestive. In fact, the Aphrodite Pandemos (the common and popular) was more intimately connected with the lunar powers and attributes than even with Venus. The moon, for instance, under the name Lucina, presided over births; under the name Diana was referred to as being the giver of life and lives, of abounding vitality; and under the name Hecate was the goddess of the underworld because the bringer of disease, decrepitude, and death.

Artes. See ARETIA

Arthur, King (Welsh) A dual figure: historical ruler who held up for forty years or so the Saxon incursions; said to have passed (not died) at or after the Battle of Camlan (540 AD). The mythological Arthur was the son of Uther Pendragon, or Uthr Ben, the Wonderful Head. In Prydwen, his Ship of Glass, he made an expedition into Annwn (the underworld) to obtain the Pair Dadeni, or cauldron of reincarnation, the symbol of initiation. As the king that was and shall be, he appears in the Welsh version of the coming of the Kalki-avatara, which will come to pass at the end of the present yuga. After Camlan he was taken to Ynys Afallen (Apple-tree Island), to be healed of his wounds and to await his return. But the apple tree of the island, as we see in the 6th-century poem "Afallenan" by Myrddin Gwyllt, is the Tree of Wisdom. The poem tells how the tree had to be hidden and guarded, but the time would come when it should be known again: then Arthur would return, and Cadwalaor, and then "shall Wales rejoice; bright shall be her dragon (leader). The horns of joy shall sound the Song of Peace and serenity. Before the Child of the Sun, bold in his courses, evil shall be rooted out. Bards shall triumph."

Artufas, Estufas Initiation caves or the underground secret temples of the Central American Indians, called kivas by the Indians of the southwestern United States.

Arudha (Sanskrit) *Ārūḍha* [from *ā-ruh* to mount, rise up] Mounted, ascended, raised up, attained; attainment. Used in compounds, such as indriyarudha (perceived, brought under the cognizance of the senses); yogarudha (absorbed in profound meditation, attainment of yoga or union).

Aruna (Sanskrit) *Aruṇa* [from the verbal root *ṛ* to move, rise, tend towards] Reddish-brown, ruddy (the color of morning as opposed to the darkness of night); dawn personified, sometimes represented as the charioteer of the sun. In the *Ramayana*, Aruna is the father of the fabulous bird Jatayu, king of the vultures, slain by Ravana. In the *Vishnu-Purana*, Aruna is one of the two sons of Kasyapa by Vinata; called Suparna, he is "king of the feathered tribes, and the remorseless enemy of the serpent race" (1:21).

In Buddhist writings Aruna is the name of 1) a Kshatriya king who sired Sikhi Buddha; 2) a class of gods; 3) a naga or serpent-king; 4) a king of Potali in Assaka who, being victorious in battle against the Kalinga king, won the latter's four daughters; and 5) a pleasure ground near Anupama where the Buddha Vessabhu, a week after attaining enlightenment, delivered his first discourse.

Arundhati (Sanskrit) *Arundhatī* [probably from *a* not + the verbal root *rudh* to check, restrain, bind] One who releases, frees, unbinds; a medicinal climber, with power to heal severe wounds; consort of the sage Vasishtha; consort of Dharma, meaning established law, procedure, truth, referring in this case to the cosmos; from Arundhati were born “the divisions of earth” (VP 1:15); personification of the morning star, Phosphoros or Lucifer-Venus of the ancient Greeks and Latins, one of the seven stars of Ursa Major; power invoked by the bridegroom for conjugal excellence; name of kundalini, the occult energy in humanity symbolized by a coiled serpent said to lie latent at the base of the spinal column until energized into activity by strenuous yoga exercises.

Arundhati is one of the most mystical terms in ancient Hindu mythology. The congruence of attributes suggests that Arundhati is the cosmic sakti or power stimulating, generating, and bringing to birth what would otherwise lie latent or relatively inactive in the abysses of cosmic force or energy. In her role of Lucifer-Venus, Arundhati may be mystically connected with the hierarchies of the manasaputras, the sons of mind, who quickened dormant mind in the early humanities.

Arupa (Sanskrit) *Arūpa* [from *a* not + *rūpa* form, body probably from the verbal root *rūp* to form, figure, represent] Formless, bodiless; in Buddhism, used in a number of compounds, such as arupa-dhatu (the formless element), arupa-loka (world of the formless), and arupa-tanha (desire for rebirth in the formless sphere). Arupa, however, does not mean there is no form of any kind, but that the forms in the spiritual worlds are nonmaterial, highly ethereal and spiritual in type.

In the theosophic scheme of the septenary cosmos, the three higher planes are termed arupa planes, formless worlds, where form as we humans perceive it ceases to exist on our objective planes, while the four lower cosmic planes are called rupa-lokas or manifested planes (OG 6, 149). If the cosmos is viewed as a denary, then the three highest planes may be called arupa, while the seven manifested planes are the rupa worlds (Fund 240).

“The *Formless* (‘Arupa’) Radiations, existing in the harmony of Universal Will, and being what we term the collective or the aggregate of Cosmic Will on the plane of the subjective Universe, unite together an infinitude of monads — each the mirror of its own Universe — and thus individualize for the time being an independent mind, omniscient and universal; and by the same process of magnetic aggregation they create for themselves objective, visible bodies, out of the interstellar atoms” (SD 1:632-3). *See also* DHATU; LOKA; RUPA

Arupa-devas (Sanskrit) *Arūpa-deva-s* [from *a* not + *rūpa* form, body + *deva* divine being] Formless celestial beings; suggested in *The Mahatma Letters* (p. 107) to refer to beings who were once men as we now are, but who have graduated out of the human sage into one of the two main classes of dhyani-chohans. According to this scheme, there are men; those superior to men who nevertheless were formerly men, divided into the rupa and arupa; and beneath men two classes who will be men in the future, such as asuras (elementals having a more or less human form) and beasts or

elementals of a less advanced class which can be called animal elementals.

When used alone, deva is vague and indefinite, as there are celestial beings named devas who are neither ex-men, asuras, nor beasts, but may be looked upon as celestial spirit-elementals.

Arvagr (Icelandic) Early awake; in Norse mythology, one of two horses that draw the sun across the sky in the Elder Edda (Grimnismal). He is said to have the runes of Odin in his ear, while his companion Alsvinnr (or Alsvidr) has them inscribed on his hoof.

Arvaksrotas (Sanskrit) *Arvāksrotas* [from *arvāk* downwards + *srotas* stream] Those beings in which the current or stream of nutriment tends downwards. The creation of man, the seventh creation of Brahma in the *Vishnu-Purana*. These seven creations, which “did not occur on this globe, wherever else they may have taken place” (SD 2:162), refer to different stages of evolution in the earlier periods of a globe-manvantara, as well as of a chain-manvantara. *See also*

TIRYAKSROTAS

Arya (Sanskrit) *Ārya* [from the verbal root *r* to rise, tend upward] Holy, hallowed, highly evolved or especially trained; a title of the Hindu rishis. Originally a term of ethical as well as intellectual and spiritual excellence, belonging to those who had completely mastered the aryasatyani (holy truths) and who had entered upon the aryamarga (path leading to moksha or nirvana). It was originally applicable only to the initiates or adepts of the ancient Aryan peoples, but today Aryan has become the name of a race of the human family in its various branches. All ancient peoples had their own term for initiates or adepts, as for instance among the ancient Hebrews the generic name Israel, or Sons of Israel.

Also applied as a title by the ancient Hindus to themselves in distinction from the peoples whom they had conquered.

Aryabhata (Sanskrit) *Āryabhaṭa* An ancient Hindu writer on algebra and astronomy, born in Kusuma-Pura (modern Patna). His most famous astrological work is the *Arya-Siddhanta*. “The earliest Hindu algebraic and astronomer with the exception of Asura-Maya” (TG 32).

A later astronomer of the same name is known as Arya-bhatta the Less.

Aryachatta. *See* ARYABHATTA

Arya-Dasa (Sanskrit) *Ārya-Dāsa* [from *ārya* noble + *dāsa* man of knowledge, barbarian, slave, servitor] A great sage and arhat of the Mahasamghika school (cf TG 32).

Aryaman (Sanskrit) *Aryaman* The chief of the pitris or manes, one of the principle adityas (solar divinities) commonly invoked in conjunction with Varuna and Mitra. The Milky Way is called Aryamanah panthah (Aryaman’s path); and Aryaman is said to preside over one of the lunar mansions (nakshatra uttaraphalguni). As a masculine noun, bosom friend, companion.

Aryans. See ARYA

Aryan Doctrine Used by Subba Row to designate the foundation doctrine from which were derived the Sankhya and Yoga philosophies, and other ancient Hindu systems of thought (Theosophist 3:93).

Arya Samaj (Sanskrit) *Ārya Samāja* A movement started in India during the 19th century by Swami Dayanand Sarasvati in order to lead his countrymen back to the pristine purity of their Vedic religion, although under the form of a theistic philosophy, and to free them from the degenerations and demoralizations of the orthodox Brahmanism of the time. It was affiliated for a short time with the Theosophical Society, but the union was soon dissolved because it became evident that the Samaj was not in harmony with the universality of the aims and purposes of the Theosophical Society as had previously been understood. The Samaj gradually spread throughout Northern India to the extent of two or three hundred branches.

Aryasangha (Sanskrit) *Āryasaṃgha* Founder of the first Yogacharya school, a direct disciple of Gautama Buddha; also a sage who lived in about the 5th or 6th century, who mixed Tantric worship with the Yogacharya system. The followers of the latter “claimed that he was the same Aryasangha, that had been a follower of Sakyamuni, and that he was 1,000 years old. Internal evidence alone is sufficient to show that the works written by him and translated about the year 600 of our era, works full of Tantra worship, ritualism, and tenets followed now considerably by the ‘red-cap’ sects in Sikhim, Bhutan, and Little Tibet, cannot be the same as the lofty system of the early Yogacharya school of pure Buddhism, which is neither northern or southern, but absolutely esoteric. Though none of the genuine Yogacharya books (the *Narjol chodpa*) have ever been made public or marketable, yet one finds in the *Yogacharya Bhumi Shastra* of the *pseudo*-Aryasangha a great deal from the older system, into the tenets of which he may have been initiated. It is, however, so mixed up with Sivaism and Tantrika magic and superstitions, that the work defeats its own end, notwithstanding its remarkable dialectical subtilty” (TG 323).

Aryasatya (Sanskrit) *Āryasatya* [from *ārya* holy, noble from the verbal root *r* to move, arise, attain + *satya* true, real from the verbal root *as* to be] Noble truth; in the plural, the four great truths of Buddhism — chatvari aryasatyani (Pali, chattari ariyasachchani): 1) dukkha — life is suffering; 2) samudaya — origin, cause, craving, egoistic desire (tanha) is the cause of suffering; 3) nirodha — destruction, extinction of desire brings cessation of suffering; and 4) aryashtangamarga — the eightfold path leads to extinction of suffering. See also ARIYASACHCHA (for Pali equivalents)

Aryashtangamarga (Sanskrit) *Āryāṣṭāṅgamārga* [from *ārya* holy, noble + *aṣṭa* eight + *aṅga* limb, division + *mārga* path, way from the verbal root *mṛg* to seek, strive to attain, investigate] Holy eight-limbed way; in Buddhism the Noble Eightfold Path enunciated by Gautama Buddha as the fourth of the Four Noble Truths (chattari aryasatyani). Consistent practice of aryashtangamarga leads the disciple ultimately to perfect wisdom, love, and liberation from samsara (the round of

repetitive births and deaths). The Eightfold Path is enumerated as: 1) samyagdrishti (right insight); 2) samyaksamkalpa (right resolve); 3) samyagvach (right speech); 4) samyakkarmantra (right action); 5) samyagajiva (right living); 6) samyagvyayama (right exertion); 7) samyaksmruti (right recollection); and 8) samyaksamadhi (right concentration). *See also* ARIYA ATTHANGIKA MAGGA (for Pali equivalents)

Aryavarta (Sanskrit) *Āryāvarta* Abode of the noble or excellent ones or the sacred land of the Aryans; the ancient name for northern and central India. It extended from the eastern to the western sea and was bounded on the north and south by the Himalaya and Vindhya mountains respectively.

As Above, So Below. *See* SMARAGDINE TABLET

Asakrit Samadhi (Sanskrit) *Asakṛtsamādhi* [from *a-sakṛt* not once, repeatedly + *samādhi* meditation] In Buddhism, repeated spiritual and intellectual meditation of the highest kind.

Asaloki. *See* LOKI

Asana (Sanskrit) *Āsana* [from the verbal root *as* to sit quietly] One of the postures adopted by Hindu ascetics; five are usually enumerated, although nearly ninety have been noted. However, they are not of deep spiritual value or meaning: “Providing that the position of the body be comfortable so that the mind is least distracted, genuine meditation and spiritual and actual introspection can be readily and successfully attained by any earnest student without the slightest attention being paid to these various postures. A man may be sitting quietly in his arm-chair, or lying in his bed at night, or sitting or lying on the grass in a forest, and can more readily enter the inner worlds than by adopting and following any one or more of these various *Asanas*, which at the best are physiological aids of relatively small value” (OG 7).

Asanga. *See* ARYASANGHA

Asaradel One of the seven transgressing angels given in the Book of Enoch, a Promethean figure who taught fourth root-race mankind “the motion of the moon” (SD 2:376).

Asat (Sanskrit) *Asat* [from *a* not + *sat* being from the verbal root *as* to be] Not being, non-being; used in the Indian philosophies with two meanings almost diametrically opposed: firstly, as the false, the unreal, or the manifested universe, in contrast with *sat*, the real; secondly, in a profoundly mystical sense, as all that is beyond or higher than *sat*. “*Sat* is born from *Asat*, and *Asat* is begotten by *Sat*: the perpetual motion in a circle, truly; yet a circle that can be squared only at the supreme Initiation, at the threshold of Paranirvana” (SD 2:449-50). In its lower sense, *asat* signifies the realms of objective nature built out of and from the various *prakritis*, and therefore regarded as illusory in contrast to the enduring Be-ness or *sat*. In its higher sense *asat* is that boundless and eternal metaphysical essence of space out of which, in which, and from which even *sat* or Be-ness itself is and endures. *Asat* here is parabrahman-mulaprakriti in its most abstract

meaning.

Asathor. *See* THOR

Asava (Sanskrit, Pali) *Āsava* [from the verbal root *su* to distill, make a decoction] A distilling or a decoction; a Buddhist term, difficult to render in European languages, signifying the distillation or decoction which the mind makes or produces from the impact upon it of outside energies or substances, whether these latter be thoughts or suggestions automatically arising and acting from outside upon us, or such as impinge upon the human consciousness from another consciousness striving to affect the former. Thus it corresponds in some respects to the Christian idea of temptation. Asava signifies attachments rising in the mind from the impact upon it of outside influences, and the ideas born of outside influences which intoxicate the mind, born in the mind or flowing into it and preventing its being held upon higher lines. Freedom from the asavas constitutes the essential of arhatship, which involves self-mastery in all its phases. The four asavas are enumerated in Southern Buddhism as 1) sensuousness and sensuality (*kama*); 2) hunger for life (*bhava*); 3) dreamy speculation (*dittha*); and 4) nescience (*avijja*).

Asava-samkhaya (Pali) *Āsava-saṃkhaya* [from the verbal root *su* to distill + *sam-khi* to destroy completely] Destruction of the mental defilements of asavas.

Asburj. *See* BORJ

Ascending Arc. *See* ARC, ASCENDING AND DESCENDING

Ascension Christian doctrine of the physical ascension of the resurrected body of Jesus Christ to heaven to be with his Father, celebrated 40 days after Easter; the prophet Elijah and the Virgin Mary are also asserted by dogma of the Roman Catholic Church to have ascended bodily to heaven. The ascension is an allegory of the rebirth, resurrection, and union of the personality or ego with the inner god or Father in Heaven (BCW 5:389).

Ascetic, Asceticism Originally exercise, practice, applied to monastic discipline and self-mortification, very much as was the Sanskrit *tapas*. But the true ascetic is not one who mortifies his passions, abuses his body, or suppresses his instincts, but one whose earthly desires have been consumed or transformed in the fire of devotion and knowledge. It is used in *The Secret Doctrine* with special reference to Siva, the “Great Ascetic,” and to kumaras who have maintained their purity by refusing to create.

Asch. *See* USHAS

Aschieros. *See* AXIEROS

Aschmogh. *See* ASHMOGH

Asclepias Acida. *See* SOMA

Asclepius, Asculapius, Asculapios. *See* AESCULAPIUS

Asdt (Hebrew) *'Eshdāth* [from *'ash*, *'esh* fire, lightning + *dāth* law, mandate, legal decree] Translated fiery law (Deut 33:2); in the Septuagint, translated as angels. It signifies the fiery spiritual beings or self-conscious spirits of cosmic character, emanating from the cosmic Logos.

Ases. *See* AESIR

Asgard, Asgard (Icelandic) [from *ass* god + *gardr* yard, home, stronghold] The home of the Aesir, creative deities in the Norse Eddas. The Aesir were ousted from their celestial abode by the Vanir (Swedish *Vaner*) who remain in divine spheres while the Aesir inspire living worlds. Asgard is separated from Midgard (middle court, the home of humanity) by the rivers Ifing (doubt) and Tund (time) and by a wall of purging fire.

Within its sacred precincts, the Aesir and Asynjor (gods and goddesses) meet to assess the previous life of the world tree and to determine their course for the future. The *Lay of Odin's Corpse* give insight into the gods' council following the death of a planet, and their difficulty in extracting the essence of that experience.

The shelf (plane) called Gladsheim (gladhome), where Asgard is situated, is also the locale of Valhalla, where Odin's "One-harriers" feast on the three boars and the mead of earth experience before returning to the fray against the powers of darkness and ignorance.

Ash (Hebrew) *'Āsh* [probably from *nā'ash* to support, bear] In Job (9:9) wrongly translated as the star Arcturus; from the Arabic it is evident that Ursa Major is referred to. Different peoples consider the Great Bear as the vital support or carrier not only of destiny but of the heavens. Thus the Hindus speak of the Saptarshayah (seven rishis), who preside over this constellation and have our universe in karmic supervision.

Ash (Tree). *See* ASK

Asha. *See* 'ESH

Ashburj. *See* BORJ

Ashemogha, Ashemaogha (Pahlavi) Used with the adjective unholy, referring to religious teachers who mislead. In the Gathas, Zoroaster often refers to such teachers as false and deluding using terms such as a-debaoma, daevas, the blind and the deaf, aiming at Kavis and Karapans. *See also* ASHMOGH

Ashen and Langhan (Kolarian) Ceremonies for casting out evil spirits, similar to the Christian exorcism, used by the Kolarian tribes in India (TG 34).

'Asher (Hebrew) *'Asher* Who, which, that; in *The Secret Doctrine* (2:468, 539), used in connection with the phrase *'ehyeh 'asher 'ehyeh* (I am that I am — Exodus 3:14).

'Asher (happiness) was the second son of Jacob (Genesis 30:13).

Asherah (Hebrew) *'Ashērāh* A Syrian goddess of fortune having close similarities with the Roman divinity Venus, and connected by analogy of attributes with Ashtoreth or Astarte, another Syrian divinity.

Also a sacred wooden pole or image standing close to the massebah and altar in early Shemitic sanctuaries, part of the equipment of the temple of Jehovah in Jerusalem till the Deuteronomic reformation of Josiah (2 Kings 23:6). The plural, 'asherim, denotes statues, images, columns, or pillars; translated in the Bible by "groves." Maachah, the grandmother of Asa, King of Jerusalem, is accused of having made for herself such an idol, which was a lingham — for centuries a religious rite in Judaea. Sometimes called the Assyrian Tree of Life, "the original Asherah was a pillar with seven branches on each side surmounted by a globular flower with three projecting rays, and no *phallic* stone, as the Jews made of it, but a metaphysical symbol. 'Merciful One, who dead to life raises!' was the prayer uttered before the Asherah, on the banks of the Euphrates. The 'Merciful One,' was . . . the higher triad in man symbolized by the globular flower with its three rays" (TG 37). *See also* ASTARTE.

'**Ashmedai**. *See* ASMODEUS

Ashmogh (Pahlavi) Demon with disheveled hair of the race of wrath; Ahriman's disciple who encourages Azhi-Dahak (Bevar-Aspa) to rise up in order to destroy mankind and shouts: "Now it is nine thousand years that Fereydun is not living; why do you not rise up, although thy fetters are not removed, when this world is full of people and they have brought them the enclosure which Yima formed?" (SBE 5:234).

Also a dragon or serpent in the Avesta, described as a huge monster with a camel's neck, which after the Fall "lost its nature and its name"; similar to the flying camel of the *Zohar* — the serpent used by Shamael to seduce Eve (SD 2:205). *See also* **Ashemogha**

Ashta (Sanskrit) *Aṣṭa* The adjective eight.

Ashtadisas (Sanskrit) *Aṣṭadīśas* [sing *aṣṭadīś* from *aṣṭa* eight + *dīś* to point out, designate] The eight cardinal points of the compass collectively; sometimes used for ashtapalas or dikpatis, the eight regents of the cardinal points of the compass. In connection with this and similar words dealing with space or spatial directions and their rulers, the great ancient religious and philosophical systems held that space is not mere emptiness or a mere container, but a vast and incomprehensibly immense plenum, pleroma, or fullness, divided into various departments, planes, spheres, or worlds, each with its controlling Maharaja. *See also* DASADIS

Ashtar, Ashtar-vidya [possibly from Sanskrit *astra* weapon, missile + *vidyā* knowledge] Used by Blavatsky for "the highest magical knowledge" (SD 2:427). *Astra-vidya*, the science of warfare,

when transferred in usage to the everlasting struggle of the adepts of the right-hand with those of the left, would take the significance not so much of the science of missiles or weapons, but that of high and powerful magic forces. “The most ancient of the Hindu works on Magic. Though there is a claim that the entire work is in the hands of some Occultists, yet the Orientalists deem it lost. A very few fragments of it are now extant, and even these are very much disfigured” (TG 35).

Ashta-siddhis (Sanskrit) *Aṣṭa-siddhi-s* [from *aṣṭa* eight + *siddhi* supernormal powers] The eight supernormal powers or faculties innate in man but at present generally latent or undeveloped, although attainable when a person reaches the status of a buddha. *See also* IDDHI; SIDDHI

Ashta-vijnana (Sanskrit) *Aṣṭa-vijñāna* [from *aṣṭa* eight + *vijñāna* function of consciousness, discernment] Eight or eightfold faculties; used in mystical Mahayana Buddhist works to signify what in Hindu philosophy is called the jnanendriyas (organs of consciousness or of conscious existence in imbodyed life). This group of inner faculties, functions, or powers of consciousness has direct reference to the skandhas of Brahmanical philosophy. While the skandhas range from the highest down to and including those of the astral-vital-physical vehicle, nevertheless when closely grouped together the ashta-vijnana may be considered as a unitary vehicle, the field of action of the spiritual ego; hence “One must see with his spiritual eye, hear with his Dharmakayic ear, feel with the sensations of his *Ashta-vijnyana* (spiritual ‘I’) before he can comprehend this doctrine fully . . .” (ML 200).

Ashtoreth. *See* ASTARTE

Asia(h), Asiatic World. *See* ‘ASIYYAH

Asideans. *See* KASDIM

Asiras (Sanskrit) *Aśiras* [from *a* not + *śiras* head] Headless; in the plural, headless beings. With particular reference to elementals not possessing what humans would call a head. Used also of the first two human races (TG 35), which means 1) that their mental powers had not yet come into function or been evolved forth, and 2) that in the first root-race, and largely in the second root-race, the then nascent human protoplasts had still a rather vague and globular form which caused Blavatsky to refer to them as pudding-bags.

Asita (Sanskrit) *Asita* Dark in color, hence often used of dark blue and even black; *krishna* has more or less the same reference to darkness of tint such as is seen in indigo. As a proper noun, a name of the planet Saturn; the dark or waning fortnight of a lunar month; the name of a descendant of Kasyapa, composer of several of the hymns of the *Rig-Veda* (9:5-24), also named Devala or Asita-Devala (and likewise the name of several other individuals); a generalizing name for a being presiding over magic and darkness. As an adjective, dark-colored, or black.

Asita may also signify unbound [from *a* not + *sita* from the verbal root *si* to bind].

‘Asiyyah (Hebrew) *‘Asiyyāh* [from *‘āsāh* to form, fashion] Lowest of the four ‘olamim (worlds or spheres) which, according to the Qabbalah, are emanated during a period of world manifestation. This ‘olam is termed the ‘asiyyatic world (the world of matter, sphere of action), also called ‘olam qelipboth, being emanated from the third world or ‘olam yetsirah. This fourth world is represented as containing the actual physical matter of the planets or spheres (gilgulim), and is the abode of Sama’el (the Prince of Darkness) and his legions. In this sphere is situated the earth, which is subject to birth, change, dissolution, and rebirth of its matter-forms. In the ‘asiyyatic world all the potencies and functions of the preceding or superior worlds are operative, including the powers and functions of the ten Sephiroth, but all greatly diminished or weakened, as being the farthest tip or extremity of the descent of the Sephirothal ray. *See also* QELIPPOTH

Ask (Scandinavian) **Askr** (Icelandic) Ash tree; in Norse myths the first humanity was fashioned by the three creative gods using Askr and Embla (the ash and, probably, the alder) as a physical basis. Allfather Odin and his two brothers endow these vegetative beings with spirit, mind, and desire coupled with will.

The universe is depicted as an ash tree, Yggdrasil, within which every lesser being is an ash tree in its own right. A Tree of Life is part of the traditions in every part of the world. “The Norse Ask, the Hesiodic Ash-tree, whence issued the men of the generation of bronze, the Third Root-Race, and the *Tzite* tree of the *Popol-Vuh*, out of which the Mexican *third* race of men was created, are all one” (SD 2:97).

The Norse tree of life is said to be rooted in the divine “ground” and to spread through the shelves of space, bearing living worlds upon its branches. Where the ash tree refers to humanity on earth it is the subject of the tale called “Askungen” (ash child or Cinderella), using an intricate play on words. *See also* YGGDRASIL

Asklepios. *See* AESCULAPIUS

Asmegir (Icelandic) [from *ass* god + *mega* might, to be able] In Norse mythology, a god-maker — a human soul on its way to becoming divine in the course of evolution.

Asmodeus (Hebrew) *‘Ashmēdai* Covetous; an evil demon in later Jewish tradition, son of Naamah (sister of Tubal-cain) and Shamdon. The spirit of lust and anger, he is king of demons, with Lilith as queen, and is sometimes associated with Beelzebub, Azrael (Angel of Death), and Abbadon. In the Talmud he is connected with the legends of Solomon, where he is the destroyer of matrimonial happiness and is forced to help in building the temple. But his description in the apocryphal book of Tobit (3:8), where he is rendered harmless by Tobias and captured by the angel Raphael, is most likely the basis for modern writers (cf IU 2:482). Possibly taken from Zend *aeshma-daeva* with *daeua* meaning ethereal being, cosmic spirit.

Asmonean, Hasmonean (Hebrew) “The Asmonean priest-kings promulgated the canon of the *Old*

Testament in contradistinction to the *Apocrypha* or Secret Books of the Alexandrian Jews — kabalists. Till John Hyrcanus they were Asideans (Chasidim) and Pharisees (Parsees), but then they became Sadducees or Zadokites — asserters of sacerdotal rule as contradistinguished from rabbinical” (IU 2:135).

Asoka (Sanskrit) *Aśoka* The name of two celebrated kings of the Maurya dynasty of Magadha. According to the chronicles of Northern Buddhism there were two Asokas: King Chandragupta, named by Max Muller the Constantine of India, and his grandson King Asoka. King Chandragupta was called Piyadasi (beloved of us, benignant), Devanam-piya (beloved of the gods), and Kalasoka (the Asoka who has come in time). His grandson received the name of Dharmasoka (the asoka of the Good Law) because of his devotion to Buddhism, his zealous support of it and its spreading. The second Asoka had never followed the Brahmanical faith, but was a Buddhist born. It was his grandfather who had been converted to the new teaching, after which he had a number of edicts inscribed on pillars and rocks, a custom followed also by his grandson; but it was the second Asoka who was the more zealous supporter of Buddhism. He is said to have maintained in his palace from 60,000 to 70,000 monks and priests, and erected 84,000 topes or stupas throughout the world. The inscriptions of various edicts published by him display most noble ethical sentiments, especially the edict found at Allahabad on the so-called Asoka’s column in the Fort.

Asomatous [from Greek *a* not + *soma* body] Incorporeal; applied to beings having no physical or material body, corresponding to the Sanskrit arupa.

Asrama (Sanskrit) *Āśrama* [from the verbal root *śram* to exert oneself spiritually] A sacred building, a monastery or hermitage for ascetic purposes; likewise one of the four periods of effort or inner development in the religious life of a Brahmin in ancient times. These asramas were 1) the student or Brahmacharin; 2) the householder or grihastha, the period of married existence when the Brahmin played his due role in the affairs of the world; 3) the period of religious seclusion or vanaprastha, usually passed in a vana (forest), a period of inner spiritual recollection and meditation on philosophical and religious matters; and 4) the one who has renounced all the distractions of worldly life or bhikshu who has turned his attention wholly to spiritual affairs, although he may have returned to the world of men for purposes of aiding and teaching.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ass-Atm

Ass In the cults of Asia Minor a symbol of Set, Typhon, Satan, Jehovah, or Saturn. Jesus rides into Jerusalem “upon an ass, and a colt the foal of an ass,” in accordance with the prophecy in Zechariah (9:9). If the ass is Saturn, and its foal the earth (whose physical globe is governed by the genius of Saturn in connection with the moon), this is an apt symbol of the descent of the Christos into the lower worlds. Plutarch relates that Typhon or Set fled on an ass into Palestine and there founded Hierosolymus and Judaeus (De Iside et Osiride, ch 30).

Assassins [from Arab *hashshashin* hashish eaters; or from proper name Hassan] Originally an order founded in Persia and Syria during the 11th century by Hassan ben Sabbah, an offshoot of the Ismaelites of the Shiite division of Islam. They taught the esoteric doctrines of Islam, encouraged mathematics and philosophy, and are said to have used hashish as a means of obtaining celestial visions. They held that creation began with the intellectual world, moved to the soul and then the rest of creation. The human soul, imprisoned in the body to carry out the teacher's orders, rejoins the universal soul at death. The usual accounts state that they sanctioned the employment of secret assassination against all enemies.

Assessors One name given by Europeans to the 42 judges in the scene of the weighing of the heart in the *Egyptian Book of the Dead*. They stand as accusers of the defunct before Osiris in the former's progress through Amenti after death. The idea of the judges reading the record from the weighing of the defunct's heart is a variant of the teaching concerning the lipikas or karmic scribes recording all things in the astral light (cf SD 1:104-5).

Assorus [from Chaldean] “The third group of progeny (Kissan [Kissare] and Assorus) from the Babylonian Duad, Tauthe and Apon, according to the Theogonies of Damascius. From this last emanated three others, of which series the last, Aus, begat Belus — “the fabricator of the World, the Demiurgus’ ” (TG 36).

Assur (Chaldean or Assyrian) [from *a-shir* leader] Also Asur, Ashur. Originally the titular deity of an ancient Assyrian city of learning on the Tigris, but with the rise of the Assyrian Empire his prominence was extended so that he became one of the foremost gods of the Assyrian pantheon. The title Asir was also given to other important deities such as Marduk and Nebo. Like Marduk, Assur was first recognized as a solar deity and represented in symbol with the adjunct of the winged disk; but later he became a god of war, so that the winged disk took a minor place under the figure of a man with a bow. Assur remained the chief deity even when the Assyrian capital was moved to Nineveh about the 8th century BC, although he was obliged to share this honor with Ishtar, then regarded as his consort, until the fall of the Assyrian Empire (606 BC).

Assyrian Tree of Life. See ASHERAH

Asta-dasa (Sanskrit) *Asta-dasā* [from the verbal root *as* to remove, finish + *dasā* state, condition] Perfect, supreme wisdom; the finished, ended, or completed state, thus pointing directly to a cosmic monad which has become supreme for and in its own hierarchy, and hence for such hierarchy is perfect, supreme wisdom — a title of the controlling divinity of the hierarchy over which it presides.

Astaphai, Astaphoi (Gnostic) [from Greek *astaphaios*] With the Egyptian Gnostics, the genius of the planet Mercury, corresponding to the Egyptian Thoth and the Greek Hermes.

Astarte (Greek) Greek form of the Syro-Phoenician goddess Ashtoreth, female counterpart of Baal. The goddess of love and fruitfulness, she was essentially a lunar goddess of productiveness or fertility. The Assyrian and Babylonian form was Ishtar, in Syria Atargates, in Phrygia Cybele, in the Bible Ashtoreth, and in North Africa Tanith or Dido. She was intimately connected in the Chaldean form of her worship with the planet Venus. She corresponds to the Egyptian Isis or Hathor, Greek Aphrodite, and Norse Freya. The Virgin Mary represented on the crescent moon weeping, is taken from similar images of Astarte (BCW 11:96-7).

Asteria (Greek) Daughter of Coeus and Phoebe, sister of Leto or Latona, and mother of Hecate; said to have turned into a quail (*ortyx*) and plunged into the sea to escape from Zeus. The island of Delos was originally named for her: first Asteria, then Ortygia.

Asterism Constellations in general, but more specifically applied to the divisions in the zodiac, which in ancient thought were believed to hold special significance. Also applied to the lunar mansions or divisions of the ecliptic, each being 13 1/2 degrees or 1/27 of 360 degrees, representing approximately the average daily progress of the moon in ecliptic longitude. The original number of lunar asterisms is said to have been 27, but another was added, represented on the lunar zodiac by a smaller division. This arrangement of 28 is divided into lucky and unlucky halves. As the first mansion in the Hindu system is dedicated to Krittika, the Pleiades, it is believed that this arrangement of lunar mansions was made at least before 2000 BC. According to the allegorical stories, King Soma, the moon, married 27 daughters of Daksha and divided his time among them.

Asterope. See PLEIADES

Aster't (Syrian) Goddess of the moon, consort of Adon, one of the most important divinities of Syria, corresponding closely to the Jewish Adonai. See also ASTARTE

Astoreth. See ASTARTE

Astra (Sanskrit) *Astra* Missile, weapon; in the war between the Pandavas and Kurus in the *Mahabharata*, in addition to the regular weapons (astras), others are mentioned: mantra-astras (weapons made powerful by mantras); divya-astra (weapons received from higher beings); and agneyastras (weapons of fire). Likewise racial remnants of the earlier Atlanteans (commonly called Rakshasas) employed the power of hallucination (maya); this is also described in the *Ramayana*. See also ASHTAR

Astraea (Greek) [from *astr* star] Star maiden; daughter of Astraeus and Eos, or of Zeus and Themis. Themis, born of Uranus and Gaia (heaven and earth), signifies law, order, equity, as does her daughter Astraea, who lived among men in the Golden Age as the goddess of justice. But when wickedness prevailed in the bronze age, she was the last of the gods to withdraw, with her sister Aidos (modesty), and is found among the stars of Virgo. Another myth says that Zeus, when he carried off Ganymedes, the personified object of lust, threw Astraea back on earth again, where she fell on her head. Ganymedes is Aquarius, and the astronomical meaning refers to an inversion of the poles, which brings Aquarius into the northern celestial hemisphere and places Virgo upside down in the southern half (SD 2:785).

The return of Astraea also means the return of the Golden Age (the beginning of a new root-race). Astraea, in another sense, is Venus-Lucifer, and Zeus the personification of the cyclic law which arrests the downward course of root-races.

Astral Bell. See BELLS, ASTRAL

Astral Body Generally equivalent to the Sanskrit *linga-sarira*, the ethereal model-body, usually invisible to our physical eyes, upon which the physical body (*sthula-sarira*) is modeled. There are three ethereal forms or bodies which might properly be called astral bodies: 1) *mayavi-rupa* — the illusory form-body of thought and substance projected by high initiates; 2) *linga-sarira* — the model- or pattern-body, the second principle of the human constitution; and 3) *kama-rupa* — the phantom or spook which is seen occasionally in the vicinity of graves or which occasionally materializes at seances.

Astral Double. See ASTRAL BODY; BHUTA; CHHAYA

Astral Light This is the next cosmic plane above the physical, which is to the physical globes of our earth or of the other bodies of our solar system what the *linga-sarira* is to the human physical body. As such, it is the carrier of life-forces — *jiva* cosmically, and *prana* individually — and the

storehouse of cosmic energies on their way to or from physical manifestation. It preserves an indelible record of all events on the astral and physical planes, there being continual interaction between the two planes. No natural phenomenon, whether mental, psychic, or physical, can be explained without it; without it, the physical world would crumble to impalpable dust.

The astral light is itself divided into subordinate planes; the lower regions teem with gross emanations from the earth, including psychic remnants from deceased beings, which exert a negative influence on the living, especially when intercourse with these remnants is encouraged by moral and physical weakness or by ignorant experiments.

The alchemical action of the astral light and its intimate connection with the physical sphere explains epidemics, whether physical or psychological. Because it transmits thoughts and emotions, its connection with karma is evident. The astral light is the mother of the physical world, just as akasa is the mother of the astral light.

The astral light is virtually the same as the sidereal light of Paracelsus and other medieval mystic philosophers who followed him. The reason for calling this kosmic plane astral or sidereal is that all nature being a vast and intricately interwoven organism, the stars and planets emanate into each other their respective celestial energies and substances. Thus, because there is this constant interchange of starry fluids emanating from the different celestial bodies, the term astral light has a foundation of esoteric scientific fact. It is applied specifically to the second kosmic plane only because it is nearest to the physical and beings living on the physical plane at times become sensible of the existence of the second kosmic plane by means of flashes of starry light or sensations of luminosity. Hence the ancient initiates, knowing the source of this starry substance, properly called it the astral or sidereal light, or by some similar expression. The astral light, finally, is the very dregs of akasa, and is virtually the same as the hypothetical ether of science.

Astral Plane. *See* ASTRAL LIGHT

Astral Monad or Soul The animal soul or vital-astral soul, the lowest and feeblest reflection or vehicle of the divine monad; when enlightened by the human monad, it produces the human being known today.

Astral World. *See* ASTRAL LIGHT

Astrology Universal analogy provides a key to occult mysteries by studying the nature and motions of the celestial orbs. The heavenly bodies are in essence gods, and the influence they shed is the aura which likewise emanates from all living beings. Ancient astrology taught the absolute solidarity of the universe and of everything within it as an organic entity so that the operations and motions of the celestial bodies and influences flowing forth from them governed or regulated all subordinate beings over which their sway fell. The seven sacred planets are correlated with the cosmic and human septenates; learning the natures of these planets provides one key to an

understanding of the natures of their correspondences. By their motions they measure cycles and determine epochs. Every being, if we reckon its life cycle, is an event; its nature, its destiny, is shown if we know and can define the epoch of its birth. Thus the adept, in proportion to his skill, can interpret the past and estimate what is to come; he can define the interrelations of things and arrive at an understanding of the structure of macrocosms and microcosms, which are spread out alike in time and space. “Astrology is a science *as infallible* as astronomy itself, with the condition, however, that its interpreters must be equally infallible; and it is this condition, *sine qua non*, so very difficult of realization, that has always proved a stumbling-block to both. Astrology is to exact astronomy what psychology is to exact physiology. In astrology and psychology one has to step beyond the visible world of matter, and enter into the domain of transcendent spirit” (IU 1:259).

Astrology therefore embraces a science of vast scope, permitting of studies which range from the sublime to the trivial, from the most spacious to the most confined. If astronomy concerns itself with the physical constitution of the celestial bodies, astrology concerns itself especially with what might be called the reasons rather than the mere laws of the universe. Considered in its largest aspect, it includes the entire universe and every being or thing, not only on the physical plane but even more so on the invisible or causal planes — the physical plane being merely the consequence of the actions and operations of the lives and forces residing in the invisible worlds.

Astrology today is an impaired legacy from Greece and Rome through the medieval art, elaborated by the speculative industry of modern students; and that same medieval astrology was itself no more than a decayed scion of the ancient stock. Modern astrology is too often cultivated in a spirit which binds us to our personality or caters to frivolous curiosity. To the merest tyro, however, it soon becomes evident that the planets cause or indicate character and events; what use the individual makes of this knowledge depends on the motives with which it is sought. Anxiety about personal fate, the desire for influence and notoriety, the need for earning a living, or even knowledge for its own sake — such motives will qualify his attainments in proportion to the scope of the sphere to which he limits himself. As the old saying attests, the stars impel, they do not compel.

Four branches of astrology are now chiefly studied: 1) mundane, applying to meteorology, seismology, husbandry, etc.; 2) state or civic, regarding the future of nations and rulers; 3) horary, solving doubts arising on any subject; and 4) genethliacal, concerned with the future of individuals from birth to death.

Blavatsky wrote that astrology is the “science which defines the action of celestial bodies upon mundane affairs, and claims to foretell future events from the positions of the stars. Its antiquity is such as to place it among the very earliest records of human learning. It remained for long ages a secret science in the East, and its final expression remains so to this day, its exoteric application only having been brought to any degree of perfection in the West during the lapse of time since

Varaha Mihira wrote his book on Astrology, some 1400 years ago. Claudius Ptolemy, the famous geographer and mathematician, founded the system of astronomy known under his name, wrote his Tetrabiblos which is still the basis of modern Astrology in 135 AD . . . As to the origin of the science, it is known on the one hand that Thebes claimed the honour of the invention of Astrology; whereas, on the other hand, all are agreed that it was the Chaldees who taught that science to the other nations. . . . If later on the name of Astrologer fell into disrepute in Rome and elsewhere, it was owing to the frauds of those who wanted to make money of that which was part and parcel of the Sacred Science of the Mysteries, and who, ignorant of the latter, evolved a system based entirely on mathematics, instead of transcendental metaphysics with the physical celestial bodies as its *upadhi* or material basis. Yet, all persecutions notwithstanding, the number of adherents to Astrology among the most intellectual and scientific minds was always very great. If Cardan and Kepler were among its ardent supporters, then later votaries have nothing to blush for, even in its now imperfect and distorted form” (Key 318-19).

Astronomos (Greek) An astronomer; in ancient Greek usage equivalent to astrologos; in the sixth degree of the Egyptian Mysteries at Thebes the candidate was taught the priestly dance in the circle and was instructed in astronomy, and in the seventh degree he received the title of astronomos (IU 2:365; TG 39-40). The initiate now understood the astronomical key to cosmic mysteries, such as the real meaning of the zodiac and of the positions, movements, and influences of the stars in general and in natal astrology.

Asu (Sanskrit) *Asu* [from the verbal root *as* to be] As a masculine noun, breath, spiritual life; in the plural, the exoteric five vital breaths of the body or pranas. Nearly all archaic languages have the same word for both breath and wind or air and spirit, such as the Greek *pneuma* and the Latin *spiritus*.

As an astronomical term, equivalent to four seconds of sidereal time or one minute of arc. As a neuter noun often used for reflection or thought, connected with the heart as its seat.

Asura (Sanskrit) *Asura* [from the verbal root *as* to breathe] A title frequently given to the hierarch or supreme spirit of our universe, as being the primal “Breather”; also a class of spiritual-intellectual beings. In Hinduism it commonly signifies elemental and evil gods or demons. “Primarily in the *Rig-Veda*, the ‘Asuras’ are shown as *spiritual divine beings*; their etymology is derived from *asu* (breath), the ‘Breath of God,’ and they mean the same as the Supreme Spirit or the Zoroastrian *Ahura*. It is later on, for purposes of theology and dogma, that they are shown issuing from Brahma’s thigh, and that their name began to be derived from *a* privative, and *sura*, god (solar deities), or *not-a-god*, and that they became the enemies of the gods” (SD 2:59).

Further, the asuras “are the sons of the primeval Creative Breath at the beginning of every new Maha Kalpa, or Manvantara; in the same rank as the Angels who had remained ‘faithful.’ These *were the allies of Soma* (the parent of the *Esoteric Wisdom*) as against *Brihaspati* (representing

ritualistic or *ceremonial* worship). Evidently they have been degraded in Space and Time into opposing powers or demons by the ceremonialists, on account of their rebellion against hypocrisy, sham-worship, and the dead-letter form” (SD 2:500).

Asura is employed with frequency in theosophical writings to signify the class of spiritual-intellectual beings called manasaputras, kumaras, or angishvattas. As a matter of fact, asuras, maruts, rudras, and daityas are but various ways of describing the intellectual gods or manasas, as contrasted with the as yet incompleting devas or suras.

Asura is used in the earliest Vedic literature as a title of the cosmic hierarch or supreme spirit. The Vedic Asura is nothing other than the Great Breath of archaic occult literature — the Great Breath coming and going as manvantara and pralaya. The other Vedic gods mentioned so much more frequently in the slokas, such as Agni, Indra, and Varuna, are all subordinate hierarchically and cosmogonically to the Vedic Asura, which is really Brahman-pradhana or the Second Logos, Father-Mother; Varuna is the acme or summit of akasa-tattva; Agni is the summit or hierarch of cosmic taijasa-tattva; and Indra is often identified with Vayu as the summit of cosmic Vayu-tattva. *See also* MAHASURA

Asura-devata (Sanskrit) Asura-devatā [from *a* not + *sura* god + *devata* from *deva* god] Equivalent to the Flames of the Stanzas of Dzyan, or the manasaputras, “for, as said, they were first Gods — and the highest — before they became ‘no-gods’ ” (SD 2:248).

Asuramaya (Sanskrit) *Asuramaya* Also Mayāsura, Mayeśvara. Legendary astronomer spoken of in Sanskrit literature as versed in magic, astronomy, and military science. “In the old Stanzas Pesh-Hun is credited with having calculated and recorded all the astronomical and cosmic cycles to come, and with having taught the Science to the first gazers at the starry vault. And it is Asuramaya, who is said to have based all his astronomical works upon those records, to have determined the duration of all the past geological and cosmical periods, and the length of all the cycles to come, till the end of this life-cycle, or the end of the seventh Race. . . .

“The chronology and computations of the Brahmin Initiates are based upon the Zodiacal records of India, and the works of the above-mentioned astronomer and magician — Asuramaya. The Atlantean zodiacal records cannot err, as they were compiled under the guidance of those who first taught astronomy, among other things, to mankind” (SD 2:49).

“Asuramaya is said to have lived (see the tradition of Jhana-bhaskara) in *Romaka-pura* in the West: because the name is an allusion to the land and cradle of the ‘Sweat-born’ of the Third Race. That land or continent had disappeared ages before Asuramaya lived, since he was an Atlantean; but he was a direct descendant of the *Wise Race, the Race that never dies*. Many are the legends concerning this hero, the pupil of Surya (the Sun-God) himself, as the Indian accounts allege” (SD 2:67).

Asura-medha (Sanskrit) *Asura-medhā* [from *asura* lord + *medhā* intelligence] The lord who bestows intelligence; a name of the manasaputras. *See also* Ahura-Mazda

Asurendra (Sanskrit) *Asurendra* [from *asura* a class of deities + *indra*] The lord of the asuras; as Indra was popularly called the chief of the gods, so Asurendra is similarly the chief of the asuras.

Asvamedha (Sanskrit) *Aśvamedha* [from *aśva* horse + *medha* the sacrifice of an animal, oblation] The horse sacrifice; an ancient Brahmanical ceremony, going back to the Vedic period. Its greatest prominence occurred during the era described in the Asvamedhika-parva of the *Mahabharata*. Kings alone were permitted to perform the sacrifice, and the proponent was considered for the time being a king of kings. A horse of particular color, selected and consecrated by ceremonies, was permitted to wander wherever it wished for a year. The king performing the sacrifice, or his representative, followed the horse with an armed escort, and every ruler of the region so entered was obligated to submit to the entering king or do battle with him. If the liberator of the horse proved successful in subjugating all the rulers encountered, he returned followed by the vanquished kings (if unsuccessful he was derided and the ceremony relinquished) and the concluding sacrifice, either actual or figurative, was performed with great celebration. The Asvamedha also is mentioned in the *Ramayana*.

Asvattha (Sanskrit) *Aśvattha* The Hindu tree of life or bodhi tree, which grows with its roots upwards into the invisible worlds and its branches downward to form the visible world. (SD 1:549, 523, 536, etc; IU 1:153)

Asvini (Sanskrit) *Aśvinī* The first nakshatra (lunar mansion).

Asvins, Asvinau (Sanskrit) *Asvin-s, Asvinau* The two horsemen; two Vedic divinities which in some respects parallel the Greek Dioscuri, Pollux and Castor. Harbingers of Ushas (the dawn), they are represented as twin horsemen, appearing in the sky in a golden chariot drawn by horses or birds. One myth gives their origin as children of the sun by a nymph, Asvini, who concealed herself in the form of a mare; another myth makes Asvini their wife. Since they precede the sun's rising they are called the parents of the sun's form, Pushan. They are also the parents of Nakula and Sahadeva, Arjuna's brothers by Madri. Many Vedic hymns are addressed to them; their attributes pertain to youth and beauty, to speed, and to duality. They bring treasures to mankind, averting misfortune and sickness, for they are the two physicians of heaven (*svar-vaidyau*). Yaska, the earliest known commentator on the Vedas, in his *Nirukta* writes that the Asvinau represent the transition from darkness to light and are identified with heaven and earth.

Blavatsky says that "these *twins* are, in the esoteric philosophy, the *Kumara-Egos*, the reincarnating 'Principles' in this Manvantara" (TG 41). That the Greek Dioscuri were respectively the son of Zeus and the son of a mortal, is a direct reference to the dual character of the kumaric mind or the higher manas, an immortal quality in human beings in its higher aspect, the lower aspect being connected with the mortal part of the human constitution.

Aswina. See ASVINI

Aswins. See ASVINS

Aswattha. See ASVATTHA

Atabulus (Latin) **Atabutos** in SD. A hot southeast wind in Europe, now called the scirocco or sirocco.

Atala (Sanskrit) *Atala* [from *a* not + *tala* place] No place, no material locality; the first and most spiritual of the seven talas, so nearly one with satyaloka, its corresponding loka or pole, that the two nearly conjoin into one — hence it is called “no place.” Atala bears somewhat the same relation to satyaloka that prakriti bears to Brahma; hence it is the first quasi-spiritual, quasi-material plane in the solar universe. “In satyaloka-atala, the highest loka combines into or rejoins the monadic essence of the planetary chain. The differentiation so marked on the lower planes ceases here and, because of this, the two blend into or become one” (FSO 264). Cosmically atala emanates directly from the solar logos and contains with satyaloka the substantial seeds of all that was, is, and will be, from the beginning to the end of the solar mahamanvantara. Atala, with satyaloka, may be considered from one standpoint the sphere of the hierarchies of the dhyanis, who are, when completely in this condition, in a state of parasamadhi, and hence clothed in the dharmakaya.

Blavatsky relates that Atala was also the name applied by the earliest of the fifth root-race to Atlantis as a whole (SD 2:322). See also LOKA

Atarpi or **Atarpi-nisi** (Chaldean) The man; in the Babylonian account of Genesis, a pious person who prayed to the god Hea to remove the evil of drought and other things before the deluge is sent. In answer to this prayer, “Hea announces his resolve to destroy the people he created, which he does by a deluge” (TG 41-2).

Atash, Atash-Azar (Persian) *Ātash, Ātash-Āzar, Atur* (Pahlavi) *Ātur, Atar* (Avestan) *Ātar*. Fire; the name of the ninth day of the month of the ancient Iranian calendar as well as the ninth month of the year (Sagittarius). Zoroaster uses the term in the Gathas in the sense of the life-giving force or the spiritual nature of the eternal truth. It is this fire which guides the universe as well as the individual towards its destiny — perfection.

In the ancient Aryan faith, atash has three qualities and sometimes is called trishazashta (fire of the three stations). These stations are named: Azar-borzin-Mehr, Azar-Faranbagh or Azar-Khordad, and Azar-Goshnasp. In later Avestic literature five different fires have been named: 1) Brezisevangha (beneficent fire of the high) spiritual fire; 2) Vohu-Fryana (fire of instinct) animal fire; 3) Urvazishta (fire of life, most beneficial fire) vegetation fire; 4) Vazishta (celestial fire of heavenly bodies) the most supporting fire; and 5) Spenishta (holy fire or paradisaical fire) the most

bountiful fire (Yasna 17, 11).

There have been seven commonly accepted fire temples named after the seven heavenly bodies: 1) Azar-Mehr (Mithra's fire); 2) Azar-Noush (fire of sweetness, healing) symbolizing Ab-e-Hayat or Water of Life; 3) Azar-Bahram (fire of victory) symbolizing creation of light; 4) Azar-Aeen or Azar Abteen (Apam-Napata, the universal self or the fire of glory that the son of the waters wishes to seize); 5) Azar-Khorin (the rule of the sun) symbolizing perfection; 6) Azar-Borzin (fire of the high); and 7) Azar-Zartusht (fire of Zoroaster, the eternal light).

Atash-Bahram, Atash Behram (Persian) *Ātash-Bahrām, Ātash Behrām*, **Verethraghna** (Avestan), **Varhran, Varhram** (Pahlavi) *Varhrān, Varhrām*. The sacred fire of the Parsis, kept perpetually burning on the altars; the third fire in the septenary system represents the first created fire, the fire of consciousness. Philosophically it alludes to the idea of becoming. It corresponds to the Hindu akasa (SD 1:338). Bahram (victorious) is one of the seven planets which rules over the first month of the Iranian year, Farvardin (Aries). In Vedic literature he is known as the slayer of the demon Vritra. In Islamic mystical writings Bahram is referred to as the fifth sphere or intellect. "As the earthly representative of the heavenly fire, it is the sacred center to which every earthly fire longs to return, in order to be united again, as much as possible, with its native abode. The more it has been defiled by worldly uses, the greater is the merit acquired by freeing it from defilement" (Vendidad 113). The Vestals in ancient Rome also kept a fire burning perpetually on their altars, as did the Greeks in the temple on the Acropolis, thus keeping the remembrance of the "living fire" by means of a visible manifestation.

The fundamental idea in these various manners of adoring fire was that, because of the warming and life-giving functions of this universal element, it symbolized the vital and all-penetrating activity of cosmic life. Furthermore, because the sun was the focus or heart through which pours the life of any solar system, therefore the ideas connected with ancient fire worship are likewise intimately connected with the teachings concerning the solar orb and its indwelling divinity.

Atavism [from Latin *atavus* ancestor] In biology, the reappearance of the characteristics of a remoter ancestor in its descendant; reversion to type; delayed heredity. A manifestation of the activities of life or the life-atoms collectively, which in building new forms "copies family resemblances as well as those it finds impressed in the aura of the generators of every future human being" (SD 1:261). Weismann approached the truth in his theory of the germ-plasm, or aggregate of life-atoms which are transmitted unchanged through generations; but the atom is the vehicle of a jiva or monad — on whatever plane — and is therefore endowed with spirit and soul and, in consequence, memory.

The tendency of specialized animal or plant species to revert to their primitive racial type conflicts with the Darwinian idea that changes result from the gradual accretion of small differentiations. Scientists see heredity as a string of beads, connected one to the other without any thread running

through the whole; whereas the theosophical philosophy regards each bead as springing from the connecting vital thread or line, so that the characteristics of all ancestors may be transmitted in latency, ready to appear at any time, should circumstances favor it.

Atef (Egyptian) *Atef*. Father; the Atef-crown was one of the crowns of Osiris (also of Khnum, less frequently of other deities) and of some kings of Egypt, especially the Ramessed line. It consisted of the tall white conical cap of Upper Egypt, flanked with a pair of ostrich plumes and having the solar disk and uraeus in front; oftentimes the cap was omitted. The atef was emblematic of the sovereignty of Egypt under the attributes of light, truth, and divinity — the feather being the hieroglyph for truth; also the “two feathers represent the two truths — *life and death*” mystically, while the uraeus is the symbol of initiation (TG 42, 355).

Aten (Egyptian) *Áten*. The disk of the sun and its vivifying, light-giving beams. Extended during the 18th dynasty to become the basis of a new religion under Amenhetep III and his son Amenhetep IV. They endeavored to arouse a more devotional feeling in the life of the Egyptians in opposition to the rigorous formalistic worship prescribed by the priests of the time, with its animal sacrifices and rigid ceremonialism, stressing the most material aspect of the gods as represented in the popular mythology. Incense and flowers decked altars, instead of blood sacrifices; joyousness pervaded the new capital city, while architects and painters created new ideas in their works. However, his successor Tut-ankh-Amen, reinstated the worship of Amen-Ra under the direction of the priests. The worship of Amen or Ammon was an idea in conception far older than and philosophically and mystically superior to the conceptions which clustered about the newer worship of Aten. This newer worship, with the ideas woven into its meaning by the monarch and his wife, was not only a reform when contrasted with the rigid ritualism into which the worship of Amen had degenerated, but actually was an attempt to infill the minds of the Egyptian people with the joyousness of the solar orb itself as the vehicle of the recondite, secret, and highly mystical Amen, abstract and highly philosophical. This illustrates how a noble worship can become ritualistic and empty, and how a more sensuous but more joyous worship can be used in a revivalistic sense to awaken a new religious devotion in the hearts of the multitude.

Athamaz [rare Hebrew identical with *Thammūz*, or *Tammūz*] A Syrian deity worshiped by both Syrians and Hebrews, equivalent to Adonis (the Greek form of the Shemitic 'Adon, “Lord”).

Athantor [probably from Arabic] A self-feeding furnace of the alchemists, and also a transmitting agent formed of astral substance or fluid. “Electricity, the one Life at the upper rung of Being, and Astral Fluid, the Athantor of the Alchemists, at its lowest; God and devil, good and evil” (SD 1:81).

Atharva Veda (Sanskrit) *Atharva Veda* One of the principal Vedas, commonly known as the fourth; attributed to Atharvan or Atharva. The *Rig-Veda* states that he was the first to “draw forth fire” and institute its worship, as well as the offering of soma and prayers. Mythologically, Atharvan is represented as a prajapati, Brahma’s eldest son, instructed by his father in brahma-vidya: thus was

he inspired to compose the Veda bearing his name. At a later period he is associated with Angiras and called the father of Agni. The *Atharva-Veda*, considered of later origin than the other three Vedas, comprises about 6000 verses, 760 being hymns, consisting of formulas and spells or incantations for counteracting diseases and calamities. The hymns are of slightly different character from those in the other Vedas: in addition to reverencing the gods, the worshiper himself is exalted and is supposed to receive benefits by reciting the mantras.

Atheism, Atheists In modern times, those who do not accept the monotheistic Christian God or any god. It formerly signified those who did not believe in the accepted divinity or divinities of the State or populace.

The Roman Empire was entirely tolerant of religious beliefs, but took strong measures with the early Christians because they were, from the legal viewpoint of the conservative Roman magistrate, religious and quasi-political radicals of a dangerous type. They were atheists in that they did not accept the State gods. Later, to the Christians, the pagans in their turn became atheists because though they believed in gods, they did not believe in the orthodox Christian God. Theosophists, Buddhists, Confucianists, etc., have been at various times called atheists because they do not accept monotheism. To strip a deity of personal human attributes is, in the eyes of monotheists, to deny the existence of that deity altogether.

Athena (Greek) Daughter of Metis (wisdom, wise counsel) and Zeus, said to have sprung fully-formed from her father's head; with Zeus and Apollo one of a divine triad. Famed for wise counsel both in peace and war, Athena was the strategist, as Homer portrays her in the Iliad. As patron deity of Athens, she was the genius of statesmanship and civic policy. Certain archaic monuments show Athena assisting Prometheus (the intellectual fire-bringer) in shaping the first human body from the plastic stuff of earth. It is equally significant that she was connected with Apollo, the god of the seers and the sun personified, in producing climatic changes due to the shifting of the poles. Athena is to be found, variously named, in every theogony, as one of the kabeiria, those mighty beings "of both sexes, as also terrestrial, celestial and kosmic," who when incarnated as initiate-teachers or kings, "were also, in the beginning of times, the rulers of mankind," giving "the first impulse to civilizations" and directing "the mind with which they had endued men to the invention and perfection of all the arts and sciences" (SD 2:363-4).

As a virgin deity of intellectual character, Parthenos, Athena is the mother of manasaputric kumaras. Thus through these intellectual progeny she is the source of ideative or intellectual power. *See also* MINERVA

Athenagoras Second century Christian apologist and philosopher, said to have been influenced by Ammonius Saccus and to have been "thoroughly instructed in the Platonic philosophy, and comprehended its essential unity with the oriental systems" (Wilder, *New Platonism and Alchemy*, p. 3-4) (BCW 14:305-8).

Athivahikas. See ATIVAHIKA

Athor. See HATHOR

Athravan, Atravan (Avestan), **Atourban** (Pahlavi), **Azarban, Azarvan** (Persian) Fire-guardian; the attendant of the sacred fire in Persian temples; the proper word for a priest in the Avesta, likewise Zoroaster's name with the Persians in far later times. Blavatsky interprets the word as "teacher of fire."

As the Persian scriptures says, it was not only the wearing of the priestly robes and bearing of the implements and the baresma which made one an athravan: "He who sleeps on throughout the night, who does not perform the Yasna nor chant the hymns, who does not worship by word or by deed, who does neither learn nor teach, with a longing for (everlasting) life, he lies when he says, 'I am an Athravan.' Him thou shalt call an Athravan who throughout the night sits up and demands of the holy wisdom, which makes man free from anxiety, with dilated heart, and which makes him reach that holy, excellent world, the world of paradise" (Vendidad 18:6, 7).

In Shah-Nameh (the Book of Kings) it was Jamshid (Yima) who categorized society into four classes. The first of these four were the Atourbans. The kings of the early Aryans were also chosen from among the first category, who were royal sages.

Athtor. See HATHOR

Ativahika (Sanskrit) *Ativāhika* [from *ati* beyond + *vāhika* from the verbal root *vah* to transport or carry] To convey or carry across; a class of beings inhabiting the lower lokas: "With the Visishtadwaites, these are the Pitris, or *Devas*, who help the disembodied soul or *Jiva* in its transit from its dead body to *Paramapadha*" (TG 42), to the highest bliss. Applied to the Sukshma-sarira or subtle body in Vedanta philosophy (cf. SD 1:132).

Atizoe. See OITZOE

Atlanteans The various peoples which flourished during long ages, on the fourth great continent, called Atlantis by theosophists; the fourth root-race. "The Fourth Race Atlanteans were developed from a nucleus of Northern Lemurian Third Race Men, centred, roughly speaking, toward a point of land in what is now the mid-Atlantic Ocean. This continent was formed by the coalescence of many islands and peninsulas which were upheaved in the ordinary course of time *and became ultimately the true home of the great Race known as the Atlanteans*" (SD 2:333-4).

"The term 'Atlantean' must not mislead the reader to regard these as one race only, or even a nation. It is as though one said 'Asiatics.' Many, multityped, and various were the Atlanteans, who represented several *humanities*, and almost a countless number of races and nations, more varied indeed than would be the 'Europeans' were this name to be given indiscriminately to the five existing parts of the world; . . . There were brown, red, yellow, white and black Atlanteans; giants

and dwarfs . . .” (SD 2:433n).

It is customary to regard the later Atlanteans as a race of sorcerers because, according to the narratives told concerning the doom of Atlantis and its inhabitants (cf SD 2:427), many deliberately followed the left-hand path — yet not all were black magicians, for there were millions in all ages of Atlantis who earnestly essayed to preserve the wisdom of their semi-spiritual forebears of the third root-race. There were wonderful civilizations during the millions of years of Atlantean development surpassing in material things anything that is known today.

In regard to the remarkable achievements that the Atlanteans made in all the arts and sciences, we read that the early fifth root-race received their knowledge from the fourth root-race. “It is from them that they learnt aeronautics, *Viwan Vidya* [vimana-vidya] (the ‘knowledge of flying in air-vehicles’), and, therefore, their great arts of meteorography and meteorology. It is from them, again, that the Aryans inherited their most valuable science of the hidden virtues of precious and other stones, of chemistry, or rather alchemy, of mineralogy, geology, physics and astronomy” (SD 2:426).

When the cyclic hour for the climax of the geologic changes in the earth’s surface finally arrived, the catastrophe occurred during which the greater part of Atlantis and its population, largely of sorcerers, perished beneath the sea; yet many islands survived, some of them of large extent, such as Ruta and Daitya. But the wiser and more holy portions of the Atlanteans had left Atlantis before this, migrating to the high tablelands of Asia: they were the forefathers of the Turanians, Mongols, Chinese, and other ancient nations.

Atlantidae (Greek) Descendants of Atlantis; “The ancestors of the Pharaohs and the forefathers of the Egyptians, according to some, and as the Esoteric Science teaches. . . . Plato heard of this highly civilized people, the last remnant of which was submerged 9,000 years before his day, from Solon, who had it from the High Priests of Egypt. Voltaire, the eternal scoffer, was right in stating that ‘the Atlantidae (our *fourth* Root Race) made their appearance in Egypt. . . . It was in Syria and in Phrygia, as well as Egypt, that they established the worship of the Sun.’ Occult philosophy teaches that the Egyptians were a remnant of the last *Aryan* Atlantidae” (TG 42).

Atlantis In Theosophical literature the fourth great land-massif or continental system which composed the land area of this globe several million years ago, and which was the home of the fourth root-race. Atlantis was not the name of this land area when inhabited by its own populations, but is borrowed by theosophists from Plato.

A surprising number of very ancient traditions besides those of Greece support the Atlantean hypothesis. Some of the widespread deluge stories, certainly those surviving during the Classic period in the nations surrounding the Mediterranean Sea, relate only to Plato’s relatively small island, Poseidonis, more or less the size of modern Ireland, if we follow Plato’s statements of size; but in addition to these there have been many deluges noticed in the traditions of other peoples

scattered over the face of the globe. The chief great flood referred to the principal collapse of Atlantis, the main sinking occurring during the Miocene period several million years ago. Other island-continent sank later, e.g., Daitya and Ruta (Sanskrit name for one of the last great islands of the Atlantean system in the Pacific Ocean) which went down during the Pliocene times — in Geikie's Nomenclature, about 850,000 years ago. (SD 2:314).

“The *Atlantic portion of Lemuria* was the geological basis of what is generally known as Atlantis. The latter, indeed, must be regarded rather as a development of the Atlantic prolongation of Lemuria, than as an entirely new mass of land upheaved to meet the special requirements of the fourth root-race. Just as in the case of Race-evolution, so in that of the shifting and re-shifting of continental masses, no hard and fast line can be drawn where a new order ends and another begins. Continuity in natural processes is never broken” (SD 2:333).

Referring to the vast expanse of lands, including both continents and islands, occupied by the populations of the fourth root-race, Blavatsky wrote: “at a remote epoch a traveller could traverse what is now the Atlantic Ocean, almost the entire distance by land, crossing in boats from one island to another, where narrow straits then existed” (IU 1:558). While the term Atlantis derived from Greek sources undoubtedly gave its name to what we now call the Atlantic Ocean, yet the Atlantic continental system reached even into what is now called the Pacific; and the islanders of this body of water almost universally amongst themselves have legends all pointing to the fact that their ancestors lived on and came from “great islands” which preceded the present distribution of land and sea. *See also* ATLANTEANS; ROOT-RACE, FOURTH

Atlas (Greek) [from *tlenai* to bear] In Greek mythology a titan, a sea god who supports on his shoulders the vault of heaven. Son of Iapetus and Clymene or Asia; brother of Prometheus, Epimetheus, and Menoetius; father of the Pleiades, Hyades, Calypso, and sometimes the Hesperides.

Also a mountain or range in West Africa. Mount Atlas, considered both geographically and mythologically, parallels Mount Meru of the Hindus. Both are intimately connected with the fourth root-race. Atlas is a symbol of the fourth root-race, and his seven daughters, the Atlantides, are the seven subraces (SD 2:493). But Atlas is also the old continents of Lemuria and Atlantis, combined and personified in one symbol, and Mount Atlas is spoken of as a relic of Lemuria. “The poets attributed to Atlas, as to Proteus, a superior wisdom and an universal knowledge, and especially *a thorough acquaintance with the depths of the ocean*: because both continents bore races instructed by *divine* masters, and because both were transferred to the bottom of the seas . . .” (SD 2:762). Atlas was compelled to leave the surface of the earth and join his brother Iapetus in the depths of Tartarus, where he supports the new continents on his “shoulders.”

Atma. *See* ATMAN

Atmabhu (Sanskrit) *Ātmabhū* [from *ātman* self + *bhū* to become] Self-existent, self-becoming,

hence self-born. Applied to each member of the Hindu Trimurti — Brahma, Vishnu, and Siva — likewise to the god of cosmic desire or unity, Kama-deva.

Atmabodha (Sanskrit) *Ātmabodha* [from *ātman* self + *bodha* wisdom] Wisdom of self; knowledge or wisdom of the hierarch or highest portion of any being. Also a work by Sankaracharya; likewise one of the Upanishads of the *Atharva-Veda*.

Atma-buddhi (Sanskrit) *Ātma-buddhi* [from *ātman* self + *buddhi* spiritual soul] The divine-spiritual part of a human being, the Pythagorean Monas or higher duad. Full mahatmas, who may be called vajra-sattvas, have merged their whole being in their compound sixth and seventh principles (atma-buddhi), through and with the buddhi-manas. Atma-buddhi is impersonal and a god per se, but when divorced from manas it can have no consciousness or perception of things beneath its own plane.

Atma-buddhi-manas (Sanskrit) *Ātma-buddhi-manas* [from *ātman* self + *buddhi* spiritual soul + *manas* mind] The reincarnating ego in conjunction with the monad. This trinity includes only the highest essence of manas — the higher manas. The combination of atma-buddhi-manas is sometimes mystically called the divine swallow or the uraeus of flame, when the speaker intends to convey the idea that spirit, the spiritual soul, and the intellect or higher manas are all united and therefore immortal and enduring for the cosmic manvantara. “The ‘Three-tongued flame’ that never dies is the immortal spiritual triad — the Atma-Buddhi and Manas — the fruition of the latter assimilated by the first two after every terrestrial life. The ‘four wicks’ that go out and are extinguished, are the four lower principles, including the body.

“ ‘I am the three-wicked Flame and my wicks are immortal,’ says the defunct. ‘I enter into the domain of Sekhem (the God whose arm sows the seed of action produced by the disembodied soul) and I enter the region of the Flames who have destroyed their adversaries,’ *i.e.*, got rid of the sin-creating ‘four wicks’ ” (SD 1:237).

The reincarnating ego is at times loosely used to signify either atma-buddhi-manas as a monadic unity or, on the other hand, the higher manas. Strictly speaking, the reincarnating ego is the combined spiritual, intellectual, and psychological fruit gathered in by the monad or atma-buddhi at the end of each individual life of the imbodyed entity; hence, the reincarnating ego is the higher manas. However, as these various manasic fruitages are ingathered by the monad in which they have their abode and from which it is impossible to separate them, the reincarnating ego is often spoken of as being the atma-buddhi plus the higher manas.

Atma-jnanin (Sanskrit) *Ātma-jñānin* [from *ātman* self + *jñānin* knower from the verbal root *jñā* to know] The knower of atman or the universal self; likewise one who knows the world-soul. In a more mystical sense directly applicable to the individual, atma-jnanin signifies one who knows his own inner divinity and recognizes his spiritual solidarity with the cosmic self, the paramatman of our solar system. Those who thus recognize their oneness with the cosmic divinity are mahatmas

of the highest class.

Atmamatra (Sanskrit) *Ātmamātra, Ātmamātrā* [from *ātman* self + *mātra* or *mātrā* element, particle] A primordial spiritual particle or monad, a particle or elementary portion of original prakriti or elemental material; “*atmamatra* is therefore the spiritual atom as opposed to the elementary, not reflective ‘elements of himself’ ” (SD 1:334). *See also* ATMAMATRASU

Atmamatrasu (Sanskrit) *Ātmamātrāsu* [from *ātman* self + *mātrā* element] In the elements of self, in the original elements or particles of selfhood. The feminine form, *atmamatra*, is the spiritual atom or the elements of self, as contrasted with the differentiated atom or molecule of manifested existence.

Atman (Sanskrit) *Ātman* Self; the highest part a human being: pure consciousness, that cosmic self which is the same in every dweller on this globe and on every one of the planetary or stellar bodies in space. It is the feeling and knowledge of “I am,” pure cognition, the abstract idea of self. It does not differ at all throughout the cosmos except in degree of self-recognition. Though universal it belongs, in our present stage of evolution, to the fourth cosmic plane, though it is our seventh principle counting upwards. It may also be considered as the First Logos in the human microcosm. During incarnation the lowest aspects of atman take on attributes, because it is linked with buddhi, as the buddhi is linked with manas, as the manas is linked with kama, etc.

Atman is for each individualized consciousness its laya-center or entrance way into cosmic manifestation. It is our self precisely because it is a link which connects us with the cosmic hierarch. Through this atmic laya-center stream the divine forces from above, which by their unfolding on the lower planes originate and become seven principles. “We say that the Spirit (the ‘Father in secret’ of Jesus), or *Atman*, is no individual property of any man, but is the Divine essence which has no body, no form, which is imponderable, invisible and indivisible, that which does not *exist* and yet *is*, as the Buddhists say of Nirvana. It only overshadows the mortal; that which enters into him and pervades the whole body being only its omnipresent rays, or light, radiated through *Buddhi*, its vehicle and direct emanation” (Key 101).

Atman is also sometimes used of the universal self or spirit, called in Sanskrit Brahman or paramatman. The individual is rooted in the surrounding kosmos by three superior principles, which are that atman’s highest and most glorious parts. Atman is included among the human principles because it is the universal absolute essence of which buddhi, the soul-spirit, is the carrier, transmitting its rays to the remainder of the human constitution.

Atmanam Atmana Pasya (Sanskrit) *Ātmānam ātmanā pasya* [from *ātman* self + the verbal root *paś* to see] See the self by the self; a favorite phrase used in Vedanta philosophy, especially by Sankaracharya. In its highest interpretation it refers to Avalokitesvara which is “in one sense ‘the *divine Self* perceived or seen by *Self*,’ the *Atman* or seventh principle ridded of its *mayavic* distinction from its Universal Source — which becomes the object of perception for, and by the

individuality centred in *Buddhi*, the sixth principle, — something that happens only in the highest state of *Samadhi*. This is applying it to the microcosm” (ML 343).

In the Upanishads the same idea is often expressed in the allegory of the two birds seated in a tree — one bird looking at the other.

Atmasamyama Yoga (Sanskrit) *Ātmasaṃyama-yoga* [from *ātma* self + *saṃyama* restraint + *yoga* union] The attaining of at-one-ment with the highest by means of self-restraint. The *Bhagavad-Gita* (ch 6) treats of atmasamyama yoga, or the quieting of the mind and the passions and desires of the personal self, in order to attain the complete realization of the true self or atman.

Atma-vada. See ATTAVADA

Atma-vidya (Sanskrit) *Ātmavidyā* [from *ātma* self + *vidyā* knowledge] Knowledge of the self; the highest form of spiritual-divine wisdom, because the fundamental or essential self is a flame or spark of the kosmic self. “Of the four Vidyas — out of the seven branches of Knowledge mentioned in the Puranas — namely, ‘Yajna-Vidya’ (the performance of religious rites in order to produce certain results); ‘Maha-Vidya,’ the great (Magic) knowledge, now degenerated into Tantrika worship; ‘Guhya-Vidya,’ the science of Mantras and their true rhythm or chanting, of mystical incantations, etc. — it is only the last one, ‘Atma-Vidya,’ or the true *Spiritual* and *Divine wisdom*, which can throw absolute and final light upon the teachings of the three first named. Without the help of Atma-Vidya, the other three remain no better than *surface* sciences, geometrical magnitudes having length and breadth, but no thickness. They are like the soul, limbs, and mind of a sleeping man: capable of mechanical motions, of chaotic dreams and even sleep-walking, of producing visible effects, but stimulated by instinctual not intellectual causes, least of all by fully conscious spiritual impulses. A good deal can be given out and explained from the three first-named sciences. But unless the key to their teachings is furnished by Atma-Vidya, they will remain for ever like the fragments of a mangled text-book, like the adumbrations of great truths, dimly perceived by the most spiritual, but distorted out of all proportion by those who would nail every shadow to the wall” (SD 1:168-9).

Called by Purucker the last of the seven jewels, the keynote running all through this jewel of wisdom being how the One becomes the many.

Atmosphere Any of various aery spheres enveloping a globe. On earth the lowest is familiar air, but there are others in the ethereal realms beyond, and the word is applied to mahat and manas, as mythologically represented by Indra, god of the firmament, the personified atmosphere (SD 2:614). However, mahat and its ray in the human being, manas, are far beyond in quality and ethereality anything that the human imagination understands by atmosphere — unless it is endowed with the mystical sense that *spiritus* had among the philosophic ancients.

The elements of our present atmosphere are compounded from simpler elements which existed on

earth at earlier stages of its evolution, and which exist now on some other globes. The atmosphere of our earth has become not only a chemical, but an alchemical crucible, in which “there is a perpetual exchange taking place in space of molecules, or atoms rather, correlating, and thus changing their combining equivalents on every planet” (SD 1:142). Neither sun nor stars are said to have our terrestrial elements, except in the sun’s outer robes, for it is only in its outer robes that the integration of atomic substances become sufficiently physical to permit the appearance of our terrestrial elements; also our globe is said to have its own special laboratory on the far outskirts of the atmosphere, and when the atoms and molecules cross this, they change and differentiate from their primordial nature. The spectroscope may show certain similarities between the elements on sun and stars and those on earth but we have no logical right to infer identity in other respects; and actually the physical and chemical properties of atoms differ on different globes, as do also most of the effects of temperature (SD 1:142).

Our atmosphere teems with invisible lives, of which germs are merely the physically imbodyed or integrated samples, minute and very weak in power. Our atmosphere contains likewise hosts of invisible beings of tremendous energy. Medieval philosophers combined these denizens of the atmosphere under the curious name of sylphs. As compared with the populations of the other elements of mystical philosophers, the sylphs are perhaps the most dangerous, psychologically and otherwise, at least so far as mankind is concerned. Further, theosophy teaches that both the atmosphere and the solid earth are interpenetrated by other spatial realms, invisible and intangible to us, but as objective to their own denizens as our world is to us.

The early races of mankind on earth did not require an atmosphere as we now know it. There are organisms on earth at present which do not need oxygen for their vital activities, and the beings at every stage of time or on every globe are invariably adapted to the external conditions which surround them.

Atmu, Atum (Egyptian) *Átmu, Átum* [from *tem* to make an end of, complete] Also Tem, Tum, Temu. A form of the sun god, represented as bringing the day to its close, thus associated with the evening sun — whether of our ordinary day, or of the ending of a manvantara. “I am the god Tem, the maker of the sky, the creator of things which are, who cometh forth from the earth, who made the seed of man to come into being, the Lord of things, who fashioned the gods, the Great Gods, who created himself, the Lord of Life, who made to flourish the Two Companies of the Gods. . . . My coming is like unto that god who eateth men, and who feedeth upon the gods” (Egyptian Book of the Dead, Budge 258-60).

The Egyptian god Tem is connected by Blavatsky with fohat, for Tem is “spoken of as the Protean god who *generates other gods* and gives himself the form he likes; the ‘master of life’ ‘giving their vigour to the gods’ (chapter lxxiv.) He is the *overseer* of the gods, and he ‘who creates spirits and gives them shape and life’; he is ‘the *north wind* and *the spirit of the west*’; and finally the ‘Setting

Sun of Life,' or the vital electric force that leaves the body at death, wherefore the defunct begs that Toum [Tem] should give him the breath from his *right* nostril (positive electricity) that he might live in his *second* form” (SD 1:673-4).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ato-Az

Atom (Greek) *atomos*. Indivisible, individual, a unit; among the Greek Atomists what in theosophy is called a monad. Atomic theories of the constitution of the universe or of matter are many and ancient. In modern physics the atom is a small particle once thought indivisible, but now resolved into component units. In some philosophies, as that of Leibniz, the atoms (which he calls monads) are psychological rather than physical units — unitary beings of diverse kinds and grades, composing the universe.

In theosophy, atoms have to be considered in relation to monads; in *The Secret Doctrine* gods, monads, and atoms are a triad like spirit, soul, and body. A monad is a divine-spiritual life-atom, a living being, evolving on its own plane, and a life-atom is the vehicle of the monad which ensouls it, and in turn ensouls a physical atom. The ultimates of nature are atoms on the material side, monads on the energetic side; monads are indivisible, atoms divisible (a departure from the etymological meaning). Thus there is a quaternary of gods, monads, life-atoms, and physical atoms. “An atom may be compared to (and is for the Occultist) the seventh principle of a body or rather of a molecule. The physical or chemical molecule is composed of an infinity of finer molecules and these in their turn of innumerable and still finer molecules. Take for instance a molecule of iron and so resolve it that it becomes non-molecular; it is then, at once transformed into one of its seven principles, viz., its astral body; the seventh of these is the atom. The analogy between a molecule of iron, before it is broken up, and this same molecule after resolution, is the same as that between a physical body before and after death. The principle remains *minus* the body. Of course this is occult alchemy, not modern chemistry” (TBL 84).

Atomists Certain ancient Greek philosophers, especially of the school of Leucippus and Democritus, who taught that all things arose from atoms (*atomoi*) and a vacuum (*kenon*). By atoms Democritus meant “indivisible particles of substance containing in themselves the potentialities of all possible future development, self-moved, self-driven . . . spiritual indivisible entities, the

ultimates of being, self-conscious, spiritual monads.

“Nor by his word *kenon*, or void, did he mean an utter emptiness, as we misconstrue that word. He meant the vast expanses of the spatial deeps, Space, in fact, which this infinite host of monads filled” (MIE 34-5). The atomists became more materialistic as time passed. The equivalent Hindu atomist schools are the Nyaya and Vaiseshika.

Atonement Reconciliation brought about by a re-formation of the lower, so that it may become at one with the higher. Hence a number of Occidental mystics refer to the processes of atonement involving the foregoing idea as at-one-ment. In its best sense atonement means the becoming at one between the human ego and its spiritual counterpart, where the life or vitality of the lower personal man is offered up as a sacrifice, willing and utterly joyful, to the higher self. Thus the life which the hierophant is enjoined to offer is not his physical life, but the undesirable and imperfect life of his lower self, the selfish personality. The custom of sacrificing helpless animals — a custom protested against by Gautama Buddha in particular — is but an instance of the way in which lofty spiritual teachings or initiatory ceremonies can degenerate into repellent or cruel rites.

Nevertheless, “the atonements by blood — blood-covenants and blood transferences from gods to men, and by men, as sacrifices to the gods — are the first keynote struck in every cosmogony and theogony; soul, life and blood were synonymous words in every language . . . The mystic meaning of the injunction, ‘Verily, verily, I say unto you, except *ye eat the flesh* of the Son of man and *drink his blood*, ye have not life in yourselves’ [John 6:53] . . . [has] to be interpreted with the help of *three* keys — one opening the *psychic* door, the second that of physiology, and the third that which unlocks the mystery of terrestrial being, by unveiling the inseparable blending of theogony with anthropology” (BCW 8:181-2).

The relation between the atonement and the intellectual and moral evolution of mankind may be explained as follows: “The Higher Manas or ego is essentially divine, and therefore pure; . . . Yet by the very fact that, though dual and during life the Higher is distinct from the Lower, ‘the Father and Son’ *are one*, and because that in reuniting with the parent Ego, the Lower Soul fastens and impresses upon it of all its bad as well as good actions, the Higher Ego — though innocent and without blemish — has to bear the punishment of the misdeeds committed by the *lower* Self together with it in their future incarnation. The whole doctrine of atonement is built upon this old esoteric tenet; . . . The *Secret Doctrine* shows that the Manasa-Putras or incarnating Egos have taken upon themselves, voluntarily and knowingly, the burden of all the future sins of their future personalities. . . . It is, then, true to say that when we remain deaf to the Voice of our Conscience, we crucify the Christos within us” (TBL 55-6). *See also* VICARIOUS ATONEMENT

Atri (Sanskrit) *Atri* [from the verbal root *ad* to eat] Devourer; one of the seven great rishis or maharshis, to whom many of the Vedic hymns are attributed. He is considered one of the ten prajapatis or lords of creation, the seven great rishis and ten prajapatis being intimately connected

in mythologic history. He is married to Anusuya, a daughter of Daksha, their son being Durvasas. He is also represented as one of the seven mind-born sons of Brahma, who are also referred to as the seven rishis of the third manvantara (which may refer both to the third round and to the third root-race in the fourth round). The key to these shifting connections is analogy.

The Sons of Atri (atrayas or atreyas) are one of the classes of the pitris representing the barhishad pitris (those who were more particularly lunar pitris), the formers and developers of the human physical body and lower principles. After “having given birth to their astral doubles, [they] are reborn as the *Sons of Atri*” (SD 2:89).

In astronomy, Atri is one of the stars of the Ursa Major, this constellation being especially connected with the seven maharshis.

Atropos (Greek) [from *a* not + *trepo* to turn] The third of the three Fates or Moira: Clotho, Lachesis, and Atropos, meaning respectively, the spinner, the lot-thrower, and one who cannot be turned aside. They are aspects of karma, Atropos being residual karma not yet worked out combined with the action of the will in the person, thus making the destined or relatively inevitable future — that which by our own making “cannot be turned aside,” because it is we ourselves as we shall be.

Atsiloth, Atziluth. See 'ATSTSILOTH

'**Attsiloth** (Hebrew) '*Attsilōth* [from '*ātsal* to join, separate, flow out] In the Qabbalah, the first of the four worlds or spheres ('olams) emanated during the manifestation of a cosmos, called the “sphere of emanations or condensation.” Being the most exalted of the spheres or conditions, it contains the upper ten Sephiroth, which represent the operative qualities of the divine will, as the most abstract and spiritual of the emanations from 'eyn soph. This uppermost sphere is represented as the abode of Diyyuqna' (the prototype, the image, the upper 'Adam or 'Adam 'Illa'ah) and is also called 'olam has-sephiroth (the world of the Sephiroth). As the most perfect emanation from 'eyn soph, 'Attsiloth is the Great Sacred Seal, the prototype from which all inferior worlds are copied, having impressed on themselves the image of the Great Seal. From this 'olam (also called the 'Attsilatic World), through the conjunction of the King and Queen, proceeds the second world — 'olam hab-beri'ah. “The globes A, Z, of our terrestrial chain are in Aziluth” (TG 46).

Attavada (Pali) *Attavāda* [from *attā* self (Sanskrit *ātman*) + *vāda* theory, disputation from the verbal root *vad* to speak] Atmavada (Sanskrit) The theory of a persistent soul. A study of Buddhist sutras or suttas shows that Gautama Buddha intended the term to convey the meaning of the heresy of separateness, the belief that one's self or soul is different and apart from the one universal self, Brahman. Its importance in philosophy and mystical thought, and its genuine Buddhist significance, lies in the fact that Buddhism does not deny the existence of a soul, but strongly emphasizes the fact that no such soul is either a special creation or in its essence different from and other than the cosmic self. Hence the meaning of the heresy of separateness, because

those who hold this view are under the constant false impression that in themselves they are different from, and other than, the universe in which they live, move, and have all their being.

In *The Mahatma Letters* attavada is termed “the doctrine of Self,” and with sakkayaditthi leads “to the *maya* of heresy and belief in the efficacy of vain rites and ceremonies; in prayers and intercession” (ML 111).

At-teekah D’At-teekeen. See ‘ATTIQA’ DE‘ATTIQIN

‘Attiqa’ De‘Attiqin (Aramaic) ‘Attīqā’ dē‘attīqīn. Qabbalistic phrase generally rendered Ancient of the Ancient; an alternative for Kether, the first Sephirah of the Sephirothal Tree, referring especially to the originating aspect of this first emanation. Also referred to as ‘Attiqa’ Qaddisha’ (the Holy Ancient). See also ANCIENT OF THE ANCIENT; ‘ARIKH’ ANPIN; RE’SH HIWWAR

Attis. See ATYS

Attraction and Repulsion Two forces ever in operation during periods of manifested activity, called by Empedocles love and hate. In physics attraction is an effect, whose cause cannot be mechanically explained without circular reasoning, and which must therefore be assumed. Newton in speaking of gravitational attraction treats it mathematically as an effect and does not dogmatize on its real nature. These two aspects of the manifestation of universal unity arise out of the polarity inherent in cosmic manifestation as between spirit and matter generally, between the higher hierarchies and the lower. Physical attraction is a manifestation of a cosmic principle which has manifestations on all planes, spiritual, mental, and psychic, so that its influence is seen in our thoughts and feelings.

In *The Secret Doctrine* (1:103), three great universal causes of manifestation are named in connection with intelligent cosmic motion, namely the breath, love or attraction, and hate or repulsion, the latter being merely polar antitheses of the same underlying cosmic energy. Through the interaction of these three, universes and worlds come into being, have their periods of manvantaric growth, and finally decay and disappear, only to reappear after a period of rest or pralaya. Herbert Spencer intuitively refers to manvantara and pralaya, and what takes place within each: “the universally co-existent forces of attraction and repulsion which, as we have seen, necessitate rhythm in all minor changes throughout the Universe, also necessitate rhythm in the totality of its changes — produce now an immeasurable period during which the attracting forces predominating, cause universal concentration, and then an immeasurable period, during which the repulsive forces predominating, causes universal diffusion — alternate eras of Evolution and dissolution” (SD 1:12).

A capital mistake made by modern science and philosophy, producing momentous consequences in theory, has been the arbitrary division of natural forces into disjunct and unrelated energies. All forces of nature originally spring from a common source, a cosmic spiritual unit, which is the

heart of nature itself, and hence it is no more possible to divorce attraction from its alter ego repulsion than it would be to have a stick which has only one end. This principle applies directly to such forces as gravitation, which is bipolar exactly as electricity is recognized to be, its two forms being attraction and repulsion, though the last has been ignored in scientific experimentation and deduction. Just as human beings, because of the bipolarity in their vital auras feel attracted to, repelled by, or both from other human beings, producing the strong sympathies and antipathies which are so well known, so does gravity operate. Celestial bodies are not only strongly or weakly attracted to each other, but are likewise strongly or weakly repelled by each other.

The universal life principle which manifests everywhere in nature, and which under one of its forms is called kundalini-sakti, of necessity includes the two great forces of attraction and repulsion. Attraction and repulsion being of cosmic origin are therefore of necessity likewise manifest in the manifold conditions of human life; but this does not imply that the individual should passively or negatively accept disturbances caused by inharmony when it is within his power as an offspring of the higher divinities to restore it — insofar as his energies and knowledge permit — to the harmony or cosmic unity from which these cosmic energies themselves spring. Hence the teaching of the greatest sages and seers of history has been to rise above the elements of personal attraction or repulsion, and to blend the two into the compassionate mastery which the indomitable human will, when trained and practiced, can acquire over not merely moods but all conditions in life. Thus he becomes a friend to all, and an enemy to none, repelling evil and attracting good, until these by association may themselves blend or marry into that mystic unity which is the achievement or culmination of evolution, whether human or cosmic.

Atyantika Pralaya (Sanskrit) *Ātyantika Pralaya* [from *ati* beyond, over + *anta* end, limit; *pra-laya* from the verbal root *li* to dissolve, dissolution] That which seems eternal or beyond limitation, which is beyond or more than the limit; individual pralaya or nirvana. The atyantika pralaya concerns only the individualities of certain rare entities, as it is the identification of the freed individual monad (jivanmukta) with the supreme spirit — a mahatmic state, whether temporary or lasting until the following mahakalpa. After having reached that state there is no future evolution possible, and consequently no re-embodiments till after the mahapralaya, which lasts 311,040,000,000,000 years. Since there is the probability of the jivanmukta's reaching nirvana at an early cycle of the manvantara, this mahapralayic period may be almost doubled, and therefore is long enough to be regarded as eternal, if not endless. Atyantika pralaya is also occasionally used for absolute obscuration, as of a whole planetary chain (SD 2:309-10n).

Atys or Attis (Greek) [probably from Phrygian] A deity worshiped in connection with the Great Mother, Cybele, in Phrygia and later throughout the Roman Empire. The legends concerning Cybele and Atys are similar to those of Aphrodite and Adonis in Syria, to Baal and Astarte in Sidon, to Isis and Osiris in Egypt. In certain aspects he represents the type-figure of initiation and adeptship in the mysteries of Cybele. These rites were held by the Corybantes in Phrygia during

the spring equinox, in imperial Rome annually from April 4-10, and then in later times from March 15-27. The fourth stage of this festival, the Hilaria, was the favorite festival in Rome.

Atziluth, Atzilatic World. See 'ATSTSILOTH

Aub. See 'OB

Audhumla (Icelandic) [from *audr* void + *hum* dusk] Dusky void; in Norse mythology, the cow (symbol of fertility) formed of the frozen vapors of elivagar (glaciers, ice waves). From her udder flowed the four streams that nourished the frost giant Ymir. She is the female principle and Ymir the male principle; the four streams of milk “which diffused themselves throughout space (the astral light in its purest emanation)” (IU 1:147). Audhumla licked the salt ice blocks and uncovered the head of Buri, the parentless progenitor of all living beings. “The meaning of the allegory is evident. It is the precosmic union of the elements, of Spirit, or the creative Force, with Matter, cooled and still seething, which it forms in accordance with universal Will. Then the Ases, ‘the pillars and supports of the World’ (*Cosmocratores*), step in and *create* as All-father wills them” (TG 43).

Audlang (Icelandic) [from *audr* void + *langr* long] One of several heavens of the Norse Eddas; one of “the three gradually ascending planets of our ‘Chain’ ” (SD 2:100), these unseen globes usually designated E, F, and G in theosophical literature. Audlang is evidently one of the “shelves” (planes) of substances different from our matter, of which these unseen globes are built. Beyond Audlang lie other heavens: Grimnismal in the Edda enumerates twelve mansions of the gods on their appropriate shelves.

Augoeides [from Greek *auge* bright light, radiance + *eidōs* form, shape] Bulwer-Lytton in *Zanoni* adopted the term from Marcus Aurelius (who says that the sphere of the soul is augoeides), using it to denote the radiant spiritual-divine human soul-ego. In *Isis Unveiled* it denotes the spiritual monad, atma-buddhi, and is collated with the Persian ferouer or feruer, the Platonic nous, etc. In a high degree of initiation the initiand comes face to face with this radiant presence, the luminous radiation streaming from the divine ego at the heart of the monad. When the Augoeides touches with its rays the inferior monads in the human constitution and awakens them to activity, these then becomes the various lower egos or manifested children of the divine ego.

Augurs [from Latin *avis* bird] One of the priestly colleges in ancient Rome. The original function was to take the auspices: to examine the heavens and other things for signs indicating the disposition of the celestial powers, especially at the inauguration of events. One of these modes of divination was the examination of the behavior of certain birds kept for the purpose. See also MANTICISM

Aum (Sanskrit) *Aum* The ancient Indians held that Om, when considered as a single letter was the symbol of the Supreme; when written with three letters — Aum — it stood among other things for

the three Vedas, the three gunas or qualities of nature, the three divisions of the universe, and the deities of the Hindu Trimurti — Brahma, Vishnu, and Siva — concerned in the creation, preservation, and destruction of the universe or the beings composing it. “The mystic formula, *résumé* of every science, contained in the three mysterious letters, AUM which signify *creation, conservation, and transformation*” (IU 2:31). These three letters are supposed by some Hindus to have correspondences as follows: “The letter A is the Sattva Guna, U is the Rajas, and M is the Tamas; these three qualities are termed Nature (Prakriti). . . . A is Bhurloka, U is Bhuvarka, and M is Svarloka; by these three letters the spirit exhibits itself” (Laheri in *Lucifer* 10:147). This word is said to have a morally spiritualizing effect if pronounced during meditation and when the mind is at peace and cleansed of all impurities. *See also* OM

Aupapaduka (Sanskrit) *Aupapāduka* Pali opapatika. Self-produced, spontaneously generated (research shows that *anupapadaka*, as found in Monier-Williams’ *Sanskrit-English Dictionary*, is a misreading of *aupapaduka*. Cf. Franklin Edgerton, *Buddhist Hybrid Sanskrit Grammar and Dictionary*, Yale University Press, New Haven, 1953, 2:162). One who does not go or come (as others do): parentless, having no material parent. One who is self-born by reason of his own intrinsic energy, without parents or predecessors from which his existence or activities are derived, as is the usual case in line descent; applied therefore to certain self-evolving gods. In Buddhism, used with particular reference to the dhyani-buddhas, who issue forth from adi-buddha without intermediary agency.

“The term Anupadaka, ‘parentless,’ or without progenitors, is a mystical designation having several meanings in the philosophy. By this name celestial beings, the Dhyani-Chohans or Dhyani-Buddhas, are generally meant. But as these correspond mystically to the human Buddhas and Bodhisattvas, known as the ‘Manushi (or human) Buddhas,’ the latter are also designated ‘Anupadaka,’ once that their whole personality is merged in their compound sixth and seventh principles — or Atma-Buddhi, and that they have become the ‘diamond-souled’ (Vajra-sattvas), the full Mahatmas. . . . The mystery in the hierarchy of the Anupadaka is great, its apex being the universal Spirit-Soul, and the lower rung the Manushi-Buddha; and even every Soul-endowed man is an Anupadaka in a latent state. Hence, when speaking of the Universe in its formless, eternal, or absolute condition, before it was fashioned by the ‘Builders’ — the expression, ‘the Universe was Anupadaka’ ” (SD 1:52).

Indeed, not only are there *aupapaduka* divinities of the solar system, but also of every organic entity, because the core of any such entity is *aupapaduka* — a mystical way of stating the doctrine of the inner god (cf OG 5-6; also FSO 487-91, 532).

Aupapaduka-bhuta (Sanskrit) *Aupapāduka-bhūta* [from *aupapāduka* self-producing + *bhūta* element from the verbal root *bhū* to be, become] The self-generated element; the second in the descending scale of the seven cosmic bhutas or elements. An analog of the Second or Unmanifest

Logos.

Aupapaduka-tattva (Sanskrit) *Aupapāduka-tattva* [from *aupapāduka* self-producing + *tattva* thatness, reality from *tad* that] Self-born or parentless principle; second in the descending scale of seven cosmic tattvas, of which five only are enumerated in the philosophical schools of India. Aupapaduka has the mystical meaning of that which comes into being, whether in the cosmos or human being, out of its inherent energy and not as the offspring or child of a predecessor. Aupapaduka-tattva corresponds to the Second or Unmanifest Logos.

Aur. See 'OR

Aura [from Greek, Latin *aura* air] A subtle invisible essence or fluid emanating from and surrounding beings, both those classed as animate and inanimate. To the eyes of clairvoyants the human aura appears as a halo of light, variously colored according to the momentary psychic and mental condition of the individual. Since everything in the universe is a center of living energies of one kind or another, it must necessarily be surrounded by a field of force, representing its radiations into the surrounding space and upon all objects within its sphere of influence. The human being is of a composite nature, and his aura will, therefore, be composite, including astral-vital, psychomental, and spiritual emanations, and any of these may be perceptible according to the plane on which the perceiver is able to function. But the aura, even though not commonly visible to our eyes, is nevertheless perceptible by the effects which it produces upon those subtle senses which all possess in addition to the conventional five. By the auras of persons we are affected, both consciously and unconsciously, and thus is explained the influence which people exercise on each other. Animals are in some ways far more sensitive to auras than we are.

Auras also emanate from so-called inorganic substances, such as magnetic substances. This subject has been investigated in connection with different bodies by Reichenbach and others, whose researches show that these emanations are bipolar as is ordinary magnetism. The phenomena of animal magnetism, investigated by Mesmer, illustrate this, for his magnetic fluid was a reality. The aura is a psychomental effluvium, and in its higher parts is a direct manifestation of the akasic portion of the auric egg surrounding every individual.

Aureole [diminutive of Latin *aureus* golden] Either a special spiritual radiance adorning the heads of saints and martyrs, or a golden halo surrounding the head or whole body of a holy man. The matter is clearly explained in *The Mahatma Letters* as: “a counterpart of what the astronomers call the red flames in the ‘corona’ may be seen in Reichenbach’s crystals or in any other strongly magnetic body. The head of a man — in a strong ecstatic condition, when all the electricity of his system is centered around the brain, will represent — especially in darkness — a perfect simile of the Sun during such periods [eclipses]. The first artist who drew the aureoles about the heads of his Gods and Saints, was not inspired, but represented it on the authority of temple pictures and traditions of the sanctuary and the chambers of initiation where such phenomena took place” (p.

Aurgelmir. See ORGELMER

Auric Egg or **Envelope** The source of the human aura, taking its name from its shape. It ranges from the divine to the astral-physical, and is the seat of all the monadic, spiritual, intellectual, mental, passionate, and vital energies and faculties. In its essence it is eternal and endures throughout the pralayas as well as during the manvantaras.

“Every being or thing throughout the universe, and indeed the universe itself, has, or rather is, its own auric egg. Its primal substance is the akasa . . .

“The auric egg originates in the monad which is its heart or core, and from which, when manifestation begins, it emanates forth in streams of vital effluvia. On the different planes which the auric egg traverses as a pillar of light, from the atmic to the physical, each such auric or pranic effluvium is a principle or element, commonly reckoned in man as seven in number. When the auric egg is viewed on any one plane of the human constitution, we discover that this plane or ‘layer’ not only corresponds to, but actually is, one of the unfolded six principles of man; it would appear to be ovoid or somewhat egg-shaped in outline, and to be a more or less dense, extremely brilliant, central portion surrounded by an enormously active interworking cloud of pranic currents. . . .

“These immensely active and interworking clouds or vital effluvia are actually the pranas of the auric egg on any one plane expressing themselves as auras” (FSO 427).

Aurnavabha (Sanskrit) *Aurṇavābha* A grammarian mentioned in Yaska’s *Nirukta*; also a demon in the *Rig-Veda*.

Aurva (Sanskrit) *Aurva* A rishi, son of Urva and grandson of Bhrigu, mentioned in the *Rig-Veda* (8:102:4). The *Mahabharata* relates that Aurva was the preceptor of Sagara (whose mother he saved from the funeral pyre), on whom he bestowed the agneyastra (fiery weapon).

Automatic Writing The practice in which a person takes pen and paper, makes his mind blank, and waits for his pen to write by some involuntary impulse. Sometimes the pen is replaced by a mechanical device such as an ouija board. The results vary from purely negative ones, through the stage of illegible scrawls, up to elaborate consecutive messages or even quotations from rare books. The ability of different persons to succeed in this practice varies, a minority being specially apt; and the aptitude can be developed by practice. The usual spiritualistic explanation is that these writings are communications from those “on the other side.” But in every case it is necessary for the automatic writer to resign the control of his own will over his physical and vital-astral body and to surrender these to the use of influences unknown to him.

From a theosophical viewpoint this is extremely hazardous, as we are protected by our physical

organism and by our own will from the dangerous, often malignant influences of the lower astral light; and to strive to break down that barrier is a proceeding which can lead to a breakdown of our linkage with our higher self.

Autumn. See SEASONS

Avabodha (Sanskrit) *Avabodha* [from *ava* down away + *bodha* awakening] Consciously cognizant or aware of; hence discrimination or awakened perception.

Avadhuta (Sanskrit) *Avadhūta* [from *ava-dhū* to shake off] Shaken off, dispelled, rejected, as applied to evil spirits or enemies; also applied to plants shaken by the wind. As a noun, one who has shaken off himself worldly feeling and shackling ties. Also one of the six degrees or stages of asceticism.

Avaiivartika (Sanskrit) *Avaiivartika* [from *a* not + *vi-vṛt* to turn around, revolve] Non-revolving, nontransmigrating; in the case of a re embodying entity, one who is advanced so far on the evolutionary path that he is no longer enslaved by, or enchained in, the whirling waves of samsara. Hence also translated “one who does not revolve any more,” applied to seventh round human beings, and therefore strictly referable to one who has reached nirvana. Also applied to every buddha “who turns no more back; who goes straight to Nirvana” (TG 44), for whether nirvana is entered as in the case of the Pratyeka Buddhas, or whether the avaiivartika renounces that lofty state and remains in the nirmanakaya as a Buddha of Compassion, both classes of buddhas have passed beyond the necessity of “revolving” any more in this round.

Avaiivartyas (Sanskrit) *Avaiivartya-s* [from *a* not + *vi-vṛt* to turn around, revolve] Those who will never return; in Mahayana Buddhism those who have passed beyond a certain grade of evolution, freeing them from the need of returning to re embodyments in lower spheres. The kumaras, strictly speaking, are avaiivartya entities because although they inflamed and awoke our latent intellectual faculties on earth during this round, they themselves did not embody, for they have no need of this, having passed beyond any lessons that they could themselves learn from earth-life. Hence they are those “who will never return” as embodying egos.

Avalokiteshwara. See AVALOKITESVARA

Avalokitesvara (Sanskrit) *Avalokiteśvara* [from *ava* down, away from + the verbal root *lok* to look at, contemplate + *īśvara* lord] The lord who is perceived; the divinity or lord seen or contemplated in its inferior or “downward-seen” aspect. The essential meaning in theosophy is the Logos, whether considered in its kosmic aspect or in its function in an entity dwelling in such kosmos. “Simultaneously with the evolution of the Universal Mind, the concealed Wisdom of Adi-Buddha — the One Supreme and eternal — manifests itself as Avalokiteshwara (or manifested Iswara), which is the Osiris of the Egyptians, the Ahura-Mazda of the Zoroastrians, the Heavenly Man of the Hermetic philosopher, the Logos of the Platonists, and the Atman of the Vedantins” (SD 1:110).

Avakokitesvara is the seventh principle in the microcosm, and therefore the atman or atma-buddhi; and analogically the seventh or highest principle in the universe, and hence the cosmic Logos in its macrocosmic position. There are in consequence two Avalokitesvaras: the First and Second Logos whether of the macrocosm or of the microcosm, because the First Logos reflects itself in the Second Logos, in the macrocosm, just as atman reflects itself in and works through its mirroring veil buddhi. There is an analogy with parabrahman and mulaprakriti, but Avalokitesvara is essentially the cosmic monad or First Logos on the one hand, and the human-divine monad or human logos, atma-buddhi, on the other hand. Avalokitesvara thus opens manifestation or differentiation in either case. *See also* Chenrezi; Kwan-shai-yin; Logos

Avapta (Sanskrit) *Avāpta* [from *ava* down, away + the verbal root *āp* to obtain] Attained, to obtain one's aim or end; initiated.

Avara (Sanskrit) *Avara* [from *ava* down, below] Inferior, low, younger.

Avarana (Sanskrit) *Āvaraṇa* [from *a-vṛ* to conceal, surround] Covering, hiding, concealing, enclosing; as a noun, the act of enclosing or concealing, also anything that conceals, encloses, or protects, as a wall, shield, or garment. In philosophy, intellectual blindness.

In Vedanta philosophy, avarana-sakti is the power of illusion, that which veils, conceals, or surrounds the real nature of beings or things.

Avara-saila-sangharama (Sanskrit) *Avara-śaila-saṅghārāma* [from *avara* western + *śaila* mountain + *saṅghārāma* monastery] A Buddhist school or monastery situated on the “western mountain,” in a place variously spelled Dhanakataka, Dhanyakataka, Dhanakstchaka, and Dhanakacheka, which according to Eitel was “built 600 BC, and deserted AD 600” (TG 44).

Avastan (Sanskrit) *Avasthāna* A habitat or dwelling place, also applied to a country as the habitat of a people. Blavatsky defines it as “an ancient name for Arabia” (TG 44).

Avastha (Sanskrit) *Avasthā* [from *ava* down into + the verbal root *sthā* to stand] State, condition, position, situation; applied to the four states of consciousness (jagradavastha, svapnavastha, sushuptyavastha, and turiyavastha). The Greek equivalent is hypostasis, that which stands under, supports, carries, or bears a superior. Thus the superior is born or manifested by its hypostasis or avastha.

Avatamsaka Sutra (Sanskrit) *Avatamsaka Sutra* *The Flower Ornament Scripture* or *The Flower Adornment Scripture*; a long and very profound Buddhist scripture, which Nagarjuna “brought back from the Realm of the Nagas” (adepts) (BCW 14:510). The basis for modern translations is the Chinese translation of Shikshananda (652-710). (BCW 14:285, 423; 6:100-1)

Avatar, Avatara (Sanskrit) *Avatāra* [from *ava* down + the verbal root *tṛ* to cross over, pass] That which passes down or descends; the passing down of a celestial energy or an individualized

complex of celestial energies — a celestial being — in order to overshadow and illuminate a human being who, at the time of such connection of divinity with matter, possesses no human soul *karmically* destined to be the inner master of the body thus born. “Hence an Avatara is one who has a combination of three elements in his being: an inspiring divinity; a highly evolved intermediate nature or soul, which is loaned to him and is the channel of that inspiring divinity; and a pure, clean, physical body” (OG 16).

Sankaracharya, Krishna, Lao-tzu, and Jesus were avataras in differing degrees, of somewhat differing structure. There was a divine ray which came down at the cyclic time of each of these incarnations, and the connecting link or the flame of mind was provided in each case by a member of the Hierarchy of Compassion. Krishna says, “I incarnate in period after period in order to destroy wickedness and reestablish righteousness” (BG ch 4, sl 8). Krishna here represents the Logos or logoc ray which “on our plane would be utterly helpless, inactive, and have no possible means of communication with us and our sphere, because that logoc ray lacks an intermediate and *fully conscious* vehicle or carrier, *i.e.*, it lacks the intermediate or highly ethereal mechanism, the spiritual-human in us, which in ordinary man is *but slightly active*. An avatara takes place when a direct ray from the Logos enters into, fully inspires, and illuminates, a human being, through the intermediary of a bodhisattva who has incarnated in that human being, thereby supplying the fit, ready, and fully conscious intermediate vehicle or carrier” (Fund 276).

Blavatsky says that “rebirths may be divided into three classes: the divine incarnations called Avataras; those of Adepts who give up Nirvana for the sake of helping on humanity — the Nirmanakayas; and the natural succession of rebirths for all — the common law. The Avatara . . . is a descent of the manifested Deity — whether under the specific name of Siva, Vishnu, or Adi-Buddha — into an illusive form of individuality, an appearance which to men on this illusive plane is objective, but it is not so in sober fact. That illusive form having neither past nor future, because it had neither previous incarnation nor will have subsequent rebirths, has naught to do with Karma, which has therefore no hold on it” (BCW 14:373-4).

Vishnu as the supporter of life is the source of one line of avataras so often spoken of in Hindu legends. These ten avataras of Vishnu are: 1) Matsya the fish; 2) Kurma the tortoise; 3) Varaha the boar; 4) Narasimha the man-lion (last of animal stage); 5) Vamana the dwarf (first step toward the human form); 6) Parasu-Rama, Rama with the axe (a hero); 7) Rama-chandra, the hero of the *Ramayana*; 8) Krishna, son of Devaki; 9) Gautama Buddha; and 10) Kalki, the avatara who is to appear at the end of the kali yuga mounted on a white horse, inaugurating a new reign of righteousness on earth. A horse has from immemorial time been a symbol of the spiritual as well as vital energies of the inner solar orb. Hence, when the next avatara is said to come riding a white horse, the meaning is that he comes infilled with the solar light or splendor — an avatara or manifestation of a spiritual and intellectual solar energy which will carry all before it on earth.

Brahmanical esotericism never taught that divinity descended into the animals as given in the legends. These names of different animals and men, like all zoological mythology, were chosen because of certain characteristic attributes. They actually represent ten degrees of advancing knowledge and growth in understanding — ten degrees in the esoteric cycle — as well as different evolutionary stages through which monads break through the lower spheres in order to express themselves on higher rungs of the evolutionary ladder of life. These names also represent the technical names given to neophytes in esoteric schools. The lowest chela was called a fish, the chela who had taken the second degree successfully was called a tortoise, and so forth, till the highest of all was called an incarnation of the sun — a white horse in Hindu legend.

These avataric descents do not appertain solely to a race, root-race, globe, chain, or solar system, because nature repeats itself by analogy, and the same line of enlarging understanding of evolutionary development takes place in all the spheres *mutatis mutandis*. Thus these avataric descents can be ascribed to the solar system, the planetary chain as a whole, a globe, a root-race, and even to a subrace.

Avayakta. See AVYAKTA

Avebury An English village in Wiltshire about 20 miles north of Stonehenge, where one of the most remarkable stone circles in England, and the largest in Europe, is located. Unfortunately many of the stones have been removed or buried, so that the monument at present is not as impressive as Stonehenge. Originally 300 stones are believed to have been in the three circles, the largest circle measuring on the average 1260 feet in diameter and 4442 feet in circumference.

Archaeologists have calculated that these circles date from about 1900 BC in the so-called Early Bronze Age. Blavatsky states that the erection of such great monolithic monuments was supervised by initiated priests, some at least coming from Egypt, belonging to the second subrace of the fifth root-race, at a time when a land connection existed between France and Great Britain, but gives no date for the British stone circles. Recent excavations, however, have disclosed that the great circle cuts right across the site of an older and rather smaller one.

Avernus (Latin) **Aornos** (Greek) [from *a* not + *ornis* bird] In popular speech an equivalent to the Greek Hades, to which the lake Avernus was supposed to be the entrance. This lake was located in the volcanic region near Vesuvius, not far from Cumae and Puteoli, and legend had it that over its waters no bird could cross.

Avesa (Sanskrit) *Āveśa* [from *ā-viś* to enter into] An entering, entrance, or taking possession of, as in the instance of an obsession; in later times used to denote a fit of anger or demoniacal frenzy. In occult literature used for the temporary occupancy of a human body for specific purposes by an adept, or to refer to an avatara during the presence of the divine influence on earth. Thus it is similar in meaning to the Tibetan tulku. Avesa, therefore, means the taking possession of, or temporary imbodiment in, a body, human or other, by an outside entity or power, whether divine

or evil.

A classical instance of the *avesa* is the story told of Sankaracharya who, to gain in that imbodiment the human experiences of a life of another character, entered the body of a raja who had just died, requickened it, and for a time pursued his activities in the body of the former king.

Avesta (Avest, Pers) **Apstak, Avestak** (Pahlavi) Law or the basic foundation, the sacred scriptures of the Mazdeans. The language of the ancient Aryans was the language of the Vedic hymns and also of the Gathic chants of Zoroaster, these being so close that a mere phonetic change often suffices to translate a passage from one into the other. Because of this connection “the Mazdean Scriptures of the *Zend-Avesta*, the *Vendidad* and others correct and expose the later cunning shuffling of the gods in the Hindu Pantheon, and restore through Ahura the *Asuras* to their legitimate place in theogony” (SD 2:60-1). *Zend*, on the other hand, traditionally designates the Pahlavi commentary on the Avesta. The *Yasnas* are the principal writings of the Zoroastrians; and in their oldest portion, the *Gathas*, the original philosophy of Mazdeism is expressed in a spirited poetic language. The *Vispered* (Pahlavi) or *Visperataro* (Avestan) [from *vispe* all + *ratavo* warriors, spiritual teachers] is an appendix to the later *Yasnas* which deals with the ritualistic aspects of the Mazdean faith.

The *Vendidad* (Pahlavi) or *Vidaeva-data* (Avestan) [from *vi* against + *daeva* evil + *data* law] has 22 fargards (chapters) of which the first two deal with the story of creation and the origin of civilization. The rest is the code of priesthood. The 21 *Yashts* are the epic of *Yazatas* or *Izads* (gods), composed in prose form. Their legends are often comparable with those of *Shah-Nameh*. Some hymns and prayers from other parts of the Avesta are found in shorter *Yashts*. There seems to be more profundity and originality of style in the longer *Yashts*. The *Khorde Avesta* (Avestan) or *Khordak-Appestak* (Pahlavi), meaning bits and pieces of Avesta, consists of different prayers taken from the other four parts of the Avesta, put together by Azarabad, the son of Mehrispand, during the reign of Shahpour II (310-379).

Zand or *Zend* is the Pahlavi interpretation of the Avesta written during the Sassanid dynasty (226-650) by the priests. Pahlavi script, due to the limitation of the number of letters, was very difficult to read correctly (one letter represented several consonantal sounds). Thus the interpretation was left to the knowledge and understanding of the reader. *Hozvareh* — words which were written in Aramaic and read in Pahlavi — made the task of reading and understanding even more difficult. *Pazand* is the interpretation of *Zand* written in *Dindabireh* script which was a far better instrument for accurate reading.

The original Avesta consisted of 21 *Nasks* of which very few remain intact. Tabari (9th century Iranian historian) writes: “Thirty years after the reign of Kay Goshtasp, Zartusht Spitaman produced a book which was written in gold on 12,000 cowhides. Kay Goshtasp ordered that this book be kept in *Dejh-Nebeshtak* and be guarded by the *Hierbads* (the learned) away from the

reach of the profane.” The Pahlavi Dinkard (of the 9th century) states that two complete copies of the Avesta existed: the one kept in the Dezh-Nebeshtak of Persopolis and the other in Ganj-e-Shizegan, which most likely was in the town of Shiz of Azarpatagan. When Alexander burned down Persopolis, the copy there was destroyed; but the one in Shizegan was translated into Greek and sent to Aristotle, Alexander’s tutor. This translation has been lost. Bal’ami, historian and the minister of the Samanid kings (early 10th century), writes that Alexander “gathered Iranian philosophers and had their writings translated into Greek and sent them to Aristotle and other Greek philosophers. He destroyed the cities of Babel, Eragh and Pars, killed all men of eminence, and burned down all King Dara’s (Darius) libraries.”

Avichi (Sanskrit) *Avīci* [from *a* not + *vīci* waves, pleasure] Waveless, having no waves or movement; without happiness; without repose. “A generalized term for places of evil realizations, but not of ‘punishment’ in the Christian sense; where the will for evil, and the unsatisfied evil longings for pure selfishness, find their chance for expansion — and final extinction of the entity itself. Avichi has many degrees or grades. Nature has all things in her; if she has heavens where good and true men find rest and peace and bliss, so has she other spheres and states where gravitate those who must find an outlet for the evil passions burning within. They, at the end of their avichi, go to pieces and are ground over and over, and vanish away finally like a shadow before the sunlight in the air — ground over in Nature’s laboratory” (OG 16-17).

Avichi is a state, not a locality per se; nevertheless, an entity, whatever state it may be in, must have location, and consequently so far as the human race is concerned, avichi is Myalba, our earth in certain of its lowest aspects. Furthermore, in avichi, although it can be looked upon as being the representation of stagnation of life and being in immobility, nevertheless this refers to the temporary or quasi-inability to rise along the evolutionary ladder — yet not completely so. Beings entirely in avichi are born and reborn uninterruptedly, with scarcely intermissions of time periods. But “suppose a case of a monster of wickedness, sensuality, ambition, avarice, pride, deceit, etc.: but who nevertheless has a germ or germs of something better, flashes of a more divine nature — where is he to go? The said spark smouldering under a heap of dirt will counteract, nevertheless, the attraction of the eighth sphere, whither fall but absolute *nonentities*; ‘failures of nature’ to be remodelled entirely, whose divine monad separated itself from the five principles during their life-time, . . . and who have lived as *soulless* human beings. . . . Well, the first named entity then, cannot, with all its wickedness go to the eighth sphere — since his wickedness *is of a too spiritual, refined nature*. He is a *monster* — not a mere *Soulless* brute. He must not be simply *annihilated* but punished; for, annihilation, *i.e.* total oblivion, and the fact of being *snuffed* out of conscious existence, constitutes *per se* no punishment, and as Voltaire expressed it: ‘*le neant ne laisse pas d’avoir du bon.*’ Here is no taper-glimmer to be puffed out by a zephyr, but a strong, positive, maleficent energy, fed and developed by circumstances, some of which may have really been beyond his control. There must be for such a nature a state

corresponding to Devachan, and this is found in *Avitchi* — the perfect antithesis of *devachan* — vulgarized by the Western nations into Hell and Heaven . . . ” (ML 196-7).

As long as the entity does not sink by attraction into the Eighth Sphere, or Sphere of Death, it still has within it the possibility of regaining its foothold on the ascending evolutionary ladder and rising again. Rare indeed are those who succeed in so rising, but the case is not absolutely hopeless. And finally, an entity may be in *avichi* not only after death, but also during life on earth, as *avichi* is a state and not a place per se.

Avichi-nirvana (Sanskrit) *Avīci-nirvāṇa* A fearful state, the opposite of the wondrous nirvana experienced by the dhyani-chohans, consisting of aeons and aeons of unspeakable, self-imposed misery. It lasts until either the vanishing monad by a desperate effort saves itself or, more usually, the final dissolution ensues in the Eighth Sphere, and the entity disappears as an organic being, finally and utterly annihilated.

Avidya (Sanskrit) *Avidyā* [from *a* not + *vidyā* knowledge, wisdom] Nescience rather than ignorance; it implies absence of wisdom rather than inherent incapacity, and is the result of illusion producing ignorance. Hence ignorance of spiritual things. *See also* VIDYA

Avikara (Sanskrit) *Avikāra* [from *a* not + *vikāra* from *vi-kṛ* to transform, change] Non-change of form or nature, unchangeable or immutable for all below it or inferior to it in the same hierarchy, hence used of the deity, god, or hierarch of such hierarchy.

Avitchi. *See* AVICHI

Avyakta (Sanskrit) *Avyakta* [from *a* not + *vyakta* manifested from *vy-añj* to anoint, adorn, cause to appear, manifest] Unmanifested; applied to Vishnu and Siva, and in the *Bhagavad-Gita* to Krishna. Hence *Avyakta* is the unmanifest or the undifferentiated, as opposed to *vyakta*, the manifest or differentiated. In the Sankhya philosophy, it is *mulaprikriti* (root- or primordial nature), the veil of *parabrahman*, or *parabrahman* manifested in *mulaprakriti*. *Mulaprakriti* is the unmanifested side of differentiated nature, and hence *avyakta*; but the term is equally applicable to the consciousness side of the universe, during those immensely long time periods when cosmic consciousness is sunken in its own essence and not manifesting. Similarly, the higher or divine-spiritual parts of cosmic consciousness may be said to be *avyakta* even during periods of cosmic manifestation. To the Sankhyas, *avyakta* is the one cosmic principle which is the root of all essential selfhood and which during cosmic *manvantara* is in its lower parts differentiated in and through the innumerable hierarchical organisms. It therefore subsists in every kind of *upadhi* and is the real spiritual entity which a person has to reach in his progress towards spirit.

In the Vedantic system of Krishna, however, *avyakta* is also *parabrahman*, that which will not perish even at the time of cosmic *pralaya*, because *parabrahman* is the one essence, not only of the whole cosmos, but even of *mulaprakriti* itself, the foundation of the manifested cosmos. “In case

you follow the Sankhyan doctrine, you have to rise from *Upadhi* to *Upadhi* in gradual succession, and when you try to rise from the last *Upadhi* to their *Avyaktam*, there is unfortunately no connection that is likely to enable your consciousness to bridge the interval. If the Sankhyan system of philosophy is the true one, your aim will be to trace *Upadhi* to its source, but not consciousness to its source. The consciousness manifested in every *Upadhi* is traceable to the *Logos* and not to the *Avyaktam* of the Sankhyas. It is very much easier for a man to follow his own consciousness farther and farther into the depths of his inmost nature, and ultimately reach its source — the *Logos* — than to try to follow *Upadhi* to its source in this *Mulaprakriti*, this *Avyaktam*. Moreover, supposing you do succeed in reaching this *Avyaktam*, you can never fix your thoughts in it or preserve your individuality in it; for, it is incapable of retaining any of these permanently” (Notes on BG 98). Nevertheless the Sankhya philosophy is as true as is the Vedanta, and reaches the same ultimates of philosophic thought and understanding, although along differing systemic lines.

In the *Law of Manu* *avyakta* is used as an equivalent to *paramatman* (universal spirit).

Avyaktabrahma (Sanskrit) *Avyaktabrahma* [from *avyakta* unmanifested + *brahman* first deity] Unmanifested deity; standing for the seventh principle (BCW 6:166; 3:315).

Avyaktamurti (Sanskrit) *Avyaktamūrti* [from *avyakta* unmanifested + *mūrti* form, shape from the verbal root *murc* to condense, solidify] To assume form; the undifferentiated or indiscrete cosmic substance. Krishna says, “the whole of this universe is pervaded by me in my *avyaktamurti*” (BG) — a way of stating that the undifferentiated spiritual substance of the universe pervades the universe, Krishna standing for the *Logos*.

Avyaktanugrahaṇa (Sanskrit) *Avyaktānugrahaṇa* [from *avyakta* unmanifested + *anugrahaṇa* the fifth or eighth creation of the Puranas] The unmanifested period of formative development, applied to *parabrahman* and *mulaprakriti* conjointly (SD 1:521-2).

Avyaya (Sanskrit) *Avyaya* [from *a* not + *vyaya* subject to change, decay from the verbal root *vyay* to expend] As an adjective, not subject to change, imperishable, incorruptible; as a masculine noun, a name of Vishnu and of Siva; as a neuter noun, a member or corporeal part of an organized body (used in Vedanta philosophy). *See also* APARINAMIN

Awen (Welsh) The muse, the inspiration of the poets. Tydain Tad Awen (Tydain father of the muse), according to the Iolo Manuscript, was the founder of Druidism.

Axieros, Axiokersa, Axiokersos, (Greek) Also *Aschieros, Achiosera, Achiochersus*. In ancient Greek mythology, three divinities whose Mysteries and worship were mainly centered in Samothrace. With *Kadmilos*, often said to be their parent, they were the *kabiri* [cf Chaldean *gibbor*, Hebrew *geber* beings of power or might, the great ones]. Frequently *Axieros, Axiokersa, and Axiokersos* are stated to be the offspring of *Hephaestus* or *Vulcan*, the fiery flame of creative cosmic intellect or *mahat*. The *kabiri* are equivalent to the four *kumaras* of Hindu literature —

Sanat-kumara, Sananda, Sanaka, and Sanatana. The functions of both groups was as guardians, guides, inspirers, bringers of illumination and prosperity; and, in the kosmic sense, as divinities intimately involved in the intelligent productive energies of nature. Their number is the same as that of the kosmic elements — four, occasionally five, and in reality seven or ten. The four named above are the lower quaternary of the kosmic septenary — those divinities most closely involved in the intelligent building and architectural construction and therefore government of the four lower cosmic planes.

In connection with man, the kabiri are the four lower classes of spiritual entities otherwise known as pitris, kumaras, and agnishvattas — all children of kosmic mahat. These divinities, although minor gods compared with the twelve great gods, were nevertheless held in the highest veneration particularly by those who were initiated into their Mysteries. Herodotus speaks of them and their functions with great reserve, but refers to them as being fire gods — which they were because cosmically representing the divine powers of the creative intellectual fire which in humanity works in similar fashion as the intellectual fire- or solar pitris. Their human influence is connected directly with manas and buddhi-manas.

Ayana (Sanskrit) *Ayana* [from the verbal root *i, ay* to go] Going, walking; road, path, way. Used in astronomy for advancing, precession; the sun's progress northward or southward, from one solstice to the other, is an ayana or half-year, two ayanas making one year. Also the equinoctial and solstitial points, the term for the solstice being ayananta. Finally, ayana signifies circulatory courses or circulations, as of the universe.

Ayatana (Sanskrit) *Āyatana* [from *ā* towards + the verbal root *yat* to rest in or on, make effort in or on] A resting place, seat, or abode; an altar, place of the sacred fire; a sanctuary, inner or outer. In Buddhism, the six ayatanas (shadayatanas), enumerated as the five senses plus manas, are regarded as the inner seats or foci of the lower consciousness, functioning through the ordinary five sense organs plus the manasic organ in the body, the brain. They are therefore classed as one of the twelve nidanas (bonds, halters, links) composing the chain of causation or lower causes of existence.

Ayin. See 'EYN

Ayodhya (Sanskrit) *Ayodhyā* The ancient city founded by Ikshvaku, the founder of the solar race (suryavansa); also the capital of Rama, hero of the *Ramayana*. It is now believed to be the modern city of Oude on the Sarayu River.

Ayur Veda (Sanskrit) *Āyurveda* [from *āyus* life, health, vital power + *veda* knowledge] One of the minor Vedas, generally considered a supplement to the *Atharva-Veda*, one of the four principal Vedas. It treats of the science of health and medicine, and is divided into eight departments: 1) salya, surgery; 2) salakya, the science and cure of diseases of the head and its organs; 3) kaya-chikitsa, the cure of diseases affecting the whole body, or general medical treatment; 4) bhuta-

vidya, the treatment of mental — and consequent physical — diseases supposed to be produced by bhutas (demons); 5) kaumara-bhritya, the medical treatment of children; 6) agada-tantra, the doctrine of antidotes; 7) rasayana-tantra, the doctrine of elixirs; and 8) vajikarana-tantra, the doctrine of aphrodisiacs. Medicine was regarded as one of the sacred sciences by all ancient peoples and in archaic ages was one of the knowledges or sciences belonging to the priesthood; and this list of subjects shows that the field covered by its practitioners was extensive. Its authorship is attributed by some to Dhanvantari, sometimes called the physician of the gods, who was produced by the mystical churning of the ocean and appeared holding a cup of amrita (immortality) in his hands.

Ayuta (Sanskrit) *Ayuta* [from *a* not + the verbal root *yu* to be interrupted, separated] Unimpeded; unseparated; ayuta-siddha is a philosophical term meaning proved to be not separated (by the intervention of space), hence inherent or innate. As an adjective, unbound, unfastened [from the verbal root *yu* to bind, fasten]. Also, ten thousand, a myriad.

Azael (Hebrew) ‘*Azā’ēl* or ‘*Azzā’ēl* One of the higher angels mentioned in the Qabbalah; the *Zohar* (iii, 208a) relates that he and the angel ‘Uzza’ scoffed at God (the *elohim*) for creating a humanity that sinned, and consequently were thrown to earth and changed into men. *See also* ‘UZZA’. (SD 2:491)

Azazel (Hebrew) ‘*Azā’zēl* [from ‘*azāz* to be firm, strong, powerful (or from ‘*ēz* goat) + ‘*ēl* divinity, god] Also Azaziel, Azazyel. God of victory; equivalent of Greek Prometheus, he was chief of the ‘*ishin* (Chaldean) or ‘*ishim* (Hebrew), men-spirits who, according to the *Zohar*, mixed themselves with mortal men, having come to earth to do so (Genesis 6:2-4). The ‘*ishin* are chained on a mountain in the desert, which means that they undergo descent into material life and confinement in incarnation. Azazel and the six other ‘*ishin* teach humankind to make weapons and utensils, and impart the knowledge of various other arts. These seven were the first instructors of the fourth root-race. The story is a form of the universal myth which represents the descent of the manasaputras and, as usual, the god of might or victory has been turned into a god of evil, his benefits into seductions, and his chivalrous sacrifice into a rebellion. He was, like Baphomet, turned into a goat — the scapegoat of the Old Testament, whose name in the Hebrew is Azazel. The goat in ancient animal symbology signified regeneration and reproductive power, hence strength, might.

Suggested additional material: Many experts in ancient Hebrew hold that the name of the old Syriac desert spirit/deity Azazel (Azazyel from the Ethiopian text) was confused with the Hebrew term “oz-oz-el” which literally meant “A goat that goes away.” This confusion was fueled by the use of a sacrificial goat “for Azazel” (actually released, not killed) in the Jewish Old Testament rite of atonement. Later, in comparatively modern times, the term “azazel” became synonymous with the idea of the scapegoat. While a firm connection has never been established, it seems likely that the 3,000-year-old Syriac Azazel is the same one mentioned about 200 BC in the apocryphal “Book of

Enoch” (Henoch) as the eventual leader of the “Sons of God” or “Watchers” sent to earth to watch over mankind, but later punished for taking human wives and teaching hidden knowledge to mankind. Confined to a thousand years’ bondage in the “abyss,” he was guarded by Archangels Michael, Raphael, Gabriel, and Phanuel. Although modern Christians often equate Azazel with Satan (Lucifer/Heylel), there is little scholarly evidence to support this view. A more likely view holds that the ancient worshippers of Yahweh sought to incorporate a link to existing, older belief systems while demonizing competing deities.

Azburj. See BORJ

Azerekhsh (Pahlavi) The most celebrated of the ancient fire-temples of the Magi, situated in Shiz, the capital of Atropatene (the Persian Gazn). Tradition ascribes the temple of Azerekhsh to Zartusht (Zoroaster).

Azhi-Dahaka (Avestan) **Zahak** (Persian) [from *azhi*, *azi* serpent; cf Sanskrit *ahi*] The destroying serpent or dragon; in the Avesta a three-headed dragon who strives to seize and put out the hvareno — the sovereign light, the glory from above. He takes hold of it, but Atar, the fire god, son of Ahura-Mazda, frightens him away and recovers the light. The scene of the fight is the sea, Vourukasha (the sea from which all the waters on the earth fall down with the winds and the clouds) or the waters of space (Yast 19).

Another myth, closely parallel with that in the Vedas, tells how Thraetaona Athwya slays the three-mouthed, three-headed, six-eyed serpent, the most dreadful drugh created by Angra-Mainyu. The scene of the battle is the four-cornered Varena, the four sided heavens (Yasna 9). Connecting the serpent with Satan or evil, Blavatsky writes: “War in heaven between Thraetaona and Azhidahaka, the destroying Serpent, ends on earth, according to Burnouf, in the battle of pious men against the power of Evil, ‘of the Iranians with the Aryan Brahmins of India’ ” (SD 2:390).

In far later times both the Pahlavi commentaries on the Avesta and the great epic writer of Persia, Ferdowsi, personalized Azhi-Dahaka as a fiend called Zahak and Thraetaona as King Jamshid. Azhi-Dahak in a pact with the Devil sells his soul in return for worldly possessions and the estate of his father, Mardas, a man of many virtues. He consents to the death of his father, totally gives into self-indulgence in physical pleasures out of vanity, and falls prey to the enchantment of flattery. No sooner does Zahak permit the Devil to kiss his shoulders than two black snakes grow in place of his lip marks. Since no cure can be found that will get rid of the vicious snakes, the Devil in the form of a physician prescribes that relief would only come from feeding the snakes with the fresh brains of young men. Azhak later finds and cuts Jamshid into two in the sea of China, and reigns with cruelty for a thousand years until Fereydoun (Thraetaona, the thrice potent) defeats him and chains him to Mount Damavand.

Aziluth. See 'ATSTSILOTH

Azoth [from Arabic *azzaug* the metal mercury] Used by Paracelsus for his universal remedy; mercury was regarded as a sort of common or root-metal contained in all other metals. Such words as mercury, in alchemical language, were generic rather than specific, and gross elements were considered as derivative from subtle ones. Thus a unitary and radical element, the parent of the other elements, is intended; the synthesis of the four elements, one aspect of the astral light.

Also used by Qabbalists, meaning pure air.

Azure Seats [from Persian *lazhward* lapis lazuli] Azure means a blue color, also the sky, hence celestial, referring to the causal realms of being, where the gods of kosmic intelligences function. Thus the azure seats of the gods conveys the abode of the spiritual forces that govern the universe in its manifold operations.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ba-Be

Ba (Egyptian) *Ba*. The human soul; closely connected with the heart, and usually depicted as a hawk with a human head. It was regarded in the nature of a human “double,” and mortal, equivalent to prana in some of its functions, or to kama-manas.

Ba'al, Baal. *See* BEL

Babel (Hebrew) *Bābāh* The inner meaning of the Tower of Babel, by which it was hoped that divinity might be reached or attained, is a house of initiation, a gate, portal, opening, or entrance to the divine. The physical tower was both the building set aside to house and protect the initiation chambers, together with the ceremonies that take place in them, and an architectural emblem to signify a raising up towards heaven. The tower may have either a divine or evil significance, either haughty pride and self-sufficiency or spiritual aspiration. Similar is the lightning-struck tower of the Tarot cards, and the Arabian Nights story of the man who built a palace completely except only for a roc's egg to hang in the dome, and when the egg is thus hung, the whole palace collapses. The work of the black magician, building from below upwards, is impermanent and, when it strikes the sky, is blasted. If such a tower and system be followed by adepts of the left-hand path for ultimate and foredestined confusion, it is one thing; but if the tower and its inner mysteries be in the charge of adepts of the right-hand path, it is another. The concentration of the narrator in the Bible concerning the Tower of Babel seems to have been entirely upon its aspect of left-hand magic.

The later Atlanteans were noted for their magic powers, wickedness, and defiance of the gods, and this tradition is preserved in many legends, such as the Biblical Tower of Babel, which derived from still older Chaldean scriptures. The legendary stories of wicked antediluvian giants warring against heaven are common in every mythology. The defeat of the giants, in some at least of these legends, results in the confusion of tongues — the break-up and dispersal of a great racial division

of mankind.

Babylon [from Assyrian “gate of the gods”] An ancient, celebrated city on the Euphrates said to have been founded by the Assyrian monarch Ninus or his legendary wife Semiramis. In ancient times one foci through which Brahmanical esoteric wisdom from India was diffused in Asia Minor, and its cosmogony forms a link between those teachings and the cosmogony of the Hebraic Bible.

Bacchus (Greek) Used by both Greeks and Romans, also called Dionysos by the Greeks, Liber by the Romans, Zagreus in the Orphic mysteries, Sabazius in Phrygia and Thrace; the same as Iacchus (connected with Iao and Jehovah). Generally represented as the son of Zeus and Semele, he is spoken of sometimes as a solar and sometimes as a lunar deity; for, like many other personifications of cosmic powers, he has both a solar and lunar (masculine or feminine) aspect. As a solar deity he has a serpent for his symbol and is a man-savior, parallel with Adonis, Osiris, Krishna, Buddha, and Christos. He is often called the god of wine, natural fertility, etc.

The original, pure Bacchic rites pertained to high initiation, in which the candidate becomes conscious of his oneness with divinity. Thus Bacchus, with his symbolic serpent and wine, stands for divine inspiration. But when the keys of the sacred science were lost and symbols were interpreted literally, the rites degenerated and often became profligate. Bacchus-Dionysos also figures as the inspirer of dramatic and representative art, inspiring the individual with the divine afflatus or mystic frenzy. Originally this meant the inner communion of the candidate with his own inner god and the consequent inspiration; on a lower plane it signifies the fleeting inspiration of poet and artist, and finally it degenerated into hysteria and morbid psychic states.

Baconian Methods The Baconian method corresponds roughly to what is known in logic as the inductive method of reasoning, of which Francis Bacon (1561-1626) was a great advocate, as contrasted with the deductive method. Considered to be the method of modern science, it consists in inferring general laws from the observation of particular instances; whereas in the deductive method, general laws are assumed because of the natural harmony of the universe, and particular instances or consequences are deduced as flowing forth from them. In the Baconian method particular phenomena are examined with the view of finding out what is essential and excluding what is nonessential, and thus establishing a general law; but the weakness of this method is that the number of particular phenomena or details to be examined in order to arrive at truth must be virtually coextensive with infinity; for in any instance a body of particular phenomena may be encountered which demands immediate readjustment or radical shiftings in opinions in process of crystallization. Actually the scientific method is a combination of both methods: we cannot interpret phenomena without having at the outset some principle in mind; moreover, no sooner have we established a general law than we begin to apply it for the discovery of other phenomena, thus using the deductive method.

A more important objection to the inductive method as used by modern science is that it limits the

basis of reasoning to the relative paucity of data furnished by our physical senses, which data we must first learn to understand beyond doubt; otherwise our reasoning is vicious. Blavatsky states that the secrets of invisible nature cannot be thus inferred, but that we must call in the aid of higher senses in order to obtain the necessary foundation for reasoning and to insure the adequate understanding of discoverable data. *See also* INDUCTIVE METHOD

Bacteria A numerous and varied class of microorganisms which exist in the air, earth, water, and in and on the bodies of plants, animals, and men. Bacteria, like all manifested things, are dual in action, being both beneficial and injurious to others: some of them provide the necessary enzymes for functional use, and others produce dangerous toxins. They are vital factors throughout the plant and animal kingdoms between which they are an organic link; and they are also a medium of contact between the astral and physical planes. As such they serve as material agents for certain phases of the operations of the laws of nature on the terrestrial plane.

Bacteria, then, are a host of visible and invisible agents which, on our plane, subconsciously carry out many processes of evolutionary life and death. They are links in the karmic chain by which the divine recorders, who follow the immutable laws in the universal mind, return to each being the results of whatever it was the antecedent cause. Thus the bacteria of a disease will multiply and produce their injurious toxins only when the karmic conditions within or surrounding the individual provide a suitable culture-medium for them. Even then, the toxemia may or may not be modified or overcome by the natural antitoxins of the blood aided by competent medical treatment. The typical disease germs found inactive in healthy throats, etc., are instances of a karma which, paradoxically, provides a dangerous contact with individual protection. The healthy person may be an unconscious carrier of the disease germ to someone who is due to reap the full effects of causes he had set in motion at some time.

The selective functions of these creative and destructive microorganisms are impersonally, and as it were automatically, directed by the invisible hierarchy of intelligences which guide the nature forces and so affect us physically and metaphysically as we have merited. The whole process is as natural as the analogous way in which a person's trillions of body cells are dominated by, and react to, the stimulation or depression of his harmonious or discordant state of mind and emotions. Both cells and bacteria are living entities, sentient but not intelligent in the human sense. The typical appearance of bacteria in certain diseases gives them a place as diagnostic signatures of physical conditions. But to regard them as the primal cause of the disease is mistaking the phenomena for the noumena which is working out karmic effects.

Badarayana Vyasa. *See* VYASA

Baddha (Sanskrit) *Baddha* [from the verbal root *bandh* to bind, tie] Bound, tied, fixed; in Hinduism "bound by the fetters of existence, or evil" (Kapila). " 'Baddha' differs from 'Mukta' in being encased as it were within these 36 Tatwams, while the other is free" (Subba Row, Theosophist

3:43). As a noun, used by Jains and Buddhists for that which binds or fetters the ray of the embodied spirit.

Badha (Sanskrit) *Bādha* [from the verbal root *bādh* to harass, pain, trouble] Affliction, trouble, pain, hurt.

Baetyl. See BETYLOS

Bagavadam (Tamil) According to Blavatsky, a scripture on astronomy and kindred subjects (TG 48). The time periods in it differ from present-day reckonings: 15 solar days make a paccham; two paccham (30 days) make a month — equivalent to only one day of the pitris. Two of such months make a roodoo; three roodoo, an ayanam; two ayanam, a year. However, this year of mortals is but a day of the gods.

Bagh-bog (Slavonian) One of the principal ancient Slavonian divinities of pre-Christian times, associated with thunder or cosmic electricity; somewhat resembling the Roman Jupiter Tonans or Greek Zeus.

Bahak-Zivo *bahak-ziwa* (Gnostic) According to the *Codex Nazaraeus*, the genius who called the world into existence out of the dark water. He is also called the father of the genii or aeons. Bahak-Zivo was ordered to construct creatures, but failed to do so because he was ignorant of Orcus (the bottomless pit); so he called to his aid a still purer spirit, Fetahil, who likewise failed in the attempt (cf SD 2:17).

Bahishprajna (Sanskrit) *Bahiṣprajñā* [from *bahiṣ* out, outside + *prajñā* intuitive consciousness] Also *Bahir-prajñā*. One whose knowledge is directed towards external objects; the present state of human consciousness.

Bai. See BA

Baital Pachisi (Hindi) *Baitāl Paccīsī*. In popular lore, a vampire believed to hover around graves and to subsist on the putrefying remains of corpses.

Bal. See BEL

Bala (Sanskrit) *Bala* Power, strength, might, vigor (cf Latin *valor*); one of the six functions of action, similar to the ten karmendriya (karmic energies) of Buddhism. In yoga practice the five powers (panchabalani) to be acquired are: complete trust or faith, energy, memory, meditation, and wisdom.

Balaam (Hebrew) *Bil'ām* One of the prophets of the Old Testament, last and greatest of the gentile prophets, appearing at the time when the Israelites were completing their forty years of wandering (Numbers 22-4). “The *Zohar* explains the ‘birds’ which inspired Balaam to mean ‘Serpents,’ to wit, the wise men and adepts at whose school he had learned the mysteries of

prophecy” (SD 2:409).

Baladeva. See BALARAMA

Balahala The fifth degree in the inferior Egyptian Mysteries; instruction in alchemy under the tuition of Horus was the principal feature of this degree, the word being *chemia* (Khemi was the old name of Egypt).

Balarama (Sanskrit) *Balarāma* Elder brother of Krishna, regarded by some as an avatara of Vishnu, by others as the incarnation of the great serpent Sesha. He spent his childhood with Krishna and during his life performed many daring exploits. Krishna, the indigo-complexioned, was considered to be a relatively full avataric manifestation of Vishnu, while Balarama, said to have been of fairer complexion, is known as a partial avataric incarnation of Vishnu.

Balder, Baldr (Icelandic) The best, foremost; the sun god in Norse mythology, the son of Odin and Frigga and a favorite with gods and men. His mansion is Breidablick (broadview) whence he can keep watch over all the worlds. One of the lays of the Elder or Poetic Edda deals entirely with the death of the sun god, also mentioned in the principal poem Voluspa. Briefly stated: the gods were concerned when Balder was troubled with dreams of impending doom. Frigga therefore set out to exact a promise from all living things that none would harm Balder, and all readily complied. One thing only had been overlooked: the harmless-seeming mistletoe. Loki, the mischievous god (human mind), became aware of this, plucked the little plant, and from it fashioned a dart. He approached Hoder, the blind god (of darkness and ignorance) who was standing disconsolately by while the other gods were playfully hurling their weapons against the invulnerable sun god. Offering to guide his aim, Loki placed on Hoder’s bow the small but deadly “sorrow-dart.” Thus mind darkened by ignorance accomplished what nothing else could: the death of the bright deity of light. Balder must then travel to the house of Hel, queen of the realm of the dead. Odin, as Hermod, goes to plead with Hel for Balder’s return, and Hel agrees to release him on condition that all living things weep for him. Frigga resumes her weary round and implores all beings to mourn the sun god’s passing. All agree save one: Loki in the guise of an aged crone refuses to shed a tear. This single taint of perverseness in the human mind condemns Balder to remain in the realm of Hel until the following cycle is due to begin. Thus death is linked with the active human mind, Loki. As the bright sun god is placed on his pyre-ship, his loving wife Nanna (the moon goddess) dies of a broken heart and is placed beside him, but before the ship is set ablaze and cast adrift, Odin leaned over to whisper something in the dead sun god’s ear. This secret message must endure unknown to all until Balder’s return, when he and his dark twin Hoder will “build together on Ropt’s (Odin’s) sacred soil.”

The allegory is subject to many interpretations. The sun god dies with every nightfall, to rise again the following morning; with every winter solstice, to return and bring a new year of light and life; and with every planetary cycle, as well as each solar lifetime. The tale also symbolizes the passing

of the golden age of innocence which had to be superseded by more conscious and purposive evolution of the human race: Loki, who represents the fire of mind — human, imperfect, clever, but unevolved, which in time must become perfected spiritual intelligence.

Bali (Sanskrit) *Bali* Daitya king who through devotion and penance became ruler of the three worlds (heaven, the upper air, and patala). Vishnu as the dwarf avatara regains these for the gods by means of his three superhuman steps or strides. (BCW 13:158, 4:367). *See also* VAMANA-AVATARA

Bal-ilu (Chaldean) An ancient name for the sun, allegorically the largest of eight houses, built by the Mother for her eight divine sons, representing the sun and the seven planets. “Bal-ilu (Marrtanda) was not satisfied, though his house was the largest. He began (to work) as the huge elephants do. He breathed (drew in) into his stomach the vital airs of his brothers. He sought to devour them. . . . [Mother] exiled Bal-ilu to the centre of her kingdom, from whence he could not move. (Since then) he (only) watches and threatens” (SD 1:100).

Balsamo, Giuseppe. *See* CAGLIOSTRO, COUNT ALESSANDRO DI

Balthazar, Belshazzar Lord of riches, lord of prisoners; one of the three Magi, described as journeying to Judea to pay homage to the infant Jesus. The ancient Babylonian deity Bel or Ba'al was associated with the moon — the lord of the high places; thus one interpretation of the legend indicates the three particular planets which were predominant at the birth of the Christ: Balthazar standing for the Moon, Kaspar for Mercury, and Melchior for Venus.

Bamian, Statues of Five colossal statues representing the height of the early human races, cut in rock by initiates of the late fourth and the fifth root-races to preserve for posterity a physical record of the height of the early races, located near Bamian (Bamiyan or Bamian), a small town in Afghanistan. The largest statue, 173 feet high, represents the first ethereal root-race of mankind. The next statue, 120 feet tall, represents the sweat-born or second root-race. The third statue, 60 feet high, immortalizes the third root-race. The fourth, representing the fourth root-race or Atlanteans, is 27 feet high. The fifth statue is only a little larger than the average tall man of today, and represents our present fifth root-race (cf SD 2:337-40).

Bandha (Sanskrit) *Bandha* [from the verbal root *bandh* to enchain, bind, fetter] A bond, fetter, confinings; in philosophy applied to life on earth, mundane bondage or attachment to this world, as opposed to mukti or moksha (final emancipation).

Bandhakarana (Sanskrit) *Bandhakarana* [from *bandha* bondage + *karaṇa* from the verbal root *kr* to make, do] Making or causing bondage; binding, fettering, or a holding back. Subba Row (Notes on BG 71) assumes that mulaprakriti is the real or principal bandhakarana as the originating cause of karmic activity, but this has reference only to the most abstract and spiritual side of things, as in the last analysis even karma itself may be traced backwards and inwards to mulaprakriti as the

field of all possible activity.

Banyan (Banian) The Indian fig tree (*Ficus bengalensis* of the Urticaceae), a shade tree remarkable for the enormous area that a single tree often covers, since roots are developed from the branches, which descend to the ground and take root. Inasmuch as each descending root in time becomes a tree trunk with branches of its own, which in their turn send roots to the ground, the gradual spread of the tree is theoretically indefinite and can reach more than a hundred yards in diameter. It was named tree of the merchants, as it was customary in olden times to hold markets under the shelter of these trees, called *bar* in Hindi, *vata* (covering) in Sanskrit.

In theosophy, used to express the peak of human evolutionary attainment on the earth-chain, the ever-living-human-Banyan or Wondrous Being (SD 1:207). Members of the hierarchy of Compassion under the Wondrous Being are referred to as tendrils descending from the heights to the lower planes of earth, these themselves aspiring to become like their spiritual superior.

Baphomet [from Greek *baphe* immersion + *metis* wisdom] A medieval mystic term usually identified with the goat of Mendes. The Templars of Malta were accused of worshiping Baphomet as an idol. Baphomet signifies a baptism in wisdom or initiation, but became degraded and misunderstood when the keys to its real meaning were lost. Pan, the Greek nature god, was often represented with the horns and hoofs of a goat; however, "Pan is related to the Mendesian goat, only so far as the latter represents, as a talisman of great occult potency, nature's creative force" (TG 246).

Ba-po. See BON

Baptism [from Greek *baptizein* to sprinkle] Ceremonial of purification with water; one of the sacraments in the Christian churches, by which persons are initiated into the visible Church of Christ. It consists in either immersion in water or sprinkling with water, according to the practice of different churches. In the Protestant Churches it is "the outward and visible sign of an inward and spiritual grace," accepted as a necessary preliminary to the other sacraments, and even as essential to salvation. In the Roman Catholic Church it carries remission of sin both original and actual. It existed in pre-Christian times among Jews and pagans, practiced in Chaldea, Egypt, India, Greece, Africa, Polynesia, North America, and ancient Europe, among others.

Mystically speaking, there are two baptisms: that of water and that of fire; the former pertaining to the plane of matter, the latter to that of spirit. In the New Testament, John the Baptist says: "I baptize you with water, but a greater than I shall come, who will baptize you with fire." Jesus instructs Nicodemus as to the two births: the birth of water and the birth of the spirit. Baptism was therefore a ceremonial pertaining to an inferior degree of initiation.

Barbelo (Gnostic) Prominent in the *Pistis Sophia*, where it is referred to as "an invisible God"; but it is one of three invisible divinities. Another passage, in which Mary is speaking to Jesus, refers to

Mary as having come from the region of Barbelo; leading C. W. King to remark that the deity includes “the Divine Mother of the Savior” (SD 2:570). But comparing other passages in the manuscript, it is clear that the term is not used in this latter sense alone.

Bard [from Latin *bardus* from Gaulish and old Brythonic probably *bardos* cf Welsh *bardd*] Exalted one, initiate, teacher; one of the three holy orders of Druidism — Druids, Bards, and Ovates. The Bards had the duty of keeping alive among the people the knowledge or intuition that there is a path that leads to wisdom and initiation. They carried this out largely by telling stories: a Mabinogi, according to Sir John Rhys, was a story belonging to the equipment of the Bards. These stories were told in such a way that their symbolic meaning might be apparent to those with intuition, but hidden from the mass. In telling the stories they used verse form a good deal, so that now in every country but Wales bard has come to mean poet. In Wales, however, it retains some relic of its original meaning: a Bard is a member of the Gorsedd, and may or may not be a poet; no poet is a Bard unless the Gorsedd has admitted him to its ranks. The Bard’s robe was of blue; that of the Druid was white; the Ovate’s green.

Barddas (Welsh) A collection of manuscripts illustrating the teachings of the Druids, awarded the prize at the Llangollen National Eisteddfod in 1858. The original preface says: “there may be found in this collection some fragments which contain, as is very clear to every initiated Bard, the remains of that sublime learning. . . . In order to prove the genuineness and great antiquity of these particulars, it may suffice that they are also discoverable . . . in the ancient Bardism of Hindustan.”

Bardesanes Greek form of Bar Deisan or Bardaisan (154-222?), a Gnostic from Edessa in Mesopotamia in the time of Marcus Aurelius. Little is known of his life, and his teachings must be gathered from fragments preserved by commentators. He has something in common with Valentinus but, if he was ever a disciple of that Gnostic, he soon diverged on his own line. Though his doctrines frequently conflict with those of the Christian Church, he is considered by some to have been a Christian. He derived much of his doctrine from India. At the head of his cosmogony stands the unknown Deity, whose shadow is the root of matter — primordial chaos; from the One and Matter spring the Son, whose union with Sophia produces the elements; and duality pervades the manifested worlds in a system of seven syzygies or pairs of active and passive principles. He upholds human free will, and makes great use of the astrological keys connecting mankind with the seven planetary spheres. As to birth, regeneration, and the inner meaning of baptism, he taught the continuing existence of the essential self through many changes of vehicle.

Bardesian System Applied often to the Codex of the Nazarenes, but with doubtful propriety, since the connection of the Nazarene system with Bardesanes seems one of similarity rather than personal relation.

Bardo (Tibetan) [from *bar* between + *do* two] Between two; generally a gap, interval, or

intermediate state, especially the state between two births. The term has become known in the West through the *Bar do thos sgröl* (*bar-do tho-dol*), “Liberation through Hearing in the Bardo,” translated by W. Y. Evans-Wentz as *The Tibetan Book of the Dead*. According to the *Bardo Thodol*, there are six such “intervals”: the bardo of birth, the bardo of dreams, the bardo of samadhi (meditation), the bardo of the moment before death, the bardo of dharmata, and the bardo of becoming. The *Bardo Thodol* describes the last three of these, and is recited in the presence of the deceased believed to be experiencing these states, usually for a total period of 49 days. It is believed that the teaching contained in the text can enable the deceased to attain liberation while in the bardo states, or at least to attain the best possible rebirth.

Bardo is used in Tibet to refer to the many events and experiences undergone by the excarnate human being after death, generally considered to last from physical death until the next rebirth or reincarnation, though it is somewhat shorter than this. Since this period “may last from a few years to a kalpa” (ML 105), the bardo has more than the meaning commonly understood by the Tibetan populace which includes the time passed by the excarnate entity in kama-loka, in the intermediate or gestation period in which the entity is preparing for its birth into devachan, and the period of ineffable bliss and peace (illusory as it may be from the standpoint of reality) passed by the entity in the devachanic state itself. It also includes the later intermediate period — usually carefully veiled from common knowledge — existent between the ending of devachan and the rebirth of the reincarnating ego.

Baresma(n) (Avestan), **Barsum** (Pahlavi), **Barsam** (Persian) [from the verbal root *bares* to grow upright] A wand of the Magi, who were instructed in the *Vendidad* to go to the tree “that is beautiful, high-growing, and mighty amongst the high-growing trees,” and after an invocation, to cut off a twig, “long as a plowshare, thick as a barley-corn. The faithful one, holding it in his left hand, shall not leave off keeping his eyes upon it, whilst he is offering up the sacrifice to Ahura-Mazda and to the Amesha-Spentas.” To this day the Parsis use the baresman, but have replaced the twigs of the scared tree with brass wires.

Blavatsky hints that baresman is taken from the tree created by Ahura-Mazda, the tree of occult and spiritual knowledge and wisdom, and so is a symbolic rod of power and wisdom, such as is often ascribed in ancient mythologies to great leaders or teachers of peoples and to high adepts. Baresman symbolically represents a branch of the tree of knowledge, known as Gaokarena in Pahlavi literature, soul healing Haoma (the extract of this tree), and Zavr (its libation). “We praise mighty Vayu, with the Haoma mixed with milk and with Baresman with the tongue of Kherad (Intellect) and the holy word, with words and deeds, with Zavr and the true spoken words” (Ram Yasht 5).

It is said in Zad-Sparam that the tree of Harwisp Tohmag (all-seed-bearing tree) was created in the sea of Farakhkard (the unbounded sea) from which all plants grow, and that the Simorgh (Saena)

nests on it. When the Simorgh flies away, all the dry seeds drop into the water which the rain brings down to earth. Next to the All-seed-bearing Tree exists the tree of white Haoma (Gaokarena), the foe of decrepitude, reviver of the dead, and giver of eternal life.

Bargalmer. See BERGELMIR

Barhaspatyamana (Sanskrit) *Bārhaspatyamāna* [from *bṛhaspati* Jupiter + the verbal root *mā* to measure] Jupiter's measure of time; a method of reckoning time based on the year of Jupiter, in which an earth-year is calculated as 361 days and 11 ghadias. One of the three methods of reckoning time used during the age when Gautama Buddha lived, especially in Magadha and by Pali writers in general, and still in use in parts of India.

Barhishad (Sanskrit) *Barhiṣad* [from *barhiṣ* sacred kusa grass, fire + the verbal root *sad* to sit] Mystically, those who attend to or who are engrossed in domestic affairs, material or merely pragmatical concerns; those pitris (fathers, ancestors) who evolved the human astral-physical form. These lunar ancestors — seven or ten classes — evolved forth their astral bodies or *chhayas* (shadows), thus forming the first astral-physical races of humanity in which the higher classes of pitris, the *agnishvattas*, incarnated, thus making out of a relatively intellectually senseless mankind, true thinking human beings.

“It thus becomes clear why the *Agnishwatta*, devoid of the grosser *creative fire*, hence unable to create physical man, having no *double*, or astral body, to project, since they were without any *form*, are shown in exoteric allegories as Yogis, Kumaras (chaste youths), who became ‘rebels,’ *Asuras*, fighting and opposing gods . . . Yet it is they alone who could complete man, *i.e.*, make of him a self-conscious, almost a divine being — a god on Earth. The *Barhishad*, though possessed of creative fire, were devoid of the higher mahat-mic element. Being on a level with the lower principles — those which precede gross objective matter — they could only give birth to the outer man, or rather to the model of the physical, the astral man” (SD 2:78-9). The *barhishads* “could only create, or rather clothe, the human Monads with their own astral Selves, but they could not make man in their image and likeness. ‘Man must not be like one of us,’ say the *creative* gods, entrusted with the fabrication of the lower animal but higher; . . . Their creating the semblance of men out of their own divine Essence means, esoterically, that it is they who became the first Race, and thus shared its destiny and further evolution. They *would* not, simply because they *could* not, give to man that sacred spark which burns and expands into the flower of human reason and self-consciousness, for they had it not to give” (SD 2:94-5).

Barley. See WHEAT

Basht. See BAST

Basileus or **Archon Basileus** (Greek) King; when the archon at Athens was replaced by a board of nine archons, the official functions were divided, and the second archon held the presidency of

religious observances, including those of the Eleusinian Mysteries. His functions should not be confounded with those of the chief hierophant, the true presider over the inner rites.

Basilides A celebrated Alexandrian Gnostic of about 120 AD, probably born in Syria, whose teachings included a system of emanations and hierarchies of powers; founder of the Basilidian Gnostics, declared an heretical sect. Basilides claimed to have derived his teachings from an original Gospel of Matthew and from Glaucus, a disciple of Peter.

Basilisk. *See* DRAGON; SERPENT

Bast (Egyptian) **Bubastis** (Greek) *Boubastis* [from *bes* heat, fire] The goddess of the seventh nome of lower Egypt, the capital of which was Per-Bast (Greek Bubastis). She was identified with the female counterparts of Ra and Tem — hence called the eye of Ra and of Tem, and the Shetat (the hidden one) — and at Thebes identified with Mut and Isis; her son by Shu was Khensu (Khonsu).

Bast is regarded as the personification of the power of the sun which manifests in the form of heat, a position which she holds together with the goddess Sekhet. But she is also intimately connected with the moon, especially in her connection with the cat — Khensu being a lunar god. Thus when she is depicted as a lioness her attributes are solar; when as a cat, lunar. This dual aspect bears a close analogy with the moon, which is further indicated when Bast is represented as being one of the goddesses of the birth chamber; and her son Khensu was declared to make women fruitful and make the human germ grow, especially in his character of the moon, the lightbearer.

Herodotus gives the Greek Artemis (or in Latin Diana) as an equivalent of Bast.

Bath Qol, Bath Kol (Hebrew) *Bath Qōl* [from *bath* daughter + *qōl* voice] Daughter of the voice; used in the Qabalah to signify the female side of the logos, the daughter of the primordial light, Shechinah, and is equivalent to the Hindu Vach and the Chinese Kwan-yin. It likewise signifies the wisdom that was received by initiates — figured as a voice — this wisdom being the daughter of cosmic all-wisdom. “Bath Kol, the *filia Vocis*, the daughter of the divine voice of the Hebrews, responding from the mercy seat within the veil of the temple . . .” (SD 1:431n).

Batoo. *See* BATU

Batte-bazi (Hindi) *Baṭṭe-bāzi* The jugglery of a trickster, as opposed to genuine occult powers.

Batu (Egyptian) *Batu*. Also Batoo, Baiti. First man in the Egyptian legend of the Two Brothers, the probable original of the Greek story of Epimetheus and Prometheus. Just as Pandora was sent to Epimetheus, so is a beautiful girl, the creation of the heavenly artist Khnum, sent to Batu, whereupon Batu’s happiness is destroyed.

Batylos. *See* BETYLOS

Baubo The Matron Baubo, the enchantress “before she succeeds in reconciling the soul —

Demeter, to its new position, finds herself obliged to assume the sexual forms of an infant. Baubo is *matter*, the physical body; and the intellectual, as yet pure astral soul can be ensnared into its new terrestrial prison but by the display of innocent babyhood. Until then, doomed to her fate, Demeter, or *Magna-mater*, the Soul, wonders and hesitates and suffers; but once having partaken of the magic potion prepared by Baubo, she forgets her sorrows; for a certain time she parts with that consciousness of higher intellect that she was possessed of before entering the body of a child. Thenceforth she must seek to rejoin it again; and when the age of reason arrives for the child, the struggle — forgotten for a few years of infancy — begins again” (IU 2:112).

Bear, Great. See URSA MAJOR AND MINOR

Beasts. See ANIMAL KINGDOM

Bee(s) Greek and Roman writers, having in mind the terminology of the Mysteries, used the term bees (melissai) to denote both priestesses and women disciples. Thus it was used for the priestesses of Delphi and other Mysteries, and by the Neoplatonists for pure and chaste persons. Honey and nectar are symbols of wisdom.

Vergil says that bees have a portion of the divine mind, from which aethereal particles stream, and that divinity permeates the whole earth so that all beings draw from it the streams of life (*Georgics* 4, 320). The spiritual or monadic consciousness (the nous) manifests itself in innumerable ways, and this same consciousness is in man. A little later Vergil says that bees are born from the carcass of a slain bullock or bull. The bull or cow is a symbol of the moon, and the moon has always stood as a symbol of the psychic intelligence or lower human mind; thus the meaning is that out of his perfectly subordinated (“slain”) bull — the lunar body or psychic nature — is born the “bee” of the disciple, the will and the urge to enter into the solar life or the spirit. In the Finnish mythology of the Kalevala, a bee is the messenger between this world and higher realms. In Scandinavian mythology bees again play an important part with the world tree (Yggdrasil).

Beelzebub, Beelzebul (Hebrew) *Ba'al zēbūb* [from *ba'al* lord + *zēbūb* fly] Lord of the flies; a god of the Philistines, popularly worshiped as the destroyer of flies, to whom was erected a temple at Ekron. The mythical zoology of the ancients points directly to an inner and mystical significance: “flies” is used not in the sense of the insect, but for a certain class of elementals whose “flying” around and through the earth is governed directly by lunar influences. Thus Beelzebub is in this connection a lunar divinity.

Ba'al-zebul, a form in the Old and New Testaments, is translated as Lord of the High House or Lord of the Habitation, the reference here being to the moon as the habitation or receptacle of these elemental souls at a certain time of their existence.

In Christian demonology, Beelzebub is one of the gubernatores of the infernal kingdom under Lucifer: thus in Milton's *Paradise Lost* he is second to Satan. In Matthew 12:24, Beelzebub is

referred to as the prince of the devils.

Behemoth (Hebrew) *Bēhēmōth*, singular *bēhēmāh* [from *bāham* to be dumb, mute] A beast, a nonspeaking living being; used in Job 40:15-23. Scholars are of the opinion that the reference here is to the hippopotamus or the Leviathan. “*Behemoth* is the principle of Darkness, or *Satan*, in Roman Catholic Theology, and yet Job says of him that ‘Behemoth is the chief (principle) of the ways of God’ ” (SD 2:486), and an entity spoken of, however poetically, as the chief of the ways of the divine, can hardly be a physical quadruped of earth.

Beijve (Sameh) The bright sun god of the nomadic people of northern Norway, Sweden, Finland, and the Kola peninsula of Russia who call themselves Sameh (people of the sun). Beijve is the son of the divine Jubmel, and the Milky Way is the shining trail left by his skis when he hastened to obey the god’s summons. With Beijve’s advice and help, Jubmel caused a bridge to be created between the upper divine worlds “where the light begins” and the lower “dark and silent worlds”; on the upper end of the span he fashioned the earth from his little reindeer doe. Her bones became earth’s armature, her flesh its ground, her blood vessels became its rivers, and her hairs the forests. The little reindeer’s skull protects the earth from the intense light of the sun, and her two eyes are the morning and the evening star. But her heart he hid deep within the earth where the lonely mountaineer may sometimes, in the quiet summer night, hear it beating.

Being and Nonbeing; Be-ness Equivalent to the Sanskrit *sat*, *asat*, and *tat*. *Asat* is “a philosophical term meaning ‘non-being,’ or rather *non-be-ness*. The ‘incomprehensible nothingness.’ *Sat*, the immutable, eternal, ever-present, and the one real ‘Be-ness’ (not Being) is spoken of as being born of *Asat*, and *Asat* begotten by ‘*Sat*.’ The unreal, or *Prakriti*, objective nature regarded as an illusion. Nature, or the illusive shadow of its one true essence” (TG 33). So *asat* or nonbeing is used both to denote that which precedes Being, and out of which Being is born — or vice versa; and to denote the illusory world in contrast with the essential or fundamental cosmic self. *Sat* (or *asat*) corresponds very largely with the Absolute of ordinary European philosophy, whereas *Be-ness* or nonbeing corresponds with the extremely metaphysical Vedic and Vedantic *tat* and *parabrahman*.

Beith ’Elohim (Hebrew) *Bēith ’Elohīm* House of the ’elohim or gods; the title of a Qabbalistic work, classed as one of the treatises of the *Zohar*, which contains the doctrines of Rabbi Isaac Loria (edited by Rabbi Irija) and treats of angels, demons, elemental spirits, and souls.

Bel (Greek, Latin) [from Semitic *ba’al* chief, lord] Lord, chief; one of the supreme gods of the Chaldeo- or Assyro-Babylonian pantheon: the second of the triad composed of Anu, Bel, and Ea. Assyriologists have assumed that Bel was simply the title of a deity, which they have designated as En-lil (the mighty lord). In the division of the universe into heaven, earth, and water, Bel was considered as the lord of the land, and his temple at Nippur was called E-kur (the mountain house), just as Ea’s was the watery house.

There have been many Bels, which may be one of the reasons that in *The Secret Doctrine* Bel is

made equivalent to the Sun, Jupiter, Saturn, and Mercury. As Bel or Ba'al means Lord, the title becomes applicable to any of the important celestial bodies.

According to one account, the creation of the world and especially of mankind is ascribed to Bel. He is also called father of the gods; and his consort, Belit, is called mother of the gods. His eldest son is Sin, god of the Moon. Bel also brings about the deluge which destroys humanity, showing his dual aspect of evolver and destroyer.

Bel has been associated with the Phoenician Baal, the supreme god of the Canaanites, conceived also as the protective power of generation and fertility, connected with the moon. His female counterpart, Ashtoreth (Astarte, Ishtar) was considered as the receptive goddess, also a lunar divinity. In later times the rites connected with these deities became degraded into licentious orgies; sacrifices were made, apparently even human sacrifices, but at one time Ba'al was worshiped as a sun god.

His various names in the Old and New Testaments demonstrate the various aspects in which he was regarded. Thus in Exodus he was named Ba'al-Tsephon, the god of the crypt. He was likewise named Seth or Sheth, signifying a pillar (phallus); and it was owing to these associations that he was considered a hid god, similar to Ammon of Egypt. Among the Ammonites, a people of East Palestine, he was known as Moloch (the king); at Tyre he was called Melcarth. The worship of Ba'al was introduced into Israel under Ahab, his wife being a Phoenician princess.

“Typhon, called Set, who was a great god in Egypt during the early dynasties, is an *aspect* of Baal and Ammon as also of Siva, Jehovah and other gods. Baal is the all-devouring Sun, in one sense, the fiery Moloch” (TG 47). As to the leaping of the prophets of Ba'al, mentioned in the Bible (1 Kings 18:26), Blavatsky writes: “It was simply a characteristic of the Sabeian worship, for it denoted the motion of the planets round the sun. That the dance was a Bacchic frenzy is apparent. Sistra were used on the occasion” (IU 2:45).

Bel is also the name for the sun with the Gauls.

Bel-Belitanus. See BELIT

Belgamer. See BERGELMIR

Belial (Hebrew) *Bēliyya'al* [from *bēlī* nothing, not + *ya'al* worth, profit, use] Worthless, signifying wickedness; also a wicked man, a destroyer, a waster. A name given by Hebrew and Christian demonologists to the aggregate of evil astral forces or influences, some of them partaking of an individualized type, whose influence is always pernicious to humans, and association with which is invariably immoral because suggestive of evil. It is a name personifying these astral entities of evil.

In the New Testament Belial is associated with Satan (2 Cor 6:15), although “if Belial must be

personified to please our religious friends, we would be obliged to make him perfectly distinct from Satan, and to consider him as a sort of spiritual ‘Diakka’ [Kama-lokic elementary]. The demonographers, however, who enumerate nine distinct orders of *daimonia*, make him chief of the third class — a set of hobgoblins, mischievous and good-for-nothing” (IU 2:482).

Belit, Belita (Bab, Chald, Assyr) Chief lady; a title applicable to any important goddess in the pantheon, applied especially to Nin-lil, consort of Bel (or En-lil) at Nippur, where she was known as mother of the gods, ruler of heaven and earth. The title was likewise later applied to Ishtar (Greek Beltis).

Bel-Belit was the combined occult powers of this representation of the godhead as both male and female, called by the Greeks and the Romans Bel-Belitanus.

Bells, Astral; Bell Sounds A melodious silvery sound as of a bell, said to be produced by creating “an inter-etheric vacuum” (SD 1:557).

Bel-Merodach. *See* MARDUK

Bel-Moloch. *See* MOLOCH

Bel Shemesh (Hebrew) Lord of the sun; a title also given to the moon, during the time when the Jews worshiped the moon as a male and when the sun was considered to be a female divinity. Later the title was applied to the sun (likewise to Jehovah), and then Ashtoreth became queen of the heaven or the moon. *See also* ASTARTE; SHAMASH

Belus. *See* BEL

Ben (Hebrew) *Bēn* Son; used in names to denote “son of,” as Ben-Hadad (son of Hadad).

Benei ’Elohim (Hebrew) *Bēnēi ’Elohīm* Sons of gods — less accurately, sons of God; the phrase occurs in Genesis 6:2, 4. In the Qabbalah, however, it often has reference to the mal’achim or mal’achayya (Chaldean), meaning either angels or messengers.

Benei Shemesh (Hebrew) *Bēl Shemesh* Sons of the sun; “the term belongs to the period when the Jews were divided into sun and moon worshippers — Elites and Belites” (TG 53-4). *See also* BEL SHEMESH

Be-ness. *See* BEING AND NONBEING; PARABRAHMAN; THAT

Beni-Nabim (Hebrew) *Bēnēi Nēbī’īm* [from *bēn* son, disciple + *nābī’* seer, prophet] Sons of seers; disciples of prophets. Blavatsky speaks of the Essenes as descendants of the Beni-Nabim (IU 1:xxx).

Bennu (Egyptian) *Bennu*. Also Benu, Benoo. A bird of the heron species, identified with the phoenix. It was prominent in Egyptian mythology, being associated with the sun: it was said to have come into being from the fire which burned at the top of the sacred Persea Tree; that the

renewed morning sun rose in the form of the bennu; and that it was the soul of Ra, the sun god. The sanctuary of the bennu was likewise that of Ra and of Osiris. A hymn in the *Book of the Dead* says: “I go in like the Hawk, and I come forth like the Bennu, the Morning Star (*i.e.*, the planet Venus) of Ra” (xiii 2). Blavatsky terms the bennu “the bird of resurrection in Eternity . . . in whom night follows the day, and day the night — an allusion to the periodical cycles of cosmic resurrection and human re-incarnation” (SD 1:312).

Ben Shamesh. See BENEI SHEMESH

Berasit, Berasheth. See BERE'SHITH

Bere'shith, (Hebrew) *Běre'shīth* The first two words of the Hebrew Genesis. As Hebrew was originally written from right to left in a series of consonants, without vowels, several renderings may be made of any passage, according to the manner of inserting vowels and of dividing the consonants into words. Thus the original Hebrew □□□□□ (b r ' sh th) may be divided as be-re'shith, as is common in European translations, and rendered “in the beginning” [*bě in + rē'shīth* beginning from *rē'sh* or *rō'sh* chief, head, first part, summit]; a second translation could be “in the first part.” If the meaning “head” be taken, then as head signifies wisdom, the rendering “in wisdom” follows. But this same combination of letters could be rendered “by arrangement” or “by establishment,” by dividing it as bare'-shith [from *bārē'* forming + *shīth* establishment, arrangement].

Bergelmir, Bargalmer (Icelandic, Scandinavian) [from *ber* to bear + *gelmir* shrieker, possibly a screaming eagle (*gemplir*) or a noun suffix attached to the Icelandic verb *gella* scream or to the Swedish adjective *gall* shrill] The giant who survives the destruction of a world; the fruit born of a life cycle (Trudgelmir). Bergelmir is called a son of Trudgelmir who in turn is born of Orgelmir (original sound), keynote of the gamut of existence.

The story relates that when Ymir, the frost giant, was killed (transformed) by the creative trinity of gods, and made into the worlds, all the evil frost giants were drowned in his blood, save Bergelmir. He is saved on a boat-keel and ground on the mill to become the substance for a new creation.

Beri'ah (Hebrew) *Běri'āh* [from *bārā'* to create, shape] The beri'atic world or 'olam hab-beri'ah is “world or sphere of creation”; second of the four worlds ('olamim) which according to the Qabbalah are emanated during the period of world manifestation. It is considered to contain pure or spiritual forms and originant ideas, for in this 'olam creation commences. This sphere is a continuation of the emanation of the first ('olam 'atstsiloth) and contains likewise, as do each of the 'olamim, a complete tenfold Sephirothal Tree, though on 'olam hab-beri'ah certain ones only of the ten Sephiroth find their especial field of action. The substance of the beri'atic world is still of a highly ethereal or quasi-spiritual type. Just as the Prototype (Diyyuqna') occupies the first world, so Metatron occupies the second — also named Kursyai' (the Throne). From this world is emanated the third world, 'olam hay-yetsirah.

Interestingly, when written without Massoretic points, beri'ah comprises the same letters — BRH — found in the Sanskrit the verbal root *brih* (to expand) from which is derived Brahma, the first Hindu creator.

Berosus (3rd century BC) A Chaldaean priest of Belus living in Babylon at the time of Alexander the Great, who translated the primeval traditions of the human race down nearly to his own times. Fragments of this work have been preserved by the historians and mythographers Apollodorus and Polyhistor, and also Josephus, of the 1st and 2nd centuries BC. His cosmogony shows that the Biblical stories of creation and deluge were derived from older sources, as since has been confirmed by Babylonian archaeology.

Bes (Egyptian) *Bes* [from *besa*, *basu* panther] A deity of foreign origin, portrayed as a dwarf with large bearded head, flat nose, protruding tongue, shaggy hair with an African headdress, girded with a panther's skin and tail. He is represented as a god of dance and music, also as a god of war, and as a protector of children. In later periods he became merged with some of the aspects of Horus. Perhaps in most aspects, however, Bes is the Egyptian representation of the Latin Cupid.

Beth Elohim. See BEITH 'ELOHIM

Bethel Stone (Hebrew) *Bēith-ēl* The pillar of Jacob, which he set up as a memorial or masebah at Bethel and anointed with oil (Genesis 28:18, 22); a phallic stone similar to the Hindu linga.

Blavatsky writes: "How could anyone worthy of the name of a philosopher, and knowing the real secret meaning of their 'pillar of Jacob,' their Bethel, oil-anointed phalli, and their 'Brazen Serpent,' worship such a gross symbol, and minister unto it, seeing in it their 'Covenant' — the Lord Himself!" (SD 2:473; BCW 12:101) See also BETYLOS

Betrayal of the Mysteries Ancient writers affirm that the prime requisite of every candidate seeking entrance into the Mysteries was a pledge of utter secrecy. Persons guilty of the betrayal of the Mysteries were rigidly excluded from participation in the celebration of the rites. Likewise those were debarred who *accidentally* were guilty of homicide or any major crime, or who had been proved guilty of sorcery. If merely unfortunate mediums, they were taken care of in hospitals maintained for that purpose in the neighborhood of temples, and if possible restored to health; if consciously traitorous or wicked, they were dealt with in other ways. Thus it is clear that even in the degenerate days dating from before Plato's time in the countries surrounding the Mediterranean, abuse of occult power was considered one of the most heinous of human offenses, for it struck directly at the roots of society, and it was for this last reason that betrayal of the Mysteries, sorcery, or similar offense was punished by the State itself.

The rules governing betrayal of the secrets were of the utmost severity, the common penalty for such infringement being death. Yet this was a sign of degeneration from the original purity of the Mysteries, for "never in any circumstances has the power or the force of the Lodge, has the hand of

a Teacher, been raised in violence or in hatred against a betrayer, against the unfaithful, no matter how grave the crime might have been. Their punishment was in this: they were *left strictly to themselves*; and the inner penalty was *the withdrawal of the Deathless Watcher, the higher self within*, which had been consciously and successfully invoked upon entrance into the Mysteries, and in the higher degrees of initiation had been faced, literally face to face. The early and automatic penalty was inner death by the soul-loss. *The betrayer lost his soul*" (Fund 254-5).

Betylos, Baetylus (Latin) [from Greek *baitylos* meteoric stone] Also betylus, baetyl, betyles. In Classical antiquity a stone, either natural or artificially shaped, venerated as of divine origin, or as a symbol of divinity. There were a number of these sacred stones in Greece, the most famous being the one on the omphalos at Delphi. Likewise there were the so-called animated or oracular stones. "Strabo, Pliny, Helancius [Hellanicus] — all speak of the electrical, or electro-magnetic power of the betyli. They were worshipped in the remotest antiquity in Egypt and Samothrace, as magnetic stones, 'containing souls which had fallen from heaven'; and the priests of Cybele wore a small betylos on their bodies" (IU 1:332). In Persia they were called oitzoe; but their origin was of far greater antiquity, for "Lemuria, Atlantis and her giants, and the earliest races of the Fifth Root-Race had all a hand in these betyles, lithoi, and 'magic' stones in general" (SD 2:346n). *See also* OPHITES

Beverage, Sacred. *See* SOMA

Bh-Bo

Bhadra-kalpa (Sanskrit) *Bhadra-kalpa* [from *bhadra* auspicious, blessed + *kalpa* age] The time period of the sages; the present age, said exoterically to last 236 million years, so called because 1,000 buddhas or sages appear in the course of it. “The Bhadra Kalpa, or the ‘period of stability,’ is the name of our present Round, esoterically — its duration applying, of course, only to our globe (D), the ‘1,000’ Buddhas being thus in reality limited to but forty-nine in all” (TG 55-6).

Bhadravihara (Sanskrit) *Bhadravihāra* [from *bhadra* auspicious, blessed + *vihāra* temple] The name of a Buddhist monastery. H. P. Blavatsky writes: “the Monastery of the Sages or Bodhisattvas. A certain Vihara or Matham in Kanyakubdja” (TG 55).

Bhagat (Hindi) A religious mendicant or devotee; “one who exorcises evil spirits” (TG 56).

Bhagavad-Gita (Sanskrit) *Bhagavad-Gītā* [from *bhagavat* illustrious, sacred, holy, lord (one of Krishna’s titles) + *gītā* song] The noble song, the Lord’s song; a portion of the *Bhagavad-Gita Parvan*, one subsection of the *Bhishma Parvan*, itself one of the principle sections of the *Mahabharata*. The *Bhagavad-Gita* consists of a dialogue in which Krishna and Arjuna have a discussion upon the highest spiritual philosophy. Krishna in this instance is the inner instructor or monitor, the higher self, advising the human self or Arjuna.

Bhagavat, Bhagavan (Sanskrit) *Bhagavat, Bhagavān* Glorious, revered, divine; hence gracious lord, patron. Used of gods, demigods, and highly revered beings such as Gautama Buddha, Krishna, and Vishnu.

Bhagavata Purana (Sanskrit) *Bhāgavata Purāṇa* One of the most celebrated and popular of the 18 principal Puranas, especially dedicated to the glorification of Vishnu-Krishna, whose history is given in the tenth book. It consists of 12 books or skandhas, of 18,000 slokas, and is narrated by Suka, the son of Vyasa, to King Parikshit, the grandson of Arjuna, one of the Pandava brothers and

hero of the *Bhagavad-Gita*.

Bhagawan. See BHAGAVAT

Bhakti (Sanskrit) *Bhakti* [from the verbal root *bhaj* to divide, share, serve, love] As a noun, devotion or affectionate attachment; also one of the paths (margas) followed by the disciple or student, which might be translated as liberation by faith or love.

Bhakti Yoga (Sanskrit) *Bhakti Yoga* [from *bhakti* devotion + *yoga* union from the verbal root *yuj* to join] The form of yoga practice of attaining at-one-ment or union with the spiritual-divine essence within by means of devotion, faith, and love.

Bhao Price, value, friendship; “a ceremony of divination among the Kolarian tribes of Central India” (TG 56).

Bharata, Bharata-varsha (Sanskrit) *Bharata, Bharata-varsha* [from the verbal root *bhr* to uphold, bear, carry, supporting, producing + *varsha* plains, lowlands, land] The ancient Hindu name for India; Bharata was a name borne also by many divinities as well as great men, heroes, and men of less note. In the *Mahabharata*, the celebrated hero who was the son of Dushyanta and Sakuntala was named Bharata, the first of twelve Chakravartins.

In theosophical literature Bharata has also been applied to an ancient sacred land. “ ‘Happy are those who are born, even from the condition of gods, as men, in Bharata-Varsha!’ exclaim the incarnated gods themselves, during the Third Root-Race. Bharata is India, but in this case it symbolized the chosen land in those days, and was considered the best of the divisions of Jambudwipa, as it was the land of active (spiritual) works *par excellence*; the land of initiation and of divine knowledge” (SD 2:369).

Bharata (Sanskrit) *Bhārata* Son or descendant of Bharata, applied to any of the descendants of King Bharata.

Bharata-varsha. See BHARATA

Bhargava (Sanskrit) *Bhārgava* Descendant of Bhrigu, the great rishi; Sukra, regent of the planet Venus and preceptor of the Daityas; likewise an ancient people mentioned in the *Mahabharata*.

Bhashya (Sanskrit) *Bhāṣya* [from the verbal root *bhāṣ* to speak] Speaking, talking; an explanatory work or commentary, especially on technical Sutras; particularly Patanjali’s Commentary of the Sutras of Panini, also called the *Mahabhashya* (great commentary).

Bhaskara (Sanskrit) *Bhāskara* [from *bhās* light + the verbal root *kṛ* to do, make] A title of Surya, the sun; mystically, it signifies life-giver. As an adjective, shining, bright.

Bhaumika Pralaya, Bhaumika Manvantara (Sanskrit) *Bhaumika-pralaya, -manvantara* [from *bhūmi* earth, land from the verbal root *bhū* to become, grow] The terrestrial or planetary

dissolution or manifestation. The bhaumika pralaya is similar to the naimittika pralaya (occasional pralaya) or Night of Brahma. When the last round of a planetary chain has been entered upon, the highest or first globe (A), followed by all the others in succession to the last, instead of entering upon a certain time of rest or obscurity, as in the previous rounds, begins to die out. The planetary dissolution or pralaya is then at hand, and when the last hour of that pralaya has struck, each globe has to transfer its life and energy to a new laya-center, to another globe, whereupon begins the bhaumika manvantara, the great life cycle of this new globe, the re-embodiment of the inner constitution or life essence of the former now dead and decaying globe.

Bhautya (Sanskrit) *Bhautya* One of the 14 manus of the earth-chain, the seed manu of the seventh round (SD 2:309).

Bhava (Sanskrit) *Bhava* [from the verbal root *bhū* to be, become] Being; coming into existence, birth, production, origin; worldly existence, the world. As used in Buddhist literature, the continuity of becoming, one of the links in the twelvefold chain of causation (nidanas), therefore also birth. As the third nidana, bhava is the karmic agent which leads every new sentient being to be born in this or another mode of existence in the trailokya and gatis.

As a proper noun, the name of a deity, also applied as a title to the gods Agni, Siva, and Rudra. *See also* ABHAVA

Bhavishya Purana (Sanskrit) *Bhaviṣya Purāṇa* [from *bhaviṣya* about to come to pass, future] One of the 18 principal Puranas, extant copies containing 7,000 slokas. While the original of this work is said to have been a revelation of future events by Brahma, it in main part is a treatise on various religious rites and observances, although containing other matter closely recalling portions of the *Laws of Manu*. Its chief deity is Siva.

Bhikkhu (Pali) *Bhikkhu* [cf Sanskrit *bhikṣu*] In Buddhism, a mendicant or monk, especially one who has donned the yellow robe and carries the begging bowl.

Bhikshu (Sanskrit) *Bhikṣu* [from the verbal root *bhikṣ* to beg] A religious mendicant who has completely renounced the distractions of worldly life; the feminine is bhikshuni.

Bhon, Bhon-pas. *See* BON

Bhoot-dak, Bhut-dak [from Hindi *bhūt* ghost (cf Sanskrit *bhūta*) + *ḍāk* mail, post] Ghost-post; an Anglo-Indian English construction for a medium, bhuta here being synonymous with preta.

Bhoots. *See* BHUTA

Bhoutya. *See* BHAUTYA

Bhrantidarsana[tah] (Sanskrit) *Bhrāntidarśana* [from the verbal root *bhram* to wander + *drṣ* to see, know, perceive] False comprehension or false apprehension; perplexity or confusion in

understanding due to false apprehension. Used to describe the illusions arising out of the egotistical, imperfect human mind in its attempts to understand reality, because this imperfectly evolved human mind is extremely apt to mistake illusions for verities, presentiments for realities, and appearances for the fundamental substratum of being. Any partially developed intellect or understanding can de facto have only an illusory conception of the manifestations of the supreme spirit.

Bhrigu (Sanskrit) *Bhr̥gu* [from *bhraj* to be hot, brilliantly glowing, or *bhrāj* to be shining] One of the most celebrated of the Vedic rishis (sages), regarded as the ancestor of the Bhargavas, enumerated as one of the ten primeval maharshis created by the first man; he is also regarded as one of the seven or ten prajapatis (progenitors) of mankind and other beings, “which is equivalent to identifying him with one of the creative gods, placed by the Puranas in Krita Yuga, or the first age, that of purity” (TG 57). Some hymns in the *Rig-Veda* are attributed to him. The planet Sukra (Venus) is associated with Bhrigu, being one of its names, and Bhrigu is often a term designating the equivalent of Friday, which is consecrated to the planet Venus. Venus is also sometimes called the son of Bhrigu.

The Bhargavas (descendants of Bhrigu): are commonly classed as gods of the middle region or aerial divinities, although in the *Rig-Veda* they are intimately connected with fire. They are represented as enclosing fire in wood and giving it to mankind; also placing fire in the navel or center of the world. Thus they are associated with the Atharvans (fire-priests), Angirasas (deities of luminous objects), and Ribhus.

Bhuja(m) (Sanskrit) *Bhuja* A curve or side; in geometry, one of the lines or sides of a mathematical figure, such as the base of a triangle; also an arm.

Bhuman (Sanskrit) *Bhūman* [from the verbal root *bhū* to become] Space; it “conveys the fundamental idea of becoming, of growth and progress by serial steps. It is that portion of the universal akasa comprised within any single Brahmanda or cosmic hierarchy, and therefore on this smaller scale applies to the aggregate of all beings and things within that hierarchy. As such, it can carry the meaning of Pleroma or Fullness” (FSO 76n).

Bhumi (Sanskrit) *Bhūmi* [from the verbal root *bhū* to become, grow into] The earth, land, ground; position, posture, attitude; metaphorically a step, degree, or stage in yoga, the Buddhists enumerating ten or more.

Our earth, or any similar celestial body on this cosmic plane, is looked upon as an entity which is becoming, growing, evolving, and is therefore a living being. Frequently, instead of Bhumi, the earth is called prithivi, because it is a manifestation of the guarding and guiding planetary spirit on the prithivi plane of the solar system.

Bhur (Sanskrit) *Bhūr* [from the verbal root *bhū* to become, spring forth] The act of becoming or

arising; by extension the locus or place of such becoming, therefore a world or even a universe; likewise the earth and even the ground or bottommost portion of a cosmic hierarchy. Frequently it signifies the earth, particularly as the lowest of the seven lokas. Likewise, the first in serial order of the three great vyahritis or mystic utterances, the other two vyahritis being bhuvar (or bhuvah) and svar.

The plural, bhavas, signifies the atmosphere, air, airy vast, or aerial expanse. *See also* BHUR BHUVAH SVAH

Bhuranyu (Sanskrit) *Bhuranyu* [from the verbal root *bhr* to support, uphold, give prominence to; to move rapidly, to flash from place to place] The rapid; an epithet of Agni, considered as the inspiring and inflaming element, the swiftly running power in the world, the fiery nature and cosmic life. Also a name of the sun, and a title of Vishnu.

Bhur Bhuvah Svah (Sanskrit) *Bhūr Bhuvah Svah* The names of the first three of the seven lokas (worlds) of this kosmos, meaning literally earth, midworld or astral world, and heaven world; the three great vyahritis or mystical utterances pronounced after Om by every Brahmin in commencing his daily prayers.

Bhur-loka (Sanskrit) *Bhūr-loka* [from *bhūr* earth + *loka* place, world] Earth world; the lowest of the seven lokas. The popular exoteric name of our earth when considered in terms of the cosmic lokas or planes. The corresponding tala is patala. The field of influence of bhurloka is said to extend little farther than our atmosphere. Our earth is patala if we look at it from the material standpoint, and bhurloka if we look at it from the energy-consciousness side.

Bhuta (Sanskrit) *Bhūta* [from the verbal root *bhū* to be, become] Has been; as an adjective become, been gone; as a noun, that which is or exists, any living being; entities that have lived and passed on. Applied specifically to “spooks, ghosts, simulacra, the reliquiae, of dead men; in other words, the astral dregs and remnants of human beings. They are the ‘shades’ of the ancients, the pale and ghostly phantoms living in the astral world, or the astral copies of the men that were; and the distinction between the bhuta and the kama-rupa is very slight.

“Bereft of all that pertains to the real entity, the genuine man, the bhuta is as much a corpse in the astral realms as is the decaying physical body left behind at physical death; and consequently, astral or psychical intercourse of any kind with these shells is productive only of evil. The bhutas, although belonging in the astral world, are magnetically attracted to physical localities similar in type to the remnants of impulses still inhering in them. The bhuta of a drunkard is attracted to wine-cellars and taverns; the bhuta of one who has lived a lewd life is attracted to localities sympathetic to it; the thin and tenuous bhuta of a good man is similarly attracted to less obnoxious and evil places” (OG 17-18).

Blavatsky also speaks of primitive humanity as relatively intellectually senseless bhutas or

phantoms: “the word in India now means *ghosts*, ethereal or *astral* phantoms, while in esoteric teaching it means *elementary* substances, something made of attenuated, non-compound essence, and, specifically, the astral *double* of any man or animal. In this case these primitive men are the *doubles* of the first ethereal Dhyanis or Pitris” (SD 2:102n).

From another standpoint, bhuta applies in a general way to reproductions in a new existence of entities which “have been” in a former existence. This is the reason cosmic elements are occasionally called bhutas in their connection with the various tattvas, because the elements in any one manvantara are the derivatives or reproductions, and therefore the bhutas, of the same elements in the previous manvantara.

Bhutas are also rudimentary substances or elements. The Vendantists and Sankhyas, when speaking of the six original producers or elements of nature, called them bhutas or prakritis. These are the bases of objective nature, the vehicular or substantial side of the tattvas (the principles of nature) and therefore inseparable from them. The ancients always reckoned four elements, and sometimes five, and called them aether, fire, air, water, and earth. But esoterically there are seven: adi-bhuta (the primordial), anupapadaka-bhuta (the unevolved or parentless), akasa-bhuta (aether), taijasa-bhuta (fire), vayu-bhuta (air), apas-bhuta (water), and prithivi-bhuta (earth). These cosmic elements are not the familiar things which we know under these names, for the familiar physical substances were taken as symbols, through certain appropriate qualities which they possess, of the actual elements of cosmic being. These familiar physical substances of earth, water, air, and fire are the correspondences on earth, in a mystic sense, of the true cosmic elements.

“It is likewise the old Stoic doctrine, that the elements give birth one to another.

Manifestation begins on the spiritual plane, and as the life impulses reach forth into grosser forms, into matter . . . the succeeding elements (bases, rudiments) are born, each one from the preceding one, and from *all preceding ones*. For instance, earth is born not merely from the element water, but likewise from fire, and air. Furthermore, the seven rounds of a planetary chain, the seven globes of a planetary chain, and the seven root-races of any globe thereof, has each its predominating correspondence with one of these seven elements”

(Fund 348).

Bhutadi (Sanskrit) *Bhūtādi* [from *bhūta* cosmic element from the verbal root *bhū* to be, become + *ādi* primordial] Original or evolving source of all beings; applied to the supreme hierarch of our hierarchy: the supreme spirit, mahapurusha, or cosmic Brahma. In a more limited sense, applied in the Sankhya philosophy to the cosmic ahamkara (the producer of egos, hence the former of individualities), the source whence the elements are evolved or derived. Thus it “precedes *Bhuta-sarga* — the ‘creation’ or differentiation of those Elements in primordial ‘Akasa’ (Chaos or Vacuity)” (SD 1:452).

Bhotalipi (Sanskrit) *Bhūtalipi* “Writing of the elements;” an alphabet concerning the evolution of

elements (BCW 5:306).

Bhutasarga (Sanskrit) *Bhūtasarga* [from *bhūta* has been + *sarga* creation, production] Elemental creation; the second of the seven creations or emanations, popularly given in the Hindu Puranas as mahat-tattva, bhutasarga, indriya or aindriyaka, mukhya, tairyagyonya or tiryaksrota, urdhvasrotas, and arvakstrotas. Bhutasarga cosmically is the first differentiation of universal indiscrete substance, or primordial akasa, the first stage of the differentiation of the pre-cosmic elements; the word bhutasarga itself suggests that this differentiation is according to seeds or germs (bhutas) reappearing anew from the preceding cosmic manvantara. “In astronomical and Cosmogonical language this Creation relates to the first stage of cosmic-life, the *Fire-Mist* Period after its Chaotic stage, when atoms issue from *Laya*” (SD 1:453).

The second hierarchy of the manus, the dhyanichohans or fully self-conscious devas, who are the original producers of form (rupas), appear at this stage of cosmic emanational evolution. In the *Vishnu-Purana* these beings are called chitrasikandinas (bright-crested), the seven rishis who are the informing souls of the seven principal stars of the Great Bear. These seven rishis represent hierarchies of spiritual beings who preside over and guide the septenary stages of the evolution of the cosmos.

Bhutatman (Sanskrit) *Bhūtātman* [from *bhūta* has been + *ātman* self] The “self of that which has been,” the reincarnating ego. Composed of lower buddhi and higher manas, its range of consciousness is over the earth planetary chain and its vehicle is the higher human soul. In a more restricted sense bhutatman could logically be applied to the human ego, which makes its various reappearances as a new personality in each earth incarnation.

Bhutavat (Sanskrit) *Bhūtavat* [from the verbal root *bhū* to be, become] What has become; applicable to those seeds of cosmic being which through evolutionary unfolding in previous manvantaras remain as crystallized seeds through the cosmic pralaya, to blossom forth into the unfolding universe at the opening of the succeeding manvantara. As the term has reference to what is not pure unevolved spirit, in archaic mythology it often bears the meaning of limitation or restriction, and therefore is frequently looked upon as being evil because it is not pure spirit.

Bhuta-vidya or **Bhuta-vijnana** (Sanskrit) *Bhūta-vidyā, Bhūta-vijñāna* [from *bhūta* has been, kama-lokic spooks + *vidyā, vijñāna* knowledge] The knowledge of evil beings, demonology; hence, the art of exorcising, treating, and curing demoniac possession — one of the branches of ancient medicine. Bhuta in ancient usage, while including what medieval Europeans called demons, refers to what in theosophy is called elementaries and other denizens of the astral realms — commonly of human origination, but sometimes astral rejects of the animal kingdom. *See also* AYUR VEDA

Bhut-dak. *See* BHOOT-DAK

Bhutesa or **Bhutesvara** (Sanskrit) *Bhūteśa, Bhūteśvara* [from *bhūta* living being + *īśa, īśvara* lord]

Lord of beings, lord of manifested entities and things; a name applied to each member of the Hindu Trimurti (Brahma, Vishnu, Siva). Siva in exoteric mythology and popular superstition is supposed to possess the special status of lord of the bhutas or kama-lokic spooks, and is the special patron of ascetics, students of occultism, and of those training themselves in mystical knowledge; so that this superstitious characterization of Siva is an entirely exoteric distortion of a profound esoteric fact. The real meaning is that Siva, often figured as the supreme initiator, is the lord of those who “have been,” but who now are become regenerates through initiation — the mystical idea here being of the preservation of self-conscious effort through darkness into light, from ignorance to wisdom, and from selfishness into the divine compassion of the cosmic heart. In view of the karmic past of such progressed entities, their former selves in this cosmic time period are the bhutas (have-beens) of what now they are. Bhutesa is also applied to Krishna in this sense.

Bhuvana (Sanskrit) *Bhuvana* [from the verbal root *bhū* to become] A living being; man, mankind; the world; the earth — all as being living entities. Also Rudra in the *Vishnu-Purana*. When used in conjunction with 14 (chaturdasa-bhuvanas), the reference is to the 14 lokas.

Bhavar-loka (Sanskrit) *Bhavar-loka* [from *bhuvas* air, atmosphere from the verbal root *bhū* to become + *loka* world, place] World of development or growth — so called because it is one of the higher astral realms acting as one of the fields for the evolution of sentient beings. The sixth counting downwards of the seven lokas, popularly signifying the ethereal realm or sphere between the earth and the sun. The corresponding tala is mahatala. Bhavarloka is often spoken of in Hindu literature as the middle region (referring to the triad of ethereal dwellings name bhur, bhuvas, and svar) and as the abode of the munis. While the exoteric statements about the various lokas and talas are based on truth, they are usually picturesque and allegorical, and commonly limit the ideas associated with them to some particular or outstanding characteristic, so while true enough when properly understood, they are almost always imperfect because incomplete.

Bhuvas (Sanskrit) *Bhuvas* [plural of *bhūr* from the verbal root *bhū* to become, grow into being, spring forth] The air, the atmosphere; the third of the four sacred words uttered by Brahmins when beginning their daily devotions: Om, bhur bhuvah svah.

Bible The Judeo-Christian holy book. The Bible is neither the literal word of God translated into the various languages, nor a collection of superstitious folklore, but a Jewish and late Greek version of the archaic wisdom expressed in the ancient mystery-language. Blavatsky classes it among the largely esoteric works whose secret symbolism is found also in the Indian, Chaldean, and Egyptian scriptures. The real Hebrew Bible is to a certain extent known only in small part to its Talmudic and Qabbalistic interpreters. The primeval faith of Israel was not what it was made to be by those who would have converted the secret doctrine into a national exoteric religion — by David, Hezekiah, and later the Talmudists. To trace the steps by which the ancient gnosis was handed down, adapted, transformed, perverted, and yet mysteriously preserved, is work to satisfy the

most diligent scholar. “*The real Hebrew Bible was a secret volume, unknown to the masses, and even the Samaritan Pentateuch is far more ancient than the Septuagint. As for the former, the Fathers of the Church never even heard of it*” (IU 2:471).

Considered as history, the Bible is a patchwork of documents put together at different times, sometimes mere allegory, as in the creation story, or partly allegorical and partly literal, as in the story of the Flood, adapted to serve the purpose of embalming the sacred teachings. It is remarkable that Christians continue to preserve books like Ezekiel — so obviously an esoteric work and so incomprehensible on ordinary doctrinal lines — the Psalms of David, Ecclesiastes, and the Book of Job.

As regards the New Testament, the Gospels are esoteric books, in which the teachings of the ancient wisdom are built around the alleged story of the mission of Jesus, a teacher who lived at a somewhat earlier date than that assigned him. The epistles of Paul are the work of one with some claim to the title of an initiate, who speaks of Christ as the logos in man, and apparently knows naught of the life story of Jesus. The Revelation of St. John is a purely symbolic esoteric work, of a Qabbalistic character, curiously enough still retained in the Christian canon.

Bifrost, Bilrost, Bafrast (Icelandic, Scandinavian) [from *bifast* to tremble] *Via tremula* (the trembling way), the rainbow; the rainbow bridge in Norse mythology, also called the asbru (bridge of the aesir), separating the realm of the gods (Asgard) from that of men (Midgard), while giving access to it. Guarding the bridge is Heimdal, the whitest aesir, who will blow the gjallarhorn when the world comes to an end and the gods withdraw to their sacred ground (Ragnarok). Then Bifrost falls when the sons of Muspel storm over it. It is said that each day the gods cross Bifrost to meet in council at the fount of Urd (the norn that represents the past or causation), but Thor must ford the river, as his lightnings would set the bridge on fire.

Bija (Sanskrit) *Bīja* Sometimes *Vīja*. Seed or life-germ, whether of animals or plants; esoterically the original or causal source of the urge of life to express itself. “Whether it be a kosmos or universe, or the reappearance of god, deva, man, animal, plant, or mineral, or, indeed, elemental, the seed or life-germ from and out of which any one of these arises is technically called *Bija*, and the reference here is almost as much to the life-germ or vehicle itself, as it is to the self-urge for manifestation working through the seed or life-germ. Mystically and psychologically, the appearance of an Avatara, for instance, is due to an impulse arising in *Maha-Siva*, or in *Maha-Vishnu* (according to circumstances), to manifest a portion of the divine essence, . . . Or again, when from the chela is born the Initiate during the dread trials of initiation, the newly-arisen Master is said to have been born from the mystic *Bija* or Seed within his own being” (OG 18).

Bimba (Sanskrit) *Bimba* Sometimes *Vimba*, *Vimva*. An image or reflection; also frequently used for the disk of the sun or moon, and consequently for a ball or hemisphere.

Binah (Hebrew) *Bīnāh* Understanding; the third Sephirah, regarded in the Qabbalah as emanating

from the second Sephirah, Hochmah — although it is also stated that both the second and third Sephiroth emanated conjointly. Binah is considered a passive potency or a feminine aspect, hence it is called the great Mother, the great productive Mother ('Imma) eternally conjoined with the Father ('Ab) for the maintenance of the universe; the supernal Mother as distinguished from Malchuth, the inferior Mother, Bride, and Queen; the upper Shechinah; and the great sea. Its Divine Name is YHWH or IHVH, which is the Tetragrammaton, while in the Angelic Order it is represented as the 'Er'elim (heroes) (Zohar ii, 43a).

Binah forms the head of the left pillar of the Sephirothal Tree; while in its application to the human body it is at times regarded as corresponding to the heart, and at others less correctly placed as corresponding to the left shoulder. From Binah is emanated the fourth Sephirah, Hesed, corresponding to the right arm.

Binary. See TWO

Biogenesis [from Greek *bios* life + *genesis* creation] That life can only proceed from life; the one Life is the source alike of mineral, vegetable, and animal entities and functions, and manifests itself on the various planes through appropriate vehicles — atoms or monads — in which it is more or less latent or active. Consequently, the modern scientific law of biogenesis is founded on misconception. See also SPONTANEOUS GENERATION

Bios (Greek) Life; sometimes equated with the Sanskrit prana in the list of human principles; yet the Greek zoe, with its significance of vitality or vital energy, rather than bios which often signifies a way of living, is perhaps more closely correspondential with the meaning of prana.

Birds Birds are regarded as originating from certain families of reptiles: “They of the long necks in the water, became the progenitors of the fowls of the air. . . . This is a point on which the teachings and modern biological speculation are in perfect accord. The missing links representing this transition process between reptile and bird are apparent to the veriest bigot, . . .

“So far as our present *Fourth Round* terrestrial period is concerned, the mammalian fauna are alone to be regarded as traceable to prototypes shed by Man. The amphibia, birds, reptiles, fishes, etc., are the resultants of the Third Round, astral fossil forms stored up in the auric envelope of the Earth and projected into physical objectivity subsequent to the deposition of the first Laurentian rocks” (SD 2:183, 684).

Birds have always had a prominent place in symbology, associated, for instance, with the deities of the ancient pantheons, generally as celestial messengers; and with the human and spiritual souls (buddhi and manas). Sometimes the bird in symbolism represented the atman. The ancient Persians at times also symbolized the human mind-soul as a bird, Karshipta.

There are a number of reasons, mainly derivative from the life habits and characteristics of birds, which account for their selection as symbols of spiritual things, chief perhaps among these the fact

that birds lay eggs, the source of new lives, whence sprang the idea of the cosmic egg appearing in and from the womb of cosmic spirit. For instance, in the Finnish Kalevala, a bird lays six golden eggs and one iron egg — the last becoming our earth — a clear reference to the seven globes of the planetary chain; and there was the cosmic egg of the Orphics in Greece and the hiranyagarbhas of Hindustan, etc.

Virtually all ancient religions comprised references to birds, sacred and otherwise — for example, the phoenix, the simorgh of the ancient Persians, the ancient Egyptian ibis, golden hawk, and bennu, and Garuda and the kalahansa of ancient India. This last is the white swan of eternity, born in and from the Eternity or the Timeless: “The Nest of the eternal Bird, the flutter of whose wings produces life, is boundless space . . .” (SD 2:293).

Birs-Nimrud Modern name of an ancient Babylonian ziggurat or temple-tower of ancient Borsippa. Even today it is the most conspicuous and striking ruin in Iraq, situated on the top of a hill over a hundred feet high. A pyramidal, stepped structure called “the house of the seven divisions of heaven and earth,” it was dedicated to Nebo, the ancient Chaldean god of wisdom. Each of the seven divisions or stages was dedicated to one of the seven planets and was faced with bricks of the color appropriate to the planet.

Bisexual. See ANDROGYNE; HERMAPHRODITE

Black Fire Qabbalistic term signifying absolute light-wisdom: “ ‘black’ because it is incomprehensible to our finite intellects” (TG 58).

Black Age. See KALI YUGA

Black Magic. See MAGIC

Black Magicians. See MAGIC

Blood The vital fluid circulating through the heart, arteries, and veins, supplying nutritive materials to all parts of the body, and receiving elements of waste for later discharge from the system. Occultism enlarges upon the truism that the blood is the life, by relating it to the spiritual and psychic life-forces circulating in the solar system. Blavatsky says

“that (a) the Sun is the store-house of Vital Force, which is the *Noumenon* of Electricity; and (b) that it is from its mysterious, never-to-be-fathomed depths, that issue those life currents which thrill through Space, as through the organisms of every living thing on Earth. . . .

“Thus, there is a regular circulation of the vital fluid throughout our system, of which the Sun is the heart — the same as the circulation of the blood in the human body — during the manvantaric solar period, or life; . . . Could the human heart be made luminous, and the living and throbbing organ be made visible . . . then every one would see the Sun-spot phenomenon repeated every second — due to its contraction and the rushing of the blood”

(SD 1:531, 541-2).

The analogy is seen in these streams of solar living fire stepped down into vital electricity on earth, and also in the psychic and astral-physical currents of lunar life which influence generation and all terrestrial growth. In chemical composition, the plasma or fluid part of the blood is said to be identical with that of primordial sea water, ocean water having since become more concentrated.

The blood is actively protean in representing *on this plane* the streams of higher vitality manifesting in body, soul, and spirit. Thus, its pranic oxygen is the agent of the solar fire; its white and red corpuscles represent the psychic life-force and the red kamic energies, all acting together in their material forms. The leucocytes or white corpuscles are formed in the lymphatic glands, in the spleen, and in bone marrow. They correspond in a sense to the lunar chhayas or builders of the ethereal forms of the second and early third root-races which “needed no warm blood, no atmosphere, no feeding” (SD 1:609). These spherical ameboid cells have both the primordial, changeable pudding-bag form and the autogenerative type of propagation. Their relation to the formation of the red cells typifies that of the early astral forms which, gradually becoming physicalized, evolved into the red-blooded, bisexual, manas-endowed beings of the later third root-race. The red cells, without autogenerative nuclei, are born in special leucocyte cells of red bone marrow, where they are produced at the rate the effete red cells are destroyed.

In human beings the pranic life-currents become impregnated with the manasic quality conferred by the agnishvattas. The lower elements of kama-prana are used in the blood offerings and sacrifices of voodoo rites and other forms of black magic:

“Blood begets phantoms. . . . Paracelsus writes that with the fumes of blood one is enabled to call forth any spirit we desire to see; for with its emanations it will build itself an appearance, a *visible* body — only this is sorcery” (IU 2:567).

The old Greeks said that a divine fluid or ichor ran in the veins of the gods. It is also our physical destiny in the far distant future to evolve into bodies without blood as we understand it, in which nobler currents of conscious life will circulate.

Blood Rites Ceremonies, covenants, and observances in which blood is used as part of the rites or performances. “The arcane doctrine teaches that the ‘blood’ rites are as old as the Third-Root race, being established in their final form by the Fourth Parent race in commemoration of the separation of androgynous mankind, their forefathers, into males and females” (BCW 8:251). Whatever sacred meaning may have entered into this primary memorial of the ethereal forms and forces of androgynous humanity becoming separate, physicalized, warm-blooded bodies, has been forgotten, misunderstood, or perverted in the exoteric rites which have come down to us.

In the ancient Mysteries and in esoteric teachings of the great religions, references to partaking of flesh and blood are purely symbolic figures of speech, the mystical idea being that of partaking of

wisdom and gaining understanding through union with the divinity whose name was used, such union being achieved during initiation, the communicant thereby acquiring spiritual strength and nobler life in common with the initiator.

The antithesis of these lofty ideas underlies the widespread prevalence of blood rites. In fact, the many blood ceremonials which mark and mar the records of so many peoples are often gross, cruel, and perverted, violating the sacredness of life by offering animal and human sacrifices. Several groups regard blood as one of the essential elements used in their numerous forms of initiations, oblations, invocations to ancestors and to spirits of various kinds. Their fixed belief that the demons or spirits invoked by these ceremonies are harmful if not propitiated, but will be gratified and nourished by the immaterial essence, savor, or fumes of the foods, alcohols, and blood offerings is not without some basis of fact; for the earth-bound kama-rupic entities and astral elementaries are attracted by, and do abstract the impalpable kama-pranic life-force from, the fumes and emanations of such offerings. These beliefs are consistent with much in the tribal customs and rites which attracts and revivifies evil entities in their own astral atmosphere. Customs like poison ordeals for so-called witches, and evil use of nature forces for injuring or destroying personal enemies, added to frequent evocations, make a vicious circle of cause and effect.

Blood Transfusion The introducing of blood from the vascular system of one animal or person into the blood vessels of another. Selecting a person for a donor whose blood matches that of the recipient takes no account of the subtle personal and karmic qualities, both active and latent, which are carried over from the donor's lifestream. The protean influence of personalized blood, thus directly transmitted, is conveyed to the other person with greater potency than would result even from drinking it. No laboratory findings of supposedly healthy blood can ever reveal the latent seeds of karmic disease, or of mental or psychological disorder, which will manifest in due time unless destroyed, even when transplanted into a different vital culture-medium. Moreover, transfusion may result in an increased or abnormal activity of such germinating seeds which thus have been involved with the physical conditions and the life issues of another person. W. Q. Judge, speaking of the esoteric teaching on the influence of the body's tissues on the soul, says:

“We say that the blood cells and the fluid they float in receive and transmit sensation.

“Each sub-division among the physical sheaths performs not only the duty of receiving and transmitting sensations, but also has the power of retaining a memory of them which is registered in the appropriate ganglions of the body, and continually, from there, implanted in the corresponding center of sensation and action in the astral body. At the same time the physical brain has always the power, as is of course a common fact, of collecting all the physical sensations and impressions” (Echoes of Orient 2:37).

The transfusion of blood is an unconscious reminiscence of Atlantean practices.

Bne' Alhim, B'ne Aleim, Bnei (ha-)Elohim. See BENEI 'ELOHIM

Bnei-Shamash. See BENEI SHEMESH

Boar One of the avatars of Vishnu or Brahma as Prajapati; in Hindu symbology the boar “which plunges into the ‘waters’ of space and lifts up the earth upon his tusks, and so bears it for the remainder of the manvantara, signifies not only the fourth-plane physical vitality, but likewise the cosmical vitality which infills and sustains the earth, rooted as this vitality is in the spiritual life of the god of our solar system” (FSO 493). See also AVATARA

Boat of the Sun, Seker Boat, Henu (Egyptian) Henu. A frequent Egyptian representation is the boat in which the god Seker is seated. In its center is placed a large coffer, representing the covering of the dead body of the sun god Af or of Osiris. Oftentimes a hawk, a symbol of the sun, is represented hovering over it with outstretched wings, and the boat was said to be steered by the dead — a reference both to the spiritual power of those who have passed on to other planes and to the idea of cycles, in that the past or dead produces the present, which in its turn is both the parent and self of the future.

On the day of the festival of Seker, the coffer was lifted off at the moment of sunrise by the High Priest of Memphis, and carried in a procession circling the temple of the deity. This represented the common rotational or revolving movements of all celestial bodies, whether of the sun or planets.

Boaz (Hebrew) Bo'az [from *bě* in + 'oz might, strength, majesty] Strength, majesty; the name of an individual in the Old Testament, as well as of the left-hand pillar which was erected by the widow's son, Hiram, before the temple of Solomon (1 Kings 7:21). From the standpoint of the Qabbalah, Boaz stands for the third Sephirah, Binah (intelligence or mind). The right-hand pillar was named Jachin (firmness, stability). The two pillars were commonly represented as white and black (or dark green) respectively, and correspond to the higher and lower ego or the dual manas.

Boddhisatwa. See BODHISATTVA

Bodha (Sanskrit) Bodha [from the verbal root *budh* to acquire understanding, awaken, know] Wisdom, knowledge, perception, consciousness. As an adjective, knowing, understanding, awakening; as a proper noun, knowledge personified as a son of Buddhi.

Bodhi (Sanskrit) Bodhi [from the verbal root *budh* to acquire understanding, awaken] Perfect wisdom or enlightenment; true divine wisdom. A state of consciousness in which one has so emptied the mind that it is filled only with the selfless selfhood of the eternal. In this state one realizes the ineffable visions of reality and of pure truth. Bodhi is a name for the enlightened intellect of buddha. “ ‘Bodhi’ is likewise the name of a particular state of trance condition, called *Samadhi*, during which the subject reaches the culmination of spiritual knowledge” (SD 1:xix). The bodhi state is called a buddha, and the organ in and by which it is manifested is termed buddhi.

Bodhi is also a name for the mystical tree under which legend says Gautama Buddha attained enlightenment, known as the sacred fig tree of India. *See also* Asvattha

Bodhidharma (Sanskrit) *Bodhidharma* [from *bodhi* wisdom + *dharma* law, spiritual ethics] Wisdom-religion, the wisdom involved in the teachings concerning reality.

Also a great arhat Kshatriya (460?-534) who traveled to China, and was instrumental in disseminating Buddhist teachings there. His guru, Panyatara, is said to have given him the name Bodhidharma to mark his understanding (bodhi) of the Law (dharma) of the Buddha.

Bodhi-druma. *See* BODHI TREE

Bodhisattva (Sanskrit) *Bodhisattva* [from *bodhi* wisdom + *sattva* essence] He whose essence has become intelligence; exoterically, one who in one or a few more incarnations will become a buddha. Occultly, when

“a human being, has reached the state where his ego becomes conscious, fully so, of its inner divinity, becomes clothed with the buddhic ray; where, so to say, the personal man has put on the garments of inner immortality in actuality, on this earth, here and now — that man is a Bodhisattva. His higher principles have nearly reached Nirvana. When they do so finally, such a man is a Buddha, a human Buddha, a Manushya-Buddha. Obviously, if such a Bodhisattva were to reincarnate, in the next incarnation or in a very few future incarnations thereafter, he would be a Manushya-Buddha. A Buddha, in the esoteric teaching, is one whose higher principles can learn nothing more. They have reached Nirvana and remain there; but the spiritually awakened personal man, the Bodhisattva, the person made semi-divine to use popular language, instead of choosing his reward in the Nirvana of a less degree, remains on earth out of pity and compassion for inferior beings, and becomes what is called a Nirmanakaya . . . a Bodhisattva is the representative on earth of a Dhyani-Buddha or Celestial Buddha — in other words one who has become an incarnation or expression of his own Divine Monad” (OG 19).

The dhyani-buddhas who each watch over one of the rounds and the great root-races on the different globes of our planetary chain, are said to send their bodhisattvas, their spiritual or human correspondents, during every round and race.

“These Dhyani Buddhas emanate, or create from themselves, by virtue of Dhyana, celestial Selves — the *super*-human Bodhisattvas. These incarnating at the beginning of every human cycle on earth as mortal men, become occasionally, owing to their personal merit, Bodhisattvas among the Sons of Humanity, after which they may re-appear as *Manushi* (human) Buddhas” (SD 1:571).

“The exoteric teaching which says that every Dhyani-Buddha has the faculty of creating

from himself, an equally celestial son — a Dhyani-Bodhisattva — who, after the decease of the Manushi (human) Buddha, has to carry out the work of the latter, rests on the fact that owing to the highest initiation performed by one overshadowed by the ‘Spirit of Buddha’ . . . a candidate becomes virtually a Bodhisattva, created such by the High Initiator” (SD 1:109).

Bodhisatwa. See BODHISATTVA

Bodhi Tree or **Bo Tree** The tree of wisdom or knowledge; the tree (*Pippala* or *Ficus religiosa*) “under which Sakyamuni meditated for seven years and then reached Buddhahood. It was originally 400 feet high, it is claimed; but when Hiouen-Tsang saw it, about the year 640 of our era, it was only 50 feet high. Its cuttings have been carried all over the Buddhist world and are planted in front of almost every Vihara or temple of fame in China, Siam, Ceylon, and Tibet” (TG 59).

This legend of the enormous height attained by the fig tree under which the Buddha obtained enlightenment, illustrates how soon the spiritual vision of the real meaning of the bodhi tree became involved in mythologic wonder.

While the historical legend of the Buddha obtaining omniscience under the bodhi tree may be correct historically, it is also a usage of the mystical language of the Mysteries — Gautama attaining supreme wisdom and knowledge under the “wisdom tree” is but another way of saying that through initiation into the highest grades of the Mysteries, he reached the stage of buddhahood because he was already a buddha through inner evolution. Again, in India adepts of both the right- and left-hand were often referred to as trees, the path indicated by whether the tree named was beneficent or maleficent. See also ASVATTHA

Bodhyanga (Sanskrit) *Bodhyaṅga* [from *bodhi* wisdom + *aṅga* limb, portion, division] Limb or division of essential wisdom; often used collectively to signify the branches of esoteric knowledge or understanding, usually enumerated as seven: 1) smṛiti (memory); 2) dharma-pravichaya (investigation — hence correct understanding or discrimination of the Law); 3) virya (energy); 4) prīti (spiritual joy); 5) prasrabdhi (confidence, tranquillity); 6) samadhi (absorption of the consciousness in a high spiritual and intellectual objective); and 7) upeksha (absolute indifference). Esoterically these correspond to seven states of consciousness (TG 59).

Bod-lhas (Tibetan) [from *bod* (bö) Tibet + *lha* spirit, divine being (cf Sanskrit *deva*)] A name of the civil capital of Tibet, Lhasa [Tib *lha-sa* place of the gods].

Bod-pa (Tibetan) [from *bod* (bö) Tibet + *pa* a person connected with] An inhabitant of Tibet.

Body. See PRINCIPLES; KOSA; STHULA-SARIRA; etc.

Boehme, Jacob or Bohme, Jakob (1575-1624). Great German mystic philosopher, one of those individuals who, showing unusual spiritual insight due to excellent past karma, are especially watched over by the Great Lodge in preparation for future work. A shepherd as a boy, he became a

shoemaker after learning to read and write.

“He was a natural clairvoyant of most wonderful powers. With no education or acquaintance with science he wrote works which are now proved to be full of scientific truths; but then, as he says himself, what he wrote upon, he ‘saw it as in a great Deep in the Eternal.’ He had ‘a thorough view of the universe, as in a chaos,’ which yet ‘opened itself in him, from time to time, as in a young plant.’ He was a thorough born Mystic, and evidently of a constitution which is most rare; one of those fine natures whose material envelope impedes in no way the direct, even if only occasional, intercommunion between the intellectual and the spiritual Ego. It is this *Ego* which Jacob Boehme, like so many other untrained mystics, mistook for God; ‘Man must acknowledge,’ he writes, ‘that his knowledge is not his own, but from God, who manifests the *Ideas* of Wisdom to the Soul of Man, *in what measure he pleases.*’ Had this great Theosophist mastered Eastern Occultism he might have expressed it otherwise. He would have known then that the ‘god’ who spoke through his poor uncultured and untrained brain, was his own divine *Ego*, the omniscient Deity within himself, and that what that Deity gave out was not in ‘what measure he pleased,’ but in the measure of the capacities of the mortal and temporary dwelling IT informed” (TG 60).

Boker, Boqer. See SANDHI; DAWN

Bon, Bön (Tibetan) [possible variation of *bod* Tibet, or an ancient word meaning invoker] Also pon and bhon. The Tibetan religion before the introduction of Buddhism in the latter half of the 8th century. The priest and adherents of Bon are called Bonpos (*bon po*), the ancient invokers for the pre-Buddhist and non-Buddhist kings and nobles of Tibet. The Bon religion, which survives today, seems based on at least four sources: 1) the ancient folk religions of the Tibetan people; 2) the tradition of the ancient “invokers”; 3) a conscious competition with Buddhism in terms of doctrine, texts, institutions, pantheon, and ritual; and 4) a number of non-Tibetan influences, including Hindu, Iranian, Central Asian, and other elements. Bon has been influenced by Buddhism to the extent that it has its own Kanjur and Tanjur, its own monks and monasteries, and its own “Buddha,” Shen-rab (*gshen rab*). All existing Bon literature was produced after the introduction of Buddhism, and shows the influence of and competition with Buddhism. Bon has also influenced Tibetan Buddhism, especially the Nyingmapa and Kargyupa sects.

Bona Dea A Roman divinity called Fauna, Fatua, and Oma: the sister, wife, or daughter of Faunus. Reverenced as chaste and prophetic, revealing her oracles to women only (as Faunus did to men), her festival being on the first of May and no male person being allowed to be present. A goddess of agriculture and shepherds, she revealed certain truths of nature to those approaching her in a harmonious, synchronizing state of mind. In general Bona Dea is the goddess of fecundity and productivity, the generative spirit of motherhood. Because she was considered to be the great producer holding the seeds of all things in her mighty womb, she was frequently identified with

Ops, the goddess of plenty, fertility, and riches. The ideas regarding her are intimately related with Saturnus or Saturn.

Boneless Race. See ROOT-RACE, SECOND

Bones The hard tissues that constitute the framework or skeleton of the physical body. They have an organic matrix for the inorganic mineral salts, which go through cycles of dissolution, changed location, crystallization, and reconstruction. Mineral molecules dissolving in their matrix and reforming themselves anew occurs at that zero-point of transition between the living mineral matter and that of the live animal tissue. This transformation of the mineral atom through crystallization is “the same function, and bears the same relation to its *inorganic* (so-called) *upadhi* (or basis) as the formation of *cells* to their organic *nuclei*, through plant, insect and animal into man” (SD 2:255). The bones also furnish blood cells and mineral content to the blood stream. In the embryonic resume of racial imbodiments, the process of ossification appears after the progressive stages of its protoplasmic, gelatinous, and cartilaginous frames, analogous to those forms through which nascent humanity passed in the first two and one-half root-races. With the deposit of bones in the fetal framework, and its functional relation to the blood, and with the development of the placenta and of the organs in the mesoderm, the conditions review the gradual physicalization of the gelatinous androgynes of the early third root-race into the bisexual humanity with organized functions like the present mammalian type.

The functions, physiological and other, that the bones play in the human body are really far more than acting as the skeletal framework. There are vital, psychomagnetic, and even electromagnetic currents passing in life through the entire bone structure of the body, and hence a constant interchange, not only by osmosis but also by action and reaction, between the bony structure of the body and the soft compact of flesh, nerves, veins, etc.

Bon-po. See BON

Boodhasp (Chaldean) “An alleged Chaldean; but in esoteric teaching a Buddhist (a Bodhisattva), from the East, who was the founder of the esoteric school of Neo-Sabeism, and whose secret rite of baptism passed bodily into the Christian rite of the same name. For almost three centuries before our era, Buddhist monks overran the whole country of Syria, made their way into the Mesopotamian valley and visited even Ireland” (TG 61).

Book of Changes. See I CHING

Book of Concealed Mystery. See SIPHRA DI-TSENI‘UTHA’

Book of Dzyan [probably from Sanskrit *dhyana* intense spiritual meditation, wisdom, divine knowledge] An archaic work of enormous antiquity upon which Blavatsky based her *Secret Doctrine*. Dzyan has been variously spelled or transliterated, and under this form is a derivative of the Tibetan. Dzyan, dzen, or ch’an is the general term for the esoteric schools and their literature.

Blavatsky describes the Book of Dzyan, saying: “An Archaic Manuscript — a collection of palm leaves made impermeable to water, fire, and air, by some specific unknown process — is before the writer’s eye. On the first page is an immaculate white disk within a dull black ground. On the following page, the same disk, but with a central point” (SD 1:1).

“The ‘very old Book’ is the original work from which the many volumes of *Kiu-ti* were compiled. Not only this latter and the *Siphrah Dzeniouta* but even the *Sepher Jezirah*, the work attributed by the Hebrew Kabbalists to their Patriarch Abraham (!), the book of *Shu-king*, China’s primitive Bible, the sacred volumes of the Egyptian Thoth-Hermes, the Puranas in India, and the Chaldean *Book of Numbers* and the *Pentateuch* itself, are all derived from that one small parent volume. Tradition says, that it was taken down in *Senzar*, the secret sacerdotal tongue, from the words of the Divine Beings, who dictated it to the sons of Light, in Central Asia, at the very beginning of the 5th (our) race; for there was a time when its language (the *Sen-zar*) was known to the Initiates of every nation, when the forefathers of the Toltec understood it as easily as the inhabitants of the lost Atlantis, who inherited it, in their turn, from the sages of the 3rd Race, the *Manushis*, who learnt it direct from the *Devas* of the 2nd and 1st Races. . . . The old book, having described Cosmic Evolution and explained the origin of everything on earth, including physical man, after giving the true history of the races from the *First* down to the Fifth (our) race, goes no further” (SD 1:xliv).

See also STANZAS OF DZYAN.

Formation. See SEIPHER YETZIRAH

Book of Numbers, Chaldean An ancient Chaldean work no longer popularly extant.

“A work which contains all that is found in the *Zohar* of Simeon Ben-Jochai, and much more. It must be the older by many centuries, and in one sense its original, as it contains all the fundamental principles taught in the Jewish Kabbalistic works, but none of their blinds. It is very rare indeed, there being perhaps only two or three copies extant, and these in private hands” (TG 75).

“It is one of the ‘Books of Hermes,’ and it is referred to and quotations are made from it in the works of a number of ancient and mediaeval philosophical authors. Among these authorities are Arnolando di Villanova’s ‘Rosarium philosoph.’; Francesco Arnolphi’s ‘Lucensis opus de lapide,’ Hermes Trismegistus’ ‘Tractatus de transmutatione metallorum,’ ‘Tabula smaragdina,’ and above all in the treatise of Raymond Lulli, ‘Ab angelis opus divinum de quinta essentia’ ” (IU 1:254n).

Book of Splendour. See ZOHAR

Book of the Dead, Egyptian The name given to certain ancient papyri of the Egyptian, more

correctly called *Pert em hru* (coming forth into day or light). They have been discovered in many of the tombs, interred with the mummies. Although by no means the only text of importance coming down from the ancient Egyptians, it is a work of extreme antiquity, containing the system expounded by the priests, and is far older than the two other extant works known as the *Book of the Pylons* and the *Book of the Tuat*. The work depicts in symbolic form the afterdeath state, as presented by the priests to the populace of Egypt. The soul is depicted in the guise of a pilgrim, journeying through various halls, at the portals of each of which he was obliged to give a correct answer — an account of the life he had lived upon earth. The pilgrim eventually reached the judgment hall, within which he was tried by the company of gods and goddesses. Before Osiris his heart was placed in a balance to testify for or against him. If he passed the test satisfactorily, he was permitted by Osiris to enter his domain and become as one of the deities.

In a mystical sense, the *Book of the Dead* is a veiled rendition of the passage of the defunct through the various tests and trials of kama-loka before entering devachan; and of the trials of initiation which were but copies, at least in its lower degrees, of the postmortem pilgrimage of the dead.

Borsippa. See BIRS-NIMRUD

Both-al (Irish) The oracular or magical stones of ancient Ireland; equivalent to the Greek betylos.

Bo-tree. See BODHI TREE

Boundless, The The infinitude of living space and unconditioned time, termed parabrahman, parabrahman-mulaprakriti, tat, or Aditi in Sanskrit; in the Chaldean Qabbalah, 'eyn soph; and with the Greeks, to apeyron. The non-existent, because nonmanifested, and therefore the concealed unity; sometimes called darkness in a mystic sense, no-number because not subject to

computation, also the rootless root. Having no relation to the bounded and conditioned which are contained within it, it is the unknown and unknowable cosmic motion, absolute consciousness, and absolute motion, and therefore to our limited minds unconsciousness and immobility. Its symbol is the circle or zero, denoting the absence of everything that can be predicated as embodying limitation.

All worlds and universes spring forth from it, run their various manvantaric periods, and sink back into it for their rest; so that what we call space is but one of its manifestations or appearances, and what we call unending duration is its aspect when we consider it under the light of eternity. It is everything because everything is included within it, and it is nothing because it is no-thing — thing implying limitation or condition. *See also* PARABRAHMAN; THAT

Boustrophedon (Greek) Ox-turning; a method of writing found in some old inscriptions, such as Solon's Laws, which ran from left to right and then back from right to left, or vice versa, as in plowing.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Br-Bz

Brachmins. *See* BRAHMANA

Bragi (Icelandic) [from *bragr* best] One of the twelve aesir, gods of the Norse Eddas. Representing poetic inspiration of the highest order, he is called the divine singer. It is said he lay sleeping on the ship of the dwarfs (kingdoms of the elements — earth, water, air, fire, aether), and when the vessel crossed the threshold of death, he awoke and sang the worlds into life. The sound of his joyfilled song and golden harp reverberates through the nine worlds awakening the music of all the spheres.

Bragi is synonymous with spiritual intuition which, united with the mind (Loki), is the means of human liberation. His consort, the goddess Idun, daily gives the gods the apples of immortality.

Brahm, Brahma. *See* BRAHMAN

Brahma (Sanskrit) *Brahmā* [from the verbal root *br̥h* to expand, grow, fructify] The first god of the Hindu Trimurti or triad, consisting of Brahma, the emanator, evolver, and creator; Vishnu, the sustainer or preserver; and Siva, the regenerator or destroyer. Brahma is the vivifying expansive force of nature in its eternally periodic manvantaras. He stands for the spiritual evolving or developing energy-consciousness of a solar system which is also called the Egg of Brahma (brahmanda). Brahma is called the creator or Logos, but in the theosophic philosophy creator is simply an abstract term or idea, like army. In Burnouf's words:

“Having evolved himself from the soul of the world, once separated from the first cause, he evaporates with, and emanates all nature out of himself. He does not stand above it, but is mixed up with it; Brahma and the universe form one Being, each particle of which is in its essence Brahma himself, who proceeded out of himself” (q SD 1:380n). The *Vishnu-Purana* explains that created beings “although they are destroyed (in their individual forms) at the

periods of dissolution, yet being affected by the good or evil acts of former *existences*, are never exempted from their consequences. And when Brahma produces the world anew, they are the progeny of his will . . .” (q SD 1:456n).

Brahman is both masculine and neuter, and therefore has two meanings. In the masculine (Brahma) it is the evolving energy of the cosmic egg, as distinguished from the neuter (Brahman). Brahma is the vehicle or sheath of Brahman. The *Vishnu-Purana* says that Brahma in its totality has essentially the aspect of prakriti, both evolved and unevolved (mulaprakriti), and also the aspects of spirit and of time. “Brahma, as ‘the germ of unknown Darkness,’ is the material from which all evolves and develops ‘as the web from the spider, as foam from the water,’ etc. This is only graphic and true, if Brahma the ‘Creator’ is, as a term, derived from the root *brih*, to increase or expand. Brahma ‘expands’ and becomes the Universe woven out of his own substance” (SD 1:83). Again,

“Here we find, as in all genuine philosophical systems, even the ‘Egg’ or the Circle (or Zero), boundless Infinity, referred to as It, and Brahma, the first *unit* only, referred to as the *male* god, *i.e.*, the fructifying Principle. It is ① or 10 (ten) the Decade. On the plane of the Septenary *or our World* only, it is called Brahma. On that of the *Unified Decade* in the realm of Reality, this male Brahma is an illusion” (SD 1:333).

According to the *Aitareya-Brahmana*, Brahma as Prajapati (lord of beings) manifests himself first of all as twelve bodies or attributes, which are represented by the twelve gods, symbolizing 1) fire; 2) the sun; 3) soma, which gives omniscience; 4) all living beings; 5) vayu, or ether; 6) death, or breath of destruction — Siva; 7) earth; 8) heaven; 9) Agni, the immaterial fire; 10) Aditya, the immaterial and invisible sun; 11) mind; and 12) the great infinite cycle, “which is not to be stopped.” Brahma in one of his phases therefore is the visible universe, every atom of which is essentially himself.

Brahma “symbolizes personally the collective creators of the World and Men — the universe with all its numberless productions of things movable and (seemingly) immovable. He is collectively the Prajapatis, the Lords of Being; and the four bodies typify the four classes of creative powers or Dhyana Chohans . . .” (SD 2:60), these four bodies being ratri (night) associated with the creation of the asuras; ahan (day) associated with the gods; sandhya (evening twilight) associated with the pitris; and jyotsna (dawn or light) associated with the creation of men.

In the beginning Brahma was Purusha (spirit) and also prakriti (matter). It is later that he separated himself into two halves — Brahma-Vach (female) and Brahma-Viraj (male). The term Brahma is not found in the Vedas. Blavatsky correlates Adam-Qadmon, Brahma, and Mars as symbols for primitive or initial generative and creative powers typifying water and earth; also all three are associated with the color red (cf SD 2:43, 124-5). *See also* BRAHMA’S DAY

Brahma-bhashya. See SENZAR

Brahmacharin (Sanskrit) *Brahmacārin* [from *brahman* cosmic spirit, divine spiritual wisdom + *cārin* one practicing or performing] One who is devoted to the student life of a religious devotee involved in sacred study; a young Brahmin in the first period of life as observed in ancient times. The name likewise is given to one who practices rigorous self-control, abstinence, chastity, etc.

Brahmacharya (Sanskrit) *Brahmacarya* [from *brahman* cosmic spirit, divine wisdom + *carya* conduct, practicing from the verbal root *car* to perform, undergo] Following a life of philosophic and religious training; usually applicable to the first stage in the life of a Brahmin of ancient times, the state of an unmarried religious student of the Vedas.

Brahmadanda (Sanskrit) *Brahmadaṇḍa* Spinal column or sushumna; “the rod or stick of Brahma, . . . symbolized by the bamboo rod carried by ascetics, the seven-knotted wand of the Yogi. The seven knots are the seven Nadis along the spinal cord” (BCW 12:701). (BCW 12:616).

Brahmadevas (Sanskrit) *Brahmadeva-s* [from *brahman* cosmic spirit + *deva* god, spiritual being] Spiritual beings who act as guardians of the human race, entities directly emanating from Brahma as spiritual-intellectual energies. See also DHYANI-CHOHANS

Brahmadikas. See BRAHMADIKAS

Brahmadikas (Sanskrit) *Brahmādika-s* The earliest emanations from Brahma; also a general name for the higher solar pitris or dhyani-chohans, whether of the solar system, planetary chain, or even individual globes, who take charge of their respective spheres for the course of its life cycle. As spiritual prajapatis, producers or emanators of hierarchical classes or families, they in a sense are identified with the manus. (SD 1:442; 2:142)

Brahmajnana *Brahmajñāna* (Sanskrit) [from *brahman* cosmic spirit + *jñāna* knowledge from the verbal root *jñā* to know] Divine, sacred, or esoteric knowledge concerning the cosmic Brahma as taught, for instance, in Vedantic philosophy; also spiritual wisdom per se.

Brahmajnanin (Sanskrit) *Brahmajñānin* [from *brahman* cosmic spirit + *jñānin* knower from the verbal root *jñā* to know] One who possesses sacred knowledge; spiritually wise or holy.

Brahman (Sanskrit) *Brahman* [from *brh* to expand] Sometimes Brahma or Brahm. The one reality, “the impersonal, supreme and uncognizable Principle of the Universe from the essence of which all emanates, and into which all returns, which is incorporeal, immaterial, unborn, eternal, beginningless and endless. It is all-pervading, animating the highest god as well as the smallest mineral atom” (TG 62). It involves both essential consciousness and substance, and is the spiritual background of the kosmos, the Cause of all Causes, what is commonly called the Unmanifest Logos: “Brahma, the Noumenon, never rests, as IT never changes and ever IS, though IT cannot be said to be anywhere” (SD 1:374). As the fundamental cosmic fountain of consciousness and spiritual

substance, Brahman is the fundamental or cosmic self which, in the case of an individual being, becomes the kshetrajna, the spiritual sun within the individual. Thus the essential self of every being or entity from cosmos to physical atom is this Brahman itself, which is the cause of the familiar saying “tat tvam asi” (you are that).

Through and from Brahman derive the various cosmic Brahmas, the expansion of the One into the many. Brahman does not put forth evolution itself nor create, but exhibits various aspects of itself by means of emanative evolution. The Hindu Puranas say that Brahma, Vishnu, and Siva are the primordial energies of Brahman, the divine neuter. There is a clear distinction between the impersonal, supreme, all-pervading, immanent, beginningless, and endless cosmic principle, whose essence is consciousness-life-substance, and the various Brahmas; for these latter are the periodic manifestations of the highest energies flowing forth at the beginning of each manvantara from the neuter Brahman, and into which these various Brahmas are ingathered again when the cosmic cycle reaches its close and pralaya ensues.

Philosophically, as the supreme cosmic principle of any universe, Brahman is enclosed within its veil or sakti, called pradhana; just as Brahma is similarly infolded within its inseparable sakti called prakriti, and on a still vaster plane mulaprakriti enfolds parabrahman. We have thus: parabrahman-mulaprakriti, Brahman-pradhana, and Brahma- or Purusha-prakriti.

Brahmana (Sanskrit) *Brāhmaṇa* Also *Brahman*, *Brahmin*. As a noun, a member of the highest of the four orthodox Hindu castes during the Vedic and post-Vedic periods. The other three Hindu castes are Kshatriya, Vaisya, and Sudra. Originally an individual became a Brahmana through personal merit and initiation, but gradually priestcraft by degrees entered in, so that the son of a Brahmana became a Brahmana by right or family protection first, then by that of descent. The rights of blood-descent in time replaced the nobler rights of genuine merit, and thus arose the rigid cast of the Brahmanas. Blavatsky says that a true Brahmana is one who has become a dvija (twice-born or initiate) and one “ ‘whose seven forefathers have drunk the juice of the moon-plant (Soma),’ and who is a ‘Trisuparna’ [“three-leaved or -winged” or active in the highest three principles], for he has understood the secret of the Vedas” (SD 1:209-10). Dvija and trisuparna, although still used in India, are used merely by courtesy and ancient custom; in archaic ages the titles were properly borne, because merited, and were descriptive rather than complimentary.

A second meaning as a noun is one of the portions of Vedic literature containing rules for the proper chanting and usage of the mantras or hymns at sacrifices, and explanations in detail of what these sacrifices are, illustrated by legends and old stories. These Brahmanas are “*pre-eminently occult works*, hence used purposely as blinds. They were allowed to survive for public use and property only because they were and are absolutely unintelligible to the masses. Otherwise they would have disappeared from circulation as long ago as the days of Akbar” (SD 1:68). Though the Brahmanas are the oldest scholastic treatises on the primitive hymns, they

themselves require a key for a proper understanding of them which Orientalists have hitherto failed to secure. Since the time of Gautama Buddha, the keys to the Brahmanical secret code have been in the possession of initiates alone, who guard their treasure with extreme and jealous care. There are indeed few, if any, individuals of the present-day Brahmanical cast in India who are even conscious that such keys exist; although no small number of them, possibly, have intimations or intuitions that a secret wisdom has been lost which is uniformly understood to have been in the possession of the ancient Indian rishis.

Brahmana is also the adjectival form for the two uses given above. *See also* CHATUR-VARNA

Brahmana Period One of the four periods into which Vedic literature has been divided by Orientalists.

Brahmanaspati. *See* BRIHASPATI

Brahmanda (Sanskrit) *Brahmāṇḍa* [from *brahma* + *aṇḍa* egg, Egg of Brahmā] The imbodiment of Brahma, particularly the solar system, physical, psychological, and spiritual. The ancient Hindus “called Brahma . . . the kosmic atom. The idea is that this kosmic atom is ‘Brahma’s Egg,’ from which the universe shall spring into manifested being, as from the egg the chick comes forth, in its turn to lay another egg. Each of these kosmic eggs or universes gives birth, after its rest period has ended, to its own offspring, each of the former derived in similar manner from its own former manvantaric egg” (Fund 494). This cosmic egg was sometimes said to be dropped by the mystic bird kalahansa, the swan of eternity; or to be the result of Brahma’s ideation (FSO 97). *See also* HIRANYAGARBA

Brahmanda Purana (Sanskrit) *Brahmāṇḍa Purāṇa* One of the 18 principal Hindu Puranas, so named because it contains an account of Brahmāṇḍa (the Egg of Brahma), and therefore of future cosmic ages as revealed by Brahma. It consists of 12,200 slokas.

Brahman-yogins. *See* YOGI

Brahma-Prajapati (Sanskrit) *Brahmā-prajāpati* [*brahmā* as *prajāpati*] Progenitor or lord of beings, synthesis of all the cosmic prajāpati or formative forces, which infill, make, and in a sense *are* the visible universe, every atom of which is essentially Brahman.

Brahma-Prakṛiti (Sanskrit) *Brahmā-prakṛti* [*brahmā* as *prakṛti*] The material or vehicular aspect of Brahma’s nature in contradistinction to Brahma-Purusha, his spiritual aspect.

Brahma Pralaya, Brahma Manvantara (Sanskrit) *Brahmā-pralaya, -manvantara* The death (or life) of Brahma, which takes place at the close of the Life or Age of Brahma, a period of 311,040,000,000 years; also called a mahapralaya or prakritika pralaya. One must ascertain whether the Brahma refers to a solar system or a smaller period of time, such as the life of a planetary chain.

Brahmapura (Sanskrit) *Brahmapura* [from *brahma* + *pura* city, abode] The abode or city of Brahmā, the creative or Third Logos. “The inmost chamber, the chamber of the Heart, and the abode of the World’s Mother” (VS 9), one of the mystic powers latent in all human beings, but called into activity by advanced yogis. Brahmapura can signify the heart or indeed the entire body. It is also the name of the so-called capital of Brahma on Mt. Kailasa in the Himalayas or on Mount Meru.

Brahma-Purusha (Sanskrit) *Brahmā-puruṣa* [*brahmā* as *puruṣa*] The spiritual aspect of Brahma’s nature in contradistinction to Brahma-prakriti, the material aspect.

Brahmaputra (Sanskrit) *Brahmaputra* [from *brahman* + *putra* son] In the Vedas, the son of a Brahmin, a member of the priestly caste. Also a son of Brahma, applied particularly to the prajapatis, the mind-born sons of Brahma, usually enumerated as seven. Blavatsky uses the term in a slightly different sense, referring to the Sons of God in connection with a certain Sacred Island in Central Asia (SD 1:209).

Also the name of one of the large rivers of India.

Brahmarandhra (Sanskrit) *Brahmarandhra* [from *brahman* cosmic spirit + *randhra* opening, fissure, cavity] Brahman’s crevice; a mystical suture or opening in the crown of the head, through which a person leaves his body at death. Connected with the heart by means of the sushumna-nadi, a psychovital channel in the spinal column. “A mystic term having its significance only in mysticism” (TG 63). Anatomically the fontanel is a soft, pulsating, unossified area in the skull of an infant, which hardens as the child develops.

Brahmarshi or **Brahma-rishi**, (Sanskrit) *Brahmarṣi* [from *brahman* + *ṛṣi* sage] A class of sages, commonly regarded as being of the Brahmanical or priestly class and associated with the prajapatis or mind-born sons of Brahma. Strictly speaking, the “descendants of those Rishis who were the founders of *gotras* of Brahmans, or caste-races” (SD 2:502). Used interchangeably with prajapati.

Brahma-Rudra (Sanskrit) *Brahmā-Rudra* A title of Siva as the terrific destroyer of the evil in human passions and of evil in a physical sense. *See also* RUDRA

Brahma-Samaj, Brahmo-Samaj A religious and theistic movement in India, originating with Raja Ram Mohan Roy, who began teaching and writing in Calcutta soon after 1800. Instituted as a reform movement working against idolatry, the degenerations of orthodox Brahmanism, the perversions and corruptions of popular Hinduism, as well as against Christian missionaries. Baboo Keshub Chunder Sen became its leader in 1858. This movement did not become as popular as the Arya-Samaj, but it became conspicuous for its work in the cause of literary culture and social reform. Its some 4,000 adherents are mostly found in Calcutta and its neighborhood.

“While the members of the Brahmo Samaj may be designated as the Lutheran Protestants of

orthodox Brahmanism, the disciples of the Swami Dyanand [the Arya-Samaj] should be compared to those learned mystics, the Gnostics, who had the key to those earlier writings which, later, were worked over into the Christian gospels and various patristic literature” (BCW 1:382).

Brahma-Savarna (Sanskrit) *Brahmasāvarṇa* One of the 14 manus of our planetary chain, the seed manu of the fifth round. (SD 2:309).

Brahma’s Day, Night, Age, Year, Life A Day of Brahma, a cosmic manvantara or out-breathing of Brahma, represents a period where worlds are evolved and pass through their allotted ages of manvantaric existence. Each Day of Brahma consists of 1,000 aggregates of four yugas or 1,000 mahayugas (great ages). In a smaller sense it is also a mahamanvantara or kalpa of a planetary chain, composed of seven rounds, a period of 4,320,000,000 terrestrial years. A Night of Brahma, a cosmic pralaya, inbreathing of Brahma, or planetary paranirvana, is of equal length.

Seven Days of Brahma or seven planetary cycles make one solar kalpa. One Year of Brahma consists of 360 Divine Days and Nights, each Day of which is the duration of the imbodiment of a planetary chain, with Nights of equal length.

The Life of Brahma or of the solar system consists of 100 Divine Years (311,040,000,000,000 terrestrial years). The current Life of Brahma is about half completed — a period of about 155,520,000,000,000 of our years having passed away since our solar system first began its mahamanvantara. There remain, therefore, fifty more Years of Brahma before the system sinks into cosmic pralaya. As only half the grand evolutionary period is accomplished, we are at the bottom of the cosmic cycle, i.e., on the lowest plane. *See also* FOUR

Brahmasrama (Sanskrit) *Brahmāśrama* [from *brahman* the supreme principle + *āśrama* sacred building, hermitage] Mystically, an esoteric seat, an initiation chamber, or secret room where the initiate strives to attain union with Brahman or the inner god. Also a temple, in which the sacred mysteries of the wisdom-religion are taught. Used as well to signify the headquarters of an esoteric school.

Brahmasutras (Sanskrit) *Brahmasūtra*-s Aphorisms on the Vedanta philosophy, ascribed to Vyasa, treating of the knowledge of Brahman.

Brahmatma (Sanskrit) *Brahmātmā* The chief Brahmin initiates;

“the Supreme Chief of all those Mahatmans. This pontificate could be exercised only by a Brahman who had reached a certain age, and he it was who was the sole guardian of the mystic formula, and he was the Hierophant who created great Adepts. He alone could explain the meaning of the sacred word, AUM, and of all the religious symbols and rites. . . .

“But there existed, and still exists to this day, a Word far surpassing the mysterious

monosyllable, and which renders him who comes into possession of its key nearly the equal of Brahman. The Brahmatmans alone possess this key, and we know that to this day there are two great Initiates in Southern India who possess it” (BCW 14:430; 14:152)

Brahma-Vach (Sanskrit) *Brahmā-Vāc* [*brahmā* as *vāc*] The female aspect of Brahma; in another sense, the two aspects of the manifested Brahma working in union or conjointly, the energetic and the vehicular, constantly interblending and cooperating. The Vach aspect therefore may be considered the female side of the cosmic Logos. *See also* BRAHMA-VIRAJ

Brahma-Vach-Viraj (Sanskrit) *Brahmā-Vāc-Virāj* Brahma in both his feminine and masculine aspects; the manifested Logos or hermaphrodite creative deity. *See also* BRAHMA-VIRAJ (SD 2:125-7; BCW 10:351)

Brahma-Vaivarta Purana (Sanskrit) *Brahma-Vaivarta Purāṇa* The metamorphosis of Brahma; one of the 18 principal Hindu Puranas, dealing with Brahma in the form of the avatara Krishna and containing prayers and invocations addressed to Krishna, with narratives about his love for Radha, the gopis, etc.

Brahmavidya (Sanskrit) *Brahmavidyā* Brahma-knowledge, divine knowledge; equivalent to theosophia, the wisdom of the gods. The secret or esoteric science or wisdom about the universe, its nature, laws, structure, and operations.

Brahma-Viraj (Sanskrit) *Brahmā-virāj* [*brahmā* as *virāj*] The energetic aspect of Brahma; for when Brahma separates himself into male and female halves, this androgynous or semi-androgynous cosmic power produces Vach and Viraj. Now as Vach, although feminine in gender, as a noun really represents the logic aspect of Brahma, Viraj, although masculine in gender, as a noun represents the perpetually active and energetic forces of manifested nature in and through which vibrates the unceasing activity of the logic Vach.

Brain The anatomy of the brain is very complex, and the organ as a whole can be considered under two main aspects: 1) in relation to consciousness, thought, and memory; and 2) in relation to functional activities stimulated by nerve currents to the various organs, muscles, etc. It is in reference to consciousness that Blavatsky states that “Occultism tells us that every atom, like the monad of Leibnitz, is a little universe in itself; and that every organ and cell in the human body is endowed with a brain of its own, with memory, therefore, experience and discriminative powers” (Studies in Occultism 100; BCW 12:134). Pirogoff, Liebig, and others are quoted in support of the view that memory is related to the bodily organs in general and not wholly to the brain. The brain

is the registering organ of memory, not memory itself. The memories of terrestrial experiences — those pertaining to the lower mind — arise in the bodily organs pertaining to it, and are transmitted to the structure of the brain, where they are registered in the kama-manasic consciousness. But the finer particles of the brain cannot be so reached, for the brain in this sense is the organ of a higher noetic mind. The higher mind does not act directly on the bodily organs, but through the mediation of the lower mind. Thus it is the personal ego “catches occasional glimpses of that which is beyond the senses of man, and transmits them to certain brain cells (unknown to science in their functions), thus making of man a *Seer*, a soothsayer, and a prophet . . .” (Studies in Occultism 89; BCW 12:367). The brain and heart are special organs through which the higher mind acting through the personal mind can stimulate the finer particles of the body to a representation of spiritual ideas.

More particularly the brain may be described as the organ of the lower manasic activities through the manasic fluid flowing forth from the inner constitution; whereas the heart is the organ — as yet only slightly evolved to its high purposes — for the buddhic or buddhi-manasic parts of the invisible human constitution. Thus when the brain is trained to receive the inflow of the current arising in the higher portion of the fluid which bathes the heart, then the individual lives for the time at least in the highest portions of his constitution, and temporarily becomes a demigod on earth.

Brain-mind Used by theosophists for the astral mind of the personal ego, the pale and too often distorted reflection of the intellection of the reincarnating ego. It is, in fact, the representative in the physical world of kama-manas, mind conditioned by materiality. The lower mind or psychonervous effluvia of the brain acts through the nervous ganglia in the kamic centers, such as the liver, stomach, and spleen, though the central ganglia of this nervous system are situated in the base of the skull. The brain, and with it the heart, however, are likewise the organs of spiritual and intellectual powers far higher than those represented by the merely human personality working through the brain-mind; hence the higher forms of thought, supersensuous, superconscious, correlate with the cerebral and cardiac centers.

The body in general and the brain in particular are compact of finer and grosser elements, the former responsive only to the breath of divine wisdom, out of reach of the winds from the passion-laden lower mind, whose function is to act on and arouse the grosser elements of the nervous system. The brain, therefore, is a kind of reflector of thought-currents and emotional tides which arise in the kamic centers of the inner self, and are distributed through the nervous ganglia in the skull to the physical kamic reflection centers in the trunk. Thus we scarcely use at all the brain itself in the true sense, or at any rate only in its lowest aspects or functions; and it is only in rare moments that the brain tissues are suffused with the glory emanating directly from the higher nature and working through the pineal and pituitary glands in the skull and through the secret center in the heart.

B'raisheeth, Brashith. See BERE'SHITH

Brazen Serpent As related in the Bible, when the Jews in the wilderness complained to Moses, “the Lord sent fiery serpents among the people, and they bit the people; and much people of Israel died” (Num 21:6); wherefore “Moses made a serpent of brass, and put it upon a pole, and it came to pass, that if a serpent has bitten any man, when he beheld the serpent of brass, he lived” (21:9).

As the Hebrew words for serpent and brass are the same when the Massoretic points are omitted (N H SH), some have sought for an interpretation by referring to the Evil One, called by the later Jews and Qabbalaistic Christians the Deprived (Nahash), but the fiery serpents “were the *Seraphim*, each one of which, as Isaiah shows (vi. 2), *‘had six wings’*; they are the symbols of Jehovah, and of all the other Demiurgi who produce out of themselves six sons or likenesses — Seven with their Creator. Thus, the Brazen Serpent is Jehovah, the chief of the ‘fiery serpents’ ” (SD 2:387n).

Again, “both the *heathen* wand and the Jewish ‘serpent’ are one and the same, namely, the *Caduceus of Mercury*, son of Apollo-python. It is easy to comprehend why the Jews adopted the ophidian shape for their ‘seducer.’ With them it was purely *physiological and phallic*” (SD 2:208).

Just as the serpent is connected with knowledge, wisdom, and magic, whether of the right- or left-hand path, so likewise has copper or brass since immemorial time in all mystic schools been a metallic compound supposed to be under the particular governance of the planet Venus, which is the ruler or controller of the human higher manas — manas being at once the savior as well as the tempter of mankind, for it is in the mind where temptation and sin or evildoing ultimately arise. See also SERPENT.

Bread and Wine “The outward and visible signs of an inward and spiritual grace,” bread and wine stand at once for the actual elements used in initiation ceremonies and for the attainments of which they are symbolic. Taking the Bacchic Mysteries as an example, wine was given as the blood of the grape and of Bacchus, blood signifying life, and Bacchus representing the mystic Logos which “was made flesh.” So the whole rite means the imparting to the candidate of the divine life by conscious union of his lower self with the god within — a union brought about by the self-devised efforts of the lower self. In the same way, bread or grain symbolized the intellectual aspect of the attainment, intellect being the “body” of the spiritual influx.

The Christian sacrament was adopted from the pagan rite. The Protestant Churches administer the sacrament in both bread and wine as the symbol of a divine grace received by the devout participant. The Catholic Church teaches that the sacred elements are actually transubstantiated by miraculous means into the blood and body of Christ, denying the cup or the wine to the laity, and regarding the rite as propitiatory for the sins of the participants and of mankind in general. The old pagan rite contained the idea that partaking of the wine meant allying oneself with the vital energy of the spiritual divinity within the neophyte, and the partaking of the bread was symbolic of a similar union of the neophyte’s mentality with the cosmic mind for which the bread

stood. *See also* SOMA; WINE

Breath In the astral-vital organisms of living beings the breath is called prana, which also means “life.” This is not limited to the respiratory functions, but includes what physiologists might call nerve currents operating in all parts of the body, of which the pulmonary diastole and systole is only a particular manifestation. Hatha yoga deals with the study and use of these functions, but before such aspects of the lower knowledge can be profitably or even safely used, the learner must have acquired self-mastery, stability, and disinterestedness of motive.

The ceaseless alternate outflowing and inflowing of cosmic life or hierarchies of lives of the one manifest reality is called the Great Breath from its analogy to physiological breathing, which implies incessant alternating motion, expansion and contraction, of life, air, wind, or spirit. The sevenfold word symbolizing the logos is said to be the evolution of the breath. Though the alternation of manvantara and pralaya conjoined are the Great Breath, the alternating motion does not cease even during the long pralayaic ages.

Breath is often used in the same sense as ray, wind, spirit, pneuma, to denote an active emanation which is at once active and passive, positive and negative, donative and receptive, the principle of polarity later in cosmic evolution becoming pronounced. An instance is when the divine breath incubates the waters of space, and worlds are produced. Absolute perpetual motion is the breath of life of the one element, and is applied to fohat. In Sanskrit it is expressed among other words by asu, the true root of asura (a living or spiritual being). In Hebrew several words express it, varying according to the spiritual or grosser meaning: neshamah, ruah, or nephesh. In Greek philosophy perhaps the main word used in this sense is pneuma, equally well translated as spirit.

The plural “breaths” is used to denote spirits or forces, such as the Ah-hi, dhyani-chohans, asuras, the holy circumgyrating breaths, and the seven breaths or divisions of the Logos. There may also be right- and left-hand breaths, or breaths (winds) from the four, six, or eight directions, each having its own specific quality and functions. In general, breath stands for the air element.

Briah, Briatic World. *See* BERIAH

Briareus (Greek) One of three giants, sons of Ouranos and Gaia, the others being Kottos and Gyges, each with 50 heads and 100 arms or hands. They were imprisoned by Kronos, but liberated by Zeus to help him in his war against the Titans. One interpretation links these brothers with Lemuria (SD 2:775-6).

Bride In the Qabbalah used in connection with Malchuth, the tenth or lowest of the Sephiroth;

however, the full realization of the Bride's marriage will occur only at the end of the seventh root-race and the seventh round of this planetary chain, when everything will be united to its parent source.

The Roman Catholic Church has also adopted the term, speaking of itself as the Bride of Christ. Explaining the passage in Revelation (19:7-9) referring to the marriage of the Lamb to his bride, Blavatsky writes: “ ‘The Logos is passive Wisdom in Heaven and Conscious, Self-Active Wisdom on Earth,’ we are taught. It is the Marriage of ‘Heavenly man’ with the ‘Virgin of the World’ — Nature, as described in Pymander, the result of which is their progeny — immortal man” (SD 2:231).

The bride's position in the marriage sacrament is also explained: as forming the left side of a triangle, the groom forming the right side, and the assistants the base line.

Bride is used in the Qabalah as the terms sheath, veil, or garment are used in other mystical systems, the meaning being that spirit always has its lining or expression in manifestation. Thus the veil of Purusha is prakriti, that of Brahman is pradhana, that of parabrahman is mulaprakriti.

Brigu, Brighou. See BHRIGU

Brihad-aranyaka or **-aranya Upanishad** (Sanskrit) *Bṛhad-āranyaka*, *-āranya Upaniṣad* [from *bṛhad* great + *āranyaka* produced in a forest] A celebrated Upanishad, forming the last five prapathakas (sections) of the *Satapatha-Brahmana* — one of the most important of the Brahmanas — attributed to Yajnavalkya. The title refers to this class of highly mystical and metaphysical literary work supposed to have been thought out by sages while retired in the solitudes of mountain and forest. Aranyaka is closely associated with Upanishad, and often used interchangeably with it; thus this work is often called *Brihad-Upanishad* or *Brihad-aranyaka-upanishad*.

Brihaspati (Sanskrit) *Bṛhaspati* [from *bṛh* prayer + *pati* lord] Sometimes Vrihaspati. A Vedic deity, corresponding to the planet Jupiter, commonly translated lord of prayer, the personification of exoteric piety and religion, but mystically the name signifies lord of increase, of expansion, growth. He is frequently called Brahmanaspati, both names having a direct significance with the power of sound as uttered in mantras or prayer united with positive will. He is regarded in Hindu mythology as the chief offerer of prayers and sacrifices, thus representing the Brahmin or priestly caste, being the Purohita (family priest) of the gods, among other things interceding with them for mankind. He has many titles and attributes, being frequently designated as Jiva (the living), Didivis (the bright or golden-colored). In later times he became the god of exoteric knowledge and eloquence — Dhishana (the intelligent), Gish-pati (lord of invocations). In this aspect he is regarded as the son of the rishi Angiras, and hence bears the patronymic Angirasa, and the husband of Tara, who was carried off by Soma (the moon). Tara is

“the personification of the powers of one initiated into *Gupta Vidya* (secret knowledge) . . .

“Soma is the moon astronomically; but in mystical phraseology, it is also the name of the sacred beverage drunk by the Brahmins and the Initiates during their mysteries and sacrificial rites. . . .

“Soma was never given in days of old to the non-initiated Brahman — the simple *Grihasta*, or priest of the exoteric ritual. Thus Brihaspati — ‘guru of the gods’ though he was — still represented the dead-letter form of worship. It is Tara *his wife* — the symbol of one who, though wedded to dogmatic worship, longs for true wisdom — who is shown as initiated into his mysteries by King *Soma*, the giver of that Wisdom. Soma is thus made in the allegory *to carry her away*. The result of this is the birth of Budha — *esoteric Wisdom* — (Mercury, or Hermes in Greece and Egypt). He is represented as ‘so beautiful,’ that even the husband, though well aware that Budha is not the progeny of his *dead-letter* worship — claims the ‘new-born’ as his Son, the fruit of his ritualistic and meaningless forms. Such is, *in brief*, one of the meanings of the allegory” (SD 2:498-9).

Tara’s abduction gave rise to the Tarakamaya — the first war in heaven. The earth was shaken to its very center and turned to Brahma requesting him to restore Tara to her husband, which request was granted. Soma had for his allies the Daityas and Danavas, whose leader is Usanas (Venus) and Rudra (Siva), while the gods who sided with Brihaspati were led by Indra.

Brisingamen (Icelandic) [from *brising* fire + *men* jewel] In Norse myths the fire jewel represents the fire of enlightened intelligence in the human race, pictured as a gem which the goddess Freya wears on her bosom. She is the spiritual power embodied in the planet Venus and the protectress of evolving, aspiring humanity. Her gem has on more than one occasion been stolen by Loki — the mischievous lower mind — which brought grief to the gods, who have the well-being of humanity at heart. Once the precious gem was in grave danger: the matter-giant Trym (our physical globe earth) stole Thor’s hammer of creation and destruction and hid it deep beneath the ground, and for its return he demanded that Freya become his wife. The story relates that she snorted with such fierce outrage that the gem was shattered.

Bronze Age. See DVAPARA YUGA

Brotherhood Human beings, in common with all other entities in the universe, are inseparable members of a spiritual unity; and the illusion of eternally separate selves, and therefore equally permanent individual and diverse interests, is due to an ignorance of fundamental facts in nature. “If the action of one reacts on the lives of all, and this is the true scientific idea, then it is only by all men becoming brothers and all women sisters, and by all practising in their daily lives true brotherhood and true sisterhood, that the real human solidarity, which lies at the root of the elevation of the race, can ever be attained” (Key 234).

Theosophical Society has always insisted on the formation of a nucleus of a universal brotherhood as its prime objective; and the teachings which it promulgates are aids subsidiary to this purpose.

As one of Blavatsky's teachers wrote: "The *Chiefs* want a 'Brotherhood of Humanity,' a real Universal Fraternity started; an institution which would make itself known throughout the world and arrest the attention of the highest minds" (ML 24). Again, "It is he alone who has the love of humanity at heart, who is capable of grasping thoroughly the idea of a regenerating practical Brotherhood who is entitled to the possession of our secrets. He alone, such a man — will never misuse his powers, as there will be no fear that he should turn them to selfish ends" (ML 252).

Brotherhood of Compassion. See HIERARCHY OF COMPASSION; MAHATMA

Brotherhood of Luxor The original brotherhood of this name is very ancient and most secret; but its name was used for a bogus society in the late 19th century, "born in Europe, only to be exposed and fly to America" (TG 193).

Brothers of Light. See RIGHT-HAND PATH

Brothers of the Shadow. See LEFT-HAND PATH

Brothers of the Sun. See RIGHT-HAND PATH

Bubastis, Bubaste. See BAST

Buddha (Sanskrit) *Buddha* [from the verbal root *budh* to perceive, awaken, recover consciousness] Awakened, enlightened; one who is spiritually awakened, who has become one with the supreme self (paramatman).

"To become a Buddha one has to break through the bondage of sense and personality; to acquire a complete perception of the real self and learn not to separate it from all other selves; to learn by experience the utter unreality of all phenomena of the visible Kosmos foremost of all; to reach a complete detachment from all that is evanescent and finite, and live while yet on Earth in the immortal and the everlasting alone, in a supreme state of holiness" (TG 64-5).

"A Buddha in the esoteric teaching is one whose higher principles can learn nothing more in this manvantara; they have reached Nirvana and remain there. This does not mean, however, that the lower centers of consciousness of a Buddha are in Nirvana, for the contrary is true; and it is this fact that enables a Buddha of Compassion to remain in the lower realms of being as mankind's supreme Guide and Instructor, living usually as a Nirmanakaya" (OG 33-4).

See also GAUTAMA

Buddhachchhaya (Sanskrit) *Buddhacchāyā* [from *buddha* awakened one + *chāyā* shadow] The shadow of the Buddha; during certain commemorative Buddhist celebrations, an image said to have appeared in the temples and in a certain cave visited by Hiuen-Tsang (c. 602 – 664), the

famous Chinese traveler (IU 1:600-01).

Buddha Gautama. See GAUTAMA

Buddhakshetra (Sanskrit) *Buddhakṣetra* [from *buddha* awakened + *kṣetra* field, sphere of action] The sphere of action of an enlightened one. According to theosophy, there are four (or seven) buddhakshetras or fields in which the buddhas manifest and do their sublime work of benevolence which, counting from above, are: 1) the realms in which the dhyani-buddhas live and work; 2) the realms in which the dhyani-bodhisttvas live and work, called by Blavatsky “the domain of ideation”; 3) the realms of the manushya-buddhas, in which these work as nirmanakayas; and 4) the field of action in which the human buddhas work, the ordinary human world — our physical globe.

Every incarnate buddha lives and works in the fourth or lowest buddhakshetra, as Gautama Buddha did; but at the same time, and more particularly when he has laid aside the physical body, he can live and work at will in the next higher buddhakshetra as a nirmanakaya; again as a dhyani-bodhisattva in his higher intermediate spiritual-psychological principle, he can at will function in the next higher buddhakshetra; while last, the dhyani-buddha within him lives and does its own sublime labor on the highest buddhakshetras as a dhyani-buddha. Here lies the true explanation of the many apparently conflicting statements made about the various kinds of buddhas and their various duties or functions, as found in the Buddhist scriptures, especially in the Mahayana writings of Central and Northern Asia.

Each one of the trikaya (three bodies or vehicles) — the dharmakaya, sambhogakaya, and nirmanakaya — has its respective place and function on and in the three highest of the buddhakshetra: the dharmakaya is the luminous or spiritual body or vehicle in which the dhyani-buddha lives and works on the first and highest buddhakshetra; the dhyani-bodhisattva similarly lives and works in the spiritual-intellectual body or vehicle called the sambhogakaya, on the second of the buddhakshetras; while the manushya-buddha, when working in the third buddhakshetras, does so in his nirmanakaya vesture or robe, vehicle, or body. The lowest buddhakshetra is the one in which the human buddha is found clothed in his body of flesh as an incarnate being.

Buddhangums (Sanskrit) *Buddhāṅga* [from *buddha* enlightened + *aṅga* limb, science] Buddha-science or the essence of occult wisdom and knowledge.

Buddha of Compassion One who, having gained the right to nirvana, renounces it to return to help all living beings. “They are men who have raised themselves from humanity into quasi-divinity; and this is done by letting the light imprisoned within, the light of the inner god, pour forth and manifest itself through the humanity of the man, through the human soul of the man. Through sacrifice and abandoning of all that is mean and wrong, ignoble and paltry and selfish: through opening up the inner nature so that the god within may shine forth; in other words,

through self-directed evolution, they have raised themselves from mere manhood into becoming god-men, man-gods — human divinities.

“They are called ‘Buddhas of Compassion’ because they feel their unity with all that is, and therefore feel intimate magnetic sympathy with all that is, and this is more and more the case as they evolve, until finally their consciousness blends with that of the universe and lives eternally and immortally, because it is at one with the universe. ‘The dewdrop slips into the shining sea’ — its origin. . . . The Buddhas of Compassion, existing in their various degrees of evolution, form a sublime hierarchy extending from the Silent Watcher on our planet downwards through these various degrees unto themselves, and even beyond themselves to their chelas or disciples” (OG 23-4).

They are in contrast to the Pratyeka Buddhas, whose goal is to win spiritual liberation for themselves alone and who do not renounce nirvana.

Buddhas of Contemplation. See DHYANI-BUDDHA

Buddhaphala (Sanskrit) *Buddhaphala* [from *buddha* enlightened + *phala* fruit] The fruit of the Buddha, which is won when the arhat has attained the fruition of arhatship (arhattvaphala).

Buddha-Siddhartha. See GAUTAMA

Buddhi (Sanskrit) *Buddhi* [from the verbal root *budh* to awaken, enlighten, know] The spiritual soul, the faculty of discriminating, the channel through which streams divine inspiration from the atman to the ego, and therefore that faculty which enables us to discern between good and evil — spiritual conscience. The qualities of the buddhic principle when awakened are higher judgment, instant understanding, discrimination, intuition, love that has no bounds, and consequent universal forgiveness.

In the theosophical scheme, it is the sixth principle counting upwards in the human constitution: the vehicle of pure, universal spirit, hence an inseparable garment or vehicle of atman. In its essence of the highest plane of akasa or alaya, buddhi stands in the same relation to atman as, on the cosmic scale, mulaprakriti does to parabrahman.

Buddhi uses manas as its garment, and in the former are likewise stored the fruitages of the many incarnations on earth; hence buddhi is often called both the seed and flower of manas. Buddhi is truly the center of spiritual consciousness and therefore its qualities are enduring. The purer and higher part of manas must awaken, by rising to it, this essential energy that inherently resides in buddhi so that the latter may become active in a person’s life. Buddha and Christ are examples of sages who had become human imbodiments of the usually latent qualities of buddhi. Buddhi becomes more or less conscious on this plane by the flowerings it draws from manas after every incarnation of the ego. “Buddhi would remain only an impersonal spirit without this element which it borrows from the human soul, which conditions and makes of it, in this illusive Universe,

as it were something separate from the universal soul for the whole period of the cycle of incarnation” (Key 159-60).

“No purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle, — or the over-soul, — has (a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyani-Buddha)” (SD 1:17).

In the human constitution buddhi is a ray from the cosmic principle mahabuddhi or adi-buddhi, a synonym for alaya, pradhana, or the Second Logos, while akasa in *its* higher reaches is identic with alaya.

Buddhi-manas (Sanskrit) *Buddhi-manas* [from *buddhi* spiritual soul + *manas* intellect] The higher ego, the principle of essential self-consciousness, especially when considered as over-enlightened by the atman or self per se. Buddhi-manas is the karana-sarira (causal body), hence the immortal or spiritual self which passes intact from one incarnation to another. This higher self or ego is formed of the indissoluble union of buddhi, the sixth principle counting upwards, and the spiritual efflorescence of manas, the fifth principle. Buddhi-manas is the divine individual soul infilled with the light of the ray from the atman, and hence includes human intellect and egoic self-consciousness, in addition to all the spiritual faculties and powers inherent in the ray itself. *See also* ATMA-BUDDHI-MANAS

Buddhindriyas (Sanskrit) *Bhuddhīndriya-s* In Hindu philosophy, one of the three main divisions of the human being according to the indriyas (instruments, organs); used in theosophy as “organs or means of spiritual consciousness, apperception, sense and action” (FSO 275). *See also* INDRIYA

Buddhi-taijasi (Sanskrit) *Buddhi-taijasī* In relation to the human principles, used to express the state of manas when it is bathed in the radiance of buddhi, the spiritual soul; yet its more exact significance is the radiance of buddhi itself: buddhi when actively radiating its own buddhic svabhava or characteristic. When manas becomes irradiated with buddhi-taijasi, then the human manasic faculty, the intellect, becomes suffused and infilled with spiritual discrimination and vision. It is the human soul “illuminated by the radiance of the divine soul. Therefore, Manas-taijasi may be described as radiant mind; the *human* reason lit by the light of the spirit; and Buddhi-Manas is the revelation of the divine *plus* human intellect and self-consciousness” (Key 159n). *See also* TAIJASA

Buddhochinga (Sanskrit) *Buddhocīṅga* “The name of a great Indian Arhat who went to China in the 4th century to propagate Buddhism and converted masses of people by means of miracles and most wonderful magic feats” (TG 68).

Budding or Gemmation A form of asexual reproduction in which the new individual is developed from a protuberance on the body of the parent, the new individual either remaining attached, as in polyzoa and most corals, or separating, as in hydra. This process is used as an analogy to convey the method of reproduction followed by the humanity of the second root-race. The bodies were more ethereal and also differed in certain reproductive processes from what takes place in humans today, so that it is not now easy to give a complete picture of the process of budding as it then was. The development of the germ-cell and its extrusion of polar cells furnish additional clues, both to this process and the allied process of fission. Besides a survival of analogous methods of reproduction in some of the present lower forms of life, there are also similar instances in the power which some creatures have of reproducing lost limbs, and in the power of cicatrization of wounds in the higher mammalia.

Budha (Sanskrit) *Budha* [from the verbal root *budh* to awake] As an adjective, intelligent, wise, clever, fully awake; hence a wise or instructed person, a sage. In mythology, Budha is represented as the son of Tara (or Rohini), the wife of Brihaspati (the planet Jupiter). Tara was carried off by Soma (the Moon), which led to the Tarakamaya — the war in svarga (heaven) — between the gods and asuras (the latter siding with Soma against the divinities). The gods were victorious and Tara was returned to Brihaspati, but the parentage of the son she gave birth to was claimed both by Brihaspati and Soma: he was so beautiful he was named Budha (cf SD 2:498-9). Upon Brahma's demand, Tara admitted that Budha was the offspring of Soma. Budha became the god of wisdom and the husband of Ila (or Ida), daughter of Manu Vaivasvata, and in one sense stands for esoteric wisdom.

Budha is also a name for the planet Mercury and its regent. Sirius was termed the star of Budha, "called the great instructor of mankind before other Buddhas" (SD 2:374).

Budhaism or Budhism [from Sanskrit *budha* wisdom] The anglicized form of the term for the teachings of divine philosophy, called in India budha (esoteric wisdom). It is equivalent to the Greek term theosophia. It must be distinguished from Buddhism, the philosophy of Gautama Buddha, although this is a direct and pure derivative from budhaism.

Builders. See COSMOCRATORES

Bull, Bull Worship The bull has been worshiped as a symbol of generative creation in its celestial or cosmic aspect — in contrast with the terrestrial and human aspect represented by the ram and sometimes the lamb. Generally the bull or cow was used as a symbol of the moon cosmogonically, although occasionally associated with solar deities. Sometimes a white bull is represented, as seen in the Egyptian Apis, who legendarily is Osiris "incarnate" in that form; with the Hindus the white bull Nandi was associated with Siva. However, the significance of the ram is terrestrial, usually phallic, and lunar in the productive sense. Thus the bull represents cosmic evolutionary power, while the ram symbolizes the terrestrial generative powers. The sacred bulls did not necessarily

represent male animals, but were mystically considered to be hermaphrodite or even sexless: thus the Egyptian bull, Apis, was depicted as being hermaphrodite, which showed his cosmic character.

The bull was at times considered to be one of the four sacred animals, corresponding to the four points of the compass and other quaternaries, such as the four Maharajas. In Assyrian and other sculptures in Asia Minor we often see a king in the act of seizing a bull by the horns and stabbing it in the belly, the significance of which is reason prevailing over impulse, mind over generative power, or the solar over the lunar elements in mankind and nature. Frequently the bulls were carved as winged, implying the creative or productive nature of the cosmogonic spirit and its all-permeant power throughout nature. The entire series of ideas here was akin to the theme associated with the Mithraic Mysteries, in one stage of which the bull figured prominently.

The preponderance of bull symbols in ancient Assyrian and other sculptures was connected with a time when the zodiacal sign Taurus, due to the precession of the equinoxes, was ascendant: this would be approaching three precessional cycles ago (more than 75,000 years). Thus the bull would then naturally be a favorite emblem and would have featured very largely in association with the iconographical elements of exoteric worship.

Bumapa (Tibetan) [possibly *dbu ma pa* (u-ma-pa) translation of Sanskrit *madhyamaka* or *madhyamika* the school of Buddhist philosophy which follows Nagarjuna] “A school of men, usually a college of mystic students” (TG 69).

Bumi Haptaiti (Avestan) *Būmi Haptāiti*, **Haft Keshvar** (Persian) [from *būmi* earth (cf Sanskrit *bhūmi*) + *haptāiti* septempartite (cf Sanskrit *sapta*)] The septempartite or sevenfold earth, which indicates that the ancient Zoroastrians, like the ancient Hindus, taught of the seven manifest globes (keshvare) of the earth planetary chain.

In Persian literature both ancient and Islamic, apart from the seven keshvars, there are often references to seven seas and seven heavens. This term has been used in the Gathas in the sense of septenary spheres of life. In Pahlavi literature and in the introduction to the Abu Mansuri Shahnameh (the oldest version of Shahnameh and one of the main sources of Ferdowsi), we find Bumi Haptaiti in this setting. *See also* KARSHVAR

Bundahish or **Bundahis** (Pahlavi) [from *bun* root, origin + *dah* to create] Origin of creation; a Zoroastrian mythologico-theological work treating of cosmogony, the government of the world, and its end. Its present form is of later date than the Avesta, but the material contained in it is of distinctly archaic character and runs far back into the night of early Persian history.

Bur (Icelandic) [from *burdr* birth] Emanation of Buri, primeval root of being in the Norse Eddas. From Bur sprang the creative trinity: Odin (Allfather), Vile (divine will), and Vi or Ve (awe, sanctity). These three forces produce the systems of worlds where the gods feast at the stellar and planetary tables on mead (experience of life).

Buri, Bore (Icelandic, Swedish) [from *burdr* birth] Primeval progenitor of cosmic life in the Norse Eddas. During the “frost giant” (long ages of nonlife) the cow Audhumla (symbol of fertility) licked salt from the blocks of ice which were all that existed in the Great Void (Ginnungagap). She uncovered the head of Buri, first divine being. From him emanated Bur (which corresponds to the Second Logos of Greek thought), and he in turn gave rise to the trinity of creators — Odin, Vile, and Vi — who brought the worlds into being.

In Scandinavian lands King Bore or Buri still symbolizes the cold which reigns during the long winter.

Buru Bonga (Kolarian) “The ‘Spirit of the Hills.’ This Dryadic deity is worshipped by the Kolarian tribes of Central India with great ceremonies and magical display” (TG 69).

Buthon. See BYTHOS

Butterfly The butterfly, because of its short life, its physical beauty, and its fluttering from flower to flower seeking nectar, has among many ancient peoples been regarded as an emblem of the impermanent, unstable characteristics of the lower human soul. For it is through the merely human soul that the person learns and gathers into the reincarnating ego the nectar or honey of wisdom through experience. Likewise the psyche in occult Greek philosophy was the organ or vehicle of the nous, the higher ego or re embodying monad. The caterpillar lives its period, making for itself a chrysalis, which after a stage of dormancy is broken by the emerging butterfly. This suggests the idea of the less becoming the greater, of an earthy entity becoming aerial. These thoughts led the ancient Greeks to use the butterfly as a symbol of the human soul (psyche); and in their mythology Psyche was in consequence represented in art with butterfly wings.

This process of nature is applied to humanity (SD 1:159): its peregrinations through the first three rounds is likened to a series of imbodyments through the caterpillar and chrysalis stages; only during the fourth round does mankind attain its first status of true humanity, more particularly during the latter part of the third root-race when human mind is enlightened by the manasaputras.

Byang-tzyoobs, Byang-tsiub, Byan-chub. See CHANG-CHUB

Bythos, Bythus (Greek) The depth; chaos, the primeval deep, frequently used by the Gnostics. For example, with Valentinus it was the cosmic source whence emanated two by two the series of aeons. Sometimes it was considered as one member of a primordial cosmic mystic square — sige (silence), bythos (depth), nous (intellect), and aletheia (truth); sometimes bythos was paired by Gnostics with sige as composing a primordial cosmic binary. *See also* ABYSS

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Cadmus, Cadmilus (Greek) Son of Agenor, king of Phoenicia, and brother of Europa, husband of Harmonia, and father of Semele; legendary founder of Thebes, who slew the dragon, planted its teeth, and built the city with the help of some of the soldiers that sprang from the teeth. He and his wife were finally turned into serpents by the gods. Said to have introduced into Greece an alphabet, possibly based upon 16 characters derived from either Egypt or Phoenicia. He belongs to the class of heroes, who succeeded the reigns of the gods and demigods on earth and who were parents and instructors of mortals.

Hermes was worshiped at Samothrace as the ancestral god under the name of Cadmus or Kadmilos.

Caduceus (Latin) A herald's staff; specially, the wand of Mercury or Hermes, god of wisdom, corresponding to Thoth. It consists of a rod or tree with two serpents wound in opposite directions round it, their tails meeting below, and their heads approaching each other above.

At the top of the rod in the Greek version is a knob, in the earlier Egyptian form a serpent's head, from which spring a pair of wings. From the central head between the wings grew the heads of the entwined serpents (spirit and matter), which descended along the tree of life, crossing the neutral laya-centers between the different planes of being, to manifest where the two tails joined on earth (SD 1:549-50). The analogy is found in every known cosmogony, all of which begin with a circle, head, or egg surrounded by darkness. From this circle of infinity — the unknown All — comes forth the manifestations of spirit and matter. The emblem of the evolution of gods and atoms is shown by the two forces, positive and negative, ascending and descending and meeting. Its symbology is directly connected with the globes of the planetary chain and the circulations of the beings or life-waves on these globes, as well as with the human constitution and the afterdeath states. Significantly, in ancient Greek mythology, Hermes is the psychopomp, psychagog, or conductor of souls after death to the various inner spheres of the universe, such as the Elysian Plains or the Meads of Asphodel. The Caduceus also signifies the dual aspect of wisdom by its twin serpents, Agathodaimon and Kakodaimon, good and evil in a relative sense.

Cagliostro, Count Alessandro di “A famous Adept, whose real name is claimed (by his enemies) to have been Joseph Balsamo. He was a native of Palermo, and studied under some mysterious foreigner [called Althotas] of whom little has been ascertained. . . . his real history has never been told. His fate was that of every human being who proves that he knows more than do his fellow-creatures; he was ‘stoned to death’ by persecutions, lies, and infamous accusations, and yet he was the friend and adviser of the highest and mightiest of every land he visited. He was finally tried and sentenced in Rome as a heretic, and *was said* to have died during his confinement in a State prison. . . . Yet his end was not utterly undeserved, as he had been untrue to his vows in some respects, had fallen from his state of chastity and yielded to ambition and selfishness” (TG 72).

Commenting upon the strange tales related concerning Cagliostro and Balsamo, Purucker wrote that

“it is upon the document issued from the Vatican containing the story of the so-called trial

and condemnation of Cagliostro that most later students and historians of the checkered and wonderful career of that remarkable man assume that Cagliostro and Guiseppe Balsamo were one individual.

“I can only say that there is a strange mystery involved in the story of these two: Balsamo and Cagliostro. How strange is the statement, if true, that both had the name *Pellegrini*, which means *Pilgrims*! How strange is it that Giuseppe Balsamo is the Italian form of the name Joseph Balm, suggesting a healing influence; and that ‘Balsamo,’ whether rightly or wrongly, can be traced to a compound Semitic word which means ‘Lord of the Sun’ — ‘Son of the Sun’; while the Hebrew name Joseph signifies ‘increase’ or ‘multiplication.’ . . . How strange it is that Cagliostro was called an ‘orphan,’ the ‘unhappy child of Nature’! Every initiate . . . is an ‘orphan’ without father, without mother, because mystically speaking every initiate is *self-born*. How strange it is that other names under which Cagliostro is stated to have lived at various times have in each instance a singular esoteric signification! . . .

“Perhaps I might go one shade of thought farther: to every Cagliostro who appears there is always a Balsamo. Closely accompanying and indeed inseparable from every Messenger there is his ‘Shadow.’ With every Christ appears a Judas” (SOPh 30-1).

Cain (Hebrew) *Qayin* In the Bible, the son of Adam and Eve, and a tiller of the ground. Becoming jealous of the offering which his brother Abel presents to the Lord, Cain, according to the legend, slays him (Genesis 4). This allegory signifies that “Jehovah-Cain, the male part of Adam the *dual* man, having separated himself from Eve, creates in her ‘Abel,’ *the first natural woman*, and sheds the *Virgin blood*” (SD 2:388). Cain and Abel represent the third root-race or the “*Separating Hermaphrodite*” (SD 2:134).

Again “beginning with Cain, the first murderer, every *fifth* man in his line of descent is a murderer. . . . In the *Talmud* this genealogy is given complete, and thirteen murderers range themselves in line below the name of Cain. This is *no* coincidence. Siva is the Destroyer, but he is also the *Regenerator*. Cain is a murderer, but he is also the creator of nations, and an inventor” (IU 2:447-8).

In Biblical genealogy, the line of Cain is Enoch, Irad, Mehujael, Methusael, and Lamech, whose sons were Jubal, Jabal, and Tubal-cain; the line of Seth, the third son of Adam and Eve, is Enos (Enoch), Cainan, Mehalaleel, Jarad (or Irad), Enoch, Methuselah, Lamech, and Noah (Genesis 4-5). Blavatsky calls it “fruitless [to] attempt to disconnect the genealogies of Cain and of Seth, or to conceal the identity of names under a different spelling. . . . all these are symbols (Kabalistically) of solar and lunar years, of astronomical periods, and of physiological (phallic) functions, just as in any other pagan symbolical creed” (SD 2:391n). *See also* ABEL

Calendar A formal table of time measures based on the motions of the heavenly bodies. Where esoteric knowledge is intact, these cyclic motions and the periods they mark are inseparably connected with all other parts of the esoteric system. Nowadays, the original calendars having been lost and reconstructed for purely civil or ecclesiastical purposes, they have no other significance. But formerly they likewise indicated the courses of cosmic evolution and the succession of human races. The *Surya-Siddhanta* gives the number of revolutions of the planets in 4,320,000 years, among other such data; and the work itself claims to be the result of observation over an immensely long period, based on a knowledge of the mathematics underlying the cosmic and terrestrial cycles. This calendar or astronomical-astrological work claims to be the original production of the Atlantean astronomer and magician Asuramaya.

The Mayas of Yucatan had a calendar system, deciphered at least in part, that extended far back into the past. In this calendar we find not only the familiar cycles of the lunation and of the solar year, but others such as the synodical revolution of Venus, and exact periods of 250, 280, or 360 days. The Egyptians in their calendar time-measurements used three different years, one of which was a year of 365 days, adapted to the Julian year by a Sothic period of 1460 years. The lunar year of 12 lunations is one of immense antiquity, and formerly of almost universal usage, frequently combined with the solar year; and the lunar year is still used, with various systems of intercalation to adapt it to the tropical year. As to such periods as 280 and 260 days, one may wonder whether these numbers were merely used as convenient for computation, or whether they rest on actual cycles not recognized by modern astronomy. The 280 is evidently connected with the human gestation and prenatal period. The position of the equinoctial point in relation to the stellar zodiac is often referred to as an indication of the dates of ancient events; and cycles of successive conjunctions of all or most of the planets are frequently mentioned in the archaic literatures of different peoples.

It seems evident that the structure of the map of time must give keys to the understanding of the evolution of worlds and races; and one may well anticipate that a knowledge of *all* the cycles and their intersections and combinations would suffice to reduce what now seems chaos into a symmetrical and thoroughly scientific system. See also ANNUS MAGNUS.

Calf Generally in ancient symbology the calf stood for the earth. The Puranic allegory “which shows ‘the Rishis milking the earth, whose calf was Soma, the Moon,’ has a deep cosmographical meaning; for it is neither *our* earth which is milked, nor was the moon, which we know, the calf. . .

. in every Purana, the calf changes name. In one it is Manu Swayambhuva, in another Indra, in a third the Himavat (Himalayas) itself, while Meru was the milker” (SD 1:398 & n). *See also* COW

Caloric According to a formerly widely accepted scientific theory of heat, when a hot body communicates heat to a cold body, there passes from the former to the latter an “imponderable” fluid, called caloric or phlogiston; and the heat developed by friction is due to a squeezing of caloric out from the body. This theory, misunderstood in later times, was abandoned when it was proved that the amount of heat which can thus be obtained from a body is unlimited, depending only on the amount of labor used in generating it. The error lay in considering that there was a definite, limited amount of caloric which, once extracted, left no further caloric to be extracted until the body had accumulated it anew, quite forgetting that the caloric or phlogiston theory held that caloric was a part of the substance of material things, just as modern electrical theory holds that material substances are themselves formed of electricity. One might as well hold that every material body possesses a certain amount of electricity, of which, when once extracted, the body can no longer furnish a further supply.

Scientists were doubtless quite right logically in abandoning the caloric theory from their viewpoint which arose out of a misunderstanding of the ancient teaching. While it is obvious that the temperature of contiguous bodies, by the natural process of heat-transference, finally becomes equalized; equally, someday science will discover that any body can be made under proper processes to be an unending source of heat, which is the very heart of the ancient caloric theory. Heat, just as any form of energy, is one of the forms of living matter, a manifestation of cosmic electricity or fohat.

Canaan, Canaanites A Biblical term most often applied to the pre-Isrealite people of the land west of the Jordan, although not so ancient as the Amorites. Augustine mentions that the Phoenicians called their land Canaan. Seti I and Rameses III mention the Kan’na, probably referring to the lands of western Syria and Palestine. In Genesis 10, Canaan (kena’an) is named among the four sons of Ham, and some scholars have suggested that the name here refers to tribes in Arabia which later settled in Palestine; further that the Phoenicians were members of the second great Semitic migration, carrying the name Canaan into the lands which they settled. The chief deity of the Canaanites would seem to be Ashtart (Astarte) from the number of her images discovered, although images closely resembling Egyptian deities have likewise been exhumed. Nebo, the ancient Chaldean god of wisdom, was also revered by the Canaanites.

Cancer The Crab. Fourth zodiacal sign, being watery, cardinal, feminine, and the only house of the

moon; in astrology it corresponds to the stomach and breast. Its symbol is a crab; in Sanskrit it is called Karkataka, and is dedicated to Surya, the god of the sun. In the Hebrew allocation of the signs to the 12 sons of Jacob, it is given to Benjamin, who is said to resemble as a wolf. This sign is that of the summer solstice in the northern hemisphere and is associated with heat, but in the southern hemisphere it is at the winter solstice, and we are told of times when the earth's poles were inverted so that the south pole was in Cancer.

According to Subba Row (Theos 3:42), Cancer represents the sacred Tetragram; the Parabrahmatharacam [Parabrahmadharaka]; the Pranava resolved into four separate entities corresponding to its four matras; the four avasthas or four states of consciousness; the four states of Brahman, etc.

Capricorn [from Latin *capr* goat + *cornus* horn] The goat, often mystically connected with the sea; the tenth sign of the zodiac. In astrology, an earthy, cardinal sign, one of the two houses of Saturn, and the exaltation of Mars; its bodily correspondence is the knees. The symbol is a hybrid monster, often with the fore part of a goat or antelope and the hind part of a fish or dolphin. In some systems it is a crocodile. This sign marks the extreme southern limit of the sun.

In the Hindu zodiac it is Makara. Subba Row (The Twelve Signs of the Zodiac) says that *ma* is equivalent to the number 5, and *kara* means hand; thus the word signifies a pentagram. It may be taken to represent objectively both the microcosm and the macrocosm. Makara is the most mysterious of the signs, connected with the fifth group of the hierarchy of creative powers, and with the microcosmic pentagram — the five-pointed star representing man (SD 1:219). In Egypt this sign was called the crocodile; with the Peratae Gnostics, it was represented as a dolphin and identified with Chozzar, god of the waters; it is associated with the Leviathan of Job, and with a group of five kumaras in India (SD 2:577).

“Makara is connected with the birth of the spiritual ‘microcosm,’ and the death or dissolution of the physical Universe (its passage into the realm of the Spiritual) . . . ‘When the Sun passes away

behind the 30th degree of *Makara* and will reach no more the sign of the *Meenam* (pisces) then the night of Brahma has come' ” (SD 2:579 & n).

Equating the 12 sons of Jacob in the Hebrew system to the signs of the zodiac, Naphthali is assigned to Capricornus: he is called a “hind let loose.”

Captures Astronomical bodies not belonging by origin to a particular system. The planet Neptune is spoken of as a capture not belonging to our solar system, meaning that it is a body which has been attracted into an orbit on our plane around the sun. The word is used similarly for the extra moons of those planets having more satellites than one true moon, which is the parent of the visible globe. These captured moons are satellites from the astronomical standpoint, but are not true parental moons.

Cardinal Points Either the four chief points of the compass (north, east, south, west), or the four chief zodiacal constellations which have descended to us from antiquity as Aries, Cancer, Libra, and Capricorn, though due to the precession of equinoxes these constellations shift as the ages pass. These four points are connected with the four arms of the equal-armed cross or with the svastika, as also with the cube — the four points with zenith and nadir added.

Cosmically the four cardinal points represent a certain stage of manifestation where the three become four, in this case the number of matter. The *Zohar* says that the three primordial elements and the four cardinal points and all the forces of nature form the Voice of the Will, which is the manifested Logos. The Dodonaean Zeus includes in himself the four elements and the four cardinal points. Brahma is likewise four-faced. The pyramid is the triangle repeated on the four cardinal points and symbolizes, among other things, the phenomenal merging into the noumenal. The four cardinal points are presided over, or are manifestations of, four cosmic genii, dragons, maharajas — in Buddhism the chatur-maharajas (four great kings) — hidden dragons of wisdom, or celestial nagas. Hinduism has the four, six, or eight lokapalas. In the Egyptian and Jewish temples these points were represented by the four colors of the curtain hung before the Adytum. See also EAST; NORTH; SOUTH; WEST

Caresma. See BARESMA

Carmel, Mount A mountain spur in Palestine, projecting into the sea south of Haifa, Israel; traditionally a sacred place and refuge, it is mentioned in the Bible (1 Kings 18:19) as the spot where Elijah publicly challenged the priests of Ba'al. Mt. Carmel was noted for its oracle, which was consulted by the emperor Vespasian. It became a refuge for early Christian anchorites, and a

monastery dedicated to Elijah existed there by 570. About 1156 the order of Carmelites was founded, dedicated to continuing on Mt. Carmel the way of life of Elijah, pictured as a monk and the founder of monasticism, and a monastery was built. St. John of the Cross, among others, uses it in metaphors for the mystic and spiritual journey. Blavatsky connects it with the Essenes. *See also* MOUNTAINS, MUNDANE (BCW 11:256-7)

Carnac A village in Brittany celebrated for the enormous number of ancient stone monuments in its vicinity, to be classed with similar monuments found in many parts of the world and with the so-called Dracontia or serpent-mounds. They are records in symbol of the world's history, designed to be enduring, and in more than one sense actually or mystically the work of giants. "The archaic records show the Initiates of the Second Sub-race of the Aryan family moving from one land to the other for the purpose of supervising the building of *menhirs* and dolmens, of colossal Zodiacs in stone, and places of sepulchre to serve as receptacles for the ashes of generations to come" (SD 2:750).

Cartesian System The system of Descartes, the great French philosopher (1596-1650), representing the first great attempt in Europe to develop philosophy on strict mathematical and scientific lines, as opposed to what seemed to him the futile subtleties of the Schoolmen.

Descartes is usually spoken of as a strong dualist. Defining substance as a thing which exists independently of any other thing, he says there can only be one real substance, God; but besides this one independent substance there exist realities dependent on God, which he calls created substances. These are of two kinds — thinking and corporeal; the nature of the former being thought, and of the latter, extension. He made this dualism of the created world so absolute that only the continual interference of God could account for the harmony. Spirit differs *radically* from matter, a finite spirit is independent of its body, so that the physical universe is unhampered by spiritual law. The human body is a machine; and although human beings have souls, animals are entirely mechanical. This view of the universe laid the foundations of modern mechanistic science; and the independence of extended substance leads to the conclusion that every body is independent of every other.

This system contrasts with those of Spinoza and Leibnitz, Spinoza accentuating the monistic view and Leibnitz regarding Descartes's two substances as aspects of the One Substance (SD 1:628-9). It is stated, furthermore, that a combination of Spinoza with Leibnitz would give the essence of theosophical philosophy, according to which the universe, though essentially a unity, appears as a plurality of monads, manifesting under the dual — yet essentially illusory — aspects of spirit and matter. There is therefore no essential difference between spirit and matter, these being but mutually contrasted aspects of the one underlying and all-pervading substance.

In his theory of the physical universe Descartes recognizes one universally diffused matter which, by rotatory or vortical motion aggregates into planetary globes or into the physical elements, thus

anticipating both the vortex theory of Thomson and the idea put forward by Crookes that the chemical elements are various modifications of an underlying protyle.

Castor. See DIOSCURI

Cataclysms [from Greek *kataklysmos* flood] The term originated among the Stoics, who taught that the world is visited periodically and alternately by deluge (cataclysm) and conflagration (ekpyrosis, “burning up”). This last teaching was taken over into early Christian theology in the idea that the world will perish in flame. The meaning of cataclysm, however, now includes both deluges and volcanic action. Theosophy holds that the earth is visited periodically and at long intervals by comparatively sudden changes, varying in geographic importance from a continental to merely local catastrophes. The whole period of the cataclysm includes a gradual beginning, a progressive intensification, a culmination, and a gradual diminution. Local transformations are often sudden, sharp, or violent, whereas those embracing a wide geographical field are usually much slower or of longer period, frequently seeming to be nothing more than the merely secular changes which human experience recognizes as customary.

Cataclysms are due to the influence of the sun, moon, planets, and ultimately also to the constellations. As all physical phenomena are manifestations of what originally occurs in the realms of mind and consciousness, the movements of the earth’s crust reflect the movements in the minds of the beings inhabiting it, for all nature is an organism and all things are ineluctably knitted together by cosmic forces.

All the cataclysms are accompanied by both deluges and volcanism, but one or the other of these is accentuated at alternately different times. The forthcoming cataclysms at the end of the fifth root-race are stated to be especially marked by the action of the element fire. Lemuria, the third continental system, is said to have perished by subterranean convulsion, tremendous volcanic activity, and other phenomena arising in the igneous element, and the consequent breaking of the sea floor; whereas that of Atlantis, or the fourth great continental system, was mainly caused by axial disturbance, leading to subsidence of lands, tremendous consequent tidal waves, and the shifting of large portions of the oceanic system. “Therefore, it is absolutely *false*, . . . that all the great geological changes and terrible convulsions have been produced *by ordinary and known physical forces*. For these forces were but the tools and final means for the accomplishment of certain purposes, acting periodically, and apparently mechanically, through an inward impulse mixed up with, but beyond their material nature. There is a purpose in every important act of Nature, whose acts are all cyclic and periodical” (SD 1:640).

Conflagration was also used by Blavatsky to denote the destruction of the earth in pralayas,

greater or less.

Catacombs Subterranean caverns and galleries, some of the most celebrated being in and around Rome. These were constructed for sepulcher, but such was not the original purpose of many in other parts of the world, though many of these also were later used for burial and hence contain bones. This latter class was originally used as secret temples for the enactment of initiatory rites. “There were numerous catacombs in Egypt and Chaldea, some of them of a very vast extent. The most renowned of them were the subterranean crypts of Thebes and Memphis. The former, beginning on the western side of the Nile, extended towards the Lybian desert, and were known as the *Serpent’s* catacombs, or passages. It was there that were performed the sacred mysteries of the *kuklos anagkes*, the ‘Unavoidable Cycle,’ more generally known as ‘the circle of necessity’; the inexorable doom imposed upon every soul after the bodily death, and when it has been judged in the Amenthian region” (SD 2:379).

Catalepsy (Greek) *katalepsis* [from *kata* down + *lambanein* to seize] A psychomotor condition of morbid sleep, associated with a peculiar plastic rigidity of the muscles which may be made to assume strained attitudes and retain them for an indefinite time. There is more or less profound loss of consciousness and of the skin sensibility. The origin of the name reflects the ancient view that the attacks are due to the sudden seizure of the victim by some supernatural influence, such as an evil spirit; the causes assigned by medical writers are extremely varied and oftentimes absurd. The cataleptic state may occur in attacks of epilepsy, hysteria, chronic alcoholism, in various functional and organic mental and nervous diseases, and in that variety of dementia praecox known as catatonia. This list of diseases, characterized by general nervous and emotional instability, suggests the rationale of the ancient view that catalepsy is one of the many types of astral obsession. Textbook descriptions of typical cases are consistent pictures of an abnormal displacement of the conscious human ego whose helpless body then is subjected to purposeless, unnatural, and strained conditions and attitudes by some low-grade astral entity.

The cataleptic phenomena are sometimes induced in a profound hypnotic state, where the operator’s will manifests through the intermediate nature of his subject. This explains the public hypnotic exhibitions of an unconscious person, rigidly stretched out, with only head and feet supported, while the body sustains excessive weight placed upon it. It is also possible, at times, for a person who is naturally psychic, or who has dabbled in attempts to cultivate psychic phenomena, to become dissociated from his normal physical status and, in a trance-like condition, to manifest the cataleptic state of beclouded consciousness and the wax-like rigidity of body. In such cases there is always danger that the lower quaternary including the unconscious body may be invaded by some astral entity which thus becomes an insidious and injurious link with kama-loka and its denizens.

Medical studies of catalepsy refer to the literary record of many classical examples of it, and claim

that it has a close relationship with the ecstatic and trance-like states of mystics, but there is a marked contrast between the unnatural attitudes of the negative, unconscious cataleptic person, who remembers nothing of his entranced state, and the generally exalted spiritual consciousness of the genuine mystic who retains full memory of his self-induced experience.

Catatonia [from Greek *kata* down + *tonos* tension] Referred to as tension-insanity, this condition is marked with successive stages of psychological depression, excitement, and stupor; the typical symptoms are peculiar mannerisms, stereotyped movements, a cataleptoid muscular rigidity, and great mental and physical stubbornness. There may be hallucinations, depressing illusions, or fantastic religious ideas, or sudden impulsions of violence or indecency, and there is always a dulling of the higher emotional and ethical feelings. After an attack, the person often admits that he has been acting perversely, foolishly, or childishly, but explains that he could not help it. When analyzed in the light of composite human nature, and of the action of different principles during life and after death, the peculiar conditions are explainable. Evidently the sufferers are overcome by some besieging astral entity of kama-rupic nature; or in certain cases by aggregated or collected thought-impressions of former emotional and lower mental storms, excitements, or passion, which at times of ethical inattention flow back upon the brain-mind and affect the receptive body and its nervous system, so that these cases are really reactionary effects of precedaneous causes which may even go back in time to a preceding life or lives.

Catharsis [from Greek *katharsis* cleansing from *katharos* pure] Cleansing, purgation; used by Aristotle for the cleansing of the emotions of the audience through experiencing a work of art, such as a drama. Also the preliminary discipline in the ancient Mysteries, where the lower nature of the aspirant is purified, fitting him or her for higher training, knowledge, and initiation. The three lowest degrees “consisted of teachings alone, which formed the preparation, the discipline, mental and spiritual and psychic and physical; what the Greeks called the *katharsis* or ‘cleansing’; and when the disciple was considered sufficiently cleansed, purified, disciplined, quiet mentally, tranquil spiritually, then he was taken into the fourth degree” (Fund 608). *See also* INITIATION; MYSTERIES.

Cave Dwellers, Cavemen People of primitive habits lived in caves in the past, in various parts of the world, as they do in the present. Skulls, bones, implements, and art works of past cavemen have served paleoethnologists as material for a stratification of human history based on a supposed ascent of humanity through progressive stages from the animal kingdom; but all that can legitimately be inferred from it is that primitive peoples have existed at all times, together with technologically sophisticated races, and that the human type has not changed for millions of years past except as to minor fluctuations of physiologic parts around the persisting general physiologic structure. These cavemen were not mere stages in an upward evolution, but decadent offshoots of great races who, once having become racial relics, took to cave life, and commenced a career of slow extinction, yet in some cases preserving something of their former fine physique and artistic ability.

Cedar Throughout Asia Minor initiates were called the trees of righteousness, hence the mystical meaning of “the cedars of Lebanon,” in which category belong also some kings of Israel; and the same term was applied in India, but mostly to adepts of the left-hand path (SD 2:494-5).

Cela. *See* CHELA

Celestial Body Taken from Coleridge, who divined that in the human celestial body must be stored the memory of all preexistent experiences of the soul. The phrase is said to mean the thought-vehicle of the monad in devachan, through which functions the manasic ego (Key 137). The range of stored memory of experiences varies in extent according to the degree of sublimity of the different vestures. Ancient mysticism taught that the self has several vestures, each of which may be called a body or sheath through which the monad acts and by which it comes in contact with the particular worlds in which it may be functioning. “There are also celestial bodies and bodies terrestrial” (1 Cor 15:40). For instance, the Vedantic classification of the kosas (sheaths of atman) gives annamayakosa (physical body), pranamayakosa (vital-astral body), manomayakosa (psychological or lower manasic body), vijnanamayakosa (higher manasic body), and anandamayakosa (buddhic body). In the Taraka Raja-Yoga system are the following upadhis or vehicles of atman: sthulopadhi (gross vehicle), sukshmapadhi (subtile vehicle), and karanopadhi (causal vehicle or self).

Different schools have different enumerations, for though the truth is one and the same, yet when it is formally expressed, we must expect adaptations rather than exactitudes. One theosophical division gives 1) the divine monad; 2) its first vehicle, the spiritual soul; then 3) the human soul; 4) the astral-vital soul; and 5) the physical body. *See also* PRINCIPLES

Celestial Buddhas. *See* DHYANI-BUDDHA

Celestial Order of Beings Hierarchies of creative powers of various orders; in *The Secret Doctrine* (1:213) seven orders of celestial beings or creative powers are described: 1) Divine Flames, Fiery Lions, or Lions of Life (symbolized by the sign Leo), the nucleole of the superior divine world; formless Fiery Breaths, identical in one aspect with the upper Sephirothal triad which is placed in the archetypal world; 2) those of fire and aether, corresponding to atma-buddhi, formless but somewhat less spiritual and more ethereal; 3) those which correspond to atma-buddhi-manas, the triads; 4) ethereal entities, the highest rupa group, the nursery of human conscious spiritual souls, the imperishable jivas; 5) connected with the microcosmic pentagon, the crocodile, Capricorn contains the dual attributes of both spiritual and physical aspects of the universe, and dual human nature; 6) and 7) partake of the lower qualities of the quaternary, conscious ethereal entities, invisible, giving rise to numerous orders of nature spirits and spirits of atoms. *See also* HIERARCHIES; HIERARCHY OF COMPASSION

Cell [from Latin *cella* a small room] A small enclosed space; applied to the unit of organic life since the mid-17th century, when Robert Hooke, using one of the early microscopes, discovered that cork consisted of many little empty enclosed spaces separated from each other, which he called cells. A century later these cells were found to contain a semi-transparent substance occurring in all vegetable and animal matter, which thereafter was regarded as the basis of organic life and so received the name of protoplasm. The cell is a collective entity containing subordinate symbiotic entities. Its structure is divided into two major parts: the central nucleus which contains the genetic material, and the surrounding cytoplasm. Theosophically, human cells sprang originally from the inner human entity, who functions as their oversoul.

The earliest human root-races were astral protoplasts that reproduced by division as cells do today. The late second and early third root-races, the “sweat-born,” reproduced by throwing off germ cells which then grew into the new entity. Because each cell is an individual being or organism with its own inherent characteristics and possibilities, some of these vital cells thrown off by early human beings were used by the entities that evolved into the higher mammals. Human cells were not as thoroughly dominated by their parent entity as they are today:

“Hence, when any one of the cells forming part of such early human bodies freed itself from the psychical and physical control that then existed, it was enabled to follow, and instinctively did follow, the path of self-expression. But in our days when the psychical and physical dominance of the human incarnated entity over the human cells composing the human body is so strong, and because the cells have largely lost their power to individual self-expression through the biologic habit of subjecting to that overlordship of the human entity, such an individualized career of a cell in self-development is a virtual impossibility. .

..

“These cells which compose his body, had they not been held in the grip of the forces flowing from the inner dominating entity, man himself, for so long a time that their own individual lives, as it were, have been overpowered and bent in his direction and can now follow almost no other path than his; had they not been so dominated they would, by the amputation of a limb for instance, immediately begin to proliferate along their own tendency-line, to build up bodies of their own kind, each one following out that particular line of life force, or progressive development, which each such cell would contain in its cellular structure as a dominant, thus establishing a new ancestral or genealogical tree” (MIE 144-5).

Cenozoic Era. *See* GEOLOGICAL ERAS

Centaurs (Greek) Greek mythology preserves legends of monsters, half man, half horse, located in wild spots in Greece. “See, for comparison, the account of creation by Berosus (*Alexander Polyhistor*) and the hideous beings born from the two-fold principle (Earth and Water) in the Abyss of primordial creation: Neras [Naras] (Centaurs, men with the limbs of horses and human bodies), and Kimnaras (men with the heads of horses) created by Brahma in the commencement of the Kalpa” (SD 2:65). The centaurs were also said to be the offspring of Ixion, king of the Lapith people, and a cloud shaped like Hera, sent by Zeus to test his wickedness; or as being offsprings of Ixion’s son and mares. They were considered a rude, wild race living in the mountains of Thessaly.

From another standpoint, however, Greek mythology represents the centaurs as being wiser than men: thus Chiron, son of Kronos and Philyra, most famous of the Centaurs, is a teacher not only of the heroes, but instructed Apollo and Diana in hunting, medicine, music, and the art of prophecy. Later, centaurs were shown as forming part of the following of Dionysus.

Cerberus (Greek) In Greek mythology, the three-headed dog with a serpent’s tail, son of Typhon and Echidna, who guards the gate to Hades or the underworld. He was brought to the earth and back by Hercules as his twelfth labor. Cerberus “came to the Greeks and Romans from Egypt. It was the monster, half-dog and half-hippopotamus, that guarded the gates of Amenti. . . . Both the Egyptian and the Greek Cerberus are symbols of Kamaloka and its uncouth monsters, the cast-off shells of mortals” (TG 74-5).

Ceremonies, Ceremonials, Sacred- Originally and essentially acts of magic, designed to bring about particular and definite results, but now almost wholly ritual observances performed from habit, from unthinking reverence to misunderstood tradition, or merely to impress the devotional imagination. The anointing of a candidate in the Mysteries was actually the completion of a process which began on higher planes and in the candidate’s inner nature, not a mere symbol intended to fix his attention or to impress his mind. In two of its ecclesiastical analogs, baptism and confirmation, we find them regarded by some churches as the “outward and visible sign of an

inward and spiritual grace,” and by others as an actual conveying of grace to the candidate; and the same with other Church sacraments. In real ceremonial magic this is fully recognized, and success depends upon the exact fulfillment of the necessary conditions; similarly in white magic, but the knowledge and proficiency required for the fulfillment of the requisite conditions is apparently beyond the attainments of the great multitude of people today. It comes only in higher degrees of chelaship and is carefully guarded from profanation. For ceremonial magic, whether white or black, means the evocation of various forces of nature, stronger or weaker depending upon their nature, demanding for their control a resolute will, an inflexible mind, and an immaculately pure heart. Ceremonies performed in ignorance may be as barren of results as a static electric machine worked in a fog.

There is a thread-soul of quasi-intuitive understanding running through the traditions of human history which impels people to keep up, however ignorantly, forms and ceremonies through the ages, often when their real significance is lost, like seeds preserved in an ark to await the time when the flood waters shall recede.

Cereals. See WHEAT

Ceres. See DEMETER

Ceridwen (Welsh) Presumably cognate with the Roman goddess Ceres; in *Hanes Taliesin (The Story of Taliesin)* the wife of Tegid Foel. The goddess of nature, her function was to do battle with her favorite sons, to oppose and persecute them until they had grown stronger to endure than she was to afflict: then she turns and becomes their devoted servant.

Ceridwen, Cauldron of (Welsh) Symbol of initiation in Welsh Druidic literature; a Bard was one who had been in the Cauldron of Ceridwen, called also pair dadeni (the cauldron of rebirth). In passing out from Wales to Europe, it became the Holy Grail; thus Parsifal, or Perceval, is Pair-cyfaill, the “Companion of the Cauldron.”

Ceridwen brewed the cauldron of wisdom on the mountainside. It was to boil for a year and a day while she roamed the hills to gather herbs to put in it; at the end of that time all would have boiled away but the Three Drops of Wisdom — Enw Duw (the Name of God). See also TALIESIN

Cerinthus (flourished 1st century) Gnostic, probably Syrian, credited with Egyptian training by Hippolytus, he taught that the world was made, not by the Supreme but by angels, “one of whom gave law to the Jews, which was not perfect, and that only a particular gospel of Matthew was of use in the New Testament” (BdeZ in BCW 14:516). He taught that “the world and Jehovah having fallen off from virtue and primitive dignity, the Supreme permitted one of his glorious Aeons, whose name was the ‘Anointed’ (Christ) to incarnate in the man Jesus” (BCW 14:372n) who was born a son of Joseph and Mary like any other mortal until Christos descended upon him, left him before his death, and returned personating him after his death (BCW 13:55; SD 2:508).

Cesil. *See* KESIL; ORION

Cetana. *See* CHETANA

Cetus (Latin) [from Greek *ketos* whale] An ecliptic constellation adjoining Pisces and Aries. In Hebrew mythology it can be connected with the marine monster that swallowed Jonah, the peregrinating dove; and is also connected with Poseidon, Dagon, and other fish deities.

Ceugant, Cylch Y Ceugant (Welsh) The cycle of infinity, the Boundless. The highest of the three Druidic circles of existence: the world of the Absolute.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Chaiah. *See* HAYYAH

Chain Used in modern theosophy to designate the visible and invisible globes which form the interior and exterior structure of any celestial body. The kosmos as a whole is a living organism, subdivided into almost innumerable subordinate series of hierarchical units; hence the kosmos is an assemblage of beings of many kinds, each of which is a compound unit, and in order to signify that the elements composing each such unit are linked together as an individual, the word chain is applied to celestial bodies. The teaching is that every celestial body whatever, visible or invisible, forms a unity with companion globes on invisible planes. When referring to the chains of globes forming a solar system, it is customary to call them planetary chains; thus we have the earth-chain, the lunar chain, the Mercury-chain, etc., each consisting of seven such globes on the manifested plane, to which the letters A, B, C, D, E, F, and G are applied.

The globes of a chain are said to be in coadunation but not in consubstantiality, which means that, though of different grades of materiality, they form a catenary unit. Although each chain consists of seven or twelve globes, the only one visible to the human eye on earth is that which is on the same plane of materiality. Of the twelve globes to each chain, seven belong to the manifested worlds and five to the unmanifested. The seven manifested globes are distributed on four planes, and the twelve globes on seven planes, as shown in the diagram.

The left-hand side of the diagram represents the descending or shadowy arc of evolution, the right side the ascending or luminous arc. Our universe is also described as one of a cosmic chain of universes.

In other particular uses of the word, the Hermetic Chain is the succession of teachers of the esoteric wisdom who preserve and pass on the sacred knowledge from generation to generation.

Chain-manvantara. See MANVANTARA

Chain of Causation. See NIDANA; KARMA

Chain-round. See ROUND

Chaitanya (Sanskrit) *Caitanya* [from *cit* to perceive, understand, be conscious] Consciousness, intelligence; the cosmic intelligence, hence also the light of the Logos. All individual egos in the

universe are rooted in cosmic chaitanya as their universal source, and become individualized for experience and work in the material realms by means of the karanopadhi. Chaitanya is thus the invisible essence of human intelligence, the cosmic root of monadic individuality, and the cosmic intelligence-force which is the intrinsic or essential consciousness behind and within individuality.

As a proper name, a reformer of the Vaishnava sect in India (1485-1527), regarded in Bengal as an avatara of Krishna. One of his chief teachings was the duty of bhakti (attachment, devotion, or love) for Krishna so strong that no caste-feeling implying sectarian division could exist with it.

Chaitya (Sanskrit) *Caitya* [from the verbal root *cit* to think, perceive] The individual soul; also a funeral monument or memorial, often containing the ashes of the deceased. Sometimes with Buddhists, a sacred building containing a revered image.

Chakna-padma-karpo (Tibetan) *phyag na padma dkar po* (chag-na pe-ma kar-po) [from *phyag na padmo* (chag-na pe-mo) lotus holder (cf Sanskrit *padmapāṇi*) from *phyag na* in hand (cf Sanskrit *pāṇi*) + *padma* lotus + *dkar po* white (cf Sanskrit *puṇḍarīka* white lotus)] He who holds the white lotus; a title given to Chenresi (Sanskrit Avalokitesvara or Padmapani).

Chakra (Sanskrit) *Cakra* Wheel; cycle; the horizon, as being circular or of a wheel-form; likewise certain pranic centers of the body. “These physiological *chakras*, which are actually connected with the pranic circulations and ganglia of the Auric Egg, and therefore function in the physical body through the intermediary of the linga-sarira, or astral model-body, are located in different parts of the physical frame, reaching from the parts about the top of the skull to the parts about the pubis. . . . were this mystical knowledge broadcast, it would be sadly misused, leading not only in many cases to death or insanity, but to the violation of every moral instinct. Alone the high initiates, who as a matter of fact have risen above the need of employing physiological *chakras*, can use them at will, and for holy purposes — which in fact is something that they rarely, if indeed they ever do” (OG 26-7).

In exoteric works six chakras are named. De Purucker lists seven: 1) muladhara, the parts about the pubis, ruled by Saturn; 2) svadhisthana, the umbilical region, ruled by Mars; 3) manipura, the pit of the stomach or epigastrium, ruled by Jupiter; 4) anahata, the root of the nose, ruled by Venus; 5) visuddha, the hollow between the frontal sinuses, ruled by Mercury; 6) ajnakhya, the fontanelle or union of the coronal and sagittal sutures, ruled by the Moon; and 7) sahasrara, the pineal gland in the skull, ruled by the Sun. “The human body as a microcosm may be looked upon as containing every power or attribute or energy in the solar system. . . . all the seven (or twelve) logioic forces that originally emanate from the sun, and pass in and through the various sacred planets, are transmitted to us as human beings and directly to the physical body. Thus each one of these solar logioic forces has its corresponding focus or organ in the human body, and these are the chakras” (FSO 459).

Chakravartin (Sanskrit) *Cakravartin* [from *cakra* wheel, cycle + *vartin* turning, one who governs]

Sovereign of the world, universal ruler; a title applied to several Hindu emperors, but referring particularly to Vishnu, who in the treta yuga in the form of a universal monarch protected the three worlds. At the end of kali yuga, legend states that Vishnu will appear again under his form of the Kalki-avatara, or Maitreya as the Buddhists say, reforming or doing away with the wicked and inaugurating a realm of spirituality and righteousness.

Chakshu (Sanskrit) *Cakṣu* [from the verbal root *cakṣ* to become visible, see] The eye; “the faculty of sight, or rather, an occult perception of spiritual and subjective realities . . .” (TG 323). Chakshus, in addition to meaning eye, as a neuter noun denotes the faculty of seeing, light, clearness. The compound loka-chakshus (eye of the world) is a title of the sun.

Chakshub. See CHAKSHU

Chakshusha (Sanskrit) *Cākṣuṣa* One of the 14 manus, the seed manu of the third round, and by analogy manu of the third root-race (SD 2:309, 615n).

Chaldeans, Chaldees To the seventh subrace of the third root-race belong the far-distant predecessors of the Mystery school; and to now forgotten geologic history the predecessors of those later called Chaldees, along with Hindu, Egyptian, Persian, and Phoenician sages. In their records are mentioned divine dynasties preceding the human kings, and the cycle of 432,000 years. From them came the origins of all such thoughts as are contained in the occult *Nabathean Agriculture*, and in their ancient records is found the source of the original Biblical cosmogonic allegories. The mathematical and astronomical lore of the Chaldeans was celebrated in all the ancient Mediterranean world: the word Chaldee often meant simply an adept, magician, or astrologer. In the Bible they are usually spoken of as Babylonians.

The racial origin of the Chaldeans, and the original source of their secret knowledge, is to be found in Central Asia, for there was a long period of time, not so many scores of thousands of years ago, when all this region enjoyed a genial climate and was covered with populous cities and vast tracts of intensely cultivated soil; and was inhabited by a people not inferior to ourselves today, and indeed in some respects superior in knowledge (cf SOPh 16-25).

Cham. See HAM

Ch’an. See DHYANA; DZYAN

Cha-na Dorje, Chagna Dorje (Tibetan) *phyag na rdo rje* (chag-na dorje) Holder of the thunderbolt-diamond; translation of Sanskrit vajrapani.

Chandala (Sanskrit) *Caṇḍāla* A member of a mixed caste, or people without caste, an outcaste. Especially in ancient India the term applied to one of the lowest and most despised status (sometimes described as being born from a Sudra father and a Brahmin mother). Commonly applied now to anyone of mixed caste “but in antiquity it was applied to a certain class of men,

who, having forfeited their right to any of the four castes — Brahmans, Kshatriyas, Vaisyas, and Sudras — were expelled from cities and sought refuge in the forests. Then they became ‘bricklayers,’ until finally expelled they left the country, some 4,000 years before our era. Some see in them the ancestors of the earlier Jews, whose tribes began with A-brahm or ‘No-Brahm.’ To this day it is the class most despised by the Brahmans in India” (TG 323-4).

Chandaja. See CHHANDAJA

Chanda-riddhi-pada. See CHHANDA-RIDDHI-PADA

Chandra (Sanskrit) *Candra* [from the verbal root *cand* to shine] The moon; as an adjective, shining, glittering, having the brilliancy of light. Sometimes synonymous with Soma.

Chandrabhaga (Sanskrit) *Candrabhāgā* The ancient name for the Chenab River in the Punjab.

Chandragupta (Sanskrit) *Candragupta* The invisible moon, the secret or concealed moon, moon-protected. The name of a celebrated king regarded as the founder of the Maurya dynasty of Magadha, and grandfather of the famous Buddhist king Asoka.

Chandrakanta (Sanskrit) *Candrakānta* [from *candra* moon + *kānta* desired, loved from the verbal root *kam* to desire] Lovely as the moon, moon-loved; the moonstone, a gem popularly believed to be formed by the congelation of the moon’s rays, and also supposed to be dissolved by the moon’s light, hence magical properties are attributed to it. “It has a very cooling influence in fever if applied to both temples” (TG 76).

Chandrakanti means moonlight; and chandrakanta, the supposed wife of the moon.

Chandramana (Sanskrit) *Candramāna* [from *candra* moon + the verbal root *mā* to measure] Moon’s measure; one of several methods of reckoning time in India, the year consisting of 360 days, the other two methods being the suryamana and barhaspatyamana.

Chandramanas is one of the ten horses which in Hindu mythology draw the chariot of the moon.

Chandramasanjyotis (Sanskrit) *Candramasañjyotis* [from *candramas* moon + *sam* with + *jyotis* light] Having the same light as the moon; according to Subba Row, a symbol of the devachanic existence, for just as the moon shines by the reflected light of the sun, so does the ego in devachan shine by the light emanating from the atma-buddhi or monadic portion of any entity’s being. The word was probably coined by Subba Row.

Chandravansa (Sanskrit) *Candravaṃśa* [from *candra* moon + *vaṃśa* lineage, race] Also Chandravamsa. The lunar race; one of the two great royal dynasties of ancient India. As related in the *Vishnu-Purana*, Soma (the moon), the child of the rishi Atri, gave birth to Budha (Mercury) who married Ila, daughter of the other great royal dynasty, the Suryavansa (solar race). Her descendants, Yadu and Puru, founded the two great branches of the Chandravansa (named

respectively Yadava and Paurava). The last important scion of the race of Yadu was the avatara Krishna. In the race of Puru were born Pandu and Dhritarashtra — parents respectively of the Pandavas and Kurus, the heroes of the *Mahabharata* enumerated in the *Bhagavad-Gita* (ch 1). “In Occultism, man is called a *solar-lunar* being, solar in his higher triad, and lunar in his quaternary. Moreover, it is the Sun who imparts his light to the Moon, in the same way as the human *triad* sheds its divine light on the mortal shell of sinful man. Life celestial quickens life terrestrial” (TG 76).

Rama, the hero of the *Ramayana*, is born in the Suryavansa, while Gautama Buddha belonged to the Chandravansa (TG 314).

Chandrayana (Sanskrit) *Cāndrāyaṇa* [from *candra* moon + *ayana* advancing, course] The path or course of the moon.

Chang-chub (Tibetan) *byang chub* (jang-chub, chang-chub) Also Byang-tzyoobs, Tchang-chub. Translation for Sanskrit bodhi (enlightenment, awakening). *Byang chub sems dpa'* (jang-chub-sem-pa) translates the Sanskrit bodhisattva, one who has attained a high degree of spiritual knowledge and mystic power; “An adept who has, by the power of his knowledge and soul enlightenment, become exempt from the curse of *UNCONSCIOUS* transmigration — may, at his will and desire, and instead of reincarnating himself only after bodily death, do so, and repeatedly — during his life if he chooses. He holds the power of choosing for himself new bodies whether on this or any other planet — while in possession of his old form, that he generally preserves for purposes of his own” (ML 285).

Chang Sham-ba-la. See SAMBHALA

Chang-ty. See HUANG TI

Chanmuka. See CHHANMUKA

Chantong (Tibetan) [from *spyān* (chen) eye + *stong* (tong) thousand] Thousand-eyed; applied to Chenresi, Tibetan equivalent of the Sanskrit Avalokitesvara or Padmapani. “Thousand-armed” is perhaps a more common epithet for Chenresi.

Chaos (Greek) [from *chaino* to gape, yawn open] “The earth was without form and void,” says Genesis in describing the first stages of cosmogony. In Greek mythology contains the same idea of the primordial emptiness and formlessness which precedes the rebirth of a universe after pralaya. It was the vacant and spiritual space which existed before the creation of the universe or of the world; from it proceeded Darkness and Night. Chaos is “chaotic” only in the sense that its constituents are unformed and unorganized; it is the kosmic storehouse of all the latent or resting seeds from former manvantaras. It means space — not the Boundless, parabrahman-mulaprakriti, but the space of any particular hierarchy descending into manifestation. In one sense it is the condition of a solar system or planetary chain during its pralaya, containing all the elements in an

undifferentiated state. Aether and chaos are the two principles immediately posterior to the first principle.

Various terms more or less synonymous are akasa, the universal egg (from which Brahma issued as light), the virgin egg, the virgin mother, the immaculate root (fructified by the ray), the primeval deep, the abyss, the great mother. The divine ray and chaos are father-mother or cosmic fire and water. Chaos-Theos-Cosmos are the triple deity or all-in-all. Chaos was personified in Egypt by the goddess Neith, who is the Father-Mother of the Stanzas of Dzyan, the akasa of the Hindus, the svabhavat of the northern Buddhists, and the Icelandic ginnungagap.

Charachara (Sanskrit) *Carācara* [from *cara* moving + *acara* not moving] The aggregate of all beings and things whether moving or fixed. It includes all the kingdoms of nature, for the ancient Hindus considered the vegetable and mineral kingdoms to be endowed with inherent life, with relative and fitting souls, as well as the animal and human kingdoms.

Charaka (Sanskrit) *Caraka* [from the verbal root *car* to wander, roam about] Wanderer; a branch or school following the practices enjoined in the *Yajur-Veda*; in the plural, the teachings as well as the followers of the doctrine taught in a branch of the black *Yajur-Veda*.

Also the name of a legendary muni and physician, born in Panchanada, Kashmir, said to have been the physician of Indo-Scythian King Kanishka (1st or 2nd century). Once Sesha, the King of the Serpents, visiting the earth, found only sickness and suffering everywhere. Being the recipient from a divine source of the *Ayur Veda* and having knowledge of all cures, he became filled with pity and determined to incarnate as the son of a muni in order to alleviate the ills of mankind. Named Charaka, as he had come to the earth as a wanderer, he then composed a new work on medicine based on the older works of Agnivesa. He is commonly accepted as an avatara of the Serpent Sesha, “an embodiment of divine Wisdom, since Sesha-Naga, the King of the ‘Serpent’ race, is synonymous with *Ananta*, the seven-headed Serpent, on which Vishnu sleeps during the *pralayas*. *Ananta* is the ‘endless’ and the symbol of eternity, and as such, one with Space, while Sesha is only periodical in his manifestations. Hence while Vishnu is identified with Ananta, Charaka is only the Avatar of Sesha” (TG 78).

Chariot Vehicle (cf Sanskrit *vahana*, Hebrew *merkhah*). The *Zohar* states that 'eyn soph uses the One, the manifested Heavenly Man, as its chariot; but, as 'eyn soph is the Boundless, it cannot come into individual relation with any thing; it is the depth or bythos of 'eyn soph whose ray uses the Heavenly Man as a chariot. It is the unmanifested Logos or Brahman which uses the manifested Logos or Brahma as its vehicle. Chariot is also used to refer to the visible planets as vehicles of the planetary deities, as for instance in the chariot of Apollo or Phoebus and in the nine chariots of the stars around Dhruva the pole star. In similar fashion, the human body is often called the chariot of the inner charioteer, the real person or true ego.

Charity [from French *charite* from Latin *caritas*] Used in some parts of the New Testament to

translate the Greek agape, which is oftener translated “love” or “affection.” Agape with the early Christians meant that inner bond of blessed union which united the individual with divinity, and mankind with their fellowmen. Till our eyes are fully opened, “there abideth faith, hope, and charity, these three; but the greatest of these is charity” (1 Cor 13). This use of the word is to be distinguished from its meaning of almsgiving.

Charon (Greek) Ferryman of the Styx in Hades, the son of Erebus (darkness) and either Nux (night) or the Styx; equivalent to the Egyptian Khu-en-ua, the hawk-headed steersman who conveys souls across the black waters that separate life from death. Originally Mercury guided the souls to the underworld, but later Charon was said to ferry souls across who had a coin, put in their mouth at death by their relatives, and who had been properly buried. Hades is kama-loka, entered not only by the shades of the departed but by candidates for initiation, and by high adepts who enter the underworld at certain times on missions of compassion, as Jesus is stated to have descended into Hell.

Charvaka (Sanskrit) *Cārvāka* A rakshasa (demon) who in the *Mahabharata* was a friend of Duryodhana, chief of the Kurus, and hence an enemy of the Pandavas. When, at the conclusion of the great battle in which the Kurus were defeated, King Yudhishtira entered Hastinapura in triumph, Charvaka assumed the form of a Brahmin and reviled the king. Yudhishtira’s Brahmins discovered the imposture and reduced Charvaka to ashes with the fire of their eyes, “i.e., magnetically by means of what is called in Occultism the ‘black glance’ or evil eye” (TG 79).

Also a materialistic philosopher whose doctrines are said to be embodied in the Barhaspatya-sutras; a “denier of all but matter, who if he could come back to life, would put shame to all the ‘Free thinkers’ and ‘Agnostics’ of the day. He lived before the Ramayanic period, but his teachings and school have survived to this day, and he has even now followers, who are mostly to be found in Bengal” (ibid.).

Chassed. See HESED

Chat. See KHAT

Chatur (Sanskrit) *Catur* The numeral adjective four.

Chaturdasa (Sanskrit) *Caturdaśa* [from *catur* four + *daśa* ten] The numeral adjective fourteen; as a feminine noun (chaturdasi), the fourteenth day in a lunar fortnight. Chaturdasaka and chaturdasan mean fourteenth.

Chaturdasa-bhuvana (Sanskrit) *Caturdaśa-bhuvana* The 14 lokas and talas, or spiritual and material worlds of existence.

Chatur-maharajas (Sanskrit) *Catur-mahārāja* [from *catur* four + *mahā* great + *rājan* king] Four great kings; exoterically guardians of the four quarters of the lowest of the six sensuous worlds;

esoterically the four spiritual regents in and of our solar system, mystically intimately connected with karma. *See also* MAHARAJA

Chatur-mukha (Sanskrit) *Caturmukha* [from *catur* four + *mukha* face] Four faces, four-faced; applied to each member of the Trimurti (Brahma, Vishnu, Siva), each being represented as four-faced. Also applicable to the side or face of a square.

Chaturthasrama (Sanskrit) *Caturthāśrama* The fourth stage of sannyasa, complete renunciation of the world. (BCW 2:118)

Chatur-varna (Sanskrit) *Caturvarṇa* [from *catur* four + *varṇa* a caste, color, form, appearance] The Hindu four castes as presented in the *Laws of Manu*: the Brahmana or priest, Kshatriya or warrior and administrator, Vaisya or merchant, and Sudra or agriculturalist and servant. These four castes, while very ancient, belonged to the archaic civilization. In the Hindu view karmic merit and demerit work to place a person in his position in life in repetitive incarnations on earth. Thus a person might be a Brahmin, the highest of the castes, but if his life were such as to bring about a change in him, some subsequent incarnation would place him either in a higher or a lower position in life. A person might be a slave or beggar in one life, but if he lives in the higher part of his nature his next imbodiment might be that of a prince; or a prince in his palace might for karmic demerit, in his next life be born a slave.

The real person is the re embodying ego, who carves its own destiny as and how it chooses, and its imbodiments correspond. It might readily happen that for the purposes of discipline and improvement of soul, a re embodying ego might deliberately choose a body in which it would have to face, meet, and overcome a great many of what the world calls misfortunes. It is not always therefore in the best interests of a learning and evolving soul to be born “with a silver spoon in its mouth,” because with such surroundings as wealth and social position might bring, a weak soul could easily receive tendencies downwards because lacking the stern discipline urging it upwards and awakening the transcendent powers of the spirit within. Luxury, ease, power, and wealth are by no means always unmixed blessings, but quite frequently become positive misfortunes to weak souls.

Also, the four principal colors.

Chatur-yoni (Sanskrit) *Catur-yoni* Four wombs; the four modes of birth; the four ways of entering on the path of birth as decided by karma. These four ways as described in ancient books are: 1) birth from the womb, as men and mammalia; 2) birth from an egg, as birds and reptiles; 3) birth from moisture and air-germs, as insects; and 4) by sudden self-transformation, as bodhisattvas and gods (anupapadaka — “parentless”). The anupapadaka birth is brought about by the intrinsic energy and karmic merit of the individual, thus transforming himself into a nobler being.

Chatvaras or **Chatvarah** (Sanskrit) *Catvāras*, *Catvāraḥ* [nominative plural of *catur* four] The four;

frequently used to represent the four kumaras usually mentioned in Hindu scriptures: Sanatkumara, Sananda, Sanaka, and Sanatana.

Chaya, Chhaya-birth, Chayaloka. See CHHAYA, CHHAYA-BIRTH, CHHAYALOKA

Chayah. See HAYYAH

Che-ba (Tibetan) Great, often used to translate the Sanskrit *maha*.

Chebel. See HEBEL

Chela (Hindi) *Celā*. Archaic spelling *cheta* (*ceta*) or *cheda* (*ceda*). Servant, disciple.

“a disciple, a pupil, a learner or hearer. The relationship of teacher and disciple is infinitely more sacred even than that of parent and child; because, while the parents give the body to the incoming soul, the teacher brings forth that soul itself and teaches it to be and therefore to see, teaches it to know and to *become* what it is in its inmost being — that is, a divine thing.

The chela life or chela path is a beautiful one, full of joy to its very end, but also it calls forth and needs everything noble and high in the learner or disciple; for the powers or faculties of the higher self must be brought into activity in order to attain and to hold those summits of intellectual and spiritual grandeur where the Masters themselves live. For that, masterhood, is the end of discipleship — not, however, that this ideal should be set before us merely as an end to attain to as something of benefit for one’s own self, because that very thought is a selfish one and therefore a stumbling in the path. It is for the individual’s benefit, of course; yet the true idea is that everything and every faculty that is in the soul shall be brought out in the service of all humanity, for this is the royal road, the great royal thoroughfare, of self-conquest” (OG 27-8).

“From Book IV of *Kiu-ti*, chapter on ‘the Laws of Upasans,’ we learn that the qualifications expected in a Chela were:

1. Perfect physical health;
2. Absolute mental and physical purity;
3. Unselfishness of purpose; universal charity; pity for all animate beings;
4. Truthfulness and unswerving faith in the law of Karma, independent of any power in nature that could interfere: a law whose course is not to be obstructed by any agency, not to be caused to deviate by prayer or propitiatory exoteric ceremonies;
5. A courage undaunted in every emergency, even by peril to life;
6. An intuitional perception of one’s being the vehicle of the manifested Avalokitesvara or

Divine Atman (Spirit);

7. Calm indifference for, but a just appreciation of everything that constitutes the objective and transitory world, in its relation with, and to, the invisible regions.

“Such, at the least, must have been the recommendations of one aspiring to perfect Chelaship. With the sole exception of the first, which in rare and exceptional cases might have been modified, each one of these points has been invariably insisted upon, and all must have been more or less developed in the inner nature by the Chela’s unhelped exertions, before he could be actually put to the test” (BCW 4:607-8).

Chemi or **Kemi** Black land; the native name of Egypt in ancient times, so called because of the blackness of its soil due to the deposits made by the river Nile. In some poetical inscriptions Kemi is placed in contrast to Toshri (the red land) — referring to the suggestive color of the sandy deserts.

Chemis (Greek) *chemmis, chemi*. “According to the Greeks, the phantom form of the Chemis (*Chemi*, ancient Egypt) which floats on the ethereal waves of the Empyrean Sphere, was called into being by Horus-Apollo, the Sun god, who caused it to evolve out of the Mundane egg” (SD 1:367).

Chemistry [from Greek *chemeia*] An ancient art or science relating to the extraction of medicinal juices from plants, or of metals from their earths, or the transmutation of physical elements, as of base metals into gold, the preparation of elixirs, and other things usually connected with alchemy, from which modern chemistry is a derivative along specialized line.

In *The Secret Doctrine* chemistry is mentioned as being, together with biology, one of the magicians of the future, especially in its form of chemical physics, when it is no longer the mechanistic science into which it has degenerated. “In Esoteric Philosophy, every physical particle corresponds to and depends on its higher *noumenon* — the Being to whose essence it belongs; and above as below, the Spiritual evolves from the Divine, the psycho-mental from the Spiritual — tainted from its lower plane by the astral — the whole animate and (seemingly) inanimate Nature evolving on parallel lines, and drawing its attributes from above as well as from below” (SD 1:218).

Chen (Chinese) Taoist term for reality; according to Chuang: “*Chen* is the highest degree of vitality or spirituality; the man who does not possess such spirituality cannot possibly stir or propel others” (bk 10, ch 31). Again, “if one cultivates the Tao in himself, his virtue (teh) will become *chen* (reality)” (*Tao teh ching*, sec 54).

Chenresi (Tibetan) *spyān ras gzigs* (chen-re-zi, or chen-re-si) [short for *spyān ras gzigs dbang phyug* (chen-re-zi-wang-chung) from *spyān ras* penetrating vision (cf Sanskrit *avalokita*) + *gzigs* forms (cf Sanskrit *rūpa*) + *dbang phyug* lord (cf Sanskrit *īśvara*)] The Lord who sees forms with his penetrating vision; translation of Sanskrit Avalokitesvara. Exoterically Chenresi is the greatest protector of Asia in general and Tibet in particular, mystically considered to have eleven heads

and a thousand arms, each with an eye in the palm of the hand, these arms radiating from his body like a forest of rays: the thousand eyes representing him as on the outlook to discover distress and to succor the troubled. In this form his name is Chantong (he of the thousand eyes) and Jigtengonpo (protector and savior against evil). “Even the exoteric appearance of Dhyani Chenresi is suggestive of the esoteric teaching. He is evidently, like Daksha, the synthesis of all the preceding Races and the progenitor of all the *human* Races after the Third, the first complete one, and thus is represented as the *culmination of the four primeval* races in his *eleven-faced* form. It is a column built in four rows, each series having three faces or heads of different complexions: the three faces for each race being typical of its three fundamental physiological transformations. The first is white (moon-coloured); the second is yellow, the third, red-brown; the fourth, in which are only two faces — the third face being left a blank — (a reference to the untimely end of the Atlanteans) is brown-black. Padmapani (Daksha) is seated on the column, and forms the apex” (SD 2:178).

Exoterically the Dalai Lama is often regarded as an incarnation of Chenresi, as a popular legend says that whenever faith begins to die out in the world, Padmapani-Chenresi emits a brilliant ray of light, and forthwith incarnates himself in one of the two great Lamas — the Dalai and Tashi Lamas. Esoterically he is called Bodhisattva Chenresi Vanchug (the powerful and all-seeing). Chenresi or Avalokitesvara “is the great *Logos* in its higher aspect and in the divine regions. But in the manifested planes, he is, like Daksha, the progenitor (in a spiritual sense) of men” (ibid.). In China, Chenresi becomes the great goddess of mercy, Kwan-yin, represented by a female figure bearing a child in her arms.

The true significance of Chenresi is the Third Logos of our solar system and the buddhi-manas of the individual human being, the active aspect of the human spiritual monad. The efflux or influence emanating from Chenresi and permeating the lower parts of the human constitution is Padmapani (the lotus-handed); Padmapani therefore is the bodhisattva of Avalokitesvara or Chenresi, and whether cosmically or psychologically the equivalent of the manifested potency of Brahma.

Cherchen An oasis in Central Asia, situated about 4,000 feet above the Cherchen-daria or Cheerchenghe River. This region is of great ethnological interest as it was once “the very hot-bed and centre of ancient civilization, surrounded on all sides by numberless ruins, above and below ground, of cities, towns, and burial-places of every description” (TG 324). Col. Prjevalski wrote years ago that “the oasis is inhabited by some 3,000 people ‘representing the relics of about a hundred nations and races now extinct, the very names of which are at present unknown to ethnologist’ ” (ibid.).

Cherno Bog (Slavic) The black deity; the chief deity of the ancient Slavonians.

Cheru (Germanic) Also Heru. The sword god of the Cherusci, an ancient Germanic tribe occupying

the basin of the Weser, to the north of the Chatti. Cheru has been associated with the Scandinavian Tyr whose name in Germanic mythology is Tio or Zio. In legend the Sword of Cheru was fashioned by the sons of Ivaldi, the dwarfs who likewise fashioned Thor's Hammer, Mjolnir. The sword of Cheru was a magical one; and in the Scandinavian mythology is described "as destroying its possessor, should he be unworthy of wielding it. It brings victory and fame only in the hands of a virtuous hero" (TG 80).

Cherub, Cherubim (Hebrew) *Kěrūb, Kěrūbīm* A celestial, sacred, occult being in Hebrew mythology; in the Old Testament various descriptions are given of the Cherubim, the prevailing one being that of winged entities with four faces, those respectively of a man, a lion, an ox, and an eagle. In Genesis, they are the guardians of Paradise; in Exodus (25:18-22) their images are to be placed in the mercy-seat and also in Solomon's temple (1 Kings 6:23-35), but their most frequent association is with the throne or chariot of Yahweh (Jehovah). In Ezekiel and the Qabbalah the Cherubim are represented as the four holy living creatures. "These four animals are, in reality, the symbols of the four elements, and of the four *lower* principles in man. Nevertheless, they correspond physically and materially to the four constellations that form, so to speak, the *suite* or *cortege* of the Solar God, and occupy during the winter solstice the four cardinal points of the zodiacal circle" (SD 1:363).

In the ancient Syrian system of enumerating the hierarchies, the Cherubim were equivalent to the sphere of the Stars. In the Jewish Qabbalah a close association is made with them and the four letters of the Tetragrammaton, YHWH; and further with the world of 'Asiyyah. In the system of hierarchies propounded by Dionysius the pseudo-Areopagite, the Cherubim rank second in the first trinity: Seraphim, Cherubim, Thrones. But the Cherubim have a still more mystical connection: "the four celestial beings are . . . the protectors of mankind and also the Agents of Karma on Earth" (SD 1:126).

In the Hebrew Qabbalah the Kerubim are the class of angels or quasi-spiritual beings corresponding with the lower Shechinah or Malchuth, the lowest or tenth of the Sephiroth. Again, "the word cherub also meant serpent, in one sense, though its direct meaning is different; because the *Cherubim* and the Persian winged [gryphes] 'griffins' — the guardians of the golden mountain — are the same, and their compound name shows their character, as it is formed of (kr) circle, and 'aub,' or ob — serpent — therefore, a 'serpent in a circle' " (SD 1:364). The color blue is associated with the Cherubim, as the color red is with the Seraphim.

Chesed. See HESED

Cheta or **Che-ti** (Chinese) Used in Chinese Buddhist works in reference to the famous Saptaparna Cave mentioned by a number of Chinese Buddhist pilgrims and writers, such as Fa-hian and Hiuen-Tsang. This cave is supposed to be one of the spots where the brilliant shadow of Gautama Buddha may still be seen on the walls of the cave at certain times by those who are fit and ready to

perceive it. It is stated that in this famous cave, Gautama Buddha used to meditate and teach his arhats and disciples.

Chetana (Sanskrit) *Cetana* As a noun, an intelligent being; the soul, the mind. As an adjective, especially in philosophy, percipient, conscious, sentient, intelligent.

The noun **chetanā** means consciousness, sense, intelligence.

Cheybi. See KHABA

Chhandaja (Sanskrit) *Chandaja* [from *chanda* will + the verbal root *jan* to be born] Will-born, self-produced. The kumaras and other divine beings such as the agnishvattas and manasaputras, are often spoken of in Hindu literature as being chhandajas.

The word can also be translated as pleasure-born, because chhanda often means joy or pleasure, since will and innate desire are different phases of the same fundamental fact.

Chhanda-riddhi-pada (Sanskrit) *Chanda-ṛddhi-pāda* [from *chanda* desire + *ṛddhi* supernormal power + *pāda* step, ray, beam] Pleasure-power-training; one of the steps enumerated in raja yoga: “the final renunciation of all desire as a *sine qua non* condition of phenomenal powers, and entrance on the direct path of Nirvana” (TG 324). The compound itself points out that by abandoning the lower desires and pleasures, one enters upon the path of obtaining the celestial joys and vast expansion of faculty and its spiritual use, although even this last is finally abandoned for a still higher stage.

Chhanmuka (Sanskrit) *Chanmūka* “A great Bodhisattva with the Northern Buddhists, famous for his ardent love of Humanity; regarded in the esoteric schools as a *Nirmanakaya*” (TG 80).

Chhannagarikah. See SHANNAGARIKAH

Chhaya (Sanskrit) *Chāyā* A shade, shadow, copy; esoterically, the astral image or body of a person. Besides referring to the human astral form, the term is usually applied to the shadows or copies — the astral body-projections — of the spiritual beings or pitris who played an important part in the early evolutionary development of humankind. In the first root-race, “the pure, celestial Being (Dhyan Chohan) and the great Pitris of various classes were commissioned — the one to evolve their images (*Chhaya*), and make of them physical man, the others to inform and thus endow him with divine intelligence and the comprehension of the *Mysteries of Creation*” (SD 2:233n). This idea also appears in the *Zohar*: “ ‘In the *Tzalam* (shadow image) of Elohim (the Pitris), was made Adam (man)’ ” (SD 2:137). See also SANJNA

Chhaya Birth The primeval mode of asexual procreation of the first root-race of mankind on this globe in this round. This first race, who were mere chhayas (astral forms or images), are said to have oozed out from the forms of the pitris. See also SANJNA

Chhinnamasta Tantrika (Sanskrit) *Chinnamastā Tāntrika* [from *chinna* severed + *masta* head] Buddhist tantric sect named for the goddess Chhinnamasta, represented with a decapitated head. In their highest initiation, the adept “must ‘cut off his own head with the right hand, holding it in the left.’ Three streams of blood gush out from the headless trunk. One of these is directed *into the mouth* of the decapitated head . . .; the other is directed toward the earth as an offering of the pure, sinless blood to mother Earth; and the third gushes toward heaven, as a witness for the sacrifice of ‘self-immolation.’ Now, this had a profound Occult significance which is known only to the initiated . . .” (BCW 4:265-6).

Chhayaloka (Sanskrit) *Chāyāloka* [from *chāyā* shadow + *loka* world] Used in the Stanzas of Dzyan for the shadow of cosmic spirit, the first shadowy veil involving the origins of primal or intellectual forms: “the ‘Divine Arupa’ (*the formless Universe of Thought*) reflects itself in Chhayaloka (*the shadowy world of primal form, or the intellectual*) the first garment of (*the*) Anupadaka” (SD 1:118-19).

Also an equivalent of the Greek and Roman Hades, the world of shades, eidola, and umbrae, corresponding to kama-loka.

Ch'i. See KHI

Chiah. See HAYYAH

Chichhakti (Sanskrit) *Cicchakti* [from *cit* thought + *śakti* power] Mental power, the power which generates thought.

Chichhakti. See CHICHCHHAKTI

Chidachit (Sanskrit) *Cidacit* [from *cit* pure thought, intelligence + *acit* non-thought, non-intelligence] Chit represents the intelligence side of nature, and its opposite, achit, is its vehicle, the substantial or matter side of nature. Chidachit refers to that which is neither the one nor the other, but the link or intermediate division between the mental form of the Logos and the manifested form in substance; hence it is equivalent to fohat.

Chidagnikunda (Sanskrit) *Cidagnikuṇḍa* [from *cit* thought, consciousness, spirit + *agni* fire + *kuṇḍa* receptacle for fire, hearth, a place in which fire may burn] The interior fire of the spirit or the mystical site in the human constitution in which the fire of spiritual thought burns. The mahatma is said to completely transmute his ahamkara (merely ego-consciousness) and elevate it to spiritual egoic universality in chidagnikunda.

Chid-akasa (Sanskrit) *Cid-ākāśa* [from *cit* consciousness + *ākāśa* ether, space] Abstract cosmic consciousness as active in spiritual cosmic substance or akasa; the infinite field of universal consciousness, pure cosmic intelligence in its union with abstract cosmic substance, the spiritual side of svabhavat. Because each universe in the Boundless is in itself a cosmic individual, having

its own wide fields of spiritual egoity, the chit is the svabhava (intrinsic individuality) of said universe.

Chidrūpa (Sanskrit) *Cidrūpa* [from *cit* pure thought, intelligence + *rūpa* form, body] The essence or form of intelligence; the logos of a hierarchy. *See also* ACHIDRUPA

Chiim. *See* HAYYIM

Chikitsa-vidya-sastra (Sanskrit) *Cikitsā-vidyā-sāstra* [from *cikitsa* the practice or science of medicine, particularly therapeutics + *vidyā* knowledge, science + *sāstra* scripture] A manual on the science of medicine “which contains a number of ‘magic’ prescriptions. It is one of the *Pancha Vidya Shastras* or Scriptures” (TG 324).

Chiliocosm (Greek) [from *chilioi* thousand + *kosmos* world] In Northern Buddhism, a world made up of a thousand regions; spoken of as equivalent to Sahalo-Kadhatu [Saha-lokadhatu] (ML 199), out of the many regions of which only three are named: kama-loka, rupa-loka, and arupa-loka. It is also stated that kama-loka has many subdivisions or subregions, so that the threefold enumeration is a rough summary of a manifold classification.

It might be said that the universe is infilled with chiliocosms, each one corresponding more or less to a hierarchy with its own integral system of worlds, regions, or divisions, each division again being subdivided to form the vast complexity of universal nature we see around us. Further, each such hierarchy from another standpoint consists of divine, spiritual, intellectual, astral, or astral-physical divisions running from the higher downwards to the lowest; and the three lowest of each such chiliocosm bear the names kama-loka (or kama-dhatu), rupa-loka (or rupa-dhatu), and arupa-loka (or arupa-dhatu), these three commonly spoken of as the trailokya, the name applying to whatever universe, hierarchy, or chiliocosm they may be in or belong to.

With regard to the trailokya, the lowest or kama-dhatu is generally the various subordinate or lowest regions of desire; the second or rupa-dhatu, while worlds of form, are of such ethereal and subtle character that they may be defined as worlds or regions of a purely intellectual or mental character; whereas the highest or arupa-dhatu comprises regions of so purely spiritual — not merely ethereal — character that the words states or divisions can alone give some idea of their character.

Chimah. *See* KIMAH

Ching-fa-yin-Tsang (Chinese) The mystery of the eye of the good doctrine; in Chinese Buddhism, the esoteric teaching or interpretation of Gautama Buddha. However, “To any student of Buddhist Esotericism the term, ‘the Mystery of the Eye,’ would show the absence of any Esotericism” (BCW 14:444).

Chinmatra (Sanskrit) *Cinmātra* [from *cit* thought + *mātra* elementary thought, intelligence]

Essential thought, mind per se; used in Vedanta philosophy, particularly the Advaita, for the germ of cosmic ideation existing at every geometrical point of the infinite chidakasa (field of cosmic ideation). Not to be confused with collateral Vedantic terms mulaprakriti (undifferentiated elemental cosmic matter) or chidakasa. These three are considered from a subjective standpoint as aspects of parabrahman. In the human constitution it is the seventh principle or atman.

Chinva or **Chinvat** (Avestan), **Chinvar** (Pahlavi) [from Pahlavi *chitan*, Avest *chinaeta* to arrange or lay as in bricklaying, pick and choose + the verbal root *vid* knowledge, recognition] Alludes to the gradual attainment of knowledge of truth, hence the act of laying the path of knowledge brick by brick.

Chiram. See HIRAM

Chiromancy. See DIVINATION

Chit (Sanskrit) *Cit* Abstract thought, consciousness as contrasted with concrete or operative thought. According to Vedantic philosophy, chit is one of the three attributes (sat, chit, ananda) of atman or Brahman or, again, of the cosmic Logos.

Chiti (Sanskrit) *Citi* [from the verbal root *cit* to think] Understanding; “that by which the effects and consequences of actions and kinds of knowledge are selected for the use of the soul,” or “conscience the *inner* Voice in man” (SD 1:288n). Some yogis consider chiti as a synonym of mahat, but theosophic philosophy considers mahat the root and base as well as the germ of chiti. Chiti is manas functioning under the illumination of buddhi, and therefore becomes discriminative or intuitive understanding, an organic activity as contrasted with abstract or pure thought or consciousness. This function when developed makes of the human intermediate nature an entity virtually identic with a manasaputra, and thus attracts by spiritual affinity guardian spirits or chitkalas, synonymous themselves with manasaputras.

Chitkala (Sanskrit) *Citkala* [from *cit* abstract thought or consciousness + the verbal root *kal* to urge on, impel, stimulate] The inciters or stimulators of consciousness or intelligent thought; manasaputras. The spiritual beings who, during the course of the early and middle third root-race, furnished humanity with the higher manasic element from their own essence; hence one of the guardian spirits of the human race. Because the chitkalas or kaumarika manasaputras belong to the Hierarchy of Light or Compassion, they have frequently been allied with what the Chinese call Kwan-Yin, the goddess of mercy or pity, who may be called the feminine aspect of the cosmic Third Logos.

Chitkara (Sanskrit) *Citkara* [from *cit* thought, consciousness + the verbal root *kṛ* to do, make] The thought-worker; the guardian angel in human beings.

Chitragupta (Sanskrit) *Citragupta* [from *citr* to depict, color with various colors + *gupta* hidden] The secret recorder who paints the picture of the person’s life on the astral light; a deva-scribe in

the abode of the dead, who records human virtues and vices and reads out the account of every soul's life from his register when the incarnate soul arrives in the kingdom of Yama, the god of death; a variant of the lipikas.

Chitrasikhandin (Sanskrit) *Citraśikhaṇḍin* Bright-crested; a title given to the seven rishis (saptarshayas) who are the ensouling powers of the seven stars of the constellation of the Great Bear (Riksha). The mystical number seven was seen to be figured in heaven by the seven large stars of the constellation Great Bear, assigned by ancient Egyptians and Hindus to the Mother of Time, and of the seven elemental powers. *See also* BHUTASARGA

Chitra Sikkandinas. *See* CHITRASIKHANDIN

Chitta (Sanskrit) *Citta* [from the verbal root *cit* to fix the mind upon, design, be intent upon] Thinking, reflection, pondering; used for either the mind or the heart, as being considered respectively the seats of conscious or unconscious mentation. Also used for memory, intelligence, reason, while in astrology it is the name of the ninth mansion (Sagittarius).

Chitta-riddhi-pada (Sanskrit) *Citta-riddhi-pāda* [from *citta* intelligence, thought, memory + *riddhi* supernormal power + *pāda* step, inspiring ray] In raja yoga, the step of renunciation of the lower memory, in the attainment of supernormal faculty or power. “The third condition of the mystic series which leads to the acquirement of adeptship; *i.e.*, the renunciation of physical memory, and of all thoughts connected with worldly or personal events in one's life — benefits, personal pleasures or associations. Physical memory has to be sacrificed, and recalled by *will power* only when absolutely needed” (TG 324).

Chitta-smṛiti-upasthana (Sanskrit) *Citta-smṛiti-upasthāna* [from *citta* intelligence, thought, knowledge + *smṛiti* remembrance + *upasthāna* placing before oneself, a following after, pursuit] Placing before oneself the knowledge of remembrance; in Buddhist literature “keeping ever in mind the transitory character of man's life, and the incessant revolution of the wheel of existence” (TG 324).

Chium, Chiun (Hebrew) *Kiyyūn, Khiyūn* A god worshiped by the Israelites in the desert: “ye have borne the tabernacle of your Moloch and Chiun your images, the star of your god” (Amos 5:26). Said to be derived from the Chaldeans, it may have been the planet Saturn, and Blavatsky writes: “*Kiyun*, or the god Kivan, worshipped by the Hebrews in the wilderness, is Siva, the Hindu, as well as Saturn” (IU 1:570).

While there is an undoubted mystical and historic connection with the planet Saturn, there is evidence which would likewise point to the planet Venus as having been at times intended by the word Kiyun, as was the opinion of the Church Father Jerome.

Chohan (Tibetan) [poss from *chös* law, dharma + Mong *khan* lord] “Lord of the dharma”; in *The Mahatma Letters* chohan is the title usually given to superiors among the Masters of the Great

White Lodge, whose chief is called the Maha-chohan. Also a general term used for beings in several states of evolution higher than the human. "There are men who become such mighty beings, there are men among us who may become immortal during the remainder of the Rounds, and then take their appointed place among the highest Chohans, the Planetary *conscious* 'Ego-Spirits' " (ML 130). Because chohan is used much as "chief" is used in English, the term does not signify one single degree in spiritual evolution.

Besides the chohans of light there are chohans of darkness who preside over pralayas, ruled by the Mamochohan. *See also* DHYANI-CHOHANS.

Choice, Moment of In theosophical literature, the point when the individual, on becoming a buddha, must decide either to renounce the world and its suffering and enter nirvana as a Pratyeka Buddha, or to return as a Buddha of Compassion to help others until all living beings reach nirvana. This decision will be determined by the aspirations and motives of the individual over many lives.

The phrase also refers to the period in the fifth round when human beings will find themselves either able to continue their evolution further up the luminous arc, developing their buddhic qualities; or, if unable to go beyond purely mental or manasic development, forced to enter paranirvana for the rest of the planetary manvantara. This period for the human kingdom corresponds to the period for the animal kingdom in the fourth round when the "door to the human kingdom" closed. At that time animals unable in this cycle to develop manas and enter the human kingdom reached the limit of their evolution for this planetary manvantara and, in the mass (excepting sishtas), had to enter paranirvana for the remainder of this planetary cycle.

Cho-khan. *See* CHOHAN

Chorea [from Greek *choreia* dancing] A disorder of the nervous system, characterized by a peculiar convulsive and irregular action of the voluntary muscles, especially those of the face and extremities. It has been called insanity of the muscles, since their action is without harmony or purpose, and each seems to have a will of its own. It is most common in the impressionable years of childhood and adolescence, though appearing at different ages and associated with other diseases which, as a rule, are free from choreic movements. All types have significant common features. First, that many cases are free from organic disease shows that this is a purely functional one; when it complicates other diseases, it retains the typical movements of essential chorea. Whether it develops after some infectious or exhausting condition or polluting experience, or after some mental or psychological strain or shock, like fright or fear, the choreiform reaction indicates the occurrence of an unstable balance between the physical and astral bodies and the inner and higher manasic in man. Persons who develop chorea share a common psychic susceptibility which marks those who are subject to disturbances like hysteria, mediumship, epilepsy, and other phases of obsession. In addition, there are similar signs of a besieging influence at first, as when the child

grows peevish, capricious, and restless, wants improper food, is listless at school, suffers with disturbed sleep and night-terrors; and later begin the convulsive movements in the muscles which are naturally under the control of the conscious will. The individual will thus weakened and, in some cases, psychic changes like hallucinations and somnambulism, point to the characteristic action of some astral influence. Further evidence of this is seen in the danger of chorea developing into more serious nervous disorders; whereas, with proper mental, moral, and physical care, cure results when the spiritual will regains its rightful place in controlling the course of life.

Chos (cho) (Tibetan) Translation of the Sanskrit dharma, in four main senses: 1) the teaching of the Buddha; 2) the reality or truth which the teaching points at; 3) in the plural, individual truths, realities, facts, events, distinguishable qualities or properties; and 4) a teaching in general, a religion.

Chrestes, Chrestos, Chrestians (Greek) *chrestos*. Applied by the Greeks as a title of respect equivalent to “the worthy.” Chrestes meant an interpreter of oracles. In the language of the Mysteries, a chrestos was a candidate or neophyte, and a christos (anointed) was an initiate. Christ is a mystical expression for the human inner god, while chrest is the good but as yet unregenerated nature; using here the language of the Mysteries, Christ may be likened to Dionysos, Osiris, or Krishna, who will deliver the suffering Chrest, mankind or Prometheus, in its trial. It is Christos that incarnates in Chrestos. These usages were taken over by the Gnostic schools out of which Christianity largely sprang, and there is abundant evidence to be found among the early Christian writers and the Gnostics themselves that the adherents originally called themselves Chrestians.

Christ. See CRESTES; CHRISTOS; MESSIAH

Christmas Christmas Day and its festival are a curious blend of Christian, Jewish, Roman, Western pagan, and perhaps other institutions. It arose as a Christian festival as part of the adaptation of the early Christian Church to the world in which it grew up. The accounts given of the birth of Christ present obvious difficulties against regarding this date as that of his actual birth, and it was looked upon rather as a commemorative festival. Before the 5th century there cannot be said to have been any general consensus as to the date, the choice wavering between that of Epiphany on January 6th, the 25th of March, and the 25th of December.

The celebration of the winter solstice, often identified with that of the new year, is virtually universal and denotes among early Christians the mystic birth of the Christ; the significance has, however, with the Christian Church, been divided between Christmas and Easter. Besides its application to the death and rebirth of the year, and to death and regeneration both cosmic and human, the symbol has special reference to the esoteric rite and exoteric drama performed in the Mysteries at this epoch, where the candidate for initiation was placed in a tomb or coffin, or on a cruciform couch, where his body remained entranced during the experiences of his liberated self,

until rebirth or resurrection on the third day.

Christmas customs likewise are derived from various sources: the exchange of gifts or sweets is a common accompaniment of new year celebrations; the tree is a universal symbol of manifested nature, and this appears again as the cross, which however is appropriated to the Friday before Easter. At the winter solstice, the sun enters Capricorn, a house of Saturn — who appears in such figures as Santa Claus, Saint Nicholas, and Old Father Christmas; and the spirit of license and good cheer are more appropriate to the genius of Saturn, especially in the form of Silenus or a satyr, than to the mystic birth of the neophyte.

Christos (Greek) Anointed; applied in the Greek Mysteries to a candidate who had passed the last degree and become a full initiate. Also the immanent individual god in a person, equivalent in some respects to Dionysos, Krishna, etc. The Hebrew word for anointed (*mashiah*) is generally written in English as Messiah. What we know as Christianity is a syncretism of borrowings from Neoplatonism, neo-Pythagoreanism, Greek Gnosticism, and Hebrew religion. Christos was commonly used in the Greek translation of the Bible as a title of the Jewish Kings, those who had been anointed for reigning — a symbolic rite taken originally from the Mysteries. St. Paul's use of the word shows that he understood its true mystical meaning, but spoke with precaution in his public epistles or writings.

The first two letters of the Greek word, $\chi\rho$, superimposed in a monogram, were on the military standard of the later Christian emperors of Rome, probably dating from Constantine, and have a significance as geometrical symbols besides. *See also* CHRESTOS

Christna. *See* KRISHNA

Chronos (Greek) Time; in Orphism, Phanes (or Eros), Chaos, and Chronos constitute a triad which, emanating from the Unknowable, reproduces the worlds; essentially one, it acts on the plane of maya as three distinct things. Chronos was identified with the titan Kronos, who dethroned Ouranos and succeeded him as ruler of the world, himself being succeeded by Zeus. Kronos devours his own children, which is symbolic of time which both brings forth and destroys events.

Chroub. *See* CHERUB

Chthonia(n) [from Greek *chthon* earth] In or under the earth; applied to various divinities as gods of the underworld. In the system of Pherecydes, kosmos contains three higher principles, “Chthona (Chaos), Aether (Zeus), and Chronos (Time), and four lower *principles*, the elements of *fire, water, aire* and the *earth*” from which everything visible and invisible was formed (BCW 13:284). Also equated with chaotic earth (IU 1:156). *See also* INFERNAL DEITIES

Chuang Tzu (Chinese) Chinese philosopher (late 4th century B.C.) who, with Lao Tzu and Kuan Tzu, is regarded as one of the patriarchs of Taoism. He wrote a work under his name which treats of the tao and its relation to the universe and man, and gives directions for the conduct of human life.

Chubilgan. See CHUTUKTU; KHOBILGAN

Chupunika (Sanskrit) *Cupuṇīkā* One of the seven Pleiades.

Churning of the Ocean The agitation of milk, separating the uniform fluid into butter and buttermilk, is used as a figure with various applications, but chiefly to a stage in cosmogenesis when the one cosmic substance becomes differentiated into the “cosmic curds.” By this churning, according to the Hindu tale, is produced amrita, the cosmic soma, the fluid of immortality; but inevitably at the same time is produced visha (poison), this being the polar qualities in the cosmic forces, and likewise in ethics good and evil. The Ocean of Milk or Life, space, is churned by the gods; the radiant essence curdled and spread throughout the depths. It is said in the *Satapatha-Brahmana* that this took place in satya yuga, but the reference here is to cosmic yugas, a period before the earth’s earliest formation. The allegory however may apply to the initial stages of cycles of various magnitudes, and has also astronomical and geographical applications to the formation of world-stuff out of primary matter and to the dvipas or climatic zones, whether celestial or terrestrial, which are spoken of as seas of milk or of curds.

Chutuktu, Hutukhtu (Mongolian) Also Khutukhtu, Houtouktou, etc. Sainly; same as the Tibetan tulku or chutuktu and the Chinese huo-fo (living buddha), rendered into Chinese by the ideographs *tsai lai jen* (the man who comes again, the one who returns), identic in meaning with the Buddhist tathagata. A high initiate or adept; those individuals who are, or are supposed to be, incarnations of a bodhisattva or some lower buddha; although these so-called incarnations may be not actual reimbodiments in the strict sense, but rather what may be described as overshadowings by a buddhic or buddha-power. The chutuktu is able, upon leaving his body at death, consciously to seek reimbodiment almost immediately in some child newly born, or at the moment of birth. Blavatsky states that it is commonly believed that there are “generally five manifesting and two *secret* Chutuktus among the high lamas” (TG 85).

Chyuta (Sanskrit) *Cyuta* [from the verbal root *cyu* to move to and fro, fall, fade] The fallen; “the Dhyanis who incarnate in the human forms of the *Third* Root-Race and endow them with intellect (Manas) are called the *chyuta*, for they fall into generation” (SD 2:47n). See also ACHYUTA

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ci-Cz

Cicchakti. *See* CHICHCHHAKTI

Cicero, Marcus Tullius (106-43 BC) Roman orator, statesman, and philosopher, who helped popularize Greek philosophy in Roman thought and create a philosophical language in Latin. Famous for the style of his speeches, letters, and essays, he is credited as the creator of classical Latin prose. A firm republican, he was executed for opposing the imperial factions after Caesar's murder.

Cimmerians In Greek mythology a people who dwelt in a land of mist and darkness, variously placed, as by Homer in the extremest west on the ocean; in historical times, a people in the Palus Maeotis, who were driven away by the Scythians. The Cimmerians were contrasted with the Hyperboreans, who inhabited a land of perpetual sunshine.

Cipher. *See* CIRCLE; ZERO

Circle In the description of cosmological symbols, the first figure is a circle: ever-eternal, universal

nature, the abstract space of a cosmic hierarchy. The circle itself may be taken as the symbol of this first manifestation, the clean sheet of paper representing abstract space, the Boundless. This circle is in reality boundless, its circumference being ideal, representing the limits of our perceptions of physical or inner space, or the ideal boundary which must be postulated in our conceptions of infinitude.

The second circle, with the central point, represents the First Logos of any hierarchy, the mystic unity symbolized by the inclusive number one, the unitary source from which proceed the creative rays or sevenfold manifestation of the Logos. The point at its center is the symbol of the cosmic germ of generation out of which all later beings emanate or flow, and hence it is the first manifestation.

Considering the circle as a line, it is without beginning or end; progress from any point in it brings us eventually to the same point again without turning back. Thus it is a symbol of cyclic evolution. Eternal motion is essentially circular and vibratory. A circular motion becomes spiral, and this is the cosmic serpent, emblem of cosmic forces, and hence of life on all planes. The egg is another form of the circle or sphere symbol; the chakra or wheel as used in India is another. The circle may be conceived as either one unbroken line, having no parts, or as an infinitude of points — which shows that zero and infinity are extremes which meet. In the symbol of the circle, spirit and matter are not yet separated; it is spirit-substance. For the problem of squaring the circle, *see* PI.

Circle of Necessity The general evolutionary cycle involving the cycles of reimpodiments which every monad has to undergo, whether on this earth, or on this or other planetary chain. In another usage, it is the kuklos anankes (Greek “circle of necessity,” or “unavoidable cycle”) which the excarnated soul has to pass through, according to the Egyptian teachings. The first usage refers to the periodic reimpodiments of the revolving and evolving egos on globes and planetary chains; whereas in the second are contained the ideas of kosmic monadic cycles involving a far wider range of evolutionary activity. *See also* KUKLOS ANANKES

Circulations of the Cosmos The pathways or channels connecting the invisible worlds of the solar system by vital and nervous cosmic streams. Just as in the human body, the solar system, which is an organic entity, has its own network of nerves, arteries, and veins, as well as its pathways along which run to and fro the streams of forces imbodying various degrees of cosmic intelligence and life. *See also* INNER ROUNDS; OUTER ROUNDS

Clairaudience Clear-hearing; ways of hearing which, at our present stage of evolution, are abnormal, whether psychic or spiritual. Psychic clairaudience is a reflection or distortion of spiritual clairaudience, which extends to the solar system or even beyond, enabling one to perceive as sound the movements of all nature, from the cycles of the spheres to the vibrations of atoms.

Clairvoyance Clear-seeing; generally, the power to use the psychic sense of vision to see things on the astral plane, the imperfect shadows of things to come or the astral records of things past. But this faculty is of restricted scope and very apt to mislead; prematurely developed in an untrained person, it is more likely to lead to error than to benefit. True clairvoyance is the opening of spiritual vision, called in India the Eye of Siva and beyond the Himalayas the Eye of Dangma; a faculty which enables the seer to see the truth and to recognize it as such. Among the seven saktis (occult powers) is enumerated jnana-sakti, which in its higher aspects is the power of knowing, true clairvoyance, but which on lower planes becomes more or less perfect psychic clairvoyance. True clairvoyance enables the seer to discern the reality behind its veils, to know right action, and to see what is happening in worlds removed by distance or difference of plane from our own. Retrospective clairvoyance interprets the past through its indelible records in the akasa.

Cleanthes (3rd century BC) Greek Stoic philosopher and poet, native of Asia Minor, who studied under Zeno at Athens for 19 years and succeeded him as head of the Stoic school in 260 BC; a beautiful hymn to Zeus is the only one of his writings that remains today.

Climacteric A critical period; a year in which important changes are held to occur, as in one's 63rd year (grand climacteric). But climacteric year "has more than the usual significance, when used by Occultists and Mystics. It is not only a critical period, during which some great change is periodically expected, whether in human or cosmic constitution, but it likewise pertains to spiritual universal changes" (SD 1:656n). Each person has a climacteric point "when he must draw near to death; if he has squandered his life-powers, there is no escape for him; but if he has lived according to the law, he may pass through and so continue in the same body almost indefinitely" (BCW 8:400).

Clito (Greek) Neptune "finds on a small island only one human couple made of clay (*i.e.*, the first

physical *human* man, whose origin began with the last sub-races of the Third Root-Races). It is their daughter Clito that the god marries, and it is his eldest son *Atlas* who receives for his part the mountain and the continent which was called by his name” (SD 2:765)

Cloaca Maxima. See EIGHTH SPHERE

Clothed with the Sun. See INITIATION

Clotho (Greek) *Klotho*. The spinner; in Greek mythology, one of the three Moirae (Fates). Human life was mystically pictured as a thread of destiny overseen by three sisters, powers of nature, named Clotho, Lachesis (disposer of lots), and Atropos (inevitable). Clotho, represented as a maiden holding the distaff, spun the thread of life.

Coach ha-Guf. See KOAH HAG-GUPH

Coadunation or **Coadunition** [from Latin *coadunare* to unify] Union; used in theosophical literature to define the interrelation of the globes of any planetary chain. Speaking of the earth-chain, “In short, as Globes, they are in co-adunition but not in consubstantiality with our earth and thus pertain to quite another state of consciousness” (SD 1:166). Were they consubstantial they would be on the same plane and of the same degree of manifested substance that our fourth-plane or physical globe earth is, whereas the higher globes are on different planes (cf SD 1:200, diagram). Yet they form one unitary system. Nevertheless, this must not be taken as implying that they occupy the same space. “Of course if there was anything in those ‘worlds’ approaching to the constitution of our globe it would be an utter fallacy, an *absurdity* to say that they are *within* our world and *within* each other (as they *are*) and that yet, they ‘do not intermingle together’ ” (Blavatsky Letters to Sinnett, 250).

Coats of Skin. See KOTHNOTH ‘OR

Cobra. See SERPENT; SSHA

Cock A “very occult bird, much appreciated in ancient augury and symbolism. According to the *Zohar*, the cock crows three times before the death of a person; . . . As the cock was always connected in symbology with the Sun (or solar gods), Death and Resurrection, it has found its appropriate place in the four Gospels in the prophecy about Peter repudiating his Master before the cock crowed thrice. The cock is the most magnetic and sensitive of all birds, hence its Greek name *alectruon*” (TG 86). In the Zoroastrian Avesta, the cock is called Parodarsh “he who foresees” the coming dawn, and is also termed the drum of the worlds, for he crows in the dawn which dazzles away the fiends of the Avesta: thus he shares with the dawn the honor of the victory.

Codex Nazaraeus or the Book of Adam (i.e., of man or humanity); the chief sacred scripture of the Nazarites and of the Mandaeans or Nasoraean; written in a Chaldeo-Syrian dialect mixed with the mystery language of the Gnostics. It is an instance of esotericism in a sect whose origin was pre-

Christian, but which survived for many centuries into the Christian era as an esoteric school running parallel with exoteric Christianity. Its symbolic teachings are shown to be identical with those in *The Secret Doctrine*.

Coelus. See OURANOS

Collyridians [from Greek *collyris* a little cake] A Gnostic sect in the early Christian Church, who transferred their worship of Ashtoreth to the Virgin Mary, to whom they offered ceremonial wafers with emblems stamped on them to denote the Queen of Heaven.

Colob. See KOLOB.

Color From darkness comes white light; from white light comes color. These correspond to the unmanifest Logos, the manifest Logos, and the seven rays, and this cosmogonical scheme is repeated throughout the universe.

White light is in the physical world resolvable into a spectrum or band of colors, and color is defined as a quality of visual perception depending on the wavelength of light. But according to theosophy we could see no color at all unless we had it in our mind from the first, and thus recognized the color outside because of its identity with what is within us. Still less could we resolve the continuous band into seven colors, as even infants can do. The physical stimuli merely evokes what is already in us, the latter recognizing what is objective outside us, causing a phenomenon of cognition to pass along the plane of the physical senses. This becomes more evident when we remember that color sense is relative, depending largely on contrast. Colors are light or sight in its septenary aspect; and color, sight, and light are used almost interchangeably in speaking of the evolution of the senses and their corresponding planes of prakriti.

Colors and sounds have great potency in practical magic, as cosmic powers can be evoked by an understanding use of the proper colors and sounds. The seven colors correspond with other septenates, such as the notes of the musical octave, the sacred planets, and the seven primary elements. It is the universal septenate viewed from a visual aspect as manifested light.

Colors are one of the manifold manifestations of cosmic vitality, a septenary unity — or a denary or duodenary unity, according to the manner of enumeration — these cosmic forces are interchangeable, their incomprehensible aggregate being cosmic life; therefore, any form of this cosmic life has not only its particular keynote of sound, but likewise its particular keynote of color, etc.

Columns. See PILLARS

Comet [from Greek *komet* long-haired, alluding to the cometary tail] A stage in the formation of globes from the primordial world-stuff, following the state known as the comic curds and preceding the formation of suns and planets. “What does Science know of Comets, their genesis,

growth, and ultimate behaviour? Nothing . . . And what is there so impossible that a laya centre — a lump of cosmic protoplasm, homogeneous and latent, when suddenly animated or fired up — should rush from its bed in Space and whirl throughout the abysmal depths in order to strengthen its homogeneous organism by an accumulation and addition of differentiated elements? And why should not such a comet settle in life, live, and become an inhabited globe!” (SD 1:204). They are called wanderers, and some of them become suns, others planets. Some become attracted to solar systems and pursue closed orbits because they are re embodying planets; others have not yet assumed periodic form; more are either broken up or absorbed by the influence of neighboring suns or globes. The matter of which they are composed, though on the same plane albeit in its higher portions, as our senses (otherwise they would not be visible to us), is not of the same kind as our terrestrial matter, but they are on their way towards it during their ages of condensation.

Come to Us, Day of. *See* DAY BE WITH US, GREAT

Communion In Christian Churches, the sacrament of the Eucharist, an ancient pagan rite early adopted by Christendom. It originally signified communion of the human self with its inner god, a state attained more or less perfectly during initiation, or by those who have attained the power thus to communicate, and symbolized in the Mysteries by ceremonial rites similar to those which the Church has borrowed. *See also* BREAD AND WINE

Compassion [from Latin *com* with + *pati* to bear, suffer] Sympathetic understanding; the feeling of one’s unity with all that is, resulting in an “intimate magnetic sympathy with all that is.” (OG)

“Canst thou destroy divine compassion? . . . Compassion is no attribute. It is the LAW of laws — eternal Harmony, Alaya’s SELF; a shoreless universal essence, the light of everlasting Right, and fitness of all things, the law of love eternal.

“The more thou dost become at one with it, thy being melted in its BEING, the more thy Soul unites with that which IS, the more thou wilt become Compassion Absolute.

“Such is the Arya Path, Path of the Buddhas of perfection” (VS 69-70).

Compensation, Law of. *See* KARMA

Concentration With meditation, an equivalent for certain parts of yoga, as found in samadhi, dharana; the removal or surmounting of distractions originating in the mind and centering the latter on the spiritual and intellectual objective to be attained, which in the best sense is union with the inner god, the divine monad — a conscious identification of oneself with the universal through the individual’s innate divinity. The method of meditative concentration prescribed in the *Bhagavad-Gita* is to perform all the duties of life without either attachment or avoidance. The hindrances to concentration which are to be removed are those arising from anger, lust, vanity, fear, sloth, etc. Such obstacles are removed by lifting the mind above them or by deliberately ignoring them, since directly fighting with them serves to concentrate the mind on them, thus

defeating the object aimed at; and by cultivating the spirit of impersonal love and the light of wisdom which it evokes. Thus the blending of the personal self with the impersonal self is achieved by an orderly process of self-directed evolution, first by unselfish work in the cause of humanity, continued in the various degrees of chelaship, culminating in initiation.

Concentration has often been perverted to mean a kind of personal self-culture, having for its aim the attainment of personal power or self-satisfaction. If unsuccessful, the attempt upsets the balance of the constitution, and if successful, it sows a bitter harvest of aroused personality for future reaping; for when yearning for sympathetic fellowship with our fellowmen we shall find our faculties counterworking us. True meditative concentration actually applies more to the heart than to the mind, and is not a forcible mental practice but a general although very positive and impersonal attitude towards life. It means the centering of our wishes, thoughts, and acts on the ideal of self-identification with the spiritual and universal. *See also* DHYANA.

Conflagrations. *See* CATAclysms

Conjunction A conjunction of two heavenly bodies occurs when, as seen from the earth, they are in the same ecliptic longitude, according to astrology; or in the same right ascension, according to astronomy. More than two bodies appearing in exact conjunction is an exceedingly rare occurrence. The planets and the sun and moon are usually considered, but the fixed stars may be included. Such conjunctions have always been held in astrology to indicate, prefigure, or cause important events and changes, and to mark the changes of cycles. The conjunctions of Saturn, Jupiter, and Mars together are specially mentioned. The conjunctions of the sun and moon are related to human and animal physiological conception. Also, the fact that the planetary orbits have nodes and apsides with their own periods of revolution, affords us material for the calculation of many longer periods. *See also* ANNUS MAGNUS.

Conscience The imperfectly received or recognized working of one's spiritual being, in itself a spiritual activity of the inner god, which as yet is able to send only some faint gleams of light, truth, and harmony into the heavy and obscure brain-mind in which most people live. The higher the stage of evolution, the more easily and abundantly is this spiritual energy transmitted to the lower self. Conscience is the voice of innate and of garnered spiritual wisdom, emanating first from the spiritual monad (buddhi) and also from the stored-up higher experiences of previous incarnations, reaching us through the veils of the intermediate principles. The thinner these veils are made through the cultivation of the virtues involved in impersonal living, the more easily does the conscience rule us and work within us.

Notwithstanding its source, the conscience cannot be said to be an infallible guide until the divine powers of the god within flow freely and are thus fully manifested. The cause of its fallibility is the blindness and reluctance of the brain-mind to receive these radiations from the divinity within. Yet, fallible though conscience be, it should be trusted and followed because it is a more or less

complete shining, in itself, of the inner light, and because by recognizing and using it, the radiation grows stronger and a person grows wiser.

Conscience is usually thought of as ethical and admonitory, and intuition, its alter ego, as instantaneous knowledge.

Consciousness [from Latin *conscio* knowing with, knowing together] The active state of spirit or the supreme fundamental in manifested existence. Like light, consciousness can become manifest only by means of a vehicle, and it can have various degrees of manifestation according to the planes. Individual consciousness originates in the Logos of any hierarchy. Every manifested entity is conscious to some degree, and is an expression of divine consciousness or spirit. Buddhi is said to be latent spiritual consciousness which becomes manifest intellectually in manas, so far as the human constitution goes (SD 2:275). Human consciousness is also closely linked to the senses.

The term consciousness is often used as alternative to spirit, as where it is said that consciousness and matter are the two aspects of parabrahman or that consciousness is the purest form of cosmic force; yet, strictly speaking, consciousness is an attribute of active spirit. It is sometimes called the universal life, the kosmic force-substance. The relative use of the word enables us to speak of states or degrees of consciousness, according to the state in which the essence is manifested on one plane or another; or to call one state unconscious by contrast with another, as when we compare waking consciousness with the consciousness of sleep or trance. *See also* SELF-CONSCIOUSNESS

Consentes Dii “Consenting or cooperating gods;” Etrusco-Roman gods or planetary rector, also called the Superior Deities or Twelve Counsel Gods, sometimes given as Juno, Vesta, Ceres, Diana, Minerva, Venus, Mars, Mercury, Jove, Neptune, Vulcan, and Apollo (BCW 5:222; FSO 319)

Conservation of Energy A scientific theory that the total energy of any material system is a quantity which cannot be increased or decreased by any action among the parts, and that when energy seems to disappear it is merely transformed into an equivalent quantity of another mode of energy. The theory, interpreted in its widest sense, means no more than an affirmation that something cannot be created out of nothing or resolved into nothing, and so would seem a perfectly harmless generalization. However, theosophy teaches that there is a constant inflow of force into any such physical or material system, which in the scientific view is from sources exterior to a “closed material system.” Theosophy does not regard such forces as exterior but looks upon closed material systems as merely phenomena on the physical plane of inner and powerful forces which produce such physical systems as an appearance — real enough for the entities within it while it lasts, but vanishing once the inner, controlling forces are withdrawn. Then the atoms simply vanish because the cohering energies which make them are likewise withdrawn.

From these considerations it is readily seen why the Masters or mahatmas in Blavatsky’s time stated that the scientific theory of the conservation of energy was wrong in concept and therefore untrue in fact, although workable enough as a mere hypothesis for laboratory studies and the then

closely restricted scientific theorizing of the day.

Correlation of forces, used by Sir William Grove (1842), is equivalent to the conservation of energy. It states that physical energies, such as light, heat, and mechanical energy, are convertible one into another, in equivalent quantities.

Controls In Spiritualism, one of the two intermediaries between the living receiver of the communications and the so-called spirit from whom the communications come. These intermediaries are the medium, who is on earth, and the control, who is beyond and serves as the agent of the communicating spirit and who controls the medium. Sometimes “guides” is used in a similar sense. In common with the spirits themselves, controls are spurious personalities engendered out of the temporary interaction of various elements in the astral light and the constitution of the medium and sitters.

Copts [from Arab from Greek *Aigyptioi*] The early native Christians of Egypt and their successors of the Monophysite sect, and now racially the closest representatives of the population of ancient Egypt. The Coptic language is a mixture of ancient Egyptian with Semitic and Greek borrowings; in the inscriptions the older demotic characters were replaced by a Greek alphabet with supplementary letters from the Demotic. The *Pistis Sophia* was originally discovered as a Coptic manuscript.

Corax (Greek) The raven; the lowest degree, that of servant, in the Mithraic systems of initiation, these various degrees corresponding to the different grades on a rising scale attained by the advancing neophyte.

Corn. See WHEAT

Coronation. See CROWN

Corpuscular Theory of Light Newton enunciated the theory that light consists in the emission and propagation of minute particles or corpuscles; but this theory failed to explain many important phenomena, especially those of diffraction, and was in time abandoned in favor of the undulatory or wave theory of Young and Fresnel, which proved satisfactory in explaining diffraction and polarization and in showing the connection between light and radiant heat, and its analogy with sound. This theory led to the supposition of an ether, in order that the undulations might be conceived in the same way as those waves which are observed in ordinary matter. Later, refined

investigations into energy transmission showed that this transmission must be regarded as particles, so that physicists speak of quanta of energy and photons of light. The apparent irreconcilability of the two necessary theories emphasizes that the former distinction between atoms and vibrations is no longer serviceable. But that which physicists call light is the effects produced in matter by light itself, which is one of the modes or effects of cosmic vital electricity — of fohat acting on the terrestrial planes. The forces of science are entified abstractions.

Correlation of Forces. See CONSERVATION OF ENERGY

Corybantes (Greek) *Korybantes*. Celebrants in the Mysteries of Rhea Cybele in Phrygia. The outer rites, celebrating the death and rebirth of Atys, began with lamentations and ended with rejoicings. On account of the boisterous character of these public celebrations, the word Corybantic has become a modern synonym for roistering. Also, the name for the eunuch priests of Cybele.

The death and rebirth of Atys represent initiation and subsequent adeptship. His impotency points directly to the perfect chastity required for the higher degrees of initiation.

Cosmic Egg. See EGG; HIRANYAGARBHA

Cosmic Element-Principles. See TATTVA

Cosmic Ideation Another name for divine thought, out of which springs the activity of universal mind — the collective aggregate of all individualized dhyani-chohnic consciousnesses everywhere. Theosophy postulates the appearance and disappearance of worlds, whether visible or invisible, as a continuous process, each world being a link in an endless chain of interlocking cosmic hierarchies. As one of these comes into manifested existence it is likened to an outbreathing of the divine breath, each such outbreathing being a thought of the cosmic ideation, this thought becoming a world. This divine breath, then, may be assumed to be cosmic ideation entering into the activity of manvantara; and cosmic ideation is the root again of all individual consciousness everywhere. Just as precosmic ideation is regarded as the root of consciousness, so precosmic substance is the spiritual substratum of matter. Thus manvantara is produced by means of the interlocking and interacting motion of cosmic ideation with primordial cosmic substance. Further, fohat is the intelligent energy behind this interlocking activity, which during manvantara joins these two together.

Cosmic ideation and cosmic substance are one in their primordial character, yet as the reawakening of the universal mind into manvantara needs the appropriate cosmic fields of action, cosmic substance may be said to be the manvantaric vehicle of cosmic ideation. Conversely, during cosmic pralaya, all the varied differentiations of cosmic substance are resolved back or indrawn once again into cosmic unity, a subjective condition, and hence during the cosmic pralaya cosmic ideation can no longer be called active, but passive.

Cosmic Planes. See DHATU; PLANE; LOKA; TALA; TATTVA

Cosmocraiores (Greek) *Kosmokratores* [from *kosmos* world + *kratores* lords] World lords; it occurs in Orphic literature, and in the New Testament Paul uses it of evil powers. In theosophy it is applied to the planetary regents who fabricated the solar system and who were hierarchically superior to the ones who fabricated our material earth (SD 2:23). The word is especially used in reference to three principal groups, corresponding to similar groups of dhyan-chohans and lipikas. The first group rebuilds worlds after pralaya, the second builds our planetary chain, and the third are the progenitors of humanity. Collectively they are the formative Logos, grouped under various names among different peoples, such as Osiris, Brahma-prajapati, Elohim, Adam-Qadmon, and Ormuzd. Again, “the Ases of Scandinavia, the rulers of the world which preceded ours, whose name means literally the ‘pillars of the world,’ its ‘supports,’ are thus identical with the Greek *Cosmocraiores*, the ‘Seven Workmen or Rectors’ of Pymander, the seven Rishis and Pitris of India, the seven Chaldean gods and seven evil spirits, the seven Kabalistic Sephiroth synthesized by the upper triad, and even the seven Planetary Spirits of the Christian mystics” (SD 2:97). Following the plan of divine ideation they fashion systems out of primordial material, called aether, ilus, protyle, etc. The cosmocraiores, as the Masons of the World, work in the vehicular or matter side of nature and receive the impress for their work from the hierarchy that works in the spirit side, the dhyanibuddhas or architects.

In another aspect the cosmocraiores relate to the genii or rectors of the seven sacred planets, and stand as the world-builders of the earth planetary chain.

Cosmogogenesis [from Greek *kosmos* world + *genesis* birth] The genesis of worlds, as distinguished from anthropogenesis or the genesis of mankind; as defined by Blavatsky: “At the commencement of a great Manvantara, Parabrahm manifests as Mulaprakriti and then as the Logos. This Logos is equivalent to the ‘Unconscious Universal Mind,’ etc., of Western Pantheists. It constitutes the Basis of the subject-side of manifested Being, and is the source of all manifestations of individual consciousness. Mulaprakriti or Primordial Cosmic Substance, is the foundation of the object-side of things — the basis of all objective evolution and Cosmogogenesis” (SD 2:24). The word is not restricted to earth, but includes innumerable globes; nor is it confined to those worlds which happen to be visible to our eye, but includes worlds on all the various planes of manifested substance. It does not mean that the worlds were created *ex nihilo* by divine fiat, nor that they were merely the productions from dead, unconscious, albeit eternal and uncreate matter. Again, cosmogogenesis is not a process which has occurred only once and for all, but a process which is repeated indefinitely during manvantaras and after great pralayas. Thus worlds are evolved from the state of latency or pralaya into which they passed at the close of the preceding manvantara, and both primordial matter and primordial spirit come from the same source — parabrahman — and are resolved again into it. The process is one of evolution or progressive manifestation on various planes of objectivity of the potentialities latent in the spiritual germ. World must be

understood, not with regard to any standards of size, but as including a universe of stars on the one hand and an atomic speck on the other.

The births and rebirths of worlds are not the haphazard productions of a consciousness eternal in its working on matter, eternal in itself and different from consciousness; but are the offspring or productions of consciousness-life-substance periodically manifesting its inherent life and powers by the appearances of different world systems — be these galaxies, solar systems, individual suns, or planetary bodies; or again, in the infinitesimal realms, atoms and their component electronic monads. The entire process of the appearances and disappearances of world systems is dependent on inherent karmic causality manifesting on all planes and taking its rise in the characteristics and action of consciousness and consciousnesses.

Cosmology The science of the structure, laws, and operations of the universe. “Occult Cosmology may be mastered if the student bears in mind that there is but One Universal Element, which is infinite, unborn, and undying, and that all the rest — as in the world of phenomena — are but so many differentiated aspects and transformations . . . of that One, from Cosmical down to microcosmical effects” (SD 1:75).

Cosmos. See KOSMOS

Cow The ancients employed certain animals as symbols to convey specific aspects of philosophical and religious teachings to the multitude, and “the cow-symbol is one of the grandest and most philosophical among all others in its inner meaning” (SD 2:470). Generally, the cow represents the fructifying power in nature — the Divine Mother or feminine principle. Among the Scandinavians that which first appeared at the birth of the universe was the divine cosmic cow, Audhumla, from whom flowed four streams of milk, providing sustenance to all the beings that followed. Among the Greeks the founding of a new race was associated with the cow — as instances, Io and Europa. In Egypt the goddesses representing the aspect of the Universal Mother are associated with cow symbols, principally Hathor and Isis. In India the cow symbol is revered: Kamaduh or Surabhi (the cow of plenty) represents the nourishing and sustaining vital and productive principle in nature. The goddesses of lunar type are found to be connected in symbology with the cow.

“The cow was in every country the symbol of the passive generative power of nature, Isis, Vach, Venus — the mother of the prolific god of love, Cupid, but, at the same time, that of the *Logos* whose symbol became with the Egyptians and the Indians — the bull — as testified to by Apis and the Hindu bulls in the most ancient temples. In esoteric philosophy the cow is the symbol of creative nature, and the Bull (her calf) the spirit which vivifies her, or ‘the Holy Spirit’ ” (SD 2:418n). See also BULL; CALF

Cracacha. See KRAUNCHA-DVIPA

Creation [from Latin, cf Greek *krainein*, Sanskrit *kr* to make, do] The Ever-existent, which in its

transcendent aspect is the eternally embracing Boundless, is the source as well as the sum total of all beings and things; hence in essence all beings and things are eternal and have never been created in the Christian sense, for they are of the very stuff, essence, and be-ness of the Boundless itself. Yet the word creation has a legitimate use in the original sense of coming forth from being into existence, not as something produced from nothing but in the ordinary sense of production of something out of something else. A human being can be said to be created in that he is brought into being as such, not from nothing but from the various elements which when combined form the human constitution, conjoined with the contemporaneous evolution of the powers and substances of the monad by which it acquires its various sheaths; worlds also can be said to be created out of primordial matter, and compound elements from simpler ones.

Hermes says that matter *becomes*; formerly it *was* — profound expressions indeed; and Fichte expresses the same idea in his distinction between *Seyn* and *Daseyn*. In this sense, matter or worlds may be said to be brought forth or created, with the significance of becoming. *See also* PRIMARY CREATION; SECONDARY CREATION

Creative World. *See* BERI'AH; 'OLAM

Creator. *See* BRAHMA; DEMIURGE; GOD; JEHOVAH

Cremation Since the last quarter of the 19th century, the practice of cremation has gained acceptance in America and many European countries, whereas in the Orient, especially in India, it has been perhaps the most common way of disposing of dead bodies. Among peoples ancient and contemporary it ranks with other modes of disposal of the dead, such as exposure to the air, burial in the earth, or being devoured by animals. Blavatsky maintains that it was universal until 80,000 or 100,000 years ago (SD 2:753). Some Christians oppose the practice because they believe that the dispersal of the physical body by fire makes it impossible for the soul to regather a body in time to be saved at the Last Judgment, and so leads to annihilation.

In our day cremation is favored chiefly for hygienic reasons, as preventing the pollution of the soil and water supply and thus removing causes of infection. Cremation does not destroy even the chemical atoms, much less the life-atoms. It aids the dissolution of the astral body, which is no longer attracted magnetically to the decaying corpse or able to exchange life-atoms with it.

Crescent [from Latin *crescere* to increase] The moon in its first quarter, or the figure of a circular arc or lune; a symbol of the moon, which in its highest signification is the Queen of Heaven, Diana, the great mother of the earth, as the sun is the great father of all. It is associated in Egypt with Isis, in Greece and Rome with Aphrodite and Venus, in Asia Minor with Astarte or Astaroth and many other lunar goddesses, who are often represented with cow's horns. The Roman Catholic Mary is sometimes represented as standing on the crescent moon, and when Venus-Lucifer became transformed into Satan, its crescent became the devil's horns. The symbol also parallels that of the ark or argha and appears in the Egyptian symbol of the solar boat, where it indicates that the

moon is the sun's vehicle.

But the moon is a triple symbol, and may stand for the lower astral light, the *linga-sarira*, and the female generative function. In the symbol of Mercury, which represents the human being, we have the crescent representing the lower mind or soul; the circle, heart or spirit; and the cross, functions or body. This symbolism appears in other planetary symbols: in Saturn, for instance, the cross is over the crescent, while in Jupiter the crescent is over the cross. Also, the crescent and star (or sun) is the emblem of the Moslem faith.

Cretaceous Period. See GEOLOGICAL ERAS

Criocephalus [from Greek *kriokephalos* ram-headed] Ram-headed; applied to representations of deities with the head of a ram, as Khnum and Ammon in Egypt, and the ram-headed sphinxes. Sometimes ram's horns are used, as in representations of Moses, to signify a high initiate but, on the other hand, the meaning is often phallic, signifying productive, generative power. A connection with the zodiacal sign Aries is highly probable, as for instance when the equinox passes from the sign of the Bull into the sign of the Ram.

Crocodile [from Greek *champsai*, Egyptian *emsehiu*] In Egypt deified under the name of Sebak (or Sebeq). The principal seat of this worship was the city Crocodilopolis (Arsinoe) where great numbers of mummified beasts have been exhumed. When the canals became dry, the crocodiles would wander about the fields and make such havoc that they were naturally associated with the powers of destruction and evil, the principal malefactor of the pantheon being Set or Typhon. The ancient Egyptians did not regard Set or Typhon, and the crocodile which represented him, as the enemy, the destroyer. In fact, in the earlier dynasties Typhon was one of the most powerful and venerated of the divinities, giving blessings, life, and inspiration to the people, and in especial perhaps to the Royal House or rulers of Egypt. The reason lay in the fact that the earlier mythology showed Typhon or Set mystically as the shadow of Osiris, the god of light and wisdom — Typhon or Set being the alter ego or more material aspect of Osiris himself. "The Crocodile is the Egyptian dragon. It was the dual symbol of Heaven and Earth, of Sun and Moon, and was made sacred, in consequence of its amphibious nature, to Osiris and Isis" (SD 1:409). The crocodile was also named as one of the signs of the zodiac, the regency of which was connected with a group of lofty beings, whose "abode is in Capricornus" (SD 1:219).

Cromagnon Man A highly advanced type of prehistoric mankind existing before the Neolithic Period, supposed to be separated into several distinct races. The first remains discovered consisted of four skeletons found in a rock shelter at Cromagnon in southwestern France in 1868; but many specimens have been found since which show that the Cromagnons were widely spread in Europe — although they are not found outside of Europe — in the last third of the Glacial Age, at the close of the Mousterian and during the Aurignacian period.

The Cromagnons were a magnificent race with splendid physical development. The capacity of the

skull is 1550 cm cubed while that of the Neanderthal skull is only 1200 cm cubed. “If I had to seek for the people which most nearly represent the Cromagnon blood in the modern world, I would seek them among the tall races of the Punjab in India” (Keith, *The Antiquity of Man*). Some of the Cromagnons said to show a marked African negroid strain are found on the Mediterranean coast on the frontiers of France and Italy.

The attempt to fit the Cromagnons into a graduated scale leading back to the immediately preceding European race, the more brutal Neanderthals, has not been successful, and the progress of anthropological discovery renders such attempts ever more difficult. The problem becomes more complicated the farther back we go; the earliest remains of humanity yet found show distinctions of racial type as marked, or more so, as those of contemporary races.

Science has not yet solved the problem of the origin of the Cromagnons. Blavatsky hints that they came indirectly from Atlantis by way of Africa: “The earliest Palaeolithic men in Europe — about whose origin Ethnology is silent, and whose very characteristics are but imperfectly known . . . were of pure Atlantean and ‘Africo’-Atlantean stocks. . . . As to the African tribes — themselves diverging offshoots of Atlanteans modified by climate and conditions — they crossed into Europe over the peninsula which made the Mediterranean an inland sea. Fine races were many of these European cave-men; the Cro-Magnon, for instance. But, as was to be expected, *progress is almost non-existent* through the whole of the vast period allotted by Science to the Chipped Stone-Age. *The cyclic impulse downwards* weighs heavily on the stocks thus transplanted — the incubus of the *Atlantean Karma* is upon them” (SD 2:740-1).

Cronus. See KRONOS

Crook, Episcopal Part of the insignia of bishops and abbots in the Roman Catholic Church, said to have been adopted from the augurs of Etruria; usually considered as representing a shepherd’s crook, in allusion to Christ as the Good Shepherd and his delegated function as such. But, taken in connection with the archbishop’s crozier, which has a cross at the end, it seems likely to be one of the ancient geometrical symbols, perhaps the serpent. Some Egyptian divinities are represented with scepters in the form of a crook or bearing a resemblance to it: it always appears in the hands of Osiris, especially in his aspect of judge of the underworld. The fundamental significance of the crook was of spiritual and intellectual dynamic energy or power usable at the will of its holder or possessor.

Crore [from Hindi *karor* 10 millions; cf Sanskrit *koṭi*] Numeral adjective 10 millions; in India, 100 lakhs — a lakh being 100,000. Used with graphic force in the Stanzas of Dzyan: “The Wheel whirled for thirty crores” (SD 2:15) — 300 million years or three occult ages.

Cross One of the most ancient, widespread, and important symbols, the vertical and horizontal lines representing Father and Mother Nature respectively. Some of its forms are the ank or tau, svastika or Thor’s Hammer, crux ansata or cross with a handle, denoting power over material

nature. The four arms of the cross represent the four elements, and its central point their synthesis or laya-point. The bending of the arms in the svastika signifies rotation and equilibrium attained by managing the changes among the elements. If a cube is opened out, its six faces make a cross with the upright limb prolonged; and the cube was another favorite symbol of Hermes. In Classical times the symbols of Hermes-Mercury, the son of Jupiter and Maia, were cruciform and were placed at crossways; and, like Jesus after the resurrection, Hermes was the conductor of souls.

In Christianity, the symbol was not derived from the crucifixion, for though the cross is a frequent early Christian symbol it is not found with a man upon it till the 6th century. It was a symbol of the mystic Christ or Christos — the Word made flesh or the Son of the trinity.

The cross may also be considered in its relation to the circle and the crescent, with which it forms a trinity of symbols, denoting Father-Mother-Son. These three are found in various combinations with each other, especially in the signs denoting the sacred planets. Thus we have the cross placed severally above the circle (the sign of Mars ♂), within it (the sign of the Earth ⊕), and below it (the sign of Venus ♀) — thus representing the lower and higher nature and the balance or midway point. The sign of Mercury combines the three elements, representing head, heart, and organs; or sun, moon, and earth. Again, a circle with vertical and horizontal diameters signifies that humanity has separated into two sexes; when the circle disappears, the fall of mankind into matter is accomplished. Originally denoting the union of spirit and matter to form spirit-matter or life, or the Second Logos, it may become a phallic symbol of physical generation. The cross has many significations, both spiritual and material as well as cosmic, earthly, and human.

For the use of the cross in initiation ceremonies, *see also* CRUCIFIXION.

Crown In the Qabalah, the first or highest Sephirah, Kether (Crown). In the Stanzas of Dzyan, “Fohat traces spiral lines to unite the sixth to the seventh — the Crown” (SD 1:31), which means that fohat, in this case working as Eros or divine love, strives to blend atman with buddhi, and the same on the corresponding cosmic planes.

Crown also signifies the summit of attainment in initiation, spiritual sovereignty, or dignity or splendor, and is much used in those senses in both the Old and New Testaments, and was typically so employed in pagan initiatory rites.

The kings and pontiffs of modern times are the feeble imitators of former king-initiates, whose insignia comprised the crown, representative of the glory or buddhic splendor, which actually encircled the head of the initiate as a nimbus, as it does in the case of the yogi in samadhi and of the buddha. The ceremony of coronation was performed in the Mysteries as the outward symbol of the completion of this attainment; and that ceremony is still perpetuated. The later Roman emperors adopted the Eastern royal fillet, which they called by the Greek name diadema; the Papal tiara goes back through it to the Persian royal headdress of that name. The American Indian wears feathers imitating the rays of light from the head.

Crucifixion The Christian doctrine of the crucifixion contains at least three elements: 1) the ancient method of execution, in use among the Romans, of fastening the victim to a tree, post, or cross; 2) the rite used in initiation; and 3) the emblem of the god in man becoming incarnate. In the initiation ceremony, which not only represented but in ancient times was the culminating event in a person's regeneration, the candidate was laid bound upon a cruciform couch, which symbolized the matter to which his consciousness is bound, while the ego-soul was liberated to experience other realms of being.

A symbolic crucifixion takes place in every incarnating divinity when it takes up terrestrial life. The myth of crucifixion symbolically has therefore become by custom significant of world saviors in general, as signifying those who lay down the personal life in order to arise a regenerated and impersonal savior. While the crucifixion mythos has become the central emblem of Christianity, the general idea of crucifixion as a symbol of regeneration is connected with many religious systems. Certainly Paul uses the word in the mystic and symbolic sense, as taking place interiorly in the individual, rather than referring to the story of Jesus' crucifixion. *See also* CROSS.

Crux Ansata (Latin) Cross with a handle ; the handle of this cross may mean that the four terrestrial elements are grasped and controlled. The circle surmounting a tau signified life and immortality as in the Egyptian ankh, the circle denoting eternity and the cross the manifested and limited universe.

In another interpretation, the crux ansata may stand for the universe and signify that the bearer is a universe in embryo. The circle hovers over the cosmic cross as the golden germ or hiranyagarbha, and from this seed drops the perpendicular which crosses and traverses the plane of matter.

Crux Dissimulata. *See* SVASTIKA

Cry from the Cross The cry of the expiring Jesus — given in the Gospels as “Eli, Eli, lama, sabachthani” (Matt 27:46) [in Mark it is Eloi]; translated in Greek “Theemou, Theemou, hinati me 'egkatelipes”; and then translated into English as “My God, my God, why hast thou forsaken me?” — is a curious instance of mistranslation, for the Hebrew words as quoted mean, “My God, my God, how thou hast glorified me!” On the other hand, Psalms 22:1 has the words, “My God, my God, why hast thou forsaken me?” but here the Hebrew for forsaken is 'azabtani (forsaken me). There seems to have been a desire to represent the cry from the cross as a fulfillment of these words of Psalms. What Jesus really uttered, according to the Hebrew, was a cry of ecstasy over the peace of attainment, clarification, and liberation. The cry in Psalms is that of the candidate for initiation left to his unaided resources, to achieve or fail by them and them alone — which is the only fair and certain test of ability.

Cryphius [from Greek *kryphios* secret, occult] In the Mithraic Mysteries, the second degree of

initiation or the candidate at that state.

Crystalline Spheres “The Egg of Brahma is composed of concentric spheres centered in the Sun, and each one of these spheres is a cosmic world. . . . The world or sphere of our Earth . . . surrounds the Sun as a sphere of dense substance, and the nucleus in this sphere or egg . . . is what we commonly call our Earth”; “These concentric world-spheres considered as a whole were the crystalline spheres of the ancients, which astronomers have so grossly misunderstood, and therefore have so much derided. . . . The meaning was, spheres of which the center was the Sun and which were transparent to our eyesight. Just as glass is very dense and yet is transparent to our eyesight, so are the ethers of our fourth cosmic plane very dense and yet transparent to us. To the inhabitants of Earth viewing the phenomena of the solar system from the Earth, the entire system of concentric spheres, due to the Earth’s rotation, seems to revolve around the Earth, and hence arises the geocentric way of looking at the apparent movements of the planets and the Sun, Moon, and stars” (Four Sacred Seasons 11, 15-4). (FSO 147-8)

Crystals, Crystallization The formation of crystals shows the working of intelligent life forces in the mineral world. The shapes of crystals show, in their harmony and proportion, the mathematical and geometrical principles permeant throughout the universe. A solution of salt, when evaporated, first crystallizes in triangular shapes and ultimately builds up cubes, both of which are symbolical figures of fundamental importance; and salt is a well-known alchemical symbol of the element of earth, also denoted by the cubical shape. Every salt has a particular form in which it crystallizes, or has perhaps two different forms; but different salts may have the same crystalline form. Snow crystals show the hexagonal patterns which display the septenate — a center from which six radii proceed. Cubic, tetragonal, hexagonal, and octagonal shapes occur; but the fivefold forms of the regular dodecahedron and icosahedron are not found. Clairvoyant sensitives see light emanating from crystals, and luminous phenomena are often seen at the formation or disruption of crystals. Blavatsky alludes to the idea that the process of crystallization might be a step in the evolution of the minerals to the next higher kingdom.

Cube Often mentioned as equivalent to the square, tetrad, or quaternary. The line, square, and cube represent three stages of matter, with the cube derived from the square in the same way as the square is derived from the line. A cube opened out gives a cross of six squares, four in the vertical line and three in the horizontal, one square being common to both, which is an emblem of the human being with his spiritual and material nature meeting at the intersection.

Cup A container, vehicle, upadhi; having in certain connections the same general sense as graal, solar boat, ark, crescent moon, etc.; so that it answers to buddhi among human principles and to mahabuddhi cosmically, as the vahana or container of atman or paramatman. It may contain wine, the symbol of spiritual life. The cup figures in the Bacchic and Orphite Mysteries, a sacred cup being handed around; this has become the chalice of the Christian Eucharist. The Grail or

Graal cup is well known in European legend.

The cup has always been one means of divination, whether by looking into it, or looking into water in it, or shaking up tea leaves or coffee grounds. These last gestures are physical adjuncts to the use of the clairvoyant vision. In the Tarots, the second suite was the cups, answering to the hearts in playing cards.

Cupid [from Latin *cupido* desire, equivalent to Greek *eros*] A being symbolizing desire in the various senses of the term, ranging from that primary formative force which brings about the union of spirit and matter, to erotic passion. *See also* EROS; KAMA; PSYCHE

Cupunika. *See* CHUPUNIKA

Curds In connection with the evolution of a universe, the first differentiation in manifestation of cosmic or primordial matter in its early differentiated forms. Astronomically, the curds are irresolvable nebulae and sometimes, in accordance with older European astronomical views, the Milky Way. The primordial matter, radical and cool, becomes at the reawakening of cosmic motion scattered through space; appearing in its early differentiated forms in clusters and lumps, like curds in whey. These are the cosmic seeds of future worlds and world systems. Particles of the curds become comets, then stars (the centers of vortices), or solar systems with their individual sun and planets. *See also* CHURNING OF THE OCEAN

Curetes (Greek) *Kouretes*. The priests in the Mysteries of Rhea Cybele in Crete, and in Classical mythology daemons or demigods to whom Cybele entrusted the infant Zeus. Identified with the kabiri, who belong to the septenary creative groups of dhyan-chohans which incarnated in the elect of the third and fourth root-races — Zeus is said to be the god of the fourth race (SD 2:360, 766, 776).

In connection with the Mysteries of Cybele in Crete, initiation in the temples of the Curetes was extremely arduous, lasting a lunar month (27 days), during which the initiand was left by himself in a crypt, undergoing the severest kind of tests; Pythagoras is stated to have successfully undergone initiation in these rites (TG 91).

Cush (Hebrew) *Kūsh* Black; the eldest son of Ham, grandson of Noah, and father of Nimrod. Also applied to his descendants, usually translated Ethiopians, and to a region vaguely defined as Ethiopia. An old tradition states that Ham stole seven books out of Noah's Ark and gave them to Cush; and Mas'udi, the Arabic historian, says that the Nabathaeans were those descendants of Ham who settled under the leadership of Nimrod.

Cutha Tablets Tablets found at Cutha, an ancient city in Babylonia, containing fragments of the ancient Chaldean account of creation.

Cybele (Greek) *Kybele*. A Phrygian goddess of caves and mountains, vines and agriculture, and

town life, first worshiped at Pessinus; later throughout Asia Minor and in Greece. The equivalent in Phrygia and Crete of Rhea, the Magna Mater (great mother), wife of Kronos and mother of Zeus. Her worship was celebrated exoterically, especially in later degenerate times, by wild dances by her votaries. In one of her phases Cybele was closely connected with the moon and its extremely recondite functions. The moon is at once a sexless potency, to be well studied because to be dreaded, and a female deity for exoteric purposes. Cybele is “the personification and type of the vital essence, whose source was located by the ancients between the Earth and the starry sky, and who was regarded as the very *fons vitae* of all that lives and breathes” (BCW 12:214). The breath of Cybele, equivalent in its highest substance to akasa-tattva — “is the one chief agent, and it underlays the so-called ‘miracles’ and ‘supernatural’ phenomena in all ages, as in every clime” (BCW 12:215). *See also* CORYBANTES; CURETES

Cycles [from Greek *kyklos* circle, wheel] The law of cycles arises out of the ever-unceasing alternations of the Great Breath of spirit in the universe. Abstract absolute motion, as the worlds evolve, assumes an ever-growing tendency to circular movement. Hence arise the wheels and globes of cosmic evolution and the rounds of the evolutionary life-waves. Motion is repetitive, ever returning to similar, but not identical, points. The geometrical symbol is the helix, which combines the cyclic with the progressive motion; if the axis of the helix is itself a circle, a vortex results, and thus wheels within wheels as the process advances to further degrees of complexity.

“The ancients divided time into endless cycles, wheels within wheels, all such periods being of various durations, and each marking the beginning or end of some event either cosmic, mundane, physical or metaphysical. There were cycles of only a few years, and cycles of immense duration, the great Orphic cycle referring to the ethnological change of races lasting 120,000 years, and that of Cassandrus of 136,000, which brought about a complete change in planetary influences and their correlations between men and gods . . .” (Key 327).

Cycle of Necessity. *See* CIRCLE OF NECESSITY

Cyclopean Structures Applied by the Greeks to certain architecture of huge stones without mortar, such as found in Tiryns and Mycenae, and attributed to the cyclopes. Cyclopean masonry is found in the platforms of the Easter Island statues, of Lemurian origin; in the vast walls of Tiahuanaco, Peru; in the colossal statues of Bamian, Asia, and many other places.

Cyclops (Greek) *Kyklops* [from *kyklos* circle, round + *ops* eye] Plural cyclopes. Round-eyed giants; Homer locates them in Sicily as a lawless race of giants with one central eye, devouring men and caring naught for Zeus; their chief is Polyphemus. For Hesiod, they are three sons of Heaven and Earth, named Arges, Brontes, and Steropes, titan of flame, thunder, and lightning respectively. Later they were considered assistants of Hephaestus in his workshops under volcanoes and their number was no longer confined to three.

The history of human evolution has passed down to us transfigured by the progressive accretion of myths, so that the name cyclopes was handed down to various owners until it meant merely giants who built vast walls. Hesiod's original three were the last three subraces of the Lemurians, the one eye was the wisdom eye, the other eyes not being *fully* developed as physical organs until the beginning of the fourth root-race. Odysseus, a fourth-race hero, though he destroys a barbarous race in the interests of culture, nevertheless puts out the third eye. It is an allegory of the passage from a simpler Cyclopean civilization of huge stone buildings to the more sensual civilization of the Atlanteans (SD 2:769). Disciples of the initiates of the fourth root-race were said to hand over divine knowledge to their cyclopes, sons of cycles or of the infinite (SD 1:208), while the cyclopes supposed to have built walls were masons in the sense of initiators (SD 2:345).

The legend of the cyclopes with the third eye is also found in ancient Ireland. De Jubainville parallels the three cyclopes of Hesiod with the three famous Irish smiths, Goibniu (Gavida) and his brothers. Goibniu slew the wicked Fomorian Balor — also a cyclops with one eye in the middle of his forehead — to give victory to the Tuatha De Danaan (gods of day and life) (*Irish Mythological Cycle* 122).

Cymry (Welsh) The Welsh people. Many derivations of this word have been suggested; the accepted one nowadays gives Cymry the meaning of “associated peoples” [from Old Welsh *combrox* compatriot from *com* with + *bro* district, region], and assumes that it came into vogue in that lost period of history during which England changed from Latin and Celtic to Germanic or Anglo-Saxon in speech; and Wales, from being mainly Gaelic, became Brythonic or Cymric in speech — the language being called Cymraeg. George Borrow identified the word with the Sanskrit *kumara*; others see in it *cyn mru* (first womb, or first mother).

Cynocephalus [from Latin *canus* dog + *cephalus* head] The dog-headed ape (*Simia hamadryas*) which in Egyptian mythology was called Amemet (eater of the dead) whose master was Thoth or Tehuti. In the Judgment scene in *The Egyptian Book of the Dead*, Amemet is represented as seated by Thoth, ready to inform his master when the pointer marks the middle of the beam on the balance, when the heart is being weighed in the scales. After Thoth makes his announcement to the gods concerning the result of the weighing of the heart, the company of the gods decree that Amemet shall not be permitted to prevail over the successful candidate.

“There was a notable difference between the ape-headed gods and the ‘Cynocephalus’ . . . , a dog-headed baboon from upper Egypt. The latter, whose sacred city was Hermopolis, was sacred to the lunar deities and Thoth-Hermes, hence an emblem of secret wisdom — as was Hanuman, the monkey god of India, and later, the elephant-headed Ganesha. The mission of the Cynocephalus was to show the way for the Dead to the Seat of Judgment and Osiris, whereas the ape-gods were all phallic” (TG 92).

“The dog-headed ape was a glyph to symbolise the sun and moon, in turn, though the

Cynocephalus *is more a Hermetic than a religious symbol.* For it is the hieroglyph of Mercury, the planet, as of the Mercury of the Alchemical philosophers, ‘as,’ say the Alchemists, ‘Mercury has to be ever *near Isis, as her minister,* as without Mercury neither Isis nor Osiris can accomplish anything in the great work.’ Cynocephalus, whenever represented with the Caduceus, the Crescent, or the Lotus, is a glyph of the ‘philosophical’ Mercury; but when seen with a reed, or a roll of parchment, he stands for Hermes, the secretary and adviser of Isis, as Hanuman filled the same office with Rama” (SD 1:388).

Cythraul (Welsh) The principle of evil, later personified as the Devil.

Cytoblastema An obsolete biological word for the formative material from which cells were supposed to arise.

Cyuta. *See* CHYUTA

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Da-Der

Da'ath (Hebrew) *Da'ath* Knowledge or science, frequently insight or wisdom; in the Qabbalah of Luriah, a triad is made of Hochmah (Father), Binah (Mother), and Da'ath (Son). This emanation does not occur in the ancient Qabbalah, nor is it one of the Sephiroth there.

Dabar (Hebrew) *Dābār*, plural *Dēbārīm*. Word, speech, frequently a cosmic spiritual conscious energy, thus equivalent to the Greek logos or cosmic spirit; also, an oracle or divine communication; cause, reason. In the Chaldean Qabbalah, equivalent to the Logos, “which Word, though it becomes in fact a plural number, or ‘Words’ — D(a)B(a)RIM, when it reflects itself, or falls into the aspect of a Host (of angels, or Sephiroth, ‘numbers’) is still collectively One, and on the ideal plane a nought — 0, a ‘No-thing’ ” (SD 1:350).

Dabistan, Dadistan (Persian) *Dabistān, Dadistān* [from *dab* from *dip* script + *stān* suffix of place] A name of ancient Persia; also a book, *Dabistan-i-Madhahib* (school of sects), written in about the mid-17th century by a Moslem traveler, Mohsan Fani, a native of Kashmir. It deals with 12 different religions, the first that of Hushang, supposed to be before the time of Zarathustra (Zoroaster).

Dache-Dachus (Chaldean) “The dual emanation of Moymis, the progeny of the dual or androgynous World-Principle, the male Apon and female Tauthe. Like all theocratic nations possessing Temple mysteries, the Babylonians never mentioned the ‘One’ Principle of the Universe, nor did they give it a name. This made Damascius (*Theogonies*) remark that like the rest of ‘barbarians’ the Babylonians passed it over in silence. Tauthe was the mother of the gods, while Apon was her self-generating male power, Moymis, the ideal universe, being her only-begotten son, and *emanating* in his turn Dache-Dachus, and at last Belus, the Demiurge of the objective Universe” (TG 93).

Dactyli, Dactyls (Greek) [from *daktylos* finger] Fingers; in Greek mythology, the smith said to have

first discovered and worked copper and iron, and to have introduced music and rhythm into Greece. Also a name for the Phrygian Hierophants of Rhea Cybele, said to be magicians, exorcists, and healers. Five or ten in number, as the number of the fingers, they have been identified with the Corybantes — priests of Atys, the youth beloved by Cybele — with the Curetes, Telchines, and others, all of which have also been connected with the kabiri. But the kabiri were the manus, rishis, and dhyani-chohans who incarnated in the elect of the third root-race and earliest part of the fourth root-race. Since the structure of the higher planes is reflected in the lower, all these names can also stand for terrestrial powers and their hierophants, according to the rites peculiar to various countries. They have been connected with the Pelasgian masonry (SD 2:345); but, like the cyclopes they were masons in more senses than one.

Dad-Dugpa (Tibetan) Identified by Blavatsky with the Brothers of the Shadow, “the murderers of their Souls” (VS 51).

Daduchus (Greek) *dadouchos*. A torch-bearer; one of the four celebrants in the Eleusinian Mysteries, preceding the Mystae in the procession to the temple of Demeter on the fifth day of the celebration of those rites.

Daemon or **Demon** [from Greek *daimon*, Latin *daemon*] A god, angel, or celestial power or spirit, of varying degrees of ethereality, and ranging from the supreme deity of the hierarchy, through the greater gods, down to mere genii and lemures. Originally the term applied to deity in general, but later it usually was referred to beings intermediate between the gods and mankind, representing the powers and functions of gods. The Greeks and Romans sometimes used the term for the human divine egos. Philosophers such as Plato divided the daemons into three classes, “the first two are invisible; their bodies are pure ether and fire (Planetary Spirits); the Daimons of the third class are clothed with vapoury bodies; they are usually invisible, but sometimes, making themselves concrete, become visible for a few seconds. These are the earthly spirits, or our astral souls” (BCW 6:187).

The daemon of Socrates stood for his higher and spiritual self, and parallels in this sense the Christian idea of the Guardian Angel. Hesiod designated them as spirits of the golden age appointed to watch over and guard mankind. We often find two daemones accompanying the individual, one prompting to good, the other to evil; while again it may be the same genius, whose influence is defined as at one time good, at another evil.

As with so many cosmic powers and their symbols, these other gods have been relegated in Judaism and Christianity to the position of evil powers hostile to mankind, to be fled from instead of revered, or ruled as obedient helpers when inferior to the human status. The whole idea of the Adversary or Devil is enshrined in the word daemones. But fallen angels, represented as rebels against God, were merely performing their natural duty in evolution by forming the lower worlds. As personification of evil, the word can only be truthfully applied to those beings that man himself,

by his evil thoughts and passions, has generated to hover in the lowest strata of the astral light or haunt kama-loka. However, the ancient Greeks and Romans themselves drew a sharp distinction between the daemones of more ethereal type, truly spiritual beings, and the lower earth-haunting daemones who were distinctly denizens of the lower astral and physical realms, and which the ancients dreaded — with reason — far more than modern Christians have ever done. *See also* AGATHODAEMON

Daemon Est Deus Inversus (Latin) Daemon is divinity inverted; more commonly, the Devil is God inverted. An ancient Hermetic, and later Qabbalistic, aphorism referring to that polar power which is required by the equilibrium and harmony in nature. The One, when manifested, becomes Two, and from the Two are unfolded or evolved all the sequence of manifest existence. Spirit and matter, good and evil, as distinct conceptions exist only by their mutual contrast. There is no evil per se, but the human notion of essential evil arises from our inability to take in the whole at a single glance.

Daemon is applicable in general to all formative power, from the highest to the lowest; in this aphorism it denotes the formative rays in their manifestation in and on the lower planes of prakriti, called by contrast the nether pole. Western monotheism, having anthropomorphized the higher creative powers into a personal God, personified the lower powers into a Devil and demons. But Satan or the Adversary is only God's messenger, because what is below reflects what is above. This aphorism, then, states that all the manifested universe is the representation or material inversion or reflection of the divine essence and its emanations which in their aggregate compose the spiritual background and causal forces of the universe. Furthermore, a reflected image reverses.

Finally, the aphorism denotes the astral light, represented by a black triangle inverted on a white (SD 1:424).

Daena (Avestan) [from *da, day* to look, see, know] The personification of the Zoroastrian law or religion, presiding over the 24th day of the month, and giving to that day her name. Together with Khista (religious knowledge, the knowledge of what leads to bliss) she forms the subject of the 16th Yasht, *Din Yasht*, Din being Pahlavi for Daena. Christi (knowledge) was used in Mithraic circles in the same sense as Daena in Zoroastrianism.

It is the human principle of understanding paralleling manas (TG 94); also the fourth of the five inner faculties. On the Chinvat Bridge after death the soul meets its daena in the form of a maiden whose appearance varies according to the soul's deeds on earth.

Daeva (Avestan) *Daēva*, **Dev** (Pahlavi), **Div** (Persian) *Dīv*. In the Avesta, beings of malicious intent popularly regarded as fiends or demons under the sway of Angra-Mainyu. It is a generalizing name for the class of spiritual, quasi-spiritual, and ethereal beings recognized in the mystical literatures of other countries as daimones, devas, spirits, etc. They range thus from self-conscious

beings of relatively high evolutionary grade through intermediate stages down to what in theosophy are called elementals.

“In the Vendidad the Daevas are called ‘evil-doing,’ and shown to rush away ‘into the depths of the world of hell,’ or matter. . . . This is an allegory showing the *Devas compelled to incarnate*, once that they have separated themselves from their parent essence, or, in other words, after the unit had become a multiple, after differentiation and manifestation” (SD 2:516). In another sense, Blavatsky interprets the daevas as referring to the Atlantean giants (SD 2:772).

In Persian, the divs are wicked, powerful beings who oppose the rule of just kings of Iran.

Dag, Dagon (Hebrew, Phoenician) *Dāg, Dāgōn* [from *dāg* fish + *ōn* diminutive; or from *dāgān* grain] Fish or a little fish; a Philistine god, at Ashod and Gaza, mentioned several places in the Bible (e.g. Judges 16). He was more than a local deity, however, as place-names called after him are widespread. Some scholars assert there was an ancient Canaanite deity of similar name, and also associate this Shemitic god with the Babylonian Dagan. It is commonly believed that Dagon was represented as half-man half-fish and identified with Oannes, though no such early representations bear his name. Some scholars cite Philo Byblius as making Dagon the discoverer of grain and the inventor of the plow, an earth god parallel with Bel.

The fish as a mystic emblem was perhaps more familiar to the primitive Christian sects than to the Hebrews. Primitive and even later Christian iconography show many examples of the fish symbolizing the Logos and its incarnation as the Messiah. Likewise, the early Christians called themselves pisciculi (Latin, “little fish”) and spoke of Christ as the Great Fish, figurating the Logos as manifesting itself in the waters of space and living there somewhat as fish live in water.

Dagoba (Singhalese) A dome-shaped structure (stupa) built over relics of Buddha or Buddhist saints.

Dagon. See DAG

Daimon(es), Daimonia. See DAEMON

Daimonion (Greek) Diminutive of daimon; the name given by Socrates to the warning voice which watched over him and checked his actions, never telling him what to do, but what *not* to do. In practical effect, it is equivalent to conscience, or the voice of the re embodying ego, aroused in human life to an extraordinary degree.

Dainn (Icelandic) [from *deyja* to swoon] A dwarf in the Norse Edda who represents unconsciousness. Dainn awakens when worlds pass into rest, and goes to sleep when they awaken. Dainn is also the name of one of the four stags that nibble the leaves of the world tree Yggdrasil.

Daiteyi (Sanskrit) *Daiteyī* Proceeding from or belonging to the daiteyas or daityas.

Daitya (Sanskrit) *Daitya* A large Atlantean island-continent; Blavatsky allows “about 850,000 years since the submersion of the last large island (part of the Continent), the Ruta of the Fourth Race, or the Atlanteans; while Daitya, a small island inhabited by a mixed race, was destroyed about 270,000 years ago, during the glacial period or thereabouts . . .” (SD 1:651). (SD 2:141, 314n, 433, 710) *See also* RUTA

Daitya(s), Daiteya(s) (Sanskrit) *Daitya-s, Daiteya-s* Descendants of Diti. If Aditi is understood as mulaprakriti, or virtually cosmic space, so Diti, the nether pole of the former, may be understood as the aggregate of the prakritis. Cosmically, daityas are titans, often called asuras, whose role is that of urgers of evolutionary progress for all things, as contrasted with the incomparably slower, but unceasing, evolutionary inertia of the vast cosmic powers. Terrestrially, they are the titans and giants of the fourth root-race. According to the Hindu Puranas, these daityas are demons and enemies of the ceremonial sacrifice and ritualistic ceremonies; but according to the secret meaning hid under these stories, some of the daityas were the forwards-looking and impulse-providing intellectual entities striving against the inertia or deadweight of human nature.

“The Demons, so called in the Puranas, are very extraordinary devils when judged from the standpoint of European and orthodox views about these creatures, since all of them — Danavas, Daityas, Pisachas, and the Rakshasas — are represented as extremely pious, following the precepts of the Vedas, some of them even being great Yogis. But they oppose the clergy and Ritualism, sacrifices and forms — just what the full-blown Yogins do to this day in India — and are no less respected for it, though they are allowed to follow neither caste nor ritual; hence all those Puranic giants and Titans are called Devils” (SD 1:415).

Daitya Guru (Sanskrit) *Daityaguru* Preceptor of the daityas; a name of Sukra, regent of the planet Venus.

“ ‘The Guru of the Daityas is the Guardian Spirit of the Earth and Men. Every change on Sukra is felt on, and reflected by, the Earth.’

“Sukra, or Venus, is thus represented as the preceptor of the Daityas, the giants of the Fourth Race, who, in the Hindu allegory, obtained at one time the sovereignty of all the Earth, and defeated the minor gods” (SD 2:31).

Daiviprakriti (Sanskrit) *Daivīprakṛti* [from *daivī* divine from the verbal root *div* to shine + *prakṛti* original substance or nature] Divine or original evolver; original source; divine matter or original substance. “As original substance manifests itself in the kosmic spaces as primordial kosmic Light . . . many mystics have referred to Daiviprakriti under the phrase ‘the Light of the Logos.’ Daiviprakriti is, in fact, the first veil or sheath or ethereal body surrounding the Logos, as Pradhana or Prakriti surrounds Purusha or Brahman in the Sankhya philosophy, and as, on a scale incomparably more vast, Mulaprakriti surrounds Parabrahman. As Daiviprakriti, therefore, is elemental matter, . . . matter in its first and second stages of its evolution from above, we may

accurately enough speak of those filmy ethereal wisps of light seen in the midnight skies as a physical manifestation of Daiviprakriti, because when they are not actually resolvable nebulae, they are worlds, or rather systems of worlds, in the making.

“When Daiviprakriti has reached a certain state or condition of evolutionary manifestation, we may properly speak of it under the Tibetan term Fohat. . . . although Fohat is the energizing power working in and upon manifested Daiviprakriti, or primordial substance, as the rider rides the steed, it is the kosmic Intelligence, or kosmic Monad as Pythagoras would say, working through both Daiviprakriti and its differentiated energy called Fohat, which is the guiding and controlling principle, not only in the Kosmos, but in every one of the subordinate elements and beings of the hosts of multitudes of them infilling the Kosmos. The heart or essence of the sun is Daiviprakriti working as itself, and also in its manifestation called Fohat, but through the Daiviprakriti and the fohatic aspect of it runs the all-permeant and directive Intelligence of the solar divinity. The student should never make the mistake, however, of divorcing this guiding solar Intelligence from its veils or vehicles, one of the highest of which is Daiviprakriti-Fohat” (OG 32-3).

Blavatsky explains various meanings of daiviprakriti:

“Thus in the Esotericism of the Vedantins, *Daiviprakriti*, the Light manifested through Eswara, the *Logos*, is at one and the same time the Mother and also the Daughter of the Logos or Verbum of Parabrahmam; while in that of the trans-Himalayan teachings it is — in the hierarchy of allegorical and metaphysical theogony — ‘the Mother’ or abstract, ideal matter, Mulaprakriti, the Root of Nature; — from the metaphysical standpoint, a correlation of Adi-Bhuta, manifested in the Logos, Avalokiteshwara; — and from the purely occult and Cosmical, Fohat, the ‘Son of the Son,’ the androgynous energy resulting from this ‘Light of the Logos,’ and which manifests in the plane of the objective Universe as the hidden, as much as the revealed, Electricity — which is Life” (SD 1:136).

Further she says that theosophy “teaches that it is this original, primordial *prima materia*, divine and intelligent, the direct emanation of the Universal Mind — the *Daiviprakriti* (the divine light emanating from the *Logos*) — which formed the nuclei of all the ‘self-moving’ orbs in Kosmos. It is the informing, ever-present moving-power and life-principle, the vital soul of the suns, moons, planets, and even of our Earth” (SD 1:602).

Dakhma (Avestan) [from *dag* to burn, cremate, brand] A funeral or cremation building of the Parsis; the Tower of Silence.

Dakini (Sanskrit) *Dākinī* Female demons, vampires, and blood-drinkers, feeding on human flesh, attendant upon Kali, the consort of Siva; a type of evil elemental. Outside of mythologic explanations, the dakinis may be said to be one type of advanced elemental beings. “But with the Fourth Race we reach the purely human period. Those who were hitherto semi-divine Beings, self-

imprisoned in bodies which were human only in appearance, became physiologically changed and took unto themselves wives who were entirely human and fair to look at, but in whom *lower, more material*, though sidereal, beings had incarnated. These beings in female forms (Lilith is the prototype of these in the Jewish traditions) are called in the esoteric accounts ‘Khado’ (Dakini, in Sanskrit). Allegorical legends call the chief of these Liliths, *Sangye Khado* (Buddha Dakini, in Sanskrit); all are credited with the art of ‘walking in the air,’ and the greatest *kindness to mortals*; but *no mind* — only animal instinct” (SD 2:284-5). *See also* LILITH

Daksha (Sanskrit) *Dakṣa* [from *dakṣ* to be able, strong] Adroit, able, intelligent, clever; used as a proper noun, intelligent power or ability. One of the chief prajapatis, cosmic creative intelligences, spiritual entities; the synthesis or aggregate of the terrestrial progenitors, including the pitris.

Daksha signifies the intelligent or competent, but usually carries with it the idea of creative or evolving power. “He is a son of Brahma, and of Aditi, and agreeably to other versions, a self-born power, which, like Minerva, sprang from his father’s body. . . . the Rig-Veda says that ‘Daksha sprang from Aditi and Aditi from Daksha,’ a reference to the eternal cyclic re-birth of the same divine Essence” (SD 2:247n).

As the progenitor of real physical man, Daksha was son of the Prachetasas and Marisha, the first of the “egg-born.” He “establishes the era of men engendered by sexual intercourse. But this mode of procreation did not occur suddenly, as one may think, and required long ages before it became the one ‘natural’ way. Therefore, his sacrifice to the gods is shown as interfered with by Siva, the *destroying deity, evolution and progress personified*, . . . Virabhadra, ‘abiding in the region of the ghosts (etherial men). . . . *created from the pores of the skin (Romakupas)*, powerful Raumas, (or Raumyas).’ Now, however mythical the allegory, the Mahabharata, which is history as much as is the Iliad, shows the Raumyas [hairy ones] and other races, as springing in the same manner from the *Romakupas*, hair or skin pores. . . .

“In the Vayu Purana’s account of Daksha’s sacrifice, moreover, it is said to have taken place in the presence of creatures *born from the egg*, from the vapour, vegetation, pores of the skin, and, finally only, from the womb.

“Daksha typifies the early Third Race, holy and pure, still devoid of an individual *Ego*, and having merely the passive capacities. Brahma, therefore, commands him to create (in the exoteric texts; when, obeying the command, he made ‘inferior and superior’ (*avara and vara*) progeny (*putra*), *Bipeds* and *quadrupeds*; and by his *will* gave birth to females. . . . to the gods, the *Daityas* (giants of the Fourth Race), the snake-gods, animals, cattle and the *Danavas* (Titans and demon Magicians) and other beings.

“. . . ‘From that period forward, *living creatures were engendered by sexual intercourse. Before the time of Daksha, they were variously propagated* — by the *will*, by sight, by touch, and by *Yoga-power*’ ” [quotes from the *Vishnu-Purana*] (SD 2:182-3).

Daksha-Savarna (Sanskrit) *Dakṣasāvarṇa* One of the 14 manus, the root-manu of the fifth round (SD 2:309).

Dakshinayana (Sanskrit) *Dakṣiṇāyana* [from *dakṣiṇa* southern + *ayana* road, path] The southward way, the way to Yama's quarter, the sun's progress south of the equator, the winter half-year.

In mystic Hindu philosophy, dakshinayanam anuya (to follow along the southward way) is used to describe dying.

Dalada (Sanskrit) *Daladā* A relic of Gautama Buddha, his supposed left canine tooth, preserved at Kandy, Ceylon. "Unfortunately, the relic shown is not genuine. The latter has been securely secreted for several hundred years, ever since the shameful and bigoted attempt by the Portuguese (the then ruling power in Ceylon) to steal and make away with the real relic. That which is shown in the place of the real thing is the monstrous tooth of some animal" (TG 95).

Dalai Lama [from Mongolian *ta-le* ocean] The title of the Great Lama or abbot of the Gedun Dubpa Monastery situated at Lhasa, Tibet; used mainly by the Chinese and Mongols. One key to the Dalai Lama's symbolical name, ocean-lama meaning wisdom-ocean, is found in the tradition of the great sea of knowledge or learning which remained for ages where now stretches the Shamo or Gobi Desert (SD 2:502). The Tibetans call him rgyal be rinpoche (precious victor) or often simply Kundun (the Presence). Popularly believed to be an incarnation of Chenresi (Avalokitesvara), he is regarded as the temporal ruler of Tibet.

The first three successors to Tsong-kha-pa as leaders of the Gelukpa school were his foremost disciples Gyel-tshab-je (*Rgyal tshab rje*), Khe-dub-je (*Mkhas grub rje*), and his nephew Gen-dun-dub (*Dge 'dun grub*). Gendundub, who founded the monastery of Tashi-Lhunpo and built up the Gelukpa order, was subsequently recognized as the first Dalai Lama. He was succeeded by Gendun Gya-tsho (*Dge 'dun rgya mtsho*), who was recognized as the reincarnation of Gendundub. Gendun Gyatsho was, in turn, succeeded by his reincarnation, Sonam Gyatsho (*Bsod nams Rgya mtsho*). In 1578 Sonam Gyatsho received the patronage of Altan Khan, leader of the Tumed Mongols, who conferred on him the honorific title of Ta-le Lama, which was posthumously conferred on Sonam Gyatsho's predecessors. From this time on the Gelukpas received Mongol patronage and spread their school among the Mongols — in fact, the fourth Dalai Lama was a great-grandson of Altan Khan. It was the fifth Dalai Lama who commissioned the building of the Potala palace and, with the aid of the Mongol leader Gushri Khan, established the Gelukpa order as the dominant power in Tibet and the Dalai Lama in Lhasa as the temporal ruler of the country.

List of Dalai Lamas:

1. Gendundub (Dge 'dun grub) 1391-1474
2. Gendun Gyatsho (dge 'dun rgya mtsho) 1475-1542
3. Sonam Gyatsho (Bsod nams rgya mtsho) 1543-88

4. Yonten Gyatsho (Yon tan rgya mtsho) 1589-1616
5. Ngawang Lobsang Gyatsho (Ngag dbang blo bzang rgya mtsho) 1617-82
6. Tsangyang Gyatsho (Tshangs dbyangs rgya mtsho) 1683-1706
7. Kelsang Gyatsho (Bskal bzang rgya mtsho) 1708-57
8. Jampel Gyatsho ('Jam dpal rgya mtsho) 1758-1804
9. Lungtog Gyatsho (Lung rtogs rgya mtsho) 1806-15
10. Tsultrim Gyatsho (Tshul khrims rgya mtsho) 1816-37
11. Khedub Gyatsho (Mkhas grub rgya mtsho) 1838-56
12. Thinle Gyatsho ('Phrin las rgya mtsho) 1856-75
13. Thubten Gyatsho (Thub bstan rgya mtsho) 1876-1933
14. Tendzin Gyatsho (Bstan 'dzin rgya mtsho) 1935-

Dama (Sanskrit) *Dama* [from the verbal root *dam* to subdue, conquer] Self-restraint, self-control.

Damaghosha (Sanskrit) *Damaghoṣa* King of Chedi and father of Sisupala, the demon-reincarnation of Ravana who was killed by the avatara Krishna.

Dambhobhi, Dambholi. See DATTOLI

Dambulla A huge rock in Ceylon, with several large, ancient cave-temples (viharas) cut in it. The Maharaja Vihara (172 by 75 ft) contains upwards of 50 figures of Buddha, most larger than life, formed from the solid rock. At the Mahadewiyo Vihara is a figure of the dead Gautama Buddha 47 feet long, reclining on a couch and pillow cut out of solid rock.

Damkina (Chaldean, Babylonian) Sometimes Davkina. Consort of Ea or Hea, god of the watery regions, partaking of Ea's characteristics, hence named Damgal-nunna (great lady of the waters), likewise Nin-Ki (lady of that which is below, i.e., the watery deeps or underworld). Mother of Marduk (or Merodach).

Damti. See TAMTI

Dan. See DHYANA

Dana (Sanskrit) *Dāna* [from the verbal root *dā* to give] The act of giving; gift, donation; in Buddhism the first of the paramitas: "the key of charity and love immortal" (VS 47).

Danava(s) (Sanskrit) *Dānava*-s Children of Danu (or Danayu) and Kasyapa, often identified with the daityas and asuras, and held to be enemies of the gods or devas. The titans and demon-magicians of the fourth root-race, almost identical with the daityas or giants and irreconcilable opponents of those groups of the fourth root-race who were the upholders of ritualism and idol-worship.

Dand, Danda (Sanskrit) *Daṇḍa* "The three and seven-knotted bamboo of Sannyasis given to them as a sign of power, after their initiation" (BCW 2:119). Used by raja yogis to store the essence of the

yogi's power: "recognizing this power in himself, he endows the given object with it and concentrates it in the object, . . . Then, when occasion arises, using his own will and discretion, he aims, in one direction or another, this power, the twofold quality of which is attraction and repulsion. . . . By such means he transforms also the wand or *danda* into a *vahana*, filling it with his own power and spirit and giving it for the time being his own properties" (Caves and Jungles 594; also 596-8)

Dangma (Senzar-Tibetan) Purified soul; used north of the Himalayas for one in whom the spiritual eye is active and who therefore is a jivanmukta or high mahatma. "The opened eye of the dangma" is used in the Stanzas of Dzyan for the awakened, active faculty of spiritual vision and intuition, through which direct, certain knowledge is obtainable of whatever thing or subject the initiate directs his attention to. It is called in India the Eye of Siva and by theosophists, the spiritual third eye.

Daniel (Hebrew) *Dāniyyē'l* The Book of Daniel in the Old Testament has twelve chapters, the first six a historical narrative, the last six prophetic. According to the former, Daniel flourished about 600 B.C., was taken captive with the other Jews to Babylon by Nebuchadnezzar, and became a Magus. His skill in interpreting dreams procured him favor and the governorship of the province of Babylon. Later he became the first president of the whole Medo-Persian empire. Scholarship, however, finds difficulties in reconciling biblical data with information from other sources.

Danu (Sanskrit) *Danu* A daughter of Daksha; by Kasyapa, mother of the danavas, often called in Hindu story demons, giants, or titans because almost the same as the daityas. Opponents of the gods of mere ritual or ritualistic ceremonies.

Daos (Chaldean) Sixth King (Shepherd) of the Babylonian Divine Dynasty who reigned for the 36,000 years. "In his time four Annedoti, or Men-fishes (Dagons) made their appearance" (TG 96).

Darasta (Kolarian) "Ceremonial magic practiced by the central Indian tribes, especially among the Kolarians" (TG 96).

Dardanus (Greek) One of the demigods or divine instructors, the son of Zeus and Electra, the daughter of Oceanus and Tethys. He was king in Arcadia, whence he transferred the kabiri-gods to Samothrace and afterwards to Asia, where he became the ancestor of the royal house of Troy.

Darem, Daren. See DAROM

Darha (Kolarian) Ancestral spirits of the Kolarians (TG 96).

Dark Epaphos. See EPAPHOS

Darkness In theosophical philosophy light is not regarded as self-existent, but as primordially the spiritual effect of a spiritual cause, the emanation from something grander and more radical beyond it. This unknown divine substratum, the original superspiritual intelligence-substance of

the universe, is sometimes called darkness; likewise, it is spoken of as absolute light. Thus absolute light and absolute darkness are the same, so that manifested light sprang from unmanifested light or darkness. Philosophically, non-ego — which is freedom from the limitations of egoity and manifested particularities — voidness, and darkness are a three-in-one, darkness being Father-Mother and light, their Son. Night or darkness preceded day and light in cosmogony, as is recognized in Genesis, where darkness broods over the face of the deep. The creation of light, or the emanation of light from darkness, is the first step in cosmic manifestation. Light thus is truly called original substance or spiritual matter; darkness, purest spirit. Synonymous with this darkness are 'eyn soph, the Boundless, the bridgeless abyss, the unmanifest, the ever-invisible robes of the eternal parent.

Light and darkness on manifested planes constitute a duality, correlative and interdependent, neither conceivable without the other. But what is darkness to our physical senses may be light to our inner senses.

Darkness is also used to denote the shadow side of things, and hence in popular speech evil as opposed to good, ignorance to knowledge. *See also* DAWN; LIGHT; USHAS

Darom (Hebrew) *Dārōm* The south, or south country; also applied to the south wind.

Darsana (Sanskrit) *Darśana* [from the verbal root *drs* to see, perceive] Seeing, vision, view, doctrine, philosophical opinion. In the plural, it refers particularly to the six schools (Shad-darsana) of ancient Hindu philosophy: 1) the Nyaya (Logical School); 2) the Vaisesika (Atomistic School); 3) the Sankhya; 4) the Yoga; 5) the Purva-Mimamsa (First Vedantic School); and 6) the Uttara-Mimamsa (Latter or Superior Vedantic School). These are connected together by intimate links of philosophical principles and postulates, so that to understand accurately the full nature of the universe and of the entire human constitution as an entity, as elaborated by the great Indian thinkers who founded these six schools, one should study all six. The different systems of these schools comprise expositions, according to the ideas of the respective founders, of the mysteries of cosmic and human nature, from the spiritual to the physical, explained and philosophically illustrated.

Darvish. *See* DERVISH

Darwinism The school of scientific thought arising out of Charles Darwin's theory of the origin and propagation of species in the animal and plant kingdoms by natural selection, resulting in the survival of the fittest. It was popularized by Thomas Huxley and Ernst Haeckel in the 19th century, and in the 20th century Neo-Darwinism has incorporated knowledge of genetics and mutation into the Darwinian framework.

While Darwinism helped bring about the widespread acceptance of the concept of evolutionary development, theosophical writers often take exception to its exclusive emphasis on an

uninterrupted, end-on evolution through the transformation of physical bodies, its reliance solely on chance and physical causes, and the absence of spirit or consciousness in the evolutionary process. Darwinism holds that the simplest chemical compounds gradually through random physical processes eventually produce simple organic entities, and then these natural, material forces produce by accretion of environmental experience ever more complex and evolved structures forming a continuum of physical evolution, until consciousness results. By this method humankind has evolved most recently from the anthropoids. By contrast, theosophy begins with the most spiritual, highly evolved entities working with the least evolved kingdoms at the opening of planetary manifestation to gradually build up the inner and outer vehicles necessary for the expression of the innate consciousness of the variety of entities making up the kingdoms of nature. The lower kingdoms find manifestation through the more evolved, so that the human kingdom is the root or origin of all the kingdoms of nature below it, which came to birth through the proto-human stock in earlier evolutionary periods.

Thus, theosophy holds that all evolution lies latent within the essence of each entity, “that the evolution of man and of the beings below him, and of the universe itself, cannot be logically and completely explained on accepted scientific lines, or by the alleged facts of science depending solely upon physical and chemical agencies. These are not the only factors working in the evolution of beings; and the main divergence . . . between the theosophical view of evolution and those theories hitherto current in the world, is that the latter refuse to admit a psycho-vital engine or motor behind and within the running physical machine — or rather engineers, call them spiritual entities if you like.” (MEI 103-4) *See also* ANTHROPOIDS; EVOLUTION

Dasa (Sanskrit) *Daśa* The numerical adjective ten.

Dasadis (Sanskrit) *Daśadīś* [from *daśa* ten + *dīś* to point out, designate] A region, part, or direction of space. *Dasadis* (pl) means the ten regions: the eight cardinal points of the compass with above and below; applied by ancient Sanskrit writers to the ten faces or sides of the universe. Such terms refer not so much to the points of the compass, although these are included, as to the actual ancient esoteric division of space considered as the incomprehensibly immense pleroma or fullness of the All. *See also* ASHTADISAS

Dasa-sila (Pali) *Dasasīla* The ten moral applications and their accompanying practices comprising the code of morality binding upon Buddhist priests; otherwise the ten items of good character and behavior which are abstinence from: 1) *panatipata veramani* (taking life); 2) *adinnadana* (taking what is not given to one); 3) *abrahmachariya* (adultery) otherwise called *kamesu michchha-chara*; 4) *musavada* (telling lies); 5) *pisunavachaya* (slander); 6) *pharusa-vachaya* (harsh or impolite speech); 7) *samphappalapa* (frivolous and senseless talk); 8) *abhijjhaya* (covetousness); 9) *byapada* (malevolence); 10) *michchhaditthiya* (heretical views). The first four, with the addition of abstinence from the use of intoxicants, comprise the *Pansil* (*Pancha-sila* in Sanskrit) or obligations

undertaken when a new follower enters into and accepts Buddhism.

Dasein, formerly **Daseyn** (German) [from *da* there + *Sein* being] Becoming; differs from Sein as the Latin *existere* differs from *esse*. Used by Fichte to denote the manifold as distinguished from the One: we know the Sein only through the Dasein. The unmanifest *is*, and *becomes* when it is manifest. *See also* BEING AND NON-BEING

Dastur(s) (Persian) Minister, authority, counselor, Zoroastrian priest; the highest class of the Parsi priests, the second class being the Mobeds. While the son of a Dastur need not be a Dastur, no one who is not the son of a Dastur can become one.

Dattali, Dattobhri. *See* DATTOLI

Dattatraya (Sanskrit) *Dattātreyā* The universal lord; popularly, “the Trinity of Brahma, Vishnu, and Siva, incarnate in an *Avatara* — of course as a triple essence. The esoteric, and true meaning is the adept’s own trinity of body, soul, and spirit; the three being all realized by him as real, existent, and potential. By Yoga training, the body becomes pure as a crystal casket, the soul purged of all its grossness, and the spirit which, before the beginning of his course of self-purification and development, was to him but a dream, has now become a reality — the man has become a demi-god” (BCW 2:160).

Dattoli (Sanskrit) *Dattoli* One name of Agastya, a sage of the first manvantara, in his former birth as the son of the progenitor of the rakshasas. Variants are Dattotti, Dattoi, Dattali, Dattotri, Dattobhri, Dambhobhi, and Dhambholi. These “seven variants have each a secret sense, and refer in the esoteric comments to various ethnological classifications, and also to physiological and anthropological mysteries of the primitive races. For, surely, the Rakshasas are not *demons*, but simply the primitive and ferocious giants, the Atlanteans, who were scattered on the face of the globe as the Fifth Race is now. Vasishta is a warrant to this, if his words addressed to Parasara, who attempted a bit of jadoo (sorcery), which he calls ‘sacrifice,’ for the destruction of the Rakshasas, mean anything. For he says, ‘Let no more of *these unoffending “Spirits of Darkness”* be destroyed’ . . .” (SD 2:232n).

Dattotri, Dattotti. *See* DATTOLI

Dava (Tibetan) *zla ba* (da-wa) The moon.

Davamata. *See* DEVAMATA

Davikina, Davkina. *See* DAMKINA

Dawn Frequently denotes the beginning of a new cycle, of greater or less extent. Venus-Lucifer is called the luminous son of morning or of manvantaric dawn; and the builders are the luminous sons of manvantaric dawn. In Greek mythology Apollo (the sun) has two daughters, Hylaira and Phoebe (evening twilight and dawn); Eos is the dawn, as is Aurora in Latin. In Hindu mythology,

the wife of Surya (the sun) is Ushas (dawn), and she is also his mother. In the *Vishnu-Purana*, Brahma, for purposes of world formation, assumes four bodies — dawn, night, day, and evening twilight. Man is said to come from the body of dawn, for dawn signifies light, the intelligence of the intellect of the universe often called mahat, the ultimate progenitor, and indeed the final cosmic goal, of the Hierarchy of Light of which the human hierarchy is a small portion. *See also SANDHI*

Dayanisi. *See* DAYYAN'ISHI

Day Be With Us, Great The lipikas, karmic recorders of the universe, make a barrier — the so-called ring pass-not — impassable during its existence but passable through evolution, between the personal ego and the impersonal or cosmic self. The incarnating monads cannot pass this “ring” until they have through evolutionary risings and development become merged once more in the universal or cosmic soul. The lipikas “are directly connected with Karma and what the Christians call the Day of Judgment; in the East it was called the Day after Mahamanvantara, or the ‘Day-Be-With-Us.’ Then everything becomes one, all individualities are merged into one, yet each knowing itself . . . then, that which to us now is non-consciousness or the unconscious, will then be absolute consciousness” (TBL 112). This is called with the Egyptians the Day of Come-to-Us and refers to what the Hindus call the paranirvana or great night of union in Brahman.

Day of Brahma. *See* BRAHMA'S DAY

Day of Judgment. *See* JUDGMENT, DAY OF

Days of Week. *See* WEEK

Dayus. *See* DYAUS

Dayyan'ishi (Hebrew) *Dayyan'ishī* [from *dayyān* judge, advocate + *'ishī* my man, my self, everybody] Judge or advocate of all. “The god worshipped by the Jews along with other Semites, as the ‘Ruler of men’; Dionysos — the Sun; whence Jehovah-Nissi, or Iao-Nisi, the same as Dio-nysos or Jove of Nyssa . . .” (TG 97).

Dbrim. *See* DABAR

Death Death is not a thing in itself, but one of the phases or temporary events in the unending dramas of life, so that the opposite of death is birth rather than life. In other words, the opposite of manifested life is unmanifest life, pralaya and its aeonic rest. Manvantara and pralaya are phases in the endless flow of the alternating current of cosmic motion, which is the immediate result of the life-breath of the spiritual essence at the heart of everything in manifestation. The same eternal motion which brings everything into objective existence has thereby caused the death of the same entity on the previous *subjective* plane of life. Then, when the lifetime of this manifestation ends, the reverse of this rhythmic motion causes the death of the entity from objective existence, and carries it back to be reborn into its subjective life.

This law applies universally to solar systems, planets, human beings, atoms, etc. The reincarnating ego is born and dies on each of the successive planes of existence through which it descends from spiritual realms to be reborn again on earth. The same rhythmic motion reversed spells death here, with the same repeated births and deaths on its ascending journey to its spiritual home.

Death occurs not from a lack of life, but because the ceaseless motion of the vital essence is wearing out the body. The senility of old age means that certain elements are already drifting in the reverse current that is setting towards the other side of the veil. With the last heartbeat, the dying person is vitally aware of a detailed panorama of his passing life as the field of experience which he is to harvest in the inner world he is about to be born into. The atoms of his body, freed from his spiritual cohering force, separate actively, each to find its appropriate field of action in nature's kingdoms. The adept, while still living in the world, has so far conquered death by self-conquest that he can use his developed spiritual will to enter into and consciously function in the realms of spiritual beings. Paul's mystical saying "I die daily," is true of the initiate who steadily transmutes some degree of his selfish personality to vitalize his higher nature.

There is a close connection between death, sleep, and initiation, sleep being an incomplete death and initiation being a conscious experience of the afterdeath states. *See also* DEVACHAN; KAMA-LOKA; PRALAYA; REIMBODIMENT; SECOND DEATH

Deathless Watcher. *See* HIGHER SELF

Debarim. *See* DABAR

Decad (sometimes decade) Ten, or a group of ten; a sacred number because the universe is built on the model of the decad, the individual and the universe as a whole being tenfold though septenary in manifestation. The One or cosmic monad is sometimes spoken of as emanating the nine, and by including the One itself we get the ten rays of the Logos, the Sephiroth, etc., which are spoken of as seven in the manifested universe. The decad may be considered as a double five or as three triangles and a unity. It is represented in ancient Greece by the Pythagorean tetraktys, of which the three upper dots represent the unmanifest universe, and the lower seven the manifest.

The decad is the radix of the denary scale of notation derived from ancient India. *See also* TEN

Decussated Crossed at an acute angle like the letter X; the decussated cross in a circle was used by Plato to symbolize "the Second God who impressed himself on the Universe in the form of the Cross," the cosmic Man "crucified" in space.

Deep. *See* ABYSS; BYTHOS; SPACE

Deist Usually a believer in natural religion, who admits the existence of deity, but denies that the latter has revealed himself through the usual religious channels. Particularly identified with the 18th century, it is a type of rationalism and reaction against dogmatic theology in favor of the free use of the intellect.

Dei Termini (Latin) Terminal gods; the Hermae or statues of Hermes placed by the Greeks at crossroads. Likewise a general name for divinities presiding over frontiers and boundaries.

Deity Intelligence and will superior to the human, forming the intelligent and vital governing essence of the universe, whether this universe be large or small. The principal views as to the nature of deity may be classed as 1) pantheistic, 2) polytheistic, 3) henotheistic, and 4) monotheistic. Pantheism, which views the divine as immanent in all nature and yet transcendent in its higher parts, is characteristic of certain Occidental philosophical systems and of all Oriental systems. Polytheism implies the recognition of an indefinite number of deific powers in the universe, the plural manifestations of the ever immanent, ever perduring, and manifest-unmanifest One. Polytheism is thus a logical development of pantheism. Henotheism is the belief in one god, but not the exclusion of others, such as is found in the Jewish scriptures, where the ancient Hebrews frankly worshiped a tribal deity and fully recognized the existence of other tribal deities. Monotheism is the belief in only one god, as is found in Christianity and Islam. These religions, in inheriting the Jewish tradition, have confounded this merely personal and local conception with the First Cause of the universe, which in theosophy would be called the formative cosmic Third Logos, thus producing an inconsistent idea of a God who is both infinite, delimited, and personal in character, with an intuition, however, of the necessarily impersonal cosmic intelligent root of all.

In theosophical philosophy, the cosmic divine in the hierarchical sense is both transcendent and immanent, during manifestation breaking as it were into innumerable rays which produce the various deific powers in inner and outer nature; each such immanent divinity, however, itself emanating from the all-encompassing and forever unmanifest Rootless Root or parabrahman. The various universes, sometimes referred to as sparks of eternity, spring from parabrahman at periodic intervals called manvantaras, and then resolve back into the pre-manvantaric condition or pralaya, only to issue forth again when the pralaya of whatever magnitude has run its course. Therefore, at one and the same time divinity is transcendent and immanent, eternal and unmanifest, while its rays or cosmic sparks of whatever magnitude are periodic and manifested. Hence from each such manifested One or cosmic hierarch proceed the multiple rays, to which in various theogonies are given names and attributes of superior deities. Thus the words god and deity become generic, and the general definition may be applied to the core of the core of any being, great or small, cosmic or human, for all are sparks of the cosmic flame of life.

The word deity, in the sense of beings which are more spiritual than the human being of today,

may be applied to the divine rulers of human races before the times of the demigods and heroes; or more generally to an indefinite range of nonphysical beings, spiritual or ethereal in character, including among the latter the so-called “spirits of the elements.” *See also* GOD; GOD(S)

Dekad. *See* DECAD

Delios (Greek) Delian; in Greek mythology, a title of Apollo, who was born on the island of Delos. Also *ta Delia*, the festival of Apollo at Delos.

Delirium Tremens (Latin) [from *delirare* to rave + *tremere* to tremble] Trembling delirium; the delirium arising from alcoholic poisoning, characterized by constant tremor, insomnia, great exhaustion, distressing illusions, and hallucinations. The abnormal consciousness displayed in this condition is graphic evidence of the existence of the astral realm interpenetrating and influencing the physical world. The characteristic hallucinations are of grotesque, vicious enemies and of various horrible animals and insects actively seeking to terrify and injure the agitated, confused sufferer who is evidently conscious on the low levels of the astral plane. Here, among the dregs in the astral light, all the vile and cruel thoughts and deeds of human life, and the worst animal impulses, are reflected back upon the earth, mankind, and beasts. Here, also, the actively evil elementaries or kama-rupic entities are instinctively drawn to any human victim who unconsciously invades their realm, attracted and vitalized by the fumes of the alcoholic liquors with which the person has saturated his body.

As liquors deaden the higher mind and feelings, while arousing the lower nature, the victim is largely devoid of the ordinary self-protection of his judgment, will, and conscience, and has gravitated to his own animal level. That he is, for the time, living in the consciousness of his own astral body accounts for the extraordinary strength he often displays, for the disorientation where he “wants to go home,” for his forgetfulness of all this afterwards, and for the convulsions which, when present, are reported as indistinguishable from true epilepsy. To the depleting vital drain from the continued restlessness and violent activity of the attacks, is added the abnormal strain of obsession by one or another excarnate entity which has been vitalized in proportion as the sufferer is exhausted.

Delos (Greek) An island of the Cyclades group in the Greek Mediterranean. Called out of the deep by the trident of Neptune, it floated about until Zeus chained it down to be the birthplace of Apollo and Artemis. In Homeric times it was a meeting place of Ionians for religious and political purposes.

Delos, the Asteria of mythology, was not really in Greece, which country did not yet exist at the time referred to in the myths; several writers have shown it to have been a far larger country or island than Greece. Diodorus Siculus calls it Basileia (island of divine kings), because the divine dynasties of Atlantis proceeded from it, and we are bidden to seek it among the islands discovered by Nordenskiöld in the Arctic (SD 2:773).

Delphi (Greek) One of the most sacred spots of ancient Greece, renowned as the seat of the most famous of the ancient Greek oracles, often called by the Greeks themselves the center or navel of the earth, though these sacred centers, mountains, etc., are numerous and are localizations of a general idea. Delphi is situated in a kind of bowl on Mount Parnassus in Phocis; its original name as found in Homer was Pytho, which connects it with Apollo, whose temple and oracle were there. It was also the place where the Pythian games were celebrated and one of the two meeting places of the Amphictyonic Council.

The oracles delivered through many ages at Delphi were famous in both ancient history and legends. They were universally revered and were consulted by the ancient sages of many lands. The Oracle, having degenerated from various causes, gradually lost the unquestioning reverence of earlier ages, and finally vanished with the downfall of Greek civilization.

Deluge. See FLOOD

Demeter (Greek) [possibly from Doric *da* earth + *meter* mother] The Earth-Mother; one of the great Olympian deities, in popular mythology specially associated with the earth and its products, patron of agriculture, goddess of law and order, and protector of marriage and the birth of offspring. As the grain goddess, counterpart of the Egyptian Isis, Roman Ceres, and corn mothers, corn maidens, and harvest goddesses of the various native cultures of the Americas today, and of the early Teutonic and Scandinavian races of central and northern Europe.

Popular legend describes Demeter as mother of Persephone, who while gathering flowers on the Nysian plain was seized by Hades and carried to the Underworld. Searching disconsolate for her lost child, Demeter came to the dwelling of Celeus at Eleusis, where she was hospitably received although her identity was unknown. On condition of being given the sole care of the king's son who was ill with fever, she remained and became the child's nurse. Each night she placed the child on a bed of living coals, but the mother, discovering this, snatched the child away in alarm. Demeter then revealed herself as a goddess and, declaring that had she been left alone she would have made the child immortal, she relinquished her post in wrath. Before leaving Eleusis, however, she founded a mystical school or cult to keep alive certain otherwise secret teachings about human divinity and the life after death. The Eleusinian Mysteries, reputed to have sprung from this earlier effort, dealt particularly with the afterdeath states and the progress and experiences of the soul between earth lives.

The great Eleusinian divinities, as far as is known, were three: Demeter-Thesmophoros as goddess of law and order; Persephone-Kore the divine maid; and Iacchos the divine son (the divine man whom it was the object of the Mysteries to bring forth from the "tomb" of the human man). Probably because of her association with Persephone, Demeter was in one of her aspects a divinity of the underworld and was worshiped as such in Sparta and at Hermione at Argolis.

In the Orphic teachings Demeter is not only the earth goddess, but is also Demeter-Kore the divine maid. This aspect is twofold: as Persephone the Virgin-Queen of the Dead; and as the mortal maid Semele, mother of the mystic savior Dionysos, and later enthroned as Semele-Thyone (Semele the Inspired). As both maid and mother she is the immortal wife of Zeus, and is also called the mother of Zeus, as an Orphic verse declares: “The goddess who was Rhea, when she bore Zeus became Demeter.” In one of her aspects, Demeter is the one to whom, in the Orphic legend, is given the still beating heart of the murdered Zagreus-Dionysus.

Demeter belongs to the class of the kabiria (kabir, kabiri): “beneficent Entities who, symbolized in Prometheus, brought light to the world, and endowed humanity with intellect and reason” (SD 2:363), great beings to whom are credited the invention of the arts and sciences that make civilization — letters and the alphabet, law, philosophy, science, art, architecture, music, spinning, weaving, and agriculture.

Demigods One of the orders of semi-divine instructors, spiritual beings in human form. Herodotus, among other Greek writers, speaks of humanity being ruled successively by gods, demigods, heroes, and men. The Lemuro-Atlanteans were among the first who had a dynasty of spirit-kings, highly evolved living devas or demigods. There are the Chinese demigods, Chin-nanga and Chan-gy, the Peruvian Manco-Capac, the Hindu rishis, and the demigods popularized among the ancient Greeks, Romans, and Egyptians. In the Golden Age of Saturnus all people were said to have been demigods, and many of the figures in mythology who seem at one moment historical characters and at another gods or symbols, were actually demigods who once dwelt among mankind, founding new cultures, instructing and guiding humanity, and revealing all the arts and sciences. As examples of demigods who actually descended and taught the human race in historic and prehistoric times, one may cite Osiris, the first Zoroaster, Krishna, and Moses.

Demions (Hebrew) *Dimyōn* Spirits, demons; the Hebrews held “*that there was a class of personating spirits which they designated demions, ‘personators.’* Admitting with Jehovah, who expressly asserts it, the existence of other gods, which were personators of the One God, were these other gods simply a higher class of personating spirits, which had acquired and exercised greater powers? . . . *how are we to know that Jehovah was not a personating Spirit . . .*” (SD 2:508-9).

Demiurge, Demiourgos (Greek) [from *demos* the people + *ergon* work] In Gnosticism, the deity as creator or cosmic artificer was a secondary or subordinate god, distinct from the supreme deity of the hierarchy, acting as creator or former of worlds, with which function the supreme is not directly concerned. Because of this seeming duality of rival gods, monotheistic Christian theology classed the demiurge among the powers hostile to God and mankind, as it did with Satan, the Serpent, Lucifer, and so many others. Marcion (2nd century) and his school attempted to reconcile these by equating the Demiourgos with the Jewish Jehovah.

The Demiourgos, however, is the deity in its creative aspect, the Second Logos — not a personal

deity, but an abstract term denoting the host of creative powers. Later, the conception was anthropomorphized. It is the *elohim* of the Bible who make *kosmos* out of chaos; the universal mind, separated from its fountain-source; the four-faced Brahma; the seven principal *dhyani-chohans*. In the Qabalah, *Hokhmah* (wisdom) becomes united with *Binah* (intelligence), which latter is *Jehovah* or the *Demiourgos*. But the *Demiourgos* itself is dual in the same sense as are those formative powers for which the name stands: acting on all planes from the highest to the lowest, the contrast between above and below, light and its shadow, is shown; added to which, it includes potencies which are symbolized by human minds as masculine and feminine. There was plenty of scope, then, for confusion as to the meaning and application of the word. *See also* ARCHITECTS; DHYANI-CHOHANS; LOGOS

Demiurgic Mind. *See* MAHAT; UNIVERSAL MIND

Demon(s) [from Greek *daimones*, Latin *daemons*] In many of the later religions, such as Christianity, either the gods of rival religions, nature spirits of paganism, or the *exuviae* or shells of the dead. Actually demons are a relatively modern misapprehension of a large class of nature sprites which in ancient thought comprised a vast range of spiritual, semi-spiritual, and astral beings, existing in different degrees of evolutionary unfoldment, and therefore classified into groups from the fully self-conscious down to the only partly conscious elementals of the astral realms. The teaching regarding *daimones* was extremely recondite; the later medieval Christian Demonologies, however, dealt almost exclusively with beings of low grade and of an astral character lacking moral sense and self-consciousness, which for ages have been called in European countries by names such as fairies, sprites, goblins, hobgoblins, pixies, nixies, and brownies. *See also* DAEMON

Demon Est Deus Inversus. *See* DAEMON EST DEUS INVERSUS

Demonologia Neo-Grecism for demonologies, treatises on so-called demons (Greek *daimones*, Latin *daemons*).

Den-sa Sum (Tibetan) "The three pillars of the State"; the three great Gelukpa monasteries in the vicinity of Lhasa: Ganden (Dga'ldan, 1409), founded by Tsong-kha-pa; and Drepung ('Bras spung, 1416) and Sera (Se ra, 1419), founded by his disciples. A commonly used term for the three monasteries is Serdegasum [composed of abbreviations for the names of each + *sum* (*gsum*) three].

Denys, St. *See* DIONYSIUS THE PSEUDO-AREOPAGITE

Deona Mati (Kolarian) One who exorcises evil spirits among the Kolarians of central India.

Depth. *See* BYTHOS

Dervish (Persian) **Driyosh** (Pahlavi) **Drighu** (Avestan) [from Pers *darvish* seeking doors from *dar* a door; i.e., those who seek from door to door, beggars] Poor one; an Islamic devotee, used in mystic

Persian literature for one who shows his spiritual grandeur by turning away from the common norms of society and material wealth. Originally a mendicant, but now it generally indicates a member of a religious fraternity, whether mendicant or not, cloistered or lay. In Turkey and Persia it indicates a wandering, begging religious, called in Arabic-speaking countries a fakir. Those whose faith is so great that they have miraculous powers are termed walis.

The dervishes are the practical expounders of Islam. As with the fakirs and sufis, the origin of the dervish fraternities is assigned to either Ali or Abu Bekr. They are divided into two great classes, the ba-Shara (with the law), who govern their conduct according to the principles of Islam; and the be-Shara (without the law), who do not rule their lives according to the formal principles of any religious creed, although they call themselves Moslems. The sufis belong principally to the latter class. There are reckoned 32 different fraternities of dervishes, with innumerable suborders, but the two principal ones known in the West are the Mevlevits (whirling or dancing dervishes), an order founded by Jelal ud-Din ar-Rumi, author of the great Persian mystical poem the *Mathnawi*; and the Rifa'ites (howling dervishes), who in ecstasy cut themselves with knives, eat live coals and glass, handle red-hot iron, and devour serpents.

In the symbolism of Hafiz (14th-century mystic Persian poet) dervish is one who has reached the highest degree of spirituality by giving up worldly possessions and in a beggar-like appearance holds the secret of alchemy. In later times, people who did not understand the subtleties of mysticism took the symbolic rejection of the material world too literally and the attitude of certain dervishes also contributed to this misconception, particularly during the Safavids, who were themselves dervishes, followers of the Sharia or Shariat (the outward rituals of religion).

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Des-Dir

Desatir (Persian) *Desātīr*. An old Persian work, filled with elements of enormous antiquity, expressed in places eloquently and poetically. In the words of its translator and publisher, Mulla Firuz Bin Kaus, it “professes to be a collection of the writings of the different Persian Prophets, who flourished from the time of Mahabad to the time of the fifth Sasan, being fifteen in number; of whom Zerdusht, or Zoroaster was the thirteenth and the fifth Sasan the last. . . . The writings of these fifteen prophets are in a tongue of which no other vestige appears to remain, and which would have been unintelligible without the assistance of the ancient Persian translation” (Preface, p. i).

The contents have been criticized by several modern scholars, who do not grant it any standing as a work coming down from ancient times for linguistic reasons. However, it contains teachings which are not merely universal, but which run far back into the night of human history; for example, the first chapter suggests the seven sacred planets (vv. 15-21); each star and planet having an intelligence, a soul, and a body (23); the kingdoms of nature on the cosmic ladder of life (54-60); reincarnation (69-72); rounds (101-112); and the grand periods or manvantaras and pralayas (114-16).

Descending Arc. See ARC, ASCENDING AND DESCENDING

Desire A word whose shades of meaning range from mere animal desire to that of cosmic kama or eros which “first arose in It,” bringing spirit into union with matter and giving rise to the creation or emanation of various classes of beings. It can also be lofty spiritual aspiration, the yearning upwards with the undying desire for the divine, or impersonal love, or again, the urge to become united or one with others. Many words overlap it in meaning, such as will, attraction, love, and cupidity, and it is generally used as a translation of the Sanskrit kama.

Philosophically, it is often synonymous with abstract will, as when kama is called sometimes

desire and sometimes will, so that will and desire seem to blend into one on the higher ranges. In the saying, behind will stands desire, will is a colorless force set in motion by desire, much as a current is set up by an electromotive force. From another viewpoint, will, as an abstract motor in the human constitution, arises from the higher or spiritual-intellectual ranges of the kama principle itself, for “Will and Desire are the higher and lower aspects of one and the same thing” (BCW 12:702). *See also* KAMA; EROS

Destiny. *See* KARMA; KARMA-NEMESIS; MOIRA

Destruction. *See* CATAclysms; PRALAYA

Deucalion, Deukalion (Greek) A son of Prometheus and Clymene, and king of Phthia in Thessaly. When Zeus resolved to destroy the degenerate human race, the only two left alive were Deucalion and his wife Pyrrha, on account of their piety. On his father’s advice, Deucalion built a ship, in which he and Pyrrha floated during the nine-days flood, until the ship finally rested on Mount Parnassus. On the advice of an oracle, they reseeded the earth by throwing stones behind them, which became human beings. *See also* ARK

Deus. *See* DEITY; GOD(S)

Deus Ennim et Circulus Est (Latin) “For God is indeed a circle”; a Hermetic axiom ascribed to Pherecydes, a Greek philosopher of the 6th century B.C., said to be the teacher of Pythagoras. The circle is a symbol of the Boundless and also of repetitive cycles; and circular motions and attitudes were prescribed in rituals by Pythagoras, Numa, and many others as being symbolic of divine and celestial concerns.

Deus Est Demon Inversus. *See* DAEMON EST DEUS INVERSUS

Deus Explicitus, Deus Implicitus (Latin) “God involved, God evolved” — the former in pralaya, the latter in manifestation.

Deus Lunus The moon god in masculine guise, the feminine being Dea Luna. Blavatsky connects him with the Hindu Soma and with Jehovah (SD 2:466). The moon is considered a feminine potency because its main function is one of generation, production, and likewise intimately connected with the vivification and feeding of seeds of life of whatever kind. Just as the human or animal mother on earth produces, nurses, and fosters her offspring, both for good and ill, such is the feminine function of the moon in those cosmic relations which connect the moon too intimately with the earth; on the other hand, the moon in its masculine aspect or potency represents its generative power as contrasted with its productive. Thus, it not only produces and fosters the seeds of life as a cosmic agent, but itself is that generative cosmic function which brings about the cyclic vital activities in the hosts of seed-lives, continuously sowing the seed-lives in the appropriate fields.

Deus Mundus (Latin) World God; the maker and ruler of the world. In one sense, the esoteric hierarchical head of the present world order; and in another, the divine aspect of this world order, as shown clearly by the word *mundus*, of which the primal etymological significance is clean, neat, orderly — corresponding with the Greek term *kosmos*, signifying orderliness and neatness in cosmical arrangement. It is thus both the world-divinity itself, abstracted from the more material plane in which it works, and this divinity identified with the hierarchical world-system through which it works.

Deus Non Fecit Mortem (Latin) “God made not death”; from *The Wisdom of Solomon (Apocrypha)*, which in the English runs: “Seek not death in the error of you life: and pull not upon yourself destruction with the works of your hands. For *God made not death*: neither hath he pleasure in the destruction of the living. For he created all things, that they might have their being. . . . But ungodly men with their works called it unto them” (1:12-16).

In the Epistles, Paul speaks of death as created by man, adding that by man also shall death be overcome. “For since by man came death, by man came also the resurrection of the dead. For as in Adam all die, even so in Christ shall all be made alive” (1 Cor 15:21-2). Paul, by his own confession, was in the habit of speaking in parables and veiling mysteries under exoteric doctrines; as his Christos was in all men, it is logical to infer that his Adam was equally generic.

This teaching refers to the contest between the older formative or building gods who made the “senseless” humanity, and the informing or intellectual gods who kindled the spark of consciousness and moral sense in them, as symbolized in the myth of Prometheus. When spirit becomes linked with matter, matter is at first preponderant and death prevails; but when the broken harmony becomes reestablished, mankind will become again free. “When man understands that ‘*Deus non fecit mortem*’ (*Sap. I, 13*), but that man has created it himself, he will re-become the Prometheus before his Fall” (SD 2:422).

Dev. See DAEVA

Deva (Sanskrit) *Deva* [from the verbal root *div* to shine] A divinity, a resplendent deity. “A Deva is a celestial being — whether good, bad, or indifferent. Devas inhabit ‘the three worlds,’ which are the *three planes* above us. There are 33 groups or 330 millions of them” enumerated in the exoteric sacred scriptures of Hindustan, although these numbers should not be taken literally (TG 98).

Deva is a very general term for various classes of celestial beings. There are classes of ethereal or spiritual beings that are behind mankind in their evolution, unself-conscious god-sparks who have yet to go through the human stage in order to bring forth more fully the glory within them. Then there are the celestial beings who have passed through the human stage and are thus evolutionally higher than we; and beings higher than these, who have developed the most divine parts of their constitution. Considered as inhabitants of the three worlds or planes above us, devas is a generalized term for those evolving life-waves or hierarchies of sentient beings evolving on the six

superior globes of earth's planetary chain. *See also* ASURA

Deva-Brahman or **Deva-Brahma** (Sanskrit) *Deva-brahman*, *Deva-brahmā* A name given to Narada, considered to be like a Brahma among the devas.

Devachan (Tibetan) *bDe-ba-can* (de-wa-chen) [from *bde-ba* happiness + *can* possessing] The happy land; exoterically, a translation of the Sanskrit *sukhavati*, the happy Western Realm or Pure Land of the dhyanibuddha Amitabha of East Asian Buddhism. Certain Tibetan books contain glowing descriptions of devachan, such as the *Mani Kambum* (or Kumbum) and the *Odpagmed kyi shing kod*. The term was first employed in theosophical literature by the Mahatmas in their letters to A. P. Sinnett.

In theosophy, devachan is the interlude between earth-lives during which the strictly higher *human* part of the human composite constitution, the reincarnating ego or higher manas, rests in perfect bliss. Recurring time periods of manifestation and quiescence are fundamental in nature, and devachan is the subjective part of the cyclic rhythm of human evolution on this globe. It corresponds, post-mortem, to the sleeping state of the imbodyed, but the devachanic “dreams” are far more vivid and real than ordinary dreams; as a matter of fact, earth life is more truly a dream — to many oftentimes a nightmare.

Devachan commences after the “second death” has taken place, when the lower quaternary of human principles (*sthula-sarira*, *linga-sarira*, *prana*, and *kama*) has separated from the reincarnating ego, which has drawn into itself the noblest thoughts, emotions, and the unrealized hopes of the past incarnation. *Atma-buddhi* and the more spiritual part of manas — the reincarnating higher human ego — become the spiritual monad for the time being, so that the human ego takes its devachan within the monad. The devachanic state applies only to the middle human principles, the purified personality. It has many degrees, and the ego finds its proper place in harmony with its karmic evolutionary stage.

Devachan is a state of peace and happiness beyond ordinary mental cognizance, and no disturbing element can enter until the reincarnating ego has finished resting and recuperating its energy for a new sojourn on earth. Because the reincarnating ego builds its own paradise out of the materials it gathered in the last incarnation, there are great varieties in the devachanic state. It is the product of every individual's unfulfilled spiritual yearnings, longings, and aspirations: since these were not fulfilled or only partly so in earth life, during the interval between earth-lives the ego seeks to fulfill them, rehearsing its spiritual yearnings which, being mental visions or pictures, are thus real in a far truer sense than anything possible on earth, where the consciousness is so thickly enshrouded with the obscuring veils of lower attractions. It is the *quality* of these aspirations, however, which determines the length of the devachanic state: the more lofty and spiritual the aspirations, the longer the stay. Devachan is not a state of positive action and responsibility, and therefore not a field of retribution for wrong done in the past.

The purified ego is far beyond the reach of ordinary mediums whose contact is confined to far grosser entities and planes. Occasionally a sensitive can rise to the devachanic plane and enter into a *spiritual* communion with an ego with whom there is close sympathy, but even this is rare, and to retain it in the memory is perhaps rarer.

In considering devachan and nirvana, devachan appertains to the higher human ego, however sublimated it may be, of any particular incarnation; whereas nirvana is a far higher state in which the personality is completely transcended and dropped, or has become so thoroughly purified that it is identified with the higher self. The devachanic state is of an illusory nature (although real enough to the devachani, just as earth life is to us); but the nirvani has attained universal consciousness and experiences reality — sachchidananda, as expressed by the Vedantists.

Devachan and nirvana are not localities, but the states of consciousness of the beings in those respective spiritual conditions. Nirvana is the highest spiritual or superspiritual state; devachan is the intermediate or high psychological states; and avichi, popularly called the lowest of the hells, is the nether pole of the spiritual condition. These three are states of beings existing in the lokas or talas, the worlds of the cosmic egg; whereas paranirvana (“beyond nirvana,” a super-nirvana) is that divine state which is virtually identification with cosmic reality.

Devachani, Devachanee Coined by the Mahatmas when first presenting the theosophical teachings, to name the entity experiencing the state of devachan, consisting of the higher triad made one for the time being — atma-buddhi-manas — after its separation from the lower quaternary in kama-loka.

Devagnanams. See DEVAJNANINS

Devajnanins (Sanskrit) *Devajñānin-s* [from *deva* god, divine + *jñānin* knower] The higher classes of divine beings who possess innate divine knowledge.

Devaki (Sanskrit) *Devakī* The mother of Krishna. She was shut up in a dungeon by her brother, King Kansa, for fear of the fulfillment of a prophecy that a son of hers would dethrone and kill him. Notwithstanding the strict watch kept, Devaki was overshadowed by Vishnu, the holy spirit, and thus gave birth to that god’s avatara, Krishna as the incarnated ray of the Logos.

In later mythology Devaki became the anthropomorphized form of Aditi or cosmic space, just as the Hebrew Mary became a celestial entity. The seven sons of Devaki killed by Karsa before the birth of Krishna symbolize the seven human principles. We must rise above them before reaching the ideal, Krishna, the Christ or the Buddha state, thus centering ourselves in the highest, the seventh or first.

Devakshi or Devakasha (Sanskrit) *Devākṣi, Devākṣa* [from *deva* spiritual, celestial + *akṣi* eye] The deva eye; the name given by Eastern occultists to the pineal gland, also called the Eye of the Dangma or the Eye of Siva.

Deva-laya (Sanskrit) *Devalaya* [from *deva* spiritual being + *laya* dissolving place from the verbal root *lī* to dissolve] The shrine of a spiritual being; all Brahmanical temples were called deva-layas. Laya has in this case the significance of a place where all the lower dissolves upwards into the higher.

Deva-loka (Sanskrit) *Devaloka* [from *deva* spiritual being + *loka* world, sphere] A world or sphere of any divinity; in the plural, refers sometimes to the seven worlds enumerated under the seven lokas.

Deva-Man (Sanskrit-English) Men of lofty spiritual and intellectual attainments who are possessed of equivalent spiritual and intellectual powers, whether latent or manifest.

Devamata (Sanskrit) *Devamata* A rishi who held a dialogue with Narada. *See also* ANUGITA

Devamatri (Sanskrit) *Devamātrī* Mother of the gods; a title of Aditi, kosmic or mystic space. Aditi is the Vedic Goddess-Mother from whose matrix the sun and planets were born, identical with the higher ranges of akasa, the spiritual essence pervading the space of any solar system; primordial kosmic substance in its highest or spiritual parts. Aditi therefore is the mystic womb of nature out of which all comes for the period of a kosmic manvantara, and into which again all sinks after the kosmic period of evolution has ceased and pralaya begins.

Devanagari (Sanskrit) *Devanāgarī* “Divine city writing,” the alphabetic script of Aryan India, in which the Sanskrit language is usually written. The Devanagari alphabet and the art of writing it were kept secret for ages, and the dvijas (twice-born) and the dikshitas (initiates) alone were originally permitted to use this literary art. In India, as in many other countries which have been the seat of archaic civilizations, sacred and secret records were committed to the tablets of the mind, rather than to material tablets. Alone the priesthood invariably had, in addition to the mnemonic records, an ideographic or syllabic script which was used when considered convenient or necessary, mainly for intercommunication between themselves and brother-initiates speaking other tongues. This applied to ideographic characters which can be read with equal facility by those acquainted with them, whatever their spoken mother-tongue may be, and to written characters embodying an archaic or sacred language, as was the case with the ancient Sanskrit. This is the main reason why these ancient peoples have so few allusions — and sometimes no allusions at all — to writing; in the civilizations of those far past times writing was not found to be a need and was kept as a sacred art for the temple scribes.

“Devanagari is as old as the Vedas, and held so sacred that the Brahmans, first under penalty of death, and later on, of eternal ostracism, were not even allowed to mention it to profane ears, much less to make known the existence of their secret temple libraries” (Five Years of Theosophy 360).

“Real Devanagari — non-phonetic characters — meant formerly the outward symbols, so to

say, *the signs used in the inter-communication between gods and initiated mortals*. Hence their great sacredness and the silence maintained throughout the Vedic and the Brahmanical periods about any object concerned with, or referring to, reading and writing. It was *the language of the gods*” (ibid. 423).

The Devanagari characters as first used among initiates and privileged men were symbolic and ideographic in form. But these outlines by use gradually lost their mere picture-form, or idea-suggesting power, and through constant use and rapid writing continuously lost more and more of the details of the picture, until they finally became merely conventional signs or letters of the alphabet. The word devanagari is synonymous with the Hermetic and Hieratic Neter-Khari (divine speech) of the Egyptians.

Devapi (Sanskrit) *Devāpi* [from *deva* god + *āpi* friend] Friend of the god; a rishi mentioned in the *Rig-Veda* as the son of Rishti-shena. In the *Mahabharata* and the Puranas he is described as a son of King Pratipa of the Kurus, who resigns his kingdom and retires into the woods, where he is still alive, awaiting with the sage Maru, at Kalapa or Katapa, the coming of Maitreya Buddha, the avatara who will come at the close of the kali yuga, according to legend.

Devaputra-Rishayah (Sanskrit) *Devaputra-ṛṣayah* [from *deva* spiritual being + *putra* son + *ṛṣi* sage] Sages who are sons of spiritual ancestors; a title applied to various classes of the higher pitris or spiritual and intellectual ancestors of the human race.

In a more restricted sense, applied to those rare but periodic appearances of spiritual beings in the human race, called by the ancient Hindus rishis, who are distinguished from avataras on the one hand and buddhas on the other hand — so that the compound in these last cases may be translated as rishis who are sons of devas or spiritual beings.

Deva-Rishi. See DEVARSHI

Devarshi (Sanskrit) *Devarṣi* [from *deva* divine being + *ṛṣi* sage] A divine or godlike sage; a son of dharma or yoga. A class of sages, such as Atri; those human sages who through striving, aspiration, and self-conquest attain a divine nature while on earth.

Devasarga (Sanskrit) *Devasarga* [from *deva* divine + *sarga* emanation, emission, creation] Divine emanation or emission; the creation of the gods, the last of the first series of creations enumerated in the *Vishnu-Purana*. It “has a universal reference; namely, the Evolutions in general, not specifically to our *Manvantara*; but the latter begins with the same over and over again, showing that it refers to several distinct Kalpas. For it is said ‘at the close of the past (*Padma*) Kalpa the divine Brahma awoke from his night of sleep and beheld the universe void.’ Then Brahma is shown going once more over the ‘seven creations’ in the secondary stage of evolution, repeating the first three on the objective plane” (SD 1:454).

Devasarman (Sanskrit) *Devaśarman* Author and quasi-sage (5th century BC) said to have written

the *Vijnana-kaya-sastra*. “He wrote two famous works, in which he denied the existence of both *Ego* and *non-Ego*, the one as successfully as the other” (TG 99).

Devasena (Sanskrit) *Devasena* A Buddhist arhat; the feminine, *Devasenā*, is a host of spiritual or celestial beings, and a name given to Vach as an aspect of Sarasvati, goddess of occult wisdom.

Devata (Sanskrit) *Devatā* [from *deva* divine being] A divine or spiritual being; a generalizing term, often identical with *deva*. In the plural, a class of celestial beings that waged war with the *daityas*, according to the Puranas.

Devavardhaki (Sanskrit) *Devavardhaki* Architect of the gods; a title given to Visvakarman, who according to Hindu mythology was the cosmic demiurge or world-former.

Deva Vardhika. See DEVAVARDHAKI

Devayana (Sanskrit) *Devayāna* [from *deva* spiritual being + *yāna* path] The way of the gods.

Devi Bhagavata Purana. See BHAGAVATA PURANA

Devi-Durga (Sanskrit) *Devī-Durgā* Spiritual and inaccessible goddess; also called Kali (the black one), she is a warlike, bloodthirsty goddess who destroys and devours her enemies without pity. She is “raw power, energy untamed by discipline or direction” (Classical Hindu Mythology 226). Sometimes considered an independent deity, at others an aspect of Siva’s consort, whose benign aspect is named Parvati.

The feminine consorts of the various divinities of ancient peoples represent the vehicular or encompassing substances and powers surrounding the emanating monad itself; and because these powers and substances are in incessant action, they are often grouped under the name *sakti*, active universal energy, which is septenary, denary, or duodenary in hierarchical construction, according to the manner of counting. Thus these spiritual or divine consorts are equivalent to the theosophical elements or principle-elements, whether of the cosmos or of any individual, which surround the individual monad and furnish the field of action through which it expresses itself.

Devil [from Greek *diabolos* slanderer, adversary; cf Italian *diavolo*, French *diable*] The Devil of the New Testament and Christian theology is an evil personality, ruling over a kingdom of evil spirits, the inveterate foe of both God and man; a fallen angel, one of the celestial host who rebelled against God and was cast out from heaven. The conception of an evil individuality is a necessary counterpart to the conception of a good personal God: evil exists, God is good and could not have made evil; therefore the devil made it, but eventually he will be overthrown, and in the meantime he fulfills God’s purpose by trying and testing mankind.

The older Hebrews had no such devil; the word Satan is nearly always used in the ordinary sense of adversary. In Job, Satan is an emissary of God, one of his sons, charged with a mission to test Job. The original Hebrew God is supreme, author of both good and evil. But with the later Hebrews

the idea underwent modification, and the notion of an evil deity arose, possibly from an adoption of Persian dualism acquired during the captivity. At the time the Gospels were written it is evident that the idea of a prince of darkness was very real and ever-present, though the story of the temptation of Jesus is evidently a picture of the triumph of an initiate over the forces of terrestrial nature.

In cosmic evolution, no sooner does duality in evolutionary manifestation supervene, than matter of necessity appears as the other pole or alter ego of spirit, from the dual nature of manifestation itself. It is only by the interaction of polar forces that evolution can proceed, a process everywhere mystically or theologically typified by the various wars in heaven. The same duality is present in human nature: the adversary is the lower quaternary manifesting through the terrestrial nature, which first dominates, and then eventually is dominated by, the upper triad or spirit. In many old myths, Satan under various names appears as the benefactor of mankind, e.g., Prometheus, Venus-Lucifer, and the Serpent of Genesis. Christian theology, through misunderstanding of and loss of the keys to its own sacred writings, has perverted several symbols: the Fall of the angels in one of its aspects is really the descent of the manasaputras; the Serpent of Eden was not the devil; and the sin of mankind was not sexual generation but the abuse of spiritual and intellectual as well as of psychic powers.

By some sects in early Christian times the doctrine of the Demiourgos or secondary creator prevailed, assuming a variety of forms, more or less philosophical and approximating the esoteric teachings; but the spirit of the times demanded a cruder conception. In the Middle Ages the idea of a personified devil and devils inflicting trials upon mankind became a veritable obsession: the idea has persisted up the present time in many churches.

Devils may denote various kinds of evil or partially evil entities in nature, evil because not yet sufficiently evolved to express the spiritual light within them; or entities generated from human thoughts and inhabiting the lower regions of the astral light. In the singular it may stand as a wide generalization for human selfishness and passions. Sensitives seeing these thought-impression in the astral light, may be inclined to view them as realities. *See also* DRAGON; LUCIFER; SATAN; SERPENT

Devonian Age. *See* GEOLOGICAL ERAS

Dgyu, Dgyu-mi, Dgiu. *See* DZYU

Dhairya (Sanskrit) *Dhairya* [from the verbal root *dhṛ* to hold, maintain] Fortitude.

Dhaivata (Sanskrit) *Dhaivata* The sixth of the seven primary musical notes of the Hindu scale. *See also* SHADJA

Dhaman (Sanskrit) *Dhāman* [from the verbal particle *dha* to put, set, lay down as a rule, fix upon] An abode; a state; the members of a class, e.g. of a family, tribe, or race; a law or rule; manner or

form; strength, faculty, splendor, majesty, dignity; also wealth in property.

Dhammapada (Pali) *Dhammpada* [from *dhamma* law, moral conduct (cf Sanskrit *dharma*) + *pada* a step, line, stanza] A fundamental text of Southern Buddhism: a collection of 423 verses believed to be the sayings of Gautama Buddha, gathered from older sources and strung together on 26 selected topics. Dealing with a wide range of philosophic and religious thought, with particular emphasis on ethics, they are often couched in beautiful imagery, so that they make a ready and profound appeal to the reader. Self-culture and self-control are forcibly inculcated, and when the precepts are followed they lead to the living of an exalted as well as useful life.

Dhanus (Sanskrit) *Dhanus* Bow; the ninth zodiacal sign, Sagittarius. According to some Hindu mystical thinkers, this sign represents the nine Brahmas or prajapatis who assisted in building the material universe. Nine is the number of becoming or change.

Dharaka (Sanskrit) *Dhāraka* A receptacle, vessel; secondarily, equivalent to dhara, the highest point, summit. Subba Row speaks of the sacred dharaka as equivalent to the sacred Hebrew Tetragram or the four matras of Pranava, the four measures or quantities of the mystical and sacred syllable Om.

Dharana (Sanskrit) *Dhāraṇā* [from the verbal root *dhr* to hold, carry, maintain, resolve] Intense concentration of the mind when directed to “some one interior object, accompanied by complete abstraction from everything pertaining to the external Universe, or the world of the Senses” (VS 73). It is the sixth stage of spiritual yoga, the effort to unite the human with the divine within, in which training “every sense as an individual faculty has to be ‘killed’ (or paralyzed) on this plane, passing into and merging with the *Seventh* sense, the most spiritual” (VS 78-9).

Dharani (Sanskrit) *Dhāraṇī* [from the verbal root *dhr* to bear, support] In Buddhism, a mystical verse or mantra; in Hinduism, verses from the *Rig-Veda*. “In days of old these mantras or Dharani were all considered mystical and practically efficacious in their use. At present, however, it is the Yogacharya school alone which proves the claim in practice. When chanted according to given instructions a Dharani produces wonderful effects. Its occult power, however, does not reside in the *words* but in the inflexion or accent given and the resulting sound originated thereby” (TG 100).

Also, any tubular vessel of the body; the earth.

Dharma (Sanskrit) *Dharma* [from the verbal root *dhr* to bear, support] Equity, justice, conduct, duty; right religion, philosophy, and science; the law per se; the rules of society, caste, and stage of life. Secondarily, an essential or characteristic quality or peculiarity, approaching closely to the meaning of svabhava.

Also a sage who married ten or thirteen daughters of Daksha, a judge of the dead; the personification of law and justice. In the *Mahabharata*, the father of Yudhishtira, chief of the

Pandavas.

Dharmachakra, (Sanskrit) *Dharmacakra* [from *dharma* law + *cakra* wheel] The wheel of the law, or the range of the law. “The emblem of Buddhism as a system of cycles and rebirths or reincarnations” (TG 100), it also applies to the Buddha as the holder of the wheel of the law: he who sets a new cycle in motion and in consequence changes the course of destiny through his expounding of the teachings.

Dharmakaya (Sanskrit) *Dharmakāya* [from *dharma* law, continuance from the verbal root *dhṛ* to support, carry, continue + *kāya* body] Continuance-body, body of the law. One of the trikaya of Buddhism, which consists of 1) nirmanakaya, 2) sambhogakaya, and 3) dharmakaya. “It is that spiritual body or state of a high spiritual being in which the restricted sense of soulship and egoity has vanished into a universal (hierarchical) sense, and remains only in the seed, latent — if even so much. It is pure consciousness, pure bliss, pure intelligence, freed from all personalizing thought” (OG 38). In the dharmakaya vesture the initiate is on the threshold of nirvana or in the nirvanic state. Sometimes the dharmakaya is called the “nirvana without remains,” for once having reached that state the buddha or bodhisattva remains entirely outside of every earthly condition; he will return no more until the commencement of a new manvantara, for he has crossed the cycle of births. Dharmakaya state is that of parasamadhi, where no progress is possible — at least as long as the entity remains in it. Such entities may be said to be for the time being crystallized in purity and homogeneity. This is, likewise, one of the states of adi-buddha, and as such is called the mystic, universally diffused essence, the robe or vesture of luminous spirituality. *See also* TRIKAYA; TRISARANA

Dharmaprabhasa (Sanskrit) *Dharmaprabhāsa* [from *dharma* law + *prabhāsa* illuminator] Illuminator of the law; the name of a buddha who will appear during the seventh root-race (TG 100).

Dharmaraja (Sanskrit) *Dharmarāja* Just and righteous king; a title given to Gautama Buddha, and to Yama, the god of the dead, in the latter instance signifying the strict and utterly impartial justice karmically encountered by those who die.

Dharma-Savarni (Sanskrit) *Dharmasāvarṇi* One of the 14 manus overseeing the earth-chain, the root-manu of the sixth round (SD 2:309).

Dharma-Smṛiti-Upasthana (Sanskrit) *Dharma-smṛiti-upasthāna* [from *dharma* law + *smṛti* remembrance + *upasthāna* the act of placing oneself] In Buddhism, the act of placing oneself in remembrance of the Law. Blavatsky paraphrases the term from another angle: “Remember, the constituents (of human nature) originate *according to the Nidanas, and are not* originally the Self” (TG 100). The nidanas are the chain of causal concatenation, the 12 causes of existence or manifestation which developed each one by itself, usually in serial and periodic order and strictly in accordance with stored-up karmic seeds of various kinds. Equally important is the fact that the

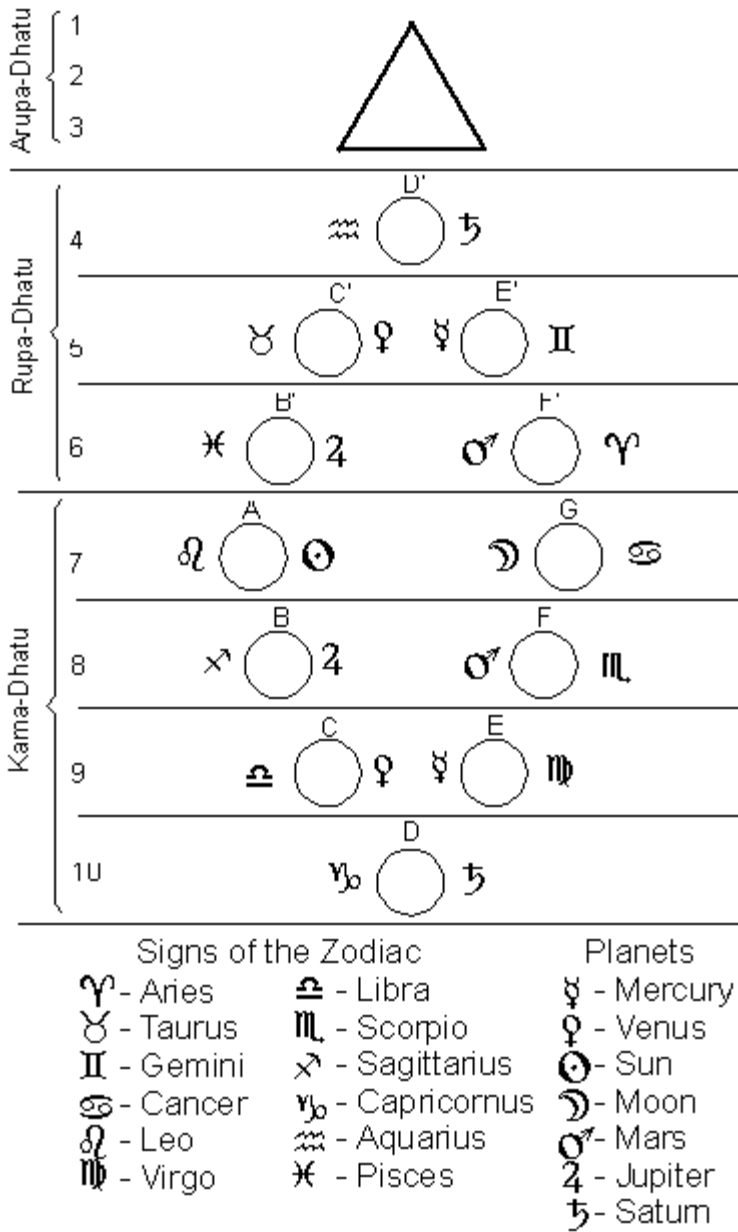

atomic core of selfhood clothes itself in the various sheaths of consciousness, which therefore actually are the seeds or, in one sense, the very being of these nidanas; so that the nidanas may be referred back to the self as their originators. The idea is the same as that embodied in the Christian statement: “As a man thinks so is he.”

Dharmasoka (Sanskrit) *Dharmāsoka* The Asoka of the dharma; a name given King Asoka, the grandson of King Chandragupta, because he devoted his life to the dharma, or law of the Buddha, and its propaganda.

Dhatu (Sanskrit) *Dhātu* Constituent part, ingredient; an equivalent to mahabhuta (element), the range or plane of primeval matter, five usually being reckoned: kha or akasa (ether); anila (wind); tejas (fire); jala (water); bhu (earth); but esoterically there are seven. “As there are seven Dhatu (principal substances in the human body) so there are seven Forces in Man and in all Nature” (SD 1:290).

In Southern Buddhism, the word also means residue, relics (that which remains after the body has been cremated), and applied especially to the relics of the Buddha’s body alleged to have been collected after its cremation.

In theosophy, the globes of the planetary chain are distributed in the three dhatus thus:

See also KAMA-DHATU

Dhimat (Sanskrit) *Dhīmat* As an adjective, wise, intelligent; as a noun, an epithet of spirituality.

Dhriti (Sanskrit) *Dhṛti* [from the verbal root *dhṛ* to hold, preserve, be steady] Firmness, constancy, resolution; as a proper noun, an epithet of a daughter of Daksha and wife of Dharma.

Dhruva (Sanskrit) *Dhruva* [from the verbal root *dhru* to be firm, fixed] The pole star; “the heavenly form of the mighty lord Hari is made of stars and shaped like a porpoise with Dhruva in its tail. This constellation makes the planets, moon, sun and so on revolve, and the *nakshatras* circle him like a wheel. . . . on Dhruva rests the sun, upholder the world with its gods, demons and human beings.

“all the planets, constellations, stars and meteors are without exception tied to Dhruva with wind cords and move in their proper courses, O Maitreya” (Classical Hindu Mythology 45-6).

“The occult sciences show that the founders (the respective groups of the seven Prajapatis) of the Root Races have all been connected with the Pole Star. In the Commentary we find: —

‘He who understands the age of Dhruva who measures 9090 mortal years, will understand the times of the pralayas, the final destiny of nations, O Lanoo’ ” (SD 2:768).

Also the name of an ancient Aryan sage, a Kshatriya, who through continuous religious austerities and philosophical meditation, became a rishi, and whose name was given to the pole star. In the Puranas, the son of Uttanapada, who was raised to the pole star by Vishnu.

Dhulkarnayn (Arabic) The two-horned one; title given by the Arabs to those conquerors, whether spiritual or material, who in their conception have subdued the world from East to West. It is thus in a sense parallel to the Hindu chakravartin.

Dhyan(s). See DHYANI-CHOHANS

Dhyana (Sanskrit) *Dhyāna* [from the verbal root *dhyai* to contemplate, meditate] Profound spiritual-intellectual contemplation, with utter detachment from all objects of sense and of a lower mental character; one of the six paramitas in Buddhism. See also JHANA

Dhyana-marga (Sanskrit) *Dhyāna-mārga* [from *dhyāna* meditation + *mārga* path] The path of meditation or profound spiritual-intellectual contemplation.

Dhyana Yoga (Sanskrit) *Dhyāna Yoga* Profound spiritual mediation on the divinity within, embodying six or seven stages of advancement, accompanied by the simultaneous abstraction of thought from external existence; the sixth chapter of the *Bhagavad-Gita* treats of dhyana yoga. Likewise, one of the paramitas of Buddhism.

Dhyan-chohans, Dhyani(s). See DHYANI-CHOHANS

Dhyani-bodhisattva (Sanskrit) *Dhyāni-bodhisattva* [from the verbal root *dhyai* to meditate, contemplate + *bodhisattva* he whose essence is bodhi (wisdom)] A bodhisattva of meditation or contemplation; the sixth in the descending series of the Hierarchy of Compassion, the mind-born sons of the dhyani-buddhas.

“There is a dhyani-bodhisattva for this globe, and also for each of the three globes which precede this globe on the downward arc, and likewise a bodhisattva for each of the three globes which follow this globe on the upward arc — one bodhisattva for each. This dhyani-bodhisattva is the spiritual head of the spiritual-psychological hierarchy of each globe. . . . Our dhyani-bodhisattva is the Wondrous Being, the Great Initiator, the Silent Watcher of our globe . . .” (Fund 275).

Dhyani-buddha (Sanskrit) *Dhyāni-buddha* [from the verbal root *dhyai* to meditate, contemplate + *buddha* awakened one] Buddhas of contemplation or meditation; the fifth in the descending series

in the enumeration of the Hierarchy of Compassion. Two general hierarchies of spiritual beings brought forth our cosmos: the dhyani-buddhas or architects who in their aggregate form the higher and more spiritual side, and actually compose the line of the luminous arc; and the dhyani-chohans or the builders or constructors who form the lower and relatively more material side, the line (from this viewpoint only) of the shadowy arc. Often the term dhyani-chohans is used for both these lines of beings.

There are seven dhyani-buddhas, so that for each round of a septenary planetary chain there is a presiding dhyani-buddha or causal buddha. Our present fourth round is under the care and supervision of the dhyani-buddha belonging to the fourth degree of this celestial hierarchy. The dhyani-bodhisattvas who watch over the globes of the planetary chain in each round are rays from the dhyani-buddha of the round.

“It is this dhyani-buddha of our fourth round, our Father in Heaven, who is the Wondrous Being, the Great Initiator, the Sacrifice, . . . The Ray running through all our individual being, from which we draw our *spiritual* life and *spiritual* sustenance, comes direct to us from this hierarchical Wondrous Being *in whom we all are rooted*. He to us, psychologically and spiritually, holds exactly the same place that the human ego, the man-ego, holds to the innumerable multitudes of elemental entities which compose his body . . .” (Fund 237-8).

These dhyani-buddhas furnished humankind with divine kings and leaders, who taught humanity the arts and sciences, and who “revealed to the incarnated Monads that had just shaken off their vehicles of the lower Kingdoms — and who had, therefore, lost every recollection of their divine origin — the great spiritual truths of the transcendental worlds” (SD 1:267).

Further, each human monad has sprung from the essence of a dhyani-buddha.

“The ‘triads’ born under the same Parent-planet, or rather the *radiations* of one and the same Planetary Spirit (Dhyani Buddha) are, in all their after lives and rebirths, sister, or ‘*twin-souls*,’ on this Earth.

“This was known to every high Initiate in every age and in every country: ‘I and my Father are one,’ said Jesus (John x. 30). When He is made to say, elsewhere (xx. 17): ‘I ascend to *my* Father and your Father,’ . . . It was simply to show that the group of his disciples and followers attracted to Him belonged to the same Dhyani Buddha, ‘Star,’ or ‘Father,’ again of the same planetary realm and division as He did” (SD 1:574).

Dhyani-chohans (Sanskrit-Tibetan) [from Sanskrit *dhyāni* contemplation + Tibetan *chohan* lord] Lords of meditation. In theosophical literature, dhyani-buddhas are the intellectual architects, the higher and more spiritual beings of the god-world. Dhyani-chohans, as a generalizing term, includes both the higher classes which take a self-conscious, active part in the architectural ideation of the universe, and the lower classes, some of which are self-conscious, but in their lower

representations progressively less on on a descending scale. The lowest of these builders are little more than merely conscious or semi-conscious beings following almost servilely the ideation of the cosmic spirit transmitted to them by the higher class of the architects.

Dhyani-chohan is likewise synonymous in one sense with the Sanskrit manu. The seven principal classes of dhyani-chohans are intimately connected, each to each, respectively, with the seven sacred planets of our solar system, and likewise with the globes of the earth planetary chain. Furthermore, there is a class of dhyani-chohans at the head of every department of nature in our solar system. These dhyani-chohans, as the summit of the Hierarchy of Light, embody in themselves as individuals the ideation of the cosmic Logos, thus forming the laws according to which nature exists and works. These laws, therefore, are really the automatic spiritual activities of the highest classes of the dhyani-chohans.

The dhyani-chohans have their bodhisattvas, intellectual offspring, or representatives on and in each descending cosmic plane, so that every being has as its highest portion one such dhyani-chohan as its egoic individuality. Hence, “the dhyani-chohans are actually in one most important sense our own selves. We were born from them; we were the monads, we were the atoms, the souls, projected, sent forth, emanated, by the dhyanis . . .” (Fund 407).

Dhyani-pasa (Sanskrit) *Dhyānipāśa* [from *dhyānin* divine being + *pāśa* rope] The rope of the gods (dhyanis); another way of referring to a great Ring-pass-not which hedges off the phenomenal world from the noumenal kosmos.

Dhyanis. See DHYANI-CHOHANS

Diabolos. See DEVIL

Diakka Coined by Andrew Jackson Davis (1826-1910), a prominent American Spiritualist, to denote kama-lokic elementaries and astral spooks or shells generally, who are amoral, deceptive beings existing in a shady corner of the Summer Land. (cf. *Diakka and Their Earthly Victims*). Blavatsky cites Porphyry in connection with the Diakka: “It is with the direct help of these bad demons, that every kind of sorcery is accomplished . . . These spirits pass their time in deceiving us, with a great display of cheap prodigies and *illusions*; their ambition is to be taken for gods, and their leader demands to be recognized as the supreme god” (IU 1:219).

These shells, spooks, elementaries, and evil phantoms of the astral light were known throughout antiquity, universally abhorred and often feared by human beings because of their evil effects on human life. Hebrew and early Christian demonologists personalized them under the head of Belial and his army of imps.

Diameter of the Circle In cosmology the horizontal diameter in the circle symbolizes the first manifestation, immaculate Mother Nature who gives birth to the universe. It also represents the hermaphrodite third root-race of humanity. “The *diameter*, when found isolated in a circle, stands

for female nature, for the first *ideal* world, *self-generated and self-impregnated* by the universally diffused Spirit of Life — referring thus to the primitive Root-Race also” (SD 2:30). The unmanifest deity is symbolized by the circle or nought, and the manifest deity by the diameter of that circle. The circle empty represents the boundless or unmanifest; the point within the circle the first differentiation, “potential Space within abstract Space,” while the horizontal diameter represents the third stage of manifestation, the divine mother or nature, and the cross in the circle is the manifested world. The vertical diameter is male, and alone in the circle represents mankind after the separation of the sexes (SD 1:4-5).

Diamond, Diamond-heart The diamond is a symbol signifying the imperishable attributes of the cosmic quinta essentia — the fifth essence of medieval mystics. In Northern Buddhism, the unmanifest Logos, being too spiritual to manifest in material realms directly, sends into the world of manifestation its heart, the diamond heart (vajrasattva, dorjesempa) which is the manifest Logos, from which emanate the Third Logos which collectively is the seven cosmic dhyani-buddhas. Manushya-buddhas, when their personality has become merged in atma-buddhi, are also called diamond-souled because of their spiritual approach to their cosmic prototype; otherwise they are mahatmas of the highest class.

Diana (Latin) [archaic fem of *Janus*] Goddess of light; an old Italian divinity, later identified with the Greek Artemis as daughter of Zeus and Latona, and sister of Apollo. Goddess of the moon and queen of the night, she presided over the chase, open country, forests, war, and water. As the moon goddess, identified in one aspect with Hecate. She was worshiped in her form of Lucina as presiding over births; as goddess of the night she was worshiped with torches, and was beloved as the protectress of the outcast and slave.

The moon “stands in closer relations to Earth than any other sidereal orb. The Sun is the giver of life to the whole planetary system; the Moon is the giver of life to our globe; and the early races understood and knew it, even in their infancy. She is the Queen and she is the King, and was King Soma before she became transformed into Phoebe and the chaste Diana. . . . For, if Artemis was *Luna* in Heaven, and, with the Greeks, Diana on Earth, who presided over child-birth and *life*: with the Egyptians, she was Hekat (Hecate) in Hell, the goddess of Death, who ruled over magic and enchantments. More than this: as the personified moon, whose phenomena are triadic, Diana-Hecate-Luna is the *three in one*. For she is *Diva triformis, tergemina, triceps* — three heads on one neck, like Brahma-Vishnu-Siva.” (SD I:386-7) *See also* ARTEMIS; HECATE; MOON

Dianoia (Greek) [from *dianoia* thought] Used by Plato and Aristotle often in contrast with soma (body); synonymous with logos, it is divine ideation and the root of all thought.

Diapason Harmony (Greek) *e dia pason chordon symphonia* The harmony throughout the whole range of the seven strings of the ancient Greek heptachord or seven-stringed lyre — the octave. The Pythagoreans, teaching that numbers and their ratios underlie manifestation, traced the

analogy between the seven-stringed lyre and the heavenly heptachord of the seven manifested planets of the ancients. Numbers were assigned to express the relative distances of the planets from the central body (sun or earth); and numbers were assigned to denote the lengths of the strings or their pitch (SD 2:601). It is impracticable to reach an exact judgment as to the details of this analogy; the stringing of the lyre differed in different times and places, and it is difficult to adapt the Greek scale to the diatonic scale. But details apart, the important point is that the universal harmony, based on numbers, prevails throughout cosmos and expressed in the phrase music of the spheres.

Diasteme or **Diastrem** (Greek) *diastema*. An interval; used in Platonic philosophy to signify the intervals between musical tones.

Dictynra, Dictynna (Greek) [from *diktyon* net] A sea goddess worshipped in Crete, an aspect of Britomartis (sweet maid), a goddess worshiped throughout the Mediterranean islands and coast, often identified with Artemis. Britomartis dispensed happiness and was a patroness of hunters, fishermen, and sailors, a goddess of health and birth. Dictynna, a daughter of Zeus and Artemis, seems to have originally been a moon goddess. She is said to “wear a wreath made of the magic plant *diktamnon*, or *dictamnus*, the evergreen shrub whose contact is said, at the same time, to develop somnambulism and cure it finally . . .” (IU 1:264).

Dido Also Elissa. Queen of Carthage in North Africa and traditionally its founder. According to Timaeus, her actual name was Theiosso, in Phoenician Helissa or Elissa; and Dido, the Phoenician equivalent of the Greek *planes* (wanderer), was given her because of her wanderings; Dido is also said to be the name of a Phoenician goddess and can be translated “the beloved.” After her husband was killed by her brother, Dido fled to Africa and founded a city which became Carthage. Rather than marry a local chieftain against her will, she killed herself; in the *Aeneid* she is said to have killed herself after being deserted by Aeneas.

Dido was “the patroness of the Phoenician mariners; and together with Venus and other lunar goddesses — the moon having such a strong influence over the tides — was the ‘Virgin of the Sea.’ . . . the Phoenicians, those bold explorers of the ‘deep,’ carried, fixed on the prow of their ships, the image of the goddess Astartè, who is Elissa, Venus Erycina of Sicily, and Dido, whose name is the feminine of David” (IU 2:446&n).

Differentiation The process of passing from the simple to the complex or, in its use in philosophy, from homogeneity to heterogeneity, from unity to multiplicity. This does not mean that the unity is less than the multiplicity or diminished by it, for the unity contains all that comes from it. The word is used in much the same sense as manifestation; the process of evolution on the downward arc is one of continuous differentiations, and the inverse process takes place on the upward arc. The Pythagoreans condemned the duad because it represented the beginning of differentiation or departure from cosmic simplicity and wholeness. In theosophical philosophy differentiation

begins after zero, from which the One is the first differentiation. Spirit is the first differentiation from space, and primordial matter is the first differentiation from spirit.

Differentiation also implies specialization of function, as is seen in biology in connection with the evolution of the cell.

Digambara (Sanskrit) *Digambara* [from *diś* a quarter or region of the heavens + *ambara* sky, atmosphere; also clothes, apparel] Sky-clothed, clothed with the elements; often applied to Siva, but likewise to advanced adepts or ascetics. Customarily Orientalists render it “without clothes,” i.e., naked, applying the term to Siva in his character of an ascetic. But while the word, especially among the Jains, has come to have the significance of a naked mendicant, when applied to Siva, the third aspect of the Hindu Trimurti who permeates all things in all directions, it means “clothed with the sky.”

Digambara likewise applies to adepts and high chelas because of their ability to project the percipient consciousness to a distance employing the power which in Tibet is called hpho-wa. They are then mystically considered to be free of all physical trappings, clothed with the sky or atmosphere and wandering in it free and at will. *See also* KHECHARA

Dii Magni or **Di Magni** (Latin) The great gods; referring specifically to the twelve great deities of the Latin pantheon. Identified with the kabiri, dhyani-chohans, etc. (SD 2:360), the twelve great deities are easily discoverable in Greek and other mythologies; they were particularly cultivated in the ancient Etrurian mythology. They are directly connected with the twelve signs of the zodiac, as being the twelve great deific spirits of the cosmos, of which divinities the twelve zodiacal signs are representations.

Dii Majores. *See* DII MAGNI

Dii Minores (Latin) Lesser gods; in the Greek and Latin pantheons, certain deities coming after the twelve great deities of Olympus. Likened to the twelve patriarchs, Gnostic aeons, the Sephiroth, etc. (IU 2:450), their number is said to vary from ten to twelve, like the signs of the zodiac. They belong to the second class of emanations and are the terrestrial reflections of the superior hierarchy represented by the cosmic dii magni.

Dii Termini. *See* DEI TERMINI

Dik (Sanskrit) *Dik* [nominative of *diś*] Space, vacuity.

Diksha (Sanskrit) *Dikṣā* [from the verbal root *dīkṣ* to consecrate or dedicate oneself] Preparation or consecration in exoteric matters for a religious ceremony; or the undertaking, equally in exoteric matters, of religious observances for a specific purpose, as well as the observances themselves; also initiation. As a proper noun, Diksha or initiation is personified as the wife of Soma (the Moon). Diksha again signifies preparatory training of the neophyte for initiation.

Dikshita (Sanskrit) *Dīkṣita* [past participle of the verbal root *dīkṣ* to consecrate or dedicate oneself] Consecrated, initiated; to dedicate oneself in training for initiation, which is exoterically alluded to in Hindu works as training for the performance of the soma sacrifice; hence as a noun, an initiate.

Diktamnon or **Diktamnos** (Greek) [from *diktyon* a hunting-net from *dikein* to throw, caste] A plant growing in abundance in Greece on Mounts Ida and Dicte, celebrated in classical antiquity for its sedative properties and for its marvelous healing power for wounds. Now applied botanically to *Fraxinella*, a different plant. The word is connected with Dictynna or Diktyinna, an epithet of the lunar Artemis (IU 1:264). *See also* DICTYNRA

Diktyinna. *See* DICTYNRA

Dimensions. *See* THREE-DIMENSIONAL; SPACE

Dingir (Akkad) The chief deity of the Akkadians; one of the forms of the creative powers as recognized by the earlier Akkadians. Every one of these demiurgic powers is the chief or first in his or her own field of activity in the universe, so that in one mythology may be found several such chief or first divinities, each being the chief or hierarch in his or her own hierarchy, but all nevertheless subordinate to the karmic mandates of the inclusive, all-enclosing, cosmic primordial elements. These chief divinities are the cosmic elements originating in and from the primordial element, which because of the extreme reverence in which it was held by archaic thought is often not mentioned, it being part of the teaching of the sanctuary.

Di-nur (Hebrew) *Dī-nūr* In the Qabbalah, part of a famous phrase which fully written is *Nehar di-nur* (the river or stream which is light or fire).

“When the man comes near his time to go away from this world, . . . when the herald calls out (the decree), at once, a flame comes forth from the North side and goes in and ignites the river *Dinur*, (*i.e.*, the river of fire, comp. Dan. vii, 10) and spreads itself out to four sides of the world and burns the souls of the guilty, and that flames goes forth and comes down on the world, etc.”

“And the *Neshamoth* souls, when they ascend, cleanse themselves in that river *D’e-noor* [Di-nur] and do not burn, they only cleanse themselves . . .” (Zohar i 218b; ii, 211b — from Myer’s Qabbala pp.405, 394)

Dionysia Festivals sacred to Dionysos, especially those held in Attica and Attic-Ionic settlements. The inferior Dionysia were celebrated in December in country places where the vine was grown; the greater, in Athens for six days at the spring equinox. At this festival the new plays were performed for three consecutive days before immense number of citizens and strangers. The Lenaea (festival of vats) in February-March, the Oschophoria in October-November, and the Anthesteria for three days in February-March were also part of the Athenian cycle of Dionysia. The Dionysiac or Bacchic Mysteries became peculiarly liable to corruption in later times, owing to

literal interpretation of the symbolism and the substitution of psychospiritual excitement for pure spiritual inspiration.

Dionysos (Greek) [from *dio* from *dis* old form of Zeus + *Nysa*] Also **Dionysius**. Zeus of Nysa, a mountain variously placed in Thrace, Boeotia, Arabia, India, Asia Minor, and Libya; another name is Bacchos, a form of Iacchos [from *'iachein* to shout] in allusion to the Bacchic invocation. Among the Romans he is called Liber, which some connect with liber (free), calling him the liberator (cf *labarum*, the later mystic emblem of the Christ). He was worshiped in Athens at the Dionysia, held a position at Delphi almost equal to Apollo, and appears in the Eleusinian Mysteries.

The son of Zeus and Semele, sun and moon — hence bisexual in character and so able to be regarded at different times as a solar or lunar deity. His meaning overlaps those of Krishna, Brahma, Christos, Adonai, Mithras, and Prometheus, for he is a savior, mediator between God and man, the celestial and the terrestrial. He was also the god who sprang from the world egg, and from whom mortals in their turn sprang, uniting in himself the nature of either sex.

The principal symbols of Dionysos are wine, the vine, and the grape which also typify the double meaning implied in the true Mysteries and their perversion. For wine is a symbol of the spirit of the Christ, as bread is of the body; and both were administered in the mystic rite from which the Christian sacrament is derived. When his inner god becomes manifest to the qualified initiate, his whole nature is illumined and vivified. But one who seeks the afflatus unprepared is driven mad or destroyed by his inner god. The Bacchic orgies and Dionysiac frenzy were a later profanation.

In his cosmic aspect, Dionysos is the demiourgos or world-former. As **Dionysos Chthonios**, he is the son of Demeter or Persephone, and one of his names is Zagreus; he was torn to pieces and devoured by titans, but his heart was saved and given to Zeus. The same chthonian aspect is seen in the **Dionysios Sabazios** of Thrace and Phrygia. This allegory parallels the Hindu Padmapani, and his dismemberment by the cosmic titans signifies the processes of evolutive cosmic differentiation into the main hierarchies of the universe. He was likewise a personification of the sun, in its spiritual and material aspects. The esoteric Greek significance of this was taught in the Orphic Mysteries. *See also ZAGREUS*

Dionysius the pseudo-Areopagite (florished 6th century) Author of the *Celestial* and *Ecclesiastical Hierarchies*, influential Neoplatonic, neo-Pythagorean texts attributed to Dionysius the Areopagite of the New Testament. The mystical hierarchical ideas imbodyed in these texts exercised a profound spiritualizing influence on later Christian thought.

Dioscuri (Greek) *Dioskouroi*. In Greek mythology, Castor and Pollux (Greek Polydeuces), Spartan twin sons of Tyndareus and Leda; their sisters were Helen and Clytemnestra. In Homer all but Helen were considered mortal, but after the twins' death they lived and died on alternate days. Later one, usually Pollux, was the son of Zeus and shared his immortality after Castor's death. Usually Zeus as a swan is said to have seduced Leda, who brought forth two eggs, one containing

Helen and the other Castor and Pollux. The twins rescued Helen from Theseus and went with the Argonauts. Castor and Pollux are associated with the zodiacal sign Gemini, and sometimes with the morning and evening stars.

Originally they were seven cosmic gods, for in the days of Lemuria there were seven egg-born dioscuroi or dhyani-chohans (agnishvatta-kumaras), who incarnated in the seven elect of the third root-race. These are identified with corybantes, curetes, dii magni, titans, etc. (SD 2:360-2). Later they were made into three and four, as male and female, the four being the four kabiri usually enumerated; and finally restricted, as were also the kabiri, to two.

Dipamkara (Sanskrit) *Dīpaṃkara* [from *dīpa* light + *kara* maker, doer] Light-maker, a former buddha, regarded by Orientalists as mythical. Referring to the former buddha or to a high adept, the word signifies the bringer or maker of light — the typical initiator.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Dis-Dz

Dis (Greek) The shining one; an older form of Zeus.

Dis (Icelandic) Sister; in Norse myths an attendant spirit or constant companion. Possibly the astral double of a living entity for when one's dis is absent, it presages death. Another companion entity, superior to the dis, is the *hamingja*, the higher self or guardian angel which protects and encourages the evolving soul, making the human monad in effect an *asmegir* — a god-maker or potential ase.

Dis (Latin) [contraction of *dives* rich] Name for Pluto, god of the underworld. The expression “rich” arises in the fact that the presiding deity of the underworld gathers in through the rolling ages whatever is, thus implying a constantly accumulating store of all things that once were, but now belong to the past. There is a distinct mystical similarity between the Greek and Latin Dis.

Dis (Sanskrit) *Dis* [from the verbal root *dis* to show, point out, direct] A direction or point of space, a cardinal point or quarter; the four cardinal points: prachi (east); dakshina (south); praticchi (west); and udichi (north). The noun *disa* likewise means direction, region, quarter, or point of space.

Used as a philosophical term, dis means space.

Disasters. See CATAclysms

Disc, Discus. See CIRCLE; DISK WORSHIP

Disciple. See CHELA

Disease Broadly stated, disease is a disordered or inharmonious vital state of the organism, with more or less excess, defect, or perversion of functional activity. The condition may be some chemical or mechanical wrong which renders the body unable to respond naturally to the

psychoelectric and other forces which play through and sustain the physical person. Moreover, the material and immaterial elements of the human constitution react upon each other for health or disease, because the mind and emotions on the one hand, and the organs and their functions on the other, are interrelated parts of the same entity. As a rule, this interplay between the material and the conscious person becomes a vicious circle in disease. Mental or emotional shock or strain can so affect function as to result in organic disease. Long continued selfish emotions cause a distorted and inharmonious interaction of the pranic or vital currents of the body, resulting in one or another disorder, according to the type of the emotions and the individual karma.

In view of the electric nature of matter, physical disorder may be regarded as an electrical disharmony or wrong, since disease always changes the polarity of the body, more or less. The vital currents of human electricity connect the conscious person with his body by the living wires of nerves. The rhythmic motion or natural harmony vibrating in each cell and organ at its own rate, is responsive to the universal vibration or Great Breath which in other modes of motion manifests as heat, light, sound, density, etc. But beyond the electrical and vibrational states of the body, and above the mental influence, is the essential self, the source of all harmony or rhythmic procedures in all below it, keyed to harmony and striving to raise the lower nature to act in unison with its finer and greater powers. When the instinct of the animal body, the mental reasoning faculties, and the re embodying ego's intuition are functioning together, the person is keyed to health, sanity, and wisdom. Otherwise, the real inner conflict manifests in some form of disorder.

As the human being, then, is a dynamo of balanced forces, some disorder in their operation is the basic wrong in human diseases. Moreover, as all matter is alive, conscious in some degree, and vibrationally responsive to the laws of nature, the same general principle applies also to disease in the animal, vegetable, and mineral kingdoms. In mankind, the organic vital fluid of the re embodying ego is the cohering factor for the entire constitution, dominating over all minor vital expressions of the life-atoms. The intense and ceaseless activity of these life-atoms builds and composes the body, and as age comes on, and the physical vehicle naturally and normally weakens, the uninterrupted activity of the vital power becomes too strong to be held in check by the gripping influence of the vital-electrical field. Thus the atomic forces, really the vital energies, continuing unabated within the body structure, slowly weaken it and finally destroy it, and this is death.

“It is likewise these internal vital activities of the life-atoms held in insufficient check by the organic vitality which bring about many if perhaps not all of the various forms of disease of a lasting character. Cases of malignant disease are due to the same general cause but on account of specific and unusual circumstances are localized in some portion of the body where the power or control of the organic vitality becomes greatly weakened” (ET 434 3rd & rev ed).

Disk Worship Another form of sun worship; however, the ancients, especially those who had been initiated in the Mystery schools, did not worship the physical sun but revered the central source of life and vivifying power of which the sun is the focus in its own kingdom, and which it therefore represents.

In ancient Egypt the various forms of the disk were favorite symbols, representing either the sun or moon. The deities specially connected with the solar disk were Amen-Ra, Aten, and Horus. In ancient India the disk or chakra was frequently associated with Vishnu; with the Buddhists it appears in the symbol of the wheel which every buddha is represented as turning or setting in motion.

The winged disk is a symbol of the soul or reincarnating ego. The wings represent the movement of the peregrinating ego through space and time, drifting by karmic destiny and its own inner impulses. The disk carried by the wings is the emblem of the ego itself.

Dissolution. See PRALAYA

Diti (Sanskrit) *Diti* As Aditi [from *a* not + *diti*] is cosmic space in general, so Diti is cosmically what may be called the first sheath or integument of Aditi. If Aditi is generalized space, Diti becomes the more or less divine spatial extent of a cosmic unit, such as a universe, solar system, etc.; but the significance of Diti points directly to lofty spirit. “Diti . . . is the sixth principle of *metaphysical* nature, the *Buddhi* of Akasa. Diti, the mother of the Maruts, is one of her terrestrial forms, made to represent, at one and the same time, the divine Soul in the ascetic, and the divine aspirations of mystic Humanity toward deliverance from the webs of Maya, and final bliss in consequence” (SD 2:613-14).

Diu Aryan root meaning “god,” corresponding to the Chaldean Iao (BCW 2:90).

Div. See DAEVA

Diva triformis. See DIANA

Divination [from Latin *divination* a soothsayer from *divus* spiritual being, god] The art of obtaining hidden knowledge by the aid of spiritual or ethereal beings. It is divisible into two main kinds: the inducing of seership or clairvoyance, and the interpretation of signs. Under the former come the oracular responses of the Pythian priestess, of the Cumaean Sibyl, and many similar instances, including all cases where the diviner induces trance or clairvoyance, whether in himself by natural power or by incantations, drugs, or other preparations; or in a subject, as when ink is poured into the palm of a child, who sees visions in it, or by some kind of hypnotism. Under the second head come geomancy, augury, the reading of the marks on the liver of a slaughtered animal, reading cards, Chinese throwing-sticks, predictive astrology, palmistry, numerology, and a great variety of other forms. Between the two classes are ranged such practices as gazing into crystal or water, where external means and interior vision both play a part in the result. Often it is

a means of utilizing one's own inner faculties, whether by natural or induced clairvoyance, or by employing the agencies which regulate events apparently casual such as the fall of the cards, the marks in the sand, the drawing of lots; and this last is related to the subject of omens.

The universal correspondences in nature, the interrelation of all things, imply that the most apparently casual and trivial events have of necessity connection with other events, so that the one can be interpreted by means of the other, provided only that the diviner knows the rules and has the insight and skill. Thus, in cartmancy, one deals the cards with a mind concentrated on the knowledge desired, and their fall is determined by these unseen and little understood influences. It is evident, however, that the condition and capacities of the diviner play an essential part in the success of the operation; hence the instructions as to fasting, continence, and the like, so often laid down as preliminaries.

The art of divining is and always has been universally diffused. Today this art, in common with many other items of ancient lore, has fallen into disrepute on account of the great abuse to which it has been subjected, as in the case of the abuses of black magic and sorcery. The same remarks would apply as are made in the case of psychism, seances, etc. — that a large proportion of humanity is neither wise enough nor well-balanced enough to meddle with such methods; and there is too much tendency to use the methods for the gratification of mere personal desires or curiosity. We do far better to attend to the cultivation of our spiritual faculties, incomparably more powerful and effective, such as intuition.

It may be added that such practices as the slaughter of animals in order to read the entrails can scarcely be regarded, in any age, as pertaining to divine or white magic.

Divine Instructors. *See* MANASAPUTRAS

Divine Pymander. *See* PYMANDER

Divine Right of Kings A tradition originating in the priest-kings of the divine dynasties — now forgotten and therefore legendary history — that ruled mankind in its earlier stages; and these again represented those semi-divine beings who came to our globe in this round from a previous round to be revealers to early mankind. As humanity sank into materialism, these initiated and illuminated priest-kings were replaced by schools or priest-colleges. Succeeding ages have witnessed a still further degeneration of the institution. Although the lofty idea embodied in this phrase has been degraded, legend and tradition tell of a time when its dignity shall be again restored upon the earth, and its institutions shall inaugurate a new and grander age. *See also* DYNASTIES

Divine Soul The vehicle or garment of the divine ego, which in its turn is the field or vehicle of the divine monad — terms referring to the human monadic centers. As the inner god corresponds to the divine monad and the inner buddha to the divine ego, so the divine soul may be said to be the expression of the buddha in manifestation on earth.

Divine Thought. See IDEATION; LOGOS

Divine Year. See BRAHMA'S DAY

Divo-rajās (Sanskrit) *Divo-rajās* [from *divas* celestial realm + *rajās* firmament] The upper stratum of the heaven-worlds.

Divyachakshus, (Sanskrit) *Divyacakṣus* [from *divya* divine + *cakṣus* eye] The divine eye; in Buddhism the first of the divine faculties attained by a buddha: the power of seeing any object in any loka or plane of consciousness. It is one of the six or seven abhijnas (inner powers or faculties), divyachakshus being real spiritual clairvoyance, enabling one to see any object in the universe at whatever distance.

Divyasrotra (Sanskrit) *Divyaśrotra* [from *divya* divine + *śrotra* ear] The divine ear; in Buddhism the second of the abhijnas (powers attained by a buddha or high initiate), that of understanding all sounds on whatever loka or plane, including the understanding of all languages. It corresponds to real clairaudience.

Diyyuqna' (Aramaic) *Diyyūqnā'*. A Qabbalistic term for the image or shadow of a spiritual counterpart, although this image itself may be highly ethereal or even spiritual; the vehicle in which the more real or spiritual enshrines itself — its shadow on a lower plane. Thus a human soul is the diyyuqna' of the human monad. "All the creatures of the world which have existed in each generation, before they came to this world, have existed before Him in their true Diyyuqna'" (Zohar, iii, 61a).

It corresponds to the Angels of the Presence or archangels, the Zoroastrian Ferouer, and even the mayavi-rupa.

Djnana. See JNANA

Djati. See JATI

Djinn. See JINN

Docetae [Latin from Greek *dokein* to seem] Illusionists; applied to certain Gnostics, regarded by the early Christian Church as heretics, who taught that the death of Christ was an illusion, some saying that he did not have a body of real matter but only an apparent body, and others explaining their belief in similar ways. The Gnostic teaching is that the Christ is the nous or Son of the spirit, overshadowing all mankind, his death being symbolic of its voluntary entrance into the murky

mists of the body. Some of these Gnostics would seem to have been trying to achieve an accommodation with the creed of the then growing Christian Church, which had transformed this mystical crucifixion into a literal and historical death of Jesus.

Dodecad. See DUODENARY

Dodecahedron The regular solid with twelve pentagonal faces, or the rhombic dodecahedron of crystallography; in *The Secret Doctrine* usually a synonym of dodecad, a group of twelve or the number twelve. Plato in *Phaedo* says that the world, if seen from above, would look like a ball covered with twelve differently colored pieces of leather. The Pythagoreans investigated regular solids, attaching great importance to them as symbols, including the regular dodecahedron which was a symbol of the universe in full manifestation.

Dodecaped. See HUSHANG

Dodona (Greek) The most ancient oracle in Greece, situated in Epirus and founded by the Pelasgians. The will of Zeus was oracularly signified to the appointed seers by the rustling of the wind in the trees, or by the sounds of a spring arising from the roots of the sacred oak. This oracle, famous in Homeric times, was in later historic times superseded by that of Delphi.

Dog Star. See SIRIUS

Dolmas (Tibetan) *sGrol-ma*. Two virgins, said to have been incarnations of the blue light from the left eye of Amitabha Buddha, as Padmapani was the incarnation of the ray from the right eye, and who together abide within mankind. These virgins were given the power to enlighten the minds of living beings (BCW 12:518).

Dolmen [from Celtic] A rude stone monument consisting of two or more upright monoliths supporting a capstone. Such monuments are found in various parts of the world, notably in Carnac, Brittany. They are symbolic records of the world's history, designed to be enduring, the work of giants.

“There are records which show Egyptian priests — Initiates — journeying in a North-Westerly direction, *by land, via* what became later the Straits of Gibraltar; turning North and travelling through the future Phoenician settlements of Southern Gaul; then still further North, until reaching Carnac (Morbihan) they turned to the West again and arrived, *still travelling by land*, on the North-Western promontory of the New Continent.

“What was the object of their long journey? . . . The archaic records show the Initiates of the Second Sub-race of the Aryan family moving from one land to the other for the purpose of supervising the building of *menhirs* and dolmens, of colossal Zodiacs in stone, and places of sepulchre to serve as receptacles for the ashes of generations to come” (SD 2:750).

Dominions One of the orders of angels in the celestial hierarchy of Dionysius the pseudo-

Areopagite; it corresponds with Bel or Jupiter. In Ephesians (1:21) the word translates the Greek Kyriotes. *See also* ANGELOLOGY

Donar (Germanic) Also Thunar. The god of thunder in Germanic mythology, equivalent to Thor of the Scandinavian Eddas.

Dondampai-denpa (Tibetan) *don dam pa'i bden pa* (don-dam-pe den-pa) Absolute or universal truth or reality, equivalent to the Sanskrit paramarthasatya; hence in the individual being, the highest spiritual perception and self-consciousness. The opposite of this term is kundzabchi-denpa (*kun rdzob kyi bden pa*, kun-dzob-kyi den-pa — illusion-creating appearance), samvritti-satya in Sanskrit — the origin of illusion or maya.

Door to the Human Kingdom Theosophical term expressing the idea that no more entities below the human stage will evolve into human beings in this round. The reason for this is that

“when Globe A of the new chain is ready, the first class or Hierarchy of Monads from the Lunar chain incarnate upon it in the lowest kingdom, and so on successively. The result of this is, that it is only the first class of Monads which attains the human state of development during the first Round, since the second class, on each planet, arriving later, has not time to reach that stage. Thus the Monads of Class 2 reach the incipient human stage only in the Second Round, and so on up to the middle of the Fourth Round. But at this point — and on this Fourth Round in which the human stage will be *fully* developed — the ‘Door’ into the human kingdom closes; and henceforward the number of ‘human’ Monads, *i.e.*, Monads in the human stage of development, is complete. For the Monads which had not reached the human stage by this point will, owing to the evolution of humanity itself, find themselves so far behind that they will reach the human stage only at the close of the seventh and last Round” (SD 1:173).

The “door” was closed into the human kingdom in the middle of the fourth round because the turning point had been reached between the monadic evolution of matter, or descent into matter on the downward arc, and the reverse process of involution, which automatically replaced it on the upward arc of the great light cycle. Thus, as we are now past the middle of the fourth round, none of the monads now working in and through the animal kingdom can enter the human kingdom during the remainder of this round; with one probably exception, however: that of the anthropoid apes.

Doppelganger (German) Double-goer; usually, a species of real phantom, seen before, after, or at the time of the death of an individual, and serving as a notification or warning of the death. In some cases the double seen is that of the seer himself, though this is not the true doppelganger. The doppelganger is most often the mayavi-rupa which can be seen at even immense distances from the individual whose presentation it is, yet the term doppelganger can likewise incorrectly be applied to the very occasional projections of the astral body which, however, can at no time

wander far from its physical frame. The true doppelganger or mayavi-rupa, whether seen or unseen, falls into two classes, without counting the rare cases involving the linga-sarira mentioned above: the mayavi-rupa projected by hpho-wa, by will and with the consciousness of the ego; and the occasional automatic or involuntary projections of the mayavi-rupa due to intense concentration of the mind upon something or someone.

Dorje (Tibetan) *rdo rje*. Equivalent to the Sanskrit vajra, meaning both thunderbolt and diamond. As a thunderbolt, it is represented in the hands of some of the Tibetan gods, especially the dragshed — deities who protect human beings — and is thus equivalent to the weapons of Indra and Zeus. Dorje is the scepter of power, whether spiritual or temporal, and appears on the altars of the Gelukpas together with the bell and cymbals: “It is also a *Mudra*, a gesture and posture used in sitting for meditation. It is, in short, a symbol of power over invisible evil influences, whether as a posture or a talisman. The *Bhons* or *Dugpas*, however, having appropriated the symbol, misuse it for purposes of Black Magic. . . . With the *Dugpas*, it is like the *double triangle reversed*, the sign of sorcery” (VS 90).

One aspect of its use by the gods is the purification that ensues in those against whom the bolt is cast, as well as the gods meting out justice by its means. A more mystical reference to dorje, however, alludes to the higher triad of the human constitution which, if continually held in view, purifies the lower quaternary as the thunderstorm does the earth’s atmosphere.

As diamond, dorje has a direct mystical reference to the supposedly indestructible nature of the diamond. It is the symbol of possession of siddhis or supernormal powers spiritual, intellectual, and astral. Those who wield this wand of power or diamond-thunderbolt are called vajra-panins.

Dorjechang (Tibetan) *rdo rje ’chang* Equivalent of the Sanskrit vajradhara (wielder of the thunderbolt). The supreme buddha or adi-buddha; also the title of a buddha having reference to his highest or most spiritual part.

Dorjesempa (Tibetan) *rdo-rje sems-dpa’* Equivalent to the Sanskrit vajrasattva, diamond-soul, diamond-being; referring to the soul’s indestructibility in the hereafter. Also a name of the celestial buddha.

Dorjeshang. See DORJECHANG

Dosha (Sanskrit) *Doṣa* [from the verbal root *duṣ* to become bad or corrupted, to commit a fault, sin] Fault, vice; wickedness, damage, harm. Also evening, darkness; as a fem noun, night personified.

Double. See DOPPELGANGER; MAYAVI-RUPA; LINGA-SARIRA; CHHAYA

Double Image Qabbalistic term for dual ego, the higher called Metatron and the lower called Samael. They are pictured as a person’s guardian angel and evil demon.

Double Sexed. *See* ANDROGYNE; HERMAPHRODITE

Double Triangle. *See* SIX-POINTED STAR

Dove Bird symbols play a prominent part in cosmogonic systems. In the Biblical deluge, as a blend of cosmic and precosmic allegories, Noah sends out first a raven, symbolizing darkness which was regarded as prior to light; and then a dove. In the Chaldean version, Noah is represented by Ishtar or Ashtoreth — a lunar goddess corresponding in some respects to Artemis and in others to Venus — and the dove is a symbol of Venus, which is also found in Greek mythology. In several nations the dove also symbolizes the soul.

In Christianity, the dove is a symbol of the Holy Ghost, who appears in that form to Jesus at his baptism. It is also often one of the four sacred animals which denote four important human principles along with the bull, the eagle, and the lion. These four animals in Greek mystic mythology are symbols respectively of the planets Venus, the Moon, Mercury (or Jupiter), and the Sun; but it is more properly here a seraph or cherub, the fiery-winged serpent or Agathodaimon. As a symbol of gentleness and love it is frequent in the Hebrew scriptures.

Downward Arc. *See* ARC, ASCENDING AND DESCENDING

Draco [from Greek *drakon* dragon] The dragon; a northern circumpolar constellation, within which is the pole of the ecliptic. But the name seems to have had different applications at different times and places; we hear it spoken of as a vast constellation extending through seven signs of the zodiac; also as the seven-headed Draco, each of whose heads is a star of Ursa Minor; and again as the pole star. Draco was a symbol of the good serpent, the Messiah of the Naaseni. *See also* DRAGON

Dracontia Temples dedicated to the Dragon, emblem of the sun, of life, wisdom, and cycles. Once they covered the globe; all that remains are those colossal upreared monoliths, or combinations of monoliths, seen at Stonehenge, Carnac, and other places. The Serpent Mounds, such as those in Ohio, symbolize the same thing. Besides being mute historic witnesses of a knowledge of the mysteries of the cosmic or mundane serpent, these temples were used as means of divination by the priests who understood their secrets.

Dragon [from Greek *drakon*, serpent, the watchful] Known to scholarship as a mythical monster, a huge lizard, winged, scaly, fire-breathing, doubtless originating in the memory of an actual prehistoric animal. Dragon is often synonymous with serpent. The dragon and serpent, whether high or low, are types of various events in cosmic or world history, or of various terrestrial or human qualities, for either one can at different times signify spiritual immortality, wisdom, reïmbodiment, or regeneration. In the triad of sun, moon, and serpent or cross, it denotes the manifested Logos, and hence is often said to be seven-headed. As such it is in conflict with the sun, and sometimes with the moon; but this conflict is merely the duality of contrary forces essential to

cosmic stability. The dragon itself is often dual, and it may be paired with the serpent, as with Agathodaimon and Kakodaimon, the good and evil serpents, seen in the caduceus. Again the dragon is two-poled as having a head and a tail, Rahu and Ketu in India, commonly described as being the moon's north and south nodes, the moon thus being a triple symbol in which a unity conflicts with a duality.

A universal myth is that of the sun god fighting the dragon and eventually worsting it, which represents the descent of spirit into matter and the eventual sublimation of matter by spirit in the ascending arc of evolution. There are Bel (and later Merodach) and the dragon Tiamat in Babylonia and with the Hebrews; Fafnir in Scandinavia; Chozzar with the Peratae Gnostics; among the Greeks Python conquered by Apollo and the two serpents killed by Hercules at his birth; the fight between Ahti and the evil serpent in the Kalevala; and many other such stories. In the Christian Apocalypse the dragon plays a great part, but it has been often misinterpreted as evil just as Satan or the Devil has been imagined as the foe of divinity and humanity. Cosmologically, all dragons and serpents slain by their adversaries are the unregulated or chaotic *cosmic* principles brought to order by the spiritual sun gods or formative cosmic powers. The dragon is the demiurge, the establisher or former of our planet and of all that pertains to it — neither good nor bad, but its differentiated aspects in nature make it assume one or the other character.

The dragon symbol, then, is both cosmic and human in its applications: it may stand for powers of nature, which first overcome man, but which he must eventually overcome, as well as the monad atma-buddhi, which through the manasic principle seeks imbodiment, but needs the help of the still lower principles in order to effect a union with the principles of earth. Cosmologically analogies are drawn between the north polar constellation Draco and one or the other of the great floods, and the word dragon is sometimes used to denote such a flood; for the position of this constellation relative to that of the earth's axis of rotation is intimately connected with cataclysms. The dragon in its higher or superior sense means among other things divine wisdom, especially where the serpent is used for terrestrial wisdom; and adepts or initiates were frequently called dragons. The dragon may be the symbol of a cycle; and the sevenfold dragon may mean the seven minor cycles in a great cycle.

Dragon of Wisdom Commonly an adept, one of the wise; also popularly a skilled magician — whether of the right or left path. Referring to the earliest stages of cosmogony, dragon is a term often used for the sun in its various cosmologic functions, also for the One or Logos. An important significance of the phrase is that the real initiator of humanity, or of the individual neophyte, is the person's own higher ego.

In Chinese Buddhism the term is used for the genii of the four quarters, called in China the Black Warrior, the White Tiger, the Vermilion Bird, and the Azure Dragon — the Four Hidden Dragons of Wisdom. In her rendering of the Stanzas of Dzyan, Blavatsky uses Dragon of Wisdom as an

equivalent of Oeaoohoo the Younger — the germ and overseer of all things to the end of the life cycle.

Dragshed (Tibetan) *drag dshed*. “Wrathful” deities; protective deities in a terrifying form, represented as bearing the dorje, the diamond scepter of the gods. Also applied to high initiates who represent on the human plane the same type of power of a wholly beneficent character that the kindly and powerful divinities are supposed to wield.

Drakon. See DRAGON

Draupadi (Sanskrit) *Draupadī* The wife in common of the five Pandava princes and brothers. In the allegory of the *Mahabharata*, she stands for the terrestrial life of the personality and, as such, she is made very little of and is allowed by Yudhisthira to be insulted and even taken into slavery during a wager at a game of dice. Yudhisthira was the eldest of the Pandava brothers and Draupadi’s chief lord. In this relation he represents the higher ego.

Draupnir (Icelandic) **Dropner** (Scandinavian) [from Icelandic *drjupa*, Swedish *drypa* to drip] In Norse myths, the magic ring wrought for Odin by the dwarfs Brock (minerals) and Sindre (vegetation), sons of Ivalde (the moon), at the fashioning of the earth. From Draupnir drop eight rings like itself every ninth night, symbolizing the succession of cycles within larger cycles.

On the death of Balder, the sun god, at the hands of his blind brother Hoder, Odin laid Draupnir on his son’s funeral pyre; Hermod, sent as messenger of Odin to the realm of Hel, queen of the dead, received it back and returned it to Odin.

Dravidian One of the three great groups of non-Aryan races in India, regarded as indigenous, along with the Tibeto-Burmese and the Kolarian. The Dravidians entered the Punjab through the northwestern passes, and after subjugating the peoples they encountered, eventually settled in the southern portion of India where they are still situated in large numbers. Although subjugated by the Aryans, they were so strongly entrenched that they were not broken up as were the other non-Aryans. The five principal Dravidian languages are: Tamil, Telugu, Kanarese, Malayalam (or Malabar), and Tulu. See also TAMIL

Dravya (Sanskrit) *Dravya* [from the verbal root *dru* to run, be in motion, become fluid, melt] Substance, thing, object; in philosophy, elementary substance, of which nine are mentioned in the Nyaya system: prithivi, ap, tejas, vayu, akasa, kala, dis, manas, and atman; in the Jain system there are only six: jiva, dharma, adharma, pudgala, kala, and akasa.

In the seven padarthas (categories of existing things) of the Vaiseshika system, dravya is enumerated as the first and corresponds to sthula-sarira in the theosophical sevenfold classification of the human principles.

Dream Commonly applied to the chaotic impressions which memory transmits to our

consciousness at the moment of waking, which are but a small part of the dreaming which goes on during the sleeping period and which is not recollected. To a large extent dreams are a reflex of our sensory impressions and of our thoughts during the waking state; the principles concerned in these cases being kama and the lower aspect of manas, which act and react with the various nerve centers and the organs at the base of the brain. But if the word dream is to be distinguished from dreamless sleep on the one hand and waking consciousness on the other, it must include a far higher kind of dream which is the experiences of the higher aspect of manas. These experiences, being so different from those of the waking state, cannot be transmitted to the latter except symbolically or in distorted form.

The astral light also plays an enormous part in most dreams. We may witness scenes which cannot have formed part of our waking experience, and evidently in this case are seeing pictures in the astral light which we correctly or erroneously connect with our own personality. Again, with prophetic dreams our vision, untrammelled by physical senses, perceives in the astral light the image of what will later happen on the physical plane, and we may occasionally carry a recollection of what has been seen into the waking state.

The Sanskrit term for this state of sleeping consciousness is svapna.

Dreamless Sleep The state of human consciousness in which a person is wrapped in profound self-oblivion, a state quite distinct from the waking state as also from the dreaming state. It is used in theosophical writings as an equivalent for the Sanskrit sushupti.

Drishti (Sanskrit) *Dṛṣṭi* [from the verbal root *dṛṣ* to see, behold with the mind's eye] Seeing, the faculty of sight; also the mind's eye, hence wisdom, intelligence. In Buddhism, not only a theory, doctrine, or visioning, but by contrast a wrong philosophical view of things.

Drought, Drouth A cyclic condition of the earth's astral light reacting upon the atmosphere and cooperating with other meteorological causes bringing about periods of dryness over larger or smaller portions of the earth; in extreme form, it brings about a state of periodic ekpyrosis or burning, resulting in the reduction of fertile areas into deserts. The opposite of this condition, resulting in extraordinary rains and floods of longer duration, and sometimes extending over wide surfaces of the earth, is called cataclysm. The dragon is said by the Chinese to be able to affect climate, producing droughts, rain, etc., a direct reference to the astral light in its cyclic workings upon earth; in history, the human application of the dragon is made to magicians of the fourth or early fifth root-race. Samael, Satan, or the Red Dragon, the Simoom, and the Vedic Vritra are drought producers, as is the Babylonian Tiamat, the dragon slain by Bel or by Merodach.

Drshti. See Drishti

Druids Members of a priestly hierarchy among the ancient Celts of Britain, Gaul, and Ireland, composed of the three Orders of Druids, Bards, and Ovates. According to the Gaulish reports

mentioned by Julius Caesar, Druidism was founded in Britain, which remained in his time its headquarters, candidates for the priesthood being sent to that island from Gaul for their training. The Welsh tradition confirms this, stating the The Wisdom had always existed; that in remote times it was known simply as Gwyddoniaeth (science) and its teachers as the Gwyddoniaid (sing., Gwyddon); that knowledge of it had declined until at some unknown period a wiseman named Tydain Tad Awen arose and taught it to his three disciples, Plenydd, Gwron, and Alawn, who in their turn taught it to the race of the Cymry. From that time forth it was known as Derwyddoniaeth or Druidism, “the wisdom taught in oak groves.”

Classical references to the Druids are many, coming from about 200 B.C. until about 200 A.D. Those written before Caesar made his attack on Gaul speak of the Druids as possessors of a high wisdom; the very first reference says that it was held in Greece that philosophy came to the Greeks from the *barbaroi* or foreigners: the Brahmins of India, the Magi of Persia, the Egyptian priesthood, and the Druids.

While the Romans were fighting the Celts, writers, beginning with Caesar, repeat more or less what has been said before about the wisdom of the Druids but, following Caesar, have much to say about their atrocities. When the Romans were no longer at war with the Druidic Celts, however, the references to the Druids are similar to the early ones, with no mention of atrocities. Blavatsky stated that Druidism was the one branch of the sacred Mysteries of antiquity in the Western world which had not degenerated; and that during the campaigns of Caesar and his forces in Gaul, three million Gauls were killed and Druidism virtually wiped out there. It is Caesar who is responsible for the current notion that the Gauls and Britons were crude savages and the Druids barbarous and cruel. He stated first that the Druids of Gaul, who were judges as well as priests, inflicted excommunication as their severest sentence, passed even on the worst criminals.

Excommunication was their capital punishment. Later on in his book he describes the famous wicker cages filled with criminals (with just men added when there were not criminals enough) who were then burnt. The two statements are contradictory. The later statement is entirely unsupported; the former is not only compatible with the Druids' reputation for profound wisdom and great humanity, but is supported indirectly by practically every classical reference which mentions the Druids at all.

In Gaul in Caesar's time Druidism was very highly organized and controlled the whole civilization, a fact Caesar is known to have deliberately understated, for in many respects Gaulish civilization was more advanced than Roman. We know nothing of Druidism in Britain from the classical writers, except that Britain was its headquarters and place of origin, and that the Druids were massacred in Mona (Anglesey), an island in northwest Wales which seems to have been the Druids headquarters in Britain.

Of Druidism in Ireland we know even less: the Irish Sagas do not indicate that the Druids there

were either priests or jurists, or indeed very important people; they appear rather as necromancers at the royal courts, astrologers, magicians, etc. Had Druidism been an organized system, as in Gaul and presumably in Britain, Patrick, the Christian missionary, could hardly have converted the whole island with the little trouble he had. In Britain, however, as soon as the Romans with their proscription of Druidism had departed in 410, there is every reason to think that Druidism flamed up again: Welsh literature, from the 6th to the end of the 15th century, is full of interesting references.

Greek and Roman authors all make much of the Druidic belief in reincarnation. One of them relates that you could always borrow money to be repaid in such and such a future life on earth — showing that it was reincarnation, the coming back as a human being, and not transmigration, the coming back as an animal, that was taught. The likeness between Druidism and Pythagoreanism is often mentioned, which perhaps suggested the legend that Pythagoras studied not only under Eastern but also under Western or Druidic teachers; and that other belief, that philosophy came to Greece not only from the East, but also from the Druids.

Drunkenness. See DELIRIUM TREMENS; SOMA

Druses A sect calling themselves Disciples of Hamsa, living mainly on Mt. Lebanon in Syria, with offshoots in neighboring regions. Its origin is a puzzle to scholars. It seems to have preserved an esoteric school and to have guarded it successfully by exclusiveness towards other peoples. They believe that the Deity, ordinarily inscrutable, manifests himself from time to time in avataric Messiahs. The fact that their faith seems to scholars to have affinity with so many different sources is proof of its eclecticism.

Dryad (Greek) [from *drys* oak, tree] Nymphs — nature spirits or elementals — pertaining especially to trees. Their life as individuals was said to be bound up with that of the tree to which it was attached and to perish when the tree perished. To modern views they were spirits *in* trees; to the ancients they were the tree itself considered as a living soul, viewed not only apart from but also in connection with the physical framework of the tree.

Duad. See DUALISM; TWO

Dualism In theology, the doctrine that there are two independent and opposing deific powers conjointly ruling the universe as, for instance, in the Zoroastrian system when it teaches that Ormazd and Ahriman, the good and evil deities, divide between them the supremacy. It is opposed to monotheism, but not necessarily to polytheism. In philosophy, the doctrine that there are two fundamental principles underlying all manifestation, such as spirit and matter, force and matter, mind and matter and in a more extended sense good and evil, high and low, black and white; in fact the doctrine has its origin in the so-called pairs of opposites in nature. Here, it is opposed to monism but not necessarily to pluralism. These oppositions of ideas in both theology and philosophy are often quite unnecessary, and rise from the tendency of the mind to keep

conceptions in rigidly thought-tight compartments, without that intermingling of principle to principle, based on a fundamental unity, which is demonstrated to be true by all we know of even physical nature.

Theosophy teaches that unity and duality, with their development as plurality in manifestation, subsist throughout the universe, every duality being comprised in a unity existing on a higher plane of being than its dual manifestation — and the duality reproducing itself in the webwork of pluralities composing the manifested universe. This is on the principle of the Pythagorean Monad producing the Duad, which produces the Triad, the last again reproducing itself in incomputable hierarchical numbers. Thus, light and dark are the dual manifestations of that which is called at once absolute light and darkness; spirit and matter are the dual manifestations of the one life; the most fundamental duality being the alternation between manvantara and pralaya, which are aspects of the ever-productive ineffable source. Monistic and dualistic philosophies merely accentuate each its own side of the question, and in reality each view more or less implies the other. The Zoroastrian doctrine, for example, in its esoteric side recognized that dualism applies only to the planes of manifestation which flow forth from it.

Duck In the opening runes of the ancient Finnish epic, the Kalevala, the earth is represented as coming into being by means of a duck or teal; in other Finnish legends it is an eagle. The duck makes her nest upon the knees of Ilmatar, the great water-mother, and lays six golden eggs and a seventh of iron. When the eggs hatch, fire is enkindled within Ilmatar, which causes her to shake herself, and in doing so she shakes the eggs into the great waters.

The primeval duck is very similar in idea to kalahansa, the primeval goose of ancient Hindustan, and also the Egyptian goose and Seb “the great Cackler”; although this ancient Finnish epic preserves the ancient wisdom-teaching of the seven globes which comprise the earth planetary chain, and also on a larger field of action, the solar system itself in its various inner and outer planes, and the surrounding and comprehending universe or galaxy.

Dudaim (Hebrew) *Dūdā’im* The mandrake, the *atropea mandragora*, mentioned in Genesis 30:14-17. As used in the Qabalah, it “is the Soul and Spirit; any two things united in love and friendship (*dodim*). ‘Happy is he who preserves his *dudaim* (higher and lower Manas) inseparable” (TG 105).

Dugpa (Tibetan) *’drug pa* (dug-pa) Adherents of the Buddhist religion of Tibet who, previous to the reform by Tsong-kha-pa in the 14th century, followed sorcery and other more or less tantric practices, which are entirely foreign to the pure teachings of Buddhism. In theosophical literature dugpa has been used as a synonym for Brother of the Shadow — especially in *The Mahatma Letters*.

The four surviving schools of Tibetan Buddhism are the *Rnying ma pa* (Nying-ma-pa), the *Bka’ rgyud pa* (Kar-gyu-pa), the *Sa skya pa* (sa-kya-pa), and the *Dge lugs pa* (Ge-lug-pa). The Kar-gyu-pa, the lineage of Marpa and Milarepa, is more than the others divided into many subschools. One of

these is the Dugpa sect, dominant in the Indo-Tibetan border areas of Ladakh in the west and Bhutan in the east. The Bhutanese and Tibetan name of Bhutan is 'brug yul (dug-yul), "country of the thunder-dragon" ('*Brug* means both thunder and dragon). One explanation for the name of the sect refers to an experience of the sect's founder, Tsand-pa Gya-re (*Gtsang pa rgya ras*, 1161-1211). In the course of establishing a monastery he was either startled by intense thunder or witnessed a flight of dragons, and named the monastery thunder-dragon ('brug). The sect and its adherents were named after the monastery, and the country where they prevailed was named after the sect. The dugpa subschool is further subdivided into three branches, known as Middle Dugpa ('*bar 'brug*), Lower Dugpa (*smad 'brug*), and Upper Dugpa (*stod 'brug*). See also DAD-DUGPA

Duhkha (Sanskrit) *Duḥkha* [from *dus* + *kha*; or from *duḥ-stha* standing badly, unsteady, unhappy] Painful, difficult; as a noun, pain, affliction, trouble, personified as the son of Naraka and Vedana.

Dukkha. See DUHKHA

Dula (Sanskrit) *Dulā* One of the seven Pleiades.

Dumah (Hebrew) *Dūmāh* The land of silence, the regions of the dead; in the Qabbalah used for the Angel of Silence or of Death. It has somewhat the same significance as the Greek Hades; another term for the same astral regions is She'ol.

Dunamis (Greek) Potency; used by Aristotle in contrast to *energeia* (act), for the invisible aspect of the universe as opposed to the visible or manifest; equivalent to Plato's *noeton* (intelligible) and *aistheton* (sensible) (FSO 194).

Duodenary (or Dodecad) The number 12, or a group of 12. A most important number in cosmic symbology, as in the 12 signs of the zodiac, the 12 apostles, the 12 great gods of Olympus and other theogonies, the 12 sons of Jacob, and 12 months of the year. The Olympian gods are six male and six female, showing dual aspects of each of the six rays of the logos (not including the synthesizing seventh); and the signs of the zodiac in astrology are similarly divided into masculine and feminine. In Buddhist cosmogony are the 12 *nidanas* — the chief causes of manifested existence, effects generated by a concatenation of causes, ending on this our physical plane. In theosophy the 12 globes, principles, etc., are distributed on seven planes, five on the three *arupa* planes, and seven on the four *rupa* planes.

Duration As used in theosophy, clearly distinguished from time. Duration is; it has neither beginning nor end, nor is it broken up into cyclic periods as time is. Time may be called its representation in the manifested universe, and therefore time is finite. Duration is outside of both manifested time and space; it is here that the distinction between time and space, both being manifestations, may be said to disappear, and we may say that abstract space and duration are one. Thus boundless duration divides into what may be called eternal, universal, unconditioned time and a conditioned time — the former the noumenon and the latter phenomenon.

Durga (Sanskrit) *Durgā* The inaccessible; the sakti or so-called feminine potency or powers of a spiritual being, hence often used as a name of the consort of Siva. *See also* DEVI-DURGA

Duscharita or **Duscharitra** (Sanskrit) *Duścarita, Duścāritra* [from the verbal root *duś-car* to act wrongly, behave badly] Misbehavior, ill-conduct, wickedness. In Buddhism, the ten chief sins: three performed by the senses acting through the body (murder, theft, and adultery), four of the

mouth (lying, calumny, lewd gossip, and evil speech), and three of the mind or lower manas (covetousness, envy, and wrong belief).

Duty. *See* DHARMA

Dvadasa-kara (Sanskrit) *Dvādaśa-kara* The twelve-handed one; title of the Hindu god Karttikeya not only because the 12 signs of the zodiac are said to be hidden on his body, but because these 12 signs work more or less powerfully through this divinity, each sign being viewed as an organ or instrument of activity. Actually, all the divinities are organs or channels through which the 12 zodiacal influences pour and work.

Karttikeya is also called **Dvadasaksha** (the twelve-eyed one) for the same reason.

Dvaita (Sanskrit) *Dvaita* Duality; applied to a Vedanta sect, also called Madhvas after their founder, Madhva (born c. 1200). The chief doctrine of this school is duality, standing in opposition to the teachings of Sankaracharya, whose system is known as the Advaita (non-duality). The Dvaita Vedantists assert that there are two principles in the universe: the supreme Being, and the innumerable multitudes of other beings among which are mankind — and that these are distinct one from the other. *See also* RAMANUJACHARYA.

Dvalin (Icelandic) [from *dvala* delay; or Swed *dvala* coma] A dwarf in ancient Norse mythology, the comatose or entranced human nature corresponding to the lesser elements of character; not entirely animal but not completely evolved as a human being, he accurately describes the imperfect, growing, and changing human self. Together with the skilled intelligence of Loki, Dvalin created appropriate gifts for the gods Odin, Thor, and Frey. *See also* DWARFS

Dvandva (Sanskrit) *Dvandva* [from *dva* two] A pair, couple; a pair of opposites; a contest or conflict between two people. In grammar, a couple of names used together, or any compound in which the two parts or words if unjoined would remain in the same case and be connected by the conjunction and (e.g., deva-gandharvas).

Applied also to the third sign of the zodiac, Gemini.

Dvapara Yuga (Sanskrit) *Dvāpara Yuga* [from *dvāpra* twain, double + *yuga* age] The third of the four great yugas which constitute a mahayuga (great age). Its duration is 864,000 human years. The *Mahabharata* gives a description of the dvapara yuga:

“In the Dwapara Yuga righteousness was diminished by a half. The Veda became fourfold. Some men studied four Vedas, other three, others two, others one, and some none at all. Ceremonies were celebrated in a great variety of ways. From the decline of goodness only few men adhered to truth. When men had fallen away from goodness, many diseases, desires, and calamities, caused by destiny, assailed them, by which they were severely afflicted and driven to practise austerities. Others desiring heavenly bliss offered sacrifices.

Thus men declined through unrighteousness” (abridged by Muir, 1:144)

Dvesha (Sanskrit) *Dveṣa* [from the verbal root *dviṣ* to hate] Hatred, dislike, enmity, anger; “One of the three principle states of mind (of which 63 are enumerated), which are *Raga* — pride or evil desire, *Dwesha* — anger, of which hatred is a part, and *Moha* — the ignorance of truth. These three are to be steadily avoided” (TG 107).

Dvija (Sanskrit) *Dvija* [from *dvi* two + the verbal root *jan* to be born] Twice-born; nowadays in India used for any man of the first three of the four castes who has undergone a certain ceremony; specifically used of a Brahman (Dvija-Brahmana) who is said to be reborn after investiture with the sacred thread, but in older times this term was used only the initiated Brahmins.

In theosophical literature, generally used for an initiate in the original sense of the word: one who really and actually is *twice-born* — the first time physically, the second time spiritually and intellectually through initiation. The modern-day purely ceremonial and ritualistic observance of “passing through a silver or golden cow” (TG 107) is a faithful but purely physical emblematic ceremony of which even among most modern Brahmins the real and original meaning has been utterly forgotten. Just as in ancient Egypt, from archaic times in Hindustan the cow has always been considered the symbol of Mother Nature, who brings to birth all things out of her ever fertile and continuously productive womb; gold has always stood for the sun, the parent of the human spiritual and intellectual faculties, while silver stood for the moon, parent of the lower human mind. Thus, just as human beings through repeated rebirths through the womb of nature grows through evolution in all parts of their constitution, so through initiation does a person become a twice-born or *dvija*, by being reborn from either the sun or the moon — both of them organs of Mother Nature.

Dvipa (Sanskrit) *Dvīpa* A zone, region, land, or continent; those in Hindu mythology refer esoterically to the seven globes of the earth’s planetary chain, as well as to the seven great continents which come successively into existence as the homes of the seven root-races. These seven *dvipas* are given in Sanskrit works as Jambu, Plaksha, Kusa, Krauncha, Saka, Salmala, and Pushkara.

Dwaita. See DVAITA

Dwapara Yuga. See DVAPARA YUGA

Dwarf(s) (Icelandic) [from *dvergr*, Anglo-Saxon *dveorg*, German *zwerg*, Swedish *dverg*] Popularly thought to be “little people,” in Norse mythology they are described as *mindre* (which can mean either “smaller” or “less”) than human; hence dwarfs may be regarded as creatures smaller than or less evolved than human beings. The word may also connote “middle,” which can describe the position of the so-called dwarf kingdoms in our universe.

Among the dwarf names in the Eddas are typical animal characteristics, such as Antlered or

Speedy. There are also more general names such as Sindre (vegetation) and Brock (the mineral world). At the formation of our globe earth Sindre and Brock, sons of Ivaldi, regent of the former earth — now the moon — created suitable gifts for the gods Odin, Thor, and Frey in competition with Loki and Dvalin (human nature). Their respective gifts were:

Artisans: Sindre and Brock // Loki and Dvalin

for Odin: Draupnir - - - - - // - - Gungnir

for Thor: Mjolnir - - - - - // - - Sif's hair

for Frey: Gullinbursti - - - - - // - - Skidbladnir

Thus the vegetable and animal world produce for Odin the cyclic progression of events, for Thor electric power and life force, and for Frey (the earth deity) the golden boar (earth) on which he rides through space; the gifts of Loki (intelligence) and Dvalin (unawakened human soul) are: for Odin the spear which never fails its mark (spiritual will), for Thor they restore the golden hair of Sif (the harvest, spiritual and material), and for Frey the ship which contains all seeds of life but which can be folded up like a kerchief when its age is over.

Dwarf of Death. See DAINN

Dweller on the Threshold (Dweller of the Threshold) Coined by Bulwer-Lytton in his romance *Zanoni*, where it represents a malevolent entity of awful and terrifying aspect awaiting to menace and tempt the aspirant to occultism. The author, by means of this vivid portrayal, has expressed the mystical fact that when one has taken a stand to overcome a certain weakness in one's nature, or even a habit, such resolution seems to array all the opposing forces against the aspirant. Thus it may readily be understood that when one seeks to enter the domain of the occult, a similar experience awaits the candidate; but the forces or energies thus aroused are of one's own making, and they must be met and conquered by their originator before progress may be successfully made. "The real Dweller on the Threshold is formed of the despair and despondency of the neophyte, who is called upon to give up all his old affections for kindred, parents and children, as well as his aspirations for objects of worldly ambition, which have perhaps been his associates for many incarnations. When called upon to give up these things, the neophyte feels a kind of blank, before he realizes his higher possibilities." (Subba Row, Theos 7:284).

Generally speaking, because of their menacing aspects, the term Dweller on the Threshold might be applied to the denizens of kama-loka, specifically to the past kama-lokic or astral remnants of a former incarnation which haunt the new imbodiment of that reincarnating ego. A person who gives way to strongly material impulse and desires forms for himself a kama-rupa which, when the person dies, can persist without undergoing complete dissolution until the quick return of such materially-minded human soul to reincarnation, when the kama-rupa is then strongly attracted to the person thus reimbodied and haunts him as an evil genius, continually instilling by automatic psychomagnetic action thoughts and impulses of evil, temptations, and suggestions of fear and

terror — all of which the person himself was responsible for in his last life.

There is even such a dweller for globes of a planetary chain of strongly material characteristic. Our moon is such a dweller to the earth. All planetary chains in the solar system probably have or have had their moons, but not in all have such moon-dwellers lasted long after the planetary chain undergoes imbodiment anew.

Dwesa. See DVESHA

Dwija. See DVIJA

Dwipa. See DVIPA

Dyanisis. See DAYYAN'ISHI

Dyaus (Sanskrit) *Dyaus* [nominative of *div*, *dyu* heaven, sky from *div* day, brightness from the verbal root *div* to shine] Heaven, sky; in the Vedas the sky was regarded as descending in three divisions, named from below upwards *avama*, *madhyama*, and *uttama* or *tritiya*. The sky was designated the father (*dyaush-pita*); the earth, the mother (*dyava-prithivi*); and *ushas* (dawn) the daughter. The term stands for “the unrevealed Deity, or that which reveals Itself only as light and the bright day — metaphorically” (TG 97).

Dyfed (Welsh) Modern Pembrokeshire, called *Gwlad Hud a Lledrith* (Land of Illusion and Phantasy). Closely associated with the family of gods, *Pwyll*, *Rhianon*, *Pryderi* — gods of the underworld or Otherworld — and in some way regarded as being close to the Otherworld. The builders of Stonehenge brought one of their circles of stones from the *Preselen Mountains* in *Dyfed*; one suspects their motive to have been to give a certain consecration to the place with stones from the Land of the Gods of the Otherworld.

Dynasties Among ancient peoples almost worldwide there have always been two types of dynastic government, the divine and the human. Ancient religious philosophy taught that government should try to follow the pattern set in the heavens or in the hierarchies of nature; and it was upon this fact that arose the early teaching of what became later known as the divine right of kings. In fact, early human history taught of the former existence of dynasties which ruled the various peoples of earth by the right of spiritual wisdom and knowledge, first through demigods, then heroes, and finally before the system passed into the merely human dynasties as we now know them, the dynasties of initiate-kings.

In ancient Hindustan there were two principal dynasties of kings, as given in the epics and the Puranas, named the *Suryavansa* (the Solar Dynasty) and the *Chandravansa* (the Lunar Dynasty). The former was said to have been descended from the sun through *Ikshvaku*, who according to mythology was the son or grandson of the sun, *Vaivasvata-Manu*, the progenitor of our present humanity. The *Chandravansa* was said to have sprung from *Atri*, the maharshi (great rishi), whose

son again was Soma or the moon, whence the name lunar given to the dynasty.

In ancient Egypt there were thirty Dynasties of kings, as enumerated by the historian Manetho. But the Egyptian priests told Herodotus that there were three divine dynasties which preceded the reign of the human kings: that of the gods, of the demigods, and of the heroes. China too had its divine dynasties which preceded the human dynasties: thus the Chow rulers are placed at 1100 BC, but they were again preceded by the Sheng and the still earlier Hea (or Hia) dynasties. The Greeks taught the existence of divine dynasties followed by human, and Plato tells of divine and semi-divine instructors who first taught mankind the arts, sciences, and agriculture. The same general tradition is found in ancient America. The ancient Chaldeans used the figures 4 3 2 in their calculations concerning the time periods of their dynasties, which they said extended backwards from themselves for a length of 432,000 years.

The Secret Doctrine states that the earliest human races were instructed and guided by divine and semi-divine beings. Thus, the fourth or Atlantean race originally received its knowledge of cycles and astronomy, as well as of the arts and sciences, from divine and semi-divine dynasts. Before the Atlanteans, the Lemuro-Atlanteans were the first who had a dynasty of spirit-kings — actual living dhyanis or demigods who had assumed bodies to teach and guide humankind; and they also instructed mankind in arts and sciences (SD 2:222).

An ancient Egyptian zodiac has been found which represented three Virgins: “The three ‘Virgins,’ or Virgo in three different positions, meant . . . the record of the first three ‘divine or astronomical Dynasties,’ who taught the Third Root-Race; and after having abandoned the Atlanteans to their doom, returned (or redescended, rather) during the third Sub-Race of the Fifth, in order to reveal to saved humanity the mysteries of their birth-place — the sidereal Heavens. The same symbolical record of the human races and the three Dynasties (Gods, Manes — semi-divine astrals of the Third and Fourth, and the ‘Heroes’ of the Fifth Race), which preceded the purely human kings, was found in the distribution of the tiers and passages of the Egyptian Labyrinth” (SD 2:435-6).

Dyookna(h), Dyoqna, D’yuqnah. See DIYYUQNA’

Dzyan (Senzar) Closely similar to the Tibetan dzin (learning, knowledge). Although Blavatsky states that dzyan is “a corruption of the Sanskrit *Dhyan* and *Jnana* . . . Wisdom, divine knowledge” (TG 107), there is also a Chinese equivalent dan or jan-na, which in “modern Chinese and Tibetan phonetics *ch’an*, is the general term for the esoteric schools, and their literature. In the old books, the word *Janna* is defined as ‘to reform one’s self by meditation and knowledge,’ a second *inner* birth. Hence Dzan, *Djan* phonetically, the ‘Book of *Dzyan*’ ” (SD 1:xx). This term then is connected directly with the ancient mystery-language called Senzar, with Tibetan and Chinese mystical Buddhism mostly of the Mahayana schools, and thirdly with the Sanskrit dhyanas of which indeed it was probably originally a corruption.

Dzyu (Senzar) Real knowledge; “the one real (magical) knowledge, or Occult Wisdom; which,

dealing with eternal truths and primal causes, becomes almost omnipotence when applied in the right direction. Its antithesis is Dzyu-mi, that which deals with illusions and false appearances only, as in our exoteric modern sciences. . . . Dzyu is the expression of the collective Wisdom of the Dhyani-Buddhas” (SD 1:108).

Dzyu-mi. *See* DZYU

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ea-El

Ea or Hea (Akkadian, Chaldean) [from house + water] One of the three chief gods of the Chaldaeo- or Assyro-Babylonian celestial triad of Anu, Bel, and Ea. In the division of the universe into heaven, earth, and water, Ea is king of the watery deeps (Shar Apsi); also Lord of that which is below (En-Ki).

Ea is figured as a man covered with the body of a fish, thus resembling Oannes and Dagon. Marodach and Marduk are also aspects of this same deity. His consort is Damkina (lady of that which is below) or Damgal-nunna (great lady of the waters). Ea is called the god of wisdom, and one of his titles, the Sublime Fish, points directly to his cosmic aspect as the ever-living spirit of and bearer of consciousness in the spatial deeps. “The waters are a symbol of wisdom and of occult learning. Hermes represented the sacred Science under the symbol of *fire*; the Northern Initiates, under that of water” (SD 2:495n).

Eabani (Babylonian) Created by Ea; the hero-companion of Izdubar (Gilgamesh) in the epic of Gilgamesh. Here he is created by Ea upon supplication by the people to send them a champion to deliver them from the tyranny of Izdubar. Eabani, however, becomes his bosom-friend and fellow-traveler, acting as guide when Izdubar descends to the regions of the dead. *See also* MARDUK

Eagle One of the four sacred animals of the Christian Qabbalists, the other three being the bull, the lion, and the man-angel. The eagle is a very ancient symbol, generally regarded as solar. “With the Greeks and Persians it was sacred to the Sun; with the Egyptians, under the name of *Ah*, to Horus, and the Koptos worshipped the eagle under the name of *Ahom*. It was regarded as the sacred emblem of Zeus by the Greeks, and as that of the highest god by the Druids. The symbol has passed down to our day, when following the example of the pagan Marius, who, in the second century B.C. used the double-headed eagle as the ensign of Rome, the Christian crowned heads of Europe made the double-headed sovereign of the air sacred to themselves . . .” (TG 108).

Ear. See SENSES; HEARING

Earth Besides being our terrestrial globe, earth is a comprehensive symbol, meaning the matter or vehicular side of manifestation as well as one of the four, five, or seven elements. It is primordial undifferentiated matter which, by the action of spirit, produces the manifested worlds of entities. The Western alchemists called this Adam's Earth; in Greek mythology it is the lower side of Rhea. The bringing forth of animate beings was due to the marriage of heaven and earth, so that our earth is an offspring of this cosmic union. Connected with this meaning are the numerous allusions to earth as the nether pole of manifestation, and it is often synonymous with the nether regions, as Pluto, Yama, etc. In the zodiac it is occasionally symbolized by Taurus, the bull which in popular astrology is the first and fixed earthy sign. As the lowest of the several elements, earth denotes physicalization, what we call physical matter being a combination of all four elements with the earth-element predominating. The pure element, however, is not physical, its characteristic property or tattva in connection with the human organs is smell, and its name in the Hindu system is prithivi-tattva; it is characterized by square or cubical forms and by fixity; the nature spirits pertaining to it were said by medieval European mystics to be the gnomes.

Our own earth is one of a system of planetary chains belonging to the solar system. The earth planetary chain consists of a coadunation or chain of seven or twelve globes, though the name earth is usually applied to the grossest globe, which alone is in direct rapport with our physical senses. The earth actually is an animate being, as are all the celestial globes.

Earth-chain Our planet, like every visible cosmic body, is one of a composite chain or coadunated group formed of seven or twelve energies and substances, the ones on our plane alone visible to our physical senses. These septenary or duodenary groups are called planetary chains, and the earth-chain is the one whose visible component is what we call the planet earth. The words and diagrams describing the idea are merely representations, not photographic. The components are distinctly separate spheres in each chain, but nevertheless form a coadunated unit, but no two globes are of the same substance.

See also PLANETARY CHAIN

Earthquakes Physical phenomena such as earthquakes are generally the end-products of a chain of causation operating not only on the physical plane but also on other cosmic planes. A study of the geology of the earth's crust as regards the lie of the rocks, the position of faults, the presence of volcanic activities, etc., may indicate the places most likely to be affected, and the relation between earthquakes and the positions of the heavenly bodies is now receiving some consideration from scientists; but they still do not recognize any connection between the cause of earthquakes and events on the mental plane of the earth. "But when they understand that there is no such thing as accident in the universe, that every event which appears to us as accident, is the effect of a force on the mental plane, then they will be able to understand why the superstitious Hindus look upon earthquakes as the effect of accumulated sins committed by men." (Theos 6:285, "Earthquakes" by K. D. M.)

The more subtle forms of force-matter or astral light form the links between the physical earth and the mental state of the living beings upon it; and rapid and more or less violent physical cataclysms may be regarded as the final effects of a sudden release of tension in those higher realms. That unusual psychic conditions perceptible to animals and even to humans precede earthquakes many hours before a shock, and long before the seismographs show the smallest tremor, is well-authenticated. "It is absolutely *false*, and but an additional demonstration of the great conceit of our age, to assert (as men of science do) that all the great geological changes and terrible convulsions have been produced *by ordinary and known physical forces*. For these forces were but the tools and final means for the accomplishment of certain purposes, acting periodically, and apparently mechanically, through an inward impulse mixed up with, but beyond their material nature. There is a purpose in every important act of Nature, whose acts are all cyclic and periodical. But spiritual Forces having been usually confused with the purely physical, the former are denied by, and therefore have to remain unknown to Science, because left unexamined" (SD 1:640).

Earth-spirit The psychic as opposed to the heavenly nature of man or of any celestial body, and therefore the astral light, the lower and lowest portions of the anima mundi. With the Gnostics and Nazarenes it was feminine; in Jewish mystical thought it is Samael, also in a sense Jehovah — in other senses Satan. It builds the physical body of terrestrial beings. In some systems it stands for the entire matter-side of manifestation; in others it is the last of a series of spirits pertaining to a hierarchy of beings and planes.

In the plural, and in a more restricted sense, applied to the gnomes or earth elementals of medieval European thought.

Eashoor. See ISVARA

East [from Old English *est*; cf Latin *aurora*, Greek *auos* dawn] One of the four quarters of the globe, different quarters being considered sacred in archaic religio-philosophy, sometimes said to be the place whence wisdom comes: there are the wise men from the East, the star in the East; Christian churches are orientated with the altar to the east. It is the place of the rising sun, and that part of the celestial equator which the ecliptic intersects at the spring equinox. Hence, as European symbology goes back to a time when the equinox was in Taurus, its corresponding figure among the four sacred animals is the bull.

Easter [from *Eostre* or *Ostara* goddess of spring] In the northern hemisphere, the time of the renewal of life in nature, and therefore the appropriate season for celebrating the mystery of rebirth and regeneration. Easter day was close to the time of one of the four sacred seasons connected with the equinoxes and solstices, which were individually celebrated in the ancient Mysteries as representatives of the four main phases of the drama of initiation. It was the second stage of initiation when the awakened person, in whom the Christ had already been born (as

celebrated at a winter solstice), was preparing to become a conqueror of self and then a teacher. Easter today is the result of a confusion and compromise between this ancient spring festival (chiefly in its Northern European form) with ecclesiastical legends and the Jewish Feast of the Passover (pesah). Good Friday, following the Christian version of this ancient theme, commemorates the descent of the Christ into the tomb, and the Sunday following, which is the third day counting inclusively, celebrates the resurrection. Due to a confusion in early Christian thought, there are certain aspects of the Easter celebration which properly pertain to the winter solstice, which the Christians, however, have rightly held as commemorating the *birth* of Christ. The Jewish ecclesiastical calendar was lunar, and the attempt to reconcile the solar calendar with the date of the Passover as fixed by the lunar calendar resulted in protracted disputes, ending in the present compromise with its fluctuating date. The use of eggs at Easter is symbolic of rebirth and shows the influence of the ancient rites, especially of Northern Europe.

Easter Island A volcanic island in the South Pacific about 2000 miles west of Chile, celebrated for its mysterious megalithic monuments including many huge platforms (ahus) built of large blocks of basalt so hard that it can scarcely be worked with steel tools. Some of the platforms are made of carefully hewn stones, ten feet long and fitted together with almost invisible joints. Some are drilled with curious round holes. Easter Island is best known for about 550 statues of great but varying size found in different places, mostly facing the ocean, some of which formerly stood on the platforms. Most vary in height from 4 to 32 feet, but the largest one, which still remains unfinished in the quarry measures about 70 feet. They are composed of a friable rock much softer than the platforms, which may well be far older. Their significance and origin are unknown, but they bear the distinct imprint of the Lemuro-Atlantean tradition. Easter Island *as land* is said to belong to the earliest civilizations of the third root-race, but the island, submerged towards the end of the third root-race, reappeared due to a sudden uplifting of that part of the ocean floor during the Champlain epoch of northern polar submersion (SD 2:327).

Wooden tablets with elaborate inscriptions were in the possession of the natives when the island was discovered, and a few still exist, but these unquestionably, when compared with the megalithic monuments, are of very recent fabrication. Somewhat similar but syllabic inscriptions are found at Oleai in the Caroline Islands, but nowhere else in the Pacific. The Easter Island script curiously resembles that on the seals discovered at Mohenjo-Daro on the Indus River, India, cities which flourished more than 5000 years ago; but neither script has yet been deciphered.

Ebionites [probably from Hebrew *'ebyon* poor] An early sect of Christians, but predating the term Christian. They were probably disciples of Jeshua ben Panthera, an initiated teacher living in the reign of Alexander Jannaeus (104-79 BC), around whom many scholars believe the Gospel story of the avatara Jesus was later built. There seems little support for the conjecture that they had a founder called Ebion. Accounts of their tenets are uncertain, for their name was transferred to various diverging sects, differing in the extent of their adhesion to the Mosaic law and in their way

of interpreting Christian dogmas as to the nature and work of Jesus. They were regarded as Judaizers and heretics, and eventually became eliminated from the Church. As Gnostics of a kind, they regarded both Christ and the polar opposite Jehovah as emanations or rays of the Logos, and were concerned with the adaptation of esoteric teachings with the Mosaic law on the one hand and with the materializing spirit of the Church on the other.

Eblis. See IBLIS

Ecclesia non novit sanguinem (Latin) The church knows not blood; formula used by the Inquisition when it handed over its culprits to the secular arm for punishment, ignoring another maxim of ancient legal jurisprudence *qui facit per alium, facit per se* (who does something through another, does it himself).

Echath. See 'AHATH

Echod. See 'EHAD

Eclectic [from Greek *eklektikos* selective, picking out] Applied to systems of philosophy or religion which cull the best from a variety of systems, with the view of thus arriving at essentials. It was applied to the School of Ammonius Saccas and other Alexandrian philosophers, implying that they picked out what was best in all faiths in order to make a new system, doing so because they knew that all the major systems of human religion and philosophy fundamentally derive from a common wisdom-religion of remote antiquity, and therefore that each such system contains at least some elements of truth. Hence they were teaching the wisdom-religion through synthesizing, and by illustrating it from various faiths. The word is also applied to other matters, e.g. schools of painting.

Eclipses of the sun and moon take place when a new or full moon occurs near one of the lunar nodes. These events were recognized by the ancients as spiritually and cyclically significant, for the universe was regarded as a corporate whole, and throughout by analogy outer events are keys to inner correspondences. According to many ancient legends, eclipses were caused by the sun's or moon's being swallowed by a cosmic dragon — figurative language, as for instance in Sanskrit where the dragon's head and tail, Rahu and Ketu are the moon's nodes.

In astrology, the moment of an eclipse is regarded as one of those epochs when the planetary configurations of the moment are significant of coming events — the birth moment of a cycle, in fact; and eclipses are mentioned in *The Secret Doctrine* as being guideposts in fixing the dates of ancient epochs that mark the junction of long cycles.

Ecliptic An imaginary great circle on the celestial sphere, defining the apparent annual path of the sun around the earth. A line drawn through the center of this circle and perpendicular to its plane constitutes its axis, the extremities of which are the poles of the ecliptic. The axis of the ecliptic and the axis of the earth are inclined to each other at an angle of 23 degrees 27 minutes, which is said

to be at present decreasing at the rate of 1 minute in 128 years. The relative movement of the two axes causes the precession of the equinoxes.

Ecpyrosis. See CATAclysms

Ecstasy, Ecstasis (Greek) [from *ekstasis* displacement, standing out from the proper place, hence rising above] A transference of consciousness from the physical plane to another inner and superior plane, accompanied by awareness and memory of the experience. It is necessary to distinguish between an astral-psychic experience and a truly psychospiritual one. The former is delusive and fraught with harm; the latter is the state of illumination spoken of by Plotinus, resulting from the true asceticism of the disciple, and in its highest form is the same as the high stage of meditation of the Hindu yogi.

Used in the Gospels to mean astonishment, trance, or ecstatic visions.

Ectenic Force [from Greek *ektenes* stretched out, extended] Name proposed by Professor Thury of Geneva for a force or agent which is supposed to be the cause or operative agency in the production of psychic phenomena such as levitation, moving objects without contact, thought transference, hypnotism, etc. Pervading all matter — nervous, organic, or inorganic — it is equivalent to Crookes' psychic force and similar hypothetical agents, and to the lowest portions of the akasa or lower astral light in connection with human nerve-force.

Ectoplasm [from Greek *ektos* without + *plasma* a thing formed] Used by observers interested in psychic research and kindred subjects to denote the filmy matter which appears at times to exude from the body of a medium. Inasmuch as purported photographs have been shown representing this matter in close proximity to the body of a medium, and even as clearly issuing from it, it is quite evident that physical or quasi-physical matter must be associated with this ectoplasm. When this ectoplasm is genuine (for it may of course be simulated for a photograph), it occurs because the constitution of the medium is loosely knit together and thus an exudation becomes possible from the medium's *linga-sarira* or model-body upon which the physical body is built. In cases of genuine ectoplasmic projection, because of the peculiar, exceptional magnetic and vital condition surrounding a medium's body, atoms are also drawn to the medium by electromagnetic attraction, such as molecules of air or dust particles of physical and pranic substance with which the air is laden. These tiny particles of often invisible physical substance fuse with the exuding material from the *linga-sarira* of the medium, giving it substance and even the appearance of physical matter. Thus when the ectoplasm is touched, it feels warm and vital; occasionally even a throbbing sensation may be felt due to the pulse-beat coming from the heart of the medium.

Edda(s) (Icelandic) [from *edda* great grandmother] Matrix of the mythic wisdom of the ancient Norse peoples, the Edda consists of two main parts: the poetic or Elder Edda, which was written down by Saemund the Wise in Iceland after the ancient oral traditions of the skalds, about 1000 AD, a version known as the *Codex Regius*.

Saemund was a learned man who, after studying in Paris, founded a school at Oddi in Iceland. Scholars have speculated on the possibility that the manuscript of Saemund may have been called *The Book of Oddi*, which became linguistically *Edda*.

In 1643 Bishop Brynjolf Sveinsson of Skalholt discovered Saemund's manuscript. He had copies made and sent the original with Thormod Torfaeus to King Frederik III of Denmark as a gift in 1662. After three hundred years it was returned to Iceland.

The Younger Edda, in which the verses are rendered in prose form by Snorri Sturlusson, a pupil of Saemund's grandson in the school at Oddi, contains some material which has been omitted or lost from the poetic version. A large part of Snorri's Edda is devoted to *Skaldskaparmal*, a treatise on the rules of alliteration and meter that apply in the creation of poetry, and the uses of *kenningar* — a type of word play giving suggestive descriptions instead of the words commonly used to designate people, gods, and things. As examples of kennings the Tree of Life is called variously the soil mulcher, the shade giver, and Odin is named allfather, the thinker, the disguised, etc. The other two sections of Snorri's Edda are named *Hattatal* (rules or conventions), and *Gylfaginning* (the mocking of Gylfe). This can also mean the "apotheosis of Gylfe" which, in the context of a Mystery teaching presents interesting possibilities.

One 18th century author, Johan Goransson, believes that the Eddas were copied from old *Runobocker* (books of runes) and that when Christianity first spread its influence in Sweden about two hundred years after Saemund, these ancient writings were systematically destroyed (*Sviogota ok Nordmanna Edda xxxi*).

The manuscripts containing the collection of lays and stories known as *Edda* are: *Codex Regius*, *Codex Wormianus*, and *Codex Upsaliensis*. The last-named and also the Arnamagnaean Vellum No. 748, which contains a portion of the text, are clearly written by Snorri.

The Eddas have given rise to a great many fairy tales, mythic and heroic stories, and humorous anecdotes, but the keys to decipher their esoteric meaning have been largely lost.

E Delphicum The Delphic E, a sacred symbol denoting, among other things, the number 5. It is the fifth letter in the Greek and English alphabets, corresponding to *he'*, the fifth letter in the Hebrew alphabet, which signifies a window and, in the Qabbalah, the human womb.

Eden or the garden of Eden (Hebrew) *'Ēden, Gan-'ēden* [from *'ēden* delight, pleasure, loveliness] The country in which the garden of Adam and Eve was situated according to the Bible. Not wholly a mythical name, for Eden "is an archaic name of the country watered by the Euphrates and its many branches, from Asia and Armenia to the Erythraean Sea" (SD 2:202). Hebraists hold that the site of Eden would be the cradle of the human race. *See also* GAN-EDEN; PARADISE

Edom (Hebrew) *'Edom* The land and the Kings of Edom are mentioned in the Bible (Genesis 36) in

allegorical manner, and treated in the Qabalah as referring to a period of unbalance before balance or harmony was inaugurated; the Kings, in one meaning of this Qabbalistic allegory, refer to the various attempts (and failures) at the formation of worlds before this one. However, “the ‘Edomite Kings’ could never symbolize the ‘prior worlds,’ but only the ‘attempts at men’ on this globe: the ‘pre-Adamite races,’ of which the Zohar speaks, and which we explain as the *First Root-Race*. . . . the Kings of Edom are the sons of ‘Esau the father of the Edomites’ (Gen., xxxvi, 43); *i.e.*, Esau represents in the Bible the race which stands between the Fourth and the Fifth, the Atlantean and the Aryan” (SD 2:705). Interestingly Edom is exactly the same word as ‘Adam (man), the only difference being one of vocalization, of changing the Massoretic points. The seven Kings of Edom are therefore the seven races of man, whether the reference be made to the seven subraces of any one root-race, or to the seven root-races themselves.

Egg One of the most comprehensive symbols, equally suggestive in a spiritual, physiological, and cosmological sense. Among other things, it stands for primordial chaos, the universal matrix, the great Deep, the Virgin Mother, and also for the kosmos or world egg produced from it. As chaos or space, it is the virgin egg, unproduced; this is fructified by the spiritual ray, and from it then issues the Third Logos. “The Virgin-egg being in one sense abstract Egg-ness, or the power of becoming developed through fecundation, is eternal and for ever the same. And just as the fecundation of an egg takes place before it is dropped; so the non-eternal periodical germ which becomes later in symbolism the mundane egg, contains in itself, when it emerges from the said symbol, ‘the promise and potency’ of all the Universe . . . The simile of an egg also expresses the fact . . . that the primordial form of everything manifested, from atom to globe, from man to angel, is spheroidal, the sphere having been with all nations the emblem of eternity and infinity” (SD 1:64-5).

As the symbol of generation, birth, and rebirth, it is “the most familiar form of that in which is deposited and developed the germ of every living being” (IU 1:157), used not only on account of the mystery of apparent self-generation, but from its spheroidal shape, the sphere and circle both being symbols of encompassing space.

The egg symbol appears in many cultures. In the *Laws of Manu*, for instance, it is stated that the Self-existent Lord, becoming manifest, created water alone; in that he cast seed which became a golden egg (hiranyagarbha); having dwelt in that egg for a divine year, Brahma splits it, forming heaven and earth. Brahma thus both fructifies the egg and is produced from it. Again, the female evolver or emanator is first a germ, a drop of heavenly dew, a pearl, and then an egg; the egg gives birth to the four elements with the fifth (akasa); it splits, the shell being heaven, the meat earth, and the white the waters of both space and earth. Vishnu, too, emerges from the egg. In Egypt, Osiris is born from an egg, like Brahma; the egg was sacred to Isis and therefore the priests never ate eggs.

The egg is used in Easter celebrations as the symbol of the renewal of life. The Easter egg derives

from the pagan custom of exchanging eggs at the birth-time of the year. Originally it had a deep esoteric hint completely lost sight of today where the custom is still held in the Occident, although commonly candies in the shape of eggs are exchanged. Giving a fellow disciple an egg in the old Mystery schools suggested the rebirth of nature, so apparent in the springtime, or again the initiation ceremonies that prevailed at the spring equinox, thereby expressing the hope that he too might at some time be “reborn,” able to free his spiritual nature from the enveloping shell as a chick frees itself from the egg.

Sometimes the word is used for the circle or zero, for the egg combines the senses of fertility and sphericity in one symbol. The egg with its central germ is the circle with the point. In company with the stroke for the masculine power in nature — sometimes represented as a vertical line — it makes the number 10, or the figure of relatively perfected or complete emanation. The egg was the symbol of life in immortality and eternity, and also the glyph of the generative matrix. The anatomy of a hen’s egg shows a wonderful analogy with the stages in comic evolution and the human principles. *See also* BRAHMANDA; WORLD EGG

Egg-born The earlier divisions of the third root-race, which produced their offspring from eggs — a method which may still be said to exist in humans today, as well as among the animals. This race and its method of reproduction was the logical outcome of the so-called “sweat-born” of the later second and earliest third root-race. The human race from its beginnings on globe D passed through different modes of reproduction which again depended upon the physiological characteristics of the various phases through which humanity progressed from ethereal through astral into physical types. At first humanity was sexless and then, through various phases of seeding, budding, and egg-bearing, became androgynous, its offspring as time passed appearing with one or the other sex predominating, and finally during the latter third root-race appeared distinct males and females from birth as at present. The higher intellectual dhyanis (manasas, sons of wisdom) would not incarnate in the earliest forms, nor even in the bodies of the early egg-born. The first half of the egg-born race was therefore mortal in its lower or personal aspects, there being as yet no personal ego to survive; the inner monadic fires were there, but with no proper vehicle into which to pour their flames. The second half became intellectually immortal at will and spiritually immortal by reason of the development and incarnation of the fifth or manas principle through the agency of the informing manasas. In the days of Lemuria, the middle and later third root-race, the egg-born are to be referred not only to the physiological processes of reproduction then current, but to the seven dhyani-chohanic classes who incarnated in the “seven Elect” of the third root-race. *See also* ROOT-RACE, THIRD

Egg of Brahma. *See* BRAHMANDA; EGG; HIRANYAGARBHA

Eggregores. *See* EGREGORES

Egkosmioi or Enkosmioi (Greek) In the world or universe; applied by Proclus to his second

highest rank of gods or planetary spirits, the first rank being the twelve hyperouranioi (supercelestial). They are the inspiring and inspiriting agencies in the universe, the indwelling gods whose spiritual, intellectual, and psychic movements provide the universe in which they exist with the respective ranges of spiritual, intellectual, and psychic intelligence and forces. The very lowest range of these indwelling divinities, however, are but slightly above the elemental beings of the cosmic astral plane.

Ego (Latin) The personal pronoun “I”; in philosophy and theosophy, the ego is the center of ‘I-am-ship’ or egoity in the human being. There are two such centers: the spiritual and impersonal, commonly called the individuality; and the personal, often called the soul or the personality. The former ego is unconditionally immortal, the latter ego is conditionally immortal, but in most cases mortal because of its lack of binding aspirations with its higher Over-self, the individuality.

The ego is that which says “I am I”; it is indirect or reflected consciousness, consciousness recognizing its own mayavi existence as a separate entity. It is not the permanent self or the atma-buddhi-manas considered as an indissoluble triad; for all egos in the human constitution are reflections of the permanent spiritual selfhood. This means that there are innumerable egos of the same kind — “myself” and other similar myselfs — also that there are egos of different kinds.

If we consider the hierarchy of the human constitution to grow from the immanent or permanent self, regarding this as the very seed of essential egoity, then a mayavi ego will be formed on each of the planes of matter and therefore on all the planes or layers of the human constitution; the seed of egoity manifesting itself in each successive vehicle and thus producing there an ego, permanent or impermanent according to its distance from the permanent self.

Thus we have: atman, the divine monad, giving birth to the divine ego, which latter evolves forth the monadic envelope or divine soul. Jiva, the spiritual monad, has its child, which is the spiritual ego, and this in turn evolves forth the spiritual soul or individual; and the combination of these two, considered as a unit, generally speaking, is atma-buddhi; bhutatman, the human ego — the higher human soul, including the lower buddhi and higher manas; pranatman, the personal ego — the ordinary human soul or person — including manas, kama, and prana; and finally the beast or animal ego — the vital-astral soul: kama and prana.

Egoity I-am-I-ness, ahamkara; human egoity is dual, but egoity really should mean individuality, not personality. The characteristic or swabhava of individuality is egoity or the essential root of I-am-I-ness, while the characteristic or swabhava of the personality is egoism, the faint shadow of egoity drunken with the sense of its own exclusive importance in the world. Further, both egoity and egoism are sharply distinguished from essential selfhood; paradoxically, the stronger the idea of essential selfhood in the human being, the less is there of egoity, and the least there is of egoism, for even egoity is a reflection, albeit high, of spiritual selfhood, which recognizes its oneness with the All. Thus ego is defined as I-am-I, consciousness recognizing its own mayavi existence as a separate entity, hence often called reflected consciousness. Essential selfhood is the characteristic

of atman in the human constitution; egoity arises in the conjunction of atma-buddhi with manas; whereas personality or egoism is the faint reflection of the latter working in and through the lower manas, kama, and prana.

Egregores Coined by Eliphas Levi, who explains it as “the chiefs of the souls who are the spirits of energy and action” (SD 1:259). They are beings “whose bodies and essence is a tissue of the so-called *astral light*. They are the shadows of the higher Planetary Spirits whose bodies are of the essence of the higher divine light” (TG 111). They are “the ‘giants’ of *Genesis* who loved the daughters of men: an allusion to the first prehuman (so to say) races of men evolved, not *born* — Alpha and the Omega of Humanity in this our ‘Round’ ” (BCW 6:176).

Egyptian Book of the Dead. See BOOK OF THE DEAD, EGYPTIAN

’Ehad (Hebrew) *’Ehād* One, first, alone, single; used by Orthodox Jews in relation to Jehovah as the one and only god. The feminine form is *’Ahath*.

Eheieh, Eheyeh, Eheih. See *’EHYEH*

’Ehyeh (Hebrew) *’Ehyeh* [from *hāyāh* to be] I am, I will be; He who exists; an equivalent for the highest name of the Deity, although not uttered. “Existence . . . corresponds to Kether and Macroprosopus” (TG 11). “The secret of this word □□□□, Ehyeh, I Am, comprises everything, when the ways are hidden and not separated and together in one place, then it is called Ehyeh, I am, all hidden and not revealed; but after it goes out from its defined line and that river bears in its bosom all things, then He is called Asher Ehyeh, *i.e.*, *That I Am*” (Zohar iii, 65b).

In *The Secret Doctrine* (2:468), used in connection with the phrase “I am that I am” (*’ehyeh ’asher ’ehyeh*), said to have been uttered by Jehovah when Moses inquired as to his name. Likewise a name for the first of the Sephiroth, Kether the Crown. See also ADONAI

Eidolon [from Greek *eidolon* form, shape; a phantom-double of the human form; Latin *simulacrum*] The astral double of living beings; the shade or perispirit, the kama-rupa after death before its disintegration. The phantom which can appear under certain conditions to survivors of the deceased.

Eight Although infrequently used in occultism, one of the important numerical stages in nature and, therefore, in all occult systems of reckoning and computation. An inaccurate use of 8, or a use springing from ignorance, can very easily mislead the student of archaic numerology as to its ancient computational value and numerical signification. After remarking that the ancients always referred to seven planets (the sun being included in the septenary), Blavatsky says: “These ‘seven’ became the eight, the *Ogdoad*, of the later *materialized* religions, the seventh, or the highest principle, being no longer the pervading Spirit, the Synthesis, but becoming an anthropomorphic number, or additional unit” (SD 2:358n).

However, the ogdoad of the ancients had a special significance, among other things referring to the addition of the linking unit, whether of a superior or inferior hierarchy, to the septenary hierarchy envisioned at the moment. Furthermore, when the seven sacred planets of the ancients were considered in connection with their relations to earth, this conjoining of the eight units was often called an ogdoad. Hinduism takes cognizance of eight great gods, namely, the eight adityas, and on some of the oldest monuments of India, Persia, and Chaldea one may see the eight-pointed or double cross.

When the figure 8 is placed on its side . . . it symbolizes the eternal and spiral motion of cycles “and is symbolized in its turn by the Caduceus. It shows the regular breathing of the Kosmos presided over by the eight great gods — the seven from the primeval Mother, the One and the Triad” (SD 2:580). In modern mathematics, it is the symbol for infinity, or for the approach to infinity.

Eightfold Path. See ARIYA ATTHANGIKA MAGGA; ARYASHTANGAMARGA

Eighth Sphere or Planet of Death Both a globe and a condition of being, where utterly, irredeemably corrupt human souls are attracted, to be dissipated as earth entities. These “lost souls” have through lifetimes lost their link with their inner god, and so can no longer serve as a channel for those spiritual forces. Too gross to remain in kama-loka or avichi, they sink to this slowly dying planet of our solar system, invisible because too dense, which acts as a vent or receptacle for human waste. “The Eighth Sphere is a very necessary organic part of the destiny of our earth and its chain. . . . in the solar system there are certain bodies which act as vents, cleansing channels, receptacles for human waste and slag. . . . [the lost soul] therefore sinks into the Planet of Death or the globe of Mara to which its own heavy material magnetism drags it, where it is dissipated as an entity from above, which means from our globe, and is slowly ground over in nature’s laboratory. . . . However, precisely because the lost soul is yet an aggregate of astral-vital-psychical life-atoms connected around a monad as yet scarcely evolved, this monad, when freed from its earth veil of life atoms, thereupon begins in the Planet of Death a career of its own in this highly material globe.” (FSO 347-8)

Ein Soph, 'Ein-suph. See 'EYN SOPH

Eisteddfod (Welsh) [from *eistedd* to sit] A session; a festival of competitions in music and poetry, presided over and organized by the Gorsedd of the Bards.

Eis Zeus Sarapi An invocation to Sarapis (or Serapis) frequently found on Gnostic gems, meaning “the One Zeus, Sarapis,” a recognition of Sarapis as the supreme deity. Similar in meaning to the Gnostic phrase Abrasax Iao (Abrasax is the One Iao) also inscribed on gems.

Eka (Sanskrit) *Eka* The numeral adjective “one”; in the sense of first, primeval, or adi, it may mean Brahma, the third or creative cosmic Logos. This or any other One, such as the Hebrew 'ahath or 'ehad, never means boundless, frontierless infinity, which is symbolized by the zero. One is always

the beginning of numeration as well as of enumeration, so that on however high a plane the One may be, it is always the beginning of the hierarchy flowing forth from it as its root or seed. In boundless infinitude there are, therefore, innumerable such Ones or hierarchs of cosmic hierarchies.

Ekagrata or **Ekagratva** (Sanskrit) *Ekāgratā, Ekāgratva* One-pointedness, absolute intentness in the contemplation of an object of meditation, holding the mind in perfect concentration on a single point of thought.

Ekana-rupa, Ekanekarupa. *See* EKANEKA-SVARUPA

Ekaneka-Svarupa (Sanskrit) *Ekānekasvarūpa* [from *eka* one + *aneka* not one, many + *svarūpa* one's own form or shape] Single yet manifold in one's own form; applied in the Puranas to Brahma: although the aspect is single yet it manifests in multiform expressions. Applicable to the various manifestations of the Logos despite its individuality and transcendency, and indeed on smaller scales applicable to any monadic individuality, such as that of a human being.

Ekasloka-Sastra (Sanskrit) *Ekaśloka-śāstra* [from *eka* one + *śloka* stanza + *śāstra* scripture] A Buddhist mystical work written by Nagarjuna, called in Chinese the *Yih-shu-lu-kia-lun*.

El (Hebrew) *’Ēl* Sometimes written Al. Strong, mighty; as an abstract noun — strength, might — applied to divinities, heroes, or cosmic spirits. By the later Jewish and Christian monotheists rendered as God.

Used in connection with Jehovah as well as with non-Jewish gods. Its plural form is *’elim*, whereas the Hebrew plural *’elohim* is, strictly speaking, the plural of a cognate Chaldee and Hebrew word *’eloah*. This last word has a feminine termination, whereas the plural has the masculine termination, thus embodying in curious fashion both masculine and feminine attributes when used in the plural form. In translations from the Bible, *’elohim* is usually translated into English as God, whereas Jehovah is usually rendered into English as Lord. *See also* ALHIM

Elder Brothers. *See* MAHATMA

Eldorado (Spanish) [from *el* the + *dorado* golden, gilded] An imaginary region supposed to abound in gold and other precious elements, often located by early European explorers in the New World somewhere in Central or South America; figuratively, a speculative goal of blissful hopes. Such ideas, like that of the Promised Land, Elysium, or Paradise, are echoes of intuitive and traditional awareness of mankind's divine origin and destiny — traditions also connected with certain spots on the earth, such as the north pole.

Electra (Greek) *Elektra*. One of the Pleiades, daughter of Atlas and mother by Zeus of Dardanus, ancestor of the royal house of Troy. Called “dark-faced,” she is sometimes considered the Pleiad not visible to the naked eye, as upon seeing the ruin of Troy, she left her place to become a comet.

Also, a daughter of Ocean, mother by Thaumias of Iris and the Harpies; and a river nymph, daughter of Ocean and Tethys. Again, she is the daughter of Agamemnon and Clytemnestra, sister of Iphigenia and Orestes. After her mother killed her father, Electra saved her brother and eventually helped him revenge their father's death. (SD 2:768; BCW 4:224)

Electricity Theosophy regards electricity not as a mere effect but as an entity or cosmic force named fohat, also spoken of distributively as the sons of fohat. In correlating electricity with these cosmic forces, we find the term given either to the one great energy from which the others differentiate, or to a particular one of such differentiations: e.g., kundalini-sakti, which is characterized by spiral or serpentine motion and is thus related to electromagnetic phenomena, although kundalini might better be called vital electricity or magnetism, for electricity and magnetism are alter egos.

Electricity as we know it is the end product of a chain of appearances on various cosmic planes. It is said in old occult works that Father-Mother is the primordial aether or akasa, sometimes called svabhavat, which was homogeneous before the evolution of the Son — fohat or cosmic electricity. Electricity is also mentioned as a form of cosmic vitality, emanating chiefly from the various suns in the universe, but also in a less degree from all other cosmic entities; and behind all such vital activities is the all-permanent cosmic intelligence unfolding itself into the vital web of the minor cosmic intelligences. Electricity on our earth-plane is one of the lowest forms of spirit-light or daiviprakriti.

The Secret Doctrine states that electricity is atomic, as signifying infinitesimal particles, which obtains confirmation from modern research and theory. Again, the statement that electricity is intimately involved in the manifestations of all forms of life is being elucidated by investigations relative to the currents which accompany vital actions in living organisms.

The standpoint of occultism is that no cosmic force, or manifestations of any cosmic force, is different from cosmic life itself — except in its svabhava or characteristic attributes; and furthermore, that no smallest particle or point of infinite space is lifeless, so that the grossest matter is to be looked upon as a dense composite of vital action. From these two postulates it follows that electricity is not only vitality, but vitality controlled by intelligence, and our own inability to sense the intelligence in electric action lies solely in our ignorance of how cosmic intelligence acts, for it is all-permeant and virtually infinite in its manifestations, whereas our own ideas of vital action are limited to the very small compass of our acquaintance with particular units which we call living.

El Elion (Hebrew) 'Ēl 'Elyōn ['ēl divinity + 'elyōn what is high or above] The God on high; “a name of the Deity *borrowed* by the Jews from the Phoenician *Elon*, a name of the Sun” (TG 111). *See also* ELON

Element [from Latin *elementa* first principles; also (singular) *elementum* an element; cf Sanskrit *lī*

to dissolve] Though element may be applied to anything, it more specifically refers to the matterside of nature; and thus the primordial element is found in mulaprakriti, the fundamental root-substance which underlies all manifestation. Schools of philosophy have seen fire, air, or water (not as understood in the usual sense) as the primal element; or have recognized fire, air, water, earth, and sometimes aether as primal elements.

While all things spring from an original unity, element is employed relatively to many things which are themselves compound. The chemical elements, for example, may spring from a more elementary protyle, and this again from the akasa, the common spiritual-ethereal parent of the physical substratum. Thus, what is homogeneous in relation to that which comes from it, may be heterogeneous in relation to that from which it comes.

The theosophical teaching regarding the cosmic elements and principles is treated under the term Tattvas. *See also* BHUTA; MAHABHUTAS; AETHER; AIR; EARTH; FIRE; WATER

Elemental(s) Used by medieval European mystics, such as the Fire-philosophers, Rosicrucians, and Qabbalists, to signify those classes of ethereal beings evolved in and born of the four elements or kingdoms of nature. Ordinarily they are spoken of as existing in four classes corresponding to the four popular elements air, fire, water, and earth; but theosophy describes these kingdoms of nature as seven or even ten in number: four of the material or quasi-material range, and three (or six) of highly ethereal and even quasi-spiritual substance. They are often described as nature spirits or sprites.

More strictly, the word is confined to those beings who are beginning their evolutionary growth, who have developed in their constitution but one of the four elements — that one from which they were born — and who are therefore in the *elemental* state of growth. It is a generalizing term for all beings evolutionally below the minerals. Nevertheless, by extension of meaning, the mineral, vegetable, and animal kingdoms are often referred to as families of elemental beings, though in more advanced stages. An elemental, therefore, is a being who has entered our, or any other, universe on its lowest plane or world.

There are three kingdoms of the elementals below the mineral kingdom, each of which has seven (or ten) subdivisions, and every entity high or low has passed through this stage at some time in its career.

There are four commonly recognized great classes of these unevolved beings, called by the medieval European mystics gnomes, undines, sylphs, and salamanders — elementals respectively of earth, water, air, and fire. These elementals are not only the inhabitants of and born from the respective elements, but really are the elements themselves. They are from one viewpoint simply nature forces, tools of the higher intelligences, and actually perform all the physical work of the world.

From another point of view they may be looked upon as life-atoms in different stages of evolutionary growth; and being in various degrees of evolution they are variously spiritual, ethereal, astral, or material, running through vast ranges on all these planes. Thus they exist everywhere: in the air we breathe, the food we eat, and all the tissues of physical nature. Through their agency we perform all our bodily or mental activities.

The three kingdoms of elementals actually build and form every new planet or world, beginning in serial order with the lowest of the three kingdoms, preparing the globe for the advent of the mineral kingdom, to be followed in turn by the vegetable and higher kingdoms in regular succession. The elementals are not only the matters of nature, but when acting together and used by higher intelligences become the forces or energies of nature, such as electricity, magnetism, light, vitality, etc. Unconsciously, human and other beings use them in the carrying on of all their bodily functions. For example, our bodies cohere through the automatic aid of the elementals of earth; and the elementals of fire give us our bodily heat.

The four kingdoms of elementals, existing in the four elements, are also known under the general designation of fairies and fays in the myths, fables, traditions, and poetry of all nations, ancient and modern. Their names are legion: peris, devs, jinn, sylvans, satyrs, fauns, elves, dwarfs, trolls, nixies, kobolds, brownies, banshees, leprechauns, pixies, moss-people, good people, good neighbors, wild women, men of peace, white ladies, and many more. They have been seen, feared, blessed, banned, and invoked in every quarter of the globe in every age.

These elementals are the principal nature forces used by the disembodied human dead, very real but *never visible* “shells” mistaken for spirits at seances, and are the producers of all the phenomena except the purely subjective. They may be described as centers of force having instinctive desires but no consciousness as we understand it. Hence their acts may be what we humans call good or bad, indifferently. They have astral forms which partake, to a distinguishing degree, of the element to which they belong and also of the universally encompassing ether. They are a combination of sublimated matter and a purely rudimental mind. Some remain throughout several cycles relatively unchanging, so far as radical change goes, but still have no separate individuality, and usually acting collectively, so to speak. Others, of certain elements and species, change under a fixed law which Qabbalists explain. The most solid of their bodies are ordinarily just immaterial enough to escape perception by our physical eyesight, but not so unsubstantial that they cannot be perfectly recognized by the inner or clairvoyant vision. They not only exist and can all live in ether, but can handle and direct it for the production of physical effects, as readily as we can compress air or water for the same purpose by pneumatic and hydraulic apparatus; in which occupation they are readily helped by the human elementaries or astral shells.

More than this, they can so condense the ether as to make for themselves tangible bodies which, by their Protean powers, they can cause to assume such likeness as the elementals themselves are at

the time impressed to assume, this being caused by their taking automatically as their models the portraits they find stamped in the memory of a person or persons present at a seance. It is not necessary that the sitter should be thinking at the moment of the one represented: the image may have faded many years before. The mind receives indelible impressions even from chance acquaintances. As a few seconds' exposure of the sensitized photographic plate is all that is requisite to preserve indefinitely the image of the sitter, so is it in incomparably greater degree with the mind. Unable to invent anything or to produce anything of itself, the elemental automatically reflects stamped impressions in the memory of human beings to its very depths; hence the nervous exhaustion and mental oppression of certain sensitive natures at spiritualistic circles. The elementals will bring to light long-forgotten remembrances of the past: forms, images, even familiar sentences, long since faded from memory, but vividly preserved on the astral tablets of the imperishable book of life. The elementals are very imitative, having neither developed will nor intelligence of their own which they self-consciously use, and hence tend automatically to copy forms in all the higher kingdoms. They have therefore many shapes or bodies, some of the more advanced taking even a quasi-human form.

Some of the elementals are said to be friendly, others unfriendly, to humanity not because of any deliberate intent on their part, but simply because mankind happens to be in such evolutionary position that it is affected one way or the other by them. Also, as different people contain in their constitution a preponderance of one of the elements over the other, they are more sensitive to the elementals of their predominating element.

Elemental Dissolution. *See* PRAKRITIKA PRALAYA

Elemental Vortices. *See* VORTEX-ATOM THEORY

Elementaries The earth-bound disembodied human souls of people who were evil or depraved when embodied: the conscious or quasi-conscious astral souls of people who on earth refused all spiritual light, remained and died deeply immersed in the mire of matter, and from whose souls or intermediate, personal nature the immortal spirit has gradually separated. These may exist for centuries before completely dissolving. Blavatsky writes of the spiritual death leading to this condition: "When one falls into a love of self and love of the world, with its pleasures, losing the divine love of God and of the neighbor, he falls from life to death. The higher principles which constitute the essential elements of his humanity perish, and he lives only on the natural plane of his faculties. Physically he exists, spiritually he is dead. . . . This spiritual death results from disobedience of the laws of spiritual life, which is followed by the same penalty as the disobedience of the laws of natural life. But the spiritually dead have still their delights; they have their intellectual endowments and power, and intense activities. All the animal delights are theirs, and to multitudes of men and women these constitute the highest ideal of human happiness. The tireless pursuit of riches, of the amusements and entertainments of social life; the cultivation of

graces of manner, of taste in dress, of social preferment, of scientific distinction, intoxicate and enrapture these dead-alive . . .” (IU 1:318).

When highly developed, this class of people, during incarnation on earth, is known in the East as the Brothers of the Shadow, a title rightly applied also to their astral shades, which are often quite fully conscious in the lower parts of nature, “cunning, low, vindictive, and seeking to retaliate their sufferings upon humanity, they become, until final annihilation, vampires, ghouls, and prominent actors. These are the leading ‘stars’ on the great spiritual stage of ‘materialization,’ which phenomena they perform with the help of the more intelligent of the genuine-born ‘elemental’ creatures, which hover around and welcome them with delight in their own spheres” (IU 1:319).

In popular modern theosophical literature, the word has also been applied to the phantoms or kama-rupic shades of disembodied persons in general, especially to the case of grossly materialistic humans whose evil impulses and appetites, still inhering in the kama-rupic phantom, draw these phantoms to physical spheres congenial to them. Even these last are a real danger to the psychological health and sanity of embodied humans, and literally haunt living human beings possessing tendencies akin to their own. Such soulless astral shells are less dangerous than actual elementaries because far less conscious, but are still filled with energies of a depraved and ignoble type. Their destiny is like that of all other pretas or bhutas — ultimate disintegration; for the gross astral atoms composing them slowly dissolve after the manner of a dissolving column of smoke.

Both these classes of astral souls or phantoms are attracted to and thickly cluster about the grossest and most material places and beings of the physical sphere. Any person of spiritual character and aspiring soul, however, repels these astral entities by a type of psychomagnetic antipathy.

Element-Principles. See TATTVA

Elephanta A small island near Bombay, called Gharipur or Gharapuri in India, which received its present name from Portuguese navigators because of its colossal elephants sculpted in stone. The island is also famous for a large cave-temple containing much noteworthy sculptures.

Eleusinia or **Eleusinian Mysteries** (Greek) [from *eleusinia* things that are to come] The most famous Mysteries in ancient Greece and, next to those of Samothrace, the most ancient. Even the Christian writer Epiphanius traces them to the days of Inachos (which some writers place so close to our time as 1800 BC, which is far too near), while others make the founder Eumolpos. Both these founders are described as at once kings and of divine parentage.

The Greater Eleusinian Mysteries were celebrated at the time of the autumnal equinox, the time of grape gathering, and the Mysteries were in honor of Demeter — in Latin Ceres and in one range of mythologic thought also the Egyptian Isis — the Earth-Mother, presiding over fertility.

The celebration of the complete Eleusinia consisted of Less and Greater Mysteries. In the former

the produce of the earth was given a part, while in the latter emphasis was laid on its higher correspondences in connection with Mystery-teaching. As its name implies, at Eleusis were taught the doctrines concerning what will happen to man after death.

Iacchos, the god of wine in more senses than one, plays an important part in these Mysteries. Demeter's daughter Persephone, goddess of the underworld, was also honored. The usual accounts, vague and fragmentary only, describe the dramatic representations of the adventures of these deities, the esoteric meaning of which was given in the Greater Mysteries.

Eleusis (Greek) [from *eleusis* a coming, advent from *eleusomai* will come] Seat near Athens of one of the most renown Mystery centers in ancient Greece. In the New Testament, it is translated as "the advent." *See also* ELEUSINIA; MYSTERIES

Elias, Elijah (Hebrew) *'Ēliyyāh* Hebrew prophet (9th century BC) who struggled against the worship of the Phoenician Baal (1 Kings 17 - 2 Kings 2:15). Blavatsky states that the Hebrew root of the name is equivalent to buddhi, and is so used in the Gospel of John and the *Pistis Sophia* (BCW 9:492-3, 13:13). *See also* CARMEL, MOUNT

Elicius (Latin) [from *elicio* to draw down, entice out] Meteorological title of Jupiter, referring to his manifestation as lightning, by which means he can be drawn down to earth.

'Eli, 'eli, lamah shabahtani. *See* CRY FROM THE CROSS

Elion. *See* EL ELION

Elivagar (Icelandic) [from *eli* ice + *vagar* waves] In Norse mythology the "waves of ice" (glaciers) which flow from the fountain Hvergelmir into all the worlds and which provide the life forms for the embodiment of all beings. In the cosmogony of the Eddas, it was from elivagar, the glacier or unmoving waters of nonbeing, that the frost giant Ymir was formed: the void of non-existence in which there was "no soil, no sea, no waves" (cf Voluspa in the elder Edda).

Into the elivagar massed in Ginnungagap (formless or sacred void) fell showers of sparks from Muspellsheim (home of fire), the energetic counterpart of Niflheim (home of clouds, nebulae), creating a vapor — Ymir, the frost giant from which the gods created worlds. Ymir is then said to have given rise to the race of rime-thurses — matter giants, for "all their kin is ever evil."

Elixir [from Arabic *al iksir* possibly from Greek *xeros* dry] An alchemical agent, the so-called power of transmutation, also the elixir of life and the universal solvent. The alchemists knew that the gross compound elements must spring from a single element, at once life and matter, not subject to decay — for the homogeneous cannot disintegrate. This was their elixir, able to extract pure gold from alloys, to dissolve all substances, and to revivify and perpetuate the life of mortal being: "he who would allopropise sluggish oxygen into *ozone* to a measure of alchemical activity, reducing it to its pure essence (for which there are means), would discover thereby a substitute for

an ‘elixir of life’ and prepare it for practical use” (SD 1:144n).

In theosophical philosophy, the general or essential elixir is attained by the student-adept when he fills his whole being with the spiritual flow of substance and energy from the immortal center within himself. It is precisely this flow of the spirit which is the true elixir of immortality and the basis of all the marvelous powers within the person thus regenerated which enables him to transmute the base into the fine, evil into good, and to obtain self-conscious perpetuity during the manvantara. *See also* HETEROGENEITY AND HOMOGENEITY; PRIMEVAL MATTER

Elmes-Fire. *See* HERMES FIRE

Eloaeos (Gnostic) The spiritual genius of the planet Jupiter; one of the seven stellar or planetary spirits of the Egyptian and other Gnostics, who together form the second or inferior hebdomad. *See also* ASTAPHAI

’Eloah (Hebrew) *’Elōah* Goddess — although because of masculine anthropomorphic predisposition, it has been commonly rendered god by European translators; used as a title of eminence both for the Jewish Jehovah and the deities, especially the goddesses, of other nations.

’Elohim is the masculine plural form; in Talmudic literature, however, the plural is frequently given as ’elohoth, *oth* being the feminine plural ending. The word is pointed ’eloha in the *Zohar* in its connection as a divinity of feminine potency with the fifth Sephirah, Geburah.

Eloai. *See* ELOAEOS

Elohim (Hebrew) *’Elohīm* [from *’elōah* goddess + *īm* masculine plural ending] The monotheistic proclivities, not only of the Jews but of Christian translators, have led to this word always being translated as God; yet the word itself is a plural form, nor is it in any sense necessarily a plural of majesty, as suggested by some monotheistic scholars. A correct rendering should denote both masculine and feminine characteristics, such as androgyne divinities.

In spite of the ideas imbodyed in the word itself, the later development of Judaism caused ’elohim to be almost entirely translated in paraphrase as the “one true God”; but in earlier times ’elohim (or rather benei ’elohim or benei ’elim — sons of gods, members of the classes of divine beings) meant spiritual beings or cosmic spirits of differing hierarchical grades: a collective class of cosmic spirits among whom is found the familiar Jewish Yahweh or Jehovah. Thus, strictly speaking and as viewed in the original Qabalah, the ’elohim meant the angelic hierarchies of many varying grades of spirituality or ethereality; and in cosmogonic or astrological matters, the ’elohim were often mentally aggregated under the generalized term tseba’oth [fem pl from the verbal root *tsaba’* a host, an army] as in the expression “host of heaven.”

In the Jewish Qabalah the ’elohim, however, are the sixth hierarchical group in derivation from the first or Crown, Kether: cosmogonically they represent the manifested formers or weavers of

the cosmos. In this Qabbalistic system, Jehovah was the third angelic potency (counting from the first, Kether). Blavatsky calls all these hierarchies symbols “emblematic, mutually and correlatively, of Spirit, Soul and Body (man); of the circle transformed into Spirit, the Soul of the World, and its body (or Earth). Stepping out of the Circle of Infinity, that no man comprehendeth, Ain-Soph (the Kabalistic synonym for Parabrahm, for the Zeroana Akerne, of the Mazdeans, or for any other ‘Unknowable’) becomes ‘One’ — the Echos, the Eka, the Ahu — then he (or it) is transformed by evolution into the One in many, the Dhyani-Buddhas or the Elohim, or again the Amshaspendis, his third Step being taken into generation of the flesh, or ‘Man.’ And from man, or Jah-Hova, ‘male female,’ the *inner* divine entity becomes, on the metaphysical planes, once more the Elohim” (SD 1:113).

The opening words of the Bible refer directly to the activities of the ’elohim, for this is the sole divine name mentioned in Genesis 1:1-2. De Purucker translates these verses from the original Hebrew as: “In a host (or multitude), the gods (Elohim) formed themselves into the heavens and the earth. And the earth became ethereal. And darkness upon the face of the ethers. And the ruah (the spirit-soul) of the gods (of Elohim) fluttered or hovered, brooding” (cf Fund 99-100). He goes on to say that “we see that the Elohim evolved man, humanity, *out of themselves*, and told them to become, then to enter into and inform these other creatures. Indeed, these sons of the Elohim are, in our teachings, the children of light, the sons of light, *which are we ourselves*, and yet different from ourselves, because higher, yet they are our own very selves inwardly. In fact, the Elohim, became, evolved into, their own offspring, remaining in a sense still always the inspiring light within, or rather above . . . the Elohim *projected themselves* into the nascent forms of the then ‘humanity,’ which thenceforward were ‘men,’ however imperfect their development still was” (Fund 101-2).

The ’elohim, then, correspond to both classes of the pitris mentioned in theosophical literature: the higher or more spiritual-intellectual of the ’elohim are the agnishvatta-pitris, and the lower groups are the barhishad-pitris. As the agnishvatta-pitris are devoid of the astral-vital-physical productive fire because they are too high and distinctly intellectual, they leave the work of production to the lower ’elohim or barhishads, who “being the lunar spirits more closely connected with Earth, became the creative Elohim of form, or the Adam of dust” (SD 2:78).

Eloi, Eloai. See ELOAEOS

Elon or **Elion** (Phoenician) A name of the sun, recognized as one of the highest active deities or cosmic energies by the Phoenicians; rendered in Greek as ’Elioun. The Hebrew form of this word is found in the Bible in the phrase ’El ’elyon, “the God or Divinity on high.”

El Shaddai. See SHADDAI

Elu (Chaldean) A Chaldean god, variant of ’El (deity, divinity), frequently used by the Hebrews as equivalent to God. The original Semitic meaning embraces the idea of surpassing might, immense

power, and unlimited strength.

Elysian Fields, Elysium (Greek) Originally in Greek mythology, beautiful meadows or plains, or islands of the blest, located in the far west by the banks of Ocean. There certain heroes of the fourth race who never experienced death were said to dwell in perfect happiness ruled by Rhadamanthus. The titans after being reconciled with Zeus also lived there under the rule of Kronos. Pindar holds that all who have passed blamelessly through life three times live there in bliss. Later, Elysium was located in the underworld as the abode of those whom the judges of the dead found worthy. The river Lethe (forgetfulness) flowed by the Elysian Fields. *See also* AANROO; DEVACHAN; HADES

Em-Ez

Emanation [from Latin *emanatus* having flowed forth from *e* from + *manare* to flow] The issuing of streams of light and life from a sun is an act of emanation; the unfolding of what is latent in a germ is an act of evolution — but equally so an emanation, for all the attributes of the developing germ “flow forth” from the inherent life which is unfolding itself. Emanation is the more appropriate term for the process by which hosts of individual monads issue from their originant or parent-source; and evolution for the subsequent unfolding, from each monad, of what is latent in it. In the word emanation is summed up the doctrine of the manifestation of worlds and living beings from a unitary divine source; so that it is opposed both to the Christian doctrine of special creation and to the materialistic scientific theory of evolution, which is a blind building up from below.

The word has a particular use in the Gnostic system of Valentinus, where the pairs of aeons successively emanate, the lower from the higher.

“The doctrine of Emanation was at one time universal. It was taught by the Alexandrian as well as by the Indian philosophers, by the Egyptian, the Chaldean and Hellenic Hierophants, and also by the Hebrews (in their Kabbala, and even in *Genesis*). For it is only owing to deliberate mistranslation that the Hebrew word *asdt* has been translated ‘angels’ from the Septuagint, when it means *Emanations, AEons*, precisely as with the Gnostics. Indeed, in Deuteronomy (xxxiii., 2) the word *asdt* or *ashdt* is translated as ‘fiery law,’ while the correct rendering of the passage should be ‘from his right hand went [not *a fiery law*, but] *a fire according to law*’; viz., that the fire of one flame is imparted to, and caught up by another like as in a trail of inflammable substance. This is precisely emanation” (TG 113-4).

Emancipation See LIBERATION; MOKSHA

Embalming. See MUMMY

Embla (Icelandic) The alder tree; in the Norse Edda, one of the two trees from which the first humanity is said to be created, woman being created from the alder and man from the ash tree. Emblu-askr is apparently a form of the askr (ash tree), the Tree of Life, a replica in the small of the cosmic ash tree, which represents a universe with all its lives, each of which is at once a branch of the “noble ash tree” and a tree of life in its own right.

The creative trinity of gods — Odin, Lodur, and Honer — endowed the ash and the alder with their own properties, thus bringing into being the human race. Odin gave his spirit, Lodur his life-force and appearance, while Honer endowed mankind with his intelligence. The vegetative growth-force was already present in the ash and alder.

Embryo In general, the vitalized germ of an organism in its earlier stages, and sometimes applied to it until it leaves the egg or womb covering. The fertilization of the germ-cell in plant or animal is an everyday working of the universal law by which spirit incubates matter for the purpose of differentiating on the objective planes, in order to manifest the subjective monadic life. Thus the reincarnating ego, in beginning to make a new body for itself, with the division of the fertilized microscopic egg cell, is analogous to the world-germ awakening in a laya-center to begin another galactic, solar, or planetary existence. “This desire for a sentient life shows itself in everything, from an atom to a sun, and is a reflection of the Divine Thought propelled into objective existence” (SD 1:44).

In the unfolding marvel of the embryonic germ-cell, both in the human and subhuman kingdoms, each kind manifests its own essential selfhood or svabhava, and its own degree of evolution. In the unfolding growth of the human embryo it rapidly epitomizes the aeon-long history of the imbodiments of the race, as it also repeats its individual course through all the forms of matter — a process often referred to as recapitulation. It goes back to past manvantaras of manifestation in mineral form, for “the cell-germinating substance (the *cytoblastema*) and the mother-lye from which crystals originate, are one and the same essence, save in differentiation for purposes” (SD 2:256n).

Back of all the orderly unfolding of the embryonic cells — usually ascribed to nature — is the subconscious directing influence of the monadic ego born from and bathing in the cosmic intelligence. In human beings the reincarnating ego is a ray of a spiritual monad, whose self-consciousness and activity takes in the solar system. This monad is karmically bound to oversee the evolving career of the human ego; and this celestial parentage in the cosmic hierarchy makes humans literally children of the sun. Here, then, is the solution of the biological mystery of unfolding purpose which is so harmoniously worked out by the reproductive material of a single cell. This intelligent influence acts upon the embryo through the directive power of “the astral fluid, working through and in conjunction with the vital capacities and potentialities of the cell . . .” (MIE 217-8).

Emepht (Egyptian) “The One, Supreme *Planetary* principle, who blows the [world] egg out of his mouth, and who is, therefore, Brahma”; (SD 1:367) “the supreme, first principle, produced an egg; by brooding over which, and permeating the substance of it with its own vivifying essence, the germ contained within was developed; and *Phtha*, the active creative principle proceeded from it, and began his work.” (IU 1:146; 2:41)

Emotion(s). See KAMA; SENSES

Emptiness. See SUNYATA

Empusa (Greek) A horrible monster, often considered to be a specter, said to be sent by Hecate in her capacity as deity of the underworld, to scare people, especially travelers; it was said to change into various shapes. By transferred meaning, used of hobgoblins in general. However, empusa was also a generalizing term for certain spectral beings or appearances entering the physical world from the lower realms of the astral, which were all directly under control of the moon, Hecate being goddess of the moon in one of the its most esoteric functions.

Empyrean [from Greek *empyres* fiery] In certain ancient and medieval cosmologies the earth was surrounded by concentric crystalline spheres, the nearest being that of the Moon, followed by the spheres of Mercury, Venus, Sun, Mars, Jupiter, and Saturn. The outermost sphere was the Empyrean, composed of a subtle cosmic fire — the word is sometimes used for heaven or firmament. These crystalline spheres of the ancients, so grotesquely misunderstood today because taken literally, were given sometimes as seven, ten, or twelve, depending on the point of view. See also CRYSTALLINE SPHERES

Emunah (Hebrew) *'Emūnāh* [from *'ēm* mother] Mother; the cosmic feminine builder or mother-builder; feminine *'Ao* (builder, architect). Found infrequently in the Qabalah, applied to the third Sephirah, Binah, which forms the first Qabbalistic triad with the first Sephirah, Kether — to which the term *'Abba* (father) is applied — and Hochmah, the second Sephirah. Both *'Amon* and *'Emunah* likewise mean firmness, stability, or security, thus involving the ideas of fidelity, faithfulness, regularity in procedures; from these last ideas, Binah or *'Imma* is called Intelligence — because it is through cosmic intelligence and its firmness or stability and fidelity in ideation that the worlds are built in their manifold manifestations and follow the intrinsic regular courses of divine ideation.

En (Greek) [from *en, eis* one; cf Latin *unum*] With Pythagoras and Empedocles, it corresponds to the *yliaster* (primordial matter or matrix) of Paracelsus, and to *akasa, anima mundi, or alaya.* (BCW 7:283)

En (Hebrew). See 'EYN

Encapsulation Medieval theory, a misunderstood rendering of the pagan Mystery teaching of the One becoming the many, which later was rejected by scientists.

“The idea was that Mother Eve in the Garden of Eden held encapsulated in her womb all the seeds of the human race, which she passed on to her children, the families of which in their turn held encapsulated the seeds of future generations, passing them on to their children; and so forth. When properly interpreted, this is what H. P. B. meant when she spoke in *The Secret Doctrine* (I, 223-4) of the unmodified germ plasm — Weismann’s theory.

“Here again the Christians anthropomorphized the esoteric doctrine, thus distorting it. As a matter of fact, not only the animal kingdom, but the vegetable, mineral, and even the three elemental kingdoms, came forth from the primal human, the 'Adam Qadmon. They were all encapsulated within him, and he brought them forth” (FSO 354n). (Dialogues 3:421-3)

Endor, Witch or Wise Woman of. See WITCH OF ENDOR

Eneidfaddeu (Welsh) [from *enaid* soul + *maddeu* to forgive] The Druidic doctrine that the soul was cleared of its sins by suffering, that suffering was both the result and the forgiveness of wrong thinking and doing; the law of karma.

Energia Naturae (Latin) Energy of nature; the same as vis naturae and similar terms in 19th century theories of a unitary vital force in nature.

Energy [from Greek *energeia* possessing + *ergon* active power] In physics, energy is treated as a measurable quantity, without reference to its actual nature or source. It used to be considered as distinct from and correlative to either matter, inertia, or mass; but now the conception of mass or matter as distinct from energy has disappeared.

Science admits the existence of vast stores of latent energy in the atoms; and considering everything as a question of physical dynamics, it infers that an equivalent quantity of physical energy must have been expended in creating the atom. Energy or life is a fundamental attribute and function of the universe, which has its manifestations on all seven or ten planes of prakriti, appearing as centers of energy which radiate outwards from within. Also used to denote the female potency or sakti (SD 1:136); *aether* too is mentioned as the quintessence of energy. Energy expended on the astral plane is far more productive of results than the same amount expended on the physical plane, according to occult dynamics.

Theosophy makes a distinction between force (or forces) and energy. The former is the name of active monadic essences, each one of which may be considered to be a living, intelligent, self-conscious force; and when this force is actively used, its power to do work or to produce effects is energy.

Enneads [from Greek *ennead* group of nine] A work of Plotinus (205? - 270) — one of the last and most famous of the Neoplatonic philosophers, and pupil of Ammonius Saccas — published by his disciple Porphyry. Each of its six books contained nine chapters.

Ennoia (Greek) [from *en* + *nous* mind, as contrasted with the object or act without] The divine mind spoken of by Simon Magus as coequal with the supreme (the Father), and as being the mother of all the archangels and angels (aeons or emanations). Ennoia had descended through the lower worlds and finally become imprisoned in gross matter, where she was subjected to abuse; but the Father manifests himself as the Son and rescues Ennoia to reinstate her on her original throne. Simon used the first person in giving out this teaching, and in the same symbolic way called Ennoia his wife Helena, and speaks of her degradation as prostitution; this has been the occasion of misunderstanding on the part of scholars, ancient and modern. Ennoia is paired with Ophis (the serpent of divine wisdom) to constitute the creative Logos.

There is a close mystical connection between Ennoia and Epinoia, the first passive aeon — aeon in Gnosticism signifying both a period of time and also a spiritual entity forming part of a cosmic hierarchy.

Enoch, Onech (Hebrew) *Ḥanōkh* Initiation or initiated; hence also hierophant. In the Bible (Genesis 4, 5), “there are three distinct Enochs — the son of Cain, the son of Seth, and the son of Jared; but they are all identical, and two of them are mentioned for the purposes of misleading. The years of only the last two are given, the first one being left without further notice.” He is the great grandfather of Noah, and stands for the first subrace of the fifth root-race (BCW 14:86&n).

The prophet Enoch, supposed to have been an antediluvian, was the inventor of learning, letters, and the founder of initiatory rites. Among the Arabs Enoch is commonly called Idris, meaning the wise or learned. Again, “The *Kerkes* and the *Onech* stand for a race cycle, and the mystical tree Ababel — the ‘*Father Tree*’ in the Kuran — shoots out new branches and vegetation at every resurrection of the *Kerkes* or Phoenix” (SD 2:617). The connection with the phoenix is purely mystical, because just as the phoenix is said to be reborn from its own ashes, thus bringing about a new cycle, so the neophyte during initiation is said to be reborn from the “ashes” of his past self.

Enoichion (Greek-Hebrew) [from Hebrew *hanakh* to make narrow, be narrow; pressure; hence to initiate, train into the paths of consecration or dedication; probably from *hanōkh* (Enoch) initiated, initiator] The root-meaning of narrowness, that which is straightened or close, is reminiscent of the New Testament saying: “Strait is the gate, and narrow is the way” (Matthew 7:14) — a direct reference to initiation. Thus enoichion can be rendered as a seer. “Esoterically and spiritually Enoichion means the ‘Seer of the Open Eye,’ the inner spiritual eye” (SD 2:530).

Ens (Latin) [from *esse* to be, being] According to scholastic philosophy, being in the most abstract sense, not necessarily existent, requiring the addition of a category to yield reality. Equivalent to the Greek *ousia* (essence), the essential nature of a thing; or the Hindu *sat*. In alchemy, an extract

containing the essential qualities of a substance; e.g., *primum ens melissae* (the spirit of balm).

Used for the real or spiritual presence in universal nature, as signifying the Ever-being or Ever-existing.

En Soph See 'EYN SOPH

Entelechy [from Greek *entelecheia* from *en telos echein* to be complete] In Aristotelian philosophy, actuality as opposed to potentiality: water is potentially solid, liquid, or gas, but actually only one of these at a time. Soul is spoken of by Aristotle as the entelecheia of body — the subsisting principle of the body's existence, and therefore the real although unseen actuality of the body's being, irrespective of emanated monads from the fundamental spirit-substance (svabhavat), when the latter is considered as their collective unity. It is the principle or substantive element of a being or thing, which produces or makes the actuality of such being or thing, considered apart from or irrespective of dependent or derivative powers or qualities.

Entropy [from Greek *entropia* turned in] The second law of thermodynamics, enunciated by mathematical physicist Clausius (1822-1888), which states that heat cannot of itself pass from a colder to a warmer body; also that it is impossible, by means of inanimate material agencies, to derive mechanical effect from any portion of matter by cooling it below the temperature of the coldest surrounding objects. The process of cooling is considered irreversible, and the energy is said to have passed into an unavailable form. The entropy of such a cooling system is said to have attained a maximum — all energy is “turned in” or run-down. The final result of such a process on a universe supposed to be dissipating its energy in the form of heat, would be to reduce all bodies to the same temperature; hence there could be no further transference of heat or energy among them and a state of quiescence or deadness would ensue. Such has been the scientific view, which assumes that the sun is a hot body cooling — a view not held by theosophy.

Further, it is a mere assumption that a process is irreversible, made on no better ground than that we have not yet been able to reverse it. For example, if all the waters of the earth ran down into the sea, and no other agency intervened, we should soon have a universal dead-level and no more running water. But this result is prevented by the effects of evaporation and other causes collaborating with it. It is easy to fall into errors by considering only a portion of the facts; but we live in a living universe and *not* in a soulless heat-engine.

Eocene. See GEOLOGICAL ERAS

Eolus. See AEOLUS

Eon. See AEON

Eosphoros (Greek) The morning star, equivalent of Lucifer or Venus. Venus “was known in *pre-*

Hesiodic theogony as Eosphoros (or Phosphoros) and Hesperos, the children of the dawn and twilight. In Hesiod, moreover, the planet is decomposed into two divine beings, two brothers — Eosphoros (the *Lucifer* of the Latins) the morning, and Hesperos, the evening star. They are the children of Astraios and Eos, the starry heaven and the dawn, as also of Kephalos and Eos . . .” (BCW 8:16). (BCW 8:5-6, 10-1, 18, 25, 27n)

Epaphos (Greek) Son of Zeus and Io, in this case the sun and moon; in the Dionysos-Sabazian Mysteries, the son of Zeus and Demeter, who is also a moon goddess. The birth of Epaphos, like that of Prometheus, symbolizes the entry of humanity on the upward arc of evolution after its descent into materiality. For Epaphos in one sense is the Logos, Zeus in the form of a serpent, and stands for the power that will carry humanity up again towards the spirituality from which it descended or fell — plus the experience garnered as intellectual beings.

Ephesus The chief of the twelve Ionic cities on the coast of Asia Minor, where the cultures of western Asia and Greece blended. Associated with Artemis or Diana of the Ephesians, Greek name of the Mylitta, Cybele, etc., of the Asiatic cults. The Ephesian Artemis is represented as a female figure with many breasts, the Great Mother Multimamma. The original temple was built in the 6th century BC, burnt in 356 BC and so magnificently restored that it was enumerated among the seven wonders of the world.

Ephesus was one of the foci of the universal secret doctrine, a laboratory whence sprang light derived from the quintessence of Buddhist, Zoroastrian, and Chaldean philosophy (IU 2:155). It was such in the early days of Christianity, and from it spread that Gnosis to which the Church was later so bitter an antagonist. It was “famous for its great metaphysical College where Occultism (*Gnosis*) and Platonic philosophy were taught in the days of the Apostle Paul. . . . It was at Ephesus where was the great College of the Essenes and all the lore the Tanaim had brought from the *Chaldees*” (TG 114).

Ephialtes (Greek) In Greek mythology a titan, son of Poseidon, who with his brother Otus makes war on Olympus and puts Ares in chains for 13 months. At the age of nine years each brother was 54 feet high and 36 feet broad. These two titans as types refer to the late Lemurians of the third root-race, and also to the earliest Atlanteans, known for their huge size, daring spirit, and their wars against the gods or Sons of Light. However, they were not demons in the Christian sense; for these early races were simply the gigantic early mankind in which self-consciousness expressed itself in high pride, the love of material power as compared with spiritual, and in works of material or physical achievement.

The name Ephialtes was borrowed in medieval etymology for a demoniac spirit who causes nightmares; and later still, for that complaint itself.

Epictetus Greek Stoic philosopher, a freed slave who taught philosophy in Rome until 90 AD, when Domitian expelled all philosophers. He left no writings, and his philosophy is known through the

Discourses and *Enchiridion* of his pupil Flavius Arrian. Like other Stoics, he held that each person has at the root of his or her being a spark of the Logos, so that all people are brothers and relationships with others must be respected. Inner harmony could be attained by correct perceptions and attitudes, differentiating between what is “ours” and thus under our control, and what is “not ours” and therefore beyond our control. He encouraged making new habits of thought and action through constant practice and self-discipline and by acting deliberately.

Epicurean Philosophy School founded by **Epicurus** (b. 341 BC), an atomist philosopher popularly associated with later travesties of his teachings. His actual teachings and way of living prove that his chief aim and good was happiness rather than pleasure; for he taught and practiced abstemiousness of living. In this he reacted to the travestied forms of Platonism which existed in his time, moving away from a barren idealism towards a concrete practicality, trying to substitute realities for empty abstractions, both in philosophy and ethics. For this reason he lays the chief stress on ethics, to the comparative neglect of logic and philosophy.

In philosophy he taught atoms and a void as the cosmic fundamentals; but his atoms were not the material particles of later European science, but the living monads or intelligent souls of the older Atomists. He did not attempt to represent the universe under the form of physical matter, but merely insisted upon the substantial nature of all being and life in protest against the impractical idealism which had reduced significant values to unrealities.

Again, Epicurus based everything on sensation in order to bring people back to actual experience, as opposed to vain outlooking speculation, as a solid foundation for an ethic. He was not an atheist in the modern sense, for he explicitly says that there are gods, but not the gods of the anthropomorphic religionists. In the same way, he did not teach a selfish individualism, but that the way to final freedom is within oneself; and when he depreciates the State and sundry social or political theories, he was merely opposing the futile abstractions then prevalent under these names.

Epidemics [from Greek *epi* upon + *demos* the people] The causes usually assigned to epidemic diseases are: individual susceptibility; earth conditions of heat, moisture, soil, water, hygiene, and sanitation; and mass movements of people, as in wars, pilgrimages, etc. While all these factors provide physical and psychological conditions favorable for the spread of certain epidemic diseases and emotional disorders, there remain potent invisible causes to be reckoned with.

Blavatsky discusses unusual and serious effects of certain causes which in some cases are cosmic rather than bacterial (BCW 12: 109). She explains that all such mysterious epidemics as influenza are due to an exuberance of ozone in the air, where an excess of oxygen has become ozone under the powerful stimulus of electricity.

The pranic life-atoms of the human body make an electrical field which, permeating our astral-vital-physical constitution, puts us in contact with the natural flow of ethereal currents of electric

and magnetic force. These forces emanate from great cosmic entities who are the intelligent agencies for the karmic action of the so-called laws of nature. They function in the noumenal realm of causes which are due to appear on earth as phenomena of all kinds. These entities, leaving aside solar forces, are the regents of the seven sacred planets, who help to build the body and oversee the destiny of both humanity and the earth. They act automatically and impersonally in harmony with the combined causes and effects of ethereal and terrestrial conditions.

The sun, moon, planets, earth, and human brain are all magnets in contact with a common network of “live” wires of consciousness. The atoms in the solar system not only probably change their combining equivalents on every planet, but they undergo a certain change in their rapid passage through our atmosphere: concerning “the *Spirit*, the *noumenon* of that which becomes in its grossest form oxygen and hydrogen and nitrogen on Earth. . . . Before these *gases* and fluids become what they are in *our* atmosphere, they are interstellar Ether; still earlier and on a *deeper* plane — something else, and so on *in infinitum*” (SD 1:626). These fluids and gases, then, have been stepped down, plane after plane, bringing to us the karmic influences of the hierarchies of entities which compose the solar organism. They are the tangible carriers of the cosmic electrical fire of divine, spiritual, mental, psychic, astral, and material forces which infill the universe. Here, in brief, are the astrological causative influences in typical epidemics, which are variously operating in other karmic diseases and mental and emotional disorders such as popular uprisings, fanatical movements, and waves of crime and vice. Happily, the same impersonal agents of the karmic law, under the influences of far higher spiritual agents, are equally active and helpful during human cycles of ethical and spiritual aspiration and progress.

Epigenesis [from Greek *epi* upon + *genesis* production] A biological theory of generation which holds that the embryo is created from the original germinal elements by a process of gradual evolution, i.e., by a passage from a relatively homogeneous condition to a specialized condition through a process of differentiation. This replaced the older idea of encasement according to which the future organism existed entire, but of microscopic dimensions, within the ovum, and was afterwards merely enlarged; and it also replaced the idea that the organism was formed by a relatively sudden accretion of parts derived from the corresponding organs in the parents. It thus accommodated embryology to the modern theory of evolution. It is open to the objections that by attempting to view growth as a purely physical process, development is made to appear as a process of accretion or adding together, instead of as a process of unfolding; and suggests the notion that something entirely new can be formed by such an additive process. But nothing can be formed unless it has previously existed in entirety, though on a subtler plane of materiality; and the coming together of physical elements is merely the filling in of a plan that has already been sketched. The astral prototype of the physical organism, seeking incarnation, draws together the physical elements required, using the procreative processes as a means. The older theory of encasement contains as much truth as the epigenesis theory, though distorted by a too physical

and theological view of the process. *See also* EMBRYO

Epilepsy A disorder recognized in antiquity as an obsession or possession by an elementary which ousts temporarily the astral-vital soul from the physical body and for the time being assumes control of the bodily mechanism. The mind thereby loses direct connection with its physical vehicle and unconsciousness results. The theosophical teaching about elementaries — astral entities whose intense desires draw them to neurotic, mediumistic, and negatively sensitive natures — gives the key to the injurious, purposeless explosions of force in the person who has been dissociated from his body and brain. Of the various bizarre sensations which usher in many typical attacks, one of the most common is the sudden look of fear or terror with which the sufferer stares fixedly as if held in thrall by some gruesome astral sight. The frequent hallucinations are, as a rule, of the same quality which the alcoholic senses in delirium tremens. Blavatsky says that epileptic fits “are the first and strongest symptoms of genuine mediumship” (Key 195).

Modern medicine reports that some cases of essential or idiopathic epilepsy often are normal individuals between attacks, and also that many autopsies reveal no organic disease to account for such marked disorder.

Epimetheus (Greek) The after-thinker; a titan, the brother of Prometheus (the fore-thinker), husband of Pandora and creator of the animals while Prometheus created humankind. Epimetheus stands for the lower aspect of human mind.

Epinoia (Greek) Thinking on a thing; by extension of meaning, the power of thought, inventiveness; a purpose, design. In Gnosticism, a name of the first passive aeon or spiritual entity forming part of a cosmic hierarchy. *See also* ENNOIA

Epiphany [from Greek *epi* to + *phaino* appear] In the Christian Church, the manifestation of Christ to the Gentiles, celebrated later in the Christian Church on January 6, and variously referred to the baptism of Christ, the visit of the Magi to Bethlehem, and other events noted in the New Testament.

In connection with initiation, it means a minor manifestation of the inner god to the candidate, as contrasted with theophany, which takes place in a higher degree, and is the appearance of the inner god.

Epithumia (Greek) In Greek metaphysics, equivalent in the human constitution to kama or the desire principle. Psyche or soul was a union of bios (physical vitality, prana), epithumia, and phren or mens (mind, manas). (BCW 1:292, 365) “Pythagoras and Plato both divided soul into two representative parts, independent of each other — the one, the rational soul, or *logos*, the other *irrational*, *alogos* — the latter being again subdivided into two parts or aspects the *thymichon* and the *epithymichon*, which, with the divine soul and its spirit and the body, make the *seven* principles of Theosophy” (BCW 7:229). *See also* PRINCIPLES

Epithymichon. See EPITHUMIA

Epopteia, Eoptai(o). See EOPTES

Epoptes (Greek) [from *epi* at, upon + *opt* to see] Sometimes epopt. In the Eleusinian Mysteries, seer, overseer, master mason, one who has the vision sublime; an initiate into the highest degree of the Mysteries (epopteia) who had attained, among other spiritual faculties and powers, that of spiritual clairvoyance. The state attained, epopteia, was the seventh and highest degree of initiation in the Eleusinian Mysteries, when the inner god shone forth through the human being, so that the candidate was at one with his inner divinity.

Equinox [from Latin *aequinoctium* equal nights] The two annual epochs when the sun, in its apparent path around the ecliptic, crosses the celestial equator, occurring about March 21 and September 23, when the days and nights are equal to each other in length. The position of this intersection or node — the equinoctial point — on the ecliptic, at the vernal equinox in the northern hemisphere, is called the first degree of Aries in the ecliptic zodiac. But this point shifts continuously, having a retrograde motion around the ecliptic occupying about 25,920 years. This period is very important because every astronomical cycle is indicative of cosmic and human cycles. In accordance with the signs of the zodiac, it is divided into twelve parts, each of 2160 years, called in theosophy the Messianic cycle and marking the coming of a world savior. The recession of the equinoxes from Pisces into Aquarius is stated to occur somewhere about the present age, and to mark a new spiritual dispensation.

In SD 2:330, a cycle is mentioned which is obtained by compounding the precessional cycle with the cycle of the apsidal revolution; this, according to figures for apsis and equinox given by modern astronomers, gives a period of about 21,000 years (probably 21,160 years).

The two equinoctial epochs of each year are also highly important as they indicate conditions favorable to certain operations, initiations, and ceremonies. These times were the ones often chosen as being favored for the celebration of the ancient Mysteries and the initiation of candidates; although the two solstices, falling in December and June, are equally important.

Erataoth (Hebrew-Syrian) The dog; one of several somewhat arbitrary but highly mystical titles given to spiritual beings among early Syrian, Hebrew, and other Near Eastern mystics, having especial reference perhaps to the seven sacred planets.

Erebus (Greek) *erebos*. Darkness; Erebus and Nux or Nyx (night) sprang from Chaos, and the pair gave birth in their turn to Aether and Hemera (Day). Darkness begets light. “Erebus was the spiritual or active side corresponding to Brahman in Hindu philosophy, and Nyx the passive side corresponding to pradhana or mulaprakriti, . . . Then from Erebus and Nyx as dual were born Aether and Hemera, Spirit and Day — Spirit being here again in this succeeding stage the active side, and Day the passive aspect, the substantial or vehicular side” (FSO 72).

Cosmically, the darkness spoken of here is the light of cosmic spirit, which is so far beyond all human ability to grasp or sense, that to us even intellectually it is as darkness; because even our intellectual light, being a secondary derivative from the cosmic darkness, is like a shadow to it. Therefore darkness and night, signifying the light of cosmic spirit in connection with original substance (here called night), gave birth to cosmic aether and day.

Similarly, the name Erebus became transferred to the underworld because its vast regions, reaching as they do into the cosmic deeps, are to human intelligence obscure and therefore dark.

Eridanus (Greek) In Greek mythology, a river into which Zeus cast Phaethon, a son of Helios (the sun), when he rashly tried to drive the chariot of the sun and had nearly set the earth on fire. It is identified with the sacred river Nile, and its etymological roots are the same as those found in *Jordan*.

As the myth of Phaethon refers, among other things, to geological changes, Eridanus has both a cosmic and earthly significance; in the former referring to the flowing of the ocean or river, mystically supposed to surround the world; and in the latter, referring to the mystical river of inspiration flowing downwards in its descent from the spirit into recipient minds.

Eridu One of the oldest seats of religious culture in ancient Babylonia, located a few miles SSW of Ur in Chaldea, and mentioned in ancient records as the city of the deep. In it was a temple of Ea, god of the sea and of wisdom. Rediscovered in 1854, it is now about 120 miles from the Persian Gulf, though spoken of in old records as being on the shore; calculations based on the rate of alluvial deposition places its date in the seventh millennium BC. Sayce, by comparing the Akkadian calendar with the present position of the vernal equinox, gives a date going back to 4700 BC.

Erinyes (Greek) [cf Latin *Furæ* furies] Also Diræ. Furies, avenging goddesses; sometimes legion, sometimes three in number, according to the point of view of the ancient writers, named by Alexandrian authors, copying Euripides: Tisiphone (avenger of the slain), Megaera (the jealous), and Alecto (unceasing hatred). Their mission was to follow and reform evil doers, which has popularly been misunderstood to be persecution. Aeschylus speaks of them as being daughters of Night, Sophocles as being born of Darkness and Earth, and Hesiod as having sprung from the blood of the injured Uranus. They dwell in the underworld, whence they issue to pursue the wicked towards reformation and the reestablishment of all broken natural equilibrium; upon the expiation of crime in Aeschylus they transform themselves into gracious and beneficent deities called the Eumenides. In Athens they were known as Semnae (the venerable ones).

The Erinyes or Eumenides are thus seen as beings who function almost automatically as karmic agents in the restoration of broken or disturbed equilibrium in the universe, and therefore are inherent in the vegetative and automatic functions of nature; thus the human body, as an analogy, when injured in some part, will attempt by latent and automatic restorative functions, as it were, to heal the injury. Their functions therefore in the world are seen at once as avengers and

beneficent healers or eumenides.

Eros (Greek) Love, desire; represented in the Hesiodic theogony as one of four self-existent deities, the others being Chaos, Gaia, and Erebus; otherwise as the son of Aphrodite by either Ares, Zeus, or Hermes. Eros is the cosmic force which causes the unmanifest to seek self-manifestation: it is divine love, will, desire; the desire to manifest in creative activity, and thus to give life and existence to all beings. This desire, which “arises first in It” (SD 2:578), is in the gods and in all nature. After the worlds have been manifested, Eros then becomes, under the form of fohat, the ever-active force which brings together and combines the elemental atoms. “Fohat, in his capacity of Divine Love (*Eros*), the electric Power of affinity and sympathy, is shown allegorically as trying to bring the pure Spirit, the Ray inseparable from the one absolute, into union with the Soul” (SD 1:119). Eros, like his synonyms kama, amor, and cupido, acts on many planes.

Eros-Phanes (Greek) [from *eros* god of love + *phanes* revealed, manifested] One of the Orphic triad — Chaos, Chronos, Phanes — evolving from the divine or cosmic egg, which the aethereal winds of space impregnate. Similar to Eros which Hesiod makes the third person of the original Greek trinity of Ouranos, Gaia, and Eros. There is a relatively close affinity between Eros or Eros-Phanes and the spiritual aspect of fohat.

Esau (Hebrew) *Ēśāw* Hairy, rough; the son of Isaac and twin brother of Jacob (Genesis 25). These twins symbolize duality in nature — good and evil, day and night; “Jacob-Israel is the feminine principle of Esau, as Abel is that of Cain, both Cain and Esau being the male principle” (TG 158). Esau as father of the Edomites (Genesis 36:43) is said to represent the race between the fourth and the fifth root-races (SD 2:705). *See also* ADAM; EDOM

Eschylus. *See* AESCHYLUS

Esculapius. *See* AESCULAPIUS

’Esh (Hebrew) *’Ēsh* **’Eshsha**’ (Aramaic) *’Eshshā*’ (cf Sanskrit *ush* to burn) Sometimes Ash(a). Fire.

’Esh Metsareph (Hebrew) *’Ēsh Metsārēf* [from *’esh* fire + the verbal root *tsāraf* to smelt, refine, purify] Fire purifying; one of the books of the so-called Dogmatic Qabbalah, usually called “The Book of the Purifying Fire,” considered by some to be a rare hermetic and alchemical work.

Eshmim. *See* SHAMAYIM

Esoteric [from Greek *esoterikos* pertaining to the inner] Applied to the advanced instructions given to qualified candidates in Mysteries or schools of philosophy, first used popularly in Greece by Aristotle. Jesus in the Bible had teachings for his disciples in private, and others for the public, precisely as all other ancient religious and philosophical teachers always had. Esoteric teachings both were and are such as could not be understood or profitably received by those not previously prepared by study and probation. Exoteric or outer teachings were often given in symbolic

language which revealed the esoteric meaning only to those who were in possession of the keys to interpretation.

Esoteric Doctrine, Philosophy, or Science. See THEOSOPHY; OCCULTISM

Esoteric School. See HIERARCHY OF COMPASSION; MAHATMA

Esse (Latin) Being, essence; *in esse* is sometimes contrasted with *in posse*, as actual existence is contrasted with potential existence. Esse is also contrasted with *existere*, in the same way as being is contrasted with existence. Alexander Wilder defined genesis as a coming from esse into *existere*, from Be-ness into being, from the eternal into kosmos and time.

Essence [from Latin *esse* to be] The characteristic nature of an entity or element. In one sense equivalent to *svabhava* (characteristic nature, type-being, pure individuality). As the name of a logical category its use was not uniform even among the Schoolmen who originated it, and it has been both identified with and discriminated from substance.

Essenes [probably from Hebrew *asa* to heal] Described by Josephus as one of three principal sects among Jews from about the middle of the 2nd century BC; the title Healer, often equivalent to savior or teacher (cf *therapeutae*). They were a sect of Jewish theosophy, rather exclusive, adhering to Jewish tradition in some respects though regarded as heretical in others. Their cardinal principles were active benevolence and self-discipline. They had an esoteric school guarded by secrecy, accessible through novitiate and degrees. Josephus, describing the rule of a community, presents the picture of a tranquil life, divided between practical avocations, assemblies, and ritual observances.

Estufas. See ARTUFAS

Eswara. See ISVARA

Eternity [from Latin *aeternus*, *aeviternus* from *aevum* an age] Originally eternity signified time divided into endless cycles stretching from the indefinite past through the present into the indefinite future, comprised within encompassing frontierless duration. Eternity therefore is the abstract sum total of endlessly cyclical time periods. As used in *The Secret Doctrine*, eternity often means a cosmic mahakalpa or manifestation period; thus the seven eternities means seven cosmic periods equivalent to 100 Years of Brahma or 311,040,000,000,000 human years. Even in the Hindu *Vishnu-Purana*, immortality, which is given as a definition of eternity, means merely “existence to the end of the Kalpa” (2:8). Occasionally used as a synonym for duration.

The emblem of eternity is the serpent in the form of a circle, biting with its active head its passive tail, and from its emanations spring worlds, beings, and things.

Ether. See AETHER; ETHEREAL

Ethereal, Ethereality Used in an attempt to define states of matter more refined and less dense than familiar physical matter. The differences between the higher divisions of matter is analogous to the corresponding subdivisions of physical matter — solid, liquid, gas, and fiery. Thus the characteristic of the solid is fixity of form, restriction of movement; that of liquid, mobility; of gas, expansibility; while the fiery element among other things is exempt from gravitation. The major divisions of matter must be graded on a somewhat analogous scale.

There is a clear distinction between 1) akasa; 2) the astral light; and 3) ether. Akasa in its higher portions is pure spirit; the astral light is the seventh or highest division of our physical cosmic plane and may even in a sense be called the most subtle part of the terrestrial atmosphere; whereas ether is a material agent or stuff interpenetrating molecular matter, and is therefore even more gross than is the astral light. In one sense these three are the highest, the very low, and the lowest parts of spirit or akasa itself, the physical stuff or body of our plane being its lees or dregs.

Etheric Body. *See* ASTRAL BODY; LINGA-SARIRA

Ethics In theosophy, a philosophy of moral conduct based on the inner structure and operations of the universe itself, not a mere code of conventional behavior. The grounds alleged for moral conduct depend on one's view of man and the universe. Theosophy distinguishes between a person's real self and the illusive personal masks which are mistaken for that self. As with Kant, a sharp distinction is drawn between wish and inclination on the one hand, and the sense of moral obligation on the other; this latter is regarded as supervening upon the drama of self-interest and imposing a higher law.

Recognizing the essential oneness of the individual with the universe, not only spiritually but on all planes, the student of occultism strives for the subordination of the personal self as an individual to the common good of all mankind, and indeed of all things that are. With this training, the student in time comes keenly to realize that there is no longer a moral obligation lying upon him to subject his personal wish to the common good, but that this subordination becomes the first joyful duty of all his life. In this manner spiritual powers, faculties, and attributes are gained, as well as intellectual expansion that, when more or less complete, combine to make the full adept or initiate. A master of wisdom is one who has developed an individual consciousness of his oneness with the Boundless, and this is the very foundation of the ethics of theosophy.

The human ethical sense is a manifestation of one's awareness and willing cooperation with the inherent spiritual laws of the universe. No person can misconduct himself without injecting disharmony into the human hierarchy of which he is a part, and for this he must pay, though nature does not revenge or punish but readjusts or restores the disturbed harmony. Though these essential laws are eternal and changeless, the degree of their manifestation at any time or in any group vary; so that we may speak of ethics also in a relative sense. The world saviors and messengers from the Great Lodge, in obedience to cyclic necessity, strike for humanity the ethical

keynote for each coming cycle.

Etruscans An ancient Italian people predating the Romans. Among the older Greek historians there is mention of Tyrrhenoi or Tyrsenoi, and of a king of Lydia named Tyrrhenos who led a Pelasgian colony to Umbria. Roman history describes a mixed population, Etrusci, Tusci, or (by their own name) Rasenna, formed by immigrants from Asia and from over the Alps, still preserving much of their ancient culture amid corrupted habits, and diffusing it to other Italian peoples.

Throughout Roman history Etruria and the Etruscans were looked upon by virtually all classes of peoples under the sway of Rome as being the seat and the exponents of magic, profound mystical thought, and esoteric philosophy; and as the Romans knew much more about those so close to their own time than modern scholarship does, this manner of viewing the ancient Etruscans cannot be set aside lightly.

‘Ets Ha-Hayyim (Hebrew) *‘Ēts Ha-ḥayyīm* The Tree of Lives; sometimes simply called the Tree (Chald *’ilan*). A Qabbalistic term applied to the Sephirothal tenfold scheme, when arranged diagrammatically in three columns of three Sephiroth each, crowned with the tenth, Sephirah or Kether.

‘Ets Ha-Hayyim is an important Qabbalistic work, which is often called together with the *Zohar* the two Bibles of the Qabbalah. It was produced by Chajim Vital (1543-1620), an Italian Qabbalist.

Eucharist [from Greek *eucharistia* thanksgiving] Adopted in the early centuries of the Christian era for the Sacrament of the Lord’s Supper, because of the thanksgiving offered over the sacred elements; also applied to the elements themselves. Thus the original meaning, a manifestation of the spirit or inner god in the soul of the neophyte or adept, became degraded into a mere ceremonial rite, itself based on the ceremony of the Bacchic participation of wine and bread — wine signifying the spirit and bread the manifested body of the spirit in matter. *See also* BREAD AND WINE

Eue, Eua. *See* EVE

Euhemerization The theory of Euhemeros, a Greek of about 316 BC, that the ancient Greek myths were imaginative or allegorical renderings of historical events, the gods once having been mortals or men, and their deeds the poetized actions of archaic human worthies. Hence to euhemerize is to interpret myths as having been once historical events. It is sometimes used in *The Secret Doctrine* as equivalent to anthropomorphism. A great deal of archaic mythology, however, is the half-forgotten and often distorted racial tradition or memory of events in the lives of once semi-divine humans, who actually were in most cases the demigods, god-men, or initiates of the later third and early fourth root-races.

Eumenides (Greek) [from *eumenides* beneficent or gracious ones]. Beneficent deities; they appear

in the famous Greek tragedy *The Eumenides* by Aeschylus. Originally karmic agents, called by the ancient Greeks avenging Erinyes (Furies), whose functions it is to attend upon human acts such as crimes and to bring about the reestablishment of the broken harmony, immediately after which they are seen in their real character: divinities of beneficence and beauty. *See also* ERINYES

Eumolpidae (Greek) Descendants of Eumolpos, a demigod who founded the Eleusinian Mysteries, of which these descendants continued to be the hereditary hierophants, although living in Athens. *See also* LYCOMIDAE

Eurydice (Greek) She of wide power and justice; the beloved companion of Orpheus. After her untimely death, he gained access to the underworld in order to lead her back to earth, only to lose her again.

The marriage of Orpheus to Eurydice is but one of many similar allegories of the union of the initiate with the esoteric truth he has won after heavy trial. Soon after her marriage, Eurydice was seen and pursued by Aristaeus who was enamored of her beauty, and she consequently died of a serpent's bite. "Aristaeus is *brutal power*, pursuing Eurydike, the esoteric doctrine, into the woods where the serpent (emblem of every sun-god . . .) kills her; *i.e.*, forces truth to become still more esoteric, and seek shelter in the Underworld, which is not the hell of our theologians" (IU 2:129-30).

The legend of Orpheus and Eurydice has also an astronomical or cosmic significance connected with terrestrial cataclysms produced by cyclic changes in the angle of the ecliptic and by the precession of the equinoxes, Eurydice or Astraea being the constellation Virgo (SD 2:785)

Eurymedon (Greek) Wide-ruling; title of Poseidon (Neptune).

Euthanasia [from Greek *eu* well + *thanatos* death] Easy death, a painless death; used for the practice of mercifully killing people who would otherwise suffer a painful death. To decide if a person should or should not be kept alive by artificial means or a life ended by artificial means requires almost superhuman discernment. An individual is not his body nor even his mind, but fundamentally a spiritual being. Physical suffering from bodily ills, however unpleasant, provides an opportunity to meet and dispose of certain karmic causes, and thereby learn and grow. Aside from the difficulty of preventing abuses in legalized euthanasia, the ethical and spiritual questions surrounding artificial prolongation and shortening of life remain extremely complex. The Stoics held that life is a gift of the gods and therefore no person has the right to reject that gift — for oneself or another — until the gods themselves call it back.

Also used for the power possessed by adepts to quit or drop their physical body painlessly, in order to work as nirmanakayas, which is the meaning of the stories in the Bible which speak of men being taken to heaven without dying.

Evangelists, Four The evangelists to whom are ascribed the four Gospels in the New Testament — Matthew, Mark, Luke, and John — associated in the symbolism of the Roman Catholic Church with

the four sacred animals found in so many ancient mythologies: the man, bull, lion, and eagle; Aquarius, Taurus, Leo, Scorpio; the four Maharajas, etc.

Evapto. See EPOPTES

Eve (Hebrew) *Hawwāh* [from *ḥāwāh* to breathe, live] Mystically the mother of all living, an allegorical yet actual figure in all archaic cosmogonies. Genesis describes three Eves: 1) the archetypal Eve, the feminine aspect of the divine androgyne which is on the one hand 'Adam Qadmon, and on the other hand Sephirah-Eve (ch. 1); 2) the Eve of the early third root-race, *after* the separation of the sexes but *before* the awakening of mind (ch. 2); and 3) Eve the mother of Abel and of Seth, here beginning the course of human history after the awakening of mind. The first Eve was no woman but, like the first Adam, the spiritual feminine aspect of an archetypal spiritual host; the second was no woman but womankind; while the third was woman and mother as now known. They companion and correspond to the three Adams: the first, the spiritual albeit masculine type of the archetypal host; the second, the mindless first human race; and the third, "the race that [had fully] separated, whose eyes are opened" (SD 2:46n). Between the Eve of Genesis and Eve the mother of Seth (Genesis 4) passed long ages, involving millions of years during which the archetypal preparation of the globe for human habitation was followed by distinct root-races and three Edens, with millions of years between even these latter.

The original from which the Hebrew Genesis was later compiled is lost. Yet even as the latter has reached us — first veiled, then probably remodeled by Ezra with shiftings that confuse the chronology — despite important words and clauses mistranslated by European scholars, its resemblance to the esoteric account is unmistakable. For Jehovah, who gave the human body and (physical) breath of life, is the hyperaxis of Saturn and an earthly, not a celestial, hierarchy. The human mind and spirit are essentially emanations from the immortal spiritual monad coeval with the universe, and subsequent human evolutionary development was both from and aided by the elohim, a spiritual host. Adam and Eve, once mind appeared in them, enter the path of self-directed evolution, a reference to the second and third Eves mentioned above. The eating of the fruit of the tree is the awakening or lighting of mind in man. It shows Eve as consorting with spiritual, not demoniacal, forces and incidentally reconciles the two creation stories. Like the serpent, the tree is an ancient and universal symbol of sacred and esoteric knowledge. To eat of its fruit is to acquire the knowledge that only the gods possess, and the possession confers immortality under the law.

There is neither relationship nor historic nor philosophic resemblance between Eve and Lilith, Adam's "first wife."

Ever-living Human Banyan. See BANYAN; WONDROUS BEING

Evil Good and evil are attributes of relativity in nature as cognized by the minds of percipient beings. "Esoteric philosophy admits neither good nor evil *per se* as existing independently in

nature. The cause for both is found, as regards the Kosmos, in the necessity of contraries or contrasts, and with respect to man, in his human nature, his ignorance and passions. There is no *devil* or the utterly depraved, as there are no Angels absolutely perfect, though there may be spirits of Light and of Darkness . . .” (SD 2:162).

Pythagorean philosophy regards the duad as evil, and the One as the only good; which symbolizes that manifested qualities are in pairs of opposites, so that contrast subsists not merely within the pair itself but also between the pair considered as a whole and the One which is superior to it. Since throughout nature we find such pairs of opposites, reconciled by a synthesizing unity, it follows that the words good and evil of necessity are used in a relative sense, and convey the notion of incompleteness as contrasted with an intuitively conceived perfection. We cannot suppose that things can be good or evil in themselves, except relatively, or even in their relations to other things.

Evil Spirits A vague expression, often applied by theological misinterpretation to the Fallen Angels — the cosmic spirits who form or produce the lower worlds; or to the powers of the matter side of nature. Again, it may designate any of a numerous class of nonphysical beings, such as elementals, nature spirits, ghosts, or astral entities generated by human thoughts, all known in Christianity under the generalizing term Devil.

Evocation [from Latin *evocare* to call forth] The calling forth of simulacra of the departed by magical processes; or the calling forth of the daemons or nature spirits of various classes by will directed by knowledge. The spiritual aspects of human beings cannot, however, be called forth, except in rare instances immediately after death, which in this case means black magic; and even so, these disembodied spirits do not actually come, but cause their simulacrum to be formed, or send a messenger. The attempt thus to evoke the departed is a wrongful interference with the courses of nature and detrimental to the welfare of the departing egos. It is much easier and more common to evoke spooks from kama-loka, or denizens of the lower astral light; and the appearances thus created are often of a composite nature, to which the medium and sitters, whether knowingly or not, contribute. This must necessarily be the case where there is actual materialization. Such practices come under the general heading of necromancy.

Evolution [from Latin *evolutio* unrolling, opening] The unfolding or bringing into manifestation of the inherent, already inwardly existing characteristics of a being; it is therefore growth from within, development. The process is universal, since the universe consists of living beings, all of which are growing because unfolding. Evolution presupposes two main factors: the entity which is evolving, and the form which is evolved. These two are related as spirit to matter, as the monad to its organism. Every one of the countless beings which constitute the universe is essentially a spark of the universal divine fire, life, or spirit; and at any time is at one stage or another of a continuous career of unfolding growth. Every spark creates for itself a succession of forms by which it expresses more or less of its inherent qualities. The physical vehicles are merely the physical end-

products; before these physical imbodiments are engendered, there are other imbodiments made of subtler grades of matter or consciousness-substance on intermediate planes, and astral stuff on the lower plane close to the physical. Evolution is a continual reaction between what is within and what is without: environment modifies growth; but without the urge of the indwelling monad, there could be no action upon environment, nor any reaction by environment.

Evolution is not a process of accretion from without; such accretion could not produce an organism unless the full plan of that organism existed already latently in ideation. Nor is evolution in the vegetable and animal kingdoms a process of mere transformism by which one physical organism changes into another. The changes take place because of the unfolding growth of the indwelling entity, each new evolutionary enfoldment of the latter impacting on the body, and therefore more or less modifying it; and this indwelling entity in this manner builds for itself new forms suitable to its own changed or more largely unfolded states.

Theosophy does not hold to the idea of a single-track, end-on evolution from a protoplasmic speck to human being, without inner astral, mental, and spiritual urge from within. Rather, the plan of evolution as represented by the different classes and orders of beings on earth may be represented by a tree, whose main trunk is the human stem, from which (so far as this manvantara is concerned) the various animal types have issued like branches, each of them then entering upon a special unfolding development and differentiation of its own. Indeed, the same observation applies with equal force to the vegetable and mineral kingdoms, although their root-types issued from the human stem long aeons before the animal types appeared on earth.

Evolution is an ancient and cardinal tenet of the archaic wisdom and was formerly called emanation. In mankind, three distinct, principal lines of evolution take place and converge; the spiritual, the mental or manasic, and the astral-vital-physical. The manasic factor is derived from the perfected humanity of a previous manvantara, whose entrance into the human stock of the third root-race brought about the union of the heavenly and the terrestrial so as to make a complete self-conscious being who thereafter mirrors every plane in nature. In humankind, the divine monad, a spark of the universal spirit, emanates from itself its first vehicle, and thus is formed the spiritual monad, atma-buddhi. This monad, emanating from itself in its turn another vehicle, becomes the higher human soul or re embodying ego; and the emanational process is continued throughout the human constitution by the formation of the astral-vital soul which in its turn emanates or oozes forth the physical body.

The process of evolution cannot be considered as ending. Just as below human beings there are less evolved kingdoms, so above are beings in whom fuller self-consciousness has been achieved than we have yet achieved, and still more of the divine potentialities realized. All evolution beneath humankind tends towards humanhood as its objective; but humanity itself has ever greater heights still before it to attain in the future.

Existence [from Latin *existo* standing forth, emerging] Although often used interchangeably with being, in theosophy being refers to abstract continuity in spirit, while existence means the phenomenal manifestation of an entity in the phenomenal worlds. Therefore being is the noumenon and existence is the phenomenon. Hence one can speak of the causes of existence (nidanas), or of all existences being dissolved. The Absolute, a cosmic hierarch, is defined with equal appropriateness as absolute existence and as non-existence. Non-existence is described as absolute being, existence, and consciousness (SD 1:39). Fichte makes a proper distinction between being (Seyn) and existence (Daseyn), the former being the noumenal One, and the latter the phenomenal manifold through which the One is known.

Exorcism [from Greek *exorkizein* to bind by an oath] In the Christian Church, the casting out of evil spirits by adjuring and commanding them. Under other names the rite has been practiced in all lands and times, with a great variety of ceremonies, and by the power of a person who is versed in the procedure and especially efficaciously by one whose life is holy. Jesus of the Gospels exercises the power and delegates it to his disciples.

Exoteric [from Greek *exoterikos* pertaining to the outer] Applied to teachings given to the public or to nonprepared candidates in the Mysteries or schools of philosophy. It applies to all the various great religions of the past insofar as their popular or public teaching is concerned. Thus exoteric does not mean false or untrue, but simply that form of the inner wisdom which was so clothed as to hide much of the inner truth; but nevertheless, despite that cloak, contained it in hidden and secret sense.

Extension Applies chiefly to the familiar attribute of physical objects or space, but can be used in a wider and more general sense. The terms space, extension, and spatial extension are to a great extent interchangeable in popular speech. The notion they convey seems essential to our mental processes, and we cannot even think of a point without having first imagined an extended space for it to be located in. When abstract space is spoken of as boundless extension, the latter word must be understood as the extension of this, that, or some other cosmic plane, and hence on each such plane resembling the spatial extension which we recognize as physical space, great or small. However, extension is not abstract space itself, for all extensions of whatever character, and on whatever plane, are contained in abstract space; so that if we speak of abstract space as boundless extension, we must enlarge the word extension to include the inner and the outer, the high and the low, and all that is visible or invisible, past, present, and future.

Extracosmic Outside the cosmos; applied to a theological personal God, who is regarded as outside of or separate from the universe which he is supposed to have created. It is the opposite of the pantheistic conception of the divine as the all-permeant cosmic spirit of the universe, in which all beings that exist “live, move, and have their being.”

Eye of Horus or **Osiris** One of the names by which the Egyptian symbol of the eye is known,

especially its hieroglyphic representation, designated *Utchat* in Egyptian. There were, in fact, two eyes: one the symbol of Thoth (Tehuti), representing the full moon; the other, the utchat of Ra (or Osiris), representing the midday sun. When referred to as the eyes of Horus they were designated as the white and the black: the white eye standing for the sun, the black for the moon. Or again they were called the right and the left, referring respectively to the sun and the moon.

“The Sun was always called by the Egyptians ‘the eye of Osiris,’ and was himself the *Logos*, the first-begotten, or light made manifest to the world, ‘which is the Mind and divine intellect of the Concealed’ ” (SD 2:25). This symbol connects Horus with the characteristic nature and functions of the manifest Logos which spiritually surveys all, guides all, and watches over all; and as the Logos contains in itself all that is, both of spirit and matter when they are manifested, the reason is seen for the more detailed ascription to sun or moon of this or that function or activity of the Logos.

Eye of Siva The third eye; physically the pineal gland, which when awakened into activity becomes the organ of the inner spiritual vision of a seer. The pineal gland was in former ages an active physical exterior organ before the present-day two eyes were developed, and was then the faculty both of physical vision and of interior illumination. As the ages passed, this third eye or pineal gland receded within the skull, finally being covered by hardened bone and the scalp. This eye may be described as the organ on this plane of spiritual intuition, through which direct and certain knowledge is obtainable at any time at the will of the seer. “The ‘eye of Siva’ did not become entirely atrophied before the close of the Fourth Race. When spirituality and all the divine powers and attributes of the deva-man of the Third had been made the hand-maidens of the newly-awakened physiological and psychic passions of the physical man, instead of the reverse, the eye lost its powers” (SD 2:302).

'Eyeh. See 'EHYEH

'Eyn Soph (Hebrew) *'Ēin Sōf* Also Ain Soph, Ayn Soph, Eyn Suph, Ein Soph, etc. No-thing, the negatively existent one, or the no-thing of space corresponding closely in some respects to the mystical sunyata of Mahayana Buddhism. Used in the Qabbalah for that which is above Kether or Macroprosopus, i.e., no-thing. “It is so named because we do not know, and it is impossible to know, that which there is in this Principle, because it never descends as far as our ignorance and because it is above Wisdom itself” (Zohar iii, 288b).

Strictly speaking, 'eyn signifies abstract Be-ness or the vast spatial deep in which all existences take their rise. Anything that is existent is a production and exists; and the womb of being or Be-ness, from which existences arise, is not only the cause of all existences but likewise their field of action — the spatial deeps. Often wrongly translated as “nothing”; but Be-ness is certainly not nothing, but essential, full Be-ness itself.

'Eyn Soph 'Or (Hebrew) *'Ēin Sōf 'Ōr* ‘The Light without bounds’ — Infinite Light. A term used in the Qabbalah, representing the Intelligence or Mind of Divinity which permeates the All, and which is

without bounds, as an immeasurable Ocean, emanating from 'Eyn Soph. From this ever-present Source of Light and arising out of it as from a womb by means of the karmically whirling movement of Fohat, is thrown into manifested being a particular Hierarchy, or River of Life or Lives, which is born from its 'Primordial' Point and proceeds in space and time to emanate the hierarchical ten Sephiroth — in their combination finally becoming a manifested universe.

The speculations of the later Qabbalists were chiefly concerned with the doctrine of emanation, but in order to complete the picture, one might add that just as the whirling motion of fohatic life in evolving, or centrifugal movement, brought the Sephiroth into being, so in the far-distant aeons of the future by means of involuting or centripetal motion, the manifested universe (or Sephiroth) will be gathered again into the Boundless Light.

'Eyn Soph 'Or thus corresponds to what in other systems of thought is called the First or Unmanifest Logos, itself born in and from the womb of the Boundless or 'Eyn Soph. This First or Unmanifest Logos in its turn, as the next stage in the emanational process, brings forth the Second or Manifest-Unmanifest Logos, which in its turn produces the Third or Formative Logos: the Three Logoi in their turn emanating the subsequent manifest seven Sephiroth.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Fa-Fz

Face Used in the Qabalah especially for the first emanations of the Sephiroth or Cosmic Tree, the cosmic structure. Two Faces are mentioned: 'Arikh 'Anpin (Macroprosopus, Great or Long Face), applied to the first Sephirah; and Ze'eir 'Anpin (Microprosopus, Small or Short Face), applied to the lower nine Sephiroth. A third Face or Head, corresponding to 'Arikh 'Anpin or Kether, is also enumerated: Resha' Hiwwara' or Re'sh Hiwwar (generally rendered White Head), signifying the white or colorless spirituality of the cosmic originating source. From the moment of their emanation, says the Qabalah, all the material for future forms was contained in the three Faces, Heads, or Beginnings. It is when the Faces look toward each other that the Holy Ancients in three Heads are called 'Arikh 'Appayim (Long Faces) (Zohar iii, 292a): the union or conjunction thus signified by "looking towards each other" meaning the combined unity in a triad of an individual, whether the monad be human, cosmic, or intermediate.

Fafnir A mythical dragon in the Norse Edda. In the long and involved saga of the Children of the Mist (Niflungar, best known as the Wagnerian *Nibelungen*), Fáfnir slew his father for his golden treasure, which had been cursed by the dwarf Andvari [from *and* spirit + *vari* watcher or guardian]. Fáfnir assumed the form of a dragon and lay guarding the gold on Gnipheden (high heath). His brother Regin, desiring to share the gold, persuaded his ward, the hero Sigurd, to kill the dragon and cook its heart for him. When Sigurd did so, he burnt his finger. Instinctively putting it in his mouth, he found that, as soon as the dragon's heart-blood touched his tongue, he became able to understand the language and messages of the birds.

This tale, like so many mythic stories, is an allegoric history of the early races of mankind, featuring their successive development of distinctive qualities and intelligence. Many myths feature the slaying of a dragon or serpent of wisdom to obtain a treasure of gold (wisdom), which in many cases carries with it a curse, indicating the need for discrimination in its use.

Fairies. See ELEMENTALS

Faith Healing, Drugless Healing Apart from the regular medical and surgical practice, widespread forms of drugless healing are employed today. Public opinion generally is either frankly skeptical about the whole matter, or believes that such afford safe and easy means of relief and escape from suffering and disease. As a whole, these forms of faith or magnetic healing depend on the “inborn or inherent, ability of the ‘healer’ or practitioner to convey healthy life-force from himself to the diseased person. This is the key to success, or the lack of success, in all cases, and in all kinds of healing of whatever so-called ‘school’ ” (SOPh 622). If the practitioner succeeds in conveying the vitality of the pranic fluids from his own healthy body to the diseased body or organ of another person, that healthy life-force “expels” or changes the inharmonious vibrations in the afflicted part and, by restoring harmony there, brings about health. Such cures can be permanent; usually they are temporary, lasting from a few days to a few years.

All these methods were known to the ancients. Unfortunately, the Western lack of any true psychology leaves unexplained the rationale of these healing systems — whether by hypnotism, magnetism, mesmerism, or healing by faith as practiced by the Christian Scientists and faith-healers — and gives no hint of their end results. The potential dangers incurred, both physical and superphysical, are unsuspected. The magnetic healer’s emanation of his vitality and will-force inevitably carries and implants in the person it affects something of his own *quality* of mind, heart, and body. The germs of any latent disease, hidden vice, or mental bias will complicate any supposed cure. Moreover, the subtle infection on inner lines karmically links for the future both healer and patient in the outcome. Even diseased or evil-minded persons of strong will and animal vitality can displace a disease and, by driving it back onto some inner level of the sufferer’s constitution, can make a seeming cure. Howsoever it is displaced out of sight, it cannot be denied out of existence, and sooner or later it will reappear in a more untimely, unnatural, and probably a more dangerous form because of its suppression at the moment of its endeavor to exhaust itself in physical expression. Physical disease, originating in wrong thought in this or a former life, becomes visible on the most material level in working its way out of the system for good. It is positively pernicious for a healer to act upon the will, conscience, or moral integrity of the sick person by hypnotizing his mind, will, and conscience into believing that sickness does not exist, or that he is a victim of fate instead of suffering from his own past actions. Any such control of another’s conscious life is a form of suggestion or hypnotism, and falls under what was formerly called black magic.

On the other hand, we are morally obligated to help the sick and suffering in the right ways of treating the body, mind, and soul; right because involving the arousing of the patient’s own inner powers of spiritual, moral, and intellectual resistance against the weaknesses in himself. The wrong ways consist in the overpowering — however good the motive of the practitioner may be — of the moral instincts, will, and conscience of the sufferer, thereby rendering him weaker than

before. In genuine mesmerism the vital emanation from a pure-minded, unselfish, healthy operator arouses the inert or disordered forces of the diseased organ or body, causing them to vibrate harmoniously and naturally. Thus the sufferer *makes himself* whole or healthy, and has no bad reaction. The best of all drugless healing methods is where the sufferer is brought into a state of hope, self-confidence, and the higher kind of resignation bringing peace and inner quiet, all of which works in harmony with the body's natural resources of health and healing. This is the kind of faith-cure used by Jesus and others of similar spiritual and intellectual stature.

Fakir (Arabic) [from *faqīr* poor] An Islamic religious mendicant, synonymous with dervish; the term is loosely applied to any mendicant devotee or yogi in India. According to T. P. Hughes, there are five principal orders of fakirs in North India and Pakistan: the Naqshbandia, Qadiria, Chishtia, Jalalia, and Sarwardia — all being ba-shara (with the law) fakirs — those who govern their conduct according to the principles of Islam. Fakirs should not be confounded with sannyasins or Hindu yogis.

Fall With reference to Christian theology and thought, the fall of the angels; or the fall of man. The former in theosophy refers to the descent of those dhyanis whose mission was intellectually to enlighten nascent mankind, and in a sense also the lower kingdoms of nature. The latter refers to the descent of human beings into matter, when they became clothed in coats of skin, and incidentally began to reproduce by sexual generation. Both of these events in the cycle of evolution have been perverted by ecclesiastical error into calamities. The descent of the manasaputric dhyanis has been transformed in Occidental theology into a rebellion of Satan and his host against God, through which Satan becomes a perpetual foe to God and mankind. The War in Heaven is allegorical and means the natural opposition and resistance of lower nature and its hosts to the progress of unfolding beings which is essential to evolution. The fall of mankind includes the natural human evolutionary passage into physical corporeality, and also the misuse of human intelligence; but does not refer to the natural use of procreative functions or to innate sinfulness.

Fallen Angels Those cosmic entities or dhyanis of various classes who in the course of their evolution descended into matter in order to form and inform the lower worlds. In doing so they rebelled in a purely mystical sense against spirit or heaven, asserting individual free will and divine love. Their act is in part one of compassion and self-sacrifice, and they are eventually saved, while they carry the cycle of evolution along the ascending arc. Christian theology has interpreted this into the legend of the fallen angles, whose rebellion against God is a crime, who are the eternal enemies of God and mankind, and who are in consequence doomed to final destruction. The myth in its original form has many variants, as in the story of Prometheus, Bahak-Zivo, the Dragon of *Revelation*, the kumaras, etc.

Family Race In theosophy, each of the main seven racial cycles is first divided into seven primary subraces, each of which is again divided into seven secondary or sub-subraces, each of which

latter is divided into seven so-called family races. The period of such a family race is generally given as that of the precessional cycle (25,920 years).

Familiar Spirit “A man or woman having a familiar spirit” is the translation in the Old Testament of the Hebrew *'Ob* or *Aub*, which means a sorcerer or necromancer, and in *The Secret Doctrine* (1:364n) is translated serpent. Such a person is a medium who is more or less under the control of this elemental or elementary, miscalled spirit, by whom he may be entranced; and is to be distinguished sharply from an adept or genuine theurgist, who is in self-conscious control of his own higher faculties through initiation following due and long preparation. These familiar spirits are equivalent to the Greek daimones, and to elementals and elementaries.

Farbauti (Icelandic) [from *far* travel, ship + *bauti* to beat, chase] In Norse mythology, a giant, father of Loki, whose mother is variously named Lofu (leafy isle, earth) or Nal (needle). Farbauti represents the wind that beats or chases the ship of life and may allegorically be connected with the manifestation of living things. This in turn produced the human intelligence (Loki).

Fargard (Pahlavi) The sections or chapters of the *Vendidad*, the principal book of the Avesta.

Farses, Farsis. See ZOROASTER

Farvarshi. See FRAVASHI

Fascination Bewitching, exercising a charm or spell over another person or an animal, consciously or unconsciously, either for good or ill, but more often the word has an evil implication. True fascination is never used by any of the right-hand path, for their working is invariably by arousing the innate spiritual, intellectual, and psychic powers inherent in others, and training the individual to take command of these powers. Fascination is exercised by snakes on birds, and by the human eye on beasts. It is used as an evil power by sorcerers, and is exercised more or less consciously by ordinary people upon each other. It is even taught today as an art for swaying the minds of customers, or more obviously by advertisements offering to confer occult powers for a fee.

Fatalism. See FATE; KARMA

Fate [from Latin *fatum* that which is divinely decreed from *fari* to speak] The regents of the kosmos, acting as karmic agents of past destiny, are said to be the establishers of fate or destiny for the world or universe then beginning its manvantaric evolution. They establish in the noumenal worlds the roots, and in the phenomenal worlds the fruits, of the essential laws of being. Fatalism is the belief that human beings have no free will; however, in actual fact, though perhaps we cannot maintain our own personal will against the laws of the universe except in very moderate degree, yet we have considerable latitude to make experiments and learn from our mistakes. The Latin *fatum* means the laws of nature or the will of the gods, personified as the Parcae or three Fates, the Greek Moirai. In the best sense therefore it means our lot, appointed by the destiny born

of our own past thoughts, feelings, and acts. *See also* KARMA; MOIRA

Fates. *See* MOIRA

Father in Heaven, Father in Secret Phrases used by Jesus in the New Testament for the human divine or spiritual monad, atman or in another context atma-buddhi; and in a smaller sense Father may be applied to the higher or reincarnating ego. In the case of an individual it is his own Absolute, the crown or summit of his constitutional hierarchy, the root or seed of all that he is. In this sense likewise, one may call the Father the paramatman, the person's spiritual self, the ray from the dhyani-buddha with which the individual is in most intimate connection. For each person the Father is his own individual Wondrous Being. Jesus bids us invoke, not an imaginary image of God, but our own spiritual self, which is in its essence one with the universal self or cosmic paramatman.

Fauns, Fauni Faunus was an ancient Italian deity, protecting agriculture and flocks and giving oracles. The Romans later identified him with the Greek Pan, and because of the many manners in which the forces of nature manifest themselves, pluralized the name into fauni, which in turn were identified with the Greek satyrs. The fauns were popularly pictured as mischievous, capricious imps and were said to cause nightmares.

Feast of the Dead Roman Catholic festival held on November 2; "it is the same thought or fear of the soul's torments at being earth-bound that underlies the ceremony of the Feast of the Dead" (BCW 3:483).

Female Principle Once the unmanifest One becomes the Duad, duality pervades the kosmos, often represented as male and female, or as active and passive, spirit and matter, mind and body, positive and negative. These latter expressions are much to be preferred because of their lack of personal attributes. Synonyms for the female principle are root-matter, mulaprakriti, the eternal cosmic Virgin, Great Mother, womb of nature, cosmic ark, etc. The physical distinction which furnishes this symbol to human minds is that of duality; and if we reason from below to above, we may easily fall into the error of assigning attributes of *physical* human nature to the celestial beings and formative powers of the kosmos, resulting in phallicism and the degradation of sacred symbols.

The male and female principles are not entities in themselves but aspects of a unity; and since every element is compound, the words male and female as applied to any element signify merely a

temporary predominance of the one or the other quality. Again, the distinction is not one of fundamental nature but of relationship, so that what is female in relation to one thing may be male in relation to another.

Feng Shui. *See* FUNG SHUI

Fenris, Fenrir (Scandinavian, Icelandic) The mythical Norse wolf destined to devour the sun at the end of its lifetime. Fenris is one of the three monstrous offspring of Loki, the other two being Hel, queen of the realms of death, and Iormungandr, the serpent that encircles the earth in the ocean's depths.

According to popular tale, Fenris grew so rapidly that the gods became alarmed lest he devour the sun prematurely and tried repeatedly to restrain him with heavy chains with no success. The dwarfs forged a magic thread, Gleipnir (lissom bond), with which the gods bound the wolf, but only when one of the gods, Tyr (Mars), agreed to hold his hand in its jaws. Tyr sacrificed his hand, so that Fenris would be harmless until the end of the cycle.

Ferho (Gnostic) Used by the Nazarene Gnostics in the *Codex Nazaraeus* for life per se, which in itself is unknown and formless, because being the productive cosmic vitality behind and within the worlds of form. "Before any creature came into existence, the Lord Ferho was" (*Codex Nazaraeus* 1:45). He is described as the Supreme Lord of Splendor and of Light, manifested as the unrevealed cosmic life which exists in Ferho from eternity.

In tabulating the Gnostic names into triads, Blavatsky places Ferho heading the first trinity of Ferho, Chaos, and Fetahil, equivalent to Father, Mother, and Son of the Christian system (IU 2:227). This is the concealed or nonmanifested trinity, equivalent to the unmanifested or First Logos of theosophical literature. At the same time Ferho is "the Life which is no Life — the Supreme God. The *Cause* which produces the Light, or the Logos *in abscondito*" (IU 2:295). Ferho, therefore, was at one time viewed as is the Hindu Brahma, the formative and creative cosmic power, and at another time as is the Hindu Brahman. Cosmic life has the same double significance: it is either the root-life or unmanifest source of all, or again the life manifest, the producer and former of the worlds.

Feruer or **Ferouer** (Persian) [from *fravashi* or *farvarshi*] A highly mystical term in ancient Persian theology, signifying generally a spiritual veil, lining, or vehicle of a still more spiritual and higher original. Consequently in mystical thought, the feruer or fravashi need not necessarily always be of the higher spiritual type or class; if the original divinity is not high, its feruer, lining or darker side, will also not be of a high spiritual character.

Ferver. *See* FERUER

Fetahil, Ptahil (Gnostic) With the Nazarene Gnostics, the builder of the material worlds. In the *Codex Nazaraeus*, Abatur, the Father, opens a gate and walks to the dark water (chaos) and looks down into it. The darkness reflects the image, whereupon a son appears or is emanated, the Logos

or Demiurge, Fetahil. Because Fetahil is thus produced in order to bring forth the worlds of manifestation, the *Codex* describes him as being immersed in the abyss of primordial stuff or matter (chaos), soliloquizing on his inability alone to produce it. Whereupon Spiritus (the Gnostic “Mother”) appears and unites with Karabtanos, cosmic kama involved in primordial matter, thus bringing forth seven stellars. These are, however, seven imperfect figures “which represent also the *seven capital sins*, the progeny of an astral soul separated from its divine source (spirit) and *matter*, the blind demon of concupiscence. Seeing this, Fetahil extends his hand towards the abyss of matter, and says: — ‘Let the Earth exist, just as the abode of the powers has exited.’ Dipping his hand in the chaos, which he condenses, he creates our planet” (SD 1:195).

The first Gnostic trinity, equivalent to Father-Mother-Son is composed of Ferho, Chaos, and Fetahil — this first triad is concealed or nonmanifest — a pure abstraction to us (IU 2:227).

In the *Codex Nazaraeus* Fetahil is also presented as one of the creative powers who were commanded to form man, and who tried to obey but failed because he was too pure; whereupon other and lower powers — Iukabar Zivo — had to be called to complete the work. In the hierarchical structure of the universe, all so-called creative powers of too high a rank are unable because of their spiritual purity and lofty state to form the lower planes until the intermediate ranges, in the gradually descending ladder of life, have been evolved or emanated into manifestation.

Fetishism [from Latin *facticius* artificial] Applied by modern scholars to the practice of worshiping various objects, either natural, as a tooth or claw of some animal, or artificial, as a carved image (idolatry). It is a relic of ancient knowledge concerning the interrelationships of everything in the kosmos and the use of objects and symbols, corresponding to particular kosmic potencies, as a means of invoking those potencies. It is a relic of archaic magic, now in many cases become degraded to a superstition; though even among many so-called primitive peoples, sympathetic students have found that certain among them often still possess more knowledge than they are willing to disclose to the casual unsympathetic outsider. The subject verges upon that of ceremonial magic, talismans, and the like, where powers of nature may be influenced.

Fetus. See EMBRYO; RECAPITULATION

Fiat Lux (Latin) Let there be light (Genesis 1:3); the light meant here is the cosmic appearance of the sons of light or the hierarchy of light, the formative logoi in their hierarchical unity.

Fiat lux ex nihilo (Let there be light out of nothing), another Latin phrase, refers to the alleged creation of light out of nothing, which is meaningless unless nothing is understood as the primordial chaos of the universe, the cosmic void or sunyata (emptiness).

Fiery Lives They are “the seventh and highest sub-division of the plane of matter, and correspond in the individual with the One Life of the Universe, though only on that plane” (SD 1:262n). These

lives by the use of their vitality alternately allow the microbes to build up and destroy the human body. *See also* LIFE-ATOM (SD 1:249-50, 262-3n; 2:117)

Fifth Principle. *See* MANAS

Fifth Root-race. *See* ROOT-RACE, FIFTH

Fifth Round. *See* ROUND, FIFTH

Fifth Rounders Human monads who, though incarnate among us in this present fourth round, are psychically, mentally, and spiritually at the stage which humanity as a whole will reach in the fifth round. The life-waves which pass around the planetary chains are not rigid and fixed as wholes so as to bind all individuals to perfect conformity with group evolution; so it is possible for certain individual monads to outstrip the mass of the life-wave in their own development, somewhat as a few drops of rain may precede a coming monsoon. These forerunners of the life-wave as individuals through their various incarnations finish the fourth round and inwardly, although not in physical bodies, undergo the experiences which the life-wave as a whole will undertake during the course of the fifth round. Thus because they have experienced at least part of the fifth round conditions, and are developed by it in this fourth round, these individuals are called fifth rounders.

Filia Vocis. *See* BATH QOL

Filioque Dogma [from Latin *filioque* or *et filio* and from the Son] Originally the Christian Creed stated simply a belief in the Holy Ghost or Spirit, and to this was added *qui ex Patre procedit* (who proceeds from the Father); still later the clause *filioque* or *et filio* was added by one of the Councils of the Western Church. The position of the insertion of this clause in the Creed marks one of the main distinctions between the Western and Eastern Churches, the former holding that the Holy Ghost proceeds from the Father and from the Son, whereas the latter has always held the more original Christian thought that the Holy Ghost proceeded from the Father, and being of a feminine nature, from both these proceeded the Son. Thus the procession so called in the Western Church: Father, Son, and Holy Spirit; whereas in the Eastern Church it has always been Father, Holy Spirit, and Son. This difference in the procession of the Holy Spirit was one of the main causes of the breaking of the Christian Church into its two main original branches, the earlier or Greek Orthodox Church, and the Western, of which the Roman Church is the typical and largest example.

Fimbulvetr (Icelandic) [from *fimbul* mighty + *vetr* winter] In Norse mythology, the immensely long period of nonlife intervening between cycles of universal existence, equivalent to the Sanskrit pralaya. In the Edda it is interchangeable with the frost giant Ymer or Ymir, who is “slain” by the gods at each new creation.

Fire Fire has been venerated in all ages as the symbol of spirit as opposed to matter. Its essence or substance is spirit; with essential or substantial air or water — considered as primordial elements — it becomes soul; with the further addition of the element earth, it becomes animated bodies because ensouled and enlivened with the attributes and qualities of the preceding more ethereal elements. Great importance was attached in ancient times to keeping alive the sacred fires of hearth and altar. In all this it was recognized that terrestrial fire is the representative of celestial fire, a phase of cosmic consciousness. Deity is often spoken of as the cosmic fire of consciousness.

The ancient conception of fire thus embraced far more than the ordinary view of fire as chemical combustion or one of its phenomena. Among all the older peoples fire was multitudinous in both characteristics and attributes, ranging from divine-spiritual intellectuality through all intermediate stages of its manifestations to the physical heat arising from the burning of material such as wood, or the natural heat of the body. It is for this reason that certain ancient philosophers, such as Heracleitos, spoke of fire as the primordial element of the universe, in close accord with the archaic outlook.

Fire is the active, energetic, vitalizing, quickening principle on all planes. It is often paired with water as spirit and form; contrasted with earth, as celestial and terrestrial; air is spoken of as its vehicle, as is also aether, because the root of cosmic aether is the celestial fire. The order of the elements varies, from different points of view and on different planes of manifestation. *The Secret Doctrine* states that from primordial chaos came forth a fire that was cold, formless, and luminous — essential consciousness-substance. The first manifested hot fires and flames issued at a much later stage in manifestation. Concealed within the central sun is the triple formless invisible fire, which precedes the septenary manifested fire of cosmos. Fire, whether heavenly or terrestrial, is the most perfect and pure reflection of the one universal flame; it is life and death, creator and recreator; the origin and end of every material thing — divine consciousness-substance. From one flame all lamps can be kindled: fire imparts infinitely without loss. Fire alone is One, on the plane of the one reality; and on the plane of illusion, its particles are fiery lives.

Like most other things, fire has its nether pole and hence its infernal aspect; but the fires of hell are purificatory. By his power of self-conscious choice an individual may set himself at variance with nature's processes, thus creating his own devils. Fire was the great agent of purification in medieval alchemy, for it removes the dross from the gold. The same is true on the moral plane, for spiritual aspiration calls down an inner fire that purifies the gold from the dross in the aspirant's heart. The two births or baptisms relate to water and fire; the former being carnal, the latter being the spiritual birth or baptism that comes to the aspirant. *See also* AGNI; ELEMENT; FLAMES; TAIJASA-TATTVA

Fireless Progenitors Primeval mankind issued from the bodies of its fireless astral progenitors, who were aeriform and devoid of compactness, although these progenitors were the former astral-

physical vehicles of the human stock itself. Thus we may say that the adult issued from the body or being of his youthful progenitor, himself as a child. These progenitors are called fireless because, not having the flame or fire of mind, they could not consciously receive and contain the higher intellectual pitris or classes of the manasaputras.

Fire-Mist In *The Secret Doctrine* (1:83, 86-7) used to signify the fire or living intellectual life of the one element in its second stage as Father-Mother, akasa, jivatman, divine astral light, or world-soul; or again as the first or highest stage of physical or lower astral substance, in some respects equivalent to the mahabhuta creation.

The Sons of the Fire-Mist are the “Sons of Will and Yoga,” the minor hierarchy of the elect or select which came into existence in the fourth root-race. *See also* AD, SONS OF

Fire-philosophers Philosophers of medieval Europe who regarded fire as the supreme principle. Their ideas were largely those of Oriental occult or semi-occult bodies; hence they may be described as either the Persian Magi, or the European followers of Robert Fludd (1574-1637), a student of Paracelsus who taught the analogy of macrocosm and microcosm and the four elements.

“The name given to the Hermetists and Alchemists of the Middle Ages, and also to the Rosicrucians. The latter, the successors of the Theurgists, regarded fire as the symbol of Deity. It was the source, not only of material atoms, but the container of the spiritual and psychic Forces energizing them. Broadly analyzed, fire is a triple principle; esoterically, a septenary, as are all the rest of the Elements. As man is composed of Spirit, Soul and Body, *plus* a fourfold aspect: so is Fire. As in the works of Robert Fludd (*de Fluctibus*) one of the famous Rosicrucians, Fire contains (1) a visible flame (Body); (2) an invisible, astral fire (Soul); and (3) Spirit. The four aspects are heat (life), light (mind), electricity (Kamic, or molecular powers) and the Synthetic Essence, *beyond Spirit*, or the radical cause of its existence and manifestation. For the Hermetist or Rosicrucian, when a flame is extinct on the objective plane it has only passed from the seen world unto the unseen, from the knowable into the unknowable” (TG 119-20).

Fire, Sacred An equivalent for sacred spark, with reference to the lighting of the fires of mind in man during the third root-race. Especially used in connection with the occult allegory of the ancient Greeks dealing with Prometheus, who is represented as bringing the sacred fire — signifying the fire of mind and thought — to mankind from heaven.

Also used in reference to the sacred Samothracian deities, the kabeiroi: “the *personified sacred Fires of the most occult powers of Nature*” (SD 2:106).

Equated with Living Fire as “a figure of speech to denote deity, the ‘One’ life. A theurgic term, used later by the Rosicrucians. The symbol of the *living fire* is the sun, *certain of whose rays develop the fire of life in a diseased body, impart the knowledge of the future* to the sluggish mind, and stimulate

to active function a certain psychic and generally dormant faculty in man” (TG 119).

Fire-self Fire-self has several meanings, from the divine to the physical fire of vitality. When used alone, it signifies the divine-spiritual power which is the very essence of the divine monad, its individuality; and because fire in occultism is but a manifestation of pure intelligence, the fire-self is therefore the loftiest monadic or individualized egoity, divine in its essence in the human or cosmic constitution.

Fires, The Forty-nine Refers to the seven states of manifestation of the one life with its various septenary subdivisions — whether these seven states of manifestation be in the kosmos or in an individualized entity. Thus cosmically it refers to the seven cosmic principles with their respective seven subdivisions. When applied to the individual it refers to its seven principles with their septenary subdivisions: “To man, it gives all that it bestows on all the rest of the manifested units in nature; but develops, furthermore, the reflection of all its Forty-nine Fires in him. Each of his seven principles is an heir in full to, and a partaker of, the seven principles of the ‘great Mother’ ” (SD 1:291).

To illustrate the meaning in the case of the human being, every one of the seven main elements or principles into which the human constitution may be divided might readily each one be called a fire, subdivided in a septenary way, so that all the seven human principles and elements when thus considered are seen to be the fires of intelligence, life, consciousness, and substance, reflecting as the individual does in his sevenfold constitution the seven kosmic elements and principles subdivided in septenary fashion.

In works such as the Hindu Puranas, the fires are personified in Agni-Abhimani and his 48 descendants, each one of which might likewise be called a brother of Abhimani, each being a particular representation or aspect of fire. The term is also applied to the Dioscuri and kabiri.

Fire or the 49 fires refer not only to the physical kosmic fire or the human vital warmth which is so generally recognized; but more strongly to the fires of vitality and intelligence. Thus for instance the kosmic First Logos might be called the original kosmic fire of intelligence and life as well as substance, dividing in manifestation as it does into its offspring which are likewise in a sense its brothers, the various principles and elements of the manifested universe. In the Gnostic *Pistis Sophia* the Rabbi Jesus in speaking to his disciples says: “Nothing therefore is more excellent than the mysteries which ye seek after, *saving only the mystery of the seven vowels and their forty and nine powers, . . .*” (SD 2:564).

Fire-walking The ability to walk unharmed across a bed of live coals, or to handle fire and heated objects with impunity. Recently this feat has been corroborated by research. It is well known to many ordinary Oriental fakirs, tribal medicine men, sorcerers, and adepts. Some mesmerists who, with a few passes, can anesthetize a limb use the same means as the fire-walkers. While some mediums are entranced before being rendered invulnerable to fire, in Tibet and India the

condition is produced consciously and at will.

In all these cases the condition results from a compression of the astral fluid already existing “about a person, so as to form an elastic shell, absolutely non-penetrable by any physical object” (IU 1:378). Nor does ordinary heat register, as such, on astral substance. This invisible shell of compressed astral fluid also accounts for the instances where the person so protected cannot be shot. In these cases the bullets appear just beyond the muzzle of the weapon, quiver in the air, and fall to the ground, as if meeting an impenetrable barrier. This protecting, elastic shell also explains why heavy blows and attacks with sharp instruments will make no impression upon “convulsionaries” as was shown by the historic records in the cases of the convulsionaries of St. Medard (IU 1:373-6).

Firmament Combines the meanings of support, expanse, and boundary; a translation of the Latin firmamentum (a support), which again renders the Greek stereoma (a foundation). The Hebrew is *raqia'* (an unfolding or expanse). The ordinary European meaning is the vault of heaven or sky. It is often identified with air, called the breath of the supporters of the heavenly dome in Islamic mysticism; in India the ethery expanse is the domain of Indra, and one reads of the 1008 divisions of the *devaloka* (god-worlds) and firmaments. It also relates to the supporters, pillars, or *cosmocratores* in so many ancient cosmogonies, said to uphold or support the world.

In this connection “waters” in Hebrew often has the mystical significance of ethers or aether, and hence the division between the waters above and the waters below does not refer to the common fluid. In this sense firmament signifies one aspect of Ring-pass-not, the dividing line between one hierarchical division and another, which divisions, rings, or firmaments mutually support and complement each other, and thus build up the web or fabric of the cosmic structure.

First Cause The first cause is demiurgic, the originating principle or root-impulse unfolding a universe or some portion of a universe. By the very fact of individualized activity it must be finite, however immense, not infinite or eternal. If the universe is a chain of causation in which each link is the effect of a precedent cause, then if there is no first cause there can be no effects, and the principle of causality disappears altogether. Infinity has no first cause but is the all-fecund womb of literally infinite numbers of productive demiurgic first causes. We can therefore but recognize the necessary limits of human conceptual power, and postulate a causeless cause: *parabrahman* or what the Vedic sages called *tad* or *tat* (that).

First Round. *See* ROUND, FIRST

Fish In ancient theologic or mystical thought, fish is cognate with water and the matrix; in the Stanzas of Dzyan, the Mother is called the Fiery Fish of Life, and the defunct in the *Egyptian Book of the Dead* says, “I am the Fish of the Great Horus.” The esoteric meaning of the fish symbol is divine, but the theological is almost universally phallic.

Pisces, the Fishes (Sanskrit Mina), is the last sign of the zodiac, and therefore marks the end of one cycle and the initiatory stage of the succeeding cycle. The fish-avatara of Vishnu is both the first and the tenth or last; and this applies both to mahakalpas and to minor cycles within them, likewise to a division of the present and former manvantara. Though Pisces as now understood refers to cyclic junctions in general, with their accompanying world saviors and floods, it has particular reference for Occidentals to Jesus and the entry of the equinoctial point into Pisces.

Out of the Greek ichthys (fish) has been made the acrostic Jesus Christos Theou Yios Soter (Jesus Christ, Son of God, Savior). Jesus, Bacchus, the Chaldean Dagon and Oannes, the Akkadian Ea, the Babylonian Xisuthrus, and the Hindu Vishnu and Vaivasvata-Manu mystically are all fish characters, and hence connected with floods and avatars.

Fission. See REPRODUCTION

Five Because of its being one half of the perfect number (ten), five held the attention and study of all followers of the Pythagorean system of numerals. As we are now in the fifth root-race, the fifth principle (manas) takes an especially prominent position in human evolution. The five-pointed star, or again the pentagon, is the symbol of the microcosm, man, often referred to as a five-limbed man. Five “symbolizes at one and the same time the Spirit of life eternal and the Spirit of life and love terrestrial — in the human compound; and, it includes divine and infernal magic, and the universal and the individual quintessence of being” (SD 2:579).

The symbol of the kali yuga is the five-pointed star reversed, with the two points or horns of the star pointing upwards. This is also a sign of sorcery.

In the numerical mysticism of ancient Egypt five crocodiles, for instance, were represented as in the celestial Nile, and the emanating deity calls forth these crocodiles in his fifth creation. The number five, as well as other numbers, was sacred to the Gnostics, hence five words signifying the five mystic powers attained by the initiate were written upon the garment in their interpretation at the glorification of Jesus. In classical Greece the E Delphicum, a sacred symbol, was the numeral five. There were five ministers of Chozzar (the Gnostic Poseidon); and in the Hindu mythology Brahma is represented as uttering five words or vowels at the creation. From another standpoint, five is the “universal quintessence which spreads in every direction and forms all matter” (SD 2:583). See also PENTAGRAM

Five-pointed Star. See PENTAGRAM

Flagae Used by Paracelsus to denote an order of spiritual beings which correspond to the Christian

guardian angels, or what would be called in theosophy the higher pitris or the sixfold dhyani-chohans — that class of the dhyani-chohans in whom six of the seven constitutional principles of nature are more or less actively manifest.

Flames Largely interchangeable with fire, both being borrowed from the Fire-philosophers in an attempt to render the ancient teachings. Often the same distinction is made as in ordinary usage: that flame is a portion of fire, or that fire is a more abstract and general term and flame a more concrete and particular. Thus, the intellectual and guiding cosmic spirits, as well as the astrally and physically creative builders, are spoken of as being a hierarchy of flames. The Lords of the Flame are the agnishvatta-pitris, or the intelligent architects cosmically; as the givers of mind to humanity they are alluded to as those whose fire is too pure for the production of physical mortal mankind. The Asiatic Qabbalists or Shemitic initiates meant by Holy Flame what is called the anima mundi or world-soul, and this is why adepts were called sons of the holy flame. Flame is also a projection of fire, as when a flame of the divine fire descends into matter, or flames of fire descend upon one inspired by the Holy Spirit or encircle the head of an initiate.

Flamma (Latin) Fire, flame; an alchemical or Western Hermetic term used to denote one of the four elements, corresponding to the alchemical sulphur and spirit.

Flood. A story found in various forms in every cosmology. The Chaldean and Sumerian versions antedate the Hebrew; India, China, and other Asiatic countries furnish their own versions. It occurs in the *Popol Vuh*, the sacred book of the Quichés of Central American, as well as among many ancient American tribes; the story is found among the ancient Scandinavians, the Polynesian peoples, and among African tribes, such as the Masai of East Africa.

These stories refer in part to an actual great deluge in the world's history, mainly to the sinking of the great and smaller islands of the Atlantean continental stretches. In many if not all the versions, we find that a race had become so corrupt that nature or the gods would no longer tolerate it, and destroyed it and brought forth a new race. There is usually a type-figure, like the Hebrew Noah, who builds an ark or other vessel of salvation, thus saving from the waters the righteous few to be the seeds of the new race. In many versions are traditions of the destruction of the preceding root-race, Atlantis, by water, and of the saving of various groups of human remnants to found new civilizations on lands, then or shortly later geologically speaking, emerging from the ocean. But besides the particular application to this latest cataclysm in the earth's history, the story refers to cataclysms in general, to the death of old races and the birth of new ones. The evolution of the earth goes on *pari passu* with that of the beings upon it. These stories are evidently allegorical as well, with reference to cosmological facts. *See also* ARK

Fluidic Double Often used by Europeans for the linga-sarira, the astral or model body, whose form is duplicated with extreme exactness by that of the physical body, but which is mobile somewhat as a fluid is, instead of being comparatively rigid like the crystallized or physical body.

Fo-chu, Fo-ch'ou (Chinese) [from *fo* Buddha + *chu* lord] A Buddha-lord, Buddha-teacher, a teacher of the doctrines of the buddhas.

Foeticide. See ABORTION

Foetus. See EMBRYO; RECAPITULATION

Fohat (Tibetan-Mongolian) [from Mon *pho*, *fo* buddha, buddhi] Cosmic life or vitality; bipolar cosmic vital electricity, equivalent to the light of the Logos, daiviprakriti, eros, the fiery whirlwind, etc. As the bridge between spirit and matter, fohat is the collectivity of intelligent forces through which cosmic ideation impresses itself upon substance, thus forming the various worlds of manifestation. In the manifested universe, it “is that Occult, electric, vital power, which, under the Will of the Creative Logos, unites and brings together all forms, giving them the first impulse which becomes in time law. . . . Fohat becomes the propelling force, the active Power which causes the One to become Two and Three . . . then Fohat is transformed into that force which brings together the elemental atoms and makes them aggregate and combine” (SD 1:109).

Fohat is ever-present and active from the primordial beginnings of a manvantara to its last end, nor does it then actually pass out of existence, but becomes quiescent or latent as it were, sleeping or dormant during the cosmic pralaya.(OG 51)

Fohatic Magnetism(s) The spiritual magnetism or electricity individual to each entity, from subatomic to galactic. The twelve signs of the zodiac each has its own fohatic magnetism which together form the characteristic quality of the galaxy. These twelve magnetisms, which are actually six bipolar magnetisms, are also responsible for the precession of the equinoxes (FSO 140). “Any planetary chain, as well as any globe thereof, is produced not only by its own monadic swabhava, but . . . the twelve fohatic magnetisms of the twelve constellations are likewise intimately involved with these inherent magnetic swabhavas in producing the planetary chains and their respective globes” (FSO 143). (FSO 125, 127, 139)

Foh-maeyu, Fo mai-yu (Chinese) [from *fo* buddha + *miao* temple] Buddha’s temple; a temple dedicated to Sakyamuni Buddha.

Foh-tchou. See FO-CHU

Fons Vitae (Latin) Fount of life; Latin title of the chief work of Ibn Gebirol (Avicbron), the Arab Jewish philosopher of the 11th century, believed by many to be a profound Kabbalist. The Hebrew title is *Meqor Hayyim* (Fountain of Lives).

Force Used in two senses: an effect produced in matter, and the unknown cause of that effect. In the former sense it is a definite measurable quantity, usable in calculating the quantitative relation between phenomena, and of practical service in mechanics. But in the latter sense, force remains for science a mystery. If it is an inherent property of matter, then matter becomes a self-moving

entity, a divine thing in its essence; if it acts on matter from outside, then where does it inhere? Is it an independent existence? The whole question is thus left hanging in the air.

According to theosophy the forces of science are effects produced on the physical plane by elementals or nature forces, which are themselves secondary causes and the effects of primary causes, ultimately of divine origin, behind the veil of terrestrial phenomena. Descending through the planes of cosmos there is a chain of effects. Theosophy sees no fundamental difference between force and motion: eternal motion gives rise on every plane to the dual manifestation of force and matter, twin aspects of the same substance.

In the universe force may be generalized as a unity, just as substance or consciousness may; but nevertheless just as there are consciousnesses and substances, so likewise cosmic force is to be understood as a generalizing phrase for cosmic forces essentially intelligent, and therefore that these cosmic forces are essentially divinities — these divinities existing on different planes of the invisible worlds of the universe in hierarchical structure or degrees. We have therefore the picture of inner and invisible conscious and likewise self-conscious forces, which are really divinities of many kinds, which by their interconnections and interwoven activities, produce the differentiated and marvelously varied manifested world in which we live.

Form Aristotle's three hypostases of objectivization are privation, form, and matter, compared to Father-Mother-Son, in which however is included life. Privation does not signify emptiness or nothingness, for the term means that which precedes form and actively manifested life as the root cause and source of the latter; and because it is formless it is called privation as having no form implying limitation or constriction. Form also is equivalent to vehicle, and so to body or imbodiment, and to the Sanskrit rupa, as seen in the distinction between rupa and arupa worlds.

Formative World. See YETSIRAH

Formless Equivalent to the Sanskrit arupa (without body or form). Because an absolutely formless thing on its own plane would have no qualities by which it could be distinguished from any other entity or thing there, the word seems rather to mean without body or form as seen from our earthly point of view. Hence it implies that entities in the arupa spheres exist as what Plato would call ideas, which will become imbodiment in the various lower planes in one or another period during the immensely long cosmic existence. Cosmic pralaya is not such for arupa entities, as only the rupas are dissolved; but this statement, while true, is made from our earthly standpoint.

Forty-nine A septenate subdivided into sevens, and made into fifty by the inclusion of a synthesizing unit. The seven elements of our terrestrial nature, of which only five are thus far actually manifest, are each divisible into 49 sub-elements. The 49 fires are made up of Agni, the three original fires (Pavaka, Pavamana, and Suchi), and their 45 sons. The mother-principle develops in the human being the reflections of these 49 cosmic fires, without which we are not perfect. A similar grouping is found in the division by some mystics of the seven mystic vowels,

with their 49 powers. *See also* FIRES, THE FORTY-NINE

Forgiveness. *See* ATONEMENT; VICARIOUS ATONEMENT

Fo-tchou. *See* FO-CHU

Four The square of two, and the second even number, hence feminine in characteristics. It was regarded by the Pythagoreans with especial esteem, for it was the base number of the tetraktys. It corresponds to a solid figure, or a square — the quaternary although on the spiritual plane, as being the immediate successor of the triad, it became the symbol of immortality, and hence in this sense a perfect number, the ideal root of all subsequent hierarchical numbers on the lower planes including the physical. Thus there is the spiritual four as the mother-type of all productivity, and there was likewise the material four, the ideal root of all numbers on the astral and physical planes. It was called by the Pythagoreans the key-keeper of nature, but it was only so in union with the number three, for then the sum made seven — the perfect number of nature in our world. The Hermetists had the same idea: four was the symbol of truth when expanded into a cube, for when this cube is unfolded the production is seven. Four is the number “which affords an arithmetical division between *unity* and *seven*, as it surpasses the former by the same number (three), as it is itself surpassed by the seven, since *four* is by as many numbers above *one*, as *seven* is above *four*” (SD 2:582).

The number four is considered feminine on the planes of matter; it is considered to be masculine and energetic only on the highest plane of abstraction. When united with three (spirit), “their union is the emblem of life eternal in spirit on its ascending arc, and in matter as the ever resurrecting element — by procreation and reproduction” (SD 2:592).

In ancient and modern occultism, 3, 4, and 7 are respectively held sacred as symbolizing light, life, and union — at least during our present manvantara; for the reckoning was somewhat as follows: unity, the One or the monad, was the generating point of spirit, from which flowed forth the first manifested stream of energy or the duad, which became in expressing itself the triad, the carrier and holder of cosmic wisdom and therefore light to our view. These three expressing themselves in the next stage of differentiation clothed themselves in a vehicle, the square or four, which thus became manifested life. Hence, when light and life conjoin in unitary action we have the complete septenary, the significant number of complete monadic being on this plane — the septenary individual.

Four also appears in the sacred key-numbers 4, 3, 2 (in this sequence): these are the basic numbers used in esoteric computations, and hence they form the numerical structure of the time periods of the four yugas of ancient India, which likewise were prominent in ancient Chaldean calculations — for the numerical science was the same in both lands. “The sacredness of the cycle of 4320, with additional cyphers, lies in the fact that the figures which compose it, taken separately or joined in various combinations, are each and all symbolical of the greatest mysteries in Nature. Indeed,

whether one takes the 4 separately, or the 3 by itself, or the two together making 7, or again the three [4, 3, 2] added together and yielding 9, all these numbers have their application in the most sacred and occult things, and record the workings of Nature in her eternally periodical phenomena. They are never erring, perpetually recurring numbers, unveiling, to him who studies the secrets of Nature, a truly divine System, an *intelligent* plan in Cosmogony, which results in natural cosmic divisions of times, seasons, invisible influences, astronomical phenomena, with their action and reaction on terrestrial and even moral nature; on birth, death, and growth, on health and disease. All these natural events are based and depend upon cyclical processes in the Kosmos itself, producing periodic agencies which, acting from without, affect the Earth and all that lives and breathes on it, from one end to the other of any Manvantara. Causes and effects are esoteric, exoteric, and *endexoteric*, so to say” (SD 2:73-4).

As instances of the recurring of the sequence 4, 3, 2: the addition of 3 ciphers produces the length of the kali yuga, 432, 000 years; with 4 ciphers, the total of the four yugas or one mahayuga, 4,320,000 years; with 7 ciphers, the period of 14 Manus or 1,000 mahayugas, which is one Day of Brahma or a period of 4,320,000,000 years. When this latter figure is multiplied by two, in order to add the period of a Night of Brahma, and then multiplied by one year of Brahma (which is equivalent to 360 such days and nights) we have the basic figure of Brahma’s Life (which consists of 100 years). When 4320 is halved the result is 2160, which multiplied by 12 is the number of years in one turning of the precessional cycle; again 2160 is the period of the so-called Messianic cycle.

Four Ages. See YUGA

Four Animals When used by Hebrews and Christians, the sacred animals seen by Ezekiel in his vision (Ezek 1:4-10): the man, the eagle, the ox or bull, and the lion. “These four animals are, in reality, the symbols of the four elements, and of the four *lower* principles in man. Nevertheless, they correspond physically and materially to the four constellations that form, so to speak, the *suite* or *cortege* of the solar god, and occupy during the winter solstice the four cardinal points of the zodiacal circle” (SD 1:363).

Sometimes called the sacred animals of the Bible, they have been associated by Christians with the four evangelists. In this connection, “each represents one of the four lower classes of worlds or planes, into the similitude of which each *personality* is cast. Thus the Eagle (associated with St. John) represents cosmic Spirit or Ether, the all-piercing Eye of the Seer; the Bull of St. Luke, the waters of Life, the all-generating element and cosmic strength; the Lion of St. Mark, fierce energy, undaunted courage and cosmic fire; while the human Head or the Angel, which stands near St. Matthew is the synthesis of all three combined in the higher Intellect of man, and in cosmic Spirituality. . . . The Eagle, Bull and Lion-headed gods are plentiful, and all represented the same idea, whether in the Egyptian, Chaldean, Indian or Jewish religions, but beginning with the Astral

body they went no higher than the cosmic Spirit or the Higher Manas — Atma-Buddhi, or Absolute Spirit and Spiritual Soul its vehicle, being incapable of being symbolised by concrete images” (TG 121).

Fourfold Classification There are many different ways of dividing the constitution of the universe or of any integral entity within it, such as a human being. Several philosophical and religious systems employ a fourfold division, as is found in certain Hindu systems. Subba Row, a Vedantist as well as a theosophist, pointed out that the fourfold classification of the human principles in some Hindu systems is not only applicable to man, but likewise to the universe and solar system. The Taraka-Raja-Yoga system — perhaps the most subtlety philosophical of the Brahmanical yoga schools — divides the human constitution into three upadhis (bases) plus the atman or essential self, as follows: atman, karanopadhi, sukshmapadhi, and sthulopadhi.

Subba Row’s fourfold classification follows:

Universe	Solar System	Man
Parabrahman <i>Beyond Brahman</i>	Brahman, Paramatman <i>Cosmic Monad</i>	Atman <i>Essential Self</i>
Mulaprakriti <i>Primordial Thread-Self</i>	Sutratman <i>Causal Vehicle or Root-Substance</i>	Karana-sarira <i>Essential Egoity</i>
Isvara <i>The Logos</i>	Hiranyagarbha <i>Golden Egg</i>	Sukshma-sarira <i>Subtle Vehicle or Personal Monad</i>
Daiviprakriti <i>Light of the Logos</i>	Visvanara <i>Subtle Essence of Physical Vehicle</i>	Sthula-sarira <i>Manifested Universe</i>

In these three columns there are correspondences reading right to left which apply to three vastly differing scales of magnitude both in quality and in explanation. Thus the last term in the first column is daiviprakriti, which really means spirit-matter in manifestation, and therefore is a gross body of the universe, although in the human case this is equivalent to the sthula-sarira or gross physical body.

It is likewise to be noted that the Vedantist classification of the principles, whether of a universe or an individual, is six in number: the essential self or atman, and five kosas emanating from it; the main reason for the Taraka-Raja-Yoga fourfold division lies in the fact that the atman of a person may be used in any one of the three upadhis independently as it were of the others, without the person’s running the risk of killing himself. In this way they form a natural division of the human being.

Comparing this fourfold classification of the human constitution with the sevenfold division

commonly set forth in theosophical literature: atman (the essential principle of selfhood and therefore the highest) is the same in both; karana-sarira is equivalent to buddhi and the higher manas; sukshma-sarira comprises manas and kama; while sthula-sarira takes in the three lower principles — prana, linga-sarira, and sthula-sarira. The reason for the two classifications is that Subba Row fastened “attention on the monads, looking upon the universe as a vast aggregate of individualities; while H. P. B. for that time of the world’s history saw the need to give to the inquiring Western mind . . . some real explanation of what the composition of the universe is as an entity — what its ‘stuff’ is, and what man is as an integral part of it. Now the seven principles are the seven kinds of ‘stuff’ of the universe. . . . [however] we must not have our minds confused with the idea that the seven principles are one thing, and the monads are something else which work through the principles as disjunct from them” (FSO 443-4). *See also* PRINCIPLES.

Four Maharajas. *See* MAHARAJA; CHATUR-MAHARAJAS

Four Noble Truths. *See* ARYASATYA; ARIYASACHCHA

Fourteen A septenate in which each member is dual. In the Hindu *Laws of Manu*, fourteen manus are enumerated; and in theosophy a root-manu and a seed-manu are given for each round. In a Hindu allegory, there arise from the churning of the ocean fourteen “precious things,” which in a corresponding Japanese system are enumerated as seven. *See also* KURMA-AVATARA

Fourth Continent. *See* ATLANTIS

Fourth Dimension A subject on which there is great confusion, owing chiefly to failure to distinguish between physical concepts and the concepts of pure geometry. Physical bodies are three-dimensional, neither more nor less; anything with fewer or more dimensions is not a physical body. In pure mathematics we may assume as many or few so-called dimensions as we like, as independent variables, and use this formulation in the interpretation of phenomena. Thus we can represent motion or position in time by a vector or a line, and thus devise a special calculus for the interpretation of physical phenomena, which we may call a space-time continuum. But we err if we try to imagine the existence of one-, two-, or four-dimensional *physical* bodies. It is of course easy to calculate how many sides, edges, such a transcendental body *would* have, supposing it could exist; but such calculations are purely algebraic. Such cloudy speculations have been seized upon to explain such phenomena as spiritualism and UFOs. However, this dimensional calculus is only useful for the interpretation of nonphysical ideas or phenomena — for example, the phenomena of thought or emotion — where physical concepts have been abstracted from our mind.

Fourth Globe or Sphere The globe D of any planetary chain, especially of our earth-chain. The lowest of the chain, because it is by itself on the lowest of the series of cosmic planes in which a planetary chain is manifesting. *See also* PLANETARY CHAIN

Fourth Principle In any septenate the fourth is the middle, and in the sevenfold human constitution it is the kama or animal soul which forms a link between the higher and lower triads, a contact-field between spirit and matter, whether cosmically or in man. This principle is fully developed during the course of the fourth round, as a fit vehicle for the next higher principle. Among the principles which create worlds, fohat in its secondary aspect as solar energy, electric vital fluid, or animal soul of nature, is denoted as the preserving fourth principle. *See also* KAMA: PRINCIPLE

Fourth Race. *See* ROOT-RACE, FOURTH

Fourth Round. *See* ROUND, FOURTH

Fravashi (Avestan) **Fravahr** (Pahlavi), **Fravati** (old Persian) [from *fra* before + *var* to grow upright, incline upward, be true] Sometimes Farvarshi. Primeval truth; the alter ego or spiritual counterpart of every entity. "The Fravashi is the inner power in every being that maintains it and makes it grow and subsist. Originally the Fravashis were the same as the Pitris of the Hindus or the Manes of the Latins, that is to say, the everlasting and deified souls of the dead; but in course of time they gained a wider domain, and not only men, but gods and even physical objects, like the sky and the earth, etc., had each a Fravashi" (Darmesteter, *Farvardin Yasht* 179).

In Yasna 26 five different faculties for understanding or five stages of consciousness are mentioned: Ahu, Daena, Baudha, Urvan, and Fravashi (the need of upright growth). In the *Bundahish* (ch 1), Ahura-Mazda produces a preparatory creation of embryonic and immaterial existences, the prototypes, fravashis, spiritual counterparts of the guardian angels of the spiritual and material creatures afterwards produced.

Ahura-Mazda, previous to the material creation, consults with the Fravashis of men (the sons of light) and these guardian spirits of men choose to fight the adversary, Ahriman, in a bodily form.

Cosmically it is the celestial double of lower celestial beings, the cosmic Christos or universal spirit (SD 2:478).

Freemasonry. *See* MASONRY

Free Will The inherent power or capacity of choice, divine in its origin, which every being in the kosmos exercises in some degree as, consciously or unself-consciously, it evolves forth its essential self. Every thing and being has its own essential characteristic or svabhava and, the universal urge being towards self-expression and self-consciousness, of necessity each has its relative share of inherent free will with which to work out its destiny. Since evolution is a coming forth of the involved monadic essence, the unfolding of inner capacities and attributes, it cannot be produced, however stimulated, by something outside of itself. The one divine will is the force behind evolution on all planes of manifestation throughout the kosmos. Hence, each entity, as a unit of the divine All, has its portion of free choice and power to bring forth what is within itself.

Free will is manifesting, however feebly, in vegetative or automatic action in the whirling electrons of the atom; also in characteristic actions of matter, such as cohesion, polarity, and electricity; in the varied growths of vegetation; in the range of animal activities; in the evolving human being, and in the perfected humans called gods; and so forth up the scales of being. It acts in the urge which brings the monad to cast off its former garments in the minerals in order to assume new ones in the vegetable kingdom, from which again, after casting off these latter, it progresses to the animal kingdom; and from this again, the monad rejects beast forms and assumes the human shape where it gains in range and momentum because now acting self-consciously in greater or less degree.

The karma which brings to a person conditions which he does not choose or wish for in his present life, is yet consistent with his free will because he is the result of all his previous actions, now expressing themselves in results. These reactions of causes which he set in motion in this or in former lives, being the result which was inherent in his previous choices, is a self-imposed destiny; but it is *not* fatalism, because *he is now free to decide* again how he will meet the results of what he previously had chosen for himself. Karma is mathematically exact, both physically and metaphysically, but it is so constantly involved with new elements of choice and of proportion that its effects of necessity are measured on a sliding scale of being, so to say.

There is an automatic phase of free will in the purposeful instinct which marks the various activities of even minute and lowly forms of life. The unself-conscious beasts are protected, and therefore guided, by the wills of celestial beings who make the so-called laws of nature, yet even the beasts instinctively choose to run true to their own inner types or *svabhava*. They unconsciously *will* to be themselves and to copy no other. They have free will exactly in proportion to their consciousness, just as any person has it in the higher degrees of his intelligence and more active intuition. Thus human beings have the power to work out their evolution, for the kingdom of heaven is taken by strength. The gods have gone ahead on the pathway towards omniscience — so far as our universe is concerned — by their own individual efforts consciously to act with an ever-enlarging measure of harmony with the one divine will. Thus the volume or power of free will is in strict proportion with the degree in which the entity has brought forth the central spark of divine willing fire which animates all that is. Nevertheless no single being or entity has completely unfettered and perfectly irresponsible free will, because of its *relative* imperfection and because of its inescapable subordination to greater wills, each such entity ever evolving from its stage of imperfection as it ascends along the scales of being: those on the higher rungs of the hierarchical ladder consciously *willing* in ever-enlarging degree to follow the greater divine will which holds all in its keeping.

Frey, Freyr, Fro (Icelandic, Scandinavian) [from *fro* seed; Anglo-Saxon *frea*; Swedish *frojda* rejoice] The Norse god associated with the earth: in theosophy he represents the planetary chain whose soul-world (Alfhem) was his “teething gift in the morning of time.” Frey and his sister Freya,

goddess of the planet Venus, are the children of Njord, the Norse Saturn-Chronos.

At the formation of the globe earth, in which Frey embodied, the dwarfs fashioned for Frey the magic ship Skidbladnir [from *skida* ski + *blad* blade] which contains the seeds of all living things but which can be folded up like a kerchief when its lifetime has elapsed. Frey is also owner of the magic sword (spiritual will) which is invincible in battle against giants (matter) provided the wielder is pure and resourceful. He is the god of sunshine and fertility.

Freya, Freyja, Froja (Icelandic, Scandinavian) Lady; Norse goddess of the planet Venus and sister of Frey, god of the planet Earth. Both are children of Njord, the Norse Saturn-Chronos, patron of the planet Saturn and the representative of time. Hence Frey and Freya are the children of time and due to end in time.

Freya, the goddess of love and beauty, corresponds to the Greek Aphrodite and the Roman Venus. As the higher intelligence of the planet Earth, she is the sponsor and supporter of motherhood, the family, and of the human race. She wears on her breast the “fiery jewel” Brisingamen, representing humanity’s finest characteristics. Often confused with Frigga, she is in certain respects interchangeable with her, inasmuch as the divinities of the solar system have strong correspondences with one another. Sacred to Freya is Friday (as Vendredi is to Venus).

Frigga, Frigg (Scandinavian, Icelandic) In the Norse Edda, the consort of Allfather Odin and wise mother of the aesir (gods) and of all creation. She spins the clouds (nebulae) and knows every being’s destiny. In Valhalla she “receives half the fallen” — Odin’s warriors who battle daily on Vigridsslatten (the plain of consecration); she has been connected with the planet Venus, but this properly belongs to Freya, with whom Frigg is sometimes confused.

Frog One of the oldest symbols in Egypt, for although associated particularly with the frog goddess Heqet, the four primeval gods of Egypt — Heh, Kek, Nau, and Amen — were each depicted with a frog’s head, the reference here being to the cosmic waters of space, out of which all things arose in the beginnings. Frog gods and goddesses were associated with the beginning or formation of the world, the symbol of the frog itself being that of resurrection and hence of renewed birth. “There must have been some very profound and sacred meaning attached to this symbol, since, notwithstanding the risk of being charged with a disgusting form of zoolatry, the early Egyptian Christians adopted it in their Churches. A frog or toad enshrined in a lotus flower, or simply without the latter emblem, was the form chosen *for the Church lamps*, on which were engraved the words ‘I am the resurrection’ . . . These frog goddesses are also found on all the mummies” (SD 1:386).

Frost Giants, Rime Thurses In the Norse Eddas, the primeval hrimthurses [from Icelandic, Scandinavian *hrim* rime + *thurs*, *thruse* giant] or frost giants are ponderous, motionless, totally mindless and stupid, to illustrate that their characteristics are those of nonliving, inert matter, not formed or organized in any way. They are the equivalent of the Greek Chaos. They represent ages

of nonlife between manifestations of universes, corresponding to the Sanskrit pralaya (dissolution). They depict graphically the stage of utter cold, unmoving “wavelessness” when no atoms move and therefore nothing exists. The frost giant from whose limbs the creative deities brought into being the spheres of life in the universe is named Ymir. His slaying marked the creation of worlds, when the gods “raised the tables” (spheres) where the deities feast on the mead of experience. The rime-thurses are said to be born from Ymir’s feet.

Ymir becomes Orgalmer when he is transformed into the primeval sound which gives rise to the range of vibrations or substantiality of which our world is built. Orgalmer becomes Trudgalmer during the period of activity of the universe, and culminates as Bargalmer, who is “placed on a boat keel and saved” or “ground on the mill” to be re-used in future existences. This sequence parallels the Hindu progression where Brahma (the expander) propels the universe into being, Vishnu sustains it, and Siva destroys its manifestation.

The Edda’s frost giants should not be confused with the giants and their daughter giantesses, or giant maidens, which represent periods of life and activity. The gods are energetic consciousnesses (monads) at all-varying stages of evolution; the giants are their physical expressions or forms, whose lifetimes, however long, are limited. The giants’ daughters represent lesser life periods, several daughter races together comprising their father-race.

Fulgur (Latin) Lightning; one aspect of Zeus or Jupiter as a cosmic god, was as Jupiter fulgurans (Jupiter when expressing his power as lightning).

Fullness, Doctrine of the. See PLEROMA

Fundamental Propositions In theosophy, the three fundamental religio-philosophic principles or propositions which Blavatsky states in the Proem to *The Secret Doctrine* are the foundation on which theosophy presents its modern philosophical teachings: 1) “An Omnipresent, Eternal, Boundless, and Immutable Principle on which all speculation is impossible, since it transcends the power of human conception”; 2) “The Eternity of the Universe *in toto* as a boundless plane; periodically ‘the playground of numberless Universes incessantly manifesting and disappearing’”; and 3) “The fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul — a spark of the former — through the Cycle of Incarnation (or ‘Necessity’) in accordance with Cyclic and Karmic law, during the whole term” (SD 1:14-17). There are also three fundamental propositions in volume 2:

As regards the evolution of mankind, the Secret Doctrine postulates three new propositions, which stand in direct antagonism to modern science as well as to current religious dogmas: it teaches (a) the simultaneous evolution of seven human groups on seven different portions of our globe; (b) the birth of the *astral*, before the *physical* body: the former being a model for the latter; and (c) that man, in this Round, preceded every mammalian — the anthropoids included — in the animal kingdom. — 2:1

Fung Shui, Feng Shui (Chinese) Wind, rain, or water; the science and art which tends to realize the ideal aim that every human dwelling place — village or city, fields and surrounding regions, roads, gates, temples; in fact everything connected with human activities upon earth — must be situated and constructed so that the universe can exercise as completely as possible its favorable influences upon them.

Also called *khan yu* (heaven and earth) in Han literature.

Ga-Gl

Gabriel (Hebrew) *Gabrī'ēl* [from *geber* might, power + *'ēl* divinity, god] Power or might of God, my power of divinity; in the New Testament represented as one of the archangels who stand in the presence of God, sent to announce to Mary the birth of Jesus (Luke 1:19, 26-31). Among the Nazarenes, Aebel Zivo was also called Gabriel Legatus (Gabriel the Messenger). With the later Jews Gabriel was regarded as one of the seven archangels; likewise in Christian theology he belongs to the hierarchy of archangels and perhaps to the first, which are equivalent to the virgin angels or kumaras (SD 2:246). The angel Gabriel watches over Iran or Persia, according to popular view; and in Ezekiel's vision of the cherubim or the four sacred animals, the face of the eagle corresponded to Gabriel. In ancient astrology, he was the ruler of the moon and the sign Taurus.

With the Gnostics the term spirit or Christos was known as the messenger of life, also called Gabriel, which Irenaeus states took the place of the Logos born of the cosmic Mother or Holy Spirit, while the Holy Spirit was considered one with the aeon, cosmic life. Gabriel is also one with the higher ego or inner divinity.

Gaea. See GAIA

Gaekarena. See GOKARD

Gaganesvara (Sanskrit) *Gagaṇeśvara* [from *gagaṇa* sky or the verbal root *gam* to go + *īśvara* lord] The lord of the sky, the lord of those who move; title of Garuda because of his dazzling splendor, for Garuda represents an occult aspect of the sun, most especially as the occult lord of migrating and peregrinating monads within the solar system. Garuda often is represented as a flying or wandering bird.

Gah (Pahlavi-Persian) In Zoroastrian tradition, a day is broken into five periods or gahs: the period of daybreak, the period of midday, the period of afternoon, the period after sunset to midnight,

and the period from midnight until the stars disappear. The second was the most celebrated gah because when the sun was at its meridian and there was no shadow, Ahura-Mazda performed the ceremony of prayer with the Amesha-Spantas in order to overcome the adversary.

Gahambars In Zoroastrianism, the six periods, or the periodical evolution of the world. These include Maidyoizaremaya when the heavens were formed; Maidyoisema when water originated; Paitishahya when earth solidified; Ayathrima when vegetation arose; Maidyairya when animal life appeared; and Hamaspathaedaya when man appeared. A seventh cycle is supposed to come after a certain cycle, after which the Persian Messiah will appear, seated on a Horse. (BCW 3:462)

Gaia, Gaea, Ge (Greek) [cf Latin *Tellus, Terra* earth] One of the older gods, described as the first being that sprang from Chaos and as giving birth to Uranos (heaven) and Pontos (sea); yet it was by Uranos that Gaia gave birth to the titans, cyclopes, and hecatoncheires. This apparent anomaly is due partly to the variable meaning of the word earth, which may mean either primordial matter in process of formation, or the earth as already formed. Gaia is thus in one sense equivalent to Aditi or the great cosmic deep. With Chaos and Eros, Gaia forms the primeval trinity. Gaia is represented by its initial, gamma, which is also the third letter in the Greek alphabet and thus indicates the third stage of cosmic evolution. As the primordial mother, she was worshiped as the nourisher of all things, also as the goddess of death to whom all must return.

Gai-hinnom. See GEI' HINNOM

Galukpas. See GELUKPAS

Gambanteinn, Gammanten (Icelandic) [from *gamban* repay + *teinn* staff; or from Swedish *gamman* joy + *ten* staff] Used in the Icelandic Edda in Skirnismal to denote a magic rod with which the messenger of the god Frey, Skirner (radiance), sought to woo the giantess Gerd (a race of humanity) on the god's behalf. The tale appears to relate an avataric descent to the human world.

Gamma Third letter in the Greek alphabet. Its capital form often stands for Gaia, the goddess or divinity of earth, which in its cosmic aspect is the third stage of evolution. Alphabetically it corresponds to gimel, the third letter in the Hebrew alphabet; and in the English alphabet is replaced by the hard guttural, C.

Gan-Aeden. See GAN-EDEN; EDEN

Gana (Sanskrit) *Gaṇa* [from the verbal root *gaṇ* to count] A group, flock, troop, multitude, number, class, etc.; in the plural used for troops or classes of inferior deities (devatas), considered as Siva's attendants, and under special superintendence of the god Ganesa (often used in the compound forms Ganadevata or Ganadevas). These celestial beings are said to inhabit maharloka: "They are the rulers of our Kalpa (Cycle) and therefore termed Kalpadhikarins, or Lords of the Kalpas. They last only 'One Day' of Brahma" (TG 124).

Also a series of asterisms or lunar mansions placed in three classes: that of the gods, men, and rakshasas.

Ganapati (Sanskrit) *Gaṇapati* Ganesa. *See also* GANESA.

Gandapada. *See* GAUDAPADA

Gandhara (Sanskrit) *Gāndhāra* The third of the seven primary notes of the Hindu musical scale. *See also* SHADJA

Gandharvas (Sanskrit) *Gandharva*-s Hindu devas or divinities called celestial singers or musicians. Esoterically they are intermediaries between the gods and mankind, and hence can be called the instructors of humanity in the secret science.

“The Gandharva of the Veda is the deity who knows and reveals the secrets of heaven and divine truths to mortals. *Cosmically* — the Gandharvas are the aggregate powers of the solar-fire, and constitute its Forces; *psychically* — the intelligence residing in the *Sushumna*, Solar ray, the highest of the *seven* rays; *mystically* — the occult force in the Soma (the moon, or lunar plant) and the drink made of it; *physically* — the phenomenal, and *spiritually* — the noumenal causes of *Sound* and the ‘Voice of Nature.’ Hence, they are called the 6,333 ‘heavenly’ Singers and musicians of Indra’s loka who personify (even in number) the various and manifold sounds in Nature, both above and below. In the latter allegories they are said to have mystic power over women, and *to be fond of them*. The esoteric meaning is plain. They are one of the forms, if not the prototypes, of Enoch’s angels, the Sons of God, who saw that the daughters of men were fair (Gen. vi.) who married them, and taught the daughters of the Earth *the secrets of Heaven*” (SD 1:523n).

The heavenly consorts or saktis of the gandharvas are the apsarases, their negative or vehicular aspects, much as a person’s soul is the container and vehicular expression of his spirit and will.

The gandharvas are similar to the various classes of Greek daimones or to the classes of the Christian angels; the highest classes of the angels, or the highest gandharvas, are equivalent to the higher dhyani-chohans. They are intelligent streams in the cosmic economy, at times active and at times passive in the working out of karmic destiny.

Gandunia(s). *See* GAN-EDEN

Gan-Eden (Hebrew) *Gan ’Ēden* [from *gan* garden, park + *’ēden*] Sometimes Gan-Aeden, Gandunia. The garden of Eden; in the Assyrian tablets it is rendered gan-dunyas or gan-dunu, which is also a name of Babylonia. *See also* EDEN; PARADISE

Ganesa (Sanskrit) *Gaṇeśa* The Hindu god of wisdom, son of Siva, who lost his human head which was replaced by that of an elephant. As he who removes obstacles, he is invoked at the commencement of any important undertaking, likewise at the beginning of books. In some

respects he is thus equivalent to the Egyptian Thoth or Thoth-Hermes, the scribe of the gods. Ganesa is the chief or head of multitudes of subordinate spiritual entities — a necessity if as the god of wisdom he accomplishes his cosmic labors through subordinate hierarchies of intelligent and semi-intelligent beings, acting as their director or guide in forming and guiding nature.

Ganga (Sanskrit) *Gaṅgā* The Ganges, the sacred river of India. The Puranas and old tales of India represent the goddess Ganga transforming herself into a river and then flowing from the toe of Vishnu. She is said to have been brought from heaven by the prayers of Bhagiratha to purify the ashes of the 60,000 sons of King Sagara who had been consumed by the angry glance of the sage Kapila.

The Ganges, like many other ancient, highly revered streams, was an emblem of the flowing from spirit to matter, or from celestial realms to material, of occult forces including streams of wisdom and power flowing from heaven to earth or from gods to mankind, an idea which once understood kept perennially before people's minds the reality of the spiritual worlds and their intimate interconnection with the realms of physical space and time.

As the true interpretation of this old tale gradually was lost, there arose the religious belief that the actual waters of the Ganges were sin-cleansing, reminiscent of the supposed sin-cleansing power of the river Jordan in Christian and even in certain Jewish thought.

Gangadvara (Sanskrit) *Gaṅgādvāra* [from *gaṅgā* the Ganges river + *dvāra* door] The door or opening of the Ganges; a town, now called Hardwar, at the foot of the Himalayas where legend says the sage Kapila sat in meditation for a number of years.

Ganga-Putra (Sanskrit) *Gaṅgā-putra* Son of the Ganges; among other things, a name of Karttikeya, the Hindu god of war.

Ganges River. See GANGA

Gangi (Sanskrit) *Gaṅgi* A renowned sorcerer, according to legend, in the time of Kasyapa Buddha, a predecessor of Gautama Buddha; regarded as an incarnation of Apalala, a naga who was the guardian spirit of the sources of the Subhavastu, a river in Udyana. Apalala is said to have been converted by Gautama Buddha and to have become an arhat.

Ganymede [from Greek and Latin *Ganymedes*] The fairest youth among mortals, abducted by Zeus. One interpretation is that when Ganymede, standing for objects of low desire, is seized by the World Lord of a darker cycle, Astraea, goddess of justice and purity, is cast out, and the Golden Age is then over (SD 2:785); astronomically, it stands for an inversion of the earth's poles, which casts down Virgo (Astraea) and brings up Aquarius (Ganymedes).

Gaekarena, Gaokerena. See GOKARD

Garden of Eden. See EDEN; GAN-EDEN; PARADISE

Garm (Icelandic) The hound of Hel, queen of the underworld, depicted in the Eddas as bloody-jawed and chained in the Gnipa cave at the entrance to her realm. At the last battle he will break his bonds and battle with the god Tyr whereupon each will be bane to the other.

Garuda (Sanskrit) *Garuḍa* In Hindu mythology a gigantic half-man and half-bird, born from an egg brought forth by Vinata, wife of Kasyapa, the self-born sprung from time and one of the seven emanators of the world. Symbol of the great cycle or manvantara, Garuda is also an emblem of the sun and the solar cycle. He is made coeternal with Vishnu as one aspect or manifestation of Vishnu himself, who therefore is often described as riding on Garuda as Vishnu in space and time. Garuda's son is Jatayu who in the *Ramayana* rushed to rescue Sita when she was carried off by Ravana, the Rakshasa king of Lanka, but was slain in the ensuing conflict.

Garuda Purana (Sanskrit) *Garuḍa Purāṇa* One of the 18 principal Puranas of ancient India, relating principally to the birth of Garuda from Vinata.

Gates of Horn and Ivory. *See* WIND

Gates of Wisdom Qabbalistic term meaning, among other things, that a candidate for occult wisdom must pass through successive gates in order to attain the highest knowledge possible to human beings. A common figure of speech in the ancient world, e.g., Egypt. In the Qabbalah fifty gates are enumerated, but

“the number is a *blind*, and there are really 49 gates, . . . These ‘gates’ typify the different planes of Being or *Ens*. They are thus the ‘gates’ of life and the ‘gates’ of understanding or degrees of occult knowledge. These 49 (or 50) gates correspond to the seven gates in the seven caves of Initiation into the Mysteries of Mithra (see Celsus and Kircher). The division of the 50 gates into five chief gates, each including *ten* — is again a blind. It is in the fourth gate of these five, from which begins, ending at the tenth, the world of Planets, thus making seven, corresponding to the seven lower Sephiroth — that the key to their meaning lies hidden. They are also called the ‘gates of Binah’ or understanding” (TG 120).

Gatha (Sanskrit) *Gāthā* [from the verbal root *gā* to sing] A song, metrical hymn, or verse; usually applied to a verse consisting of a moral aphorism which belongs not to the Vedic writings but to the Itihasas or the epic poetry and legends of a later date. A gatha of eight equal feet or 32 syllables is called aryagiti.

Gati (Sanskrit) *Gati* Way, course, path; “the six (esoterically *seven*) conditions of sentient existence. These are divided into two groups: the three higher and the three lower *paths*. To the former belong the devas, the asuras and (*immortal*) men; to the latter (in exoteric teachings) creatures in hell, pretas or hungry demons, and animals. Explained *esoterically*, however, the last three are the *personalities* in Kamaloka, elementals and animals. The seventh mode of existence is that of the Nirmanakaya . . .” (TG 125).

A gati is the path or sphere of existence entered upon by entities impelled because of past karma. If a person lives a noble and upright life, his gati will be the path or sphere of humanity in its higher aspects. If he deliberately lives an evil, degenerate existence, his course or next sphere of existence will be a rebirth in some degenerate human form or sphere of activity. Similarly with the divinities and all other entities: they find their succeeding spheres of life and action strictly according to karma. For karma is universal; and what one makes himself to be, that in very truth he shall become. The becoming in every instance and sphere of the manifested universe is according to the persisting karmic conditions impelling, and occasionally compelling, an entity into this, that, or some other of the gatis.

Gatra (Sanskrit) *Gātra* [from the verbal root *gā* to go, move] A limb or member of the body; in the plural, mystically refers to the limbs of Brahma, from which the seven mind-born sons, the kumaras or manasaputras, are said to be born. The feminine form sometimes is used as a name of the earth, the Mover.

Gaudapada (Sanskrit) *Gauḍapāda* A celebrated Brahmin teacher, author of the Commentaries on the *Sankhya-Karika*, *Mandukya-Upanishad*, and other works.

Gaudapadacharya (Sanskrit) *Gauḍapādācārya* The teacher Gaudapada; Sankaracharya's guru or teacher of philosophy.

Gauramukha (Sanskrit) *Gauramukha* [from *gaura* shining, brilliant, beautiful + *mukha* face] The purohita or family priest of Ugrasena, king of Mathura.

Gauri (Sanskrit) *Gaurī* Feminine adjective brilliant, beautiful. Frequently used for feminine beings or entities, it means a maid; the earth; the goddess Parvati; consort of Siva and of Varuna; and likewise the Mother of Sakyamuni, Gautama Buddha.

Gautama (Sanskrit) *Gautama* Gotama (Pali) The sacerdotal name of the Sakya family, hence the name of Prince Siddhartha, the son of Suddhodana of Kapilavastu. Gautama Buddha was also called Sakyamuni, meaning the muni or sage of the Sakyas.

Gavel. See MALLET

Gaya (Sanskrit) *Gayā* A famous city of pilgrimage in Bihar, India, a little north of the modern Bodhgaya, where Sakyamuni reached buddhaship.

Gayatri or **Savitri** (Sanskrit) *Gāyatrī*, *Sāvitrī* [from the verbal root *gā* to sing] A verse of the *Rig-Veda* (III, 62, 10): Tat savitur varenyam bhargo devasya dhimahi dhiyo yo nah prachodayat, "Let us meditate on that excellent splendor of the divine sun; may it illumine (inspire) our hearts (minds)."

Every orthodox Brahmin is supposed to repeat this archaic hymn, at least mentally, at both his morning and evening religious devotions. An explanatory paraphrase, giving the inner meaning of

the Gayatri is: O thou golden sun of most excellent splendor, illumine our hearts and fill our minds, so that we, recognizing our oneness with the divinity which is the heart of the universe, may see the pathway before our feet, and tread it to those distant goals of perfection stimulated by thine own radiant light.

“First it [the light of the Logos] is the life, or the *Mahachaitanyam* of the cosmos; that is one aspect of it; secondly, it is force, and in this aspect it is the *Fohat* of the Buddhist philosophy; lastly, it is wisdom, in the sense that it is the Chichakti [Chichchakti] of the Hindu philosophers. All these three aspects are . . . combined in our conception of the Gayatri” (N on BG 90).

Gayomard, Gayo-martan. See KAYUMARS

Geber (Hebrew) *Geber* [from *gābar* to be strong, plural *gibbōrīm*] Man, with the connotation of might or strength; hence a mighty or strong man. Intimately connected with the word *kabbirim* (*kabiri* or *kabeiroi*), *geber* has a triple meaning, signifying a mighty spiritual power or being, of angelic character, as well as giants or titans on earth — the latter the reflection of the former. The planets, likewise, because of their indwelling spiritual angels or rectors, are frequently called by the same name. See also *Gibborim*.

Ge’boorah. See GEBURAH

Geborim. See GEBER; GIBBORIM

Geburah (Hebrew) *Gēbūrāh* Strength, might, power; the fifth Sephirah, also called Pahad (fear) and Din (judgment, justice), emanated from the four preceding Sephiroth. It is regarded in the Qabbalah as a passive potency, a feminine aspect, the second in the left pillar of the Sephirothal Tree. Its Divine Name is usually pointed by Qabbalists ’Eloha, though this word is most often found in its slightly shortened form of ’Eloah or ’Eloha. In the Angelic Order Geburah is represented as the Seraphim. In its application to the human body, it is regarded as the left arm; while in its application to the seven globes of a planetary chain it corresponds to globe A (SD 1:200). From this Sephirah is emanated the sixth, Tiph’ereth.

Gedong, Gyelong, Gelung (Tibetan) *dge slong* (ge-long) Buddhist monk, translating Sanskrit *bhikshu*.

Gedulah (Hebrew) *Gēdūlāh* Greatness, majesty; in the Qabbalah, another name for the Sephirah Hesed.

Geh (Pahlavi) A wicked female demon who comes to the assistance of Ahriman to vex Ahura-Mazda’s creation.

Gehenna. See GEI’ HINNOM

Gehs. See GAH

Gei' Hinnom (Hebrew) *Gēi' Hinnōm* Also Gai-hinnom. The valley of Hinnom, generally rendered as by the Greek Gehenna, situated south of Jerusalem, in which was Tophet where children were at one time sacrificed to Moloch (2 Kings 23:10). Later the place was used as a crematorium for the refuse of the city, perpetual fires being kept for that purpose. In the Bible it is translated as hell or hell of fire, but the Hebrew word bears no such interpretation. The Greek Gehenna “is identical with the Homeric Tartarus” (IU 2:507).

In the Zohar and Talmud, the place of purification. After death, Dumah (the Angel of Death, or the shadowy land of silence, the region of the astral dead — She'ol, Hades, the underworld) leads the impure Neshamah to the dwelling of Gei' Hinnom, where it must be purified in order to proceed upon its journey (Zohar i 218b). Just as cities need a crematorium for purifying purposes, so has the earth a gehenna, a planet like our own which is “termed by the occultists the *eighth* sphere . . . on which all the dross and scorification of the cosmic matter pertaining to our planet is in a continual state of remodelling” (IU 1:328).

Geist (German) Spirit.

Gelukpas (Tibetan) *dge lugs pa* (ge-lug-pa, ge-luk-pa) Also Gelugpas. Model of virtue, or a contraction for earlier names of Tsong-kha-pa's school *dga' ldan pa'i lugs*, or *dga' ldan lugs pa*, derived from the name of the great monastery of Ganden (*dga ldan*) which he founded. Those who follow the precepts inaugurated by the Tibetan Buddhist reformer Tsong-kha-pa (1358-1417).

Buddhism was introduced into Tibet in the latter half of the 8th century, but was colored by a Tantric element and Bon, the pre-Buddhist Tibetan religion, both of which were quite foreign to the teachings of Gautama Buddha. The state of the priesthood was then so low, and the religion so degraded, that the reforms instituted by Tsong-kha-pa were generally welcomed. A far stricter code of morals was laid down for the priests who were forbidden to marry or to drink wine; and to distinguish the Kah-dum-pas (those bound by ordinances), the wearing of yellow robes and hoods was inaugurated in contradistinction to the red robes and the black robes of the degenerate sects; hence following Chinese usage, the Gelukpas are commonly called the Yellow Caps, Yellow Hats, or Yellow Hoods.

Tsong-kha-pa founded the large lamaseries at Ganden and Sera, which with the Drepung lamasery were the three most powerful religious bodies in Tibet — called the Three Pillars of the State (*den-sa sum*). His successor Geden-tub-pa founded the monastery of Tashi-lhunpo — which in the 17th century became the residence of the Panchan Lama. In 1641 the Red Caps were completely subdued by the Oelot Mongols, by request of the fifth Dalai Lama (Lob-sang Gyatso); and ever since the Dalai Lamas have held the temporal sovereignty of Tibet, adhering to the Reformed Buddhism of the Gelukpas.

Gelung. See GEDONG

Gemara' (Hebrew) *Gēmārā'* [from the verbal root *gāmar* to complete, perfect] Teaching leading to full initiation; the supplementary part of the Talmud based upon the Mishnah. The arrangement of the present Gemara' is attributed originally to Rabbi Ashi (352-427).

Gematria [Hebrew/Aramaic *gēmaṭriyā'* from Greek *geōmetría* geometry] A Qabbalistic system of interpreting the Bible, consisting in finding the numerical value of a word or words — the 22 letters of the Hebrew alphabet each designating a number — and then substituting another word whose numerical value is equivalent to the one under consideration. Another method is that of using arithmetical values of words and phrases for interpretation of scriptures. This method forms *one* of the keys of interpreting sacred scriptures, although a very minor one, and in the hands of one who is inexpert an almost useless method.

Gemini The Twins; third zodiacal sign, an airy, masculine, common or mutable sign, corresponding to the shoulders, lungs, and arms. It governs the west and is the diurnal house of Mercury.

In Sanskrit the third sign is called Mithuna (pair, couple, also male and female); in the Hebrew system, assigning the twelve sons of Jacob to the twelve signs of the zodiac, Simeon and Levi represent Gemini.

Gemmation. See BUDDING

Genesis (Greek) Beginning; generation; birth, production; the first book in the Bible as translated into Greek, whose opening chapters deal with the genesis of worlds and creatures. The Book of Genesis is based on the cosmogony of the Chaldeans.

“The first three chapters are transcribed from the allegorical narratives of the beginnings common to all nations. Chapters four and five are a new allegorical adaptation of the same narration in the secret *Book of Numbers*; chapter six is an astronomical narrative of the Solar year and the seven *cosmocratores* from the Egyptian original of the Pymander and the symbolical visions of a series of *Enoichioi* (Seers) — from whom came also the Book of Enoch. The beginning of Exodus, and the story of Moses is that of the Babylonian Sargon, who having flourished . . . 3750 B.C. preceded the Jewish lawgiver by almost 2300 years. (See *Secret Doctrine*, vol. II., pp. 691 *et seq.*) Nevertheless, *Genesis* is an undeniably esoteric work. It has not borrowed, nor has it disfigured the universal symbols and teachings on the lines of which it was written, but simply adapted the eternal truths to its own national spirit and clothed them in cunning allegories comprehensible only to its Kabbalists and Initiates” (TG 127).

Genius, Genii (Latin) [from the verbal root *gen* birth, innate] Generally an indwelling spiritual or ethereal being, as contrasted with a corporeal being. Genii are the active individualizing beings or

elements in the constitution of any entity, although invariably of ethereal or spiritual type. For instance, in the human being, the intellectual genius is the manasaputra in our constitution; likewise our astral genius is the vital-astral monad, or astral person.

In one significance, a genius is an instructing divinity, but not necessarily of the higher classes. In the special sense found in Greek and Roman belief, the genii were personal tutelary deities of human beings, assigned to each one at birth, attending him through life, and conducting him to Hades at death. This genius was honored by rites and sometimes deified. The word is also used, as *genius loci*, to mean the deity that presides over a locality or over some topographical feature. These are the ethereal, as distinguished from the corporeal, forces in nature.

The word genius is also applicable to the divine instructors of individuals and races; while with the Gnostics it stood for aeons or angels. Atom, in its original sense and not as denoting a particle, is equivalent to genius, for in this original sense it is equivalent to the theosophical term life-atom.

The word is also familiar in its evil side, in the expression evil genius. Human beings hover between the influence of benign and malign powers which have been personified into guardian angels and besetting demons, or good and evil stars. The good and evil genii of the individual are among the karmic conditions which, interacting with free choice, modify his ruling destiny; they are either the heavenly voice of the invisible spiritual prototype, or the lower astral person.

In the wider meaning, genius stands for so great a range of beings as to comprise virtually all the hierarchies of dhyān-chohans, operative on all inner planes, including those denoted by god, deva, angel, daimon, etc.

In modern usage, genius is exalted intellectual power and creative ability, a remarkable aptitude for some special pursuit, which is the greatest responsiveness of the brain and brain-memory to the higher manas or mind. The bent or especial aptitude along a particular line is due to efforts made along that line in past lives now coming forth in force, and relatively unhindered by the necessity of having to go through every step of the learning stages. It is as though the genius is enabled to tap the garnered treasury of wisdom stored within the reincarnating ego, and it flows forth through his mind unhampered; whereas the average person, except at odd inspirational moments, cannot regularly make the connection with this inner store of wisdom and knowledge. *See also* JINN

Geocentric Theory A theory in which the earth is regarded as being at the center of the solar system, usually referring to the system of Claudius Ptolemy. In accordance with ancient teachings, Ptolemy represents the earth as surrounded by ten concentric spheres: those of water, air (or fire), Moon, Mercury, Venus, Sun, Mars, Jupiter, Saturn, and the stars. To account for the actual irregularities of the planetary motions, he introduced eccentrics and epicycles as corrections, and by this means the system, though complicated, is workable. The heliocentric theory reduces the complication and anomaly to order and regularity. However, since we are living on the earth, and

our consciousness is functioning on the corresponding plane, there is considerable justification for the adoption of a geocentric theory; and this may have been done for exoteric purposes by those who were actually aware of the heliocentric theory.

Geological Eras When H. P. Blavatsky was writing about the age of the earth in *The Secret Doctrine* she compared the teachings of the scientists of that time and found nothing but confusion and uncertainty as to geological figures. However, Professor Lefevre in his *Philosophy* adopted an original method of interpreting the data available. Instead of trying to reach exact figures in regard to the length of the entire fossil-bearing period of sedimentation from the Laurentian period to the present day, or of its subdivisions, he worked out the *relative* durations of the sedimentary deposits. With this for a background the actual duration of the eras and periods could easily be calculated when reliable evidence was found. Lefevre's studies were based on the erosion of rocks and the deposition of sediments, and his conclusions have stood with little modification till now. H. P. Blavatsky noticed that his estimates of the *relative* duration of the geological ages agreed fairly well with the 'esoteric' information in her possession, and so by adapting her knowledge of the real figures to Lefevre's proportional scale she constructed a time table which, she says, approximates the truth "in almost every particular." Her total of "320,000,000 years of sedimentation" is much less than that of modern geologists, even though she includes the Laurentian period in her table, which they omit. Her "Esoteric" table (SD 2:710) is as follows:

ROUGH APPROXIMATIONS.

Primordial lasted 171,200,000 years.

Laurentian

Cambrian

Silurian

Primary lasted 103,040,000 years

Devonian

Coal

Permian

Secondary lasted 36,800,000 years

Triassic

Jurassic

Cretaceous

Tertiary lasted 7,360,000 years (probably in excess)

Eocene

Miocene

Pliocene

Quaternary lasted 1,600,000 years (probably in excess).

A glance at the modern table alongside hers will show how greatly modern geologists have extended their time periods. Two reasons are given for this great extension: first, the supposedly known and constant rate of radioactive disintegration in certain minerals found in the rocks; second, the modern belief that biological evolution by natural selection, etc., required far more time than formerly seemed necessary or permissible.

In her Esoteric table Blavatsky, following Lefevre's arrangement, combines the three oldest periods, the Laurentian, Cambrian and Silurian, into her Primordial era. The two latter are now placed in the Paleozoic era, and the Laurentian and older rocks are included within the preceding Precambrian era, an enormously long complex of sedimentary, plutonic and metamorphosed rocks lying in tangled confusion below the Paleozoic strata, and in which forms of life are very scanty or altogether absent. The Precambrian era was longer than all the subsequent eras combined, and probably covers much of the "third round" evolution of life on this globe, for Blavatsky says that her 320,000,000 years of sedimentation, which approximates to the time elapsed since the Precambrian era, refers to this round (the fourth) of the human life-wave, for "it must be noted that even a greater time elapsed during the preparation of this globe for the Fourth Round *previous to stratification*" (SD 2:715n). The tremendous cataclysms and the general transformations of the earth's crust that took place at the end of the third round (greater than any of the "revolutions" that have happened since) destroyed nearly all traces of the third round forms of life. A few living entities, mostly or entirely marine, managed to exist in and survive the great disturbances during the dawning of the opening drama of the fourth round. Their fossils are found in the earliest periods of the Paleozoic era associated with the rather more advanced forms which gradually superseded them (SD 2:712).

The scheme of terrestrial evolution from the standpoint of the ancient wisdom given in *The Secret Doctrine* is, in a few words: the earth we see is the fourth of a sevenfold "chain" of globes which constitutes a single organism, as we may call it. The other six globes are not visible to our gross senses but the entire group is intimately connected. The vast stream of human monads circulates seven times round the earth planetary chain during the great cycle. We are now in the fourth circulation or *round* of the great pilgrimage on our globe and so this period is called the fourth round. While on our globe we pass through seven stages called "root-races," each lasting for millions of years. Each in its turn is subdivided into smaller septenary sections. Each succeeding root-race is shorter than its predecessor, and there is some overlapping. Great geological changes separate each root-race from its successor and only a comparatively few survivors remain to provide the seed for the next root-race.

The individualized life cycles in the rounds are associated with diversities in environment. Each round is a component part of a great serial order of evolution which may be summarized as the

gradual descent of spirit into matter and the subsequent ascent. The first round, even on this globe, was highly spiritual and ethereal: the succeeding rounds are less so, until the middle of the fourth round is reached. After that axial period the process is reversed and by degrees the original state of ethereality is reassumed. A similar process takes place within each round, but on a minor scale — smaller cycles within a dominant one. The physical condition of the earth's substance is modified in a corresponding way. The amazing modern discoveries of the nature of the atom, of its transmutations, and of the transformation of 'matter' into energy have removed any prima facie objections to such a process.

The first root-race of the fourth round was by far the longest of its seven root-races, because within it were included advanced monads from the third round or life-wave on this globe, called *sishtas* (those left behind to serve as "seeds of life" for the returning life-wave in the succeeding round), and other forerunners, who preceded by millions of years the main aggregation of monads that formed the first root-race properly so called. The second root-race was not so long as the first, the third was considerably shorter, and so forth. We are now about halfway through the fifth root-race, and two-and-a-half root-races are still to come before the end of the fourth round on this globe. The fourth round contains the period of greatest materiality for the vehicles of the monad during the entire seven rounds, and during this middle round the ascent of the ladder of spiritual unfoldment begins. Although the "physical" conditions of the entire fourth round were denser than those of its predecessors, the early part of the fourth, which includes the first and second root-races and most of the third, was still quite ethereal and no material traces of man have been left for science to discover. In the fourth root-race, the earth itself became hard and dense.

In regard to the dates and duration of the earlier root-races of the fourth round we are given but little information. We can, however, place the early root-races approximately side by side with the periods and dates given by H. P. Blavatsky in her Esoteric table and reach a fairly close idea of their antiquity. From some casual hints contained in *The Secret Doctrine* it is clear that the first root-race began before the Mesozoic (Secondary) era, most probably in the Pennsylvanian (Carboniferous) period in the Paleozoic, but possibly earlier. According to the Esoteric table this could even be almost 150,000,000 years ago. The ethereal first root-race, which did not know physical "death," gradually blended with the second root-race in the Permian period.

It is noteworthy that there is some parallelism between the root-races and the periods beginning with great geological, climatic, and biological changes called by geologists "revolutions." This applies even to the earliest or ethereal races. At least four and possibly more have taken place, the most important and earth-shaking being that which ushered in the fourth round (about the end of the Precambrian era as already mentioned). As we are only in the fifth root-race no doubt we shall experience other cataclysmic changes during the closing period of this round on this globe. We read in *The Secret Doctrine*:

As land needs rest and renovation, new forces, and a change for its soil, so does water. Thence arises a periodical redistribution of land and water, change of climates, etc., all brought on by geological revolution, and ending in a final change in the axis. — 2:726

The exact duration of the rounds or the root-races has never been given out; and the geologists are not inclined to commit themselves definitely in regard to the length of their eras and periods. But there is no doubt of the actuality of the serial events or cyclic repetitions and of the order in which they occur, irrespective of the number of years that may be assigned to them.

Nothing definite is revealed about the chronology of the four earlier *subraces* of the third root-race, but approximately exact figures are given for the first time when we reach the fifth subrace, and we learn that about 18,618,000 years have elapsed from that subrace to the present day. This period is called by Blavatsky that of “our humanity” because the characteristics of mankind as we understand it — physically, emotionally and mentally — showed their first indications in the fifth subrace.

We have, however, so greatly changed since the monad emerged from the shadowy ethereal vestures or vehicles of “pre-human man” that as Blavatsky says:

that which Science — recognizing *only physical man* — has a right to regard as the *prehuman* period, may be conceded to have extended from the First Race down to the first half of the Atlantean [Fourth] race, since it is only then that man became the “complete *organic* being he is now.” And this would make *Adamic* man no older than a few million of years. — SD 2:315

According to the dating in the Esoteric table, the third root-race was at its peak in the Jurassic period, becoming denser in the Cretaceous period and ending in the early Cenozoic era. It overlapped the fourth root-race, commonly called the Atlantean, which reached its middle period 8-9,000,000 years ago, near the beginning of the earliest division of the Cenozoic era, the Paleocene. The disastrous breaking up of the main Atlantean continental area occurred in the Miocene period, but portions such as the great islands, Ruta and Daitya, lingered until much later, and Plato’s small “island of Atlantis” perished only 11-12,000 years ago.

As Vaivasvata’s humanity, in which we are particularly interested, began to develop 18-19,000,000 years ago, it is obviously far older than the Cenozoic era which, according to the Esoteric table, began about 8,960,000 years ago, but here we find a striking unconformity between modern geology and the esoteric teaching. In several places Blavatsky envisages the possibility that the geologists might increase their estimate of the length of the Cenozoic era, and says that this would not be disturbing.

It may make our position plainer if we state at once that we use Sir C. Lyell’s nomenclature for the ages and periods, and that when we talk of the Secondary and Tertiary age, of the

Eocene, Miocene and Pliocene periods — this is simply to make our facts more comprehensible. Since these ages and periods have not yet been allowed fixed and determined durations, 2½ and 15 million years being assigned at different times to one and the same age (the Tertiary) — and since no two geologists and naturalists seem to agree on this point — Esoteric teachings may remain quite indifferent to whether man is shown to appear in the Secondary or the Tertiary age. If the latter age may be allowed even so much as 15 million years' duration — well and good; for the Occult doctrine, jealously guarding its real and correct figures as far as concerns the First, Second, and two-thirds of the Third Root-Race — gives clear information upon one point only — the age of “Vaivasvata Manu's humanity.” (SD 2:693)

Though Vaivasvata's humanity — our humanity — has existed for 18-19,000,000 years, and for less than half that time we have been complete organic beings, we may look forward to many more millions of years before any radical changes will take place in our physical structure. During the fourth root-race, the Atlantean, the lowest stage of materiality was reached, and we in the fifth root-race are now somewhat less physically dense. By the time we attain the seventh root-race of this fourth round, in the far distant future, our flesh will have become much more refined and almost translucent, and near the close of the manvantara or great life-period of planetary evolution in the seventh round we shall have risen so far above the lower cosmic plane in which our earth now functions that our highly ethereal bodies “are of light.” ()

Germ In cosmogenesis, the germ stands for the first well-developed localized cosmic entity, luminous and semi-astral, that is to be a future world, whether a globe or a sun. Hence the germ is the developed resultant of the first cosmic impulse of the primeval intelligent formative principle working downwards into manifestation. This stage in the evolution of a cosmic entity, whether globe or sun, in Sanskrit is called *hiranyagarbha* (golden germ or womb), for out of the germ as from a womb springs or evolves the entity later to appear. *The Secret Doctrine* (2:176) speaks of the self-existent Kama, born from the heart of Brahma, as the personification of “the *first movement* that stirred the ONE, after its manifestation from the purely abstract principle, to create, ‘Desire first arose in It, which was the *primal germ of mind*; . . . the bond which connects Entity with Non-Entity.’”

Japanese cosmogony says that “out of the chaotic mass, an egg-like nucleus appears, having within itself the germ and potency of all the universal as well as of all terrestrial life” (SD 1:216).

The fourth order of celestial beings, the highest group among those monads invested with their appropriate forms for that plane, is the nursery of the human, conscious, spiritual souls, and they constitute, through the next lower order “the first group of the first septenary host — the great mystery of human conscious and intellectual Being. For the latter are the field wherein lies concealed *in its privation* the germ *that will fall into generation*. That germ will become the

spiritual potency in the physical cell that guides the development of the embryo, and which is the cause of the hereditary transmission of faculties and all the inherent qualities in man” (SD 1:218-19). *See also* BACTERIA

Germain, Count St. *See* SAINT-GERMAIN

Germ-Buds. *See* BUDDING

Germ Cell The early physical vehicle or carrier of the ‘ “spiritual plasm’ that dominates the germinal plasm” in the development of the embryo (SD 1:219); “every germ-cell, human or other, is the physical expression of inner, ethereal, and psycho-magnetic activities, and is a compact or bundle or sheaf of inner forces and substances ranging from the divine through intermediate degrees down to the astral and the physical, just as man, but on a much larger scale, himself is” (ET 487 3rd & rev ed). Each germ-cell is the precipitation or projection on and into the physical plane of an inner, psycho-ethereal radiation, an incarnation of a ray point originating in the inner worlds and contacting physical matter by psychomagnetic affinity, and thus arousing a proper particle or molecular aggregate of living physical substance into becoming a reproductive cell. This ray point or tip of the imbodying ray or radiance, is not the reincarnating ego itself, but the tip of the projected ray issuing from the reimbodying ego. When this ego — itself a ray from the spiritual monad — reaches its own intermediate sphere, after leaving its parent-monad, it descends no farther into matter from that plane. But its radiated influence, its psychomagnetic ray, having stronger affinities for material worlds than itself, goes deeper into matter and there awakens into activity the life-atoms in each of the various planes between that of the reimbodying ego and the grossest matter of physical earth. When this psycho-vital-electric or -magnetic ray awakens some particular life-atom in gross physical matter on earth, that life-atom so chosen belonged to the same reimbodying ego before, and therefore responds to its own “parent.” It may even be regarded as the tip of the reimbodying ray from which it is precipitated into matter, “which physical matter, as atoms, is thus attracted around this tip, building first the material imbodiment of the said life-atom and by progressive accretion finally becoming the living germ-cell” (ET 488 4 3rd & rev ed).

This descent of the ray tip into, and selection of, suitable earth of matter, has been the basis of all the various methods of procreation. The process began in the huge ovoid form of the ethereal first root-race by simple division of this human cell, as the embryo today repeats in beginning its rapid review of racial records. “One infinitesimal cell, out of millions of others at work in the formation of an organism, determining alone and unaided, by means of constant segmentation and multiplication, the correct image of the future man (or animal) in its physical, mental, and psychic characteristics. . . . *those germinal cells do not have their genesis at all in the body of the individual, but proceed directly from the ancestral germinal cell passed from father to son through long generations*” (SD 1:223n). *See also* HEREDITY; PROCREATION; REPRODUCTION

Germ Plasm A term used by German biologist August Weismann (1894-1914) for the hereditary material in each cell passed unchanged from generation to generation. The cell was divided into somatic plasm and germ plasm, the latter divided into the dormant portion passed on to the next generation unchanged and the active portion which was used to build the body. This passive germ plasm was “immortal” in that it was the identical to that belonging to a person’s earliest ancestor. *See also* HEREDITY

Ghadia (Prakrit) Medieval and modern form of the Sanskrit ghati, or ghatika, the 60th part of a day of 24 hours.

Ghaf. *See* KAF

Gharma-ja (Sanskrit) *Gharma-ja* [from *gharma* heat, warmth, perspiration from the verbal root *ghṛ* to moisten, wet (cf Greek *thermos* heat) + *ja* born] Sweat-born; title of Karttikeya, said to have been born of Siva’s vital sweat. Karttikeya is one of the most important of the kumaras of archaic Hindu occult legends, the kumaras being virginal divinities who sprang from the body of Brahma. As Brahma is the Third Logos, whatever minor parts the kumaras may play in subsequent cosmic history, their primary importance was in the building of the universe.

Ghatkas, Ghatikas. *See* GHADIA

Ghocha. *See* GHOSHA

Ghools. *See* GHOUL

Ghosha (Sanskrit) *Ghoṣa* An indistinct noise; tumult; a sound of words or cries heard at a distance. In Buddhism, a great arhat, author of the *Abhidharmamrita-Sastra*.

Ghost The occasional apparitions of deceased persons — but in no instances whatsoever of the spirits of the dead — or invisible astral entities producing various psychic phenomena. This age-old belief is consistent with the breaking up of composite human nature into its component parts at death. As the astral model-body, when freed from its familiar physical duplicate, is still magnetically attached to the body, it is sometimes seen haunting the new grave for a short time. Soon the atoms of this shadowy form begin to dissipate. But the more ethereal and enduring astral atoms cohere in the kama-rupic body of the deceased person’s lower mental, emotional, and psychic nature. These imbodyed lower passions and desires become in connection with their astral automatic vehicle an earth-bound entity when they are separated from the re embodying ego at the second death in the purgatorial astral underworld. These so-called spooks are what the Roman writers named umbrae or larvae of the dead; earlier, the Greeks spoke of these human reliquiae as eidola — the astral “images” of the dead. The ancients were well informed regarding the shades or shells which were cast off by the purified inner self when it ascended from kama-loka to its devachan in higher spheres.

The kama-rupic shades, whether mere shells or not, are usually invisible but they are sometimes seen by clairvoyants. The more coherent ones are the shells of gross or wicked people and are influences of sensual or evil trend which instinctively haunt the atmosphere of persons and places whose characters or conditions are congenial to them and therefore magnetically attract them. Even well-meaning sensitives and persons of mediumistic or psychic type, being relatively negative physically because more or less aware on the astral plane, are susceptible, at times, to some of these strangely perverse and obsessing influences. The ancient teachings show why people's instinctive dread of the ghostly dregs or remnants of the personal self is well founded.

Ghoul [from Arabic *ghul*, *ghuwal*] In popular Arabic lore a class of evil beings, haunting the mountains and woods and preying upon mankind and animals. More specifically, the astral or astral-physical entities haunting cemeteries or burial grounds, with an eye upon the danger to humans or animals who come into contact with them. These Arabic ghouls are earth-bound kama-rupas of the most debased and material type, and parallel the Hindu preta of the lowest type, or even the pisachas, etc.

Gian-ben-Gian. See GYAN

Giant The universal tradition of gigantic human beings and beasts points back to the Lemurian and Atlantean races, which were physically gigantic as compared with humankind of today. Also often popularly used as an equivalent of demons, titans, daityas, asuras, danavas, gibborim, jotuns, etc., here having reference to the powers of earth who contended against the gods in the early periods of the formation of the globe and its populations.

Gibborim (Hebrew) *Gibbōrīm* [plural of *geber* mighty man from *gābar* to be strong] Generally refers to the antediluvian giants or Atlanteans, the fourth root-race of mankind. In the fifth root-race they became known as the kabiri — the early mighty men of wisdom (SD 2:273). See also GEBER

Gilgoolem. See GILGULIM

Gilgulim (Hebrew) *Gilgūlīm* [from the verbal root *gālal* to roll, revolve] Wheels; cycling, whether of things or of periods of time; a whirlwind, and things driven by a whirlwind. In the Qabbalah, used to express the doctrine of the revolution, whirling, or cycling of souls in both space and time: “All the souls go up into the *gil-gool-ah* [gilgula’], i.e. revolutions or turnings . . . How many *Gilgoolem* and how many hidden things, the Holy does with them? . . . And how many worlds turn around with them, and how the world turns around in so many hidden wonders? And the children of man do not know and do not comprehend, how the souls revolve like a stone which is thrown from a sling” (Zohar ii 99b).

Orthodox Qabbalists maintain that after death the soul goes through a series of whirlings or cyclings, finding no rest until the “immortal particle” reaches Palestine (the promised land). “The

process was supposed to be accomplished by a kind of metempsychosis, the psychic spark being conveyed through bird, beast, fish, and the most minute insect. . . . The Allegory relates *to the atoms of the body*, which have each to pass through every form before all reach the *final* state, which is the first starting point of the departure of every atom — its primitive *laya* State. But the primitive meaning of *Gilgoolem*, or ‘Revolution of Souls,’ was the idea of the re-incarnating Souls or *Egos*” (SD 1:568n).

The lowest of the four ‘olams (worlds or spheres) named ‘Asiyyah is also called the world of the gilgulim. A further reference to gilgulim is in the representation of the Sephirothal scheme of the ten spheres, the first being called re’shith hag-gilgulim — the commencement of whirling motions from and under the primum mobile.

One of the treatises usually included in the *Zohar*, “The Book of the Revolutions of Souls,” is considered to be an explanation of Rabbi Loria’s ideas contained in *Beth ’Elohim* — also part of the *Zohar*.

Gimil, Gimle. See GIMLI

Gimli (Icelandic) [from *gimill*, *himill*, *himin* heaven] In Norse mythology, a heavenly abode, where “gentle gods of the chosen” shall abide in serenity after the destruction of the present world system (Ragnarok). Not to be confused with Valhalla, where Odin’s heroes rest between battles on the Plain of Consecration (Vigridsslatten).

In Gimli a golden palace will shine brighter than the sun. It will surpass in splendor the heavens named Audlang [from *aud* empty, desolate + *lang* vast, spacious] and Vidblain [from *vid* wide, spacious + *bla* blue] and will be the future home of the gods when they return after Ragnarok. “These are the three gradually ascending planets of our ‘Chain.’ There the gods were enthroned, as *they used to be*. . . . From Gimil’s heights (the *seventh* plane or globe, the highest and the purest), they looked down upon the happy descendants of LIF and LIFTHRASIR (the coming Adam and Eve of purified *humanity*), and signed to them to CLIMB *up higher*, to *rise in knowledge and wisdom*, step by step, from one ‘heaven to another,’ until they were at last fit to be united to the Gods in the house of All-Father” (SD 2:100). This is foretold by the sibyl in Voluspa.

Gin-Hoang. See T’IEN-HUANG

Ginnungagap (Icelandic) [from *ginn* vast, wide + *unga* bring to birth, hatch (as an egg) + *gap* chasm, maw] The gaping void of Norse mythology; space as an unimaginable abstraction, without form and void. The formless void that preceded creation, and the abode of the gods during the long night of nonbeing. The prefix “ginn” is found only in conjunction with such words a ginnheilog (the supreme divine essence), ginnregin (the highest gods, superior to the aesir and even the vanir). Ginnungave represents the “most holy sanctuaries” — the universe. Odin in his loftiest aspect is referred to as ginnarr, connoting the aether or Sanskrit akasa. The verb *ginna* also means

to delude or play a trick on.

According to the Edda's poetic description, before the existence of worlds, there was naught but Ginnungagap. All matter was frozen in a state of nonbeing, for in the absence of the energizing impulsion (the gods) nothing moved, no atoms existed, hence no matter. This state of non-existence was portrayed as the frost giant Ymir, which resulted when heat from the fiery world, Muspellsheim (home of flame), met the vapors from the world of mists, Niflheim (home of nebulae), creating fertile vapor in the void.

The cow Audhumla licked salt from the blocks of ice and uncovered the head of Buri (King Bore of Swedish tradition), personification of frozen, unmoving nonbeing. From Buri emanated Bur and from this second stage (or second divine Logos) descended the creative trinity of gods: Odin, Vile, and Vi, which powers together "slew" Ymir and with his body (matter) formed the worlds.

Gjol, Gjöl (Icelandic) [from *gjoll* din] In Norse mythology, one of the rivers of elivagar (icicle waves) which flow from Hvergelmir, the source of absolute matter, the abyss. It is bridged by the gold-covered Gjallarbru (noisy bridge) which leads to the realm of Hel, queen of the dead.

Glamour. See FASCINATION

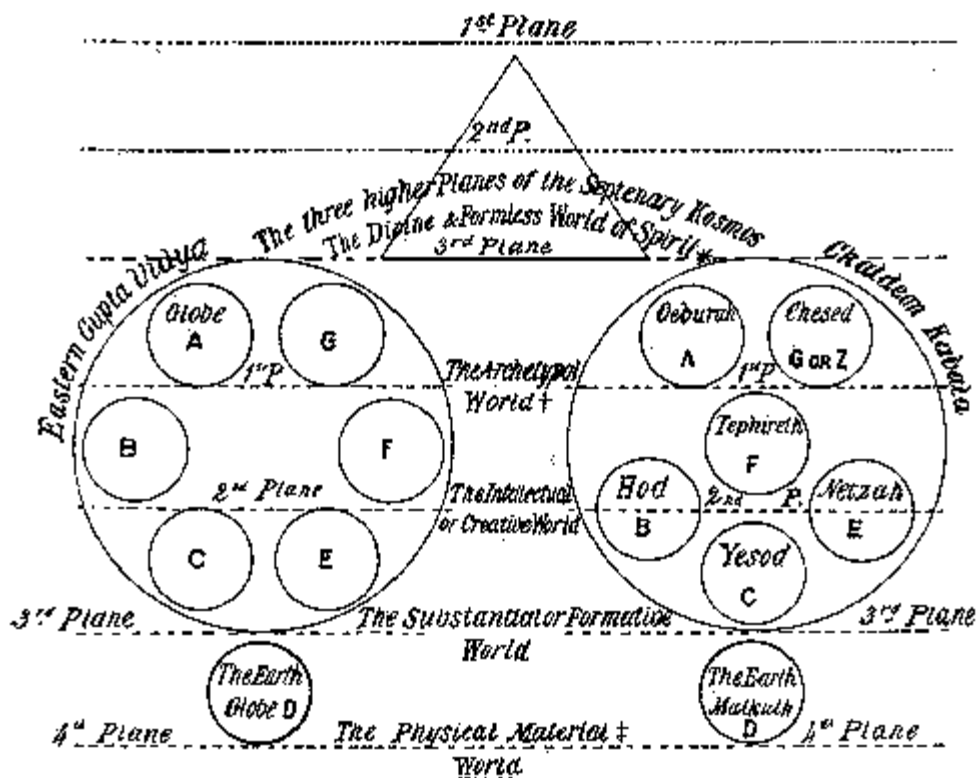

Gland. See PINEAL GLAND; PITUITARY GLAND

Globe In theosophy, a unit in the constitution of every planet or sun, each of which is composed of several globes, in their entirety referred to as a planetary or solar chain. Furthermore, moons, nebulae, and comets also have a seven or twelvefold constitution, even as has man, who is a copy in the small of the universe. These globes are analogous to the monadic centers in the human constitution. The seven manifested globes on the four lower cosmic planes for purposes of convenience are enumerated as A, B, C, D, E, F, G; but reference is sometimes made more mystically to the globes from "A to Z," plainly hinting at all the globes of the chain. When considering seven cosmic planes, twelve globes are given. These globes are related to the seven (or twelve) sacred planets and to the twelve zodiacal constellations (diagram from FSO 323).

The life-waves, the various hosts or kingdoms such as elemental, mineral, animal, human, or devas, circle around these globes in seven great cycles called rounds. Each life-wave in turn first enters globe A, runs through its life cycle there, and then passes in time on to globe B, the succeeding life-wave meanwhile entering globe A, and so onwards and forwards through the whole series. In our own planetary chain, globe D is our earth. Three globes precede it on the downward arc, and three follow it on the ascending arc of evolution — referring here to the manifested seven globes. The passing through seven root-races of any kingdom or life-wave on any globe is called a globe-round.

The seven globes can be related to the Qabbalistic worlds and sephiroth, as Blavatsky did (SD 1:200):

See also PLANETARY CHAIN

Globe-round In theosophical terminology, the passage of one life-wave through seven root-races on one globe. Seven (or ten or twelve) globe-rounds — one on each globe of a planetary chain — is called a planetary round. See also ROUND; INNER ROUND

Globe, Winged A very ancient Egyptian design of a globe borne on wings, with two uraei or mystic serpents on either side of the globe, incubating it with their breath. The symbol signifies regeneration; also the passage from the illusory past through the present and into the illusory future, which all things of material type must undergo. It signifies the rebirth of the world from pralaya into manvantara, sinking again into pralaya, and again winging its way out of the vast womb and deeps of cosmic spatial consciousness into individualized existence. It signifies the passing of entities from one embodiment to another. The globe itself is symbolic of the center of consciousness; the wings signify the passage through time and space: the passage from planet to planet and from planet to sun; from sun to stars; and the return. The two serpents signify the mystic powers of consciousness and will; of life and death.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Gn-Gz

Gna (Icelandic) One of the handmaidens of Frigga, consort of Allfather Odin in Norse mythology. She carries messages throughout the nine worlds on behalf of her mistress.

Gnana, Gnanam. See JNANA

Gnana-Devas, Gnan-Devas. See JNANA-DEVAS

Gnanasakti. See JNANA-SAKTI

Gnata, Gnatha. See JNATA

Gnayam. See JNEYA

Gnipa (Icelandic, Scandinavian) Peak; in Norse mythology, the gnipa-hollow is the cave that gives entrance to the underworld or world of the dead governed by Hel, Loki's daughter. The hound of Hel, Garm, howls in the hollow before Ragnarok.

Gnome [from Greek *gnome* thought, intelligence; or *gnomon* one who knows, an instructor, interpreter, guardian] Coined by Paracelsus for the elemental beings pertaining to the element earth, hence popularly believed in Medieval Europe to inhabit mines and caves, pictured as very small men, ugly and often misshapen. The females, called gnomides, were supposed to be of extreme beauty and goodness, being the especial guardians of diamonds. Elemental beings generally "are the Soul of the elements, the capricious forces in Nature, acting under one immutable Law, inherent in these Centres of Force, with undeveloped consciousness and bodies of plastic mould, which can be shaped according to the conscious or unconscious will of the human being who puts himself *en rapport* with them" (BCW 6:189). They belong to the three elemental kingdoms below the mineral kingdom.

The element earth is not that which we call earth, which is a compound of all seven of the ancient

elements and of all or most of the modern chemical elements. Rather, it is the Hindu prithivi-tattva, whose quality is smell and whose shape is mystically cubic as regards its paramanus. When a person has a predominance of the earth element in his constitution, the gnomes are said to be attracted to him and aid him in things which correspond to the earth principle; these include hidden treasures and wealth. Of course there is the antithetical side of the earth element which produces heaviness, grossness, etc.

Gnosis (Greek) [cf Sanskrit *jnana* knowledge] Knowledge; used by Plato and the Neoplatonists to signify the divine knowledge (gupta-vidya) attained through initiation; and means for the student the active penetration into and going beyond the veils of mind, by which process a true vision of reality is to be obtained.

Gnostics Various schools — agreeing in fundamentals, differing in details according to their teachers — which inculcated gnosis (divine wisdom); they preceded or coincided with the early centuries of Christianity, and were grouped about Alexandria, Antioch, and other large centers of the Jewish-Hellenic-Syrian culture. The teachers include Philo Judaeus, Clement of Alexandria, Simon Magus and his pupil Menander, Saturninus, Basilides, Valentinus, Marcion, Celsus, and others. Their teachings in many respects were those of the ancient wisdom, derived from contact with the still extant sources in Egypt, India, Persia, and elsewhere.

Characteristic doctrines held by them are the system of emanations, powers, or aeons, with which they bridged the gap, otherwise remaining unfilled, between divinity and the world; the whole thus constituting the pleroma. All the potentialities of the supreme descend by emanational evolution through the various orders of aeons to man, who is thereby endowed with unlimited potentials. The distinction between Agathodaimon and Kakodaimon; the recognition of the mystical serpent of knowledge as the endower of mankind with wisdom and opponent of the merely creative or working Demiourgos (represented as the Old Testament Jehovah) were, among other matters, fairly well made in these systems.

According to Clement, the enlightened or perfect Christian is a Gnostic. In Gnostic teaching, Christ is an aeon of high degree; he is Lucifer the Light-bringer, who redeems humanity from the lower power of the merely creative or working Demiourgos — that is, from becoming enmeshed in the lower cosmic powers.

Until the mid-twentieth century, the principal extant Gnostic writings were quotes in surviving attacks against the Gnostics made by early Christian writers, the *Pistis Sophia* and “two Books of Jeu,” and the Neoplatonic *Corpus Hermeticum* (Hermes Trimegistos, Divine Pymander, etc.). With the discovery of the Nag-Hammadi scrolls, many more Gnostic writings have come to light and scholars are gaining a wider understanding of both Christian and non-Christian Gnosticism.

Gnyana. See JNANA

Gnypa. *See* GNIPA

Goat of Mendes. *See* MENDES

Gobi or Shamo Desert A wild, arid region of mountains and sandy plains which was once fertile land and in part the site of a former inland sea or lake on which was the “Sacred Island” where the “Sons of Will and Yoga,” the elect of the third root-race, took refuge when the daityas prevailed over the devas and humanity became black with sin. It has been called by the Chinese the Sea of Knowledge, and tradition says that the descendants of the holy refugees still inhabit an oasis in “the dreadful wildernesses of the great Desert, the Gobi . . .” (SD 2:220). This region was transformed into a sea for the last time ten or twelve thousand years ago; a local cataclysm drained off the waters southward and westward, leaving the present conditions. It is also said that the events connected with the drying up of the Gobi region are associated with allegories of wars between the good and evil forces and the “systematic persecution of the Prophets of the Right Path by those of the Left” which led the world into materialistic forms of thought.

Goblin. *See* ELEMENTAL

God In its widest sense, the origin and root of all that is. Absolute Being may be regarded perhaps as one equivalent expression, but even Being itself may be regarded as a condition or attribute, and beyond it we must therefore postulate Be-ness. The idea of a root or origin sometimes connotes supreme power and governance; but such conception of a rootless root or infinite origin does not exist, for whatever is, or has been, or ever will be, must ultimately spring from the womb of boundless infinitude, and we can speak only of a power and governance in connection with the subordinate or minor — however supernal or sublime they may be — which spring forth from the Boundless in virtually infinite numbers through beginningless and endless duration.

Monotheists recognize but one God, conceived as a supreme personality and usually endowed with attributes pertaining to human personality, this mental image of God therefore being but a reflection of the human mind, with its inherent limitations and biases; yet even monotheists tacitly recognize other gods under the name of natural forces. Polytheism recognizes hierarchies of divine beings, and pantheism discerns divine power as everywhere and eternally present. The human being also in essence is a divinity. The attribution of personality to God is justly regarded as an inadmissible limitation; but there is a lack of clearness as to the meaning of such words as personality, self, and individuality, which unfortunately leads some monotheistic minds to the fear that the denial of personality will reduce the conception of divinity to merely an empty abstraction. Yet our inability to conceive the inconceivable has nothing to do with our intuition and duty, nor with the vision of the inner god as the supreme guide in a human life. *See also* PERSONAL GOD

God(s) and Goddess(es) A generalizing term signifying all self-conscious entities superior to humankind, most often restricted to the three dhyanic-chohanic kingdoms. The gods have differing

places in nature's hierarchical scheme, running through innumerable grades of cosmic intelligences. Theosophy teaches that human beings who successfully reach the seventh round on this earth chain will pass, at the conclusion of this last round, into the kingdom superior to the human, that of the lowest dhyani-chohans.

One function of dhyani-chohans (gods or demigods of a lower type) is the watching over of all hierarchies below them, some being guardians of the human host, others guarding and protecting the less evolved kingdoms. The higher hierarchical ranges of gods or divinities in our universe "are Entities of the higher worlds in the hierarchy of Being, so immeasurably high that, to us, they must appear as Gods, and collectively — God. . . . To the highest, we are taught, belong the seven orders of the purely divine Spirits; to the six lower ones belong hierarchies that can occasionally be seen and heard by men, and who do communicate with their progeny of the Earth; which progeny is indissolubly linked with them, each principle in man having its direct source in the nature of those great Beings, who furnish us with the respective invisible elements in us" (SD 1:133).

These beings belong to two general divisions, the arupa (formless) and the rupa (form) divinities. Those having forms should not be imagined as necessarily having human forms as in the ancient pantheons, yet rupa gods do have highly ethereal forms, some perhaps resembling the present human shape and others of quite different construction. But the arupa divinities are to our power of imagination "beings of pure intelligence and of understanding, pure essences, pure spirits, formless as we conceive form" (Fund 347).

Tradition has it that in the immemorial past, certain lower gods associated intimately with their children, humanity, on this globe; but as time went by and mankind became more immersed in material pursuits, people grew to become increasingly forgetful of their divine origin and of the presence of the shining divinities instructing and guiding their forebears, so that the gods and demigods were remembered only in mythologies and religious metaphors of the various races.

What did the ancients mean by their gods and goddesses? They were intended to represent the guiding intelligences present within or in back of all invisible secrets, as well as astral and physical manifestations of nature. During the third root-race there were beings who were

"endowed with the *sacred fire* from the spark of higher and then independent Beings, who were the psychic and spiritual parents of Man, as the lower *Pitar Devata* (the *Pitris*) were the progenitors of his physical body. That Third and holy Race consisted of men who, at their zenith, were described as, 'towering giants of godly strength and beauty, and the depositaries of all the mysteries of Heaven and Earth.' . . .

" . . . the chief gods and heroes of the Fourth and Fifth Races, as of later antiquity, are the *deified images of these men of the Third*. The days of their physiological purity, and those of their so-called Fall, have equally survived in the hearts and memories of their descendants.

Hence, the dual nature shown in those gods, both virtue and sin being exalted to their highest degree, in the biographies composed by posterity” (SD 2:171-2).

The primeval human deity worship degenerated during the fourth root-race (the Atlantean), the ideal at first becoming confused with the form, and the latter finally almost superseding the spirit — thus in the relatively complete materialization of idea into form, the later Atlanteans in time began to worship themselves, what was to them the powers of nature appearing through themselves as human beings; the degeneration of the ideal proceeding so far that ultimately the worst kind of idol worship became relatively universal, except for the seed of the newer and somewhat higher mankind of the fifth root-race then beginning. “The moderns are satisfied with worshipping the male heroes of the Fourth race, who created gods after their own sexual image, whereas the gods of primeval mankind were ‘male and female,’ ” i.e., hermaphrodite (SD 2:135).
See also DEITY

Godhead The essential state or nature of divinity; as a Christian term used sometimes as a synonym for God; the Christian Trinity or God as a three-in-one.

God-man Mankind after the change in the third root-race when animal humanity became incarnate devas because of the overshadowing incarnations of the manasaputras. Also manas (mind) in alliance with atma-buddhi, as contrasted with manas in alliance with the lower principles — the latter being simply and merely human. Sometimes used to describe the avatars appearing in the human race at periodic intervals, or again to describe buddhas or other spiritual-human beings.

God-parents Christian law, strong in the Greek Orthodox Church, weaker in the Roman Catholic, and forgotten in the Protestant, based in the fact that once a spiritual teacher begins to teach the disciple, he takes on the student’s karma in connection with the occult sciences until the student becomes in turn a master. The god-parents “tacitly take upon themselves all the sins of the newly baptised child — (anointed, as at the initiation, a mystery truly!) — until the day when the child becomes a responsible unit, knowing good and evil” (BCW 9:156, cf 9:285-6).

God-sparks When evolution starts on the downward arc, the spiritual essence appears as a vast host of individual monads or spiritual, conscious atoms which, because of their lack of the self-conscious human condition, are often termed unself-conscious god-sparks — although this does not mean that they lack self-consciousness on their own plane, for these monads never leave their own planes. To speak of a monad incarnating means that a ray projected from the monad “descends” from its plane in a minor avataric sense to inflame the nascent manasic element or power in lower beings, precisely as took place in the cases of the manasaputras. These god-sparks, being the spiritual monads of living entities, gradually emanate from themselves the successive vestures through which they manifest, the process taking place serially and ladder-fashion on the downward arc; with the eventual result that, at the end of the *ascending* arc, the unself-conscious

god-sparks become self-conscious gods, which means that the self-conscious humanity of them becomes linked self-consciously to the self-consciousness of the monads on their own plane.

God-wisdom. See THEOSOPHY

Goetia (Greek) [from *goes* enchanter, sorcerer] Also goety. One who uses incantations by song or speech, one who holds others under the spell of sound, chants, or incantations. Porphyry condemns it as black magic, distinguishing it from theurgy or divine magic; and it has in general been so contrasted.

Gogard. See GOKARD

Gokard (Pahlavi) *Gōkard*. Also Geokar, Gaekarena. In the *Bundahish* the white haoma or Tree of Life which guards the tree of all seeds (Harawispa tohma). This tree of all germs was given forth and grew up in the Farakhkard (unbounded) ocean from which the germs of species of plants ever increased. And near it, the Gokard tree was produced for keeping away deformed decrepitude, and the full perfection of the world arose from this (Bundahis 9:5-6). It is described as a luxuriant tree in whose branches a serpent dwells. “But while the Macrocosmic tree is the Serpent of Eternity and of absolute Wisdom itself, those who dwell in the Microcosmic tree are the Serpents of the manifested Wisdom. One is the One and All; the others are its *reflected* parts. The ‘tree’ is man himself, of course, and the Serpents dwelling in each, the conscious *Manas*, the connecting link between Spirit and Matter, heaven and earth” (SD 2:98). See also HAOMA

Gold The king of metal, symbol of perfection, durability, and purity; of the real sun, the great masculine principle, the Father, the positive side of the solar cosmic life. Alchemists considered gold as being a deposit of solar light, regarding light as the emanative fire from the sun. The gold of human nature, which has to be purified by fire from its dross, is manas, the self-conscious element, when purified from contamination with the dross of the lower principles and united with buddhi. While divine alchemy seeks to purify the gold of human nature, physical alchemy seeks to derive gold by transmutation from baser metals. In contrast with gold, brass is mentioned as signifying the baser elements or the world of passionate matter; and by another contrast, silver is the analog of the watery or feminine principle, whose planetary counterpart is the moon.

The first and purest of the four Hesiodic races in Greece was golden and gave the name to their age. In Hindu writings the world is evolved from a golden egg or germ (hiranyagarbha).

Golden Age The first of the four Hesiodic Ages — Gold, Silver, Bronze, Iron — signifying the beginning of a new root-race and, on a smaller scale, the beginning of any subordinate racial period. This four-fold division applies not only to root-races but to all their subdivisions.

The Golden Age was under the rule of Kronos (Saturnus) who, according to Plato, not believing that men could rule themselves, caused them to be ruled by gods. It was a time of innocence and happiness: truth and justice prevailed, the earth brought forth without toil all that was necessary

for mankind, perpetual spring reigned, and the heroes passed away peacefully into spiritual existence. Equivalent to the Hindu satya yuga.

Golden Apples. See HESPERIDES; TREE

Golden Ass. See APULEIUS; ASS; SATURN

Golden Calf In the Old Testament, an object (Hebrew *agel, egel*, calf or globe) made in the wilderness by Aaron at the request of the Israelites when Moses had not returned from Mt. Sinai (BCW 3:130). Upon his return, Moses destroyed the idol by burning it, grinding it to powder, strewing it on water, and making the Israelites drink it (Ex 32:20) — which Blavatsky holds has an alchemical significance (BCW 11:44). In one sense the golden calf stands for the secret knowledge the Jews took from the Egyptians. In another sense it is “the sacred heifer, the symbol of the ‘Great Mother,’ first the planet Venus, and then the moon . . . as says G. Massey . . . :

‘This [the Golden Calf] being of either sex, it supplied a twin type for Venus, as Hathor or Ishtar [Astareth], the double Star, that was male at rising and female at sunset, and therefore the Twin-Stars of the “First Day” ’ ” (BCW 8:308-9).

Golden Chain (of Hermes or Homer). See HERMETIC CHAIN

Golden Cow. See COW; DVIJA; HOLY OF HOLIES

Golden Egg. See HIRANYAGARBHA; FOURFOLD CLASSIFICATION; WORLD EGG; DUCK

Golden Fleece In Greek mythology, the fleece of a ram sent by the gods to save Phrixus and Helle, son and daughter of Athamas and Nephele, from their stepmother Ino. Flying through the air, it bore them towards Asia Minor. Helle drowned in the sea (at the Hellespont), but Phrixus arrived at Colchis. There he sacrificed the ram to Zeus and presented the fleece to king Aeetes, who hung it in a grove of Ares. Later, a generation before the Trojan War, Jason and the Argonauts brought the fleece back to Greece with the aid of Aeetes’ daughter Medea.

Golden Rule In the West, applied to the moral teaching as voiced by Jesus in the Sermon on the Mount, and stated by him to be all the law and the prophets: “All things whatsoever ye would that men should do to you, do ye even so to them” (Matt 7:12); “As ye would that men should do to you, do ye also to them likewise” (Luke 6:31).

This teaching is in all the religions of the world, expressing the law of our higher nature, which is love and harmony, as contrasted with the law of our lower nature, which makes for personal separateness and sets the individual at variance with his neighbor. Its realization in thought and conduct is an indispensable requisite to attainment on the path of wisdom and liberation. The following are selected from many similar teachings:

Hillel, Jewish Rabbi (b. 50 B.C.): “Do not to others what you would not like others to do to

you.”

Aristotle, Greek (385B.C.): “We should conduct ourselves towards others as we would have them act towards us.”

Pittacus, Greek (650 B.C.): “Do not to your neighbor what you would take ill from him.”

Zoroaster, Persian: “Hold it not meet to do unto others what thou wouldst not desire done unto thyself; do that unto the people, which when done to thyself, is not disagreeable unto these.”

Confucius, China: “Do unto another what you would have him do unto you, and do not unto another what you would not have him do unto you.”

The *Mahabharata*, India: “This is the sum of all true righteousness — treat others as thou wouldst thyself be treated. Do nothing to thy neighbor which hereafter thou wouldst not have thy neighbor do to thee.”

Golden Thread, Golden Cord. See SUTRATMAN

Golgotha [from Greek of Hebrew *gulgoleth*, Chald *gulgalta* skull; in Greek *cranion*; Latin *calvaria*, whence Calvary.] The site of Jesus’ alleged physical crucifixion; often used metaphorically to signify crucifixion or trial.

Gompa, Gonpa (Tibetan) *dgon-pa*. Wilderness, solitary hermitage, monastery. Often built in solitary places, met with most frequently in mountain fastnesses and in secluded valleys.

Good. See EVIL; AGATHON, TO

Good Friday Anniversary celebration of the alleged physical crucifixion of Jesus Christ, which has a shifting date, varying between the 20th of March and the 23rd of April, the epoch of the Jewish Passover and the spring equinox.

Good Friday and Easter Sunday are a borrowing from the ancient Mysteries — the mystic death and resurrection of the unconquered sun, exemplified by the mystic death and resurrection of the successful neophyte. This celebration is likewise connected with the winter solstice; the wish of the church authorities to accommodate themselves both to Roman and Jewish customs has caused the festival to be split, so that the birth now is celebrated in winter and the death and the resurrection in spring, whereas birth and resurrection are two words for the same mystic truth.

Even in the dogmatic and somewhat mechanical Christian celebration of these originally pagan mysteries, Friday is the day of Venus, a prototype of the organ of the gnostic individuality; Saturday is the day of Saturn, a prototype of the guardian in ancient mystical occultism of the initiatory Ring-pass-not; and Sunday, the day of the rising or resurrection, is the day of the sun, giver of life and light.

Goose. See HAMSA; KALAHANSA; SEB

Gopa (Sanskrit) *Gopa* [from *go* cow + the verbal root *pā* to protect, cherish] Protector, guardian, cowherd, herdsman, milkman; in the mythology concerning Krishna, Gopa is applied to him as chief herdsman — or shepherd, to use the Christian form of the idea.

Gopi (Sanskrit) *Gopī* [fem of *gopa* cowherd] In Hindu mythology the female cowherds of Vrindavana — playmates and companions of Krishna during his boyhood, considered mystically as celestial personages or powers. Gopi is sometimes spoken of as one of the wives of Sakyamuni, but the meaning here is a mystical power.

Gorgon (Greek) In Greek mythology, three sisters with wings, brazen claws, enormous teeth, and serpents instead of hair on their heads. The one usually meant is the mortal Medusa, once a beautiful maiden turned into a gorgon by the gods. She was overcome by Perseus who avoided her fatal glance, which would have turned him to stone, by using a mirror. Pegasus, the winged horse, sprang from her severed neck. Evidently the gorgons represent one of the powers which rule the lower realms of nature which have to be overcome by the aspirant to wisdom in the initiatory trials.

Gorilla. See ANTHROPOIDS; DOOR TO THE HUMAN KINGDOM

Gorsedd (Welsh) A throne, seat, chair; an assembly of the Bards; now, the Assembly of Bards that directs the National Eisteddfod. According to *Barddas*, a Gorsedd might be held four times a year at the solstices and equinoxes. According to Iolo Morganwg, there were three Gorseddau [Gorseddau] of old, of which two became public and lost the secret wisdom; but the third, the Gorsedd of Morganwg (Glamorgan) disappeared from public view in early times and became an esoteric body (cellddysgol — secret teaching), preserving the wisdom of the Druids.

Gospels Usually, the four accepted or canonical gospels of the New Testament, being the three synoptic gospels — Matthew, Mark, Luke — and the Gospel according to John. They are an authorized and approved selection from a far larger number of Gospels, extant, partially extant, and lost, attributed to various disciples and apostles, claiming to give accounts of the life and teachings of Jesus Christ and his apostles.

The key to an understanding of the nature of the four Gospels lies in a consideration of the process which the functions and teachings of some of the Mystery schools of Asia Minor became gradually transformed into the formal religious system known as Christianity. The Gospels must have originated as extracts from the Mystery-dramas enacted in those schools. The mystical-human birth of Jesus, his trials or tests, his teachings, crucifixion, resurrection, etc., are clearly a form of the world-old and universal Mystery-drama of initiation of a human neophyte re-enacted in those ceremonies. The Gospels' present form is the result of many copyings, recensions, omissions, additions, and alterations. They are, in fact, symbolic narratives made around the personality and

individuality of a real character which thus has become a Mystery-figure; and contain also many teachings properly to be attributed to him, belonging to the general class of *logia*, or wise sayings of teachers, paralleled in the other world sacred scriptures. Jesus, *as represented*, is not historical; but there was an actual teacher, doubtless bearing the name Yeshua', Latinized as Jesus, who lived about a century earlier than the commonly accepted beginning of the Christian era.

Gotama Pali spelling of Gautama. *See* GAUTAMA

Gotra (Sanskrit) *Gotra* A race, tribe, family, or kin.

Gotra-Bhu-Jnana (Sanskrit) *Gotra-bhū-jñāna* [from *gotra* race, family + *bhū* earth + *jñāna* knowledge, wisdom] Wisdom of the races of the earth.

Gott (German) God.

Governors Hermetic name for a septenate of builders, cosmic evolvers, or planetary spirits; or for more than one such septenate, as the seven rays of a logos each have septenary subdivisions. Usually the reference is to the seven cosmic spirits, according to the Hermetic system; which stimulate and guide the operations of nature and are reflected in the small in mankind. Equivalent terms are *rectores mundi*, *cosmocrates*, 'elohim, rulers, etc.

Grail, Holy In Christian legend, the cup or chalice which Jesus used at the Last Supper, later used to catch his blood. It was made from the stone which fell from Lucifer's crown as he plunged to earth. As Lucifer brought the mental principle to mankind, the stone can be seen as egoic consciousness. In medieval times, the grail associated with unusual powers, especially the regeneration of life and Christian purity. *See also* CERIDWEN, CAULDRON OF; CUP

Grain. *See* WHEAT

Gramani (Sanskrit) *Grāmaṇī* [from *grāma* village] The leader or chief of a village. Also a chief of the gandharvas. In the plural, an equivalent of yakshas.

Grand Architect of the Universe Masonic term for the maker of the universe; "the Greeks gave this Third or formative Logos the title Demiourgos, a word mystically signifying the supreme cosmic Architect of the universe. This same idea always has been held by the Christians as well as by modern speculative Freemasonry . . ." (FSO 183) Theosophically this Grand Architect is a collective way of presenting the forces of nature, the *cosmocrates* or cosmic builders, acting on the ideation laid down by still higher beings — dhyani-buddhas, referred to collectively as mahat or cosmic mind — rather than a personal god or entity; "but now the modern Masons make of their G. A. O. T. U. a personal and singular Deity" (TBL 40). *See also* MASTERS, THE THREE ANCIENT GREAT.

Grantha (Sanskrit) *Grantha* [from *granth* to tie, compose] A tying, binding, stringing together; a verse (particularly one of 32 syllables, i.e., a sloka); a composition, literary production, book — the

ancient Sanskrit manuscript being leaves held together by means of a cord.

The name especially given to the sacred scriptures of the Sikhs. These were originally compiled in 1604 by the fifth Sikh guru, Arjan, and consisted of hymns of the first five gurus and of saints of different religions and castes. In 1705-6 Govindsingh, the tenth and last guru, added the hymns of the ninth guru and enjoined that after him the Grantha would take the place of the guru. The theme of the hymns is the union of the human soul with the divine through transcending of egoism.

Gravitation Attraction, and hence gravitation, is a manifestation of cosmic desire, which draws together separate things into unities. Desire is the attribute of living beings, and the universe is exclusively composed of living beings.

The effects of gravitation within our terrestrial limits are calculable; and by transferring these laws speculatively to the stellar spaces, we can construct a coherent mechanics not only of the solar system but of the galaxy. But in doing so we merely sketch the architecture of a mechanical universe; and it is not certain how far we are justified in applying the terrestrial to extraterrestrial regions, and using this as a basis for calculations as to mass, distance, etc.

Gravitation, like all the other phenomena of nature, is to be attributed to living beings of cosmic magnitude by reason of the vital electricity or vital magnetism emanating from these beings, which electricity or magnetism is at once one of the phenomena of life and of cosmic intelligence. In the lower scale of magnitudes found in and among the molecules, atoms, and electronic particles, the same observations apply. Cohesion among the infinitesimals is the microcosmic working of the same fundamental qualities that manifest themselves in macrocosmic phenomena, such as gravitation.

Griffin, Grypes (Latin) [plural of *gryps*; cf Greek *gryph*] A creature supposed to have the fore parts and wings of an eagle and the hind parts of a lion, with either the head of a lion or an eagle; in some forms there is also a serpent's tail. It belongs to the general class of dragons, chimeras, etc., which may be symbolic representations of abstractions, reminiscences of extinct animals, or the actual forms presented to the eye of a seer by certain cosmic powers — a familiar ancient Greek idea. Assyrian, Persian, and Greek griffins were generally represented as savage guardians of treasure, which shows them to be some of the natural energies which the individual has to defy in order to obtain such treasure. They are one way of representing the powers that guard and govern the lower kingdoms of nature, and which resist and menace whoever challenges their power and treasure; whence they appear as horrific monsters.

Grihasta. See GRIHASTHA

Grihasta (Sanskrit) *Grhasta* [from *grha* house, home + *sthā* to station oneself, stand] A householder; the second state or period in the religious life of a Brahmin, as enumerated in the Laws of Manu. He was supposed to perform the duties of the master of a house and father of a family, after having finished a preliminary course of studies and investiture with the sacred thread. He continued the reading and teaching of the Vedas, likewise making and assisting in sacrifices.

Group-souls The idea that there are entities which express themselves through the collectivity of the individuals of a race or nation, or other similar group, somewhat as the soul of a person may express itself through the collectivity of the living units which compose his organism. However, the living units of our body do not of themselves engender a unitary entity but, having been drawn together by similarity of karma and by the vital magnetism of the imbodyed soul, form the vehicle for the expression of the entity of a higher order. The individuals of a race or nation, though drawn by similarity of karma and character into the same race or nation, do not thereby constitute a vehicle for the manifestation of any entity of a higher order which is the predominant and almost exclusive factor in the case.

There are, nonetheless, such things as the national genius, which can be metaphysically explained by calling it a minor ray from the logos, to which belong the already relatively highly evolved individual units of the group thus overenlightened. Such a national or racial aggregation of individuals of like karma and character likewise create a vital atmosphere, a manifestation of the genius, which exists in the creative ideation of the planetary spirit, both as an imbodyed idea and as an abstract spiritual entity. It is in this sense that such expressions were used in ancient Greek and other mythologies when speaking of nature spirits, *genii loci*, or denoting families and races

by an eponym, ancestor, or the name of a god.

A misunderstanding of certain teachings has also given rise in some minds to the idea that animals, when they die, become merged in a group-soul, which is entirely erroneous when connected with the implication that they lose their individuality and do not reappear as the same partially egoic individuals. Every animal, as also every organism down to an atom, has its monad or permanent individuality, which is on the path of evolution just as human monads are, though at a lower stage. This individuality cannot be lost. Yet the manifested quality of individuality is so little developed in the animals, as compared with human beings, that their monads to our minds, although not in themselves, are much more alike than are human monads, so that they seem to us to fall together more readily into a group. But the word group here is a collective noun and denotes an entity, but of an extremely abstract — to us — type.

Grypes. See GRIFFIN

Guanches Aborigines of the Canary Islands, or only of Teneriffe.

Guardian Angel Christian term for the various classes of dhyanis which guard the worlds, races, nations, and mankind pertaining to them. The five middle human principles are the essence of the sixfold dhyanic-chohans and of the pitris. Equivalents are daimones, genii, theoi, devas, gods, Paracelsus' flagae, etc. The personal quality that pervades so much of Christianity represents them as special to each individual, which is true enough in a sense; and they may be anything from a ray of divine light from the core of our being, to the kind of karmic heirloom designated as one's lucky star. As a matter of fact, there is for each human individual an ever watching, forever guiding and stimulating spiritual power within himself, his own spiritual ego which, when allowed by the brain-mind, infills the individual with its strength, wisdom, and peace.

Guardian Wall A collective or generalized title given to the body of nirmanakayas and their immediate chelas or disciples who watch over, protect, and help humanity and all creatures of earth, each initiate being compared to a stone in the Guardian Wall (VS 68).

Guf. See GUPH

Guhya-vidya (Sanskrit) *Guhyavidyā* [from *guhya* secret from the verbal root *guh* to conceal, keep secret + *vidyā* knowledge, wisdom.] Secret knowledge, esoteric wisdom; in India, especially, the esoteric knowledge and science of the mantras and their true rhythm in chanting. Equivalent in grammatical meaning to *gupta-vidya*.

Guides Spiritualistic term for supposed invisible helpers and instructors belonging to the Spirit-land communicating with people either through mediumship or by a receptive capacity of the person communicated with. While theosophy rejects the explanation offered by spiritualists, it nevertheless teaches that the universe in its webs of being contains many orders of entities existing in all-various grades. Some of these entities can be to any worthy person a source of

inspiration. However, the fact that their influence comes from a nonphysical source is no guarantee of the desirability of that influence, but by the very fact of its unknown origin should be scrutinized at once or suspected as to character and source. Nor must we forget in this connection that the possibilities of self-deception are almost infinite.

In general the consensus of all antiquity was that communication or intercourse of any kind with astral entities, whether spooks, shells, elementaries, or what not, was extremely dangerous and often evil in their influence upon human character. In India such astral entities are called bhutas, pisachas, etc.

Gullinbursti (Icelandic) [from *gullin* golden + *bursti* bristles, mane] In Norse mythology, a golden boar which draws the chariot of Frey, god of the terrestrial world. He received it as a gift from the two dwarfs Brock (mineral kingdom) and Sindri (vegetable kingdom), sons of Ivalde, the moon.

Gullveig, Gultweig (Icelandic) [from *gull* gold + *veig* thirst, drink] The Norse Edda's principal poem, Voluspa, contains a cryptic allusion to Gullveig as "thrice burned, thrice reborn, yet still she lives." Speared by the gods, "thirst for gold" arose each time from her baptism of fire more beautiful than before. She was the cause of the first war in the world when the aesir (creative gods) were ousted from their heavenly abode by the vanir (superior gods), the latter remaining in Asgard.

Several meanings are possible: thirst for gold may be taken as the thirst for wisdom which causes deities to embody in worlds, leaving their divine spheres to higher powers. This is reminiscent of the Hindu agnishvattas and kumaras. The thrice purified gold has been identified with manas, the conscious soul (SD 2:520). A more obvious meaning is that thirst for gold represents greed for possessions, and that Gullveig was an enchantress who brought sin into the world and with it the action of karma.

Guna (Sanskrit) *Guṇa* A thread, cord, string of a musical instrument; also an attribute, quality, or peculiarity. Each of the five elements is said to have its guna or peculiar quality, as well as a corresponding organ of sense in the human being. Thus ether has sabda or sound for its guna and the ear for its organ; the air has tangibility for its guna and the skin for its organ; fire or light has sight for its guna and the eye for its organ; water has taste for its guna and the tongue for its organ; the earth has smell for its guna and the nose for its organ. There are actually seven gunas in nature, only five of which have yet been evolved in any especial degree, and two remain still to appear both as qualities and as sense organs in the distant future.

Each one of these gunas, with its corresponding quality or sense organ, is evolved in each one of the seven root-races that form a globe manvantara. The above listing gives the order in which these gunas appear correspondentially to the root-race which brings them into activity. At the present time, being in the fifth root-race, we have evolved five perceptible gunas with their corresponding qualities and sense organs.

According to the Sankhya philosophy, prakriti is considered to possess three basic qualities or qualitative bases (triguna), namely sattva (substantial reality), rajas (inherent activity), and tamas (inertia), popularly rendered goodness, passion, and darkness; or virtue, foulness, and ignorance.

According to the Nyaya philosophy, all existing things possess 24 gunas or characteristic qualities: rupa (shape or form); rasa (savor); gandha (odor); sparsa (tangibility); sankhya (number); parimana (dimension); prithaktva (severalty); samyoga (conjunction); vibhaga (disjunction); paratva (remoteness); aparatva (proximity); gurutva (weight); dravatva (fluidity); sneha (viscosity); sabda (sound); buddhi or jnana (understanding or knowledge); sukha (happiness); dukha (pain); ichchha (desire); dvesha (aversion); prayatna (effort); dharma (merit or virtue); adharma (demerit); and samskara (the self-reproductive quality).

Gunavat (Sanskrit) *Guṇavat* [from *guṇa* quality] Endowed with qualities or merits, hence excellent, perfect. In philosophy, endowed with the five qualities or elements. Blavatsky also uses the anglicized form gunavatic.

The noun *gunavatta* means the state of being endowed with qualities.

Gungnir (Scandinavian) [from *gunga* to swing] In Norse myths, the spear wrought for Allfather Odin by the giant-god Loki and the dwarf Dvalin. The name seems an allusion to alternating opposites, such as activity and rest, or spirituality and materiality.

Gullveig (thirst for gold, wisdom) was transfixed on it and burned, “thrice burned and thrice reborn, again and again, yet still she lives.” It was then that Odin hurled his spear into the throng of gods, thus instigating the war in heaven which caused the aesir (active gods) to be ousted from Asgard, leaving the vanir in possession of their heavenly abode. The vanir are “water gods”: cosmic deities having reference to the mystic void, the waters of space. The vanir do not participate directly in our system of worlds, whereas the aesir are the creative powers in our universe and dwell in its globes, seen and unseen.

Guph, Guf, Guff (Hebrew) *Gūf* A hollow or empty body, a shell; commonly used in the Qabbalah to signify the human physical body, whether alive or dead. Other Hebrew words for body are: guphah, gewiyyah, and gewah.

Gupta-maya (Sanskrit) *Gupta-māyā* [from *gupta* secret + *māyā* illusion] Secret illusion; the art used by Hindu street “magicians” to make mango trees appear to grow rapidly, to allow a boy to climb a rope fastened in the clouds, etc. Blavatsky holds that such phenomena arise from the psychological power of the “magician” to project a fascination or glamour on the spectators. (BCW 12:321, 326)

Gupta-vidya (Sanskrit) *Gupta-vidyā* [from *gupta* from the verbal root *gup* to conceal, preserve + *vidyā* knowledge, wisdom] Secret knowledge, secret wisdom; the source of all religions and philosophies known to the world: theosophy, the ancient wisdom-religion, the esoteric philosophy.

See also THEOSOPHY

Guru (Sanskrit) *Guru* Teacher, preceptor; applied not only to a chela's spiritual teacher, but to spiritual and metaphysical teachers of many kinds. The spiritual fire within each person, the higher self or atma-buddhi, is also called a guru, a divine instructor; and this higher self within each individual is, when all is said, the supreme guru for that person. The Master outside of the disciple's own spiritual guide is a very necessary element in genuine occult instruction; but the outer guru, the Master who teaches and leads the disciple, has always in view the evocation and development of the guru within the disciple — the bringing to birth of the chela's own inner divine and intellectual energies and powers.

Guru-deva (Sanskrit) *Guru-deva* [from *guru* teacher + *deva* divine being] Deva-teacher; a title of respect and reverence used by chelas for their instructors.

Guruparampara (Sanskrit) *Guruparamparā* [from *guru* teacher + *paramparā* a row or uninterrupted series or succession] An uninterrupted series or succession of teachers. Every Mystery school or esoteric college of ancient times had its regular and uninterrupted series of teacher succeeding teacher, each one passing on to his successor the mystical authority and headship he himself had received from his predecessor. There are two kinds of guruparampara: first, those who rise one above the other in spiritual dignity and in progressively greater esoteric degree; and, second, those who succeed each other in time and in one line in the outer world. Yet these two kinds are but the same rule of series manifesting in two slightly differing manners. This process copies the hierarchical structure of nature itself.

Guruparampara applies in ordinary human life, for “a long chain of influence extends from the highest spiritual guide who may belong to any man, down through vast numbers of spiritual chiefs, ending at last even in the mere teacher of our youth. Or, to restate it in modern reversion of thought, a chain extends up from our teacher or preceptors to the highest spiritual chief in whose ray or descending line one may happen to be. And it makes no difference whatever, in this occult relation, that neither pupil nor final guide may be aware, or admit, that this is the case” (Letters That Have Helped Me).

Gwydion (Welsh) The son of Don (Irish, Dana). There were two chief god-families: the Children of Don and the Children of Llyr. Gwydion might be equated with Hermes. His castle (Caer Gwydion) is the Milky Way, but also (like many of the stars and constellations) it was projected in Wales somewhere. An exactly similar projecting of celestial powers and functions into human life was at one time universal. One has to divine the functions of these gods from corresponding figures in other mythologies: in the *Mabinogi* they are all euhemerized into men.

Gwynfyd, Clych y Gwynfyd (Welsh) Bliss, the cycle of bliss. In Druidism, the worlds above the human, the second of the three cycles of being; that to which the soul attains after evolving beyond the Little World — the human state — and the cycle of Abred. From Gwynfyd the soul might elect

to take on further incarnation in the Little World, moved by the desire to help forward human evolution.

Gwynfydolion (Welsh) In Druidism, when the universe flashed into existence from latency, the Gwynfydolion — the host of souls that had reached Gwynfyd in a previous life period of the universe — awoke in Gwynfyd and, looking forth, desired to take infinity (Cylch y Ceugant) by storm. But traveling out from Gwynfyd with this purpose in view, they sank into Abred and began the cycle of incarnations that brought them at last into the human kingdom, whence by self-purification they may reach their native Cylch y Gwynfyd again.

Gyalugpas. See GELUKPAS

Gyan (Persian) Also Gian-ben-Gian, Gyan-ben-Gian. According to the Persian legend, Gyan was king of the peris or sylphs. He had a wonderful shield which served as a protection against evil or black magic — the sorcery of the devils. Blavatsky remarks that Gyan might be spelled Gnan (which corresponds to the Sanskrit jnana), meaning true or occult wisdom. His shield, “produced on the principles of astrology, destroyed charms, enchantments, and bad spells, could not prevail against *Iblis*, who was an agent of Fate (or Karma)” (SD 2:394).

Gyges (Greek) One of three giants having a dual aspect as a god and a mortal, imprisoned by Kronos for their rebellion against him. The Ring of Gyges is a familiar metaphor in European literature. Plato relates that Gyges was a Lydian who murdered King Candaules and then married his widow. He once descended into a chasm and found a brazen horse with an opening in its side in which was the skeleton of a man, on whose finger was a brass ring. Gyges took the ring and when placed upon his own finger, it made him invisible.

The ring here signifies the circle of knowledge or cycle of initiatory experience and wisdom thus gained, which the fully completed initiate thereafter carries with him in the form of the ring or circle of wisdom and power. One of the powers of the adept, for instance, is to render himself invisible at will, which is achieved by throwing around himself a veil of akasa. The descent into the earth points emphatically to the descent into the pit or underworld which every neophyte of the higher degrees must undertake before completing the initiatory cycle. Gyloon, Gylung. See GEDONG

Gymnosophists [from Greek *gymnosophistai* naked wise men] Name given by the Greeks to the ascetics met by Alexander in India, as mentioned by Plutarch and others. They are said in some cases to have practiced extreme asceticism, including virtual nudity in all weathers; these “learned yogis and ascetic type philosophers who returned to the jungle and forest, there to reach through great austerities superhuman knowledge and experience,” are said to have possessed occult powers due to their mode of life and to the traditional knowledge which they had (TG 130, IU 1:90, 113).

Habal de Garmin. *See* HEBEL DE-GERMIN

Habel (Hebrew) *Hebel* [from the verbal root *hābal* to breathe, blow, be vain, transitory, impermanent, fade away] Breath, mist, vapor, emptiness; whatever is illusory, non-enduring, corresponding to the Sanskrit concept of maya; translated in Ecclesiastes (1:2) as “vanity.” (FSO 105)

Also the son of Adam and Eve, Abel. *See also* ABEL

Hachamim (Hebrew) *Hakhāmīm* **Hakkim** (Aramaic) *Hakkīm*. Wise men; philosophers, statesmen, magicians — also at times the historical Magians.

Hachoser. *See* HA-HOSER

Hades or **Aides** (Greek) [from *aides*, *Aidoneus* the invisible] Son of Kronos and Rhea, brother of Zeus and Poseidon. When the world was shared among the three brothers, Hades obtained the nether regions sometimes equated with Dis, Orcus, and Tartarus. After the time of Homer the name was given to the region he presided over with his consort Persephone. This corresponds to the underworld, those regions of the astral light which extend from the highest kama-loka to the deepest depths of avichi; although the more restricted usage of Hades applies to kama-loka. Hades is pictured as a dark realm in the depths of the earth, surrounded by rivers. However, the meaning of underworld shifts according to the viewpoint had at any time, the earth itself sometimes being equated with Hades.

The god Hades is sometimes called Pluto, giver of wealth, because grain grows from the depths of the earth, and in this respect he was worshipped as an agricultural god.

Hagar (Hebrew) *Hāgār* The Egyptian handmaiden of Sarai (Sarah), who bore Abraham a son,

Ishmael (Genesis 16). Some interpreters identify Hagar with Mount Sinai, as the numerical interpretation of her name is 235, the number of lunar cycles in 19 tropical years (SD 2:76).

Hahnir. See HONER

Ha-Hoser (Hebrew) *Ha-Ḥoser* The diminished, implying derivation and reflection; reflected lights is a Qabbalistic term for a minor hierarchy of builders of inferior power.

Haimavatas. See HIMAVAT

Ha-'Indra' Rabba' Qaddisha' (Aramaic) *Hā-'Idrā' Rabbā' Qaddīshā'*. The Great Holy Assembly; one treatise of the *Zohar*, consisting of discourses by Rabbi Shim'on to his assembly of disciples upon the form of the Deity and on pneumatology. It is considered to be a development of the *Siphra di-Tseni'utha'*, the most ancient portion, and therefore the basis of the *Zohar*.

Ha-'Idra' Zuta' Qaddisha' (Aramaic) *Hā-'Idrā' Zūṭā' Qaddīshā'*. The Less (or Small) Holy Assembly; a small treatise of the *Zohar*, containing the discourses of Rabbi Shim'on to his remaining six disciples upon the Sephiroth; based upon the *Ha-'Idra' Rabba' Qaddisha'*.

Haima (Sanskrit) *Haima* [from *heman* gold, winter] Golden, equivalent to *hiranya*; also wintry. Mystically, certain things or entities were considered golden in the sense of best, the most superior. Thus the Himalayan mountains, because they were considered the best of mountains, were often spoken of as *haima* (golden), and possibly in later times the term often was used merely to express the idea of golden, having lost its original implication.

Hajaschar. See HAY-YASHAR

Hakem The wise one, the Messiah to come, of the Druzes or the Disciples of Hamsa (TG 133).

Hakim (Arabic) *Ḥakīm* [from *ḥakama* to appoint, chose, judge] A sage, wise man, or physician.

Hakim (Arabic) *Ḥākīm* [from *ḥakama* to appoint, chose, judge] Title for a governor or judge.

Halloween. See ALL SAINTS' DAY

Hallucination Commonly, perception of objects without reality or an experience of sensations without external cause, usually thought to arise from a disorder of the nervous system. However, hallucination means something different to an occultist.

“A state produced sometimes by physiological disorders, sometimes by mediumship, and at others by drunkenness. But the cause that produces the visions has to be sought deeper than physiology. All such visions, especially when produced through mediumship, are preceded by a relaxation of the nervous system, invariably generating an abnormal magnetic condition which attracts to the sufferer waves of astral light. It is the latter that furnishes the various hallucinations. These, however, are not always what physicians would make

them, empty and unreal dreams. No one can see that which does not exist — *i.e.*, which is not impressed — in or on the astral waves. A Seer may, however, perceive objects and scenes (whether past, present, or future) which have no relation whatever to himself, and also perceive several things entirely disconnected with each other at one and the same time, thus producing the most grotesque and absurd combinations. Both drunkard and Seer, medium and Adept, see their respective visions in the Astral Light; but while the drunkard, the madman, and the untrained medium, or one suffering from brain-fever, see, because they cannot help it, and evoke the jumbled visions unconsciously to themselves, the Adept and the trained Seer have the choice and the control of such visions. They know where to fix their gaze, how to steady the scenes they want to observe, and how to see beyond the upper outward layers of the Astral Light. With the former such glimpses into the *waves* are hallucinations: with the latter they become the faithful reproduction of what actually has been, is, or will be, taking place. The glimpses at random caught by the medium, and his flickering visions in the deceptive light, are transformed under the guiding will of the Adept and Seer into steady pictures, the truthful representations of that which he wills to come within the focus of his perception” (TG 133-4).

Halo The radiance streaming from the head of a holy person. *See also* AUREOLE.

Haltiat (Finnish) Singular *haltia*. Regents or genii; in Finnish mythology everything in nature was governed by these invisible deities or cosmic spirits, who were generally represented in pairs. They were regarded as immortal, having spirits and distinctive individual forms, the minor ones in the hierarchy being less distinctive in vehicle and power than those of higher grade.

Ham *ham* (Hebrew) *Hām* [from *ḥām* hot, warm, heat, warmth] In the Bible, one of the three sons of Noah, from whom a great majority of the southern nations were supposed to trace their descent (Genesis 10). Some scholars have suggested that ham is equivalent to khem (black), the native name of Egypt, for Chem is the name of Egypt in the Qabbalah.

Noah and his sons in some instances represent the fifth root-race, in others the third root-race; or cosmically the collective symbol of the lower quaternary, “Ham being the Chaotic principle” (SD 2:597n).

Hamadryad [from Greek ‘*ama* together with + *dryad* tree-soul] Nearly the same as dryad, but indicating that the life of the tree elemental was bound up with that of the tree. With dryad, the mind dwells upon the fact that the physical tree is but an expression of an indwelling life or tree-soul, an elemental being expressing itself as a tree. With hamadryad, the emphasis lies in the thought that not only is a tree the expression of a tree-soul, but that this tree-soul and the tree are essentially, and even physically, one; and that the dryad or tree-soul itself is but again the expression of a still higher monadic essence.

Hamingja (Icelandic) Also *fylgja*. Luck, lot, or fortune in the Norse Edda; a human being’s guardian

angel, the spiritual soul who guides his destiny. She is descended from the norns, who are the hamingjas of the world. To bestow one's hamingja on another is to give a blessing. When a human being dies, his hamingja departs, withdrawn to its own divine realm.

Hamitic Races Generally speaking, the races or tribes which are supposed to have been descended from Ham, one of the sons of Noah according to Biblical legend. Now used by scholars chiefly in a philological sense, referring to a class of languages represented principally by the ancient Egyptian, and its greatly modified modern descendant Coptic; the Libyan or Berber languages of Northern Africa; and the Ethiopic languages of Eastern Africa.

Hammer (of Creation). See SVASTIKA; MJOLNIR

Hamsa, Hansa (Sanskrit) *Haṃsa* The mystic swan or goose; representing divine wisdom beyond the reach of men. Exoterically, a fabulous bird which, when given milk mixed with water, drank only the milk and left the water, milk standing for spirit and water for matter. Anagrammatically, hamsa

“is equal to a-ham-sa, . . . meaning ‘I am he’ (in English), while divided in still another way it will read ‘So-ham,’ ‘he (is) I’ — Soham being equal to Sah, ‘he,’ and aham, ‘I,’ or ‘I am he.’ In this alone is contained the universal mystery, the doctrine of the identity of man's essence with god-essence, for him who understands the language of wisdom. Hence the glyph of, and the allegory about, Kalahansa (or hamsa), and the name given to Brahma neuter (later on, to the male Brahma) of ‘Hansa-Vahana,’ he who uses the Hansa as his vehicle. The same word may be read ‘Kalaham-sa’ or ‘I am I’ in the eternity of Time, answering to the Biblical, or rather Zoroastrian ‘I am that I am’ ” (SD 1:78).

Hanoch, Hanokh. See ENOCH

Hansa-Vahana (Sanskrit) *Haṃsa-vāhana* He who uses the hansa (swan) as his vehicle, a title of Brahman (neuter).

Hanuman or **Hanumat** (Sanskrit) *Hanumān, Hanumat* Monkey-god of the *Ramayana*. The son of Pavana, god of the winds, or spirit, Hanuman is fabled to have assumed any form at will, wielded rocks, removed mountains, mounted the air, seized the clouds, and to have rivaled Garuda in swiftness of flight. According to the epic, Hanuman and his host of semi-human monkey-beings became the allies of Rama, the avatara of Vishnu, in his war with the Rakshasa-king of Lanka, Ravana, who had carried off Rama's wife, the beautiful Sita. As advisor to Rama and leader of his army, Hanuman showed unparalleled audacity, wit, and wisdom, thereby accomplishing great feats.

The deep reverence that the Hindus for ages have held for this monkey-being is based on an intuitive, but nevertheless traditional, remembrance of the connection, more intimate than at present, that existed during Atlantean and even Lemurian times between human beings and the

apes and even monkeys. The monkeys, although now static stocks, were originally derivative from Lemurian humanity, just as the anthropoids were later derivatives from miscegenations between undeveloped Atlantean savages and the monkeys of those distant times. Therefore, there is a strain of manas, however as yet undeveloped, in the anthropoid and the simian stocks.

Haoma (Avestan) **Hūm** (Pahlavi) **Homa** (Persian) The Tree of Life; there are two haomas: the yellow or golden earthly haoma, which when prepared and used as an offering for sacrifice is the king of healing plants, the most sacred and powerful of all the offerings prescribed in the Mazdean scriptures. This haoma is equivalent to the Hindu soma — the sacred drink used in the temples, and is said to endow he who drinks it with the property of mind.

The white haoma (or hom) is called the Gokard, the sacred tree of eternal life created by Ahura-Mazda which grows up in the middle of the Farakhard ocean (unbounded ocean or the waters of space), surrounded by the ten thousand healing plants, created by Ahura-Mazda to counteract the 99,999 diseases created by Angra-Mainyu. By the drinking of the Gokard men will become immortal on the day of the resurrection, according to the *Bundahish*. From the white haoma was also cut the sacred baresma of the Mobeds.

In later esoteric Persian literature, Simorgh takes the place of haoma at the top of Mount Alborz. It finally becomes the mythical bird that brings happiness and good fortune to those he protects.

The fruit of the haoma was the fruit of the tree of knowledge and wisdom (later transformed into the forbidden fruit), similar to the apples of wisdom and the pippala. *See also* ASVATTHA

Hap or **Hapi** (Egyptian) *Hāp* or *Hāpi*. God of the Nile; Hep (later Hap) is a name believed to be given to the river by the predynastic Egyptians. The deity is always represented in the form of a man with the breasts of a woman: symbol of fertility and nourishment.

As Egypt was divided into the North and South, the deity took on two aspects: Hap-Reset, the North Nile, pictured with a cluster of papyrus plants upon his head, and Hap-Meht, the South Nile, depicted with lotus plants. He was called the vivifier, creator of things which exist, father of the gods. In one aspect, Hap was identified with Osiris, especially Osiris-Apis or Serapis; thus Isis came to be regarded as his consort. Likewise he had absorbed the attributes of Nu, the primeval watery abyss from which Ra, the sun god, emerged on the first day of the new world period; therefore he was designated the father of living things, for without the waters of Hap, all living things would perish. Blavatsky points to his psychopompic role and his equivalence with the angel Gabriel (BCW 10:55-6).

Hap among the ancient Egyptians was considered to have two existences, the celestial and the earthly, and in a sense was in Egypt what the river Jordan, both mystical and earthly, became to the Jews and Christians. Again, it is both the river of life and the river of death, crossed at the beginning of the peregrinations undertaken by the deceased.

Happy Fields A name for the afterdeath state among the ancient Chaldeans, Babylonians, and Assyrians. These regions were reached after passing through the place of purgation (in a restricted sense therefore equivalent to the Greek Hades) which was ruled over by the Lady of the Great Land, called Nin-Kigal by the Assyrians and Allatu by the Babylonians. The entrance to this place was by means of the cave of Aralu.

The whole underworld was said to be ruled over by Nergal, god of wisdom, and was divided into seven spheres or regions, each under the guardianship of a watcher stationed at a massive portal. The deceased is represented as a traveler who must surrender a portion of his vestments (his sheaths of consciousness) to each one of the seven guardians in turn. *See also* ISHTAR

Hara (Sanskrit) *Hara* [from the verbal root *hr̥* to bear, take away] Bearing, taking away, carrying off, destroying; as a proper name, the destroyer, applied to Siva as the regenerator.

Hare Many mythologies have featured the hare, especially the Egyptian. Thus the symbol of the hare frequently occurs in the hieroglyph, as well as a hare-headed deity named Unnu, with his consort Unnut — ancient divinities of Hermopolis, the latter being closely associated with Sekhet.

A striking similarity is present in the mythology of the Algonquin Indians of North America; their chief deity was a mighty hare known as Menabosho or Michabo, to whom they went at death. One account places him in the east, another in the west. The ancient Germanic and Scandinavian peoples used the hare as a symbol, being sacred to the nature goddess Freyja; likewise to the Anglo-Saxon Ostara, goddess of springtime. This is believed to be the basis for the present-day association of the rabbit or hare with Easter. The anthropomorphic idea is found also among other races, very frequently among the Mongolians, Chinese, Japanese, and other Far Eastern peoples. It was considered to be androgynous, thus typifying an attribute of the creative Logos.

Eros, god of sexual love, is represented as carrying a hare. The hare was sacred to Osiris and was also a symbol of the moon.

Hari (Sanskrit) *Hari* [from the verbal root *hr̥* to take, remove; to be yellow] Especially the name of Krishna as an avatara of Vishnu; likewise applied to other deities, generally Siva. Also an alternative name for the sign of the zodiac Simha or Leo — the word itself meaning a lion, as well as being a name for the sun, the moon, the horses of Indra, and for one of the nine varshas or divisions of the world.

As an adjective, yellow or green.

Hari-ashvas. *See* HARYASVAS

Harikesa (Sanskrit) *Harikeśa* [from *hari* yellow + *keśa* hair] One of the seven principal rays of the sun; also a name for Savitri. As an adjective, yellow- or golden-haired. It is a title especially given to Siva.

Haris (Sanskrit) *Hari-s* One name of the twelve great gods or jayas emanated by Brahma in producing the universe and all in it.

Harivamsa, Harivansa (Sanskrit) *Harivaṃśa* The lineage of Hari, or Krishna. A celebrated poem of 16,374 verses, generally regarded as a part of the *Mahabharata*, but believed by some to be of much later date than the greater epic. It treats of the adventures of the family of Krishna, being divided into three parts: an introduction that traces the dynasty; the life and adventures of Krishna; and the conditions occurring during the kali yuga and the future condition of the world.

Harmachis (Greek) **Harmachus** (Latin) **Heru-khuti** (Egyptian) *Heru-khuti*. Horus of the two horizons, an aspect of the god referring particularly to the sun god Ra. The two horizons represent the day sun and the night sun, or sunrise and sunset. The principal sites of this worship were at Annu (Heliopolis) and Apollonopolis. The largest monument of Heru-khuti is the famous Sphinx near the pyramids of Gizeh. The meanings of Harmachis, the Sphinx, are both numerous and perplexing, but one of the most illuminating is that it was the symbol of the risen god-man, the type-figure of success achieved under the most difficult and trying ordeals of the initiatory cycle.

Haroeris, Haroiri. See AROERIS

Harpocrates (Greek) **Heru-pa-khart** (Egyptian) *Heru-pa-khart*. Horus the Younger, or Horus the Babe. Representations of his mother Isis with an infant are common in Egypt, and with his father, Osiris, a trinity is formed of Father-Mother-Son. Harpocrates came to be regarded as the type of new birth and life, thus the first hours of the day, the first days of the month, and the first days of the year, were especially associated with him. He was the god of silence or of the Mysteries, and little has come down to the present day with regard to this aspect of the deity.

Finally, at least in some important aspects of his characteristics and worship, he was adopted by both Greeks and Romans, albeit recognized as being a foreign divinity.

Har-Ru-Bah (Egyptian) *Heru-āa-ābu*. The heart of Horus; a title of Horus in *The Egyptian Book of the Dead*.

Harshana (Sanskrit) *Harṣaṇa* Thrilling with joy or desire; the name of a particular sraddha (rite) and of a deity presiding over sraddhas.

Harviri. See AROERIS

Haryasva (Sanskrit) *Haryaśva* [from *hari* bay + *aśva* horse] Bay horse; a name applied both to Indra and Siva. In the *Harivansa*, the Haryasavas are represented as the five or ten thousand sons of the patriarch Daksha, born for the purpose of peopling the earth, but the rishi Narada persuaded them to remain celibates; after which they dispersed themselves through the regions and did not return. This means “that they had all incarnated in mortals. The name is given to natural born mystics and celibates, who are said to be incarnations of the ‘Haryaswas’ ” (TG 136).

Haryaswas. See HARYASVA

Hasoth. See YESOD

Hatha Yoga (Sanskrit) *Haṭha-yoga* A lower form of yoga practice which uses physical means for purposes of self-development, teaching that it is possible to attain to a certain grade of psychomental abstraction and to develop some of the lower vital-astral powers, by means of a set of physical exercises and postures, by the regulation of the breath, or by certain other psychophysical methods. These methods are to be neither recommended nor followed, for they are exceedingly dangerous except when practiced in minor degree under the supervision of a teacher, and above everything else in full coordination with the higher forms of yoga.

Hatha yoga practices can be exceedingly dangerous to sanity and health. Being of nonphysical nature on one side, they can adversely affect the mind, and in extreme cases even dislodge the mind from its normal and proper seat, producing insanity. Being of a physical nature also, they interfere with the proper pranic circulations in the body; the pranas when left alone are usually productive of health, and when disturbed by attempted meddling produce disease.

One phase of hatha yoga is the pranayama (suppression of the breath), interference with the normal and healthy respiration of the body; a practice which can readily produce tuberculosis of the lungs. It is breathing deeply, healthfully, and as often as common sense suggests, that brings benefits to the body because bringing about a better oxygenation of the blood and therefore a better physical tone. In very rare circumstances only, where a chela has advanced relatively far mentally and spiritually, but has still an unfortunate and heavy physical karma as yet not worked out, it may possibly be proper, under the guidance of a genuine teacher, to use the hatha yoga methods in a limited degree, but only under the teacher's own eye. For this reason hatha yoga books are occasionally mentioned in theosophical literature — the *Yoga Aphorisms* of Patanjali, for example, is a hatha yoga scripture, but one of the highest type. But generally, hatha yoga practices are injurious and therefore unwise, for they distract the attention from things of the spirit and direct it to the lower parts of the constitution.

Unfortunately, however, physical practices of various kinds seem to be particularly attractive to the average person because apparently within the sphere of easy performance. One does not know the dangers lurking there; but actually, to achieve even the minor results that come from perfect performance, greater effort and larger difficulties have to be encountered than in raising one's eyes to the nobler forms of yoga. It is always safe and indeed requisite for a disciple to practice the higher branches of yoga: jnana yoga, raja yoga, bhakti yoga, and karma yoga, which means the yoga of unselfish action in daily life. Consequently, when considered apart from the nobler forms of yoga there is not a particle of spirituality in all these hatha yoga practices.

Hathor (Greek) **Het-Hert** (Egyptian) *Ḥet-Ḥert* [from *ḥet-ḥert* the house above] One of the oldest known Egyptian deities. Het-Hert refers to the sky or heaven, known by the Greeks as Hathor.

Originally, Hathor was a cosmic goddess, consort of Ra, mother of light — the production of which was considered the opening act in cosmogony, producer of the twin deities Shu and Tefnut (the sky and the moisture of the sky). Later she was regarded as the great Mother, bringing forth all the gods and goddesses — Mother Nature personified. She has been associated with all the goddesses of Egypt, partaking of all their attributes; but her principal title was Lady of Amentet (the Holy Land or underworld).

The Greeks identified Hathor with Aphrodite, for she was the patron deity of beauty and joy in life, of artists and their creative work as was the celestial and earthly Venus. Her chief position, however, was goddess of the Underworld, providing the deceased with food and drink.

Astronomically she was associated with the star Sept (Sothis or Sirius), which rose heliacally on the first day of the Egyptian New Year. When the sun god Ra entered his boat, Hathor went with him and took up her position as a crown upon his forehead.

Hathor was closely connected with Neith (at Sais), and in Ptolemaic times with Nekhebet, Uatchet, and Bast. “Hathor is the *infernal* Isis, the goddess pre-eminently of the West or the *nether* world” (SD 1:400n). Yet this was but the lower aspect of Hathor, Neith, and Isis. Neith, or the celestial Hathor, was one of the most spiritual, recondite, and abstract of all the deities of the Egyptian pantheon, in this sense the celestial womb of light, out of which came in hierarchical procession the world or the cosmos and all in and of it. *See also* NEITH

Hati. *See* AB HATI

Haunted Houses Physicho-astral remains of the deceased tend to haunt the places where they dwelt in life; and in cases which are relatively rare, though numerous absolutely, conditions may bring about a connection between the lower astral plane and the physical so that visible images are seen, voices or footsteps heard, and objects may be moved. In some cases the astral image or reliquiae may persist for centuries, making what is called a ghost; it is an astral corpse or relic, automatically repeating acts or words. Often bones have been found under a house, and popular belief has it that the haunting has ceased after they were ceremonially interred. Sometimes there is an evident desire on the part of the kama-rupa to communicate information of some sort, as of a hidden document or buried treasure, and this is not because the kama-rupa is the spirit desiring to communicate its information, but because the kama-rupa has stamped upon it photographically, as it were, the intense desire of the person during life to guard the treasure and conceal it, and even to reveal it to some individual.

Under this heading must be included the mischievous pranks of the poltergeist, due to the action of a persistent relic of the psycho-astral nature of a deceased person, in combination with elementals, often again working in conjunction with a mediumistic living individual.

Havas. See HADES

Havvah. See EVE

Havyavahana (Sanskrit) *Havyavāhana* The fire of the gods; the sacrificial fire which receives offerings to the gods. In the Puranas, Suchi, the solar fire, is made its parent.

Hawk Symbol associated in ancient Egypt with the sun; whenever there was an emphasis placed on solar worship the hawk was usually present, especially at Hieraconopolis (the hawk city) south of Thebes. The hawk was especially sacred to Horus, Ra, Osiris, and Seker. Horus and Ra (the latter particularly in his association with Menthu, the lord of Thebes) were often depicted as hawk-headed, both being solar deities.

The golden hawk was often identified with the bennu (the Egyptian phoenix), and there was also the hawk of the gods itself which was regarded as an offspring of the god Tem and associated with Horus in his aspect of the son of Osiris.

The hawk too depicted one of the parts of the human constitution, the human soul; oftentimes it is represented as hovering over the mummy: "The sense varies with the postures of the bird. Thus when lying as dead it represents the transition, *larva* state, or the passage from the state of one life to another. When its wings are opened it means that the defunct is resurrected in Amenti and once more in conscious possession of his soul. The chrysalis has become a butterfly" (TG 136).

In many other countries the hawk, or some other flying creature, symbolized the human soul. See also KHENSU

Hayah. See HAYYAH

Hayo Bischat. See HIWYAI' BISHA'

Hayyah (Hebrew) *Ḥayyāh* [from *ḥāyāh* life, vitality.] Sometimes Chiah, Chayah, Hay-yeh, etc. Life in the abstract; as an adjective, living; a living being or thing, and hence often a beast or an animal; in a collective plural, living beings including human beings.

In its connection with nephesh, equivalent to the Greek psyche or Latin anima, there is frequently found the phrase nephesh hayyah (living creature). Equivalent also to the Sanskrit prana or vitality; and when considered as an entity, it corresponds closely with the astral monad, for prana or vitality must have its astral vehicle or body to work through, such as the *linga-sarira*.

The vital spirit or spirit of life runs throughout all the seven principles whether human or cosmic, so that there is a direct and distinct application of this word even to the highest or spiritual part of any being. Indeed, life itself which permeates the entire human and cosmic constitution is derived originally from the spiritual monad, which explains why hayyah is connected in meaning with neshamah (spirit), being equivalent to buddhi.

Hay-Yashar (Hebrew) *Hay-yāshār* Blavatsky spelled Hayasscher. The straight, upright, or righteous, the light-forces; used in the Qabalah for a group or minor hierarchy of forces or energies of an inferior grade, but still belonging to the powers of light.

Hayyim (Hebrew) *Ḥayyīm* [masculine plural of feminine *ḥayyāh* life] Lives, living beings. *See also* HAYYAH

Hayyoth Haq-Qadosh (Hebrew) *Ḥayyōth haq-Qādōsh* [from *ḥayyāh* a living being + *haq* definite article + *qādōsh* holy] Holy living creatures; Qabbalistic term for the four creatures of Ezekiel's vision, generally referred to as the cherubim. These holy living creatures are the four symbolic beasts which in the zodiac are called Taurus, Leo, Scorpio, and Aquarius.

Hazim hozim (Hebrew) *Ḥozīm* [from plural *ḥāzāh* to see, behold, contemplation as of spiritual or divine things; singular *ḥozeh* prophet or seer] In ancient times there were schools of hozim which were well known, in which occult sciences were taught. Samuel is said to have been the head of such a school at Ramah, while Elisha is said to have had his at Jericho.

Hdu-Byed (Tibetan) (hDu-bYed) *'du byed* (du-je) Equivalent of Sanskrit samskara; many meanings, including the fourth in the Buddhist list of five skandhas.

He', Hei (Hebrew) *Hē', Hēi* The fifth letter of the Hebrew alphabet, ה, supposed to be a window or opening. Blavatsky suggests that its meaning in the Tetragrammaton (IHVH) יהוה is that of a womb. The numerical value is 5.

It holds an intermediate position in pronunciation between the soft aleph א and the harsher heth ח and consequently both in pronunciation and writing it is occasionally interchanged with these two other characters.

Hea. *See* EA

Head of all Heads [from Chaldean *Reisha' dechol Reisha'*] Qabbalistic term also referred to as the Ancient of Ancients ('Attiqa' De'Attiqin), the Concealed of the Concealed, or the Hid of the Hid.

“In that Atteekah ['Attiqa'] nothing is revealed except the Head alone, because it is the Head of all Heads . . . The Wisdom above, which is the Head, is hidden in it, the Brain which is tranquil and quiet, and none knows it but Itself. . . . And this Hidden Wisdom . . . the Concealed of the Concealed, the Head of all Heads, a Head which is not a Head, nor does any one know, nor is it ever known, what is in that Head which Wisdom and Reason cannot comprehend” (Zohar iii 288a).

It corresponds to Brahman-pradhana, behind and within and above which is the ever-incomprehensible, parabrahman. *See also* RE'SH HIWWAR

Healing. *See* MEDICINE; FAITH HEALING; HERBS; MAGNETIC HEALING; MESMERISM

Hearing The fifth or highest sense corresponding in the tattvas to akasa. It was only during the third root-race that hearing became manifest as a distinctly individualized physical sense apparatus. Vibrations of material particles in and outside of the body arouse the sense of hearing as a physical manifestation. *See also* SENSES; SOUND

Heart The heart is the seat in the human body of buddhic consciousness, corresponding to the anahata chakra which is ruled by the planet Venus. There are three principal centers of the human body: the heart as the center of spiritual consciousness; the head as the center of mental consciousness; and the navel as the center of kamic or emotional consciousness. The heart is the organ through which the higher ego acts, seeking to impress the lower self which works through the brain. In this sense the heart is the most important part of the body, and when developed leads to spiritual mastery, the unity of atma-buddhi-manas. In another sense, the heart corresponds to prana, “but only because Prana and the Auric Envelope are essentially the same, and because again as Jiva it is the same as the Universal Deity” (BCW 12:694).

Cosmically, the sun is the beating heart of the solar system, and the sunspot cycle of approximately 12 years represents the cycle of its beating, as it sends forth and receives back the circulations on many planes which sustain the solar system. The sun is “a beating heart; in another sense, it is a brain. There is a temptation to use the words heart and brain literally, and such usage wanders not far from fact. But it is not the physical globe which is the true head and heart, except insofar as the physical universe is concerned. The real head and the real heart, coalescing and working as one, are the divinity behind and above and within the physical vehicle of our glorious daystar” (FSO 299; cf SD 1:541-2).

Heart Doctrine In Mahayana Buddhism, the hidden or esoteric teachings as opposed to the eye doctrine, the public or exoteric teachings. In theosophy, the heart doctrine is considered to contain the more profound and compassionate teachings which go beyond the literal interpretation of the publicly given doctrines. ()

Heart, Sacred. *See* SACRED HEART

Heat In science heat is a class of effects called thermal, and diagnosed as vibratory affections of the particles of bodies, produced by solar radiation, mechanical means, chemical action, or the flow of electric current. In seeking the unity which may reconcile these diversities, science has agreed to call heat a mode of motion or one of the forms of energy. According to this theory, heat energy and mechanical energy are mutually convertible. Heat in the terms of modern physics cannot be described either as a fluid or as a mode of motion; but like all physical phenomena, whether we call them substantial or dynamic, it is a function of the activities of some substratum whose nature science is still striving to define.

Theosophically, heat is a manifestation of one of seven forces emanating from the fount of cosmic life and manifesting itself by various effects on various planes. It is a form of one of the seven

primordial conscious forces emanating from anima mundi, one of the seven sons of fohat, or one of seven radicals — one aspect of universal motion; in other words, the emanation from a living entity expressing itself on our plane as heat. The forces of physics are manifestations of elementals, which themselves are manifestations of noumena on a still higher plane. Heat is both substantial and energetic in character, and we may speak of it as being actually a fluidic emanation from living bodies; although it is equally possible to produce heat in so-called inanimate matter because of the stirring up of the same fluid in these bodies by means of intelligence acting to that end.

Heathen. *See* PAGAN

Heaven and Hell In Christian theology, the abodes of Deity and the celestial hierarchy on the one hand, and of Satan and his fallen angels on the other hand; the final goal of those who are saved and of those who are damned. The origin of the doctrine is founded in the ancient Mystery teachings concerning the human afterdeath experiences and the corresponding experiences passed through by the candidate for initiation. Hell may be likened to kama-loka and also avichi, though neither is eternal. Kama-loka is better represented, however, by purgatory. Heaven is a reflection of devachan, blended also with ideas of nirvanic states. Thus heaven and hell should both be used in the plural, as is commonly the case in their non-Christian equivalents: Elysium, nirvana, Paradise, Valhalla, Olympus, and many other names for heaven; and Tartarus, Gehenna, She'ol, Niflheim, etc., for hell.

Heaven and hell may denote states of consciousness experienced in daily life on earth. A rough division of cosmic spheres makes heaven the highest, hell or Tartarus the lowest, with the earth beneath heaven, and the underworld beneath it and preceding Tartarus. The crystalline spheres of medieval astronomy are called heavens surrounding the earth concentrically. Far from being adjudicated by a deity to happiness or torment, after death a person goes to that region to which he is attracted by the affinities which he has set up during his life. Thus theosophy teaches the existence of almost endless and widely varying spheres or regions, all inhabited by peregrinating entities; and of these regions the higher can be dubbed the heavens and the lowest the hells, and the intermediate can be called the regions of experiences and purgation. All spheres possessing sufficient materialized substance to be called imbodyed spheres are hells by contrast with the ethereal and spiritual globes of the heavens. Therefore in a sense and on a smaller scale, the lower globes of a planetary chain may be called hells, and the higher globes of the chain, by contrast, heavens.

All evolving entities go to both the heavens and the hells of our solar system in accordance with their evolutionary necessities, and for the purpose of purgation through the suffering of material experience; but in all cases such peregrinating egos are attracted at the different times of their long evolutionary schooling to those spheres by sympathy or psychomagnetic pull. The immense justice of this idea, from which the heavens and hells of the different religions have come, is

readily apparent. *See also* LOKA

Heavenly Adam. *See* 'ADAM QADMON

Hebdomad [from Greek *hebdomas* a group of seven] A group of seven, a septenary; a period of seven days, or seven years, etc., as in Sabbatical periods.

Hebel. *See* ABEL

Hebel de-Garmin, Hebel de Germin (Aramaic) *Hebel de-Garmīn* [from *hebel* breath, vapor + *gerem* a bone] The breath (life) of the bones, rendered by some Qabbalists as the body of resurrection, referring to the tselem (image) of the deceased believed to remain as an indestructible prototype. Also met with in the Old Testament in the vision of Ezekiel (ch 37) where the army of bones are breathed into life; likewise in Daniel and Isaiah.

A somewhat parallel concept occurs in *The Egyptian Book of the Dead*: “Rise up thou, O Osiris, thou hast thy backbone, O still-heart, thou hast thy neck vertebrae and thy back” (ch 155).

Hebel is also the Hebrew spelling of the second son of Adam, usually rendered in English as Abel, brother of Cain.

Hecate (Greek) *Hekate*. This goddess, daughter of Perses and Asteria, was given power from Zeus in heaven, earth, and sea. She was a mysterious divinity, popularly represented as the goddess of sorcery and witchcraft, haunting crossroads and graveyards, wandering only by night and seen by dogs, whose barking told of her approach. Identified with Artemis and Persephone, she was held to be the same as Selene or Luna in heaven, Artemis or Diana on earth, and Persephone or Proserpina in the underworld; hence she was called Tergemina, Triformis, Triceps, etc. She is the personified moon, whose phenomena are triadic and is one prototype of the Christian Trinity (SD 1:387).

Just as Diana represented the moonlight splendor of night, so Hecate represented its darkness and terrors; and she is best known as a deity of the nether world, sending forth terrible phantoms and presiding wherever sorcery is practiced.

In the Orphic teachings, she was trimorphas (three-formed) “the personified symbol of the various and successive aspects represented by the moon in each of her three phases; and this interpretation was already that of the Stoics, . . . while the Orpheans explained the epithet [[*Trimorphos*]] by the three kingdoms of nature over which she reigned” (SD 1:395).

Hedonism [from Greek *hedone*, pleasure] In ethics, the doctrine that the gratification of natural inclinations is the chief good, and that the moral law is thereby fulfilled. The value of this doctrine depends entirely on what we are to understand by pleasure or inclination. In the best sense, which was that of Epicurus and his followers, these words may be considered as one way of trying to express the *summum bonum*, the goal of human endeavor; and this school pointedly taught that

neither happiness nor peace are ever attainable by the subjection of human thought, mind, and conscience to the instincts or inclinations of the body. Some aspects of modern utilitarianism may be considered as a form of hedonism. But the doctrine as stated is easily degraded, and in its worst form becomes the pursuit of sensual gratification. In fact, hedonism as a word, and as understood now and by many even in ancient times, is the exact opposite of what these early philosophers believed and taught. *See also* EPICUREAN PHILOSOPHY

Heh. *See* HE'

Hekat, Heket. *See* HEQET

Hel (Icelandic) [from *helju* hell, death] The mythical regent of the Norse realm of the dead, depicted as half black or blue and half flesh-colored. In myths the representative of death is usually said to be a child of mind: in the Edda she is the daughter of Loki (fire of mind) and of the giantess Angerboda (boder of regret). She rules the nine worlds of death which correspond to the nine worlds of life, and apportions to each arrival a domicile appropriate to that soul's merit or demerit. Some may frolic in sunlit meadows, others suffer agony beneath the lower gates leading to Niflhel [from *nifl* cloud + *hel* death] where matter is ground to extinction. The realm of Hel with its varied accommodations resembles the Greek Hades more than the hell of popular belief where evil souls are sent for punishment. Rather, the kingdom of death is a restful interlude where souls spend a fitting time in their rightful environment. The Eddas relate that elves (human souls) sleep among the gods when they are feasting on the mead of a past period of life (experience); thus the resting souls are present in the divine spheres even through unconscious of their surroundings.

In the Edda's *Vagtamskvadet*, the tale is told of the sun god's death and departure for the house of Hel, where a sumptuous apartment is furnished for him and mead is being freshly brewed for his arrival.

Helheim, Helhem (Icelandic, Swedish) Hel's home; in the Norse Eddas the domain of Hel, ruler of the realm of death. Hel or Hela, daughter of Loki, governs the lands where souls spend the time intervening between lives in the "victory worlds." The realms of death vary from beautiful, peaceful meadows of delight to cages woven of venomous serpents where the occupants undergo acute suffering. The lowest of these hells contain rivers of venom in which oath-brakers and adulterers must wade.

Heliocentric The heliocentric system was universally known in antiquity as a part of the teaching of the Mysteries, and certain eminent sages of those archaic times even taught it more or less openly, among them Confucius in China, Greek philosophers, Egyptian priests, and Hindu astronomical and other writers. Pythagoras veiled the heliocentric theory under the teaching that the planets (and the sun) revolved around a mysterious central fire, invisible to us, but whose light was reflected to the earth by the sun.

At the same time, practically all antiquity adopted the geocentric point of view for public dissemination of their ideas. Secrecy may have been their reason; or they may have wished to represent the mechanism geocentrically for convenience of use, since they and their readers lived upon the earth and not upon the sun. The same secrecy is not necessary today because we no longer recognize the harmony of nature and the universal correspondences: we can be trusted with the key because we have mislaid the lock.

Heliolatry. *See* SUN WORSHIP

Helios, Helion, Helius (Greek) The sun god, son of Hyperion and Theia, brother of Selene (the moon) and Eos (the dawn). He drives the chariot of the sun across the sky. Generally identical with Apollo or Phoebos; sol in Latin, sun in English, assimilated etymologically with the Hebrew 'El and 'elohim, the Chaldean Bel, and the Phoenician Ba'al. Helios is paired with Selene the moon, as Sol is with Luna.

Hell. *See* HEAVEN AND HELL

Hemadri (Sanskrit) *Hemādri* [from *heman* golden + *adri* mountain.] The golden mountain; one name of Mount Meru.

Hemera (Greek) Day; in older Greek mythology, from Chaos issue Erebus and Nox (cosmic darkness and cosmic night) and from these two under the action of Eros, issue Aether and Hemera (light and day) — darkness generates light. Aether is the light of the heavenly or superior spheres, whereas Hemera is the light of the inferior and terrestrial regions.

Henoah. *See* ENOCH

Hephaistos, Hephaestus (Greek) A fire god, child of Zeus and Hera, equivalent to the Latin Vulcanus or Vulcan. He is twice cast down from Olympus, to which however he returns; thus he is a messenger of the gods to earth, and appears on various planes as a manifestation of cosmic fire. He is a kabir, a cosmic teacher of men, whom he instructed in the use of fire and the metallurgic arts. Jupiter, or the four-faced or four-sided Brahma, partakes of all four elements and disputes his fiery function to Hephaistos. The volcanic island of Lemnos, on which Hephaistos is said to have fallen when cast from Olympus, was sacred to him.

Hephaistos has both a cosmic and an earthly significance; and because he is essentially a fire god, his nature and functions are necessarily involved with all the mystical ranges of thought into which fire enters: the fire of spirit, the fire of intellect, the fire of creative activity, etc. He may generally be identified with the fiery or aspiring element in human beings derivative from the higher manas, which links Hephaistos with the manasaputric activities.

As the smith of the gods, he is related to the kabiri, the instructor of mankind in the metal arts. He made thunderbolts for Zeus, armor, jewelry, and other items for the gods, and is said to have

molded the first woman, Pandora, which was sent to Epimetheus.

Heptachord The seven-stringed lyre of Apollo, corresponding to septenates in general, such as seven musical tones, seven prismatic colors, seven human or cosmic principles, etc. From it the god evoked the harmony that governs the worlds in their motions.

One of its correspondences is the seven sacred planets, Apollo being the sun. As the ancients all regarded the sun, under whatever name, as a seven- or twelve-rayed one — the allusions here being to the doctrine of the logoi proceeding from the sun's heart and finding their respective individual habitations in the planets — the heptachord is thus the actual or organic structure of the solar system; and in reality Apollo's heptachord is Apollo's own self flowing forth in seven logoi powers.

Heptad. See SEVEN

Heptakis (Greek) *heptaktys*. Seven times; equivalent of the seven-rayed Chaldean Iao, as represented on Gnostic gems. See also HEPTACHORD

Heqet or **Heqtit** (Egyptian) *Heqet* or *Heqtit*. A goddess, represented as frog-headed, generally identified with Hathor, but in Hermopolis also associated with Isis, as the two goddesses were the abstract and the concrete aspects of the same cosmic power. Originally the female counterpart of the god Khnemu, by whom she became the mother of Aroeris (Heru-ur or Horus the Elder). She is also connected with resurrection. See also FROG

Hera (Greek) Olympian divinity, sister and consort of Zeus, counterpart of the Roman Juno. According to the Homeric poems she was accorded the same honors by the other divinities as Zeus himself, who counseled with her and also shared with her secret things unknown to the other gods. She is represented as Queen of Heaven only at a later date. Like Zeus she had the power to confer the gift of prophecy. Mother of Ares, Hephaistos, and Hebe, she was the goddess of marriage and birth, patron divinity of woman from birth to death, and of domestic duties. Sanctuaries for the worship of Hera existed in many parts of Greece, the principal center being Argos.

Hera corresponds to the personalized prakriti of the Hindus, as Zeus in so many respects is a Greek counterpart of Brahma. This explains why the functions, high and low, of Hera were generative and productive, in general the fecund producer of all things throughout the drama of manvantara.

Heracles (Greek) *Herakles* **Hercules** (Latin) [probably from *heros* free man, cf Latin *herus* lord of a household; or "renowned through Hera"] Son of Zeus and Alcmene, greatest of the Greek heroes. He delivers Prometheus from Zeus, and slays the two serpents representing the nodes of the moon. The passage of the sun through the zodiacal signs typifies the twelve labors of Heracles, in this case denoting the energies of the cosmic Logos working on various planes, and also in the microcosmic sphere the trials through which an initiate must pass before reaching adeptship. In one of his highest aspects he is a solar entity, self-born, and possibly equivalent to Thor of Scandinavia (SD

1:131-2). He is the first-begotten, in some ways equivalent to Bel of Asia Minor and to Siva in India (SD 2:492). He is one of the minor logoi who strive to endow humankind with higher faculties. Again, he appears as the sun god who descends to Hades (cave of initiation) in order to deliver the denizens there from their bonds, thus being equivalent to Mahasura and Lucifer.

The name Heracles was often given to heroes and demigods who embodied his particular characteristics.

Heracitus *Herakleitos* (535-475 BC) Greek philosopher from Ephesus, known as “the obscure” because of difficult writing style. He held that knowledge is based on sense perceptions, and wisdom consists in recognizing the intelligence that guides the universe. Everything is in constant flux, everything being resolvable into the primordial element fire after cycling through all the elements. Nature is constantly dividing and uniting itself, so that all things are at once identical and not identical. ()

Herakles. See HERACLES

Heranasikha (Singhalese) [from *herana* novice + *sikha* rule, precept] Manual of Precepts; a work written in Elu or the ancient Singhalese, for the use of young priests.

Herbs The very large number of plants used as remedial agents in medicine are the natural remedies in treating disease, divine instructors having revealed to early humanity the great boon of agriculture and the medical use of plants. Echoes of the archaic wisdom appear in Vedic writings, but few can interpret the philosophy of the one Life which functions in the elements and forces of the human body, and their related action in the plants and minerals of the body of the earth.

The Sanskrit word for medicine in general is *aushadha* (consisting of herbs), and the ancient Hindu materia medica was the source from which subsequent systems of practice in many other countries drew their remedies, when a broad conception of the sacred art of healing marked their highest periods of national attainment. Originally the medical practitioners were as familiar with the mystical and occult properties of plants and minerals as magicians themselves were. Both understood the analogy and interrelations between the principles of the composite human being and all the various elements throughout the realm of nature. That some plants are attracted by the sun and others by the moon, etc., was explained by a profound knowledge of astronomy and of the occult influences of solar, lunar, and planetary time periods and sidereal forces. This gave the key for the best time, place, and conditions for gathering the herbs, and for the special pharmacy required for bringing out the vital remedial action which, by working with nature, left no unfavorable aftereffects. There is no record of medical laboratory work producing artificial synthetic products which, even when duplicating nature’s substances chemically, are not different vitally. Nor was organotherapy resorted to when and where the healing art held a worthy place in high civilizations.

One of the earliest physicians in Europe to bring herbs into medical practice was Paracelsus, who taught that every plant on earth belonged to, or had its origin in, a star. Following him there were many who allocated the herbs and plants as pertaining to the seven sacred planets of the ancients. The Hermetists of old also had the plants so listed.

Hercules. See HERACLES

Heredity The theosophical philosophy explains heredity as being the attraction of re embodying monads to the respective families with which they have affinities of various kinds; and thus it is the re embodying egos carrying such individual characteristics or attributes which perpetuate them in the family life-stream. It is the sutratman (life thread) which runs through successive generations.

The life-atoms of the lower human principles are drawn again to us when we re embody so that both the soul and the life-atoms of its bodies are essentially the same from life to life. The cause of heredity is a certain class of dhyanichohans spoken of as the fourth order of angelic beings. They “are the field wherein lies concealed *in its privation* the germ *that will fall into generation*. That germ will become the spiritual potency in the physical cell that guides the development of the embryo, and which is the cause of the hereditary transmission of faculties and all the inherent qualities in man. . . . This inner soul of the physical cell — this ‘spiritual plasm’ that dominates the germinal plasm — is the key that must open one day the gates of the terra incognita of the Biologist, now called the dark mystery of Embryology” (SD 1:219).

That the child carries on or transmits many features from his parents cannot be denied, but it is of no greater significance than the fact that he also derives features from a variety of other sources, all which contribute materials and subordinate agents by which the karma of the individual is fulfilled. That karma is the innate character of the individual, as embodied in the various spiritual, manasic, psychological, or astral vehicles which contribute to the composite human being. Without taking into account these acquired characteristics on the inner planes, what determines the extent or manner in which the character of the offspring will be modified by the modicum of new physical influence derived from the parents cannot be explained. For, “it is . . . unquestionable that in the case of *human* incarnations the law of Karma, racial or individual, overrides the subordinate tendencies of ‘Heredity,’ its servant” (SD 2:178).

Further, nothing in nature is static, and energy always flows into the physical system *from within*. Heredity cannot be understood on the presumption that inorganic particles exist; it is necessary to bear in mind that all the results are due to the cooperation and interaction of living beings of many kinds and degrees.

To summarize: what modern usage calls heredity, the transmission of characteristics from parents to children, is not a merely physiologic or biologic mechanism acting automatically or fortuitously;

but actually is brought about because of the attraction to certain families, or certain parents, of re embodying egos possessing in greater or larger degree the same characteristics which the parents themselves have. On identical lines is to be explained the reason why races and even nations continue with their respective characteristics; egos are drawn to similar fields for incarnation. Thus it is that the transmission of type and characteristics continues both racially and individually from generation to generation, always modified by the individualities of the re embodying egos.

Heresy of Separateness The belief that one's self is or can be separate in essence from all other selves. Our apparent separation is functional, not organic or real. This heresy is the one fundamental error against which all theosophical students are warned, and is alluded to in Christian mystic thought as the sin against the Holy Ghost. *See also* BROTHERHOOD

Hermanubis (Greek) **Heru-em-Anpu** (Egyptian) *Heru-em-Anpu* [Anubis in connection with Horus] The aspect of Anubis (Anpu) connected with the wisdom of the underworld, particularly in regard to its Mysteries, hence very little is known of this phase except what is mentioned mainly by Plutarch and Apuleius. In this aspect Anubis was “ ‘the revealer of the mysteries of the *lower world*’ — not of Hell or Hades as interpreted, but of our Earth (the *lowest world of the septenary chain of worlds*) — and also of the sexual mysteries. . . . The fact is that esoterically, Adam and Eve while representing the early *third* Root Race — those who, being still mindless, imitated the animals and degraded themselves with the latter — stand also as the dual symbol of the sexes. Hence Anubis, the Egyptian god of generation, is represented with the head of an animal, a dog or a jackal, and is also said to be the ‘Lord of the *under world*’ or ‘Hades’ into which he introduces the *souls of the dead* (the reincarnating entities), for *Hades* is in one sense the womb, as some of the writings of the Church Fathers fully show” (TG 139-40).

Hermaphrodite [from Greek *Hermes* + *Aphrodite*] The form and typical nature of both the god and goddess in one individual. Androgyne also relates to a dual-sexed human being. Thus, the hermaphrodite embodies nature's universal polarity on its lower planes, which polarity is an emanation from the non-dual or non-bipolar mental and spiritual realms. In an abstract sense, this is a personification of the universal polarity in nature on its lower planes, wherein the so-called masculine and feminine principles are the opposing but coordinating agencies, often called positive and negative, in their creative and generative aspects. “The ancients taught the, so to speak, *auto-generation* of the Gods: the one divine essence, *unmanifested*, perpetually begetting a second-self, *manifested*, which second-self, androgynous in its nature, *gives birth in an immaculate way* to everything macro- and micro-cosmical in this universe” (SD 1:398).

Attention is drawn to the philosophic need of making a sharp distinction between what Blavatsky has called primary creation and secondary creation, the former referring to the one divine unity in which all later manifesting hierarchies primordially inhere as One; whereas the secondary creation or stage in cosmic evolution begins with the fourth stage or fourth cosmic plane beneath

the former, where polarity, duality, and the consequent emanational elaboration of the universe into its hierarchical structures begins. Thus through emanational cosmic evolution the One breaks through its two aspects of parabrahman and mulaprakriti into the cosmically androgyne and phenomenal finite manifested universe.

The asexual procreative methods of the early root-races had evolved to the hermaphroditic status in the early and middle third root-race. The present conditions of sex will also pass away in due course of time after ages of experience as man and woman shall have brought forth the innate masculine and feminine aspects of the human ego. The human race in the course of millions of years will become dual-sexed and finally sexless.

Hermas *The Pastor of Hermas* or *The Shepherd of Hermas* is an early Christian book, attributed to Hermas because that name occurs several times in it, though the authorship is doubtful. It was widely known in the East and regarded as inspired, receiving a respect approximating that paid to the canonical New Testament. It had wide vogue as early as the 2nd century. Irenaeus, Clement of Alexandria, and Origen quote it as scripture; and Origen identifies the author with the Hermas mentioned in Romans. Though it is impossible to assign to it a definite date of composition, conjecture points to the time of Hadrian and Antoninus Pius (117-161 AD). Full of legends and allegories, it presents in suggestive forms the gospel of love, but the name of Jesus Christ does not occur. It was thought by some to be Jewish in origin and contains passages from the *Zohar*. It has come down to us in several Latin translations, but only fragments of the Greek manuscript have yet come to hand.

Hermes (Greek) Greek god, son of Zeus and Maia, the third person in a triad of Father-Mother-Son, hence the formative Logos or Word. He is equivalent to the Hindu Budha, the Zoroastrian Mithra, the Babylonian Nebo — son of Zarpa-Nitu (moon) and Merodach (sun) — and the Egyptian Thoth with the ibis for his emblem; also to Enoch and the Roman Mercurius, son of Coelus and Lux (heaven and light). Among his emblems are the cross, the cubical shape, the serpent, and especially his wand, the caduceus, which combines the serpent and cross. The name has been used generically for many adepts. To Hermes were attributed many functions, such as that of inspiring eloquence and healing, and he is the patron of intellectual, artistic, and productively agricultural pursuits. The nature and functions of this divinity express themselves to our mind as light, wisdom, intelligence, and quickness — especially in an intellectual sense. He was the messenger of the gods, and also the psychopomp or conductor of souls to the netherworld. In his lower aspects he is often made to serve as the inspirer of gross misuses of intelligence such as clever theft — thus illustrating that even the noblest qualities have their dark side.

Hermes-Fire Equivalent to St. Elmo's fire, the brush-discharge of electricity seen at mastheads.

Hermes, Tablets of. See SMARAGDINE TABLET

Hermes Trismegistus Hermes thrice-great; the name of Hermes or Thoth the divinity in his

human aspect as a high initiate. A mythical name for adepts adopted by several writers on so-called Hermetic subjects, with which the early Christian Fathers and the Gnostics show that they were acquainted. *See also* PYMANDER

Hermetic Axiom “As it is above, so it is below; as it is below, so it is above.” *See also* SMARAGDINE TABLET

Hermetic Chain or **Great Chain of Being** Greek expression found even in Homer, signifying the chain of beings from divinities reaching down to inferior gods, heroes, and sages, to ordinary human beings. Each link in this aggregate of hierarchies, of which each link is itself a hierarchy, transmitted its wisdom and power to the next below it; and it is thus that knowledge was originally communicated to early mankind. *See* GURUPARAMPARA

Hermod (Icelandic) [from *her* host, army + *mod* might, courage] A son of Odin in Norse mythology, equivalent to Hermes or Mercury, messenger of the gods. Best known for his memorable journey to the kingdom of Hel on behalf of the gods, when he was sent to entreat the queen of death to give up the sun god Balder whose death at the hands of his blind brother Hoder had been brought about by Loki (in some versions Odin himself undertakes the errand).

Heroes [from Greek *heros* free man, lord, great man] Classical antiquity speaks of heroes and demigods, of mingled divine and human parentage, who ruled over and instructed mankind in bygone ages. The mingled divine and human parentage has reference to the great human figures of the later third and early fourth root-races who embodied as individuals the spiritual qualities of their divine ancestors as well as the human attributes which in those days were continuously becoming more dominant, and in time were destined to overshadow the diviner parts.

Such traditions are found everywhere, from Chaldea to Peru and Mexico, and always consistent with one plan. They recount the evolution of mankind through long ages preceding the present kali yuga; and teach that, as mankind proceeded on the descending arc, human beings were ruled successively by gods, demigods, heroes, and finally mortal initiate-kings, who later gave way to ordinary human rulers. Among genuine semidivine heroes who belong to the earliest part of the present root-race, are such names as Orpheus, Hermes, Cadmus, and Asclepius, all of whom revealed true esoteric sciences to humanity, from which sciences have descended to our own times the various arts, knowledges, and sciences.

Hesed or **Chesed** (Hebrew) *Hesed* [from *hāsad* to be zealous towards, to feel kindness and love for]

Love, kindness; the fourth Sephirah, Mercy, Love, or Compassion, also called Gedulah (greatness, magnificence), emanated from the three preceding Sephiroth or first triad. Hesed is regarded as an active masculine potency, the second in the right pillar of the Sephiroth Tree. Its Divine Name is 'El (the mighty); in the Angelic Order it is represented as the Hashmaim (the scintillating flames), as of polished or burnished brass. In its application to the human body, regarded as the right arm, giving strength; while in its application to the seven globes of our planetary chain it corresponds to globe G. From this Sephiroth is emanated the fifth, Geburah.

Hesiodic Cosmogony The cosmogony and theogony of Hesiod, the Greek poet-philosopher of the 8th century BC, are historical but need interpretation to understand the symbology involved and to filter out the accumulation of minor myths which have been mingled with it. His two great works are *Works and Days* and *Theogony*. Among the features he mentions are: that gods and mortals have one common origin; that there have been four races preceding ours — called golden, silver, bronze, and iron, the fourth being that of the heroes who fell at Thebes and Troy; that seven is a sacred number in days and in constellations; that the beginning of all things was Chaos (Hesiod having the singular restraint to say nothing about what preceded Chaos); that “night” came before “day.” The giants he mentions parallel the asuras and suras and are reminiscences of Atlanteans. His three cyclopes are said to have been representative figures for the last three subraces of Lemuria, and also for three polar continents (SD 2:769, 776). His Prometheus typifies the Greek moral ideal in representing this rebel demigod as the benefactor of mankind, in contrast with the Christian Satan.

Hesperides The Greek goddesses who, with the hundred-headed dragon Ladon, guarded the golden apples which Gaia (earth) gave as a wedding present to Hera on her marriage to Zeus. These apples grew on a tree in a garden by the banks of the river Oceanus near Mt. Atlas, which geographically for the ancients was the peak of Teneriffe, a remnant of Atlantis. One of the tasks of Hercules was to secure some of these apples. The Hesperides are, according to various authorities, three, four, or seven in number. Hesiod calls them the daughters of Night; they are also called Atlantides, and by some made the daughters of Atlantis and Hesperis.

In this we recognize the mythos of the tree of knowledge with its fruit and its location in the garden of life, localized in those mysterious lands of the West from which the ancestors of the Greeks migrated when the new race was in birth from the surviving elect of the old. It represents the Golden Age, the Eden of Grecian mythology.

Hesperos (Greek) Venus as the evening star, brother of Eosphoros or Phosphoros (equivalent to the Roman Lucifer), the morning star, children of dawn and twilight. In Hesiod they are children of Astraios and Eos (starry heaven and dawn). Hesperos was glorified in early Christian and pagan bridal songs, and Blavatsky calls Hesperos the father of the Hesperides. (SD 1:386; BCW 8:16-8)

Heteremeroi. *See* DIOSCURI

Heterogeneity and Homogeneity Heterogeneity applies in theosophy to the immensely differentiated and variegated emanations of the cosmic spirit, itself considered the homogeneous or nondifferentiated source and root of all. During a manvantara the one uniform and noncompounded spirit becomes differentiated into the incomprehensibly vast varieties of manifested nature; whereas during pralaya differentiation vanishes and all returns into the noncompounded homogeneity of the cosmic spirit. Neither term is used in too absolute a sense; each refers to cosmic hierarchies or universes, surrounded by the limitless spaces of infinite space. *See also* DIFFERENTIATION; ELEMENT; LAYA-CENTER; PRIMEVAL MATTER; UNITY

Hetu (Sanskrit) *Hetu* Cause, motive, impulse; in the Nyaya system of philosophy, a logical reason or deduction or argument; the reason for an inference, applied especially to the second member or avayava of the five-membered syllogism. In Buddhism, a primary cause, opposed to pratyaya (concurrent cause).

Hezekiah (Hebrew) *Ḥizqiyyāh* Jehovah makes strong; according to the Bible, one of the greatest and best kings of Judah, the titular son of Ahaz and son-in-law of Isaiah. He sought to purge the religion and beliefs of the Jews: this is symbolized in the Bible as the breaking of the Brazen Serpent (2 Kings 18:4). “It was Hezekiah who was the expected Messiah of the exoteric state-religion. He was the scion from the stem of Jesse, who should recall the Jews from a deplorable captivity, about which the Hebrew historians seem to be very silent, . . . but which the irascible prophets imprudently disclose. If Hezekiah crushed the exoteric Baal-worship, he also tore violently away the people of Israel from the religion of their fathers, and the secret rites instituted by Moses” (IU 2:441).

Hi-Hz

Hierarchies [from Greek *hieros* sacred + *archein* to rule] Primarily the field of influence of a ruler or hierarch of a body of beings — divine, human, or otherwise — organically disposed in serial grades or ranks; and secondarily, the power or post of a hierarch or ruler in sacred rites, copied after the cosmic pattern. In theosophy both meanings blend. Hierarchies, or the interpenetrating of beings, is a key teaching regarding the structure and operation of the universe. This applies not only to the entities comprising a universe but to all its planes and spheres, for these, as well as the entities therein, interblend and interlock in an endless series, one group linking to its superior or inferior in evolutionary grade, in *its* turn being the link to the ascending or descending group: thus everything exists in and because of everything else. The essential nature or hyparxis of the hierarchy flows forth from the hierarch, and is delegated in proportionate lower degrees to inferior members of the hierarchy, so that all is vitally and organically connected. The hierarchical system is inherent potentially in the cosmic germ or seed from which the entire manifested universe springs; and thus the hierarchical system pervades the manifested universe throughout in all its parts from the highest to the lowest.

Scales of seven, ten, or twelve may be used to define this hierarchical structure. Using the denary scale as an example, we see that the hierarch of any given hierarchy is the lowest member of the immediately superior decad; while the lowest member of the same hierarchy is the hierarch of the immediately inferior decad, so that the scale is a scale of nine. This may explain the use of nine as a sacred number, the difference between ancient inclusive methods of counting and our present methods, and the principle of overlapping cycles. The generalized Greek pre-Christian hierarchy is: 1) divine hierarchies; 2) gods, or divine-spiritual; 3) demigods; 4) heroes; 5) men; 6) animals; 7) plants; 8) minerals; 9) elementals, to which may be added the supreme source as hyparxis of this hierarchy, which is itself the lowest member of the immediately preceding superdivine hierarchy. *See also* LOKA; TALA; CELESTIAL ORDER OF BEINGS

Hierarchy of Compassion, Spiritual-psychological Hierarchy The hierarchy of spiritual beings extending from the highest solar or galactic monad, to the least element forming its vehicles or being. “It is built of divinities, demigods, buddhas, bodhisattvas, and great and noble men, who serve as a living channel for the spiritual currents coming to this and every other planet of our system from the heart of the solar divinity, and who themselves shed glory and light and peace upon that pathway from the compassionate deeps of their own being. . . .

“On our earth there is a minor hierarchy of light. Working in this sphere there are lofty intelligences, human souls, having their respective places in the hierarchical degrees. These masters or mahatmas are living forces in the spiritual life of the world; and awakened minds and intuitive hearts sense their presence, at least at times” (FSO 467-8). The head of the terrestrial spiritual-psychological hierarchy is a being sometimes called the Silent Watcher, who acts as a channel for all the spiritual forces flowing to and from the earth, and who is connected inwardly with all the beings on earth.

In theosophical literature, the Hierarchy of Compassion of our solar system is sometimes given as: 1) adi-buddhi (primal wisdom), the mystic universally diffused essence; 2) mahabuddhi (universal buddhi), the Logos; 3) daiviprakriti (universal divine light), universal life, the Second Logos; 4) Sons of Light, the seven cosmic logoi, the logoi of cosmic life, the Third Logos; 5) dhyani-buddhas (buddhas of contemplation); 6) dhyani-bodhisattvas (bodhisattvas of contemplation); 7) manushya-buddhas (human buddhas), racial buddhas; 8) bodhisattvas; and 9) men. Here, the Sons of Light or the seven cosmic logoi emanating from the sun and working in its kingdom are the parents of the rectors or planetary spirits of the seven sacred planets. The seven dhyani-buddhas, also called the celestial buddhas or causal buddhas, through their emanated representatives each govern one round of the septenary cycles of evolution on a planetary chain. The seven dhyani-bodhisattvas, or bodhisattvas of the celestial realms, similarly through their emanated representatives each govern one of the seven globes comprising a planetary chain. The manushya-buddhas are the buddhas which watch over the root-races in a round, two appearing in every race, one near the commencement and one near the midpoint of each root-race. Gautama Buddha was the second racial buddha of the fifth root-race. The bodhisattvas of earth are those spiritual and intellectually advanced human beings who leave the nirvana of buddhahood in order to remain on earth for their sublime work of aiding, stimulating, and guiding those hosts of entities, including humanity, trailing behind them.

Hierogrammatists [from Greek *hierogrammateus* from *hieros* sacred + *grammateus* scribe] Applied by Greek writers to the sacred scribes of ancient Egypt, who wrote and read the sacred records, and among whose functions was that of the instruction of initiants or neophytes preparing for initiation.

Hierophant [from Greek *hierophantes* from *hieros* sacred + *phainein* to show] A revealer of sacred

mysteries; title given to the highest adepts in the temples of antiquity, who taught and expounded the Mysteries. The attributes of a hierophant were those of Hermes or Mercury, being both expounder and mystagog or conductor of souls. In Hebrew an equivalent is found in the hierarchy of the 'elohim. Many names of man-gods refer to archaic hierophants, such as Orpheus, Enoch, etc. The hierophants of ancient Egypt handed down the sacred teachings, some of which were, however, lost by the deaths of hierophants before they had completed their message because, due to the degeneration which had come upon the West, they were unable to find appropriate pupils to receive the wisdom.

During the celebration of the ancient Mysteries, the hierophant in the drama of the Mysteries represented the demiurge, the Third Logos, opening or revealing the mysteries of the universe and, in consequence, of human nature to the neophytes. He was thus the sacred teacher.

Higher Ego The individuality, as contrasted with the personality; the higher ego lies in atma-buddhi-manas as the reincarnating ego, and is a reflection or minor projection of the higher self or atman. The higher ego is contrasted with the lower or personal ego which is formed from the kamic, astral, and physical imbodiments of the former.

Higher Manas The aspect of the dual manas or human mental principle, which is attracted to buddhi or the spiritual principle, and which therefore is conditionally immortal. The lower manas is attracted to the kama or desire principle and dissolves after death as part of the kama-rupa. ()

Higher Self The divine-spiritual essence or essential egoity overshadowing the human being, the atma-buddhi with the efflorescence of manas. The higher self is the god within, the source of all right motive, the fountain of intuition, and the voice of divine harmony seeking to control the individual's life and to transform or transmute all the voices of personal desire.

Higher Triad In theosophical literature a distinction is often made between that part of human nature which is immortal and that which is mortal. Hence the seven principles were divided into the higher triad — comprising atman, buddhi, and manas — and lower quaternary — kama, prana, linga-sarira, and sthula-sarira. Another division is also frequently used: higher triad — atman, buddhi, and higher manas; lower quaternary — lower manas or kama-manas, prana, linga-sarira, and sthula-sarira.

Thus, the higher triad is what is occasionally called the immortal re embodying ego or monad.

Hilasira. See DAWN

Hilkiah (Hebrew) *Hilqiyyāh* The high priest of Jerusalem during the reign of Josiah (2 Kings 22), who found again the manuscripts of the Bible. Blavatsky stresses the fact that he was unable to read “the Book of God,” and states that this copy disappeared (IU 2:470); and that the real Hebrew Bible was and is a volume partly written in cipher, which is what a large number of Qabbalists have always claimed. “What could remain, we ask, of the original writings of Moses, if such ever existed, when they had been lost for nearly 800 years and then found when every remembrance of them must have disappeared from the minds of the most learned, and Hilkiah has them re-written by Shaphan, the scribe?” (BCW 7:263).

Hillel, Heilel (Hebrew) *Hēilel* [from *hālal* to shine] Shining brightly or gloriously; used in Isaiah (14:12), referring to the king of Babylon: “How art thou fallen from the heavens, Lucifer [Hillel], Son of the Morning, how art thou cast down unto the earth, thou who didst cast down the nations.” (BCW 8:27-8n)

Himadri (Sanskrit) *Himādri* [from *hima* cold, frost + *adri* mountain] The cold mountain; applied to the Himalayas; other names are himachala (trembling with cold), himaga (snow mountain), and himavat.

Himalayas. See HIMAVAT; MOUNTAINS, MUNDANE

Himavat, Himavan (Sanskrit) *Himavat, Himavān* The snowy; a name of the Himalaya range, especially the personified aspect, mythologically considered as the husband of Mena or Menaka, whose eldest daughter was Himavatsuta — the Ganges. Also used as an adjective, snow-clad. The mountain range is known as Himavan-mekhala (the snowy mountain belt or girdle). In the esoteric commentaries on the Book of Dzyan this chain of mountains is represented as a belt that encircles the earth — whether above or below water (SD 2:401).

Hinayana (Sanskrit) *Hīnayāna* Little vehicle; the Theravada school of Southern Buddhism, with its

representative in the Buddhism of the North; usually considered the exoteric school in contrast with the Mahayana (great vehicle), the so-called esoteric school. The Hinayana represents what Buddhist mystics have called the eye doctrine, that portion of the Buddha's teaching which is exoteric or for the public, and therefore visible to the eye; while the Mahayana is called the heart doctrine, meaning that portion of the Buddha's teaching which was hid, the secret or heart of the teaching. But there is also a distinctly esoteric side to the Hinayana when it is properly analyzed and understood.

Hindu Trinity. See TRIMURTI

Hindu Schools, Six. See DARSANA

Hippocentaurs [from Greek *hippos* horse + *kentauros* centaur] Centaurs said to be half man, half horse. The prefix *hippo* distinguishes them from another kind of monster, the ichthyscentaurus — half man, half fish. They are among the monsters resulting from nature's unaided attempts to create in the early stages of evolution.

Hippopotamus In ancient Egypt, a symbol connected with every goddess, especially Rert or Rertu, Apet, and Ta-urt. It was used as a kindly guardian of the dead in the underworld in the *Book of the Dead*. In a contrary aspect, the monster Am-mit, which appears in the judgment scene, has the hindquarters of a hippopotamus. It represents the horrors and fear of the astral world awaiting the defunct, which spring into life if that person's karma has brought about awakening self-consciousness in kama-loka.

The hippopotamus, the crocodile, and the frog were all either aquatic or amphibious animals, and as all ancient zoocosmology took its figures of speech from the surrounding world, these animals were chosen as symbolic of the early creative action in the waters of space, out of which arose the world. In an equally important sense, however, the hippopotamus has distinct reference to the astral world, and hence so far as the individual is concerned, to the post-mortem peregrination of the latter in kama-loka.

In another aspect the hippopotamus goddess was the female counterpart of Set and the mother of the sun god, whom she brought into the world at Ombos. "In Egyptian symbolism Typhon was called 'the hippopotamus who slew his father and violated his mother,' Rhea (mother of the gods). His father was Chronos. As applied therefore to Time and Nature (Chronos and Rhea), the accusation becomes comprehensible. The type of Cosmic Disharmony, Typhon, who is also Python, the monster formed of the slime of the Deluge of Deucalion, 'violates' his mother Primordial Harmony, whose beneficence was so great that she was called 'The Mother of the Golden Age.' It was Typhon, who put an end to the latter, *i.e.*, produced the first war of the elements" (TG 142).

In ancient Persia the hippopotamus appears as a symbol in connection with the twelve-legged steed of Hushang. It also appears as a divine symbol in Mexico.

Hiquet. See HEQET

Hiram, Huram, King of Tyre (Hebrew) *Hīrām, Hūrām* [from *hāwar* to become white or pale; or from *hārāh* to burn (as with ardor), be noble or free-born; or *hāram* to devote, consecrate as to religion or destruction, be killed or destroyed] A contemporary of the kings of Israel David and Solomon, who sent David cedar trees, carpenters, and masons in order to build him a house and who later, in response to a request from Solomon, sent timber from Lebanon and a skillful man, Hiram Abif or Hiram 'abiu, to aid him in building Solomon's Temple (2 Chron 3:12-13). All the ancient records speak of King Hiram as a master builder who built the temples of Hercules and Astarte, virtually rebuilt Tyre, and reconstructed the national temple of Melkarth (Melekartha). At the entrance to this temple were two pillars, one of gold and one of smaragdus or emerald, which probably were the immediate prototypes of the pillars Jachin and Boaz in front of the temple which Solomon later built with Hiram's assistance, thus connecting the worship of Jehovah with that of Melkarth or Baal. The original prototype of these pillars were the Pillars of Hermes.

Hiram Abif, Hiram Abif (Hebrew) *Hīrām 'Ābīv, Hūrām 'Ābīv* [from *hāwar* to become white or pale; or from *hārāh* to burn (as with ardor), be noble or free-born; or *hāram* to devote, consecrate as to religion or destruction, be killed or destroyed] The last derivation is descriptive of the character and fate (according to Masonic tradition) of Hiram Abif; while the second derivation befits the character of Hiram King of Tyre. Hiram Abif is described as a widow's son of the tribe of Naphtali (1 Kings 7:14), and a skillful, knowledgeable man, a worker in gold, silver, brass, and iron, as was his father (2 Chron 2:12). Hiram Abif was sent by Hiram King of Tyre to King Solomon to aid in the building of his Temple.

In Freemasonry Hiram Abif is the central figure in the drama of the Third or Master Mason's degree, and one of the Three Ancient Grand Masters of the Craft (the other two being King Solomon and Hiram King of Tyre). Before the completion of the building of the Temple he was slain by three ruffians because he refused to communicate to them the Master Mason's Word, which on account of his death was said to be lost, for it can be communicated only when all the Three Ancient Grand Masters are present. Hiram Abif was hastily buried in a shallow grave marked by a sprig of acacia or myrtle, which led to its discovery and the subsequent raising of Hiram Abif by the power of a Substitute Word which, it was decreed, should be used until the Lost Word be again found.

The Masonic initiation was modeled on that of the Lesser Mysteries of Egypt, also used in India from time immemorial with Loka-chaksu (eye of the world) and Dinkara (day-maker or the sun). "In Egypt the third degree was called *Porte de la Mort* (the gate of death) . . . in the modern rite, one finds the reproduction of this Egyptian myth, except that in place of Osiris, inventor of the arts, or the Sun, one finds the name of Hiram, which signifies *raised — eleve*, (the epithet which belongs to the Sun) and who is skillful in the arts" (Ragon, *Orthodoxie Maçonnique* 101-2). The slaying of

Hiram signifies the annual slaying of the sun by the last three months of the year, the sun being reborn or raised at the winter solstice, one of the four great initiation periods celebrated in antiquity.

Hiram Abif is a type-figure of all the saviors of humanity who sacrificed themselves for the salvation of mankind, a direct human representative of its prototype among the divinities, such as Odin and Visvakarman, the builder and artificer of the gods. Hiram Abif is also the type-figure of the individual's inner god, crucified upon the cross of material existence.

Hiranya (Sanskrit) *Hiranya* Golden, hence any vessel or ornament made of gold; also substance, imperishable matter. *See also* HIRANYAGARBHA

Hiranyagarbha (Sanskrit) *Hiranyagarbha* [from *hiranya* imperishable substance, golden + *garbha* womb, embryo, fetus, also the interior of anything, hence a temple] Golden egg or womb; the matrix of imperishable substance. "The luminous 'fire mist' or ethereal stuff from which the Universe was formed" (TG 142); applied to Brahma, described in the *Rig-Veda* as born from a golden egg formed out of the seed deposited in the waters when they were produced as the first vikaras of the Self-existent; according to *Manu* (1:9) this seed became a golden egg, resplendent as the sun, in which the self-existent Brahman while remaining transcendent in its higher parts, evolved into Brahma the Creator, who is therefore regarded as a manifestation of the Self-existent. Having continued a year in the egg, Brahma divided it into two parts by his mere thought, and with these two he formed the heavens and the earth; and in the middle he placed the sky, the eight regions, and the eternal abode of the waters.

"The 'Mundane Egg' is, perhaps, one of the most universally adopted symbols, highly suggestive as it is, equally in the spiritual, physiological, and cosmological sense. . . . The mystery of apparent self-generation and evolution through its own creative power repeating in miniature the process of Cosmic evolution in the egg, both being due to heat and moisture under the efflux of the unseen creative spirit, justified fully the selection of this graphic symbol. The 'Virgin Egg' is the microcosmic symbol of the macrocosmic prototype — the 'Virgin Mother' — Chaos or the Primeval Deep. The male Creator (under whatever name) springs forth from the Virgin female, the immaculate root fructified by the Ray. Who, if versed in astronomy and natural sciences, can fail to see its suggestiveness? Cosmos as receptive Nature is an Egg fructified — yet left immaculate; once regarded as boundless, it could have no other representation than a spheroid. The Golden Egg was surrounded by seven natural elements (ether, fire, air, water), 'four ready, three secret' " (SD 1:65).

In Vedantic philosophy, used somewhat equivalently to sutratman, atman invested with the sukshma-sarira, as well as with the other sariras flowing forth from this and permeating and infilling them all as the thread-self.

Hiranyakasipu (Sanskrit) *Hiranyakaśipu* [from *hiranya* golden + *kaśipu* clothing, vesture] Golden clothing; one of the most celebrated of the Hindu titans or daityas, son of the sage Kasyapa and Diti. As related in the *Mahabharata*, he obtained the favor of Brahma and was granted sovereignty of the three worlds for a million years. He became all-powerful because he could not be slain either by god, man, or animal. But his power was used evilly, so that he became notorious for his impiety. He persecuted his son Prahlada for worshiping Vishnu until once, when Prahlada was engaged in his observances, Vishnu during his fourth avataric incarnation appeared out of a pillar in the form of Narasimha (half man, half lion) and tore Hiranyakasipu to pieces.

Hiranyakasipu, after being slain by the Narasimha-avatara was born as Ravana, who in turn was slain by Rama (another avatara of Vishnu); after which he is reborn as Sisupala, who was slain by Krishna (the latest avatara of Vishnu). “This parallel evolution of Vishnu (spirit) with a Daitya, as men, . . . gives us the key not only to the respective dates of Rama and Krishna but even to a certain psychological mystery” (SD 2:225).

Hiranyaksha (Sanskrit) *Hiranyākṣa* [from *hiranya* golden + *akṣa* eye] Golden eye; one of the principal daityas (titans), twin brother of Hrianyakasipu. In the *Mahabharata*, he dragged the earth to the depths of the ocean, and because of this was slain by Vishnu in his third avataric manifestation of the Varaha-avatara (the boar incarnation). His progeny is said to number 77 crores, or 770 millions. “Hiranyaksha is the ruler or king of the *fifth* region or Patala, a Snake-god” (SD 2:382n).

Hiranyapura (Sanskrit) *Hiranyapura* [from *hiranya* golden + *pura* city] Golden city; in Hindu mythology, a city which floats in the air, the abode of the danavas (one class of titans); again an asura town situated beyond the ocean. Generally asura was employed in the ancient popular writings to designate, among other things, members of the fourth root-race, who indeed were giants in stature and dwelt in the lands beyond the ocean, in Atlantis.

Hisi or **Hiisi** (Finnish) Also Juntas, Piru, and Lempo. The principle of evil in ancient Finnish mythology, described as a cruel, bloodthirsty spirit, responsible for all the evil in the world, inflicting diseases and misfortunes upon mankind. The Kalevala relates that when the highest deity, Ukko, refused to give life to the evil serpent formed from the spittle of Suoyatar, Hisi breathed a soul into the beast so it might aid him.

Hitopadesa (Sanskrit) *Hitopadeśa* [from *hita* good, proper + *upadeśa* counsel, advice] Good counsel; a well-known Sanskrit collection of ethical precepts, allegories, and tales from a larger and older work called the *Panchatantra*, both books consisting of mingled verse and prose. The verses, mostly proverbs and maxims of practical wisdom, are supported by prose fables in which animals often play the part of human beings.

Hivim (Hebrew) *Ḥiwwiym* [from *ḥāwāh* to live, breathe] Plural of hivi (*ḥiwwī*), which mystically signifies a serpent; likewise one of the tribes mentioned in the Old Testament as originating from

Canaan (Genesis 10:17), the serpent tribe of Palestine who were ministers to the temples, somewhat like the Levites or Ophites of Israel and Asia Minor respectively (cf IU 2:481).

In ancient America *hivim* was also used in association with the serpent: the chiefs called Votan, the Quetzalcohuatl or serpent deity of the Mexicans, say: “I am Hivim”; “Being a Hivim, I am of the great race of the Dragon (snake). I am a snake myself, for I am a Hivim” (IU 1:554).

Hiwyai’ Bisha’ (Aramaic) *Ḥiwyāi’ Bīshā’* [*ḥiwyāi’* animal + *bīshā’* evil, wrong] The beast (of evil); from the union of Samael (Prince of Poison) and his wife ’Esheth Zenunim (woman of whoredoms) is produced the Beast: forming an infernal triad, the nether pole of the divine triad — which becomes the devil and the tempter in the *Zohar*. “Esoterically our lower animal passions” (TG 137). *See also* LILITH.

Hler (Icelandic) [from *hles* shelter from Anglo-Saxon *hleō*] The Norse god of the sea, more often named Aegir in the Eddas, one of the three sons of the primeval giant Ymir. Comparable to the Greek Oceanos or Okeanos and the Welsh Llyr (sea); his nine daughters, Hles-doetr (daughters of Hler), are the waves.

Hlidskjalf (Icelandic) [from *hlid* side, gate; or from *hlifd* protection + *skjalf* shelf, bench, plane] The word may mean either that the gods are arrayed by our side in the struggle of life; or deriving it from the Scandinavian *lida* (to suffer), it could be by extension of meaning the “shelf of compassion,” whence their protection extends over the human race. In the Norse Edda, it is on Hlidskjalf that Odin is enthroned with his consort Frigga and whence he is able to survey all worlds. Frey, the deity of our terrestrial world, also oversees his domain from this vantage point.

Hoang Ty. *See* HUANG TI

Hobilgans. *See* KHOBILGAN

Hochmah (Hebrew) *Ḥokhmāh* Also transliterated as Chochmah, Hhokhmah, Chokmah, etc. Wisdom; the second Sephirah, regarded in the Qabalah as the first emanation from the first Sephirah, Kether. Wisdom is considered as a masculine active potency, and is therefore called ’Ab, the Father, to whom Binah, the Mother and third of the Sephiroth, is united. It is the head of one of the three pillars in the Sephirothal Tree, called the Column of Benignity, Mercy, or Grace, placed on the right side. Its Divine Name is Yah (a substitute for the mystery-name Iao), whereas the Divine Name for the third Sephirah is the so-called four-lettered name or Tetragrammaton IHVH — Jehovah. Among the angelic hosts it is represented by the ’ophanim, the wheels of Ezekiel’s vision. In its human application, Hochmah is represented as infilling the skull and brain, and less accurately as corresponding to the right shoulder. “Wisdom generates all things. By means of the 32 paths, Wisdom is spread throughout the universe, it gives to everything form and measure” (*Zohar* iii, 290a).

Hod (Hebrew) *Hōd* Splendor, glory, majesty; the eighth Sephirah, regarded in the Qabbalah as the emanation of the seven preceding Sephiroth. It is classed as a passive potency, feminine in aspect, forming the base of the left pillar of the Sephirothal Tree. Its Divine Name is 'Elohim Tseba'oth; in the angelic order it is represented as the Benei 'Elohim (Sons of God). In its application to the human body, as representative of 'Adam Qadmon (Heavenly Man), Hod is regarded as the left pillar or leg; while in its application to the seven globes of our planetary chain it corresponds to globe B (SD 1:200). From Hod is emanated the ninth Sephirah, Yesod.

Hoddmimir's Holt (Icelandic) [from *hodd* treasury + *Mimir, Mimer* a giant, the root of matter + *holt* grove] In Norse myths the sacred grove where is guarded the treasury that is being sought by the gods in matter during manifestation. In that grove Lif and Lifthrasir, the immortal principles in humanity, are secreted when the world has ended its lifetime and before it is reborn.

Hokhmah. See HOCHMAH

Holy City Many spiritual traditions symbolize the goal of human attainment or the abode of the gods as a holy city. With the Hindus, Brahmapura is the capital of Brahma on Mt. Kailasa in the Himalayas or on Mt. Meru, as well as being the inmost chamber of the heart. According to the Chhandogya Upanishad (8:1:1), within the Brahmapura "is an abode, a small lotus-flower; within it is a small space (*antarakasa*). What is within that, should be searched out; that, assuredly, is what one should desire to understand." Hiranyapura (golden city) stands for the sun and for the invisible, etheric regions of space; while the Siddhapura or White Island is both the indestructible home of adepts on earth and the poles of the earth or Mt. Meru.

The Jews and Christians speak of the City of God or heavenly Jerusalem, the secret or sacred Salem, which is the goal of human spiritual attainment. This is contrasted with the earthly Jerusalem, the earth or human world. In the Qabbalah, the Holy City symbolizes both the holy of holies and the maqom which is "(the Secret *Place* or the Shrine) on Earth: in other words, the human womb, the microcosmic copy and reflection of the *Heavenly Matrix*, the female space or primeval Chaos, in which the male Spirit fecundates the germ of the Son, or the visible Universe" (SD 2:84).

Holy Flame Qabbalistic term (particularly among Eastern Asiatic Semites), synonymous with anima mundi (the soul of the world). Initiates were called Sons of the Holy Flame.

Holy Ghost [from Greek *hagion pneuma* holy spirit or breath] The Holy Ghost or Spirit in the Occident usually means the Third Person of the Christian Trinity or Triune God. The typical form of the primary philosophic and cosmogonic triad is Father-Mother-Son with the female potency figuring both as mother, wife, and daughter of the Son. The Holy Ghost is strictly speaking the feminine principle in the Christian Trinity, and in primitive Christianity was counted the second in serial order or procession, although in later times the West, led by the Roman Catholic Church, transferred the position of the Holy Ghost from second to third. Thus the original series was

Father, Holy Ghost or Mother, and Son, whereas the Occident now reckons the series in the procession as Father, Son, and Holy Ghost; and this difference of opinion which arose in the Middle Ages was one of the great factors splitting the Christian Church into the Eastern or Greek Orthodox and the Western. In Christianity, the Son is said to be God made manifest in a particular man; the Holy Ghost is the divine spirit which works in all men and brings them into conformity with the image of the Son or Christ.

The Holy Ghost is the spiritual ray from the central sun, which passes down through the planes of manifestation, penetrating all hierarchies in its course and therefore likewise the human mind when it is permitted ingress into his soul. It is equivalent to the Light of the Logos, daiviprakriti, the Gnostic Sophia, the Qabbalistic Shechinah (or perhaps Sephirah), the Mother of the Ogdoad, and in Indian thought the feminine sakti. But while daiviprakriti is the Light of the Logos, this is only because the Logos transmits to itself the light from above.

Holy of Holies Equivalent to the Latin Sanctum sanctorum, referring to the sacred place in temples or churches from which all but the chief priest or hierophant were excluded. In pre-Christian times the ancient temples each had its especial sanctuary, in which was placed an altar or receptacle of some kind, be it ark, box, or some similar thing, perhaps even a sarcophagus.

The Holy of Holies in theory was the seat, residence, or sanctuary of the god or goddess to whom the temple had been consecrated; and piety always considered that the divine power was present there. A similar series of ideas clothes the chancel and its contained altar in Christian Churches even today.

The Holy of Holies, however, must not be confused with initiation chambers also contained in many temples and caves of antiquity, in which during the rites of initiation the neophyte entered, was initiated, and thereafter left the sacred precincts as reborn. In ancient Egypt the holy of holies par excellence of this latter type was the King's Chamber in the Great Pyramid; and the coffer there was the sarcophagus used for initiation purposes. The sarcophagus was symbolic of the female principle, as from the feminine principle of nature, as a mother, was born the new "child" or disciple, now become a twice-born. The idea of the twice-born was that the physical birth came from the human mother, while the mystic birth took place from the womb of nature, of which the initiation chamber was the emblem. Hence at a much later date arose the phallic idea of the Jews that the human female womb was the maqom (the place).

Although part of the Hindu ceremonies necessitated a passing through the golden cow, as an emblem of Mother Nature, the neophyte did this in the same stooping position that was done in passing through the gallery in the ancient pyramids of Egypt. "The ceremony of passing through the Holy of Holies (now symbolized by the cow), in the beginning through the temple *Hiranya gharba* (the radiant Egg) — in itself a symbol of Universal, abstract nature — meant spiritual conception and birth, or rather the *re-birth* of the individual and his regeneration: the *stooping*

man at the entrance of the *Sanctum Sanctorum*, ready to pass through the matrix of mother nature, or the physical creature ready to re-become the original spiritual Being, *pre-natal Man*” (SD 2:469-70).

Holy of Holies has a specific meaning in connection with the Jewish tabernacle, as explained in Exodus, referring to the inner part, the western division of the tabernacle. Three of the sides of the holy place were the walls of the tabernacle itself, while the fourth or eastern end of the sanctum was closed by a curtain or veil — upon which were the figures of the cherubim — suspended from four pillars of shittim wood overlaid with gold. The intention was to have this Holy of Holies in the shape of a perfect cube, the length, breath, and height being each ten cubits. In this sanctuary was placed the Ark of the Covenant or Testament, made of shittim wood overlaid with gold. Upon the Ark was the golden mercy-seat (the kapporeth), also two golden cherubim facing towards the center. Instead of being a “*sarcophagus* (the symbol of the matrix of Nature and resurrection) as in the *Sanctum sanctorum* of the pagans, they had the ark made still more *realistic* in its construction by the two cherubs set up on the coffer or ark of the covenant, facing each other, with their wings spread in such a manner as to form a perfect *yoni* (as now seen in India). Besides which, this generative symbol had its significance enforced by the four mystic letters of Jehovah’s name, namely יהוה; or ך meaning *Jod* (*membrum Virile*, see Kabala); ם (He, the *womb*); ן (Vau, a crook or a hook, a nail), and ף again, meaning also ‘an opening’; the whole forming the perfect *bisexual* emblem or symbol or Y(e)H(o)V(a)H, the male and female symbol” (SD 2:460). However, “the worship of the ‘god in the ark’ dates only from David; and for a thousand years Israel knew of no phallic Jehovah” (SD 2:469). *See also* ARK

Holy Spirit. *See* HOLY GHOST

Holy Water As practiced in the Roman Catholic Church the rite is virtually identical with that of the ancient Egyptians: the water which has been blessed or consecrated is used to sprinkle the worshipers and objects used in the church service. It was unquestionably adopted from the ancient Mysteries, and became a rite of external symbolic purification. In Egypt and pagan Rome, it “accompanied the rite of bread and wine. ‘Holy water was sprinkled by the Egyptian priest alike upon his gods’ images and the faithful. It was both poured and sprinkled. A brush has been found, supposed to have been used for that purpose, as at this day.’ (Bonwick’s *Egyptian Belief* [p. 418]) As to the bread, ‘the cakes of Isis . . . were placed upon the altar. Gliddon writes that they were “identical in shape with the consecrated cake of the Roman and Eastern Churches.” Melville assures us “the Egyptians marked this holy bread with St. Andrew’s cross.” The *Presence* bread was broken before being distributed by the priests to the people, and was supposed to become the flesh and blood of the Deity. The miracle was wrought by the hand of the officiating priest, who blessed the food. . . . Rouge tells us “the bread offerings bear the imprint *of the fingers*, the mark of consecration”.’ (*Ibid*, page 418)” (TG 144-5).

Homoeomerian (Homoimerian) System [from Greek *homoios* similar + *meros* part] The theory of the Greek philosopher Anaxagoras that the spiritual originants or seeds of all classes of beings and things existed in the primordial cosmic chaos, and that each such originant or seed was of like substance with all others, and therefore in a more extended sense likewise with the species to which these gave rise through emanational evolution. These seeds, particles, monads, or spiritual atoms were called homoimere (of similar part — often verging in meaning into identity). It was the action of nous (cosmic intelligence) on chaos — or in Hindu terms, of mahat on svabhavat — which at the opening of a period of cosmic evolution separated and discriminated these quasi-identical atoms, starting them on their respective evolutions in the families of hierarchies to which they belong, the various individuals thereof manifesting as beings and things of various kinds, such as atoms of grain or gold, etc., each according to its original nature or svabhava.

This profound system of philosophy traces all things back to an original cosmic fountain or identical source, as seeds from the world tree, out of which has grown the theosophical concept of universal brotherhood.

Homogeneity. See HETEROGENEITY AND HOMOGENEITY

Homoimerian. See HOMOEOMERIAN

Homunculi (Latin) Mannikins; in medieval alchemical thought, artificially created little men, little not necessarily in stature but in being incomplete. Paracelsus claims to have made them, and detailed sometimes gruesome accounts of their manufacture, and the result can be found in old books on magic. The principles of earth and water are required to give a body and vitality, the will of the magician is the directive force, and some kind of nature spirit must be imbodyed therein, as the 'Ishonim mentioned in the *Zohar*. But this makes only an animal with human (or other) shape; and to make a complete human being it would be necessary to imitate the act of the manasaputras. Blavatsky anticipates that science may and undoubtedly one day will be able to make homunculi, as the medieval alchemists dreamed of doing.

Honavar, Ahunavar (Pahlavi) *Hōnavar*, **Ahuna-Vairya** (Avestan) Ancient Persian name for the Logos or cosmic reason, Word or Verbum; the Holy Word of the Avesta is given by Ahura-Mazda to Zoroaster “in the boundless time,” and it is the great weapon of Zoroaster in prevailing over Angra-Mainyu. It was by reciting the Honavar at the beginning of the world that Ahura-Mazda likewise confounded Angra-Mainyu.

Also a prayer in the Avesta.

Honer, Hoener, Haenir (Scandinavian, Icelandic) In the Norse Edda, one of the three creative gods who fashion humanity from the ash and alder trees and endow their creation with their own divine properties. Each of the creative forces corresponds to one of the cosmic elements, the tattvas of Brahmanic philosophy. Honer stands for the principle of fluidity: he gives the

intelligence which illumines the soul with understanding, thus corresponding in one aspect with the manasaputras. Odin, who corresponds to air, gives breath or spirit, while Lodur or Lodurr, the fiery element, gives warm blood, color, and keen senses.

Honer was sent as a hostage to the vanir at the battle of the gods (the war in heaven) and will remain captive until the final confrontation at Ragnarok, when the gods withdraw to their own spheres.

Honey, Honey-dew Used by some ancient writers as a symbol for wisdom, the idea being that just as the bees (emblem of initiates) gather nectar or honey (knowledge) from the flowers (of life) and digest it into honey, so are the experiences of human life stored in the memory, and the knowledge so garnered is digested into wisdom. The priestesses of certain Greek temples were called Melissai (bees).

In the ancient Scandinavian conception of the World Tree (Yggdrasil), the dew that fell from this cosmic tree was called honey-dew, and was gathered by the bees — the initiates who through successes in passing the rites are enabled to bring themselves into synchronous harmony with the different cosmic powers and planes, and thus become channels or interpreters of cosmic wisdom to humanity. The idea is akin to the real meaning of the ambrosia of the ancient Greeks, which was the food of the gods — standing for the ancient wisdom.

Ho-pahme. See AMITABHA

Hor. See HARPOCRATES; HORUS

Horaios, Horaeus. See OURAIOS

Hor-Ammon (Greek) **Heru-Amen** (Egyptian) *Heru-Āmen*. “ ‘The Self-engendered,’ a word in theogony which answers to the Sanskrit *Anupadaka*, parentless. Hor-Ammon is a combination of the ram-headed god of Thebes and of Horus” (TG 145) (SD 2:464)

Horchia (Chaldean) A goddess of fire, and hence of the hearth, whether of the State or the family, and thus equivalent in some respects to the Roman Vesta. Also known under the name Titea Aretia and associated with the Earth Mother or the womb of planetary fire which brought the earth forth as one of the globes of the chain.

Horizontal Line Used in the symbols of the triangle and the cross. In an isosceles triangle with the point of the apex representing a Logos, and the two equal sides flowing from it representing the masculine and feminine rays, the horizontal base-line stands for the physical foundation from

which the manifested objective world starts into existence. In the cross, the horizontal line represents matter or vehicle, the perpendicular line spirit or life; the horizontal line is differentiated matter on the plane of perception and is called feminine.

Hor-Jared. *See* ARARAT; JARED

Horn, Door or Gate of. *See* WIND

Horns Much used in the Bible, often as a symbol of might; and the altar in the tabernacle had horns, which were seized as sanctuary by the fugitive suppliant. In the prophetic and apocalyptic books of Christianity and other religions, we find dragons and other monsters with horns, the number of horns possibly having a symbolical reference to races. Its most general sense is as a symbol of natural generative power, whence it is characteristic of several symbolic animals, as the ram, the bull and cow, the goat, etc. It is seen in Greece in Pan, the god of natural generation and procreative fertility; and in Judaism in the goat which, as the scapegoat, stands among other things for the fall into generation, and was thus said to bear away the burden of the people's sins in early and medieval Europe. Satan or the Devil is represented with horns in a similar sense, for actually he represents the nether aspect of nature, and in popular belief his horns, like his hoofs and tail, are regarded as horrific and bestial attributes. The moon, the oldest and most graphic symbol of productive generation, is said to have horns and the same are seen in the zodiacal Taurus, the sign of the moon's elevation, while the ram's horns are seen in Aries — the one representing the passive, the other the active principle in nature.

Horos. *See* HORUS

Horoscope [from Greek *horoskopos* observing the hours] The charts drawn in natal astrology for the birth-moment of a child, and the character and destiny to be read from them. The analogy between the positions of the heavenly bodies and the character and destiny of the native is deducible from theosophic principles and can be proved by the experience of really competent astrologers. To arrive at any completeness in such forecasts, however, it would be necessary to take into account vastly more data than are usually considered by, or accessible to, modern astrologers: the influence of fixed stars and of planets which are not visible to physical sight, and the immense influences of circumambient space. At best, too, astrologers can but ascertain the environmental circumstances which surround the native, without being able to estimate those indeterminate factors which result from a free will and an active intelligence. *See also* ASTROLOGY

Horse In the ancient Mediterranean and Northern European mythologies, used in connection with the sun and standing as a symbol for the solar powers or the sun itself. The sun is frequently represented in ancient thought as being drawn along the heavens by means of horses. In ancient Persia and Greece, individual heroes, as for instance Hushenk and Bellerophon, are said to have obtained mastery over and consequent use of wonderful horses with which they were enabled to approach the sun. In Scandinavian mythology, horses were represented as carrying the heroes

into the under- and over-world, and as mounts of the Valkyries they bore the fallen heroes to Valhalla.

In this connection, the Kalki-avatara — stated to be the final incarnation of Vishnu in Hinduism or the incarnation of Maitreya-Buddha in Northern Buddhism — and the final great hero and savior of mankind of the Zoroastrians called Sosiosh, as well as the Faithful and True one of the Christian book of Revelation, all appear on a white horse. All these heroes or saviors are connected emblematically with horses of power because the horse has been from immemorial time a representation of solar, spiritual, and intellectual energies. *See also* ASVAMEDHA

Hoshang. *See* HUSHANG

Horsusi. *See* HARPOCRATES; HORUS

Horus (Latin) **Heru** (Egyptian) *Heru* [from *heru* above] Egyptian deity associated with the sun god Ra, equivalent in certain respects to Apollo of the Greeks and, similarly, a slayer of a serpent. Originally two distinct deities were recognized: Heru-ur (Aroeris or Haroiri, Horus the Elder) and Heru-pa-khart (Harpocrates, Horus the Younger or Horus the Child). The older Horus was represented as the winged globe or solar disk, while the younger Horus represented the sun reborn each morning from the waters, carried on the lotus flower. But in later times the characteristics of the two were merged into one, and a further change was made from an original self-born deity to the mythological aspect of a holy child found in the triad Osiris-Isis-Horus — Father-Mother-Son. Thus the representations of Isis suckling the babe Horus are numerous. Each aspect of this god was represented in a different manner, yet all portrayed the deity as hawk-headed: the hieroglyph for Horus is a hawk.

Horus is helper to the dead in the *Book of the Dead*, where he is shown as presenting the justified pilgrim to Osiris, pleading in his behalf, so that the former may enter the regions of the glorified. In the Pyramid Texts, Horus and Set are portrayed as setting the ladder so that the deceased may proceed on his journey, Horus helping the pilgrim to mount the ladder into the other regions.

“If we bear in mind the definition of the chief Egyptian gods by Plutarch, these myths will become more comprehensible; as he well says: ‘Osiris represents the beginning and principle; Isis, that which receives; and Horus, the compound of both. Horus engendered between them, is not eternal nor incorruptible, but, being always in generation, he endeavours by vicissitudes of imitations, and by periodical passion [suffering] (yearly re-awakening to life) to continue always young, as if he should never die.’ Thus, since Horus is the personified physical world, Aroueris, or the ‘elder Horus’ is the ideal Universe; and this accounts for the saying that ‘he was begotten by Osiris and Isis when these were still in the bosom of their mother’ — Space” (TG 31).

And further: “the older Horus was the *Idea* of the world remaining in the demiurgic mind ‘born in

Darkness before the creation of the world'; the *second* Horus was the same Idea going forth from the *Logos*, becoming clothed with matter and assuming an actual existence" (SD 1:366).

Hoshang. See HUSHANG

Host, Hostia, Hostes. See BREAD AND WINE

Host. See ANGEL(S); DHYANI-CHOHANS; HIERARCHIES

Hotri (Sanskrit) *Hotr* An offerer of an oblation with fire, or burnt offering; hence a sacrificer, a priest. As used in the *Rig-Veda*, one of the four kinds of officiating priests at a sacrifice: he who invokes the gods by reciting the mantras from the *Rig-Veda*. In the *Anugita* the plural is used symbolically for the seven senses, which are represented as being seven priests: "the senses supply the fire of mind (*i.e.*, desire) with the oblations of external pleasures." Thus these seven are the causes of emancipation (cf TG 146).

Houah. See EVE

Houen (Chinese) The lower portion of the human soul, corresponding to kama. The other human aspect is the ling, the higher ling corresponding to buddhi and the lower ling to manas (BCW 7:202). The houen after death becomes the kama-rupa or astral elementary. Chinese used to evoke houen in cases of murder to receive information on the case (BCW 7:205).

Houris [French of Persian *huri*, Arabic *hawra'* from *hawira* to be black-eyed] Women with large black eyes set in large whites, described in the Koran as beautiful virgins of unfading youth and free from disease, who await the devout Moslem in paradise. Every Moslem who attains paradise is allotted 72 houris.

Houses or **Mansions** Receptacles, vehicles, stations; the visible planets are called the houses of the planetary regents. In astrology, the signs of the zodiac are called twelve houses: the sun and moon have one house each, and the other five planets have two houses each.

Houtouktou. See CHUTUKTU

Hovah. See EVE

Hozim. See HAZIM

Hpho-wa (Tibetan) *'pho-ba* (pho-wa) Also Fo-wa. The changing of one's place, the moving of one's self; applied especially to the occult exercise of the inner power by which one is enabled to transfer his consciousness to any desired place on earth, or even to heavenly bodies, while the physical body is left entranced. This occult power was well known among the ancients and is still well known today among those who are acquainted with certain occult laws, and in theosophical writings is called projection of the mayavi-rupa.

Also the yogic practice of the transference of one person's consciousness into the body of another, newly dead, person.

Hrada (Sanskrit) *Hrāda* According to a legend in the Puranas, there was in the night of time a war between the gods and the asuras or daityas, beings who opposed ritualism and dogma, which lasted one divine year. On this occasion the gods were defeated by the daityas under the leadership of Hrada.

Hrimthurses, Hrimthursar. See FROST GIANTS

Hrishikesa (Sanskrit) *Hṛṣīkeśa* [from *hṛṣīka* sense + *īś* to rule] Lord of the senses; applied to manas or the mentality. A distinction should be drawn between senses and sense organs. Also one of the names of Krishna and of Vishnu, with pointed reference to their manasic attributes.

Hsien-Chan(g). See T'IEN-CHAN

Hsin (Chinese) Mind, heart; philosophic term of the school of Ch'i (4th and 3rd centuries BC), which called its doctrine *hsin shu* (the art of mind). By mind is meant not the brain or the heart, but a "mind within the mind" that bears to the human constitution the same relation as the sun bears to its system. It is the ruler of the lower human aspects including the body, and the component parts of these lower aspects are its ministers (Kuan Tzu, P'ien 12,36).

Hsing (Chinese) Used in the *I Ching* for an individual's character or the soul's qualities. In the sevenfold classification of human principles, equivalent to *kama*: "*Zhing* [hsing], which is translated correctly enough 'essence,' is the more subtle and pure part of matter — the grosser form of the elementary ether" (BCW 4:242).

Hsi-tsang (Chinese) [from *hsi* west + *tsang* (cf Tibet *tsan*) a central province of Tibet whose most important city is Shigatse] Blavatsky spells Si-dzang. The name for Tibet "mentioned in the MSS. of the sacred library of the province of Fo-Kien [Fu-chien], as the great seat of Occult learning from time immemorial, ages before Buddha" (SD 1:271n).

Hu' (Hebrew) *Hū'* The pronoun he or it; used in the Qabbalah to represent the Macroprosopus or macrocosm because Macroprosopus is not so closely known as to be addressed in the second person, but is called in the third person Hu'. "That, from which proceeds *Ab*, the 'Father'; therefore the Concealed *Logos*" (TG 143).

Huan (Chinese) Also hwun. Spirit; used in the *I Ching*, equivalent to atman.

Huang Ti or **Hoang Ty** (Chinese) Great spirit; according to a legend, the Great Spirit's sons fall into the Valley of Pain (our earth), by which they acquire new wisdom of the lower spheres, their leader, the Flying Dragon, having drunk of the forbidden ambrosia. They are identical with the Fallen Angels or reincarnating egos (TG 143).

Hubilgan. See KHOBILGAN

Huen. See HOUEN

Hu Gadarn (Welsh) Hu the Mighty; from the time of Owen Glyndwr to that of Henry VII of England, Hu Gadarn is constantly mentioned in poetry, sometimes identified with Jesus Christ. From the period of Owen Glyndwr comes a hymn to Hu:

The smallest of the small
Is Hu Gadarn. . . .
And he is the greatest of the Great.
An atom of light is his chariot.

Hu led the Cymry into the Island of the Mighty; with his yoke of Exalted Oxen he drew the Afangc out of the Lake of Floods, thus preventing the drowning of the world; these Exalted Oxen, Nynnio and Peibio, had been formerly kings of England and Scotland who, because of their arrogance in claiming kingship of the galaxy, had been deposed by Rhita Giaut, King of Wales, and turned into oxen. Hu Gadarn is also said to have had a white shield — corresponding in this instance to the shield of Gyan of Persia.

There is no reference to Hu in the *Mabinogi* or the 6th century poets, though there was a Gaulish god, Hesus, who may be the same individual.

Hugin (Icelandic) [from *hug* mind] One of two ravens which fly daily over the battlefield earth (Vigridsslatten) and report back to Allfather Odin. The word *hug* connotes thought and thinking, mood, courage, wish, opinion, desire, foreboding; in addition it is used in numerous combinations, such as strength of mind, peace of mind, etc.

Odin's other raven, Munin (memory), is its inseparable companion. Both are indispensable for the growth of consciousness which evolves through the kingdoms from less to greater by means of experience in the realms of life.

Hum (Sanskrit) *Hum, Hūm* A mystical syllable used as an interjection or exclamation in sentences in sacred texts such as mantras, closely akin to and virtually identic with the sacred syllables Om and Aum. In Vedic ritual, used before the singing of the Prastava (prelude), as well as during the chanting of the Pratihara (response). It is present in the well-known Tibetan mystical sentence Om mani padme hum.

Human Ego The center of human egoity belonging to the higher part of manas. A vehicle or ray of the human monad, its expression is the human soul. It is distinguished from the animal soul or personal ego.

Human Kingdom One of the great kingdoms or divisions of monads on earth. Below it are the animal, plant, mineral, and also three elemental kingdoms; above are kingdoms of dhyanis or

highly evolved human beings and gods. One of the critical points in evolution, at which self-consciousness is attained, although by no means fully developed. Here the spiritual and the material meet: the spiritual self finds its house in the organism built up of lower elements, and the two-natured human being of earth is thus formed. *See* MAN; ROOT-RACES

Human Monad In the human constitution, the fourth monadic focus or center on the descending scale of individualizing consciousness. It is the basis or root of the human ego from which emanates the human soul — a temporary or periodic appearance enduring for one incarnation, having for its range of consciousness the ordinary human consciousness of daily life.

At death the essence of the human soul is united to the human ego, which in its turn at the second death is reunited with the upper duad (atma-buddhi); and the human ego thereupon enters into the state of consciousness called devachan. Having become at one with its spiritual parent, at least for the duration of devachan, the ego rests and digests its garnered store of wisdom, knowledge, and experience, and upon the completion of this period of devachanic recuperation it issues forth again when the karmic hour strikes, once more to become the human ego at its succeeding birth.

Human Soul The clothing or ray of the human ego; it is the egoic center in manas, under the influence of both buddhi and the kamic nature. We may speak of a threefold human soul — buddhi-manas or the spiritual soul, manas or the human soul, and kama-manas or the animal soul, each the expression of its own ego. Each ego is the expression of its monad. The characteristic of the human soul is duality, affording the field for the interaction of spiritual and lower forces.

Humors In medieval European medical thought, a fluid or juice, applied especially the four fluids — blood, phlegm, cholera (yellow bile), and melancholy (black bile) — which were thought to determine a person's health and temperament. This theory derived from classical sources. "These vital spirits and humors corresponded, however imperfectly, to the pranic fluids of ancient Hindu teaching — considered to be both ethereal essences and physical humors. From early mediaeval times up to the recent present, medicine consistently taught that normal physical health in the human body was maintained when these vital spirits and humors were operating in equilibrium, and that disease and even death were products of their malfunctioning. The archaic ages were unanimous in their agreement on these points" (FSO 556).

Huperouranioi (Greek) **Hyperurani** (Latin) Above the heavens, or in highest heaven; the name given by Plato, Proclus, and other Greek philosophers to the highest orders of celestial beings, those above the enkosmioi (intercosmic gods).

Huschenk. *See* HUSHANG

Hushang (Persian) Also Husheng, Hoshang, Hosheng, Haoshyanha; **Ushhanj** (Arabic) Second king of the legendary Pishdadi dynasty, who succeeded his grandfather Kaimurath. In Firdusi's *Shahnamah*, he is noted as having introduced and taught his people the method of making bread

and the art of cookery. He first brought out fire from stone, and thus founded the religion of the Fire-worshippers, calling the flame which was produced the Light of the Divinity, and introducing the Festival of Sadah. His celestial guardian was Manishram or Behram, the planet Mars.

He had a twelve-legged horse, born of a hippopotamus and a crocodile and found on the dry island (a new continent) seven months' journey distant. The horse was the Persian symbol for the sun and, interpreting a leg as a cycle, we have twelve divine cycles or the sum of the yugas — 12,000 divine years; which is the length of the Mazdean Zervan daregho-hvadata (the Sovereign Time of the long period). Again, Hushang mounted on his steed is the monad pursuing its journey on and through the twelve mansions.

Hutukhtu. See CHUTUKHTU

Hvaniratha (Avestan) Also Khvaniratha, Qaniratha. In the Avesta, the name of globe D of our earth planetary chain, the six other globes also being named in the *Vendidad*, where Hvaniratha is the fourth or lowest of the karshvares. See also KARSHVAR

Hvanuatha. See HVANIRATHA

Hvergelmir, Hvergalmer (Icelandic) [from *hverr* cauldron, boiler + *gelmir* loud one, screamer] Roaring cauldron; in Norse myths, the spring which waters the third root of Yggdrasil (the World Tree) which reaches into Niflheim, the home of mists (nebulae). From Hvergelmir flow the thrice twelve plus one ice streams or glaciers, elivagar, which furnish the various life forms for the kingdoms of nature, each one suitable to the type of being which is to inhabit and use that form.

Hwan (Chinese) Spirit.

Hwergelmir. See HVERGELMIR

Hwun. See HWAN

Hwyl (Welsh) Sail; the method of chanting used in Wales for poetry and rhetoric, the idea being that the inspiration drives and fills the spoken words with a certain vibrant, singing quality of sound, as the wind fills, swells, and drives the sails of a ship.

Hyades [from Greek *hyo* to rain] The rainers, or daughters of rain; the stars in the head of Taurus the Bull, the brightest of them being Aldebaran. The usual explanation, borrowed from the Greeks and Romans, is that their rising with the sun, which occurs in May, indicates rain, but they also indicate periodical deluges (SD 2:785).

In Greek mythology they were nymphs, the daughters of Atlas and Aethra, and sisters of the Pleiades, their number varying from two to seven. They were worshiped as nurses of Zeus or Dionysos, and for this service were put in the sky as stars.

Hydra (Greek) A water serpent, feminine, corresponding to a masculine hydros; usually the

monster which Hercules overcomes in one of his twelve labors. As the twelve labors signify, among other things, the trials of an initiate in the Mysteries, the mythologic hydra symbolizes the psycho-astral forces which have to be mastered.

In past stages of evolution, when inchoate attempts at formation were made, and when planes and states of matter were not as they are now, strange monsters existed, which were at first purely lower astral, then astral-physical, and finally physical, before they died out. Hence the idea that the hydra was derived from traditions or astral visions of some reptile-monster of the Mesozoic Age may be an imperfect intuition of the facts.

Hydranos (Greek) Baptizer; “a name of the ancient Hierophant of the Mysteries who made the candidate pass through the ‘trial by water,’ wherein he was plunged thrice. This was his baptism by the Holy Spirit which moves on the waters of Space. Paul refers to St. John as *Hydranos*, the Baptist. The Christian Church took this rite from the ritualism of the Eleusinian and other Mysteries” (TG 146).

Hydrogen The chemical element hydrogen is a terrestrial manifestation of an Element fundamental throughout the universe; and it is in this general sense that it is often spoken of in *The Secret Doctrine*. There we find hydrogen described as the material and spiritual *basis*, its subjective or abstract essence occupying a similar position in the world of mental and subjective phenomena to that which its physical equivalent occupies among the chemical elements. It is Spiritual Fire, the Ray which proceeds from its still greater Spiritual Noumenon, the Dhyani of the First Element. It is a gas only on our terrestrial plane, and is very closely allied to the physical protyle or root-element. It is the Upadhi of both Air and Water, and is fire, air, and water — one under three aspects (SD 2:105, 112-13).

Blavatsky also states that all the matter of the universe, when analyzed by science to its ultimates, yields only four elements: hydrogen, oxygen, nitrogen, and carbon. These four are the basis of organic matter, and are correlated with the four lower human principles: hydrogen with kama and with the primary creative powers, so that the trinity of Mother-Father-Son corresponds to hydrogen, oxygen, and nitrogen (SD 2:592-3).

Hydromancy. See DIVINATION

Hygeia or **Hygea** (Greek) *hygieia*. Health; goddess of health, daughter of Aesculapius, represented as a maiden feeding a serpent from a cup — the serpent referring generally to the vital pathways or flow of the buddhi, often alluded to in Hindu writings as kundalini, drinking from the cup of knowledge. Identified with the Roman Salus.

Hyksos The Shepherd-Kings of Egypt, who invaded and conquered Egypt from the east sometime after the beginning of the 13th dynasty. Under Salatis they made Memphis their capital city and their descendants held Egypt for 511 years. “According to Josephus, the Hyk-sos were the ancestors

of the Israelites. This is doubtless substantially true” (IU 2:487).

Hyle (Greek) Wood, material; primordial matter as first manifested in and from Chaos, but as yet undifferentiated; the Mother, paired with spirit as Father. A Pythagorean word and, according to Plutarch, one of a lower tetraktys consisting of *to agathon* (the good), *nous* (intelligence), *psyche* (soul), and *hyle* (matter). Equivalent to *ilus*.

Hylo-idealism A philosophic cult founded by Dr. Robert Lewins, popular at the time when *The Secret Doctrine* was written (1887-8). It regarded self as the reality. The main reason Blavatsky seems to have so strongly criticized this group was for its materialistic basis, as it derived the cognizing self from matter (as expressed by the *hylo* in its name). This is directly contrary to theosophic teachings which derive both the primordial self and all its manifestations from cosmic spirit or the Logos.

Hylozoism [from Greek *hyle* matter + *zoe* life] A term used by Ralph Cudworth (1617-88); the doctrine that matter includes its own vitalizing principle. Contrasted in *The Secret Doctrine* with crude materialism on the one hand and anthropomorphic deism on the other, it is said to be tantamount to a kind of pantheism. The Stoics, using the word matter to mean something that actually exists, argued that the vitalizing agents in matter, although spiritual in origin, must themselves be material in order to affect matter. The duality between spirit and matter, or the active and passive potencies, they regarded as formal and a concession to Aristotelianism. They recognized the mind and vitality inherent in nature: “Nature is a habit moved from itself, according to seminal principles,” says Laertius, after Zeno. This is equivalent to recognizing the hierarchies of gods, in contrast with the notion that one “Supreme Architect” concerns himself directly with the innumerable details of the inferior ranges of the universe.

Hyparxis (Greek) Essential nature; Neoplatonic term for the summit, beginning, or hierarch of a hierarchy: “this army of beings in any one hierarchy is . . . more than a mere collective entity, because it is united in its apex, in what is actually the fount of that hierarchy. This fount is the hyparxis or spiritual sun from which all the other nine planes or classes of the hierarchy emanate . . .; even as the hyparxis of any one hierarchy is the lowest class or plane of a superior hierarchy, and so practically ad infinitum” (Fund 108-9). Equivalent to the First Logos.

Hyperborean [from Greek *hyperboreos* beyond the north wind] In Greek mythology the Hyperboreans dwelt in the inaccessible extreme north, in bliss and everlasting spring, exempt from death and old age, toil and war. Sometimes it was said that sunshine was continuous for six months, and that Phoebes (the sun) visited the region every year. *The Secret Doctrine* adopts this name for the continent or homeland of the second great root-race of mankind. *See also* ROOT-RACE, SECOND

Hyperion (Greek) [from *hyper* above, high + *ion* he that goes] The sun god, commonly joined with Helios in Homer, as Hyperion Helios or Helios Hyperion. Also a titan descended from Ouranos and

Gaia (heaven and earth) who pairs with Thea. Strictly speaking, the sun god and the titan are one, the distinction lying in this individual's being viewed from two different aspects.

Hypnotism [from Greek *hypnos* sleep] One name for an artificially produced somnambulistic, entranced, or psychologized state. A better word for the procedure is psychologization, hypnotism being but one phase of the general subject which includes fascination, multiple or double personality, some religious ecstasies, and different methods of psychic healing. All these things operate in and upon the important intermediate part between our spiritual and physical-astral self and usually affect the latter self very strongly. This intermediate part is the human soul of the reincarnating entity — the man or woman we see and know. As this includes the psychomental-emotional powers and faculties, it is intimately related to intelligence and sanity, to emotions and conduct, and to health.

Theosophy holds that mesmerism is not hypnotism. In hypnotism the subject's intermediate nature is disjoined from its natural relations with his physical and astral body and put out of the control of the person himself, becoming susceptible to other influences. This process is a reversal of all evolutionary currents which in every being unfold and manifest from conscious centers within. Such a reversal is dangerous and far-reaching in its results, spiritually, mentally, morally, psychically, and physically.

Moreover, the hypnotizer endangers himself by such intimate linking with the lower mind and feeling of his subject — whose spiritual nature is always beyond another's control. From the operator's entrance into, and operation of, the subject's physico-astral body, there results a mutual infection with each other's faulty human nature. Whoever thus changes the forces and trend of another's life, obligates himself to share karmically in those changes to the end.

Psychologizing a person to heal him of disease or rid him of some injurious habit is also harmful. Bodily ills, in themselves, are the cleansing processes by which past inner wrongs of thought and feeling, having reached the material plane, can be worked out of the system. As for karmic faults and failings in character, the person restrained from them by hypnotism or psychologization merely loses a timely opportunity to develop his spiritual will by which alone every human being must consciously work out his own destiny. The apparent cure of disease, or of a weakness, means that these have been driven inwards, dammed back, inevitably to reappear with accumulated force at a less opportune time in this or a future life. Nor does the practice of self-hypnotization or self-psychologization prevent a disjunction of the person's intermediate nature from his immortal self. The results finally appear as mental disease resulting in crime or as physical disease which is the minor evil.

Suggestion has a dual power: for good or for ill, the results depending upon both the motive and the method of its use. The conscious and unconscious use of it for self-interest is unfortunately met with everywhere; as a part of modern training in high-power salesmanship, it pervades the

methods popular in both commercial and professional circles. However, suggestion has a power of noble appeal to the intelligence and spiritual will of others whose better nature responds to a good example, impersonal teaching, and pure and helpful thoughts and feelings. Hypnotism and other such practices are dangerous because they so often fall into black magic or sorcery.

Hypostasis (Greek) [from *hypo* under + *sta* stand, cf Latin *substantia*, English *substance*, Sanskrit *avastha*] The essential nature of a thing, the thing's original foundation, apart from any attributes. In Greek philosophy, used to signify the underlying basis or primordial origin of what flowed forth, that which flowed forth becoming the differentiated. It is also used to denote the persons of a trinity, as in theology and in the triune Vishnu.

Hysteria This protean disorder is regarded as a functional neurosis with abnormal sensations, emotions, or paroxysms, manifesting itself chiefly by emotional instability, by the ease with which it is influenced, in negativism and impulsiveness, a tendency to make sensations, a remarkable egotism, desire to talk, to fabricate, and to simulate. There is constant, capricious change of mood and activity. No other disorder can counterfeit so many diseases as hysteria. The psychic faculties at times displayed in clairvoyance, hallucinations, cataleptic and somnambulistic states, etc., show an active functioning in the astral body; while convulsive and other abnormal movements, and mental absences in which the actor does and says bizarre, unwonted, and inexplicable things for various periods of which only a vague or no remembrance is retained, point to the play of some astral entity, as occurs in other obsessions.

The theosophical interpretation of hysteria is that some obsessing astral entity, not always excarnate human or wholly human, is playing upon the human being in unnatural and useless ways. The patient's unconscious includes his various past lives in which he developed the neurotic tendencies which now attract harmful psychic influences. Among the various types and grades of astral entities from which the normal body and mind are a protection, there are the elementaries dominated and enslaved by some special form or forms of desire. Of such, there may be those with the intense love of attention and the egoism which is so generally marked in hysterical types.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ia-Iz

Iacchos (Greek) [from *iacho* or *iakcheo* to shout] A sacred name of Bacchus (Dionysos) in the Eleusinian Mysteries, in which he is son of Zeus and Demeter, not of Zeus and Semele as was the Theban Bacchus. The name, an allusion to the invocations accompanying the rites, is mystically connected with Iao and Jehovah.

Iabraoth (Gnostic) In the *Pistis Sophia*, ruler of six of the twelve aeons, who in response to the opposition of Ieu, Father of the Father of Jesus, do not persist in the Mystery of Intercourse, Converted to the Mysteries of Light, they are raised “into a pure *Air*, into the Light of the Sun, amid the Region of the Midst, and of the Invisible Deity” (BCW 13:34).

Iah(o). See IAO; YAH

Ialdabaoth (Gnostic) [from Shem *ilda* + *baoth*] Child from the egg (of Chaos); the spirit of matter, the chief of the lower 'elohim and father of the six dark stellar spirits or terrestrial angels, and thus one of the lower group of the Qabbalistic Sephiroth, the shadow or reflection on the lower four cosmic planes of the arupa or formless higher Sephirothic range. These emanations from the stellar spirits become darker and more material as they recede in descent from their sources, and are thus properly represented as the seven planetary (and global) genii or rectors.

Ialdabaoth's mother, Sophia Achamoth (wisdom of the lower four of the cosmic planes) is the daughter or manifested reflection of the Heavenly Sophia — divine wisdom, or the mahat-side of akasa. Therefore Ialdabaoth is equivalent to the Nazarene Demiourgos of the *Codex Nazaraeus*, which makes him identical with the Hebrew Jehovah, the creator of the physical earth and the material side of the rector of the planet Saturn. He is also identical with Tsebaoth-Adamas, “the Pthahil of the *Codex Nazaraeus*, the Demiurge of the Valentinian system, the Proarchose of the Barbelitae, the Great Archon of Basilides and the Elohim of Justinus, etc. Ialdabaoth (the Child of Chaos) was . . . the Chief of the Creative Forces and the representative of one of the classes of

Pitris” (BCW 13:43n). In the Ophite scheme he is the first of the superior septenate.

As a creative spirit, Ialdabaoth generates six sons (the lower terrestrial angels or stellar spirits) without assistance of any female, and when these sons strive with him he creates Ophiomorphos, the serpent-shaped spirit of all that is basest in matter. When Ialdabaoth proclaims that he is Father and God, and that none is above him, Sophia tells him that the first and second Anthropos (heavenly man) are above him. So Ialdabaoth’s sons create a man, Adam, to whom Ialdabaoth gives the breath of life, emptying himself of creative power. Having rebelled against his mother, his production is mindless and has to be endowed with mind by Sophia Achamothe — a reference to the descent of the manasaputras. The man, thus informed, aspires away from his producer, who thereupon becomes his adversary, produces the three lower kingdoms of beings, and imprisons man in a house of clay (flesh). Ialdabaoth also makes Eve (Lilith) to deprive the man of his light powers. Sophia sends the serpent or intelligence to make Adam and Eve transgress the commands of Ialdabaoth, who casts them from Paradise into the world along with the serpent. Sophia deprives Adam and Eve of their light power, but eventually restores this power so that they awoke mentally. Here there is much the same confusion that surrounds the various meanings of Satan and the serpent.

Ialdabaoth, who is lion-headed or in the form of a lion, represents the kama principle, the false light that draws the soul into matter and struggles against its rise again to spirit. Some Gnostics held that Sophia sent Christos to help humankind when Ialdabaoth and his forces were shutting out the divine light, and Ialdabaoth, “discovering that Christos was bringing to an end his kingdom of Matter, stirred up the Jews, his own people, against Him, and Jesus was put to death” (BCW 14:161). *See also* JEHOVAH

I-am, I-am-I I-am-I denotes self-consciousness in which the essential consciousness is reflected in a transmitting vehicle or soul. I-am denotes simple unadulterated being, and is used as a name for the cosmic self. Thus the I-am-I is a lower manifestation of the I-am, which is abstract and incomprehensible to ordinary human mentality. Philosophically, I-am-I is a temporary production of Purusha working in and through the prakritis, or of the image-making power inherent in human consciousness called ahankara (the “I-creating” faculty); so that when evolution has been completed, the I-am-I or self-consciousness will have risen through its various higher forms to become at least for a manvantara the cosmic self.

The consciousness expressed into the phrase I-am is also, when compared with the cosmic self, the limited and therefore imperfect demiurgic state, the Demiurge being the production of that cosmic self. Hence, not only the I-am-I, but likewise the I-am, are withdrawn and become latent during pralaya in paramatman or the inexpressible divine. *See also* EGO; SELF

I-am-ness Ahankara, self-hood, egoship; an evolution of consciousness centered in manas, by which manas becomes the field for the play of self-consciousness. Also, the illusion of separate

selfhood.

I Am That I Am (Hebrew) 'Ehyeh 'Asher 'Ehyeh A title given by Jehovah to himself, a variation of I-am-I, indicating that Jehovah, whatever he may claim to be, is merely one of the gods of the manifested world, a Demiourgos, and not the Supreme. *See also* 'EHYEH

Iao (Gnostic) A three-letter mystery-name, parallel in one sense with the Sanskrit pranava, and reminiscent of triune deities represented by a triplicity of sounds. It occurs in many variations: Io, the Grecian moon goddess; Iaho, Jevo, Jehovah, and other Hebraic forms; Iaso, the possible origin of the name Jesus; Iacchos, the Bacchus of the Mysteries. It is at once threefold, fourfold, and sevenfold in meaning.

Iao Hebdomad (sevenfold) was one of the septenary mystery-gods of the Gnostics, given by Origen as the regent of the moon. The Gnostics had a superior hebdomad, an inferior or celestial one, and the terrestrial one. Iao was regarded as the chief of the superior seven heavens above the earth and is identical with the chief of the lunar pitris (SD 1:448).

Again, Iao Hebdomad is the septenary Iao or the collective seven cosmic rectors, each one representing a heaven, and therefore identifying this Iao Hebdomad at once with the seven mystery-planets of the ancients. Iao, sometimes connected with Yaho, from another standpoint is the collective seven or ten classes of the manasaputras. It is also connected with the Chaldean heptakis. Thus Iao or Iao Hebdomas, according to the point of view, is not only the septenary groups of the lunar dhyanis or pitris, but likewise the seven or ten groups of the manasaputras.

In its association with the moon, it is either male, female, or androgyne according to the particular relationship in which it is being viewed. It is also the serpent of Eden, the bright angel, one of the elohim clothed with radiance and glory, the Iao of the Mysteries, chief of the androgyne creators of mankind. Like Bacchus and other divinities, there was a degraded meaning, leading to phallic doctrines and rituals.

As a mystery-name, Iao or Yaho had a far higher and more spiritual significance, representing the triune forces and substances connected with the supreme divinity of our own cosmic hierarchy, whose seat was superior to the seven heavens, and which therefore made this divinity equivalent to the universal atman, or paramatman, the cosmic spiritual light whose radiations were the individual noetic monads.

Iapetus, Iapetos (Greek) A titan, son of Ouranos and Gaia, thrown into Tartarus by Zeus. He was father of Prometheus, Epimetheus, Atlas, and Menoetius.

Iavar-Zivo. *See* IUKABAR ZIVO

Ibis Universally venerated throughout Egypt, especially at the city of Khemennu (Hermopolis), where the bird was associated with the moon. According to Herodotus (2:75), the ibis was

particularly venerated because of destroying the winged serpents which came flying from Arabia in spring. The black ibis is especially venerated; there is also a commoner sort which is white and black, which “was sacred to the moon, because the latter planet is white and brilliant on her external side, dark and black on that side which she never turns to the earth. . . . Hermes, as shown by Abenephius (*Se cultu Egypt.*), watched under the form of that bird over the Egyptians, and taught them the occult arts and sciences” (SD 1:362), Thoth (Tehuti) being represented as ibis-headed. This bird is equivalent to the albatross and the kalahamsa or mythical white swan of eternity or time.

Iblis or **Eblis** [from Arabic *iblis*] An evil being, in Islamic belief, of spiritual or angelic origin, often named Shaitan and generally equivalent to Satan. In the Koran he is represented as the leader of the angels who rebelled against Allah, and was therefore hurled from Paradise. Although doomed to death his sentence has been withheld until the Judgment Day. Before his fall he was called Haris or Azazel. Often regarded as the leader of the jinn, or the wicked genii who are commonly considered by Moslems to be of evil spirituality; but popular legend likewise endows them with powers, often great, not infrequently for the benefit of mankind. *See also AZAZEL*

Ice Ages. *See* GEOLOGIC AGES

Ichchha (Sanskrit) *Ichchā* [from the verbal root *iṣ* to desire] Wish, desire, intention; derivatively, will.

Ichchha-sakti (Sanskrit) *Ichchā-śakti* [from *icchā* desire, will + *śakti* power] Will power or the force of desire; this power of the will is one of the occult forces of nature. Its most ordinary manifestation on the physical plane is the generation of the nerve currents necessary to set certain muscles in motion for the accomplishment of the desired object, and the paralyzing of other muscles. A yogi generally performs his wonders by using *ichchha-sakti* combined with *kriya-sakti*. Desire arouses or motivates the will, which then moves in accordance with the direction given it through the desire, which always partakes of mental activity. From this general basis the adept with his knowledge of the laws of nature can utilize certain desires of a lofty character, which arouse the corresponding will on the different planes.

I Ching (Chinese) Also *Yi King*. The Book of Changes; also Holy Book of Mutations, these mutations being the manifestations of tao. The text of the original treatise is from a system of eight trigrams and 64 hexagrams, composed of whole and broken lines, thus:

which, by altering the positions of the whole and broken lines form the changes in the diagrams. This has been assigned by scholars to Fu-Hsi (30th century BC). The first extant commentary on it is assigned to Ching Wen, founder of the Chou dynasty in 1122 BC, and his son. There have been many explanations offered regarding this work, called by many the Qabbalah of China: some see in it only a system of divination, a lunar calendar, phallic worship, or again the vocabulary of a tribe whose very existence had to be postulated for this purpose. Both Taoists and Confucianists

regard the *I Ching* as the holiest of books; Confucius declared that he would like to give another 50 years of his life to its study, while the only Chinese commentator who is said to have understood it was Chu Hsi (1130-1200).

In the *Hi-ts'ze* (or so-called Appendices to the work) the universe is described as a living organism called T'ai-ch'i (the supreme being, or most ultimate). The processes of birth and rebirth, or the production of life, are due to the manifestations of tao by means of the yang and yin. "To Yang belong the numbers 1, 3, 5, 7, and 9; to Yin belong the numbers 2, 4, 6, 8, and 10. There are then five celestial and five terrestrial numbers; these rows of five operate upon each other, and each number has one with which it corresponds. The sum of the celestial numbers is twenty-five. It is in accordance with these factors that the processes of the Universe are effected, and the kwei and the shen do their work" (Hi-ts'ze).

Speaking of the *I Ching*, Blavatsky says: "the *Stanzas* given in our text . . . represent *precisely the same idea*. The old archaic map of Cosmogony is full of *lines* in the Confucian style, of concentric circles and dots. Yet all these represent the most abstract and philosophical conceptions of the Cosmogony of our Universe" (SD 1:441).

Ichthus, Ichthys (Greek) Fish; used in a mystic sense of Jesus Christ, given acrostically by the initial Greek letters of the phrase 'Iesous Christos Thiou Yios Soter (Iesous Christos Theou Yios Soter) meaning Jesus Christ, Son of God, Savior.

"The Gnostics had also a nickname for their *ideal* Jesus — or the man in the *Chrest* condition, the Neophyte on trial, and this nickname was *Ichthus*, the 'fish.'

"With this fish, with the waters in general, and, for the Christians, with the Jordan waters in particular, the whole program of the ancient Mystery-Initiation is connected. The whole of the *New Testament* is an allegorical representation of the Cycle of Initiation, *i.e.*, the natural birth of man in *sin* or flesh, and of his second or spiritual birth as an Initiate followed by his resurrection after three days of trance — a mode of purification — during which time his human body or Astral was in Hades or Hell, which is the earth, and his divine Ego in Heaven or the realm of truth" (BCW 11:495).

The word was also applied to Bacchus. It is similar to other figures associated with fish symbols, such as Jonas, Oannes, Dagon, Vishnu, etc. *See also* FISH; PISCES

Icshu. *See* IKSHU

Ida (Icelandic, Scandinavian) [from *ida* eddy, whirlpool] The restless, ever-moving; in the Norse Eddas the Field of Ida is the plain in the center of Asgard, abode of the gods, where the aesir assemble to hold counsel; comparable to the Vigridsslatt (plain of consecration) where human heroes struggle against the forces of darkness during their life cycle. Each plain is appropriate to the world and its denizens and each has its corresponding heavenly sphere above it (cf SD 2:100).

The remaining aesir gods gather on the Field of Ida after Ragnarok, nothing else of Asgard having survived.

Ida or **Ila** (Sanskrit) *Idā, Ilā* Refreshment, flow; the goddess of sacred speech, similar to Vach; in the *Rig-Veda* called the instructress of Manu, instituting the rules for the performing of sacrifices. The *Satapatha-Brahmana* represents Ida as arising from a sacrifice which Manu had performed for the purpose of obtaining offspring. Although claimed by the gods Mitra and Varuna, she became the wife of Manu, giving birth to the race of manus. In the Puranas, she is daughter of Vaivasvata-Manu, wife of Budha (wisdom), and mother of Pururavas. In some accounts she is born a woman, becomes a man named Sudyumna, then rebecomes a woman before finally becoming a man again. This refers to the androgynous third root-race, as well as to the later part of the second root-race.

“In their most mystical meaning, the union of Swayambhuva Manu with Vach-Sata-Rupa, his own daughter (this being the first ‘euhemerization’ of the dual principle of which Vaivasvata Manu and Ila are a secondary and a third form), stands in Cosmic symbolism as the Root-life, the germ from which spring all the Solar Systems, the worlds, angels and the gods” (SD 2:148).

See also ILA

Ida (-nadi) (Sanskrit) *Idā-nāḍi* [from *idā* refreshment + *nāḍi* tubular vessel] One of the three channels forming the spinal column of the body, which are the main avenues for not only the psychovital economy of the body, but likewise for spiritual and intellectual currents between the head and the body proper. In occultism the spinal column plays many physiological roles, but is especially threefold in its functions. The central channel is called the sushumna-nadi, with a channel on either side: the pingala-nadi on the right, and the ida-nadi on the left, although sometimes these positions are given as reversed. All the chakras are connected with the spinal column and the nadis “by the nervous and sympathetic systems as well as by the blood vessels. In occultism the spinal column is not only an organ, but it is actually threefold in its functions, being the foundation of the pranic vitality of the body, driven by the kama of pingala and more or less controlled by the higher manasic or directing attributes of ida” (FSO 462).

Idaean Mysteries Mysteries held in connection with the Magna Mater (Great Mother), Roman name for Rhea or Cybele, whose worship prevailed in Crete and Asia Minor, in both of which are places named Ida. The Phrygian worship degenerated in later times into profligate practices.

Idam (Sanskrit) *Idam* This; used by Vedic and other archaic sages to describe the manifested universe, contrasting it with *tat* (that), the ineffable source from which all universes spring and into which they again resolve for their pralaya (cosmic rest), and from which they later reissue for new periods of manifested activity.

Ida-nadi. See IDA (-NADI)

Idaspati (Sanskrit) *Iḍaspati* [from *id* a refreshing draught, libation + *pati* lord, master] Lord of libations; applied to Brihaspati in the *Rig-Veda*; also to Pushan, a Vedic deity; in the Puranas applied to Vishnu, particularly in his aspect of Narayana (the mover on the waters).

Idavatsara (Sanskrit) *Idāvatsara* [from *idā* this present day + *vatsara* the fifth year of a five-year cycle] This year of a five year cycle; one of the single years of a lustrum, a period of five years. Also one of the five periods that form the yuga, the Vedic cycle taken as the basis of calculation for larger cycles (TG 151).

Iddhi (Pali) *Iddhi* [from the verbal root *sidh* to succeed, attain an objective, reach accomplishment] Equivalent to the Sanskrit *siddhi*, used to signify the powers or attributes of perfection: powers of various kinds, spiritual and intellectual as well as astral and physical, acquired through training, discipline, initiation, and individual holiness. In Buddhism it is generally rendered “occult power.” There are two classes of *iddhis*, the higher of which, according to the *Digha-Nikaya* and other Buddhist works, are eight in number: 1) the power to project mind-made images of oneself; 2) to become invisible; 3) to pass through solid things, such as a wall; 4) to penetrate solid ground as if it were water; 5) to walk on water; 6) to fly through the air; 7) to touch sun and moon; and 8) to ascend into the highest heavens. The same work represents the Buddha as saying: “It is because I see danger in the practice of these mystic wonders that I loathe and abhor and am ashamed thereof” (1:213) — a true statement although *iddhis* are powers of the most desirable kind when pertaining to the higher nature, for they are of spiritual, intellectual, and higher psychical character. It is only when *iddhis* or *siddhis* are limited to the meaning of the gross astral psychic attributes that the Buddha properly condemns them as being dangerous always, and to the ambitious and selfish person extremely perilous. Further, it was an offense against the regulations of the Brotherhood (Samgha) for any member to display any powers before the laity.

The bases for the acquirement of the *iddhis* rested upon four completed steps in training (*iddhipada*): determination in respect of concentration on purpose, on will, on thoughts, and on investigation.

Idealism Philosophical systems based fundamentally on consciousness, as contrasted with systems based on sensation or materialism. It affirms that the universe is an imbodiment of mind or, as stated by theosophy, the aggregated imbodiments of hierarchies of minds proceeding from a unitary divine root or universal hierarch. It states that reality is essentially divine, spiritual, or noumenal and, on a lower plane, that the psychic is noumenal to the physical, which is its phenomenon. As a theory of knowledge, idealism identifies reality, so far as humankind is concerned, with inner conscious experience, or asserts that the mental life alone is truly knowable.

Subjective idealism denies the existence of objective reality altogether, except perhaps as illusory, as for instance in the views of Berkeley. Objective idealism, such as the system of Schelling, recognizes the existence of objective worlds while regarding the ideal world as the primary

production and paramount: the external world has a relative and temporary or mayavi reality. This latter view is the only strictly logical one; for if we annihilate the object, we must thereby annihilate the subject also, these two terms having no meaning except relatively to each other. In any theory of knowledge, there must be knower and thing known; and the latter is objective to the former. Absolute idealism logically is as unthinkable as is absolute materialism. *See also* MAYA

Ideal Man. *See* 'ADAM QADMON; PURUSHA

Ideation The faculty, power, or process of forming ideas. Cosmic ideation denotes an abstraction, being one aspect of cosmic egoity, and also the more concrete reality represented by mahat. Cosmic ideation, focused in a basis or upadhi, results as the abstract consciousness of space working through the monad or vehicle; and the manifestations vary according to the degree of the different upadhis. Cosmic ideation is sometimes called mahabuddhi or mahat, the universal world-soul, the cosmic or spiritual noumenon of matter. As mahat is the primordial essence or principle of cosmic consciousness and intelligence, it is the fountain of the seven prakritis — the seven planes or elements of the universe — and the guiding intelligence of manifested nature on all planes. Going deeper, we have precosmic ideation, which is an aspect of that metaphysical triad which is the root from which proceeds *all* manifestation.

Idea, as Plato pointed out, means primarily a prototype existing in the cosmic mind and manifested in forms by the action of cosmic energy, guided by ideation, working in matter. Therefore it must be regarded as innate, and our thoughts are mental manifestations of ideas. With Plato and Aristotle (when not using the word to denote species), ideas were the fundamental roots of manifested things, as viewed under the aspect of consciousness rather than under that of matter. Hence the faculty of ideation, considered cosmically, is originative and creative of what lies latent in ideation itself, and can be so in the human being, since each individual is a microcosm. This is quite different from the faculty of making mental images of sensory experiences, these images being really what the Greeks called phantasmata. Yet even this is a degree of the original process and may be called, perhaps, astral ideation.

Idei or Idaei, Idaeic Finger. *See* DACTYLI

Ideos Used by Paracelsus to denote primordial undifferentiated matter in Chaos.

Idises (Germanic) Applied to seeresses or prophetesses — same as the Scandinavian dises; more commonly called Wise Women, such as those who were able to succor the sick by means of herbs and potencies.

Idol, Idolotry [from Greek *eidolon* image, idol] The use of images of divinities, which pertains to exotericism, as do visible symbols, ceremonies, and rituals in general. Attitudes vary among religions: Judaism, Islam, and Protestant Christianity absolutely forbid it; Orthodox Christianity permits icons, such as pictures of saints; Roman Catholicism, Hinduism, and Buddhism permit it

altogether. Varying degrees of ignorance or enlightenment may regard an idol as in itself a species of embodied divinity, as transmitting the influence of a divinity or, more spiritually, as a reminder of a divinity. In a real sense, idolatry is the attaching of undue importance to the form rather than to the spirit, and often becomes degraded into worshipping the images made in our imagination and embodied in work of the hands. "Esoteric history teaches that idols and their worship dies out with the Fourth Race, until the survivors of the hybrid races of the latter (Chinamen, African Negroes, etc.) gradually brought the worship back. The Vedas countenance no idols; all the modern Hindu writings do" (SD 2:723).

Idra(h) Rabba Qaddisha. See HA-'INDRA' RABBA' QADDISHA'

Idun(n) (Icelandic, Scandinavian) [from *id* rejuvenation] Norse goddess of eternal youth; the oldest of the moon god Ivaldi's younger brood, representing the soul of the earth. Her spouse is Bragi, the patron and inspirer of bards. Idun is the guardian of the apples of immortality which she feeds the aesir (gods) daily (at each new cycle).

Idwatsara. See IDAVATSARA

I-em-hetep or **Imhetep** (Egyptian) *I-em-ḥetep* **Imouthis, Imouthes** (Greek) Also Imhotep, Imhot-pou. He who comes in peace; the Egyptian deity presiding over medicine, especially in connection with its learning and science; a son of Ptah who, with his brother Nefer-tem, was regarded as the third member of the great triad of gods at Memphis. The Greeks equated him with Aesculapius. He was regarded as the god of study and in later times took on some of the attributes of Thoth or Tehuti as the scribe of the gods. During their life he healed men's bodies; after their death he superintended the preservation of their bodies, and was regarded as one of the protectors of the dead in the underworld. He is termed the Logos-Creator in conjunction with Kneph (SD 1:353).

Iesous. See JESUS

Iesus Hominum Salvator. See I. H. S.

Iesus Nazarenus Rex Iudaeorum (Latin) Jesus the Nazarene, King of the Jews; the initials are the same as those of the medieval Rosicrucian motto, *Igne natura renovatur integra* (by fire nature is restored in purity, or pure matter is restored by spirit).

Ieu, Ieon (Gnostic) Also Jeu. First man, used in the *Pistis Sophia*; other titles are: the Overseer of the Light, the Legate of the first Statute, the Guardian of the Veil, and the Father of the Father of Jesus. Thus it is another name for the Qabbalistic 'Adam Qadmon, the cosmic manifest intelligence or Third Logos.

Ieve, Ieva. See EVE

Ievo. See JEHOVAH; IAO; YAH

Ifing (Icelandic, Scandinavian) [from *if, ef* doubt] In Norse mythology, a wide, ever-flowing river which runs between Asgard (court of the gods) and Jotunheim (home of the giants where the worlds of the living are formed). This river never freezes over to form an ice-bridge which might be traversed by the unworthy, but all human souls must eventually cross the river Doubt and also the river Time (Tund) in order to gain the realm of the gods.

Igaga, Igege, Igigi (Chaldean) A hierarchy of superior angels: the angels or spirits of heaven as distinguished from the anunnaki, the angels of earth.

igne Natura Renovatur Integra (Latin) By fire nature is restored in purity, or pure matter is restored by spirit; the medieval Rosicrucian motto signifying that the working of the inner fire of the spirit, when operating free and unchained by its surrounding veils, reduces these veils into oneness with itself, so that pure, complete, or original nature is restored to its primordial essence. Thus, in its application to the human being, when a person lives entirely in the light or fire of the spirit or god within, all his veils of consciousness coalesce with the inner fire, so that his original spiritual being is restored and he becomes a god-man.

Ignis (Latin) Fire; cf Sanskrit agni.

Ignis Fatuus (Latin) Foolish fire; will-o'-the-wisp.

I. H. S. Well-known Christian monogram, taken as being the initials of Iesus Hominum Salvator (Jesus Savior of Men); and the first three letters of the Greek Iesous (Jesus). It is also a monogram representative of Dionysos used in the Mysteries. As a Latin abbreviation, having mystic significance, it means acrostically, In hoc signo victor eris (in this sign thou shalt be victorious). *See also* JESUS

IHVH. *See* TETRAGRAMMATON

Ikhir Bonga (Kolarian) A spirit of the deep of the Kolarian tribes in Central India (TG 152).

Ikshu (Sanskrit) *Ikṣu* One of the legendary seven seas, supposed by some to be the Euxine or Black Sea.

Ikshvaku (Sanskrit) *Ikṣvāku* The son of Vaivasvata-Manu — progenitor of the present human race and son of Vivasvat (the sun). Ikshvaku was the founder of the solar race of kings (Suryavansa), reigning at Ayodhya at the commencement of the treta yuga (second age). It is said that he had a hundred sons, one of whom, Nimi, founded the Mithila dynasty.

Ila or **Ila** (Sanskrit) *Ilā, Ila* Closely connected with Ida, sometimes used interchangeably, meaning flow, speech, the earth. *Ilagola* means the earth globe. *See also* IDA, IDA (-NADI)

Ilavrita (Sanskrit) *Ilāvṛta* One of the nine varshas (divisions of the earth) according to ancient Hindu teaching; what is now the region of the north pole and surrounding Mount Meru, said to be

the habitat of divinities.

Ildabaoth, Ilda Baoth. *See* IALDABAOTH

Iliados Used by Paracelsus as synonymous with Ideos, primordial matter in the subjective state.

Ilithyia (Latin) **Eileithyia** (Greek) [from Greek *erchymai* to come, come back] She who comes to aid women who are in travail; Greek goddess of childbirth, daughter of Zeus and Hera. Essentially a lunar divinity, her generative functions are often adopted by other divinities, such as Hera, Artemis, Juno, Lucina, and Diana. She was worshiped especially at Crete and Delos, though sanctuaries and statues were dedicated to her in many places.

Illa-ah, 'Illa'ah. *See* 'ADAM 'ILLA'AH

Illinus A god in the Chaldean theogony of Damascus (TG 153).

Illuminati (Latin) The enlightened, adepts; a title assumed in Europe by different bodies of mystics at different times, claiming to have attained the faculty of direct vision of divine truth, and also applied popularly to later bodies, such as Swedenborgians and Rosicrucians. Its most recent and common use is in reference to a secret society, partly religious, apparently partly political, which arose in Germany toward the end of the 18th century, spread its influence over other countries, had degrees of initiation, and entered into relationships with Masonic lodges.

Illupl. *See* ULUPI

Illusion Positive unreality, or that which is wholly and completely deceptive without basis in reality; as such some philosophers consider it to be rooted in the human mind itself, subjective or interior rather than external or objective. As thus understood, illusion falls far short of the significance of the Sanskrit *maya*, for which it is used as a translation. For the sense of *maya* is that of appearance rising out of reality, not something opposed to reality. It is evident that, if the universe can be said to exist at all, we must allow that illusion in the sense of *maya* has existence, a relative or temporary reality, for it obviously originates from and shadows forth the reality within and behind it. It is not that reality itself, but its multiform appearances. To say that the world in which we live, and all the people and beings and things in it, are an illusion, does not mean that all this is an empty dream; it means that what is so real to us, as long as we are conscious on this plane, will be seen as a *maya* or deceptive appearance from our viewpoint when we become conscious on a higher and more inclusive plane. *See also* MAYA

Ilmatar (Finnish) The ancient Finnish great cosmic Mother, who helped in the production of the earth and heavens. In the *Kalevala*, she is described as daughter of ether or air (*ilma*). After passing her existence for ages in the air, she descended to the waters — naught else then existed. After seven hundred years she raised her voice to the great deity and the primeval duck was sent to her. When the earth was formed, she was able to bring forth her seven sons, whose exploits

constitute the principal narrative of the great Finnish epic.

Ilus (Greek) [from *ilue* mud] Primordial slime or mud; used by Berosus, the Chaldean, for the rude material out of which the cosmos was built; and by Sanchoniathon, the Phoenician writer, for the offspring of Chaos after the embrace of the spirit. The lotus flower or manifested universe grows out of the cosmic ilus or primordial substance. The elements differentiate or unfold into activity from their primeval ilus resting in laya. “Esoterically the homogeneous *sediment* of Chaos or the Great Deep. The first principle out of which the objective Universe was formed” (TG 146). The same as hyle.

Also, in Greek legend, the son of Tros and the mythical founder of Ilium (Troy).

Ilythia. See ILITHYIA

Image. See CHHAYA; TSELEM

Imagination Usually the making of mental pictures; but this is actually merely fancy; imagination is “one of the plastic powers of the higher Soul, the memory of preceding incarnations, which, however, disfigured by the lower Manas, yet rests always on a ground of truth” (TG 153). Imagination is therefore a creative power which, used in conjunction with will, calls forth not only creative forces, but likewise their productions. Thus it can be used for spiritualization and also for the materialization of images conceived in the mind; to bring about the results we desire, whether good or evil. It may become our master, chaining us to the illusions we have created; when, however, we can direct this power and resist its suggestions of fancy, it becomes a powerful instrument in shaping our lives and destiny.

Imago (Latin) Image, similitude, simulacrum, apparition, ghost; sometimes used for the *linga-sarira*.

Imhot-pou. See I-EM-HETEP

Immaculate Conception A dogma of the Roman Catholic Church that Mary, mother of Jesus, was born immaculate, that is without original sin in the Christian sense. It is a misapprehension of ancient Mystery-teachings which entered into the original Church through some of the early Fathers who had been initiated in the Mystery schools of their time. The origin of the idea is in the primordial cosmic triad or trinity of Father-Mother-Son, where the principle personified as Mother must be conceived of as immaculate both in original and in productive power and action.

From this truly sublime cosmic idea there flowed forth coordinate ideas having application to the individual human being. For the individual human triad of atma-buddhi-manas is a reflection or ray from the cosmic triad; so that what the cosmic Father is to the universe, atman is in the human triad; the cosmic Mother corresponds to buddhi; and the cosmic Son to manas. And as the humanity of an individual resides in the manas and can become spiritual and immortal, or a

christos, by alliance upwards with the other two individuals of the triad, the dogma gradually became materialized to signify that a human child was born of an immaculate mother, who in her turn was immaculately conceived without sin.

Immah Illa-ah, 'Imma' 'Illa'ah (Aramaic) *'Immā' 'Illā'āh*. Mother or beginning of divinity, heavenly or supernal mother; Qabbalistic term applied to the third Sefirah, Binah, to distinguish it from Malchuth, the inferior mother (termed the Bride or Queen). It is the spiritual Shechinah, the divine matrix or source out of which flows the emanational hierarchy whose completed development is the manifested universe. *See also* AIMA; AM

Immortality That which is not subject to death, deathlessness. Death is the dissolution of a compound entity, where the compound itself ceases to exist, though its elements do not perish. Nor does the ensouling entity perish because of the dissolution of its physical, astral, or other vehicle. Hence in a restricted sense certain elements can be said to be immortal, relative to the compound they form.

Theosophy teaches the constant rebirths of the identic spiritual-intellectual individuality throughout the manvantara; and that, even after union into paranirvana, the individuality, precisely because it is then on its own higher plane or sphere of life, is not lost and will reemerge at a new manvantara to pursue its own particular cycle. This eternal monad, the spiritual-intellectual individuality, is the real and truly immortal essence of the person; and within this supreme cycle of immortality are a series of less immortalities, each representing the life cycle of one of the imbodiments of the monad. Death therefore of necessity becomes a recurrent process, precisely like birth or rebirth, and of many degrees, and simply means the dissolution of some group of lower sheaths enclosing the individual in imbodiment.

Viewing the question from the consciousness aspect, death means the exchange of one mode of consciousness for others. We cannot say offhand that we are either mortal or immortal, since we contain various elements of both kinds. The essence of the individuality is unconditionally immortal, its sheaths or bodies are mortal in various and relative degrees.

Immortality is conditional for the human soul: if it aspires to its inner god and allies itself therewith, the human soul becomes immortal because it is at one with its spiritual parent, the upper triad or monad. But if the personal or human soul refuse to recognize its spiritual essence and allies itself with increasing fullness with the complex compound of the lower human nature, it loses its chance of immortality and becomes but a psychological mortal compound itself.

The Buddha's statement that "nothing composite endures and consequently that as man is a composite entity there is in him no immortal and unchanging 'soul,' is the key. The 'soul' of man is changing from instant to instant — learning, growing, expanding, evolving — so that at no two consecutive seconds of time or of experience is it the same. Therefore it is not immortal. For immortality means enduring continually *as you are*. If you evolve you change, and therefore you

cannot be immortal in the part which evolves, because you are growing into something greater” (FSO 385). In this sense, portions of an entity may endure for long periods of time, and thus be called immortal; but they are not immortal in the sense of continuing to exist unchanged or in a state identical to what they are now.

Imothos, Imouthes. See I-EM-HETEP

Imperishable Sacred Land. See MOUNTAINS, MUNDANE; POLES, TERRESTRIAL AND CELESTIAL; SVETA-DVIPA

In (Japanese) Equivalent to the Chinese yin; in Shintoism, the feminine principle of matter or earth, impregnated by *Yo* (the heavens), the male ethereal principle, and then precipitated into the universe. She forms the first ethereal, sexless objective being, and with him produces the seven divine spirits who emanate the seven creations.

Inachus, Inachos (Greek) River god, the most ancient king of Argos and forefather of the Pelasgic peoples; son of Oceanus and Tethys, father of Io and Phoroneus. After the flood of Deucalion, he led the inhabitants of southern Greece from the mountains to the plains.

Inca(s) (Peruvian) The creative gods in Peruvian theogony, and later the rulers of the country. The seven Incas are said to have repopled the earth after the deluge: “They belonged at the beginning of the *fifth* Root-race to a dynasty of divine kings, such as those of Egypt, India, and Chaldea” (TG 154).

Incantation [from Latin *cantare* to sin] Charm, mantra; the expert use of the power of unvocalized or vocalized sound in evolving occult forces of nature. Used in magic, especially of the ceremonial kind. The power of sound, akasic in character, is the “*first of the keys which opens the door of communication between Mortals and the Immortals*” (SD 1:464); one of the seven siddhis, mantrika-sakti.

Incarnation Imbodiments of an entity or monad in a body of flesh, usually human. It is also used of avataras, buddhas, etc., in treating of the manifold mystery of the union of godhood and humanhood. This mystery, both among Hindus and Christians, is a distorted and anthropomorphic understanding of the teaching as to the presence of the unseen cosmic principles throughout all nature and man, as symbolized by the circle and cross.

Divine incarnations do not mean that a divine being seizes upon and occupies the body of a human being as by a kind of obsession; but that every person has within him the powers by which he can manifest his own innate divinity, and that a few people have these powers developed in a special degree. When properly understood, a truly divine incarnation, as in avataras, was one of the greatest of the mysteries of every archaic religious system.

Incense Fragrant incense has been used from immemorial antiquity practically worldwide, often

in ceremonial magic of various kinds. Incense may be simple, as in the usage of burning leaves, bark, or wood, the smoke itself being often so fragrant as to fall under the modern ideas of incense; or compound when it is composed of various ingredients, all of a more or less fragrant character when burned. The explanation of the original use of incense was that it was a strong purifying agent, some plants thus used in purificatory fumigations being far more powerful in effect than others. In its worst uses, incense is distinctly stupefying in character, and when so used its burning partakes of sorcery. Its purificatory effect is because smoke of various kinds, or the fumes from the burning, are antiseptic or cleansing in character; and some plants especially when burned repel evil-natured denizens in the astral light.

Incubus (Latin) [from *in* upon + *cub* lie] The nightmare, regarded as an astral goblin which lies upon the sleeper. Modern medicine regards it as a subjective impression produced by physiological disorders, but we must take into account as well the lower strata of the astral light, teeming with soulless elementals as well as astral vampires or elementaries, ready to take advantage of unguarded and disordered conditions.

Also a goblin which, in medieval belief, holds sexual intercourse with human beings, a belief found elsewhere, as in India, where the term used is *pisacha*. Incubi are sometimes spoken of as of either sex, but properly *succuba* is used for the female. They are “Ghools, Vampires, and soulless Elementals; formless centres of Life, devoid of sense; in short, *subjective protoplasms* when left alone, but called into a definite being and form by the creative and diseased imagination of certain mortals” (TG 154). Thus it is the lustful imagination and vitality of the victim that gives these beings their power upon him; without that, they are powerless and not to be feared.

Indeterminacy Used in science to mean that the investigation of intra-atomic phenomena has (for the time being) reached the limits of human power to determine the behavior of a particle. The Heisenberg principle of uncertainty states that it is impossible to increase the accuracy of measurement of the velocity of a particle without by this very observational act introducing an uncertainty into the determination of its position. The attempt to represent phenomena as a chain of cause and effect must lead sooner or later to a point where we can no longer trace the cause — not because causes vanish, but because of the imperfection of our observation and of our instruments, so that the chain of causation continues until we lose track of it because of incapacity. Hence we are unable to predict the behavior of a particle. Subsequent investigation may enable us to carry the chain of causation farther, but the process cannot go on indefinitely without carrying us beyond the physical plane. The standards of measurement successfully adopted for molar physics and for phenomena within terrestrial limits have proved inadequate for the definition of phenomena outside those limits; and both theory and experiment show that these standards are largely conceptual and must be changed to suit new conditions.

Some people try to introduce a volitional principle into nature at this point, but this is falsely to

assume that the volitional principle is absent elsewhere — an assumption purely speculative, and which seems entirely unwarranted. It is not that the universe is divided into a mechanical section and a volitional section, arbitrarily separated by a hypothetical boundary that varies according to our progress in investigation. The mechanical interpretation therefore is a device adopted for practical purposes on the physical plane, which enables us to predict results within limits that do not bring the validity of its assumptions into question. Science finds that one form of motion is consequent upon another, but it knows nothing about the cause of motion; and words like force and mass are merely convenient abstractions. Hence there can be no reason for introducing a psychological element into nature at one point rather than at another, for such disjunct compartments do not exist in nature.

Indeterminacy, as used by science, is the contrary of determinism; both would seem to imply attitudes of mind rather than actualities in nature.

Indivisibles. *See* ATOM

Individuality [from Latin *individuum* undivided thing, unit] In philosophy, as well as in theosophy, used for inherent selfhood: monad, ego, atom. Used in theosophy for the higher ego in man as contrasted with the lower ego or personality — a distinction not made in ordinary parlance, where the two words may even be used in the opposite senses. The individuality is the immortal spiritual ego or monad; whereas the personality, or lower quaternary of the septenary human constitution, is the mortal human ego which goes to pieces at death.

Indolentia (Latin) Freedom from pain; an Epicurean term denoting the tranquility which was their ideal of attainment for the sage who sees that happiness is inseparable from virtue.

Indovansas. *See* INDUVANSA

Indra (Sanskrit) *Indra* Vedic god of the firmament, supporter or guardian of the eastern quarter of the visible kosmos, whose functions somewhat parallel those of the equivalent of the four Maharajas. Indra, Varuna, and Agni were considered among the three highest gods of the Vedas, although the triad of Vayu, Surya, and Agni is frequently mentioned, Indra often taking the place of Vayu. Indra is often described as the champion of all the gods and overthrower of their enemies, especially the conqueror of Vritra, the great cosmic serpent. Indra thus has numerous parallels with the St. Michael of the Occident, and some of his functions are identic with Karttikeya, the god of war.

“In the Rig Veda Indra is the highest and greatest of the Gods, and his Soma-drinking is allegorical of his highly spiritual nature. In the Puranas Indra becomes a profligate, a regular drunkard on the Soma juice, in the terrestrial way” (SD 2:378). Indra corresponds with the cosmic principle mahat and in the human constitution with its reflection, manas, in its dual aspect. At times he is connected with buddhi; at others he is dragged down by kama, the desire principle.

Indrani (Sanskrit) *Indrāṇī* [feminine of *Indra*] Also Aindri. The consort of Indra, personifying the aindriyaka, the evolution of the elements of senses (SD 2:614). As Indra stands for mahat — especially for the dual aspect of manas in man — his marriage to Indrani “because of her voluptuous attractions” may represent the enchaining of the higher manas to the lower because of the karmic links of both with the lower ternary in the human constitution, this union, combination, or marriage manifesting itself as the kama-manasic portion of human consciousness.

Indriya (Sanskrit) *Indriya* Power, force, especially with reference to the faculty of sense; sense itself, including the inner or astral organ of sense; also occasionally the number five as symbolic of the five senses. The buddhi-indriyani or jnanendriyani are the five inner organs or faculties of perception: eye, ear, nose, tongue, and skin. To these are added the karmendriyani (organs of action): larynx, hand, foot, anus, and generative parts; between these ten organs and atman stands manas, which thus with the atman and the ten faculties and organs of sense, make twelve divisions of the human constitution. In Vedantic philosophy the four inner organic faculties (antar-indriyani) are manas, buddhi, ahamkara, and chitta.

Each of these fourteen faculties and organs is presided over by its own respective inyantri (ruler): the eye by the sun; the ear by the quarters of the world; the nose by the two Asvins; the tongue by Prachetas; the skin by the wind; the voice by fire; the hand by Indra; the foot by Vishnu; the anus by Mitra; the generative organs by Prajapati; manas by the moon; buddhi by Brahman; ahamkara by Siva; chitta by Vishnu as Achyuta. The differences in enumeration are to be accounted for by the different manners in which the various Indian philosophic schools enumerated and divided the different parts of the human constitution.

In the Puranas seven creations are enumerated, the third being called indriya, or organic evolution. *See also* AINDRIYAKA

In yoga training restraint of the senses is termed *indriya-samyama*, while *indriyasanga* is nonattachment to objects of sense or of the material world.

Indriyatman (Sanskrit) *Indriyātman* [from *indriya* sense + *ātman* self] A term used by Blavatsky (SD 2:108) to represent the third stage in the descending scale of the manifestation of Brahman. It implies that the spiritual or intellectual soul through its own particular radiations is the fundamental or guiding essence bringing about the evolution of the interior senses and their corresponding physical organs, and is likewise the latent guiding intelligence and instinct behind them.

Indu (Sanskrit) *Indu* In the Brahmanas, the moon; in the Vedas, a drop, especially of soma, or a spark. It refers to the physical moon and its functions, whereas Soma implies the somewhat more mystical and esoteric lunar attributes.

Inductive Method, Induction In logic, the process of reasoning from the parts to the whole, from

the particular to the general, or from the individual to the universal; contrasted with the deductive method, which reasons from the whole to the parts, from the general to the particular, from the universal to the individual. It is associated with Aristotle as contrasted with Plato, also with Francis Bacon and modern science in general. Science endeavors to establish general laws by reasoning from particular observations; but it is necessary to assume that what is true in an individual case will be true in the general case of which it is only an instance. The hypotheses thus framed are necessarily and naturally regarded as provisional, subject to modification in the light of subsequent, more extended observations of nature. This method endeavors to come to an understanding of nature by a continued process of trial and error, the formulation of its laws becoming ever wider. But an essential part of this method itself is deductive, since we continually reason back from the provisional hypotheses we have laid down to the new facts which we seek to discover in support or in refutation of them. For this reason, the method of science has often been called a deductive-inductive method. Indeed, pure induction is probably inconceivable, since we cannot enter upon a mental process unless we first entertain some general ideas. Induction and deduction are interdependent functions of the ratiocinative mind.

Further, the data of scientific induction are sensory percepts; and no amount of such data will enable us to ascertain the truth about the causal worlds which underlie phenomena. If we admit, with Plato, the existence of intuition or direct perception of essential truths, or if we accept his doctrine of the existence of soul memories latent in the mind, we have a resource which will free us from complete reliance on this synthetic method of reaching general truths. *See also* BACONIAN METHODS

Induvansa, Induvamsa (Sanskrit) *Induvaṃśa* [from *indu* moon + *vaṃśa* race] The lunar race or dynasty in ancient Hindu stories. *See also* CHANDRAVANSA

Ineffable Name With the Jews, applied to the word Jehovah; with the Qabbalists, associated with the Tetragrammaton (JHVH, YHVH, or IHVH). The Ineffable Name is the secret of secrets, IHVH (or Jehovah) being used as a screen. The power of the Ineffable Name is the power or force of the natural harmony in nature, which the ancient Greek mystical philosophers called music or the cosmic harmony. The name used by the Western Qabbalists is not to be pronounced, rather than ineffable, for the “ ‘Ineffable Name’ of the true Occultist, is *no name* at all, least of all is it that of Jehovah. The latter implies, even in its Kabbalistical, esoteric meaning, an androgynous nature, YHVH, or one of a male and female nature. It is simply Adam and Eve, or man and woman blended in one, and as now written and pronounced, is *itself a substitute*. But the Rabbins do not care to remember the Zoharic admission that YHVH means ‘not as I Am written, Am I read’ (*Zohar*, fol. III., 230a). One has to know how to divide the Tetragrammaton *ad infinitum* before one arrives at the *sound* of the truly unpronounceable name of the Jewish mystery-god” (TG 155-6).

Infants. *See* INNOCENTS

Infernal Deities [from Latin *inferi* or *inferni* inhabitants of the lower world] Cosmic powers pertaining to the lower planes of manifestation. Classical mythology shows the earth and its beings between the heavens and the infernal regions, under the double influence of the higher and the lower deities. Sometimes they are called chthonian deities, gods of the earth or underworld, implying a duality of heaven and earth, or above and below. They are usually doubles of the superior gods, often with the same name but distinguished by an epithet, as in Jupiter Chthonius or Osiris-Typhon. The contrast between good and evil has given a sinister aspect to these deities, as being connected with death, destruction, and affliction, though they are necessary cosmic powers. Christian theology in particular has turned them into devils.

Infinite [from Latin *in* not + *finitus* ended] That which is endless or not finite; ancient peoples expressed the frontierless, beginningless, and endless hierarchical immensities, whether of space, time, spirit, or matter in many ways, as in the 'eyn soph (without bounds or frontiers) of the Qabbalah, the Hindu parabrahman (beyond Brahman), the Void, the Sunyata of Buddhism, the Ginnungagap (gaping void) of the Scandinavians, the Deep of the Bible, or the waters of space, etc. Many philosophers of antiquity considered it futile to speculate upon that which is *ex hypothesi* beyond the understanding of the human mind, confessedly finite in function and range. For whatever the human mind can shape or figurate to itself as a concept must be de facto finite in itself, however great or grand. Infinite was never used as a synonym for deity or any divine being, for however immense in its incomprehensible vastness in both time and space, it could be nevertheless only finite, for the human mind itself had given birth to the human thought, and the human mind is finite.

Similarly, the Absolute is not the infinite, for absolute means “freed” or “liberated,” such as the cosmic hierarch of a universe; and this could not be infinite or boundless, but must have been of finite origin, grown into stature of divine grandeur. The ancients taught that the universe was filled with gods, and that the universes were as numerous in beginningless space and time, as number in itself is beginningless and endless and therefore incommensurable.

“The Boundless can have no relation to the bounded and the conditioned”; “the *immutably* Infinite and the *absolutely* Boundless can neither will, think, nor act. To do this it has to become finite, and *it* does so, by its ray penetrating into the mundane egg — infinite space — and emanating from it as a finite god” (SD 1:56, 354).

Inflectional Speech. See SPEECH

Influenza. See EPIDEMICS

Initiate [from Latin *initio* entering into, beginning] One who has entered into or begun, or passed at least one initiation in the sacred Mysteries; initiates can therefore be of various degrees. Synonymous with reborn, dvija (twice-born), Son of the Sun, etc.

Initiant [from Latin *initio* entering into, beginning] One who is preparing for initiation, as distinguished from one who has been initiated — the latter being an initiate. One who is an initiate in one degree may be only an initiand as to a higher degree.

Initiation [from Latin *initio* entering into, beginning] Generally, the induction of a pupil into a new way of living and into secret knowledge by the aid of a competent teacher. In ancient times initiation or the Mysteries were uniform and one everywhere, but as times passed, each country — though basing its Mysteries and initiation ceremonies on the one original wisdom common to mankind — followed manners of conducting the procedures native to the psychology and temperament of the different peoples. In still later times most of the original wisdom was but dimly remembered; and the Mysteries and the initiation ceremonies degenerated into little more than ceremonial rites, with more or less academic or theological teaching accompanying them — as was the case in the Mysteries of Greece, for instance; although it is true that there were genuine initiates in Greece down to the fall of the Mediterranean civilizations.

“Every nation had its exoteric and esoteric religion, the one for the masses, the other for the learned and elect. For example, the Hindus had three degrees with several sub-degrees. The Egyptians had also three preliminary degrees, personified under the ‘three guardians of the fire’ in the Mysteries. The Chinese had their most ancient *Triad* Society: and the Tibetans have to this day their ‘triple step’: which was symbolized in the ‘*Vedas* by the three strides of Vishnu. . . . The old Babylonians had their three stages of initiation into the priesthood (which was then esoteric knowledge); the Jews, the Kabbalists and mystics borrowed them from the Chaldees, and the Christian Church from the Jews” (TG 333).

In theosophy initiation is generally used in reference to entering into the sacred wisdom under the direction of initiates, in the schools of the Mysteries. By initiation the candidate quickens natural evolution and thus anticipates the growth which will be achieved by the generality of humanity at a much later time in developmental evolution. He or she unfolds from within the latent spiritual and intellectual powers, thus raising individual self-consciousness to a corresponding level. The induction into the various degrees was aptly spoken of as a new birth.

The seats of initiation were often situated on mountains, which because of this were regarded as holy mountains. Often rocky caves or recesses in mountains were chosen for their inaccessibility, and used as initiation crypts or chambers for teaching; in ancient Egypt the Great Pyramid was an initiation temple.

“The initiated adept, who had successfully passed through all the trials, was *attached*, not *nailed*, but simply tied on a couch in the form of a *tau* \top (in Egypt) or a *Svastika* without the four additional prolongations (thus: \oplus , not $\卐$) plunged in a deep sleep (the ‘Sleep of Siloam’ it is called to this day among the Initiates in Asia Minor, in Syria, and even higher Egypt). He was allowed to remain in this state for three days and three nights, during which time his

Spiritual Ego was said to confabulate with the 'gods,' descend into Hades, Amenti, or Patala (according to the country), and do works of charity to the invisible beings, whether souls of men or Elemental Spirits; his body remaining all the time in a temple crypt or subterranean cave. In Egypt it was placed in the Sarcophagus in the King's Chamber of the Pyramid of Cheops, and carried during the night of the approaching third day to the entrance of a gallery, where at a certain hour the beams of the rising Sun struck full on the face of the entranced candidate, who awoke to be initiated by Osiris, and Thoth the God of Wisdom" (SD 2:558).

There were successive degrees of initiation, of which seven are usually enumerated. Of these the first three were preparatory, consisting of discipline of the whole nature: moral, mental, and physical. At each stage, the neophyte had to pass through a carefully graded series of tests or trials in order that he might prove his inner strength and capabilities to proceed. In this manner the neophyte reached and entered the fourth degree, in which the powers of his inner god having by now become at least partially active in his daily life and consciousness, he was enabled to begin the experience of passing into other planes and realms of life and of being, and thus to learn to know them by *becoming* them. In this way he acquired first-hand knowledge of the truths of nature and of the universe about which he previously had been taught.

In the fifth initiation, called in ancient Greece theophany (the appearance of a god), the candidate meets for at least a fleeting moment his own spiritual ego face to face, and in the most successful of these cases, for a time actually becomes one with it. Epiphany signifies a minor form of theophany.

In the sixth stage, theopneusty (in-breathing or through-breathing of a god, divine inspiration), the candidate becomes the vehicle of his own inner god, for a time depending on the neophyte's own power of retention and observation, so that he is then inspired with the spiritual and intellectual powers and faculties of his higher self.

In the seventh degree, theopathy (the suffering a god — suffering oneself to be one's own inner god), the personal self has become permanently at-one with the inner divinity. The successful passing of the seventh trial resulted in the initiate's becoming a glorified Christ, to be followed by the last or ultimate stage of this degree known in Buddhism as achieving buddhahood or nirvana. Since limits cannot be set to attainment, however, still loftier stages of spiritual and intellectual unfolding or initiation await those who have already attained the degree of buddhahood.

In Buddhist works four degrees of training, in these cases equivalent to initiation, are given: 1) srotapatti (he who has entered the stream), one who has commenced the task of transmuting the forces of his nature to the purposes of his higher self; 2) sakridagamin (he who comes once more), one who will be reborn on earth only once again before reaching the lower degrees of nirvana; 3) anagamin (he who does not come), one who will no longer be reincarnated anymore, unless the choice be made to remain on earth in order to help humanity; and 4) arhat or arhan (the worthy

one), one who at will can and does experience nirvana even during his life on earth.

Inner Eye. *See* EYE OF SIVA; PINEAL GLAND; THIRD EYE

Inner God Used for the higher self or divine monad, the focus of divine-spiritual individuality in the human constitution, especially in connection with the degree of initiation when the candidate comes into communion with his true spiritual self, the god within.

Inner Man The true and immortal entity in us, as contrasted with the outward and mortal form (physical body, astral body, etc.). The higher ego, the higher manas or manas in conjunction with atma-buddhi; nous as opposed to psyche.

Inner Round In theosophical literature, the passage of the ten classes or hosts of monads through all the globes comprising a planetary chain. An inner round begins on the highest globe and continues its progress around and through them all, concluding the cycle again at the globe from which it first started. The same journey is undergone by the spiritual monad after death.

Such a complete circuit of the life-waves on each and every one of the globes of a planetary chain is termed a planetary round or chain-round, whereas the complete passage of a life-wave on one globe before going to the next succeeding globe is termed a globe-round; seven or twelve of these globe-rounds comprise one planetary round. Each life-wave makes seven cycles on each globe, which are termed root-races. *See also* ROUND

Innocents In ancient Judea this name, and that of infants or little ones, was given to neophytes and initiates just born, meaning that they were newly become such. We find the same usage in the New Testament story of the murder of the Innocents by Herod: in its original it meant the murder of chelas or initiates, but has been adapted in the Christian scriptures to mean the slaughter of actual babies with a view to include the body of Jesus.

Inorganic. *See* LIFE

I. N. R. I. Four letters found at the head of pictures of Jesus on the cross, and generally interpreted as the initials of Iesus Nazarenus Rex Iudaeorum (Jesus the Nazarene, King of the Jews) but according to others representing a Rosicrucian motto: *Ingne natura renovatur integra* (by fire, nature is renewed entire).

Insanity [from Latin *in* not + *sanus* sound] Unsoundness of the mental faculties or organs, with or without loss of volition and of consciousness. "Arcane science teaches that the abandonment of the living body by the soul frequently occurs, and that we encounter every day, in every condition of life, such living corpses. Various causes, among them overpowering fright, grief, despair, a violent attack of sickness, or excessive sensuality may bring this about. The vacant carcass may be entered and inhabited by the astral form of an adept sorcerer, or an elementary (an earth-bound disembodied human soul), or, very rarely, an elemental. . . . In insanity, the patient's astral being is

either semi-paralyzed, bewildered, and subject to the influence of every passing spirit of any sort, or it has departed forever, and the body is taken possession of by some vampirish entity near its own disintegration, and clinging desperately to earth, whose sensual pleasures it may enjoy for a brief season longer by this expedient” (IU 2:589).

Not all insane persons, however, suffer with the restless inner tension due to a besieging influence. Some grope along on their own kama-manasic level, bewildered because deprived of the directing influence of their higher principles. Some of these people are suffering from a dissociation of the inner conscious self from his brain which ordinarily connects him with the external world of things and people. Such cases know inwardly that they are not insane but, being unable to make themselves understood, and hence being regarded and treated as lunatics, they sometimes finally do become mentally deranged.

While karmic conditions may prevent a cure in this life for many cases, many others respond happily when, to the best resources of modern treatment, is added the knowledge of composite human nature with knowledge of its relations to the invisible astral sphere which interpenetrates and influences our world of mind and matter. Most important help may come from the confident, friendly, uplifting influence which emanates from intelligent, earnest, pure-minded attendants who deal with them.

Insignia Majestatis (Latin) The characteristics, badges, or tokens of majesty; used metaphorically of characteristic marks of spiritual grandeur or power.

Inspiration, Inspired [from Latin *in* into, upon + *spiro* breathe (cf *afflatus* from *ad* upon + *flo* breathe); adopted from Greek *empneusis* from *en* in + *pneo* breathe] Generally the reception of knowledge or influence from a source superior — or even inferior — to the ordinary consciousness.

Instinct The vegetative, passive, or automatic side of intuition, which expresses itself all through natural existences. The atoms move and sing by instinct, and by the instinctual faculty the animal guides its life. In human beings are the divine instincts of love, forgiveness, and pity. “Instinct, as a divine spark, lurks in the unconscious nerve-centre of the ascidian mollusk, and manifests itself at the first stage of action of its nervous system as what the physiologist terms the reflex action. It exists in the lowest classes of the acephalous animals as well as in those that have distinct heads; it grows and develops according to the law of the double evolution, physically and spiritually; and entering upon its conscious stage of development and progress in the cephalous species already endowed with a sensorium and symmetrically-arranged ganglia, this reflex action, whether men of science term it *automatic*, as in the lowest species, or *instinctive*, as in the more complex organisms which act under the guidance of the sensorium and the stimulus originating in distinct sensation, is still one and the same thing. It is the *divine instinct* in its ceaseless progress of development. This instinct of the animals, which act from the moment of their birth each in the

confines prescribed to them by nature, and which know how, save in accident proceeding from a higher instinct than their own, to take care of themselves unerringly — this instinct may, for the sake of exact definition, be termed automatic; but it must have either within the animal which possesses it or *without*, something's or some one's *intelligence* to guide it" (IU 1:425).

Instinct may be considered as the automatic or quasi-intelligent functioning of the infinitude of rays flowing forth from the kosmic mind — these rays in their turn first passing through the divine intelligences, then through the spiritual intelligences, then through the hosts of beings of less degree, and finally reaching animate and inanimate entities. Instinct, thus, wherever functioning throughout nature is seen to be the action of kosmic mind. In proportion as intuitions are farther evolved along the ladder of life, instinct merges into intelligence, then into self-conscious intelligence, and finally into spiritual intelligence which is the veil of the kosmic divinity.

Instructors, Divine. See DYNASTIES

Intellect. See MANAS; MIND

Interlaced Triangles. See SEAL OF THE THEOSOPHICAL SOCIETY; SIX-POINTED STAR

Intermediate Nature In a threefold division of the human constitution, such as the Christian spirit, soul, and body, the intermediate nature would correspond to soul and would represent the intermediate duad — manas and kama. The upper duad (atman, buddhi) would correspond to spirit; and the lower triad (prana, linga-sarira, sthula-sarira) to body.

It is the intermediate nature, our human portion, which reincarnates: it is a ray of the spiritual part or upper duad, and by repeated incarnations, through unfolding of the latent spirituality within itself, it finally “ascends” to reach the status of its parent, the upper duad. Hence, the intermediate nature is often referred to as the human soul.

Intoxicants. See SOMA; DELIRIUM TREMENS

Intra-Mercurial Planet. See VULCAN

Intuition The working of the inner vision, instant and direct cognition of truth. This spiritual faculty, though not yet in any sense fully developed in the human race, yet occasionally shows itself as hunches. Every human being is born with at least the rudiment of this inner sense. Plotinus taught that the secret gnosis has three degrees — opinion, science or knowledge, and illumination — and that the instrument of the third is intuition. To this, reason is subordinate, for intuition is *absolute knowledge*, founded on the identification of the mind with the object. Iamblichus wrote of intuition: “There is a faculty of the human mind, which is superior to all which is born or begotten. Through it we are enabled to attain union with the superior intelligences, to be transported beyond the scenes of this world, and to partake of the higher life and peculiar powers of the heavenly ones.” From another point of view, intuition may be

described as spiritual wisdom, gathered into the storehouse of the spirit-soul through experiences in past lives; but this form may be described as automatic intuition. The higher intuition is a filling of the functional human mind with a ray from the divinity within, furnishing the mind with illumination, perfect wisdom and, in its most developed form, virtual omniscience for our solar system. This is the full functioning of the buddhic faculty in the human being; and when this faculty is thus aroused and working, it produces the manushya or human buddha.

Inversion of Poles. See POLES, TERRESTRIAL AND CELESTIAL

Invisible Worlds Theosophy teaches that the universe is a living organism, composed of an infinite number of minor organisms of all-various degrees of expression in both spirit and matter. These groups of minor organisms or worlds are separated from each other in consciousness, not in space, by planes. All the beings of any one plane have senses relating to that plane and are therefore usually unconscious of other planes by *first* perception. Further, these planes are of such different ranges of matter and therefore of vibration, that the entities within them intermingle without mutual interference. The suns and planets, therefore, of any one plane interpenetrate our physical sphere, and permeate it, so that in our own daily affairs we actually pass through the worlds, through the very beings, it may be, of the entities dwelling in these realms invisible to us. These invisible realms are made of matter just as is our physical world, but it is of matter more ethereal or gross than ours. We do not cognize them with our physical senses because of the different rates of vibration of the different planes.

Although our senses tell us nothing of these innumerable other planes, yet the inner and invisible higher spheres are inexpressibly important because they are the causal realms of which our physical universe is but the phenomenal production. But while these higher planes are the fountainhead, ultimately, of all the energies and matters of the whole physical world, yet to an entity inhabiting these inner and invisible worlds, these latter are as substantial and real to that entity as our physical world is to us. Just as we know in our physical world various grades or conditions of energy and matter, from the grossest to the most ethereal, so do the inhabitants of these other worlds know and cognize their own grossest and also most ethereal substances and energies.

The theosophical teaching about invisible worlds has no connection or parallel with the Summerland of the Spiritualists.

Involution Infolding, as contrasted with evolution or unfolding; used as correlative with evolution, it means the passing from a state of comparative manifestation to one of comparative latency. In the downward arc of progress, spirit is said to involve, and matter to evolve, these processes being reversed during the upward arc. See also ARC, ASCENDING AND DESCENDING

Io (Greek) The daughter of Inachos, first king of Argos, she was beloved by Zeus and changed into a heifer to avoid Hera's jealousy. Hera, not deceived, had the heifer watched by the hundred-eyed

Argos, who was then slain by Hermes at the command of Zeus. After many wanderings in Europe and Asia, Io recovered her form in Egypt and gave birth to the dark Epaphos who became king of Egypt and founded Memphis.

Io means the moon in Argive usage and in Egypt. She is again Isis, Diana, the arc of life, mother of gods and of generations, queen of earth, often symbolized with cow's horns. Dark Epaphos is Dionysos-Sabazios, son of Zeus and Demeter in the Sabazian Mysteries (SD 2:415).

The name shows the stroke in the circle, which stands for the number ten. In Greek it is *[[IO]]*, and in Gnostic gems is *[[IAO]]* (Iao), sometimes connected with Arbaxas as Abraxasiao. Students of literal symbology have written it Ioh and related it to Jehovah, etc.

Ioannes (Gnostic) "Ioannes, the Baptist who is usually associated with Waters, is but a Petro-Paulite name and symbol of the Hebrew Ionah [the Jonah swallowed by the whale] and the First Messenger, Assyrian Oannes . . . The fishermen and fishers of men in the Gospels are based on this mythos." (Enoch, the Book of God 2:80, quoted BCW 3:217) Equivalent of John, Oannes, Dagon, and Vishnu, the personified microcosm (BCW 11:488).

Ioh. See IO; JEHOVAH

Iolo Morganwg A Welsh stonemason of the 18th and early 19th centuries, who claimed to have copied the documents contained in the book *Barddas* from manuscripts he found in private libraries in Wales. These documents claim to detail the philosophy of the Druids; the teachings given make clear the meaning of numberless passages of Welsh literature from the 6th to the 15th century, and are also in accord with the esoteric doctrine of all the ancient nations.

Ionian or Ionic School A school of Greek philosophers of the 5th and 6th centuries BC in Ionia, considered to have been founded by Thales of Miletus (640-550 BC) and including Anaximander, Anaximenes, Anaxagoras, Heraclitus, Diogenes of Apollonia, Archelaus, and Hippo. They were astronomers, geometers, and geographers who sought to explain the universe in terms of matter, movement, and force. Thales and Hippo make the cosmic element water the primordial originating element; Anaximenes and Diogenes of Apollonia make it the cosmic element air; Heraclitus, the cosmic element fire. Anaxagoras postulates a supreme hierarchical mind (nous) as imparting evolutionary form and order to chaos, the undeveloped substance of nature.

Iormungandr (Icelandic) [from *Iormun* huge, vast, superhuman + *gandr* magic, enchantment or *andr* spirit] In the Norse Edda, the Midgard serpent which girds the earth, one of three gigantic offspring of Loki. The other two are Fenris, the wolf destined to devour the sun when its life is spent, and Hel, queen of the realms of death. Iormungandr may refer to the equator, the plane of the ecliptic and, in a still larger context, to the Milky Way.

Irad. See CAIN

Irdhi. See IDDHI

Iri-sokhru. See KHENSU

Irkalla (Chaldean) The netherworld or underworld of the Babylonians, also known as Aralu, its entrance approached by a deep cavern. It was ruled over by the goddess Allatu, or Ereshkigal (lady of the netherworld), sister or alter ego of Ishtar, the great nature goddess. The same idea is present in the Egyptian conception of Isis and Nephthys. Irkalla was ruled conjointly by Allatu and Nergal, who was also considered the god of the dead.

Iron Age The fourth of the ages enumerated in the theogony of Hesiod, corresponding to the Hindu kali yuga (black age). It is described in all ancient writings as the worst of the four, because the most material; it marks the lowest point of a cycle of evolution. Each root-race is divided into four ages, following generally along the lines of the Hindu yugas; and the smaller divisions of a race are similarly subdivided. In fact, the four ages are inherent in nature's evolutionary cycles of progression, so that the smaller is contained within the greater and repeats it on a minor scale. Thus there are the four serial ages applicable to the solar system as a whole, smaller series of four ages applicable to any planet, etc.

In modern paleoethnology, the iron age follows stone and bronze ages, in accordance with a supposed evolution in the use of materials for implements.

Isangi, Isanami. See IZANAGI AND IZANAMI

Isarim (Hebrew) [from *'asar* to bind, confirm, frequently used in the sense of vows of abstinence.] A name for initiates or adepts among the ancient Hebrew, and particularly among the ancient Jewish Essenes, counterparts of the Egyptian hierophants.

Isatva (Sanskrit) *Īsatva* Supremacy, superiority, lordship; hence divine power.

Ish Amon (Gnostic) Among some Jewish Gnostics such as the Nazarenes, the equivalent of the divine thought abiding in quiescence or semi-activity in the pleroma or the Boundless, synonymous with Ferho which in the Nazarene system, together with Chaos (Dark Water) and Ptahil, form a trinity equivalent to Father-Mother-Son. Equivalent in theosophical terms to the unmanifest or First Logos. This Logos at the beginning of the evolution of a universe produces the Second Logos, described as feminine because productive or generative, and out of this latter again is generated the creative or Third Logos, called in Gnostic systems Iukabar Zivo.

Ischin. See 'ISHIN

'Ishin, 'Ishim (Hebrew, Chaldean) *'Īshīn, 'Īshīm* In the Qabbalah, a lower order of angels, ranking ninth in the hierarchy of angels, corresponding to the Sefirah Yesod. The *Zohar* depicts the 'ishin as chained on a mountain in the desert, alluding to them as chained to the earth during the cycle of incarnation. The 'ishim are otherwise the Benei 'Elohim, who in human evolution were the

prototypes of the fallen angels who by their fall made of the mindless races of protoplasmic humanity the thinking and self-conscious human beings that men now are. Thus they correspond to the manasaputras . . . The 'ishin are also said to help magicians produce homunculi (SD 2:376).

Ishdubar. *See* IZDUBAR

Ishmonia (Arabic) A city in Arabia, near which is situated the “petrified city,” of which legend tells that immense subterranean galleries and halls still exist, containing libraries of ancient rolls and manuscripts.

Ishtar (Chaldean) Ancient Babylonian deity, eldest of heaven and earth, daughter of Anu (the lord of the heavens). Her worship was fervently pursued by the multitude both in Babylonia and Assyria, although she was known under various names in different localities — Anunit, Nina, Nanna, Innanna, Atar — even when represented as the consort of Marduk (Babylonia) and of Assur (Assyria). In popular conception, she was the bounteous nature goddess, queen of beauty and joyousness, equivalent to Aphrodite or Venus, however, rather than Ceres, although synthesizing certain attributes of both these goddesses. Her other aspect is as the grim, stern harvester, withdrawing the life-forces so that everything during this period shall have sleep and rest. This aspect was stressed by the warlike Assyrians, who represented her as armed with bow and arrows, and hence she becomes their chief goddess of battles; whereas the Babylonians stressed the mother and child idea. Her symbol was an eight-rayed star.

Ishtar, with Shamash and Sin (the life-force, the sun, and the moon), formed an important triad of divinities. In astronomy Ishtar was a name of the planet Venus — the double aspect of the goddess being made to correspond to the morning and evening star.

Ishtar likewise is mystically the theogonic representation of the earth itself in its productive and fecund aspects as the mother of all, and hence essentially to be considered as prakriti emanating from mulaprakriti.

Isis (Greek) **Ast** (Egyptian) *Āst*. Chief goddess of the Egyptian popular pantheon, daughter of Seb and Nut. Generally portrayed bearing the papyrus scepter and the ankh, wearing the vulture headdress with the uraeus on her forehead from which rose a pair of horns (either cow's or ram's) encircling the solar disk: the horns represented mystic nature and the moon (SD 2:31). Her attributes pertain to the Great Mother, the personification of concrete nature, giving birth to and nourishing all things, portrayed by ancient artists as the mother suckling her babe.

The mythological aspect stresses the dutiful mother and faithful wife. Her sorrow upon the death of her husband, Osiris, as well as her wanderings in search of his body, are very similar to those of the Greek nature goddess Demeter searching for her daughter Persephone. To Isis is also attributed the knowledge of the potency of mantras, with which she revivifies her poisoned son,

Horus.

Osiris, Isis, and Horus form the Egyptian triad of Father-Mother-Son. Isis is credited with the characteristics of most of the other goddesses of the pantheon, but her chief attribute of producer and giver of life is manifested even in the underworld, where her help sustains the deceased. The symbol of Isis in the heavens was the star Sirius.

Israel (Hebrew) *Yisrā'el* [from *yāshar* upright, straight, righteous + *'el* a divinity] The national designation of the Jews, principally applied in Jewish history to the northern kingdom as distinct from Judah; later it referred to the Jews as a religious community united under the national god Jehovah. The name was assigned to Jacob (Genesis 32:28), who was regarded as the parent of the twelve tribes.

The original significance of Israel is, in the singular, an upright, righteous man, who strives for union with his inner god; hence an initiate. The Jews applied this term in reverential yearning to themselves, with a special application to the noblest Hebrews among them; but the term abstractly is as applicable to the righteous ones or initiates of any country.

Istar, Ister. See ISHTAR

Isvara (Sanskrit) *Īśvara* [from the verbal root *īś* to rule, be master] Lord; the supreme self or hierarch of any universe, large or small, likewise the divine spirit in man. Also a title for many gods in the Hindu pantheon, such as Vishnu and Siva.

In the *Bhagavad-Gita* Isvara is that which “dwelleth in the heart of every creature” and which “causeth all things and creatures to revolve mounted upon the universal wheel of time” (chs 43; 61). It is the essence of the spiritual monad in any individualized evolving being, the spiritual root, the god within, and the source of the spiritual and vital streams in any being which bring about its unfolding in evolution and its peregrinations through the fields of experience. Equivalent to the Father in Heaven of Jesus, and hence the source of the inner Christos or Buddha. Thus in one sense it is the individualized dhyani-buddha of every being. See also LOGOS

Iswara, Iswur. See ISVARA

Itchasakti. See ICHCHHA-SAKTI

Itthyphallic [from Greek] Pertaining to the erect phallus, a symbol carried in Bacchic processions signifying abstract creative power.

Itihasa (Sanskrit) *Itihāsa* [from *iti* thus, so + *ha* indeed + *āsa* it was] Thus indeed it was; legend, tradition, history. From the custom of narrators to conclude their utterance with this phrase, it acquired the meaning of tradition. It is also “the narrative of the lives of some august personages, conveying at the same time meanings of the highest moral and occult importance” (BCW 6:42).

Itthammuktas. See NITYAMUKTAS

Iukabar Zivo (Gnostic) Also Iavar Ziva, Iu-Kabar Zivo, Javar-Zivo, Kebar Zivo, Cabar Zio. Known also as Nebat-Iavar-bar-Iufin-Ifafin (Lord of the Aeons) in the Nazarene system. The *Codex Nazaraeus* tells of the efforts at creation of the Lords of the Aeons. In order to counteract the creation of the seven badly disposed principles, the greatest lord, Mano, calls on Iukabar Zivo, the mighty Lord of Splendor, to create in his turn. He does so by emanating seven other lives: these are the cardinal beings or Virtues, the seven primordial archangels, “who shine in their own form and light ‘from on high’ and thus re-establish the balance between good and evil, light and darkness” (SD 1:196). These seven holy lives are the seven primal dhyani-chohans, while Iukabar Zivo is called the third life, the creative or Third Logos. He is also identical with Christ (Christos) as the true vine.

Iurbo Adonai (Gnostic) Also Iurbo Adunai. Term for Iao-Jehovah, whom the Gnostic Ophites regarded as an emanation of Ildabaoth, the son of Sophia Achamoth. Many Gnostics regarded Iurbo Adonai as the God Moses.

Ivaldi, Ivalde (Icelandic, Scandinavian) [from *i* in, into + *valdi* power, wielder] Wielder of power, or entering into power; in the Norse Edda, a dwarf (a not-yet-human consciousness) and also a giant, meaning a period of material life.

Ivaldi seemingly represents the previous lifetime of our planetary consciousness which was imbodyed in the moon when it was living before the earth was formed. His is the home of the dark elves, said to be situated beneath Midgard (the earth). His children are Nanna (the lunar soul), and Idun (the terrestrial soul), while Hjuke and Bil are the children whose shadows are seen on the face of the full moon and who live on in the nursery rhyme of Jack and Jill. Additional descendants of Ivaldi are the dwarfs Brock and Sindri, representing respectively the mineral and vegetable kingdoms now on earth.

Iwaldi. See IVALDI

Izanagi and Izanami (Japanese) In Shintoism, the primordial male and female ancestors of humanity, who begot the first god of earth, Tenshoko doijin. “These ‘gods’ are simply our five races, Isanagi and Isanami being the two kinds of the ‘ancestors,’ the two preceding races which give birth to animal and to rational man” (SD 1:241). This heavenly pair was said to have created Japan from drops of brine. ()

Izdubar (Babylonian) An ancient hero of Erech, whose exploits are recorded in the Epic of Gilgamesh, one of the most important literary works to have been excavated in Nineveh, coming from the royal collection of Assurbanipal (668-26 BC), in the form of twelve tablets (although not all are completely preserved). The hero’s name, written ideographically, was formerly read Izdubar, until another fragment of the same cycle gave the rendition Gilgamesh.

Ized, Izad (Pahlavi, Pers) A class of ancient Zoroastrian deities subordinate to Ahura-Mazda and carriers of his will. In the Avesta, the Yashts are addressed to the izeds. In the *Bundahish*, Neryosengh, the messenger of the gods, is referred to as an ized, as is Anahita, the goddess of the waters.

In later Zoroastrianism, a class of 33 divine beings or ancient Aryan deities are known as izeds.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ja-Jz

Jabal (Hebrew) *Yābāl* Stream; in the Bible, the son of Lamech and Adah: “he was the father of such as dwell in tents, and of such as have cattle” (Genesis 4:20). Blavatsky compares Jabal to the kabiri who were the instructors of mankind in agriculture (SD 2:390).

Jabalas (Sanskrit) *Jābālās* A school whose students study the mystical portions of the *White Yajur-Veda*.

Jachin (Hebrew) *Yākhīn* The right-hand pillar set up before the temple of Solomon by Hiram (1 Kings 7:21). From the Qabbalistic standpoint, Jachin is the right pillar of the Sephirothal Tree composed of Hochmah (wisdom), Hesed (mercy), and Netsah (firmness). Its companion Boas (Bo‘az), the left pillar, consists of Binah (intelligence), Geburah (strength), and Hod (splendor). Jachin and Boaz together represent the dual manas, or higher and lower ego.

Jacob (Hebrew) *Ya‘aqob* The younger son of Isaac, founder of the nation of the Israelites, and twin brother of Esau; the Israelites are occasionally called Beith ya‘aqob (house of Jacob). The twins symbolize the dual principle in nature, Jacob being the feminine and Esau the masculine principle. Jacob’s pillar is equivalent to the linga; the twelve sons of Jacob are parallel to the Hindu rishis and can correspond to the twelve signs of the zodiac. The dream of Jacob, in which he sees angels ascending and descending a ladder from heaven to earth may be interpreted as the transferring of matter from plane to plane, or as the constant circulation of peregrinating monads or beings upwards and downwards, thus fulfilling destiny and feeding the structure of the universe.

Jacobites A Christian sect in 6th century Syria “which held that Christ had only one nature and that confession was not of divine origin. They had secret signs, passwords and a solemn initiation with mysteries” (TG 161).

Jadoo (Hindi) *Jādū*. Sorcery, black magic, or the power of casting enchantments as practiced by the

jadugars, wizards, or sorcerers in India.

Jadoogar *Jadugar* (Hindi) In India, one who practices jadu or sorcery. Believed by the populace to be the possessor of the evil eye inasmuch as such a sorcerer is able to inspire hatred or love at will, cause sudden maladies or even death, and cause disease among cattle, in addition to other practices of a necromantic character.

Jadu. See JADOO

Jadupati. See YADAVA

Jagaddhatri (Sanskrit) *Jagaddhātrī* [from *jagat* the world + *dhātrī* mother, nurse] World-mother, world foster-mother; applied to Sarasvati and Durga, among other Hindu goddesses. Used particularly in connection with Krishna in his aspect of the Logos, the avatara, and likewise with his brother Balarama, who both are brought to their mother, Devaki, by means of Jagaddhatri. Cosmologically, the name refers to a spiritual substance which is one of the first few removes from Brahman. In the building of worlds it is the cosmic matrix out of which worlds are born, and which therefore acts not only in the sense of mother, but likewise as foster-mother, nurse, and producer.

Jagadyoni (Sanskrit) *Jagadyoni* [from *jagat* world + *yoni* womb] The womb of the world; applied to Brahma, Vishnu, and Krishna. It is the material cause of the universe and not the mother of the world, as often translated. It signifies a portion of the spatial deeps to be womb or source of some celestial body such as a planet, or a group of bodies such as a solar system. Jagad-yoni, therefore, is any portion of kosmic space which through karmic destiny is to be the focus out of which shall spring a celestial globe or solar system. It parallels in certain senses the Hindu hiranyagarbha and Greek pleroma (BCW 11:491).

Jagannatha (Sanskrit) *Jagannātha* [from *jagat* world + *nātha* protector, lord] World protector, governor or lord of the world; title of Vishnu and Krishna, especially in his avataric manifestation from Vishnu; also of Rama, a previous avatara. “This deity is worshipped equally by all the sects of India. . . . He is the god of the Mysteries, and his temples, which are most numerous in Bengal, are all of a pyramidal form” (IU 2:301). Applied specifically to the idol of Vishnu-Krishna at Puri in Orissa, Bengal, which is drawn through the street in a huge vehicle, under the wheels of which devotees were supposed to allow themselves to be crushed — the modern English form is Juggernaut, meaning any law, custom, or belief that demands blind devotion and ruthless sacrifice.

In cosmology, Jagannatha is the cosmic hierarch of a particular cosmic unit out of which all flows in evolutionary procession, forming the periods of that universe’s manifestation, and back into which in due course all again is gathered, to reissue forth again when the new cosmic manvantara opens. Thus in a sense Jagannatha parallels the productive member of the Hindu triad, Brahma.

Jagat (Sanskrit) *Jagat* [from the verbal root *gam* to go] The world or earth; the universe; in the

plural, people in general or mankind. Originally that which moves or goes continuously, in constant action, hence that which cosmically is alive.

Jagrat (Sanskrit) *Jāgrat* [from the verbal root *jāgri* to be awake] The waking state of consciousness; the first of the four states of consciousness (avasthas) mentioned in Yoga philosophy. Jagrat is often compounded with avastha (condition, state) as jagradavastha. *See also* SUSHUPTI; SVAPNA; TURIYA

Jah (Hebrew) *Yāh* [from *hāyāh* to be, come to pass, become] An abbreviation of Jehovah — although probably the original from which Jehovah is derived — occurring especially in the phrase “Jah is his name.” It signifies cosmic being, albeit in a restricted sense. In the Qabbalah, Jah is the divine name of the Sephirah Hochmah; also the masculine aspect of the hermaphrodite conception of Jehovah. *See also* JAH-HAVAH; JAH-VEH; JEHOVAH

Jah-Havah, Ja-Heva, Jah-Hovah. Also Jah-Eve, etc. Western Qabbalist term designating Jah or Yah as the masculine aspect and Hovah (or Eve) as the feminine aspect of Jehovah: the two when joined forming an androgynous being; it also refers to the time when humanity was androgynous, later separating into sexes. *See also* JEHOVAH.

Jahnavi (Sanskrit) *Jāhnavī* Jahnu’s daughter; applied to the river Ganges. In the *Mahabharata*, when the Ganges came from heaven it flowed over the earth and inundated the sacrificial ground of Jahnu, who drank up its waters. He consented to discharge them from his ears, and hence the river is regarded as his daughter.

Jah-Veh (Hebrew) *YHVH* One transliteration of Jehovah, referring specifically to Genesis 4:26: “then men began to call themselves Jehovah,” i.e., they knew themselves to be then males and females.

Jaimini (Sanskrit) *Jaimini* Celebrated sage and philosopher of antiquity, pupil of Vyasa, to whom the *Sama-Veda* was transmitted by his teacher (Bh-P 1.4.21). The founder of the Purva-Mimansa or Karma-Mimansa system — one of the six Darsanas or schools of Hindu philosophy.

Jaina Cross. *See* SVASTIKA

Jains, Jainas [from *jina* victorious] Followers of the jinas; one of the major Indian religions. Scholars place their origin in the 5th century BC, believing them to be the last direct representatives of the philosophical schools which then flourished. Jainism, however, became overshadowed with the rise of Buddhism, which it closely resembles; but came to the front when the Buddhist fervor waned in India. The first recorded Jain teacher is Vaddhamana (known as Mahavira, “the great hero”), a contemporary of Gautama Buddha; the Jains themselves state that there was a succession of teachers antedating him, and enumerate 24 Jinas or Tirthankaras. Jains deny the authority of the Vedas and do not believe in any personal supreme god. They have a complex religious philosophy which includes belief in the eternity of matter, the periodicity of the

universe, and the immortality of human's and animal's minds. They are particularly known for avoiding harming any living thing.

Jakin. See JACHIN

Jala (Sanskrit) *Jala* Water, or liquid matter; one of the five elements or states of prakriti. It comes forth from tejas (fire), and its specific quality or sense is gandha (smell). See also APAS; BHUTA; ELEMENT (BCW 13:67)

Jalarupa (Sanskrit) *Jalarūpa* [from *jala* water + *rūpa* form, body] Water-form, water body; applied to the tenth zodiacal sign, Makara, equivalent to Capricorn, represented as a beast with the head and forelegs of an antelope, and the body and tail of a fish.

“Taken variously to mean a shark, a dolphin, etc.; as it is the *vahan* of *Varuna*, the Ocean God . . .” (SD 2:577). It appears on the banner of Kama, god of love, and is connected with the immortal egos (TG 162).

Jamblichus. See IAMBLICHUS

Jambu-dvipa (Sanskrit) *Jambu-dvīpa* [from *jambu* rose-apple tree (a gigantic tree said to flourish on Mount Meru) + *dvīpa* continent, continental island] The middle of the seven dvipas or continents enumerated in the geography of the Puranas and the *Mahabharata*, which relate that Mount Meru rises from the center of Jambu-dvipa. This dvipa was divided into nine varshas (parts or divisions): 1) Bharata, or India situated south of the Himalayas, the southernmost division; 2) Kimpurusha; 3) Hari-varsha; 4) Ila-vrita, the central varsha containing Mount Meru; 5) Ramyaka; 6) Hiran-maya; 7) Uttara-Kuru; 8) Bhadrasha, east of Ila-vrita; 9) Ketu-mala, west of the central varsha. Each varsha was apportioned to one of his nine sons by Agnidhra, king of Jambu-dvipa.

Generally the seven dvipas may be regarded as the seven globes of the earth-chain, Jambu-dvipa “alone representing our globe, the six others are the (to us) invisible companion globes of this earth. This is shown by the very nature of the allegorical and symbolic descriptions. *Jambu* (dwipa) ‘is in the centre of all these (the so-called insular continents) and is surrounded’ by a *sea of salt water* (lavana),” the other six are surrounded by seas of wine, clarified butter, etc. (SD 2:320).

Jam-pe-yang (Tibetan) *'jam dpa'i dbyangs*. Equivalent of Sanskrit manjughosha, another name of the bodhisattva Manjusri.

Janaka (Sanskrit) *Janaka* [from the verbal root *jan* to be born, come forth] A king of the Mithila dynasty reigning at Videha; grandson of Ikshvaku, founder of the solar dynasty (Suryava-nsa).

Twenty generations later, another king of the same name reigned at Videha, famed for his good works, knowledge, and sanctity, also called Siradhvaja (he of the plow-banner) for, as related in the *Ramayana*, when the king was preparing the ground for a sacrifice for obtaining offspring, a maiden, Sita, sprang up ready formed from the furrow which he had made with his plow. Through

his righteous life he became a Brahmin and one of the Rajarshis — referred to in the *Bagavad-Gita* (ch 3). It is also related that he and his preceptor-adviser, Yajnavalkya, prepared the way for the Buddha.

Used as an adjective meaning generating, producing.

Jana-loka. See JANARLOKA

Janardana (Sanskrit) *Janārdana* [from the verbal root *jan* to be born, come forth + the verbal root *ard* to move, agitate] The adored of mankind, exciting or agitating men, besought by mortals; in the Puranas, the one cosmic intelligent life, manifesting in the threefold aspect of fashioner, preserver, and regenerator (Brahma, Vishnu, Siva). Also applied to Krishna in his avataric manifestation of Vishnu.

A philosophical translation is world-mover, signifying the inherent intelligent vitality of a manifested cosmic unit; the ever-born.

Janarloka (Sanskrit) *Janarloka* [from *jan* to be born + *loka* world, place] Also janoloka. Birth-world, world of pious men or saints; the third, counting downwards, of the seven lokas (principles or planes of a hierarchy), its tala (element or matter side) being sutala. Exoterically said to extend beyond the solar system, the abode of the kumaras belonging to a high plane, but one nevertheless inferior to those living in taparloka. The siddhas (saints, pious men) are stated to have their spiritual dwellings or rest periods in janarloka. There too, according to the Puranas, animals destroyed in the general kosmic conflagration are born again (SD 1:371).

These lokas and talas are invisible spheres of a nature far more ethereal so far as the majority of the lokas is concerned than bhurloka, our material earth. The lokas apply not only to the solar system, but to the planetary chain and to every one of its globes.

Jangama (Sanskrit) *Jaṅgama* [from the verbal root *gam* to go, move] Goers, movers; living entities which are self-moving, such as beasts and human beings. Used in contrast with sthavara (fixtures), beings not able to move at will, such as the minerals and plants.

As an adjective, movable or locomotive.

Jang-Chhub. See CHANG-CHUB

Janman (Sanskrit) *Janman* [from the verbal root *jan* to be born] Birth.

Janna. See DHYANA

Janus (Latin) [from *janua* a gate] Oldest and most exalted of the Roman gods, he was called the oldest of the gods and the beginning of all things, the origin of all organic life and especially human life; from him sprang all wells and rivers, and he had power also on the seas. He had no Greek counterpart, and may originally have been a god of sun and light, who opened and closed

the day; later he was especially the god of beginnings and endings, such as the closing and opening of cycles, symbolized in his statues by his having two faces, one before and one behind, visioning the future and the past; also of all doors, entrances, and passages, he being pictured as a porter with a staff and key. He was saluted every morning, at the beginning of all the months (calends), and at the first of the year. When the Romans began their year near the winter solstice (153 BC), they called the month *Januarius*, the month of Janus, as the end of one cycle and the beginning of another. They connected the name Janus with *Dianus*, one aspect of the divine sun, whose feminine is *Diana*, the moon.

Janus was also considered the most ancient Italian king, who built a temple by the Tiber and gave a friendly welcome to Saturn.

The Christians transformed him into St. Peter, ruling the gate or entrance to heaven.

Jao-Jehovah. *See* IAO

Japa (Sanskrit) *Japa* [from the verbal root *jap* to murmur, whisper] The practice of certain yogis of repeating in a murmuring tone passages from the scriptures or mantras, or the names of a deity.

Japheth (Hebrew) *Yefeth* The second son of Noah, supposed to be the ancestor of the northern and western nations, and of the Indo-European stocks. Blavatsky equates Japheth with the titan Iapetus (SD 2:344).

Jara-marana (Sanskrit) *Jarā-maraṇa* [from *jarā* aging, old age from the verbal root *jr* to age, grow old + *marāṇa* dying, death from the verbal root *mṛ* to die] Old and age and death. The skandhas or groups of attributes — everything finite in the human constitution which is brought over from the last life as karmic tendencies or impulses — reunite at a person's new birth. They thus constitute his new personality, making the new person not only the child of the person of the last life, but actually a reappearance of that personality plus whatever changes or modifications death and the devachanic interval have brought to pass. After the maturity of the incarnating person is reached, these skandhas which form the human personality slowly begin to weaken and separate in preparation for death. This process continuing finally brings about jara-marana, decrepitude and death.

Jaras (Sanskrit) *Jaras* [from the verbal root *jr* to become old] The becoming old, decay, old age; a hunter in the *Mahabharata* who accidentally wounded Krishna and caused his death. Mystically, it may be described as that vital cyclic power of constant movement in manifested beings by which youth becomes maturity and then old age, then producing infancy, youth, maturity, and old age again.

Jared, Yered (Hebrew) *Yered* [from the verbal root *yārad* to descend] In Genesis 5, a decedent of Seth and son of Mahalaleel; his life-span is given as 962 years — representing a cycle of a race and identified with the third root-race (SD 2:597). His son was Enoch, father of Methuselah. *See also*

Jasher, Book of; Sopher Hay-Yashar (Hebrew) *Sēfer hay-Yāshār* Book of the upright or honorable ones; a poetic collection of Hebrew stories and allegories portraying the religious beliefs of the people of the time of its compilation. Regarded by some scholars as a 12th century composition in Spain, others hold it is not earlier than the time of Solomon. At all events, the *Book of Jasher* is older than the Mosaic Pentateuch, because references to it are found in Joshua 10:13, 2 Samuel, and Isaiah. “Although rejected by the orthodox Rabbis, we cannot help thinking that, as in the case of the apocryphal *Gospels*, . . . the *Book of Jasher* is the true original from which the subsequent *Bible* was in part composed. . . . both are corner-stones of the Mosaic and Christian religions” (IU 2:399).

Jata (Sanskrit) *Jāta* [from the verbal root *jan* to be born, come forth] Born, brought into existence, produced; when applied to human beings, a son; a living being. As a proper noun, one of the seven kumaras.

Jataka (Sanskrit) *Jātaka* [from the verbal root *jan* to be born] A birth story; the 550 Jataka tales form one of the books of the *Khuddaka Nikaya* of the Buddhist canon. These stories are supposed to have been related by the Buddha and are considered by some to be the accounts of his former lives, and by others to be a group of tales built of occult truth and past experiences of the Buddha and treated in an allegorical way by some of his first and greatest disciples in order to depict a synopsis of the evolutionary history of the human race.

“Gautama, the Buddha, would not have been a mortal man, had he not passed through hundreds and thousands of births previous to his last. Yet the detailed account of these, and the statement that during them he worked his way up through every stage of transmigration from the lowest animate and inanimate atom and insect, up to the highest — or *man*, contains simply the well-known occult aphorism: ‘a stone becomes a plant, a plant an animal, and an animal a man.’ Every human being who has ever existed, has passed through the same evolution. But the hidden symbolism in the sequence of these re-births (*jataka*) contains a perfect history of the evolution on this earth, *pre* and *post* human, and is a scientific exposition of natural facts. One truth not veiled but bare and open is found in their nomenclature, *viz.*, that as soon as Gautama had reached the human form he began exhibiting in every personality the utmost unselfishness, self-sacrifice and charity” (TG 65).

Jatayu (Sanskrit) *Jaṭāyu* King of the vultures, steed of Vishnu and other gods, son of Aruna and Syeni according to the *Mahabharata*; or son of Garuda according to the *Ramayana*. Jatayu promised his aid to Rama, and when the demon-king Ravana was carrying off Rama’s wife Sita, the king of birds gave pursuit, but was mortally wounded after a furious battle with Ravana. In the Puranas, when Rama’s father, King Dasaratha, went to the ecliptic to recover Sita from Sani (Saturn), his chariot was consumed by a glance from Sani’s eye, but Jatayu caught the falling king

and saved him.

“Jatayu is, of course, the cycle of 60,000 years within the great cycle of Garuda; hence he is represented as his son, or nephew, *ad libitum*, since the whole meaning rests in his being placed on the line of Garuda’s descendants” (SD 2:570-71). Birds have been from time immemorial the emblems of migrating and evolving monads.

Jati (Sanskrit) *Jāti* [from the verbal root *jan* to be born, come forth from intrinsic inner vital power] Birth, production, the form of existence fixed by birth; also rank, family, race. In Buddhism, one of the twelve nidanas (causes of existence).

“The cause and the effect in the mode of birth taking place according to the ‘Chatur Yoni,’ when in each case a being, whether man or animal, is placed in one of the six (esoteric seven) *gati* or paths of sentient existence, which esoterically, counting downward, are: (1) the highest Dhyani (*Anupadaka*); (2) Devas; (3) Men; (4) Elementals or Nature Spirits; (5) Animals; (6) lower Elementals; (7) organic Germs. These are in the popular or exoteric nomenclature, Devas, Men, Asuras, Beings in Hells, Pretas (hungry demons), and Animals” (TG 103).

Java Aleim (Hebrew) *Yēhovāh ’Elōhīm* More commonly Jehovah Elohim. Lord God — in Genesis (ch 1) the word ’elohim is used; in chapter 2, Yehovah or Lord makes its appearance; and elsewhere the words are combined into Yehovah ’Elohim. In the esoteric philosophy of Mesopotamia, used as a term for the head of a college of priests (’Elohim) which at one time flourished in Chaldea; the possessor of the “word,” passing it on to his successor only at the moment of death. *See also* ELOHIM

Jave, Javo. *See* JEHOVAH

Javidan Khirad (Persian) Eternal intellect; the original Javidan Khirad which is supposed to be the teachings of Houshang, one of the mythical Pishdadian kings (Para-Dhata), the ancient law givers. Ibn-e-Moskouyeh (Iranian historian, 923-1030) wrote a book under the same name. In the introduction to this book he writes: “In my youth I had read a book called Estetalat-al-Fahm by Jahiz (160-255 Hejra) in which he had spoken of Javidan Khirad with such unparalleled praise that was unheard of. I searched for this book and traveled everywhere until at last I found it with the Mobed-Mobedan (the chief of Mobeds) of Fers.”

Jaya (Sanskrit) *Jaya* [from the verbal root *ji* to conquer] Conquering, winning, victorious. As a noun, conquest, victory, hence a favorite proper name, applied to gods and goddesses, Arjuna, the sun, etc. In the Puranas, the jayas are the twelve great gods (or twelve great hierarchies of beings) created by Brahma to assist him in his work of creation in the very beginning of the kalpa. Also termed *chhandajas* — those born of their own will or *svabhava*, in human and other form. Being lost in *samadhi* they neglected to create, and therefore they were cursed to be born repeatedly in

each manvantara until the seventh. They are called respectively: Ajitas, Tushitas, Satyas, Haris, Vaikunthas, Sadhyas, and Adityas. They are equivalent to the manasaputras or reincarnating egos.

Jaya-indriyanam is a philosophical term meaning victory over or restraint of the senses.

Jebel Djudi. *See* JEBEL JUDI

Jebel Judi (Arabic) The holy mountain or flood-mountain of Arabian legends which in the flood legends of other Near Eastern peoples appears as Mount Ararat, and the Babylonian Mount of Nizir, where the ark or container of lives landed.

Jehoshua (ben Pandira or Panthera). *See* JESUS

Jehovah (Hebrew) *Yĕhovāh* In the Bible, the god of the Hebrews; a modern mispronunciation of the Hebrew alphabetic characters, resulting from the combining by the Jews themselves of the Hebrew consonants of this word (YHVH) with the vowels of the word Adonai (my lords) because the Jews, while always writing or copying the alphabetic characters of the name correctly in their manuscripts, when reading it never pronounced the word YHVH, but read “Adonai” in its stead — writing the Massoretic points of Adonai to vocalize YHVH to produce Yahovah. Consequently when the Bible came to be studied by those unfamiliar with the real pronunciation of YHVH, it was read in various ways, commonly as Jehovah. It is now held by some scholars that YHVH should be pronounced yahweh or yave. It is also given as Yihweh (he will be, or it will be) (SD 2:129). However, Josephus, a priest who undoubtedly knew the correct pronunciation, wrote that it would be highly unlawful for him to divulge it as the Jews regarded it as too holy to pronounce aloud.

Blavatsky writes that the rendering Ja-ho-vah is “a perversion of the Holy Name”: that the majority of the Jews themselves were ignorant of the true pronunciation. “Alone, out of all their nation the high priests had it in their possession, and respectively passed it to their successors,” before their death. “Once a year only, on the day of atonement, the high priest was allowed to pronounce it in a whisper” (IU 2:398-9).

The Hebrews were not the only ones who knew of and revered a divinity whose name when written was conveyed by vowels mainly, as for instance the Gnostic Iao, Ieuo, or Iaou. All these ancient peoples by these vowel-words desired to express the fluid life-giving energy of the globe, of the moon, and of the planetary source — in this case, Saturn.

The early Christian Fathers connected the moon and its functions with Jehovah — as the proximate but not causal “giver of life and death.” Moreover “With the Israelites, the chief function of Jehovah was child-giving, and the esotericism of the Bible, interpreted Kabbalistically, shows undeniably the Holy of Holies in the temple to be only the symbol of the womb. . . . This idea must certainly have been borrowed by the Jews from the Egyptians and Indians . . .” (SD 1:264). Jehovah is likewise identified with the serpent or dragon that tempted Eve, the dragon often standing for the primordial principle.

In the Qabalah, Jehovah is regarded as hermaphrodite and connected with the female Sephirah Binah. The Qabbalists show the word to be “composed of the two-fold name of the first androgyne — Adam and Eve, Jod (or Yodh), Vau and He-Va — the female serpent as a symbol of Divine Intelligence proceeding from the One-Generative or Creative Spirit” (IU 2:398).

From the standpoint of the Jews, Jehovah was their patron deity, the regent of the planet Saturn. *See also* TETRAGRAMMATON

Jehovah Nissi (Hebrew) *Yēhovāh Nissī* [from *nēs* lofty, an elevation + *ī* mine] Jehovah, my elevation; in the Bible the altar built by Moses (Ex 17:15); Blavatsky maintains that this aspect of Jehovah was equivalent to Dionysos or Bacchus, and that the Jews worshiped this deity (the androgyne of Nissi) as the Greeks might have worshiped Bacchus and Osiris. Tradition has it that Bacchus was reared in a cave of Nysa, which is between Phoenicia and Egypt. As the son of Zeus, he was named for his father (gen *Dios*) and the place: Dio-Nysos (the Zeus or Jove of Nysa). Diodorus identifies this Dionysos with Osiris.

Jehovah-Tzabaoth, -Tsebaoth, or -Sabaoth The seventh Sephirah of the superior septenary, identified with Netsah (triumph), who “esoterically . . . corresponds with Haniel (human *physical* life), the androgyne Elohim, with Venus-Lucifer and Baal, and finally with the Letter *Vau* or Microprosopus, the *Logos*. All these belong to the formative world” — also with Siva, Saturn, and the angel Michael or Mikael; “Mikael and his angels, or *Jehovah-Tzabaoth* (the ‘Host’) who *refused to create* as the seven passionless, mind-born, sons of Brahma did, because they aspire to incarnate as men *in order to become higher than the gods* — fight the Dragon [of esoteric wisdom], conquer him, and the child of matter is born” (BCW 8:148). *See also* TSEBA’OTH (SD 1:459)

Jehovists one of the two main trends of ancient Jewish religious thought, the other being the Elohists. “The portions belonging to these respectively are so blended together, so completely mixed up by later hands, that often all external characteristics are lost. Yet it is also known that the two schools were antagonistic; that the one taught esoteric, the other exoteric, or theological doctrines; that the one, the Elohists, were Seers (*Roeh*), whereas the other, the Jehovists, were prophets (*Nabi*), and that the latter — who later became Rabbis — were generally only nominally prophets by virtue of their official position, . . . That, again, the Elohists meant by ‘Elohim’ ‘forces,’ identifying their Deity, as in the Secret Doctrine, with Nature; while the Jehovists made of Jehovah a personal God externally, and used the term simply as a phallic symbol — a number of them secretly disbelieving even in metaphysical, abstract Nature, and synthesizing all on the terrestrial scale. Finally, the Elohists made of man the divine incarnate image of the Elohim, emanated first in all Creation; and the Jehovists show him as the last, the crowing glory of the animal creation, instead of his being the head of all the sensible beings on earth” (BCW 14:183-4). David is said to have introduced this worship in Judea after living among the Tyrians and Philistines where such rites and beliefs were common: “David knew nothing of Moses, it seems, and if he introduced the

Jehovah-worship, it was not in its monotheistic character, but simply as that of one of the many [*Kabeirean*] gods of the neighbouring nations — a tutelary deity of his own [יהוה] to whom he had given the preference, and chosen among ‘all other [Kabeiri] gods,’ (IU 2:45). Blavatsky holds that the Jehovahists altered the Mosaic texts. ()

Jerusalem (Hebrew) *Yěrūshālēm, Yěrūshālayim* Represents the earth; in Christian and Qabbalistic symbology, also the city of God or the heavenly Jerusalem, the goal of human spiritual attainment. “In Hebrew it is written *Yrshlim* or ‘city of peace,’ but the ancient Greeks called it pertinently *Hierosalem* or ‘Secret Salem,’ since Jerusalem is a rebirth from Salem of which Melchizedek was the King-Hierophant, a declared Astrolator and worshipper of the Sun, ‘the Most High’ . . .” (TG 164). Plutarch relates that Typhon or Set after a long battle with Horus fled on an ass in to Palestine and there founded Hierosolymus and Judaeus — these two names meaning Jerusalem and the Jews (Isis and Osiris, sec 31).

Jeshu ben-Panthera. See JESUS

Jesirah. See YETSIRAH

Jesod. See YESOD

Jesus [Latin of Greek *Iesous* from Hebrew *Yěshūa*‘ contraction of *Yěhōshua*‘ a proper name meaning savior or helper, or that which is spacious or widespread] Indubitably a historical character, whose life as narrated in the Gospels is pure allegory, a story of the initiation chamber. There is a story current from medieval times among the Jews, mentioned in the *Sepher Toledoth Yeshua*‘ (Book of the Generations of Jesus), to the effect that the Jesus of the Gospels was a Jehoshua ben Panthera, a Jewish adept living about 100 BC. Jesus illustrates the typical sequence in occult history: 1) the coming of a leader or teacher to a people needing to be led and taught; 2) his passing, followed by the adoration, even worship, of his followers; 3) the gradual transformation of historic facts into more or less embroidered legends or mythological tales, which in time cluster so thickly about his memory that his identity as a person, and even his name, are lost; 4) the myth, allegory, or legend; and 5) the efforts of other, later teachers to explain, interpret, and reinstate this earlier teacher, now a purely mythic figure or else materialized and misunderstood.

The Christian Gospels appear to have originated in mystery-dramas, beautiful and often sublime in their inner significances, in which were depicted the experiences of the neophyte and adept in his union with the Logos, and hence such unified individual was called a Logos incarnate as a man, the Logos itself being variously named as Christos or Dionysos, and to have been by stages adapted and given a semi-historical guise, as has happened in other instances besides the Christian mythos. Christ therefore, or the Christos, is not a particular man or an especial incarnation of divinity, but a generic term for the divine as incarnated in all human beings, although Jesus was undoubtedly

the name of this great Jewish initiate-avatara as an individual. Hence this universal allegory in its Christian version has a true historical peg to hang from; for there did appear, sometime before the Christian era, a special cyclic messenger who was due to come on the change of the ecliptic point from one sign of the celestial zodiac to another, from the sign of Aries to Pisces. In theosophical literature, Jesus is considered to be an avatara, the messenger for the European Messianic or Piscean cycle. As such, Jesus represented a ray sent from the Wondrous Being or spiritual hierarchy of the earth into the soul of a pure human being, while the racial buddha, Gautama Buddha, supplied the intermediate or psychological nature in this act of white magic.

“But it is probable that the theosophic effort which Jesus attempted to initiate did not endure for fifty years after his death. Almost immediately after his passing, his disciples, all half-instructed, and in some cases almost illiterate, men . . . foisted upon the world of their time the forms and beliefs of early Christianity; and had there been nothing but these, that religious system had not lived another fifty years. But what happened? During the oncoming of the dark cycle after Jesus (which began as before said about the time of Pythagoras), the last few rays from the setting sun of the ancient light shone feebly in the minds of certain of these Christian Fathers, Clement of Alexandria for one, and Origen of Alexandria for another, and in one or two more like these, who had been initiated at least in the lowest of some of the then degenerate pagan Mysteries; and these men entered into the Christian Church and introduced some poor modicum of that light, . . . which they still cherished; and these rays they derived mainly from the Neo-pythagorean and the Neoplatonic system” (Fund 486-7).

The Hebrew name Jah or Jehovah became identified in the mind of Christians with the name of Jesus, although Jesus never was in any wise identical with the Jewish Jehovah, but was identified in initiation through his own inner god or Father in Heaven, and the Jewish Jehovah mystically was the regent of the planet Saturn.

The first three letters in Greek make I.H.S. placed at the head of representations of the crucified Jesus, often said to stand for Iesus Hominum Salvator (Jesus the savior of men) or In hoc signo (in this sign), with reference to the alleged vision of a cross of the Emperor Constantine. Jesus is a form of a worldwide mystery-name, whose importance was its meaning, usually given as a three-letter monogram, analogous to the Sanskrit Aum. We find it in the Greek Gnostic Iao and variants are common in ancient Greece, such as Iasios, Iasion, Jason, Iasos; and initiates were known as Iasides or sons of Iaso. *See also AVATARA*

Jetavaniya (Sanskrit) *Jetavanīya* [from *Jetavana* a grove near Sravasti where the Buddha at one time promulgated his doctrines] A Buddhist mystical school of Ceylon, which tradition alleges was founded about 247 BC by Katyayana, a favorite disciple of Gautama Buddha. One of the three divisions of an early Buddhist school called the Sthavirakaya founded some 300 BC.

Jethro (Hebrew) *Yithrō* Also called Reuel (Exodus 2). In the Bible the father of seven daughters: one, Zipporah, he gave in marriage to Moses. These daughters represent his various spiritual, intellectual, and psychic powers and faculties, as the offspring of the monadic or egoic center.

In one sense Jethro is the initiator of Moses: “Jethro is called the ‘father-in-law’ of Moses; not because Moses was really married to one of his seven daughters. Moses was an Initiate, if he ever existed, and as such an ascetic, a nazir, and could never be married. It is an allegory like everything else. Zipporah (the shining) is one of the personified Occult Sciences given by Revel-Jethro, the Midian priest Initiator, to Moses, his Egyptian pupil” (SD 2:465n). *See also* REUEL-JETHRO

Jetzira(h). *See* YETSIRAH

Jevo. *See* JEHOVAH

Jewels of Wisdom, The Seven Theosophical term for seven fundamental teachings explanatory of the universe, its structure, laws, and operations. As enumerated with their Sanskrit names, they are: 1) re-embodiment (punarjanman); 2) the doctrine of consequences, results, or of causes and effects (karma); 3) hierarchies (lokas and talas); 4) individual characteristics involving self-generation or self-becoming (svabhava); 5) evolution and involution (pravritti and nivritti); 6) the two paths (amritayana and pratyekayana); and 7) the knowledge of the divine self and how the One becomes the many (atma-vidya).

Jhana (Pali) *Jhāna* Meditation in wisdom, equivalent to Sanskrit dhyana. This experience was originally divided into four states: the mystic, with his mind free from sensuous and worldly ideas, concentrates his thoughts on some special subject such as the impermanence or mayavi character of all exterior things; uplifted above attention to externals and ordinary reasoning he experiences keen joy and quiet ease both of body and mind; the bliss passes away and he becomes suffused with a sense of inner completeness, in its higher stages approaching cosmic ranges; he becomes aware permanently of purest lucidity of intellect and perfect equanimity.

Jhana Bhaskara. *See* JNANA BHASKARA

JHVH. *See* JEHOVAH; TETRAGRAMMATON

Jigten gonpo (Tibetan) *'jig rten mgon po* (Jig-ten Gon po) [from *'jig rten* world (cf Sanskrit *loka*) + *mgon po* lord (cf Sanskrit *natha*)] Lord or guardian of the world, equivalent of Sanskrit lokanatha; title applied to Avalokitesvara or Chenrezi.

Jinn, Jinni, Jinnee (Arabic) *Jinnī*, singular jinniy, plural jinn; also genii. In the Koran a class of beings, both male and female, between angels and human kind and represented as being created from smokeless fire, abounding particularly in desert places. Popularly jinn are regarded as being able to appear to mankind in the form of domestic animals or of human beings of gigantic size, the

benevolent ones appearing in beautiful shape, the malevolent in horrible guise.

Jinshnu (Sanskrit) *Jiṣṇu* [from the verbal root *ji* to win, conquer] Victorious, triumphant, winning; as a proper noun, a name of Vishnu and of Indra, equivalent of the Hebrew Michael, the leader of the archangels. Also applied to Arjuna as the son of Indra.

Jiva (Sanskrit) *Jīva* A living being, or center of potential vitality and intelligence, equivalent to monad as well as life-atom. “Beginning its career as an unself-conscious god-spark, a jiva — a cosmic elemental born from the cosmic element — its destiny is to pass through all intermediate stages of evolution until finally it becomes a full-blown god, a jivanmukta” (FSO 225).

Jiva is also used for the cosmic life principle or force and is sometimes used interchangeably with prana, the life principle of the human constitution.

Jivanmukta (Sanskrit) *Jīvanmukta* [from *jīva* living being + *mukta* freed] A freed jiva, a human being who has attained freedom as an individualized monad from the material spheres, “who lives in the highest portions of his constitution in full consciousness and power even during earth-life” (OG 73).

Often signifies the loftiest class of initiates, adepts, or mahatmas, whether imbodyed or disimbodyed; also one who has reached nirvana during life.

Jivanu (Sanskrit) *Jīvānu* [from *jīva* living entity + *anu* atom, indivisible particle] Life-atom; a term coined by de Purucker for “a ‘life-atom,’ a life-infinitesimal, the ‘soul’ of the chemical atom. . . . [it] lasts only for a certain period of time within the cosmic manvantara” (FSO 274). *See also* LIFE-ATOM

Jivatman (Sanskrit) *Jīvātman* [from *jīva* living being + *ātman* self] The human spiritual ego, which is deathless until the end of the solar mahamanvantara. Strictly, the spiritual monad whose especial seat is the buddhi principle, the seed and the fruit of manas. Its range of consciousness is the solar system.

Jivatmas. *See* JIVANMUKTA

Jnana (Sanskrit) *Jñāna* [from the verbal root *jñā* to know, have knowledge, understand] Intelligence, understanding, knowledge; the old philosophers said that parabrahman is not jnata (known), not jnana (knowledge), and not jneya (that which may be known), nevertheless parabrahman is the one source of which these three modes of understanding are manifestations.

Jnana and vidya are closely similar, with perhaps the suggestion of intuitive intellectual cognizance expressed in jnana, and a more active and individualized activity expressed by vidya. Either word can stand for knowledge or wisdom; in theosophy jnana is often translated as innate or intuitive knowledge, and vidya as reflective or stored-up cognizance of intellectual and other values, or wisdom, though these distinctions are somewhat arbitrary. *See also* JHANA

Jnana Bhaskara (Sanskrit) *Jñāna-bhāskara* The sum of knowledge; a Sanskrit medical work; also “a work on Asuramaya, the Atlantean astronomer and magician, and other prehistoric legends” (TG 165).

Jnana-darsana-suddhi (Sanskrit) *Jñāna-darśana-śuddhi* [from *jñāna* knowledge, wisdom + *darśana* vision, teaching + *śuddhi* purity, truth, perfection] Purity or perfection in the vision (or teaching) of knowledge or wisdom.

Jnana-devas (Sanskrit) *Jñāna-deva-s* [from *jñāna* knowledge, wisdom + *deva* god] Gods of knowledge or wisdom; the higher classes of gods or devas including the manasaputras, agnishvattas, and kumaras. In one sense these jnana-devas are our reincarnating egos; in another, the term is applied to high sages such as the mahatmas, with the implication that they have been successful in attaining, or are in training for attaining, self-conscious union with the god within.

Jnana-sakti (Sanskrit) *Jñāna-śakti* [from *jñāna* knowledge, wisdom + *śakti* power, energy] Wisdom-power, the power of pure intellect which is a ray from the Logos, and therefore is the consciousness of the higher manas. Each of the saktis — whether jnana-sakti, ajnana-sakti, ichchha-sakti, or kriya-sakti — manifesting in the universe or in an individual being, is the expression of a force of nature; and therefore as each such force of nature is the emanation from a cosmic entity, each one of them has its own svabhava (individuality or essential characteristic) which differentiates it sharply from all other forces of nature.

Jnana-sakti has the power or intrinsic faculty of movement of intelligence in the universe, which likewise expresses itself in man, a child of that universe; consequently it acts according to its own peculiarities or characteristics. The adept, knowing this through the power of his spiritual monad, can at any time select any one of these saktis of his constitution and use it alone or in combination with others to produce both interior or exterior phenomena. He does so by an expenditure of one or the other of the saktis that he is using, which are concentrated so to speak in his constitution. Hence their use is always followed by a corresponding reaction, much after the fashion of an electrical discharge; and a certain time is always required for the constitution to reestablish its normal equilibrium. Such equilibrium is a condition of health.

Thus when an adept for some noble object purposes to use his inner powers, it is rare indeed that a single one of these saktis is employed alone. First there may be an evocation from his constitution of the sakti of ideation or high mentation giving the picture of what must be done, thus directing the flow of the will; then follows the evocation of ichchha-sakti or desire to perform the object in view. This combines with kriya-sakti or mental power guiding the desire and the will along the proper path to the end desired. Other saktis may or may not be called into function as needed. The saktis most commonly having a phenomenal effect or repercussion on the physical plane are ichchha-sakti, combining with kriya-sakti, guided by jnana-sakti.

Jnana-vidya (Sanskrit) *Jñāna-vidyā* [from *jñāna* knoweldge + *vidyā* wisdom] Equivalent to Brahma-vidya or theosophy, the wisdom-tradition or gnosis. (BCW 11:271)

Jnana Yoga (Sanskrit) *Jñāna-yoga* The form of yoga practice and training where the attaining of union with the spiritual-divine essence within is by means of cultivating wisdom, spiritual insight, and intuition.

Jnanendriya (Sanskrit) *Jñānendriya* [from *jñāna* intelligence, knowledge + *indriya* sense organ] Organ of sensation or perception, sense organ; especially the five human inner senses of perception in contradistinction to the karmendriyas — the five physical senses through which the former work. Synonymous with buddhindriya, which mystically could mean the organ of buddhi, but commonly describes the physical organs of perception and sensation through which intelligence works: the eye, ear, nose, tongue, and skin. *See also* INDRIYA; SENSES

Jnanesvari (Sanskrit) *Jñāneśvarī* [from *jñāna* knowledge + *īśvarī* queen] Queen of knowledge; a mystic treatise in which Krishna describes to Arjuna the condition of a fully illuminated yogi.

Jnanin (Sanskrit) *Jñānin* [from the verbal root *jñā* to know] A sage, one who is endowed with knowledge concerning the spiritual and the divine; as an adjective, wise.

Jnata (Sanskrit) *Jñāta* [from the verbal root *jñā* to know] Known, ascertained, understood. Jnatri [*Jñātrī*], a noun, means one who knows or understands.

Jneya (Sanskrit) *Jñeya* [from the verbal root *jñā* to know] That which is to be or can be known or understood.

Job (Hebrew) *ʾIyyōb* Persecuted, tried; one of the books in the Bible, depicting the story of Job, regarded by Blavatsky as far older than the Pentateuch. She points out that there is no reference to any of the Hebrew patriarchs, that Jehovah is not mentioned in the poem itself, that there is no mention of the Sabbatical institution, and that there is a direct discussion on the worship of the heavenly bodies (prevailing in those days in Arabia). “The *Book of Job* is a complete representation of ancient initiation and the trials which generally precede this grandest of all ceremonies. The neophyte perceives himself deprived of everything he valued, and afflicted with foul disease. His wife appeals to him to adore God and die; there was no more hope for him” (IU 2:494-5). Elihu the hierophant teaches Job, now ready to learn the meaning of his experience, and Job is able to contact his own higher self or inner god.

Jod. *See* YOD

Jod-hevah, Jod-he-vau-he. *See* JEHOVAH; TETRAGRAMMATON

John the Baptist Considered by Christians the last of the Hebrew prophets and the forerunner and announcer of Jesus. His statement “I indeed baptize you with water unto repentance: but he that cometh after me is mightier than I, whose shoes I am not worthy to bear: he shall baptize you with

the Holy Ghost, and with fire” (Matt 3:11), is explained to mean that John as a non-initiate could impart no greater mysteries than those pertaining to the plane of matter — the exoteric gnosis and ritualism; while Jesus could impart the fire of spiritual knowledge (SD 2:566). His disciples are described as dissenters from the Essenes (IU 2:130).

The rite of baptism was an important function of the Less Mysteries, and in various forms was universal over the earth, so that John the Baptist appears as a teacher in the Less Mysteries, which he seems to have resurrected as a rite in Judea at about the time when Jesus lived. A baptismal rite is known to have been practiced as a function of the Less Mysteries not only among the Chaldeans and Akkadians, but likewise among the Egyptians and certain of the ancient Greeks.

Jonah, Jonas (Hebrew) *Yōnāh* Dove; a Hebrew prophet, son of Amitai, about whom the Bible story relates that he heard the voice of the Lord commanding him to go to Nineveh and cry out against the city because of its wickedness. But instead of following the command, Jonah set off upon a vessel bound to Jaffa, was subsequently cast overboard and swallowed by a “big fish,” in which he remains three days. This is reminiscent of the three days allotted to the initiation experience, and also of the fact that fish is a mystery-term embodying the idea of either an advanced adept whose consciousness swims in the ether of space or, as in this place, an emblem of the initiation chamber. Further, primitive Christians often spoke of Jesus as the big fish and of themselves as little fishes (*pisciculi*).

Mystically, there is likewise another convergence of ancient esoteric symbolic ideas, as Jonah means “dove,” which has always been an emblem of the spirit or cosmically of the Second Logos; thus a dove or initiated human being entered for three days into a big fish, and upon the expiration of this term was again cast forth. Like all such mystery-tales, several different deductions may be drawn. Thus W. Q. Judge interprets the story as an astronomical cycle (Ocean 122).

Jord (Icelandic, Scandinavian) Earth; in Norse myths the daughter of Night (*nott*). The mystic symbology of the Edda calls Night a daughter of the primeval frostgiant from whose substance the worlds were formed, and a sister of the sustaining power *Trudgalmer*, with whom she bore a son, *Udr* (rich, prolific, devastating), indicating *Bergelmir*, the end and fruition of a life cycle. Her second marriage to one of the creative deities produced the earth, while a third union with *Delling* (dawn) made her the mother of bright Day.

Jordan (Hebrew) *Yardēn* “The flowing” (a river) — with a collateral idea of descent from a higher place, in which lies its mystical significance. “Many Christian hymns speak of the mystical Jordan and of reaching the ‘shore beyond,’ a conception which appears to be more or less identic with that of Buddhism. ‘This side’ is the life of the world, the usual or common pursuits of men. The ‘other shore’ is simply the life spiritual, involving the expansion in relatively full power and function of the entire range of man’s nature. In other words, to reach the ‘other shore’ means

living at one with the divinity within, and hence partaking of the universal life in relatively full self-consciousness” (FSO 43-4). This symbolism applies to other holy rivers, such as the Nile and Ganges.

Blavatsky, commenting on the *Pistis Sophia*, says that the Jordan is “the mystic ‘River’ which stopped the Exodus of the Israelites from Egypt ‘which is the body’ (V, 7)” (BCW 13:30n); the *Philosophumena* (bk 8, ch 3) states that at Jesus’ baptism he left his “impression” in the Jordan, so that after his physical body had been destroyed by crucifixion, his soul “might put on the body, which had been impressed in the water when he was baptized, instead of the fleshly body” — an allegory of initiation. *See also* ERIDANUS; HAP; MANO

Joseph (Hebrew) *Yōsēf* [from *yāsaf* to increase, enlarge] In the Old Testament (Genesis 37-50), the eleventh son of Jacob, first by his favorite wife Rachel; known for his coat of many colors, he was sold into slavery by his jealous brothers, and later was instrumental in the Jews settling in Egypt. Joseph “was an Initiate, otherwise he would not have married Aseneth, the daughter of Petephre (‘Potiphar’ — ‘he who belongs to Phre,’ the Sun-God), priest of Heliopolis and governor of On” (BCW 14:357). His second dream that “the sun and the moon and the eleven stars made obeisance” to Joseph (Genesis 37:9-10) may be a reference to the zodiac, the eleven “stars” or zodiacal constellations bowing to the twelfth because that one was “his star.” The twelve sons of Jacob are also a reference to the twelve signs of the zodiac, Joseph corresponding to Sagittarius (SD 1:649).

In the New Testament, Joseph the carpenter is the father of Jesus (Matt 1:16, Luke 2:4), considered as connecting him to the house of David despite the Christian doctrine that Mary conceived Jesus immaculately without human father. Cosmically, he may be connected with such mythic carpenters as Visvakarman and Tvastri. In another sense, Joseph is Jesus’ spiritual teacher, Joseph ben Pandira (IU 2:201). (2nd Joseph)

Joshua, Josue (Hebrew) *Yēhōshua* In the Old Testament, son of Nun (*nun*, “fish”) and successor of Moses, who led the Israelites in the invasion and settlement of Caanan; in the Middle Ages, rated among the “Nine Worthies.” Moses died or disappeared “from the top of Mount Pisgah (*Nebo*, oracular Wisdom), after he had laid his hands upon Joshua, who thus became ‘full of the spirit of wisdom,’ *i.e.*, initiated” (BCW 14:264-5). Jesus [from Hebrew *Yeshua*‘ contraction of *Yehoshua*‘ savior, helper, or that which is spacious or widespread] is sometimes identified with Joshua, Qabbalistically.

Jotunn, Jotun (Icelandic) Giant; in the Norse Edda the giants represent the material spheres in which gods embody, thus enlightening those dark worlds while gaining there the “mead” of experience. There are giants of varying types and degrees. The ultimate source of matter (Sanskrit *mulaprakriti*) is named Mimir in the Edda. Other giants represent periods during which the gods animate a world, race, or other living being. Each named giant is a life period or material embodiment of a god; it exists for as long as the energizing deity is embodied, and dies, slain by the

hammer of Thor, at the end of that period. Within the long span of a giant's life a number of giantesses, "daughters" of the giant, represent smaller cycles, races or subraces of the giant, their father. A giant is thus both a manifest entity and the lifetime of such an entity, thus paralleling the aeons of Greek mythology.

Distinct from the living giants are the thurses or frost giants, symbolizing periods of nonlife when the gods are absent in their supernal heavens.

Jotunheim (Icelandic, Scandinavian) [from *jotunn* giant + *heimar* home, land] In Norse mythology, the home of the giants, one of the nine worlds of the Eddas, described as beyond the ocean which surrounds Midgard, and separated from the home of the gods (Asgard) by Ifing — the river which never freezes over. Jotunheim stands for the material spheres of life visited by the gods who gain the "mead" of wisdom by embodying in worlds. Such a sphere is the earth and so also are the other planets and celestial bodies, though of varying evolutionary status.

Jove or **Iove** (Gnostic) An anglicized form of Jupiter, the highest god of the Romans, corresponding to the Greek Zeus. *See also* JUPITER; ZEUS

Also, one of the seven stellar spirits or genii of the seven sacred planets of the Egyptian Gnostics, Jove corresponding to the genius of the moon, also known as Iao. Again, one of the seven sons of Ialdabaoth who make up the second heptomad, corresponding to Jehovah (SD 1:449). *See also* ASTAPHAI

Jubal (Hebrew) *Yūbāl* [from *yābēl* to flow, stream forth] River, stream; in the Bible the son of Lamech and Adah: "father of all such as handle the harp and organ" (Genesis 4:21). Jubal is compared to the kabiri who "fabricated the *harp* for Kronos and the trident for Poseidon" (SD 2:390).

Juda(h) (Hebrew) *Yēhūdāh* In the Old Testament, the fourth son of Jacob (Genesis 29:35), ancestor of one of the twelve tribes of Israel, which later became one of the main elements of the kingdom of Judah (933-586 BC). He corresponds to the zodiacal sign Leo the Lion.

Judas Judas Iscariot was the disciple of Christ who betrayed him and later committed suicide. Taking the twelve disciples of Christ as a symbolic dodecad, he was a type of Adversary or Satan, representing the polar opposite of what is most revered. His treachery therefore is the discharge of his function, though the symbol has become a narrative of betrayal and crime. It is an old mystical saying that "every Savior has his Judas," every Messiah his Adversary.

Judas also is identified with another of the twelve disciples — written Jude in Matthew and Luke, and Judas in John — generally identified with Thaddaeus. Again, the author of the Book of Jude, called the brother of James and sometimes identified with the Jude discussed above.

Judgment, Day of In theosophy, a testing of the soul of a candidate for initiation, as in the

judgment of the soul before Osiris in the Egyptian *Book of the Dead*; or to the final readjustment at the end of a cycle of manifestation, when there is an involution or return to the original divine and cosmic unity; sometimes spoken of as the Day Be-with-us or Day Come-to-us. All the karma of the cycle of manifestation then will have been balanced, all accounts paid.

In Christianity, the idea takes color from Hebrew prophetic denunciations, such as that of Zephaniah who, after denouncing Judah and Jerusalem, promises a reign of universal peace under a Jehovah or Yahveh. In Revelations 14:14-20, there is a judgment which is evidently connected with the expected appearance of a Messiah. In the episcopal creeds believers declare their faith in Jesus Christ who “shall come to judge the quick and the dead.”

Juggernaut. See JAGANNATHA

Jul, Jol (Scandinavian, Icelandic) [from *hjol* wheel, related to the solar solstice at midwinter; cf Anglo-Saxon *geol* December] The midwinter festival, when the sun begins its northward course, was celebrated long before that season of the year became Christmas. There are innumerable reminders of its importance to the ancient Norsemen in the names of yule games, yule banquets, yule logs, etc. The Jolahelgi (yule holiday) was a sacred season, and had special significance when there was a Jola-tungl (yule moon). Their Yule lasted thirteen days, whence are derived the names threttandi (the thirteenth) for Epiphany, the 6th of January, as also the English Twelfth-night.

One of Odin's names is Jolnir.

Juno. See HERA

Jupiter (Latin) [from *Jov* + *pater* father; probably from same root as Greek *Zeus* and Sanskrit *dyaus* bright sky] The sky god or the ruler of heaven, the father of gods, identified in popular thought among the ancients with the Greek Zeus. He corresponds to the Hindu Brihaspati. The sixth world of the ancient Syrians was that of Jupiter or Bel, and was ruled by the Dominions (SD 1:435). See also ZEUS

Also the fifth planet from the sun in the solar system, regarded as one of the seven sacred planets of the ancients. In theosophy the regent or rector of Jupiter exercises a particular influence over globe B of the earth-chain, and also the globe on the ascending arc preceding globe A. Its zodiacal houses are Sagittarius and Pisces; its day is Thursday.

The Master KH remarked to Sinnett: “your science has a theory, I believe, that if the earth were suddenly placed in extremely cold regions — for instance where it would exchange places with Jupiter — all our seas and rivers would be suddenly transformed into solid mountains; the air, — or rather a portion of the aeriform substances which compose it — would be metamorphosed from their state of invisible fluid owing to the absence of heat into liquids (which now exist on Jupiter, but of which men have no idea on earth). Realize, or try to imagine the *reverse* condition, and it will be that of Jupiter at the present moment.

“The whole of our system is imperceptibly shifting its position in space. The relative distance between planets remaining ever the same, and being in no wise affected by the displacement of the whole system; and the distance between the latter and the stars and other suns being so incommensurable as to produce but little if any perceptible change for centuries and millenniums to come; — no astronomer will perceive it *telescopically*, until Jupiter and some other planets, whose little luminous points hides now from our sight millions upon millions of stars (all but some 5000 or 6000) — will suddenly let us have a peep at a few of the *Raja-Suns* they are now hiding. There is such a king-star right behind Jupiter, that no mortal physical eye has ever seen during this, our Round. Could it be so perceived it would appear, through the best telescope with a power of multiplying its diameter ten thousand times, — still a small dimensionless point, thrown into the shadow by the brightness of any planet; nevertheless — this world is thousands of times larger than Jupiter. The violent disturbance of its atmosphere and even its red spot that so intrigues science lately, are due — (1) to that shifting and (2) to the influence of that Raja-Star. In its present position in space imperceptibly small though it be — the metallic substances of which it is mainly composed are expanding and gradually transforming themselves into aeriform fluids — the state of our own earth and its six sister globes before the first Round — and becoming part of its atmosphere” (ML 167).

Jurassic Period. See GEOLOGICAL ERAS

Jurbo-Adonai. See IURBO ADONAI; ADONAI

Justinian (483-565) Emperor of the Eastern Roman Empire, who preserved Roman law for future Europeans, and who closed the last Mystery schools at Athens. (Fund 486)

Jyotis (Sanskrit) *Jyotis* [from the verbal root *jyut* to shine] Light (of the sun, dawn, fire, lightning), brightness (of sky); also light personified; the sun and moon. In the plural, the planets and stars. Also, spiritual light as the divine principle of life or source of intelligence (especially when used with *paurusha* — human). In the Puranas, one of the seven *prajapatis*.

Jyotisham-jyotis (the light of lights) in the Upanishads refers to the supreme spirit or the hierarchy of our solar hierarchy.

Jyotisha (Sanskrit) *Jyotiṣa* [from the verbal root *jyut* to shine] An astronomer; as a neuter noun, astronomy, also called *jyotisha-vidya*. One name for Hindu astrology. Likewise the name of one of the six *Vedangas* (parts of the Vedas), a short tract giving instructions for fixing the days and hours of Vedic sacrifices.

Jyotisham (Jyotch or) Jyotis (Sanskrit) *Jyotiṣām-jyotis* Light of lights, phrase used to describe the supreme spirit or Brahman in the Upanishads (TG 166; BCW 4:580).

Jyotsna (Sanskrit) *Jyotsnā* [from the verbal root *jyut* to shine] Moonlight, or a moonlit night. Also one of the bodies assumed by Brahma, one of the 16 kalas (parts or divisions of the moon). In the plural, lights or splendors, with particular reference to the innate radiance of astronomical bodies.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ka-Kd

Ka (Egyptian) *Ka* plural *kau*. Equivalent to the astral double, model-body, or linga-sarira. The ancient Egyptians held that when a human being was born, the ka was born with him and remained with him throughout his life. Even after death it remained in the tomb with the corpse; it was popularly believed that the offerings placed on graves were made to perpetuate the ka. Furthermore, the gods possessed them, each deity being said to have many kau; thus in one text the god Ra is said to possess seven bau (souls) and 14 kau. Even cities were held to possess kau in the heaven world.

Ka (Sanskrit) *Ka* [Interrogative pronoun who; forms include *kas*, *kim*, *kā*] Who — occasionally personified as a deity; “it has its esoteric significance and is a name of Brahma in his phallic character as generator or *Prajapati*” (TG 167). “Who” can also refer to the incomprehensible or ineffable, an expression of the speaker’s mental refusal to give a name to that which is unnamable and inexpressible, and is therefore equivalent to parabrahman.

Kaaba, Ka’ba, Kaabeh (Arabic) The edifice at Mecca sacred to Moslems. The celebrated black stone, the principal object of veneration, is placed in the black corner — the southeast corner (Safa). It is said to have come directly from heaven, originally being as white as snow, but subsequently becoming black because of the sins of mankind. The white stone, the reputed tomb of Ismael, is in the north side and the place of Abraham is to the east.

Kabala(h), Kabbala. See QABBALAH

Kabiri, Kabeiri, Kabeiroi, Kabarim, Kabirim, Kabiria (Greek) Cabiri (Latin) Plural name of certain very mysterious divinities, revered in nearly all the countries of the Near East. They were worshiped as divinities in Samothrace and on Lemnos (the island sacred to Vulcan) and were popularly represented as cosmic dwarves, the sons of Vulcan (Hephaestos), and masters of the art of working metals. Kabiri was a generic title: as the mighty they were of both sexes, gods and

mortals, terrestrial, celestial, and kosmic. Blavatsky describes the kabiri as the seven divine titans identical with the seven rishis saved from the flood by Vaivasvata-Manu (SD 2:142). The “mighty men of renown” (gibborim) who date from the days of the earliest Atlantean subraces while yet Lemuria had not wholly disappeared — became in the fifth root-race the teachers whom the Egyptians and Phoenicians called kabiri, the Greeks titans, and the Hindus rakshasas and daityas.

In short, the kabeiroi, identical with the kumaras and rudras, classed with the dhyani-buddhas and with the 'elohim of Jewish theology, directing “the mind *with which they endued men*” to the arts and sciences that build civilization, and closely linked with solar and earthly fires, are no other than the kumara-agnishvatta-manasaputras of theosophy: kumaras in their unsoiled divinity; agnisvattas (those who have tasted the fire) or solar lhas; and manasaputras (sons of mind) who in pity took upon themselves the heavy cross of incarnation that they might help struggling humanity to come up higher. They are classed as three, four, or seven; the names of four being Axieros, Axiokersa, Axiokersos, and Kadmilos.

These very mysterious and powerful divinities of the archaic ages, whatever name may be given to them, are in the cosmic hierarchies the same as the dhyani-buddhas and the dhyanis of modern theosophy, equivalent to the archangels and angels of the Christian hierarchical scheme. Thus they are the children of cosmic spiritual fire, this fire in its turn being equivalent to the luminous and warming effulgence of action of the hierarchies of cosmic mind. They are the most occult divinities of the archaic wisdom-religion, and the worship of them under whatever name they were known was invariably marked by a high degree of spiritual and philosophic profundity and deep religious devotion.

Kadesh, Kadeshim, Kedeshuth. See QODESH

Kadim. See QEDEM

Kadmilos, Kadmos (Greek) One of the kabiri, ancestral god of the inhabitants of Samothrace; sometimes identified with Hermes. See also CADMUS

Kadmon (Hebrew) *Qadmōn* Eastern, first; when used with Adam, the compound means primeval cosmic man, the aggregate of the ten Sephiroth or the creative or Third Logos. See also 'ADAM QADMON

Kadosh [from Hebrew *qodesh* consecrated, holy] One of the degrees pertaining to Freemasonry, associated with the Knights Templars, instituted at Lyons, France, 1743. See also QODESH

Kadru, Kadra (Sanskrit) *Kadrū, Kadrā* Wife of Kasyapa and mother of Kapila; “there was a race of *Nagas*, said to be a thousand in number only, born or rather sprung from Kadra, Kasyapa’s wife, for the purpose of peopling *Patala*, which is undeniably America, . . .” (SD 2:132).

Kadush (Gnostic) [from Hebrew *qādōsh* holy, sacred] The holy one; one name of the sun in the

Codex Nazaraeus.

Kadushu. *See* QODESH

Kaf, Kaph, Ghaf (Persian) *Kāf, Kaph, Ghāf*, **Kaofa** (Avestan) *Kaofā*, **Kafor** (Pahlavi) Mountain; in Persian tradition the sacred mythological mountain, comparable in many respects to the Hindu Mount Meru; regarded as the abode of the gods and the place whither heroes travel in order to reach the sacred land beyond these mountains. Hushenk, the hero, rode there on his twelve-legged horse, while Tahmurath went on his winged steed. It is the abode of Simorgh or Angha, the legendary bird of knowledge. In the “Aghre-Sorkh” (Red Intellect) of 12th century mystic philosopher Sohrevardi, Ghaf is referred to as the abode of intellect, surrounding the world with eleven peaks that only initiates can pass through. He says that the Night-Lightener Jewel (Gohar-e-Shab Afrooz) can be found in Mount Ghaf. This jewel receives its brilliance from the tree of Toubā which is on Mount Ghaf.

Kah-dum-pas (Tibetan) *bka' gdams pa* (Ka-dam-pa) The first “reformed” school of Tibetan Buddhism, founded by the Indian Buddhist teacher Dipamkara Srijnana or Atisa (982-1048), who came to Tibet in 1042. Tshong-kha-pa is viewed as a successor to Atisa, and the Gelukpa order is sometimes called the “New Kadampa.”

Kailasa (Sanskrit) *Kailāsa* A lofty mountain in the Himalayas; in mythology Siva's paradise is placed upon Kailasa, north of Lake Manasarovara. The god of wealth, Kuvera, also is said to have his palace there. Because of the occult history attached to Mount Kailasa, Hindu metaphysics not infrequently uses Kailasa for heaven or the abode of the gods.

Kailem. *See* KELIM

Kaimarath, Kaimurath. *See* KAYUMARS

Kain. *See* CAIN

Kakodaimon (Greek) [from *kakos* evil + *daimon* god, genius] Opposed to agathodaimon, the good genius. This Gnostic term denoted the nether pole of the dual serpent — in one sense Scorpio as contrasted with Virgo, lord of the lower kingdoms, tempter of man, but turned into an aid if he is withstood and overcome.

Kala (Sanskrit) *Kāla* [from the verbal root *kal* to calculate] Dark, dark-colored as black or dark blue; a name of Siva or Rudra, and of the planet Saturn.

Also time, a period of time, especially the period of the world (equivalent to yuga), hence the human period of time or life cycle and consequent death — often personified and represented with the attributes of Yama, regent of the dead. Philosophically, used for endless time in manifestation, infinite duration, in which occur the definite cyclical time periods.

Kala (Sanskrit) *Kalā* A small part of anything, especially a 16th part; also a cycle, variously given as 1/900 part of a day — 1.6 minutes; 1/1800 — 0.8 minutes; etc. Used for the seven substrata of the elements or dhatus of the human body (flesh, blood, fat, phlegm, urine, bile, semen) there being 3015 kalas or atoms in every one of the six dhatus.

Also any practical mechanical or fine art, 64 being enumerated.

Kalabhana. See KALANABHA

Kala Brahma (Gouri) Another name for the god Sabda Brahma, a mystic name for akasa or the astral light, the source of occult sounds and the power of mantras. Sabda Brahma's "vehicle is called *Shadja*, and the latter is *the basic tone in the Hindu musical scale*. It is only after . . . passing through the study of preliminary sounds, that a Yogi begins to see *Kala Brahma*, i.e., perceives things in the Astral Light" (BCW 4:166; cf 4:164).

Kalagni (Sanskrit) *Kālāgni* [from *kāla* time + *agni* fire, flame] The flame of time, with reference to time's ineluctable consuming or regeneration of manifested beings and things. A name of the god Hari, as the destroyer or regenerator of all things.

Kalahansa or Kalahamsa (Sanskrit) *Kalahansa* The swan in eternity; in the pre-cosmogonical aspect, Kalahansa becomes Brahman or Brahma (neuter), darkness or the unknowable; and second, the swan in time and space when by analogy Kalahansa becomes Brahma (masculine). Rather than Brahma being the Hansa-vahana (the one using the swan as vehicle), it is Brahma who is Kalahansa, while Purusha, the emanation from Brahma, as one of its aspects as a creative power, is the Hansa-vahana or swan-carrier.

"The 'Swan or goose' (Hansa) is the symbol of that male or temporary deity, as he, the emanation of the primordial Ray, is made to serve as a Vahan or vehicle for that divine Ray, which otherwise could not manifest itself in the Universe, being, antiphrastically, itself an emanation of 'Darkness' — for our human intellect, at any rate" (SD 1:80).

"The 'First Cause' had no name in the beginnings. Later it was pictured in the fancy of the thinkers as an ever invisible, mysterious Bird that dropped an Egg into Chaos, which Egg becomes the Universe. Hence Brahm was called Kalahansa, 'the swan in (Space and) Time.' He became the 'Swan of Eternity,' who lays at the beginning of each mahamanvantara a 'Golden Egg.' It typifies the great Circle, or O, itself a symbol for the Universe and its spherical bodies" (SD 1:359).

Kalaka (Sanskrit) *Kālakā* One of the daughters of the Danava Vaisvanara. Kalaka and her sister Puloma were mothers of thirty millions of Danavas by Kasyapa. They are said to have lived in Hiranyapura (the golden city) which floats in the air: in one sense the sun, and in another sense the etheric regions of space interior to the physical universe. Their children were called Kalakanjas and Paulomas.

Kalanabha (Sanskrit) *Kālanābha* [from *kāla* black + *nābha* navel] One name of the asura Taraka.

Kalapa (Sanskrit) *Kalāpa* A place mentioned in the *Vayu-Purana*, said to be on the northern side of the Himalayas, hence in Tibet. The *Matsya-Purana* has it that from Kalapa (spelled Katapa) in due course will issue forth the Kalki-avatara.

Kalapani (Sanskrit) *Kālapāni* [from *kāla* black + *pāna* water] Also *kālapāna* or *kālapānīya*. Black water; a name given to the ocean.

Kalavingka. See KALAVINKA

Kalavinka (Sanskrit) *Kalaviṅka* An allegorical, sweet-voice bird of immortality, representing one of the noblest elements in the human constitution, the higher ego. Its voice is heard at a certain stage of dhyana in genuine yoga practice which is entirely spiritual-intellectual combined with rigid psychic control, and has naught to do with hatha yoga.

Kalavinka is said to have awakened King Bimbasara and thus saved him from the bite of a cobra — a legend signifying a sage saving himself from the assault of the lower serpent.

Kali (Sanskrit) *Kālī* The black; name of the seventh tongue of Agni, the fire god, which was a black fiery flame. Blackness and darkness have always been associated with the pre-cosmic night in its mystical sense, the pralaya preceding the awakening manifestations of life in the present universe. Hence kali represents pre-cosmic wisdom. By that strange inversion of fact which nature manifests nearly everywhere, the highest is reflected in the lowest as in a mirror, so that in this sense the black fiery flame is the condensed fiery magnetic vitality of the lowest material worlds; therefore in this sense kali often stands for wickedness and evil.

Later, Kali or Kali-devi became a title of the wife of Siva, Parvati, because of her fierce and destructive nature.

Kaliadovki (Russian) Christmas mystery-plays enacted in Russia, Poland, and Galicia (BCW 2:165). “It is but a few years since, during every Christmas week, Punch-and-Judy-boxes, containing the above named personages [Joseph, Mary, and the angel], an additional display of the infant Jesus in his manger, were carried about the country in Poland and Southern Russia” (IU 2:119).

Kalidasa (Sanskrit) *Kālidāsa* The greatest poet and dramatist of historic India, one of the “nine gems” that adorned the court of King Vikramaditya at Ujjayini. He is the true or reputed author (although the name Kalidasa has been given in Indian literature to several poets) of *Sakuntala*, *Meghaduta*, *Malavikavimitra*, *Vikramorvasi*, etc. Whether all the works attributed to this Kalidasa are really to be ascribed to him or not, the fact remains that they are among the finest specimens of Indian poetry.

Kalikaraka (Sanskrit) *Kalikāraka* Strife-maker; a name of Narada, the divine rishi. In the Puranas,

Narada is the first Adversary in individual human form, “the opposing Power required by the equilibrium and harmony of things in Nature — like Shadow to throw off still brighter the Light, like Night to bring into greater *relief* the Day, and like cold to make one appreciate the more the comfort of heat . . .” (SD 1:411).

Kaliya, Kaliya-naga (Sanskrit) *Kāliya, Kāliya-nāga* A serpent-king with five heads whose mouths vomited fire and smoke which devastated the country around, said to have lived in a deep pool of the Yamuna River. The Puranas relate that Krishna, one of the avatars of Vishnu, in his childhood overcame this serpent, then let him retreat into the ocean with his wives and offspring. This mythical monster symbolizes human passions, the river or water being a symbol of matter.

Kali Yuga (Sanskrit) *Kali Yuga* Iron age or black age; the fourth and last of the four great yugas constituting a mahayuga (great age), the other three being the krita or satya yuga, treta yuga, and dvapara yuga. The kali yuga is the most material phase of a being’s or group’s evolutionary cycle. The fifth root-race is at present in its kali yuga, which is stated to have commenced at the moment of Krishna’s death, usually given as 3102 BC. The Hindus also assert that at the first moment of kali yuga there was a conjunction of all the planets. Although the kali yuga is our present profoundly materialistic age, in which only one fourth of truth prevails among humanity, making a period often called an age black with horrors, its swift momentum permits one to do more with his energies, good or bad, in a shorter time than in any other yuga. This period will be followed by the krita yuga of the next root-race.

The *Vishnu-Purana* says of the kali yuga that the barbarians will be masters of the banks of the Indus, of Chandrabhaga and Kasmira, that “there will be contemporary monarchs, reigning over the earth — kings of churlish spirit, violent temper, and ever addicted to falsehood and wickedness. They will inflict death on women, children, and cows; they will seize upon the property of their subjects, and *be intent upon the wives of others*; they will be of unlimited power, their lives will be short, their desires insatiable. . . . People of various countries intermingling with them, will follow their example; and the barbarians being powerful (in India) in the patronage of the princes, while purer tribes are neglected, the people will perish (or, as the Commentator has it, ‘The Mlechchhas will be in the centre and the Aryas in the end.’) Wealth and piety will decrease until the world will be wholly depraved. Property alone will confer rank; wealth will be the only source of devotion; passion will be the sole bond of union between the sexes; falsehood will be the only means of success in litigations; and women will be objects merely of sensual gratification. . . . a man if rich will be reputed pure; dishonesty (*anyaya*) will be the universal means of subsistence, weakness the cause of dependence, menace and presumption will be substituted for learning; liberality will be devotion; mutual assent, marriage; fine clothes, dignity. He who is the strongest will reign; the people, unable to bear the heavy burthen, *Khara bhara* (the load of taxes) will take refuge among the valleys. . . . Thus, in the Kali age will decay constantly proceed, until the human race approaches its annihilation (*pralaya*). . . . When the close of the Kali age shall be nigh, a

portion of that divine being which exists, of its own spiritual nature . . . shall descend on Earth . . . (*Kalki Avatar*) endowed with the eight superhuman faculties. . . . He will re-establish righteousness on earth, and the minds of those who live at the end of Kali Yuga shall be awakened and become as pellucid as crystal. The men who are thus changed . . . *shall be the seeds of human beings*, and shall give birth to a race who shall follow the laws of the Krita age, the age of purity. As it is said, ‘When the sun and moon and the lunar asterism Tishya and the planet Jupiter are in one mansion, the Krita (or Satya) age shall return’ ” (SD 1:377-8). *See also* YUGA.

Kalki Avatara (Sanskrit) *Kalkī* (or *Kalki*) *Avatāra* [from *kalkin* white horse + *avatāra* divine descent] The white-horse avatara, the 10th and last descent of Vishnu, in the form of a white horse at the end of kali yuga. “When the close of the Kali-age shall be nigh, a portion of that divine being which exists, of its own spiritual nature . . . shall descend on Earth . . . endowed with the eight superhuman faculties. . . . He will re-establish righteousness on earth, and the minds of those who live at the end of Kali-Yuga shall be awakened and become as pellucid as crystal. The men who are thus changed . . . shall be the seeds of human beings, and shall give birth to a race who shall follow the laws of the Krita-age, the age of purity” (VP 4:24).

Equivalent to Maitreya-Buddha of Northern Buddhism, Sosiosh of the Zoroastrians, and the Faithful and True on the white horse of Revelations.

Kalmucks, Kalmuiks, or Calmucks A people of Mongolian race settled principally in Russia and China, but found in other parts of Central Asia. In China they are known as Olüts or Elocts: their language is akin to Mongolian, and they use the same alphabet. Their religious beliefs are similar in character to those of Lamaism.

Kalpa (Sanskrit) *Kalpa* [from the verbal root *klṛp* to be in order] A generalizing term for a period or cycle of time.

Kama (Sanskrit) *Kāma* [from the verbal root *kam* to desire] Desire; the fourth substance-principle of which the human constitution is composed: its desire principle or the driving, impelling force. Born from the interaction of atman, buddhi, and manas, kama per se is a colorless force, good or bad according to the way the mind and soul use it. It is the seat of the living electric impulses, desires, aspirations, considered in their energetic aspect. When a person follows his lower impulses and centers his consciousness in the body and astral nature, he is directing that force downwards. When he aspires and opens his heart and mind to the influence of his higher manas and buddhi, he is directing that force upwards and thus progressing in evolution.

“This fourth principle is the balance principle of the whole seven. It stands in the middle, and from it the ways go up or down. It is the basis of action and the mover of the will. As the old Hermetists say: ‘Behind will stands desire.’ For whether we wish to do well or ill we have to first arouse within us the desire for either course. . . . On the material and scientific side of occultism, the use of the inner hidden powers of our nature, if this principle of desire

be not strong the master power of imagination cannot do its work, because though it makes a mould or matrix the will cannot act unless it is moved, directed, and kept up to pitch by desire. . . .

“This fourth principle is like the sign Libra in the path of the Sun through the Zodiac; when the Sun (who is the real man) reaches that sign he trembles in the balance. Should he go back the worlds would be destroyed; he goes onward, and the whole human race is lifted up to perfection” (Ocean 45-7).

Cosmic kama or desire, equivalent to the Greek eros, is the source of fohat, the driving intelligent energies of the universe. It is impersonal compassion and sympathy.

Kamadeva (Sanskrit) *Kāmadeva* [from *kāma* desire + *deva* god, divinity] The Hindu god of love, one of the Visve-devas in the Hindu pantheon. As the Eros of Hesiod was connected in early Greek mythology with the world’s creation, and only afterwards became degraded into the passionate Cupid, so was Kama in his original meaning as used in the Vedas, which gives the metaphysical and philosophical significance of his functions in the cosmos. Kama is the first conscious, all-embracing desire for universal good, love, and the first feeling of infinite compassion and mercy for all that lives and feels, needs help and kindness, that arose in the consciousness of the creative One Force, as soon as it came into life and being as a ray from the Absolute. Kama “is in the Rig-Veda (x. 129) the personification of that feeling which leads and propels to creation. He was the *first movement* that stirred the One, after its manifestation from the purely abstract principle, to create. ‘Desire first arose in It, which was the *primal germ of mind*; and which sages, searching with their intellect, have discovered to be the bond which connects Entity with Non-Entity’ ” (SD 2:176) — or manas with pure atma-buddhi. Only later did kama become the power that gratifies desire on the animal plane.

In the Puranas, Kama is the king and lord of the apsarases. He is pictured armed with a bow and arrows: the bow is often represented to be of sugar cane, the bowstring a line of bees, and each arrow is tipped with a distinct flower which is devoted to, and supposed to preside over, one of the senses. He is also often represented as a handsome youth riding on a parrot and attended by nymphs, one of whom bears his banner displaying the Makara, or a fish on a red background.

The attributes ascribed to Kamadeva in exoteric literature rarely depict the full sway of this cosmic force or entity in its multifarious ranges of activity. Kama is not only a cosmic principle or entity but also is inherent in every unit of the innumerable hosts of entities which compose the cosmos. Thus kama is the fourth principle in the human constitution; and, just as in its cosmic activities and relations, kama is both a superior and an inferior activity; indeed, it may be said to be divine in its higher aspects, just as it is physical in its lowest fields of action.

Kama-dhatu (Sanskrit) *Kāmadhātu* Desire world; first of the Buddhist trailokya (three regions), called kama (desire), rupa (form), and arupa (formless). In the theosophic scheme, kama-dhatu is

composed of the seven manifested globes of the earth-chain on the four lowest cosmic planes. Rupa-dhatu (form or image world) is composed of the five superior globes on the higher three cosmic planes. Arupa-dhatu (formless or imageless world), composed of the three highest of the ten cosmic planes, is to us a purely subjective world, a state rather than a place. The dhatus correspond in meaning with the Hindu lokas.

Kamadhenu (Sanskrit) *Kāmadhenu* [from *kāma* desire, wish + *dhenu* milch cow] Also Kamaduha, Surabhi. The mythical cow belonging to the sage Vasishtha, produced by the gods at the churning of the cosmic ocean. She is supposed to grant all desires and hence is termed the cow of plenty. This allegory refers to the appearance of the earth in space as the mother of all that later is — at least so far as our globe is concerned — the earth being mythologically considered to be milked and thus producing food. Many archaic mythologies have such an emblem of generative fertility.

Kamaduh. See KAMADHENU

Kama-loka (Sanskrit) *Kāma-loka* [from *kāma* desire + *loka* world, sphere] Desire world; a semi-material plane, subjective and invisible to us, the astral region penetrating and surrounding the earth. It is the original of the Christian purgatory, where the soul undergoes purification from its evil deeds and the material side of its nature. It is equivalent to the Hades of the Greeks and the Amenti of the Egyptians, the land of Silent Shadows.

Kama-loka is the abode of the disembodied astral forms called kama-rupas and of the still highly vitalized astral entities who quit physical existence as suicides and executed criminals who, thus violently hurled out of their bodies before the term of natural death, are as fully alive as ever they were on earth, lacking only the physical body and its linga-sarira. In addition the kama-loka contains elementaries and lost souls tending to avichi. All these entities remain in kama-loka until they fade out from it by the complete exhaustion of the effects of the mental and emotional impulses that created these eidolons of human and animal passions and desires. The second death takes place in kama-loka, after the upper duad frees itself of the lower, material human elements before entering devachan. “If, contrariwise, the entity in the kama-loka is so heavy with evil and is so strongly attracted to earth-spheres that the influence of the monad cannot withdraw the Reincarnating Ego from the Kama-rupa, then the latter with its befouled ‘soul’ sinks lower and lower and may even enter the Avichi. If the influence of the monad succeeds, as it usually does, in bringing about the ‘second death,’ then the kama-rupa becomes a mere phantom or kama-rupic spook, and begins instantly to decay and finally vanishes away, its component life-atoms pursuing each one the road whither its attractions draw it” (OG 76). The highest regions of kama-loka blend into the lowest regions of devachan, while the grossest and lowest regions of kama-loka bend into the highest regions of avichi.

Kama-manas (Sanskrit) *Kāma-manas* [from *kāma* desire + *manas* mind] The lower or intermediate duad, the human soul or personal ego. In our present state of evolution, human consciousness is almost wholly in this intermediate duad, one part of which consists of the upward-aspiring manas which in connection with its parent buddhi is called the reincarnating ego. The lower part of manas in conjunction with kama is attracted below to material things, and in human life is commonly called the personal ego. This personal ego is mortal, although the monad of which it is the expression lasts through the ages.

Kama-manas in the human constitution is conditionally immortal or mortal: if the kama-manas aspires successfully upwards and makes intellectual and emotional union with the buddhi over-enlightening it, the immortality for the manvantara is relatively certain. If, however, the kama-manas is insufficiently illuminated to withstand successfully the attractions of the lower astral and material realms of feeling and thought, it is attracted downwards and becomes enchained in these lower realms, and immortality in this case is lost, for the time being at least.

Kama-rupa (Sanskrit) *Kāma-rūpa* [from *kāma* desire + *rūpa* body, form] The desire body; the

portion of the human inner constitution in which inhere the various mental and psychic energies. After death it becomes the vehicle in the kama-loka of the usually unconscious higher principles of the person that was.

“After death . . . there occurs what is called the ‘second death,’ which is the separation of the immortal part of the second or intermediate Duad from the lower portions of this Duad, which lower portions remain as the kama-rupa in the etheric or higher astral spheres which are intermediate between the devachanic and the earthly spheres. In time this kama-rupa gradually fades out in its turn, its life-atoms at such dissolution passing on to their various and unceasing peregrinations.

“It is this kama-rupa which legend and story in the various ancient world-religions or philosophies speak of as the ‘shade,’ and which it has been customary in the Occident to call the ‘spook,’ or ‘ghost.’ It is, in short, all the mortal elements of the human soul that was. The kama-rupa is an exact astral duplicate, in appearance and mannerism, of the man who died; it is his *eidolon* or ‘image’ ” (OG 76-7).

“Bereft as it is of its higher mind, spirit and physical senses, if left alone to its own senseless devices, it will gradually fade out and disintegrate. But, if forcibly drawn back into the terrestrial sphere whether by the passionate desires and appeals of the surviving friends or by regular necromantic practices — one of the most pernicious of which is mediumship — the ‘spook’ may prevail for a period greatly exceeding the span of the natural life of its body. Once the Kamarupa has learnt the way back to living human bodies, it becomes a vampire, feeding on the vitality of those who are so anxious for its company. In India these *eidolons* are called *Pisachas*, and are much dreaded . . .” (TG 172).

Kamic [from Sanskrit *kāma* desire] An anglicized form of kamika, meaning desirous, pertaining to desire.

Kamsa, Kansa (Sanskrit) *Kaṁsa, Kaṁśa* A tyrannical king of Mathura in ancient India, evil uncle of Krishna. When it was foretold that the eighth child of Devaki would kill him, he endeavored to destroy all of her children; so the parents fled with Krishna, their eighth child. Then Kansa ordered all male children of the land to be killed, but Krishna escaped — a legend paralleling the massacre of the infants by King Herod of Palestine in the New Testament. In the legends surrounding great religious figures, “everyone of them, whether at their birth or afterwards, is searched for, and threatened with death (yet never killed) by an opposing power (the world of Matter and Illusion), whether it be called a king Kamsa, king Herod, or king Mara (the Evil Power)” (BCW 14:141). Thus Kamsa in one aspect stands for the opposing power in initiation rites. Krishna, as it was predicted, finally killed his persecutor. (SD 2:48, 504n, 604n; BCW 8:378)

Kanada (Sanskrit) *Kaṇāda* The sage who founded the Vaiseshika or atomist school of Hindu philosophy. Like the Greek atomists Democritus and Epicurus, Kanada was no materialist for, just

as they did, he believed in divinities or intelligent cosmic entities as the primal causes and governors in the universe. *See also* ATOMISTS.

Kandu (Sanskrit) *Kaṇḍu* In the Puranas, a sage and yogi whose holiness and pious austerities awakened the jealousy of the gods. Kamadeva, as lord of the gods, sent one of his apsarases, Pramlocha, to tempt the sage. He lived with her for several centuries, which seemed to him only as one day. Finally the sage, returning to his senses, repudiated her and chased her away, whereupon she gave birth to a daughter, Marisha, in an extraordinary manner. Blavatsky compares this legend to the temptation of Merlin by Vivien, and Sarah's temptation of Pharaoh in the Old Testament (SD 2:174-5&n).

Kandu represents the age of ethereal or astral humanity, of early nascent, physical first root-race, still mindless and senseless. He, as a race, gives birth to the second root-race, called the sweat-born, through Pramlocha.

Kangalin (Hindi) *Kaṅgālīn*. Witches; those who practice sorcery or necromancy, feared by the populace because of the results which can be achieved through their expert skill.

Kanishka (Sanskrit) *Kaniṣka* A celebrated ruler or king in Northern India who reigned around the first century. Next to Asoka, he was among the greatest patrons and supporters of Indian Buddhism, building some of the finest stupas or dagobas in Northern India and Kabulistan.

Kanishtha (Sanskrit) *Kaniṣṭha* The youngest; a class of gods which will manifest in the 14th or last manvantara of our world.

Kaniya. *See* KANYA

Kanjur (Tibetan) *bka' 'gyur* (kang-gyur, kan-jur) [from *bka'* sacred word + *'gyur* translation] The portion of the Tibetan Buddhist canon containing the sutras, the texts ascribed to the Buddha himself and called the "Buddha Word" (Sanskrit buddha-vachana). The second part of the Tibetan Buddhist canon, the Tanjur, contains sastras or commentaries and other scholastic works. The Kanjur consists almost entirely of works translated from Sanskrit or other Indian languages. Although the texts contained in the Kanjur are overwhelmingly of Indian origin, the compilation of the Kanjur was done in Tibet, and in structure it differs greatly from the old Indian Tripitakas. Four more or less complete recensions of the Buddhist canon survive: the Pali, the Chinese, the Tibetan, and the Mongolian, this last, however, being a translation of the Tibetan. The first three recensions differ from each other in content and arrangement. The overall arrangement of the Kanjur is in three sections, giving the Sanskrit names: Vinaya (monastic discipline), Sutra (discourses of the Buddha), and Tantra (esoteric and ritual texts). The Sutra section is divided into several subsections. Each section or subsection contains numerous individual texts.

The Tibetan Kanjur was originally collected in manuscript, perhaps in the early 14th century. Beginning in 1410, the Kanjur has been published in numerous editions printed from woodblocks.

Over twenty manuscript and blockprint editions are known to have existed. The following five blockprint editions are the best known in the West, and can give an idea of the immense extent of the Kanjur: 1) The Peking editions of 1700-37 — about 1055 texts in 106 volumes; 2) The Narthang edition of 1730-32 — about 761 texts in 100 volumes; 3) The Derge edition of 1729-33 — about 1108 texts in 102 volumes; 4) the Cone (cho-ne) edition of 1721-31 — 1055 texts in 107 volumes; and 5) The Lhasa edition of 1934 — 808 texts in 99 volumes.

Kansa. See KAMSA

Kanya (Sanskrit) *Kanyā* Virgin; the sixth zodiacal sign, Virgo, which may represent mahamaya or sakti. The saktis or six primary forces in nature (parasakti, jnanasakti, ichchhasakti, kriyasakti, kundalinisakti, and mantrikasakti) together are represented by the astral light, called the heavenly or celestial Virgin by Kabalists and Hermetic philosophers.

Kaph. See KAF

Kapila, Kapila-rishi (Sanskrit) *Kapila, Kapila-ṛṣi* A great sage and adept of antiquity who flourished before the middle of the 6th century BC, considered to be the founder of the Sankhya philosophy. These archaic teachers, such as Zoroaster and Hermes, were several in number, it having been a habit in archaic times for the later heads of a school to use the name of the school's founder as their own, the name thus becoming in some cases a title.

Kapila is also one of the three secret kumaras who are the progenitors of the true spiritual self in the physical human being. In many of the old writings Kapila is also symbolic of cosmic spirit, or of the individual spiritual self who represents the highest state reached on earth. Hence the Puranas and the *Ramayana* relate that Sagara's 60,000 sons were reduced to ashes by a mere glance of Kapila's eye. This allegory symbolizes the personifications of human emotions, both passional and mental, being completely reduced to inactivity by the spiritual wisdom and purity of the sage — here the personification of wisdom itself.

Kapila is also a primeval sage of the satya yuga who imparted true wisdom to all creatures. See also SANKYA.

Kapilaksha (Sanskrit) *Kapilākṣa* Kapila's eye; an allegorical name for certain spiritual and intellectual powers evoking vibratory forces which neutralize and bend to their will all the lower human mentations and emotions. In the Puranas, *Ramayana*, and other Hindu works, the sage Kapila's very glance made a mountain of ashes of King Sagara's 60,000 sons, who were the personifications of the human mental and emotional attributes.

Kapilasthen, Kapilasthan [possibly Sanskrit *Kapilasthāna*] Kapila's seat; the place where tradition says that Kapila sat in meditation for a number of years.

Kapilavastu (Sanskrit) *Kapilavastu* [from *kapila* yellow, golden + *vastu* substance] Golden

substance; the birthplace of Gautama Buddha, the capital of his father, King Suddhodana. Mystically the birthplace of the inner buddha within each person, the home of our individual Father in heaven, and cosmically applying to our spiritual alliance in and with the sun — here called Kapilavastu. The whole legend of the Buddha's life may be mystically interpreted through studying the symbolic meaning of the various names used there, because whatever actual historical fact may have been imbodyed in these various names of his birth and later career, the names themselves were chosen likewise to portray his mystical birth. Thus his mother is called Mayadevi (goddess of illusion) or Mahamaya (great illusion), as every initiate, buddhas included, in a mystical sense is born from and out of cosmic illusion into the supernal truth of buddhahood.

Kapi-vaktra (Sanskrit) *Kapi-vaktra* Monkey-faced; a name of Narada, the divine rishi.

Kara (Sanskrit) *Kara* [from the verbal root *kr* to do; cf. Latin *cerus* a former] A maker, causer; hence a hand. Also the side of a polygon.

Karabtanos (Gnostic) In the *Codex Nazaraeus*, the spirit of blind or animal desire, son of Spiritus (Anima Mundi or the astral light), and generator, by the astral light as mother, of seven other spirits of his own kind: pure spirit fails at creation, so that it is only when Karabtanos “consents to *help* his mother, that the ‘Spiritus’ conceives and brings forth ‘Seven Figures,’ and again ‘Seven’ and once more ‘Seven’ (the Seven Virtues, Seven Sins and Seven Worlds” (BCW 6:192n). He is a symbol of matter; also of kama-rupas in the astral world, said to be without sense or judgment.

Karaim Jews “Jews of the Crimea — who call themselves the descendants of the true children of Israel, *i.e.*, of the Sadducees — reject the *Torah* and the *Pentateuch* of the Synagogue, reject the Sabbath of the Jews (keeping Friday), will have neither the Books of the Prophets nor the *Psalms* — nothing but their own Books of Moses and that they call his one and real Law” (BCW 14:174).

Karana (Sanskrit) *Kāraṇa* Cause, metaphysically speaking, invariably associated with intelligence. There are various kinds of karanas, all closely similar in type and attributes, such as karana-sarira and karanopadhi.

Karana-sarira (Sanskrit) *Kāraṇa-śarīra* [from *kāraṇa* cause + *śarīra* body, bodily frame] Cause-body or causal body; the principle or causal element which brings about not only the reimpodiment of an entity, but also its evolution during a manvantara through an endless series of reimpodiments.

“The human *Ego* is neither Atman nor Buddhi, but the higher *Manas*: the intellectual fruition and the efflorescence of the intellectual self-conscious *Egotism* — in the higher spiritual sense. The ancient works refer to it as *Karana Sarira* on the plane of *Sutratma*, which is the golden thread on which, like beads, the various personalities of this higher *Ego* are strung” (SD 2:79).

It is the reproducing agent, principle, or instrument in the constitution of a being such as man,

which brings about the repetitive reimpodiments that such being is impelled, and in one sense compelled, by karma to undergo. Such a reimpodiment can be of two types: if the causal instrument is on a high plane, such as buddhi-manas — the treasury of all ingathered seeds of being which will reproduce themselves in future existences as the higher parts of an individual — then in such case it is the buddhi-manas which is the karana-sarira; on the other hand, if the main causal instrument or principle bringing about such repetitive imbodiments is of a lower type, and reproduces existences for the reincarnating entity in lower vehicles, then we can say it is the kama-manas or lower manas which is the karana-sarira. Thus there are in the composite human constitution at least two such karanic or causal elements, one of a higher and one of a lower character. However, neither the karana-sarira nor the karanopadhi is, strictly speaking, the inner god of man which is the atman or fundamental self of our reimpodifying monad, called the karanatman.

Karanatman (Sanskrit) *Kāraṇātman* [from *kāraṇa* cause + *ātman* self] The causal self; the divine source of one's being, from which flow forth in a descending scale in continuously less ethereal grades and qualities the various elements which form the human compound constitution. It is the causal self because from it as the primordial fountain of consciousness and being flow forth all the elements, principles, qualities, characteristics — the svabhava — of any entity undergoing its long evolutionary peregrination in the realms of the manifested universe. It is equivalent to atman, called in Hindu literature Isvara (Lord). The various monads in the human constitution — divine, spiritual, human, animal, and astral-vital — are derivatives from this fundamental or supreme atman in the constitution, its children or offspring. These various monads by their reproductive action actually are the causal principles or instruments of the various and unending series of reimpodiments that any entity during the kosmic manvantara is under karmic necessity of undergoing; and it is, therefore, these various monads in their outer or vehicular aspect which are the respective karanopadhīs or karana-sarira.

Karanda. See KALAVINKA

Karanopadhi (Sanskrit) *Kāraṇopādhi* [from *kāraṇa* cause + *upādhi* base, vehicle, disguise] Causal instrument, or instrumental cause in the long series of reimpodiments to which reimpodifying entities are subject. An upadhi is certain natural properties or constitutional characteristics supposed to be the disguises, clothing, or masks in and through which the spiritual monad works, bringing about the repetitive manifestations upon the earth-chain of certain of its functions and powers, and intimately connected with the peregrinations of the monad through the various spheres of the solar kosmos. In one sense, therefore, karanopadhi is almost interchangeable with maya or the illusory disguises through which spiritual monadic entities work and manifest themselves.

The lower karanopadhi or cause bringing about reimpodiment is avidya (nescience). When a

reimbodying entity through repeated rebodiments in material spheres rises into self-conscious recognition of its own divine powers, it shakes off the disguises of maya and becomes a jivanmukta. As an entity grows more and more like its divine-spiritual counterpart, it is less subject to avidya. “It is, in a sense, the seeds of Kama-manas left in the fabric or being of the reincarnating entity, which act as the *karana* or reproducing cause, or instrumental cause, of such entity’s reincarnations on earth” (OG 78).

The higher karanopadhi, belonging to the spiritual-intellectual part of the human constitution, is the reproductive impulse in the spiritual monad which causes it to reemerge into a new series of imbodiments at the dawn of the solar manvantara. This karanopadhi is directly related to buddhi or buddhi-manas, the spiritual soul as a veil or vehicle of the monadic essence or spiritual monad. Its role is similar to that of prakriti with Purusha, or pradhana surrounding Brahman, or mulaprakriti with parabrahman. The karanopadhi is also the vehicle produced by the spiritual bija (seed).

Though there are seven human principles, there are but three distinct upadhis, in each of which the atman may work independently of the rest. These three upadhis can be separated by an adept without killing himself, but he cannot separate the seven principles from each other without destroying his constitution. According to the Taraka-Raja-Yoga, these three upadhis are karanopadhi, sukshmapadhi, and sthulopadhi. Karanopadhi corresponds to the anandamaya-kosa of the Vedantic classification and to the sushupti or deep dreamless sleeping state. The avatara doctrine is closely connected with these various human upadhis.

Karest (Egyptian) *Karest*. Mummy; Massey identifies it with Christ: “the author of the Christian name is the Mummy-Christ of Egypt, called the *Karest*, which was a type of the immortal spirit in man, the Christ within (as Paul has it), the divine offspring incarnated, the Logos, the Word of Truth, the *Makheru* of Egypt. It did not originate as a mere type! The preserved mummy was the *dead body of any one* that was *Karest*, or mummified, to be kept by the living; and, through constant repetition, this became a type of the resurrection from (not of!) the dead” (quoted BCW 188n). Blavatsky comments that this interpretation is too materialistic. (BCW 8: 197-200, 203)

Kargyutpas (Tibetan) *bka' rgyud pa* (kar-gyu-pa) Succession; a sect of semi-reformed Buddhists founded by Marpa in the last half of the 11th century and continued under his successor Milarepa. The adherents of this sect, in common with many other semi-ascetic bodies, believe in a successive order of teachers.

Karkata or **Karkataka** (Sanskrit) *Karkaṭa*, *Karkaṭaka* A crab; the fourth zodiacal sign, Cancer. This sign represents the sacred Tetragram, and completes the first quaternary.

Karli A village about 45 miles southeast of Bombay, famous for its rock-cut cave-temple, the finest of its kind in India.

Karma (Sanskrit) *Karma* [from the verbal root *kr* to do, make, denoting action] Action, the causes and consequences of action; that which produces change. One of the primary postulates of every comprehensive system of philosophy, described as a universal law, unceasingly active throughout universal nature and rooted in cosmic harmony, in its operations existing from eternity, inevitable, inherent in the very nature of things. It is action, absolute harmony, the adjuster; it preserves equilibrium by compensating and adjusting all actions, excessive or defective. Hence it is called the law of retribution, implying neither reward nor punishment, based on nature's own urge of harmonious equilibrium. As such it has been personalized as Nemesis and by many other names, a practice which lends itself to popular imagining of avenging deities, such as God or Gods, Furies, Fates, Destiny, etc. As there are no such things as inanimate beings in the universe, it is not surprising to hear of karmic agents and of scribes or lipika who record karma. Karma must necessarily be transmitted by living beings of one grade or another, because there is no other means possible, and universal nature is but a vast, virtually frontierless being whose entire structure, laws, and operations are the innumerable hierarchies of beings in all-various grades, which thus not only condition nature, but are in fact universal nature itself. By our acts we create living beings which act upon other people and ultimately react upon ourselves. These beings, then, are agents of karma on one plane; on higher planes other orders of beings are such agents.

“An Occultist or a philosopher will not speak of the goodness or cruelty of Providence; but, identifying it with Karma-Nemesis, he will teach that nevertheless it guards the good and watches over them in this, as in future lives; and that it punishes the evil-doer — aye, even to his seventh rebirth. So long, in short, as the effect of his having thrown into perturbation even the smallest atom in the Infinite World of harmony, has not been finally readjusted. For the only decree of Karma — an eternal and immutable decree — is absolute Harmony in the world of matter as it is in the world of Spirit. It is not, therefore, Karma that rewards or punishes, but it is we, who reward or punish ourselves according to whether we work with, through and along with nature, abiding by the laws on which that Harmony depends, or — break them.

“Nor would the ways of Karma be inscrutable were men to work in union and harmony, instead of disunion and strife. For our ignorance of those ways — which one portion of mankind calls the ways of Providence, dark and intricate; while another sees in them the action of blind Fatalism; and a third, simple chance, with neither gods nor devils to guide them — would surely disappear, if we would but attribute all these to their correct cause. With right knowledge, or at any rate with a confident conviction that our neighbours will no more work to hurt us than we would think of harming them, the two-thirds of the World's evil would vanish into thin air. Were no man to hurt his brother, Karma-Nemesis would have neither cause to work for, nor weapons to act through. . . . We stand bewildered before the mystery of our own making, and the riddles of life that *we will not* solve, and then

accuse the great Sphinx of devouring us. But verily there is not an accident in our lives, not a misshapen day, or a misfortune, that could not be traced back to our own doings in this or in another life” (SD 1:643-4).

The effect of karma on human beings is merely the natural reaction from their actions, which may be described as only half-actions, for they are not completed until the reaction has ensued. Since the consequences of acts do not necessarily ensue immediately, it follows that at any stage of our career we may experience the results of actions performed a long time in the past.

Karma does not obviate free will or imply fatalism or mechanistic determinism. It is not merely a mechanical or mechanistic chain of linked cause and effect, by which every act is predetermined by some previous act and by no other cause. Man is a divine spark expressing itself through a series of vehicles, forming by means of these vehicles a series of egos, each conscious and operative on its own plane. Through his contract with higher planes, he has the power of bringing new forces into operation, so he is not inexorably bound in a mechanistic sense by his karma. On the other hand, to speak of an absolutely free will is meaningless; the will becomes more and more emancipated from conditions as we penetrate deeper into the recesses of our nature; but it must always be actuated by motive of some kind, and hence, being conditioned by motive, it comes under the operation of the universal law of karma.

There are many types of karma, such as human, racial, national, family, individual, etc. A chain of causation, stretched out in time, will be intersected by any given present moment; so that in speaking of a person, we may say he sums up in himself both his past and his future, he is his own karma. Since the whole universe and all the beings which compose it are linked and blended together, it follows that no person can have exclusive interests and that the karma of all beings is linked and, in a profound sense, identical. Karma in its moral aspect is cosmic justice. It should not interfere in any way with helping others, nor does it render futile the exercise of compassion, for we incur as much responsibility by refraining from action as by acting. “Sow kindly acts and thou shalt reap their fruition. Inaction in a deed of mercy becomes an action in a deadly sin” (VS 31).

Karmabandha (Sanskrit) *Karmabandha* [from *karma* action, activity + *bandha* bond, fetter] The bonds of karma or action; the repeated existences of an entity brought about by the karmic bonds of continuation, born of thought, feeling, and action. A being which has no karmabandha has attained freedom from the enthralling chains and attractions of material existence; but such a jivanmukta nevertheless has karma belonging to and suitable to the plane on which it then is. Thus a jivanmukta can rise above karma relative to the lower realms of being; but as long as any entity, however high, endures as an individualized monadic center, it inevitably produces karma of some kind appropriate to its own high sphere of life and activity. For the meaning of karma is action or activity of any kind — spiritual, intellectual, psychological, astral, or physical. We human beings, living in the lower planes, produce karma corresponding to us and our environment; but the gods,

because individualized and active beings in their own spheres, produce of necessity karma corresponding with their own lofty state.

Karmakanda (Sanskrit) *Karmakāṇḍa* That part of the Sruti or Vedic writings which relates to ceremonial acts and sacrificial rites; Blavatsky holds them to be unimportant spiritually (BCW 4:366). Also one of the scriptures of the Jains.

Karma-Nemesis [from Sanskrit *karma* action, cause and effect + Greek *Nemesis* goddess of harmony or retribution] The appointed karmic lot or destiny of any entity, latent in the entity's germinal existence and unfolded progressively in the course of its growth or evolution. The universe as a whole fulfills, in the course of its cyclic evolution, all that is contained in the germ at the dawn of its manifestation; and the individual, who in essence is a spark of the divine life, follows the same inscrutable law of destiny, as do also the worlds and all the beings in and on them.

The destiny which lies in the germ is the destiny which belongs to the spiritual entity in its various attributes behind that germ, and these attributes as a whole — in other words the svabhava of the entity — are born of that entity's portion of free will leading it off into strange bypaths during the ages-long course of its evolutionary growth. The incarnate person, having the power of choice, can wander temporarily far astray from the path of his divine destiny, lured by the attractions of the lower planes of manifestation. This stirring up of karmic results which actually becomes Karma-Nemesis, that which cannot be avoided and must be worked out, is the beneficent but inexorable adjuster and restorer of harmony.

Thus destiny is not fatalism, but emphatically supports the idea of intrinsically spiritual free will. The stirring up of these seeds of Karma-Nemesis are the consequences or results of the entity's own will in act, feeling, and consequent result. Thus destiny is of two kinds: that which the evolving entity has stored up as character, propensities, biases, and svabhava in other lives; and that which the entity, using its modicum of free will, is now storing up for its future, but in accordance with its own exercise of will or choice. *See also* FREE WILL; KARMA; NEMESIS

Karmasannyasa Yoga (Sanskrit) *Karmasannyāsa-yoga* The attaining of at-one-ment with the highest by means of renunciation of action for personal benefit, treated in the fifth chapter of the *Bhagavad-Gita*. An ascetic who seeks nothing for self and rejects nothing for self, who is free from the influence of the pairs of opposites, is thereby released from the bonds forged by action or karma; but renunciation of action and devotion through action are both means of final emancipation, and of the two, devotion through action or karma yoga is superior to renunciation. Thus it is better for the personal man to act, and if necessary to act strongly, for spiritual things and causes, than to renounce personal action of any kind and thereby sink into fruitless quietism.

Karma-vadins (Sanskrit) *Karma-vādin-s* Karma-preachers; applied to the followers of the Karma-Mima-nsa-Darsana, one name of the Purva-Mima-nsa school founded by Jaimini, which taught a

merely critical interpretation of the text of the Veda.

Karma Yoga (Sanskrit) *Karma-yoga* [from *karma* action + *yoga* union] One of the methods or stages of yoga practice and training, involving attaining at-one-ment or union with the spiritual-divine essence within by means of unselfish action or works.

Karmendriyas (Sanskrit) *Karmendriya-s* Organs of action; the innate astral-vital-physical organs of sensation and action on the physical plane — the generative organs, hands, feet, excretory organs, and mouth. They form one of the three classes of indriyas (organs, channels, instruments) given in Hindu philosophy, the others being buddhindriyas (organs of spiritual consciousness, sense, and action) and jnanendriyas (organs of intellectual and psychological consciousness) (FSO 275-6). The karmendriyas also have correspondences with the tanmatras (rudiments), bhutas (elements), and jnanendriyas (sense organs) as well as with the lokas, rupas, and human principles and senses (BCW 12:660-1, 12:667). *See also* INDRIYA

Karna (Sanskrit) *Karṇa* [from the verbal root *kṛ* to pour forth, scatter, throw out] Radiant; a son of Kunti by Surya, the sun, before her marriage to Pandu. Therefore, Karna was a half-brother of the Pandava princes, but sided with the Kurus in the great conflict of the *Mahabharata*.

Karnaim. *See* QEREN

Karnak The ancient Egyptian temple at Thebes, situated on the eastern bank of the Nile, called the Temple of Karnak after a modern village in the vicinity named El-Karnak.

Karneios (Greek) **Carneus** (Latin) Title of Apollo; like Krishna, who is also mystically an imbodiment of a solar spiritual force, this deity refers to mystical matters connected with the sun and its spiritual effluvia radiating throughout the solar system. Apollo Karneios was celebrated at Sparta in the great festival of the Karneia, held during nine days of the Attic month Metageitnion (August).

Karshipta, Karshift (Pahlavi) The holy bird of the Zoroastrians who brought the law of Mazda into the Vara (man). “Karshipta is the human mind-soul, and the deity thereof, symbolized in ancient Magianism by a bird, as the Greeks symbolized it by a butterfly. No sooner had Karshipta entered the *Vara* or man, than he understood the law of Mazda, or Divine Wisdom. . . . With the Kabalists it was a like symbol. ‘Bird’ was a Chaldean, and has become a Hebrew synonym and symbol for Angel, a Soul, a Spirit, or Deva; and the ‘Bird’s Nest’ was with both Heaven, and is God’s bosom in the *Zohar*” (SD 2:292). The Egyptians also spoke of the spiritual swallow, the soul-bird — manas.

This allegory describes the descent of the manasaputras during the third root-race: a high intelligence able to wing its way in the celestial realms entering man’s constitution and awakening the faculty enabling him to understand and to recite “the Law” as imbodied in the highest divinities to and for the human species.

Karshvar (Avestan) **Kishvar** (Pahlavi) **Keshvar** (Persian) Also karshvare(s). A globe of the earth-chain, seven being enumerated in the *Vendidad*: Arzahe and Savahe; Fradadhafshu and Vidadhafshu; Vourubaresti and Vouruzaresti; and Hvaniratha. They are enumerated as being in three strata or layers, with a fourth single karshvare, while the Gathas speak of the septempartite earth (bumi haptaiti). These three strata refer to the cosmic planes, on which the globes are located two by two, with our earth alone on the lowest plane. Each karshvares is surrounded by an ocean, making it impossible to pass from one to another, the ocean being space.

“Karshvares in their seven applications refer equally to the seven spheres of our planetary chain, to the seven planets, the seven heavens, etc., according to whether the sense is applied to a physical, supra-mundane, or simply a sidereal world” (SD 2:384-5).

See also BUMI HAPTAITI

Karta, Kartta. *See* PURUSHA

Kartikeya. *See* KARTTIKEYA

Karttika (Sanskrit) *Kārttika* [from *kṛttikā* the Pleiades] A month corresponding to October-November. Also the ancient Hindu god of war, given the name Karttika or Karttikeya because mythologically he is said to have been nursed and reared by the six Krittikas or Pleiades.

Karttikeya (Sanskrit) *Kārttikeya* [from *kṛttikā* the Pleiades] The ancient Hindu god of war, given the name Karttika or Karttikeya because mythologically he is said to have been nursed and reared by the six Krittikas or Pleiades. Astronomically he is the planet Mars. He was born from fire and water out of a seed of Rudra-Siva, a phase of the cosmic Logos, via Agni, who dropped the seed into the Ganges. Like the Pleiades, he is represented with six heads, corresponding to the six visible stars of the constellation: Karttikeya is said to be the seventh or hidden Pleiad.

Karttikeya was born for the purpose of killing Taraka, the too holy and wise deva-daimon, who had obtained through austerity all the knowledge and yoga powers of the gods. Karttikeya is equivalent to Michael, Indra, and Apollo. *See also* GHARMA-JA

Karuna-bhavana (Sanskrit) *Karuṇā-bhāvanā* [from *karuṇā* compassion + the verbal root *bhū* to become] The act of causing meditation or compassion to come into being. The meditation or thought given to cultivating pity and compassion in yoga practices.

Karuna-bhawana. *See* KARUNA-BHAVANA

Kasdim (Aramaic) *Kaśdīm* [plural of *kaśdī* Chaldean] Chaldeans; the Hebrew word kashdim means the inhabitants of Babylonia, also astrologers.

Kashaya-vastra (Sanskrit) *Kaṣāya-vastra* Red-colored cloth; in the Puranas, the rishi Vaisishtha was asked by the gods to bring the sun, Surya, to satyaloka. The sun told him the worlds would be

destroyed if he left, but the sage offered to place his kashaya-vastra in place of the sun's disk, which he did. This red-colored cloth is the visible body of the sun. Blavatsky comments that "the ascetic's dress being, as all know, dyed expressly into a red-yellow hue, a colouring matter with pinkish patches on it, rudely representing the vital principle in man's blood, — the symbol of the *vital principle* in the sun, or what is now called chromosphere" (BCW 5:157).

Kashyapa. See KASYAPA

Kasi (Sanskrit) *Kāśī* [from *kāśī* shining, splendid] One ancient name of Benares, India.

Kasi-khanda (Sanskrit) *Kāśī-khaṇḍa* The section of the *Skanda-Purana* treating of the city of Benares, India.

Kaspar One of the three Magi or wise men in Christian legend. In Egypt the scribe of the gods or the recorder was Tehuti (Thoth), who was also the god of wisdom, equivalent to Hermes or Mercury: always present at initiations, and the presiding influence, as initiator, at all ancient initiations. Looking at the Christian story in this context, infant is a name for a "newly born" initiate, who thus is a twice-born (Sanskrit *dvija*). The star refers to the esoteric wisdom which taught the wise men of the time that the cycle in its turning had brought about the birth of an avatara, a manifestation on this earth of a certain starry or solar divinity. See also BALTHAZAR; MELCHIOR

Kasyapa (Sanskrit) *Kaśyapa* A sage often mentioned in the Vedas. The son of Marichi, Brahma's mind-born son; the father of Vivasvat, the father of Manu, the progenitor of mankind; husband of Aditi, chief and father of the adityas — who are the powers of the sun — and one of the seven great cosmic rishis. Father by Aditi's sisters of demons, nagas, reptiles, birds, and all living things. The *Atharva-Veda* says that the "self-born Kasyapa sprang from Time," time often being identified with Vishnu, the preserver. Thus Kasyapa represents one of the primordial spiritual-intellectual powers of the solar system, and is one of the main original solar logoi. Especially in his function as chief of the solar adaityas, cosmically he is the sun itself.

Being thus the cosmic head of his hierarchy — a hierarchy necessarily represented on earth — there is likewise in humanity a group of human beings who are, as it were, by spiritual-psychological affinity descendants of Kasyapa in the direct line, and in whom the powers of Kasyapa from time to time become strongly manifest. When such strongly manifested Kasyapika powers appear in a person by all occult right and customary usage, such imbodiment of the powers of the hierarch Kasyapa is likewise called Kasyapa.

Kasyapa-aditya or **Kasyap-aditya.** See KASYAPA

Katakopanishad. See KATHA UPANISHAD

Katapa. See KALAPA

Katha (Sanskrit) *Kathā* [from the verbal root *kath* to tell, relate] A story, tale, fable.

Katharsis. See CATHARSIS

Katha Upanishad or **Kathopanishad** (Sanskrit) *Kaṭhōpaniṣad* One of the Upanishads of the *Yajur-Veda*, named after the sage Katha; commented upon by Sankaracharya, founder of the Advaita-Vedanta school.

Kaumari (Sanskrit) *Kaumārī* Virgin, virginal; the active female energy or sakti of Karttikeya. Also an adjectival form of kumara.

Kauravas (Sanskrit) *Kaurava*-s The adjectival noun of Kurus, the opponents of the Pandavas in the *Mahabharata*. In a similar way Pandavas is derived from Pandu (light-colored, pale, blond). As light has always been taken as a synonym of spirit, some writers have argued that the Kauravas represent the material or evil forces, and the Pandavas the spiritual and light forces, both in cosmic and human natures; yet such analogies can be pressed too far. There was good and bad on both sides in the famous Indian epic.

Kauravya (Sanskrit) *Kauravya* King of the nagas or initiates in Patala (geographically the Americas) at least some 5000 years ago. Krishna's disciple, Arjuna, is said in the *Mahabharata* to have traveled to Patala and to have married Ulupi, the daughter of King Kauravya.

Kavyas (Sanskrit) *Kavya*-s, *Kāvya*-s [from *kavi* intelligent, wise] A class of pitris, the descendants of Kavi, closely connected with Sukra, regent of the planet Venus. Connected intimately with the manasaputras or solar pitris, monads of intrinsically spiritual-intellectual type or descent, as opposed to the barhishads or lunar pitris, the lower human ancestors. As the various descents of mind governed by cyclic law are connected with the manasaputras, we see the reason the kavyas are often represented as intimately connected with the whirling cycles of evolutionary time, and as presiding over these cycles.

Kavyavahana (Sanskrit) *Kavyavāhana* [from *kavya* a class of pitris + *vāhana* vehicle, carrier] The vehicle or carrier of the kavyas, the transmitter of kavya influence or power. It often stands for the intellectual fire or vitality of the solar pitris. In Hinduism this conception becomes the sacrificial fire which receives and translates offerings to the pitris. In the Puranas, pavaka (electric fire) is made parent to kavyavahana, but it is not the coarse electric substance of prithivi (the physical world), but the electric vivifying vitality of mind or intelligence.

Kaya. See TRIKAYA

Ka-yin. See CAIN

Kayumars (Persian), **Gayomard** (Pahlavi) *Gayōmard*, **Gayo-maretan** (Avestan) *Gayō-maretan* [from *gayō* life + *maretan* to become mortal and mutable] The first legendary king of Shah-Nameh, Ferdausi of the Pishdadian Dynasty [from *para-dhata* primeval law], who was not aware of the

existence of evil until his son Siamak was killed by Diev. This corresponds to the Biblical Adam before Eve ate from the tree of knowledge of good and evil. He is identified with 'Adam Qadmon or the aggregate logos comprehending within itself the ten classes of spiritual beings or Sephiroth; also the representative of the last individuals of the pitric dynasties on earth which preceded the truly human races.

His grandson Hushang (Arabic Ushhanj) is the king who discovers fire and brings civilization to man, becomes king of seven keshvars, and establishes the ancient religion, worshiping fire as the symbol of knowledge.

Kchana. *See* KSHANA

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ke-Kz

Keb. *See* SEB

Kebar-Zivo. *See* IUKABAR ZIVO

Kedara (Sanskrit) *Kedāra* A field, meadow, plain; a mountainous region in the Himalayas; also a name of Siva as worshiped in the Himalayas.

Keherpas, Karpas (Persian), **Kalpadh** (Pahlavi) *Kālpadh*. A cloth made of cotton; In Persian literature, used in the sense of a white cotton gown. It might symbolically allude to the aerial form, as a Parsi FTS wrote in *Five Years of Theosophy*, designating it as the third of seven human principles: “The word translated ‘aerial form’ [keherpas] has come down to us without undergoing any change in the meaning. It is the modern Persian word *kaleb*, which means a mould, a shape into which a thing is cast, to take a certain form and features” (p. 148).

Kelim (Hebrew) *Kēlīm* Vessels, utensils; in space the Qabbalists depicted a great source or fountain of life, which becomes the beginning of a number of cosmic vases or vessels — the kelim — which are the ten Sephiroth; through which all the energies, forms, and innumerable manifested objects come into being. This source of lives, the Crown or Kether, corresponds to the productive or generative Brahma, which just before the beginning of manvantaric manifestation was nonmanifest in the bosom of its higher essence, Brahman or parabrahman. When Brahma awakens to new activity and thus becomes what Western religion and philosophy call the Creator, the cosmic demiurge or former, then the various vessels or vases spring into being, and flow forth from Brahma, the Father-Mother. Being termed vessels simply signifies that the cosmic Sephiroth are the holders or containers of all the powers, faculties, forces, attributes, etc., which bring about the building of the manifested universe, enshrining as the Sephiroth do the unfolding of the energies of the Divine in the latter’s activity during manifestation.

Later Qabbalists regarded the kelim as being connected with the 22 canals — equivalent to the 22 letters of the Hebrew alphabet; which with the ten Sephiroth make the 32 paths of wisdom.

Kena Upanishad or **Kenopanishad** (Sanskrit) *Kenopaniṣad* [from *kena* by whom + *upaniṣad*] An Upanishad of the *Sama-Veda*, which opens with the question: “By whom commanded do mind, life, voice, eye, and ear go forth into being?”

Kerenhappuch (Hebrew) *Qeren Happūkh* Horn of paint, horn of antimony, or horn of Amalthea or plenty; in the Bible the third daughter of Job (42:14). HPB writes that this is a Pagan mythological name, not in its words but in its significance, and that it shows that the *Book of Job* is the work of an Initiate: “The presence in the *Septuagint* of this heroine of Pagan fable, shows the ignorance of the transcribers of its meaning as well as the exoteric origin of the *Book of Job*” (IU 2:496)

Kerkes [from Arabic] The Phoenix of the Koran, described as living for a thousand years and then consuming itself in a self-generated fire, from which it is reborn.

Kesarin (Sanskrit) *Keśarin* also *Kesarin*, *Keśarī*. Having a mane; a variant name of Anjana, the naga or initiate who was the mother of Hanuman, the monkey-god of the *Ramayana*. Hanuman’s father, the wind god (Pavana or Vayu), is at times also called Kesarin.

Keshara [Khaga]. See KHECHARA

Keshvar. See KARSHVAR

Kesil (Hebrew) *Kēsīl* [from *kāsal* to be heavy, sluggish, stupid, foolish] Fool, dullard; the constellation Orion. In the plural, constellations.

Kesin (Sanskrit) *Keśin* A demon slain by Krishna, the eighth avatara of Vishnu.

Kether (Hebrew) *Kether* Crown; in the Qabbalah, the name of the first Sephirah which is regarded as the first condensation of spiritual substance around the monadic center, this gathering together being the first reflection — the number 1 — from manifested nonbeing or ’eyn soph, the mystical cosmic womb of being represented figuratively as the Zero. Kether is termed the Primordial Point (nequdah ri’shonah) and the Expanded or Evolved Point (nequdah peshutah) because when the first reflection from above or condensation from ’eyn soph occurred, it was figured as a point or monadic garment.

This first Sephirah contains involved within itself all the other nine Sephiroth, which it proceeds in regular serial order to emanate forth. It is considered in the Qabbalah as a sexless yet androgynous potency. Kether is original spiritual Light in comparison with divine Darkness or the absolute Light of ’eyn soph, this divine Darkness being beyond human conception and hence termed the Concealed of the Concealed — a title also applicable to Kether itself. Being the oldest or first of the Sephiroth it is termed the Most Holy Ancient One (‘Attiqa’ Qaddisha’), the Ancient of Days (‘Attiq Yomin), and the White Head (Reisha’ Hiwwara’) as containing within itself all colors. As head of

the Sephirothal Tree, Kether is termed the Great Aspect, Macroprosopus, or Long Face ('Arich 'Anpin) as it contains all the attributes of the other nine Sephiroth. Its Divine Name is 'Ehyeh (I am), the first manifested existence or cosmic being. Applied to man, Kether is represented by the head. Its first emanation became the second Sephirah, Hochmah.

Keto. *See* CETUS

Ketu (Sanskrit) *Ketu* The descending node of the moon in astronomy; in Hindu mythology, the tail of the celestial dragon who is supposed to attack the sun during eclipses; also a comet or meteor.

Kha or **Khat** (Egyptian) [from *khaā* to set aside, cast away] The physical body, whether alive or dead. It refers to the unimportance of the physical body in the human constitution, abandoned or cast off at death, or indeed temporarily abandoned in the case of initiates who were elsewhere than in the body.

Also the sacred plant of the Egyptians corresponding to the Hindu soma.

Kha (Sanskrit) *Kha* Ethery spaces, often applied to the earth's atmosphere, sometimes used for akasa.

Khaba or **Khaibit** (Egyptian) *Khaba* or *Khaibit*. Shade, shadow; many of the deities are represented with two bodies, one often termed the thought-body, corresponding to the mayavi-rupa. There were other Egyptian terms for the mayavi-rupa. Blavatsky made khaba equivalent in the human constitution to the spiritual soul or buddhi, whereas Massey made it equivalent to astral body or linga-sarira (SD 2:632-3). *See also* KA

Khado. *See* KHADOMAS

Khadomas (Tibetan) *mkha' 'gro ma* (kha-do-ma) [from *mkha'* sky + *'gro* going + *ma* female] Equivalent of Sanskrit dakini; in popular Tibetan folklore, deities having feminine characteristics, and hence often styled mothers, although regarded as demons. Blavatsky states that they are elementals, "occult and evil Forces of Nature," and that Lilith is the Jewish equivalent: "Allegorical legends call the chief of these Liliths, *Sangye Khado* (Buddha Dakini, in Sanskrit); all are credited with the art of 'walking in the air,' and the greatest *kindness to mortals*; but *no mind* — only animal instinct" (TG 177; SD 2:285). Thus the khado or khadoma are equivalent to one of the classes of nature spirits recognized by the medieval Fire-philosophers.

Khaga. *See* KHECHARA

Khaldii, Khaldis. *See* CHALDEANS

Khamism [from *chem, chemi* the black land] Used by Bunsen for the Egyptian language, or old Coptic.

Khanda (Sanskrit) *Khaṇḍa* [from the verbal root *khaṇḍ* to divide] A partition, portion or part

divided off from the whole; hence a section or chapter of Hindu scripture. Used in philosophy for divisional parts.

Khanda-kala (Sanskrit) *Khaṇḍa-kāla* [from *khaṇḍa* a portion, part + *kāla* period of time] Time as broken up into periods; hence finite or conditioned time in contradistinction to infinite time or eternity.

Khanoch. See ENOCH

Khat. See KHA

Khechara (Sanskrit) *Khecara* [from *kha* blue ether, heaven, sky + *cara* wanderer, goer] He who wanders in the spatial blue, or he who wanders along the roads of heaven. One who can leave his physical body and go to other places in his mayavi-rupa; “the body of the Yogi becomes as one *formed of the wind*; as ‘a cloud from which limbs have sprouted out,’ after which — ‘he (the Yogi) beholds the things beyond the seas and stars; he hears the language of the Devas and comprehends it, and perceives what is passing in the mind of the ant’ ” (Jnanesvari q in VS 77). Equivalent to the Tibetan hpho-wa and Sanskrit khaga.

Khem (Egyptian) *Khem*. A deity presiding over the districts of Herui and Khem in Upper Egypt; being an aspect of Horus the Younger (Heru-merti). He is especially connected with the fish in the city of Sekhem in the Underworld: “Se-khen is the residence or *loka* of the god Khem (Horus-Osiris, or Father and Son), hence the ‘Devachan’ of Atma-Buddhi.

“ . . . Khem is Horus avenging the death of his father Osiris, hence punishing the Sins of man when he becomes a disembodied Soul. Thus the defunct ‘Osirified’ became the god Khem, who ‘gleans the field of *Aanroo*,’ *i.e.*, he gleans either his reward or punishment, as that field is the celestial locality (Devachan) where the defunct is given *wheat*, the food of divine justice” (SD 1:220-21).

Khensu or **Khonsu** (Egyptian) *Khensu* or *Khonsu* [from *khens* to travel, move about] The third of the triad of deities worshiped especially at Thebes, where he was regarded as the moon god, son of Amen-Ra and Mut. As Nefer-hetep (lord of joy of heart) he is depicted with the head of a hawk, surmounted by the crescent moon and the disk, and bearing the flailed staff and the ankh. As the moon he ruled over the month and possessed complete power over evil (or lunar) beings bringing disease and suffering, regarded as infesting earth, air, sea, and sky. Thus Khensu was addressed as the healer of diseases and the banisher of evil. Khensu was also associated with Horus as Harpocrates (Heru-pa-khart — Horus the babe) and with Ra, the sun god. At Hermopolis (Khemennu) he was associated with Thoth and called Khensu-Tehuti.

Khepera (Egyptian) *Khepera* [from *kheper* to become, be born, arise into manifestation] Originally one of three aspects of the sun: “I am Khepera in the morning, and Ra at noon-day, and Temu in the evening.” Later each of these aspects developed into a separate deity. Khepera was the god of

regeneration and development in growth, a spiritual power regulating re-embodiments and transmigrations and the deity presiding over the Egyptian form of the creation, where he is the only thing in existence besides the watery abyss, Nu. The deity of the universe, Nebertcher (a form of Ra) says: "I am he who came into being in the form of the god Khepera," the hieroglyphic text representing the word by the scarab surmounted by a circle. The universe, then, is but the re-manifestation of a previous universe: the scarab standing for rebirth and regeneration, and the circle for karmic destiny in the universe as containing the seeds of life, brought into activity through re-embodiment or rebirth. The primeval deities Shu and Tefnut were brought forth by Khepera, who was the developer of everything which comes into manifested being from latency. In *The Book of the Dead* Khepera is called the father of the gods.

Khi (Chinese) Also **Ch'i**. Breath; "The *khi* is the full manifestation of the *shen*" (I Ching), "while the bones and the flesh moulder in the ground, and imperceptibly become the earth of the fields, the *khi* departs to move on high as a shining light" (*Tsi i* 11). Blavatsky compares it in its essential meaning to buddhi in the human constitution; in other ways it is equivalent to the Hindu prana.

Khiu-te, Book of. See KIU-CHE, BOOK OF

Khnoom, Khnoum, Khoom. See KHNUM

Khnum, Khnumu, or Khnemu (Egyptian) *Khnum, Khnumu, or Khnemu* [from *khnem* to join, unite] The chief member of the triad of deities revered at Abu or Elephantine, their worship extending from Thebes to Philae. Khnemu was the Father who was in the beginning, who fashioned the first egg from which sprang the sun, raiser up of the heaven upon its four pillars, and supporter of the same in the firmament, builder of gods and men, maker of all things which are, evolver of things which shall be, the source of things which exist. Thus Khnemu is intimately connected with Khepera, perhaps the latter in his active creative functions. His attributes are those of a water deity, one of the recondite cosmic powers in the waters of space; later he became associated with the Nile god, Hapi, taking on the name Hap-ur, and with Nu, the primeval god of the watery abyss or space. But at Abu he united the characteristics of Ra, Shu, Seb, and Osiris. Even in Christian times his worship flourished, for Gnostic gems bear testimony to his popularity. Sometimes pictured as a ram-headed deity fashioning a man on a potter's wheel.

Khobilgan (Mong) Also Khubilkhan. One spelling of the title given in Central Asia to the supposed incarnations of the Buddha-influence.

Khoda (Persian) *Khōda*, **Khvataya, Khvatadha** (Avestan) *Khvatāya, Khvatādha* [from *khvat* self + *aya* come to be, or *dhata* creating, law] Khvataya is similar to the Sanskrit svata-ayu (self-existing), while khvatadha means self-created. In modern Persian khoda means "God."

Khons, Khonsu, Khonsoo. See KHENSU

Khopirron, Khopri, Khoprod, Khopron. See KHEPERA

Khou. See KHU

Khu (Egyptian) *Khu*. The human spirit-soul, closely connected with the heart (ab), and considered to be everlasting; usually depicted in hieroglyphics in the form of a heron. Massey makes it equivalent with manas, but Lambert makes it equivalent to divine spirit (SD 2:632-3). Elsewhere Blavatsky emphasizes the duality of the khu: the “justified” khu, absolved of sin by Osiris after death, which continues to live a second life; and the khu “which died a second time,” doomed to wander about and torture the living, as they are able to assume any form and enter into living bodies. This first type is equivalent to the reincarnating ego or immortal human soul. The second type is identical with the Roman larvae, lares, simulacrum, or shade, the Chinese houen, the theosophical elementary, and the necromantic “spirit” (cf BCW 7:155-17, 190-3).

Khubilkhan. See KHOBILGAN

Khuddaka-patha (Pali) *Khuddaka-pāṭha* [from *khuddaka* little one + *pāṭha* reading, text] A Buddhist scripture given to neophytes upon joining the Samgha (the Buddhist brotherhood); first book in the *Khuddaka-Nikaya* — a collection of short canonical Buddhist books. This brief text contains some of the most beautiful poems in Buddhist literature, and the reverential feelings evoked by reading it are unquestionably the principal reason for its use. It opens with a profession of faith in the Buddha, in the Doctrine, and in the Order.

Khutuktu. See CHUTUKHTU

Khuniras, Khuniras Bami (Pahlavi) **Havaniratha, Xvaniraos** (Avestan) The middle of the seven keshvars and the seventh in order. Abu Mansuri’s Shah-Nameh states that whatever existed in the four corners from one end to the other was bestowed upon this earth and divided into seven parts, each part called a keshvar (Avest *Kareshvar*), the seventh which is in the middle being called Khuniras Bami. This is where we live, which the kings called Iranshahr, consisting of all the known countries of the time including China, India, Barbar, etc.

Khutukhtu. See CHUTUKHTU

Kieou-tche. See KIU-CHE, BOOK OF

Kimah (Hebrew) *Kīmāh* [from *kūm* to heap, cluster together; or from *kāmah* to long for, be in love with something cf Sanskrit the verbal root *kam*] The Pleiades, known as the seven stars; mentioned in the Bible as bringing a sweet and gentle influence upon earth and men (Job 38:31).

Kimnaras. See KINNARA

Kimpurusha (Sanskrit) *Kimpuruṣa* Also *kimpūruṣa*. “What sort of a man?”; according to the Brahmanas, an evil being resembling a man. In later times, identified with kinnaras, beings in which the figure of a man and of an animal are combined. One class of celestial beings regarded as

attendants of Kubera.

In the *Vishnu-Purana*, Kimpurusha is one of the nine khandas (portions) into which the earth is divided, described as the region between the mountains Himachala and Hemakuta; occasionally therefore called Kimpurusha-varsha.

Kinaras. See KINNARA

King Arthur. See ARTHUR, KING

Kingdom(s) In natural history, a large group, department, or domain, marked off from others by characteristic qualities, three being generally recognized: animal, vegetable, and mineral, with mankind at the summit of the animal kingdom. Ancient thought as a whole, however, took account of vast spheres of cosmic inner space and inner consciousness inhabited by numerous hierarchies of all-various evolving, intelligent, and semi-intelligent beings. Hence it is that mankind was a separate kingdom; and, if we consider human nature as a whole, humanity is more sharply distinguished from the lower kingdoms than they are from each other. To these four in theosophy are added three kingdoms below the mineral called elemental kingdoms, thus making a septenate. Above the human may be enumerated three dhyani-chohanic or god kingdoms, but the word “man” has often been used so as to include these kingdoms. These divisions correspond to the other septenary and denary divisions in the cosmos.

The more highly each kingdom is specialized along its peculiar lines, the more sharply is it differentiated from the other kingdoms; but the distinction tends to disappear and merge into a continuity when the entities in the different kingdoms are in an elementary or germinal stage. The entities in any kingdom higher than the lowest must pass in brief recapitulation through all the stages represented by the preceding kingdoms, before they can develop the features characteristic of their own kingdom.

In another sense, kingdom is sometimes used in theosophy to signify the life-waves circling around a planetary chain, or the various individualized hierarchies in universal nature, each one comprising the kingdom or domain of its own characteristic species, topped by its hierarch.

Kingdom of Heaven, Kingdom of God In the New Testament, used by John the Baptist, Jesus, and St. Paul; it indicates a state of relative spiritual completion and attainment, not merely the afterdeath state of the “righteous” or “saved,” as seen in the statement, “the kingdom of God is within you” (Luke 17:21). Blavatsky interprets the answer in the *Gospel of the Egyptians* as to when the kingdom of heaven will come — “When the Two has been made One, and the Outward has become as the Inward, and the Male with the Female neither Male nor Female” — as signifying among other things, 1) the union of lower manas with the higher manas, the self-conscious raising of the personality to the individuality; and 2) the return of humankind to the androgynous state in future root-races. “Thus this Kingdom may be attained by individuals now, and by mankind in

Races to come” (BCW 13:48-9; 14:55).

King’s Chamber (Pyramid of Cheops) An initiation chamber and holy of holies of the Egyptian Mysteries, a symbol of the womb of nature and of regeneration through rebirth. “On the days of the Mysteries of Initiation, the candidate, representing the solar god, had to descend into the Sarcophagus, and represent the energizing ray, entering into the fecund womb of Nature. Emerging from it on the following morning, he typified the resurrection of life after the change called Death. In the great Mysteries his figurative death lasted two days, when with the Sun he arose on the third morning, after a last night of the most cruel trials. While the postulant represented the Sun — the all-vivifying Orb that ‘resurrects’ every morning but to impart life to all — the Sarcophagus was symbolic of the female principle” (SD 2:462; cf. SD 2:466&n). *See also* INITIATION

Kings of Edom. *See* EDOM

Kinnara, Kimnara (Sanskrit) *Kinnara, Kimnara* [from *kim* what + *nara* man] “What sort of a man?” — a mythical being supposed to have a human figure with the head of a horse; or sometimes a horse’s body having the head of a man. In later times, like the naras, they are reckoned with the gandharvas (celestial choristers), and are likewise frequently connected with the kimpurushas. Some accounts say that they sprang from the toe of Brahma; but they were the product of the earth at the commencement of the kalpa, the early attempts of formation of quasi-conscious beings leading to self-conscious beings.

In a larger sense, the kinnaras, kimpurushas, etc., are entities belonging to our planetary chain who partake partly of the nature of matter or form, and partly of spirit. They have a definite place in the economy of the planetary chain and perform their functions very much as the human hierarchy does. They are more advanced than the mere nature sprites or elementals, but yet are inferior to humankind, and are to be classed generally with the hosts of quasi-astral beings.

Kinvad or **Chinvad** (Avestan?) In the *Vendidad*, the holy bridge made by Ahura-Mazda extending over hell and leading to Paradise. For the souls of the righteous it widens to the breadth of nine javelins; for the souls of the wicked it narrows to a thread, and they fall down into hell, according to later Persian mythology. It corresponds to the Sirath bridge of the Moslems.

In the Avesta (Yasht 22), on the fourth day after death, the soul of the defunct finds itself in the presence of a maid of divine beauty or of fiendish ugliness according as he himself was good or bad, and she leads him into heaven or hell. This holy bridge and this maid are naught but karma; and as a person is essentially his own karma, the maid he meets after death is himself, divine in beauty or fiendish in ugliness; or again his constitution itself after death is the holy bridge which in the good and noble person can be traversed safely, but in the case of the wicked person who has starved his spiritual nature to a mere thread, his constitution becomes like the edge of a razor, and if there is not sufficient good and decency in the defunct to traverse this razor bridge, he falls into

the lower regions.

Kioo-tche. See KIU-CHE, BOOK OF

Kiratarjuniya (Sanskrit) *Kirātārjunīya* A poem by Bharavi describing the combat of Arjuna with the God Siva in the form of the wild mountaineer Kirata; the story is derived from the *Mahabharata*.

Kismet (Turkish) [from Arab *qismat* from *qasama* to divide] Fate, destiny; used by Moslems to designate all the incidents and details that occur to a person during life — what is commonly called one's lot, but implying that this is foreordained and irrevocable. As such it is not identical with karma.

Kistophoros (spelled by Blavatsky Kistophores) The fourth degree in the Egyptian Mysteries. The neophyte received this title when he had successfully passed the trial by judgment — similar to that described in the double hall of truth in the *Egyptian Book of the Dead*. In this degree the mystery-name Iao was communicated to the candidate.

Kiver-Shans. See KWEI SHEN

Kiu-che, Book of (Chinese) [Tibetan *rgyud-sde*] A large occult astronomical and astrological work known in certain parts of China and Tibet, but unknown in the Occident.

Kiu-te, Kiu-ti. See KIU-CHE, BOOK OF

Kiyun, Kiyyun. See CHIUM

Klesa (Sanskrit) *Kleśa* [from the verbal root *kliś* to molest, torment, suffer] Pain, suffering, involving nevertheless love of physical existence. Philosophically, the love of life, the cleaving to existence, the love of pleasure or of worldly enjoyment, evil or good. In the Yoga philosophy there are five klesa-karins (causes of pain): avidya (ignorance or nescience); asmita (egoism); raga (passion); dvesha (hatred); and abhinevesa (attachment, devotion).

Klesha. See KLESA

Klikoosha, Klikoucha (Russian) A crier out, screamer; those so possessed by the Evil One at times crow like cocks, neigh, and prophesy (TG 178).

Klippoth. See QELIPPOTH

Klotho. See CLOTHO

Kneph or **Knouphis** (Egyptian) *Kneph* or *Knouphis*. An alternative form of the deity Khnum or Khnemu, associated with Egyptian cosmogony. One of the gods of creative force: “as Chnoumis-Kneph, who represents the Indian Narayana, the Spirit of God moving on the waters of space, as *Eichton* or Ether he holds in his mouth an Egg, the symbol of evolution; and as *Av* he is Siva, the

Destroyer and the Regenerator; for as Deveria explains: ‘His journey to the lower hemispheres appears to symbolize the evolutions of substances, which are born to die and to be reborn.’ Esoterically, however, . . . Chnoumis-Kneph was pre-eminently *the god of reincarnation*” (TG 82-3). All these solar gods are the personification of the attributes of one god, representing various aspects of the phases of generation and impregnation.

Knights Templars A religio-military order, a brotherhood in arms, founded in the 12th century by Hugh de Payens and Geoffrey de St. Omer (Godfrey de St. Aldemar), and seven other knights for the purpose of protecting the Holy Sepulcher of the Christians, taking its name from the palace of the Latin kings in Jerusalem, which was called Solomon’s Temple. The Order being partly monastic, the knights took the usual vows of poverty, chastity, and obedience. The Order spread rapidly throughout Europe and the Near East, the Order being under the governance of an elected Grand Master, the first being Hugh de Payens elected in 1118, and the last, the 22nd, being Jacques de Molay, elected in 1297.

“The Temple was the last European secret organization which, as a body, had in its possession some of the mysteries of the East” (IU 2:380). The Order of the Temple was linked with the earlier Essenes and Gnostics, and the true Rosicrucians of the Middle Ages, and Freemasonry in its highest and oldest degrees, notably the third or Master Mason’s degree.

The high purposes for which the Order was founded were, however, gradually lost sight of due to the adoption of certain purely ecclesiastical rites and ceremonies. In the early years of the 14th century the Order, which had gained greatly in power and wealth, especially in France, was suppressed by Philip IV acting under the authority of Pope Clement V. In 1310 54 of the knights were publicly burnt, and in 1313 Jacques de Molay, the last Grand Master of the Order, suffered the same fate.

The Knight Templar degree of modern Freemasonry claims descent from the original Order.

Knoum. See KHNUM

Knouph. See KNEPH

Knower. See JNATA

Koah hag-Guph (Hebrew) *Kōah hag-Gūf* [from *kōah* power, strength, aptness + *gūf* body, vehicle, shell] Also Choach-ha-guf, ko’h-ha-guph, etc. The body of (vital) strength; equivalent to the model-body or *linga-sarira* in the sevenfold classification of human principles (cf SD 2:633).

Kobold The German name for the fairy of the hearth or the elemental beings or nature sprites of the character of the earth element. Popularly believed to inhabit mines and other underground places, corresponding to the gnomes. When such a being dwells in a house it is sometimes mistakenly called a poltergeist or racket sprite.

Koeus. See KOIOS

Koh-kaf. See KAF

Koinoboi (Greek) A body of mystics in Egypt of the early Christian era, often confused with the Therapeutae.

Koios (Greek) One of the seven titans as enumerated by Orpheus.

Kokab (Hebrew) *Kōkhāb* A shining celestial body, stars or planets, with the implication of a living being of celestial character; hence stellar light. In the Qabbalah and elsewhere in ancient Hebrew writings, frequently used for the planet Mercury.

Kol. See QOL

Kol-arbas (Hebrew) *Qōl-'arba'* Voice of the (sacred) four, voice of the Holy Tetrad; the sacred number four in the Valentinian Gnostic system — equivalent in many respects to the Pythagorean sacred tetrad, cosmogonically or pneumatologically as the higher four principles in the human constitution.

Kolarian The indigenous non-Aryan races of India are divided into three great classes: Tibeto-Burmese, Kolarian, and Dravidian. Although generally regarded as aboriginal, the Kolarians are known to have entered Bengal by means of the northeastern passes: they encountered the Dravidians in central India, who broke up the Kolarians and pushed them towards the east and west. Thus when the Aryans entered India, the Kolarians again succumbed to the invaders and were still more scattered into smaller groups. There are nine principal languages of the Kolarian group of which the most important is Santali. It is not akin to the Sanskrit, nor does it employ the Devanagari alphabet.

Interestingly, the Kolarians count by 20 rather than by 10, the same method employed by the Mayas in Central America.

Koldoun, Koldun (Russian) A magician or sorcerer; one having more power and knowledge than a znachar (wizard).

Koliadovki. See KALIADOVKI

Kolob. In Mormon writings, a planet nearest the throne of God: “[Abraham] saw the stars, that they were very great, and that one of them was nearest unto the throne of God; . . . and the name of the great one is Kolob, because it is near unto me, for I am the Lord thy God: I have set this one to govern all those which belong to the same order as that upon which thou standest. . . . And thus there shall be the reckoning of the time of one planet above another, until thou come nigh unto Kolob, which Kolob is after the reckoning of the Lord’s time; which Kolob is set nigh unto the throne of God, to govern all those planets which belong to the same order as that upon which thou

standest.” (*The Pearl of Great Price*, The Book of Abraham 3:2-3, 9)

Kols A tribe in central India “much addicted to magic. They are considered to be great sorcerers” (TG 179).

Kon-ton, Konton (Japanese) The primordial chaotic essence of the Shinto cosmogony.

Konx-om-pax (Greek) Mystic words used in the Eleusinian Mysteries, said to be an imitation of Egyptian words used in the mystical Isiac rites, whose meaning is still unknown. Possibly an ancient Atlantean phrase brought over into Egypt from the Atlantic island which Plato calls Atlantis, when Atlantean emigrants left their island for the purpose of colonizing the Egyptian delta and brought their mysteries with them.

Koorgan, Kurgan (Russian) A mound, generally artificially made; an old tomb. Popular tradition attaches magical or so-called supernatural occurrences to such mounds or their vicinity.

Koot-Hoomi. *See* KUTHUMI

Koran *al-Qur’ān* (Arabic) [from *qārā* to read] Book, reading; the holy scripture of Islam, regarded by Moslems as the word of God (Allah) as delivered to his prophet Mohammed. The Koran explains that in heaven there is the mother of the book, well concealed. Piece by piece it was sent down to the prophet by means of an angel, spirit, or the angel Gabriel. Mohammed issued these revelations serially, each one being called a reading (*qur’an*) or a writing (*kitab*), and each particular one was also called a *sura* (a series) — a word now used for each section or chapter, of which there are 114.

Mohammed dictated these *suras* to his immediate followers, who memorized them. But when some of these original reciters had lost their lives in the conflicts which occurred after the death of Mohammed, Omar suggested to Caliph ’Abu-Bekr (the successor of Mohammed) that they be reduced to writing. The commission to collect as many as possible of the narrations or parts of the revelations was given to Zaid, a native of Medina who had often acted as an amanuensis to Mohammed. This collection became the first Koran, which Azid wrote down in Arabic. Some years later a second redaction was made and all previous parts or manuscripts were burned: Zaid dictated the work to four scribes, and these four copies have come down to our own day.

The contents of the Koran are varied both in style and material: a declaratory style predominates; denunciations abound; idolatry and deification of any beings or things are condemned — especially in regard to the worship of Jesus as the son of God, although Jesus and Moses are both regarded as holy prophets. A similarity to the Jewish Bible is observable, even to attributing customs of the Jews to the Arabs. Allah is glorified as the one, all-powerful God, and Mohammed as his prophet. Believers receive special instruction, and terrible punishments are threatened for nonbelievers. The doctrines of heaven and hell in the Moslem conception are forcefully presented.

Kore-Persephone (Greek) [from *kore* maiden cf Ionic *koure*] The name under which Persephone

was worshiped in Attica; one of the three aspects of the earth goddess Demeter, who appears as wife, mother, and daughter. Kore-Persephone was one of the three great Eleusianian deities, the other two being Demeter and Zagreus-Iacchos, her child. As one of the chief divinities in the Mysteries, Kore (as Demeter-Kore) was fit consort of the dragon god (Zeus who wooed her in the form of a dragon).

Proclus, quoting Orpheus, says that when Persephone is united with the celestial Zeus she is then Demeter-Kore, but that when united with Pluto or Hades she is Kore-Persephone.

It was by Kore as the spouse of Hades that the bright side of death was revealed. She thus belonged preeminently to the Eleusinian Mysteries and one of the mystical dramas enacted for the instruction of neophytes was the rape of Persephone in which she was represented as in possession of the third eye. Blavatsky places her among the kabiria (SD 2:363).

Kore is also symbolized as the celestial weaver, who when carried off to the underworld by Hades is said to have left her webs unfinished. Proclus speaks of her as “weaving the diacosm of life” (*Cratylus*), and Claudianus tells of her weaving a robe for Demeter in which “she marks out the procession of the elements and the paternal seats with her needle, according to the laws of Mother Nature.”

Kosa (Sanskrit) *Kośa* [from the verbal root *kuś* to hold, enclose, embrace] A sheath or covering; its primary meaning is of enfoldment or containment. Philosophically, it is generally rendered sheath or encasement, also sometimes principle by Blavatsky. Five are enumerated in Vedantic philosophy (the panchakosa), corresponding very closely with the theosophical sevenfold classification of human principles, as seen in the following table made by Subba Row:

	<i>Esoteric Buddhism</i>		Vedānta	Tāraka-Rāja-Yoga
1.	Sthūla-śarīra		Annamaya-kośa	Sthūlopādhi
2.	Prāṇa		Prāṇamaya-kośa	
3.	Vehicle of Prāṇa [Liṅga-śarīra]			
4.	Kāma-rūpa [Kāma]		Manomaya-kośa	Sūkṣmopādhi
5.	Mind [Manas]	(a) Volitions & feelings		
		(b) Vijñāna (Intellect)		
6.	Spiritual Soul [Buddhi]		Ānandamaya-kośa	Kāraṇopādhi
7.	Ātman		Ātman	Ātman

Kosha(s). See KOSA

Kosmocratores. See COSMOCRATORES

Kosmos [from Greek *kosmos* order, universe] The universe, equivalent to the Latin *mundus*. Theosophy contemplates an infinite series of successive wholes or universes, each sufficiently complete to entitle it to be called a kosmos or universe, and yet each included within a larger whole. As there are no absolutes or final limits, this being contrary to nature, no sense of finality should be given to the word kosmos, which includes the invisible planes as well as the visible universe. Some theosophical writers use kosmos to refer to our home universe or galactic system, and cosmos for the solar system.

The triple deity Chaos-Theos-Cosmos is the containment of the space, both subjective and objective, of any hierarchy, however great or small, these in each case making a tetraktys.

Kothnoth 'Or (Hebrew) *Kothnōth 'Ōr* [from *kuthoneth* undergarment, tunic, close coat + 'ōr skin, whether human or animal] Also Chitonuth-our. Coats of skin; used in Genesis (3:21): “Unto Adam also and to his wife did the Lord God make coats of skin, and clothed them,” referring to the third root-race when truly astral humanity became physicalized or carnalized, thus receiving a body of flesh or coat of skin.

Kottos (Greek) Also Cottus. In Greek mythology, a son of Ouranos and Gaia (heaven and earth), one of the Hecatonchires — three gigantic brothers each with 100 arms and 50 heads — who were banished to Tartarus by Ouranos and who under Zeus became assistants to Hephaistos.

Koueis. See KWEI

Kounboun, Kunbum, Kumbum [from Tibetan *sku-'bum*] The sacred tree of Tibet, called the tree of the ten thousand images and characters. Tibetan tradition has it that this tree grew from the long hair of Tsong-kha-pa (14th century) who was buried in an enclosure of the lamasery of Kunbum where the tree is still growing. Said to be the only specimen of its kind to be found anywhere, although others deny this. Each of its leaves is said by some to bear a letter or a religious sentence written in perfect sacred characters. More recent travelers state that the tree is a noteworthy one whose leaves, twigs, or branches contain innumerable instances of strange lines or markings, though not alphabetic.

Krasis di Holou (Greek) [from *krasis* interblending, intermingling + *di'*, *dia* through + *holou* of the whole] A mingling through everything or all; used by the Stoics for the doctrine of the intermingling of all essences in the universe, which arise out of the primordial root-substance.

Kratidvishas. See KRATUDVISH

Kratu (Sanskrit) *Kratu* One of the mind-born sons of Brahma, a prajapati or emanator and progenitor of hierarchical entities. Kratu's consort, Samnati, was the mother of the 60,000 Valikhilyas described as chaste, resplendent, glorious sages of pygmy size, attendants upon the sun.

Kratudvish (Sanskrit) *Kratudviṣ* In Hindu mythology, an enemy of all ritualistic and ceremonial worship and exoteric sham; the spiritual beings which represented, in their human aspect, the adepts of esoteric wisdom in opposition to the multitude who followed exoteric and popular religious forms, mummeries, and sacrifices. The kratudvishas were often called the asuras, daityas, danavas, kinnaras, etc., who fought against Brihaspati, the prototype of exoteric and ritualistic worship in the Tarakamaya (war in heaven). All the kratudvishas are represented as being yogis and ascetics of great spiritual and intellectual power.

Kratudwishas. See KRATUDVISH

Krauncha-dvipa (Sanskrit) *Krauñca-dvīpa* According to the Puranas, the fifth of the seven dvipas (continents or islands) which make up the world. Esoterically these seven dvipas represent, among other things, our globe and its six invisible companion globes. Jambu-dvipa represents our globe D, while Plaksha, Salmala, Kusa, Krauncha, Saka, and Pushkara represent the six higher and invisible globes of our planetary chain. These dvipas also correspond to the geographical continents of the seven great root-races and even to the dry-land divisions of the earth during the period of one root-race. Hence Krauncha-dvipa, as the fifth, would correspond to our fifth root-race continent.

Kravyad (Sanskrit) *Kravyād* A flesh-eater; a carnivorous man or animal; also a title for the consuming fire of the funeral pyre, hence a name of Agni in one of his destructive or regenerative forms.

Kreios (Greek) One of the seven titans named by Orpheus.

Krios (Greek) A ram; the Latin Aries. Also one of the seven titans of Orpheus.

Krisasva (Sanskrit) *Kṛśāśva* Having lean horses; allegorical name of the father of the agneyastra, the magical weapons and missiles of Brahma which are spoken of in the *Ramayana* as weapons endowed with life and elemental intelligence.

Krisaswas. See KRISASVA

Krishna (Sanskrit) *Kṛṣṇa* Black, dark, dark blue; the most celebrated and eighth avatara of Vishnu. Hindus consider him their savior, and he is worshiped as the most popular of their gods. Krishna was born some 5000 years ago, the incarnated human spiritual power that closed the dvapara yuga — his death in 3102 BC marked the beginning of kali yuga. He was the son of Devaki and the nephew of Kansa, who parallels King Herod.

The life of Krishna bears interesting and occasionally striking similarities to the legends of other spiritual teachers. The lives of all those great spiritual messengers were recorded by initiates in the language of symbol and allegory. Krishna's conception, birth, and childhood are in essentials a prototype of the New Testament story.

One portion of the *Mahabharata*, the *Bhagavad-Gita*, contains the teachings given by Krishna to

Arjuna as his guide and spiritual instructor, teachings which are the quintessence of the highest yoga. The details of Krishna's life are symbolically given in the Puranas.

Krishna-kirana (Sanskrit) *Kṛṣṇa-kiraṇa* The radiant Krishna; one of his titles.

Krishnapaksha(m) (Sanskrit) *Kṛṣṇapakṣa* [from *kṛṣṇa* dark, black + *pakṣa* the half of a month] The dark half of a month, the 15 days during which the moon is waning.

Kristophores. See KISTOPHOROS

Krita Yuga (Sanskrit) *Kṛta Yuga* [from *kṛta* well-done from the verbal root *kṛ* to do, make + *yuga* age] The first of the four great yugas which constitute a mahayuga (great age). In the krita or satya yuga, virtue or intrinsic goodness is said to reign supreme. It is often called the Golden Age of mankind, lasting 1,728,000 years. See also YUGA

Krittika (Sanskrit) *Kṛttikā* [from *kṛtti* pelt, hide on which a disciple sits from the verbal root *kṛt* to divide into portions] plural krittikas. The Pleiades; originally the first lunar mansion, in later times the third, having Agni as its regent. The constellation is sometimes represented as a flame, sometimes as a knife. In mythology there are six krittikas represented as nymphs, who became the nurses of the god of war, Karttikeya.

Kriya-sakti (Sanskrit) *Kriyā-śakti* [from *kriyā* action + *śakti* power] The power of action; mystically the power of active thought or spiritual will power,

“that mysterious and divine power latent in the will of every man, and which, if not called to life, quickened and developed by Yogi-training, remains dormant in 999,999 men out of a million, and gets atrophied. . . .

“ ‘*Kriyasakti* — the mysterious *power of thought* which enables it to produce external, perceptible, phenomenal results by its own inherent energy. The ancients held that any idea will manifest itself *externally* if one's attention (and Will) is deeply concentrated upon it; similarly, an intense volition will be followed by the desired result’ ” (SD 2:173).

In the early part of the third root-race before the complete separation of the sexes, certain holy sages who were the most intellectually evolved of the then humanity, produced the first nagas, called the Sons of Will and Yoga, by the power of kriyasakti. In the distant future, human reproduction will be through this spiritual will power and imagination.

Kroesus. See KREIOS

Kronos (Greek) In Greek mythology, the youngest of the titans, son of Ouranos (heaven) and Gaia (earth). His mother gave him a sickle, emblem of karmic reappings in the course of time, when he led the war against his father. After castrating his father, he became ruler of the gods and, so he would not suffer a similar fate, he swallowed all his children by his wife-sister, Rhea. Eventually,

however, he was overthrown by his youngest son, Zeus. In some accounts he was imprisoned in Tartarus, in others he was reconciled with Zeus and reigned with Rhadamanthys on the Islands of the Blessed.

Considered originally a harvest god, his name became interpreted as equivalent to Chronos (time) and many of his characteristics imply this. He was pictured as an old man with a mantle over the back of his head, holding a sickle in his hand. The Romans identified him with Saturnus, a harvest god. He is also identified in various ways with Jehovah, Saturn, and Kala, and sometimes made father of the seven titans. Blavatsky remarks that he personifies the Lemurians or third root-race humanity.

Krura-lochana (Sanskrit) *Krūra-locana* The evil-eyed, a title of Sani, the regent of the planet Saturn, and to the planet itself.

Kshana (Sanskrit) *Kṣaṇa* An extremely short period of time; the 90th part of a thought, the 4500 part of a minute, the 75th part of a second, during which from 90 to 100 births and as many deaths occur on this earth, according to Hindu legends.

Kshanti (Sanskrit) *Kṣānti* [from the verbal root *kṣam* to be patient] Patience; one of the six Buddhist paramitas.

Kshara (Sanskrit) *Kṣara* [from the verbal root *kṣar* to flow or stream away, melt away, perish, wane] That which is perishable; applied to the manifested universe or to a body of any kind, because of its transitory, perishable, and impermanent character. Krishna in the *Bhagavad-Gita* divides all existing entities into two classes, the kshara (those not permanent) and the akshara (the imperishable) — the latter being a common title of the higher gods.

Kshatra. See KSHETRA

Kshatriya, Kshatriya (Sanskrit) *Kṣattriya, Kṣatriya* The warrior, administrator, ruler; the second of the four Hindu castes. See also CHATUR-VARNA

Kshayatithis or **Tithi-Kshaya** (Sanskrit) *Kṣayatithis, Tithikṣaya* The day of the new moon, used in Sanskrit astronomical works.

Kshetra (Sanskrit) *Kṣetra* A sphere of action; a field. In the *Bhagavad-Gita*, used for the compounded constitution of the knower or conscious entity (also kshetrajna). Not only the constitution of a being which thus provides the field in which the spiritual knower works within himself, but in another sense applied to the field of action of a being in which it works and manifests its faculties and powers. Thus the constitution of a human being is the kshetra in which the monad lives and acts; similarly the solar system is the kshetra of the hierarch of the solar system.

Kshetrajna (Sanskrit) *Kṣetrajña* [from *kṣetra* field (body) + *jña* knower] The knower in or of the

field; imbodyed spirit, the conscious ego in its highest manifestations. Regarded as the sphere of action, or compounded constitution, of the knower or conscious entity; hence the spiritual ego, the human soul's spiritual parent, buddhi-manas. Kshetrajna often refers to the combination of atma-buddhi-manas called the reincarnating ego, or the Lord, in us. As imbodyed ego, it is the cognizing and recognizing element in the human constitution.

“This perishable body, O son of Kunti, is known as Kshetra; those who are acquainted with the true nature of things call the soul who knows it, the Kshetrajna. . . .

“Know, O chief of the Bharatas, that whenever anything, whether animate or inanimate, is produced it is due to the union of the Kshetra and Kshetrajna — body and the soul” (BG ch 13).

See also AJA

Kshetrajneshvara (Sanskrit) *Kṣetrajñeśvara* [from *kṣetra* field (body) + *jña* knower + *īśvara* lord] The cognizing egoic self in the individual, the same as kshetrajna plus the suggestion of individual power implied in the word Lord.

Kshetrajneshwara. *See* KSHETRAJNESVARA

Kshetram. *See* KSHETRA

Kshira (Sanskrit) *Kṣīra* Milk; mystically, the curds of space, or the nebulous matter of the spatial deeps, out of which universes, solar systems, or planets are evolved.

Kshira-samudra (Sanskrit) *Kṣīra-samudra* The ocean of milk, which was churned by the gods, according to Puranic legend. The sea of milk and curds is the Milky Way and the various congeries of nebulae. The allegory of the churning of the ocean of milk refers to a time before the kosmos was evolved. Vishnu, who here stands for aeonic preservation of karmically developed cosmic stuff or matter, is its intelligent preserver, and churns out of the primitive ocean (the chaos of a universe in pralaya) the amrita or immortal essence which is reserved only for the gods. *See also* KURMA-AVATARA

Kuan. *See* KWAN

Kuan Tzu (Chinese) The most voluminous Taoist work that has come down to our day. It treats of the ethical and political philosophy of tao with regard to the universe and man. Its authorship is assigned to Kuan tzu (also Kaun Chung or Kwan-twu, Kwan-tsze, Kwan-tse, etc.) of the 7th century BC. He is regarded as one of the three patriarchs of Tao — the other two being Lao tzu and Chuang Tzu. The work bears evidence of having been added to by other and later authors.

Kuch-ha-guf. *See* KOAH HAG-GUPH

Kuei. *See* KWEI

Kuen-lun-shan (Chinese) One of the sacred mountains in China, situated in the southwest between China and Tibet in the Keun-lun range which divides Tibet on the south from Eastern Turkestan. Every three years Buddhists assembled there, their observances climaxed by religious marvels produced by the hierophant (styled Foh-chu, “buddha-teacher”) under the Tree of Knowledge and Life (Sung-ming-shu).

Kukkuta-pada-giri (Sanskrit) *Kukkuṭa-pāda-giri* [from *kukkuṭa* cock + *pāda* foot + *giri* mountain] Also called Guru-pada-giri, the teacher’s mountain; a mountain situated about seven miles from Gaya, famous owing to a persistent report that the Buddhist arhat Mahakasyapa even to this day dwells in its caves.

Kuklos (Greek) A circle, wheel; in philosophy, a cycle. The ancients divided the duration of our world or universe into a large number of cycles, the small within the great, somewhat after the fashion of the vision of Ezekiel who saw wheels within wheels, cycles within cycles.

Kuklos Anankes, Kuklos Anagkes (Greek) The circle or wheel of necessity; may stand for the journey of the disembodied entity to the state of devachan and back to earth, which was at times symbolized by the serpent-mounds, the serpent swallowing his tail, and other emblems of the dragon, all of which among other things denote cyclic time. In the subterranean crypts of Thebes and Memphis were celebrated the sacred Mysteries of kuklos anankes, in which the candidates for initiation were given actual instructions in the inexorable laws traced for every disembodied soul.

In addition, the circle of necessity refers to the wheel of time in its many intricate cyclings or whirlings, and to the peregrination or rounding through both the visible and invisible spheres of the hosts of monads during a cosmic manvantara, these taking place not only upwards and downwards, so to speak, but likewise having a distinct reference to the growth through unfolding by the monads of what is latent within them.

Kulluka or **Kulluka-bhatta** (Sanskrit) *Kullūka, Kullūka-bhaṭṭa* A writer supposed to be of the 15th century, well known because of his commentary upon *The Laws of Manu*, for which he received the title bhatta (learned man).

Kumaras (Sanskrit) *Kumāra-s* [from *ku* with difficulty + *māra* mortal] Mortal with difficulty; often used for child or youth; and philosophically, pure spiritual beings, unself-conscious god-sparks uninvolved with matter who, destined by evolution to pass through the realms of matter, become mortal, i.e., material, only with difficulty because of their lofty spirituality. They are the classes of arupa or solar pitris, along with the agnishvattas and manasaputras. Of all the seven great divisions of dhyani-chohans, there is none with which humanity is more concerned than with the kumaras, the mind-born sons of Brahma-Rudra or Siva, the inveterate destroyer of human passions: “it is they who, by incarnating themselves within the senseless human shells of the two first Root-races, and a great portion of the Third Root-race — create, so to speak, *a new race*: that of

thinking, self-conscious and *divine* men” (SD 1:456-7). In the Puranas their number varies, given as seven, four, and five. They are often called the Four, because Sanaka, Sanada, Sanatana, and Sanat-Kumara are the names of four important groups of kumaras as they spring from the fourfold mystery. The three secret names of the seven are variously given: Sana, Sanat-Sujata, and Kapila; or Kapila, Ribhu, and Panchasikha; or Jata, Vodhu, and Panchasikha, all of which are but aliases. The patronymic name of the kumaras is Vaidhatra [from *vidhatri* a title of Brahma as creator of the universe].

These kumaras are sometimes also called rudras, adityas, gandharvas, asuras, maruts, and vedhas. The seven kumaras — both as groups and as aggregated individuals — are intimately connected with the dhyani-buddhas who watch over the seven rounds of our planetary chain. The four groups of kumaras generally spoken of are connected equally intimately with the four celestial bodhisattvas of the four globes of our round, and by correspondence with the four completed root-races of our earth. They are identical with the angels of the seven planets, and their name shows their connection with the constellation Makara or Capricorn. Makara is connected with the birth of the spiritual microcosm, and the death or dissolution of the physical universe (its passage into the realm of the spiritual) as are the kumaras. Mara is the god of darkness, the Fallen one, and death, i.e., death of every physical thing; but through the karmic lessons learned also the quickener of the birth of the spiritual. The kumaras are connected also with the sage Narada. An allegory in the Puranas says that the kumaras, the first progeny of Brahma, were without desire or passion, inspired with the holy wisdom, and undesirous of progeny. They refused to create, but were compelled later on to complete divine man by incarnating in him. The barhishads or lunar pitris formed the “senseless” astral-physical humanity of the early root-races. Those beings possessing the living spiritual fire were the agnishvattas or solar pitris. The sons of Brahma, the kumaras, being originally themselves unconscious (in our sense) could be of no use in supplying the mental and kamic principles, as they did not possess them: they had attained no individual karmic elevation in merit of their own as had the agnishvattas. The perfection of the kumaras was passive and negative (nirguna). The kumaras eventually “sacrifice” themselves by incarnating in mankind, thus corresponding to the manasaputras and fallen angels cast into hell (material spheres, our earth).

Kumara-budhi (Sanskrit) *Kumāra-budhi* The human buddhic or spiritual monad, mystically signifying utterly pure monadic wisdom, with all its lofty attributes.

Kumara-guha (Sanskrit) *Kumāra-guha* The virgin-youth of mystery; title of the Hindu god Karttikeya.

Kumbha (Sanskrit) *Kumbha* Watering pot; the eleventh zodiacal sign, Aquarius. “When represented by numbers, the word is equivalent to 14. It can be easily perceived then that the division in question is intended to represent the ‘Chaturdasa Bhuvanam,’ or the 14 lokas spoken of

in Sanskrit writings” (Subba Row, Theos 3:44).

Kumbhaka (Sanskrit) *Kumbhaka* An extremely dangerous practice belonging to the hatha yoga system, consisting in retaining the breath by shutting the mouth and holding the nostrils closed with the fingers of the right hand. Such breathing exercises are attended with the utmost physiological danger unless practiced under the guidance of a genuine adept.

Kumbhakarna (Sanskrit) *Kumbhakarna* Brother of King Ravana of Lanka, then far larger than the Sri Lanka (Ceylon) of modern days which is but the great northern headland of the large island of ancient times. Kumbhakarna, under a curse of Brahma, slept for six months, and then remained awake one day to fall asleep again, and so on, for many hundreds of years. He was awakened to take part in the war between Rama and Ravana.

Kumbum Tree. See KOUNBOUM

Kumil-Madan (Tamil) Blowing like a bubble; the elemental associated with water, called undine in the Occident. A merry imp in popular tales, assisting people in the proximity of water, even causing a rain shower. To those who resort to divination by water, the Kumil-Madan lends his aid by showing the present or the future.

Kumuda-pati (Sanskrit) *Kumuda-pati* Lord of the lotus; title of the moon, the earth’s parent.

Kunbum. See KOUNBOUM

Kundalini, Kundalini-sakti (Sanskrit) *Kuṇḍalinī, Kuṇḍalinī-śakti* [from *kuṇḍalinī* circular, spiral + *śakti* power, force] The circular power; one of the mystic, recondite powers in the human constitution. It “is called the ‘Serpentine’ or the *annular* power on account of its spiral-like working or progress in the body of the ascetic developing the power in himself. It is an electric fiery occult or *Fohatic* power, the great pristine force, which underlies all organic and inorganic matter”; “it is *Buddhi* considered as an active instead of a passive principle (which it is generally, when regarded only as the vehicle, or casket of the Supreme Spirit Atma). It is an electro-spiritual force, a creative power which when aroused into action can as easily kill as it can create” (VS 77-8, 76-7). Kundalini works in and through the human auric egg on all levels: “In its higher aspect Kundalini is a power or force following winding or circular pathways carrying or conveying thought and force originating in the Higher Triad. Abstractly, in the case of man it is of course one of the fundamental energies or qualities of the Pranas. Unskilled or unwise attempts to interfere with its normal working in the human body may readily result in insanity or malignant or enfeebling disease” (OG 83).

Kundzabchi-denpa *kun rdzob kyī bden pa* (kun-dzob-kyi den-pa) Illusion-creating appearance; Tibetan equivalent of Sanskrit samvritti-satya. See also DONDAMPAI-DENPA

Kunlun Mts. See KUEN-LUN-SHAN

Kunti (Sanskrit) *Kuntī* Wife of Pandu and mother of three of the Pandavas, foes of their cousins, the Kauravas, in the *Mahabharata*.

Kun-ttag, Kun-tag (Tibetan) *kun brtags*. Imagined, projected; particularly applied to illusion. Equivalent to the Sanskrit *parikalpita* (to be arranged or distributed). The connection arises from the fact that the homogeneous breaks up into the heterogeneous, and in this sense becomes *parikalpita*, and heterogeneity is the nursery or womb of illusion.

Kuran. See KORAN

Kurma-avatara (Sanskrit) *Kūrma-avatāra* The Tortoise avatara; a descent of Vishnu, the sustainer of life, in the form of a tortoise. In the Puranas, a portion of cosmic Vishnu descended as the kurma to restore to mankind the mystic nectar (amrita), the essence of life and truth, as well as other holy and precious things needful to humanity, which had been lost. Vishnu ordered the gods to churn the sea of milk that they might procure once more these precious things, and he promised to become the tortoise on which the mountain Mandara as a churning stick should rest. Out of the sea of churned milk arose the 14 precious things, and with these the gods won their authority over the demons once more. Cosmically this churning of the sea of milk relates to a period before the earth's formation, the sea of milk being the expanse of space populated by the nebulae and diffuse star-stuff, the seeds and substance of future worlds and their hierarchies.

Kurma Purana (Sanskrit) *Kūrma Purāṇa* [from *kūrma* tortoise] One of the 18 principal Hindu Puranas, so named because it deals with the avataric incarnation of Vishnu in the form of a tortoise. The scripture was recited by Janardana (Vishnu) in the regions under the earth to Indradyumna and the rishis in the proximity of Sakra. It tells about the Lakshmi Kalpa, and treats of the objects of life: duty, wealth, pleasure, and liberation.

Kuru (Sanskrit) *Kuru* The ancestor of Dhritarashtra, father of the Kauravas and the brother of Pandu, the father of the Pandavas. According to modern scholars, he ruled in the northwest of India around Delhi.

Kurukshetra (Sanskrit) *Kurukṣetra* The plain upon which the great battle between the Kurus and Pandavas took place, as told in the *Mahabharata*. Modern scholars place it in northwest India near Delhi, where there is a plain which to this day is called the Plain of Kurukshetra.

Kurus (Sanskrit) *Kuru-s* The foes and cousins of the Pandavas, as related in the *Mahabharata*. See also KAURAVAS

Kusa (Sanskrit) *Kuśa* The sacred grass (*Poa cynosuroides*, a grass with long pointed stalks) used in India at certain religious ceremonies, commonly called darbha by Brahmins.

Kusa-dvipa (Sanskrit) *Kuśa-dvīpa* One of the seven dvipas (island-continents) into which the globe is divided, according to the occult geography of the Puranas. It was said to be surrounded by a sea

of liquefied butter. Cosmically, one of the globes of the earth planetary chain.

Kusadwipa. See KUSA-DVIPA

Kusala or **Kusala** (Sanskrit) *Kuśala, Kusala* Merit, virtue.

Kusa-nagara (Sanskrit) *Kuśa-nagara* The town in which Gautama Buddha is said to have died.

Kusinara. See KUSA-NAGARA

Kutastha (Sanskrit) *Kūṭastha* [from *kūṭa* the highest, summit + *stha* standing] Standing at the summit; in philosophy holding the highest position, the primordial divinity; hence often a synonym for Isvara (the divine-spiritual monad) or akshara (the imperishable). Also used for akasa and mulaprakriti. Thus whether in the galaxy, solar system, or a monadic individual such as man, it stands for the indwelling highest monad.

Kuthumi, Koot Hoomi The name assumed by one of the mahatmas, a teacher of Blavatsky, who played an important part in the founding of the Theosophical Society, and whose correspondence formed the basis of A. P. Sinnett's works and of *The Mahatma Letters to A. P. Sinnett*. It was not his own proper personal name.

Kutti Shattan (Tamil) An elemental being popularly regarded as an imp and associated with fire.

Kuvera, Kubera (Sanskrit) *Kuvera, Kubera* In Hindu mythology the regent of the north, also the chief of various spirits of nature whose abode is the underworld or Hades. Like the Greek Pluto-Plutus, he is said to be possessed of great wealth and to be the keeper of all the treasures on earth.

Kwan, Kuan (Chinese) Taoist term equivalent to the Sanskrit *dhyana* (meditation). "*Kuan* means originally to 'watch' for omens, and in the dictionaries it is defined as 'looking at unusual things,' as opposed to ordinary seeing or looking. Hence, in accordance with the general 'inward-turning' of Chinese thought and vocabulary, it comes to mean 'what one sees when one is in an abnormal state'; and in Taoist literature it is often practically equivalent to our own mystic word 'Vision.' The root from which *dhyana* comes has however nothing to do with 'seeing' but means simply 'pondering, meditating'; and it was only because *kuan* already possessed a technical sense closely akin to that of *dhyana* that it was chosen as an equivalent, in preference to some such word as *nien*, or *ssu*, which are the natural equivalents" (Waley, *The Way and Its Power* 119-20).

Kwan-shai-yin, Kuan-shi-yin (Chinese) Equivalent to the Sanskrit Avalokitesvara, both being the seventh cosmic principle. Mystically, the cosmic Logos or Word, and in common with all the logoi referred to as a cosmic Dragon of Wisdom; the first universal manus or cosmic *dhyana*-chohans.

Kwan-shai-yin is often confused with Kwan-yin, the Chinese goddess of compassion, the feminine Logos and counterpart of Kwan-shai-yin; but "*Kwan-shai-yin* — or the universally manifested voice 'is active — *male*; and must not be confounded with *Kwan-yin*, or *Buddhi* the Spiritual Soul (the

sixth Pr.) and the vehicle of its “Lord.” ’ It is *Kwan-yin* that is the female principle or the manifested *passive*, manifesting itself ‘to every creature in the universe, in order to deliver all men from the consequences of sin’ . . . while *Kwan-shai-yin*, ‘the Son identical with his Father’ is the *absolute activity*, hence — having no direct relation to objects of sense is — *Passivity*” (ML 344).

Kwan-shai-yin, the Voice or Logos, is “the germ point of manifested activity; — hence — in the phraseology of the Christian Kabalists ‘the Son of the Father and Mother,’ and agreeably to ours — ‘the Self manifested in Self — *Yih-sin*, the ‘one form of existence,’ the child of *Dharmakaya* (the universally diffused Essence), both male and female” (ML 346).

In man it is the atman when working through — as it always does during imbodiment — its veil buddhi, thus enabling the atman to send down and distribute the atmic rays throughout the other five principles of the human constitution.

Kwan-yin, Kuan-yin (Chinese) The Chinese Buddhist goddess of compassion, the female aspect of Kwan-shai-yin, referred to in the Stanzas of Dzyan as the triple of Kwan-shai-yin, residing in Kwan-yien-tien, “because in her correlations, metaphysical and cosmical, she is the ‘Mother, the Wife and the Daughter’ of the *Logos*, just as in the later theological translations she became ‘the Father, Son and (the female) Holy Ghost’ — the *Sakti* or Energy — the Essence of the three. Thus in the Esotericism of the Vedantins, *Daiviprakriti*, the Light manifested through Eswara, the *Logos*, is at one and the same time the Mother and also the Daughter of the Logos or Verbum of Parabrahmam; while in that of the trans-Himalayan teachings it is — in the hierarchy of allegorical and metaphysical theogony — ‘the Mother’ or abstract, ideal matter, Mulaprakriti, the Root of Nature . . . a correlation of Adi-Bhuta, manifested in the Logos, Avalokiteshwara; and from the purely occult and Cosmical, Fohat, the ‘Son of the Son,’ the androgynous energy resulting from this ‘Light of the Logos’ ” (SD 1:136-7).

Kwan-yin is the Chinese counterpart from one point of view of the Egyptian Isis, the Hebrew Bath-Qol — the “daughter of the (Divine) Voice” — and of the Hindu Vach. “She is male and female *ad libitum*, as Eve is with Adam. And she is a form of Aditi — the principle higher than *Ether* — in Akasa, the synthesis of all the forces in Nature; thus Vach and Kwan-Yin are both the magic potency of Occult sound in Nature and Ether — which ‘Voice’ calls forth Sien-Tchan, the illusive form of the Universe out of Chaos and the Seven Elements” (SD 1:137).

Kwan-yin-tien, Kuan-yin-t’ien (Chinese) The melodious heaven of sound, the abode of Kwan-yin, the range of action of the Logos and of the minor logoi on their own planes.

Kwei (Chinese) Also Kuei. Generally, evil spirits or demons; used in Taoism in connection with yin, referring to beings supposed to be connected with the dark side of nature. Yin is regarded as a universal kwei divisible into myriads of particles. Union of the kwei and shen causes life, activity; their separation causes death. Man is likewise composed of a kwei and shen, the kwei representing the dark side of his nature.

Kwei Shen, Kuei Shen (Chinese) “Man is a product of the beneficial operation of Heaven and Earth, or of the copulation of the Yin and the Yang, and the union of a *kwei* with a *shen*; he consists of the finest breath which the five elements contain” (*Li yun* 3). The mayavi-rupa, which is the combination by the power of thought (or the inner kriyasakti) of the manasic faculty with a tenuous astral garment. The mayavi-rupa, however, is more often made to contain the complete human being minus the lowest triad (body, physical vitality, and linga-sarira); thus only in one sense does the mayavi-rupa correspond with the kwei shen. In the lower parts of the human constitution, it becomes vehicular rather than related to active self-consciousness, and can signify the vital body or linga-sarira.

Kyriel *kyrielle* (French) [from Greek *kyrie eleeson* Lord have mercy, opening invocation used in the Christian churches] A litany, a long list of words or names.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

La-Li

La and **Laeti** (Icelandic) [from *la* high water mark on the shore, used symbolically for blood, bloodline; *laeti* manner, including both appearance and sound] Skill and manner, also translated as blood and keen senses; the two qualities in human beings, bloodline, or in modern terms genetic heredity, and personality with the appearance and sound it presents, which are the gifts of Lodur (fire, vitality), the third member of the creative trinity which endowed humanity with its human and divine potential. The other two creative agents were Odin (air, spirit), and Honer (water, intelligence). The early humans were by them endowed with the properties of these three aspects of divine nature.

Labarum (Latin) **Labaron** (Greek) The standard carried by armies under the Christian Roman emperors, consisting of a pike from whose crossbar hung a silken banner bearing a crown of gold which enclosed the monogram  made of the two first Greek letters of Christos. The banner was a modification of the original Roman banner, and the monogram was an ancient symbol used in the Mysteries, for instance in Egypt, where it was an emblem of Osiris and Horus ages before the Christian emperors. It is one form of the cross and circle, borrowed by the Christians and adapted to suit their purposes.

This symbol can be traced “from our modern cathedrals down to the Temple of Solomon, to the Egyptian Karnac, 1600 BC. The Thebans find it in the oldest Coptic records of symbols preserved on tablets of stone and recognize it, varying its multitudinous forms with every epoch, every people, creed or worship. It is a Rosicrucian symbol, one of the most ancient and the most mysterious. As the Egyptian *Crux ansata*,  or  that travelled from India, where it was considered as belonging to the Indian symbolism of the most early ages, its lines and curves could be suited to answer the purpose of many symbols in every age and fitted for every worship” (Some Unpublished Letters of Blavatsky 153-5).

Labyrinth [from Greek *labyrinthos* probably from *laura* crypt] The complex prison built for King Minos of Crete by Daedalus to house the Minotaur. Theseus succeeded in finding his way out with the aid of the thread given him by the king's daughter, Ariadne. Symbolically, it may be the celestial labyrinth, into which the souls of the departed plunge, and also its earthly counterpart, as shown in the tortuous subterranean chambers in ancient Egypt, or similar constructions under temples in various ancient lands. These labyrinths also symbolized the races of mankind, and the succession of gods, demigods, and heroes who preceded mortal kings. These underground chambers in general were used as initiation chambers in the Mysteries, where candidates were taught by actual experience various truths regarding human destiny after death; hence there was an exact analogy between the physical construction of these chambers and the truths thus symbolized. The labyrinth therefore refers both to an inner and outer mystery. One of the coins unearthed at Knossos in Crete showed a diagram of such a maze, and this identical pattern, exact to the last important detail, has been found among the Pima Indians of Arizona (cf Theosophical Path, April 1925). Clearly its real significance was common knowledge to initiates in all parts of the world.

Concerning the labyrinth of ancient Egypt, "Herodotus, preserved for posterity the remembrance of that wonder of the world, the great Labyrinth. . . . Herodotus says that he found therein 3,000 chambers; half subterranean and the other half above-ground. 'The upper chambers,' he says, 'I myself passed through and examined in detail. In the underground ones (which *may exist till now*, for all the archaeologists know), the keepers of the building would not let me in, for they contain the sepulchres of the kings who built the Labyrinth, and also those of the sacred crocodiles. The upper chambers I saw and examined with my own eyes, and found them to excel all other human productions' " (IU 1:522-3).

The series of chambers in the labyrinth was an attempt to portray in the Mysteries by means of a construction — whether subterranean or above ground — the peregrinations of the human monad in its postmortem destiny, as it wandered from chamber to chamber — from sphere to sphere or globe to globe — in the celestial spaces, finally returning to its point of departure, in this instance to human reimpodiment.

Lachesis (Greek) Lot, destiny; second of the three Moirae (Fates), represented in Greek mythology as allotting to each person the characteristics as well as the length of his life, measuring these by the thread which they spun. Lachesis measured the thread spun by her sister Clotho, which then was cut by Atropos. She is often represented as a maiden with a scroll or globe.

Ladder Used symbolically in many cultures, to represent a means of ascending or descending to different worlds or the structure of the universe. "The *Brahmanical Ladder* symbolises the *Seven Worlds* or *Sapta Loka*; the *Kabalistical Ladder*, the seven lower Sephiroth; *Jacob's Ladder* is spoken of in the Bible; the *Mithraic Ladder* is also the 'Mysterious Ladder.' Then there are the Rosicrucian,

the Scandinavian, the Borsippa Ladders, . . . and finally the *Theological Ladder* which, . . . consists of the four cardinal and three theological virtues” (TG 185).

Ladder of Life The system of hierarchies, all orders of worlds and beings from the highest to the lowest forming a regular graduated series like the rungs of a ladder or steps, which are like landing places in a continuous progress of evolution; they are temporary halting places of a monad descending and reascending through the planes between spirit at one end and matter at the other. The same sense is seen in the words scale [from Latin *scala* a flight of steps] and degree and grade [from Latin *gradus* step]. “From *Gods to men*, from *Worlds to atoms*, from a star to a rush-light, from the Sun to the vital heat of the meanest organic being — the world of Form and Existence is an immense chain, whose links are all connected” (SD 1:604). *See also* HERMETIC CHAIN

Lady of the Sycamore. *See* NEITH

Laeti. *See* LA

Lahash (Hebrew) *Lahash* A whispering, sighing, or praying for help; magic, conjuration. Qabbalistically, the secret speech, “nearly identical in meaning with *Vach*, the hidden power of the Mantras” (SD 1:354).

Lahgash. *See* LAHASH

Lajja (Sanskrit) *Lajjā* Modesty, personified as the wife of Dharma and mother of Vinaya (good conduct, discipline), and the daughter of Daksha.

Lak (Hindi) [cf Sanskrit *lakṣa*] A hundred thousand.

Lakshana (Sanskrit) *Lakṣaṇa* Mark, sign, or symbol; the 32 lakshanas are the 32 bodily signs or marks of a buddha by which he is recognized.

Lakshmi (Sanskrit) *Lakṣmī* Prosperity, happiness; the Hindu Venus, goddess of fortune and beauty who sprang with other precious things from the foam of the ocean when churned by the gods and demons for the recovery of the amrita. She is variously regarded as the wife or sakti of several of the great gods, notably Vishnu.

Lalitavistara (Sanskrit) *Lalitavistara* A celebrated biography of Gautama Buddha by Dharmaraksha (308 AD); a Theravada work of the Mahasanghika school, written in Sanskrit.

Lama (Tibetan) *bla ma*. Superior, excellent; equivalent to the Sanskrit guru. Correctly applied only to the ecclesiastical dignitaries of superior classes or grades, who really should be teachers or gurus in monasteries; also to such officials as the tulkus, the heads of the better class of large monasteries; also to the heads of the great monastic colleges, and likewise to monks who hold high scholastic degrees; other monks are usually called trapas (students).

Unfortunately, Occidental authors almost invariably designate any Tibetan monk a Lama, due

largely perhaps to the improper assumption of the title by Tibetans themselves who have no right to use it, though they may belong to the lower ranks of the ecclesiastical hierarchy in Tibet. Hence the religion is commonly called Lamaism by European writers.

Lamech (Hebrew) *Lemech* In the Bible, a son of Methusael (a descendant of Cain), and also a son of Methuselah (a descendant of Seth) and the father of Noah (Genesis 4:18-24; 5:25-31). Genesis 4:16 through ch 5 “give purely historical facts; though the latter were never correctly interpreted. . . . Every woman is an euhemerized land or city; every man and patriarch a race, a branch, or a subdivision of a race. The wives of Lamech give the key to the riddle which some good scholar might easily master, even without studying the esoteric sciences” (IU 1:579).

The individuals in these archaic genealogies are at one time to be considered as men, at another time as races or subdivisions of races, while on a cosmic scale they stand for various spiritual powers or celestial energies imbodyed in constellations of the zodiac; whereas their wives or consorts are equivalent to the Hindu saktis, their manifested powers, attributes, or faculties in, by, and through which they express themselves. Thus the wife of such an individual is not only his companion, but the veil, sheath, or garment which encloses him.

Lamech's length of life is given as 777 years. As each patriarch represents in one sense a new race or subrace, the number of years refers to a cycle. In the signs of the zodiac, Lamech stands for Aquarius. Assigning each patriarch to one of the Sephiroth, Lamech represents the ninth, Yesod.

Lamiae (Latin from Greek) According to classical popular ideas, monsters with the head and breast of a woman and the body of a serpent, alluring and destructive to men; astral vampires haunting human beings of negative and sympathetic character. Also an elementary, an earth-bound astral sorcerer of either sex; in some cases the lamiae are the astral shells.

Such hybrid symbols may, like the Siren and the Lorelei, likewise signify the astral light and the temptations of the Hall of Delusion, or the incubi and succubi, originating in the Near East and distorted as entities by the monkish imagination of the Middle Ages.

Lamrin (Tibetan) *lam rim*. Stages of the path; the name for a genre of Tibetan Buddhist literature. The most famous such work is Tsong-kha-pa's *Lam rim chen mo*, which claims to be based on the earliest such work, the *Bodhipathapradipa* by Atisha (Dipamkara-shrijnana).

Land of the Eternal Sun From immemorial time mystics and occult philosophers have consistently taught of the existence of a land where the sunshine is perpetual, the abode of the gods whose particular function it is to oversee the destinies, not only of mankind, but of other hierarchical groups occupying the earth. Any attempt to fix a geographical locality as this land of the eternal sun has never been successful, for it is no geographical locality, but a region mystically said to be at the top of Mount Meru or the north pole of the earth.

There is a legend known in Tibet which places the mystical Sambhala not only on earth, but

likewise upon Mount Meru, and again in the sun — implying a hierarchy of divine or spiritual beings existing in a threefold order, each order having its own stage or place in this scheme.

Lang. See LUNG

Language. See SPEECH

Lanka (Sanskrit) *Laṅkā* The ancient name of the island of Ceylon (Sri Lanka). The third root-race ended its career in that part of a continent which later became the Lanka of the Atlanteans. In the *Ramayana* it is described as of gigantic extent and magnificence, “with seven broad moats and seven stupendous walls of stone and metal.” Its foundation is attributed to Visvakarman, who built it for Kuvera, the king of the demons, from whom it was taken by Ravana, the great foe of Rama, hero of the *Ramayana*. The *Bhagavata-Purana* shows Lanka or Ceylon as primarily the summit of Mount Meru, which was broken off by Vayu, god of the wind, and hurled into the ocean.

Ceylon has become the seat of the Southern Buddhist Church, the Siamese Sect, the representation of the purest exoteric Buddhism outside of Tibet, the latter one home of the Mahayana school.

Lanoo A student; an accepted chela.

Laomedon (Greek) The legendary founder and king of Troy; son of Ilus and Eurydice, and father of Priam. Zeus compelled Apollo and Poseidon to assist Laomedon in building Troy. This story represents the founding of a Mystery school, although the veiled language used hides the real meaning (SD 2:795).

Lao-Tse or **Lao-tzu** (Chinese) One of the great teachers of China who appeared and taught some little time before Confucius began his career. Tradition has it that there was a meeting between Confucius and Lao-Tzu, and that the former referred to the latter as a dragon, an ancient mode of referring to a master of wisdom or initiate.

Although said to have written one thousand books “his great work, however, the *heart* of his doctrine, the ‘Tao-te-King,’ or the sacred scriptures of the *Taosse*, has in it, as Stanislas Julien shows, only ‘about 5,000 words,’ hardly a dozen of pages, yet Professor Max Muller finds that ‘the text is unintelligible without commentaries, so that Mr. Julien had to consult more than sixty commentators for the purpose of his translation,’ the earliest going back as far as the year 163 BC, *not earlier*, as we see. During the four centuries and a half that preceded this *earliest* of the commentators there was ample time to veil the true Lao-Tse doctrine from all but his initiated priests. . . . Tradition affirms that the commentaries to which our Western Sinologues have access are not the *real occult* records, but intentional veils, and that the true commentaries, as well as almost all the texts, have long since *disappeared* from the eyes of the profane” (SD 1:xxv).

Lapis Philosophorum. See PHILOSOPHER’S STONE

Lararium (Latin) A shrine for holding the lares (images of the household gods) and similar relics

in the houses of ancient Romans. The lares are described as those parts of the human constitution left behind by the immortal monad after death, these remnants being of different classes because belonging to different planes. The Latins grouped them under three general planes: manes, lares, and lemures. The lemures were virtually the kama-lokic shades or shells, and so likewise were the larvae; the lares were at once the ancestral images in a family or of a city, and at the same time more mystically the quasi-personalized astral forces hovering around and thus becoming tutelary influences — a Roman belief difficult to describe; whereas the manes corresponded more closely to exarnate human monads. *See also* LARVA

Lares (Latin) [from Etruscan *lars* conductor, leader] The tutelary household deities, or godlings, regarded as the souls of deceased ancestors and represented by images kept in the lararium of the household and to which a portion of each meal was reserved. Such belief and practice are common among many peoples, an instance of a lofty teaching becoming misunderstood and thereby degraded into popular belief and often superstition. The original meaning of lares was the psycho-intellectual part of imbodyed human beings, who therefore in a sense guide and protect mankind. Later in mythology they became mere ghosts or kama-rupic phantoms of a better and higher class than the larvae.

Larva (Latin) A ghost, phantom; used by certain Latin writers, such as Apuleius (2nd century), for the animal souls or astral-vital shells of deceased persons. Those shells which were more or less earth-bound and of grossly material character, and therefore baneful in their influence on living humans, were commonly called larvae, as distinguished from the lares, which were inoffensive or even friendly to the living. Larvae, therefore, are the astral and kamic remnants cast off by the disembodied ego in kama-loka, the shades or spooks, also including elementaries, all to be shunned by imbodyed people, as they are without intelligence and conscience and invariably vampirize astrally and vitally those who give them the opportunity of doing so.

Last Judgment. *See* JUDGMENT, DAY OF

Latona (Latin) Equivalent of the Greek **Leto**; mother of Apollo and Artemis. Latona quarreled with Niobe, who taunted her with having only one son and one daughter, whereas she herself had seven sons and seven daughters. As a result, the 14 children were slain by Apollo and Artemis. Latona, geographically, represents the polar region and the former Hyperborean continent. Niobe is the Atlantean race, with its seven subraces and their seven branches; this race, falling into sin, is destroyed by Apollo and Artemis, deities of light; while an allusion to the Atlantean flood is seen in the copious tears of Niobe (SD 2:770). We see here how the keys to the Mysteries are made up into interesting stories, and thus repeated from age to age.

Laurentian Period. *See* GEOLOGICAL ERAS

Laws of Manu. *See* MANU, LAWS OF

Laya-center [from Sanskrit *laya* melting, dissolution, disappearance from the verbal root *lī* to dissolve, disintegrate, vanish away] A point of disappearance; a zero-point, or a point in substance where every differentiation has temporarily ceased; also the ultimate quiescent state: the nirvana of the seventh principle, the point at which primordial substance begins to differentiate and gives birth to the universe.

Matter in the laya-state is in its eternal and normal condition; when differentiated it is in an abnormal state — a phenomenon becoming a transitory illusion when perceived by the senses. “A laya-center is the mystical *point* where a thing disappears from one plane and passes onwards to reappear on another plane. It is that point or spot — any point or spot — in space, which, owing to karmic law, suddenly becomes the center of active life, first on a higher plane and later descending into manifestation through and by the laya-centers of the lower planes. In one sense a laya-center may be conceived of as a canal, a channel, through which the vitality of the superior spheres pours down into, and inspires, inbreathes into, the lower planes or states of matter, or rather of substance. . . .

“Finally, a laya-center is the point where substance rebecomes homogeneous. Any laya-center, therefore, of necessity exists in and on the critical line or stage dividing one plane from another. Any hierarchy, therefore, contains within itself a number of laya-centers” (OG 84-5).

The monad of a human being enters into manifested life through a solar laya-center which is the atman or universal spirit. Likewise the atmic plane of any being contains such a laya-center through which pour the forces from above.

“Dimensions or positions in space have nothing to do with it, because a laya-center is not of a physical and material nature. It is the disappearing-point for all things below it, and the entering-point for all things above it, for any one particular entity, be it an atom, a sun, a planet, a human being. . . .

“In speaking of the monad, we must not confuse it with the laya-center. . . . the neutral center, in matter or substance, through which consciousness passes — and the center of that consciousness is the monad” (Fund 375).

“A ‘neutral centre’ is, in one aspect, the limiting point of any given set of senses. Thus, imagine two consecutive planes of matter as already formed; each of these corresponding to an appropriate set of perceptive organs. We are forced to admit that between these two planes of matter an incessant circulation takes place; and if we follow the atoms and molecules of (say) the lower in their transformation upwards, these will come to a point where they pass altogether beyond the range of the faculties we are using on the lower plane. In fact, to us the matter of the lower plane there vanishes from our perception into nothing — or rather it passes on to the higher plane, and the state of matter corresponding

to such a point of transition must certainly possess special and not readily discoverable properties” (SD 1:148).

Lay-chelas [from Greek *laikos* Latin *laicus* of the people + Sanskrit *chela* disciple] Coined by the Master KH who applied it to Sinnett and Hume in the same sense as in speaking of a lay preacher as contrasted with an officially ordained one. Such a chela has not entered upon the prescribed rules incumbent upon one formally accepted as a chela — nor is he even a probationary chela — but he has nevertheless by his devotion and study, by his own wish enrolled himself as member of the outer court, so to speak.

Lebanah (Hebrew) *Lēbānāh* White; name for the moon used only in poetry, referring to the moon as a planet and astrological influence (TG 188).

Lebanon (Hebrew) *Lēbānōn* A mountain range in Syria and Palestine of two principal chains, Lebanon or Libanus on the west and Antilibanus on the east. In this region dwell the brotherhood of the Druzes and likewise the Nabatheans. Lebanon is most often associated with its cedars; however, the phrase cedars of Lebanon also meant initiants who “were called the ‘trees of Righteousness,’ and the cedars of Lebanon, as also were come kings of Israel” (SD 2:494). In India too adepts were sometimes called trees.

While the range of mountains in Syria and Palestine is called Lebanon (white), nevertheless there is a direct ancient mystical reference here to the moon or lunar influence; as a meaning of this range as envisaged by the ancient inhabitants would be the lunar range of mountains, points directly to esoteric observances connected with the moon and its malignant and unwholesome influences.

Leda (Greek) The wife of Tyndareus, king of Sparta, and mother of Clytemnestra, Helen, Castor, and Pollux by Tyndareus or Zeus or both (cf SD 2:121-3). In one allegory, Leda takes the form of a swan and, visited by Zeus in the form of a swan, lays two eggs, which connects her with Kalahansa and similar mythologic birds. One allusion of the allegory is to the egg-born third root-race of mankind.

Left-hand Path or path of shadows, those taking it called in theosophy brothers of the shadow. One of the two fundamental paths or courses in nature, the left-hand path or path of matter in contrast to the right-hand path or path of spirit. Shadow signifies matter, for spirit may be considered to be pure energy, and matter, although essentially crystallized spirit, may be looked upon as the shadow world or vehicular world in which the energy, spirit, or pure light works. Matter is but a generalizing term, comprised of an almost infinite number of degrees of increasing ethereality from the grossest physical substance, or absolute matter, up to the most ethereal or spiritualized substance, providing the logic of calling this the path of shadows. Those on this path are often called black magicians in contrast to white magicians or sons of light who follow the path of self-renunciation, self-conquest, and an expansion of the heart, mind, and consciousness in love

and service for all that lives.

A Sanskrit equivalent for the left-hand path is *pratyeka-yana* [from *pratyeka* every one for himself + *yana* path]. Those who follow this path are also called *vamacharins*, and their school or course of life is known as *vamachara* or *savyachara*. They follow the easy but perilous path leading downwards into ever more confusing, horrifying stages of matter and final spiritual obscuration and personal annihilation.

After death the lower classes of those on the left-hand path become the terrestrial or earthly elementaries. Cunning, low, vindictive, and seeking to retaliate their sufferings upon imbodyed humanity, they become, until final annihilation, astral vampires, and therefore a constant psychic and even physical menace to those who open the doors of communication with them.

The higher classes of the brothers of the shadow, those who may be called spiritual sorcerers, mentioned in the New Testament as entities of spiritual wickedness, have a longer life period than have the lower classes. These spiritual sorcerers, depending upon the degree of unfolding of spiritual energy which they have attained and prostituted to evil uses, may even endure till the end of the globe *manvantara*, reincarnating themselves at repeated, rapid intervals; but their pathway is downwards into still deeper ranges of matter, and involves a progressively greater loss of inner spiritual light reaching them from their spiritual monad.

“Multitudes of human beings are unconsciously treading the Path of the Shadows, and in comparison with these multitudes it is relatively only a few who self-consciously lead and guide with subtle and wicked intelligence this army of unsuspecting victims of *Maya*. The Brothers of the Shadow are often highly intellectual men and women, frequently individuals with apparent great personal charm, and to the ordinary observer, judging from their conversation and daily works, are fully as well able to ‘quote scripture’ as are the Angels of Light!” (OG 22).

The warnings given to students of occultism about this matter have always been very solemn and urgent, and no one should at any moment consider himself safe or beyond the possibilities of taking the downward way until he has become at one with the divine monitor within, his own inner god. At every step, with every morn, at every choice, we face the right- or the left-hand path and are forced to choose.

Lehdaio (Gnostic) In the Nazarene and Bardesian systems, the Son or formative Logos. Lord Mano, the chief of the middle triad or the Second Logos, is represented as the Lord of Celstitude, who produces Lehdaio, the Just Lord. Thus in the triads of logoi, Mano, Spiritus (equivalent to the Holy Ghost), and Lehdaio form the second trinity, analogous to the Christian Father, Mother, Son (IU 2:227).

Lemminkainen (Finnish) A hero of the Kalevala, the son of Lempi. He does battle with the serpent

of Tuoni (death) in the Finnish version of the archaic tale, so common in ancient mythologies. Lemminkainen, however, does not slay the serpent, but conquers it by means of the magic words: “But the hero, quick recalling, speaks the master-words of knowledge, words that came from distant ages, words his ancestors had taught him, words his mother learned in childhood” (rune 26).

Of especial interest is the account of the hero's journey to the regions of the dead (Tuonela), thence to bring back with him the black swan. He is sent thither with but one arrow and his bow; but he is unsuccessful in returning to the upper regions, owing to the fact that he does not know the magic words enabling him to counteract the bite of an adder from the Stream of the Dead. Similar to the Egyptian account in the story of Osiris, there is the plaint of the bereaved mother, the search for her son, and finally the recovery of the body of Lemminkainen, which had been severed into five pieces and cast into the river of death. The mother is unable to restore her son to life, however, even though with divine aid she was able to make the body whole and heal the wounds with balsam obtained by a honeybee (Mehilainen). Finally she instructs the bee how to fly to the greatest deity, Ukko, on the seventh heaven: by way of the moon and the Great Bear. The honeybee makes the flight successfully, returning with the life-giving essence (the balm of the Creator), and the mother brings her son back to life once more.

Lemnos A volcanic island in the Aegean Sea, formerly one of several places sacred to the kabiri, who were regarded as deities of the sacred cosmic fire; also sacred to Hephaestos.

Lemures (Latin) Shades of the departed; used in archaic Rome for a class of entities of the underworld or the astral light, in an inclusive sense embracing both kama-rupic shells, called larvae, and the higher portions of the human constitution which have separated from the shells and were called lares or manes.

Zoologists called the animal the lemur, on account of its nocturnal habits.

Lemuria The ancient continent, or system of continental masses, inhabited by the various races and subraces of the third root-race. The name was adopted by theosophists from certain European zoologists, especially Sclater and Haeckel, who gave that name to a hypothetical zoologic area or sunken continent in order to explain the distribution of certain animals, especially the lemurs.

Lemuria embraced large areas in the Pacific and Indian Oceans, and at one time extended in a horseshoe around Madagascar and South Africa (then but a fragment), while Northern Lemuria stretched into the North Atlantic and sent an arm as far as Norway. A ridge in the Atlantic 9000 feet high, runs south from a point near the British Isles, slopes towards South America, then turns southeast toward the African coast, and thence to Tristan d'Acunha. It would be wrong, however, to suppose that the configuration of Lemuria was always the same; for secular changes are continually operating in all geologic epochs. At one time it covered the whole area from the foot of the Himalayas, westward to Haridvar, eastward to Assam, southward to Southern India and

Sumatra, embracing Australia on one side and Madagascar on the other, reaching nearly to the Antarctic Circle; extending far into the Pacific to Easter Island. Its remains are seen in the numerous islands included in this area.

Lemuria, although submerged as a continental system, was not submerged as was Atlantis, but sank because of terrific seismic and volcanic activities lasting for ages. Its Atlantic portion was the geological basis for the succeeding continental system of Atlantis, which thus was rather a development of the Lemurian system than an entirely new and separate body of continental masses. See ROOT-RACE, THIRD

Leo The lion; the fifth sign of the zodiac (in Sanskrit Simha or Sinha). It is a masculine sign, fiery and fixed, corresponding in the human body to the heart and being the only house of the sun. Among the twelve sons of Jacob in the allocation according to the Hebrew system, it is Judah, who is described as a lion's whelp. In respect to the hierarchy of creative powers, "The highest group is composed of the divine Flames, so-called, also spoken of as the 'Fiery Lions' and the 'Lions of Life,' whose esotericism is securely hidden in the Zodiacal sign of Leo. It is the *nucleole* of the superior divine World. . . . They are the formless Fiery Breaths, identical in one aspect with the upper Sephirothal Triad, which is placed by the Kabalists in the 'Archetypal World' " (SD 1:213).

In the Brahmanical zodiac Simha is dedicated to soma, the moon. Of two synonyms for Simha — Panchasyam and Hari — the first indicates that it represents the five Brahmas or Buddhas; and the second shows it to be Narayana, the Jivatman, or Pratyagatman, which the Advaitins regard as identical in essence with paramatman, and as the son of paramatman. This is the true cosmic christos, in which the elements of the phenomenal universe have only a potential existence, being combined into a unity, or indeed into a single cosmic entity.

The lion also is one of the four sacred animals, equivalent to the four Maharajas, represented as being situated in the four corners of the cosmos.

Lethe (Greek) Forgetfulness; a river of the Underworld which confers upon souls destined to live again on earth the boon of oblivion of their former experiences. It refers to the postmortem destiny of the human soul as it sinks into its pre-devachanic unconsciousness and final carefree devachanic bliss, thus gaining oblivion of inferior human concerns and utter peace before the time comes for the resumption of new bodies on earth. Also it refers to the loss of memory of the postmortem experiences and prebirth panoramic vision before birth.

Leto. See LATONA

Levanah. See LEBANAH

Leviathan (Hebrew) *Liwěyāthān* Foldings, turnings, windings, hence whatever is infolded or wound. Mystically time as the great serpent of cyclic or circling time, likewise space and the various phenomena that happen in space such as the turnings and windings of forces as

manifested by electricity in lightning or thunderbolt. Ancient Hebrew Biblical esotericism made of Leviathan a great sea monster, with particular reference to the waters of space. In its exalted sense it means the cycling and everlasting motion of divinity in duration and in abstract space; its concrete or lowest aspect signifies the apparently unregulated, winding, turbulent forces of the material worlds — also inimical forces which seem antagonistic to the spiritual and intellectual balance of him who strives upwards. One significance was that of a great serpent or crocodile — it is sometimes compared to the Hindu Makara; another is “Deity in its double manifestation of good and evil” (TG 188).

In the *Siphra’ Di-Tseni’uthah* Leviathan is described as the serpent which runs with 370 leaps and holds its tail in its mouth. Here there is a very evident reference to the cycling in time and space, and the 360 degrees or points, both of time and space, with an added 10 degrees or points implying the inauguration or beginning of a new cycle after the old one is ended. The tail in the mouth signifies unending cyclic time. Once in a thousand years, a revolution in its joints takes place, and its head is broken in the waters of the ocean.

Levitation [from Latin *levis* light in weight] The act of rising in the air at will or unconsciously, in opposition to gravitation. However, theosophy does not view gravitation in the Newtonian sense, but sees in it magnetic attraction and repulsion. Levitation is due to a change in the polarity of a body becoming identical with the polarity of the earth on which the body rests, which then repels the body or ceases to attract it. The height attained being dependent upon the strength or potentiality of the electric polar energy resident in the rising body. It is possible, and indeed easy, for the adept to change the polarity of his body at will.

In ancient Greece levitation was called *aithrobates* (from which *aethrobacy*), meaning the art of walking in the ether or air.

Lha (Tibetan) *lha*. God, deity, equivalent to the Sanskrit *deva*.

Lhagpa (Tibetan) *lhag pa*. In Tibetan astrology and mysticism the planet Mercury, symbolized by a hand. His solar house is Gemini, which signifies the arms and hands; like them he stands for action and executive skill. Equivalent to the Sanskrit *Budha*. Also Wednesday.

Lhakang (Tibetan) *lha khang*. God-house; a temple or image hall; a crypt, especially a subterranean temple.

Lhamayin (Tibetan) *lha ma yin*. Non-deity, not a deity; equivalent to the Sanskrit *asura*. A class of elemental beings or nature spirits corresponding to the various elemental sprites of the lower planes, such as the terrestrial. The lhamayins in popular Tibetan folklore are considered demons and devils, but esoterically they are a class of beings one step higher than the terrestrial sphere (SD 2:63).

Lhasa or **Lhassa** (Tibetan) *lha sa* [from *lha gods* + *sa* place] Place of the gods, equivalent of the

Sanskrit deva-bhumi. The capital city of Tibet, situated on the banks of an important tributary of the Tsang-po River; hither converged trade routes from Turkestan, Siberia, Mongolia, China, and India, as well as from the other parts of Tibet. Though called the Forbidden City, it was only so to Europeans, very few of whom were ever permitted to penetrate into the interior of Tibet. As well as being the most flourishing and prosperous city, it was the abode of the Dalai Lama and his government before the conquest of Tibet by the Chinese. Before it became the capital, Lhasa was apparently known as Ra-sa, “place of the goats.”

Lhy. See LI

Li (Chinese) The third and principal of the four cardinal virtues, embracing observance of all the duties imposed by the religious, social, and ethical rules for human life — the tao of man. “The li then positively have their origin in the Great Universum, which, dividing itself, became Heaven and Earth, and, revolving, is the Yin and the Yang. . . . Therefore the meaning of the term *li* is ‘chief principle of Man.’ It is through the *li* that Man speaks the truth and cultivates concord” (*Li yun* 4).

Liberalia (Latin) Festivals in honor of the Roman deities Liber and Libera — connected with the Greek Bacchus and Persephone — celebrated on March 17th of their calendar.

Liberation In theosophy, freedom from conditioned existence; in its strictest sense the state of a monad which has become the Brahman of its hierarchy, and therefore is free, released, perfected — a jivanmukta — for what seems to us an eternity. Synonymous with moksha, nirvana, emancipation.

Liberation of the self from the causes of illusion is sometimes spoken of in relation to the seven sensitive and sensory veils, especially with reference to the human manas principle. Emancipation consists in recognizing that these veils, of which the lower four are by far the most illusory, are the perceivers, and that the function of the true self is those higher faculties which collate and discriminate among perceptions of all kinds and which reach final and true judgment. The self sees or ascertains truth; the veils perceive and are caught by the webs of illusion. The one who has achieved this is said to have attained the fire of knowledge, which destroys not only illusion but even destroys the causes leading to the planes of illusion. Vishnu, among the Vaishnavas in India, and Siva among the Saivas, or indeed of any other divinity, can be considered the cause of final emancipation when used for the true self, exactly as Christians may claim with perfect truth that the Christ (in man) is the shower of final emancipation. The successive emancipation from the seven veils marks seven stages of initiation. Buddhi, from this standpoint the highest, most diaphanous, and therefore the closest to reality of the veils, is said to be transformed into the tree whose fruit is emancipation.

Libra A balance; the scales, the seventh sign of the zodiac. In astrology a masculine, airy cardinal sign, the chief house of Venus; its bodily correspondence being the loins and adjacent organs.

The three signs Virgo-Libra-Scorpio were formerly represented by one sign, Virgo-Scorpio, so that originally the zodiac exoterically consisted of ten signs; and then two secret signs were added, thus making the present zodiac of twelve signs or houses. This was done by dividing this sign into Virgo and Scorpio and placing between them the balancing sign Libra, said to have been invented by the Greeks. The Hindu zodiac also has the sign Tula (balance) in this position, presided over by Kuvera, ruler of the Underworld. As said by Subba Row, this sign prepares the way for the earthly Adam to become Nara (spiritual man).

In the system of the twelve sons of Jacob, Asher is assigned to Libra. Libra marks the autumn equinox in the northern hemisphere and one of the two beginnings of the Jewish year. Libra is also equated with Enoch and Hermes (IU 2:463).

Lif and **Lifthrasir** (Icelandic) [from *lif* to live, live on, remain (when others are gone on); *lifthrasir* tough, hard to kill from *thrasir* sturdy one] Life, and survival; in the Norse Edda, the enduring life principles of the human race which live on after the end of the world, “concealed in the memory hoard of the sun (Hoddmimir’s holt): morning dew is their food, and from them will be born ages to come” — when the world is reborn.

In this allegory life (or the monadic lives) remains sleeping during the cosmic, solar, or planetary pralayas, manifesting again when the periods of activity recommence. Also applied to racial cycles (TG 188).

Life Life per se is conscious, substantial, spiritual force, manifesting in myriad ways as the various lives and as forms of energy, whether macrocosmic, microcosmic, or infinitesimal. Force and substance, or life, are essential aspects of universal reality which in its highest is termed cosmic life-substance-intelligence. As there is a vast scale of substance-forces existing in all-various degrees of ethereality, so “there is life *per se*, in individuals manifesting as a vital fluid belonging to each one such grade or stage or plane of material manifestation — and these vital fluids in their aggregate form what we may call the Universal Life, manifesting in appropriate form on any one plane and functioning therefore through the various matters of that plane” (ET 216 3rd & rev ed).

Life as an entity or process is all that is, the basis or essence of all that is — beginningless and endless. It is the spiritual electricity, or the vital svabhava, of the monad, which it pours forth out of itself and thus produces the individual characteristics of every entity, celestial or terrestrial. As the divine monad is a breath of pure spirit, pure consciousness, life may be called the innumerable manifold phases of consciousness in time and space. “Consciousness is the Originant, and this Originant by its own inherent powers and energies, faculties and attributes, produces life out of itself: not at any one time specifically, but continuously forever, and coincidentally with its own existing duration. Consciousness and life together originate and produce thereafter from themselves what men call the manifestations of force or energy, which in its turn deposits or lays down, so to say, the matters and substances of the Universe, much as wine will deposit its lees” (ET

Instead of life and death, birth and death are opposites, being different phases of life. *See also* JIVA; PRANA

Life-atom In theosophical literature, the vital ensouling power or vital entified unit in every primary or ultimate physical particle, itself a vital quasi-conscious individualized vehicle of the spiritual monad or highest consciousness-center. A life-atom is not the physical atom of science, which is but the vehicle or garment of the former, compounded of physical or physical-astral matter only. This being so, an atom decomposes when its term of expression on this plane is ended, but it reimbodies itself again, doing so by the innate force or life which its ensouling monad (life-atom) radiates. The term does not mean the ultimates or primary particles of prana (life principle or life force). Prana, itself derivative from the jiva, is as an entity quite distinct from the atoms it animates. The physical atoms belong to the lowest or grossest state of matter on our plane, while jiva essentially is an emanation or outpouring from atman or paramatman.

“Life is ever present in the atom of matter, whether organic or inorganic, conditioned or unconditioned — a difference that the occultists do not accept. Their doctrine is that life is as much present in the inorganic as in the organic matter: when life-energy is active in the atom, that atom is organic; when dormant or latent, then the atom is inorganic” (BCW 5:111-12).

Life-atoms may indeed be called the building blocks of the universe or of any imbodyed entity: for they are in very truth the vehicles of universal life. They are composite of consciousness in the core of the core of each, and they manifest spontaneously in that form of consciousness which at times is called will and at other times force or energy. They partake of spirituality and remain ever invisible: physical atoms group and form around them and their aggregation results in physical matter, the life-atoms being to them very much as higher and invisible principles.

Life-atoms may be said to belong to all planes, functioning within each of the seven principles of which the human composition is built: thus we may speak of divine life-atoms, spiritual life-atoms, intellectual, psychic, vital, astral, and physical life-atoms. During man’s life those which are intimately connected with an individual are in a state of constant flux and reflux, entering and leaving in unceasing rhythms the body of their owner or host; but after death the dominant controlling factor having departed from the lower planes, each group of life-atoms proceeds to peregrinate throughout their respective natural habitats. Thus when the physical body dies, the life-atoms of the body go into the soil, into plants, or into the bodies of beasts or men — through food or by osmosis, or in breathing creatures through the air that is inspired or expired — they are drawn to bodies by magnetic sympathy. This transmigration of the life-atoms is the origin of the theories of the transmigration of the human soul into beasts after death.

The life-atoms belonging to the astral plane which make up the linga-sarira or model-body of men

and beasts, are also liberated at death and follow along the same general lines as the physical life-atoms: they find their way into and out of other astral vehicles with which they are in magnetic sympathy. In this way they help form the astral vehicles of individuals of the three lower kingdoms as well as of the beast and human kingdoms. In similar manner peregrinate the psychic, intellectual, spiritual, and divine life-atoms. In order that the spiritual monad may proceed on its afterdeath journey, all sheaths of the spiritual consciousness must be dropped on their appropriate planes, thus finally permitting the spiritual ego to pursue its upward and inward journey unhampered by the attractions to the lower planes which these life-atoms bring about.

“The life-atoms are actually the offspring or the off-throwings of the interior principles of man’s constitution. It is obvious that the life-atoms which ensoul the physical atoms in man’s body are as numerous as the atoms which they ensoul; and there are almost countless hosts of them, . . . in practically incomputable numbers. Each one of these life-atoms is a learning entity, an evolving entity, a being which is living, moving, growing, never standing still — evolving towards a sublime destiny which ultimately becomes divinity” (OG 87).

During this evolutionary journey it passes from unself-consciousness through manifold and all-various stages of experience to self-consciousness, finally merging into divinity. When this last stage is reached it is no longer an unself-conscious god-spark but a self-conscious god, one of the co-laborers and collaborators in the great work of the building of the worlds.

Life-fluid Used for Dr. Richardson’s nervous ether and similar theories. If life is merely a property of matter, instead of matter in all its innumerable phases and densities being the productions of life, those materialists who wish to regard life as something more than a mere attribute, may posit a life-fluid, that moves “dead matter.” The hypothesis of a single life-fluid, however, is elementary in comparison with the Indian systems of psychophysiology, which divide prana into numberless vital currents, having various functions, pervading particular organs. All of these are modes or differentiations of vital cosmic electricity; and like other forms of electricity, they are each on its own plane atomic, so they may be viewed as currents of life-atoms. They follow the laws impressed on them by the linga-sarira and form a hierarchical system with master-centers and subordinate ones. At dissolution, when the linga-sarira is withdrawn, the life-atoms pass to other planes or lokas, according to their several affinities.

Life of Brahma. See BRAHMA’S DAY

Life-thread. See SUTRATMAN

Life-wave Each of the different classes or hosts of monads, whether considered as seven, ten, or twelve. Each class consists of monads in seven, ten, or twelve degrees of advancement. The ten classes or life-waves comprise three elemental, the mineral, the vegetable, the animal, the human, and three dhyān-chohanic kingdoms. When the hosts of beings forming a life-wave — entities derived from a former, now-dead planet — feel the impulse arriving for them to enter on their

further evolutionary course, they cycle from globe to globe in regular serial order along the entire planetary chain which has been prepared for them by the three classes or hosts of elementals, who may be regarded as the predecessors of the life-waves, or as forming part of them. Each life-wave passes seven times around the seven spheres of the planetary chain, at first during our round cycling down the shadowy arc until the evolutionary bottom of the movement is attained during the middle of the fourth round, and then rising along the luminous arc, such round therefore passing through all the seven elements of the cosmos; each entity, whether divine, spiritual, mental, psychic, astral, and even physical, continuously progressing through the seven cosmic elements towards the source from which the life-wave started. The life-waves follow one another in the order named from globe to globe of the chain; but during the course of the ascent up the luminous arc, and before the seventh globe is reached, the law of retardation operates on the lower kingdoms in such fashion that all the seven classes complete their round more or less at the same time on the last globe. This constitutes a chain-round, and is followed by a chain minor nirvana. The time period during which the life-wave completes its evolution through seven root-races on one globe of the chain is a globe-round.

The terms rounds, races, and life-waves may apply to still greater evolutionary circulations, pertaining to the solar system as a whole, and even to the galaxy.

Life-winds. See PRANA

Light Light ranges from the arcana of cosmic being to the physical light that turns the vanes of some scientific mill. As the opposite of darkness, evil, ignorance, sleep, and death, it signifies wisdom, goodness, and life. In one sense it is a permutation of mulaprakriti, and as such is that root-substance which can never become objective to mortals in this race or round. It is objective only in relation to that Darkness which is absolute Light. Otherwise it includes both spirit and matter. Three kinds are enumerated: the abstract and absolute, which is darkness; the light of the unmanifest-manifest or Second Logos; and the latter reflected in the dhyanichohans, minor logoi, and thence shed upon the lower and more objective planes. In a high aspect, it is daiviprakriti or the light of the Logos, the synthesis of the seven cosmic forces; descending through the planes of manifestation, it condenses into forms; physical matter itself is a condensation of light. Through light everything is thus brought into being. Being a root of mental self, it also therefore is the root of physical self (SD 1:430).

Light does not necessarily imply heat, as heat is one of the effects produced by the action of light on matter. The term cool radiance has its physical application in the light of phosphorescence. Light becomes relative on manifested planes, its correlative being darkness, which to other beings may be light, while our light may be their darkness. Again, what is light to beings on a higher plane of perception, may be darkness to us, because it does not impress our senses.

Light-bearer, Light-bringer A title given since immemorial time and in most civilized countries to

anyone who brings light to others, such as Lucifer or Prometheus. The planet Venus is said to be the light-bearer of our earth, in both its physical and mystic sense (SD 2:33).

Light of the Logos. See DAIVIPRAKRITI

Lights The formative or creative radiations or rays through the hierarchies of beings descending in serial order down even to physical light. Physical light is the distant reflection on our plane of the spiritual light emanating from the collective group of the Lights and the Flames. Again, the Qabbalah speaks of six lights emanating from the Crown or Kether.

Lila (Sanskrit) *Līlā* Sport, diversion, pastime; in Hindu scriptures the acts of divinity, such as the creation or emanation of worlds, are called lila.

Lilalohita. See NILALOHITA

Lilatu. See LILITH

Lilin (Aramaic) *Līlīn*. In the Hebrew Qabbalah, a name for those general classes of astral and semi-astral entities who in the early times of the human race, notably during the third root-race, were the offspring of unconscious sorcery arising in intercourse between the unconscious mankind of those times and astral or semi-astral entities lower than man. For this reason in the Qabbalah they are inaccurately but graphically called demons. Referred to as children of Lilith and their descendants.

Lilith (Hebrew) *Līlīth* [from *layil* night] In popular Jewish legend a female demon, commonly but erroneously supposed to be nocturnal, counterpart of the Babylo-Assyrian Lilit or Lilu. In Rabbinical writings Lilith is the first consort or wife of the mindless Adam, and it was from the snares of Eve-Lilith that the second Eve, the woman, become his savior (IU 2:445).

“The numberless traditions about Satyrs are no fables, but represent an extinct race of animal men. The animal ‘Eves’ were their foremothers, and the human ‘Adams’ their forefathers; hence the Kabalistic allegory of Lilith or Lilatu, Adam’s first wife, whom the Talmud describes as a charming woman, with long wavy hair, i.e., — a female hairy animal of a character now unknown, still a female animal, who in the Kabalistic and Talmudic allegories is called the female reflection of Samael, Samael-Lilith, or man-animal united, a being called *Hayoh Bishah*, the Beast or Evil Beast. (*Zohar*, ii, 255, 259). It is from this unnatural union that the present apes descended” (SD 2:262).

Lilith or the Liliths in the common Talmudic idea are nocturnal specters or female creatures usually appearing at night and haunting human beings. The Rabbis describe these entities as having the female form, as being elegantly dressed, and as lying in wait for children by night. These Jewish fables, which have direct reference to female elementaries and other denizens of the astral light, and correspond to the Roman and Greek empusas, stringes, and lamiae; the Arabian

ghulah (masculine ghul), entities of monstrous character dwelling in the sandy deserts, awaiting men and destroying them if possible; and to the Hindu pramlocha, khados, and dakinis.

Limbo or **Limbus** [from Latin *limbus* border] The fringe of hell, according to the Scholastic conception, which was used by Dante and Milton in their epics. In patristic theology, it was regarded as a place for the souls of people who had lived before Christ, or imbeciles and unbaptized infants. Also in some churches it is regarded as a kind of purgatory or waiting place for the soul after death. Similar to kama-loka.

Limbs The Qabbalah speaks of the limbs of Microprosopus, of 'Adam Qadmon (the Heavenly Man), and of the Sephiroth. In Hindu writings, especially the Puranas, the beings created from the limbs of Brahma remain without progeny, whereas his mind-born sons become the creators. In Egyptian mythology Osiris-Ptah or Ra creates his own limbs by creating the gods destined to personify his phases.

Limbus Major (Latin) [from *limbus* border + *major* great] Used by Paracelsus for the fundamental matter from which all creatures have sprung — Adam's Earth. He also applied it to the manifestation of that primordial substance in each one of the creatures.

Line Stages of evolutionary development in cosmic manifestation are sometimes symbolized by the geometrical forms point, line, plane, solid, corresponding to unit or monad, duad, triad, and quaternary. Lines are therefore rays proceeding from an egoic center, and represent cosmic forces and, on the lower planes, the forces familiar in physics. These are dual, bipolar. In geometric symbols, lines may be combined, as for instance in the cross, where common agreement makes the vertical line masculine, the horizontal feminine; or in triangles, where the side lines and the base line each have its particular meaning. A line drawn in physical space may be regarded as a symbol for a real line, but to comprehend what the latter is, we must abstract the idea from all notions of physical space.

Linga (Sanskrit) *Linga* The phallus; in ancient India, the symbol of abstract creation. Force becomes the linga or organ of creation only on this earth. With the ancient Aryans the significance was grand, sublime, and poetical — and these views of this symbol were those of the whole archaic pagan world. The idea of creative power or force was divine, and much of this same spirit of abstract reverence prevails even today in India. It was the sacred symbol of cosmic productive and regenerative power, whose multimirriad activities are manifest in universal nature and thus it was that in the small or concrete, as well as in the great or abstract, the idea was discovered and the spiritual aspect of the matter was dominant. Hence, the linga was made a symbol of Siva, and of every other creative god. The linga (symbol of creative activity) and yoni (symbol of generative or productive activity) of Siva worship, stand too high philosophically in their original significance, its modern degeneration notwithstanding, in any wise to be called phallic worship, where the spiritual has been dragged down to become the animal, the sublime into the grossness of the

terrestrial.

Linga Purana (Sanskrit) *Liṅga Purāṇa* One of the 18 principal Puranas, in which Siva, supposed to be present in the Agni-linga (great fiery phallus) gives an account of the formation of the worlds and the objects of life. It also contains mythologic accounts of Siva's incarnations as avataras.

Linga-sarira (Sanskrit) *Liṅga-sarīra* [from *liṅga* characteristic mark, model, pattern + *sarīra* form from the verbal root *sri* to moulder, waste away] A pattern or model that is impermanent; the model-body or astral body, only slightly more ethereal than the physical body; the second principle in the ascending scale of the sevenfold human constitution. It is the astral model around which the physical body is built, and from which the physical body flows or develops as growth proceeds. "These astral realms are not one single plane, but a series of planes growing gradually more ethereal or spiritual as they approach the inward spheres of Nature's constitution or structure. The Linga-sarira is formed before the body is formed, and thus serves as a model or pattern around which the physical body is molded and grows to maturity; it is as mortal as is the physical body, and disappears with the physical body" (OG 88), dissolving atom by atom with the atoms of the physical corpse.

The linga-sarira has great tensile strength. It changes continuously during a lifetime, although these changes never depart from the fundamental human type or pattern, just as the physical body alters every moment. It also possesses the ability to exteriorize itself to a certain distance from its physical encasement, but in no case more than a few feet. It is composed of electromagnetic matter, which is somewhat more refined than the matter of our physical body. The whole world was composed of such matter in far past ages before it became the dense physical sphere it now is. After long ages the astral form had evolved and perfected, so that it has the form that the human races had during the early period of the third root-race — a more or less materialized concretion of the still more ethereal astrals of the first and second root-races. After another long period, during which the cycle of further descent into matter progressed, the gradually thickening astral form oozed forth from itself a coat of skin, corresponding to the Hebrew allegory of the Garden of Eden. Thus the present physical flesh-form of mankind appears.

The astral form sustains and permeates the body, containing the real or causal organs corresponding to the physical outer sense organs. It has its own complete system of nerves and arteries for conveying the various astral auric fluids, which are to that body as our blood, nervous energy, and pranic currents are to the physical. Hence, the linga-sarira is the real personal body.

Amongst others of its functions, it automatically registers and retains all the effects, including the physical memories, of earth-life, and thus automatically and of necessity repeats after death, in accordance with its limited powers, what the person knew, said, thought, and saw during life. If properly understood, the workings of the linga-sarira during life would give the key to many of what are now called the mysteries and problems of psychological and physiological science.

Lion In Christian mystical thought one of the four sacred animals of the Bible, associated with the evangelist Mark and, as in the mystical thought of other peoples, representing intense energy, sometimes undaunted courage, and occasionally the solar fire. The lion was a favorite symbol with the ancients, for instance with the Chaldeans, and as a leitmotif of Chaldean art is found extensively. It is also found frequently on Gnostic gems and as emblem and as symbol among the ancient Mithraists, where the lion was one of the stages of instruction and initiation.

“Over the seven rays of the lion’s crown, and corresponding to their points, stand, in many cases, the seven vowels of the Greek alphabet AEHIOYΩ, testifying to the Seven Heavens.’ This is the *Solar* lion and the emblem of the Solar cycle . . .” (SD 2:564).

The lion is also Leo, one of the twelve signs of the zodiac.

Lingha(m). See LINGA

Lipika (Sanskrit) *Lipika* [from the verbal root *lip* to write] A scribe; divine beings connected with karma, recorders who impress on the astral light a record of every act and thought, great or small, in the phenomenal universe. The lipika are active cosmic karmic intelligences, the highest class of architects, which lay down from manvantara to manvantara the tracks of karmic evolution to be followed by all evolving entities within the manvantara about to begin; and these tracks are rigidly begun, and their direction controlled, by the endpoint of the paths of karmic achievement in the preceding manvantara. They “project into objectivity from the passive Universal Mind the ideal plan of the universe, upon which the ‘Builders’ reconstruct the Kosmos after every Pralaya, . . . it is they who are the direct amanuenses of the Eternal Ideation — or, as called by Plato, the ‘Divine Thought’ ” (SD 1:104). The lipika thus are in every sense the agents of karmic destiny, for they are both the vehicles of divine ideation in their work, and yet the expressions of karmic law arising in the past and projected on the background of the future. Their intelligence and vitality permeate their particular universe and all the beings in it, so that the lipikas are stamped with whatever takes place.

The lipikas are among the very highest classes of dhyanichohans or cosmic spirits in the universe; as entities, they may be thought of as acting from the highest plane of our chain of globes. In a sense they connect, karmically, the planes of pure spirit with those of matter, the cosmically vast with the manifested. These recorders of and in the karmic ledger of the solar system mark the distinctive barrier between the personal ego and the impersonal self, which latter is the noumenon and parent-source of the former. Hence the allegory that they circumscribe the manifested world of matter within the Ring-pass-not — a mystical way of saying that they karmically circumscribe the limits of manifestation of the worlds of matter within the limits of karmic achievement for the evolving beings, and these limits form the Ring-pass-not.

Because of their lofty position, they are identified with the universal intelligence, as its immediate vehicles or channels. Thus they are not only the channels but the imbodiments of karma, and

therefore not only the interpreters or agents of karma, but the recorders or scribes upwards into cosmic ideation of whatever takes place on lower planes. Their function is thus dual: imbodiments, channels, or interpreters of karma to be worked out in the universe in which the lipikas function, and thus agents of cosmic ideation; and second, as the scribes or recorders of the innumerably multitudinous karmic records of the beings below themselves.

The lipikas correspond to the Egyptian Assessors of Amenti, to the four Recording Angels of the Qabbalah, the Hindu four Maharajas and chitra-gupta, the Christian seven Angels of the Presence, and to the Book of Life of Revelations. They are directly connected with karma, with the Day of Judgment, or the Day-Be-With-Us, when everything becomes one, all individualities becoming one, yet each knowing itself.

Liquor Amnii A serous liquid which appears early and freely in the development of the embryo. Concerning the analogy between the formation of the human body and that of a planet: “This mysterious process of a nine-months’ formation, the Kabalists call the completion of the ‘individual cycle of evolution.’ As the foetus develops amidst the *liquor amnii* in the womb, so the Earths germinate in the universal ether, or astral fluid, in the womb of the Universe” (SD 2:188).

Liquor Vitae (Latin) Life-fluid; used by Paracelsus to describe the life principle in the nerves, apparently the same as prana or Dr. B. W. Richardson’s nervous ether. Prana is but a generalizing term for the five or seven distinct pranas which collectively form the life principle or vital essences in the human constitution.

Lithos, Lithoi (Greek) Stone monuments in Egypt, at Carnac in Brittany, and elsewhere, with symbolic markings on them. Those of archaic age were set up by the last subrace of the Lemurians, who lived until late in Atlantean times, and by the late subraces of the Atlanteans as well as by early races of the present fifth root-race.

Living Buddhas. See TULKU

Living Dead “Soulless” persons rather than lost souls; a term originating with Pythagoras. The numerous class of people who live wholly in the sense-life and drift along, their higher nature dormant.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Lo-Lz

Lobha (Sanskrit) *Lobha* [from the verbal root *lubh* to desire greatly] Covetousness, avarice, stupidity; in Hindu mythology a god, the son of Pushti and Maya, equivalent to the Latin Cupido, from which comes the modern European Cupid. In this connection Lobha is said to be a son of Brahma generated by the latter in an evil moment.

Lodge-Force, Lodge-Spirit The spiritual and intellectual influence or atmosphere radiating from the chief Lodge of Light or the Great White Lodge, and shared to a greater or less degree by students and bodies of students whose devotion and achievement render them receptive.

Lodur, Lodurr (Icelandic, Scandinavian) *Lóðurr* In the Norse Edda, one of the creative divine trinity who endowed nascent humanity with their own properties, thus creating a thinking kingdom of beings out of the ashtree and the alder. Lodurr's gifts were la and laeti (skill and manner, also translated as blood and keen senses), while his brother deities Odin and Honer gave them respectively spirit and discernment.

There is an analogy between Odin (spirit) and air; between Honer (intelligence) and water; and between Lodurr (vitality) and fire or vital heat in any organism.

Logi (Icelandic, Scandinavian) Flame; in Norse myths, wildfire, the destructive property of fire, another aspect of it being Loki, who represents the fire of mind in the human race. In one tale of the Eddas Logi and Loki compete to see who can eat the fastest. They finished together but, while Loki had eaten all the food, Logi had also consumed the wooden platter and won the contest.

Logi and his cohorts are allied with Surt, the fire which destroys the world when its life is ended.

Logia (Greek) Sayings, referring to the spoken teachings of an initiate to his disciples, as distinct from written teachings; sometimes equivalent to agrapha (unwritten teachings) and the aporrheta (things that must not be revealed) of the Mysteries. It usually refers to such sayings believed to

have been given by Jesus and not recorded in the canon, but the secret basis on which Matthew and other evangelists constructed their Gospels. Certain schools of early Christians, whom afterwards were called heretics — the Nazarenes and the Ebionites — based their teachings and rules upon some of these secret discourses. They could only be interpreted by those possessing the keys, hence Jerome, who was employed by the ecclesiastical authorities to translate some of them, could not make much out of them; and what he did make out was hard to reconcile with the canonical Gospels.

Logic An attempt to formulate the processes of the ratiocinative mind, connecting idea with idea in a causal sequence, leading from predicate to conclusion. When the predicate consists of axioms, the species of logic is called deductive, or reasoning from the general to the particular; when the predicate is facts of experience, the logic is called inductive, or proceeding from particulars to generals. As a means of arriving at truth it alone is quite unreliable, as it is but a body of rules based on human experiences, and hence it is often rather a means of justifying conclusions after they have already been formed. This unreliability arises both from the difficulty of applying the process with rigid precision, and also from the uncertainty of the predicates in both systems. A study of what is written on logic will show that there is no agreement as to what constitutes an axiom — whether it is an intuitive perception of truth, or whether it is merely an inference from experience. The same uncertainty exists as to the validity of the assumptions from which inductive chains of reasoning are drawn.

The Greek Sceptics and Pyrrhonists demonstrate that rigid logic leads to contradictory conclusions (antinomies), a fact which led them to doubt the efficacy of the mentality as a means of ascertaining truth. A strictly logical system may be found in pure mathematics, where we lay down axioms and postulates, which are to be treated as not open to question; and then proceed by rigid rules to the inevitable conclusion. But what is possible in an ideal science is not possible in an actual world of infinite variety and fluidity. Theosophy places the subject in a different light, because it recognizes the existence in man of powers of direct cognition by the awakened faculties of buddhi. Thus man has the means of a true deductive system; but even so, deduction must be considered together with induction, analogy, and other methods, as merely one of the various means by which we arrive at a knowledge of truth.

Logograms [from Greek *logos* words + *gramma* letter] A single letter or other sign representing a whole word. Many ancient esoteric writings are written wholly or partially in logograms, such as the Egyptian *Book of the Dead*, certain names in the Vedas, and to some extent in the Bible, so that they have a hidden meaning beneath the sense of the words and sentences. The Chinese written language itself is logographical. In Hebrew and Greek, letters represent numbers, which also is often a key to hidden meanings. *See also* GEMATRIA

Logos (Greek) plural logoi. Word; expressive cosmic intelligence manifested in every rational

being. With Plato, that power of the mind which is manifested in speech; its relation to nous or intelligence is not always clearly distinguished. With reference to the logos in man, an important distinction was made by the ancients between the logos endiathetos (ideal or unspoken word) and the logos prophorikos (expressed or spoken word), the former being an unexpressed idea in the mind. The word was adopted by Christian theologians mingled with ideas taken from the Hebrews, used in the second sense, as found in the first chapter of John, where the Logos seems almost anthropomorphized.

In theosophy, logos stands for the manifested unity at the head of any hierarchy, which is the First Logos. There are innumerable such logoi in cosmic space. The Second Logos emanates from it and is dual, combining both the active and passive sides of the emanation from the First Logos, just as a word combines idea or thought with the vibratory energy of sound. The Third Logos, again, is the offspring or emanation from the Second or Dual Logos.

It is just in these three logoi, considered as a cosmic unit, that arose the original teaching of the Christian Trinity. In the original Christian idea, the Son was identified with the Third Logos and proceeded from the Father and the Holy Spirit, the Second Logos, originally in Christianity a feminine cosmic power; whereas the Roman Catholic Church made the procession of the Son come directly from the First Logos or Father, the Holy Ghost being misplaced and made the Third Logos. In later developments of Christian theology, the Logos is spoken of as the Word made flesh, the manifestation of God on earth, the Son of God, Christ, the miscalled Second Person of the Trinity. This idea was still further narrowed and debased into the doctrine of a single and special earthy manifestation of the Godhead.

After parabrahman, the one ineffable and unthinkable reality, comes the First or Unmanifested Logos, corresponding to paramatman in cosmos and atman in man, the supreme monadic self in any hierarchy; then as an emanation from the former comes the quasi-manifested or Second Logos, corresponding to cosmic and human buddhi, always envisaged as a feminine potency; and then from the former two proceeds the manifested, creative, or Third Logos, corresponding to mahat on the cosmic plane and manas in the human constitution. Thus Logos is a center of unity in a being, which may exist in an unmanifest or a manifest condition, but always derivative from the supreme mystery above it — to which must be added an intermediate state of partial or incipient manifestation. Man is sometimes spoken of as the Third Logos, as it corresponds to manas.

“This [first] Logos may be called in the language of old writers either *Eswara* or *Pratyagatma* or *Sabda Brahman*. It is called the *Verbum* or the Word by the Christians, and it is the divine *Christos* who is eternally in the bosom of his father. It is called *Avalokiteswara* by the Buddhists; at any rate, *Avalokiteswara* in one sense is the Logos in general, . . . In almost every doctrine they have formulated the existence of a centre of spiritual energy which is unborn and eternal, and which exists in a latent condition in the

bosom of *Parabrahmam* at the time of *pralaya*, and starts as a centre of conscious energy at the time of cosmic activity. It is the first *gnatha* or the ego in the cosmos, and every other ego and every other self . . . is but its reflection or manifestation. In its inmost nature it is not *unknowable* as *Parabrahmam*, but it is an object of the highest knowledge that man is capable of acquiring. . . .

“ . . . *Parabrahmam* by itself cannot be seen as it is. It is seen by the Logos with a veil thrown over it, and that veil is the mighty expanse of cosmic matter. It is the basis of all material manifestations in the cosmos.

“ . . . the first manifestation of *Parabrahmam* is a Trinity, the highest Trinity that we are capable of understanding. It consists of *Mulaprakriti*, *Eswara* or the *Logos*, and the conscious energy of the *Logos*, which is its power and light; and here we have the three principles upon which the whole cosmos seems to be based. First, we have matter; secondly, we have force — at any rate, the foundation of all the forces in the cosmos; and thirdly, we have the ego or the one root of self, of which every other kind of self is but a manifestation or reflection” (Notes on BG 18-22).

On account of the universal analogies running throughout Nature, every cosmic unit, such as a solar system or a sun, is an expression in itself of a minor series of First, Second, and Third Logoi; and this primordial Triad through the Third Logos breaks into seven offspring-logoi, which become the seven solar logoi.

Lohita (Sanskrit) *Lohita* Red; a title of the planet Mars.

Lohitanga (Sanskrit) *Lohitāṅga* [from *lohita* red, ruddy + *aṅga* limb; the red-limbed] The planet Mars; the third root-race is born under Lohitanga. (SD 2:29)

Loka (Sanskrit) *Loka* Place, locality; in Brahmanic literature, heavens; in theosophical literature, world, sphere, plane. Used in the metaphysical systems of India, both in contrast to and in conjunction with *tala* (inferior world). “Wherever there is a *loka* there is an exactly correspondential *tala*, and in fact, the *tala* is the nether pole of its corresponding *loka*. *Lokas* and *talas*, therefore, in a way of speaking, may be considered to be the spiritual and the material aspects or substance-principles of the different worlds which compose and in fact are the kosmic universe” (OG 168). The *lokas* and *talas* must be thought of by twos: a *loka* and its corresponding *tala* can no more be separated than can the two poles of a magnet. They are the two sides of being, the two contrasting forces of nature, the light-side and the night-side.

There are many different divisions of the *lokas* and *talas* used in Hindu literature, but many are merely exoteric blinds. Dividing the universe into seven manifested grades or planes of being, which are really worlds, these worlds are polarized into *lokas* and *talas*, two by two throughout. The seven *lokas* and seven *talas* together form the seven cosmic planes. Of these seven *loka-tala*

pairs, the three highest belong to the relatively arupa (formless) or spiritual worlds, and are often called arupa lokas and arupa talas. The four lowest pairs belong to the rupa (form) or material worlds, and are often called rupa lokas and talas. These lokas and talas are not placed in nature's structure above each other like steps of a stair, but are within each other, interblending and continually interacting. Each inner one is finer and more ethereal than the next outer one; the inmost of either series is the most ethereal and spiritual of all. The more spiritual the center, the wider is its outflow of radiation and influence, and it therefore reaches far beyond the more material ones. Exoteric Hindu literature details specific limitations or frontiers to the reach of each loka and tala, as for instance when it is said that svarloka and talatala extend to the pole star, or that the reach of influence of bhuvvarloka and mahatala extend to the sun.

Our earth, globe D of the earth-chain, is patala if we look at it from the material standpoint; and it is bhurloka if we look at it from the energy-consciousness side. In this globe the loka and tala are equally bipolarized because it is the only globe on the lowest cosmic plane. It is the turning point of our planetary chain where matter and spirit are equilibrated. The field of influence of this loka and tala — and indeed of all the lokas and talas — extends little farther than the psychomagnetic region of globe D.

The solar system as a whole has its corresponding cosmic lokas and talas; so has any planetary chain of the solar system and any globe of such chain. Each one of these different scales is built of its own series of lokas and talas on the analogical principle that what prevails in the cosmic whole as its fundamental structure must necessarily prevail in its every portion.

Just as the kosmos is divided into seven planes with its cosmic lokas and talas, its tattvas and bhutas — its principles and elements — so is every globe of our planetary chain, and indeed every human being, of necessity divided in a similar manner, with its own seven lokas and seven talas, which in the case of man are the principles and elements of his constitution. Thus,

“the seven principles of our globe are the seven lokas and seven talas belonging especially to earth; and the seven principles of each one of the other six globes of our planetary chain, are the respective lokas and talas belonging to each one of them. Now the two other globes on each plane of the three planes above ours, making thus the other six globes of our planetary chain, receive their respective life force, receive their respective inflow of intellectual and spiritual energies and beings, from the respective lokas and talas of the sun. There are seven suns, but only one sun on this plane, as our globe is but one on this plane, the lowest of the seven kosmical planes.”

“each one of these lokas and each one of these talas produces the following lower one of the scale from itself, . . . The highest of either line projects or sends forth the next lower. It, in addition to its own particular characteristic or swabhava, contains also within itself the nature of the one above it, its parent, and also sends forth the one lower than it, the third in

the line downwards. And so on down the scale. So that each one of the principles or elements [or lokas or talas] is likewise sevenfold, containing in itself the subelements of that or those of which it is the reflection from above” (Fund 472, 481-2).

The lokas, in our present fourth planetary round, are dominant on the luminous arc, while the talas are recessive; whereas the talas are the dominant factors or worlds on the shadowy arc of descent, where the lokas are recessive or involving. Virtue, purity, kindness, compassion are signs that the entity possessing them is evolving the spirit within, and therefore is ascending along the lokas of the luminous arc and thus is a denizen of the lokas as the dominant factors in his evolution. Selfishness, impurity, unkindness, cruelty, and deception are the signs that the entity possessing them is then under the influence or dominance of the talas, and is for the time being on a shadowy arc — the particular and characteristic effect of the working of the influences of the talas.

Loka-chakshus (Sanskrit) *Loka-cakṣus* [from *loka* world + *cakṣus* eye] The eye of the world; also one name of the sun.

Lokaloka (Sanskrit) *Lokāloka* [from *loka* world + *aloka* unworld] The world and that which is not the world, the world and the invisible worlds, the inner ranges of being. In the mythological geography of the Puranas, said to be the belt or circle of mountains surrounding the outermost of the seven seas and dividing the visible or manifest world from the invisible or unmanifest worlds, often called the region of darkness (darkness here signifying merely nonvisible).

Lokanatha (Sanskrit) *Lokanātha* [from *loka* world + *nātha* refuge, protector] World refuge or world protector; law. A title of Gautama Buddha, conveying the idea that he is the spiritual refuge and protector of our world.

Lokapalas (Sanskrit) *Lokapāla-s* [from *loka* world + *pāla* protector from the verbal root *pā* to protect] The spiritual supporters, rulers, and guardians either of a universe or of a world. The cosmic, solar, or planetary spirits who preside over the eight points of the compass, among them being the four Maharajas. Each of these guardian spirits has an elephant (or other symbolic animal) who takes part in the defense and protection of the quarter, and these eight elephants are themselves sometimes called lokapalas. These elephants and their spouses pertain “to fancy and afterthought, though all of them have an occult significance” (SD 1:128). According to the Hindu pantheon, Indra presides over the east; Agni, the southeast; Yama, the south; Surya, the southwest; Varuna, the west; Vayu, the northwest; Kuvera, the north; and Soma, the northeast.

Lokapala-sabha-varnana (Sanskrit) *Lokapāla-sabhā-varṇana* [from *lokapāla* world protector + *sabhā* assembly + *varṇana* description] The description of the assembling of the world protectors (rajarshis); see *Mahabharata*, Sabha Parva, Section 20:233(8) (Debroy tr.) cited by Subba Row, *Notes on the Bhagavad Gita*, Section 2.

Lokaratha. See LOKANATHA

Loki [from Danish *lys*, Swed *ljus*, Anglo-Saxon *leoht*, Latin *lux* light; cf *liechan*, *liuhan* to enlighten; Greek *leukos* white.] In Norse myths, the giant grown to godhood who represents the active human mind: on one hand he is related to Logi (flame), destructive wildfire; on the other he is called Loft (lofty), when he represents aspiring, elevating intelligence. Like Lucifer, he is the enlightener of humankind who became transformed in popular stories into a culprit guilty of all the ills that can result from the misuse of mind.

Loki is descended from giant stock, but he is accepted among the Aesir (gods) as one of them and is considered a blood brother to Odin. Although as prankster and mischief maker he causes trouble for his brother deities at every turn, nevertheless, when appealed to, it is Loki who with his ready wit saves each situation. The panorama of evolution is thus epitomized: the pure deities must use mind, self-consciousness and free will unhampered, unruly though these properties are, to gain understanding. That is the purpose for which they embody; this means that the human thinking faculty must earn its godhood by freely choosing to cooperate with the divine purpose.

Loki is thus a complex figure of markedly dual character: his giant ancestry, which rightly belongs to the past, suggests the only partly evolved human nature, uninspired by divine wisdom. At the same time he is associated with the divine fire of intelligence. This godlike quality entails free will, which in our human condition is often unwise unless guided by inspiration and brings misfortune when acting on its own.

Loki is closely related to the gem of Freya (human higher intelligence), and to Gullveig (thirst for gold). The latter can represent either wisdom or plain greed for possessions.

With the giantess Angerboda (boding regret) Loki sired three offspring: the Midgard serpent (the equator) which is curled round the earth in the depths of the oceans and which also has larger astronomical applications; the wolf Fenris, which is to devour the sun at the end of its lifetime; and Hel, the queen of the realms of death. According to one tale Loki in the shape of a mare gave birth to Odin's eight-legged steed, Sleipnir (slider), and so provides the mount which enables Odin to enter all spheres of life. In another, Loki and Dvalin, the human "dwarf" (animal) nature, competed with the sons of the giant Ivaldi to produce valuable gifts for the Aesir (gods).

Loki is variously named the son of Lofu (leafy isle, the earth), because it is here that apply the various allegories concerning this at once sacred and naughty figure; the son of Nal (needle); and of Farbuti.

One of the most familiar stories of the Eddas is that in which the sun god Balder was killed by his blind brother Hoder through the machinations of Loki. This brought the golden age to an end and for this the bringer of mind and free will to man is condemned to remain in the underworld, "bound with his dead son's guts" until the end of this world cycle, when he will be released.

Lord of the Flies. *See* BEELZEBUB

Lord of the Lotus (Sanskrit Kumuda-pati) Title applied to various productive intelligent powers in nature, and on the macrocosmic scale to the generative lords of the universe, the lotus being the symbol of the manifested universe, the matrix of nature, so that the Lord of the Lotus is the activating productive power in it.

Lorelei The legendary maiden who sat on a rock in the Rhine between Bingen and Coblenz, combing her beautiful hair and by her entrancing song bewitching sailors on the river to their doom. She belongs to a numerous class of such mythologic maidens, representing mainly the fascinating powers of the astral light over the unwary pilgrim in search of knowledge. The astral light partakes of the “watery” cosmic element, and the nature spirits pertaining to water on this plane were called by medieval European mystics the undines, of whose entrancing beauty and singing many tales are told, such as that of Odysseus and the sirens, or the Scandinavian lake maiden.

Lost Soul An entity who through a series of rebirths has been slowly following the easy descent to Avernus. A lost soul is one who is not merely “soulless” in the ordinary theosophical usage, but is one who has lost the last link, the last delicate thread of consciousness, connecting him with his inner god.

This loss of the soul cannot ensue as long as even one spiritual aspiration remains functionally active. When not one single, quivering aspiration spiritward remains, the soul is lost for that manvantara; its essence, as it were, is inverted, and its tendency is downwards into avichi where, depending upon the power over nature acquired by the soul, circumstances may bring about an almost immediate annihilation of it or, perhaps, a manvantara of avichi-nirvana, a fearful state indeed, contrasted with the wondrous nirvana of the dhyani-chohans.

But this horrible fate, the easy descent, is brought about gradually. Passing from human birth to an inferior human birth, and then to one still more inferior, the degenerate astral monad — all that remains of the human being that once was — may finally even enter the body of some beast to which it feels attracted (and this is one side of the teaching of transmigration, which has been so badly misunderstood); some finally go even to plants perhaps, at the last, and will ultimately vanish. The astral monad will then have faded out. Such lost souls are exceedingly rare.

The lost soul is at one pole of consciousness and the master at the other. It is between the higher human soul, and the human soul (or man proper) that lies the psychological frontier over which one must pass forwards or backwards, into regeneration or degeneration. The first leads to masterhood, the second to final annihilation. For, as attraction to matter increases, the egoic soul-quality deteriorates, and through attrition the link is broken, and the soul finally sinks into the Eighth Sphere, the Planet of Death.

Lost Word According to the Masonic ritual of the third or Master Mason's degree, the Word which was in the possession of the three Grand Masters of the Craft, King Solomon, Hiram of Tyre, and Hiram Abif, and could be given only when the three were "present and agreed," was said to have been lost on the death of Hiram Abif, in consequence of which it was decreed that until the True Word was again found, a Substitute Word should be used. By the death of Hiram Abif not only was the Master's True Word lost, but it was discovered that there were no plans upon the Trestle-Board for continuing the work of the building of the Temple. This gives a clue to the meaning of the Lost Word which "ought to stand as 'lost words' and lost secrets, in general, for that which is termed the lost 'Word' is no word at all, as in the case of the Ineffable Name" (TG 191). Communicated to man in the childhood of the human race, these lost secrets were passed on from hierophant to hierophant in turn.

Every true Mason is in search of the Lost Word, the secret knowledge or gupta-vidya, yet the lost secrets of the Royal Art can never be communicated to, because they cannot be comprehended by, one who does not recognize and in degree at least realize his own inner divinity, the immanent christos or buddha within, which is his true self; i.e., through initiation become, actually and in fact, a Christos, an Osiris, a Hiram Abif. Every degree of initiation into the Mysteries has its secrets, its Word, its sacred formula, which may be communicated only to those who, according to Masonic ritual "are duly and truly prepared, worthy and well qualified," else the penalty is death to the one so revealing the Word or secrets.

The mythos of Orpheus and Eurydice is a Mystery-story of the loss of the Word — Eurydice being a personification of the esoteric wisdom. The recovery of the Word is possible only to him who, during initiation, descends into the Underworld fully prepared, and who fulfills the inescapable conditions for return therefrom in possession of the Word, as was Orpheus through his marriage with Eurydice. Should he like Orpheus lose it — fail to bring Eurydice back with him — such loss brings inevitable death, or at least a rupture between the personal man and his higher spiritual nature, so that the personal man, unprotected by his spiritual nature, becomes the prey of remorse and of the lower terrestrial passions, the Bacchantes, and is finally slain by them. But this is not necessarily final failure, for in the next or in a succeeding life he may again begin his search for the Word, and if undaunted by obstacles, even by repeated failures, he continue in his search, he may and probably will ultimately find it.

Lotus [from Greek *lotos*] A lily belonging to the genus *Nymphaea*, an ancient and universal symbol; in India spoken of innumerable times under its Sanskrit name padma.

"It is the flower sacred to nature and her Gods, and represents the abstract and the Concrete Universes, standing as the emblem of the productive powers of both spiritual and physical nature. It was held sacred from the remotest antiquity by the Aryan Hindus, the Egyptians, and the Buddhists after them; revered in China and Japan, and adopted as a Christian

emblem by the Greek and Latin Churches, who made of it a messenger as the Christians do now, who replace it with the water lily. It had, and still has, its mystic meaning which is identical with every nation on the earth” (SD 1:379).

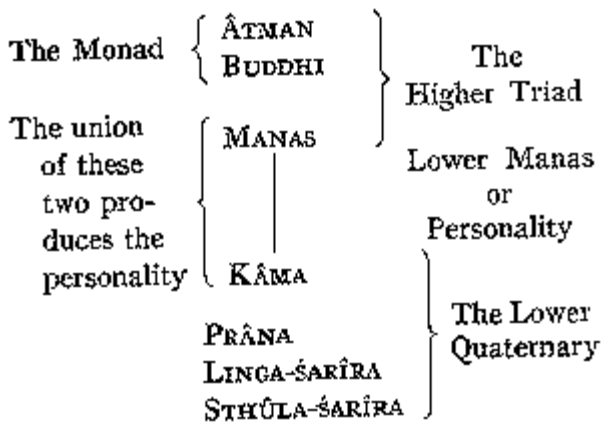

In relation to men, the lotus is the symbol of the self-producing soul which, during manifestation immersed in material life as the lotus seed is embedded in the mud of lake or pond, is wakened by the warm rays of the spiritual sun, and grows upward through the world of illusion (symbolized by water) to blossom in the free air and sunlight of truth. Cosmically the lotus symbolizes the emanation of the objective from the subjective, the manifested effect or production of the eternal plan on which the invisible worlds are built by the formative logoi. This lies buried, until the time for its svabhava or production comes, in the bosom of eternal ideation — as the lotus plant of visible nature exists in miniature in the seed.

Lower Face or Lower Countenance. *See* MICROPROSOPUS

Lower Nature, Lower Self The dual human nature arises from the fact that manas (mind), the field and substance of human thought and reasoning, is the scene of interaction between the spiritual soul (buddhi-manas) and the animal soul (kama-manas). Thus there is a threefold division, so that lower self may be considered as either the kama-manas as opposed to buddhi-manas, or else the dual human consciousness or false ego, consisting of both selfish and unselfish elements. The term lower nature, however, refers to the animal and selfish side of human nature, that part which tends downwards and which has to be regenerated and raised.

Lower Principles, Lower Quaternary According to the septenary division of human nature, the septenate is divided into a triad above and a quaternary below, four being a number in this case corresponding to matter, and three corresponding to spirit and intellect. Theosophical teachings enumerate the seven principles in several different ways which tends to keep the student's ideas fluid and thus prevent dogmatic orthodoxy.

At one time the lower quaternary was given as kama (desire), prana (vitality), linga-sarira (astral body) and sthula-sarira (physical body); later the physical body was excluded from the list of principles, and lower manas was added to make up the four. These principles, however, must not be regarded as separate things conjoined or strung together, as they are several aspects or states of manifestation of the one life that circulates through the human constitution. Another way of regarding the matter is to say that there are two triads, the higher triad of atma-buddhi with higher manas and the lower triad of our astral-vital nature, each of which becomes a complete quaternary when the element of self-conscious mind is added to it.

If we use the symbol of the Tetraktys, the two lower lines consisting of a three and a four, will stand for the human septenate, the three highest points representing cosmic principles.

It is also necessary to avoid looking on the lower quaternary as something evil, which must be destroyed or wrongly subjugated; it is in fact an essential part of the complete human being, and what it needs is regulation, inspiration from above, and consequent regeneration.

Lubara (Chaldean) The god of pestilence and disease.

Lucianists A Christian religious sect of the 2nd century which taught a version of the occult doctrine as to the meaning of Satan and the so-called Fall of the angels, who descended into matter to bring light to the lower planes.

Lucifer (Latin) Light-bringer [cf Greek *Phosphoros*; or *Eosphoros* dawn-bringer]; the planet Venus, the morning star. Lucifer is light bringer to earth, not only physically as the brightest of the planets, but in a mystical sense also. In mysticism he is the chief of those minor powers or logoi who are said to rebel against high heaven and to be cast down to the bottomless pit — the so-called war in heaven and the fall of the angels. This allegory is found also in the legend concerning Prometheus, in the Hindu Mahasura who rebels against Brahma and is cast by Siva into patala, and in the Scandinavian Loki. In the cyclic sweep of evolution, spirit has first to descend or become involved in differentiation and in the worlds of matter, so that worlds and beings may be brought forth and evolved. The logoi who thus bring the light may allegorically be said, like Prometheus, to steal the fire, and their assertion of divine free will may be construed into an act of evolutionary rebellion; yet such is their karmic function as well as duty.

Lucifer has been transformed in later Occidental theology into a synonym for the Evil One or the Devil. If the god Jehovah were the highest divinity, which this Jewish tribal deity is not, then any

power withstanding him must necessarily be considered to be his adversary; and in the same way the teaching as to the immanent Christ, not only in the world but in each individual person, not being altogether agreeable with the doctrine of salvation by faith in an external savior, became transformed into the Tempter inspiring man to sinful rebellion against God. Lucifer in a very true sense stands for the self-conscious mind in man, which is at once tempter and enlightener — tempter in its lower aspects and enlightener and inspirer in its higher. *See also* MANASAPUTRAS; PROMETHEUS; SATAN

Luciferians A Christian sect formed in the 4th century by Lucifer, bishop of Cagliari. He was an ardent supporter of the Athanasians against the Arians, but split off from the other Athanasian prelates because they were not sufficiently intolerant in their opposition of the Arians. The sect perished after his death and left no distinctive doctrine of importance.

Lucina (Latin) [from *lux* light] A name of the goddess Juno, or of Diana as the goddess of productivity and therefore with direct connection with the moon. A secondary meaning refers to Hecate, the lunar goddess, in her aspect of causing disturbed dreams and specters. The different names given to the functions of the moon, such as Diana, Lucina, Hecate, or Artemis, do not represent different mythologic individuals, but different lunar functions as exercised on earth — different aspects of the moon.

Lug (Tibetan) [possibly *lugs* (luk, lu) way, method, manner] A method of writing in cipher whereby esoteric doctrines may be preserved, using numerals and colors, each of which correspond to a letter of the Tibetan alphabet to form a complete cryptographic alphabet (cf VS vii-viii).

Luminous Arc. *See* ARC, ASCENDING AND DESCENDING

Luna. *See* DIANA; LUNAR GODS

Lunar Chain, Moon-Chain The planetary chain of the solar system which, although now dead and in decay, was the former imbodiment of our present earth-chain. When the life forces inherent in a globe of a planetary chain have completed seven rounds on that globe, these life forces progressively pass out into a laya-center which then becomes, after a time period determined by karma, the vital nucleus for the corresponding globe or the next imbodiment of that planetary chain. This took place on the lunar chain as the globes of this chain in the preceding chain-manvantara reached the end of their life-term in manifestation, and died in serial order from the first to the last globe. Thus each globe of the lunar chain as it died became a lunar globe-corpse still infilled with the molecular life of the globe, but deprived of all its higher, more ethereal and spiritual parts — exactly as happens at the death and decay of a human physical body. Though globe D of the moon-chain, as an instance in point, thus passed into invisibility with the disintegration of its molecular components and with the passage of cosmic ages, yet we are able to discern its phantom, our moon, because our senses, correlated to the physical plane of matter of our chain, are also correlated to what on the lunar chain would be astral matter, and thus are able

to perceive what is actually the kama-rupa or astral shell of globe D of the lunar chain (our moon). Hence the earth-chain is the child or reimpodiment of the lunar chain.

Lunar Gods If moon stands for the feminine side of nature, it is Isis, the Great Mother; and thus a lunar god may be a very august being, and even with some nations regarded as superior to and prior to the masculine side. On the other hand, moon may stand for the nether pole of manifestation and thus lunar gods may stand in contrast with solar gods, as pertaining to an inferior, exoteric, or materialistic cultus. The moon is said to be threefold, e.g., Diana-Hecate-Luna, ruling over the superior, inferior, and middle worlds. Lunar gods may also apply to the lunar pitris.

“Called in India the Fathers, ‘Pitris’ or the lunar ancestors. They are subdivided, like the rest, into seven classes or Hierarchies. In Egypt although the moon received less worship than in Chaldea or India, still Isis stands as the representative of Luna-Lunus, ‘the celestial Hermaphrodite.’ Strange enough while the modern connect the moon only with lunacy and generation, the ancient nations, who knew better, have, individually and collectively, connected their ‘wisdom gods’ with it. Thus in Egypt the lunar gods are Thoth-Hermes and Chons; in India it is Budha, the Son of *Soma*, the moon; in Chaldea Nebo is the lunar god of Secret Wisdom, etc., etc. The wife of Thoth, *Sifix*, the lunar goddess, holds a pole with five rays of the five-points star, symbol of man, the *Microcosm*, in distinction from the Septenary Macrocosm. As in all theogonies a goddess precedes a god, on the principle most likely that the chick can hardly precede its egg, in Chaldea the moon was held as older and more venerable than the Sun, because, as they said, darkness precedes light at every periodical rebirth (or ‘creation’) of the universe. Osiris although connected with the Sun and a Solar god is, nevertheless, born on Mount *Sinai*, because *Sin* is the Chaldeo-Assyrian word for the moon; so was Dio-Nysos, god of Nyssi or *Nisi*, which latter appellation was that of Sinai in Egypt, where it was called Mount Nissa” (TG 192-3).

Lunar Pitris [from Sanskrit *pitṛ* father, ancestor] Lunar fathers, also called barhishad-pitris and lunar ancestors; used in distinction from the solar pitris or agnishvattas. Lunar pitris are the actual progenitors of our lower principles, as distinguished from the dhyani-chohans who are, in an important sense, our own selves. Lunar pitris, in the wider sense, come from the moon-chain to inform the earth-chain, forming a sevenfold or tenfold hierarchy. In a more restricted sense, they are those elements in our constitution which are below the evolutionary standard of the agnishvattas, informing our lower principles; whereas the solar pitris originating not in the moon-chain but in a higher sphere, give to man the higher parts of his constitution. There is a subdivision of the seven classes of lunar pitris into arupa (formless) and rupa (form). The lunar pitris built a psychophysical vehicle fit for the informing intellectual spirit which the agnishvattas communicated.

Lunar Race. See CHANDRA-VANSA

Lung (Chinese) Dragon; the being who excels in intelligence. Dragons of Wisdom was the name given by the Chinese to the first disciples of the primitive adepts of the third root-race, and later of the fourth and fifth root-races. The dragon was described as: “gifted with an accepted form, which he has the supernatural power of casting off for the assumption of others, he has the power of influencing the weather, producing droughts or fertilizing rains at pleasure, of raising tempests and allaying them” (Mythical Monsters 212).

Confucius spoke of the dragon as one who “feeds in the pure water of Wisdom and sports in the clear waters of Life”; while the *Twan-ying-tu* says of the yellow dragon, “His wisdom and virtue are unfathomable . . . he does not go in company and does not live in herds (he is an ascetic). He wanders in the wilds beyond the heavens. He goes and comes, fulfilling the decree (Karma); at the proper seasons if there is perfection he comes forth, if not he remains (invisible)” (SD 2:365).

Lucina. See DIANA; LUNAR GODS

Lunisolar Year The year of twelve lunations, widely used and often spoken of as the lunar year; otherwise, applicable to various cycles which adjust with more or less approximation the periods of the sun and moon, especially the period of 532 years (Dionysian cycle). This is sometimes called the lunisolar year which combines the Metonic cycle of 19 solar years with the cycle of 28 years, which latter brings the days of the week into harmony with the days of the Julian year.

Lunus. See LUNAR GODS

Lupercalia (Latin) Roman festival of purification and expiation held on February 15, originating from a pastoral festival dating before the foundation of Rome. The power invoked was that of Faunus (under the name of Lupercus), Pan, or some similar nature god, considered to be protector of flocks and promoter of fertility. The best known feature of the later Roman rite was the running around of the two youths called Luperci, who smote people with leather thongs, especially women wishing to be cured of barrenness. In 494 it was changed to the Christian Feast of the Purification.

Lusus Naturae (Latin) Sport of nature; a freak or rare production or phenomenon, also sometimes used for a chance resemblance, such as a flint with the form of a human foot or ear.

Lux. See LIGHT

Lycanthropy [from Greek *lykanthropos* wolf-man] In all times and places there has been prevalent the belief that human beings can become transformed into wolves or other animals, obsessed by the spirits of these animals, or even assume this condition at will through sorcery; the object being to gratify hatred or to satisfy voracious instincts. People thus affected are said to have appeared both to themselves and to others in the form of wolves and to have attacked animals, but especially human beings. The English name for such a person was werewolf (man-wolf). The belief was very prevalent in medieval Europe, and was the occasion for numerous legal executions. It

has disappeared before the advance of our present culture, but it was a fact, depending upon little understood mysteries of psychologization, and the belief still holds among some people.

The phenomenon is a variety of black magic, involving both the practice of psychologization and in certain cases the subjection of the victim to astral obsession: either an involuntary astral seizure on the part of a mediumistic person, or a deliberate act of sorcery on the part of a degraded one. The lower realms of the astral light harbor baneful exuviae of various sorts, with which a pernicious commerce may be had through various forms of moral depravity and psychic weakness. It was an exaggerated and specialized form of obsessions which takes place in our day in people transported by passion or afflicted with violent insanity; hence it is often found convenient to describe it simply as a form of insanity, which however does not explain how the appearances of a wolf were caused. In extreme cases, however, the craving for physical life and the dread of personal extinction in a human kama-rupa may be so great that it may seize and enter the body of a living animal.

Lycomidae (Greek) A family living in ancient Athens, hereditary torch-bearers in the Eleusinian Mysteries. The members of this family formed with the Eumolpidae, likewise hereditary officials, two of the most important functionaries in the celebration of these archaic rites. The torchbearers with the hierophants (Eumolpidae) had to be men of proved and known integrity and of spotless life, until the Mysteries degenerated in later times.

Lyre of Apollo. *See* HEPTACHORD

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Ma-Mam

Ma (Sanskrit) *Mā* In Hindu mythology a name of Lakshmi, the consort of Vishnu, goddess of prosperity, welfare, and happiness.

Maat (Egyptian) *Maāt*. The goddess personifying physical and moral law, order, and truth, regarded as the feminine counterpart of Thoth (Tehuti). She is represented as standing with Thoth in the boat of Ra when the sun god first rose above the waters of the primeval spatial abyss of Nu. She is called the daughter of Ra, the eye of Ra, lady of heaven, queen of the earth, and mistress of the Underworld, who guides the course of the sun. The type and symbol of the goddess is the ostrich feather; the word *maat* is represented by the hieroglyph of the feather and means primarily that which is orderly and direct, hence in a moral sense, right, truth, justice, including a reference to the fact that these supreme attributes weigh light as a feather in the scales of judgment, and yet are as weighty in importance as the universe itself. Maat was regarded by the Egyptians, in connection with her moral power, as the greatest of goddesses, for she was the chief lady of the Judgment Hall, into which the deceased must enter (called the Hall of Maati, “double truth”).

Mabbul (Hebrew) *Mabbūl* A flood, deluge, inundation. “Esoterically, the periodical outpourings of astral impurities on to the earth; periods of psychic crimes and iniquities, or of regular moral cataclysms” (TG 211).

Mabinogion (Welsh) A plural form invented by Lady Charlotte Guest and applied to the Mabinogi and other medieval or earlier romances which she translated from Welsh to English. The Mabinogi proper has four branches: the stories of Pwyll Pendefig Dyfed (Pwyll prince of Dyfed); Manawyddan fab Llyr (Manawyddan son of Llyr); Branwen ferch Llyr (Branwen daughter of Llyr); and Math fab Mathonwy. The tales as they come down to us were written down in South Wales some time before the Conquest — in the last two centuries of Welsh independence — and are

marked by great beauty of style and literary finish. Matthew Arnold compares them to “peasants’ huts built of the stones of Ephesus”: the substance of them comes from a profound antiquity which, with its wisdom, the latest tellers of them did not fully understand. As to that antiquity: when Bran the Blessed invaded Ireland, we are told, there was no sea between Wales and Ireland, but only two small rivers. These being unbridged, the question arose, how should the hosts of the Island of the Mighty cross them? A question Bran solved by laying down his body from bank to bank, saying: “He who is Chief, let him be the Bridge,” a saying that contains a great part of the secret wisdom of the Druids.

Besides the Mabinogi, Lady Guest’s *Mabinogion* contains such stories as “Culhwch and Olwen” (a repository of relics of the lost mythology) and “The Dream of Rhonabwy,” both Arthurian, but Welsh and mythological. Other stories are “Peredur, the Lady of the Fountain,” “Geraint ab Erbin,” in which the Romance, Arthurianism, and Norman influence are beginning to appear. In “Peredur” we see the cauldron, symbol of initiation with the Druids, in process of becoming the Holy Grail: Peredur and Perceval are Pair-(g)edur and Pair-cyfaill — the “servant” and the “friend” of the cauldron.

Machagistia The divine theologic magic of ancient Persia and Chaldea; Magianism in its purest and highest form. Ammianus Marcellinus (4th Century) remarks that “Plato, that most learned deliverer of wise opinions, teaches us that Magiae is by a mystic name Machagistia, that is to say, the purest worship of divine beings; of which knowledge in olden times the Bactrian Zoroaster derived much from the secret rites of the Chaldaeans; and after him Hystaspes, a very wise monarch, the father of Darius” (Roman History 23, 6, 32).

Macrocosm [from Greek *makros* wide, large + *kosmos* universe] Kosmos considered in contradistinction from any one of its parts or microcosms.

Macroprosopus (Latin) [from Greek *makros* great + *prosopon* face] Also Long Face, Great or Vast Countenance. Coined by medieval Qabbalists to translate the Chaldee phrase ‘Arich Anpin (great face), one of the names of the first emanation of the Sephiroth Tree, Kether the Crown. Generally regarded as the universe in its totality, “in the Chaldean Kabal, a pure abstraction; the Word or logos, or dabar (in Hebrew), which Word, though it becomes in fact a plural number, or ‘Words’ — d(a)B(a)Rim, when it reflects itself, or falls into the aspect of a Host (of angels, or Sephiroth, ‘numbers’) is still collectively One, and on the ideal plane a nought — 0, a ‘No-thing.’ It is without form or being, ‘with no likeness with anything else’ ” (SD 1:350). The originator of the succeeding nine emanated Sephiroth which, flowing forth from the Crown, are collectively called Microprosopus.

Madan (Tamil) One that looks like a cow; wicked elementals or other astral and subastral sprites or nature spirits, half-brutes or half-monsters. They are particularly helpful to sorcerers of evil intent, as they are used for striking people and cattle with sudden illness and even death.

Madbhava (Sanskrit) *Madbhāva* [from *mad* base of the first person singular pronoun + *bhāva* being, nature, essence] My essence, my nature.

Madhava (Sanskrit) *Mādhava* A name of Vishnu because of his slaying of the asura Madhu; applied to Krishna as an avataric manifestation of Vishnu; also the month corresponding to April-May.

As a feminine noun, Madhavi, a title of Lakshmi, consort of Vishnu.

Madhavacharya (Sanskrit) *Mādhavācārya* [from *Mādhava* + *āchārya* teacher, preceptor] Celebrated religious teacher and scholar of the 14th century, one of the main teachers of the Dvaita-Vedanta school of pronounced dualism. It teaches the existence or permanent reality of two fundamental principles in universal nature: spirit and matter, or divinity and the universe. This dualism is in direct contrast with the unity doctrine taught in the Advaita-Vedanta or nondualistic system of Sankaracharya.

Madhavas (Sanskrit) *Mādhava*-s In the plural, the descendants of Madhu, men of the race of Yadu, and hence often called Yadavas.

Madhavi (Sanskrit) *Mādhavī* A spring flower; a name of Lakshmi, the consort of Vishnu. *See also* MADHAVA

Madhu (Sanskrit) *Madhu* An asura; in the *Mahabharata* and the Puranas, Madhu and Kaitabha sprang from the ear of Vishnu while he was asleep at the end of a kalpa. Brahma was also lying asleep on the lotus springing from Vishnu's navel, and the two asuras were on the point of slaying Brahma, when Vishnu awoke and slew them — hence he was called Kaitabhajit and Madhusudana. The *Harivansa* relates that the bodies of the asuras were cast into the sea and produced an immense amount of marrow, out of which Narayana formed the earth. Krishna also killed a demon named Madhu.

As an adjective, delicious, sweet.

Madhusudana (Sanskrit) *Madhusūdana* The slayer of Madhu; a title of Vishnu, who slew the asura Madhu; and of Krishna as an avatara of Vishnu because he slew the demon Madhu.

Madhva (Sanskrit) *Madhva* also *Mādhava*. The founder of a sect of Vaishnavas called Madhvas after their founder who lived in southern India. Regarded by his followers as an incarnation of Vayu, said to have been born about 1200, his doctrine is known by its chief characteristic called Dvaita (duality), and stands in opposition to the system of Advaita (nonduality) of Sankaracharya, a follower of the Siva-form of philosophic thought. He was a follower of the Vishnu-form of religious philosophy, and his special teaching of Dvaita was based on the supposition that the supreme soul of the universe and the human soul are distinct entities, thus being in sharp contrast with the Advaita, which teaches that the spiritual essence of individual beings is identic with that

of the universe.

Madhya (Sanskrit) *Madhya* The middle; as an adjective, middle, center, interior as contrasted with outer; also intermediate as contrasted with either extreme or end. As a neuter noun, 10,000,000 trillions or 10 quintillion (10,000,000,000,000,000,000).

Madhyama (Sanskrit) *Madhyama* The fourth or middle tone of the seven primary notes of the Hindu musical scale.

Madhyama (Sanskrit) *Madhyamā* [feminine of *madhyama*] One of the states of vach (mystic speech), which is of four kinds according to its differentiation: para, pasyanti, madhyama, and vaikhari. The madhyama vach is the link between the mental form (in the Logos) and the manifested form (in matter). It corresponds mystically to the Light of the Logos. Vach, though often equivalent to Logos, is the feminine counterpart of Brahma, the masculine side of the Logos. Thus Vach is the spiritual aspect of prakriti.

Madhyamikas (Sanskrit) *Mādhyamika*-s Belonging to the middle way; a sect mentioned in the *Vishnu-Purana*, probably at first a sect of Hindu atheists. A school of the same name was founded later in Tibet and China, and as it adopted some of the esoteric principles taught by Nagarjuna, one of the great founders of the esoteric Mahayana system, it had certain elements of esoteric truth. But because of its tendency by means of thesis and antithesis to reduce everything into contrary categories, and then to deny both, it may be called a school of Nihilists for whom everything is an illusion and an error in the world of thought, in the subjective as well as in the objective universe. This school is a good example of the danger of wandering too far in mere intellectual disquisition from the fundamental bases of the esoteric philosophy, for such merely brain-mind activity will infallibly lead to a philosophy of barren negation.

Madim, Ma'adim (Aramaic) *Ma'adim*. Strength, force, vehemence; also a Qabbalistic name for the planet Mars.

Madonna. See MARY

Maga (Sanskrit) *Maga* A Magian or priest of the sun; in India priests of a certain class serving Surya (the sun) were called Magas. In the plural, *magas*, a country in Sakadvipa, supposed to have been inhabited chiefly by Brahmins.

Magadha (Sanskrit) *Magadha* An ancient country in South Behar, India which after the establishment of Buddhism in India, was ruled by Buddhist kings.

Mage. See MAGI

Magha (Sanskrit) *Maghā* The 13th day in the dark half of the moon in the month of Bhadra (August-September).

Maghada. See MAGADHA

Maghayanti, Meghayanti (Sanskrit) *Meghayanti* One of the seven Pleiades.

Magi [plural of Old Persian *magus* a wise man from the verbal root *meh* great; cf Sanskrit *maha*; cf Avestan *mogaha*, Latin plural *magus*, Greek *magos*, Persian *mogh*, Pahlavi *maga*] An hereditary priesthood or sacerdotal caste in Media and Persia. Zoroaster, himself a member of the Society of the Magi, divides the initiates into three degrees according to their level of enlightenment: the highest were referred to as Khvateush (those enlightened with their own inner light or self-enlightened); the second were called Varezem (those who practice); and the third, Airyamna (friends or Aryans). The ancient Parsis may be divided into three degrees of Magi: the Herbods or novitiates; the Mobeds or masters; and the Destur Mobeds or perfect masters — the “*Dester Mobeds* being identical with the Hierophants of the mysteries, as practised in Greece and Egypt” (TG 197).

Pliny mentions three schools of Magi: one founded at an unknown antiquity; a second established by Osthane and Zoroaster; and a third by Moses and Jannes. “And all the knowledge possessed by these different schools, whether Magian, Egyptian, or Jewish, was derived from India, or rather from both sides of the Himalayas” (IU 2:361). According to Shahrestani (12th-century Islamic scholar) the Magi are divided into three sects: Gaeomarethians (Kayumarthians), Zurvanian (Zurvanian), and Zoroastrians. They all share the common belief that in this manifested universe the dualism of light and darkness is at work and that the final victory of the light is the day of resurrection.

Porphyry refers to the Magi as the learned men among the Persians who are in the service of the deity (*Abst* 4:16), while Philo Judaeus describes them as the most wonderful inquirers into the hidden mysteries of nature: holy men who set themselves apart from everything else on this earth, “*contemplated the divine virtues and understood the divine nature of the gods and spirits, the more clearly; and so, initiated others into the same mysteries, which consist in one holding an uninterrupted intercourse with these invisible beings during life*” (IU 1:94-5). It is likely that the use of the name and the order survived in times when their true dignity was no longer apparent.

In the Bible Magi is translated “wise men.” The term has also become familiar through the story of the three wise men who came to the infant Jesus bearing gold, frankincense, and myrrh.

Magic, Magician [from Persian *magus* a wise man, great; cf *magi*] The great art; a knowledge of the mysteries of nature and the power to apply them. In its true sense it is gupta-vidya (divine knowledge), the aim of those who tread the path of wisdom; but in ages of decline its chief secrets are withdrawn from public access, and what remains passes through transformations and gradually degenerates.

“*The ancients believed in the power of man by magic practices to command the services of the*

gods: which gods, are in truth, but the occult powers or potencies of Nature, personified by the learned priests themselves, in which they revered only the attributes of the one unknown and nameless Principle. As Proclus the Platonist ably puts it: ‘Ancient priests, when they considered that there is a certain alliance and sympathy in natural things to each other, and of things manifest to occult powers, and discovered that all things subsist in all, *fabricated a sacred science from this mutual sympathy and similarity*. . . . and applied for occult purposes, both celestial and terrene natures, by means of which, through a certain similitude, they deduced divine virtues into this inferior abode.’ Magic is the science of communicating with and directing supernal, supramundane Potencies, as well as of commanding those of the lower spheres; a practical knowledge of the hidden mysteries of nature known to only the few, because they are so difficult to acquire, without falling into sins against nature” (TG 197).

White magic or theurgy is knowledge used for impersonal and beneficent purposes, the bringing into human life of the pattern and powers of nature as these exist on the spiritual planes. Black magic or goetia is knowledge used for selfishly personal or evil purposes. Natural magic is the knowledge and employment of the natural powers, forces, and substances of nature — practically what today is called science. If the knowledge gained through the study of natural science is distorted in its use to selfish or ignoble ends, it becomes de facto black magic. While a hard and fast distinction may not be applicable to all cults of magic, where the student or practitioner has not yet made a conscious choice between the two paths, yet in the end he must choose the one or the other. For nature’s forces must be controlled, either by a pure or an impure will, if the practitioner is not to fall victim to them. The motive and use that a person makes of his faculties and will are the deciding factors as to whether the magic is beneficent or maleficent. Any selfish, self-seeking, or selfishly restricted use of nature’s laws or powers is against the impersonality and universality of nature: “The smallest attempt to use one’s abnormal powers for the gratification of self makes of these powers sorcery or Black Magic” (Key 346).

In theosophical writings, advanced students of occultism who have acquired some knowledge and use of spiritual powers but misuse them for selfish purposes are called black magicians, Brothers of the Shadow, followers of the left-hand path, or sometimes dugpas. In their highest class they are adepts in spiritual evil. Whenever the forces of nature are used for selfish purposes, such misuse by anyone marks such person as a black magician, whether conscious or unconscious. Those who follow the pathway of self-renunciation, self-sacrifice, self-conquest, and an expansion of the heart, mind, and consciousness in love and service for all that lives are called white magicians or Sons of Light.

Magnale Magnum (Latin) The great Great; used by Van Helmont for a natural occult principle which connects the souls of men, enabling them to influence each other mutually. It is anima mundi in one restricted, localized sense.

Magna Mater (Latin) The Great Mother, the mother of the gods, a title given to many Asiatic goddesses at the time when the Romans were in Asia; identified by the Greeks with Rhea, daughter of Ouranos and Gaia, wife of Kronos, and mother of Zeus and other gods. In Asia the name was given specially to Cybele, whose worship later became degraded into licentious rites. Every nation had its own chief goddess, or mother goddess, who was called Great Goddess, exactly as the Latins did with their own Magna Mater.

Magne (Icelandic) [from *magn* main, strength] Thor, Norse god of thunder and lightning, in his capacity as electromagnetism in the infinite reaches of space, has two sons: Mode and Magne. Both mean power, though Mode has the connotation of anger, suggesting a repelling force, whereas Magne connotes power that is granted one. These two sons of Thor may represent attraction and repulsion, or gravitation and radiation on the cosmic level.

Magnes (Latin, Greek) Loadstone; used by Paracelsus, medieval theosophists, and alchemists for a mysterious and potent fluid, the spirit of light, whose description answers to the akasa, aether, or the most spiritual parts of the astral light. It thus corresponds to the anima mundi.

Magnetic Healing Introduced to the West by Mesmer; in it the pranas or general vital powers of the healer are able to help, in many cases, a sufferer to throw off an ailment or disease by arousing the sufferer's own powers of resistance to vital inharmony or disease. The success of magnetic healing arises from the fact that human or animal magnetism is a fluid, and hence an emanation flowing from the healer to the sufferer. The existence of such human or animal magnetism has now been established by the researches of a multitude of investigators during the last century or more. All human beings have this magnetic fluid, but some natural-born healers have the instinctive power of projecting or emitting their own magnetism, which flows from different parts of the body, but especially from the tips of the fingers, the eyes, or the hands.

To animal magnetism likewise are to be ascribed the cause of the so-called antagonisms or repulsions, or again affinities and attractions, between human beings.

Magnetism [from Greek *lithos magnetes* Magnesian stone, magnetic oxide of iron, found in Magnesia in Thessaly] Scientifically, magnetic force is due to the movement of electric charges. While physics is concerned only with mineral magnetism, older thought saw the analogy between the various planes of nature and used magnetism in a wiser sense. The term animal magnetism is not so fanciful: *The Secret Doctrine* speaks of biune creative magnetism as acting in the constitution of man and animals in the form of the attraction of contraries as in sexual polarization; of there being seven forms of kosmic magnetism; of electricity and magnetism being manifestations of kundalini-sakti; of the world-soul as represented by a sevenfold cross whose arms are light, heat, magnetism, etc.

Magnetism, like other forces, is a manifestation of the activities of living beings. These forces are at the same time the physical counterparts, reflections, or phases of the universal cosmic

electromagnetism, life-energy, or fohat. Magnetism, which is the alter ego of electricity, is that aspect or functioning of cosmic electromagnetism, mainly known to us as causing attraction and repulsion, and distinguished by bipolarity.

Both physical and physiological analogies suggest that terrestrial magnetism is inherent in some of the ultra-physical constituents of our globe, and that it must be powerfully influenced by the magnetism of other globes of the earth-chain, as well as by cosmic sources belonging to the solar system and even beyond. The position of the magnetic poles of the earth varies, and with this variation go variations in the magnetic inclination, declination, intensity, and distribution; which variations have cycles that are under study by scientists. What is called the north pole of a *magnet* should be called its south pole, since it is attracted and not repelled by the north pole of the earth; thus some writers call the north pole of a magnet the north-seeking pole.

“We know of no phenomenon in nature entirely unconnected with either magnetism or electricity . . . All the phenomena of earth currents, terrestrial magnetism and atmospheric electricity, are due to the fact that the earth is an electrified conductor, whose potential is ever changing owing to its rotation and its annual orbital motion, the successive cooling and heating of the air, the formation of clouds and rain, storms and winds, etc. . . . Science would be unwilling to admit that all these changes are due to *akasic* magnetism incessantly generating electric currents which tend to restore the disturbed equilibrium” (ML 160).

All electromagnetism is rooted in or takes its rise from the akasa, and the bipolarity of magnetism and electricity is simply a reproduction in our sphere — and even in human beings when they manifest themselves — of the fundamental bipolarity in cosmic structure inherent in the akasa, out of the womb of which the worlds are born. Magnetism might be considered the more subtle part of electricity, and electricity the grosser aspect of the fundamental force which is both. Both are fluids, emanations, from the akasa, and are really two aspects of the underlying fohat.

Magnetization Influences which one person may exercise on another akin to mesmerism whether of a gross physical nature, to which the term animal magnetism is applied, or of a loftier nature, the action of mind upon mind. Metallic magnetism is itself one manifestation of subtle natural forces, of which personal magnetism is another manifestation. Magnetism, whether diffuse or localized or in the form of animal magnetism, is an emanation from the beings which produce it from their own inner vital power, and hence magnetism is a fluid. Those who are especially endowed with the faculty of arousing it in themselves and projecting it, mainly through the tips of the fingers or the eyes, can use it for either corrective, or for evil and destructive, purposes; while all other beings, even inanimate objects, possess it but do not emanate it willfully or consciously. It flows forth from them as an aura, usually unconsciously. Thus magnetism has an auric efflux or fluid, which finds its foundation in the vitality or pranic sources of the beings or things from which it flows.

Magnum Opus (Latin) The great work; in medieval and modern times an alchemical term for the making of the philosopher's stone and the elixir of life; an achievement which, as with alchemy generally, may be regarded as being accomplished either in the laboratory of human nature among the elements of man's constitution, or in a brick and mortar laboratory with chemicals.

Magnus Aether (Latin) Great aether, also called Pater Omnipotens Aether (almighty father aether).

Magnus Annus. See ANNUS MAGNUS

Magus. See MAGI

Mahabharata (Sanskrit) *Mahābhārata* One of the two great epic poems of ancient India, the largest poetic work known to literature, consisting of 220,000 lines. The masses of tradition and tales in this epic make it the national treasury from which bards, poets, dramatists, and artists, as from an inexhaustible source, draw their themes. It contains the history of the family of the Bharatas in addition to a great many beautiful truly mystical and occult teachings, and a few really splendid minor episodes like the *Bhagavad-Gita* and *Anugita*. Tradition makes Vyasa — a generic name of high literary authority, used by at least several archaic writers — the author of this grand poem. The main theme of the epic is the great struggle between the Kauravas and the Pandavas, descendants through Bharata from Puru, the great ancestor of one branch of the Lunar race. The object of the struggle was the kingdom whose capital was Hastinapura (elephant city), the ruins of which are said to be traceable 57 miles northeast of Delhi, on an old bed of the Ganges.

Mahabhashya (Sanskrit) *Mahābhāṣya* [from *mahā* great + *bhāṣya* commentary on technical sutras, usually in the vernacular] Great commentary; Patanjali's Commentary on the Sutras (Grammar) of Panini and the Varttikas of Katyayana (Katyayana's critical annotations of Panini's Sutras). Sometimes referred to simply as the Bhashya, it is one of the three known writings of Patanjali.

Mahabhautic [anglicization of Sanskrit *mahābhautika*] Adjective of mahabhutas, the elementary substantial principles of the universe.

Mahabhutas (Sanskrit) *Mahābhūta*-s [from *mahā* great + *bhūta* element from the verbal root *bhū* to be, become] Great or primordial element; the gross or vehicular cosmic elements in contradistinction from the subtle or causative cosmic elements (tanmatras) out of which the mahabhutas are evolved. Five are enumerated exoterically — aether, fire, air, water, and earth — but in the esoteric enumeration there are seven, ten, or twelve. Also an adjective meaning being great, or relating to the gross elements.

The mahabhutas are so called because they are the karmic fruits or resultants from the preceding cosmic manvantara, so that even these great cosmic elements begin their evolutionary courses in the new cosmic manvantara at the exact point in development which they had acquired when the preceding pralaya began.

The tanmatras are the inner vital cosmic principles, the causal rudiments, which evolve forth the mahabhutas. The distinction between them may be seen by an analogy drawn from the human constitution: the difference between sense as a faculty or power and sense organ as the vehicle of the sense faculty. The five senses hitherto developed in the human being — hearing, sight, touch, taste, and smell — have their five corresponding sense organs, the senses producing through evolution and time their respective organs. Similarly on the cosmic scale, the tanmatras correspond to the senses in the human constitution, while the mahabhutas correspond to the sense organs in the human body.

Mahabuddhi (Sanskrit) *Mahābuddhi* [from *mahā* great + *buddhi* consciousness, spiritual soul] Great buddhi or consciousness; synonym of mahat (cosmic mind or intelligence).

Mahachaitanya (Sanskrit) *Mahācaitanya* [from *mahā* great + *caitanya* consciousness, intelligence] The living consciousness or intelligence of the universe or of all nature. Daiviprakriti is, strictly speaking, the mahachaitanya “of the whole cosmos, the one energy, or the only force from which spring all force manifestations” (N on BG 71), this one energy or force being essentially and inherently conscious and intelligent.

Maha-chohan (Sanskrit-Tibetan) [from Sanskrit *mahā* great + Tibetan *chohan* lord] The great lord; “the chief of a spiritual Hierarchy, or of a school of Occultism; the head of the trans-Himalayan mystics” (TG 200).

Mahadeva (Sanskrit) *Mahādeva* [from *mahā* great + *deva* deity] The great god; a title of Siva.

Mahaguru (Sanskrit) *Mahāguru* [from *mahā* great + *guru* teacher] The great teacher; a name of the great initiator or awakener of the spiritual nature in man, also called the Great Being or Great Sacrifice.

“The ‘BEING’ . . . is the *Tree* from which, in subsequent ages, all the great *historically* known Sages and Hierophants, such as the Rishi Kapila, Hermes, Enoch, Orpheus, etc., etc., have branched off. As objective *man*, he is the mysterious (to the profane — the ever invisible) yet ever present Personage about whom legends are rife in the East, especially among the Occultists and the students of the Sacred Science. It is he who changes form, yet remains ever the same. And it is he again who holds spiritual sway over the *initiated* Adepts throughout the whole world. He is, as said, the ‘Nameless One’ who has so many names, and yet whose names and whose very nature are unknown. He is *the* ‘Initiator,’ called the ‘Great sacrifice.’ For, sitting at the threshold of light, he looks into it from within the circle of Darkness, which he will not cross; nor will he quit his post till the last day of this life-cycle. . . . Because he would fain show the way to that region of freedom and light, from which he is a voluntary exile himself, to every prisoner who has succeeded in liberating himself from the bonds of flesh and illusion. . . .

“It is under the direct, silent guidance of this Maha — (great) — Guru that all the other less divine Teachers and instructors of mankind became, from the first awakening of human consciousness, the guides of early Humanity. It is through these ‘Sons of God’ that infant humanity got its first notions of all the arts and sciences, as well as of spiritual knowledge; and it is they who have laid the first foundation-stone of those ancient civilizations that puzzle so sorely our modern generation of students and scholars” (SD 1:207-8).

Mahajvala (Sanskrit) *Mahājvāla* [from *mahā* great + *jvāla* flame] A large flame; name of one of the hells in Hindu philosophy.

Mahakala (Sanskrit) *Mahākāla* [from *mahā* great + *kāla* time] Great time; a name of Siva as the destroyer, and of Vishnu as the preserver.

Mahakalpa (Sanskrit) *Mahākālpa* [from *mahā* great + *kalpa* age] Great age; lifetime of Brahma consisting of 100 Divine Years, equivalent to 311,040,000,000,000 years. The time period between the beginning and end of a complete solar manvantara — the entire lifetime of our solar system.

Mahakasa (Sanskrit) *Mahākāśa* [from *mahā* great + *ākāśa* ether, space] Great akasa; endless space, the seventh universal principle. Equivalent to pradhana or even mulaprakriti, which describe the boundless space or womb of all being which, in connection with the central point or Brahman, is the cosmic source of all.

Maha-loka. See MAHARLOKA

Mahamanvantara (Sanskrit) *Mahāmanvantara* [from *mahā* great + *manvantara* period of manifestation] A great cycle of cosmic manifestation and activity, whether of a universe, solar system, or planet. The mahamanvantara of a solar system or Life of Brahma is a period of 311,040,000,000,000 terrestrial years. A mahamanvantara of the earth-chain is a Day of Brahma or a period of seven rounds of the planetary chain. We have lived somewhat more than one-half of our planetary mahamanvantara; and again 50 Years of Brahma (one half of the Life of Brahma) have also passed away. We have thus reached the first Divine Day of the first Divine Month of the ascending cycle of the second cosmic period of fifty Divine Years of the cosmic mahamanvantara.

The day after the mahamanvantara is the Day-Be-With-Us or the Christian Day of Judgment. Then all individualities are merged into one, each still possessing essential or intrinsic knowledge of itself. But at that time, what to us now is nonconscious or the unconscious, will be absolute consciousness.

Mahamara (Sanskrit) *Mahāmāra* [from *mahā* great + *māra* death from the verbal root *mṛ* to die] The great destroyer; the king of the maras (temptations), and often called the Great Ensnarer. This character is usually represented “with a crown in which shines a jewel of such lustre that it blinds those who look at it, this lustre referring of course to the fascination exercised by vice upon certain natures” (VS 76). It is due to the power of maya or seductive illusion that mahamara or the

different maras possess their sway over sentient beings.

Mahamaya (Sanskrit) *Mahāmāyā* [from *mahā* great + *māyā* illusion] The great illusion; the manifested universe in its totality. “Esoteric philosophy, teaching an *objective* Idealism — though it regards the objective Universe and all in it as *Maya*, temporary illusion — draws a practical distinction between collective illusion, *Mahamaya*, from the purely metaphysical stand-point, and the objective relations in it between various conscious *Egos* so long as this illusion lasts” (SD 1:631). The belief in the separateness of the universe, and everything in it, from the absolute divine All is one of the greatest delusions of mahamaya.

Maha-Parinibbana-Sutta or **Suttanta** (Pali) *Mahā-Parinibbāna-Sutta* [from *mahā* great + *parinibbāna* complete nirvana + *sutta*, *suttanta* text, book] *The Book of the Great Decease* of the Buddhist Pali canon, “one of the most authoritative of the Buddhist sacred writings” (TG 200).

A scripture of the same name of the Mahayana school of Northern Buddhism, supposed by some to be of later date, is written in Sanskrit: the *Maha-paranirvana-sutra* (Paradise Sutra).

Mahapralaya (Sanskrit) *Mahāpralaya* The great dissolution; sometimes applied to a planetary pralaya (bhaumika or naimittika pralaya), but usually applied to the pralaya of the solar system (saurya or Brahma pralaya). During a mahapralaya or Brahma pralaya, not only will material and psychic bodies be reduced to their original principles, but even the spiritual egos: the past, present, and future humanities, like all other entities and things, will be free to enter into their own divine essences. Everything then will have reentered the Great Breath and be merged in Brahman or the divine unity, so to remain until the mahapralaya is ended and a mahamanvantara begins a cycle of cosmic evolution.

Mahapurusha (Sanskrit) *Mahāpuruṣa* [from *mahā* great + *puruṣa* man, cosmic Ideal Man] The supreme spirit of the universe; paramatman or Brahman. Also a name of Vishnu.

Maharaja (Sanskrit) *Mahārāja* [from *mahā* great + *rāja* king] Great king; in Hindu literature four are spoken of as the mystical regents and protectors of the four quarters of the earth — north, south, east, and west — because they are the mystical regents and guardians of cosmic space in our solar system.

In Egyptian temples the parti-colored curtain separating the holy recess from the place for the congregation was drawn over the five pillars symbolizing our five senses as well as the five root-races, while the four colors of the curtain represented the four cardinal points and the four as yet evolved cosmico-terrestrial elements. This grouping, among other things, thus symbolized that it is through the four high rulers of the four cosmic quarters that our five senses become cognizant of the hidden truths of nature. The same mystic symbolism is found in the Tabernacle and the square courtyard prepared by Moses in the wilderness, “in the Zoroastrian caves, in the rock-cut temples of India, as in all the sacred square buildings of antiquity that have survived to this day. This is

shown definitely by Layard, who finds the four cardinal points, and the four primitive elements, in the religion of every country, under the shape of square obelisks, the four sides of the pyramids . . . Of these elements and their points the four Maharajahs were the regents and the directors” (SD 1:126).

The four Maharajas correspond to the cherubim, seraphim, the winged globes, fiery or winged wheels, the gandharvas (sweet singers), asuras, kinnaras, and celestial nagas. In Chinese Buddhism the Maharajas are called the four hidden dragons of wisdom: the Regent of the North is called the Black Warrior, of the East the White Tiger, of the South the Vermilion Bird, and of the West the Azure Dragon.

There are profound, highly mystical differences which distinguish the Maharajas from the lipikas. The Maharajas, who are both the protectors of mankind on earth and the agents of karma, are those highly evolved spiritual powers or individualized cosmic beings who belong to the light-side of universal nature, to the hierarchies of compassion representing beings of unfolded evolutionary development who by the very nature of their essence become almost the automatic guardians of light and cosmic order which the semi-intelligent and so-called unintelligent forces and energies of nature automatically obey.

The lipikas, on the other hand, are cosmic spiritual entities who might almost be called the viceroys of the sublime cosmic hierarch of our galaxy. For this reason their actions or functions are of so widely impersonal a character, for they operate not so much from power and consciousness belonging solely to the solar system, but in obedience to the spiritual vital mandates of the galactic sphere, to which they are wholly subservient and of whose flow of intelligent impersonal forces they are but impartial ministers in almost instinctual obedience. They represent what might be called the impersonal flow of cosmic destiny.

Maharaja Sect. See VALLABHACHARYAS

Maharajikas (Sanskrit) *Mahārājika*-s [from *mahārāja* king] The kingly; in Buddhist philosophy a class of gods inhabiting the lowest heaven. Their number is variously given, e.g., 236 or 220.

Maharloka (Sanskrit) *Maharloka* [from the verbal root *mah* to be great, also pleasure, delight + *loka* world, plane] Great world; the fourth of the seven lokas. The corresponding tala and nether pole is rasatala. Maharloka is the abode of certain classes of pitris, certain of the manus, and the seven rishis, as well as of orders of celestial spirits and gods. Its sphere of influence is exoterically said to extend to the utmost limits of the solar system. See also LOKA; RASATALA

Maharshi (Sanskrit) *Maharṣi* [from *mahā* great + *ṛṣi* sage, seer] Also **Maharishi**. A great sage or seer, especially referring to the ten maharshis who were the mind-born sons of Prajapati or Manu Svayambhuva: Marichi, Atri, Angras, Pulastya, Pulaha, Kratu, Prachetas, Vasishtha, Bhrigu, and Narada. They are also called the ten (or seven) prajapatis. See also MUNI

Mahasabha (Sanskrit) *Mahāsabhā* [from *mahā* great + *sabhā* assembly, gathering, collection, bundle] The bundle of wonderful (mayavi or illusionary) things given to the Pandavas by Mayasura, the architect of the daityas who was versed in magic, astronomy, and military science.

Mahasaurya Manvantara and **Pralaya** [from Sanskrit *mahā* great + *saurya* solar] The life period or period of manifestation of the solar system, or its death and dissolution. *See also* MANVANTARA; PRALAYA (FSO)

Mahasunya or **Mahasunyata** (Sanskrit) *Mahāsūnya, Mahāsūnyatā* [from *mahā* great + *sūnyatā* emptiness] The great void; when considered in its positive aspect, boundless space, including all the spaces of space, and therefore the universe and all that is in it considered from the spiritual and divine standpoints, which to intelligences living in lower realms seem to be the great Void. When considered from its negative aspect, cosmic illusion (mahamaya) because the entire boundless objective universe with all its visible or invisible planes is, from the standpoint of the divine-spiritual, unreal and illusive, i.e., impermanent and transitory, although lasting spans which to human comprehension might seem almost an eternity. Thus both the positive and negative significances are based upon the fundamental idea of the utter reality of the divine-spiritual, and the unreality, impermanence, and fleeting character of all that is objective.

Mahasura (Sanskrit) *Mahāsura* [from *mahā* great + *asura* demon from *a* not + *sura* god] The great asura; the Hindu Lucifer. Exoterically, Mahasura has been rendered by some Europeans as comparable with the Christian Satan; but esoterically he is the Great Spirit. The word *sura* is usually translated “god” and *asura*, “not-god,” demons or evil beings; but they are precisely the opposite when properly understood. In the Vedas the suras are always connected with Surya (the sun), and hence regarded as somewhat inferior divinities or devas. As the asuras are the opposites of these, they are superior beings of the highest character — a subtle and yet true distinction.

Mahat (Sanskrit) *Mahat* [from the verbal root *mah* to be great] The great; cosmic mind or intelligence, the basis and fundamental cause of the intelligent operations in and of nature considered as an organism. Blavatsky called it the first product of pradhana, the first-born of the Logos, universal mind limited by manvantaric duration, the cosmic noumenon of matter, the one impersonal architect of the universe, the great manvantaric principle of intelligence, the Third Logos, and the divine mind in active operation.

Eternal in its essence and periodical in its manifestations, mahat combines the ideal plans and prototypes of all beings and things in the manifested objective and subjective world. In another sense it is the entire aggregate of the dhyani-chohanic host, and therefore the source of the active organic cosmic intelligence controlling and directing the operations of fohat; it is likewise the direct source of the manasaputras, a class of the dhyani-chohanic host.

In Brahmanical philosophy, mahat is the father-mother of manas. In Sankhya philosophy, it corresponds to kosmic buddhi or mahabuddhi and is called the first of the seven prakritis or

productive creation, the other six being ahamkara and the five tanmatras.

When a ray from mahat expresses itself as the human manas (or even as the manasic attribute of the finite gods), it then because of surrounding maya involves the quality of egoity or aham-ship. Thus it is said that the great Tree of Life has parabrahman as its seed, mahat as its trunk, and ahamkara as its spreading branches.

Mahatala (Sanskrit) *Mahātala* [from *mahā* great + *tala* sphere, place] Great place, pointing to prevalence or dominance of astral substance; the sixth in the descending scale of the seven talas. The corresponding loka or pole is bhuvarkala. Mahatala among other things corresponds to the elemental beings who are connected with taste, and therefore includes the state of consciousness appertaining to this class. It corresponds in one sense to the pranic activity in man, and in nature to the salamanders and gnomes of the Rosicrucians. Mahatala is the next to the grossest of the cosmic spheres or realms; the grossest or most material of all being patala.

Mahatma (Sanskrit) *Mahātman* [from *mahā* great + *ātman* self] Great soul or self; relatively perfected human beings, also called teachers, elder brothers, Masters, sages, seers, etc. They are human beings who, through self-directed evolution and spiritual striving over many lifetimes, have attained a lofty spiritual and intellectual state. They are farther advanced evolutionarily than the majority of people, possessing great knowledge and powers; but their primary duty is the instruction and protection of mankind. From this body of advanced human beings, which has existed since humanity attained self-consciousness, have come the great teachers and the wisdom at the root of the world's great religious, philosophic, and scientific systems.

Used in India as an honorary title for any great or revered man.

Mahatmya (Sanskrit) *Māhātmya* Magnanimity; exalted state; the virtue of any divinity or sacred shrine. Also refers to a work which gives an account of the legends and merits of any holy place or object.

Mahatoruvat (Sanskrit) *Mahatoruvat* [from *mahat* cosmic mind + *uruvat* spaciousness] As spacious as cosmic mind, with the implication of the encompassing Boundless or parabrahman.

Mahatorvavat. See MAHATORUVAT

Mahat-tattva (Sanskrit) *Mahat-tattva* The first of the seven creations or emanations, the primordial self-evolution of that which had to become manifested cosmic mahat, the universal mind or infinite intellect — the collective hosts and aggregates of spiritual intelligences such as Brahma, the manus, the dhyanichohans, etc. The Puranas enumerate the other six creations as 2) bhutasarga; 3) indriya or aindriyaka; 4) mukhya; 5) tairyagyonya or tiryaksrotas; 6) urdhvasrotas; and 7) arvaksrotas.

Mahavansa, Mahavamsa (Sanskrit) *Mahāvamśa* [from *mahā* great + *vaṃśa* lineage, race] Great

lineage; a Pali work written by the monk Mahanama in the 5th century, treating of Buddhist history and its spread in Ceylon; regarded as an authoritative historical work.

Mahavidya (Sanskrit) *Mahāvīdyā* [from *mahā* great + *vidyā* knowledge] The great knowledge, magic knowledge “now degenerated into Tantrika worship” (SD 1:169). This great esoteric science is possessed in its relative fullness by the highest initiates alone, as it embraces almost universal wisdom.

Mahavihara-Vasinah (Sanskrit) *Mahāvihāra-vāsinaḥ* [from *mahā* great + *vihāra* monastery + *vāsinaḥ* plural of *vāsin* dweller] Dwellers of the great monastery; a highly mystical Buddhist school of Ceylon, founded by Katyayana, according to tradition a pupil of Gautama Buddha. One of the three divisions of an early Buddhist school called the Sthavirakaya. *See also* JETAVANIYA

Mahavishnu (Sanskrit) *Mahāviṣṇu* Great Vishnu; a title of Vishnu. Source of the avatars of Vishnu. *See also* BIJA

Mahayana (Sanskrit) *Mahāyāna* [from *mahā* great + *yāna* vehicle] Great vehicle; a highly mystical system of Northern Buddhist philosophy and learning, in the main founded by Nagarjuna. Of the two schools of Buddhism, usually classed under the Mahayana and Hinayana or Theravada respectively, the Mahayana is usually called the esoteric and the Hinayana the exoteric. But due to human weakness, love of the eye doctrine, and misunderstanding of the rites and ceremonials enjoined, the exoteric teaching of the Mahayana in its popular aspects is stressed today; while its deeper, more mystical teaching has to a large extent been withdrawn into the charge of initiated adepts.

The Hinayana school is the oldest, while the Mahayana is of a later period, having originated after the death of Buddha. Yet the tenets of the latter are ancient indeed, and both schools in reality teach the same doctrine. The Mahayana system exists in different schools varying among themselves to a greater or less degree as regards interpretation of fundamental tenets which all these subordinate schools nevertheless accept.

Mahayana Sraddhotpada Sastra (Sanskrit) *Mahāyāna Śraddhotpāda-sāstra* Usually translated as “The Awakening Faith in Mahayana.” However, the word *sraddha* means more than simple faith — it means a certainty or confidence based on an unfoldment of inner experience.(FSO 45-6)

Mahayana-Sutra (Sanskrit) *Mahāyāna-sūtra* [from *Mahāyāna* great vehicle + *sūtra* textbook] Writings which treat of the Buddhist teachings as they were promulgated originally by Nagarjuna.

Mahayogin (Sanskrit) *Mahāyogin* [from *mahā* great + *yogin* a devotee of yoga, ascetic] A great yogi or ascetic; an especial title of Siva, although given to other Hindu divinities.

Mahayuga (Sanskrit) *Mahāyuga* [from *mahā* great + *yuga* age, period of time] Great age; in Hindu works, the 1000th part of a kalpa or Day of Brahma. The aggregate of the series of four yugas —

satya or krita yuga, treta yuga, dvapara yuga, and kali yuga — constitute a mahayuga or an age whose duration is 4,320,000 terrestrial years. Seventy-one mahayugas form the reign of one manu, or 306,720,000 years. Taking the reign of one manu, or of a manvantara, and multiplying it by 14 (which represents the 14 manus who exist in one kalpa) gives 4,294,080,000 years. To this figure should be added the sandhyas (dawn) and sandhyansas (twilight) — 25,920,000 (there being a dawn and twilight between each manu), and the result is 4,320,000,000 years, or a Day of Brahma, which is one kalpa or 1000 mahayugas.

As used in theosophy, the progress of the life-wave through the globes of a planetary chain, from its first globe to its last, the life-wave passing through a series of seven smaller yugas or root-races upon each of the seven manifest globes of the planetary chain. The period comprises 4,320,000,000 years. Mahayuga frequently refers also to time periods less than that of the great cycle or chain-round above alluded to. For instance, the period of the seven root-races which form the passage of the life-wave through any one of the globes, is often called a mahayuga.

Mahesa (Sanskrit) *Maheśa* [from *mahā* great + *īśa* lord, master] The great lord, a title of Siva.

Mahesvara (Sanskrit) *Maheśvara* [from *mahā* great + *īśvara* lord, master] The great lord; a title of Siva. “The spirit in the body is called *Mahesvara*, the Great Lord, the spectator, the admonisher, the sustainer, the enjoyer, and also the *Paramatma*, the highest soul” (BG 96).

Mahoraga (Sanskrit) *Mahoraga* [from *mahā* great + *uraga* serpent] Great serpent; a name of Sesha, the great serpent of eternity, infinite time.

Maia (Greek) The daughter of Atlas and the mother of Hermes by Zeus; identified by the Romans with the goddess of spring, Maia Maieslas, also called Fauna, Bona Dea, Ops.

Maitra or **Maitreya** (Sanskrit) *Maitra*, *Maitreya* [from *mitra* friend, a name of the spiritual sun] As an adjective, friendly, benevolent, kind; the masculine noun refers to various individuals: a bodhisattva and future buddha; the god Mitra; with reference to human beings, a friend of all creatures — one who has arrived at the highest state of human perfection. It signified one of the perfect states of Buddhism, sometimes enumerated as one of the ten paramitas.

Maitreya is also a well-known Buddhist arhat.

Maitreya-Buddha (Sanskrit) *Maitreya-Buddha* Equivalent to the Kalki (white horse) avatara of Vishnu, to Sosiosh, and other Messiahs. Popular teaching states that Gautama Buddha visited him in a celestial abode and commissioned him to come to earth as his successor 5,000 years after the Buddha’s death. Theosophic philosophy teaches that the next buddha will appear during the seventh subrace of this round.

Makara (Sanskrit) *Makara* A kind of sea animal; the tenth zodiacal sign, Capricorn. Makara likewise represents a pentagon. The figure of the complete material universe is a dodecahedron, a

figure bounded by pentagons. Makara represents both the microcosm and macrocosm, as external objects of perception. *See also* CAPRICORN

Makara-ketu (Sanskrit) *Makara-ketu* [from *makara* fish + *ketu* banner] The banner of Makara or fish-banner; a name of the god Kama because his banner bore a representation of Makara, the zodiacal Capricorn.

Makaras (Sanskrit) *Makara-s* The five words beginning with M that concern the lower tantric practices: *madya* (wine); *mamsa* (flesh); *matsya* (fish); *mudra* (mystic gesticulations); and *maithuna* (sexual intercourse).

Mal'achim (Hebrew) *Mal'ākhīm* **Mal'achayya'** (Aramaic) *Mal'ākhayyā'* [plural of *mal'ākh* messenger] Also *mal'akhim*. A generalizing term for messengers, ministrants, ministers, or angels in the original sense of intermediaries or mediators between the spiritual and the more material realms; hence it is applicable to all the ten classes of angelic beings of the Qabbalistic hierarchy. Applied especially to the messengers of God in the Bible, generally rendered angels, also termed *Benei-'Elohim* (sons of the gods). *See also* 'ISHIM

Malayak. *See* MAL'ACHIM

Malchuth, Malkuth, Malkhuth (Hebrew) *Malkhūth* Kingdom, dominion; the tenth Sephirah in the Qabbalah, the carrier or container of the nine preceding Sephiroth and the final and lowest emanation which includes all the potencies of the preceding nine. It is regarded as the base of the central pillar of the Sephirothal Tree. Its Divine Name is 'Adonai; in the Angelic Order it is represented as the Cherubim (Kerubim). In the application to the human body, as representative of the cosmic body, it is placed in or under the feet; while in the application to the seven globes of our planetary chain it is globe D. This Sephirah is termed *Matrona'* or *Matronitha'*, the inferior Mother, the Queen and Bride of Microprosopus — the six or nine preceding Sephiroth. In one aspect it is the lower Shechinah [from the Hebrew and Chaldean verbal root *shachan* to dwell in, abide in] meaning dwelling or abode; whence the term kingdom as the dwelling or abode of all the inner authorities and powers of the entire Tree of Life or Sephirothal scheme. There is a divine or spiritual Shechinah, which is the veil of, as well as the abode or kingdom of, the spiritual monad; it is equivalent to the *mulaprakriti* of parabrahman, or on a somewhat lower plane the *prakriti* of Purusha, or again the *pradhana* of Brahman. Hence there is a good deal in genuinely Qabbalistic writings on the Divine Light or Life, which is the splendorous veil inclosing, covering, and manifesting the glory of the Hid One — what the Qabbalah calls the Ancient of Ancients or Ancient of Days, or what in theosophical philosophy is called the spiritual monad.

Male Principle or Masculine Principle One member of the primordial, universal duality which characterizes all manifestation, its correlative being the feminine principle. Other terms for this duality are Purusha and prakriti, spirit and matter, positive and negative, active and passive. Male or female, masculine or feminine, are attributed to cosmic principles merely because these

principles, being universal and bipolar, express themselves throughout all the ranges of cosmic life. Since human beings and animals belong to the ranges of cosmic life, and in their present evolutionary stage are passing through the period of quasi-unipolar development which is called sex, its terms have been somewhat arbitrarily used in attempting to describe the bipolarity of the cosmic principles. Strictly speaking, these cosmic principles are non-male and non-female. The same descriptive habit runs throughout all theology, as when deities were described as gods and goddesses. In the Qabbalistic Sephirothal Tree some of the Sephiroth are paired, as are the aeons in the system of Simon Magus and Valentinus.

Ma-li-ga-si-ma (Chinese) The continent which legend relates formerly sank beneath the ocean's waves. As related in a legend, owing to the iniquity of the giants in Ma-li-ga-si-ma, it was submerged with all its inhabitants, except the king, Peiru-un, who was able to escape from the deluge with his family, having been warned by the gods of the impending catastrophe through two idols. This king and his descendants peopled China.

Malkhuth, Malkuth. See MALCHUTH

Mallet One of the tools or insignia of the Masonic Fraternity; perhaps a survival of the svastika.

Maluk. See MAL'ACHIM

Malum in se (Latin) Evil in itself; inherently evil by its own nature, rather than by its accidents or relationships. The traditional Satan of theology is in fact not an inherently evil power, but a power antagonistic in its functions, and so called by the early Christians Adversary, corresponding to the Greek word diabolos. In theosophy nothing is considered evil in itself, the contrast between good and evil being a manifestation of duality. But this does not mean that there is no evil at all — that good and evil are indifferent, that we may adopt a neutral attitude in our conduct. In fact, to deny that evil is inherent is to affirm that it is relative; and as long as we live in a world of contrasts we have before us the choice of two paths, one of which is right and the other wrong. If it is true that all is comprised within the scheme of eternal justice and wisdom, it is also true that we cannot yet arrogate to ourselves the power to dispense such omniscience.

Mamitu (Chaldean) The goddess of fate.

Mammals The highest class of animals produced from man, himself a mammal, in this fourth round. The evolutionary plan, as regards the passing of life-waves around the planetary chain entails that so far as the human and animal kingdoms are concerned, in the fourth round man shall appear before the mammals on globe D of the earth-chain. The other stocks of the animal kingdom were at the beginning of this round represented by their various sishas, as in fact man himself was. In each round after the first, each one of the kingdoms or life-waves on entering a globe of the chain, does so in its regular serial order.

The man of the second and early third root-race, though distinctly belonging to the human

kingdom, was different from the truly human man of today, as much in his inner psychical apparatus as in his astral-vital-physical body. This body was then much more astral or tenuous than that of today, composed of life-atoms of all kinds, seeking manifestation and finding a temporary habitat in the human body, which thus becomes their host. These atoms were continuously entering and leaving the body, just as happens in the human body today, but with this difference — that the atoms which the human body throws off today are far more stamped with the person's own *svabhava* (individual, personal characteristics) than formerly, and they are in consequence strongly and continuously attracted back to their human host, who is often their source. But in those early races the various monadic entities, which in their evolution were far inferior to the human monad, and each of which expressed itself through a life-atom, were in consequence far more free from the human dominating, almost tyrannical control, for then man had not yet acquired his present power of strongly impressing his own stamp on these life-atoms. The result was that in these early times each of these evolving monads with its life-atom vehicle on this plane could, when thrown off from the human entity, become the origin of a line of an animal stock, according to *its* own innate characteristics and potentialities. Thus were from time to time through the geologic ages generated the various mammalian stocks or phyla, each different according to the nature of the monad-germ thus thrown off, many of which were then able to pursue a course of evolutionary differentiation and specialization along its own particular line — each one unfolding from within its characteristics, expressing themselves in form and shape.

Thus it is seen how man precedes the mammals in the fourth round; but this does not apply to the non-mammalian animals, which were nevertheless evolved from the human stock in more or less the same manner during the preceding third and second rounds.

Occult biology also teaches that every monad which now has unfolded itself into the human stage, did at some remote cosmic period pass through all the lower kingdoms of nature as they then existed; even as the monads now finding expression in the elemental, mineral, vegetable, and animal kingdoms are undergoing the same process of evolutionary unfolding from within outwards and therefore are on their way upwards to a state equivalent in characteristic powers to what the human now has reached.

“The mammalia, whose first traces are discovered in the marsupials of the Triassic rocks of the Secondary Period, were evolved from *purely* astral progenitors contemporary with the Second Race. They are thus *post-Human*, and, consequently, it is easy to account for the general resemblance between their embryonic stages and those of Man, who necessarily embraces in himself and epitomizes in his development the features of the group he originated” (SD 2:684; cf MIE ch 12).

Mamo-chohans (Tibetan?) In theosophy, the lords of darkness and of the forces of pure matter — the dark and sinister spirits and operations of nature which are the activities of hosts of cosmic

monads climbing slowly upward but as yet still sunken in the deep spiritual sleep of material existence. Hence mammo-chohans are unprogressed or unevolved planetaries or monads. The dhyani-chohans correspond to light, knowledge, and evolution; the mammo-chohans to darkness, ignorance, destruction, etc. “The Dhyan Chohans answer to *Buddh*, Divine Wisdom and Life in blissful knowledge, and the Ma-mos are the personification in nature of *Shiva*, Jehovah and other invented monsters with Ignorance at their tail” (ML 463). The dhyani-chohans preside at the opening and throughout every manvantara, while the mammo-chohans preside at the opening and throughout the pralayas.

EDITORS' NOTE: This online version of the *Encyclopedic Theosophical Glossary* is a work in progress. For ease of searching, diacritical marks are omitted, with the exception of Hebrew and Sanskrit terms, where after the main heading a current transliteration with accents is given.

Man-Mar

Man [from Sanskrit the verbal root *man* to think; cf Latin *mens* mind, Sanskrit *manas*, *manu*] The human kingdom, which is the midpoint of evolution, reaching relative consciousness in the fourth round, but attaining full human or manasic consciousness only the fifth round. On the last three rounds of the evolutionary journey man tends to become a god, and then divinity itself, and like every other original life-atom to reassume its primeval form as a member of the dhyani-chohanic host. Spiritual primeval intelligences, in order to become fully self-conscious gods, must pass through the human stage — not necessarily that of terrestrial man but including all intelligences which have achieved their evolutionary unfolding from within the appropriate equilibrium between spirit and matter.

Man may be considered as having three main bases or upadhis: 1) the monadic or divine-spiritual, emanating from the supreme or cosmic monad of our universe; 2) the mental-intuitional, supplied by the manasa-dhyanis and manifesting from the sun in their evolutionary passage; and 3) the vital-astral-physical, as well as the emotional-psychic, from the moon-chain.

In the widest sense, the term is used for the Heavenly Man or Third Logos, or even the unified Triad of the first three cosmic Logoi, called the Crown of the Sephirothal Tree in the Qabalah, the originant and not the copy of the universe, and therefore being the latter's source as well as the ultimate pattern toward which all in the universe tends.

Mana (Sanskrit) *Māna* [from the verbal root *man* to think] Opinion, conception, idea; also self-conceit, arrogance, pride (especially in the compound *aham-mana*). In Buddhism, one of the six evil feelings or one of the ten fetters to be discarded. As a neuter noun, consideration, respect, honor. In astrology the name of the tenth mansion or house.

Mana (Sanskrit) *Māna* [from the verbal root *mā* to measure] as a masculine noun means dwelling, building, house; as a neuter noun, measuring, dimension, computation as of time; in philosophy,

proof, demonstration. *See also* PRAMANA

Manas (Sanskrit) *Manas* [from the verbal root *man* to think] The seat of mentation and egoic consciousness; the third principle in the descending scale of the sevenfold human constitution. Manas is the *human* person, the reincarnating ego, immortal in essence, enduring in its higher aspects through the entire manvantara. When imbodyed, manas is dual, gravitating toward buddhi in its higher aspects and in its lower aspects toward kama. The first is intuitive mind, the second the animal, ratiocinative consciousness, the lower mentality and passions of the personality. “Manas is dual — *lunar* in the lower, *solar* in its upper portion’ . . . and herein is contained the mystery of an adept’s as of a profane man’s life, as also that of the *post-mortem* separation of the divine from the animal man” (SD 2:495-6).

At present manas is not fully developed in mankind, and kama or desire is still ascendant. In the fifth round, however, manas “will be fully active and developed in the entire race. Hence the people of the earth have not yet come to the point of making a conscious choice as to the path they will take; but when in the cycle referred to, *Manas* is active, all will then be compelled to consciously make the choice to right or left, the one leading to complete and conscious union with *Atma*, the other to the annihilation of those beings who prefer that path” (Ocean 59). Those human beings who cannot rise to the higher manasic and buddhic aspects of themselves in the fifth round will fall into their nirvanic rest for the remainder of this embodiment of the earth-chain, to re-emerge at the beginning of the next embodiment of the earth to pick up their evolutionary journey.

The annihilation of those who choose the left-hand or matter path occurs because they use their manasic faculty to its prostitution for selfish and evil purposes, which leads to a final rupture of the manasic links. When this rupture is complete, the entity being no longer attached to the higher triad sinks rapidly into the whirlpool of absolute matter and is finally disintegrated into its component life-atoms. The higher triad or monad thus freed from its downward-tending personality, after a period of rest in spiritual realms evolves a new lower garment in which to manifest in a later manvantara.

If the union between the lower or personal manas, and the individual reincarnating ego or higher manas, has not been effected during the course of past lives, then the former is left to share the fate of the lower animal, gradually to dissolve into its component life-atoms and to have its personality annihilated. But even then the spiritual ego remains of necessity a distinct being.

“The higher and the lower Manas are one . . . and yet they are not — and that is the great mystery. The Higher Manas or Ego is essentially divine, and therefore pure; no stain can pollute it, as no punishment can reach it, *per se*, the more so since it is innocent of, and takes no part in, the deliberate transactions of its Lower Ego. Yet by the very fact that, though dual and during life the Higher is distinct from the Lower, ‘the Father and Son’ *are one*, and

because that in reuniting with the parent Ego, the Lower Soul fastens upon and impresses upon it all its bad as well as good actions — both have to suffer, the Higher Ego, though innocent and without blemish, has to bear the punishment of the misdeeds committed by the *lower* Self together with it in their future incarnation. The whole doctrine of atonement is built upon this old esoteric tenet; for the Higher Ego is the antitype of that which is on this earth the type, namely, the personality” (TBL 55-6).

Should the human personality be of a heavily gross and materialistic type so that very few spiritual impulses are gathered in after death by the higher triad, then this higher triad is reincarnated almost immediately because there was nothing in the life just lived to call for the devachan experience of the personality. There can be no devachan for the manasic personality unless this personality has had in the life just lived at least a modicum of spiritual thought, yearning, and impulse. It is the higher manas which experiences devachan because of the spiritual qualities inherent in this higher manas and to which it has given imperfect expression in the life just lived. It is in devachan that this higher manas has its field of spiritual-mental activity, where it receives its due compensation, its mead of reward, for all the spiritual disappointments, sufferings, and imperfect expressions which it had to bear during earth-life.

Mahat or universal mind is the source of manas: what manas is in the human constitution, mahat is in the cosmic constitution. Manas is thus a direct ray from the cosmic mahat. Manas is sometimes loosely called the kshetrajna or real incarnating and permanent spiritual ego, the individuality; but the kshetrajna strictly speaking is the buddhi-manas or higher manas.

Manasa(s) (Sanskrit) *Mānasa* [from *mānasa* intelligent from *manas* mind] Adjective of manas; in theosophical literature, title for the Sons of Wisdom or manasaputras, those intellectual beings, spiritual pitris or dhyanis, who endowed humanity with manas or intelligence; hence, the immortal egos in man. *See also* AGNISHVATTAS; MANASAPUTRAS

Manasa-dhyanis (Sanskrit) *Mānasa-dhyāni-s* [from *mānasa* mental, intelligent from *manas* mind + *dhyāni-s* class of pitris from *dhyāni* meditation] The agnishvatta pitris, the givers of manas (mind) and intellectual consciousness to man; those solar and lunar pitris or dhyanis who incarnated by irradiation from themselves in the mentally senseless forms of semi-ethereal flesh of third root-race mankind. In the Puranas, considered the highest of the pitris (fathers of mankind). The agnishvattas or manasa-dhyanis are intimately connected evolutionally and in occult cosmology with the sun, and are hence often called the solar ancestors of mankind. They are, in fact, one of the several classes of monads springing directly from mahat who provided man with his intellect, mind, and sense of individual moral responsibility.

Manasa-pitris (Sanskrit) *Mānasa-pitr-s* [from *mānasa* mental from *manas* mind + *pitṛ* father] Fathers of mind; those spiritual beings who endowed mankind with intelligence. “The *monad* of the animal is as immortal as that of man, yet the brute knows nothing of this; it lives an animal life
